lenity. But, if we confider the picts whicls has had to Roberf. detect, the confpiracies which he had to fruitrate, the Rubrtf.t. fecret and powerful enemies he had to deal with; if we inquire allo into the commotions which the wicked atminifration of Wenceflas had excited, the irruptions and devaftations of plunderers and lighway robbers, which the nobles countenanced, and the diftreffed fituation in which he found Germany, we muft withons hefitation conclude, that his lenity indicated his prudence, in reftoring by flow degrees the empire to it; original tranquillity. Robert hed lis vircues, he lover: his fubjects, and governed them with wifdom. Poffeffed of much political knowledge for the age in which he lived, he wanted nothing but talents fur war to make him an accomplifhed prince. He was twice married. The name and rank of his firt wife is unknown; he had by her a fon who died before him. His fecond wife was Elizabeth, daughter of Frederic burgrave of Nuremberg, by whom he had five fons and three daughters. The three daughters were, Margaret married to Charles duke of Lorrain; Agnes to Adolphus duke of Cleves; Elizabeth to Frederic duke of Auftria. His fons were, Louis the firt of the electoral branch, which became extinct in 1559; John father of Chrifopher king of Denmark ; Frederic who died without iffue; Ctho count of Sintheim; laftly, Stephen, from whorn defcended the elector, and the other counts palatine of the Rhine, who are extant at this day.

Robert (of Bavaria), prince palatine of the Rhine, and duke of Cumberland, the fon of Frederic, elector palatine, by Elizabeth, daughter of James I. king of England, diftinguifhed himielf by his valour as a general and admiral; firlt in the Dutch, and then in the Englifh fervice. He was unfuccefsful in the caufe of his uncle Charles I. againt the parliament forces; but under Charles II. he defeated the Dutch fleet, and was made lord high admiral of England in 1673 . This prince was a lover of the fciences, and particularly fkil. ful in chemiftry. He died in 1682 .

ROBERTSON (Dr William), one of the moft celebrated hiltorians of his age, was one of thofe great characters whofe private life, flowing in an even and unvaried fream, can afford no important information to the bingrapher, although his writings will be read to the lateft polterity with undiminifhed pleafure. He was born at the manfe of Borthwick in the year 172 I . His father was, at the time of his diath, one of the miniters of the Old Grey Friar's church in Edirburgh, which the Decior came afterwards to fupply. In 1743 he was iconfed preacier, and placed in the parifh of Glad:-muie in 1744 ; whence, in $175^{8}$, he was tranflated to Lady Yelter's perim in Edinburgh. In $17{ }^{6} \mathrm{G}_{1}$, on the death of piacipal Golue, he was elected principal oi the Enivoricy of Edinburgh, and appointed one of the miniters of the Old Grej Friar's church. Abous this period he received the degree of Doctor of Divinity, and was appointed hiforiographer to his majelty for Scotland, and one of his mijelty's chaplains for that kingdum.

Wefind it not eafy to afcertain at what period were firf ninfolded the great and finguiar talents which deftined Dr Robertfon to be one of the finf writers that refcued Britain from the reproach of not having any good hiforians. We are, howerer, affured, that bcfore the publication of any of his liteiary pe:formance,

Phertfon, even from his firft appearance in public life, his abilities had begun to attract the notice of obferving men; and to his mor: intimate friends he difcovered marks of fuch hich-minded ambition, as, feconded by thofe abilities, could not have failed to carry him to the firlt honours of his profeffion, in whatever fphere he had been placed, and whatever oppofition he might have had to combat.

The firft theatre that offered for the difplay of his talents, was the General Affembly of the Church of Scotiand. It is the annual meetings of this court that produce-to view men who would otherwife remain in the deepeft obfcurity. There the humble paltor, whofe lot has been caft in the remoteft corner of the Highland wilds, feels himfelf, for a time, on a footing of equality with the firft citizen in the kingdom: he can there difpute with him the prize of eloquence, the moft flattering diftinction to a liberal mind; a diftinction which is naturally fought after with the greater eagernefs in that affembly, as the fimple eftablifhment of the church of Scotland has rendered it the only pre-eminence to which the greateft part of its members can ever hope to attain.

From the moment Dr Robertion firlt appeared in this affembly, he became the objest of univerial attention and applaufe. His fpeeches were marked with the fame manly and perfuafive eloquence that diftinguifhes his hiftorical compofitions; and it was obferved by all, that while his young rivals in oratory contented themfelves with opening a caufe, or delivering a Rudied harangue, he fhowed equal ability to flart objections, to anfwer, or to reply ; and that even his moft unpremeditated effufions were not unadorned with thofe harmonious and feemingly meafured periods, which have been fo much admired in his works of labour and reflection. He foon came to be confidered as the ableft fupporter of the caufe he chofe to efpoufe, and was now the unrivalled leader of one of the great parties which have long divided the church of which he was a member.

When we reflect upon this circumftance, and confider how much mankind are the fame in every fociety, we fhall be the lefs furprifed to find, in the literary works of $\operatorname{Dr}$ Robertion, an acquaintance with the human lieart, and a knowledge of the world, which we look for in vain in other hiftorians. The man who has fpent his life in the difficult tafk of conducting the deliberations of a popular affembly, in regulating the pafions, the interefts, the prejadices, of a numerous faction, has advantages over the pedant, or mere man of letters, which no ability, no ftudy, no fecond-hand information, can ever compenfate.

The firft work which extended the Doctor's reputation beyond the walls of the general affembly, was a fermon preached at Edinburgh before the fociety for propagating Chriftian knowledge, and afterwards publifhed; the fubject of which was, ' The ftate of the world at the appearance of Jefus Chrit.' The ingenuity with which a number of detached circumftances are there collected, and fhown to tend to one fingle point, may perhaps rival the art which is fo much admired in the bifhop of Meaux's celebrated Univerfal Hiftory.

This fermon did-great honour to the author; and it is probably to the reputation he gained by it, that we
ought to attribute the unanimity with which he was Roberton. called to be one of the minifters of Edinburgh-an event which happened not long after, viz. in the year ${ }^{1758}$. In 1759, he publifhed, in two volumes quarto, - The Hillory of Scotiand, during the reigns of Queen Mary and of King James VI. till his Acceffion to the Crown of England, with a Review of the Scotch Hiftory previous to that period.' This work in its ftructure is one of the moft cemplete of all modern hiftories. It is not a dry jejune narrative of events, deftitute of ornament; nor is it a mere frothy relation, all glow and colouring. The hiftorian difcovers a fufficient fore of imagination to engage the reader's attention, with a due proportion of judgment to check the exuberance of fancy. The arrangement of his work is admirable, and his defrriptions are animated. His fyle is copious, nervous, and correct. He has difplayed confummate fkill in rendering fuch paffages of our hillory as are familiar to our recollection agreeable and entertaining. He has embellifhed old materials with all the elegance of modern drefs. He has very judicioufly avoided too circumftantial a detail of trite facts. His narratives are fuccinct and fpirited; his reflections copious, frequent, and generally pertinent. His fentiments refpecting the guilr of Mary have indeed been warmly controverted by Meffrs Tytler, Stuart, and Whitaker; and the general opinion now feems to be, that their victory is complete. That victory, however, on the part of Whitaker, is fullied by the acrimony with which he writes. Dr Robertion was no rancorous or malignant enemy of the unfortunate queen. While relating, what he doubtlefs believed, he makes every poffible allowance for Mary from the circumftances in which fhe was placed ; and his hiffory will be read with pleafure by candid men of all parties as long as the language in which it is compofed fhall continue to be underfood.

In ${ }^{1769}$, Dr Robertfon publifhed, in three volumes quarto, The Hiftory of the Reign of the Emperor Charles V. with a View of the Progrefs of Society in Europe, from the Subverfion of the Roman Empire to the beginning of the 16 th century.-The valt and general importance of the period which this hiftory comprifes, together with the reputation which our hiforian had defervedly acquired, co-operated to raife fuch high expectations in the public, that no work perhaps was ever more impatiently wifhed for, or perufed with greater avidity. The firf volume (which is a preliminary one, containing the progrefs of fociety in Europe, as mentioned in the title) is a very valuable part of the work; for it ferves not only as a key, to the pages that follow, but may be confidered as a general introduction to the ftudy of hiftory in that period ia which the feveral powers of Europe were formed into one great political fyftem, in which each took a ftation, wherein it has fince remained (till within a very: few years at leaft) with lefs alterations than could have been expected, after the fhocks occafioned by fo many internal revolutions, and fo many foreign wars. Of the hiftory itfelf, it may be fufficient to obferve, that it is jufly ranked among the capital pieces of hiftorical excellence. There is an elegance of expreffion, a depth of difcernment, and a correctnefs of judgment, which do hozour to the hiftorian. The characters are inimitably penned. They are not contrafted by a ftudied antithefis, but by an oppofition which refults from a

## ROB

$\underbrace{\text { Rebertion. very acute and penetrating infight into the real merits }}$ of ench characer, fairly deduced from the feveral circumftances of his conduct exemplified in the hiltory. For this work the doctor got L. 4500 Sterling.

In 1779, Dr Roberifon publifhed The Hiftory of America, in two volumes quarto. This celebrated work may be confidered with great propriety as a fequel to the preceding hiftory. From the clofe of the 15 th century we date the mof fplendid era in the annals of modern times. Difcoveries were then made, the influence of which defcended to pofterity; and events happened that gave a new direction to the firit of nations.

To the inhabitants of Europe, America was in every refpect a new world. There the face of the earth changed its appearance. The plants and trees and animals were ftrange; and nature feemed no longer the fame. A continent opened that appeared to have recently come from the hands of the Creator, and which Thowed lakes, rivers, and mountains, on a grander fcale, and the vegetable kingdom in greater magnificence, than in the other quarters of the globe; but the animal tribes in a fate of degradation, few in number, degenerated in kind, imperfect, and unfinifhed. The human fpecies in the earlieft ftage of its progrefs, vaft and numerous nations in the rudeft form of the favage ftate which philofophers have contemplated, and two great empires in the lowelt degrec of civilization which any records have tranfmitted to our review, prefented to the philofophic eye at this period the moft fruitful fubject of fpeculation that was to be found in the annals of hiltory.

The difcovery of the New World, moreover, was not only a curious fpectacle to the philofopher, but, by the change which it effected, an interefting fpectacle to the human race. When Columbus fet fail for unknown lands, he little expected that he was to make a revolution in the fyltem of human affairs, and to form the deftiny of Europe for ages to come. 'The importance and celebrity therefore of the fubject had attracted the attention of philofophers and hiftorians. Views and fketches of the new world had been given by able writers, and fplendid portions of the American fory had been adorned with all the beauties of eloquence. But, prior to the appearance of Dr Robertfon's hictory, no author had beftowed the mature and profound inveftigation which fuch a fubject required, or had finifhed, upon a regular plan, that complete narration and per$f:\{$ whole which it is the province of the hiftorian to tranfmit to pofterity. And as the fubject upon which our author entered was grand, his execution ivas mafterly. The character of his former works was immediately difcerned in it. They had been read with uncommon admiration. When the Hiftory of Scotland was firlt publifhed, and the author altogether unknown, Lord Chefterfield pronounced it to be equal in eloquence and braty to the productions of Livy, the pured and moftciatical of all the Roman Hiftorians. His literare reputation was not confined to his own country : the tefimony of Europe was foon added to the voice of Britain, It may be mentioned, indeed, as the characterittic quality $u$ our author's manner, that he poffercd ia no common degree that fupported elevation which is fuituble to compofitions of the higher clafs; and, in his Hiftoy of America, he difplayed that hap-
py union of frength and grace which becomes the ma- Robertfon. jefty of the hiftoric mufe. In the fourth book of his firft volume, which contains a defcription of America when firf difcovered, and a philofophical inquiry into the manners and policy of its ancient inhabitants, he difplays, moreover, fo much patient invelligation and found philofophy, abounds in fuch beautiful or interefting defcription, and exhibits fuch variety and copioufnefs of elegant wising, that future times will probably refer to it as that part of his works which gives the belt idea of his genius, and is the moft finilhed of all his productions.

In 1787 appeared a tranflation of the Abbé Clavigero's Hiftory of Mexico; in which work the author threw out various reflections, tending in feveral inftances to impeach the credit of Dr Robertfon's Hiftory of America. This attack induced our learned hiftorian to revife his work, and to inquire into the truth of the charges brought againft it by the hiftorian of New Spain : and this he appears to have done with a beco: ming attention to the importance of the facts that are controverted, and to the common interelts of truth. The refult he publifhed in 1788, under the title of Additions and Corrections to the former Editions of Dr Robertfon's Hiftory of America.-In many of the difputed paffages, he fully anfwered the Abbé Clavige. ro, and vindicated himfelf: in others he candidly fubmitted to correction, and thus gave additional value to his own work.

The literary labours of Dr Robertion appear to have been terminated in 1 クリI by the publication of An H ftorical Difquifition concerning the Knowledge which the Ancients had of India, and the progrefs of Trade with that Country prior to the Difcovery of the Pal: fage to it by the Cape of Good Hope; with an Appendix, containing Obfervations on the Civil Polity, the Laws, and Judicial Proceedings, the Arts, the Sciences, and Religious Inftitutions of the Indians.The perufal of Major Rennell's Memoir, for illuftrating his Map of Hindoltan, fuggefted to Dr Robertfon the defign of examining more fully than he had done, in his Hiftory of America, into the knowledge which the ancients had of India, and of confidering what is certaia, what is obfcure, and what is fabulous, in their accounts of that remote country. Of his various performances, this is not that of which the defign is the moft extenfive, or the execution the molt elaborate; but in this hiftorical difquifition we perceive the fame patient aftiduity in collecting his materials, the fame difcernment in arranging them, the fame perfpicuity of narrative, and the fame power of illultration, which fo eminently difinguifh his other writings, and which have long rendered them the delight of the Britifh reader at home and an honour to Britifl literature abroad.

A truly ufeful life Dr Robertfon clofed on the inth of June 1793 , at Grange-Houle, near Edinburgh, after a lingering illnefs, which he endured with exemplary fortitude and refignation. Itmay be truly obferved of him, that no man lived more refpected, or died more fincerely lamented. Indefatigable in his literary refearches, and poffelfing from nature a found and vigerous underftanding, he acquired a ftore of ufeful knowledge, which afforded him ample fcope for the exertion of his extraordinary abilities, and raifed him to the moft diftinguifhed eminence in the republic of letters. As a.

Anigus a miniter of the gofpel, i. was a faithful paftor, and Robiniz.
jufly merited the efteem and veneration of his flock. in a word, he may be pronounced to be one of the
moft perfect characters of the age; and his name will be a lafting honour to the ifland that gave him birth. Fis converfation was cheerful, entertaining, and indruclive; his manners affable, pleafing, anl endearing.

Dr Robertion left three fons and two daughters. The eldeft fon is procurator for the church of Scotland, and an advocate. The other two are officers in the army; and one of them difinguifhed himfelf under Lord Cornwallis in fuch a manner as to command the warmeft praife from that illuftrious general.

ROBIGUS and ROBIGO, a Roman god and goddefs, who joined in the prefervation of corn from blight. Their feftival was kept on the $\mathbf{2} \boldsymbol{5}$ th of April.

ROBIN ноод. See Hood.

## Robin Red-Breaf. See Motacilla.

ROBINIA, false acacia, in botany: A genus of the decandria order, belonging to the diadelphia clafs of plants; and in the natural method ranking under the 32 d order, Papilionacea. The calyx is quadrifid; the legumen gibbous and elongated. There are nine fpecies. Themoft remarkable are the caragnana andferox, the leaves of the former of which are conjugated, and compofed of a number of fmall folioles, of an oval figure, and ranged by pairs on one common tock. The flowers are leguminous, and are cluftered on a filament. Every Hower confifts of a fmall bell-thaped petal, cut into four fegments at the edge, the upper part being rather the wideft. The keel is fmall, open, and rounded. The wings are large, oval, and a little raifed. Within are Io ftamina united at the bafe, curved towards the top, and rounded at the fummit. In the midft of a fheath, formed by the filaments of the famina, the pitili is perceivable, confifting of an oval germen, terminated by a kind of button. This germen becomes afterwards an oblong flattilh curved pod, containing four or five feeds, of a lize and fhape irregular and unequal; yet in both refpects fomewhat refembling a lentil.

This tree grows naturally in the fevere climates of Northern Alia, in a fandy foil mised with black light earth. It is particularly found on the banks of great rivers, as the Oby, Jenifia, \&c. It is very rarely met with in the inhabited parts of the country, becaufe cattle are very fond of its leaves, and hogs of its roots; and it is fo hardy, that the fevereft winters do not affect it. Gmelin found it in the neighbourhood of Tobollk, buried under 15 feet of fnow and ice, yet had it not fuffered the leaft damage. Its culture confifts in being planted or fowed in a lightifh fandy foil, which muft on $n$ o account have been lately manured. It thrives beft near a river, or on the edge of a brook or ipring; but prefently dies if plented in a marihy foot, where the water flagnates. If it is planted on a rich foil, well tilled, it will grow to the height of 20 feet, and in a very few years will be as big as a common birch tree.

In a very bad foil this tree degenerates, and becomes a mere fhrub: the leaves grow hard, and their fine bright green colour is changed to a dull deep green. The Tongufian Tartars, and the inhabitants of the recthern paits of Siberia, are very fond of the fruit of this tree, it being almoft the only fort of pulfe they eat. M. Strahlemberg, author"of a well efteemed defcription
of Siberia, affures us that this fruit is tolerably pleafant food, and very nourifhing. Thefe peafe are firft infufed in boiiing water, to take off a certain acrid tafte they have, and are afterwards dreffed like common peafe or Windfor beans; and being ground into meal, pretty good cakes are made of them. The leaves and tender hoots of this tree make excellent fodder for feveral forts of cattle. The roots, being fweet and fucculent, are very well adapted to fattening hogs; and the fruit is greedily eaten by all forts of poultry. After feveral experiments fomewhat fimilar to the methods ufed with anil and indigo, a fine blue colour was procured from its leaves. The fmaller kind of this tree feems ftill better adapted to anfwer this purpofe. The ftriking elegance of its foliage, joined to the pleafing yellow colour of its beautiful flowers, fhould, one would imagine, bring it into requeft for forming nofegays, or for freedily making an elegant hedge.

Befides the qualities above recited, it poffeffes the uncommon advantage of growing exceedingly quick, and of being eafily tranfplanted. There are large plantations of it now in Sweden, Norway, Lapland, and Iceland. Linnæus aflures us, that, after the Pinis folquinir, erroneoully called the cedar tree of Siberia, this tree, of all that are to be found in Siberia, is moft worthy of cultivation.
2. The robinia ferox is a beautiful hardy fhrub, and, on account of its robuft Atrong prickles, might be introduced into this country as a hedge plant, with much propriety. It refifts the fevereft cold of the climate of St Peterfurgh, and perfects its feed in the garden of the emprefs there. It rifes to the height of fix or eight feet; does not fend out fuckers from the root, nor ramble fo much as to be with difficulty kept within bounds. Its flowers are yellow, and the general colour of the plant a light pleafing green. A figure of it is given in the Flora Roffica by Dr Pallas, who found it in the fouthern diftricts, and fent the feeds to Si Peteribourgh, where it has profpered in a fituation where few plants can be made to live.

ROBINS (Benjamin), a moft ingenious mathematician, was born at Bath in 1707. His parents were Quakers, and of low condition, confequently neither able nor willing to have him much inftructed in human learning. Neverthelefs his own propenity to fcience procured him a recommendation to $\mathrm{Dr}_{r}$ Pemberton at London; by whofe affiftance, while he attained the fublimer parts of mathematical knowledge, he commenced teacher of the mathematics. But the bufinefs of teaching, which required confinement, not fuiting his active difpofition, he gradually declined it, and engaged in bufinefs that required more exercife. Hence he tried many laborious experiments in gunnery, from the perfuafion that the refiftance of the air has a much greater influence on fwift projectiles than is generally imagined. Hence alfo he was led to confide:- the mechanic arts that depend on mathematical principles; as the conftruction of mills, the building of bridges, the draining of fens, the rendering of rivers navigable, and the making of harbours. Among other arts, fortification much engaged his attention; and he rete with opportunities of perfecting himfelf by viewing the principal ftrong places of Flanders, in fome tours he made abroad with perfons of diftinetion.

Upon his return from one of thefe excurfionc, he found

Pobina, Robins.

## $\mathbf{R O B} \quad\left[\begin{array}{ll}3 I I\end{array}\right] \quad \mathrm{l} 0 \mathrm{D}$

Kのかins.
found the learned amufed with Dr Berkeley's work, intilied The $A n l_{j, j}$, in which an attempt was made to explode the method of fluxions. Mr Rubins was therefure advifed to clear up this affair by giving a diftinct account of Sir Ifaac Newton's doctrines, in fuch a manner as to obviate all the objections that had been made without naming then?. Accordingly he publifhed, in 1735, A Difcourfe concerning the Nuture and Certainty of Sir Ifaac Newton's Method of Fluxions: and fome exceptions being made to his manuer of defending Sir Ifaac Newton, he afterwards wrote two or three additional difcourfes. In 1738 he defended the fame great philofopher againlt an objection contained in a note at the end of a Latin piece, called Matbo, five Cofmotheoria puerilis; and the following year printed Remarks on M. Euler's Treatife of Motinn, on Dr Smith's Syftem of Optics, and on Dr Jurin's Difcourfe of diftinet and indiftinct Vifion annexed to Dr Smith's work. In the meanwhile, Mr Robins did not folely confine himfelf to mathematical fubjects: for in 1739 he publifhed three pamphlets on political affairs, without his name; when two of them, relating to the convention and negociations with Spain, were fo univerfally efteemed, as to occafion his being employed in a very honourable poft; for on a committee being appointed to examine into the paft conduct of Sir Robert Walpole, he was chofen their fecretary.

In ${ }^{1742}$, Mr Robins publifhed a fmall treatife, intitled New Principles of Gunnery, containing the refule of many experiments; when a Difcourfe being publifhed in the Philofophical Tranfactions, in order to invalidate fome of his opinions, he thought proper, in an account he gave of his book in the fame Tranfactions, to take notice of thofe experiments; in confequence of which, feveral of his Differtations on the Refiftance of the Air were read, and the experiments exhibited before the Royal Society, for which he was prefented by that honourable body with a gold medal.

In 1748 appeared Lord Anfon's Voyage round the World, which, though Mr Walter's name is in the title, has been generally thought to be the work of Mr Robins. Mr Walter, chaplain on board the Centurion, had brought it down to his departure from Macao for England, when he propofed to print the work by fubleription. It was, however, it is faid, thought proper, that an able judge fhould review and correct it, and Mr Robins was appointed; when, upon examination, it was refolved that the whole fhould be written by Mr Robirs, and that what Mr Walter had done fhould only ferve as materials. Hence the introduction entire, and many differtations in the body of the work, it is faid, were compofed by him, without receiving the leaft affiftance from Mr Walter's manufcr:pt, which chiefly related to the wind and the weather, the currents, courfes, bearings, diftances, the qualities of the ground on which they anchored, and fuch particulars as generally fill up a failor's account. No production of this kind ever met with a more favcurable reception; four large impreffions were fold wiihin a twelvemonth; and it has been tranflated into moit of the languages of Europe. The fifth edition, printed at Loudon in 1749 , was revifed and correfted by Mr Robins himfelf. It appeats, however, from the corrigelida and addenda to the if volume of the Biographia Britanaica, printed in the beginning of the fourth ve'ume of tiat wors, that

Mr Rcbins was only confulted with refpect to the dr Fofition of the drawinge, and that he had left Englard
K.bin: Robinfon. bifore the book was printed. Whether this be the fact, as it is afferted to be by the widow of NI Walte:, it is not for us to determine.

It is certain, however, that Mr Robins acquired the fame, and he was foon after defired to compofe an apo$\operatorname{logy}$ for the unfortunate affair at Prefonpans in Scotland, which was prefixed as a preface to The Report of the Proceedings of the Board of General Officers on their Examination into the Conduct of LieutenantGeneral Sir John Cope ; and this preface was efteemed a mafterpiece in its kind. He afterwards, through the interelt of Lord Anfon, contributed to the improvements made in the Royal Obfervatory at Greenwich. Having thus eftablifhed his reputation, he was offered the choice of two confiderable employments ; either to go to Paris as one of the commiflaries for adjufting the limits of Arcadia, or to be engineer-general to the Eaft India company. He chofe the latter, and arrived in the Eaft Indies in 1750; but the climate not agreeing with his conftitution, he died there the year following.

ROBINSON (the mot Rev. Sir Richard) archbilhop of Arnagh and Lord Rokeby, was immediately defcended from the Robinfons of Robeky in the North Riding of the county of York, and was born in 1709. He was educated at Weftminlter fchool, from whence he was elected to Chrift-Church, Oxford, in 1726. After continuing his Audiss there the ufual time, Doctor Blackburne, archbilhop of York, appointed him his chaplain, and collated him firf to the rectory of Elton, in the Ealt Riding of Yorkfhire, and next to the prebend of Grindal, in the cathedral of York, In 1751 he attended the Duke of Dorfet, lord-lieutenant of Ireland, to that kingdom, as his firft chaplain, and the fame year was promoted to the bifhopric of Killala. A family connection with the Earl of Holderneffe, who was fecretary of fate that year, with the Earl of Sandwich and other noblemen related to him, opened the faireft profpects of attaining to the firft dignity in the Irifh church. Accordingly in 1759 he was tranflatel to the united fees of Leighlin and Ferns, and in I761 to Kildare. The Duke of Northumberland being appointed to the lieutenancy of Ireland in ${ }_{17} 65$, he was advanced to the primacy of Armagh, made lordalmoner, and vice-chancellor of the univerfity of Dublin. When Lord Harcourt was lord-lieutenant of Ireland in 1777, the king was pleafed by privy-feal at St James's, February 6th, and by patent at Dublin the 26th of the fame month, to create him Baron Rokeby of Armagh, with remainder to Matthew Robiufon of Wett Layton, Eiq; and in 1783 he was appointed prelate to the molt illuftrious order of St Patrick. On the death of the Duke of Rutland lord-lieutenant of Ireland in 1787, he was nominated one of the lords. juftices of that kingdom. Sir William Robinfon, his brother, dying in 1785 , the primate fucreeded to the title of baronet, and is the furvivor in the direct male line of the Robinions of Rokeby, being the 8th in defcent from William of K ndal. His grace died a: Clition near Brifol in the end of October 1794.

No pimite ever fat in the fee of Armagh who watched more carefuliy oier the intercht of the church of Ireland, as the fatute-book evinces. The act of the

Robiution. 1 th and 12 th of his prefent majefty, which fecures to bifhops and ecclefiaftical perfons repayment by their fuccelfors of expenditures in purchafing glebes and houfes, or building new houfes, originated from this excellent man, and muft ever endear his name to the clergy. The other acts for repairing cfiarches, and facilitating the recovery of ecclefiaftical dues, were among the many happy exertions of the primate.

But it was at Armagh, the ancient feat of the primacy, that he difplayed a princely munificence. A very elegant palace, 90 feet by 60 , and 40 high, adorns that town; it is light and pleafing, without the addition of wings or leffer parts ; which ton frequently wanting a fufficient uniformity with the body of the edifice, are urconnected with it in effect, and divide the attention. Large and ample offices are conveniently placed behind a plantation at a fmall diftance. Around the palace is a large lawn, which fpreads on every fide over the hills, fkirted by young plantations, in one of which is a terrace, which commands a moft beautitul view of cultivated hill and dale; this view from the palace is much improved by the barracks, the fchool, and a new church at a diftance; all which are fo placed as to be exeeedingly ormamental to the whole country.

The barracks were erected under the primate's direction, and form a large and handfome edifice. The fchool is a building of confiderable extent, and admirably adapted for the purpofe; a more beautiful or better contrived one is nowhere to be feen; there are apartments for a mafter, a fchool-rcom 56 feet by 28 , a large dining room and fpacious airy dormitories, with every other neceffary, and a fpacious play-ground walled in ; the whole forming a handfome front : and attention being paid to the refidence of the mafter (the falary is 4001 . a year), the fchool flourifhes, and mult prove one of the greateft advantages to the country. This edifice was built entirely at the primate's expence. The church is erected of white fone, and having a tall fpire, makes a very agreeable object, in a country where churches and fpires do not abound. The primate built three other churches, and made confiderable reparations to the cathedral; he was alfo the means of erecting a public infirmary, contributing amply to it himfelf: he likewife conftructed a public library at his own coft, endowed it, and gave it a large collection of books; the room is 45 feet by 25 , and 20 high, with a gallery and apartments for the librarian. The town he ornamented with a market-houfe and fhambles, and was the direct means, by giving leafes upon that condition, of almoft new-building the whole place. He fornd it a neft of mud cabins, and he left it a well-built city of ftone and flate. Thefe are noble and fpirited works, in which the primate expended not lefs than L. $30,0 c 0$. Had this fum been laid out in improving a paternal eftate, even then they would be deferving great praife; but it is not for his pofterity but the public good that his grace was fo munificent. A medal was ftruck by the ingenious William Moffop of Dublin, which has on one fide the head of the primate, infcribed "Richard Robinfon, Baron Rokeby, Lord Primate of all Ireland." And on the reverfe, the fouth front of the obfervatory in Armagh, erelied by his grace, with this admirable motto, "The Heavens declare the glory of God." mbcclexime.

Robinson (Robert), a diffenting minifer of confi-
derable note, was born on the 8th of Otober 1735, at Swaff ham in Norfolk. His father died when he was young; and his maternal grandfather Robert Wilkin, of Milden-hall, Suffolk, gent. who had ever been diffatisfied with his daughter's marriage, deprived him of his maternal inheritance, cutting him off vith half a guinea. His uncle, however, who was a fubftantial farmer, in fome meafure fupplied this lofs. He took Mr Robinfon home, and placed him under the Rev. Jofeph Brett, at Scarning fchool in Norfolk, with a view to the minilary of the church of England ; where he had for one of his fchool-fellows the lord chancellor Thurlow. When about the age of 15 or 16 , he imbibed the notions of George Whitfield; on which account he was difcarded by his uncle, and again expofed to poverty and want. He firft directed liis thoughts towards the miniftry in the year 1754 , and commenced preacher in the following year at the age of 20 ; preaching his firt fermon to a congregation of poor people at Milden-hall. He continued for a year or two as one of Mr Whitfield's preachers, and during that period he married. In the year 1758, however, he determined to feparate frem the Methodifts: after which he fettled at Norwich with a fmall congregation formed chiefly of his methodiftic friends, being at that time an Independent. In the year 1759 he was invited to Cambridge, and for two years preached on trial to a congregation confiling of no more than 34 people, and fo poor that they could only raife L. $3: 6$ : o a quarter for his fubfiftence. In June 1701 he fettled as their paftor, and was ordained in the ufual manner; at which time we are told he exercifed the office of a barber. In 1774, his congregation had fo much increafed as to confift of 1000 fouls, including children and fervants.
In Cambridge Mr Robertion's talents foon attracted notice, and he quickly fet up a Sunday evening lecture, which was well attended. His preaching was altogether without notes; a method in which he was peculiarly happy: not by trufting to his memory entirely, nor by working himfelf up to a degree of warmth and paffion, to which the preachers among whom he firft appeared commonly owe their ready utterance ; but by thoroughly fudying and making himfelf perfectly matter of his fubject, and a certain facility of expreffion which is never at a lofs for fuitable and proper words. In fhort, his manner was admirably adapted to enlighten the underftanding, and to affect and reform the heart. He had fuch a plainnefs of fpeech, fuch an eafy and apparent method in dividing a difcourfe, and fuch a familiar way of reafoning, as difcovered an heart filled with the tendereft concern for the meaneft of his hearers; and yet there was a decency, propriety, and juftnefs, that the moft judicious could not butt approve. Several gentlemen of the univerfity, eminent for character and abilities, we are told, were his conflant hearers.
The circumflances which lof him his uncle's pasronage paved the way for the future cvents of his life. The incident which made him difcard the common fen. timents on the fubject of baptifm, at once marked the turn of his mind, and fhows what apparently fight caufes frequently determine the lot and ufefulnefs of our lives. Ile was invited to the baptifm of a child; the minitter who was to perform the fervice keeping the company in lorg expectation of his appearance, frate

## $R O B$

## ROE

Robinfon, one fuggefted, that fuppofing the child were not baptized at all, he faw not how it could affect his happinefs. Though the converfation was not purfued, the hint ftruck Mr Robinfon's mind ; and he immediately determined to read the New Teltament with this patticular view, to examine what it faid concerning the oaptifm of infants. He accordingly began with the Gofpel of Matthew ; and, in fuccellion, perufed the hiltorical and epittolary borks; in expectation that he fhould find in every following part what he had not met with in the preceding parts of the facred volume; namely, paffages recommending and urging this rite. But obferving, on thi whole, a total filence about it, he thought it his duty to relinquilh the practice, as without foundation in the rule of our faith; which appeared to him to fpeak only of the baptifm of believers.

This change of his fentiments was more unfavourable than the former alterations in his religious judgment to his worldly views; and having married very early in life from pure affection, he was involved in great difficultie, for near 12 years after his fettlement in Cambridge; as, in that courfe of time, his family became numeruus, and the fupport of an aged mother, as well as of a wife and ten children, depended upon him. But unexpected fupplies, from quarters of which he was ignorant, frequently relieved his neceffities, and confirmed his trult in Providence : yet the fituation of his family mult, it is eafy to conceive, have much affected his mind. For he appears to have poffefled great tendernefs and fenfibility, and to have regarded with peculiar endearment his domeftic connections.

It may be reckoned a circumftance worthy of mention, that the fphere of Mr Robinfon's miniftry was the fame in which his great-grandfather Mr Shelly, of Jefus College, and vicar of All-Saints, had, with others, diffuied the principles of the Puritans, about the beginning of the laft century. The reputation of the Diffenters in the univerfity and neighbourhood had for almoft a century been finking into contempt, when Mr Robinfon fettled with the baptift church at Stone-Yard. His abilities and affiduity, however, raifed their reputation. The place in which his people affembled, which was at finft a barn, afterwards a ftable and granary, and then a meet ng-houfe, but ftill a damp, dark, and ruinous place, foo: became too fmall for the audience; and feveral of the new auditors being men of fortune, they purchafed the fite, and erected at their own expence a new houfe in the year 1764 .

His labours as a preacher were not limited to the town of Cambridge; but foon after his coming there, he fet up teveral lectures in the adjacent villages. His lectures were either annual or occafional, or fated on fixed days. The ufual time was half an hour after fix in che evening; and fometimes at five in the mornipg; and now and then in the fummer at two in the afternoon, for the fake of thofe who came from a diftance.

He died on the gth of June 1790 , at the houfe of William Ruffel, Efq; of Showell green near Birmingham. He had laboured under an alarming diforder for fome time before; but on the Sunday preceding his death he preached a charity fermon. On Monday he was feized with a fit ; on Tuelday he recovered and went to bed tolerably well, and was found dead next morning.

The abilities of Mr Robinfon were very confiderable,
Vol. XVI,
as appears from his numerous works; and he poffeffed Roborants, the quality of expreffing his thoughts in an eafy and Rochefort. a forcible, anner. He is faid to have bien of an unfteady t: mper, but the frequency with which he changed his relicious creed is a proof rather of candour than urfeadinetis. The acrim ny uith which he treated the Church of Englded, and h's plan of Lectures of the Pranciples of Nenconfornity, for the Influction of $\mathrm{Ca}-$ techunens, have expoled him to much cenfure.

Mr Robinfon's largeft work, the Hittory of Baptifm and of the Baptifts, was publifhed fince his death, and is written in the fame ftyle and with the fame ability as his other works. Though we have heard it remarked by a learned profeffor of Theology in the church which he oppofed, it is not a little remarkable that there is in it no argument or fact againft infant baptifm which was not anfwered by Dr Wall nearly 100 years ago, of whofe arguments Mr Robinfon however takes no notice.

ROBORANTS, in pharmacy, medicines which Areligthen the parts, and give new vigour to the confitution.

ROCHEFORT, a handfome and confiderable town of France in the territory of Aunis. It was conftructed by Louis XIV. and is built in the midft of marhes exprefsly drained for that purpofe; and time evinced the utility of the project, for as a port it foen became as neceffary and important to the crown of France as Breft or Toulon. It has a department of the marine, and has large magazines of naval ftores. There is alfo one of the fineft halls of arms in the kingdom, and a great many workmen eraployed in making them; there are alfo forges for anchors, and work-houfes for fhip-carpenters, who are employed in every thing that relates to the fitting out of fhips that come within the compafs of their province. They likewife caft great guns here ; and have antifts, whofe employment is fculpture and painting. There are alfo ftocks for building men of war, ropewalks, magazines of provifions and powder, a manufactory of fail-cloth, an hofpital for failors, and proper places to clean the fhips. Add to thefe, the houfes of the intendant, the fquare of the capuchins, and the fuperb ftructure which contains lodgings for 300 marine guards, where they are taught the bufinefs and exercifes belonging to feamen and offlcers who go on board the men of war.

Befide the ufual number of workmen which were employed at Rochefort during the monarchy, which amounted to about 900 , there were about 600 galley flaves, occupied in the molt painful and laburious branches of fervice. The town is fituat:d on the river Charente, about five leagues from its mouth, and was fortified by Louis XIV. at the time he conltructed it; but its fituation is at fo confiderable a diftance from the fea, as to render itfufficiently fecure from any attack, and they have therefore clofed up the battlements, and neglected the fortifications. The town is laid out with great beauty and elegance. The ftreets are all very broad and Itraight, extending through the whole place from fide to fide ; but the buildings do not correfpond with them in this refpect, as they are moftly low and irregular. W. Long. o. 54. N. Lat. 46. 3.

ROCHEFOUCAULT (Francis earl of), defcended of an illuftrious family, next in dignity to that of R $\mathbf{r}$.
the

## ROC

Rocl. for: the fovereigns, was chamberlain to king Charles VIII. cault and Louis XII. His character at court was admired
as obliging, generous, upright, and fincere. In 1494 he food godfather to Francis I. who, when he came to the throne, continned to pay great refpect to that fpiritual relation. He made him his chamberlain in ordinary, and erefted, in 1515, the bareny of Rochefoucault into an earldom ; and, in his writ of erection, cbferves, that he did this in memory of the great, honourable, highly ufeful, and commendable fervices which the faid Francis had done to his predeceffors, to the crown of France, and to himfelf. The earl of Rochefoucault died in 1517 , leaving behind him an illuftrious memory, and a character univerfally refpected. Since his time all the eldeft fons of that family have taken the name of Francis.

Rochefoucault (Francis duke de la), prince of Marfillac, governor of Poitou, was born in 1603. -He was the fon of Francis, the firf duke of Rochefoucault, and was diftinguifhed equally by his courage and his wit. Thefe flining qualities endeared him to all the nobility at court, who were ambitious of decorating themfelves at once with the laurels of Mars and of Apoilo. He wrote two excellent works; the one a book of Maxims, which M. de Voltaire fays has contributed more than any thing elfe to form the tafte of the French nation ; and the other, Memoirs of the Regency of Queen Anne of Auftia. It was partly at the inftigation of the beautiful duchers de Longueville, to whom he had been long attached, that the duke de Rochefoucault engaged in the civil wars, in which he fignalized himfelf particularly at the battle of St Antnine. Beholding one day a portrait of this lady, he wrote underneath it thefe two lines from the tragedy of Alcyonée:
"P Pour meriter fon cour, pour plaire à fes beaux yeux, " F'ai fait la guerre aux rois, jel'aurois fait auz deux."
Which may be thus rendered in Englifh :
"To gain her heart, and pleafe her fparbling eyes,
"" I've war'd with kings, and would have brav'd the $\mathfrak{f k i e s . " ~}$
It is reported, that after his rupture with Madame Longueville, he parodied the above verfes thus:

* Pour ce caur inconfant, qu'enfn je connois mietux,
" Fe fais la guerre aux rois, $j$ 'en ai perdu les yeux."
After the civil wars were ended, he thought of nothing but enjoying the calm pleafures of friendihip and literature. His houfe became the rendezvous of every perfon of genius in Paris and Verfailles. Racine, Boileau, Savigne, and La Fayette, found in his converfation charms which they fought for in vain ellewhere. He was not, however, with all his elegance and genius, a member of the French Academy. The necefity of making a public fpeech the day of his reception was the only caufe that he did not claim admittance. This nobleman, with all the courage he had difpl-yed upon various critical occafions, and with his fuperiority of birth and underttanding over the common run of men, did not think himelf capable of tacing an audience, to utter only four lines in publie, without being out of countenance. He died at Paris in 1630 , aged 68, leaving behind him a character which has been variounly
drawn by thofe who during his life were proud of his friendifip. That he was well acquainted with human nature is certain; and his merit in that refpect was fully admitted by Swift, who was himfelf not eafily impofed upon by the artificial difguifes of the hypocrite.

ROCHELLE, a celebrated city of France, capital of the territory of Aunis, with a very commodious and fafe harbour, which, though it does not admit veffels of any confiderable burden, is yet well calculated for trads. "It may be divided (fays Mr Wraxal) into three parts; the bafon, which is the innermolt of thefe, is only a quarter of a mile in circumference; and at the entrance are two very noble Gothic towers, called the Tower de St Nicholas, and the Tour de la Chaine. They are now in a ftate of decay, but were anciently defigned to protect the town and harbour. Without thefe towers is the Avant Port, extending more than a league, and bounded by two points of land to the north and fouth. Beyond all is the road where the largent fhips ufually anchor, protected from the fouth-weft winds by the illands of Re, Oleron, and Aix." The celebrated mound erected by Richlieu extends from fide to fide acrofs the whole harbour, nearly an Englifh mile in length, and when the fea retires is ftill vifible. "I walked out upon it (fays Mr Wraxal) above 300 feet. Its breadth is at this time more than 150 feet, and it widens continually towards the bafe. No effort of art or power can poffibly imprefs the mind with fo valt and fublime an idea of the genius of Richlieu, as does this bulwark againft the fea. While I ftood upon it, in the middle of the port, between the waves which rolled on either fide, and contemplated its extent and frength, I was almort inclined to fuppofe this aftonifhing work to be fuperior to human power, and the production rather of a deity than of a mortal. A fmall opening of about 200 feet was left by Pompey Targon, the architect who conftructed it, to give entrance to veffels, and fhut up by chains fixed acrofs it. A tower was likewife erect$\epsilon d$ at each end, no remains of which are now to be feen. Neither the duke of Buckingham, nor the earl of Lindfey, who were fucceffively fent from England to the aid of the befieged by Charles the Firt, dared to attack this formidable barrier : they retired, and left Rochelle to its fate. In all probability, a thoufand years, aided by florms and all the fury of the fea, will make little or no impreffion on this mound, which is defigned to endure as long as the fame of the Cardinal, its author."

Before the revolution, Rochelle was a bifhop's fee, and contained a college of humanities, an academy, a fchool for medicine, anatomy, and botany, and a mint. It cannot lay claim to any remote antiquity, being merely a little collection of houfes on the fhore, inhabited by filhermen, when William IX. laft count of Poictou, rendered himfelf matter of it in 1139 . From this Prince it defecnded to his only daughter Eleanor, afterwards queen of Henry II. of Englind; and her charter incorporaing the town is ftill preferved in the regifters of the city. In the year 1540 , Rochelle was the grand afylum of the Proteltants; and the maffacre at Paris was foon followed by the fiege of Rochelle, which began in November 1572, and was raifed in June 1573 ; but in 1628, after a moft obftinate refiftance, and a fiege of 13 months, it firrendered to

## R O C

Rochefter. the mercy of Louis XIII. At the beginning of ${ }^{-}$ firlt fiege, the number of nhabitants in the city amounted to 72,000 ; in the fecond they diminifhed to 28,000; and they were, when Mr Wraxal was there, between 17 and 18,000 , of which fcarce 2000 were Huguenots. The houfes of this city are fine, and fupported with piazzas, under which perfens may walk in all weathers; and the ftreets in general are as ftraight as a line. There are feveral handfome churches, and other ftructures, befides a remarkable pump in the fquare of Dauphiny, which throws cut the water through feveral pipes. There are no remains of the old fortifications, except on the fide of the harbour, where there are bulwarks and ftrong towers to defend the entrance. The new fortifications are in the manner of Vauban. Before Canada was ceded to England, and New Orleans to Spain, the trade of Rochelle was very lucrative. It revived about the year 1773 , and, befide that to the coalt of Guinea and the Eaft Indies, the inhabitants carried on a confiderable trade in wines, brandy, falt, paper, linen cloth, and ferge. It is feated on the ocean, in W. Long. I. II. N. Lat. 46. 10.

ROCHESTER, a city of Kent, in England, is fituated on the Medway, feven miles and a half north of Maidfone, and 30 from London. It appears to have been one of the Roman Itations, from the bricks in the walls, as well as the Roman coins that have been found about it. It has three parifh churches built with ftone and flints, befides the cathedral, which is but a mean Aructure. This little city, which was made a bithop's fee by king Ethelbert, anno 604, has met with many misfortunes. In 676 , it was facked by Eldred king of Mercia; in 839 and 885 , befieged by the Danes, but refcued by king Alfred. About 100 years after, it was befiend by king Eihelred, and forced to pay L. 100. Anno 999 it was taken and plundered by the Danes. Anno 1088 it was befieged and taken by William Rufus. In king John's time it was taken from the Baronc, after three month's fiege; and the very next year, viz. 1256 , its caftle, founded by William the Conqueror, w'as ftormed and taken by feveral of the Barnns, under the French king's fon. In the reign of Henry III. it was befieged by Simon Montford, who burnt its then wooden bridge and tawer, and fpoiled the church and priory, and then marched off. This city has alfo been feveral times deftroyed by fire, viz. in 1130 , on June 3 , in 1137 , and in 1177; after which it is faid to have continued defolate till 1225 , when it was repaired, ditched, and walled round. In the Saxon heptarchy there were three mints in Rochefter, two for the kin $r$ and one for the bifhop. In 1281, its old wooden bridge was carried off by the ice, in a fudden thaw after a froft which had made the lifedway palfable on foot. Another was built in the reign of Richard Il. but puled down again, on the rumour of an inv ifi, n from France. Ii was afterwards reftored, but fo oticn fubject to expenfive repairs, by reafon of the rapid courfe of the river under it, as well as the great breadth and depth of it, that in the reign of Edward III. it was rafolved to build a new brisge of ftone; and the fame was begun, and in a manner completed, at the expe:ce of Sir John Cobham and Sir Robert Knoiles, Edward III.'s rencrals, out of the fpoils they had taken in France. It has 2I arches. The town is governed by a maycr, ricortir, 12 addermen, : 2

## 315] <br> ROC

common-councilmen, a town-clerk, three fearjeants at Rochefter, mace, and a water-bailiff. To its cathedral belong a Rock. dean and fix prebendaries. Gundulph's tower flands on the nosth fide of the cathedral, and is fuppofed to have been built by the bifhop, as a place of fecuri. ty for the treafures and archives of that church and fee. Some fuppofe it to have been intended for a bell tower, and others fer an ecclefiallical prifon; but whatever might be its deftination, its machicolations, its loop-hole windows, and the thicknefs of its walls, fhows frength and defence were confidered as neceffary. This tower was 60 cett high, but fome part has lately fallen down; the walis are fix feet thick, and contain within them an area of 20 feet fquare : it was divided into five floors or ftories of unequal height, and had a communication with the upper part of the church, by means of an arch or bridge, the fteps of which are fill vifible. It is fuppofed to have been erected after the cathedral was built. For the maintainance of its bridge, certain lands are tied down by parliament, to which it has fent members from the firft. The town-houfe, built in the year 1687 , for the courts, affizes, and feffions, and the charity-fchool, are two of the beft public buildings here.-A mathematical fchool was founded here, and an alms-houfe for lodging fix poor travellers every night, and allowing them 4 d . in the morning when they depart, except perfons contagioufly difeafed, roguts, and proctors. In the fummer here are always fix or eight lodgers, who are admitted by tickets from the mayor. The Roman Walling-ftreet runs through this trwn from Shooters-Hill to Dover. The mayor and citizens hold what is called an admiralty-court once a-year for regulating the oyfter-fifhery in the creeks and branches of the Medway that are within their jurifdiction, and for profecuting the cable-hangers, as they are called, who dredge and fith for oyfters without being free, by having ferved feven years apprenticeihip to a fifherman who is free of the filhery. Every licenfed dredger pays 6 s .8 d. a-year to the fupport of the courts, and the fifhery is row in a flourifhing way. Past of the caftle is kept in rep.ur, and is ufed as a magazine, where a party of foldiers do conltant duty. The bridge was repaired in 1744, and pallifadoed with new iron rails. Rochefter contains about 700 houfes, and 2000 inhabitants. It confilts of only one principal freet which is wide, and paved with fints. The houfes are generally well built with brick, and inhabited by tradefmen and innkeepers. It has alfo four narrow freets; but no fort of manufactory is carried on here. Stroud is at the welt end of this place, and Chatham at the eaft. It is 27 miles north-welt by welt of Canterbury, and 30 fouth-eaft by eaft of London. Long. ©. 36. E. Lat. 51.23.N.

## Rochester (earl of). See Wilmot.

ROCK, a large mafs or block of bard fone rocted in the ground. See Mountain, Petrifaction, and Stone.

Rock, in ornithology, a fpecies of Vulture.
Rock Bifons are cavities or artificial bafons of dife. rent fizes, from fix feet to a few inches diameter, cut Grofier's. in the furface of the recks for the purpofe, as is fup- Fonand pofed, of collecting the dew and rain pure as it de- and Wides, fcended from the heavens, for the ufe of ablutions ard purifications, prefcribed in the druidical religion; the fe, efpecially the dew, being deemsd the purefl of all

Rock, Rocket.
fluids. There are two iurts of thofe bafons, one with
lips or communications between the different bafons, the other fimple cavities. The lips as low as the bottom of the bafons, which are horizontal, and communicate with one fomewhat lower, fo contrived that the contents fall by a gradual defcent through a fucceffion of bafons either to the ground, or into a veffel fet to receive it. The bafons without lips might be intended for refervoirs to preferve the rain or dew in its original purity without touching any other veffel, and was per. haps ufed for the druid to drink, or wafh his hands, previous to officiating at any high ceremony, or elfe to mix with their mifletoe.

Some of thefe bafons are fo formed as to receive the head and part of the human body; one of this kind is found on a rock called king Arthur's bed, in the parifh of North Hall in Cornwall, where are alfo others, called by the country people Arthur's troughs, in which they fay he ufed to feed his dogs.

Rock-Cryftal, in natural hiftory, otherwife called fprig-cryfal, a name given to the third order of cryftals, from their being affixed to a rock or other folid body. See Crystal.

Rock-Salt. See Salt.
Rock-Oil. See Petroleum.
Rock-Fif. See Gobius.
ROCKET, an artificial fire-work, confilting of a cylindrical cafe of paper, filled with a compofition of certain combultible ingredients; which, being tied to a flick, mounts into the air, and then burfts. See PyROTECHNY.

Theory of the Flight of Sky-Rockets. Mariotte takes the rife of rockets to be owing to the impulfe or refiftance of the air againit the flame. Dr Defagulier accounts for it otherwife.

Conceive the rocket to have no vent at the choak, and to be fet on fire in the conical bore; the confequence will be, either that the rocket would burft in the weakeft place, or, if all its parts were equally frong, and able to fultain the impulfe of the flame, the rocket would burn out immoveable. Now, as the force of the flame is equable, fuppofe its action downwards, or that upwards, fufficient to lift 40 pounds. As thefe forces are equal, but their directions contrary, they will deftroy each other's action.

Imagine then the rocket opened at the choak; by this means the action of the flame downwards is taken away, and there remains a force equal to 40 pounds acting upwards, to carry up the rocket, and the fick it is tied to. Accordingly, we find that if the compofition of the rocket be very weak, fo as not to give an impulfe greater than the weight of the rocket and ftick, it does not rife at all; or if the compofition be flow, fo that a fmall part of it only kindles at firf, the rocket will not rife.

The fick ferves to keep it perpendicular ; for if the rocket thould begin to itumble, moving round a pint in the choak, as being the common centre of gravity of rocket and ftick, there would be fo much friction againft the air by the ftick between the centre and the point, and the point would beat againft the air with fo much velocity, that the friction of the medium would reftore it to its perpendicularity.

When the compofition is burnt out, and the impulfe upwards is ceafed, the common centre of gravity is
brought lower towards the middle of the ftick; by which means the velocity of the point of the Itick is decreafed, and that of the point of the rocket increafed; fo that the whole will tumble down, with the rocket-end foremolt.

All the while the rocket burns, the common centre of gravity is Thifting and getting downwards, and fill the fafter and the lower as the fick is the lighter, fo that it fometimes begins to tumble before it be burnt out; but when the htick is a little too heavy, the weight of the rocket bearing a lefs proportion to that of the ftick, the common centre of gravity will not get fo low but that the rocket will rife ftraight, though not fo falt.

Rocket, in botany. See Brassica.
ROCKINGHAM, a town in Northamptonfhire, in England, 87 miles from London, ftands on the river Welland. It has a charity-fchool, a market on Thurfdaf, and a fair on Sept. 8. for five days. Its foret was reckoned one of the largeft and richeft of the kingdom, in which William the Conqueror built a caltle; it extended, in the time of the ancient Britons, almoft from the Welland to the Nen, and was no:ed formerly for iron-works, great quantities of flags, i. e. the refure of the iron-ore, being met with in the adjacent fitids. It extended, according to a furvey in 1641 , near 14 miles in length, from the weft end of Middleton-Woods to the town of Mansford, and five miles in breadth, from Brigftock to the Welland; but is now difmembered into parcels, by the interpofition of fields and towns, and is divided into three bailiwicks. In feveral of its woods a great quantity of charcoal is made of the tops of trees, of which many waggon-loads are fent every year to Peterborough. There is a fpacious plain in it called Rockinghamihire, which is a common to the four towns of Cottingham, Rcckingham, Corby, and Gretton. King William Rufus called the council here of the great men of the kingdom. W. Long. o. 46. N. Lat. 52.32.

RODNEY (George Bridges;, Lord Rodney, was born in the year 1718. Of the place of his birth and the rank of his anceftors we have not been able to procure any well authenticated account. His father was a naval ufficer ; and commanding, at the time of his fon's birth, the yacht in which the king, attended by the Duke of Chandos, was paffing to or from Hanover, he alked and obtained leave to have the honour of calling his infant fon Grorge Bridges. The royal and noble godfathers advifed Captain Rodney to educate his boy for his own profeffion, promifing, as we have been told, to promote him as rapidly as the merit he fhould difplay and the regulations of the navy would permit.

Of young Rodney's early exertions in the fervice of his country, nothing, however, is known to the writer of this abftract, nor, indeed, any thing of fufficient importance to be inferted in articles fo circumfcribed as all our biographical fhetches muft be, till 175 I , when we find him, in the rank of a Commodore, fent out to make

Rodney.

make accurate difcoveries refpecting an inland which was fuppofed to lie about $50^{\circ} \mathrm{N}$. I. and about 300 leagues W. of England : but he returned without having feen any fuck inland as that which he was appointed to furvey. In the war which foo followed this voyage of difcovery, he was promoted to the rank of a rear-admiral, and was employed to bombard Havre-deGrace ; which in 17.59 and 1760 he confiderably danaged, together with forme chipping. In 1761 he was font on an expedition againft Martinico, which was reduced in the beginning of the year 1762 , and about the fame time St Lucia furrendered to Captain Harvey. Both there iflands were retired to the French at the peace of 1763.

In reward for his Cervices, he was created a knight of the bath ; but being inattentive, as many feamen are, to the rules of economy, his circumstances became fo embarrafled that he was obliged to fly from his country, with very dight hopes of ever being able to return. He was in France when the policy of that court induce them take a decided part with America againft Great Britain; and it is faid that fome men in power, no Arrangers to the desperate fate of Sir George's affairs, offered him a high command in the French navy, if he would carry arms again at his own country. This offer he rejected with becoming indignation. Soon af ter this gallant behaviour, the Duke de Chartres, afterwards the infamous Orleans, told Sir George that he was to have a command in the fleet which was to be oppored to that under the command of his countryman Mr Keppel; and with an infulting air asked him what he thought would be the confequence of their meeting? "That my countryman will carry your Highnefs with him to learn Englifh." was the high-fpirited reply.When the divifions, which the mutual recriminations of Admiral Keppel and Sir Hugh Pallifer excited in the Britufi navy, made it difficult for the miniftry to procare experienced, and at the fame time popular, commanders for their fleets, Lord Sandwich wrote to Sir George Bridges Rodney, offering him a principal command : but the difficulty was for the veteran to find money to pay his accounts in France, fo that he might be permitted to leave that kingdom. The money, it has been repeatedly affirmed, was advanced to him by the courtiers whofe offer he had before indignantly rejected. He arrived, therefore, in England, and was again em. ployed in the fervice of his country. His firlt exploit after his appointment was in January 1780 , when he took 19 Spanifh tranfports bound to Cadiz from Bilbca, together with a 64 gun flip and 5 frigates, their convol. On the 16th of the fame month he fell in with the Spanifh fleet, confifting of in fail of the line, under the command of Don Juan de Langara; of which are was blown up during the engagement, five were taken and carried into Gibraltar, among which was the admiral's flip, and the reft were much thattered. In April the fame year, he fell in with the French fleet, under the command of Admiral Guichen, at Martinico, whom he obliged to fight, and whom he completely beat; though from the Chattered fate of his own fleet, and the unwillingnefs of the enemy to rife another action, he took none of their hips. The fuccefsful efforts of this gallant admiral during the year 1780 were generally applauded through the nation $n$. He received the thanks of both Houses of Parliament, and addreffes of thanks from
various parts of Great Britain, and the iflands to which his victories were more particularly serviceable. In Decomber the fame year, he made an attempt, together with General Vaughan, on St Vincent's, but failed. In r781, he continued his exertions, with much fuccels, in defending the Weft India iflands; and, along with the above named general, he conquered St Eultatits; on which occafion his conduct to the inhabitants has been much, though perhaps unjufly, cenfured. The inland was certainly a nett of contraband traders.

On the 12 th of April ${ }_{1} 782$, he came to a clone actimon with the French fleet under Count de Graffe; during which he funk one Chip and took five, of which the admiral's Sip, the Ville de Paris, was one. The following year brought peace ; but, as a reward for his numerous Cervices, he had a grant of L. 2000 a-year for himfelf and his two facceffors. He had lung before been created a baronet, was rear-admiral of Great Brimtain, and at length was juftly promoted to the peerage, by the title of Baron Rodney of Stoke, Sumer feifhire, and made vice-admiral of Great Britain. He was once aldo governor of Greenwich Holpitad.

Lord Rodney had been twice married; fist to the filter of the Earl of Northampton, and fecondly to the daughter of John Clies, Eff; with whom he did not regide for feveral years before his death, which happened on the 24th of May 1792. He was succeeded in title and eftates by his for George, who married in 17.8 I Martha, daughter of the Right Hon. Alderman Hatley, by whom he has iffue.

Of the private life of Lord Rodney we know bur little. His attention to the wants of the feamen, and the warrant officers ferving under him, indicated that humanity which is always allied to true courage. He has often, from the number of dishes which his rank brought to his table, felefted fomething very plain for himfelf, and rent the reft to the midihipmen's mefs. His public tranfactions will tranfmit his name with honour to pofterity; his bravery was unqueftionable, and his fuccefs has been feldom equalled. It has, indeed, been very generally faid, that his fail in naval tactics. was not great, and that he was indebted to the fuperior abilities of Capt. Young and Sir Charles Douglas for the manœuvres by which he was fo fuccefsful againft Lan. gard and De Graffe. But, fuppofing this to be true, it detracts not from his merit. A weak or foolifh commeander could not always make choice of the ableft offcess for his fret captains, nor would fuck a man be guided by their advice.

Whatever was Lord Rodney's. fill in the faience of naval war, or however much he may have been beholden to the counsels of others, he certainly pofferfed himfelf the diftinguifhed merit of indefatigable exertion ; for he never omitted any thing within the compass of his power to bring, the enemy to action. He therefore unqueftionably deterves the reflect and the gratitude of his coontry: In the year 1783 the House of Affembly in Jamaica voted L. 1000 towards erecting a marble ftatue to him, as a mark of their gratitude and veneration for his gallant fervices, fo timely and gloriously performed for the falvation of that inland in particular, as well as the whole of the $\mathrm{B}_{1} \mathrm{itifh}$ We it India iflands and trade in general. We have not, however, herd of any foch tribute being paid to him in Britain ster before or fiance his death.
$\underbrace{\text { Rohan, }}$
$\qquad$

## $\mathrm{ROH} \quad\left[\begin{array}{ll}319\end{array}\right] \quad \mathrm{ROH}$

Rohan. in France ; and was equally formidable for his genies as his fword. In defence of the ciria and religious rights of his party, he maintained three viars againt Louis XIII. The firf, which terminated to the advantage of the Proteltants, broke out when that prince wilhed to eftablifh the Romifn religion in Le Bearn: the fecond, becaufe of the fiege which Cardinal De Richlieu caufed to be laid to Rochelle : and the third, when that place was befieged a fecond time. The confequerces of this war are fufficiently known: Rochelle furrendered : and the duke de Rohan perceiving, that after the taking of this place, the majority of his party were endeavouring to make up matters with the court, fucceeded in procuring for them a general peace in 1629 , upon very honourable and advantageous terms. The only facrifice of importance which the Huguenots were obliged to make, was their fortifications; which put it out of their power to renew the war. Some factious perfons, diffatisfied with feeing their fortrefles fall into their enemies' hands, were ready to accufe their general of having fold them. This great man, undeferving of fuch odious ingratitude, prefented his breait to thefe enraged malcontents, and faid, "Strike, frike! I wifh to die by your hands, after I have hazarded my life in your fervice." The peace of 1629 having entinguifhed the flame of civil war, the duke de Rohan, no longer of ufe to his party, and become difagreeable at court, retired to Venice. There is a very particular anecdote of him, extracted from the Memoirs of the duchefs of Rohan, Margaret of Bethune, daughter of the famous Sully. Whilf the dake de Rohan was at Venice, a propofal was made to him from the Porte, that for 200,000 crowns, and an annual tribute of 20,000 , the Grand Signior would give him the inland of Cyprus, and fully inveft him with the dignity and prerogatives of king. The duke was warmly inclined to comply with this propofal, and to fettle in the ifland the Proteltant families of France and Germany. He negociated this bufinefs at the Porte by means of the intervention of the patriarch Cyril, with whom he had much correfpondence ; but different circumftances, and in particular the death of the patriarch, occurred to break off the treaty. The republic of Venice chofe Rohan for their commander in chief againft the Imperialifts; but Louis XIII. took him from the Venetians, and fent him ambaffador into Swifferland, and into the Grifons. He wifhed to affilt thefe people in bringing back La Valteline under their obedience, the revolt of which the Spaniards and Imperialifts encouraged. Rohan, being declared general of the Grifons, atter many victories, drove the German and Spanifh troops entitely from La Valteline in 1633 . He defeated the $S_{f}$. niards again in 1636 at the banks of the lake of Côme. France, lot thinking it proper to withuraw her troops, the Grifons rofe up in arms, and the dule de Rohan, not fatisted with the conduct of the court, entered into a fpe ial treaty with them the 28 th March 1637. This hero, fearing the refentment of cardinal de Richlieu, retined to Gencva, wi.h a view to join his friend the duke of Saxe-Weimar, who wifhed him to undertake the command of his army, then ready to ergage the Imperinlitss near Rhinfield. Although the decimed this honour, yet he took the command of the reginent of Naffu , with which he threw the enemy into contufion; but was himicif wounded, Fobruary 28. $10 \% 3$,
and died of his wounds the 1 th of April followins, at the age of 59 . He was interred May 27th, in the church of St Perre in Geneva, where there is a nagnificent monument of marble erected to his memory, having on the moft inufrious actions of his life. The duke de Rohan was one of the preateft generals of his time, equal to the princes of Orarge, aud capable, like them, of fetting a comm nwealth; but more zea. lous than they for religion, or at lealt apparing to be fo. He was vigilant and indefabyable, not aliowing bimfelf any pleafures which might take 'ff his attention from his neceffary employments, and well qual fied for being the head of a party; a polt very difficult to retain, and in which he had to fear equally from his enemies and his friends. It is in this light that Voltaire has viewed this illuntrious chatacter, when he compoied the following verfe:

> Ave tous les talcus le Ciel lavoit fait naitre: Il agit en Hiros; en Sage il cicrivit.
> Il fut đuême grand lomime en combattant fon Maílre, Et plus grand lorfqu'il le fervit.

$H_{i s}$ military virtues were much heightened by the fweetners of his difpofition, his affable and courteous manners, and by a generofity which had few examples. Neither ambition, pride, nor a view of gain, could ever be traced in his character. He was wont to fay, that "true glory and a zeal for the public good never duelt where felf-intereft reigned." Rohan had always a particular regard for Henry the Fourth : "Truly (aid he, fometimes after the death of that prince) when I. think of him, my heart is ready to break. A wound received in his prefence would have aff. rded me more fatisfaction than now to gain a battle. I weu'd have valued an encomium from him in this art, of which he was the greateft mafter of his time, nore than the united praifes of all the commanders now living.' He wrote feveral interelting performances : $\mathbf{1}$. The Interefts of Princes, printed at Cologne in 1666, in 12 mo : in which work he fully examines the public interefts of all the princes of Europe. 2. The Perfect General, or an abridgment of the wars from Cæfar's Commentaries, in 12 mon . In this he makes it. appear, that a knowledge of the tactics of the ancien ts might be of much ufe to the moderns. 3. A Treatife on the Corruption of the ancient Militia, 4. A Treatile on the Government of the Thirteen Provinces. 5. Memoins; the beft edition of which is in 2 vols 12 mo . They contain the hiftory of France from 1610 to 1629 . 6. A Collection of fome Poltical Difcourfes on Sidte Affairs, from 1612 to 1629, 8ro, Paris, 1644, 1693, 1755 ; with the Memoirs and Letters of Hen y Duie de Rohan relative to the war of La Valteline, 3 vol, 12 mo, Geneva, 1757 . This was the firl edition whithappe.red of thefe curious memcirs: We owe it to the great attention and diligence of M. le Baron de Zuriaben, who publifhed them from different authentic maru cripts. He likewife ornamented this edition with geographical, hitorical, and genealogical notes, and a preface, whoch contains an abricged, but high'y interefting life, of the duke de Rohan, author of the memirs. The abbe Pérau has alo written a life of him, which occupies the 2 Ift and 22 d volumes of the Ritory of he Illu. flrious Men of Prance. Sone want of fivit might lc excufed in the detail of was finilied upwads cit 140

H Roll.
vears ago ; yet the memoirs of the duke de Rohan flill afford confiderable pleafure in the perufal. He tells his fory with humour, with fufficient exactners, and in fuch a tyle as procures the confidence of the reader.

ROHAULT (James), a celebrated Cartefian philofopher, was the fon of a merchant of Amiens, where he was born in 1620. He became well fkilled in the mathematics, and taught them at Paris, where hie became acquained with M. Clerfelier, an advocate, who gave him his daughter in Marriage. Rohault alfo taught phil faphy in the fame city with unc mmon applanfe. He there improved the arts, and gave excellent lectu es to the artifts and workmen. He died at Paris in 1675. He wrote, in French, 1. A Treatife on Natural Philofophy. 2. The Elements of the Mathematics. 3. A Treatife on Mechanics, which is very curious. 4. Philofophical Converfations; and other works. His Phyfics have been tranflated into Latin, by Dr Samuel Clarke, with notes, in which the Cartelian errors are corrected upon the Newtonian fyftem.

ROLANDRA, in botany: A genus of the polygamia fegregata order, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the $49^{\text {th }}$ order, Compefiba. The common calyx conlifts of diftinct $A_{0}$ of culi, between each of which are fhurt fquama, the whole forming a round bead. The partial calyx is bivalved. The corolla is fmall and funnel-lhaped, the tube fmall as a thread, the laciniex fhort and acute. The ftamina are five; the fyle bifid. It has no other feed veffel except the partial calyx, which contains a long three-fided feeds Of this there is only one fpecies, viz. the Argentea; a native of the Weft Indies, and found in copfes and wate lands.

ROLL, in manufactories, fomething wound and folded up in a cylindrical form.

Few fuffs are made up in rolls, except fatins, gaufes, and crapes; which are apt to break, and take plaits not eafy to be got out, if folded otherwife. Ribbons, laces, gallons, and paduas of all kinds, are alfo thus rolled.

A roll of tobacco, is tobacco in the leaf, twifted on the mill, and wound twift over twitt about a fick or roller, A great deal of tobacco is fold in America in rolls of various weights; and it is not till its arrival in England, Spain, France, and Holland, that it is cut.
A roll of parchment, properly denotes the quantity of 60 fkins.
The ancients made all their books up in the form of rolls; and in Cicero's time the libraries confifted wholly of fuch rolls.
Role, in law, figniffes a fchedule or parchment which may be rolled up by the hand into the form of a pipe.

In thefe fchedules of parehment all the pleadings; memorials, and akts of court, are entered and filed by the proper officer; which being done, they become records of the court. Of thefe there are in the exchequer feveral kinds, as the great wardrobe roll, the cofferer's roll, the fubfidy-roll, \&c.

Roll is alfo ufed for a lift of the names of perfons of the fame condition, or of thofe who have entered into the fame engagement. Thus a court-roll of a manor, is that in which the names, rents, and fervices, of each tenant are copied and enrolled.

## K O L

Calves-bead RoLt, a roll in the two temples, in which every bencher is taxed yearly at 2 s . every barrifler at is. 6 d , and every genteman under the bar at Is. to the cook and other officers of the houre, in confideration of a dinner of calves-heads provided in Ealter-term.

Mufler-Rozs, that in which are entered the foldiers of every troop, company, regiment, \&c. As foon as a foldier"s name is written down on the roll, it is death for him to defert.

Roles-Office, is an office in Chancery-lane, London, appointed for the cultody of the rolls and records in chancery.

Mafter of the Rolzasu Sce Master of the Rolls.
Rider-Roxs, a fchedule of parchment frequently fewed or added to fome part of a roll or record.

Raxls of Parliament, are the manufcript regifters or rolls of the proceedings of the ancient parliaments, which before the invention of printing were all engroffed on parchment, and prockaimed openly in every county. In thefe rolls are alfo contained a great many decifions of diffeult points of law, which were frequiently in former times referred to the decifion of that high court.

Roll, or Roller, is alfo a piece of wood, iron, brafs; \&cc. of a eylindrical for $m$, afed in the conftruction of feveral machines, and in feveral works and manufac. tories.

Thus in the glafs manafacture they have a rumingroll, which is a thick cylinder of calt brafs, which ferves to conduct the melted glars to the end of the table on which large looking-glaffes, 8 c. are caft.

Founders alfo ufe a roll to work the fand which they ufe in making their moulds.

The preffes called calendars, as ferving to calendar Auffs withal, conffit, annong other effential parts, of two rollers. It is alfo between the two rollers that the waves are given to filks, mohairs, and other ftuffs pro. per to be tabbied.

Impreffions from copper-plates are alfo taken by pafling the plate and paper between two rollers. See Rolling-prefs Pringtng.

Rolls, in flatting-mills, \&cc. are two iron inftruments of a cylindrical form, which ferve to draw or ftretch out plates of gold, filver, and other metals.

Rolls, in fugar-works, are two large iron barrels which ferve to bruife the canes, and to exprefs the juice. Thefe are caft hollow, and their cavities are filled up with wood, the cylinders of which are properly the rollers.

ROLLER, in furgery, a long and broad bandage, ufually of linen-cloth, rolled round any part of the body, to keep it in, or difpofe it to a ftate of health.

ROLLI (Paul), was born at Rome in 1687. He was the fon of an architect, and a pupil of the celebrated Gravina, who infpired him with a tafte for learning and poetry. An intelligent and learned Englifh lord having brought him to London, introduced him to the rcyal family as a mafter of the Tukcan language. Rolli remained in England till the death of queen Caroline his protector, and the patronefs of literature in general. He returned to Italy in 1747, where he died in 5767 , in the 8oth year of his age, leaving behind him a very curious collection in natural hitory, \&cc. and a valuable and well chofen library. His principal works firft ap-

## R O L <br> R O L

Rollin. eared in London in 1735, in 8 vo. They confift of after the manner of Catullus. There is Iikewife, by him a Collection of Epigrams, printed at Florence in 1776 , in 8 vo , and preceded with his life by the Abbe Fondini. What Martial fad of his own Collection may be fail of this, "That there are few good, but many indifferent or bad, piece; in it." Rolli, however, bore the character of one of the belt Italian poets of his age. During his flay in London, he procured ediions of several authors of his own country. The principal of there were, the Satires of Ariofto, the Burlefque Works of Bernie, Varchi, \&c. 2 vols, in 8 vo , which poffefs confiderable merit. The Decameron of Boccace, 1727, in to and folio; in which he has faithfully copied the celebrated and valuable edition published by the 7untes in 1527: and, daftly, of the elegrant Lucretia of Marchetti, which, after the mana. feript was reviled, was printed at London in 1717, in 8vo, through the influence and attention of Rolls. This edition is beautiful ; but the work is thought of pernicious tendency. There are likewife, by him, tranflations into Italian verfe of the Paradife Loft of Milton, printed at London in folio in 1735 ; and of the Odes of Anacreon, London 1739, in 8vo.

ROLLIN (Charles), a juftly celebrated French writer, was the for of a cutler at Paris, and was born there on the 30 th of January 1661. He ftudied at the college Du Plefis, in which he obtained a burfary through the intereft of a Benedictine monk of the White Mantle, whom he had ferved at table, and who difcovered in him forme marks of genius. Here he acquire the regard of M. Gobinet, principal of that colloge, who bad a particular efteem for him. After haring Audied humanity and philofophy at the college of Du Pleflis, he applied to divinity three years at the Sorbonne; but he did not profecute this ftudy, and never role in the church higher than to the rank of a tonfured prieft. He afterwards became profeffor of rhetoric in the fame college; and, in 1688 , fucceeded Horfan, his matter, as profeffor of eloquence, in the royal college. No man ever exercifed the functions of it with greater eclat: he often made Latin orations, to celebrate the memorable events of the times; and frequently accompanied them with poems, which were read and efteemed by every body. In 1694, he was chosen rector of the univerfity; and continued in that office two years, which was then a great mark of difunction. By virtue of his office, he fpoke the annual panegyric upon Louis XIV. He made many very ufeful regulations in the univerfity; and particularly revived the ftudy of the Greek language, which was then much neglected. He fubflituted academical exercifes in the place of tragedies; and introduced the practice which had been formerly observed, of caufing the ftudents to get by heart paffages of Scripture. He was a man of indefatigable attention; and trained innumerable perfons, who did honour to the church, the fate, and the army. The firf prefident Purtial was pleafed one day to reproach Rollin in a jocular fain, as if he exceeded even himfelf in doing bufinefs: to whom Rollin replied, with that plainnefs and fincerity which was natural to him, "It becomes you well, Sir, to reproach me with this; it is this habit of labour in me which has diftinguifhed you in the place of
advocate-general, which has raifed you to that of firft prefident: you owe the greatness of your fortune to me."

Upon the expiration of the rectorfhip, cardinal Noarles engaged him to fuperintend the ftudies of his nephews, who were in the college of lion; and in this office he was agreeably employed, when, in $1699,1: 2$ was with great reluctance made coadjutor to the prim. copal of the college of Beauvais. This college was then a kind of defert, inhabited by very few ftudents, and without any manner of difcipline: but Rollin's great reputation and induftry foo re-peopled it, and made it that flourifhing fociety it has ever fence continued. In this fituation he continued till 1712 ; when the war between the Jefuits and the Janfenifts drawing toward; a crifis, he fell a facrifice to the prevalence of the formex. Father le Tellier, the king's confeffor, a furrious agent of the Jefuits, infufed into his matter premjudices againft Rollin, whore connections with cardinal de Noailles would alone have fufficed to have made him a Janfenilt ; and on this account he loft his flare in the principality of Beauvais. No man, however, could have loft left in this than Rollin, who had every thing left him that was neceffary to make him happy ; retirement, books, and enough to live on. He now began to be employed upon Quinctilian ; an author he justly valued, and daw neglected not without uneafinets. He retrenched in him whatever he thought rathe curious than ufeful for the instruction of youth: he placed summaries or contents at the head of each chapter; and he accompanied the text with fort felect notes. His edition appeared in 1715, in 2 vols 12 mo , with an elegant preface, retting forth his methor and views.

In 1710, the univerfity of Paris, willing to have a head fuitable to the importance of their interefts in the then critical conjuncture of affairs, chore Rollin again rector: but he was difplaced in about two months by a letter de cachet. The univerfity had prefented to the parliament a petition, in which it protelted againft taking any part in the adjuftonent of the late difputes; and their being congratulated in a public oration by Rollin on this ftep, occafioned the letter which ordered them to choofe a rector of more moderation. Whatever the univerfity might fuffer by the removal of Rolelin, the public was probably a gainer ; for he now applied himfelf to compofe his treatife upon the Manner of Studying and Teaching the Belles Lettres, which was publifhed, two volumes in 1726 , and two more in $1728,8 v o$.

This work has been juftly efteemed for the fentiments of religion which animate its author, whole zeal for the public good prompted him to felect the choiceft paffage of Greek and Latin authors. The ftyle is fufficiently elegant, but the language on forme occafions is not remarkable for delicacy; and in the book altogether there is neither much order nor depth. The author has indeed spoken of common things agreeably, and has spoken as an orator on fubjects which demanded the inveltigation of the philosopher. One can fcarcely re. duce any thing in him to principles. -For example, the three fpecies of eloquence; the fipple, the temperate, and the fublime, can fcarcely be underfoot from him when we read that the one refembles a frugal table; the fecond a beautiful ruin, with green wood growing Ss

[^10]

[^11]Rollin. on its banks; and the third thunder and an impetuous river which overflows every thing that oppofes it.

The work, however, has been exceedingly fuccefsful, and juftly fo ; and its fucceis encouraged its author to undertake another work of equal ufe and entertainment ; his Hifoire Ancienne, \&c. or "Ancient Hiftory of the Egyptians, Carthaginians, Afyrians, Babylonians, Medes and Perfians, Macedonians, and Greeks," which he finifhed in 13 vols 8 vo . and publifhed between 1730 and $173^{8}$. M. Voltaire, after having obferved that Rollin was " the firft member of the univerfity of Paris who wrote French with dignity and correctnefs, fays of this work, that " though the laft volumes, which were written in too great a hurry, are not equal to the firf, it is neverthelefs the beft compilation that has yet appeared in any language ; becaufe it is feldom that compilers are elcquent, and Rollin was remarkably fo." This is perlaps faying too much. There are indeed in this work fome paffages very well handled; but they are only fuch as he had taken from the ancient authors, in doing juftice to whom he was always very happy. The reader will eafily difcover in this work the fame attachment to religion, the fame defire for the public good, and the fame love of virtue, which appears in that on the Belles Lettres. But it is to be lamented that his chronology is neither exad nor correfponding; that Le ftates facts inaccurately; that he has not fufficiently examined the exaggerations of ancient hiftorians; that he often interrupts the moft folemn narrations with mere trifles; that his ftyle is not uniform ; and this want of zaniformity arifes from his borrowing from writers of a modern date 40 or 50 pages at a time. Nothing can be more noble and more refined than his reflections; but they are Atrewed with too fparing a hand, and want that lively and laconic turn on account of which the hiftorians of antiquity are read with fo much pleafure. He tranfgreffes the rule which he himfelf had eftablifhed in his Treatife on Studies. "The precepts which have a refpect to manners (fays he) ought, in order to make an imprefion, to be fhort and lively, and pointed like a dart. That is the moft certain method of making them enter and remain on the mind." There is a vifible negligence in this diction with regard to grammatical cuftom, and the choice of his expreffions, which he does not choofe at all times with fufficient tafte, al. though, on the whole, he writes well, and has preferved limfelf free from many of the faults of modern authors. While the laft volumes of his ancient hiftory were printing, he publifhed the firlt of his Roman Hiftory; which he lived to carry on, through the eighth and into part of the ninth, to the war againft the Cimbri, about 70 years before the battle of Actium. Mr Crevier, the worthy difciple of Rollin, continued the hiftory to the battle of Aetium, which clofes the tenth volume ; and has fince completed the original plan of Rollin in 16 vols 12 mo , which was to bring it down from the foundation of the city to the reign of Conftantine the Great. This hiftory had not fo great fuccefs as his Ancient Hiftory had. Indeed it is rather a moral and hiftorical difcourfe than a formal hiftory; for the author does little more than point out fome more remarkable events, while he dwells with a fort of prolixity on thofe parts which furnifh him a free field for moralizing. It is alternately diffufe and barren; and the greatef advantage of the work is, that there are feveral paffages from T.

Livy tranflated with great elegance into French. He Rollin. alfo publithed A Latin Tranflation of mot of the Theological Writings relative to the difputes of the Times in which he lived. Rollin was one of the molt zealous adherents of deacon Pâris; and before the inclofure of the cemetery of St Medard, this diftinguilhed character might have been often feen praying at the foot of his tomb. This he confeffes in his Letters. He publifhed alfo Leffer Pieces; containing different Letters, Latin Harangues, Difcourfes, Complimentary Addreffes, \&c. Paris 1771,2 vols. 12 mo . A collection which might have been contained in one volume, by keeping in only the belt pieces. It is notwithftanding valuable for fome good pieces which it contains, for the favourable opinion which it exhibits of folid probity, found reafon, and the zeal of the author for the progrefs of virtue and the prefervation of talte. The Latin of Rollin is very correct, and much after the Ciceronian fyle, and embellifhed with moft judicious thoughts and agreeable images. Full of the reading of the ancients, from which he brought quotations with as much propriety as plenty, he expreffed himfelf with much fpirit and excellence. His Latin poems deferve the fame eulogium.

This excellent perfon died in 1741. He had been named by the king a member of the academy of infariptions and belles lettres in 1701 ; but as he had not then brought the college of Beauvais into repute, and found he had more bufinefs upon his hands than was confiftent with a decent attendance upon the functions of an academician, he begged the privileges of a veteran, which were honourably granted him. Neverthelefs, he maintained his connections with the academy, attended their affemblies as often as he could, laid the plan of his ancient hiftory before them, and demanded an academician for his cenfor. Rollin was a man of an admirable compofition; very ingenious, confummate in polite learning, of rigid morals, and eminently pious. He;was rather too religious; his religion carrying him into the territories of fuperftition; and he wanted nothing but a mixture of the philofophic in his nature to make him a very perfect character. Nothing could be more benign, more pacific, more fweet, more moderate than Rollin's temper. He fhowed, it mult be owned, fome zeal for the caufe of Janfenifm; but in all other refpects he was exceedingly moderate. The celebrated poet Rnuffeau conceived fuch a veneration for hirn, that he came out of banifhment incognito toParis, on purpofe to vifit him and pay his refpects to him. He looked upon his hitories, not only as the beft models of the hiftoric kind, but as a complete fyftem of politics and morals, and a moft inftructive fehool for princes as well as fubjects to learn all their duties in.

Intead of blulking at the lownefs of his birth, Rollin on no occafion acfitated to fpeak of it. "It is from the Cyclops's fhop (fays he, in a Latin epigram to one of his friends, to whom he had fent a fmall fword) that I have taken my fight towards Parnaffus." He was not, however, without frme fhare of vanity, efpecially at hearing mention made of his writings, of which the well-timed praifes of his adherents had given him a very high opinion. He fpoke without any diffimulation what he thought; and his opinions were lefs the effect of prefumption than of opennefs of heart. He was one of thofe men who are vain without any mixture of

## R O L [ 323 R OL

Rulling, pride. Rollin fpoke pretty well; but he had a greater Rolin. readinefs of writing than fpeaking; and much more fa-
tisfaction might be derived from his works than from his converfation. His name became famous through out Europe ; feveral princes fought the honour of his friendfhip. The duke of Cumberland and the princeroyal of Pruffia (afterwards king) were among the lift of his admirers. This monarch honoured him with feteral letters; in one of which he pays him the following compliment, " Men of your character are fit com. panions for kings." As to the literary merit of this author, it was, we fufpect, too much extolled in his own time, and has been too much undervalued in ours.

ROLLING, the motion by which a fhip rocks from fide to fide like a cradle, occafioned by the agitation of the waves.

Rolling, therefore, is a fort of revolution about an imaginary axis paffing through the centre of gravity of a hhip: fo that the nearer the centre of gravity is to the keel, the more violent will be the rolling motion; becaufe the centre about which the vibrations are made is placed fo low in the bottom, that the refiftance made by the keel to the volume of water which it difplaces in rolling, bears very little proportion to the force of the vibration above the centre of gravity, the radius of which extends as high as the malt-heads.

But if the centre of gravity is placed higher above the keel, the radius of vibration will not only be diminifhed, but an additional force to oppofe the motion of rolling will be communicated to that part of the Chip's bottom which is below the centre of gravity.

So far as relates to the effect of rolling, when produced by the quality or flowage of the ballaft, and to the manner by which it may be prevented, viz. a change of the quantity or difpofition of the ballat, we thall endeavour to explain under the article Trim. It may, however, be neceffary to remark, that the conftruction of the fhip's bottom may alfo contribute to diminilh this movement confiderably.

Many fatal difalters have happened to flips arifing from a violent rolling ; as the lofs of the mafts, loofening of the cannon, and ftraining violently on the decks and fides, fo as to weaken the thip to a great degree. See Pitching.

Rolling-Prefs. See Rolling Press.
Rolling-Tackle, a pulley or purchafe faftened to that part of a fail-yard which is to the windward of the matt, in order to confine the yard clofe down to the leeward when the fail is furled.

It is ufed to prevent the yard from haviry a great friction againft the maft in a high fea, which would be equally pernicious to both.

ROLLO, the conqueror of Normandy, was a Norwegian duke, banifhed from his country by Harold Fiarfagre, who conquered Norway in 870 , on account of the piracies he exercifed, He firft retired with his fleet among the iflands of the Hebrides to the north. weft of Scetland, whither the flower of the Norwegian nobility had fled for refuge ever fince Harold had become mafter of the whole kingdom. He was there received with open arms by thofe warriors, who, eager for conquelt and revenge, waited only for a chief to undertake fome glorious enterpiife. Rollo fetting bimfelf at their head, and feeing his power formidable, faited towards England, which had been long as it
were a field open on all fides to the violence of the northern nations. But the great Alfred had fome years before eftablifhed fuch order in his part of the illand, that Rollo, after feveral fruitlefs attempts, defpaired of forming there fuch a fettlement as thould make him amends for the lofs of his own country. He pretended, therefore to have had a fupernatural dream, which promifed him a glorious fortune in France, and which ferved at leaft to fupport the ardour of his followers. The weaknefs of the government in that kingdom, and the confufion in which it was involved, were fill more perfuafive reafons to infure them of fuccefs. Having therefore failed up the Seine to Rouen, he immediately took that capital of the province, then called Neuftria, and making it his magazine of arms, he advanced up to Paris, to which he laid fiege in form. This war at length ended in the entire ceffion of Neuftria, which Charles the Simple was obliged to give up to Rollo and his Normans in order to purchafe a peace. Rollo received it in perpetuity to himfelf and his pofterity, as a feudal duchy dependent on the crown of France. A defcription of the interview between Charles and this new duke gives us a curious picture of the manners of thefe Normans (as they were called by foreigners) ; for the latter would not take the oath of fealty to his fovereign lord any other way than by placing his hands within thole of the king; and abfolutely refured to kifs his feet, as cultom then required. It was with great difficulty he was prevailed on to let one of his warriors perform this ceremo. ny in his Itead; but the officer to whom Rollo deputed this fervice, fuddenly raifed the king's foot fo high, that he overturned him on his back; a piece of radenefs which was only laughed at: to fuch a degree were the Normans feared, and Charles defpifed.

Soon after, Rollo was perfuaded to embrace Chriftianity, and he was baptized with much ceremony by the archbifhop of Rouen in the cathedral of that city. As froon as he faw himfelf in full poffeffion of Normandy, he exhibited fuch virtues as rendered the province happy, and deferved to make his former outrages forgotten. Religious, wife, and liberal, this captain of pirates became, after Alfred, the greateft and molt humane prince of his time.

ROMAN, in general, fomething belonging to the city of Rome. See Rome.
King of the ROMANS, in modern hiftory is a prince elected to be fucceffor to the reigning emperor of Germany.

ROMANCE in matters of literature, a fabulous relation of certain adventures defigned for the entertainment and inftruction of the readers, and differing from the novel as it always exhibits actions great, dangerous, and generally extravagant. Many authors of the firf name have written on the ancient Romance. It has exercifed the pen of Hurd, of Warburton, and of fome ladies, who have not thought it any derogation to the fenfibility of their fex to unite antiquarian refearch with the cultivation of the belles lettres. We have not, however, feen any where fo concife, jult, and elegant an account of the origin and progrefs of romances as in D'Ifraeli's Curiofities of Literature. "Romance (fays this writer) has been elegantly defined the offspring of fiction and love. Men of learning have amufed them. felves with tracing the epocha of romances. In this,
refearch

## R O M

refearch the $y$ have difplayed more ingenuity than judgement ; and fome have fancied that it may have cxifed as far back as the time of Arittotle ; Dearchus, one of his difciples, having written feveral works of this amufing fpecies.
"Let us, however, be fatisfied in deriving it from the Theagenes and Chariclea of Heliodorus, a bifhop who lived in the $4^{\text {th }}$ century, and whofe work has been lately tranflated. This elegant prelate was the Grecian FeneIon (A). Beautiful as thefe compofitions are when the imagination of the writer is fufficiently ftored with accurate obfervations on human nature, in their birth, like many of the fine arts, they found in the zealots of religion men who oppofed their progrefs. However Heliodorus may have delighted thofe who were not infenfible to the felicities of a fine imagination, and to the enchanting elegancies of ftyle, he raifed himfelf, among his brother ecclefiaftics, enemies; who at length fo far prevailed, that it was declared by a fynod, that his performance was dangerous to young perfons, and that if the author did not fupprefs it, he muft refign his bifhoprick. We are told he preferred his romance to his bifhopric. Even folate as in Racine's time, it was held a crime to perufe thefe unhallowed: pages. He informs us, that the firf effufions of his mufe were in confequence of ftudying that ancient romance, which his malter obferving him to devour with the keennefs of a familhed man; he fratched it from his hands and flung it in the fire; a fecond copy experienced the fame fate. What could Racine do? He bought a third, and took the precaution of devouring it fecretly till he got it by heart; after which he offered it to his mafter with a fmile to burn, if he chofe, like the others.

The decifion of thefe bigots was founded in their opinion of the immorality of fuch works. They alleged, that the writers paint too warmly to the imagination, adurefs themfelves too forcibly to the paffions; and in general, by the freedom of their reprefentations; hover on the borders of indecency. This cenfure is certainly well-founded. Many of the old romances', and even of the dramas; acted in Europe two centuries ago, are fuch as common proftitutes would in this age think indecent. But we are at prefent concerned with the origin of romance.
"The learned Fleury, thinks that they were not known aill the 12 th century, and gives as their original the hiftory of the dukes of Normandy. Verdier, whofe opinion is of no great weight, fays the invention of ro: mance was owing to the Normans of France ; and that thefe fictions being originally written in the old Norman language, they were entitled Normances ; the name was afterwards aitered to that of Romances. The Spaniards, who borrowed them from the French, called them Romanzes, which alfo did the Italians.
"Dom Rivet, one of the learned affociates of the con-

## 324 ] ROOM

gregation of St Maur, authors of the Literary Hiftory of France, fixes their origin in the roth century. He fays, that the moft ancient romance known was one which appeared in the middle of that century; under the title of Pbilomena, or the Beloved. This romance contains the pretended exploits of Charlemagne before Narbonne. At Touloufe, he tells us, they have preferved a copy of the Philomena in its original language; that is to fay, the Romaunt or polifhed ; fuch as was then fpoken at court. They preferred this language to the Latin, which was then that of the common people, but vitiated with their corruptions:
"So far have we travelled on the road of conjecture : we fliall now turn into the path of fact. It is certain that thefe compoftions derive their name from the language in which they were firft written. Abbć Iraild has' given us' the character of the earlieft romances, which we fhall tranfcribe; for to add to what is well exprefled; however it may pleafe the vanity of a writer, feldom tends' to the gratification of the reader.

- The firt romances were a monltrous affemblage of hiftories, in which truth and fiction were equally blended, but all without probability; a compofition of amorous adventures, and all the extravagant ideas of chivalry. The incidents are infinitely multiplied ; deftitute of connection, of order, and art. Thefe are the ancient and miferable romances which Cervantes, in his celebrated fatirical romance of Don Quixote, has covered with an eternal ridicule.'
"It is, however, from thefe productions rather in their improved ftate, that poets of all nations have drawn their richeft inventions. The agreeable wildnefs of that fancy which characterifed the eaftern nations was caught by the crufaders. When they returned home, they mingled in their own the cuftoms of each country. The Saracens, who were men like themfelves, becaufe they were of another religion, and were therefore their enemies, were pictured under the tremendous form of Paynim Giants. The credulous reader of that day followed with trembling anxiety the Red-crofs Knight. It was thus that fiction embellifhed religion, and religion invigorated fiction. Such incidents have enlivened the cantos of Ariofto, and adorned the epic of Taifo. Spenfer is the child of their creation ; and it is certain that we are indebted to them for fome of the bold and ftrong touches of Milton."

Other circumftances however have been affigned as the fources of thefe extravagant fictions. "Caftles were erected to repulfe the vagrant attacks of the Normans; and in France (from the year 768 to 987) thefe places became fatal to the public repofe. The petty defpots who raifed thefe caftles, pillaged whoever paffed, and carried off the females who pleafed them. Rapine, of every kind, was the privilege of Lords! Mezeray ob. ferves, that it is from thefe circumftances romances. have
(A) An ingenious and learned friend inquires, " Is not the romance of the Golden $A!s$, by Apuleius, to be. confidered as an earlier feecimen than that of Heliodorus?' To this our author has no objection; but he would not warrant any romance to be the firft that ever was written. It is thus that fome writers, more learned than fagacious, have difcovered the firlt inventor of epiftolary correfpondence. A lady receives this honour : tuch. learning is defperate! From the Afiatic Refearches and other puolications on Oriental literature, we are 1 d to believe, that the native country of romance is the ealt; where it feems to have flourithed in all its extrava ${ }_{f}$ anc grandeur from time immemorial.

## ROM

$\underbrace{\text { Romatice. have invented their tales of knights-errant, monfters, and }}$ Eiants.
" De Saint Foix, in his Hiforical Effays on this fubjeet, thus expreffes himfelf: ' Women and girls were not in greater fecurity when they paffed by abbeys. The monks fuftained an affault rather than relinquifh their prey : if they faw themfeives lofing ground, they brought to their walls the relics of fome faint. Then it generally happened that the affalants, feized with awful veneration, retired, and dared not to purfue their vengeance. This is the origin of the enchanters, of the enchantments; and of the enchanted caftles, defcribed in romances.'
"'To thefe may be added what the author of Northern Antiquities. Vol. I. p. 243, writes, that 'as the wall's of the caftles ran wisding round them, they often called them by a name which fignified ferpents or drugors; and in thefe were commonly fecured the women and young maids of diftinction, who were feldom fafe at a time when fo many bold warriors were rambling up and down in fearch of adventures. It was this cultom which gave occafion to ancient romancers, who knew not how to defcribe any thing fimply, to invent fo many fables concerning princeffes of great beauty, guarded by dragons.'
"The Italian romances of the 14 th century were fpread abroad in great numbers. They formed the polite literature of the day. But if it is not permitted to authors freely to exprefs their ideas, and give full play to the imagination, thefe works mult never be placed in the ftudy of the rigid moralift. They indeed pufhed their indelicacy to the verge of groffnefs, and feemed rather to feek than to avoid feenes which a modern would blufh to defcribe. They (to employ the expref. fion of one of their authors) were $n$ it afhamed to name what God bad created. Cinthia, Bandello, and others, but chiefly Buccacin, rendered libertinifm agreeable, by the farcinating charms of a polifhed ityle, and a luxuriant imagination.
" This however muft not be admitted as an apology for immoral works; for poifon is till poifon, even when it is delicious. Such works were, and fill continue to be, the favourites of a nation which is ftigmatifed for being prone to illicit pleafure's and impure amours. They are fill curions in their editions, and are not parfimonious in their price for what they call an uncaltrated cony. There are many Italians, not literary men, who are in poffefion of an ample library of thefe old novelits.
"If we pafs over the moral irregularities of thefe romances, we may difcover a rich vein of invention, which. only requires to be releafed from that rubbifh which disngures it to beconie of an invaluable price. The Decameruns, the Hecatommiti, and the Novellas of thefe writers, made no inconfiderable figure in the little libraiy of our Shakefpeare. Chaucer is a notorious imitator and lover of them; his Knight's Tale is little more than a paraphrafe of Boccacio's Tefeoide. Fontaine bas calight all their charms with all their licentioufnefs. From fuch work, thefe great poets, and many of their contemporaries, frequently borrowed their plots; not uncommonly kindled at their flame the ardour of their genius; but bending too fubmiffively to their own peculiar tafte 2 or that of their age, in extracting the ore, they have not purified it of the alloy,
]
"We muf now turn our contemplation to the French romances of the lat century. They were then carried to a point of perfection, which as romances they cannot exceed. To this thee Aftrea of D'Urlé greatly contributed. It was followed by the illuftrious Baffa, the great Cyrus, Clelia, \&c. which, though not adapted to the prefent age, gave celebrity to their authors. Their ityle, as well as that of the Altrea, is diffufe and infipid. Zaide (attributed by fome to Segrais, but by Huet to Madame La Fayette) and the princefs of Cleves are tranflated, and though they are mafterpieces of the kind, were never popular in our country, and are little adapted to its genius.
" It is not furprifing that romances have been regarded as pernicious to good fenfe, morals, tafte, and literature. It was in this light that they were confidered by Boileau; becaufe a few had fucceeded, a croud imitated their examples. Gomberville and Scudery, and a few more were admired; but the fatirift diffolved the illufion. This he did molt effectually by a dialogue, in which he ridicules thofe citizens of a certain diftrict, whofe characters were concealed in thefe romances, under the names of Brutus, Horace Cocles, Lucretius, and Clelia. This dialogue he only read to his friends, and did not give it for a long time to the public, as he efteemed mademoifelle de Scudery : but when at length it was publifned, it united all the romance writers againft our fatirift.
" From romances, which had now exhaufted the pa. tience of the public, fprung novels. They attempted to allure attention by this inviting title, and reducing their works from ten to two volumes. The name of romance difgufted; and they fubltituted thofe of hiftories, lives, memoirs, and adventures. In thefe works (obferves Irail) they quitted the unmatural incidents, the heroic projects, the complicated and endlefs in. trigues, and the exertion of noble paffions; heroes were not now taken from the throne, they were fought for even amongft the lowelt ranks of the people. On this fubject, I fiall jult obferve, that a novel is a very dangerous poifon in the hand of a libertine; it may be a "alutary medicine in that of a virtuous writer." See Novel.

ROMAGNA, a province of Italy, in the pope's territories, bounded on the north by the Ferrarefe, on the fouth by Tufcany and the duchy of Urbino, on the eaft by the Gulf of Venice, and on the weft by the Bolognefe and a part of Tufcany, It is fertile in corn, wine, o:1, fine fruits, and paftures. It has alfo mines, mineral waters, and falt-works, which make. its principal revenue. Ravenna is the capital town.

ROMANIA, a province of Turkey in Europe, bounded on the north by Bulgaria, on the eaft by the Black Sea, on the fouth by the Archipelago and the fea of Marmora, and on the weft by Macedonia and Bulgaria; being 200 miies in length and 150 in breatith. It was formerly called Thrace, and is the principal and largeft of all the provinces the Turks porfifs in Europe. It is a fruitiul country in corn and patures, and there are mires of filver, lead, and alum. It is divided into three great gnvernments or fangiacates; namely, Kirkel, of which Philipoli is the capital; Galipoli, whore capital is of the fame name; and Byzantium, or B zia, ir Viza, of which Con\&antinople is the capial. $r_{\text {ithe Turks beltow the }}$ name

Romano，name of Romelia on all the territories they poffers in R．me． $\underbrace{\text { ．}}$ Europe．

ROMANO（Giulia），a famous painter，was the difciple of Raphael，who had fuch an affection for him， that he appointed him，with John Francis，Penni，his heir．His conceptions were more extraordinaty and more elevated than even thofe of his malter，but not fo natural．He was wonderful in the choice of atti－ tudes；but did not perfectly underfand the lights and fhades，and is frequently barih and ungraceful．The folds of his draperies，fays Du Frefnoy，are neither beautiful nor great，eafy nor natural，but all extrava－ gant，like the fantaftical habits of comedians．He was， however，fuperior to moft painters，by his profound knowledge of antiquity；and，by converfing with the works of the mot excellent poets，particularly Homer， he made himfelf mafter of the qualifications neceffarily required in a great deffgner．Julio Romano was alfo well fkilled in architecture．He was employed by car－ dinal de Medicis，who was afterwards pope under the name of Clement VII．；and afterwards went to Mantua， whither he was invited by Frederic Gonzaga，marquis of that city，in order to avoid his being juitly punifhed for his having drawn at Rome the defigns of $20 \mathrm{ob}-$ fcene plates，engraved by Mark Antony，to which A． retine added the fame number of fonnets．Julio Ro－ mano embellifhed the city of Mantua with many of his performances both in painting and architecture；and died in that city in 1545 ，at 54 years of age，much regretted by the marquis，who had an extraordinary friendihip for him．

ROME，a very ancient and celebrated city of Ita－ ly，fituated on the river Tiber，in E．Long． $13^{\circ}$ ．N． Lat．41．45．once the capital of the greateft empire in the world；and famous in modern hiltory for being the centre of an ecclefialtical tyranny，by which for many ages the greatelt part of the world was held in fubjec－ tion．

The ancient Romans derived their origin from $\mathbb{E}$－ neas the Trojan hero ：and though fome hittorians pre－ tend to treat his voyage into Italy as a mere fable，yet no fufficient reafons for rejecting this account have been offered，nor has any more probable hiftory of the origin of the Roman name been given；fo that，without en－ tering into the difpute，we fhall proceed to the hiftory of Aneas and his fucceffors as they are recorded by the generality of Latin writers．

When the Greeks，by the treachery of the fons of Antenor，or by whatever other means it happened， were become malters of Troy，Eneas with the forces under his command retired into the fortrefs of the city， and defended it bravely for fome time；but yielding at

2

## 灰neas fies

 from＇ruy tomount da．length to neceflity，he conveyed away his gods，his fa－ ther，wife，and children，with every thing he had that was valuable，and，followed by a numerous çowd of Trojans，fled to the ftrong places of Mount Ida．Hi－ ther all thofe of his countrymen，who were more an－ xious than the reft to preferve their liberty，flocked to him from the feveral towns of Troas．His army thus augmented and advantageoully pofted，he continued quiet，waiting for the departure of the Greeks，who， it was imagined，would return home as foon as they had pillaged the country．But thefe，after they had enriched themfelves with the fpoils of Troy and of the neighbouring towns，turned their arms againft the fu－
gitives，refolving to attack them in their ftrong－holds upon the mountain．Eneas，to avoid the hazard of being forced in his laft refuge，had recourfe to nego－ ciation；and，by his heralds，intreated the enemy not ciation；and，by his heralds，intreated the enemy not Makes
to conitrain him to a battle．Peace was granted him，peace with on condition that he with his followers quitted the Tro－the Greeks jan territories；and the Greeks，on their part，promi－and leaves fed not to moleft him in his retreat，but to let him ${ }^{\text {it．}}$ fafely pafs through any country within the extent of their domination．

Upon this affurance Æneas equipped a fleet，in or－ der to feek a fettlement in fome foreign land．We are told，that at his departure he left his eldeft fon Afca－ nius with the Dafylites，a people of Bithynia，who de－ fired to have him for their king；but that the young prince did not remain long with them ：for when Sca－ mandrius（Aftyanax），with the reft of the Hectoridæ whom Neoptolemus permitted to return home from Greece，repaired to him，he put himfelf at their head， and led them back to their native country．

The Trojan having croffed the Hellefpont，arrived in the peninfula of Pallene，where he built a city，call－ ed from him XEneia，and left in it a part of that mul－ titude whieh had followed him．From thenee he fail－ ed to Delos ：and thence to Cythera，where he erested a temple to Venus．He built another to the fame god－ defs in Zacynthus，in which illand he likewife inititu－ ted games，called the races of REneas and Venus：the ftatues of both，fays Dionyfius，are Itanding to this day．In Leucas，where the Trojans landed，was to be feen，in the fame author＇s time，a temple erected to Ve－ nus the mother of 正neas．Nor were Actium and Am－ bracia without monuments that teftified his arrival in thofe places．At Dodona were found brazen vafes， upon which the name of the Trojan hero，who had made an offering of them to Jupiter，was engraven in old characters．Not far from Buthrotos，in Epirus，a Trojan camp which had efcaped the injuries of time， retained the name of Troja．All thefe antiquities，ftill fubfifting in the reign of Augultus，were then looked upon as indifputable proofs of 不neas＇s voyage to Epi－ rus：＂and that he came into Italy（adds the fame Dionyfius）we have the concurrent teftimony of all the Romans；the ceremonies they obferve in their facri－ fices and feftivals bear witnefs to it，as alfo the Sibyl－ line books，the Pythian oracles，and many other things which nobody can reafonably reject as invented merely for ornament．＂

The firlt land of Italy which Æneas made，after croffing the Ionian fea，was cape Minerva，in Iapygia； and here he went on thore．Sailing afterwards from hence，and coalting along the fouth－ealt of Italy and the ealt and fouth fides of Sicily，he arrived with his fleet either by choice or by ftrefs of weather at the port of Drepanum in that ifland．Elymus and Egeftus，who had efcaped from Troy a little before him，had brought a Trojan colony to this place．Eneas augmented it by a good number of his followers，whom，pleafed to have tound a fafe refting place after many dangers and fatiguing voyages，he willingly left behind him at their requelt；though certain authors pretend that he was conftrained to it by the difficulty of tranfporting them， becaufe fome Trojan women，weary of the fea，had burnt a confiderable part of his thips．

Æneas，leaving Drepanum，fteered his courfe for Italy

 firt landed, he gave name Palinurus, from one of his pilots who died there. The little illand of Leucafia, not far diftant, whither he failed next, got its name in like manner from a daughter of Æneas's fifter, who there ended her days. The port of Mifenum, the ifland of Prochyta, and the promontory of Cajeta where he fucceffively arrived were fo called from being the burial places, the firt of a noble Trojan his companion, the fecond of his kinfwoman, and the third of his nurfe. At length the Tr jan prince and his chofen band finifhed their tedious and painful voyages on theLands in Itait: coaft of the fince famous Latium. This was a fmall territory on the eaft fide of the river Tiber, centaining a part of the prefent Canipagna di Roma: Latinus was the king of it ; his capital town, Laurentum ; his fubjects, a people who, till his tim e called Aborigines, tad from him taken the name of Latins. Here, far removed from their implacable enemies the Greeks, Æneas and his followers undertook to raife a fecond Troy: they fortified a camp near the mcuth of the Tiler, gave it the name of Troy, and flatered themfelves with the hopes of a quiet fettlment, and a period to all their unhappy adventures.

When Æneas arrived in Italy, Latinus was engaged in a war with the Rutuli, a neighbouring people, in which he was attended but with very indifferent fuccefs, when news was brought him that a forsign army had made a defcent on his coafts, pillaged the naritime part of his dominions, and were fortifying themfelves in a camp at a fmall diftance from the fea. Hereupon he marched againft them with all his forces, hoping to oblige them to reimbark and abandon his dominions, without meeting with any great refiftance from a band of vagabonds, as he fuppofed, or pirates, come only to feek for plunder: but finding them, as he drew near, well-armed, and regularly drawn up, he thought it advifable to forbear engaging troops that appeared fo well difciplined; and, intead of venturing a battle, to defire a parley. In this conference Latinus underfanding "ho they were, and being at the fime time fruck witi terror, and touched with compaffion for thofe brave but unfortunate men, entered into a treaty with th. m, and afligned them a tract of land for a fettlement, on cordition that they flruld employ their arms and exert their valour in defence of lis dominions, and look upon the Ruruli as a common enemy. This condition REneas realily accepted; and complied with his engagement $f$ ) faithful'y, that Latinus came at length to repofe an entire confidence in the Thojan ; and in proof of it gave him Lavinia, his daughter and only child, in marriage, fecuring to him by that means the fucceffion to the throne of Latium. Rncas, to teftify his gratiude to Latinus, and affectinn for Lavinia, gave her name to the camp the bad pitched; and intead of Troy called it Lavirium. The Trojans follnwed the example of their leader ; and by making alliances with La in families, became, in a fhort time, one and the fame people with the Latins.

In the mean time Turnus, the queen's nephew, who lad been brought up in the palace under the eye of Latinus, and entertained hopes of marrying Lavinia and fucceeding to the throne, feeing the princefs bethowed on a ftranger, and all his views defeaked, went
over to the Rutuli ; and by Atirring them up, brnught on a batcle between them and the Latins, in which both he and Latinus were killed. Thus Æneas, by the death of his father-in-law, and by that of a troublefome rival, come into the quiet poffeffion of the kingdom of Latium, which he governed with great wifdom, and tranfmitted to his pofterity.

Æneas is faid to have reigned three years ; during which time he eftablifhed the worfhip of the gods of his own country, and to the religion of the Latins added that of Troy. The two Palladiums, which had been the protectors of that city, became the tutelary deities of Lavinium, and, in after ages, of the whole Roman empire. The worhip of Vefta was likewife introduced by REneas; and virgins, from her called $V_{e}$ fals, were appointed to keep a fire continually burning in honour of that goddefs. Jupiter, Venus, and many other deities who had been revered in Troy, became, in all likelihood, known to the Latins by means of Aneas; which gave occafion to the poets of reprefenting him under the character of a pious hero.
While 不neas was thus employed, the Rutuli, ancient enemies of the Latin name, entering into an alliance with Mezentius king of the Tyrrhenians, took the field with a defign to drive out thofe new-comers, of whefe power they began to conceive no fmall jealoufy. Eneas marched out againft them at the head of his Trojans and Latins. Hereupon a battle enfued, which lafted till night; when EEneas being pufhed'to the banks of the Numicus, which ran clofe by Lavinium, and forced into that river, was there drowned. The Trojans concealed his body; and pretending that he had vanifhed away on a fudden, made him pafs for a deity among his credulous fubjects, who accordingly erected a temple to him under the title of $\mathcal{F}$ upiter $I n$ diges.

Upon the death of Æneas, his fon Euryleon, called Succeedec alfo Afcanius and Iulus, afcended the throne; but as by his foa the young king did not think it advifable to venture Afcanius, a battle in the very beginning of his reign, with a formidable enemy, who promifed himfelf great fuccef from the death of Æneas, he had the prudence to confine himfelf within the walls of Lavinium, and to try whether he could, by an honourable treaty, put an end to fo dangerous a war. But the haughty Mezentius demanding of the Latins, as one of the conditions of a peace, that thev fhould pay him yearly, by way of tribute, all the wine produced in the territory of Latium, Afcanius rejefted the propofal with the utmoft indignation; and having caufed all the vines throughout his dominions to be confecrated to Jupiter, and by that means put it out of his power to cormply with the enemy's requeft, he refolved to make a vigorous falls, and try whether he could, by force of arms, bring the irfulting Tyrrhenian to more reafonable terms. The main bndy of the enemy's army was encamped at fome difance from Lavinium ; but Laufus, the for ol Mezentius, with the flower of their youth under his command, lay entrenched at the very gates of the city, The Trojans, who had been long accuftomed to make vigorous fallies, marching out in the night, attacked the poft where Lautus commanded, forced his entrenchrients, and obliged the troops he had with him to fave themfelves by flying to the main body of the army en. camped on the plain; but the unexpected arrival and

Rome.

Who defeats the Rutuli.
orerthrow of their advance-guard fruck them with fuch terror, that, infead of topping the flight of their companions, they fled with them, in great diforder, to the neighbouring mountains. The Latins purfued them, and in the purfuit Laufus was killed: whofe death fo difcouraged Mezentius, that he immediately fued for peace; which was granted him, upon condition, that for the future the Tiber fhould be the boundary be-
tween the Latin and Hetrurian territories.

In the mean time Lavinia, who had been left with child by Æneas, entertaining a ftrong jealoufy of the ambition of ber fon-in-law, retired to the wonds, and was there peaceably delivered of a fon, who, from his father, was named JEneas, and, from the place of his birth, had the furname of $S_{y} l$ lvius : but as the queen's flight, who had difappeared on a fudden, raifed fufpicions at Lavinium prejudical to the reputation of Afcanius, he ufed all poffible means to remove them, caufed diligent fearch to be made after Lavinia, calmed her fears, and prevailed upon her to return to the town with her fon whom he ever after treated as a brother. Lavinium grew every day more populous; but as it was in reality the patrimony of Lavinia, and the inheritance of her fon Sylvius, Afcanius refolved to refign it to them, and build elfewhere another city for himfelf. This he made the place of his refidence, and the capital of his new kingdom, calling it Alba Louga; Alba, from a white fow, which we are told Eneas had found in the place where it was built; and Longa, to ditinguifh it from another town of the fame name in the country of the Marfi ; or rather, becaufe it extended, without having much breadth, the whole length of a lake near which it was built. It was 30 years after the building of Lavinium that Afcanius fixed his abode at Alba; and there he died, after a reign of about $3^{8}$ years, 12 of which he had refided at his new fettlement. He left a fon called Iulus ; fo that between him and Sylvius lay the right of fucceffion to the Latin throne; the latter being the fon, and the former the grandfon of Æneas.

The Latins not thinking it their intereft to continue divided, as it were, into two ftates, refolved to unite Alba and Lavinium into one fovereignty ; and as Syl-
II vius was born of Lavinia the daughter of Latinus, and Refignsthe had thereby an undoubted title to the kingdom of his Kigiom. grandfather, whereas the other was but the fon of a ftranger, the Latins beftowed the crown on Sylvius; and, to make Iulus fome amends, decreed to him the fovereign power in affairs of religion; a power which thencetorth continued in his family. Sylvius was fucceeded by 13 kings of the fame race, who for near 400 years reigned at Alba: but we fcarce know any thing of them befides their names, and the years of their refpective reigns. Aneas Sylvius died, after a reign of 29 years. His fon, called alfo 压neas Sylvius, governed Latium 3 I years. Latinus Sylvius, who fucceeded him, fwayed the fceptre for the fpace of 5 I yearsAlba reigned 39 ; Capetus, by Livy named Atys, 26; Capis, 28; and Capetus, 13 . Tiberinus, who fucceeded him, engaged in a war which proved fatal to
him; for in a battle which was fought on the banks of the Albula, he was forced into that river and drowned. From him the river took the name of Tiber, which it has borne ever fince. Agrippa fucceeded Tiberinus after a reign of eight years; and left the throne, which
he had held 41 years, to Alladius; who reigned ig, and was fucceeded by Aventimus, who left his name to the hill Aventinus, where be was interred. Procas, who fucceeded him, and reigned 23 years, was the father of Numitor and Amulius; and at his death bequeathed the throne to his elder fon Numitor. But Amulius, who furpaffed his brother in courage and underfanding, drove him from the throne ; and to fecure it to himfel;, murdered Regeftus, Numitor's only fon, and confecrated his daughter Rhea Sylvia to the worfhip of Vefta, by which the was obliged to perpetual virginity. Adventur But this precaution proved ineffectual ; for as the Vef. of Rhea tal was going to a neighbouring fpring to fetch water Sylvia. for the performance of a facrifice to Mars, the was met and rayifhed by a man in a military habit, like that in which the god Mars is reprefented. Some authors think that this counterfeit Mars was a lover come thither by her appointment ; others charge Amulius himfelf with ufing this violence to his niece, not fo much to gratify his luft, as to have a pretence to deltroy her.For ever after he caufed her to be carefully watched, till the was delivered of two fons; and then exaggerating her crime in an affembly of the people, he prevailed upon them to fentence her to deatl), and to condemn the fruit of her criminal amcur to be thrown into the Tiber. The fentence againf Rhea was, according to Of Ronvfome authors, changed by Amulius, at the requeft of lus and Kehis daughter Antho, into perpetual confinement, but mus. executed again!t the twins; who being laid in a wooden trough, and carried to the foot of Mount Palatine, were there turned adrift on the Tiber, which at that time overflowed its banks. But the wind and ftream proved both fo favourable, that at the fall of the water the two infants were left fafe on the ftrand, and were therehappily found by Fauttulus, the chief of the king's Thep. herds, and fuckled by his wife Acca Laurentia, who for her diforderly life was called $L$ upa ; and this probably gave rife to the fabulous miracle of their being nurfed by a wolf.

As Fauftulus was probably well acquainted with the birth of the twins, he took more than ordinary care of their education, and fent them to Gabii to be inftructed there in Greek litcrature. As they grew up, they appeared to have fomething great in their mien and air which commanded refpect; and the afcendant which they affumed over the other fhepherds made them dreaded in the forefts, where they exercifed a fort of empire. A quarrel happening between the herdfmen of Amulius and thofe of Numitor, the two brothers took the part of the former againft the latter; and fome blood being fhed in the fray, the adverfe party, to be revenged on Romulus and Remus (for fo the twins were called), on the feftival of Lupercalia, furprifed Remus, and carried him before Numitor, to be punifhed according to his deferts. But Numitor feeling himfelf touched in the prifoner's favour afked him where he was born, and who were his parents. His anfwer immediately ftruck Numitor with a lively remembrance of his two grandfons; their age, which was about 18 years, agreed with the time when the two infants were expofed upon the Tiber ; and there needed no more to change his anger into tendernefs.

In the mean time Romulus, eager to refcue his brother, and purfue thofe who had carried him off, was preparing to be revenged on them; but Fauitulus dif-

## ROM

Rone. ~~
fuaded him from $i$; and on that occafion, difclofing to him his birth, awakened in his breaft fentiments whin thy of his extraction. He refolved, at all adventures, to artemp: the delivering of his muther and grandfather from oppreffion. With this view he affemoied the country people, "ver whom the had alfumed a kind ot loveremg. ty, aiad engaged them to come to the city on an appointed day, and enter it by different gates, previded with arms, which they were to conceal. Whule Romulus was chus difpofing every thing ior the execusion of his defign, Numiter made the fame difcovery to Remu, conc rning his parents, and the oppretions they groaned under; which fo fired him, that he was ready to embark in any enterpri.e. But Numitor took care to moderate the tranforts of his grandion, and only dilired him to acquaint his brother with what he had heard from him, and to fend him to his houfe. Romulus foon came, and was tollowed by Faultulus, who took with him the trough or 1 kiff in which the twins had been expoled, to fhow it to Numitor: but, as the fhepherd becrayed an air of concern and earnettnefs in his looks, he was itopped at the gate of the city, led before Amulius, and examined concerning his burden. It was eafliy known by its make and infeription, which was $\mathfrak{t}$ ill legible; and therefore Fauftulus owned what it was, and confefled that the twins were living; but, in order to gain time, pretended that they were feeding: flocks in a remote defert. In the mean time, the ufurper's death being reiolved on, Remus undertook to raiie the city, and Romulus to inveft the king's palace. The country people came at the time appointed; and formed themielves into companies each conlifting of 100 men. They had no other enfigns but bundles of hay hanging upon long poles, which the Latins at that time called manipuli; and hence came the name of manipulares, originally given to troops raifed in the country. With this tumultuours army Romulus befet the avenues of the palace, forced the guard, and having killed the tyrant; after he had reigned 42 years, reltored his grandtather sumitor to the throne.

Affairs being thus fettled at Alba, the two brothers, by the advice of Numitor, undertook the founding of a new coldny. The king beftowed on them thofe lands near the Tiber where they had been brought up, fupplied them with adl manner of inttruments for breaking up ground; with flaves, and beafts' of burden, and granted futl liberty to his fubjects to join them. Hereupon molt of the Trojans of whom there till remained 50 families in Auguftus's time, chofe to follow the fortune of Romnlus and Remus, as did alfo the inhabitants of Palantium and Satutnia, two fmall towns. For the more fpeedy carrying on of the work, it was thought proper to divide thofe who were to be employed in the building of the city into two companies, one under the command of Romulus, the other of Remus; but this divifion; which was dedigned purely with a view to the public welfare, and that the two prrties might work by way of emulation, gave birth to two factions, and produced a jealouly between the two brothers, which broke out when they came to choofe a place for the building of their new city; for Remus was for the Aventine, and Romulus for the Pdatine mount. Upon which, the matter being referred to their grandfather, he advifed the contending parties to have recourfe to the gods, and to Vol. XVI.
$329] \quad$ R O M
put an end to the difpute by augury, to which he was inmflt grea ly addicted. The da; appointed for the cememony beins come, the brotliets $p$ ited themfelves each upen his $h \mathrm{l}_{\mathrm{t}}$; and it was agreed, thit whoever thonld ce the fint ilight, of the greateit number, of vultures, fhonll gain his cau'e. After the t"o rivals had wated it me time for the appearance of a fitur ur able omen, R mulu, before any had appeared, fent to acquaint bis brother that he had feen fome vultures; bui R mus, having actually feen fix, ' hile his brother's meffengers were yet on their way, haftened, on their atrival, to motut Palatine, to examine the truth of what they had told him. He had no fooner got thither, thanf by an unexpected good fortune twelve vultures appeared to Rornulus. Thefe he immediately fhowed to his brother ; and, tranfperted with joy, defired him to judge himfelf of the truth of what his metfengers had told him. However, Remus difcovered the deceit; and, being told that Romulus had not feen the twelve vultures till after he had feen fix, he infilted on the time of his feeing them, and the other on the number of birds he had feen. This widened the breach between the two brothers; and, their parties being divided, while each man efpouled the caufe of his leader, the difpute grew fo warm, that, from words they came at length to blows. The fhepherd Faultulus, who was' equally dear to both the brothers, endeavouring to part the combatants; was by'an unknown hand laid dead on the foot. Some writers tell us, that Remus Death of likewife loft his life in the fray; but the greater num- Remus. ber place his death later, and fay that he was killed by' one Fabius, for having, in defifion, leaped over the wall of the new city: but Livy fays, the more common report was, that Remus fell by the hand of his brother.

Komalus, being niow head of the colony, by having Foundation got the better of his brother's party' in the late engage. of Rome. ment, applied his thoughts wholly to the building of the city, which he propofed to call after his own name. He chofe mount Palatine for its fituation, and performed all thofe ceremonies which the fuperitition of the Hetrurians had introduced. He firt offered facrifices to the gods, and ordered all the people to do the fame: and from that time decreed, that eagles fhould be the aufpices of his new colony. After this, great fite' were kindled'before their tents, and all the people leaped through the flames to purify themfelves. When this ceremony was over, they dug a trench round the fpot where the affemblies of the people were afterwards held, and threw into it the firit-fruits of whatever they were allowed to make ufe of for food: every man of the colony was ordered to caft into the fame trench an handful of earth, brought either from his own or fome neighbouring country. The trench they called Mundus, that is, the reorld, and made it the centre rouna which the city was to be built. 'Then Romulus, 'roking an ox and a cow to a plough, the coulter whereof was brafs; marked out, by a deep furrow, the whole compars of the city. Thefe two animals, the fymbols of marriage, by which cities are peopled, were afterwards flain upon the altar. All the people followed the plough, throwing inwards the clods of earth which the ploughfhare fometimes turned outwards. Wherever a gate was to be made, the plough was lifted up, and carried; and hence came the Latin word, porta, "a gate," de.

Konic. Palatine tood by itfelf, the whole was inclofed within the line made by the plough, which formed almoft the figure of a fquare; whence, by Dionyfius Halicarnaffenfis, it is called $R$ oma Quadrata $^{2}$

As to the exact year of the foundation of Rome, there is a great difagreement among hiftorians and chronologers. Fabius Pictor, the molt ancient of all the Roman writers, places it in the end of the Seventh Olympiad; this is, according to the computation of Uher, in the year of the world 3256 , of the flood 1600 , and 748 before the Chriltian æra, The Romans, if we may to call them, began to build, as Plutarch and others inform us, on the 21 ift of April; which day was then confecrated to Pales, goddeis of the fhepherds; whence the fertival of Pales, and that of the foundation of the city, were afterwards.jointly celebrated at Rome.

When Rome had received the utmoft perfection a poor vil- which its poor and rude founder could give it, it lage. confifted of about 1000 houfes, or rather huts; and was properly fpeaking a beggarly village, whereof the principal inhabitants followed the plough, being obliged to cultivate with their own hands the ungrateful foil of a barren country which they had fhared among themfelves. Even the walls of Romulus's palace were made of rufhes, and covered with thatch. As every one had chofen his ground to build upon, without any regard to the regularity and beauty of the whole, the ftreets, if we may fo call them, were both crooked and narrow. In fhort, Rome, till it was rebuilt after the burning of it by the Gauls, was rather a diforderly heap of huts, than a city built with any regularity or order.

As foon as the building of the city was finifhed, Romulus affembled the people, and defired them to choofe what kind of government they would obey. At that time monarchy was the unanimous voice of the Romans, and Romulus was elected king. Before he afcended the throne, however, he confulted the will of the gods by augury; and having received a favourable anfwer, it thence became an eftablifhed cuftom to have recourfe to augury before the raifing any one to the dignity of king, prieft, or any public employment. After this he applied himfelf to the eftablifhment of good order and fubordination among his fubjects. He put on a habit of diftinction for himfelf, appointed 12 lictors to attend him as guards, divided his fubjects, who at this time confifted only of 33,000 men, into curie, decuria, patricians, plebeians, patrons, clients, \&c. for an account of which, fee thefe articles as they occur in the order of the alphabet. After this he formed a fenate confifting of roo perfons, chofen from among the patricians; and a guard of 300 young men called celeres, who attended the king, and fought either on foot or on horfeback as occafion required. The kinges office at home was to take care of religious affairs, to be the guardian of laws and cuftoms; to decide the weightier caufes between man and man, referring thofe of fmaller moment to the fenate; to call together the fenators, and affemble the people, firft delivering his own opinion concerning the affair he propofed, and then ratifying by his confent what was agreed on by the majority. Abroad, and in the time of war, he was to command the army with abfolute authority, and to take care of the public money. The fenate were not only to be judges in matters of fmall
importance, but to debate and refolve upon fuch public affairs as the king propofed, and to determine them by a plurality of voices. The people were allowed to create magiftrates, enact laws, and refolve upon any war which the king propofed; bat in all thefe things the confent of the fenate was neceffary.

Romalus next proceeded to fettle the religious af. fairs of his people. Many of the Trojan and Phrygian dcities were added to thofe whom the Aborigines or Italian natives already worfhipped. He chofe priefts, inftituted feftivals, and laid the foundation of a regula: fyftem of religion; after which, as his colony was till thinly peopled, he opened an afylum for fugitive flaves, homicides, outlaws, and debtors. 'Thefe, however, he did not at firft receive within the walls, but appointed for their habitation the hill Saturnius called afterwards Capitolinus, on which he erected a temple to a divinity of his own invention, whom he named the Afylean god, under whofe protection all criminals were to live fecurely. But afterwards, when the city was enlarged, the afylum was inclofed within the walls, and thofe who dwelt in it included among the citizens of Rome.

When Romulus had thus fettled every thing relating Rape of the to his new colony, it was found that a fupply of wo subine women was wanting to perpetuate its duration. This oc- men. cafioned fome difficulty; for the neighbouring nations refufed to give their daughters in marriage to fuch a crew of vagabonds as had fettled in Rome; wherefore Romulus at laft refolved on the following expedient. By the advice of his grandfather Numitor, and with the confent of the fenate, he proclaimed a folemn fealt and public games in honour of the Equeftrian Neptune called Confus. This occafioned a great concourfe of people, who flocked from the adjacent parts to behold thefe pompous fhows, together with the new city. But, in the midft of the folemnity, the Romans, rufhing in with their fwords drawn, feized all the young women, to the number of 683 , for whom Romulus chofe hufbands. Among all thofe who were thus feized, only one married woman, named Herffilia, was found; and Romulus is faid to have kept her for himfelf.

This violence foon brought on a war with the neigh- Occafions bouring nations. Acron king of Cænina, a city on war with the confines of Latium, having entered into a league the neighwith the inhabitants of Cruftuminum and Antemno, bouring invaded the Roman territories. Romulus marched nations. againlt them without delay, defeated the confederate army, killed their king in fingle combat, decreed himfelf a triumph, and confecrated the fpoils of Acron to Jupiter Feretrius, under the name of Opima Spolia. The. city of Cænina was razed to the ground, and the inhabitants tranfplanted to Rome, where they were admitted. to the privileges of citizens. The king then marched with one legion (confliting at this time of 3000 foot and 300 horfe) againft the Cruftumini and Antemnates, both of whom he defeated in battle, and tranfplanted the inhabitants to Rome; which being incapable of holding: fuch a number, Romulus took in the hill Saturnius abovementioned, on the top of which he built a citadel, committing the care of it to a noble Roman named Tarpeius. The citadel was furrounded on all fides with ramparts and towers, which equally commanded the city and country. From the foot of the hill Saturnius a wall was carried on quite to the Tiber, and a gate

Rome.
opened in it named Carmentalis, from Carmenta the mo. ther of Evander, who either lived there, or had fome chapel ot altar erected to her.

Romulus had now become fo formidable to his neighhours, and had fo well eftablithed his reputation for clemency, rhat feveral cities of Heturia voluntarily fubmitted to lim. Cœlius, an Hetrurian general, led the troops under his command to Rome, and fettled on an hill near the city, which from him took the name of Mount Calius. The Sabines, however, not in the lealt difmayed at this increafe of the Roman forces, fent a deputation to Romulus, demanding reftitution of the young women who had been carried off; and, upon his refufal, marched to Rome with an army of
23 25,000 foot and 1000 horfe, under the command of Invafion of their king Titus Tatius. Romulus, having received the sabines. fupplies from Numitor and from Hetruria, likewife took the field, with 20,000 foot and 800 horfe, with whom he feized an advantageous polt, and fortified himielf fo ftrongly, that he could not be attacked. The Sabine monarch, perceiving the military fkill of Romulus, began to be apprehenfive of the event ; but was The citadel extricated out of his difficulties by the treachery of befieged. Tarpeia daughter to the governor of the citadel, who agreed to betray that important fortrefs to the enemy, on condition of being rewarded with the bracelets which the Sabines wore on their left arms. But when once they became mafters of this important place, they are faid to have crufhed Tarpeia under the weight of their bucklers, pretending that thus they difcharged their promiie, as they wore their bucklers alfo on their left arms. The poffeffion of the citadel enabled the Sabines to carry on the war with more fuccefs; but, at laft, in a general engagement, they had the miffortune to be driven back into the citadel, whither they were purfued by the Romans, who expected to have retaken that important polt ; but the enemy, rolling down great ftones from the top of the hill, wounded Romulus on the head, fo that he was carried infenlible out of the field of battle, while, in the mean time, his troops were repulfed, and purfued to the very gates of Rome. However, the king foon recovering himfelf, encouraged his routed troops, and drove the enemy back into the citadel. But while the two nations were thus fiercely contending, the women, for whofe caufe the war had been commenced, undertook the office of mediators; and having obtained leave from the fenate, marched is: a body to the camp of the Sabines, where they pleaded the caufe of their hubands fo effectually, that a treaty of union between the two nations was fet on foot, and a peace was at laft concluded, on the following terms. 1. That the two kings thould refide and reign jointly at Rome. 2. That the city thould till, from Romulus, be called Rome; but the inhabitants $\mathcal{Q}$ irites, a name till then peculiar to the Sabines. 3. 'That the two nations thould be- come ore; and that the Sabines fhould be made free in Rome, and enjoy all the privileges of Roman citizens. As Rome was chiefly indebted for this increafe of her power and fplendor to the Sabine women, honourable pivileges and marks of ditindtion were allowed them. Every one was commanded to give way to them; in capital caties they were exempted from the jurifdiction of the ordinary judges; and their children were .ilwed to wear a golden ball hangirg from their necks,
and a pasticular kind of robe called pratexta, to diatinguith them from the vulgar.

The two kinge reigned with great harmony for the fpace of fue ytars; during which time the only militury exp oit they accomplifhed was the reduction of the city of Cameria at a fmall diltance from Rome. Four thoil. fand of the Camerini were tran planted to Rome, and a Roman colony fent to repeople Cameria; foon atier which the Sabine king was murdered by the Livinians, on account of his granting protection to fome of his friends who had ravaged their territories. The Lavinians, fearing the refentment of Romulus, delivered up the affafins into his hands; but he fent them back unpunilited, which gave occafion to furpeet that he was not difpleafed with the death of his colleague. Soon after the death of Tatius, Rome was afficted with famine and peftilence, which encouraged the Ca. merini to revolt; but Romulus marching againtt them fuddenly, defeated them with the lofs of 6000 men . After which he attacked the Fidenates, whofe city ftood about five miles from Rome, took their capital, and made it a Roman colony. This drew upon him the refentment of the Veientes, a powerful nation in the refentment of the Veientes, a powhood, who claimed Fidenæ as within their jurifdiction; but their forces being defeated in their juridiction; but their forces being defeated in prifoners, they were obliged to fue for peace. Romulus
granted them a truce for 100 years, on condition that prifoners, they were obliged to fue for peace. Romulus
granted them a truce for 100 years, on condition that they delivered to him feven fmall towns on the Tiber, together with fome falt-pits near the mouth of that ri-
ver, and fent 50 of their chief citizens as holtages together with fome falt-pits near the mouth of that ri-
ver, and fent 50 of their chief citizens as holtages to Rome. The prifoners taken in this war were all fold for flaves. The remaining part of the life of Romulus was fent in making laws for the good of his people; but to-
wards the latter end of his reign, being elated with in making laws for the good of his people; but to-
wards the latter end of his reign, being elated with fuccefs, he began to enlarge the bounds formerly fet to his prerogative, and to behave in an arbitrary manner. He paid no longer any regard to the vuice of the fenate, but affembled them only for form's fake to ratify his commands. The fenate therefore confpired to de-
ftroy him, and accomplifhed their purpofe while he his commands. The fenate therefore confpired to de-
ftroy him, and accomplifhed their purpofe while he was reviewing his troops. A violent form of hail and
thunder difperfed the army ; and the fenators taking was reviewing his troops. A violent ftorm of hail and
thunder difperfed the army ; and the fenators taking this opportunity, when they were left alone with the king, intantly killed him, and conveyed his body out of fight. Some writers tell us, that, the better to And likeconceal the fact, they cut his body in pieces, each of wife Rom them carrying away a part under his robe; after which mulus. they told the multitude, that their king was on a fudden furrounded by flame, and fnatched up into heaven. This Atratagem, however, did not fatisfy the foldiery, and violent difturbances were about to enfue, when Julius Proculus, a fenatur of great diftinction, having affem. bled the Curix, told them that Romulus had appear. ed to him, and enjoined him to acquaint the people that their king was returned to the gods from whom $h$ : originally came, but that he would continue to be propitious to them under the name of $\mathscr{O}_{\text {uirinus }}$; and to the truth of this ftory Julius fwore.

Romulus reigned, according to the common computation, 37 years: but fome hiftorians reduce the length of his reign to little more than 17 ; it bcing very unlikely, as they obferve, that a prince of tio $i$ : an axtive difpofition fhould perform nothing weth) if

His death followed by an interregnum.
record during a period of 20 years. Be this as it will, however, the death of Romulus was followed by an in. terregnum, curing which the fenators, to prevent anarchy and confufion, tock the government into their own hands. Tatius added another hundred to that body: and thefe 200 fenators divided themfelves into decuries or tens. Thefe decuries drew lots which thould govern firft; and the decury to whofe lot it fell enjoyed the fupreme authority for five days; yet in fuch a mannet, that one perfon only of the governing decury had the enfigns of fovereignty at a time. To thefe another decury fucceeded, each of them fitting on the throne in his tuirn, \&c. But the people foon growing weary of fuch frequent change of mafters, obliged the fenate to refolye on the election of a king. The fenate referred the eleetion to the people, and the people to the fenate, who at laft undertook the tafk. Sume difficulties, however, occurred : the Romans did not choofe to be fubject to a Sabine; and the Sabines, as they had been fubject to Romulus after the death of Tatius, infifted that the king fhould be chofen out of their nation. At laft it was agreed, that the king fhould be a Sabine; but that the Romans fhould make the choice.

In confequence of this determination, the Romans elected Numa Pompilius, an auftere philofopher, who had married Tatia, the daughter of Tatius the late king. After the death of his wife, he gave himfelf entirely up to philofophy and fupertition, wandering from folitude to folitude, in fearch of facred woods and fountains, which gave the people a great opinion of his fanctity. The philofopher at firft rejected the offer of the kingdom; but being at laft prevailed upon, he ret out for Rome, where he was received wiih loud acclamations, and had his election unanimoully confirmed by the fenate.

The reign of Numa is by no means memorable for battles or conquefts. He was averfe to war ; and made it his ftudy to foften the manners of the Romans, rather than to exalt them to fuperiority over their neighbours. He difmiffed the celeres, encouraged agricul. ture, and divided the citizens into diftinet bodies of tradefmer. This laft meafure he took on purpofe to abolifh the diftinction between Romans and Sabines, which had hicherto rent the city into two factions; and this effectually anfwered his end: for now all of each particular profeffion, whether Romans or Sabines, were obliged to affociate together, and had each their refpective courts and privileges. In this divifion the muficians held the firft rank, becaufe they were employed in the offices of religion. The golifmiths, carpenters, curriers, dycrs, taylors, \&c. formed alfo diitinct communities; and were allowed to make byelaws ameng themfelves, to have their own fefivals, particular facrifices, \&ec.

Though Numa himfelf is faid by Plutarch to have bad pretty jult notions of the Supreme Being, he neverthelefs added ianumerable fuperititions to thofe he found in Rome. He divided the minitters of religion into eight claffes, appointing to each their office with the greateft precifion; he erected a temple to Janus, the fy mbol of prudence, which was to remain open in time of war, and to be fhut in time of peace. Another temple was erected to Bona Fides; and he inyented a new kind of deities called Dii Termini, or
boundaries, which he caufed to be placed on the bosders of the Roman ftate, and of each man's particular lands. - -The lait reformation which Numa undertook, was that of the kalendar. Romulus had divided his year into ten months, which, according to Plutarch, had no certain or equal number of days; fome confifting of 20 , fome of 35 , \&c. However, by other hiftorians, we are informed that he allotted to March, May, Quintilis, and October, 3 I days; to April, June, Sextilis, November, and December $30^{\circ}$; making in all 304 days. But Numa being better acquainted with the celeftial motions, added to thefe the two months of January and February. To compofe thefe two months he added 50 days to the 304 ; and thus made the year anfwer to the courfe of the moon. He then took fix more from the months that had even days; and added one day merely out of fupertition, that the year might prove fortunate; for the pagans looked upon even numbers as unlucky, but imagined odd numbers to be fortunate. However, he could make out no more than 28 for February, and therefore that month was always reckoned unlucky among the Romans. Befides this, he obferved the difference between the folar and lunar year to be II days; and to remedy the inequality, he added an intercalary month named Mercedinus or Mercedonius, of 22 days every two years: but as he knew alfo that the folar year confifted of 365 days 6 hours, he ordered that every fourth year the month Mercedinus thould confift of 23 days. The care of thefe intercalations was left to the priefts, who left out or put in the intercalary day or month as they imagined it to be lucky or unlucky; and by that means created fuch confufion, that the feltivals came in procefs of time to be kept at a feafon quite uppofite to what they had been farmerly.

Thefe are ill the remarkable tranfactions of the succeeded reign of Numa, which is faid to have continued 43 by Tullus years; though fome think that its duration could not Hoftiliue bu above 15 or 16. His death was followed by a fhort interi egnum; after which Tullus Hoftulus, the fun or grandfen of the fom us Herfilia, was unanimounly chofen king. Being of a bold and fiery temper, he did not 1 ng continue to imitate his peaceful predecetior. The Albans, indeed, foon gave him in opportunity of exercifing his martial difpofition. Cœlitis, or, as he is called by Livy, Cluilius, who was at the head of the Alban republic, jealous of the grow $_{F}$ ing greatnefs of Rome, privately commiffioned fome of the molt indigent of his fubjects to wafte the Roman territory; in corfequence of which a Roman army entered the territories of Alba, engaged the robbers, killed many, and took a great number prifoners, A war toon commenced, in confequence of this, between the two nations; but when the armies came in tight of each oiher, their ardour cooled, neither of them feeming inclined to come to an engagement. This inaction raifed a great difcontent in the Alban army argainf Cluilius; infumuch that he came to a refolution ot giving battle to the Romans next morning, or of forming their trenches if they fhould decline it. Next morning, however, he was found dead in his bed; after which the Albans chofe in his Itead' one Mertus Fufietius, a man remarkable for his hatred to the Roman name, as Cluilius had been before him. Fuffetius; however, continued in the fame

## $\mathrm{ROM} \quad[333] \quad \mathrm{R} O \mathrm{M}$

Rome. fate of inactivity as his predeceffor, until he received certain intelligence that the Veientes and Fidenates had refolved to deltroy both Romans and Albans when they fhould be weakened by a battle. Fuffetius then refolved to came to an accommodation with the Romans; and, having obtained a conference with Tullus, both feemed equally defirous of avoiding the calamities of war. But, in order to eltablifh the peace on the molt perfeet foundation, Tullus propofed that all, or at leaft the chief families in Alba, fhould remove to Rome; or, in cafe they were unwilling to leave their native city, that one common council fheuld be eftablifhed to govern both cities, under the direction of one of the two fovereigns. Fuffetius took afide thofe who attended him, to confult with them about this propofal; but they, though willing to come to an accommodation with Rome, abfolutely refufed to leave Aiba. The only difficulty remaining, then, was to fettle which city fhould have the fuperiority; and, as this could not be determined by argument, Tullus propofed to determine it by fingle combat betwixt himfelf and Fuffetius. This propofal, however, the Alban general thought proper to decline; and it was at lalt agreed, that three champions thould be chofen out of each camp to decide the difference. This produced the famous combat between the Horatii and Curiatii, by which the fovereignty was decided in favour of Rome. See Horatil.

Tullus now refolved to call the Fidenates to an account for their treacherous behaviour during the war with Alba, and therefore cited them to appear before the fenate; but they, confcious of their gult, refufed to appear, and took up arms in conjunetion with the Veientes. Fuffetius, in obedience to the orders of Tullus, joined him with the Alban troops; but the day before the battle, he acquainted the principal officers with his defign, which was to ftand neuter till fortune had declared for one fide, and then to join with the conqueror. This defign being approved; Euffetius, during the engagement, retired with his forces to a neighbouring eminence. Tulus perceived his treachery; but dufiembling his uneatinefs, told his men that Fuffetius had polleffed himelf of that hill by his order, and that he was from thence to rufh dswn upon the enemy. The Veientes, in the mean time, who had expected that Fuffetius was to join them, were difmayed, and the Romans obtained the vitory. After the battle, Tullus returned privately to Rome in the night ; and having confulted with the fenate about the treachery of Fuffetius, returned to the camp by break of day. He then detached Horatiss, who had conquered the three Curiatii, with a chofen body of horfe and foot, to demolifh Alba, as had been concerted at Kome. In the mean time, he commanded bith the Roman and Alban troops to attend him unarmed, but gave private orders to the Romans to bring their fords concealed under their garments. When they were affembled, he baid npen the treachery of Fuffetius, and

Albs demolifhed, and thr in habitiants tratifportid o Rome. ardered him to be torn in pieces by hories. His accomplices were all put to the fword; and the inhabitants of Alba carried to Rome, where they were admitied to the privileges of citizens, and fome of them even admitted to the fenate.

Tullus now turned his arms againt Fidenæ, which he again reduced uncer the Roman yoke; and took

Medulia, a Atrong city of the Latins; afier which he waged a fuccelsful war with the Sabines, whofe union with the Romans feems to have ceafed with the time of Numa. This was the laft of his martial exploits; after which we bear no more of him, but that he became extremely fupertitious in his advanced years, giving, ear to many foolifh ftories, as that it rained Hones, that miraculous voices were heard from heaven, \&c. and for this he appointed nine days expiatory facrifices; whence it became a cuftom to appoint nine days to appeafe the wrath of the gods as often as men were alarmed with prodigies. As to the manner of his death authors are not agreed. Some tell us that Death of he was killed by lightning, together with his wife, Tullus, children, and his whole family; while others are of who is fucopinion that he was murdered with his wife and children by Ancus Martius who fucceeded him. He died after a reign of 33 years, leaving the city greatly increafed, but the dominions much the fame as they had been in the time of Romulus.
Atter a fhort interregnum, Ancus Martius, the grandron of Numa by his daughter Pompilia, and Marcus his relation, was unanimoufly chofen by the people and fenate. Though naturally inclined to war, be began his reign with attempting to reltore the ceremonies of Numa, which had been negleeted under Tullus Holtilius. He endeavoured affo to draw the attention of his people to hulbandry and the peaceful arts; advifing them to lay afide all forts of violence, and to return to their former employments. This gained him the affections of his fubjects, but brought up $n$ him the contempt of the neighbouring nations. The Latins, protending that their treaty with Rome was expired, made inroads into the Roman territories. Ancus, after ufing the ceremonies directed by Numa, His war took the field with an army confifing entirely of new lisc exlevied tronps, and reduced the cities of Politorium, Tille. ploits and na, and Ficana, tranfplanting the inhapitants to Rome. death.
A now colony of Latins repeopled Polioorium; but Ancus retook the place next year, and entirely demolifhed it. He then laid fiege to Medulia; which, though it had been ruined by Tullus Holtilius, was now flronger than ever. It fubmitted after a fiege of four years, when Ancus tound himfelf obliged to undertake a fecond expedition againft Ficana, which he had before reduced, as we have already related; and it was not without the utmon difficulty that he reduced it a fecond time. After this he dcfeated the Latins in a pitched battle; vanquilhed the Fidenates, Veientes, and Sabines; and having $t+k e n$ in the hill Janiculum to be included withi: the walls, and built the port of Oltia, he died in the 24th year of his reign,

Ancus Martius letr two fons behind him, one an infant, and the other about 15 years of age. Both of thefe he put under the tuition of Tarquin, the fon of a rich merchant in Coritith, who had fled from that city to fecure his wealth from Cypfelus tyrant ot the place. He fettled in Tarquinii, one of the principal cities in Hetruria; but finding that he could not there attain to any of the principal poits in the city on account of his His $h 1:, s$ foreign extraction, he removed to Rome, where he fupplanted had been gradually 1 aifed to the rank of partrician and 1 . fenator. The death of Ancus Martius gave him an opportunity of affumirg the regal dignity, and fetting afide his pupils; and in the beginning of his reign he

## R O M I. 334 I R O M

 war.ton': care to ffrengthen his party in the fenate by triumph by the fenate; while the enemy, difheartened adding another hundred to that body. Thefe were called fenatores ininorum gentiun, becaufe they were chofen out of the plebeians; however, they had the fame authonity in the fenate as the others, and their children were called patricians.
Tarquin was not inferior to any of his predeceffors either in his inclination or abilities to carry on a war. As foon as he afcended the throne, he recommenced hoftilities with the Latins; from whom he took the cities of Apiolæ, Cruftuminum, Nomentum, and Collatia. The inhabitants of Apiolx were fold for flaves ; but thofe of Cruftuminum and Nomentum, who had fubmitted after their revolt, were treated with great clemency. The inhabitants of Collatia were d'farmed, and obliged to pay a large fum of money; the fovereignty of it, in the mean time, being given to Egerius, the fon of Arunx, Tarquin's brother; from whence he took the name of Collatinus, which he tranfmitted to his polterity. Corniculum, another city of Latium, was taken by form, and reduced to afhes. This progrefs having greatly alarmed the Latins, feveral of them joined their forces in order to oppofe fuch a formidable enemy; but being defeated in a bloody battle near Fi denæ, they were obliged to enter into an alliance with Rome; upon which the Latins having held a national conference, entered into a league with the Hetrurians, and again took the field with a very numerous army. But Tarquin, having defeated the confederate armies in two very bloody battles, obliged the Latin cities to fubmit to a kind of dependence on Rome; and, having entered the city in criumph, built the circus maximus with the fpoils which he had taken from the enemy.

The war with the Latins was fcarce ended, when another commenced with Hetruria. This was accounted the molt powerful nation in Italy, and was at that time divided into 12 tribes or lucomonies. There appointed a national affembly, in which it was decreed that the whole force of Hetruria fhould be employed againit Tarquin; and if any city prefumed only to ftand neuter, it hould be for ever cut off from the national alliance. Thus a great army was taifed, with which they ravaged the Roman territory, and took Fidera by the treachery of fome of its inhabitants. Tarquin, not being in a condition to oppofe them at firlt, was obliged to fubmit to the lofs occafioned by their ravages for a whole year; after which he took the field with all the forces he could raife. The Roman army wats divided into two bodies, one under the king himfelf, the other commanded by his nephew Collatinus. The latter, having divided his forces in order to plunder the country, was defeated; but Tarquin, in two engagements, vanquifhed the army which oppofed him. He then marched againft Fidenæ, where he gained a third battie ; after which he took the city. Such of the citizens as were fufpected to have been concerned in betraying it to the enemy were whipped to death; the reft were fent into banifhment, and their lands divided by lotamong the Roman foldiers. Tarquin now hattened to oppofe the new army of the Hetrurians before their forces could be properly collected; and having come up with them at Eretum, a place about 10 miles from Rome, defeated them with great flaughter, for which victory he was decreed a
by fo many misfortunes, were glad to fue for peace; which Tasquin readily granted, upon the fole condition of ther owning his fuperiority over them. In Eufigns of compliance with this, the Hetrurians fent him all the royalty enfigns of royalty which were in ufe among them, viz. fent him a crown of gold, a throne of ivory, a fceptre with an eagle on the top of it, a tunic embroidered with guld, and adorned with figures of palm-branches, together with a purple robe enriched with flowers of feveral colours. Tarquin, however, would not wear thefe magnificent ornaments till fuch time as the fenate and people had confented to it by an exprefs law. He then applied the regalia to the decoration of his triumph, and never afterwards laid them afide. In this triumph he appeared in a gilt chariot, drawn by four horfes, clothed in a purple robe, and a tunic em. broidered with gold, a crown on his head, and a fceptre in his hand, attended by 12 lictors with their axes and fafces.

Tarquin, having now obtained fome refpite from war, applied himfelf to the beautifying and ornamenting the city. He built the walls of Rome with hewn ftone, and erected thofe famous common fewers which have defervedly been accounted one of the wonders of the world. Rome at this time contained four hills within its compars, viz. the Palatinus, Tarpeius, Quirinalis, and Colius. In the valleys between thefe hills, the rain-water and fprings uniting, formed great pools which laid under water the ftreets and public places. The mud likewife made the way impaffable, infected $3^{8}$ the air, and rendered the city unhealthy. Tarquin Euilds the undertook to free the city from this nuifance, by con- commou veying off thefe waters by fubterraneous channels into fewers, and the Tiber. In doing this, it was neceffary to cut thro' hills and rocks a channel large enough for a navigable Atream, and covered with arches ftrong enough to bear the weight of houfes, which were frequently built upon them, and ftood as firm as on the mof folid foundations. All thefe arches were made of hard fone, and neither trouble no: expence were fared to make the work durable. Their height and breadth were fo confiderable, that a cart loaded with hay could eafily pafs through them under ground. The expence of confructing thefe fewers was never fo thoroughly underflood as when it became neceffary to repair them; for then the cenfors gave no lefs than 1000 talents to the perfon appointed for this purpofe.

Befides thefe great works, Tarquin adorned the forum, furrounding it with galleries in which were fhops for tradefmen, and building temples in it for the youth of both fexes, and halls for the adminiftration of public juftice. He next engaged in a war with the Sabines, on pretence that they had affifted the Hetrurians. Both armies took the field, and came to an engagement on the confines of Sabinia, without any confiderable advantage on either fide; neither was any thing of confequence done during the whole campaign. Tarquin then, confidering with himfelf that the Roman forces were very deficient in cavalry, refolved to add fome new bodies of knights to thofe already infituted by Romulus. But this project met with great oppofition from the fuperfitious augurs, as the original divifion of horfe into three bodies had been determined by anguries; and Actius Nævius, the chief of

## R O M

Rome． of Nevius the augur．
the divincts at that time，violently oppofed the king＇s will．On this Tarquin，defirous to expofe the deceit of thefe people，fummoned Nævius before an affembly of the people，and defired him to thow a fpecimen of his art，by telling the king if what he thought of at that time could be done or not．＇The augur replied， after confulting his birds，that the thing was very pof fible．On which Tarquin told him，that he had been thinking whether it was poffible to cut a flint with a razor，pulling at the fame time a razor and flint from below his robe．This fet the people a－laughing；but Nævius gravely defiring the king to try it，he was fur－ prifed to find that the flint yielded to the razor；and that with fo much eafe as to draw blood from his hand．The pe ple teftified their furprife by loud ac－ clamations，and Tarquin himfelf continued to have a great veneration for augurs ever after．A fatue of brafs was erected to the memory of Nævius，which continued till the time of Augultus；the razor and flint were buried near it，under an altar，at which witneffes were afterwards fworn in civil caufes．

This adventure，whatever was the truth of it，caufed Tarquin to abandon his defign of increafing the number of bodies of horfe，and content himfelf with augment－ ing the number in each body．He then renewed the war with the Sabines，ravaged their country defeated them in three pitched battles，obliging them at laft to fubmit to him and put him in poffeffion of their country．In the decline of life he employed himfelf in further decorating the city，building temples，\＆c．
originally deprived of the kingdom．

After the death of Tarquin I．his wife Tanaquil preferved the kingdom to her fon－in－law Servius Tul－ lius，by artfully giving out that the king was only ftunned，and would foon recover；upon which the fons of Ancus went voluntarily into banifhment．The fecond day after his deceafe，Servius Tullus heard caufes from the throne in the royal robes and attended by the lic－ tors；but as he pretended only to fupply the king＇s place till he fhould recover，and thought it incumbent on him to revenge the wicked attempt upon his life， he fummoned the fons of Ancus to appear before his tribunal；and on their non－appearance，caufed them to be declared infamous，and their eftates to be confifca－ ted．After he had thus managed matters for fome time in fuch a manner as to engage the affections of the people，the death of Tarquin was publihed as a thing that had newly happened，and Servius Tullius affumed the enfigns of royalty，having none to difpute the honour with him．

The new king fhowed himfelf every way worthy of the throne．No fooner were the Hetrurians informed of Tarquin＇s death，than they fhook off the yoke ；but Servius quickly reduced them to obedience，depriving them of their lands，which he fhared among the poor Roman citizens who had none．For this he was de－ creed a triumph by the people，in fpite of the oppo－ fition if the fenate，who could never be brought to approve of his election to the kingdom，though he was foon after legally chofen by the tribes．

After Servius had ob：ained the fanction of the po－ pular voice，he marched a fecond time againtt the re－ volted Hetrurians；and having again vanquifhed them，
was decreed another triumph．He then applied him－Rone． felf to the enlarging and adorning the city．To the $\underbrace{}_{42}$ hills Palatincs，Tarpeius，Quirinalis，Colius，and Aven－Inderers tinus，he added the Efquilinus and Viminalis，fixing the ity， his own palace on the Eiquilinus，in order to draw in－and arde a habitants thither．He likewife added a fourth tribe，fourth tribe which he called Tribus Efquitina，to thofe in⿴囗十⿱一⿴⿻儿口一寸 by Romulus．He divided alfo the whole Roman ter aleacy in－ allo the whole Roman ter－intuscu． ritory into dilinet tribes，commanding that there thould be at lealt one place of refuge in each tibe，fituated on a rifing ground，and Atrong enough to fecure the effects of the peafants in cafe of a fudden alarm．＇Thefe Atrong－holds he called pagi，that is，＂t villages；＂and commanded that each of them fhould have their pecu－ liar temple，tutelary god，and magiltrates．Each of them had likewife their peculiar feftival，called paga． nalia；when every perfon was to pay into the hands of thofe who prefided at the facrifices a piece of mo－ ney，the men of one kind，the women of another，and the children of a third．By this means an exact com－ putation was made of the men，women，and children， in each tribe．

In the mean time，his two wards，Lucius Tarquinius and Arunx，the grandchildren of Tarquin，being grown up，in order to fecure their fidelity，he married them to his two daughters．And though the elder of thefe daughters，who was of a mild and tractable difpofition， refembled in character the younger of his pupils，as the elder of his pupils did the younger of his daugh－ ters，who was of a violent and vicious temper，yet he thought it advifable to give his elder daughter to Tar－ quin，and the younger to Arunx ；for by that means he matched them according to their ages，and at the fame time hoped that the elder Tullia＇s fweet difpo－ fition would temper Tarquin＇s impetuofity，and the younger Tullia＇s vivacity roufe the indolence of Arunx．

During the public rejoicing for this double mar－ riage，the twelve lucumonies of Hetruria uniting their forces，attempted to fhake off the Roman yoke；but were in feveral battles defeated by Servius，and obliged to fubmit to him on the fame conditions on which they had fubmitted to his predeceffor．For this fuccefs Ser－ vius was honoured with a third triumph．

The king being thus difengaged from a troublefome war，returned to the purfuit of his political fchemes； and put in execution that mafterpiece of policy which Rome made ufe of ever after，and which eftablifhed a perpetual order and regularity in all the members of the ftate，with refpect to wars，to the public revenues， and the fuffrages of the comitia．The public fupplies had hitherto been raifed upon the people at fo much an head，without any diftinction of rich and poor； whence it likewfe followed，that when levies were made for the war，the rich and poor were equally obliged to take the field，according to the order of their tribe；and as they all ferved at their own expence，the poorer fort could hardly bear the charges of a campaign．Befides， as the mof indigent of the people faw thenfelves bur－ dened with the fame taxes as the rich，they pretended to an equal authority in the comicia：fo that the elec－ tion of kings and magittrates，the making of peace or war，and the judging of criminals，were given up into the hands of a populace who were eafily corrupted，and had nothing to lofe．Servius formed a project to reme－

## ROM <br> ROM

las , enjcining all the Roman citizens to bring in an account in writing of their own names and ages, and of tho fe of their fathers, wives, and children. By the f.me law, all beads of families were commanded to dehiver in upon oath a jult eftimate of their effects, and to ad to it the places of their abode, whether in town or c uritry. Whoever did not bring in an account of his effects, was to be deprived of his eltate, to be beat ith rods, and publicly fild for a flave. Servius, from thefe particular accuants, which might be pretty well relied on, undertock to eafe the poor by burdening the rich, and at the fame time to pleafe the latter by increafing their power.
Hiddivifion To this end, he divided the Roman people into fix of the peo- clafles; the firf clafs confilted of thofe whofe eftates pieinto and effects amounted to the value of 10,000 drachma, or 100,000 afes of brafs; the firft way of computing being uled by the Greeks, and the latter by the Latins. This clais was fubdivided into 80 centuries, or companies of foot. To thefe Servius joined 18 centuries of Roman knights, who fought on horreback; and appointed this confiderable body of horfemen to be at the head of the firft clais, becaufe the eftates of thefe knights, without all doubt, exceeded the fum neceflary to be admitted into it. However, the public fupplied them with horfes; for which a tar was laid upon wi. dows, who were exempt from all other tributes. This firt clafs, including infantry and cavalry, confifted of 28 centuries. The fecond clafs. comprehended thofe whofe eitates were valued at 5700 drachme, or 75,000 afes of brafs. It was fubdivided into 20 centuries, all toot. To thefe were added two centuries of carpenters, fmiths, and other artificers. In the third clafs were thofe who were eftermed worth 5000 drachmes, or 50,000 afes. This clafs was fubdivided into 20 centuries. The fourth clafs was of thofe whofe effects were rated at the value of 500 drachmæ, or 25,000 afes, and was divided into 20 centuries; to which were added two other centuries of trumpets, and blowers of the horn, who fupplied the whole army with this martial mufic. The fifth clafs included thofe only whofe whole fubftance did not amount to more than 1250 drachma, or 12,500 afes; andithis clafs was divided into 30 centuries. The fixth clafs comprehended all thofe who were not worth: fo much as thofe of the fifth clafs: they exceeded in number any other clafs, but neverthelefs were reckoned but as one century.

The king drew from thefe regulations all the advantages be had expected. Levies for the army were no longer raifed by tribes, nor were taxes laid at fo much a head as formerly, but all was levied by centuries. When, for inftance, an army of 20,000 men, or a large fupply of money, was wanted for the war, each century furnithed its quota both of men and money : fo that the firt clats, which contained more centuries, though fewer men, than all the others together, furnifhed more men and more money for the public fervice than the whole Roman fate betides, And by this means the Roman armies confifted for the mof part of the rich citizens of Rome; who, as they had lands and effeets to defend; fought with more refoletion, while their riches enabled them to bear the expence of a.campaign. As it was but jult the king fhould make the firt clafs amends. for the weight laid on it,
changing the comitia by curix, in which every nan gave his vote, into comitia by centuries, in which the majority wa not reckoned by fingle perfons, but by centuries, how few foever there might be in a century. Hence the firlt clafs, which contained more centuries than the other five taken together, had every thing at its difpofal. The votes of this clafs were firt taken; and if the 98 centuries happened to agree, or only 97 of them, the affair was determined; becaule thefe made the majority of the 193 centuries which compofed the fix claffes. If they difagreed, then the fecond, the third, and the other claffes in their order, were called to vote, though there $w_{i}$ s very feldom any occafion to go fo low as the fourth clafs for a majority of voter: fo that by this good order Servios brought the affairs of the ftate to be determined by the judgment of the moft confidetable citizens, who underitood the public interelt much better than the blind mulitude, liable to be impofed upon, and eafily corrupted.

And now the people being thus divided into feveral The 45 orders, according to the cenfus or valuation of their fus and eftates, Servius refolved to folemnize this prudent re- luftrum. gulation by fome public act of religion, that it might be the more refpected and the more lalling. Accordingly, all the citizens were commanded to appear, on a day appointed, in the Campus Martius, which was a large plain, lying between the city and the Tiber; formerly confecrated by Romulus to the god Mars. Here the centuries being drawn up in battalia, a folemn luftration or expiatory facrifice was performed in the name of all the people. The facrifice conifted of a fow, a fheep, and a bull, whence it took the name of fuovetraurilia. The whole ceremony was called luftrum, à luenda; that is, from paying, expiating, clearing, or perhaps from the godders Lua, who prefided over expiations, and to whom Servius had dedicated a temple. This wife king confidering, that in the fpace of five years there might be fuch alterations in the fortunes of private perfons as to entitle fome to be raifed to an higher clafs, and reduce others to a lower, enjoined that the cenfus fhould be renewed every five years. As the cenfus was ufually clofed by the luftrum, the Romans henceforth began to compute time by liatruims, each luftrum containing the fpace of five yeatsi. However, the luftrams were not always regularly obferved; but often put off, though the cenius had been made it the fifth year. Some writers are of opinion, that Servius at this time coined the-firlt moriey that: had ever appeared at Rome; and add, that the circumitances of the luftrum probably led him to famp the figures of the animals there flain on pieces of brafs of a certain weight.

The governmett of the city beine thus eftabifhed 46 in foregular a manner, Servius, touehed with compaf- men. frow for thofe whom the misfortunes of an unfuccefsful war had reduced to flavery, thought that futh of them as had by leng and faithful fervices-deferved and:obtained their freedem, were much more worthy of being made Roman citizens, than untrathable vagabonds from foreign countries, who were admitted without diftinc. tion He therefore gave the ireedmen their choice, either to return to their ownt country, or continue at Rome. Thofe who chofe to continue there, he divided into four tribes, and. fettled then within the city ;

## R O M

and though they were diftinguifhed from the plebian by their old name of liberti or freedmen, yet they enjoyed all the privileges of free citizens. The fenate took offence at the regard which the king thowed to fuch mean people, who had but lately h. ken off their fetters; but Servius, by a moft humane and judicious difcourfe, entirely appeafed the fathers, who paffed his inititution into a law, which fubfifted ever after.
The wife king, having thus eftablifhed order among the people, undertook at laft to reform the royal power itfelf; his equity, which was the main fpring of all his refolutions, leading him to aft contrary to his own intereft, and to facrifice one half of the royal authority to the public good. His predeceffors had referved to themfelves the cognizance of all caufes both public and private; but Servius, finding the duties of his office too much for one man to difcharge well, committed the cognizance of ordinary fuits to the fenate, and referved that only of fate-crimes to himfelf.

All things being now regulated at home, both in the city and country, Servius turned his thoughts abroad, and formed a fcheme for attaching the Sabines and Latins to the Romans, by fuch focial ties as fhould be Atrengthened by religion. He fummoned the Latin and Sabine cities to fend their deputies to Rome, to confult about an affair of great importance. When they were come, he propofed to them the building of a temple in honour of Diana, where the Latins and Sabines fhould meet once a year, and join with the Romans in offering facrifices to that goddefs; that this feftival fhould be followed by a council, in which all difputes between the cities fhould be amicably determined ; that there proper meafures fhould be taken to purfue their common intereft ; and, laftly, in order to draw the common people thither, a fair hould be kept, at which every one might furnifh himfelf with that he wanted. The king's defign met with no oppofition: the deputies only added to it, that the temple fhould be an inviolable afylum for the united nations; and that all the cities fhould contribute toward the expence of building it. It being left to the king to choofe a proper place for it, he pitched upon the Aventine hill, where the temple was built, and affemblies annually held in it. The laws which were to be obferved in thefe general meetings were engraved on a pillar of brafs, and were to be feen in Augutus's time, in the Latin tongue, but in Greek characters.
Ficked But now Servius was grown old; and the ambition fntrigues of of Tarquin his fon-in-law revived in proportion as the his daugh- king advanced in years. His wife ufed her utmoft enfor and $\quad$ deavours to check the rafhnefs and fury of her hulband, and to diverthim from all criminal enterprifes; while her younger fifter was ever infligating Arunx, who placed all his happinefs in a private life, to the molt villanous attempts. She was continually lamenting her fate in being tied to fuch an indolent hurband, and wifhing the had either continued unmarried, or were become a widow. Similitude of temper and manners, formed, by degrees, a great intimacy between her and Tarquin. At length the propofed nothing lefs to him than the murdering of her father, fifter, and hufband, that they two might meet and afcend the throne together. Soon after, they paved their way to an inceituous marriage, he by poifoning his wife, and the her hufband; and then had the affurance to afk the king's
and queen's confent to their marriage. Servius and Tarquinia, though they did not give it, were filent, through too much in tulgance to a da'ghter in whom now wa, their only hope of polterity. Bat thefe criminal nuptials werc only the firft fep towards a yet greater iniquity. The wicked ambition of the newmarried couple firlt fhowed itfelf againft the king : for they publiciy declared, that the crown belonged to them ; that Servius was an ufurper, who, being appointed tutor to Tarquin's grandchildren, had deprived his pupils of their inheritance; that it was high time for an old man, who was but little able to fupport the weight of public affairs, to give place to a prince who was of a mature age, \&c.
The patricians, whom Servius had taken great pleafure in humbling during the whole time of his reign, were eafily gained over to Tarquin's party; and, by the help of money, many of the poorer citizens were alfo brought over to his intereft. The king, being informed of their treafonable practices, endeavoured to diffuade his daughter and fon-in-law from fuch proceedings, which might end in their ruin; and exhorted them to wait for the kingdom till his death. But they, defpifing his counfels and paternal admonitions, refolved to lay their claim before the fenate; which Servius was obliged to fummon: fo that the affair came to a formal procefs. Tarquin reproached his father-in law with having afcended the throne without a previous interregnum; and with having bought the votes of the people, and defpifed the fuffrages of the fenate. He then urged his own right of inheritance to the crown, and injuttice of Servius, who, being only his guardian, had kept polfeflion of it, when he himfelf was of an age to govern. Servius anfwered, that he had been lawfully elected by the people; and that, if there could be any hereditary right to the kingdom, the fons of Arcus had a much better one than the grandfons of the late king, who mult himfelf have been an ufurper. He then referred the whole to an affembly of the people; which being immediately proclaimed all over the city, the forum was foon filled; and Servius harangued the multitude in fuch a manner as gained all their affections. They all cried out with one voice, Let Servius reign; let him continue to make the Romans bappy. Amidft their confufed clamours, thefe words were likewife heard : Let Tarquin perifb; let bim die; let us kill bim. This language frightened him fo, that he retired to his houfe in great bafte; while the king was conducted back to his palace with the acclamations of the people.
The ill fuccefs of this attempt cooled Tarquin's ardent defire of reigning ; but this ambition made him aet a new part. He undertook to regain the faviur of his father-in-law by careffes, fubmifiinns, and proteftations of a fincere regard and affection for him; infomuch that the king, who judged of the policy of others from his own, was fincerely reconciled to him, and tranquillity re-eftablifhed in the royal family. But it was not long ere Tarquin, roufed by the continual reproaches of his wife, began to renew his intrigues among the fenators ; of whom he had no fooner gained a confiderable party, than be clothed himelf in the royal robes, and canfrng the fafces to be carried before him by fome of his domeftics, croffed the Roman forum, entered the temple where the fenate ufed to meet, and feated bim-

the faction he found already in their places (for he had given them private notice to be there early) ; and the reft, being fummoned to affemble in Tarqnin's name, made what hafte they could to the appointed place, thinking that Servius was dead, fince Tarquin aflumed the title and functions of king. When they were all affembled, Tarquin made a long fpeech, reviling his father-in-law, and repeating the invectives againt him, which he had fo often uttered, calling him a flave, an ufurper, a favourer of the populace, and an enemy to the fenate and patricians. When he was yet fpeaking, Servius arrived; and, rafhly giving way to the motions of his courage, without confidering his ftrength, drew near the throne, to pull Tarquin down from it. This raifed a great noife in the affembly, which drew the people into the temple; but nobody ventured to part the two rivals. Tarquin therefore, being more ftroing and vigorous, feized the old man by the wailt, and, hurrying him through the temple, threw him down from the top of the fteps into the forum. The king, who was grievoufly wounded, raifed himfelf up with fome difficulty : but all his friends had abandoned him; only two or three of the people, touched with compaffion, lent him their arms to conduct him to his palace.

As they were leading him on fo flowly, the cruel Tullia appeared in the forum, whither the had haftened in her chariot on the firt report of what had paffed in the fenate. She found her hulband on the top of the fteps of the temple; and, tranfported with joy, was the firft who faluted him king. The example was immediately followed by the fenators of Tarquin's party. Nor was this enough for the unnatual daughter: fhe took afide her hulband, and fuggefted to him, that he would never be fafe folong as the ufuper of his crown was alive. Hereupon Tarquin inftantly difpatched fome of his domeftics to take away the remains of the unfortunate king's life. The orders for the wicked parricide were no fooner given than Tullia mounted her chariot again, with an air of triumph, to return home. The way to her houfe was through a narrow ftreet, called vicus cyprius, or the good freet. There the affaffins had left the king's body, which was till panting. As this fight, the charioteer, fruck with horror, checked his horfes, and made a fop: but Tullia forced him to go on; and the blood of the father is faid to have dyed the wheels of the chariot, and even the clothes of the inhuman daughter, whence the freet was called ever after vicus fceleratus.

The new king proved a moft defpotic and cruel tyrant ; receiving, in the very beginning of his reign, the furname of proud, on account of his capricious humour and haughty behaviour. All controverfies whatever were decided by himfelf and his friends; and he banifhed, fined, and even executed, whom he pleafed. The cenfus and luftrum, the divifion of citizens into claffes and centuries, were abolifhed; and all kinds of affemblies, even thofe for amufement and recreation, were prohibited, both in town and country. Nay, to fuch a height did Tarquin carry his infolence and tyranny, that the mof virtuous of the fenators went into voluntary banifhment; while many of thofe who remained were cut off on various pretences, that the king might enjoy their eftates.

Tarquin could not but be fenfible of the extreme dan.
ger in which he flood by lofing the affections of his people in fuch a manner. He therefore provided a fufficent number of foldiers, by way of guard, to prevent attempts upon his perfon; and gave his daughter to Octavius Mamilius, one of the moft confiderable men among the Latins, in order to frengthen his intereft by this foreign alliance, in cafe of a revolt among his fubjects. Mamilius accordingly procured many friends to his father-in-law, but he had like to have loft them again by his haughty behaviour. He had defired the Latins to call a national council at Ferentinum, where he would meet them on a day appointed by himfelf. The Latins accordingly met; but after waiting for feveral hours, Tarquin did not appear. On this, one Turnus Herdonius, an enterprifing and eloquent man, who hated Tarquin, and was jealous of Mamilius, made a fpeech, in which he inveighed againft the haughty bebaviour of Tarquin, fet forth the contempt which he had put upon the Latins, and concluded with defiring the council to break up and return home without taking any further notice of him. Mamilius, however, prevailed upon them to return the day following; when Tarquin made his appearance, and told the affembly that his'defign in calling them together was to claim his right of commanding the Latin armies, wh ch he faid was derived from his grandfather, but which he defired to be confirmed to him by them. Thefe words were fcarce out of his mouth, when Herdonius, rifing up, entered into a detail of Tarquin's tyranny and arup, entered into a detail of Tarquin's tyranny and ar- deftroy would foon feel in an equal degree, if they complied with Tarquin's demand. To this fpeech the king made no reply at that time, but promifed to anfwer him next day. In the mean time, however, he bribed the domeftics of Herdonius to admit among his baggage a large quantity of arms: and then, telling the Latins that Herdonius's oppofition proceeded only from Tarquin's having refufed him his daughter in marriage, accufed him of having laid a plot to cut off all the deputies there prefent, and to ufurp a jurifdicticn over the Latin cities; as a proof of which he appealed to the arms hid among the baggage of Herdonius. The accufed, confcious of his iuntcence, defired that his baggage might be fearched ; which being auccordingly done and the arms found, he was hurried away without being allowed to make any defence, and thrown into a bafon at the head of the fpring of Ferentinum, where a hurdle being laid upon him, and fones laid upon the hurcle, he was preffed down into the water and drowned.

In confequence of this monftrous treachery, Tarquin was looked upon by the Latins as their deliverer, and declared general of the Latin armies ; foon after which, the Hernici and two tribes of the Volfci entered into an alliance with him on the fame terms. In order to keep thefe confederates together, Tarquin, with their confent, erected a temple to Jupiter Latialis on an hill near the ruins of Alba, where he appointed certain feafts called Ferice Latine to be held on the 27 th of 53 April, where the feveral nations were to facrifice to ge- the Ferim ther, and on no account to commit any hofilitics againgt Latinx. each other during their continuance. The king then proceeded to make war on the reft of the Voilci who had refufed to enter into an alliance with him. Some depredations which they had committed in the territo-

员ome. $\rightarrow \rightarrow$
ries of the Latins ferv-d for a pretence to begin the ivar ; but as Tarquin had no confidence in the Romans, his army was compofed only of a fmall body of them who were incorporated among the Latin aux liaries. However, be defeated the enemy, took one of their cities by ftorm, and gave the booty to his foldiers. He next tuined his arms aganit the Sabines, whom he entirely defeated in two engagements, and made the whole nation tributary; for which exploits he decreed himfelf two triumphs, and on his return to Rome he employed the populace in finifhing the fewers and circus which had been begun by his grandfather Tarquin $I$.

In the mean time, the perfecutions of Tarquin a. gainlt his own fubjects daily drove fome of the moft confiderable into banifhment. A great number of patricians took refuge in Gabii, a city of Latium about 13 miles from Rome; where the inhabitants, touched with compaffion for their misfortunes, not only received them with kindnefs, but began a war with Tarquin on their account. The Gabini feem to have been the moft formidable enemies whom the Romans had hitherto met with ; fince Tarquin was obliged to raife a prodigious bulwark to cover the city on the fide of Gabii. The war lalted feven years; during which time, by the mutual devaftations committed by the two armies, a great fcarcity of provifions took place in Rome. The people foon grew clamorous; and Tarquin being unable either to quiet them, or to reduce the Gabini, fell upon the following difhonourable and treacherous expedient. His fon Sextus Tarquinius pretended to be on very bad terms with his father, and openly inveighed againt him as a tyrant; on which he was proclaimed a rebel, and publicly beaten in the forum. This being reported at Gabii, by perfons fent thither on purpofe, the inhabitants became veiy defirous of having Sextus among them ; and accordingly he foon went thither, having previoully obtained a folemn promife from the inhabitants never to deliver him up to his father. Here he made frequent inroads into the Roman territories, and always came back laden with ipoii, his father fending againft him only fuch weak parties as muft infallibly be worfted. By this means he foon came to have fuch a high degree of credit among the Gahini, that he was chofen general of their army, and was as much malter at Gabii as Ta, quin was at Rome. Finding then that his authority was fufficiently eftablifhed, he difpatched a flave to his father for inltructions; but the king unwilling to return an explisit anfwer, only took the meffenger into th: garden, where he fruck off the heads of the talleft poppies. Sextus undertood that by this hint the king delired him to put to death the leading men in the city of Gabii, which he immediately put in execution ; and while the city was in confufion on account of this maffacre, he opened the gates to his father, who tiok prfefion of the city with all the pride of a conqueror.- The inhabitants dreaded every thing from the haughty tyrany of the Roman monarch: however, on this occation he confulted his policy rather than his revenge; granted them their life, liberty, and eftates, and even entered into a treaty of alliance with them. The articles were written on the hide of an ox, which was ftill to be feen in the time of Augultus, in the temple of Jupiter Fidius. After this, however, he made his fon Sextus king of Gabii ; fending off alfo t.
his two other fons, Titus and Arunx, the cne to build a city at Sirnia, the other at Circrum, a promontory of the Tyrinene fea, and both thefe to keep the Vollci in awe.

Fur fome time Tarquin now enjoyed a profound peace ; the Romans, being accultomed to opprefino and the yoke of an imperious matter, making no oppofition to his will. During this interval Tarquin ${ }_{\dagger}$ See Sibyl. met with the colebrated adventure of the Sibyl $\dagger$; whofe books were ever a.terwards held in high eftima. Eoots of tion at Rome, and Tarquin appointed two perfons of the sibyls. diftinction to take care of them. Thefe were called Duunviri : but their number was afterwards increafed to Io, when they were called Decemviri ; and then to 15, when they were termed शuindecemviri. At this time alfo the written civil law had its origin among the Romans; all the fatutes enacted by the kings being collected into one body; which, from Papirius the name of the collecter, was called the Papirian law. The temple of the Capitol was alfo finifhed; for which purpofe the molt fkilful architects and workmen were brought from Hetruria, the populace being obliged to ferve them in the molt laborious parts.

We now come to the important revolution which put Downfal an end to the regal power at Rome, and introduced a of the renew form of government, to which this city is allowed gal power. to owe the greatelt part of her grandeur. Tarquin, as we have already feen, had left himfelf no friends among the rich citizens, by reafon of the oppreffion under which he made them labour; and the populace were equally difaffected on account of their being obliged to labour in his public works. Among the many perfons of diftinction who had been facrificed to the avarice or fufpicions of Tarquin, was one M. Junius, who had married the daughter of Tarquin I. This nobleman had a fon named L. Funius Brutus, who efcaped the cruelty of the tyrant by pretending to be an idiot, which part he had ever fince continued to act. Soon after the finifhing of the works abovementioned, a violent plague happening to break out at Rome, Tarquin fent his fons Titus and Arunx to confult the oracle of Delphi; and the princes took Brutus along with them, to divert themfelves with his pretended folly by the way. Brutus chofe for his offering to the Delphic Apollo a tick of elder; which occafioned much laughter. However, he had the precaution to inclofe a rod of gold within the ftick; and to this probably it was owing that the prieftefs gave the princes the following riddle, that he who thould firft kifs his mother thould fucceed Tarquin in the government of Rome. This anfwer had been given to their inquiries concerning the fucceffion ; upon which the two brothers either drew lots which of them fhould kifs ther mother at their return, or agreed to do it at once, that botil might reign jointly: but Brutus, imagining the oracle had another meaning, fell down and kiffed the earth, the common mother of all living. This, in all probability, the prieftefs had mednt; and had given the anfwer on purpofe to have another proof of Brutus's ingenuity, which had already difcovered itfelf, by his offering the elder ftick.

On the return of the princes to Rome, they found their father engaged in a war with the Rutuli. The treafury being exhaufted by the fums which Tarquin had expended in his public works, he had marched to

Rome. $\xrightarrow{\sim}$

Ardea, the capital of that nation, which lay about 20 miles from Rome, in hopes of taking it without oppofition. Contrary to his expechation, however, he was obliged to befiege it in form ; and this conftrained him to lay a heavy tax upon his fubjects, which increafed the number of malcontents, and difpofed every thing for a revolt. As the fiegre was carried on very flowly, the general officers frequently made entertainments for one another in their quarters. One day, when Sextus Tarquinius was entertaining his brothers, the converfation happened to turn upon their wives: every one extolled the good qualities of his own ; but Collatinus befowed fuch extravagant praifes on his Lucretia, that the difpute ended in a kind of quarrel. It was then refolved that they fhould mount their horfes and furprife their wives by their unexpected return. The king's daughters-in-law were employed in feafting and diverfion, and feemed much difconcerted by the appearance of their hulbands; but Lucretia, though the night was far advanced, was found, with her maids about her, fpinning and working in wool. She was not at all difcompofed by the company whom her hufband brought with him, and they were all pleafed with the reception fhe gave them. As Lucretia was very beautiful, Sextus Tarquinius conceived a paffion for her, which refolving to fatisfy at all events, he foon returned to Collatia in the abfence of Lucretia's hufband, and was entertained by her with great civility and refpect. In the night-time he entered Lucretia's apartment, and threatened her with immediate death if the did not yield to his defires. But finding her not to be intimidated with this menace, he told her, that, if the ftill perfifted in her refufal, he would kill one of her male flaves, and lay him naked by her when fhe was dead, and then declare to all the world that he had only revenged the injury of Collatinus. On this the virtuous Lucretia (who, it feems, dreaded proftitution lefs than the infamy attending it) fubmitted to the defires of Sextus ; but refolved not to outlive the violence which had been offered her. She dreffed, herfelf in mourning, and took a poniard under her robe, having previoully wrote to her hufband to meet her at her father Lucretius's houfe, where the refufed to difcover the caufe of her grief except in a full affembly of her friends and relations. Here, addreffing herfelf to her hulband Collatinus, fhe acquainted him with the whole affair; exhorted them to revenge the injury; and protefted that fhe would not outhe the lofs of her honour. Every one prefent gave her a folemn promife that they would revenge her quarrel ; but while they endeavoured to comfort her, the fuddenly fabbed herfelf to the heart with the dagger which fhe had concealed under her robe. Sce Chastity.

This extravagant action inflamed beyond meafure the minds of all prefent. Brutus, laying afide bis pretended folly, drew the bloody dagger out of Lucretia's body ; and, fhowing it to the affembly, fwore by the blood upon it that he would purfue Tarquin and his family with fire and fword: nor would he ever fuffer that or any other family to reign in Rome. The fame oath was taken by all the company ; who were fo murch furprifed at the apparent tranfition of Brutus from folly to wiftom, that they did whatever he defired them.By his advice the gates of the city were flat, that nobody might go out of it to inform Tarquin of what
was going forward; which, as Lucretius had been left governor of the city by Tarquin, was put in execution without difficulty. The corpfe of Lucretia was then expofed to public view; and Brutus having made a fpeech to the people, in which he explained the myftery of his conduct in counterfeiting folly for many years paft, proceeded to tell them that the patricians were come to a refolution of depofing the tyrant, and exhorted them to concur in the fame defign. The people teftified their approbation, and called out for arms; but Tarquin Brutus did not think proper to truft them with arms till he had firlt obtained a decree of the fenate in favour of the defign. This was eaflly procured : the fenate enacted that Tarquin had forfeited all the prerogatives belonging to the regal authority, condemned him and all his pofterity to perpetual banifhment, and devoted to the gods of hell every Roman who fhould hereafter, by word or deed, endeavour his reftoration ; and this decree was unanimoully confirmed by the carix.

Tarquin being thus depored, the form of government ${ }_{59} 59$ became the nextobject, Lucretius was for the prefent of governdeclared Interrex ; but Brutus being again confulted, ment chane declared, that though it was by no means proper for ged. the ftate to be without fupreme magittrates, yet it was equally neceffary that the power thould not be centered in one man, and that it Chould not be perpetual. For this reafon he propofed, that two magiitrates, called confuls, thould be elected annually; that the fate fhould thenceforth have the name of republic; that the enfigns of royalty fhould be abolifhed; and that the only enfigns of confular dignity fhould be an ivory chair, a white robe, and 12 lictors for their attendants. However, that he might not utterly abolifh the name of king, he propofed that this title hould be given to him who had the fuperintendency of religous matters, who fhould thenceforth be called rex facrorum, or king of facred things.

This fcheme of Brutus being approved of, Brutus and 60 Collatinus were propofed by Lucretius as the two firft leaves confuls, and unanimoufly accepted by the people, who Rome. thought it was impoffible to find more implacable enemies to the Tarquins. They entered on their office in the year $508 \mathrm{~B} . \mathrm{C}$. ; and Tulia, perceiving that now all was lolt, thought proper to leave the city, and retire to her hufband at Ardea. She was fuffered to depart without moleftation, though the populace hooted at her, and curfed her as the went along. Tarquin, in the mean time, being informed by fome who had got out of Rome before the gates were fiut, that Bratus was raifing commotions to his prejudice, returned in hafte to the city, attended only by his fons and a few friends; but, finding the gates thut, and the people in arms on the walls, he returned again to the camp: but here again, to his furprife, he found that the confuls had taken the opportunicy of gaining over the army to their interelt; fo that, being refufed admitance into the camp alfo, he was forced to fly for refuge, at the age of 76 , with his wife and three fons, to Gabii, where Sextus had been made king. Here he continued for fome time: but not finding the Latins very for ward to revenge his caufe, he retired into Hetruria; where, being the country of his mother's family, he hoped to find more friends, and a readier affiftance tor attempting the recovery of his throne.

Rome.
or happy deliverance from tyranny. However, as TarState of the quin had by his policy procured himfelf many friends Roman abroad, thefe now became enemies to the Roman name; empire at and, by the defection of their allies, the Roman domithis time. nions were left in much the fame ftate as they had been
in the time of Romulus. The territory of Rome had always been confined to a very narrow compafs. Though almolt conftantly victorious in war for 243 years, they had not yet gained land enough to fupply their city with provifions. The main ftrength of the ftate lay in the number of the citizens of Rome; which the cuftom of tranfplanting the inhabitants of the conquered cities thither had fo prodigioufly increafed, that it put the Romans in a condition of ufurping the authority over other nations, the moft inconfiderable of which had an extent of territory far exceeding theirs. By frequent depredations and incurfions they fo haraffed the petty ftates of Latium and Hetruria, that many of them were conftrained to enter into treaties with Rome, by which they obliged themfelves to furnifh her with auxiliaries whenever fhe fhould be pleafed to invade and pillage the lands of her other neighbours. Submiffions of this kind the Romans called making alliances with them, and thefe ufeful alliances fupplied the want of a larger territory; but now, upon the change of her government, all the allies of Rome forfook her at once, and either food neuter, or efpoufed the canfe of the banifhed king; fo that the was now obliged to maintain her liberties as the belt might.

The new confuls in the mean time took the moft effectual methods they could for fecuring the liberties of the republic. The army which had been employed in the fiege of Ardea marched home under the conduct of Herminius and Horatius, who concluded a truce with the Ardeates for 15 years. The confuls then again affembled the people by centuries, and had the decree of Tarquin's banifhment confirmed; a rex facrorum was elected to prefide at the facrifices, and many of the laws of Servius Tullius were revived to the great joy of the people, who were thas reftored to their ancient right of voting in all important affairs. Tarquin, however, refolved not to part with his kingdom on fuch eafy terms. Having wandered from city to city in order to move compaffion, he at length made 'Tarquinii the feat of his refidence; where he engaged the inhabitants to fend an embalfy to Rome, with a modeft, fubmiffive letter from himfelf, directed to the Roman people. The ambaffadors reprefented in fuch frong teims to the fenate how reafonable it was to let the king be heard b fore be was condemned, and the danger which threatened the fate from the neighbouring powers if that common juftice were refufed, that the confuls inclined to bring thefe agents before the people, and to leave the decition thereof to the curia; but Valerius, who had been very active in the revolution, frenuoufly oppofed this, and by his influence in the fenate got it prevented. As that illuftrious body had been greatly thinned by the murders committed by Tarquin, new mimbers were clected from among the knights, and the ancient number of 300 again completed. The old fenators had heen called patres or "fathers;" and as the names of the new ones were now written on the fraill roll, the whole body received the nare of patros conforiti.

The old king was not to be fciled by a fingle at-

## R O M

tempt. He prevailed on the inhabitants of Tarquinii to fend a fecond embafy to Rome, under pretence of demanding the eftates of the exiles, but with private inftructions to get the confuls affaffinated. The reftoration of the eftates of the exiles was oppofed by Brutus, but Collatinus was for complying with it ; whereupon Brutus accufed his colleagne of treachery, and of a defign to bring back the tyrant. The matter was then referred to the people, where it was carried by one vote in favour of the Tarquins. But whillt the people A confpi vote in favour of the Tarquins. But whilit the people a conipi-
were employed in loading carriages with the effects of racy formthe exiles, and in felling what could not be carried off, the ambaffadors found means to draw fome of the neareft relations of the confuls into a plot with them. Thefe were three young noblemen of the Aquilian family (the fons of Collatinus's fifter), and two of the Vite. iii (whofe fifter Brutus had married) ; and thefe laft engaged Titus and Tiberius, the two fons of Brutus, in the fame confpiracy. They all bound themfelves by folemn oaths, with the dreadful ceremony of drinking the blood of a murdered man and touching his entrails. They met at the houfe of the Aquilii, where they wrote letters to Tarquin and gave them to the ambaffadors. But though they ufed all imaginable precaution, their proceedings were overheard by one Vindicius a flave, who immediately commonicated the whole to Valerius; upon which all the criminals were apprehended. Brutus Aood judge over his own fons; and, notwithonding the intercfion of the whole afembly, Brutus and the tears and lamentations of his children, commanded them to be beheaded; nor would he depart till he faw the execution of the fentence. Having performed this piece of heroic barbarity, he quitted the tribunal, and left Collatinus to perform the reft. Collatinus, however, being inclined to fpare his nephews, allowed them a day to clear themfelves; and caufed Vindicius, the only witnefs againft them, to be delivered up to his mafters. This roufed the indignation of the people in general, efpecially of Valerius, who had promifed to protect the witnefs, and therefore he refufed to deliver him up to the lictors. The multitude called aloud for Brutus to return; which when he had done, he told them that he had executed his two fons in confequence of his own paternal authority over them, but that it belonged to the people to determine the fate of the reft. Accordingly, by a decree of the curix, all the delinquents fuffered as traitors except the ambaffadors, who were fpared out of refpect to their character. The flave Vindicius had his liberty granted him; and was prefented with 25,000 afes of brafs, in value about 360 Spanifh dollars. The decree for reftoring the eftates of the exiled Tarquins was annulled, their palaces were deftroyed, and their lands: divided among the indigent people. The public only retained a piece of ground near the Campus Martius, which the king had ufurped. This they confecrated to Mars, and it afterwards tecame a common field where the Roman youth exercifed themfelves in ranning and wreftling. But after this confecration, the fuperfitious Romans fcrupled to ufe the corn whicis they found there ready reaped to their hands: fo that, with fome trees, it was thrown into the Tiber; and the water being low, it fopped in the middle of the ri. ver, and began to form a fine inland named afterwards. Infitla Satra

The behaviour of Brutus towards his two fons Aruck

Rome. fuch a terror into the Romans, that farce any perfon Whrlt oppofe him ; and therefore, as he hated Collatinus, he openly accufed him before the people, and wilhout
65 cyemony depofed him from the confulfhip, banith ng Depoles his him at the fame time from Rome. The multitude ac-coll-gut quiefed in every thing he faid, and refufed to hear cvllatinus. Collatinus fpeak in his own defence; fo that the conful was on the point of being driven out with ignominy and difgrace, when Lucretius interpofed, and prevailed up n B Butus to allow his colleague quietly to refign the fufces, and retire of his own accord from the city. Brutus then, to remove all fufpicions of perfonal enmi:y, procured him a prefent of 20 talents out of the pablic treafury, to which he added five of his own. Collatinus then retired to Lavinium, where he lived in peace, and at laft died of old age.

After the abdication of Collatinus, Valerius was chofen in his room; and as his temper agreed moch better with Brutus than that of Collatinus, the two confuls lived in great harmony. Nothing, however, could make the dethroned king forego the hope of recovering his kingdom by force. He firft engaged the Volfci and Tarquinienfes to join their forces in order to fupport his rights. The confuls marched out without delay to meet them. Brutus commanded the horfe and Valerius the foot, drawn up in a fquare battalion. The two armies being in fight of each other, Brutus advanced with his cavalry, at the fame time that Arunx, one of Tarquin's fons, was coming forward with the enemy's horfe, the were actuated only by motives of hatred, without thoughts of felf-prefervation, both of them were pierced through with their lances. The death of the two generals ferved as a prelude to the battle, which continued with the utmoft fury till night, when it could not be known which fide had got the vittory, or which had loft the greateft number of men. A report was fpread, however, that a voice had been heard out of a neighbouring wood, declaring the Romans conquerors; and this, probably a Aratagem of Valerius, operated fo powerfully on the fupertitious minds of the Volfci, that they left their camp in confufion, and returned to their own country. It is faid that Valerius, having caufed the dead to be numbered, found that the Volfci had loft 11,300 men, and the Romans only one fhort of that number.

Valerius being left without a colleague in the confulthip, and having for fome reafons delayed to choofe one, began to be furpected by the people of afpiring at the fovereignty; and thefe fufpicions were in fome meafure countenanced by his building a fine houfe on the fteep part of the hill Palatinus, which overlooked the forum, and was by them confidered as a citadel. But of this Valerius was no fooner informed, than he caufed this houfe to be pulled down, and immediately called an affembly of the people for the election of a conful, in which he left them entirely free. They chofe Lucretius; and, being afhamed of having furpected Valerius; they complimented him with a large ground. plot in an agreeable place, where they built him a houfe. The new conful died a few days after his prozotion, fo that Valerius was once more left fole go.
vernor. In the interval betwixt the death of Lutcre. tius and the choics of another conful, Valerius gave the people fo many friking proofs of his attachment to their intereft, that they beftowed upon him the furname of Popicold or "P pupular;" nor was he ever called by another name afterwards.
When Poplicola's year of confullhip expired, the Romans thought fit, in confequence of the critical fituàtion of affairs, to eleet him a fecond time, and joined with him T. Lucretius, the brother of the famous Lu. cretia. They began with reftoring the cenfus and luArum; and found the number of Roman citizens, at or above the age of puberty, to amount to 130,000 . As they apprehended an attack from the Latins on account of Tarquin, they were at great pains to fortify Sinquirinum or Singliuria, an important poft on that fide. Contrary to their expectations, however, the Latins remained quiet; but an haughty embaffy was received from Porfena king of Clufium in Hetruria, commanding them either to take back the Tarquins to vades the Rome, or to reftore them their eftates, To the firf Rumain of thefe demands the confuls returned an abfolute re- territories, fufal: and, as to the fecond, they anfwered, that it was impracticable ; a part of thofe eftates having been confecrated to Mars, and the reft divided among indigent people, from whom they could not be recovered. The imminent danger which now threatened the city, procured Valerius the honour of a third coufullhip; and with him was joined Horatius Pulvilius, who had enjoyed the dignity for a few months before in the interval betwixt the death of Lucretius and the expiration of the firt confulate.
While the Romans were making the moft vigorous And ${ }^{69} \mathrm{l}_{\mathrm{c}}$ preparations for defence, Porfena; attended by his fon feats their Arunx and the exiles, marched towards the city at the arny. head of a formidable army, which was quickly joined by a confiderable body of Latins under Marrilins, the fon-in-law of Tarquin. The confuls and the fenate took all imaginable care to fupply the common people. with provifions, left famine fhould induce them to open the gates to Tarquin; and they defired the country people to lodge their effects in the fort Janiculum, which overlooked the city, and which was the only fortified place poffeffed by the Romans on that fide the Tiber. Poriena, however, foon drove the Romans out of this fort; upon which the confuls made all their troops pafs the river, and drew them up in order of battle to defend the bridge, while Porfena advanced to engage them. The victory was a long time dotabtful, but at laft the Romans fled. Horatius Cocles, nephew Bravery of to the conful, with Sp . Lartius and T. Herminius, Horatius who had commanded the right-wing, polted themfelves Cocles. at the entrance of the bridge, and for a long time bravely defended it : but at laft, the defenfive arms of Lartius and Herminius being broken, they retired; and then Horatius defiring them to advife the confuls from him to cut the bridge at the other end, he for a while fuftained the attack of the enemy alone At latt, being wounded in the thigh, and the fignal giventhat the bridge was almof broken down, he leaped into the river, and fwam acrofs it through a fhower of darts. The Romans, in token of gratitude for this eminent fervice, erected a flatue to him in the temple of Vulcan, gave him as much land as he himfelf with one yoke of oxen could plough in one day; and each of the inha-

## R O M

bitants, to the number of 300,000 , gave him the value
of as much food as each confumed in a day. But notwithtanding all this, as he bad loft one eye, and from his wounds continued lame throughout the remainder of his life, thefe defects prevented his ever being raifed to the confulate, or invefted with any military command.

The city was not yet fully invefted; but as it was very difficult to find provifions for fuch a multitude, the inhabitants foon began to be in want. Porfena being informed of their difficulties, told them that he would fupply them with provifions if they would take back their old mafters; but to this they replied, that hunger was a lefs evil than flavery and oppreffion. The conftancy of the Romans, however, was on the point of failing, when a young patrician, named Mutius Cor$d u s$, with the confent of the fenate and confuls, undertook to affaffinate Porfena. He got accefs to the He-

71
Attempt
of Mutius
Cordus to affaffinate Porfena, way to the king's tent. It happened to be the day on which the troops were all reviewed and paid; and Porfena's fecretary, magnificently dreffed, was firting on the fame tribunal with the king. Mutius, mittaking him for Porfena, inflantly leaped upon the tribunal and killed him. He then attempted to make his efcape; but being feized and brought back, he owned his defign; and with a countenance exprefive of defperate rage and difappointment, thruft his hand which had miffed the blow into a fan of burning coals which ftood by, and there held it for a confiderable time. On this, Porfena, changing his refentment into admiration, granted him his life and liberty, and even reftored him the dagger with which he intended to bave flabbed himelf Mutius took it with his left hand, having lon the ufe of the other; and from this time had the name of Scavola, ir " leit handed." Hc then, in order to induce Porfena to break up the figge, invented a flory that 300 young Romans, all of them as refolute as himedif, hal fworn to take away the life of the king of Hetruria, or to perihh in the attempt. This had the defired effect ; Porrena fent deputies to Rome, whofe only demands were, that the Romans fhould reftore the eftates of the Tarquins, or give them an equivalent, and give back the feven fmall towns which had been formerly taken from the Veientes. The latter of there demands was cheerfully complied with ; but the former was fill refured, until Porfena fhould hear the frong reafons they had to urge againf it. A truce being agreed on, deputies were fent to the Hetrurian camp to plead the Roman caufe againt the Tarquins, and with them ten young men, and as many virgins, by way of hoftages for purfurming the other article.
The reception which Porfena gave the deputies raifed the jealoufy of the Tarquins; who fill retaining their ancient pride, refured to admit Porfena for a judge between them and the Rcmans. But the king without any regald to their oppofition, refelved to fatisfy hinielf, by an exact inquiry, whether the protection he lad give: the Targuins was jutt. But while the caufe was ready to be opened before the Roman deputies, news were brought that the young women whom the R mans had fent as hoftages had ventured
to fwim acrofs the Tiber, and were returned to Rome. They had gone to bathe in the river, and Clxlia hap-
fight raifed in her a defire of returning to it. She therefore ventured to fwim acrofs the river ; and having encouraged her companions to follow her, they all gtt fafe to the oppofite fhore, and returned to their fathers houfes. The return of the hoftages gave the conful Poplicola great uneafinefs; he was afraid left this rath action might be imputed to want of fidelity in the Romans. To remove therefore all fufpicions, he fent a deputation to the Hetrurian camp, affuring the king that Rome had no fhare in the foolifh attempt of the young women ; and promifing to fend them immediately back to the camp from whence they had fled. Porfona was
eafily appeafed; but the news of the fpeedy return of Treacliery the hoftages being known in the camp, the Tarquins, of the Tarwithout any regard to the truce, or refpect to the king quins. their protector, lay in ambufh on the road to furprife them. Poplicola having put himfelf at the head of the Roman troops who efcorted them, fuftained the attack of the Tarquins, though fudden and unexpected, till his daughter Valeria rode full fpeed to the Hetrurian camp. and gave notice of the danger her father and companions were in ; and then Arunx, the king's fon flying with a great body of cavalry to their relief, put the aggreffers to the rout.

This notorious piece of treachery in the Tarquins gave Porfena ftrong fufpicions of the badnefs of their caufe. He therefore affembled the chief commanders of the Hetrurians ; and having heard in their prefence the complaints of the Romans, and the juflification of their proceedings againft the Tarquins, he was fo fruck with horror at the recital of the crimes the Targuins were $9_{4}$ charged with, that he immediately ordered them to bandons leave his camp; declaring, that he renounced his alli- their caufe. ance with them, and would no longer continue the hofpitality he had fhown them. He then commanded the ten young virgins to be brought before him and inquired who was the firlt author and chief manager of the enterprife. They all kept filence, till Clælia herfelf, with an air of ittrepidity, confeffed, that the alone was guilty, and that the had encouraged the others by her advice. Upon this the king, extolling her refolution above the bravery of Horatius and the intrepidity of Mutius, made her a prefent of a fine horfe, with fumptuous furniture. After this he concluded a peace with the Romans, and reftored to them all their hoftages ; declaring, that their bare word was to him a fufficient fecurity for the performance of the articles.
And now Porlena being about to return to Clufum, gave, betore hi departure, a further teftimony of his refpect and friendfhip for the Romans. He knew that Rome was greatly diftreffed for want of provifions; but being afraid to offend the inhabitants by relieving them in a direct manner, he ordered his foldiers to leave behind them their tents and provifions, and to earry nothing with them but their arms. As his camp abounded with all forts of provitions, Rome was hereby much relieved in her wants. The moveables and corn of the Hetrurians were fold by auction to private perfons; and on this occation the Romaus took up the cuftom of making a proclamation by anderald, whenever any effects belonging to the public were to be fold, in the following words, Theje are Porfena's gsofls. The defign of this was to preferve the memory of that prince's kindnefs. The fenate, not fatisfied with this, erected a flatue of the king near the comitium, and fent an

## $\mathrm{ROM} \quad\left[\begin{array}{ll}344\end{array}\right] \quad \mathrm{R} O M$

Rone. embally to him with a piefent of a throne adorned with ivory, a feeptre, a crown of gold, and a triumphal robe.

Thus the Romans efcaped the greateft danger they bad hitherto been in. However, they did not yet enjoy tranquility. The Sabines revolted, and continued the war for fome time with great obftinacy: but being defeated in feveral engagements, they were at laft obliged to fubmit ; and fcarce was this war ended, when ano- Tarquin. Bef re they began this war, however, an embaffy was fent to Rome, the purport of which was, that the Romans thould raife the fiege of Fidenx which had revolted, and receive the Tarquins; who, on their part, fhould grant a general amnefty. The ambaffadors were to aliow the Romansa whole year to confider on thofe overtures; and to threaten them with a war in cafe they refufed to comply with them. The chief view of Tarquin and his partians in promoting this embaffy was, to lay hold of that oportunity to raife a fedition in the city. To the ambaffadors, therefore, of the Latins, he joined fome of his own emiffaries, who, on their arrival in the city, found two forts of people difpofed to enter into their meafures; to wit, theflaves, and the meaner citizens.

