The iffue of the civil wars, and the loyalty of captain Sage, left him nothing to beftow upon his fon but a liberal education and his own principles of piety and virtue. In thofe days the Latin language was taught in the parorhial fchools of Scotland with great ability and at a trifling expence; and after young Sage had acquired a competent knowledge of that language at one of thofe ufful feminaries, his futher, without receiving from an ungrateful court any recompence for what he had loft in the caufe of royalty, was ftill able to iend him to the univerfity of St Andrew's, where having. remained in college the ufual number of terms or feffions, and performed the evercifes required by the ftatutes, he wa; admitted to the degree of mafter of arts, the hishelt honour which it appears he ever received from any univerfity.

During lis refidence in St Andrew's he fudied the Greet and Roman authors with great diligence, and was likewife inftructed in logic, metaphyfies, and fuch other branches of philoforhy as then obtained in the fchools, which, though we affect to fmile at them in this enlightened age, he always fooke of as highly ufe.

Voz. XVI.
ful to him who would undertand the pects, hitorians, and orators of ancient Greece, and even the fathers of the Chriftian church. In this opinion every man will agree with him who is at all acquainted with the ancient metaphyfics, and has read the writings of Clemens Alexandrinus, Origen, Tertullian, Chryfoftome, and other fathers of great name; for each of tirofe writers adopted the principles of fome one or other of
the philofophical fects, realoned from their notions, and writers adopted the principles of fome one or other of
the philofophical fects, reationed from their notions, and often made ufe of their terms and phrafes.

When Mr Sage had taken his mafter's degree, the narrownefs of his fortune compelled him to accept of narrowness of hiv ortune compelled ham to accept of
the firlt literary employment which was offered to him; and that happened to be nothing better than the office and that happened to be nothing better than the office
of fchooimater in the parifl of Bingry in Fifelhire, whence he was foon removed to Tippermuir in the
county of Perth. In thefe humble fations, thoush he whence he was foon removed to Tippermuir in the
county of Perth. In thefe humble ftations, though he wanted many of the neceffaries and almof all the comforts of life, he profecuted his ftudies with great fuccefs; but in doing fo, he unhappily imbibed the feeds of feveral difeafes which afflicted him through life, and notwithftanding the native vigour of his confitution impaired his health and fhortened his days. From the miferable drudgery of a parifh-fchoolmafler, he was relieved by Mr Drummond of Cultmalundie, who invited him to fuperintend the educaticn of his fons, whom he accompanied firft to the public fchool at Perth, and afterwards to the univerfity of St Andrew's. This was fill an employment by no means adequate to his merit, but it was not wholly without advantages.
At Perth he gained the friendfhip and efteem of Dr his merit, but it was not wholly without advantages.
At Perth he gained the friendfhip and efteem of Dr Rofe, afterwards lord bifhop of Edinburgh, and at St
Andrew's of every man capable of properly eltimating Andrew's of every man capable of propenly eltimating genius and learning.

The education of his pupils was completed in 1684 , when he was left with no determinate object of purfuit. In this moment of indecifion, his friend Dr Rofe, who
had been promoted from the parfonage of Perth to the In this moment of indecifion, his friend Dr Rofe, who
had been promoted from the parfonage of Perth to the profeflorfhip of divinity in the univerfity which he proferiornip of divinity in the univerfity which he uncle then archbifhop of Glafgor, that he was by that uncle then archbilhop of Glafgor, that he was by that the churches in the city. He was then about 34 years of age, had ftudied the Scriptures with great afiduity, of age, had ftudied the Scriptures with great afliduity,
was no ftranger to ecclefiaftical hiftory, or the apologies and other writings of the ancient fathers, was thorough mafter of fchool-divinity, had examined with great ac. mater of ichool-divinity, had examined with great actween the Romifh and reformed churches, and between the Calvimifts and Remonfrants; and it was perhaps to his honour that he did not fully approve of all the articles of faith fubfcribed by any one of thefe contending fects of Clutiftians. A man fo far advanced in life, and $f$, thoroughly accomplifhed as a fcholar, would naturally be looked accomplifhed as a fcholar, would naturally be looked
up to by the greater part of the clergy as foon as he became one of their body. This was in tact tne cafe : Mr Sage was, immediately on his admifion int
orders, appointed clerk to the fynod or prefloytery of cafe : Mr Sage was, immediately on his admifion int
orders, appointed clerk to the fynod or prefloytery of Glafrow; an office of great truft and refpectability, to which we know nothing fimilar in the church of England.

During the eftablifhment of epifcopacy in Scotland, from the reftoration of Charles II. till the year 1690 , the authority of the bilhops, though they peffeffed the 4 G
ful:
When Mr Suge hat tak manter's degree, the Andrew's of crerys. land. we know nothing limilar in the church of Eng-
trenter

Sige.
fole power of ordination, was very limited in the government of the church. They did every thing with the confent of the prefbyters over whom they prefided. Diocefan fynods were held at $\mathfrak{f}$ tated times for purpofes of the fame kind with thofe which employ the meetings of prefbyteries at prefent (fee Presbyterians), and the only prerogative which the bifhop feems to have enjoyed was to be permanent prefident, with a negative voice over the deliberations of the affembly. The acts of each fynod, and fometimes the charge delivered by the bifhop at the opening of it, were regiftered in a book kept by the clerk, who was always one of the moft eminent of the diocefan clergy,

Mr Sage continued in this office, difcharging in Glafgow all the duties of a clergyman, in fuch a manner as endeared him to his flock, and gained him the efteem even of thofe who were diffenters from the eftablifument. Many of his brethren were trimmers in eccle. fiaftical as well as in civil politics. They had been republicans and prefbyterians in the days of the covenant ; and, with that ferocious.zeal which too often characterizes interefted converts, had concurred in the feverities which, during the reign of Charles II. were exercifed againft the party whom they had forfaken at his reftoration. When that party again raifed its head during the infatuated reign of James, and every thing indicated an approaching change of the eftablifhment, thofe whofe zeal for the church had fo lately incited them to perfecute the diffenters fuddenly became all gentlenefs and condefcenfion, and advanced towards the prelbyterians as to their old friends.

The conduct of Mr Sage was the reverfe of this. He was an epifcopalian and a royalift from conviction : and in all his difcourfes public and private he laboured to inflil into the minds of others the principles which to himfelf appeared to have their foundation in truth. To perfecution he was at all times an enemy, whilf he never tamely betrayed through fear what he thought it his duty to maintain. The confequence was, that in the end of the year 1688 he was treated by the rabble, which in the weftern counties of Scotland rofe againft the eftablifhed church, with greater lenity than his more complying brethren. Whilf they, without the fmalleft apprehenfion of their danger, were tom from their families by a lawlefs force, and many of them perfecuted in the crueleft manner, he was privately warned to withdraw from Glafgow, and never more to return to that city. So much was confiftency of conduct and a feady adherence to principle refpected by thofe who feemed to refpect nothing elfe.

Mr Sage retired to the metropolis, and carried with him the fynodical book, which was afterwards demanded by the prefbytery of Glafgow, but not recovered till about three or four years ago, that, on the death of a nephew of Dr Rofe the latt eftablifhed bifhop of Edinburgh, it was found in his poffeflion, and reftored to the prefbytery to which it belonged. Mr Sage had detained it and given it to his diocefan and friend, from the fond hope that epifcopacy would foon be re-eftablifhed in Scotland; and it was doubtlefs with a view. to contribute what he could to the realifing of that hope, that, immediately on his being obliged to leave Glafgow, he commenced a keen polemical writer. At Edinburgh he preached a while, till refufing to take Bis. oaths of allegiance when required by the govern-
ment, he was obliged to retire. In this extremity, he found protection in the houfe of Sir Willam Bruce, the fheriff of Kinrofs, who approved his principles and admired his virtue. Returning to Edinburgh, in 1695, he was obferved, and obliged to abficond. Yet he returned in 1696, when his friend Sir William Bruce was imprifoned as a fufpected perfon. He was foon forced to look for refuge in the hills of Angus, under the name of Jackfon.

After a while Mr Ságe found a fafe retreat with the countefs of Callendar, who employed him to inftruct her family as chaplain, and her fons as tutor. Thefe occupations did not wholly engage his active mind : for he employed his pen in defending his order, or in expofing his oppreffors. When the countefs of Callendar had no longer fons to inttruct, Sage accepted the invitation of Sir John Stuart of Garntully, who wanted the help of a chaplain, and the converfation of a fcholar. With Sir John he continued till the decency of his manners, and the extenfivenefs of his learning, recommended him to a higher ftation. And, on the 25 th of January 1705, he was confecrated a bifhop by Paterfon the Archbihop of Glafgow, Rofe the bifhop of Edinburgh, and Douglas the bifhop of Dumblain. But this promotion did not prevent ficknefs from falling on him in November 1706. After lingering for many months in Scotland, he tried the effect of the waters of Bath in 1709, without fuccefs. At Bath and at London he remained a twelvemonth, recognifed by the great and careffed by the learned. Yet though he was invited to ftay, he returned in 1710 to his native country, which he defired to fee, and where he wifhed to die. And though his body was debilitated, he engaged, with undiminifhed vigour of mind in the publication of the works of Drummond of Hawthornden, to which the celebrated Ruddiman lent his aid. Bifhop Sage died at Edinburgh on the 7th of June 1711, lamented by his friends for his virtues, and feared by his adverfaries for his talents.

His works are, ift, Two letters concerning the Perfecution of the Epifcopal Clergy in Scotland, which with other two by different authors were printed in one volume at London in 1689. 2dly, An Account of the late Eftablifhment of Prelbyterian Government by the Parliament of Scotland, in 1690, London, 1693.3 dly , The Fundamental Charter of Prebyters, London, 1695. 4thly, The Principles of the Cyprianick Age with regard to Epifcopal Power and Jurifdiction, London, 1695. 5thly, A Vindication of the Principles of the Cyprianick Age, London, 1701. 6thly, Some Remarks on the Letter from a Gentleman in the City, to a Minifter in the Country, on Mr David Williamfon's Sermon before the General Affembly, Edinburgh, 1703. 7thly, A Brief Examination of fome Things in Mr Meldrum's Sermon, preached on the 16 th of May 1703 , againf a Toleration to thofe of the Epifcopal Perfuafion, Edinburgh, 1703 . 8thly, The Reafonablenefs of a Toleration of thofe of the Epifcopal Perfuafion inquired into purely on Church Principles, Edinburgh, IクO4. 9thly, The Life of Gawin Douglas, in 1710 . Iothly, An Introduction to Drummond's Hiftory of the Five Jamefes, Edinburgh, 1711. Of the principles maintained in the fe publications, different readers will think very differently; and it is probable that the acrimony difplayed in fome of them will
be generally condemned in the prefent day; whilit the learning and acutenefs of their author will be univerfally acknowledged and admired by all who can dittin. guifh merit in a friend or an adverfary.

SAGENE, a Kuffian long meafure, 500 of which make a verlt : the fagene is equal to feven Englifh feet. SAGINA, in botany: A genus of the tetragynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 22 d order, Caryophyllei. The calyx is tetraphyllous; the petals four; the capfule is unilocular, quadrivalved, and polyfpermous.

SAGITTARIA, arrow•head: A genus of the polyandria order, belonging to the monœcia clafs of plants; and in the natural method ranking under the fifth order, Tripelatoidea. The male calyx is tryphillous; the corolla tripetalous; the filaments generally about 14 ; the female calyx is triphyllous; the corolla tripetalous; many pittils; and many naked feeds. There are four fpecies of which the mof remarkable is the fagittifolia, growing naturally in many parts of England. The root is compofed of many ftrong fibres, which frike into the mud ; the footitalks of the leaves are in length proportionable to the depth of the water in which they grow ; fo they are fometimes almolt a yard long: they are thick and fungous; the leaves, which float upon the water, are thaped like the point of an arrow, the two ears at their bafe fpreading wide afunder, and are very fharp-pointed. The flowers are produced upon long ftalks which rife above the leaves, ftanding in whorls round them at the joints. They confint of three broad white petals, with a clufter of ftamina in the middle, which have purple fummits. There is always a bulb at the lower part of the root, growing in the folid earth beneath the mud. This bulb conftitutes a confiderable part of the food of the Chinefe; and upon that account they cultivate it. Horfes, goats, and fwine eat it ; cows are not fond of it.