The flaves had formed a confpiracy the year before to feize the Capitol, and fet fire to the city in feveral quarters at the fame time. But the plot being difeovered, thofe who were concerned in it had been all crucified, and this execution had highly provoked the whole body of flaves. As to the meaner citizens, who were for the moft part overwhelmed with debt, and cruelly ufed by their creditors, they were well apprifed that there could happen no change in the government but to their advantage. Thele were the confpirators pitched upon, and to them were given the following parts to act : the citizens were to make themfelves matters of the ramparts and gates of the city, at an appointed hour of the night; and then to raife a great fhout as a fignal to the flaves, who had engaged to maffacre their mafters at the fame inftant : the gates of the city were then to be opened to the Tarquins, who were to enter Rome while it was yet reeking with the blood of the fenators. The confpiracy was ripe for execution, when Tarquin's principal agent, Publius and Marcus, both of his own name and family, being terrified with frightful dreams, had not courage enough to proceed in their defign till they had confulted a diviner. However, they did not difover to him the confpiracy; but only afked him in general terms, what fuccefs they might expeft in a project
svill end in your ruin; difburden yourfelves of fo beavy a $l_{\text {oad. }}$. Heretapon the Tarquins, fearing left fome of the other confpirators frould be before hand with them in informing, went immediately to S. Sulpitius, the only conful then at Rome, and difcovered the whole matter to him. The conful greatly commended them, and detained them in his houfe, till, by private inquiries, he was aflured of the cruth of their depofitions. Then he alfembled the fenate, and gave the Latin ambaffadors their audience of leave, with an anfwer to their propofals; which was, that the Romans would neither receive the Tarquins, nor raife the fiege of Fidenx, being all
to a man ready to facrifice their lives in defence of their liberties, and willing to undergo any dangers rather than fubmit to the government of a tyrant.

The ambalfadors being difmiffed with this anfwer, and conducted out of the city, Sulpitius laid open to the fathers the dreadful confpiracy. It ftruck them with horror: but they were all at a lofs in what manner they fhould apprehend and punifh the guilty; fince, by the law of Poplicola, there was an appeal to the people in all capital cafes; and the two witneffes, who were ftrangers, might be excepted againtt by Roman citizens. In this perplexity they left the whole conduct of this critical afair to Sulpitius; who took a method which he thought would equally ferve to prove the guilt and punifh the guilty. He engaged the two informers to affemble the confpirators, and to appoint a rendezvous at midnight in the forum, as if they defigned to take the lalt meafures $f, r$ the execution of the cnterprife. In the mean time be ufed all proper means to fecure the city, and ordered the Roman knights to hold themfelves ready, in the houfes adjoining to the forum, to execute the orders they fhould receive. The confpirators met at the time and place appointed by the two Tarquins; and the knights, upon a fignal agreed on beforehand, inveited the forum, and blocked up all the avenues to it fo clofely, that it was impoffible for any of the confpirators to make their efcape. As foon as it was light, the two confuls appeared with a ftrong guard on the tribunal ; for Sulpitius had fent to his colleague Manius, who was befieging Fidenæ, defiring him to haften to the city with a chofen body of troops. The people were convened by curiz, and acquainted with the confpiracy which had been formed againlt the common liberty. The accufed were allowed to make their defence, if they had any thing to offer againlt the evidence: but not one of them denying the fact, the confuls repaired to the fenate, where fentence of death was pronounced againit the confpirators, in cafe the people approved it.
This decree of the fenate being read to and approved The con by the affembly, the people were ordered to retire, and rators pas the confpirators were delivered up to the foldiers, who nilhed. put them all to the fword. The peace of Rome was thought fufficiently fecured by this froke.of feverity ; and therefore, though all the confpirators were not punifhed with death, it was judged proper not to make any further inquiries. The two informers were rewarded with all the privileges of Roman citizens, 100,000 afes, and 20 acres of land. Three feftival-days were appointed for expiations, facrifices, and public games, by the way of thankfgiving to the gods. But the general joy was difturbed by a melancholy accident: as the people were conducting Manius Tullius the conful from the circus to his houfe, he fell from his chariot, and died three days after.
The city of Fidenx was not yet reduced : it held out during the following confullhip of T. Exbutius and P. Veturius; but was taken the next year by T. Lartius, who, together with $Q$. Clalius, was raifed to the confular dignity. The Latins, enraged at the lofs of this town, began to complain of their leading men; which opportunity Tarquin and Mamilius improved fo far, as to make all the Latin cities, 24 in rumber, enter into an alliance againf Rome, and to bind themfelves by oath never to violate their engagements. The La-

# R O M <br> [ 345 ] <br> R O M 

Rome. tins made valt preparations, as did likewife the Romans; but the latter could procure no affiftance from their n iighbours. As the Latin nation was much fuperior to them in ftrength, they fent deputies to folicit fuccours from the feveral flates with which they were furrounded: but their negociations proved every where unfucceffful; and, what was worfe than all, the republic had rebellious fons in her own bofom, who refufed to
lents of his colleague; nor were they difappointed in their expectations. But Lartius, with the fame readinefs, named Clolius; and the only conteft was, which of the two fhould raife the other to the fupreme autho-

 rounded: but their negociations proved every where nity to his colleague, till Clelius, ftarting up on a fud-
unfucceffful; and, what was worfe than all, the republic den, abdicated the confulfhip, and, after the manner
had rebellious fons in her own bofom, who refufed to of an interrex, proclaimed Titus Lartius dictator, who
lend their aid in defence of their country. The poorer thereupon was obliged to take upon him the government

Rome.
mony that reigned between them and the people, thought it expedient to create a dictator. The two confuls were therefore impowered to name one of themfelves to that dignity; whereupon Virginius readily yielded it to his colleague Pofthumius, as the more able commander. The new dictator, having created Æebutius Elva his general of the horfe, and divided his army into four bodies, left one of them, under the command of Sempronius, to guard the city; and with the other three, commanded by himfelf, Virginius, and Rebutius, marched out againft the Latins, who, with an army of 40,000 foot and 3000 horle, under the command of Sextus Tarquinius, Titus Tarquinius, and Mamilius, had already made themfelves mäfters of Cor* bio, a Itrong-hold belonging to the republic, and put the garrifon to the fword. Pofthumius encamped in the night on a fteep hill near the lake Regillus, and Virginius on another hill over-againf him. Æbutius was ordered to march filently in the night, with the cavalry and light-armed infantry, to take poffeffion of a third hill upon the road, by which provifions muft be brought to the Latins.

Before Æbutius had fortified his new camp, he was vigoroufly attacked by Lucius Tarquinius, whom he repulfed three times with great lofs, the dictator having fent him a timely reinforcement. After this, 平butius intercepted two couriers fent by the Volfci to the Latin generals, and, by letters found upon them, difcovered, that a confiderable army of the Volfci and Hernici were to join the Latin forces in three days. Upon this intelligence, Pofthumius drew his three bodies of troops together, which amounted in all to no mose than 24,000 foot and roco horfe, with a defign to engage the enemy before the arrival of the fuccours they expected. Accordingly he encouraged his men, and, with his army in battle array, advanced to the place where the enemy was encamped. The Latins, who were much fuperior to the Romans in numbers, and befides began to want provifions, did not decline the engagement. Titus Tarquinius, at the head of the Roman exiles and deferters, was in the centre, Mamilius in the right wing, and Sextus Tarquinius in the left. In the Roman army the diftator commanded in the centre, Rbutius in the left wing, and Virginus in the right.

The firft body which advanced was that of the dictator; and, as foon as it began to march, T. Tarquinius, fingling out the dictator, ran full fpeed againft him. The dictator did not decline the encounter, but, flying at his adverfary, wounded him with a javelin in the right fide. Upon this, the firft line of the Latins advanced to cover their general; but he being carried out of the field, they made but a faint refiftance when charged by the troops of the dictator. They were defitute of a leader; and therefore began to retire, when Sextus Tarquinius, taking the place of his brother, brought them back to the charge, and renewed the fight with fuch vigour, that the victory in the centre was ftill doubtful. On the fide of Mamilius and Fbutius, both parties, encouraged by the example of their leaders, fought with incredible bravery and refolution. Efter a long and bloody contelt, the two generals agreed to determine the doubtful victory by a fingle c.mbat. Accordingly the champions pulhed on their i) Ifes againlt each other. Fbutius with his lance
wounded Mamilius in the breaft; and Mamilius with his fword Ebutius in the right arm. Neither of the wounds were mortal; bat, both generals falling from their horfes put an end to the combat. Marcus Valerius, the brother of Poplicola, fupplying the place of不butius, endeavoured, at the head of the Roman horfe, to break the enemy's battalions; but was repulfed by the cavalry of the Roman royalifts. At the fame time Mamilius appeared again in the van, with a confiderable body of horfe and light-armed infantry. Valerius, with the affiftance of his two nephews, the Sons of Poplicola, and a chofen troop of volunteers, attempted to break through the Latin battalions, in order to engage Mamilius; but, being furrounded by the Roman exiles, he received a mortal wound in his fide, fell from his horfe, and died. The dead body was carried off by the two fons of Poplicola, in fpite of the utmoft efforts of the exiles, and delivered to Valerius's fervants, who conveyed it to the Roman camp; but the young heroes being afterwards invefted on all fides, and overpowered by numbers, were both killed on the fpot. Upon their death, the left wing of the Romans began to give ground, but were foon brought back by Pofthumius; who, with a body of Roman knights, Aying to their afliftance, charged the royalifts with fuch fury, that they were, after an obftinate refiftance obliged to give way, and retire in the utmoft confufion. In the mean time Titus Horminius, one of the dictator's lieutenants, laving rallied thofe who had fled, fell upon fome clofe battalions of the enemy's right wing, which fill kept their ground under the command of Mamilius, killed him with his own hand, and put that body to llight. But while he was bufy in Atripping the budy of his enemy, he received himfelf a wound, of which he died foon after.

Sextus Farquinitus in the mean time maintained the fight with grear bravery, at the head of the left wing, againt the conful Virginius; and had even broke thro' the right wing of the Roman army, when the dictator attacked him unexpeciedly with his victorious fquadrons. Then Sextus, having loft at once all hopes of vistory, threw himfelf, like one in defpair, into the midit of the Roman knights, and there funk under a multitude of wounds, after he had diftinguifhed himfelf in a moft eminent manner. The death of the three generals was followed by the entire defeat of the Latin entirely de army. Their camp was taken and plundered, and molt feated, and of their troops cut in pieces; for, of the 43,000 men their camp who came into the field, fcarce 10,000 returned home. The next morning the Volfci and Hernici came, according to their agreement, to affilt the Latins; but finding, upon theis arrival, how matters had gone, fome of them were for falling upon the Romans before they could recover from the fatigue of the preceding day ; but others thought it more fafe to fend ambaffadors to the dictator, to congratulate him on his vidory, and affure him that they had left their own country with no other defign than to affif Rome in fo dangerous a war. Pofthumius, by producing their couriers and letters, gave them to underftand that he was well apprifed of their defigns and treacherous proceedings. However, out of a regard to the law of nations, he fent them back unhurt, with a challenge to their generals to fight the next day; but the Volfci, and their confederates, not caring to engage a victorious army, decamped

## R O M

Rome. camped in the night, and returned to their refpective

8y
Tarquin dies. countries before break of day.

The Latins having now no remedy but an entire fubmiffion, fent ambaffadors to folicit a peace at Rome, yielding themfelves abfolutely to the judgment of the fenate. As Rome had long fince made it a maxim to fpare the nations that fubmitted, the motion of Titus Lartius, the late dictator, prevailed; and the ancient treaties with the Latins were renewed, on condition, however, that they flould reftore the prifoners they had taken, deliver up the deferters, and drive the Roman exiles out of Latium. Thus ended the laft war which the Romans waged with their neigbours on account of their banifhed king; who, being now abandoned by the Latins, Hetrurians, and Sabines, retired into Campania, to Aritodemus tyrant of Cumx, and there died, in the goth year of his age and 14 th of his exile.

The Romans were no fooner freed from thefe dangerous wars, than they began to opprefs one another; and thofe domeftic feuds took place which continued more or lefs during the whole time of the republic.

New di
fturbances at Rome.

The firft difturbances were occafioned by the oppreffion of the plebeians who were debtors to the patricians. The fenate, who were at the head of the patricians, chofe to the confulate one Appius Claudius, who violently oppofed the pretenfions of the plebeians; but gave him for his colleague one P. Servilius, who was of a quite contrary opinion and difpofition. The confequence of this was, that the confuls difagreed; the fenate did not know what to determine, and the people were ready to revolt. In the misit of thefe dilturbances, an army of the Volfci advanced towards Rome; the people refufed to ferve; and had not Servilius procured fome troops who ferved out of a perfonal affec. tion to himfelf, the city would have been in great danger.

But though the Volfci were for this time driven back, they had no intention of dropping their defigns; they engaged in an alliance with them the Hernici and Sabines. In the mean time, the difputes at Rome continued with as much violence as ever. Nay, though they were exprefsly told that the Volfcian army was on its way to befiege the city, the plebeians abfolutely refufed to march againft them; faying that it was the fame thing whether they were chained by their own countrymen or by the enemy. In this extremity Setvilius promifed, that when the enemy were repulfed the fenate would remit all the debts of the plebeians. This having engaged them to ferve, the conful marched out at their head, defeated the enemy in a pitched buttle, and took their capital, giving it up to be plundered by his foldiers, without referving any part for the public treafury.

Whatever might have been the reafons of Servilius for this Itep, it furnifhed Appius with a pretence for refufing him a triumph, as a man of a feditious difpofition who aimed at popularity by an exceffive indulgence and profufenefs to his foldiers. Servilius, incenfed at this irjutice, and encouraged by the acclamations of the people, decreed himfelf a triumph in fpite of Appius and the fenate. After this he marched againit the Aurunci, who had entered Latium; and, in conjunction with Pofthumius Regillens, he utterly defeated them, and obliged them to retire into their own country. But neither the fervices of the general nor

A oldiers could mollify the fenate and patrician pairy. Appius even doubled the feverity of his judgments, and imprifoned all thofe who had been fet at liberty during the war. The prifoners cried for relief to Servilius; but he could not obtain the accomplifhment of thofe promifes which the fenate never had meant to perform; neither did he choofe to quarrel openly with the whole patrician body; fo that, ftriving to preferve the friendinip of both parties, he incurred the hatred of the one and the contempt of the other. Perceiving therefore that he had loft all his interelt with the plebeians, he joined with the patricians againft them; but the plebeians rufhing tumultuoufly into the forum, made fuch a noife, that no fentence pronounced by the judges could be heard, and the utmolt confufion prevailed through the whole city. Several propofals were made to accommodate matters; but through the obftinacy of Appius and the majority of the fenators, they all came to nothing. In the mean time it was neceffary to raife an army againft the Sabines, who had invaded the territories of the republic; but the people refufed to ferve. Manius Valerius, however, brother to the celebrated Poplicola, once more prevailed upon them to march out againit the common enemy ; having previoully obtained affurance from the fenate that their grievances fhould be redreffed. But no fucner had victory declared in favour of the Romans, than the fenatc, apprehending thatt the foldiers at their return would challenge Valerius, who had been nominated dictator, for the performance of their promifes, defired him and the two confuls to detain them ftill in the field, under pretence that the war was not quite finifhed. The confuls obeyed; but the dictator, whofe authority did not depend on the fenate, difbanded his army, and duclared his foldiers free from the oath which they had taken; and as a further proof of his attachment to the plebeians, he chofe out of hat order 400 , whom he invefted with the dignity of knights. After this he claimed the accomplifhment of the promifes made by the fenate; but inftead of performing them, he had the mortification to hear himfelf loaded with reproaches; on which he refigned his office as dictafor, and acquainted the people with his inability to fulfil his engagements to them. No fooner were thefe tranfactions known in the army, than the foldiers, to a resrevolt, man, deferted the confuls and other officers, and reti-but all the red to a hill called afterwards Mons Sacer, three miles troubles ire from Rome, where they continued to obferve an exact ended by difcipline, offering no fort of violence whatever. The ereating fenate, after taking proper meafures for the defence of tribunes the city, fent a deputation to the malecontents; but pecple. it was anfwered with contempt. In fhort, all things tended to a civil war, when at laft matters were com. promifed by the inftitution of tribunes of the people, who had power to prevent the paffing of any law that might be prejudicial to the people, and whofe perfons were declared facred, infomuch that whoever offered the leaft violence to the perfon of a tribune was declared accurfed, his effects were to be confecrated to Ceres, and he himfelf might be killed with impunit $y$; and all the Romans were to engage themfelves, in th ir own name and that of their pofterity, never to repeal this law. The people, after thefe regulations, erected an altar to Jupiter the Terrible, on the top of the hill where their camp had food; and when they had offer-

## R O M

Rome.
them on afrefh to the charge, drove back the enemy
within their walls, and, entering the city with them, them on afrefh to the charge, drove back the enemy
within their walls, and, entering the city with them, made himfelf mafter of it. This exploit atchieved, he with all expedition put himfelf in the foremolt ranks of the conful's main army, that was juft gcing to engage with the Antiates, who were come to the relief of the place; and there he behaved with equal bravery, and had equal fuccefs.

The next day the conful, having erected his tribunal before his tent, called the foldiers together. His whole fpeech to them was little more than a panegyric upon Marcius. He put a crown upon his head ; affigned him a tenth part of all the fpoil; and, in the name of the republic, made him a prefent of a fine horfe with ftately furniture, giving him leave at the fame time to choofe out any ten of the prifoners for himfelf; and $l_{\text {d ffly, }}$, he alioted him as much money as he could carry away. Of all thefe offers Marcius accepted only the horfe, and one captive of the ten, an old friend of his fainily, that he might give him his liberty. To add to the glory of the brave warrior, the conful bett,wed on him the furname of Coriolanus, transferring thereby from himfelf to Marcius all the honour of the conqueft of Corioli. Cominius, at his return to Rome, difbanded his army; and war was fucceeded by works of religion, public games, and treaties of peace. A cenfus and a luftrum clofed the events of this memorable con-

91 Niminution of the power of the Ro: muns. mp. There appeared to be in Rome at thas the no more than 110,000 men fit to bear arms; a number by many thoufands lefs than at the laft enrollment. Doubtlefs great numbers had run away to avoid being flaves to their creditor:.

Under the following adminifration of T. Geganius and P. Minuciuc, Rome was terribly afliciced by a famine, occafioned chieAty by the neglect of ploughing and fowing during the late troubles; for the fedition had happened after the autumnal equinox, absut fow-inc-time, and the accommodation was not made till their retreat, they returned to Rome, led by their new magiftrates and the deputies of the fenate.

Thus the Roman confitution, which had originally been monarchic, and from thence had paffed into an ariltecracy, began now to verge towards a democracy. The tribunes immediately after their election obtained permiffion from the fenate to elect two perfons as their minitters or affitants, who fhould eafe them a little in the great multiplicity of their affairs. Thefe were called plebeian adiles; and afterwards came to have the infpection of the public baths, aqueducts, with many other offices originally belonging to the confuls, after which they were called fimply adiles.
All oppofition to the making of regular levies being now at an end, the conful Cominius led an army againt the Volfci. He defeated them in battle, and took from them Longula and Polufca; after which he befieged Coricli, a city ftrongly forlified, and which might be called their capital. He carried this place, and gained a victory over the Antiates, the fame day; but Caius Marcius, an eminent patrician, had all the glory of both actions. The troops detached by the conful to fcale the walls of Corioli being repulfed in their firft affault, Marcius rallied the runaways, led , $\stackrel{t}{ }$ litrz, they began to fear that the place mioht be ve. infected; and this apprehenfion became fo univerfal, that not one of them would confent to go thither. Neverthelefs the fenate at length publifhed a decree that all the citizens fhould draw lots; and that thofe to whofe lot it fell to be of the colony fhould inftantly march for Veliirx, or fuffer the fevereft punifhments for their difobedience: fear and hunger made the people comply; and the fathers, a few days after, fent away a fecond colony to Norba, a confiderable city of Latium. But the patricians were difappointed as to the benefit they expected from thefe meafures. The plebeians who remained in Rome being more and more preffed by hunger and want, grew daily more angry with the fenate. At firlt they affembled in fmall companies to vent their wrath in abufive complaints; and at length, in one great body, rufhed all together into the forum, calling out upon their tribunes for fuccour.

The tribuncs made it their bufinefs to heighten the general difcontent. Having convened the Difturbane rius Icilius, chief of the rius Icilius, chief of the college of tribunes, inveighed by the trio moft bitterly agairft the fenate ; and when he had end-buneso ed his harangue, exhorted others to fpeak freely their thoughts; particularly, and by name, calling upon Brutus and Sicinius, the ringleaders of the former fedition, and now ædiles. Thefe men, far from attempting to extinguifh the fire, added fref fuel to it: And the more to inflame the fpirits of the mulvitude, they enumerated all the paft infults which the people had fuffer. ed from the nobles. Brutus concluded his harangue with loudly threatening, that if the plebeians would follow his advice, he would foun oblige thofe men who had caufed the prefent calamity to find a remedy for it; after which the affembly was difmiffed.
The next day, the confuls, greatly alarmed at this commotion, and apprehending from the menaces of Brutus fome very míchievous event, thought it advi-
fable

## R O M

Rome. fable to convene the fenators, that they might confider of the beft means to avert the impending evil. The fathers could not agree in opinion. Some were for employing foft words and fair promifes to quiet and gain over the moit turbulent. But Appius's advice prevailed : which was, that the confuls fhould call the people together, affure them that the patricians had not brought upon them the miferies they fuffered, and promife, on the part of the fenate, all poffible care to provide for their neceffities; but at the fame time fhould reprove the difturbers of the public peace, and threaten them with the fevereft punifhments if they did not amend their behaviour.

When the confuls, towards the clofe of the day, having affembled the people, would have fignified to them the difpofition and intention of the fenate, they were interrupted by the tribunes. A difpute enfued, in which no order or decency was obferved on either fide. Several fpeaking at the fame time, and with great vociferation, no one could be well underftood by the audience. The confuls judged, that being the fuperior magiftrates, their authority extended to all affemblies of the citizens. On the other fide, it was pretended, that the affemblies of the people were the province of the tribunes, as the fenate was that of the confuls.
The difpute grew warm, and both parties were ready to come to blows; when Brutus having put fome queftions to the confuls, ended it for that time. Next day he propofed a law which was carried, that no perfon of the . Whatever fhould interupt a tribune when fpeaking in
people in- an affembly of the people; by which means the influcreales. ence and power of the popular party was confiderably increafed, and the tribunes became formidable opponents to the confuls and patricians. An opportunity foon offered for both parties to try their ftrength. A great fleet of thips laden with corn from Sicily, a great part of which was a prefent from Gelon the king of that country to the Romans, and the reft purchafed by the fenate with the public money, raifed the:r fpiits once more.

But Coriolanus incurred their refentment, by infifting that it fhould not be diftributed till the grievances of the fenate were removed. For this, the tribunes fummoned him to a trial before the people, under pretence

When the appointed day was come, all perfons were filled with the greateft expectations, and a valt concourfe from the adjacent country aflembled and fillid up the forum. Coriolanas, upon this, prefented him. felf before the people with a degree of intrepidity that nerited better fortune. His graceful perfor, his perfuative eloquence, the cries of thofe whom he had faved from the enemy, inclined the audito's t' relent. But being confounded with a new charge which he did not expect, of having embezzled the plunder of Antium, the Tribunss immediately took the votes, and Coriolanus was condemned to perpetual exile.

This fentence againft their braveft defender ftruck the whole body of the fenate with forrow, confernation, and regret. Coriolanus alone, in the midft of the tumult, feemed an unconcerned fpectator. He returned home, followed by the lamentations of hundreds of the molt refpectable fenators and citizens of Rome, to take a lafting leave of his wife, his children and his mother Veturia. Thus recommending his little children to
their care, he left the city, without followers or fortune, to take refuge with Tullus Attius, a man of great power among the Volfcians, who took him under his He leaves protection, and efpoufed his quarrel.

The firlt thing to be done, was to induce the Volfci and joins to break the league which bad been made with Rome; and for this purpofe Tullus fent many af his citizens thither, in order to fee fome games at that time celebrating; but at the fame time gave the fenate private information, that the ftrangers had dangerous intentions of burning the city. This had the defired effect ; the fenate iffued an order that all ftrangers, whoever they were, fhould depart from Rome before funfet. This order Tullas reprefented to his countrymen as an infraction of the treaty, and procured an embalfy to Rome, complaining of the breach, and demanding back all the territories belonging to the Volicians, of which they had been violently difpoffeffed; declaring war in cafe of a refufal: but this meffage was treated by the fenate with contempt.

War being thus declared on both fides, Coriolanus Gainagrcat and Tullus were made generals of the Volfcians; and advantages accordingly invaded the Roman territories, ravaging over the and laying wafte all fuch lands as belonged to the ple- Romans. beians, but letting thofe of the fenators temain untouched. In the mean time, the levies went on very flowly at Rome; the two confuls, who were re-elected by the people, feemed but little filled in war, and even feared to encounter a general whom they knew to be their fuperior in the field. The allies alfo fhowed their fears, and flowly brought in their fuccours; fo that Coriolanus continued tis take their towns one after the other. Fortmne followed him in every expedition; and he was now fo famous for his victories, that the Volfri left their cowns defencelefs to follow him into the field. The very foldiers of his colleague's army came over to him, and would acknowledge no other general. Thus finding himfelt unoppofed in the field, and at the head of a numerous army, he at length invented the city of Rome itfelf, fully refolved to befiege it. It was then Iavell that the fenate and ined pavells the that the fenate and the people unanimoully agreed to city. fend deputies to him, with propolals of reftoration, in cafe he thould driw off his army. Coriolanus received their propofals at the head of his principal officers, and, with the liemmefs of a general that was to give the law, refufed their-offers.

Ancther embafly was now fent forth, conjuring him not to exact from his native city aught but what became Romans to grant. Coriolanus, however, fill perfifted in his former demands, and granted them but three days in which to finifh their deliberations. In this exigence, all that was left was anothor deputation ftil more folems than either of the former, compofed of the pontiffs, the priefts, and the augurs. Thefe, cloathed in their habits of ceremony, and with a grave and mournful deportment, iffued from the cits, ard en. tered the camp of the conqueror: but all in vain, they found him fevere and inflexible as before.

When the people faw them return ineffectually, they began to give up the commonwrealth as loft. Ti:cis temples were filled with old men, with women and $\mathrm{hi}^{1}$ dren, who, proftrate at their altars, put up their ardent prayers for the prefervation of their country. Notling was to be heard but anguifh and lamen:ation, nothin: to be feen but fcenes of affright and diftrefs. At length

Rome.

100 But abandons the cuterprize at the interceffion of his nother.
roI Is affaffinated by the Volfci.
it was fuggefted to them, that what could, not be eftected by the interceffion of the fenate or the adjuration of the priefts, might be brought about by the tears of his wife, cr the commands of his mother. This deputation feemed to be relifhed by all; and even the fenate itfelf gave it the fanction of their authority. Veturia, the mother of Coriolanus, at firft made fome hefitation to undertake fo pious a work : however, the at laft undertook the embaffy, and fet forward from the city, accompanied by many of the principal matrons of Rome, with Volumnia his wife, and his two children. Coriolanus, who at a diftance difcovered this mournful train of females, was refolved to give them a denial, and called his officers round him to be witnefs of his refolution; but, when told that his mother and his wife were among the number, he inftantly came down from his tribunal to meet and embrace them. At firft, the women's tears and embraces took away the power of words; and the rough foldier himfelf, hard as he was, could not refrain from fharing in their diftrefs. Coriolanus now feemed much agitated by contending paffions; while his mother, who faw him moved, feconded her words by the molt perfuafive eloquence, her tears : his wife and children hung round him, intreating for protection and pity; while the fair train, her companions, added their lamentations, and deplored their own and their country's diftrefs. Coriolanus for a moment was filent, feeling the ftrong conflict between honour and inclination: at length, as if rouzed from his dream, he lew to take up his mother, who had fallen at his feet, crying out, "O my mother, thou haft faved Rome, but loft thy fon." He accordingly gave orders to draw off the army, pretending to the officers that the city was too frong to be taken. Tullus, who had long envied his glory, was not remifs in aggravating the lenity of his conduct to his countrymen. Upon their return, Coriolanus was flain in an infurrection of the people, and afterwards honourably buried, with late and ineffectual repentance.

The year following, the two confuls of the former year, Manlius and Fabius, were cited by the tribunes to appear before the people. The Agrarian law, which had been propofed fome time before, for equally dividing the lands of the commonwealth among the

Thus, by threats and well-timed, fubmiffion, he prevailed upon the tribunes to put off their law for a time, and carried himfelf fo as to be a terror to the multitude whenever they refufed to enlift; and their greateft encourager whenever their fubmiffion deferved it. Thus, having reftored that tranquillity to the people which he fo much loved himfelf, he again gave up the fplendors of ambition, to enjoy it with a greater relifh in his little farm.

Cinctinatus was not long retired from his office when a frefh exigence of the flate once more required his affiftance. The 左qui and the Volfci, who, though fill worted, ftill were for renewing the war, made ncw inroads into the territories of Rome. Minutius, one of the confuls who fucceeded Cincinnatus, was fent to oppofe them; but being naturally timid, and rather more atraid of being conquered than defirous of victory, his army was driven into a defile between two mountains, from which, except through the enemy, there was no egrefs. This, however, the Æqui had the precaution to fortify; by which the Roman army was fo hemmed in on every fide, that nothing remained but fubmiffion to the enemy, famine, or immediate dath. Some knights, who found means of getting away privately through the enemy's camp, were the firft that brought the account of this difafter to Rome. Nothing could exceed the confternation of all ranks of people when informed of it. The fenate at firft thought of the other conful ; but not having fufficient experience of his abilities, they unanimoully turned their eyes upon Cincinnatus, and refolved to make him distator. Cincinnatus, the only perfon on whom Rome could now place her whole dependence, was found, as before, by the meffengers of the fenate, labouring in his little field with cheerfal induftry. He was at firt altonifhed at the enfigns of unbounded power with which the deputies came to inveft him ; but ftill more at the approach of the principal of the fenate, who came out to meet him. A dignity fo unlooked for, however, had no effect upon the fimplicity or the integrity of his manners: and being now poffeffed of abfolute power, and called upon to nominate his mafter of the horfe, he chofe a poor man named Tarquitius, one who, like himfelf, defpifed riches when they led to difhonour. Upon entering the city, the dictator put on a ferene look, and intreated all thofe who were able to bear arms to repair before fun-let :o the Campus Martius (the place where the levies were made) with neceffary arms, and provifions for five days. He put himfelf at the head of thefe; and, marching all night with great expedition, he arrived before day within fight of the enemy. Upon his approach, he ordered his foldiers to raile a loud fhout, to apprize the conful's army of the relief that was at hand. The Æqui were not a little amazed when they faw themfelves between two enemies; but Atill more when they perceived Cincinnatus making the Aronget entrenchments beyond them, to prevent their efcape, and inclofing them as they had inclofed the conful. To prevent this, a furious combat enfued; but the Aqui, being attacked on both fides, and unable to refift or fly, begged a ceflation of arms. They offered the dictator his own terms: he gave them their lives; but obliged them, in token of fervitude, to pafs under the yoke, which was two fpears fet upright, and ano. ther acrofs, in the form of a gallows, beneath which

I26 Quelled by Cincinnatus

104 Who faves a confular army from defruction. - people, was the object invariably purfued, and they were accufed of having made unjultifiable delays in put. ting it off.

It feems the Agrarian law was a grant the fenate could not think of giving up to the people. The confuls, therefore, made many delays and excufes, till at length they were once more obliged to have recourfe to a dictator; and they fixed upon Quintus Cincinnatus, a man who had for fome time given up all views of ambition, and retired to his little farm, where the deputies of the fenate found him holding the plough, and dreffed in the mean attire of a labouring hurbandman. He appeared but little elevated with the addreffes of ceremony and the pompous habits they brought him; and, upon declaring to him the fenate's pleafure, he teItified rather a concern that his aid fhould be wanted. However, he departed for the city, where both parties were ftrongly enflamed againft each other: but he was refolved to fide with neither ; only, by a ftrict attention to the interefts of his country, inftead of gaining the confidence of fation, to obtain the eiteem of all.

## ROM

Rome. the vanquifhed were to march. Their captains and ge-
nerals he made prifoners of war, being referved to adorn his triumph. As for the plunder of the enemy's camp, that he gave entirely up to his own foldiers, without referving any part for himfelf, or permitting thofe of the delivered army to have a chare. Thus, having refcued a Roman army from inevitable deltruction, having defeated a powerful enemy, having taken and fortified their city, and, fill more, having refufed any part of the fpoil, he refigned his dictatorihip, after having enjoyed it but $\mathrm{r}_{4}$ days. The fenate would have enriched him; but he declined their proffers, choofing to retire once more to his farm and his cottage, content with temperance and fame.

But this repofe from foreign invafion did not leffen the tumults of the city within. The clamours for the Agrarian law ftill continued, and fill more fiercely,

105
Bravery of
Sicinius
Dentatus.

106 when Sicinius Dentatus, a plebeian, advanced in years, but of an admirable perfon and military deportment, came forward, to enumerate his. hardfhips and his merits. This old foldier made no fcruple of extolling the various merits of his youth; but indeed his atchievements fupported oftentation. He had ferved his country in the wars 40 years; he had been an officer 30 , firft a centurion, and then a tribune: he had fought 120 battles, in which, by the force of his fingle arni, he had faved a multitude of lives : he had gained 14 ci vic, three mural, and eight golden crowns, befides 83 chains, 60 bracelets, 18 gilt fpears, and 23 horfe-trappings, whereof nine were for killing the enemy in fingle combat: moreover, he had received 45 wounds, all before, and none behind. Thefe were his honours : yet, notwithftanding all this, he had never received any fhare of thofe lands which were won from the enemy, but continued to drag on a life of poverty and contempt; while others were poffeffed of thofe very territories which his valour had won, without any merit to deferve them, or ever having contributed to the conqueft. A cafe of fo much hardflip had a ftrong effect upon the multitude ; they unanimoufly demanded that the law might be paffed, and that fuch merit fhould not go unrewarded. It was in vain that fome of the feriators rofe up to fpeak agant it; their voices were drowned by the cries of the people. When reaion, therefore, could n.i longer be heard, paffion, as ufual, fucceeded; and the young patricians, running, furioully into the throng, broke the balloting urns, and difperfed the multitude that offered to oppofe them. For this they were fome time after fined by the tibunes; but their refolution, neverthelefs, for the prefent, put off the $\dot{A}$ grarian law.

The commonwealth of Rome had now for near 60 years been fluctuating between the contending orders that compofed it, till at length, each fide, as if weary, were willing to refpire a while from the mutual exertions of their claims. The citizens, now, therefore, of every rank, began to complain of the arbitrary decifions of their magitrates, and wifhed to be guided by a witten body of liws, which being known might

dors fent to Athens to bringe new Jaws Irom thence. prevent wrongs as well as punifh them. In this both the fenate and the people concurred, as hoping that fuch laws woold put an end to the commotions that fo long had haraffed the fate. It was thereupon agreed, that amballadors fhould be fent to the Greek cities in Italy, and to Athens, to bring home fuch laws from
$35 \mathbf{I} \quad \mathbf{R} O \mathrm{M}$
J
Rome. table and ufeful. For this purpofe, three fenators, Pofthumius, Sulpicius, and Manlius, were fixed upon, and galleys affigned to convoy them, agreeable to the majefty of the Roman people. While they were upon this commiffion abroad, a dreadful plague depopulated the city at home, and fupplied the interval of their ab. fence with other anxiety than that of wifhes for their return. In about a year the plague ceafed, and the ambaffadors returned, bringing home a body of laws, collected from the moft civilized ftates of Greece and Italy, which being afterwards formed into ten tables, and two more being added, made that celebrated code called the Laws of the Twelve Tables, many fragments of which remain to this day.

118
The ambaffadors were no fooner returned, than the Decemiviri tribunes required that a body of men fhould be cho- elected. fen to digeft their new laws into proper form, and to give weight to the execution of them. After long debates whether this choice fhould not be partly made from the people as well as the patricians, it was at lalt agreed that is of the principal fenators fhould be elected, whofe power, continuing for a year, fhould be equal to that of kings and confuls, and that without any appeal. The perfons chofen were Appius and Genutius, who had been elected confuls for the enfuing year; Polthumius, Sulpicius, and Manlius, the three ambaffadors; Sextus and Romulus, former conful, ; with Julius Veturius, and Horatius, fenators of the firft confideration.
The decemviri being now invelted with abfolute power, agreed to take the reins of government by turns, and that each fhould difpenfe jultice for a day.

Thefe magiftrates, for the firt year, wrought wih extreme application: and their work being finifhed, it was expected that they would be contented to give up their offices; but having kn:wn the charms of power, they were now unwilling to refign it : they They betherefore pretended that fome laws were yet wanting come abfoto complete their defign, and intreated the fenate for lute. a contiauence of their offices; to which that body affented.

But they foon threw off the mafk of moderation; and, regardleis either of the approbation of the fenate or tie people, refolved to continue themfelves, againt all order, in the decemvirate. A conduct fo notorious produced difcontents ; and thefe were as fure to produce frefh acts of tyranny. The city was become almoft a defert, with refpect to all who had any thing to lofe; and the decemvirs' rapacity was then only difcontinued, when they wanted frefh objects to exercife it upon. In this ftate of flavery, frofcription, and mutual diftruft, not one citizen was found to firike for his country's freedom; thefe tyrants continued to rule without controul, being conftantly guarded, not with their lictors alone, but a numerous crowd of depen dents, clients, and even patricians, whom their vices had confederated round them.

In this gloomy fituation of the fate, the $\mathbb{F}$ qui and $\begin{gathered}\text { Invafion of }\end{gathered}$ Vulfci, thofe conftant enemies of the Romans, under- the $\AA$ pui took their incurfions, refolved to profit by the inteftine and Vi.i. divitions of the people, and advanced within about 10 miles $f$ Rome

But the decemviri, being put in poffeffion of ail the military as well as of the civil power, divided their ar-

## R OM

Rome. pius in the city, to keep it in awe; the other two were commanded by his colleagues, and were led one againf the 不qui, and the other againft the Sabines. The Roman foldiers had now got into a method of punifhing the generals whom they dilliked, by fuffering themfelves to be vanquifhed in the field. They put it in practice upon this occafion, and fhamefully aban-

111 'The Romans lefeated, doned their camp upon the approach of the enemy. Never was the news of a victory more joyfully received at Rome than the tidings of this defeat: the generals, as is always the cafe, were blamed for the treachery of their men : fome demanded that they fhould be depofed; others cried out for a dietator to lead the troops to conqueft: but among the reft, old Sicinius Dentatus the tribune fpoke his fentiments with his ufual opennefs; and treating the generals with contempt, Thowed all the faults of their difcipline in the camp, and of their conduct in the field. Appius, in the mean time, was not remifs in obferving the difpofition of the people. Dentatus, in particular, was marked out for vengeance, and, under pretence of doing him particular honour, he was appointed legate, and put at the head of the fupplies which were fent from Rome to reinforce the army. The office of legate was held facred among the Romans, as in it were
united the authority of a general, with the reverence due to the priefthood. Dentatus, no way fufpecting his defign, went to the camp with alacrity, where he was received with all the external marks of refpect. But
the generals foon found means of indulging their defire of revenge. He was appointed at the head of 100 men to go and examine a more commodious place for encampment, as he had very candidly affured the commanders that their prefent fituation was wrong. The foldiers, however, who were given as his attendants, were affaffins; wretches who had long been minifters of the vengeance of the decemviri, and who now engaged to murder him, though with all thofe apprehenfions which his reputation, as he was called the Roman $A$ chilles, might be fupp fed to infpire. With thefe defigns, they led him from the way into the hollow bofom of a retired mountain, where they began to fet upon him from behind. Dentatus, now too late, perceived the treachery of the decemviri, and was refolved to fell his life as dearly as he could; he therefore put his back to a rock, and defended himfelf againft thofe who prefled moft clofely. Though now grown old, he had ftill the remains of his former valour, and killed no lefs than 15 of the affailants, and wounded 30. The affaffins now therefore, terrified at his amazing bravery, fhower. ed in their javelins upon him at a diftance; all which he received in his fhield with undaunted retolution. The combat, tho: gh fo unequal in numbers, was managed for fome time with doubtful fuccefs, till at length his aflailants bethought themfelves of afcending the rock againft which he ftood, and thus poured down ftones upon him from above. This fucceeded ; the old foldier fell beneath their united efforts, after having fhown by his death that be owed it to his fortitude, and not his fortune, that he had come off fo many times victorious. The decemviri pretended to join in the general forrow for fo brave a man, and decreed him a funeral, with the firt military honours: but the greatnefs of their apparent diftrefs, compared with their
known hatred, only rendered them ftill more deteftable to the people.
But a tranfaction fill more atrocious than the for- Trasical mer ferved to infpire the citizens with a refolution to flory of break all meafures of obedience, and at laft to reftore Virginia. freedom. Appius, who itill remained at Rome, fitting one day on his tribunal to difpenfe juftice, fiw a maiden of exquifite beauty, and aged about 15 paffing to one of the public fchools, attended by a matron her nurfe. Conceiving a violent paflion for her, he refolved to obtain the gratification of his defire, whatever fhould be the confequence, and found means to inform himfelf of her name and family. Her name was Virginia, the daughter of Virginius a centurion, then with the army in the field; and fhe had been contracted to Icilius, formeriy a tribune of the people, who had agreed to marry her at the end of the prefent campaign. Appius, at firft, refolved to break this match, and to efpoufe her himfelf: but the laws of the Twelve Tables had forbidden the patricians to intermarry with the plebeians; and he could not infringe thefe, as he was the enacter of thim. Nothing therefore remained but a criminal enjoyment; which, as he was long ufed to the indulgence of his paffions, he refolved to obtain. After having vainly tried to corrupt the fidelity of her nurfe, he had recourfe to another expedient, fill more guilty. He pitched upon one Claudius, who had long been the minifter of his plealures, to affert the beautiful maid was his flave, and to refer the caufe to his tribunal for decifion. claudius behaved exact!y according to his inftructions; for entering into the fchool, where Virginia was playing among her female companions, he feized upon her as his property, and was going to drag her away by force, blut was prevented by the people drawn together by her cries. At length, after the firl heat of oppofition was over, he led the weeping virgin to the tribunal of. Appius, and there plaplibly expofed his pretenfions. He afferted, that the was born in his houfe, of a female flave, who fold her to the wife of Virginus, who had been barren. That he had feveral credible evidences to prove the truth of what he faid; but that, until they could come together, it was but reafonable the flave fhould be delivered into his cultody, being her proper malter. Appius feemed to be ftruck with the juftice of his claims. He obferved, that if the reputed facher himeelf were prefent, he might indeed be willing to delay the delivery of the maiden for fome time; but that it was not lawful for him, in the prefent cafe, to detain her from her mafter. He therefore adjudged her to Cl iudius, as his flave, to be kept by him till Virginius thould be able to prove his paternity. This fentence was received with loud clamours and reproaches by the multitude : the women, in particular, came round Virginia, as if willing to protect her from the judge's fury ; while I ilius, her lover, boldly oppofed the decree, and obliged Clau. dius to take refuge under the tribunal of the decemvir. All things now threatened an open infurrection; when Appius, fearing the event, thought proper to fufpend his judgment till the arrival of Virginius, who was then about in miles from Rome, with the army. The day following was fixed for the trial; and, in the mean time, Appius fent letters to the generals to confine Virginius, as his arrival in town might only ferve to

## R O M

Rome. kindle fedition among the people. Thefe letters, however, were intercepted by the centurion's friends, who fent him down a full relation of the defign laid againt the liberty and the honour of his only daughter. Vir. ginius, upon this, pretending the death of a near retation, got permifion to leave the camp, and flew to Rome, infpired with indignation and revenge. Accordingly, the next day he appeared before the tribunal, to the altonifhment of Appius, leading his weeping daughter by the hand, both habited in the deepelt mourning. Claudius, the accufer, was alfo there, and began by making his demand. Virginius next fpoke in turn : he reprefented that his wife had many children; that fhe had been feen pregnant by numbers; that, if he had intentions of adopting a fuppofitious child, he would have fixed upon a boy rather than a girl ; that it was notorious to all, that his wife had herfelf fuckled her own child; and that it was furprifing fuch a claim thould be now revived after a is years difcontinuance. While the father fpcke this with a ftern air, Virginia food trembling by, and, with looks of perfuafive innocence, added weight to all his remonftrances. The people feemed entirely fatisfied of the hardfhip of his cafe, till Appius, fearing what he faid might have dangerous effects upon the multitude, interrupted him, under a pretence of being fifficiently innructed in the merits of the caufe, and finally adjudged her to Claudius, ordering the lictors to carry her off. The lictors, in obedience to his command, fuon drove off the throng that preffed round the tribunal ; and now they feized upon Virginia, and were delivering her up into the hands of Claudius, when Virginius, who found that all was over, feemed to acquiefce in the fentence. He therefore mildly intreated Appius to be permitted to take a laft farewell of one whom he had long con. frdered as his child; and fo fatisfied, be would return to his duty with frefh alacrity. With this the decemvir complied, but upon condition that their endearments fhould pafs in his prefence. Virginius, with the moft poignant anguifh, took his almoft expiring daughter in his arms, for a while fupported her head upon his brealt, and wiped away the tears that rolled down her lovely vifage; and happening to be near the fhops that furrounded the forum, he fnatched up a knife that lay on the fhambles, and buried the weapon in her breaft; then holding it up, reeking with the blood of his daughter, "Appius (he cried) by this blood of innocence, I devote thy head to the infernal gods." Thus faying, with the bloody knife in his hand, and threatening deftruction to whomfoever fhould oppofe him, he ran through the city, wildly calling upon the people to Itrike for freedom, and from thence went to the camp, in order to fpread a like flame through the army.

He no fooner arrived at the camp, followed by a number of his friends, but he informed the army of all that was done, ftill holding the bloody knife in his hand. He afked their pardon, and the pardon of the gods, tor having committed fo rath an action, but afcribed it all to the dieadful neceflity of the times. The amm, already pedifpofed, immediately with fhouts echoed ther approbation; and decamping, left their generals behind, to take their ftation once more upon mount Aventine, whither they had retired about 40 Vol. XVI.
years before. The other army, which had been to ope pofe the Sabines, feemed to feel a like refenment, and came over in large parties to join them.

Appius, in the mean time, did all he could to quell The dethe difturbances in the city; but finding the tumult cemvirne incapable of controul, and perceiving that his mortal abolifed. enemies, Valerius and Horatius, were the molt active in oppofition, at firt attempted to find fafety by flight ; neverthelefs, being encouraged by Oppius, who was one of his colleagues, he ventured to alfemole the fenate, and urged the punifhment of all deferter; The fenate, however; were far from giving him the relief he fought for ; they forefaw the dangers and miferies that threatened the fate, in cafe of oppoling the incenfed army ; they therefore difpatched meflengers to them, offering to reltore their former mode of government. To this propofal all the people joyfully affented, and the army gladly obeyed. Appius and Oppias, one of his colleagues, both died by their own hands in prifon. The other eight decemvirs went into voluntary exile ; and Claudius, the pretended mafter of Virginia, was driven out after them.

The tribunes now grew more turbuient : they pro- Now dife pofed two laws; one to permit plebeians to intermarry turbences. with patricians; and the other, to permit them to be admitted to the confullhip alfo. The fenaters received thefe propofals with indignation, and feemed refolved to undergo the utmolt eatremities rather than fubmit to enact them. However, finding their refiftance only increafe the commotions of the fate, they at lat confented to pafs the law concerning intermarriages, ho. ping that this conceffion would fatisfy the people. But they were to be appeafed but for a very fliont time : for, returning to their old cult $m$ of refuling to enlift upon the approach of an enemy, the confuls were forced to hold a private conference with the chief of the fenate ; where, after many debates, Claudius propofed an expedient as the moft probable means of fatisfying the people in the prefent conjuncture. This was, to create fix or eight governors in the room of confuls, wher cof one half at leaft fhould be patricians. This project was eagerly embraced by the people ; yet fo fickle were the multitude, that thoun many of tribines plebeians ftood, the choice wholly fell upon the patii. cians who offered themfelves as candidates. Theie new magiftrates were called military tribunes; they were at firlt but three, afterwards they were increafed to four, and at length to fix. They had the power and eangus of confuls; yet that power being divided amonor a number, each fingly was of lefs authority. The firit that were chofen only continued in office about three months, the angurs having found fomething amifs in the ceremonies of their election.

The military tribunes being depofed, the confuis once more came into office; and, in order to lighten the weight of bufinefs which they were obliged to fuftain, a new office was erected, namely, that of cenfors, The ollice to be chofen every fifth year. Their bufinefs was to of confor take an eltimate of the number and eltates of the inlltutud people, and to diftribute them into their proper claffes; to inipect into the lives and manners of their fellow-citizens ; to degrade fenators for mifcondue:; to difmou t knights; and to turn down plebeians from their tribes into an inferior, in cafe of roiflemeanour. The two firlt

## $\mathbf{R}$ OM $\quad[354] \quad \mathrm{R} \mathbf{~ O} \mathbf{M}$

Kome. $\longrightarrow$ veii refoived.
cenfors were Papirius and Sempronius, both patricians; and from this order they continued to be elected for near 100 years.

This new creation ferved to reftore peace for fome time among the orders; and the triumph gained over the Volficians by Geganius the conful, added to the univerfal fatisfaction that reigned among the people.

This calm, however, was but of fhort continuance : for, fome time after, a famine preffing hard upon the poor, the ufual complaints againft the rich were renewed; and thefe, as before, proving ineffectual, produced new feditions. The confuls were accufed of neglect in not having laid in proper quantities of corn: they, however, difregarded the mu:murs of the populace, content with exerting all their care in attempts to fupply the prefling neceffities. But though they did all that could be expected from active magiftrates, in providing, and diltributing provifions to the poor; yet Spurias Mrlius, a rich knight, who had bought up all the corn of Tufcany, by far outfhone them in liberality. This demagogue, inflamed with a fecret defire of becoming powerful by the contentions in the ftate, diftributed corn in great quantities among the poorer fort each day, till his houfe became the afylum of all fuch as wifhed to exchange a life of labour for one of lazy dependence. When he had thus gained a fufficient number of partizans, he procured large quantities of arms to be brought into his houfe by night, and formed a confpiracy, by which he was to obtain the command, while fome of the tribunes, whom he had found means to corrupt, were to act under him, in feizing upon the liberties of his country. Minucius foon difcovered the plot; and informing the fenate thereof, they immediately formed the refolution of creating a dictator, who fhould have the power of quelling the sonfiracy, without appealing to the people. Cincinnatus, who was now 80 years old, was chofen once more to refcue his country from impending danger. He began by fummoning Mælius to appear ; who refufed to obey. He next fent Ahala, the mafter of his horfe, to force him; who, meeting him in the forum, and preffing Mælius to follow him to the diftator's tribunal, upon his refufal Ahala killed him on the fpot. The dictator applauded the refolution of his officer, and commanded the confpirator's goods to be fold, and his houfe to be demolifhed, diftributing his ftores among the people.

The tribunes of the people were much enraged at the death of Mælius; and, in order to punifh the fegate, at the next election, infead of confuls, infifted upon reforing their military tribunes. With this the fenate vere obliged to comply. The next year, however, the government returned to its ancient chamel, and confuls were chofen.

The Veientes had k ng been the rivals of Rome; they had ever taken the opportunity of its internal
diftreffes to ravage its territories, and had even threatened its ambaffadors, fent to complain of thefe injuries, with outrage. In war they had been extremely formidable, and had cut off almoft all the Fabian family; who, to the number of 306 perfons; had voluntarily undertaken to defend the frontiers againft their incurfions. It feemed now therefore determined, that die city of Veii, whatever it fhould colt, was to fall; and tic $R$ mans accordingly fat regularly down before
it, propared for a long and painful refiftance. The ftrength of the place, Rome. gers, may be inferred from the continuance of the fiege, which latted for 10 years; during which time the army continued encamped round it, lying in winter under tents made of the fkins of beafts, and in fummer driving on the operations of the attack. Various was the fuccefs, and many were the commanders that directed the fiege : fometimes all the befiegers' works were defroyed, and many of their men cut off by fallies from the town; fometimes they were annoyed by an army of Veians, who attempted to bring affiftance from without. A fiege fo bloody feemed to threaten ds. population to Rome itfelf, by draining its forces continually away; fo that a law was obliged to be made for all the bachelors to marry the widows of the foldiers who were flain. In order to carry it on with greater vigour, Furius Camillus was created dictator, and to him was intrufted the fole power of managing the long protracted war. Camillus, who, without intrigue or any folicitation had raifed himfelf to the firlt eminence in the ftate, had been made one of the cenfors fome time before, and was confidered as the head of that office; he was afterwards made a military tribune, and had in this poft gained feveral advantages over the enemy. It was his great courage and abilities in the above offices that made him thought molt worthy to ferve his country on this preffing occafion, Upon his appointment, numbers of the people flocked to his flandard, confident of fuccefs under fo experienced a commander. Confcious, however, that he was unable to take the city by form, he fecretly wrought a mine into it with valt labour, which opened into the midft of the citadel. Certain thus of fuccefs, and finding the city incapable of relief, he fent to the fenate, defiring that all who chofe to fhare in the plunder of Veii fhould immediately repair to the army. Then giving his men directions how to enter at the breach, the city was inftanty filled with his legions, to the amazement and confernation of the befieged, who, but a moment before, had refted in perfect fecu-

J2I rity. Thus, like a fecond Troy, was the city of Veii Is taken by taken, after a 10 years fiege, and with its fpoils en- Camillus. riched the conquerors; while Camillus himfelf, tranfported with the honour of having fubdued the rival of his native city, triumphed after the manner of the kings of Rome, having his chariot drawn by four milk-white horfes; a diftinction which did not fail to difgult the majority of the fpectators, as they confidered thofe as facred, and more proper for doing honour to their gods than their generals.

His ufual rood fortune attended 122 expedition againft the Falifci; he routed their army, fity to the and befieged their capital city Falerii, which threatened Falifci.
a long and vigorous refiftance. Here a fchoolmafter, who had the care of the children belonging to the principal men of the city, having found means to decoy them into the Roman camp, offered to put them into the hands of Camillus, as the fureft means of inducing the citizens to a fpeedy furrender. The general was fruck with the treachery of a wretch whofe. duty it was to protect innocence, and not to betray it; and immediatcly ordered him to be ftripped, his bands tied behind him, and in that ignominious manner to be whipped into the town by his own fcholars.

## R OM <br> [ 355 ] <br> $\mathrm{R} O \mathrm{M}$

Rome. This generous behaviour in Camillus effected more than his arms could do: the magiftrates of the town immediately fubmitted to the fenate, leaving to Ca millus the conditions of their furrender; who only fined them in a fum of money to fatisfy his army, and received them under the protection and into the alliance of Rome.

Notwithltanding the veneration which the virtues of Camillus bad excited abroad, they feemed but little adapted to bring over the refpect of the turbulent tribunes at home, as they raifed fome freth accufation againt him every day. To their other charges they added that of his having concealed a part of the plunder of Veii, particularly two brazen gates, for his nwn ufe ; and appointed him a day on which to appear before the people. Camillus, finding the multitude exafperated againft him upon many accounts, detefting their ingratitude, refolved not to wait the ignominy of trial ; but, embracing his wife and children, prepared to depart from Rome. He had already paffed as far as one of the gates, unattended on his way, and

123 Hegoesinto voluntary exile.

124 unlamented. There he could fupprefs his indignation no longer; but, turning his face to the Capitol, and lifting up his hands to heaven, intreated all the gods that his country might one day be fenfible of their injuftice and ingratitude ; and fo faying, he paffed forward to take refuge at Ardea, where he afterwards learned that he had been fined 1500 afes by the tribunes at Rnme.

The Romaris indeed foon had reafon to repent their ufage of Camillus; for now a more formidable enemy than ever they had met with threatened the republic: an inundation of Gauls, leaving their native woods, under the command of one Brenuus, walted every thing with fire and fword. It is faid that one Cceditius, a man of the lowelt rank, pretended to have heard a miraculous voice, which pronounced difinetly thefe words: "Go to the magiftrates, and tell them that the Gauls draw near." The meannefs of the man made his warning defpifed; though, when the event fhowed the truth of his prediction, Camillus erected a temple to the unknown Deity, and the Romans invented for him the name of Aius Locutius. Meffenger after meffenger arrived with the news of the progrefs and devaltations of the Gauls ; but the Romans behaved with as much fecurity as if it had been impoffible for them to have felt the effects of their depredations. At laft envoys arrived at Rome, imploring the affiltance of the republic againlt an army of Gauls, which had made an irruption of the irruption and fiege was this: Arunx, one of the chief men of Clufium in Hetruria, had been guardian to a young lucumo, or lord of a lucumony, and had educated him in his houfe from his infancy. The lucuma, as foon as he was of an age to feel the force of pattion, fell in love with his guardian's wife; and, upon the firlt difcovery of their intrigue, conveyed her away. Arunx endeavoured to obtain reparation for the injury he had received; but the lucumo, by his intereft and money, gained over the magiftrates: fo that the injured guardian, finding no protectors in Hetruria, refolved to make his application to the Gauls. The people among all the Celtic nations, to whom he chofe to addrefs himfe.f, were the Senones; and, in order to en-
gage them in his quarrel, he acquainted them with the great plenty of Italy, and made them tafte of fome Italian wines. Upon this the Senones refolved to follow him; and a numerous army was immediately formed, which paffing the Alps, under the conduct of their He trurian guide, and leaving the Celtæ in Italy unmolefted, fell upon Umbria, and poffeffed themfelves of all the country from Ravenna to Picenum. They were about fix years in fettling themfelves in their new acquifitions, while the Romans were carrying on the fiege of Veii. At length Arunx brought the Senones before Clufium, in order to befiege that place, his wife and her lover having fhut themfelves up there.

The fenate, being unwilling to engage in an cpen war with a nation which had never offended them, fent an embaffy of three young patricians, all brothers, and an embafly of three young patricians, all brothers, and an embaffy
of the Fabian family, to bring about an accommodation to them. between the two nations. Thefe ambaffadors, being arrived at the camp of the Gauls, and conducted into the council, offered the mediation of Rome; and demanded of Brennus, the leader of the Gauls, What injury the Clufini had done him ; or what pretenfions any people from a remote country could have upon Hetruria? Brennus anfwered proudly, that his right lay in his fword, and that all things belonged to the brave; but that, without having recourfe to this primitive law of nature, he had a juft complaint againft the Clutians, who, having more lands than they could cultivate, had refufed to yield to him thofe they left untilled: And what other motives had you yourfelves, Romans (faid he), to conquer fo many neighbeuring nations : You have deprived the Sabines, the Albans, the Fidenatec, the 不qui, and the Volfci, of the beft part of their territories. Not that we accufe you of injuftice; but it is evident, that you thought this to be the prime and molt ancient of all laws, to make the weak give way to the ftrong. Forbear therefore to intereft yourfelves for the Clufini, or to allow us to take the part of the people you have fubdued."

The Fabii were highly provoked at fo haughty an Imprudent anfwer ; but, diffembling their refentment, defired leave conduct of to go into the town, under pretence of conferring witis the ambatthe magiftrates. But they were no fooner there, than fadors. they began to ftir up the inhabitants to a vigorous defence; nay, forgetting their character, they put themfelves at the head of the befieged in a fally, in which Q. Fabius, the chief of the ambaffadors, flew with his own hand one of the principal officers of the Grauls. Hereupon Brennus, calling the gods to witnefs the perfidioufnefs of the Romans, and their violating the law of nations, immediately broke up the fiege of Clufium, and marched leifurely to Rome, having fent an herald before him, to demand that thofe ambaffadors, who had fo manifeftedly violated the law of nations, fhould be delivered up to him. The Roman fenate was greatly perplexed between their regard for the law of nations and their affection for the Fabii. The wifelt of the fenate thought the demand of the Gauls to be but juf and reafonable : however, as it concerned perfons of great confequence and credit, the confcript fathers referred the affair to the people affembled by curix. As the Fabian family was very popular, the curiæ were fo far from condemning the three brothers, that, at the next election of military tribunes, they were chofen the

Rone.
firl. Brennus, looking upon the promotion of the F a
bii as an high affront on his nation, haftened his march to Rome.

As his army was very numerous, the inhabitants of the towns and villages through which he paffed left their habitations at his approach; but he ftopped nowhere, declaring that his defign was only to be revenged on the Romans. The fix military tribunes, to wit, Q. Fabius, Cæfo Fabius, Caius Fabius, Q. Sulpitius, $Q$ Servilius, and Sextus Cornelius, marched out of Rume at the head of 40,000 men, without either facrificing to the gods or confulting the aufpices; effential ceremonies among a people that drew their courage and confidence from the propitious figns which the augurs declared to them. As moft of the military tribunes were young, and men of more valour than experience, they advanced boldly againt the Gauls, whofe army was 70,000 ftrong. The two armies met near the river Allia, about 60 furlongs from Rome. The Romans, that they might not be furrounded by the enemy, extended their wings fo far as to make their centre very thin. Their beft troops, to the number of 24,000 men, they polted between the river and the adjoining hills; the reft they placed on the hills. The Gauls firf attacked the latter, who being foon put into confufion, the forces in, the plain were fruck with fuch terror that they fled withont drawing their fwords. In this general diforder, moit of the foldiers, inftead of returning to Rome fled to Veii : fome were drowned as they endeavoured to fwim acrofs the Tiber; many fell in the purfuit by the fword of the conquerors; and fome got to Rome, which they filled with terror and confternation, it being believed there that all the reft were cut off. The day after the battle, Brennus marched his troops into the neighbourhood of Rome, and encamped on the banks of the Anio. Thither his fcouts brought him word, that the gates of the city lay open, and that not one Roman was to be feen on the ramparts. This made him apprehenfive of fome ambufcade, it being unreafonable to fuppofe that the Romans would abandon their city to be plundered and facked without making any refiftance. On this confideration he advanced flowly, which gave the Romans an opportunity to throw into the Capitol all the men who were fit to bear arms. They carried into it all the provifions they could get; and, that they might laft the longer, admitted none into the place but fuch as were capable of defending it.
As for the city, they had not fufficient forces to defend it ; and therefore the old men, women, and children, feeing themfelves abandoned, fled to the neighbouring towns. The Veftals, before they Ieft Rome, took care to hide every thing appropriated to the gods which they could not carry off. The two palladiums, and the facred fire, they took with them. When they came to the Janiculus, one Albinius, a plebeian, who was conveying his wife and children in a carriage to a place of fafety, feeing the facred virgins bending under their load, and their feet bloody, made his family alight, put the prieftelles and their gods into the carriage, and conducted them to Cære, a city of Hetruria, where they met with a favourable reception. The Veftals remained at Care, and there continued to perform the ufval rites of religion; and hence thofe rites ware called' ceremonies. But while the reft of the citizens at Rome were providing for their fafety, about 80
of the moft illuftrious and venerable old men, rather than fly from their native city, chofe to devote themfelves to death by a vow, which Fabius the high pontiff pronounced in their names. The Romans believed, that, by thefe voluntary devotements to the infernal gods, diforder and confufion was brought among the enemy. Of thefe brave old men fome were pontifices, others had been confuls, and other generals of armies, who had been honoured with triumphs. To complete their facrifice with a folemnity and pomp becoming the magnanimity and conftancy of the Romans, they dreffed themfelves in their pontifical, confular, and triumphal robes; and repairing to the forum, feated themfelves there in their curule chairs, expecting the enemy and death with the greateft conitancy.

At length Brennus, having fpent three days in ufe- Rome pillefs precaitions, entered the city the fourth day after laged and the battle.' He found the gates open, the walls with- burnt. out defence, and the houfes without inhabitants. Rome appeared to him like a mere defart ; and this folitude increafed his anxiety. He could not believe, either that the Romans were lodged in the Capitol, or that fo numerous a people fhould abandon the place of their nativity. On the other hand, he could nowhere fee any armed men but on the walls of the citadel. However, having firft fecured all the avenues to the Capitol with ftrong bodies of guards, he gave the reft of his foldiers leave to difperfe themfelves all over the city and plunder it. Brennus himfelf advanced into the forum with the troops under his command, in good order; and there he was fruck with admiration at the unexpected fight of the venerable old men who had devoted themfelves to death. Their magnificent habits, the majefty of their countenances, the filence they kept; their modefty and conftancy at the approach of his troops, made him take them for fo many deities: for they continued as motionlefs as fatues, and faw the enemy advance without fhowing the leaft concern. The Gauls kept a great while at an awful diftance from them, being afraid to come near them. But at length one foldier bolder than thie reft, having out of curiofity touched the beard of M. Papirius; the venerable old man, not being ufed to fuch familiarity, gave him a blow on the head with his ivory ftaff. The foldier in revenge immediately killed him ; and the reft of the Gauls following his example; flaughtered all thofe ve. nerable old men without mercy.

Afrer this the enemy fet no bounds to their rage and fury. They plundered ail places, dragging fuch of the Romans as had fhut themfelves up in their houfes into the ftreets, and there putting them to the fword without diftinction of age or fex. Brennus then in- They in vefted the Capitol; but being repulfed with great lofs, veft the in order to be revenged of the Romans for their refít- Capitol. ance, he refolved to lay the city in afhes. Accordly, by his command, the foldiers fet fire to the houfes, demolifhed the temples and public edifices, and rafed the walls to the ground. Thus was the famous city of Rome entirely deftroyed; nothing was to be feen in the place where it food but a few little hills covered with ruins, and a wide wafte, in which the Gauls who invefted the Capitol were encamped. Brennus, finding he fhould never be able to take a place which nature had fo well fortified otherwife thai by famine, turned the fiege into a blockade. Dat inf the mean time; his army

## $\mathrm{R} O \mathrm{M}$

Rome.
army being diftreffed for want of provifions, he fent out parties to pillage the fields, and raife contributions in the neighbouring cities. One of thefe parties appeared before Ardea, where the great Camillus had now fpent two years in a private life. Notwithltand. ing the affront he had received at Rome, the love he bore his country was not in the leaft diminifhed. The fenate of Ardea being met to deliberate on the meafures to be taken with relation to the Gauls, Camillus, more afflicted at the calamities of his country than at his own banifhment, defired to be admitted into the council, where, with his eloquence, he prevailed upon the Ardeates to arm their youth in their own defence, and refufe the Gauls admittance into their city.

Hereupon the Gauls encamped before the city ; and as they defpifed the Ardeates after they had made themfelves mafters of Rome, they preferved neither order nor difcipline in the camp, but fpent whole days in drinking. Hereupon Camillus, having eafily perfuaded the youth of the city to follow him, marched out of Ardea in a very dark night, furprifed the Gauls drowned in wine, and made a dreadful flaughter of them. Thofe who made their efcape under the helter of the night fell next day into the hands of the peafants, by whom they were maffacred without mercy. This defeat of the enemy revived the courage of the Romans fcattered about the country, efpecially of thofe who had retired to Veii after the unfortunate battle of Allia. There was not one of them who did not condemn himfelf for the exile of Camillus, as if he had been the author of it ; and looking upon that great man as their laft refource, they refolved to choofe him for their leader. Accordingly, they fent without delay ambaffadors to him, befeeching him to take into his protection the fugitive Romans, and the wrecks of the defeat at Allia. But Camillus would not accept of the command of the troops till the people affembled by curix had legally conferred it upon him. He thought the public authority was lodged in the hands of thofe who were fhut up in the citadel, and therefore would undertake nothing at the head of the Roman troops till a commiffion was brought him from thence.

To do this was very difficult, the place being invefted on all fides by the encm!. However, one Pontius Cominius, a man of mean birth, but bold, and very ambi-' tious of glory, undertook it. He put on a light habit, and providing limielf with cork to keep the longer above water, threw himfelf into the Tiber above Rome in the beginning of the night, and fuffered himfelf to be carried down with the ftream. At lengith he came to the foot of the Capitol, and landed at a feep place where the Gauls had not thought it neceffary to polt any centinels. There he mounted with great difficulty to the rampart of the citadel; and having made himfelf known to the guards, he was admitted into the place, and conducted to the magitrates. The fenate being immediately affembled, Pontius gave them an account of Camillus's victory; and in the name of all the Romans at Veii demanded thit great captain for their general. There was not much time fent in debates: the curiz being called together, the act of condemnation which had been pafied on Camillus was abrogited, and he named dictator with one voive. Pontius was immediately dipatchel with the decree; and the fame good fortune which hrid attended him to the Capitol accom-
panied him in his return. Thus was Camillus, from the ftate of banifhment, raifed at once to be fovereign magiftrate of his country. His promotion to the command was no fooner known, but foldiers flocked from all parts' to his camp; infomuch that he foon faw himfelf at the head of above 40,000 men, partly Romans and partly allies, who all thought themielves invincible under fo great a general.

While he was taking proper meafures to raife the blockade of the citadel, fome Gauls rambling round the place, perceived on the fide of the hill the print of Pontius's hands and feet. They obferved likewife, that the mofs on the rocks was in feveral places torn up. From thefe marks they concluded, that fomebody had lately gone up to and returned from the capitol. The Gauls immediately made their report to Brennus of what they had obferved; and that experienced commander laid a defign, which he imparted to nobody, of furprifing the place by the fame way that the Roman had afcended. With this view he chofe out of the army fuch foldiers as had dwelt in mountainous, countries, and been accuftomed from their youth to climb precipices. Thefe he ordered, after be had well esamined the vature of the place, to afcend in the night the fame way that was marked out for them; climbing two abreaft, that one might fupport the other in getting up the fteep parts of the precipice. By this means they advanced with much difficulty from rock to rock, till they arrived at' the foot of the wall. They proceeded with fuch filence, that they were not difcovered or heard, either by the centinels who were upon guard in the citadel, or even by the dogs, that are ufually awaked and alarmed at the leaft noife. But though they eluded the fagacity of the dogs, they could not efcape the vigilance of the geefe. A flock of thefe birds was kept in a court of the Capitol in honour of Juno, and near her temple.' Notwith t anding the want of provi $f_{10}$ s in the garrifon, they had been fpared out of religion; and as thefe creatures are naturally quick of hearing, they were alarmed at the firft approach of the Gauls; fo that running up and down, with their cackling and beating of their wings, they awaked Manlius, a gallant foldier, who fome years before had been conful. He founded an alarm; and was the firft man who mounted the rampart, where he found two Gauls already upon the wall. One of thefe offered to difcharge a blow at him with his battle-ax ; but Manlius cut off his right hand at one blow, and gave the other fuch a pufh with his buckler, that he threw him headlong from the top of the rock to the bottom. Hc , in his fall, drew many others with him; and, in the mean time, the Romans crowding to the place, prelled upon the Gauls, and tumbled them one over another. As the nature of the ground would not fuffer them to make a regular retreat, or even to fly, moft of them, to avoid the fwords of the enemy, threw themfelves down the precipice, fo that very few got fafe back to their camip.

As it was the cuftom of the Romans at that time not to fuffer any commendable action to go unrewarded, the tribune Sulpitius affembled his troops the next morning, in order to beftow the military rewards on thofe who, the night before, had deferved them. Among thefe Manlius was firt named; and, in acknowledgment of the imjortant lervice be had juft rendered the flate, every foldier gave him part ot the corn which he recei-
$\underbrace{\text { Rome. }}$ ngly from the public tock, and a little meafure of wine out of his fcanty allowance. An inconfiderable prefent indeed in itfelf, but very acceptable at that time to the perfon on whom it was beftowed. The tribune's next care was to punifh the negligent: accordingly the captain of the guard, who ought to have had an eye over the centinels, was condemned to die, and, purfuant to his fentence, thrown down from the top of the Capitol. The Romans extended their punifhments and rewards even to the animals. Geefe were ever after had in honour at Rome, and a flock of them always kept at the expence of the public. A golden image of a goofe was erected in memory of them, and a goofe every year carried in triumph upon a foft litter finely adorned; whillt dogs were held in abhorrence by the Romans, who every year impaled one of them on a branch of elder.

Ths blockade of the Capitol had already lafted feven months; fo that the famine began to be very fenfibly felt both by the befieged and befiegers. Camillus, fince his nomination to the dictatorfhip, being mafter of the country, had pofted ftrong guards on all the roads ; fo that the Gauls dared not fir out for fear of being cut to pieces. Thus Brennus, who befieged the Capitol, was befieged himfelf, and fuffered the fame inconveniences which he made the Romans undergo. Befides, a plague raged in his camp, which was placed in the midft of the ruins of the demolifhed city, his men lying confufedly among the dead carcafes of the Romans, whom they had flain, and not buried. So great a number of them died in one quarter of the city, that it was afterwards called Bufta Gallica, or the place where the dead bodies of the Gauls were burnt. But, in the mean time, the Romans in the Capitol were more pinched with want than the Gauls. They were reduced to the laft extremity, and at the fame time ignorant both of the lamentable condition to which the enemy's army was brought, and of the fteps Camillus was taking to relieve them. That great general only waited for a favourable opportunity to fall upon the enemy; but, in the mean time, fuffered them to pine away in their infected camp, not knowing the extreme want the Romans endured in the Capitol, where they were fo deftitute of all forts of provifions, that they could no longer fubfift. Matters being brought to this fad pafs on both fides, the centinels of the Capitol, and thofe of the enemy's army, began to talk to one another of an accommodation. Their difcourfes came at length to the ears of their leaders, who were not averfe to the defign.

The fenate, not knowing what was become of Camillus, and finding themfelves hard pinched by hunger, refolved to enter upon a negociation, and empowered Sulpitius, one of the military tribunes, to treat with the Gauls; who made no great difficulty in coming to terms, they being no lefs defirous than the Romans to putan end to the war. In a conference, therefore, between Brennus and Sulpitius, an agreement was made, som,
weight. We are told, that the weights of the Gauls were falfe, and their fcales untrue; which Sulpitius complaining of. Brennus, inftead of redrefling the injuftice, threw his fword and belt into the fcale where the weights were; and when the tribune afked him the meaning of fo extraordinary a behaviour, the only anfwer he gave was, $V_{\mathscr{A}}$ viliis! "Wo to the conquered!" Sulpitius was fo ftung with this haughty anfwer, that he was for carrying the gold back into the Capitol, and fuftaining the fiege to the laft extremity; but others thought ic advifable to put up the affront, fince they had fubmitted to a far greater one, which was to pay any thing at all.

During there difputes of the Roman deputies among themfelves and with the Gauls, Camillus advanced with his army to the very gates of the city ; and being there informed of what was doing, he commanded the main body to follow him flowly and in good order, while he, with the choiceft of his men, hattened to the place of the parley. The Romans, overjoyed at his unexpected arrival, opened to make room for him as the fupreme magitrate of the republic, gave him an account of the treaty they had made with the Gauls, and complained of the wrong Brennus did them in the execution of it. They had fearce done fpeaking, when Camillus cried out, "Carry back this gold into the Capitol; and you, Camillu Gauls, retire with ycur fcales and weights. Rome drivesaway mult not be redeemed with gold, but with Iteel." Bren- the Gauls. nus replied, That he contravened a treaty which was concluded and confirmed with mutual oaths. "Be it fo (anfwered Camillus) ; yet it is of no force, having been made by an inferior magiftrate, without the privity or confent of the dictator. I, who am invelted with the fupreme authority over the Romans, declare the contract void." At thefe words Brennus flew into a rage; and both fides drawing their fwords, a confufed fcuffe enfued among the ruins of the houfes, and in the narrow lanes. The Gauls, after an inconfiderable lofs, thought fit to retire within their camp; which they abandoned in the night, not caring to engage Camillus's whole army, and, having marched eight miles, encamped on the Gabinian way. Camillus purfued them as foon as it was day, and, coming up with them, gave them a total overthrow. The Gauls, according to Livy, made but a faint refiftance, being difheartened at the lofs they had fuftained the day before. It was not, fays that author, fo much a battle as a flaughter. Many pe Gauls were llain in the action, more in the entirely cut purfuit; but the greater number were cut off, as they off. wandered up and down in the fields, by the inhabitants of the neighbouring villages. In fhort, there was not one fingle Gaul left to carry to his countrymen the news of this fatal cataftrophe. The camp of the barbarians was plundered; and Camillus, loaded with fpoils, returned in triumph to the city, the foldiers in their fongs ftyling him Romulus, Fatber of bis country, and Second founder of Rome.

As the houfes of Rome were all demolifhed, and the walls razed, the tribunes of the people renewed, with more warmth than ever, an old project which had occafioned great difputes. They had formerly propofed a law for dividing the fenate and government between the cities of Veii and Rome. Now this law was revi- ${ }^{141}$ ved; nay, molt of the tribunes were for entirely aban- about redoning their old ruined city, and making Veii the fole noving to feat Veii.

## R O M

 the project, Veii offering them a place fortified by art and nature, good houfes ready built, a wholefome air, and a fruitful territory. On the other hand, they had no materials for rebuilding a whole city, were quite exhaufted by misfortunes, and even their ftrength was greatly diminifhed. This gave them a reluctance to fo great an undertaking, and emboldened the tribunes to utter feditious harangues againft Camillus, as a man too ambitious of being the reftorer of Rome. They even infinuated that the name of Romulus, which had been given him threatened the republic with a new king. But the fenate took the part of Camillus, and, being defirous to fee Rome rebuilt, continued him, contrary to cuftom, a full year in the office of dictator; during which time he made it his whole bufinefs to fupprefs the ftrong inclination of the people to remove to Veii. Having affembled the curix, he expoftulated with them upon the matter; and, by arguments drawn from prudence, religion, and glory, prevailed upon them to lay afide all thoughts of leaving Rome. As it was neceffary to have the refolution of the people confirmed by the fenate, the dictator reported it to the confcript fathers, leaving every one at full liberty to vote as he pleafed. While L. Lucretius, who was to gave his opinion the firt, was beginning to fpeak, it happened that a centurion, who with his company had been upon guard, and was then marching by the fenate-houre, cried out aloud, "Plant your colours, enfign; this is the beft place to flay in." Thefe words were confidered as dictated by the gods themfelves; and Lucretius, taking occafion from them to urge the necelfity of flaying at Rome, "An lappy omen, (cried he); I adore the gods who gave it." The whole fenate applauded his words; and a decree was paffed without oppofition for rebuilding the city.Though the tribunes of the people were defeated by Camillus in this point, they refolved to exercife their authority againf another patrician, who had indeed deferved punithment. This was Q. Fabius, who had violated the law of nations, and thereby provoked the Gauls, and occationed the burning of Rome. His crime being notorious, he was fummoned by C. Martius Rutilus before the affembly of the people, to anfiver for his conduct in his embalfy. The criminal had reafon to fear the fevereft punifhment : but his relations gave out that he died fuddenly ; which generally happened when the accufed perfon had determined to prevent his condemnation, and the fhame of a public punifhment. On the other hand, the republic gave an houfe fituated on the Capitol to M. Manlius, as a monument of his valour, and of the gratitude of his fellow-citizens. Camillus clofed this year by laying down his dictatorfhip: whereupon an interregnum enfued, during which he governed the fate alternately with P. Cornelius Scipio; and it fell to his lot to prefide at the election of new magiftrates, when L. Valerius Poplicola, L. Virginius Tricoftus, P. Cornelius Coffus, A. Manlius Capitolinu, L. Æmilius Mamercinuc, and L. Potthumius Albinus, were chofen. The firft care of thefe new magiftrates was to collect all the ancient monuments of the religion and civil laws of Rome which could be fr und among the ruins of the demolifhed city. The laws of the twelve tables, and fome of the laws of the kings, had been written on brafs, and
fixed up in the forum ; and the treaties made with feveral nations had been engraved on pillars erected in the temples. Pains were therefore taken to gather up the ruins of thefe precious monuments; and what could not be found was fupplied by memory. The pontifices, on their part, took care to re-eftablifh the religious ceremonies, and made alfo a lift of lucky and unlucky days.

And now the governors of the republic applied themfelves wholly to rebuild the city. Plutarch tells us, that as the workmen were digging among the ruins of the temple of Mars, they found Romulus's augural ftaff untouched by the flames; and that this was looked upon as a prodigy, from whence the Romans inferred that their city would continue for ever. The expence of building private houfes was partly defrayed out of the public treafure. The rdiles had the direction of the works; but they had fo little talte for order or beauty, that the city, when rebuilt, was even lefs regular than in the time of Romulus. And though in Auguitus's time, when Rome became the capital of the known world, the temples, palaces, and private houfes, were built in a more magnificent manner than before ; yet even then thefe new decorations did not rectify the faults of the plan upon which the city had been built after its firft demolition.

Rome was fcarce reftored, when her citizens were alarmed by the news that all her neighbours were combining to her deftruction. The 灰qui, the Volici, the Hetrurians, and even her old friends the Latins and the Hernici, entered into an alliance againt her, in hopes of oppreffing her before the had recovered her frength. The republic, under this terror, nominated Camillus dictator a third time. This great commander, having appointed Servilius to be his general of horfe, fummoned the citizens to take arms, without excepting even the old men. He divided the new levies into three bodies. The firlt, under the command of $A$. Manlius, he ordered to encamp under the walls of Rome ; the fecond he fent into the neighbourhood of Veii; and marched himfelf at the head of the third, to relieve the tribunes, who were clofely befieged in their camp by the united forces of the Volfci and La. tins. Finding the enemy encamped near Lanuvium, on the declivity of the hill Marcius, he pofted himfelf behind it, and, by lighting fires, gave the diftrefled Romans notice of his arrival. The Volfi and Latins, when they underftood that Camillus was at the head of an army newly arrived, were fo terrified, that they fhut themfelves up in their camp, which they fortified with great trees cut down in halte. The dictator, obferving that this barrier was of green wood, and that every morning there arofe a great wind, which blew full upon the enemy's camp, formed the defign of taking it by fire. With this view he ordered one part of his army to go by break of day with fire-brands to the windward fide of the camp, and the other to make a brifk attack on the oppofite fide. By this means the enemy were entirely defeated, and their camp taken. Camillus then commanded his men to extinguilh the flames, in order to fave the booty, with which he rewarded his army. He then left his fon in the camp to guard the prifoners; and, entering the country of the Equi, made himfelf mafter of their capital city Bola. From thence be marched againtt the Volfci;

145
Camillus. defeats the Volfci and latins.
whom

Rome.
whom he entirely reduced, after they had waged war with the Romans for the fpace of 107 years. Having fubdued this untractable poople, he penetrated into Hetruria, in order to relieve Sutrium, a town in that country in alliance with Rome, and befieged by a numerous army of Hetrurians. But, notwithftanding all the expedition Camillus could ufe, be did not reach the place before it had capitulated. The Sutriri, being greatly diftreffed for want of provifions, and exhaulted with labour, had furrendered to the Hetrurians, who had granted them nothing but their lives, and the cloaths on their backs. In this deltitute condition they had left their own coontry, and were going in fearch of new habitations, when they met Camillus leading an army to their relief.

The unfortunate multitude no fooner faw the Romans, but they threw themfelves at the dictator's feet, who, moved at this melancholy fight, defired them to take a little reft, and refrefh themfelves, adding, that he would foon dry up their tears, and transfer their forrows from them to their enemies. He imagined, that the Hetrurians would be wholly taken up in plundering the city, without being upon their guard, or obferving any difcipline. And herein he was not miftaken., The Hetrurians did not dream that the dictator could come fo fpeedily from fuch a diftance to furprife them; and therefore were wholly employed in plundering the houfes and carrying off the booty, or feafing on the provifions they had found in them. Many of them were put to the fword, and an incredible number made prifoners; and the city was reftored to its ancient inhabitants, who had not waited in vain for the performance of the dietator's promife. And now, after thefe glorious exploits, which were finifhed in fo fhort a time, the great Camillus entered Rome in triumph a third time.

Camillus having refigned his didatorfhip, the republic, chofe fix new military tribunes, Q . Quinctius, Q . Servius, L. Julius, L. Aquilius, L. Lucretius, and Ser. sulpitius. During their adminitration the country of the AEqui was laid wafte, in order to put it out of their power to revclt anew ; and the two cities of Cortuofa and Contenebra, in the lucumony of the Tarquinienfes, were taken from the Hetrurians, and entirely demolifhed. At this time it was thought proper to repair the Capitol, and add new works to that part of the hill where the Gauls had endeavoured to fcale the citadel. Thefe works were efteemed very beautiful, as Livy informs us, even in the time of Augufus, after the city. was embellifhed with moft magnificent decorations.

And now Rome being reinftated in her former flourifhing condition, the tribunes of the people, who phad been for fome time quiet, began to renew their feditious harangues, and revive the old quarrel about the divifion of the conquered lands. The patricians had appropriated to themfelves the Pomptin territory lately taken from the Volfci, and the tribunes laid hold of this opportunity to raife new difurbances. But the citizeris being fo drained of their money that they had not enouch left th cultivate new farms and fock them with cattle, the declamations of the tribunes made no impreffion upon their minds; fo that the project vanifhed. As for the military tribunes, they owned that their election had been defective; and, left the irregularities of the former comitia fhould be continued in the fuc-
ceeding ones, they voluntarily laid down their office. So that, after a hort interregnum, during which M. Manlius, Ser. Su'pitius, and L. Valerius Potitus, govemed the republic, fix new military tribunes L. Papirius, C. Surgius, L. 压milius, L. Menenius, L. Valerius, and C. Cornelius, were chofen for the enfuing year, which was fpent in works of peace. A temple, which had,been vowed to Mars during the war with the Gauls, was built, and cenfecrated by T. Quinctiu;, who prefided over the affain of religion. As there had hitherto been but few Roman tribes beyond the Tiber which had a right of fuffrage in the comitia, four new ones were added, under the name of the Stellativa, Tramontina, Sabatina, and Arnienfis; fo that the tribes were now in all 25, which enjoyed the fame rights and pri-. vileges.

The expectation of an approaching war induced the Unbond. centuries to choofe Camillus one of the military tribunes ed power for the next year. His colleagues were Ser. Cornelius, conferredQ. Servilius, L. Quinctius, L. Horatius, and P. Vd- on Camillerius. As all thefe were men of moderation, they ${ }^{\text {lus, }}$ 'agreed to inveft Canillus with the fole management of affairs in time of war; and accordingly in full fenate transferred all their power into his hands; for that he became in effect dictator. It had been already determined in the fenate to turn the arms of the republic againt the Hetrurians ; but, upon advice that the Antiates had entered the Pomptin territory, and obliged the Romans who had taken poffeflion of it to retire, it was thought neceffary to humble them before the republic engaged in any other enterprife. The Antiates had joined the Latins and Hernici near Satricum; fo that the Romans, being terrified at their prodigious numbers, fhewed themfelves very backward to engage; which Camillus perceiving, he inflantly mounted his horfe, atd riding through all the ranks of the army, encouraged them by a proper fpeech; after which he difmounted, took the next ftandard-bearer by the hand, led him towards the enemy, and cried out, Soldiers, ad. vance. The foldiery. were afhamed not to follow a general who expofed himfelf to the firt attack; and therefore, having made a great fhout, they fell upon the enemy with incredible fury. Camillus, in order to increafe their eagernefs ftill more, commanded a ftandard Who gives to be thrown into the middle of the enemy's battalions; ates \& \& . a: which made the foldiers, who were fighting in the firf great deranks, exert all the refolution they could to recover it. feat. The Antiates, not being able any longer to make head againft the Romans, gave way, and were entirely defeated. The Latins and Hernici feparated from the Volfci, and returned home. The Volfci, feeing themfelves thus abandoned by their allies, took refuge in the neighbouring city of Satricum; which Camillus immediately invefted, and took by affauit. The Volfci threw down their arms, and furrendered at difcretion. He then left his army under the command of Valerius; and returned to Rome to folicit the confent of the fenate, and to make the neceflary preparations for underlaking the fiege of Antium.

But, while he was propofing this affair to the fe- His ${ }^{149}$ nate, deputies arrived from Nepet and Sutrium tho fis other ties in allance with Rome in the neighbourhood of He truia, demanding fuccours againft the Hetrurians, who threatened to beffege thefe two cities, which were the keys of Hetruria. Hereupon the expedition aydinf

## $R O M$

 haften to the relief of the allied cities, witi. the troops which Servilius had kept in readinefs at Rome in cafe of an emergency. Camillus immediately fet out for the new war; and, upon his arrival before Sutrium, found that important place not only belieged, but almolt taken, the Hetrurians having made themfelves mafters of fome of the gates, and gained poffeffion of all the avenues leading to the city. However, the inhabitants no fooner heard that Camillus was come to their relief, but they recovered their courage, and, by barricadoes made in the Itreets, prevented the enemy from making themfelves mafters of the whole city. Camillus in the mean time having divided his army into two bodies, ordered Valerius to march round the walls, as if he defigned to fcale them, while he with the other undertook to charge the Hetrurians in the rear, force his way into the city, and thut up the enemy between the befieged and his troops. The Romans no fooner appeared but the Hetrurians betook themfelves to a diforcerly flight through a gate which was not inveited. Camillus's troops made a dreadful naughter of them within the city, while VaJerius put great numbers of them to the fword without the walls. From reconquering Sutrium, Camillus haftened to the relief of Nepet. But that city being better affected to the Hetrurians than to the Rornans, had voluntarily fubmitted to the former. Wherefore Camillis, having invefted it with his whole army, took it by affault, put all the Hetrurian foldiers without diftinction to the fword, and condemned the authors of the revolt to die by the axes of the lictors. Thus ended Camillus's military tribunefhip, in which he acquired no lefs reputation than he had done in the moft glorious of his dictatorthips.I50 Ambition of M.Manliug. a dangerous fedition is laid to have taken place through lius, the ambition of Marcus Manlius, who had faved the Capitol from the Gauls in the manner already related. Though this man had pride enough to defpife all the other great men in Rome, yet he envied Camillus, and took every opportunity of magnifying his own exploits beyond thufe of the dictator. But rot finding fuch a favourable reception from the nobility as he defired, he concerted meafures with the tribunes of the people, and Arove to gain the affections of the multitude. Not content with renewing the propofal for the diftribution of conquered lands, he alfo made himfelf an advocate for infolvent debtors, of whom there was now a great number, as molt of the lower clats had been obliged to burrow money in order to rebuild their houfes. The fenate, alarmed at this oppofition, created A. Cornelius Colfus diclator, for which the war with the Volfci afiorded them a fair pretence. Manlius, however, Atill continued to inflame the people againft the patricians. Betides the molt unbounded perfonal generofity, he held alemblies at his own houfe (in the citadel), where he confidently gave out that the fenators, not content with

Vol. XVI.
being the poffeffors of thofe lands which ought to have been equally divided among all the citizens, had concealed, with an intent to appropriate it to their own ule, all the gold which was to have been paid to the Gauls, and which would alone be fufficient to difcharge the debts of all the poor plebeians; and he moreover promifed to thow in due time where this treafure was concealed. For this affertion he was brought before the dictator; who commanded him to difcover where the pretended treafure was, or to confefs openly before the whole affembly that he had flandered the fenate.Manlius replied, that the dictator himfelf, and the principal perfons in the fenate, could only give the proper intelligence of this treafure, as they had been the moft active in fecuring it. Upon this he was committed to prifon ; but the people made fuch difturbance, that the fenate were foon after fain to releafe him. By this he was emboldened to continue his former practices; till at laft the fenate gave an order to the military tribunes to take care that the commonwealth fuffered no detriment from the pernicious projects of Marcus Manlius, and even gave them authority to affaffinate him, if they found it neceffary fo to do. At laft, however, he was publicly accufed of afpiring to be king; however, the people, it is faid, were fo Atruck with gratitude, on account of his having delivered the Capitol from the Gauls, that they could not refolve to condemn him. But the military tribunes, who, it feems, were bent on his defruction, having appointed the affembly to be held without the city, there obtained their wifh. Manlius who is was thrown headlong from the Capitol itfelf: it was condemned thenceforth decreed that no patrician fhould dwell in and exceuthe Capitol or citadel ; and the Manlian family refolved ${ }^{\text {ted }}$ that no member of it fhould ever afterwards bear the prænomen of Marcus. No fooner was Manlius dead, howe ver, than the people lamented his fate; and becaufe a plague broke out foon after, they imputed it to the anger of the gods on account of the deltruction of the hero who had faved the ftate (a).

The Romans, having now triumphed over the Sa bines, the Etrurians, the Latins, the Hernici, the Equi, and the Volfcians, began to look for greater conquefts. They accordingly turned their arms againlt the Samnites, a people about 100 miles ealt from the city, defcended from the Sabines, and inhabiting a large trat of fouthern Italy, which at this day makes a confiderable part of the kingdom of Naples. Valerius Corvus and Cornelius were the two confuls, to whofe care it firlt fell to manage this dreadful contention between the rival ftates.

Valerius was one of the greateft commanders of his ${ }^{15} 5^{5}$ time; he was furnamed Corvus, from a ftrange cir- the Sam. cumftance of being affilted by a crow in a fingle com-nites. bat, in which he fought and killed a Gaal of a gigantic flature. To his colleague's care it was configned to lead an army to Samnium, the enemy's capital; while Corvus was fent to relieve Capua, the capital of the

(A) The above accounts are exactly conformable to what is to be found in the beft Latin hiforians; neverthe. lefs they are far from being reckonsd univerfally authentic. Mr Hooke, in his annotations on the death of M, Manlius, has given very ftrong reafons againt believing either that Camillus refcued the gold from the Gauls; or that Mankius was condemned. See Hook's Roman Hifory. Vol. II. p. 326, et jeq.

Campanians. The Samnites wrere the braveft men the Romans had ever yet encountered, and the contention between the two nations was managed on both fides with the moft determined refolution. But the fortune of Rome prevailed; the Samnites at length fled, averring, that they were not able to withttand the fierce looks and the fire-darting eyes of the Romans. The other conful, however, was not at firft fo fortunate; for having unwaringly led his army into a defile, he was in danger of being cut off, had not Decius, a tribune of the army, poffeffed himfelf of an hill which commanded the enemy: fo that the Samnites, being attacked on either fide, were difeated with great flaughter, no lefs than 30,000 of them being left dead upon the field of battle.

## uqus.

Some time after this victory, the fuldiers who were fationed at Capua mutinying, forcel Quintius, an old and eminent foldier, who was then refiding in the country, to be their leader; and, conducted by their rage more than their general, came within eight miles of the city. So terrible an enemy, almoft at the gates, not a little alarmed the fenate; who immediately created Valerius Corvus dictator, and fent him forth with another army to oppofe them. "The two armies were now drawn up againt each other, while fathers and fons beheld themfelves prepared to engage in oppolite caufes; but Corvas, knowing his influence aming the foldiery, inftead of going forward to meet the mutineers in an hoftle manner, went with the moit cordial friendihip to embrace and expeftulate with his old acquaintances. His conduct had the defired effect. Quintius, as their speaker, only defired to have their detection from their duty forgiven; and as for himfelf, as he was innocent of their cenfpiracy, he had no reafon to folicit pardon for his offences.

A war between the Romans and the Latins followed foon after ; but as their habits, "arms, and language, were the fame, the molt exact difcipline was neceflany to prevent confufion in the engagement. Orders, therefore, were iffaed by Manlius the conful, that no foldier fiould leave his ranks upon whatever provocation; and that he fhould be certainly put to death who fhould offer to do otherwife. With thefe injunctions, poth armies were drawn out in array, and ready to begin; when Metius, the general of the enemy's cavalry, pulhed forward from his lines̃, and challenged any lnight in the Roman army to fingle combat. For fome tine there was a general paufe, no foldier offering to difobey his orders', till Titus Manlius, the conful's own fon, burning with fhame to fee the whole body of the Romans intimidated, boldly fallied out againft his adverfary. The foldiers on both fides for a while fufpended the general engagement to be feectators of this fierce encounter. Manlias killed his adverfary; and then difpoiling him of his armour, returned in triumph to his father's tent, where he was preparing and giving orders relative to the engagement. Howfoever he mi; ht have been applauded by his fellow-foldiers, being as yet doubtful of the reception he fhon'd find from his father, he came, with helitation, to lay the enemy's fpoils at his feet, and with a modeft air infinuated, that what he did was entirely from a fpirit of hereditary virtue. But he was foon dreadfully made fenfible of his error, when his father, turning away, ordered him to s: Led pullicly forth before the army, and there to
have his head itruck of on account of his difobeying orders. The whole army was ftruck with horror at this unnatural mandate: fear for a while kept them in fülpenfe; but when they faw their young champion's head ftruck off, and his blood ftreaming upon the ground, they could no longer contain their execrations and their groanss. His dead body was carried forth without the camp, and being adorned with the fpoils of the variquithed enemy, was buried with all the pomp of military diftrefs.

In the mean time, the battle joined with mutual fury; and as the two aimies had often fought under the fame leaders, they combated with all the animofity of a civil war. The Latins chielly depended on their bodily ftrength; the Romans, on their invincible courage and conduct. Forces fo nearly matched feem. ed only to require the protection of the deities to turn the fcale of victory; and, in fact, the augurs had foretold, that whatever part of the Roman army fhould be diftreffed, the commander of that part fhould devote himfelf for his country, and die as a facrifice to the immortal gods. Manlius commanded the right wing, and Decius led on the left. Both fides fought for fome time with doubtful fuccers, as their courage was equal; but, after a time, the left wing of the Roman army began to give ground. It was then that Decius, who commanded there, refolved to devote himfelf for his country, and to offer his own life as an atonement to fave his army. Thus determined, he called out to Manlius with a loud voice, and demanded his inftructions, as he was the chief pontiff, how to devote himfelf, and the form of the words he fhould ufe. By his directions, therefore, being clothed in a long robe, his head covered, and his arms Itretched forward, Itanding upon a javelin, he devoted himfelf to the celeftial and infernal gods for the fafety of Rome. Then arming himfelf, and mounting on horfeback, he drove furioufly into the midft of the enemy, carrying terror and confternation wherever he came, till he fell covered with wounds. In the mean time, the Roman army contidered his devoting himfelf in this manner as an alfurance of fuccefs; nor was the fuperftition of the Latins lefs powerfully influenced by his refolution; a total rout began to enfue: the Romans preflici them on every fide; and fo great was the carnage, that fcarce a fourth part of the enemy furvived the defeat. This was the laft battle of any comequence that the Latins had with the totaliy doRomans: they were forced to beg a peace upon hard feated and conditions; and two years after; their itrongelt ciiy, fubdued. Pædum, being taken, they were brought under an entire fubmiftion to the Roman power.

A lignaldifgrace which the Romans fultained about this time in their contelt with the Samnites, made a paufe in their ufual good fortune, and turned the fcale for a while in the enemy's favour. The fenate having denied the Samnites peace, Pontius their general was refolved to gain by fratagem what he had fiequently loft by force. Accordingly, leading his army into a defile called Cluudium, and taking poffeflion of all its outlets, he fent io of his foldiers, habited like fhepherds, with directions to throw themfelves in the way the Romans were to march. The Roman oonful met them. and taking them for what they appeared, demanded the route the Samnite army had taken; they, with feeming indiference, replied, that they were gone to Luceria, a

## $\mathrm{ROM} \quad\left[36_{3}\right] \quad \mathrm{ROM}$

I55 Pyrrhus king of Epirus invited into Italy by the 'raren tines.
town in Apulia, and were then actually befieging it. The Roman general, not fufpecting the ftratagem that was laid againlt him, marched directly by the fhorteft road, which lay through the defiles, to relieve the city; and was not undeceived till he faw his army furrounded, and blocked up on every fide. Pontius thus having the Romans entirely in his power, firt obliged the army to pafs under the yoke, having been previoully ftripped of all but their garments; he then ftipulated that they flould wholly quit the territories of the Samnites, and that they fhould continue to live upon terms of former confederacy. The Romans were conftrained to fubmit to this ignominious treaty, and marched into Capua difarmed and half naked. When the army arrived at Rome, the whole city was mof furprifingly afflicted at their fhameful return; nothing but grief and refentment was to be feen, and the whole city was put into mourning.

But this was a tranfitory calamity; the war was carried on as ufual for many years; the power of the Samaites declining every day, while that of the Romans continually increafed. Under the conduct of Pa pirius Curfor, who was at different times conful and dictator, repeated triumphs were gained. Fabius Maximus alfo had his fhare in the glory of conquering them; and Decius, the fon of that Decius whom we faw devoting himfelf for his country about 40 years befors, followed the example of his father, and ruthed into the midit of the enemy, imagining that he could fave the lives of his countrymen with the lofs of his own.

The fuccers of the Romans againf the Samnites alarmed all Italy. The Tarentines in particular, who had long plotted underhand againlt the republic, now openly declared themfelves; and invited into Italy Pyrrhus king of Epirus, in hopes of being able by his means to fubdue the Romans. The offer was readily accepted by that ambitious monarch, who had nothing leis in view than the conquelt of all Italy.Their ambaffadors carried magnificent prefents for the king, with inftructions to acquaint him, that they only wanted a general of fame and experience; and that, as for troops, they could themfelves furninh a numerous army of 20,000 horfe and 350,000 foot, made up of Lucanians, Meffapians, Samnites, and Tarentines. As foon as the news of this deputation were brought to the Roman camp, Emilius, who had hitherto made war on the Tarentines but gently, in hopes of adjuiting mat. ters by way of negociation, took other meafures, and hegan to commit all forts of hoftilities. He took cities, ftormed caftles, and laid the whole country wafte, burning and deltroying all before him. The Tarentines brought their army into the field; but Rmilius toon obliged them to take refuge within their walls. However, to induce them to lay afide the defign of receiving Pyrrhus, he ufed the prifoners he bad taken with great moderation, and even fent them back with. out ranfom. Thefe highly extolled the generofity of the conful, infomuch that many of the inhabitants were brought over to the Roman party, and they all began to repent of their having rejected a peace and fent for Pyrrhus:

But, in the mean time, the Tarentine ambaffadors arriving in Epirus, furfuint to the powers they had requed, made an abolute trasy with tie hing; who
immediately fent before him the famous Cyneas, with 3000 men, to take polfellion of the citadel of 'rarentum. This eloquent minifter foon found means to depofe Agis, whom the Tarentines had chofen to be their general and the governor of the city, though a fincere friend to the Romans. He likewife prevailed upon the Tarentines to deliver up the citadel into his hands; which he no fooner got poffelfion of, than he difpatched meffengers to Pyrrhus, foliciting him to halten his departure for Italy. In the mean time, the conful Emilius, finding that he could not attempt any thing with fuccefs againt the Tarentines this campaign, refolved to put his troops into winter-quarters in Apulia, which was not far from the territory of Tarentum, that was foon to become the feat of the war. As he was obliged to pafs through certain defiles, with the fea on one fide and high hills on the other, he was there attacked by the Tarentines and Epirots from great numbers of barks fraught with balifæ (that is, engines for throwing itones of a valt weight, and from the hills, on which were polted a great many archers and lingers. Hereupon Emilias placed the Tarentine prifoners between him and the enemy; which the Tarentines perceiving, foon left off molefting the Romans, out of compaffion to their own countrymen; fo that the Romans arrived fafe in Apulia, and these took up their winter-quarters.

The next year 不milius was continued in the command of his own troops, with the title of proconful; and was ordered to make war upon the Salentines, who had declared for the Tarentines. The prefent exigence of affairs obliged the Romans to enlift the proletarii, who were the meaneft of the people, and therefore by way of contempt called proletarii, as being thought incapable of doing the ftate any other fervice than that of peopling the city, and focking the republic with fubjects. Hitherto they had never been fuffered to bear arms; but were now, to their great fatisfation, enrolled as well as others. In the mean time Pyrrhus arrived at Tarentum, having narrowly efcaped hlipwreck ; and being conducted into the city by his faithful Cyneas, was received there with loud acclamations.

The Tarentines, who were entirel $\overline{5}$ devoted to their 1156 The I arentines, who were entirel, devoted to their yyrrhus
pleafures, expected that he Thould take all the fatigues obliges the of the war on himfelf, and expofe only his Epirots to Tarentines danger. And indeed Pyrrhus for fome days diffembled to learn the his defign, and fuffered the Tarentines to indulge without reftraint in their ufual diverfions. But his ihips, which had been difperfed all over the Ionian fea, arriving one after another, and with them the troops which he had put on board at Epirus, he began to reform the diforders that prevailed in the city. The theatre was the place to which the idle Tarentines reforted daily in great numbers, and where the incen. diaries firred up the people to fedition with their he. rangues : he therefore caufed it to be fhut up, as he did, likewife the public gardens, porticoes, and places of exercife, where the inhabitants ufed to entertain then ${ }^{-}$felves with news, and fpeak with great freedom of their governors, cenfuring their conduct, and fettling the government according to their different bumours, which occafioned great divifions, and rent the city into various factions. As they were a very voluptuous and indo. lent people, they fpent whole days and nishts in fealts, mafquerades, plays, \&x. Thefe therefore Pyrrhus ab-

## R O M

Rome. folutely prohibited, as no lefs dangerous than the affemblies of prating politicians. They were utter Arangers to militarytexerciles, and the art of handling arms; but Pyrrhus having caufed an exact regifter to be made of all the young men who were fit for war, picked out the Atrongeft among them, and incorporated them among his own troops, faying, that he would take it upon himfelf to give them courage. He exercifed them daily for feveral hours; and on that occafion behaved with an inexorable feverity, inflicting exemplary junifhment on fuch as did not attend or failed in their duty. By thefe wife meafures he prevented feditions among the citizens, and inured their youth to military difcipline; and becaufe many, who had not been accuftomed to fuch feverity and rigour, withdrew from their native country, Pyrrhus by a public proclamation, declared all thofe capitally guilty who thould at tempt to abandon their country, or abfent themfelyes from the common mufters.

The Tarentines, being now fenfible that Pyrrhus was determined to be their mafter, began loudly to. complain of his conduct; but he, being informed of whatever paffed among them by his fpies, who infinuated themfelves into all companies, privately difpatched the moft factious, and fent thofe whom he fufpected, under various, pretences, to his fon's court in Epirus.

In the mean time, P. Valerius Levinus, the Roman conful, entering the country of the Lucanians, who were in alliance with the Tarentines, committed great ravages there; and having taken and fortified one of their cafles, waited in that neighbourhood for Pyrrhus. The king, though he had not yet received any fuccours from the Samnites, Meffapians, and other allies of the Tarentines, thought it highly dithonourable to continue fhut up in a city, while the Romans were ravaging the country of his friends. He therefore took the field with the troops he had brought with him from Epirus, fome recruits of Tarentum, and a fmall number of Italians. But before he began hoftilities, be wrote a letter to Lævinus, commanding him to difband his army ; and on his refufal, immediately marched towards thofe parts where Lævipus was waiting for bim. The Romans were encamped on the hither fide of the river Siris ; and Pyrrhus appearing on the oppofite bank, made it his firf bufinefs to recomoitre the enemy's camp in perfon, and fee what appearance they made. With this view he crofied the river, attended by Megacles, one of his officers and chief favourites; and having obferved the conful's intrenchments, the manner in which he had pofted his advanced guards, and the good order of his camp, he was greatly furprifed; and addrefling Megacles, "Thefe people (faid he) are not fuch barbarians as we take them to be: let us try them before we condemn them." On his return, he changed his refolution of attacking them; and, fhuting himfelf up in his intrencluments, waited for the arrival of the confederate troops. In the mean time, he pofted ftrong guards along the river, to prevent the cnemy from paffing it, and continually fent out fcouts to difcover the deligns, and watch the motions of the conful. Some of thefe being taken by the advanced guards of the Romans, the conful himfelf led them lirough his camp, and having thewed them his:army, hent them back to the king, liling them, that he had many other troops to foow them in due time.

Lxvinus being determined to draw the enemy to a Rome. battle before Pyrrhus received the reinforcements he ${ }_{5} 17$ expected, having harangued his troops, marched to the His firt banks of the Siris; and there drawing up his infantry battle with in battalia, ordered the cavalry to file off, and march a the Rogreat way about, in order to find a paffage at fome mans. place not defended by the enemy. Accordingly, they pafled the river without being obferved; and falling upon the guards which Pyrrhus had polted on the banks over-againft the confular army, gave the infantry an opportunity of croffing the river on bridges which Lxvinus had prepared for that purpofe. But before they got ovet, Pyrrhus, haftening from his camp, which was at fome diftance from the river, hoped to cut the Roman army in pieces while they were difordered with the difficulties of paffing the river, and climbing up the fteep banks; but the cavalry covering the infantry, and ftanding between them and the Epirots, gave them time to form themfelves on the banks of the river. On the other hand, Pyrrhus drew up his men as fall as they. came from the camp, and performed fuch deeds of valour, that the Romans thought him worthy of the great reputation he had acquired.

As the cavalry alone had hitherto engaged, Pyrrhus, who confided moft in his infantry, haftened back to the camp, in order to bring them to the charge; but took two precautions before he began the attack: the firlt was, to ride through the ranks, and thowhimfelf to the whole army; for his horfe having been killed under him in the firlt onfet, a report had been fpread that he was flain : the fecond was, to change his habit and helmet with Megacles; for having been known in the engagement of the horfe by the richnefs of his attire and armour, many of the Romans had aimed at him in particular, fo that he was with the utmoft difficulty taken and faved, after his horfe had been killed under him. Thus difguifed, he led his phalanx againtt the Roman legions, and attacked them with incredible fury. Lie-, vinus fuftained the fhock with great refolution, fo that the victory was for many hours warmly difputed. The Romans gave feveral times way to the Epirots, and the Epirots to the Romans; but both parties rallied again, and were brought back to the charge by their commanders. Megacles, in the attire and helmet of Pyrrhus, was in all places, and well fupported the character he had aflumed, But his difguife at latt proved fatal to him: for a Roman knight, by name Dexter, taking him for the king, followed him wherever he went; and having found an opportunity of difcharging a blow at him, flruck him dead on the fpot, ftripped him of his helmet and armour, and carried them in triumph to the conful, who by fhowing to the Epirots the fpoils of their king, fo terrified them, that they began to give ground. But Pyrrhus, appearing bare-headed in the firft files of his phalanx, and riding through all the lines, undeceived his men, and infpired them with new courage.

The advantage feemed to be pretty equal on both fides, when Lævinus ordered his cavalry to advance; which Pyrrhus obferving drew up 20 elephants in the front of his army, with towers. on their backs full of bowmen. The very fight of thofe dreadful animals chilled the bravery of the Romans, who had never before feen any. However, they fill advanced, till their horfes, not being able to bear the fmell of them, and
frightened

Rome. frightened at the flrange noife they made, either threw their riders, or carried them on full fpeed in fpite of their utmoft efforts. In the mean time, the archers, difcharging fhowers of darts from the towers, wounded feveral of the Romans in that confufion, while others were trod to death by the elephants. Notwithitanding the diforder of the cavalry, the legionaries ftill kept their ranks, and could not be broken, till Pyrrhus at-

158 The Romans defeated. tacked them in perfon at the head of the Theffalian horfe. The onfet was fo furious, that they were forced to yield, and retire in diforder. The king of Epirus reftrained the ardour of his troops, and would not fuffer them to purfue the enemy : an elephant, which had been wounded by a Roman foldier, named Minucius, having caufed a great diforder in his army, this accident favoured the retre:t of the Romans, and gave them time to repafs the river, and take refuge in Apulia. The Epirot remained mafter of the field and had the pleafure to fee the Romans fly before him : but the viftory coft him dear, a great number of his beft officers and foldiers having been flain in the battle; whence he was heard to fay after the action, that he was both conqueror and conquered, and that if he gained fuch another viflory, he fhould be obliged to return to. Epirus alone.

His firt care after the action was to bury the dead, with which the plain was covered; and herein he made no diftinction between the Romans and his own Epirots. In viewing the bodies of the former, be obferved, that none of them had received difhonourable wounds; that they had all fallen in the pofts affigned them, nill held their fwords in their hands, and fhowed, even after death, a certain martial air and fiercenefs in their faces; and on this occafion it was that he uttered thefe famous words: "O that Pyrrhus had the Romans for his foldiers, or the Romans Pyrrhus for their leader! ogether, we hould fubdue the whole world."

The king of Epirus undertood the art of war too Ho reap "hat advantage he could from his victory. He broke into the countries in alliance with the Romans, pluadered the lands of the republic, and made incurfions even into the neighbourhood of Rome. Many cities opened their gates to $\mathrm{h} m$, and in a fhort time lee made himfelf mafter of the greatelt jart of Cimpamia. White he wats ia that fruitful province, fubfifting hii troops there at the expence of the Romans, he was joined by the Satmites, Lucanians, and Merfapians, ". Hom lie had fo long expected. After having reproached them for thcir delay, he gave them a good thare of the troits he had taken from the cnemy; and laving by thi means gained their afestions, be marched without iofs of time to lay fiege to Capua: but Lrevinus, having already received a reinforcement of two legions, threw fome tronps into the city ; which obliged Pyrrhus to drop his delign, and, leaving Capua, to march fraight to Naples. Lævinus followed him, haralfing his troops on their march; and at length, by keeping his army in the neighbourh od, forced him to give over all thoughts of making himfe:f malter of that important city. The king then, all on a fudden, took 1,is route towards Rome by the Latin way, furprifed Fregelix, and, marching through the country of the Hernici, fat down before Prenefte. There, from the top of an hill, he had the pleafure of feeing Rome; and
is faid to have advanced fo near the walls, that he drove a cloud of duft into the city. But he was foon forced to retire by the other conful T. Coruncanius, who, having reduced Hetraria, was juft then returned with his victorious army to Rome. $1 l_{1}$ e king of Epirus, therefore, having no hopes of bringing the Hetrurians into his interelt, and feeing two confular armies ready to fall upon him, raifed the fiege of Prenefte, and haftened back into Campania; where, to his great furprife, he found Lxvinus with a mere numerous army than that which he had defeated on the banks of the Siris. The conful went to meet him, with a defign to try the fate of another battle; which Pyrrhus being unwilling to decline, drew up his army, and, to ftrike terror into the Roman legions, ordered his men. to beat their bucklers with their lances, and the leaders of the elephants to force them to make a hideons noife. But the noife was returned with fuch an univerfal fhout by the Romans, that Pyrhus, thinking fo much alacrity on the part of the vanquilhed too fure a prognoftic of victory, altered his mind; and, pretending that the auguries were not favourable, retired to Tarentum, and put an end to the campaign.

While Pyrrhus continued quiet at Tarentum, he He inclines had time to reflect on the valour and conduct of the to peace. Romans; which made him conclude, that the war in which he was engaged mutt end in his ruin and difgrace, if not terminated by an advantagecus peace. He was therefore overjoyed when he heard that the fenate had determined to fend an honourable embaify to him, not doubting but their errand was to propofe terms of peace. The ambaffadors were three men of diftinguifhed merit ; to wit, Cornelius Dolabella, who was famous for the fignal victory he had gained over the Senones, Fabricius, and Emilius Pappus, who had been his colleague in the confulate two years before.' When they were admitted to an audience, the only thing they demanded was a furrender of the prifoners, either by the way of exchange, or at fuch a ranfom as thould be agreed on; for Pyrrhus, in the late battle, had made 1800 prifoners, molt of them Roman knights and men of diftinction in the republic. They had fourht with great bravery, till their horfes, frightened with the roaring of the king's elephants. lad either thrown them, or obliged them to difmount; by which unforefeen accident they had fallen into the encmy's hands. 'The fenate, therefore, pitying the condition of thofe brave men, had determined, contrary to their cuftom, to redeem them. Pyrrhus wa greatly furprifed and difappointed when he found that they had no other propofals to make; but, conceal. ing his thoughts, he only anfwered that he would confider of it, and let them know his refolution. Ac. cordingly, he affembled his council: but his chiel ta. vourites were divided in their opinions. Milo, who commanded in the citadel of Tarentum, was for coming to no compofition with the Romans; but $\mathrm{C}:-$ neos, who knew his mafter's inclination, propofed not only fending back the prifoners without ranfom, but difpatching an embafly to Rome to treat with the fenate of a lafting peace. His advice was approved, and he himfelf appointed to go on that embalfy. Af. ter thefe refolutions, the king acquainted the ambaffadors, that he intended to releafe the prifoners withous ranfom, fince he lad already riches enough, and de.

Rome. fired nothifg of the republic but her friendhip. Af. fhould be continued; that his ambaffador flould be fent terwards he had feveral conferences with Fabricius, back that very day; that the king of Epirus fhould not whofe virtue he had tried with mighty offers of riches be permitted to come to Rome; and that they thould and grandeur ; but finding him proof againf all temp- acquaint his ambaffador, that Rome would enter into tations, he refolved to try whether his intrepidity and no treaty of peace with his matter till he bad left courage were equal to his virtue. With this view, he Italy. caufed an elephant to be placed behind a curtain in the hall where he received the Roman ambaffador. As Fabricius had never feen one of tho e beafts, the king, taking a turn or two in the hall with him, brought him within the elephant's' reach, and then caufed the curtain to be drawn all on a fudden; and that monftrous animal to make his ufual noife, and even lay his trunk on Fabricius's head. But the intrepid Roman, without betraying the leall fear or concern, "Does the greet king (faid he, with furprifing calmnefs), who could not ftagger me with his offers, think to frighten me with the braying of a beaft ?" Pyrrhus, aftonifhed at his immoveable conftancy, invited him to dine with him; and on this occafion it was; that the converfation turning upon Epicurean philofoply, Fabricius made that celebrated exclamation, " $O$ that Pyrrhus, both fur Rome's fake and his own, had placed his happinefs in the boafted indolence of Epicuras."

Every thing Pyrrhus heard or faw of the Romans increafed his earneftnefs for peace. He fent for the three ambaffadors, releafed 200 of the prifoners with vut ranfom, and fuffered the reft, on their parole, to return to Rome to celebrate the Saturnalia, or feafts of Saturn, in their owni families. Having by this ob. liging behaviour gained the good will of the Roman ambaffadors, he fent Cyneas to Rome, almoft at the fame time that they left Tarentum. The inftructions he gave this faithful minifter, were, to bring the Ro. mans to grant thefe three articles: I. That the Tarentines fhould be included in the treaty made with the king of Epirus. 2. That the Greek cities in Italy fhould be fuffered to enjoy their laws and liberties. 3. That the republic fhould reftore to the Samnites, Lucanians, and Bruttians, all the places fhe had taken from them. Upon thefe conditions, Pyrrhus deciared himfelf ready to forbear all further holtilities, and conclude a lafting peace. With thefe inftructions Cyneas fet out for Rome; where, partly by his eloquence, partly by rich prefents to the fenators and their wives, he foon gained a good number of voices. When he was admitted into the fenate, he made an barangue worthy of a difciple of the great Demonthenes; after which he read the conditions Pyrrhus propoied, and, with a great deal of eloquence, endeavouring to thow the reafonablenefs and moderation of his matter's demands, akked lesve for Pyrrhus to come to Rome to conclude and fign the treaty. The fenators were generally inclined tio agree to Pyrrhús's terms; but neverthelefs, as feveral fenators were abfent, the determination of the affair was pofponed to the next day; when Appius Claudius, the greateft orator and molt learned civilian in Rome, old and blind as he was, cauTe Ror not appeared for many years; and there, partly by his
mans refure eloquence, partly by his authority, fo prepoffefled the to trest. fed himelf to be carried to the fenate, where he bad minds of the fenators againt the king of Epirus, and

Cyneas, furprifed at the anfwer given him, left Rome the fame day, and returned to Tarentum, to acquaint the king with the final refolution of the fenate. Pyrrhus would have willingly concluded a peace with them upon honourable terms; but, as the conditions they offered were not by any means. confitent with the reputation of his arms, he began, without lof of time, to make all due preparations for the next campaign. On the other hand, the Romans having raifed to the confulate P. Sulpicius Saverrio, and P. Decius Mus, difpatched them both into Apolia, where they found Pyrrhus encamped near a little town called Afculum. There the confuls, joining their armies, fortified themfelves at the foot of the Appennines, having between them and the enemy a large deep fream which divided the plain. Both armies continued a great while on the oppolite banks, before either ventured to pafs over to attack the other. The Epirots allowed the Romans to crofs the fream, and draw up on the plain. On the other hand, Pyrrhus placed his men likewife in order of battle in the fame plain; and all the ancients do him the juftice to fay, that no commander ever underfood better the art of drawing up an army and directing its motions. In another the right wing he placed his Epirots and the Samnites; battle. in his left the Lucanians, Bruttians and Salentines; and his phalanx in the centre. The centre of the Roman army confifted of four legions, which were to engage the enemy's phalanx ; on their wings were pofted the light-armed auxiliaries and the Roman horfe. The confuls, in order to guard their troops againf the fury of the elephants had prepared chariots, armed with long points of iron in the fhape of forks, and filled with foldiers carrying firebrands, which they were directed to throw at the elephants, and by that means frighten them, and fet their wooden towers on fire. Thefe chariots were pofted over-againit the king's elephants, and ordered not to flir till they entered upon action. To this precaution the Roman generals added another, which was, to direct a body of Apulians to attack Pyrrhus's camp in the heat of the engagement, in order to force it, or at leaft to draw off part of the enemy's troops to defend it. At length the attack began, both parties being pretty equal in number; for each of them confifted of about 40,000 men. The phalanx futtained, for a long time, the furious onfet of the legions with incredible bravery: but at length being forced to give way, Pyrrhus commanded his elephants to advañce, but not on the fide where the Romans had pofted their chariots; they marched round, and falling upon the Roman horfe, foon put them into confufion. Then the phalanx, returning with frefh courage to the charge, made the Roman legions in their turn give ground. On this occafion Decius was killed, fo that one conful only was left to command the two Roman armies. Dut while all things feemed to favour Pyrrhus, the body of Apulians whicli we have mentioned above, falling unexpectedly on the camp of the Epirots, obliged the king to difpatch a ftrong detachment to defend his intrenchments. the conditions he offered, that, when he had done fpeaking, the confcript fathers unanimuully paffed a decree, the fubfance of which was, That the war with Pyrrhus

Rime. Upon the depature of thefe troops, fome of the Epirots, imagining that the camp was taken, began to lofe courage, and retire ; thofe who were next to them followed their example, and in a fhor time the whole army gave way. Pyrrhus having attempied feveral times in vain to rally his forces, returned to the charge wi $h$

Pyrihus
difeated,
aud dangeroully wounded. a fmall number of his friends and the mott couragious of his officers. With thefe he fultained the fury of the victorious legions, and covered the retreat of his own men. Bat being, after a moli gallant behaviour, dane gercully wo unded, he retired at laft with his fmall band in good order, leaving the Romans mafters of the field. As the fun was near fetting, the Romans, being extremely fatigued, and a great number of them wounded, the coniul Sulpicius, not thinking it advifable to purfue the enemy, founded a retseat, repaffed the itream, and brought his troops back to the camp. Sulpicius appeared in the field of battle the next day, with a defign to bring the Epirots to a fecond engagement ; but finding they had withdrawn in the night to Tarentum, he likewife retired, and put his troops into winter-quar. ters in Apulia.

Both armies continued quiet in their quarters during winter ; but early in the fpring took the field anew.The Romans we:e commanded this year by two men of great fame, whom they had raifed to the confulate the fecond time: thefe were the celebrated C. Fabricias and Q. Amilius Pappus; who no fooner arrived in Apulia, then they led their troops into the territory of Tarentum. Pyrrhus, who had received confiderable reinforcements from Epirus, met them near the frontiers, and encamped at a fmall diftance from the Ro-

164 The king's phyfician offers to polfon him but is difcovered by the Romans.
man army. While the confuls were waiting here for a favourable opportunity to give batte, a meffenger from Nicias, the king's phyfician, delivered a letter to Fabricius; whersin the traitor offered to take off his mater by puifon, provided the conful would promife him a seward proportionable to the greatnefs of the fervice. The virtuous Roman, being filled with horror at the bare propefal of fuch a crime, immediately communicated the affair to his colleague; who readily joined with him in writing a letter to Pyrrhus, wherein they warned him, vithout difcovering the criminal, to take care of himfelf, and be upon his guard againtt the treacherous defigns of thofe about him. Pyrrhus, out of a deep fenfe of gratitude for fo great a benefit, releafed immediately, without ranfom, all the prifoners be had taken. But the Romans, diddaining to accept either a favour from an enemy, or a recompence for not committing the blackeft treachery, declared, that they would not receive their prifoners but by way of exchange ; and accordingly fent to Pyrrhus an equal nomber of Samnite and Tarentine prifoners.

As the king of Epirus grew every day more weary of a war which he feared would end in his difgrace, he fent Cyneas a fecond time to Rome, to try whether he could, with his artful harangues, prevail upon the confeript fathers to hearken to an accommodation, upon fiuch terms as were confiftent with his honour. But the ambaffador frund the fenators fleady in their former refolution, and determined not to enter into a treaty with his mafter till he had left Etaly, and withdrawn from thence all his forces. This gave the king great uneafinefs; for he had already loft moft of his veteran troogs and beft officers, and was fenfible that he fhould
lofe the reft if he venture 1 another engagement. While he was revolving thefe melancholy thoughts in his mind, ambafladors arrived at his camp from the Syra- Py cufians, Agrigentines, and Leontines, imploring the af- goes into filtance of his arms to drive out the Carthaginians, and Sicily. pat an end to the troubles which threatened their refpective fiates with utter deftruction. Pyrrhus, who wanted only fome honourable pretence to leave Italy, laid hold of this; and appointing Mulo governor of Tarentum, with a ftrong gar rifn to keep the inhabitants in awe during his abience, he fet fail for Sicily with 30,000 foot and 2500 horfe, on board a flect of 200 hhips. Here he was at firit attended with gieat fuccefs; but the Sicilians, difgutted at the refolution he had taken of paffing over into Africa, and much more at the enormous exactions and extortions of his minifters and courtiers, had fubmitted partly to the Carthaginians and partly to the Mamertines I When Carthage heard of this change, new troops were raifed all over Africa, and a numerous army fent into Sicily to recover the cities which Pyrrhus had taken. As the Sicilians daily deferted from him in crowds, he was no way in a condition, with his Epirots alone, to withltand fo powerful an enemy ; and therefore, when deputies came to him from the Tarentines, Samnites, Bruttians, and Lucanians, reprefenting to him the loffes they had fuftained fince his departure, and remonftrating, that, without his affiltance, they mult fall a facrifice to the Romans, he laid hold of that opportunity to abandon the ifland, and return to Italy. His fleet was attacked by that of He return Carthage; and his army, after their landing, by the into ltal. Mamertines. But Pyrrhus having, by his heroic bravery, efcaped all danger, marched along the fea fhore, in order to reach Tarentum that way. As he paffed through the country of the Locrians, who had not long before maffacred the trons he had left there, he not only exercifed all forts of cruelty on the inhabitants, but plundered the temple of Proferpine to fupply the wants of his army. The immenfe riches which he found there, were, by his order, fent to Tarentum by fea; but the fhips that carried them being dafhed againit the rocks by a tempeft, and the mariners all loft, this proud prince was convinced, fays livy, that the gods were not imaginary beings, and caufed all the treafure, which the fea had thrown upon the fhore, to be carefully gathered up, and replaced in the temple: nay, to appeafe the wrath of the angry goddefs, he put all thofe to death who had advifed him to plunder her temple. However, fuperftition made the arcients afcribe to this act of impiety all the misfortunes which afterwards befel that unhappy prince.

Pyrrhus at length arrived at Tarentum; but of the army he had carried into Sitily, he brought back into Italy only 2000 horfe and not quite 20,000 foot. He therefore reinforced them with the belt troops he could raife in the countries of the Samnites, Lucanians, and Bruttrans; and hearing that the two new confuls, Cu rius Dentaius and Cornelius Lentulus, had divided their forces, the one invading Lucania and the other Samnium, he likewife divided his army into two bodies, marching with the choice of his Episots againt Dentatus, in hopes of furprifing him in his camp near Beneventum. But the conful having notice if his approach, went out of his intrenchments with a frong detachment of legionarics to meet him; repulfed his

Rome.
van-guard, put many of the Epirots to the fword, and in Sicily. In order to keep this governor in his duty, took fome of their elephants. Curius encouraged with he is faid to have made him a very ftrange prefent, viz. this fuccefs, marched his army into the Taurafian fields, a chair covered with the fkin of Nicias, the treacherous and drew it up in a plain which was wide enough for his troops, but too narrow for the Epirot phalanx, the phalangites being fo crowded that they could not handle their arms without difficulty. But the king's eagernefs to try his frength and fkill with fo renowned a commander, made him engage at that great difadvantage. Upon the firft fignal the action began; and one of the king's wings giving way, the vistory feemed to incline to the Romans. But that wing where the king fought in perion repulfed the enemy, and drove them back quite to their intrenchments. This advantage was in great part owing to the elephants; which Curius perceiving, commanded a corps de referve, which he had pofted near the camp, to advance and fall upon the elephants. Thefe carrying burning torches in one hand, and their fwords in the other, threw the former at the elephants, and with the latter defended themfelves againt their guides; by which means they were both forced to gire way. The elephants being put to flight broke into the phalanx, clofe as it was, and there caufed a general diforder ; which was increafed by a remarkable accident: for it is faid, that a young elephant being wounded, and thereupon making a dreadful noife, the mother quitting her rank, and haftening to the affitance of her young one, put thofe who ftill kept their ranks into the utmolt confufion. But, however that be, it is certain that the Romans obttained at laft a compiete victory. Orofus and Eutropius tell us that Pyrrhus's army confifted of 80,000 foot and 6000 horfe, including his Epirots and allies; whereas the confular army was fearce 20,000 ftrong. Thofe who exaggerate the king's lofs fay, that the number of the flain on his fide amounted to 30,000 men; but others reduce it to 20,000 . All writers agree, that Curius took 1200 prifoners and eight elephants. This victory, which was the molt decifive Rome had ever gained, brought all Italy under fubjection, and paved the way for thofe valt conquetts which afterwards made the Romans matters of the whole known world.

Pyrrhus being no way in a condition, after the great lofs he had fuftained, to keep the field, retired to Tarentum, attended only by a fmall body of horfe, leaving the Romans in full poffeffion of his camp; which they fo much admired, that they made it ever after a model to form theirs by. And now the king of Epirus refolved to leave Italy as foon as pofible; but concealed his defign, and endeavoured to keep up the drooping fpirits of his allies, by giving them hopes of peedy fuccours from Greece. Accordingly he difpatched ambaffaders into Etclia, Illyricum, and Macedon, demanding fupplies of men and money. But the antwers from thofe courts not proving favourable, he forged fuch as might pleafe thofe whom he was willing to deceive; and by this means fupported the courage of his friends, and kept his enemy in play. When he could conceal his departure no longer, he pretended to be on a fudden in a great paffion at the dilatorinefs of his friends in fending him fuccours; and acquainted the Tarentines, that he mult go and bring them over himfelf. However, he left behind him a ftrong garriion in the citadel of Tarentum, under the command of the fame Milo who had kept it for him during: his ftay
phyfician, who had offered Fabricius to poifon his mafter.
Atter all thefe difguifes and precautions, Pyrrhus at
laft fet fail for Epirus, and arrived fafe at Acroceraunium with 8000 foot and 500 horfe; after having fpent to no purpofe fix years in Italy and Sicily.
Though, from the manner in which Pyrrhus took his leave, his Italian allies had little reafon to expect any further affiltance from him, yet they continued to amufe themfelves with vain hopes, till certain accounts arrived of his being killed at the fiege of Argos, as has been related under the article Epirus. This threw who are the Samnites into defpair: fo that they put all to the fubjutd, iffue of a general battle ; in which they were defeated with fuch dreadful flaughter, that the nation is faid to have been almoft exterminated. This overthrow was mafters of
 tians, Tarentines, Sarcinates, Picentes, and Salentines; fo that Rome now became miltrefs of all the nations from the remotelt parts of Hetruria to the Ionian fea, ard from the Tyrrhenian fea to the Adriatic. All thefe nations, however, did not enjoy the fame privileges. Some were entirely fubject to the republic, and had no laws but what they received from thence; others retained their old laws and cuftoms, but in fubjection to the republic: fome were tributary; and others allies, who were obliged to furnifh troops at their own expence when the Romans required. Some had the privilege of Roman citizenfhip, their foldiers being incorporated in the legions; while others had a right of fuffrage in the elections made by the centuries. Thefe different degrees of honour, privileges, and liberty, were founded on the different terms granted to the conquered nations when they furrendered, and were afterwards increafed according to their fidelity and the fervices they did the republic.

The Romans now became refpected by foreign ria- Other contions, and received ambaffadors from Ptolemy Philadel- quefts phus king of Egypt, and from Apollonia a city of Ma- made by
cedon. Senfible of their own importance, they now the Rcgranted protection to whatever nation requefted it of mans. them; but this not with a view of ferving one party, but that they might have an opportunity of fubjecting both. In this manner they affifted the Mamertines againft Hiero king of Syracufe, which brought on the wars with the Carthaginians, which terminated in the total deftruction of that ancient republic, as has been related under the article Carthage. The interval between the firft and fecond Punic wars was by the Romans employed in redacing the Boii and Ligurians, who had revolted. Thefe were Gaulifh nations, and had always been very formidable to the Romans, who now gave one of their confuls a notable defeat. However, he foon after fufficiently revenged himfelf, and defeated the enemy witi great flaughter; though it was not till fome time after, and with, a good deal it difficulty, that they were totally fubdued. During this interval alfo, the Romans feized on the iflands of Sardinia, Corfica, and Malta; and in the year 219 B . C. the two former were reduced to the form of a province. Papirius, who had fubdued Corfica, demanded atriumph; but not having intereft enough to obtain it, he took a method entirely new to do himfelf juftice. He pat ${ }^{\text {s }}$
himfelf at the head of his victorious army, and marched
to the temple of fupiter Latialis, on the hill of Alba, with all the pomp that attended triumphant victors at Rome. He made no oticr alteration in the ceremony, loat that of wearing a crown of myrule inftead of a crown of laurcl, and this on account of his having defeated the Corficans in a place where there was a grove of mynles. The example of Papirius was afterwards followed by a great many generals to whem the ferate refufed triumpis.

The next year, when M. Amilius Barbula and M. Junius Pera were conilis, a new war ferung up in a kingdom out of Italy. Jibyriam, properly fo called, which bortored upon Macedon and Epirus, was at this time governed by a woman named Tcuta, the widow of king Agren, and guardian to her fon Pinxus, who , was under age. The fuccess of her late hufband againit the Rtolians had funhed her t" fuch a degree, that, inftead of fettling the affairs of her ward in peace, the commanded her fubjets to cruile along the cralt, feize all the fips they met, take what places they could, and fpare no nation. Her pirates had, purfuant to her orders, taken and plundered many fhipa belonging to the Roman merchants; and lier troops were then befieging the ifland of Ifa in the Adriatic, though the inluabitants had put themfelves under the protction of the republic. Upon the complaints therefore of the Italian merchants, and to protect the people of Iffa, the fenate fent two ambalfadors to the Illyrian queen, Lucius and Caius Coruncanus, to demand of her that the would reltrain her fubjects from infefting the fea with pirates. She anfwered the $n$ haughtily, that fhe could only premife that her fubjects fhould not fur the future attack the Romans in her name, and by public authority: " but as for any thing more, it is not cultomary with us (faid the) to lay reftraints on our fubjects, nor will we forbid them to reap thofe advantages from the fea which it offers them." "Your cuftoms then ( $r$ splied the youngeft of the ambaffadors) are very different from ours. At Rome we make public examples of thofe fubjects who injure others, whether at home or abroad. Tenta, we can, by our arms, force you to reform the abules of your bad government." Thefe unfeafonable threatenings provoked Teuta, whowas naturally a proud and imperious woman, to fuch a degree, that, without regard to the right of nations, fhe caufed the ambatiadors to be murdered on their return bome.

When fo notorious an infraction of the law of nations was known at Rome, the people demanded vengeance and the fenate having firft honoured the manes of the ambafidors, by erecting, as was ufual in fuch cales, flatues three feet high to their memory, ordered a flect to be equipped, and troops raifed, with all pofitble expedition. But now Teut, reflecting on the enormity of her proceedings, fent an embalfy to Pome affuring the fenate that the had no hand in the murder of the amboffadors, and offering to deliver up to the : epublic thofe who had committed that barbarons aftallination. The Romans being at that time threatened with a war from the Gauls, were ready to accept this fatisfaction: but in the mean time the तlyyrian feet having gained fome advantage over that of the Achre. ans, and taken the illand of Cercyra, near Epirus, this fuccefs made Teuta believe berfelf invincible, and forget the promife fhe had made to the Romans; nay, the Von. XVI,
fent her flect to feize on the illand of Mha, whain tioc Romans had taken under their protedion.

Hercupon the confuls for the new year, P. Ponthamius $\Lambda$ lbinius and Co. Fulvius Centumalus, errbarl. . 1 for Myricum; Fulvius having the command of the gezt, which conlifled of 100 gallers; and Ponthemins of the land forces, whichanoonted to 20,000 foct, befises is fmall body of horfe. Fuluius apicared with his fee: hefore Corcyra in the Adriatic, and was put in poi feffion toth of the illand and city by Demetans of Phares, governor of the place for Queen Teuta. Nor was this all; Demetrius found means to make the inhabitants of Apollonia drive out the Illyrian gavrici. and admit into their city the Roman troops. is Ayollonia vas one of the keys (ffllyricum on the fide of Macedon, the confuls, who had hithrto acted jointly, no fooner faw thomfelves in potithon of it than they feparated, the fleet cruifing along the coaft, and the a:my penetrating intn tie heart of the queen's dominions. The Andyœans, Parthini, and Atintanes, roluntarily fubmitted to Pofhumius, being induced by the perfuafions of Demetrius to hake off the Mlyrin yoke. The conful being now in poffeffion of meft of the inland towns, returned to the coalt, where, with the affiltance of the flett, he took many frong-hold:. among which was Nutria, a place of great ftrength, and defonded by a numerous garrifon; fo that it made a vigorous defence, the Romans having lof before it a greas many private men, feveral legionary tribunes, and one quælter. However, this lofs was repaired by the taking of 40 Illyrian veffels, which were returnirg home laden with booty. At length the Roman fleet appeared before Iffa, which, by Teuta's order, was fill clofely befreged, notwithftanding the lofles fhe had fuftained. Howerer, upon the approacb of the Roman fleet, the Illyrians difperfed; but the Pharians, who ferved among them, followed the example of their countryman Demethius, and joined the Romans, to whom the Iffani readily fubmitted.

In the mean time Sp. Corvilius and Q. Fabius Maximus being raifed to the confulate a fecrnd time, Pofthumius was recalled from Illyricum, and refufed a triumph for having been too prodigal of the Roman blood at the fiege of Nutria. His colleague Fulvius was appointed to command the land forces in his room, in quality of procontul. Hereupon Teuta, who had founded great hopes on the change of the confuls, retired to one of her ftrong-holds called Rbizon, and from thence early in the fpring fent an embafly to Rome. The fenate refufed to treat with her; but granted the young king a peace upon the following conditions: I. That he fhould pay an annual tribute to the republic. 2. That he fhould furrender part of his dominions to the Ro. mans. 3. That he fhould never fuffer above three of his fhips of war at a time to fail beyond Lyfus, a town on the confines of Macedon and Illyricum. The places he yitlded to the Romans in virtue of this treaty, were the iflands of Corcyra, Iffa, and Pharos, the city of Dyrrhachium, and the country of the Atintanes. Sonn after Teuta, either out of fhame, or compelled by a fecret article of the treaty, abdicated the regency, and Demetrius fucceeded her.

## R O M

Rome. aio the fears of the people were excited by a prophecy faid to be taken out of the Sybilline books, that the Gauls and Greeks fhould one day be in poffeffion of Rome. This prophecy, however, the fenate found means to elude, as they pretended, by burying two Gauls and twe Greeks alive, and then telling the multitude that the Gauls and Greeks were now in the poffeffion of Rome. The difficulties whill fuperfition liad raifed being thus furmounred, the Romans made valt preparations againf the Gauls, whom they feem to have dreaded above all other nations. Some fay that the number of forces raifed by the Romans on this occalion amounted to no fewer than 800,000 men. Of this incredible multitude $24,8,000$ foot and 26,000 horfe were Rnmans or Campanians; neverthelefs, the Gauls, with only c0,000 foot and 20,000 horfe, forced a paftige through Hutrurid, and took the road towards Rome. Here they had the good fortune at firit to defeat one of the Roman armies; but being foon after met by two others, they were utterly defeated, with the lofs of more than 50,000 of their number. The Romans then entered their country, which they cruelly ravaged; but a plague breaking out in their army, obliged them to return home. This was followed by a new war, in which thofe Gauls who inhabited Infubria, and Liguria were totally fubdued, and their country reduced to a Roman province. Thefe conquefts were followed by that of Iftria; Dimalum, a city of importance in Illyricum; and Pharos, an ifland in the Adriatic fea.

The fecond Punic war for fome time retarded the conquelt of the Romans, and even threatened their Itate with entire deftruction; but Hannibal being at laft recalled from Italy, and entirely defeated at Zama, they made peace upon fuch advantageous terms as gave them an entire fuperiority over that republic, which they not long after entirely fubverted, as has been re-
${ }^{773}$ lated in the hiltory of Carthage.
The fuccelsful iffue of the fecond Punic war bad greatly increafed the extent of the Roman empire. They were now mafters of all Sicily, the Mediterranean iflands, and great part of Spain; and, through the difienfions of the Afiatic ftates with the king of Macedon, a pretence was now found for carrying their arms into thefe parts. The Gauls in the mean time, however, continued their incurfions, but now ceafed to be formidable; while the kings of Macedon, through mifconduct, were firft obliged to fubmit to a difadvantageous peace, and at laft totally fubdued (fee $\mathrm{M}_{\mathrm{AcE}}$ bon). The reduction of Macedon was foon followed by that of all Greece, either by the name of allies or otherwife ; while Antiochus the Great, to whom Hansibal fled for protection, by an unfucceffful war firft gave the Romans a footing in Afia (fee Syria). The 3 paniards and Gauls continued to be the moft oblinate enemies. The former, particularly, were rather exterminated than reduced; and even this required the utmoft care and vigilance of Scipio. Emilianus, the conqueror of Carthage, to execute. See Spain and Numantia.

Thus the Romans attained to a height of power fuperior to any other nation in the world; but now a fe-
frious as any in the commonwealth. His father had been twice raifed to the confulate, was a great general, and had been honoured with two triumphs. But he was ftill more renowned for his domeflic virtues and probity, than for his birth or valour. He married the daughter of the firlt Africanus, faid to be the pattern of her fex, and the prodigy of her age; and had by her feveral children, of whom three only arrived to maturity of age, Tiberius Gracchus, Caius Gracchus, and a daughter named Sempronia, who was married to the fecond Africanus. Tiberius, the elden, was deemed the mof accomplifaed youth in Rome, with refpect to the qualities both of body and mind. His extraordina. ry talents were heightened by a noble air, an engaging countenance, and all thofe winning graces of nature which recommend merit. He made his firt campaigns under his brother-in-law, and diftinguifhed himfelf on all occafions by tis courage, and by the prudence of his conduct. When he returned to Rome, he applied bimfelf to the fludy of eloquence; and at 30 years old was accounted the beft orator of his age. He married the daughter of Appius Claudius, who had been formerly conful and cenfor, and was then prince of the fenate. He continued for fome time in the fentiments both of his own and his wife's family, and fupported the interefts of the patricians; but without openly attacking the popular faction. He was the chief author and negociator of that fhameful neceffary peace with the Numantines; which the fenate, with the utmoft injultice, difaunulled, and condemned the conful, the quxtor, and all the officers who had figned it, to be delivered up to the Numantines (fee Numantia). The people indeed, out of efteem for Gracchus, would not fuffer him to be facrificed: but, however, he had juft reafon to complain, both of the fenate and people, for paffing fo fcandalous a decree againft his general and bimfelf, and breaking a treaty whereby the lives of fo many citizens had been faved. But as the fenate had chiefly promoted fuch bafe and iniquitous proceedings, he refolved in due time to fhow his refentment againft the party which had contributed moft to his difgrace.

In order to this, he ftood for the tribunelhip of the people ; which he no fooner obtained, than he refolved to attack the nobility in the moft tender part. They bad ufurped lands unjuftly; cultivated them by flaves, to the great detriment of the public ; and had lived for about 250 years in open defiance to the Licinian law, by which it was enacted that no citizen fhould poffers more than 500 acres. This law Tib. Gracchus refol. ved to revive, and by that means revenge himfelf on the patricians. But it was not revenge alone which prompted him to embark in fo dangerous an attempt. It is pretended, that his mocher Cornelia animated him to undertake fomething worthy both of his and her family. The reproaches of his mother, the authority of fome great men, namely of his father-in-law Appius Claudius, of P. Craffus the pontifex maximus, and of Mutius Scrvola, the moft learned civilian in Rome, and his natural thirft after glory, joined with an eager defire of revenge, confpired to draw him into this mof unfortunate fcheme.

The law, as he firt drew it up, was very mild: for A new law it only ena@ted, that thofe who poffefled more than 500 propored acres. of land fhould parit with the overplus; and that by Gracthe chus.

## R O M

Runse.
the full value of the faid lands fhould be paid them out of the public treafury. The lands thus purchafed by the public were to be divided among the poor citizens; and cultivated either by themfelves or by freemen, who were upon the foot. Tiberius allowed every child of a family to hold 250 acres in his own name, over and above what was allowed to the father. Nothing could be more mild than this new law; fince by the Licinian he might have abrolutely deprived the rich of the lands they unjultly porfeffed, and made them accountable for the profits they had received from them during their long poffeffion. But the rich patricians could not fo much as bear the name of the Licinian law, though thus qualified. Thofe chiefly of the fenatorial and equeftrian order exclaimed againft it, and were continually mounting the roftra one after another, in order to diffuado the people from accepting a law which, they faid, would raife difturbances, that might prove more dangerous than the evils which Tiberius pretended to redreis by the promulgation of it. Thus the zealous tribune was obliged day after day to enter the lifts with frefh adverfaries; but he ever got the better of them both in point of eloquence and argument.

The people were charmed to hear him maintain the caufe of the unfortunate with fo much fuccefs, and beftowed on him the higheft commendations. The rich therefore had recourfe to violence and calumny, in order to deftroy, or at leaft to difcredit, the tribune. It is faid they hired affaffins to difpatch him; but they could not put their wicked defign in execution, Gracchus being always attended to and from the roftra by a guard of about 4000 men. His adverfaries therefore endeavoured to ruin his reputation by the blackell calumnies. They gave out that he aimed at monarchy; and publifhed pretended plots laid for crowning him king. But the people, without giving ear to fuch groundlefs reports, made it their whole bulinefs to encourage their tribune, who was hazarding both his life and reputation for their fakes.

When the day came on which this law was to be accepted or rejected by the people affembled in the comitium, Gracchus began with haranguing the mighty croud which an affair of fuch importance bad brought together both from the city and country. In his fpeech he fhowed the juftice of the law with fo much eloquence, made fo moving a defcription of the miferies of the meaner fort of people, and at the fame time fet forth in fuch odious colours the ufurpation of the public lands, and the immenfe tiches which the avarice and rapacioufnefs of the great had raked together, that the people, traniported with fury, demanded with loud cries the billets, that they might give their fuffrages. Then Gracchus, finding the minds of the citizens in that warmth and emotion which was neceffary for the fuccefs of his defign, ordered the law to be 176
Oppofed by But unluckily one of the tribunes, by name Marcus the tribune OAtavius Cacina, who had always profeffed a great Octavius, friendihip for Gracchus, having been gained over by the patricians, declared againit the proceedings of his friend and colleague; and pronounced the word which had been always awful in the mouth of a tribune of the people, Vet., "I forbid it." As Octavius was a man of an unblameable character, and had hitherto been very zealous for the publication of the law, Gracchus
$37 \mathrm{I}]$

## R O M

was greatly furprifed at this unexpected oppofition from his friend. However, he kept his temper, and only de. fired the people to affemble again the next day to hear their two tribunes, one in defence of, the other in oppefition to, the law propofed. The people met at the time appointed; when Gracchus addrefling himfelf to his colleague, conjured him by the mutual duties (i) their function, and by the bonds of their ancient friend. thip, not to oppofe the good of the people, whom they were bound in honour to protect againt the ufurpation of the great : nay, taking his colleague afide, he addref. fed him thus, "Perhaps you are perfonally concerned to oppofe this law; if $\int 0$, I mean, if you have mote than the five hundred acres, I myfelf, poor as I am, engage to pay you in money what you will lofe in land." But Oftavius, either out of Ahame, or from a principle of honuur, continued immoveable in the party he had embraced.

Gracchus therefore had recourfe to another expe dient; which was to fufpend all the magiftrates in Rome from the execution of their oflices. It was law. ful for any tribune to take this ftep, when the palling of the law which he propofed was prevented by mere chicanery. After this, he affembled the people anew, and made a fecond attempt to fucceed in his defign. When all things were got ready for collecting the fuffrages, the rich privately conveyed away the urns in which the tablets were kept. This kindled the tri. bune's indignation, and the rage of the people. The comitium was like to become a field of battle, when two venerable fenators, Manlius and Fulvius, very feafonably interpofed; and throwing themfelves at the tribune's feet, prevailed upon him to fubmit his law to the judgment of the conicript fathers. This was making the fenators judges in their own caufe : but Grac* chus thought the law fo undeniably juft, that he could not perfuade himfelf that they would reject it ; and if they did, he knew that the incenfed multitude would no longer keep any meafures with them.

The fenate, who wanted nothing but to gain time, affected delays, and came to no refolution. There were indeed fome among them, who, out of a principle of equity, were for paying fome regard to the complaints of the tribune, and for facrificing their own interelt to the relief of the diftreffed. But the far greater part would not hear of any compofition whatfoever. Here. upon Gracchus brought the affair anew before the people, and earneftly intreated his colleague Octavius to drop his oppofition, in compaffion to the many unfortunate people for whom he interceded. He put him in mind of their ancient friendihip, took him by the hand, and affectionately embraced him. But fill Octavius was inflexible. Hereupon Gracchus refolved to deprive OAavius of his tribunelhip, fince he alone obtinately withtood the defires of the whole body of fo great a people. Having therefore affembled the people, he told them, that fince his colleague and he were divided in opinion, and the republic fuffered by their divifion, it was the province of the tribes affembled in comitia to re-eftablifh concord among their tribunes. "If the caufe I maintain (faid he) be, in your opinion, unjuft, I am ready to give up my feat in the college. On the contrary, if you judge me worthy of being continued in your fer. vice in this ftation, deprive him of the tribunenip who alone obftructs my wifhes, As foon as you fhall have 3 A 2

Rone. nominated one to fucceed him, the law will pafs without oppofition." Having thus fpoken, he difmiffed the affembly, after having fummoned them to meet again the next day.

And now Gracchus, being foured with the oppofition he had met with from the rich, and from his ob!tinate colleague, and being well apprifed that the law would pafs in any form in which he fhould think fit to propoie it, refolved to revive it as it was at firlt paled, without abating any thing of its leverity. There was no exception in favour of the children in families', or reimburfement promifed to thofe who fhould part with the lasds they pofefed above $500^{\text {facres. }}$. The next day the people being affembled in vaft crowds on this extraordivary occalion, Gracchus made freth applications to Ostavius, but to no purpofe; he obllinately perfited in his oppofition. 'Then Gracchus turning to the people, "Judge you, (faid he), which of us deferves to be deprived of his office." At thefe words the firit tribe roted, and declared for the depolition of Octavias. Upon which Gracchus, fufpending the ardour of the tribes, made another effort to bring over his opponent by gentle methods. But all his endeavours proving ineffectud, the other tribes went on to vote in their turns, and followed the example of the firt. Of 35 tribes, 17 had already declared againt Ottavius, and the i8th was juft going to determine the affair, when Gracchus, being willing to try once more whether he conld reclaim his colleague, fufpended the collecting of the fuffrages; "and addrefling Otavius in the moft preffing terms conjured him not to expole himfelf, by his obltinacy, to fo great a difgrace, nor to give bim the grief of having calt a
177 blemilh upon his colleague and friend, which neither Who is de-time nor merit would ever wipe off. Octavius, how. pofed, and ever, continuing obfinate, was depofed, and the law the law pafied.

The depofed tribune was dragged from the roltra by the inceafed multitude, who would have infulted him further, had not the fenators and his friends facilitated his efcape.

The Licinian law being thus revived with one confeat both by the city and country tribes, Gracchus caufed the people to appoint trinmvirs, of three commiffioners, $t_{0}$ haten its esecution. In this commifion Che people gave Gracchus $t$ efirlt place; and he had intereft enough to get his father-in-law Appius ClauGus and his brother Cains Gracches, appointed his colleagues. Thefe three fpent the whole fummer in eraveling through all the Italin provinces, to examine what lands wereheld by any perfon above 500 acres, in order to divide them ameng the poor citizens. When Cracchus retarned from his progrefs, he found, by the death of his chief agene, the his abferice had not abated either tie hatred of the $1 \mathrm{i} h \mathrm{~h}$, or the love of the poor, oward bim. As it plimly appeared that the deceafed fard been pofoned, the tribune took this occafion to apply himfelt again to his protectors, and implore their afthance againit the iolence and treachery (f his enemies. The populace, more attached after this aecident to their hero than ever, declared they would ftand by him to the lut drop of their blood; and this their zeal encouraged lim to add' a new clawie to the law, viz. that the commificners fhould likewife inquire what i.nds had been ufurped from the republic. This was tweling defenators in a mont tender prist; for molt
of them had appropriated to themfelves lands belonging to the republic. But after all, the tribune, upon a trict inquiry, found that the lands taken from the rich would not be enough to content all the poor citizens. But the following accident eafed him of this difficulty, and enabled hin to fop the murmurs of the malcontents amony the people.
${ }^{5 \prime}$ Attalus Philometer, king of Pergamus, having bequenthed his dominions and effects to the Romans, Eudemus the Pergamean brought his tieafures to Rome talus diat this time; aud Gracchus immediately got a new law vided apaffed, enating, that this money fhould be divided mong the among the poor citizens who could not have lands; people by and that th:e difpofal of the revenues of Pergamus thould not be in the fenate, but in the corsitid. By thefe fteps Gracthus mot effectually humbled the $E$ nate; who, in order to difcredit him among the pe: ple, gave out that Eademus, who had brought the king's will to Rome, had left with Gracchus the royal diadem and mantle of Attalus, which the law-making tribune was to ufe when he fhould be proclaimed king of Rome. But thefe reports only ferved to make Gracchus be more upon his guard, and to infpire the people with an implacable hatred againft the rich who were the authors of them. Gracchus being now, by his power over the minds of the multitude, abfolute malter of their fuffrages, formed a defign of raifing his father-in-law Appius Claudius to the confulate next year, of promo. ting his brother Caius to the tribunelhip, and geting himfelf continued in the fame office. The laft was what molt nearly concerned him; his perfun, as long as he was in office, being facred and inviolable. As the fenate was very active in endeavouring to get fuch only elected into the college of tribunes as were enemies to Gracchus and his faction, the tribune left no ftone unturned to fecure his election. He told the people, that the rich had refolved to affaffinate him as foon as he was out of his office; he appeared in mourning, as was the cuftom in the greateft calamities; and bringing. his children, yet young, into the forum, recommended them to the people in fuch terms, as howed that he defpaired of his own prefervation. At this fight the populace returned no anfwer, but by outcries and menaces againt the rich.

When the day appointed for the election of new tribunes came, the people were ordered to affemble in the Capitol in the great court before the temple of Jupiter. The tribes being met, Gracchus produced his petition, intreating the people to continue him one yaa. longer in the office of tribune, in confideration of the great danger to which be was expe fed, the rich having vowed his deftruction as foon as his perin n fould be no more f:cred. This was indeed an unufual requet, it having been long cuftomary not to continue any tribure in his ofice above a year, However, the tribes began to vote, and the two firlt declared for Gracchus. Hereupon the rich made great clamours; which terrified Rubrius Varro, who prefided in the college of tribunes that day, to fuch a degree, that he refigned his place to Q. Mummius, who offered to prefide in his room. But this raifed a tumult among the tribunes themfelves; fo that Grasclius wifely difmiffed the allembly, and crdered them to meet again the rext day.

In the mean tirne the people, being fenfible of what importance it was to them to prefeive the life of fo

## $R ○ M$

$\underbrace{\text { Rome powerful a protetor, not only conducted him home, }}$ but watched by turns all night at his door. Next morning by break of day, Gracchus having affembled hisfriends, led them from his houfe, and poited one half of them in the comitium, while he went up himfelf with the other to the Capitol. As foon as he appeared, the people faluted him with loud acclamations of joy. But farce was he placed in his tribunal, when Fulvius Flaccus a fenator, and friend to Gracchus, breaking through tne crowd, came up to him, and gave him notice, that the fenators, who were af. fembled in the temple of Faith, which almont touched

179 A confp:racy againf his life. that of Jupiter Capitolinus, had confpired againtt his life, and were refolved to attack him openly on his very tribunal. Hereupon Gracchus tucked up his robe, as it were, to prepare for a battle; and, after his example, fome of his party, feizing the ftaves of the apparitors, prepared to defend themfelves, and to repel force by force. There preparations nerrified the other tribunes; who immediately abandened their places in a cowardly mamer, and mixed with the crowd; while the priefts ran to thut the gates of the temple, for fear of its being profaned. On the other hand, the friends of Gracchus, who were diperfed by parties in different places, cried out, We are ready: What muft we do? Gracchu:, whofe voice could not be heard by all his adherents on account of the tumult, the clamours, and the confufed cries of the different parties, put his hand to his head; which was the figual agreed on to prepare for battle. But fome of his enemies, putting a malicious conitruction upon that gefture, immediately flew to the fenate, and told the fathers, that the feditious tribune had called for the crown to be put upon his head. Hereupon the fenators, fancying they already faw the king of Pergamus's diadem on the tribune's head, and the royal mantle on his thoulders, relolved to give the conful leave to arm his legions, treat the friends of Gracchus as encmies, aud turn the comitium into a field of battle.

But the conful Multius Scævola, who was a prudent and moderate man, refufed to be the inftrument of their rath revenge, and to dithonour his confulate with the maflacre of a difirmed people. As Calpurnius Pifo, the other conful, was then in Sicily, the moft turbulent among the fenators cried out, "Since one of our confuls is abfent, and the ct'er betrays the repuditic, let us do ourlelves juftice; let us immediately gon and demolifh with our own hands this idel of the people." Scipio Nafica, who had been all along for violent meatures, inveighed bitterly againft the conful for refu'sing to fuccour the republic in her greatelt diftrefs. Scipio leafica was the great grandfon of C:eius Sapio, the uncle of the firt Africanus, and confequently coufin to the Gmachi by their mother Cornelia. But neverthelefs not one of the fenators betrayed a more irreconcileable hacred againt the tribune than he. When the prudent conful refufed to arm his leginne, and put the atherents of Gracchus to death contary to the ufual forms of jutiec, he fet no bounds to his fary, bat, rinisg up from his place, cried out like a madmai', "Since our concil betrays us, lit thofe who love the republic follow me." Having uttered thefe words, he immediately waiked out of the temple, a:unded by a great number of enaters.

Nanca thew his robe over his ficulars, allu having covered his had with it, advanced with his followens

# K, $\boldsymbol{m}_{1}$ 

 covered his had with it, advanced with his folowers ixninto the crowd, where he was joined by a company of a fufle the clients and friends of the patricians, armed with enfues, it: ftaves and club;: Thefe, faling indiferenly uron all which Who food in their way, diperied the crowd. Many of is kathect, Gracchus's party took to their hools; and in that tumult all the feats being overturned and broken, Nafica, armed with the leg of a broken bencl, knocked down all who oppofed him, and at length reached Giacchus. One of his party feized the tribune by the lappet of his robe: but he, quitting his gown, fled in his runic; ancd as he was in that hurry of Spirits, which is infeparable from fear, leaping over the broken benches, he had the misfortunc to llip and fall. As he was getting up again, he received a blow on the head, which ftunned him: then his adverfarics rufhing in upon him, with rereated blows put an end to his life.

Rome was by his death delizered, according to $C^{-}$cero, from a doneltic enemy, who was more formidablto her than even that Numantia, which had folt kindled his refentments. Perhaps no man was ever born with greater talents, or more capable of aggrandiaing himdelf, and doinghone ur to his country. Iut his great mind, his manly courage, bis lively, eafy, and power. ful eloquence, were, fays Cicerc, like a from in the hands of a madman. Gracchus abufed tiem, not ia fupporing an unjait caufe, but in conducting a good one with too much violence. He went fo liar as to make fome believe that he had really fomelhing in view befides the interef of the people whom he pretended to relieve; and therefore fome hiltorians have reprefented him as a tyrant. But the moft judicions writers clear him from this impuation, and afcribe his firt defign of reviving the Licinian law to an eager defire of being revenged on the ferators for the affront they had very unjultly put upon him, and the conful Mancinus, as we bare hinted above. 'The law he attempted to revive had an air of juftice, which gave a fanction to his revenge, without calting any blemilh on his reputation.

The death of Gracchus did not put an end to the tumult. Above $\hat{j} 00$ of the tribune's friends lolt their lives in the fray; and their bodies were thrown, with that of Graccha, into the Tiber. Nay, the fenate carried their revenge begond the fatal day which had tained the Capitd with Roman blocd. They fought fir all the friends of the late tubunc, and winhout any form of law alfafinated fome, and forced others into banifment. Caius Billius, one of the molt zealous de fenders of the feople, was feized by his enemies, and fhut up in a catk with fakes and vipers, where he miferably periflec!. Though the laws prohib:ted any citizen to take away the life of another beiore he had been legally condzmed, Nafica and his followers were acquitted by the fenate, who enacted a decree, juftifying all the cruelties committed agrint Cracchus and his adherents.

Thefe difturbances were for a floort time intermpted by a revolt of the flaves in Siciy, owafioned by the batces in: cruelty of their mafters; but they being fonn reduced, crati, the contefs about the Sempronian luev, as it was called, again took place. Boh partes were determined not to yield; and therefore the moll fatal cifucts enfued. The firf thirg of corliquenoe was ine dat? of Sci-
pio Aricmus the Second, who was prisately frangled in his bed by fone of tine partifans of the plebeian party, about 129 B. C. Cinias Gracchus, brother to him vil:) lad beenformerly killed, not only underook the revival of the Scmpronian law, but propofed a new one, grating: the rights of Roman citizens to all the Italian allies, who conh receive no thare of the lands divided in confequence of the Senpronide liw. The confequences of this were much worfe than the former; the flame feread throughall Italy; and the nations who had made twat with the republic in its infancy again commenced enemies more formilable than before. Fregellæ, a city of che Volfci, revolted: bac being fuddenly attacked, was obliged to fubmit, and was rafed to the ground; which quieted matters for the prefent. Gracchus, however, Rill continued his attempts to hamble the fenate and the reft of the patrician body: the ultimate confequence of which was, that a price was fet on his head, and that of Fulvius his confederate, no lefs than
their weight in gold, to any one who thould bring them
182

## The cuf-

## tom of pro-

 fcription 6egun. to Opimins the chief of the patrician party. Thus the cultom of profeription was begun by the patricians, of which they themfelves foon had enough. Gracchus and Fulvius were facriticed, but the difurders of the republic were not fo eafily cured.The inundation of the Cimbri and Teutones put a topp to the civil difcords for fome time longer; but they being defeated, as related under the articles Cimbri and Teutones, nothing prevented the troubles from being revived with greater fury than before, except the war with the Sicilian flaves, which had again commenced with more dangerous circumftances than ever. But this war being totally ended about 99 B. C. no farther obitacle remained. Marius, the con* See Nu- queror of Jugurtha * and the Cimbri, undertook the midia. caufe of the plebeians againgt the fenate and patricians. Having affociated himielf with A puleius and Glaucia, two factious men, they carsied their proceedings to fuch a length, that an open rebellion commenced, and' Marius himfelf was obliged to ant againt his allies. Peace, however, was for the prefent reltored by the maffacre of Apuleius and Glaucia, with a great number of their followers; upon which Marius thought proper to leave the city.

While factious men thus endeavoured to tear the republic in pieces, the attempts of well-meaning people to heal thofe divifions ferved only to involve the fate in calamities fill more grievous The confuls obferved, that many individuals of the Italian allies lived at Rome, and falfely pretended to be Roman citizens. By means of them, it was likewife perceived, that the plebeian party had acquired a great deal of its power ; as the votes of thefe pretended citizens were always at the fervice of the tribunes. The confuls therefore got a law paffed, commanding all thofe pretended citizens to return home. This was fo much refented by the Italian ftates, that an univerfal defection took place. A fcheme was then formed by M. Livius Drufus, a tribune of the people, to reconcile all orders of men ; but this only made matters worfe, and procured his own affaffination. His death feemed a fignal for war. The Marfi, Peligni, Samnites, Campanians, and Lucanians, and in fhort all the provinces from the river Liris to the Adriatic, revolted at once, and formed themfelves into a republic, in oppofition to that of Rome.

The haughty Romans were now made thoroughty fenfible that they were not invincible : they were defeated in almolt every engagement; and munf foon have yielded, had they not fallen upon a method of dividing their encmies. A law was paffed, enacting, that all the nations in Italy, whofe alliance with Rome was indifputable, thould enjoy the right of Roman citizens. This drew off feveral nations from the alliance; and at the fame time,' Sylla taking upoti him the command of the Roman armies, fortune foon declared in favour of the latter.

The fuccefs of Rome againit the allies ferved only to bring greater miferies upon herfelf. Marius and Sylla became rivals; the formeradhering to the people, and the latter to the patricians. Marius affociated with one of the tribunes named Sulpitius; in conjunction with whom he raifed fuch difurbances, that Sylla was forced to retire from the city. Having thus driven off his rival, Marius got himfelf appointed general againit Mithridates $\dagger$ king of Pontus; but the foldiers retufed to obey any other than Sylla. A civil war immediately enfued, in which Marius was driven out in his turn, and a price fet upon his head and that of Sulpitius, with many of their adherents. Sulpitius was foon feized and killed; but Marius made his eicape. In the mean time, however, the cruelties of Sylla rendered him obnoxious both to the fenate and people ; and Cinna, a furious partifan of the Marian faction, being cho: fen conful, cited him to give an account of his conduct. Upon this Sylla thought proper to fet out for Afia; Marius was recalled from Africa, whither he had fled; and immediately on his landing in Italy, was joined by a great number of thepherds, flaves, and men of defperate fortunes; fo that he foon faw himfelf at the head of a confiderable army.

Cinna, in the mean time, whom the fenators had de- Horrid pofed and driven out of Rome, folicited and obtained cruelties a powerful army from the allies; and being joined by committed Sertorius, a moit able and experienced general, the two, in conjunction with Marius, advanced, towards the capital; and as their forces daily increafed, a fourth army was formed under the command of Papirius Carbo. The fenate raifed fome forces to deferd the city; but the troops being vaftly inferior in number, and likewife inclined to the contrary fide, they were obliged to open their gates to the confederates. Marius entered at the head of a numerous guard compofed of flaves, whom he called his Bardicans, and whom he defigned to employ in revenging himfelf on his enemies. The firf order he gave thefe affaffins was, to murder all who came to falute him, and were not anfwered with the like civility. As every one was for. ward to pay his compliments to the new tyrant, this order proved the deftruction of valt numbers. At laft thefe Bardixans abandoned themfelves to fuch exceffes in every kind of vice, that Cinna and Sertorius ordered their troops to fall upon them; which being inftantly put in execution, they were all cut off to a man.

By the deftruction of his guards, Marins was res duced to the neceffity of taking a method of gratifying his revenge fomewhat more tedious, though equally effectual. A conferrence was held between the four chiefs, in which Marius feemed quite frantic with rage. Sertorius endeavoured to moderate hisfury; but, being

## ROM

Kome. over-ruled by Cinna and Carbo, a refolution was taken to murder without mercy all the fenators who had oppofed the popular faction. This was immediately put in execution. A general flaughter commenced, which lafted five days, and during which the greatelt part of the obnoxious fenators were cut off, their heads fuck upon poles over-againt the roftra, and their bodies dragged with hooks into the forum, where they were left to be devoured by dogs. Syila's houfe was demolifhed, his goods confifcated, and he himfelf declared an enemy to his country; however, his wife and children had the good fortunate to make their efcape.This maflacre was not confined to the city of Rome. The foldiers, like as many blood-hounds, were difperfed over the country in fearch of thofe who fled. The neighbouring towns, villages, and all the highways, fwarmed with affaffins ; and on this occafion Plutarch obferves with great concern, that the mott facred ties of friendfhip and hofpitality are not proof againft treachery, in the day of adverfity, for there were but very few who did not difcover their friends who had fled to them for fhelter.
185
ylla threatens revenge.

This flaughter being over, Cinna named himfelf and Marius confuls for the enfuing year ; and thefe tyrants feemed refolved to begin the new year as they had
ended the old one : but, while they were preparing to renew their cruelties, Sylla, having proved victorious in the eaf, fent a long letter to the fenate, giving an account of his many victories, and his refolution of returning to Rome, not to reltore peace to his country, but to revenge himfelf of his enemies, i. $e$. to deftroy thofe whom Marius had fpared. This letter occafioned an univerfal terror. Marius, dreading to enter the lifts with fuch a renowned warrior, gave himfelf up to exceffive drinking, and died. His fon was affociated with Cinna in the government, though not in the confulfhip and proved a tyrant no lefs cruel than his father. The fenate declared one Valerius Flaccus general of the forces in the eaft, and appointed him a confiderable army ; but the troops all to a man deferted him, and joined Sylla. Soon after, Cinna declared himfelf conful a third time, and took for his colleague Papirius Carbo; but the citizens, dreading the tyranny of thefe inhuman montters, fled in crowds to Sylla, who was now in Greece. To him the fenate fent deputies, begging that he would have compaffion on his country, and not carry his refentment to fuch a length as to begin a civil war: but he replied, that he was coming to Rome full of rage and revenge; and that all his enemies, if the Roman people confented to it, fhould perifh either by the fword or the axes of the executioners. Upon this feveral very numerous armies were formed againit hirn ; but, through the mifconduct of the generals who commanded them, thefe armies were everywhere defeated, or went over to the enemy. Pompey, afterwards ftyled the Great, fignalized himfelf in this war, and embraced the party of Sylla. The Italian nations took fome one fide and fome another, as their different inclinations led them. Cinna, in the mean time, was killed in a tumult, and young Marius and Carbo fucceeded him; but the former having ventured an engagement with $S$; lla, was by him defeated, and forcet to fly to Prænefte, where he was clofely befieged.

Thus was Rome reduced to the loweft degree of konc. mifery, when one Pontius Telefinus, a Samnite of great 186 experience in war, projected the total ruin of the city. Rome in He had joined, or pretended to join, the generals of tie utmol the Marian faction with an almy of $40,000 \mathrm{men}$; and danger therefore marched towards Prænelt, as if he deffgned to relieve Marius. By this means he drew Sylla and Pompey away from the capital; and then decamping in the night, over-reached thefe two generals, and by break of day was within 10 furlongs of the Collatine gate. He chen pulled off the mank; and declaring himelf as much an enemy to Marius as to Sylla, told his troops, that it was not his defign to alfift one Roman againf another, but to deftroy the whole race. "Let fire and fword (faid he) dellony all ; lat no quairter be given; mankind can never be free aslong as one Roman is left alive."-Never had this proud metropolis been in greater danger ; nor ever had any city a more narrow efcape. The Roman yrath marched out to oppofe him, but were driven back with great flaughter. Sylla himfelf was defeated, and forced to fly to his camp. Telefinus advanced with more fury than ever; but, in the mean time, the other wing of his army having been defeated by M. Cralfus, the victorious general attacked the body where Telefinus commanded, and by putting them to flight, faved his country from the molt imminent danger.

Bylla, having now no enemy to fear, marched firft 187 to Atemnx, and thence to Rome. From the former Monftrous
city be carried $80 c 0$ pifoners to Rome, and caufed cruelty of them all to be maffacred at once in the circus. His sylla. cruelty next fell upon the Præneftines, 12,000 of whom were maffacred without mercy. Young Marius had killed himfelf, in order to avoid falling into the hands of fuch a crucl enemy. Soon after, the inhabitants of Norba, a city of Campania, finding themfelves unable to refift the forces of the tyrant, fet fire to their boufes, and all perifhed in the flames. The taking of theje cities put an end to the civil war, but not to the cruel. ties of Sylla. Having affembled the people in the comitium, he told them, that he was refolved not to fpare a fingle perfon who had borne arms againlt him. This cruel refolution he put in execution with the mon unrelenting vigour; and having at laft cut off all thofe whom he thought capable of oppoling him, Sylla caufed himfelf to be declared perpetual dictator, or, in other words, king and abfolute fovereign of Rome.

This revolution happeened about $80 \mathrm{~B} . \mathrm{C}$. and from He is prothis time we may date the lofs of the Roman liberty, claimed Sylla indeed refigned his power in two years; but the perpeteal. citizens of Rome having cnce fubmitted, were ever dictator. after more inclined to fubmit to a mafter. Though individuals retained the fame enthufialtic notions of liberty as before, yet the minds of the generality feem from this time to have inclined towards monarchy. New mafters were indeed already prepared for the re. public. Cæfar and Pompey had eminently diftin. guifhed themfelves by their martial exploits, and were already rivals. They were, however, for fome tine prevented from raifing any difturbances by being kept at a diftance from each other. Scrtorius, one of the generals of the Marian faction, and the only one of them poffefed cither of honour or Eribity, had retirect

n ne. ners.
into Spain, where he cretted a republic independent of Roms. Iompey and Metellus, two of the bet reputad generals in Rome, were fent agdinft him; but iuftead of conquerisu, they were on all occafions colquered by him, and obliged to abandon their enterprife with difgrace. At latt Sertorius was treacherounly murdered; and the traiturs, who after lis death ufurped the command, beins totally deftitute of his abilities, wese cafily defeated by Pompey: and thus that general reaped an undeficrved honour from conclading the war with turces.
The Spanifh war was fearce ended, when a very dangerous one was excited by Spartacus, a 'Ihracian gladiator. For fome time this rebel proved very fucceffal; but at lalt was tot mly defeated and killed by Crafus. The fugitives, however, rallied again, to
1ng the number of 5000 ; but, being totally defeated br Pomycy Pornpay, the latter took occafion from thence to claim and craffus the glory which was juftly due to Craffus. Being thus afiome
; 戶斤. atlbecome extremely popular, and fetting no bounds to thority. his ambition, he was chofen conlul along with Cridfus.

Both generals were at the head of powerful armies; and a conteft between them immediately began :b but who fhould firt lay down their arms. With difficulty they were in appearance reconciled, and immediately began to oppofe one another ina new way. Pompey courced the favour of the people, by reinfating the tribunes in their ancient power, which had been greatly aoridged by Sylla. Crafus, though naturally covetons, entertaired the populace with furprifing profufion at 10,000 tables, and at the fame time diftributed corn fufficient to maintain the ir families for three months Thefe prodigious expences will feem lefs furprifing, Whein we contder that Craflus was the richelt man in Rome, mad that his eftate amounted to upwards of roos talents, i. e. $1,356,2501$. fterling. Notwithfanding his utmoft efforts, however, Pompey fill had the auperiority; and vas therefore propofed as a proper perfon to be employed for clearing the feas of pirates. In this new fation a moft extenfive power was to be Granted to him. He was to have an abf lute authority 1or three years over all the feas within the fraits or pillars of Hercules, and over all the countiles for the ipace of 400 furlongs from the fea. He was empowered to raite as many foldiers and mariners as he thought pruper; to take what fums of money he pleafed out of the public treafury without being accountable for them; and to choofe out of the fenate fifteen fenators to be his lieutenants, and to execute his orders when he himiflf could not be prefent. The fenfible part of the people were againt invelting one man with fo much power; but the unthinking multitude rendered all. oppofition fruitefs. The tribune Rofiess attempted to fpeak againl it, but was prevented by the clamours of the people. He then held up two of his fingers, to fhow that he was for dividing that extenfive commiffion between two perions: but on this the affembly burlt out into fuch hideous outcres, that a crow flying accidentally over the comitium, was funned with the noife, and fell down among the rabble. This law being agreed to, Pompey executed his commifirin fo much to the public fatisfaction, that on his retarn a new law was propofed in his favour. By this he was to be appointed gene:al of all the forces in Afia; and as he was till to retain the fovereignty of the feas, he was now in
fat made fovereign of all the Reman empire.This law was fupported by Cicero and Cafdr, the former afpiring at the cofflate, and the latter pleafed to fee the Romans fo radily appointing themfelves a matter. Pomper, however, executed his commifion with the utinole fidelity and fuccefs, completing the conquelt of Pontus, Albania, Iberia, \&. which had been fuccolifully beguar by Sylla and Lucullus.

But while Pompey was thus aggrandifirg himfelf, 190 the republic was on the point of being fubverted by of curtacy a confpiracy formed by Lusius Sergius Catiline. He was defcended from an illuftrinus tamily; but having quite ruined his eftate, and ren iered himfelf infamus by a feries of the molt deteft:ble crimes, he aflociated with a number of other's in circumftances fimilar to his own, in order to repair their broken fortuves by ruining their country. Their fcherre was to murder the confuls together with the greateft part of the fenators, fet fire to the city in different places, and then feize the government. This wicked defign mifcarried twice; but was not on that account dropped by the confipators. Their pariy increafed cuery day ; and both Cæfar and Craffus, who tince the departure of Pompey had ftudied to gain the affections of the people as far as poffible, were thought to have been privy to the con!piracy. At laft, however, the matter was difcovered by means of a young knight, who had indif. creetly revealed the fecret to his paramour. Catiline then openly took the field, and, fron raifed a confiderable army : but was utterly defeated and killed about $62 \mathrm{~B} . \mathrm{C}$. ; and thus the republic was freed from the prefent danger.
In the mean time, Cxfar continued to adrance in popularity and in power. Soon after the defeat of Catiline, he was created pontifex maximus; and after that was fent into Spain, where he fubdued feveral nations that had never before been fubject to Rome.While he was thus employed, his tival Pompey returned from the eaft, and was received with the higheft honours; but though fill as ambitious as ever, he now affected extraordinary modefty, and declined accepting of the applaufe which was offered him. His aim was to affume a fovereign authority without feeming to defire it ; but he was foon convinced, that, if he defired to reign over his fellow-citizens, it muft be by force of arms. He therefore renewed his intrigues, and fpared no pains, however mean and fcandalous, to inereafe his popularity. Cæfar, on his rerurn from Spain, found the fovereignty divided between Craflus and Pompey, each of wh $m$ was ineffectually Araggling to get the better of the other. Cwfar, no lefs ambitious than the other two, prop; fed that they fhould put an end to their differences, and take him for a partner in their power. In thort, he projected a triumvirace, or anficiation of $19 x$ three perfons, (Pompey, Craflus, and himfelf), in which The firf hould be lod eate and rate. people; and, in order to make their confederacy more lafting, they bound themfelves by mutual oaths and promifes to fland by each other, and fuffer nothing to be undertaken or carried into execution without the una. nimous confent of till the three.
Thus was the liberty of the Romans taken away a fecond time, nor did they ever afterwards recover it; though at prefent nose perceived that this was the cafe,

except Cato. The affociation of the triumvirs was for a long time kept fecret; and nothing appeared to the people except the reconciliation of Pompey and Craffus, for which the fate reckoned itfelf indebted to Ceffar. The firt confequence of the tiiumvirate was the confullhip of Julius Cæiar. But though this was obtained by the favour of Pompey and Craffus, he found himfelf difappointed in the colleague he wanted to affociate with him in that office. He had pitched upon one whom he knew he could manage as he pleafed, and diftributed large fums among the people in order to engage them to vote for him. The fenate, however, and his own weapons; and having therefore fet up another candidate, diftributed fuch immenfe fums on the oppofite fide, that Cælar, notwithitanding the valt riches he had acquired, was forced to yield. This defeat proved of fmall confequence. Cæfar fet himfelf to engage the affections of the people; and this he did, by an agrarian law, fo effectually, that he was in a manner idolized. The law was in itfelf very reafonable and jut ; neverthelefs, the fenate, perceiving the defign with which it was propofed, thought themfelves bound to oppofe it. Their oppofition, however, proved active in his endeavours againft it, was driven out of the affembly with the greateft indignity, and from that day became of no confideration; fo that Cæfar was

The next ftep taken by Cofar was to fecure the knights, as he had already done the people; and for this purpofe he abated a third of the rents which they annually paid into the treafury; after which he governed Rome with an abfolute fway during the time of his confulate. The reign of this triumvir, however, was ended by his expedition into Gaul, where his military exploits acquiced him the higheft reputationPompey and Crafius in the mean time became confuls, and governed as defpotically as Cæfar himfelf had done. On the expiration of their firf confulate, the republic fill into a kind of anarchy, entirely owing to the difor. ders occafioned by the two late confuls. At laft, however, this confulion was ended by raifing Crallus and Pompey to the contulate a fecond time. This was no fooner dore, than a new partition of the empire was propofed. Craflus was to have Syria and all the eaftern provinces, Pompey was to govern Africa and Spain, and Cetar to be continued in Gaul, and all this for the fpace of five years. This law was paffed by a great majority; uporn which Craifus undertook an expedition againtt the Pathians, whom he imagined he frould catily overcome, and then enrich himfelf with their foils; Cafar applied with great atliduity to the completing of the conquelt of Gau: ; and Pompey having nothing to d, in his province, Ataid at Rome to govera the republic alone.

The affuirs of the Romans were now haftening to a critis. Crudus, having oppeffed all the provinces of the ealt, was totally dufered and killed by the Par-
ther Cæfar or Pompey fhould firlt refign the command of their armies, and return to the rank of private perfons. As both parties faw, that whoever firft laid down his arms mult of courfe fubmit to the other, both refufed to difarm themfelves. As Cæfar, however, had amafled immenfe riches in Gaul, he was now in a condition not only to maintain an army capable of vying with Pompey, but even to buy over the leading men in Rome to his intereft. One of the confuls, named Emilius Paulus, coft him no lefs than 1500 talents, or 310,6251 . fterling; but the other, named Marcellus, could not be gained at any price. Pompey had put at the head of the tribunes one Scribonius Curio, a young patrician of great abilities, but fo exceedingly debauched and extravagant, that he owed upwards of four millions and a half Iterling. Cæfar, by enabling him to fatisfy his creditors, and fupplying him with money to purfue his debaucheries, fecured him to his interelt; and Curio, without feeming to be in Cæfar's intereft, found means to do him the moft effential fervice. He propofed that both generals thould be recalled; being well affured that Pompey would never confent to part with his army, or lay down the government of Spain with which he had been invefted, fo that Cæfar might draw from Pompey's refufal a pretence for continuing himfelf in his province at the head of his troops. This propofal threw the oppofite party into great embarrafiments; and while both profeffed their pacific intentions, both continued in readinefs for the molt ubltinate and bloody war.Cicero took upon himfelf the office of mediator ; but Pompey would hearken to no terms of accommodation. The orator, furprifed to find him fo obltinate at the fame time that he neglected to ftrengthen his army, afked him with what forces he defigned to make head againft Cælar? To which the other anfwered, that he needed but ftamp with his foot, and an army would fart up out of the ground. This confidence he affumed becaufe he periuaded himfelf that Cæfar's men would abandon him if matters came to extremities. Cæfar, however, though he affected great moderation, yet kept himfelf in readinefs for the worlt; and therefore, when the fenate paffed the fatal decree for a civil war, he was not in the lealt alarmed. This decree was iffued in the year 49 B. C. and was exprefled in the following words: "Let the confuls for the year, the proconful Pompey, the pretors, and all thole in or near Rome who have been confuls, provide for the public rafety by the moft proper means." This decree was no fooner paffed, than the conful Marcellus went, with his colleague Lentulus, to a houfe at a fmall diftance from the town, where Pompey then was; and prefenting him with a fword, "We require you (aid he) to take upon you with this the defence of the republic, and the command of her tronps." P.,mpey obeyed; and Cæfar was by the fame decree divelted of his office, and one Lucius Domitius apprinted to fucceed him, the new governor being empowered to ruife $40 c 0$ men in order to take poffeffion of his province.

War being thus reflived on, the fenate and Pompey began to make the neceil ry preparations for oppofirg Colar. The attempt of the latter to withftand the:r anthority they termed a tunult ; from which contemptible epithet it appeared that they either did not know, or did not dread, the enemy whom they were bringing upan themilves. H wever, they ordered 30,0co Po 3 B

Hoftilities
begun by
Czar.
raign troops as Pompey fhould think proper; the erpence of which armament was defrayed from the public treafury. The governments of provinces, and all public honours, were beftowed upon fuch as were remark: able for their attachment to Pompey and their enmity to Cafar. The latter, however, was by no means wanting in what concerned his own intereft. Three of the tribunes who had been lis friends were driven out of Rome, and arrived in his camp difguifed like flaves. Cefar thowed them to his army in this ignominious habit; and, fetting forth the iniquity of the fenate and patricians, exhorted his men to ftand by their general under whom they had ferved fo long with fuccefs; and finding by their acclamations that he could depend on them, he refolved to begin hoftilities immediately.

The firlt defign of Cæfar was to make himfelf manter of Ariminum, a city bordering upon Cifalpine Gaul, and confequently a part of his province; but as this would be looked upon as a declaration of war, he re-: folved to keep his defign as private as polfible. At that time he himfelf was at Ravenna, from whence he fent a detachment towards the Rubicon, defiring the officer who commanded it to wait for him on the banks of that river. The next day he affifted at a fhow of gladiators, and made a great entertainment. Towards the clofe of the day he rofe from table, defiring his guelts to flay till he came back, which he faid would be very foun; but, inftead of returning to the company, he immediately fet out for the Rubicon, having left orders to fome of his mof intimate friends to follow him through different roads, to avoid being obferved. Having arrived at the Rubicon, which parted Cifpaline Gaul from Italy, the fucceeding misfortunes of the empire occurred to his mind, and made him hefitate. Turning then to Afinius Pollio, "If I do not crofs the river (faid he), I am undone; and if I do crofs it, how many calamities fhall I by this means bring upon Rome!" Having thus fooken, he mufed a few minutes; and then crying out, "The die is caft," he threw himfelf into the river, and croffing it, marched with all poffible fpeed to Ariminum, which he reached and furprifed before daybreak. From thence, as he had but one legion with him, he difpatched orders to the formidable army he bad left in Gaul to crefs the mountains and join him.
The activity of Cæfar ftruck the oppofite party with the greatelt terror; and indeed not without reafon, for they had been extremely negligent in making preparations againt fuch a formidable opponent. Pompey himfelf, no lefs alarmed than the reft, left Rome with a defign to retire to Capua, where he had two legions whom he had formerly draughted out of Cæfar's army. He communicated his intended flight to the fenate; but at the fame time acquainted them, that if any magiffrate or fenator refufed to follow him, he fhould be treated as a friend to Cxfar and an enemy to his country. In the mean time Cæfar, having raifed new troops in Cifalpine Gaul, fent Marc Antony with a detachment to feize Aretium, and fome other officers to fecure Pifaurum and Fanum, while he himfelf marched at the head of

195 Takes foveral towns. the thirteenth legion to Auximum, which opened its gates to him. From Auximum he advanced into Picenum, where he was joined by the twelfth legion from Tranfalpine Gaul. As Picenum readily fubmitted to him, he led his forces againit Corfinium, the capital of
the Peligni, which Domitns Ahenobarbus: defended with thirty cohorts. But Cæiar no fooner invefted it, than the garrifon betrayed their commander, and delivered him up with many fenators, who had taken refuge in the place, to Cæfar, who granted them their lives and liberty. Domitius, fearing the refentment of the conquerof, had ordered one of his flaves, whom he ufed as a phyfician, to give him a dofe of poifon. When he came to experience the humanity of the conqueror, he lamented his misfortune, and blamed the haftinefs of his own refolution. But his phyflician, who had only given him a fleeping.draught, comforted him, and received his liberty as a reward for his affection.

Pompey, thinking: himielf no longer. fafe at Capua after the reduction of Corfinium, retired to Brundufium, with a defign to carry the way into the ealt, where all the governors were his creatures. Cefar fol lowed him clofe; and arriving with his army before Brundufium, invefted the place on the land-fide, and undertook to thut up the port by aftaccado of his own invention. But, before the work was completed, the fleet which had conveyed the two confuls with thirty: cohorts to Dyrrhachium being returned, Pompey refolved to make his efcape, which he conducted with all the experience and dexterity of a great officer. He kept his departure very fecret; but, at the fame time, made all neceflary preparations for the facilitating of it. In the firf place, he walled up the gates, then dug deep and wide ditches crofs all the Areets, except only thofe two that led to the port; in the ditches he planted flarp pointed fakes, covering them with hurdles and earth. After thefe precautions, he gave exprefs orders that all the citizens fhould keep within doors, left they: fhould betray his defign to the enemy; and then, in the fpace of three days, embarked all his troops, except the light-armed infantry, whom he had placed on the walls; and thefe likewife, on a fignal given, abandoning their polts, repaired with great expedition to the fhips. Cæfar, perceiving the walls unguarded, ordered his men to feale them, and make what hafle they could after the enemy. In the heat of the purfuit, they would have fallen into the ditches which Pompey had prepared for them, had not the Brundufians warned thern of the danger, and, by many windings and turnings, led them to the haven, where they found all the fleet under fail, except two veffels, which had run aground in going out of the harbour. Thefe Cexfar took, made the foldiers on board prifoners, and brought them afhore.
Cerar, feeing himfelf, by the flight of his rival, mafter of all Italy from the Alps to the fea, was defirous to follow and attack bim befure he was joined by the fupplies which he expected from Afia. But being dertitute of fhipping, he refolved to go firft to Rome, and fettle fome fort of government there; and then pafs into Spain, to drive from thence Pompey's troops, who had taken poffeffion of that great continent, under the command of Afranius and Petreius. Before he left Brundufium, he fent Scribcnius Curio with three legions into Sicily, and ordered Q. Valerius, one of his lieutenants, to get together what fhips he could, and crofs. over with one legion into Sardinia. Cato, who commanded in Sicily, upon the firf news of Curio's landing there, abandoned the ifland, and retired to the camp of the confuls at Dyrrbachium; and Q. Valerius no fooner appeared with bis fmall fleet off Sardinia,

Rome.
than the Caralitini, now the inhabitants of Cagliari, drove out Aurelins Cotta, who commanded there for the fenate, and put Cxfar's Lentenant in poffeffion both of their city and illand.
197 Cxfar goes to Rome. wards the mean the general himelf advanced to tors then in Italy, defiring them to repair to the capital, and aflit him with their council, Above all, he was defirous to fee Cicero; but could not prevail upon him to return to Rome. As Cæfar drew near the capital, he quartered his troops in the neighbouring municipia; and then advancing to the city, out of a pretended refpect to the ancient cuftoms, he took up his quarters in the fuburbs, whither the whole city crowded to fee the famous conqueror of Gaul, who had been abfent near ten years. And now fuch of the tribunes of the people as had fled to him for refuge reaffumed their functions, mounted the roftra, and endeavoured by their fpeeches to reconcile the people to the head of their party, Marc Antony particularly, and Caffius Longinus, two of Cafar's noft zealous partifans, moved that the fenate fhould meet in the fuburbs, that the general might give them an account of his conduct. Accordingly, fuch of the fenators as were at Rome affembled; when Cæfar made a fpeech in juftification of all his proceedings, and concluded his harangue with propofing a deputation to Pompey, with offers of an accommadation in an amicable manner. He even defired the confcript fathers, to whom in appearance he paid great deference, to nominate fome of their venerable body to carry propofals of peace to the confuls, and the general of the confular army; but none of the fenators would take upon him that commifion. He then began to think of providing himfelf with the neceffary fums for carrying on the war, and had recourfe to the public treafury. But Metellus, one of the tribunes, oppofed him; alleging a law forbidding any one to open the treafury, but in the prefence and with the confent of the confuls. Cæfar, however, without regarding the tribune, went directly to the temple of Saturn, where the public money was kept. But the keys of the treafury having been carried away by the conful Lentulus, he ordered the doors to be broken open. This Metellus oppofed : but Cæfar, in a paffion, laying his hand on his fword, threatened to kill him if he gave him any

198
farther difturbance; which fo terrified Metellus, that he withdrew. Cefar took out of the trealary, which was ever after at his command, animmenfe fum; fome fay, 300,000 pounds weight of gold. With this fupply of money he raifed troops all over Italy, and fent governors into all the provinces fubject to the republic.

Cælar now made Marc Antony commander in chref of the armies in Italy, fent his brother C. Antonius to govern Illyricum, afigned Cifalpire Getul to Licinius Craffus, appointed M. Amilius Lepidas governor of the capital; and having got together fome fhips to cruife in the Adriatic and Mediterranean feas, he gave the command of one of his fleets to P. Cornelias Dolabella, and of the other to roung Hortenfius, the fon of the famous orator. As Pompey had fent governors into the fame provinces, by this means a general war was kindled in almoft all the parts of the known world. However, Cæfar would not trutt any of his lieutenants with the conduct of the war in Spain, which was Pompey's favourite province, but took it upon himfelf; and
having fettled his affairs in great hafte at Rome, re. turned to Ariminum, affembled his legions there, and pafing the Alps, entered Tranfalpine Gaul. There he was informed that the inhabitants of Marfeilles had refolved to refufe him entrance into their city ; and that L. Domitius Ahenobarbus, whom he had generoufly pardoned and fet at liberty after the reduction of Corfinium, had fet fail for Marfeilles with feven galleys, having on board a great number of his clients and flaves, with a defign to raife the city in favour of Pompey. Cæfar, thinking it dangerous to let the enemy take poffeffion of fuch an important place, fent for the 15 chief magiftrates of the city, and advifed them not to begin a war with him, but rather follow the example of Italy, and fubmit. The magiftrates returned to the city, and foon after informed him that they were to ftand neuter; but in the mean time Domitiuis arriving with his fmall fquadron, was received into the city, and declared general of all their forces. Hereupon Cæfar immediately invefted the town with three legions, and ordered twelve galleys to be built at Arelas, now Arles, in order to block up the port. But as the fiege was like to detain him too long, he left C. Trebonius to carry it on, and D. Brutus to command the fleet, while he continued his march into Spain, where he began the war with all the valour, ability, and fuccefs of a great general. Pompey had three generals in this continent, which was divided into two Roman provinces. Varro commanded in Farther Spain; and Petreius and Afranius, with equal power, and two confiderable armies, in Hither Spain. Cxfar, while he was yet at Marfeilles, fent $Q$. Fabius, one of his lieutenants, with three legions, to take poffeftion of the paffes of the Pyrenees, which Afranius had feized. Fabius executed his commiffion with great bravery, entered Spain, and left the way open for Cefar, who quickly followed him. As foon as he had croffed the mountains, he fent out fcouts to obferve the fituation of the enemy; by whom he was informed, that Afranius and Petreius having joined their forces, confifing of five legions, 20 cohorts of the natives, and 5000 horfe, were advantageoully pofted on an hill of an eafy afcent in the neighbourhood of Ilerda, now Lerida, in Catalonia. Upon this advice Cæfar advanced within fight of the enemy, and encamped in a plain between the Sicoris and Cinga, now the Segro and Cinca. Beween (If the eminence on which Afranius had pofted him- to great felf, and the city of Ilerda, was a fmall plain, and in the diftrefs in middle of it a rifing ground, which Cafar attempted to feize, in order to cat off by that means the communi. cation between the enemy's camp and the city, from whence they had all their provifions. This occafioned a fharp difpate between three of Cæfar's legions and an equal number of the enemy, which lafted five hours with equal fuccefs, both parties claiming the victory. Bat after ail, Afranivs's men, who had firt feized the polt, maintained themfelves in poffeffion of it in fpite of CX for's utmoft efforts. Two days after this battle, continual rains, with the melting of the fnow on the mountains, fo fwelled the two rivers between which Cærar was encamped, that they overflowed, broke down his bridges, and laid under water the neghbouring country to a great diftance. This cut off the communication between his camp and the cities that had declared for him; and reduced him to fuch Atraits, that his army was ready to die for famine, wheat being fold in his

3 B 2
camp
camp at 50 Reman denari per bufhel, that is, 11.12 s . $1 \frac{1}{2} \mathrm{~d}$. Itering. He tried to rebuild his bridges, but in sain; the volence of the ftream rendering all his endeavours fruitlefs.

Upon the news of Cæfar's difrefs, Pompey's party at Rame began to take courage. Several perfons of diftindion went to congratulate Afranius's wife on the fuccefs of her iufond's arms in Spain. Many of the fenators riho bad hitherto food neuter, hatiened to Pompey's camp, raking it for granted that Cefar was reduced to the laft extremity, and all hopes of his party lott. Of this number was Cicero; who, without any regard to the remonitrance of Atticus, or the letters Cæfar himfelf wrote to him, defiring him to juin neither party, he left Italy, and landed at Dyrrhachium, where Pompey received him with great marks of joy 200 and riencfip. But the joy of Pompey's party was Overcomes not long-lived. For Cæfar, after having attempted fehis difficul- veral times in vain to rebuild the bridges, caufed boats ties, and to be made with all puffible expedition; and while the reduces all enemy were diverted by endeavcuring to intercept the span. e$y$ fuccours that were fent him from Gaul, he laid hold of
the affections both of the people, and the patricians. He recalled the exiles, granted the rights and privileges of Roman citizens to all the Gauls beyond the Po, and, as pontifex maximus, filled up the vacancies of the facerdotal colleges with his own friends. Though it was expected that he would have abfolutely cancelled all debts contracted fince the beginning of the trombles, he only reduced the interelt to one-fourth. But the chef ufe he made of his dictatorlhip was to prefide at the election of confuls for the next year, when he got himfelf, and Servilius Ifaurizus, one of his moft zealous partifans, promoted to that dignity.

And now being refolved to follow Pompey, and carry Follows the war into the eaft, he fet out for Brundufum, whi- Ponpey ther he had ordered 12 legions to repair with all pof into the fible expedition. But on his arrival he found only five eaft. there. The reft, being afraid of the dangers of the fea, and unwilling to engage in a new war, had marched leifurely, complaining of their general for allowing them no refpite, but hurrying them continually from one country to another. However, Cæfar did not wait for them, but fet fail with only five legions and 600 horfe in the beginning of January. While the relt were waiting at Brundufuum for fhips to tranfport them over into Epirus, Cæfar arrived fafe with his five legions in Chaonia, the northern part of Epirus, near the Ceraunian mountains. There he landed his troops, and fent the hips back to Brundufium to bring over the legions that were left behind. The war he was now entering upon was the molt difficult he had yet undertaken. Pompey had for a whole year been affembling troops from all the eaftern countries. When he left Italy, he had only Give legions; but fince his arrival at Dyrrhachium he had been reinforced with one from Sicily, another from Crete, and two from Syria. Three thoufand archers, fix cohorts of flingers, and feven thoufand horfe, had been fent him by princes in alliance with Rome. All the free cities of Afia had reinforced his army with their beft troops; nay, if we give credit to an hiftorical poet, fuccours were brought him from the Indus and the Ganges to the eaft, and from Arabia and Erhiopia to the fouth ; at leaft it is certain, that Greece, Afia Minor, Syria, Palefine, Egypt, and all the nations from the Mediterranean to the Euphrates, took up arms in his favour. He had almoft all the Roman knights, that is, the flower of the young nobility, in his fquadrons, and his legions confifted moftly of veterans inured to dangers and the toils of war. Pompey himfelf was a general of great experience and addrefs; and had under him fome of the beft commanders of the republic, who had formerly conducted armies themfelves. As for his navy, he had above 500 fhips of war, befides a far greater number of fmall velfels, which were continually cruifing on the coalts, and intercepting fuch hips as carried arms or provifions to the enemy. He had likewife with him above 200 fenators, who formed a more sumerous fenate than that at Rome. Cornelius Lentulus and Claudius Marcellus, the Jalt year's confuls, prefided in it; but under the direction of Pompey their protector, who ordered them to affemble at Theffalonica, where he buile a fately hall for that parpofe. There, in one of their affemblies, at the motion of Cato, it was decreed, that no Roman citizens fhould be put to death but in battle, and that no city fubject to the republic fhould be facked. At the fame time the

[^17] that opportunity to convey his boats in the night on carriages 22 miles from his camp; where with wonderful quicknefs a great detachment paffed the Sicoris, and enc mping on the oppofite bank unknown to the enemy, built a bridge in two days, opened a communication with the neighbouring country, received the rupplies from Gaul, and relieved the warts of his foldiers. Cafar being thus delivered from danger, purfued the armies of Afranius and Petreius with fuch fuperior addrefs and conduct, that he forced them to fubmit without coming to a battle, and by that means became mafter of all Hither Spain. The two generals difbanded their troops, fent them out of the province, and returned to Italy, after having folemnly promifed never to affemble forces again, or make war upon Cxfar. Upon the news of the reduction of Hither Spain, the Spaniards in Farther Spain, and one Roman legion, deferted from Varro, Pompey's governor in that province, which obliged him to furrender his other legion and all his money.

Cxfar having thus reduced all Spain in a few months, appointed Caffius Longinus to govern the two provinces with four legions, and then returned to Marfeilles; which city was juft upon the point of furrendering after a moft vigorous refiftance. Though the inhabitants had by their late treachery deferved a fevere punifhment, yet he granted them their lives and liberty; but fripped their arfenals of arms, and obliged them to deliver up

201 Returns to Cifalpine Gaul; and from thence haftened to Rome, Rome, and where he laid the foundation of his future grandeur. is created He found the ciry in a very different flate from that in diAator. which he had left it. Moft of the fenators and magifrates were fled to Pompey at Dyrrhachium. However, there were fill pretors there; and among them M. Amilius Lepidus, who was afterwards one of the triumvirs with Octavius and Marc Antony. The pretor, to ingratiate himfelf with Cxfar, nominated him dictator of his own authority, and againft the inclination of the fenate. Cafar accepted the new dignity; but neither abufed his power, as Sylla had done, nor retained it fo long. During the II days of his dictatorhip, he governed with great moderation, and gained

confcript fathers affembled at Theffalonica decreed, that they alone reprefented the Roman fenate, and that thofe who refided at Rome were encouragers of ty ranny, and friends to the $t$ rant. And indeed, as the fower of the nobility was with Pompey, and the mof virtuous men in the repubiic had taken refuge in his camp, he was yenerally looked upon as the only hope and fupport of the public liberty. Hence muny perfons of eminent probity, who had hitherto flocd neuter, flocked to him from ail parts. Among thefe were young Brutus, who dicerwaris confpired againt Cxiar, Titius tex:ius, and Labienus. Brutus, whofe father had been put to death in Gelata by Pomrey's order, had never fpoken to him, or fo much as faluted him fince that time: but as he now look dupon him as the defender of the public liberty, he joined him, facrificing therein his private refentment to the intereft of the public. Pompey received him with great joy, and was willing to confer upo: him fome command; but he declined the offer. Tidius Sextius, though extremely old and lame, yet left Rome, and went as far as Macedonia to join Pompey there. Labienus !ikewife forfook his old benefactor, under whom he had ferved during the whole courfe of the Gaulifh war, and went over to his rival, though Cafar lad appointed bim commander in chief of all the forces on the other fide the Alps. In fhort, Pompey's patty gr.w into fuch reputation, that his caufe was generdly calld the good caufe, while Cæfar's adherents were lo ked upon as enemies to their country, and abet.
tors of tyrarny.

As foun as Cx far landed, he marched direstly to Oricum, the neareft city in Epirus, which was taken without oppofition. The like fuccefs attended bim at Apollonia, which was in no condition to ltan a fiege; and thefe two conquefts opened a way to Dyrrhachium, where Pompey had his magazines of arms and provifions. This fuccefs, however, was interrupted by the news that the fleet which he lad fent back to Brundufium to tranfport the reft of his troops had been attacked by Bibulus, one of Pompey's admirals, who had taken 30 , and inhumanly burnt them with the feamen on board. This gave Cæfar great uneafinefs, cfpecially as he heard that Bibulus, with 110 fhips of war, had taken poffeffion of all the harbours between Salonium and Oricum; fo that the legicns at Brundufium could not venture to crofs the fea without great danger of falling into the enemy's hands. By this Cæfar was fo much errbinalfed, that he made propofals of accommindation upon very moderate terms ; being no other than that both Pompey and he fhould diband their armies within thre days, renew their former friend hhip with filemn ouths, and return tengether to Italy. Thefe propofals were fent by Vibullius Refus, an intimate friend of P:mpey, whom Cxfar had twice taken prifoner. Pompey, however, probably elated with his late good fortune, anfwered that he would not hearken to any terms, left it thuld be faid that he owed his Ife and returi to Italy to Cx'ar's favour. How ever, the latter :gain fent cne Vatinius to confer with Pomply about a tieaty of peace. Labienus was appointed to receive the ponfals: but while they were conferring togethe:, a party of $P$ mpey's men $c$ ming up to them, difcl arged their darts at Vatinius and thofe who attended him. Some of the guards were wounded, and Vatinius narrowly efcaped with his life.

In the mean time Cxfar advanced towards Dyrrha. chium, in hopes of furprifing that important place; but Pompey unexpectedly appearing, he halted on the other fide of the river Apfins, where he entrenched himfelf as, having but a fmall number of troops in comparifon of tiee formidable army which attended Pompey. The latter, however, notwithifanding his fuperiority, durft not crofs the river in Cafea's fight ; fo that the two armies continued for fome time quiet in their reipective camps. Cæfar wrote letter after letter to Marc Antony, who commanded the leg:ons he had left in Italy, to come to Li, affifance ; but receiving no anfwer, Cxas dif ruiced himfelf in the hait of a flave, and with all imaginable fecrecy went on board a fifherman's bark, with a defigu to go over to Brundufium, though the enemy's fleet was cruifing on the coafts both of Gieece and Italy. This defign, however, mifcarried, by reafon of the boat being put back by contrary winds ; and thus Cæfar was reltored to his folliers, who had been very unealy at his abfence. He was no fooner landed than he difpatched Polthumius, one of his lieutenants, with moft prefing orders to Marc Antony, Gabinius, and Calenus, to bring the troops to him at all adventures. Gabinius, unwilling to expofe all the hopes of his general to the hazards of the fiea, thought it fafer to march a great way ahout by Illyricum, and therefore engaged all the legionaries he could to follow: him by land. But the Illyrians, who had, unknownto him, declared for Pompey, fell unexpectedly upon him and killed him and his men, not one efcaping. - Marc Antony and Calenus, who went by fea, were in the greatelt danger from one of Pompey's admirals; but had the good luck to bring their troops fafe to fhore at Nyphrum, in the neighbourhood of Apollonia. As foon as it was known that Antony was landed, Pompey marched to prevent his joining Cæfar. On the other hand, Cefar inftantly decamped, and haftening to the relief of his licutenant, joined him before Pompey came up. Then Pompey, not caring to engage them when united, rutired to an advantageous polt in the neighbourhood of Dyrrhachium, known by the name of Afparagium, and there encamped. Cx'ar having thus at length got all his troops together, refolved to finifh the war by one general action, and determine the fate of the world, either by his own death or by that of his rival. To this end he offered Pompey battle, and kept his army a great while drawn up in fight of the enemy. But Pompey declining an engagement, he decamped, and turned towards Dyrrhachium, as if he defigned to furprife it, hoping by this means to draw Pompey into the plain. But Pompey, looking upon the taking of Dyrrhachium as a chimerical project, followed Cxfar at fome diffance, and letting him draw near to the city, encamped on a hill called Petra, which commanded the fea, whence he could he fupplied with provifions. from Greece and Afla, while Cæfar was forced to bring corn by land from Epirus, at a valt expence, and through many dangers.
This inconvenience put Cæfar upon a new defign, which was to furround an army far more numerous. than his own, and, by fhutting them up within a narrow tract of ground, diftrefs them as much for want of forage as his troops were diftreffed for want of corn. Purfiant to this defign, he drew a line of circumvalla. tion from the fea quite round Pompey's camp, and kept

Rome. him fo clofely blocked up, that though his men were plentifully fupplied with provifions by fea, yet the horfes of his army began foon to die in great numbers for want of forage. Cæfar's men, though in the utmont diftrefs for want of corn, yet bore ail with incredible cheerfulnefs; protefting, that they would rather live upon the bark of trees than fuffer Pompey to efcape, now they had him in their power. Cæfar tells us, that in this extremity fuch of the army as had been in Sardinia found out the way of making bread of a certain root called clara, which they fteeped in milk; and that when the enemy infulted them on account of the ftarving condition which they were in, they threw feveral of thefe loaves among them, to put them out of all hopes of fubduing them by famine. "So long as the earth produces fuch roots (faid they), we will not let Pompey efcape." At length Pompey, alarmed at the diftempers which began to prevail in his army, made feveral attempts to break through the barriers that inclofed him, but was always repulfed with lofs. At length being reduced to the utmolt extremity for want of forage, he refolved at all events to force the enemy's lines and efcape. With the affiftance, therefore, and by the advice of two deferters, he embarked his archers, flingers, and light-armed infantry, and marching him-

205
Is criven from fome of his poits. that part of Cæfar's lines which was next to the fea, and not yet quite finifhed. He fet out from his camp in the dead of the night, and arriving at the poit he defigned to force by break of day, he began the attack by fea and land at the fame time. The ninth legion, which defended that part of the lines, made for fome time a vigorous refiftance; but being attacked in the rear by Pompey's men, who came by fea, and landed between Cæ\{ar's two lines, they fled with fuch precipitation, that the fuccours Marcellinus fent them from a neighbouring poft could not ftop them. The enfign who carried the eagle at the head of the routed legion was mortally wounded; but neverthelefs, before he died, had prefence of mind enough to confign the eagle to the cavalry of the party, defiring them to deliver it to Cwiar. Pompey's men purfued the fugitives; and made fuch a flaughter of them, that all the centurions of the firft cohort were cut off except one. And now Pompey's army broke in like a torrent upon the pofts Cæfar had fortified, and were advancing to attack Marceilinus, who guarded a neighbouring fort; but Marc Antony coming very feafonably to his relief with 1.2
his fortune changed on a fudden. His right wing, in looking for an entrance into the camp, marched along: the outfide of a trench which Cæfar had formerly carried on from the left angle of his camp, about 400 paces, to a neighbouring river. This trench they miftook for the rampart of the camp; and being led away by that miftake from their left wing, they were foon after prevented from rejoining it by the arrival of Pumpey, who came up at the head of a legion and a large body of horre. Then the legion which Cæfar had attacked taking courage, made a brifk fally, drove his men back to the firft entrenchment which they had feized, and there put them in great diforder while they were attempting to pafs the ditch. Pompey, in the mean time, falling upon them with his cavalry in flank, completed their defeat ; and then flying to the enemy's right wing, which had paffed the trench mentioned above, and was fhut up between that and the ramparts of the old camp, made a moft dreadful flaughter of them. The trench was filled with dead bodies, many falling into it in that diforder, and others paffing over them and preffing them to death.

In this diftrefs, Cæfar did all he could to ftop the flight of his legionaries, but to no purpofe : the ftan-dard-bearers themfelves threw down the Roman eagles when Cæfar endeavoured to ftop them, and left them in the hands of the enemy, who on this occafion took 32 ftandards; a difgrace which Cæfar had never fuffered before. He was himfelf in no fmall danger of falling by the hand of one of his own men, whom he took hold of when flying, bidding him ftand and face about; but the man, apprehenfive of the danger he was in, drew his fword, and would have killed him, had not one of his guards prevented the blow by cutting off his arm. Cælar loft on this occation 960 of his foot, 400 of his horfe, 5 tribunes, and 32 centurions.

This lofs and difgrace greatly mortified Cæfar, but He redid not difcourage him. After he had by his lenity trieves his and eloquent fpeeches recovered the fpirit of his troops, affairs, he decamped, and retired in good order to Apollonia, where he paid the army, and left his fick and wounded. From thence he marched into Macedon, where Scipio Metellus, Pompey's father-in-law, was encamped. He hoped either to draw his rival into fome plain, or to overpower Scipio if not affitted. He met with great difficulties on his march, the countries through which he paffed refufing to fupply his army with provifions; to fuch a degree was his reputation funk fince his laft defeat! On his entering Theffaly he was met by Domitius, one of his lieutenants, whom he bad fent with three legions to reduce Epirus. Having now got all his forces together, he marched directly to Gomphi, the firft town of Theflaly, which had been formerly in his intereft but now declared againft him. Whereupon he attacked it with fo much vigour, that though the garrifon was very numerous, and the walls were of an uncommon height, he made himfelf matter of it in a few hours. From hence he marched to Metropolis, another confiderable town of Theffaly, which immediately furrendered; as did all the other cities of the country, except Larifla, of which Scipio had made hincele mafter.

On the other hand, Pompey being continually importuned by the fenators and officers of his army, left his camp at Dyırhachium, and followed Cxiar, firmly
refolved

refolved not to give him battle, but rather to diftrefs that punifhed thole that were cruel to men in adverhim by keeping clofe at his heels, Atraitening his quartens, and cutting off his convoys. As he had frequent opportunities of coming to an engagement, but always declined it, his friends and fubalterns began to put ill constructions on his dilatoriness to his face.

There, together with the complaints of his folders, made him at length resolve to venture a general action. With this defign he marched into a large plain near the cities of Pharfalia and Thebes; which latter was alto called Philippi, from Philip king of Macedon, and the father of Perfes, who, having reduced the Thebans, placed a colony of Macedonians in their city. This plain was watered by the Enipeus, and furrounded on all fides by high mountains; and Pompey, who was fill averfe from venturing an engagement, pitched his camp on the declivity: of a fteep mountain, in a place altogether inacceffible. There he was joined"by Scipio his father-in-law, at the head of the legions which he had brought with him from Syria and Cilicia. But notwithftanding this reinforcement, he continued irefolute, and unwilling to put all to the iffue of a fingle action; being fill convinced of the wifdom of his mavim, that it was better to deftroy the enemy by fatigues and want, than to engage an army of brave veterans, who were in a manner reduced to despair. As he put off from day to day, under various pretences, defending into the plain where Cæfar was encamped, his offcess forced him to call a council of war, when all to a man were for venturing a general action the very next day. Thus was Pompey obliged to Sacrifice his own judgment to the blind ardour of the multitude; and the neceffary meafures were taken for a general engagemont.

The event of chis battle was in the higheft degree fortunate for Cærar $\dagger$; who refolved to purfue his advantage; and follow Pompey to whatever country he should retire. Hearing, therefore, of his being at Amphipolis, he rent off his troops before him, and then embarked on board a little frigate in order to crofs the Hellespont; but in the middle of the trait, he fell in with one of Pompey's commanders, at the head of ten flips of war. Cæfar, no way terrified at the fuperiority of his force, bore up to him, and commanded him to fubmit. The other inftantly obeyed, awed by the terrom of Cxfar's name, and furrendered himfelf and his fleet at difcretion.

From thence he continued his voyage to Ephefus, then to Rhodes; and being informed that Pompey had been there before him, he made no doubt but that he was fled to Egypt ; wherefore, lofing no time, he ret fail for that kingdom, and arrived at Alexandria with about 4000 men; a very inconfiderable force to keep foch a powerful kingdom under lubjection. But he was now grown fo fecure in his good fortune, that he expected to find obedience everywhere. Upon his landing, the frt accounts he received were of Pompey's miferable end, who had been affaffinated by orders of the treacherous king as foo as he went on fore; and foo after one of the murderers came with his head and ring as a molt grateful prefent to the conqueror. But Cæfar turned away from it with horror, and Portly after ordered a magnificent tomb to be built to his memory on the foot where he was murdered; and a termple near the place, to Nemefis, who was the goddefs
fity.
It fhould feem that the Egyptians by this time had forme hopes of breaking off all allance with the Roomans; which they confidered, as in fact it was, but a fpecious fubjection. They firft began to take offence at Cæfar's carrying the enfigns of Roman power before him as he entered the city. Photinus, the eunuch, aldo treated him with difrefpect, and even attempted his life. Cæfar, however, concealed his refentment till he had a force fufficient to punish his treachery; and fending privately for the legions which had been formerly enrolled for Pompey's fervice, as being the neareft to Egypt, he in the mean time pretended to repose an entire confidence in the king's minifter. However, he foo changed his manner when he found himfelf in no danger from his attempts; and declared, that, as being a Roman conful, it wis his duty to fettle the fucceflion to the Egyptian crown:

There were at that time two pretenders to the crown. of Egypt: Ptolemy, the acknowledged king ; and the celebrated Cleopatra his filter; who, by the cuftom of the country, was also his wife, and, by their father's will, hared jointly in the fuccelfion. However, not being contented with a bare participation of power, the aimed at governing alone; but being cppofed in her views by the Roman enate, who confirmed her brother's title to the crown, the was banifhed into Syria with Arfine her younger filter.

Cellar, however, gave her new hopes of obtaining the kingdom, and fent both for her and her brother to plead their cause before him. Photinus, the young. king's guardian, who had long borne the mont inveterate hatred as well to Cxfar as to Cleopatra, difdained this propofal, and backed his refufal by fending an army of 20,000 men to befiege him in Alexandria. Cæfar bravely repulsed the enemy for forme time; but finding the city of too great extent to be defended by fo fall an army as he then had with him, he retired to the palace, which commanded the harbour, where he purpofed to make a land. Achillas, who commanded the Egyptians, attacked him there with great vigour, and ftili aimed at making himfelf natter of the fleet that lay before the palace. Cæfar, however, too well knew the importance of thole hips in the hands of an enemy; and therefore burnt them all in fete of every effort to prevent it. He next poffeffed himfelf of the ifle of Pharos, which was the key to the Alexandrian port, by which he was enabled to receive the fupplies font him from all fides; and in this fituation he determined to withftand the united force of all the Egyptians.

In the mean time, Cleopatra having heard of the arefont turn in her favour, refolved to depend rather on Cæfar's favour for gaining the government than her own forces. She had, in fact, affembled an army in Syria to fupport her claims; but now judged it the wifelt way to rely entirely on the decifion of her felt. elected judge. But no arts, as the juftly conceived, were fo likely to influence Cæfar, as the charms of her perfon. The difficulty was how to get at Cæffr, as her enemies were in poffelfion of all the avenues that led to the palace. For this purpofe, the went on board a fall veffel, and in the evening landed near the palace; where, being wrapped up in a coverlet, the was

,

Rome. carried by one Afpolodorus into the very chamber of Cxfar. Her addrefs at firft pleafed him; but her careffes, which were carried beyond the bounds of innocence, entirely brought him over to fecond her claims.

While Cleopatra was thus employed in forwarding her own views, her fifter Arfinoe was alfo ftrenuoufly engaged in the camp in purfuing a feparate intereft. She had tound means, by the affiftance of one Ganymede her confidalt, to make a large divifion in the Egyptian army in her favour ; and foon after caufed Achil. las to be murdered, and Ganymede to take the command in his ftead, and to carry on the fiege with greater vigour than before. Ganymede's principal effort was by letting in the fea upon thofe canals which fup. plied the palace with frefh water ; but this inconvenience Cæfar remedied by digging a great number of wells. His next endeavour was to prevent the junction of Cæfar's $24^{\text {th }}$ legion, which he twice attempted in vain. He foon after made himfelf mafter of a bridge which joined the inle of Pharos to the continent, from which poft C æfar was refolved to diflodge him. In the heat of action, fome mariners came and joined the combatants; but being feized with a panic, inftantly fled, and fpread a general terror through the army. All Cæfar's endeavours to rally his forces were in vain, the confulion was paft remedy, and numbers were drowned or put to the fword in attempting to efcape; on which, feeing the irremediable diforder of his trops, he retired to a hip in order to get to the palace that was jult oppolite. However, he was no fooner on board than great crowds entered at the fame time with him ; upon which, apprehenfive of the fhip's finking, he jumped into the fea, and fwam 200 paces to the fleet that lay before the palace.

The Alexandrians, finding their efforts to take the palace ineffectual, endeavoured at leaft to ger their king out of Cæfar's power, as he had feized upon his perfor in the beginning of their difputes. For this purpofe they made ufe of their cuft mary arts of diffimulation, profelling the utmolt defirefor peace, and only wanting the prefence of their lawful prince to give a fanction to the treaty. Cæfar, who was fenfible of their perfidy, neverthelefs concealed his fufpicions, and gave them their king, as he was under no apprehenfions from the abilities of a boy. Prolemy, however, the inftant he was fet at liberty, inftead of promoting peace, made every effort to give vigour to hoftilities.

In this manner Cæfar was hemmed in for fome time : but he was at laft relieved from this mortifying fituation by Mithridates Pergamenus, one of his molt faithful partizans; who, collecting a numerous army in Syria, marched into Egypt, tuok the city of Pelufium, repulfed the Egyptian army with lofs, and at laft, joining with Cæfar, attacked their camp, and made a great flaughter of the Egyptians. Piolemy himfelf, attempting to efcape on board a veffel that was failing down the river, was drowned by the Thip's finking; and Cx . far thus became mafter of all Egypt without any further oppofition. He therefore appointed, that Cleopatra, with her younger brother, who was then but an infant, fhould jointly gorern, according to the intent of their father's will; and drove out Arfinoe with Ganymede 'nto barifhment.

Cæfar now for a while feemed to relax from the ufual azivity of his conduct, captivated with the charms
of Cleopatra. Infead of quitting Egypt to go and quell the remains of Pompey's party, he abandoned himfelf to his pleafures, paffing whole nights in feafts with the young queen. He even refolved to attend her up the Nile into Ethiopia; but the brave veterans, who had long followed his fortune, boldly reprehended his conduct, and refufed to be partners in fo infamous an expedition. Thus, at length, roufed from his lethargy, he left Cleopatra, by whom he had a fon who was afterwards named Cafario, in order to oppofe Pharnaces the king of Pontus, who had now made fome inroads upon the dominions of Rome. Here he was attended with the greateft fuccefs, as we have related under the article Pontus; and having fettled affairs in this part of the empire, as well as time would permit, he embarked for Italy, where he arrived fooner than his enemies could expect, but not before his affairs there abfolutely required his prefence. He had been, during his abfence, created conful for five years, dictator for one year, and tribune of the people for life. But Antony, who in the mean time governed in Rome for him, had filled the city with riot and debauchery, and many commotions enfued, which nothing but the arrival of Cæfar could appeafe. However, by his moderation and humanity, he foon reftored tranquillity to the city, fcarce making any diftinction between thofe of his own and the oppofite party. Thus having, by gentle means, reftored his authority at home, he prepared to march into Africa, where Pompey's party had found time to rally under Scipio and Cato, affifted by Juba king of Mauritania. But the vigour of his proceedings had like to have been retarded by a mutiny in his whole army. Thofe veteran legions, who had hitherto conquered all that came before them, began to murmur for not having received the rewards which they had expected for their paft fervices, and now infifted upon their difcharge. However, Cæfar found means to quell the mutiny; and then, according to his ufual diligence, landed with a fmall party in Africa, the reft of the army following foon after. After many movements and fkirmifhes , he refolved at laft to come to a decifive battle. For this purpofe he invefted the city of Tapfus, fuppofing that Scipio would attempt its relief, which turned out according to his expectation. Scipio, joining wilh the young king of Mauritania, advanced with his army, and encamping near Cæfar, they foon came to a general battle. Cæfar's fuccefs was as ufu 1 ; the enemy received a complete and final overthrow, with little lofs on his fide. Juba, and Petrelus his general, killed each other in defpair; Scipin, atempting to efcape by fea into Spain, fell in among the enemy, and was flain ; fo that, of all the generals of that undone party, Cato was now alone remaining.

This extraordinary man, having retired into Africa after the battle of Pharfalia, had led the wretched remains of that defeat through burning deferts and tracts infefted with ferpents of various malignity, and was now in the city of Utica, which he had been lett. th defend. Still, however, in love with even the fhow of Roman government, he rad formed the principal citizens into a fenate, and conceived a refolution of holding out the town. He accordingly affembled his fenators upon this cocafion, and exhorted them to cato kilis ftand a fiege; but finding his aćmonitions ineffectual, himafelf. he fabbed himfelf with his fword $\dagger$. Upon his death, $\dagger$ Eee Cato.

Rome.
the war in Africa being completed, Ceffar returned in triumph to Rome; and, as if he had abridged all his former triumphs only to increate the fplendor of this, the citizens were aftonifhed at the magnificence of the proceffion, and the number of the countries he had futduad. It lated four days : the firn was for Gaul, the fecond for Egypt, the third for his victories in Afia, and the fourth for that over Juba in Africa. To every one of his foldiers he gave a fum equivalent to about 150 l. Sterling, double that fum to the centurions, and four times as much to the fuperior officers. The citizens alfo flared his bounty; to every one of whom he diftributed 10 bufhels of corn, io pounds of oil, and a fum of money equal to about two pounds Sterling. He, after this, entertained the people at about 20,000 tables, treated them with the combat of gladiators, and filled Rome with a concourfe of fpectators from every part of Italy.

The people now feemed eager only to find out new modes of homage and unuful methods of adulation for their great enflaver. He was created, by a new title Magifler Morum, or Matter of the Morals of the People; he received the title of Emperor, Father of bis country; his perfon was declared faced; and, in flo ort, upon him alone were devolved for life all the great dignities of the fate. It mut be owned, however, that no fovereign could make a better ufe of his power. He immediately began his empire by repreffing vice and encouraging virtue. He communicated the power of judicature to the fenators and the knights alone, and by many fumptuary laws refrained the fcandalcus luxuries of the rich. He proposed rewards to all fuch as had many children; and took the molt prudent methods of reperpling the city, that had been exhaufted in the late commotions; and befides his other works, he greatly reformed the kalendar.

Having thus reftored profperity once more to Rome, he again found himfelf under a neceflity of going into Spain, to oppofe an army which had been railed there under the two foes of Pompey, and Labienus his formar general. He proceeded in this expedition with his ufual celerity, and arrived in Spain before the enemy thought him yet departed from Rome. Cneius and Sextus, Pompey's fons, profiting by their unhapby father's example, refolved as much as poffible to protract the war; fo that the first operations of the two armies were font in fieges and fruitlefs attempts to furprife each other. At length Crefar, after taking many cities from the enemy, and purfuing young Pom. per with unwarid perfeverance, compelled him to come to a battle upon the plains of Munda.

After a molt oblinate engagement, Cxfar gained a complete victory (fee Munda) ; and having now fibdued all his enemies, he returned to Rome for the lan time to receive new dignities and honours, and to enjoy an accumulation of all the great offices of the Rate. Still, however, he pretended to a moderaton in the enjoyment of his power; he left the confull to be named by the people; but as he poffeffed all the authority of the office, it from this time began to fink into contempt. He enlarge. the number of fematers aldo; but as he had provomfy deltroyed thai power, their new honours were hut empty titles. Ide took care to pardon all who had been in arms agent him, but not till he had deprived them of the porno
of refinance. He even fer up once more the flatus of Pompey; which, however, as Cicero observed, he only did to fecure his own. The reft of this extraordinary man's life was employed for the advantage of tic fate. He adorned the city with magnificent buildinge; he rebuilt Carthage, and Corinth fending colovies to both cities; he undertook to level Several montans in Italy, todrain the Pontine marChes near Rome, and defigned to cut through the Ithmus of Peloponnefug. Thus he formed mighty projects and defigns beFond the limits of the longeft life; but the greaten of all was his intended expedition against the Parthians, by which he defigned to revenge the death of Craffus; then to pars through Hyrcania, and enter Scythia along the banks of the Calpian fa; from thence to open himSelf a way through the immeafurable forefts of Germanny into Gaul, and fo return to Rome. Thefe were the aims of ambition : but the jealoufy of a few individuals put an end to them all.

The fenate, with an adulation which marked the degeneracy of the times, continued to load Cxfar with freflh honours, and he continued with equal vanity to receive them. They called one of the months of the year after his name; they ftamped money with his image; they ordered his ftatue to be fer up in all the cities of the empire; they inftituted public facrifices on his birthday ; and tailed, even in his lifetime, of enrolling him in the number of their gods. Antony, at one of their public feftivals, foolishly ventured to offer him a diadem; but he put it back again, refufing it feveral times, and receiving at every refufal loud acclamati ns from the people. One day, when the fenate ordered him forme particular honours, he neglected to rife from his feat ; and from that moment is fid to have been marked for deftruction. It began to be rumoured that he intended to make himfelf king; for though in fact he already was fo, the people, who had an utter averfion to the name, could not bear his affuming the title. Whether he really defigned to affume that empty honour mut now forever remain a ferret ; but certain it is, that the unfufpecting ; opennefs of his conduct marked fomething like a confidence in the innocence of his intentions. When informed by thole about him of the jealoufies of many perfons who envied his power, he was heard to fay, That he had rather die once by treason, than to live continually in the apprehension of it : and to convince the world how little he had to apprehend from his enemies, he dibanded his company of Spanifh guards, which facilitated the enterprife againt his life.

## R O M

The corfpirators, to give a colour of juttice to their, fions, dreading more the dangers of poverty than of proceedings, remitted the execution of this defign to the ides of March, the day on which it was repurted that Cxfar was to be offered the crown. The augurs had foretold that this day would be fatal to him; and the night preceding, he heard his wife Calphurnia lamenting in her fleep, and beirg awakened, the confeffed to him that fhe dreamt of his being affaffinated in her arms. Thefe omens, in fome meafure, began to change his intentions of going to the fenate, as he had refolved, that day ; but one of the confirators coming in, prevailed upon him to keep his refolution, teling him of the reproach which would attend his ftaying at home till his wife had lucky dreams, and of the preparations that were made for his appearance. As he went along to the fenate, a flave, who haftened to lim with information of the confpiracy, attempted to come near him, but could not for the crowd. Artemidorus, a Greek philofopher, who had difcovered the whole plot, delivered to him a memorial, containing the heads of his information; but Cæfar gave it, with other papers, to one of his fecretaries without reading, as was ufual in things of this nature. As foon as he had taken his place in the fenate, the confpirators came near him, under a pretence of faluting him ; and Cimber, who was one of them, approached in a fuppliant pofture, pretending to fue for his brother's pardon, who was banifhed by his order. 'All the confpirators feconded him with great tendernefs; and Cimber, feeming to fue with ftill greater fubmiffion, cook
22I hold of the bottom of his robe, holding him fo as to $H_{e}$ is mur- prevent his rifing. This was the fignal agreed on. dered, Cafca, who was behind, ftabbed him, though flightly, in the fhoulder. Cæfar inftantly turned round, and with the fyle of his tablet wounded him in the arm. However, all the conifirators were now alarmed ; and inclofing him round, he received a fecond ftab from an unknown hand in the breaft, while Caffius wounded him in the face. He fill defended himfelf with great vigour, rufhing among them, and throwing down fuch as oppofed him, till he faw Brutus among the confpirators, who, coming up, ftruck his dagger in his thigh. From that moment Cæfar thought no more of defending himfelf, but looking upon this confpirator, cried out, "And you too, Brutus!" Then covering his head, and fpreading his robe before him in order to fall with greater decency, he funk down at the bafe of Pompey's itatue, after receiving three-and-twenty wounds, in the 56th year of his age, and 4th of his reign.
Great con- As foon as the confpirators had difpatched Cæfar, fufionocca- they began to addrefs themfelves to the fenate, in orfioned der to vindicate the motives of their enterprife, and to y death. excite them to join in procuring their country's freedom; but all the fenators who were not accomplices fled with fuch precipitation, that the lives of fome of them were endangered in the throng. The people alio being now alarmed, left their ufual occupations, and ran tumul. tuoully through the city ; fome actuated by their fears, and fill more by a defire of plunder. In this ftate of confufion, the confpirators all retired to the Capitol, and guarded its accefes by a budy of gladiators which Brutus had in pay. It was in vain they alleged they only firuck for freedom, and that they killed a tyrant who ufurped the rights of mankind: the people, accuftomed to luxury and eafe, little regarded their profef-
fubjection.
The friends of the late dictator now began to find that this was the time for coming into greater power than before, and fur fatisfying their ambition under the veil of promoting juffice. Of this number was Antony, whom we have already feen acting as a lieutenant under Cæfar. He was a man of moderate abilities and exceffive vices; ambitions of power, but Akilled in war, to which he had been trained from his youth. He was conful for this year ; and refulved, with Lepidus, who was fond of commotions like himfelf, to feize this opportunity of afluming the fovereign power. Lepidus, tiierefore, took poffefion of the forum with a band of foldiers at his devotion; and Antony being conful, was permitted to command them. Their firlt ftep was to poffefs themfelves of all Cæfar's papers and money; and the next to convene the fenate, in order to determine whether Cxfar had been a legal magiftrate or a tyrannical ufurper, and whether thofe who killed him merited rewards or punifhments. There were many of thefe who had received their promotions from. Cæfar, and had acquired large fortunes in confequence of his appointments; to vote him an ufurper, therefore, would be to endanger their property ; and yet to vote him innocent, might endanger the fate. In this dilemma they feemed walling to reconcile extremes; wherefore they approved all the acts of Cæfar, and yet granted a general pardori to all the confpirators.
This decree was very far from giving Antony fatisfaction, as it granted fecurity to a number of men who were the avowed enemies of tyranny, and who would be foremolt in oppofing his fchemes of reftoring abfolute power. As therefore the fenate had ratified all Cæfar's acts without diftination, he formed a fcheme upon this of making him rule when dead as imperioufly as he had done when living. Being, as was faid, poffeffed of Cæfar's books of accounts, he fo far gained upon his fecretary as to make him infert whatever he thought proper. By thefe means, great fums of money, which Cæfar never would have beftowed, were. here diftributed among the people; and every man who was averfe to republicin principles was here fure of finding a gratuity. He then demanded that Cxfar's. funeral obfequies thpuld be performed ; which the fenate now could not decently forbid, as they had never declared him a tyrant. Accordingly, the body was brought forth into the fooum with the utmof folemnity; and Antony began his operations upon the paffons of the people, by the prevailing motives of private intereft. He firft read Cæfar's will, in which he Antony had left Octavius, his fifter's grandfon, his heir, per- inflames mitting him to take the name of Cofar ; and three parts the peoof his private fortune Brutus was to inherit in cafe ${ }^{\text {ple. }}$ of his death. The Roman people were left the gardens which he had on the other fide the Tiber; and every citizen, in particular, was to receive 300 fefterces. This lait bequeft not a little contributed to increafe the people's affection for their late dictator; they now began to confider Cxfar as a father, who, not fatisfied with doing them the greatef good while living, thought of benefiting them even after his death. As Antony continued reading, the multitude began to be moved, and fighs and lamentations were heard from every quarter, Antony, feeing the audience favourable $\underbrace{\text { Rome. }}$

Rome.
vourable to his defigns, now began to addrefs the af. fembly in a more pathetic ftrain : he prefented before them Cæfar's bloody robe, and as he unfolded it, took care they fhould obferve the number of fabs in it: he then difplayed an image, which to them appeared the body of Cæfar, all covered with wounds. The people could now no longer contain their indignation; they unanimoully cried out for revenge; all the old foldiers who had frught under him, burnt, with his body, their coronets, and other marks of conquelt with which he had honoured them. A great number of the firtt matrons in the city threw in their ornaments alfo; till at length, rage fucceeding to forrow, the maltitude ran with flaming brands from the pile to fet fire to the confpirators' houfes. In this rage of refentment, meeting with one Cinna, whom they miltook for another of the fame name who was in the confpiracy, they tore him in piecies. The confpirators themfelves, however, being well guarded, repulfed the multitude with no great trouble; but perceiving the rage of the people, they thought it fafelt to retire from the city. Divine honours were then granted him; and an altar was erected on the place where his body was burnt, where afterwards was erected a column infcribed, To the Father of his country.
He endea-

## oursto en-

 grofs the power entirely into his own hand.In the mean time, Antony, who had excited this flame, refolved to make the beft of the occafion. Having gained the people by his zeal in Cæfar's caufe, he next endeavoured to bring over the fenate, by a feeming concern for the freedom of the ftate. He therefore propofed to recal Sextus, Pompey's only re-
maining fon, who had concealed himfelf in Spain fince the death of his father ; and to grant him the com. mand of all the fleets of the empire. His next ftep to their confidence, was the quelling a fedition of the people, who rofe to revenge the death of Cæfar, and putting their leader Amathus to death, who pretended to be the fon of Marius. He after this pretended to dread the refentment of the multitude, and demanded a guard for the fecurity of his perfon. The fenate granted his requeft; and, under this pretext, he drew round him a body of 6000 refolute men, attached to his intereft, and ready to execute his commands. Thus he continued every day making rapid ftrides to abio. lute power; all the authority of government was lodged in his hands and thofe of his two brothers alone, who hared among them the confular, tribunitian, and protorian power. His vows to revenge Cæfar's death feemed either pollponed, or totally forgotten; and his only aim feemed to be to confirm himelf in that power which he had thus artfully acquired. But an obttacle to his ambition feemed to arife from a quarter in which

226

## Is oppofed

 by OAtavianus. he leaft expected it. This was from one Octavius, or Octavianus Cæfar, afterwards called Aucuftus, who was the - grand-nephew, and adopted fon of Cæfar, and was at Apollonia when his kinfman was llain. He was then about 18 years old, and had been fent to that city to improve himfelf in the fudy of Grecian literature. Upon the news of Cafar's death, notwithftanding the earnelt difluafions of all his friends, he refolved to return to Rome, to claim the inheritance, and revenge the death of his uncle. From the former profeflions of Antony, he expected to find him a warm affitant to his aims; and he donbted not, by his concurrence, to take fignal vengeance on all who had a hand in the con-
## R O M

fpiracy. However, be was greatly difappointed. An. Rume. tony, whofe projects were all to aggrandize himfelf, gave him but a very cold reception, and, inftead of granting him. the fortune left him by the will, delayed the payment of it upon various pretences, hoping to check his a mbition by his limiting his circumftances. Bat Octavianus, inftead of abating his claims, even fold his own patrimonial eftate, to pay fuch legacies as Cæfar had left, and particularly that to the people. By thefe means he gained a degree of popularity, which his enemies vainly laboured to diminith, and which in fact he had many other methods to procure. His converfation was elegant and infinuating, his face comely and graceful, and his affection to the late dictator fo fincere, that every perfon was charmed either with his piety or his addrefs. But what added ftill more to his intereft was the name of Cæfar, which he had affumed, and, in confequence of which, the former followers of his uncle now flocked in great numbers to him. All there he managed with fuch art, that Antony now began to conceive a violent jealoufy for the talents of his young opponent, and fecretly laboured to counteract all his defigns. In fact, he did not want reafon; for the army near Rome, that had long wifhed to fee the coufpirators punifhed, began to turn from him to his rival, whom they faw more fincerely bent on gratifying their defires. Antony having procured alfo the government of Hither Gaul from the people, two of his legions that he had brought home from his former government of Macedonia, went over to Octavianus; notwithftanding all his remonftrances to detain them. This produced, as ufual, interviews, complaints, recriminations, and prejended reconciliations, which only tended to widen the difference; fo that, at length, both fides prepared for war. Thus the ftate was divided into three diltinct factions; that of Octavianus, who aimed at procuring Cæfar's inheritance, and revenging his death; that of Antony, whore fole view was to obtain abfolute power; and that of the confpitators, who endeavoured to reftore the fenate to its former authority.

Antony being raifed by the people to his new government of Cifalpine Gaul, contrary to the inclinations of the fenate, refolved to enter upon his province immediately, and oppore Brutus, who commanded a fmall body of troops there, while his army was yet entire. He accordingly left Rome, and marching thither, commanded Bratus to depart. Brutus, being unable to oppofe him, retired with his forces; but being purfued by Antony, he was at laf befieged in the city of Mutina, of which he fent word to the fenate.

In the mean while, Oetavianus, who by this time had raifed a body of 10,000 men, returned to Rome; and being refolyed, before he attempted to take vengeance on the confpirators, if prffible to diminifh the power of Antony, began by bringing over the fenate to fecond his defigns. In this he fucceeded by the credit of Cicero, who had long hated Antony becaule he thought him the enemy of the fate. Accordingly, A war by means of his eloquence, a decree was paffed, or- breaksout dering Antony to raife the fege of lifutina, to eva-between cuate Cifalpine Gaul, and to await the further orders them. of the fenate upon the banks of the Rubicon. An. tony treated the order with contempi; and inhead of

Rome. none obeying, began to mow his difpleafure at being hitherto fo fubmifive. Nothing notr therefore remained for the fenate but to declare him an enemy to the ftate, and to fend Octavianos, with the army hehad rai'ed, to curb his infolence. The latter was very ready to offer his army fur this expedition, in order to revenge his own private injuries, before be undertock thofe of the public. The two confuls, Hirtius and Panfa, joined all their forces; and thus combined, they marched at the head of a numerous army, againft Antony, into Cifa!pine Gau'. After one or two ineffectual conflicts, both armies came to a general engagement; in which Antony was defeated, and compelled to fly to Lepidus, who commanded a body of forces in Furner Gaul. This victory, however, which promifed the fenate fo much fuccefs, produced effects very different from their expectations. The two confuls were mortally wounded ; but Panfa, previous to his death, called Octavianes to his bed-fide, and advifed him to join with Antony, telling him, that the fenate only defired to de. pref's both, by oppofing them to each other. The advice of the dying conful funk deep on his fpirits; fo that from that time he only fought a pretext to break with them. Their giving the command of a party of his army to Decimus Brutus, and their denying him a triumph foon after, ferved to alienate his mind entirely from the fenate, and made him refolve to join Antony and Lepidus. He was willing, however, to try the fenate thoroughly, before be came to an open rupture ; wherefore he fent to demand the confulfhip, which was refufed him. He then thought himelf obliged to keep no meafures with that affembly, but privately fent to found the inclinations of Antony and Lepidus, concerning a junction of forces, and found them as eager to affift as the fenate was to oppofe him. Antony was, in fact, the general of both armies, and Lepidus was only nominally fo, his foldiers refufing to obey him upon the approach of the former. Wherefore, upon being affured of the affifance of Octavianus upon their arrival in Italy, they foon croffed the Alps with an army of 17 legions, breathing revenge againft all who had oppofed their defigns.

The fenate now began, too late, to perceive their error in difobliging Octavianus; and therefore gave him the confulfhip which they had fo lately refufed, and, to prevent his joining with Antony, flattered him with new honours, giving him a power fuperior to all law. The firlt ufe Octavianus made of his new authority was to procure a law for the condemnation of Brutus and Caflius; after which, he joined his forces with thofe of Antony and Lepidus.
228
The meeting of thefe three ufurpers of their country's freedom was near Mutina, upon a little ifland of the river Panarus. Their mutual fufpicions were the caule of their meeting in this place. Lepidus firf entered, and, finding all things fafe, made the fignal for the other two to approach. Octavianus began the conference, by thanking Antony for his zeal in putting Decimus Brutus to death; who, being abandoned by his army, was taken as he was defigning to efcape into Macedonia, and beheaded by Antony's command. Their conference lafted for three days; and the refult

## 229.

 The fecond triunvi:Gaul; Lepidus, Spain ; and Oftavianus, Africa, and the Mediterranean inands. As for Italy, ard the $e^{1}$ Atern provinces, they were to remain in common, until their general enemy was entirely fubdued. But the laft article of their union was a dreadful one. It was arreed that all their enemies hould be deftroyed; of which each prefented a lift. In thefe were conipifed not only the encmies, but the friends of the triumvirate, fince the partifans of the one were often fourd among the ofpofers of the others. Thus Lepidus gave up his brother Paulus to the vengeance of his colleague; Antony permitted the profeription of his uncle Lucius; and Octavianus delivered up the great Cicero. The moft facred rights of nature were violated; 300 femators, and aboye 2000 knights, were included in this terrible profcription; their fortunes were confifcated, and their murderers enriched with the fooil. Rome foon felt the effects of this inferral union, and the horrid cruelities of Marius and Sylla were renewed. As many as ciuld efcape the cruelty of the triumvirs, fled thither into Macedonia to Brutus, or found refuge with young Pompey, who was now in Sicily, and co. vered the Mediterranean with his numerous navy. Their cruelties were not aimed at the men alone; but the fofter fex were in danger of being marked as ob. jects either of avarice or refentment. They made out a lift of 1400 women of the belt quality, and the richeft in the city, who were ordered to give in an account of their fortunes, to be taxed in proportion, But this feemed fo unpopular a meafure, and was fo firmly oppofed by Hortenfia, who fooke againf it, that, inftead of 1400 women, they were content to tax only 400. However, they made up the deficiency by extending the tax upon men; near 100,000 , as well citizens as Atrangers, were compelled to furnifh fupplies to the fubverfion of their country's freedom. At laft, both the avarice and vengeance of the triumviri feem. ed fully fatisfied, and they went into the fenate to declare that the profcription was at an end ; and thus having deluged the city with blood, Oatavianus and Antony, leaving Lepidus to defend Rome in their abfence, marched with their army to oppofe the confpirators, who were now at the head of a formidable army in Afia.

Brutus and Caffus, the principal of thefe, upon the Theyare death of Cæfar, being compelled to quit Rome, went oppofed by into Greece where they perfuaded the Roman ftudents Brutus and at Athens to declare in the caufe of freedom; then Caffius. parting, the former raifed a powerful army in Macedonia and the adjacent countries, while the latter went into Syria, where he foon became mafter of 12 legions, and reduced his opponent Dolabella to fuch Atraits as to kill himfelf. Both armies foon after joining at Smyrna, the fight of fuch a formidable force began to revive the declining firits of the party, and to re-unite the two generals fill more clofely, between whom there had been fome time before a flight mifunderftanding. In fhort, having quitted Italy like diftrefs. ed exiles, without having one fingle foldier or one town that owned their command, they now found themfelves at the head of a fourining army, furnifhed with all the neceffaries for carrying on the war, and in a condition to fupport a conteft where the empire of the world depended on the event. This fuccefs in raifing levies was entirely owing to the juftice, mo-
deration,

## $\mathrm{R} O \mathrm{M}$

Rome.

deration, and great humanity of Bratus, who in every inftance feemed fudious of the happinefs of his country.

It was in chis flourifing fate of their affairs that the confpirators had formed a refolution of gaing againft Cleopatra, who, on her fide, had made great preparations to affilt their opponents. However, they were diverted from this purpofe by an information that Octavianus and Antony were now upon their march, with 40 legions to oppofe them. Prutus now, therefore, moved to have their army pafs over into Greece and Macedonia, and there meet the enemy ; but Caffius fo far prevailed as to have the Rhodians and Lycians firf reduced, who had refufed their ufual contribution. This expedition was immediately put in execution, and extraordinary contributions were raifed by that means, the Rhodians having farce any thing left but their lives*. The Lycians fuffered ftill more feverely; for having fhut themfelves up in the city of Xanthus, they defended the place againft Brutus with fuch fury, that neither his art nor intreaties could prevail upon them to furrender. At length, the town being fet on fire, by their attempting to burn the works of the Romans, Brutus, inflead of laying hold on this opportunity to form the place, made every effort to preferve it, in. treating his foldiers to try all means of extinguifhing the fire : but the defperate phrenzy of the citizens was not to be mollified. Far from thinking themfelves obliged to their generous enemy for the efforts which were made to fave them, they refolved to perifh in the flames. Wherefore, inftead of extinguifhing, they did all in their power to angment the fire, by throwing in wood, dry reeds, and all kinds of fuel. Nothing could exceed the diftrefs of Brutus upon feeing the townfmen thus refolutely bent on deftroying themfelves : he rode sbout the fortifications, ftretching out his hands to the Xanthians, and conjuring them to have pity on themfelves and their city; but, infenfible to his expoftulaticns, they rulhed into the flames with defperate obftinacy, and the whole foon became an heap of undiftinguilhable ruin. At this horrid fpectacle, Brutus oftred a reward $t$ every foldier who would bring him a Lycian alive. The number of thofe whom it was pofible to fave from their own fury amounted to no more than 150 .

Brutus and Caffins met once more at Sardis, where, after the ufual ceremonies were paffed between them, they refolved to have a private conference together, when, after mush altercation, they were at laft perfectly reconciled. After which, night coming on, Caffius invited Buaus and his friends to an entertaiument.
Brutus fecs Upon retiring home, it was that Brutus, as Plutarch
a fueclre tells the fory, fav a foeqre ia his tent. It was in the deal of the night, when the whole camp was perfoctly quict, that Brutus was employed in reading by a lamp that was juft expiring. On a fudden he thought he heard a noife as if fomebody entered; and looking towards the door, he perceived it open. A gigantic figure, with a frightful afpect, ftood before him, and continued to gize upon him with filent feverity. At kat Brutus had courage to fpeak to it: " Art thou a dxmon or a mortal man? and why comeft thou to me?" "Brutus," replied the fhantom, "I an thy evil genius, thou flate fee me again at Philippi." "Weil then," antw red Erutu", without being difompofed,
"we hail meet again." Upon which the phantom vanifhed; and Brutus calling to his fervants, aked if they had feen any thing; to which replyieg in the negative, he again relumed his fludies. But as he was ftruck with fo ftrange an occurrence, he mentioned it the next day to Caffius, who, being an Epicurean, alcitied it to the effect of imagination too minh exercied by vigilance and anxiety. Bratus appeared fatisfied with this folution of his late terrors; and, as Antony and Octavianus were now advanced into Macedonia, they foon after paffed over into Thrace, and advanced to the city of Philippi, near which the forces of the triumvirs were poted.
A battle foon enfued; in which the republicans were defeated, and Caffius killed, as is related in the article Philipif.
The firlt care of Brutus, when he became the fole The regeneral, was to affemble the difperfed troops of Caf- publicans fius, and animate them with frelh hopes of victory. A s defeated.
they had lolt all they poffeffed by the plundering of their camp, he promifed them 2000 denarii each man to make up their loffes. This once more infpired them with new ardour ; they admired the liberality of their general, and with loud fhouts proclaimed his former intrepidity. Still, however, he had not confidence fufficient to face the adveriary, who offered him battle the enfuing day. His aim was to flarve his enemies, who were in extreme want of provifions, their fleet having been lately defeated. But his fingle opinion was over-ruled by the rett of his army, who now grew every day more confident of their frength, and more arrogant to their new general. He was, therefore, at laft, after a refpite of 20 days, obliged to comply with their folicitations to try the fate of the battle. Both armies being drawn out, they remained a long while oppofite to each other withour offering to engage. It is faid that he himfelf had loft much of his natural ardour by having again feen the fpectre the night prece. ding : however, he encouraged his men as much as poffible, and gave the fignal for battle within three hours of fun-fet. Furtune again declared againt him ; and the They are two triumviri expreflyly ordered by no means to fuffer defeated a the general to efcape, for fear he fhould renew the fecond war. Thus the whole body of the enemy feemed chiefly time. intent on Brutus alone, and his capture feemed inevitable. In this deplorable exigence, Lucilius his friend reioived, by his own death, to effect the general's delivery. Upon perceiving a body of Thracian horfe clofely purfuing Brutus, and jult upon the point of taking him, he boldly threw himfelf in their way, telling them that he was Brutus. The Thracians, overjoyed with fo great a p.ize, immediately difpatched fome of their companions, with the news of their fuccef, to the army. Upon which, the ardour of the purfuit now abating, Antony marched out to meet his prifoner ; fome filently deploring the fate of to virtuous a man; others reproaching that mean defire of life for which he confented to undergo captivity. Antony now feeing the Thracians approach, began to prepare himfelf for the interviev ; but the faithful Lucilius, advancing with a cheerful air, owned the deceit that he had put upon him : on which the triumvir, fruck with fo much fidelity, pardoned him upon the fpot; and from that time forward loded him with benefits, and honoured him vith his friendfhip.

## R O M

In the mean time Brutus, with a fmall number of friends, paffed over a rivulet, and, night coming on, fat down under a rock which concealed him from the purfuit of the enemy. After taking breath for a little time, he fent out one Statilius to give him fome information of thofe that remained; but he never returned, being killed by a party of the enemy's horfe. Brutus judging very rightly of his fate, now refolved to die likewife, and fpoke to thofe who food round him, to lend him their laft fad affiftance. None of them, however, would render him fo melancholy a piece of fervice. At laft one Strabo, averting his head, prefented the fword's point to Brutas; who threw himfelf upon it, and immediately expired.

From the moment of Bratus's death the triumviri began to act as lovereigns, and to divide the Roman dominions between them, as theirs by right of conquef. However though there were apparently three who thus participated all the power, yet, in fact, only two were actually poffeffed of it; fince Lepidus was at firft admitted merely to curb the mutual jealoufy of Antony and Octavianus, and was poffeffed neither of intereft in the army nor authority among the people. Their firtt care was to punif thofe whom they had formerly marked for vengeance. The head of Brutus was fent to Rome to be thrown at the foot of Cæfar's flatue. His ahes, however, were fent to his wife Porcia, Cato's daughter, who afterwards killed herfelf by fwallowing burning coals. It is obferved, that of all thofe who had a band in the death of Cæfar, not one died a natural death.

The power of the triumviri being thus eftablifhed upon the ruins of the commonwealth, Antony went into Greece, and fpent fome time at Athens, converfing among the philofophers, and affifting at their difputes in perfon. From thence he paffed over into Afia, where all the monarchs of the eaft, who acknowledged the Roman power, came to pay him their obedience. In this manner he proceeded from kingdom to kingdom, attended by a crowd of fovereigns, exacting contributions, diftributing favours, and giving away crowns with capricious infolence. He prefented the kingdom of Cappadocia to Syfenes, in prejudice of Ariarathes, only becaufe he found pleafure in the beauty of Glaphyra, the mother of the former. He fettled Herod in the kingdom of Judea, and fupported him againft every oppofer. But among all the fovereigns of the eaft who fhared his favours, none had fo large a part as Cleopatra, the celebrated queen of Egypt.

It happened that Serapion, her governor in the ifland of Cyprus, had formerly furnifhed fome fuccours to he confpirators; and it was thought proper that fhe thould anfwer for his conduct on that occafion. Accordingly, having received orders from Antony to come and clear herfelf of this imputation of infidelity, fhe
readily complied, equally confcious of the goodnefs of her caufe and the power of her beauty. She had already experienced the force of ber charms upon Cxfar and Pompey's eldeft fon; and the addition of a few years fince that time had not impaired their luftre. Antony was now in Tarfus, a city of Cilicia, when Cleopatra refolved to attend his court in perfon. She friled down the river Cydnus, at the mouth of which the city food, wilh the moft fumptuous pageantry. Her galley was covered with gold; the fails were of purple, large, and foating in the wind. The oars of
filver kept tune to the found of flutes and cymbals. She herfelf lay reclined on a couch fpangled with fars of gold, and with fuch ornaments as poets and painters had ufually afcribed to Venus. On each fide were boys like Cupids, who fanned her by turns; while the moft beautitul nymps, drefed like Nereids and Graces, were placed at proper diftances around her. Upon the banks of the river were kept burning the moft exquifite perfumes, while an infinite number of people gazed upon the fight. Antony was captivated with her beauty; and, leaving all his bufinefs to fatisfy his paffion, fhortly after followed her into Egypt.

While he thus remained idle, Octavianus, who took upon him to lead back the veteran troops and fettle them in Italy, was affiudoufly employed in providing for their fubfiftence. He had promifed them lands at home, as a recompenfe for their paft fervices; but they. could not receive new grants, without turning out the former inhabitants. In confequence of this, multitudes of women, with children in their amns, whofe tender years and innocence excited univerfal comparfion, daily filled the temples and the Areets with their diltreffes. Numbers of hufbandmen and fhepherds came to deprecate the conqueror's intention, or to obtain an habitation in fome other part of the world. Amongat this number was Virgil the poet, who in an humble manner begged permifion to retain his patrimonial farm: Virgil obtained his requelt; but the reft of his countrymen, of Mantua and Cremona, were turned out without mercy.

Italy and Rome now felt the moft extreme miferies; Miferies ${ }^{238}$ the infolent foldiers plundered at will; while Sextus fuftained Pompey, being mafter of the fea, cut off all foreign by the Rocommunication, and prevented the people's receiving mans. their ufual fupplies of corn. To thefe mifchiefs were added the commencement of another civil war. Fulvia, the wife of Antony, who had been left behind him at Rome, had felt for fome time all the rage of jealoufy, and refolved to try every method of bringing back her hufband from the arms of Cleopatra. She confidered a breach with Octavianus as the only probable means of roufing him from his lethargy; and accordingly, with the affiftance of Lucius her brother-in-law, who was then conful, and entirely devoted to her intereft, fhe began to fow the feeds of diffenfion. The pretext was, that Antony fhould have a fhare in the diftribution of lands as well as Octavianus. This produced fome negociations between them; Octavianus offered to make the veterans themfelves umpires in the difpute. Lucius re. fufed to acquiefce; and being at the head of more than fix legions, moftly compofed of fuch as had been difpoffelfed of their lands, he refolved to compel Ottavianus to accept of whatever terms he fhould offer. Thus a new war was excited between OMavianus and Antony; or, at leaft, the generals of the latter affumed the fanction of his name. Octavianus; however proved victorious: Lucius was hemmed in between two armies, and conftrained to retreat to perufia, a city of Etruria, where he was clofely befieged by the oppofite party. He made many defperate faliies, and Fulvia. did all in her power to relieve lim, but without faccefs. He was at latt, therefore, reduced to fuch extremity by famine that he came out in perfon and dclivered himelf up to the mercy of the conqueror. Octavianus received him very honourably, and generoufly pardoned him and all his followers. Thus having con-

## $\mathrm{R} O \mathrm{M}$

 to Rome.Antony, who during this interval, was revelling in all the fudied luxuries procured him by his inidious miftef, having heard of his brother's overthrow, and his wife's being compelled to leave Italy, was refolved to oppole Octavianns without delay. He accordingly failed at the head of a confiderable fleet from Alexandria to Tyze, from thence to Cyprus and Rhodes, and had an interview with Fulvia his wife at Athens. He much blamed her for occalioning the late diforders, teftified the utmoft contempt for her perfon, and, leaving her upon her death bed at Sycion, haftened into Italy to fight Octavianus. They both met at Brundufium ; and it was now thought that the flames of a civil war were going to blaze out once more. The forces of Antony, were numerous, but mofly newly raifed; however, he was affilted by Sextus Pompeius, who in thefe oppofitions of interefts was daily coming into power. Octavianus was at the head of thofe veterans who had always been irrefiltible, but who feemed no way difpofed to fight againit Antony their former general. A negociation was therefore propofed; and a reconciliation was effected. All offences and affronts were mutually forgiven; and to cement the union, a marriage was concluded between Antony and Octavia, the fifter of Octavianus. A new divifion of the Roman empire was made between them; Octaviaanus was to have the command of the welt, Antony of the eaft, while Lepidus was obliged to content himfelf with the provinces in Africa. As for Sextus Pom. peius, he was permitted to retain all the illands he had already poffeffed, together with Peloponnefus; he was alfo granted the privilege of demanding the confulhip in his abfence, and of difcharging that office by any of his friends. It was likewife ftipulated to leave the fea open, and pay the people what corn was due out of Sicily. Thus a general peace was concluded, to the great fatisfalion of the people, who now expected a ceffation from all their calamities.

This calm feemed to continue for fome time: Antony led his forces againft the Parthians, over whom his lientenant, Ventidius, had gained great advantages. Oftavianus drew the greateft part of his army into Gaul, where there were fome difturbances; and Pompey went to fecure his newly ceded province to his in. teref. : It was on this quarter that frefh motives were given for renewing the war. Antony, who was obliged by treaty to quit Peloponnefus, refufed to evacutte it till Pumpey had fatisfied him for fuch debts as were due to him from the inhabitants. This Pompey would by no means comply with; but immediately fitted out a new fleet, and renewed his former enterprifes, by cutting off fuch corn and provifions as were configned to Italy. Thus the grievarces of the poor were again renewed; and the people began to complain, that inftead of three tyrants they were now opprefled by four.

In this exigence, Octavianus, who had long meditated the beft means of diminithing the number, refolved to begin by getting rid of Pompey, who kept the ftate in continued alarms. He was mafter of two fleets; one of which he had caufed to be built at Ravenna; and another which Menodorus, who revolted from Pompey, brought to his aid. His firft attempt was to inyade Sicily; but being overpowered in his paffage by

Pompey, and afterwards fhattered in a form, he was obliged to defer his defigns to the enfuing year. During this interval he was reinfcreed by a fleet of 120 fhips, given him by Antony, with which he refolved once more to invade Sicily on three feveral quarters. But fortune feemed ftill determined to oppofe him. He was a fecond time diabled and fhattered by a ftorm: which fo raifed the vanity of Pompey, that he began to flyle himfelt the fon of Neptune. However, Octaviauus was not to be intimidated by any difgraces; for having fhortly refitted his navy, and recruited his furces, he gave the command of buth to Agrippa, his faith- Sextus ful friend and affociate in war. Agrippa proved him- Pompeius felf worthy of the trult repofed in him : he began his operations by a victory over Pompey; and, though he was hortly after wortted himfelf, he foon after gave his adverfary a complete and final overthrow. Thus undone, Pompey refolved to fly to Antony, from whom he expected refuge, as he had formerly obliged that triumvir by giving protection to his mother. However, he tried once more, at the head of a fmall bady of men, to make himfelf independent, and even furprifed: Antony's officers who had been fent to accept of his fubmiffions. Neverthelefs, he was at laft abandoned by his foldiers, and delivered up to Titus, Antony's lieutenant, who fhortly after caufed him to be flain.

The death of this general removed one very powerful obitacle to the ambition of Octavianus, and he refolved to take the earlieft opportunity to get rid of the reft of his affociates. An offence was foon furnifhed by Lepidus, that ferved as a fufficient pretext for depriving him of his thare in the triumvirate. Being now at the head of 22 legions, with a frong body of cavalry, he idly fuppofed that his prefent power was more than an equivalent to the popularity of Octavianus. He therefore refolved upon adding Sicily, where he then was, to his province; pretending a right, as having firft i:svaded it. His colleague fent to expoftulate upon thefe proceedings; but Lepidus fiercely replied, 'that he was determined to have his fhare in the adminiftration, and would no longer fubmit to let one alone porfefs all the authority." Octavianus was previoufly in: formed of the difpofition of Lepidus's foldiers; for he had, by his fecret intrigues and largeffes, entirely attached them to himfelf. Wherefore, without further delay, he with great boldnefs went alone to the camp of Lepidus, and with no other affitance than his private bounties, and the authority he had gained by his former victories, he refolved to depofe his rival. The foldiers thronged round him with the molt dutiful ala. crity, while Lepidus haftened to prevent their defection. But Octavianus, though he received a wound from one of the centurions, went with great prefence of mind to the place where the military enfigns were planted, and, flourifing one of them in the air, all the legionary fol. diers ran in cruwds and faluted him as their general. Lepidus being thus abandoned by his men, divefted ${ }^{24 I}$ himfelf of all the marks of his authority, which he defeated could no longer keep, and fubmiffively threw himfelf and baat the feet of Octarianu:. This general fpared his nifhed. life, notwithltanding the remonftrances of his army; but deprived him of all his former authority, and banilhed him to Circxum.

Octavianus was received upon his return to Rome with univerfal joy; the fenators met himat the gates,

Rome.

242
Antony's imprulent conduet.
and conducted him to the Capitol: the people followed, crowned with garlands of flowers ; and after having returned thanks to the gods, waited upon him to his palace. There remained now but one obftacle to his ambition, which was Antony, whom he refolved to remove, and for that purpofe began to render his character as contemptible as he poffibly could at Rome. In fact, Antony's conduct did not a little contribute to promote the endeavours of his ambitious partner in the ftate. He had marched againft the Parthians with a prodigious army ; but was forced to return with the lofs of the fourth part of his forces, and all his bag. gage *. This extremely diminifhed his reputatios; but his making a triumphal entry into Alexandria foon after, entirely difgufted the citizens of Rome. However, Antony feemed quite regardlefs of their refentment : totally difregarding the bufinefs of the fate, he fpent whole days and nights in the company of Cleopatra, who ftudied every art to increafe his paffion, and vary his entertainments. Not contented with fharing in her company all the delights which Egypt could afford, Antony was refolved to enlarge his fphere of luxury, by granting her many of thofe kingdoms which belonged to the Roman empire. He gave her all Phœnicia, Celo-Syria, and Cyprus; wih a great part of Cilicia, Arabia, and Judea; gifts which he had no right to beftow, but which he pretended to grant in imitation of Hercules. This complication of vice and folly at length totally exafperated the Romans; and Octavianus, willing to take advantage of their refentment, took care to exaggerate all his defects. At length, when he found the people fufficiently irritated againft him, he refolved to fend Octavia, who was then at Rome, to Antony, as if with a view of reclaiming her hufband; but, in fact, to furnifh a fufficient pretext of declaring war againf him, as he knew fhe would be difmiffed with contempt.

Antony was now in the city of eucopolis, revelling with his infidious paramour, when he heard that Octavia was at Athens, upon her journey to vifit him. This was very unwelcome news to him as well as to Cleopatra; who, fearing the charms of her rival, endeavoured to convince Antony of the frength of her paffion. He frequently caught her in tears, which fhe feemed as if willing to hide; and often intreated her to tell him the caufe, which fhe feemed willing to fupprefs. Thefe artifices, together with the ceafelefs flattery and importunity of her creatures, prevailed fo much upon Antony's weaknefs, that he commanded Octavia to return home without feeing her, and attached himfelf ftill more clofely to Cleopatra than before. His ridiculous paffion now began to have no bounds. He refolved to own her for his wife, and entirely to repudiate Octavia. He accordingly affembled the people of Alexandria in the public theatre, where was raifed an alcove of filver, under which were placed two thrones of gold, one for himfelf and the other for Cleopatra. There he feated himfelf, dreffed like Bacci us, while Cleopatra fat befide him clothed in the ornaments and attributes of Ifis, the priacipal de:ty of the Egyptians. On that occafion he declared her queen of all the countries which he had already beftowed upon her; while he affociated Cæfario, her fon by Cæfar, as her partner in the government. To the two children which he had by her himfelf he gave the title of king of kings, with very extenfive do-
minions; and, to crown his abfurdities, he fent a minute account of his proceedings to che two confuls at Rome. It was now neceffary to act up to his imaginary dignity; new luxuries and pageantries were now therefore itudied, and new marks of profufion found out: not lefs than 60,000 1. Sterling were lavifhed upon one fingle entertainment; it is faid, upon this occafion, that Cleopatra diffolved a pearl of great value in vinegar, and drank it off. But we are told of one circumftance that might well reprefs their delights, and teach mankind to relifh the beverage of virtue, however fimple, above their greateft luxuries. He was fufpicious of being poifoned in every meal; he feared Cleopatra, whom he fo much loved, and would eat nothing without having it previoully tafted by one of his attendants.

In the mean time Octavianus had now a fufficient re ${ }^{244}$ pretext for declaring war ; and informed the fenate of make war his intentions. However, he deferred the execution of tpon him. his defign for a while, being then employed in quelling an infurrection of the Illyrians. The following year was chiefly taken up in preparations againt Antony, who, perceiving his defign, remonftrated to the fenate, that he had many caufes of complaint againft his colleague, who had feized upon Sicily without offering him a fhare; alleging thathe had alfo difpoffeffed Lepidus, and kept to himfelf the province he had commanded; and that he had divided all Italy among his own foldiers, leaving nothing to recompenfe thofe in Afia. To this complaint Octavianus was contented to make a farcaftic anfwer ; implying, that it was abfurd to complain of his diftribution of a few trifling diftricts in Italy, when Antony baving conquered Parthia, he might now reward his foldiers with cities and provinces. The farcafm upon Antony's misfortunes in Parthia fo provoked him, that he ordered Canidius, who commanded his army, to march without intermiffion into Europe; while he and Cleopatra followed to Samos, in order to prepare for carrying on the war with vigour. When arrived there, it was ridiculous enough to behold the odd mixture of preparations for pleafure and for war. On one fide all the kings and princes from Europe to the Euxine fea had orders to fend him thither fupplies both of men, provifions, and arms; on the other fide, all the comedians, dancers, buffoons, and muficians of Greece, were ordered to attend him. Thus, frequently, when a fhip was thought to arrive laden with foldiers, arms, and ammunition, it was found only filled with players and theatrical machinery. When news was expected of the approach of an army, meffengers only arrived with tidings of a frefl quantity of venifon. The kings who attended him endeavoured to gain his favour more by their entertainments than their warlike preparations ; the provinces frove rather to pleafe him by facrificing to his divinity, than by their alacrity in his defence; fo that fome were heard to fay, "What rejoicings would not this man make for a victort, when, he thus triumphs at the eve of a dangerous war! ! In fhort, his beft friends now began to forfake his inteterefts.

His delay at Samos, and afterwards at Athens, where he carried Cleopatra to receive new honours, was extremely favourable to the arms of Ofavianus. This general was at firt fcarcely in a difpofition on oppofe him, had he gow into Italy; but he foon found time

## ROM

some.
to put himfelf in a condition for carrying on the war, and fhortly after declared it againlt him in form. All Antony's followers were invited over to join him, with great promifes of rewards : but they were not declared encmies, partly to prevent their growing defperate, and partly 10 give a thow of moderation to his own party. At length both found themfelves in readinefs to begin the war, and their armies were anfwerable to the empire they contended for. The one was followed by all the forces of the eaft; the other drew all the ftrength of the weft to fupport his pretenfions. Antony's force compofed a body of 100,000 foot and 12,000 horfe; while his flett amounted to 500 fhips of war. The army of Octavianus muftered but 80,000 foot, but equalled his adverfary's in his number of cavalry : his fleet was but half as numerous as Antony's; however, his fhips were better built, and manned with better foldiess.

The great decifive engagement, which was a naval one, was fought near Actium, a city of Epirns, at the entrance of the gulph of Ambracia. Antony ranged his fhips before the mouth of the gulph; and Octavianas drew up his fleet in oppofition. Neither general affumed any fixed ftation to command in ; but went about from hip to fhip wherever his prefence was necellary. In the mean time, the two land armies, on oppofite fides of the gulph, were drawn up, only as fpectators of the engagement; and encouraged the fleets by their fhouts to engage. The battle began on both fides with great ardour, and after a manner vot practifed upon former occafions. The prows of their veflels were armed with brazen points; and with thefe they drove furioully againft each other. In this con. flict the thips of Antony carse with greater force, but thofe of OEtavianus avoided the fhock with greater dextetity. On Antony's fide, the tterns of the thips were raiferl in form of a tower; from whence they threw ar. rows from machine, for that purpofe. Thofe of Octavianus made ufe of long poles hooked with iron, and fire-pots. They fought in this manner for fome time with equal animofity; nor was there any advantage on either fide, except a frall appearance of diforder in the centre of Antony's fleet. But all of a fudden Cleopatra determined the fortune of the day. She was feen flying from the engagement attended by 60 fail ; Atuck, perhaps, with the terrors natural to her fex: but what increafed the general amazement was, to behold Antony hirnfelf following foon after, and leaving his fleet at the mercy of the conquerors. The engagement, notwithftanding, continued with great obttinacy till five in the evening; when Antony's forces, partly confrained by the conduct of Agrippa, and partly perfuaded by the promifes of Octavianus, fubmitted to the conqueror. The land-forces foon atter followed the example of the navy; and all yielded to the conqueror without flriking a liow the fourth day after the tattle.

When Cleopatra fled, Anony purfited ber in a five. cared galley; and coming along-fide of her fipip entered, whout feeing or being fien by her. She was in the flem, ard he went to the prow, where he remained for tome time filent, holding his head between his hand. In this manner he contimued three whole days; during which, eith.r through iadignation or thame, he rither faw nor fpoke to Cleopatra. At laft, when they ware arrived at the promontory of Tenarus, the

Vol. XVI.
queen's female attendants reconciled them, and every thing went on as before. Still, however, he had the confolation to fuppofe his army continued faithful to him ; and accordingly difpatched orders to his lieutenant Canidius to conduct it into Alia. However, he was foon undeceived when he arrived in Africa, where he was informed of their fubmiffion to his rival. This account fo tranfported him with rage, that he was hardly prevented from killing himfelf; but at length, at the entreaty of his friends, he returned to Alexindria, in a very different fituation from that in which he had left it fome time before. Cleopatra, however, feemed to retain that fortitude in her misfortunes which had utterly abandoned her admirer. Having amafled confiderable riches by means of confication and other acts of violence, fhe furmed a very fingular and unheard of project ; this was to convey her whole fleet over the ifthmus of Suez into the Red Sea, and thereby fave herfelf in another region beyond the seach of Rome, with all her treafures. Some of her veffels were actually tranfported thither, purfuant to her orders; but the Arabians having burnt them, and Antony difluading her from the defign, the abandoned it for the more improbable fcheme of defending Eyypt ane of defending Egypt againft the conquelur.- to defend She omitted nothing in her power to put his advice in Egypt practice, and made all kinds of preparations for war ; againt the at lealt hoping thereby to obtain better terms from Oc- ${ }^{\text {conqueror. }}$ tavianus. In fact, he had always loved Antony's fortunes rather than his perfon; and if the could have fallen upen any method of faving herfelf, though even at his expence, there is no doubt but the would have embraced it with gladnefs. She even fill had fome hopes from the pou er of her charms, though the was arrived almoft at the age of 40 ; and was defirous of trying upon Octavianus thofe arts which had been fo fuccef ful with the greateft men of Rcme. Thus in three embaffies, which were fent one after another from Antony to his rival in Afia, the queen had always her fecret agents, charged with particular propofals in her name. Antony defired no more than that his life might be fpared, and to have the liberty of paffing the remainder of his days in obfcurity. To thefe propofals Octavianus made no reply. Cleopatra fent him alfo public propofals in favour of her children; but at the fame time privately refigned him her crown, with all the enfigns of royalty. To the queen's public propofal no anfwer was given; to her private offer he replied, by giving her affurances of his favour in cafe fhe fent away Antony or put bim to death. Thefe negriciations were net fo private but they came to the knowledge of Antony, whofe jaloufy and rage were now heightened by every concurrence. He built a fmall folitary houfe upon a mole in the fea; and there he paffed his time, fhunning all commerce with mankind, and profeffing to imitate Timon the man hater. However, his furious jealoufly drove him even from this retreat into fociety; for hearing that Cleopatra had many fecret conferences with one Thyrins, an emiffry from Octaviana, he feiged upon him, and having ordered him to be cruelly fcourged, he fent him back to his patron. At the fante time he fent letters by him, importing, that he had chaftifed Thyafus for infulting a man in his mi foriunes; but withal he gave his rival permiffion to avenge himfit, by fcourging Hiparchus, Antony's freednaan, in the fame manner. The revenge, in this cafe, would have
bcen

$\underbrace{\text { Rome. been highly pleafing to Antony, as Hyparchus had }}$ Let him to join the furtumes of his more fuccefsful rival.

Meanwhile, the operations of the war were carried vigoroully forward, and Egypt was once more the theatre of the contending armies of Rome. Gallus, the lieutenant of Octavianus, took Paretonium, which opened the whole country to his incurfions. On the other fide, Antony, who had fill confiderable forces by fea and land, wanted to take that important place from the enemy. He therefore marched towards it, fattering himfelf, that as foon as he fhould fhow himfelf to the legions which he had once commanded, their affection for their ancient general would revive. He approached, therefore, and exhorted them to remember their former vows of fidelity: Gallus, however, ordered all the trumpets to found, in order to hinder Antony from being heard, fo that he was obliged to retire.

Octavianus himfelf was in the mean time advancing given up to with another army before Pelufium, which, by its Detavianus ftrong fituation, might have revarded his progrefs for fome time. But the governor of the city, either wanting courage to defend it, or previoully inftructed by Cleopatra to give it up, permitted him to take pofleffion of the place ; fo that Qctavianus had now no obAtacle in bis way to Alexandria, whither he marched with all expedition. Antony, upon his arrival, fallied out to oppofe him, fighting with great defperation, and putting the enemy's cavalry to flight. This flight advantage once more revived his declining hopes; and, being naturally vain, he re-entered Alexandria in triumph. Then going, all armed as he was, to the palace, he embraced Cleopatra, and prefented her a foldier who had diftinguilhed himfelf in the late engagement. The queen rewarded him very magnificently ; prefenting bim with an head-piece and breaft-plate of gold. With thefe, however, the foldier went off the next night to the other army. Antony could not bear this detection without frelh indignation; he refolved, therefore, to make a bold expiring effort by fea and land, but previoully offered to fight his adverfary in fingle combat. Datavianus tco well knew the inequality of their fituations to comply with this forlorn offer; he only, therefore, coolly replied, that Antony had ways enough to 248 die befides fingle combat.
Antouydem The evening before the day appointed for the laft ferted by defperate attempt, he ordered a grand entertainment to his fleet.

Cleopatra had, for a long while, dreaded t!ie effects of Antony's jealoully ; and had, fome time before, prepared a method of obviating any fudden fallies it might produce. Near the temple of Ifis the had erected a building, which was feemingly defigned for a fepulchre. Hither fhe remuved all her treafure and moft valuable effects, covering them over with torches, faggots, and other combuftible matter. This fepulchre the defigned to anfwer a double purpofe; as well to fcreen her from the fudden refentments of Antony, as to make Octavianus believe that the would burn all her treafures in cafe he refufed her proper terms of capitulation. Here, therefore, the retired from Antony's prefent fury ; fhutting the gates, which were fortified with bolts and bars of iron : but in the mean time gave orders that a report lhould be fpread of her death.This news, which foon reached Antony, recalled all his former love and tendernefs. He now lamented her

#### Abstract

before feemed to defire it ; and called one of his freedmen, named Eros, whom he had engaged by oath to kill him whenever fortune fhould drive him to this laft refource. Eros being now commanded to perform his promife, this faithful follower drew the fword, as if going to execute his orders; but turning his face, plunged it into his own bofom, and died at his mafter's feet. Antony for a while hung over his faithful fer- Stabs him vant, and, commending his fidelity, took up the fword, felf with with wisich haiabing himimeff in the belly, he fell backe. Rit. foroth ward upon a little couch. Though the wound was mortal, yet the blood fopping he recovered his fpirits, and earneftly conjured thofe who were come into the room to put an end to his life ; but they all fled, being feized with fright and horror. He therefore continued in agonies for fome time ; till he was informed by one of the queen's fecretaries that his miftrefs was fill alive. He then earneflly defired to be carried to the place where fhe was. They accordingly brought him to the gate of the fepulchre ; but Cleopatra, who would not permit it to be opened, appéared at the window, and threw down cords in order to pull him up. In this manner, affifted. by her two female attendants, fhe raifed him all bloody from the ground; and while yet fufpended in the air, he continued Aretchil, g out his hands to encourage her. Cleopatra and her maids had only juft Arength fufficient to raife him ; and at laft, with much ftraining, they effected their purpofe, and carried him to a ceuch, on which they gently laid him. Here fhe gave way to her forrow, tearing her clothes, beating her breaf, and kiffing the wound of which he was dying. She called upon him as her lord, her hufband, her emperor, and feemed to have forgot her own diftreffes in the greatnefs of his fufferings. Antony intreated her to moderate the tranfports of her grief, and afked for fome wine. After he had drank, be intieated Cleopatra to endeavour to preferve her life, if fhe could do it with honour ; and recommended Proculus, a friend of Octavianus, as one the might rely on to be her interceffor. Jult as he had done feaking, he expired; and Proculus made his appearance by command of Octavianus, who had been informed of Antony's defperate conduct. He was fent to try all means of getting Cleopatra into his power ; his mafter having a double motive for his folicitude on this occafion; one, to prevent her deftroying the treafures the had taken with her into the tomb; the other, 

he himfelf compelled to return into the town. His anger was now ungovernable; he could not help crying out aloud as he paffed, that he was betrayed by Cleo. patra, and delivered by her to thofe who, for her fake alone, were his enemies. In thefe fufpicions he was sot deceived ; for it was by fecret orders from the queen that the fleet had paffed over to the enemy.
be prepared. At day-break he pofted the few troops he had remaining upor a rifing ground near the city : from whence he fent orders to his galleys to engage the enemy. There he waited to be a ipectator of the combat ; and, at firft, he had the fatisfaction to fee them advance in good order; but his approbation was foon turned into rage, when he faw his fhips only faluting thofe of Octavianus, and both fleets uniting together, and failing back into the harbour. At the very fame time his cavalry deferted him. He tried, however, to lead on his infantry; which were eafly vanquifhed, and

Rome.
to preferve her perfon as an ornament to grace his tri- made ufe of every method the could think of to propiumph. Cleopatra, however, was upon her guard, and would not confer with Proculus, except through the gate, which was well fecured. In the mean time, while he defignedly drew out the conference to fome length, and had given Gallus, one of his fellow-foldiers, directions to carry on the converfation in his abfence, he entered with two more by the window at which Antony had been drawn up. As foon as he was entered, he ran down to the gate ; and one of the women crying out, that they were taken alive, Cleopatra, perceiving what had happened, drew a poniard, and attempted $t$ stab herfelf: but, Proculus prevented the blow, and gently remonftrated that the was cruel in refufing fo good a prince as his mafter was, the pleafure of difplaying his cle mency. He then forced the poniard out of her hand, and examined her cluathes to be certain the had no poifon about her. Thus leaving every thing fecured, he went to acquaint his matter with his proceedings.

Octavianus was extremely pleafed at finding her in his power : he fent Epaphroditus to bring her to his palace, and to watch her with the utmoft circumfpection. He was likewife ordered to ufe her, in every refpeet, with that deference and fubmiffion which were due to her rank, and to do every thing in his power to render her captivity agreeable. She was permitted to have the honour of granting Anteny the rights of burial, and furnifhed with every thing fhe defired, that was becoming his dignity to receive, or her love to offer. Yet ftill the languifhed under her new confine. ment. Her exceflive forrow, her many loffes, and the blows the had given her bnfom, produced a fever which fhe feemed willing to increafe. She refolved to abtain from taking any nourifhment, under the pretence of a regimen neceffary for her diforder ; but Octavianus being made acquainted with the real motive by her phyfician, began to threaten her with regard to ber children, in cafe fhe perfifted. This was the only punifhment that could now affest her ; fhe allowed herfelf to be treated as they thought proper, and received whatever was prefcribed to her recovery.

In the mean time Octavianus made his entry into Alexandria; taking care to mitigate the fears of the inhabitants, by converfing familiarly as he went along with Areus, a philofopher, and a native of the place. The citizens, however, trembled at his approach; and when he placed himfelf upon the tribunal, they proItrated themfelves, with their faces to the ground, before him, like criminals who waited the fentence of their execution. Octavianus prefently ordered them torife ; telling them, that three motives induced him to pardon them: His refpect for Alexander, who was the founder of their city; his admiration of its beauty ; and his friendfhip for Areas, their fellow-citizen. Two only of particular note were put to death upon this occation ; Antony's eldeft fon Antyllus, and Cæfario, the fon of Julius Cæfar: both betrayed into his hands by their refpective tutors, who themfelves fuffered for their perfidy thortly after. As for the reft of Clenpatra's children, he created them with great gentlenefs, leaving them to the care of thofe who were entrulted with their education, who had orders to provide them with every thing fuitable to their birth. When the was recovered from her late indifpofition, he came to vifit her in perfon.Cleopatra had been preparing for this interview, ard
tiate the conqueror, and to gain his affection; butin vain. However, at his departure, Octavianus imagined that he had reconciled her to life, and to the indignity of being fhown in the intended tri mph, which he was preparing for on his return to Rome : but in this he was deceived. Cleopatra, all this time, had kept a correfpondence with Dolabella, a young Roman of high birth, in the camp of Octavianus; who, perhaps, from compaffion, or ftronger motives, was interefted in the misfortunes of that princefs. From him fhe learnt the intentions of Octavianus, and that he was determined to fend her off in three days, together with her children, to Rome. She now therefore determined upon dying; but previoully intreated permiffion to pay her oblations at Antony's tomb. This requeft being granted her, the was carried with her two female attendants to the Itately monument where he was laid. There fhe threw herfelf lipon his coffin, bewailed her captivity, and renewed her proteltations not to furvive him. She then crowned the tomb with garlands of flowers ; and having kiffed the coffin a thoufand times, fhe returned home to execute her fatal refolution. Having bathed, and ordered a fumptuous banquet, the attired herfelf in the molt fplendid manner. She then fealled as ufial ; and foon after ordered all but her two attendants, Charmion and Iras, to leave the room. Then, having previoufly ordered an afp to be fecretly conveyed to her in a banket of fruit, fhe fent a letter to Ottavianus, informing him of her fatal purpofe, and defiring to be buried in the fame tomb with Antony. Octavianus, upon recei. 252 ving this letter, inftantly difpatched meffengers to prevent her, but they arrived too late. Upon entering the chamber, they beheld Cleopatra lying dead upun a gilded couch, arrayed in her royal robes. Near her, Iras, one of her faithful attendants, was fretched lifelefs at the feet of her miltrefs : and Charmion herfelf, almoft expiring, was fettling the diadem upon Cleopatra's head. She died at the age of thirty-nine, after having reigned twenty-two years. Her death put an end to the monarchy in Egypt, which had flourifhed there from time immemorial.

Octavianus feemed much troubled at Cleopatra's death as it deprived him of a principal ornament in his intended triumph. However, the manner of it a good deal exalted her character among the Romans, with whom fuicide was confidered as a virtue. Her dying requeft was complied with, her body being laid by Antony's, and a magnificent funeral prepared for her and her two female attendants.

After having fettled the affairs of Egypt, he left Alexandria in the beginning of September, in the year of Rome 720 , with a defign to return through Syria, Afia Minor, and Greece, to Italy. On his arrival at Antioch, he found there Tiridates, who had been raifed to the throne of Parthia in oppofition to Phrahates, and likewife ambaffadors from Phrahates, who were all come on the fame errand; to wit, to folicit the affiftance of the Romans againft each other. Octavianus gave a friendly anfwer both to Tiridates and the ambaffadors of Phrahates, without intending to help either ; but rather with a defign to animate the one againf the other, and by that means to weaken both, fo far as to render the Parthian name no longer formidable to Rome. After this, having appointed Meffala
$3 D_{2}$ Corvinus

## R O M

Roms. Corvinus governor ol Syria, he marched into the pro rince of Aflit, properly fo called, and there took up nis winter-quarters. He fpent the whole winter in fetthing the affairs of the feveral provinces of Afia Minor and the adjacent iflands; and early in the fpring paffed into Greece, whence he fet out for Rome, which he entered in the month Sextilis, afterwards called $A u g{ }^{\prime} u f$, in three triumphs, which were celebrated for three days together.

And now Octavianus was at the height of his wifhes, fole fovereign, fole mafter, of the whole Roman empire. But, on the other hand, the many dangers which attend an ufurped power, appearing to him in a ftronger light than ever, filled his mind with a thoufand perplexing thoughts. The natural averfion of the Romans to a kingly government, their love of liberty, and the ides of March, when his father Julius was murdered in full fenate by thofe rery men whom he thought the moft devoted to his perfon, made him fear there might arife another Brutus, who, to reftore liberty to his country, might affaffinate him on his very throne. This he knew had happened to Julius Cæfar ; whereas Sylla, after having laid down the authority he had ufurped, died peaceably in his bed in the midtt of his enemies. The paffion of fear outweighed in his foul the charms of a diadem, and inclined him to follow the example of Sylla. He was indeed very unwilling to part with his authority; but fear began to get the better of his ambition. However, before he came to any refolution, he thought it advifable to confult his two molt intimate and trufty friends, Agrippa and Mrecenas; the former no lefs famous for his probity than his valour; and the latter a man of great penetration, and generally efteemed the moft refined politician of his age. Agrippa enlarged on the many and almoft inevitable dangers which attend monarchy, infuportable to a free people, and to men educated in a commonwealth. He did not forget the examples of Sylla and Cæfar; and clofed his fpeech with exhorting 'Octavianus to convince the world, by reltoring liberty to his country, that the only motive for his taking up arms was to revenge his father's death.
Mxcenas, on the other hand, remonitrated to him, that he had done too much to go back; that, after fo much bloodthed, there could be no fafety for him but on the throne; that, if he divefted himfelf of the fovercign power, he would be immediately profecuted Ly the children and friends of the many illuftrious perfons whom the misfortunes of the times had forced him to facrifice to his fafety; that it was abfolutely necei. fary for the welfare and tranquillity of the republic, that the fovereign power thould be lodged in one perfon, not divided among many, \&c. Octavianus thanked them both for their friendly advice, but howed himfelf inclined to follow the opinion of Mæcenas; whereupon that able minifter gave him many wife inftructions and rules of government, which are related at length by Dio Caffus, and will ever be looked upon as a mafterpiece in folitics. Aming other things he told him, That he could not fail of being fucceffful in all his undertakings, hap$p y$ in his lifetime, and famous in hiftory after his death, it he never deviated from this rule ; to wit, To govern others as he would with to be governed himfelf, had he been born to obey and not to command. He added,

That if, in taking upon him the fovereign power, he dreaded the name of king, a name fo odious in a commonwealth, he might content himfelf with the itle of Cefar or Imperator, and under that name, which was well known to the Romans, enjoy all the authority of a king.

This advice Octavianus followed, and from that time laid afide all thoughts of abdicating the fovereign power; but, to deceive the people into a belief that they ftill enjoyed their ancient government, he continued the old magiftrates, with the fame name, pomp, and ornaments, but with juft as much power as he thought fit to leave them. They were to have no military power, but only their old jurifdiction of deciding finally all caufes, except fuch as were capital ; and though fome of thefe lalt were left to the governor of Rome, yet the chief he referved for himfelf. He paid great court to the people : the very name that covered his ufurpation was a compliment to them; for he affected to call it the power of the tribunefhip, though he acted as abfolutely by it as if he had called it the dictatorial power. He likewife won the hearts of the populace by cheapnefs of provifions and plentiful markets; he trequently entertained them with fhows and fports; and by thefe means kept them in good-humour, and made them forget ufurpation, flavery, and every public evil; people in eale and plenty being under no temptation of inquiring into the title of their prince, or refenting acts of power which they do not immediately feel.

As for the fenate, he filled it with his own creatures, raifing the number of the confcript fathers to 1000 . He fupplied feveral poor fenators with money out of the treafury to difcharge the public offices, and on all occafions affected an high regard for that venerable body; but at the fame time divefted them of all power, and reduced them to mere cyphers. To prevent them from raifing new difturbances in the diftant provinces, he iffued an edict, forbidding any fenator to travel out of Italy without leave, except fuch as had lands in Sicily, or Narbonne Gaul, which at that time comprehended Languedoc, Provence, and Dauphiny. To thefe provinces, which were tear Italy, and in a perfect ftate of tranquillity, they had full liberty to retire when they pleafed, and iive there upon their eftates. Before be ended his fixth confulhip, he took a cenfus of the people, which was 41 years after the laft; and in this the number of the men fit to bear arms amounted to 463,000 , the greateft that had ever been found before. He likewife celebrated the games which had been decreed by the fenate for his victory at Actium; and it was ordered, that they fhould be celebrated every fitth year, four colleges of priefts being appointed to take care of them; to wit, the pontifices, the augurs, the feptemvirs, and quindecimvirs. The more to gain the affections of the people, he annulled, by one edif, the many fevere and unjuft laws, which had been enacted during the triumvirate. He raifed many public buildings, repaired the old ones, and added many ftately ornaments to the city, which at this time was, if we may give credit," to fome ancient writers, about 50 miles in compafs, and contained near four millions of fouls, reckoning men, women, children, and flaves. He attended bufinefs, reformed abufes, fhowed great regard for the Roman name, procured-public abundance, pleafure, and jollity,

Rome.
at anchor near Ravenna in the Adriatic fea, to command Dalmatia, Greece, Cyprus, andthe reft of the eaftern provinces; the other at Mifenum in the Mediterranean, to keep in awe the weftern parts of the empire. They were likewife to keep the feas clear of pirates, to convey the veffels which brought to Rome the annual tributes from the provinces beyond fea, and to tranfport corn and other provifions neceffary for the relief and fubfiftence of the city. As to the civil government, Auguftus enacted feveral new laws, and reformed fime of the old ones: however, he affected to do $n$ :thing without the advice of the fenate; who were fo well pleafed with the complaifance fhowed them on all occalions, that to the reft of his titles they added that of Pater Patria, or "Father of his Country."

And now Auguftus having fettled all things with regard to the civil and military eftablifhments of the empire, turned his arms againg the Spanifh nations called the Cantabrians and Afurinns, who had never been fully fubdued. The war, however, terminated as ufual, in favour of the Romans; and thefe brave na tions were forced to receive the yoke, though not without the molt violent refiftance on their part, and the utmoft difficulty on that of the Romans (See Asturia). 259 By this and his other conquefts the mame of Augultus His friend- became fo celebrated, that his friendfhip was courted ed by the by the moft diftant monarchs: Phrahates king of Parlings of thia confented to a treaty with him upon his own parthia and terms, and gave him four of his own fons with their India.
began to be attacked by thofe nations which in procels of time were to overthrow it. The Germans, by which name the Romans confounded a great number of nation ${ }^{\text {n }}$ Eumpere beran the northern parts in the began to make incurfions into Gaul. Their firlt at- the nortempt happened in the year 1.7.B. C. when they at barians. firf gained an inconfiderable advantage, but were foon driven back with great lofs. Soon after this the Rhæti, who feem to have inhabited the country bordering on the lake of Conltance, invaded Italy, where they committed dreadful devartations, putting all the males to the fword without diftinction of rank or age; nay, we are told, that, when women with child happened to fall into their hands, they confulted their augurs whetler the child was male or female ; and if they pronounced it a male, the mother was immediately maffacred. Againlt thele barbarians Auguftus fent Drufus the fecond fon of the emprefs Livia; who, though very young, found means to gain a complete victory with very little lofs on his part. Thofe who efcaped took the road to Gaul, being joined by the Vindelici, anoth re nation in the neighbourb od; but Tiberius, the ilder brother of Drufus, marched againlt them, and overthrew them fo completely, that the Khæti, Vindelici, and Norici, three of the molt barbarous nations in thofe parts, were fain to fubmit to the pleafure of the emperor. To keep their country in awe, Tiberius planted two colonies in Vindelicia, opening a road from thence into Noricum and Rhretia. One of the cities which he built for the defence of his colonies was called Dryfornagus; the other, Auguffa Vindeli:orum ; both of which are now known by the names of Niminghen and Augfourg.

Auguftus, who had long fince obtained all the tem- Augufus poral honours which could well be conferred upon him, now began to affume thofe of the fpiritual kind alfo; being in the year 13 B. C. created Pontifex Maximus: an office which he continued to hold till his death; as did alfo his fucceffors till the time of Theodolius. By virtue of this office he corrected a very grofs miftake in the Roman kalendar; tor the pontifices having, for the fpace of 36 years, that is, ever fince the reformation of Julius Cæfar, made every third year a leap year, inftead of every fourth, twelve days had been inferted inftead of nine, fo that the Roman year confifted of three days more than it ought to have done. Thefe three fuperfluous days having been thrown out, the form of the year has ever fince been regularly obferved, and is fill known by the name of the old fyle in ufe amng us. On this occafion he gave his own name to the month of Augult, as Julius Cefar had formerly done to the month of July.

In the year 11 B. C. Agrippa died, and was fuc- Tiberius ceeded in his high employment of governor of Rome fucceeds by Tiberius; but, before invefting him with this ample Agrippa. power, the emperor caufed him to divorce his wife Agrippina (who had already brought him a fon, and was then big with child), in order to marry Julia the widow of Agrippa and daughter of the emperor. Julia was a princefs of an infamous character, as was known to almoft every body excepting Auguftus himfelf; however, Tiberius made no hefitation, through fear of difobliging the emperor.

The emperor now fent his two fons Tiberius and Drufus againtt the northern nations. Tiberius redu-

## R OM

ced the Pannonians, who had attempted to thake off the yoke after the death of Agrippa. Drufus performed great exploits in Germany ; but while he was confidering whether he fhould penetrate further into thefe northern countries, he was feized with a violent fever, which carried him off in a few days. He was fucceeded in his command by Tiberius, who is reported to have done great things, but certainly made no permanent conquelts in Germany. However, he was honoured with a triumph, and had the tribunitial power for five years conferred upon him ; which was no fooner done, than, to the great furprife of Augultus and the whole city, he defired leave to quit Rome and retire to Rhodes. Various reafons have been affigned for this extraordinary refolution; fome are of opinion that it was in order to avoid being an eye-witnefs of the de. baucheries of his wife Julia, who fet no bounds to her lewdnefs; though others imagine that he was offended at the honours which Augultus had conferred on his grandchildren, efpecially at his Ityling them princes of the Roman youth; which left him no hopes of enjoying the fovereign power. However, Augultus pofitively refuled to. comply with his requef, and his mother Livia ufed her utmolt endeavours to dilfuade him from his refolution : but Tiberius continued obltinate; and finding all other means ineffectual, at laft fhut himfelf up in his houle, where he abltained four whole days from nourifhment. Auguitus, perceiving that he could not get the better of his obltinate and inflexible temper, at laft complied with his requef. Tiberius foon grew weary of his retirement, and, giving out that he had left Rome only to avoid giving um264 brage to the emperor's two grandchildren, defired leave $I_{s}$ confined to return; but Augultus was fo much difpleafed with there by Augufus for feven ycars. his having obftinately infifted on leaving Rome, that he obliged him to remain at Rhodes for feven years longer. His mother, with much ado got him declared the emperor's lieutenant in thofe parts; but Tiberius, dreading the refentment of his father-in-law, continued to act as a private perfon during the whole time of his ftay there.

A profound peace now reigned throughout the whole empine; and in confequence of this the temple of Janus was fhut, which had never before happened fince the time of Numa Pompilius. During this pacific interval, the Saviour of mankind was born in Judæa, as is recorded in the facred hiltory, 748 years after the foundation of Rome by Romulus. 'Three years. after, Tiberius returned to the city, by permilion of Aupultus, who yet would not allow him to bear any public office; but in a fhort time, Lucius Cxfar, one of the emperor's grandchildren, died, not without fufpicions of his being poifoned by Livia. Tiberius hhowed fuch great concern for his death, that the affection of Augultus for him returned; and it is. faid that he would at that time have adopted Tiberius, had it not been for giving umbrage to his other grandfon Caius Cæfar. This obftacle, however, was foon after semoved; Caius being taken off allo, not without great fufpicions of Livia, as well as in the former cale. Au-

266
Augufus adopts Ti herius as his fon. gultus was exceedingly concerned at his death, and immediately adopted Tiberius as his fon; but adopted alfo Agrippa Polthumius, tiee third fon of the famous Agrippa ; and obliged Tiberius to adupt Germanicus the fon of his brother Drufus, though he had a fon of his own named Drufus; which was a great mortifica-
tion to him. As to Agrippa, however, who might have been an occafion of jealoufy, Tiberius was foon freed from him, by his difgrace and banifhment, which very foon took place, but on what account is not known.

The northern nations now began to turn formidable : and though it is pretended that Tiberius was always fuccefsful againlt them, yet about this time they gave the Romans a mof terrible overthrow; three legions and fix cohorts, under Quintilius Varus, being almolt entirely eut in pieces. Auguftus fet no bounds to his grief on this fatal occafion. For fome months he let his hair and beard grow, frequently tearing his garments, knocking his head againft the wall, and crying out like a diftracted perfon," Reftore the legions, Varus!" Tiberius, however, was foon after fent into Germany ; and for his exploits there be was honoured with a triumph. Augultus now took him for his colleague in the fovereignty; after which he fent Germanicus againt the northern barbarians, and Tiberius into Illyricum. This was the laft of his. public acts; for having accompanied Tiberius for part of his journey, he died at Noka in Campania, in the 7 th year of his age, and coth of his reign - ivia was furpesed of having haftened his death by giving him poifoned figs. Her reafon for this was, that fhe feared a reconciliation between him and his grandfon Agrippa whom he had banifhed, as we have already related. Some months before, the emperor had paid a vifit to Agrippa, unknown to Livia, Tiberius, or any other perfon, excepting one Fabius Maximus. This man, on his return home, difcovered the fecret to his wife, and fhe to the emprefs. Augultus then perceiving that Fabius had betrayed him, was fo provoked, that he banifhed him from his prefence for ever; upon which the unfortunate Fabius, unable to furvive his difgrace, laid violent hands on himfelf.

Tiberius who fucceeded to the empire, refolved to fecure himfelf on the throne by the murder of Agrippa; whom accordingly he caufed to be put to death by a military tribune. Though this might have been a fufficient evidence of what the Romans had to expect, the death of Augultus was no fooner known, than the confuls, fenators, and knights, to ufe the expreffion of Tacitus, ran headlong into flavery. The two confuls firtt took an oath of fidelity to the emperor, and then adminiftered it to the fenate, the people, and the foldiery. Tiberius behaved in a dark myfterious manner, taking care to rule with an abfolute fway, but at the farme time feeming to hefitate whether he fhould accept the fovereign power or not; infomuch that one of the fenat rs took the liberty to tell him, that other men were flow in performing what they had promifed, but he was flow in promiling what he had already performed. At laft, however, his modelty was overcome, and he declared his acceptance of the fovereignty in the following words: " I accept thie empire, and will hold it, till fuch time as you, confeript fathers, in your great prudence, fhall think proper to give repofe to my old age."

Tiberius had fearce taken poffeftion of the throne, when news were brought him that the armies in Pan nonia and Germany had mutinied. In Pannonia, three legions having been allcwed forne days of relaxation from their ufual duties, either to mourn for the death of Auguftus, or to rejoice for the acceffion of Tiberias, grew turbulent and feditious. The Pinnonian muti-

## R O M

neers were headed by one Percennius, a common foldier ; who, betore he ferved in the army, had made it his whole bulinels to form parties in the theatres and playboufes to hifs of applaud fuch actors as he liked or difliked. Inflamed by the fpeeches of this man, they openly revolted; and though Tiberius himfelf wrote to them, and fent his fon Drufus to endeavour to quell the tumult, they maffacred fome of their officers, and infulted others, till at laft, being frightened by an eclipfe of the moon, they began to llow fome figns of 1 epentance. Of this favourable difpofition Drufus took advantage; and even got the ringleaders of the revolt condemned and executed. Immediately after this they were again terrified by fuch violent ftorms and dreadiul rains, that they quietly fubmitted, and every thing in that quarter was reftored to tranquillity.

The revolt of the German legions threatened much more danger, as they were more numerous than thofe of Pannonia. They proceeded nearly in the fame way as the Pannonian legions, falling: upon their officers, efpecially the centurions, and beating them till they almolt expired, drove them out of the camp, and fome of them were even thrown into the Rhine. Germanicus, who was at that time in Gaul, haftened to the camp on the firf news of the difturbance; but being unable to prevail on them to return to their duty, he was obliged to feign letters from Tiberius, granting all their demands. Thefe were, That all thofe who had ferved 20 years fhould be difcharged; that fuch as had ferved 16 fhould be deemed veterans: and that fume legacies which had been left them by Auguftus fhould not only be paid immediately, but doubled. This laft article he was obliged to difcharge without delay out of the money which he and his friends had brought to defray the expences of their journey ; and on receiving it, the troops quietly retired to their winter-quarters. But in the mean time, fome deputies fent either by Tiberius or the fenate, probably to quell the fedition, occafioned frefh diturbances; for the legionaries, taking it into their heads that there deputies were come to revoke the concefions which Germanicus had made, were with difficulty prevented from tearing them in pieces; and, notwithftanding the utmoft endeavours of Germanicus, behaved in fuch an outragecus manner, that the general thought proper to fend off his wife Agrippina, with her infant fon Claudius, the herfelf at the $I$ me time being big with child. As fhe was attended by many women of dutinction, wives of the chief officers in the camp, their tears and lamentations on parting with their hubands occafioned a great uproar, and drew together the foldiers from all quarters. A new fcene enfued, which made an impreffion even upon the moft oblinate. They could not behold, without thame and compaffion, fo many women of rank travelling thus forlorn, without a centurion to attend them, or a foldier to guard them; and their general's wife among the reft, carrying her infant child in her arms, and preparing to fly for thelter againft the treachery of the Roman legions. This made fuch a deep impreffion on the minds of many of them, that fome ran to ftop her, while the reft recurred to Germanicus, earnefly intreating him to recall his wife, and to prevent her from being obliged to feek a fanctuary among fóreigners. The generalimproved this favourable difpofition, and in a fhort time they of their own accord feized and
maffacred the ringleaders of the revolt. Still, however, two of the legions continued in their difobedience. Againt them therefore Germanicus determined to lead thore who had returned to their duty. With this view he prepared veffels; but before he embarked his troops, he wrote a letter to Cæcina who commanded them, acquainting him that he approached with a powerful army, retolved to put them all to the fword without diftinction, if they did not prevent him by taking vengeance on the guilty themfelves. This letter Cxcina communicated only to the chief officers and fuch of the foldiers as had all along difapproved of the revolt, exhorting them at the fame time to enter into an affociation againf the feditious, and put to the fword fuch as had involved them in the prefent ignominy and guilt. This propofal was approved of, and a cruel maffacre immediately took place; infornuch that when Germanicus came to the camp, he found the greateft part of the legions deftroyed. This greatly affected the humane Germanicus, who caufed the bodies of the flain to be burnt, and celebrated their obfequies with the ufual folemnities; however the fedition was thus effequally quelled, after which he led his army into Germanys, There he performed many great ex. ploits + ; but fill all that he could perform was far from freeing the empire from fo dangervas and trouble. fome an enemy. In the year 19 , he died, of poifon, as was fuppofed, given by Pifo, his partner in the government of Syria, to which Germanicus had been promo. ted after his return from the north.

In the mean time, Tiberius, though he affected to court the favour of the people by various methods, yet fhowed himfelf in general fuch a cruel and bloodthirty tyrant, that he became the object of univerfal abhorrence. Though he had hated Germanicus in his heart, lie punifhed Pifo with death : but in about a Tiberius year after the death of Germanicus, having now no cruel tyobjeet of jealoury to keep him in awe, he began to rant. pull off the mafk, and appear more in his natural character than before. He took upon himfelf the interpretation of all political meafures, and began daily to diminifh the authority of the fenate; which defign was much facilitated, by their own aptitude to flavery; fo that he defpifed their meannefs, while he enjoyed its effects. A law at that time fubfifted, which made it treafon to form any injurious attempt againt the majefty of the people. Tiberius affumed to himfelf the interpretion and enforcement ot this law; and extended it not only to the cafes which really affected the fafety of the tare, but to every conjuncture that could poffibly be favourable to his hatred or fufpicions. All freedom was now therefore banilhed from convivial meetings, and diffidence reigned amongit the deareft relations. The law of offended majefly being revived, many perfons of diftinction fell a facrifice to it.

In the beginning of thefe cruelties, Tiberius topok Rife of into bis confidence Sejanus, a Roman knight; but by Sejanus a birth a Volfcian, who found out the method of gain- wicked miing his confidence, by the moft refined degree of dif- nifter. fimulation, being an over-match for his matter in his own arts. He was made by the emperor captain of the Prætorian guards, one of the moft confidential trufts in the ftate, and extolled in the fenate as a worthy affociate in his labours. The fervile fenators, with ready

## R O M

ready adulation, fet up the fatues of the favourite befide thofe of Tiberius, and feemed eager to pay him fimilar honours. It is not well known whether he was the advifer of all the cruelties that enfued foon after; but certain it is, that, from the beginning of his miniftry, Tiberius feemed to become more fatally fufpicious.
It was from fuch humble beginnings that this minilter even ventured to afpire at the throne, and was refolved to make the emperor's foolifh confidencé one of the firlt Ateps to his ruin. Howeyer, he confidered that cutting off Tiberius alone would rather retard than promote his defigns while his fon Drufus and the children of Germanicus were yet remaining. He therefore began by corrupting Livia, the wife of Drufius; whom, after having debauched her, he prevailed upon to poifon her hufband. This was effected by means of a flow poifon (as we are told), which gave his death the appearance of a cafual ditemper. Tiberius, in the mean time, either naturally phlegmatic, or at leall not much regarding his fon, bore his death with great tranquillity. He was even heard to jef upon the occafion; for when the ambalifadors from Troy came fomewhat late with their compliments of condolence, he anfwered their pretended diftreffes, by condoling with them alfo upon the lofs of Hector.

Scjanus having fucceeded in this, was refolved to make his next attempt upon the children of Germanicus, who were undoubted fucceffors to the empire. However he was fruftrated in his defigns, both with regard to the fidelity of their governors, and the chaftity of Agrippina their mother. Whereupon he refolved upon changing his aims, and removing Tiberius out of the city; by which means he expected more frequent opportunities of putting his defigns into execution. He therefore ufed all his addrefs to perfuade Tiberius to retire to fome agreeable retreaf, remote from Rome. By this he expected many advaitages, fince there could be no accefs to the emperor but by him. Thus all letters being conveyed to the prince by foldiers at his own devotion, they would pafs through his hands; by which meins he mult in time become the fole governor of the empire, and at laft be in a capacity of removing all obftacles to his ambition. He now therefore began to infinuate to Tiborius the great and numerous inconveniences of the city, the fatigues of
attending the fenate, and the feditious temper of the inferior citizens of Rome. Tiberius, either prevailed upon by his perfuations, or purfuing the natural turn of his temper, which led to indelence and debauchery, in the twelfth year of his reign left Rome, and went into Campania, under pretence of dedicating temples to Ju, ter and Auguftus. After this, though he removed to feveral places, he never returned to Rome; but fent the greateft part of his time in the iflaind of Caprea, a place which was rendered as infamous by his pleafures as deteftable by his cruelties, which were fhocking to human nature. Buried in this retrat, he gave himfelf up to his pleafures, quite regardlefs of the miferies of his fubjects. Thus an infurrection of the Jews, upon placing his flatue in Jerufalem, under the govenment of Pontius Pilate, gava him no fort of unicalinefs. The falling of an amphitheatre at Fiuenx, in which 50,000 perfons were either killed or wounded, no way affected his repofe. He was only emoloych in fudying how

Vol. XVI.
to vary his odicus pleafurcs, and furcing inis fecble Ruse, frame, fhattered by age and former debaucherics, into the enjoyment of them. Nothing can prefent a more horrid picture than the retreat of this impure old man, attended by all the minitters of his perverted appetites. He was at this time 67 years old ; his perfon was moft difpleafing; and fome fay the difagreeablenefs of it, in a great meafure, drove him into retirement. He was quite bald before; his face was all broke out into ulcers, and covered over with platers; his body was bowed forward, while its extreme height and leannefs increafed its deformity. With fuch a perfon, and a mind nill more hideous, being gloomy, furpicious, and cruel, he fat down with a view rather of forcing his appetites than fatisfying them. He fpent whole nights in debaucheries at the table; and he appointed Pomponius Flaccus and Lucius Pifo to the firt pofts of the empire, for no other merit than that of haviag fat up with him two days and two nights without interruption. Thefe he called his friends of all hours. He made one Novelius Torgnatus a prator for being able to drink off five bottles of wine at a draught. His luxuries of another kind were fill more deteftable, and feemed to increafe with his drunkennefs and gluttons. He made the moft eminent women of Rome fubfervient to his lufts; and all his inventions only feemed calculated how tomake his vices more extravagant -1 abominable. The numberlefs obfcene medals dug in that ifland at this day bear witnefs at once to his fhame, and the veracity of the hiftorians who have defcribed his debaucheries. In fhort, in this retreat, which was furrounded with rocks on every fide, he quite gave up the bufinefs of the empire; or, if he was ever active, it was unly to do mifchief. But, from the time of his. retreat, he became more cruel, and Sejanus always endeavoured to increafe his diftrufts. Secret fpies and informers were placed in all parts of the city, who converted the mof harmlefs actions into fubjects of offence. If any perfon of merit teftified any concern for the glory of the empire, it was immediately conflrued into a defign to obtain it. If another fooke with regret of former liberty he was fuppofed to aim at re-eftablifing the commonwealth. Every action became liable to forced interpretations; joy expreffed an hope of the prince's death ; melancholy, an envying of his profperity. Sejanus found his ains every day facceeding ; the wretched emperor's telrors were an infrumen that he wrought upon at his pleafure, and by which he levelleci every obfacle to his defigns. But the chief onjeets of his jcalou y were the children of Germanicus, whom he rcfolved to put out of the way. He therefore continued to render them obncxious to the emperor, to alarm him with falle reparts of their ambition, and to terrify them with alaras of his intended cruelty. By thefe means, he fo contrived to widen the breach, that he actually produced on both fides thofe difpofticns which be pretended to obviate; fides thofe dipoliticns which be pretenced to obviate;
till at lenctiv, the two prince; Nero and Drufis were The ciil deciared cuemies to the ftate, and afterwards flarved dicu of to death in prifon; while Agrippina their mother was fant into be bifhment.

In this mamer Sejanus proceeded, removing all who ftood between him and the empire, and every day increafing in conflence with Tiberius, and power with the fenate. The number of his far ues exseeded even

thofe of the emperor ; people fwore by his fortune, in the fame manner as they would have done had be been actually upon the throne, and he was more dreaded than even the tyrant who actually enjoyed the empire. But the rapidity of his rife feemed only preparatory to the greatnefs of his downfall. All we know oi his firlt difgrace with the emperor is, that Satrius Secundus was the man who had the boldnefs tu accure lim. Antonia, the mother of Germasicus, feconded the accufation. What were the particulars of his crimes, we cannot learn : but certain it is, that he attempted to ufurp the empire, by aiming at the life of Tiberius. He was very near difpatching him when, his practices were difcovered, and his awn life was fubfituted for that againt which he aimed. Tiberius, fentible of the traitor's power, proceeded with his ufual diffimulation in having him apprehended. He granted him new honours at the very time he refolved his death, and took him as his colleague in the confullhip. The emperor's letter to the fenate began only with flight complaints againft his friend, but ended with an order for putting him in prifon. He intreated the fenators to protect a poor old man, as he was, abandoned by all; and in the mean time, prepared fhips for his flight, and ordered foldiers for his fecurity. The fenate, who had long been jealous of the favourite's power, and dreaded his cruelty, immediately took this opportunity of going beyond their orders.
Inftead of fentencing him to imprifonment, they directed his execution A ftrange revolution now appeared in the city; of thofe numbers that but a moment before were preffing into the prefence of Sejanus, with offers of fervice and adulation, not one was found that would feem to be of his acquaintance; he was deferted by all; and thofe who had formerly received the greatef benefits from him, feemed now converted into his molt inveterate enemies. As he was conducing to execution, the people loaded him with infult and execration. He attempted to hide his face with his hands; but even this was denied him and his hands were fecured. Nor did the rage of his enemies fubfide with his death ; his body was ignominioufly dragged about the ftreets, and his whole family executed with him.

His death only lighted up the emperor's rage for fur-
the rock was to be feen, from which he ordered fuch as had difpleafed him to be thrown headlong. As he was one day examining fome perfons upon the rack, he was tuld that an old friend of his was come from Rhodes to fee him. Tiberius fuppofing him brought for the purpofe of information, immediately ordered him to the torture ; and when he was convinced of his miftake, he ordered him to be put to death, to prevent further difcovery.

In this manner did the tyrant continue to torment others, although he was himfelf fill more tortured by his own fufpicions; fo that in one of his letters to the fenate, he confeffed that the gods and goddeffes had fo aftlicted and confounded him, that he knew not what or how to write. In the mean time the frontier: provinces were invaded withi impunity by the barbarians. Mæfia was feized on by the Dacians and Sarmatians ; Gaul was wafted by the Germais, and Armenia conquered by the king of Parthia, Tiberius, however, was fo much a flave to his brutal appetites, that he left his provinces wholly to the care of his lien. tenants, and they were intent rather on the accumulation of private fortune than the fafety of the ftate. Such a total diforder in the empire produced fuch a degree of anxiety in him who governed it, that he was heard to wifh, that heaven and earth might perrifh when he died. At length, however, in the 22 d year of his reign, he began to feel the approaches of his diffolution, and all his appetites totally to forfake him. He now, therefore, found it was time to think of a fucceffor, and hefitated for a long while, whether he thould choofe Caligula, whofe vices were too apparent to efcape his obfervation. He had been often heard to fay, that this youth had all the faults of Sylla, without his virtues; that he was a ferpent that would fting the empire, and a Phaeton that would fet the world in a flame. However, notwithftanding all his well-grounded apprehenfions, he named him for his fucceffor; willing, perhaps, by the enormity of Caligula's conduct to cover the memory of his own.

But though he thought fit to choofe a fucceffor, he concealed his approaching decline with the utmoft care, as if he was willing at once to hide it from the world and himfelf. He long had a contempt for phyfic, and refufed the advice of fuch as attended him: he even feemed to take a pleafure in being prefent at the fports of the foldiers, and ventured himfelf to throw a javelin at a boar that was let loofe before him. The effort which he made upon this occafion caufed a pain in his fide, which haftened the approaches of death: fill, however, he feemed willing to avoid his end; and frove, by change of place, to put off the inquietude of his own reflections. He left his favourite iffand, and went upon the continent, where he at laft fixed at the promontory of Mifenum. It was here that Charicles, his phyfician, pretending to kifs his hand, felt the failure of his pulfe, and apprifed Macro, the emperor's prefent favcurite, that he had nct above two days to live. Tiberius, on the contrary, who had perceived the art of Charicles, did all in his power to imprefs his attendants with an opinion of his health: he continued at table till the evening; he faluted all his guelts as they left the roonf, and read the acts ci the fenate, in which they had abiolved fome perfors he-had written againh, with great indignation. Fe
refolved
ther executions. The prifons were crowded with pretended accomplices in the confpiracy of Sejanus. Tiberins began to grow weary of particular executions; he therefore gave ordtrs that all the accufed fhould be put to death together without further examination. Of 20 fenators, whom he chofe for his council, he put 16 to death. "Let them hate me (cried he) fo long as they obey me." He then averred, that Priam was an bappy man, who outlived all his pofterity. In this manner there was not a day without fome barbarous execution, in which the fufferers were obliged to undergo the mot flameful indignities and exquifite torment: When one Camillus had killed himfelf to avoid the torture: " Ah (cried Tiberius), how that man has been alle to efcape me!" When a prifoner carnefly intreased that he would not defer his death : * No (cried the tymat), I am not fufficiently your fiend, to fhorten your tormen:." He often fatisfied his tyes with the tortures of the wretches that were put to suath betore him; and in the days of Suetonius higula

Rome.

## R O M

R O M
No monarch ever came ta the throne with more ad. vantages than Caligula. He was the fon of Germanicus, who had been the darling of the army and the people. He was bred among the foldiers, from whom he received the name of Caligula, from the fhort buf. kin, called caliga, that was worn by the common centincls, and which was alfo ufually worn by him. As, he approached Rome, the principal men of the ftate went out in crowds to meet him. He received the congratulations of the people on evaly ficte, all equi.ils. pleafed in being free irom the cruelties of tiberins, and in hoping new advantages from the vitues of his fuccefior.

Caligula feemed to take every precaution to imprefs them with the opinion of an happy change. Amidlt the rejoicings of the multitude, he advanced mourning, with the dead body of Tiberius, which the foldiers brought to be burnt at Rome, according to the cuftom of that time. Upon his entrance into the city, he was received with new titles of honour by the fenate, whofe chief employment feemed now to be, the art of increafing their emperor's vanity. He was left co-heir with Gemellus, grandfon to Tiberius ; but they fet afide the nomination, and declared Caligula fole fucceffor to the empire. The joy for this election was not confined to the narrow bounds of Italy; it fpread through the whole empire, and victims without number were facrificed upon the occafion. Some of the people, upon his going into the infud of Campania, made vows for his return; and fhortly after, when he fell fick, the multitudes crowded whole nights round his palace, and fome even devoted themfelves to death in cafe he recuvered, fetting up bills of their refolutions in the ffreets. In this affection of the citizens, ftrangers themfelves feemed ambitious of fharing. Artabanus, king of Parthia, fought the emperor's alliance with affiduity. He came to a perfonal conference wich one of his legates; paffed the Euphrates, adored the Roman eagles, and kiffed the emperor's images; fo that the whole world feemed combined to praife him for virtues which the fuypofed him to poffefs.

The new emperor at firf feemed extremely careful Caligntu of the public favour; and having performed the fune- heginsto ral folemnities of Tiberius, he hattened to the iflands of rign with Pandataria and Pontia, to remove the afthes of his mother and brothers, expofing himfelf to the dangers of tempeftuous weather, to give a luftre to his piety. Having brought them to Rome, he infituted annual folemnities in their honour, and ordered the month of September to be called Germanicus, in memory of Lis: father. Thefe ceremonies being over, he conferred the fame honours upon his grandmother Antonia, whic!. had before been given to Livia; and ordered all informations to be burnt, that any ways exp fed the enemies of his family. He even refufed a paper that was offer ed him, tending to the difoovery of a confpiacy agaient him; alleging, That he was confcious (f incthins to deferve any man's hatred, and therefore had no fears from their machirations. He caufed the inflitutions of Auguftus, which had been difufed in tie reign of Tiberius, to be revived; undertook to reiom many abues in the fate, and fevercly punifhed o mupt go. vernors. Among others, he banifhed Pontius Pilite into Gaul, where this umud magitrate aficward fat an end to his life by fuicitc. He banified the fpintio...

## ROM

or inventur of abuminable receations, from Rome; attempted to renure the ancient manner of electing magiltrates by the fuffrages of the people; and gave them a tree jurifdicion, without any appeal to himfelf. Although the will of Tiberius was annulled by the fenate, and that of Livia fuppreffed by Tiberius, yet he caufed all thar legacies to be punctually paid; and in order to make Cumelius amends for mifing the crown, he caufed him to be elected Princeps Juventutis, or principal of the youth. He reftored fome kings to their dominions who had been unjuftly difpoffefled by Tiberius, and gave them the arrears of their revenues. And, that he might appear an encourager of every virtue, he ordered a female flave a large fum of money for enduring the moft exquifite torments without difcover:ug the fecrets of her maiter. So many conceffions, and fuch apparent virtue, could not fail of receiving juft applaufe. A thield of gold, bearing his image, was decreed to be carried annually to the Capitol, attended by the fenate and the fons of the nobility finging in praife of the emperor ${ }^{2} 3$ virtues. It was likewife ordained, that the day on which he was appointed to the empire fhould be called Pubitia; implying, that when he came to govern, the city received a new foundation.
In lefs than eight months all this fhew of moderation and clemency vanifhed; while furious paffions, unexampled avarice, and capricious cruelty, began to take their turn in his mind. As moft of the cruelties of Tiberius arofe from fufpicion, fo mof of thofe committed by Caligula took rife from prodigality. Some indeed affert, that a diforder which happened foon after his acceffin to the empire, entirely difcompofed his undertanding. However this may be, madnefs itfelf could farce dictate cruelties more extravagant, or inconfiftencies more ridiculous, than are imputed to him; tome of them appear almoft beyond belief, as they feem entirely without any motive to incite fuch barbarities.

The firt object of his cruelty was a perfon named Politus, who had devoted himfelf to death, in cafe the emperor, who was then fick, thould recover. When Caligula's health was re-eftablifhed, he was informed of the zeal of Politus, and átually compelled him to complete his vor. This ridiculous devotee was therefore led round the city, by children, adorned with chaplets, and then put to death, being thrown headlong from the ramparts. Another, named Secundus, had vowed to fight in the amphitheatre upon the fame occafion. To this he was alfo compelled, the emperor dimfelf choofing to be a fpectator of the combat. However, he was more fortunate than the former, being fo facoclsful as to kill his adverfary, by which he obtained a releafe from his vow. Gemellus was the next who fuffered from the tyrant's inhumanity. The pretence againft him was, that he had wilhed the emperor might not recover, and that he had taken a counter-poifon to fecue him from any fecret attempts againt his life. Caligula ordcred him to kill himfelf; but as the unfortunate youth was ignorant of the manner of doing it, the emperor's meffengers foon inftructed him in the fatal leffon. Silenus, the emperor's father in-law, was the next that was put to death upon flight fufpicions ; and Gercinus, a fenator of noted integrity, refulisg to witnefs falfely againfthim, thared his fate. After thefe followed a crowd of victims to the emperor's avarice or fufpicion. The pretext againd.
hem was their enmity to his family ; and in pronif of his accufations he produced thofe very memorials which but a while before he pretended to have burnt. Among the number of thafe who were facrificed to his jealoufy, was Macro, the late favourite of Tiberius, and the perfon to whom Caligula owed his empire. He was accufed of many crimes, fome of which were common to the emperor as well as to him, and his death brought on the ruin of his whole family.

Thefe cruelties, however, only feemed the firt fruits of a mind naturally timid and fufpicious: his vanity and profufion foon gave rife to others which were more atrocious, as they frung from lefs powerful motives. His pride firft began by affuming to himfelf the title of rulcr, which was ufually granted only to kings. He would alfo have taken the crown and diadem, had he not been advifed that he was already fuperior to all the monarchs of the world. Not long after, he affumed divine honours, and gave himfelf the names of fuch divinities as he thought molt agreeable to his nature. For this purpofe he caufed the heads of the ftatues of Jupiter and fome other gods to be ftruck off, and his own to be put in their places. He frequently feated himfelf between Caftor and Pollux, and ordered all who came to their temple to worfhip, fhould pay their adorations only to him; nay, at laft he altered their temple to the form of a portico, which he joined to his palace, that the very gods, as he faid, might ferve him in the quality of porters.

He was not lefs notorious for the depravation of his appetices than for his ridiculous prefumptions. Neither perfon, place, nor fex, were obftacles to the indulgence of his unnatural lufts. There was fearce a lady of any quality in Rome that efcaped his lewdnefs; and, indeed, fuch was the degeneracy of the times, that there were few ladies who did not think this difgrace an bonour. He committed inceft with his three fiters, and at public feafts they lay with their heads upon his bofom by turns. Of thefe he proftituted Livia and Agrippina to his vile companions, and then banifhed them as adultreffes and confpirators againft his perfon. As for Drufilla, he took her from her huband Longinus, and kept her as his wife. Her he loved fo affectionately, that, being fick, he appointed her as heirefs of his empire and fortune ; and the happenipg to die before him, he made her a goddefs. Nor did her example when living, appear more dangerous to the people than her divinity when dead. To mourn for her death was a crime, as the was become a goddefs; and to rejoice for her divinity was capital, becaufe the was dead. Nay, even flence itfelf was an unpardonable infenfibility, either of the emperor's lofs or his filter's advancement. Thus he made his fifter fubfervient to his profit, as before he had done to his pleafure; railing valt fums of money by granting pardons to fome, and by confifcating the goods of others. As to his marriages, whether he contracted them with greater levity, or dif. folved them with greater injuftice, is not eafy to determine. Being prefent at the nuptials of Livia Oreftilla with Pifo, as foon as the folemnity was over, he commanded her to be brought to him as his own wife, and then difmilfed her in a few days. He foon after banifhed her upon fufpicion of cohabiting with her hufband after the was parted from him. He was enamoured of Lollio Paulina, upon a bare relation of her grand-

Rome. mother's beauty ; and thereupon took her from her hufband, who commanded in Macedonia; notwithfanding which, he repudiated her as he had done the former, and likewife forbad her future marrying with any other. The wife who caught melt firmly upon his affections was Milonia Cæfonia, whofe chief merit lay in her perfect acquaintance with all the alluring aris of her fex, for fhe was otherwife poffefled neither of youth nor beauty. She continued with him during his reign; and the loved her fo ridiculounf, that he fometimes fhowed her to his foldiers dreffed in armour, and fometimes to his companions flark naked.

But of all his vices, his prodigality was the moft remarkable, and that which in fome meafure gave rife to the relt. The luxuries of former emperors were fimplicity itfelf, when compared to thofe which he practifed. He contrived new ways of bathing, where the richeft oils and molt precious perfumes were exhaufted with the utmoft profution. He found out difhes of immenfe value; and had even jewels, as we are told, diffolved among his fauces. He fometimes had fervices of pure gold prefented before his guefts inftead of meat; obferving, that a man fhould be an economit or an emperor.

For feveral days together he flung confiderable fums of money among the people. He ordered hips of a prodigions bulk to be built of cedar, the ftems of ivory inlaid with gold and jewels, the fails and tackling of various filks, while the decks were planted with the choicelt fruit trees, under the fhade of which he often dined. Here, attended by all the minifters of his pleafures, the molt exquifite fingers, and the moll beautiful youths, he coafted along the fhore of Campania with great fplendor. All his buildings feemed rather calculated to raife aftonifhment, than to anfwer the purpofes of utility. But the moft notorious inftance of his fruitlefs profution was the valt bridge at Puteoli, which he undertook in the third year of his reign. To fatisfy his defire of being mafter as well of the ocean as the land, he caufed an infinite number of thips to be faftened to each other, fo as to make a floating bridge from Baix to Puteoli, acrofs an arm of the fea three miles and an half broad. The fhips being placed in two rows, in form of a crefent, were fecured to each other with anchors, chains, and cables. Over thefe were laid valt quantities of timber, and upon that earth, fo as to make the whole refemble one of the freets of Rome. He next caufed feveral houfes to be built up. on his new bridge, for the reception of himfelf and his attendants, into which frefh water was conveyed by pipes from land. He then repaired thither with all his court, attended by prodigious throngs of people, who came from all parts to be-fpetators of fuch an expenAve prgent. It was there that Caligula, adorned with all we magnificence of eaftern royalty, fitting on horfeback, with a civic crown and Alex:ader's breat-plate, stiented by the groat officers of the army, and all the robility of Rome, eatered at one end of the bridge, and with ridiculous importance rode to the other. At mipht, the naraber of torcbes and other ihuminations with which this expeniive flructure was adorned, caft fuch a gleam as illuminated the whole bay, and all the neighbouring mountains. This feemed to give the weak empercr new caufe for evitation; boafting that be bad turned nigtt into dar, as woll as fea into land.

The next morning be again rode over in a trium hant chariot, followed by a numerous train of chariotecrs, and all his foldiers in glittering armour. He then afcended a roftrum erected for the occation, where he made a folemn oration in praife of the greatnefs of his enterprife, and the affiduity of his workmen and his army. He then difributed rewards among his ment and a fplendid feat fucceeded. In the midf of the entertainment many of his attendants were thrown into the fea; feveral fhips filled with fpectators were attacked and funk in an hoffile manner; and although the majority efcaped through the calmnefs of the wia. ther, yet many were drowned; and fome who endeavoured to fave themfelves by climbing to the bridge, were ftruck down again by the emperor's command. The calmnefs of the fea during this pageant, which continued for two days, furnifhed Caligula with frell opportunities for boalting ; being heard to fay, "that Neptune took care to keep the fea fmooth and ferene, merely out of reverence to him."

Expences like thefe, it may be naturally fuppofed, mult have exhaufted the moft unbounded wealth: in fact, after reigning about a year, Caligula found his revenues totally exhaufted; and a fortune of about $18,000,000$ of our mones, which Tiberius had amaffed together, entirely fent in extravagance and folly. Now, therefore, his prodigality put him upon new methods of fupplying the exchequer; and as before his profufion, fo now his rapacity became boundlefs. He put in practice all kinds of rapine and extortion; while his principal fudy feemed to be the inventing new im. pofts and illicit confifcations. Every thing was taxed, to the very wages of the meaneft tradefman. He caufed freemen to purchafe their freedom a fecond time; and poifoned many who had named him for their heir, to have the immediate poffeffion of their fortunes. He fet up a brothel in his own palace, by which he gained confiderable fums by all the methods of proftitution. He alfo kept a gaming-houfe, in which he himelf prefided, fcrupling none of the meanelt tricks in order to advance his gains. On a certain occalion having had a run of ill luck, he faw two rich knights paffing through his court; upon which he fuddenly rofe up, and caufing both to be apprehended, confifcated their cltates, and then joining his former companions, boalted that he never had a better throw in his life. Another time, wanting money for a take, he went down and caufed feveral noblemen to be put to death; and then returnins, told the company that they fat playing for trifies while he had won 60,000 felterces at a caft.

Such infupportable and capricious cruelties produced many fecret confpiracies againt him; but thefe were for a while deferred, upon account of his intended cxpedition againtt the Germans and Britons, which he undertook in the third year of his reign. For his purpofe, he caufed numerous levies to be made in all parts of the empire ; and talked with fo much refolution, that it was univerfally believed he would conquer all before him. Fis march perfeetly indicated the inequality of his temper : fometimes it was forapid, that the cohorts were obliged to leave their ftandards $b:-$ hind them; at other times it was fo flow, that it mure refembled a pompous proceffion than a military expedition. In this difpofition he would caufe himfelf to be carried on eight men's houlders, and order all the

## R O M $[406$ 〕 R O M

$\underbrace{\text { Rome. }}$
neighbouring cities to have their ftreets well fwept and watered to defend him from the dult. However, all thefe mighty preparations ended in nothing. Infteid of conquering Britain, he only gave refuge to one of its banifhed princes; and this he deferibed in a letter to the fenate, as taking poffeffion of the whole inland. Intead of conquering Germany, he only led his army to the fea-hore in Batavia. There difpofing his en. gines and warlike machines with great folemnity, and drawing up his men in order of battle, he went on board his galley, with which coatting along, he commanded his trumpets to found and the fignal to be given as if for an engagement ; upon which, his men having had previous orders, immediately fell to gathering the fhells that lay upon the thore into their helmets, terming them the fpoils of the conquered occan, worthy of the palace and the Capitol. After this doughty expedition, calling his army together as a general after victory, he harangued them in a pompous manner, and highly extolled their atchievements; and then diftributing money among them, difniffed them with orders to be joyful, and congratulated them upon their riches. But that fuch exploits fhould not pafs without a memorial, he caufed a lofty tower to be erected by the fea-fide'; and ordered the galleys in which he had put to fea to be conveyed to Rome in a great meafure by land.
After numberlefs inftances of folly and cruelty in this expedition, among which he had intentions of defroying the whole army that had formerly mutinied
in pieces; plainly flowing by their condati, that tyranny in a prince produces cruelty in thofe whom he governs. - It was afcer returning from this extravagant expedition, that he was waited upon by a deputation of the Jews of Alexandria, who came to deprecate his anger for not worlhipping his divirity as other nations had done. The emperor gave them a very ungracious reception, and woild probably have deftroyed their countrymen if he had not foon after been cut off.

This affair of the Jews remained undecided during his reign; but it was at laft fettled by his fucceffor to their fatisfaction. It was upon this occafion that Philo made the following remarkable anfwer to his aflociates, who were terrified with apprehenfions of the emperor's indignation; "Fear nothing (cried he to them), Caligula, by declaring againft us, puts God on our fide."

The continuation of this horrid reign feemed to threaten univerfal calamity : however, it was but fhort. There had already been feveral confpiracies formed to deltroy the tyrant, but without fuccefs. That which racy forme at laft fucceeded in delivering the world of this mon- ed againk fter, was concerted under the influence of Caffius Cherea, tribune of the prætorian bands. This was a man of experienced courage, an ardent admirer of freedom, and confequently an enemy to tyrants. Befides the motives which he had in common with other men, he had received repeated infults from Caligula, who took all occafions of turning him into ridicule, and impeaching him of cowardice, merely becaufe he had an effeminate voice. Whenever Cherea came to demand the watch-word from the emperor, according to cuftom, he always gave him either Venus, Adonis, or fome fuch, implying effeminacy and foftnefs. He therefore fecretly imparted his defigns to feveral fenators and knights, whom he knew to have received perfonal injuries from Caligula, or to be apprebenfive of thofe to come. Among thefe was Valerius Afiaticus, whofe wife the emperor had debauched. Annius Vincianus, who was fufpected of having been in a former confpiracy, was now defirous of really engaging in the firf defign that offered. Befides thefe, were Clemens the prefect; and Califus, whole riches made him obnoxious to the tyrant's refentment.

While thefe were deliberating upon the mof certain and fpeedy method of deftroying the tyrant, an unexpected incident gave new ftrength to the confpiracy. Pompedius, a fenator of diftinction, having been accufed before the emperor, of having fyoken of him with difrefpect, the informer cited one Quintilia, an actrefs, to confirm his accufation. Quintilia, however, was poffefled of a degree of fortitude not eafily found. She denied the fact with obtinacy; and being put to the torture at the informer's requel, the bore the feverelt torments of the rack with unfhaken confancy. But what is moft remarkable of her refolution is, that the was acquainted with all the particulars of the confpiracy; and although Cherea was appointed to prefide at her torture, fhe revealed nothing: on the contrary, when the was led to the rack, fhe trod upon the toe of one of the confpirators, intimating at once her knowledge of the confederacy, and her own refolution not to divulge it. In this manner fhe fuffered until all her limbs were diflocated; and in that deplorable ftate was prefented to the emperor, who ordered her a gratuity

Romé.
for what the bad fuffered. Cherea could now no lon- under his father Germanicus, he began to think of a triumph. The fenate, who had long been the timid miniters of his pride and cruelty, immediately fet about confulting how to fatisfy his expectations. They confidered that a triumph would, even to himfelf, appear as a burlefque upon his expedition: they therefore decreed him only an ovation. Having come to this refolution, they fent him a deputation, informing him of the honours granted him, and the decree, which was drawn up in terms of the moft extravagant adulation, However, their flattery was far from fatisfying his pride. He confidered their conduct rather as a dimimation of his power, than an addition to his glory. He therefore ordered them, on pain of death, not to concern themfelves with his honours; and being met by their meffengers on the way, who invited him to come and partake of the preparations which the fenate had decreed, he informed them that he would come; and then laying his hand upon his fiword, added, that he would bring that alfo with him. In this mauner, either quite omitting his triumph, or deferring it to another time, he entered the city with only an ovation; while the fenate paffed the whole day in acclamations in his praife, and fyeeches filled with the molt exceffive flattery. This conduct in fome meafure ferved to reconcile him, and foon after their exceffive zeal in his caufe entirely gained his favour. For it happened that Protogenes, who was one of the molt intimate and the moit cruel of his favourites, coming into the houfe, was fawned upon by the whole body of the fenate, and particularly by Proculus. Whereupon Protogenes with a fierce look, afked how one who was fuch an enemy to the emperer could be fuch a friend to him? There needed no more to excite the fenate againit Proculus. They inftantly feized upon him, and violently tore him.

## $\therefore \mathrm{R}$ M

Rows.
ger contain his indignation at being thus made the inftrument of a tyrant's cruelty. He therefore propofed to the confipators to attack him as he went to offer facrifices in the Capitol, or while he was employed in the fecret pleafures of the palace. The relt, however, were of opinion, that it was beft to fall upon him when he fhould be tunattended; by which means they would be more certain of fuccefs. After feveral deliberations, it was at laft refolved to attack him during the continuance of the Palatine games, which lalted four days; and to frike the blow when his guards fhould have the leaft opportunity to defend him. In conlequence of this, the three firlt days of the games paffed without affording that opportunity which was fo ardently defired. Cherea now, therefore, began to apprehend, that deferring the time of the confpiracy might be a mean to divulge it: he even began to dread, that the honour of killing the tyrant might fall to the lot of fome other perfon more bold than himfelf. Wherefore, he at lat refolved to defer the execution of his plot only to the day following, when Caligula fhould pais through a private gallery, to fome baths not far ditant from the palace.

The laft day of the games was more fplendid than .the rêt ; and Caligula feemed more fprightly and con- defcending than ufual. He took great amufement in feeing the people framble for the fruits and other rarities thrown by his order among them; and feemed no way apprehenfive of the plot formed for his deftruc.tion. In the mean time, the confpiracy began to tran. fire ; and had he poffeffed any friends, it could not have failed of being difcovered. The confpirators waited a great part of the day with the moft extreme anxiety ; and at one time Caligula feemed refolved to fpend the whole day without any refrefhment. This unexpected delay entirely exafperated Cherea; and had he not been reftrained, he would have gone and perpetrated his defign in the midat of all the people. Juft at this inftant, while he was yet hefitating what he fhould do, Afprenas, one of the confpirators, perfuaded Caligula to go to the bath and take fome flight refrefhment, in order to enjoy the reft of the entertainment with greater relifh. The emperor therefore rifing up, the confirators ufed every precaution to keep off the throng, and to furround him, under pretence of greater afliduity. Upon entering into the little vaulted gallery that led to the bath, he was met by a band of Grecian childres who had been inftructed in finging, and were come to perform in his prefence. He was once more therefore going to return into the theatre with them, lad not the leader of the band exculed himfelf, as having a cold. This was the moment that Cherea feized to Arike him to the ground; crying out, "Pyrant, think upon this." Immediately after, the other confpirators rufhed in; and while the emperor continued to refift, crring out, thar he was not yet dead, they difpatched him with 30 wounds, in the 2gth year of his age, after a thert reign of three years ten months and eight days. With him, his wife and infant daugh. ter alfo perifhed; the one being fabbed by a centurion, the other having its brains dathed out againt the wall, His coin was alfo melted down by a decree of the fenate ; and fuch precautions were taken, that all feemed willing, that neither his fcutures nor his name might be tranfmited to pollority.

As foon as the death of Caligula was made public, it produced the greateft confufion in all parts of the city. The conf 8283 rant rant without attending to a fucceffor, had all faught fufion enfafety by retiring to private places. Some thought fues on the report of the emperor's death was only an artifice of his own, to fee how his enemies would behave. Others averred that he was fill alive, and actually in a fair way to recover. In this interval of fufpenfe, the German guards finding it a convenient time to pillage, gave a loofe to their licentioufnefs, under a pretence of revenging the emperor's death. All the confpirators and fenators that fell in their way received no mercy : Afprenas, Norbanus, and Anteius, were cut in pieces. However, they grew calm by degrees, and the fenate was permitted to affemble, in order to deliberate upon what was neceffary to be done in the prefent emergency.

In this deliberation, Saturninus, who was then conful, infifed much upon the benefits of liberty ; and talked in raptures of Cherea's fortitude, alleging that it deferved the higheft reward. This was a language highly pleafing to the fenate. Liberty now became the favourite topic; and they even ventured to talk of extinguifhing the very name of Cæfar. Impreffed with this refolution, they brought over fome cohorts of the city to their fide, and boldly feized upon the Capitol. But it was now too late for Rome to regain her pritine freedom; the populace and the army oppofing their endeavours. The former were ftill mindful of their ancient hatred to the fenate, and remembered the donations and public fpectaeles of the emperors with regret. The latter were fenfible they could have no power but in a monarchy; and had fome hopes that the election of the emperor would fall to their detet. mination. In this oppofition of interefts, and variety of opinions, chance feemed at laft to decide the fate of the empire. Some foldiers happening to run about the palace, difcovered Claudius, Caligula's uncle, lurking in a fecret place, where he had hid himfelf through fear. Of this perfonge, who had hitherto been defpifed for his imbecillity, they refolved to make an emperor : and accordingly carried him upon their fhoulders to the camp, where they proclaimed him at a time he expected nothing but death.

The fenate now, therefore, perceiving that force alone was likely to fettle the fucceffion, were refolved to fubmit, fince they had no power to oppole. Clau. dius was the perfon mot nearly allied to the late emperor, then living; being the nephew of Tiberias, and the uncle of Caliguld. The fenate therefore paffed a decree, confirming him in the empire; and went foon after in a body, to render him their compulfive homage. Charea was the firlt who fell a facrifice to the jealcufy of this new monarch. He met death with all the fortitude of an ancient Roman; deliring to die by the fame fword with which he had killed Caligula. Lupus, his friend, was put to death with him ; and Sabinus, one of the coufpirators, laid violent hands on timfelf.

Claudius was 50 years old when he began to reign. The complicated difeafes of his infancy had in fome meafure arected all the faculties both of his body and mind. He was continued in a ftate of pupillage much longer than was ufual at that time ; and feemed, in

He forbade all perfons, upon fevere penalties, to facrifice to him as they had done to Caligula; was allidupus in hearing and examining complaints; and frequently adminiftered juftice in perfon; tempering by his mildnefs the feverity of the law. We are told of his bringing a woman to acknowledge her fon, by adjudging her to marry him. The tribunes of the people coming one day to attend him when he was on his tiibunal, he courteoufly excufed himfelf for not having room for them to fit down. By this deportment he fo much gained the affections of the people, that upon a vague report of his being flain by furprife, they ran about the ftreets in the utmoft rage and confternation, with horrid imprecations againft all fuch as were acceifary to his death; nor could they be appeafed, until they were affured, with certainty, of his fafety. He took a more than ordinary care that Rome fhould be continually fupplied with corn and provifions, fecuring the merchants againft pirates. He was not lefs affiduous in his buildings, in which he excelled almoft all that went before him. He conftructed a wonderful aquæduct, called after his own name, much furpaffing any other in Rome, either for workmanhip or plentiful fupply. It brought water from 40 miles diftance, through great mountains, and over deep valleys; being built on ftately arches, and furnifing the highelt parts of the city. He made alfo an haven at Oftia; a work of fuch immenfe expence, that his fucceffors were unable to maintain it. But his greateft work of all was the draining of the lake Fucinus, which was the largeft in Italy, and bringing its water into the Tiber, in order to ftrengthen the current of that river. For effecting this, among other valt difficulties, he mined through a mountain of fone three miles broad, and kept 30,000 men employed for 11 years tngether.

To this folicitude for the internal advantages of the fate, he added that of a watchful guardianhhip over the provinces. He reftored Judea to Herod Agrippa, which Caligula had taken from Herod Antipas, his uncle, the man who had put John the Baptilt to death, and who was banithed by order of the prefent emperor. Claudius alfo reftored fuch princes to their kingdoms as had been unjuftly difpolfeffed by his predeceffors; but deprived the Lycians and Rhodians of their liberty, for having promoted infurrections, and crucified fome
igy
In expedition -gainf Brisic. citizens of Rome.
Fie even undertook to gratily the people by foreign conqueft. The Britons, who had, for near 100 years, been left in fole poffeflion of their own inland, began to feek the mediation of Rome, to quell their inteftine commotions. The principal man who defired to fubject his native country to the Roman dominion, was
one Bericus, who, by many arguments, perfuaded the emperor to make a defcent upon the ifland, magnifying the advantages that would attend the conqueft of it. In purfuance of his advice, therefore, Plautius the prætor was ordered to pafs over into Gaul, and make preparations for this great expedition. At firt, indeed, his foldiers feemed backward to embark; declaring, that they were unwilling to make war beyond the limits of the world, for to they judged Britain to be. However, they were at laft perfuaded to go; and the Britons, under the conduct of their king Cynobetinus, were feveral times overthrown. And thefe fucceffes foon after induced Claudius to go into Britain in perfon, upon pretence that the natives were fill feditious, and had not delivered up fome Roman fugitives who had taken fhelter among them; but for a particular account of the exploits of the Romans in that ifland, fee the article Englang.

But though Claudius gave in the beginning of his reign the higheit hopes oi an happy continuance, he foon began to leffen his care for the public, and to commit to his favourites all the concerns of the empire. This weak prince was unable to act but under the di- any acts rection of others. The chief of his direftors was his wife Meffalina: whofe name is almoft become a common appellation to women of abandoned characters. However, the was not lefs remarkable for her cruelties than ber lutts; as by her intrigues the dettroyed many of the moft illuftrious families of Rome. Subordinase to her were the emperor's freedmen; Pallas, the treafurer; Narcifitis, the fecretary of ftate; and Callifus, the malter of the requelts. Thefe entirely governed Claudius; fo that he was only left the fatigues of ceremony, while they were poffefled of all the power of the fate.

It would be tedious to enumerate the various cruelties which thefe infidious advifers obliged the feeble emperor to commit: thofe againt his own family will fuffice. Appius Silanus, a perfon of great merit, whe had been married to the emperor's mother-in-law, was put to death upon the fuggetions of Meflalina. After him he flew both his fons-in-law, Silanus and Pompey, and his two nieces the Livias, one the daughter of Drufus, the other of Germanicus ; and all without permitting them to plead in their defence, or even without affigning any caufe for his difpleafure. Great numbers of others fell a facrifice to the jealoufy of Meffalina and her minions; who bore fo great a fivay in the fate, that all offices, dignities, and governments, were entirely at their difporai. Every thing was put to fale: they took money for fardons and penalties; and accumulated, by thefe means, fuch valt fums, that the wealth of Crofus was confidered as nothing in comparifon. One day; the emperor complaining that his exchequer was exhaulted, he was ludicroully told, that it might be fufficiently replenifhed if his two freedmen would take him into partnerfhip. Still, however, during fuch corruption, he regarded his favourites with the higheft efteem, and even folicited the fenate to grant them peculiar marks of their approbation. Thefe diforders in the minifters of government did not fail to produce confpiracies againft the emperor. Statius Corvinus and Gallus Affinius formed a confpiracy ugainft him. Two knights, whofe names are not told us, privately combined to affafinate him, But the revolt
which gave him the greateft uneafinefs, and which was punifled with the moft unrelenting feverity, was that of Camillus, his lieutenant general in Dalmatia. This general, incited by many of the principal men of Rome, openly rebelled againt him, and affumed the title of emperor. Nothing could exceed the terrors of Claudius, upon being informed of this revolt: his nature and his crimes had difpofed him to be more cowardly than the relt of mankind ; fo that when Camillus commanded him by letters to relinquifh the empire, and retire to a private ftation, he feemed inclined to obey. However, his fears upon this occafion were foon removed : for the legions which had declared for Camillus being terrified by fome prodigies, fhortly after abandoned him; fo that the man whom but five days before they had acknowledged as emperor, they now thought it no infamy to deftroy. The cruelty of Meffalina and her minions upon this occafion feemed to have no bounds. They fo wrought upon the emperor's fears and fufpicions, that numbers were executed without trial or proof; and farce any, even of thofe who were but fufpected, efcaped, unlefs by ranfoming their
fuch cruelties as thefe, the favourites of the emduct. peror endedvoured to eftablifh his and their own autho-
rity: but in order to increafe the neceffity of their af- fiftance, they laboured to augment the greatnefs of his terrors. He now became a prey to jealoufy and difquietude. Being one day in the temple, and finding a fword that was left there by accident, he convened the fenate in a fright, and informed them of his danger. After this he never ventured to go to any fealt without being furrounded by his guards, nor would he fuffer any man to approach him without a previous fearch. Thus wholly employed by his anxiety for felf. prefervation, he entirely left the care of the ftate to his favourites, who by degrees gave him a relifh for flaughter. From this time he feemed delighted with inflicting turtures; and on a certain occafion continued a whole day at the city of Tibur, waiting for an hangman from Rome, that he might feaft his eyes with an execution in the manner of the ancients. Nor was he lefs regardlefs of the perfons he condemned, than cruel in the infliction of their punifhment. Such was his extreme fupidity, that he would frequently invite thofe to fupper whom he had put to death but the day before; and often denied the having given orders for an execution, but a few lours after pronouncing fentence. Suetonius affures us, that these were no lefs than 35 fenators, and above 300 knights, executed in his reign ; and that fuch was his unconcern in the midft of fluughter, that one of the tribunes bringing him an account of a ceriain fenator who was executed, he quite forgot his offence, but calmly acquiefced in his punifhment.
In this maner was Claudius urged on by Meffalina to commit cruelties, which he confidered only as wholefome feverities; white, in the mean time, fhe put no brunds to her enormities. The impunity of her paft vices only incuani, $\begin{gathered}\text { h } \\ \text { her confidence to ecmmit new, }\end{gathered}$ her dobucherie became every day more notorious, and her lewdner exceeded what had ever been feen at Rome. She cauted la me women of the firt quality to commit adultery in the prefence of their hubands, and deftroyed fuch as relufed to comply. After appearing for Vos. XIV.
fome years infatiable in her defires, fhe at length fixed her affections upon Caius Silius, the moft beautiful youth in Rome. Her love for the young Roman feemed to amount even to madnefs. She obliged him to divorce his wife Junia Syllara, that fhe might entirely poffefs him herfelf. She obliged him to accept of immenfe treafures and valuable prefents; colabiting with him in the moft open manner, and treating him with the molt fhamelefs familiarity. The very imperial ornaments were transferred to his houfe; and the emperor's flaves and attendants had orders to wait upon the adulterer. Nothing was wanting to complete the infolence of their conduct, but their being married together; and this was foon after effected. They relied upon the emperor's imbecility for their fecurity, and only waited till he retired to Oftia to put their illjudged project in execution. In his abfence, they celebrated their nuptials with all the ceremonies and fplendor which attend the moft confident fecurity. Meffalina gave a loofe to her paffion, and appeared as a Bacchanalian with a thyrfus in her hand; while Silius affumed the character of Bacchus, his body being adorned with robes imitating ivy, and his legs covered with bufkins. A troop of fingers and dancers attended, who heightened the revel with the moft lafcivious fongs and the moft indecent attitudes. In the midft of this riot, one Valens, a buffoon, is faid to have climbed a tree; and being demanded what he faw, anfwered that he perceived a dreadful form coming from Oftia. What this fellow fpoke at random was actually at that time in preparation. It feems that fome time before there had been a quarrel between Meffalina and Narciffus, the emperor's firt freedman. This fubtle minifter therefore defired nothing more than an opportunity of ruining the emprefs, and he judged this to be a moft favourable occafion. He firit made the difcovery by means of two concubines who attended the emperor, who were inftructed to inform him of Meflalina's marriage as the news of the day, while Narcifis himfelf fepped in to confirm their information. Finding it operated upon the emperor's fears as he could wifh, he refolved to alarm him ftill more by a difcovery of all Meffalina's projects and attempts. He aggrava~ ted the danger, and urged the expediency of fpeedily punifhing the delinquents. Claudius, quite terrified at? fo unexpected a relation, fuppofed the enemy were aiready at his gates; and frequently interrupted his freedman, by akking if he was ftill matter of the em. pire. Being affured that he yet had it in his power to continue fo, he refolved to go and punifh the affront offered to his dignity without delay. Nothing could exceed the confternation of Meffalina and her thought:lefs companions, upon being informed that the emperor was coming to difturb their feftivity. Every one retired in the utmolt confufion. Silius was taken. Meffalina took fhelter in fome gardens which the had lately feized upon, heving expelled A faticis the true owner, and put him to death. From thence he fent Brittanicus, her only fon by the emperor, with Ociavie her daughter, to intercede for her, and implore his mercy. She foon after followed then herfeif; but Narciflus had fo fortified the emperor araint her ants, and contrived fuch methods of diverting lis attention from her defence, that the was obligel to return in defpair. Narcifus beirg thus far fuccelsful, led Clandias

Rome. -
to the houfe of the adulterer, there fhowing him the apartments adorned with the fpoils of his own palace; and then conducting him to the pretorian camp, revived his courage by giving him aflurances of the readinefs of the foldiers to defend him. Having thus artfully wrought upon his fears and refentment, the wretched Siifus was commanded to appear; who, making no defence, was infantly put to death in the emperor's prefence. Several others thared the fame fate; but Meffalina fill fattered herfelf with the hopes of pardon. She refolved to leave neither prayers nor tears unattempted to appeafe the emperor. She fometimes even gave a loofe to her refentment, and threatened her accufers with vengeance. Nor did the want ground for entertaining the molt favourable expectations. Claudius having returned from the execution of her paramour, and having allayed his refentment in a banquet, began to relent. He now therefore commanded his attendants to apprife that miferable creature, meaning Meflalina, of his refolution to bear her accufation the next day, and ordered her to be in readinefs with her defence. The permifion to defend herfelf would have been fatal to Narcifles; wherefore he rufhed out, and ordered the tribunes and centurions who were in readinels to execute her immediately by the emperor's command. Claudius was informed of her death in the midft of his banquet; but this infenfible idiot fhowed not the lealt appearance of emotion. He continued at table with his ufual tranquillity; and the day following, while he was fitting at dinner, he afked why Meffalina was abfent, as if he had totally forgotten her crimes and her punifhment.

Claudins being now a widower, declared publicly, that as he had hitherto been unfortunate in his marriages, he would remain fingle for the future, and that he would be contented to forfeit his life in cafe he broke his refolution. However, the refolutions of Claudius were but of fhort continuance. Having been accuflomed to live under the controul of women, his prefent freedom was become irkfome to him, and he was entirely unable to live without a director. His freedmen therefore perceiving his inclinations, refolved to procure him another wife; and, after fome deliberation 206 they fixed upon Agrippina, the daughter of his broThe empe- ther Germanicus. This woman was more practifed in sor marries vice than even the former emprefs. Her cruelties were Agrippina, more dangerous, as they were directed with greater caution: fhe had poifoned her former hufband, to be at liberty to attend the calls of ambition; and, perfectly acquainted with all the infirmities of Claudius, only made ufe of his power to advance her own. However, as the late declaration of Claudius feemed to be an obftacle to his marrying again, perfons were fuborned to move in the fenate, that he fhould be compelled to take a wiie, as a matter of great importance to the commonwealth; and fome more determined flatterers than the rell left the houfe, as with a thorough refolution, that inftant, to conltrain him. When this decree paffed in the fenate, Claudius had fcarce patience to contain himfelf a day before the celebration of his nuptials. However, fuch was the deteftation in which the people in general held thefe inceftuous matches, that though they were made lawful, yet only one of his tribunes, and one of his freedmen, followed his example.

Claudius having now raceived a new director, fub-
mitted with more implicit obedience than in any for. mer part of his reign. Agrippina's chief aims were to gain the fucceffion in favour of her own fon Nero, and to fet afide the claims of young Britannicus, fon to the emperor and Meflalina. For this purpofe the married Nero to the emperor's daughter Ostavia, a few days after her own marriage. Not long after this the urged the emperor to frengthen the fucceffion, in imitation of his predecefors, by making a new adoption; and caufed him to take in her fon Nero, in fome meafure to divide the fatigues of government. Her next care was to increale her fon's popularity, by giving him Seneca for a tutor. This excellent man, by bireh a Spaniard, had been banifhed by Claudius, upon the falfe teftimony of Meffalina, who had accufed him of adultery with Julia the emperor's niece. The prople loved and admired him for his genius, but fill more for his ftrio. morality; and a part of his reputation necefarily devolved to his pupil: This fubtle woman was not lefs affiduous in pretending the utmolt affection for Britannicus; whom, however, the refolved in a proper time to deftroy: bat her jealouty was not confined to this child only; fhe, fhortly atter her acceffion, procured. the dealins of feveral ladies who had been her rivals in the emperor's affections. She difplaced the captains of the guard, and appointed Burrhus to that command; a perfon of great military knowledge, and ftrongly attached to her interefts. From that time the took lefs paias to difguife her power, and frequently entered the Capitol in a chariot; a privilege which none before were allowed, except of the facerdotal order.

In the 12 th year of this monarch's reign, fhe perfuaded him to reftore liberty to the Rhodians, of which he had deprived them tome years before; and to remit the taxes of the city Ilium; as haxing been the progenitors of Rome. Hor defign in this was to increafe the popularity of Nero, who pleaded the caufe of both, cities with great approbation. Thus did this ambitious woman take every ftep to aggrandize her fon, and was even contented to become hateful herfelf to the public, merely to increafe his popularity.

Such a very immoderate abufe of her power ferved at laft to awaken the emperor's fufpicions. Agrippina's imperious temper began to grow uinfupportable to him ; and he was heard to declare, when heated with wine, that it was his fate to fuffer the diforders of his wives, and to be their executioner. This expreffion funk deep on her mind, and engaged all her faculties to prevent the blow. Her firlt care was to remove Narciffus, whom the hated upon many accounts, but particularly for his attachment to Claudius. This minifter, for fome time, oppofed her defigns; but at length thought fit to retire, by a voluntary exile, into Campania. The unhappy emperor, thus expofed to all the machinations of his infidious confort, feemed entirely regardlefs of the dangers that threatened his deftruc. tion. His affection for Britannicus was perceived every day to increafe, which ferved allo to increafe the vigilanice and jealoufy of Agrippina. She now, therefore, refolved not to defer a crime which the had meditated a long while before; namely, that of poifoning her huband. She for fome time, however, debated with herfelf in what manner the thould adminifter the poifon; as fhe feared too ftrong a dofe would difcover her treachery, and one too weak might fail of its effect.

## ROM [4II] ROM

Rome.
297
By whom he is poi
foned.

At length fhe determined upon a poifon of fingular ef. ficacy to deftroy his intellects, and yet not fuddenly to terminate his life. As the had been long converfant in this horrid practice, fhe applied to a woman called Locufla, notorious for affiling on fuch occafions. The poifon was given to the emperor among mulhrooms, a difh he was particularly fond of. Shortly after having eaten, he dropped down infenfible; but this caufed no alarm, as it was ufual with him to fit eating till he had ftupified all his faculties, and was obliged to be carried off to his bed from the table. However, his conflitution feemed to overcome the effects of the potion, when Agrippina refolved to make fure of him: wherefore the directed a wretched phyfician, who was her creature, to thruft a poifoned feather down his throat, under pretence of making him vomit; and this difpatched him.

The reign of the emperor, feeble and impotent as he was, produced no great calamities in the Itate, fince his cruelties were chiefly levelled at thofe about his perfon. The lift of the inhabitants of Rome at this time amounted to fix millions eight hundred and fortyfour thoufand fouls; a number little inferior to all the people of England at this day. The general character of the times was that of corruption and luxury: but the military fpirit of Rome, though much relaxed from its former feverity, ftill continued to awe mankind ; and though during this reign, the empire might be juftly faid to be without a head, yet the terror of the Roman name alome kept the nations in obedience.

Claudius being deftroyed, Agrippina took every precaution to conceal his death from the public, until fhe had fettled her meafures for fecuring the fucceffion. A ftrong guard was placed at all the avenues of the palace, while the amufed the people with various reports; at one time giving out that he was fill alive; at another, that he was recovering. In the meanwhile, the made fure of the perfon of young Britannicus, under a pretence of affection for him. Like one overcome with the extremity of her griet, fhe held the child in her arms, calling him the dear image of his father, and thus preventing his efcape. She ufed the fame precautions with regard to his fiters, Octa. via and Antonia; and even ordered an eatertainment in the palace, as if to amufe the emperor At lat, when all things were adjufted, the palace-gates vierc thrown open, and Nero, accompanied by Burlas, prefect of the Protorian guards, iffued to receive the congratulations of che people and the army. The cohorts then attending, proclaimed him with the lodef acclamations, though not without making fome inquiries after Britannicus. He was camied in a chariot to the relt of the army; wherein having made a feech proper to the occafion, and promifing then a donation, in the manner of his predeceffors, he was dechared en:peror by the army, the fenate, and the perpie.

Nero's firlt care was, to fhow all pothbe refpet to the deceafed emperor, in order to cover tie guite of tis death. His obrequies were perfored wib a pomp equal to that of Auguitus: the young emperor pronounced his funeral oration, and he was canenized among the gods. The funcral oration, though focien by Nero, was drawn up by Seneca; and it was romarked, that this was the firlt time a Roman emporor need. ed the affiftance of anothen's eloguens.

Nero, though but 17 years of age, began ins ieign
Rome with the general approbation of mankind. As he cow. ed the empire to Agrippina, fo in the beginning he fubmitted to her directions with the moft implicit obedience. On her part, fhe feemed refolved on governing with her natural ferocity, and confidered her private animofities as the only rule to guide her in public jutice. Immediately after the death of Claudius, fhe caufed Silanus, the pro-conful of Afia, to be aifaffinated upon very flight fufpicions, and without ever acquainting the emperor with her defign. The next object of her refentment was Narcifus, the late emperor's favourite; a man equally notorious for the greatnefs of his wealth and the number of his crimes. He was obliged to put an end to his life by Agrippina's order, though Nero refufed his confent.

This bloody onfet would have been followed by His exce! many feverities of the fame nature, had not Seneca lent adniand Burrhus, the emperor's tutor and general, oppo- uiffation fed. Thefe worthy men, although they owred their for five rife to the emprefs, were above being the inftuments years. of her cruelty. They, therefore, combined together in an oppofition; and gaining the young emperor on their fide, furmed a plan of puwer, at once the moft merciful and wife. The beginning of this monarch's reign, while he continued to act by their counfels, las always been confidered as a model for fucceeding princes to govern by. The famous emperor Trijan ufed to fay, "That for the firft five years of this prince all other governments came fhort of his." In fact, the young monarch knew fo well how to conceal his innate depravity, that his nearef friends could fcarce perceive his virtues to be but affumed. He appeared juft, liberal, and humane. When a warrant for the execution of a criminal was brought to him to be figned, he was heard to cry out, with feeming concern, "Would to Heaven that I had never learned to write!" The fenate, upon a certain occafion, giving him their applaufe for the regularity and juftice of his adminiftration; he replied with fingular modefly, "That they flould defer their thanks till he had deferved them." His condefeention and affability were not lefs than his other virtues; fo that the Romans began to think, that the clemency of this punce would compenfate for the tyramy of his prodeceffors.

In the rean thene, Agrippina, who was excluded from any hare in govermmint, aliompted, by every pofftle method, to mumain ber dechining power. Perceiving that ier fon had haten in low wh a freedwoma, inmed ACe, and dicading the influence of a concubine, he tried every ate to prevent his growing pafion. Fuwever, in to corrupt a court, it was no diticuit matter for le comperor to fiad other ronfdents reacy to adfe him in his wihes. the gratif. cation of his pation, increfore, in this infance, only He preco.. five:: to increafe his hatred fou the smpref. Nor was mothe: it long beiore he gave cvicul marks of his difobe. dience, by diflacing Pallas her chief favoncite. It was upon this cecafion that fhe fift ferceived the total cecienfon of her authonity; which thew her into the mot ungovemable fury. In orde: to give terron to Ler rage, the prochaned that hritannicus, the real leir to the thrme, was fill living, aid in a conditi" to recuive his father's cmpire, which wis now nolleffed by an umper, Sle dmenencitogo ad de camp, and

## $\mathrm{R} O \mathrm{M} \quad\left[4^{\mathrm{I} 2}\right] \quad \mathrm{R} O M$

Rome. there expofe his bafenefs and her own, invoking all the furies to her affiftance. Thefe menaces ferved to alarm the fufpicions of Nero; who, though apparently

301 Poifons his brother. seror.
guided by his governors, yet had begun to give way to his natural depravity. He, therefore, determined upon the death of Britannicus, and contrived to have him poifoned at a public banquet. Agrippina, howcver, flill retained her natural ferocity : fhe took every opportunity of obliging and flattering the tribunes and centurions; fhe heaped up treafures with a rapacity beyond her natural avarice; all her actions feemed calculated to raife a faction, and make herfelf formidable to the emperor. WhereuponNero commanded her German guard to he taken from her, and obliged her to lodge out of the palace. He alfo forbade particular perfons to vifit her, and went bimfelf but rarely and ceremonioully to pay her his refpects. She now, therefore, began to find, that, with the emperor's favour, fhe had lont the aliduity of her friends. She was even accufed by Silana of confpiring againt her Son, and of defign. ing to marry Plautius, a perfon defcended from Att guftus, and of making him emperor. A fhort time after, Pallas, her favourite, together with Burrhus, were arraigned for a fimilar offence, and intending to fet up Cornelius Sylla. Thefe informations being proved void of any foundation, the informers were banifhed; a punifhment which was confidered as very inadequate to the greatnefs of the offence.

As Nero increafed in years, his crimes feemed to increafe in equal proportion. He now began to find a pleafure in running about the city by night, difguifed like a lave. In this vile habit he entered taverns and brothels, attended by the lewd miniters of his pleafures, attempting the lives of fuch as oppofed him, and frequently endangering lis own. In imitation of the emperor's example, numbers of profigate young men infefted the freets likewife; fo that every night the city was filled with tumult and diforder. However, the people bore all thefe levities, which they afcribed to the emperor's youth, with patience, having occafion every day to experience his liberality, and having alfo been gratified by the abolition of many of their taxes. The provinces alfo were no way affected by thefe riots; for except difturbances on the fide of the Parthians, which were foon fuppreffed, they enjoyed the mott perfect tranquillity.

But thofe fenfualities, which, for the firf four years of his reign, produced but few diforders, in the fifth became alarming. He firf began to tranfgrefs the bounds of decency, by publicly abandoning Octavia, his prefent wife, and then by taking Poppea, the wife of his favourite Otho, a woman more celebrated for her beauty than her virtues. This was another grating circumftance to Agrippina, who vainly ufed all her intereft to difgrace Poppea, and reinftate herfelf in her fon's loff favour. Hiftorians affert, that the even offered to fatisfy his palion herfelf, by an inceftuous compliance; and that, had not Seneca interpofed the fon would have joined in the mother's crime. This however, does not feem probable, fince we find Poppea victorious, foon after, in the contention of interefts; and at lalt impelling Nero to parricide, to fatisfy her revenge. She began her arts by urging him to divorce his prefent wife, and marry herfelf: fhe reproached him as a pupil, who wanted not onlyipower ovet others, but
liberty to direct himfelf. She infinuated the dangerous defigns of Agrippina; and, by degrees accultomed his mind to reflect on parricide without hormor. His cruelties againft his mother began rather by various circumftances of petty malice than by any downright injury. He encouraged feveral perfons to teafe her with litigious fuits; and employed fome of the meannelt of the people to fing fatirical fongs againt her, under her windows: but, at latt, finding thefe ineffectual in breaking her fpirit, he refolved on putting her to death. His firt attempt was by poifon ; but this, though twice repeated, proved ineffectual, as fhe had fortified her conftitution againt it by antidotes. This failing, a fhip was contrived in fo artificial a manner as to fall to pieces in the water ; on board of which fhe was invited to fail to the coalts of Calabria. However, this plot was as ineffectual as the former: the mariners, not being apprifed of the fecret, difurbed each other's operations; fo that the fhip not finking as readily as was expected, Agrippina found means to continue fwimming, till the was taken up by fome trading veffels paffing that way. Nero finding all his machinations were difcovered, refolved to throw off the mank, and put her openly to death, without further delay. He therefore caufed a report to be fpread, that the had confpired againft him, and that a poniard was dropped at his feet by one who pretended a command from Agrippina to affaflinate him. In confequence of this, he applied to his governors Seneca and Burrhus, for their advice how to act, and their affiftance in ridding him of his fears. Things were now come to fuch a crifis, that no middle way could be taken; and either Nero or Agrippina was to fall. Seneca, therefore, kept a profound filence; while Burrhus, with more refolution, refufed to be perpetrator of fo great a crime; alleging, that the army was entirely devoted to all the defcendants of Cæfar, and would never be brought to imbrue their hands in the blood of any of his family. In this embarraffment, Anicetus, the contriver of the fhip abovementioned, offered his fervices; which Nero accepted with the greateft joy, crying out, "That then was the firft moment he ever found himfelf an emperor." This freed. man, therefore, taking with him a body of foldiers, furrounded the houfe of Agrippina, and then forced open the doors. The executioners having difpatched her with feveral wounds, left her dead on the couch, and went to inform Nero of what they had done. Some hiftorians fay, that Nero came immediately to view the body; that he continued to gaze upon it with pleafure, and ended his horrid furvey, by cooly obferving, that he never thought his mother had been fo handfome. However this be, he vindicated his conduct next day to the fenate; who not only exculed, but applauded his impiety.

All the bounds of virtue being thus broken down, Folly and Nero now gave a loofe to his appetites, that were not meannefs only fordid but inhuman. There feemed an odd con- of Ners. traft in his difpofition; for while he practifed cruelties which were fufficient to make the mind thudder with horror, he was fond of thofe amufing arts that foften and refine the heart. He was particularly addicted, eveu from childhood, to mufic, and not totally ignorant of poetry. But chariot-driving was his favourite purfuit. He never miffed the circus when charict-races were to be exhibited there; appearing at firf privately, and

## 303

caufes his.
nother to be murdered.

Rome. $\underbrace{\text { Rome. }}$

Rome. foonafter pubicly; till atlatt, his paffion increafing by indulgence, he was not content with being merely a fpectator, but refolved to become one of the principal performers. His governors, however, did all in their power to reflrain this ferverted ambition; but finding him refolute, they inclofed a fpace of ground in the valley of the Vatican, where he firf exlibited only to fome chofen fpectators, but thorly after invited the whole town. The praifes of his flattering fubjects onJy fimulated him fill more to thefe unbecoming purfuits: fo that he now refolved to affume a new character, and to appear as a finger upor the ftage.

His paftion frit mufic, as was obferved, was no lefs natural to him than the former; but as it was lefs manly , fo he endeavoured to defend it by the example of fome of the moft celebrated men, who practied it with the fame fondnefs. He bad been inftructed in the principles of this art from his childhood; and upon his advancement $t$, the empire, he had put himfelf under the moft celebrated mafters. He patiently fubmitted to their infructions, and ufed all thofe methods which fingers practife, either to mend the voice, or improve its volubility. Yet, notwithftanding all his affiduity, his voice was but a wretched one, being both feeble and unpleafant. However, he was refolved to produce it to the public, fuch as it was; for fattery, he knew, would fupply every deficiency. His firft public appearance was at games of his own inflitution, called juveniles; where he advanced upon the ftage, tuning his inftrument to his voice with great appearance of fkill. A group of tribunes and centurions attended behind him; when his old governor Burrhus ftood by his hopeful pupil, with indignation in his countenance, and praifes on his lips.

He was defirous alfo of becoming a poet: but he was unwilling to undergo the pain of fudy, which a proficiency in that art requires; he was defirous of being a poet ready made. For this purpofe, he got togetherfeveral perfons, who were confidered as great wits at court, though but very little known as fuch to the public. Thefe attended him with verfes which they had compofed at home, or which they blabbed out extemporaneoufly; and the whole of their compofitions being tacked together, by his direction, was called a poom. Nor was he without his philofophers alfo; he touk a pleafure in hearing their debates after fupper, but he heard them merely for his amufement.
Furnifhed with fuch talents as thefe for giving pleafure, he was refolved to make the tour of his empire, and give the moft public difplay of his abilities wherever he came. The place of his firf exhibition, upon leaving Rome, was Naples. The crowds there were fo great, and the curiofity of the people fo earneft in hearing him, that they did not perceive an earthquake that happened while he was finging. His defire of gaining the fuperiority over the other actors was truly ridiculous: he made intereft with his judges, reviled his competiters, formed private factions to fupport him, all in imitation of thofe who got their livelihood up $n$ the ftage. While he continued to perform, no man was $p=r$ mitted to depart from the theatre, upon any pretence whatfoever. Some were fo fatigued with hearing him, that they leaped privately from the walls, or pretended to fall into fainting fits, in order to be
carricd out. Nay, it is faid, that feveral women were a-me. delivered in the theatre. Soldiers were placed in feveral parts to obferve the looks and geftures of the fpectators, either to direct them where to point their applaufe, cr reftrain their difpleafure. An old fenator, named $\nu_{5}^{r} f$ fafian, afterwards emperor, happening to f.ll afleep upon one of thefe occafions, very narrowly efc.nped with his life.
After being fatigued with the praifes of his countrymen, Nero refolved upon going over into Grcees, to receive new theatrical honours. The occafion wits this. The cities of Greece had made a law to fend him the crowns from all the games; and deputies were accordingly difpatched with this (to him) important embaffy. As he one day entertained them at his talle in the moft fumptu us manner, and converfed with them with the utmofl familiarity, they intreated to hear him fing. Upon his complying, the artful Greeks teftified all the marks of ecflafy and rapture. Applaufis io warm were peculiarly pleafing to Nero: he could not refrain from crying out, That the Greeks alone were worthy to hear him; and accordingly prepared without delay to go into Greece, where he fpent the whole year enfuing. In this journey, his retinue refembled an army in number; but it was only compofed of fingers, dancers, taylors, and other attendants upon the theatre. He paffed over all Greece, and exhibited at all their games, which he ordered to be celebrated in one year. At the Olympic games he refolved to fhow the people fomething extraordinary; wherefore, he drove a chariot with ro horfes; but being unable to fultain the vio. lence of the motion, he was driven from his feat The fpectators, however, gave their unanimous applaufe, and he was crowned as conqueror. In this manner he obtained the prize at the Ithmian, Pythian, and Nemean games. The Greeks were not fparing of their crowns; he obtained 1800 of them. An unfortunate finger happened to oppofe him on one of thefe occafions, and exerted all the powers of lis art, which, it appears, were prodigious. But he feems to have been a better finger than a politician; for Nero ordered him to be killed on the fpot. Upon his return frorn Greece, be entered Naples, through a breach in the walls of the city, as was cuftomary with thofe who were conquerors in the Olympic games. But all the fplendor of his return was referved for his entry into Rome. There he appeared feated in the chariot of Augultus, dreffed in robes of purple, and crowned with wild olive, which was the Olympic garland. He bore in his hand the Pythian crown, and had 1100 more carried before him.Befide him fat one Diodorus, a mufician; and behind him followed a band of fingers, as numerous as a legion, who fung in honour of his vitories. The fenate, the knights, and the people, attended this puerile page. ant, filling the air with their acclamations. The whole city was illuminated, every freet fmoked with incenfe; wherever he p:ffed, vittims were flain; the pavement was ftrewed with faffron, while garlands of flowers, ribbons, fowls, and palties, (for fo we are told), were flowered down upon him from the windows as he paffed along. So many honours only inflamed his defires of acquiring new; he at laft beeran to take leffons in wrefling ; willing to imitate Hercules in ftrength, as he bad rivalled A $\mathrm{A}_{\text {ollo }}$ in acivity. He alfo caufed a

## R O M

lion of palteboard to be made with great art, againft which he undauntedly appeared in the theatre, and ftruck it down with a blow of his club.

But his cruelties even outdid all his other extravagancies, a complete lift of which would exceed the limits of the prefent article. He was often heard to obferve, that he had rather be hated than loved. When one happened to fay in his prefence, That the world might be burned when he was dead: "Nay," replied Nero, " let it be burnt while I am alive." In fict, a great part of the city of Rome was confumed by fire
fhortly after. This remarkable conflagration took place in the IIth year of Nero's reign. The fire began ationg certain fhops, in which were kept fuch goods as were proper to feed it ; and fpread every way with fuch amazing rapidity, that its havock was felt in diftant ftreets, before any meafures to ftop it could be tried. Befides an infiaite number of common houfes, all the noble monuments of antiquity, all the fately palaces, temples, porticoes, with goods, riches, furniture, and merchandize, to an immenfe value, were devoured by the flames, which raged firf in the low regions of the city, and then mounted to the higher with fuch terrible violence and impetaofity, as to fruftrate all relief. The Thrieks of the women, the various efforts of fome endeavouring to fave the young and tender, of others attempting to affift the aged and infirm, and the hurry of fuch as frove only to provide for themfelves, occationed a mutual interruption and univerfal confufion. Many, while they chiefly regarded the danger that purfued them from behind, found themfelves fuddenly involved in the flames before and on every fide. If they efcaped into the quarters adjoining, or into the parts quite remote, there too they met with the devouring flames. At laft, not knowing whither to fly, nor where to feek fanctuary, they abandoned the city, and repaired to the open fields. Some, out of defpair for the lofs of their whole fubtance, others, through tendernefs for their children and relations, whom they had not been able to fnatch from the flames, fuffered themfelves to perifh in them, though they might eafily have found means to efcape. No man dared to ftop the progrefs of the fire, there being many who had no other bufinefs but to prevent with repeated menaces all attempts of that nature; nay, fome were, in the face of the public, feen to throw lighted fire brands into the houfes, loudly declaring that they were authorifed fo to do; but whether this was only a device to plunder more freely, or in reality they had fach orders, was never certainly known.

Nero, who was then at Antiam, did not offer to reara to the city, till he heard that the flames were advancing to his palace, which, after his arrival, was, in fpite of all oppofition, burnt down to the ground, with all the houfes adjoining to it. However, Nero, affecting compafion for the multitude, thus vagabond and bereft of their dvellings, laid open the field of Mars, and all the great edifices erected there by Agrippa, and even his own gardens. He likewife caufed tabernacles to be reared in hatte for the reception of the forlorn populace; from Oftia, too, and the neighbour. ing cities, were brought, by lis orders, all forts of furniture and neceffaries, and the price of corn was conflderably leffened. But thefe bounties, however generous ani popular, were beftowed in vain, becaufe a report is fpread abroad, that, during the time of this gene-
ral conflagration, he mounted his domeftic ftage, and fung the deftruction of Troy, comparing the prefent defolation to the celebrated calamities of antiquity. At length, on the fixth day, the fury of the flames was ftopped at the foot of mount Efquiline, by levelling with the ground an infinite number of buildings; fo that the fire found nothing to encounter but the open fields and empty air.

But fcarce had the late alarm ceafed, when the fire broke out anew with frefh rage, but in places more wide and fpacious; whence fewer perfons were deftroyed, but more temples and public porticoes were overthrown. As this fecond conflagration broke out in certain buildings belonging to Tigellinus, they were both generally afcribed to Nero; and it was conjectured, that, by deftroying the old city, he aimed at the glory of building a new one, and calling it by his name. Of the fourteen quarters into which Rome was divided, four remained entire, three were laid in alkes, and, in the feven others, there remained here and there a few houfes, miferably fhattered, and half confumed. Among the many ancient and ftately edifices, which the rage of the flames utterly confumed, Tacitus reckons the temple dedicated by Servius Tullius to the Moon; the temple and great altar confecrated by Evander to Hercules; the chapel vowed by Romulus to Jupiter Stator ; the court of Numa, with the temple of Vefta, and in it the tutelar gods peculiar to the Romans. In the fame fate were involved the ineftimable treafures acquired by fo many victories, the wonderful works of the beft painters and fculptors of Greece, and, what is ftill more to be lamented, the ancient writings of celebrated authors, till then preferved perfectly entire. It was obferved, that the fire began the fame day on which the Gauls, having formerly taken the city, burnt it to the ground.

Upon the ruins of the demolifhed city, Nero found. Nero's goled a palace, which he called his golden boufe; though den palace. it was not fo much admired on account of an immenfe profufion of gold, precious ftones, and other ineftimable ornaments, as for its valt extent, containing fpacious fields, large wilderneffes, artificial lakes, thick woods, orchards, vineyards, hills, groves, \&c. The entrance of this fately edifice was wide enough to re: ceive a coloffus, reprefenting Nero, 120 feet high : the galleries, which confifted of three rows of tall pillars, were each a full mile in length; the lakes were encompaffed with magnificent buildings, in the manner of cities, and the woods ftocked with all manner of wild beafts. The houfe itfelf was tiled with gold: the walls were covered with the fame metal, and richly adorned with precious ftones and mother-of-pearl, which in thofe days was valued above gold: the timber-work and ceilings of the rooms were inlaid with gold and ivory: the roof of one of the banqueting rooms refembled the firmament both in its figure and motion, turning inceffant. ly about night and day, and fhowering all forts of fweet waters. When this magnificent ftructure was finifhed, Nero approved of it only fo far as to fay, that at length be began to lodge like a man. Pliny tells us that this palace extended quite round the city. Nero, it feems, did not finifh it; for the firt order Otho figned was, as we read in Suetonius, for fifty millions of fefterces to be employed in perfecting the golden palace which Nero had begun.

Rome.
$3 * 7$ Undertakes to cut a canal
from Aycrnus to Tiber.

308
Romé rebuilt.

Tha projectors of the plan were Severus and Celer two bold and enterprifing men, who foon after put the emperor upon a fill more expenfive and arduous undertaking, namely, that of cutting a canal through herd rocks and fteep mountains, from the lales Arernus to the mouth of the Tiber, 160 miles in length, and of fuch breadth that two galleys of five ranks of oars might eafily pafs abreaft. His view in this was to cpen a communication between Rome and Campania, free from the troubles and dangers of the fea; for, this very year, a great number of veffels laden with corn were fhipwrecked at Mifenum, the pilots choofing rather to venture out in a violent form, than not to arrive at the time they wore expected by Nero. For the executing of this great underaking, the emperor ordered the prifoners from all parts to be tranfported into Italy; and fuch as were convicted, whatever their crimes were, to be condemned only to his vorls. Nero, who undertook nothing with more ardour and readinefs than what was deemed impoffible, expended incredible fums in this rafh undertaking, and exerted all his might to cut through the mountains adjoining to the lake Avernus; but, not being able to remove by art the obftacles of nature, he was in the end obliged to drop the enterprife. The ground that was not taken up by the foundations of Nero's own palace, he affigned for houfes, which were not placed, as after the burning of the city by the Gauls, at random, and without order ; but the freets were laid out regularly, fpacious, and fraight; the edifices reftrained to a rertain height, perhaps of 70 feet, according to the plan of Augultus; the courts were widened; and to all the great houfes which ftood by themfelves, and were called ifes, large porticoes were added, which Nero engaged to raile at his own expence, and to deliver to each proprietor the fquares about them clear from all rubbifh. He likewife pro. mifed rewards according to every man's rank and fubftance; and fixed a day for the performance of his promife, on condition that againft that day their feveral houfes and palaces were finithed. He moreover made the following wife regulations to obviate fuch a dreadful calamity for the future ; to wit, That the new buildings fhould be raifed to a certain height without timber; that they fhould be arched with fone fiom the quarries of Gabii and Alba, which were proof againft fire; that over the common fprings, which were diverted by private men for their own ufes, overfeers fhould be placed to prevent that abufe; that every citizen fhould have ready in his houfe fome machine proper to extinguifh the fire ; that no wall fhould be common to two houfes, but every houfe be inclofed within its own peculiar valls, \&e. Thus tise city in a fhort time refe out of its whes with new luftre, and more beautiful than cwer. However, fome believed, that the ancient form was more conducing to health, the rays of the fun being hardly felt on account of the parrownefs of the ftreeis, and the height of the buildings, whereas now there was no fhelter againf the forching heat. We are toid, that Nero celigned to extend the walls to Oftia, and to bring from thence by a canal the fea into the city.

The emperor ufed every art to throw the odium of this conflagration upon the Chriftians, who were at that time gaining ground in Rome. Nothing could
be more dreadful than the perfecution mited asamat them upon this falle accufation, of which an account is wer. iven upons 309 given under the article Ecclefiafical His roxr. Hitherto, Tre corhowever, the citizens of Rome feemed comparatively firacy of exempted from his cruelties, which chiefly fill upon lifo. ftrangers, and his neareft connections; but a confpiracy formed againft him by Pifo, a man of great power and integrity, which was prenaturely difcovered, opened a new train of fufpicions that deftroyed many of the pris:cipal families in Rome. This confpiracy, in which fe. veral of the chief men of the city were concerned, was firt difcovered by the indifcreet zeal of a woman name: Epicharis, who, by fome means now unknown, had been let into the plot, which fhe revealed to Volufius, a tirbune, in order to prevail upon him to be an accomplice. Volulius, inftead of coming into her defign, went and difcovered what he liad learned to Nero, who immediately put Epicharis in prifon. Soon after, a freedman belonging to $S$ crenius, one of the accomplices, made a farther difoovery. The confpirators were examined apart; and as their teftimonies differed, they were put to the torture. Natalis was the firft who made a confeffion of his own guilt and that of many others. Sc.:nius gave a lift of the confpirators fill more ample. Lucan, the poer, was amongit the number; and he, like the reit, in order to fave himfelf, ftill farther enlarged the catalogue, naming, among others, Attilia, his own mother. Epicharis was now, therefore, again called upon and put to the torture; but her fortitude was proof againft all the tyrant's cruelty; neither fcourging nor burning, nor all the malicious methods ufed by the executioners, could extort the fmalleft confelfion. She was therefore remanded to prifon, with orders to have her tortures renewed the day following. In the meantime, the found an opportunity of itrangling herfelf with her handkerchief, by hanging it againft the back of her chair. On the difcoveries already made, Pifo, Lateranus, Fennius Rufus, Subrius Flavius, Sulpitius Afper, Veftinus the conful, and numberlefs others, were all executed without mercy. But the two moft remarkable perfonages who fell on this occafion were Seneca the philofopher, and Lucan the poet, who was his nephew. It is not certainly known whether Seneca was really concerned in this confpir.acy or not.This great man had fur fome time perceived the outrageous conduct of his pupil ; and, finding himfelf incapable of controuling his favage difpefition, had retired from court into folitude and privacy. However, his retreat did not now protect him; for Nero, either having real teftimony againt him, or elfe hating him for his virtues, fent a tribune to inform him that he was fufpected as an accomplice, and foon after fent him an order to put himfelf to death, with which he com. plied.

In this manner was the whole city filled with flaughter, and frightful inftances of treachery. No malier was fecure from the vengeance of his flaves, nor even parents from the bafer attempts of their children. Not only throughout Rome, but the whole country round, bodies of icidiers were feen in purfuit of the fufpected and the guilty. Whole crowds of wretches loaded with chains were led every day to the gates of the palace, to wait their fentence from the tyrant's own lips. He always prefided at the torture in perfon, attended by Ti-
gellinus,

## ROM

* See Eng
gellinus, captain of the guard, who, from being the principal miniter and favourite.
Nor were the Roman provinces in a better fituation than the capital city. The example of the tyrant feemed to influence his governors, who gave inflances not only of their rapacity, but of their cruelty, in every part of the empire. In the feventh year of his reign, the Britons revolted, under the conduct of their queen among them, that they loft not only all hopes, but

A war alfo was carried on againft the Parthians for the greateft part of this reign, conducted by Corbulo ; who, after many fucceffes, had difpoffeffed Tiridates, and fettled Tigranes in Armenia in his room. Tiridates, however, was foon after reftored by an invafion of the Parthians into that country; but being once more oppofed by Corbulo, the Romans and Parthians came to an agreement, that Tiridates fhould $\mathbf{c}$ ntinue to govern Armenia, upon condition that he fhould lay down his crown at the feet of the emperor's ftatue, and receive it as coming from him ; all which he fhortly afdefired to have repeated to his perfon; wherefore by letters and promifes he invited Tiridates to Rome, granting him the molt magnificent fupplies for his journey. Nero attended his arrival with very fumptuous preparations. He received him feated on a throne, accompanied by the fenate ftanding round him, and the whole army drawn out with all imaginable fplendor.Tiridates afcended the throne with great reverence ; and approaching the emperor fell down at his feet, and in the moft abject terms acknowledged himfelf his flave. Nero raifed him up, telling him with equal arrogance, that he did well, and that by his fubmiffion he had gained a kingdom which his anceftors could never acquire by their arms. He then placed the crown on his head, and, after the moft coftly ceremonies and entertainments, he was fent back to Arme.ia, with incredible fums of

In the 12 th year of this emperor's reign, the Jews alfo revolted, having been feverely oppreffed by the Roman governor. It is faid that Florus, in particular, was arrived at that degree of tyranny, that by public proclaration he gave permiffion to plander the country, provided he received half the fpoil. Thefe oppreffions drew fuch a train of calamities after them, that the fufferings of all other nations were flight in comparifon to what this devoted people afterwards endured, as is related under the article Jews. In the mean time, Nero proceeded in his cruelties at Rome with unabated

The valiant Corbulo, who had gained fo many victosies over the Parthians, could not efcape his fury. Nor did the emprefs Poppxa herfelf efcape; whom, in a fit of anger, he kicked when fhe was preguant, by which the mifcarried and died. At latt the Romans began to grow weary of fuch a monfer, and there ap-
peared a general revolution in all the provinces.
The firit appeared in Gaul, under Julius Vindex, who commanded the legions there, and publicly proteft-, ed againt the tyrannical government of Nero. He ap-: eared to have no other motive for this revolt than thiat

Boadiaea.*; but were at laft fo completely defeated, that ever after, during the continuance of the Romans even all defire of freedom. ter performed. A ceremony, however, which Nero money to defray the expences of his return. feverity.
of freeing the world from an opprefor ; for when it was told him that Nero had fet a reward upon his head of $10,000,000$ of fefterces, he made this gallant anfwer, "Whoever brings me Nero's head, thall, if he pleafes, have mine." But ftill more to fhow that he was not acfuated by motives of private ambition, he proclaimed Sergius Galba emperor, and invited him to join in the revolt. Galba, who was at that time goveruor of Spain,was equally remarkable for his wiftom, in peace and his courage in war. But as all talents under corrupt princes are dangerous, he for fome years, had feemed willing to court obfcurity, giving himfelf up to an inactive life, and avoiding all opportunities of fignalizing his valour. He now therefore, either through the caution attending old age, or from a total want of ambition, appeared little inclined to join with Vindex, and continued for fome time to deliberate with his friends on the part he fhould take.
In the mean time, Nero, who had been apprifed of the proceedings againft him in Gaul, appeared totally regardlefs of the danger, privately fattering himelf that the fuppreffion of this revolt would give him an opportunity of fref confifcations. But the actual revolt of Galba, the new of which arrived foon after, affected him in a very different manner. The reputation of that And of general was fuch, that from the moment he declared Gabba.: againt him, Nero confidered himfelf as undone. He received the account as he was at fupper ; and inftantly, Atruck with terror, overturned the table with his foot, breaking two cryftal vafes of immense value. He then fell into a fwoon; from which when he recovered he tore his clothes, and ftruck his head, crying out, " that he was utterly undone.". He then began to meditate flaughters more extenfive than he yet had committed. He refolved to maflacre all the governors, of provinces, to deftroy all exiles, and to murder all the Gauls in Rome, as a punifhment for the treachery of their countrymen. In fhort, in the wildnefs of his rage, he thought of poifoning the whole fenate, of burning the city, and turning the lions kept for the purpofes of the theatre out upon the people. Thefe defigns being impracticable, he refolved at laft to face the danger in perfon. But his very preparations ferved to mark the infatuation of his mind. His principal care was, to provide waggons for the convenient carriage of his mu-fical inftruments; and to drefs out his concubipes like Amazons, with whom he intended to face the enemy. He alfo made a refolution, that if be came off with fafety and empire, he would appear again upon the theatre with the lute, and would equip himfelf as a panto mime.

While Nero was thus frivoloully employed, the revolt became general. Not only the armies in Spain and Gaul, but alfo the legions in Germany, Afica, and Lufitania, declared againft him. Virginius Rufus alone, who commanded an army on the Upper Rhine, for a while continued in fufpenfe; during which his forces, without his permiffon, falling upon the Gauls, routed them with great flaughter, and Vindex flew himfelf. But this ill fuccefs no way advanced the interefts of Nero; he was fó detefted by the whole empire, that he could find none of the armies faithful to him, however they might difagree with each other. He therefore called for Locuitd to furnifh him with poifon; and, thus prepared for the worlt, he retired to the Servilian gar-

Rome.

## $\underbrace{(n)}$

dens, with a refolution of flying into Egypt. He ac-
cordingly difpatched the freedmen, in which he had the moft confidence, to prepare a fleet at Oftia; and in the meanwhile founded, in perfon, the tribunes and centurions of the guard, to know if they were willing to fhare his fortunes. But they all excufed themfelves, under divers pretexts. One of them had the boldnefs to anfwer him by a part of a line from Virgil: Ufque adeone miferum eft mori? "Is death then fuch a mistortune?" Thus deftitute of every refource, all the expedients that cowardice, revenge, or terror could produce, took place in his mind by turns. He at one time refolved to take refuge among the Parthians; at another, to deliver him. felf up to the mercy of the infurgents: one while, he determined to mount the roltrum, to alk pardon for what was pait, and to conclude with promifes of amendment for the future. With thefe gloomy deliberations he went to bed ; but waking about midnight, he was furprifed to find his guards had left him. The pretorian foldiers, in fact, having been corrupted by their commander, had retired to their camp, and proclaimed Galba emperor. Nero immediately fent for his friends to deliberate upon his prefent exigence; but his friends alfo forfook him. He went in perion from houfe to * houfe; but all the doors were fhut againt him, and none were found to anfwer his inquiries. While he was purfuing this inquiry, his very domettics followed the general defection ; and having plundered his apartment, efcaped different ways. Being now reduced to defperation, he defired that one of his favourite gladiators might come and difpatch him; but even in this requelt there was none found to obey. "Alas! (cried he) have I neither friend nor enemy?" And then running defperately forth, he feemed refolved to plunge headlong into the Tiber. But juft then his courage beginning to fail him, he made a fudden ftop, as if willing to recol. lect his reafon; and anked for fome fecret place, where he might re-affume his courage, and meet death with becoming fortitude. In this diflrefs, Phaon, one of his freedmen, offered him his country-houfe, at about four miles diftant, where he might for fome time remain concealed. Nero accepted his offer; and, halfdrefled as he was, with his head covered, and hiding his face with an handkerchief, he mounted on horfeback, attended by four of his domeltics, of whom the wretch. ed Sporus was one. His journey, though quite fhort, was crowded with adventures. Round him he heard nothing but confufed noifes from the camp, and the cries of the foldiers, imprecating a thoufand evils upon his head. A paffenger, meeting him on the way, cried, "There go men in purfuit of Nero." Another alked him, if there was any news of Nero in the city? His horfe taking fright at a dead body that lay near the road, he dropped his handkerchief; and a foldier that was near, addreffed him by name. He now therefore quitted his borfe, and forfaking the highway, entered a thicket that led towards the back part of Phaon's houfe, through which he crept, making the beft of his way among the reeds and brambles, with which the place was overgrown. When he was arrived at the back part of the houfe, white he was waiting till there fhould be a breach made in the wall, he took up fome water in the hollow of his hands from a pool to drink; faying, "To this liquor is Nero reduced." When the hole was made large enough to admit him, he crept in upon Voz. XVI.
all-fours, and took a fhort repofe upon a wretched pal. let, that had been prepared for his reception. Being prefled by hunger, he demanded fomewhat to eat: they brought him a piece of brown bread, which he refufed; but he drank a little water. During this interval, the fenate finding the protorian guards had taken part with Galba, declared him emperor, and condemned Nero to die more majorum; that is, " according to the igour of the ancient laws." Thefe dreadful tidings were quickly brought by one of Phaon's flaves from the city, while Nero yet continued lingering between his hopes and his fears. When he was told of the refolution of the fenate againf him, he afked the meffenger what he meant by being punifhed "according to the rigour of the ancient laws?" To this he was anfwered, that the criminal was to be ftripped naked, his head was to be fixed in a pillory, and in that pofture he was to be fcourged to death. Nero was fo terrified at this, that he feized two poniards which he had brought with him, and examining their points, returned them to their fheaths, faying, that the fatal moment was not yet arrived. However, he had little time to fpare; for the foldiers who had been fent in purfuit of him were juft then approaching the houfe : wherefore hearing the found of the horfe's feet, he fet a dagger to his throat, with which, by the affitance of Epaphroditus, his freedman and fecretary, he gave himfelf a mortal wound. He was not quite dead when one of the cen. His death turions entering the room, and pretending he came to his relief, attempted to fop the blood with his cloak But Nero, regarding him with a ftern countenance, faid, "It is now too late. Is this your fidelity?"Upon which, with his eyes fixed, and frightfully flaring, he expired, in the 32 d year of his age, and the 14 th of his reign.

Galba was 72 years old when he was declared em- Uneafinefs peror, and was then in Spain with his legions. How of Gulna int ever, he foon found that his being raifed to the throne the befinwas but an inlet to new difquietudes. His firl embar- ning of his raffment arofe from a diforder in his own army; for upon his approaching the camp, one of the wings of horfe repenting of their choice, prepared to revolt, and he found it no eafy matter to reconcile them to their duty. He alfo narrowly efcaped affaffination from fome flaves, who were prefented to him by one of Nero's freedmen with that intent. The death of Vindex alfo ferved to add not a little to his difquietudes; fo that, upon his very entrance into the empire, he had fome thoughts of putting an end to his own life. But hearing from Rome that Nero was dead, and the empire transferred to him, he immediately affumed the title and enfigns of command. In his journey towards Rome he was met by Rufus Virginius, who, finding the fenate had decreed him the government, came to yield him obedience. This general had more than once rcfufed the empire himielf, which was offered him by his foldiers ; alleging, that the fenate alone had the difpofal of it, and from them only he would accept tice honour.

Galba having been brought to the empire by mears Faultsin ${ }^{317}$ of his army, was at the fame time willing to fupprefo his ad in :their power to commit any future diturbance. His firit wiftration. approach to Rome was attended witt, one of thoie rigorous flrokes of juftice which orght ratier to be de. nominated cruelty than any thing elfe. A body sima$3 \mathbf{G}$ riners,

R O M
Rome. $\xrightarrow{\sim}$ riners, whom Nero had taken from the oar and enlifted among the legions, went to meet Galba, three miles from the city, and with loud importunities demanded a confirmation of what his predeceffor had done in their favour. Galba, who was rigidly attached to the ancient difcipline, deferred their requeft to another time. But they, confidering this delay as equivalent to an abfolute denial, infifted in a very difrefpectful manner ; and fome of them even had recourfe to arms: whereupon Galba ordered a body of horfe attending him to ride in among them, and thus killed 7000 of them ; bue not content with this punifhment, he afterwards ordered them to be decimated. Their infolence demanded correction; but fuch extenfive punifhments deviated into cruelty. His next ftep to curb the infolence of the foldiers, was his difcharging the German cohort, which had been eftablithed by the former emperors as a guard to their perfons. Thofe he fent home to their own country unrewarded, pretending they were difaffected to his perfon. He feemed to have two other objects alfo in view ; namely, to punifh thofe vices which had come to an enormous height in the laft reign, with the ftrictelt feverity; and to replenifh the exchequer, which had been quite drained by the prodigality of his predeceffors. But thefe attempts only brought on him the imputation of feverity and avarice; for the fate was too much corrupted to admit of fuch an immediate tranfition from vice to virtue. The people had long been maintained in floth and luxury by the prodigality of the former emperors, and could not think of being obliged to feek for new means of fubfiftence, and to retrench their fuperfluities. They began, therefore, to fatirize the old man, and turn the fimplicity of his manners into ridicule. Among the marks of avarice recorded of him, he is faid to have groaned upon having an expenfive foup terved up to his table; he is faid to have prefented to his Iteward, for his fidelity, a plate of beans ; a famous player upon the flute, named Canus, having greatly delighted him, it is reported, that he drew out his purfe, and gave him five-pence, telling him, that it was private and not public money. By fuch ill-judged frugalities, at fuch a time, Galba began to lofe his popularity; and he, who before his acceffion was efteemed by all, being become emperor, was confidered with ridicule and contempt. But there are fome circumfances alleged againft him, lefs equivocal than thofe trifting ones already mentioned. Shortly after his coming to Rome, the people were prefented with a moft grateful fpectacle, which was that of Loculta, Elius, Policletus, Petronius, and Petinus, all the bloody minifters of Nero's cruelty, drawn in fetters through the city, and publicly executed. But Tigellinus, who had been more aftive than all the reft, was not there. The crafty villain had taken care for his own fafety, by the largenefs of his bribes; and thrugh the people cried out for vengeance againft him at the theatre and at the circus, yet the emperor granted him his life and pardon. Helotus the eunuch, alfo, who had been the inltrument of poifoning Claudius, efcaped, and owed his fafety to the proper application of his wealth. Thus, by the inequality of his conduct, he became defpicable to bis fub. jects. At one time fhewing himfelf fevere and frugal, at another remifs and prodigal ; condemning fome il. luttrious perfons without any hearing, and pardoning others though guilty: in fhort, nothing was done but
by the mediation of his favourites; all offices were ve. nal, and all punifhments redeemable by money.

Affairs were in this unfettled pofture at Rome, when the provinces were yet in a worfe condition. The fuccefs of the army in Spain in choofing an emperor induced the legions in the other parts to wifh for a fimilar opportunity. Accordingly, many feditions were kindled, and feveral factions promoted in different parts of the empire, but particularly in Germany. There were then in that province two Roman armies; the one which had lately attempted to make Rufus Virginius emperor, as has been already mentioned, and which was commanded by his lieutenant ; the other commanded by Vitellius, who long had an ambition to obtain the empire for himfelf. The former of there armies defpifing their prefent general, and confidering themfelves as fufpected by the emperor for having been the laft to acknowledge his title, refolved now to be foremoft in denying it. Accordingly, when they: were fummoned to take the oaths of homage and fidelity, they refufed to acknowledge any other commands but thofe of the fenate. This refufal they backed by a meflage of the prætorian bands, importing, that they were refolved not to acquiefce in the election of an emperor created in Spain, and defiring that the fenate thould proceed to a new choice.

Galba being informed of this commotion, was fenfible, that, befides his age, he was lefs refpected for want of an heir. He refolved therefore to put what he had formerly defigned in execution, and to adopt fome perfon whofe virtues might deferve fuch advancement, and protect his declining age from danger. His favourites underftanding his determination, infantly refolved to give him an heir of their own choofing; fo. that there arofe a great contention among them upon this occafion. Otho made warm application for himfelf; alleging the great fervices he had done the emperor, as being the firft man of note who came to his affiftance when he had declared againft Neroa However, Galba, being fully refolved to confult the public good alone, rejected his fuit; and on a day appointed ordered Pifo Lacinianus to attend him. The character given by hiftorians of Pifo is, that he was every way worthy of the honour defigned him. Hewas noway related to Galba; and had no other intereft but merit to recommend him to his favour. Taking. this youth therefore by the hand, in the prefence of his friends, he adopted him to fucceed in the empire, giving him the moft wholefome leffous for guiding his future conduct. Pifo's conduct fhowed that he was, highly deferving this diftinction: in all his deportment. there appeared fuch modefty, firmnefs, and equality of mind, as befpoke him rather capable of difcharging, than ambitious of obtaining, his prefent dignity. But the army and the fenate did not feem equally difinterefted upon this occalion; they had been fo long ufed tobribery and corruption, that they could now bear no emperor who was not in a capacity of fatisfying their avarice. The adoption therefore of Pifo was but coldly received; for his virtues were no recommendation in a nation of univerfal depravity.

Otho now finding his hopes of adoption wholly fru- Otho defrated, and fill further ftimulated by the immenfe load clared $\epsilon$ mof debt which he had contracted by his riotous way of peror. living, refolved upon obtaining the empire by force,

## $\mathrm{ROM} \quad[419] \quad \mathrm{R} O M$

Rnme. fince he could not by peaceable fucceffion. In fact, his circumitances were fo very defperate, that he was heard to fay, that it was equal to him whether he fell by his enemies in the field or by his creditors in the city. He therefore raifed a moderate fum of money, by felling his intereft to a perfon who wanted a place; and with this bribed two fubaltern officers in the protorian bands, fupplying the deficiency of largeffes by promifes and plaulible pretences. Having in this manner, in lefs than eight days, corrupted the fidelity of the foldiers, he ftole fecretly from the emperor while he was facrificing; and affembling the foldiers, in a fhort fpeech urged the cruelties and avarice of Galba. Finding thefe his invectives received with univerfal fhouts by the whole army, he entirely threw off the malk, and avowed his intentions of dethroning him. The foldiers being ripe for fedition, immediately feconded his views: taking Otho upon their thoulders, they inftantly proclaimed him emperor ; and, to Atrike the citizens with terror, carried him with their fwords drawn into the camp.

Galba, in the mean time, being informed of the revolt of the army, feemed utterly confounded, and in want of fufficient refolution to face an event which he
fhould have long forefeen. In this manner the poor old man continued wavering aud doubtful; till at latt, being deluded by a falfe report of Otho's being flain, he rode into the forum in complete armour, attended by many of his followers. Juft at the fame inftant a body of horfe fent from the camp to deftroy him entered on the oppofite fide, and each party prepared for the encounter. For fome time hoftilities were fufpended on each fide; Galba, confufed and irrefolute, and his antagonifts ftruck with horror at the bafenefs of their enterprife. At length, however, finding the emperor in fome meafure deferted by his adherents, they ruthed in upon him, trampling under foot the crowds of people that then filled the forum. Galba fee. ing them approach, feemed to recollect all his former fortitude ; and bending his head forward, bid the affaffins Itrike it off if it were for the good of the people. This was quickly performed; and his head being fet upon the point of a lance, was prefented to Otho, who ordered it to be contemptuoully carried round the camp; his body remaining expofed in the ftreets till it was buried by one of his flaves. He died in the 73 d year of his age, after a fhort reign of feven months.

No fooner was Galba thus murdered, than the fenate and people ran in crowds to the camp, contending who fhould be foremolt in extolling the virtues of the new emperor, and depreffing the character of him they had fo unjuitly deftroyed. Each laboured to excel the $r \in f$ in his inftances of homage ; and the lefs his affections were for him, the more did he indulge a!l the vehemence of exaggerated praife. Otho finding himfelf furrounded by congratulating multitudes, immediately repaired to the fenate, where he received the ditles ufually given to the emperors; and from thence returned to the palace, feemingly refolved to reform his life, and allume manners becoming the greatnefs of his ftation.

He began his reign by a fignal inftance of clemen$\mathrm{r} y$, in pardoning Marius Celfus, who had been highly favoured by Galba; and not contented with barely forgiving, be advanced him to the highelt honours; af-
ferting, that " fidelity deferved every reward." This act of clemency was followed by another of juftice, equally agreeable to the people. Tigellinus, Nero's favourite, he who had been the promoter of all his cruel. ties, was now put to death; and all fuch as had been unjuftly banifhed, or Atripped, at his inftigation, during Nero's reign, were reftored to their country and fortunes.