SAGITTARIUS, in aftronomy, the name of one, of the 12 figns of the zodiac.

SAGO, a fimple brought from the Eaft Indies, of confiderable ufe in diet as a reftorative. It is produ. ced from a fecies of palm-tree (Crcas circinalis, L.) growing fontaneoufly in the Ealt Indies without any culture. The progrefs of its vegetation in the early ftages is very flow. At firft it is a mere fhrub, thick fet with thorns, whicl, makes it difficult to come near it ; but as foon as its fem is once formed, it rifes in a fhort time to the height of 30 feet, is about fix feet in circumference, and imperceptibly lofes its thorns. Its ligneous bark is about an inch in thicknefs, and covers a multitude of long fibres; which, being interwoven one with another, - envelope a mars of a gummy kind of meal. As foon as this tree is ripe, a whitifh dutt, which tranfpires through the pores of the leaves, and adheres to their extremities, proclaims its inaturity. The Malais then cut them down near the root, divide them into feveral fections, which they flit into quarters: they then foop out the mafs of mealy fubtance, which is enveloped by and adheres to the fibres; they dilute it in pure water, and then pafs it througls a ltraining bag of fine cloth, in order to feparate it from the fibres. When this pafte has loft part of its moifture by evapordt: an, the Malais throw it into a kind of earthen veffels, of different thapes, wiere they allow it to dry and hard-
en. This pafte is wholefome nourifhing food, and preferves for many years. The Indians eat it diluted wit! water, and fometimes baked or boiled. Through a principle of humanity, they referve the finelt part of this meal for the aged and infirm. A jelly is fometimes made of it, which is white and of a delicious flavour.

SAGUM, in Roman antiquity, a military habit, open from top to bottom, and ufually faltened on the right houlder with a buckle or clafp. It was not dif. ferent in Chape from the chlamys of the Greeks and the paludamentum of the generals. The only difference between them was, that the paludamentum was made of a richer ftuff, was generally of a purple colour, and both longer and fuller than the fagum.

SAGUNTUM, an ancient town of Spain, now called Morvedro, where there are ftill the ruins of a Roman amphicheatre to be feen. The new town is feated on a river called Morvedro, 15 miles to the north of Valencia, in E. Long. 0. ı0. N. Lat. 39. 38. It was taken by Lord Peterborough in 1706.

SAICK, or Saique, a Turkifl veffel, very common in the Levant for carrying merchandize.

SAIDE, the modern name of Sidon. See Sidon.
SAIL, in navigation, an affemblage of feveral breadths of canvas fewed together by the lifts, and edged round with cord, faftened to the yards of a fhip, to make it drive before the wind. See Ship.

The edges of the cloths, or pieces, of which a fail is compofed are generally fewed together with a double feam; and the whole is fkirted round at the edges with a cord, called the bolt-rope.

Although the form of fails is extremely different, they are all neverthelefs triangular or quadrilateral figures; or, in other words, their furfaces are contained either between three or four fides.

The former of thefe are fometimes fpread by a yard, as lateen-fails; and otherwife by a ftay, as ftay-fails; or by a malt, as fhoulder-of-mutton fails; in all which cafes the foremoft leech or edge is attached to the faid yard, malt, or ftay, throughout its whole length. The latter, or thofe which are four-fided, are either extended by yards, as the principal fails of a fhip; or by yards and booms, as the fudding-fails, drivers, ringtails, and all thofe fails which are fet occafionally; or by gaffs and booms, as the main-fails of floops and brigantines.

The principal fails of a hip (Plate CCCCXLIV. fig. 2.) are the courfes or lower fails $a$; the top-fails $b$, which are next in order above the courfes; and the top. gallant fails $c$, which are cxpanded above the top-fails.

The courfes are the main-fail, fore-fail and mizea, main fay-fail, fore Ray-iail, and mizen Cay-fail: but more particularly the three firf. The mair-flay fiil is rarely ufed except in fmall veffels.

In all quadranguldr fails the apper edge is caltod the bead; the fides or kints are called leedes; and the botiom or lower edge is termed the joot. If the head is parallel to the foot, the two lower corners are denomanated ches, and the upuer comers earinge.

In all trianguar iais, and in theie tour-fided rails whercin the head is not parnilel to the foot, the foremolt corner at the foot is called the tacs, and the afo ter lower corner the clue; the foremolt perpendicular or floping edge is called the foreleot, and the limanoft the afor lech.
$\qquad$
Sagutu
Snis.

The heads of all four-fided fails, and the fore leeches of lateer.-fails, are attached to their refpetive yard or gaff by a number of fmall cords called ro.bands; and the extremities are tied to the yard-arms, or to the peek of the gaff, by earings.

The ftay-fails are extended upon flays between the mafts, whereon they are drawn up or down occafionally, as a curtain flides upon iss rod, and the lower parts are ftretclied out by a tack and theet. The clues of a topfail are drawn out to the extremities of the lower yard, by two large ropes called the top-fail Jeets; and the clues of the top-gallant fails are in like manner extended upon the top-fail yard-arms, as exhibited by Gg. 2.

The ftudding-fails are fet beyond the leeches or ©kirts of the main-fail and fore-fail, or of the top-fails or top-gallant fails of a thip. Their upper and lower edges are accordingly extended by poles run out beyond the extremities of the yards for this purpofe. Thofe fails, however, are only fet in favourable winds and moderate weather.

All fails derive their name from the matt, yard, or Aay, upon which they are extended. Thus the principal fail extended upon the main-mat is called the mainJail, $d$; the next above, which fands upon the maintop mat, is termed the main-top fail, $e$; and the higheft, which is fpread acrofs the main-top-gallant matt, is named the main top gallant fail, $f$.

In the fame manner there is the fore-fail, $g$; the fore top-fail, $b$; and the fore-top-gallant-fail, $i$; the mizen, $k$; the mizen top-fail, $l$; and mizen top-gallant fail, $m$. Thus alfo there is the main-ftay-fail, $o$; main-top-maft fay-fail, $p$; and main top-gallant ftayfail, $q$; with a middle ftay-fail which ftands beween the two lall.
$N . B$. All thefe ftay-fails are between the main and fore-malts.

The flay-fails between the main-maft and mizen-malt are the mizen ftay-fail, $r$; and the mizen top-maf fay-fail; $s$; and fometimes a mizen top gallant fay-fail above the latter.

The fay-fails between the foremaft and the bowfprit are the fore ftay-fail, $t$; the fore top-mat ftay-fail $u$; and the jib, $x$. There is befides two fquare fails extended by yards under the bow-fprit, one of which is called the $\int p r i t-f a i l, y$; and the other the forit-fail toj-Suil, z.

The Atudding-fails being extended upon the different yards of the main-maft and forematt, are likewife named according to their ftations, the lower, top-maf, or top-gallant fucding fals.

The ropes by which the lower yards of a thip are hoifted up to their proper height on the mafts, are called the jears. In all other fails the ropes employed for this purpofe are called baliards.

The principal fails are then expanded by haliards, fheets, and bowlines; except the courfes, which are always flretched ont below by a tack and fheer. They are drawn up together, or truffed up, by bunt-lines, clue-lines, $d d$; leech-lines, ee; reef-tackles, $f f$ thabline, $g$; and filing lines. As the bunt-lines and leechJines pats on the other fide of the fail, they are expreffed by the dotted lire; in the figure.

The courfes, top fails, and top-gallant fails, are wheeled about the maft, fo as to fuit the various direc-
tions of the wind by braces. The higher fudding fails, and in general all the ftay-fails, are drawn down, fo as to be furled, or taken in, by downhauls.

Some experienced fail-makers contend, that it would be of much advantage if many of the fails of fhips were made of equal magnitude ; in which cafe, when neceffity required it, they could be interchangeably ufed. For example, as the mizen top-fail is now made nearly as large as the main top-gallant fail, it would be eafy to make the yards, mafts, and fails, fo as mutually to fuit each other. The main and fore-top fails" differ about two feet at head and foot, and from une to three feet in depth. Thefe likewife could be eafly made alike, and in fome cafes they are fo. The fame may be faid of the main and fore top-gallant fails, and of the mizen topergallant fail, and main fore-royal. The main-fail and fore-fail might alfo, with refpect to their head, be made alike; but as the former has a gore at the leech, and a larger gore at the foot for clearing it of the gallows, boats, \&c. which the latter has not, there might be more dificulty in arranging them. The difficulty, however, appears not to be infurmountable. Thefe al. terations, it is thought, would be extremely ufeful in the event of lofing fails by Atrefs of weather. Fewer fails would be thus neceffary, lefs room would be required to ftow them, and there would be lefs danger of confufion in taking them out. But perhaps the utility of thefe alterations will be more felt in the merchant-fervice than in the navy, which latter has always a large fore of fpare fails, and fufficient room to ftow them in order. Thus, too, fpare yards and mafts might be confiderably reduced in number, and yet any cafual damages more eafily repaired at fea. Top-maft fudding fails are occafionally fubfituted for awnings, and might, by a very little attention in planning the rigging of a fhip, be fo contrived as to anfwer both purpofes. See Shipbuilding.

Sail is alfo a name applied to any veffel beheld at a diftarice under fail.

To fet $S_{A i L}$, is to unfurl and expand the fails upon their refpective yards and flays, in order to begin the action of failing.

To Make SAIL, is to fpread an additional quantity of fail, fo as to increafe the fhip's velocity.

To Borten $S_{A I L}$, is to reduce or take in part of the fails, with an intention to diminilh the fhip's velocity.

To Strike SAIL, is to lower fuddenly. This is particularly ufed in faluting or doing homage to a fuperior force, or to one whom the Jaw of nations acknowledges as fuperior in certain regions. Thus all foreign veffels ftrike to a Britigh man of war in the Britifh feas.

SAILING, the movement by which a veffel is wafted along the furface of the water, by the action of the wind upon her fails.

When a thip changes her ftate of ref into that of motion, as in advancing out a harbour, or from her ftation at anchor, fhe acquires her motion very gradually, as a body which arrives not at a certain velocity till after an infinite repetition of the action of its weight.

The firf impreffion of the wind greatly affects the velocity, becaufe the refiftance of the water might defroy it ; fince the velocity being but finall at firt, the
refiffance of the water which depends on it will be very feeble: but as the hip increafes her motion, the force of the wind on the fails will be diminifhed; whereas, on the contrary, the refiftance of the water on the bow will accumulate in proportion to the velpcity with which the veffel advances. Thus the repetition of the degrees of force, which the action of the fails adds to the motion of the fhip, is perpetually decreafing; whillt, on the cantrary, the new degrees added to the effort of refitance on the bow are always augmenting. The velocity is then accelerated in proportion as the quantity added is greater than that which is fubtracted; but when the two powers become equal; when the impreffion of the wind on the fails has lon fo much of its force, as only to act in proportion to the oppofite impulfe of refiftance on the bow, the fhip will then acquire an additional velocity, but continue to fail with a conftant uniform motion. The great weight of the fhip may indeed prevent her from acquiring her greateff velocity; but when the has attained it, fhe will advance by her own intrinfic motion, without gaining any new degree of velocity, or deffening what the has acquired. She moves then by ber own proper force if vacuo, without being afterwardi fubject either to the effort of the wind on the fails, or to the refigtance of the water on the bow. If at any time the impulfion of the water on the bow thould deftroy any part of the velocity, the effort of the wind on the fails will revive it, fo that the motion will continue the fame. It mult, however, be obferved, that this flate will only fubfift when thefe two powsers act upon each other in direct oppofition; otherwife they will mutually deftroy one another. The whole theory of working fhips depends on this counter-action, and the perfect equality which fhould fabfit between the cffort of the wind and the impulfion of the water.