In the mean time, the legions in Lower Germany Vizellius having been purchared by the large gifts and fpecious revolts. promifes of Vitellius their general, were at length induced to proclaim him emperor ; and regardlefs of the fenate, declared that they had an equal right to appoint to that high flation with the cohorts at Rome. The news of this conduct in the army foon fpread confernation throughout Rome; but Otho was particularly fruck with the account, as being apprehenfive that nothing but the blood of his countrymen could decide a conteft of which his own ambition only was the caufe. He now therefore fought to come to an agreement with Vitellius; but this not fucceeding, both fides began their preparations for war. News being received that Vitellius was upon his march to Italy, Otho departed from Rome with a valt army to oppofe him. But though he was very powerful with regard to numbers, his men, being little ufed to war, could not be relied on. He feemed by his behaviour fenfible of the difproportion of his forces; and he is faid to have been tortured with frightful dreams and the moft uneafy apprehenfions. It is alfo reported by fome, that one night fetching many profound fighs in his fleep, his fervants ran haftily to his bed fide, and found him ftretched on the ground. He alleged he had feen the ghoft of Galba, which had, in a threatening manner, beat and pulhed him from the bed; and he afterwards ufed many expiations to appeafe it. However this be, he proceeded with a great fhow of courage till he arrived at the city of Brixellum, on the river Po, where he remained, fending his forces before him under the conduct of his generals Suetonius and Celfus, who made what hafte they could to give the enemy battle. The army of Vitellius, which confifted of $70,000 \mathrm{men}$, was commanded by his generals Va lens and Cecina, he himfelf remaining in Gaul in order to bring up the reft of his forces. Thus both fides haftened to meet each other with fo much animofity and precipitation, that three confiderable battles were fought in the fpace of three days. One near Placentia, another near Cremona, and a third at a place called Caftor; in all which Otho had the advantage. But thefe fucceffes were of but fhort-lived continuance; for Valens and Cecina, who had hitherto acted feparately, joining their forces, and reinforcing their armies with frefh fupplies, refolved to come to a general engagement. Otho, who by this time had joined his army othodeat a little village called Bedriacum, finding the enemy, feated at notwithftanding their late lofes, inclined to come to a Bedriacum. battle, refolved to call a council of war to determine upon the proper meafures to be taken. His generals were of opinion to protract the war: but others, whofe inexperience had given them confidence, declared, that nothing bat a battle could relicue the miferies of the fate; protefting, that Fortune, and all the gods, with the divinity of the emperor himfelf, favoured the defign, and would undoubtedly profper the enterprife.

## R O M $\quad$ [ 420 ] $\quad$ O M

In this advice Otho acquiefced: he had been for fome time fo uneafy under the war, that be feemed willing to exchange fufpenfe for danger. However, he was fo furrounded with flatterers, that he was prohibited from being perfonally prefent in the engagement, but prevailed upon to referve himfelf for the fortune of the empire, and wait the event at Brixellum. The affairs of both armies being thus adjufted, they came to an engagement at Bedriacum; where, in the beginning, thore on the fide of Otho feemed to have the advantage. At length, the fuperior difcipline of the legions of Vitellius turned the fcale of victory. Otho's army fled in great confufion towards Bedriacum, being purfued with a miferable flaughter all the way.

In the mean time, Otho waited for the news of the battle with great impatience, and feemed to tax his meffengers with delay. The firft account of his defeat was brought him by a common foldier, who had efcaped from the field of battle. However, Otho, who was ftill furrounded by flatterers, was defired to give no credit to a bafe fugitive, who was guilty of falfehood only to cover his own cowardice. The foldier, however, fill perfifted in the veracity of his report; and, finding none inclined to believe him, immediately fell upon his fword, and expired at the emperor's feet. Otho was fo much fruck with the death of this man, that he cried out, that he would caufe the ruin of no more fuch valiant and worthy foldiers, but would end the conceft the florteft way; and therefore having exhorted his followers to fubmit to Vitellius, he put an end to his own life.

It was no fooner known that Otho had killed himfelf, than all the foldiers repaired to Virginius, the commander of the German legions, earnefly intreating him to take upon him the reins of government; or at leaft, intreating his meditation with the generals of Vi tellius in their favour. Upon his declining their requeft, Rubrius Gallus, a perfon of confiderable note, undertook their embaffy to the generals of the conquering army ; and foon after obtained a pardon for all the adherents of Otho.

Vitellius was immediately after declared emperor by the fenate; and received the marks of diftinction which were now accuflomed to follow the appointment of the frongeft fide. At the fame time, Italy was feverely diftreffed by the foldiers, who committed fuch outrages as exceeded all the oppreffions of the moft calamitous war. Vitellius, who was yet in Gaul, refolved, before he fet out for Rome, to punifh the pretorian co. horts, who had been the inftruments of all the late difturbances in the tiate. He therefore caufed them to be difarmed, and deprived of the name and honour of foldiers. He alfo ordered 150 of thofe who were moft guilty to be put to death.

As he approached towards Rome, he paffed through the towns with all imaginable fplendor; his palfage by water was in painted galleys, adorned with garlands of flowers, and profufely furnifhed with the greatelt dei: cacies. In his journey there was neither order nor difcipline among his foldiers; they plundered wherever they came with impunity; and he feemed no way difpleated with the iicenticufnefs of their behaviour.

Upon his arrival at Rome, he entered the city, not as a place he came to govern with juftice, buc as a town that became his own by the laws of conquel. He
marched through the ftreets mounted on horfeback, all in armour ; the fenate and people going before him, as if the captives of his late victory. He the next day made the fenate a fpeech, in which he magnified his own actions, and promifed them extraordinary advantages from his adminiftration. He then harangued the people, who being now long accuftomed to flatter all in authority, highly applauded and bleffed their new emperor.

In the mean time, his foldiers being permitted to fa- His hame tiate themfelves in the debaucheries of the city, grew ful giuttotally unfit for war. The principal affairs of the ftate tony, and were managed by the loweft wretches. Vitellius, more other vics. abandoned than they, gave himfelf up to all kinds of luxury and profufenefs: but gluttony was his favourite vice, fo that he brought himfelf to a habit of vomit. ting, in order to renew his rmeals at pleafure. His entertainments, though feldom at his own coft, were prodigivully expenfive; he frequently invited himfelf to the tables of his fubjects, breakfalting with one, dining with another, and fupping with a third, all in the fame day. The molt memorable of thefe entertainments was that made for him by his brother on his arrival at Rome. In this were ferved up 2000 feveral difhes of filh, and 7000 of fowl, of the mont valuable kinds. But in one particular difh he feemed to have outdone all the former profufion of the moft luxurious Romans. This difh, which was of fuch magnitude as to be called the Bield of Minerva, was filled with an olio made from. the founds of the filh called fcarri, the brains of phea. fants and woodcocks, the tongues of the moft coltly birds, and the fpawn of lampreys brought from the Carpathian fea. In order to cook this difh properly, a furnace was built in the fields, as it was too large for any kitchen to contain it.

In this manner did Vitellius proceed; fo that Jofephus tells us, if he had reigned long, the whole empire would not have been fufficient to have maintained his gluttony. All the attendants of his court fougit to raife themfelves, not by their virtues and abilities, but the fumptuoufnefs of their entertainments. This prodigality produced its attendant, want; and that, in turn, gave rife to cruelty.

Thofe who had formerly been his affociates were now deftroyed without mercy. Going to vifit one of them in a violent fever, he mingled poifon with his water, and delivered it to him with his own hands. Henever pardoned thofe money-lenders whe came to demand payment of his former debts. One of the number coming to falute him, he immediately crdered him: to be carried off to execution; but fhortly after, com. manding him to be brought back, when all nis attendants thought it was to pardon the unhappy creditor, Vitellius gave them foon to underfood that it was. merely to have the pleafure of feeding his eyes: with: his torments. Having conlemned another to death, be executed his two fons with him, only for their prefuming to intercede for their father. A Roman knight: being dragged away to execution, and crying out that he had made the emperor his heir, Vitellius demanded to fee the will, where finding himfelf joint heir with another, he ordered both to be executed, that he might enjny the legacy without a partner:

By the continuance of fuch vices and crue'ties as thefe he became odious to all mankind, and the aftro

Rome.
$\underbrace{\text { Rome. }}$
$\underbrace{\text { Rome. }}$ logers began to prognofticate his ruin. A writing was fet up in the forum to this effect: "We, in the name of the ancient Chaldeans, give Vitellius warning to depart this life by the kalends of October." Vitellius, on his part, received this information with terror, and ordered all the aftrologers to be banifhed from Rome. An old woman having foretold, that if he furvived his mother, he fhould reign many years in happinefs and fecurity, this gave him a defire of putting her to death; which he did, by refufing her fultenance, under the pretence of its being prejudicial to her health. But he foon faw the futility of relying upon fuch vain prognoftications; for his foldiers, by their cruelty
327 and rapine, having become infupportable to the inhaVefpafian bitants of Rome, the legions of the Ealt, who had at proctaimed firlt acquiefced in his dominion, began to revolt, and cmperor. Ihortly after unanimoully refolved to make Vefpafian
emperor

Vefpafian, who was appointed commander againft the rebellious Jews, had reduced mof of their country, except Jtrufalem, to fubjection. The death of Nero, however, had at firft interrupted the progrefs of his arms, and the fucceffion of Galba gave a temporary check to his conquetts, as he was obliged to fend his fon Titus to Rome, to receive that emperor's commands. Titus, however, was fo long detained by contrary winds, that he received news of Galba's death before he fet fail. He then refolved to continue neuter during the civil wars between Otho and Vitellius; and when the latter prevailed, he gave him his homage with reluctance. But being defirous of acquiring reputation, though he difliked the government, he determined to lay fiege to Jerufalem, and actually made preparations for that great undertaking, when he was given to undertand that Vitchlius was detefted by all ranks in the empire. Thefe murmurings increafed every day, while Vefpafian fecretly endeavoured to advance the difcontcnts of the army. By thefe means they began at length to fix their eyes upon him as the perfon the molt capable and willing to terminate the miferies off his countif, and put a peri d to the injuries it fuffered. Not only the legions under his command, but thefe in Mxiia and Pannonia, came to the fame refolution, io that they declared themfelves for Vefpafian. He was alf, without his own confent proclaimed emperor at Alexandria, the army there confirming it with extraordinary applaue, and paying their accuftomed homage. Still, $h$ swever, Vifpallan feerned to decline the honour done him ; till at length his foldiers compelled him, with their ihreats of immediate death, to accept a litle which, in all probability, he wifhed to enjoy. He now, therefore, called a council of war : where it was refolved, that his fon $T i$ tus thould carry on the war againlt the Jews; and that Mutianus, one of his generals, fhould, with the greateit part of his legions, : nter Italy; while Vetpatian himf lf thould levy forces in all parts of the eall, in oider to reinforce them in cafe of neceffity.

During thefe preparations, Vitellius, though bur ed in floth and luxury, was retolved to make an eff. rt to defend the empire; wherefore his chief commanders, Valens and Cecina, were ordered to make all poffible preparations to refift the invaders. The tirf army that entered Italy with an hoftile iitention was under the command of Antonius Primus, who was met by Ce -
cina near Cremona. A battle was expected to enfue; but a negociation taking place, Cecina was prevailed upon to change fides, and declare for Vefpafian. His army, however, quickly repented of what they had done; and imprifoning their general, attacked Antodone ; and imprioning their general, attacked Anto- ${ }^{328}$ nius, though without a icuder. The engagement con- vitellius tinued during the whole night: in the morning, after a defeated. flort repalt, both aimies engaged a fecond time; when the foldiers of Antonius faluting the rifing fun, according to cultom, the Vitellians fuppofing that they had received new reinforcements, betook themfelves to flighr, with the lofs of 30,000 men. Shortly after, freeing
their general Cecina from prifon, they prevailed upon with the lofs of 30,000 men. Shortly after, freeing
their general Cecina from prifon, they prevailed upon him to intercede with the conquerors for pardon; which
they obtained, though not without the mof horrid barhim to intercede with the conquerors for pardon; which
they obtained, though not without the mof horrid barbarities committed upon Cremona, the city to which they had retired for fhelter.
When Vitelius was informed of the defeat of his army, his former infolence was converted into an extreme of timidity and irrefolution. At length be comtreme of timidity and irretolution. At length he com-
manded Julius Prifcus and Alphenus Varus, with fome forces that were in readinefs, to guard the paffis of the Apennines, to prevent the enemy's march to of the Apennines, to prevent the enemy's march to
Rome ; referving the principal body of his army to fecure the eity, under the command of his brother Lucius. But being perfuaded to repair to his army in Lucius. But being perfuaded to repair to his army in
perfon, his prefence only ferved to increafe the contempt of his foldiers. He there appeared irrefolute,
and fill luxurious, without counfel or conduct, ignotempt of his foldiers. He there appeared irrefolute,
and ftill luxurious, without counfel or conduct, igno. rant of war, and demanding from others thofe infrutions which it was his duty to give. After a fhort
continuance in the camp, and underftanding the revolt continuance in the camp, and underftanding the revolt of his fleet, he returned once more to Rome : but every day only ferved to render his affairs ftill more every day only ferved to render his affairs ftill more
depperate; till at laft he made offers to Vefpafian of refigning the empire, provided his life was granted, and a fufficient revenue for his fupport. In order to anforce his requeft, he iffued from his palace in deep mourning, with all his domeftics weeping round him,
He then went to offer the fword of juftice to Cecilius, mourning, with all his domeftics weeping round him,
He then went to offer the fword of juftice to Cecilius, the conful; which he refufing, the abject emperor prepared to lay down the enfigns of the empire in the temple of Concord. But being interrupted by the temple of Concord. But beng interrupted by
fome, who cried out, That he himfelf was Concord, he refolved, upon fo weak an encouragement, fill to mainain his power, and immediately prepared for his defence.
During this fluctuation of counfels, one Sabinus, who had advifed Vitellius to refign, perceiving his defperate fituation, refolved, by a bold flep, to oblige Vefpafian, and accordinyly feized upon the Capitol. The capiBut he was premature in his attempt; for the foldiers tal burnt. of Vitelluns attacked him with great fury, and, prevailin. by their numbers, foon faid that beautiful building in athes. During this dieadful ennflagration, Viteliius was feaiting in the palace of Tibe:ius, and beholding all the horrors of the aflault with great fatisfiat n. Salinus was taken prifoner, and flortly ater executed by the emperor's command. Young Dömitian, his nephew, who was afterwards emperor, efcaped by flight, in the habit of a prieft ; and all the reft who furvived the fire were put to the fword.

But this faccefs ferved little to improve the affairs of Vitellius. He vainly fent meffenger after meffenger to being Verpafian's general, Antouives, to a compofition.

Rome.
$\underbrace{}$

330 Dreadful fituation of Rome.

This commander gave no anfwer to his requefts, but aill continued his march towards Rome. Being arrived before the walls of the city, the forces of Vitellius were refolved upon defending it to the utmoft extremity. It was attacked on three fides with the utmort fury; while the army within, fallying upon the befiegers, defended it with equal obitinacy. The battle lafed a whole day, till at laft the befieged were driven into the city, and a dreadful flaughter made of them in all the freets, which they vainly attempted to defend. In the mean time, the citizens flood by, looking on as both fides fought; and, as if they had been in a theatre, clapped their hands; at one time encouraging one party, and again the other. As either turned their backs, the cirizens would then fall upon them in their places of refuge, and fo kill and plunder them without mercy. But what was fill more remarkable, during thefe dreadful flaughters both within and without the city, the people would not be prevented from celebrating one of their riotous feafts, called the Saturnalia; fo that at one time might have been feen a frange mixture of mirth and mifery, of cruelty and lewdnefs; in one place, butyings and flaughters; in another, drunkennefs and feanting ; in a word, all the horrors of a civil war, and all the licentioufnefs of the moft abandoned fecurity !

During this complicated fcene of mifery, Vitellius retired privately to his wife's houfe, upon mount Aventine, defigning that night to fly to the army commanded by his brother at Tarracina. But, quite incapable, through fear, of forming any refolution, he changed his mind, and returned again to his palace, now void and defolate; all his flaves forfaking him in his diftrefs, and purpofely avoiding his prefence. There, after wandering for fome time quite difconfolate, and fearing the face of every creature he met, he hid himfelf in an obfcure corner, from whence he was foon taken by a party of the conquering foldiers. Still, however, willing to add a few hours more to his miferable life, he begged to be kept in prifon till the arrival of Vefpafian at Rome, pretending that he had fecrets of importance to difcover. But his intreaties were vain: the foldiers binding his hands behind him, and throwing an halter round his neck, led him along, half naked, into the public forum, upbraiding him, as they proceeded, with all thofe bitter reproaches their malice could fuggeft, or his own cruelties deferve. They alfo tied his hair backwards, as was ufual with the moft infamous malefactors, and held the point of a fword under his chin, to prevent his hiding his face from the public. Some caft dirt and filth upon him as he paffed, others ftruck him with their hands; fome ridiculed the defects of his perfon, his red fiery face, and the enormous greatnefs of his belly. At length, being come to the place of punifhment, they killed him with many blows; and then dragging the dead body through the freets with an book, they threw it, with all pofible ignomy int the river Tiber. Such was the miferable end of this emperor, in the $57^{\text {th }}$ year of his age, after a th rt reipn of ei ht months and five days.

Vitelitus being dead, the conquering army purfued the'r enemies th, onghout the city, while neither houfes nor temples afforded refuge to the fugitives. The it ee:s and allic places were all ftrewed with dead, each man lying flain whore it was his misfortune to be
overtaken by his unmerciful purfuers. But not only the enemy fuffered in this manner, but many of the citizens, who were obnoxious to the foldiers, were dragged from their houfes, and killed without any form of trial. The heat of their refentment being fomewhat abated, they next began to feek for plunder; and under pretence of fearching for the enemy, left no place without marks of their rage or rapacity. Befides the foldiers, the lower rabble joined in thefe deteftable outrages; fome llaves came and difcovered the riches of their mafters; fome were detected by their neareft friends ; the whole city was filled with outcry and lamentation; infomuch, that the former ravages of Otho and Vitellius were now confidered as flight evils in comparifon.

At length, however, upon the arrival of Mutianus, general to Vefpafian, thefe flaughters ceafed, and the fate began to wear the appearance of former tranquillity. Vefpafian was declared emperor by the unanimous confent both of the fenate and the army; and dignified with all thofe titles, which now followed ra. ther the power than the merit of thofe who were appointed to govern. Meffengers were difpatched to him into Egypt, defiring his return, and teftifying the utmoft defire for his government. However, the winter being dangerous for failing, he deferred his voyage to a more convenient feafon. Pethaps, alfo, the diffenfions in other parts of the empire retarded his return to Rome; for one Claudius Civilis, in Lower Germany, excited his countrymen to revolt, and deftroyed the Roman garrifons, which were placed in different parts of that province. But, to give his rebellion an air of juftice, he caufed his army to fwear allegiance to Vefpafian, until he found himfelf in a condition to throw off the mafk. When he thought himfelf fufficiently powerful, he difclaimed all fubmifion to the Roman government; and having overcome one or two of the lieutenants of the empire, and being joined by fuch of the Romans as refufed obedience to the new emperor, he boldly advanced to give Cerealis, Vefpafian's general, battle. In the beginning of this engagement, he feemed fucceffful, breaking the Roman legions, and putting their cavalry to flight. But at length Cerealis by his conduct turned the fate of the day, and not only routed the enemy, but took and deAtroyed their camp. This engagement, however, was not decifive; feveral others enfued with doubtful fuccefs. An accommodation at length took place. Civilis obtained peace for his countrymen, and pardon for himfelf; for the Roman empire was, at this time, fo torn by its own divifions, that the barbarous nations around made incurfions with impunity, and were fure of obtaining peace whenever they thought proper to demand it.
During the time of thefe commotions in Germany, the Sarmatians, a barbarous nation in the northeaf of rruption the empire, fuddenly paffed the river Ifer, and marched matians. into the Roman dominions with fuch celerity and fury, as to deffroy feveral garrifons, and an army under the command of Fonteius Agrippa. However, they were driven back by Rubrius Gallus, Verpafian's lieutenant, into their native forefts; where feveral attempts were made to confine them by garrifons and forts, placed along the confines of their country, But thefe hardy nations, having once found the way into the empire,

Rome. $\underbrace{\text { Rone }}$
never after defilted from invading it upon every rpportunity, till at length they over-ran and deftroyed it entirely.

Vefpafian continued fome months at Alexandria in Egypt, where it is faid he cured a blind and a lame man by touching them. Before he fet out for Rome, he gave his fon Titus the command of the army that was to lay fiege to Jerufalem; while he himfelf went forward, and was met many miles from Rome by all the fenate, and near half the inhabitants, who gave the fincereft teftimonies of their joy, in having an emperor of fuch great and experienced virtues. Nor did he in the lealt difappoint their expectations; being equally affiduous in rewarding merit, and pardoning his adverfaries ; in reforming the manners of the citizens, and fetting them the bet example in his power.

In the mean time, Titus carried on the war againlt the Jews with vigour, which ended in the terrible deAtruction of the city, mentioned under the article Jews. After which his foldiers would have crowned Titus as conqueror; but he refufed the honour, alleging that he was only an inftrument in the hand of Heaven, that manifefty declared its wrath againft the Jews. At Rome, however, all mouths were filled with the praifes of the conqueror, who had not only fhowed bimfelf an excellent general, but a conrageous combatant: his return, therefore, in triumph, which he did with his fa ther, was marked with all the magnificence and joy that was in the power of men to exprefs. All things that were efteemed valuable or beautiful among men were brought to adom this great occafion. Among the rich fpoils vere expofed vaft quantitie, of gold taken out of the temple; but the book of their law was not the leaft remarkable among the magnificent profufion. A triumphal arch was erected upon this occalion, on which were defcribed all the vistories of Titus over the Jews, which remains almoft entire to this very day. Vefpafian likewife built a tomple t.: Peace, wherein were depofited molt of the Jewifh fpoils; and having now calmed all the commotions in every part of the empire, he thut up the temple of Janus, which had been open about five or fix years.

Vefpafian having thus given fecurity and peace to the empire, refolved to correct numberlefs abufes which had grown up under the $t$ ranny of his predeceffors. To effect this with greater eafe, he joined Titus with lim in the confulthip and tribunitial power, and in fome meafure admitted him a partner in all the higleft offices of the fate. He began with reftraining the licentioulnefs of the army, and forcing them back to their prittine dicopline. He abridged the proceffes that had been carried to an unrealonable length in the courts of juftice. He took care to rebuild fuch parts of the city as had fuffered in the late commotions; particularly the Capitol, which bad been lately burnt; and which he now reftored to more than former magnificence. He Jikewife built a famous amphithearre, the ruins of which are to this day an evidence of its andent gran deur. The other ruinous cities of the empire alfo thared his paternal care; he improved fuch as were declining, adorned others, and built many anew. In fuch acts as thefe he paffed a long reign of clemency and moderation; fo that it is faid, no man fuffered by an unjult or a fevere decree during his adminiftration.

Julius Sabinus feems to be the only'perfon who was
treated with greater rigour than was ufual with this emperor. Samms was commaner of a tmall army in Ganl, and had declared himfelf emperor upon the death of Vitellius. However, his army was fhortly after overcome by Vefpafian's general, and he himfelf compelled to foek fafery by flight. He for fome time wandered through the Roman provinces, without being difcovered : but finding the purfuit every day become clofer, he was obliged to hide himfelf in a cave; in which he remained concealed for no lefs than nine years, attended all the time by his faithful wife Empona, who provided provilions for him by day, and repaired to him by night. However, the was at laft difcovered in the perturmance of this pious office, and Sabinus was taken prifoner and carried to Rome. Great interceffion was made to the emperor in his behalf: Empona herfelf appearing with her two children, and imploring her hufband's pardon. However, neither her tears nor intreaties could prevail; Sabinus had been too dangerous a rival for mercy; fo that, though fhe and her children were ipared, her huiband fuffered by the executioner.

But this feems to be the only inflance in which he refented palt offences. He caufed the daughter of Vi tellius, his avowed enemy, to be married into a noble family, and he himfelf provided her a fuitable fortune. One of Neros fervants coming to beg for pardon for having once rudely thrult him out of the palace, and infulted him when in office, Vefpafian only took his revenge by ferving him jult in the fame manner. When any plots or confpiracies were formed againt him, he difdained to punifh the guilty, faying, That they deferved rather his contempt for their ignorance, than his refentment; as they feemed to envy him a dignity of which he daily experienced the uneatinefs. His liberality towards the encouragement of arts and learning, was not lefs than his clemency. He fettled a conftant falary of 100,000 fetterces upon the teachers of rhetoric. He was particularly favourable to Jofephus, the Jewifh hiftorian. Quintilian the orator, and Pliny the naturalift, flourifhed in his reign, and were highly elteemed by him. He was no lefs an encourager of all other excellencies in art; and invited the greateft mafters and artificers from all parts of the world, making them confiderable prefent:, as he found occafion.

Yet all his numerous acts of generofity and magnificence could not preferve his character from the impu. tation of rapacity and avarice. He revived many obfolete methods of taxation; and even bought and fold commodities himfelf, in order to increafe his fortune. He is charged with advancing the molt avaricious governors to the provinces, in order to thare their plunder on their return to Rome. He defcended to fome very unufual and difhonourable impofts, even to the laying a tax upon urine. When his fon Titus remonftrated againft the nednnefs of fuch a tax, Vefpafian taking a prece of money, demanded if the fmell offended him; and then added, that this very money was produced by urine. But in excufe for th:s, we mult obferve, that the exchequer, when Vefpafian came to the throne, was fo much exhanlted, that he informed the fenate that it would require a fupply of three hundred millions (fterling) to re-eftablifh the commonwealth. This neceflity muft natarally produce more numerous and heavy taxations than the empire had hitherto experienced: but while the provinces were thas obliged to

## $\mathrm{R} O \mathrm{M}$ <br> [ 424$] \quad \mathrm{R} \mathrm{O} \mathrm{M}$

precaution to provide for their fafety; fo that we find but two infurrections in this reign.- In the fourth year of his reign, Antiochus king of Comagena, holding a private correfpondence with the Parthians, the declared enemies of Rome, was taken prifoner in Cilicia, by Pyrrhus the governor, and fent bound to Rome. But Vefpafian generoully prevented all ill treatment, by giving him a refidence at Lacedæmon, and allowing him a revenue fuitable to his dignity. About the fame time alfo, the Alani, a barbarons people inhabiting along the river Tanais, abandoned their barren wilds, and invaded the kingdom of Media. From thence paffing into Armenia, after great ravages, they overthrew Tiridates, the king of that country, with prodigious llaughter. Titus was at length fent to chaftife their infolence: but the barbarians retired at the approach of the Roman army, loaded with plunder; being compelled to wait a more favourable opportunity of renewing their irruptions. Thefe incurfions, however, were but a tranfient form, the effects of which were foon repaired by the emperor's moderation and affiduity. We are told, that he now formed and eftablifhed a thoufand nations, which had fcarcely before amounted to 200 . No provinces in the empire lay out of his view and protection. He had, during his whole reign, a particular regard to Britain; his generals, Petilius Cerealis, and Julius Frontinus, brought the greateft part of the ifland into fubjection; and Agricola, who fucceeded foon after, completed

In this manner, having reigned io years, loved by his fubjects, and deferving their affection, he was furprifed by an indifpofition at Campania, which he at once declared would be fatal, crying out, in the fpirit of Paganiifm, "Methinks I am going to be a god." Removing from thence to the city, and afterwards to a country-feat near Reate, he was there taken with a flux, which brought him to the laft extremity. However, perceiving his end approach, and juft going to expire, he cried out, that an emperor ought to die ftanding; wherefore, raifing himfelf upon his feet, he expired in 340 the hands of thofe that futtained him.
Titus fuc-
Titus being joyfully received as emperor, notwithceeds to the flanding a flight oppoftion from his brother Domitian, empire.
tions feemed calculated to enfure. As he came to the throne with all the advantages of his father's popularity, he was refolved to ufe every method to increafe it. He therefore took particular care to punifh all informers, falfe witneffes, and promoters of diffenfion, condemning them to be fcourged in the moft public freets, next to be dragged through the theatre, and then to be baniihed to the uninhabited parts of the empire, and fold as flaves. His courtefy and readinefs to do good have been celebrated even by Chriftian writers ; his principal rule being, never to fend any petitioner diffatisfied away. One night, recollecting that he had done nothing beneficial to mankind the day preceding, he cried out among his friends, "I have loft a day." A fentence too remarkable not to be univerfally known.

In this reign, an eruption of mount Vefuvius did Adreadconfiderable damage, overwhelming many towns, and ful erupfending its afhes into countries more than 100 miles diftant. Upon this memorable occafion, Pliny the naturalift loft his life; for, being impelled by too eager a curiofity to oblerve the eruption, he was fuffocated in the flames $\dagger$. There happened alfo about this time a fire at Rome, which continued three days and nights fucceffively, which was followed by a plague, in which 10,000 men were buried in a day. The emperor, hown ever, did all that lay in his power to repair the damage fuftained by the public; and, with refpect to the city, declared that he would take the whole lofs of it upon himfelf. Thefe difafters were in fome meafure counterbalanced by the fucceffes in Britain under Agricola. This excellent general having been fent into that country towards the latter end of Vefpafian's reign, fhowed himfelf equally expert in quelling the refractory, and civilizing thofe who had formerly fubmitted to the Roman power. The Ordovices, or inhabitants of North Wales, were the firt that were fubdued. He then made a defcent upon Mona, or the inland of Anglefea; which furrendered at difcretion. Having thus rendered himfelf matter of the whole country, he took every method to reftore difcipline to his own army, and to introduce fome fhare of politenefs among thofe whom he had conquered, He extorted them, both by advice and example, to build temples, theatres, and fately houfes. He caufed the fons of their nobility to be inAtructed in the liberal arts; he had them taught the Latin language, and induced them to imitate the Roman modes of dreffing and living. Thus, by degrees, this barbarous people began to affume the luxurious manners of their conquerors, and in time even outdid them in all the refinements of fenfual pleafure. For the fuccefs in Britain, Titus was faluted emperor the 15 th time; but he did not long furvive his honours, being feized with a violent fever at a little diftance from Rome. Perceiving his death to approach 343 he declared that during he declared, that during the whole courfe of his life he knew but of one action which he repented of ; but that action he did not think proper to exprefs. Shortly after, he died (not without fufpicion of treachery from his brother Dumitian, who had long withed to govern) in the $4^{\text {it }}$ year of his age, having reigned two years two months and twenty days.

The love which all ranks of people bore to Titus, Succeeded facilitated the election of his brother Domitian, not- by Domiwithftanding the ill opinion many hide already conceived tian. of him. His ambition was already but too well
knoẅrn,

Qome. known, and his pride foon appeared upon his coming to the throne ; having been heard to declare, that he had given the empire to his father and brother, and now received it again as his due.

The beginning of his reign was univerfally acceptable to the people, as he appeared equally remarkable for his clemency, liberality, and jutice. He carried his abhorrence of cruelty fo far, as at one time to forbid the facrificing of oxen. His liberality was fuch, that he would not accept of the legacies that were left him by fuch as had children of their own. His juftice was fach, that he would fit whole days and reverfe the partial fentences of the ordinary judges. He appeated very careful and liberal in repairing the libraries which had been burnt, and recovering copies of fuch books as had been loft, fending on purpofe to Alexandria to tranicribe them. But he foon began to fhow the natural deformity of his mind. Intead of cultivating literature, as his father and brother had done, he neglected all kinds of fudy, addicting himfelf wholly to the meaner purfaits, particularly archery and gaming. No emperor before him entertained the people with fuch various and expenfive fhows. During thefe diverfions he diltributed great rewards; fitting as prefident himfelf, adomed with a purple robe and crown, with the priefts of Jupiter and the college of Flavian priefts abont him. The meannefs of his occupations in folitude were a juft contraft to his exhibitions in public oftentation. He ufually fpent his hours of retirement in catching flies, and ficking them through with a bodkin; fo that one of his fervants being afked if the emperor was alone, he anfwered, that he had not fo much as a fly to bear him company. His vices feemed every day to increafe with the duration of his reign; and as he thus became more odious to his people, all their murmurs only ferved to add frength to his fufpicions, and malice to his cruelty. His ungrateful treatment of Agricola feemed the firft fymptom of his natural malevolence. Domitian was always particularly fond of obtaining a military reputation, and therefore jealous of it in others. He had marched fome time before into Gaul, upon a pretended expedition againt the Catti, a people of Germany; and, without ever feeing the enemy, refolved to have the honour of a triumph upon his return to Rome. For that purpofe he purchafed a number of flaves, whom he dreffed in German habits ; and at the head of this miferable proceffion entered the city, amidft the apparent acclamations and concealed contempt of all his fubjects. The fucceffes, therefore, of Agricola in Britain affecied him with an extreme degree of envy. This admirable general, who is fcarce mentioned by any writer exc-pt Tacitus, purfued the advantages which he had already obtained. He routed the Caledorians; overcame Galgacus, the Britifh chief, at the head of $30,000 \mathrm{men}$; and afterwards fending out a feet to fcour

land.
took care that triumphant ornaments, Aatues, and other honours, fhould be decreed him ; but at the fame time he removed him from his command, under a pretence of appointing him to the government of Syria. By thefe means, Agricola furrendered up his government to Saluftius Lucullus, but foon found that Syria was other. wife difpofed of. Upon his return to ${ }^{2}$ Rome, which was privately and by night, he was coolly received by the emperor ; and dying fome time after in retirement, it was fuppofed by fome that his end was haftened by Domitian's direction.

Domitian foon after found the want of fo experienced a commander in the many irruptions of the barbarous nations that furrounded the empire. The Sarmatians in Europe, joined with thofe in Afia, made a formidable invafion; at once deftroying a whole legion, and a general of the Romans. The Dacians, under the conduct of Decebalus their king, made an irruption, and overthrew the Romans in feveral engagements. Loffes were followed by loffes, fo that every feafon became memorable for fome remarkable overthrow. At laft, however, the flate making a vigorous exertion of its internal power, the barbarians were repelled, partly by force and partly by the affiftance of money, which only ferved to enable them to make future invafions to greater advantage. But in whatever manner the enemy might have been repelled, Domitian was refolved not to lofe the honour of a triumph. He returned in great. fplendor to Rome; and not contented with thus triumphing twice without a victory, he refolved to take the furname of Germanicus, for his conqueft over a people with whom he never contended.

In proportion as the ridicule increafed againg him, his pride feemed every day to demand greater homage. He would permit his ftatues to be made only of gold and filver; affumed to himfelf divine honours; and ordered that all men fhould treat him with the fame appellations which they gave to the divinity. His cruelty was not behind his arrogance; he caufed numbers of the molt illuftrious fenators and others to be put to death upon the moft trifing pretences. Saluftius Lucullus, his lieutenant in Britain, was deftroyed only for having given his own name to a new fort of lances of his own invention. Junius Rufticus died for publifhing a book, in which he commended Thrafea and Prifcus, two philofophers who oppofed Vefpafian's coming to the throne.

Such cruelties as thefe, that feem almof without a motive, may naturally be fuppofed to have produced rebellion. Lucius Antonius, governor in Upper Germany, knowing how much the emperor uras detefted at home, aflumed the enfigns of imperial dignity. As he was at the head of a formidable army, his fuccefs remained long dcubtful; but a fudden overfowing of the Rhine dividing his army, he was fet upon at that juncture by Normandus; the emperor's general, and totally routed. The news of this victory, we are told, was brought to Rome by fupernatural means, on the fame day that the battle was fought. Domitian's feverity was greatly increafed by this fuccefs, of fhort duration. the empeIn order to difcover thofe who were accomplices with ror. the adver'e party, he invented new tortures, fometimes cutting off the hands, at other times thrulting fire into the privities, of the people whom he fufpected of being his enemies. During thefe cruelties, he aggravated 3 H

$\underbrace{\text { Rumr. }}$ without a preamble full of gentlenefs and mercy. He was particularly terrible to the fenate and nobility, the whole body of whom he frequently threatened entirely to extirpate. At one time, he furrounded the fenatehoufe with his troops, to the great coniternation of the fenators. At another, he refolved to amufe himfelf with their terrors in a different manner. Having invited them to a public entertainment, he received them all very formally at the entrance of his palace, and conducted them into a facious hall, hung round with black, and illuminated by a few melancholy lamps, that diffufed light only fufficient to thow the horrors of the flace. All around were to be feen nothing but coffins, with the names of each of the fenators written upon them, together with other objects of terror, and inftruments of execution. While the company beheld all the preparations with filent agony, feveral men, having their bodies blackened, each with a drawn fword in one hand and a flaming torch in the other, entered the hall, and danced round them. After fome time, when the guets expected nothing lefs than inftant death, well knowing Domitian's capricious crueliy, the doors were fetopen, and one of the fervants came to inform them, that the emperor gave all the companyleave to withdraw.

Thefe cruelties were rendered ftill more odious by his lult and avarice. Frequently after prefiding at an execution, he would retire with the lewdeft proftitutes, and ufe the fame baths which they did. His avarice, which was the confequence of his profufion, knew no bounds. He feized upon the eftates of all againft whom he could find the fmalleft pretenfions; the molt trifling action or word againft the majefty of the prince was fufficient to ruin the poffeffor. He particularly exacted large fums from the rich Jews; who even then began to practife the art of peculation, for which they are at prefent faid to be remarkable. He was excited againft them, not only by avarice, but by jealoufy. A prophecy had been long current in the eaft, that a perion from the line of David fhould rule the world. Whereupon, this fufpicious tyrant, willing to evade the prediction, commanded all the Jews of the lineage of David to be diligently fought out, and put to death. Two Chriftians, grandfons of St Jude the apoftle, of that line, were brought before him ; but finding them poor, and no way ambitious of temporal power, he difmiffed them, confidering them as objects too mean for his jealoufy. However, his perfecution of the Chriftians was more fevere than that of any of his predeceffors. By his letters and edicts they were banifhed in feveral parts of the empire, and put to death with all the tortures of ingenious cruelty. The predictions of Chaldeans and aftrologers alfo, concerning his death, gave him moft violent apprehewfions, and kept him in the moft tormenting difquietude. As he approached towards the end of his reign, he would permit no criminal, or prifoner, to be brought into his prefence, until they were bound in fuch a manner as to be incapable of injuring him; and he generally fecured their chains in his own hands. His jealoufies increafed to that degree, that he ordered the gallery in which he walked to be fet round with a pellucid ftone, which ferved as a mirror to reflect the perfons of all fuch as approached him from behind. Every omen and prodigy gave him frefh anxiety.

Buta period was foon to be put to this monfter's
cruelty. Among the number of thofe whom he at once carefled and fufpected, was his wife Domitia, whom he had taken from Elius Lama, her former hufband. This woman, however, was become obnoxious to him, for having placed her affections upon one Paris, a ed againat plarer; and he refolved to difpatch her, with feveral him. others that he either hated or fulpected. It was the tyrant's method to put down the names of all fuch as he intended to deitroy in his tablets, which he kept about him with great circumfpection. Domitia, fortunately happening to get a fight of them, was itruck at finding her own name in the catalogue of the fated to deltruction. She fhowed the fatal litt to Norbanus and Petronius, prefects of the prætorian bands, who found themfelves fet down; as likewife to Stephanus, the comptroller of the houfehold, who came into the confpiracy with alacrity. Parthenias alfo, the chief chamberlain, was of the number. Thefe, after many confultations, determined on the firt opportunity to put their defign in execution; and at length fixed on the 18th day of September for the completion of their attempt. Domitian, whofe death was every day foretold by the aftrologers, who, of confequence, mult at laft be right in their predictions, was in fome meafure apprehenfive of that day; and at he had been ever timorous, fo he was now more particularly upon his guard. He had fome time before fecluded himfelf in the molt fecret receffes of his palace; and at midnight was fo affrighted as to leap out of bis bed, inquiring of his attendants what hour of the night it was. Upon their fallely alfuring him that it was an hour later than that which he was taught to apprehend, quite tranfported, as if all danger was paft, he prepared to go tothe bath. Juft then, Parthenius his chamberlain came to inform him that Stephanus the comptroller of his houfehold defired to fpeak to him upon an affair of the utmoft importance. The emperor having given orders that bis attendants fhould retire, Stephanus entered with his hand in a fcarf, which he had worn thus for fome days, the better to conceal a dagger, as none were permitted to approach the emperor except unarmed.He began by giving information of a pretended confpiracy, and exhibited a paper in which the particulars were fecified. While Domitian was reading the con- He is 35 tents with an eager curiofity, Stephanus drew his dag- dered., ger; and fruck him in the groin. The wound not being mortal, Domitian caught hold of the affafin, and threw him upon the ground, calling out for affiftance. He demanded alfo his fword, that was ufually placed under his pillow ; and a boy who attended in the apart. ment, running to fetch it , found only the fcabbard, for: Parihenins had previoully removed the blade. The: ftruggle with Stephanus fill continued: Domitian ftill kept him under, and at one time attempted to wreit the dagger from his hand, at another to tear out his eyes with his fingers. But Parthenius, with his freedman, a gladiator, and two fubaltern officers, now coming in, ran all furiounly upon the emperor, and difpatched him with many wounds. In the mean time, fome of the officers of the guard being alarmed, came to his affiftance, but too late to fave him; however, they flew. Stephanus on the fpot.

When it was publicly known that Domitian was. flain, the joy of the fenate was fo great, that being af fembled with the utmof hafte, they began to load his,

## R OM

memory with every reproach. His ftatues were com. manded to be taken down; and a decree was made, that all his infcriptions fhould be erafed, his name ftruck out of the regifters of fame, and his funeral omitted. The people, who now took little part in the affairs of government, looked on his death with indifference; the foldiers alone, whom he had loaded with favours, and enriched by largeffes, fincerely regretted their benefactor. The denate, therefore, refolved to provide a fucceffor before the army could have an op-

35 I
Cocceius Nerva
made cmperor. portunity of taking the appointment upon themfelves: and Cocceius Nerva was chofen to the empire the very day on which the tyrant was flain.

Nerva wis of an illultrious family, as moft fay, by birth a Spaniard, and above 65 years old when he was called to the throne. He was, at that time, the mof remarkable man in Rome, for his virtues, moderation and refpect to the laws; and he owed his exaltation to the blamelefs conduct of his former life. When the fenate went to pay him their fubmiffions, he received them with his accuftomed humility; while Arius Antonius, his mof intimate friend, having embraced him with great familiarity, congratulated him on his acceftion to the empire : and indeed.no emperor had ever fhewn himfelf more worthy of the throne than Nerva; his only fault being that he was too indulgent,

352
Hisgreat
clemency and mode ration.

## veral good

laws. and often made a prey by his infidious courtiers.

However, an excefs of indulgence and humanity were faults that Rome could eafily pardon, after the cruelties of fuch an emperor as Domitian. Being long accultomed to tyranny, they regarded Nerva's gentle reign with rapture, and even gave his imbecility the name of benevolence. Upon coming to the throne, he folemnly fwore than no fenator of Rome fhould be put to death by his command, during his reign, though they gave ever fo juft a caufe. He conferred great favours, and beftowed large gifts, upon his particular friends. His liberality was fo extenfive, that, upon his firlt promotion to the empire, he was conftrained to fell his gold and filver plate, with his other rich moveables, to enable him to continue his liberalities. He releafed the cities of the empire from many fevere impolitions, which had been laid upon them by Vefpafian; took off a rigorous tribute, which had been laid upon carrages; and reftored thofe to their property who had been unjuftly difpoffeffed by Domitian.

During his fhort reign he made feveral good laws. He particularly prohibited the caltration of male children ; which had been likewife condemned by his predeceffor, but not wholly removed. He put all thofe flaves to death who had, during the laft reign, informed againtt their mafters. He permitted no ftatues to be erected to honour him, and converted into money fuch of Domitian's as had been fpared by the fenate. He fold many rich robes, and much of the fplendid furniture of the palace, and retrenched feveral unreafonable expences at court. At the fame time, he had fo little regard for money, that when Herodes Atticus, one of his fubjects, had found a large treafure, and wrote to the emperor how to difpofe of it, he received for anfwer, that he might $u f e$ it ; but the finder ftill irforming the emperor that it was a fortune too large for a private perfon, Nerva, admiring his honeity, wrote him word, that then he might abufe it.

A life of fuch generofity and mildnefs was not;
however, without its enemies. Calpurnius Craflus, with fome others, formed a dangerous confpiracy to deft: oy him; but Nerva would ufe no feverity : he refted fatisfied with banifhing thofe who vere culpable, though the Cenate were for inflicting more rigorous punifhments. But the moft dangèrous infurrection againft his interefts was from the pretorian bands; who, headed by Cafparius Olianus, infifted upon revenging the late emperor${ }^{*}$ s death, whofe memory was fill dear to them from his frequent liberalities. Nerva, whofe kindnefs to good men rendered him fill more obnoxious to the vicious, did all in his power to ftop the progrefs of this infurrection; he prefented himfelf to the mutinous foldiers, and, opening his bofom, defired them to frike there, rather than be guilty of fo much injuftice. The foldiers, however, paid no regard to his remonftrances; but, feizing upon Petronius and Parthenius, flew them in the moft ignominious manner. Not content with this, they even compelled the emperor to approve of their fedition, and to make a fpeech to the people, in which he thanked the cohorts for their fidelity. So difagree. able a conftraint upon the emperor's inclinations was, in the end, attended with the molt happy effects, as it caufed the adoption of Trajan to fucceed him in the empire. Nerva perceived that in the prefent turbulent Adopts difpofition of the times, he ftood in need of an affiftant Trajan as in the empire, who might thare the fatigues of government, and contribute to keep the licentious in awe. For this purpofe, fetting afide all his own relations, he fixed upon Ulpius Trajan, an utter Aranger to his family, who was then governor in Upper Germany, to fucceed him. Having put his determination in execution, and performed the accuftomed folemnities, he inftantly fent off ambaffadors to Cologne, where Trajan then refided, intreating his affitance in punifhing thofe from whom he had received fuch an infult. The adoption of this admirable man, proved fo great a curb to the licentioufnefs of the foldiery, that they continued in perfect obedience during the relt of this reign; and Cafparius being fent to him, was, by his command, either banifhed or put to death.

The adopting Trajan was the laft public act of Death of Nerva. In about three months after, having put him- Nerva. felf in a violent paffion with one Regulus a fenator, he was feized with a fever, of which he fhortly after died, after a lhort reign of one year four months and nine days. He was the firlt foreign emperor who reigned in Rome, and juttly reputed a prince of great generofity and moderation. He is alfo celebrated for his wifdom, though with lefs reafon, the greatelt inftance he gave of it, during his reign, being in the choice of his fucceffor.

Trajan's family was originally from Italy, but he him. G Trajan's family was originally from Italy, but he him. Grear qua.
felf was born in Seville in Spain. He very early ac- lities of companied his father, who was a general of the Ro. Trajan. mans, in his expeditions along the Euphrates and the Rhine ; and while yet very young, acquired a confiderable reputation for military accomplifhments. He enured his body to fatigue; he made long marches on foot; and laboured to acquire all the fkill in war which was neceffary for a commander. When he was mad. ge: neral of the army in Lower Germany, which was one of the moft confiderable employments in the empire, it made no alteration in his manners or way of living; and the commander was feen noway differing from the priyate tribune, except in his fuperior wifdom and vir- majeftic and vigorous; he was at that middle time of life which is happily tempered with the warmth of youth and the caution of age, being 42 years old. To thefe qualities were added, a modelly that feemed peculiar to himfelf alone; fo that mankind found a pleafure in praifing thofe accomplifhments of which the poffeffor feemed no way confcious. Upon the whole, Trajan is diftinguifhed as the greatelt and the belt emperor of Rome. Others might have equalled him in war, and fome might have been his rivals in clemency and goodnefs; but he feems the only prince who united thefe talents in the greateft perfection, and who appears equally to engage our admiration and our regard. Upon being informed of the death of Nerva, he prepared to return to Rome, whither he was invited by the united intreaties of the flate. He therefore began his march with the difcipline that was for a long time unknown in the armies of the empire. The countries through which he paffed were neither ravaged nor taxed, and he entered the city, not in a triumphant manner, though he had deferved it often, but on foot, attended by the civil officers of the ftate, and followed by his foldiers, who marched filently forward with modetty and refpect. It would be tedious and unneceffary to enter into a detail of this good monarch's labours for the ftate. His application to bufinefs, his moderation to his enemies, his modefty in exaltation, his liberality to the deferving, and his frugality in his own expences; thefe have all been the fubject of panegyric among his cotemperaries, and they continue to be the admiration of polterity. Upon giving the prefect of the pretorian band the fword, according to cuftom, he made ufe of this remarkable exprefion, "Take this fword, and ufe it, if I have merit, for me; if otherwife, againft me." After which he added, That he who gave laws was the firt who was bound to obferve them. His failings were his love of women, which, however, never hurried him beyond the bounds of decency ; and his immoderate paffion for war, to which he had been bred up from his childhood. The firt war he was engaged in after his coming to the throne was with the Dacians, who during the reign of Domitian, had committed numberlefs ravages upon the provinces of the empire. He therefore raifed a powerful army, and with great expedition marched into thofe barbarous countries, where he was vigoroully oppofed by Decebalus, the Dacian king, who for a long time withftood his boldeft efforts; but was at laft entirely reduced, and his kingdom made a Roman province, See Dacia. At his return to Rume, he entered the city in triumph; and the rejoicings for his victories latted for the fpace of 120 days.

Having thus given peace and profperity to the empire, Trajan continued his reign, loved, honoured, and almoft adored, by his fubjects. He adorned the city with public buildings; he freed it from fuch men as lived by their vices; he entertained perfons of merit with the utmot familiarity; and fo little feared his enemies, that he could fcarcely be induced to fuppofe that he had any. chrilliaus, about
look upon the Chriftians with a fufpiciouts eye. The extreme veneration which he profeffed for the religion of the empire, fet him fedulounty to oppofe every innovation, and the progrefs of Chrifianity feemed to alarm him. A law had tor fome time before been paffed, in which all Heteriæ, or focieties diffenting from the eftablifhed religion, were confidered as illegal, being reputed nurferies of impolture and fedition. Under the fanction of this law, the Chrillians were periecuted in all parts of the empire. Great numbers of them were put to death, as well by popular tamults as by edicts and judicial proceedings. However, the perfecutirn ceafed after fome time; for the emperor having advice from Pliny, the pro-conful in Bithynia, of the innocence and fimplicity of the Chriftians, and of their inoffenfive and moral way of living, he fufpended their punifhments. But a total ftop was put to them upon Tiberianus the governor of Paleftine's fending him word, That he was wearied out with executing the laws againt the Galileans, who crouded to execution in fuch multitudes, that he was at a lofs how to proceed. Upon this information, the emperor gave orders, that the Chriftians fhould not be fought after; but if any offered themfelves, that they fhould fuffer. In this manner the rage of perfecution ceafed, and the emperor found leifure to turn the force of his arms againft the Armevians and Parthians, who now began to throw off all fubmifion to Rome.

While he was employed in thefe wars, there was a Iufurrecdreadful infurrection of the Jews in all parts of the em-tion of the pire. This wretched people, fill infatuated, and ever Jews. expecting fome fignal deliverer, took the advantage of Trajan's abfence in the eaft to maflacre all the Greeks and Romans whom they got into their power, without reluctance or mercy. This rebellion firt began in Cyrene, a Roman province in Africa; from thence the flame extended to Egypt, and next to the ifland of Cy prus. Thefe places they in a manner difpeopled with ungovernable fury. Their barbarities were fuch, that they eat the flefh of their enemies, wore their fkins, fawed them afunder, caft them to wild beafts, made them kill each other, and fudied new torments by which to deftroy them. However, thefe cruelties were of no long duration: the governors of the refpective provinces making head againft their tumultuous fury, foon treated them with a retaliation of cruelty, and put them to death, not as human beings, but as ourragious pefts to fociety. As the Jews had practifed their cruelties in Cypıus particularly, a law was publicly enacted, by which it was made capital for any Jew to fet foot on the ifland.

During thefe blondy tranfactions, Trajan was pro. Succeffes ${ }_{3}^{359}$ fecuting his fucceffes in the eaft. His firlt march was Trajan in into Armenia, the king of which country had difclaimed the call. all alliance with Rome, and received the enfigns of roy. alty and duminion from the monarch of Parthia. However, upon the news of Trajan's expedition, his fears were fo great, that he abandoned his country to the invaders; while the greatel part of his governors and nobility came fubmiffively to the emperor, acknowledging themfelves his fubjects, and making him the molt coftly prefents. Having in this manner taken poffeflion of the whole country, and gotten the king into his power, he marched into the dominions of the

konte.

## $\xrightarrow{2}$

king of Parthia. There entering the dpolent kingdom of Mefopotamia, he reduced it into the form of $\mathfrak{a}$ Ro man province. From themce he went againit the Parthians, marching on foot at the head of his army; in this manner croffing the rivers, and canfurming to all the feverities of difcpline which were impored on the meanef foldier. His fucceffes againf the Parthians wete great and numerous. He conquered Syria and Chaldea, and took the famous city of Babylon. Here, attempting to crofs the Euphrates, he was oppofed by the enemy, who were refolved to ftop his paffage : but he fecretly caufed boats to be made upon the adjoining mountains; and bringing them to the water fide, palfed his army with great expedition, not, however, without great flanghter on both fides. From thence he traverfed tracts of country which had never before been invaded by a Roman army, and feemed to take a pleafure in purfuing the fame march which Alexander the Great had formerly marked out for him. Having paffed the rapid Atreams of the Tigris, he advanced to the ciiy Ctefiphon, which he took, and opened himfelf a paffage into Perfia, where he made many conquefts, that were rather falendid than ferviceable. After fubduing all the country bordering on the Tigris, he marched fouthward to the Perfian gulph, where he fubdued a monarch who poffeffed a confiderable inland made by the divided ftreams of that river. Here, winter coming on, he was in danger of lofing the greatelt part of his army by the inclemency of the chmate and the inundations of the river. He therefore with indefatigable pains fitted out a fleet, and failing down the Perfian gulph, entered the Indian ocean, conquering, even to the Indies, and fubduing a part of them to the Roman empire. He was prevented from purfuing further conquelts in this diftant country, both by the revolt of many of the provinces he had already fubdued, and by the fcarcity of provifions, which feemed to contradict the reports of the fertility of the countries he was induced to invade. The inconveniences of increafing age alfo contributed to damp the ardour of this enterprife, which at one time he intended to purfue to the confines of the earth. Returning, therefore, along the Perfian gulph, and fending the fenate a particular account of all the nations he had conquered, the names of which alone compofed a long catalague, he prepared to punifh thofe countries which had revolted from him. He began by laying the famous city of Edeffa, in Mefopotamia, in afhes; and in a fhort fpace of time, not only retook all thofe places which had before acknowledged fubjection, but conquered many other provinces, fo as to make himfelf maiter of the molt fertile kingdoms of all Afia. In this train of fucceffes he farce met with a repulfe, except before the city Atra, in the deferts of Arabia. Wherefore judging that this was a proper time for bounding his conquetts, he refolved to give a mafter to the countries he had fubdued. With this refolution he repaired to the city Ctefiphon, in Perfia; and there, with great ceremony, crowned Parthamafpates king of Parthia, to the great joy of all his fubjects. He eftablifhed another king allo over the kingdom of Albania, near the Cafpian fea. Then placing governors and lieutenants in other provinces, he refolved to return to his capital in a more magnificent manner than any of his predeceffors had done before him. He accordingly left Adrian general of all
his forces in the eaft; and continued his journey towards Rome, where the mof magnificent preparations were made for his arrival. However, he had not got farther than the province of Cilicia, when he found himfelf too weak to proceed in his ufual manner. He therefore caufed himfelf to be carried on hip-board to the city of Selencia, whete he died of the apoplexy, having been attacked by that difoxder once before. During the time of his indifpofition, his wife Plotina conftantly attended near him; and, knowing the emperor's dillike to Adrian, it is thought forged the will, by which he was adopted to fucceed.

Trajan died in the 63 d year of his age, after a reign He dies, of nineteen years fix months and fifteen days. How and is fuchighly he was efteemed by his fubjects appears by their ceeded by manner of bleffing his fucceffors, always wifhing them Adrian. the fortune of Auguitus, and the goodnefs of Trajan. His military virtues, however, upon which he chiefly valued himfelf, produced no real advantages to his country; and all his conquefts difappeared, when the power was withdrawn that enforced them.

Adrian was by defcent a Spaniard, and his anceftors were of the fame city where Trajan was born. He was nephew to Trajan, and married to Sabina his grandniece. When Trajan was adopted to the empire, Adrian was a tribune of the army in Mæfia, and was fent by the troops to congratulate the emperor on his advancement. However, his brother-in-law, who defired to have an opportunity of congratulating Trajan himfelf, fupplied Adrian with a carriage that broke down on the way. But Adrian was refolved to lofe no time, and performed the reft of the journey on foot. This afliduity was very plealing to the emperor; but he difliked Adrian from feveral more prevailing motives. His kinfman was expenfive, and involved in debt. He was, befides, inconftant, capricious, and apt to envy another's reputation. Thefe were faults, that, in Trajan's opinion, could not be compenfated either by his learning or his taients. His great 1 kill in the Greek and Latin languages, his intimate acquaintance with the laws of his country and the philofophy of the times, were no inducement to T'rajan, who, being bred himfelf a foldier, defired to have a military man to fucceed him. For this reafon it was that the dying emperor would by no means appoint a fucceffor; fearful, perhaps, of injuring his great reputation, by adopting a perfon that was unworthy. His death, therefore, was concealed for fome time by Plotina his wife, till Adrian had founded the inclinations of the army, and found them firm in his interefts. They then produced a forged initrument, importing that Adrian was adopted to fucceed in the empire. By this artifice he was elect. ed by all orders of the ftate, though then ablent from Rome, being left at Antioch as general of the forces in the ealt.

Upon Adrian's election, his firt care was to write the fenate, exculing himfelf for affuming the empire without their previous approbation; imputing it to the hatty zeal of the army, who rightly judged that the fenate ought not long to remain without a head. He then began to purfue a courfe quite oppofite to that of his predeceffor, taking every method of declining war, and promoting the ar s of peace. He was quite fatis. fied with preferving the ancient limits of the empire, and feemed no way, ambitious of extenfive conqueft.

Romic. For this reafon he abandoned all the conquefts which Trajan had made, judging them to be rather an incon-

361 He abanclensall the eaftern conquefts of Adrian
venience than an advantage to the empire; and made the river Euphrates the boundary of the empire, placing the legions along its banks to prevent the incurfions of the enemy.
Having thus fettled the affairs of the eaft, and leaving Severus governor of Syria, he took his journey by land to Rome, fending the afhes of Trajan thither by fea. Upon his approach to the city, he was informed of a magnificent triumph that was prepating for him; but this he modefly declined, defiring that thofe honours might be paid to Trajan's memory which they had defigned for him. In confequence of this command, a moft fuperb triumph was decreed, in which Trajan's fatue was carried as a principal fgure in the proceffion, it being remarked that he was the only man that ever triumphed after he was dead. Not content with paying him thefe extraordinary honours, his afhes were placed in a golden urn, upon the top of a column 140 feet high. On this were engraven the particulars of all his exploits in baffo relievo; a work of great labour, and which is fill remaining. Thefe teftimonies of refpect to the memory of his predeceffor did great honour to the heart of Adrian. His virtues, however, were contrafted by a ftrange mixture of vices; or to fay the rruth, he wanted ftrength of mind to preferve his general rectitude of character without deviation. As an emperor, however, his conduct was moft admirable, as all his public tranfactions appear dictated by the foundeft policy and the molt difinterefted wifdom. But thefe heing already enumerated under the article Adrian, it would be fuperfluous to repeat them in this place. He was fucceeded by Marcus Antoninus, afterwards furnamed the Pious, whom he adopted fome time before his death. See Antoninus Pius.

From the beginning of the reign of Antoninus Pius, we may date the decline of the Roman empire. From the time of Cæfar to that of Trajan, fcarce any of the emperors had either abilities or inclination to extend
the limits of the empire, or even to defend it againft Rome. the barbarous nations who furrounded it. During all this face, only fome inconfiderable provinces to the northward of Italy, and part of the ifland of Britain, had been fubjugated. However, as yet, nothing was loft ; but the degeneracy and corruption of the people had fown thofe feeds of diffolution which the empire quickly began to feel. The diforders were grown to fuch an height that even Trajan himfelf could not cure them. Indeed his eaftern conquefts could fcarce have been preferved though the republic, had been exifting in all its glory; and therefore they were quietly refigned by his fucceffor Adrian, as too diftant, difaffected, and ready to be over-run by the barbarous nations. The province of Dacia, being nearer to the centre of government, was more eafily preferved; and of confequence remained for a long time fubject to Rome. During the 23 years of the reign of Antoninus, few remarkable events happened. The hiftorians of thofe times are exccflive in their praifes of his juftice, generofity, and other virtues, both public and private. He put a ftop to the perfecution of the Chriftians, which raged in the time of Trajan and Adrian, and reduced the Brigantes, a tribe of Britons, who had revolted. However, during his reign, feveral calamities befel the empire. The Tiber, overflowing its banks, laid the lower part of Rome under water. The inundation was followed by a fire, and this by a famine, which fwept off great numbers, though the emperor took the utmoft care to fupply the city from the moft diftant provinces. At the fame time the cities of Narbonne in Gaul, and Antioch in Syria, together with the great fquare in Carthage, were deftroyed by fire; however, the emperor foon rellored them to their former condition. He died in the year 160, univerfally lamented by his fubjects, and was fucceeded ty Marcus Aurelius, furnamed the Pbilofopher, whom he had adopted towards the latter end of his reign.

The tranfactions of this emperor the reader will find related under the article $A_{\text {ntoninvs }} P$ bilofopbus, (A)
(A) As, after the death of Marcus Aurelius, the Roman, empire declined very faft, it may not be amifs here to give fome account of the military and other eftablifhments of the Roman emperors. Mr Gibbon obferves that, in the times of the commonwealth, the ufe of arms was confined to thofe who had fome property to defend, and an intereft in maintaining the laws which were propofed to be enacted. But, as the public freedom declined and war became degraded into a trade, thofe who had the property of the country chofe rather to hire others than to expofe their own perfons, as is the cafe with our modern armies. Yet, even after all confideration of property had been laid afide among the common foldiers, the officers continued to be chofen from among thofe who had a liberal education, together with a good fhare of property. However as the common foldiers, in which the ftrength of an army confifts, had now no more of that virtue called patriotifm, the legions which were formerly almoft invincible, no longer fought with the fame ardour as before. In former times, the profeffion of a foldier was more honuurable than any other; but, when the foldiers came to be looked upon as hirelings, the honour of the profeflion funk of courfe, and, by this means, one of the fronget motives which the foldiers had to fubmit to their fevere difcipline, and exert themfelves againft their enemies, was removed. On the very firf entrance of a foldier into the Roman fervice, a folemn oath was adminiftered to him, by which he engaged never to defert his ftandard; to fubmit his own will to that of his leaders, and to facrifice his life for the fafety of the emperor and the empire. The attachment which the Romans had to their flandards was indeed aftonifhing. The golden eagle, which appeared in the front of the legion, was almolt an object $n f$ adoration with them; and it was efleemed impious, as well as ignominious, to abandon that facred enfign in the time of danger. The centarions bad a right to punifh with blows, the generals with death; and it was an inflexible maxim of the Ruman dificipline, that a good foldier fhould dread his officers mach more than the enemy.

Notwithftanding all this, fo fonfible were the Romans of the infufficiency of mere valour withont fill, that military

## R OM

Rome. After the death of Marcus Aurelins, his fon Commodus fucceeded to the imperial throne without oppofation. He was in every refpect unworthy of his fa-
ther; and fo prone to vice, that he was generally believed to have been the fon, not of Marcus Aurelius, but of a celebrated gladiator, with whom the emprefs
military exercifes were the unremitted object of their difcipline. The recruits and young foldiers were conflantly trained both in the morning and evening; and even the veterans were not excufed from the daily repecition of their exercife. Large fheds were erected in the winter-quarters of the troops, that thefe ufeful labours might not be interrupted by tempeftuous weather, and the weapons ufed in thefe imitations of war were always twice as heavy as thofe made ufe of in real action. The foldiers were diligently infructed to march, to run, leap, fwim, carry heavy burdens, and handle every fpecies of weapon either for offence or defence; to form a variety of evolutions; and to move to the fuund of flutes in the pyrrhic or martial dance. It was the policy of the ableft generals, and even of the emperors themfelves, to encourage thefe military fludies by their prefence and example; and we are informed that Adrian, as well as Trajan, frequently condefcended to inftruct the unexperienced foldiers, to reward the diligent, and fometimes to difpute with them the prize of fuperior frength and dex. terity. Under the reigns of thofe princes, the fcience of tactics was cultivated with fuccefs; and, as long as the empire retained any vigour, their military inftuctions were refpected as the moft perfect model of Ruman difcipline.

From the foundation of the city, as the Romans had in a manner been continually engaged in war, many alterations had taken place in the conftitution of the legions. In the time of the emperors, the heavy-armed infantry, which compofed its principal ftrength, was divided into 10 cohorts and 55 companies, under the orders of a correfpondent number of tribunes and centurions. The firt cohort, which always claimed the poft of honour and the cuftody of the eagle, was formed of inc5 foldiers, the moft approved for valour and fidelity. The remaining nine cohorts confifted each of 555 ; and the whole body of legionary infantry confifted of $\sigma_{100}$ men. Their arms were uniform, and excellently adapted to the nature of their fervice; an open helmer with a lofty creft ; a breaft-plate or coat of mail; greaves on their legs, and a large buckler of their left arm. Their buckler was of an oblong and concave figure, four feet in length, and two and an half in breadth; framed of a light wood, covered with a bull's hide, and ftrongly guarded with brafs plates. Befides a lighter fpear, the legionary carried the pilum, a ponderous javelin about fix teet long, and terminated by a maffy triangular point of theel 18 inches in length. This weapon could do execution at the diftance of 10 or 12 pace; ; bnt its froke was fo powerful, that no cavalry durft venture within its reach, and fcarce any armour could be formed proof againgt it. Asfnon as the Roman had darted his pilum, he drew his.fword, and rufhed forward to clofe with the enemy. It was a fhort well-tempered Spanifh blade with a double edge, and equally calculated for the purpofes of pufhing and ftriking ; but the foldier was always inftructed to prefer the former ufe of his own weapon, as his body remained thereby the lefs expofed, while at the fame time he inficted a more dangerous wound on his adverfary. The legion was ufually drawn up eight deep; and the regular diltance of three feet was lett between the filesand ranks. Thus the foldier poffeffed a free fpace for his arms and motions; and fufficient intervals were allow ed, through which feafonable reinforcements might be introduced to the relief of the combatants. The cavalry, without which the force of the legion remained imperfect, was divided into ten troops or fquadrons: the firt, as the companion of the firt cohort, confifted of 132 men ; whill each of the other nine amounted only to 66 . The entire eftablifhmer:t formed a body of 726 horfe, naturally connected with its refpective legion; but occa fionally acting in the line, and compofing a part of the wings of the army. The cavalry of the ancient republic was comp, fed of the nobleft youths of R me and Italy, who, by performing their military fervice on horfeback, prepared themfelves for the offices of fenator and conful; but after the alteration of manners and govern-ment which took place at the end of the commonwealth, the molt wealthy of the equeftrian order were engaged in the adminitration of juftice and of the revenue; and, whenever they embraced the profelfion of arms, they were immediately entrufted with a troop of horfe or a cohort of foct, and the cavalry, as will as the infantry, were recruited from the pr vinces. The horfes were bred for the moft part in 3pain, or in Cappadocia. The Roman troopers defpifed the complete armour which encumbered the cavalry of the eaf. Inftead of this, their arms confifted only of an helmet, an oblong thiedd, light bonts, and a coat of mail. A javelin and a long broad. fword were their principal offenfive weapons. They feem to have borrowed the ufe of lances and iron maces from the barbarians.

Befides the legionaries, the Romans, efpecially in the times of the emperors, began to take auxiliaries into their pay. Confiderable levies were regularly made among thole provincials who had not yet attained to the rank of Roman citizens. Many dependen: princes and communities, difperfed round the frontiers, were permitted, for: a while, to hold their freedom and fecurity by the tenure of military fervice. Even felect troops of barbarians. were compelled to enter into the fervice; which was afterwards found to be a moft deftructive expedient, not only as it carried the ,Roman military fkill among barbarians who were otherwife unacquainted with it, but it gave thefe auxiliaries themfelves frequent opportunites of revolting, and at laft of dethroning the emperors at pleafure, and even of overturning the empire itfelf. The number of auxiliaries was feldom inferior to that of the legionaries themfelves. The braveft and moft faithful bands amuag them were placed under the command of prefects and centurions, and ferverely trained in the arts of Roman difcipline; but the tar greater part retained. thofe arms which they had ufed in their native country. By this infitution, each legion, to whom a certain: zumber of auxiliaries was allotted, contained within itfelf every fpecies of lighter troops, and of miffile weapons;

Rome. Fautina was fuppofed to be intimate. According to Mr Gibbon, however, Commodus was not, as has been reprefented, a tiger born with an infatiate thirf of hu-
man blood, and capable from his infancy of the moft inhuman actions. Nature had formed him of a weak, rather than a wicked difpofition. His fimplicity and
and was capable of encountering every nation with the advantages of its refpective arms and difcipline. Nor was the legion deflitute of what, in modern language, would be ftyled a train of artillery. This confifted of 10 military engines of the largeit fize, and 56 fmaller ones; but all of them, either in an oblique or horizontal manner, difcharged fones and darts with irrefiltible violence.

The camp of a Roman legion prefented the appearance of a fortified city. As foon as the fpace was marked out, the pioneers carefully levelled the ground, and removed every impediment that might interrupt its perfect. regularity. Its form was an exact quadrangle; and it may be computed that a fquare of 700 yards was fufficient for the encampment of 20,000 Romans, though a fimilar number of modern troops would expofe to the enemy a front of more than treble that extent. In the midft of the camp, the pratorium, or general's tent, arofe above the others; and the cavalry, infantry, and auxiliaries, had each their refpective ftations appointed them. The ftreets were broad, and perfectly ftraight; and a vacant face of 200 feet was left on all fides between the tents and rampart. The rampart itfelf was 12 feet high, armed. with a line of frong and intricate palifades, and defended by a ditch 12 feet deep and as much broad. This labour was performed by the legions themfelves, to whom the ufe of the fpade and the pick-ax was no lefs familiar than that of the fword or pilum. Whenever the trumpet gave the fignal of departure, the camp was almoft inftantly broke up, and the troops fell into their ranks without delay or confufion. Befides their arms, which the foldiers fearcely confidered as an incumbrance, they were laden with their kitchen-furniture, the inftruments of fortification, and provifions for many days. Under this weight, which would opprefs a modern foldier, they were taught to advance by a regular ftep, near 20 . miles in fix hours. On the appearance of an enemy, they threw afide their baggage, and, by eafy and rapid evolutions, converted the column of march into an order of battle. The flingers and archers Rkirmilhed in the front; the auxiliaries formed the firt line, and were feconded or fuftained by the legions. The cavalry covered the flanks, and the military engines were placed in the rear.

The numbers of the Roman armies are not eafily calculated with any tolerable accuracy. We may compute, however, that the legion, which confifted of $683^{i}$ Romans, might, with its attendant auxiliaries, amount to 12,500 men. The peace eftablifhment of Adrian and his fucceffors was compofed of no fewer than 30 of thefe formidable brigades; and moft probably formed an army of 370,000 men. Inftead of being confined within the walls of fortified cities, which the Romans confidered as the refuge of weaknefs or pufillanimity, the legions were encamped on the banks of the great rivers, and along the frontiers of the barbarians. Three legions were fufficiest for Britain. The principal ftrength lay upon the Rhine and Danube, and confifted of 16 legions, difpofed in the following proportions : two in the Lower, and three in the Upper Getmany; one in Rhatia; one in Noricum; four in Pannonia; three in Mæfia; and two in Dacia. The defence of the Euphrates was intrufted to eight legions, fix of whom were placed in Syria, and the other two in Cappadocia. With regard to Egypt, Africa, and Spain, as they were far removed from any important fcene of war, a fingle legion maintained the domeftic tranquillity of each of thofe great provinces. Italy was defended by the city cohorts and prætorian guards formerly mentioned. Thefe differed nothing from the legions in their arms and inftitutions, except in a morefilendid appearance, and a lefs rigid difcipline.

The Roman navy, though fufficient for every ufeful purpofe of government, never feemed adequate to the greatnefs of the empire. The policy of the emperors was directed only to preferve the peaceful dominion of the Mediterranean fea, which was included within their dominions, and to protect the commerce of their fubjects. Two permánent fleets were ftationed by Auguftus, one at Ravenna on the Adriatic, and the other at Mifenum in the bay of Naples. A very confiderable force was alfo fationed at Frejus in Provence; and the Euxine was guarded by 40 fhips and 3000 foldiers. To all thefe we may add the fleet which preferved the communication between Gaul and Britain, and a great number of veffels conftantly maintained on the Rhine and Danube to harafs the enemy, or intercept the paffage of the barbarians. The whole military eftablifhment by fea and land anounted to about 450,000 men.

It was not, however, to this formidable power alone that the empire owed its greatnefs. The policy of the laws contributed as much to its fupport as the martial eftablifhment itfelf. According to Mr Gibbon, though the provinces might occafionally fuffer from the partial abufe of delegated authority, the general principle of government was wife, fimple, and beneficent. Among thefe beneficient principles he reckons that of univerfal toleration; but to this there were feveral exceptions: for the Britifh Druids were perfecuted and deftroyed by the Romans on account of their religion; the Egyptians and Jews were fometimes perfecuted; and the Chrifians were frequently fo, and that even under the very beft emperors, Trajan and Marcus Aurelius. However, as a very general toleration of religious fentiments did take place under the heathen emperors of Rome, we muft certainly look upon this as one of the caufes of the proiperity of the empire.

Another thing which greatly contributed to the flrength and profperity of the empire, was extending of the freedom of Rome to fo many peofle. "The narrow policy. (fays Mr Gibbon) of preferving, without any foreign mixture, the pure blood of the ancient citizens, had checked the fortune and hatened the ruin of Athens and Sparta. During the moft flouifing era of the Athenian conmonwealth, the number of citizens decreafed gradually from about 30,000 to $21, c \mathrm{co}$. If, on the contrary, we fudy the growth of the Roman republic, we

timidity rendered him the flave of his attendants, who gradually corrupted his mand. His cucity, which at fint obeyed the dictates of others, degenerated into

Vol. XVI.
habit, a foul." But ho foul." But, however this may be, it is certain that the
actions of this emperor were flagitious almolt beyond 3 I aptralié.
may difcover, that notwichftanding the inceffant demands of wars and colonies, the citizens, who, in the tiry : of Survius 'Tulhus, amounted to no more than 83,000 , were multiplied, before the end of the focial war, to the rumber oi 463,000 men able to bear arms in the fervice of their country. When the allies of Rome clamed an equal thare of honours and privileges, the fenate preferred the chance of war to a conceffion; however, it laft, all the Italian fates, excont the Sanmites and Lucamians, were admitted into the bofom of the republic, and fan contributed to the ruin of puilic freedom. When the popular affemblies had been fuppreffed by the adminiftration of the emperor:, the conquerors were diftinguilhed from the vanquifhed nations only as the firls and moft honourable order of fibjects; and their increafe, however rapid, was no longer expofed to the fame dangers. Yet the princes who adopted the maxims of Augultus, guarded with the fricteft care the dignity 0 : the Roman name, and difiufed the freedom of the city with a prudent liberality.
"Till the privileges of the Romans had been progreffively extended to all the inhabitants of the empire, an: important ditinction was preferved between Italy and the provinces. The eftates of the Italians were exempted from taxes, and their perfons from the arbitrary jurifdiction of governors. From the foot of the Alps to the extremity of Calabria, all the natives of Italy were born citizens of Rome. The provinces of the empire wers deftitute of any public force or conftitutional freedom. The free ftates and cities, which had embraced the caufe of Rome, were infenfibly funk into real fervitude. The public authority was every where engrofled by the minifters of the fenate and of the emperors, and that authority was abfolute. But the fame falutary maxim: of government which had fecured the peace and obedience of Italy, were extended to the molt diftant conquelts. A nation of Romans was gradually formed in the provinces, by the double expedient of introdu. cing colonies, and of admitting the mon faithful and deferving provincials to the freedom of Rome.
"So fenfible were the Romans of the influence of language over national manners, that it was their moft fe. rious care to extend with the progrefs of their arms, the ufe of the Latin tongue. The eaftern provinces, however, were lefs docile in this refpect than the weftern ones; and this obvious difference made a dittinction between the two portions of the empire, which became very remarkable when it began to decline. Nor was the influence of the Greek language and ientiments confined to the narrow limits of that once celebrated country. Their cmpire, by the progrefs of colonies and coaquelt, had been diffufed from the Adriatic to the Euphrates and Nile. Afia was covered with Greek cities, and the long reign of the Macedonian kings had introduced a filent revolution into Syria and Egypt. In their pompous courts, thofe princes united the elegance of Athens with the luxury of the eaft; and the example of the court was imitated, at an humble diftance, by the higher ranks of their fubjects. Such was the general divifion of the Roman empire into the Latin and Greek languages; to which we may add a third diftinction for the body of the natives in Syria, and efpecially in Egypt. The ufe of their ancient dialects, by fecluding them from the commerce of mankind, checked the improvements of thefe barbarians. The flothful effeminacy of the former expofed them to the contempt, the fullen ferocioufnefs of the latter excited the averfion, of the Roman conquerors. They feldom defired or deferved the freedom of the city; and it is remarked, that more than 230 years elapfed after the ruin of the Ptolemies, before a native Egyptian was admitted into the fenate of Rome.
"The number of fubjects who acknowledged the laws of Rome, of citizens, of provincials, and of flaves, cannot now be fixed with fuch accuracy as the importance of the object would deferve. We are informed, that when the emperor Claudius exercifed the office of cenfor, ne took an account of 6,954,000 Roman citizens; who, with the proportion of women and children, mult have amounted to about $20,000,000$ of fouls. The multitude of fubjects of an inferiur rank was uncertain and fluctuating: but after weighing with attention every circumftance which could infuence the balance, it feems probable that there exifted, in the time of Claudius, about twice as many provincials as there were Roman citizens, of either fex, and of every age; and that the $n_{d}$ ves were at leaft equal in number to the free inhabitants of the Roman world. The total amount of this imperfect calculation would rife to about 120 millions of perfons; a degree of population which polfibly exceeds that of modern Europe, and forms the moft numerous fociety that has ever been united under the fame fyltem of government.
"Domeftic peace and union were the natural confequences of the moderate and comprehenfive policy embraced by the Romans. The vanquifhed nations, tlended into one great people, refigned the hope, nay even the wifh, of refuming their independence, and fcarcely confidered their own exiftence as diftinct from the exiftence of Rome. The eftablifhed authority of the emperors pervaded, without an effort, the wide extent of their dominions, and was exercifed with the fame facility on the banks of the Thames, or of the Nile, as on thofe of the Tiber. The legiens were deftined to ferve againt the public enemy, and the civil magittrate feldom required the aid of a military force.
"It was fcarcely pofilible that the eyes of contemporaries fhould difcover in the public felicity the latent caufes of decay and corruption. This long peace, and the uniform government of the Romans, introduced a flow and fecret poifon into the vitals of the empire. The minds of men were gradually reduced to the fame level; the fire of genius was extinguifhed, and even the military fpirit evaporated. The natives of Europe were brave and sobuft. Spain, Gaul, Britain, and Illyricum, fupplied the legions with excellent foldiers, and confituted the

## $\mathrm{ROM} \quad\left[\begin{array}{ll}434\end{array}\right] \quad \mathrm{R} O \mathrm{M}$

a paral:el. Mary very ftrange infances of his cruelty are related by the ancients. He is faid to have cut afunder a corpulent man whom he faw walkirg along the freet; partly, to try his own frength, in which he greatly excelled ; and partly, as he himfelf owned, out of curiofity, to fee his entrails drop out at once. He took pleafure in cutting off the feet, and putting out the eyes, of fuch as he met in his rambles through the city; telling the former, after he had thus maimed them, that now they belonged to the nation of Monopolili; and the latter, that they were now become Luffcinii) alluding to the word lufcus, " one-eyed." Some he murdered becanfe they were negligently dreffed; others, becaufe they feemed to be trimmed with too much nicety. He pretended to great fkill in furgery, efpecially at letting blood: but fometimes, inftead of eafing by that means thofe whom he vifited, or who were prevailed upon to recur to him, he cut off, by way of diverfion, their ears and nofes. His lewdnefs and debaucheries weie equally remarkable, and equally infamous. However, he is faid to have been exceedingly well filled in archery, and to have performed incredible feats in that way. He excelled all men in Itrength; and is faid to have run an elephant through with his fyear, and to have killed in the amphitheatre 100 lions, one after another, and each of them at one blow. Forgetful of his dignity, he entered the lifts with the common gladiators, and came off conqueror 735 times; whence he often fubfcribed himfelf in his letters, the conqueror of 1000 gladiators.

The public tranfactions of this reign were but very few. Soon after his father's death, Commodus concluded a peace with the Marcommanni, Quadi, \&c. on
the following conditions. I. That they fhould not fettle within five miles of the Danube. 2. That they fhould deliver up their arms, and fupply the Romans with a certain number of troops when required. 3 . That they thould affemble but once a month, in one place only, and that in prefence of a Roman centurion. 4. That they flould not make war upon the Jazyges, Buri, or Vandals, without the confent of the people of Rome. On the other hand, Commodus promifed to abandon, which he accordingly did, all the caftles and fortreffes held by the Romans in their country, excepting fuch as were within five miles of the Danube. With the other German nations, whom his father had almof entirely reduced, he concluded a very difhonourable peace; nay, of fome he purchafed it with large fums of money.

Soon after the return of the emperor to Rome, his fifter Lucilla, perceiving that he was univerfally abhorred on account of his cruelty, formed a confpiracy againf his life. Among the confpirators were many fenators of diftinction. It was agreed among them that they fhould fall upon the emperor while he was going to the amphitheatre through a narrow and dark paffage ; and that Claudius Pompeianus, to whom Lucilla had betrothed her daughter, fhould give the firlt blow. But be, inftead of Ariking at once, thowed him the naked dagger, and cried out, "This prefent the fenate fends you :" fo that the guards had time to refeue the emperor, and to feize the conlpirators, who were foon after put to death. The emperor banifhed his fifter to the ifland of Caprex, where he foon after caufed her to be privately murdered.

The favourite minilter of Commodus was one Pe rennis;
real ftrength of the monarchy. Their perfonal valour remained; but they no longer poffeffed that public courage which is nourithed by the love of independence, the fenfe of national honour, the prefence of danger, and the habit of command. They received laws and governors from the will of their fovereign, and trulted for their defence to a mercenary army. The pofterity of their boldeft leaders were contented with the rank of citizens, and fubjects. The moft afpiring fipits reforted to the court or ftandard of the emperors; and the deferted provinces, deprived of political ftrength or union, infenfibly funk into the languid indifference of privatelife.
" The love of letters, almof infeparable from peace and refinement, was fafhionable among the fubjects of Adrian and the Antonines; who were themfelves men of learning and curiofity. It was diffufed over the wholeextent of their empire; the moft northern tribes of Britons had acquired a tafte for rhetoric ; Homer as well as Virgil were tranferibed and ftudied on the banks of the Rhine and Danube ; and the mof liberal rewards fought out the faintelt glimmerings of literary merit. The fciences of phyfic and aftronomy were cultivated $v$. ith fome degree of reputation; but, if we except Lucian, an age of indolence pafled away without producing a fingle writer of genius who deferved the attestion of pofterity. The authority of Plato, of Ariftotle, of Zeno, and Epicurus, itill reigned in the fchools; and their fyftems, tranfmitted with blind deference from one generation of difciples to another, precluded every generous attempt to correct the errors or enlarge the bounds of the human: mind. The beauties of the poets and orators, inftead of kindling a fire like their own, produced only fervile imitations; or, if any ventured to deviate from thefe models, they deviated at the fame time from good fenfe and propriety. The provincials of Rome, trained by an uniform artificial education, were engaged in a very unequal competition with thofe bold ancients, who, by expreffing their genuine feelings in their native tongue, had already occupied every place of honour. The name of poet was almoft forgotten; that of arator was ufurped by the fophifs. A cioud of critics, of compilers, of commentators, darkened the face of learning, and the decline of genius was foon followed by the corruption of talte.
"Longinus obferves and laments the degeneracy of his contemporaries, which debafed their fentiments, enervated their courage, and depreffed their talents; comparing them to pigmies, whote ftature has been diminifhed by conftant preffure on their limbs. This diminutive fature of ma":kind was conitantly finking below the old ftandard, and the Roman world was indeed penpled by a race of pigmi.s; when the fierce gidats of the north broke in and mended the puny breed. They reltored a manly freedom ${ }_{i}$ and $_{2}$ after the revolution of ten centuries ${ }_{2}$, freedom became the happy parent of tane and fcience.".

Rome. rennis; who in oppreffion and cruelty feems to have been nothing inferior to thofe of the moft tyrannical emperors. During the firf part of the reign of Commoduc, he ruled with an abfolute fway ; but at laft was torn in pieces by the enraged foldiery, whom he had offended by his too great feverity. He was fucceeded in his place by a freedman named Cleander; for the empero: himfelf was fo much taken up with his pleafiures, that he could not beftow even a moment on the affairs of thate. The new miniter abufed his power in a more flagrant manner than even his predeceffor had done. By him all things were openly fet to fale; offices, provinces, public revenues, juftice, and the lives of men both innccent and guilty. The minitter, who ruled the emperor without controul, infufed fuch terrors into his timorous mind, that he changed the captains of his guards almoft continually. One Niger enjoyed the dignity only fix hours; another only five days; and feveral others a ftill fhorter fpace. Moft of thofe officers loft their lives along with their employments; being accufed of treafon by Cleander, who continually folicited, and at laft obtained, that important polt for himfelf.
365 In the year 187 happened a remarkable revolt. One Maternus, a common foldier, having fled from his colours, and being joined by many others guilty of the fame crime, grew in a fhort time fo powerful, the banditri flocking to him from all parts, that he over-ran and plundered great part of Gaul and Spain; ftormed the Atrongeft cities; and ftruck the emperor and people of Rome with fuch terror, that troops were raifed, and armies difpatched againt him. Pefcennius Niger was fent to make head againft him in Gaul, where he became very intimate with Severus, who was then governor of Lyons, and who wrote a letter to the emperor, commending the prudent and gallant behaviour of Ni ger in purfuing the rebels. Maternus, finding himfelf reduced to great ftraits, divided his men into feveral fmall bands, and marched privately with them by different ways into Italy; having nothing lefs in view than to murder the emperor during the folemnity which was kept annually in honour of the mother of the gods, and on his death to feize upon the empire for himfelf. They all arrived at Rome undifcovered; and feveral of his men had already mixed themfelves with the emperor's guards, when others of his own party betrayed him. He was immediately feized and executed; and his death put an end to the difturbances which fome of his followers had begun to raife in other provinces. In the fame year broke out the molt dreadful plague, fays Dio Caffus, that had been known. It lafted two or three years; and raged with the greatelt violence at Rome, where it frequently carried off 2000 perfons a day. The following year a dreadful fire, which confumed a great part of the city, was kindled by lightring; and at the fame time the people were afficted with a dreadful famine, occationed, according to fome authors, by Cleander, who, having now in view nothing lefs than the fovereignty itfelf, bought up underhand all the errn, in order to raife the price of it, and gain the affections of the foldicry and people by diftributing it among them. Others tell us, however, that Papirius Dionyfius, "hofe province it was to fupply the city with provifions, contributed towards the fanime, in order to make the people rife againft Clean-
der. Be this as it will, the populace afcribed all their calamities to this hated minifter; and one day, while the people were celebrating the Circaffian games, a troop of children, having at their head a young woman of an extraordinary tature and fieree afpect, entering the circus, began to utter aloud many bitter invectives and dreadful curfes againtt Cleander; which being for fome time anfwered by the people with other invectives and curfes, the whole multitude rofe all of a fudden, and flew to the place where Cleander at that time refided with the emperor. There, renewing their invectives, they demanded the head of the minifter who had been the occafion of fo many calamities. Hereupon Cleander ordered the protorian cavalry to charge the multitude; which they did accordingly, driving them with great flaughter into the city. But the populace difcharging fhowers of fones, bricks, and tiles, from the tops of the houles and from the windows, and the city-guards at the fame time taking part with the people, the pratorian horfe were foon obliged to fave themfelves by Hight : nor was the flaughter ended till the emperor, apprifed of the tumult, caufed the head of Cleander to be ftruck off and thrown out to the enraged populace. The emperor himfelf did not long fur- ${ }^{367}$ or vive Cleander ; being cut off by a confpiracy of Marcia murdered. his favourite concubine, Lætus captain of the guards, and Eclectus his chamberlain.

No fooner was the death of Commodus known, than the fenate affembled, and declared him a public enemy, loading him with curfec, ordering his ftatues to be broken to pieces, and his name to be rafed out of all public infcriptions; and demanded his body, that it might be dragged through the Atreets, and thrown into the Ti ber. But Helvius Pertinax, whom the confpirators Pertinax had previounly defigned for the empire, and who had raifed to already affumed it, prevented fuch an outrage, by let- the empire. ting the fenators know that Commodus was already buried. This extraordinary perfonage had paffed through many changes of fortune. He was originally the fon of an enfranchifed flave, called AElius, who only gave him fo much learning as to qualify him for keeping a little fhop in the city. He then became a fchoolmafter, afterwards fudied the law, and after that became a foldier; in which fation his behaviour was fuch as caufed him to be foon made captain of a cohort againt the Parthians. Being thus introduced to arms he went through the ufual gradation of military preferment in Britain and Mœfia, until he became the commander of a legion under Aurelius. In this ftation he performed fuch excellent fervices againit the barbarians, that he was made conful, and fucceffively governor of Dacia, Syria, and Afia Minor. In the reign of Commodus he was banifhed; but foon after recalled, and fent into Britain to reform the abufes in the army. In this employment his ufual extraordinary fortune attended him: he was oppofed by a fedition among the legions, and left for dead among many others that were flain. However, he got over this danger, feverely punifhed the mutineers, and eftablifhed regularity and difcipline among the troops he was fent to command. From thence he was removed into Africa, where the fedition of the foldiers had like to have been as fatal to him as in his former government. Removing from Africa, and fatigued with an active life, he betook himfelf to retirement : but Commodus,
willing

## R O M <br> R O M

Rome.
villing to keep him atill in view, made him prefect of the city; which employment he filled, when the confpirators fixed upon him as the properelt perfon to fucceed to the empire.

His being advanced by Commodus oniy ferved to increafe his fears of falling as an object of his fufpicions; when therefore the confpirators repaired to his houle by night, he confidered their arrival as a command from the emperor for his death. Upon Lætus entering his apartment, Pertinax, without any fhow of fear, cried out, That for many days he had expected to end his life in that manner, wondering that the emperor had deferred it fo long. However, lie was not a little furprifed when informed of the real caufe of their vifit; and being ftrongly urged to accept of the 369 empire, he at latt complied with their offer.
His excel-
Being carried to the camp, Pertinax was proclaimed emperor: foon after the citizens and fenate confented; the joy for the election of a new fovereign being fcarce equal to that for the death of the former. The provinces quickly followed the example of Rome; fo that he began his reign with univerfal fatisfaction to the whole empire, in the 68th year of his age.

Nothing could exceed the wifdom and juftice of this monarch's reign the fhort time it continued. He punifhed all thofe who had ferved to corrupt the late emperor, and difpofed of his ill-got poffeffions to public ufes. He attempted to reftrain the licentioufnefs of the protorian bands, and put a fop to the injuries and infolences they committed againft the people. He fold molt of the buffoons and jefters of Commodus as flaves; particularly fuch as had obfcene names. He continually frequented the fenate as often as it fat, and never refufed an audience even to the meaneft of the people. His fuccefs in foreign affairs was equal to his internal policy. When the barbarous nations abroad had certain intelligence that he was emperor, they immediately laid down their arms, well knowing the oppofition they were to expect from fo experienced a commander. His great error was avarice; and that, in fome meafure, ferved to haften his ruin.

The prætorian foldiers, whofe manners he had atcempted to reform, having been long corrupted by the indulgence and profufion of their former monarchs, began to hate him for the parfimony and difcipline he had introduced among them. They therefore refolved to dethrone him; and for that purpofe declared Maternus, an ancient fenator, emperor, and endeavoured to carry him to the camp to proclaim him. Maternus, however, was ton juft to the merits of Pertinax, and too faithful a fubject, to concur in their feditious defigns; wherefore efcaping out of their hands, he fled, firit to the emperor, and then out of the city. They then nominated one Falco, another fenator; whom the fenate would have ordered for execution, had not Per. tinax interpofed, who declared that during his reign no fenator hould fuffer death.

The protorian foldiers then refolved unanimoufly not to wife any fecret confpiracies, or private contrivances, but boldly to feize upon the emperor and empire at once. They accordingly, in a tumultuens manner, marched through the freets of Rome, and entered the palace without oppofition. Such was the terror at their approach, that the greatelt part of the emperor's attendants forfook him; while thofe who remained earnelt-
$y$ intreated him to fly to the body of the pcople, and
Rome. intereft them in his defence. However, he rejected their advice; declaring, that it was unworthy his imperial dignity, and all his paft actions, to fave himfelf by flight. Having thus refolved to face the rebels, he had fome hopes that his prefence alone would terrify and confound them. But what could his former virtues, or the dignity of command, avail againft a tumultuous rabble, nurfed up in vice and minifters of former tyranny? One Thaufins, a Tungrian, fruck him with his lance on the breaft, crying out, "The fol. diers fend you this." Pertinax finding all was over, covered his head with his robe, and funk down, mangled with a multitude of wounds, which he received from various affaffins. Eclectus, and fome more of his attendants, who attempted to defend him, were alfo flain: his fon and daughter only efcaped, who happened to be lodged out of the palace Thus, after a reign of three months, Pertinax fell a facrifice to the licentious fury of the protorian army. From the number of his adventures, he was called the tenris-ball of Fortune; and certainly no man ever experienced fuch a variety of fituations with fo blamelefs a character.

The foldiers having committed this outrage, retired Theempire with great precipitation; and getting out of the city expofed to to the reft of their companions, expeditioufly fortified fale, and their camp, expecting to be attacked by the citizens. bought by Two days having paffed without any attempt of this lianus Jukind, they became more infolent; and willing to make ufe of the power of which they found themfelves por. feffed, made proclamation, that they would fell the empire to whoever would purchafe it at the higheft price. In confequence of this proclamation, fo odious and unjult, only two bidders were found; namely, Sulpicianus and Didius Jolianus: The former, a confular perfon, præfest of the city, and fon-in-law to the late emperor Pertinax ; the latter, a confular perfon likewife, a great lawyer, and the wealthieft man in the city. He was fitting with fome friends at dinner when the proclamation was publifhed; and being charmed with the profpect of unbounded power, immediately rofe from table and hatened to the camp. Sulpicianus was got there before him; but as he had rather promifes than treafure to beftow, the offers of Didius, who produced immenfe fums of ready money, prevailed. He was received into the camp by a ladder, and they inftantly fwore to obey him as emperor. From the camp he was attended by his new electors into the city; the whole body of his guards, which confifted of 10,000 men, ranged around him in fuch order as if they had prepared for battle, and not for a peaceful ceremony. The citizens, however, refufed to confirm his election; but rather curfed him as he paffed. Upon being conducted to the fenate-houfe, he addreffed the few fenators that were prefent in a very laconic fpeech: "Fathers, you wast an emperor; and I am the fitteft perfon you can choofe." But even this, fhors as it feems, was unneceffary, fince the fenate bad it not in their power to refufe their approbation. His fpeech being backed by the army, to whom he had given about a million of fterling, fucceeded. The choice of the foldiers was confirmed by the fenate, and Didius was acknowledged emperor, now in the 57 th year of his age.

It flould feem by this weak monarch's conduct when

Rome.

372
Pefcennius
Niger and Septimius Severus affume the empire.
feated on the throne, that he thought the government of an empire rather a pleafure than a toil. Inltead of attempting to gain the hearts of his fubjects, he gave himfelf up to eafe and inactivity, utterly regardlef's of the duties of his ftation. He was mild and gentle in. deed; neither injuring any nor expecting to be injured. But that avarice, by which he became opulent, ftill followed him in his exaltation; fo that the very foldiers who elected him, foon began to deteft him for thofe qualities, fo very oppofite to a military character. The people alfo, againt whofe confent he was chofen; were no lefs inimical. Whenever he iffued from his palace, they openly poured forth their imprecations againft him; crying out, that he was a thief, and had ftolen the empire. Didius, however, in the true fpirit of a trader, patiently bore it all; fometimes beckoning them with fmiles to approach him, and teftifying his regard by every kind of fubmiffion.

While Didius was thus contemptuoufly treated at home, two valiant generals, in different parts of the empire, difclaimed his authority, and boldly refolved to attempt the throne for themfelves. Thefe were, Pefcennius Niger, governor of Syria; and Septimius Severus, commander of the German legions. Niger was beloved by the people for his clemency and valour ; and the report of his propofing Pertinax for his model, and refolving to revenge his death, gained him univerfal efteem among the people. Being thus apprifed of their inclinations, he eafily induced his army in Syria to proclaim him emperor ; and his title was, fhortly after, acknowledged by all the kings and potentates in Afia, who fent their ambaffadors to him as their lawful prince. The pleafure of being thus treated as a monarch, in fome meafure retarded his endeavours to fecure his title. Entirely fatisfied with the homage of thofe about him, he neglected the opportunities of fuppreffing his rivals; and gave himfelf up to luxury and fealting at Antioch. The conduct of Severus, an African by birth, was very different. Being proclaimed by his army, he began by promifing to revenge the death of Pertinax, and took upon him his name. He next fecured the fidelity of all the frong places in his province; and then refolved, with the utmolt expedition, to march with his whole force directly to Rome.

In the mean time, Didius, who difregarded the at. tempts of Niger, was greatly alarmed at thofe of Severus. He frit, with many folicitations, procured the fenate to proclaim him a traitor. He then applied hinfolf to make the neceffary provifions to oppofe him, in which he found nothing but difappointment. The cohorts that elected him were enervated by vice and laxury; the people detefted his caule; and the cities of Italy had long been difufed to the arts of war. Some advifed lim to march forward, and meet Severus as he was croffing the Alps: others were for fending the generals upon that expedition. The unfortunate Didius, unequal to the tafk of empire, and quite confounded with the multiplicity of counfels, could take no other refolution but that of awaiting his rival's coming at Rume. Accordingly, foon after being informed of his approach, he obtained the confent of the fenate to fend his ambaffadors, offering to make him a partner of the empire. But Severus rejected this offer, confcious of his own frength, and of the weannets of the propofer. The fenate foon appeared of the fame fentiments; and

## 437 ] R O M

perceiving the timidity and weaknefs of their prefent
Rome. mafter, began to abandon him, alleging, that he who could not defend the empire was not worthy to govern it. Didius vainly endeavoured to reduce them to their duty, firt by intreaties, and then by threats; but thefe only ferved to halten his deftruction. The fenate being called together, as was formerly practifed in the times of the commonwealth by the confuls, they unanimoufly decreed, That Didius fhould be deprived of the empire, and that Severus fhould be proclaimed in his ftead. They then commanded Didius to be flain; and fent meffengers for this purpole to the palace, where they found him difarmed, and weeping among a few friends that fill adhered to his interelt. When thn executioners began to prepare for their fatal errand, he expoftulated with them, demanding what crime he had committed ? He could not be perfuaded to think, that paying his money, and receiving an empire in exchange, deferved fo fevere a punifhment. The executioners, however, were neither able nor willing to enter into the merits of the caufe; they prefently led him into the fecret baths of the palace, and obliging him to ftretch his neck furwards, after the manner of condemned criminals, ftruck off his head, and placed it up in thofe courts where he had formerly pleaded with great fuccefs.
The fenate having thus difpatched Didius, fent am. Scverus debaffadors to Severus, yielding him obedience, granting him the enfigns and the ufual titles of empire, and in. peror. forming him of the death of Didius. Severus, who was now about 47 years of age, received them with all proper refpect; and entertaining them honourably continued his march towards Rome. As he came near the city, his firft exertion of power was, to have all the protorian foldiers who had lately fold the empire come forth unarmed to meet him. Thefe, though fenfible of their danger, had no other refource left but compliance ; and accordingly came forward with branches of: laurel, as if to welcome his approach. Severus, how. ever, foon fhowed how little capable their prefent fubmiffion was to atone for their palt offences: after upbraiding them, in a fhort fpeech, with all their crimes, he commanded them to be inftantly ftripped of their military habits, deprived of the name and honour of foldiers, and banifhed 100 miles from Rome. He then entered the city in a military manner, took poffefion of the palace, and promifed the fenate to conduct bimfelf with clemency and juftice. However, though he united great vigour with the moft refined policy, yet his African cunning was confidered as a particular defect in him. He is celebrated for his wit, learning, and prudence ; but equally blamed for infidelity and cruelty. In fhort, be feemed alike difpofed to the pertormance of the greateft acts of virtue and the molt bloody feverities. He began his command, by feicing all the children of fuch as bad employments or autho rity in the ealt, and detained them as pledges for their fathers loyalty. He next fupplied the city with corn; and then with all pollible expedition marched againft Niger, who was ftill confidered and honoured as emperor of the eaft.

One of the chief obftacles to his march was, the Niger ${ }^{375}$ leaving behind him Clodius Albinus, commander of the feated and legions in Britain, whom he by all means winhed to fe-killed. cure in his interefts. For this end, he endenvoured to

## R O M

prevail upon him, by giving him hopes of fucceeding to the empire ; infinuating, that he himfelf was declining, and his children were as yet but intants. To deceive hin fill farther, he wrote in the fame fyle to the fenate, gave him the title of Cafar, and ordered money to be coined with his image. Thefe artifices ferving to lull Albinus into falfe fecurity, Severus marched againft Niger with all his forces. After fome undecifive conflits, the laft great battle that was fought between thef extraordinary men was upon the plains of Iffus, on the very. fpot where Alexander had formerly conquered Darius. Befides the two great armies drawn up on the plain, the qeighbouring mountains were covered with infinite numbers of people, who were merely led by curiofity to become fectators of an engagement that was to determine the empire of the world. Severus was conquerer; and Niger's head being ftruck off by fome foldiers of the conquering army, was infultingly carried through the camp on the point of a lance.

This victory fecured Severus in the poffeffion of the throne, However, the Parthians, Perfians, and fome other neighbouring nations, took up arms, under a pretence of vindicating Niger's caufe. The emperor marched againf them in perfon, had many engagements with them, and obtained fuch fignal victories over them, as enlarged the empire, and eftablifhed peace in the eaft.
Niger being no more, Severus now turned his views againft Albinus, whom he refolved by every means to deftroy. For this purpofe he fent affatins into Britain, under a pretence of bringing him letters, but in reality to difpatch him. Albinus being apprifed of their defigns, prevented their attempt by recurring to open force and proclaiming himfelf emperor. Nor was he without a powerful army to fupport his pretenfions; of which Severus being fenfible, bent his whole force to oppofe him. From the eaft he continued his courfe acrofs the fraits of Byzantium, into the moft weftern parts of Europe, without intermifion. Albinus being informed of his approach, went over to meet him with his forces into Gaul; fo that the campaign on both fides was carried on with great vigour. Fortune feemed for a while variable; but at laff a decifive engagement came on, which was one of the moft defperate recorded in the Roman hiftory. It lafted from morning till night, without any feeming advantage on either fide; at length the troops of Severus began to fly, and he himif happening to fall from his horfe, the army of Albinus cried out, Viftory. But the engagement way foon renewed with vigour by Lxtus, one of Severus's commanders, who came up. with a body of referve, defigning to deftroy both parties and make himfelf emperor. This attempt, though defigned againf both, turued out entirely to the advantage of Severus. He theryfor: again charged with fuch fury and exainefs, that he foon plucked the victory from thofe who but a fhrrt time before feemet conquerors; and purfining them into the city of Lyons, took Albinus prifoner, and cut off his head; treating his dead body with infuls that could only flow from a mean and revengeful temper. Eill the fenators who were flain in battie he ordered to be quartered, and fuch as were taken alive were immediately executed.

Faving t'uus fecured himfelf in poffefion of the empire, upon his return to Rome he loaded his foldiers with
rewards and honours; giving them fuch privileges as ftrengthened his own powers while they deftroyed that of the ftate. For the foldiers, who had hitherto fhowed the Atrongeft inciination to an abufe of power, were now made arbiters of the fate of emperors; and we fhall henceforward behold them fetting them up, and dethroning them, at pleafure.

Being thus fecure of his army, he refolved to give way to his natural turn for conquelt, and to oppofe his arms againft the Parthians, who were then invading the frontiers of the empire. Having therefore previoufly given the government of domeftic policy to one Plautianus, a particular favourite of his, to whofe daughter he married his fon Caracalla, he fet out for the eaft, and profecuted the war with his ufual expedition and fuccefs. He forced fubmiffion from the king of Armenia, deftroyed feveral cities in Arabia Felix, landed on the Parthian coalts, took and plundered the famous city Ctefiphon, marched back through Paleftine and Egypt, and at length returned to Rome in triumph.

During this interval, Plautianus, who was left to direct the affairs of Rome, began to think of afpiring to the empire himfelf. Upon the emperor's return, he employed a tribune of the pratorian cohorts, of which he was the commander, to affaffinate bim, as likewife his fon Caracalla. The tribune feemed cheerfully to undertake this dangerous office; but inftead of going through with it, informed Severus of his favourite's treachery. He at firft received it as an improbable ftory, and as the artifice of fome one who envied his favourite's fortune. However, he was at laft perfuaded to permit the tribune to conduct Plautianus to the em. peror's apartments. With this intent, the tribune went and amufed him with a pretended account of his killing the emperor and his fon, defiring him, if he thought it fit to fee them dead, to come with him to the palace. As Plautianus ardently defired their deaths, he readily gave credit to this relation; and following the tribune, he was conducted at midnight into the innermoft receffes of the palace. But what muf have been his difappointment, when, inftead of finding the emperor lying dead, as he expected, he beheld the roomlighted up with torches, and Severus, furrounded by his friends, prepared in array to receive him. Being afked by the emperor, with a flern countenance, what had brought him there at that unfeafonable time? he was at firt utterly confounded; wherefore, not knowing what excufe to make, he ingenuounly confeffed the whole, intreating forgivenefs for what he had intended. The emperor feemed in the beginning inclined to pardon; but Caracalla his fon, who from the earlieft age fhowed a difpofition to cruelty, fpurned him away in the midit of his fupplications, and with his fword ran him through the body.

Severus having efcaped this danger, fpent a confiderable time in vifiting fome cities in Italy, permitting none of his officers to fell places of truft or dignity, and diftributing juftice with the ftrifteft impartiality. He took fuch an exact order in managing his exchequer, that, notwithfanding bis great expences, he left more money behind him than any of his predeceffors. His armies alfo were kept upon the moft refpectable footing; fo that he feared no invafion. Being equally attentive to the prefervation of all parts of the erapire, he refolved to make his lalt expedition into $\underset{\substack{\text { Britain, } \\ \text { where }}}{\text {, }}$

Rome.

## R OM

Rome.
where the Romans were in danger of being deftroyed, or compelled to fly the province. Wherefore, after appointing his two fons Caracalla and Geta joint fuccellors in the empire, and taking them with him, he landed in Britain, to the great terror offu h as had drawn down his refentment. Upon his progrefs into the country, he left his fon Geta in the fouthern part of the province, which had continued in obedience, and march. ed with his fon Caracalla againtt the Caledonians. In this expedition, his army fuffered prodigious hardfhips in purfuing the enemy; they were obliged to hew their way through intricate forelts, to drain extenfive marih. $e 5$, and frm bridges over rapid rivers; fo that he loft 50,000 men by fatigue and ficknefs. However, he fipported all thefe inconveniences with the greateft bravery; and is faid to have profecuted his fuccefles witin fuch vigour, that he compelled the enemy to fue for peace; which they obtained, not without the furrender of a coniderable purt of their country. We mult here obferve, however, that the Pifts and Caledonians are fo often confounded together by hilt rians, that many miftakes have thence arifen concerning the progrefs and conquefts of the Romans in the north of Britain. But from the boundary formed by the famous wall of Severus (fee Saverus's Wall), we mult conclude, that no part of Caledonia, properly fo called, had been either on this or any other occafion ceded to him ; and there is reafon to believe, that he rather received checks from the people of that territory, than was ever able to make any confiderable impreffion upon them. Be this, however, as it may, after having made peace, and built his wall, he retired to York; where, partly through age and fatigue, and partly through grief at the irreclaimable life of Caracalla, he found himfelf daily declining, having aiready loft the ufe of his feet. To add to the diftrefs of his fituation, he was informed that the foldiers had revolted, and declared his fon emperor. In this exigence, he feemed once more to recal his natural vigour; he got nimfelf immediately put into bis litter, and commanded the new emperor, with the tribunes and centurions, to be brought before him. Though all were willing to court the favour of the young empero:, fuch was the authority of Severus, that none dared to difobey. They appeared betore him confounded and trembling, and implored pardon upon their knees. Upon which, putting his hand to his head, he cried out, "Know, that it is the head that governs, and not the feet." However, foon perceiving his diforder to increafe, and knowing that he could not outlive it, he called for poifon; which being refuled
him, he loaded his ftomach with food; which not being able to diaeft, it foon brought him to his en.t, in the 56 th year of his age, after an active though cruel

378
Caracalla
ande ta
fuccied. reign of about 18 years.

Caracalla and Geia being acknowledged as emperors by the army, bogan to fhow a murual hatred to each other even before their arrival at Rome. Their only agreement was, in refolving to deify Severus their father; but foon after, each fought to attach the fenate and atmy to his own particular intereft. They were of very oppofite difpofitions: Caracalla was fierce and cruel to an extreme degree; Geta was mild a:d merciful; fo th:t the city foon found the danger us effects of being governed by two princes of equal power and contrary inclinations.

But this oppofition was of no long continuance ; for Caracalla being refolved to govern alone, furioully entered Geta's apartment, and, followed by ruffians, flew 379 him in his mother's arms. Having committed this de- dered by teltable murder, he iffued with great hafte from the pa- Caracalla. lace, crying out, That his brother would have flain him; and that he was obliged, in felf-defence, to retaliate the intended injury. He then took refuge among the pretorian cohorts, and in a pathetic tone began to implore their affiftance, ftill making the fame ex. cufe for his conduct. To this he added a much more prevailing argument, promifing to beftow upon them the largelfes ufually given upon the election of new empet ors, and diltributing among them a molt all the treafures which had been amafled by his father. By fuch periuafires the foldiers did not hefitate to proclaim him fole emperor, and to figmatize the memory of his brother Geta as a traitor and a: enemy to the commonwealth. The fenators were foon atter induced, eithet through favour or fear, to appruve what had been done by the army : Caracalla wept for the death of his brother wiom he had flain; and, to carry his hypocrify to the utmolt extreme, ordered him to be adored as a god.

Being now emperor, he went on to mark his courfe who with blcod. Whatever was done by Domitian or Ne-prowes a ro fell fhort of this monfter's barbarities. Lætuc, who moft firt advifed him to murder his brother, was the firlt who fell a facrifice to his jealoufy. His own wife Plautina followed. Papinian, the renowned civilian, was beheaded for refufug to write in vindication of his cruelty ; anfwering the emperofrs requeft, $b$ obferving, That it was much eafier to commit a parricide than to defend it. He commanded all governors to be flain that his brother had appointed; and deftroyed not leis than 2000 perfons who had adhered to his party. Whole ights were fpent in the execution of his bloody decrees; and the dead bodies of people of all ranks were carried out of the city in carts, where they were burnt in heaps, without any of the ceremonies of a fu. neral. Upon a certain occafion, he ordered his foldiers to fet upon a crowded audience in the theatre, only for difcountenancing a charioteer whom he happened to favour. Perceiving himfelf hated by the people, he publicly faid, that he could infure his own fafety though not their love; fo that he neither valued their reproaches nor feared their hatred.

This fafety which he fo much built upon was placed His extrain the protection of his foldiers. He had exhaulted vagant folthe treafury, drained the provinces, and committed a ly, crucity, thoufand acts of rapacity, merely to keep them ftedfalt and trea in his interefts; and being difpoied to trul himfelf with them particularly, he refolved to lead them upon a vifit through all the provinces of the empire. He firft went into Germany ; where, to oblige the natives, he dreffed himfelf in the habit of their country. Ftom theace he travelled into Macedonia, where he pretended to be a $\xi$ reat admirer of Alexander the Great; ind among other extravagancies caufed a itatue of that monarch to be made with two faces: one of which refembled Alexinder and the other himfelf. He was fo corrupted by flattery, that he called himielf Alexanier ; walked as he was told that monarch had walked; and, like him, bent his head to one fhoulder. Shortly after, arriving at Leffer Afia and the ruins of Troys as he

Rome. was viewing the tomb of Achilles, he took it into his head to refemble that hero; and one of his freedmen happening to die at that time, he ufed the fame ceremonies that were performed at the tomb of Patrocles. Paffing thence into Egypt, he maffacred in the molt terrible manner the inhabitants of Alexandria, on account of the fatires they compofed en him, as is related under the article Alexandria.

Going from thence into Syria, he invited Artabanus king of Parthia to a conference; defiring his daughter in marriage, and promiling him the mof honourable protection. In confequence of this, that king met him on a fpacious plain, unarmed, and only attended with a valt concourfe of his nobles. This was what Caracalla defired. Regardlefs of his promife, or the law of nations, he inftantly furrounded him with armed troops, let in wild bealts among his attendants, and made a moft terfible flaughter among them; Artabanus himfelf efcaping with the utmolt difficulty. For this vile treachery he obtained from the fenate the furname of Parthicus.

Upon his return towards Rome, it would feem as if father's his vices were inexhaultible ; for having been guilty of parricide, he now refolved to marry the mother of Geta whom he had flain. It happened that one day feeing her drop her veil, which difclofed her naked bofom, which was extremely beautiful, he told her, that he would poffefs thofe charms he beheld, if it were lawful. To this unnatural requeft the hefitated not to anfwer, that he might enjoy all things who poffeffed all. Whereupon, fetting afide all duty and refpef for his deceafed father, he celebrated his nuptials with her in public, totally difregarding the cenfures and the farcafms of mankind.

However, though he difregarded fhame, he was not infenfible to fear. He was ever uneafy in the confcioufnefs of being univerfally hated; and was continually confulting aftrologers concerning what death he fhould die. A mong others, he fent one of his confidants, named Maternianus, with orders to confult all the aftrologers in the city concerning his end. Maternianus confidered this as a proper time to get rid of Macrinus, the emperor's principal commander in Mefopotamia; a man who was daily fupplanting him in his mafter's favour. He therefore informed him by letter, as if from the aftrolngers, that Macrinus had a defign againft his life; and they confequently advifed him to put the confpirator to death. This letter was fent fealed, and made up, amongft many others, to be conveyed with the greater fecrecy, and delivered to the emperor as he was preparing for a chariot-race. However, as it never was his cuftom to interrupt his pleafures for his bufinefs, he gave the packet to Macrinus to read over, and to inform him of the contents when more at leifure. In perufing thefe letters, when Macrinus came to that which regarded himfelf, he was unable to contain his furprife and terror. His firf care was, to referve the letter in queftion to himfelf, and to acquaint the empercr only with the fubftance of the reft. He then fet about the molt probable means of compafing his death, by which alone he could expect any fafety. At length he determined to apply to one Martialis, a man of great Arength, and a centurion of the guards, who hated the empercr from various motives; particularly for the death of a brother, whom Caracalla had ordered
to be flain. Him therefore Macrinus exhorted to re: venge his brother's death, by killing the tyrant, which he might eafily effect; as being always fo near bis perfon. Martialis readily undertook the dangerous talk; being willing to meet death himfelf, fo he might obtain his defire of feeing the tyrant expire before him. Accordingly, as the emperor was riding out one day He is 383 near a little city called Carre, he happened to with-dered. draw himfelf privately, upon a natural occafion, with only one page to hold his horfe. This was the cpportunity Martialis had fo long and ardently delired; wherefore running to him as if he had been called, he ftabbed the emperor in the back, fo that he died immediately. Martialis unconcernedly returned to his troop ; but retiring by infenfible degrees, he endeavour. ed to fecure himfelf by flight. But lis companions foon miffing him, and the page giving information of what had been done, he was purfued by the German horfe and cut in pieces.

During the reign of this execrable tyrant, which continued fix years, the empire was every day declining ; the foldiers were entirely malters of every election; and as there were various armies in different parts, fo there were as many interefts all oppofite to each other. Caracalla, by fatisfying their moft unreafonable appetites, deftroyed all difcipline among them, and all fubordination in the fate.

The foldiers, now without an emperor, after a fufpenfe of two days, fixed upon Macrinus, who took all poffible methods to conceal his being privy to Caracalla's murder. The fenate confirmed their choice fhortly after; and likewife that of his fon Diadumenus, whom he took as a partner in the empire. Macrinus was 53 years old when he entered upon the government of the empire. He was of obfcure parentage; fome fay by birth a Moer, who by the mere rotation of office, being firlt made prefect of the pratorian bands, was now, by treafon and accident, called to fill the throne. We are told but little of this emperor, except his engaging in a bloody though undecided battle with Artabanus king of Parthia, who came to take vengeance for the injury he had futtained in the late reign: how ever, this monarch finding his real enemy dead, was content to make peace, and returned into Parthia. Something is alfo faid of the feverity of this emperor's difcipline; for to fuch a pitch of licentioufnefs was the Roman army now arrived, that the moft fevere punifhments were unable to reftrain the foldiers; and yet the moft gentle inflictions were looked upon as feverity. It was this rigorous difcipline, together with the artifices of Nixfa, grandmother to Heliogabalus the natural fon of Caracalla, that caufed the emperor's ruin. Helio. gabalus was prielt of a temple dedicated to the Sun, in balus reEmefa, a city of Phœnicia; and though but 14 years volts old was greatly loved by the army for the beauty of ayainat his perfon, and the memory of his father, whom they him. ftill confidered as their greatelt benefator. This was foon perceived by the grandmother; who being very rich in gold and jewels, gave liberal prefents among them, while they frequently repaired to the temple, both from the garrifon in the city and the camp of Macrinus. This intercourle growing every day more frequent, the foldiers, being difgufted with the feverities of their prefent emperor, began to think of placing Heliogabalus in his ftead. Accordingly, fending for him

## $\mathrm{ROM} \quad[44 \mathrm{I}] \quad \mathrm{K} \mathrm{OM}$

Rone to their camp, he was immediately proclaimed; and fuch were the hopes of his virtues, that all men began to affect his interefts.

Macrinus, who at this time was purfoing his pleafures at Antioch, gave but little attention to the firlt report; only fending his lieutenant Julian, with fome legions, to quell the infurrection. However, thefe, like the reft, foon declared for Heliogabalus, and flew their general. It was then that Macrinus found he had treated the rebellion too flightly; he therefore refolved, with his fon, to march directly againft the feditious legions, and force them to their duty. Both parties met on the confines of Syria : the battle was for fome time furious and obstinate ; but at laft Marcrinus was overthrown, and obliged to feek fafety by flight. His principal aim was to get to Rome, where he knew his pre. fence was defired; wherefore he travelled through the provinces of Afia Minor with the utmof expedition and privacy, but unfortumately fell fick at the city of Chalcedon. There thofe who were fent in purfuit, overtook and put him to death, together with his fon Diadumenus, after a fhort reign of one year and two months.

The fenate and citizens of Rome being obliged to fubmit to the appointment of the army as ufual, Heliogabalus afcended the throne at the age of 14. One at do early an age, invefted with unlimited power, and furrounded with flatterers, could be expected to act only as they thought proper to direct. This young emperor was entirely led by them; and being fenfible that it was in his power to indulge all his appetities, he fudied only their gratification. As he is defcribed by Heliogabalus worfe hiftorians, he appears a monfter of fenfuality. His than any of fhort life therefore is but a tiffue of effeminacy, lutt, his predeceffors.
and extravagance, He married, in the fmall fpace of four years, fix wives, and divorced them all. He built a temple to the fun; and willing that his god thould have a wife as well as himfelf, he married him to Pallas, and fhortly after to the moon. His palace was a place of rendezvous for all the proftitutes of Rome, whom he frequently met naked, calling them bis follow foldiurs, and companions in the field. He was fo fond of the fex, that he carried his mother with him to the fenatehoufe, and demanded that fhe fhould always be prefent when matters of importance were debated. He even went fo fur as to build a fenate-houfe for women, with fuitable orders, habits, and diftinctions, of which his mother was made prefident. They met feveral times; all their debates turning upon the fafhions of the day, and the different formalities to be ufed in giving and receiving vifits. To thefe follies, he added great cruelty and boundlefs prodigality; fo that he was heard to fay, that fuch difhes as were cheaply obtained were fearce worth tating. His fuppers theretore generally colt Gcoo crowns, and often 60,000 . He was always dreffed in cloth of gold and purple, enriched with precious flones, and yet never wore the fame habit twics. His palace, his chambers, and his beds, were all furnifhed of the richef fuffs, covered with gold and jewels. Whenever he took horfe, all the way between bis appartment and the place of mounting was covered with gold and filver duft frewn at his approach.

Thefe excefles were foon perceived by his grandmo ther Mafla, whofe intrigues had firtt raifed him to the throne : fo that the thought to leffen his power by di-
viding it. For this purpofe, under a pretence of freeing him from the cares of public bufinet:, fhe perfuaded him to adopt his coufn-german, Alexander, as his Adopts fucceffor; and likewife to make him his partuer in the Alexander, confulthip. Heliogabalus, having thus raifed his cufin, and takes had fcarce given him his power, when he wifhed again him for his to take it away; but the virtues of this young prince ${ }^{\text {colleague. }}$ had fo greatly endeared the people and the army to him, that the attempt had like to have been fatal to the tyrant himfelf. The prætorian foldiers mutinying, attempted to kill him as he was walking in his gardens; but he efcaped, by hiding himfelf from their fury. However, upon returning to their camp, they continued the fedition; requiring that the emperor fhould remove fuch perfons from about him as oppreffed the fubject, and contributed to contaminate him. They required alfo the being permitted to guard the young prince themfelves, and that none of the emperor's favourites or familiars fhould ever be permitted to converfe with him. Heliogabalus was reluctantly obliged to comply; and confcious of the danger he was in, made preparations for death, when it fhould arrive, in a manner truly whimfical and peculiar. He built a lofty tower with fteps of gold and pearl, from whence to throw himfelf headlong in cafe of neceffity. He alfo prepared cords of purple filk and gold to frangle himdelf with; he provided golden fwords and daggers to ttab himfelf with; and poiions to be kept in boxes of emerald, in order to obtain what death he chofe belt. Thus fearing ail things but particularly fufpicious of the defigns of the fenate, he banifhed them all out of the city : he next attempted to poifon Alexander, and fpread a report of his death; but perceiving the foldiers begin to mutiny, he immediately took him in his chariot to the camp, where he experienced a frefh mortification, by finding all the acclamations of the army directed only to his fucceffor. This not a little raired his indignation, and excited his delire of revenge. He returned towards the city, threatening the moft fevere punilhments againt thofe who had difpleafed bim, and meditating frelh cruelties. However, the foldiers were Is murder. unwilling to give him time to put his defigns in execu-ed hy the tion : they followed him directly to his palace, purfued foldicr
him from apartment, to apartment, and at laft found him concealed in a privy; a fituation very different from that in which he expected to die. Having dragged him from thence through the ftreets, with the molt bitter invectives, and having difpatched him, they attempted once more to fqueeze his pampered body into a privy; but not eafly effecting this, they threw it into the Tiber, with heavy weights, that none might afterwards find or give it burial. This was the miferable and ignominious death of Heliogab alus, in the 18 ch year of his age, after a deteltable reign of four years. His mother alfo was flain at the fame time by the foldiers; as were alfo many of the opprobrious affociates of his criminal pleafures.

Alexander being, without oppofition, declared emperor, the fenate, in their ufual method of adulation, were for conferring new titles upon him ; but he modeftly dechined them all, alleging, that titles were only honourable when given to virtue, not to flation. This outfet was an happy omen of his future viriues; and few princes in hiftory have been more commended by his contemporaries, or indeed more deferved commendaVol. XVI.

## R O M

Rome. wire.
tion. To the molt rigid juftice he added the greatelt humanity. He loved the good, and was a fevere reprover of the lewd and infamous. His accomplifhments were equal to his virtues. He was an excellent mathematician, geometrician, and mufician; he was equally frilled in painting and fculpture ; and in poetry few of his time could equal him. In fhort, fuch were his talents, and fuch the folidity of his judgment, that though but 16 years of age, he was confidered as a wife old man.

The firft part of his reign was fpent in a reformation of the abufes of his predeceffor. He reftored the fenators to their rank; nothing being undertaken without the moft fage advifers, and moft mature deliberation. Anong the number of his advifers was his mo. ther Mammza; a woman eminent for her virtues and accomplifhments, and who made ufe of her power as well to fecure her fon the affections of his fubjects, as to procure them the moft juft adminiftration. He was a rigid punifher of fuch magittrates as took bribes, faying, That it was not enough to deprive fuch of their places; for their trufts being great, their lives, in moft cafes, ought to pay for a breach of them. On the contrary, he thought he could never fufficiently reward fuch as had been remarkable for their jultice and integrity, keeping a regifter of their names, and fometimes alking fuch of them as appeared modeft and unwilling to approach him, why they were fo backward in demanding their reward, and why they fuffered him to be in their debt? His clemency extended even to the Chriftians, who had been punifhed in the former reigns with unrelenting barbarity. Upon a contelt between them and a company of cooks and vintners, about a piece of public ground, which the one claimed as a place for public worlhip, and the others for exercifing their refpective trades, he decided the point by bis refeript, in thefe words: "It is better that God be worfhipped there in any manner, than that the place fhould be put to ufes of drunkennefs and debauchery."

His abilities in war were not inferior to his affiduity in peace. The empire, which from the remiffnefs and -debauchery of the preceding reigns now began to be attacked on every fide, wanted a perfon of vigour and conduct to defend it. Alexander faced the enemy wherever the invafion was mot formidable, and for a Chort time deferred its ruin. His firf expedition, in the tenth year of his reign, was againft the Parthians and Perfians, whom he oppofed with a powerful army. The Perfians were routed in a decifive engagement with great flaughter; the cities of Ctefiphon and Babylon were once more taken, and the Roman empire was reftored to its former limits. Upon his return to Antioch, his mother Mammæa fent for the famous Origen, to be inftructed by him in the principles of Chriftianity; and after difcourfing with him for fome time .upon the fubject, difmiffed him, with a proper fafeguard, to his native city of Alexandria. About the fame time that Alexander was victorious in the Eaft, Furius Celfus, his general, obtained a fignal vistory oper the Mauritanians in Africa. Varius Macrinus was fucceffful in Germany, and Junius Palmatus returned with conqueft from Armenia. However, the number uf thefe vitories only hatened the decline of the empire, which was wafted by the exertion of its own
frength, and was now becoming little more than a plendid ruin.

About the $1^{\text {th }}$ year of his reign, the Upper Ger. mans, and other northern nations, began to pour down immenfe fwarms of people upon the more fouthern parts of the empire. They paffed the Rhine and the Danube with fuch fury, that all Italy was thrown into the moft extreme confternation. The emperor, ever ready to expofe himfelf for the fafety of his people, made what levies he could, and went in perfon to fem the torrent; which he fpeedily effected. It was in the courfe of his fucceffes againft the enemy, that he was cut off by a mutiny among his foldiers. The legions encamped about Moguntia, having been abominably corrupted during the reign of Heliogabalus, and trained up in all kinds of rapine and difobedience, required the moft frict command. Alexander could neither endure their tumultuary obedience, nor they his regular difcipline. His own faults, and thofe of his mother Mammxa, were objected againf him. They openly exclaimed, That they were governed by an avaricious woman, and a mean-fpirited boy; and refolved upon electing an emperor capable of ruling alone. In this general revolt Maximinus, an old and experienced commander, held frequent conferences with the foldiers, and enflamed the fedition. At length, being determined to difpatch their prefent emperor, they fent an executioner into his tent; who immediately ftruck off his head, and, fhortly after, that of his mother. He died in the 29th year of his age, after a profperous reign of thirteen years and nine days.
The tumults occafioned by the death of Alexander Succeede being appeafed, Maximinus, who had been the chief by Maxipromoter' of the fedition, was chofen emperor. This minns, a extraordinary man, whofe character deferves particular man of giattention, was born of very obfcure parentage, being gantic fizthe fon of a poor herdfman of Thrace. In the begin ture and ning he followed his father's profeffion, and only exer- nary cifed his perfonal courage againft the robbers who in- ftrength. fefted the part of the country in which he lived. Soon after his ambition increafing, he left his poor employment, and enlifted in the Roman army ; where he foon became remarkable for his great Atrength, difcipline, and courage. This gigantic man was no lefs than eight feet and a balf high; he had a body and ftrength correfponding to his fize, being not lefs remarkable for the magnitude than the fymmetry of his perfon. His wife's bracelet ufually ferved him for a thumb-ring; and his frength was fo great, that he was able to draw a carriage which two oxen could not move. He could frike out an horfe's teeth with a blow of his fif, and break its thigh with a kick. His diet was as extraordinary as the reft of his endowments; he generally eat 40 pounds weight of flefh every day, and drank fix gallons of wine, without committing any debauch in either. With a frame fo athletic, he was poffeffed of a mind undaunted in danger, and neither fearing nor regarding any man. The firlt time he was made known to the emperor Severus, was upon his celebrating games on the birth-day of his fon Geta. Maximinus was then a rude countryman, and requefted the emperor to be permitted to contend for the prizes which were diftributed to the beft runners, wreftlers, and boxers, of the army. Severus, unwilling to infringe the military difcipline,

## $R$ OM [ 443$] \quad \mathrm{ROM}$

Ronie. would not permit him at firft to combat, except with flaves, againft whom his frength appeared aftonifhing. He overcame 16 in running, one after the other: he then kept up with the emperor on horfeback; and having fatigued him in the courfe, he was oppofed to feven of the mof active foldiers, and overcame them with the greateft eafe. From that time he was particularly noticed, and taken inte the emperor's body-guards, in which his affiduity and prompt obedience were particularly remarkable. In the reign of Caracalla, he was made a centurion, and diftinguifhed himfelf in this flation by his frict attention to the morals and difcipline of thofe he commanded. When made a tribune, he fill retained the hard fimplicity of bis life; ate as the meaneft centinel; fpent whole days in exercifing his troops, and would now and then himfelf wrefle with eight or ten of the ftrongeft men in the army, whom he threw with fearce any effort. Being thus become one of the moft remarkable men in the empire, both for courage, difcipline, and perfonal activity, he gave fhortly after, a very high inftance of his unfhaken fidelity: for when Macrinus was made emperor, he refufed to ferve under a prince that had betrayed his fovereign; and retired to Thrace, his native country, where he followed commerce, and purchafed fome lands, content with privacy rather than a guilty dependence. Upon the acceflion of Heliogabalus to the throne, this bold veteran once more returned to the army; but was, in the very beginning, difgufted at the bafe effeminacy of the emperor ; who, hearing amazing inftances of his ftrength, anked him, if he were equally capable in com. bats of another nature? This lewd demand was fo little fuitable to the temper of Maximinus, that he infantly left the court. Upon the death of Heliogabalus, he again returned to Rome, and was received with great kindnefs by Alexander, who particularly recommended him to the fenate, and made him commander of the fourth legion, which confifted of new-raifed foldiers. Maximinus gladly accepted of this charge, and performed his duty with great exactnefs and fuccefs, fetting an example of virtue and difcipline to all the commanders of the army. Nor was his valour lefs apparent againft the Germans, whither he was fent with his legion; fo that he was unanimoully confidered as the boldeft, braveft, moft valiant, and molt virtuous foldier in the whole empire. He foon, however, forfeited all there juflly merited titles, when he was raifed to the throne; and, from being the moft loved commander in the army, he became the moft cruel tyrant upon earth. Yet in fact, his former virtues were all of a fevere and rigid kind, which, without any education, might very eafily degenerate into tyranny ; fo that he might have miftaken his fucceeding cruelty for difcipline, and his feverity for juffice. However this be, Maximinus is confidered as one of the greateft monters of cruelty that ever difgraced power; and, fearful of nothing himfelf, he feemed to fport with the terrors of all mankind.

He began his reign, by endeavouring to force obedience from every rank of people, and by vindicating his authority by violence. The fenate and people of Rome were the firit that incurred his refentment. They utterly refufing to confirm the election of the army, he was the firlt emperor who reigned without their concurrence or approbation. However he feem-
ed regardlefs of their oppofition, proceeding to icone his election by putting all fuch to death as had been raifed by his predeceffor. The Chrifians alfo, having found favour in the former reign, felt the weight of his refentment ; and were perfecuted in feveral parts of the empire, particulariy in thofe where he himictif re. fided. His cruelty likewife extended to the rich, whole lives and eftates became a frequent facrifice to avarice and fufpicion. But what appears ftill a more extraordinary inflance of his cruelty, being allamed of the meannefs of his extraction, he commanded all fuch as were beft acquainted with him and his parentage to be fain, although there were fome among the number that had relieved him in his low condition.
However, his cruelties did not retard his military His 394 operations, which were carried on with a fpirit be-in war. coming a better monarch. He overthrew the Germans in feveral battles, wafted all their country with fire and fword for 400 miles together, and fet a refolution of fubduing all the northern nations as far as the ocean. In thefe expeditions, in order to attach the foldiers more firmly to him, he increafed their pay ; and in every duty of the camp, he himfelf tonk as much pains as the meaneft centinel in his army, fhowing incredible courage and affiduity. In every engagement, where the conflict was hotteft, Maximinus was always feen fighting there in perfon, and deftroying all before him: for, being bred a barbarian, he confidered it as his duty to combat as a common foldier, while he commanded as a general.

In the mean time, his cruelties had fo alienated the Confpis minds of his fubjects, that feveral confpiracies were cies formed fecretly aimed againft him. Magnus, a confular per- againft fon, and fome others, had plotted to break down a him. wooden bridge, as foon as the emperor had paffed it, and thus to abandon him to the enemy. But this being difovered, gave Maximinus an opportunity of indulging his natural feverity, upon this pretext alone caufing above 4000 to be flain. Shortly after, fome of Alexander's old foldiers withdrawing themfelves from the camp, proclaimed one $Q$ uarcianus as emperor, who had been lately difgulted at Maximinus for being difmiffed from employment. The foldiers, in fact, confrrained him to accept of the dangerous fuperiority to which he was expofed: and fhortly after, in the fpirit of the times, the perfon who had been the promoter of his advancement, murdered him in his bed, and carried his head to Maximinus; who received him kindly at firt, but foon put him to a cruel death, for his complicated guilt of treafon and treachery.

Theie partial infurrections were foon after followed Gordian by a fpirit of general difcontent throughout all the proclaimed empire. The provinces of Africa were the firft that emperor. fhowed their deteftation of the tyrant, whofe extortions and cruelties among them were become infupportable. They firt flew his procurator; and afterwards confidering how dangerous a crime they had committed, they refolved to throw off all expectations of pardon, and create a new emperor. Gordian was then proconful of Africa, a perfon of great fame for his virtues, and highly reverenced for a blamelefs life of near 80. Him, therefore, they determined to elect ; and accordingly the foldiers and natives affembling together, tumultuoully entered his houfe, refolved to put their defign in execution. Gordian, who at firf fuppofed 3 K 2
they

they were come to kill him, being made fenfible of their intentions, utterly refufed their offer, alleging his extreme age, and Maximinus's power. But all his oppofition was vain : they conflrained him to accept of the proffered dignity; and he, with his fon Gordian, who was 46 years of áge, were declared emperors. Being thus raifed contrary to his inclination, the old man immediately wrote to the fenate, declaring that he had unwillingly accepted of the empire, and would only keep his authority till he had freed it from the tyranny of its prefent oppreffor. The fenate very joyfully confirmed his election, adjudging Maximinius as an enemy and traitor to the ftate. The citizens alfo fhowed an equal zeal in the caufe: they flew upon fuch as were the reputed friends of Maximinus, and tore them in pieces; even fome who were innocent falling a facrifice to the multitude's blind ráge. So great an alteration being made in the city againft the interefts of Maximinus, the fenate were refolved to drive the oppofition to the extreme; and accordingly made all neceffary preparations for their fecurity, ordering Maximinu's's governors to be difplaced, and commanding all the provinces to acknowledge Gordian for emperor. This order was differently received in different parts, as people were affected to one or the other party; in fome provinces the governors were flain; in others, the meffengers of the fenate; fo that all parts of the empire felt the confequence of the civil war.

In the mean time, when Maximinus was informed of thefe charges againit him, his rage appeared ungovernable. He roared like a favage beaft, and violently ftruck his head againlt the wall, fhowing every inftance of ungovernable diftraction. At length his fury being fomewhat fubfided, he called his whole army together ; and, in a fet fpeech, exhorted them to revenge his caufe, giving them the ftrongeft affurances that they thould poffefs the eftates of all fuch as had offended. The foldiers unanimouily promifed to be faithful; they received his harangue with their ufual acclamations; and, thus encouraged, he led them towards Rome, breathing nothing but flaughter and revenge. However, he found many obftacles to his impetuofity; and, though he defired nothing fo much as difpatch, his marches were incommodious and flow. The tumultuous and difobedient armies of the empire were at prefent very different from the legions that were led on by Sylla or Cafar; they were loaded with baggage, and followed by flaves and women, rather refembling an eatern caravan, than a military battalion. To there inconveniences allo was added the hatred of the cities through which he paffed, the inhabitants all abandoning their houfes upon his approach, and fecuring their provifions in proper hidingplaces. However, in the complication of inconveniences and misfortunes, his affairs began to wear a fasourable appearance in Africa: for Capelianus, the governor of Numidia, raifed a body of troops in his favour, and marched againft Gordian, towards Car. thage; where he" fought the youriger Gordian, llew him, and deltroyed his army. The father, hearing of the death of his fon, together with the lofs of the battle, Atrangled himfelf in his own girdle. Capelianus purfuing his victory, entered Carthage; where he gave a loofe to pillage and flaughter, under a pretence of revenging the caufe of Maximinus. The news of
thefe fucceffes was foon brought to the emperor, who now increafed his diligence, and flattered himfelf with a fipeedy opportunity of revenge. He led on his large army by halty journeys into Italy, threatening deftruction to all his oppolers, and ardently wifhing for frefh opportunities of flaughter.

Nothing could exceed the confternation of the fenate upon the news of this defeat. They now faw themfelves not only deprived of the affiftance of Gordian and his fon, on whom they greatly relied; but alfo oppofed by two formidable tyrants, each commanding a victoriousarmy, directly marching towards Rome, and meditating nothing but vengeance. In this afflicting exigence, they, with great folemnity, met at the temple of Jupiter, and after the mof mature deliberations, chofe Pupienus and Balbinus emperors conjointly. Thefe were men who had acquired the efteem of the Pupienu public both in war and peace, having commanded ar-and Balbio mies, and goversed provinces, with great reputation; nus proand being now appointed to oppofe Maximinus, they claimed made what levies they could, both in Rome and the emperors, country. With thefe, Pupienus marched to top the progrefs of the invaders, leaving the city to a frefh and unlooked for calamity. This was occafioned by two of Maximinus's foldiers, who, entering the fenatehoufe, were flain by two fenators. This quickly gave offence to the body of the prætorian foldiers, who inftantly refolved to take revenge, but were oppofed by the citizens; fo that nothing was feen throughout Rome, but tumult, flanghter, and cruelty. In this univerfal confufion, the calamity was increafed by the foldiers fetting the city on fire, while the wretched inhabitants were combating each other in the midf of the flames.

Neverthelefs, Maximinus himfelf, in whofe favour thefe feditions were promoted, did not feem to be more fortunate. Upon being informed of the new election of emperors, his fury was again renewed, and he paffed the Alps, expecting, upon entering Italy, to refrefh his fatigued and famifhed army in that fertile part of the country. But in this he was entirely difappointed; the fenate had taken fuch care to remove all kinds of fuftenance to fortified places, that he fill found himfelf reduced to his former neceffries, while his army began to murmur for vant. To this a nother difappointment was added fhortly after : for, approach ing the city of Aquileia, which he expected to enter without any difficulty, he was aftonilbed to find it prepared for the mof obftinate refiftance, and refolved nu to hold out a regular fiege. This city was well fortified and populous, and the inhabitants greatly averfe to Maximinus's goverrnmènt but what added ftill more to its ftrength, it wa's commanded by two excellent generals, Crípinus and Menophilis, who had fo well furnihhed it with men and ammunition, that Maximinus found no fmall refitance, even in invefting the place. His firlt attempt was, to take the city by form; but the befieged threw down fuch quantities of fcalding pitch and fulphur upon his foldiers, that they were unable to contimue the affault. He then determined upon a blockade; but the inhabitants were fo refolute, that even the old men and children were feen combating upon the walls, while the women cut off their hair to furnifh the foldiers with bow-ftrings. Maximinus's rage at this unexpected oppofition was

## R O M

Rome.
now ungovernable: having no enemy to wreak his recity had held out through their neglect or incapacity, while famine made great depredations upon the reft of his army. Nothing now appeared on either fide to terminate the conteit, except the total deftruction of while refcued the declining empire from deftruction, and faved the lives of thou'ands. The foldiers being revolts on every fide, refolved to terminate their calamities by the tyrant's death. His great frength, and fentment upon, he turned it againf his own commanders. He put many of his generals to death, as if the either. But a mutiny in Maximinus's own army a long haraffed by famine and fatigue, and hearing of his being always armed, were, at firf, the principal motives to deter any from affaffinating him; but at length having made his guards accomplices in their defign, they fet upon him, while he flept at noon in his tent, and flew both him and his fon, whom he had made his partner in the empire, without any oppofition, after an ufurpation of about three years, and in the 6 th year of his age.

The tyrant being dead, and his body thrown to the dogs and birds of prey, Pupienus and Balbinus continued for fome time emperors without oppofition. But the protorian foldiers; who had long been notorious for mutiny and treafon, foon refolved on further change. Nor did the diffenfions between the new made emperors themfelves a little contribute to their downfall: for though both were remarkable for wifdom and age, yet they could not reftrain the mutual jealoufy of each other's power. Pupienus claimed the fuperiority from his great experience; while Balbinus was equally afpiring upon account of his family and fortune.

In this ill-judged conteft, the pratorian foldiers, who were enemies to both, fet upon them in their palace, at a time their guards were amufed with feeing the Capitoline games. Pupienus perceiving their tumultuous approach, fent with the utmoft fpeed for affiftance from his colleague : but he, out of a culpable fufpicion that fomething was defigned only againt himfelf, refufed to fend fuch if the German guards as were next his perfon. Thus the feditious foldiers found an eafy accefs to both the emperors' apartments; and dragging them from the palace towards the camp, thew them both, leaving their dead bodies in the ftreets, as a dieadful inftance of their fedition.

In the midft of this fedition, as the mntineers wore proceeding along, they by accident met Gordian, the grandfon of him who was hain in Africa, and declared him emperor on the foot. The fenate and peopic
had been long reduced to the necefity of fuffering their emi. $x^{\circ} \circ$ be nominated by the army ; fo that all theyco.id co in the prefent inflance was to confirm their choice. This prince was but 16 years old when he began his reign, but his virtues feemed to compenfate for his want of experience. His principal aims were, to unite the oppoting members of the government, and to reconcile the folders and citizons to each other. His learning is faid to have been equal to his virtues; and we are affured that he had 62,000 books in his library. His refpect for Mifitheis, his governor and inftructor, was fuch, that he married his daughter, and profited by his conefels in all the critical circumftances of his reign.

## $445] \mathrm{R} \mathrm{O} \mathrm{M}$

The firt four years of this empcror's reigu we:: Rome attended with the utmof profperity; but in the fifth
$4 \times 4$ he was alarmed with acceunts from the ealt, that Sa-His luceefs por, king of Perfia, had furioufly invaded the confines againft the of the Roman empire, and having taken Antioch, had barb ritas. pillaged Syria and all the adjacent provinces. Befides the Perfians, the Goths alfo invaded the empire on their fide, pouring down like an inundation from the north, and attempting to fix their refidence in the kingdom of Thrace. To oppofe both thefe invafions, Gordian prepared an army; and having gained fome victories over the Goths, whom he obliged to retire, he turned his arms againft the Perfians, whom he defeated upon feveral occafions, and forced to return home with difgrace. In gaining thefe advantages, Mifithæus, whom he had made prætorian præfeet, had the principal fhare; but he dying foon after (as it is fuppofed being poifoned by Philip an Arabian, who was appointed his fucceflor), the fortunes of Gordian feemed to die with him. The army began to be no longer fupplied with provifions as ufual ; murmurs were heard to prevail, and thefe were artfully fomented by Philip. Things thus proceeding from bad to worfe, Philip was at firit made his equal in the command of the Is murde empire; fhortly after, invefted with the fole power; ed by thiand, at length, finding himfelf capable of perpetrating lip, whis his long meditated cruelty, Gordian was, by his order, fucce. flain, in the 22 d year of his age, after a fuccefsful reign of near fix years.

Philip having thus murdered his benefactor, was fo fortunate as to be immediately acknowledged emperor by the army. The fenate alfo, though they feemed at firft to oppofe his power, confirmed his election, and gave him, as ufual, the title of Augufus. Philip was about 40 years old when he came to the throne; being the fon of an obfcure Arabian, who had been captain of a band of robbers. Upon his exaltation, he alfo. ciated his fon, a boy of fix years of dge, as his partner in the empire; and, in order to fecure his power at home, made peace with the Perfians, and marched his army towards Rome. On his way, having conceived a defire to vifit his native country of Arabia, he built there a city called Pbilippopolos; and from thence returning to Rome, he was received as emperor, and treated with all the marks of fubmiffion, though not of joy. To put the people in good humour, he caufed the leculur games to be celebrated, with a magnificence fuperior to any of his predecefors, it being jult 1000 years after the building of the city. Upon occafinn of thefe games, we are to that both Philip and his fon were converted to Chriftianity. However this bs, a murderer and an ungratetul ufirper does no great honour to whatever opinion he may happen to embrace. We have little account of the latter part of his reign in the wretched and matilated hifories of the times; we only learn, that the Goths having invodal the empire, Marinus, Philip's lieutenant, who was feat aremin them, revolted, and cand himfelf to be declared emperor. This revolt, however, was but of hort duration; for the army which had raifed him repented of their rafhnefs, depefed him with equal levito; and put hirn to death. Decius was the perfon whom Philip appointed to command in the roon of the revolting general. The chief merit of Dus with the caparor

436 The thourindth yeas of Rome.
was, that when Marinus had rebelled, he averred in that fenate, That the traitor's prefumption would be very fhorly his ruin; which, when it happened accordingly, Plilip appointed him to fucceed in the command of the rebellious army. Decius, who was a man of great fubtlety, being thus entrufted with fo much power, upon arriving at the army found that the foldiers were refolved on invefting him with the iupreme authority. He therefore feemed to fuffer their importunities, as if through conftraint; and, in the mean time, fent Philip word, that he had unwillingly affumed the title of emperor, the better to fecure it for the rightful poffeffor; adding, that he only looked for a convenient opportunity of giving up his pretenfions and title together. Philip knew mankind too well, to rely upon fuch profeffions; he therefore got together what forces he could from the feveral pornces, and led them forward towards the conines of Italy. However, the army had fcarce arrived at Verona, when it revolted in favour of Decius, and fetting violently upon Philip, a centinel, with one blow, cut off his head, or rather cleaved it afunder, feparating the under jaw from the upper. Such was the deferved death of Philip, in the $45^{\text {th }}$ year of his age, after a reign of about five years; Decius being univerfally acknowledged as his fucceffor, A. D. 248.

The activity and wifdom of Decius in fome meafure flopped the haftening decline of the Roman empire. The fenate feemed to think fo highly of his mesits, that they voted him not inferior to Trajan; and indeed he feemed in every inflance to confult their dignity in particular, and the welfare of all inferior ranks of people. He permitted them to choofe a cenfor, as was the cuftom in the flourifing times of Rome; and Valerian, his general, a man of fuch frict morals, that his life was faid to be a continual cenforfhip, was chofen to that dignity.- But no virtues could now prevent the approaching downfall of the ftate; the obftinate difputes between the Pagans and the Chriftians within the empire, and the unceafing irruptions of barbarous nations from without, enfeebled it beyond the power of a remedy. To ftop thefe, a perfecution of the Chriftians, who were now grown the moft numerous body of the people, was impolitically, not to fay unjuftly, begun; in which thoufands were put to death, and all the arts of cruelty tried in vain to leffen their growing number. This perfecution was fucceeded by dreadful devaltations from the Goths, particularly in Thrace and Moflid, where they had been molt fuccefsful. Thefe irruptions Decius went to oppofe in perfon; and coming to an engagement with them, flew 30,000 of to purfue his victory, he was, by the treachery of Gallus his own general, led into a defile, where the king of the Goths had fecret information to attack him. In this difadvantageous fituation, Decius firft faw his fon killed with an arros, and foon after his whole army put to the rout. Wherefore, refolving not to furvive his lofs, he put fpurs to his horfe, and inftantly plunging into a quagmire, was fwallowed up, and his body could never be found after. He died in the 50 th year of his age, after a fhort reign of two years and fix months; leaving the character of an excellent prince, and one capable of averting the de-
fruction of the empire, if human means could have effected it.

Gallus, who had thus betrayed the Roman army, Succeeded had addrefs enough to get himfelf declared emperor by by Gallus. that part of it which furvived the defeat; he was 45 years old when he began to reign, and was defcended from an honourable family in Rome. He bought a difhonourable peace from the enemies of the ftate, agreeing to pay a confiderable annual tribute to the Goths, whom it was his duty to reprefs. Having thus purchafed a fhort remiffion from war, by the difgrace of his country, he returned to Rome, to give a loofe to his pleafures, regardlefs of the wretched fituation of the empire.

Nothing can be more deplorable than the fate of Miferable the Roman provinces at this time. The Goths and empire. other barbarous nations, not fatisfied with their late bribes to continue in peace, broke in upon the eaftern parts of Europe. On the other fide, the Perfians and Scythians counmitted unheard of ravages in Mefopotamia and Syria. The emperor, regardlefs of every national calamity, was loft in debauch and fenfuality at home; and the Pagans were allowed a power of perfecuting the Chriftians through all parts of the ftate; thefe calamities were fucceeded by a peftilence, that feemed to have in general fpread over every part of the earth, and which continued raging for feveral years in an unheard of manner ; and all thefe by a civil war, which followed fhortly after, between Gallus and his general Amilianus, who having gained a victory over the Goths, was proclaimed emperor by his conquering army. Gallus hearing this, was foon roufed from the intoxications of pleafure, and prepared to oppofe his dangerous rival. Both armies met in Mœfia, and a battle enfued, in which Emilianus was victorious, and Gallus, with his fon, were flain. His death was merited, and his vices were fuch as to deferve the deteftation of pofterity. He died in the 47 th year of his age, after an unhappy reign of two years and four months, in which the empire fuffered inexpreffible calamities. "Æmilianus, after his victory over Gallus, expected to be acknowledged emperor; but he foon found himfelf miferably difappointed. The fenate refufed to acknowledge his claims; and an army that was fationed near the Alps chofe Valerian, their own commander, to fucceed to the throne. In confequence of this, Æmilianus's foldiers began to confider their general as an obftacle to the univerfal tranquillity, and flew him in order to avoid the mifchiefs of a civil war.

Valerian being thus univerfally acknowledged as emperor, although arrived at the age of 70 , fet about reforming the ftate with a fpirit that feemed to mark a good mind and unabated vigour. But reformation was then grown almoft impracticable. The difputes between the Pagans and Chriftians divided the empire as before; and a dreadful perfecution of the latter enfued. The northern nations over-ran the Roman dominions in a more formidable manner than ever; and the empire began to be ufurped by a multitude of petty leaders, each of whom, neglecting the general ftate, fet up for himfelf. To add to thefe calamities, the Perfians, under their king Sapor, invaded Syria; and comin foner, and into Mefopotamia, took the unfortunate Valerian Pri- fulted by
foner, the Perfians.

## R O M <br> R O M

Rome. +rers
foner, as he was making preparations to oppofe themNothing can exceed the indignities, as well as the cruelties, which were practifed upon this unlappy monarch, thus fallen into the hands of his enemies. Sapor, we are told, always ufed him as a footfool for mounting his horfe; he added the bitternefs of ridicule to his infults, and ufually obferved, That an attitude like that to which Valerian was reduced, was the beft ftatue that could be erected in honour of his victory. This horrid life of infult and fufference continued for feven $y \in a r s$, and was at length terminated by the cruel Perfian's commanding his prifoner's eyes to be plucked our, and afterwards 492 caufing him to be flead alive.

The news of the defeat of the Roman army by the Perfians, and the captivity of Valerian, no fooner reached the barbarous nations at war with Rome, than they poured on all fides into the Roman territories in
incredible multitudes, threatening the empire, and Rome itfelf, with utter deftrustion. The Goths and Scythians ravaged Pontus and Alia, committing every where dreadful devaftations; the Alemanni and Franks having over-run Rhetia advanced as far as Ravenna; putting all to fire and fword; the Quadi and Sarmatians feized on great part of Dacia and Pannonia; while other barbarous nations, invading Spain, made themfelves malters of Tarraco and other important places in that province. In the mean time Gallienns, the fon of Valerian, having promifed to revenge his father's captivity, and reprefs the barbarians, was chofen emperor without any oppofition. He was at that time in Gaul; but haftened into Italy, from whence he drove out the barbarians, either by the terror of his approach, or by overcoming them in battle.In Dacia and Pannonia, alfo, the barbarians were driven back by Regillianus, who commanded there, and who is faid to have gained feveral vitories in one day.
But in the mean time, one Ingenuus, a man of great reputation in war, and univerfally beloved both by the people and foldiery, caufed himfelf to be proclaimed em. peror in Pannonia, where he was general'y acknowledged as well as in Moffia. Gallienus no fooner heard of his revolt, than he marched from the neighbourhood of Ravenna, where he then was, into Illyricum, engaged Ingenuus, and put him to flight. Some authors tell us, that Ingenuus was killed after the battle by his own foldiers; while others affirm, that he put an end to his own life to avoid falling into the hands of Gallienus, who ufed his vittory with a cruelty hardly to be parallelled. The following letter to Verianus Celer, one of his officers, will fhow the difpofition of this emperor: " I thall not be fatisfied (fays he) with yr ur putting to death only fuch as lave borne arms againlt me, and might have fallen in the field: you muft in every city deftroy all the males, old and young; fpare nore who have wifhed ill to me; none who have fpoken ill of me the fon of Valerian, the father and brother of princes. Ingenuus emperor! Tear, kill, cut in pieces vithout mercy : you underftand me; do then as you know I would do, who have written to you with my own hand." In confequence of thefe cruel orders, a moft dreadful havock was made among that unhappy people; and, in feveral cities, not one male child was left alive. The troops who had formerly ferved urder Ingenuus, and the inhabitants of Mofia who had efraped the general
flaughter, poroked by thefe cruelties, proclaimed Regillianus emperor. He was a Dacian by birth, deicended, as was faid, from the celebrated king Decebalus whom Trajan had conquered; and had, by feveral gallant actions, gained reputation in the Roman armies. Afier he was proclaimed emperor, he grined great advantages over the Sarmatians; but was foon after murdered by his own foldiers. Thefe revolts werc quickly followed by many others. Indeed it is not furprifing, at a time when the reins of government were held with fo loofe an hand, that a crowd of ufurpers fhould ftart up in every province of the empire. The grear number of ufurpers who pretended to the empire about this time have been diftinguifled by the name of the thirty tyranis. However, there were only 19 ; viz. The thir Cyriades, Macrianus, Balifta, Udenatus, and Zenobia tyrants. in the eaft : in Gaul, and the weftern provinces, Pofthumus, Lollianus, Victorinus and his mother Victoria, Marius, and Tetricus; in 1llyricum, and on the confines of the Danube, Ingenuus, Regillianus, and Aureolus; in Pontus, Saturninus; in Iffauria, Trebellianus; in Theffaly, Pifo; in Achaia, Valens; in Egypt, Æmilianus; and in Africa, Celfus. Several of thefi pretenders to the empire, however, though branded with the opprobrious appellation of tyrants, were eminent examples of virtue, and almolt all of them were poffeffed of a confiderable fhare of vigour and ability. The principal reafon affigned for their revolt was, the infamous character of Gallienus, whom neither officers nor foldiers could bear to ferve. Many of them, however, were forced by the foldiers to affume the imperial dignity much againlt their will. "You have lof," faid Saturninus to his foldiers when they invelted him with the purple, "a very ufeful commander, and have made a very wretched emperor." The apprehenfions of Saturninus were julaified by the event. Of the 19 ufurpers already mentioned, not one died a natural death; and in Italy and Rome Gallienus alone continued to be acknowledged emperor. That prince indeed honoured Odenatus prince of Palmyra with the title of Augufius, who continued to polfefs an independent fovereiguty in the eaft all his lifetime, and at his death tranfmitted it to his wife Zenobia. See Palmyra.

The confequences of thefe numerous ufirpations Fatal confe were the mot fatal that can be conceived. The elec- quences of tions of thefe precarious emperors, their life and death, thefe ufurwere equally deftructive to thefr fubjects and adbe. pations. rents. The price of their elevation was inftantly paid to the troops by an immenfe donative drawn from the exhaufted people. However virtuous their character, and however pure their intentions might be, they found themfelves reduced to the neceffity of fupporting their ufurpation by frequent acts of rapine aud cruelty. When they fell, they involved armies and provinces i: their fall, as appears from the letecr of Gallienus already quoted. Whilf the forces of the fate were dilperfed in private quarrels, the defencelefs provinces l:iy expofed to every invader. The bravelt uforpers wero compelled, by the perplexity of their fituation, to conclude difhonourable treaties with the barbarians, and even to fubmit to fhameful tribitits, and intro. duce fuch numbers of barbarians into the Roman fervice as feemed fuficient at once to overthrow the empire.

## R O M

 - 'licuns :andered, a 1,1 is $L$ Lic caeded by ciatud:us.

But when ti:e empire feemed tivas teady to fink at once, it haden!y revived on the deall of Gdilienus, who was mardured by IFartian, one of his own generals, while he befieged Aureolus, one of the tyrants, in Milan. His death gave gensral fatisfaction to all, except his foldiers, who hoped to reap the reward of their treachery by the plunder of Milan. But being fruftrated in the fe expectations, and in fome meafure kept within hounds by the largeffes of Martian, Flavius Claudius was nominated to fucceed, and joyfully accepted by all orders of the ttate, and his title confirmed los the fenate and the people.

We are not fufficiently afured of this emperor's. lineage and country. Some affirm that he was born in Dalmatia, and defcended from an ancient family there ; others affert that he was a Trojan; and others, that he was fon to the emperor Gordian. But, whatever might have been his defcent, his merits were by no means doubtful. He was a man of great valour and conduct, having performed the moft eminent fervices againft the Goths, who had long continued to make irruptions into the empire. He was now about 55 years old, equally remarkable for the frength of his body and the vigour of his mind; he was chafte and temperate, a rewarder of the yood, and a fevere punifher of fuch as tranfgreffed the laws. Thus endowed, therefore, he in fome meafure put a ftop to the precipitate decline of the empire, and once more feemed to reftore the glory of Rome.

His firt fuccefs, upon being made emperor, was againit Aureolus, whom he defeated near Milan. His next expedition was to oppofe the Goths, againft whom he led a vely numerous army. Thefe barbarians had made their principal and molt fuccefffal irruptions into Thrace and Macedonia, fwarmed over all Greece, and hiat pillaged the famous city of A thens, which had long been the ichool of all the polite arts to the Romans. The Goths, however, had no veneration for thofe embellifhments that tend to foften and humanize the mind, but detroyed all monuments of tafte and learning with the moft favage alacrity. It was upon one of there occalions, that, having heaped together a large pile of books in order to burn thems, one of the commanders whuaded them from the defign, alleging, that the time which the Grecians fould wafte on books would only render them more anqualified for war. But the empire feemed to tremble, not only on that fide, but almoft on every quarter. At the fame time, above 300,000 of thefe barbarians (the Heruli, the Trutangi, the Virturgi, and many narelefs and uncivilized nations) came Cown the river Danube, with 2000 flips, fraught with men and ammunition, fpreading terror and devaltation on every fide.

In this flate of univerfal difmay, Claudius alone feemed to continue unfhaken, He marched his difpropor. tioned army againft the favage invaders; and, though but ill prepared for fuch an engagement, as the forces of the empire were then employed in different parts of the world, he came off victorious, and made an incredible flaugbter of the enemy. The whole of their great army was cither cut to pieces or taken prifoners: houfes ware filled with their arns; and farce a province of the empire, that was not furnifhed with flaves from thofe that furvived the defeat. Thefe fucceffes were followed by many others in different parts of the empire; fo that
the Goths, for a confiderable time after, made but a feeble oppolition. He fome time after marched againate the revolted Germans, and overthrew them with confiderable flaughter. His laft expedition was to oppofe Tce tricus and Zenobia, his two puiffant rivals in the empire, But on his march, as he approached near Sirmium, in Claudius 498 Pannonia, he was feized with a pettilential fever, of dies, and is which he died in a few days, to the great regret of his fucceeded fubjects, and the irreparable lofs of the Roman em-by Aurtpire. His reign, which was not quite of two years lian.
continuance, was active and fuccefsful; and fuch is the character given of him by hiftorians, that he is faid to have united in himfelf the moderation of Au. gultus, the valour of Trajan, and the piety of Antoninus.

Immediately after the death of Claudius, the army made unanimous choice of Aurelian, who was at thit time malter of the horfe, and efteemed the molt valiant commander of his time. However, his promntion was not without oppofition on the part of the fenate, as Quintillus, the brother of the deceafed emperor, put in his claim, and was for a while acknowledged at Rome. But his authority was of very fhort duration; for finding himfelf abandoned by thofe who at firlt inftigated him to declare for the throne, he chofe to prevent the feverity of his rival by a voluntary death, and caufing his veins to be opened, expired, after having reigned but 17 days.

Aurelian being thus univerfally acknowledged by all the ftates of the empire, afiumed the command, with a greater fhow of power than his predecefors had enjoyed for fome time before. This active monarch was born of mean and obfcure parentage in Dacia, and was about 55 years old at the time of his coming to the throne. He had fpent the early part of his life in the army, and had rifen through all the gradations of military duty. He was of unfhaken courage and amazing ftrength; he in one engagement killed 40 of the enemy with his own hand, and above 900 at feveral different times. In fhort, his valour and expedition were fuch, that he was compared to Julius Cæfar ; and, in fact, only wanted mildnefs and clemency to be every way his equal.

The whole of this monarch's reign was fpent in re 499 prefling the irruptions of the northern nations, in fuccers humbling every other pretender to the empire, and pu-againf the nifhing the monftrous irregularities of his own fubjects. barbarians. He defeated the Marcomanni, that bad invaded Italy, in three feveral engagements, and at length totally defroyed their army. He was not lefs fucceffful againdt Zenobia, the queen of the Ealt, a woman of the molt heroic qualifications, who bad long difclaimed the Roman power, and eftablifbed an empire of her own, as is related under the article Palmyra.

Aurelian having thus brought back peace to the empire, endeavoured, by the rigours of juftice, to bring back virtue alfo. He was very ftrict in punifhing the crimes of the foldiery: in his orders to his lieutenants, he infifted that the peafants fhould not be plundered upon any pretences; that not even a grape, a grain of falt, or a drop of oil, fhonid be exacted un. jufty. He caufed a foldier who had committed adultery with his hoftefs, to have bis feet tied to the tops of two trees, forcibly bent at top to mect each other ; which being let loofe, and fuddenly recoiling, tore the criminal

## R O M

## $\mathrm{R} O \mathrm{M}$

 fome meafure, required it. In thefe punifhments in flicted on the guilty, the Chriltians, who had all along been growing more numerous, were' fharers. Againit there he drew up feveral letters and edicts, which howed that he intended a very fevere perfecution; but if we may believe the credulous hiftorians of the times, he was diverted jult as he was going to fign them by a thunderbolt, which fell fo near his perfon, that all the penple judged him to be deftroyed.But however Heaven might have interpofed on this occafion, it is certain that his feverities at laft were the catue of his deftruction. Menefthus, his principal fe. cretary, having been threatened by him for fome fault which he had committed, began to confider how he might prevent the meditated blow. For this purpofe, he forged a roll of the names of feveral perfons, whom he pretended the emperor had marked out for deach, adding his own to ftrengthen him in the confidence of the party. The feroll thus contrived was fhown with an air of the utmoft fecrecy to fome of the perfons concerned; and they, to procure their fafety, immediately agreed with him to deftroy the emperor. This refolution was foon put in execution ; for, as the emperor fated with a fmall guard from Uraclea, in Thrace, towards Byzantium, the confpirators fet upon him at

500

## He is mur-

dered. once, and flew him with very fmall refiftance. He was flain in the 6oth, or, as fome fay, in the 63 d year of his age, after a very active reign of almoft five years.

The number of pretenders to the throne, which had formerly infefted the empire, were, by the laft monarch's activity, fo entirely removed, that there now feemed to be none that $w$ : uld venture to declare himfe!f a candidate. The army referred the choice to the fenate; and,
on the cther fide, the fenate declined it; fo that a fpace of near eight months elapfed in thefe negociations. At length, however, the fenate made choice of Tacitus, a man of great merit, and noway ambitious of the honours that were offered him. Upon being folicited to accept the empire, he at firit refufed, and retired to his country-houfe in Campania, to avoid their importunities; but being at length prevailed upon, he accepted the reins of government, being at that time 75 years old.

One of the firlt acts of his government was the punithment of thofe who had confpired againtt the late emperor. Menefthus was impaled alive, his body being thrown to be devoured by wild beafts; his eftate allo was confifcated to the exchequer; and his ready moner, which was very conliderable, applied towards paying the army. During this fhort reign, the fenate feemed to have a large fhate of authority, and the hiAtorians of the times are liberal of their praifes to fuch empernrs as were thus willing to divide their power.Upon endeavouring to obtain the confulhip for his brother Probus, he was refufed it by the fenate; at which be feemed no way moved, but calmly remarked that the fenate beft knew whom to choofe. This moderation prevailed in all the reft of his conduct: he was extremely temperate; his table was plain, and furnifhed with nothing expentive; he even prohibited his em. prefs from wearing jewels, and forbad the ufe of gold and embroidery. He was fond of learning, and the memory of fil $h$ men as had deferved well of their

Vol. XVI.
country. He particularly efteemed the works of his Rome. namefake Tacitus the hiRorian; commanding that they fhoulci be placed in every public library throughout the empire, and that many copies of them hould be tranfcribed at the public charge. A reign begun with fuch moderation and jultice, only wanted continuance to have made the empire happy; but after enjoying the empire about fix months, he died of a fever in his His death. march to oppnfe the Perfians and Scy thians, who had invaded the ealtern parts of the empire.

Upon the death of Tacitus the army feemed divided in the choice of an emperor ; one part of it chofe Flo. rianus, brother to the deceafed; but the majority were for fome time undetermined. They alleged amongit each other the neceffity of choofing one eminent for valour, honour, piety, clemency, and probity; but the laft virtue being that chiefly infifted upon, the whole army, as if by common confent, cried out that Probus fhould be emperor. He was accordingly confirmed in this dignity with the ufual folemnities: and Florianus finding himfelf deferted, even by thofe legions who had promifed to fand up in his fupport, opened his arteries and bled himfelf to death,

Probus was 44 years old when he afcended the Probus raithrone, being born of noble parentage at Sirmium in fed to the Pannonia, and bred up a foldier from his youth. He empire. began early to diftinguifh himfelf for his difcipline and valour; being frequently the firlt man who in befieging towns fcaled the walls, or that burft into the enemy's camp. He was no lefs remarkable for fingle combats, and faving the lives of many eminent citizens. Nor was his activity and courage, when elected to the $\epsilon$ mpire, lefs apparent, than in his private fation. He firlt repreffed the Germans in Gaul, of whom he flew 400,000 . He then marched into Dalmatia, to oppofe and fubdue the Sarmatians. From thence he led his furces into Thrace, and forced the Goths to fue for peace. He after that turned his arms towards Afia; 504 fubdued the province of Ifauria; and marching on- quefte. ward, conquered a people called the Blemyes; who, leaving their native forelts of Ethiopia, had poffefled themtelves of Arabia and Judea, and had continued in a flate of rebellion fince the reign of Gallienus. N:rfis alfo, the king of Perfia, fubmitted at his approach: and upon his return into Europe, he divided the depopulated parts of Thrace among its barbarous invaders: a circumftance that afterwards produced great calamities to the empire.

His diligence was not lefs confp;cuous in fuppreffing inteftine commotions. Saturninus being compelled by the Egyptians to declare himfelt emperor, was defeated and flain. Proculus alfo (a perfon remarkable only for his great attachment to women, and who boafted in a letter, that, having taken 100 Sarmatian virgins prifoners, he deprived ten of that name in one night, and all the relt within a fortnight) fet up againit the emperor; but was compelled to fly, and at length delivered up by the Germans. At the fame time Conofus (who was a remarkable votary to Bacchus, being able to drink as much wine as ten cruld do, without being difordered) rebelled, and being overcome hanged himfelf in defpair. Probus, when he faw him immediately aiter his death, could not av id pointing to him, and faying, "There hangs nit a man but a cafk." Still, however, notwistanding every effort to give quier to the empire, 3 L
the
$\underbrace{\text { Prme. }}$

506 Is murdercd.
the barbs ians who furounded it kept it in continual alarins. 'Whey were frequent'y repulfed into their native wls, but they as certainly returned with frefh rage and increafed ferocity. The Goths and Vandals, finding the emperor engaged in quelling domeftic difputes, renewed their accuftomed inrcads, and once more felt the punilhment of their prefumptions. They were cocquered in feveral encragements; and Probus returned in triumph to Rome. His active temper, however, would not fuffer him to continue at reft whilft a fingle uemy was left to conquer. In his laft expedition he led his foldiers againlt the Perfians; and yoing through Siimium, the place of his nativity, he there employed teveral thoufands of his foldiers in draining a fen that was incommodious to the ishabitants. The fatigues of this undertaking, and the great reflraint that was laid upen the foldiers' licentions manners, produced a confiracy, which ended in his ruin: for taking the opportunity as he was marching into Greece, thes fet upon and flew him after he had reigned fix years and four months with general approbation.

Carus, who was pretorian prefect to the deceafed emperor, was chofen by the army to fucceed him; and he, to flrengthen his authority, named his two fons Carinus and Numerianus with him in command; the former of whom was as much fullied by his vices, as the youngelt was virtuous, modelt, and courageous. The new emperor had fcarce time to punith the murderers of the late monarch, when he was alarmed by a frefh irruption of the Sarmatians; over whom he gained a fignal viftory. The Perfian monarch alfo made fome attempts upon the empire; but Carus affured his ambaliadors, that if their mafter perfilted in his obftinacy, all his fields thould mortly be as bare as his own bald head, which he fhowed them. In confequence of this threat, he marched to the very walls of Ctefiphon, and a dreadful battle enfuing, he once more gained a complete victory. What the refult of this fiaccefs might have been, is not known ; for he was thortly after ftruck dead by lightning in his tent, with many others that were round him. Numerianu*, the youngeft fon, who accompanied his father in this expedition, was inconfolable for his death; and brought fuch a diforder upon his eyes with weeping, that he was obliged to be carried along with the army, fhut up in a clofe litter. The peculiarity of his fituation, after fome time, excited the ambition of Aper, his father-in-law, who fuppofed that he could now, without any great danger, aim at the empire himfelf. He therefore hired a mercenary villain to murder the emperor in his litter; and the better to conceal the fact, gave out that he was fill alive, but unable to endure the light. In this manner was the dead body carried about for fome days, Aper continuing to attend it with the utmoft appearance of refpect, and to take orders as ufual. The offenfivenefs, however, of its fmell at length difcovered the treachery, and excited an univerfal uproar throughout the army. In the midit of this tumule, Dioclefian, one of the moft rioted commanders of his time, was chofen emperor, and with his own hand flew Aper; having thus, as it is faid, fulfilled a prophecy, which had faic, that Dioclefian fhould be emperor after he had flain a boar; al lading to the name of his rival, which fignifies a boar. Carinus, the remaining fon, did not long furvive his father and brother; for giving himfelf up to his vices,
and yet at the fame time oppoting the now-made ernperor, the competitors led their forces into Noefia; where Dioclefian being victorious, Carinus was flain by a tribune of his own army, whofe wife he had formerly abufed.

Dioclefian was a perfon of mean birth; being ac- Diuclefian counted, according to fome, the fon of a fcrivener; and raif.d to of a flave, according to others. He received his name the entfrom Dioclea, the town in which he was born; and was about 40 years old when he vas elecked to the empire. He pardoned all who had joined Carinus, without injuring either their fortunes or honours. Confcious alfo that the weight of empire was too heavy fur one alone to fuftain, he took in Maximian, his general,

Pome.
as a partner in the fatigues of duty, making him his as a partner in the fatigues of duty, making him his ${ }^{509}$ fifing each oher, thefe two continued to live in the ftrift- Maxmian eft friendfhip; and though fomewhat differing in temper (as Maximian was rather a man of vicious inclinations), yet they concurred in promoting the general good, and humbling their enemies. And it mult be obferved, that there never was a period in which there were more numerous or formidable enemies to oppofe.
The peafants and labourers in Gaul made a dange- Infurrec 510 rous infurrection, under the conduct of Amandus and Helianus, but were fubdued by Maximian. Achilleus, who commanded in Egypt, proclaimed himfelf emperor; and it was not without many bloody engagements that he was overcome, and condemned by Dioclefian to be devoured by lions. In Africa, the Roman legions, in like manner, joined with many of the natives, feized upon the public revenues, and plundered thofe who continued in their duty. Thefe were alfo fubdued by Maximian; and, after a long dubious war, contrained to fue for peace. About the fame time, a principal commander in Britain, named Caraufius, proclaimed himfelf emperor, and poffeffed himfelf of the ifland. To oppofe this general's claims, Maximian made choice of Conftantius Chlorus, whom he created Cæfar, and married to Theodora his daughter-in-law. He, upon his arrival in Britain, finding Caraufius very ftrong, and continually reinforced from Germany; though proper to come to an accommodation; fo that this ufurper continued for feven years in quiet poffeffion of the whole ifland, till he was flain by Alectus, his. friend and intimate. About this time alfo, Narfes, king of Perfia, began a dangerous war upon the empire, and invaded Mefopotamia. To ftop the progrefs of the enemy upon this quarter, Dioclefian made choice of Gavlerius (furnamed Armentarius, from the report of his being born of a cow-herd in Dacia) ; and he likewife was created Cæfar. His fuccefs alfo, though very doubtful in the beginning, was in the end terminated according to his wifhes. The Perfans were overcome in a decifive engagement, their camp plundered and taken, and their king's wives and children made prifoners. of war. There only remained, of all the enemies of the Roman empire, thofe who lay to the northward unfubdued. Thefe were uttarly unconquerable, as well upon account of their favage ficreenefs, as the inhofpitable feverity of the climate and foil from whence they iffued. Ever at war with the Romans, they infued forth, when the armies that were to reprefs their invafions were called away; and upon their return, they as fuddenly withdrew into cold, barren, and inaccefible

5 II Th: Chriftians cruclly perfecuted.
places, which only themfelves could endure. In this manner the Goths, Sarmatians, Alani. Quadi, \&c. poured down in incredible numbers; while every defeat feemed but to increafe their ftrength and perfeverance. Of thefe, multitudes were taken prifoners, and fent to people the more fouthern parts of the empire; Atill greater numbers were deftroyed ; and though the reft were driven back to their native forefts, yet they continued ever mindful of their inveterate enmity, and, like a favage beaft, only continued inactive, till they had licked their wounds for a new encounter.

During this interval, as if the external miferies of the empire were not fufficient, the tenth and laft great perfecution was renewed againft the Chriftians. This is faid to have exceeded all the former in feverity: and fuch was the zeal with which it was purfued, that, in an ancient infcription, we are infurmed that they had effaced the name and fuperftition of the Chriftians, and had reftored and propagated the worlhip of the gods. Their attempts, however, were but the malicious efforts of an expiring party ; for Chriflianity fhortly after was eftablifhed by law, and triumphed over the malice of all its enemies. In the midft of the troubles raifed by this perfecution, and of the contefts that fruck at the internal parts of the ftate, Dioclefian and Maximian furprifed the world by refigning their dignities on the fame day, and both retiring into private ftations. Hiftorians are much divided concerning the motives that thus induced them to give up thofe honours which they had purchafed with fo much danger. Some afcribe it to the philofophical turn of Diclefian; and cthers, to his being difgufted with the obftinacy of his Chriftian fubjects: but Lactantius afferts, that he was compelled to it, together with his partner, by Galerius, who co. ming to Nicomedia, upon the emperor's recovery from a great ficknefs, threatened him with a civil war in cafe he refuled to refign. However, of this we are well affured, that he fill preferved a dignity of fentiment in his retiremert, that might induce us to believe he had no other motive for refignation than the love of quiet, and the conlcioufxefs of his inability to difcharge on a fick-bed the duties of a fovereign. Having retired to his birth-place, he fpent his time in cultivating his garden, affuring his vifitors that then only he began to enjoy the world, when he was thought by the reft of mankind to forfake it. When allo fome attempted to perfuade him to refume the empire, he replied, That if they knew his prefent happinefs, they would rather endeavour to imitate than difturb it. In this contented manner he lived fome time, and at laft died either by poifon or madnef, it is uncertain which. His reign, which continued 20 years, was active and ufeful; and his authority, tinctured with feverity, was well adapted to the depraved fate of morals at that time.

Maximian, his parener in the empire and in refignation, was by no means fo contented with his fituation. He longed once mote for power, and difturbed the two fucceeding re!gns with various efforts to refume it ; attempting to engage Dioclefian in the fame defign. Being obliged to leave Rome, where he had bred great confufion, he went over into Gaul, where he was kindly received by Cenitantine. the then act nowledred emporor of the welt. But here alfo continuing his intrigues, aid endeaboung to force his own datroter and deitroy lier bufband, he was detecter, and condemn-
ed to die by whatever death he fhould think proper ; and Lactantius tells $u$ s that he chofe hanging.

Upon the refignation of the two emperors, the two CouftanCæfars whom they had formerly chofen were univer- tius Chlofally acknowledged as their fucceffors. Conftantius rus, and Chlorus, who was fo called from the plainnefs of his Galerius, complexion, was virtuous, valiant, and merciful. Ga. emperors. lerius, on the other hand, was brave, but brutal, incontinent, and cruel. As there was fuch a difparity in their tempers, they readily agreed, upon coming into full power, to divide the empire: Conftantius being appointed to govern the weftern parts; namely, Italy, Sicily, the greateft part of Africa, together with Spain, Gaul, Britain, and Germany : Galerius had the ealtern parts allotted to his fhare ; to wit, Illyricum, Pannonia, Thrace, Macedonia, all the provinces of Greece, and the Lefler Afia, together with Egypt, Syria, Judea, and all the countries ealtward. The greatnels of the divifion, however foon induced the emperors to take in two partners more, Severus and Maximin, who were made Cæfars, and affifted in the conducting of affairs; fo that the empire now was under the guidance of four perfons, all invefted with fupreme authority.

We are informed but of few particulars of the reign of Conftantius, except a detail of his character, which appears in every light moft amiable. He was frugal, chafte, and temperate. His mercy and juflice were equally confpicuous in his treatment of the Chriftians, whom he would not fuffer to be injured; and when at length perfuaded to difplace all the Chriftian officers of his houlehold that would not change their religion, when fome of them complied he fent them away in difgrace; alleging, that thofe who were not true to their God, would never be faithful to their prince.

In the fecond year of his reign he went over into Britain; ard leaving his fon Conftantine as a kind of hoftage in the court of his partner in the empire, took up his refidence at York. He there continued in the practice of his ufual virtues; till falling fick, he began to think of appointing his fon for his fucceffor. He accordingly fent for him with all fpeed; but he was paft recovery before his arrival : notwithftanding, he received him with marks of the utmolt affection, and raifing himfelf in his bed, gave him feveral ufeful inftructions, particularly recommending the Chriftians to his protection. He then bequeathed the empire to his care; and crying out, that none but the pious Conftantine fhould fucceed him, he expired in his arms.

In the mean time, Galerius, his partner in the empire, being informed of Conit intine's advancement, teflified the moft ungovernable rage, and was even going to condemn the meffenger who brought him the account : but being diffuaded, he feemed to acquiefce in what becould not prevent, and fent him the marks of royalty; but at the fame time declared Severus emperor, in oppofition to his interefts. Juft about this time alfo, another pretender to the empire ftarted up. This was M 5 P4 Maxentius, a perlon of mean extrastion; but very much ufurntius favrured by the foldiers, whom lie permitted to pilage throne. at difcretion. In order to oppoie Maxentins, Severus led a numerous army towards the gates of Rome; but his folliers confidering againt whem they ware to fight, immediately tbandoned him ; and fhortly after he put an end to his own life, by opening bis vcins. To revenge his death, $C_{5}$ lerius matched int) Inily, re

Rome. $\underbrace{\text { Rnme. }}$ fulving to ruin the inhabitants, and to deftroy the whole fenate. His foldiers, however, upon approaching the capital began to waver in their refolutions: wherefore he was obliged to have recourfe to intreaties, imploring them not to abandon him; and, retiring by the fame route by which he had advanced, made Licinius, who was orjginally the fon of a poor labourer in Dacia, Cxfar, in the room of Severus who was fain. This feemed to be the laft act of his power; for thortly after he was feized with a very extraordinary diforder in his privates, which baffled all the kill of his phyficians, and carried him off, after he had languifhed in torments for near the fpace of a year. His cruelty to the Chrifians wats one of the many crimis alleged againth him; and their hilt rians have not failed to aggravate the circumftances of his death as a judgment from Heaven for his former impity. However this be, he abated much of his ieverities againg them on his deathbed; and revoked thofe edicts which he had formerly publifhed, tending to their perfecution, a little before his death.

Conftantine being thus delivered from his greateft opponent, might now be confidered as poffeffing more power than any of his rivals who were yet remaining. The empire was at that time divided between him and three others: Masentius, who governed in Rome, a perfon of a cruel difpofition, and a ftedfaft fupporter of paganitm ; Licinius, who was adopted by Galerius, and commanded in the eaft; and likewife Miximin, who had formerly been declared Cæfar with Severus, and who alfo governed fome of the eaftern provinces.

For fome time all things feemed to wear a peaceful appearance ; till at length, either ambition, or the tyrannical conduet of Maxentius, induced Conftantine to engage in an expedition to expel that commander from Rome, and to make the preper preparations for marching into Italy. It was upon this occafion that he formed a refolution which produced a migtty change in the politics as well as the morals of mankind, and gave a new turn to the councils of the wife, and the purfuits of ambition. One evening, as we are told by Eufebius, the army being upon its march toward Rome, Confantine was taken up with vatious confiderations upon the fate of fublunary things, and the dangers of his approaching expedition: fenfible of his own incapacity to fuceeed without divine afiftance, he employed his meditations upon the opinions that then were chiefly agitated among mankind, and fent up bis ejaculations
to Heaven to infirie him with wifdom to choofe the path he ought to purfie. It was then, as the fun was declining, that there fuddenly appeared a pillar of light in the heavens, in the fathion of a crofs, with this infription, torta Nikh "In this overcome." So ex. traordinary an arpearance did not fail to create aftonilhment both in the emperor and his whole army, who confidered it as their difpoftions led them $t$ : believe. Thofe who were attached to paganim, prompted by their anfpices, pronounced it a moft inaufpicious omen, portending the moft unfortunate events. But it made a different impreflion on the emperor's mind; who, as the account goes, was farther encouraged by vifions the fime night. He therefore, the day following, caufed a royal landard to be made, like that which he had feen in the heavens; and commanded it to be carried before him in his urars, as an enfign of victory and celeftial.

## 452 ]

## R O M

proteftion. After this, he confulted with feveral of the principal teachers of Chriltianity', and made a pub $\underbrace{\text { Rome. }}$ lic avowal of that facred perfuafion.

Conftantine having thus attached his foldiers to his interelt, who were moltly of the Chriltian perfuafion, loft no time in entering Italy with 90,000 foot and 8000 horfe; and foon advanced to the very gates of Rome. The unfortunate Maxentius, who had long gi- Maxentiu ven himfelf up to eafe and debauchery, now began to defeated make preparations when it was too late. He firit put ${ }^{\text {and killed. }}$ in practice all the fuperftitious rites which paganim taught to be neceffary ; and then confulted the Sibylline books; from whence he was informed, that on that great day the enemy of Rome Ihould perilh. This prediction, which was equivocal, he applied to Conttantine; wheretore, leaving all things in the beft pofture, he advanced from the city with an army of 100,000 foot and 18,000 horfe. The engagement was for fome time fierce and bloody, till his cavalry being routed, victory declared upon the fide of his opponent, and he himfelf was drowned in his fight by the breaking down of a bridge as he attempted to crofs the river Tiber.

Conftantine, in confequence of this viktory, entering the city, difclaimed all praifes which the fenate and people were ready to offer; afcribing his ficcefs to a luperior power. He even caufed the crofs, which he was faid to have feen in the heavens, to be placed at the right of all his itatues, with this inicription: "That under the influence of that victorious crofs, Conlantine had delivered the city from the yoke of tyrannical power, and had reftored the fenate and people of Rome to their ancient authority." He afterwards ordained, that no criminal fhould for the future fuffer death by the crofs; which had formerly been the moft ufual way of punifhing flaves convicted of capital offences. Edias were foon after iffued, declaring that the Chriftians fhould be eafed from all their grievances, and received into places of truft and authority. Thus the new religion was feen at once to prevail over the whole Roman. empire ; and as that enormous fabric had been built and. guided upon pagan principles, it lof a great deal of its itrength and coherence when thofe principles were thus. at once fubverted.

Things continued in this ftate for fome time, Conftantine all the while contributing what was in his power. to the intereft of religion, and the revival of learning, which had been long upon the decline, and was almolt. wholly extinct in the empire. But in the midlt of thefe afliduities, the peace of the empire was again difturbed by the preparations of $M_{1 x i m i n}$, who geverned in the ealt, and who, defirous of a full participation of power, marched againtt Licinius with a very numerous army. In conlequence of this flep, after many conflicts, a ge- Maxiain neral engagement enfued, in which Maximin fuffered a defeatani total defeat ; many of his troops were cut to pieces, death. and thofe that furvived fubmitted to the conqueror. Mxximin, however, having efcaped the general, carnage, once more put himfelf an the head of another army, refolving to try the fortune of the field; but death prevented hi; defign. Asshe died by a very extraordinary kind of madnels, the Chriftians, of whom he was the declared enemy, did not fail to afcrise his end to a judgment from Heaven; but this was the age in which falfe judgments and falfe miracles made up the bulk of their uninfruckive history,

Conftantine and Licinius thus remaining undifputed

Rone.
518 Wur between Conftantive and Licinius. poffeffors and partners in the empire, all things promifed a peaceable continuance of friendhip and power. However, it was foon found, that the fame ambition that aimed after a part, would be content with nothing lefs than the whole. Pagan writers afcribe the rupture between thefe two potentates to Conftantine; while the Chriftians, on the other hand, impute it wholly to Licinius. Both, perhaps, might have concurred: for Licinius is convicted of having perfecuted Chrifianity, which was fo highly favoured by his rival ; and Conftancine is known to have been the firft to begin the preparations for at open upture. Both fides exerted all their power to make oppofition; and at the head of very formidable armies, came to an engagement near Cybalis, in Pannonia. Conftantine, privious to the batit:, in the nidft of his Chriftian bilhops, begged the alliftance of Heaven; while Licinias, with equal zeall, called upon the pagan priefts to intercede with the gods in his favour. Conftantina, after an obftinate reliftance from the enemy, became victorious; took their camp; and, after fome time, compelled Licinius to fue for a truce, which was agreed upon. But this was of no long continuance ; for, foon alter, the war

diswh isd ion to death.
breaking out afrefh, and the rivals coming once more to a general engagement, it proved decifive. Licinius was entirely deteated, and purtued by Conftantine into Nicomedia, where he furrendered himfelf up to the vic. tor; having firit obtained an oath that his life thould be fpared, and that he fhould be permitted to pafs the remainder of his days in retirement. This, however, Contanime fhortly aiter broke; for either fearing his defigns, or finding him acuuilly engaged in fref conpiracies, he commanded lim to be put to death, together with Martian his general, who fome time before bal been created Cæliar.
Conftantine being now fole monarch of the empire, withour a rival to divide his power, or any perfon from whofe claims he couid have the lealt apprebentions, refolved to eftablifh Chriftianity on fo fure a bafis, that no pew regulations fhould thake it. He commanded that in all the provinces of the empire the orders of the bilhops thould be exactly obeyed; a privilege of which, in fucceeding times, thefe fathers made hut a very indifferent ufe. He called alio a general council of thefe to meet at Nicea, in order to reprefs the herefies that had already crept into the church, particulanly that of Arius. To this place repaired about 318 bifhops, befides a multitude of prefyeters and deacuns, together with the em. peror himifelf; who all, to abont 17 , concurred in condemning the tenets of Arius; whe, with his affociates, was banilhed into a remote part of the empire.

Having thus reftored univerfal tratiequility to the emFire, he vas not able to ward off the calamities of a more domeitic nature. As the hiltories of that period are entirely at variance with each other, it is not eafy to tell the motives which induced him to put his wife Faufta and his fon Crijpos to death. The moft platfible account is this: Faulla the emprefs, who was a woman of great beauty, but of extravagant defires, had long, though fecrety, loved Crifpn:, Conilantine's fon by a former wife. She had tried every art to infpire this youth with a mulual paffion ; but, finding her more diftant efforts ineffectual, had even the confisence to make him an open confeffion of her defires. This pro-

## 453 ] <br> R O M

duced an explanation, which was fatal to both. Crifpus received her addreffes with deteltation; and fhe, to be revenged, accufed him to the emperor. Contantine, fired at once with jealouly and rage, ordered him to die without a hearing ; nor did his innocence appear till it was too late for redrefs. The only reparation therefore that remained, was the putting Faulta, the wicked inftrument of his former cruelty, to death; which was accordingly executed upon her, together with fome others who had been accomplices in her falfehood and treachery.

But the private misfortunes of a few were not to be weighed againft evils of a more general natuse, which the Roman empire Chortly after experienced. Theie arofe from a meafure which this emperor conceived and executed, of transferring the feat of the empire from Rome to Byzantium, or Conftantinople, as it was afterwards called. Whatever might have been the reafons which induced him to this undertaking ; whether it was becaufe he was offended at fome aftronts he received at Rome, or that he fuppofed Conftantinople more in the centre of the empire, or that he thought the eaftern parts more required his prefence, experience has fhown that they were weak and groundlefs. The empire had long before been in the molt declining ftate; but this in a great meafure gave precipitation to its downfall. After this it never refurned its former fplendor, but languifhed.

His firlt defign was to build a city which he might make the capital of the world; and for this purpofe, he made choice of a fituation at Chalcedon in Afia Minor; but we are told, that in laying out the ground. plan, an eagle caught up the line, and few with it over to Byzantium, a city which lay upon the oppofite fide of the Bofphorus. Here, therefore, it was thought $\epsilon x$. pedient to fix the feat of the empire; and indeed nature feems to have formed it with all the conveniences and all the beauties which might induce power to make it the feat of refidence. It was fituated on a plain that rofe gently from the water; it commanded that frait which unites the Mediterranean with the Euxine. fea, and was furnihed with all the adrantages which the moft iadulgent climate could beftow. This city, therefore, he beautified with the moft magnificent edi-. fices; he divided it into 14 regions; built a capitol, aia amphitheatre, many churches, and other public works; and having thus rendered it equal to the magnificence of his idea, he dedicated it in a very folemn manner to the God of martyrs ; in about two years after, repairing thither with his whole coust.

This removal produced no immediate alteration in the government of the empire; the inhabitants of Rome, tho' with reluctance, fubmitted to the change; nor was there for two or three years any difurbance: in the fate, until at length the Gouns, finding that the Romans had withdrawn all their garif ns along the Danube, renewed th ir inroads, and ravaged the country with unheard of crueity. Conttantine, however, foon repreffed their incurfions, and fo ftraiened them, that neir 100,000 of their number perifhed by cold. and hunger. Thefe and fome othe infurrections being bapply fuppreffed, the g.vernment of the empire was divided as follows. Cinftantine, the emperur's eldeft fon, commanded in Gau! and the weftern pro. vinces ; Conftantius governed Africa and Ingricum ; and

Konre.

52 r Transfers the feat of empire to Conftantinople.

## R O M [ 454$] \quad$ R O M

Rome.
Conftans ruled in Italy. Dalmatius, the emperor's brother, was fent to defend thofe parts that bordered upon the Goths ; and Annibalianus, his nephew, had the charge of Cappadocia and Armenia Minor. This divifion of the empire fill farther contributed to its downfall: for the united frength of the ftate being no longer brought to reprefs invafions, the barbarians fought with luperior numbers; and conquered at laft, though often defeated: Conftantine, however, did not live to feel thefe calamities. The latter part of his reign was peaceful and fplendid; ambaffadors from the remoteft Indies came to acknowledge his authority; the Perfians, who were ready for frefh inroads, upon finding him prepared to oppofe, fent humbly to defire his friendfip and forgivenefs. He was above 60 years old, and had reigned above 30 years, when he found his health began to decline. To obviate the effects of his diforder, which was an intermitting fever, he made ufe of the warm baths of the city; but receiving no benefit from thence, he removed for change of air to
Helenopolis, a city which he had built to the memory of his mother. His diforder increafing, he changed again to Nicomedia; where finding himfelf without hopes of recovery, he caufed himfelf to be baptifed; and having $f$ on after received the facrament, he expired, after a memorable and active reign of 32 years. This monarch's character is reprefented to us in very different lights : the Chrifian writers of that time adorning it with every ftrain of panegyric; the heathens, on the contrary, loading it with all the virulence of invective. He eftablifhed a religion that continues the bleffing of mat kind; but purfued a fcheme of politics that deftroyed the empire.

From the time of Conftantine to the divifion of the empire between Valentinian and his brother Valens, the hiftory of Rome is related under the article Constantinople, where alfo that of the eaftern part is carried down to the final deftruction of that city by the Turks. In the beginning of the reign of Valentinian, the province of Libya Tripolitana was grievoufly oppreffed by the barbarians of the defert, and almolt equally fo by Romanus its own governor. His conduct was fo exceedingly oppreffive, that the inhabitants fent a deputation to Valentinian, complaining of their unhappy fituation, and defiring redrefs. Palladius was accordingly fent to inquire into the flate of the province; bat being gained over by Romanus, he made a falfe report to the emperor; and thus the unhappy province was left a prey to the mercilefs invaders and rapacious governor. During the reft of this reign the barbarians continued their inroads into the empire; and among others, we find the Saxons $n$ w putting in for a fhare of the fpoils of the ruined empire : however, their army was at this time entirely cut off. At laft Valentinian himfelf took the field againtt thefe northern barbarians; and entering the country of the Quadi, deftroyed all with fire and fuverd. The barbarians on this were fain to fue for peace in a very humble manner; but Valentinian, fulling into a great paffion while fpeaking to them, threatened to extirpate the whole nation at once. His fury on this occation produced an apoplexy, or fome other mortal diforder; for he fuddenly fell down, and being corvejed by his attendants into his chamber, he was feized $w$ th violent convulfive fits and contortions of all has limbs, in the agonies of which he expired,
in the year 375, the 55 th of his age, and 12 th of his reign.

After the death of Valentinian, his fon Gratian took upon him the imperial dignity; foon after becoming mafter of the whole empire by the death of Valens. The tranfactions of his reign, and thofe of his partner Theodofius, are related under the article Constantinople, $n^{2} 77-89$. The death of Theodofius gave the finifhing ftroke to the Roman affairs; his fon Honorius, to whom he left the weftern empire, being porfeffed of no abilities whatever, and indeed feeming to have been but very little removed from an idiot. The barbarians appear to have been abundantly fenfible of the advantages offered them by the death of Theodofius. He expired in the month of January ; and before the acceffion of fpring, the Goths were in arms. The bar- Invafion barian auxiliaries alfo now declared their independency; of the and along with their countrymen, furioufly affailed the Goths undeclining empire. The Goths were now headed by an experienced commander, their celebrated king Alaric; who would have proved formidable even in better times of the empire. He firft over-ran Greece, which he accomplifhed without oppofition, through the treachery of the governor, who commanded the troops that defended the pafs at Thermopyle to retire at the approach of the enemy. Athens, Corinth, Argos, Sparta, yielded without refiftance; and the whole country was ravaged and deftroyed by the blood thirfty barbarians. At laft, in the year 397, he was oppofed by Stilicho, the general of Honorius, a man of great valour and experience in war. The Goths were defeated with great lofs, and afterwards befieged in their camp; but through miftake or negligence in the Roman commander, they were fuffered to efcape, and make themfelves malters of the province of Epirus. Alaric then, having found means to conclude a treaty with the minifters of Conftantinople, Stilicho was obliged to retire.

Not long after this, Alaric invaded Italy itfelf. The emperor, ftrack with terror, would have abandoned the country and fled into Gaul: but this difgraceful and pernicious meafure was oppofed by Stilicho ; who propofed to the court of Honorius, at that time at Milan, that if they would maintain their ground during his abfence, he would foon return with an army capable of oppofing the barbarians. This being agreed to, Stilicho immediately fet out for Rhætia, where the molt confiderable body of the Roman forces at that time was, and collected his troops with the utmolt diligence. But in the mean time Hon rius was in the greatelt danger; having been obliged to take retuge in the town of Afta in Piedmont. To this place the Goths inftantly laid fiege, and a capitulation had been propofed, when the drooping firits of Honorius were at once revived by the arrival of Stilichn, whom he had fo long expected. The Goths were now befieged in cheir turn, and obliged to come to a decifive battle fothed deat Pollentia. The engagement lalted the whole day; Pollentia. but at laft the Goths were compelled to retreat. Their camp was inftantly invelted ; their entrenchments forced with great flaughter; the wife of Alaric was taken, with all the wealth wiich had heen amaffed in plundering Greece; while many thoufands of Roman prifoners were relealed from the molt deploralle flavery. The vifury, however, was not fa decifive but that

Alaric

## R O M $\quad[455] \quad \mathrm{R} O \mathrm{M}$

Rome.

Alaric continued fill extremely formidable; and Stilicho chofe rather to conclude a treaty with him, and allow lim an amnual penfion, than to continue the war with vigour. Alaric, who was not very fcrupulous in his obfervance of this treaty, in his retreat attempted to make himfelf mater of the city of Verona: but stilichy coming up with him near that place, gave him a terrible defeat, in which the lofs was little lefs than it had been at Pollentia; after which lie effected a retreat out of Italy, but not without the greateft difficulty and dinger.