The effect of failing is procuced by a judicious arrangement of the fails to the direction of the wind. Accordingly the various modes of failing are derived from the different degres and fituations of the wind with regard to the courfe of the vefiel. See Seamanship.

To illurate this obfervation by examples, the plan of a number of thips preceeding on various courfes are reprefented by fig. 3. which ealibits the 32 points of the compafs, of which C is the centre; the direction of the wind, wlich is northerly, being expreffed by the arrow.

It has been obferved in the article Closs-Hauled, that a faip in that fituation will fail nearly within fix points of the wid. Thus the fhips B and yare clofehauled; the former being on the larboard-tack, feering E. N. E. and the latter on the flarboard tack, failing W. IN. W. with their yards $a b$ braced obliquely, as fuitable to that manner of faling. The lire of battle on the larboard tack would accordirgly be expreffed by CB , and on the flarboard by $\mathrm{C} y$.

When a thip is neither clotebauled, nor fleering afore the wind, the is in general inid to be failing large. 'The relation of the wind to her courfe is precifely determined by the number of points between the latter and the courfe clofe-hauled. Thus the thips $c$ and $x$ have the wind one point large, the former fleering E. $b$ N. and the latter W. $b$. N. The yards remain al-
moll in the fame pofition as in $B$ and $y$; the bowhines and fheets of the fails being only a little flackened.

The fhips $d$ and $u$ have the wind two points large, the one feering eaft and the other weft. In this manner of failing, however, the wind is more particulaty faid to be upon the beam, as being at right angles with the keel, and coinciding with the pofition of the fhip's beams. The yards are now more acrofs the fhip, the bowlines are calt off, and the fheets more relaxed; fo that the effort of the wind being applied nearer to the line of the hip's courfe, her velocity is greatly augmented.

In $e$ and $t$ the fhips have the wind three points large ${ }_{\text {. }}$. or one point abaft the beam, the courfe of the former being E. $b$ S. and that of the latter W. $b$ S. The fheets are fill more flowing, the angle whicb the yards make with the keel further diminifhed, and the courfe ascelerated in proportion.

The fhips $f$ and $f$, the firt of which teeers E. S. E. and the fecond W.S.W. bave the wind four points large, or two points abaft the beam. Ing and $r$ the wind is five points large, or three points abaft the beam, the former failing S. E. $b$ E. and the latterS. W. . W W. In both thefe fituations the fheets are fill farther flackened, and the yards laid yet more athwart the faip's length, in proportion as the wind approaches the quarter.

The fhips $b$ and $q$, feering S. F, and S. W. have the wind fix points $1 a r g e$, or more properly on the quarter; which is confidered as the moll favourable manner of failing, becaufe all the fails co-operate to increafe the fhip's velocity: whereas, when the wind is right aft, as in the fhip $m$, it is evident that the wind in its paflage to the foremof fails will be intercepted by thofe which are farther aft. When the wind is on the quartcr, the fore-tack is brought to the cat-head; and the main-tack being caft off, the weather-clue of the main-fail is hoifted up to the yard, in order to let the wind pafs freely to the fore-fail; and the yards are difpofed fo as to make an angle of about two points, or nearly $22^{\circ}$, with the keel.

The fhips $i$ and $p$, of whiclathe former fails S. E. $b$ S. and the latter S.W. 6 S. are faid to have the wind three points on the larboard or ftarboard quarter: and thofe expreffed by $k$ and $o$, two points; as fteering S.S.E. and S.S.W. in both which pofitions the yards make nearly an angle of $16^{\circ}$, or about a point and an half, with the hip's length.

When the wind is one point on the quarter, as in the fhips $l$ and $n$, whofe coulfes are S. $b$ E. and S. $b$ W. the fituation of the yards and fails is very little different from the lat mentioned; the angle which they make with the keel being fomewhat lefs than a point, and the flay fails being rendered of very little fervice. The fhip $m$ fails right afore the wind, or with the wind right aft. In this pofition the yards are laid at right angles with the flip's length : the flay-fails being entirely ufelefs, are hauled down; and the main-fail is drawn up in the brails, that the fore-fail may operate ; a meafure which confiderably facilitates the feerage, or effort of the helm. As the wind is then intercepted by the main top-fail and main top-gallant-fail, in its paffage to the fore-topfail and fore-top-gallant-fail, thefe latter are by confequence entirely becalmed; and
might

Suiling might therefore be furled, to prevent their being fretted $1{ }^{\circ}$ Saint. by flapping againft the maft, but that their effort con-
tributes greatly to prevent the fhip from broaching-to, when fhe deviates from her courfe to the right or left thereof.

Thus all the different methods of failing may be divided into four, viz. clofe-hauled, large, quartering, and afore the wind; all which relate to the direction of the wind with regard to the fhip's courfe, and the arrangement of the fails.

Sailing alfo implies a particular mode of navigation, formed on the principles, and resulated by the laws, of trigonometry. Hence we fay, Plain Sailing, Mercator's, Middle-latitude, Parallel, and Great-circle Sailing. See the article Navigation.

SAil-making, the art of making fails. See Sail and Ship-building.

SAilor, the fame, with Mariner and Seaman.
SAINT, means a perfon eminent for piety and virtue, and is generally applied by us to the apoftles and other holy perfons mentioned in Scripture. But the Romanifts make its application much more extenfive. Under the wotd Canonization we have already faid fomething on their practice of creating faints. Our readers, however, will not, we truft, be difpleafed with the following more enlarged account, which they themfelves give of the matter. The canonization of faints, then, they tell us, is the enrolment of any perion in the canon or catalogue of thofe who are called faints; or, it is a judgment and fentence of the church, by which it is declared, that a deceafed perfon was eminent for fanctity during his lifetime, and efpecially towards the end of it; and that confequently he mult now be in glory with God, and deferves to be honoured by the church on earth with that veneration which The is wont to pay to the bleffed in heaven.

The difcipline with regard to this matter has varied. It would feem that in the firft ages every bifhop in his own diocefe was wont to declare what perfons were to be honoured as faints by his people. Hence St Cyprian, about the middle of the third century, B. 3 . ep. 6. requires that he be informed of thofe who fhould die in prifon for the faith, that fo he might make mention of them in the holy facrifice with the martyrs, and might honour them afterwards on the anniverfary day of their happy death. This veneration continued fometimes to be confined to one country; but fometimes it extended to diftant provinces, and even became univerfal all over the church. It was thus that St Laurence, St Ambrofe, St Auguftine, St Bafil, and many others, appear to have been canonized by cuftom and univerfal perfuafion. In thofe ages none were reckoned faints but the apofles, the martyrs, and very eminent confeflors, whofe fanctity was notorious everywhere.

Afterwards it appears that canonizations were wont to be performed in provincial fyneds under the directige of the metropolitan. It was thus that St Ifidore of Sevile was canonized in the 7 th century, by the Sth council of Toledo, 14 years after his death. This mamer of cánonization continued occafionally down to the 12 th century. The laft inflance of a faint canomi--zed in that way, is that of St Walter abbot of Pontoife, who was declared a faint by the archbifhop of Rouen in the year 1153.

In the 12 th century, in order to prevent mitakes in fo delicate a matter, Pope Alexander III. judged fee of Rome exclufively; and decreed that no one fhould for the future be honoured by the church as a faint without the exprefs approbation of the pope.

Since that time, the canonization of faints has been carried on in the form of a procefs; and there is at Rome a congregation of cardinals, called the congregation of boly rites, who are affifted by feveral divines under the name of confultors, who examine fuch matters, and prepare them for the decifion of his holinefs. When therefore any potentate, province, city, or religious body, think fit, they apply to the pope for the canonization of any perfón.

The firft juridical ftep in this bufinefs muft be taken by the bifhop in whofe diacefe the perfon for whom the application is made had lived and died, who by his own authority calls witneffes to atteft the opinion of the holinefs, the virtues, and miracles, of the perfon in queftion. When the deceafed has refided in different diocefes, it may be neceffary that different bifhops take fuch depofitions ; the originals of which are preferved in the archives of their refpective churches, and authentic copies fealed up are fent to Rome by a fpecial meffenger, where they are depofited with the congregation of rites, and where they muft remain for the face of ten years without being opened. They are then opened, and maturely examined by the congregation, and with their advice the pope allows the caufe to go on or not as he thinks proper. The folicitors for the canonization are then referred by his holinefs to the faid congregation, which, with his authority, gives a commifion to one or more bilhops, or other refpectable perfons, to examine, on the fpot and in the places where the perfon in queftion has lived and died, into his character and whole behaviour. Thefe commifionets fum. mon witneffes; take depofitions, and collect letters and other writings of the venerable man, and get all the intelligence they can concerning him, and the opinion generally entertained of him. The report of thefe commiffioners is confidered attentively and at length by the congregation, and every part of it difcuffed by the confultors, when the congregation determines whether or not they can permit the procefs to go on. If it be allowed to proceed, a cardinal, who is called ponent, undertakes to be the principal agent in that affair. The firt queftion then that comes to be examined is, whether or not the perfon propofed for canonization can be proved to have been in an eminent degree endued with the moral virtues of prudence, juftice, fortitude, and temperance ; and with the theological virtues of faith, hope, and charity ? All this is canvaffed with great deliberation; and there is a dittinguifled ecclefiaftic called the promoter of the holy faith, who is fworn to make all reafonable objections to the proofs that are adduced in favour of the canonization. If the decifion be favourable, then the proofs of miracles done to fhow the fanctity of the perion in queftion are permittud to be brought forward; when two miracles mult be verinied to the fatisfaction of the congregation, both as to the reality of the facts, and as their hering been truly above the power of nature. If the decifion on this comes out likewife favourable, then the whole is laid

Plate ccedxiv.

## SAI [ 607$] \quad$ S A I

Saint. $\underbrace{5}$
before the pope and what divines he choofes (A). Public prayer and fafting are likewife prefcribed, in order to obtain light and direction from heaven. After all this long procedure, when the pope is refolved to give his approbation, he iffues a bull, firft of beatijfcation, by which the perfon is declared ble $f$ fed, and afterwards another of fandification, by which the name of faint is given him. Thefe bulls are publifhed in St Peter's church with very great folemnity.

A perfon remarkable for holinefs of life, even before he is canonized, may be venerated as fuch by thofe who are perfuaded of his eminent virtue, and his prayers may be implored : but all this mult reft on private opinion. After his canonization, his name is inferted in the Martyrology, or catalogue of faints, of which the refpective portion is read every day in the choir at the divine office. A day is alfo appointed for a yearly commemoration of him. His name may be mentioned in the public church fervice, and his interceffion with God befought. His relics may be enfhrined : he may be painted with rays of glory, and altars and churches may be dedicated to God in honour of him, and in thankfgiving to the divine goodnefs for the bleffings beftowed on him in life, and for the glory to which he is raifed in heaven.

The affair of a canonization is neceffarily very expenfive, becaufe fo many perfons muft be employed about it ; fo many journeys mult be made; fo many writings for and againft it mult be drawn out. The expence altogether amounts to about 25,000 Roman crowns, or L. 6000 Sterling. But it is generally contrived to canonize two or three at a time, by which means the particular expence of each is very much leffened, the folemnity being common.

It often happens that the folicitors for a canonization are unfuccefsful. Thus the Jefuits, even when their intereft at Rome was greatelt, could not obtain the canonization of Bellarmine; and it is remarkable, that the objection is faid to have been, his having defended the indirect power of the pope over Chriltian princes even in temporals.

Several authors have written on canonization, and particularly Profper Lambertini, afterwards pope under the name of Benedict XIV. who had held the office of promoter of the fuith for many years. He publifhed on it a large work in feveral volumes, in folio, of which there is an abridgment in French. In this learned performance there is a full hiftory of the canonization of faints in general, and of all the particular procelfes of that kind that are on record : an account is given of the manner of proceeding in thefe extraordinary trials; and it is fhown, that, befides the affiftance of Providence, which is implored and expected in what is fo much connected with religion, all prudent human means are made ufe of, in order to avoid miftakes, and to obtain all the evidence of which the matter is fufceptible, and which muft appear more than fufficient to every impartial judge. See Pupe, Popery, \&c.
$S_{\text {AINT- }}$ Foin, in botany, a fpecies of the hedyfarum. See Hedysarum; and Agriculture, no i 80.

Saint fanuarius's Blood. See Chemistry, n' 800. SAINIES, an ancient and cunfiderable town of France. It is the capital of Saintonse, and before the revolution was a b:fhop's fee. lt contained likewife feveral convents, a Jefuits college, and an abbey remar?able for its fteeple, built with fmall ftones, which admits the light. It is feated on an eminence, 37 miles foutheaft of Rochelle, and 262 fouth fouth-weft of Paris. W. Long. o. 34. N. Lat. 45. 45. The caftle is feated on a rock, and is reckoned impregnable.

This city was a Roman colony; and thofe conquerors of the earth, who polifhed the nations they fubdued, have left behind them the traces of their magnificence. In a hollow valley between two mountains, and almoft adjoining to one of the fuburbs, are the ruins of the amphitheatre. Though now in the latt ftage of decay, its appearance is augult and venerable. In fome parts, fcarce any of the arches are to be feen; but the eaft end is ftill in a great degree of prefervation. From its fituation in a valley, and from the ruins of an aqueduct which conveyed water to the town from near three leagues diftance, it has been fuppofed that Naumachix were reprefented in it ; but this amounts only to conjecture. A triumphal arch, on which is an infeription in Roman letters, merits likewife attention. It was erected to Germanicus, on the news of his death, fo univerfally lamented throughout the empire. The river Charente furrounds this city, as the Severne does that of Shrewfbury, defcribing the form of a horfe-fhoe.

Except the remains of Roman grandeur yet vifible at Saintes, the place contains very little to detain or amuie a traveller. It is built with great irregularity ; the ftreets are narrow and winding, the houfes mean, and almoft all of them are fome centuries old. The cathedral has been repeatedly defaced and dettroyed by Normans and Huguenots, who made war alike on every monument of art or piety. One tower only efcaped their rage, which is faid to have been built as early as the year 800 by Clarlemagne. It is of an enormous magnitude, both as to height and circumference. Thefe circumtances have probably conduced more to its prefervation during the fury of war, than any veneration for the memory of its founder, or for the fanctity of its inflitution.

SAINTONGE, a province of France, bounded on the ealt by Ang umois and Perigord, on the north by Poitou and the territory of Aunis, on the welt by the ocean, and on the fouth by Bourdelois, and Giron, about 62 miles in length and 30 in breadth. The river Charente runs through the middle of it, and renders it one of the fineft and molt fertile provinces in France, abounding in all forts of corn and fruits; and they make the beft falt here in Europe.

The SAINTS; three leagues diftant from Guadaloupe, are two very fmall iflands, which, with another yet fmaller, form a triangle, and have a tolerable harbour. Thirty Frenchmen were fent thither in 1648 , but were foon driven away by an exceflive drought, which dried up their only fpring before they had time to make any refervoirs. A fecond attempt was made in $16 ; 2$,
sitradam and lafling plantations were eftablifhed, which now wendra gield 50,000 weight of coffee, and 100,000 of cotII shlamanca. ${ }^{\text {ton. }}$
$\underbrace{\text { stamanca }}$ SAKRADAWENDRA is the name of one of the Ceylonefe deities, who commands and governs all the reft, and formerly anfwered the prayers of his worfhippers ; but according to the fabulous account which is given of him, the golden chair, on which he fat, and the foot of which was made of wax, that was foltened by their prayers and tears, and funk downward, fo that he could take notice of their requelts and relieve them, being difpofed of among the poor, they no longer derive any benefit from him, or pay him any reverence. SALADIN, a famous fultan of Egypt, equally renowned as a warrior and legillator. He fupported himfelf by his valour, and the influence of his amiable character, againtt the united efforts of the chief Chriftian potentates of Europe, who carried on the molt unjuft wars againft him, under the falfe appellation of $H 0 . y$ Wars. See under the articles Egypt and Croisade:

SALAMANCA, an ancient, large, rich, and populous city of Spain, in the kingdom of Leon, fituated on the river Tormes, about 75 miles weft from Madrid. It is faid to have been founded by Teucer the fon of Telamon, who called it Salamis or Salmantica, in memory of the ancient Salamis. Here is an univerfity, the greateft in Spain, and perhaps inferior to nome in the whole world, in refpect at leaft to its revenues, buildings, number of fcholars, and mafters. Here are alfo many grand and magnificent palaces, fquares, comvents, churches, colleges, chapels, and hofpitals. The bifhop of this country is fuffragan to the archbilhop of Compoftella, and has a yearly revenue of 1000 ducats. A Roman way leads from hence to Merida and Sevilie, and there is an old Roman bridge over the river. Of
the colleges in the univerfity, four are appropriated to young men of quality; and near it is an infirmary for poor fick fcholars. W. Long. 6. ro. N. Lat. 41. O, SALAMANDER, in zoology. See Lacerta. SALAMIS, an ifland of the Archipelago; fituated in E. Long. 34.0. N. Lat. 37. 32.-It was famous in antiquity for a battle between the Greek and Perfian fleets. In the council of war held among the Perfians on this occafion, all the commanders were for engaging, becaufe they knew this advice to be mof agreeable to the king's inclinations. Queen Artemifia was the only perfon who oppofed this retolution. She was queen of Halicarnaffus; and followed Xerxes in this war with five fhips, the belt equipped of any in the flest, except thofe of the Sidonians. This princefs diftinguifhed berfelf on all occafions by her fingular courage, and ftill more by her prudence and conduct. She reprefented, in the council of war we are fpeaking of, the dangerous confequences of engaging a people that were far more expert in matitime affarrs than the Perfians; alleging, that the lofs of a battle at fea would be attended with the rain of their army; whereas, by fpinning out the war, and advancing into the heart of Greece, they would create jealoufies and divifions among their enemies, who would feparate from one another, in order to defend each of them their own country; and that the king, might, almoft without ftriking a blow, makehimfelf mafter of Greece. This advice, though very prudent, was not followed, but an engagement unanimoully refolved upon. Xerxes, in order to encourage his men by his prefence, caufed a throne to be erected on the top of an eminence, whence be might fafely behold what ever happened; having feveral cicribes about him, to write down the names of fuch as fhould fignalize themfelves againf the enemy. The approach of the Perfian fleet, with the news that a frong detachment from the army was marching againf Cleombrotus, who defended the ifthmus, Atruck fuch a terror into the Pe . loponnefians, that they could not by any intreaties be prevailed upon to ftay any longer at Salamis. Being therefore determined to put to fea, and fail to the ifthmus, Themiftocles privately difpatched a trulty friend to the Perfian commanders, informing them of the intended flight; and exhorting them to fend part of their fleet round the ifland; in order to prevent their efcape. The fame meffenger affured Xerxes, that Themitocles, who had fenthim that advice, defigned to join the Perfians, as foon as the battle began, with all the Athenian fhips. The king giving credit to all he faid, immediately caufed a ftrong fquadron to fail round the illand in the night in order to cut off the enemy's flight. Early next morning, as the Peloponnefians were preparing to fet fail, they found themfelves encompaffed on all fides by the Perlian fleet; and were againlt-their will obliged to remain in the fraits of Salamis and expofe themfelves to the fame dangers with their allies. The Grecian fleet confifted of 380 fail, that of the Perfians of 2000 and upwards. Themiftocles avuided the engagement till a certain wind, which rofe regularly every day at the fame time, and which was entirely contrary to the enemy, began to blow. As foon as he found himfelf favoured by this wind, he gave the fignal for battle. The Perfians, knowing that they fought under their king's eye, advanced with great refolution; but the wind blowing directly in their faces, and the largenefs and

Salamis, Salary.

number of their flips embarraffing them in a place fo frat and narrow, their courage freon abated; which the

[^48]

$\qquad$

n

Several methods of preparing falep have been propofed and practiced. Geoffroy has delivered a very judicious procefs for this purpofe in the Hifloire de l'Academnie Royale des Sciences, 1740; and Retmus, in the Swedifh Tranfactions 1764, has improved Geoffroy's method. But Mr Moult of Rochdale has lately favoured the public with a new manner of curing the orchis root; by which falep is prepared, at leaft equal, if not fuperior, to any brought from the Levant. The new root is to he wafhed in water; and the fine brown fkin which covers it is to be feparated by means of a fmall brufh, or by dipping the root in hot water, and rubbing it with a coarfe linen cloth. When a fufficient number of roots have been thus cleaned, they are to be fpread on a tin-plate, and placed in an oven heated to the uftal degree, where they are to remain fix or ten minutes, in which time they will have lof their milky whitenefs, and acquired a tranfparency like horn, without ary diminution of bulk. Being arrived at this ftate, they are to be removed, in order to dry and harden in the air, which will require feveral days to effect; or by ufing a very gentle heat, they may be finifhed in a few hours.

Salep thus prepared, may be afforded in thofe parts of England where labour bears a high value, at about eight-pence or ten-pence per pound: And it might be fold ftill cheaper, if the orchis were to be cured, without feparating from it the brown fk in which covers it; a troublefome part of the procefs, and which does not contribute to render the root either more palatable or falutary. Whereas the foreign falep is now fold at five or fix fhillings per pound.

Salep is faid to contain the greatef quantity of vegetable nourifhment in the fmalleft bulk. Hence a very judicious writer, to prevent the dreadful calamity of famine at fea, has lately propofed that the powder of it fhould conftitute part of the provifions of every fhip's company. This powder and portable foup, difolved in boiling water, form a rich thick jelly, capable of fupporting life for a confiderable length of time. An ounce of each of thefe articles, with two quarts of boiling water, will be fufficient fubfiftence for a man a day; and as being a mixture of animal and vegetable food, mult prove more nourifhing than double the quantity of ricecake, made by boiling rice in water : which laft, however, failors are often obliged folely to fubfift upon for feveral months; efpecially in voyages to Guinea, when the bread and flour are exhaulted, and the beef and pork, having been falted in hot countries, are become unfit for ufe.
"But as a wholefome nourifment (fays Dr Perci-

- Effays Medical and Experincutal. vai*), rice is much inferior to falep. I digefted feveral alimentary mixtures prepared of mutten and water, beat up with bread, fea-bifcuit, falep, rice-flour, fagopowder, potato, old cheefe, $\& c$. in a heat equal to that of the human body. In 48 hours they had all acguired a vinous fmell, and were in brifk fermentation, except the mixture with rice, which did not emit many air-bubbles, and was but little changed. The third day feveral of the mixtures were fweet, and continued to ferment ; others had loft their inteftine motion, and were four ; but the one which contained the rice was secome putrid. From this experiment it appears, that rice as an aliment is flow of fermentation, affd a very weak corrector of putrefaction. It is therefore an im-
proper diet for hofpital-patients; but more particularly for failors in long voyages; becaufe it is incapable of