Italy being thus haprily delivered, Honcrius entered Rome in triumph, haviag Stilicho along with him in the triumphal chariot. On his entry into the city, he abolithed the thow's of gladiators; which, though forbidden by Confantine, had been tolerated by his fucceffors, and even by Theodofius himfelf, out of complaiance to the people, who were beyond meafure fond of that inhuman diverfion. However, foon after, the emperor was cbliged to leave the metropolis and retire to Ravenna, in order to fecure himfelf from the barbarians, who now broke in upon the empire on all fides. Such multitudes now made their appearance, that it is not a little difficult to account for their fudden emigration. Mr Gibbon accounts for it from a fuppofed revolution in the north-eaftern parts of China. "The Chinefe annals (fays he), as they have been interpreted by the learned induftry of the prefent age, may be ufefully applied to reveal the fecret and remote caufes of the fall of the Roman empire. The extenfive territory to the north of the great wall was pofeiffed, after the flight of the Huns, by the victorious Sienpi; wh) were fometimes broken into independent tribes, and fometimes re-united under a fupreme chief; till at length fyling themfelves Topa, or " mafters of the earth," they acquired a mare folid confiftence, and a more formidable power. The Topa foon compelled the paftoral nations of the eaftern defert to acknowladge the fuperiority of their arms: they invaded China in a period of weaknefs and inteftine difcord; and thefe fortunate Tartars, adopting the laws and manners of the vanquifhed people, founded an imperial dymaty, which reigned near 160 years over the northern provinces of the monarchy. Some generations before they afcended the throne of China, one of the Topa princes had enlifed in his cavalry a flave of the name of $M$ Ioko, renowned for his valour ; but who was tempted, by the fear of punifthment, to defert his flandard, and to range the defert at the head of 100 followers. 'This gang of robbers and ouclaws fwelled into a camp, a tribe, a numerous people, diftinguifhed by the apjellation of Geougen; and their hereditary chieftains, the pofterity of Moko the flave, affumed their rank among the Scythian monarchs. The youth Toulun, the greatelt of his defcendants, was exercifed by thofe misfortunes which are the fch ol of heroes. He bravely firurgled with adverfity, broke the imperious yoke of the 'Topa, and became the legiflator of his nation, and the conqueror of Tartary. His troops were diftributed into regular bands of 100 and of 1000 men; cowards were ftenned to death; the moft fplendid honours were propefed as the reward of valour; and Toulun, who bad knowledge enough to defpife the learting of China, adopted only fuch arts and inflitutions as were favourable to the military fpiris of his government. His
tents, which he removed in the winter feafon to a more fouthern latitude, were pitched during the fummer on the fruifful banks of the Selinga. His conquefts Atretched from the Corea far begond the river Irtifh. He vanquifhed, in the country to the north of the Cafpian fea, the nation of the Huns; and the new title of Khonn, or Cajan, expreffed the fame and power which he derived from this memorable victory.
"The chain of events is interrupted, or rather is concealed, as it paffes from the Volga to the Vifula, through the dark interval which feparates the extreme limits of the Chinefe and of the Roman geography. Yet the temper of the barbarians, and the experience of fucceffire emigrations, fufficiently declare, that the Huns, who were oppreffed by the arms of the Geuugen, foon withdrew from the prefence of an infulting victor. The countries towards the Euxine were alrcady occupied by their kindred tribes, and their lafty fight, which they foon converted into a bold attack, would more naturally be directed towards the rich and level plains through which the Vifula gently flows into the Baltic fea. The north muft again have been alarmed and agitated by the invafion of the Huns; and the nations who retreated before them muft have preffed with incumbent weight on the confines of Germany. The inhabitants of thofe regions which the ancients have affigaed to the Suevi, the Vandals, and the Burgundians, might embrace the refolution of abandoning: to the fugitives of Sarmatia their woods and moraffes; or at lealt of difcharging their fuperfluous numbers on the provinces of the Roman empire. About four years after the victorious Toulun had affumed the title of kbanof the Geougch, another barbarian, the haughty Rhodogant, or Radagaifus, marched from the northern extremities of Germany almof to the gates of Rome, and left the remains of his army to atchieve the deftruction of the weft. The Vandals, the Suevi, and the Burgundians, formed the ftrength of this mighty hof : but the Alani, who had found an hofpitable reception in their new feats, added their active cavalry to the heavy infantry of the Germans; and the Guthic adventurers crowded fo eagerly to the ftandard of Radagaifus, that by fome hiftorians he has been fyled the king of the Gorbs. Twelve thoufand warriors, diftinguifhed above the vulgar by their noble birth or their valiant deeds, fus invad glittered in the van ; and the whole multitude, which traly with was not lefs than 200,000 fighting men, might be in- a prodigicreafed by the acceflion of women, of children, and of ${ }^{\text {eus army }}$ flaves, to the amount of 400,000 perfons. This formidable emgiration iffued from the fame coaft of the Bal. tic which had poured forth the myriads of the Cim. bri and Teutones to affault Rome and Italy in the vigour of the republic. After the departure of thofe barbarians, their native country, which was marked by the veltiges of their greatnefs, long ramparts, and gigantic moles, remained during fome ages a valt and' dreary folitude; till the human feecies was renewed by the powers of generation, and the vacancy was filled up by the influx of new inhabitants. The nations. who now ufurp an extent of land which they are unable to cultivate, would foon be affitited by the induArious poverty of their neighbours, if the government. of Europe did not protect the claims of dominion andproperty.
"The correfpondence of nations was in that age fo:

## R O M

imperfect and precarious, that the revolutions of the north might efcape the knowledge of the court of Ra. venna; till the dark cloud which was collected along the coat of the Baltic burt in thunder upon the banks of the Upper Danube. The emperor of the weft, if his minilters difturbed his amuements by the news of the impending danger, was fatisfied with being the occation and the fectator of the war. The fafety of Rome was intrufted to the counfels and the fword of Stilicho; but fuch was the feeble and exhaulted flate of the empire, that it was impoffible to reftore the fortifications of the Danube, or to prevent, by a vigorous effort, the invafion of the Germans. The hopes of the vigilant minifter of Honorius were confined to the defence of Italy. He once more abandoned the provinces; recalled the troops; preffed the new levies, which were rigoroufly exacted, and pufillanimoully eluded; employed the molt efficacious means to arrelt or allure the deferters; and offered the gift of freedom, and of two pieces of gold, to all the flaves who would enlift. By thefe efforts he painfully collected from the fubjects of a great empire an army of 30,000 or 40,000 men ; which, in the days of Scipio or Camillus, would have teen inftantly furnifhed by the free citizens of the territory of Rome. The 30 legions of Stilicho were reinforced by a large body of barbarian auxiliaries; the faithful Alani were perfonally attached to his fervice; and the troops of Huns and of Goths, who marched under the banners of their native princes Hulden and Sarus, were animated by intereft and refentment to oppofe the ambition of Radagaifus. The king of the confederate Germans paffed, without refiltance, the Alps, the Po, and the Appenine; leaving on one hand the inacceffible palace of Honorius, fecorely buried among the marhes of Ravenna; and on the other, the camp of Stilichn, who had fixed his head-quarters at Ticinum, or Pavia, but who feems to have avoided a decilive battle till he had affembled his diftant forces. Many cities of Italy were pillaged, or deltroyed; and the fiege of Florence by Radagaifus is one of the earlieft events in the hiftory of that celebrated republic, whofe firmnefs checked and delayed the unkilful fury of the barbarians. The fenate and people trembled at their approach within 180 miles of Rome; and anxiouly compared the danger which they had efcaped with the new perils to which they were expofed. Alaric was a Chriftian and a foldier, the leader of a difciplined army ; who underftood the laws of war, who refipected the fanctity of treaties, and who had familiarly converfed with the fubjects of the empire in the fame camps and the fame churches. The favage Radagaifus was a ftranger to the manners, the religion, and even the larguage, of the civilized nations of the fouth. The firccenefs of his temper was exafperated by cruel fupertition; and it was univerfally believed, that he had bound himfelf by a folemn vov to reduce the city into a heap of ftones and afhes, and to facrifice the moft illuftrious of the Roman fenatirs on the altars of thole gods who were appeafed by human blood. The public danger, which thould have reconcifed all domeftic animofities, difplayed the iacurable madnefs of reli tious faction. The oppreffed votaries of Jupiter and Mercury refpected, in the implacable enemy of Rome, the character of a devout pagan; loudly declared, that they were more apprehenfive of the facrifices than of the arms of Kadagai.
fus ; and fecretly rejoiced in the calamities of their Rome. country, which condemned the faith of their Chritian adverfaries.
"Florence was reduced to the laft extremity ; and the Defeated fainting courage of the citizens was fupported only by and dethe authority of St Ambrofe, who had communicated flroyed by in a dream the promife of a fpeedy deliverance. On a Stilicho. fudden they beheld from their walls the banners of Stilicho, who advanced with his united force to the relief of the faithful city ; and who foon marked that fatal fpot for the grave of the barbarian hoff. The apparent contradictions of thofe writers who varioufly relate the defeat of Radagaifus, may be reconciled without offering much violence to their refpective teftimonies. Orofius and Augultin, who were intimately connected by friendfhip and religion, afcribe this miraculous victory to the providence of God rather than to the valour of man. They fricly exclude every idea of chance, or even of bloodfhed ; and pofitively affirm, that the Romans, whofe camp was the fcene of plenty and idlenefs, enjoyed the diftrefs of the barbarians, flowly expiring on the harp and barren ridge of the hills of Fæfulx, which rife above the city of Florence. Their extravagant affertion, that not a fingle foldier of the Chriftian army was killed, or even wounded, may be difmiffed with filent contempt; but the reft of the narrative of Auguftin and Orofius is confiftent with the fate of the war and the charader of Stilicho. Confcious that he commanded the laft army of the republic, his prudence would not expofe it in the open field to the headiring fury of the Germans. The method of furrounding the enemy with ftrong lines of circumvallation, which he had twice employed againtt the Gothic king, was repeated on a larger fcale, and with more confiderable effect. The examples of Cæfar muft have been familiar to the moft illiterate of the Roman warriors; and the fortifications of Dyrrhachium, which connected 24 caftles by a perpetual ditch and rampart of 15 miles, afforded the model of an entrenchment which might confine and ftarve the molt numerous hoft of barbarians. The Roman troops had lefs degenerated from the induftry than from the valour of their anceftors; and if the fervile and laborious work offended the pride of the foldiers, Tufcany could fupply many thoufand peafants, who would labour, though perhaps they would not fight, for the falvation of their native country. The imprifoned multitude of horfes and men was gradually deftroyed by famine, rather than by the fword; but the Romans were expofed, during the progrefs of fuch an extenfive work, to the frequent attacks of an impatient enemy. The defpair of the hungry barbarians would precipitate them againgt the fortifications of Stilicho; the general might fometimes indulge the ardour of his brave auxiliaries, who eagerly preffed to af.* fault the camp of the Germans; and thefe various incidents might produce the tharp and bloody conflicts which dignify the narrative of Zofimus, and the Chronicles of Profper and Marcellinus. A feafonable fupply of men and provifions had been introduced into the walls of Fiorence; and the famithed holt of Radagaifus was in its turn befieged. The proud monarch of fo many warlike nations, after the lofs of his braveft warriors, was reduced to confide either in the faith of a capitulation, or in the clemency of Stilicho. But the death of the royal captive, who was ignominioufly beheaded, difgraced the triumph of Rome and of Chriftianity; and
$\underbrace{\text { Rome. }}$
the fhort delay of bis execution was fufficiont to brand tic conquern witn the guilt of cool and deliberate cruelty. The fam (hed Germıns who eic tped the fury of the ausiliaries were fold as flaves, at the contemptible price of as mant fingle peces of gold: but the difference of food end climate wept away great numbers of thofe unhappy ftrangers ; an 'it was obferved, that the inhuman purchates, intead of reaping the fruit of their labour, were foon obliged to add to it the expence of interring them. Stilicao informed the empetor and the fenate of his fucces; and deferved a fecond time the glorious title of Deliverer of Italy.
" The fame of the victory, and more efpecially of the miracle, has encourayed a vain perfuafion, that the whole army, or rather nation, of Germans, who migrated from the fhores of the Daltic, miferably perilhed under the walls of Florence. Such indeed was the fate of Radagaifus himitelt, of his brave and tiththful companions, and of more than one-third of the various multitude of Suevi and Vandals, of Alani and Burgundians, who adhered to the flandard of their general. The union of fuch an army might excite sur furprife, but the caufes of feparation are obvious and forcible; they were the pride of birth, the infolence of valour, the jealoufy of command, the impatience of fubordination, and the obftinate conflict of opinions, of interefts, and of paffions, among fo many kings and warriors, who were

530
Account of untaught to yield or to obey. After the defeat of Ra-theremain- dagaifus, two parts of the German hoft, which mult der of the have exceeded the number of 100,000 men, fill rearay of Radagaifus. mained in arms between the Apennine and the Alps, or between the Alps and the Danube. It is uncertain whether they attempted to revenge the death of their gene-
ral: but their irregular fury was foon diverted by the prudence and firmnets of Stilicho, who oppofed their march, and facilitated their retreat; who confidered the fafety of Rome and Italy as the great object of his care, and who facrificed with too much indifference the wealch and tranquillity of the diftant provinces. The barbarians acquired, from the junction of fome Panno. nian deferters, the knowledge of the country and of the roads; and the invafion of Gaul, which Alaric had defigned, was executed by the remains of the great army of Radagaifus.
"Yet if they expected to derive any affiftance from the tribes of Germany who inhabited the banks of the Rhine, their hopes were difappointed. The Alemanni preferved a fate of inactive neutrality; and the Pranks diftinguifhed their zeal and courage in the defence of the empire. In the rapid progrefis down the Rhiné, which was the firft aft of the adminiftration of Stilicho, he had applied himfelf with peculiar attention to fecure the alliance of the warlike Franks, and to remove the irrecuncileable enemies of peace and of the republic. Marcomir, one of their kings, was publicly convicted before the tribunal of the Roman magiftrate of violating the faith of treaties. Hs was fentenced to a mild, but difant exile, in the province of Tufcany; and this degradation of the regal dignity was fo far from exciting the refentment of his fubjects, that they punifhed with weath the turbulent Sunno, who attempted to revenge his brother, and maintained a dutiful allegiance to the princes who were eltablifhed on the throne by the choice of Stilicho. When the limits of Gaul and Germany were linken by the northe:n emigration, the Franks Vol. XVI.
bravely encountered the fingle force of the Vandals; who, regardlefs of the lefiens of advel fits, had again feparated their troops from the fandard of their barba- Th 5 II ritn ailee. They paid the penalty of thcir rafhnefs; cislisdefeatand 20,000 Vandals, with their king Godigifclus, were ed by the fadin in the fieid of battle. The whole people mult have vanks. been extirpated, if the fquadrons of the Alan', advancing to their relief, had n't trampled down the iniantry of the Franks; who, after an honourable refifance, were compelled to relinquith the unequal conteff. 'i he victorious confederates purfued their march; and on the lat day of the year, in a feafon when the waters of the Rhine were moft probably frozen, they entered wihout oppofition the defencelefs frovinces of Gaul. This memorable paffage of the suevi, the Vandals, the Alani, and the Burgundians, who never afterwards retreated, may be confidered as the fall of the Roman empire in the countries beyond the Alps; and the barriers, which had fo long feparated the favage and the civlized nations of the earth, were from that fatal moment levelled with the ground.
"While the peace of Germany was fecured by the attachment of the Franks and the neutrality of the Alemanni, the fubjects of Rome, unconfcious of their approaching calamities, enjoyed a ftate of quiet and profperity, which had feldom bleffed the frontiers of Gaul. Their flocks and herds were permitted to graze in the paftures of the barbarians; their huntimen penetrated, without fear or danger, into the darkeft receffes of the Hercynian wood. The banks of the Rhine were crowned, like thofe of the Tiber, with elegant houfes and well cultivated farms; and if a poet defcended the river, he might exprefs his doubt on which fide was fituated the territory of the Romans. This fcene $53^{2}$ of peace and plenty was fuddenly changed into a defert, ged vy the and the profpect of the fmoaking ruins could alone di- barbarians. ftinguif the folitude of nature from the defolation of man. The flourifling city of Mentz was furprifed and deftroyed; and many thoufand Chriftians were inhumanly malfacred in the church. Worms perifhed after a long and obftinate fiege : Strafburg, Spires, Rheims, Tournay, Aras, Amiens, experienced the cruel oppref. fion of the German yoke; and the confuming flames of war fpread from the banks of the Rhine over the greateft part of the 17 provinces of Gaul. That rich and extenfive country, as far as the Ocean, the Alps, and the Pyrenees, was delivered to the barbarians, who drove before them, in a promifcuous crowd, the bilhop, the fenator, and the virgin, laden with the fooils of their houfes and altars."

In the midth of thefe calamities a revoit happened in Revolt of Britain, where one Confantire, a common foldier, was Eonfanraif.d to the imperial throne, merely for the fake of his taie, wilront name. However, he feems to bare been a man of con- Honorius fiderable abilites, and by no means unfit for the high lectges as dignity to which he was raifed. He goverved Bicicin tis pattr: with great prof perity; paffed wer into Gaul and $\mathrm{S}_{\mathrm{p}}$ ain, in the cra the iuhabitants of which fubmited without oppoflion, ris. being glad of any protector whatever from the barbarians. Honorius, incapable of defending the empire, or reprefing the revolt, was bliged to acknowiedre him for his partner in the empirc. In the mean time, Alaric, with his Goths, threatened a new invefion us: lefs he was paid a certain fum of meney. Stilicho is faid to lave cccafioned this demand, and to have inffi-

Rome.
534 Stilicho difgraced and put to death.
$-535$ FRome ta.ken and ;plundered Jy Alaric.
ed upon fending him the money he demanded; and this was the caufe of his difgrace and death, which happened foon after, with the extirpation of his family and friends. Nay, fuch was the general hatred of this unfortunate minifer, that the foldiers quartered in the cities of Italy no fooner heard of his death, than they murdered the wives and children of the barbarians whom Stilicho had taken into the fervice of Honorius. The enraged hufbands went over to Alaric, who made a new demand of money; which not being readily fent, he laid fiege to Rome, and would have taken it, had not the emperor complied with his demand. The ranfom of the city was 5000 pounds of gold, 30,000 of filver, 4000 filk garments, 3000 fkins dyed purple, and 3000 pounds of pepper. On this occafion the heathen temples were ftripped of their remaining ornaments, and among others of the flatue of Valour; which the pagans did not fail to interpret as a prefage of the fpeedy ruin of the fate.
Alaric having received this treafure, departed for a flort time : but foon after he again blocked up the city with a numerous army ; and again an accommodation with Honorius was fet on foot. However, for fome reafons which do not clearly appear, the treaty was broken off, Rome was a third time befieged, and at laft taken and plundered. Alaric, when upon the point of breaking into the city, addrefling his foldiers, told them, that all the wealth in it was theirs, and therefore be gave them full liberty to feize it ; but at the fame time he frictly enjoined them to thed the blood of none but fuch as they ihould find in arms; and above all, to fpare thofe who fhould take fanctuary in the holy places, efpecially in the churches of the apoitles St Peter and St Paul; which he named, becaufe they were mott fpacious, and confequently capable of affording an afylum to great numbers of people. Having given thefe orders, he abandoned the city to his Goths, who treated it no better, according to St Jerome, than the Greeks are faid to have treated ancient Troy; for after having plundered it for the fpace of three, or, as others will have it, of fix days, they fet fire to it in feveral places; fo that the ftately palace of Salluft, and many other magnificent buildings, were reduced to ahhes ; nay, Procopius writes, that there was not in the whole city one houfe left entire ; and both St Jerome and Philoforgius affert, that the great metropolis of the empire was reduced to an heap of afhes and ruins. Though many of the Goths, purfuant to the orders of their general, vefrained from fhedding the blood of fuch as made no refiftance; yet others, more cruel and blood-thirfy, maffacred all they met: fo that the ftreets in fome quarters of the city were feen covered with dead bodies, and fivimming in blood. However, not the leaft irjury was offered to thofe who fled to the churches; nay, the Goths themfelves conveyed thither, as to places of fafety, fuch as they were defirous thould be fpared. Many of the fatues of the gods that had been left entire by the emperors as excellent picces of art, were on this occafion deftroyed, either by the Goths, who, though moitly Arians, were zealous Chritians, or by a dreadful form of thunder aud lightning which fell at the fame time upon the city, as if it had been fent on purpofe to complete with them the defiruction of idolatry, and abolith the fmall remains of pagan fuperfition. However, notwith handing thefe ascounts, fome affirm that
the city fuffered very little at this time, not fo much as when it was taken by Charles V .

Alaric did not long furvive the taking of Rome, be- Death of ing cut off by a violent fit of ficknefs in the neighbour. that conhood of Rhegium. After his death the affairs of Ho-qucror. norius feemed a little to revive by the defeat and death of Conftantine and fome other ufurpers; but the provinces of Gaul, Britain, and Spain, were now almolt entirely occupied by barbarians; in which fate they continued till the death of Honorius, which happened in the year 423 , after an unfortunate reign of 28 years.

After fome ufurpations which took place on the death of Honorius, his nephew Valentinian III. was declared emperor of the welt, and his mother Placidia regent during his minority. He was fcarce feated on the throne, when the empire was attacked by the Huns under the celebrated Attila. The Romans, however, wretched and degenerate :s they were, had they been unanimous, would even yet have been fuperior to their enemies. The emprefs then had two celebrated generals, Bonifacius and Actius; who by their union might have faved the empire: but unhappily, through the treachery of Aetius, Bonifacius was obliged to revolt ; and a civil war enfued, in which he loft his life. Aetius, however, notwithftanding his treachery, was pardoned, and put at the head of the forces of the empire. He detended it againgt Attila with great fpirit and fuccefs, notwithftanding the deplorable fituation of affairs, till he was murdered by Valentinian with his own hand, on the fufpicion that he afpired to the empire. But in the mean time the provinces, except Italy itielf, were totally over-xun by the barbarians. Genferic king of the Vandals ravaged Africa and Sicily; the Goths, Suevi, Burgundians, \&c. had taken poffeffion of Gaul and Spain; and the Britons were oppreffed by the Scots and Picts, fo that they were obliged to call in the Saxons to their affiftance, as is related under the article England. In the year 455, Valentinian was murdered by one Maximus, whofe wife he had ravifhed. Maximus immediately affumed the empire; but felt fuch violent anxieties, that he defigned to refign it and fly out of Italy, in order to enjoy the quiet of a private life. . However, being diffuaded from this by his friends, and his own wife dying foon after, he forced the Emprefs Eudoxia to marry him. Eudoxia, who had tenderly loved Valentinian, provoked beyond meafure at being married to his murderer, invited Genferic king of the Vandals into Italy. This proved a moit fatal fcheme : for Genferic immediately appeared before Rome; a violent tumult enfued, in which Maximus Rone ${ }^{537}$ loft his life; and the city was taken and plundered by ken and Genferic, who carried uff what had been left by the plundered Goths. A veffel was loaded with coftly ftatues; half ly Genthe covering of the Capitol, which was of brafs plated feric, over with gold; facred veffels enriched with precious Itones; and thofe which had been taken by Titus out of the temple of Jerufalem; all of which were loll with the veffel in its paffage to Africa.

Nothing could now be more deplorable than the fate of the Roman affairs : neverthelefs, the empre conti.. nued to exift for fome years longer; and even feemed to revive for a little under Marjurianus, who was declared emperor in 458 . He was a man of great courage, and poffefled of many other excellent qualities. He
defeated

Romer
defeated the Vandals, and drove them out of Italy.
With great labour he fitted out a fleet, of which the With great labour he fitted out a fleet, of which the
Romans had been long deftitute. With this he defigned to pafs over into Africa; but, it being furprifed and burnt by the enemy, he himfelf was foon after murdered by one Ricimer a Goth, who had long governed every thing with an ablolute fway. After the death of Marjorianus, one Anthemius was raifed to the empire: but beginning to counteract Ricimer, the latter openly revolted, befieged and took Rome; where he committed innumerable cruelties, among the relt putting to death the unhappy emperor Anthemius, and raifing one Olybius to the empire. The tranfactions of his reign were very few, as he died foen after his acceffion. On his death one Glycerius ufurped the empire. He was depoled in 474, and one Julius Nepos had the name of emperor. He was driven out the next year by his general Oreftes, who caufed his fon AuguItus or Auguitulus to be proclaimed emperor. But the following year, 476, the barbarians who ferved in the Roman armies, and were diftinguifhed with the title of allies, demanded, as a reward for their fervices, the third part of the lands in Italy; pretending, that the whole country, which they had fo often defended, belonged of right to them. As Oreftes refufed to comply with this infolent demand, they refolved to do themfelves jultice, as they called it; and, openly revolting, chole one Odoacer for their leader. Odoacer was, according to Ennodius, meanly born, and only a private man in the guards of the emperor Auguftulus, when the barbarians revolting, chofe him for their leader. However, he is faid to have been a man of uncommon parts, equally capable of commanding an army and governing a tate. Having left his own country when he was yet very young, to ferve in Italy, as he was of a Atature remarkably tall, he was admitted among the emperor's guards, and continued in that Atation till the prefent year; when, putting himfelf at the head of the barbarians in the Roman pay, who, though of different nations, had, with one confent chofen him for their leader, he marched againft Oreltes and his fon Augu\{lulus, who fill refufed to give them any thare of the lands in Italy.

As the Roman troops were inferior, both in number and valour, to the barbarians, Oreftes took refuge in Pavia, at that time one of the belt fortified cities in Italy : but Odoacer, invefting the place without lofs of time, took it foon after by affault, gave it up to be plundered by the foldieis, and then fet fire to it ; which reduced molt of the houfes, and two churches, to aihes. Oreftes was taken prifoner, and brought to Odoacer, who carried him to Placentia, and there caufed him to be pur to death, on the 28 th of Augult, the day on which he had driven Nepos out of Ravenna, and obliged him to abandon the empire. From Placentia, Odoacer marched Araight to Ravenna, where he found Paul, the brother of Oreltes, and the young emperor Auguftulus. The former be immediately put to death ; but fparing Augustulus, in corfideration of his youth, he ftripped him of the enfigns of the imperial dignity, and confined him to Lucullanum, a caftle in Campania; where he was, by Odoacer's orders, treated with great hamanity, and allowed an handfome maintenance to fupport himfelf and his relations. Rome readily fubmitted to the conqueror, who immediately caufed
himfeli to be proclaimed king of Italy, but would not
Rim: alfume the purple, or any other mark of the imperial dignity. Thus failed the, very name of an empire in the Weft. Britain had been long fince abandoned by the Romans; Spain was held by the Goths and Sue. vi; Africa, by the Vandals; the Burgundians, Goths, Franks, and Alani, had erected feveral tetrarchies in Gaul; at length Italy itfelf, with its proud metropolis, which for fo many ages had given law to the relt of the world, was enflaved by a contemptible barbarian, whofe family, country, and nation, are not well known to this day.

From this time, Rome has ceafed to be the capital of an empire; the territories of the pope, to whom the city is now fubject, being inconfiderable. The origin of the pope's temporal power, and the revolutions of Italy, are related under the article Italy; and a fketch of the fisitual ufurpations of the popes may be feen under the articles History, fect. ii. and RerormatION ; and likewife under the various hiltorical articles as they occur in the courle of this work.

It is thought chat the walls of modern Rome take in nearly the fame extent of ground as the ancient ; but the difference between the number of buildings on this anvacra fpot is very great, one half of modern Rome lying walte, or occupied with gardens, fields, meadows, and vineyards. One may walk quite round the city in three or four hours at mof, the circumference being reckoned about 13 Italian miles. With regard to the number of the inhabitants, modern Rome is alfo greatly inferior to the ancient : for, in 1709 , the whole of thefe amounted only to 138,568 ; among which were 40 bifhops, 2686 priefts, 3559 monks, $181_{4}$ nuns, 393 courtefans, about 8000 or 9000 Jews, and $1+$ Moors, In 1714, the number was increaled to 143,000 . In external fplendor, and the beauty of its temples and palaces, modern Rome is thought by the molt judicious travellers to excel the ancienr. There was nothing in ancient Rome to be compared with St Peter's church in the modern. That Rome was able to recover itfelf after fo many calamities and devaltations, will not be matter of furprife, if we confider the prodigious fums that it has fo long annually drawn from all countries of the Popith perfuation. Thefe fums, hough fill confiderable, have been continually decreafing fince the Reformation. The furface of the ground on which Rome was originally founded is furprifingly altered. At pre. fent it is difficult to diftinguifh the feven hills on which it was firft built, the low grounds being almoft filled up with the ruins of the ancient Itreets and houfes, and the great quantities of earth wafhed down from the hills by the violence of the rains. Anciently the fuburbs extended a valt way on all fides, and made the city appear almof boundlefs; but it is quite otherwife nuw, the country about Rome being alzoolt 2 deficr. To this and other caufes it is owing, that the air is nonc of the moft wholefome, efpecially during the fummer heats, when few go abroad in the day-time. No city at prefent in the world furpalfes, or indeed equals, Rome, for the multiplicity of fine fountains, noble edifices, antiquities, curiofities, paintings, Itatues, and fculptures. The city fands on the Tiber, 10 miles from the Tufcan fea, 380 from Vienna, 560 from Paris, 740 from Amiterdam, 810 from London, and 900 from Madrid. The Tiber is \{ubject to fre$3 \mathrm{M}_{2}$ quant

## ROM <br> RON

Rone. -
quent inundutions, by which it cfen docs great damage. A fmall part of the city is fepurated from the other by the river, and is therefore called Travefere, or beyond the Tiber. There are feveral bridges over the river, a great number of towers on the walls, and 20 gates. The remains of Rome's ancient grandear confiit of ttatues, coloffufes, temples, palaces, theatres, naumachias, triumpbal arches, circufes, columns, obelifks, fountains, aqueducts, naufoleums, thermæ or hut-baths, and other flructures. Of modern buildings, the fplendid churches and palaces are the moft remarkable. Mr Addifon fays, it is almott impoffible for a man to form in his imagination fuch beautiful and glorious fcenes as are to be met with in feveral of the Roman churches and chapels. This gentleman tells us alfo, that no part of the antiquities of Rome pleafed him fo much as the ancient ftatues, of which there is fill an incredible variety. Next to the flatues, he fays, there is nothing more furprifing than the amazing variety of ancient pillars of fo many kinds of marble. Rome is faid to be well paved; but not well lighted, nor kept very clean. Two-thirds of the houfes are the property of the churches, convents and alms houfes. Proteftants are not obliged to kneel at the elevation of the hoft, or ar meeting the eucharif in the ftreets; and they may have fleh-meat always at the inns, even during Lent. Here are many academies for promoting arts and fciences, befides the univerfity. The carnival here is only during the eight days before Lent, and there are no fuch fcenes of riotas at Venice: profltutes, however, are publicly tolerated. To maintain good order, there is a body of 300 Sbirri, or Halberdeers, under their barigella, or colonel. There is little or no trade carried on in Rome, but a vaft deal of money is fpent by travellers and other ftrangers. The principal modern fructures are the church of St Peter, and the other churches; the aqueducts and fountains; the Vatican, and the other palaces ; the Campidolio, where the Roman fenate refides, \&c. The principal remains of antiquity are the pila miliaria of fine marble; the equeftrian brafs ftatue of Marcus Aurelius Antoninus; the marble monument of the emperor Alexander Severus; marble bufts of the emperors and their conforts; three brick arches of the temple cf Peace, built by the emperor Vefpafian; the triumphal arch of Septimus Severus and of Gallienus; the circus of Antoninus Caracilla; fome parts of the cloaca-maxima; the columna Antonina, reprefenting the pincipal actions of Marcus Aurelius; the columna Trajani, or Trajan's pillar ; fome fragments of the curia, or palace of Antoninus Pius, and of 'Nerva's forum ; the maufoleum of Auguitus, in the Strada Pontifici; the remains of the emperor Severus's tomb without St John's gate; the pyramid of Caius Ceftus near St Paul's gate; the porplyyry ceffin of St Helen, and the original fatue of Conftamine the Great, in the church of St John of Lateran : a font of orieital granite, in the chapel of St Giovanni in fonte, faid to have been erested by Conftanine the Great; an Egyptian obelifk near the church of St Maria Magsirre: the inately remains of Dioclefian's baths; the celebrated Panthern; the obelifks of Scfontis and Augutas by the Clementine college; the charch of Et Paul fuori della Mura, faid to have been wielt by Confantine the Great; the Farnefe Hercu-
lec, in white marble, of a Coloffiun fize and exquifite workmanhip, in a court of the Farnefe palace, and an admirable group cut out of one block of marble, in another court of the fame palace. Befides thefe there are a great many more, which our bounds will not allow us to take any further notice of. Here is a great number of rich and well-regulated hofpitals. Near the church of St Sebaftiano alle Catacombe, are the moft fpacious of the catacombs, where the Chriftians, who never burned their dead, and fuch of the Pagan Romans as could not afford the expence of burning, were buried. Along the Via Appia, without St Sebaltian's gate, were the tombs of the principal families of Rome, which at prefent are ufed for cellars and focre-houfes by the gardeners and vinedreffers.
ROMNEY, a town of Kent in England. It is one of the cinque-port towns, and is feated on a marh of the fame name, famous for feeding cattle; but the air is very unhealthy. It was once a large and populous place, but the retiring of the fea has reduced it very nuch ; however, it fends two members to parliament.
ROMORENTIN, is a fmall town fituated on the river Saudre, in the territory of Blafois in France, famous for its woollen manufacture. It is faid to be a very ancient place; and the inhabitants pretend that Cæfar built a tower here, of which there are fill fome. confiderable remains. They have a manufacture of ferge and cloth, which is ufed for the clothing of the troops.
ROMPEE, or Rompu, in heraldry, is applied to ordinaries that are reprefented as broken; and to chevrons, bends, or the like, whofe upper points are cut off.
ROMULUS, the founder and firft king of Rome. See Rome, n ${ }^{\text {D }} 14$.
RONCIGLIONE, is a town of Italy, in the Ecclefiaftic State, and Patrimony of St Peter, in E. Long. 13. N. Lat. 42. 12. It is a fmall place, but had a pretty good trade, and was one of the richert in the province, while it belonged to the dukes of Parma, which was till 1649 , when pope Innocent $X$. became mafter of it, and it has ever fince continued in the poffeffion of his fucceffors.
RONDELETIA, in botany : A genus of the monogynia order, belonging to the pentandria clafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The C rolla is funnelfhaped; the capfule bilccular, inferior, and polyfipermons, roundifh and crownet.
RONA, one of the Hebrifes iflands, is reckoned about 20 leagues diftant from the northeaft point of Nefs in Lewis-about a mile long, and half a mile. broad. It has a hiill in the weft part, and is only vifible from Lewis in a fair fummer's day. There is a chapel in the ifland dedicated to St Ronan, fenced with a fone wall round it. This church the natives take care to keep very neat and clear, and fweep it every day. There is an altar in it, on which there lies a big. plank of wood about ten feet long. Every foot has a hole in it, and in every hole is a forse, to which the natives afcribe feveral virtues; one of them is fingular (as they fay) for promoting fpeedy delivery to a woman in. travel. The inhabitants are extremely ignorant, and very fuperfitious. See Martin's Defiription.

## $\mathrm{R} O \mathrm{~N}$

RONSARD (Peter de) was born at the cafte of Poiffonitre in Vendomois in 1 1524. He was defcended of a noble family, and was educated at Paris in the college of Navarre. Academical purfuits not fuiting his genius, he left college, and became page to the duke of Orleans, who refigned him to James Stuart, king of Scots, married to Magdalene of France. Ronfard continued in Scotland with King James upwards of two years, and afterwards went to France, where he was employed by the duke of Orleans in feveral negociations. He accompanied Lazarus de Baif to the diet of Spires. Having from the converfation of this learned man imbibed a paffion for the belles-lettres, he fudied the Greek language with Baif's fon under Dorat. It is reported of Ronfard, that his practice was to ltudy till two o'clock in the morning ; and when he went to bed, to awaken Baif, who refumed bis place. The mufes poffeffed in bis eyes an infinity of charms; and he cultivated them with fuch fuccefs, that he acquired the appellation of the Prince of the Poets of his time. Henry II. Francis II. Charles IX. and Henry III. loaded him with favours. Having gained the firlt prize of the Feux Floraux, they thought the reward promifed below the merit of the work, and the reputation of the poet. The city of Touloufe caufed a Minerva of mafly filver of confiderable value to be made and fent to him. This prefent was accompanied with a decree declaring him The French Poet, by way of diftinction. Ronfard afterwards made a prefent of his Minerva to Henry II. and this monarch appeared as much elated with this mark of the poet's efteem for him, as the poet himfelf could have been had he received the prefent from his fovereign. Mary, the beautiful and unfortunate queen of Scots, who was equally fenfible of his merit with the Toulonefe, gave him a very rich fet of table-plate, among which was a veffel in the form of a rofe-buh, reprefenting Mount Parnaffus, on the top of which was a Pegafus with this infeription:

## A Ronfard, l' Apoliun ic la fource des mujes.

From the above two anecdotes of him may eaflily be inferred the reputation in which he was held, and which he continued to keep till Malherbe appeared. His works poffefs both invention and genius; but his affectation of everywhere thrufting in his learning, and of furming words from the Greek, the Latin, and the different provincialifms of France, has rendered his verfification difagreeable and often unintelligiblc.

> Rorfarl', dit DefPréaux, par une autre mćtbode, Re?!'ant tout, brouilla tout, fit un art à fa mode; Et to: teffis long temps cut un beureux defina; Mais fin mulf, en Frangois parlant Grec et Latin, Vii diuns láuid fuivant, par un retour grotefque, Tomber cie fis grands mots le fufle pédantefque.

He wrote hymns, odes, a poem called the Franciad, cclogues, epigrams, fonnets, \& c . In his odes he takes bombalt for poetical raptures. He wifhes to imitate Pindar ; and labouring too much for lofty expreffions, he lofes himecir in a cloud of words. He is obfcur: : ma bard to the lat degree : faults which he might eafly have avoided by ftudjing the works of Maror, who had beore he wro:e brought French poesy very naar to pertestion. "Marot's turn and fyle

## 46i ] RONN

of compofition are fuch (fays Bruyere), that he feems Konfard to have written after Ronfard : there is hardly any disference, except in a few words, between Marct and us. Ronfard, and the authors his contemporaries, did more differvice than good to ftyle: they checked its courfe in the advances it was making towards perfection, and had like to have prevented its ever attaining it. It is furprifing that Marot, whofe works are fo natural and eafy, did not make Ronfard, vilo was fired with the flrong enthufiafm of poetry, a greater post than either Ronfard or Maret:" But what could be expected from a man who had fo little tafte, that he called Marot's works 'a dunghill, from which rich grains of gold by induftrious working might be drawn?' As a fpecimen of our author's intolerable and ridiculous af. fectation of learning, which we have already cenfured, Boileau cites the following verfe of Ronfard to his miftrefs: Effes-vjus pas ma feule entelechie?" are not you my only entelechia? Now entelecbia is a word peculiar to the peripatetic philofophy, the fenfe of which does not appear to have ever been fixed. Hermalaus Barbarus is faid to have had recourfe to the devil, in order to know the meaning of this new term ufed by Ariftotle; but he did not gain the information he wanted, the devil, probably to conceal his ignorance, fpeaking in a faint and whifpering fort of voice. What could Ronfard's miltrefs therefore, or even Rentard himfelf, know of it ; and, what can cxcufe in a man of real genius, the low affectation of ufing a learned tem:, becaufe in truth nobody could underfand it. He has, however, fome pieces not deflitute of real merit; and there are perhaps few cffufions of the French mufe more truely poetical than his Four Senfons if the Tear, where a moft fertile inagination difplays all its riches.

Ronfard, though it is doubtful whether he cver was in orders, held feveral benefices in commendam; and he died at Saint-Cofme-les-Tours, one of thefe, December 27.1585 , being then 61 years of age. He appeared more ridiculous as a man than as a poet: he was particularly vain. He talked of nothing but his fanily and his alliances with crowned heads. In his panegyrics, which he addreffes to himfelf without any ceremony, he has the vanity to pretend, that from Ronfard is derived the word Rofignol, to denote both a mulician and a poet together. He was born the year after the defeat of Francis I. before Pavid: " Juf as heaven (faid he) wifhed to indemnify France for the loffes it had futtained at that place." He blufhed not to tell of his in. trigues. All the ladies fought after him; but he never faid that any of them gave him a denial of their favours. His immoderate indulgence in pleafure, joined to his literary labours, ferved to baften his old age. In his 5 cth year he was weak and valetudinary, and fubject to attacks of the gout. He retained his wit, his vivacity, and his readinefs at poetic compofition, to his laft moments. Like all thofe who afpire after pais. lic efteem, he had a great number of almirers and tome enemies. Though Melin de Saint-Gelais railed at him continually, Rabelais was the perfon xhom he molt dreaded. He took alvays care to inforin himisil whers that jovial rector of Meudon went, that he might rot be found in the fame place wiin $\mathrm{h} \cdot \mathrm{m}$. It is reported, that Votiane atedi : fimilar pait with regard to Feron** * See le of wiofe entemporary fillies and is:a wets ho was much ron.

ROOD, a quantity of land equal to 40 fquare perches, or the fourth part of an acre.
Definition.
ROOF, expreffes the covering of a houfe or building, by which its inhabitants or contents are protected from the injuries of the weather. It is perhaps the effential part of a houfe, and is frequently ufed to exprefs the whole. To come under a perfon's roof, is to enjoy his protection and fociety, to dwell with him. Tectum was ufed in the fame fenfe by the Romans. To be within our walls rather expreffes the being in our poffefion : a roof therefore is not only an effential

2
roofs. part of a houfe, but it even feems to be its characteriftic feqture. The Greeks, who have perhaps excelled all nations in talte, and who have given the molt perfect model of architectonic ordonnance within a certain limit, never erected a building which did not exhibit this part in the diftinctelt manner; and though they borrowed much of their model from the orientals, as will be evident to any who compares their architecture with the ruins of Perfepolis, and of the tombs in the mountains of Sciras, they added that form of roof which their own climate taught them was neceffary for fheltering them from the rains. The roofs in Perfia and Arabia are flat, but thofe of Greece are without exception floping: It feems therefore a grofs violation of the true principles of talte in architecture (at lealt in the regions of Europe), to take away or to hide the roof of a houle; and it mult be afcribed to that rage for novelty which is fo powerful in the minds of the rich. Our anceftors feemed to be of a very different opinion, and turned their attention to the ornamenting of their roofs as much as any other part of a building. They Showed then in the moft confpicuous manner, running them up to a great height, broke them into a thoufand fanciful fhapes, and tuck them full of highly dreffed rindows. We laugh at this, and call it Gothic and clumfy; and our great architects, not to offend any more in this way, conceal the roof altogether by parapets, baluftrades, and other contrivances. Our forefathers certainly did offend againft the maxims of true tafte, when they enriched a part of a houfe with marks of elegant habitation, which every fpectator mult know to be a cumberfome garret: but their fucceffors no lefs offend, who take off the cover of the houfe altogether, and make it impoffible to know whether it is not a mere

3 Eirror of sia Chriftopher Wren in the roof of st Paul' London.
ikreen or colonnade we are looking at.

We cannot help thinking that Sir Chrifopher Wren erred when he fo induftrioufly concealed the roof of St Paul's church in London. The whole of the upper order is a mere fcreen. Such a quantity of wall would have been intolerably offenfive, had he not given it fome appearance of habitation by the mock windows or nitches. Even in this ftate it is glonmy, and it is odd, and is a puzzle to every fpectator-There fhould be no puzzle in the defign of a building any more than in a difcourfe. It has been faid that the double roof of the great churches which have ailles is an incongruity, looking like a $h$ ufe ftanding on the top of another houfe. But there is not the lealt occafion for fuch a thought. We know that the aifle is a fhed, a cloifter. Suppofe only that the lower roof or thed is hidden by a balultrade, it then becomes a portico, againft which the connoiffeur has no objection: yet there is no differ-
ence; for the portico muf have a cover, otherwife it is neither a lhed, cloifter, nor portico, any more than a building without a roof is a houfe. A houfe without a vifible roof is like a man abroad without his hat ; and we may add, that the whim of concealing the chimneys, now fo fafhionable, changes a houfe to a barn or ftore-houfe. A houfe hould not be a copy of any thing. It has a title to be an original; and a fcreen-like houfe and a pillar-like candleftick are fimilar folecifms in tafte.

The architect is anxicus to prefent a fine object, and Little ato a very fimple outline difcuffes all his concerns with the tention roof. He leaves it to the carpenter, whom he frequent. paid by ly puzzles (by his arrangements) with coverings almof to this pars impofible to execute. Indeed it is feldom that the idea of a build of a roof is admitted by him into his great compofi- ing. tions; or if he does introduce it, it is from mere affectation, and we may fay pedantry. A pediment is frequently ftuck up in the middle of a grand front, in a fituation where a roof cannot perform its office; for the rain that is fuppofed to flow down its fides, muit: be received on the top of the level buildings which flank it. This is a manifeft incongruity. The tops of dreffed windows, trifing porches, and fometimes a projecting portico, are the only fituations in which we fee the figure of a roof correfpond with its office. Having thus loft fight of the principle, it is not furprifing that the draughtfman (for he fhould not be called architect) runs into every whim : and we fee pediment within pediment, a round pediment, a hollow pediment, and the greateft of all abfurdities, a broken pediment. Nothing could ever reconcile us to the fight of a man with a hat without its crown, becaufe we cannot overlook the ufe of a hat.

But when one builds a houfe, ornament alone will Advannot do. We mult have a cover; and the enormous ex- tages of a pence and other great inconveniences which attend the high pitch: concealment of this cover by parapets, baluftrades, and ed roof, fcreens, have obliged architects to confider the pent roof as admiffible, and to regulate its form. Any man of fenfe, not under the influence of prejudice, would be determined in this by its fitnefs for anfwering its purpofe. A high pitched roof will undoubtedly thoot off the rains and fnows better than one of a lower pitch. The wind will not fo eafily blow the dropping rain in between the flates, nor will it have fo much power to ftrip them off. A high pitched roof will exert a fmaller thruft on the walls, both becaufe its ttrain is lefs horizontal, and becaufe it will admit of lighter covering. But it is more expenfive, becaufe there is more of it. It requires a greater fize of timbers to make it equally ftrong, and it expofes a greater furface to the wind.

There have been great changes in the pitch of roofs: our forefathers made them very high, and we make them very low. It does not, however, appear, that this change has been altogether the effer of principle change has been alogether the effect of principle. In the pitch the timple unadorned habitations of private perfons, of roofss every thing comes to be adjuited by an experience of inconveniences which have refulted from too low pitched roofs; and their pitch will always be nearly fuch as fuits the climate and covering. Our architedt, however, go to work on different principles. Their profeffed aim is to make a beautiful object. The fources of the pleafures arifing from what we call tafte are fo various, fo complicated, and even fo whimfical, that it

## ROO

Roof. ed by our profeffed architects. We cannot help thinking, that much of their practice refults from a pedantic veneration for the beautiful productions of Grecian architecture. Such architects as have written on the principles of the arc in refpect of proportions, or what they call the ordonnance, are very much puzzled to have made of the Greek architecture is, that it exhibits a nice adjuftment of ftrength and ftrain. But when we confider the extent of this adjuftment, we find that it is wonderfully limited. The whole of it confilts of a bafement, a column, and an entablature; and the entablature, it is true, exhibits fomething of a connection with the framework and roof of a wooden building; and we believe that it really originated from this in the hands of the orientals, from whom the Greeks certainly borrowed their forms and their combinations. We could eafily fhow in the ruins of Perfepolis, and among the tombs in the mountains (which were long prior to the Greek architecture), the fluted column, the bafe, the Ionic and Corinthian capital, and the Doric arrangement of lintels, bearms, and rafters, all derived from unqueftionable principle. The only addition made by the Greeks was the pent roof; and the changes made by them in the fubordinate forms of things are fuch as we fhould expect from their exquifite judgment of beauty.

But the whole of this is very limited; and the Greeks, after making the roof a chief feature of a houfe, went no farther, and contented themfelves with giving it a flope fuited to their climate. This we have followed, becaufe in the milder climates we have no cogent reafon for deviating from it; and if any architect fhould deviate greatly in a building where the outline is exhibited as beautiful, we fhould be difgufted; but the difguft, though felt by almoft every fpectator, has its origin in nothing but habit. In the profiffed architect or man of education, the difgult arifes from pedantry : for there is not fuch a clofe connection between the form and ufes of a roof as fhall give precife dete:minations; 8 and the mere form is a matter of indifference.
Difference We fhould not therefore reproba.e the high-pitched between the ancient Greeks and

## modern

Toofs.
roofs of our anceftors, particularly on the continent of Europe. It is there where we fee them in all the extremity of the fafhion, and the tafte is by no means exploded as it is in England. A baronial calte in Germany and France is feldom rebuilt in the pure Greek ftyle, or even like the modern houfes in Britain; the high pitched roofs are retained. We fhould not call them Gothic, and ugly becaufe Gothic, till we fhow their principle to be falfe or taltelefs. Now we apprehended that it will be found quite the reverfe; and that though we cannot bring ourfelves to think them beautiful, we oughe to think them fo. The conftruction of the Greek architecture is a transference of the practices that are neceffary in a wooden building to a building of fone. To this the Greeks have adhered, in fpite of innumerable difficultic:. Their marble quarries, however, put it in their power to retain the proportions which habit had rendered agreeable. But it is next to impoffible to adhere to theie proportions with freeftone or brick, when the order is of magnificent dimenfions. Sir Chriftopher Wren faw this ; for his mechanical knowledge was equal to his tafte. He compofed the front of St Paul's church
in London of two orders, and he coupled his columns; and fill the lintels which form the architrave are of fuch length that they could carry no additional weight, and he was obliged to trufs them behind. Had he made but one order, the architrave could not have carried its own weight. It is impolfble to execute a Doric entablature of this fize in brick. It is attempted in a very noble front, the Academy of Arts in St Peterfburgh. But the architect was obliged to make the multules and other projecting members of the corniche of granite, and many of them broke down by their own weight.

Here is furely an error in principle. Since ftone is And the the chief material of our buildings, ought not the mem- effee of bers of ornamented architecture to be refinements on our uffys. the effential and unaffected parts of a fimple ftonebuilding. There is almoft as much propriety in the architecture of India, where a dume is made in imitation of a lilly or other flower inverted, as in the Greek imitation of a wooden building. The principles of mafonry, and not of carpentry, hould be feen in our architecture, if we would have it according to the rulco of jult tafte. Now we affirm that this is the characteriftic feature of what is called the Gothic architecture. In this no dependence is had on the tranfverfe ftrength of fone. No lintels are to be feen; no extravagant projections. Every ftone is prefled to its neighbours, and none is expofed to a tranfverfe ftrain. The Greeks were enabled to execute their coloffal buildings only by ufing immenfe blocks of the hardelt materials. The Norman mation could raife a building to the fkies without uling a ftone which a labourer could not carry to the top on his back. Their architects fludied the princif les of equilibrium; and having attained a wonderful knowledge of it, they indulged themfelves in exhibiting: remarkable inftances. We call this falfe talte, and fay that the appearance of infecurity is the greatelt fault. But this is owing to our habits: our thoughts may be faid to run into a wooden train, and certain fimple maxims of carpentry are familiar to our imagination; and in the careful adherence to thefe conifits the beanty and fymmetry of the Greek architecture. Had we been as much habituated to the equilibrium of preffure, this apparent infecurity would not have met our eye: we would have perceived the frength, and we floould have relifhed the ingenuity.

The Gothic architedure is perhaps intitled to the Rationa name of rational architecture, and its beauty is founded nature of on the characteriftic diftinction of our fpecies. It de- the Gothis ferves cultivation : not the pitiful, fervile, and un- architecfkilled copying of the monuments; this will produce incongruities and abfurdities equal to any that have crept into the Greek architecture : but let us cxamine with attention the nice difpofition of the groins and fpaundre's; let us fudy the tracery and knots, not as ornaments, but as ufeful members; let us obferve how they have made their wa!ls like honey-combs, and ad. mire their ingenuity as we pretend to admire the inflinct infufed by the great architect into the bee. All this cannot be underfiood without mechanical knowledga; a thing which few of our profeffonal architests have any fhare of. Thus would architeconic tatte be a mark of fkill ; and the perfon who prefents the defign of a building would know how to erecute it, without commiting it entirely to the mafon and carpenter.

Thefe obferaticns are not a digrelion from cur fub-

$$
\mathrm{ROO} \quad\left[\begin{array}{ll}
464
\end{array}\right] \quad \mathrm{ROOO}
$$

ject. The fame principles of mutual preflure and equilibrium have a $p$ ace in roofs and many wooden edifices; and if they had been as much ftudied as the Normans and Saracens feem $t$, have fudied fuch of them as were applicable to their purpofes, we might have produced wooden buildings as far fuperior to what we are familiarly acquainted with, as the bold and wonderful ciurches Itill remaining in Europe are fuperior to the limid productions of our flone architefure. 'The cein. tres ufed in building the bridge of Orleans and the corn-market of Paris, are late infances of what may be done in this way. The lat mentioned is a dome of $2 c 0$ feet diameter, built of fir planks; and there is not a piece of timber in it more than nine feet long, a foot broad, and three inches thick.

The Norman architects frequently roofed with itone. Their wooden roofs were in general very fimple, and their profeffed aim was to difpenfe with them altogether. Fond of their own fcience, they copied nothing from a wooden building, and ran into a fimilar fault with the ancient Greeks. The parts of their buildings which were neceffarily of timber were made to imitate ftone-buildings ; and Gothic ornament confifts in cramming every thing full of arches and fpaundrels. Nothing elfe is to be feen in their timber-works, nay even in their fculpture. Look at any of the maces or fceptres ftill to be found about the old cathedrals; they are filver fteeples.

But there appears to have been a rivalfhip in old times between the mafons and the carpenters. Many of the baronial halls are of prodigious width, and are roofed with timber: and the carpenters appeared to have borrowed much knowledge from the mafons of thofe times, and their wide roofs are frequently conftructed with great ingenuity. Their cim, like the mafons, was to throw a roof over a very wide building without employing great logs of timber. We have feen roofs 60 feat wide, without having a piece of timber in it above 10 feet long and 4 inches fquare. The Parliament Houfe and Tron.Church of Edinburgh, the great hall of Tdrnaway caftle near Elgin, are fecimens of thofe roofs. They are very numerous on the continent. Indeed Britain retains few monuments of private magnificence. Arifocratic ftate never was fo great there; and the rancour of the civil wars gave molt of the performances of the carpenter to the flames. Weftminiter-hall exhibits a fpecimen of the falfe talte of the Norman roofs.- It contains the effential parts indeed, very properly difpofed; but they are hidden, or intentionally covered, with what is conceived to be ornamental ; and this is an imitation of fone arches, crammed in between lender pillars which hang down from the principal frames, truffes, or rafters. In a pure Norman roof, fuch as Tarnaway hall, the effential parts are exhibited as things underftood, and therefore relifhed. They are refined and ornamented; and it is here that the inferior kind of tafte or the want of it may appear. Fnd here we do not mean to defend all the whims of our anceftors; but we affert that it is no more neceffary 10 consder the members of a roof as things to be conrealed like a garret or privy, than the members of a asiling, which form the mont beautiful part of the ?reek architesture. Should it be faid that a roof is miy a tang to keep off the rain, it may be anfwered,
that a ceiling is only to keep off the duf, or the flor to be trodden under too:, and that we the ula have neither copartments in the on n n inlaid worn or carpets on the other. The ftructure of a rocf may theretore be exhbited with pr priey, and made an ornamental feature. This has been done even in Italy. The church of St Maria Maggiore in Rone and feveral others are fpecimens: but it mult be acknowedged, that the forms of the principal frames of thefe roofs, which refemble thofe of our modern buildings, are very unfit for agreeable omament. As we have already obferved, our imaginations have not been made fufficiently familiar with che principles, and we are rather alarmed than pleated with the appearance of the immenfe logs of timber which form the couples of there roofs, and hang over our heads with every appearance of weight and danger. It is quite otherwife with the ingenious roofs of the German and Norman architects. Slender timbers, interlaced with great fymmetry, and thrown by neceffity into figures which are naturally pretty, form altogether an object which no carpenter can view without pleafure. And why fhould the gentleman refufe himfelf. the fame pleafure of beholding fcientific ingenuity?

The roof is in faft the part of the building which requires the greateft degree of 1 kill, and where fcience will be of more fervice than in any other part. The architect feldom knows much of the matter, and leaves the tafk to the carpenter. The carpenter confiders the framing of a great roof as the touchftone of his art; and nothing indeed tends fo much to thow his judgement and his fertility of refource.
It mult therefore be very acceptable to the artilt to have a clear view of the principles by which this diff.cult problem may be folved in the beft manner, fo that the roof may have all the ftrength and fecurity that can be wilhed for, without an extravagant expence of timber and iron. We have faid that mechanical fcience can give great affiftance in this matter. We may add that the framing of carpentry, whether for roofs, floors, or any other purpofe, affords one of the moft elegant and moft fatisfactory applications which can be made of mechanical fcience to the arts of common life. Unfortunately the practical artift is feldom poffefled even of the fmall portion of fcience which would almont in-
fure his practice from all rifk of failure ; and fure his practice from all rifk of failure; and even our mof experienced carpenters have feldom any more knowledge than what arifes from their experience and natural fagacity. The moft approved author in our language is Price in his Britifh Carpenter. Mathurin Joufle is in like manner the author moft in repute in France; and the publications of both thefe authors are void of every appearance of principle. It is not uncommon to fee the works of carpenters of the greateft reputation tumble down, in confequence of miftakes flom which the moft elementary knowledge would have faved them.

We fhall attempt, in this article, to give an account Purpofe of the leading principles of this art in a manner fo fami- of this arliar and palpable, that any perfon who knows the com- ticie. mon properties of the lever, and the compofition of motion, thall fo far underttand them as to be alle, on every occalion, to to difpofe his materials, with refpect to the Arains to which they are to be expofed, that he ihall always know the effective ftrain on every piece, and

Roof.

Shall, in molt cafes, be able to make the difpofition Such as to derive the greateft poffible advantage from the materials which he employs.

It is evident that the whole mut depend on the primcipl.s which regulate the frength of the materials, relitive to the manner in which this frength is exerted, and the manner in which the Grain is laid on the piece of matter. With refpect to the firf, this is not the proper place for conlidering it, and we molt refer the reader to the article $S_{\text {tinngth }}$ of Materials in Mechanics. We hall jut borrow from that article two or three propofitions fuited to our purpose.

The force with which the materials of our edifices, roofs, floors, machines, and framings of every kind, refit being broken or crufhed, or pulled afunder, is, immediately or ultimately, the cohefion of their particles. When a weight hangs by a rope, it tends either immediately to break all the fibres, overcoming the cohefion among the particles of each, or it tends to pull one parcel of them from among the reft, with which they are joined. This union of the fibres is brought about by forme kind of gluten, or by twitting, which caufes them to bind each other fo hard that any one will break rather than come out, fo much is it withheld by friction. The ultimate refiftance is therefore the conefin of the fibre; the force or ftrength of all fibrous materials, foch as timber, is exerted in much the fame manner. The fibres are either broken or pulled out from among the reft. Metals, ftone, glass, and the like, refit being pulled afunder by the dimple cohefion of their parts.

The force which is neceffary for breaking a rope or wire is a proper meafure of its itrength. In like mannet, the force neceffary for tearing directly afunder any rod of wood or metal, breaking all its fibres, or tearing them from among each other, is a proper meafure of the united ftrength of all there fibres. And it is the fimpleft fran to which they can be expofed, being jut equal to the fum of the forces neceffary for breaking or difengaging each fibre. And, if the body is not of a fibrous ftructure, which is the cafe with metals, tones, glafs, and many other fubfrances, this force is fill equal to the simple fum of the cohefive forces of each particle which is feparated by the fracture. Let us diftinguif this mode of exeston of the cohesion of the body by the name of its $\mathrm{A}_{\mathrm{b}}$ solute Strength.

When fold bodies are, on the contrary, exposed to great compreflion, they can refit only to a certain degree. A piece of clay or lead will be fqueezed out; a piece of freeftone will be crushed to powder; a beam of wood will be crippled, fuelling out in the middle, and its fibres lone their mutual cohefion, after which it is eafily crushed by the load. A notion may be formed of the manner in which there ftrains are refifted by conceiving a cylindrical pipe filled with fall foot, well Shaken together, fo that each fphericle is lying in the clofeft manner poffible, that is, in contact with fix others in the fame vertical plane (this being the pollton in which the foot will take the leaftroom). Thus each touches the ret in fix points: Now fuppofe them all united, in there fix points only, by rome cement. This aftemblage will nick together and form a cylindrical pillar, which may be taken out of its mould. Sup.

Vol. XVI.
firmly fixed, and let it be loaded with a weight $W$ appended to its extremity. This tends to break it; and the leal reflection will convince any perfon that if the beam is equally flong throughout, it will break in the line $C D$, even with the furface of the wall. It will open at $D$, while $C$ will ferve as a fort of joint, round which it will turn. The crofs faction through the line $C D$, is, for this reason, called the faction of fradure, and the horizontal line, drawn through C on its under furface, is called the axis of fracture. The fracture is made by tearing afunder the fibres, foch as DE or FG. Let us fuppofe a real joint at C , and that the beam is really faxed through along CD, and that in place of its natural fibres threads are fublituted all over the fection of fracture. The weight now tends to break there threads; and it is our bufinefs to find the force neceffary for this purpofe.

It is evident that DCA may be confidered as a bended lever, of which $C$ is the fulcrum. If $f$ be the force which will jut t balance the cohefion of a thread when hung on it fo that the fmalleft addition will break it, we may find the weight which will be fufficient for this purpofe when hung on at A, by haying, AC : CD $=f: \varphi$, and $\uparrow$ will be the weight which will jut break the thread, by hanging $\Phi$ by the point $A$. This gives us $\varphi=f \times \frac{\mathrm{CD}}{\mathrm{CA}}$. If the weight be hung on at $a$, the force jul fufficient for breaking the fame thread will be $=f \frac{C D}{C a}$. In like manner the force $\varphi$, which mut be hung on at $A$ in order to break an equally ftrong or an 3 N
equally
pore this pillar funding upright, and loaded above. The fupports arifing from the cement act obliquely,

 -very frat. in relation to tranverde firming. Plate cceexa.

R O O
Roof. $\overbrace{}^{\text {Roof }}$ equally refiting fibre at F , muit be $=f \times \frac{\mathrm{CF}}{\mathrm{CA}}$. fo on of all the reft

If we fuppofe all the fibres to exert equal refiftances at the inftant of fracture, we know, from the fimpleft elements of mechanics, that the refiftance of all the parlicles in the line CD, each acting equally in its own place, is the fame as if all the individual refiftances were united in the middle point $g$. Now this total refilfance is the refiftance or ftrength $f$ of each particle, multiplied by the number of particles. This number may be expreffed by the line CD, becaufe we have no reafon to fuppofe that they are at unequal diftances. Therefore, in comparing different fections together, the number of particles in each are as the fections themfelves. Therefore DC may reprefent the number of particles in the line $\mathrm{DC}^{\prime}$. Let us call this line the depth of the beam, and exprefs it by the fymbol $d$. And fince we are at prefent treating of roofs whofe rafiers and other parts are commonly of uniform breaduh, let us call AH or BI the breadth of the beam, and exprefs it by $b$, and let $C$ A be called its length, $l$. We may now exprefs the frength of the whole line CD by $f \times d$, and we may fuppofe it all concentrated in the middle point $g$, Its mechanical energy, therefore, by which it refiits the energy of the weight $w$, applied at the diftance $l$, is $f . \mathrm{CD} . \mathrm{C} g$, while the momentum of $w$ is $w . \mathrm{CA}$. We mult therefore have $f . \mathrm{CD} . \mathrm{Cg}=w . \mathrm{CA}$, or $f d . \frac{\mathrm{x}}{2} d$ $=w . l$, and $f d: v=l: \frac{\mathrm{r}}{2} d$, or $f d: w=2 l: d$. That is twice the length of the beam is to its depth as the al.folute ftrength of one of its vertical planes to its relative ftrength, or its power of reffing this traniverfe fracture.

It is evident, that what has been now demonftrated of the refiltance exerted in the line CD, is'eqzally true of every line parallel to $C D$, in the thicknefs or breadth of the beam. The abfolute ftrength of the whole fection of fracture is properly reprefented by $f . d . b$, and we ftill have $2 l: d=f d b: w$; or twice the length of the beam is to its depth as the abfolute ftrength to the relative ftrength. Suppofe the beam 12 feet long and one foot deep; then whatever is its abfolute ftrength, the $24^{\text {th }}$ part of this will break it if hung at its extremity.

But even this is too favourable a fatement; all the fibres are fuppofed to act alike in the inftant of fracture. But this is not true. At the inflant that the fibre at D breaks, it is fretched to the utmof, and is exerting its whole force. But at this inflant the fibre at $g$ is not fo much ftretched, and it is not then exerting its utmoft force. If we fuppofe the extenfion of the fibres to be as their diflance from C , and the actual exertion of each to be as their extenfions, it may eafily beflown (fee Strengitand Strain), that the whole refintance is the fame as if the full force of all the fibres were united at a point $r$ difant from C by one third of CD. In this cafe we muft fay, that the abfolute frength is to the relative ftrength as three times the lengeth to the depth; fo that the beam is weaker than by the former flatement in the proportion of two to three.

Even this is more Arength than experiment juftifies; and we can fee an evident reafon for it. When the beam is frained, not only are the upper fibres Greiched, but the lower fibres are compreffed, This is
very diftinsly feen, if we attempt to break a piece of

C is not the centre of fracture. There is fome point $c$ which lies between the fibres which are ftretched and thofe that are compreffed. This fibre is neither ftretched nor fqueezed; and this point is the real centre of fracture; and the lever by which a fibre D refilts, is not DC , but a fhorter one $\mathrm{D} c$; and the energy of the whole refiftances mult be lefs than by the fecond ftatement. Till we know the proportion between the dilatability and compreffibility of the parts, and the relation between the dilatations of the fibres and the refiftances which they exert in this ftate of dilatation, we cannot pofitively fay where the point $c$ is fituated, nor what is the fum of the astual refiftances, or the point where their action may be fuppofed concentrated. The tormer woods, fuch as oak and chefnut, may be fuppofed to be but flightly compreffible; we know that willow and other foft woods are compreffible. Thefe laft muft therefore be weaker: for it is evident, that the fibres which are in a Itate of compreffion do not refift the fracture. It it well known, that a beam of willow may be cut through from C to $g$ without weakening it in the leaft, if the cut be filled up by a wedge of hard wood Auck in.

We can only fay, that very found oak and red fir have the centre of effort fo fituated, that the abfolute Arength is to the relative flrength in a proportion not lefs than that of three and a half times the length of the beam to its depth. A fquare inch of found oak will carry about 8000 pounds. If this bar be firmly. fixed in a wall, and project 12 inches, and be loaded at the estremity with 200 pounds, it will be broken. It will juft bear 190, its relative ftrength being $\frac{1}{4 z}$ of its abfolute flrength; and this is the cafe only with the fineft pieces, fo placed that their annual plates or layers. are in a vertical pofition. A larger $\log$ is not fo, ftrong tranfverfely, becaufe its plates lie in various directions round the heart.

Thefe obfervations are enough to give us a diftinet notion of the valt diminution of the frength of timber when the ftrain is acrofs it ; and we fee the juftice of the maxim which we inculcated, that the carpenter, in framing roofs, fhould avoid as much as poffible the expofing his timbers to tranfverfe frains. But this cannot be avoided in all cafes. Nay the ultimate ftrain, arifing from the very nature of a roof, is tranfverfe. The ratters mult carry their own weight, and this tends to break them acrofs: an oak beam a foot deep will not carry its own weight if it pr.ject more than 60 feet. Befides this, the rafters mult carry the lead, ty ling, or flates. We mult therefore confider this rranfverfe. ftrain a little more particularly, fo as to know what ftrain will be laid on any part by an unavoidable load, laid on either at that part or at any other.

We have hitherto fuppofed, that the beam had one
of its ends fixed in a wall, and that it was loaded at the when other end. This is ntt an ufual arrangement, and was, beamsare taken merely as affording a fimple application of the. fupported mechanical priaciples. It is much more ufual to have and the ends the beam fupported at the ends, and louded in the ind loaded midmiddle. Let the beam FEGH (fig. 2.) reft on the dile, \&c.. props $E$ and $G$, and be loaded at its middle poirt $\mathbf{C}$ with a weight $W$. It is required to determine the ftrain at the fection CD? It is plain that the beam will
receive:
.

## $\mathrm{ROO} \quad\lceil 467 \quad$ ROO

Roof. receive the fame fupport, and fuffer the fame frain, if, inftead of the blocks $E$ and $G$, we fubftitute the ropes E $f e, \mathbf{G} h g$, going over the pulleys $f$ and $g$, and loaded with proper weights $e$ and $g$. The weight $e$ is equal to the fupport given by the block E ; and $g$ is equal to the fupport given by G. The fum of $e$ and $g$ is equal to W ; and, on whatever point W is hung, the weights $c$ and $g$ are to $W$ in the proportion of DG and DE to GE. Now, in this ftate of things, it appears that the frain on the fection $C D$ arifes immediately from the upward action of the ropes $F f$ and $H b$, or the upward preffions of the blocks $E$ and $G$; and that the office of the weight $W$ is to oblige the beam to oppore this ftrain. Things are in the fame flate in refpect of ftrain as if a block were fubfituted at $D$ for the weight $W$, and the weights $e$ and $g$ were hung on at $E$ and $G$; only the directions will be oppofite. The beam tends to break in the fection CD, becaufe the ropes pull it upwards at $\bar{E}$ and $G$, while a weight $W$ holds it down at $C$. It tends to open at $D$, and $C$ becomes the centre of fracture. The ftrain therefore is the fame as if the half ED were fixed in the wall, and a weight equal to $g$, that is, to the half of W , were bung on at G.

Hence we conclude, that a beam fupported at both ends, but not fixed there, and loaded in the middle, will carry twice as much weight as it can carry at its extremity, when the other extremity is faft in a wall.

The ftrain occafioned at any point $L$ by a weight $W$, hung on at any other point $D$, is $=W \times$ DE $\overline{E G} \times L G$. For $E G$ is to $E D$ as $W$ to the preflure occafioned at $G$. This would be balanced by fome weight $g$ acting over the pulley $b$; and this tends to break the beam at L, by acting on the lever GL. The preffure at $G$ is $W \cdot \frac{D E}{E G}$, and therefore the frain at $L$ is W. $\frac{\mathrm{DE}}{\mathrm{EG}}$ LG.

- In like manner, the ftrain occafioned at the point $D$ by the weight $W$ hung on there, is $W \frac{D E}{\overline{E G}} \times D G$; which is therefore equal to $\frac{1}{2} \mathrm{~W}$, when D is the middle point.

Hence we fee, that the general, ftrain on the beam arifing from one weight, is proportionable to the rectangle of the parts of the beam, (for $\frac{\text { W.DE.DG }}{\text { EG }}$ is as DE.DG), and is greateft when the load is laid on the middle of the beam.

We alfo fee, that the ftrain at $L$, by a load at $D$, is equal to the frain at D by the fame load at L . And the ftrain at $L$, from a load at $D$, is to the frain by the fame load at $L$ as DE to LE. Thefe are all very obvious corollaries; and ther fufficiently inform us concerning the ftrains which are produced on any part of the timber by a load laid on any other part.

If we now fuppore the beam to be fixed at the two ends, that is, firmly framed, or held down by blocks at I and K, placed beyond E and G, or framed into pofts, it will carry twice as much as when its ends were free. For fuppofe it fawn through at $\mathrm{CD}^{\text {; }}$ the weight $W$ hung on there will be juft fufficient to break it at $E$ and $G$. Now reftore the connection of the fec-
tion $C D$, it will require another weight $W$ to break it there at the fame time.

Therefore, when a rafter, or any piece of timber, is firmly connected with three fixed points $G, E, I$, it will bear a greater load between any two of them than if its connection with the remote point were removed; and if it be faltened in four points, $G, E, I, K$, it will be twice as frong in the middle part as without the two remote connections.

One is apt to expect from this that the joilt of a flocr will be much frengthened; by being firmly built in the wall. It is a little Itrengthened; but the hold which can thus be given it is much too fhort to be of any fenfible fervice ; and it tends greatly to thatter the wall, becaufe, when it is bent down by a load, it forces up the wall with the momentum of a long lever. Judicious builders therefore take care not to bind the joilts tight in the wall. But when the joitts of adjoiming rooms lie in the fame direction, it is a great advantage to make them of one piece. They are then twice as ftrong as when made in two lengths.

It is ealy to deduce from thefe premiffes the ftrain on $\begin{gathered}20 \\ 20\end{gathered}$ any point which arifes from the weight of the beam itfelf, or from any load which is uniformly diffufed over the whole or any part. We may always confider the whole of the weight which is thus uniformly diffufed over any part as united in the middle point of that part; and if the load is not uniformly diffufed, we may ftill fuppofe it united at its centre of gravity. Thus, to know the ftrain at $L$ arifing from the weight of the whole beam, we may fuppofe the whole weight acculmulated in its middle point $D$. Alfo the ftrain at $L$, arifing from the weight of the part ED, is the fame as if this weight were accumulated in the middle point $d$ of ED; and it is the fame as if half the weight of ED were hung on at $D$. For the real ftrain at $L$ is the upward preffure at $G$, acting by the lever GL. Now call the weight of the part $\mathrm{DE} e$; this upward preffure
will be $\frac{e \times d \mathrm{E}}{\mathrm{EG}}$, or $\frac{\frac{1}{2} e \times \mathrm{DE}}{\mathrm{EG}}$.
Therefore the frain on the middle of a beam, arim fing from its own weight, or from any uniform load, is the weight of the beam or its load $\times \frac{E D}{E G} \times D G$; that is, half the weight of the beam or load multiplied or acting by the lever $D G$; for $\frac{E D}{E G}$ is $\frac{1}{2}$.

Alfo the ftrain at L , arifing from the weight of the beam, or the uniform load, is $\frac{x}{5}$ the weight of the beam or load acting by the lever LG. It is therefore proportional to LG, and is greateft of all at D. Therefore a beam of uniform ftrength throughout, uniformly loaded, will break in the middle.

It is of importance to know the relation between the ftrains arifing from the weights of the beams, or from any uniformly diffufed load, and the relative frength. We have already feen, that the relative frength is $f \frac{d b . d}{m l}$, where $m$ is a number to be difcovered by experiment for every different fpecies of materials. Leaving out every circumftance but what depends on the dimenfions of the bam, viz, $d, b$, and $l$, we $f_{\text {ee that }}$ the relative frength is in the proportion of $\frac{d^{2} b}{l}$, $3 \mathrm{~N}_{2}$ that
that is, as the breadth and the fquare of the depth directly and the length inverfely.

Now, to confider firlt the ftrain arifing from the weight of the beam itfelf, it is evident that this weight increafes in the fame proportion with the depth, the breadth, and the length of the beam. Therefore its power of refilting this frain mult be as its depth ditectly, and the fquare of its length inverfely. To confider this in a more popular manner, it is plain that the increale of breadth makes no change in the power of refifting the actual ftrain, becaufe the load and the abfolute ftrength increafe in the fame proportion with the breadth. But by increafing the depth, we increafe the refiting fection in the fame proportion, and therefore the number of refifing fibres and the abfolute frength: but we alfo increafe the weight in the fame proportion. This makes a compenfation, and the relative ftrength is yet the fame. But by increafing the depth, we have not only increafed the abfolute ftrength, but alfo its mechanical energy: For the refitance to fracture is the fame as if the full ftrength of each fibre was cxerted at the point which we called the centre of effort; and we fhowed that the diftance of this from the underfide of the beam was a certain portion (a half, a third, a fourth, \&c.) of the whole depth of the beam. This diftance is the arm of the lever by which the cohefion of the wood may be fuppofed to act. 'Therefore this arm of the lever, and confequently the energy of the refiftance, increafes in the proportion of the depth of the beam, and this remains uncompenfated by any increafe of the ftrain. On the whole, therefore, the power of the beam to fuftain its own weight increafes in the proportion of its depth. But, on the other hand, the power of withftanding a given frain applied at its extremity, or to any aliquot part of its length, is diminithed as the length increafes, or is inverfely as the length; and the ftrain arifing from the weight of the beam alfo increafes as the length. Therefore the pow:- of refifting the ftrain actually exerted on it by the weight of the beam is inverfely as the fquare of the length. On the whole, therefore, the power of a beam to carry its own weight, varies in the proportion of its depth directly and the fquare of its length inverfely.

As this ftrain is frequently a confiderable part of the whole, it is proper to confider it apart, and then to reckon only on what remains for the fupport of any extraneous load,
power of a beam to load which is uniformly diffufed over its length, mult carryaload be inverfely as the fquare of the length: for the unifornaly diffured over its length. power of withftanding any frain applied to an aliquot part of the length (which is the cafe here, becaufe the load may be conceived as accumulated at its centre of gravity, the middle point of the beam) is inverfely as the length; and the actual Atrain is as the length, and therefore its momentum is as the fquare of the length. Therefore the power of a beam to carry a weight uniformly diffufed over it, is inverfely as the fquare of the length, $N . B$. It is here underftood, that the uniform load is of fome determined quantity for every foot of the length, fo that a beam of double length carries a Gitectwhen double load.
the action We have hitherto fuppofed that the forces which ef the load tend to breals a beam tranfyerfely, are acting in a direcssoblique.
tion perpendicular to the beam. This is always the cafe in level floors loaded in any manner; but in roofs, the action of the load tending to break the rafters is oblique, becaufe gravity always acts in vertical lines. It may alfo frequently happen, that a beam is Atrained by a force acting obliquely. This modification of the frain is eafly difcufled. Suppore that the external force, which is meafured by the weight W in Gig. I. acts in the direction $A w^{\prime}$ inftead of AW. Draw Cat perpendicular to $A x$. Then the momentum of this external force is not to be mealured by $\mathrm{W} \times \mathrm{AC}$, but by $\mathrm{W} \times a \mathrm{C}$. The Itrain therefore by which the fibres in the fection of fracture $D C$ are torn afunder, is diminifled in the proportion of CA to $\mathrm{C} \dot{A}$, that is, in the proportion of radius to the fine of the angle CAá, which the beam makes with the direction of the external force.

To apply this to our purpofe in the moft familiar manner, let AB (fig. 3.) be an oblique rafter of a build. ing, loaded with a weight $W$ fufpended to any point C , and thereby occafioning a ftrain in fome part D . We have already feen, that the immediate caufe of the Itrain on D is the reaction of the fupport which is given to the point $B$. The rafter may at prefent be confidered as a lever, fupported at $A$, and pulled down by the line CW. This occafions a preffure on $B$, and the fupport acts in the oppofite direction to the action of the lever, that is, in the direction $\mathrm{B} b$, perpendicular to BA. This tends to break the beam in every part. The preffure exeried at $B$ is $\frac{W \times A E}{A B}, A E$ being a horizontal line. Therefore the ftrain at $D$ will be $\mathrm{W} \times \mathrm{AE}$
$\frac{\mathrm{AB}}{} \times \mathrm{BD}$. Had the beam been lying horizontally, the ftrain at $D$, from the weight $W$ fufpended at $C$, would have been $\frac{W . A C}{A B} \times B D$. It is therefore diminifhed in the proportion of $A C$ to $A E$, that is, in the proportion of radius to the coline of the elevation, or in the proportion of the fecant of elevation to the radius.

It is evident, that this law of diminution of the ftrain is the fame whether the ftrain arifes from a load on any part of the rafter, or from the weight of the rafter it felf, or from any load uniformly difufed over its length, provided only that thefe loads act in vertical lines.

We can now compare the frength of roofs which have different elevations. Suppofing the width of the building to be given, and that the weight of a fquare yard of covering is alfo given. Then, becaure the load on the rafter will increafe in the fame proportion with its length, the load on the lant-fide BA of the roof will be to the load of a fimilar covering on the half AF of the flat roof, of the fame widit, as $A B$ to $A F$. But the tranfverfe action of any load on AB, by which it tends to break it, is to that of the fame load on AF as $A F$ to $A B$. The tranfverfe firain therefore is the fame on both, the increafe of real load on AB being compenfated by the obliquity of its af.on. But the ftrengths of beams to refilt equal ftrains, applied to fimilar points, or uniformly diffufed over them, are in. verfely as their lengths, becanfe the momentum or energy of the frain is proportional to the length. There. fore-

Roof.

Roof.
fore the power of $A B$ to withland the Atrain to which it is really expofed, is to the power of AF to refilt its frain as AF to AB. If, therefore, a rafter AG of a certain fcantling is jult able to carry the roofing laid on it, a rafter AB of the fame fantling, but more elevated, will be too weak in the proportion of $A G$ to $A B$. Therefore feeper roofs require flouter rafters, in order that they may be equally able to carry a roofing of equal weight per fquare yard. To be equally ftrong, they mult be made broader, or placed nearer to each other, in the proportion of their greater length, or they mult be made deeper in the fubduplicate proportion of their length. The following ealy confruction will enable the artift not familiar with computation to proportion the depth of the rafter to the flope of the roof.

Let the horizontal line af (fig. 4.) be the proper depth of a beam whofe length is half the width of the building; that is, fuch as would make it fit for carrying the intended tiling laid on a flat roof. Draw the vertical line $f b$, and the line $a b$ having the elevation of the rafter; make $a g$ equal to $a f$, and defcribe the femicircle $b d g$; draw $a d$ perpendicular to $a b$, $a d$ is the required depth. The demonftration is evident.

We have now treated in fufficient detail what relates to the chief ftrain on the component parts of a roof, namely, what tends to break them tranfverfely; and we have enlarged more on the fubject than what the prefent occafion indifpenfably required, becaufe the propo. fitions which we have demonftrated are equally applicable to all framings of carpentry, and are even of greater moment in many cafes, particularly in the conftruction of machines. Thefe confift of levers in various forms, which are ftrained tranfverfely; and fimilar ftrains frequently occur in many of the fupporting and connecting parts. We thall give in the article Timber an account of the experiments which have been made by different naturalifts, in order to afcertain the abfolute ftrength of fome of the materials which are moft generally framed together in buildings and engines. The houfe-carpenter will draw from them abfolute numbers, which he can apply to his particular purpofes by means of the propofitions which we have now eftablifhed.

We proceed, in the next place, to confider the other frains to which the parts of roofs are ex pofed, in confequence of the fupport which they mutually give each other, and the preffures (or thrufts as they are called in the language of the houfe-carpenter) which they exert on each other, and on the walls or piers of the building.

Let a beam or piece of timber $A B$ (fig. 5.) be fufpended by two lines $A C, B D$; or let it be fupported by two props $\mathrm{AE}, \mathrm{BF}$, which are perfectly moveable round their rennote extremities $E, F$, or let it relt on the two polifhed plains KAH, LBM. Moreover, let G be the centre of gravity of the beam, and let GN be a line through the centre of gravity perpendicular to the horizon. The beam "ill not be in equilibrio unlefs the vertical line GN either paffes through $P$, the point in which the directions of the two lines $A C, B D$, or the directions of the two props $A E, F D$, or the perpendiculars to the two planes KAH, LBM interfect each other, or is parallel to thefe directions. For the fiupports given by the lines or props are unquettionably exerted in the direction of their lengths; and it is as well
known in mechanics that the fupports given by plates are exerted in a ditection perpendicular to thote planes in the points of contadt and we know that the weight of the beam acts in the fame manner as if it were all accumulated in its centre of gravity $G$, and that it atts in the direction $G N$ perpendicular to the horizon. Moreover, when a body is in equilibrio between thre: forces, they are acting in one plane, and their direc. tions are either parallel or they pafs through one point.

The fupport given to the beam is theretole the fane as if it were fufpended by two lines which are attached to the fingle point $P$. We may alio infer, that the points of fufpenfion $C_{2} D$, the foints of fupport $E, I$; the points of contact $A, B$, and the centre of gravity $G$, are all in one vertical plane.

When this pofition of the beam is difturbed by any external force, there muft either be a motion of the points $A$ and $B$ round the centres of fulpenfion $C$ and D , or of the props round thefe points of fupport E and $F$, or a fliding of the ends of the beam along the polifhed planes GH and IK; and in confequence of thefe motions the centre of gravity G will go out of its place, and the vertical line $G N$ will no longer pafs through the point where the directions of the fupports interfect each other. If the centre of gravity rifes by this mo. tion, the body will have a tendency to recover its form. er pofition, and it will require force to keep it away from it. In this cafe the equilibrium may be faid to be fable, or the body to have falility. But if the centre of gravity defcends when the body is moved from the pofition of equilibrium, it will tend to move ftill farther; and fo far will it be from recovering its former pofition, that it will now fall. This equilibrium may be called a tottering equilibrium. Thefe accidents depend on the fituations of the points $\mathrm{A}, \mathrm{B}, \mathrm{C}, \mathrm{D}, \mathrm{E}, \mathrm{F}$; and the? may be determined by confidering the fubject geometrically. It does not much interelt us at preent; it is rarely that the equilibrium of fufpenfion is tottering, oi that of props is fable. It is evident, that if the beam were fufpended by lines from the point $P$, it would have ftability, for it would fwing like a pendulum round $P$, and therefore would always tend towards the pofition of equilibrium. The interfection of the lines of fupport would fill be at $P$, and the vertical line drawn through the centre of gravity, when in any other fituation, would be on that fide of P towards which this centre has been moved. Therefore, by the rules of pendulous bodies, it tends to come back. This would be more remarkably the cafe if the points of fufpenfion ( and $D$ be on the fame fide of the point $P$ with the points of attachment $A$ and $B$; for in this cafe the new point of interfection of the lines of fupport would fhift to the oppofite fide, and be fill farther from the vertical line through the new pofition of the centre of gravity. But if the points of fufpenfion and of attachment are on op. pofite fides of P , the new point of interfection may fhift to the fame fide with the centre of gravity, and lie beyond the vertical line; in this cafe the equilibrium is tottering. It is eafy to perceive, too, that if the equi. librium of fufpenfion from the points $C$ and $D$ be ftable, the equilibrium on the props $A E$ and $B F$ mult be tottering. It is not neceflary for our prefent purpofe to engage more particulatly in this difcuffion.

It is plain that, with refpect to the mere momentary equilibrium, there is no difference in the fupport by
threads,

## ROO

threads, or props, or planes, and we may fublitute the one for the other. We fhall find this fubftitution extremely ufeful, becaufe we eafily conceive diftinct notions of the fupport of a body by ftrings.

Obferve farther, that if the whole figure be inverted, and ftrings be fubftituted for props, and props for ftrings, the equilibrium will fill obtain: for by comparing fig. 5 . with fig. 6 . we fee that the vertical line through the centre of gravity will pats through the interfection of the two ftrings or props; and this is all that is neceffary for the equilibrium : only it mutt be obferved in the fabflitution of props for threads, and of threads for props, that if it be done without inverting the whole figure, a ttable equilibrium becomes a

This is a moft ufeful propofition, efpecially to the unlettered artifan, and enables him to make a practical ufe of problems which the greateit mechanical geniufes have found no eafy tafk to folve. An inftance will fhow the extent and utility of it. Suppofe it were required to make a manfard of kirb roof whofe width is $A B$ (fig. 7.), and confifting of the four equal rafters $A C, C D, D E, E B$. There can be no doubt but that its beft form is that which will put all the parts in equilibrio, fo that no ties or flays may be neceffary for oppofing the unbalanced thruft of any part of it. Make a chain $a c d e b$ (fig. 8.) of four equal pieces, loofely connected by pin-joints, round which the parts are perfeetly moveable. Sulpend this from two pins $a, b$, fixed in a horizontal line. This chain or feftoon will arrange itfelf in fuch a form that its parts are in equilibrio. Then we know that if the figure be inverted, it will compofe the frame or trufs of a kirb-roof $a \gamma \delta \in b$, which is alfo in equilibrio, the thrufts of the pieces balancing each other in the fame manner that the mutual pulls of the hanging fettoon $a c d e b$ did. If the proportion of the height $d f$ to the width $a b$ is not fuch as pleafes, let the pins $a, b$ be placed nearer or more diftant, till a proportion between the width and height is obtained which pleafes, and then make the figure ACDEB fig. 7. fimilar to it. It is evident that this propofition will apply in the fame manner to the determination of the form of an arch of a bridge; but this is not a proper place for a farther difcuffion.

We are now able to compute all the thrults and other preffures which are exerced by the parts of a roof on each other and on the walls. Let AB (fig. 9.) be a beam flanding anyhow obliquely, and $G$ its centre of gravity. Let us fuppofe that the ends of it are fupported in any directions $\mathrm{AC}, \mathrm{BD}$, by frings, props, or planes. Let thefe directions meet in the point $P$ of the vertical line PG paffing through its centre of gravity. Through $G$ draw lines $G a, G b$ parallel to PB , PA. Then
The weight of the beam $\left.\begin{array}{l}\text { The preflure or thrult at } A \\ \text { The preflure at } B\end{array}\right\}$ are proportional to $\left\{\begin{array}{l}\mathrm{PG} \\ \mathrm{P} a \\ \mathrm{P} b\end{array}\right.$

For when a body is in equilibrio between three forces, thefe forces are proportional to the fides of a triangle which have their directions.

In like manner, if $\mathrm{A} g$ be drawn parallel to $\mathrm{P} b$, we fhall have

470 J R 0
Or, drawing $\mathrm{B}_{\boldsymbol{\gamma}}$ parallel to $\mathrm{P}_{a}$

Roof: $\underbrace{\text { Roof. }}$

27
It cannot be difputed that, if frength alone be confi- The proper dered, the proper form of a roof is that which puts the torm of a whole in equilibrio, fo that it would remain in that roof is that fhape although all the joints were perfectly loofe or which puts flexible. If it has any other fhape, additional ties or in equi,ibraces are neceffary for preferving it, and the parts are brio. unneceffatily ftrained. When this equilibrium is obtained, the rafters which compofe the roof are all acting on each other in the direction of their lengths; and by this action, combined with their weights, they fuftain no ftrain but that of compreffion, the ftrain of all others that they are the moft able to refift. We may confider them as fo many inflexible lines having their weights accumulated in their centres of gravity. But it will allow an eafier inveftigation of the fubject, if we fuppofe the weights to be at the joints, equal to the real vertical preffures which are exerted on thefe points. Thefe are very eafily computed : for it is plain, that the weight of the beam $A B$ (fig. 9.) is to the part of this weight that is fupported at $B$ as $A B$ to $A G$. Therefore, if W reprefent the weight of the beam, the vertical preffure at $B$ will be $W \times \frac{A G}{A B}$, and the vertical preffure at $A$ will be $W \times \frac{B G}{A B}$. In like manner, the prop $B F$ being confidered as another beam, and $f$ as its centre of gravity and $z v$ as its weight, a part of this weight, equal to $w \times \frac{f F}{\overline{B F}}$, is fupported at $B$, and the whole vertical preffure at $B$ is $W \times \frac{A G}{A B}+w, \times \frac{f F}{B F}$. And thus we greatly fimplify the confideration of the mutual thrufts of roof frames.' We need hardly obferve, that although thefe preffures by which the parts of a frame fupport each other in oppofition to the vertical action of gravity, are always exerted in the direction of the pieces, they may be refolved into preffures acting in any other direction which may engage our attention.

All that we propofe to deliver on this fubject at prefent may be included in the following propofition.

Let ABCDE (fig. ro.) be an affemblage of rafters in a vertical plane, refting on two fixed points $A$ and E in a horizontal line, and perfectly moveable round all the joints $A, B, C, D, E$; and let it be fuppofed to be in equilibrio, and let us inveftigate what adjuftment of the different circumftances of weight and inclination of its different parts is neceffary for producing this equilibrium.

Let F, G, H, I, be the centres of gravity of the different rafters, and let thefe letters exprefs the weights of each. Then (by what has been faid above) the weight which prefles $B$ direetly downwards is $F \times \frac{A F}{A B}+G \times$ $\overline{\mathrm{BC}}$. The weight on C is in like manner $\mathrm{G} \times \frac{\mathrm{BG}}{\overline{\mathrm{BC}}}+$ $H \times \frac{\mathrm{DH}}{\mathrm{CD}}$, and that on D is $\mathrm{H} \times \frac{\mathrm{CH}}{\mathrm{CD}}+\mathrm{I} \times \frac{\mathrm{EI}}{\mathrm{DE}}$.

Let $\mathrm{A} b \dot{c} d \mathrm{E}$ be the figure ABCDE inverted, in the manner already defcribed. It may be conceived as a thread faftened at $A$ and $E$, and loaded at $b, c$, and

## ROO

KOO
Roof. $d$ with the weights which are really preffing on $\mathrm{B}, \mathrm{C}$, canfe $c m=d n$, we have BR to BS as the compreflion and $D$. It will arrange itfelf into fuch a form that all will be in equilibrio. We may difcover this form by means of this fingle confideration, that any part $b c$ of the thread is equally fretched throughout in the direction of its length. Let us therefore inveltigate the proportion between the weight $\beta$, which we fuppofe to be pulling the point $b$ in the vertical direction $b \beta$ to the weight $d$, which is pulling down the point $d$ in a fimilar manner. It is evident, that fince AE is a horizontal line, and the figures $\mathrm{A} b c d \mathrm{E}$ and ABCDE equal and fimilar, the lines $\mathrm{B} b, \mathrm{C} c, \mathrm{D} d$, are vertical. Take $b f$ to reprefent the weight hanging at $b$. By ftretching the threads $b A$ and $b c$, it is fet in oppofition to the contractile powers of the threads, acting in the directions $b \mathrm{~A}$ and $b c$, and it is in immediate equilibrio with the equivalent of thefe two contractile forces. Therefore make $b g$ equal to $b f$, and make it the diagonal of a parallelogram $b b i g$. It is evident that $b h, b i$, are the forces exerted by the threads $b \mathrm{~A}, b c$. Then, feeing that the thread $b_{c}$ is equally ftretched in both directions, make $c k$ equal to $b i ; c k$ is the contractile force which is excited at $c$ by the weight which is hanging there. Draw $k l$ parallel to $c d$, and $l m$ parallel to $b c$. The force $l c$ is the equivalent of the contractile forces $c k, c m$, and is therefore equal and oppofite to the force of gravity ading at C. In like manner, make $d n=c m$, and complete the parallelogram $n d p a$, having the vertical line $o d$ for its diagonal. Then $d n$ and $d p$ are the contractile forces excited at $d$, and the weight hanging there muft be equal to od.

Therefore, the load at $b$ is to the load at $d$ as $b g$ to do. But we have feen that the compreffing forces at $\mathrm{B}, \mathrm{C}, \mathrm{D}$ may be fubftituted for the extending forces at $b, c, d$. Therefore the weights at $\mathrm{B}, \mathrm{C}, \mathrm{D}$ which produce the compreffions, are equal to the weights at $b, c, d$, which produce the extenfions. Therefore $b g: d o=$ $\mathrm{F} \times \frac{\mathrm{AF}}{\mathrm{AB}}+\mathrm{G} \times \frac{\mathrm{CG}}{\mathrm{BC}}: \mathrm{H} \times \frac{\mathrm{CH}}{\mathrm{CD}}+\mathrm{I} \times \frac{\mathrm{EI}}{\mathrm{DE}}$.

Let us enquire what relation there is between this proportion of the loads upon the joints at $B$ and $D$, and the angles which the rafters make at thefe joints with each other, and with the horizon or the plumb lines. Produce AB till it cut the vertical $\mathrm{C} c$ in Q: draw BR parallel to $C D$, and $B S$ parallel to $D E$. The fimilarity of the figures ABCDE and AbcdE , and the fimilarity of their pofition with refpect to the horizontal and plumb lines, how, without any further demonftration, that the triangles QCB and $g b i$ are fimilar, and that $\mathrm{QB}: \mathrm{BC}=\xi i: i b=b b: i b$. Therefore QB is to $B C$ as the contractile force exerted by the thread A $b$ to that exerted by $b s$; and therefore QB is to BC as the compreftion of BA to the compreffion on BC (A). Then, becaufe $b i$ is equal to $c k$, and the triangles CBR and $c k l$ are fimilar, $\mathrm{CB}: \mathrm{BR}=c k: k l$, $=$ $c k: c m$, and $C B$ is to $B R$ as the compreffion on $C B$ to the compreftion on CD. And, in like manner, be-
on DC to the compreffion on DE . Alfo $\mathrm{BR}: \mathrm{RS}=$ $n d: d a$, that is, as the compreffion on DC to the load on D. Finally combining all thefe ratios.
$\mathrm{QC}: \mathrm{CB}=g b: b i,=g b: k_{c}$
$\overline{\mathrm{CB}}: \mathrm{BR}=k c: k l,=k c: d n$
$\mathrm{BR}: \mathrm{BS}=n d: n o=d n: n o$
$\mathrm{BS}: \mathrm{RS}=n o: d o=n o: d \rho$, we have finally
$\mathrm{QC}: \mathrm{RS}=\mathrm{g} b: o d=$ Lord at $\mathrm{B}:$ Load at $\mathrm{D}_{\text {. }}$
Now
$\mathrm{QC}: \mathrm{BC}=f, \mathrm{QBC}: \int, \mathrm{BQC},=f, \mathrm{ABC}: f, \mathrm{AB} b$
$\mathrm{BC}: \mathrm{BR}=f, \mathrm{BRC}: \int, \mathrm{BCR}=f, \mathrm{CD} d: f, b \mathrm{BC}$
$\mathrm{BR}: \mathrm{RS}=f, \mathrm{BSR}: \int, \mathrm{RBS}=f, d \mathrm{DE}: f, \mathrm{CDE}$
$\mathrm{QC}: \mathrm{RS}=f, \mathrm{ABC} . f, \mathrm{CD} d . f, d \mathrm{DE} \cdot f, \mathrm{CDE} . f, \mathrm{AB} t$. $\int, 6 \mathrm{BC}$.
$\mathrm{QC}: \mathrm{RS}=\frac{f, \mathrm{ABC}}{f, \mathrm{AB} b \cdot \int \mathrm{CB} b}: \frac{f, \mathrm{CDE}}{f, d \mathrm{DC} . f, d \mathrm{DE}}$
That is, the loads on the different joints are as the fines of the angles at thefe joints directly, and as the products of the fines of the angles which the rafters make with the plamb-lines inverfely.

Or, the loads are as the fines of the angles of the joints directly, and as the products of the cofines of the elevations of the rafters jointly.

Or, the loads at the joints are as the fines of the angles at the joints, and as the products of the fecants of elevation of the rafters jointly: for the fecants of angles are inverfely as the cofines.

Draw the horizontal line BT. It is evident, that if this be confidered as the radius of a circle, the lines $B Q, B C, B R, B S$ are the fecants of the angles which thefe lines make with the horizon. And they are alfo as the thrufts of thele rafters to which they are parallel. Therefore, the thrult which any rafter makes in its own direction is as the fecant of its elevation.

The horizontal thrult is the fame at all the angles. For $i_{1}=k x,=m \mu,=n y_{,}=p \pi$. Therefore both walls are equally preffed out by the weight of the roof. We can find its quantity by comparing it with the load on one of the joints :
Thus, $\mathrm{QC}: \mathrm{CB}=\int, \mathrm{ABC}: \int, \mathrm{AB} \cdot \mathrm{B}$
$\mathrm{BC}: \mathrm{BT}=$ Rad. $: f, \mathrm{BCT},=$ Rad. $: f, \mathrm{CB} b$ Therefore, $\mathrm{QC}: \mathrm{BT}=$ Rad. $x /, \mathrm{ABC}: \int, b \mathrm{BA} \times \int, b \mathrm{BC}$.

It deferves remark, that the lengths of the beams do not affect either the proportion of the load at the different joints, nor the polition of the rafters. This depends merely on the weights at the angles. If a change of length affects the weight, this indeed theweighte affects the form alio; and this is generally the cafe. For it feldom happens, indeed it never fhould happen, that the weight on rafters of longer bearing are not greater. The covering alone increafes nearly in the proportion of the length of the rafter.

If the proportion of the weights at $B, C$, and $D$ are
( $\Lambda$ ) This proportion might have been thown directly without any ufe of the inverted figure or confideration of contractile forces; but this fubltitution gives diftinct notions of the mode of acting even to perfons not much converfant in fuch difquifitions; and we wifh to make it familiar to the mind, becaufe it gives an eafy folution of the molt complicated problems, and furnifhes the practical carpenter, who has little fience, with. folutions of the molt difficult cafes by experiment. A feftoon, as we called it, may eafily be made; and we are certain, that the forms into which it will arrange itfelf are models of perfect frames.

## $\mathrm{ROO} \quad\left[\begin{array}{ll}47^{2}\end{array}\right] \quad \mathrm{ROO}$

Roof. are given, as alfo the pofition of any two of the lines, the pofition of all the reft is determined.
If the horizontal diftances between the angles are all equal, the forces on the different angles are proportional to the verticals drawn on the lines through thefe angles from the adjoining angle, and the thruft from the adjoining angles are as the lines which connect them.

If the rafters themfelves are of equal lengths, the weights at the different angles are as thefe verticals and as the fecants of the elevation of the rafters jointly.
prastial This propofition is very fruitful in its practical coninferences. fequences. It is eafy to perceive that it contains the whole theory of the contituction of arches; for each ftone of an arch may be confidered as one of the rafters of this piece of carpentry, fince all is kept up by its mere equilibrium. We may have an opportunity in tome future article of exhibiting fome very elegant and fimple folutions of the moft difficult cafes of this important problem; and we now proceed to make ufe of the knowledge we have acquired for the confruction of roofs.

We mentioned by the bye a problem which is not urfrequent in practice, to determine the beft form of a kirb-roof. Mr Couplet of the Royal Academy of Paris has given a folution of it in an elaborate memoir in 1726, occupying feveral lemmas and theorems.

Let $A E$ (fig. II.) be the width, and CF the height; it is required to conftruct a roof ABCDE whofe rafters $\mathrm{AB}, \mathrm{BC}, \mathrm{CD}, \mathrm{DE}$, are all equal, and which fhall be in equilibrio.

Draw CE, and bifect it perpendicularly in $\bar{H}$ by the line $D H G$, cutting the horizontal line $A E$ in $G$. About the centre $G$, with the diftance GE, defcribe the circle EDC. It muft pafs through C, becaufe CH is equal to HE and the angles at H are equal. Draw HK parallel to FE, cutting the circumference in K. Draw CK, cutting GH in D. Join CD, ED; thefe lines are the rafters of half of the roof required.

We prove this by fhowing, that the loads in the angles C and D are equal. For this is the proportion which refults from the equality of the rafters, and the extent of furface of the uniform roofing which they are fuppofed to fupport. Therefore produce ED till it meet the vertical FC in N ; and having made the fide CBA fimilar to CDE, complete the parallelogram BCDP, and draw DB, which will bifect $C P$ in $R$, as the horizontal line KH , bifects CF in Q . Draw KF, which is evidently parallel to DP. Make CS perpendicular to CF , and equal to FG ; and about S , with the radius SF , defcribe the circle FK.W. It mult pafs through K , becaufe SF is equal to CG , and $\mathrm{CQ}=$ QF. Draw WK, WS, and produce BC, cutting ND in 0 .

The angle WKF at the circumference is one-half of the angle WSF at the centre, and is therefore equal to WSC, or CGF. It is therefore double of the angle CEF or ECS. But ECS is equal to ECD and DCS, and ECD is one-half of NDC, and DCS is one-half of DCO, or CDP. Therefore the angle WKF is eqt ai to NDP, and WK is parallel to ND, and CF is to CW as CP to CN ; and CN is equal to CP . But it has been fhown above, that CN and CP are as the
loads upon D and C . Thefe are therefore equal, and the rame ABCDE is in equilibrio.

A comparition of this folution with that of Mr Coup. let will fhow its great advantage in refpect of fimplicity and perficuity. And the intelligent reader can eafily adapt the conftruation to any proportion between the rafters AB and BC , which other circumftance, fuch as garret-room, \&c. may render convenient. The conftruction muft be fuch that NC may be to CP as CD to $\frac{C D+D E}{2}$.

Whatever proportion of $A B$ to $B C$ is affumed, the point $\mathrm{D}^{\prime}$ will be found in the circumference of a femicircle $H^{\prime} D^{\prime} b^{\prime}$, whofe centre is in the line CE, and having $\mathrm{AB}: \mathrm{BC}=\mathrm{CH}^{\prime}: \mathrm{HE}^{\prime},=c b^{\prime}: b^{\prime} \mathrm{E}$.-The reft of the conftruction is fimpie.

In buildings which are roofed with flate, tyle, or fhingles, the circumfance which is mof likely to limit the conftruction is the flope of the upper rafters CB, CD . This mult be fufficient to prevent the penetration of rain, and the ftripping by the winds. The only circumftance left in our choice in this cafe is the proportion of the rafters $A B$ and $B C$. Nothing is eafier than making NC to CP in any defired proportion when the angle BCD is given.
We need not repeat that it is always a defirable thing to form a trufs for a roof in fuch a manner that it hhall be in equilibrio. When this is done, the whole force of the ftruts and braces which are added to it is employed in preferving this form, and no part is expended in unneceflary ftrains. For we muft now obferve, that the equilibrium of which we have been treating is always of that kind which we called the tottering, and the roof requires ftays̀, braces, or hanging timbers, to give it ft:fnefs, or keep it in fhape. We have alfo faid enough to enable any reader, acquainted with the moft elementary geometry and mechanics, to compute the tranfverfe frains and the thrufts to which the component parts of all roofs are expofed.

It only remains now to fhow the general maxims by General $\frac{32}{2}$ which all roofs muft be confructed, and the circum- naxims by ftances which determine their excellence. In doing this we fhall be exceedingly brief, and almof content ourfelves with exhibiting the pricipal forms, of which he conendlefs variety of rocfs are only flight modifications. We fhall not trouble the reader with any account of fuch roofs as receive part of their fupport from the interior walls, but confine ourfelves to the more dificult problem of throwing a roof over a wide building, without any intermediate fupport; becaufe when fuch roofs are confructed in the beft manner, that is, deriving the greateft poffible frength from the materials emplyyed, the beft conftruction of the others is necelfarily included. For all fuch roofs as reft on the middle walls are roofs of fmaller bearing. The only exception deferving notice is the roofs of churches which have ainles feparated from the nave by columns. The roof muft ife en thefe. But if it is of an arched form internall $\Gamma$, the horizontal thrufts muft be nicely balanced, that they may not pulf the columns afide.

The fimpleft notion of a roof-frame is, that it con- simpieft filts of two rafters $A B$ and $B C$ (fig. 12.), meeting in notion of the ridge $B$.

Even this fimple form is fufceptible of better and worfe

## $3 I$

The trufs for a root fhould always be in equilibrio.

## ROO <br> R OO

worfe. We have already feen, that when the weight of a fquare yard of covering, is given, a fieeper roof requires Aronger rafters, and that when the fcantling of the timbers is alfo given, the relative flength of a rafter is inverfely as its length. But there is now another circumfance to be taken into the account, viz. the fupport which one rafter leg gives to the other. The beit form of a rafter will therefore be that in which the relative ftrength of the legs, and their mutuai fupport, give the greatelt product. Mr Muller in his Military Engineer, gives a determination of the belt pitch of a roof, which has confiderable ingenuity, and has been copied into many books of military education both in Britain and on the continent. Defcribe on the width A C, fir. 13. the femicircle AFC, and bifect it by the radius FD. Produce the rafter $A B$ to the circumference in $E$, join $E C$, and draw the perpendicular $E G$. Now $A B: A D=A C: A E$, and $A E=\frac{A D \times A C}{A}$, and $A E$ is inverfely as $A B$, and may therefore reprerent its ftrength in relation to the weight actually lying on it. Alfo the fupport which $C B$ gives to $A B$ is as CE, becaufe CE is perpendicular to $A B$. Therefore the form which renders $\mathrm{A} E \times \mathrm{EC}$ a maximum feems to be that which has the greateft frength. But AC :
$A E=E C: E G$, and $E G=\frac{A E \cdot E C}{A C}$, and is there-
fore proportional to AE.EC. Now EG is a maximum when $B$ is in $F$, and a fquare pitch is in this refpect the ftrongeft. But it is very doubtful whether this conItruction is deduced from juft principles. There is another ftrain to which the leg A B is expofed, which is not taken into the account. This arifes from the curvature which it unavoidably acquires by the tranfverfe preffure of its load. In this ftate it is preffed in its own direction by the abutment and load of the other leg: The relation between this ftrain and the refiftance of the piece is not very diftinctly krown. Euler has given a differtation on this fubject (which is of great importance, becaufe it affects pofts and pillars of all kinds ; and it is very well known that a poit of ten feet long and fix inches fquare will bear with great fafety a weight which would crufh a poft of the fame fcantling and 20 feet long in a minute) ; but his determination has not been acquiefced in by the firf mathematicians. Now it is in relation to thefe two frains that the ftrength of the rafter fhould be adjufted. The firmnefs of the fupport given by the other leg is of no confequence, if its own frength is inferior to the ftrain. The force which tends to crufh the leg A B, by comprefling it in its curved Itate, is to its weight as $A B$ to $B D$, as is cafily feen by the compofition of forces; and its incurvacion by this force has a relation to it, which is of intricate determination. In is contained in the properties demonftrated by Bernoulli of the elaftic curve. This determination alfo includes the relation between the curvature and the leneth of the piece. But the whole of this feemingly finiple problem is of much more difficult inveftigation than Mr Muller was aware of; and his rules for the pitch of a roof, and for the fally of a dack gate, which depends on the f.me principles, are of no value. He is, however, the firlt author who attempted to folve either of thefe problems on mechanical principles fulceptible of precife reafoning. Belidor's folutions, in his Arcbiticlure Ifycirauique, are below notice.

Vol. XVI.

Reafons of economy have made carpenters prefer Ecof. a low pitch; and although this does diminifh the fupport given by the oppotite leg fatter than it increafes the relative ftrength of the ocher, this is not of material confequence, becaufe the ftrength remaining in the oppofite leg is fill very great; for the fupporting leg is acting againft compreffion, in which cafe it is vaftly ftronger than the fupported leg asting againft a tranfverfe ftrain.

But a roof of this fimplicity will not do in moft cafes. Thrutt on There is no notice taken in its conftruction of the thrult the walls, which it exerts on the walls. Now this is the ftrain which is the molt hazardous of all. Our ordinary walls, infead of being able to refift any confiderable ftrain preffing them outwards, require, in general, fome ties to keep them on foot. When a perion thinks of the thinnefs and height of the walls of even a frong boufe, he will be furprifed that they are not blown down by any ftrong puff of wind. A wall of three feet thick, and 60 feet high, could not withiltand a wind blowing at the rate of 30 feet per fecond (in which cafe it acts with a force confiderably exceeding two pounds on every fquare foot), if it were not fiffened by crofs-walls, joilts, and roof, which all help to tie the different parts of the building together.

A carpenter is therefore exceedingly careful to avoid How every horizontal thruft, or to oppofe them by other aroided. forces. And this introduces another effential part into the conftruction of a roof, namely the tie or beam AC , (fig. I4.), laid from wall to wall, binding the feet $A$ and $C$ of the rafters together. This is the fole office of the beam ; and it thould be confidered in no other light than as a ftring to prevent the roof from pufhing out the walls. It is indeed ufed for carrying the cciling of the apartments under it; and it is even made to fupport a flooring. But, confidered as making part of a roof, it is merely a ftring; and the ftrain which it withotands tends to tear its parts afunder. It therefore acts with its whole abfolute force, and a very fmall fcantling would fuffice if we could contrive to faften it firmly enough to the foot of the rafter. If it is of oak, we may fafely fubject it to a ftrain of three tons for every fquare inch of its fection. And fir will fafely bear a frain of two tons for every fyuare inch. But we are obliged to give the tie-beam much larger dimenfions, that we may be able to connect it with the foot of the rafter by a mortife and tenon. Iron fraps are alfo frequently added. By attending to this office of the tie-beam, the judicious carpenter is directed to the proper form of the mortife and tenon and of the ftrap. We fhall confider both of thefe in a proper place, after we become acquainted with the various ftrains at the joints of a roof.

Thefe large dimenfions of the tie-beam allow us to load it with the ceilings without any rifk, and even to lay floors on it with moderation and caution. But when it has a great bearing or fpan, it is very apt to bend downwards in the middle, or, as the workmen term it, to fway or fwag ; and it requires a fupport: The queftion is, where to find this fupport? What fixed points can we find with which to connect the middle of the tie-beam? Some ingenions carpenter thought of fufpending it from the ridge by a fiece of timber $B D$ (Gig. 15.), called by fome carpenters the king-fof. It mult be acknowledged that there was great ingenuity in this the ught. It was alfo perfectly juft. For the weight of the rafters $\mathrm{BA}, \mathrm{EC}$ tends to make them fly

## ROO

R.m.f.
$\qquad$ out at the foot. This is prevented by the tie-beam, and this excites a preffine, by which they tend to comprefs each other. Suppofe them without weight, and that a greit weight is laid on the ridge $B$. This can be fup. ported only by the butting of the rafters in their own dinections $A B$ and $C B$, and the weight tends to comprefs them in the oppofite directions, and, through their intervention, to ftretch the tie-beam. If neither the ratters can be compreffed, nor the tie-beam fretched it is plain that the triangle $A B C$ muft retain its fhape, and that $B$ becomes a fixed point, very proper to be ufed as a point of fufpenfion. To this point, therefure, is the tie-beam fufpended by means of the kingFoft. A common fecctator, unacquainted with carpentry, views it very differently, and the tie-beam appears to kim to carry the roof. The king-polt appears a pillir refting on the beam, whereas it is really a ftring; and an iron-rod of one-fixteenth of the fize would have done juft as well. The king-polt is fometimes mortifed into the tie-bearn, and pins put through the joint, which gives it more the look of a pillar with the roof refting on it. This does well enough in many cafes. But the belt method is to connect them by an iron Itrap, like a ftirrup, which is bolted at its upper ends into the ling-polt, and paffes round the tie-beam. In this way a fpace is commonly left between the end of the kingpoit and the upper fide of the tie beam. Here the beam plainly appears hanging in the Airrup; and this method allows us to reftore the beam to an exact level, when it has funk by the unavoidable compreffion or other yielding of the parts. The holes in the fides of the iron Arap are made oblong inftead of round; and the bolt which is drawn through all is made to raper on the under fide; fo that driving it farther draws the tie-beam upwards. A notion of this may be formed by looking at fig. 16. which is a fection of the polt and beam.

It requires confiderable attention, however, to make this fufpenfion of the tie-beam fufficiently firm. The top of the king polt is cut into the form of the archttone of a bridge, and the heads of the rafters are firmly mortifed into this projecting part. Thefe projections are called joggles, and are formed by working the king poft out of a much larger piece of timber, and cutting off the unneceffary wood from the two fides; and, left all this thould not be fufficient, it is ufual in great works to add an iron-plate or Itrap of three branches, which are bolted into the heads of the kingpoit and raftere.

The rafters, though not fo long as the beam, feem to ftand as mush in Deed of fomething to prevent their bending, for they carry the weight of the covering.This camot be done by fufpenfion, for we have no fixed points above them : But we have now got a very frm point of fupport at the foot of the king-polt.Braces or firuts, ED, FD, (fig. 17.), are put under the middle of the rafters, where they are flightly mortifed, and their lower ends are firmly mortifed into joggles formed on the foot of the king-polt. As thefe braces are very powerful in their refiftance to compreffion, and the king-poft equally fo to refift extenfion, the points E and F may be confidered as fixed; and the rafters being this reduced to half their former length, 37. have now four times their former relative ftrength.

Conturct Roofs do notalways confilt of two floping fides meettoped int ing in aridge. They have fometimes a flat on the top, suofe.
$474]$
R O O
with two floping fides. They are fometimes formed with a double flope, and are called kirb or manfarde roofs. They fometimes have a valley in the middle; and are then called M roofs. Such roofs require another piece which may be called the trufs beam becaufe all fuch frames are called truffes, probably from the French word trouffe, becaufè fuch roofs are like portions of plain roofs trouffés or fhortened.

A flat-topped roof is thas conftructed. Suppofe the three rafters $A B, B C, C D$ (fig. I8.) of which $A B$ and $C D$ are equal, and $B C$ horizontal. It is plain that they will be in equilibrio, and the roof have no tendency to go to either fide. The tie-beam AD withltands the horizontal thruts of the whole frame, and the two rafters $A B$ and $C D$ are each preffed in their own directions in confequence of their butting with the middle rafter or trufs beam BC. It lies between them like the keytone of an arch. They lean towards it, and it relts on them. The preffure which the trufs-beam and its load excites on the two rafters is the very fame as if the rafters were produced till they meet in G, and a weight were laid on thefe equal to that of BC and its load. If therefore the trufs-beam is of a fcantling fufficient for carrying its own load, and withftanding the compreffion from the two rafters, the roof will be equally frong (while it keeps its fhape) as the plain roof AGD furnified with king-poft and braces. We may conceive this another way. Suppofe a plain roof AGD, without braces to fupport the middle $B$ and $C$ of the rafters. Then let a beam BC be put in between the rafters, butting upon little notches cut in the rafters. It is evident that this muft prevent the rafters from bending downwards, becaufe the points B and C cannot defeend, moving round the centres $A$ and $D$, without fhortening the diftance BC between them. This cannot be without comprefling the beam BC. It is plain that BC may be wedged in, or wedges driven in between its ends $B$ and $C$ and the notches in which it is lodged. Thefe wedges may be driven in till they even force out the rafters GA and GD. Whenever this happens, all the mutual preffure of the heads of thefe rafters at $G$ is taken away, and the parts GB and GC may be cut away, and the roof ABCD will be as ftrong as the roof AGD furnifhed with the king-polt and braces, becaufe the trufs-beam gives a fupport of the fame kind at B and C as the brace would have done.

But this roof $A B C D$ would have no firmnefs of fhafe. Any addition of weight on one fide would deftroy the equilibrium at the angle, would deprefs that angle, and caufe the oppofite one to rife. To give it ftiffnefs, it mult either have ties or braces, or fomething partaking of the nature of both. The ufual method of framing is to make the heads of the rafters butt on the joggles of two fide-pofts BE and CF, while the trufs-beam, or ftrut as it is generally termed by the carpenters, is mortifed fquare into the infide of the heads. The lower ends $E$ and $F$ of the fide-polts are connected with the tie-beam either by mortifes or Araps.

This confruction gives firmnefs to the frame; for the angle $B$ cannot defcend in confequence of any inequality of preffure, without forcing the other angle $C$ to rife, This it cannot do, being held down by the poft CF. And the fame conftruction fortifies the tiebeam, which is now fufpended at the points $E$ and $F$
from

## Roof.

 $\underbrace{\text { Roof. }}$ [^33]

## R O O

Roof.
from the points $B$ and $C$, whofe firmnefs we have juft now hown.

Buc although this roof may be made abundantly ftrong, it is not quite fo ftrong as the plain roof AGD of the fame fcantling. The compreflion which BC muft futtain in order to give the fame fupport to the rafters at $B$ and $C$ that was given by braces properly placed, is confiderably greater than the comprellion of the brace:. And this ftrain is an addition to the tranfverfe frain which BC gets from its own load. Alfo this form necelfarily expoles the tie beam to crofs ftrains. If BE is mortifed into the tie-beam, then the ftrain which tends to deprefs the angle ABC preffes on the tie-beam at $E$ tranfverfely, while a contrary frain adts on $F$, pulling it upwards. Thefe ftrains however are fmall; and this conftruction is frequently ufed, beiny fufceptible of fufficient Arength, without much increafe of the dimenfions of the timbers; and it has the great advantage of $g$ ving free room in the garrets. Were it not for this, there is a much more perfiet form reprefented in fig. 19. Here the two pofts $\mathrm{BE}, \mathrm{CF}$ are united below. All tranfverfe action on the tie-beam is now entirely removed. We are almoft difpofed to fay that this is the ftrongelt roof of the fame width and flope: for if the iron frap which connets the pieces $B E, C F$ with the tie-beam have a large bolt $G$ throngh it, confining it to one point of the beam, there are five points $A, B, C, D, G$, which cannot change their places, and there is no tranfverfe itrain in any of the connections.

When the dimenfirns of the buildiag are very great, fo that the picces $A B, B C, C D$, would be thought too weak for wirhtanding the crofs trains, braces may be added as is exprefled in fig. i8. by the dotted lines. The reader will obferve that it is not meant to leave the top flat externally: it mult be raifed a little in the middle to thoot off the rain. But this mutt not be done by incurvating the beam BC. This would foon be crufhed, and fpring upwards. The flopes mint be given by pieces of timber added above the ftrutting beam.

And thus we have completed a frame of a roof. It conlilts of thefe principal members: The rafters, which are immediately loaded with the covering ; the tie-beam which withtands the horizontal thruft by which the roof tends to fly out below and pulh out the walls; the king.polts, which hang from fixed points and ferve to uphold the tie-beam, and alfo to afford other fixed points on which we may relt the braces which fupport the middle of the rafters; and lafly the trufs or ftrut-ting-heam, which ferves to give mutual abutment to the different parts which are at a diftance from each other. The rafters, braces, and truffes are expofed to compreffion, and muft therefore have not only cohefion but fliffnefs. For if they bend, the prodigious comprefions to which they are fubjected would quickly crufh them in this bended ftate. The tie-beams and king-polts, if performing no other cffice but fupporting the roof, do not require ftiffnefs, and their places might be fuppiied by ropes, or by rods of iron of one-tenth part of the rection that even the fmalleft oak ftretcher requires. Thefe members require no greater dimenfions than what is neceffary fir giving fufficient joints, and any more is a needlefs expence and load. All roofs, however complicated, confift of thefe effential parts, and if pieces of timber are to be feen
nounced ufelefs, and they are frequently hurtful, bronounced ufelefs, and they are frequently hurtful, by producing crofs ftrains in fome other piece. In a roof properly conftruced there fhould be no fuch Atrains. Ail the timbers, except thofe which immediately carry the covering, fhould be either pufhed or drawn in the dircction of their length. And this is the rule by which a roof thould always be examined.

Thefe effential parts are fufceptible of numberlefs com- Are fufcepbinations and varieties. But it is a prudent maxim to tible oi make the confruction as fimple, and confifting of as faw numberlefy parts, as polfible. We are lefs expofed to the imperfec. tions of wormanhip fuch tions and offer 1 . Another varieties. effential harm a ifes from many pieces, by the compreffron and the flrinking of the timber in the crofs direction of the fibres. The effect of this is equivalent to the fhortening of the piece which butts on the joint. This alters the proportions of the fides of the triangle on which the fhape of the whole depends. Now in a roof fuch as fig. 18. there is twice as much of this as in the plain pent roof, becaufe there are two polts. And when the direction of the butting pieces is very oblique to the action of the load, a fmall fhrinking permits a great change of thape. Thus in a roof of what is called pediment pitch, where the rafters make an angle of 30 degrees with the horizon, half an inch comprefion of the king-poft will produce a fagging of an inch, and occafion a great ftrain on the tie-beam if the polts are mortifed into it. In fig. 2. of the roofs in the article Architecrure, half an inch fhrinking of cach of the two poits will allow the middle to fagg above five inches. Fig. I. of the fame plate is faulty in this refpect, by cutting the flrutting-beam in the middle. The ftrutting-beam is thus fhortened by three fhrinkings, while there is but one to morten the rafters. The confequence is, that the trufs which is included within the rafters will figg away from them, and then they muft bend in the middle till they again reft on this included trufs. This roof is, however conftrueted on the whole on good principles, and we adduce it only to fluow the advantages of fimplicity. This cutting of the truffung-beamis unavoidable, if we nould preferve the king-poft. But we are in doubt whether the fervice performed by it in this cafe will balance the inconvenience. It is employed only to fupport the middle of the upper half of each rafter, which it does but imperfectly, becaufe the braces and frut muft be cut half through at their croffing: if thefe joints are made tight, as a workman would wifh to do, the fettling of the root will caufe them to work on each other croflwife with infuperable force, and will undouttedly frain them caceedingly.

This method of including a truis within the rafters of a pent roof is a very confiderable addition to the att of carpentry. But to infure its full effect, it fhould always be executed in the manner reprefented in fig. I. Plate XLVIII. with butting rafters under the principal ones, butting on joggles in the heads of the pofts. Without this the ftut-beam is hardly of any fervice. We would therefore recommend fig. 20. as a proper conftruction of a truffed roof, and the king-paft which is placed in it may be employed to fupport the upper part of the rafters, and alfo for preventing the ftrutbeam from bending in either direction in confequence of its great compreffion. It whallo give a fuppenfion for the great burdens which are fometimes necelfary in
a theatre.

## $\mathrm{R} O \mathrm{O}$

a ticatre. The machinery has no other firm points to which it can be attached; and the portion of the fingle rafters which carry this king-poft are but fhort, and therefore may be confiderably loaded with fafety.

We obferve in the drawings which we fometimes have of Chinefe buildings, that the trufling of roofs is underflood by them. Indeed they mult be very experienced carpenters. We fee wooden buildings run up to a grear height, which can be fupported only by fuch trufing. One of thefe is iketched in fig. 21. There a:e fome very excellent fpecimens to be feen in the buildings at Deptford, belonging to the victuallingoffice, afually called the Red Houfe, which were erected about the year 1788, and we believe are the performance of Mr James Arrow of the Board of Works, one of the molt intelligent artilts in Britain.
Thus have we given an elementary, but a rational or fcientific, account of this important part of the art of carpentry. It is fuch, that any practitioner, with the trouble of a little reflection, may always proceed with confidence, and without refting any part of his practicc on the vague notions which habit may have given him of the Itrength and fupports of timbers, and of their manner of acting. That thefe frequently millead, is proved by the mutual criticifms which are frequently publifhed by the rivals in the profeffion. They have frequently fagacity enough (for it can feldom be called fcience) to point out glaring blunders; and any perfon who will look at fome of the performances of Mr Price, Mr Wyatt, Mr Arrow, and others of acknowledged reputation, will readily fee them diftinguihable from the works of inferior artifts by fimplicity alone. A man without principles is apt to confider an intricate confruction as ingenious and effectual; and fuch roofs fometimes fail merely by being ingenioully loaded with timber, but more frequently fill by the wrong action of fome ufelefs piece, which produces flrains that are tranfverfe to other pieces, or which, by rendering fome points too firm, caufe them to be deferted by the relt in the general fubfiding of the whole. Inftances of this kind are pointed out by Price in his Britifh Carpenter. Nothing fhows the flill of a carpenter more than the difinctnefs. with which he can forefee the changes of fhape which muft take place in a fhort time in every roof. A knowledge of this will often correct a confruction which the mere mathematician thinks unexceptionable, becaufe he does not reckon on the actual compreffion which muft obtain, and imagines that his triangles, which fuftain no crofs frains, invariably retain their flape till the pieces break. The fagacity of the experienced carpenter is not, however, enough without fcience for perfecting the art. But when he knows how much a particular piece will yield to compreffion in one cafe, fcience will tell him, and nothing but fcience can do it, what will be the compreffion of the fame piece in another very different cafe. Thus he learns how far it will now yield, and then he proportions the parts fo to each other, that when all have yielded according to their ftrains, the whole is of the flape he wifhed to produce, and every joint is in a ftate of firmnefs. It is. here that we oblerve the greatef number of improprieties. The iron ftraps are frequently in pofitions not fuited to the actual Atrain on them, and they are in a tate of viclent twif, which both tends firongly to
break the Atrap, and to cripple the pieces which they furround.

In like manner, we frequently fee joints or mortifes in a ftate of violent frain or the tenons, or on the heels and fhoulders. The joints were perhaps properly Thaped to the primitive form of the truis; but by its fettling, the bearing or the pufh is changed : the brace, for example, in a very low pitched roof, comes to prefs with the upper part of the fhoulder, and, acting as a powerful lever on the tenon, breaks it. In like manner, the lower end of the brace, which at firt butted firmly and fquarely on the joggle of the king-polt, now preffes with one corner with prodigious force, and feldom fails to fplinter off on that fide. We cannot help recommending a maxim of Mr Perronet the celebrated hydraulic architect of France, as a golden rule, viz. to make all the fhoulders of butting pieces in the form of an arch of a circle, having the oppofite end of the piece for its centre. Thus, in fig. 18 . if the joggle-joint $B$ be of this form, having A for its centre, the fagging of the roof will make no partial bearing at the joint; for in the fagging of the roof, the piece $A B$ turns or bends round the centre $A$, and the counter-preflure of the joggle is ftill directed to A, as it ought to be. We have jult now faid bends round A. This is too frequently the cafe, and it is always very difficult to give the tenon and mortife in this place a true and invariable bearing. The rafter pufles in the direction BA, and the beam reiifts in the direction AD. The abutment fhould be perpendicular to neither of thefe but in an intermediate direction, and it ought alfo to be of a curved fhape. But the carpenters perhaps think that this would weaken the beam too much to give it this fhape in the fhoulder ; they do not even aim at it in the heel of the tenon. The fhoulder is commonly even with the furface of the beam. When the bearing therefore is on this fhoulder, it caufes the foot of the rafter to flide along the beam till the heel of the tenon bears againft the outer end of the mortife (See Price's Britijh Carpenter, Plate C. fig. I K). This abutment is perpendicular to the beam in Price's book, but it is more generally pointed a little outwards below, to make it more fecure againft farting. The confequence of this conftruction is, that when the roof fettles, the fhoulder comes to bear at the inner end of the mortife, and it rifes at the outer, and the tenon taking hold of the wood beyond it, either tears it out or is itfelf broken. This joint therefore is feldom trufted to theftrength of the mortife and tenon, and is ufually fectred by an iron ftrap, which lies obliquely to the beam, to which it is bolted by a large bolt quite through, and then embraces the outlide of the rafter foot. Very frequently this ftrap is not made fufficiently oblique, and we have feen forme made almoit fquare with the beam. When this is the cafe, it not only keeps the foot of the rafter from flying out, but it binds it down. In this cafe, the rafter acts as a powerful lever, whofe fulcrum is the inner angle of the fhoulder, and then the ftrap never fails to cripple the rafter at the point. All this can be prevented only by making the ftrap:very long and very oblique, and by making its outer end (the ftirrup part) fquare with its length, and making a notch in the rafter foot to receive it. It cannot now cripple the rafter, for it will rife along with it, turning round

## ROO

Roof.

the bolt at its inner end. We have been thus particular on this joint, becaufe it is here that the ultimate ftrain of the whole roof is exerted, and its fituation will not allow the excavation neceflary for making it a good mortife and tenon.

Similar attention mult be paid to fome other fraps, fuch as thofe which embrace the niiddle of the rafter, and connect it with the polt or trufs below it. We mult attend to the change of Chape produced by the fagging of the roof, and place the ftrap in fuch a manner as to yield to it by turning round its bolt, but fo as $n \cdot t$ to become loofe, and far lefs to make a fulcrum for any thing acting as a lever. The ftrains arifing from fuch actions, in framings of carpentry which change their hape by fagging, are enormous, and nothing can refift them.

## 42 of

 calculatingftrains or thrufts,

We flall clofe this part of the fubject with a fimple method, by which any carpenter, withour mathematical fcience, may calcalate with fufficient precifion the Arains or thrufts which are produced on any point of his work, whatever be the obliquity of the pieces.

Let it be required to find the horizontal thrult acting on the tie-beam AD of fig. 18. This will be the fame as if the weight of the whole roof were laid at $G$ on the two raf:ers GA and GD. Draw the vertical line GH. Then, having calculated the weight of the whole roof that is fupported by this fingle frame $A B C D$, including the weight of the pieces $A B, B C$, $\mathrm{CD}, \mathrm{BE}, \mathrm{CF}$ themfelves, take the number of pounds, tons, \&c. which expreffes it from any fcale of equal parts, and fet it from $G$ to $H$. Draw HK, HL pa. rallel to GD, GA, and draw the line KL, which will be horizontal when the two fides of the roof have the lame flope. Then ML meafured on the fame fale will give the horizontal thrult, by which the itrength of the tie-beam is to be regulated. GL will give the thrult which tends to crulh the rafters, and LM will alfo give the force which tends to crufh the frut-beam $B C$.

In like manner, to find the Arain on the king-poft BD of fig. 17. confider that each brace is prefled by half the weight of the roofing laid on BA or BC, and this preflure, or at leaft its hurtful effect, is diminifhed in the proportion of BA to DA, becaufe the action of gravity is vertical, and the effect which we want to counteract by the braces is in a direction Ee perpendicular to BA or BC. But as this is to be relifted by the brace $f \mathrm{E}$ acting in the direction $f \mathrm{E}$, we mult draw $f e$ perpendicular to $E$, and fuppofe the ftrain augmented in the proportion of $\mathrm{E} e$ to $\mathrm{E} f$.

Having thus obtained in tons, pounds, or other meafures, the trains which mult be balanced at $f$ by the coherion of the king-poft, take this meafure from the fcale of equal parts, and fet it off in the directions of the braces to G and H , and complete the parallelogram $\mathrm{G} f \mathrm{HK}$; and $f \mathrm{~K}$ meafured on the fame fcale will be the ftain on the king-poff.
the artit may then examine the Atrength of his the trufs. will bear at an average 7000 pounds comprefion will bear at an average 7000 pounds compreffion or
fretchitg it, and may be fafely loaded with 3500 for any length of time; and that a fquare inch of fir will in like manner fecurely bear 25 co . And, becaufe Atraps are ufed to refift fome of thefe ftrains, a fquare inch of well wrought tough iron may be fafely ftraned
by 50,000 pounds. But the artift will always recol. lect, that we cannot have the fame confidence in iron as in timber. The faults of this laft are much more eafily perceived; and when timber is too weak, it gives us warning of its failure, by yielding fenfibly before it breaks. This is not the cafe with iron; and much of its fervice depends on the honelty of the blackfmith.

In this way may any defign of a roof be examined. sketch of We fhall here give the reader a fletch of two or three fome trufitruffed roots, which have been executed in the chief ed rooff, varieties of circumftances which occur in common practice.

Fig. 22. is the roof of Sc Paul's Church, Covent Gar. den, London, the work of Inigo Jones. Its contruction is fingular. The roof extends to a confiderable diftance beyond the building, and the ends of the tie-beams fupport the Tufcan corniche, appearing like the mutules of the Doric order. Such a roof could not reft on the tie-beam. Inigo Jones has therefore fupported it by a trufs below it; and the height has allowed him to make this extremely ftrong with very little timber. It is accounted the highelt roof of its width in London. But this was not difficult, by reafon of the great height which its extreme width allowed him to employ without hurting the beauty of it by too high a pitch. The fupports, however, are difpofed with judgment.

Fig. 23. is a kirb or manfaid roof by Price, and fuppofed to be of large dimenfions, having braces to carry the middle of the rafters.

It will ferve exceedingly well for a church having pillars. The middle part of the tie-beam being taken away, the ftrains are very well balanced, fo that there is no rilk of its pulhing afide the pillars on which it refts.

Fig. 24. is the celebrated roof of the theatre of the univerfity of Oxford, by Sir Chriftopher Wren. The fpan between the walls is 75 feet. This is accounted a very ingenious, and is a fingular performance. The middle part of it is almof unchangeable in its form ; but from this circumflance it does not diftribute the horizontal thrult with the fame regularity as the ufual conftruction. The horizontal thruft on the tie-beam is about twice the weight of the roof, and is withitood by an iron frap below the beam, which Aretches the whole width of the building in the form of a rope, making part of the ornament of the ceiling.

In all the roofs which we have confidered hitherto Cafes in the thrult is difcharged entirely from the walls by the which the tie-beam. But this cannot always be done. We fre thruft catiquently want great elevation within, and arched ceil- not be difings. In fuch cafes, it is a much more difficult matter from the to keep the walls free of all prefure nutwards, and walls by there are few buildings where it is comp'etely done, the tie. Yet this is the greateft fault of a rocf. We flall juf beam. point cut the methods which may be moll fuccefffully adopted.

We have fad that a tie-beam juft performs the of. fice of a ftring. We have faid the fame of the kingpoft. Now fuppofe two rafters AB, BC (fig. 25.) moveable about the joint $B$, and refting on the top of the walls. If the line BD be fufpended from $B$, and the two bines DA, DC be faftened to the fetr of the rafters, and if thefe lines be incapable of extenficn, is is plain that all thruft is removed fom the walls as ct
fectuaily

## R O O

## ROO

Ronf. fectually as by a common tie-beam. And by fhortening BD to $\mathrm{B} d$, we gain a greater infide height, and mone room for an arched celling. Now if we fubftitute a king-polt BD (fig. 26.) and two ftretchers or hammer-beams DA, DC for the other ftrings, and connest them firmly by means of iron ftraps, we obtain our purpofe.

Let us compare this roof with a tie-beam roof in point of Itrain and frength. Recur to fig. 25. and complete the parallelogram $A B C F$, and draw the diagonals $A C, B F$ croffing in $E$. Draw $B G$ perpendicular to CD. We have feen that the weight of the roof (which we may call $W$ ) is to the horizontal thruft at C as BF to EC; and if we exprefs this thruft by $T$, we have $T=\frac{W \times E C}{B F}$. We may at prefent confider $B C$ as a lever moveable round the joint $B$, and pulled at C in the direction EC by the horizontal thruft, and held back by the ftring pulling in the direction CD. Suppofe that the forces in the directions $E C$ and $C D$ are in equilibrio, and let us find the force S by which the ftring CD is ftrained. Thefe forces muft (bs the property of the lever) be inverfely as the perpendiculars drawn from the centre of motion on the lines of their direction. Therefore $\mathrm{BG} ; \mathrm{BE}=\mathrm{T}: \mathrm{S}$, and $S=T \times \frac{B E}{B G},=W \times \frac{B E \cdot E C}{B F \cdot B G}$.

Therefore the ftrain upon each of the ties DA and $D C$ is always greater than the horizontal thrult or the ftrain on a fimple tie-beam. This would be no great inconvenience, becaufe the fmalleft dimenfions that we could give to thefe ties, fo as to procure fufficient fixtures to the adjoining pieces, are alvays fufficient to withfland this ftrain. But although the fame may be faid of the iron fraps which make the ultimate connections, there is always fome hazard of imperfect work, cracks or flaws, which are not perceived. We can judge with tolerable certainty of the foundnefs of a piece of timber, but cannot fay fo much of a piece of iron. Moreover, there is a prodigious ftrain excited on the king-polt, when BG is very fhort in comparifon of BE, namely, the force compounded of the two ftrains $S$ and $S$ on the ties DA and DC.

But there is another defect from which the ftraight tie-beam is entirely free. All roofs fettle a little.When this roof fettles, and the points $B$ and $D$ defcend, the legs BA, BC mult fpread further out, and thus a preffure outwards is excited on the walls. It is feldom therefore that this kind of roof can be executed in this fimple form, and other contrivances are neceffary for counteracting this fupervening action on the walls. Fig. 27. is one of the belt which we have feen, and is executed with great fuccefs in the circus or equeltrian theatre in Edinburgh, the width being 60 feet. The pieces EF and ED help to take off fome of the weight, and by their greater uprightnefs they exert a fmaller thrult on the walls. The beam $\mathrm{D} d$ is alfo a fort of trufs beam, having fomething of the fame effect. Mr - Price has given another very judicious one of this kind, Britifh Carpenter, Plate IK, fig. C, from which the tie-beam may be taken away, and there will remain very little thrult on the walls. Thofe which he has given in the following Plate $K$ are, in our opinion, very faulty. The whole ftrain in thefe laft roofs tends to break the rafters and ties tranfverfely, and the fixtures of
the ties are alfo not well calculated to refitt the frain Roof. to which the pieces are expofed. We hardly think that thefe roofs could be executed.

It is fcarcely neceffary to remind the reader, that in Gencral oball that we have delivered on this fubject, we have at- fervations. tended only to the conltrustion of the principal rafters or truffes. In fmall buildings all the rafters are of one kind; but in great buildings the whole weight of the covering is made to relt on a few principal rafters, which are connected by beams placed horizontally, and either mortifed into them or fcarfed on them. Thefe are called puriins. Small rafters are laid from purlin to purlin; and on thefe the laths for tiles, or the fkirting. boards for flates, are nailed. Thus the covering does not immediately reft on the principal frames. This allows fome more liberty in their contruction, becaufe the garrets can be fo divided that the principal rafters fhall be in the partitions and the reft left unincumbered. This conltruction is fo far analogous to that of floors which are conttructed with girders, binding, and bridgeing joifts.

It may appear prefuming in us to queftion the propriety of this practice. There are fituations in which it is unavoidable, as in the ronfs of churches, which can be allowed to reft on fome pillars. In other fituations, where partition-walls intervene at a diftance not too great for a fout purlin, no principal rafters are neceilary, and the whole may be roofed with fhort rafters of very flender fcantling. But in a great uniform roof, which has no intermediate fupports, it requires at leaft fome reafons for preferring this meth; $d$ of carcafe-roofing to the fimpler method of making all the rafters alike. The method of carcafe-roofing requires the felection of the greatelt logs of timber, which are feldom of equal ftrength and foundnefs with thinner rafters. In thefe the outfide planks can be taken off, and the belt part alone worked up. It alfo expofes to all the defects of workmanfhip in the mortifing of purlins, and the weakening of the rafters by this very mortifing ; and it brings an additional load of purlins and thort rafters. A roof thas conftructed may furely be compared with a floor of fimilar conftruction. Here there is not a fladow of doubt, that if the girders were fawed into planks, and thefe planks laid as joifts fufficiently near for carrying the fooring boards, they will have the fame ftrength as before, except fo much as is taken out of the timber by the faw. This will not amount to one-tenth part of the timber in the binding, bridging, and ceiling joitts which are an additional load; and all the mortifes and other joinings are fo many diminutions of the ftrength of the girders; and as no part of a carpenter's work requires more fkill and accuracy of execution, we are expofed to many chances of imperfection. But, not to reft on thefe confidera. tions, however reafonable they may appear, we fhall relate an experiment made by one on whofe judgment and exactnefs we can depend.

Two models of floors were made 18 inches fquare of Confirmed the fineft uniform deal, which had been long feafoned. by experiThe one confilted of timple joilts, and the other was ment. framed with girders, binding, bridging, and ceiling joits. The plain joifts of the one contained the fame quantity of timber with the girders alone of the other, and both were made by a molt accurate workman. They werc placed in wooden trunks 18 inches fquare within,

## $\mathrm{ROO} \quad\left[\begin{array}{ll}479\end{array}\right] \quad \mathrm{ROO}$

Roof.
within, and relted on a frong projection on the infide. Small fhot was gradually poured in upon the floors, fo as to fpread uniformly over them. The plain joilted floor broke down with 487 pounds, and the carcafe floor with 327. The firt broke without giving any warning; the other gave a violent crack when 294 pounds had been poured in.

A trial had been made before, and the loads were 34 I and 482. But the models having been made by a lefs accurate hand, it was not thought a fair fpecimen of the ftrength which might be given to a carcafe floor.

The only argument of weight which we can recollect in favour of the compound conftruction of roofs is, that the plain method would prodigioufly increafe the quantity of work; would admit nothing but long timber, which would greatly add to the expence; and would make the garrets a mere thicket of planks. We admit this in its full force; but we continue to be of the opinion that plain roofs are greatly fuperior in point of Arength, and therefore fhould be adopted in cafes where the great difficulty is to infure this neceffary circumfance.

It would appear very negleaful to omit an account of the roofs put $2 a$ round buildings, fuch as domes, cupolas and the like. They appear to be the molt difficult taiks in the carpenter art. But the difficulty lies entirely in the mode of framing, or what the French call the trait de cbarpenteric. The view which we are taking of the fubject, as a part of mechanical fcience, has little connection with this. It is plain, that whatever form of a trufs is excellent in a fquare building mult be equally fo as one of the frames of a roundone; and the only difficulty is how to manage their mutual interfections at the top. Some of them mult be difcontinued before they reach that length, and common fenfe will teach us to cut them fhort alternately, and always leave as many, that they may ftand equally thick as at their firlt fpringing from the bafe of the dome. Thus the length of the purlins which reach from trufs to trufs will never be too great.

The truth is, that a round building which gathers in at top, like a glafs-houfe, a potter's kiln, or a fpire fteeple, intead of being the molt difficult to erect with flability, is of all others the eafieft. Nothing can fhow this more forcibly than daily practice, where they are run up without centres and without fcaffoldings; and it requires grofs blunders indced in the choice of their outline to put them in much danger of falling from a want of equilibrium. In like manner, a dome of carpentry can hardly fall, give it what thape or what contruction you will. It cannot fall unlefs fome part of it flies out at the bottom : an iron hoop round it, or fraps at the joinings of the trufles and purlins, which make an equivalent to a hoop, will effectually fecure it. And as beauty requires that a dome thall fpring almoft perpendicularly from the wall, it is evident that there is hardly any thruft to force our the walls. The cnly part where this is to be guarded againtt is, where the tangent is inclined about 40 or 50 degrees to the horizon. Here it will be proper to make a cuurfe of firm horizontal joinings.

We doubt not but that domes of carpentry will now be raifed of great extent. The Halle du Bled at $\mathrm{Pa}-$ xis of 200 feet in diameter, was the invention of an in-
telligent carpenter, the Sieur Moulineau. He was not by any means a man of fcience, but had much more mechanical knowledge than artifans ufually have, and was convinced that a very thin fhell of timber might not only be fo fhaped as to be nearly in equilibrio, but that if hooped or firmly connected horizontally, it would have all the ftiffnefs that was neceffary; and he prefented his project to the magiftracy of Paris. The grandeur of it pleafed them, but they doubted of its poflibility. Be. ing a great public work, they prevailed on the Academy of Sciences to confider it. The members, who were competent judges, were inftantly ftruck with the juftnefs of Mr Moulineau's principles, and aftonifhed that a thing fo plain had not been long familiar to eve. ry houfe-carpenter. It quickly became an univerfal to. pic of converfation, difpute, and cabal, in the polite circles of Paris. But the Academy having given a very favourable report of their opinion, the project was immediately carried into execution, and foon completed, and now ftands as one of the great exhibitions of Paris,

The confruction of this dome is the fimpleft thing that can be imagined. The circular ribs which compofe it confift of planks nine feet long, 3 inches broad, and three inches thick ; and each rib contifts of three of thefe planks bolted together in fuch a manner that two joints meet. A rib is begun, for inflance, with a plank of three feet long flanding between one of fix feet and another of nine, and this is continued to the head of it. No machinery was neceffary for carrying up fuch fmall pieces, and the whole went up like a piece of bricklayer's work. At various diftances thefe ribs were connected horizontally by purlins and iron ftraps, whick made fo many hoops to the whole. When the work had reached fuch a height, that the diftance of the ribs was two-thirds of the original diftance, every third rib was difcontinued, and the fpace was left open and glazed. When carried fo much higher that the diftance of the ribs is one-third of the original diftance, every fecond rib (now confiting of two ribs very near each other) is in like manner difcontinued, and the void is glazed. A little above this the heads of the ribs are framed into a circular ring of timber, which forms a wide opening in the middle; over which is a glazed canopy or umbrella, with an opening between it and the dome for allowing the heated air to get out. All who have feen this dome fay, that it is the moft beautiful and magnificent object they have ever beheld.

The only difficulty which occurs in the conftruction of wooden domes is, when they are unequally loaded, by carrying a heavy lanthern or cupola in the middle. In fuch a cafe, if the dome were a mere fhell, it would be crufhed in at the trop, or the action of the wind on the lanthern might tear it out of its place. Such a dome mult therefore confilt of truffed frames. Mr Price has given a very good one in his plate OP, tho' much fronger in the truffes than there was any occafion for. This caufes a great lofs of room, and throws the lights of the lanthern too far up. It is evidently copied from Sir Chriftopher Wren's dome of St Paul's church in London; a model of propriety in its particular fituation, but by no means a general model of a wooden dome. It refts on the brick cone. within it ; and Sir Chriltopher has very ingenioully made ufe of it for Atiffening this cone, as any intelligens

perfon will percieve by attending ta its confruction (See Price, Plate OR).

Fig. 28. reprefents a dome executed in the Regifer Office in Edinburgh by James and Robert Adams, and is very agreeable to mechanical principles. The fpan is 50 feet clear, and the thigknefs is only $4 \frac{1}{2}$.

49
Farther remarks on Norman roufs.

We cannot take leave of the fubject without taking fome notice of what we have already fpoken of with commendation by the name of Norman roofs. We called them Norman, becaufe they were frequently executed by that people foon after their eftablifhment in Italy and other parts of the fouth of Europe, and became the prevailing tafte in all the great baronial caf. tles. Their architects were rivals to the Saracens and Moors, who about that time built many Chriltian churches; and the architecture which we now call Gothic feems to have arifen from their joint labours.

The principle of a Norman roof is extremely fimple. The rafters all butted on joggled king pofts AF, BG, CH, \&c. (fig. 29.), and braces or ties were then difpofed in the intervals. In the middle of the roof HB and HD are evidently ties in a flate of extenfion, while the polt CH is compreffed by them. Towards the walls on each fide, as between $B$ alid $F$, and between $F$ and $L$, they are braces, and are compreffed. The ends of the polts were generally ornamented with knots of flowers, emboffed globes, and the like, and the whole texture of the trufs was exhibited and drefled out.

This conftruction admits of employing very fhort timbers; and this very circumftance gives greater frength to the truf:, becaufe the angle which the brace or tie makes with the rafter is more open. We may alio perceive that all thrult may be taken off the walls. If the pieces AF, BF, LF, be removed, all the remaining diagonal pieces act as ties, and the pieces directed to the centre act as ftruts; and it may alfo be obferved, that the principle will apply equally to a ftraight or flat roof or to a floor. A floor fuch as $a b c$, having the joint in two pieces $a b, b c$, with a ftrut $b d$, and two ties, will require a much greater weight to break it than if it had a continued joift $a c$ of the fame fcantling. And, laftly, a piece of timber acting as a tie is much fronger than the fame piece acting as a ftut: for in the latter fituation it is expofed to bending, and when bert it is much lefs able to withftand a very great ftrain. It mult be acknowledged, however, that this advantage is balanced by the great inferiority of the joints in point of Atrength. The joint of a tie depends wholly on the pins; for this reafon ties are never ufed in heavy works without frapping the joints with iron. In the roofs we are now deferibing the diagonal pieces of the middle part only act purely as ties, while thofe towards the fides act as ftruts or braces. Indeed they are feldom of fo very fimple conftruction as we have defcribed, and are more generally conftructed like the INetch in fig. 30 . having two fets of rafters $A B, a b$, and the angies are filled up with thin planks, which give great fiffnefs and Atrength. They have alfo a double fet of purlins, which conneft the different truffes. The roof being thas divided into fquares, other purlins run between the middle points $E$ of the rafters. The rafter is fupported at $E$ by a cheek put between it and the under rafter. The niddle point of each fquare of
the roof is furported and ftiffened by four braces, one of which fpings fiom $e$, and its oppofite from the fin milar part of the adjoining trufs. The other two braces fpring from the middle points of the lower purlins, which go horizontally from $a$ and $b$ to the next trufs, and are fupporred by planks in the fame manner as the rafters. By this contrivance the whole becomes very ftiff and flrong.

We hope that the reader will not be difpleafed with concluour having taken fome notice of what was the pride of fion. our anceitors, and confituted a great part of the finery of the grand ball, where the fedual lord affembled his vaffals and difplayed his magnificence. The intelligent mechanic will fee much to commend; and all who look at thefe roofs admire their apparent flimly lightnefs, and wonder at their duration. We have feen a hall of 57 feet wide, the roof of which was in four divifitns, like a kirb roof, and the truffes were ahout 16 feet afunder. They were fingle rafters, as in fig. 30. and their dimenfions were only eight inches by fix. The roof appeared perfectly found, and had been Itanding ever fince the year 1425 .

Much of what has been faid on this fubject may be applied to the conftruction of wooden bridges and the centers for turning the arches of flone-bridges. But the farther difcuffion of this mult be the employment of another article.

ROCFING, the materials of which the roof of a houie is compored. See the foregoing article.

ROOK, in ornithology. See Corvus.
Rooks are very deftructive of corn, efpecially of wheat. They fearch out the lands where it is fown, and watching them more carefully than the owners, they perceive when the feed firft begins to fhoot up its blade ; this is the time of their feeding on it. They will not be at the pains of fearching for it at random in the fown land, for that is mom: trouble than fo fmall a grain will requite them for: but as foon as thefe blades appear, they are by them directed, without lofs of time or pains, to the places where the grains lie; and in three or four days time they will root up fuch valt quantities, that a good crop is often thus deftroyed in embryo. After a few days the wheat continuing to grow, its blades appear green above ground; and then the time of danger from thefe birds is over; for then the feeds are fo far robbed of their mealy matter, that they are of no value to that bird, and it will no longer give itfelf the trouble to deftroy them.

Wheat that is fown fo early as to fhoot up its green blades before the harveft is all carried in, is in no danger from thefe birds; becaufe while it is in a flate worth their fearching for, the fcattered corn in the harveft fields is eafier come at, and they feed wholly on this, neglecting the fown grain. But as this cannot al. ways be done, the farmers, to drive away thefe ravenous and mifchievous birds, dig holes in the ground and fick up the feathers of rooks in them, and hang up dead rooks on fticks in feveral parts of the fields; but all this is of very little ufe; for the living rooks will tear up the ground about the feathers, and under the dead ones, to fteal the feeds. A much better way than cither is to tear feveral rooks to pieces, and to fiatter the pieces over the fields ; but this latts but a little while, fur the kites and other birds of prey foon carry off the pieces and feed upon them. A gun is a good remedy
while

## ROO

Rooke.
e the perfon who has it is prefent ; but as foon as he is gone, they will return with redoubled vigour to the field and tear up every thing before them.

The beft remedy the farmer has is to watch well the time of the corn's being in the condition in which they feed upon it; and as this lafts only a few days, he fhould keep a boy in conftant pay to watch the field from day-break till the dulk of the evening. Every time they fettle upon the ground to fly over it, the boy is to holloa, and throw up a dead rook into the air : this will always make them rife; and by degrees they will be fo tired of this conftant difturbance, that they will feek out other places of preying, and will leave the ground even before the time of the corn's being unfit tor them. The reafon of their rifing at the tofling up of their dead fellow-creature is, that they are a bird extremely apprehenfive of danger, and they are always alarmed when one of their comrades rifes. They take this for the rifing of an out-bird, and all fly off at the fignal.

ROOKE (Sir George), a gallant naval commander, born of an ancient and honourable family in Kent, in England, in 1650 . His merit raifed him by regular fteps to be vice-admiral of the blue : in which ftation he ferved in the battle of La Hogue, on the 22d of May 1692 ; when it was owing to his vigorous behaviour, that the laft ftroke was given on that important day, which threw the French entirely into confufion. But the next day he obtained ftill more glory; for he had orders to go into La Hogue, and burn the enemy's fhips as they lay there. There were 13 large men of war, which had crowded as far up as poffible; and the tranfports, tenders, and ammunition fhips, were difpofed in fuch a manner that it was thought impoflible to burn them. Befides, the French camp was in fight, with all the French and Irifh troops that were to have been employed in the invafion of England; and feveral batteries were raifed on the coaft, well provided with heavy artillery. The vice-admiral made the neceffary preparations for obeying his orders, but found it impoffible to carry in the lhips of his fquadron : he therefore ordered his light frigates to ply in clofe to the thore; and having manned out all his boats, went himfelf to give directions for the attack, burnt that very night fix three-deck-fhips, and the next day fix more, from 76 to 60 guns, together with moft of the tranfports and ammunition veffels; and this under the fire of all the batteries juft mentioned, and in fight of all the French and Irifh troops : yet this bold action colt the lives of no more than ten men. The vice-admiral's behaviour on this occafion appeared fo great to King Willians, that having no opportunity at that time of promoting kim, he fettled a penfion of 1002 l. per annum on him tcr life; and afterwards going to Portfmouth to view the fleet, went on bcard Mr. Rooke's thip, dined with him, and then conferred on him the honour of knighthood, he having a little before made him vice-admiral of the red.

In confequence of other fervices he was in 1694 raided to the rank of admiral of the blue: towards the clofe of the roxt year, he was admiral of the white; and was alfo appointed admiral and commander in chief in the Mediterranean.

During King William's reign, Sir George was twice elected member for Portimouth; and upon the accef elected member fo
VoL. XVI.
fion of Queen Anne in ifox, be was confituted viceadmiral and lieutenant of the admiralty of England, as alfo lieutenant of the fleets and feas of the kingdom. Upon the declaration of war againf Fiance he was ordered to command a fleet fent againt Cadiz, the duke of Ormond having the command of the land forces. On his paffage home, receiving an account that the galleons, under the efcort of a frong French fquadron, were got into the harbour of Vigo, he refolved to attack them ; and on the 1 Ith of October came before the harbour of Rondondello, where the French commander had neglected nothing neceffary for putting the place into the beft polture of defence. But notwithftanding this, a detachment of 15 Englifh and 10 Dutch men of war, of the line of battle, with all the fire fhips, were ordered in; the frigates and bomb-veffels followed; the great fhips moved after them, and the army landed near Rondondello. The whole fervice was performed under Sir George's directions, with admirable conduct and bravery ; for, in thort, all the Mips were deftroyed or taken, prodigious damage done to the enemy, and vaft wealch acquired by the allies. For this action Sir George received the thanks of the Houfe of Commons, a day of thankfgiving was appointed both by the queen and the ftates-general, and Sir George was promoted to a feat in the privy-council; yet, notwithftanding this, the Houfe of Lords refolved to inquire into his conduct at Cadiz. But he fo fully juftified himfelf, that a vote was paffed, approving his behaviour.

In the foring of the year 1704 , Sir George commanded the Thips of war which conveyed King Cha. III. of Spain to Lifbon. In July, he attacked Gibralter; when, by the bravery of the Englifh feamen, the place was taken on the 24 th, though the town was extremely ftrong, well furnifhed with ammunition, and had 100 guns mounted, all facing the fea and the narrow paffes to the land: An action which was conceived and executed in lefs than a week; though it has fince endured fieges of many months continuance, and more than once baffled the united forces of France and Spain. This brave officer being at laft obliged, by the prevalence of party-fpirit, to quit the fervice of his country, retired to his feat in Kent; where he fpent the remainder of his days as a private gentleman.

He was thrice married; and by his fecond lady Mrs Luttrell left one fon. He died January 24. 1708-9, in his 58th year, and was buried in Canterbury cathedral, where a monument is erected to his memory. In his private life he was a good hulband and a kind maf. ter, lived hofpitably towards his neighbours, and left behind him a moderate fortune ; fo moderate, that when he came to make his will, it furprifed thofe who were prefent: but Sir George affigned the reafon in a few words, "I do not leave much (faid he), but what I leave was honefly gotien; it never cof a failor a tear, or the nation a farthing."

ROOM, a chamber, parlour, or other apartment in a houfe. See Architecture and Ventilation.

ROOT, among botaniits, denotes that part of a plant which imbibes the nutritious juices of the earth, and tranfmits them to the orher parts. See Plant and RADIX.

Colours extratted from Roots. See Colour-Maliig, $n^{0} 41$.

## ROP

Root, Rapemaking.

Rope-maring is an art of very great importance;

Root, in algebra and arithmetic, denotes any number which, multiplied by itfelf once or oftener, produnearly in the following order :-Riga outhot, Peterfburgh outhot, hemp from Koninghurgh, Archangel, Sweden, Memel. Cbucking is a name given to a hemp that comes from various places, long in the fibre, but coarfe and harfh, and its ftrength is inferior to hemps which one would think weaker. Its texture is fuch, that it does not admit flitting with the batchel fo as to be more completely drefied. It is therefore kept in its coarfe form, and ufed"for inferior cordage. It is however a good and frong hemp, but will not make fine work. There are doubtlefs many good hemps in the fouthern parts of Europe, but litcle of them is brought to our market. Codilla, half clean, \&c. are portions of the abovementioned hemps, feparated by the dreffing, and may be confidered as broken fibres of thofe hemps.

Only the firt qualities are manufactured for the rigging of the Britifh navy and for the fhips of their Ealt India company.

and there are few that better deferve the attention of weight, becaufe each fibre is already ftrained in the fame manner as if loaded with as much weight as it is able to bear. What we have faid of this extreme cate is true in a certain extent of every degree of twift that we give the fibres. Whatever force is actually exerted by a twilted fibre, in orcier that it may fufficiently comprefs the reft to hinder them from being drawn out, mult be confidered as a weight hanging on that fibre, and muft be deduced from irs abfolute ftrength of cohefion, before we can eflimate the ftrength of the fkain. The ftrength of the 1 k ain is the remainder of the abfoluce ftrength of the fibres, after we have deduced the force employed in twilting them together.

From this obfervation may be deduced a fundamental principle in rope-making, that all twifting, beyond what is neceffary for preventir $\%$ the fibres from being drawn out without breaking, diminithes the Arength of the cordage, and fhould be avoided when in our power. It is of importance to keep this in mind. making.

to breals
with the
leaft addi-tionaltwif.

$\qquad$

Rope1 m

Ropemaking.

5 Method to beobferved in twifting the fibres.

6 yarns.

It is neceflary then to ewit the fibres of hemp together, in order to make a rope; but we fhould make a very bad rope if we contented ourfelves with twifling together a bunch of hemp fufficiently large to withftand the frains to which the rope is to be expofed. As foon as we let it go out of our hands, it would untwilt itfelf, and be again a loofe bundle of hemp; for the fibres are Atrained, and they are in a confiderable degree elaftic; they contract again, and thus untwit the rope or fkain. It is neceffary to contrive the twift in fuch a manner, that the tendency to untwift in one part may act againt the fame tendency in another and balance it. The procefs, therefore, of rope-making is more complicated.

The firft part of this procefs is spinning of ropeyarns. This is done in various ways, and with different machinery, according to the nature of the intended cordage. We fhall confine our defcription to the manufacture of the larger kinds, fuch as are uíed for the ftanding and running rigging of hips.

## 7

Defcription An alley or walk is inclofed for the purpofe, about of the ap- 200 fathoms long, and of a breadth fuited to the extent paratus and manner of ufing it.
plate CCCCXLI of the manufacture. It is fometimes covered above. At the upper end of this rope-walk is fet up the fpinning. wheel, of a form refembling that in fig. 1 . The band of this wheel goes over feveral rollers called whirls, turning on pivots in brafs holes. The pivots at one end come through the frame, and terminate in little hooks. The wheel being turned by a winch, gives motion in one direction to all thofe whirls. The fpinner has a bundle of dreffed hemp round his waift, with the two ends meeting before him. The hemp is laid in this bundle in the fame way that women fpread the flax on the diftaff. There is great variety in this; but the general aim is to lay the fibres in fuch a manner, that as long as the bundle lafts there may be an equal number of the ends at the extremi$t y$, and that a fibre may never offer itfelf double or in a bight. The fpinner draws out a proper number of fibres, twifts them with his fingers, and having got a fufficient length detached, he fixes it to the hook of a whirl. The wheel is now turned, and the fkain is twifted, becoming what is called arope-yarn, and the fpinner walks backwards bown the rope-walk. The part already twifted draws along with it more fibres out of the bundle. The fpinner aids this with his finfers, fupplying hemp in due proportion as he walks away from the wheel, and taking care that the fibres come in equally from both fides of his bundle, and that they enter always with their ends, and not by the middle, which would double them. He fhould alfo endeavour to enter every fibre at the heart of the yarn. This will caufe all the fibres to mix equally in making it up, and will make the work fmooth, becaufe one end of each fibre is by this means buried among the reft, and the other end only lies outward; and this, in paffing through the grafp of the Spinner, who preffes it tight with his thumb and palm, is alro made to lie fmooth. The greateit fault that can be committed in fpinning is to allow a fmall thread to be twifted off from one fide of the hemp, and then to cover this with hemp fupplied from the other fide: for it is evident that the fibres of the central thread make very long firals, and the ikin of fibres which covers them mult be much more oblique. This covering has but little connection with what is
below it, and will eafily be detached. But even while it remains, the yarn cannot be ftrong; for on pulling it, the middle part, which lies the ftraighteft, muft bear all the frain, while the outer fibres, that are lying obliquely, are only drawn a little more parallel to the axis. This defect will always happen if the hemp be fupplied in a confiderable body to a yarn that is then fpinning fmall. Into whatever part of the yarn it is made to enter, it becomes a fort of loofely connected wrapper. Such a yarn, when untwifted a little, will have the appearance of fig. 2. while a good yarn looks like fig. 3. A good fpinner therefore endeavours always to fupply the hemp in the form of a thin flat fkain with his lefi hand, while his right is employed in gralping firmly the yarn that is twining off, and in holding it tight from the whirl, that it may not run into loops or kinks.

It is evident, that both the arrangement of the fibres and the degree of twifting depend on the fill and dexterity of the fpinner, and that he muft be inftructed, not by a book, but by a matter. The degree of twift depends on the rate of the wheel's motion, combined with the retrograde walk of the fpinner.

We may fuppofe him arrived at the lower end of the walk, or as far as is neceffary for the intended length of his yarn. He calls out, and another fpinner immediately detaches the yarn from the hook of the whirl, gives it to another, who carries it afide to the reel, and this fecond fpinner attaches his own hemp to the whirl hook. In the mean time, the firlt fpinner keeps fait hold of the end of his yarn ; for the hemp, being dry, is very elaftic, and if he were to let it go out of hishand it would inftantly untwift, and become little better than loofe hemp. He waits, therefore, till he fees the reeler begin to turn the reel, and he goes flowly up the walk, keeping the yarn of an equal tightnefs all the way, till he arrives at the wheel, where he waits with his yarn in hand till another fpinner has finifhed his yarn. The firt fpinner takes it off the whirl hook, joins it to bis own, that it may follow it on the reel, and begins a new yarn.

Rope-yarns, for the greateft part of the large rig- 8 ging, are from a quarter of an inch to fomewhat more kinds of than a third of an inch in circumference, or of fuch a rope-yarns. fize that 160 fathoms weigh from $3^{\frac{1}{2}}$ to 4 pounds when white. The different fizes of yarns are named from the number of them contained in a frand of a rope of three inches in circumference. Few are fo coarfe that 16 will make a ftrand of Britifh cordage; 18 is not unfrequent for cable yarns, or yarns fpun from harfh and coarfe hemp; 25 is, we believe, the fineft fize which is worked up for the rigging of a fhip. Much finer are indeed fpun for founding lines, fifhing lines, and many other marine ufes and for the other demands of fociety. Ten good fpinners will work up above 600 weight of hemp in a day; but this depends on the weather. In very dry weather the hemp is very elaltic, and requires great attention to make fmoth work. In the warmer cimates, the fpinner is permitted to moiften the rag with which he grafps the yarn in his right liand for each yarn. No work can be done in an open fpinning walk in rainy weather, becaufe the yarns would not take on the tar, if immediately tarred, and would rot if kept on the reel for a long time.

the yarns into what may with propriety be called a rope, tion in which they are twilted. Let fig. 5 . be fuppored cord, or line. That we may have a clear conception of the principle which regulates this part of the procefs, Method of we fhall begin with the fimpleft poffible cafe, the union converting of two yarns into one line. This is not a very ufual the ropeyarns into ropes, cords, or lines. fabric for rigging, but we felect it for its fimplicity.

When hemp has been fplit into very fine fibres by the hatchel, it becomes exceedingly foft and pliant, and after it has lain for fome time in the form of fine yarn, it
tion in which they are twilted. Let fig. 5 . be fuppored
a crofs fection of the two yarns touching each other at $d$, and there glued to a board. The fibres of each pull obliquely; that is, they both pull away from the board, and pull laterally. The direction of this lateral pull of the fibres in the circumference of each yarn is reprefented by the little darts drawn round the circumferences. Thefe actions directly oppofe and balance each other at $d$; but in the femicircles oet, $t f o$, they evi-
amay be unreeled and thrown loofe, without lofing much of its twift. Two fuch yarns may be put on the whirl of a fpinning wheel, and thrown, like flaxen yarn, fo as to make fewing thread. It is in this way, indeed, that the failmaker's fewing thread is manufactured; and when it has been kept on the reel, or on balls or bobbins, for fome time, it retains its twift as well as its ufes require. But this is by no means the cafe with yarns fpun for great cordage. The hemp is fo elaftic, the number of fibres twilted together is fo great, and the diameter of the yarn (which is a fort of lever on which the elafticity of the fibre exerts itfelf) is fo confiderable, that no keeping will make the fibres retain this conftrained pofition. The end of a rope-yarn being thrown loofe, it will immediately untwift, and this with confiderable force and fpeed. It would, therefore, be a fruitlefs attempt to twift two fuch yarns together; yet the ingenuity of man has contrived to make ufe of this very tendency to untwift not only to counteract itfelf, but even to produce another and a permanent twift, which requires force to undo it, and which will recover itfelf when this force is removed. Every perfon muft recollect that, when he was twitted a packthread very hard with his fingers between his two hands, if he flackens the thread by bringing his hands nearer together, the packthread will immediately curl up, running into loops or kinks, and will even twitt itfelf into a neat and firm cord. Familiar as this fact is, it would puzzle any perfon not accuftomed to thefe fubjects to explain it with diftinctnefs. We fhall confider it with fome care, not as piece of mechanical curiofity, but as a fundamental principle in this manufacture, which will give us clear inftructions to direct us in the mof delicate part of the whole procefs. And we beg the attention of the artifts themfelves to a thing which they feem to have overlooked.

Let $m d$, $n d$ (fig. 4.) be two yarns fixed to one foint $d$, and let both of them be twifted, each round its own axis, in the direction $a b c$, which will caufe the tibres to lie in a forew form, as reprefented in the figure. If the end $d$ of the yarn $m d$ were at liberty to turn round the point $d$, it would turn accordingly, as often as the end $m$ is turned round, and the yarn would acquire no twift; but being attached to fome folid body it cannot turn without turning this body. It has, however, this tendency, and the body muft be forcibly prevented from turning. If it be held faft for a time, and then let go, it will be turned round, and it will not itop till it has turned as often as the end $m$ has been twifted, and now all the twift will be undone. Thus it is the tendency of the yarn $m d$ to untwift at the end $d$ (becaufe it is kept faft at $m$ ), which produces this motion of the body attached to it at $d$. What we have faid of the yarn $m d$ is equally true of the yarn ad. Both tend to turn, and will turn, the body attacied at $d$ round the common axis, in the fame direc-
dently confpire to turn the board round in the fame direction. The fame may be faid of the outer halves of any circles defcribed within thefe. In the inner halves of thefe inner circles the actions of fome fibres oppofe each other; but in every circle there are many more confpiring actions than oppofing ones, and the confpiring actions exert themielves by longer levers, fo that their joint momentum greatly exceeds that of the oppofing forces. It may be demonftrated, that if all the fibres exert equal forces, the force which tends to turn the board round the common axis is $\frac{2}{3}$ of the force em. ployed to twift both the yarns.

Suppofe then that the folid body to which the yarns are attached is at liberty to turn round the common axis; it cannot do this without carrying the yarns round with it. They mult, therefore, turn round each other, and thus compofe a rope or cord $k l$, having its component yarns (now called frands) lying in a direc. tion oppofite to that of the fibres in each ftrand. The rope will take this twift, while each of the Itrands is really untwifting, and the motion will not ftop till all is again in equilibrio. If the yarn had no diameter and no rigidity, their elatic contraction would not be balanced till the cord had made half the number of turns which had been given to that part of the yarn which is thus doabled up. But, as the yarns have a fenfible diameter, the fame ultimate contraction of the fibres will be expended by the twifting of the cord in fewer turns; even if the yarns had no rigidity. The turns neceffary for this purpofe will be fo much fewer, in proportion to the twift of the yarns, as the fibres of the yarn lie more obliquely, that is, as the yarns are more twilted. But further, this contractile force has to overcome the rigidity or ftiffnefs of the yarns. This requires force merely to bend it into the forew form ; and therefore, when all is again at reft, the fibres are in a ftate of ftrain, and the rope is not fo much clofed by doubling as it would have been had the yarns been fofter. If any: thing can be done to it in this fate which will foften the yarns, it will twift itfelf more up. It has therefore a tendency to twift more up; and if this be aided by an external force which will bend the ftrands, this will hap. pen. Beating it with a foft mallet will have this effect ; or, if it be forcibly twifted till the fibres are allowed to contract as much as they would have done had the yarn been perfectly foft, the cord will keep this twif without any effort ; and this mult be confidered as its moft perfect fate, in relation to the degree of twift originally given to the yarns. It will have no tendency to run into kinks, which is both troublefome and dangerous, and the fibres will not be exerting any ufelefs effort.

To attain this ftate fhould therefore be the aim of every part of this fecond procefs; and this principle Ihould be kept in view through the whole of it.

The component parts of a rope are called frands, as

takes up in his hand fuch as are flack, and draws them board to heave more upon that flrand. Fic finds it tight, keeping them fo till he reaches the upper end, where he cuts the yarns to a length, again adjults their tightnefs, and joins them all together in a knot, to which he fixes the hook of a tackle, the other block of which is fixed to a firm poft, called the warping-poft. The kkain is well ftretched by this tackle, and then feparated into its different frands. Each of thefe is knotted apart at both ends. The knots at their upper ends are made faft to the hooks of the cranks in the tackle-board, and thofe at their lower ends are faftened to the cranks in the fledge. The fledge itfelf is kept in its place by a tackle, by which the Atrands are again ftretched in their places, and every thing adjufted, fo that the fledge fiands fquare on the walk, and then a proper weight is laid on it. The tackle is now caft off, and the cranks are turned at both ends, in the contrary direction to the twitt of the yarns. (Ir fome kinds of cordage the cranks are turned the fame way with the finning rwift). By this the ftrands are twifted and hardened up; and as they contract by this operation, the fledge is dragged up the walk. When the foreman thinks the ftrands fufficiently hardened, which he eftimates by the motion of the fledge, he orders the heavers at the cranks to ftop. The middle ftrand at the fledge is taken off from the crank. This crank is taken out, and a ftronger one put in its place at D, fig. 9. The other itrands are taken off from their cranks, and all are joined on the hook which is now in the middle hole. The top is then placed between the ftrands, and, being preffed home to the point of their union, the carriage is placed under it, and it is firmly fixed down. Some weight is taken off the fledge. The heavers now begin to turn at both ends. Thofe at the tackle-board continue to turn as they did before; but the heavers at the iledge turn in the oppofite direction to their former motion, fo that the cranks at both ends are now turning one way. By the motion of the fledge crank the top is forced away from the knot, and the rope begins to clofe. The heaving at the upper end reftores to the flrand the twift which they are conftantly lofing by the laying of the rope. The workmen judge of this by making a chalk mark on intermediate points of the thands, where they lie on the fakes which are fet up along the walk for their fupport. If the twift of the ftrands is diminifhed by the motion of clofing, they will lengthen, and the chalk mark will move away from the tackle-board: but if the twift increafes by turning the cranks at the tackleaboard, the frands will fhorten, and the mark will come nearer to it.

As the clofing of the rope advances, the whole fhortens, and the fl. dge is dragged up the walk. The top moves fafter, and at laft reaches the upper end of the walk, the rope being now laid. In the mean time, the fledge has moved feveral fathoms from the place where it was when the laying began.

Thefe motions of the fledge and top mult be exactly adjufted to each other. The rope mult be of a certain length. Therefore the fledge mult ftop at a certain place. At $t$ ai moment the rope fould be laid; that is, the top thould be at the tackle-board. In this confilts the addrefs of the foreman. He has his attention directed both days. He looks at the ftrands, and when he fees any of them hanging flacker between the flakes than the others, he calls to the Heavers at the tackle-
more difficult to regulate the motion of the top. It requires a confiderable force to keep it in the angle of the ftrands, and it is always difpofed to flart foi ward. To prevent or check this, fome ftraps of foft rope are brought round the ftaff of the t'p, and then wrapped feveral times round the rope behind the top, and kept firmly down by a lanyard or bandage, as is fhown in the figure. This both holds back the top and greatly affilts the laying of the rope, caufing the firands to fall into their places, and keep clofe to each other. This is fometimes very difficult, efpecially in ropes compofed of more than three ftrands. It will greatly improve the laying the rope, if the top have a tharp, fmooth, tapering pin of hard wood, pointed at the end, projecting fo far from the middle of its fmaller end, that it gets in between the ftrands which are clofing. This fupports them, and makes their clofing more gradual and regular. The top, its notches, the pin, and the warp or frap, which is lapped round the rope, are all fmeared with greafe or foap, to affit the clofing. The foreman judges of the progrefs of clofing chietly by his acquaintance with the walk, knowing that when the fledge is abreat of a certain take the top fhould be abreaft of a certain other fake. When he finds the top too far down the walk, he flackens the motion at the tackle-board, and makes the men turn brifkly at the fledge. By this the top is forced up the walk, and the laying of the rope accelerates, while the fledge remains in the fame place, becaufe the flrands are lofing their $t$ wit, and are lengthening, while the clofed rope is fhortening. When, on the other hand, he thinks the top too far advanced, and fears that it will be at the head of the walk before the fledge has got to its proper place, he makes the men heave brifkly on the ftrands, and the heavers at the fledge crank to work foftly. This quickens the motion of the fledge by fhortening the frands; and by thus compenfating what has been overdone, the fledge and top come to their places at once, and the work appears to anfwer the intention.

But this is a bad manner of proceeding. It is evident, that if the ftrands be kept to one degree of hardnefs throughout, and the heaving at the Aledge be uniformly continued, the rope will be uniform. It may be a little longer or fhorter than was intended, and the laying may be too hard in proportion to the twift of the ftrands, in which cafe it will not keep it; or it may be too flack, and the rope will tend to twift more. Either of thefe faults are difcoverable by flackening the rope before it. come off the hooks, and it may then be corrected. But if the error in one place be compenfated by that in another, this will not be eafly feen before taking off the hooks; and if it is a large and ftiff rope, it will hardly ever come to an equable fate in its different parts, but will be apt to run into loops during fervice.

It is, therefore, of importance to preferve the uniformity throughout the whole. Mr Du Hamel, in his great work on rope-making, propofes a method which is very exact, but requires an apparatus which is cumberfome, and which would be much in the way of the workmen. We think that the following method would be extremely eafy, embarrafs no one, and is perfectly exact Hawing exac. Having determined the proportion between the propofed, velocity of the top and fledge, let the diameter of the \&c.

## RO1 <br> [ 487 ]

Rope- truck of the top carriage be to that of another truck making. fixed to the fledge, in the proportion of the velocity of
the top to that of the fledge. Let a mark be made on the rim of each; let the man at the fledge make a fignal every time that the mark on the fledge truck is uppermoft. The mark on the carriage truck fhould be uppermoft at the fame inftant; and in this way the foreman knows the flate of the rope at all times with. out quitting his ftation. Thus, in making a cable of 120 fathoms, it is ufual to warp the yarns 180 fathoms, and to harden them up to 140 before clofing. Therefore, in the clofing, the top mult move 140 fathoms, and the fledge only 20. The diameter of the carriage truck fhould therefore be feven times the diameter of the fledge truck.

We have hitherto proceeded on the fuppofition, that the twift produced by the cranks is propagated freely along the ftrands and along the clofing rope. But this is not the cafe. It is almoft unavoidable that the twift is greater in the neighiourhood of the crank which producesit. The ftrands are frequently of very confiderable weight, and lie heavy on the ftakes. Force is therefore neceflary to overcome their friction, and it is only the overplus that is propagated beyond the flake. It is proper to lift them up from time to time, and let them fall down again, as the fawer does with his marking line. This helps the twift to run along the ftrand. But this is not enough for the clofed rope, which is of much greater weight, and much fiffer.When the top approaches the tackle-board, the heaving at the fledge could not caufe the flrands immediately behind the top to clofe well, without having previoufly produced an extravagant degree of twift in the intermediate rope. The efforr of the crank mult therefore be affifted by men flationed along the rope, each furnifhed with a tool called a woolder. This is a ftout oak ftick about thee feet long, havirg a ftrap of foft ropeyarn or cordage fattened on its middle or end. The ftrap is wrapped round the laid rope, and the workman works with the ftick as a lever, twifting the rope round in the direction of the crank's motion. The worlders fhould keep their eye on the men at the crank, and make their motion correfpond with his. Thus they fend forward the twitt produced by the crank, without either increafing or diminithing it, in that part of the rope which lies between them and the fledge.

It is ufual before taking the rope from the hooks to heave a while at the fledge end, in order to harden the rope a little. They do this fo as to take it up about $\frac{{ }^{2}}{\text { ro }}$. The propriety or impropriety of this. practice depends entirely on the proportion which has been previounly obferved between the hardening of the frends and the twitting of the clofing rope. It is, in all cafes, better to adjult thefe precifely, and then nothing remains to be done when the top has arrived at the upper end of the walk. The making of two ftrand and three frand line pointed out the principle which flould be attended to in this cafe; namely, that the twift given to the rope in laying fhould be precifely what a perfectly foft rope would give to itfelf. We do not fee any reafon for thinking that the proportion between the number of turns given to the flrands and the number of turns given to the laid line by its own elaticity, will vary by any difference of diameter. We would the:efore recommend to the artifts to fettle this proportion
by experiment. The line fhould be made of the fineft, fmalleft, and fofteft threads or yarn. Thefe fhould be made into ftrands, and the frands fhould be hardened up in the direction contrary to the fpinning twift. The rope fhould then be laid, hanging perpendicularly, with a fmall weight on the top to keep it down, and a very fmall weight at the end of the rope. The number of turns given to the frands fhontd be carefully noticed, and the number of turns which the rope takes of itfelf in clofing. The weight fhould then be taken off, and the rope will make a few turns more. This whole number will never exceed what is neceiffary for the equilibrium ; and we imagine it will not fall much fhort of it. We are clearly of cpinion an exact adjuftment of this particular will tend greatly to improve the art of rope-making, and that experiments on good principles for afcertaining this proportion would be highly valuable, becaufe there is no point about which the artits themfelves differ more in their opinions and practice.
The cordage, of which we have been defcribing the Mode of manufacture, is faid to be hawser-Laid. It is not making uncommon to make ropes of four ftrands. Thefe are flirodd-laid ufed for fhrouds, and this cordage is.therefore called shroud-Laid cordage. A rope of the fame fize and weight mult be fmoother when it has four ftrands, becaufe the ftrands are fmaller: but it is more difficult to lay clofe. When three cylindrical ftrands are fimply laid together, they leave a vacuity at the axis amounting to $\frac{x}{28}$ of the fection of a Atrand. This is to be filled up by compreffing the ftrands by twifting them. Each mutt fill up $\frac{1}{3}$ of it by changing its flape; and $\frac{1}{2}$ of this change is made on each fide of the frand. The greateft change of fhape therefore made on any one part of a ftrand amounts only to $\frac{1}{x} \frac{1}{5}$ of the fection of the ftrand. The vacuity between four cylinders is $\frac{3}{1 T}$ of one of them. This being divi ed into eight parts, is $\frac{1}{20}$ of a ftrand, and is the greateft compreflion which any part of it has to undergo. This is nearly five times. greater than the former, and mult be more difficult to produce. Indeed it may be feen by looking at the figures if. and 12 . that it will be eafier to comprefs a Arand into the obtufe angle of 120 degrees than into the right angle of 90 ; and without reafoning more about the matter, it appears that the difficulty will increafe with the number of Atrands. Six ftrands mult touch each other, and form an arch leaving a hollow in the middle, into which one of the frands will lip, and then the reft will not completely furround it. Such a rope would be uneven on the furface. It would be weak; becaufe the central fltand would be flack in comparion of the reft, and would not be exeting its whole force when they are juft ready to break. We fee then that a four ftrand rope muft be more difficult to lay well than a hawfer-1did rope. With care, however, they may be laid well and clofe, and are much ufed in the Britifh navy.
Ropes are made of four ftrands, with a heart or Ard wich Atrand in the middle. This gives no additional Atrength, a heart in for the reafon juft now given. Its only afe is to make the midule. the work better and more eafy, and to fupport all the Arands at the fame diftance from the axis of the rope. This is of great confequence; becaufe when they are at unequal diftances from the axis, fome mult be more floping than others, and they will not refilt alike. This.

Ropemaking.
heart is made of inferior ituff, flack laid, and of a fize
jult equal to the fpace it is to fill. When a rope of this fabric has been long ufed and become unferviceable, and is opened out, the heart is always found cut and chaffed to pieces, like very fhort oakum. This happens as follows: When the rope is violently ftrained, it Itretches greatly; becaufe the ftrands furround the axis obliquely, and the Atrain draws them into a pofition more parallel to the axis. But the heart has not the obliquity of parts, and cannot ftretch fo much; at the fame time, its yarns are firmly grafped by the hard ftrands which furround them; they muft therefore be torn into thort pieces.

The procefs from laying a rope with a heart is not very different from that already defcribed. The top has a hole pierced through it, in the direction of the axis. The fkain or ftrand intended for the heart paffes through this hole, and is ftretched along the walk. A boy attends it, holding it tight as it is taken into the clofing rope. But a little attention to what has been faid will thow this method to be defective. The wick will have no more turns than the laid rope; and as it lies in the very axis, its yarns will be much Itraighter than the ftrands. Therefore when the rope is ftrained and ftretched, the wick cannot ftretch as much as the laid ftrands; and being firmly grafped by them, it muft break into fhort pieces, and the frands, having lot their fupport in thofe places, will fink in, and the cordage grow loofe. We hould endeavour to enable all to fretch alike. The wick therefore fhould be twifted in the fame manner as the ftrands, perhaps even a little more. It will thus communicate part of its ftrength to the rope. Indeed it will not be fo uniformly folid, and may chance to have three firal vacuities. But that this does no harm, is quite evident from the fuperior ftrength of cable-laid cordage, to be defcribed prefently, which have the fame vacuities. In this way are the main and fore ftays made for hips of the line. They are thought ftronger than hawferlaid ropes, but unfit for running rigging ; becaufe their itrands are apt to get out of their places when the rope is drawn into loops. It is alfo thought that the leart retains water, rots, and communicates its putrefaction to the furrounding frands.

Such is the general and effential procefs of rope-making. The fibres of hemp are twifted into yarns, that they may make a line of any length, and fick among each other with a force equal to their own cohefion. The yarns are made into cords of permanent twilt by laying them; and, that we may have a rope of any degree of frength, many yarns are united in one ftrand, for the fame reafon that many fibres were united in one yarn; and in the courfe of this procefs it is in our power to give the rope a folidity and hardnefs which makes it lefs penerrable by water, which would rot it in a fhort while. Some of thefe purpofes are inconfiftent with others: and the fkill of a rope-maker lies in making the beft compenfation; fo that the rope may on the whole be the belt in point of ftrength, pliancy, and duration, that the quantity of hemp in it can produce.

There is another species of cordage in very general ufe. A rope of two or more ftrands may be ufed as a ftrand, in order to compole a fill larger rope; and in this manner are cables and other ground tackle com.
monly made; for the
The procefs of cable-laying hardly differs from that of hawfer-laying. Three ropes, in their ftate of per. manent twif, may be twifted together ; but they vill not hold it, like fine thread, becaufe they are fiff and elaftic. They mult therefore be treated like ftrands. for a hawfer. We mult give them an additional twift, whick will difpofe them to lay or clofe themfelves; and. this difpofition muft be aided by the workmen at the fledge. We fay the twif fhould be an addition to theirtwift as a rope. A twift in the oppofite direction will. indeed give them a difpofition to clofe behind the top; but this will be very fmall, and the ropes (now ftrands). will be exceedingly open, and will become more open. in laying. The twift is therefore given in the direction of their twift as a rope, or oppofite to that of the. primary itrands, of which the ropes are compofed. Thefe primary ftrands are therefore partly untwifted in. cable-laying a rope, in the fame manner as the yarns are untwifted in the ufual procefs of rope-making.

We need not infitt farther on this part of the manufacture. The reader muft be fenfible that the hawfers intended for ftrands of a cable mult not be fo much twifted as thofe intended to remain hawfers; for the twift given to a finifhed hawfer is prefumed to be that which renders it moft perfect, and it mult be injured by any addition. The precife proportion, and the diftri. bution of the working up between the hardening of the ftrands and clofing the cable, is a fubject about which the artilts are no better agreed than in the cafe of haw-fer-laid cordage. We did not enter on this fubject while defcribing the procefs, becaufe the introduction of reafonings and principles would have hurt the fimplicity of the defcription. The reader being now acquainted with the different pares of the manipulation, and knowing what can be done on any occafion, will now be able to judge of the propriety of the whole, when he learns the principle on which the ftrength of a rope depends.
We have already faid, that a rope-yarn fhould be ${ }^{19}$ twifted till a fibre will break rather than be pulled out eftimating from among the reft, and that all twitting beyond this is the injurious to the ftrength of the yarn: And we advanced frength of this maxim upon this plain confideration, that it is need-r- ropes. lefs to bind them clofer together, for they will already. break rather than come out; and becaufe this clofer binding is produced only by forcibly wrapping the outer fibres round the imner, and drawing the cuter ones tight. Thus thefe fibres are on the ftetch, and are frained as if a weight were hung on each of them. 'I'he procefs of laying lines, of a permanent twit, hows that we muft do a little more. We mult give the yarn a degree of elaftic contractility, which will make it lay itfelf and form a line or cord which will retain its twitt. This muft leave the fibres of the yarns in a fate of greater compreffion than is neceffary for juft keeping them together. But more than this feems to be needlefs and hurtfal. The fame maxim muft direct us in forming a rope confifting of ftrands, containing more than one yarn. A neediffs excefs of twift leaves them ftrained, and lefs able to perform their office in the rope.
It not unfrequently happens, that the workman, in order to make his rope follid and firm, hardens up.

Roper making.

Rupe making. n-

20 Effect of twifting on the Atringth of ropes, \&c.
the Arands till they really break : and we beheve that, in the general practice of making large hawfers, many of the outer yarns in the Arands, efpecially thofe which chance to be outermoft in the laid rope, and are therefore molt frained, are broken during the operation.

But there is another confideration which hould alfo make us give no greater twif in any part of the operation than is abfolutely neceffary for the firm cohefion of the parts, and this independent of the frain to which the fibres or yarns are fubjected. Twifting caures all the fibres to lie obliquely with refpect to the axis or general direction of the rope. It may juft happen that one fibre or ope yarn fhall kegp in the axis, and remain Araight; all the reft mult be oblique, and the more oblique as they are farther from the axis, and as they are more twifted. Now it is to be demonitrated, that when any train is given to the rope in the direction of its length, a ftrain greater than this is actually excited on the oblique fibres, and fo much the greater as they are more oblique; and thus the fibres which are already the weakelt are expofed to the greateft Itrains.

Let CF (fig. 13.) reprefent a fibre hanging from a hook, and loaded with a weight $F$, which it is jult able to bear, but not more. This weight may reprefent the abfolate force of the fibre. Let fuch another fibre be laid over the two pulleys $A, B$ (fig. 14.), which are in a horizontal line AB , and let weights F and $f$, equal to the former, be hung on the ends of this fibre, while another weight $R$, lefs than the fum of $F$ and $f$, is hung on the middle point C by a hook or thread. This weight will draw down the fibre into fuch a pofition ACB, that the three weights $\mathrm{F}, \mathrm{R}$, and $f$, are in equilibrio by the intervention of the fibre. We affirm that this weight $R$ is the meafure of the relative arength of the fibre in relation to the form $A C \beta$; for the fibre is equally Atetched in all its parts, and therefore in every part it is frained by the force F . If therefore the weights F and $f$ are held falt, and any addition is made to the weight $R$, the fibre muft break, being already ftrained to its. full ftrength; therefore R meafures its frength in relation to its fituation. Complete the parallelogram $A C B D$, and draw the diagonal $C D$; becaure $A B$ is horizontal, and $A C=B C, D C$ is vertical, and coincides with the direction CR, by which the weight $R$ adts. The point $C$ is drawn by three forces, which are in equilibrio. They are therefore proportional to the fides of a triangle, which have the fame directions; or, the force ading in the direction CA is to that acting in the direction CR as CA to CD. The point $R$ is jupported by the two forces CA, CB, which are equivalent to CD ; and therefore the weight F is to the weight R as CA is to CD . Therefore the abfolute ftrengths of the two fibres AC, BC, taken feparately, are greater than their united frengths in relation to their pofition with refpect to $C R$ : and fince this proportion remains the fame, whatever equal weights are hung on at $F$ and $f$, it follows, that when any Itrain $D C$ is made to act on this fibre in the direction DC, it excites a greater ftrain on the fibre, hecaufe CA and CB taken together are greater than CD. Each fibre fultains a ftrain greater than the half of CD.

Now let the weight $R$ be turned round the axis CR. This will caufe the two parts of the fibre ACD to lap round each other, and compofe a twited line or cord Vol. XVI.
$C R$, as in 6g. 15 , and the parallelogram $A C B D$ will remain of the fame form, by the yielding of the weights

Rope$F$ and $f$, as it is evident from the equilibrium of forces. The fibre will always affume that form which makes the fides and diagonal in the proportion of the weights. While the fibres lap round each other, they are Atdined to the fame degree, that is, to the full extent of their Arength, and they remain in this degree of frain in every part of the line or cord CR. If therefore each of the fibres has the frength $A B$, the cord has the Arength $D C$; and if $F$ and $f$ be held fagt, the fmalleit addition to $R$ will break the cord. The fum of the abfolute frength of the two fibres of which this thread is compofed is to the fum of their relative ftrengths, or to the ftrength of the thread, as $A C+C B$ is to $C D$, or as AC is to EC.

If the weights F and $f$ are not held faft, but allowed to yield, a heavier weight $r$ may be hung on at $C$ without breaking the fibre; for it will draw it into another pofition $\mathrm{A} c \mathrm{~B}$, fuch that $r$ fhall be in equilibrio with $F$ and $f$. Since $F$ and $f$ remain the fame, the fibre is as much frained as before. Therefore make $c a, c b$ equal to $C A$ and $C B$, and complete the parallelogram acbd. $c d$ will now be a meafure of the weight $r$, becaufe it is the equivalent of $c a$ and $c b$. It is evident that $c d$ is greater than $C D$, and therefore the thread formed by the lapping of the fibre in the pofition $a c b$ is fronger than the former, in the proportion of $c d$ to $C D$, orce to CE. The cord is therefore fo much fronger as the fibres are more parallel to the axis, and it mult be Itrongeft of all when they are quite parallel. Bring the pulleys $A, B$ clofe to each other. It is plain that if we hang on a weight R lefs than the fum of F and $f$, it cannot take down the bight of the fibre; but if equal to them, although it cannot pull it down, it will keep it down. In this cafe, when the fibres are parallel to each other, the frength of the cord (improperly fo called) is equal to the united abfolute frengths of the fibres.

It is eafy to fee that the length of each of the fibres which compofe any part $C R$ of this cord is to the length of the part of the cord as AC to EC; and this is the cafe even although they fhould lap round a cylinder of any diameter. This will appear very clearly to any perfon who confiders the thing with attention. Let ac (fig. 16. ) be an indefinitely ampll portion of the fibre which is lapped obliquely round the cylinder, and let HKG be a fection perpendicular to the axis. Draw $a e$ parallel to the axis, and draw $e c$ to the centre of the circle HKG, and $a e^{\prime}$ parallel te $e c$. It is plain that $e^{\prime} c$ is the length of the axis correfponding to the fmall portion $a c$, and that $e^{\prime} c$ is equal to $a c$.

Hence we derive another manner of expreffing the ratio of the abfolute and relative flrength; and we may fay that the abfolute ftrength of a fibre, which has the fame oblquity throughout, is to its relative firength as the length of the fibre to the length of the cord of which it makes a part. And we may fay, that the Atrength of a rope is to the united abfolute ftrength of its yarns as the length of the cord to the length of the yarns; for although the garns are in various ftates of obliquity, they contribute to the frength of the cord in as much as they contribute immediately to the Arength of the ftrands. The ftrength of the yarns is to that of the ftrands as the length of the yaras to that of the
ftranc's

## R O P [ 490 ] R O P

准ope making. man

Atrands, and the frength of the flrands is to that of the rope as the length of the firlt to that of the latt.

And thus we fee that twifting the fibres diminifhes the ftrength of the affemblage; becaufe their obliquity, which is its neceffary confequence, enables any external force to excite a greater flrain on the fibres than it could have excited had they remained parallel; and fince a greater degree of twifting neceffarily produces a greater obliquity of the fibres, it mult more remarkably diminifh the ftrength of the cord. Moreover, fince the greater obliquity cannot be produced without a greater frain in the operation of twifting, it follows, that immoderate twifting is doubly peejudicial to the frength of cordage.
Theoretical Thefe theoretical deductions are abundantly confirmdeductions ed by experiment; and as many perfons give their afo confirmed by Reau-mur'sexperiments.
fent more readily to a general propofition when prefented as an induction from unexceptionable particulars, than when offered as the confequence of uncontroverted
principles, we fhall mention fome of the experiments which have been made on this fibject. Mr Reaumur, one of the moft zealous, and at the fame time judicious, obfervers of nature made the following experiments. (Mem. Acad. Paris, 17 II.)
I. A thread, confifting of 832 fibres of filk, each of which carried at a medium I dram and I 8 grains, would bardly fupport $5 \frac{\frac{x}{2}}{2}$ pounds, and fometimes broke with 5 pounds. The fum of the abfolute frengths of the fibres is 1040 drams, or upwards of 8 pounds 2 ounces.
2. A ikain of white thread was examined in many places. Every part of it bore $9 \frac{1}{2}$ pounds, but none of it would bear 10 . When twifted flack into a cord of 2 yarns it broke with 16 pounds.
3. Three threads were twifted together. Their mean ftrength was very nearly 8 pounds. It broke with $17 \frac{1}{2}$, whereas it fhould have carried 24 .
4. Four threads were twifted. Their mean frength was $7 \frac{1}{2}$. It broke with $21 \frac{1}{2}$ inftead of 30 . Four threads, whofe ftrength was nearly 9 pounds, broke with 22 inflead of 36 .
5. A fmall and very well made hempen cord broke in different places with $58,63,67,72$ pounds. Another part of it was untwitted into its three frands. One of them bore $29 \frac{1}{2}$, another $33 \frac{1}{2}$, and the third 35 ; therefore the fum of their abfolute ftrengths was 98. In another part which broke with $7^{2}$, the ftrands which had already borne this ftrain were feparated. They bore 26,28 , and 30 ; the fum of which is 84 .
The late admiral Sir Charles Knowles made many thofe of Sir experiments on cordage of fize. A piece of rope c. Knoriles $3 \frac{\pi}{5}$ inches in circumference was cut into many portions. Each of thefe had a fathom cut off, and it was carefully opened out. It was white, or untarred, and contained 72 yarns. They were each tried feparately, and their mean ftrength was 90 pounds. Each correfponding piece of rope was tried apart, and the mean fitength of the nine pieces was 4552 pounds. But go times 72 is 6480 .

Nothing is more familiarly known to a feaman than the fuperior flrength of rope-yarns made up into a ikain without twifting. They call fuch a piece of rope a Salvage. It is ufed on board the king's fhips for rolling tackles, flinging the great guns, butt-flings, nippers fort holding the viol on the cable, and in everv
wanted.

It is therefore fufficiently eftablifhed', both by theory and obfervation, that the twifting of cordage diminifhes its ftrength. Experiments cannot be made with fufficient precifion for determining whether this diminution is in the very proportion, relative to the obliquity of the fibres, which theory points out. In a bawfer the yarns lie in a great variety of angles with the axis. The very outermoft yarn of a ftrand is not much inclined to the axis of the rope: for the inclination of this yarn to the axis of its own ftrand nearly compenfates for the inclination of the ftrand. But then the oppofite yarn of the fame ftrand, the yarn that is next the axis of the rope lies with an obliquity, which is the fum of the obliquities of the ftrand and of the yarn. So that all the yarns which are really in the axis of the rope are exceedingly oblique, aind, in general, the infide of the rope has its yarns more oblique than the outfide: But in a laid rope we thould not confider the ftrength as made up of the ftrengths of the jarns; it is made up of the ftrengths of the ftrands: For whes the rope is violently ftretched, it untwifts as a rope, and the ftrands are a little more twilted; fo that they are refifting as ftrands, and not as yarns. Indeed, when we confider the procefs of laying the rope, we fee that it mult be fo. We know, from what has been already faid, that the three ftrands would carry more when parallel than when twifted into a rope, although the yarns would then be much more oblique to the axis. The chief attention therefore fhould be turned to the making the moft perfect ftrands.

We are fully authorifed to fay that the twif given to cordage fhould be as moderate as poffible. We are certain that it diminifhes the ftrength, and that the appearance of ftrength which its fuperior fmoothnefs and hardnefs gives is fallacious. But a certain degree of this is neceffary for its duration. If the rope is laid too flack, its parts are apt to open when it happens to be catched in fhort loops at its going into a pulley, \&c. in which cafe fome of the ftrands or yarns are apt to kink and break. It alfo becomes too pervious to water, which foaks and rots it. To prevent thefe and other fuch inconveniences, a confiderable degree of firmnefs or hardnefs is neceffary; and in order to give the cordage this appearance of fuperior flrength, the manufacturer is difpofed to exceed.

Mr Du Hamel made many experiments in the royal Experi-dock-yards in France, with a view to afcertain what is ments of the beft degree of twift. It is ufual to work up the Du Hamet yarms to $\frac{2}{3}$ of their length. Mr Du Hamel thought to afcerthis too much, and procured fome to be worked up beft degree only to $\frac{3}{3}$ of their length of the garns. The ftrength of twith, of the firlt, by a mean of three experiments, was $43^{21}$, \&c. and that of the laft was 5187 .

He caufed three ropes to be made from the fame hemp, fpun with all poflible equability, and in fuch proportion of yarn that a fathom of each was of the fame weight. The rope which was worked up to $\frac{2}{3}$ bore 4098 pounds; that which was worked up to $\frac{3}{4}$ bore 4850 ; and the one worked up to $\frac{4}{5}$ bore $6205^{\circ}$. In another trial the ftrengths were 4250,6753 , and 7397. Thefe ropes were of different fizes.

He had influence enough, in confequence of thefe experiments, to get a confiderable quantity of rigging

Ropemaking. $\underbrace{\text { making. }}$

## ROP

Ropemaking.
made of yarns worked up only to $\frac{3}{4}$ of their length, and had them ufed during a whole campaign. The officers of the fhips reported that this cordage was about $\frac{1}{4}$ lighter than the ordinary kind ; nearly $\frac{1}{8}$ fenderer, fo as to give lefs hold to the wind, was therefore more fupple and pliant, and run eafier through the blocks, and did nut run into kinks; that it required fewer hands to work ic, in the proportion of two to three ; and that it was at leaf $\frac{x}{4}$ ftronger. And they faid that it did not appear to have fuffered more by ufing than the ordinary cordage, and was fit for another campaign.

Mr Du Hamel alfo made experiments on other fa. brics of cordage, which made all twifting unneceffary foch as fimply laying the yarn in fkains, and then covering it with a worming of fmall line. This he found grearly fuperior in ftrength, but it had no duration, becaufe the covering opened in every fhort bending, and was foon fretted off. He alfo covered them with a woven coat in the manner practifed for houfe-furniture. But this could not be put on with fufficient tightnefs, without an enormous expence, after the mannar of a horfe-whip. Small ropes were woven folid, and were prodigioully ftrong. But all thefe fabrics were found too foft and feivious to water, and were foon rendered unferviceable. The ordinary procefs of ropemaking therefore mult be adhered to ; and we mult endea vour to improve it by diminifhing the twilt as far as is compatible with the neceffary folidity.

In purfuance of this principle, it is furely advifable to lay flack all fuch cordage as is ufed for ftanding rigging, and is never expofed to thort berdings. Shrouds, ftays, backftays, pendants, are in this fituation, and can eafily be defended from the water by tarring, ferving, \&c.

The fame principle alfo directs us to make fuch cordage of four ftrands. When the Atrands are equally hardened, and when the degree of twilt given in the laying is precifely that which is correfpondent to the twift of the ftrands, it is demonitrable that the ftrands are lying lefs obliquely to the axis in the four-ftrand cordage, and fhould therefore exert greater force. And experience fully confirms this. MrDu Hamel caufed two very fmall hawfers to be made, in which the frands were equally hardened. One of them had three itrands, and the other fix with a heart. They were worked up to the fame degree. The firf broke with 865 pounds, and the other with 1325. Several comparifuns were made, with the fame precautions, between cordage of three and of four frands, and in them all the fourftrand cordage was found greatly fuperior ; and it appeared that a heart judicioully put in not only made the work eafier and more perfect to the eye, but alfo increafed the Itrength of the cordage.

It is furely cnreafonable to refufe credit to fuch a uniform courfe of experiment, in which there is no motive for impofition, and which is agreeable to every clear notion that we can form on this complicated fubjest; and it argues a confiderable prefumption in the profefional artilts to oppofe the vague notions which they have of the matter to the calm reflections, and minute examination of every particular, by a man of good underftanding, who had no intereft in mifleading them.

The fame principles will explain the fuperiority of
cable-laid cordage. The general aim in rupe-making is to make every yarn bear an equal fhare of the general ftrain, and to put every yarn in a condition to bear it. But if this cannot be done, the next thing aimed at is, to put the yarns in fuch fituations that the flains to which they are expofed in the ufe of the rope may be proportioned to their ability to bear it. Even this point cannot be attained, and we mult content ourfelves with an approach towards it.

The greatelt difficulty is to place the yarns of a large ftrand agreeably to thofe maxims. Suppofing them placed with perfect regularity round the yarn which is in the middle: they will lie in the circumferences of concentric circles. When this whole mafs is turned equally round this yarn as an axis, it is plain that they will all keep their places, and that the middle yarn is fimply twifted round its axis, while thofe of the furrounding circles are lapped round it in fpirals, and that thefe fpirals are fo much more oblique as the yarns are farther from the axis. Suppofe the fledge kept faft, fo that the ftrand is not allowed to fhorten. The yarns mult all be Itretched, and therefore ftrained; and thofe mult be the molt extended which are the fat theft from the middle yarn. Now allow the fledge to approach. The ftrand contracts in its general length, and thofe yarns contract moft which were molt extended. The remaining extenfion is therefore diminithed in all; but ftill thofe which are molt remote from the middle are moft extended, and therefore moft ftrainest, and have the fmallett remainder of their abfolute force. Unfortunately they are put into the molt unfavourable fituations, and thofe which are already moft ftrained are left the moft oblique, and have the greatelt Atrain laid on them by any external force. But this is unavoidable: Their greatef hurt is the frains they fuftain in the manufacture. When the ftrand is very large, as in a nine-inch hawfer, it is almoft impoffible to bring the whole to a proper firmuefs for laying without Atraining the outer yarns to the utmolt, and many of them are broken in the operation.

The reader will remember that a two-ftrand line was laid or clofed merely by allowing it to twift itfelf up at the fwivel of the loper; and that it was the elatticity arifing from the twift of the yarn which produced this effect: and he would probably be furprifed when we faid, that, in laying a larger rope, the ftrands are twifted in a direclion oppofite to that of the fpinning. Since the tendency to clofe into a rope is nothing but the tendency of the ftran:'s to untwit, it would feem natural to twif the ftrands as the yarns were twifted before. This would be true, if the elafticity of the fibres in a yarn produced the fame tendency to untwift in the ftrand that it does in the yarn. But this is not the cale. The contraction of one of the outer yarns of a ftrand tends to pull the ftrand backward round the axis of the frand : but the contraction of a fibre of this yarn tends to turn the yarn round its own axis, and not round the axis of the ftrand. It tends to untwift the yarn, but not to untwift the flrand. It tends to untwilt the ftrand only fo far as it tends to contract the yarn. Let us fuppofe the yarn to be fpun up to one-half the length of the fibres. The contracting power of this yarn will be only one-half of the force exerted by the fibres : therefore, whatever is the force necelfary for clofing the rope properly $y_{2}$ the fibres of

Rope $\underbrace{\text { making. }}$ the fame yarn, fpun up to one-half, be made up in a ftrand, and let the ftrand be twifted in the oppolite direction to the fpinning till it has acquired the fame elafticity fit for laying. The yarns are untwifted. Suppofe to three-fourths of the length of the fibres. They are now exerting only four-thirds of the force neceffary for laying, that is, two-thirds of what they were obliged to exert in the other cafe; and thus we have flonger yarns when the ftrands are equally ftrained. But they require to be more ftrained than the other; which, being made of more twifted yarn, fooner acquire the elafticity fit for laying. But fince the elaiticity which fits the ftrand for laying does not increafe fo fall as the ftrain on the fibres of the yarn which produces it, it is plain, that when each has acquired that elaflicity which is proper for laying, the frands made of the flack-twifted yarin are the ftrongeft; and the yarns are alfo the Arongelt; and being fofter, the rope will clofe bettér.

Experience confirms all this; and cordaye, whofe ftrands are twilted in the oppofite direction to the twift of fpinning, are found to be ftronger than the others and its defects when made, we have fallen on a method by laying of making great cordage by laying it twice. A hawit twice. fer-laid rope, flack fpuin, little hardened in the ftrands,
and flack laid, is made a ftrand of a large rope called a cable or cablet. The advantages of this fabric are evident. The Atrands are reduced to one-third or onefourth of the diameter which they would have in a hawfer of the fame fize. Such ftrands cannot have their yarns lying very obliquely, and the outer yarns cannot be much more ftrained than the inner ones. There mult therefore be a much greater equality in the whole fubftance of cable-laid cordage, and from this we fhould expect fuperior firength.