Salep. preventing, and will not contribute much to check, the progrefs of that fatal difeafe, the fea-fcurvy. Under certain circumitances, rice feems difpofed of itfelf, without mixture, to become putrid; for by long keeping it fometimes acquires an offenfive fotor. Nor can it be confidered as a very nutritive kind of food, on account of its difficult folubility in the fomach. Experience confirms the truth of this conclufion; for it is cbferved by the planters in the Weft Indies, that the negroes grow thin, and are lefs able to work, whilft they fublift upon rice.
"Salep has the fingular property of concealing thetafte of falt water ; a circumftance of the high $\in \mathbb{f t}$ importance at fea, when there is a fiarcity of frefh water. I diffolved a dram and a half of common falt in a pint of the mucilage of falep, fo liquid as to be potable, and the fame quantity in a pint of fpring-water. The falep was by no means difagreeable to the talte, but the wate: was rendered extremely unpalatable. This experiment fuggefted to me the trial of the orchis rnot as a correct. or of acidity, a property which would render it a very ufeful diet for children. But the folution of it, when mixed with vinegar, feemed only to dilute like an equal proportion of water, and not to cover its fharpnefs. Salep, however, appears by my experiments to retard the acetous fermentation of milk; and confequently voould be a good lithing for milk-pottage, efpecially in large towns, where the cattle being fed upon four draff muft yield acefcent milk.
" Salep in a certain proportion, which I have not yet been able to afcertain, would be a very ufeful andprofitable addition to bread. I directed one ounce of the powder to be diffolved in a quart of water, and the mucilage to be mixed with a fufficient quantity of flour, falk, and yeaft. The flour amounted to two pounds, the yeaft to two ounces, and the falt to 80 grains. The loaf when baked was remarkably well. fermented, and weighed three pounds two ounces. An-. other loaf, made with the fame quantity of flour, \&c. weighed two pounds and 12 ounces; from which it appears that the falep, though ufed in fo fmall a proportion, increafed the gravity of the loaf fix ounces, by abforbing and retaining more water than the flour alone was capable of. Half a pound of flour and an ounce of falep were mixed together, and the water added according to the ufual method of preparing bread. The loaf when baked weighed 13 ounces and an half; and would probably have been heavier if the falep had been previoufly diffolved in about a pint of water. But it fhould be remarked, that the quantity of flour ufed in this trial was not fufficient to conceal the peculiar tafte of the falep.
" The reftorative, mucilaginous, and demulcent qualities of the orchis root, render it of confiderable ufe in various difeafes. In the fea-fcurvy it posverfully obtunds the acrimony of the fluids, and at the fame time is eafily affimilated into a mild and nutritious chyle. In diarrhoas and the dyfentery it is highly ferviceable, by fheathing the internal coat of the intefiines, by abating irritation, and gently correcting putrefaction. In the fymptomatic fever, which arifes from the abforption of pus from ulcers in the lungs, from wounds, or from amputation, falep ufed plentifully is an admirable demul-

## SAL [6ir | S A L

Salcrno cent, and well adapted to refilt the diflolution of the \| cratis of the blcod, which is fo evident in thefe cafes. Salicornia. And by the fame mucilaginous quality, it is equally efficacious in the ftrangury and dyfury; efpecially in the latter, when arifing from a venereal caufe, becan e the difcharge of urine is then attended with the molt exquifite pain, from the ulceration about the neck of the bladder and through the courfe of the urethra. I have found it alfo an ufeful aliment for patients who labour under the ftone or gravel." The ancient chemilts appear to have entertained a very high opinion of the orchis root, as appears from the fecreta fecretorum of Raymund Lully, a work dated 1565.

SALERNO, an ancient and confiderable town of Italy, in the kingdom of Naples, and capital of the Hither Ptincipato, with an archbithop's fee, a caltle, harbour, and an univerfity chiefly for medicine. It is feated at the bottom of a bay of the fame name. E. Long. ${ }^{14} 4.43$. N. Lat. 40.45.

SALET, in war, a light covering or armour for the head, anciently worn by the light-horfe, only different from the cafque in that it had no creft and was little more than a bare cap.

SALIANT, in fortification, denotes projecting. There are two kinds of angles, the one faliant, which have their point outwards; the other re-entering, which have their pôtints inwards.

Saliant, Salient, or Saillant, in heraldry, is applied to a linn, or other beaft, when its fore-legs are raifed in a leaping polture.

SALIC, or salique, Law, (Lex Salica), an ancient and fundamental law of the kingdom of France, ufually - fuppofed to have been made by Pharamond, or at leaft by Clovis ; in virtue whereof males only are to inherit.

Some, as Poflellus, would have it to have been called Salic, q. d. Gallic, becaufe peculiar to the Gauls. For Montanus infifts, it was becaufe Pharamond was at firf called Salicus. Others will have it to be fo named, as having been made for the falic lands. Thefe were noble ficfs which their firft kings ufed to beftow on the dallians, that is, the great lords of their falle or court, without any other tenure than military fervice ; and for this reafon, fuch fiefs were not to defeend to women, as being by nature unfit for fuch a tenure. Some, again, derive the origin of this word from the Salians, is tribe of Franks that fettled in Gaul in the reign of Julian, who is faid to have given them lands on condition of their perfonal fervice in war. He even palfed the conditions into a law, which the new conquerors acguiefced in, and called it julic, from the name of their former countrymen.

SALICORNIA, jointed glass-wort, or Saltwort: A genus of the monogynia order, belonging to the monandria clafs of plants; and in the natural me. thod ranking under the iath order, Holoracea. The calyx is ventricote, or a little fwelling out and entire ; tlete are no petals, and but one feed. There are four fiecies, of which the moll remarkable are, r. The lruticola, with obtufe points, grows plentifully in moft of we falt marthes which are overflowed by the tides in many parts of England. It is an annual plant, with thick, fucculent, jointed ftalks, which trail upon the ground. The flowers are produced at the ends of the points toward the extremity of the branches, which are fimall, and foure difcernible by the naked eye. 2. The
perennis, with a thrubby branching flat, guxis:atu- shiti, rally in Sheppey illand. This hath a fhrubly bratucl- Sseiar. ing falk about fix inches long; the points of the articulations are acute; the flalks branch from the botom, and form a kind of pyramid. 'They are peremial. and produce their flowers in the fame manner as the former.

The inhabitants near the fea-coafts where thefe plints grow, cut them up toward the latter end of fummer, when they are fully grown; and, after having dried them in the fun, they burn them for their athes, which are ufed in making of glafs and foap. Thefe berbs are by the country people called kelp, and promifcuoully gathered for ufe. See the article Salsola; alfo Dyeing of $L_{\text {EATHER, }}$ p. $75^{\circ}$. note a.

SALII, in Roman antiquity, prielts of Mars, whereof there were 12, inftituted by Numa, wearing painted, particoloured garments, and high bonnets; with a fteel cuiraffe on the breaft. They were called falii, from faltare " to dance ;" becaufe, after affifing at facrifices, they went dancing about the ftreets, with backlers in their lefthand, and a rod in their right, ftriking mufically with their rods on one another's bucklers, and finging bymns in honour of the gods.

SALINO, one of the Lipari iflands, fituated between Sicily and Italy, confilts of two mountains both in an high flate of cultivation. The one lying more towards the north than the other is rather the lighelt of the two, and is called del Capo, " the head." The other is called del'a Fuffa felice, or " the happy valley." One-third of the ertent of thefe hills from the bottom to the fummit is one continued orchard, confifting of vines, olive, fig, plum, apricot, and a valt diverfity of other trees. The white roofs of the houfes, which are every where interfperfed amid this diverlity of verdure and foliage, contribute to variegate the profpedt in a very agreeable manner. The back part of almoft all the houfes is fhaded by an arbour of vines, fupported by pillars of brick, with crots poles to fuiltain the branches and foliage of the vines. Thofe arbours thelter the houfes from the rays of the fun, the heat of which is quite fcorching in thefe fouthern regions. 'The vines are extremely fruitful; the poles bendingr under the weight of the grapes.

The fcenes in this ifland are more interefting to the lover of natural hiftory than to the antiquarian. See Reticulum.

On the fouth fide of the ifland, however, there are fill to be feen fome fone ruins of an ancient bath, a Roman work. They confit of a wall of 10 or in fathoms in extent, and terminating in an arch of no great height, of which only a fmall part now remains. The building feems to have been reduced to its prefat Itate rather by the ravages of men than the injuries of time. Almolt all the houfes in the illand are built of materials which have belonged to ancioat monaments. The ancients had, in all probability, baths of frell as well as of falt water in this illand; for whenever the prefent inhabitants have occaficn for a furini; of frelb water, they have only to dig a pit on the fhome, and pure fweet water fows in great abundance.

There were formenly mines of ilum liere, from which the inhabitants drew a very confiderable yearly revenue. But whether they are exhaufted, or whatever circumAtance may have caufed them to be given up, they ar

Salifbury, now no longer known. The ifland abounds in a variety of fruits.

On the eaft fide it is very populous. There are two places which are both called Lingua "the tongue," and which contain a good number of inhabitants; the one is near Salino, the other is diftinguifhed by the name of St. Marina: there are befides thefe two other villages. All thefe places together may contain about 4000 inhabitants : the circumference of the ifland may be about 14 miles.

SALISBURY, the capital of the county of WiltThire in England, fituated in W. Long. 1. 55. N. Lat. 51. 3. This city owed its firt 1 ife to its cathedral, which was begun in 12 Ig , and finifhed in J 258 . Accordins to an eftimate delivered in to Henry III. it colt, forty thoufand marks. It is a Gothic building, and is certainly the mof clegant and regular in the kingdom. The doors and chapels are equal in number to the months, the windows to the days, and the pillars and pilaftes to the hours in a year. It is built in the form of a lantern, with a fpire in the middle, and nothing but buttreffes and glafs windows on the outfide. The fipe is the highelt in the kingdom, being 410 feet, which is twice the heignt of the monument in London. The pillars and pilaftres in the church are of fufile marble; the art of making which is now either entirely lof or little known. This magnificent church has lately undergone moft beautiful alterations; with an addition of two fine windows, and an organ prefented by the king. The roof of the chapter-houfe, which is 50 feet in diameter, and 150 in circumference, bears all upon one flender pillar, which is fuch a curiofity as can hardly be matched in Europe. The turning of the weftern road through the city in the reign or Edward III. was a great advantage to it. The chancellorfhip of the moft noble order of the garter, which is annexed to this fee, was firlt conferred on bifhop Richard Beauchamp. The hofpital of St. Michael's, near this city, was founded by one of its bifhops. Dr. Seth Ward, bifhop of this fee in the reigu of Charles II. contributed greatly to the making the river Avon navigable to Chrift church in Hampfine. The fame prelate in 1683 , built an hofpital for the entertainment of the widows of poor clergymen. There are three other churches befide the cathedral, which is without the liberty of the city, and a greater number of boarding fchools, efpecially for young ladies, than in any other town in England. Here is a manufacture of Aruggets, flannels, bone-lace, and thofe cloths called Salifbury whites; in confideration of which, and its fairs, markets, allizis, boarding-fchools, and clergy, the city nay be juftly faid to be in a flourifing condition. It was incorporated by Henry III. and is governed by a mayor, high-fteward, recorder, deputy-recorder, 24 aldermen, and 30 affitants or common council men. The number of fouls is about 10,000. A new council chamber is jult now (June 1794) building here with proper courts of juftice, by the earl of Radnor; to which Mr. Huffey is alfo a great benefagor. That nuarter called the clofe, where the canons and prebendaries live, is like a fine city of itfelf. Here is an af. fembly for the ladies every Tuefday, and coaches fet out from hence to London every day. In this town are feveral charity-fchools; the expence of one of them
is entirely defrayed by the bihop. The city gives the title of earl to the noble family of Cecil.

SAlisburr Plain, the extenfive downs in Wilthire, which are thus denominated, form in fummer one of the moft delightful parts of Great Britain for extent and beauty. It extends 28 miles weft of Weymouth, and 25 ealt to Winchefter; and in fome places is near 40 miles in breadth. That part about Salifbury is a chalky down, and is famous for feeding numerous flocks of fheep. Confiderable portions of this tract are now enclofing, the advantages of which are fo great, that we hope the whole will undergo fo beneficial an alteration.

SALIVA, is that fluid by which the mouth and tongue are continually moikened in their natural ftate: and is fupplied by glands which form it, that are called falivary glands. This humour is thin and pellucid, incapable of being concreted by the fire, almot without tafte and fmell. By chewing, it is expreffed from the glands which feparate it from the blood, and is intimately mixed with our food, the digeftion of which it greatly promotes. In hungry perfons it is acrid, and copioully difcharged; and in thofe who have fafted long it is highly acrid, penetrating, and refolvent. A too copious evacuation of it, produces thirlt, lofs of appetite, tad digeftion, and an atrophy.

SALIVATION, in medicine, a promoting of the flux of faliva, by means of medicines, moftly by mercury. The chief ufe of falivation is in difeafes belonging to the glands and membrana adipofa, and principally in the cure of the venereal difeafe; though it is fometimes alfo ufed in epidemic difeafes, cutaneous difeafes, \&c. whofe crifes tend that way.

SALIX, the willow, in botany: A genus of the diandria order, belonging to the diocia clafs of plants: and in the natural method ranking under the 50 th order, Amentacce. The amentum of the male is fcaly; there is no corolla; but a nectariferous glandule at the bafe of the flower. The female amentum is fcaly; there is no corolla; the ftyle bifid; the capfule unilocular and bivalved; the feeds pappous. The willow trees have been frequently the theme of poetical defcription, both in ancient and modern times. In Virgil, Horace, and in Ovid, we have many exquifite allufions to them and their feveral properties; and for a melancholy lover or a contemplative poet, imagination cannot paint a fitter retreat than the banks of a beautiful river, and the thade of a drooping willow There are 3I fpecies; of which the molt remarkable are, I. The caprea, or common fallow-tree, grows to but a moderate height, having fmooth, dark-green, brittle branches: oval, waved, rough leaves, indented at top, and woolly underneath. It grows abundantly in Great Britain, but more frequently in dry than moift fituations: it is of a brittle nature, fo is unfit for the bafket-makers; but will ferve for poles, ftakes, and to lop for fire-wood; and its timber is good for many purpoles. 2. The alba, white, or filver-leaved willow, grows to a great height and confiderable bulk, having fmooth pale-green fhoots; long, fpear-fhaped, acuminated, fawed, tilvery-white leaves, being downy on both fides, with glands below the ferratures. This is the common white willow, which grows abundantly about towns and villages, and by the fides of rivers and brooks, \&c. 3. The vitellina, yellow or golden willow,

## Salix,

 Sallec.grows but to a moderate height; having yellow, very pliant fhoots; oval, acute, ferrated, very fmooth leaves, with the ferratures cartilaginous, and with callous punctures on the footitalks. 4. The purpurea, purple, or red willow, grows to a large height, having long, reddif, very plable fhoots, and long fpear-fhaped, ferrated, fmooth leaves, the lower ones being oppofite. 5 . The viminalis, or oficr-willow, grows but a moderate height, having flender rod-like branches; very long, pliant, greenith thoots; and very long, narrow, fpearThaped, acute, almolt entire leaves, hoary, and filky underneath. 6. The pentandria, pentandrous, broadleaved, fweet-fcented willow, grows to fome confiderable ftature, having brownifh-green brancles; obiong, broad, ferrated, froooth, fweet-fcented leaves, fhining above; and pentandrous flowers. 7. The triandria, or triandrous willow, grows to a large fature, having numerous, erect, greyifh-green branches, and pliant thoots; oblong, acute-pointed, ferrated fimooth, fhining. green leaves, eared at the bafe; and triandrous flowers. 8. The fragilis, fragile, or crack-willow, rifes to a middling ftature, with brownifh, very fragile, or brittle branches, long, oval-lanceolate, fawed, fmooth leaves of a fhining-green on both fides, having dentaied glandular foot-ltalks. This fort in particular being exceedingly fragile, fo that it eafly cracks and breaks, is unfit for culture in ofier.grounds. 8. The Babylonica, Babylorian pendulous falix, commonly called weeping willow, grows to a largifh fize, having numerous, long, flender, pendulous branches, hanging down loofely all round in a curious manner, and long, narrow, fpear-fhaped, ferrated, fmooth leaves. This curious willow is a native of the eaft, and is retained in our hardy plantations for ornament, and exhibits a moft agreeable variety; particularly when difpofed fingly by the verges of any piece of water, or in fpacious openings of grafsground.

All the fpecies of falix are of the tree kind, very hardy, remarkable faft growers, and feveral of them attaining a confiderable ftature when permitted to run up to ftandards. They are moftly of the aquatic tribe, being generally the molt atundant and of molt profperous growth in watery fituations: they however will grow freely almoft any where, in any common foil and expofure; but grow confiderably the faftelt and ftrongeft in low moift land, particularly in marfhy fituations, by the verges of rivers, brooks, and other waters; likewife along the fides of watery ditche,, \&c. which places often lying walte, may be employed to good advantage, in plantations of willows, for different purpofes.

SALLEE, an ancient and confiderable town of Africa in the kingdom of Fez , with a harbour and feveral ports. The harbour of Sallee is one of the beft in the country; and yet, on account of a bar that lies acrolis it, thips of the fmallett draught are forced to unload and take out their guns before they can get into it. There are docks to build hips; but they are hardly ever ufed, for want of fill and materials. It is a large place, divided into the Old and New Towns, by the iiver Guero. It has long been famous for its rovers or pirates, who make prizes of all the chriftian fhips that come in their way, except there is a treaty to the contrary. The town of Sdllee in its prefent ftate, though large, prefents nothing worthy the obfervation of the
traveller except a battery of 2 f picecs of camm trenting the fea, and a redoubt at the entrance of the riser, which is about a quarter of a mile broad, and penetrates feveral miles into the interio colintry. W. Long. 6. 30. N Lat. 34. 0.

SALLET, or Sallad, a difh of eatable herbs, ordinarily accompanying roait meat; compofed chichy of crude, frefl herbage, feafoned with falt, oil, and vinegar

Menage derives the word from the Latin falata; of fal, "治t;" others from $\mathrm{fa}^{7}$ cedo; Du-Cange from fulfana, which is ufed in Aufonius and Columella in the fame fenfe.

Some add multard, hard eggs, and fugar ; others, pepper, and other fipes, with orange-peei, faffon, \&c.

The principal failet-herbs, and thofe which ordinarily make the balis of our Enghth fallets, are letuce, celery, endive, crelfes, radifh, and rape; along with which, by way of furniture, or additioncic, are ufed purflane, ipinach, forrel, tarragon, burnet, corn-hallet, and chervil.

The gardeners call fome plants fmall lichs in fallets; thefe fhould always be cut while in the leed-leat: as crefies, muftard, radih, turnep, fpinach, and lettuce; all which are raifed from feeds fown in drills, or lines, from the middle of February to the end of March, under glaffes or frames; and thence to the middle of May, upon natural beds, warmly espofed; and during the fummer heats in more fhady places; and afterwards in September, as in March, \&x.; and laftly, in the rigcur of the winter, in hot-beds. If they chance to be frozen in very trolty weather, putting them in fpring-water two hours before they be ufed, recovers them.

SALLO (Denis de), a French writer, famous for being the projector of literary journals, was born at Paris in 1626. He ftudied the law, and was admitted a counfellor in the parliament of Paris in 1652 . It was in 1664 he fchemed the plan of the Fournal des $S_{\text {çavans }}$; and the year following began to publifh it under the name of Sieur de Heronville, which was that of his valet de chambre. But he played the critic fo feverely, that anthors, furprifed at the novelty of fuch aitack, retorted fo powerfully, that M. de Sallo, unable to weather the ftorm, after he had publifhed his. third Journal, declined the undertaking, and turned it over to the abbe Gallois; who, without prefuming to criticie, contented himfelf with merely giviog titles, and making extracts. Such was the origin of literary journals, which afterwards fprang up in other countries under different titles; and the luccefo of them, under judictous management, is a clear proof of their utility. M. de Sallo died in 1669.

SALLUSTIUS (Caius Crifpus), a celebrated Ro. man hiftorian, was born at Amserfum, a city of Italy, in the year of Rome 660, and before Chrift 85. His education was liberal, and he made the belt ufe of it. His Roman Hitory in fix books, from the death of Sylla to the confpiracy of Catiline, the great work fry ma which he chiefy derived his glory among the ancients, is unfortunately loft excepting a few fragments; but his two detached pieces of Hiftory which happily remain entire, are fufficient to juftify the grat enco. miams ho has received as a writer.-He bas had the fingular honour to be twice tranflated by a royal hand: firt by Queen Elizabeth, nocorlogto Camden,

Shuains and ccond , by the prefent Infant of Spain, whofe verfion of this degant hiftorian, lately printed in folio, is one of the mot beautiful books that any country has produced fince the invention of printing. No man has inverghed more fharply againt the vices of his age than this hiftorian ; yet no man had lefs pretenfions to virtue than he. His youth was fpent in a moft lewd and profgate manner; and his patrimony almolt fquandered away when he had fcarcely taken woflelion of it. Marcus Varro, a wreter of undoubted credit, relates, in a fragment preferved by Aulus Gellius, that Sallult was actually caught in bed with Faufta the daughter of Sylla, by Milo her huband; who fourged him very feverely, and did not fuffer him to depart till he had redeemed his liberty with a confiderable fum. A. U. C. 694, he was made queftor, and in 702 tribune of the people; in neither of which places is he allowed to have acquitted himfelf at all to his honour. By virtue of his queforfhip, he obtained an admifion into the fenate; but was expelled thence by the zentors in 704, on account of his immoral and debauched way of life. In the year 705 Cæfar reftored him to the dignity of a fenator; and to introduce him into the houfe with a better grace, made him queftor a fecond time. In the adminiftration of this office he behaved himfelf very fcandalounly; expofed every thing to fale that he could find a purchafer for; and if we may believe the author of the iavective, thought nothing wrong which he had a mind to do: Nibil non venale babuerit, cujus aliquis enptor fuit, nibil non aquum et verum duxit, quad ipff faccre collibuiffet. In the year 707 , when the African war was at an end, he was made prator for his fervices to Cafar, and fent to Numidia. Here he asted the fame part as Verres had done in Sicily; outrageoully plundered the province; and returned with fuch immenfe riches to Rome, that he purchafed a zrolt magnificent building upon mount Quirinal, with thofe gardens which to this day retain the name of Saliuftian gardens, befides his country houfe at Tivoli. How he fent the remaining part of his life, we have 20 account from ancient writers. Eufebius tells us, that he married Terentia, the divorced wife of Cicero; and that he died at the age of 50 , in the year 710, which was about four years before the battle of Actium. Of the many things which he wrote, befide his Hiftories of the Catilinarian and Jugurthine wars, we have fome orations or fpeeches, printed with his fragments.