Accordingly, their fuperiority is 'great, not lefs than in the proportion of 13 to 9 , which is not far from the proportion of 4 to 3 . A cable is more than a fourth part, but is not a third part, ftronger than a hawfer of the fame fize or weight.

They are feldom made of more than three hawfers of three flrands tach, though they are fometimes made of three folur-Atranded hawfers, or of four three-ftranded. The firft of thefe two is preferred, becaufe four fmall ftrands can be laid very clofe ; whereas it is difficult to lay well four hawfers, already become very hard.

The fuperiority of a cable-laid cordage being attributed entirely to the greater perfection of the ftrands, and this feeming to arife entirely from their fmallnefs, it was natural to expect fill better cordage by laying cables as the ftrands of ftill larger pieces. It has been tried, and with every requifite attention. But although they have always equalled, they have not decidedly excelled, common cables of the fame weight; and they require a great deal more work. We thall not therefore enter upon the manipulations of this faric.

There is only one point of the mechanical procefs of rope-making which we have not confidered minutely; and it is an ircportant one, viz. the diftribution of the
total fhortening of the yarns between the hardening of the Itrands and the laying the rope. This is a point about which the artifts are by no means agreed. There is certainly a pofition of the Itrands of a laid rope which puts every part in equilibrio; and this is what an elafic, but perfectly foft rope (were fuch a thing pofible), would aflume. But this cannot be difcovered by any experiments made on large or even on firm cordage; and it may not be thought fufficiently clear that the proportion which would be difcovered by the careful fabrication of a very fmall and foft line is the fame that will fuit a cordage of any diameter. We muft proceed much on conjecture ; and we cannot fay that the arguments ufed by the partizans of different proportions are very convinciing.

The general practice, we believe, is to divide the whole of the intended flortening of the yarns, or the working up into three parts, and to employ two of thefe in hardening the ftrands, and the remaining third in clofing the hawfer.

Mr Du Hamel thinks, that this repartition is injudicious, and that the yarns are too much ftrained, and the ftrands rendered weak. He recommends to invert this proportion, and to Chorten one-third in the hardening of the ftrands, and two-thirds in laying the hawfer. But if the ftrain of the yarns only is confidered, one fhould think that the outfide yarn of a ftrand will be more ftrained in laying, in proportion to the yarn of the fame ftrand, that is, in the very axis of the rope. We can only fay, that if a very foft line is formed in this way, it will not keep its twif. This fhows that the turns in laying were more than what the elafticity or hardening of the ftrands required. The experiments made on foft lines always fhowed a tendency to take a greater twift when the lines were made in the firt manner, and a tendency to lofe their twill when made in Mr Du Hamel's manner. We imagine that the true proportion is between thefe two extremes, and that we fhall not err greatly if we halve the total fhortening between the two parts of the procefs. If working up to two-thirds be infifted upon, and if it be really too much, Mr Du Hamel's repartition may be better, becaufe part of this working will quickly go off when the cordage is ufed. But it is furely better to be right in the main point, the total working up, and then to adjutt the diftribution of it fo that the finifhed cordage that precifely keep the form we have given to it.

There mult be the fame uncertainty in the quadraple: diftribution of the working up a cable. When a cable has'its yarns fhortened to two-thirds, we believe the ordinary practice has been, ift, To warp 180 fathoms; 2 d , To harden up the frands 30 fathoms ; 3d, To lay or clofe up 13 fathoms; $4^{\text {th }}$, To work up the hawfers nine fathoms; 5 th, To clofe up eight fathoms. This leaves a cable of 120 . Since Mr Du Hamel's experiments have had an influence at Rochefort, the practice has been to warp 190, to harden up 38, to lay up 12, to work up the hawfers 10 , and then to clofe up fix; and when the cable is finifhed, to thorten it two fathoms more, which our workmen call throwing the turn well $u p$. This leaves a cable of 122 fathoms.

As there feems little doubt of the fuperiority of cordage fhortened one-fourth ojer cordage fhortened onethird, the following diftribution may be adopted: warp

## 

Rope
30
Of the
trains

## made fe

 of during the operatimon,31 General rule for compting the Strength cordage.

190 fathoms, harden up 12 , lay up in, work up the
hawfers 12 , and clofe up 12 more, which will leave a cable of 143 .

There is another queftion about which the artifts are divided in their opinions, viz. the trains made ufe of during the operation. This is produced by the weight laid on the fledge. If this be too fall, the fronds will not be fufficiently tightened, and will run into kinks. The fledge will keep up by farts; and a fall inequality of twit in the ftrands will throw it askew. The top will not run well without a confiderable preffore to throw it from the clofing point, and therefore the cordage will neither close fairly nor firmly; on the other hand, it is evident, that the ftrain on the ftrands is a complete expenditure of fo much of their force, and it may be fo great as to break them. There are the extreme pofitions. And we think that it may be fairby deduced from our principles, that as great a frain should be laid on the Errands as will make good work, that is, as will enable the rope to clofe nearly and completely, but no more. But can any general rule be given for this purpole?

The practice at Rochefort was to load the fledge till its weight and load were double the weight of the yarns when it warped 180 fathoms. A fix-inch hawfer will require about a ton. If we fuppofe the friction one-third of the weight ; the ftrain on each ftrand will be about two hundred and a quarter weight. Mr Du Hame thinks this too great a load, and proposes to put only five-fourths or three-feconds of the weight of the cordage; and til lefs if a shorter piece be warped, because it does not require fo much force to throw the twit from the two cranks to the middle of the ftrand. We thall only fay, that ftronger ropes are made by hearwy loading the carriage, and working up moderately, than by greater fhortening, and a lighter load; but all this is very vague.

The reader will naturally alk, after this account of the manufacture, what is the general rule for computing the ftrength of cordage? It cannot be expected to be very precife. But if ropes are made in a manner perfeatly fimilar, we fhould expect the frength to be in proportion to the area of their fection; that is, to the square of their diameters or circumferences, or to the number of equal threads contained in them.

Nor does it deviate far from this rule; yet $\mathrm{Mr}: \mathrm{Du}$ Hame flows, from a range of experiments made on all cordage of $3^{\frac{1}{2}}$ inch circumference and under, that the ftrength increases a little falter than the numbber of equal threads. Thus be found that ropes of

|  |  |  |
| :--- | :--- | :--- |
| 9 threads bore | 1014 pounds, inftead of | 946 |
| 12 | 1564 | 1262 |
| 18 | 2148 | 1893 |

We cannot pretend to account for this. We muff alpo observe, that the ftrength of cordage is greatly inproved by making them of yarn fun fine. This requires finely drefled hemp; and being more fupple, the fibres lie clofe, and do not form fuck oblique finals. But all hemp will not foin equally fine. Every \{alk feerns to confift of a certain number of principal fibres, which flit more eafily into a fecund fer, and there more difficulty into a third fer, and fo on. The ultimate fineness, therefore, which a reafonable degree of defling can give to hemp, bears forme proportion, not in-
deed very precife, to the fize of the fall. The Mri-

 It was laid up in the magazines, and comparifons were made from time to time as follows:

## ROP

NIr Du Hamel fays, that it is decided by experience, 1 . That white cordage in continual fervice is onethird more durable than tarred. 2. That it. retains its force much longer while kept in fore. 3. That it refilts the ordinary injuries of the weather one-fourth longer.

We know this one remarkable fact. In 1758 the fhrowds and fays of the Sheet hulk at Portfmouth dockyard were overhawled, and when the worming and fervice were taken off, they were found to be of white cordage. On examining the ftorekeeper's books, they were found to have been formerly the fhrowds and rigging of the Royal William, of Ino guns, built in 1715 , and rigged in 1716. She was thought top-heavy and unfit for fea, and unrigged and her ftores laid up. Some few years afterwards, her fhrowds and ftays were fitted on the Sheer hulk, where they remained in conftant and very hard fervice for about 30 years, while every tarred cope about her had been repeately renewed. This information we received from Mr Brown, boatfwain of the Royal William during the war 1758, \&c.

Why then do we tar cordage? We thus render it more unpliant, weaker, and lefs durable. It is chiefly ferviceable for cables and ground tackle, which mult be continually wetted and even foaked. The refult of careful obfervation is, 1. That white cordage, expofed to be alternately very wet and dry, is weaker than tarred cordage. 2. That cordage which is fuperficially tarred is conftantly ftronger than what is tarred throughout, and it refifts better the alternatives of wet and dry. N. B. The fhrouds of the Sheer hulk were well tarred and blacked, fo that it was not known that they were of white cordage.

Tar is a curious fubtance, mifcible completely with water. Attempts were made to anoint cordage with oils and fats which do not mix with water. This was expected to defend them from its pernicious effects. But it was diftinctly found that thefe matters made the tibres of hemp glide fo eafily on each other, that it was hardly poffible to twift them permanently. Before they grafped each other fo hard that they could not be drawn, they were ftrained almoft to breaking.

Attempts have been made to increafe the ftrength of cordage by tanning. .But although it remains a contant practice in the manufacture of nets, it does not appear that much addition, either of ftrength or durability, can be given to cordage by this means. 'The trial has been made with great care, and by perfons fully able to conduct the procefs with propriety. But it is found that the yarns take fo long time in drying, and are fo much hurt by drying flowly, that the room required for a confiderable rope-work would be immenfe; and the improvement of the cordage is but trifling, and even equivocal. Indeed tanning is a chemical procefs, and its effect depends entirely on the nature of the materials to which the tan is applied. It unqueltionably condenfes, and even ftrengthens, the fibre of leather : but for any thing that we know a priori, it may deftroy the cohefion of hemp and flax; and experiment alone could decide the qneftion. The refult has been unfavourable; but it does not follow from this that a $\tan$ cannot be found which fhall produce on the texture of vegetables effects fimilar to what oak-bark and other altringents produce on the animal fibre or membrane. It is well known that fome dyes increafe the
frength of flax and cotton, notwithftanding the corrofion which we know to be produced by fome of the ingredients. This is a fubject highly worth the attention of the chemift and the patriot.

Rope-Dancer. See Rope-Dancer.
Rope- Tarn, among failors, is the yarn of any rope untwifted, but commonly made up of junk; its ufe is
to make finnet, matts, \&c. to make finnet, matts, \&c.

RORIDULA, in botany : A genus of the monogynia order, belonging to the pentandria clafs of
plants. The corolla is pentapetalous; the calyx pengynia order, belonging to the pentandria clafs of
plants. The corolla is pentapetalous; the calyx pentaphyllous; the capfule trivalved; the antheræ fcrotiform at the bafe.

ROSA, the Rose: A genus of the polygamia order belonging to the icofandria clafs of plants ; and in the natural method ranking under the 35 th order, Senticofa. There are five petals; the calyx is urceolated,
quinquefid, corneous, and fraightened at the neck. The ticofa. There are five petals; the calyx is urceolated,
quinquefid, corneous, and fraightened at the neck. The feeds are numerous, hifpid, and affixed to the infide of the calyx.

The forts of rofes are very numerous; and the bo-
tanifts find is very difficult to determine with accuracy which are fpecies and which are varieties, as well as which are varieties of the refpective fpecies. On this
account Linnxus, and fome other eminent authors, are which are varieties of the refpective fpecies. On this
account Linnæus, and fome other eminent authors, are inclined to think that there is only one real fpecies of rofe, which is the rofa canina, or "dog-rofe of the hedges," \&c. and that all the other forts are acci-
dental varieties of it. However, according to the prehedges," \&c. and that all the other forts are acci-
dental varieties of it. However, according to the prefent Linnæan arrangement, they ftand divided into 14
fuppofed fpecies, eaih comprehending varieties, which fent Linnæan arrangement, they ftand divided into 14
fuppofed fpecies, eaih comprehending varieties, which in fome forts are but few, in others numerous.

The fuppofed fpecies and their varieties, according
to the arrangement of modern botanifts, are as follow:

1. The canina, canine rofe, wild dog-rofe of the
2. The canina, canine role, wild dog-rofe of the
hedges, or hep-tree, grows five or fix feet high, having prickly-ftalks and branches, pinnated, five or feven-
lobed leaves, with aculeated foot-ftalks, fmooth pe-prickly-\{talks and branches, pinnated, five or fevendunculi, oval fmooth germina, and fmall fingle flowers. There are two varieties, red-flowered and white-flowered. They grow wild in hedges abundantly all over Britain; and are fometimes admitted into gardens, 2 few to increafe the variety of the flurubbery collection.
3. The alba, or common white-rofe, grows five or fix feet high, having a green ftem and branches, armed with prickles, hifpid pedunculi, oval fmooth germina, and large white flowers. The varieties are,-large
double white rofe-dwarf fingle white rofe-maidensand large white flowers. The varieties are,-large
double white rofe-dwarf fingle white rofe-maidensblufh white rofe, being large, produced in clufters, and of a white and blufh-red colour.
4. The Gallica, or Gallican rofe, \&xc. grows from about three or four to eight or ten feet high, in different varieties; with pinnated, three, five, or feven-lobed rent varieties; with pinnated, three, five, or feven-lobed
leaves, and large red and other coloured flowers in different forts. This fpecies is very extenfive in fuppofed
varieties, bearing the above fpecific difinction, feveral varieties, bearing the above fpecific diftinction, feveral of which have been formerly confidered as diftinet fpecies, but are now ranged among the varieties of the Gallican rofe, confifting if the following noted varieties. Common red ufficinal rofe, grows erect, about three or four feet high, having fmall branches, with but few prickles, and large fpreading half double deep.red flowers.

$\qquad$

## ROS <br> ROS

Rol3.
red rofe, is a variety of the common red rofe, growing but three or four feet high, having large fpreading femidouble red fiowers, beantifully ftriped with white-and deep red.-York and Lancafter variegated rofe, grows five, fix, or eight feet high, or more; bearing variegated red flowers, confifting of a mixture of red and white; alfo frequently difpofed in elegant Itripes, fometimes in half of the flower, and fometimes in fome of the petals.-Monthly rofe, grows about four or five feet high, with green very prickly fhoots; producing middle-fized, moderately-double, delicate flowers, of different colours in the varieties. The varieties are, cormmon red-flowered monthly rofe-blufh-flowered-white-flowered-Atriped-fowered. All of which blow both early and late, and often produce flowers feveral months in the year, as May, June, and July ; and frequently again in Auguft or September, and fometimes, in fine mild feafons, continues till November or December: hence the name monthly rofe.-Double virginrofe, grows five or fix feet high, having greenilh branches with farce any fines; and with large double palered and very fragrant flowers.-Red damafk rofe, grows eight or ten feet high, having greenifh branches, armed with fhort aculea; and moderately-double, fine foft-red, very fragrant flowers.-White damafk rcfe, grows eight or ten feet high, with greenifh very prickiy branches, and whitifh-red flowers, becoming gradually of a whiter colour.-Blufh Belgic rofe, grows three or four feet high, or more; having greenifh prickly branches, five or feven lobed leaves, and numerous, very double, blufhred flowers, with fhort petals, evenly arranged.-Red Belgic rofe, having greenifh and red fhoots and leaves, and fine double deep-red flowers.-Velvet rofe, grows three or four feet high, armed with but few prickles; producing large velvet-red flowers, comprifing femidouble and double varieties, all very beautiful rofes.Marbled rofe, grows four or five feet high, having brownifh branches, with but few prickles; and large, double, finely-marbled, red flowers.-Red-and-yellow Auftrian rofe, grows five or fix feet high, having flender reddifh-branches, armed with fhort brownifh aculea; and with flowers of a reddifh copper colour on one fide, the other fide yellow. This is a curious variety, and the flowers affume a fingularly agreeable appearance. Yellow Auftrian rofe, grows five or fix feet high, having reddifh very prickly fhoots; and numerous bright. yellow flowers.-Double yellow rofe, grows fix or feven feet high; with brownifh branches, armed with numerous large and fmall yellowih prickles; and large very double yellow flowers.-Frankfort rofe, grows eight or ten feet high, is a vigorous fhooter, with brownifl branches thinly armed with frong prickles; and produces largifh double purplifh.red flowers, that blow irregularly, and have but little fragrance.
4. The centifolia, or hundred-leaved red rofe, \&c. grows from about three or four to fix or eight feet high, in cifferent forts, all of them hifpid and prickly; pinnated three and five lobed leaves; and large very double red flowers, having very numerous petals, and of different thades in the varieties. The varieties are, -common Dutch hundred-leaved rofe, grows three or four feet high, with erect greenifh branches, but moderately armed with prickles; and large remarkably double red flowers, with fhort regularly arranged petals.
-Blufh hundred leaved rofe, grows like the other, with large very double pale-red flowers.-Provence rofe, grows five or fix feet, with greenifh-brown prickly branches, and very large double globular red flowers, with large petals folding over one another, more or $1 \in f$, in the varieties.-The varieties are, common red Provence rofe, and pale Provence rofe; both of which having larger and fomewhat loofer petals than the following fort.-Cabbage Provence rofe; having the petals clofely folded over one another like cabbagesDutch cabbage rofe, very large, and cabbages tolerably. -Childing Provence rofe-Great royal rote, grows fix or eight feet high, producing remarkably large, fomewhat loofe, but very elegant flowers.-All thefe are large double red flowers, fomewhat globular at firf blowing, becoming gradually a little fpreading at top, and are all very ornamental fragrant rofes.--Mofs Provence rofe, fuppofed a variety of the common rofe; grows erectly four or five feet high, having brownifh ftalks and branches, very clofely armed with fhort prickles, and double crimfon-red flowers; having the calyx and upper part of the peduncle furrounded with: a rough mofly-like fubftance, effecting a curious fingularity. This is a fine delicate rofe, of a high fragrance, which, together with its moffy calyx, renders it of great eftimation as a curiofity.
5. The cinnamomea, or cinnamon rofe, grows five or fix feet high, or more, with purplifh branches thinly aculeated ; pinnated five or feven lobed leaves, having almoft inermous petioles, fmooth pedunculi, and fmooth globular germina; with fmall purplifh-red cinnamonfcented flowers early in May. 'There are varieties with. double flowers.
6. The Alpina, or Alpine inermous rofe, grows five or fix feet high, having fmooth or unarmed reddift branches, pinnated feven-lobed fmooth leaves, fomewhat hifpid pedunculi, oval germina, and deep-red fingle flowers; appearing in May. This fpecies, as being free from all kind of armature common to the other forts of rofes, is efteemed as a fingularity; and from this property is often called the virgin role.
7. The Carolina, or Carolina and Virginia rofe, \&c. grows fix or eight feet high, or more, having fmooth reddifh branches, very thinly aculeated; pinnated fevenlobed fmooth leaves, with prickly foot-ftalks; fomewhat hifpid pedunculi, globofe hifpid germen, and fingle red flowers in clufters, appearing mofly in Auguit and September. The varieties are, dwarf Pennfylvania refe. with fingle and double red flowers-American pale-red rofe. This fpecies and varieties grow naturally in different parts of North America; they effect a fire varioty in our gardens, and are in eftimation for their late. flowering property, as they often continue in blow from Auguf until October; and the flowers are fuccecded by numerous red berry-like heps in autumn, caufing a variety all winter.
8. The villofa, or villofe apple-bearing rofe, grow's fix or eight feet high, having frong erect brownif? fmooth branches; aculeated fparfedly pinnated feven. lobed villofe or hairy leaves, downy underneath, with prickly foot-ltalks, hifpid peduncles, a globular frickly germen; and large fingle red flowers, fucceeded by large round prickly heps, as big as little apples. This fpecies merits admittance into every collection as a curiofity for the fingularity of its fruit, brth for variety

## ROB

and ufe; for it baving a thick pulp of an agreeable acid relifl, is often made into a tolerable good fweetmeat.
9. The pimpinellifolia, or burnet-leaved rofe, grows atout a yard hish, aculeated fparfedly; fmall neatly pinnated feven-lobed leaves, having obtufe folioles and rough petioles, imooth peduncules, a globular fmooth germen, and fimall fingle flowers. There are varieties with red llowers-and with white flowers. They grow wild in England, \&c. and are cultivated in hrubbenies for variety.
ro. The fpinocillima, or moft fpinous, dwarf burnetleaved rofe, commonly called Scatch rofe, grows but two or three feet high, very clofely armed with fpines; fimall neatly pinated feven lobed leaves, with prickly foot-falks, prickly pedunculi, oval fmooth germen, and numerous fmall fingle flowers, fucceeded bry round darkpurple heps. The varieties are, common white flowered -red-flowered--Atriped-flowered--marble-flowered, They grow naturally in England, Scotland, \&x. The firft variety tifes near a yard high, the others but one or two feet, all of which are fingle-flowered; but the flowers being numerous all over the branches, make a pretty appearance in the collection.
11. The eglanteria, eglantine rofe, or fweet briar, grows five or fix feet high, having green branches, armed with frong fpines fparfedly; pinnated fevenlobed odoriferous leaves, with acute folioles and rough foot-falks, fmueth pedunculi, globular foroath germina, and frall pale-red fowers. The varieties are, common ingle-flowered-femi-double flowered- - double-flower-ed-biuth double flowered-y yllow-flowered. This fpecies grows naturally in fome parts of England, and in Switzerland. It claims culture in every garden for the odoriferons property of its leaves; and thould be planted in the borders, and other compartments contiguous to walks, or near the habitation, where the plants will impart their refrefling fragrance very profufely all around; and the young branches are excellent for imjruving the odgur of nofe-gays and bpw-pots.
12. The mofchata, or mufk-rofe, fuppofed to be a variety only of the ever-green mulk.rofe, hath weak fimooth green falks and branches, rifing by fupport from fix to eight or ten feet high ar more, thinly armed with frong fines; pinnated feven-lobed fmooth leaves, with prickly foot ftalks; hifpid peduncles ; oval hifid germen; and all the branches terminated by large umbellate clufters of pure-white mulk-fcented flowers in Auguft, \&c.
13. The fempervirens, or exer-greeu mufk-rofe, hath a fomewhat trailing falk and branches, rifing by fup. port five or fix feet high or more, kaving a fmooth bark armed with prickles; pinnated five-lobed fmooth fhining evergreen leaves, with prickly petioles, hifpid pedunculi, oval hifpid germen ; and all the branches terminated by clufters of pure-white flowers of a mufly fragrance; appearing the end of July, and in Apguft. The femperwirent property of this elegant fpecies renders it a curiofity among the rofy tribe; it alfo makes a fine appearance as a flowering fhrub. There is one variety, the deciduous mulk-rofe abovementioned. This fpecies and variety flower in Auguft, and is remmarkable for producing them numeroufy in clufters, continuing in fucceffion till October or November.

The above 13 fpecies of rofa, and their refpective va.
rieties, are of the fhrub kind; all deciduous, except the laft fort, and of hardy growth, fucceeding in any common foil and fituation, and flowering annually in great abundance from May till October, in different forts; though the general flowering teafon for the principal part of them is June and July : but in a full collection of the different fpecies, the hlow is fontinued in conftant fucceffion feveral monhs, even fometimes from May till near Chrifmas; producing their fowers univerfally on the rame year's fhoots, rifing from thofe the year before, generally on long pedunculi, each terminated by one or more rofes, which in their characteri, fic ftate confift each of five large petals and many flamina; but in the doubles, the petals are very numerous; and in fome forts, the flowers are fucceeded by fruit ripening to a red colour in autumn and winter, from the feed of which the plants may be raifed: but the moft certain and eligible mode of propagating moft of the forts is by fuckers and layers; and by which methods they may be increafed very expeditioully in great abundance.

The white and red rofes are ufed in medicine. The former diftilled with water yields a fmall portion of a butyraceons oil, whofe flavour exactly refembles that of the rofes themfelves. This oil and the diftililed water are very ufeful and agreeable cordials. Thefe rofes al, fo, befides the cordial and aromatic virtues which refide in their volatile parts, have a mild purgative one, which remains entire in the decoction left after dintillation. The red rofe, on the contrary, has an altringent and gratefully corroborating virtue.

ROSA (Salvator), an admirable painter, born at Naples in 1614. He was firlt inftructed by Francefco Francazano, a kinfman: but the death of his father reduced him to fell drawings Iketched upon paper for any thing he could get; one of which happening to fall into the hands of Lanfranc, he took him under his proteation, and enabled him to enter the fchool of Spagnoletto, and to be taught moreover by Daniel Falcone, a diftinguithed painter of battles at Naples. Salvator had a fertile imagination. He fludied nature with attention and judgment ; and always reprefented her to the greateft advantage: for every tree, rock, cloud, or fituation, that enters into his compofition, fhows an elevation of thought that extorts admiration, He was equally eminent for painting battles, animals, fea or land forms; and he' executed thefe different fubjects in fuch tate as renders his works readily diftinguifhable from all others. His pieces are exceedingly fcarce and valuable ; one of the moft capital is that reprefenting Saul and the witch of Endor, which was preferved at Yerfailles. He died in 1673; and as his paintings are in few hands, he is more generally known by his prints; of which he etched a great number. He painted landfeapes more than hiftory; but his prints are chiefly hiforical. The capital landfcape of this mafter at Chifyick is a noble picture. However, he is faid to have been ignorant of the management of light, and $t$, have fometimes fhaded faces in a difagreeable manner. He was however a man of undoubted genius; of which he has given frequent fpecimens in his works. A roving difpofition, to which he is faid to have given full fcope, feems to have added a wildnefs to all his thoughts. We are told that he fpent the early part of his life in a troop of banditti; and that the rocky defolate fcenes

## R OS [ 497 ] R OS

Rofacea in which he was accuftomed to take refuge, furniffed him with thole romantic ideas in landfcape, of which he is to exceedingly fond, and in the defcription of which he fo greatly excels. His rollers, as his detached fogores are commonly called, are fuppofed alfo to have been taken from the life.

Savator Rofl is fufficiently known as a painter; but until now we never heard of him as a mufician. Among the mufical manufcripts purchafed at Rome by Dr Burney, was a mufic book of Salvatore, in which are many airs and cantatas of different mafilters, and eight entire cantatas, written, fec, and tranferibed by this celebrated painter himfelf. From the fpecimen of his talents for mufic here given, we make no fcruple of declaring, that he had a truer genius for this faience, in point of melody, than any of his predeceffors or cotemporaries: there is aldo a frength of expreffion in his verfes, which lets him far above the middle rank as a poet. Like molt other artifts of real original merit, he complains of the ill ufage of the world, and the difficulty he finds in procuring a bare fubfiltence.

## ROSACEA. See Gotta Rofacea.

ROSACEOUS, among botanifts, an appellation given to fuch flowers as are compofed of feveral petals or leaves difpofed in a fort of circular form, like those of a role.

ROSAMOND, daughter of Walter Lord Clifford, was a young lady of exquifite beauty, fine accomplifhments, and bleft with a molt engaging wit and fureetnefs of temper. She had been educated, according to the cultom of the times, in the nunnery of Godftow; and the popular flory of her is as follows: Henry II. flaw her, loved her, declared his paffion, and triumphed over her honour. To avoid the jealoufy of his queen Elinor, he kept her in a wonderful labyrinth at Woodtack, and by his connection with her had William Longford earl of Salibury, and Genffroy bishop of Lincoln. On Henry's absence in France, however, on account of a rebellion in that country, the queen found means to difcover her, and though truck with her beauty, the recalled fufficient refentment to poifon her. The queen, it is raid, difcovered her apartment by a thread of fill; but how fie came by it is differently related. This popular flory is not however fupport ed by history ; feveral writers mention no more of her, than that the queen fo vented her Spleen on Rofamond as that the lady lived not long after. Other writers affert that the died a natural death; and the flory of her being poifoned is thought to have arifen from the figure of a cup on her tomb. She was buried in the church of Goditow, oppofite to the high altar, where her body remained till it was ordered to be removed with every mark of difgrace by Hugh bifhop of Lincoln, in 119 I . She was, however, by many confidered as a faint after her death, as appears from an infcription on a crops which Leland lays tod near Godftow :

> Sui meat pac oret, fignum falutis aloret, Unique fibi deiur veniam. Rofamunda precetur.

Grope's. And alpo by the following gory : Rofamond, during Antiquities her refidence at her bower, made feveral vifits to Godof thylind tow; where being frequently reproved for the life the and Wales, led, and threatened with the confequences in a future f. 176, \&. . Atate, the always anfirered, that the knew the fhould be Vol. XVI.
fave ; and as a token to them, flowed a tree which fie fid would be turned into a fore when fie was with the faints in heaven. Sion after her death this wonderful metamorphofis happened, and the tone was flown to Arrangers at Godfow till the time of the difffolution.

ROSARY, among the Roman catholics. See CharLet.

ROSBACH, a town of Germany, in Saxony, famons for a victory obtained here by the king of Pruffia over the French, on November 5. 1757, in which 10,000 of the French were killed or taken prifoners, with the hoff of no more than 500 Pruffians. See Prussid, $n^{\circ} 3$.

ROSCHILD, a town of Denmark, in the int of Zealand, with a bifhop's fee and a foal univerfity. It is famous for a treaty concluded here in 1658 ; and in the great church there are feveral tombs of the kings of Denmark. It is fated at the bottom of a fall bay, in E. Long. 12. 20. N. Lat. 55. 40.

ROSCOMMON, a county of Ireland, in the province of Connaught, bounded on the weft by the river Sue, on the eat by the Shannon, on the north by the Curlew mountains, on the fouth and fouth-eat by the King's county and part of Galway. Its length is 35 miles, its breadth 28. The air of the county, both on the plains and mountains, is healthy; the foil yields plenty of grass, with fome corn, and feeds numerous herds of cattle. The Curlew mountains on the north are very high and feed; and, till a road with great labour and difficulty was cut through them, were inpaffable.

Roscommon, which gives the title of earl to the family of Dillon, and name to the county, though not large, is both a parliamentary borough and the county town.

ROSCOMMON (Wentworth Dillon, earl of), a celebrated poet of the 1 th ch century, was the for of James Dillon earl of Rofcommon; and was born in Ireland, under the administration of the fart earl of Strafford, who was his uncle, and from whom he received the name of Wentworth at his baptism. He paffed his infancy in Ireland; after which the earl of Strafford Cent for him into England, and placed him at his own feat in Yorkfhire, under the tuition of Dr Hall, afterwards bishop of Norwich, who inftructed him in Latin, without teaching him the common rules of grammar, which he could never retain in his memory, and yet he learnt to write in that language with claffical alegance and propriety. On the earl of Strafford's being impeached, he went to complete his education at Caen in Normandy; and after forme years travelled to Rome, where he became acquainted with the molt valuable re, mains of antiquity, and in particular was well killed in medals, and learned to Speak Italian with foch grace and fluency, that he was frequently taken for a native. He returned to England foo after the Reltoration, and was made captain of the band of penfioners; but a dippate with the lord privy feal, about a part of his eftate, obliged him to refign his pot, and revifit his native country, where the duke of Ormond appointed him captain of the guards. He was unhappily very fond of gaming; and as he was returning to his lodgings from a gaming-table in Dublin, he was attacked in the dark by three ruffians, who were employed to affatinate him.

## ROS

Eoi.m:- The earl defended bimfelf with fuch refolution, that mon. he had difpatched one of the aggreffors, when a gen-
tleman paffing that way took his part, and difarmed another, on which the third fought his fafety in flight. This generous affiftant was a difbanded officer of good family and fair reputation, but reduced to poverty; and his lordhip rewarded his bravery by refigning to him his poft of captain of the guards. He at length returned to London; when he was made mafter of the horfe to the duchefs of York, and married the lady Frances, eldeft daughter of Richard earl of Burlington, who had been the wife of Colonel Courtney. He here diftinguifhed himfelf by his writings : and in imitation of thofe learned and polite affemblies with which he had been acquainted abroad, began to form a fociety for refining and fixing the flandard of the Eng. lifh language, in which his great friend Mr Dryden was a priscipal affitant. This fcheme was entirely defeated by the religious commotions which enfued on king James's acceffion to the throne. In 1683 he was feized with the gout; and being too impatient of pain, he permitted a bold French empiric to apply a repel. ling medicine, in order to give him prefent relief; which drove the diftemper into his bowels, and in a fhort time put a period to his life, in January 1684. He was buried with great pomp in Weftmintter-abbey.

His poems, which are not numerous, are in the body of Englifh poetry collected by Dr Johnfon. His "Effay on Tranflated Verfe," and his tranflation of " Horace's Art of Poetry," have great merit. Waller addreffed a poem to his lordfhip upon the latter, when he was 75 years of age. "In the writings of this nobleman we view (fays Fenton) the image of a mind naturally ferious and folid; richly furnifhed and adorned with all the ornaments of art and fcience; and thofe ornaments unaffectedly difpofed in the moft regular and elegant order. His imagination might probably have been more fruitful and fprightly, if his judge. ment had been lefs fevere; but that feverity (delivered in a mafculine, clear, fuccinct Ityle) contributed to make him fo eminent in the didactical manner, that no man, with juftice, can affirm he was ever equalled by any of our nation, without confeffing at the fame time that he is inferior to none. In fome other kinds of writing his genius feems to have wanted fire to attain the point of perfection; but who can attain it? He was a man of an amiable difpofition, as well as a good poet; as Pope, in his 'Effay on Criticifm,' hath teftified in the following lines:

> Rofcommon not more learn'd than good, With manners generous as his noble blood; To him the wit of Greece and Rome was known, And every author's merit but his own."

We munt allow of Rofcommon, what Fenton has not mentioned fo diftinctly as he ought, and, what is yet very much to his honour, that he is perhaps the only correct writer in verfe before Addifon; and that, if there are not fo many or fo great beauties in his compofitions as in thofe of fome contemporaries, there are -at lealt fewe: faults. Nor is this his higheft praife; for Pope has celebrated him as the only moral writer of King Charles's reign:

Unhappy Dryden! in all Charles's days,
Rofcommon only boafts unfpotted lays.

Of Rofcommon's works, the judgment of the public feems to be right. He is elegant, but not great; he never labours after exquifite beauties, and he feldom falls into grofs faults. His verfification is fmooth, but rarely vigorous, and his rhymes are remarkably exact. He improved tafte, if he did not enlarge knowledge, and may be numbered among the benefactors to Englifh literature.
ROSE, in botany. See Rosa.

## Effence of Roses. See Roses Otter. <br> Rofnce of Roses. See Roses iter.

Rose of Fericho, fo called becaufe it grows in the plain of Jericho, though it did not originally grow plain of Jericho, though it did not originally grow did not know that it was brought from Arabia Petrea.
Rofe bufles are frequently found in the fields about did not know that it was brought from Arabia Petrea.
Rofe bufles are frequently found in the fields about Jericho; but they are of a feecies much inferior to thofe fo much extolled in Scripture, the flowers of which fome naturalifts pretend to have in their cabinets.
"The rofe fhrub of Jericho (fays Mariti) is a fmall Travels plant, with a bufhy root, about an inch and a half in through
length. It has a number of ftems which diverge from Syria nd
Paleftine. plant, with a bufhy root, about an inch and a half in through
length. It has a number of fems which diverge from Syriand
Paletine. the earth : they are covered with few leaves; but it is Palentine. loaded with flowers, which appear red when in bud, turn paler as they expand, and at length become white entirely. Thefe flowers appear to me to have a great refemblance to thofe of the elder-tree; with this difference, that they are entirely deftitute of fmell The flems never rife more than four or five inches from the ground. This fhrub fheds its leaves and its flowers as it withers. Its branches then bend in the middle, and becoming entwined with each other to the top, form a kind of globe. This happens during the great heats; but during moilt and rainy weather they again open and exparid.
" In this country of ignorance and fuperfition, people do not judge with a philofophical eye of the alternate fhuting and opening of this plant: it appears. to them to be a periodical miracle, which heaven operates in order to make known the events of this world. The inhabitants of the neighbourirg cantons come and examine thefe flrubs when they are about to undertake a j urney, to form an alliance, to conclude any affair of importance, or on the birth of a fon. If the ftems of the plants are open, they do not doubt of fuccefs; but they account it a bad omen to fee them flut, and therefore renounce their project if it be not too late.
" This plant is neither fubject to rot nor to wither. It will bear to be tranflianted; and thrives without degenerating in any kind of foil whatever."

Roses Otter (or effential oil of), is obtained from rofes by fimple diftillation, and may be made in the following manner: A quantity of freh rofes, for example 40 pounds, are put in a fill with 60 pounds of water, the rofes being left as they are with their calyxes, but with the flems cut clofe. The mafs is then well mixed together with the hands, and a gentle fire is made under the fill ; when the water begins to grow hot, and fumes to rife, the cap of the fill is put on, and the pipe fixed; the chinks are then well luted with pafte, and cold water put on the refrigeratory at top: the receiver is alfo adopted at the end of the pipe; and the fire is continued under the fill, neither too violent nor too weak. When the impregnated water begins to come over, and the fill is very hot, the fire is leffen-

avels ough ria and leftine.

## ROS

Rofe, Rofetio.
ed by gentle degrees, and the diltillation continued till 30 pound: of water are come over, which is generally done in about four or five hours; this rofe-water is to be poured again on a freth quantity ( 40 pounds) of rofes, and frem 15 to 20 pounds of water are to be drawn by diftillation, following the fame procels as be fore. The rofe-water thus made and cohobated will be found, if the rofes were good and frefh, and the diftillation carefully performed, highly fcented with the rofes. It is then poured into pans either of earthen ware or of tinned metal, and left expofed to the freth air for the night. The otter or effence will be found in the morning congealed, and fwimming on the top of the water ; this is to be carefully feparated and collected either with a thin fhell or a fkimmer, and poured into a vial. When a certain quantity has thus been obtained, the water and feces mult be feparated from the clear effence, which, with refpect to the firt, will not be difficult to do, as the effence congeals with a fight cold, and the water may then be made to run off. If, after that, the effence is kept fluid by heat, the feces will fubfide, and may be feparated; but if the operation has been neatly performed, there will be litrle or none. The feces are highly perfumed as the effence, and muft be kept, after as much of the effence has been fkimmed from the rofe-water as could be. The remaining sater thould be ufed for frelh diftillations, inltead of common water, at lealt as far $2 s$ it will go.

The above is the whole procefs, as given in the Afia* Vol. I. tic Refearches by lieutenant-colonel Polier *, of making p. 322. genuine otter of rofes. But attempts (he fays) are often made to augment the quantity, though at the expence of the quality. Thus the rafpings of fandalwood, which contain a deal of effential oil, are ufed; but the impofition is eafily difcovered, both by the fmell, and becaufe the effential oil of fandal-wood will not congeal in common cold. In other places they adulterate the otter by difilling with the rofes a fweetfcented grafs, which colours it of a high clear green. This does not congeal in a flight cold. Tbere are numerous other modes, far more palpable, of adulteration. The quantity of effential cil to be obtained from rofes is very precarious, depending on the kill of the diftiller, on the quality of the rofes, and the favourablenefs of the feafon. The colour of the otter is no criterion of its goodnefs, quality, or country. The calyxes by no means diminifh the quality of otter, nor do they impart any green colour to it. They indeed augment the quantity, but the trouble neceffary to ftrip them is fuch is to prevent their being often ufed.

Rose-Noble, an ancient Englith gold coin, firft Atruck in the reign of Edward III. It was formerly current at 6s. 8d. and fo called becaufe ftamped with a rofe. See Money.

## Rose-Wood. See Aspalathus.

ROSETTO, a town of Africa, in Egypt, is pleafantly ficuated on the weft fide of that branch of the Nile called by the ancients Bolbitinum, affirmed by He rodotus to have been formed by art; the town and saftle being on the right hand as you enter that river. Any one that fees the hills about Rofetto would judge that they had been the ancient barriers of the fea, and conclude that the fea has not loft more ground than the pace between the hills and the water.

## 499 ]

## $R O S$

Rofetto is efteemed one of the pleafanteft places Rofeto, in Egypt: it is about two miles lon; , and confits Roficuonly of two or threc Atreetc. The country about it is mott delyghtul and fertile, as is all the whole Delta on the other fide of the Nale, exhbiting the mont pleafant profpect of gardens, orchaids, and corn.fields, ex. cellently well culcivated. The calile ftands about two miles north of the town, on the weft fide of the river. It is a fquare building, with round towers at the fou: corners, mounted with fome pieces of brafs cannon. The walls are of brick, cafed with ftone, fuppofed to have been built in the time of the holy war, thought fince repaired by Cheyk Begh. At a little diftance lower, on the other fide of the river, is a platform, mounted with fome guns, and to the ealt of it are the falt lakes, out of which they gather great quantities of that commodlty. At fome farther diftance, failing upthe river, we fee a high mountain, on which flands an old building that ferves for a watch-tower. From this eminence is dicovered a large and deep gulph, in form of a crefcent, which appears to have been the work of art, though it be now filled up, and difcovers nothing but its ancient bed. Rofetto is grown a confiderable place for commerce, and hath fome good manufactures in the linen and cotton way; but its chief bufinefs is the carriage of goods to Cairo, all the European. merchandife being brought thither from Alexandria by fea, and carried in other boats to that capital; as thofe that are brought down from it on the Nile are there fhipped off for Alexandria; on which account the Europeans have here their vice-confuls and factors to tranfact their bufinefs; and the government maintains a beigh, a cultomhoufe, and a garrifon, to keep all fafe and quiet.

In the country to the north of Rofetto are delightful gardens, full of orange, lemon, and citron trees, and almoft all forts of fruits, with a variety of groves of palm-trees; and when the fields are green with rice, it adds greatly to the beauty of the country. It is about 25 miles northealt of Alexandria, and 100 north-welt of Cairo. E. Long. 30. 45. N. Lat. 31, 30.

ROSICRUCIANS, a name affumed by a fect or cabal of hermetical philofophers; who arofe, as it has been faid, or at leaft became firlt taken notice of, in Germany, in the beginning of the fourteenth century. They bound themfelves together by a folemn fecret, which they all fwore inviolably to preferve; and obliged themfelves, at their admifion into the order, to a ftrict obfervance of certain eftablifhed rules. They pretended to know all fciences, and chiefly medicine; whereof they publifhed themfelves the reftorers. They pretended to be mafters of abundance of important fecrets, and, among others, that of the philofopher's ftone; all which they affirmed to have received by tradition from the ancient Egyptians, Chaldeans, the Magi, and Gymnofophits. They have been diftinguifhed by feveral names, accommodated to the feveral branches of their doctrine. Becaufe they pretend to protract the period of human life, by means of certain noftrums, and even to reftore youth, they were called Immortales; as they pretend. ed to know all things, they have been called Illuminati; and becaufe they have made no appearance for feveral years, unlefs the feet of Illuminated which lately ftarted up on the continent derives its origin from them, they have been called the invifule brothers. Their fociety is

## ciar's.

## $\mathrm{ROS} \quad[500] \quad \mathrm{ROS}$

Roffitu- frequently figned by the letters F. R. C. which fome of the Atars over all corporeal beings, and their particucians. among them interpret fratres roris cocti; it being pretended, that the matter of the philofopher's fone is dew concoeted, exalted, sxc. Some, who are no friends to free-mafonry, make the prefent flourifling fociety of free-mafons a branch of Roficrufians; or rather the Roficruflans themfelves, under a new name or relation, viz. as retainers to building. And it is certain, there are fome free-mafons who have all the characters of Roficrufians; but how the æra and original of mafonry (fee Masonry), and that of Roficrucianifm, here fixed from Naudæus, who has written exprefsly on the tur ject, confift, we leave others to judge.

- Notwithfanding the pretended antiquity of the Roficrucians, it is probable that the alchemilts, Paracelfilts, or fire-philofophers, who fpread themfelves through al. moft all Europe about the clofe of the fixteenth century, affumed about this period the obfcure and ambiguous title of Roficrucian brethren, which commanded at firlt fome degree of refpect, as it feemed to be borrowed from the arms of Luther, which were a crofs placed upen a rofe. But the denomination evidently appears to be derived from the fcience of chemiftry. It is not compounded, fáys Mofheim, as many imagine, of the two words rofa and criux, which fignify rofe and crofs, but of the latter of thefe words, and the Latin ros, which fignifies dew. Of all natural bodies, dew was deemed the moft powerful diffolvent of gold; and the crofs, in the chemical language, is equivalent to light, becaufe the figure of a crofs + exhibits, at the fame time, the three letters of which the word lux; or light, is compounded. Now lux is called, by this feet, the feed or menfruum of the red dragon, or, in other words, that grofs and corporeal light which, when properly digefted and modified, produces gold. Hence it follows, if this etymology be admitted, that a Roficrucian philofopher is one who, by the intervention and ar. fiftance of the dew, feeks for light, or, in other words, the fubftance called the philofopher's ftone. The true meaning and energy of this denomination did not efcape the penetration and fagacity of Gaffen di , as appears by his Exament Pbilofophia Ftuddane, fect. 15. tom. iii. p. 261. And it was more fully explained by Renaudor; in his Conferences Pibliques, tom. iv. p. 87.

At the head of thefe fanatics were Robert Fludd, an Engelifh phyfician, Jacob Behmen, and Michael Mayer. but if rumour may be credited, the prefent Illuminated have a head of higher rank. The common principles, which ferve as a kind of centre of union to the Roficrucian fociety, are the following: 'They all maintain, that the difilution of bodies, by the power of fire, is the only way by which men can arrive at true wifdom, and come to difcern the firlt principles of things. They al acknowledge a certain analogy and harmony between the powers of nature and the doctrines of religion ; and believe that the Deity governs the king dom of grace by the fame laws with which he rules the kingdom of nature; and hence they are led to ufe chemical denominations to exprefs the truths of religion. They all hold, that there is a fort of divine en. ergy, or foul, diffufed through the frame of the univerfe, which fome call the argbeus, others the univerfal foir:t, and which others mention under different appellations. They all talk in the moft fuperifitious manner Qf. what they call the fignatures of things, of the power
lar influence upon the human race, of the efficacy of magic, and the various ranks and orders of demons. Thefe demons they divide into two orders, fylphs and gnomes; which futpplied the beautiful machinery of Pope's Rape of the Lock. In fine, the Roficrucians and all their fanatical defcendants agree in throwing out the moft crude incomprehenfible notions and ideas, in the moft obfcure, quaint, and unufual expreffions.-Mofh. Eccl. Hift. vol. iv. p. 266, \&c. Englifh edition, 8vo. See Behmen and Theosophists.

## ROSIER. See Pilatre.

ROSIERS-aux-Salines, a town of France, in Lorraine, and in the bailiwick of Nancy, famous for its falt-works. The works that king Staniflaus made here are much admired. It is feated on the river Mu ert, in E. Long. 6. 27. N. Lat. 48. 32.

ROSKILD, formerly the royal refidence and metropolis of Denmark, ftands at a fmall diftance from the Bay of Ifefiord, not far from Copenhagen. In its flourifhing fate it was of great extent, and comprifed within its walls 27 churches, and as many convents.Its prefent circumference is fcarcely half an Englifh mile, and it contains only about 1620 fouls. The houfes are of brick, and of a neat appearance. The only remains of its original magnificence are the ruins of a palace and of the cathedral, a brick building with two fpires, in which the kings of Denmark are interred. Little of the original building now remains. According to Holberg, it was conitructed of wood, and afterwards built with fone, in the reign of Canute.From an infcription in the choir, it appears to have been founded by Harold VI, who was ftyled king of Denmark, England, and Norway. Some verfes, in barbarous Latin, obfcurely allude to the principal incidents of his life; adding, that he built this church, and died in 980.-See Coxe's Travels into Poland, Ruffia, Sweden, and Denmark, voi. ii. p. 525 .

ROSLEY-hill, a village in Cumberland (England), with a fair on Whit-Monday, and every fortnight after till September 29. for horfes, hórned catele, and linen cloth.

ROSLIN, or Roskelyn, a place in the county of Mid Lothian in Scotland, remarkable for an ancient chapel and caftle. The chapel was founded in 1446, by St Clare; prince of Orkney, for a provolt, lix prebendaries; and two finging boys. The outlide is ornamented with a multitude of pinnacles, and variety of ludicrous fculpture. The infide is 69 feet long, the breadth 34 , fupported by two rows of cluftered pillars, between feven and eight feet high, with an aille on each fide. The arches are obtufely Gothic. Theie arches are continued acrois the fide-ailles, but the centre of the church is one continued arch, elegantly divided into compartments, and finely fculptured. The capitals of the pillars are enriched with roliage, ant a variety of figures; and amidit a heavenly concert ippears a cherubim blowing the ancient Highland bagppes. The cattle is feated on a peninfulated rock, in a deep glen far beneath, and acceffible by a bridge of great beight. This bad been the feat of the great family of Sinduir. Of this houfe was Oliver, favourite of James V. and the innocent caufe of the lofs of the battle of Solway Mofs, by reafon of the envy of the nobility on account of his being preferred to the command.

## ROS

R.ers, Rufinano.
found in every part of the country. The valleys, or Atraths, are generally covered with wood ; and near Alfrag there are forelts of fir 15 or 20 miles in length, well focked with deer and game of all forts. Great numbers of black cattle, horfes, fheep, and goats, are fed upon the mountains; and the fea, rivers, and lakes, teem with filh and fowl. The lochs on the weltern coalt abound with herrings in the feafon, particularly Loch Eu , about nine miles long, and three in breadth; one part of this is formed by a bay, or inlet of the fea; and the other is a lake of frefh water. The fides of it are covered with wood, where formerly abundance of iron was fmelted. Though the middle part of Rofs, called Ardrofs, is mountainous and farce inhabited, the north ealt parts on the rivers Okel, Charron, and Frith of Tayne, are fruitful, and abound with villages. Coygach and Afsgut, two northerly diltricts, are bare and hilly ; yet they abound with deer and black cattle; and we fee feveral good houfes towards the coaft, where there are alfo promontories, and huge rocks of marble. Ardmeanach, part of the peninfula betwixt the bays of Cromarty and Murray, is a barony, which of old beltowed a title on the king of Scotland's fecond fon. The diftriat of Glen-elchig, on the fouth-weft, was the paterial eftate of the earl of Seaforth, chief of the clan of Mackenzie : but the laft earl of that name, having rifen in rebellion, was in the year 1719 defeated at Glenthiel, in this very quarter, together with a fmall body ot Spaniards by whom he had been joined. His auxiliaries were taken; and though he himfelf, with fume of his fileuds, efcaped to the continent, his eftate and honours were forfeited. At the fame time, the king's troops, who obtained this viEtory, difmantled the cafthe of Yion-donnen, fituated on an ifland in a bay that fronts the ifle of Sky. It belonged to the crown ; but the oflice of heredicary governor was vefted in the earl of Seaforth, and here he had erected his magazine. Rofs is chiefly peopled by the Mackenzies and Frafers, two warlike clans, who fpeak Erfe, and live in the Highland fahion. There are fifheries carried on along the coalt; but their chief traffic is with fheep and black cattle. The chief towns of Rofs are Channerie, Dingwall, Tayne, and Fortrofe.

ROSSANO, a frong town of Italy, in the kingdom of Naples, and in the Hither Calabria, with an archbiMop's fee, and the title of a principality. It is pretty large, well peopled, and feated on an eminence furrounded with rocks. There is nothing in this archiepifcopal city that claims much notice; the buildings are mean, the ftreets vilely paved and contrived. The number of inhabitants does not exceed 6000 , who fubfift by the fale of their oil, the principal object of their attention, though the territory produces a greal deal of good wine and corn.

Roflano probably owes its origin to the Roman emperors, who confidered it as a polt equally valuable for ftrength and convenience of traffic. The Marfans, a family of French extraction, poffeffed this territory, with the title of prince, from the time of Charles II. to that of Alphonfus II. when the laft male heir was, by that prince's order, put to death in Ifchia, where he "la, confined for treafon. It afterwards belonged to Bona, queen of Poland, in right of her mother Ifabella, danghter to Alphonfus II. and at her deceafe returned to the crown. It was next in the poffeflion of the Al-
dobrandini, from whom the Borghefi inherited it. So late as the 16 th century, the inhabitants of this city fpoke the Greek language, and followed the rites of the

Ros-fulis rendezvous of the Bafilian monks in Magna Grecia. E. Long. 16. 52. N. Lat 39.45.

ROS-solis, Sun-dew, an agreeable firituous liquor, compofed of burnt brandy, fugar, cinnamon, and milkwater ; and fometimes perfumed with a little mulk. It has its nume from being at firft prepared wholly of the juice of the plant ros folis, or drofera. See Drosera.

ROSTOCK, a town of Germany, in the circle of Upper Saxony, and duchy of Mecklenburg, with an univerfity and a very good harbour. It is the belt town in this country; and has good fortifications, with an arfenal. The duke has a ftrong caftle, which may be looked upon as a citadel. It is divided into three parts, the Old, the New, and the Middle Towns. It was formerly one of the Hanfeatic towns, and is ftill. Imperial, under the protection of the dake of Mecklenburg. It is feated on a lake where the river Varne falls into it, and carries large boats. The government is in the hands of 24 aldermen, elected out of the nobility, univerfity, and principal merchants; four of whom are burgomafters, two chamberlains, two ltewards for the river, and two judges of civil and criminal matters. Thefe 24 are called the Upper Houfe, and have in a manner the whole executive power lodged in them, with the power of coining money, and electing officers. There is alfo a common council of roo inferior citizens, who are fummoned to give their advice upon extraordinary emergencies relating to the whole community. The principal things worth feeing are the fortifications, the prince's palace, the ftadthoufe, the arfenal, and the public library. The town is famous for good beer, which they export in great quantities. Some years ago they had no lefs than 250 privileged brewers, who, it is faid, brewed fo many thoufand tuns a year, befides what particular perfons brew for their own ufe. E. Long. 12. 55 . N. Lat. 54. 8.

ROSTOFF, or Rostow, a large town of the Ruf. fian empire, and capital of a territory of the fame name, with an archbifhop's fee, feated on the lake Coteri, in E. Long. 40. 25. N. Lat. 57. 5. The duchy of Roftoff is bounded on the north by Jaroflow, on the ealt by Sutdal, on the fouth by the düchy of Mofcow, and on the weft by that of Tuete.

ROSTRA, in antiquity, a part of the Roman forum, wherein orations, pleadings, funeral harangues, \&c. were delivered.

ROSTRUM, literally denotes the beak or bill of a bird; and hence it has been figuratively applied to the beak or head of a fhip.

## ROSYCRUCIANS. See Rosicrucians.

ROT, a very fatal difeafe incident to theep, arifing from wet feafons, and too moift palture. It is very difficult of cure, and is attended with the fingular circumfance of a kind of animals being found in the blood-veifels. See Ovis and Sheep.

ROTA, the name of an ecclefiaftical court of Rome, compofed of 12 prelates, of whom one mult be a German, another a Frenchman, and two Spaniards; the other eight are Italians, three of whom mult be Romans, and the other five a Bolognefe, a Ferraran, a Milanefe, a Venetian, and a Tufcan.-This is one of

I Definition and interefling nature of the fubject.

## ROTANG. See Calamus.

ROTATION, is a term which expreffes the motion of the different parts of a folid body round an axis, and diftinct from the progreflive motion which it may have in its revolution round a diftant point. The earth has a rotation round its axis, which produces the viciffitudes of day and night ; while its revolution round the fun, combined with the obliquity of the equator, produces the varieties of fummer and winter.

The mechanifm of this kind of motion, or the relation which fubfifts between the intenfity of the moving forces, modified as it may be by the manner of application, and the velocity of rotation, is highly interefting, both to the fpecalative philofopher and to the practical engineer. The preceffin of the equinoxes, and many other aftronomical problems of great importance and difficulty, receive their folutions from this quarter: and the actual performance of our molt valuable machines cannot be afcertained by the mere principles of equilibrium, but require a previous acquaintance with certain general propofitions of rotatory motion.

It is chiefly with the view of affifting the engineer that we propofe to deliver in this place a few fundamental propofitions; and we fhall do it in as familiar and popular a manner as poffible, although this may caufe the application of them to the abftrufe problems of aftronomy to be greatly deficient in the elegance of which they are fufceptible.

When a folid body turns round an axis, retaining its fhape and dimenfions, every particle is actually defcribing a circle round this axis, and the axis paffes through the centre of the circle, and is perpendicular to its plane. Moreover, in any inftant of the motion, the particle is moving at right angles with the radius vector, or line $j$ ining it with its centre of rotation. Therefore, in order to afcertain the direction of the motion of any from the particle perpendicular to the axis $A B$ of ro- ta $i \cdot n$. This line will lie in the plane of the circle $\mathrm{P} m n$ of rotation of the particle, and will be its radius vector ; and a line $P Q$ drawn from the particle perpendicular to this radius vector will be a tangent to the circle of rotation, and will have the direction of the motion of this

The whole body being fuppofed to turn together, it is evident, that when it has made a complete rotation, cach particle has defcribed a circumference of a circle, and the whole paths of the different particles will be in the ratio of thefe circumferences, and therefore of their radii ; and this is true of any portion of a whole turn, fuch as $\frac{x}{2}, \frac{x}{4}$, or 20 degrees, or any arch whatever; therefore the velocities of the different particles are proportional to their radii vectores, or to their diftances

And, laftly all thefe motions are in parallel planes, fention. to which the axis of rotation is perpendicular.

When we compare the rotations of different bodies How the in refpect of velocity, it is plain that it cannot be done rotation of by directly comparing the velocity of any particle in different one of the bodies with that of any particle of the other; bodies in for, as all the particles of each have different velocitics, velority this comparifon can eftablith no ratio. But we fami- may be liarly compare fuch motions by the number of complete wor pred, turns which they make in equal times, and we fay that the fecond hand of a clock turns 60 times fafter than the minute hand; now this comparifon is equally juit in any part of a turn as in the whole. While the minute hand moves round one degree, the fecond-hand moves 60 ; therefore, as the length or number of feet in the line uniformly defcribed by a body in its progreffive motion in a proper meafure of its progreffive velocity, fo the number of degrees defcribed by any particle of a whirling body in the circumference of its circle of rotation, or the angle defcribed by any radius vector of that body, is a proper meafure of its velocity of rita. tion. And in this manner may the rotation of two bodies be compared; and the velocity is with propriety termed angular velocity.

An angle is directly as the length of the circumference on which it ftands, and inverfely as the radius of the circle, and may be expreffed by the fraction of which the numerator is the arch, and the denominator the radius. Thus the angle PC $p$ may be exprefled by $\frac{\mathrm{P}_{p}}{\mathrm{PC}}$. This fraction expreffes the portion of the radius which is equal to the arch which meafures the angle; and it is converted into the ufual denomination of degrees, by knowing that one degree, or the 360 th pant of the circumference, is $\frac{1}{57,296}$ of the radius, or that an arch of 57,296 degrees is equal to the radius.

When a folid body receives an impulfe on any one point, or when that point is anyhow urged by a moving force, it cannot move uithout the other points alfo moving. And whatever is the motion of any particle, that particle muft be conceived as urged by a force precifely competent to the production of that motion, by acting othes. immediately on the particle itfelf. If this is not the paticle immediately acted on by the external force, the force which really impels it is a force arifing from the cohefion of the body. The particle immediately impelled by the external force is preffed towards its neighbouring particles, or is drawn away from them ; and, by this change of place, the connecting forces are brought into action, or are excited; they act on the particles adjoining, and change, or tend to change, their diftances from the particles immediately beyond them; and thus the forces which connect this next feries of particles are alfo excited, and another feries of particles are made to exert their forces; and this goes on through the body till we come to the remote particle, whofe motion we are confidering. The forces which conned it with the adjoining feries of particles are excited, and the particles moved. We frequently fay that the external moving force is propagated thro ${ }^{2}$ the body to the diftant particle; but this is not accurate. The particle is really and immediately moved by
$\qquad$
the forces which connect it with thofe adjoining. It
號 particle. from the axis of rotation.

## R.O T 1504 J R O T

Rotatior.
will greatly affilt our conception of the manner in which motion is thas produced in a diftant particle, if we confider the particles as fo many little balls, conneeted with each other by flender firal fprings like cork-ferews. This would compore a mafs which would be compref fible, or which could be fretched, \&c. And if we give an impulfe to one of thefe balls, we fhall fet the whole alfomblage in motion round any axis which we may fuppore to fupport it. Now any one of thefe balls is really and immediately moved by the elafticity of the firal wires which join it to its neighbours.

We are but little acquainted with the nature of thefe connecting forces. It can be learned only by the phenomena which are their effects. Thefe are various, almoft beyond defcription ; but the mechanical philofopher has little to do with this variety. The diftinctions $u$ hich are the immediate caufes of fluidity, of hardnefs, foftnefs, elafticity, ductility, are not of very difficult conception. There is one general fact which is fufficient for our prefent purpofe-the forces by which the particles of bodies act on each other are equal. This is a matter of unexcepted experience; and no other foundation can be given to it as a law of mechanical nature.

An immediate confequence of this law is, that when two external forces A and B are in equilibrium by the intervention of a folid body (or rather when a folid body is in equilibrium between two external forces), thefe forces are equal and oppofite; for the force $A$ is in fact in immediate equilibrium with the oppofite forces exerted by the particles to which it is applied, and is therefore equal and oppofite to the force refulting from the combination of all the forces which connect that particle with the feries of particles immediately adjoining. This refulting force may with propriety be called the equivalent of the forces from the combination of which it refults. The ufe of this term will greatly abbreviate language. This firt fet of connecting forces confilts of a number of diftinct forces correfponding to cach particle of the feries, and each force has an equal and oppofite force correfponding to it : therefore the compond force by which the firft feries of particles asts on that to which the external force $A$ is applied, is equal and oppofite to the compound force which connects this firft feries with the next feries. And the fame thing muft be faid of each fucceeding feries of jarticles, till we come at laft to the particle to which the external force $B$ is immediately applied. The force cxerted by this particle is equal and oppofite to that external force; and it is equal to the compound force exerted by the fecond feries of particles on that fide; therefore the forces $A$ and $B$ are equal and oppofite.

It refults from this propofition, that when any number of external forces are applied to a folid body, and it is in equilibrio between them, they are fuch as would be in equilibris if they were all applied to one point. Let the forces $a \mathrm{~A}, l \mathrm{~B}, c \mathrm{C}$, (fig. 2.), be applied to three particles of the folid body. Therefore a A is immediately in equilibrium with an equal and oppofite force $A a$, refulting from the compofition of the force $A D$, which connects the particles $A$ and $B$, and the force $A E$ which conne $A_{\text {s }} A$ with $C$. In like manner $b B$ is immediatel ${ }^{-}$in equilibrin with $B f$, the equivalent of the forces $B F$ and $B G$; and $c \mathrm{C}$ is in immediate equilibrio
with the equivalent $\mathrm{C} x$ of the forces CH and CI . We fhall conceive it very clearly if we fuppofe the three forces $\mathrm{A} a, \mathrm{~B} b, \mathrm{C} c$, to be exerted by means of threads pulling at the folid body. The connecting parts between A and B , as alfo between A and C , are ftretched. The lines AB and AC may be conlidered as elaftic threads. Each thread is equally flretched through its whole length; and therefore if we take $A D$ to reprefent the force with which the particle $A$ is held back by the particle $B$, and if we would alfo reprefent the furce with which $B$ is held back by $A$, we muft make BF equal to AD. Now ( $n^{\circ}$ 9.) the forces AD and DF are equal and oppofite ; fo are the forces AE and CI; fo are the forces CH and BG. Now it is evident, that if the fix forces $\mathrm{AD}, \mathrm{BF}, \mathrm{BG}, \mathrm{CH}, \mathrm{CI}$, AE, were applied to one particle, the particle would be in equilibrio; for each force is accompanied by an equal and oppofite force : and if the force $A_{a}$ were applied in place of $A D, A F$, the equilibriunn would remain, becaufe $A \propto$ is equivalent to $A D$ and AE. The fame is true of $B \beta$ and $C r$. Therefore if the three forces $A \alpha, B \beta, C x$, were applied to one point, they would be in equilibrio, Confequently if the three forces $a \mathrm{~A}, b \mathrm{~B}, \mathrm{C} c$, which are refpectively equal and oppofite to $\mathrm{A} \alpha, \mathrm{B} \beta, \mathrm{C} \pi$, are fo applied, they will be in equilibrio. It is plain that this demonftratfon may be extended to any number of forces.

We may jult remark by the bye, that if three forces are thus in equilibrio, they are acting in one plane; and, if they are not parallel, they are $r$ allly directed to one point : for any one of them muit be equal and oppofite to the equivalent of the other two ; and this equivalent is the diagonal of a parallelogram, of which the other two are the fides, and the diagonal and fides of any parallelogram are in one plane; and fince they are in one plane, and any one of them is in equilibrio with the equivalent of the other two, it mult pass thro' the fame point with that equivalent, that is, through the point of concourfe of the other two.

Thefe very fimple propofitions are the foundation of the whole theory of fatics, and render it a very fimple branch of mechanical fcience. It has been made abftrufe by our very attempts to fimplify it. Many ela- rendered borate treatifes have been written on the fundamental abotrufe by property of the lever, and in them all it has been attemptsat thought next to an infuperable difficulty to demonitrate fimpli the equilibrium of a ftraight lever when the parallel forces are inverfely as their diftances from the fulcrum.

We think the demonfrations of Archimedes, Fonfenex, D'Alembert, and Hamilton, extremely ingenious; but they only bring the mind into fuch a flate of conception that it cannot refufe the truth of the propofition; and, except Mr Hamilton's, they labour under the difadvantage of being applicable only to commenfurable diftances and forces. Mr Vince's, in the Philofophical Tranfactions for 1794, is the moft ingenious of them all; and it is wonderful that it has not occured long ago. The difficulty in them all has arifen from the attempt to fimplify the matter by confidering a lever as an inflexible ftraight line. Had it been taken out of this abflract form, and confidered as what it really ic, a natural body, of fome fize, having its particles connected by equal and oppolite forces, all dificulty would have vanilhed.

 Mechanical fcience has beencury would have vamined.

## R.OT

Rotation.
I2 Mode of conceiving the magnirude of any moving force.

That we may apply thefe propofitions to explain the motion of rotation, we mult recollect an unqueftionable propofition in dynamics, that the force which produces any motion is equal and oppofite to the force which would prevent it, when applied in the fame place and in the fame line, or which would extinguifh it in the fame time in which we fuppofe it to be produced. Therefore the force which is excited and made to act on any particle of a body, by the action of an external force on another particle, to as to caufe it to move round an axis, is equal and oppofite to the force which, when applied to that particle in the oppolite direction, would be in equilibrio with the external force.

The only diftinct nution we can form of the magnitude of any moving force is the quantity of motion which it can produce by acting uniformly during fome given time. This will be had by knowing the velocity which it will produce in a body of known bulk. Thus we know that the weight of ten pounds of matter acting on it for a fecond will caufe it to fall 16 feet with an uniformly accelerated motion, and will leave it in a ftate fuch that it would move on for ever at the rate of 32 feet in a fecond; which we call communicating the velocity of 32 feet per fecond. In the fame manner, the beft way of acquiring a diftinct conception of the rotatory effort of a moving force, is to determine the quantity of rotatory motion which it can produce by
acting uniformly during fome known time.

Let a folid body turn round an axis pafling through the point $C$ (fig. 3.) perpendicular to the plane of this figure. Let this rotation be fuppofed to be produced by an external force acting in the direction FP. Let this force be fuch, that if the body were free, that is, unconnected with any axis fupported by fixed points, it would, by acting uniformly during a fmall moment of time, caufe its centre of gravity $G(A)$ to defcribe a line of a certain length parallel to FP. This we know to be the effect of a moving force acting on any folid body in free fpace. The centre of gravity will always defcribe a ttraight line. Other particles may chance to move differently, if the body, befides its progreflive motion, has alfo a motion of rotation, as is generally the cafe. Draw GI parallel to FP, and make GI to GC as the velocity which the external force would communicate to the centre of the body (if moving freely, unconnected with a fupported axis), to the velocity which it communicates to it in the fame time round the axis Vol. XVI.
Cc. Alfo let $n$ be the number of equal particles, or the quantity of matter in the body. Then $m$.GI will exprefs the quantity of motion produced by this force and is a proper meafure of it as a moving force; for GI is twice the face defcribed during the given time with an uniformly accelerated motion.

But fince the body cannot move any way but round the axis paffing through $C$, the centre $G$ will begin to move with the velocity, and in the direction, GH perpendicular to the line CG ( $\mathrm{n}^{\circ} 2$.) And any particle $A$ can only move in the direction $A L$, perpendicular to CA. Moreover, the velocities of the different particles are as their radii vectores; and CG is actually equal to the line GH, which expreffes the velocity of a particle in C. Therefore CA will in like manner exprefs the velocity of the particle $A$. If $A$ exprefs its quantity of matter, A.CA will exprefs its quantity of motion, and will reprefent the force which would produce it by acting uniformly during the moment of time.

We expreffed the external moving force by m.GI. part of it is employed in exciting the force $A \cdot C A$, which urges the particle A. In order to difcover what part of the external force is neceffary for this purpofe, draw CP perpendicular to FP. The preceding obfervations fhow us, that the force wanted at $A$ is equal to the force which, when applied at $P$ in the direction FP, would balance the force A.CA applied to $A$ in the direction LA. Therefore (by the property of the lever $A C P$, which is impelled at right angles at $A$ and $P$ ) we mult have CP to CA as the force A.CA to the balancing preffure, which mult be exerted at $P$, or at any point in the line FP. This preffure is therefore $\frac{A \cdot C A \cdot C A}{C P}$ or $\frac{A \cdot C A^{2}}{C P}$. As we took $m$.GI for the meafure of the whole external force, GI being the velocity which it would communicate to the whole body moving in free fpace, we may take $G i$ for the velocity which would be communicated to the whole body by the preffure $\frac{A \cdot C A^{2}}{C P}$, and then this preffure will be properly expreffed by mGi, In like manner m.ik may exprefs the portion of the external force employed in communicating to another particle B the motion which it acquires; and fo on with refpect to all the particles of the body.

It mult be defirable to fee the manner in which the 3 S

Rutatior.
(A) We take this term in its ufual fenfe, as exprefing that point where the fum of the equal gravitations of each particle may be fuppofed united. It is by no means (though commonly fuppofed) the point where the equivalent of the real gravitations of the particles may be fuppofed to act, and to produce the fame motion as when acting on each particle feparately. It is this point only when all the particles gravitate alike, and in parallel directions. If the body were near the centre of the earth for inftance, the gravitations of the different particles would neither be nearly equal nor in parallel lines; and the place of its real centre of gravity, on which the equivalent of its whole gravitation may be fuppofed to act, would be very different from $\mathbf{G}$. Were we to denominate the point $G$, as ufually determined, by its mathematical properties, we would call it the centre of position ; becaufe its diftance from any plane, or its pofition with refpect to any plane, is the average difance and pofition of all the particles. The true defignation of $G$ is " the point through which if any plane whatever be made pais, and if perpendiculars to this plane be drawn from every particle, the fum of all the perpendicu. lars on one fide of this plane is equal to the fum of all the perpendiculars on the other fide."

If we were to denominate $G$ by its mechanical properties, we would call it the centre ofinertia; for this is equal in every particle, and in the fame direction : and it is not in confequence of gravity, but of inertia, that the body defcribes with the point $G$ a line parallel to FP. We wifh this remark to be kept in mind.

## R O T

forces are really concerned in giving motion to the different particles.

Suppore the external force to act immediately on the external particle $F$. The line FC connecting this particle with the axis in C is either ftretched or compreffed by the effort of giving motion to a remote particle A. It is plain that, in the circumftances reprefented in the figure, the line FC is compreffed, and the axis is pufhed by it againt its fupports in the direction $\mathrm{C}_{\mathrm{r}}$; and the body mult, on this account, refilt in the oppofite direction $\mathrm{F} f$. The particle $A$ is dragged out of its pofition, and made to begin its motion in the direction AL perpendicular to AC. This cannot be, unlefs by the connection of the two lines AC, AF. A refifts by its inertia, and therefore both AC and AF are fretched by dragging it into motion. By this refiftance the line AC tends to contract itfelf again, and it pulls $\mathbf{C}$ in the direction $C_{c}$, and $A$ in the direction $A a$; and if we take $C_{c}$ to reprefent the action on $C, A a$ muft be taken equal to it. In like manner AF is ftretched and tends to contract, pulling $F$ in the direction $F_{\varphi}$ and $A$ in the direction $A$ a with equal forces. Thus the particle $A$ is pulled in the directions $A a$ and $A \alpha$; the particle $F$ is pulled in the direction $F \varphi$, and puthed in the direction $\mathrm{F} f$; and C is pulled in the direction $\mathrm{C} c$, and pufhed in the direction $\mathrm{C}_{x}$. A $a$ and $\mathrm{A} a$ have produced their equivalent $A L$, by which $A$ is dragged into motion; $F f$ and $\mathrm{F} \Phi$ produce their equivalent $\mathrm{F}_{\mathrm{g}}$ by which the external force is refifed, and Fg is equal and oppofite to $m . G i$; the forces $C c$ and $C_{x}$ produce their equivalent C $d$ by which the axis is preffed on its fupports, and this is refifted by an equal and oppofite reaction of the fupports in the direction $d$ C. The forces therefore which excite in the body the motion A.AL are both external, viz. the impelling force $g \mathrm{~F}$, and the fupporting force $d$ C. AL therefore is not only the immediate equivalent of $A a$ and $A a$, but alfo the remote equivalent of $g \mathrm{~F}$ and $d \mathrm{C}$. We may therefore afcertain the proportion of $g$ (that is, of $m . G i$ ) to AL (that is, of A.AC), independent of the property of the lever. $g \mathrm{~F}$ is to $A L$ in the ratio compounded of the ratios of $g \mathrm{~F}$ to $\mathrm{F}_{\phi}$ or $\mathrm{A} a$, and of Aa to AL. But we fhall obtain it more eafily by confidering $g \mathrm{~F}$ as the equivalent of AL and $d \mathrm{C}$. By what has been demonftrated above, the directions, of the three forces $g \mathrm{~F}, \mathrm{AL}$, and $d \mathrm{C}$ muft meet in one point $E$, and $g \mathrm{~F}$ muft be equal to the diagonal $t \mathrm{E}$ of the parallelogram $\mathrm{E} e t \varepsilon$, of which the fides $\mathrm{E} e, \mathrm{E}$ : are refpectively equal to AL and $d \mathrm{C}$. Now $t \mathrm{E}$ is to $\mathrm{E} e$ as the fine of the angle $t e \mathrm{E}$ to the fine of the angle $\mathrm{E} t e$, that is, as the fine of CEA to the fine of CEP, that is, as CA to CP, as we have already demontrated by the property of the lever. We preferred that demonftration as the fhortef, and as abundantly familiar, and as congenial with the general mechanifm of rotatory motions. And the intelligent reader will ob-
ferve, that this other demonfration is nothing but the de- Rotation. monftration by the lever expanded into its own elements. Having once made all our readers fenfible of this internal procefs of the excitement and operation of the forces which connect the particles, we fhall not again have recourfe to it.

It is evident that the fum of all the forces $g \mathrm{~F}$, or $m$. Gi, muft be equal to the whole moving force $m$. GI. that $m$. P $p$ may be $=m$. GI. That is, we mult have $m . \mathrm{GI}=\int \frac{\mathrm{A} . \mathrm{CA}^{2}}{\mathrm{CP}}$; or, becaufe CP is given when the pofition of the line FP is given, we mult have $m$. GI $=\frac{\int A \cdot C A^{2}}{C P}$, where both $A$ and $C A$ are variable quantities.

This equation gives us $m$. GI.CP $=\int$ A.CA ${ }^{2}$. Now we learn in mechanics that the energy of any force applied to a lever, or its power of producing a motion round the fulcrum, in oppofition to any refiftance whatever, is expreffed by the product of the force by the perpendicular drawn from the fulcrum on the line of its direction. Therefore we may call $m$. GI.CP the momentum (в), energy, or rotatory effort, of the force $m$. GI. And in like manner $\int$ A.CA ${ }^{2}$ is the fum of the momenta of all the particles of the body in actual rotation; and as this rotation required the momentum $m$. GI.CP to produce it, this momentum balances, and therefore may exprefs the energy of all the refiftances made by the inertia of the particles to this motion of rotation. Or $\int$ A.CA ${ }^{2}$ may exprefs it. Or, take $p$ to reprefent the quantity of matter in any particle, and $r$ to reprefent its radius vector, or diftance from the axis of rotation, $/ p \cdot r^{2}$ will exprefs the momentum of inertia, and the equilibrium between the momentum of the external force $m$. GI, acting in the direction FP, and the combined momenta of the inertia of all the particles of the whirling body, is expreffed by the equation $m$. GI. $\mathrm{CP}=f \mathrm{~A} \cdot \mathrm{CA}^{2}$, $=$ $\int p r^{2}$. The ufual way of Atudying elementary mechanics gives us the habit of affociating the word equilibrium with a late of reft; and this has made our knowledge fo imperfect. But there is the fame equilibrium of the actual immediate preffures when motion enfues from the action. When a weight $A$ defcending raifes a fmaller weight $B$ by means of a thread paffing over a pulley, the thread is equally ftretched between the acting and refifting weights. The Atrain on this thread is undoubtedly the immediate moving force acting on $B$, and the immediate refilting force acting on $A$.
The fame equation gives us $\mathrm{GI}=\frac{\int p \cdot r^{2}}{m \cdot \mathrm{CP}}$.
Now GI : CG $=\frac{\int p \cdot r^{2}}{m \cdot \mathbf{C P}}: \mathbf{C G},=\int p \cdot r^{2}: m \cdot \mathbf{C P}$ . CG; but CG reprefents the velocity of the centreHence we derive this fundamental propofition $\int p . r^{2}$
(в) The wrd momentum is very carelefsly ufed by our mechanical writers. It is frequently employed to exprefs the product of the quantity of matter and velocity, that is, the quantity of motion ; and it is alfo ufed (with frict propriety of language) to exprefs the power, energy, or efficacy of a force to produce motion in the circumftances in which it acts. We wifh to confine it to this ufe alone. Sir Ifaac Newton adhered rigidly to this employment of the term (indeed no man exceeds him in precifion of expreffion), even when he ufed it to exprefs the quantity of motion: for in thefe inftances the energy of this quantity of motion, as modified by the: circumftances of its action, was always in the ratio of the quantity of motion.

## R O T

Rotation,
$: m . \mathrm{CP} . \mathrm{CG}=\mathrm{GI}: \mathrm{CG}$; or, that $\int \cdot p \cdot r^{2}$ is to $m$. CP. CG as the velocity of the body moving freely to the velocity of the centre of gravity round the axis of rotation. angle? It evidently expreffes a number; for both the numerator and denominator are of the fame dimenfions, namely, furfaces. It therefore expreffes the portion of the radius which is equal to the arch meafuring the angle, fuch as $\frac{1}{2}, \frac{1}{3}, \frac{5}{x}, \& \mathrm{c}$. And to have this angle in degrees, we have only to recollect that the radius is $=$ 57,2958.

This angular velocity will be a maximum when the axis of rotation paffes through the centre of gravity G . For draw from any particle $A$ the line $A a^{3}$ perpendicular to CG, and join AG. Then $\mathrm{CA}^{2}=\mathrm{GA}^{2}+$ $\mathrm{CG}^{2}=2 \mathrm{CG} \times \mathrm{Ga}$. Therefore $\int \mathrm{CA}^{2}=\int \mathrm{GA}^{2}+$ $\int \mathrm{CG}^{2} \doteq \int 2 \mathrm{CG} \times \mathrm{G} a,=\int \mathrm{GA}^{2}+m . \mathrm{CG}^{2} \pm$ $f 2 \mathrm{CG} \times \mathrm{G} a$. But, by the nature of the centre of gravity, the fum of all the $+G a$ is equal to that of all the - $\mathrm{G} a$; and therefore $\{2 \mathrm{GC} \times \mathrm{G} a$ is nothing ; and therefore $\int \mathrm{CA}^{2}=\int \mathrm{GA}^{2}+m \cdot \mathrm{CG}^{2}$ Therefore $\int \mathrm{CA}^{2}$ or $/ p r^{2}$ is fmalleft, and $\frac{m \text {. GI. CP }}{\int p r^{2}}$ is greatelt when $m . \mathrm{CG}^{2}$ is nothing, or when CG is nothing ; that is, when C and G coincide.

The abfolute quantity of motion in the whirling body, or the fum of the motions of all its particles, is $\frac{m \cdot G I \cdot C P \cdot \int p \cdot r}{\int p r^{2}}$. For the motion of each particle is m. GI. CP. $p r^{2}$.

The refiftance which a given quantity of matter makes to a motion of rotation is proportional to $\int p r^{2}$. For this mult be meafured by the forces which mut be fimilarly applied in order to give it the fame angular motion or angular velocity. Thus let one external force be $m$. GI, and the other $m$. 21. - Let both be applied at the diftance CP. Let $r$ be the radius vector in the one body, and $\rho$ in the other; now the angular velocities $\frac{m \cdot G I . C P}{\int p r^{2}}$ and $\frac{m \cdot \gamma_{1} \cdot C P}{\int p \rho^{2}}$ are equal by fuppofition. Therefore $m$. GI: $m \cdot \gamma=\int p r^{2}: \int p p^{2}$.

As in the communication of motion to bodies in free fpace a given force always produces the fame quantity of motion; fo in the communication of motion to bodies obliged to turn round axes, a given force, applied at a given diftance from the axes, always produces the fame quantity of momentum. Whence it may eafily ve deduced (and we flall do it afterwards), that as in the communication of motion among free bodies the fame quantity of motion is preferved, fo in the communica-

R O T
tion of motion among whirling bodics the fame quanRotation. tity of whirling motion is preferved.

This is a propofition of the utmof importance in practical mechanics, and may indeed be confidered as the tundamental propofition wich refpect to all machines of the rotatory kind when performing wrork; that is, of all machines which derive their efficacy from levers or wheels. There is a valuable fet of experiments by Mr Smeaton in the Philofophical Tranfactions, Volume LXVI. which fully confirm it. We thall give an example by and by of the utility of the propofition, fhowing how exceedingly imperfect the ufual theories of mechanics are which do not proceed on this principle.
With refpect to the general propofition from which all thefe deductions have been made, we mult obferve, that the demonftration is not reftrifted to the time neceffary for caufing each particle todefcribe an arch equal to the radius vector. We affumed the radius vector as the meafure of the velocity merely to fimplify the notation. Both the progreffive motion of the free body and the rotation of the whirling body are uniformly accelerated when we fuppofe the external force to act uniformly during any time whatever; and the fpaces defcribed by each motion in the fame time are in a conflant ratio. The formulx may therefore with equal propriety reprefent the momentary accelerations in the different cafes.

It muft alfo be obferved, that it is not neceffary to Allthe parfuppofe that all the particles of the body are in one ticles of a plane, and that the moving force acts in a line FP ly. body not ing alfo in this plane. This was tacitly allowed, merely neceflarily to make the prefent inveltigation (which is addrefled fapporcd in chiefly to the practical mechanic) more familiar and eafy. The equilibrium between the force $\mathrm{A} \times \mathrm{CA}$, which is immediately urging the particle A, and the force $m . \mathrm{G} i$ employed at P or $\mathrm{F}, \mathrm{in}$ order to excite that force at A would have been precifely the fame although the lines AC and FP had been in different planes, provided only that thefe planes were parallel. This is known to every perfon in the leaf acquainted with the wheel and axle. But if the external moving force does not act in a plane parallel to the circles of rotation of the different particles, it muft be refolved into two forces, one of which is perpendicular to thefe planes, or parallel to the axis of rotation, and the other lying in a plane of rotation. And it is this laft only th +t we confider as che moving force ; the other tends merely to puilh the body in the direction of its axis, but has no tendency to turn it round that axis. When we come to confider the rotation of a body perfectly free, it will be neceffary to attend particularly to this circumftance. But there are feveral important mechanical propofitions which do not require this.

The motion of any body is eltimated by that of its 28 centre of gravity, as is well known. The difference tion of a between the motion of the centre of a free body and body entithe motion of the centre of a body turning round an mated by axis, is evidently owing to the connection which the parts of the body have with this axis, and to the acis centre tion of the points of fupport on this ari. This of gravity, tion of the points of fupport on this axis. This ac- \&cc. tion mult be conlidered as another external force, combined with that which acts on the particle P , and therefore mult be fuch as, if combined with it, would produce the very motion which we obferve. That is, if

## R OT

W.ntition.
we furpofe the body unconnected with any fixed points,
but as having its axis acted on by the fame forces which thefe points exert, the body would turn as we obferve it to do, the axis remaining at ref.

Therefore join I and H , and complete the parallelogram GIHK. It is plain that $m$. GK muft reprefent the forces exerted by the axis on the fixed points.

If therefore GI fhould coincide with GH, and the point I with the point $H$, the force GK vanifhes, and the body begins to turn round C , without exerting any preffure on the points of fupport ; and the initial motion is the fame as if the body were free. Or, the axis at C is then a $/ \mathrm{p}$ ontaneous axis of converfion.

That this may be the cafe, it is neceffary, in the firt place, that the external force ast in a direction perpendicular to CG; for GI is always parallel to FP: it being a leading propofition in dynamics, that when a moving force atts on any part whatever of a folid body, unconnected with fixed points, the centre of gravity will proceed in a fraight line parallel to the direction of that force. In the next place GH mult be equal to GI ; that is, $\left(\mathrm{n}^{0} 21\right) \frac{m . G I . C P . C G}{\int p r^{2}}$ is equal to GI , or $\frac{m \cdot \mathrm{CP} \cdot \mathrm{CG}}{\int p r^{2}}=\mathrm{I}$, and $\mathrm{CP}=\frac{\int p r^{2}}{m \cdot \mathrm{CG}}$.

The equation $\mathrm{CP}=\frac{\int p r^{2}}{m \cdot \mathrm{CG}}$ gives us $m \cdot \mathrm{CG} . \mathrm{CP}$ $=\int p r^{2},=\int A \cdot \mathrm{CA}^{2}$. But it was fhown ( $\mathrm{n}^{\circ} 23$ ), that $/ \mathrm{A} \cdot \mathrm{CA}^{2}=\int \mathrm{A} \cdot \mathrm{GA}^{2}+m \cdot \mathrm{CG}^{2}$. Therefore $f \mathrm{~A} \cdot \mathrm{GA}^{2}=m . \mathrm{CG} \cdot \mathrm{CP}-m . \mathrm{CG} \cdot \mathrm{CG},=m . \mathrm{CG}$ $\mathrm{CP}-\mathrm{CG}),=n . \mathrm{CG}$. GP. Therefore we have (for another determination of the point of impulfe $P$ fo as to annihilate all preffure on the axis) $G P=$ $\frac{f \mathrm{~A} \cdot \mathrm{GA}^{2}}{m \cdot \mathrm{CG}}$. This is generally the mof eafily obtained, the mathematical fituation of the centre of gravity being well known.
$N . B$. When $\mathrm{CP}=\frac{\int p r^{2}}{m \cdot \mathrm{CG}}$, we fhall always have the velosity of the centre the fame as if the body were free, but there will always be a preffure on the points of fupport, unlefs FP be alfo perpendicular to CG. In other pofitions of FP the preffure on the axis, or on its points of fupport, will be $m$. GI $\times 2 \mathrm{fin}$. GCP.

It would be a defirable thing in our machines which, derive their efficacy from a rotatory motion, to apply the preflures arifing from the power and from the refift. ance oppofed by the work in fuch a manner as to annihilate or diminith this preffure on the fupports of the axis of motion. Attention to this theorem will point out what may be done; and it is at all times proper, nay neceffary, to know what are the preffures in the points of fupport. If we are ignorant of this, we fhall run the rifk of our machine failing in thofe parts; and our anxiety to prevent this will make us load it with needlefs and ill-difpofed Atrength. In the ordinary theories of machices, deduced entirely from the principles of equilibrium, the preffure on the points of fapport (exclufive of what proceeds from the weight of the machine itfelf) is ftated as the fame as if the moving and refifing forces were applied immediately to thefe points in their own directions. But this is in all cafes erronesus; and, in cafes of fwift motions, it is greatly fo. We may be convinced of this by a very fimple infance.

Suppofe a line laid over a pulley, and a pound weight Rotation. at one ead of it , and ten pounds at the other; the preffure of the axis on its fupport is eleven pounds, according to the ufual rule; whereas we fhall find it only $3 \frac{7}{7 x}$. For, if we call the radius of the pully 1 , the momentum of the moving force is $10 \times 1-1 \times 1,=$ s ; and the momentum of inertia is $10 \times \mathrm{I}^{2}+1 \times \mathrm{I}^{2}$ $\left(\mathrm{n}^{\mathrm{o}}\right.$ 18.) $=1 \mathrm{I}$. Therefore the angular velocity is $\frac{9}{\mathrm{~T}}$. But the diftance CG of the centre of gravity from the axis of motion is alfo $\frac{9}{T T}$, becaufe we may fuppofe the two weights in contact with the circumference of the pulley. Therefore the velocity of the centre of gravity is $\frac{9}{T T}, \times \frac{9}{T x}=\frac{8 x}{T_{2}^{2 i}}$ of its natural velocity. It is therefore diminifhed $\frac{40}{12 T}$ by the figure of the axis of the pulley, and the 11 pounds prefs it with $\frac{40}{12}$ of their weight that is, with $3 \frac{7}{T}$ pounds.

Since all our machines confift of inert matter, which cf know.
3uices force to put it in motion, or to fop it, or to ing the requires force to put it in motion, or to flop it, or to ing the change its motion, it is plain that fome of our natural momenpower is expended in producing this effeet ; and fince tum ofinthe principles of equilibrium only fate the proportion ertia; between the power and refiftance which will preferve the machine at reft, our knowledge of the actual performance of a machine is imperfect, unlefs we know how much of our power is thus employed. It is only the remainder which can be ftated in oppofition to the refiftance oppofed by the work. This renders it proper to give fome general propofitions, which enable us to compute this with eafe.

It would be very convenient, for inftance, to know And confefome point in which we might fuppofe the whole rota- quently the tory part of the machine concentrated ; becaufe then we forcenecefcould at once tell what the momentum of its inertia is, fary to and what force we muft apply to the impelled point of it the machine, in order to move it with the defired velocity.

Let $S$, fig. 3. be this point of a body turning round the fupported axis paffing through C ; that is, let S be fuch a point, that if all the matter of the body were collected there, a force applied at $P$ will produce the fame angular velocity as it would if applied at the fame point of the body having its natural form.

The whole matter being collected at S , the expreffion $\frac{m \text {. GI. CP }}{(p)}$ of the angular velocity becomes $\frac{m \text {. GI. CP }}{\text { a }}$
 fore $\int p r^{2}=m . \mathrm{CS}^{2}$, and $\mathrm{CS}=\sqrt{\frac{\int p r^{2}}{m}}$.

This point $S$ has been called the Centre of Gyration.

In a line or fiender rod, fuch as a working beam, or the fpoke of a wheel in a machine; CS is $\sqrt{\frac{\pi}{3}}$ of its length.

In a circle or cylinder, fuch as the folid drum of a capftan, C S $=\sqrt{\frac{1}{2}}$ its radius, or nearly $\frac{7}{10}$. But if it turns round one of its diameters, $\mathrm{CS}=\frac{1}{2}$ radius.

In the periphery of a circle, or rim of a wheel, $\mathrm{C} S$, $=$ radius nearly.
If it turn round a diameter, $\mathrm{CS}=\sqrt{\frac{1}{2}}$ radius. The furface of a fphere, or a thin fpherical fhell, turning round a diameter, has $C S=\sqrt{\frac{2}{3}}$ radius, or nearly $\frac{4}{5}$ or $\frac{5}{6}$.
A folid fphere turning round a diameter has CS $=\sqrt{\frac{2}{5}}$ radius, or nearly $\mathrm{T}_{\mathrm{T}}$. This is ufeful in the pro-

Lotation. $\underbrace{\text { ratarer }}$
blem of the preceffion of the equinoxes. We may obferve by the way, that if we confider the whirling body as a fy ftem of feveral bodies with rigid or inflexible connections, we may confider all the matter of each of thefe bodies as united in its centre of gyration, and the rotation of the whole will be the fame; for this does not change the value of $\frac{\int p r^{2}}{m}$.

There is another way of making this correction of - the motion of a machine, or allowing for the inertia of the machine itfelf, which is rather fimpler than the one now given. We can fuppofe a quantity of matter collected at the point to which the moving force is applied, fuch that its inertia will oppofe the fame refiftance to rotation that the machine does in its natural form. Suppofe the moving force applied at $P$, as before, and that inftead of the natural form of the body a quantity of matter $=\frac{\int p r^{2}}{C P}$, collected at $P$; the moving force will produce the fame angular velocity as on the body, in its natural form. For the angular velocity in this
 the fame as before.

A point $O$ may be found, at fuch a diftance from the axis, that if all the matter of the body were collected there, and an external force $m$. GI applied to it in a direction perpendicular or any how inclined to CO , it will produce the fame angular velocity as when applied to the centre of gravity $\mathbf{G}$, with the fame inclination to the line C G.

In this cafe, the angular velocity muft be $\frac{m \cdot \mathrm{GI} \cdot \mathrm{CO}}{m \cdot \mathrm{CO}^{2}}$ ( $\mathrm{n}^{\circ}$ 22.), which is $=\frac{\mathrm{GI}}{\mathrm{CO}}$. This mult be equal (by fuppofition) to the angular velocity where the fame force $m$. GI is applied in the fame inclination to G.The angular velocity in this cafe mult be $\frac{m \text {. GI. CG. }}{f p r^{2}}$ Therefore we have $\frac{\mathrm{GI}}{\mathrm{CO}}=\frac{m \cdot \mathrm{GI} \cdot \mathrm{CG}}{\rho p r^{2}}$, and $\frac{\mathrm{CO}}{\mathrm{GI}}=$ $\frac{\int p r^{2}}{m \cdot G I \cdot C G}$, and $\mathrm{CO}=\frac{\int p r^{2}}{m \cdot C G} \cdot$ Alfo, as in $n^{\circ} 31$. $\mathrm{GO}=\frac{\int \mathrm{A} \cdot \mathrm{GA}^{2}}{m \cdot \mathrm{CG}}$.

This point O has feveral remarkable properties.
In the firf place, it is the point of a common heavy body fwinging round C by its gravity, where, if all its weight be fuppofed to be concentrated, it will per- form its ofcillations in the fame time. For while the body has its natural form, the whole force of gravity may be fuppofed to be exerted on its centre of gravity. When the matter of the body is collected at O , the force of gravity is concentrated there alfo; and if CG have the fame inclination to the horizon in the firt cafe that CO has in the fecond, the action of gravity will be applied in the fame angle of inclination, and the two bodies will acquire the fame angular velocity; that is, they will defcend from this fituation to the vertical fituation (that is, through an equal angle) in the fame time. Thefe two bodies will therefore of cillate in equal times. For this reafon, the point $O$ fo taken in the line 1

CG, which is the radius vector of the centre of inertia, Rotation. that CO is equal to $\frac{\int \mathrm{A} \cdot \mathrm{CA}^{2}}{m \cdot \cdot \mathrm{CG}}$, or $\mathrm{GO}=\frac{\int A \cdot \mathrm{GA}^{2}}{m \cdot} \cdot$ is called the Centre of Oscillation of the body; and a heavy point fufpended by a thread of the length CO is called its equivalent or fynchronous pendulum, or the fimple pendulum, correfponding to the body itfelf, which is confidered as a compound pendulum, or as confifting of a number of fimple pendulums, which by their rigid connection difturb each other's motions.

That CO may be the equivalent pendulum, and 0 the centre of ofcillation, $O$ mult be in the line $C G$, otherwife it would not reft in the fame pofition with the body, when no force was keeping it out of its vertical pofition. The equation $\mathrm{CO}=\frac{\int A \cdot \mathrm{CA}^{2}}{m \cdot C G}$ only determines the diftance of the centre of ofcillation from the centre of fufpenfion, or the length of the equivalent fimple pendulum but does not determine the precife point of the body occupied by the centre of ofcillation; a circumftance alfo neceffary in fome cafes.

Mathematicians have determined the fituation of this Mode of ${ }^{4 \sigma}$ point in many cafes of frequent occurrence. Huyghens, determinin his Horologium Ofcillatarium, and all the beft writers ing its fituof treatifes of mechanics, have given the method of in- ation. veltigation at length. The general procefs is, to multiply every particle by the fquare of its diftance from the axis of fufpenfion, and to divide the fum of all thefe products by the product of the whole quantity of matter multiplied by the diftance of its centre of gravity from the fame axis. The quotient is the diftance of the centre of ofcillation, or the length of the equivalent. fimple pendulum : for $\mathrm{CO}=\frac{\int p \cdot r^{3}}{m \cdot \mathrm{CG}^{2}}$
a. If the body is a heavy Atraight line, fufpended by one extremity, CO is $\frac{2}{3}$ of its length.
6. This is nearly the cafe of a llender rod of a cylindrical or prifmatic fhape. It would be exactly fo if all the points of a tranfverfe fection were equally diftant from the axis of fufpenfion.
$c$. If the pendulum is an ifofceles triangle fufpended by its apex, and vibrating perpendicularly to its own plane, CO is $\frac{3}{4}$ of its height.
$d$. This is nearly true of a very flender triangle (that is, whofe height many times exceeds its bafe) fwinging round its vertex in any direction.
e. In a very dlender cone or pyramid fwinging from its vertex CO, is $\frac{4}{5}$ of its height nearly.
$f$. If a fphere, of which $r$ is the radius, be fufpended by a thread whofe weight may be neglected, and whofe length is $l$, the diftance between its centre of fufpenfion and centres of ofcillation is $a+r+\frac{2}{5} \frac{r^{2}}{a+r}$; and the diftance between its centers of bulk and ofcillation is $\frac{2}{5} \frac{r}{a+r}$. Thus, in a common fecond's pendulum, whofe length at London is about $39 \frac{\mathrm{x}}{\mathrm{x}}$ inches, the centre of ofcillation will be found about $\frac{x}{00}$ of an inch. below the centre of the ball, if it be two inches in diameter.
g. If the weight of the thread is to be taken into. the account, we have the following diftance between the centre of the ball and that of ofcillation, where B is the weight of the ball, $a$ the diltance of the point

## KOT

Rotation. $\underbrace{\text { Rotation }}$ ball, and $w$ the weight of the thread or rod, $\mathrm{GO}=\frac{\left(\frac{x}{3} w+\frac{2}{S} \mathrm{~B}\right) d^{2}-\frac{x}{0} w\left(a d+a^{2}\right)}{\left(\frac{1}{2} w+\mathrm{B}\right) a-\frac{x}{2} d w}:$ or, if we confidet the weight of the thread as an unit, and the weight of the ball as its multiple (or as expreffed by the number of times it contains the weight of the thread), $\mathrm{GO}=\frac{\frac{\frac{1}{6} a}{\mathrm{~B}+\frac{\mathrm{T}}{2}}}{}$.

As the point $O$, determined as above, by making $\mathrm{CO}=\frac{\int p r^{2}}{m \cdot \mathrm{CG}}$, is the centre of ofcillation of the body turning round C , fo C is the centre of ofcillation of the fame body turning round O : for, refuming A.CA in place of $p r$, we have $\int A . \mathrm{CA}^{2}=m . \mathrm{CO} . \mathrm{CG} . \quad$ Now $\int \mathrm{A} . \mathrm{CA}^{2}=\int, \mathrm{A} . \mathrm{OA}^{2}+\int \mathrm{A} . \mathrm{OC}^{2}-\int \mathrm{A} . \mathrm{OC.}^{2} \mathrm{O}$ й, (Euclid, II. 12. I3.), or $m . \mathrm{CO} . \mathrm{CG}=\int \mathrm{A} . \mathrm{OA}^{2}+\int \mathrm{A}$. $\mathrm{OC}^{3}-f \mathrm{~A} . \mathrm{OC} .20 \dot{d} . \quad \mathrm{But} f \mathrm{~A} . \mathrm{OC}^{2}=m . \mathrm{OC}^{2},=m$. OC.OC; and (by the nature of the centre of gravity) fA.OC. 20 áa $=m$. OC. 2 OG. Therefore we have $m . \mathrm{CO} . \mathrm{CG}=\int \mathrm{A} . \mathrm{OA}^{2}+m . \mathrm{OC} . \mathrm{OC}-m . \mathrm{OC} .2 \mathrm{OG}$; and $\int$ A. $\mathrm{OA}^{2}=m . \mathrm{OC} . \mathrm{CG}+m . \mathrm{CO} .2 \mathrm{OG}-m \mathrm{CO} . \mathrm{CO}$, $=m . \mathrm{CO}(\mathrm{CG}+2 \mathrm{OG}-\mathrm{CO})$. But $\mathrm{CG}+2 \mathrm{OG}$ is equal to $\mathrm{CO}+\mathrm{OG}$, and $\mathrm{CG}+2 \mathrm{OG}-\mathrm{CO}$ is equal to OG. Therefore $\int \mathrm{A} . \mathrm{OA}^{2}=m . \mathrm{CO} .0 \mathrm{G}$, and $\mathrm{CO}=\frac{\int \mathrm{A} . \mathrm{OA}^{2}}{m}$, which is all that is wanted (according to $\mathrm{n}^{\circ} 39$.) to make C the centre of ofcillation when O is the centre of furpention.

If the point of farpenfion, or axis of rotation, be anywhere in the circumference of a circle of which G is the centre, the point O will be in the circumference of another circle of which $G$ is the centre: for, by $\mathrm{n}^{\circ} 38$. $\mathrm{GO}=\frac{\mathrm{SA}^{\mathrm{SA}} \mathrm{GA}^{2}}{m \cdot \mathrm{CG}} \quad$ Now $/ \mathrm{A} \cdot \mathrm{GA}^{2}$ is a fixed quantity; and therefore while CG is contant, OG will alfo be contant.
We may allo obferve that the diftance of the axis from the centre $S$ of gyration is a mean proportional between its ditance from the centre G of gravity and the centre O of ofillation: for we had ( $\mathrm{n}^{\circ}$ $\mathrm{CS}^{2}=\frac{\int p r^{2}}{m}$, and $\mathrm{CO}=\frac{\int_{p}-r^{2}}{m \mathrm{CG}}$, and therefore $\operatorname{CO} . C G=\frac{\int p r^{2}}{m}=$ CS $^{2}$ and $\mathrm{CO}: \mathrm{CS}=\mathrm{CS}: \mathrm{CG}$.
We fee alfo that the diflance $\mathbf{C O}$ is that at which an external force muft be applied ; fo that there may not be any preffure excited in the axis upon its points of fupport, and the axis may be a fpontaneous axis of converfion. This we learn, by comparing the value of CO with that of CP in art. 30 . This being the cafe, it follows, that if an external force is applied in a direction paffing thro' O , perpendicular to CO , it will produce the fame initial velocity of the centre as if the body were free: for as it exerts no preffure on the points of fupport, the initial motion mult be the fame as if they were not there.

If the external force be applied at a greater diftance in the line CG, the velocity of the centre will be greater than if the body were free. In this care the preffure excited in the axis will be backward, and confequently the points of fupport will re-act forward, and this re-action will be equivalent to another external
force confpiring with the one applied at 0 . curious confequences may be deduced from this.

If the external force be applied to a point in the Why this line GC, lying beyond C , the motion of the centre will point is be in the oppofite direction to what it would have ta-fometimes ken had the body been free, and fo will be the preffures exerted by the points of fupport on the axis.

A force $m$. GI applied at P produces the initial progreffive motion m.GH; and any force applied at O , perpendicular to CG, produces the fame motion of the centre as if the body were free. Therefore a force $m . \mathrm{GH}$ applied thus at O will produce a motion $m . \mathrm{GH}$ in the centre, and therefore the fame motion which $m$.GI applied at P would produce ; and it will produce the momentum $m$.GI at $P$. Therefore if a force equal to the progreffive motion of the body be applied at $O$, perpendicularly to CO , in the oppofite direction, it will fop all this motion without exciting any frain on the axis or points of fupports. Therefore the equivalent of all the motions of each particle round $C$ is conceived as paffing through $O$ in a direction perpendicular to CO ; and the blow given by that point to any body oppofed to its motion is confidered as equal to the compounded effect of the rotatory motion, or to the progreffive motion of the body combined with its rotation.

For fuch reafons $O$ has been called the Centre of ImpropriePercussion of the body turning round C. But the ty of the name of centre of momentum, or rotatory effort, would have term. $j$ been more proper.

We can feel this property of the point $O$ when we give a fmart blow with a ftick. If we give it a motion round the joint of the wrif only, and frike fmartly with a point confiderably nearer or more remote than $\frac{2}{3}$ of its length, we feel a painful thock or wrench in the hand; but if we frike with that point which is precifely at $\frac{2}{3}$ of its length, we feel no fuch difagreeable Arain.

Mechanical writers frequently fay, that $O$ confidered as the centre of percuffion, is that with which the moft violent blow is ftruck. But this is by no means true; $O$ is that point of a body turning round $C$ which gives a blow precifely equal to the progreffive motion of the body, and in the fame direction. As we have already faid, it is the point where we may fuppofe the whole rotatory momentum of the body accumulated. Every particle of the body is moving in a particular direction, with a velocity proportional to its diftance from the axis of rotation; and if the body were ftopped in any point, each particle tending to continue its motion endeavours to drag the reft along with it. Whateger point we call the centre of percuffion fhould have this property, that when it is Itopped by a fufficient force, the whole motion and tendency to motion of every kind fhould be ftopped; fo that if at that inftant the fupports of the axis were annihilated, the body would remain in abfolute ref.

The confideration of a very fimple cafe will fhow Centre of that this point of foppage cannot be taken indifferently. percuffion, Suppofe a fquare or rectangular board $\mathrm{CDD}^{\prime} \mathrm{C}^{\prime}$, fig. 4 . how deadvancing in the direction $G H$, perpendicular to its fined. plane, without any rotation. Let $G$ be the centre of gravity, and the middle of the board. It is evident, that if a force be applied at $G$, in the direction $H G$,

## ROT [ 5II ] ROT

$\underbrace{\text { Rotation. }} \begin{aligned} & \text { and equal to the quantity of motion of the board, all } \\ & \text { motion will be ftepped : for when the point } G \text { is fop- }\end{aligned}$ motion will be ftcpped : for when the point $G$ is fopped, no reafon can be affigned why one part of the thing mult happen if the board be fopped by a ftraight edge put in its way, and paffing through G: for example, in the line LGM, or $g \mathrm{G} h$. But if this edge be fo placed that the board flall meet it with the line IPK, then, becaufe this line dues not divide it equally, and becaufe there is a greater quantity of motion in the part $\mathrm{CIKC}^{\prime}$ than in the part IDD'K, though the progreffive motion may be foopped, the upper part will advance, and a motion of rotation will commence, of which IK will be the axis. Now fuppofe that the board, inftead of having been moving along in the direction GH, every part with the fame velocity had been fwinging round the axis CC like a pendulum, from the pofition $\mathbf{C} d d^{\prime} \mathrm{C}^{\prime}$, and that it is ftopped by a ftraight edge meeting it in the line LGM parallel to $\mathrm{CO}^{\prime}$, in the moment that it has attained the vertical pofition CDD'C'; all. its motion will not be ftopped: for, although LGM divides the board equally, there is more motion in the lower part LDD'M than in the upper part CLMC' becaufe every particle of the lower part is defcribing larger circles and moving fwifter. Therefore when the line LGM is ftopped, there will be a tendency of the lower part to advance, and the pivots C and ' $\mathbf{C}^{\prime}$ of the axis will be preffed backwards on their holes; and if the holes were at that inftant removed, a rotation would commence, of which LM is the axis. The board mult therefore be fopped in fome line IPK below LGM, and fo fituated, that the fum of all the momenta on each fide of it fhall be equal. This alone can hinder a rotation round the axis IPK. From what has been already demonitrated, it appears, that this will be prevented if the edge meets the board in a line IPK paffing through $O$ the centre of ofcillation, which is fituated in the li:ic $g$ Gbpaffing through the centre of gravity perpendicular to the axis CC'. This line IOK may therefore be called the line or axis of percuffion.

But any point of this line will not do. It is evident that if the board fhould meet the fixed edge in the line $g \mathrm{GO} b$, all motion will be flopped, for the motions on each fide are equal, and neither can prevail. But if it be flopped in the line $p \mathrm{Pq}$, there is more motion in the part $p q \mathrm{D}^{\prime} \mathrm{C}^{\prime}$ than in the part $p q \mathrm{DC}$; and if the fupports at C and $\mathrm{C}^{\prime}$ were that inftant taken away, there would commence a rotation round the axis $p q$. Confequently, if the body were not fopped by an edge, but by a fimple point at P , this rotation would take place. The motions above and below P would indeed balance each other, but the motions on the right and left fides of it would not. Therefore it is not enough for determining the centre of percuftion that we have afcertained its diftance $g \mathrm{O}$ from the axis of rotation by the equation $g \mathrm{O}=\frac{\int p r^{2}}{m \cdot g \mathrm{G}}$. This equation only gives us the line 10 K parallel to $\mathrm{CC}^{\prime}$, but not the point of percuffion. This point (fuppofe it $P$ ) mult be fuch that if any line $p \mathrm{P} q$ be drawn through it, and confidered as an axis round which a rotation may commence, it /ball not commence, becaufe the fum of all the momenta round this axis on the right fide is equal to the

## what manner this condition may be fecured.

Let there be a body in a fate of rotation round the
Rotation. axis $\mathrm{D} d$ (fig. 5.), and let G be its centre of gravity, and CGO a line through the centre of gravity perpendicular to the axis DC d. At the moment under confideration, the centre of gravity is moving in the direction GH , perpendicular to the radius vector GC , as alfo perpendicular to a plane paffing through the lines $\mathrm{D} d$ and CG. Let O be the centre of ofcillation. Draw the line $n \mathrm{O}$ parallel to $\mathrm{D} d$. The centre of percuffion mult be fomewhere in this line. For the point of percuffion, wherever it is, mult be moving in the fame direction with the progreffive motion of the body, that is, in a direction parallel to GH , that is, perpendicular to the plane DCG. And its diftance from the axis $\mathrm{D} d$ mult be the fame with that of the centre of ofcillation. Thefe conditions require it therefore to be in fome point of $n \mathrm{O}$. Suppofe it at P . Draw $\mathrm{P} p$ perpendicular to $\mathrm{D} d$. P muft be fo fituated, that all the momenta tending to produce a rotation round the line $p$ P may balance each other, or their fum total be nothing.

Now let A be any particle of the body which is out of the plane DCG, in which lie all the lines CGO, $p \mathrm{P}, n \mathrm{OP}, \& \mathrm{c}$. Draw its radius vector $\mathrm{A} a$ perpendicular to $\mathrm{D} a$, and draw $a n$ parallel to CG, and therefore perpendicular to $\mathrm{D} a$. The plane $\mathrm{A} a n$ is perpendicular to the plane Dan (Euclid, XI. 4). Draw AL perpendicular to $\mathrm{A} a$, and $\mathrm{A} /$ perpendicular to an. Then, while the body is beginning to turn round $\mathrm{D} d$, the incipient motion of the particle A is in the direction AL, perpendicular to its radius vector A $a$. This motion AL may be confidered as compounded of the motion Al, perpendicular to the plane DCG, and the motion /L in this plane. It is evident that it is A $l$ only which is oppofed by the external force ftopping the body at P , becaufe $\mathrm{A} l$ alone makes any part of the progreflive motion of the centre of gravity in the direction GH.

We have hitherto taken the radii vectores for the meafures of the velocities or motions of the particles. Therefore the quantity of motion or the moving force of A is $\mathrm{A} . \mathrm{A} a$, and this is exerted in the direction AL, and may be conceived as exerted on any point in this line, and therefore on the point L. That is, the point L might be confidered as urged in this direction with the force A.A $a$, or with the two forces of which the force A.A $a$ is compounded. The force in the direction AL is to the force in the direction $\mathrm{A} l$ as AL to $\mathrm{A} l$, or as $a \mathrm{~A}$ to $a l$, becaure the triangles $\mathrm{A} / \mathrm{L}$ and al A are fimilar. Therefore, inftead of fuppofing the point L urged by the force A.A $a$, acting in the direction $A L$, we naay fuppofe it impelled by the force A.al, acting perpendicularly to the line $A l$, or to the plane DCG, and by the force A.A $l$ acting in this plane, viz. in the direction $\mathrm{L} n$. This laft force has nothing to do with the percuffion at P. Therefore we need confider the point $L$ as only impelled by the force. A.A : The momentum of this force, or its power to urge the plane DCG forward in the direction GH, by turning it round $\mathrm{D} d$, muft be A.al.aL. (N. B. This is equal to A.A $a^{2}$, becaufe $a l: a \mathrm{~A}=a \mathrm{~A}: a \mathrm{~L}$, and A.A $a^{2}$, has been flown long ago to be the ge.
neral

## $\mathrm{RO} \mathrm{T} \quad\left[\begin{array}{c}512\end{array}\right] \quad \mathrm{RO} \mathrm{T}$

Rotation. neral expreffion of the rotatory momentum of a particle).

Draw $\dot{L} m$ perpendicular to $P p$. If we confider $P_{p}$ as an axis about which a motion of rotation may be produced, it is plain that the momentum of the point $L$ to produce fuch a rotation will be A.al. Lm. In like manner, its momentum for producing a rotation round $n \mathrm{P}$ would be A.al.Ln. In general, its momentum for producing rotation round any axis is equal to the product of the perpendicular force at $L$ (that is, A.al) and the diftance of $L$ from this axis.

In order therefore that P may be the centre of percufion, the fum of all the forces A.al.Lm muft be equal to nothing; that is, the fum of the forces A.al. $\mathrm{L} m$ on one fide of this axis $\mathrm{P}_{p}$ muft be balanced by the fum of forces $A^{\prime} \cdot a^{\prime} l . L^{\prime} m^{\prime}$ on the other fide. To exprefs this in the ufual manner, we mult have fA.al. $n \mathrm{P}=0$. But $n \mathrm{P}=n \mathrm{O}$-OP. Therefore $\int \mathrm{A} \cdot a \ln \cdot n \mathrm{O}-\int \mathrm{A} \cdot a l . \mathrm{OP}=0$, and $\int \mathrm{A} \cdot a l \cdot n \mathrm{O}=$ fA.al.OP. But OP is the fame wherever the particle A is fituated; and becaufe G is the centre of gravity, the fum of all the quantities A. $a l$ is $m . \mathrm{GC}, m$ being the quantity of matter of the body; that is, $\int \mathrm{A} . a l=m . \mathrm{GC}$, and $\int \mathrm{A} . a l . \mathrm{OP}=m . \mathrm{GC} . \mathrm{OP},=$ $\int \mathrm{A} . a \ln n \mathrm{O}$. Hence we derive the final equation $\mathrm{OP}=\frac{\int \mathrm{A} \cdot a \ln \mathrm{n} \mathrm{O}}{m \cdot \mathrm{GC}}$.

Therefore the centre of percufion $P$ of a body turning round the axis $\mathrm{D} d$ is determined by thefe conditions: ift, It is in the plane DCG, paffing through the axis and the centre of gravity; 2 d , It is in a line $n \mathrm{O}$ pafling through the centre of ofcillation, and parallel to the axis, and therefore its difance $\mathbf{P} p$ from the axis of rotation is $\frac{\int \mathrm{A} \cdot \mathrm{A} a^{2}}{m . \mathrm{CG}}$; and, $3^{\mathrm{d}}$, Its diftance OP from the centre of ofcillation is $\frac{f \mathrm{~A} \cdot a \ln \mathrm{O} \mathrm{O}}{m . \mathrm{CG} .}$.

## 54 How both

In order therefore that the centres of ofcillation and centres co- percuffion may coincide, or be one and the fame, op incide. muft vanifh, or SA.al. $n \mathrm{O}$ mult be equal to nothing, that is, the fum of all the quantities A.al. $n \mathrm{O}$ on one fide of the line CO muft be equal to the fum of all the quantities $\mathrm{A}^{\prime} \cdot a^{\prime} l^{\prime} \cdot n^{\prime} \mathrm{O}$ on the other fide.

Let $\mathrm{D} d d \Delta$ be a plane paffing through the axis $\mathrm{D} d$ perpendicular to that other plane DCG through it, in which the centre of gravity is fituated, and $\operatorname{let} \mathrm{C} g_{2} x$ be a third plane pafting through the centre of gravity perpendicular to both the planes $D d \delta \Delta$ and DCG. Draw $l r$ and $a$ a perpendicular to $a \mathrm{~L}$, and $r$ a perpendicular to c , and then draw $\mathrm{A} \alpha, \mathrm{A}_{\dot{\alpha}}$ perpendicular to $a \dot{a}$ and $r \dot{\alpha}$. It is evident that $\mathrm{A}_{a}$ and $\mathrm{A}_{\dot{\alpha}}$ are refpectively equal to $a l$ and $l r$, or to $a l$ and $n o$; fo that the two factors or conflituents of the momentum of a particle A round the centre of percuffion are the diftances of the particle from the planes $\mathrm{D} d \delta \Delta$ and $x \operatorname{cg} \gamma$, both of which are perpendicular to that plane through the axis in which the centre of gravity is placed.

We may fee, ffrom thefe obfervations, that the centres of ofcillation and percuffion do not neceffarily coincide, and the circumftance which is neceffary for their coincidence, viz. that $\int \mathrm{A} . \mathrm{A}_{\mathrm{a}}, \mathrm{A} \dot{\delta}$ is equal to O . It is of importance to keep this in mind.
There occurs here another obfervation of great importance. Since every force is balanced by an equal
force acting in the oppofite direction, and fince all mn- Rotation. tion progreflive and rotatory is fopped by an external force applied at P in the direction $q \mathrm{P}$, it follows that, if the body were at relt, and the fame force be applied there, it will fet the body in rotation round the axis $\mathrm{D} d$, in the oppofite direction, with the fame angular velocity, and without any preflure on the pivots $D$ and d. For whatever motion of the particla $A$, in the direction $A L$, was fopped by a part of the external force applied at $P$, the fame motion will be produced by it in the quiefcent particle $A$ in the oppofite direction LA. And as the pivots $D$ and $d$ had no motion in the cafe of the body turning round them, they will acquire no motion, or will have no tendency to motion, or no preffare will be exerted on them, in the laft cafe. Therefore when an external force is applied at $P$ in a direction perpendicular to the line $\mathrm{P} p$, the line $\mathrm{D} d$ will become a momentary fontaneous axis of converfion, and the incipient motion of the body will perfectly refemble the rotation of the fame body round a fixed axis $\mathrm{D} d$.

There is another fet of forces of which we have as yet taken no notice, viz. that part of each force AL which is directed along the plane DCG, and is reprefented by $l \mathrm{~L}$ when the whole force is reprefented by $A L$, or by $A l$ when the whole force is reprefented by A $a$. Thefe forces being all in the plane DCG, and in the direction CG or GC, can have no effect on the rotation round any axis in that plane. But they tend, feparately, to produce rotation round any axis pafing through this plane perpendicularly. And the momentum of $A$ to produce a rotation round an axis perpendicular to this plane, in O for inftance, muft evidently be $A: A / . n O$, and round $P$ it muft be $A . A / . n P$, \&c. We thall have occafion to confider thefe afterwards.

It is ufual in courfes of experimental philofophy to ofbalis and illuftrate the motions of bodies on mclined planes and cylinders curved furfaces by experiments with balis rolling down rolling thefe furfaces. But the motions of fuch rolling balls down inare by no means jult reprefentations of the motions clined they reprefent. The ball not only goes down the inclined plane by the action of gravity, but it alfo turns round an axis. Force is neceffary for producing this rotation; and as there is no other fource but the weight of the ball, part of this weight is expended on the rotation, and the remainder only accelerates it down the plane. The point of the ball which refts on the plane is hindered from lliding down by friction; and therefore the ball tumbles, as it were, over this point of contact, and is inftantly catched by another point of contact, over which it tumbles in the fame manner. A cylinder rolls down in the very fame way; and its motion is nearly the fame as if a fine thread had been lapped round it, and one end of it made faft at the bead of the inclined plane. The cylinder rolls down by unwinding this thread.

The mechanifm of all fuch motions (and fome of Mechanifm them are important) may be underftood by confidering of thefe them as follows: Let a body of any fhape be connect-motions. ed with a cylinder FCB (fig. 6.) whofe axis paffes through $G$ the centre of gravity of the body. Suppofe that body fufpended from a fixed point $A$ by a thread wound round the cylinder. This body will defcend by the action of gravity, and it will alfo turn round, unwinding the thread. D:aw the horizontal

## R OT <br> $\left[\begin{array}{lll}513 & \\ 5\end{array}\right.$ <br> R OT

Kotation, line OGC. It will pafs through the point of contact C of the thread and cylinder, and C is the point round which it begins to turn in defcending. Let O be its centre of of cillation correfponding to the momentary centre of rotation C. It will begin to defcend in the fame manner as if all its matter were collected in O : for it may be confidered, in this inftant, as a pendulum fufpended at C . But in this cafe O will defcend in the fame manner as if the body were falling freely. Therefore the velocity of G (that is, the velocity of defcent) will be to the velocity with which a heavy body would fall as CG to CO. Now fince the points C, G, $O$, are always in a horizontal line, and the radius CG is given; as alfo $\mathrm{CO}\left(1^{\circ} 4^{8 .}\right.$.) the velocity of a body falling freely, and of the body unwinding from this thread, will always be in the fame proportion of CO to CG, and fo will the fpaces defcribed in any given time. And thus we can compare their motions in every cafe when we know the place of the centre of ofcillation.

Cor. I. The weight of the defcending body will be to the tenfion of the thread as CO to GO : for the tenfion of the thread is the difference between the momentum of the rolling body and that of the body falling freely.
Obferve, that this proportion between the weight of the body and the tenfion of the thread will be always the fime: for it has been demonftrated already, $\mathrm{n}^{\circ} 4^{2}$. that if C be in the circumference of a circle whofe centre is $\mathrm{G}, \mathrm{O}$ will be in the circumference of another circle round the fame centre, and therefore the ratio of CG to CO is conftant.
Cor. 2. If a circular body FCB roll down an inclined plane by unfolding a thread, or by friction which prevents all fliding, the fipace defcribed will be to that which the body would defcribe freely as CG to CO: for the tendency down the inclined plane is a determined proportion of $t^{\text {l}} \mathrm{l}$ e weight of the body. The motion of rotation ill thefe cafes, both progrefive and whirling, is unionrmiy acc-lerated.

Something of the fame kind cbtains in common pendulous bodies. A ball hung by a thread not only ofcillates, but alfo makes part of a rotation; and for this reafon its ofollations differ from thofe of a heavy point hanging by the tame thread, and the centre of ofcill:tion is a little below the centre of the ball. A ball hung by a thread, and offillating between cycloidal checks, does not ofcillate like a body in a cycloid, becaufe is centre of of:lhation is continually fiftires its place. Huyghens aveiuad this by fulpending his pendulous body from two points, to that it did not charge its attitude during its ofcillation. lf our fpringcarriages were hung in this manner, having the four lower ftap'c, to which the ftraps are fixed as far afunder as the four upper flaples a: the ends of the fprings, the body of the cartiage would perform its cfcillations without kicking up and dnwn in the difagreeable manner they now do, by whith we are frequently in danEer of Ariking the glafles with our heads. The fwings would indeed be greater, but incomparably eafier; and we could hold things almofi as feadily in our hand as if the carriage were not fiwinging at all.
This will fuffice for an account of the rotation round fixed axes, as the fuundation for a theory of machines actually performing work. The limits of our under-

Vol. XVI.
taking will not allow us to do any more than jult point Rotation. out the method of apply ing it.

Let there be any machiic of the rotatory kind, i. c. Nethed of compofed of levers or wheels, and let its conftrucion be applyine fuch, that the velocity of the point to which the power this thecty is applied (which we fhall call the imbelled foint) is to the velocity of the working point in the ratio ( $\% m$ to n. It is well known that the energy of this machine will be the fame with that of an axis ir peritrochio, of which the radii are $m$ and $n$.

Let $p$ exprefs the actual preffure exerted on the impelled point by the moving powcr, and let $r$ be the aftual preflure or refiftance exerted on the workirs point by the work to be performed. Let $:$ be the inertia of the power, or the quantity of dead matter which mult move with the velocity of the impelle. point in order that the moving power may act. Thas the moving power may be the wwighlt of a bucket of water in a water-wheel; then $x$ is the quantity of matter in this bucket of water. Let $y$ in like manner be the inertia of the work, or matter which muft be moved wich the velocity of the working-point, in arde: that the work may be performed. Thus $y$ may be : quantity of water which muft be continually pulhed along a pipe. This is quite different from the weigint of the water, though it is proportional to it, and may be meafured by it.

Let $f$ be a preffure giving the fame refiftance when applied at the working-point with the friction of the machine, and let $a n^{2}$ be the momentum of the machine's inertia, viz. the fame as if a proper quantity of matter $a$ were attached to the working-point, or to any point at the fame diftance from the axis.

This fate of things may be reprefented by the wheel and axle PQS (fig. 7.) where $x$ and $y$ and $a$ are reprefented by weights acting by lines. $P$ is the impelled point, and $R$ the working-point; $C P$ is $m$ and CR is $n$. The moving force is reprefented by PA, the refiltance by RB , and the friction by BF .

It is evident that the momentum of the inertia of $x, y$, and $a$ are the fame as if they were for a moment attached to the points $P$ and $R$.

Hence we derive the following expreffions,
I. The angular velocity $=\frac{p_{m}-\overline{r+f n}}{x m^{2}+\overline{y+a n^{2}}}$.
2. Velocity of the working.point $=\frac{p^{m n}-\overline{r+f} n^{2}}{x m^{2}+y+a i^{2}}$.
3. Work performed $=\frac{p m n r-\overline{r+f^{2}}{ }^{2} r}{x m^{2}+y+a n^{2}}$. For the

Formulx , and their ufe in prac-
tice. ${ }^{6} 5$
work is proportional to the product of the refiftance and the velocity with which it is overcome.
We fhall give a very fimple example of the utility of thefe formulx. Let us fuppofe that water is to be raifed in a bucket by the defcent of a weight, and that the machine is a fimple pulley. Such a machine is defcribed by Defaguliers *, who fays he found it prefer- *xper. able to all other machines. The bucket dipped itfelf phil. vol. in the ciftern. A chain from it went over a pulley, and at its extremity was a flage on which a man could fep from the head of a fair. His preponderance brought down the ftage and raifed the bucket, which difcharged its water into another ciftern. The man quitted the ftage, and walked up fairs', and there he found 3 T

## R O T

- tation. it ready to receive him, becaufe the empty bucket is made heavier than the empty ftage.

Now, if there be no water in the bucket, it is evident, that although the motion of the machine will be the quickeft poffible, there will be no work performed. On the other hand, if the loaded itage and the full bucket are of equal weight, which is the ufual fatement of fuch a machine in elementary treatifes of mechanics, the machine will fand fill, and no work will be performed. In every intermediate flate of things the machine will move, and work will be performed. Therefore the different values of the work performed muft be a feries of quantities which increafe from nothing to a certain magnitude, and then diminifh to nothing again. The maxim which is ufually received as a fundamental propofition in mechanics, viz. that what is gained in force by the intervention of a machine is lof in time, is therefore falfe. There muft be a particular proportion of the velocities of the impelled and workingpoints, which will give the greateft performance when the power and refiltance are given; and there is a certain proportion of the power and refiftance which will have the fame effect when the fructure of the machine has previounly fixed the velocities of the impelled and working points.
This proportion will be found by treating the formula which expreffes the work as a fluxionary quantity, and finding its maximum. Thus, when the ratio of the power and refiftance is given, and we wifh to know what mult be the proportion of the velocities $m$ and $n$, that we may conftruct the machine accordingly, we have only to confider $n$ as the variable quantity in the third formula. This gives us

$$
n=m \times \frac{\sqrt{x^{2} \times r+f^{2}+p^{2} x} \frac{a+y}{p a+y}-x r+f}{}
$$

This is a fundamental propofition in the theory of working machines: but the application requires much attention. Some natural powers are not accompanied by an inertia worth minding; in which cafe $x$ may be omitted. Some works, in like manner, are not accompanied by any inertia; and this is a very general cafe. In many cafes the work exerts no contrary ftrain on the machine at reft, and $r$ is nothing. In moft inflances the intenfity of the power varies with the velocity of the impelled point, and is diminifhed when this increafes ; the refiftance or actual preffure at the work-ing-point frequently increafes with the velocity of the working-point. All thefe circumftances mult be attended to; but fill they only modify the general propofition. Thefe are matters which do not come within the limits of the prefent article. We only took this opportunity of fhowing how imperfect is the theory of machines in equilibrio for giving us any knowledge of their performance or juft principles of their conftruction.

One thing, however, muft be particularly attended to in this theory. The forces which are applied to the body moveable round an axis are confidered in the theory as preffures actually exerted on the impelled points of the body or machine, as when a weight is appended to a lever or wheel and axle, and, by defcending uniformly, acts with its whole weight. In this cafe the weight multiplied by its diftance from the axis will always exprefs its momentum, and the rotation will (ca-
teris paribus) be proportional to this product. But in many important cafes our machines are actuated by external impulfions. A body in motion frikes on the impelled point of the machine, and caufes it to turn round its axis. It is natural for us to confider the quantity of motion of this impelling body as the meafure of our moving force. Suppofing $n$ to be its quantity of matter, and V its velocity, $n \mathrm{~V}$ appears a very proper meafure of its intenfity. And if it be applied at the diftance CP from the axis of rotation, $n \mathrm{~V} \cdot \mathrm{CP}$ fhould exprefs its energy, momentum, or power to turn the machine round C ; and we fould exprefs the angular velocity by $\frac{n \mathrm{~V} \cdot \mathrm{CP}}{f p^{2}}$. Accordingly, this is the manner in which calculations are ufually made for the conftruction and performance of the machine, as may be feen in almoft every treatife of mechanics.

But nothing can be more erroneous, as we fhall fhow shown to by a very fimple inftance. It fhould refult from thefe be erroneprinciples that the angular velocity will be proportional ous.
to CP. Let us fuppofe our moving power to be a ftream of water moving at the rate of ten feet per fecond, and that every fecond there paffes 100 pounds of water. We fhouid then call our moving force 1000 . It is evident, that if we fuppofe the arm of the floatboard on which it frikes to be infinitely long, the impelled point can never move fafler than Io feet in a fecond, and this will make the angular velocity infinitely fmall, inftead of being the greateft of all. The rotation will therefore certainly be greater if CP be fhorter. We need not examine the cafe more minutely.

We muft therefore carefully diftinguifh between the quantity of motion of the impelling body and its moving power, as it is modified by its manner of acting. The moving power is the preffure aqually exerted on the impelled point of the machine. Now the univerfal fact of the equality of action and reaction in the collifion of bedies affures us, that their mutual preffure in their collifion is meafured by the cbange of motion which each fuftains: for this change of motion is the only indication and meafure of the preffure which we fuppofe to be its caufe. A way therefore of afcertaining what is the real moving force on a machine actuated by the impulfion of a moving body, is to difcover what quantity of motion is loft by the body or gained by the machine; for thefe are equal. Having difcovered this, we may proceed according to the propofitions of rotatory mo. tion.
Therefore let AEF (fig. 8.) reprefent a body moveable round an axis paffing through C, perpendicular to the plane of the figure. Let this body be fruck in the point $A$ by a body moving in the direction FA, and let BAD be a tangent to the two bodies in the point of collifion. It is well known that the mutual actions of two fclid bodies are always exerted in a direction perpendicular to the touching furfaces. Therefore the mutual preffure of the two bodies is in the direction AP perpendicular to AD . Therefore let the motion of the impelling body be refolved into the directions $A P$ afid AD. The force AD has no thare in the preffure. Therefore let $V$ be the velocity of the im. pelling body eftimated in the direction AP, and let $n$ be its quantity of matter. Its quantity of motion in the direction AP will be $n \mathrm{~V}$.

Did AP pafs through C, it is evident that the only
effect

## R O T <br> [515] <br> R O.T

notation. effect would be to prefs the axis on its fupports. But $\sim^{A P}$, the diretion of the preffure, being inclined to $A C$, the point $A$ is forced alide, and in fome fmall moment of time defcribes the little arch $\mathrm{A} a$ round the centre $C$. The point $P$ will therefore defcribe a fmall arch $\mathrm{P}_{\rho}$, fubtending an angle $\mathrm{PC}_{p}=A \mathrm{C} a$. Draw ao perpendicular to AP , and $a d$ perpendicular to AD . The triangles $d \mathrm{~A}, A C P$ are fimilar, and $A a: \mathrm{A}_{0}=$ $\mathrm{AC}: \mathrm{CP}$. But the angles $\mathrm{AC} a, \mathrm{PC} p$ being equal, the arches are as their radii, and $\mathrm{A} a: \mathrm{P}_{i}=A \mathrm{C}: \mathrm{CP}$, $=\mathrm{A} a: \mathrm{A}_{0}$; therefore $\phi p=\mathrm{A} 0$.

Now fince, in confequence of the impulfe, $A$ defcribes A $a$ in the moment of time, it is plain that $A_{o}$ is the space through which the impelling body continues to advance in the direction of the preffure; and if V be taken equal to the face which it defcribed in an equal moment before the Aroke, $v$ will exprefs the remaining relncity, and $\mathrm{V}-\mathrm{v}$ is the velocity lof, and $n(\mathrm{~V}-v)$ is the quantity of motion loft by the impelling body, and is the true meafure of the preffure exerted. This gives us the whole circum!tances of the rotatory motion. The angular velocity will be $\frac{n(\mathrm{~V}-v) \cdot \mathrm{CP}}{\int p r^{2}}$, and the velocity of the point $A$ will be $\frac{n(V-v) \cdot C P \cdot C A}{\int p r^{2}}$. Call this velocity $u$. The fimilarity of triangles gives us CA: $\mathrm{CP}=\mathrm{A} a($ or $u): \mathrm{A}_{0}($ or $v)$ and $u=\frac{v . \mathrm{CA}}{\mathrm{CP}}$. There. fore $\frac{\mathrm{V} \cdot \mathrm{CA}}{\mathrm{CP}^{2}}=\frac{n(\mathrm{~V}-v) \mathrm{CP} \cdot \mathrm{CA}}{\int \notin r^{2}}$. From this we deduce $v=\frac{n \cdot \mathrm{~V} \cdot \mathrm{CP}^{2}}{\int p r^{2}+n \cdot \mathrm{CP}^{2}}$, and thus we have obtained the value of $v$ in known quantities; for $n$ was given, or fuppofed known; fo alfio was $V$ : and fince the direstion FA was given, its difance CP from the axis is given; and the form of the body being known, we can find the value of $\int p r^{2}$. Now we have feen that $v$ is alfo the velocity of the point $P$; therefore we know the abfolute velocity of a given point of the body or machine, and confequently the whole rotatory motisn.

We have the angular velccity $=\frac{n \mathrm{~V} \cdot \mathrm{CP}}{\sqrt{\rho^{2}}+n \cdot \mathrm{CP}^{2}}$ : we flatl find this a maximum when $\int p r^{r}=n \cdot \mathrm{CP}^{2}$; and in this cafe $\mathrm{CP}=\sqrt{\frac{\int p r^{2}}{n}}$, and $v=\frac{1}{2} \mathrm{~V} . \quad$ So that the
74 greateft velocity of rotation will be produced when the

Authors treating of the application of cliat theory :Liommended.
friking body lofes $\frac{1}{2}$ of its velocity.
What we have now delivered is fufficient for explaining all the motions of bodies turning round fixed axes; and we prefume it to be agreeable to our readers, that we have given the inveltigation of the centres of gyration ofcillation, and percuffion. The curious reader will find the applation of thefe theorems to the theory of machines in two very valuable differtations by Mr Euler in the Memoirs of the Academy of Berlin, vols viii. and $x$. and occacionally by other authors who have treated mechanigs in a fcientific and ufeful manner, going beyond the fchnol-boy elements of equilibrium.

There remains a very important cafe of the rotation of bodies, without which the knowledge of the motion of folid bodies, is incomplete ; namely, the rotation of frec bodies, that is, of bodies unconnected with any fixed points. We nardly fee an inftance of motion of a
free body without fome rotation. A flone thrown from the hand, a ball from a cannon, the planets themid:e=, are obferved not only to :alvance, but alfo to whirl round. The famous problem of the preceffion of the equinoxes depends for its folution on this doctrine; and the theory of the working of hips has the fame foundation. We can only touch on the leading propotitions.

We need not begin by demonitrating, that when the direction of the external force palfes through the centre of the body, the body will advance without any rotation. This we conlider as familiarly known to every perfon verfant in mechanics; nor is it neceffary to demonftrate, that when the direction of the moving force does not pafs through the centre of gravity, this centre will ftill advance in a direction parallel to that of th: moving force, and with the fame velocity as if the direction of the moving force had paffed through it. This is the immediate confequence of the equality of action and reaction obferved in all the mechanical phenomena of the univerfe.

But it is incumbent on us to demonftrate, that when the direction of the moving force does not pafs thro' th: centre of gravity, the body will not only advance in the direction of the moving force, but will alfo turn round an axis, and we muft determine the pofition of this axis, and the relation fubfilting between the progreflive and rotatory motions.

The celebrated John Bernoulli was the firft who confidered this fubject ; and, in his Difquifitiones Mlathiniodynamice, he has demonftrated feveral propofitions coscerning the fpontaneous axis of converfion, and the motions arifing from eccentric external forces: and although he affumed for the leading principle a propofition which is true only in a great number of cafes, he has determined the rotation of fpherical bodies with great accuracy,

This combination of motions will be palpable in fome fimple cafes, fuch as the following : Let two equal bodies A and B (fig. 9) be connected by an inflexible rod (of which we may neglect the inertia for the prefent). Let $G$ be the middle point, and therefore the centre of gravity. Let an external force act on the point $P$ in the direstion $F P$ perpendicular to $A B$, and let AP be double of PB. Alfo let the force be fuch, that it would have caufed the fyltem to have moved from the fituation $A B$ to the fituation $a b$, in an indefinitely fmall moment of time, had it acted immediately on the centre $G$. $G$ would in this cafe have defcribed G $g$, A would have defcribed $A a$, and $B$ would have defcribed B $b$, and $a b$ would have been parallel to AB : for the force impreffed on $A$ would have been equal to the force impreffed on $B$; but becaufe the force acts on $P$, the force impreffed on $A$ is but one half of that impreffed on $B$ by the property of the lever: therefore the initial motion or acceleration of $A$ will be on$1 y$ half of the initial motion of $B$; yet the ceatre $G$ mult fill be at $g$. We fhall therefore afcertain the initial motion of the fyltem, by drawing through $g$ a line $\alpha g \beta$, fo that $A$ a fhall be $\frac{1}{2}$ of $B \beta$. This we thall do by making $A C=A B$, and drawing $C \alpha g \beta$. Then $a \beta$ will be the pofition of the fyftem at the end of the moment of time. Thus we fee that the body mult have a motion of rotation combined with its progreflive motion.

$\underbrace{\text { Fotatios. And we deduce immediately from the premifes that }}_{78} \begin{gathered}\text { An rotation is performed round an axis paffing through }\end{gathered}$

78 How no. tion is per formed in theere calcs
the centre of gravity $G$ : for fince the centre defcribes a ftraight line, it is never either above or below the axis of rotation, and is therefore always in it. This is a fundamental theorem, and our fubfequent inveftigation is by this means greatly fimplified, being thus reduced to two problems: I . To'determine in what disection the axis paffes through the centre of gravity. 2. To determine the angular velocity of the rotation, or how far the centre muft advance while the body makes one turn round the axis. This eftablithes the relation between the progreffive and rotatory motions. It will contribute to our better conception of both thefe problems to fee the refult in the prefent fimple cafe.

It is evident, in the firit place, that the impreffions made on A and B are in lines $\mathrm{A} a, \mathrm{~B} b$ parallel to FP and Gg ; and therefore the motions of the points $A$, $G$, and $B$, are made in one plane, viz. the plane FPG. The axis of rotation therefore mult be a line drawn through $G$, perpendicular to this plane. If we give it any other pofition, one of the points $A, B$, or both of them, muft quit this plane.

In the next place, in $b a$ produced take $b c=\mathrm{BC}$. Then fupfofing $A C$ to be a rigid line connected with the fyftem, it is evident that if there had been no rotaticn, the line $B C$ would have kept parallel to its firlt pofition, and that at the end of the moment of time $C$ would have been at $c$. The point C therefore has had, by the rotation, a backward motion $c \mathrm{C}$, relative to the centre $G$ or $g$, and this motion is equal to the progreffive motion $\mathbf{G} g$ of the centre; therefore if we make Gr equal to the circumference of a circle whofe radius is CG, the body will make one rotation round the centre of gravity, while this centre moves along $G \gamma$; and thus the relation is eftablifhed between the two motions.

But farther, the point C has, in fact, not moved out of its place. The incipient motion has therefore been fuch, that $C$ has become a fpontaneous centre of converfion. It is eafy to fee that this mult always be the cafe, whatever may be the form of the rigid body or fyitem of particles connected by inflexible and inexten. fible lines. Since the fytem both advances and turns round an axis paffing through its centre of gravity, there mult be fome point in the fyttem, or which may be conceived as connected with it by an inflexible line, which moves backward, by the rotation, as faft as the centre advances forward. A line drawn through this point parallel to the axis mult in this inftant be at reft, and therefore mult be a fontaneous axis of converfion. And, in this inftant, the combined motions of rotation round an axis paffing through the centre of gravity and the motion of progreffion, are equivalent to, and actually constitute, an incipient fimple motion of rotation round another axis parallel to the former, whofe pofition may be afcertained. But it is neceffary to eftablifh this propofition and its converfe on cleazer evidence.

Therefore let G (fig. io.) be the centre of gravity of a rigid fyitem of particles of matter, fuch as we fuppofe a flid body to be. Let this fyftem be fuppofed to turn round the axis $\mathrm{G} g$, while the axis itfelf is moving forward in the direction and with the velocity GI. Let the ratation be fuch, that a particle $A$ has the direction and rolocity Ab. Let us firt fuppofe the progreflive mo-
tion GI to be perpendicular. to the axis G.g. It will therefore be parallel to the planes of the circles defcribed
round the axis by the different particles. Let $C G_{g}$ be a plane perpendicular to GI. It will cut the plane of the circle defcribed by $A$ in a Atraight line $c g$, and $g$ will be the centre round which $A$ is turning. Therefore A $g$ will be the radius vector of $A$, and $A b$ is perpendicular to Ag. Let Ad be perpendicular to $c g$, and in A $d$ take A e equal to GI or $g i$. It is evident, that the abfolute motion of $A$ is compounded of the motions $A e$ and $A b$, and is the diagonal $A f$ of the parallelogram A ef $b$. In the line $g c$, which is perpendicular to $G g$, take $g c$ to $g A$, as $A e$ to $A b$, and draw $c \mathrm{C}$ parallel to $g \mathrm{G}$, and produce $b \mathrm{~A}$ till it cut $c g$ in $n$. We fay that $\mathrm{C}_{c}$ is in this moment a fpontaneous axis of converfion; for, becaufe $A n$ is perpendicular to $\mathrm{A} g$ and $\mathrm{A} d$ to $\mathrm{C} g$, the angle $c g \mathrm{~A}$ is equal to $d A \pi$, or $f b A$. Therefore, fince $c g: g A=f b$ $: b A$, the triangles $c g A$ and $f b A$ are fimilar, and the angle $g$ A $c$ is equal to $b$ A $f$ : Take away the common angle $g$ A $f$, and the remaining angle $c \cdot A f$ is equal to the remaining angle $b \mathrm{~A} g$, and $A f$ is perpendicular to $A c$, and the incipient motion of $A$ is the fame in refpect of direction as if it were turning round the axis. $c$ C. Moreover, A $f$ is to $f b$ or $g i$ as $A c$ to $c g$. Therefore, both the direction and velocity of the abfolute motion of $A$ is the fame as ifthe body were turning round the fixed axis $c \mathrm{C}$; and the combined motion $\mathrm{A} e$ of progreffion, and the motion $A b$ of rotation round $G_{g}$, are equivalent to, and really conltitute, a momentary fimple motion of rotation round the axis $\mathrm{C} . c$ given in pofition, that is, determinable by the ratio of $A_{e}$ to $A B$.

On the other hand, the converfe propofition is, that a fimple motion of rotation round a fixed axis $C c$, fuch that the centre $G$ has the velocity and direction $G$ I perpendicular to CG , is equivalent to, and produces a motion of rotation round an axis $\mathbf{G} g$, along with the progreflive motion GI of this axis. This prop fition is demonftrated in the very fame way, from the confideration that, by the rotation round $\mathrm{C} c$, we have $\dot{c} \mathrm{~A}$ : $c g=$ A $f: g i$. From this we deduce, that A $b$ is perpendicular to A $g$, and that $f b: A b=\dot{c} g: g A$; and thas we refolve the motion $A f$ into a motion $A b$ of rotation round $G g$, and a motion $A e$ of progreffion common to the whole body.

But let us not confine the progreflive motion to the direction perpendicular to the axis $G g$. Let us fuppofe that the whole body, while turning round $G g$, is carried forward in the direction and with the velocity GK. We can always conceive a plane $L G C_{2}$ which is perpendicular to the plane in which the axis $G g$ and the direction GK of the progreffive motion are fituated.And the motion GK may be conceived as compounded of a motion G I perpendicular to this plane and to the axis; and a motion of tranflation $G L$, by which the axis dides along in its own direction. It is evident, that in confequence of the firt motion GI, there arifes a motion of rotation round $\mathrm{C} c$. It is alfo evident, that if, while the body is turning for a moment round $\mathrm{C} c_{\text {, }}$ this line be flid along itfelf in the direction $\epsilon \mathrm{C}$, a mo. tion equal to GL will be induced on every particle $A$, and compounded with its motion of rotation AF, and that if $f \phi$ be drawn equal and parallel to $G L, \phi$ will be the fituation of the particle $A$ when $G$ is in $K$.

And thus it appears, that when the progreffive mo-

## $\mathrm{ROTT} \quad\left[\begin{array}{c} \\ 517\end{array}\right] \quad \mathrm{R} \mathrm{O} \mathrm{T}$

Rot:tion. tion is perpendicular to the axis of rotation paffing through the centre of gravity, the two motions progrefive and rotatory are equivalent to a momentary fimple motion of rotation round a fontaneous axis of converfion, which is at reft: but when the progreffive motion is inclined to the axis paffing thro' the centre, the fiponta. neous axis of converfion is flding in its own direction.

We may conceive the whole of this very diftinctly and accurately by attendin's to the motion of a garden roller. We may fuppofe it fix feet in circumference, and that it is dragged along the rate of three feet in a fecond from ealt to welt, the axis of the roller lying north and fouth. Suppofe a chalk line drawn on the furface of the roller parallel to its axis. The roller will turn once round in two feconds, and this line will be in contact with the groued at the intervals of every fix feet. In that inflant the line on the roller now fpoken of is at relt, and the motion is the fame as if it were fixed, and the roller really turning round it. In fhort, $\mathrm{i}:$ is then a fpontaneous axis of converfion.

Now, fuppofe the roller dragged in the fame manner and in the fame direction along a fheet of ice, while the ice is floating to the fouth at the rate of four feet in a fecond. It is now plain that the roller is turning round an axis through its centre of gravity, while the centre is carried in the direstion $\int 36^{\circ} 52^{\prime} \mathrm{W}$. at the rate of five feet per ifcond. It is alfo pluin, that when the line drawn on the furface of the fone is applied to the ice, its only motion is that which the ice itfelf has to the fouthward. The motion is now a motion of rotation round this foontanesus axis of converfion, compounded with the motion of four feet per fecond in the direction of this axis. And thus we fee that any complication of motion of rotation round an axis paffing through the centre of gravity, and a motion of progreffion of that centre, may always be reduced to a momentary or incipient motion of rocation round another axis parallel to the former, compounded with a motion of that axis in its own direction.

The demonftration which we have given of thefe two propofitions points out the method ot finding the axis $\mathrm{C} c$, the incipient rotation round which is equivalent to the combined progreflive motion of the body, and the rotation ruand the axis Gg . We have only to note the rotatory velocity $A b$ of lome particle $A$, and its diftance $A g$ from the axis, and the progreflive velocity GI of the whole body, and then to make GC a fourth proportional to $\mathrm{A} b, \mathrm{GI}$, and $g \mathrm{~A}$, and to place GCin a phine perpendicular to GI, which is perpendicular to $\mathrm{G}_{3}$, and to place C on that fide of $\mathrm{G}_{g}$ which is moving in the oppofite direction to the axis.

In the fimple cafe of this problem, which we exhibited in order to give us eafy and familiar notions of the fubject, it appeared that the retrograde velocity of rotation of the point $C$ was equal to the progreffive velocity of the centre. This mult be the cafe in every point of the circumference of the circle of which CG, fig. 9 . is the radius. Therefore, as the body advances, and turns round $G$, this circle will apply itfelf in fuccelfion to the line CK parallel to $\mathrm{G}_{2}$; and any individual point of it, fach as C , will defcribe a cycloid of which this circle is the ginerating circle, CK the bafe, and CG balf the altitude. The other points of the body will defribe trochoids, elongated or contracted according as the defcribing points are nearer to or more remote $f r \cup m$ G than the point $C$ is.

It is now evident that all this muft cbtain in every cafe, as well as in this fimple one. And when wie have afcertained the diftance $G C$ between the axis of rotation paffing through the centre, and the momentary fponta- cation neous axis of converfion paffing through C , we can then made to afcertain the relation between the motions of rotation more comand progreffion. We then know that the body will plex cafermake one rotation round its central axis, while its centre moves over a fpace equal to the circumference of a circle of a known diameter.

We muft therefore proceed to the methods for determining the pofition of the point $C$. This muft depend on the proportion between the velocity of the general progreflive motion, that is, the velocity of the centre, and the velocity of fome point of the body.This muft be afcertained by obfervation. In moft cafes which are interefting, we learn the pofition of the axis, the place of its poles, the comparative progreffive velocity of the centre, and the velocity of rotation of the different points, in a variety of ways; and it would not much increafe our knowledge to detail the rules which may be followed for this purpofe. The circumftance which chiefiy interefts us at prefent is to know how thefe motions may be produced; what force is neceffary, and how it muft be applied, in order to prociuce a given motion of rotation and progreffion; or what will be the motion which a given force, applied in a given manner, will produce.

We have already given the principles on which we may proceed in this inveftigation. We have fhown the circumftances which determine the place of the centre of percuffion of a body turning round a given fixed axis. This centre of percuffion is the point of the body where all the inherent forces of the whirling body precifely balance each other, or rather where they unite and compofe une accumulated progreflive force, which may then be oppofed by an equal and oppofite external force. If, therefore, the body is not whirling, but at reft on this fixed axis, and if this external force be applied at the centre of percuflion, now become a point of impulfion, a rotation will commence round the fixed axis precifely equal to what had been flopped by this external force, but in the oppofite direction; or, if the external force be applied in the direction in which the centre of percuffion of the whirling body was moving at the miltant- of foppage, the rotation produced by this impulfe will be the fame in every refpect. And we found that in the inflant of application of this external force, either to ftop or to begin the motion, no preffure whatever was excited on the fupports of the axis, and that the axis was, in this initant, a fpontaneous axis of convertion.

Moreuver, we have fhown, art. 84, that a rotation round any axis, whether fixed or fpontaneous, is equivalent to, or compounded of, a rotation round another axis parallel to it, and paffing through the ceatre of gravity, and a progreflive motion in the direction of the centre's motion at the inftant of impulfe.

Now, as the pofition of the fixel axis, and the known difpofition of all the particles of the body with refpect to this axis, determin:s the place of the centre of percufion, and furnifhes all the mathematical conditions which muft be implemented in its determination, and the direction and magnitude of the force which is produced and exerted at the centre of percuffion; $f_{0}$, on the other hand, the knowledge of the magnitude aud
direation

## K O T

Eotation.
direction of an external force which is exerted on the point of impulfion of a body not connected with any fixed axis, and of the difpofition of all the parts of this body with refpect to this point of impulfion, will furnifh us with the mathematical circumftances which determine the pofition of the fpontaneous axis of converfion, and therefore determine the pofition of the axis through the centre (parallel to the fpontaneous axis of converfion), round which the body will whirl, while its centre proceeds in the direction of the external force.

The procefs, therefore, for determining the axis of progreffive rotation is jult the converfe of the procefs for determining the centre of percuffion.

John Bernoulli was the firit who confidered the motion of free bodies impelled by forces whofe line of direction did not pafs through their centre of gravity; and he takes it for granted, that fince the body both advances and turns round an axis paffing through the centre of gravity, this axis is perpendicular to the plane paffing through the direction of the force, and through the point of impulfion and the centre of gravity. Other authors of the firlt name, fuch as Huyghens, Leibnitz, Roberval, \&c. have thought themfelves obliged to demonftrate this. Their demonftration is as follows:

Let a body whofe centre of gravity is G (fig, II.) be impelled at the point $P$ by a force acting in the direction $P Q$ not paffing through the centre. The inertia of the whole body will refift in the fame manner as if the whole matter were collected in $G$, and therefore the refiftance will be propagated to the point $P$ in the direction GP. The particle $P$, therefore, is impelled in the direction PQ , and refifted in the direction $P A$, and mult therefore begin to move in fome direction $P B$, which makes the diagonal of a parallelogram of which the fides have the directions $P Q$ and $P A$. The diago nal and fides of a parallelogram are in one plane. Pis therefore moving in the plane $A P Q B$ or $G P Q$, and it is turning round an axis which paffes through G.Therefore this axis muft be perpendicular to the plane GPQ.

It would require a feries of difficult propofitions to fhow the fallacy of this reafoning in general terms, and to determine the pofition of the axis through G. We fhail content ourfelves with a very fimple cafe, where there can be no hefitation. Let $A$ and $B$ (fig. I2.) be two equal balls connected with the axis $a b$ by inflexible lines $\mathrm{A} a, \mathrm{~B} b$, perpendicular to $a b$. Let $\mathrm{A} a$ be I , and $\mathrm{B} b 2$. The centre of gravity $G$ will evidently be in the line $c G$ parallel to $A a$ and $B b$, and in the middle of $a b$, and $c G$ is $r_{2}^{\frac{x}{2}}$. Let $O$ be the centre of ofcillation. $c \mathrm{O}$ is $=\frac{\mathrm{A} \cdot \mathrm{A} a^{2}+\mathrm{B} \cdot \mathrm{B} b^{2}}{\mathrm{~A}+\mathrm{B} \cdot \mathrm{c} \mathrm{G}},=\frac{5}{3}$. Draw $\mathrm{A} m, \mathrm{~B} n$ perpendicular to $c \mathrm{G}$, and fuppofe the balls transferred to $m$ and $n$. Their centre of ofcillation will be fill at O ; and we fee that if the fyftem in this form were itopped ar $O$, all would be in equilibrio. For the force with which the ball $A$ arrives (by fwinging round the axis) at $m$, is as its quantity of matter and velocity jointly, that is, A. Aa, or I. That of B arriving at $n$ is $\mathrm{B} . \mathrm{B} b$, or 2 . The arm $n \mathrm{O}$ of the lever turning round O is $\frac{2}{3}$, and the arm $n \mathrm{O}$ is $\frac{x}{3}$. The frrces, theiefore, are reciprocally as the arms of the lever on which they act, and their momenta, or powers to turn the line $m n$ round $O$, are equal and oppofite, and therefore balance each other ; and therefore, at the
inftant of llopping, no preffure is exerted at $a$. There- Rotatine, fore, if any impulfe is made at $O$, the balls at $m$ and $n$ will be put in motion with velocities I and 2 , and $c$ will be a fpontaneous centre of converfion. Let us fee whether this will be the cafe when the balls are in their natural places $A$ and $B$, or whether there will be any tendency to a rotation round the axis $c \mathrm{O}$. The msmentum of A , by which it tends to produce a rotarion round $c \mathrm{O}$ is $\mathrm{A} . \mathrm{A} a . \mathrm{A} m_{\mathrm{s}}=\mathrm{I} \times \mathrm{A} \%$. That of B is $\mathrm{B} \cdot \mathrm{B} b . \mathrm{B} n,=2 \times \mathrm{B} n . \quad \mathrm{A} m$ and $\mathrm{B} n$ are equal, and therefore the momentum of $B$ is double that of $A$, and there is a tendency of the fyltem to turn round $c \mathrm{O}$; and if, at the inftant of ftoppage, the fupports of the axis $a b$ were removed, this rotation round $c \mathrm{O}$ would take place, and the point $b$ would advance, and $a$ would recede, $c$ only remaining at reft. Therefore, if an im pulfe were made at $O$, $a b$ would not become a fpontaneous momentary axis of converfion, and $O$ is not the centre of percuifion. This centre mult be fomewhere in the line OP parallel to $a b$, as at $P$, and fo fituated that the momenta A.Aa.A a and B.B $\beta$. B $\beta$ may be equal, or that $A_{a}$ may be double of $\mathrm{B} \beta$, or $a p$ double of $b p$. If an impulfe be now made at $P$, the balls AB will be urged by forces as 1 and 2 , and therefore will move as if round the axis $a b$, and there will be no preffures produced at $a$ and $b$, and $a b$ will really become a momentary fontaneous 2 wis of converfion.

Now join $G$ and P. Here then it is evident, that a body or fyftem $A, B$, receiving an impulfe at $P$ perpen. dicular to the plane $a c \mathrm{G}$, acquires to itfelf a fpontaneous axis of converfion which is not perpendicular to the line joining the point of impulfion and the centre of gravity. And we have fhown, in art. 84. that this motion round $a b$ is compounded of a progreffive motion of the whole body in the direction of the centre, and a rotation round an axis paffing through the centre parallel to $a b$. Therefore, in this fyttem of free bodies, the axis of rotation is not perpendicular to the plane paffing through the centre of gravity in the direction of the impelling force.
As we have already obferved, it would be a laborious Difficulty tafk to afcertain in general terms the pofition of the of afcerprogreffive axis of rotation. Althougb the procefs is taining its pofition in the invere of that cuffion when the axis of rotation is given, it is a moft terms. intricate bufinefs to convert the fteps of this procefs. The general method is this: The momentum of a particle A (fig. 5.) by which it tends to change the pohtion of the axis $\mathrm{D} d$, has for its factors A a $\mathrm{A} l$, and A $\dot{\alpha}$. which are its diftances from three planes $\mathrm{D} d \delta \Delta$, DCO , and $\mathrm{C} g \gamma^{\prime} x$, given in pofition. The fum of all thefe mult be equal to nothing, by the compeniation of pofitive and negative quantities. We mult find three other planes (of which only one is in fome meafure determined in pofition, being perpendicular to DCO $n$ ), fo fituated that the fums of fimilar products of the diftances of the particles from them may in like manner be equal to nothing. This is a very intricate problem; fo intricate, that mathematicians have long doubted and difputed about the certainty of the folum tions. Euler, d'Alembert, Frifi, Landen, and others, have at laft proved, that every body, however irregular its fhape, has at leaft three axes paffing through its centre of gravity, round which it will continue to re-

## ROT

Rutetion. volve while proceeding forward, and that thefe are at right angles to each other; and they have given the conditions which muft be implemented in the determi. nation of thefe axes. But they fill leave us exceedingIy at a lofs for means to difcover the pofitions of the axes of a given body which have thefe conditions.

To folve this problem therefore in general terms, would lead to a difquifition altogether difproportioned to our work. We muft reftrict ourfelves to thofe forms of body and fituations of the point of impulfion which admit of the coincidence of the centres of ofcillation and percuffion; and we muft leave out the cafes where the axis has a motion in the direction of its length ; that is, we fhall always fuppofe the fpontaneous axis of converfion to have no motion. Thus we fhall comprehend the phenomena of the planetary motions, fimilar to the preceffion of our equinoctial points, and all the interefting cafes of practical mechanics. The fpeculative mathematical reader will fill up the blanks of this inveftigation by confulting the writings of Euler and D'Almbert in the Berlin Mermoirs, Frifi's Cofmographia, and the papers of Mr Landen, Mr Milner, and Mr Vince, in the Philofophical Tranfactions. But we hope, by means of a beautiful propofition on the compofition of rotatory motions, to enable every reader to difcover the pofition of the axis of progreflive rotation in every cafe which may intereft him, without the previous folution of the intricate problem mentioned above.

Let ABPC $p b \mathrm{~A}$ (fig. 13.) be a fection of a body through its centre of gravity $G$, fo formed, that the part ABPC is fimilar, and fimilarly placed with the part A $b p$ C, fo that the plane AC would divide it equally. Let this body be impelled at $P$ in the direction HP, perpendicular to the plane AC. The axis round which it will turn will be perpendicular to $\mathrm{G} \pi$. Suppofe it at A. Then drawing AB and A $b$ to fimilar points, it is plain that $\mathrm{B} \beta, b \beta$ are equal and oppofite ; thefe reprefent the forces which would raife or lower one end of the axis, as has been already obferved. The axis therefore will remain perpendicular to $\mathrm{G} \pi$.

Let the body be fo fhaped, that if the parts of the right and left of the point of impulfe $\pi$ (the impulfe is here fuppofed not perpendicular to the plane AC, but in this plane) are equal and fimilarly placed; then the momenta round AC mult balance each other, and the axis EF will have no tendency to go out of the plane $\mathrm{ABC} b \mathrm{~A}$ perpendicular to the impulfe.

Any body whofe fhape has thefe two properties will turn round an axis perpendicular to the plane which paffes through the centre of gravity in the direction of the impelling force. This condition is always found in the planets when difturbed by the gravitation to a diflant planet: for they are all figures of revolution. The direction of the difturbing or impelling force is always in a plane pating through the axis and the difturbing body.

With fuch limitations therefore we propofe the following problem:

Let $G$ (fig. 14.) be the centre of gravity of a body in free fpace, which is impelled by an external force $f$, acting in the line FP, which does not pafs through the centre. Let $m$ be the number of equal particles in the
body, or its quantity of matter. Let the force $f$ be
fuch, that it would communicate to the body the velocity $v$; that is, would caufe the centre to move with the velocity $v$. It may be expreffed by the quantity of motion which it produces, that is, by $m v$, and it would produce the velocity $m v$ on one particle. It is required to determine the whole motion, progreffive and rotatory, which it will produce, and the fpace which it will defcribe during one turn round its axis.
Draw GI parallel and PGC perpendicular to FP, and let GI be taken for the meafure of the progreflive velocity $v$.

It has been demonftrated that the centre $G$ will proceed in the direction GI with the velocity $v$, and that the body will at the fame time turn round an axis paffing through G, perpendicular to the plane of the figure, every particle defcribing circles in parallel planes round the axis, and with velocities of rotation proportional to their diftances from it. There is therefore a certain diftance GB, fuch that the velocity with which a particle defcr:bes its circumference is equal to the progreffive velocity $w$. Let $B C D$ be this circumference. When the particle defcribing this circumference is in the line CGP, and in that part of it which lies beyond P from G, its abfolute velocity mult be double that of the centre $G$; but when it is in the oppofite point $C$, its retrogade velocity being equal to the progreffive velocity of the centre, it mult be at reft. In every pofition of the body, therefore, that point of the accompanying circumference which is at this extremity of the perpendicular drawn through the centre on the line of direction of the impelling force is at reft. It is at that inftant a fpontaneous centre of converion, and the fraight line drawn through it perpendicular to the plane of the figure is then a fpontaneous axis of converfion, and every particle is in a momentary ftate of rotation round this axis, in directions perpendicular to the lines drawn to the axis at right angles, and with velocities proportional to thefe diftances; and laftly, the body advances in the direction GI through a fpace equal to the circumference BCD , while it makes one turn round $G$.
Let $A$ be one of the particles in the plane of the figure. Join AC, AG, AP. Draw Ab, Ac, Ad perpendicular to CP, CA, GA. The abfolute motion $A_{c}$ of $A$ is compounded of the progreflive motion $A b$ common to the whole body and equal to GI, and the motion Ad of rotation round the centre of gravity $G$. Therefore fince $A b$ is equal to $v$, and $A_{c}$ is the diagonal of a parallelogegitr given both in fpecies and mangitude, it is all \%iven, and (as appears alfo from the reafoning in art. 85.) it is to GI as CA to CG.
By the application of the force $m v$ in the direction FP, every particle of the body is dragged out of its place, and exerts a refiftance equal to the motion which, it acquires. A part of this force, which we may call $m v$, is employed in communicating the motion $\mathrm{A} c$ to A ; and, from what has been lately fhown, $\mathrm{CG}: \mathrm{CA}=\mathrm{GI}: \mathrm{A} c_{2}=v: \mathrm{A}_{c^{\prime}}$, and therefore $A c=\frac{v^{v} \cdot \mathrm{CA}}{C G}$. But fat ther (agreeably to what was demonffrated in art 16.) we have CP:CA $=\mathrm{A} c: m v,=\frac{v \cdot \mathrm{CA}}{\mathrm{CG}}: m \dot{v}$, and therefore $m v=$ ข. $\mathrm{CA}^{*}$

Rotetion. v.CA ${ }^{2}$
$\overline{\mathrm{CG} \cdot \mathrm{CP}}$. Therefore the whole force employed in communicating to each particle the motion it really acquires or $m \mathrm{r}$, is equal to the fluent of the quantity $\frac{v . \mathrm{CA}^{2}}{\text { CP.CG }}$ or $m v=\frac{v \cdot f \mathrm{CA}^{2}}{\mathrm{CPCG}}$, and $m . \mathrm{CP} . \mathrm{CG}=\int \mathrm{CA}^{2}$, which by art. 23. is equal to $\int \mathrm{GA}^{2}+m . \mathrm{CG}^{2}$. Therefore we have $m . \mathrm{CP} . \mathrm{CG}-m . \mathrm{CG} . \mathrm{CG}=\int \mathrm{GA}^{2}$, or $m . \mathrm{GP} . \mathrm{CG}$ $=f \mathrm{GA}^{2}$, and finally, $\mathrm{CG}=\frac{\int \mathrm{GA}^{2}}{m \cdot \mathrm{GP}}$.

Now the form of the body gives us $\int \mathrm{GA}^{2}$, and the pofition of the impelling force gives us $m$. GP. Therefore we can compute the value of CG; and if $\pi$ be the periphery of a circle whofe radius is unity, we have $\pi . C G$ equal to the fpace which the body muft defribe in the direction GI, while it makes one rotation round its axis.

Cor. I. The angular velocity, that is, the number of turns or the number of degrees which one of the radii will make in a given time, is proportional to the impelling force: for the length of CG depends only on the form of the body and the fituation of the point of impulfion; while the time of defcribing $\pi$ times this length is inverfely as the force.
2. The angular velocity with any given force is as GP: for CG, and confequently the circumference $\pi$. CG, defcribed during one turn, is inverfely as GP.
3. PC is equal to $\frac{\int \mathrm{PA}^{2}}{m \cdot \mathrm{GP}}:$ for we have $\int \mathrm{PA}^{2}=$ $\int \mathrm{GA}^{2}+m \cdot \mathrm{GP}^{2}$. Therefore $\frac{\int \mathrm{PA}^{2}}{m \cdot \mathrm{GP}}=\frac{\int \mathrm{GA}^{2}}{n \cdot \mathrm{GP}}$ $+\frac{m \cdot \mathrm{GP}^{2}}{m \cdot \mathrm{GP}},=\mathrm{CG}+\mathrm{GP},=\mathrm{CP}$.
4. If the poins $\mathbb{E}$ is the centre of impulion of the fame body. P will be a fpontaneous centre of converfion (fee art. 41).
5. A force equal and oppogite to $m v$, or to $f$, applied at $G$, will fop the progreffive motion, but will make no change in the rotation; but if it be applied at $P$, it will ftop all motion both progreffive and rotatory. If applied between P and G , it will fop the progreffive motion, but will leave fome motion of rotation. If applied beyond P it will leave a rotation in the oppofite direction. If applied beyond $G$, or between $G$ and C , it will increafe the rotation. All this will be eafily conceived by reflecting on its effect on the body at reft.
6. A whirling body which has no progreffive motion cannot have been brought into this ftate by the action of a fingle force. It may have been put into this condition by the fimultaneous operations of two equal and oppofite forces. The equality and oppofition of the torces is neceffary for ftopping all progrefive motion. If one of them has acted at the centre, the rotatory motion has been the effect of the other only. If they have acted on oppofite fides, they confpired with each ocher in producing the rotation; but have oppofed each other if they acted on oppofite fides.

In like manner, it is plain that a motion of rotation, together with a progreflive motion of the centre in the direction of the axis, could not have been produced by the action of a fingle force.
7. When the fpace S which a body defcribes du- Rotation ring one rotation has been obferved, we can difcover ro3 the point of impulfe by which a fingle force may have acted in producing both the motions of progreffion and rotation: for $\mathrm{CG}=\frac{\mathrm{S}}{\pi}$, and $\mathrm{GP}=\frac{\sqrt{\mathrm{G} \mathrm{GA}^{2}}}{m \cdot \mathrm{CG}},=$ $\pi \int \mathrm{GA}^{2}$.

In th centre at which the fun and planets mav have received tien of this the fingle impulfes which gave them both their motions doctrine to of revolution in their orbits and rotation round their the heavenaxes.

It was found (art. 40.f) that the diftance OG of the centre of ofcillation or percuffion of a fphere fwinging round the fixed point C from its centre G , is $\frac{2}{5}$ of the third proportional to CG, and the radius of the fphere, or that $O G=\frac{2}{5} \frac{\mathrm{RG}^{2}}{\mathrm{CG}}$. Suppofing the planets to be homogeneous and fpherical, and calling the radius of the planet $r$, and the radius of its orbit R , the time of a rotation round its axis $t$, and the time of a relvolution in its orbit $T$, and making $1: \pi$ the ratio of radius to the periphery of a circle, we fhall have $\pi \mathrm{R}$ for the circumference of the orbit, and $\pi \mathrm{R} \frac{t}{\mathrm{~T}}$ for the arch of this circumference defcribed during one rotation round the axis. This is S in the abovementioned formula. Then, diminihing this in the ratio of the circumference to radius, we obtain $C G=R \frac{t}{T}$, and $O G=\frac{2}{5} \frac{r^{2}}{\mathrm{CG}},=\frac{2}{5} \frac{\mathrm{~T} r^{2}}{t \mathrm{R}}$. This is equivalent to $\frac{\pi \int \mathrm{GA}^{2}}{m . \mathrm{S}}$, and eafier obtained.

This gives us Gv

We have not data for determining this for the fun. But the very circumatance of his having a rotation in $27^{\mathrm{d}} 7^{\mathrm{h}} 47^{\prime}$ makes it very probable that he, with all his attending planets, is alfo moving forward in the celeftial fpaces, perhaps round fome centre of fill more general and extenfive gravitation: for the perfect oppofition and equality of two forces, neceffary for giving a rotation without a progrefifive motion, has the odds againft it of infinity to unity. This corroborates the conjectures of philofophers, and the obervations of Herfchel and other aftronomers, who think that the foJar fyltem is approaching to that quarter of the heavens in which the conftellation Aquila is fituated.
8. As in the communication of progreffive motion among bodies, the fame quantity of motion is preferved before and after collifion, fo in the communication of

## ROT

Lotation, tation among whirling bodies the quantity of rotatory momentum is preferved. This appears from the general tenor of our formula: for if we fuppofe a body turn ing round an axis paffing through its centre, without any progreflive motion, we mult fuppofe that the force $m v$, which put it in motion, has been oppofed by an equal and oppofite force. Let this be fuppofed to have acted on the centre. Then the whole rotation has been the effect of the other acting at fome diftance GP from the centre. Its momentum is $n v$.GP. Had it acted alone, it would have produced a rotation compounded with a progreffive motion of the centre with the velocity $v$; and the body acquires a momentary fontaneons axis of converfion at the diftance GC from the centre of gravity. The abfolute velocity AC of any particle is $\frac{\text { v. } \mathrm{AC}}{\mathrm{CG}}$; its momentum is $\frac{\text { v. } A C^{2}}{G C}$, and the fum of all the momenta is $\frac{\int v \cdot A C^{2}}{C G}$, or $\frac{v \int A C^{2}}{{ }^{2} G}$, and this is equal to $m v . G P$. But when the progreffive motion is fopped, $\mathrm{A} b$, which was a conftituent of the abfolute rnction of $A$, is annihilated, and nothing remains but the motion $A d$ of rotation round $G$. But the triangles $d \mathrm{~A} c$ and GAC were demonfrated ( $\mathrm{n}^{\circ} 8 \mathrm{I}$.) to be fimilar; and therefore $\mathrm{AC}: \mathrm{Ad}$ $=C A: G A$. Therefore the abfolute velocity of the particle, while turning round the quiefcent centre of gravity $G$, is $\frac{\text { v.GA }}{G C}$; its momentum is $\frac{\text { w. } G A^{2}}{G C}$; the fum of all the momenta is $\frac{\sigma^{\prime} / G A}{G C}$; and this is ftill equal to $m$ v. Obferve, that now GC is not the dif. tance of the centre of converfion from the centre of gravity, becaufe there is now no fuch thing as the fpontaneous axis of converfion, or rather it coincides with the axis of rotation. $G C$ is the diflance from the centre of a particle whofe velocity of rotation is equal to $v$.

Now let the body be changed, either by a new diftribution of its parts, or by an addition or abltraction of matter, or by both; and let the fame force $m v$ aft at the fame diftance GP from the centre. We thall fill have $m v . G P=\frac{v / \mathrm{GA}^{2}}{\mathrm{GC}}$; and therefore the fum of the momenta of the particles of the whirling body is fill the fame, viz. equal to the momentum of the force $m v$ acting by the lever GP. If therefore a free body has been curning round its centre of gravity, and has the diftribution of its parts fuddenly changed (the centre however remaining in the fame place), or has a quantity of matter fuddenly added or taken away, it will turn with fuch an angular velocity that the fum of the momenta is the fame as before.
Applica- We have been fo particular on this fubject, becaufe ton to the it affects the celebrated problem of the preceflion of problem of the equinoxes; and Sir Ifaac Newton's folution of it is the preceffion of the equinoxs. erroneous on account of his miftake in this particular. He computes the velocity with which a quantity of matter equal to the excefs of the terreftrial fpheroid
libration of the whole mafs, upon tise fuppontion tiat liatni... the quantity of motion in the libratory fpheroid is the fame with the previous quantity of motion of the libra. ting redundant ring or fhell; whereas he fhould have computed it on the fuppofition that it was the quantity of momenta that remained unchanged.
a: The fame thing obtains in rotations round fixed azes, as appears by the perfect famenefs of the formule for both clafles of motions.

This law, which, in imitation of the Leibnitzians; we might call the confirvatio momentorum, makes it of importance to have expreffions of the value of the accumulated momenta in fuch cafes as moft frequently occur. The moll frequent is that of a fphere or fuheroid in rotation round an axis or an equatorial diame. ter; and a knowledge of it is neceffary for the folution of the problem of the preceflion of the equinoxes. : See Precession, $\mathrm{n}^{\circ} 33$.

Let APap (fig. 15.) be a fphere turning round the diameter $\mathrm{P} p$, and let $\mathrm{DD}^{\prime}$, d $d d^{\prime \prime}$ be two circles parallel to the equator $A a$, very near each other, comprehending between them an elementary flice of the fphere. Let CA be $=a, \mathrm{CB}=x$, and $\mathrm{BD}=y$, and let $\pi$ be the circumference of a circle whofe radius is I. Laftly, let the velocity of the point $A$ be $v$. Then
:v$\frac{y}{a}$ is the velocity at the diftance $y$ from the axis, $\pi y$ is the quantity of matter in the circumference whofe radius is $y$; for it is the length of that circumference when expanded.

$$
\frac{v \pi y^{2}}{a}, \text { or } \frac{v y}{a} \times \pi y \text {, is the quantity of motion in this }
$$

circumference turning round the axis $P_{p}$.

$$
\begin{aligned}
& \frac{v \pi y^{3}}{a} \text { is the momentum of the fame circumference. } \\
& \frac{\pi \pi y^{3} y}{a} \text { is the fluxion of the momentum of the circle }
\end{aligned}
$$

whofe radius is $y$, turning in its own plane round the axis.
$\frac{v \pi y^{4}}{4^{\cdot} a}$ is the fluent, or the momentum of the whole circle; and therefore it is the momentum of the circle DD'.
$\frac{v \pi y^{4} \dot{x}}{4 a}$ is the fluxion of the momentom of the hemifphere; for $\mathrm{B} b=\dot{x}$, and this fraction is the momentum of the flice $d \mathrm{DD}^{\prime} d^{\prime \prime}$.
$y^{2}=a^{2}-x^{2}$, and $y^{4}=a^{4}-2 a^{2} x^{2}+x^{4}$. Thers. fore $\frac{v \pi}{2 a} \times\left(a^{4} \dot{x}-2 a^{2} x^{2} \dot{x}+x^{4} \dot{r}\right)$ is the fluxion of the momentum of the whole fohere. Of this the fluent for the fegments whofe heights are $C B$, or $x$, is $\frac{q \pi}{2 a}$ $\left(a^{4} x-\frac{2 a^{2} x^{3}}{3}+\frac{x^{5}}{5}\right)$.

Let $x$ become $a$, and we have for the nicmertum of the whole fphere $\frac{v \pi}{2 a}\left(a^{5}-\frac{2}{3} a^{5}+\frac{1}{5} a^{5}\right),=v \pi\left(\frac{a^{4}}{2}-\right.$ $\left.\frac{a^{4}}{3}+\frac{a^{4}}{10}\right)=v \pi \frac{4}{2} 5 a^{4}$.

Let us fuppofe that this rotation has been produced by the action of a force $m u$; that is, a force which wouldcommanicate the velocity $n$ to the whole ma: 5 : 3 U over the infribed fphere would perform its librations, if detached from the fpherical nucleus. He then fuppofes it fuddenly to adhere to the fphere, and to drag it into the fame libratory motion; and he computes the Vol. XVI.

## RO'I'

of the fphere, ha3 it acted in a direction palling through its centre; and let us fuppofe that this force acted on the equatorial point $A$ at right angles to $A C$ : Its momentum is $m u a$, and this is equal to $v \pi \frac{4}{x^{5}} a^{4}$. Alfo, we know that $m=\frac{2}{3} \pi a^{3}$. Therefore we have $u \cdot \frac{2}{3}$ $\pi a^{4}=v \frac{4}{T_{5}} \pi a^{4} \frac{2}{3} u=\frac{4}{T_{3}} v$, and $v=\frac{5}{2} u$.

Let $E P Q p$ Be an oblate fpheroid whofe femi-axis PC is $a$, and equatorial radius EC is $b$, and let $v$ be the velocity on the equator of the infcribed fphere. Then fince the momentum of the whirling circle $D D^{\prime}$ is $\frac{v \pi y^{4}}{4 a}$, the momenta of the fphere and fpheroid are in the quadruplicate ratio of their equatorial radii ; and therefore that of the whole fpheroid is $\frac{4}{3} \pi b^{4} v$. And if $w$ be the velocity at E correfponding to the velocity $v$ at $A$, fo that $w=\frac{b}{a} v$, we have the momentum of the fpheroid, expreffed in terms of the equatorial velo. city at the furface, $\frac{4}{x^{5}} b^{3} a w$.

If the fame forco $m u$ be made to act in the fame manner at E , its momentum $m u b$ is $=\frac{4}{15} b^{2} a w$, and $a v=\frac{15 m u}{4 \pi b^{3} a}$. Therefore the angular velocities $\frac{v}{a}, \frac{\pi}{b}$, which the fame force $m u$ acting at A or E will produce in the fpere and the fpheroid, are as $\frac{15 m u}{4 \pi a^{4}}$ and $\frac{15 m}{4 \pi b^{3} a}$, that is, in the triplicate ratio of the equatorial diameter $b$ to the polar axis $a$.

Lafly, if the oblate fpheroid is made to turn round an equatorial diameter paffing through $C$ perpendicular to the plane of the figure, it is plain that every fection parallel to the meridian EPQ $p$ is an ellipfe fimilar to this meridian. If this ellipfe differs very little from the infcribed circle, as is the cafe of the earth in the problem of the preceffion of the equinoxes, the momentum of each ellipfe may be confidered as equai to that of a circle of the fame area, or whofe diameter is a mean proportional between the equatorial and polar diameters of the Spheroid. This radius is to the radias of the circumferibed circle as $\sqrt{b a}$ to $b$. Therefore the momenta of the fection of the fpheroid and of the circumfrribed fphere are in the conftant ratio of $b^{2} a^{2}$ to $b^{4}$, or of $a^{2}$ to $b^{2}$. And if the velocity in the equator of this circumfcribed fphere be called $w$, the momentum of the fphere is $\frac{4}{x_{5}} \pi b^{4} w$; and theretore that of the fpheroid is $\frac{4}{15} \pi b^{2} a^{2} w$, agreeably to what was affumed in the article Precession, $n^{\circ} 33$.

This value of the momentum of a fpheroid round an equatorial diameter is only a very eafy approximation ; an exact value may be obtained by an infinite feries. The whole matter of the fpheroid may be confidered as uniformly diftributed on the furface of a fimilar fpheroid whofe diameter is $=\sqrt{\frac{\bar{s}}{2}}$ of the diameter of the fpheroid. It will have the f.me momentum, becaufe a triangle in one of the ellipfes, having an elementary arch of the circumference for its bafe, and the centre of the ellipfe for its vertex, has its centre of gyration diftant from the vertex $\sqrt{\frac{\pi}{2}}$ the length of the radius of the ellipfe, and the problem is reduced to the finding the fum of thefe lines. But even when the feries for this fum involves the 3 d power of the eccentricity, it is $n$ t more exact than the above approximation.

A fimilar propofition may be obtained for a prolate foheroid vibrating round an equatorial diameter, and
applied to the conjectural Chape of the moon, for ex- Retaticn. plaining her ofcillations.

The reader mult have obferved that the preceding All rota. difquifitions refer to thofe motions only which refult tory mofrom the action of external forces and to the ftate of tions acincipient motion. All circular motions, fuch as thofe companied of rotation, are accompanied by centrifugal forces. A fugalforces. central force is neceffary for retaining every particle in its circular path; fuch forces mult therefore be excited in the body, and can arife only from the forces of cohefion by which its particles are held together. There forces are mutual, equal, and oppofite; and as much as a particle $A$ (fig. 5.) is retained by a force in the direction $A a$ of the line which connects it with the fixed axis $\mathrm{D} d$ or in the direction AG (fig. 10.), which connects it with the progreflive axis; fo much mult the point $a$ of the axis $\mathrm{D} d$ be urged in the oppofite direc. tion a A, or fo much mult the whole body be urged in the direction GA. Every point therefore of the axis $\mathrm{D} d$, or of the axis through G in fig. 10. is carried in a variety of directions perpendicular to itfelf. Thefe forces may or may not balance each other. If this balance obtains with refpect to the fixed axis, its fupports will fultain no preffure but what arifes from the external force; if not, one fupport will be more prefled than the other ; and if both were removed, the axis would change its pofition. The fame mult be affirmed of the axis through $G$ in fig. Io. This, having no fupport, mult change its pofition.

And thus it may happen, that the axis of rotation paffing through $G$ which has been determined by the preceding difquifitions is not permanent either in refpect of the body, or in refpect of abrolute fpace. Thefe two rotations are effentially different. The way to conceive both is this. Suppofe a fpherical furface defcribed round the body, having its centre in the centre of gravity ; and fuppofe this furface to revolve and to proceed forward along with the body : in fhort, let it be conceived as an immaterial furface attached to the bodyThe axis of rotation will pals through this furface in two points which we fhall call its poles. Now, we fay that the axis is permanent with refpect to the body when it has always the fame poles in this fpherical furface. Suppofe another fpherical furface defcribed round the fame centre, and that this furface alfo accompanies the body in all its progreffive motion, but does not turn with it. The axis is permanent with refpect to abfoluce fpace when it has always the fame poles in this furface : it is evident that thefe two facts are not infeparable. A boy's top fpins on the fame point and the fame corporeal axis, while, towards the end of its motion, we obferve it directing this round and round to different quarters of the room. And when we make an egg or a lemon fpin with great rapidity on its fide on a level table, we fee it gradually rife up, till it fand quite on end, fpinning all the while round an axis pointing to the zerith.

This change in the pofition of the axis is produced by the unbalanced actions of the centrifugal forces exerted by the particles. Suppofe two equal balls $A$ and B (fig. 16.) connected by an inflexible rod whofe middle point is $G$, the centre of gravity of the balls. This fyltem may be made to turn round the material axis $\mathrm{D} d_{2}$ A defcribing the circle AEFA, and $B$ defcribing the circle $B H K B$. The rod $A B$ may alfo be conceived

## $\mathrm{ROT} \quad\left[\begin{array}{ll}523\end{array}\right] \quad \mathrm{RO} \mathrm{O}^{\prime \prime}$

Rotation. as moveable round the point $G$ by means of a pin at right angles to the axis. Suppofe the balls paffing through the fituations $A$ and $B$; their centrifugal forces urge them at the fame time in the directions $C A$ and $O B$, which impulfions confpire to make the connecting rod recede from both ends of the axis $\mathrm{D} d$. And thus the balls, inftead of defcribing parallel circles round this axis, will defcribe parallel fpirals, gradually opening the angles DGA, $d G B$ more and more, till the balls acquire the poftion a $\beta$ at right angles to the axis. They will not ftop there, for each came into that pofition with an oblique motion. They will pafs it; and were it not for the refiftance of the air and the friction of the joint at $G$, they would go on till the ball $A$ came to defcribe the circle BHK , and the ball B to defcribe the circle AEF. The centrifugal forces will now have exhaufted by oppofition all the motions which they had acquired during their paffage from the pofition $A B$ to the pofition $\alpha \beta$; and now they will again defcribe fpirals gradually opening, and then contracting, till the balls arrive at their original pofition $A B$, when the procefs will begin again. Thus they will continue a kind of ofcillating rotation.

Thus the axis is continually changing with refpect to the fyltem of balls; but it is fixed in refpect to abfolute fpace, becaufe the axis $\mathrm{D} d$ is fupported. It does not yet appear that it has any tendency to change its pofition, becaufe the centrifugal tendency of the balls is completely yielded to by the joint at $G$. The material axis has indeed fultained no change; but the real axis, or mathematical line round which the rotation was going on every moment, has been continually fhifting i:s place. This is not fo obvious, and requires a more attentive confidcration. To fhow accurately the gradual change of pofition of the real axis of rotation would require a long difcuffion. We thall content ourfelves with exbibiting a cafe where the pofition of the momentary axis is unqueltionably different from D $d$, which we may fuppofe horizontal.

Take the balls in the pofition af. They came into this pofition with a firal motion, and therefore each of them was moving obliquely to the tangents $\alpha \phi, \beta \gamma$ to the circle $\alpha \delta \beta_{\varepsilon}$, fuppofe in the directions $\alpha \theta, \beta \lambda$. They are therefore moving round the centre $G$ in a plane $\theta \propto \beta \lambda$, inclined to the plane $\phi \alpha \beta \gamma$ of the circle $\alpha \delta \beta_{s}$. The momentary axis of rotation is therefore perpendicular to this oblique plane, and therefore does in $\quad$ not coincide with $\mathrm{D} d$.
Of the eva- We cannot enter upon the inveftigation of this evagation of the axis.
tions, and given the whole paths of cragaion. M Segnor was, we believe, the firt who fhowed (in a Diflertation De Motu Turbinum, Halle, 1755), that in every body there were at lealt three lines paffing through the centre of gravity at right angles to each other, forming the folid angle of a cube, round which the centrifugal forces were accurately balanced, and therefore a rotation begun round either of thefe three lines would be continued, and they are permanent axes of rotation. Albert Euler gave the firlt demonftration in 1760 , and fince that time the inveftigation of thefe axes has been extended and improved by the different authors already named. It is an exceedingly difficult fubject ; and we recommend the fynthetical inveltigation by Frifi in his Cofmorraphia as the fitteft for inftructing a curious reader to whom the fubject is new. We fhall conclude this differtation with a beautiful theorem, the enunciation of which we owe to P. Frifi, which has amazingly improved the whole theory, and gives eafy and elegant folutions of the mof difficult problems. It is analogous to the great theorem of the compofition of motions and forces.

If a kody turns round an axis AGa (fig. 17.) paf- P. Frifi's fing through its centre of gravity $G$ with ine angular theorem. velocity $a$, while this axis is carried round another axis $\mathrm{BG} b$ with the angular velocity $b$, and if GD be taken to GK as $a$ to $b$ (the points $B$ and E being taken on that fide of the centre where they are moving towards the fame fide of the plane of the figure), and the line $D E$ be drawn, then the whole and every particle of the body will be in a ftate of rotation round a third axis $\mathrm{CG}_{c}$, lying in the plane of the other two, and parallel to $D E$, and the angular velocity $c$ round this axis will be to $a$ and to $b$ as DE is to GD and to GE.

For, let $P$ be any particle of the body, and fuppofe a fpherical furface to be defcribed round $G$ palling through $P$. Draw PR perpendicular to the plane of the figure. It is evident that PR is the common fection of the circle of rotation IPi round the axis A $a$, and the circle $K P k$ of rotation round the axis $B b$. Let $\mathrm{I} i, \mathrm{~K} k$ be the diameters of thefe circles of rotation, $F$ and $G$ their centres. Draw the radii PF and PO, and the tangents PM and PN. Thefe tangents are in a plane MPN which touches the fphere in $P$, and cuts the plane of the axis in a line $M N$, to which a line drawn from the centre $G$ of the fphere through the point $R$ is perpendicular. Let $P N$ reprefent the velocity of rotation of the point $P$ round the axis $\mathrm{B} b$, and $\mathrm{P} f$ its velocity of rotation round $\mathrm{A}_{a}$. Complete the parallelogram $\mathrm{PN} t f$. Then $\mathrm{P} t$ is the direction and velocity of motion refulting from the compofition of PN and $\mathrm{P} f . \quad \mathrm{P} t$ is in the plane MPN, becaure the diagonal of a parallelogram is in the plane of its lides PN and Pf .

Let perpendiculars $f \mathrm{~F}, t \mathrm{~T}$, be drawn to the plane of the axes, and the parallelogram PN $f f$ will be orthographically projected on that plane, its projection being a parallelogram RNTF. (F here falls on the centre by ac. cident). Draw the diagonal RT. It is evident that the plane $\mathrm{PR} t \mathrm{~T}$ is perpendicular to the plane of the two ases, becaufe PR is fo. Therefore the compound motion $P t$ is in the plane of a circle of revolution round fome axis fituated in the plane of the other two. Therefore produce TR, and draw GC cutting it at sight $3 \mathrm{U}_{2}$
azgles

## i O T $\quad\left[\begin{array}{ll}524\end{array}\right] \quad \mathrm{ROT}$

Rueation. angles in H , and let LPl be the circle, and PH a radius. Pt is therefore a tangent, and perpendicular to $P H$, and will meet $R T$ in fome point $Q$ of the line MN. The particle $\mathbf{P}$ is in a ftate of rotation round the axis CGc, and its velocity is to the velocities round Aa or $\mathrm{B} b$ as $\mathrm{P} t$ to Pf or PN. The triangles PRN and OPN are fimilar. For PN the tangent is perpendicular to the radius $O P$, and $P R$ is perpendicular to $O N$. Therefore $O P: P N=P R: R N$, and $R N=\frac{P R . P N}{O P}$. But the velocity of $P$ round the axis $B 6$ is OP.b. Therefore $\mathrm{RN}=\frac{\mathrm{PR} . O P . b}{\mathrm{OP}}=\mathrm{PR} . b$. In like manner RF $\Rightarrow \mathrm{PR} . a$. Therefore RF: RN=a:b=GD:GE. But NT: RN = fine NRT : fine NTR, and GD: GE $=$ fine GED : fine GDE. Therefore fine NRT: fine $N T R=$ fine GED : fine GDE. But RNT = EGD, for NR is perpendicular to EG and NT (being parallel to IF ) is perpendicular to DG . Therefore $\Gamma R$ is perpendicular to $E D$, and $C c$ is parallel to $E D$, and the rotation of the particle $P$ is round an axis parallel to ED.

And fince RN, RF, RT, are as the velocities $b, a$, $c$, round thefe different axes, and are proportional to EG, DG, DE, we have $c$ to $a$ or to $b$ as ED to GD or GE, and the propofition is demonfrated.
This theorem may be thus expreffed in general terms.

If a body revolves round an axis paffing through its centre of gravity with the angular velocity $a$, while this axis is carried round another axis, alfo paffing through its centre of gravity, with the angular velocity $b$, thefe two motions compofe a motion of every particle of the body round a third axis, lying in the plane of the other two, and inclined to each of the former axes in angles whofe fines are inverfely as the angular velocities round them; and the angular velocity round this new axis is to that round one of the primitive axes as the fine of inclination of the two primative axes is to the fine of the inclination of the rew axis to the other primitive axis.

When we fay that we owe the enunciation of this theorem to $P$. Frifi, we grant at the fame time that bmething like it has been fuppofed or affumed by other Juthors. Newton feems to have conlidered it as true, and even evident, in homogeneous fipheres; and this has been tacitly acquiefced in by the authors who followed him in the problem of the preceffion. Inferior writers have carelefsly affumed it as a truth. Thus Nollet, Gravefande, and cthers, in their contrivances for exhibiting experiments for illuftrating the compolition of vortices, proceeded on this affumption. Even authors of more fcrupulous refearch have fatisfied themfelves, with a very imperfect proof. Thus Mr Landen, in his excellent difertation on rotatory motion, Philofophical Tranfacticns, Vol. LXVII. contents himfelf with fhow. ing, that, by the equality and oppofite directions of the motions round the axes $\lambda a$ and $\mathrm{B} b$, the p int C will be at reft, and from thence concludes that $\mathrm{CG} c$ will be the new axis of rotation. But this is exceedingly halty (note alf, that this differtation was many years poltenor to that of P. Friif) : For although the feparate motions of the point $C$ may be equal and oppofite, it ${ }_{3}{ }^{\prime}$ by no means either a mathematical or a mechanical oce:equence that the body willtum round the axis C.c.
n order that the point $C$ may remain at reft, it is neceliary that all tendencies to motion be annihilated: this is not even thought of in making the affumption. Frifi has fhown, that in the motion of every particle round the axis $\mathrm{C}_{6}$, there is involved a motion round the two axes $\mathrm{A} a$ and $\mathrm{B} b$, with the velocities $a$ and $b$; and it is a confequence of this, and of this only, that the impulfes which would feparately produce the rotations of every particle round $\mathrm{A} a$ and $\mathrm{B} b$ will, either in fucceffion or in conjunction, produce a rotation round $\mathrm{C} c$. Moreover, Mr Landen's not having attended to this, has led him, as we imagine, into a miltake refpecting the velocity with which the axis changes its pofition; and though his procefs exhibits the path of evagation with accuracy, we apprehend that it does not affign the true times of the axes arriving at particular points of this path.

It follows from this propofition, that if every par. Concluticle of a body, whether folid or fluid, receives in one fions deinftant a feparate impulfe, competent to the production of a motion of the particle round an axis with a certain angular velocity, and another impulfe competent to the production of a motion round another axis with a certain velocity, the combined effect of all thefe impul. fions will be a motion of the whole fyftem round a third axis given in pofition, with an angular velocity which is alfo given : and this motion will obtain without any feparation or difunion of parts; for we fee that a motion round two axes conftitute a motion round a third axis in every particle, and no feparation would take place although the fyftem were incoherent like a mals of fand, except by the action of the centrifugal forces arifing from rotation. Mr Simpfon therefore erred in his folution of the problem of the preceffion, by fuppofing another force neceffary for enabling the particles of the fluid fpheroid to accompay the equator when difplaced from its former fituation. The very force which makes the difplacement produes the accompaniment, as far as it obtains, which we fhall fee prefentIy is not to the extent that Mr Simpfon and other authors who treat this problem have fuppofed.

For the fame reafon, if a body be turning round any axis, and every particle in one inftant get an impulfe precifely fuch as is competent to produce a given angular velocity round another axis, the body will turn round a third axis given in pofition, with a given allgular velocity : for it is indifferent (as it is in the ordinary compofition of motion) whether the forces act on a particle at once or in fucceffion. The final mo. tion is the fame both in refpect of direction and velo. city.

Lafly, when a rigid body acquires a rotation round an axis by the action of an impulfe on one part of it, and at the fame time, or afterwards, gets an impulfe on any part which, alone, would have produced a certain rotation round another axis, the eflev of the combined actions will be a rotation round a third axis, in terms of this propofition; for when a rigid body acquires a motion round an axis, not by the fimultaneou: impulfe of the precifely competent force on each particle, but by an impulfe on one part, there bas been piopurated to every particle (by means of the connecting forces) an impulfe precifely competent to produce the motion which the particle really acquires; and when a rigid body, al-
ready.

## ROT T $[525] \quad \mathrm{ROT}$

Rotation. ready turning round an axis $\mathrm{A}_{\mathrm{a}}$ (fig. 17.) receives an impulfe which makes it actually turn round another axis $\mathrm{C} c$, there has been propagated to each particle a force precifely competent to produce, not the motion, but the change of motion which takes place in that particle, this is, a force which, when compounded with the inherent force of its primitive motion, produces the new motion; that is (by this theorem), a force which alone would have caufed it to turn round a third axis $B b$, with a rotation making the other conftituent of the actual rotation round Cc.

This mult be confideres as one of the molt important propolitions in dynamics, and gives a great extenfion to the doctrine of the compofition of motion. We fee that rotations are compounded in the fame manner as other motions, and it is extremely eafy to difcover the compofition. We have only to fuppofe a fiphere defcribed round the centre of the body; and the equator of this fphere correfponding to any primitive pofition of the axis of rotation gives us the direction and velocity of the particles fituated in it. Let another great circle cut this equator in any point; it will be the equator of another rotation. Set off an arch of each from the point of interfection, proportional to the angular velocity of each rotation, and complete the fpherical parallelogram. The great circle, which is the diagonal of this parallelogram, will be the equator of the rotation, which is actually compounded of the other two.

And thus may any two rotations be compounded. We have given an infance of this in the folution of the problem of the Precession of the Equinoxes, Vol. XV. p. 463 .

It appears plainly in the demonftration of this theorem that the axis $C_{c}$ is a new line in the body. The change of rotation is not accomplifhed by a transference of the poles and equator of the former rotation to a new fituation, in which they are again the poles and equator of the rotation; for we fec that in the rotation round the axis $\mathrm{C}_{c}$, the particle of the body which was furmerly the pole $A$ is deferibing a circle round the axis Cc. Not knowing this compolition of rotations, Newton, Walmfiy, Smpton, and other celebrated mathe. maticians, fimanioed, that the axis of the earth's rotation remained the fame, but changed its polition. In this they were confermed by the conltancy of the obferved laitules of places on the fafice of the earth. Bat the asi; of the earth's rotation really changes its place, and the poles hift throurh diferent points of its furface; but thefe different points are too near each other to make the change fonfible to the nicelt obfervation.

## 125

It would feem to refult from thefe obfervations, that it is impotible that the axis of rotation can change its pofition in abfolute face without changing its pofition in the body, coltrary to what we experience in a thoufind familiar initances; and indeed this is impofible by any one change. We cannot by the impulie of any one force matiea kody which is turning round the axis A a change its pofition and turn round the fame material axis boonght into the pufition $C c$. In the fame way that a bo y man pais t'rugh a feries of intermedist: points, in going from one end of a line to the orher, fo it mult acquire an infinite feries of intermediate rotations (each of them momentary) before the fime material axis paifes into another poition, fo as to. Wecome an asis of rotation. A momentary impulie
may make a great change of the pofition of the axis of Rotationt. rotation, as it may make in the velocity of a rectilineal motion. Thus although the rotation round $A a$ be indefinitely fmall, if another equally fmall rotation be impreffed round an axis $B b$ perpendicular to $A a$, the axis will at once fhift to $C c$ half way between them ; but a fucceffion of rotations is neceffary for carrying the primitive material axis into a new pofition, where it is again an axis. This transference, however, is poffible, but gradual, and muft be accomplifled by a continuation of impulfes totally different from what we would at firlt fuppole. In order that A may pafs from $A$ to $C$, it is not enough that it gets an impulfe in the direstion AC. Such an impulfe would carry it thither, if the body had not been whirling round $\mathrm{A}_{a}$ by the mere perfeverance of matter in its ftate of motion; but when the body is already whirling round $A a$, the particles in the circle IP $i$ are moving in the circumference of that circle; and fince that circle alfo partakes of the motion given to $A$, every particle in it mult be inc: flant$l y$ deflected from the path in which it is moving. The continual agency of a force is therefore neceffary for this purpofe; and if this force be difcontinued, the point A will immediately quit the plane of the arch AC, along which we are endeavouring to move it, and will fart up.

This is the theorem which we formeng faid would enable us to overcome the difficulties in the inveftigation of the axis of rotation.

Thus we can difcover what Mr Landen calls the evagations of the poles of rotation by the action of centrifugal forces : For in fig 16 . the known velocity of the ball $A$ and the radius $A C$ of its circle of rotation will give us the centrifugal force by which the balls tend to turn in the plane DAdBD. This gives the axis $\mathrm{E} d$ a tendency to move in a plane ;erpendicular to the plane of the figure ; and its feparation from the poles D and $d$ does not depend on the feparation of the connecting rod $A B$ from its prefent inclination to $\mathrm{D} d$, but on the argle which the fpiral path of the ball makes with the plane of a circle of rotation round $\mathrm{D} d$. The diftance of the new poles from D and $d$ is an arch of a circle which meafures the angle made by the firal with the circle of rotation round the primitive axis. This will gradually increafe, and the mathematical axis of rotation will be defcribing a fpiral round D and $d_{2}$ gradually feparating from thefe points, and again ap. proaching them, and coinciding with them again, at the time that the balls themfelves are moft of all removed from their primitive fituntion, name! $y$, when $A$ is in the place of $B$.

The fame theorem alfo enables us to find the incipient axis of rotation in the complicated cafes which are almoft inaceflible by means of the elementary principles of rotation.

Thus, when the centres of ofcillation and percufion do not coincide, as we fuppofed in fig. 5. and 12 . Suppofe, firft, that they do coincide, and find the prfition of the axis $a, b$, and the angular velocity of the rotation. Then find the centre of percuffion, the axis $P_{p}$, and the momentem round it, and the angular velocity whic! this momentum, would produce. Thus we have ebtained twu rocations round given axes, and with given an. gular velocities. Compound thefe rotations by this thevem, and we obtain the required pofition of the

## F29

And the in? cipient axis in compli-- cated cales.

## $R 0 \mathrm{~T} \quad\left[\begin{array}{ll}526\end{array}\right] \quad \mathrm{ROT}$

true incipient axis of rotation, and the angnlar velocity, without the intricate procefs which would otherwife have been neceffary.

If the body is of fuch a flape, that the forces in the plane DCG do not balance each other, we thall then difcover a momentum round an axis perpendicular to tibis plane. Compound this rotation in the fame manner with the rotation round $\mathrm{D} d$.

And from this fimple view of the matter we learn (what would be difficult to difcover in the other way), that when the centre of percuffion does not coincide with that of rotation, the axis is in the plane DGC, though not perpendicular to PG. But when there is a momentum round an axis perpendicular to this plane, the incipient axis of rotation is neither perpendicular to PC, nor in a plane perpendicular to that paffing through the centre in the direction of the impelling force.

We muft content ourfelves with merely pointing out thefe tracks of inveltigation to the curious reader, and recommending the cultivation of this molt fruitful theorem of Father Frifi.