SALLY-ports, in fortification, or Pofern-Gates, as they are fometimes called, are thofe under-ground paffages which lead from the inner works to the outward ones; fuch as from the higher flank to the lower, or to the tenailles, or the communication from the middle of the curtain to the ravelin. When they are made for men to go through only, they are made with iteps at the entrance and going out. They are about 6 feer wide and $8 \frac{1}{2}$ feet high. There is alfo a gutter or thore made under the fally-ports, which are in the middle of the curtains, for the water which runs down the flreets to pafs into the ditch; but this can only be done when they are wet ditches. When fally-ports ferve to carry guns through them for the out-works, inftead of making them with fteps, they mult have a gradual flope, and be 8 feet wide.
SALMASIUS (Claudius), a French writer of un-
common abilities and immenfe erudition, defcended Salmafus, from an ancient and noble family, and born at or near salme. Semur in 1596. His mother, who was a proteltant, infufed her notions of religion into him, and he at length converted his father; he fettled at Leyden; and in 1650 paid a vifit to Chritina queen of Sweden, who is reported to have hewn him extreordinary marks of regard. Upon the violent death of Charles I. of England, he was prevailed on by the royal family, then in exile, to write a defence of that king; which was anfwered by the famous Milton in 165 I , in a work ethtitled Defenfio pro Populo Anglicano contra Claudii Sulmafii Defenfionem Regiam. This book was read over all Eurupe; and conveyed fuch a proof of the writer's abilities, that he was refpected even by thofe who hated his principles. Salmatius died in 1653 ; and fome did not foruple to day, that Milton killed him by the acuteners of his reply. His works are numerous, and of various kinds; but the greatelt monuments of his learning are, his Note in Hyiarie Ausufte Scriptores, and his Exercitationes Pliniance in Solinum.

SALMO, the SALmon; a genus of the order of abdominales. The head is fmooth, and furnifhed with teeth and a tongue; the rays of the gills are from four to ten; the back-fin is fat behind; and the belly-fins have many rays. There are 29 fpecies; of which the molt remarkable are,

1. The falar, or common falmon, is a northern fifh, being unknown in the Mediterranean fea and other warm climates : it is found in France in fome of the rivers that empty themfelves into the ocean, and nerth as far as Greenland; they are alfo very common in Newfoundland, and the northern parts of North America. Salmons are taken in the rivers of Kamtfchatka; but whether they are of the fame fpecies with the European kind, is not very certain. They are in feveral countries a great article of commerce, being cured different ways, by falting, pickling, and drying: there are ftationary fifheries in Iceland, Norway, and the Baltic; but we believe no where greater than thofe at Colraine in Ireland; and in Great Britain at Berwick, and in fome of the rivers in Scotland. In the Hiftory of Cumberland, we are told that "they depofit their ipawn even on the upper fide of Pouley-bridge, but always in the ftream of Eamont. At thofe times it is not an eafy matter to drive them away by throwing ftones at them. They will take a bait of roe, or fmall fifh, while upon the rud, or laying their fpawn. We have never heard of a falmon or falmon fmelt being feen in the lake. They go up the river Derwent in Sep. tember, through the lake of Baffenthwaite, up the river which runs through Kefwick into the vale of St John, where they depofit their fpawn in the fmall ftreams nnd feeders of the lake. The young falmon are called falmon fmelts, and go down to the fea with the firft floods in May."

The falmon was known to the Romans, but not to the Greeks. Pliny fpeaks of it as a fifh found in the rivers of Aquitaine; Anfonius enumerates it among thofe of the Mofel. The falmon is a fifh that lives both in the falt and frefh waters; quitting the fea at certain feafons for the fake of depofiting its fpawn, in fecurity, in the gravelly beds of rivers remote from their mouths. There are fcarce any difficulties but what they will overcome, in order to arrive at places fit for their

Salmo. their purpofe : they will afcend rivers hundreds of miles,
force themfelves againf the moft rapid freams, and force themfelves againf the mort rapid ftreams, and
fpring with amazing agility over cataracts of feveral feet in height. Salinon are frequently taken in the Rhine as high up as Bafil; tiey gain the fources of the Lapland rivers in fite of their torrent-like currents, and furpafs the perpendicular falls of Leixflip, Kennerth, and Pont Aberglaityn. It may here be proper to con. tradict the vulgar error, of their taking their tail in their mouth wher they attempt to leap; fuch as Mr Pennant faw, fprung up quite ftraight, and with a frongtremulous motion.

The falmon is a filh fo generally known, that a very brief defcription will ferve. The largef we ever heard of weighed 74 pounds. The colour of the back and fides are grey, fometimes fpotted with black, fometimes plain : the covers of the gills are fubject to the fame variety; the belly filvery; the nofe fharp-pointed; the end of the under jaw in the males often turns up in the form of a hook; fometimes this curvature is very confiderable: it is faid that they lofe this hook when they return to the fea. The teeth are lodged in the jaws and on the tongue, and are flender, but very fharp; the tail is a little forked.
2. The trutta, or fea-trout, migrates like the true falmon up feveral of our rivers; fpawns, and returns to the fea. That defcribed by Mr Pennant was taken in the Tweed below Berwick, June 1769 . The fhape was more thick than the common trout; the weight three pounds two ounces. The irides filver; the head thick, fmooth, and dufky, with a glois of blue and green; the back of the fame colour, which grows fainter towards the fide-line. The back is plain, but the fides, as far as the lateral line, are marked with large difinet irregular fhaped fpots of black : the lateral line ftraight ; the fides beneath the line and the belly, are white. Tail broad, and even at the end. Thic dorfal fin had 12 rays; the pectoral 14 ; the veniral 9 ; the anal io. The flefh when boiled is of a pale red, but well-flavoured.
3. The fario, or trout; the colours of which vary greatly in different waters, and in different feafons. Trouts differ alio in fize. One taken in Liynallet, Denbighfhire, which is famous for an excellent kind, meafured 17 inches, its depth three and three-quarters, its weight one pound ten ounces; the head thick; the nofe rather fharp; the upper jaw a little longer than the lower; both jaws, as well as the head, were of a pale brown, blotched with black; the teeth harp and frong, difpored in the jaws, roof of the month, and tongue. The back was dufky; the fides tinged with a purplifh bloom, marked with deep purple fote, mixed with black above and below thefele line, which was frait; the belly white. The firlt dorfal fin was fpotted; the fpurious fin brown, tipped with red; the pectoral, ventral, and anal fins, of a pale brown; the edges of the anal fin white; the tail very little forked when extended.-The fomachs of the common trouts are uncommonly thick and mufcular. They feed on the fhell-gifh of lakes and rivers, as well as on fmall filh. They likewife take into their ftomachs gravel or fmall ftones, to allit in comminuing the teftaceous parts of their food. The trouts of certain lakes in Ireland, fuch as thefe of the province of Galway and fome others, are re-
markable for the great thicknets of their fumach: simo. which, from fome light refemblance to the orans of digeftion in birds, have been called giazards; the Irilh name the fpecies that has them gillaroo trouts. Thefe ftomachs are fometimes ferved up to table under the former appellation. Trouts are mof voracious filh, and afford excellent diverfion to the angler. The pation for the fport of angling is fo great in the neighbourhood of London, that the liberty of fifhing in fome of the ftreams in the adjacent counties is purchafed at the rate of 101. per annum. Thefe filh fhift their quarters to fodwn; and, like falmon, make up towards the heads of rivers to depofit their roes. The under jaw of the trout is fubject, at certain times, to the fame curvature as that of the falmon.
" It is caught (fay the editers of the Hiftory of Cumberland) in very great plenty at all feafons of the year ; one weighing a pound and a half is an ufual fize, though fome are caught of 4 lb . weight. Five or fix ounces is a common weight; the largeft are commonly the beft for the table, when they cut of a deep falmon colour. In the winter months great quantities are potted along with the charre, and fent to London, Ac.-.The angler, on a favourable day, here enjoys his diverfion in higher perfection than in moft places. A tront occafionally ftrays out of the Eamont into the lake, and vice verfa, out of the lake into the river. They are eatily diftinguifhed by their fpots; and it is obferved, that a filh taken from its ufual place is not in fo good a condition as one of equal length taken on its own ground; hence it is probable, that they do not emigrate, except when difeafed or fpawning. Geld fifh (thofe without fpawn) are the firmeft and belt. They have been taken out of a folid piece of ice, in which they were frozen, as it were in a cafe, perfectly uninjured, after animprifonment of feveral hours."
4. The fpecies, called from its colcur the aubite, migrates out of the fea into the river $E f k$ in Cumberland, from July to September. When dreffed, their Helh is red, and moft delicious eating. They have, on their firf appearance from the falt-water, the lernea falmonea, or falmon loufe adhering to them. They have both milt and fpawn; but no fry has as yet been oblerved. This is the fifh called by the Scots ploinocs. They never exceed a foot in length. The upper jaw is a little longer than the lower; in the firt are two rows of teen, in the laft one: on the tongue are fix teeth. The back is Araight: the whole body of ant eitgant form; the lateral line is ftraight; colour, between that and the top of the back, dufky and filvery intermixed; beneath the line, of an exquifite whitenefs; firft dorfal fin footted with black : tail black, and mucil forked.
5. The famlet is the lealt of the trout kind; is fre. quent in the Wye, in the upper part of the Severn, and the rivers that run into it, in the north of England, and in Wales. It is by feveral imagined to be the fry of the falmon; but Mr Pennant diffents from that opinion. See his Brit. Zcol. Iil. 303.

This fecies has a general refemblance to the trout, therefore muft be defcribed comparatively, $1 / t$. The head is proportionably narrower, and the mouth lets than that of the trout. $2 d l y$. Their body is deeper. $3 d l y$. They feldom exceed fix or feven inches in length; ai: mof, eight and alalf. fthe. The peat ral fins have feneral'ry