Thefe are by no means fpeculations of mere curiofity, interefting to none but mathematicians; the nobleft art which is practifed by man mult receive great improvement from a complete knowledge of this fubject. We mean the art of seamanship. A thip, the moft admirable of machines, mutt be confidered as a body in free fpace, impelled by the winds and waters, and continually moved round fpontaneous axes of converfion, and inceffantly checked in thefe movements. The trimming of the fails, the action of the rudder, the very difpofition of the loading, all affect her verfatility. An experienced feaman knows by habit how to produce and facilitate thefe motions, and to check or fop fuch as are inconvenient. Experience, without any reflection or knowledge how and why, informs him what pofition -of the rudder produces a deviation from the courfe. A fort of common fenfe tells him, that, in order to make the fhip turn her head away from the wind, he muft increale the furface or the obliquity of the head fails, and diminifh the power of the fails near the ftern. A few other operations are dictated to him by this kind of common fenfe; but few even of old feamen can tell why a hip has fuch a tendency to bring her head up in the wind, and why it is fo neceffary to crowd the fore part of the fhip with fails; fewer fill know that a certain fhifting of the loading will facilitate fome motions in different cafes; that the crew of a great fhip running fuddenly to a particular place fhall enable the fhip to accomplifh a movement in a formy fea which could not be done otherwife; and perhaps not one in ten thoufand can tell why this procedure will be fuccefsful. But the mathematical inquirer will fee all this; and it would be a moft valuable acquifition to the pub. lic, to have a manual of fuch propofitions, deduced from a careful and judicious confideration of the circumftances, and freed from that great complication and intrie cacy which only the learned can unravel, and expreffed in a familiar manner, clothed with fuch reafoning as will be intelligible to the unlearned ; and though not accurate, yet perfuafive. Mr Bouguer, in his Traité $d u$ Navire, and in his Mranteuvre des Vaifeaux, has delivered a great deal of ufeful information on this fubject ; and Mr Bezout has made a very ufeful abftract of thefe works in his Cours de Mathematique. But the fubject
is left by them in a form far too abotrufe to be of any Rotheram general ufe : and it is unfortunately fo combined with or founded on a falfe theory of the action and refiltance of fluids; that many of the propofitions are totally

## Rotten-

fone. inconfiftent with experience, and many maxims of feamanfhip are falfe. This has occafioned thefe doctrines to be neglected altogether. Few of our profeffional feamen have the preparatory knowledge neceffary for improving the fcience; but it would be a work of immenfe utility, and would acquire great reputation to the perfon who fuccefsfully profecutes it.

We fhall mention under the article Seamansmap the chief problems, and point out the mechanical principles by which they may be fulved.

ROTHERAM, a town in the Weft Riding of Yorkfhire, feated on the river Don, near which there is a handfome fone-bridge. It is a well built place, and the market is large for provifions. W. Lorg. i. ic. N. Lat. 53. 25.

ROTHSAY, a town in the ifle of Bute, of which it is the capital. It is a well-built town of fmall houfes, and about 200 families; and is within thefe few years much improved. It has a good pier, and is feated at the bottom of a fine bay, whofe mouth lies exactly oppofite to Loch Steven in Cowal. Here is a fine depth of water, a fecure retreat, and a ready navigation down the Frith for an export trade. Magazines of goods for foreign parts might be moft advantageoully erected here. The women of this town fin yarn, the men fupport themfelves by filking. W. Long. 5. o. N. Lat. 55 . 50.

Rothfay gives the title of Duke to the frince of Scotland, a title which was formerly accompanied with fuitable revenues, powers, and privileges. Of the origin of this title we have the following account from the pen of the learned Dr M•Leod of Glafgow. Some time between the 16 th of March and the 26 th of October 1398, John of Gaunt, who is Ayled John duke of Aquitaine and Lancafter, uncle to the king of England, and David, who is ftyled earl of Carrick, eldeft fon of the king of Scotland, met for the purpofe of fettling the borders, and terminating all matters in difpute. At a fubfequent interview between the fame parties, David is ftyled Duke of Rothfay. "This innovation probably proceeded on an idea, to which the interview of the two princes might natually give rife, that it was unfuitable, and unworthy of the Scottifh national dignity, that the princes of England fhould enjoy a title of nobility, which was efteemed to be of higher rank than that poffeffed by the hereditary prince of Scotland." And this, in the opinion of our author, was the occafion of introducing the title of Duke into Scotland.

ROTTBCELLIA, in botany ; a genus of the digynia order, belonging to tbe triandia clafs of plants. The rachis is jointed, roundifh, and in many cafes filiform; the calyx is ovate, lanceolated, flat, fimple, or bipartite; the florets are alternate on the winding rachis.

ROTONDO, or Rorundo, in architecture, an appellation given to any building that is round both within and without ; whether it be a church, a faloon, or the like. The moft celebrated rotundo of the ancients is the pantheon at Rorae. See Pantheon.

ROTTEN-stone, a mineral found in Desbyfhire

Rottennefs and ufed by mechanics for all forts of finer grinding Rotterdam. and polifhing, and fometimes for cutting of fones. According to Ferber, it is a tripoli mixed with calcareous earth.

## ROTTENNESS. See Putrefaction.

ROTTERDAM, is a city in the province of Holland, in E. Long. 4. 20. N. Lat. 52. fituated on the north bank of the river Maefe, about 37 miles fouth of Amfterdam, nine fouth-eaft of the Hague, and 15 to the eaftward of Briel. It is a large and populous city, of a triangular figure, handfomely built of brick, the freets wide and well paved. There are ten gates to the town, fix of which are at the land fide and four at the fide of the Maefe. It is fuppofed to take its name from the Roter, or Rotter, a little river that falls into the canals of this city, and from Dam, a dike. It is uncertain when it was firlt built ; and though it is fuppofed to be very ancient, yet we find no mention made of it before the 13 th century. In the year 1270 it was furrounded with ramparts, and honoured with feveral privileges; but 27 years after it was taken by the Flemings. In the year 1418, Brederode chief of the Haeks made himfelfmalter ofit; fince which time it has continued yearly to increafe by means of the conveniency of its harbour. Its arms are vert, a pale argent, quarterly in a chief on the firft and third, or, a lion fpotted fable, on the fecond and fourth a lion fpotted gules.

Rotterdam is not reckoned one of the principal cities of the province, becaufe it has not been always in its prefent flourifhing condition. The Dutch call it The firlt of the fecond rank, whereas it ought to be efteemed the fecond of the firlt, being, next to Amfterdam, the moft trading town in the United Provinces. Its port is very commodious; for the canals, which run through mott parts of the town, bring the fhips, fome of 200 or 300 ton, up to the merchant's door; a conveniency for loading and unloading which is not to be found in other places. The great fhips go up into the middle of the town by the canal into which the Maefe enters by the old head, as it comes out by the new. A ftranger, upon his firft entering this place, is aftonifhed at the beautiful confulion of chimneys intermixed with tops of trees with which the canals are planted, and ftreamers of veffels; iniomuch that he can hardly tell whether it be fleet, city, or forelt. The Harring Vliet is a very fine ftreet; molt of the houfes are new, and built of hewn ftone; but the grandelt as well as

Pekam's
Tour thro Holland, bi.
molt agreeable ftreet in Rotterdam is the Bomb Quay, which lies parallel with the Maefe; on one fide it is open to the river, and the other is ornamented with a grand facade of the belt houfes in the city, inhabited chiefly by the Englifh; they are five or fix ftories high, mafly and very clumfy; wherever there is any attempt at ornament, it is the worlt that can be conceived. One fees no Grecian architecture, except Doric entablatures, Atuck upon the top of the upper flory, without pilafters; Ionic volutes, turned often the wrong way, and an attempt at Corinthian capitals, without any other part of the order. The doors are large, and Atuck with great knobs and clumfy carving; you afcend to them, not in front, but by three or four feeps going up on each fide, and you are affitted by iron rails of a mof immenfe thicknefs. Thefe houles are almoft all window ; and the window fhutters and frames being painted green, the glafs has all a green caft, which is
helped by the reflection from the trees that overfbadow $\underbrace{\text { Rotterdun. }}$ their houfes, which, were it not for this circumflance, would be intolerably hot, from their vicinity to the canals. Moft of the houfes have looking glaffes placed on the outfides of the windows, on both fides, in order that they may fee every thing which paffes up and down the Areet. The ftair-cafes are narrow, fteep, and come down almoft to the door. In general, the houfes rife with enormous fteep roofs, turning the gable end to the ftreet, and leaning confiderably forward, fo that the top often projects near two feet beyond the perpendicular. The Bomb Quay is fo broad, that there are diftinct walks for carriages and foot-paffengers, lined and fhaded with a double row of trees.-You look over the river on fome beautiful meadows, and a fine avenue of trees, which leads to the pelt-houfe: it feems to be an elegant building, and the trees round it are fo difpofed as to appear a thick wood. This freet is at leaft half a mile in length, and extends from the old to the new head, the two places where the water enters to fill the canals of this extenfive city. When water runs through a freet, it then affumes the name of a canals of which kind the Heeren-fleet has the pre-eminence; the houfes are of free-ftone, and, very lofty; the canal is fpacious, and covered with fhips : at one end ftands the Englifh church, a neat pretty building, of which the bilhop of London is ordinary.

This port is much more frequented by the Britifh merchants than Amfterdam, infomuch that, after a frof, when the fea is open, fometimes 300 fail of Britifh veffels fail out of the harbour at once. There is always a large number of Britilh fubjects who relide in this town, und live much in the fame manner as in Great Britain. The reafon of the great traffic between this place and England, is becaufe the thips can generally load and unload, and return to England from Rotterdam, before a fhip can get clear from Amiterdam and the Texel. Hence the Englifh merchants find it cheaper and more commodious, after their goods are arrived at Rotterdam, to fend them in boats over the canals to Amfterdam. Another great advantage. they have here for cormerce is, that the Maefe is open, and the paffage free from ice, much fooner in the fpring than in the $Y$ and Zuyder-fea, which lead to Amiterdam.

The glats-houfe here is one of the belt in the feven provinces; it makes abundance of glafs-toys and enamelied bowls, which are fent to India, and exchanged for china-ware, and other oriental commodities.

The college of admiralty here is called the college of the Maefe, the chief of all Holland and the United Provinces. The lieutenant-general, admiral of Hot land, is obliged to go on board of a Rotterdam hip in. the Maefe when he goes to fea, and then he commands the fquadron of the Maele.

On the eaft fide of the city there is a large baion and dock, where thip-carpenters are continually employed for the ufe of the admiralty, or of the Eaft Indi company. But the largeft hips belonging to the admiralty of Rotterdam are kept at Helvoetiluys, as the moit commodious ftation, that place being lituated on the ocean; for it requires both time and trouble to work a large fhip from the dock of Rotterdam to the fea.

Rotterdam has four Dutch churches for the eftam blifhed religion. There is one thing very remarkable-

## ROU

Kuttrilam in refpeet to the great church, that the tower which \# Rouen. leaned on one fide was fet up fraight in the year 1655 , as appears by the infcription engraven on brafs at the
bottom of the tower withinfide. In the choir of this church are celebrated, wile no fmall folemnity, the promotions made in the Latin fchools. Befides, there are two Englifh churches, one for thofe of the church of England and the other for the Prefbyterians; and one Scotch church; as likewife one Lutheran, two Armen:an, two Anabaptift, four Roman Catholic chapels, and one Jewih fynagogue,

Though the public buildings here are not fo fately as thofe of Amfterdam and fome other cities, yet there are feveral of them well worth feeing. The great church of St Laurence is a good old building, where are many ftately monuments of their old admirals. From the top of this church one may fee the Hague, Delft, Leyden, Dort, and molt of the towns of fouth Holland. There are feveral fine market-places, as three fifh-markets, the great market, the new-market, and the hogs-market. The Stadthoufe is an old building, but the chambers large and finely adorned. The magazines for fitting out their fhips are very good fructures. The Exchange is a noble building, begun in the year ${ }^{1720}$, and finifhed in 1736. Upon the Great Bridge in the market-place there is a fine brafs fatue erected to the great Erafmus, who was born in this city in 1467, and died at Bafil in Switzerland. He is reprefented in a furred gown, and a round cap, with a book in his hand. The ftatue is on a pedeftal of marble, furrounded with rails of iron. Juft by, one may fee the boufe where this great man was born, which is a very fmall one, and has the following diftich written on the door:

## 庣dibus bis ortus, mundunn decoravit, Erafinus, Artibus, ingenio, religione, fide.

Rotterdam and the whole of the United Provinces are now in the poffeffion of the French Republic. See Revolution and $U_{\text {nitad }}$ Provinces.

ROTULA, in anatomy, the fmall bone of the knee. called alro patella.

ROTUNDUS, in anatomy, a name given to feveral mufcles otherwife called teres.

Routad. See Aradus.
ROUANE, or Rosne, an ancient and confiderable town of France, in Lower Foren, with the title of a duchy; feated on the river Loire, at the place where it begins to be navigable for boats. E. Long. 4.9.N. Lat. 46. 2.

ROUCOU, in dyeing, the fame with Anotta and

## Eixa.

ROUEN, a city of France, and capital of Normandy, had an archbifhop's fee, a parliament, a mint, a handfome college, an academy, two abbeys, and an old catle. It is feven miles in circumference, and furrounded with fix fuburb; ; and contained before the revolution 35 parifhes, and 24 convents for men and women. The metropolitan ćburch has a very bandfome front, on which are two lofty fteeples; whence there is a fine view of the town and country. The great bell is 13 feet high and II in diameer. The church of the Beneditine abbey is much admired by travellers. The parliament-houfe is adorned with beautiful tapeftry and fine-pistures. There are a great number of foun-
tains, though the houfes are ordinary; but the walk upon the quay is very pleafant, and there are 13 gates from thence into the city. The number of the inhabitants are about 60,000 , and they have feveral woollen manufactures. It is feated on the river Seine; and the tide rifes fo high, that veffels of 200 tons may come up to the quay: but one of the greatelt curiofities is the bridge, of 270 paces in length, fuported by boats, and confequently is higher or lower according to the tide. It is paved and there are ways for footpaffengers on each fide, with benches to fit upon; and coaches may pafs over it at any hour of the day or night. It is often called Roan by Englifh hiftorians; and is 50 miles fouth-weft of Amiens, and $; 0$ northweft of Paris.
Though large, and enriched by commerce, Rouen is not an elegant place. The ftreets are almof all narrow, crooked, and dirty ; the buildings old and irregular. It was fortified by St Louis in 1253, but the walls are now demolifhed. The environs, more peculiarly the hills which overlook the Seine, are wonderfully agreeable, and covered with magnificent villas. E. Long. i. io. N. Lat. 49. 26.
ROVERE, or Roveredo, a ftrong town of the Tyrol, on the confines of the republic of Venice; feated on the river Adige, at the foot of a mountain, and on the fide of a ftream, over which there is a bridge, defended by fwo large towers and a ftrong cafte, io miles fouth of Trent. The town is tolerably well built, and governed by a chief magittrate, ftyled a Podeftat. There are feveral churches and convents, that consain nothing worthy of notice. The moft remarkable thing, and what they call the great wonder of Reveredo, is its fpinning-houfe for a manufacture of filk, in which they have a great trade here to the fairs of Bolzano. They have allo a very good trade in wine. Betwixt Trent and Roveredo is the ftrong fort of Belem, belonging to the houfe of Auftria. It is fituated on a rock, and commands the roads at the foot of the mountain. E. Long. if. I. N. Lat. 46. 12.

ROUERGUE, a province of France, in the government of Guienne; pounded on the eaft by the Cevennes and Gevaudan, on the weft by Querci, on the north by the fame and Auvergne, and on the fouth by Languedoc. It is 75 miles in length, and 50 in breadth ; not very fertile, but feeds a number of cattle, and has mines of copper, iron, alum, vitriol, and fulphur. It is divided into a county, and the upper and lower marche. Rhodez is the capital town.
ROVIGNO, a populous town of Italy, in Itria, with two good harbours, and quarries of fine ftone. It is feated in a territory which produces excellent wine, in a peninfula on the weftern coalt. E. Long. 13. 53. N. Lat. 45 . 14.

ROVIG(), is a town of Italy, in the territory of Venice, and capital of the Polefin di Rovigo, in E. Long. 12. 25. N. Lat. 45. 6. It is a fmall place, poorly inhabited, and encompaffed with ruinous walls. Formerly it belonged to the duke of Ferrara, but has been fubject to the Venetians fince 1500 , and is famous for being the birth-place of that learned man Coelius Rhodoginus. It was built upon the ruins of Adria, anciently a noble harbour one mile from Rovigo, that gave name to the gulph, but now a half-drowned vil. lage, inlabited by a few fifhermen.

Riven
!
Rovigo.

## R OU

Roundelay ROUNDELAY, or Roundo, a fort of ancient poem, derived its name, according to Menage, from its form, and becaufe it ftill turns back again to the firft verfe, and thus goes round. The common roundelay confifts of 13 verfes, eight of which are in one rhyme and five in another. It is divided into couplets; at the end of the fecond and third of which the beginning of the roundelay is repeated; and that, if polfible, in an equivocal or puming fenfe. The roundelay is a popuLur poem in France, but is little known among us. Marot and Voiture have fucceeded the belt in it. Rapin remarks, that if the roundelay be not very exquifite, it is intolerably bad. In all the ancient ones, Menage obferves, that the verfe preceding has a lefs complete fenfe, and yet joins agreeably with that of the clofe, without depending neceffarily thereon. This rule, well obferved, makes the roundelay more ingenious, and is one of the fineffes of the poem. Some of the ancient writers fpeak of the roundelay or roundel as a kind of air appropriated to dancing; and in this fenfe the term feems to indicate little more than dancing in a circle with the hands joined.

ROUND. House, a kind of prifon for the nightly watch in London to fecure diforderly perfons till they can be carried before a magiltrate.

Round Houfe, in a lhip, the uppermolt room or cabin on the ftern of a fhip, where the mafter lies.

ROUNDS, in military matters, a detachment from the main-guard, of an officer or a non-commiffioned officer and fix men, who go round the rampart of a garriion, to liten if any thing be firring without the place, and to fee that the centinels be diligent upon their duty, and all in order. In frict garrifons the rounds go every half-hour. The centinels are to challange at a diftance, and to reft their arms as the round palfes. All guards turn out, challenge, exchange the parole, and reft their arms, \&c.

Rounds are ordinary and extraordinary. The ordinary rounds are three: the town-major's round, the grand-round, and the vifiting-round.

Manner of going the Roonds. When the townmajor gnes his r und, he comes to the main guard, and demands a ferjeant and four or fix men to efcort him to the next guard; and when it is dark, one of the men is to carry a light.

As foon at the fentry at the guard perceives the round coming, he fhall give notice to the guard, that they may be ready to turn out when ordered; and when the round is advanced within about 20 or 30 paces of the guard, he is to challenge brifkly; and when he is anfwered by the ferjeant who attends the round, Town major's round, he is to fay, Stand round! and reft his arms; after which he is to call out immediately, Serjeant, turn out the guard, town-major's round. Upon the fentry calling, the ferjeant is to turn out the guard immediately, drawing up the men in good or der with fhouldered arms, the officer placing himfelf at the head of it, with his arms in his hand. He then orders the ferjeant and four or fix men to advance toward the round, and challenge: the ferjeant of the round is to anfwer, Town major's round; upon which the ferjeant of the guard replics, Advance, ferjeant, suith the parole! at the fame time ordering his men to relt their arms. The ferjeent of the rrund advances alone, and grives the ferjeant of lie guard the pa-

Vol. XVI.
role in his ear, that mone elfe may hear it; duricg Rnufsilton, which period the ferjeant of the guard holds the fpear Rouffeau. of his halbert at the other's breaft. The ferjeant of the round then returns to his poft, whilft the ferjeant of the guard leaving his men to keep the round from advancing, gives the parole to his officer. This being found right, the officer orders his ferjeant to return to his men; fays, Advance, town-major's round! and orders the guard to reft their arms; upon which the ferjeant of the guard orders his men to wheel back from the centre, and form a lane, through which the townmajor is to pafs (the efcort remaining where they were), and go up to the officer and give him the parcle, laying his mouth to his ear. The officer holds the fpear of his efponton at the town major's brealt while lie gives him the parole.

The defign of rounds is not only to vifit the guards, and keep the centinels alert; but likewife to difcover what paffes in the outworks, and beyond them.

ROUSSILLON, a province of France, in the Py. renees, bounded on the eaft by the Mediterranean fea, on the weft by Cerdagne, on the north by Lower Languedoc, and on the fouth by Catalonia, from which it is leparated by the Pyrenees. It is a fertile country. about 50 miles in length, and 25 in breadth, and remarkable for its great number of olive-trees. Perpignan is the capital town.

ROUSSEAU (James), an eminent painter, was born at Paris in the year 1630 , and ftudied firf under Swanevelt, who had married one of his relations; after which he improved himfelf by travelling into Italy, practifing folely in perfpective, architecture, and landfcape. On his return home, he was employed at Marly. He diftinguifhed himfeif very much in painting buildings, and by his knowledge of, and attention to, the principles of perfpetive. Louis XIV. employed him to decorate his hall of devices at St Germaine-cn-Laie, where he reprefented the operas of Lulli. But biing a Protef. tant, he quitted France on the perfecution of his brethren, and retired to Swifierland. Louis invited him back; he refufed, but fent his defigns, and recommended a proper perion to execute them. After a fhort ftay in Swifferland, he went to Holland; whence he was invited over to England by Ralph duke of Montague, to adorn his new houfe in Bloomfury, where he painted much. Some of his pictures, both in landfcape and architecture, are over doors at Hampton. court ; and he etched fome of his own defigns. His perfpectives having been moft commonly applied to decorate courts or gardens, have fuffered much from the weather. Such of them as remain are monuments of an excellent genius. The colours are durable and bright, and the choice of them moft judicious. He died in Soho-fquare, about the year 1693 , aged 63 .

Rousseau (John Baptift), a celebrated Frencia poet, was born at Paris in April 1671. His father, who was a fhoemaker in good circumftances made bim fudy in the beft college of Paris, where he diftinguifhed himfelf by his abilities. He at length applied himfelf entirely to poetry, and foon made himielf known by feveral ihort pieces, that were filled with lively and agreeable images, which made him fought for by perfons of the firt rank, and men of the brighteft genius. He was admitted in quality of elcove, or pupii, into the academy of Infriptions and Belles Lettres, in 1701, $3 \times$
and

## $R$ O U $\quad 1530] \quad \mathrm{R}$ O U

andeav, and almof all the reft of his life attached himfelf to fome of the great lords. He attended marhall Tallard into England, in quality of fecretary, and here contracted a friendfhip with St Evremond. At his return to Paris, he was admitted into the politelt company, lived among the courtiers, and feemed perfectly fatisied with his fituation; when, in 1708, he was profecuted for being the author of fome couplets, in which the characters of feveral perfons of wit and merit were blackened by the moft atrocious calumnies. This profecution made much noife; and Rouffeau was banifhed in 1712 out of the kingdom, to which he was never more to return, by a decree of the parliament of Paris. However, he always feadily denied, and even on his death.bed, his being the author of thefe couplets.From the date of this fentence he lived in foreign countries, where he found illuftrious protefors. The count de Luc, ambaffador of France, in Swifferland, took fim into his family, and fudied to render his life agreeable. He took him with him to the treaty of Baden in 1714, where he was one of the plenipotentiaries, and prefented him to prince Eugene, who entertaining a particular efteem for him, took him to Vienna, and introduced him to the emperor's court. Rouffeau lived about three years with prince Eugene; but having loft his favour by fatirifing one of his miftreffes, he retired to Bruffels, where he afterwards ufually refided, and where he met with much attention and much generofity, as we fhall foon mention.-It was here that his difputes with Voltaire commenced, with whom he had become acquainted at the college of Louis the Great, who then much admired his turn for poetry. At that time Voltaire affiduoufly cultivated the acquaintance of Rouffeau, and made him a prefent of all his works; and Rouffean, flattered by his refpect, announced him as a man who would one day be a glory to the age. The author of the Henriad continued to confult him about his productions, and to lavifh on him the higheft encomiums, while their friendifhip daily increafed. When they again met at Bruffels, however, they harboured the blackeft malice againft one another. The caufe of this enmity, as Rouffeau and his friends tell the fory, was a lecture which he had compofed from his Epifle to Julia, now Urania. This piece frightened Vnitaire, as it plainly difcovered his rage againf him. The young man, vexed at thefe calumnies, underfood the whole as thrown cat againft him. This is what Rouffeau afferts. But bis adverfaries, and the friends of the poet whom he cried down, fufpected him, perhaps rather rafhly, of having employed farcafms, becaufe he thought that his own reputation was in danger of being eclipfed by that of his rival. What is very fingular, thefe two celebrated characters encieavoured each of them to prepoffers $t^{t}$ le public with a bad opinion of the other, which they themfelves never entertained in reality, and to fmother in their breat that efteem for each other which, in defance of all their exertions, fill held its place, Rouffeau, from the perind of this dipute, always repefented Voltaire as a buffoon, as a writer poffeffing neither tafe nor judgment, who owed all his fuccefs to a particulr mode wi ich he purfued. As a poet he confi. dered him as inferior to Lucan, and litile fuperior to Pradon. Voltair- treated him fill worfe. Rouffean, ac. cording to him, was nothing better than a plagiarilt,
who could make fhift to rhime, but could not make Rouffeau. any reflections; that he had nothing but the talent of arranging words, and that he had even loft that in fo. reign countries. He thus addreffes him, in a piece lit. tle known :

> Aufitôt le Dieu qui an'in/pire
> T'arracha le luth et la lyre Qu'avoient défhonsrés tes mains;
> $\mathcal{T} u$ n'es plus qu'un reptile immondé, Rebut du Parnaffe et du monde Enféveli dans tes venins.

In confequence of the little efteem in which Rouffeau was held at Bruffels, he could never forget Paris. The grand-prior of Vendome, and the baron de Breteuil, folicited the regent duke of Orieans to allow him to return; which favour was obtained. But our poet, before he would make ufe of the lettres de rapel iffued in his favour, demanded a review of his procef(s, which he wifhed to be repealed, not as a matter of favour, but by a folemn judgment of court; but his petition was refufed. He then came over, in 172 I, to England, where he printed $A$ Colletion of bis Works, in 2 vols 12 mo , at London. This edition, publihed in 1723 $^{2}$, brought him near 10,000 crowns, the whole of which he placed in the hands of the Oftend company. The affairs of this company, however foon getting into confufion, all thofe who had any money in their hands lof the whole of it, by which unfortunate event Rouffeau, when arrived at that age when he food moft in need of the comforts of fortune, had nothing to depend upon but the generofity of fome friends. Boutet, public notary in Paris, was peculiarly generous and attentive to him. He found a ftill greater afylum in the Duke d'Aremberg, whole table was open to him at all times; who being obliged in 1733 to go into the army in Germany, fettled on him a penfion of 1500 livres. But unfortunately he foon loft his good opinion, having been imprudent enough to publifh in a Journal (of which Voltaire accufed him), that the duke d'Aremberg was the author of thofe verfes for which he himfelf had been banifhed France. He was therefore difmiffed from his table, and his pride would not allow him to accept of the penfion after this rupture. Bruffels now became infupportable to him; and the count du Luc, and M. de Senozan, receiver-general of the church revenue, being informed of his difappointments, invited him to come privately to Paris, in the hopes of procuring a diminution of the period of his banifhment. Some time previous to this Rouffeau had publifhed two new letters; one to P. Brumoi, on tragedy; the other to Rollin, on hiftory. It is fuid, he expected from his letter to Brumoi to get the favour of all the Jefiuts; and from the one to Rollin, the patronage of the Janfenifts. He had likewife written an Ode, in praife of Cardinal de Fleury, on Peace, which wet with a favourable reception, although it was not equal to fome of his former pieces. He imagined his retarn to Paris wonld be found no difficult mater. He aucmpted it, and found he could not vbtair a pafs for a fingle yeai. Some fay, that Roureau hat ircined tome perfons in power, by an allegory, calieed T'e judynent of Pluto; in which pece he defribus one of the peincipal judges,

## $\mathrm{ROUU} \quad[53 \mathrm{I}$ | R O U

Kouffeau. whofe fkin Pluto had caufed to be taken off, and fretch- fortunes; lie difplays thofe principles which are fup. Rouffer ed out on the feat in the bench. This fatire, joined to the fecret machinations of enemies, rendered all the attempts of his !riends to procure his return abortive. After having ftaid three months at Paris, he returned to Bruldels in lebruary 1740 , at which place he died March 17. 1741, ftrongly imprefled with religious ientiments. Immediately before he received the viaticum, he protefted he was not the author of thofe horrid verfes which had fo much embittered his life; and this decla. tion, in the opinion of the virtuous pait of mankind, will be confidered as a fufficient proof of his innocence. Some have faid that Rouffeau was profane, troublefome, capricious, froward, vindictive, envious, a flatterer, and a fatirit. Others again reprefent him as a man full of candour and opennefs, a faithful and grateful triend, and as a Chritian affected with a fenfe of religion.Amidf fuch widely varied accounts it is difficult to form an opinion of his character. Such of our readers as wifh to know more of this great poet may confult the Dictionary of M. Chaupepié, written with as much precifion as impartiality, who endeavours to give a jult idea of his character. From what he fays, it does not appear that Rouffeau can be cleared from the accufation brought againft him of having attacked his benefactors. We believe he may be much more eaflly freed from the imputation brought againft him by fome of having difowned his father : for what occafion had Rouffeau to conceal the obfcurity of his birth? It exalted his own merit.
M. Seguy, in concert with M. the prince of la Tour Taffis, has given a very beautiful edition of his works, agreeable to the poet's laft corrections. It was publifhed in 1743, at Paris, in 3 vols. 4 to, and in 4 vols. 12 mo , containing nothing but what was acknowledged by the author as his own. It contains, i. Four Books of Odes, of which the firlt are facred odes, taken from the Pfalms. "Rouffeau (fays Freron) unites in himfelf Pindar, Horace, Anacreon, and Malherbe. What fire, what genius, what flights of imagination, what rapidity of defcription, what variety of affecting ttrokes, what a crowd of brilliant comparifons, what richnefs of rhymes, what happy verlification; but efpecially what inimitable exprefion! His verfes are finifhed in the higheft ityle of perfection that French verfe is capable of affuming." The lyric compofitions of Rouffeau are, in general, above mediocrity. All his odes are not, however, of equal merit. The moft beautiful are thofe which he has addrefled to count du Luc, to Malherbe, to prince Eugene, to Vendome, to the Chriftian princes; his Odes on the death of the prince de Conti, on the battle of Peterwaradin ; and the Ode to Fortune, altho' there are curtainly fome few weak ftanzas to be met with in it. There is confiderable nearnefs in the compofition of the Ode to a Widow, in his ttanzas to the Abbé de Chaulieu, in his addreffes to Roffignol, in his Odes to count de Bonneval, to M. Duche, and to count de Sinzindorf; and it is to be lamented that he wrote fo few pieces of this kind, from which his genius feemed to lead him with difficulty. 2. Two books of Epifles, in verfe. Although thefe do not want their beauties, yet there prevails too much of a mifanthropic fpirit in them, which takes away greatly from their excellence. He makes too frequent mention of his exemies and his mil-
ported lefs on the bafis of truth than on thofe various pafforns which ruled his mind at the tme. He puts forth his anger in paradoxes. If he be reckoned equal to Horace in his odes, he is far inferior in his epiftles. There is much more philofophy in the Roman poet than in him. 3. Cantatas. He is the father of this fpecies of peetry, in which he ftands unrivalled. His pieces of this fort breathe that poetical extreffion, that picturefque fyle, thofe happy turns, and thofe ealy graces, which conflitute the true character of this kind of writing. He is as lively and impetuous as he is mild and affecting, adapting himlelf to the paffions of thofe perfons whom he makes to fpeak. "I confefs (lays M. de la Harpe) that I find the cantatas of Roulfeau more purely lyric than his odes, although he rifes to greater heights in thefe. I fee nothing in his cantatas but bold and agreeable images. He always addrefles himfelf to the imagination, and he never becomes either 100 verbofe or too prolix. On the contrary, in fome of the beft of his odes, we find fome languifhing ftanzas, ideas too long delayed, and verfes of inexcufable meannefs." 4. Allegories, the moft of which are happy, but fome of them appear forced. 5. Epigrams, after the manner of Martial and Marot. He has taken care to leave out of this edition thofe pieces which licentioufnefs and debauchery inipired. They bear, indeed, as well as his other pieces, the marks of genius; but fuch productions are calculated only to difhonour their authors, and corrupt the heart of thofe who read them. 5. A book of Poems on Various Subjects, which fometimes want both eafe and delicacy. The moft diftinguifhed are two eclogues, imitated from Virgil. 6. Four comedies in verfe; the Flatlerer, whofe character is well fupported ; the Imaginary Forefathers, a piece which had much lefs fuccels, although it affords fufficiently good fentiment; the Capricious Man, and the Dupe of Herfelf, pieces of very inconfiderable merit. 7. Three comedies in profe; the Cof fee-boufe, the Magic Girdle, and the Madragore, which are little better than his other theatrical pieces. The theatre was by no means his forte; he had a genius more fuited for fatire than comedy, more akin to Boileau's than Moliere's. 8. A Collection of Letiers, in profe. In this edition he has felected the moft interefting.There is a larger collection in 5 volumes. This lalt has done at the fame time both injury and honour to his memory, Rouffeau in it fpeaks both in favour of and againit the very fame perfons. He appears too haty in tearing to pieces the characters of thole who difpleafed him. We behold in them a man of a fleady character and an elevated mind, who wifhes to return to his native country only that he might be enabled completely to jufify his reputation. We fee him again correfponding with perfons of great merit and uncimmon integrity, with the Abbé d'Olivet, Racine the fon, the poets La Foffe and Duche, the celebrated Rollin, M. le Franc de Pompignan, Xc. \&c. We meet alfo with fome anecdotes and exact judgments of feveral writers. A bookfeller in Molland has publifhed his port-folio, which does him no honour. There are, indeej, fome pieces in this wretched collection which did come from the pen of Rouffeau; but he is lefs to be blamed for them than they arc who have drawn thefe works from that oblivion to which our great poet had

## ROU

Ronliau. $\cdots$ configned them. A pretty $\mathrm{g}^{\text {cod }}$ edition of his Select Picies appeared at Paris in $1-41$, in a fmall 12 mo volume. His portrait, engraved by the celebrated Aved, his old friend, made its appearance in 1778 , with the following motto from Martial :

## Certior in unfro carmine vultus erit.

Rovsseav (John-James), was born at Geneva June 28. 1712. His father was by profeffion a clock and watch-maker. fat his birth, which, he fays, was the firlt of his nisfortanes, he endangered the life of his mother, and he himielf was for a long time after in a vere weak ard languilhiog fate of health; but as his bodily freng:t increafed, his mental powers gradually opened, and afforded the happieft prefages of future greatnefs. His father, who was a citizen of Geneva, was a well-informed tradefman; and in the place where he wrought he kept a Plutarch and a Tacitus, and thefe authors of courfe foon became familiar to his fon. A rafh juvenile tep occafioned his leaving his fathen's houfe. "Finding himfelf a fugitive, in a itrange country, and without money or friends, he changed (fays he himfelf) his religion, in order to procure a fubfiltence." Bornex, bifhop of Anneci, from whom he foumbt an afylum, committed the care of his education to Madame de Warrens, an ingenious and amiable lady, who had in 1726 left part of her wealth, and the Proteitant religion, in order to throw herfelf into the bofom of the church. This generous lady ferved in the trip'e capacity of a mother, a friend, and a lover, to the new profelyte, whom the regarded as her fon. The neceffity of procuring for himfelf fome fettlement, however, or perhaps his unfettled difpolition, obliged Roufeau often to leave this tender mother.

He poffeffed more than ordinary talents for mufic ; and the Abbé Blanchard flattered his hopes with a place in the royal chapel, which he, however, failed in obtaining for him; he was therefore under the neceffity of teaching mufic at Chamberi. He remained in this place till 1741 , in which year he went to Paris, where he was long in very deftitute circumftances. Writing to a friend in 1743, he thus expreffes himfelf: "Every thing is dear here, but efpecially bread." What an expreffion; and to what may not genius be reduced! Meanwhile he now began to emerge from that obfcurity in which he had hitherto been buried. His friends placed him with M. de Montaigu, ambalfador from France to Venice. According to his own confeflion, a proud mifanthropy and a peculiar contempt of the riches and pleafures of this world, confituted the chief traits in his character, and a mifun. derftanding foon took place between him and the ambalf.dor. The place of depute, under M. Dupin, far-mer-general, a man of confiderable parts, gave him fome temporary relief, and enabled him to be of fome bene. fit to Madame de Wartens his former benefactrefs. The yeari 750 was the commencement of his literary career. The academy of Dijon had propofed the following quetion: "Whether the revival of the arts and iciences has contibuted to the refinement of manners ?" Ronfleas at firft inclined to fupport the affirmative. "This is the pons afinorum (fays a philofopher, at that time a friend of his), take the negative fide of the queftion ${ }_{2}$ and I'll promife you the greatelt fuccefs."

## ROU

His difcourfe agninft the fcicnces, accordingly, ha. Rouftean. ving been found to be the beft written, and replete with the deepeft reafoning, was publicly crowned with the approbation of that learned body. Never was a paradox fapported with more eloquence; it was not however a new one; but he enriched it with all the advantages which either knowledge or genius could confer on it. Immediately after its appearance, he met with feveral opponents of his tenets, which he defended; and from one difpute to another, he found himfelf involved in a formidable train of correfpondence, without having ever almolt dreamed of fuch oppofition. From that period he decreafed in happineis as he increafed in celebrity. His "Difcourfe on the caufes of inequality among mankind, and on the origin of focial compacts," a work full of almoft unintelligible maxims and wild ideas, was written with a view to prove that mankind are equal ; that they were born to live apart from each other; and that they have perverted the order of nature in forming focieties. He beftows the higheit praife on the ftate of nature, and depreciates the idea of every focial compact. This difcourfe, and efpecially the dedication of it to the republic of Geneva, are the chef-d'euvres of that kind of eloquence of which the ancients alone had given us any idea. By prefenting this performance to the magiltrates, he was received again into his native country, and reinitated in all the privileges and rights of a citizen, after having with much difficulty prevailed on himfelf to abjure the Catholic religion. He foon, however, returned to France, and lived for fome time in Paris. He afterwards gave himfelf up to retirement, to efcape the hafts of criticifm, and follow after the regimen which the ftrangury, with which lee was tormented, demanded of him. This is an important epoch in the hiftory of his life, as it is owing to this circumftance, perhaps, that we have the moft elegant works that have come from his pen. His "Letter to M. d'Alembert" on the defign of erecting a theatre at Geneva, written in his retirement, and publifhed in 1757 , contains, along with fome paradoxes, fome very important and well-handled truths. This letter firf: drew down upon him the envy of Voltaire, and was the caufe of thofe indignities with which that author never ceafed to load him. What is fingular in him, is, that although fo great an enemy to theatrical repreientations himielf, he caufed a comedy to be printed, and: in 1752 gave to the theatre a paltoral (The Village Conjurar), of which he compofed both the poetry and mufic, both of them abounding with fentiment and elegance, and full of innocent and rural fimplicity. What renders the Village Conjurer highly delightful to perfons of tafte, is that perfect harmony of words and mufic. which every where pervades it ; that proper connedio. among the parties who compofe it; and its being perfectly correct from beginning to end. The mufician, hath fpoken, hath thought, and felt like a poet. Every thing in it is agreeable, interefting, and far fuperior to. thole common affected and infipid' productions of our modern petit-dramas. His Dictionary of Mufic affords feveral excellent articles; fome of them, however, are very inaccurate. "This work (fays M. la Borde), in his Effay on Mufic, has need to be written over again, to fave much trouble to thofe who wifh to ftudy it, and prevent them from falling into errors, which

## R O U L 533 ] O U

Rouffeat. it is dificult to avoid, from the engaging manner in has felt it more, or made it appear to more advan. Rnuficau. ~ which Rouffenu drags along his readers." The paffages in it which have any reference to literature may be eafily dittinguifhed, as they are treated with the agreeablenefs of a man of wit and the exactnefs of a man of $t a f t$. Rouffeau, foon after the rapid fucce. of his Village Conjurer, publifhed a Letter on French Mufic, or rather ayainf French mulic, written with as much freedom as livelinefs. The exafperated patinims of French comedy treated him with as much fory as if he had confpired againft the ftate. A crowd of infignificant enthufiafts ipent their ftrength in outcries again:t him. He was infulted, menaced, and lampooned. Harmonic fanaticifm went even to hang him up in effigy.

That interefting and tender fyle, which is fo confpi cuous throughout the Village Conjurer, animates feveral letters in the New Heloifa, in fix parts, publifhed 176 r , in 12 mo . This epiftalary romance, of which the plot is ill-managed, and the arrangement bad, like all other works of genius, has its beauties as well as its faults. More truth in his characters and more precifion in his details were to have been wifhed. The charaters, as well as their fyle, have too much famenefs, and their linguage is too affected and exaggerated. Some of the letters are indeed admirable, from the force and warmth of exprefion, from an effervefcence of fentiments, from the irregularity of ideas which always characterife a paffion carried to its height. Bu: why is fo affecting a letter $f$ of ofen accompanied with an unimportart digreffion, an infipid criticifm, or a felf-contradicting paradox? Why, after having thone in all the enersy of fentiment, does he on a fudden tum unaffecting? It is becaufe none of the perfunages are truly interefting. That of St Preux is weak, and after forced. Julia is an affemblage of tenderner and $I$ ily, if elevation of foul and of coquetry, of natural parts and pedantry. Wolmar is a violent man, and almof beyond the limits of nature. In fine, when he willes to change his fiyle, and adopt that of the fpeaker, it may eafily be obferved that ke does not long fupport it, and every attempt emlarraffes the author and cools the reader. In the He. loif, Rouffeau's unlucky talent of rendering every thing problematical, appears very confpicuous; as in his arguments in favour of and againt duelling, which af. ford an apology for fuicide, and a jult condemnation (f it: in his facility in palliating the crime of adultery, and his very itrong reafons to make it abhorred: on the one hand, in declamations againt focial happinefs; on the other, in tranfports in favour of humanity: here, in violent rhapfodies againf philofophers; there, by a rage for adopting their opinions: the exiftence of God attacked by fophiltry, and Atheits confuted by the mot irrefragabie argun:ents; the Chriltian religion combated by the molt tpecions objections, and celebrated with the moff fubiime eulogies.

His Emilia afterwards made note noife than the new Feloifa. This moral romance, which was publifhed in ${ }_{17}^{7} 62$, in four vols 12 mo , treats chiefly of education. Rouffe:u wilh ed to fillow nature in every thing; and though his fyltem in feveral places differs from received idens, it deferves in many refpects to be put in practiee, and with fome neceflary modifications it has been fo. His precepts are expreffed with the force and dig. nity of a mind full of the leading truths of morality. If he bas not always been virtuous, no body at lealt
tage. Every thing which he fays againft luxury fhows the vices and conceited opinions of his age, and is worthy at once of Plato or of Tacitus. His flyle is peculiar to himelf. He fometimes, howeyer, appears, by a kind of affected rudenefs and afperity, to ape at the mode of Montaigne, of whon he is a great admirer, and whofe fentiments and exprefions he often clothes in a new drefs. What is moft to be lamented is, that in wifhing to educate a young man as a ChriItian he has filled his third volume with objections againt chilltianity. He has, it mult te cmfeffed, given a very fublime culogium on the Gofpe!, and an affecting portrait of its divine Author: but the miracles, and the prophecies which ferve to cfablifh his miffion, he attacks without the leaft referve. Admitting only natural religion, he weighs every thing in the balasce of reafon; and this reafon being falfe, leads him into dilemmas very unfavourable to his own repofe and happineis.
He dwelt from 1754 in a fmall houfe in the country near Montmorenci; a retreat which he owed to the generofity of a farmer-general. The caufe of his love for this retirement was, according to himfelf, "that invincible fpirit of liberty which nothing could conquer, and in competition with which honours, fortune, and reputation, could not ftand. It is true, this defire of liberty has occafioned lefs pride than lazinefs; but this indolence is inconceiva. le. Every thing fartles it ; the molt inconfiderable reciprocalities of focial life are to it infupportable. A word to fpeak, a letter to write, a vifit to pay, things neceffary to be done, are to me punifhments. Hear my reafons. Although the ordinary intercourle between mankind be odi us to me, intimate friendhip appears to me very dear; becaufe there are no mere ceremonies due to it ; it agrees with the heart, and all is accomplifhed. Hear, again, why I have always thunned kindneffes fo much; becaufe every act of kindnefs requires a grateful mind, and I find my heart ungrateful, from this alone, that gratitude is a duty. Lattly, that kind of felicity which is neceffary for me, is not fo much to do that which I wifh, as not to do what I wifh, not to do." Roufleau enjoyed this felicity which he fo much wifhed in his retirement. Without entirely adopting that too rigorous mode of life purfued by the ancient Cynics, he deprived himelf of every thing that could in any meafure add fuel to this wifhed-for luxury, which is ever the companion of riches, and which inverts even cultom itfelf. He might have been happy in this retreat, if he could have forgot this public which he affected to detpife; but his defire atter a great name got the better of his felf-love, and it was this thirft after reputation which made him introduce to many dangerous paragraphs in his Emila.

The French parliament condemned this book in 1762, and entered into a criminal profecution againlt the author, which forced him to make a precipitate retrear. He directed his ftep: tuwatds his native country, which faut its gates upon him. Profribed in the place where he firit drew breath, he fought an afylum in Switzerland, and found one in the principality of Neuichatel. His fift care was to defeid his Emilia againt the mandate of the archbithop of Paris, by whom it had been anathematied. In 1763 he publifhed a letter $2_{2}$ in which he re-exhibi:s all his errors, fet off with

## R O U

$\underbrace{\text { Rcufliau. the molt animated difplay of eloquence, and in the moft }}$ infidious manner. In this letter he defcribes himfelf as " more vehement than celebrated in his refearches, but fincere on the whole, even againf himfelf; fimple and good, but fenfible and weak; often doing evil, and always loving good; united by friendhaip, never by circumftances, and keeping more to his opinions than to his interelts; requiring nothing of men, and not wifhing to be under any obligation to them ; yielding no more to their prejudices than to their will, and preferving his own as free as his reafon ; difputing about re ginn without licentioulnefs; loving neither impiety nor ianaticifm, but difliking precife people more than bold fpirits," \&c. \&c. From this fpecimen, the limitations he would appoint to this portrait may eafily be diicovered.

The letters of La Montaigne appeared foon after ; but this work, far lefs eloquent, and full of envious difcuffions on the magiftrates and clergy of Geneva, irritated the Proteltant minifters without effecting a reconciliation with che clergy of the Romifh church. Rouffeau had folemnly abjured the latter religion in 1753, and, what is fomewhat frange, had then refolved to live in France, a Catholic country. The proteltant clergy were not fully reconciled by this change; and the protection of the king of Pruffia, to whom the principality of Neufchatel belonged, was not fufficient to refcue him $\therefore$ :om that obloquy which the minifter of MoutiersTravers, the village to which he had retired, had excited againft him. He preached againft Rouffeau, and his fermons produced an uproar among the people. On the night between the 6th and 7th September 1765 , fome fanatics, drove on by wine and the declamations \&f their minifter, threw fome ftones at the windows of the Genevan philofopher, who fearing new infults, in vain fought an afylum in the canton of Berne. As this Canton was connected with the republic of Geneva, they did not think proper to allow him to remain in their city, being profcribed by that republic. Neither his broken ftate of health, nor the approach of winter, could foften the hearts of thefe chdurate 3 partans. In vain, to prevent them from the fear they had of the fpreading of his opinions, did he befeech them to fhut him up in prifon till the furing; for even this favour was denied him. Obliged to fet out on a journey, in the beginning of a very inclement feafon, he reached Strafbourg in a very deftitute ficuation. He received from Marthal de Contades, who then commanded in that place, every accommodation which could be expected from generofity, humanity, and compaffion. He waited there till the weather was milder, when he went to Paris, where Mr Hume then was, who determined on taking him with him to England. After having made fome ftay in Paris, Rouffeau actually fet out for London in $\mathrm{I}_{7}$ 66. Hume, much affected with his fituation and his misfortunes, procured for him a very agreeable fettlement in the country. Our Genevan plilofopher was not, however, long fatisfied with this new place. He did not make fuch an impreffion on the minds of the Englifh as he had done on the French. His free difpofition, his obdurate and melancholy temper, was deemed no fingularity in England. He was there looked upon as an ordinary man, and the periodical prints were filled with fatires againt him. In. particular, they publithed a forged letter from the king
of Pruffia, holding ap to ridicule the principles and Rouftau, conduct of this new Diogenes. Rouffeau imagined there was a plot between Hume and fome philofophers in France to deftroy his glory and repofe. He fent a letter to him, filled with the molt abufive expreffions, and reproaching him for his conduct towards him. From this time he looked upon Hume as a wicked and perfidious perfon, who had brought him to England with no other view than to expofe him to public ridicule; which foolifh and chimerical idea was nourifhed by felf-love and a reftlefs difpofition. He imagined that the Englifh philoropher, amidit all his kindneffes, had fomething difagreeable in the manner of expreffing them. The bad health of Rouffeau, a ftrong and melancholy imagination, a too nice fenfibility, a jealous difpofition, joined with philofophic vanity, cherifhed by the falfe informations of his governefs, who poffeffed an uncommon power over him ; all thefe taken together, might tend to prepoffefs him with unfavourable fentiments of fome innocent freedoms his benefactor might have taken with him, and might render him ungrateful, which he thought himfelf incapable of becoming. Meanwhile, thefe falfe conjectures and probabilities ought never to have had the weight with an honeft mind to withdraw itfelf from its friend and benefactor. Proofs are always neceffary in cafes of this kind ; and that which Rouffeau had was by no means a certain demonftration. The Genevan philofopher, however, certainly returned to France. In paffing through Amiens, he met with M. Greffet, who interrogated him about his misfortunes and the controverfies be had been engaged in. He only anfwered, "You have got the art of making a parrot fpeak; but you are not yet poffeffed of the fecret of making a bear fpeak." In the mean time, the magiftrates of this city wifhed to confer on him fome mark of their efteem, which he abfolutely refufed. His difordered imagination viewed thefe flattering civilities as nothing elfe than infults, fuch as were lavifhed on Sancho in the ifland of Barataria. He thought one part of the people looked upon him as like Lazarille of Tormes, who, being fixed to the bottom of a tub, with only his head out of the water, was carried from one town to another to amufe the vulgar. But thefe wrong and whimfical ideas did not prevent him from afpiring after a refidence in Paris, where, without doubt, he was more looked on as a fpectacle than in any other place whatever. On the ift July 1770, Rcuffeau appeared, for the firlt time, at the regency coffee-honfe, dreffed in ordinary clothing, having for fome time previous to this wore an Armenian habit. He was loaded with praifes by the furrounding multitude. "It is fomewhat fingular (fays M. Sennebier) to fee a man fo haughty as he returning to the very place from whence he had been banifhed fo often. Nor is it one of the fmalleft inconfiftencies of this extraordinary character, that he preferred a retreat in that place of which he had fpoken fo much ill." It is as fingular that a perfon under fentence of imprifonment fhould winh to live in fo public a manner in the very place where kis fentence was in force againf him. His friends procured for him, however, liberty of Raying, on condition that he fhould neither write on religion nor politics: he kept his word; for he wrote none at all. He was contented with living in a calm philofophical manner, giving himfelf to the fociety of a few tried friends, fhunning the

## R O U

Rouffeau. company of the great, appearing to have given up all his whimfies, and affecting neither the character of a philofopher nor a bel efprit. He died of an apoplexy at Ermenon-ville, belonging to the marquis de Girardin, about ten leagues from Faris, July 2. 1778, aged 66 years. This nobleman has erected to his memory a very plain monument, in a grove of poplars, which conftitutes part of his beautiful gardens. On the tomb are infribed the following epitaphs:

## Ici rcpofe <br> L'Homme de la Nature

- His
motto.

Atanding he had certain refources againt the latter. In Roufican, other refpects he was charitable, generous, fober, jult, contenting himfelf with what was purely neceffary, and refufing the means which might have procured him wealth and offices. He cannot, like many other fophifts, be accufed of having often repeated with a ftudied emphafis the word Virtue, without infpiring the fentiment. When he is fpeaking of the duties of mankind, of the principles neceffary to our happinefs, of the duty we owe to ourfelves and to our equals, it is with a copioufnefs, a charm, and an impetuofity, that could only proceed from the heart. He faid one day to M. de Buffon, "You have afferted and proved before J. J. Rouffeau that mothers ought to fuckle their children." "Yes (fays this great naturalif), we have all faid fo; but M. Rouffeau alone forbids it, and caufes himfelf to be obeyed." Another academician faid, "that the virtues of Voltaire were without heart, and thofe of Rouffeau without head." He was acquainted at an early age with the works of the Greck and Roman authors; and the republican virtues there held forth to view, the rigorous aulterity of Cato, Brutus, \&c. carried him beyond the limits of a fimple eftimation of them. Influenced by his imagination, he admired every thing in the ancients, and faw nothing in his comtemporaries but enervated minds and degenerated bodies.

His ideas about politics were almoft as eccentric as his paradoxes about religion. Some reckon his Social Compat, which Voltaire calls the Unfocial Compaat, th= greateft effort his genius produced. Others frid it full of contradistions, errors, and cynical paffages, obfcure, ill-arranged, and by no means worthy of his hinit $g$ pen. There are feveral other fmall pieces wrote by him, to be found in a collection of his works publifhed in 25 vols 8 vo . and I 2 mo , to which there is appended a very infignificant fupplement in 6 vols.

The moft ufeful and moft important truths in this collection are picked cut in his Thoughts; in which the confident fophift and the impious author difappar, and nothing is offered to the reader but the eloquent writc: and the contemplative moralift. There were fond in his port-folio his Confeffions, in twelve books; the firft fix of which were publifhed. "In the preface to thefe memoirs, which abound with characters well drawn, and written with warmth, with energy, and fometimes vilk elegance, he declares (fays M. Paliffot), like a peevila mifauthrope, who boldly introduces himfelf on the ruin; of the world, to declare to mankind, whom he fuppo. affembled upon thefe ruins, that in that innumerable multitude, none could dare to fay, I ambetter than thai man. This affectation of feeing himfelf alone in the u:iverfe, and of continually directing every thing to himfelf, may appear to fome morofe minds a fanaticifn: of pride, of which we have no examples, ar leaft cinse the time of Cardan." Dut this is not the only blatne which may be attached to the author of the Conemons. With unealine!s we fee him, under the pretext of fin. cerity, difhenousins the character of his benefacireis Lady Warrer. There are innuendos no le's offenfir againt obfcure and celebrated characters, whin onght entirely or bealy to have been fuppreffed. A tay of wit fall, the R aficus would late besa held in bigher eft'i. ation for virthe, blad he died without lis: couferfion. The hirne opiaion is entertiond by M, Bene-

Rewfiau, bier, author of the Literary Hittory of Geneva: "His Roue. confeffions (fays he) appear to me to be a very danger-
ous book, and -pant Ruafleau in fuch colcurs as we would never have ventured to apply to him. The excellent t:aly lis which we meet with of fome fentiments, and the delicate asatomy which he makes of fome actions, are not fufficient tw counterbalance the deteftable matier which is found in them, and the uaceafing obloquies everywhere to be met with." It is certain, that if Rouffeau has given a faithful delineation of fome perfons, he has viewed others through a cloud, which formed in his mind perpetual fu'picions. He imagined he thought jultly and fooke truly; but the fimpleft thing in natu.e, fays M. Servant, if ditilled through his violent and fufpicious head, might become poiion. Rouffeau, in what he fays of himfelf, makes fuch acknowledgments as certainly prove that there were better men than he, at leaft if we may judge him from the firt fix books of his memoirs, where nothing appears but his vices. They ought not perhaps to be feparated from the fix latt books, where he fpeaks of the virtues which make reparation for them; or rather the work ought not to have been publifhed at all, if it be true (which there can be little doubi of) that in his confeffions he injured the public manners, both by the bafenefs of the vices he difclofed, and by the namner in which he united them wih the virtues. Tive other pieces which we find in this new edition of his works are, 1. The Reveries of a Solitary Wanderer, being a journal of the latter part of his life. In this he confeffes, that he liked better to fend his children into hofpitals deltined for orphans, than to take upon himfelf the charge of their maintenance and education; and enleavours to paliate this error, which nothing can exculpate. 2. Confiderations upun the Government $f$ Poland. 3. The Adventures of Lord Edwasd, a novel, being a kind of fupplement to the new Helnifa. 4. Various Memoirs and Fugitive Pieces, with a great number of letiers, fome of which are very long, and written with oo much ftudy, but containing fome e:oquent paflages and fome decp thought. 5. Emilia and S phia. 6. The Levite of Ephraim, a poem in profe, in 4 canto:; writen in a cruly ancient ityle of fimplicity. 7. Letters to Sara. 8. An Opera and a Comedy. 9. Trrmfations of the firlt book of '2 citus's Hijfory, of the Etijode of Olinda and Sophronia, taken from Tafjo, \&c. \&c. Like all the othe writings of Rouffeau, we find in thefe pofthumous pieces meny admirable and fome ofeful things; buc they all: abound with contradiction:, paradixes, and ideas very unfavourable to religion. In his letters eifecidlly we fee a man chagrined at misfortanes, which he never attributes to himelf, fufpicious of every body about him, cailing and believing himfeli a lamb in the midft of wolves; in one word, as like Pafcal in the itrength of his genius, as in his fancy of always feeing a prec pice about him. This is the reflection of M. Servant, who knew him, affifted him, and careffed h.m curing his retreat at Grenoble in 1768. This magiltrare having been very attentive in ob:erving bis charatter, ought the rather to de believed, as he in pected it without ether malice, envy, or refentment, and only from the concern he had for this phitorophe:, whim he loved and admires.

ROUT, in law, is appiies to an affembly of perfons
going forcibly to commit fome unlawful act, whether they execute it or not. See Rior.

ROU'E, a public road, highway, or courfe, efpecially that which military forces take. This word is alfo ufed for the defeat and flight of an army.

ROWE (Nicholas), defcended of an ancient family in Devonhire, was burn in 1673. He acquired a complete talte of the claffic authors under the famous Dr Bufby in Weftminfter fchool; but poetry was bis early and daring fudy. His father, who was a lawyer, and defigned him for his own profeffion, entered him a fudent in the Middle Temple. He made remarkable advances in the fludy of the law ; but the love of the belles lettres, and of poetry in particular, Iopt him in his career. His firft tragedy, the Ambitious Stepmother, meeting with univerfal applaufe, he laid afide all thoughts of rifing by the law. He afterwards compofed feveral tragedies ; but that which he valued himielf moft upon, was his Tamerlane. The others are, the Fair Penitent, Ulyfes, the Royal Convert, Fane Shore, and Lady Fane Grey. He alfo wrote a poem called the Biter, and feveral poems upon different fubjects, which have been publifhed under the title of Mifcellaneous Works, in one volume, as his dramatic works have been in two. Rowe is chiefly to be confidered (Dr Johnion obferves) in the light of a tragic writer and a tranilator. In his attempr at comedy, he failed fo ignominiouly, that his Biter is not inferted in his works; and his occafional poems and fhort compofitions are rarely worthy of either praife or cenfure, for they feem the cafual fports of a mind feeking rather to amufe its leifure than to exercife its powers. In the conftruction of his dramas there is not much art; he is not a nice obferver of the unities. He extends time, and varies place, as his convenience requires. To vary the place is not (in the opinion of the learned critic from whom thefe obfervations are borrowed) any violation of nature, if the change be made between the acts; for it is no lefs eaty for the fpectator to fuppofe himfelf at Athens in the fecond act, than at Thebes in the firlt; but to change the fcene, as is done by Rowe in the middle of an act, is to add more acts to the play, fince an act is to much of the bufinefs as is tranfacted without interruption. Rowe, by this licence, eafily extricates himfeli from difficulties; as in Lady Jane Gray, when we have been terrified with all the dreadful pomp of pablic execution, and are wondering how the heroine or the poet will proceed, no fooner has Jane pronounced fome prophetic rhimes, than-pafs and be gone-the fcene clofes, and Pembroke and Gardiner are turned out upon the ftage. I know not (fays Dr Johnfon) that there can be f. und in his plays any deep fearch into nature, any accurate difcriminations of kindred qualities, or nice difplay of paffion in its progrefs; all is general and undefined. Nor does he much intereft or affect the auditor, except in Jane Shore, who is always feen and heard with pity. Alicia is a character of empty noife, with no refemblance to real forrow or to natural madnefs. Whei.ce then has Rowe his reputation? From the reafonablenefs and propriety of time of his fcenes, from the elegance of his diction, and the fuavity of his verfe. He feldom moves eitlier pity or terror, but he often elevates the fentiment; he reldom pief ces the breaf, but he always delights the ear, and often improves the under-

## R O W

Rowe. $\underbrace{\text { Row }}$ undertanding. Being a great admirer of Shakefpeare, than the honourable Mr Thynne, who willingly took he gave the public an edition of his plays; to which he prefixed an account of that great man's life. But the moft confiderable of Mr Rowe's performances was a tranflation of Lucan's Pbarfalia, which he jutt lived to finith, but not to publifh; for it did not appear in print till 1728, ten years after his death.

Meanwhile, the love of poetry and books did not make him unfit for bufinefs; for no'ondy applied clofer to it when occafinn required. The Dule of Queenfberry, when fecretary of ftate, made him fecreaary for public affairs. After the Duke's death, all avenues were flopped to his preferment; and during the reft of Queen Anne's reign he paffed his time with the Mures and his books. A ftory, indeed, is told of him, which fhows that he had fome acquaintance with her miniters. It is faid, that he went one day to pay his court to the lord treafurer Oxford, who alked him, "If he underftood Spanifl well ?" He anfwered, "No :" but thinking that his Lordhip might intend to fend him into Spain on fome honourable commiffion, he prefently added, "that he did not doubt but he could fhortly be able both to underftand and to $f_{1}$ peak it." The earl approving what he faid, Rowe took his leave; and, retiring a few weeks to learn the language, waited again on the Earl to acquaint him with it. His Lordfhip. afking him. "If he was fure he undertood it thoroughly ?" and Rowe affirming that he did, "How bappy are you, Mr Rowe," faid the Earl, "that you can have the pleafure of reading and underttanding the Hiftory of Don Quixote in the original!" On the acceffion of George I. he was made poet laureat, and one of the land furveyor's of the cultoms in the port of London. The prince of Wales conferred on him the clerkflhip of his council; and the Lord Chancellor Parker made him his fecretary for the prefentations. He did not enjoy thefe promotions long; for he died Dec.6.1718, in his 45 th year.
Mr Rowe was twice married, had a fon by his firf wife, and a daughter by his fecond. He was a handfeme, genteel man; and his mind was as amiable as his perfon. He lived beloved; and at his death had the honour to be lamented by Mr Pope, in an epitaph which is printed in Pupe's works, although it wis not affixed on Mr Rowe's monument in Weftminfter-abbey, where he was interred in the poet's corner, oppofite to Chaucer.
Rowe (Elifabeth), an Englifh lady, eminent for her exceilent writings borh in profe and verfe, born at Ilchefter in Somerfethire in 1647, was the daughter of worthy parents, Mr Walter S nger and Mirs Elifabeth Portnel. She received the firf ferious impreffions of religion :as foon as the was capable of it. There being a great adinity between painting and poetry, this lady, who had a vein for the one, naterally had a talte for the other. She was al.o very fond of mulic; chiefy of the grave and folemn kind, as bef fuited to the grandcur of her fentimorts and the fublimity of her devotion. Bat poctry was her fovomite cripleymert, her difinguifhing excilence. So prevalent was her genius this way, that her profe is all poetical. In 169 , a colication of her poems was publifhed at the datire of two friend. Lier paraphrafe on the wavith chapter of Job was written as the requeft of bilhop Ken. Sis had no other tutur for the French and Italian lioncages

Vor, Xir.
the tafk upon himfelf. Her fhining merit, with thie charms of her perfon and converfation, had procared her a great many admirers. Among others, it is faid, the famcus Mr Prior made his addreffes to her. But Mr Thomas Rowe was to be the happy man. This gentleman was honourably defcended: and his fupericr renius, and infatiable thirft after knowledge, were confpicunus in his earlieft years. He had formed a defign to compile the lives of all the illuftrious perfons in antiquily omitted by Plutarch; which, indeed, he partly. execured. Eight lives were publifhed fince his deceafe. They were tranflated into French by the abbé Belienger in 1734. He fpoke with eafe and fluency; had a frank and benevolent temper, an inexhautible fund of wit, and a communicative difpofition. Such was the man who, charmed with the perfon, character, and writings, of our authorefs, married her in 1710, and made it his fudy to repay the felicity with which fhe crowned his life. Too intenfe an application to fudy, beyond what the delicacy of his frame would bsar, broke his health, and threw him into a confumption, which put a period to his valuable life in May 1715 , when he was but juft paft the 28 th year of his age. Mrs Rowe wrote a beautiful elegy on his death; and continaed to the laft moments of her life to exprefs the higheft veneration and affection for his memory. As foon after his deceafe as her affairs would permit, the indulged her inclination for folitude, by retiring to Frome, in Somerfethire, in the neighbourhood of which place the greatelt part of her eftate lay. In this reccefs it was that the compofed the moft celebrated of her works, Friendhip in Death, and the Letters Moral and Lntertaining. In 1736, fhe publifhed, the Hiftory of Joieph; a poem which fhe had written in her younger years. She did not long furvive this publication; for flae died of an apople:y, as tras fuppofed, Feb. 20. 1736.7. In her cabinet were found letters to feveral of her friends, which the had ordered to be delivere. immediately after her deceafe. The Rev. Dr Ifaac Wat:s, agreeab!y to her equeft, revied and publifhed her devotions in 1737, under the title of Devout Exercifes (f the Heart in Meditation and Solil quy, Praife and Prayer; and, ia 1739, her Mifcellane.us Works, in profe and verfe, were putlifhed in 2 vols. 8 vo , with en account of her life and writings prefixed.

As to her perfon, the was not a regular beatity, yet poffeffed a large fhare of the charms of her fex. She was of a moderate ftature, her lair of a fine colnir. her eges of a darkiih erery inclining to blue, and full rf fire. Her complexio:i was sery fair, and a natural blefh :lnwed in her checks. She fpoke gracefully; her voice was exceedingly fweet and harmonious; and fhe tiad : foftnefs in her afpect which ieffired bue, yet not wirizout $f$ me mixture of atat awe and vereration which di:tinguilhed fence and virue, apparent in the couteranc, are wont to cte.te.
ROWEL, among farriers, a kind of iffue arfuc:ing to what in furgery is called a foon. See Farmerin, fetr. v .

## R O Y

Rowley, opinions have been entertained, which we have noticed Roxhurgh. ? Chatterton.

Roweey (William), who ftands in the third clafs of dramatic writers, lived, in the reign of king Charles I. and received his education at the univerfity of Cambridge; but wheher he took any degree there, is not evident; there being but few particulars preferved in regard to him more than his clofe intimacy and connection with all the principal wits and poetical geniufes of that age, by whom he was well beloved, and with fome of whom he joined in their writings. Wood ftyles him " the ornament, for wit and ingenuity, of Pembrokehall in Cambridge." In a a word, he was a very great benefactor to the Englilh ftage, having, exclufive of his aid lent to Middleton, Day, Heywood, Webfter, \&c. left us five plays of his own compofing, and one in which even the immortal Shakefpeare afforded him fome affiftance.

ROXBURGH-shire, or Teviotdale, a county of Scotland, deriving its name from the town of Roxburgh, which is now deftroyed, and the river Teviot, that runs through the fhire into the Tweed, is divided into the three diltricts of Teviotdale, Liddifdale, and Efkale, or Eufdale, fo called from their refpective rivers, Teviot, Liddal, and Efk. It is bounded on the eall and fouth ealt by Northumberland and Cumberland, on the fouth and fouth-weft by Annandale, on the weft by Tweeddale, on the north by the Merfe and Lauderdale ; ext reding about 30 miles from eaft to weft, and about 15 in breadth from the border of England to the Blue Cairn in Lauder-moor. The flire exhibits a rough irregular appearance of hills, moffes, and mountains interfperfed, however, with narrow valleys, and watered with delightful Areams. Though the face of the country is bare of woods, the valleys yield plenty of corn, and the hills abound with palture for theep and black cattle. The principal mountains of this country are known by the name of Cockraw: from whence a range of very hige hills runs weltward, dividing Scotland from England. On the confines of this fhire are the debateable lands; the property of which was formerly difputed by the Scots and Englifh borderers, but adjudged to the Scots at the union of the crowns.Koxburghthire yields plenty of lime and freeftone, which in former times was freely ufed by the inhabitants in building cafles to defend them from the invafions of their Englifh neighbours. The moft diftinguifhed families in this country are the Scots and Kers, who raifed themfelves to wealth and honours by their bravery and fuccefs in a fort of predatory war with their enemies of South Britain. The fhire is very populous; and the people are fout and valiart. They were formerly inured to military difcipline and all the dangers of war, by living on dry marches contiguous to thofe of England; being so numerous and alert, that this and the neighbouring fhire of Berwick could in 24 hours produce 10,000 men on horfeback, well armed and accoutred. In the thire of Roxburgh we fill mect with a great man ber of old caltles and feats belonging to private geademen, whofe anceftors figralized themfelves in this manner; and we find the remains of old encampmeots, and a Roman military way, vulgarly called the caufocay, running from Haunum to the Tweed. The principal town, called Rorburgh, giving the title of
duke to the chief of the Kers, was anciently a royal borough, containing divers parifhes, large and flourifhing, defended by a ftrong citadel, which was often alternateIy reduced by the Englifh and Scotch adventurers. It was in befieging this caftle that James II. of Scotland loft his life by the burfing of a cannon. In confequence of the almoft continual wars between the two nations, this fortrefs was razed, the town ruined, and its royalty tranflated to Jedburgh, which is now a royal borough, fituated between the 'Tefy and Jed.

ROXENT-cape, or Rock of Lijbon, a mountain and remarkable promontory in Portugal, fituared in the Atlantic ocean, at the north entrance of the Tagus, 22 miles north of Libon.

ROYAL, fomething belonging to a king : thus we fay, royal family, royal affent, royal exchange, \&c.

Roral Family. The firtt and moft confiderable branch of the king's royal family, regarded by the laws of England, is the queen.

1. The queen of England is either queen regent, queen confort, or queen dowager. The queen regent, regnant, or fovereign, is the who bolds the crown in her own right; as the firft (and perhaps the fecond) queen Mary, queen Elifabeth, and queen Anne; and fuch a one has the fame powers, prerogatives, rights, dignities, and duties, as if fhe had been a king. This is exprefsly declate $\mathrm{J}^{\prime}$ by ftatute I Mar. I. ft. 3. c. I. But the queen confort is the wife of the reigning king; and fhe by virtue of her marriage is participant of divers prerogatives above other women.

And, firt, the is a public perfon exempt and diftinct from the king; and not, like other married women, fo clofely connected as to have loft all legal or feparate exiftence fo long as the inarriage continues. For the queen is of ability to purchafe lands and to convey them, to make leafes, to grant copyholds, and do other acts of ownerlhip, without the concurrence of her lord; which no other married woman can do: a privilege as old as the Saxon era. She is alfo capable of taking a grant from the king, which no other wife is from her hufband ; and in this particular fhe agreees with the augufta or piiffima regina conjux divi imperatoris of the Roman laws; who, according to Juftinian, was equally capable of making a grant to, and receiving one from, the emperor. The queen of England hath feparate courts and officers diftinct from the king's, not only in matters of ceremony, but even of law; and her attorney and felicitor general are entitled to a place within the bar of his majelty's courts, together with the king's counfel. She may likewife fue and be fued alone, without joining her hubband. She may allo have a feparate property in goods as well as lands, and has a right to difpofe of them by will. In hort, fhe is in all legal proceedings looked upon as a feme fole, and not as a feme covert; as a fingle, not as a married woman. For which the reafon given by Sir Edward Coke is this: becaufe the wifdom of the common law would. not have the king (whofe continual eare and ftudy is for the public, and circa ardua regni) to be troubled and difquieted on aecoult of his wife's domeftic affairs; and therefore it velts in the queen a power of tranfacting her own concerns, without the intervention of the king, as if the was an unmarried woman.

The queen hath alfo many exemptions, and minute prerogatives. For infance: fhe pays no toll; nor is

Roxent, Royal.
$\qquad$

## KOX

## R O Y

diguict jegali, no man can marry t queen-dowager without fpecial licence from the king, on pain of forfiting his land and grods. This Sir Edward Coke tells $u$ s, was enatted in parliament in 6 Henry VI. though the fatute be not ir print. But fhe, though an alien born, thall ftill be entitled to dower after the king's demife, which no other alien is. A queen-dowager when married again to a fubject, doth not lofe her regal dignity, as peerefles-dowager do when they marry commoters. For Katharine, queen-dowager of Henry V. though fhe married a private gentleman, Owen ap Meredith ap Theodcre, commonly called Owen Tudor; yet, by the name of Katharine queen of England, maintained an action againit the bithop of Carlifle. And fo the dowager of Navarre marrying with Edmond the brother of king Edward I. maintained an action of dower by the name of queen of Na varre.
3. The prince of Wales, or heir apparent to the crown, and alfo his royal confort, and the princefs royal, or eldeft daughter of the king, are likewife peculiarly regarded by the laws. For, By ftatute 25 Edw. III. to compafs or confpire the death of the former, or to viclate the chaftity of either of the latter, are as much high treafon as to confpire the death of the king, or violate the chaftity of the queen. And this upon the fame reafon as was before given; becaufe the prince of Wales is next in fucceffion to the crown, and to violate his wife might taint the bloodroyal with baftardy; and the eldeft daughter of the king is alfo alone inheritable to the crown on failure of iffue male, and therefore more refpected by the laws than any of her younger fifters; infomuch that upon this, united with other (feodal) principles, while the military tenures were in force, the king might levy an aid for marrying his eldeft daughter, and her only. The heir apparent to the crown is ufually made prince of Wales and earl of Chefter, by fpecial creation and inveltiture; but being the king's eldeft fon, he is by inheritance duke of Cornwall, without any new creation.
4. The ref of the royal family may be confidered in two different lights, according to the different fenfes in which the term royal family is ufed. The larger fenfe includes all thofe who are by any poffibility inheritable to the crown. Such, before the revolution, were all the defcendants of William the Conqueror ; who had branched into an amazing extent by intermarriages with the ancient nobility. Since the revelution and act of fettlement, it means the Proteftant iffue of the princefs Sophia; now comparatively few in number, but which in procers of time may poffibly be as largely diffufed. The more confined fenfe inciudes only thofe who are in a certain degree of propinquity to the reigning prince, and to whom therefore the law pays an extraordinary regard and refpect; but after that degree is paft, they fall into the rank of ordinary fubjects, and are feldom confidered any farther, unlefs catled to the fucceffion upon failure of the nearer lines. For though collateral confanguinity is regarded indefinitely with refpect to inheritance or fuccefion, yet it is and can only be regarded within fome certain limits in any other refpec, by the natural conftitution of things and the dictates of pofitive law.

The younger fons and daughters of the king, and
other bunches of the royal family, who are not in the immediate line of iucceinon, were therefore little farther regarded by the ancient law, than to give them a certain degree of precedence befcre all peers and pub. lic officers as will ecclefiatical as temporal. This is done by the ttatute 3 I Henry VIII. c. Io. which enacts that no perfon except the king's children fhall prefume to fix or have place at the fide of the cloth of eftate in the parlament chamber; and that certain great officers therein named fhall have precedence above all dukes, except only fuch as fhall happen to be the. king's fon, brother, uncle, nephew (which Sir Edward Coke explains to fignify grandion or nepos), or brother's or fifter's fun. But under the defcription of the king's children, his grandfons are held to be included, without having recourfe to Sir Edward Coke's interpretation of nepherw; and therefore when his late majelty king George II. created his grandfon Edward, the fecond fon of Frederick prince of Wales deceafed, duke of York, and referred it to the houfe of lords to fettle his place and precedence, they certified that he ought to have precedence next to the late duke of Cumberland, the then king's youngclt fon; and that he might have a feat on the left hand of the cloth of eftate. But when, on the acceffion of his prefent majefy, thefe royal perfonages ceafed to take place as the children, and ranked only as the brotber and uncle of the king, they alfo left their $f$ eats on the fide of the cloth of eftate; fo that when the duke of Gloucefter, his majefty's fecond brother, took his feat in the houfe of peers, he was placed on the upper end of the earls bench (on which the dukes ufually fit) next to his royal highnefs the duke of York. And in 1717 , upon a quetion referred to all the judges by king George I. it was refolved, by the opinion of ten againft the other two, that the education and care of all the king's grandchildren, while minors, did belong of right to his majelty as king of this realm, even during their father's life. But they all agreed, that the care and approbation of their marriages, when grown up, belonged to the king their grandfather. And the judges have more recently concurred in opinion, that this care and approbation extend allo to the prefumptive heir of the crown; though to what other branches of the royal family the fame did extend, they did not find precifely determined. The molf frequent inftances of the crown's interpofition go no farther than nephews and nieces; but examples are not wanting of its reaching to more diftant collaterals. And the ftatute 6 Henry VI. before-mentioned, which prohibits the maniage of a queen-dowager without the confent of the king, affigns this reafon for it: "becaufe the difparagement of the queen thall give greater comfort and example to other ladies of efate, who are of the blood-royal, more lightly to difparage themfelves." Therefore by the fatute 28 Hen. VIII. c. 18. (repealed, among other ftatutes of treafons, by I Edw. VI. c. 12) it was made high treaton for any man to contract marriage with the king's children or reputed children, his fifters or aunts ex parte paterna, or the children of his brethren or filters; being exactly the fame degrees to which precedence is allowed by the Ratute 3 I Hen. VlII. before-mentioned. And now, by flatute 12 Geo. III. c. 1I. no defcendant of the body of king George II. (other than the iffue of princeffes married into foreign families) is capable of contracting

## R U B

difguaful to Rubas, whenentural difolition was mo- Rubuts. de!t and amiabe.

Anxious to find an artif whofe genius and difpofitions were congenial with his own, he became the ditciple of Octavio Van Veen, generally known by the name of Otho Venius, a painter of fingular nerit, and who was not only nkilled in the principles of his art, but alfo diltinguithed for learning and other accomplimments. Between the mafter and fcholar a remarkable fimilarity appeared in temper and inclination; irdeed, in the whole turn of their minds. It was this congeniality of fentiments which animated Rubens with that ardent paffion for the art of painting which at length determined him to purfue it is a profeffion. From this time he gave up his whole mind to it ; and fo fuccefsful were his exertions, that be foon equalled his matter.

In order to arrive at that perfection which he already beheld in idea, it became requilise to ftudy the productions of the moft eminent artilts. For this purpofe he travelled through Italy, vifiting the moR valuable collections of paintings and antique ftatues with which that country abounds.

Sandrart, who was intimately acquainted with Rubens, informs us, that he was recommended in the moit honourable manner to the duke of Mantua by the arc! 1 duke Albert, who had witneffed his talents in the finilhing of fome fine paintings defigned for his own palace. At Mantua he was received by the duke with the molt flattering marks of diftinction, and had opportunities of improving himfelf which he did not neglect. Herche carefully Itudied the works of Julio Romano. He next vifited Rome, where he had an opportunity of examining the productions of Raphael. The paintings of Titian and Paolo Veronefe called him to Venice, where he accomplifhed himfelf in the art of colouring.

He continued in Italy feven years. At length receiving intelligence that his mother was taken ill, he haftened to Antworp: but his filial affection was not gratified with a fight of her ; the died before his arrival. He married foon after ; but his wife dying at the end of four years, he retired from Antwerp for fome time, and endeavoured to foothe his melancholy by a journey to Holland. At Utrecht he vifited Hurtort, for whom he had a great value.

The fame of Rubens was now fpread over Europe. He was invited by Mary of Medicis queen of Henry IV. of France to Paris, where he painted the galleries in the palace of Luxemburg. Thefe form a feries of paintings which delineate the hiftory of Mary; and afford a convincing proof how well qualified he was to excel in al'eg.rical and emblematical compofitions. While at Paris he became acquainted with the duke of Buckingham, who was lo taken with his great talents and accomplithments, that he judged him well qualified to explain to Itabella, the wife of Albert the archduke, the caufe of the mifunderftanding which had taken place between the courts of England and Spain. In this employment Rubens acquitted himelf with fuch propriety, that Ifabella appointed him envoy to the king of Spain, with a commifion to propofe terms of peace, and to bring back the inftructions of that monarch. Philip was no lefs captivated with Rubens: He conferred on him the honour of knighthood, and made him fecretary to his privy council. Rubens returned

## Rubens.

returned to Bruffels, and thence pafied over into England in 1630 with a commifion from the Catholic king to negociate a piece between the two crowns. He was fucceffful in his negociation, and a treaty was concluded. Charles I. who then filled the Britifh throne, could not receive Rubens in a public character on account of his profeffion; neverthelefs, he treated him with every mark of refpect. Having engaged him to paint fome of the apartments of Whitehall, he not only gave him a handfome fum of money, but, as an acknowledgement of his merit created him a knight; and the duke of Buckingham, his friend and patron, purchafed of him a collection of pictures, fatues, medals, and antiques, with the fum of L. 10,000 .

He returned to Spain, where he was magnificently honoured and rewarded for his fervices. He was created a gentleman of the king's bedchamber, and named fecretary to the council of ftate in the Netherlands. Rubens, however, did not lay afide his profeffion. He returned to Antwerp, where he married a fecond wife called Helena Forment, who, being an eminent beauty, helped him much in the figures of his women. He died on 30 th May 1540 , in the 63 d year of his age; leaving valt riches to his children. Albert his eldeft fon fucceeded him in the office of fecretary of Itate in Flanders.

As Rubens was poffeffed of all the ornaments and advantages that render a man worthy to be efteemed or courted, he was always treated as a perfon of confequence. His figure was noble, his manners engaging, and his converfation lively ; his learning was univerfal. Though his favourite fudy muft have occupied him much, yet he found time to read the works of the moft celebrated authors, and efpecially the poets. He fpoke feveral languages perfectly, and was an excellent ftatesman.

His houfe at Antwerp was enriched with every thing in the àts that was rare and valuable. It contained ne fpacious apartment, in imitation of the rotunda at Rome, adorned with a choice collection of pictures which he had purchafed in Italy ; part of which he fuld to the duke of Buckingham.

His genius qualified him to excel equally in every thing that can enter into the compofition of a picture. His invention was fo fertile, that, if he had occafion to paint the fame fubject feveral times, his imagination always fupplied him with fomething ftriking and new. The attitudes of his figures are natural and varied, the carriage of the head is peculiarly graceful, and his expreffion noble and animated.

He is by all allowed to have carried the art of co. louring to its higheft pitch; he underftood fo thoroughly the true principles of the chiaro-fcuro, that he gave to his figures the utmot harmony, and a prominence refembling real life. His pencil is mellowed, his ftrokes bold and eafy, his carnation glows with life, and his drapery is fimple, but grand, broad, and hung with much fkill.

The great excellence of Rubens appears in his grand compofitions; for as they are to be viewed at a diftance, he laid on a proper body of colours with uncommon boldnefs, and fixed all his tints in their proper places; fo that he never impaired their luftre by breaking or torturing theris; but touched them in fuch a manner as to give them a lafting force, beauty, and harmony.

Ir is generally allowed, that Rubens wanted correct.
nefs in drawing and defigning ; fome of his figures being heavy and too fhort, and the limbs in fome parts not being jutly fketched in the outline. Though he had fent feven years in Italy in fudying thofe antiques by which other celebrated artifts had modelled their talte; though he had examined them with fuch minute attention as not only to perceive their beanties, but to be qualified to defribe them in a Differtation which he wrote on riat fubject: jet he feems never to have divelted himielf of that heavy ftyle of painting, which, being pechiliar to his native country, he bad infenfibly acquired. The aft nifhing rapidity too with which he painted, made him fall into inaccuracies, from which thofe works that he finifhed with care are entirely exempted.

Among his finifhed pieces may be mentioned the Crucifixion of Jefus Chrift betweeen the two Thieves, which was very lately to be feen at Antwerp; but of all his works the paintings in the palace of Luxemburg belt difplay his genius and his ftyle.

It is the obfervation of Algarotti, that he was more moderate in his movements than Tintoretto, and more foft in his chiaro-furo than Carravaggio ; but not fo rich in his compofitions, nor fo light in his touches, as Paolo Veronefe; in his carnations lefs true than Titian, and lefs delicate than Vandyck. Yet he contrived to give his colours the utmoft tranfparency and harmony, notwithlanding the extraordinary deepnefs of them; and he had a ftrength and grandeur of Ayle entirely his own.

RUBIA, madder : A genus of the monogynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 47 th order, Stellata. The corolla is monopetalous and campanulated; and there are two monofpermous berries. There are three fpecies, of which the moft remarkable is the tinctorum, or dyer's madder, fo much ufed by the dyer's and callico-printers. This hath a perennial root and annual falk: the root is compofed of many long, thick, fucculent fibres, almoft as large as a man's little finger; thefe are $j$ ined at the top in a head like afparagus, and run very deep into the ground. From the upper part, or head of the root, come out many fide-roots, which extend juft under the furface of the ground to a great diftance, whereby it propagates very faft; for thefe fend up a great number of fhoots, which, if carefully taken cff in the fpring foon after they are above ground become fo many plants. Thefe roots are of a reddifh colour, fomewhat tranfparent; and have a yellowifh pith in the middle, which is tough and of a bitterifh tafte. From this root arife many large fourcornered jointed Italks, which, in good land, will grow five or fix feet long, and if fupported, fometimes feven or eight : they are armed with fhort herbaceous prickles; and at each joint are placed five or fix fpear-fhaped leaves : their upper furfaces are fmooth : but their midrib on the under fide is armed with rough herbaceons fpines, and the leaves fit clofe to the branches in whorls. From the joints of the ftalk come out the branches, which fuftain the flowers : they are placed by pairs oppofite; each pair croffing the other: thefe have a few fmall leavts toward the bottom, which are by threes, and upwards by pairs oppofite : the branches are terminated by loofe branching fikes of yellow flowers, which are cut into four parts refembling ftars:- Thefe appear in June, and are fometimes fucceeded by feeds, which

Rubens, Rubia.

## RU B

Rubininka which feldom ripen in England. For the manner of Rubus. its cultivation and preparation for the use of dyers, fee the article Madder.

Madder -root is unfed in medicine. The virtues attribute to it are thole of a detergent and aperient; whence it has been usually ranked among the opening roots, and recommended in obstructions of the vifcera, particularly of the kidneys, in coagulation of the blood from falls or bruifes, in the jaundice, and beginning droplies. It is an ingredient in the icteric decoction of the Edinburgh pharmacopeia.
It is observable, that this root, taken internally, tinges the urine of a deep red colour; and in the Philofophical Tranfactions we have an account of its producing a like effect upon the bones of animals who had it mixed with their food: all the bones, patticularly the more fold ones, were said to be changed, both externally and internally, to a deep red ; but neithen the fleshy nor the cartilaginous parts fuffered any alterations: forme of thee bones macerated in water for many weeks together, and afterwards fteeped and boiled in spirit of wine, loft none of their colour, nor communicated any tinge to the liquors. This root, therefore, was concluded to be poffeffed of great fubtilty of parts, and its medical virtues hence to deferve inquiry. The fame trials, however, made by others, have not been found to produce the fame effects as thole abovementioned. -Of late the root has come into great repotation as an emmenagogue.

RUBININSKA, one of the northern provinces of Ruffia, bounded by the province of Dwina on the north, by Syrians on the eat, by Belozera on the couth, and by the lake Onega on the welt.

RUBRIC, in the canon law, fignifies a title or artickle in certain ancient lew-books; thus called becaufe written, as the titles of the chapters in our ancient bibles are, in red letters.

RUBUS, the Bramble, or Ra/pberry buff: A genus of the polygamia order, belonging to the icofandria class of plans; and in the natural order ranking under the 35 th order, Senticofac. The calyx is quinquefid, the petals five; the berry confining of monospermous acini or pulpy grains. The principal fpecies is the common raspberry, which, with its varieties, demads culture in every garden for their fruit; particularly the common red kind, white fort, and twicebearing ralpberry; all of which are great bearers: but for the general plantations, we choole principally the common red and the white kind, as being generally the greatelt bearers of all ; planting also a there of the wice-bearing fort, both as a curiofity and for the fake of iss autumnal crops of fruit, which in favourable feafons ripen in tolerable perfection; observing to allow all the forts forme open expofure in the kitchen garden, though they will proper in almoft any fituaion.

The other fpecies are confidered as plants of variety, for hardy plantations in the hrubbery. Some of them are a'fo very ornamental flowering plants; particularly the Virginian towering rafpberry, and the doublebloffomed bramble, which have great merit as furniture for ornamental compartments; and the white-berried bramble, which is a great curiofity. All the other feecis and varieties ferne to diverfify large collections.

RUBY, a genus of precious ftones of various colours; as, I . Of a deep red colour inclining a little to purple; the carbuncle of Pliny. 2. The spinel, of the colour of a bright corn poppy flower. 3. The balais

 Gil. The balafs comes principally from Brail, though rome are alpo brought from the Eft Indies. The rubiel comes alto from Brafil, but are fad to lofe their colour in the fire. A variety of this gem, but of a fofl quality, is found in great plenty on the fea-fhore near Ely in Fifeshire, Scotland. There is alto a tone

#### Abstract

or pale red inclining to violet; fuppofed to be the mothe of rubies. 4. The rubicell, of a reddifh yellow. According to Cronftedt, the ruby chryftallifes into an oc-

RUD 「 544 ] R D D

Whilh comes near to the ruby found near Portfoy, Banffshire, and at Inverary, Argylefhire, Scotland. The rubino di rocia of the Italians is a true garnet of a deep red and violet, or of the amethyft colour. What is called ruby of arfenic or of fulphur is the realgar: the ruby of zinc is the red blend; and the ruby of filver is the red filver ore.

Rubies may be artificially made from Brafilian topazes of a fmoky appearance, by giving them a gradual heat in a crucible filled with alhes, until it be red. hot.

Rock Rubr, the amethyfizonias of the ancients, is found in Syria, Calcutta, Cananor, Cambaya, and Ethiopia. It is the molt valued of all the fpecies of garnets, and is frequently fold as a ruby under the narme of rubinus Ru/ficum. See Garnet and Ruby.

RUCTATION, a ventofity arifing from indigef. tion, and difcharging itfelf at the mouth with a very difagreeable noife.

RUDBECK (Olaus), a learned Svedifh phyfician, born of an ancient and noble family in 1630. He became profeffor of medicine at Upfal, where he acquired great applaufe by his extenfive knowledge ; and died in 1702. His principal works are, 1. Exercitatio anotomica, exbibens ductus novos hepati os aquofos, $\sigma^{\circ}$ vafa glandularum ferofa, in 4to. He there afferts his claim to the difcovery of the lymphatic veffels, againft the pretenfions of Thomas Bartholin. 2. Atblantica, five Manbein, vera Japheti pofterorum fedes ac patria, 4 vols folio, is full of ftrange paradoxes fupported with profound learning: he there endeavours to prove, that Sweden was the country whence all the ancient Pagan divinities and our firtt parents were derived; and that the Germans, Englifh, French, Danes, Greeks, and Romans, with all other nations, originally came from thence.

RUUBECKTA, in botany: a genus of the polygamid fruftanea order, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the 4,9 th order, Compofita. The receptacle is paleaceous and conical; the pappus confilts of a quadridentate margin; the calyx of a double feries of fcaly leaves.

RUDDER, in navigation, a piece of timber turning on hinges in the ftern of the fhip, and which, oppofing fometimes one fide in the water and fometimes another, turas or directs the veffel this way or that. See Helm.

In the feventh volume of the Tranfactions of the Society inftituted at London for the Encouragement of Arts, Manufactures, and Commerce, there is explained a method of fupplying the lofs of a hhip's rudder at fea. The invention, which is Captain Pakenham's of the royal navy, has been approved by Admird Cornwallis, the commiffionets of the admiralty, by the fociety in whofe tranfactions the account of it was firt putliffed, and who prefented to Captain Pakenham their gold me. dal, by the Trinity-houfe, by the managing owners of Eaft India fhipping, by the duke of Sudermania the prefent regent of Sweden, and by the fociety for the improvement of naval architecture. The fubfitute here recommended for a loft rudder, fays the inventor, is formed of the materials without which no thip coes to fe:t, and its confrution is fimple and fpeedy. Captain Pakenlam, howeyer, did not give a particular ac-
count of his invention to the fociety whom he addreffed, and to whom he fent a model of his invention, till fuch time as he had an opportunity of reducing the theory he had conceived to practice. On the 7 th of July 1788, he made this trial with the Merlin of Newfoundland; and he declares that, during the different manœuvres of tacking and wearing, he could not difcover the lealt variation between the operation of the machine and that of the thip's rudder: the was fleered with the fame eafe by one man, and anfwered the helm, in every fituation fully as quick. Admiral Comwallis certifies the fame with refpect to the Crown of 64 guns, which loft her rudder on the Kentifh Knock, when with the fubltitute fhe was flecred to Portfmouth with the utmoft eafe in a heavy gale, and, as the admiral afferts, it would have taken her to the Ealt Indies.

The materials and conftruction are thus defcribed in the Tranfactions. " $\mathrm{N}^{\circ}$ I. a top-malt inverted; the fid-hole to fhip the tiller in, and fecured with hoops ceccexin from the anchor focks; the heel forming the head of the rudder. $\mathrm{N}^{\circ}$ 2. The inner half of a jibb-boom. $\mathrm{N}^{\circ} 3$. The outer half of a jibb-boom. $\mathrm{N}^{\circ} 4$. A fifh: the whole of thefe materials well-bolted together :-in a merchantman her ruff-tree. No 5. A cap, with the fquare part cut ont to fit the ftern-poft, and acting as a lower gud. geon, fecured to the itern-p ft with hawfers, leading from the bolts of the cap, under the fhip's bottom, into the hawfe-holes, and hove well tort. No 6. A plank, or, if none on board the fhips, gangboards. $\mathrm{N}^{\circ} 7$. An-chor-ftocks, made to fit the topmaft as partners, fecu. red to the deck, and fupplying the place of the upper gudgeon, and in a merchant-fip the clamps of her windlafs. No 8. A tern-polt. $\mathrm{N}^{\circ} 9$. Hoops from the anchor ftocks. $N^{\circ}$ 1o. Pigs of ballaft, to fink the lower part. The head ot the rudder to pafs through as many decks as you wifh."

On this the Captain makes the following remarks : "It might pribably be fuppofed, that a difficulty would occur in bringing the jaws of the cap to embrace the ftern-poft; but this will at once be obviated, when it is remembered that the top-cbains, or hawfers, leading from each end of the jaws, under the fhip's bottom, are in fact a continuance of the jaws themfelves. Nor can it be apprehended that the cap, when fixed, may be impelled from its fation, either by the efforts of the fea, or the courfe of the hip through the water, tho' even the hawfers, which confine it in the firft inftance, fhould be relaxed:-the experiment proves, that the partners muft be firt torn away, or the main-piece broken off.
"Since the improved fate of navigation, notwithAtanding remedies have been found in general for the moft difaftrous accidents at fea, experience his evinced that nothing complete, had been hatherto invented to ftupply the lofs of a rudder. The firt expedient within my knowledge were cables veered aftern, with tackles leading from them to the fhip's quarters. This practice was fuperieded by the invention of the machine ufually called the Iffruich nachine ; but the contruction of it is complex and unwieldy, and veffels are feldom found in poffefion of the materials which form it. Commodere Byron, in the Journal of his Voyare round the Wurle, fays, that the lamer, with every afiltance from his own fhip; was five days in confuraing it. Befides, like the before-

## R U D <br> $\left[\begin{array}{lll} & 545\end{array}\right]$ <br> R U D

Ruddiman. beforementioned fcheme, it can only operate to fteer a fhip large (asd that but very wildly), and of courfe, under the circumitance of a lee-lhore, defeat the moft fhilful exertions of a feaman. Several other expedients have been adopted, which I thall not mention here, as the fame defects equally appear in all.
" Thus it was apparent, that ample room was left for the difcovery of fome more certain refource than any of the former; and the fcheme which has fuggetted itfelf to me, will, I truft, be found fully to anfwer the purpofe intended. The materials are fuch as fcarcely any thip can venture to fea without; and the conffruction fo fpeedy, eafy, and fimple, that the capacity of the meaneft failor will at once conceive it. I need not, from mathematical principles, fhow the certainty of its effect, as it is formed and managed in the fame manner as a thip's common rudder: and as the common rudder is certainly of all inventions the beft calculated for guiding a veffel through the water, it will of courfe follow, that whatever fubfitute the neareft refembles that, mult be beft adapted to fupply its lofs."

RUDDIMAN (Thomas), one of the moft eminent grammarians which Scotland had produced, was born in Octoler 1674, at Raggel, in the parith of Boyndie and county of Banff. His father James Ruddiman was a farmer, and frongly attached to the houle of Stuart.

Mr Rudc:iman was infructed in the principles of Lain grammar at the parifh.fchool of Boyndie, where his application was fo vigorous, and his progrefs fo rapid, that he quickly furpaffed all his clafs-fellows. His mafter, George Morifon, who was a fkilful and attentive teacher, being unwilling to check his ardour for learning, permitted him to follow the impulfe of his genius, and to advance without waiting the flow progrefs of the other boys.

The pleafure which the youthful mind receives from vivid defcription, though wild and romantic, approaches to ecflacy, and often makes an impreffion which remains indelible. While at fchool, the firft book which charmed the opening mind of Ruddiman was Ovid's Metamorphofes; nor did he ceafe to relifh the beauties of this author when his judgment was mature, for during the reft of his life Ovid was his favourite poet.

At the age of fixteen he became anxious to purfue his ftudies at the univerfity; but his father thinking him too young, oppofed his inclination. Hearing of the competition trial, which was annually held at King's college, Aberdeen, for a certain number of burfaries on the foundation of that univerfity, Ruddimun's ambition was kindled. Without the knowledge of his father, and with only a fingle guinea in his pocket, which his fifter had privately given him, he fet out for that place. On the road he was met by a company of gypleys, who robbed him of his coat, his fhoes, his flockings, and his guinea. This misfortune did not damp his enterprifing firit: He continued his jeturney to Aberdeen, prefented himfelf before the profeffors as a candidate; and though he had neither clothes to give him a decent appearance nor friends to recommend him, he gained the firt prize.

After attending the univerfity four years, he obtained the degree of mafter of arts; an honour of which he was always proud. The thefis fays, the difputation on this occation lafted ab aurora u/fue ad vefperum, i. e. Vol. XVI.
"from morning till night." Tho' Ruduiman was only Ruditasan. twenty years of age when he left the univerfity, it appears from a book intitled Rhetoricorum Libri tres, compofed before this period, but never publifhed, that he had then read the Roman claffics with uncommon attention and advantage.

He was foon after engaged as a tutor to the fon of R'bert Young, Efq; of Auldbar, the great grandfon of Sr Peter Young, who under the direation of Buchanan had been preceptor of James VI. His income here muft have been very fmall, or his fituation unpleafant; for within a year he accepted the office of fchoolmafter in the parifh of Laurence-kirk. The profeffion of fichoolmaiter in a country-parifh at that period could open no field for ambition, nor profpect of great emolument; for by an act of parliament paffed in 1633 , the falary appropriated to this office could not be increafed above 200 merks Scots, or L. 11:2:2 $\frac{2}{3}$ Sterling. In difcharging the duties of this humble but important fation, it is probable that he ufed Simfon's Rudimenta Grammatica, which was then originally taught in the northern fchools, and by which he himfelf had been inftructed in the principles of Latin grammar.

When Ruddiman had fpent three years and a half in this employment, the celebrated Dr Pitcairne happening to pafs through Laurence-kirk, was detained in that village by a violent form. Pitcairne wanting amufement, inquired at the hoftefs if the could procure any agreeable companion to bear him company at dinner. She replied, that the fchoolmafter, though young, was faid to be learned, and, though modeft, fhe was fure co.ld talk. Pitcairne was delighted with the converfation and learning of his new companion, invited him to Edinburgh, and promifed him his patronage.

When Ruddiman arrived in Edinburgh, the advocates library which had been founded eighteen years before by Sir George Makenzie, attracted his curiofity and attention, and he was foon after appointed af-fiftant-keeper under Mr Spottifwoode the principal librarian. His falary for executing this laborious office was L. 8:6:8. He had befides a fntill honorary prefent from thofe who were admitted advocates for correcting. their thefes: he was alfo paid for copying manufcripts for the ufe of the library. And the faculty, before he had held the office two years, were fo highly pleafed with his conduct, that they made him a prefent of 50 pounds Scots, or L. 4:3:4 Sterling.

During the fitting of the court of feffion he attended the library from ten till three. But this confinement did not prevent him from engaging in other laborious duties: A part of his time was occupied in teachines young gentlemen the Latin language. Some he attended at their lodgings, fome waited upon him, and fome refided in his own houfe. An exact lift of the names of thofe who attended him, expreffing the date of their entry, and the fums which he was to receive from each, has been found in his pocket-book; a curious relick, which is ftill preferved.

When Ruddiman's merit as a fcholar became better known, his affiftance was anxioufly folicited by thofe who were engaged in literary publications. Freebaime, a refpectable bookfeller of that period, prevailed upon him to correct and prepare for the prefs Sir Robert Sibbald's Introdutio ad biforiam rerum a Romanis geftarum in ea Borealis Brttannis parte aue ultra murum

Picticum
$R$ U D
$\underbrace{\text { Ruddiman. Piticumeft. He received for his labour L. } 3 \text { Sterling. }}$ It the requeft of Mr Spotifwoode librarian, for L. 3 Sterling he contributed his aid to the publication of Sir Robert Spottifwoode's Practiques of the Laws of Scotland.

In 1707 he commenced auctioneer, an employment not very fuitable to the dignified character of a man of letters : but to this occupation he was probably impelled by neceffity; for upon balancing his accounts at the end of the preceding year, the whole furplus was L. 28. 2s. with profpects of L. 236:7: 6 Seots. Ruddiman had a family; and feems to have been a ftranger to that foolifh pride which has feduced fome literary men into the opinion, that it is more honourable to Rarve than have recourfe to an occupation which men of rank and opulence are accuftomed to defpife. The fame year he publifhed an edition of Volufeni de Animi Tranquilitate Dialogus, to which he prefixed the life of Volutenus. Volufenus cr Wilfon was a learned Scotfman, and had the honour to be patronized by Cardinal Wolfey (fee Wilson). In 1709 be publifhed Fobnfoni Cantici Solomonis Parapbrafs Poetica, and Fobnfoni Cantica with notes, which he dedicated in verfe to his friend and patron Dr Pitcairne. The edition confifted of 200 copies. The expence of printing amounted to L. 5. io s. Sterling, and he fold them at a fhilling each copy.

The philological talents of Ruddiman were next direted to a more important object, in which they became more confpicuous and ufeful. Freebairne the brokieller propofed to publifh a new edition of the Scottihh tranlation of Virgil's Æeneid by Gawin Douglas bifhop of Dunkeld. Of the contributions which fome eminent characters of the age prefented, the molt valuable were fupplied by Ruddiman. Freebairne acknowledged in general terms this obligation, but has not done him the juftice to inform the reader what thefe valuable contributions were, and Ruddiman's modefty reflrained him from publickly afferting his claim. From the pocket-book which has been already mentioned, it appears that Ruddiman corrected the work and wrote the gloffary; and there is ftrong reafon to believe that he was the author of the 42 general rules for affilting the reader to undertand the language of Douglas. To thofe who wifh to be acquained with the ancient language of this ifland, the gloflary, will be a treafure, as it forms a compendious dictionary of the Anglo-Saxnn. For this elaborate work Ruddiman was ulowed L 8: 6: 8 Sterling,

The reputation of Ruddiman had now extended to a difance. Hie was invited by the magitrates of Dundee to be rector of the grammar-fchool of that town ; but the faculty of advocates, anxious to retain him, zugmented his falary to L. $30: 6: 8$ Sterling, and ine declined the offer.

In 17 II he affifted Bifhop Sage in publifhing Drummond of Fawthornden's works; and performed the fame favour to Dr Abercrombie, who was then preparing for the prefs his Martial Atchievements.

## R U D

In 1713 he was deprived of his friend Dr Pitcairne. On this occafion he teftified all the refpect which friendfhip could infpire to the memory of his deceafed patron and furviving family. He compofed Pitcairne's epitaph, and conducted the fale of his library, which was difpofed of to Peter the Great.

In 1714 the Rudiments of the Latin tongue were publifhed. Eighteen or nineteen Latin grammars, compofed by Scotchmen, had appeared before this period; yet fuch is the intrinfic value of this little treatife, that it foon fuperfeded all other books on the fubject, and is now taught in all the grammar-fchools in Scotland. It has alfo been tranflated into other languages.

He was next called upon to publifh the works of Buchanan. The value of there he enhanced much by an elaborate preface, his Tabula Regum Scotic Cbronolo. gica, and Propriorum Nominum Interpretatio. The interpretation of proper names was highly requifite; for Buchanan has fo difguifed them in the Roman drefs, that the original name is fcarcely difcernible; and the preface puts the reader on his guard againft the chronoiogical errors and factious fpirit of the hiftory. Ruddiman alfo added a learned differtation, intitled 1$)_{e} \cdot M e-$ tris Buchananais Libellus, aud fubjoined annotations critical and political on the Hiftory of Scotland. As he efpoufed the caufe of Queen Mary, he railed againft himfelf an hof of enemies, and gave occafion to that celebrated controverfy which has been carried on with much keennefs and animofity, and with little intermiffion, even to the prefent times. For this work Ruddiman was promifed L. 40 Sterling.

He had now been fo long accullomed to fuperintend the prefs, that he was led to form the plan of erecting a printing-office himfelf (A). Accordingly, in the year 1715, he commenced printer in partner fhip with his brother' Walter, who had been regularly bred to the bufinefs. Some years after he was appointed printer to the univerfity, along with James Davidfon bookfeller.

The firf literary fociety formed in Scotland was inflituted in the year 1718 . It probably derived its crigin from the factious and turbulent firit of the times. The learned, anxious perbaps to fiud fome refpite fromthe political diflenfions of the day, endeavoured to procure it in elegant amufement $;$ for one of the fundamen. tal articles of the new affociation was, that the "uffairs of church and flate fhould not be introduced." Ruddiman and the mafters of the high-fchool had the bonour to found this fociety. They were afterwards joinedby Lord Kaimes.

In 1725 the firft part of his Grammatice Latine $I_{n}$ Jitutiones, which treated of etymology, was publifhec. The fecond part, which explained the mature and principles of fyntax, appeared in 173 I . He alfo wro:e a third part on profody, which is faid to be more copious and correct than any other publication on the fubject. When urged to give it to the public, he faid dryly, "The age has fo little tafte, the fale would not pay: the expence." Of this work he publifhed an abridgements:
(1) It has. long been an object of curiofity to afcertain the time at which the art of printing was introduced into Scodland. Mr Robertfon, the keeper of the records, has lately difcovered a patent of-King James IV. which renders it certain that a printing-prefs was firt eftablifhed at Edinburgh during the gear 1507,30 years; ziter Caxton had brought it into England. See Printing, P. 5. 22.

## $R$ U D $\quad[547] \quad \mathrm{KUDD}$

Kuddiman. ment, to which he fubjoined an abftract of his pro- who had for fome time been the principal manager of Rultimin. fody.

Ruddiman next engaged in the management of a newfpaper, an employment for which his genius and inAuftry feemed to render him well qualified. But thote who thould expect either much information or amufement from this publication, would perhaps be greatly difappointed. The newfpaper which he conducted was the Caledonian Mercury, and was eftablifhed in 1720 by William Rolland a lawyer. Ruddiman acted only in the capacity of printer for five years; but upon the death of Mr Rolland in 1729, the property was tranfferred to him, or to his brother Walter and him con. junctly. This paper continued in the family of Ruddiman till the year 1772, when it was fold by the truf. tees of his grandchildren to Mr.John Robertion.
The Caledonian Mercury was at firf printed three times a week, on Monday, Tuefday, and Thurfday, in a fmall s.to of four pages, with two columns in each page, and 50 lines in each column; fo that the whole paper contained only 400 lines. It now contains in its folio fize 2480 lines.
Mr Ruddiman, after the death of Mr Spotififoode librarian, remained for fome time in his former ftation; but was at length appointed keeper of the library, tho' without any increafe of falary ; and fome years after $\mathbf{M r}$ Goodal, the defender of Queen Mary, fucceeded him in the office of fub-librarian.
The afliduous application of Ruddiman, fupported by fuch learning, was intilled to weallh, which now indeed flowed upon him in what was at that period deemed great abundance. On the ift of October 1735 , it appeared from an exat ftatement of his affairs, that he was worth L. 1832:5:2 Sterling; and on the 20th of May, the enfining year, his wealth had increafed to L. $1085: 6: 3$ Sterling. In 1710 he valued his effects at L. $24: 14: 9$ Sterling.

In 1737 the fchoolmatters and teachers in Edinburgh formed themfelves into a fociety, in order to eftablifh a fund for the fupport of their wives and children. Of this fcheme Ruddiman was an active promoter, and was chofen treafurer. Perhaps it was this affociation which in 174.2 gave the idea to the Scots clergy of forming their widows fund.
In 1739 he publifhed Sclefus Diplomatum et Numif. matum Scotia Thefaurus. This work was projected and begun by Anderfon (hence called Anderfon's Diploma$t a$, but was finilhed by Ruddiman. The preface, which is an excellent commentary on Anderfon's performance, was written by Ruddiman, and difplays a greater extent of knowledge than any of his other productions.
As Ruddiman had imbibed from his father thofe political principles which attached him to the family of Stuart, he probably did not remain an unconcerned fpectator of the civil commotions which in 1745 agitated Scotland. He did not, however, take any active pait in the rebellicn. His principles he has been heard to fay, induced him to be a quiet fubject and a good citizen. He retired to the country during the fummer of 1745 ; and whle his falow-citizens were fpilling each others blood, he was more happily engaged in writing Critical Obfervations on Burman's Commentaries on Lucan's Pharfalia. The Caledinian Mercury was in the mean time marked with a jealous ege. His fon,
that newfpaper, having copied a paragraph which was $\underbrace{-}$ reckoned feditious from an Englifh paper, was imprifoned. The folicitation of his father procured his re. leafe : but it was too late; for the unhappy young man had contracted a diftemper in the tolbooth of Edinburgh which brought him to his grave.

During the latt feventeen years of his life Ruddiman was almof inceffantly engaged in controverfy. To this he was in fome meafure compelled by the violent attacks which fome critics of the times had fuccefively made upon his works. He was firft called upon by Benfon, auditor in the exchequer, to determine the comparative merit of Buchanan and Johnton as poets. He gave a decided preference to Buchanan in perfpicuity, parity, and variety of ftyle; but, like a candid critic, allowed Johnfton to be fuperior in the harmony of his numbers. His next antagonift was Logan, one of the minifters of Edinburgh, a weak illiterate man, but an obftinate polemic. The fubject of contelt was, whether the crown of Scotland was Atriclly hereditary, and whether the birth of Robert III. was legitimate? Ruddiman maintained the affirmative in both points, and certainly far furpaffed his antagonift in the powers of reafoning. He proved the legitimacy of Robert by the public records of the kingdom with a torce of argument which admits of no reply; but in difcuffing the firf queftion (by which he was led to confider the conteft between Bruce and Baliol) he was not fo fucceffful : for there are many inftances in the hifory of Scotland in which the brother fucceeded to the crown in preference to the fon. He fhowed, however, that the Scottifh crown was at no period properly elective; and that, according to the old licentious confitution of the kingdom, the right of Bruce, who was the neareft in blood to the royal Atock, was preferable to the claim of Baliol though defcended from the eldeft daughter.
But the labours of Ruddiman did not end when the pen dropt from the feeble hand of Logan. He was foon called upon to repel the attacks of Love, ichoolmafter of Dalkeith, who maintained, in oppofition to him, that Buchanan had neither repented of his treatment of Queen Mary, nor had been guilty of ingratitude to that princefs. That Buchanan ever repented there is reafon to doubt. Whether he was guilty of ingratitude let the unbiafled determine, when they are affured by authentic records that Mary conferred on him a penfion for life of 500 pound Scots.

When Ruddiman had arrived at his eightieth year, and was almoft blind, he was affailed by James Man, mafter of an hofpital at A berdeen, with a degree of rancour and virulence, united with fome learning and ability, which mult have touched him in a fenfible manner, and alarmed his fears for his reputation after his deceafe. He was called a finifbed pedant, a furious calumniator, and a corrupter of Buchanan's works. The venerable old man again put on his armour, entered the lifts, and gained a complete vicory. Man, with all his acutenefs, conld only point out twenty errors in two folie volumes. Sume of thefe were typographical, fome trifing, and fome doubtful. Ruddiman, with much pleafantry, drew up againt Man an account of 469 errors, confifing of 14 articles, of which two or three may be produced as a fpecimen. i. Falfehoods and prevarications, 20. 2. Abfurdities, 69. 3. Paflages from

Ruadiman, clafic authons which were mifanderfood by Man, 10. $\underbrace{\text { Rudeheir. The triumph which he gained over this viralent ad- }}$ verfar: he diu not long enjoy; for he died at Edinburgh on the 19 th of January 1757 , in the 83 d year of his age, and was buried in the Grey Friars church-yard without any monument to diftinguifh his grave.

He was three times married, but left behind him only one daughter, Alifon, who was married in 1747 to James Stewart, Efq. He is fuppofed to have died worth L. 3000 Sterling.

He was of the middle fize, of a thin and ftraight make, and had eyes remarkably piercing. Of his talents and learning his works afford the moft fatisfactory proofs. His memory was tenacious and exact. He could repeat long paffages of his favourite poet Ovid, to the amount of 60 lines, and without omitting a word. He was fo great a mather in the Latin language, that he has perhaps been equalled by none fince the days of Buchanan.

Ruddiman has left a charaster unftained by vice, and ditinguifhed by many virtues. His piety was exemplary. He fpent Sunday in religious employment ; and ire are informed had prayers read to him every morning by his amanuenfis when the infirmities of age required fuch an affiftant. He was frugal of his time, neither indolent nor fond of amufement ; and fo remarkably temperate, that it is faid he never was intoxicated. Though often forced into controverly, and treated with infolence, he never defcended to fcurrility and abufe, nor cherifhed refentment againft bis enemies. His candour was much admired in one inftance in the favourable character which he publifhed in the Caledonian Mercury of his antagonift Love ( B ), after his deceafe. Upon the whole, it mult be allowed that Ruddiman has been of great fervice to claffical literature, and an honour to his native country.

RUDESHEIM, a rich village of the Rhinegau, lituated about five miles from the city of Mentz, concains about 2500 inhabitants. The wine of this place is looked upon as without comparifon the beft of the Rhinegau, and confequently of all Germany. Baron Riefbeck fays, he found it much more fiery than that of Hochheim; but that for pleafantnefs of tafte there is no comparifon betwixt them. The beft Rudefheim, like the beft Hochheimer, fells upon the fpot for three guilders the bottle. "Yru can (fays our author) have no tolerable wine here for one guilder, nor any very good for two; at leaft I fhould prefer the worf Burgundy I ever tafted to any Rudefheimer I met with either here or at Menta for thefe prices. Indeed the wine of our b. ft (a rich ecclefiafic) was far better than any we could get at the inn. It fands to reafon, that the fame vintage furnifhes grapes of very different degrees of goodnefs; tut befides this, it is in the Rhi-
negau as every where elfe. The beft wines are gene- Rudefheint rally fent abroad by the poor and middling inhabitants, and the worit kept for internal confumption ; for the exRue. pence of the carriage being the fame in both cafes, ftrangers had much rather pay a double price for the good than have the bad. It is only rich people, fuch as our hoft was, who can afford to keep the produce of their land for their own drinking. Upon this principle, I have eaten much better Swifs cheefes out of Switzerland than in it, and have drank much better Rhenifh in the inns of the northern parts of Germany than in the country where the wine grows. The pofition of the country alfo contributes to render the wine dearer that it would otherwife be. As the belt wine grows in its more northern parts, the eafy tranfport by the Rhine to Holland, and all parts, of the world, raifes its price above its real value. . The place where the flower of the Rudefheim wine grows is precifely the nect of the land, formed by the winding of the Rhine to the north after it has run to the weftward from Mentz hither. This neck, which is a rock almoft perpendicular, enjoys the firlt rays of the rifing and the laft of the fetting fun. It is divided into fmall low terraces, which are carried up to the usmoft top of the hill like Iteep ftairs; thefe are guarded ky fmall walls and earthen mounds, which are often wafhed away by the rain. The firf vine was brought hither from France, and they ftill call the beft grape the Orleannois. They plant the vine ftocks very low, fearce ever more than four or five feet high. This way of planting the vine is favourable to the production of a great deal of wine, but not to its goodnefs, as the phlegmatic and harf parts of it would certainly evaporate more, if the fap was refined through higher and more numerous canals. This is undoubtedly the reafon why every kind of Rhenifh has fomething in it that is harfh, four, and watery. The harvelt of the beft vineyards, which are the lower ones, in the abovementioned neck of land, is often bought before-hand, at the advanced price of fome ducats, by Dutch and other merchants. It muft be a very rich fock to yield above four meafures of wine.You may eafly imagine, that the cultivation of vineyards mult be very expenfive in this country, as the dung, which is extremely dear, mult be carried up to the top of the mountains on the peatants' fhoulders."

RUDIMENTS, the firt principles or grounds of any art or fcience, called alfo the elements thereof.

RUE, in botany. Se Ruta.
Rue (Charles de la), a French orator and poet, was born at Paris in 1643. He was educated at the college of the Jefuits, where he afterwards became a profeffor of humanity and rhetoric. At an early age his talent for poetry difclofed itfelf. In 1667, when he was only 24 years old, he compofed a Latin poem on the conqueits of Louis XIV. which was fo much efteemed by the
(B) The following character of Love was publifhed in the Caledonian Mercury of the 24th of September1750. "On Thurlday morning died at Dalkeith, after a lingering illnefs, in the 55 th year of his age, Mr John: Love, retor of the grammar-fchool there; who, for his uncommon knowledge in claffical learning, his indefatigable diligence, and itrictnefs of difcipline without feverity, was jufly accounted one of the moft fufficient maiters in this country." This character is doubtlefs juft ; though Love is now known to have been the fchoo!malter fatizized by Smolet in the beginning of his Roderic Random.

## R U E

Rue, the celebrated Peter Corneille, that he tranlated it into Ruellia. $\underbrace{\text { Ruella. }}$

French, prefented it to the King, and at the fame time
paffed fo high encomiums on the fuperior merit of the original, that the author was received into the favour of that monarch, and ever after treated by him with fin. gular refpect.

De la Rue, anxious to preach the gofpel to the Canadians, requefted leave of abfence from his fuperiors; but having deftined him for the pulpir, they refufed to comply with his requeft. Accordingly he commenced preacher, and became one of the moit eminent orators of his age. In his difcourfes he would probably have been too lavifh of his wit, if he had not been cautioned againlt it by a judicious courtier. "Continue (faid he) to preach as you do. We will hear you with pleafure as long as you reafon with.us; but avoid wit. We value the wit contained in two verfes of a fong more than all that is contained in moft of the fermons in Lent."

Refpecting the delivery of fermons, he entertained an opinion quite oppofite to the eftablifhed practice of his countrymen. In France it was cultomary not to read fermons from the pulpit, but to recite them from memory. This he confidered as a laborious tafk not compenfated by any advantages. On the contrary, he was of opinion that reading fermons was preferable.The preacher, with his difcourfe before him, could read it with eafe, free from that timidity and embar. raffment which frequently attends the aft of recollection; and he would fave a confiderable time which is ufually fent in committung it to memory. In theie fentiments many will not be difpofed to acquiefce: but, without pretending to determine the queftion, it may be afferted, that a fermon, whether read or recited, if fooken in a ferious manner, and with proper inflections and tones of voice, will produce all the effects for which a fermon is calculated.

De la Rue died at Paris on the 27 th of May 1725 , at the age of 82 .

He was as amiable in fociety as he was venerable in the pulpit. His converfation was pleafant and inftructive. His tafte and knowledge enabled him to converfe with eafe, and to exprefs himielf with propriety on every fubject. He charmed his fuperiors by his wit, and his inferiors by his affability. 'Though living amidet the bultic of the world, he was always prepared tor the folitude of the clolet and the retreat or the cloiter. In the pulpit he poured forth the finelt effufions of eloquence in the molt animated and impreffive minner. He publithed Panegyrics, Funeral Orations, and Sermons. His beit fermon is that intitied Des Comamit's Publiques, and his molt admired inneral oration was compoled on the Prince of Luxemburg. There are alo cragedies of his writing, both in Latin and French, which wers approved by Corneille. He was one of thofe who publithed editicts of the clafics for the ufe of the Dauphen. Virgil, which fell to his fhare, was publifhed with notes, and a Life of the Poet, in 1675, 4to, and is a valuable and ufful cuition.

RUELLIA, in botany: A senus of the angiofipermit order, belonging to the didynamia clafs of plants; and in the matural method manking under the 40th order, Perfonite. The calyx is quinquepartite; the corolla fub-can panulated; the ftamina approaching: together in pairs; the capfule fpringivg afunder by means of its elaftic fegments.

RUFF, in ichthyology; a fpecies of Perca.
Ruff, in ornithology, a fpecies of Tringa.
RUFFHE 1 D (Dr Owen), was the fon of his Majefty's baker, in Piccadily; who buying a lottery ticket for him in his infancy, which happened to be drawn a prize of 5001 . this fum was applied to educate him for the law. He accordingly entered in the Middle 'Temple; and feconded fo well the views of his father, that he became a good fcholar and an acute barrifter. While he was waiting for opportunities to diftinguifh himfelf in his profeflion, he wrote a variety of pamphlets on temporary politics; and was afterwards diftinguilhed by his accurate edition of The Statutes at Large, in 4 to. He now obtained good bufinefs, though more as a chamber-counfellor in framing bills for parliament than as a pleader ; but his clofe application to Ittdy, with the variety of works he engaged in as an author, fo impaired his conftitution, that after the laft exertion of his abilities to defend the conduct of adminiftration toward Mr Will:es, by a pamphlet intitled, " The Cafe of the late election for the county of Middlefex confidered," he was prevented from receiving the 1 eward of a place in the Treafury, by dying in 1769, at about 46 years of age. Some time before his death, bifhop Warburton engaged him to write his long promifed Life of Alexander Pope; which, however, when executed, was very far from giving general fitisfaction. The author attributed his ill fuccefs to the deficiency of his materials; while the public feemed rather to be of opinion that, as a lawyer, he ventured beyond his proper line, when he affumed the talk of a critic in poetry.

RUFFLING, or Ruifing, a beat on the drum. Lieutenant-generals have three ruffles, major-generals two, brigadiers one, and governors one, as they pals by the regiment, guard, \&c.

RUFINUS was born about the middle of the fourth century at Concordia, an inconfiderable town in Italy. At firft he applied himfelf to the belles lettres, and particularly to the ftudy of eloquence. To accomplifh himfelf in this elegant art, he removed to Aquileia, a town at that time fo celebrated that it was called a fecond Pome. Having made himfelf acquainted with the polite literatuse of the age, be withdrew into a monaf. tery, where he devoted himfelf to the fudy of theology. While thus occupied, St Jerome happened to pafs. through Aquileiz. Rufnus formed an intimate friend. fhip with him; but to his inexpreffible grief was foon de. prived of the company of his new friend, who conti-. nued his tra:els through France and Germany, and then fet out for the ealt. Rufinus, unable to bear his abfence, refolved to follow him. Accordingly he embarked for Egypt; and having vifited the hermits who inhabit the deferts of that country, he repaired to Alexandria to hear the renowned Didymus. Here he was gratified with a fight of St Melania, of whofe virtue and charity he had heard much. The fanctity of his manners foon obtained the confidence of St Melania, which continued without interruption during their refidence in the eaft, a period of 30 years. The Arians, who fwayed the ecelefraltical feeptre in the reign of Valens, perfecuted Rufinus. with great cruelty. They threw him into a dungeon, loaded him with chains, and after almoft tarving him to death, banifhed him to the deferts of Palefinc. From this exiie he was relieved by the pecuniary aid of $\mathrm{E} t$ Melania, who employed her wealth in ranfoming these

## R U I

Rufnus confeflors who had been condemned to prifon or banifhment.

St Jerome, fuppofing that Rufinus would immediately proceed to Jerufalem, wrote to one of his friends there, congratulating him on the profpect of fo illultrious a vifitor. To Jerufalem he went, and having built a monaftery on the Mount of Olives, he there affembled a great number of hermits, whom he animated to virtue by his exhortations. He converted many to the Chriltian faith, and perfuaded more than 400 hermits who had taken part in the fchifm of Antioch to return to the church. He prevailed on many Macedonians and Arians to renounce their errors.

His attachment to the opinions of Origen fet him at variance with St Jerome, who, being of a temper pecaliarly irritable, not only retracted all the praifes which he had lavifhed upon him, but loaded him with fevere reproaches. Their difputes, which were catried to a very indecent height, tended to injure Chriftianity in the eyes of the weak. Theophilus, their mutual friend, Settled their differences; but the reconciliation was of fhort continuance. Rufinus having publifhed a tranflation of the principles of Origen at Rome, was fummoned to appear before Pope Analtafius. But he made a fpecious apology for not appearing, and fent a vindication of his work, in whic! he attempted to prove that certain errors, of which Origen had been accufed, were perfectly confiftent with the opinions of the orthodox. St Jerome attacked Rufinus's tranflation. Rufinus compofed an eloquent reply, in which he declared that he was only the tranflator of Origen, and did not confider himfelf bound to fanction all his errors. Moft ecclefialtical hiforians fay that Rufinus was excommunicated by Pope Anaftafius; but for this no good evidence has been brought. In 407, he returned to Rome ; but the year after, that city being threatened by Alaric, he retired to Sicily, where he died in 410.

His works are, I. A Tranflation of Jofephus; 2. A Tranllation of feveral works of Origen; 3. A Latin Verfion of Ten Difcourfes of Gregory Nazianzen, and Eight of Bafil's; 4. Chromatius of Aquilea prevailed on him to undertake a Tranflation of the Ecclefialtical Hiftory of Eufebius, which engaged him almoft ten years. He made many additions to the body of the work, and continued the hiftory from the 20th year of Conftantine to the death of Theodofius the Great. Many parts of this work are negligently written, many things are recorded as facts without any authority but common report, and many things of great importance are entirely omitted. 5. A Vindication of Origen. 6. 「wo Apologies addreffed to St Jerome. 7. Commentaries on the prophets Hofea, Joel, and Amos. 8. Lives of the Hermits. 9. An Explanation of the Creed.

RUGEN, an ifland in the Baltic Sea, on the coaft of Pomerania, over againft Stralfund, about 23 miles in length and 15 in breadth, with the title of a principality. It is frong both by art and nature, abounds in corn and catile, and belongs to Sweden. The chief town is Bergen. E. Long. I4. 30. N. Lat. 54. $3^{2}$.

RUINS, a term particularly ufed for marnificent buildirits fallen into decay by length of time, and whereof there only temains a confufed heap of materials. Such are the ruins of the tower of Babel, of the tower of Belus, two days journey from Bagdat, in Syria, on
the banks of the Euphrates; which are now no more than a heap of bricks, cemented with Bitumen, and whereof we only perceive the plan to have been fquare. Such alfo are the ruins of a famous temple, or palace, near Schiras, in Perfia, which the antiquaries will have to have been built by Ahafuerus, and which the Perflans now call Tchelminar, or Chelminar ; q. d. the 40 columns; becaufe there are fo many columns remaining pretty entire, with the traces of others; a great quantity of baffo-relieros, and unknown characters, fufficient to fhew the magnificence of the antique architecture. The moft remarkable ruins now exilting of whole cities are thofe of Palmyra and Persepolis of the grandeur of which fome idea may be formed from the views given in the plates referred to from thefe articles, to whicn may be added thofe of Herculaneum and Pompeium. The magnificent ruins fill remaining in Rome, Athens, \&c. of particular edifices, as temples, palaces, amphirheatres, aqueducts, baths, \&c. it were endlefs to enumerate, and beyond the plan of this work to reprefent.

RUIZIA, in Botany: A genus of the polyandria order, belonging to the monodelphia clafs of plants; and in the natural method ranking under the 37 th order, Columniferc. The calyx is double; the external are triphyllous; the internal are parted into five. The co. rolla confifts of five petals, inclining to the right hand fide, and adhering to the ftamina, whieh are from 30 to 40 . It has ten fyli, and as many capfulx. Thefe are compreffed and membranous. In each capfule are two feeds. There are foar fpecies, viz. I. Cordata; 2. Lobata; 3. Palmata; 4. Lacinata, all natives of Afia and the Cape of Good Hope.

RULE, in matters of Literature, a maxim, canon, or precept, to be obferved in any art or fcience.

Rule, in a monaftic fenfe, a fyftem of laws or regulations, whereby religious houfes are governed, and which the religious make a vow, at their entrance, to obferve. Such are the rules of the Auguftins, Benedictins, Carthufians, Francifcans, \&c. See Augustins, \&c.

Rules of Court, in law, are certain orders made from time to time in the courts of law, which attorneys are bound to obferve, in order to avoid confufion; and both the plaintiff and defendant are at their peril alfo bound to pay obedience to rules made in court relating to the caufe depending between them.

It is to be obferved, that no court will make a rule for any thing that may be done in the ordinary courfe; and that if a rule be made, grounded upon an affidavit, the other fide may move the court againft it, in order to vacate the fame, and thereupon hall bring into court a copy of the affidavit and rule. On the breach and contempt of a rule of court an attachment lies; but it is not granted for difobedience to a rule, when the party has -not been perfonally ferved; nor for difobeying a rule made by a judge in his chamber, which is not of force to ground a mution upon, unlefs the fame be entered.

A rule of court is granted every day the courts at Weltmintler fit, to prifoners of the King'c.bench or Fleet prifons, to go at large about their private affairs.

Rule of Three. See Arithmétic and Proportion.
Rule, or Ruler, an inftrument of wood ar metal, with feveral lines delineated on it; of great ure in

Ruizia, Rule.

## R U M <br> K U M

Rum.
practical menfuration. When a ruler has the lines of chords, tangents, fines, \&c. it is called a plane fale.

RUM, a fpecies of brandy or vinous fpirits, diftilled from fugar-canes.

Rum, according to Dr Shaw, differs from fimple fugar-fpirit, in that it contains more of the natural flavour or effential oil of the fugar-cane; a great deal of raw juice and parts of the cane itfelf being often fermented in the liquor or folution of which the rum is prepared. The untuous or oily flavour of rum is often fuppofed to proceed from the large quantity of fat ufed in briling the fingar; which fat, indeed, if coarfe, will uftually give a ftinking flavour to the firit in our difillations of the fugar liquor or wafh, from our refining fugar-houfes; but this is nothing of kin to the flavour of the rum, which is really the effect of the natural flavour of the cane.

The method of making rum is this: When a fufficient fock of the materials are got together, they add water to them, and ferment them in the common method, though the fermentation is always carried on very flowly at firft ; becaufe at the beginning of the feation for making rum in the illands, they want yeaft or fome other ferment to make it work: but by degrees, after this, they procure a fufficient quantity of the ferment, which rifes up as a head to the liquor in the operation; and thus they are alle afterwards to ferment and make their rum with a great deal of expedition, and in large quantities.

When the wafh is fully fermented, or to a due degree of acidity, the difillation is wried on in the common way, and the fpirit is made up proof: though fometimes it is reduced to a much greater ftrength, nearly approaching to that of alcohol or fpirit of wine ; and it is then called double-difililcel rum. It might be eafy to recify the fpirit, and bring it to much greater purity than we ufually find it to be of: for it brings over in the diftillation a very large quantity of the oil ; and this is often fo difagreeable, that the rum mult be fuffered to lie by a lung time to mellow before it can be ufed; whereas, if well rectified, it would grow mellow ni:ch fooner, and would have a much lefs potent flavour.

The beft Atate to keep rum in, both for exportation and other ures, is doubtlefs that of alcohol or rectified firit. In this manner it would be tranfported in one hatif the bulk it ufually is, and might be let down to the common proof-ftength with water when necelfary : for the comenon ufe of making punch, it would Rikewie ferve much better in the fate of alcohol : as the tafte would be cleaner, and the flength might always be regulated to a much greater exaetnefs, than in the ordinary way.

The ouly ule to which it would not fo well ferve in this fate, would be the common practice of adulteration among our diftillers; for when they want to mix a large portion of cheaper firit with the rum, their bufinefs is to have it of the proof-ltrength, and as fall of the flavouring oil as they can, hat it may drown the flavour of the firits they mix with it, and extend its own. If the bufinets of rectitying rum was more nicely managed, it feems :t very praticable fcheme to throw out fo much of the oil, as to have it in the fine light ftate of a clear fpirit, ba lighty impregnated with it : in this cafe it would very ne.rly refernble arac ${ }^{2}$ as is
proved by the mixing a very fmall quantity of it with a taftelefs fpirit, in which cafe the whole bears a very near refemblance to arac in flavour.
Rum is ufually very much adulterated in Britain; fome are fo bare-faced as to do it with malt-fipit; but when it is done with molaffes fpirit, the taftes of both are fo nearly allied, that it is not eafily difcovered. The belt method of judging of it is by fetting fire to a little of it; and, when it has burnt away all the inflammable part, examining the phlegm both by the tafte and fmell.

Rum is a confiderable ifland, one of the Hebrides, or rather one continued rock, of nearly 30 miles in circumference. It is the property of Mr Maclean of Coll; contain 300 inhabitants; grazes cattle and fheep; pays 200 i. rent annually : but has neither kelp, freeftone, nor lime.

RUMELIA, in geography, the fame with ancient Greece; now a part of Turkey in Europe.

RUMEN, the paunch, or firt ftomach of fuch animals as chew the cud; thence called Ruminant Animals. See Comparative Anatomy, $\mathrm{n}^{\circ}$ 92, \&c.

RUMEX, Dock, in botany; A genus of the trigynia order, belonging to the hexandria clafs of plants; and in the natural method ranking under the 12 th order Holoracee. The calyx is triphyllous; there are three connivent petals, and one triquetrous feed. There are 27 fpecies; of which the mof remarkable are,
I. The patientia, commonly called patience rbubarb. This was formerly much more cultivated in the Britifh gardens than at prefent: the roots of this have been generally ufed for the monk's rhubarb, and has even been thought to be the true kind; but others fuppofe the fecond fort fhould be ufed as fuch. The root is large, and divides into many thick fibres; their outer cover is brown, but they are yellow within, with fome reddifh veins; the leaves are broad, long, and acute-pointed; their footfalks are of a reddifh colour; the falks rife fix or feven feet high, and divided towards the top into. feveral erect branches garnifhed with a few narrow leaves. terminating with loofe fikes of large ftaminous flowers. Thefe appear in June, and are fucceeded by pretty large three-cornered feeds, whofe coverings are entire, wnich ripen in autumn.
-2. The alpinus, or monk's rhubarb, grows naturally on the Alps, bet las long been cultivated in the Britifl gardens. This hath large roots which fpread and mulsiply by their offsets: they are fhorter and thicker than the former, are of a very dark brown on the outlide, and yellow within. The leaves are of the round heart-fhape, ftanding upon long foottalks. The ftalks rife from two to three feet hight they are thick, and have a few fmall roundif leaves on the lower part; but the upper part is clcfely garnifhed with Ipikes of white flowers ftanding erect clofe to the ftalks. Thefeappear in the latter end of May and are fucceeded by large triangular feeds which ripen in Augult.
3. The aquaticus, or water-dock, grows naturally in ponds, ditches, and fanding waters, in many parts of Britain. It is fuppofed to be the herba Britannica of the ancients. It hath large roots which ftrike deep into the loofe mud, fending out leaves which are above two feet long. The flalks rife five or fix feet bigh when the plants grow in water, but in dry land deldom more than three; thefe are garnifhed wilh narrow

R U N
$\begin{aligned} & \text { Runinaut. leaves among the fikes of flowers to the top. The } \\ & \text { flowers fand upon flender foottalks, which are refexed }\end{aligned}$
$\begin{aligned} & \text { Runuer. } \\ & \text { they are of an herbaceous, colour, appear in June, and } \\ & \text { the feeds ripen in autumn. }\end{aligned}$
4. The acutus, or fharp-pointed dock, (the oxylapathum of the Phops) ; but the markets are fupplied with roots of the common docks which are indiferently gathered by thofe who collect them in the filds, where the kind commonly called butter-dock (from its leaves being ufed to wrap up butter) is much more common than this. The roots of this are flender, and run downright, fending out a few fmall fibres; the ftalks rife about two feet bigh, garnifhed at bottom with leaves four inches long, and one and an half broad in the middle. They are rounded at their bafe, where they are flightly indented, but end in acute points. From the joints of the ftalks come out alternately long footftalks, which fultain the fikes of flowers, which grow in fmall whorls round the falks, at about an inch diftant.

There plants are but feldom cultivated; and fo eafily multiply by their numerous feeds, that they foon become troublefome weeds where they once get an entrance.

RUMINANT, in natural hifory, is applied to an animal which chews over again what it has eat before; which is popularly called cberving the cud. Peyer, in a treatife De Ruminantibus at Ruminatione, thows that there are fome animals which really raminate; as oxen, fleep, deer, goats, camels, hares, and fquirrels: and that there are others which only appear to do io, as moles, crickets, bees, beetles, crabs, mullets, \&c. The latter clafs, he obferves, have their foomachs compofed of mufcular fibres, b; which the food is ground up and down as in thofe which really ruminate. Mr Ray obferves, that ruminants are all fourfooted, hairy, and viviparous ; fome with hollow and perpetual horns, others with deciduous ones.

RUMP of the sacrifices, Mofes had ordained, that the rump and fat of the lheep that were offered for peace-offering fhould be put upon the fire of the al$\operatorname{tar}$ (Lev. iii. 9. vii. 3. viii. 25. is. 19.). The rump was efteemed the moft delicate part of the animal.

RUMPHIA, in botany: A genus of the monogynia order, belonging to the triandria clafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The calyx is crifid ; the petals three; the fruit a trilocular plum.

RUNDLET, or Runlet, a fmall veffel, containing an uncertain quantity of any liquor, from 3 to 20 gillons.

RUNGS, in a fhip, the fame with the floor or ground timbers; being the timbers which conflitute her floor; and are bolted to the keel, whofe ends are sung-heads.

RuNG-Heads, in a fhip, are made a little bending to direst the fweep or mold of the futtocks and naveltimbers; for here the lines begin which make the compafs and bearing of the fhip.

RUNIC, a term applied to the language and letters of the ancient Goths, Danes, and other northern natior:s. Sie Aiphabet.

RUNNER, in the fea-language, a rope belonging to the gariec and the two bolt-tackles. It is reeved in a fingle block joined to the end of a pendant: it
has at one end a hook to hitch into any thing; and, Runniug at the other, a double block, into which is reeved the fall of the tackle, or the garnet, by which means it purchares more than the tackle would without it,

Thrufli
Rupert.
RUNNING-тhrush, among farriers. See Farriery, fect. xliv.

RUNNET, or Rennet, is the concreted milk found in the ftomachs of fucking quadrupeds, which as yet have received no other nourithment than their mother's milk. In ruminating atimals, which bave feveral fomachs, it is generally found in the laft, though fometimes in the next to it. If che runnet is dried in the fun, and then kept clofe, it may be preferved in perfesion for years. Not only the runnet itfelf, but alfo the fomach in which it is found, curdles milk without any previous preparation. But the common method is, to take the inner membrane of a calf's flomach, to clsan it well, to falt and hang it up in brown paper: when this is ufed the falt is wafhed off, then it is macerated in a little water during the night, and in the morning the infulion is poured into the milk to curdle it. But fee more particularly the article Cheese for a proper receipt to make rumnet, upon which the quality of the cheefe greatly depends-The medicinal qualities of runnet are its acrimony, its refolvent power, and its ufefulnefs in furfeits from food of difficult digeftion.

RUPEE, a filver coin current in the Eaft Indies, worth abnat 2 s .6 d . fterling.

RUPERT, or Robert. See Robert.
Rupert, prince palatine of the Rhine, \&c. fon of Frederic prince elector palatine of the Rhine and Elifabeth daughter to king James I. of England, was born in 1619. He gave proofs of his bravery at the age of 13 ; and in 1642 came over into England, and offered his fervice to king Charles I. his uncle, who gave him a command in his army. At Edgehill he charged with incredible bravery, and made a great flaughter of the parliamentarians. In 1644 he fe:zed the town of Cirencefter ; obliged the governor of Litchfield to furrender ; and having joined his brother prince Maurice, reduced Briftol in three days, and paffed to the relief of Newark. In 1644 he marched to relieve York, where he gave the parliamentarians battle, and entirely defeated their right wing ; but Cromwell charged the marquis of Newcaftle with fuch an irrefifible force, that prince Rupert was entirely defeated. After this the prince put himfelf into Brifol, which furrendered to Fairfax after a gallant refiftance. The king was fo enraged at the lofs of this city, fo contrary to his expectation, that he recalled all prince Rupert's commiffions, and fent him a pafs to go out of the kingdom. In 1648 he went to France, was highly complimented by that court, and kindly received by king Charles II. who fojourned there for the time. Afterward he was conflituted admiral of the king's navy; infefted the Dutcb fhips, many of which he took; and having engaged with De Ruyter, obliged him to fly. He died in 1682, and was interred in king Henry VII.'s chapel, Weftminfter, with great magnificence. IIr Grainger obferves, that he poffelfed in a high degree that kind of courage whil $l$ is better in an attack than a defence ; and is lefs adapted to the land fervice than that of the fea, where precipitate valour is in its element. He feldom e:ngaged but he gained the advantage, which

## R U S $\quad$ [ 553$]$ RUS

he generally loft by purfuing it too far. He was bet- and cut into fix parts; of a purple colow, fitharg cate ter qualificd to fterm a citadel, or cven to mount a breach, than patiently to fuftain a fiege; and would have furnifhed an excellent hand to a general of a cooler head. This prince is celebrated for the invention of prints in mezzotinto, of which he is faid to have taken the hint from a foldier's fcraping his rufty fufil. The firft print of this kind ever publifhed was done by his highnefs, and may be feen in the firf edition of Evelyn's Sculptra. The fecret is faid to have been foon after difcovered by Sherwin an engraver, who made ufe of a loaded file for laying the ground. The prince, upon feeing one of his prints, fufpected that his fervant had lent him his tool, which was a channeled roller ; but upon receiving full fatisfaction to the contrary, he made him a prefent of it. The roller was afterwards laid afide; and an infrument with a crenelled edge, fhaped like a Thoemaker's cutting-knife, was ufed inftead of it. He alfo invented a metal called by his name, in which guns were caft; and contrived an excellent method of boring them, for which purpofe a water-mill was erected at Hackney-marfh, to the great detriment of the undertaker, as the fecret died with the illuftrious inventor.

Rupfrt's Drops, a fort of glafs-drops with long and flender tails, which burlt to pieces on the breaking off thofe tails in any part ; faid to have been invented by prince Rupert, and therefore called by his name. Concerning the caufe of this furpriing phenomenon fcarce any thing that bears the leaft appearance of probability has been offered. Their explofion is attended in the dark with a flafh of light; and by being boiled in oil, the drops are deprived of their explofive quality.

RIIPIN, or Rapin, a town of Germany, in the marquifate of Brandenburg, and capital of a duchy of the fame name. It is divided into the Old and the New. The Old was nothing but an ancient calle, very well furniihed, the late king of Pruffia, before his father's death, refiding there. New Rupin is feated on a lake, and become a confiderable place of trade, with a ma. nufactory of cloth. It is alio noted for brewers. E. Long. 13. 23. N. Lat. 53. o.

RUPPIA, in botany : A genus of the tetragynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 1 gth order, Inundate. There is neither calyx nor corolla; but four pedicellated feeds.

RUSCUS, кnee-holey, or Butcher's Broom: A genus of the fyngenefia order, belonging to the diœcia clafs of plants; and in the natural method ranking under the 1 Ith order, Sarmentacea. The male calyx is hexaphyllous; there is no corolla; the nectarium is central, ovate, and perforated at the top. The female calyx, corolla, and nectarium, are the fame as in the male; thete is one ftyle, with a trilocular two-feeded berry.

The moit remarkable fpecies is the aculeatus, or common butcher's broom, common in the woods in many parts of England. It has roots compofed of many thick fibres which twine about each other; from which arife feveral fiff green falks about three feet high, fending out from their fides feveral fhort branches, garnilhed with fliff, oval, heart-fhaped leaves, placed alternately on every part of the fock, ending with fharp prickly points. The flowers are produced in the middle, on the upper fide of the leaves; they are fmall, Vol. XVI.
to the midrib. They appear in June; and the fimale flowers are fucceeded by berries as large as cherries, of a fweetifh talle, which ripen in winter; when they are of a beautiful red colour. As this plant grows wild in moft parts of England, it is rarely admitted into gardens; but if fome of the roots are planted under call trees in large plantations, they will fpread into large clumps; and as they retain their leaves in winter, at that feafon they will have a good effect. The feeds of this plant generally lie a year in the ground before they vegetate; and the plants fo raifed are long before they arrive as a fize big enough to make any figure, and therefore it is much better to tranfplant the roots.The root of this plant is accounted aperient, and in this intention is fometimes made an ingredient in apozems and diet-drinks, for opening flight obftructions of the vifcera and promoting the Huid fecretions. This plant is ufed by the butchers for befoms to fweep their blocks. Huckiters place the boughs round their bacon and cheefe to defend them from the mice; for they cannot make their way through the prickly leaves.

RUSH, in botany. See Juncus.
Rush-Candles. See Rufb-Candles.
RUSHWORTH (John), the compiler of fome ufeful collections refpecting the affairs of ftate, was born in Northumberland (England) about the year 1607, and was defcended of honourable anceftors. After attending the univerfity of Oxford for fome time, he removed to Lincoln's Inn ; but the ftudy of law not fuiting his genius, he foon deferted it, in order to feek a fituation where he might more eafily gratify his love for political information. He frequented the meetings of parliament, and wrote down the fpeeches both of the king and members. During the fpace of in years, from 1630 to 1640 , when no parliament was held, he was an attentive obferver of the great tranfactions of ftate in the ftar-chamber, the court of honour, and exchequer chamber, when all the judges of England affembled there on cafes of great emergency. Nor did he neglect to obferve with a watchful eye thofe events which happened at a diftance from the capital. He vifited the camp at Berwick, was prefent at the battle of Newborn, at the treaty of Rippon, and at the great council of York.

In 1640 he was appointed affiftant to Henry Elfynge clerk to the houfe of commons, and thus had the beft. opportunities of being acquainted with their debates and proceedings. The commons con:fidered him as a perfon worthy of confidence. In particular, they trufted him with carrying their meffages to the king while he remained at York. And when the parliament created Sir Thomas Fairfax their general, Rulhworth was appointed his fecretary, and difcharged the office much to the advantage of his matter. When Fairfax refigned his commiffion, his fecretary returned to Lincoln's Inn, and was foon after (in $165 \mathrm{I} \cdot 2$ ) chofen one of the committee that was appointed to deliberate concerning the propriety and means of altering or new-modeling the common law. He was elected one of the reprefentatives for Berwick upon Tweed to the parliament which Richard Cromwell affembled in 1658, and was re-elected by the fame town to the parliament which reAored Charles II. to the crown.

After the Reforation, he delivered to the king feve4 A ral

## R U S <br> R U S

ral books of the privy-council, which he had preferved in his own poffeffion during the commotions which then agitated the country. Sir Orlando Bridgeman keeper of the great feal chofe him his fecretary in 1677 , an office which he enjoyed as long as Sir Orlando kept the fealo. In 1678 he was a third time chofen member for Berwick, and a fourth time in the enfuing parliament in 1679 . He was alfo a member of the parliament which was convened at Oxford. The different offices he had held afforded him favourable opportunities of acquiring a fortune, or at leaft an independence ; yet, whether from negligence or prodigality, he was never pofteffed of wealth, Having run himfelf into debt, he was arrelted and committed to the King's Bench prifon, Southwark, where he lingered for the laft fix years of his life in the moft deplorable condition. His memory and judgment were much impaired, partly by age and partly by the too frequent ufe of firituous liquors. He died on the 12 th of May 1690 .

His "Hiftorical Collections of private Paffages in State, weighty Matters in Law, remarkable Proceedings in Parliament," were publifhed in folio at different times. The firf part, comprehending the years between 1618 and 1629, appeared in 1659. The copy had been entrulted by Oliver Cromwell to Whitelock, with inftructions to perufe and examine it. Upon perufing it, he thought it neceffary to make fome alterations and additions. The fecond part was publifhed in 1680; the third in 1692 ; the fourth and laft, which comes down to the year 1648 , was publifhed in 1701 ; and altogether made feven volumes. Thefe underwent a fecond edition in 1721 ; and the trial of the earl of Strafford was added, which made the eighth. This work has been much applauded by thofe who condemn the conduct of Charles $I$. and accufed of partiality by thofe who favour the caufe of that unhappy monarch. One perfon in particular, Dr John Nelfon of Cambridge, in a Collection of the Affairs of State publifhed by the command of Charles II. undertook to prove, "that Rufhworth has concealed truth, endeavoured to vindicate the prevailing detractions of the late times, as well as their barbarous actions, and with a kind of rebound to libel the government at fecond-hand." This accufation feems to be carried too far. His principles indeed led him to fhow the king and his adherents in an unfavourable light, and to vindicate the proceedings of parliament; yet it cannot juftly be affirmed that he has mifreprefented or falfified any of the fpeeches or facts which he has admitted into his collection. Perhaps he may have omitted fome papers merely becaufe they were unfavourable to the party which he had cipoufed; and is therefore not to be confidered as an impartial hiftorian who relates the whole truth, but as in họneft lawyer, who fates all his facts fairly and candidly, but paffes over fuch as are injurious to his client's caufe.

RUSSELIA, in botany: A genus of the trigynia order, belonging to the pentandria clafs of plants. The calyx is five-leaved; the petals five above; the capfule is one-celled and many feeded.

RUSSIA, a very large and powerful kingdom, partly in Europe and partly in Afia, is bounded on the north by the Northern Ocean, or Frozen Sea; on the ealt it is Situation wafhed by the Eaftern Ocean, and is divided from Ame. and extenc. rica by Behring's (formerly Anian) Straits, which are about 73 verts (A) wide. From thence, towards the fouth, it extends along the chain of the Aleoutficie iflands, which approach the north-welt coaft of America; and from Kantfchatka, towards the fouth-welt, it extends, by a chain of other illands, called Kourilikie iflands, as far as Japan; on the fouth it borders on the Black Sea, on the nations which dwell at the foot of the Caucafian mountains, on a part of Perfia, the Cafpian fea, the hordes of Kirghinkaifacki, on Ziungoria, Chinefe Mungalia and Daouria (B); and on the weft, on the Danifh and Swedifh Lapland, the Baltic Sea, Courland, Livonia, Lithuania, Poland, and Turkey in Europe.

Ruffia occupies more than a feventh part of the known continent, and nearly the 26 th part of the whole globe. Its greateft extent from weft to eaft, viz. from the $39 \frac{1}{4}$ to $207 \frac{1}{4}$ degree of longitude, is 168 degrees; and if the iflands of the Eattern Ocean be included, it will then be 185 ; fo that the continental length of Ruffia, viz. from Riga to Tchoukotikoy Nofs, which is the fafternmoft promontory, will conftitute about 8500 verfts. The greatelt extent of this empire from north to fouth, that is, from the 78 th to $50 \frac{1}{4}$ degree of latitude, is $27 \frac{3}{4}$ degrees. Hence the breadth of Ruffia, that is, from the Cape Taymour, which is the north-eaftern promontory, to Kiakhta, will conftitute about 3200 verfs.

The greater part of this empire lies in the temperate zone, and a part of it, viz. that which is beyond the $66 \frac{1}{2}$ degree of latitude, lies in the frigid zone; and the whole furface contains above $2,150,000$ fquare verfts. There therefore is not at prefent, and never has been in any period, an empire, the extent of which could be compared to that of Ruffia. The length and breadth of this immenfe empire, taken in a ftraight line, may be thus difcovered. Its furthermolt point or fpot on the north is the Taymour Cape, which is the moft north-eaftern promontory in the government of Tobollk, lying in the 78 th degree of latitude; its fartheft point on the fouth is the mouth of the river Soulak, falling into the Cafpian Sea in the government of Caucafus, lying in the 43 d degree of latitude; its wefternmolt point is the ifland of Oezel in the government of Riga, in the $39^{\frac{1}{4}}$ degree of longitude; and the furthermoft point of it on the ealt is the Tchoukotfkoy Nofs, which is the moft eaftern cape in the go. vernment of Irkoutik, lying in the 207 $\frac{1}{4}$ degree of longitude.

In ancient times Ruffia was inhabited by various na. Originat tions; fuch as Hunns, Scythians, Sarm.tians, Maffa- inhabigetes, Sclavonians, Cimbri, \&c. of whom an account tants. is given under the various detached articles in this work. The origin of the Ruffians themfelves, though not prior to the ninth century, is fill covered with almoft impenetrable obfcurity ; partly owing to the ig. norance and barbarity of the people, and partly to the miftaken
(a) Verfta is the ufual meafure of roads in Ruffia, in 66 yards and two feet.
(B) Daouria is that extent of land which is traverfed by the river Amour. It is fo called on account of the Daouri, its ancient inhabitauts, who were a race of the Toungoofi or Manjouri.

## R U S $\quad[555] \quad$ R U S

 fang.minaken policy which yet prevails in the nation, of introling all accounts of their origin, and inquiries a $r$ their ancient fate and fituation $n$ of which we have a remarkable inftance in the fuppreffion of a work by profeffor Muller, intitled De Originibus Gentis et Nominis Rugiruin.

According to feveral authors of credit, the Ruffians derived their origin from the Slavi or Slavonians, corruptly called the Sclavonians, who fettled firft along the banks of the Volga, and afterwards near the Danube, in the countries named Bulgaria and Hungary: but being driven from thence by the Romans (whom the Rulfians call Wolochers, or Wolotaners), they firlt removed to the river Boryfthenes, or Dneiper, then over ran Poland, and, as is reported, built the city of Kiow. Afterwards they extended their colonies farther north, to the rivers which run into the Ilmen lake, and laid the foundation of the city of Novogorod. The towns of Smolenik and Tfernikow appear alfo to have been built by them, though the dates of thefe events cannot be afcertained. The moft ancient inhabitants, not only of Ruflia, but all over Siberia, quite to the borders of China, are called Thbudi: for profeffor Muller, on inquiring in thofe parts by whom the ancient buildings and lepulchral monuments he faw there, were erected, was everywhere anfwered, that they were the works of the Tinadi, who in ancient times had lived in that country.

In the ninth century, the Scandinavians, that is, the Danes, Norwegians, and Swedes, emigrated from the north, and, croffing the Baltic, went to feek habitations in Ruffia. They firft fubdued the Courlanders, Livonians, and Elthonians; and, extending their conquefts ftill farther, they exacted tribute from the Novognrodians, fettled kings over them, and traded as far as Kiow, and even to Greece. Thefe new invaders were called Waregers; which, according to profeffor Muller, fignifies " fea-faring people;" or, if derived from the old northern word war, it fignifies "warlike men." To thefe Waregers the name of Ruffes, or Rufians, is thought by the moft eminent authors to owe its origin; but the etymology of the word itfelf is entirely uncertain.

In the dark ages of which we are fpeaking, it is pretty certain that Rulfia was divided among a great number of petty princes, who made war upon each other with the ferocity and cruelty of wild bealts; fo that the whole country was reduced to the utmoft mifery ; when Geftomifel, a chief of the Novogorodians, pitying the unhappy fate of his countrymen, and feeing no other method of remedying their calamities, advifed them to offer the government of their country to the Waregers. The propofal was readily accepted, and three princes of great abilities and valour were fent to govern them; namely, Ruric, Sincus, and Truwor, generally fuppofed to have been brothers. The firft took up his refidence at Ladoga, in the principality of Great Novogorod; the fecond at Bielo Ofero, or the White Lake; and the third kept his court at Ifbork, or, according to others, at a fmall town, then called Truertzrg, in the principality of Plenkow. The three brothers reigned amicably, and made confiderable additions to their dominions; all of which at length devolved to Ruric by the death of Sincus and Truwor ; but what
the en:quefts inf the two brothers were, we have no tecords to inform $u$; of.

Ruric, to his honour, became zealous for the flritt Ruric the adminiftration of jultice; and iffued a commanl to all frll fovethe boyars wh poffeffed territories under him, to exer. reign. cile it in an exact and uniform manner. To this en $i$, it was neceffary there fhould be general laws. And this naturally leads us to conjecture, that letters were not entirely unknown in his duminions.

The Rulfian empire continued to flourifh till the end of the reign of Wolodomir, who afcended the throne in the year 976. Having fettled the affairs of his empire in peace, he demanded io marriage the princefs Anne, fifter to the Greek emperor Bafilius Porphyrogenitus. His fuit was granted, on condition that he fhould embrace Chrifianity. With this the Rulfian Chrifianimonarch complied; and that vaft empire was thence- ty introduforward confidered as belonging to the patriarchate of ${ }^{\text {ced. }}$ Conftantinople, Wolodomir received the name of $B a$ filius on the day on which he was baptized; and, according to the Ruffian annals, 20,000 of his fubje:ts, were baptifed the fame day. Michael Syra, or Cyrus, a Greek, fent by Photius the patriarch of Conftantinople, was accepted as metropolitan of the whole country. At the fame time, Wolodomir put away all his former wives and concubines, of whom he had upwards of 800 , and by whom he had 12 fons, who were baptized on the fame day with himielf. The idols of paganifm were now thrown down; churches and monafteries were erected, towns built, and the arts began Learning to flourifh. The Sclavonian letters were now firit in- and the troduced into Ruffia; and Wolodomir fent miffionaries arts cultito convert the Bulgarians; but only three or four of vatcd. their princes came to him and were baptized. Thefe events happened in the year 987 .

Wolodomir called the arts from Greece, cultivated them in the peaceable periods of his reign, and rewarded their profeffors with generofity, that he might difpel the clouds of ignorance which enveloped his country, call forth the genius of his countrymen, and render them happy. He alfo founded public fchools, and enacted a law concerning the methods of inftructing youth, and directing the conduct of the matters appointed to inftruft them. Fie died in 1008, and, contrary to all rules of found policy and prudence, divided his empire among his 12 fons. The confequence was, A civil that they fell to making war and deftroying one ano- war. ther as foon as their father was dead. Suantepolk, one of the brothers, having deftroyed and feized upon the dominions of two others, was himfelf driven out by Jariflaus, and obliged to fly to Boleflaus king of Poland. This brought on a dreadful war betwixt the Poles and Ruffians; in which the former were victorious, and the latter loft a great part of their dominions, as has been related under the article Poland.

Jarillaus finding himfelf unable to oppofe the king of Poland, now turned his arms againft the relt of his brothers, all of whom he difpoffeffed of their dominions, and feized them for himfelf. He next attacked the Coffacki, over whom he gained feveral advantages. After which he ventured once more to try his fortune with Boleflaus: but in this fecond expedition he was attended with worfe fuccefs than before; being now reduced to the condition of a vallal and tributary to the

12uflia.
9 comestrilutary to Poland.

10
Subdued by the rar tars.
vi\{orions monarch. However, in the reign of Mieczflaus II. the fucceffor of Boleflaus, the Ruffians again thook off the yoke, and a lafting peace was confirmed by the marriage of Mieczflaus with the fifter of Wolodomir.
Jariflaus now continued to enjoy the empire quietly, and was fo much addicted to reading, that he devoted even a part of the night to his ftudies. He invited men of letters to his court, and caufed many Greek books to be tranflated into the Ruffian language. It was he that in the year 1019, gave the people of Novogorod feveral laws, under the title of Gramota Soudebnaia, to be obferved in the courts of juftice. Theie are the firt laws that were reduced to writing in Ruffia; and, what renders them remarkable, is the conformity they have with thofe of the other northern nations. He founded a public fchool at Novogorod, where he maintained and educated 300 children at his own expence. His court was the moft brilliant of the north, and furnifhed an afylum to unfortunate princes. He died in $105^{2}$; and fell into the fame error which his father had committed, by dividing his dominions among his five fons. This produced a repetition of the bloody fcenes which had been acted by the fons of Wolodomir: the Poles touk the advantage of the diftracted flate of affairs to make continual inroads and invafions; and the empire continued in the moft deplorable fituation till the year 1237, when it was totally fubdued by the Tartars. We are not informed of any particulars of this remarkabie event, further than that innumerable multitudes of thefe barbarians, headed by their khan Batto, or Battus, after ravaging great part of Poland and Silefia, broke fuddenly into Ruffia, where they committed the greatell cruelties. Moft of the Rufian princes, among whom was the great duke George Sevoloditz, were made prifoners, and racked to death; and, in fhort, none found mercy but fuch as acknowledged themfelves the fubjects of the Tartars. The imperious conqueror impofed upon the Ruffians every thing that is mof mortifying in flavery; infifting that they fhould have no other princes than fuch as he approved cf; that they fhould pay him yearly a tribute, to be brought by the fovereigus themfelves on foot, who were to prefent it humbly to the Tartarian ambaffador an horfeback. They were alfo to proltrate themfelves vefore the hanghty Tartar; to offer him milk to drink; and, if any drops of it fell down, to lick them up; a fingular mark of fervility, which continued near 260 years.

George Sevoloditz was fucceeded by his brother Michael Sevoloditz Zernigoufki ; who oppofed the Tartars, but was defeated by them, and lof his life. He left three fons, Feodor, Alexander, and Andrew, whofe wars with each other ended in the death of them all. A fon of Alexander, and of the fame name, was then placed on the throne by the Tartars; and his fon Danilow, or Daniel Alexandrovitz, removed his court from Wolodimir to Mofcow, where he firf affumed the title of Great duks: of Wolodimir and Moffaw. Daniel Alexandrovitz leit two fons, Gregory and John ; the former of whom, named Kalita, from a purfe he ufed always to carry about him filled with money for the poor, afcended che throne; but he was foon affaffinated by another prince named Demetri Michaelovitz, who *as himfelf put to death for it by the Tartars; and

John, likewife furnamed Kalita, was then made czar. Ruff. This Jobn left three fons, John, Simon, and Andrew ; and the eldelt of thefe, commonly called $I_{7}, a n$ I $I_{\text {ram }}$. vitz, was made czar, with the approbation of the Tartars, on whom he was dependent.
During thefe feveral reigns, which fill a fpace of upwards of 100 years, and which all hiftorians have paffed over for want of records concerning them, the miferies of a foreign yoke were aggravated by all the calamities of inteftine difcord and war; whilf the knights of Li - nuiss. vonia, or brothers of the flort--fword, as they are fometimes called, a kind of military order of religious, on one fide, and the Poles on the other, catching at the opportunity, attacked Ruffia, and took feverdl of its towns, and even fome confiderable countries. The Tartars and Rufians, whofe interefts were in this cafe the fame, often united to oppofe their common encmies ; but were generally worfted. The Livonians took Plefkow; and the Poles made themfelves malters of Black Ruffia, the Ukraine, Podolia, and the city of Kiow. Cafimir the Great, one of their kings, carried his conquefts fill farther. He afferted his pretenfions to a part of Ruffa, in right of his relation to Boleflaus duke of Halitz, who died without iffue, and forcibly poffeffed himfelf of the duchies of Perzemyllia, Halitz, and Luckow, and of the diftricts of Sanock, Lubackzow, and Trebowla; all which countries he made a province of Poland.

The newly-conquered Ruffians were ill-difpofed to brook the government of the Poles; whofe laws and cuftoms were more contrary to their own than thofe of the Tartars had been. They joined the Jatter to rid themfelves of the yoke; and affembled an army numerous enough to overwhelm all Poland, but deffitute of valour and difcipline. Cafimir, undaunted by this deluge of barbarians, prefented himfelf at the head of a few troops on the borders of the Viftula, and obliged his enemies to retire.

Demetrius Ivanovitz, fon of Ivan Ivanovitz, who commanded in Mofcow, made frequent efforts to rid himfelf of the galling yoke. He defeated in feveral battles Maymay khan of the Tartars; and, when conqueror, refufed to pay them any tribute, and affumed the title of great duke of Mufooy. But the oppreflors of the north returned in greater numbers than before; A great arand Demetrius, at length overpowered, after a ftruggle pieces by of three years, perifhed with his whole army, which, the Tarif we may credit hiftorians, amounted to upwards of tars. 240,000 men.

Bafilius Demetrivitz revenged his father's death. He attacked his enemies, drove them out of his dominions, and conquered Bulgaria. He made an alliance with the Poles, whom he could not fubdue; and even ceded to thema part of his country, on condition that they fhould help him to defend the reft againft any new incurfions of the Tartars. But this treaty was a weak barrier againft ambition. The Ruffians found new enemies in their allies; and the Tartars foon returned.Baflius Demetrivitz had a ton who was called after his name, and to whom the crown ought naturally to have defcended. But the father, fufpecting his ligitimacy, left it to his own brother Gregory, a man of a fevere and tyrannical difpofition, and therefore hated by the people, who afferted the fon's right, and proclaimed him their fovereign. The Tartars took cognizance

## R U S

of the difpute, and terminated it in favour of Bafilius; upon which Gregory had recourfe to arms, drove his nephew from Mofcow to the principality of Uglitz, and forcibly ufurped and kept poffeffion of his throne. Upon the death of Gregory, Bafilius returned to Mofcow ; but Andrew and Demetrius, fons of the late ufurper, laid fiege to that city, and obliged him to retire to the monaltery of Troitz, where they took him prifoner, with his wife and fon, and put nut his eyes: hence the appellation of jemnoi, "blind," by which this Bafilius is diftinguifed. The fubjects of this unfortunate prince, incenfed at the cruel treatment he had received, forced the perpetraturs of it to fly to Novogorod, and reinfated their lawful fovercign at Nifcow, where he died.

In the midft of this general confufion, John Bafiovitz I. by his invincible fpirit and refined policy, became both the conqueror and deliverer of his country, and laid the firf foundation of its future grandeur. Obferving with indignation the narrow limits of his power at his acceffion to the throne, after the death of his father Bafilius the Blind, he began immediately to revolve within himfelf the means of enlarging his dominions. Marriage, though he had in reality no regard or inclination for women, feemed to him one of the beft expedients he could begin with; and accordingly he demanded and obtained Maria, fifter of Michael duke of Twir; whom he foon after depofed, under pretence of revenging the injuries done to his father, and added this duchy to his own territories of Mofoow. Maria, by whom he had a fon named $7 a b n$, who died before him, did not live long; and upon her death he married Sophia, daughter of Thomas Paleologus, who had been driven from Conftantinople, and forced to take Thelter at Rome, where the pope portioned this princels, in hopes of procuring thereby great advantages to the Romifh religion ; but his expectations were fruftrated, Sophia being obliged to conform to the Greek church after her arrival in Ruffia. What could induce Bafilovitz to feek a confort at fuch a diftance, is nowhere accounted for ; unlefs it be, that he hoped by this means to eftablifh a pretenfion to the empire of the eaft, to which her father was the next heir: but however that may be, the Ruffians certainly owed to this alliance their deliverance from the Tartar yoke. Shocked at the fervile homage exacted by thefe proud victors, her hufband going to meet their ambaf. fadors at fome diftance from the city, and ftanding to hear what they had to fay; whilft they were at dimer, Sophia told him, that fhe was furprifed to find that the had married a fervant to the Tartars. Nettled at this reproach, Bafilovitz feigned himfelf ill when the next deputation from the 'Tautars arrived, and under that pretence avoided a repetition of the ftipulated humiliating ceremonial. Another circumftance equally difpleafing to this princefs was, that the Tarars had, by agreement, within the walls of the palace of Mofoow, houfes in which their minilters refided; to thow their power, and at the fame time watch the actions of the great duke. To get rid of thefe, a formal embafly was fent to the Tartarian khan, to tell him, that So. phia having been favoured with a vifion from above, ordering her to build a temple in the place where thofe houfes ftood, her mind could not be at eafe till fhe had fulfilled the divine command; and therefore his lade
was defired to pull them down, and give his peorlo Rumb. others. The khan confented: the houtes within the Kremlin were demolifhed; and no new ones being provided, the Tartar refidents were obliged to leave Mo!cow ; their prince not being able to revenge this breach of promile, by reafon of a war he was then engaged in with the Poles. Baflovitz taking advantage of this circumftance, and having in the mean time confiderably increafed his forces, openly difclaimed all fubjection to the Tartars, attacked their dominions, and made himfelf malter of Cafan, where he was folemnly crowned with the diadem of that kingdom, which is faid to be the fame that is now ufed for the coronation of the Ruffian fovereigns. The province of Permia, with great part of Lapland and Ariatic Bulgaria, foon fubmitted to him ; and Great Novogorod, a city then fo famous that the Ruffians ufed to exprefs its vaft importance by the proverbial expreflion of, Who can refift God and the Great Novogorod? was reduced by his generals after a feven years fiege, and yielded him an immenfe treafure; no lefs, fay fome writers, than 300 cart loads of gold and filver, and other valuable effects. Alexander Witcld, waiwode of Lithuania, whs in poffeflion of this rich place, from which he had exacted for fome years an annual tribute of 100,000 rubles, a prodigious fum for thofe days and for that country. When it was taken by John Baflovit, he, the better to fecure his conquelt, put it under the protestion of the Poles, voluntarily rendered himfelf their tributary for it, and accepted a governor from the hand of their king Cafimir, a weak and indolent prince, from whom he well knew he had nothing to fear. The Novogorodians continued to enjoy all their privileges till about two years after; when John, ambitious of reigning without controul, entered their city with a numerous retinue, under pretence of keeping to the Greek faith, he being accufed of an intention to embrace the Romifh religion; and with the alliftance of the archbinhop Theophilus, ftripped them all of their remaining riches. He then depofed the treacherous prelate, and eftablifhed over Novogorod new magiftrates, creatures of his own ; deftroying at once, by this means, a whole city, which, had its liberties been protected, and its trade encouraged, might have proved to him an inexhauftible fund of wealth. All the north beheld with terror and attoniflment the rapid increafe of the vietor's power: forcign nations courted his alliance; and the feverdi petty princes of Ruffia fubmitted to him without refilt. ance, acknowledging themfelves his vaffals.

The Poles, however, complained loudly of his late breach of fith in regard to Novogorod, and threatened revenge : upon which Baflovitz, elated with his fucceffes, with the riches he had amaffed, and with the weak condition of moft of his neighbours, fent a body of troops into Lithuania, and foon became mafter of Invandes L: feveral of its towns. Cafimir applied for affitance to thuma and Matthias king of Hungary : but was anfwered by this sbliges the laft, that his own foldiers were quite undifciplined; fue for to that his auxiliaries had lately mutinied for want of pay; peace. and that it was impoflible for him to raide a new army cut of the neighbouring countries. The Polifh monarch in this diftrefs was obliged to purchafe of John a cefiation of arms for two years, durireg which the Mufcovite made new acceffions to his dominions.

The dukes of Servia, whefe territories wore about

Ruffic. mia.

His fuccefs three armies, which reduced feveral places, defroyed in Lithua- the country about Smolenko, and defeated the Lithu-
nia.

500 miles in extent, had long thought themfelves ill
wicd by the Lithuanians on account of their religion, uicd by the Lithuanians on account of their religion,
which was that , $f$ the Greek church; and wanted to withdraw from their fubjection on Poland, and put themfelves under the protection of Rulfia. The following accident afforded them the wifhed-for pretence. Their envoys arriving at Wilna, defired admittance to the king's prefence : which being refufed, one of them endeavoured to force his way in; but the porter fhut the door rudely againft him, and in fo doing broke one of his Gingers. The fervant was immediately put to death fur this offence: but the Servians, by no means fatisfied with that, returned home in a great fury, and prevailed upon their countrymen to fubmit themfelves and their country to the Mufcovites. Cafimir made feveral attempts to recall them, but to no purpofi.

Matthias king of Hungary dying about this time, two of his fons, Uladiflaus, then king of Bohemia, and John Albert, contended for the vacant crown. Cafimir wanted to give it to the latter, whom he accordingly affitted to the utmoft of his power; and to enable him the better fo to do, though he was in great want of money as well as men, he purchafed a renewal of the truce with the Ruffians, and thereby gave John Bafilovitz time to eftablifh himfelf in his new acquilitions.

Cafimer died in the year 1492, and was fucceeded on the throne of Poland by his fon John Albert, who, totally difregarding the Ruffians, involved himfelf unneceffarily in a war with the brave Stephen duke of Moldavia : and, though he had at the fame time both the Tartars and Turks againft him, his propenfity to pleafore, and his lafcivious difpofition, rendered him fo indolent, that he not only did not fo much as attempt to molef Bafilowitz in any of his poffeffions, but concluded a peace with him on terms very advantageous to the latter ; and even entered into a treaty, by which he fipulated not to affift the Lithuanians, though they had chofen his brother Alexander for their duke, in cafe the Ruffians fhould attack them, as it was fuppofed they would. Alexander thinking to parry the inconveniences of this agreement, and to guard againit the defigns of his enemies, demanded in marriage Ba filowitz's daughter, Helena, by his fecond wife Sophia, and obtained her. The Lithuanians then flattered themfelves with a profpect of tranquillity: but the ambitious $c z a r$, for Bafilovitz had affumed that title fince his conqueft of Cafan, aiming only at the increafe of dominion, foon found a pretence to break with his new allies, by alleging, that Polifh Ruflia, as far as the river Berezina, had formerly belonged to his anceftors, and therefore fhould be his; and that Alexander, by his marriage-contract, had engaged to build a Greek church at Wilnaw for his Ruffian confort, whicb he had not done, but on the contrary endeavoured to force the Polith Ruflians to embrace the religion of the church of Rome. In confequence of this plea, he fent into the territories of his fon-in-law, by different ways anian field-marfhal Oftroky near the river Wedrafch,
where he fell unawares into an ambulh of the Ruffians. Alexander raifed a new army of Silefians, Bohemians, and Moravians; but they came too late, the Ruffians having retired with their plunder. Elated by their
fuccefs againit the Lithuanians, they invaded Livonia Ruffia. in the year $15<2$, with ${ }_{130,000}$ men : but Walter Von Plettenberg, grand-mafter of the knights of the crofs, is defeated with only 12,000 men, gave them a total overthrow ; in Livonia killing 10,000 of his enemies, with fcarce any lufs on and obliged his own fide. Bafilovitz difirited by this defeat, and to resixe. being then engaged in a war with the Tartars, the Poles, and the city of Pleflow, immediately difpatched an embaffy to Pletrenberg, and concluded a truce with him for 50 years. At the fame time he begged of that general to fend to Mofcow, that he might fee him, one of the iron-dragoons, as he cailed them, who had performed wonders in the late engagement. Von Plettenberg readily complied; and the czar, ftruck with admiration, rewarded the cuiraffier's accomplifhmentts with confiderable honours and prefents.

Alexander had been elected king of Poland upon the death of his brother John Albert, which happened in the beginning of this year: but the Poles refufed to crown his confort Helena, becaufe fhe adhered to the Greek religion. Provoked at this affront, and probably fill more timulated by ambition, Bafilovitz refolved again to try his fortune with them ; and accordingly ordered his fon Demetrius, now the eldeft, to march againft Smolenfko, and reduce that city. The young prince did all that could be done: but the vigorous refiftance of the befieged, and the atrival of the king of Poland with a numerous army, obliged the Rulians to raife the fiege and return home; and the czar was glad to make a frefh truce with the Poles for fix years, upon the eafy terms of only returring the prifoners he had taken. Some writers fay, that flying into a violent paffion with his fon the moment he faw him, and imputing the mifcarriage of this expedition to his want of courage or conduct, he gave him a blow which laid him dead at his feet; to which is added, that remorfe for this rafh action carried his father to his grave : but this account is not confirmed by authors whofe authority can be relied on. Certain it is, how. ever, that neither of them long furvived this event; and that Demetrius died firt ; for Sophia, who had gained an abfolute afcendant over her huiband, and wanted to give the fovereignty to her own children, perfuaded him by varicus artful infinuations to fet afide and impriton his grandfon Demetrius, the only child of the late John, whom he had by his firl wife Maria, and declare her then eldeft fon, Gabriel, his fucceffor. Age and infirmities had rendered the czar fo weak, that he blindly followed the iniquitous advice; but fhortly after finding his end approach, he fent for young Demetrius, expreffed great repentance for his barbarity towards him, and on his death-bed declared him his He dies ${ }^{23}$ lawful fucceffor. He died in November 1505, after a and is fucreign of 55 years; leaving behind him an immenfe ceeded by territory, chiefly of his own acquiring. his fon who
The czar was no fooner dead, than his fon Gabriel takes the Ivanovitz, at the inftigation of his mother Sophia, Baflius. put an end to the life of the young Demetrius, by confining him in prifon, where he perifhed with hunger and cold; after which Gabriel was crowned by the name of Bafilius, and took the title of czar, as well as all the other titles belonging to the fovereignty. On his acceffion to the throne he expected that the Poles would be in confufion about the election of a new fovereign; but his expectations being defeated by their unanimous

election of Sigifmund I. a prince of a mild and peaceable difpofition, he fent an army into Lithuania, and laid fiege to Smolenko. The place made a brave refiftance, till news arrived that the crown-troops of Po. land were coming to their affiftance, with the additional aid of 80,000 Crim Tartars ; on which the Rulfians returned home whth the utmolt precipitation. They were, however, quickly followed by the Poles, who reduced the czar to fubmit to fuch terms as they pleafed to impofe. Bafilius remained quiet till he thought himfelf capable of revenging the ii,juriss he had fuftained; after which, pretending to fet out upon fome other expedition, he marched with a numerous army, and encamped in the neighbourhood of Plefkow, where the Poles, prefuming on the late treaty, received him as a friend and ally. But in the mean time the Mufcovite priefts of the Greek church preached to their hearers concerning the expediency of having a fovereign of their own religion; and brought them to fuch a height of enthufiafm, that they murdered their magiftrates, and opened their gates to the czar, who made them all flaves, and fent them away to different parts, replacing them with Mufcovites, the better to fecure his conqueft. Soon after he took alfo the city of Smolenfko; and the Swedes, alarmed at his rapid progrefs, defired a prolongation of the truce, at that time fubfitting between the two ftates, for 60 years longer. The duchy of Lithuania was the great object of the defigns of Bafilius; and to accomplin his defign, he ordered Ivan Czeladin, a man of great refolution, and enterprizing even to rafhnefs, to march thither with 80,000 men. The army of the Poles did not exceed 35,000 men, but was commanded by a moft experienced general. The two armics met on the oppofite banks of the Dneiper, near Orfova, and the Poles paffed that river in fight of their enemies. Czeladin's officers advifed him to fall upon the enemy when about half of them had croffed the river ; but that general, too confident of fuccefs, replied, that the other half would then run away, and he was determined to gain a complete victory. The Lithuanians began the attack, but were repulfed by the Ruffians; who imprudently following them, loft an advantageous fituation, and found themfelves at once expofed to the fu.l fire of the enemy's artillery. The Polifh cavalry then rufhed in among them fword in hand, and made dreadful havoc; the trembling Ruffians fcarce even attempting to defend themfelves. Thofe who endeavoured to fly, fell into the Dneiper and were drowned; and all the reft, including Czeladin himfelf, were made flaves.
piftrefs of Bafilius was at Smolenko when he received the news Bailines.
therrhaving invaded Ruffia and defeated the armies of the czar in the year 1521 , they poured in thither in fuch incredible multitudes, that they quickly made 1.0 . ${ }^{2}$ ? themfelves matters of Mofcow. An army, which had taiken 1, ? been fent to oppoie their progref, was defated near the láa. the river Occa; and the czar's brother Andrew, who ${ }^{\text {tars. }}$ commanded it, was the very firft who fled. Bafilin; with great dificulty made his way to N vogorod; fis ternified, that he hid hinfelf by the way under ahaycock, to avoid a fraggling party of the enemy. The Tartars, however, foon obliged him to fign a writing, by which he acknowledged himfelf their valfal, and promifed to pay them a tribute of fo much a head for every one of his fubjects. Befides this, Machmergerei, the commander of the Tartars, caufed his own Etatue to be fet up. at Mofcow, as a mark of his fovereignty; compelled Bafilius to return to his capital, to bring thither in perfon the firf payment of this tribute, ani, as a token of his fubmiffion, to proltrate himfelf before his ftatie. Machmetgerei then left Mofcow, and returned home with an immenfe booty, and upwards of 80,000 prifoners, who were made flaves, and fold like cattle to the Turks and other enemies of the Chriltian name. In his way back he att mpted to take the city of Rezan; but was repulfed with confiderable lofs by Iwan Kowen, who commanded in that place for the Ruffians. Here the Tartar general rarrowly efcaped with his life, his coat being fhot through with a mu-fret-ball; and the Mufcovites pulled down his Atatue, and broke it to pieces as foon as the conquerors had leff them.

The Tartars were no fooner gone, than Bafilius began to talk in a high ftrain of the revenge he intended to take of them; but was never able to execute his threats. He died in J 53 ; and was fucceeded by his fon Ivan or John Bafilovitz, an infant of five years of age.

During the minority of the young prine his uncles Andrew and Gor the him of the crown; but their attempts were defeated by the care and activity of his guardians; and the Poles alfo immediately commenced hoftilities, but could make little progrefs. The new czar, as foon as he cutered the 19th year of his age, fhowed an inclination for refcuing his fubjects out of that defperate flate of igno. rance and barbarifm in which they had been bitherto immerfed. He fpent a fplendid embaffy to the emperor Charles V. who was then at Augfourg, to defire the renewal of the treaty of friendfhip which had been concluded with his father Maximilian ; and offering to enter into a league with him againt the Turks, as enemies to the Chriftian religion; for his farther information in which, particularly in regard to the doctrine and ceremonies of the Latin church, he requelted that his ambaffador might be allowed to fend from Germany to Ruffia proper priefts to inftruct him and his fubjects. With thefe he likewife defired to have fome wife and experienced ftatefmen, able to civilize the wild peoplo under his government ; and alfo, the better to help to polifh them, he requefted that he would fend mechanics and artifts of every kind; in retarn for all whice he offered to furnifh two tons of gold yearly, for 20 years together, to be employed in the war againft the Turks. The emperor readily agreed to the defire of the czari and the Ruffian ambaffador acecrdingly en-

than the engroming of the whole commerce of the north, fopped them, and reprefented ftrongly to the emperor, in the name of all the merchants in Livonia, the dangerous confequence of thus affording inftructions to the Rufians, who would foon avail themfelves of it to ruin their trade, and diftrefs the fubjects of his imperial majelty. The workmen and others intended for Rumlia were eafily prevailed upon to return to their respective homes ; and the czar's ambaffador was arrefted epon his artival at Lubec, and imprifoned there at the fuit of the Livonians: however, he made his efcape thortly after ; and the czar, though provoked to the lat degree at the behaviour of the Lubeckers, was ob. liged for fome time to fufpend his refentment.
r'ine firft enterprife of Baflovitz now was againft the Tartars of Cafan; who had hitherto been fuch formidable enemies. In this he was attended with great fuccefs; the whole territory was conquered in feven years; but the capital, named alfo Cafan, being wel. fortified and bravely defended, made fuch reffitance as quite difheartened the befiegers, and made them think of abandoning their enterprife. Baflovitz being informed of this, haltened to them with a confiderable reinforcement, endeavoured to revive their drooping courage, and exhorted them to pulh the fiege with redoubled vigour. However, the greater part, deaf to all his remonfrances, after loudly infilting upon a peace with the Tartars, and leave to return home, proceeded to mutiny, and fell upon their comrades who were for continuing the war. Baflovity, alarmed at this event, ruthed in among the combatants, and with great difficuliy parted them: but neither menaces nor intreaties, nor even a promile of giving them the whole plunder of the city if they took it, could prevail on them to continue the war. Their rage at laft prompted them to threaten the life of their fovereign; $\cdots h o$, to provide for his own fafety, was obliged to make the beft of his way to Mofcow ; and the mutineers, no longer regarding any command, inftantly returned thither.

Baflovitz, though juftly incenfed at this infolence, took a method of punifhing it which does honour to his humanity. Having felented a guard of 2000 of his beft troops, he ordered a great fealt, to which he invited his principal nobles and officers, to each of whom, according to the Ruffian cuftom, he gave very rich garments. The chief of the feditious were clothed in black velvet; and after the dinner was over, he made a fpeech to the whole company, fetting forth the behaviour of his troops before Calan, their contempt of his commands, and their confpiracy to take away his life : to which he added, that he was doubly fory to find the inftigators of fuch wickednefs among thole who were ftyled, and who ought to be, his faithfil counfellors; and that thofe who knew themfelves to be guilty of fuch atrocious wickednefs could not do better than voluntarily to fubmit themfelves to his mercy. Upon this, mof of them immediately threw themfelves at his feet, and implired his pardon. Some of the moft criminal were executed, but the relt were only inprif.ned.

4

Immediately after this puniflment of the rebels, Bafilovitz marched with a frefh army to re-inveft Ca . fan before the Tartars had time to recover themfelves. $\quad 33$ The befieged fill made an obftinate defence, and the of Cafan Ruflians again began to be difpirited; upon which the again beczar ordered his pioneers to undermine the walls of fieged and the citadel, a practice then quite unknown to the Tar- taken. tars. This work being completed, he directed his priefts to read a folemn mafs to the whole army, at the head of which he afterwards fpent fome time in private prayer, and then ordered fire to be fet to the powder, which afted fo effectually, that great part of the foundation was immediately blown up, and the Mufcovites rufhing into the city, flaughtered all before them; while the altonifhed Tartars, crowding out at the oppofite gate, croffed the river Cafanka, and fled into the forefts. Among the prifoners taken on this occation were Simeon king of Cafan with his queen ; both of whom were fent to Mofcow, where they were treated with the utmoft civility and refpect.

Encouraged by this fuccefs, Bafilovitz invaded the Aftracan country of Aftracan, the capital of which he foon re. redaced. duced; after which he prepared to revenge himfelf on the Livonians for their behaviour in fopping the German artifts. John Bafilovitz I. had concluded a truce with this people for 50 years; which being now expired, Iodocus, archbifhop of Dorpt and canon of Munfter in Weftphalia, fenfible of the danger to which he was expofed by the vicinity of the Rulfians, requefted the czar to give him a prolongation of the truce. Baflovitz defired him to choofe whether be N 35 would have a truce for five years longer, on condition tion with that all the inhabitants of his archbifhopric fhould pay the Livoto him the annnal tribute of a fifth part of a ducat for nians. each ${ }^{\text {perfon, }}$ which the people of Dorpt had formerly agreed to pay to the grand-dukes of Plefkow; or, for 20 years, on this farther condition that he and the Livonians fhould rebuild all the Ruffian churches which bad been demolifhed in their territories at the time of the reformation, and allow his fubjects the free exercife of their religion. Iodocus evaded an anfwer as long as he could: but finding at laft that the affair grew ferious, he levied a confiderable fum from his fubjects, and fled with it to Munfter, where he refigned his prebend and married a wife. His fucceffor, whofe name was Herman, and the depaties from Livonia, accepted of the conditions, and fwore to obferve them ; with this additional claufe, that the priefts of the Romifh communion fhould be exempted from paying tribute.

But though the Livonians fwore to the oblervation Their ${ }^{36}$ of thefe terms, they were at that very time in treaty treachery. with Guftavus Vafa, king of Sweden, to join them in attacking Ruffia. The king of Sweden very readily complied with their defires; upon which Bafilowitz invaded Finland. Guftavas advanced againft him with a powerful army; but as neither the Poles nor Livonians gave him any affitance, he was obliged to conclude a treaty with the czar, and foon after to evacuate the country. Finland was at this time governed State of by William of Furltenberg grand-matter of the Li- Finland. vonian knights, and the archbi op of Riga, witn forme other prelates; between whom a quarrel happened about this time, which foon facilitated the defigns of छallovita on the country. The archbifhop, after at-

## $R$ U S

mpting to fet himfelf above the grand-mater even in civil affairs, and to perlecute thoee who adhered to the archbihhopric of Riga Chriftopher duke of Mecklenburg. From the abilities and haughty temper of this lord, the Livonian knights apprehended that they had reafon to fear the fame fate which had befallen the Teutomic order in Pruffia; and the ftep itfelf was, befides, unprecedented, and contrary to the eltablifhed laws of the country. Thefe difcontents were heightened by letters faid to be intercepted from the archbithop to his brother Albert duke of Pruffia, inviting this laft totally to fupprefs the order of Livonian knights, and to fecularize their poffetions, efpecially in Finland; fo that an open war broke out among the contending parties, and the archbifhop was feized and made pritoner: He was, however, foon releafed through the mediation of the emperor of Germany and other potentates, backed. by the powerful preparations of the Pruffians to avenge his caufe; but in the rean time, the ftrength of their country being totally exhaufted, the Livonians were obliged, inftead of preparing for war, to fue to the Czar for peace. Baflovit\% replied, that he did not believe their intentions to be fincere while they kept 6000 Germans in pay; and therefore, if they meant to treat of peace, they mult begin with difmiffing thefe troops. The Livonians, having no longer any power
refit, did as they were ordered; but icavailed them
 vaged by the Ruffians. belore them with the molt thocking cruelty. After this they entered the teritories of Riga, where they behaved with equal inhumanity; and having at laft fatiated therrfelves with blood and treafure, they retired with an immenfe booty and a great number of
prioners.

The Livonianc, now thoroughly convinced of their own folly in expofing themfelves to the refentment of the exafperated Rutians, fent ambaliadors to fue for peace in good earnelt. The.e offered the Czar a prefent of 30,000 ducats, and prevailed upon him to grant their nation a truce for four months, during which they returned home to get the moneg. But in this interval the Livonian governor of the city of Nerva, out of an idle frolic, fired fome cannon againit Ivanogorod or Ruffan Nerva, fituated on the oppofite fide of the river, and killed leveral of the Czar's fubjects who were affembled in an open place quite unarmed. The Ruifians, out of regard to the truce, did not even attempt to make reprifals; but immediately acquainted Bafilovitz with what had happened: which fo incenfed the Czar, that when the Livonian ambaffad,rs artived, he told them, he looked upon their nation to be a fet of perjured wretches, who had renounced all honefty; that they might go back with their money and propofals, and let their countrymen know that his vengeance would foon overtake them.

The ambaffadors were farce arrived in Livonia, when an army of 300,000 Ruffians entered the diftrict of Nerva, under the command of Peter Sifegiledrii, who had been a famous pirate in the Euxine le:. He took the city of Nerva in nine days, and very feedily made him. fell matter of Dorpt, where he found iramenfe treafures. Several other garrifons, teriified by the aproach of fuch numbers, quitted the:r pofts; fo that tia Ruffians becarne mafters of a great fart of Livonia almoft without Vol. XVI.
oppofition. At laft, Gothard Kettler, grand-mafter of Ruffia. the knights of Livonia, intreated Chriftian III. king of Denmark to take Riga, Revel, and the countries of Garnland, Wirrland, and Efthonia, under his protection; but the advanced age of that monarch, the diflance of the places, and the want of fufficient power to withftand fo potent an adverfary, made him decline the offer. However, he affilted them with fome money and powder, of which they ftood greatly in need. Having then applied, without fuccefs, firf to the emperor ot Germany, and then to the court of Sweden, Kettle: put himfelf under the protection of the Poles, who had hitherto been fuch formidable enemies to the Ruffiars. In the mean time the latter purfued their conquefts; they took the city of Marienburg, laid walte the diftria of Riga, defroyed Garnland, and penetrated to the very gates of Revel. Felin, in which was the beft artillery of the whole country, became theirs by the treachery of its garrifon ; and here William of Furftenberg the old grand-mafter was taken, and ended his days in a prifon at Mofcow. The diftracted fituation of the Livonian affairs now induced the bifhop of Oefel to fell his bitopric to Ferdinand king of Denmark, who exchanged it with his brother Magnus for a part of Holftein. The ditricts of Revel and Efthonia put themfelves under the protection of Sweden; and then the grand-mafter, finding himfelf deferted on all fides, fuppreffed the order of which he was the chief, and accepted of the duchy of Courland, which he held as a fief of the crown of Poland.

The Crar faw witio pleafure the divifion of Liwnia between the Swedes and Poles, which, he rightly judged, would produce quarrels between the two nations, and thus give him the fairer opportunity of reizing the whole to himfelf. Accordingly, in 1564, the Swedes offered him their affitance againft the Poles; but he, judging himfelf to be fufficiently ftrong without them, attacked the Poles with his own forces, and was twice defeated, which checked his farther operations in Li vonia. In 1569 he entered into a treaty of commerce with England, captain Richard Chancellor having a A triaty fhort time before difoovered a paffage to Archangel in Ruflia and Ruffia through the White Sea, by which that empire England. was likely to be fupplied with foreign goods, without the affintance either of Poland or Livonia. To the difcoverers of this new paffage Baflovitz granted many exclufive privileges; and after the death of queen Mary renewed the. alliance with queen Elizabeth, and which has been continued without interruption ever fince.

In the mean time, however, a prodigious army of Turks and Tartars entered Mufcovy, with a defign to fubdue the whole country. But Zercbrinov, the Czar's general, having attacked them in a defile, put them to flight with confiderable flaughter. Then they retired towards the mouth of the Volga, where they expected a confiderable reinforcement; but being clofely purfued by the Ruffians and Tartars in alliance with them, they were asain defeated and forced to fly twards Azov on the Black Sea. But when they came there, they found the city almof entirely ruined by the bluwing up of a powder magazine. The Ruflans then atacked their thips there, took fome, and funk the reft; by which means aimoft the whole army perifned with hunger or the fword of the enemy.

From this time the empire of Ruffia became fo for4 B midable

Ruflia．midable，that none of the neighbouring nations could hope to make a total conqueft of it．The Poles and Swedes indeed continued to be very formidable enemies； and，by the infligation of the former，the Crim Tartars， in 1571 ，again invaded the country with an army of $7.0,000$ men．The Ruffians，who might have prevent－ ed their paffing the Volga，retired before them till they

44
Moffow talsen and burnt by cheTartars．数e within 18 miles of the city of Morcow，where they were totally defeated．The Czar no fooner heard this news than he retired with his moft valuable effects to a well－fortified cloyfter ；upon which the Tartars entered the city，plundered it，and fet fire to feveral churches． A violent form which happened at the fame time foon fpread the flames all over the city；which was entirely reduced to afhes in fix hours，though its circumference was upwards of 40 miles．The fire likewife communi－ cated itfelf to a powder－magazine at fome diftance from the city；by which accident upwards of 50 rods of the city wall，with all the buildings upon it，were deftroy． ed；and，according to the bett hiftorians，upwards of 120,000 citizens were burnt or buried in the ruins，be－ fides women，children，and foreigners．The cafle， however，which was frongly fortified，could not be taken；and the Tartars hearing that a formidable army was coming againft them under the command of Mag－ nus duke of Holftein，whom Bafilovitz had made king of Livonia，thought proper to retire．The war，never－ thelefs，continued with the Poles and Swedes；and the Czar being defeated by the latter after fome trifling

War with But the negociations being fomehow or other broken Swedenand off，the war was renewed with the greatelt vigour． Poland
league together againt the Ruffians，gained great ad－ vantages over them；and，in 1579 ，Stephen Battori， who was then raifed to the throne of Poland，levied an army exprefily with a defign of invading Ruffia，and of regaining all that Poland had formerly claimed，which indeed was little lefs than the whole empire．As the Poles undertood the art of war much better than the Ruffians，Bafilovitz found his undirciplined multitudes unable to cope with the regular forces of his enemies： and their conquefts were fo rapid，that he was foon obliged to fue for peace：which，however，was not granted；and it is poffible that the number of enemies which now attacked Ruffia might have overcome the empire entirely，had not the allies grown jealous of each other ；the confequence of which was，that in 1582 a peace was concluded with the Poles＇，in which the Swedes were not comprehended．However，the Swedes find－ ing themfelves unable to effect any thing of moment after the defertion of the ir dlies，were fain to conclude a truce； thortly after which the Czar，having been worted in an engagement with the Tartars died in the year 1584.

This great prince was fucceeded by his fon Theo－ dore Ivanovitz；a man of fuch weak underfanding， that he was totally unfit for government．Under him， therefore，the Ruffian affairs fell into confufion；and Boris Gudenov，a nobleman whofe fifter Theodore had married，found means to affume all the authority． At laft，unable to bear even the name of a fuperior，he refolved to ufurp the throne．For this purpofe he caufed the Czar＇s brother Demetrius，at that time only nine years of age，to be affiffinated；and afterwards， kgowing that no trufe could be put in an affaffin，he
caufed him alfo to be murdered left he fhould divulge the fecret．In 1597 the Czar himfelf was taken ill and died，not without great fufpicion of his being poi－ foned by Gudenov；of which indeed the Czarina was fo well convinced，that the would never afterwards fpeak to her brother．

With Theodore ended the line of Raric，who had governed the empire of Ruffia for upwards of 700 years．Boris，who in reality was poffeffed of all the power，and would indeed have fuffered nobody elfe to reign，artfully pretended to be unwilling to accept the crown，till compelled to it by the intreaties of the people；and even then he put the acceptance of it on the iffue of an expedition which he was about to un－ dertake againt the Tartars．The truth of the matter， however，was，that no Tartar army was in the field， nor had Boris any intention of invading that country； but by this pretence he affembled an army of 500,000 men，which he thought the moft effectual method of fecuring himielf in his new dignity．In 600 he con－ cluded a peace with the Poles，but refolved to continue the war againlt the Swedes；however，being difappoint－ ed in fome of his attempts againft that nation，he enter－ ed into an alliance with the Swedifh monarch，and even propofed a match between the king＇s brother and his daughter．But while thefe things were in agitation，Dreadful the city of Mofcow was defolated by one of the moft famine at dreadful famines recorded in hiftory．Thoufands of Mofow． people lay dead in the ftreets and highways，with their mouths full of hay，fraw，or even the moft filthy things
 which they had been attempting to eat．In many houfes
the fatteft perfon was killed in order to ferve for food
to the reft．Parents were faid to have eaten their chil－
dren，and children their parents，or to have fold them to
buy bread．One author（Petrius）fays，that he himfelf
faw a woman bite feveral pieces out of a child＇s arm as
fhe was carrying it along；and captain Margaret relates，
that four women having ordered a peafant to come to

one of their houfes，under pretence of paying him for
fome wood，killed and eat up both him and his horfe．
This dreadful calamity lafted three years，notwithftand－
ing all the means which Boris could ufe to alleviate it；
and in this time upwards of 500,000 people perifhed in
the city．
In i6o4 a young man appeared，who pretended to
be Demetrius，whom Boris had caufed to be murdered，
as we have already feen．Being fupported by the Poles，
he proved very troublefome to Boris all his lifetime；
and after his death deprived Theodore Borifovitz，the
new Czar，of the empire ；after which he afcended the
throne himfelf，and married a Polifh princefs，How－
ever，he held the empire but a fhort time，being killed
in an infurrection of his fubjects；and the unhappy Cza－
rina was fent prifoner to Jaroflaw．
A After the death of Demetrius，Zufki，who had con－
fpired againf him，was chofen Czar；but rebellions con－
tinually taking place，and the empire being perpetually
haraffed by the Poles and Swedes，in I 6 Io Zufki was
depofed，and Uladiflaus fon of Sigifmund king of Po－
land was elected．However，the Poles reprefenting to
Sigifmund，that it would be more glorious for him to
be the conqueror of Ruffia，than only the father of its which they had been attempting to eat．In many houfes
the fatteft perfon was killed in order to ferve for food
to the reft．Parents were faid to have eaten their chil－
dren，and children their parents，or to have fold them to
buy bread．One author（Petrius）fays，that he himfelf
faw a woman bite feveral pieces out of a child＇s arm as
fhe was carrying it along ；and captain Margaret relates，
that four women having ordered a peafant to come to
one of their houfes，under pretence of paying him for
fome wood，killed and eat up both him and his horfe．
This dreadful calamity lafted three years，notwithftand－
ing all the means which Boris could ufe to alleviate it；
and in this time upwards of 500,000 people perifhed in
the city．

one of their houfes，under pretence of paying him for
fome wood，killed and eat up both him and his horfe．
This dreadful calamity lafted three years，notwithftand－
ing all the means which Boris could ufe to alleviate it；
and in this time upwards of 500, ooo people perifhed in
the city．
In roo4 a young man appeared，who pretended to
be Demetrius，whom Boris had caufed to be murdered，
as we have already feen．Being fupported by the Poles，
he proved very troublefome to Boris all his lifetime；
and after his death deprived Theodore Borifovitz，the
new Czar，of the empire；after which he afcended the
throne himfelf，and married a Polifh princefs，How－
ever，he held the empire but a fhort time，being killed
in an infurrection of his fubjects；and the unhappy Cza－
rina was fent prifoner to Jaroflaw．
After the death of Demetrius，Zulki，who had con－
fpired againft him，was chofen Czar；but rebellions con－
tinually taking place，and the empire being perpetually
haraffed by the Poles and Swedes，in I 6 Io Zufki was
depofed，and Uladiflaus fon of Sigifmund king of Po－
land was elecked．However，the Poles reprefenting to
Sigifmund，that it would be more glorious for him to
be the conqueror of Ruffia，than only the father of its
fovereign，he carried on the war with fuch fury，that
the Ruffans in defpair fell upon the Poles，who refided
in great numbers at Mofcow．The Poles being well
armed which they had been attempting to eat．In many houfes
the fatteft perfon was killed in order to ferve for food
to the reft．Parents were faid to have eaten their chil－
dren，and children their parents，or to have fold them to
buy bread．One author（Petrius）fays，that he himfelf
faw a woman bite feveral pieces out of a child＇s arm as
fhe was carrying it along；and captain Margaret relates，
that four women having ordered a peafant to come to
one of their houfes，under pretence of paying him for
fome wood，killed and eat up both him and his horfe．
This dreadful calamity lafted three years，notwithftand－
ing all the means which Boris could ufe to alleviate it；
and in this time upwards of 500,000 people perifhed in
the city．

## R U S

52 State of courts of judicature, and power of old families.

53
Addrefs of Alexis in getting rid of this laft tuil.
armed and mofly foldiers, had greatly the advantage; however, they were on the point of being opprefled by numbers, when they fell upon the moft cruel method of enfuring their fuccefs that could be devifed. This was by fetting fire to the city in feveral places; and while the dittreffed Ruffians ran to $f_{a v e}$ their families, the Poles fell upon them fword in hand. In this confufion upwards of 100,000 people perifhed; but the event was, that the Poles were finally driven out, and loft all footing in Ruffia.

The expulfion of the Poles was fucceeded by the election of Theodorovitz Romanov, a young nobleman of 17 years of age, whofe pofterity, till the acceffion of the prefent Emprefs, continued to enjoy the fovereignty. He died in 1646 , and was fucceeded by his fon Alexis; whofe reign was a continued feene of tumult and confufion, being haraffed on all fides by external enemies, and having his empire perpetually difturbed by internal commotions.

The fources of thefe commotions wete found in the multiplicity and inconfiftency of the laws at that period, and in the jarring claims of the nobles on the borders. An emanoy ukafe, or perfonal order, which is an edict of the fovereign, figned with his own hand, is the only law of Rufia. Thefe edicts are as various as the opinions, prejudices, paffions, or whims of men; and in the days of Alexis, they produced endlefs contentions. To remedy this evil, he made a felection, from all the edicts of his predeceffors, of fuch as had been familiarly current for a bundred years; prefuming that thofe either were founded in natural jultice, or during fo long a currency had formed the minds of the people to confider them as jult. This digeft, which he declared to be the common law of Ruffia, and which is prefaced by a fort of inflitute, is the ftandard law-book at this day known by the title of the Ulogenie or Selecion; and all edicts prior to it were declared to be obfolete. He foon made his novella, however more bulky than the Ulogenié ; and the additions by his fucceffors are beyond enumeration. This was undoubtedly a great and ufeful work; but Alexis performed another fill greater.

Though there are many courts of judicature in this widely extended enpire, the emperor has always been lord paramount, and could take a caufe from any court immediately before himfelf. But as feveral of the old nobles had the remains of principalities in their families, and held their own courts, the fovereingn or his minifters, at a dittance up the couutry, frequently found it difficult to bring a culprit out of one of thefe hereditary feudal jurifdiftions, and try him by the laws of the empire. This was a very difagreeable limitation of imperial power; and the more fo, that fome families claimed even a right to repledge. A lucky opportunity offered of fettling this difpute ; and Alexis embraced it with great ability.
Some families on the old frontiers were taxed with their defence, for which they were obliged to keep regiments on foot; and as they were but fcantily indemnified by the flate, it fometimes required the exertion of authority to make them keep up their levies. When the frontiers, by the conqueft of Cafan, were far extended, thofe gentleman found the regiments no longer burdenfome, becaufe by the help of falfe mufters, the former fcanty allowance much more than reimburfed them for the expence of the eftablifhment. The confe-
quence was, that difputes arofe from them about the right of guarding certain diftricts, and law-fuits were neceffary to fettle their refpertive claims. Thefe were tedious and intricate. One claimant fhowed the order of the court, iffued a century or two back, to his anceftor for the marching of his men, as a proof that theright was then in his family. His opponent proved, that his anceftors had been the reallords of the marches; but that, on account of their negligence, the court had iffued an emmanoy ukafe to the other, only at that particular period. The emperor ordered all the family archives to be brought to Mofcow, and all documents on both fides to be collected. A time was fet for the examination; a fine wooden court-houfe was built; every paper was lodged under a good guard; the day was appointed when the court fhould be opened and the claims heard; but that morning the houfe, with all its contents, was in two hours confumed by fire. The emperor then faid, "Gentlemen, henceforward your ranks, your privileges, and your courts, are the nation's, and the nation will guard itfelf. Your airchives are unfortunately loft, but thofe of the nation remain. I am the keeper, and it is my duty to adminifter juftice for all and to all. Your ranks are not private, but national ; attached to the fervices you are actually performing. Henceforward Colonel Buturlin (a private gentleman) :anks before Captain Viazemiky (an old prince)."

This conftitution, which eftablifhed the different Alexis's ranks of Ruflia as they remain to this day, is by confituVoltaire afcribed to Peter: but it was the work of tien with Alexis; who, when the fituation of himfelf and his country is confidered, mult be allowed to have been a great and a good man. He died in 1676, and was fucceeded by his fon Theodore Alexiovitz; who after an excellent reign, during the whole of which he exerted himfelf to the utmolt for the good of his fubjects, died in 1682, having appointed his brother Peter I. commonly called Peter the Great, his fucceffor. Se Acceffion Piter I.

Theodore had another brother named $\mathcal{F}$ obn; but as he was fubjeet to the falling-ficknefs, the Czar had preferred Peter, though very young, to the fucceffion. But through the intrigues, of the princefs Sophia, fifter to Theodore, a ftrong party was formed in favour of John; and foon after both John and Peter were proclaimed fovereigns of Ruffia under the adminifration of Sophia herfelf, who was declared regent. However, this adminiftration did not continue long ; for the princefs regent having confpired againt Peter, and having the misfortune to be difcovered, was confined for life in a convent. From this time alfo John continued to be only a nominal fovereign till his death, which happened in 1696, Peter continuing to engrofs all the power.
It is to this emperor that Ruflia is univerfally al. lowed to owe the whole of her prefent greatnefs. The private character of Peter himfelf feems to have been but very indifferent. Though he had been married in his eighteenth year to a young and beautiful princefs, he was not fufficiently reftrained by the folemn ties of wedlock; and he was befides fo much addicted to feafing and drunkennefs, the prevailing vice of his country, that nobody could have imagined him capable of effecting the reformation upon his fubjects which he actually accomplifhed. In fpite of all difadvantages, however,

## K U S

Ry:Tin,
he appied himfelf to the military art and to civil government. He had alio a very fingular natural defect, which, had it not been conquered, would have rendercd him for ever incapable of accomplifhing what he afterwards did. This was a vehement dread of water; which is thus accounted for. When he was about five years of age, his mother went with him in a coach, in the fpring.feafon; and pafing over a dam where there was a confiderable water-fall, whilf he lay afleep in her lap, he was fo fuddenly awaked and frightened by the rufhing of the water, that it brought a fever upon him ; and after his recovery he retained fuch a dread of that clement, that he could not bear to fee any ftanding water, much lul to hear a running ftream. This averfion, however, he conquered by jamping into water; and aterwards bucume very fond of that element.

Being afhamed of the ignorance in which he had been brought up, he learned almolt of himfelf, and without a mafter, enough of the High and Low Dutch l.mguages to fpeak and write intelligibly in both. He looked upon the Germans and Hollanders as the molt civilized nations; becaufe the former had already erected fome of thofe arts and manufactures in Mofcow, which he was defirous of fpreading throughout his empire; and the latter excelled in the art of navigation, which he confidered as more nereilary than any ocher. 1)uring the adminituation of the pricefs Sophia, he had furmed a defign of eftablifhing a maritime power in Ruflia; which he accomplifhed by the means which we have recorded in his life.

Having reformed his army, and introduced new difcipline among them, he led his troops againft the Turks; from whom, in 1696 , he took the fortrefs of Azov, and had the fatisfaction to fee his fleet defeat that of the enemy. On his return to Mofcow were fruck the firft medals which had ever appeared in Ruffia. The legend was, "Peter the first, the auguft emperor of Fuffia." On the reverfe was Azov, with thefe words, Victorious by fire and water. Notwithftanding this fuecefs, however, Peter was very much chagrined at having his fhips all built by foreigners; having befides as great an inclination to have an harbour on the Baltic as on the Euxine Sea. Thefe confiderations determined him to fend fome of the young nobility of his empire into foreign countries, where they might improve. In 1697 he fent 60 young Ruffians into Italy; moft of them to Venice, and the reft of Leghorn, in order to learn the method of contructing cheir galleys. Forty more were fent out by his direction for Holland, with an intent to inftruct themfelves in the art of building and working large fhips: others were appointed for Germany, to ferve in the land-forces, and to learn the military difcipline of that nation. At laft he refolved to travel through different countries in perfon, that he might have the opportunity of profiting by his own obfervation and experience. Of this journey we bave given a fhort acconnt elfewhere; and fhall here only add, that in executing his great defign, he lived and worked like a common carpenter. He laboured hard at the forges, rope-yards, and at the feveral mills for the fawing of timber, manufacturing of paper, wiredrawing, \&c. In acquiring the art of a carpenter, he began with purchafing a boat, to which he made a milt himfelf, and by degrees be executed every part of the confluction of a hip.

Betides this, Peter frequently went from Sweden to Amfterdam, where he attended the lectures of the celebrated Ruyfch on anatomy. He alfo attended the lectures of burgomafter Witfen on natural philofophy. From this place he went for a few days to Utrecht, in order to pay a vifit to King William III. of England; and on his return fent to Archangel a 60 gun fhip, in the building of which he had affilted with his own hands. In 1698 he went over to England, where he employed himfelf in the fame manner as he had done in Holland. Here he perfected himfelf in the art of fhip building ; and having engaged a great number of artificers, he returned with them to Holland; from whence he fet out for Vienna, where he paid a vifit to the emperor ; and was on the point of fetting out for Venice to finifh his improvements, when he was informed of a rebellion having broken out in his dominions. This was occafioned by the fupertition and obftinacy of the Ruffians, who having an almolt invincible attachment to their old ignorance and barbarifm, had refolved to dethrone the Czar on account of his innovations. But Peter arriving unexpectedly at Mofcow, quickly put an end to their machinations, and took a mont fevere revenge on thofe who had been guilty. Having 62 then made great reformations in every part of his em- whth Swepire, in 1700 he entered into a league with the kings den. of Denmark and Poland againit Charles XII. of Sweden. The particulars of this famous war are related under the article Sweden. Here we fhall only obferve, that, from the conclufion of this war, Sweden ceafed not only to be a formidable enemy to Ruffia, but even loft its political confequence in a great meafure altogether.

Peter applied himfelf to the cultivation of commerce, His affidu arts, and fciences, with equal affiduity as to the purfuits ous firitit of of war; and he made fuch acquifitions of dominion imrrou-even in Europe itfelf, that he may be faid, at the time ment. of his death, to have been the moll powerful prince of his age. He was unfortunate in the Czarovitz his eldeft fon, whom he contrived to get rid of by the forms of juftice (fee Peter I. note b), and then ordered his wife Catharine to be crowned with the fame He fictes magnificent ceremonies as if the had been a Greek em- the crown prefs, and to be recognifed as his fucceffor; which the on his wife accordingly was, and mounted the Rufian throne upon the deceate of her hufband. She died, after a glorious reign, in 1727 , and was fucceeded by Peter II. a minor, fon to the Czarovitz. Many domellic revolutions happened in Ruffia during the fhort reign of this prince; but none was more remarkable than the difgrace and exile of Prince Menzikoff, the favourite general in the two late reigns, and efteemed the richeft fubject in Earope. Peter died of the fmall-pox in 1740.
 and his wife, the Ruffian fenate and nobility, upon the chefs of death of Peter II. ventured to fet afide the order of Courland fucceffion which they had: eftablifhed. The male iflue ralled to of Peter was now extinguifhed ; and the duke of Hol the thrute Atein, fon to his eldeft daughter, was by the deftination of the late emprefs intitled to the crown : but the Ruffians, for political reafons, filled their throne with Anne. duchefs of Courland, fecond daughter to John, Peter's eldeft brother; though her eldefl fifter the ducheis of Mecklenburgh was alite. Her reign was extremely profperous g. and thourgh the accepted of the crown un-

Rufla. der limitations that fome thought derogatory to her dignity, yet the broke them all, allerted the prerogative of her anceltors, and punithed the afpiring Dolgorucki tamily, who had impofed upon her limitations, with a view, as it is faid, that they themelves might govern. She raife her favourate Biron to the duchy of Courland; and was obliged to give way to many fevere ex. ecutions on his account. Upon her death in 1740, John, the ton of her niece the princefs of Mecklenburgh, by Antony Ulric of Brunfwic Wolfenbuttel, vas, by har will, intitled to the fuccefion: but being no more Lian two years old, Liron was appointed to be acminiltrator of the empire during his nonage. This detimation was dilagreeable to the princefs of Mecklenlurgh and her hulband, and unpopular among the Ruffians. Count Munich was employed by the princel's of lvicklenburgh to arreft Biron; who was tried, and condemned to die, but was fent in cxile to Siberia.
66 'The adminiltration of the princels Anne of Mecklen-
dizabeth burch and her hufband was, upon many accounts, but Pcter I ob- particularly that of her German connections, difagreetums the able not only to the Ruflans, but to ouler powers of crown. Europe; and notwithitanding a profperous war they carried on with the Swedes, the princefs Elizabeth, datghter by Catharine to Peter the Great, formed fuch a par $\gamma$, that in one night's time the was declared and proclaimed enprots of the Ruffias; and the princefs of Mecklenburgh, her hufband, and fon, were nade prifoners.

Elizabeth's reign may be faid to have been more gloHertegn incommonly gio2.elいま.
rious than that of any of her predeceffo:, he: father excepted. She abolifhed capital punifhments, and irtroduced into all civii and military proceedios; a moderation till her time unknown in Rulfia: but at the fame time the punifhed the counts Munich and Ofterman, who had the chiet management of ailitirs during the late adminitration, with exile. She made peace with Sweden; and itttled the fuccefion to that crown, as well as to her own dominions, upn the molt equitable foundation. Having gloriouly finifhed a war, which had been fierred up againlt her with Sweden, the a eplaced the matural order of fucceffion in her own faatily, by dularing the duke of Hollein-Gottorp, who wasdtendedirom her clder fifter, to be her hetir. She gave him the title of grand duke of Rulin; and foon afrer ber acceflion to the throne; the called tim to her cont; whetche rearonced the fuccelica to the crown of Buiden, which undoubtedly belroged to him, tiniraced tha Greck atlgion, and married a princefs of Anmate Zerbit, by whom he had a fon, who is now heir so the Rulian enpire.

Few princes have bid a more uninterrupted career of glory than Elizabeth. She was completely vietorious sver the Swedes. Her alliance was courted by Great Drituin at the expence of a large fublidy ; but many puitical, and fome private reafons, it is aid, determined ber to take part with the houfe of Aultria againft the king of Pruifia in $175^{6}$. Her arms alme gave a turn to the luccuis of the war, which was in disfavour of Erulia, notwithftanding that munarch's amazing abiliais both in the fild and c.ibinet. Her conquelts were fual as postenced the enire deftruction of the Fruffan power, which was perbaps faved unly by her critical Jeath on January 5. 1,62.

Elizatiti. was fucceeded by Peter III. grand priace
of Ruffia and duke of Holttein; a prince whofe con- Ruffa. duct has been varioully reprefented. He mounted the 08 throne polfeffed of an enthufiaftic admiration of his Character Prulman majefty's virtues; to whom he gave peace, and of her fucwhofe principies and practices lee feems to have adopted ceffor Dice as the dirctories of his futue reign. He might liave ${ }^{I I I}$. furmonnted the effets even of thofe peculiarities, unpopular as they then were in Ruflia; but it is faid, that he aimed at reformations in his dominions, which even Peter the Great durt not attempt ; and that he eve: ventured to cut off the beards of his clergy. He was certainly a weak man, who had no opinions of his own, but childifhly adopted the fentiments of any perion who touk the trouble to teach him. His. chief amufement was buffoonery; and he would fit for hours looking with pleafure at a merry-andrew fing. ing drunken and vulgar fongs. He was a ftranger to the country, its inhabitants, and their manners; and fuffered himfelf to be perfuaded by thofe about him, that the Ruflans were fools and beafts unworthy of lis attention, except to make them, by means of the Prullian difcipline, good fighting machines. Thefe fentiments regulated his whole conduct, and prepatcul the way for that revolution which improprieties of a different kind tended to hatten.

Becoming attached to one of the Vorontzoff ladies, fifter to the princets Dahkoff, he difgufted his wife, who was then a lovely woman in the prime of life, of great natural talents and great acquired accomplifh. ments; whilft the lady whom he preferred to her was but one degree above an idiot: The princefs Dathkoff, who was married to a man whofe genius was not fuperior to that of the emperor, being dame d'bonneur and lady of the bed-chamber, had of courfe much of the emprefs's company. Similasity of fituations knit thele two illultrious perfonages in the clofent friendhip. The princefs being a zealous admirer of the French cconomi/les, could make her converfation both amuling and initructive. She retailed all her ftatifical knowledge; and fincing the emprefs a willing hearer, fhe fpoke of her in every company as a prodiry of know. ledge, judgment, and philanthropy. Whilft the emperor, by his buffoonery and attachment to foreign manners, was dally incurring more and more the odium of his fubjens, the popularity of his wife was rapidly increafing; and fome perfons about the court exprefled their regret, that fo much knowledge of government, fach love of humanity, and fuch ardent wifhes tor the profperity of Rullia, thonld only fumith converfations with Catharina Komanovna*. The empreis and her favourite did not lett thefe expreflons pafs unobferved: they continued their ftudies in concert; and whill the former was employed on her famous code of laws for a great empire, the latter always reported progrefs, till the middling circles of Mofcow and St Peterfourgh begat to feak familiariy of the bleflings which they mine enjoy if thefe finecula ions could be realized.

Meanwhile Peer III. was giving fiefh caufe of difcontent. Eahad rechied from Siberia count Munich, who was indeed a fencble brave and worthy man, Peter's un but as le was iatarting under the effefts of Ruffian def- couduct poifm, and hat grourds of refentrene againt $m$, it of the great families, te cid not much difcourage the emfers's unprpuar conduct, but only tied to moderate it and give it in ferm. Peer, however, was impatient.

75
Theyare eafily gained over to the party ai Catharine, by difgulting the army.
ilhat he 1 It was foon and eafily gained by the emiffarics of Catharine. Four regiments of guards, amounting to 8000 men, were inftantly brought over by the three brothers Orlof, who had contrived to ingratiate themfelves with their officers. The people at large were in a flate of indifference, out of which they were roufed by the following means. A little manufcript was handed about, containing principles of legiflation for Ruffia, founded on natural rights, and on the claims of the different claffes of people which had infentibly been formed, and become fo familiar as to appear natural. In that performance was propofed a convention of deputics from all the claffes, and from every part of the empire to converfe, but without authority, on the fubjects of which it treated, and to inform the fenate of the refult of their deliberations. It paffed for the work The fervants of that favourite betrayed her to her fifter, who imparted the intelligence to the emprefs. Catharine faw her danger, and inftantly formed her refolution. She mult either tamely fubmit to perpetual imprifonment, and perhaps a cruel and ignominious death, or contive to harl her huband from his throne. No other alter native was left her ; and the confequence was what undoubtedly was expected. The proper fteps were taken; folly fell before abilities and addrefs, and in three When the emperor faw that all was loft, he attempt, ed to enter Cronftadt from Oranienbaum, a town on the gulph of Finland, 39 verfts, or near 26 miles from Peteriburg. The fentinels at the harbour prefented thcir mukkets at the barge ; and though they were not loaded, and the men had no cartridges, he drew back. The Englifh failors called from thip to fhip for fome perfon to head them, declaring that they would take him in and defend him; but he precipitately withdrew. Munich received him again at Oranienbaum, and exhorted him to mount his horfe and head his guards, fwearing to live and die with him. He faid, "No: I fee it cannot be done without fhedding much of the blood of my brave Holftenians. I am not worthy of the facrifice." The revolution was fettled, and Catharine declared autocratrix. The crown was faid to be
preffed upon her, and her fon was proclaimed ber heir, and as fuch great duke of all the Ruffias.

Rufina.
She behaved with magnanimity and moderation; re- Her magy tained Munich; eren pardoned countefs Vorontzoff the nanimous emperor's fovourite; and afterwards, on her marriage and mode. with Mr Paulotiky, made a handfome fettlement on rate behathem. She allowed the expectations of golden days and viour. a philofophical government to become the fubject of fafhionable converfation; and the princefs Dafhkoff (c) was completely happy. The convention of deputies was even refolved on; and as they were not to be elected by the people, except here and there for the fhow, Prince Galitzin and Count Panin, whom fhe had completely gained over, and who had the greateft abilities of any Ruffians about court, were at immenfe pains in appointing a proper fet. In the mean time, a great number of fhowy patriotic projects were begun. A she indigrave Englifh clergyman was invited over to fuperin- tuees tend the inftitution of fchools for civil and moral edu- fchoolb. cation ; and the emprefs was molt liberal in her appointments. This inftitution failed, however, to produce the effects expected from it. The clergyman appointed, though a molt excellent character and real philanthropitt, had views too contracted for the fphere in which he was placed; and Mr Betfkoy, the Ruffian Mecanas, to whom the emprefs referred him for inftructions, preferred declamation, and fage-playing, and ballets, to all other accomplifhments.

In the mean time, elegance of all kinds was introdu- And fends ced before the people were taught the principles of the nobles morals. The nobles were fent a travelling; and as the Ruffians more eafily acquire foreign languages than the people of moft other nations, have great vivacity without flippancy, and in general underftand play, thefe travellers were everywhere well received, efpecially at Pa ris, where reafons of fate contributed not a little to procure to them that attention with which they were treated. They were ravilhed with the manners of foreign courts, and imported fafhions and fineries without bounds. The fovereign turned all this to her own account, by encouraging a diffipation which rendered court favours neceffary, and made the people about her forget their Utopian dreams.

The convention of deputies at laft affembled in the capital. The emprefs's book of inftructions (D) came forth; and by fome great things were doubtlefs expected. The moft confequential of the deputies were privately inftructed to be very cautious, and informed that fue carriages and guards were ready for Siberia. There was a grand proceffion at their prefentation. Each had the honour of kiffing her majeliy's hand and receiving a gold medal. They met in form to recognife one another,
(c) This lady, during the progrefs of the revolution, certainly acted either from the moft difinterefted patriotifm or the molt generous friendihip. She might have taken part with the emperor, and directed the counfels of the empire; for ber fifter, on whom he doated, acknowledged her fuperiority, and wanted nothing but pleafure. Between them they could eafily have governed fuch a man as Peter III. But Catharine Romanovia was a theoretical enthufiaft, who loved the emprefs becaufe fhe thought her a philofopher and philanthropift ; and perhaps fhe might entertain hopes of directing the conduct of Catharine II. as fhe had formerly affifted her in her patriotic ftudies.
(D) It is intitled, Infrucions for the Deputies to confult about a New Code of Laws, \&c. and is a very refpectable work, which does honour to the emprefs, by whom it was undoubtedly compofed.

## R U S

Ruffia. of the eni-done Taxes we, many patriotic things were really prels.
other, then parted, and have never met fince. The thing melted away without notice; and the princefs Daihkoff was handiomely given to underftand, that her counfels were no longer neceffary, and that the could not do better than take the amufements of the tour of Europe. She was liberally fupplied, and has ever fince been treated with great kindnefs, but kept amufed with fomething very different from legiflation.

In the mean time, many patriotic things were really burthenfome. Every perfon was declared free who had ferved government without pay for two years. No man was allowed to fend boors from his cultivated eftates to his mines in Siberia, nor to any diftant eftates, but for the purpofes of agriculture. Many colonies of German peafants were in various places fettled on the crown-lands, to teach the natives the management of the dairy; a branch of rural economy of which the Ruffians were till that period fo completely ignorant, that there is not in their language an appropriated word for butter, or cheefe, or even for cream.

The Ruflians hoped to be likewife inftructed in agriculture ; but the colonifts were poor and ignorant; and this part of the project came to nothing, like the great national fchools. Other improvements however took place in favour of commerce; for all barriers were removed, and goods fuffered to pafs through the empire duty-free. The emprefs with great liberality encouraged the introduction of arts and manufactures. An academy was inftituted of fculpture, painting, and architecture, \&c. a magnificent and elegant building was erected for it, and many éleves fupported in it at the expence of the crown. Several very promifing youths have been educated in that academy ; but as the Ruffians are childifhly fond of finery, and cannot be perfuaded that any thing fine was ever done by their own countrymen, the fudents are all, on leaving the academy, fuffered to ftarve.

The emprefs, who has a very jult tafte in architecture, has herfelf defigned feveral buildings equally uleful and ornamental to her capital (fee Neva and Petersburgh) ; and while the has thus diligently cultivated the arts of peace, the has not negiected thofe of war. She put her fleets on the moft sefpectable footing, and procured a number of Britifh officers to infruct her feamen in the fcience of naval tactics. By land, her fucceffes againft the Turks, the Swedes, and the Poles (fee Turiey, Sweden, and Poland), compel us to believe, that her troops are better difciplined, and her generals more fkilful, than any whom the greateft of her predeceffors cou'd bring into the field; and perhaps it is not too much to fay, that the empire of Ruffia, though the peopie are but juft emerging from a ftate of barbarifm, is at thas day the molt powerful in Europe.

Rufia is divided into two great parts by a range of mountains called Oural, or the Belt, which, through the whole breadth of $\mathrm{i}^{\mathrm{r}}$, form one continual uninterupted barrier, dividing Siberia from the remaining Ruflia.That part of Ruffia which lies on this fide of the Oural mountains prefents a very extenfive plain verging weftward by an eafy defcent. The valt extent of this plain has a great variety of different climates, foils, and products. The northern part of it is very woody,
marfhy, and but little fit for cultivation, and has a len-
Reflis. fible declivity towards the White and the Frozen Seas. The other part of this vaft plain includes the whole extent along the river Volga as far as the deferts, extending by the Carpian and the Azov Seas, and conftitutes the finelt part of Ruffia, which in general is very rich and fruitful, having more arable and meadow land than wood, marfhes, or barren deferts.

The part lying on the other fide of the Oural mountains, known by the name of Siberia, is a flat tract of land of confiderable extent, declining imperceptibly towards the Glacial Sea, and equally by imperceptible degrees rifing towards the fouth, where at lalt it forms a great range of mountains, conftituting the boders of Ruffia on the fide of China. Between the rivers Irtifh Obè, and the Altay mountains, there is a very extenfive plain, known by the name of Barabinkaya Stepe, viz. the deferts of Baraba, the northern part of which is excellent for agriculture; but the fouthern part, on the contrary, is a defert full of fands and marfhes, and very unfit for cultivation. Between the rivers Obè and Eniffey there is more woodland than open ground; and the other fide of the Eniffey is entirely covered with impervious woods, as far as the lake Baical; but the foil is fruitful everywhere; and wherever the trouble has been taken of clearing it of the wood, and of draining it from unneceffary water, it proves to be very rich, and fit for cultivation; and the country beyond the Baical is furrounded by ridges of high fony mountains. Proceeding on farther towards the eaft, the climate of Siberia becomes by degrees more and more fevere, the fummer grows fhorter, the winter longer, and the frolts prove more intenfe.

With refpect to the variety of climates, as well as Varicty of the produce of the earth, Ruffia naturally may be di- climates. vided into three regions or divifions, viz. into the northera, middle, and fouthern divifions.

Thefe were about 20 years ago fubdivided into different governments, for the better adminiftration of juAtice.

The northern divifion, beginning from the 57 th degree of latitude, extends to the end of the Ruffian dominions on the north, and includes the governments of St Peterfburgh, Riga, Revel, Vyborg, Pfcov, Nevogorod, Tver, Olonetz, Archangel, Vologda, Yaronlavl, Kofroma, Viatka, Perme, and Tobollk. ' Hie middle divifion is reckoned from the 57 th to the 50 th degree of latitude, and includes the governments of Moficow, Smolenik, Polotik, Moghilev, Tchernigov, NovogorodSieverfkoy, Kharkov, Voronez, Kourk, Oiel, Kalouga. Toola, Riazane, Vladimir, Niznei-Nrvogorod, Tambov, Saratov, Penza, Sinbitk, Kazane, Oufa, Kolhivane and Irkouttk. The fonthern divifion buins at the 5oth degree of latitude, and extends to the end of Ruflia on the fouth, includirg the gevernments of Kiev, Ekatherinollav, Caucafus, and the province of Taurida. To this may be added the habitations of the Coffacs of the Don.

The northern divifion, though deficient in grain, ${ }^{8}{ }^{83}$ fruit and garden vegetables, has the preference before of the no:the other two in the abundance of animals, rare and thern, mid. valuable for their finins; in fifhes of particular forts, de, and very ufeful for different purpofes oflife; in cattle, and fouthern metals of inferior kinds, \&c. The middle dipifion of divifinns. Rufla abounds in differne linds of grain, hemp, flax, catlen,

R U S
Rulfis. ,

84 External commerce of Ruflia

管 rope. as well as different metals. Makarievikaya, Korennaya, and Irbitikaya. tiers of Poland, Sweden, and Turkey.
cattle, fifh, bees, timber proper for every ufe, different kinds at $\because$ ild beals, metals, both of fuperior as well as of interior kind, different precious ftones, \&c. This divition is likewife molt convenient for the habitation of $m+r i k i n d$, or account of the temperature and pleafantnufs f the air. The fouth divifion has not that abundance of grain, but has the preference in different delicate kinds of fruit, quantity of fifh, cattle, and wild animals, amonght which there are feveral fpecies different from thofe which are found in the middle divifion. It exceeds greatly both the other divifions in plants and roots fit for dying and for medical purpofes, as well as for the table; neither is it deprived of precious fones,

The products of thele three divifions conftitute the permament and inexhauftible riches of Kullia; for, be. fides what is neceffary for home confumption, there is a great quantity of thofe products exported yearly into foreign countries to the amount of feveral millions of rubles. Thefe productions are brought from different places to fairs, eftablifhed in different parts of Ruffia, where the merchanis buy them up, and forward them to different ports, and other trading towns, for exportation into foreign kingdoms. Thefe fairs are likewile the places where a confiderable quantity of goods imported from foreign kingdoms is difpofed of. The principal varmankas, that is, fairs, are the yarmanka

The external commerce of Ruffia may be divided into two different branches; 1 ft . The commerce with the European nations, which is carried on by buying and felling goods either for ready money or upon credit. 2d. The commerce with the Afratic nations, which is conducted by barter or exchange of goods.

The principal ports belonging to the firlt part of Rulfia are on the Baltic fea, St Peterfburgh, Riga, Vyborg. Revel, Narva, Frederick\{ham, and the Baltic port; Aichangel on the White fea, and Cola on the Northern Ocean ; Taganrog on the fea of Azov ; Kherfon, Sevaitopole, Balaklava, Soudak, Theodofia, Kerche, an $\pm$ Phanagoria on the Black fea, befides others of fmaller note. In thefe ports commerce is carried on, as well as in feveral trading towns fituated on the fron-

The products of Ruffia exported into the different European kingdoms confil chiefly in hemp, flax, different kinds of grain, tallow, hides, fail cloth, iron, tim. ber, linfeed, butter, hemp-oil, train-oil, wax, potafhes, tar, tobacco, briftles, linens, pultry, and other goods, the greatelt part of which is exported chiefly by way of $S t$ Peterfurgh, Riga, and Archangel ; and in return from th: European kingdoms they receive woollen cloths, different kinds of goods made of worfted, filk, cotton, and thread; wines and beer, white and moilt firars, filks, cotton unwinught, and yarn; Frenh braudy, liquors, arrack, fhrub, different iron tools, and toy: g gld and filver in bars, in foreism money, and in other things; brilliants, pearls, gatanterie goods, coffee, colours; peltry, viz. beaver and oter fkins; herrings, ftock-Eh, falt, tobacco, different trees, oil, horfes, china and earthen ware, \&c. The greateft part of thefe goods is impurted thr ugh the ports of St Peterfburgh and Riga, but a coniderable quantity is likewife admitted by land through different frontier cuftomhoufes.

## R U S

The principal goods exported into Afia are partly Ruffin, the products of Ruflia, and partly imported from other 86 European kingdoms, and confift of peltry and hides. And afia. The other goods are woollen clictiss, bays, borax, bottles, printed linens, iron, and differents kinds of ironware, calamancos, kerfeys, glue, ifinglafs, cochineal, indigo, laura, tinfel, gold and filver lace, foap; all kinds of arms, as piftols, guns, fabres; different kinds of $\mathrm{li}-$ nens, printed and glazed, friped linen, ticking, pallock, crafh, \&c. From the Ahatic kingdoms they import different filk goods, ratv filk, cotton, filk-wove fuffs, gold and filver in bars and in coin, cattle, horfes, \&c.

The mountains within Ruffia, as well as thofe on its $\& \mathrm{M}$. frontiers, abound with minerals of various kinds. Gold filver, quickfilver, copper, lead, iron-ore, very powerful loaditones, mountain-cryftal, amethylt, topazes of different forts, agates, cornelian; beryl, chalcedony, onyx, porphyry, antimony, pyrites, aquamarines, chryfolites, ophites, and lapis lazuli, are found in them, befides marble, granite, trappe, maria or Mufcovy glafs, of remarkable fize and clearnefs, bafaltes, and coal, \&c ; and in every part of Siberia, but particularly in the plains of it, are found bones of animals uncommonly large, mammoth's teeth (fee Mamмотн), and other foffils.

In the Ruffian empire are many lakes of very large Lakes. extent. 1. The Ladoga, anciently called Neva, is the larget lake in Europe, extending in length 175 and in breath 105 verfts; or it is 116 Englifh miles long and near 70 broad. It lies between the governments of St Peteriburgh, Olonetz, and Vyborg; and communicates with the Baltic fea by the river Neva, with the Onega lake by the river Svir, and with the Ilmen lake by the river Volkov. Several confiderable rivers fall into it, as the Pafha, Sias, Oyat, and others. The Ladoga canal is made near this lake. 2. The Onega lake is fituated in the government of Olonetz. It is above 200 verits long, and the greateft width of it does not exceed 80 verfts. 3. The Tchude lake, or Peipus, lies between the governments of St Peterfburgh, Pfcov, Revel, and Riga. It is near 80 verits long and 60 broad. It joins to the lake of Pfoov by a large neck of water. The length of this lake is 50 and the width about 40 verfts. The River Velikaya flows into it. The river Narova comes out of the lake Peipus, which by the river Embakha communicates with the lake Wirtz-Erve, and from this latter flows the river Fellin, and runs into the bay of Riga. 4. The Ilmen lake, anciently called Maik, lies in the government of Novogorod. Its length is 40 and width 30 verits. The rivers Mita, Lovate, Shelrne, and others, fall into it ; and only one river Volkov, runs out of it, by which it is joined .with the Ladoga lake. 5. The Bielo-Ozero, that is, the White Lake, lies in the government of Novogorod. It extends 50 verfts in length, and about $30^{\circ}$ in width. There are many fmall rivers which run into it; but only one river, Shekfna, comes out of it, and falls into the river Volga. 6. The Altin, or Altay lake, otherwife culled the Telefl Lake, is fituated in the government of Kolhivane. It extends in length i 26 and in width about 84 velfs. The river Biya comes nut of it, which being juined to the river Katounya, conflitute the river Obè. 7. The Baical Lake, otherwife called the Eai. cal Sea, and the Holy Sex, lies in the government of Irkoutk. Its extent in length is 600 , and in width from

30 to 50 verns, and in the wideft places as far as 70 verfs. 8. The Tchani Lake lies in the deferts of Baraba, between the rivers Obè and Irtilh. It joins with a great many fmaller lakes, occupies a valt tract of land, and abounds very much in fifh. 9. Between the Gulf of Finland and the White Sea there are feveral lakes which extend from 50 to 70 vertts in length; and befides thefe there are many other falt lakes in different parts of Ruffia, fuch as the Ozero, that is, the lake Eltonkoye, Bogdo, Inderfkoye, Ebele, Koryakovkoye, Yamifhevikoye, Borovye, and others; and the falt which is got from them ferves for the ufe of the greateft part of the empire. To thefe may be added the Cafpian, which, though called a fea, is more properly a lake, as it has no communication with the ocean either vifible or fubterraneous. See Caspian-Sea, and Pneumatics, $n^{\circ} 277$.

Ruffia boafts likewife of a confiderable number of large and famous rivers. Of the Dvina or Dwina, the Neva, Dneiper of Neiper, the Don, the Volga, the Irtis, the Onega, the Oby, and the Lena, the reader of this work will find fome account under their refpective names; but in this valt empire there are many other rivers worthy of notice, tho' not perhaps of fuch minute defcription. Among thefe the Boug, or, as it is fometimes written, Bog, rifes in Poland; then directing its courfe to the fouth-ealt, it divides the government of Ecatherinoflav from the deferts of Otchakov, now belonging to Ruffia, and falls into the Liman, which communicates with the Black Sea.

The Kubane confifts of many fprings or rivulets running out of the Caucafian mountains, and divides itfelf into two branches, the one of which falls into the Azov Sea, and the other into the Black fea. This river, from its fource to the end of it, conftitutes the frontier of Rulfia.

The Oural, formerly Yaik, takes its rife in the Oural mountains, in the government of Oufa, which it divides from that of Caucafus, and extends its courfe about 3000 verfts. It receives many rivers, the principal of which are the Or, Sakmara, Yleck, and Ter-kool.-The Kcuma tifes in the Caucafian mountains, and runs through the plains between 'lerek and Volga, and at laft lofes itfelf in the fands, before it comes to the Cafpian fea. The Terek originates in the Caucafian mountains, runs between them, and then coming out, extends its courfe to the Cafpian Sea, and receives feveral rivers, as the Malka, Soonja, Bakian, and Ackfay.

The Bolfhaya Petchora, that is, the great Petchora, rife, in the Oural mountains, in the government of Vologda, runs acrofs the whole breadth of the government of Archangel, and falls into the Icy fea. It receives in its courle feveral rivers, the principal of which are the Outcha and the Elma. The E:ifley is formed by the junction of two rivers, the Oulookema and the Baykem 1 , which rife in the Altay mountains in Mungalia. It runs through the whole extent of Siberia, and falls into the Icy fea. The extent of the Eniffey is about 2500 verfts. It receives in its courfe feveral rivers, the principal of which are the Abakam, Elogooy, Podkamennaya Tungouka, Niznyaya Tungoulka, and Tourookhan. The Yana, the Indighirka, and the Kolhima, are likewife no inconfiderable rivers in the government of Irkoutfk. The firf iffes in the mountains Vol. XVI.
which overfhadow the banks of the river Lena on the right hand, and extends its courfe 800 verts. 'ithe two laft take their fources in the mountains which extend on the coafts of the Eaftern fea. The lengtlo of the Indighirka is 1200 and that of Kolhima 1500 verfis.The laft, near its mouth, is divided into two branches, and receives the rivers Omolon and Oncoy. The Anadir is the eafternmoft of all the rivers in Siberia. It rifes out of the lake Ioanko, in the diftrict of Okhothk, and runs through the eaftern part of it, and then lalls into the Eaftern ocean. The Amour is formed by the junction of two confiderable rivers, the Shilka and Argoonya, which are joined jut by the frontiers of China. Il rans through the Chinefe dominions, and at laf falls into the Eaftern ocean. The Kamtfchatka runs througl2 the peninfula of the fame name, extending its courfe from the Verkhney to Nizney Oftrog, that is, from the upper to the lower fort, and falls into the Eaftern ocean. The Penjina rifes in the Yablonnoy ridge o: mountains, and falls into the Penjinkaya Gooba, thai is, the gulph or the fea of Penjina.

In fuch a valt extent of country, fretching from the State or $90^{\circ}$ temperate fo far into the frigid zone, the climate the wea-. mult vary confiderably in different places. In the ther. fouthern parts of the Ruffian empire, the longeft day does not exceed fifteen hours and a half; whereas in the moft northern, the fun in fummer is feen two months above the horizon. The country in general, though lying under different climates, is exceflively cold in the winter. Towards the north, the country is covered near three quarters of the year with fnow and ice; and by the feverity of the cold many unfortunate perfons are maimed, or perifh. This fort of weather commonly fets in about the latter end of Augult, and continues till the month of May; in which interval the rivers are frozen to the depth of four or five feet. Water thrown up into the air will fall down in icicles; birds are frozen in their flight, and travellers in their fledges. In fome provinces the heats of fummer are as fcorching as the winter colds are rigorous.

The foil of Mufcovy varies fill more than the cli- Soill ${ }^{9!}$ mate, according to the influence of the fun and the fituation of the country. In the warmer provinces, the procefs of vegetation is fo rapid, that corn is commonly reaped in two months after it begins to appear above the furface of the ground. Hence the great variety of muhhrooms produced fpontaneoully in Rufia, whic'? may be confidered as a comfortable relief to the poor, while they appear as delicacies at the tables of the rich. Above 1000 waggon-loads of them ufed to be fold annually in Mofcow. Perhaps it is on account of the fcarcity of provifions that fuch a number of fafts are inftituted in the Mofcovite religion.

Belides the productions already mentioned as peculiar And vensto each of the three great natural divifions of the em- table propire, Mufcovy yields rhubarb, flax, hemp, pature for dusichs. cattle, wax, and honey. Among other vegetables, we find in Ruffid a particular kind (f rice called pfyntha, plenty of excellent melcns, and in the neighbourhood of Aftracan the famous zoophyton, or animal plant, which the Mufcovites call bennaret, or lambkin, from its refemblance to a lamb. See the article Scythian Laiab.

Agriculture in gencral is but little underfood, and state ${ }^{93}$ lefs profecuted in this country. The molt confiderable as ricuiarticles in the cenomy of a Rufian farm are wax and tur:

## R U S

## RU S $\quad[571] \quad R$ US

To much a val variety of people, nations, and languages, it is needilefs to observe, that no general chiracter can with truth be applied. The native Ruffians are

fordate repaft. Both fexes are remarkably healthy and robuft, and accuftom themfelves to fleep every day after dinner.

The Ruflian women are remarkably fair, comely, ftrong, and well-fhaped, obedient to their lordly hufbands, and patient under difcipline: they are even faid to be fond of correction, which they confider as an infallible mark of their hufband's conjugal affection; and they pout and pine if it be with-held, as if they thought themfelves treated with contempt and difregard. Of this neglect, however, they have very little caufe to complain ; the Ruffian hadband being very well difpofed, by nature and inebriation, to exert his arbitrary power. Some writers obferve, that, on the weddingday, the bride prefents the bridegroom with a whip of her own making, in token of fubmiffion; and this he fails not to employ as the inftrument of his authority. Very little ceremony is here ufed in match-making, which is the work of the parents. Perhaps the bridegroom never fees the woman till he is joined to her for life. The marriage being propofed and agreed to, the lady is examined, ftark-naked, by a certain number of her female relations; and if they find any bodily defect; they endearour to cure it by their own fkill and experience. The bride, on her wedding-day, is crowned with a garland of wormwood, implying the bitternefs that often attends the married ftate. When the prieft has tied the nuptial knot at the altar, his clerk or fexton throws upon her head a handful of hops, wifhing that fhe may prove as fruitful as the plant thus fcattered. She is muffled up, and led home by a certain number of old women, the parifh-prieft carrying the crofs before; while one of his fubalterns, in a rough goat-1kin, prays all the way that hee may bear as many children as there are hairs on his garment. The new-married couple, being feated at table, are prefented with bread and falt; and a chorus of boys and girls fing the epithalamiom, which is always grofsly obfcene. This ceremony being performed, the bride and bridegroom are conducted to their own chamber by an old woman, who exhorts the wife to obey her hußband, and retires. Then the bridegroom defires the lady to pull off ene of his bufkins, giving her to underftand, that in one of them is contained a whip, and in the other a jewel or a purie of money. She takes her choice; and if the finds the purfes interprets it into a good omen; whereas fhould the light on the whip, the conftues it into an unhappy prefage, and iuftantly receives a lafh as a fpecimen of what fle has to expect. After they have remained two hours together, they are interrupted by a deputation of old women, who come to fearch for the figns of her virginity: if thefe are apparent, the young lady ties up her hair, which before confummation hung loofe over her fhqulders, and vifits her mother, of whom the demands the marriage partion. It is generally agreed, that the Mufcovite hufbands are barbarous even to a proverb; they not only adminifter frequent and fevere correction to their wives, but fometimes even torture them to death, without being fubject to any punifhment for the murder.

The canon law of Miufcovy furbids the conjugal commerce on Mondays, Wednefdays, and Fridays ; and wheever tranfgrefles this law, mut bathe himfelf before he enters the church-porch. He that marries a fecond
wife, the firft being alive, is not admitted farther than the church-door: and if any man efpoufes a third, he is excommunicated: fo that though bigamy is tolera. ted, they neverthelefs count it infamous. If a woman is barren, the hufband generally perfuades her to retire into a convent : if fair means will not fucceed, he is at Kiberty to whip her into condefcenfion. When the czar, or emperor, has an inclination for a wire, the mof beautiful maidens of the empire are prefented to him for his choice.

The education of the czarovitz, or prince royal, is intrufted to the care of a few perfons, by whom he is Itrictly kept from the eyes of the vulgar, until he hath attained the 15 th year of his age: then he is publicly expofed in the market-place, that the people, by viewing him attentively, may remember his perfon, in order to afcertain his identity; for they have more than once been deceived by impofters.

Such is the flavery in which the Muffovites of both Authority fexes are kept by their parents, their patrons, and the emperor, that they are not allowed to difpute any match that may be provided for them by there directors, however difagreeable or odicus it may be. Officers of the greatelt rank in the army, both native and foreigners, have been faddled with wives by the fovereign in this arbitrary manner. A great general fome time ago deceafed, who was a native of Britain, having been preffed by the late czarina to wed one of her ladies, faved himfelf from a very difagreeable marriage, by pretending his conftitution was fo unfound, that the lady would be irreparably injured by his com. pliance.

In Ruflia, the authority of parents over their children is almoft as great as it was among the ancient Romans, and is often exercifed with equal feverity. Should a farther, in punifhing his fon for a fault, be the immediate caure of his death, he could not be called to account for his conduct ; he would have done nothing but what the law authorifed him to do. Nor does this legal tyranny ceafe with the minority of children; it continues while they remain in their father's family, and is often exerted in the moft indecent manner. It is not uncommon, even in St Peterfburgh, to fee a lady of the higheft rank, and in all the pomp and pride of youthful beauty, ftanding in the court-yard with her back bare, expofed to the whip of her father's fervants. And fo little difgrace is attached to this punifhment, that the fame lady will fit down at table with her father and his guefts immediately after flie has fuffered her flogging, provided its feverity has not confined her to bed.

The Mufcovites are fond of the bagpipe, and have Mufic and a kind of violin, with a large belly like that of a lute : dancing. but their mufic is very barbarous and defective. Neverthelefs, there are public fchools, in which the children are regularly taught to fing. The very beggars ank alms in a whining cadence, and ridiculous fort of recitative. A Ruffian ambaffador at the Hague, having been regaled with the beft concert of vocal and inftrumental mufic that could be procured, was afked how be liked coe entertainment? he replied, "Perfeetly well: the beggars in my country fing juf in the fame manner." 'the warlike mufic of the Ruffans confilts in kettle-drums and trumpets: they likewife ufe hunting horns; but they are not at all expert in the per-
formance

Rufla. bemance. It has been faid, that the Ruflians think it lith or Tartarian flaves to divert them with this exercife in their hours of diffipation. Such may have been the cafe formerly, or may be fo now, in the diltant and moft barbarous provinces of the empire; but at St Pe terfburgh dancing is at prefent much relifhed, and a minuet is nowhere fo gracefully performed in Europe as by the fafhionable people in that metropolis.
We have elfewhere obferved, that the Ruffian language is a dialect of the Sclavonic, and the pureft perhaps that is now anywhere to be found (fee PhiloloGy, Sect. ix. (3.); but they have nothing ancient written in it, except a tranflation of Chryfoftom's Of. fices for Eafter, which are at this day good Ruflian, and intelligible to every boor, though certainly not lefs than 800 years old. There is no Ruflat poetry which there is reafon to believe 200 years old; and the oldeft tranfation of the Scriptures into that language berg. Science has made but a very fmall progrefs among them; and the reputation of the imperial aca- demy at St Peterfburgh has been hitherto fupported by the exertions of foreigners. For antiquarian refearch they have as little relifh as for fcientific inveftigation. Every thing, to pleafe, mult be new ; and the only elucidations which we have of their antiquities are the performances of Germans and other foreigners, fuch as profeffors Bayer, Muller, and Gmelin. One native has indeed fhown fome defire to recover and preferve what he can of their moft ancient poetry; but in his refearches, he feems more indebted to an exquifitely nice ear than to any erudition. Erudition indeed they hold in the mof foyereign contempt. No gentleman is ever taught Latin or Greek; and were a Ruffian Ararger in company to give any hint of his poffeffing fuch knowledge, every man with a fword would draw away his chair, and fet him down for a charity-boy. Peter the Great and the prefent emprefs have done what fovereigns could do to difpel thefe clouds of ignorance, by infituting fohools and colleges, and giving the mafters and profeffors military rank; but all in vain. One of the moft accomplifhed fcholars of the age, after having made himielf extremely agreeable to a company of ladies, by means of his tafte in mufic, and a fword at lis fide, was inftantly deferted by them upon fome perfon's whifpering through the room that he was a man of learni:ag; and before his fair companions would be reconciled to him, he was obliged to pretend that he was a lieutenaut-colonel totally illiterate.

The two firlt fentences of Prince Shtcherbatoff's dedication of his Hiftory of Ruffia, which was printed in three volumes 4 to, in 1770 , afford $2 n$ admirable fipecimen of Ruffian literature. "The hiftory of the human underftanding (lays this dedicator) affures us, that everywhere the iciences have followed the progrefs of the profperity and the frength of kingdoms. When the Grecian arms had overthrown the greatelt monarchy then in the world, when they had the famous generals Miltiades, Themiftocles, Ariftides, Conon, and Alcibiades, at the fame time flourifhed amerg them Anaximander, Anaxigoras, Archytas, Socrates, and Plato. And when Augutus lad congu:red the world, and had fhat the gates of the temple of Janus, and the proud Romans, under his happy government, chacr:ully obejed
his commands, then did Titus Livius, Thucydides, Ruffe. Virgil, and Horace, adorn his court, and celebrate his $\underbrace{\text { Runn. }}$ glory." - A palfage io repiete as this with blunders and anachronifms it would furely be difficult to find in any cther author.

The Ruffians were converted to the Chriftian reli- Religion. gion towards the latter end of the tenth century, as has been already related. Since that period they have confeffed the articles of the Greek church, mingled with certain fuperltitious ceremonies of their own. They do not believe in the pope's infallibulity or fupremacy, or even hold communion with the fee of R me: they ufe auricular confeffion, communicate in both kinds, adopt the A thanafian creed, and adhere to the eftailifhed liturgy of St Bafil. They worfhip the Virgin Mary, and other faints; and pay their adorations to croffes and relics. They obferve four great fafts in the year, during which they neither tafte filh, flefh, nor any animal production : they will not drink after a man who has eaten llefh, nor ufe a kuife that has cut meat in lefs than 24 hours after it has been ufed; nor will they, even though their health is at fake, touch any thing in which harthorn or any animal fubltance has been infufed. While this kind of Lent continues, they fubfilt upon cabbage, cucumbers, and rye-bread, drinking nothing ftronger than a fort of fmall beer called qualfi $\dagger$. They likewife taft every Wednelday and Fri- $\dagger$ See Puaday. Their common penance is to ablain from every fant. fpecies of food and drink, but bread, falt, cucumbers, and water. They are ordered to bend their bodies, and continue in that painful pofture, and between whiles to ftike their head againft an image.

The Mufcovites at all times reject as impure, horie flefh, elk, veal, hare, rabbit, afs's milk, mare's milk, and Venice treacle, becaufe the flefh of vipers is an ingredient ; alfo every thing that contains even the fralleft quantity of mulk, civet, and caftor: yet they have no averfion to fwine's flefh; on the contrary, the country produces excellent bacon. They celebrate 15 grand feftivals in the year. On Palm-Sunday there is a mag. nificent proceffion, at which the czar affits in perfon and on foot. He is apparelled in cloth of gold ; his train is borne up by the prime of the nobility, and te is attended by his whole court. He is immediat $l y$ preceded by the officers of his houfehold, one of whom carries his handkerchief on his arm, lying upon another of the richeft embroidery. He halts at a fort of platform of free-ftone, where, turring to the eaft, and bending his body almoft double, he pronounces a fhorit prayer: then he proceeds to the church of Jerufalem. where he renews his devotion. This exercife being performed, he returns to his palace, the bridle of the patriarch's horfe refting upon his arm. The horfe's head being covered with white linen, is held by fome nobleman; while the patriarch, fitting fidewrife, and holding a crofs in his hand, diftributes benedictions as he moves along : on his head he wears a cap edged with ermin, adorned with loops and buttons of gold and precious fones: before him are difplayed banners of confecrated fuff, in a variety of colours. Above 500 priefts walk in the proceffion; thote who are near the patriarch bearing pictu-es of the Virgin Mary, ichly oinmented with gold, jewels, and pearls, togither with croffes, relics, and religicus books, including a copy of the Gorpelc, which they reckon to be of inctimable

## R U S [ 574 ] R U S

Ruffis. eftimable value. In the the midft of this proceffion is borne a triumphal arch; and on the top an apple-tree covered with fruit, which feveral little boys inclofed in the machine endeavour to gather. The lawyers and laity carry branches of willow; the guards and the fpectators proftrate themfelves on the ground while the proceffion halts; and after the ceremony, the patriarch prefents a purfe of 100 rubles to the czar, who perhaps invites him to dine at his table. During the feaon of Eafter, the winie empire is filled with mirth and rejoicing: which, bowever, never fails to degenerate into heat and debauchery; even the ladies may indulge themfelves with frong liquors to intoxication without fcandal. When a lady fends to inquire concerning the health of her guefts whom the entertained over-night, the ufual reply is, "I thank your miftrefs for her good cheer : by my troth, I was fo merry that I don't remember how I got home."

During thefe carnivals, a great number of people, in reeling home drunk, fall down and perifh among the fnow. It is even dangerous to relieve a perfon thus overtaken; for, fhould he die, the perfon who endeavoured to affitt him is called before the judge, and generally pays dear for his charity.

The Mufcovite priefts ufe exorcifms at the adminiftration of baptifm. They plunge the child three times over head and ears in water, and give it the facrament of the Lord's Supper in one fpecies, until it hath attained the age of feven; after which the child is indulged with it in both kinds. They likewife adminifter the facrament to dying perfons, together with extreme unction; and if this be neglected, the body is denied Chriftian burial. Soon as the perion expires, the body is depofited in a coffin, with a luncheon of bread, a pair of fhoes, fome few pieces of money, and a certificate figned by the parifh-prieft, and directed to St Nicholas, who is one of their great patrons. They likewife hold St Andrew in great veneration, and ridiculoufly pretend they were converted by him to Chriftianity. But next to St Nicholas, they adore St Anthony of Padua, who is fuppofed to have failed upon a mill-ftone through the Mediterranean and Atlantic, and over the lakes Ladoga and Onega, as far as Novogorod. Every houfe is furnifhed with an image of St Nicholas, carved in the molt rude and fantaltic manner ; and when it becomes old and worm-eaten, the owner either throws it into the river with a few pieces of coin, faying, "Adieu, brother;" or returns it to the maker, who accommodates him with a new image for a proper confideration. The good women were very careful in adorning their private St Nicholafes with rich clothes and jewels; but on any emergency, thefe are sefumed, and the faint left as naked as he came from the hand of the carpenter.

There are monafteries in Ruffia; but neither the monks nor the nuns are fubject to fevere reftrictions. The friars are either horfe-jockeys, or trade in hops, wheat, and other commodities; the filters are at liberty to go abroad when they pleafe, and indulge themfelves in all manner of freedors.

Heretofore libe $t$ t of confcience was denied, and svery conviated heretic was committed to the flames; but lince the reign of Peter, all religions and fects are intrated hroighont the empire. Roman Catholics, Entherans, Calvinifts, Armenians, Jers, and Mahoactus, enjog the frse crerdife of their refenive forms
of worfhip; though it was not without great difficulty, and by dint of extraordinary folicitation from different powers, that the Romifh religion was allowed. Peter knowing the dangerous tenets of a religion that might fet the ipiritual power of the pope at variance with the temporal power of the emperor, and being well acquainted with the meddling genius of its profeffors, held out for fome time againit the interceffion of Germany, France, and Poland; and though at length he yielded to their joint interpofition, he would by no means fuffer any Jefuit to enter his dominions.

The government of Ruffia is mere defpotifm. The Governwhole empire is ruled by the arbitrary will and plea-ment. fure of the fovereign, who is ftyled the czar or tzar, a title which is probably a corruption of Cæfar. Heretofore he was ftyled grand duke of Mufcovy: but fince the reign of Peter, he is dignified with the appellation of emperor of Ruffa; and the prefent fovereign is ftyled emprefs of all the Ruffias. The emperor is abfolute lord, nor only of all the eftates in the empire, but alfo of the lives of his fubjects; the greateft noblemen call themfelves his flaves, and execute his commands with the molt implicit obedience. The common people revere him as fomething fupernatural ; they never mention his name, or any thing immediately belonging to him, without marks of the moft profound refpect and awful veneration. A man alking a carpenter at work upon one of the czar's warehoules, what the place was intended for ? anfwered, "None but God and the czar knows."
The nobility of Ruffia were formerly rich and powerful, and ruled defpotically over their inferiors : bat we have feen how the facher of Peter the Great contrived to frip them of their privileges, and they are now venal dependants on the court. They fill retain the titles of their anceftors, though many of them are in the mof. abject poverty and contempt.

All the peafants in the empire are confidered as immediate flaves belonging to the czar, to the boyars, or to the monafteries. The value of eftates is computed, not by the extent or quality of the land, but from the number of thofe peafarts, who may be fold, alienated, or given away, at the pleafure of their matters. The number of thefe hufbandmen, whither living in villages or in the open country, being known, the czar, by requiring a certain proportion of each lord or proprietor, can raife $300,00 a$ men in lefs than 40 days.

The adminiftration is managed by a grand council, called dumnoy boyaren, or "council of the boyars," who are the grandees of the empire, and act as privy counfellors. To this are fubfervient fix inferior chambers and courts of judicature, provided each with a prefident. The firt regulates every thing relating to ambaffadors and foreign negociations; the fecond takes cognizance of military affairs; the third manages the public revenues of the empire; the bufinefs of the fourth is to encourage, protect, and improve trade and commerce. The two laft hear and determine in all caufes, whether civil or criminal.

Peter divided the empire into the eight governments of Mofcow, Archangel, Afnph, Cafan, Aftracan, Chioff and the Ukraine, Siberia, Livonia, comprehending Ingria, Plefcow, and Novogorod, Smoleniko, and Veronitz. The guvernors or waivodes were vefted with power to difpore of all employments civil and military, and receive the revenues. They were directed to"

Ruffia. defray all expences in their refpective governments, and fend a cercain yearly fum the great treatury. In a word, they enjoyed ablolute power in every thing but what related to the regular troops, which, though quartered in their juridictoon, were neither paid nor directed by them, but received their orders immediately from the czar or his generals.

In 1775 the prefent emprefs made a complete newmodelling of the internal government in a form of great fimplicity and uniformity. By this reglement the divided the whole empire into 43 governments, as we have already mentioned, placing over each, or where they are of lefs extent, over two contiguous governments, a governor-general with very conliderable powers. She fubdivided each government into provinces and diftricts; and for the better adminiftration of juftice erected in them various courts of law, civil, criminal, and commercial, analogous to thofe which are found in other countries. She eftablifhed likewife in every goverament, if not in every province, a tribunal of confcience, and in every diftrict a chamber for the protection of orphans. Amid! fo many wife inftitutions a chamber for the adminiftration of her imperial majefty's revenues was not forgotten to be eftablifhed in each government, nor a tribunal of police in each diftrict. The duty of the governor-general, who is not properly a judge, but the guardian of the laws, is to take care that the various tribunals in his government difcharge their refpective duties, to protect the oppreffed, to enforce the adminiftration of the laws; and when any tribunal thall appear to have pronounced an irregular fentence, to fop the execution till he make a report to the fenate and receive her majefty's orders : It is his bufinels likewife to fee that the taxes be regularly paid; and, on the frontiers of the empire, that the proper number of troops be kept up, and that they be attentive to their duty.

This reglement contains other inftitutions, as well as many directions for the conducting of law-fuits in the different courts, and the adminiftration of juftice, which do her majefty the highelt honour ; but the general want of morals, and what we call a fenfe of honour, in every order of men through this valt empire, mult make the wifeft regulations of little avail. Ruffia is perhaps the only nation in Europe where the law is not an incorporated profeffion. There are no femina. ries where a practitioner mult be educated. Any man who will pay the fees of office may become an attorney, and any man who can find a client may plead at the bar. The judges are not more learned than the pleaders. 'They are not fitted for their offices by any kind of education; nor are they neceffarily chofen from thofe who have frequented courts and been in the practice of pleading. A general, from a fucceffsul or an equivocal campaign, may be inflantly fet at the head of a court of jutice; and in the abfence of the imperial court from Sc Pete:flurgh, the commanding officer in that city, whoever he may be, prefides $e x$ officio in the high court of juftice. The other courts generally change their prefidents every year. Many inconveniences muft arife from this fingular confitution; but fewer, perhaps, than we are apt to imagine. The appointment to fo many inferior governments makes the Ruffian nobility acquainted with the grofs of the ordinary bufinefs of law-courts; and a tratute or imperial edict is law in every cafe. The great obfacles to the admi-
niftration of juftice are the contrariety of the laws and the venality of the judges. From infurior to fuperior courts there are two appeals; and in a great proportion of the caufes the reverfal of the fentence of the inferior courts fubjects its judges to a heavy fine, unlefs they can produce an edict in full point in fupport of their decifion. This indeed they feldom find any difficuliy to do; for there is hardly a cafe fo fimple but that edicts may be found clear and precife for both parties; and therefore the judges, fenfible of their fafety, are very feldom incorruptible. To the principle of honour, which often guides the conduct of judges in other na. tions, they are fuch abfolute ftrangers, that an officer has been feen fitting in ftate and diftributing juftice from a bench to which he was chained by an iron collar round his neck, for having the day before been detected in conniving at fmuggling. This man feemed not to be afhamed of the crime, nor did any one avoid his company in the evening.

Few crimes are capital in Ruffia : murder may be atoned by paying a fum of money ; nay, the civil magiftrate takes no cognizance of murder, without having previoully received information at the fuit of fome individuals. Criminals were punilhed with torture and the moft cruel deaths till the reign of the illuftrious Catharine I. when a more merciful fyftem took place, and which the prefent emprefs has fince confirmed by law. See the articles Catharine $I$. of Rufia, and Elizabeth Petrowna.

We have already mentioned the traffic of the Ruf. Trade ${ }^{108}$ fians with the different nations both of Afia and Eu-revcnuc. rope, and fpecified iron as one of the articles which they export. We may here add, that in 1792 there were in the government of Parma alone, which lies in the northern divifion of the empire, 88 copper and iron works belonging to the government and private perfons, and three gold works. The metals extracted in thefe works are chiefly conveyed to St Peterfburgh by water-carriage on the river Tchufovaya, which falls into the Kama. With refpect to the revenue of Ruffia, it continually fluctuates, according to the in: creafe of commerce or the pleafure of the czar, who has all the wealth of the empire at his difpofal. He monopolizes all the bett furs, mines, minerals, and the trade by land to the Eaft Indies; he farms out all the tobacco, wine, brandy, beer, mead, and other liquors; the inns, taverns, public houfes, bith, and fweatinghoufes. The cuftoms upon merchandize, the impolts upon corn, and toll exacted from cities, towns, and villages, are very confiderable. He poffeffes demefnes to a very great value; inherits the jeffects of all thofe that die inteftate, or under accufation of capital crimes; derives a duty from all law-fuits; and to fum up the whole, can command the fortunes of all his fubjects. All thefe articles produce a large revenue, which was three years ago eftimated at upwards of $40,000,000$ rubles, or L. 6,333,333:6:8 Sterling; bat then the intrinfic value of money is at leaft three times greater in Rufia than in Britain. The expences in time of peace never exceed $38,000,000$ rubles : the remainder is not treafured up, but is employed by her imperial majefty in contructing public edifices, making harbours, canals, roads, and other ufeful works, for the glory,$f$ the empire and benefit of her fubjects.

The ftanding army of Ruffia is computed at 250,000 men; befides there, the Rufians can afferb:e a bedy

Ruffia. $\xrightarrow{\sim}$

## R U T [ 576 ] R U T

kuf of 40,000 irregulars, Calmucks, Coffacks, and other Tartars, who live under their dominion. But the number may be doubled on any emergency. The czarina has likewife a confiderable fleet in the Baltic, and a great number of formidable galleys, frigates, fire-hips, and bomb-ketches.

RUST, the flower or calx of any metal, procured by corroding and diffolving its fuperficial parts by fome menfruum. Water is the great inftrument or agent in producing ruft : and hence oils, and other fatty bodies, fecure metals from ruit; water being no menfruum for oil, and therefore not able to make its way through it. All metals ezcept gold are liable to rult; and even this alfo if expofed to the fumes of fea-falt. For remedies againt ruft, fee Iron, par, uit.

RUSTIC, in architecture, implies a manner of building in imitation of nature, rather than according to the rules of art. See Architecture.

Rusitic Gods, dii rufici, in antiquity, were the gods of the country, or thofe who prefided over agriculture, Sx. Varro invokes the 12 dii confentes, as the principal among the ruftic gods; viz. Jupiter, Tellurs, the Sun, Moon, Ceres, Bacchus, Rubigus, Flora, Minerva, Venus, Lympha, and Good Luck. Befides thefe 12 arch-ruftic gads, there were an infinity of lefer ones; as Pales, Vertumnus, Tutelina, Fulgor, Sterculius, Mellona, Jugatinus, Collinus, Vallonia, Terminus, Sylvanus, and Priapus. Struvius adds the Satyrs, Fauns, Sileni, Nymphs, and even Tritons; and gives the empire over all the suftic gods to the god Pan.

Rusfic Order, that decorated with rultic quoins, rultic work, \&c.

Rustic Work, is where the ftones in the face, \&c. of a building, inftead of being fmooth, are hatched, or picked with the point of a hammer.

RUSTRE, in heraldry, a bearing of a diamond thape, pierced through in the middle with a round hole. See Heraldry.

RUT, in hunting, the venery or copulation of deer.
RUTA, rue: A genus of the monogynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the 26 th order, Multifiliqua. The calyx is quinquepartite; the petals concave; the receptacle furrounded with 10 melliferous pores; the capfule is lobed. In fome flowers, a fifth part of the number is excluded. There are feveral fpecies; of which the moft remarkable is the hortenfis, or common broad-leaved garden rue, which has been long cultivated for medicinal ufe. This rifes with a fhrubby ftalk to the height of five or fix feet, fending out branches on every fide, garnifhed with decompounded leaves, whofe fmall lobes are wedge-fhaped, of a grey colour, and have a ftrong odour. The flowers are produced at the end of the branches in bunches almoft in the form of umbels : they are compofed of four yellow concave petals which are cut on their edges, and eight yellow ftamina which are longer than the petals, terminated by roundifh fummits. . The germen becomes a roundifh capfule, with four lobes punched full of holes containing rough black feeds.

Rue has a ftrong ungrateful fmell, and a bitterifh fenettating tafte: the leaves, when full of vigour, are extremely acid, infomuch as to inflame and blifter the © r ; if much handled. With regard to their medicinal vitues, they are powerfully Itimulating, attenuating, : ad decergent; and hence, in cold phlermatic habits,
they quicken the circulation, diffolve tenacious juices, open obftructions ( $f$ the excretory glands, and promote the fluid fecretions. The writers on the materia medica in general have entertained a very ligh opinion of the virtues of his plan:. Boerharve is full of its praifes; particularly of the effential oil, and the diftilled water cohobated or redililied feveral times from frefh parcels of the herb. After extravac:antly commending other waters prepared in this mamer, he adds, with regard to that of rue, that the greateft commendations he can beftow upon it fall fiort of its merit: "What medicine (fays he) can be more efficacious for promoting fweat and perfpiration, for the cure of the hyfteric paffion and of epileplies, and for expelling poifon?" Whatever fervice rue may be of in the two laft cafes, it undoubtedly has its ufe in the others: the cohobated water, however, is not the moft efficacious preparation of it. An extract made by rectified fpirit contains in a fmall compafs the whole virtues of the rue; this menftruum taking up by infulion all the pungency and flavour of the plant, and elevating nothing in difillation. With water, its peculiar flavour and warmth arife ; the bitternefs, and a confiderable fhare of the pungency, remaining behiad.

Ruta Baga, or Swedifh turnip. See Husbandry, P. 761.

Book or RUTH, a canonical book of the Old Teftament; being a kind of appendix to the book of Judges, and an introduction to thofe of Samuel; and having its title from the perfon whofe ftory is here principally related. In this ftory are obfervable the ancient rights of kindred and redemption ; and the manner of buying the inheritance of the deceafed, with other particulars of great note and antiquity. The canonicalnefs of this book was never difputed; but the learned are not agreed about the epocha of the hiftory it relates. Ruth the Moabitefs is found in the genealogy of our Saviour. Matth. i. 5.

RUTiluUS. See Cyprinus, $n^{\circ} 6$.
RUTHERGLEN, or by contraction RUGLEN, the head borough of the netherward of Lanarkfhire in Scotland, is fituated in N. Lat. $55^{\circ} 5 \mathrm{I}^{\prime}$, and W. Long. $4^{\circ} 13^{\prime}$; about two miles fouth-ealt of Glafgow, and nine weft of Hamilton. Few towns in Scotland can lay greater claim to antiquity than Rutherglen. Maitland, in his Hiftory of the Antiquities of Scotland, vol. i. p. 92. tells us, that it was founded by a king Reuther, from whom it derived its name; and a tra. dition of the fame import prevails among the inhabitants. But without laying any frefs on the authority of tradition, which is often falfe and always doubtful, we find, from feveral original charters ftill preferved, that it was erected into a royal borough by king David I. about the year 1126 .

The territury under the jurifdiction of the borough was extenfive, and the inhabitants enjoyed many diftinguifhed privileges, which were however gradually wrefted from them, by political influence, in favour of Glafgow, which in latter times rofe into confequence by trade and manufactures. The ancient dimenfons of the place are now unknown; but in the fields and gardens towards the eaft the foundations of houfes are occafionally difcovered. It is now of a very reduced fize, confilting but of one principal freet and a few lanes, and containing about 163 I inbabitants.

About 150 yards to the fourh of the main ateet

## $R \mathrm{U} T$

Ruther- is a kind of lane, known by the name of Dins-dykes. glen. A circumfance which befel the unfortunate queen Mary, immediately after her forces were routed at the battle of Langfide, has ever fince continued to characterife this place with an indelible mark of opprobti. um. Her majefty, during the battle, food on a rifing ground about a mile from Rutherglen. She no fooner faw her army defeated than the took her precipitate flight to the fouth. Dins-dykes unfortunately lay in her way. Two rultics, who were at that inftant cutting grafs hard by, feeing her majelty fleeing in hafte, rudely attempted to intercept her, and threatened to cut her in pieces with their fcythes if the prefumed to proceed a ftep further. Neither beauty, nor even royalty itfelf, can at all times fecure the unfortunate when they have to do with the unfeeling or the revengeful. Relief however was at hand; and her majelty proceeded in her flight.

Adjoining to a lane called the Back-row ftood the caftle of Ratherglen, originally built at a period coeval, it is reported, with the foundation of the town. This ancient fortrefs underwent feveral fieges during the unhappy wars in the days of king Robert Bruce, and it remained a place of ftrength until the battle of Langfide; foon after which it was deftroyed by order of the regent, to revenge himfelf on the Hamilton family, in whofe cultody it then was. The foundations of the buildings are now erafed, and the fite converted into dwelling-houfes and gardens.

The kizk of Rutherglen, an ancient building of the Saxon-Gothic ftyle, was rendered farmous by two tranfactions, in which the fate of Sir William Wallace and his country was deeply concerned. In it a truce was concluded between Scotland and England in the year 1297 (Henry's Life of Wallace, Book VI. verfe 862.), and in it Sir John Monteath bargained with the Englifh to betray Wallace his friend and companion (Life of Wallace, Book XI. verfe 796). This ancient building, having become incommodious, was, in 1794, pulled down, and one of a modern fyle was erected in its place. Buried in the area were found valt quantities of human bones, and fome relics of antiquity.

No borough probably in Britain poffeffes a political conftitution or fett more free and unembarrafled than Rutherglen, It was anciently under the influence of a felfelected magiftracy, many of whom lived at a diftance from the borough, and who continued long in office without interruption. Negligence on the one hand, and an undue exertion of power on the other, at length excited the burgeffes, about the middle of the laft century, to apply an effectual remedy to this evil. The community who, at that period, poffeffed the power of reforming the abufes that had long prevailed in the management of the borough, were much affilted in their exertions by a Mr David Spens town-clerk, a gentleman unbiaffed by falfe politics, and who was animated with a high degree of true patriotifm. Great oppofition was at firft made to the reform ; but the plan adopted by the burgefies was wifely laid, and was profecuted with unremitting affiduity. They were proof againa the influence and bribery of 2 party that itruggled to concinue the old practice; and having at length furmounted every difficulty, they formed a new conititution or fett for the borough, which in 167 I , was ap-

Vol. XVI.
proved of by all the inhabitants of the town, and afer-
wards inferted in the records of the genernl convention of the royal boroughs of Scotland.

Rutiand- fhire, Ruyfch.

Rutherglen, in conjunction with Glafgow, Renfrew, and Dumbarton, fends a m mber to the Britith pariiament. The fairs of this town are generally well attended, and have long been famous for a great fhow of horles, of the Lanark!hire breed, which are efteemed the beft draught-horfes in Britain. The inhabitants of this borough fill retain fome cultoms of a very remote antiquity. One of thele is the making of Rutherglen four cakes. The operation is attended with fome peculiar rites, which lead us to conclude that the practice is of Pagan origin. An account of thefe rites is given in Ure's Hiftory of Rutherglen and Kilbride, p. 94. ; from whence we have taken the above account of this place, and which we do not hefitate to recommend to the attention of fuch of our readers as are fond of natural and local hitory, being perfuaded that they will find it to be both an ufeful and entertaining performance.

RUTLANDSHIRE, is the lealt county in England, it being but 40 miles in circumference; in which are two towns, 48 parifhes, and $3^{263}$ houfes. However, for quality it may be compared with any other county ; the air being good, and the foil fertile both for tillage and paftures; and it not only affords plenty of corn, but feeds a great number of horned cattle and fheep. It is well watered with brooks and rivulets; and the prin. cipal rivers are the Weland aud the Wafh. It is bound. ed on the eaft by Lincolnfhire; on the fouth by the river Weland, which parts it from Northamptonfhire ; and on the weft and north by Leicelterfhire. It has only two market-towns; namely, Okeham, where the aflizes and feffions are held, and Uppingham.

RUYSCH (Frederic), one of the moft eminent anatomilts of which Holland can boaft, was born at the Hague in 1638. After making great progrefs at home, he repaired to Leyden, and there prolecuted the fudy of anatomy and botany. He fudied nextat Francker, where he obtained the degree of doctor of phyfic. He then returned to the Hague; and marrying in 1661 , dedicated his whole time to the ftudy of his profeffion. In 1665 he publifhed a treatife, entitled Dilucidatio valvularum de variis lymphaticis et lacteis; which raifed his reputation fo high, that he was chofen profeffor of anatomy at Amiterdam. This honour he accepted with the more pleafure, becaufe his fituation at Amfterdam would give him eafy accefs to every requifite help for cultivating anatomy and natural hiftory. After he fettled in Amfterdam, he was perpetually engaged in diffecting and in examining with the moft inquifitive eye the various parts of the human body. He improved the fcience of anatomy by new difcoveries; in particular, he found out a way to preferve dead bodies many years from putrefaction. His anatomical collection was curious and valuable. He had a feries of foctufes of all fizes, from the length of the little finger to that of a new born infant. He had alfo bodies of full grown perfons of all ages, and a vaft number of animals almoft of every fpecies on the globe, befides a great many other natural curiofities. Peter the Great of Ruffia, in his tour through Holland in the year 1698, vifited Ruyfch, and was fo charmed with his converfation, that he

4 D
paffed

Ruyricl: Ruyter.
paffed whole days with him; and when the hour of departure came, he left him with regret. He fet fo high a value on Ruych's cabinet of curiofities, that when he returned to Holland in 1717 , he purchafed it for 30,000 florins, and fent it to Peterfburgh.

In 1685 he was made profeffor of medicine, an office which he difcharged with great ability. In 1728 he got his thigh-bone broken by a fall in his chamber. The year before this misfortune happened he had been deprived of his fon Henry, a youth of talents, and well fkilled in anatomy and botany. He had been created a doctor of phytic, and was fuppofed to have affifted his father in his difcoveries and publications. Ruyich's family now confifted only of his youngett daughter. This lady had been early infpired with a paffion for anatomy, the favourite fcience of her father and brother, and had ftudied it with fuccefs. She was therefore well qualified to affilt her father in forming a fecond collection of curiofities in natural hiftory and anatomy, which he began to make after the emperor of Ruflia had purchafed the firf. Ruyfch is faid to have been of fo healthy a conftitution, that though he lived to the age of 93, yet during that long period he did not labour under the infirmities of difeafe above a month. From the time he broke his thigh he was indeed difabled from walking without a fupport; yet he retained his vigour both of mind and body without any fenfible alteration, till in 173 r his ftrength at once deferted him. He died on the 22d of February the fame year. His anatomical works are printed in 4 vols 4 to.

The ftyle of his writings is fimple and concife, but fometimes inaccurate. Inftruction, and not oftentation feems to be his only aim. In anatomy he unduubtedly made many difcoveries; but from not being fufficiently converfant in the writings of other anatomifts, he publifhed as difcoveries what had been known before. The academy of fciences at Paris in 1727 elected him a member in place of Sir Iface Newton, who was lately deceafed. He was alfo a member of the Royal Society of London.

RUYTER (Michael Adrian), a diftinguifhed naval officer, was born at Fleffingue, a town of Zealand, in 1607. He entered on a fea-faring life when he was only 1 I years old, and was firft a cabin-boy. While he advanced fucceflively to the rank of mate, malter, and captain, he acquitted himfelf with ability and honour in all thefe employments. He repulfed the Irilh, who attempted to take Dublin out of the hands of the Englifh. He made eight voyages to the Weft Indies and ten to Brazil. He was then promoted to the rank of rear admiral, and fent to affilt the Portuguefe againft the Spaniards. When the enemy came in fight, he advanced boldly to meet them, and gave fuch unqueftionable proofs of valour as drew from the Portuguefe monarch the warmeft applaufe. His gallantry was ftill more confpicuous before Salee, a town of Barbary. With one fingle veffel he failed through tse roads of that place in defiance of five Algerine Corfairs who came to attack him.
$\ln 163^{\prime} 3$ a fquadron of feventy veffels was difpatched againft the Engliih under the command of Van Tromp. Ruyter, who accompanied the admiral in this expedition, feconded him with great fk ill and bravery in the ehree battles which the Englifh fo glorioufly won. He was afterwards flationed in the Mediterranean, where
he captured feveral Turkifh veffels. In 1659 he received a commiffion to join the king of Denmark in his war with the Swedes; and he not only maintained his former reputation, but even raifed it higher. As the reward of his fervices, the king of Denmark ennobled him and gave him a penfion. In 1661 he ran afhore a veffel belonging to Tunis, releafed 40 Chriftian naves, made a treaty with the Tunilians, and resuced the Algerine corfairs to fubmiffion. His country as a teftimony of her gratitude for fuch illuftrious fervices, raifed him to the rank of vice-admiral and commander in chief. To the latter dignity, the higheft that could be conferred upon him, he was well intitled by the fignal victory which he obtained over the combined fleets of France and Spain. This battle was fought in 1672 about the time of the conqueft of Holland. The fight was maintained between the Englifh and Dutch with the obftinate bravery of nations which were accuftomed to difpute the empire of the main. Ruyter having thus made himfelf mafter of the fea, conducted a fleet of Indiamen fafely into the Texel; thus defending and epriching his country, while it was become the prey of hoftile invaders. The next year he had three engagements with the fleets of France and England, in which, if poffible his bravery was ftill more diftinguilhed than ever. D'Eflrees the French vice-admiral wrote to Colhert in thefe words: "I would purchafe with my life the glory of De Ruyter." But he did nor long enjoy the triumphs which he had fo honourably won. In an engagement with the French fleet off the coalt of Sicily, he loft the day, and received a mortal wound, which put an end to his life in a few days. His corpfe was carried to Amfterdam, and a magnificent monument was there erected by the command of the ftates-general. The Spanifh council beftowed on him the title of duke, and tranfmitted a patent invefting him with that dignity; but he died before it arrived.

When fome perfon was congratulating Louis XIV. upon De Ruyter's death, telling him he had now got rid of ne dangerous enemy; he replied, "Every one mult be forry at the death of fo great a man."

RYE, in botany. See Secale.
Rre-Grafs. See Agriculture, $\mathrm{n}^{\circ} 179$.
Rye, a town in Sullex, with two markets on Wednefdays and Saturdays, but no fair. It is one of the cinque-ports; is a handfome well-built place, governed by a mayor and jurats, and fends two members to parliament. It has a chu ch built with fone, and a townhall; and confits of three ftreets, paved with Stone. One fide of the town has been walled in, and the other is guarded by the fea. It has two gates, and is a place of confiderable trade in the fhipping way. From thence large quantities of cirn are exported, and many of the inhabitants are fifhermen. It is 34 miles fouth-eaft by fouth of Tunbridge, and 64 on the fame point from London. The mouth of the harbi:ur is of late choaked up with fand; but if well opened, it would be a good ftation for privat ers that cruize againft the French. E. Loug. O. 50 . N. Lat. 5 I. 0.

RYMER (Thomas), Efq; the author of the Fadera, was born in the north of England, and educated at the grammar fchool of Northallerton. He was admitted a fcholar at Cambridge, then became a metrber of Gray's Inn, and at length was appointed hiftoriographer to IKing William in place of MreShadwell. He wrote A View

## R Y O [ 579 ] R Y S

Rymer

View of the Tragedies of the laft Age, and afterwards publifhed a tragedy named Edrar. For a critic he was certainly not well qualified, for he wanted candour; nor is his judgment much to be relied on, who could condemn Shakefpear with fuch rigid feverity. His tragedy will fhow, that his talents for poetry were by no means equal to thofe whofe poems he has publicly cenfitred. But though he has no title to the appella. tion of poet or critic, as an antiquarian and hiftorian his memory will long be preferved. His Fodera, which is a collection of all the public tranfactions, treaties, \&c. of the kings of England with foreign princes, is efteemed one of the moft authentic and valuable records, and is oftener referred to by the beft Englifh hiftorians than perhaps any other book in the language. It was pub. lifhed at London in the beginning of the prefent century in 17 volumes folio. Three volumes more were added by Sanderfon after Rymer's death. The whole were reprinted at the Hague in 10 vols in 1739 . They were abridged by Rapin in French, and inferted in Le Clerc's Bibliotheque, a trandation of which was made by Stephen Wharley, and printed in 4 vols $8 \mathrm{vo}, 173 \mathrm{I}$.

Rymer died 14th December 1713, and was buried in the parifh church of St Clement's Danes. Some fpecimens of his poetry are preferved in the firlt volume of Mr Nichol's Select Collection of Mifcellaneous Poems, 1780.

RYNCHOPS, in ornithology, a genus belonging to the order of anferes. The bill is fraight; and the fuperior mandible much horter than the inferior, which is truncated at the point. The fpecies are two, viz. the nigra and fulva, both natives of America.

RYOTS, in the policy of Hindoftan, the modern name by which the renters of land are diftinguifhed. They bold their poffeffions by a leafe, which may be confidered as perpetual, and at a rate fixed by ancient
furveys and valuations. 'This arrangement las been fo Ryf.lia, long eitablihed, and accords fo well with the ideas of Ryfwisk. the natives, concerning the diftinction of calts, and the functions allotted to each, that it has been invariably maintained in all the provinces fubject either to Mahometans or Europeans; and to both it ferves as the bafis on which their whole fyftem of finance is founded.

Refpecting the precife mode, however, in which the ryots of Hindoftan held their poffeffions, there is much diverfity of opinion; the chief of which are very impartially delineated in note iv. to the Appendix of Robertion's Hiftorical Difquifition, \&c. concerning India, p. 345. to which we refer fuch of our readers as are interefted in this fubject of finance.

RYSCHIA, in botany: A genus of the monogynia order, belonging to the pentandria clafs of plants; and in the natural method ranking with thofe that are doubtful. The calyx is pentaphyllous; the corolla is pentapetalous; and the apices turned back, about three times the length of the calyx; the filaments are five, awl-fhaped, and fhorter than the petals. The feedveffel is quadrilocular, and contains many feeds. Of this there are two fpecies, viz. the Clauffolia and Souroubea.

RYSWICK, a large village in Holland, feated between the Hague and Delft, where the prince of Orange has a palace, which ftands about a quarter of a mile farther. It is a very noble ftructure, all of hewn ftone, of great extent in front, but perhaps not propor. tionably high. It is adorned with a marble ftair-cafe, marble floors, and a magnificent terrace. There is a good profpect of it from the canal between Delft and the Hague. This place is remarkable for a treaty concluded here in 1697 between England, Germany, Holland, France, and Spain. E. Long. 4. 20. N. Lat. 52. 8.

SAAVEDRA (Michael de Cervantes), a celebrated Spanifh writer, and the inimitable author of Don Quixote, was born at Madrid in the year 1549. From $4 \mathrm{D}_{2}$ his

Saavedra. his infancy he was fond of books; but he applied him. felf wholly to books of entertainment, fuch as novels and poetry of all kinds, efpecially Spanilh and Italian authors. From Spain he went to Italy, either to ferve Cardinal Aquaviva, to whom he was chamberlain at Rome; or elfe to follow the profeffion of a foldier, as he did fome years under the victorious banners of Marco Antonio Colonna. He was prefent at the battle of Lepanto, fought in the year 1571; in which he either lof his left hand by the fhot of an harquebus, or had it fo maimed that he lot the ufe of it. After this he was taken by the Moors, and carried to Algiers, where he continued a captive five years and a half. Then he returned to Spain, and applied himfelf to the writing of comedies and tragedies; and he compored feveral; all of which were well received by the public, and acted with great applaufe. In the year 1584 he publifhed his Galatea, a novel in fix books; which he prefented to Afcanio Colonna, a man of high rank in the church, as the firft fruits of his wit. But the work which has done him the greatelt honour, and will immortalize his name, is the hiftory of Don Quixote; the firlt part of which was printed at Madrid in the year 1605. This is a fatire upon books of knight-errantry ; and the principal, if not the fole, end of it was to deftroy the reputation of thefe books, which had fo infatuated the greater part of mankind, efpecially thofe of the Spanillina. tion. This work was univerfally read; and the moft eminent painters, tapeftry-workers, engravers, and fculptors, have been employed in reprefenting the hiltory of Don Quixote. Cervantes, even in his lifetime, obtained the glory of having his work receive a royal approbation. As King Philip III. was ftanding in a bal. cony of his palace at Madrid, and viewing the country, he obferved a ftudent on the banks of the river Manzanares reading in a book, and from time to time breaking off and beating his forehead with extraordinaly tokens of pleafure and delight: upon which the king faid to thofe about him, "That fcholar is either mad, or reading Don Quixote:" the latter of which proved to be the cafe. But virtus laudatur et aglet: notwithftanding the vaft applaufe his book every where met with, he had not interelt enough to procure a fmall penfion, but had much ado to keep himfelf from flarving. In the year 1615, he publifhed a fecond part; to which he was partly moved by the prefumption of fome faribbler, who had publifhed a continuation of this work the year before. He wrote alfo feveral novels; and among the reft, "The Troubles of Perfiles and Sigifmunda." He bad employed many years in writing this novel, and finifhed it but juft before his death; for he did not live to fee it publifhed. His ficknefs was of fuch a nature, that he himfelf was able to be, and actually was, his own hiltorian. At the end of the preface to the Troubles of Perfiles and Sigifmonda, he reprefents himfelf on hor feback upon the road, and a ftudent, who had overtaken him, engaged in converfation with him: "And happening to talk of my illnefs (fays he), the ftudent foon let me know any doom, by faying it was a dropfy I had got; the thirft attending which all the water of the ocean, though it were not falt, would not fuffice to quench. Therefore Senor Cervantes, fays he, you muft drink nothing at all, but do not forget to eat; for this alone will recover you without any other phyfic. I have been told the fame by others, anfwered I;
but I can no more forbear tippling, than if I were born to do nothing elfe. My life is drawing to an end ; and from the daily journal of my pulfe, I fhall have finifhed my courfe by next Sunday at the farthent.-But adieu, my merry friends all, for $I$ am going to die; and I hope to fee you ere long in the other world, as happy as heart can wifh." His dropfy increafed, and at lait proved fatal to him; yet he continued to fay and to write bon mots. He feceived the laft facrament on the 18th of April 1616; yet the day after wrote a Dedication of the Troubles of Perfilis and Sigifmunda to the Conde de Lemos. The particular day of his death is not known.

SABA, a Dutch ifland near St Euftatia in the Weft Indies. It is a fteep rock, on the fummit of which is Rapnal's a little ground, very proper for gardening. Frequent Hintory, rains, which do not lie any time on the foil, give growth to plants of an exquifite flavour, and cabbages of an extraordinary fize. Fifty European families, with about one hundred and fifty llaves, here raile cotton, (pin it, make ftockings of it, and fell them to other colonies for as much as ten crowns* a pair. Throughout America there is no blood fo pure as that of Saba; the women there preferve a frefhnefs of complexion, which is not to be found in any other of the Caribbee illands. Happy colony! elevated on the top of a rock between the 1 ky and fea, it enjoys the benefit of both elements without dreading their forms.; it breathes a pure air, lives upon vegetables, cultivates a fimple commodity, from which it derives eafe without the temptation of riches: is emplojed in labours lefs troublefome than ufeful, and poffeffes in peace all the bleffings of moderation, health, beauty, and liberty. This is the temple of peace from whence the philofopher may contemplate at leifure the errors and paflions of men, who come, like the waves of the fea, to ftrike and dalh themfelves on the rich coafts of America, the fpoils and poffeffion of which they are perpetually contending for, and wrelting from each other : hence may he view at a diftance the nations of Eurobe bearing thunder in the midalt of the ocean, aud burning with the flames of ambition and avarice under the heats of the tropics; devcuring gold without ever being fatisfied; wading through feas of blood to amafs thofe metals, thofe pearls, thoie diamonds, which are ufed to adorn the oppreffors of mankind; loading innumerable lhips with thofe precious cafks, which furnifh luxury with purple, and trom which flow pleafures, effeminacy, cruelty, and debauchery. The tranquil inhabitant of Saba views this mafs of follies, and ipius his cotton in peace.

SAB压ANS. See Sabians.
SABAZIA, in Greek antiquity, were nocturnal myfteries in honour of Jupiter Sabazius. All the initiated had a golden ferpent put in at their breafts, and taken out at the lower part of their garments, in memory of Jupiter's ravifh.ng Proferpina in the lorm of a ferpent. There were alfo other fealts and facrifices diftinguifhed by this appellation, in honour of Mithras, the deity of the Pert:ans, and ut Bacchus, who was thus denominated by the Sabians, a people of Thrace.

SABBATARIANS, or seventh day baptists, a fect of anabaptilts; thus called, becaufe they obferved the Jewih or Saturday-Sabbath, from a perfuafion that it was never abrogated in the New Teftament by the inAtitutions of any other.

SABBATH, vol, iv.

Sabbath. $\underbrace{}_{\mathbf{I}}$

SABBATH, in the Hebrew language, fignifies ref. Defiuition. of refl, becaufe that in it God had refted from all his works which he created and made. From that time the feventh day feems to have been fet apart for religious fervices; and, in confequence of a particular injunction, was afterwards oblerved by the Hebrews as an holyday. They were commanded to fet it apart for facred purpofes in honour of the creation, and like, wife in memorial of their own redemption from Egyp2. tian bondage.

Importance The importance of the inflitution may be gathered of the infi- from the different laws refpecting it. When the ten tution and early ceremonies. commandments were publifhed from Mount Sinai in tremendous pomp, the law of the Sabbath held a place
in what is commonly called the firt table, and by fubfequent flatutes the violation of it was to be punifhed with death. Six days were allowed for the ufe and fervice of man; but the feventh day God referved to himfelf, and appointed it to be obferved as a ftated time for holy offices, and to be fpent in the duties of piety and devotion. On this day the minifters of the temple entered upon their week; and thofe who had attended on the temple fervice the preceding week went out at the fame time. New loaves of thew-bread were placed upon the golden table, and the old ones taken away. Two lambs for a burnt-offering, with a certain proportion of fine flour, mingled with oil, for a bread-offer. ing, and wine for a libation, were offered. The Sabbath, as all other feltivals, was celebrated from evening to evening. It began at fix in the evening on Friday, and ended at the fame time the next day.
Time of its Concerning the time at which the Sabbath was firft infitution. inftituted, different opinions have been held. Some have maintained, that the fanctification of the feventh day, mentioned in Gen. ii. is only there fpoken of sia aponequy or by anticipation; and is to be underfood of the fabbath afterwards njoined the children of Ifrael at the commencement of the Mofaic difpenfation. But without entering into a particular examination of all the arguments adduced to fupport this opinion, a few obfervations, it is prefumed, will be fufficient to fhow that it refts on no folid foundation.

It cannot eafily be fuppofed that the infpired pen. man would have mentioned the fanctification of the feventh day amongit the primeval tranfactions, if fuch fanctification had not taken place until 2500 years afterwards. Writers, ambitious of that artificial elegance which the rules of criticifm have eftablifhed, often bring together in their narratives events which were themfelves far diftant, for the fake of giving form to their difcourle; but Mofes appears to have defpifed all fuch flimfy refinements, and to $h \cdot v e$ conftructed his narrative in great coi.formity to the feries of events.

From the accounts we have of the religious fervice practifed in the patriarchal age, it appears that, immediately after the tal!, when Adam was reftored to favour through a Mediator, a fated form of public worShip was inftituted, which man was required to obferve in teftimony, not only of his dependence on the Creator, but alfo of his faith and bope in the promife made to our firft parents, and feen afar off. Of an inftitution then fo grand and important, no circumitance would be omitted that is neceffary to preferve it, or that contributes to render the obfervance of it regular and folemn.

That determined times are neceffary for the due celebration of divine fervice, cannot be denied. Such is the contitution of man, that he mult have particular times fet apart for particular fervices. He is doomed to toil and labour ; to earn his bread in the fweat of Neceffity his face; and is capable of performing religious du- of fated ties only in fuch a manner as is confiftent with his fitu- days for ation in the world. If ftated times for religious folem- the pernities had not been enjoined, the confequence would have been, that fuch folemnities would have been allogether neglected ; for experience fhows, that if mankind were left at liberty when and how often they fhould perform religious offices, thefe offices would not be performed at all. It is the obfervation of holy times that preferves the practice of holy fervices; and without the frequent and regular returns of hallowed days, man would quickly forget the duty which he owes to God, and in a fhort time no veltige of religion would be found in the world.

Among the ordinances which Gad vouchfafed his Objections ancient people, we find that the pious observation of to the earholydays was particularly infifted upon; and the Sab- ly infitubath was enjoined to be kept holy, in the moft folemn Sabbath manner, and under the fevereft penalties. Can it then confidered. be fuppofed that He would fuffer mankind, from the creation of the world to the Mofaic era, to remain without an inftitution fo expedient it itfelf, and as well fitted to anfwer the end propofed by it, under the one difpenfation, as ever it could be under the other? No; we have every imaginable reafon to conclude, that when religious fervices were enjoined, religious times were appointed alfo; for the one neceffarily implies the other.

It is no objection to the early inftitution of the Sabbath, that there is no mention of it in the hitory of the patriarchal age. It would have fwelled the Bible to a molt enormous fize, had the facred hiftorian given a particular account of all the tranfactions of thofe times; befides, it would have anfwered no end. When Mofes wrote the book of Geneffs, it was unneceffary to relate minutely tranfactions and inftitutions already well known by tradition: accordingly we fee, that his narrative is everywhere very concife, and calculated only to preferve the memory of the moft important fadts. However, if we take a vie:v of the church-fervice of the patriarchial age, we fhall find that what is called the lg gal difpenfation, at leaft the liturgic part of it, was no new fyftem, but a collection of inftitutions oblerved from the beginning, and republithed in form by Mofes. The Scriptures inform us that Cain and Abel offered facrifices; and the account which is given of the acceptance of the one, and the rejection of the oher, evidently fhows that ftated laws refpecting the fervice had then taken place. "In procefs of time," at the end of the days, "Abel brought an offering" Here was prief, altar, matter of facrifice, appointed time, motive to facrifice, atonement made, and accepted. The diftinction of animals into clean and unclean before the flood, and Noah's facrifice immediately after his deliverance, without any new direction, is an unanfwerabie proof of the fame truth. It is teftified of Abraham, by God himfelf, that he kept his cbarge, his commandments, his fatutes, and his laws. Thefe expreffions comprehend the various branches, into which the law given at Sinai was divided. They contain the moral preceps, affirmative and negative, the matter of religious fervice, a body of

## SAB $\quad\left[\begin{array}{ll}582\end{array}\right] \quad$ S A B

Sabbath. laws to direct obedience, and to which man was to con-
 to this, we find that facrifices were offered, altars and places of worfhip cinfecrated, and the Sabbath alio mentioned as a well known folemnity, before the promikigation of the law. It is exprefsly taken notice of at the fall of manna; and the incidental manner in which it is then mentioned, is a convincing proof that the Iraelites were no itrangers to the inltitution: for had it been a $\%, w$ one, it muit have been enjoined in a pofitive and particular manner, and the nature of it muft have been laid open and explained, otherwife the

7
Argument from the general divifion of time into weeks.
*
Siven.

The divifion of time into weeks, or periods of feven days, which obtained to early and almoit univerfally, is a ttrong indication that one day in feven was always diftinguilhed in a particular manner. Week, and Jeven days, are in fcripture language fynonymous terms. God commanded Noah, feven days betore he entered the ark, to introduce into it all forts of living creatures. When the waters of the flood began to abate, Noah fent forth a dove, which, finding no reft for the fole of her foot, returned to him. Atter feven days he fent forth the dove a fecond time, and again the returned to the ark. At the expiration of other feven days he let go the dove a third time : and a week is fpoken of (Gen. xxix.) as a well known face of time.

This feptenary divifion of time has been, from the earlieft ages, uniformly obferved over all the ealtern world. The Ifraelites, Affyrians, Egyptians, Indians, Arabians, and Perfians, have always made ufe of a week, confifting of feven days. Many vain attempts have been made to account for this uniformity; but a practice fo general and prevalent could never have taken place, had not the feptenary diftribution of time been inlituted from the beginning, and handed down by tradition.

From the fame fource alfo muft the ancient heathens have derived their notions of the facrednefs of the feventh day. That they had fuch notions of it is evident from feveral paffages of the Greek poets quoted by Aritobulus, a learned Jew, by Clement of Alexandria, and Eufebius.

The feventh, the facred day.
 Afterwards came the feventh, the facred day.

Again:

On the feventh day all things were completed.

All things were made perfect on the feventh day.
That they likewife held the number feven in high eftimation has been fhown by a learned, though fometimes fanciful, author*, with fuch evidence as to enforce conviction. The Pythagoreans call it the venerable numway's Originals, vol. ii. p. $6=$.
ber, $\sigma \in \epsilon_{a \sigma j u s} a \xi / 05$, worthy of veneration, and held it to be perfect and moft proper to religion. They denominated it fortune, and alfo Ityled it voice, found, mufe, becaufe, no doubt, feven diftinet notes comprehend the whole fcale of mufic, beyond which neither voice nor inftrument can go, but mult return from the feventh, and begin again anew. They likewife defigned it $\tau \leq \lambda \varepsilon \sigma$ 易pos, leading to the end.

Seven, in the Hebrew language, is expreffed by a word that primarily fignifies fulinefs, completion, fufficiency, and is applied to a weel,' or feven days, becaufe that was the full time employed in the work of creation; to the Sabbath, becaufe on it all things were completed; and to an oath, becaule it is fufficient to put an end to all Atrife. This opening of the Hebrew root will enable us to come at the meaning of thofe expreffions of the heathens, and alfo let us fee whence they derived their ideas and modes of fpeaking, and that the knowledge of the tranfactions at the creation, though much perverted, was never entirely loft by them.

It has been fuppofed by fome, that the heathens borrowed the notion of the facrednefs of the feventh day from the Jews. But this opinion will not readily be admitted, when it is confidered that the Jews were held in the greateft contempt by the furrounding nations, who derided them no lefs for their fabbaths than for their circumcifion. All forts of writers ridiculed them on rhis account. Seneca charged them with fpending the feventh part of their time in floth. Tacitus faid, that not only the feventh day, but alfo the feventh year, was unprofitably walted. Juvenal brings forvard the fame charge; and Perfius upbraided them with their recutita fabbata. Plutarch faid that they kept it in honour of Bacchus. Tacitus affirmed, that it was in honour of Saturn ; but the moft abominable affertion of all is that of Apion, who faid that they obferved the Sabbath in memory of their being cured on that day of a thameful difeafe, called by the Egyptians fabbo.

Some perceiving the force of this objection have contended, that time was divided into weeks of feven days, that each of the planetary gods, the Sun, Moon, Mercury, Venus, Mars, Jupiter, and Saturn, who were the Dii majorum gentium, might have a day appropriated to his fervice. But if fuch was the origin of weeks, how came the great and ancient goddefs $T_{\text {ellus to }}$ to be omitted? She was worfhipped by the early idolaters as well as the other planets, and mult furely have been deemed by them as worthy of a particular day fet apart to her honour as the planet Saturn, who was long undifcovered, afterwards feen but occafionally, and at all times confidered as of malign afpect. (See RemPHAN.)

Others have fuppofed, that as the year was divided into lunar months of fomething more than 28 days, it was natural to divide the month into quarters from the different phafes of the moon, which would produce as many weeks of feven days. But this fuppofition is lefs tenable than the former. The phafes of the moon are not fo precifely marked at the quarters as to attract to them any particular notice, nor are the quarterly appearances of one month commonly like thofe of another. Wecannot, therefore, conceive what fhould have induced the earlieft obfervers of the phafes of the moon to divide the month into four parts rather than into three, or five, or feven Had the ancient week confifted of 14 days, it might have been inferred, with fome degree of plaufibility, that its length was regulated by the phafes of the moon, becaufe the fhape of that luminary, at the end of the fecond quarter, is very precifely marked; but there is nothing which, in the prefent hypothefis, could have everywhere led mankind to make their weeks confift of feven days. This divifion of time, therefore, can be accounted for only by admitting the primeval inAtitution

## $\mathrm{SAB} \quad\left[\begin{array}{lll}583\end{array}\right] \quad S \mathrm{AB}$

sabbath. Pitution of the Sabbath, as related by Mofes in the book of Genefis. That infitution was abfolutely neceffary to preferve among men a fenfe of religion; and it was renewed to the Jews at the giving of the law, and its oblervance enforced by the fevereft penalties. It was

Strict manner in which the ancient Jews ubferved the Sabbath.
accordingly obferved by them with more or lefs ftrictnefs in every period of their commonwealth, and there is none of the inftitutions of their divine lawgiver which, in their prefent Atate of difperfion, they more highly honour. They regard it, indeed, with a fuperftitious reverence, call it their fpoufe, their delight, and feeak of it in the molt magnificent terms. They have often varied in their opinons of the manner in which it ought to be kept. In the time of the Maccabees, they carried their refpect for the fabbath fo very high, that they would not on that day defend themfelves from the attacks of their enemies. But afterwards, they did not fcruple to ftand upon their neceffary defence, although they would do nothing to prevent the enemy from carrying on their operations. When our faviour was on earth, it was no fin to loofe a beaft from the itall, and lead him to water; and if he had chanced to fall into a ditch, they pulled him out : but now it is abfolutely unlawful to give a creature in that fituaion any other affiftance than that of food; and if they lead an animal to water, they mult take care mot to let the bridle or halter hang loofe, otherwife they are tranfgreffors.

As the law enjoins reft on that day from all fervile employments, in order to comply with the injunction, they undertake no kind of work on Friday but fuch as can eafily be accomplithed before evening. In the afternoon they put into proper places the meat that they have prepared to eat the day following. They afterwards fet out a table covered with a clean cloth, and place bread upon it, which they alfo cover with another cloth; and during the fabbath the table is never moved out of its place. About an hour before funfet, the women light the fabbath lamps, which hang in the places where they eat. They then ftretch forth their hands to the light, and pronounce the following benediction. "Bleffed be thou, O God, king of the world, who haft enjoined us, that are fanctified by thy commandments, to light the fabbath lamp." Thefe lamps are wo or more in number, according to the fize of the chamber in which they are fufpended, and continue to burn during the greateft part of the night. In order to begin the fabbuth will, they walh their hands and faces, trim their hair, and pare their nails, beginning at the fourth finger, then going to the fecond, then the fifth, then the third, and ending with the thumb. If a Jew cafts the pairings of his nails to the ground, he is rafcah, that is, a wicked man; for Satan has great power over thofe pairings of nails; and it feems they are of great ufe to the wizzards, who know how to employ them in their eachantments. If he buries them in the earth, he is tzedic, that is, a juft man; if he burns them in the fire, he is chefid, that is worthy of honour, an holy $m \mathrm{n}$. When they have performed thefe preparatory ceremosies, they repair to the fynagogue, and enter upon their devocions. As foon as prayers begin, the le;arted fouls ipring out of the purgatorial flames, and have liber to cool thenafelves in water while the fabbath lafts; for which reafon the Jews prolong the continuance of it as much as they can; and the Rabbins have frictly commanded them not to exhault
all the water on the fabbath day, left thofe miferable Sabbath. fouls thould by that means be deprived of the refrefhing element. When they have ended their prayers, they return home, and falute one another, by wilhing a good fabbath. They then fit down to table. The malter of the family takes a cup full of wine, and lifting up his hand, fays, "Bleffed be thou, O God, our Lord, king of the world, who haft created the fruit of the vine.Bleffed be thou, O God our Lord, king of the world, who haft fanctified us by thy commandments, and given us thy holy fabbath; and of thy good will and pleafure haft left it to us as an inheritance, the memorial of thy works of creation. For it is the beginnning of the congregation of faints, and the memorial of the coming out of Egypt. And thou haft alfo chofen us from all other people, and fanctified us, and with love and pleafure haft left thy holy fabbath an inheritance. Bleffed be thou, O God, who fanctified the fabbath." After this benediction is ended, he drinks, and gives the cup to all that are prefent. He then removes the cloth, and taking bread, fays, "Bleffed be thou, O God our Lord, king of the world, who bringeft bread out of the earth." Then he breaks off a bit, and eats, and alfo gives a piece of it to every one of the company.

On the morning of the fabbath, the Jews do not rife fo early as they do at other times. Thinking, the greater pleafure they take on that day, the more devoutly they keep it. When they come into the fynagogue, they pray as ufual, only the devotions are fomewhat longer, being intermingled with pralmody, in honour of the fabbath. The pentateuch is then produced, and feven fections of it are read in order by feven perfons chofen for the purpofe. Several leffons are likewife read out of the prophets, which have fome relation to what was read out of the law. After morning prayers they return to their houfes, and eat the fecond fabbathmeal, fhewing every token of joy, in honour of the feftival. But if one has feen any thing omincus in his fleep; if he bas dreamed that he burnt the book of the law; that a beam has come out of the walls of his houfe ; that his tecth have fallen out ;-then he fafts until very late at night, for all fuch dreams ăre bad ones. In the afternoon they go aguin to the fynagogue, and perform the evening iervice, adding to the ordinary prayers fome leffons that refpect the fabbath. When the devotional duties are ended, they return home, and light a candle refembling a to. ch, and again fit down to eat. They remain eating untilnear fix, and then the mafter of the family takes a cup, and pouring wine into it rehearfes fome benedictiors; after which he pours a little of the wine upon the ground, and fays, "Bleffed be thou, O Lord, King of the world, who haft created the fruit of the vine." Then holding the cup in his left hand, with the right he takes a box of fweet fpices, and fays. "Bleffed be thou, O Lord God, who halt created various kinds of fweet fpices." He fmells the fpices, and holds them out to the reft, that they may do the fame. He then takes the cup in his right hand, and going to the candle views the left very narrowly, and pronounces a bleffing. With the cup in the left hand, he examines the right in the fame manner. A gain, holding the cup in his right hand, he rehearfes ansther benediction, and at the fame time pours fome of the wine on the ground. After this he drinks a little of it, and then hands it about to the relt of the family, who finifh.

Sabbath. morn
what remains. In this manner the fabbath is ended by the Jews, and they may return to their ordinary employments. Thofe who meet pay their compliments, by wifhing one another a happy week.

The Rabbins have reckoned up nine and thirty primary prohibitions, which ought to be obferved on the fabbatic feftival; but their circumftances and dependents, which are alfo obligatory, are almoft innumerable. The 39 articles are, Not to till the ground; to fow; to reap; to hay; make to bind up heaves of corn; to threfh; to winnow; to grind ; to fift meal ; to knead the dough ; to bake; to fhear; to whiten ; to comb or card wool; to fpin; to twine or twif; to warp; to dye; to tie; to untie; to few; to tear or pull in pieces; to build; to pull down; to beat with a hammer; to hunt or fifh; to kill a beaft; to flay it; to drefs it ; to fcrape the Rkin; to tan it; to cut leather; to write; to fcratch out; to rule paper for writing; to kindle a fire; to extinguifh it; to carry a thing from place to place; to expofe any thing to fale. Thefe are the primary prohibitions, and each of thefe has its proper confequences, which amount to an incredible number; and the Jews themfelves fay, that if they could keep but two fabbaths as they ought, they would foon be delivered out of all their troubles.

If a Jew on a journey is overtaken by the fabbath in a wood, or on the highway, no matter where, nor under what circumftances, he lits down ; he will not fir out of the fpot. If he falls down in the dirt, he lies there; he will not rife up. If he fhould tumble into a privy, he would reft there: he would not be taken out (A). If he fees a flea fkipping upon his clothes, he mult not catch it. If it bites him, he may only remove it with his hand; he muft not kill it; but a loufe meets with no fuch indulgence, for it may be deftroyed. He mult not wipe his hands with a towel or cloth, but he may do it very lawfully with a cow's tail. A frefh wound mult not be bound up on the fabbath-day ; a plafter that had formerly been applied to a fore may remain on it ; but if it falls off, it mult not be put on nnew. The lame may ufe a faff, but the blind mult not. Thefe particulars, and a great many more of the fame nature, are obferved by the Jews in the fricteft manner. But if any one wifhes to know more of the practice of that devoted race, he may confult Buxtorf's Fudaica Synagoga, chap. x. xi. where he will find a complete detail of their cuftoms and ceremonies on the fabbath; and likewife fee the primary prohibitions branched out into their refpective circumftances.

As the feventh day was obferved by the Jewifh church, in memory of the relt of God after the works of creation, and their own deliverance from Pharaoh's tyranny ; fo the firft day of the week has always been obferved by the Chriftian church, in memory of the refurrection of Jefus Chrift, by which he completed the work of man's redemption on earth, and refcued him from the dominion of him who has the power of death.

This day was denominated by the primitive Chriftians the Lord's day. It was alfo fometimes called Sunday; which was the name given to it by the heathens, who dedicated it to the fun. And indeed, although it was originally called Sunday by the heathens, yet it may very properly retain that name among Chriftians, becaufe it is dedicated to the honour of "The true light," which lighteth every man that cometh into the world, of Him who is Ityled by the prophet "The Sun of righteoufnefs," and who on this day arofe from the dead. But although it was, in the primitive times̀, indifferently called the Lord's day or Sunday, yet it was never denominated the fabbath; a name conltantly appropriated to Saturday, or the feventh day, both by facred and ecclefiaftical writers.

Of the change from the feverth to the furf day of The men the week, or even of the intitution of the Lord's day feltival, there is no account in the New Teltament. However, it may be fairly inferred from it, that the firft day of the week was, in the apoltolic age, a ftated time for public worthip. On this day the apoftles were affembled, when the Holy Ghoft came down fo vifibly upon them to qualify them for the convertion of the world. On this day we find St Paul preaching at Troas, when the difciples came to break bread: and the directions which the fame apoftle gives to the Corinthians concerning their contributions for the relief of their fuffering brethren, plainly allude to their religious affemblies on the firf day of the week.

Thus it would appear from feveral paflages in the New Teftament, that the religious obfervation of the firt day of the week is of apoftolical appointment; and may indeed be very reafonably fuppofed to be among thofe directions and inftructions which our bleffed Lord himfelf gave to his difciples, during the 40 days between his refurrection and afcenfion, wherein he converfed with them, and fpoke of the things pertaining to the kingdom of God. Still, however, it mult be owned that thofe paffages, although the plainelt that occur, are not fufficient to prove the apoftolical inftitution of the Lord's day, or even the actual obfervation of it. In order, therefore; to place the matter beyond all controverfy, recourfe mult be had to ecclefiatical teflimony.

From the confentient evidence and uniform practice of the primitive church, and allo from the atteftation of Pliny, an heathen of no mean figure both in learning and power, we find that the firft day of the week was obferved in the earlieft ages as an holyday or feftival, in honour of the refurrection of Chrift. Now there are but two fuurces whence the cuftom could poffibly have arifen. It muft have been inftituted either by buman or divine authority: by human authority it was not inftituted; for there was no general council in thofe early times, and without the decree of a general council it was impoffible that any ecclefiaftical inftitution cculd have been univerfally eftablifhed at once. It remains, therefore, that it muft have been inftituted by divine appears to be of divine origin.
(A) This, it feems, was once really the cafe. A Jew of Magdeburg fell into a privy on a Saturday. He might have been taken out; but he told thofe who offered him their affiftance to give themfelves no trouble, for there he was determined to keep holy the fabbath day. The bifhop, when he heard of it, refolved that he thould fanetify the next day alfo in the fame place; and fo, betwixt them, the poor Jew loft his life.
sabosth. divine authority : and that it really was fo, will farther appear from the following confiderations. It is ceptain that the apoftles travelled over the greateft part of the world, and planted churches in the remoteft parts of it. It is certain allo that they were all led by the fame fpirit; and their defire was, that unity and uniformity fhould be obferved in all the churches which they had founded. It is not therefore furprifing that, in the primitive times, the fame doctrine, the fame worlhip, the fame rites and cuftoms, fhould prevail all over the Chriftian world; nay, it would have been unaccountable had the cafe been otherwife. For this reafon we may conclude that every cufom, univerfally obferved in the early ages of the Chritian church, and not inftituted by a general council, was of original appointment.
${ }^{2} 4$ which the Lord's day was instituted. times.

As the Lord's day is fanctified, that is, fet apart to Chriftians for the worthip and fervice of God, their Creator, Redeemer, and Sanctifier, a little confideration will eafily difcover how it ought to be obferved. Although a day feparated from worldly bufinefs, yet it is in no fenfe a day of idlenefs, but a feafon apprópriated to the works of falvation and labours of charity.

In the primitive times this holy day was obferved in the moft folemn manner. From the monuments of thofe eariy ages we learn, that it was fpent in a due and conitant attendance on all the offices of divine wor-
fhip. On it they held their religious affemblies, in which the writings of the apolthes and prophets were read to the people, and the doctrines of Chriftianity further prefled upon them by the exhortations of the clergy. Solemn prayers and praifes were offered up to God, and hymas fung in ficnour of Chrift ; the Lord's fupper was contantly celebrated; and collections were made for the maintenance of the clergy and the relief of the poor. On this day they abtained, as much as they could, from bodily latour. They loaked upon it as a day of joy and gladnefs; and therefore all fating on it was prohibited, even duirg the feafon of lent, their great annual faft.-.Such was the zeal of thofe times, that nothing, no not the fevereft perfecutions, hindered them from celebrating holy offices on this day. They were often befet and betrayed, and as ofren flaughtered in confequence of cruel edicts from emperors, thofe very emperors for whofe happinefs and proferity they always offered up their fervent prayers. For this caufe, when they could not meet in the daytime, they affembled in the morning before it was light; and when fick, in exile, or in prifon, notiang troubled them more than that they could not attend the fervice of the church. No trivial pretences were then admitted for any one's abfence from public worfhip; for fevere cenfures were paffed upon all who were abfent witiout fome urgent neceffity. When the empire became Chriftian, Conftantine and his fuccellors made laws for the more folemn obfervation of the Lord's day. They prohibited all profecuions and pleadings and other juidical matters to be tranfaned on it, and alfo all unnecefiry labour; not that it was looked upon as a Jewifh fabbuth, but hecaufe thefe things were confiderca as inconfifent with the duties of the feltival.

Bit although the primitive Chriftiars did not indulge themfteres in the practice of unnectfary labour or tifling amufements, yet they did not wholly abfain from wo king, if great neceffity required it. The Vor. XVI.
council of Lasdicta enjoined that men fhouid abofain $\underbrace{3 i \text { bhath. }}$ flom work on the Lord's day if pofible; but if any were found to judaize, they were to be cenfured as great tranfgrefiors. So circumfpect were the primitive Chriftians about their conduct on this feftival, that on the one hand they avoided all things which tended to profane it, whillt on the other they cenfured all thofe who infifted it hould be obferved with Pharifaical rigour.

The primary duty of the Lord's day is public zusp- Advantsfip. The nature and defign of the Chritian religion yes refultfufficiently fhows the neceffity and importance of af-ing from fembling for the duties of devotion. The whole fcope vation of of Chriltianity is to bring us to an union with God, it. *" which cannot be obtained or preferved without frequent. communications with him; and the reafons which fhow religious intercourfe to be the indifpenfable duty of Chriftians in a private capacity, will bind it with equal or more force on them conlidered as a community.

The advantages of public worthip, when duly performed, are many and great. There are two, however, which deferve to be confidered in a particular manrer. It gives Chriltians an opportunity of openly profeffing their faith, and teflifying their obedience to their Redeemer in the wifeft and beft mamer ; and in an age when atheifm has arifen to an alarming height, when the Son of God is crucified afrefh, and put to open flame, every man, who has any regard for religion, will cheerfully embrace all opportunities of declaring his abhorrence of the vicious courfes purfued by thofe degenerate apoftates. He will with pleafure lay hold on every occalion to teltify that he is neither afraid nor afhamed to confefs the truth; and will think it his indifpenfable duty openly to difavow the firs of others, that he may not incur the gnilt of partaking of them.

Public worfhip preferves in the minds of men a fenfe of religion, without which feciety could not exilt. Nothing can keep a body of men together and unite them in promoting the public good, but fuch principles of action as may reach and govern the heart. But thefe can be derived only from a fenfe of religious duties, which can never be fo ftrongly impreffed upon the mind as by a conftant attendance upon public worfhip. Nothing can be more weak than to neglect the public worfhip of God, under the pretence that we can employ ourfelves as acceptably to our Maker at home in our clofets. Both kinds of worfhip are indeed neceffary; but one debt cannot be paid by the difcharge of another. By publifh worfhip every man profeffes his belief in that God whom he adores, and appeals to Him for his finrerity, of which his neighbour cannot judge. By this appeal he endears himielf more or lefs to others. It creates confidence; it roots in the heart benevolence, and all other Chriftian virtues, which produce, in common life, the fruits of mutual love and general piace.

People in general are of opinion that the duties of the Lord's day are over when public worthip is ended. But they feem to $f$ rgst for what purpofes the day was fot apart. It is not only appropriated to the duties of pualic worfhip, but alfo fanctified to our improvement in the knowledge of the doctrines of Chriftianity. It is an inftitution calculated to alleviate the condition of the laborious claffes of mankind, and, ia 4 E
curfe-

Shosih. confequence of that, to afford reft to beafts alio. It is proper, it is neceffary, that man fhould reflect on his condition in the world, that he fhould examine the flate of his foul, and inquire what progrefis he has made in that work which was given him to do. Thofe that have children or fervants are obliged to look after their initruction as well as their own. Thefe are the ends which the inftitution of Sunday was defigned to anfwer. Every man muft allow that thefe things mult be done at fome time or other; but unlefs there be fet times for doing them, the generality of mankind would wholly neglect thern.

Vifiting and travelling (though very common) are enormous profanations of this holy day. Families are thereby robbed of their time; a lofs for which no amends can ever be made them: Servants, inftead of having leifure to improve themfelves in fpiritual knowledge, are burdened with additional labour: And in a mari of any humanity, it muft excite many painful ienfations, when be reflects how often the ufeful horfe on that day experiences all the anguifh of hunger, torn fides, and battered knees. Every kind of amufement, every kind of common labour, is an encroachment on the particular duties of the Lord's day ; and confequently men profane the day by fpending it in any amufements, or undertaking upon it any ordinary employment unlefs it be a work of abfolute neceffity.
$S_{A B b A \tau H-B r e a k i n g, ~ o r ~ p r o f a n a t i o n ~ o f ~ t h e ~ L o r d ' s ~ d a y, ~}^{\text {, }}$ is punifhed by the municipal laws of England. For, befides the notorious indecency and fandal of permitting any fecular bufinefs to be publicly tranfacted on that day in a country profeffing Chriftianity, and the corruption of morals which ufually follows its profanation, the keeping one day in feven holy, as a time of relaxation and refrefhment, as well as for public worfhip, is of admirable fervice to a fate, confidered merely as a civil inftitution. It humanizes, by the help of converfation and fociety, the manners of the lower claffes; which would otherwife degenerate into a 1 avage ferocity fordid and felfifinefs of firit: it enables the induftrious workman to purfue his occupation in the enfuing week with health and cheerfulnefs: it imprints on the minds of the people that fenfe of their duty to God fo neceffary to make them good citizens; but which yet would be worn out and defaced by an unremitted continuance of labour, without any fated times of recalling them to the worfhip of their Maker. And therefore the laws of king Athelftan forbad all merchandizing on the Lord's day, under very fevere pemalties. And by the ftatute 27 Hen. VI. c. 5 . no fair or market fhall be held on the principal feltivals, GoodFriday, or any Sunday (except the four Sundays in harvelt ), on pain of torfeicing the goods expofed to fale. And, fince by the ftatute I Car. F. c. 1. no perfons fhall aflemble, out of their own parifhes, for any fport whatfoever, upon this day ; nor, in their parifhes, fhall ufe any bull or bear beating, interludes, plays, or other unlawful exercifes or paftimes ; on pain that every offender fhall pay 3 s. 4 d . to the poor. This ftatute does not prohibit, but rather impliedly allows, any innocent recreation or amufement, within their refpective pa rithes, even on the Lord's day, after divine fervice is. over. But by fatute 29 Car. II. c. 7. no perfon is allowed to work on the Lord's day, or ufe any boat or barge, or expofe any goods to fale, except meat in
public houfes, milk at certain hours, and works of ne- Sabellians ceffity or charity, on forfeiture of 5 s . Nor fhall any drover, carrier, or the like, travel upon that day, unn $\underbrace{\text { S.ble. }}$ der pain of 20 s.

SABELLIANS, a fect of Chritians of the 3d century, that embraced the opininns of Sabellius, a philofopher of Egypt, who openly taught that there is but one perfon in the Godhead.

The Sebellians maintained, that the Word and the Holy Spirit are only virtues, emanations, or functions of the Deity; and held, that he who is in heaven is the Father of all things, that he defcended into the virgin, became a child, and was born of her as a fon ; and that having accomplifhed the myftery of our falvation, he diffufed himfelf on the apolles in tongues of fire, and was then denominated the Holy Gloof. This they explained by refembling God to the fun, the illuminative virtue or quality of which was the Word, and its warming virtue the Holy Spirit. The word, they taught, was darted, like a divine ray, to accomplifh the work of redemption; and that being re-afcended to heaven, the influences of the Father were communicated after a like manner to the apoftles.

SABIANS, an early fect of idolaters, which continues to this day, and worfhips the fun, moon, and fars. See Polytheism, ${ }^{\circ}{ }^{\circ} 10,11,12$.

SABINA, a province of Italy, in the territories of the church; bounded on the north by Umbria, on the eaft by Farther Abruzzo, on the fouth by the Campagna of Rome, and on the weft by the patrimony of St Peter. It is 22 miles in length, and almoft as much in breadth; watered by feveral fmall rivers, and abounding in oil and wine. There is no walled town in it, and Magliano is the principal place.

SABINUS (George), a celebrated Latin poet, born in the electorate of Brandenburg in 1508 . His poem Res gefte Cafarum Germanorum, fpread his reputation all over Germany, and procured him the patronage of all the princes who had any regard for polite literature: he was made profeffor of the belles lettres at Frankfort on the Oder, rector of the new academy of Koning faurg, and counfellor to the elector of Brandenburg. He married two wives, the firt of whith was the eldeft daughter of the famous reformer Melancthon; and died in 1560 . His poems are well known, and have been often printed.

SABLE, or $S_{A B L E}$ Animal, in zoology, a creature of the weafel-kind, called by authors mulfela zibelina. See Mustela, $\mathrm{n}^{\circ} 6$.

The chafe of thefe animals, in the more barbarous. times of the Ruffian empire, was the employ, or rather taik, of the unhappy exiles in Siberia. As that country is now become more populous, the fables have in a great meature quitted it, and retired further north and eaft, to live in defert forefts and mountains: they live near the banks of rivers, or in the little iflands in them; on this account they have, by fome, been fuppofed to be the $\Sigma_{a} \mathrm{Esppav}^{2}$ of Ariforle (Hiff. An. lib. viii. c. 5.), which he clafes with the animals converfant among waters.

At prefent the hunters of fables form themfelves into troops, from five to 40 each : the laft fubdivide into leffer parties, and each choofes a leader; but there is one that directs the whole: a fmall covered boat is provided for each party, loaded with provifions, a dog.

## SAB

## S A B

Sable.
and net for every two men, and a veffel to bake their bread in : each party has alfo an interpreter for the country they penetrate into. Every party then fets out according to the courfe their chief points out: they go againtt the ftream of the rivers, drawing their boats up, till they arrive in the hunting country; there they ftop, build huts, and wait till the waters are frozen, and the feafon commences: before they begin the chace, their leader affembles them, they unite in a prayer to the Almighty for fuccefs, and then feparate : the firlt fable they take is called God's fable, and is dedicated to the church.
Then they penetrate into the woods; mark the trees as they advance, that they may know their way back; and in their hunting-quarters form huts of trees, and bank up the fnow round them: near thefe they lay their traps; then advance farther, and lay more traps, ftill building new huts in every quarter, and return fucceffively to every old one to vifit the traps and take out the game to fkin it, which none but the chief of the party muft do: during this time they are fupplied with provifions by perfons who are employed to bring it on fledges, from the places on the road, where they are obliged to form magazine, by reafon of the impracticability of bringing quantities through the rough country they mult pafs. The traps are a fort of pitfall, with a loofe board placed over it, baited with fifh or flefh: when fables grow fcarce, the hunters trace them in the new-fallen fnow to their holes; place their nets at the entrance; and fometimes wait, watching two or three days for the coming out of the animal: it has happened that thefe poor people have, by the failure of their provifions, been fo pinched with hunger, that, to prevent the cravings of appetite, they have been reduced to take two thin boards, one of which they applied to the pit of the fomach, the other to the back, drawing them tight together by cords placed at the ends: fuch are the hardhips our fellow. creatures undergo to fupply the wantonnefs of luxury.

The feafon of chace being finihed, the hunters reaffemble, make a report to their leader of the number of fables each has taken; make complaints of offenders againft their regulations; punifh delinquents; fhare the booty; then continue at the head-quarters till the rivers are clear of ice; return home, and give to every church the dedicated furs.
$S_{A B L E}$ Cape, the molt foutherly province of Nova Scotia, in North America, near which is a fine cod-fifhery. W. Long. 65. 34. N. Lat. 43. 24.
Sable Ine is adjoined to this cape, and the coafts of both are moft commodioully fituated for fifheries.
Sable Trade, the trade carried on in the fkins or furs of fables; of which the following commercial hiftory was tranflated by Mr J. R. Forter from a Ruffian performance on that fubject by Mr Muller.
"Sable, fohle, in Ruffian; zsbel in German. Their price varies from 1 1. to 10 l. Sterling, and above: fine and middling fable kins are without bellies, and the coarfe ones are with them. Forty fkins make a collection called zimmer. The fineft fables are fold in pairs perfoctly fimilar, and are dearer than fingle ones of the fame guodnefs; for the Ruffians want thofe in pairs for facing caps, cloaks, tippets, \&c. the blackeft are reputed the belt. Sables are in feafon from November
to February ; for thofe caught at any other time or the year are fhort-haired, and then called nedofoboli. The hair of fables differs in length and quality: the long hairs, which reach far beyond the inferior ones, are called os; the more a fkin has of fuch long hairs, the blacker it is, and the more valuable is the fur; the very beft have na cther but thofe long and black hairs. Motchba is a technical term ufed in the Ruffian furtrade, expreffing the lower part of the long hairs; and fometimes it comprehends likewife the lower and fhorter hairs: the abovementioned beft fable furs are faid to have a black motchka. Below the long hairs are, in the greater part of the fable-furs, fome fhorter hairs, called podofie, i. e. under-os; the more podofie a fur has, it is the lefs valuable: in the better kind of fables the podofie has black tips, and a grey or rufty motchka. The firl kind of motchka makes the middling kind of fable furs; the red one the worft, efpecially if it has but few os. Between the os and podofie is a low woolly kind of hair, called podfada. The more podfada a fur has, the lefs valuable : for the long hair will, in fuch cafe, take no other direction than the natural one; for the characters of fable is, that notwithftanding the hair naturally lies from the head towards the tail, yet it will lie equally in any direction as you frike your hand over it. The various combinations of thefe characters, in regard to os, motchka, podofie, and podfada, make many feccial divifions in the goodnefs of furs: befides this, the furriers attend to the fize, preferring always, catcris paribus, the biggeft, and thofe that have the greateft gilis. The fize depends upon the animal being a male or a female, the latter being always fmaller. The glofs vanifhes in old furs: the frefh ones have a kind of bloomy appearance, as they exprefs it ; the old ones are faid to have done blooming: the dyed fables always lofe their glofs; become lefs uniform, whether the lower hairs have taken the dye or not; and commonly the hairs are fomewhat twitted or crifped, and not fo ftraight as in the natural ones. Some fumigate the fkins, to make them look blacker; but the fmell, and the crifped condition of the long hair, betrays the cheat; and both ways are detected by rubbing the fur with a moilt linen cloth, which grows black in fuch cafes.
" The Chinefe have a way of dyeing the fables, fo that the colour not only lafts (which the Ruffian cheats cannot do), but the fur keeps its glofs, and the crifped hairs only difcover it. This is the reafon that all the fables, which are of the beft kind, either in pairs or feparate, are carried to Ruffia; the reft go to China. The very beft fables come from the environs of Nertchitk and Yakutf; ; and in this latter diftrid, the country about the river Ud affords fumetimes fables, of whom one fingle fur is often fold at the rate of 60 or 70 rubles, 12 l. or 141 . The bellies of fables, which are fold in pairs, are about two fingers breadth, and are tied together by 40 pieces, which are fold from II. to 2 1. Sterling. Tails are fold by the hundred. The very beft fable-furs muft have their tails; but ordinary failes are often cropped, and 100 fold from 4 1. to 81. Sterling. The legs or feet of fables are feldom fold $f$ cparately; white fables are rare, and no common merchan. dize, but bought only as curiofties : fome are yellowifh, and are bleached in the fpring on the fnow."

Sible.

## S A C

Sable, in hera!dly, fignifies "black;" and is borrowed from the French, as are molt terms in this fcience: in engraving it is expreffed by both horizontal and perpendicular lines crofling each other. Sable of itfelf fignifies conftancy, learning, and grief; and ancient heralds will have it, that when it is compounded with

| Or |  | H |

| Pur. |  | Auterity. |

The occafion that introduced this colour into heraldry is thus related by Alexander Nefit, p. 8. The duke of Anjou, king of Sicily, after the lofs of that kingdom, appeared at a tournament in Germany all in black, with nis fhield of that tincture, feme de larmes, i. e. befprinkled with drops of water, to reprefent tears, indicating by that both his grief and lofs.

SABLESTAN, or Sablustan, a province of Afia, in Perfia, on the frontiers of Indoitan; bounded on the north by Khorafin ; on the eaft, by the mountains of B.alk and Candahar ; on the fouth, by Sageftan or Segeftan; and on the weft, by Heri. It is a mountainous councry, very little known to Europeans; nor is it certain which is the capital town.

SABRE, a kind of fword or fcimitar, with a very broad and heavy blade, thick at the back, and a little fulcaled or crooked towards the point. It is the ordinary weapon worn by the Turks, who are faid to be very expert in the ufe of it.

SABURRA, in medicine, ufually denotes any collection of half putrid indigefted matter in the ftomach and inteltines, by which the operation of digeftion is impeded.

SABURR庣, gritts, in natural hiftory; a genus of foflls, found in minute mafles, forming together a kind of powder, the feveral particles of which are of no determinate fhape, nor have any tendency to the figure of chryftal, but feem rudely broken fragments of larger maffes; not to be diffolved or difunited by water, but retaining their figure in it, and not cohering by means of it into a mafs; confiderably opake, and in many fpecies fermenting with acids; often fouled with leterogene matters, and not unfrequently taken in the coarfer ftony and mineral or metaline particles.

Gritts are of various colours, as, 1. The fony and fparry gritts, of a bright or greyif white colour. 2. The red fony gritts. 3. The green fony gritts, compofed of homogene fparry particles. 4. The yelinw gritt, of which there is only one fepecies. 5. The black and blackifh gritts, compofed of ftony or talky particles.

SACEA, a featt which the ancient Babylowians and other orientals held annmally in honour of the deity $\dot{A}$ naitis. The Sacæa were in the Eaft what the Saturnalia were at Rome, viz, a feaft for the flaves. One of the ceremonies was to choofe a prifoner condemned to death, and allow him all the pleafures and gratifications he would wifh, before he were carried to execution.

SACCADE, in the manege, is a jerk more or lefs violent, given by the horfeman to the horfe, in pulling or twitching the reins of the bridle all on a fudden
and with one pall, and that when a horfe lies heavy Sacerdotal upon the hand, or obftinately arms himfelf.

This is a correction ufed to make a horfe carry well ; Sacheverei. but it ought to be ufed difcreetly, and but feldom.

SACERDOTAL, fomething belonging to priefts.

## See Priest.

SACCULUS, in anatomy, a diminutive of faccus, fignifies a little bag, and is applied to many parts of the body.

SACCHARUM, Sugar, or the Sugar-Cane, in botany: A genus of the digynia order, belonging to the triandria clals of plants; and in the natural method ranking under the $4^{\text {th }}$ order, Gramina. There is no calyx, but a long down ; the corolla is bivalved. There is but one fpecies of this genus, viz. the officina. It is a native of Africa, the Eat Indies, and of Brazil ; from whence it was introduced into the Weft India iflands foon after they were icttled. The fugar-cane is the glory and the pride of thofe inlands. It amply rewards the indultrious planter, enriches the Britilh merchant, gives bread to thoufands of manufacturers and feamen, and brings an immenfe revenue to the crown. For the procefs of making fugar, fee Sugar.

Sugar, formerly a luxury, is now become one of the necelfaries of life. In crop-time every negro on the plantations, and every animal, even the dogs, grow fat. This fufficiently points out the nourifhing and healthy qualities of fugar. It has been alleged, that the eating of fugar fpoils the colour of, and corrupts, the teeth: this, however, proves to be a miltake, for no pe, ple on. the earth have finer teeth than the negroes in Jamaica. Dr Alfton, formerly profeffor of botany and materia medica at Edinburgh, endeavoured to obviate this vulgar opinion: he had a fine fet of teeth, which he afcribed folely to his eating great quantities of fugar. Externally too it is often ufeful: mixed with the pulp of roafted oranges, and applied to putrid or ill-d fpefed ulcers, it proves a powerful corrector.

SACCHI (Andrea), a celebrated painter, born at Rome in 1594. He was the difciple of Frarcifo Albano, whom he afterwards furpaffed in tafte and correctnefs. He diftinguilhed himfelf in a very eminent degree by his paintings in frefon; ard a frong emulation fubfiting between him and Pietro de Cirtona, they each arrived at a degree of perfection that netther of them might have known without fuch a crmpetition. The works of Sacchi have fuch intrinfic merit, and are finifhed with fuch uncommon care and fkill, as. will always fecure the applaufe of the judicious, and preferve their trae value. He died in 1668.

SACHEVEREL. (Dr Henry), a famous clergyman of the Tory faction in the reign of queen Anne; who diftinguifhed himfelf by indecent and fcurrilous fermons and writings againlt the diffenters and revolution principles. He owed his confequence, however, to being in. difcreetly profecuted by the houfe of lords for his affizefermon at Derby, and his 5 th of November fermon at St Paul's in 1709; in which he afferted the doctrine of non-refitance to government in its utri~h extent; and reflected feverely on the act of toletation. The high and low church parties were very violent at that time; and the trial of Sacheverel inflamed the highchurch party to dangerous riots and exceffes: he was, however, fufpended for three jears, and his fermons burned by the common hangman. The Tories being
in adminittration when Sackeverel's fufpenfion expired, he was freed with every circumftance of honour and public rojoicing ; was ordered to preach before the commons on the 2gth of May, had the thanks of the houfe for his difcourle, and obtained the vauable rectory of St Andrew's, Holborn.

SACK, a wine ufed by our anceftors, which fome have taken to be Rhenifh and fome Canary wine.Venner, in his Via Recta ad Vitam Longam, printed ia 1628 , lays that fack is "completely not in the third degree, and that fome affect to drink fack with fugar and fome without; and upon no other ground, as I think, but as it is beft pleafing to their p.late." He goes on to fay, "that fack, taten by itfelf, is very hot and very penetrative; being taken with fugar, the heat is both fomewhat allayed, and the penetrative quality thereof alfo retarded." He adds further, that Rhenifh, \&c. decline after a twelvemonth, but fack and tise other ftronger wines ars belt when they are two or three years old. It appears so be highly probable that fack was not a fiweet wine, from its being tiken with fugar, and that it did not eceive its name from having a faccharine flavour, but from its being origianily fored in facks or borachios. It does not appear to have been a French wine, but a frong wine the production of a hot climate. Probably it was what is called dry moun:ain, or fome Spanifh wine of that kind. This conjecture is the more plaufible, as Howell, in his French and En;lith Difionary, printed in the year 1650, tranflates fack by the words vin $d$ ' $E \int p a g n e$, vin fec.
$S_{A C K}$ of Wool, a quantity of wool containing jult 22 hone, and every fone 14 pounds. In Scotland, a fack is 24 fone, each fone containing 16 ponncis.
$S_{A C K}$ of Cotion $W_{\text {ool, }}$ a quantity from one hundred and a half to four hundred weight.

SACKS of Earth, in fortification, are canvas Lags filled with earth. They are ufed in making retrencirments in hafte, to place on parapets, or the head if the breaches, sc. to repair them, when beaten down.

SACKEUS, a mudical inf ument of the wind kind, being a fort of trumpet, though different from the conimois trumpet both in form and fize; it is fit to play a bafs, and is contrived to be drawn out of faortened, according to the tone regaird, whether grave or acute. The Icalians call it trombone, and the Latins tuba durtiks.

SACEVHLEE ('Chomas, Lord Buchhurft, and earl of Durfet), a Itatefmea and poet, the fon of Richard Sacivilic, Eq; of Eachburlt, in the prith of Withen in Suflex, was born in the year 1536 . He was Eent to Harthall in Cxford, in the latter end of the reign of Edward VI. whence he removed to Cambridge, where he took a mafter of arts degree, and thence to the Inner Temple. Ele row applicd himfelf to the ftudy of the law, and was called to the bar. We are told that he commenced poet whill at toe univertities, and that thefe his juvenile prodections were much ajmired, none of which, bowever, have been preferved.In the frouth and fith year of queen Mary, we find him 2 member of the houfe of commons; about w: ich time, i: 1557, he wrote a petical piece, inisled The In. Gugtion, or The Mïror of Macilitates. This lat was meant to comprehend all the unfor tunate Great from the beginning of Engilifh hiltory ; but the defign being dropped, it was inderted in the body of the work. The

Mirror of Mapiftrates is formed on a dramatic plan; Sackville in which the peisons are introduced fpeaking. The Induction is written much in the ftyle of Spencer, who, with fome probability, is fuppofed to have imitated this author.

In I561, his tragedy of Gorboduc was acted before queen Elifabeth by the gentlemen of the Inner Temple. This was the firit tolerable tragedy in our language. The Companion to the Play-houfe teils us, that the three firf acts were written by Mr Tho. Norton. Sir Philip Sidney, in his Apology for Poctry, fays, " it is full of ftately fpeeches, and well-founding phrafes, climbing to the height of Seneca in his ttyle, \&c. Rymer !peaks highly in its commendation. Mr Spence, at the inftigation of Mr Pope, republifhed it in 1736 , with a pompous preface. It is faid to be our firlt dramatic piece written in verfe.

In the firft parliament of this reign, Mr Sackville was member for Sulfex, and for Bucks in the fecond. In the mean time he made the tour of France and lt ly, and in 1566 was imprifoned at Rome, when he was informed of his father's death, by which he became poffeffed of a very confiderable fortune.

Having now obtained his liberty, he returned to England; and being firlt knighted was created Lord Buckhurit. In 1570 he was fent ambaflador to France, In 1586 he was one of the commiffioners appointed to try the unfortunate Mary queen of Scots; and was the meflenger employed to report the confirmation of her fentence, and to fee it executed. The year following be went ambalfador to the States General, in confequence of their complaint againlt the earl of LeiceIter; who, dilliking his impartiality, prevailed on the queen to recal him, and confine him to his houfe. In this fate of c nfinement he continued about 10 months, when Leicelter dying, he was reftored to favour, and in 15 .: 10 was inftalled knight of the garter: but the moft incontrovertible proot of the queen's partiality for lord Buckhurft appeared in the year 1591, when foe caufed him to be elected chancellor in the univerlity of Oxford, in oppofition to her favourite Effex. In 1598 , on the death of the treafurer Lurleigh, lord Buckhurf fuccceled him, and by virtue of his office became in effect prime miniter; and when, in 1601 , the earls of Efiex and Sothampton were brought to trial, he fat as lord high teward on that awful occafion.

On the acceffion of Jamce I. he was gracioufly received, had the office of lord high treafurer confirmed to him for life, and was created earl of Dorlet. He continued in high fivour with the king till the day of his death; which happened fuddenly, on the 19th of April 1608 , in the council-chamber at Whitehall. He was interred with great folemnity in Wefminiter abbey. He was a good poet, an able miniter, and an honeft man. Fro:n him is defcended the piefent noble family of the Dorfets. "It were needlefs (fays Mr Walpole) to add, that he was the patriarch ot a race of genius and :it."

Sackille (Charles, earl of Dorfet), a celebrated wit and post, defcended from the toregoing, was born ia 1637. He was, like Villiers, Rochefter Sedley, \&c. one of the libertines of king Charles's court, and fometimes indulged himfelf in inexcufable excefies. He openly dircountenanced the violent meafures of James II. and engaged early for the prince of
$\underbrace{\text { Sucrament. }}$ Orange, by whom he was made lord chamberlain of the houfehold, and taken into the privy-council. He
died in 1706 , and left feveral poetical pieces, which, though not confiderable enough to make a volume by themfelves, may be found among the works of the minor poets, publifhed in 1749.

SACRAMENT is derived from the Latin word facramentum, which fignifies an oath, particularly the oath caken by foldiers to be true to their country and general. The words of this oath, according to Polybius, were, obtemperaturus fum ft facturus quicquid mandabitua ab imperatoribus juxta vires. The word was adopted by the writers of the Latin church, and employed, perhaps with no great propriety, to denote thofe ordinances of religion by which Chriftians came under an obligation, equally facred with that of an oath, to obferve their part of the covenant of grace, and in which they have the affurances of Chrift that he will fulfil his part of the fame covenant.

Of facraments, in this fenfe of the word, Proteftant churches admit of but two ; and it is not eafy to conceive how a greater number can be made out from Scripture, if the definition of a facrament be jult which is given by the church of England. By that church, the meaning of the word facrament is declared to be "an outward and vifible fign of an inward and firitual grace given unto us , ordained by Chritt himfelf as a means whereby we receive the fame, and a pledge to affure us thereof." According to this definition, baptifm and the Lord's Supper are certainly facraments; for each confilts of an outward and vifible fign of what is believed to be an inward and fpiritual grace; both were ordained by Chrift himfelf, and by the reception of each does the Chriftian come under a folemn obligation to be true to his divine mafter, according to the terms of the covenant of grace. (See Baptism and Supfer of the Lord.) The R •manifts, however, add to this number confirmation, penance, extreme unction, ordination, and marriage, holding in all feven facraments; but two of thofe rites not being peculiar to the Chriftian church cannot poffibly be Cbrifitian facraments, in contradiftinction to the facraments or obligations into which men of all religions enter. Marriage was inflitured from the beginning, when God made man male and female, and commanded them to be fruitful, and multiply and replenifh the earth; and penance, as far as it is of the fame import with repentance, has a place in all religions which teach that God is merciful, and men fallible.The external feverities impofed upon penitents by the church of Rome (ice Penance) may indeed be in fome refpects peculiar to the difcipline of that church, though the penances of the Hindoos are certainly as rigid; but none of thefe feverities were ordained by Chrift himfelf as the pledge of an inward and firitual grace; nor do they, like baptifm and the Lord's Supper, bring men under obligations which are fuppofed to be analogous to the meaning of the word Jacramentum. Confirmation has a better title to the appellation of a facrament than any of the other five popifl rites of that name, though it certainly was not confidered as fuch by the earieft writers of the Chriftian church, nor does it appear to have been ordaned by Chrif himfelf, (fee Confirmation). Ordination is by many churches confide ed as a very importast rite; but as it is not adminittered to all men, nor bas any particular form ap-
propriated to it in the New Teftament, it cannot be Sacrament confidered as a Chriftian facrament conferring grace generally neceffary to falvation. It is rather a form of authorifing certain perfons to perform certain offices, which refpeet not themfelves but the whole church; and extreme unction is a rite which took its rife from the miraculous powers of the primitive church vainly claimed by the fucceeding clergy. (See Ordination and $E_{\text {atreme }} U_{\text {nction. }}$ ) Thefe confiderations feem to have fome weight with the Romifh clergy themfelves; for they call the eucharift, by way of eminence, the boly facrament. Thus to expofe the holy facrament, is to lay the confecrated hoft on the altar to be ado-red.-The proceffion of the boly facrament is that in which this hoft is carried about the church, or about a town.

Numerous as we think the facraments of the Romifh church, a fect of Chriftians fprung up in England early in the current century who increafed their number.The founder of this fect was a Dr Deacon, we think, of Manchefter, where the remains of it fubfifted very lately, and probably do fo at prefent. According to thefe men, every rile and every pbrafe in the book called the Apofolical Confitutions were certainly in ufe among the apofles themfelves. Still, however, they make a difinction between the greater and the lefier facraments. The greater facraments are only two, baptifm and the Lord's fupper. The leffer are no fewer than ten, viz. five belonging to baptifm, exorcifm, anointing with oil, the white garment, a tafte of milk and honey, and anointing with chrijm or ointment. The other five are, the fign of the crofs, impofition of hands, uncition of the fick, boly orders, and matrimony. Of the nature of thefe leffer facraments, or the grace which they are fuppofed to confer, our limits will permit us to give no account.Nor is it neceffary that we fhould. The fect which taught them, if not extinguifhed, is certainly in its laf wane. It has produced, however, one or two learned men ; and its founder's Full, True, and Comprehenfive View of Chriftianity, in two Catechifms, is a work which the Chriftian antiquary will read with pleafure for information, and the philofopher for the materials which it contains for meditation on the workings of the human mind. It was publifhed in 8 vo , in the year 1748.

Congregation of the Holy Sacrament, a religious eftablifhment formed in France, whofe founder was Autherius, bifhop of Bethlehem, and which, in 1644 , received an order from Urban VIII, to have always a number of ecclefiaftics ready to exercife their miniftry among pagan nations, wherever the pope, or congregation $d e$ propaganda, fhould appoint.

SACRAMENTARIANS, a general name given to all fuch as have publifhed or held erronenus doctrines of the facrament of the Lord's Supper. The term is chiefly applied among Roman Catholics, by way of reproach, to the Lutherans, Calvinifts, and other Proteftants.

SACRAMENTARY, an ancient Romih churchbook, which contains all the prayers and ceremonies practifd in the celebration of the facraments.

It was wrote by pope Gelafius, and afterwards revifed, corrected, and abridged, by ist Gregory.

SACRE, or SAKER, in ornithology, the name of a fpecies of falcon, called by authors falco facer, and differ. ently

## S A C <br> 591 ] <br> S A C

Sacred, ently defcribed by different authors, but by all agreed Sacrifice. to be an extremely bold and active bird. It is a native of the northern regions of Europe; and a variety called by fome writers the fpeckled parlridge bawk is found at Hudfon's bay, North America.

SACRED, fomething holy, or that is folemnly offered and confecrated to God, with benedictions, unctions, \&c.

Kings, prelates, and priefts, are reckoned facred perfons; abbots are only bleffed.-The deaconhood, fub. deaconhood, and prieftiood, are all facred orders, and are faid to imprefs' a facred indelible character. The cuftom of confecrating kings with holy oil is derived (fays Gutlingius) from the Hebrews ; among whom, he agrees with Grotius, it was never ufed but to kings who had not an evident right by fucceffion. He adds, that the Chriftian emperors never ufed it before Juitin the younger ; from whom he takes it to have paffed to the Goths, \&c.

Sacred is alfo applied to things belonging to Gid and the church. Church-lands, ornaments, \&c. are held facred.-The facred college is that of the cardinals.

Sacrfd Majefly, is applied to the emperor and to the king of Englind ; yet Loyfeau fays it is blafphemy. See Majesty. The ancients held a place fruck with thunder as facred. In the civil law, facred place chiefly denotes that where a perfon deceafed has been interred.

## SAcrbd Elixir. See Elixir.

SACRIFICE, an offering made to God on an altar, by means of a regular minifter, as an acknowledgment of his power, and a payment of homage. Sacrifices (though the term is fometimes ufed to comprehend all the offerings made to God, or in any way devored to his fervice and honour) differ from mere oblations in this, that in a facrifice there is a real deftruction or change of the thing offered; whereas an oblation is only a fimple offering or gift, withcut any fuch change at all : thus, all forts of tythes, and firft fiuits, and whatever of men's worldly fubflance is confecrated to God, for the fupport of his worthip and the maintenarce of his miniters, are of. ferings or oblations: and thefe, under the Jewifh law, were either of living creatures or other things: but facrifices, in the more peculiar fen ef the term, were either wholly or in a part confumed by fire. They have by divines been divided into bloody and unbloodg. Bloody facrifices were made of living creatures; unbloody of the truits of the earth. They have alfo been divided into expiatory, impeiratory, and cachariftiand. The firft kind were cif-red to obiain of God torgivenefs of fins; the fecond, to procure fome favour; and the third, to exprefs thankiumeds for favours already received. Under one or other of thele heads may all facrifices be arranged; though we are told, that the Egyptians had 666 different kinds, a number furpafting all credibility.

Concerning the origin of facrifices very various opinions have been held. By many, the Phœaicians are fuppofed to have been the authors of them; tiough Porphyry attributes their invention to the Egyptians; and Ovid imagines, from the import of the name victim and bofia, that no bloody facrifices were offered till wars prevailed in the world, and nations obtained vietories
over their enemies. Thefe are mere hypothefes, con.
tradicted by the moft authentic records of antiquity, and entitled to no regard.

By modern deifts, facrifices are faid to have had their origin in fuperftition, which operates much in the fame way in every country. It is therefore weak, according to thofe men, to derive this prastice from any particular people; fince the fame mode of reafoning would lead various nations, without any intercourfe with each other, to entertain the fame opinions refpecting the nature of their gods, and the proper means of appeafing their anger. Men of grofs conceptions imagine their deities to be like themfelves, covetous and cruel. They are accuftomed to appeafe an injured neighbour by a compofition in money; and they endeavour to compound in the fame manner with their gods, by rich offerings to their temples and to their priefts. The moft valuable property of a fimple people is their cattle. Thele offered in facrifice are fuppofed to be fed upon by the $\mathrm{d}_{1}$ vinity, and are actually fed upon by his priefts. If a crime is committed which requires the punifhment of death, it is accounted perfectly fair to appeafe the deity by offering one life for another; becaufe, by favages, punifhment is confidered as a debt for which a man may compound in the beft way that he can, and which one man may pay for another. Hence, it is faid, arofe the abfurd notions of imputed guilt and vicarious atonement. Among the Egyptians, a white bull was chofen as an expiatory facrifice to their god Apis. After being killed at the altar, his head was cut off, and calt into the river, with the following execration: "May all the evils impending over thofe who perform this facrifice, or over the Egyptians in general, be averted on this head *."

Had facrifice never prevailed in the world but among fuch grofs idolaters as worlhipped departed heroes, who were fuppofed to retain in their ftate of deification all the paffions and appetites of their mortal ftate, this account of the origin of that mode of worhip would have been to us perfectly fatisfactory. We readily admit, that fuch mean notions of their gods may have actually led far diftant tribes, who could not derive any thing from each other through the channel of tradition, to imagine that beings of human paffins and appetites might be appeafed or bribed by coftly offerings. But we know from the $m$, 1 incontrovertible authority, that facrifices of the three kinds that we have mentioned were in ufe among people who worbipped the true God, and who mult have had very correct notions of his attributes. Now we think it impoffible that fuch notions could have led any man to fancy that the taking. away of the life of a harmlefs animal, or the burning of a cake or other fruits of the earth in the fire, would be. acceptable to a Being felf exiftent, omnipotent, and omnifcient, who can neither be injured by the crimes of his creatures, nor receive any acceffion of happinefs from a thoufand worlds.

Senfible of the force of fuch reafoning as this, fome perfons of great name, who admit the authenticity of the Jewilh and Chrifian facrifices, and firmly relyon the atonement made by Chrit, are yet unwilling (it is difficult to conceive for what realon) to allow that facrifices were originally intituted by God. Of this way of thinking were St Chryfottom, Spencer, Grotius, and Warburton, as were likewife the Jews Maimonidec, R.

## * Herodo-

 tus, lib. 2 .$\underbrace{\text { Escrifice. }}$ Levi, Pen Gerfon, and Abarbanel. The greater part of thefe writers maintain, that facrifices were at firf a human inflitution; and that God, in order to prevent their being offered to idols, introduced them into his lervice, though he did not approve of them as good in themfe.ves, or as proper rites of worhip. That the infintely wie and good God thould introduce into his fervice improper rites of worfhip, appears to us fo extremely improbable, that we cannot but wonder how fuch an opinion fhould ever have found its way into the minds of fuch men as thofe who held it. Warburton's theory of facrifice is much more plaufible, and being more lately publifhed, is worthy of particular examination.

According to this ingenious prelate, facrifices had their origin in the fentiments of the human heart, and in the ancient mode of converfing by action in aid of words. Gratitude to Ged for benefits received is natural to the mind of man, as well as his bounden duty. * Divine "This duty (fays the bifhop*) was in the moft early Leg. b. ix. times difcharged in expreffive actions, the leaft equivocal
c. 2 . c. 2. of which was the offerer's bringing the firtt fruits of pafturage or agriculture to that fequeftered place where the Deity ufed to be more folemnly invoked, at the ftated times of public worlhip; and there prefenting them in homage, wi h a demand which ipoke to this purpofe. -'I do hereby acknowledge thee, $O$ my God! to be the author and giver of all good: and do now, with humble gratitude, return my warmeft thanks for thefe thy bleffings particularly beftowed upon me."-Things thus devoted became thenceforth facred: and to prevent their defecration, the readieft way was to fend them to the table of the prieft, or to confume them in the fire of the altar. Such, in the opinion of our suthor, was the origin of euchariftical facrifices. Impetratory or precative facrifices had, he thinks, the fame origin, and were contrived to exprefs by action an invocation for me continuance of God's favour. "Expiatory facrifies (fays the learned prelate) were in their own natuie as in:clligible, and in practice as rational, as either co tile other twe. Here, inftead of prefenting the firlt fruits of agriculture and pafturage, in corn, wine, oil, and wool, as in the eucharittical, or a portion of what was to be fown or otherwife propagated, as in the impetratory; fome chofer animel precious to the repenting criminal, who deprecates or is fuppofed to be obnoxious to the Deity who is to be appeafed, was offered up and flain at the altar, in an action which, in all languages, when trantated into words, fpeaks to this purpofe:-'I confets my tranfgrefiions at thy foottool, O my God! and with the deepeit c ntrition implore thy pardon; confeffing that I deferve death for thofe my offences.' The latter part of the confefficn was more forcibly expreffed by the action of Atriking the devoted animal, and depriving it of Life; which, when put inte words, conclutes in this manner.-' And I own that I myfelf defreve the death which I now inflict on this animal.'

This $f$ fem of facrifice, which his lordhip thinks fo well fapported by the meft early movements of fimple nature, we adne: to be ingenious, but by no means fatisfatory. That mankind in the earlier agee of the world were accu; med to fuply the deficienc ite of their language by expreTve geticulations we are not inclined to contrevert : the cult m prevails awong favage nations, or nutions half civilized, at the prefent day. His
lordbip, however, is of opipion, and we heartily agree sacrifice. with him, that our firlt parents were influcted by God t make articulate founds figuificant of ideas, notions, and things (iee Language, $n^{\circ}$ 6.), and not left to fabricate a language for themfelves. That this heaventaught language could be at firft copious, no man will fuppofe who thinks of the paucity of ideas which thofe who fooke it had to exprefs; but when we confider its origin, we cannot entertain a doubt but that it was precife and perfpicuous, and admirably adapted to all the real purpofes of life. Among thefe purpofes mutt furely be included the worfhip of God as the mof import. ant of all. Every fentiment therefore which enters into worfhip, gratitude, invocation, confeffion, and deprecation, the progenitcrs of mankind were undoubtedly taught to clothe in words the moft fignificant and unequivocal; but we know from Mofes, whofe divine legation the bifhop furely admitted, that Cain and Abel, the eldeft children of our firft parents, worfhipped God by the rites of facrifice : and can we fuppofe that this practice occurred to them from their having fo far forgotien the language taught them by their father, as to be under the neceffity of denoting by action what they could not exprefs by words? If this fuppofition be admitted, it will force another npon us fill more extravagant. Even Adam himfelf mult, in that cafe, have become dumb in confequence of his fall; for it is not conceivable, that as long as he was able to utter articulate founds, and affix a meaning to them, he would ceafe, in the prefence of his family, to confefs his fins, implore forgivenefs, and exprefs his gratitude to God tor all his mercies.

The right reverend writer, as if aware of fome fuch objection as this to his theory, contends, that if facrifices had arifen from any other fource than the light of reafon, the Scripture would not have been filent concerning that fource; " efpecially fince we find Mofes carefully recording what God immediately, and not nature, taught to Adam and his family. Had the original of facritice, fays he, been prefcribed, and direclly commanded by the Deity, the facred hiltorian could never have omitted the exprefs mention of that circumftance. The two capital obfervances in the Jewifh ritual were the Sabbath and Sacrifices. To imprefs the highelt reverence and veneration on the Sabbath, he is careful to record its divine original : and can we fuppofe that, had facrifices had the fame original, he would have neglected to eftablifh this truth at the time that he recorded the other, fince it is of equal ufe and of equal importance ? I fhould have rilid, indeed, of much greater ; for the multifarious facrifices of the Law had not only a reference to the forfeiture of Adam, but likewife prefigured our redemption .by Jefus Chrift."

But all this reafoning was forefeen, and completely anfwered before his lordfhip gave it to the public. It is probable, that though the diftinction of weeks was well known over all the eaftern world, the Hebrews, during their refidence in Egypt, were very negligent in their obfervance of the Sabbath. To enforce a religious obfervance of that facred day, it became neceffary to inform them of the time and occafion of its firft infitution, that they might keep it holy in memory of the creation; but, in a country like Egypt, the people' were indance: of holding facrifices rather in too hightl an too low veneration, fo that there was not the fame neceflity

Sacrifice. ceffity for mentioning explicitly the early infitution of them. It was fufficient that they knew the divine inflitution of their own facrinces, and the purpofes for which they were offered. Befides this, there is reafon to believe, that, in order to guard the Hebrews from the infeit ons ot the heathen, the rite of facrificing was loaded with many additional ceremonies at its fecond in ftitution under Mofes. It might, therefore, be improper to relate its original fimplicity to a rebelliwus people, who would think themleives ill-ufed by any aliditional burdens of trcuble or expence, however really neceffary to their happinefs. Bifhip Warburton fees clearly the neceflity of concealing from the Jews the fpiritual and refined nature of the Chriftian difpenfation, left fuch a backfliding people fhould, from the contemplation of it, have held in contempt their own economy. This', he thinks, is the reafon why the prophets, fpeaking of the reign of the Mefliah, borrow their images from the Mofaic difpenfation, that the people living under that difpenfation might not difpife it from perceiving its end; and we think the reafon will hold equally good for their lawgiver concealing from them the fimplicity of the firft facrifices, left they fhould be tempted to murmur at their own multifarious ritual.

But his lordfhip thinks that facrifices had their origin from the light of natural reafon. We fhould be glad to know what light natural reafon can throw upon fuch a fubject. That ignorant pagans, adoring as gods departed heroes, who ftill retained their fenfual appetites, might naturally think of appeafing fuch beings with the fat of fed beafts, and the perfumes of the altar, we have already admitted; but that Cain and Abel, who knew that the Goid whom they adored has neither body, parts, nor paffions; that he created and fuftains the univerfe; and that from his very nature he mult will the happinefs of all his creatures, fhould be led by the light of natural reafon to think of appeafing him, or obtaining favours from him, by putting to death harmlefs animals, is a pofition which no arguments of his lordfhip can ever compel us to admit. That Abel's facrifice was indeed accepted, we know; but it was not accepted becaufe it proceeded from the movements of the human mind, and the deficiency of the original language, but becaufe it was offered through faith. The light of natural, reafon, however, does not generate faith, but fcience; and when it fails of that, its offspring is abfurdity. "Faith is the fubtance of things hoped for, the evidence of things not feen," and comes not by reafoning but by hearing. What things then were they of which Abel had heard, for which he hoped, and in the faith of which he offered facrifice? Undoubtedly it was a reftoration to that immortality which was forfeited by the tranfgrefion of his parents. Of fuch redemption an obfcure intimation had been given to Adam in the promife that the feed of the woman fhould bruife the head of the ferpent; and it was doublefs to imprefs upon his mind in more friking colours the manner in which this was to be done, that bloody facrifices were firft inftituted + . As long as the import of fuch rites was thus underfood, they conflituted a perfectly rational worfhip, as they fhowed the people that the wages of fin is death; but when men funk into idolatry, and loft all hopes of a refurrection from the dead, the llaughtering of animats to appeare their deities was a practice grofsly fuperfitious. It reftVol. XVI.
ed in itfelf without pointing to amy farther end, and the grovelling worhippers believed that by their facrifices they purchafed the fayour of their deities. When once this notion was entertained, human facifices were foon introduced ; for it naturally occurred to thofe who offered them, that what they moft valued themfives would be moft acceptable to their offended gods, (fee the next article). Bv the Jewifh law, thefe abominable offerings were ftrictly forbidden, and the whole ritual of facrifice reftored to its original purity, though not fimplicity.

All Chriftian churches, the Socinian focieties or churches, not excepted, have till very lately agreed in believing that the Jewih facrifices ferved, amongft other ufes, for types of the death of Chrit and the Chriftian worhhip, (fee Type) In this belief all foter Chrittians agree fill, whillt many are of opinion that they were likewife feederal rites, as they certainly were confidered by the ancient Romans *.

Of the various kinds of Jewifh facrifices, and the fubordinate ends for which they were offered a full account is given in the books of Mofes. When an Ifraelite offered a loaf or a cake, the prieft broke it in two parts; and fetting afide that half which he referved for himfelf, broke the other into crumbs, poured oil, wine, incenfe, and falt upon it, and fpread the whole upon the fire of the altar. If thefe offerings were accompanied with the facrifice of an animal, they were thrown upon the vistim to be confumed along with it. If the offerings were of the ears of new corn, they were parched at the fire, rubbed in the hand, and then offered to the prieft in a veffel, over which he poured oil, incenfe, wine, and falt, and then burnt it upon the altar, having firtt taken as much of it as of right belonged to himielf.
The principal facrifices among the Hebrews confilted of bullocks, fheep, and goats; but doves and turtles were accepted from thofe who were not able to bring the other : thefe beatts were to be perfect, and without blemifh. The rites of facrificing were various; all of which are very minutely defcribed in the books of Mofes.

The manner of facrificing among the Greeks and Romans was as follows. In the choice of the vietim, they took care that it was without blemifh or imperfection; its tail was not to be too fmall at the end; the tongue not black, nor the ears cleft; and that the buil was one that had never been yoked. The victim being pitched upon, they gilt his forebead and horns, efpecally if a bull, heifer, or cow. The head they alfo adorned with a garland of flowers, a woollen infula or holy fillet, whence hung two rows of chaplets with twifted ribands; and on the middle of the body a kind of fole, pretty large, hung down on each fide : the leffer victims were only adorned with garlands and bundles of flowers, together with white tufts or wreaths.
The victims thus prepared were brought before the altar; the leffer being driven to the place, and the greater led by an halter; when, if they made any ftruggle, or refufed to go, the refiftance was taken for an ill omen, and the facrifice frequently fet afide. The victim thus brought was carefully examined, to fee that there was no defect in it ; then the prieft, clad in his facerdotal habit, and accompanied with the facrificers and other attendants, and being walhed and purified ac-
$\underbrace{\text { Sacrifice. cording to the ceremonies preferibed, turned to the right }} \begin{aligned} & \text { hand, and went round the altar, fprinkling it with meal }\end{aligned}$ hand, and went round the altar, fprinkling it with meal
and holy water, and allo befprinkling thofe who were prefent. Then the crier proclaimed with a loud voice, Who is here ? To which the people replied, Many and good. The prieft then havirg exhorted the people to join with him by faying, Let us pray, confeffed his own unworthinefs, acknowledging that he had been guilty of divers fins; for which he begged pardon of the gods, hoping that they would be pleafed to grant his requefts, accept the oblations offered them, and fend them all health and happinefs ; and to this general form added petitions for fuch particular favours as were then defired. Prayers being ended, the prieft took a cup of wine ; and having tafted it himfelf, caufed his affitiants to do the like; and then poured forth the remainder between the horns of the victim. Then the prieft or the crier, or fometimes the moft honourable perfon in the company, killed the beaft, by knocking it down or cutting its throat. If the facrifice was in honour of the celeftial gods, the throat was turned up towards heaven, but if they facrificed to the heroes or infernal gods, the victim was killed with its throat towards the ground. If by accident the beaft efcaped the ftroke, leaped up after it, or expired with pain and difficulty, it was thought to be unacceptable to the gods. The beaft being killed, the prieft infpected its entrails, and made predictions from them. They then poured wine, together with frankincenfe, into the fire, to increafe the flame, and then laid the facrifice on the altar ; which in the primitive times was burnt whole to the gods, and thence called an bolocauft; but in after.times, only part of the victim was confumed in the fire, and the remainder referved for the facrificers; the thighs, and fometimes the entrails, being burnt to their honour, the company feafted upon the reft. During the facrifice, the prieft, and the perfon who gave the facrifice, jointly prayed, laying their hand upon the altar. Sometimes they played upon mufical inftruments in the time of the facrifice, and on fome occafions they danced round the altar, finging facred hymns in honour of the god.

Human Sacrifices, an abominable practice, about the origin of which different opinions have been formed.The true account feems to be that which we have given in the preceding article. When men had gone fo far as to indulge che fancy of bribing their gods by facrifice, it was natural for them to think of enhancing the value of fo cheap an alonement by the coft and rarity of the offering; and, oppreffed with their malady, they never refted till they bad got to that which they conceived to be the moft precinus of all, a human facrifice. "It was cuftomary (fays Sanchoniathon $\dagger$ ), in ancient times, in great and public calamities, before things became incurable, for princes and magiftrates to otfer up in facrifice to the avenging demons the deareft of their offspring," Sanchu niathon wrote of Phœenicia, but the practice prevailed in every nation under hèven of which we have received any ancient account. The Egyptians had it in the early part of their monarchy. The Cretans likewife had it, and retained it for a longer time. The nations of Arabia did the fame. The people of Dumah, in particular, facrificed every year a child, and buried it underneath an altar, which they made ufe of tuntead of an idol; for they did not admit of images.

The Perfians buried people alive. Ameftris, the wife of Xerxes, entombed 12 perfons quick under ground for the good of her foul. It would be endlefs to enumerate every city, or every province, where thefe dire practices obtained. The Cyprians, the Rhodians, the Phoceans, the Ionians, thofe of Chios, Lefbos, Te nedos, all had human facrifices. The natives of the Tauric Cherfonefus offered up to Diana every Atranger whom chance threw upon their coaft. Hence arofe that jut expoftulation in Euripides upon the inconfiftency of the proceeding; wherein much good reafoning is implied. Iphigenia wonders, as the goddefs delighted in the blood of men, that every villain and murderer fhould be privileged to efcape, nay be driven from the threfhold of the temple ; whereas, if an honeft and virtuous man chanced to ftray thither, he only was feized upon, and put to death. The Pelafgi, in a time of fcarcity, vowed the tenth of all that fhould be born to them for a facrifice, in order to procure plenty. Ariftomenes the Meffenian flew 300 noble Lacedemonians, among whom was Theopompus the king of Sparta, at the altar of Jupiter at Ithome. Without doubt the Lacedemonians did not fail to make ample returns; for they were a fevere and revengeful people, and offered the like victims to Mars. Their feftival of the Diamaftigofis is well known; when the Spartan boys were whipped in the fight of their parents with fuch feve rity before the altar of Diana Orthia, that they often expired under the torture. Phylarchus affirms, as he is quoted by Porphyry, that of old every Grecian ftate made it a rule, before they marched towards an enemy, to folicit a bleffing on their undertakings by human victims.
The Romans were accufomed to the like facrifices. They both devoted themfelves to the infernal gods, and conftrained others to fubmit to the fame horrid doom. Hence we read in Titus Livius, that, in the confulate of Æmilius Paulus and Terentius Varro, two Gauls, a man and a woman, and two in like manner of Greece, were buried alive at Rome in the Ox-market, where was a place under ground, walled round, to receive them; which had befure been made ufe of for fuch cruel purpofes. He fays it was a facrifice not properly Roman, that is, not originally of Roman inftitution; yet it was frequently practied there, and that too by public authority. Plufarch makes mention of a like inftance a few years before, in the confulithip of Flaminius and Furius. There is reafon to think, that all the principal captives who graced the triumphs of the Romans, were at the clofe of that cruel pageantry put to death at the altar of Jupiter Capitolinus. Caius Marius offered up his own daughter tor a victim to the Dii Averrunci, to procure fuccefs in a battle againg the Cimbri ; as we are informed by Dorotheus, quoted by Clemens. It is likenife attented by Plutarch, who fays that her name was Calpurnia. Marius was a man of a four and blocdy dilpofition; and had probably heard of fuch facrificts being offered in the enemy's camp, among whom they were very common, or he might bive beheld them exhibited at a diftance; and therefore murdered what was neareft, and fhould have been deareft to him, to counteract their fearful fpells, and outdo them in their wicked machinely. Cícero, makit,g mention of this cuftom being common in Gaul, adds, that it prevailed among that people even at the

## S A C

3 acrifice. $\underbrace{3}$ me he was feaking : from whence we may be led to infer, that it was then difcontinued among the Romans. And we are told by Pliny, that it had then, and not very long, been difcouraged. For there was a law enatked, when Lentulus and Craffus were confuls, fo late as ine 657 th year of Rome, that there thould be no more human facrifices: for till that time thofe horrid rites had been celebrated in broad day without any mafk or controul ; which, had we not the beft evidence for the fact, wouid appear fcarce credible. And however they may have been difcontinued for a time, we find that they were again renewed; tho' they became not fo public, nor fo general. For not very long after this, it is reported of Augultus Cæfar, when Perufia furrendered in the time of the fecond triumvirate, that befides multitudes executed in a military manner, he offered up, upon the Ides of March, 300 chofen perfons, both of the equeftian and fenatorial order, at an altar dedicated to the manes of his uncle Julius. Even at Rome itfelf this cuftom was revived: and Porphyry affures us, that in his time a man was every year facrificed at the fhrine of Jupiter Latialis. Heliogabalus offered the like viatims to the Syrian deity which he introduced among the Romans. The fame is faid of Aurelian.

The Gauls and the Germans were fo devoted to this fhocking cultom, that no bufinefs of any moment was tranfacted among them without being prefaced with the blood of men. . They were offered $u_{p}$ to various gods; but particularly to Hefus, Taranis, and Thautates. Thefe deities are mentioned by Lucan, where he enumerates the various nations who followed the fortunes of Cæfar.

The altars of thefe gods were far removed from the ccmmon refort of men; being generally fituated in the depth of woods, that the gloom might add to the horror of the operation, and give a reverence to the place and proceeding. The perfons devoted were led thither by the Druids, who prefided at the folemnity, and performed the cruel offices of the facrifice. Tacitus takes notice of the cruelty of the Hermunduri, in a war with the Catti, wherein they had greatly the advantage; at the clofe of which they made one general facrifice of all that was taken in battle. The poor remains of the legions under Varus fuffered in fome degree the fame fate. There were many places deftined for this purpofe all over Gaul and Germany ; but efpecially in the mighty woods of Arduenna, and the great Hercynian foreft; a wild that extended above 30 days journey in length. The places fet apart for this folemnity were held in the utmolt reverence, and only approached at particular feafons. Lucan mentions a grove of this fort near Mafflia, which even the Roman foldiers were afraid to violate, though commanded by Cæfar. It was one of thofe fet apart for the facrifices of the country.

Claudian compliments Stilicho, that, among other advantages accruing to the Roman armies through his conduct, they could now venture into the awful foreft of Hercynia, and follow the chafe in thofe fo much dreaded woods, and otherwife make ufe of them.

Thefe practices prevailed among all the people of the north, of whatever denomination. The Maffagetx, the Scythians, the Getes, the Sarmatians, all the various nations upon the Baltic, particularly the

## 595 ] $\quad$ A C

Suevi and Scandinavians, held it as a fixed principle, that their happinefs and fecurity could not be obtained but at the expence of the lives of otiners. Their chief gods were Thor and Woden, whom they thought they could never fufficiently glut with blood. They had many very celebrated places of worfhip; efpecially in the ifland Rugen, near the mouth of the Oder; and in Zealand: fome, too, very famous amorg the Semnones and Naharvalli. But the molt reverenced of all; and the moft frequented, was at Upfal; where there was every year a grand celebrity, which continued fo: nine days. During this term they facrificed animals of all forts: but the moft acceptable victims, and the molt numercus, were men. Of thefe facritices none were efteemed fo aufpicious and falutary as a facrifice of the prince of the country. When the lot fell for the king to die, it was received with univerfal acclamations and every expreffion of joy; and it once happened in the time of a famine, when they caft lots, and it fell to king Domalder to be the people's victim: and he was accordingly put to death. Olaus Tretelger, another prince, was burnt alive to Woden. They did not fpare their own children. Harald the fon of Gunild, the firf of that name, dew two of his children to obtain a ftorm of wind. "He did not let (fays Verftegan) to facrifice two of his fons unto his idols, to the end he might obtain of them fuch a tempeft at fea, as fhould break and difperfe the fhipping of Harald king of Denmark." Saxo Grammaticus mentions a like fact. He calls the king Haquin ; and fpeaks of the perfons put to death as two very hopeful young princes. Another king flew nine fons to prolong his own life; in hopes, perbaps, that what they were abridged of would in great meafure be added to himfelf. Such inftances, however, occur not often, but the common victims were without end. Adam Bremenfis, fpeaking of the awful grove at Upfal, where thefe horrid rites were celebrated, fays, that there was not a fingle tree but what was reverenced, as if it were gifted with fome portion of divinity: and all this becaufe they were ftained with gore and foul with human putrefaction. The fame is obferved by Scheiffer in his account of this place.

The manner in which the victims were flaughtered, was diverfe in different places. Some of the Gaulifh nations chined them with a ftroke of an ax. The Cel$t æ$ placed the man who was to be offered for a facrifice upon a block, or an altar, with his brealt upwards, and with a fword ftruck him forcibly acrofs the fternum; then tumbling him to the ground, from his agonies and convulfious, as well as from the effufion of blood, they formed a judgment of future events. The Cimbri ripped open the bowels; and from them they pretended to divine. In Norway they beat men's brains out with an ox-yoke. The fame operation was performed in Iceland, by dafhing them againft an altar of itone. In many places they transfixed them with arrows. After they were dead, they fufpended them upon the trees, and left them to putrefy. One of the writers above quoted mentions, that in his time 70 carcafes of this fort were found in a wood of the Scevi. Dithmar of Merfourgh, an author of nearly the fame age, fpeaks of a place called Ledur in Zealand, where there were every year 99 perfons facrificed to the god Swantowite. During thefe bloody feftivals a general

## S A C <br> S A C

Sacrifice. joy prevailed, and banquets were moft royally ferved.
They fed, caroufed, and gave a loofe to indulgence, which at other times was not permitted. They imagined that there was fomething mylterious in the number nine: for which reafon thefe fealts were in fome places celebrated every ninth year, in others every ninth month ; and continued for nine days. When all was ended, they wafhed the image of the deity in a pool; and then difmiffed the affembly. Their fervants were numerous, who attended during the term of their fealting, and partook of the banquet. At the clofe of all, they were fmothered in the fame pool, or otherwife made away with. On which Tacitus remarks, how great an awe this circumftance muft neceffarily infufe into thofe who were not admitted to thefe myfteries.

Thefe accounts are handed down from a variety of authors in different ages; many of whom were natives of the countries which they defcribe, and to which they feem ftrongly attached. They would not therefore have brought fo foul an imputation on the part of the world in favour of which they were each writing, nor could there be that concurrence of teftimony, were not the hiftory in general true.

The like cuftom prevailed to a great degree at Mexico, and even under the mild government of the Peruvians; and in moft parts of America. In Africa it is ftill kept up; where, in the inland parts, they facrifice fome of the captives taken in war to their fetiches, in order to fecure their favour. Snelgrave was in the king of Dahoome's camp, after his inroad into the countries of Ardra and Whidaw ; and fays, that he was a witnefs to the cruelty of this prince, whom he faw facrifice multitudes to thed eity of his nation.

The fame abominable worfhip is likewife practifed occafionally in the iflands vifited by Captain Cook, and other circumnavigators, in the South Sea. It feems indeed to have prevailed in every country at one period of the progrefs of civilization, and undoubtedly had the origin which we have affigned to it.

The facrifices of which we have been treating, if we except fome few inftances, conffted of perfons doomed by the chance of war, or affigned by lot, to be offered. But among the nations of Canaan, the victims were peculiarly chofen. Their own children, and whatever was neareft and deareft to them, were deemed the moft worthy offering to their god. The Carthaginians, who were a colony from Tyre, carried with them the religion of their mother-country, and inftituted the same worlhip in the parts where they fettled. It confifted in the adoration of feveral deities, but particularly of Kronus; to whom they offered human facrifices, and efpecially the blood of children. If the parents were not at hand to make an immediate offer, the magiItrates did not fail to make choice of what was moft fair and promifing, that the god might not be defrauded of his dues. Upon a check being received in Sicily, and fome wher alarming circumftances happening, Hamilcar without any hefitation laid hold of a boy, and offered him on the fpot to Kronus; and at the fame time diowned a number of priefts, to appeafe the deity of the fea. The Carthaginians another time, upon a great defeat of their army by Agathocles, imputed their mifcarriages to the anger of this god, whofe fervices had been neglected. Touched with this, and feeing the
enemy at their gates, they feized at once 300 children of the prime nobility, and, ffered them in public for a facrifice. Three hundred move, being perfons who were fomehow obnoxious, yielded themfelves voluntarily, and were put to death with the others. The negleet of which they accufed themfelves, confifted in facrificing children purchafed of parents among the poorer fort, who xeared them for that purpofe, and not felecting the moft promifing, and the moft honourable, as had been the cultom of old. In fhort, there were particular chitdren brought up for the altar, as fheep are fattened for the thambles; and they wete bought and butchered in the fame manner. But this indifcriminate way of proceeding was thought to have given offence. It is remarkable, that the Egyptians looked out for the mof fpecious and handfome perfon: to be facrificed. The Albanians pit hed upon the beft man of the community, and made him pay for the wickednefs of the reft. The Carthaginians chofe what they thought the moft excellent, and at the fame time the molt dear to them; which made the lot fall heavy upon their children. This is taker notice of by Silius Italicus in his fourth book.

Kronus, to whom thefe facrifices were exhibited, was an oriental deity, the god of light and fire; and therefore always worfhiped with fome reference to that element. See Phoenicia.

The Greeks, we find, called the deity to whom thele offerings were made Agraulos; and feigned that fhe was a woman, and the daughter of Cecrops. But how came Cecrops to have any connection with Cy prus? Agraulos is a corruption and tranfpofition of the original name, which fhould have been rendered Uk $E l$ Aur, or Uk El Aurus; but has, like many orher oriental titles and names, been ftrangely fophifticated, and is here changed to Agraulos. It was in reality the god of light, who was always worfhipped with fire. This deity was the Moloch of the Tyrians and Canaanites, and the Melech of the Ealt; that is the great and principal god, the god of light, of whom fire was efteemed a fymbol; and at whofe flirine, inftead of viler vistims, they offered the blood of men.

Such was the Kronus of the Greeks, and the Moloch of the Phoenicians: and nothing can appear more fhocking than the facrifices of the Tyrians and Carthaginians, which they performed to this idol. In all emergencies of ftate, and times of general calamity they devoted what was moft neceffary and va. luable to them for an offering to the gods, and particularly to Moloch. But befides thefe andetermined times of bloodfhed, they had particular and preferibed feafons every year, when children were chofen out of the molt noble and reputable families, as before mentioned. If a perfon had an only child, it was the more liable to be put to death, as being efteemed more acceptable to the deity, and more efficacious for the general good. Thofe who were facrificed to Kronus. were thrown into the arms of a molten idol, which ftood in the midla of a large fire, and was red with heat. The arms of it were ftretched out, with the hands turned upwards, as it were to receive them: yet floping downwards, fo that they dropt from thence into a glowing furnace below. To other gods they were otherwife fliughtered, and, as it is implied, by the very hands of their parents. What can be more

Sactifice. horrid to the imagination, than to fuppofe a father leading the deareft of all his fons to fuch an infernal larine? or a mother the molt engaging and affectionate of her daughters, jult riting to maturity, to be flaughtered at the alcar of Alhtaroth or Baal? Juftin delcribes this umnatural cultom very patherically: Quippe bomines, ut widitimas, immolabant: et impuberes (que atas bofium mifericordiam provocat) aris admovebant; pacem fanguine eorum expofcentes, pro quorum vita Dii rogari maxime folent. Such was their blind zeal, that this was continually practifed; and fo much of nataral affection ftill left unextinguifhed, as to render the fcene ten times more fhocking from the tendernefs which they feemed to exprefs. They embraced their children with great fondnefs, and encouraged them in the gentleft terms, that they might not be appalled at the fight of the hellih procefs; begging of them to fubmit with cheerfulnefs to this fearful opera. tion. If there was any appearance of a tear rifing, or a cry unawares efcaping, the mother fmothered it with her kiffes, that there might not be any fhow of backwardnefs or conftraint, but the whole be a freewill offering. Thefe cruel endearments over, they ftabbed them to the heart, or otherwife opened the fluices ot life; and with the blood warm, as it ran, befmeared the altar and the grim vifage of the idol. Thefe were the cuftoms which the Ifraelites learned of the people of Canaan, and for which they are upbraided by the Pfalmift: "They did not dettroy the nations, concerning whom the Lord commanded them; but were mingled among the heathen, and learned their works: yea, they facrificed their fons and their daughters unto devils, and thed innocent blood, even the blood of their fons and of their daughters, whom they facrificed unto the idols of Canaian; and the land was polluted with blood. Thus were they defiled with their own works, and went a-wh ring with their own inventions."

Thefe cruel rites, practifed in fo many nations, made Plutarch debate with himfelf. "Whether it would not have been better for the Galatæ, or for the Scythians, to have had no tradition or conception of any fuperior beings, than to have formed to themfelves notions of gods who delighted in the blood of men; of gods, who efteemed human victims the moft acceptable and: perfect facrifice? Would it not (fays he) have been more eligible for the Carthaginians to have had the atheift Critias, or Diagoras, their lawgiver, at the commencement of their polity, and to have been taught, that there was neither god nor demon, than to have facrificed, in the manner they were wont, to the god which they adored? Wherein they acted, not as the perfon did whom Empedocles defcribes in fome poetry, where he expores this unnatural cultom. The fire there with many idle vows offers up unwittingly his fon $f \mathrm{r}$ a facrifice; but the youth was fo changed in feature and figure, that his father did not know him. Teefe people ufed, knowingly and wilfully, to go through this bloojy work, and flaughter their own offspring. Even they who were childlefs would not be exempted from this curfed tribute; but purchafed children, at a price, of the poorer fort, and put them to death with as little remorfe as one would kill a lamb or a chicken. The mother, who facrificed her child, ftood by, without any feeming fenfe of what the was lofing, and without uttering a groan. If a figh did
by chance efcape, the loft all the horour which fie ssimitegt propofed to herfelf in the offering, and the child was II notwithftanding flain. All the time of this ceremony, Sanducees. while the children were murdering, there was a noife of clarions and tabors founding before the idol, that the cries and fhrieks of the victims might not be heard. "Tell me now (fays Plutarch) if the montters of old, the Typhons, and the giants, were to expel the gods, and to rule the world in their ftead; could they require a fervice more horrid than thefe infernal rites and facrifices?"

SACRILEGE, sacrilegium, the crime of profaning facred things, or things devoted to God; or of alienating to laymen, or common purpofes, what was given to religious perfons and pious ufes.

SACRISTAN, a church-officer, otherwife called Sexton.

SACRISTY, in church-hitory, an apartment in a church where the facred utenfils were kept, being the fame with our Vestri.

SADDLE, is a feat upon a horfe's back, contrived for the conveniency of the rider.

A hunting-faddle is compofed of two bows, two bands, fore-bolfters, pannels, and faddle-ftraps; and the great faddle has, befides thefe parts, corks, hind-boliters, and a trouflequin.

The pommel is common to both.
SADDUCEES, were a famous fect among the ancient Jews, and confited of peifons of great quality and opulence. Refpecting their origin there are various accounts and various opinions. Epiphanius, and after him many other writers, contend, that they took their rife from Dofitheus a fectary of Samaria, and their name from the Hebrew word p7s juff or jufice; from the great juftice and equity which they fhowed in all their actions; a derivation which neither fuits the word Sadducee nor the general character of the fect. They are thought by fome too to have been Samaritans; but this is by no means probable, as they always attended the worfhip and facrifices at Jerufalem and never at Gerizzim.

In the Jewifh Talmud we are told that the Saddu. cees derived their name from Sadoc, and that the fect arofe about 260 years before Chrift in the time of Antigonus of Socho, prefident of the Sanhedrim at Jerufalem, and teacher of the law in the principal divinity fchool of that city. He had often in his lectures, it feems, taught his fcholars, that they ought not to ferve God as flaves do their mafters, from the hopes of a reward, but merely ont of filial love for his own fake; from which Sadoc and Baithos inferred that there were no rewards at all after this life. They therefore fepa. rated from their malter, and taught that there was no refurrection nor future ftate. This new doctrine quickly fpread, and gave rife to the fect of Sadducees, whicl in many refpects refembled the Epicureans.

Dr Prideaux thinks, that the Sadducees were at firft no. more than what the Caraites are now; that is, they would not receive the traditions of the elders, but ftuck to the written word only; and the Pharifees being grat promoters of thofe traditions, hence thefe two fects became directly oppofite to each other. See Prideaux's Conn, part. ii b. 2: and 3. and fee alfo Pharisees and Ca~ raites.

Afterwards the Sadducees imbibed other doctrises, which

Saducees. which rendered them a fect truly impious; for they denied the refurrection of the dead, and the exiftence of angels, and of the fpirits or fiuls of men departed (Mat, xxii. 23. Acts xxiii. 8.) They held, that there is no fpiritual being but God only; that as to man, this world is his all. Trey did not deny but that we had reafonable fouls: but they maintained this foul was mortal; and, by a neceffary confequence, they denied the rewards and punifhments of another life. They pretended alfo, that what is faid of the exiltence of angels, and of a future refurrection, are nothing but illufions. St Ep phanius, and after him St Auftin, have advanced, that the Sadducees denied the Holy Ghoft. But neither Jofephus nor the evangelifts accufe them of any error like this. 1t has been alfo imputed to them, that they thought God, corporeal, and that they received none of the prophecies.

It is pretty dificult to apprehend how they could deny the being of angels, and yet receive the books of Mofes, where fuch frequent mention is made of angels and of their appearances. Grotius and M. Le Clerc obferve, that it is very likely they looked upon angels, not as particular beings, fubfifting of themfelves, but as powers, emanations, or qualities, infeparable from the Deity, as the fun-beams are infeparable from the fun. Or perhaps they held angels not to be fpiritual but mortal ; jult as they thought that fubftance to be which animates us and thinks in us. The ancients do not tell us how they folved this difficulty, that might be urged againit them from fo many paffages of the Pentateuch, where mention is made of angels.

As the Sadducees acknowledged neither punifhments nor recompenfes in another life, fo they were inexorable in their chaftifing of the wicked. They obferved the law themfelves, and caufed it to be obferved by others, with the utmoft rigour. They admitted of none of the traditions, explications, or modifications, of the Pharifees; they kept only to the text of the law; and maintained, that only what was written was to be obGerved.

The Sadducees are accufed of rejecting all the books of Scripture except thofe of Mofes; and to fupport this opinion, it is obferved, that our Saviour makes ufe of no Scripture againft them, but paffages taken out of the Pentateuch. But Scaliger produces good proofs to vindicate them from this reproach. He obferves, that they did not appear in Ifrael till after the number of the holy books were fixed; and that if they had been to choofe out of the canonical Scriptures, the Pentateuch was lefs favourable to them than any other book, fince it often makes mention of angels and their apparition. Befides, the Sadducees were prefent in the temple and at other religious affemblies, where the books of the prophets were read indifferently as well as thofe of Mofes. They were in the chief employs of the nation, many of them were even priefts. Would the Jews have fuffered in thefe employments perfons that rejected the greateft part of their Scriptures? Menaffe-ben-Ifrael fays exprefsly, that indeed they did not reject the prophets, but that they explained them in a fenfe very different from that of the other Jews.

Jofephus affures us, that they denied deftiny or fate; alleging, that thefe were only founds void of fenfe, and that all the good or evil that happens to us is in confe-
quence of the good or evil fide we have taken, by the Sadducces. free choice of our will. They faid alto, that Gud was far removed from doing or knowing evil, and that man was the abfolute matter of his own actions. This was roundly to deny a providence; and upon this footing I know not, fays $F$. Calmet, what could be the religion of the Sadducees, or what influence they could afcribe to God in things here below. However, i: is certain they were not only tolerated among the Jews, but that they were admitted to the high-priefthood iffelf. John Hircanus, high-prielt of that nation, feparated himfelf in a fignal manner from the fect of the Pharifees, and went over to that of Sadoc. It is faid alfo, he gave ftrit command to all the Jews, on pain of death, to receive the maxims of this fect. Ariftobulus and Alexander Jannæus, fon of Hircanus, continued to favour the Sadducees; and Maimonides affures us, that under the reign of Alexander Jannæis, they had in poffeffion all the offiees of the Sanhedrim, and that there only remained of the party of the Pharifees, Simon the fon of Secra. Caiaphas, who condemned Jefus Chrilt to death, was a Sadducee (Acts, v. 17. iv. 1.) ; as alfo Ananus the younger, who put to death St James the brother of our Lord. At this day, the Jews hold as heretics that frall number of Sadducees that are to be found among them. See upon this matter Serrar. Tiibaref. Menaffe ben-Ifrael, De Refurrectione mortuorum; Bafnage's Hiflory of the Fews, \&c. ; and Calmet's Differtation upon the Sects of the Ferws before the Commentary of St Mark.

The fect of the Sadducees was much reduced by the deftruction of Jerufalem, and by the differfion of the Jews; but it revived afterwards. At the beginning of the third century it was fo formidable in Egypt, that Ammonim, Origen's malter, when he faw them propagate their opinions in that country, thought himfelf obliged to write againft them, or rather againft the Jews, who tolerated the Sadducees, though they denied the fundamental points of their religion. The emperor Juftinian mentions the Sadducees in one of his novels, banifhes them out of all the places of his dominions, and condemns them to the fevereft punifhments, as people that maintained atheiftical and impious tenets; denying the refurrection and the laft judgment. Annus, or Ananus, a difciple of Juda, fon of Nachman, a famous rabbin of the 8 th century, declared himfelf, as it is faid, in favour of the Sadducees, and ftrenuouily protected them againft their adverfaries. They had alfo a celebrated defender in the 12 th century, in the perfon of Alpharag a.Spanith rabbin. This doctor wrote againtt the Pharifees, the declared enemies of the Sadducees; and maintained by his public writings, that the purity of Judaifm was only to be found among the Sadducees; that the traditions avowed by the Pharifees were ufelefs; and that the ceremonies, which they had multiplied without end, were an unfupportable yoke. The rabbi Abraham-ben-David Italleri replied to Alpharag, and fupported the fect of the Pharifees by two great arguments, that of their univerfality and that of their antiquity. He proved their antiquity by a continued fucceffion from Adam down to the year 1167 ; and their univerfality, becaufe the Pbarifees are fpread all the world over, and are found in all the fynagogues. There are ftill Sadducees in Africa and in feveral other places. They deny the immortality of the foul, and

Sadier the refurrection of the body: but they are rarely found, at leaft there are but few who declare themfelves for thefe opinions.

SADLER (John), was defcended from an ancient family in Shropfhire; born in 1615 ; and educated at Cambridge, where he became eminent for his great knowledge in the oriental languages. He removed to Lincoln's-Inn, were he made no fmall progrefs in the ftudy of the law and in 1644 was admitted one of the mafters in chancery, as alfo one of the two mafters of requefts. In I 649 he was chofen town-clerk of London and the fame year publifhed his Rights of the kingdom. He was greatly efteemed by Oliver Cromwell, by whofe fpecial warrant he was continued a mafter in Chancery, when their number was reduced to fix. By his intereft it was that the Jews obtained the privilege of building for themfelves a fynagogue in London. In 1658 he was made member of parliament for Yarmouth; and next year was appointed firt commiffioner under the great feal with Mr Taylor, Mr Whitelocke, and others, for the probate of wills. In 1660 he publifhed his Olbia. Soon after the Reftoration, he loft all his employments. In the fire of London in 1666, he was a great fufferer ; which obliged him to retire to his feat of Warmwell in Dorfethire, where he lived in a private manner till 1674 , when he died.

SADOC, a famous Jewifh rabbi, and founder of the fect of the Sadducees.

SADOLET (James), a polite and learned cardinal of the Romifh church, born at Modena in 1477. Leo X. made him and Peter Bembus his fecretaries, an office for which they were both well qualified; and Sadolet was foon after made bifhop of Carpentras, near Avignon : he was made a cardinal in 1536 by Paul III. and employed in feveral negociations and embaffies. He died in 1547, not without the fulpicion of poifon, for correfponding too familiarly with the Proteftants, and for teftifying too much regard for fome of their doctors. His works, which are all in Latin, were collected in 1607 at Mentz, in one volume 8vo. All his contemporaries fpoke of him in the higheft terms.

SAFE-GUard, a protection formerly granted to a ftranger who feared violence from fome of the king's fubjects for feeking his right by courfe of law.

SAFE Conduct, is a fecurity given by a prince under the great feal, to a ftranger for his fafe-coming into and paffing out of the realm; the form whereof is in Reg. Orig. 25. There are letters of fafe conduct which mult be enrolled in chancery ; and the perfons to whom granted muft have them ready to fhow; and touching which there are feveral ftatutes. See Prerogative.

SAFFRON, in the materia medica, is formed of the ftigmata of the crocus officinalis *, dried on a kiln, and

- Sce Cro- preffed together into cakes. Of this there are two cus.

The faffron ground is feldom above three acres, or lefs than one ; and in choofing, the principal thing they
have regard to is, that they be well expofed, the foil not pour, nor a very fiff clay, but a temperate dry mould, fuch as commonly lies upon chalk, and is of an hazel colour ; though, if every thing elfe anfwers, the colour of the mould is pretty much neglected.

The ground being made choice of, about Lady-day or the beginning of April, it muft be carefully ploughed, the furrows being drawn much clofer together, and deeper if the foil will allow it, than is done for any kind of corn ; and accordingly the charge is greater.

About five weeks after, during any time in the month of May, they lay between 20 and 30 loads of dung upon each acre, and having fpread it with great care, they plough it in as before. The fhorteft rotten dung is the beft; and the farmers, who have the conveniency of making it, fpare no pains to make it good, being fure of a proportionable price for it. About midfummer they plough a third time, and between every 16 feet and an half they leave a broad furrow or trench, which ferves both as a boundary to the feveral parcels, and for throwing the weeds into at the proper feafon. The time of planting is commonly in the month of July. The only inftrument ufed at this time is a fmall narrow fpade, commonly called a fpit-hovel. The method is this: One man with his fhovel raifes about three or four inches of earth, and throws it before him about fix or more inches. Two perfons, generally women, follow with roots, which they place in the farthelt edge of the trench made by the digger, at about three inches from each other. As foon as the digger has gone once the breadth of the ridge, he begins again at the other fide; and, digging as before, covers the roots lait fet, which makes room for another row of roots at the fame diftance from the firf that they are from one another. The only dexterity neceflary in digging is, to leave fome part of the firft fratum of earth untouched, to lie under the roots; and, in fetting, to place the roots directly upon their bottom. The quantity of roots planted on an acre is generally about 16 quarters, or $12:$ bulhels. From the time of planting till the beginning of September, or fometimes later, there is no more labour required; but at that time they begin to vegetate, and are ready to fhow themielves above ground, which may be known by digging up a few of the roots. The ground is then to be pared with a fharp hoe, and the weeds raked into the furrows, otherwife they would hinder the growth of the faffron. In fome time after, the flowers appear.

They are gathered before they are full blown, as well as after, and the proper time for it is early in the morning. The owners of the faffron-fields get together a fufficient number of hands, who pull off the whole flowers, and throw them by handfuls into a bancet, and fo continue till about in o'clock. Having then carried home the flowers, they immediately fall to picking out the figmata 0 r chives, and together with them a pretty large proportion of the ftylus itfelf, or ftring to which they are attached: the reft of the flower they throw away as ufelefs. Next morning they return to the field, without regarding whether the weather be wet or dry; and fo on daily, even on Sundays, till the whole crop is gathered.-The next labour is to dry the chives on the kilg The kiln is built upon a thich
plank

Suffron. ner
plank, that it may be moved from place to place. It is thoroughly from earth, decayed old pieces, involucra, fupported by four thorr legs; the outfide confifts of eight pieces of wood of three inches thick, in form of a quadrangular frame, about 12 inches fquare at the bottom on the inlide, and 22 on the upper part; which laft is likewile the perpendicular height of it. On the forefide is left a hole of about eight inches fquare, and four inches above the plank, through which the fire is put in ; over all the reft laths are laid pretty thick, clofe to one another, and nailed to the frame already mentioned. They are then plattered over on both fides, as are alfo the planks at bottom, very thick, to ferve for an hearth. Over the mouth is laid a haircloth, fixed to the edges of the kiln, and likewife to two rollers or moveable pieces of wood, which are turned by wedges or fcrews, in order to ftretch the cloth. Inftead of the hair-cloth, fome people ufe a net-work of iron-wire, by which the faffron is fooner dried, and with lefs fuel ; but the difficulty of preferving it from burning makes the hair-cloth preferred by the belt judges. The kiln is placed in a light part of the houfe; and they begin with putting five or fix fheets of white paper on the hair-cloth, and upon thefe they lay out the wet faffron twn or three inches thick. It is then covered with fome other theets of paper, and over thefe they lay a coarfe blanket five or fix times doabled, or inftead of this, a canvas pillow filled with ftraw; and after the fire has been lighted for fome time, the whole is covered with a board having a confiderable weight upon it. At firlt they apply a pretty frong heat, to make the chives frweat as they call it; and at this time a great deal of care is necelfary to prevent burning. When it has been thus dried about an hour, they turn the cakes of faffron upfide down, putting on the coverings and weight as before. If no finifter accident happens during thefe firt two hours, the danger is thought to be over; and nothing more is requifite than to keep up a very gentle fire for 24 hours, turning the cake every half hour. That fuel is beft which yields the leatt fmoke; and for this reafon charcoal is preferable to all others.

The quantity of faffron produced at a crop is uncertain. Sometimes five or fix pounds of wet chives are got from one rood, fometimes not above one or two; and fometimes not fo much as is fufficient to defray the expence of gathering and drying. But it is always obferved, that about five pounds of wet faffron go to make one pound of dry for the firlt three weeks of the crop, and fix pounds during the laft week. When the heads are planted very thick, two pounds of dry faffron may at a medium be allowed to an acre for the firft crop, and 24 pounds for the two remaining ones, the third being confiderably larger than the fecond.

To obtain the fecond and third crops, the labour of heeing, gathering, picking, \&c. already mentioned, muft be repeated; and about midfummer, after the third crop is gathered, the roots mult all be taken up and tranf. planted. For taking up the roots, fometimes the plough is made ufe of, and fometimes a forked hoe ; and then the ground is harrowed once or twice over. During all the time of ploughing, harrowing, \&c. 15 or more people will find work enough to follow and gather the heads as they are turned up. The roots are next to be carried to the houfe in facks, where they are cleaned and rafed. This labour confifts in cleaning the roots
or excrefcences; after which they become fit to be planted in new grou:ud immediate'y, or they may be kept for fome time, without danger of fpoiling. The quantity of roots taken up in proportion to thofe planted is uncertain ; but, at a medium, 24 quarters of clean roots, fit to be planted, may be had from each acre.There fometimes $h_{d}$ ppens a remarkable change in the roots of faffron and fome other plants. As foon as they begin to fhoot upwards, there are commonly two or three large tap-roots fent forth from the fide of the old one, which will sur, two or three inches deep into the ground. At the place where thefe bulbs firt come out from, the old one will be formed fometimes, though not always, and the tap-root then decays. The bulb increafes in bignefs, and at laft falls quite off; whici commonly happens in April. But many times thefe tap-roots never produce any bulbs, and remain barren for ever after. All fuch roots therefore fhould be thrown away in the making a new plantation. This degeneracy of the roots is a difeafe for which no cure is as yet known.

When faffron is offered to fale, that kind ought to be chofen which has the broadeft blades; this being the mark by which Englifk faffron is diftinguifhed from the foreign. It ought to be of an orange or fiery-red colour, and to yield a dark yeHow tineture. It fhould be chofen frefh, not above a year old, in clofe cakes, neither dry nor yet very moif, tough and firm in tearing, of the fame colour within as without, and of a ftrong, acrid, diffufive fmell.

This drug has been reckoned a very elegant and ufeful aromatic. Befides the virtues it has in common with other fubftances of that clafs, it has been accounted one of the higheft cordials, and is faid to exhilarate the firits to fuch a degree as, when taken in large dofes, to occafion immoderate mirth, involuntary laughter, and the ill effects which follow from the abufe of fpirituous liquors. This medicine is particularly ferviceable in hyfteric depreffions proceeding from a cold caufe or obftruction of the uterine fecretions, where other aromatics, even thofe of the more generous kind, have little effect. Saffron imparts the whole of its virtue and colour to rectified fpirit, proof-fpirit, wine, vinegar and water. A tincture drawn with vinegar lofes greatly of its colour in keeping ; the watery and vinous tinctures are apt to grow four, and then lofe their colour alfo : that made in pure fpirit keeps in perfection for many years.

Meadow-Saffron. See Colchicum.
SAGAN, in fcripture-hiitory, the fuffragan or deputy of the Jewilh high prieft. According to fome writers, he was only to officiate for him when he was rendered incapable of attending the fervice through ficknefs or legal uncleannefs on the day of expiation; or, according to others, he was to affift the high-prieft in the care of the affairs of the temple and the fervice of the priefts.

SAGAPENUM, in pharmacy, \&c. a gam-refin brought to us in two forms; the finer and purer is in loofe granules or fingle drops; the coarfer kind is in maffes compofed of thefe drops of various fizes, cemented together by a matter of the fame kind. In either cafe, it-is of a firm compact fubftance, confiderably heavy, and of a reddifh colour on the outfide, brownifh within,

Saffron \| Sagapenuni. $\rightarrow$ rer

## S A G

 within, and footted in many places with fmall yellowifh or whitifh fpecks. Its fmell is ftrong and difagreeable ; its tafte acrid and unpleafint.It is brought to us trom Perfia and the Eaft Indies. The plant which produces it has never been defcribed; but is fuppofed to be, as Diofcorides fays, of the ferula kind, from the feeds and fragments of the ftalks fometimes met with in the body of it.

Sagapenum is a very great attenuant, aperient, and difcutient. It is good in all diforders of the breaft that owe their origin to a tough phlegm. It has alfo been found to difcufs tumors in the nervous parts in a remarkable manner ; and to give relief in habitual headachs, where almoft all things elfe have failed. Its cofe is from ten grains to two feruples; but it is now feldom given alone. It has been found, however, to do great things in afthmas; in obftructions of the vifcera, particularly the fpleen ; in nervous complaints; and even in epileplics. It alfo promotes the menles, and expels the fecundines; and is an ingredient in the theriaca, mithridate, and other of the fhop compofitions.

SAGE, in botany. See Salyia.
Sage (Alain Rene), an ingenious French romancewriter, was born at Ruys in Brittany in the year 1667. He had a fine flow of imarination, was a complete mafter of the French and Spanifh languages, and wrote feveral admited romances in imitation of the Spanilh authors. Thefe were, The Bachelor of Salamanca, 2 vols 12 mo ; ivew Adventures of Don Quixote, 2 vols 12 mo ; The Devil on Two Sticks, 2 vols 12 mo ; and Gil Blas, 4 vols 12 mo . He produced alio fome comedies, and other pieces of piealantry; and died in 1747, in a little houfe near Paris, where he fupported himelelf by writing.

Sage (the reverend John), fo juftly admired by all who knew him for his claffical learning and reafoning powers, was born, in 1652 , in the parifh of Creich and county of Fiie, North Britain, where his anceftors had lived for feven generations with great refpect though with little property. His father was a captain in Lord Duffus's regiment, and fought for his king and country when Monk flormed Dundee on the 30 of of Augult 165 I .