Salmo. generally but on: large black foot, though fometimes a lingle fmall one attends it; whereas the pectoral fins of the trout are more numeroufly marked. 5 tbly , The ipurius or fat fin on the back is never tipped with red; nor is the edge of the anal fin white. 6tkly, The fpots on the body are fewer, and not fo bright: It is alfo marked from the back to the fides with fix or feven large bluifh bars; but this is not a certain charaster, as ine fame is fometimes found in young trouts. 7thly, The tail of the famler is much more forked than that of the zrout. Thefe filh are very trequent in the rivers of Scotland, where they are called pars. They are alfo common in the Wye, where they are known by the name of firlings, or lafprings.
6. The alpinus, or red charr (umbla minor, or cafe charr of Pennant), is an inhabitant of the lakes of the north, and of thofe of the mountainous parts of Eu. rope. It affests clear and pure waters, and is very rare. ly known to wander into running flreams, except into fuch whofe bottom is fimilar to the neighbouring lake. It is found in valt abundance in the cold lakes on the fummits of the Lapland Alps, and is almott the only filh that is met with in any plenty in thofe regions; where it would be wonderful how they fubfiited, had not Providence fupplied them with innumerable larvx of the gnat kind: thefe are food to the fill, who in their turn are a fupport to the migratory Laplanders, in their fummer-voyages to the diftant lake. In fuch excurfions thofe vacant people find a luxurious and ready repaft in thefe fif, which they drefs and eat without the addition of fauces; for exercife and remperance render ufolefs the inventions of epicurifm. There are but few lakes in Great Britain that produce this filh; and even thofe not in any abundance. It is found in Ullfwater and Windermere in Weftnoreland; in Llyn Quellyn, near the foot of Snowdon; and, before the difcovery of the copper mines, in thofe of Llynberris; but the mineral freams have entirely defroyed the fifh in the laft lakes. In Scotland it is found in Loch Inch, and other neighbouring lakes, and is faid to go into the Spey to spawn.
" The largeft and moft beautiful we ever received (fays Mr i'ennant) were taken in Windermere, and were communicated by the Rev Mr Farifh of Carlifle, with an account of their natural hiftory. He fent five fpecimens; two under the name of the cafe charr, male and female; another he called the geld charr, i. e. a charr which had not fpawned the preceding feafon, and on that account is reckoned to be in the greatelt pertection. The two others were infcribed, the red charr, the flower or gild cbarr, the carpia lacus lenaci, Rani Syn. Pifa. 66. which laft are in Wettmoreland diftinguifhed by the epithet red, by reafon of the flefh aftaming a higher colour than the other when dreffed.
" The umbla minor, or cafe charr, fpawns about Michaelmas, and cliefly in the river Brathy, which uniting with another called the Rowthay, about a quarter of a mile above the lake, they both fall into it together. The Brathy has a black rocky bottom; the bottom of the Rowthay is a bright fand, and into this the charr are never obferved to enter. Some of them, however, fpawn in the lake; but always in fuch parts of it which are fony, and refemble the channel of the Brathy. They are fuppofed to be in the highelt per-
fection about May, and continue fo all the fommer; yet are rarely caught after April. When they are fpawning in the river they will taks a bait, but at no other time; being commonly taken, as well as the other fpecies, in what they call breaft-nets, which are in length about 24 fathoms, aud about five where broadeft. -The feafon which the other fpecies fpawn in is from the beginning of January to the end of March. They are never known to afcend the rivers, but always in thofe parts of the lake which are firingy, where the bottom is fmooth and fandy, and the water warmeit. The fillsermen judge of this warmth, by obferving that the water feldom freezes in the places where they fpawn except in intenfe frolts, and then the ice is thinner than in other parts of the lake. They are taken in greateft plenty from the end of September to the end of November; at other times they are hardly to be met with. This fpecies is much more efteemed for the table than the other, and is very delicate when potted. The length of the red charr to the divifion in its tail was 12 inches; its biggeft circumference almolt 7. The firt dorfal fin was five inches and three-quarters from the tip of its nofe, and confilted of 12 branched rays, the firft of which was thort, the fifth the longeft; the fat fin was very fmall. Each of the five filh had double noftrils, and frall teeth in the jaws, roof of the mouth, and on the tongue.-The jaws of the cafe charr are perfectly even; on the contrary, thofe of the red charr were unequal, the upper jaw being the broadelt, and the teeth hung over the lower, as might be perceived on paffing the finger over them. - The geld or barren charr was rather more gender than the others, as being without fpawn. The back was of a glofly: dulky blue; the fides filvery, mixed with blue, fpotted with pale red; the frdes of the belly were of a pale red, the bottom white. The tails of each bifurcated."
7. The thymallus, or grayling, haunts clear and rapid ftreams, and particularly thofe that flow through mountainous countries. It is found in the rivers of Derbyfhire; in fome of thofe of the north; in the Tame near Ludlow; in the Lug, and other itreams near Leomintter; and in the river near Chriftchurch, Hampfhire. It is alfo very common in Lapland: the inhabitants make ufe of the guts of this fifh intead of rennet, to make the cheefe which they get from the millk of the rein-deer. It is a voracious filh, rifes freely to the fly, and will very eagerly take a bait. It is a very fwift fwimmer, and difappears like the tranfient paffage of a fhadow, from whence we believe it derived the name of umbra.

## Effugienfque oculos celeri levis umbra natatu. Aufon. The umbra fwift efcapes the quickelt eye.

Thymalus and tbimus are names beftowed on it on account of the imaginary fcent, compared by fome to that of thyme; but we never could perceive any particular fmell. It is a filh of an elegant form ; lefs deep than that of a trout: the largelt we ever heard of was taken near Ludlow, which was about half a yard long, and weighed four pounds. fix ounces; but this was a very rare inftance. The iridies are filvery, tinged with yellow : the teeth very minute, feared in the jaws and the roof of the mouth, but nons on the tongue : the head is duffey; the covers of the gills of a gloflye green : the back and fides of a fine filvery, grey; but when the fifh is juit

Gatmon. taken, varied fightly with blue and gold; the fide-line is ftraight: the fcales are large, and the lower edges dufky, forming ftraight rows from head to tail: the, tail is much forked.
8. The cperlanus, or fmeit, inhabits the feas of the northern parts of Europe, and probably never is found as far fouth as the Mediterranean: the Seine is one of the Frencl rivers which receive it; but whether it is found fouth of that, we have not at prefent authority to fay. If we can depend on the obfervations of navigators, who generally have too much to think of to attend to the minutix of natural hiftory, thefe fifh are taken in the Straits of Magellan, and of a molt furprifing fize, fome meafuring 20 inches in length and 8 in circumference. They inhabit the feas that wafh thefe iflands the whole year, and never go very remote from thore except when they afcend the rivers. It is remarked in certain rivers, that they appear a long time before they fpawn, being taken in great abundance in November, December, and January, in the Thames and Dee, but in others not till February; and in March and April they fpawn ; after which they all return to the falt water, and are not feen in the rivers till the next feafon. It has been obferved that they never go into the Merfey as long as there is any fnow.water in the river. Thefe fifh vary greatly in fize; but the largelt we ever heard of was 13 inches long, and weighed half a pound. They have a very particular fcent, trom whence is derived one of their Englifh names, fmelt, i. e. fmell it. That of parting, which is ufed in Wales and the north of Eugland, is taken from the French Jperlan. There is a wonderful difagreement in the opinion of people in refpest to the icent of this fifh: fome affert it flavours of the violet; the Germans, for a very different reafon, diftinguifh it by the elegant title of finkffcb.Smelts are often fold in the freees of London fplit and dried. They are called dried /parlings; and are recommended as a relifh to a glafs of wine in the morning. It is a filh of a very beautiful form and colour ; the head is tranfparent, and the ikin in general fo thin, that with a good microfcope the blood may be obferved to circulate. The irides are filvery; the pupil of a full black; the under jaw is the longett : in the front of the upper jaw are four large teeth; thofe in the fides of both are fmall; in the roof of the mouth are two rows of teeth; on the tongue two others of large teeth. The fcales are fmall, and readily drop off: the tail confifts of 19 rays, and is forked. The colour of the back is whitith, with a caft of green, beneath which it is varied with blue, and then fucceeds a beautiful glofs of a filvery hue.
9. The lavaretus, or gwiniad, is an inhabitant of feveral of the lakes of the Alpine parts of Europe. It is fuund in thofe of Switzerland, Savoy, and Italy; of Norway, Sweden, Lapland, and Scotland; in thofe of Ireland, and of Cumberland; and in Wales, in that of Llyntegid, near Bala, in Merionethfhire. It is the fame with the ferra of the lake of Geneva; the fchelly of Hulle-water ; the pollen of Lough Neagh ; and the vangis and juvengis of Loch Mabon. In Scotland, there is a tradition that it was frit introduced there by their beauteous but unfortunate queen, Mary Stuart; and as in her time the Scotch court was much Frenchified, it feems likely that the same was derived from the Vol. XVI.

French vendoife, a " dace;" to which a night oberer suman might be tempted to compare it from the whitenefs of its factes. The Britifh name groiniad, or whiting, was bellowed upon it for the fame reafon. It is a gregarious filh, and approaches the fhores in valt fanols in fpring and in fummer; which proves in many places a bleffed relief to the poor of inland countries, in the fame degree as the annual return of the herring is to thofe who inhabit the coalts. Between 7000 and 8000 have been taken at one draught. The gwiniad is a fill of an infipid tafte, and mult be eaten foon, for it will not keep long; thofe that choofe to preferve them do it with falt. They die very foon after they are taken. Their fopaning feafon in Llyntegid is in December. The largeft gwiniad we ever heard of weighed between three and four pounds : the head is fmall, fmooth, and of a dulky hue; the eyes very large; the pupil of a deep blue: the nofe blunt at the end; the jaws of equal length : the mouth fmall and toothlefs: the branchiontegous rays nine : the covers of the gills filvery, powdered with black. The back is a little arched, and flightly carinated: the colour, as far as the lateral line, is glofed with deep blue and purple; but towards the lines affumes a filvery calt, tinged with gold ; beneath which thofe colours entirely prevail. The tail is very much forked: the fcales are large, and adhere clofely to the body.

SALMON, in ichthyology. See Salmo, $\mathrm{n}^{0}$ I.
Salmon-Fi/aery. See Salmon-Fishbry.
SALON, or $S_{A L O O N}$, in architecture, a lofty, fpacious fort of hall, vaulted at top, and ufually comprehending two ftories, with two ranges of windows.

The falon is a grand room in the middle of a building, or at the head of a gallery, \&c. Its faces, or fides, are all to have a fymmetry with each other ; and as it ufually takes up the height of two ftories, its ceiling, Daviltr obfervés, fhould be with a moderate fweep.

The falon is a fate-room much ufed in the palaces in Italy ; and from thence the mode came to us. Ambaffadors, and other great vifitors, are ufually received in the falon.

It is fometimes bnilt fquare, fometimes round or oval, fometines octagonal, as at Marly, and fometimes in other forms.

SALONA, a fea-port town of Dalmatia, feated on a bay of the gulph of Venice. It was formerly a very confiderable place, and its ruins fhow that it was 10 miles in circumference. It is 18 miles north of Spalatto, and fubject to Venice. It is now a wretched Fortis's village, preferving few diflinguifhable remains of its an- Travels in cient fplendor. Doubtlefs the two laft ages have de- to Dalouafroyed all that had efcaped the barbarity of the north- tia. ern nations that demolifhed it. In a valuable MS. relation of Dalmatia, written by the fenator Giambattifta Guiltiniani, about the middle of the 1 Gh century, there is a hint of what exifed at that time. "The nobility, grandeur, and magnificence of the city of Salona, may be imagined from the vaults and arches of the wonderful theatre, which are feen at this day; from the vaft ftones of the fineft marble, which lies fcattered on, and buried in the fields; from the beautiful column of three pieces of marble, which is ftill fanding in the place where they fay the arfenal was, towards the feathore; and from the many arches of furprifing beanty,
fup-

Salunichi fupported by very high marble columns; the height of H :Saliette. the arches is a flone-throw, and above them there was an aqueduct, which reached from Salona to Spalatro. There are to be feen many ruins and veftiges of large palaces, and many ancient epitapbs may be read on fine marble ftones; but the earth, which is increafed, has buried the moft ancient fones, and the moft valuable things." E. Long. 17.29. N. Lat. 44. 10.

SALONICHI, formerly called Theflalonica, a feaport town of Turkey in Europe, and capital of Macedonid, with an archbifhop's fee. It is ancient, large, populous, and rich, being about 10 miles in circumference. It is a place of great trade, carried on principally by the Greek Chrittians and Jews, the former of which have 30 churches, and the latter as many fynagogues; the Turks alfo have a few mofques. It is furrounded with walls, flanked with towers, and defended on the land fide by a citadel, and mear the harbour with three forts. It was taken from the Venetians by the Turks in 1431. The principal merchandize is filk. It is feated at the bottom of a gulph of the fame name, partly on the top, and partly on the fide of a hill, near the river Vardar. E. Long. 23. I3. N. Lat. 40. 41 .

SALSES, a very ftrong caftle of France, in Rouffillon, on the confines of Languedoc. It was taken from the Spaniards by the French in 1642 ; and is feated on a lake of the fame name, among mountains, io miles north of Perignan. E. Long. 3. o. N. Lat. 43. 35.

SALSETTE, an ifland of the Ealt Indies, adjacent to Bombay, from which it is in one place divided only by a narrow pafs fordable at low water. It is about 26 miles long, and eight or nine broad. The foil is rich, and by proper cultivation capable of producing any thing that will grow in tropical climates. It is every where well watered, and when in the poffeffion of the Portuguefe furnifhed fuch quantities of rice, that it was called the Granary of Goa. It abounds alfo in all kinds of provifions, and has great plenty of game, both of the four-footed and feathered kind. It has pretty high mountains; and there is a tradition that the whole vas thrown up from the bottom of the fea: in confirmation of which it is faid, that on the top of the higheft hill there was found, fome years ago, a ftone anchor, fuch as was anciently ufed by the inhabitants of that country. Here we meet with the ruins of a place called Canara, where there are excavations of rocks, fuppofed to be contemporary with thofe of Elephanta. They are much more numerous, but not comparable to the former either in bignefs or workmanfhip.

The illand of Salfette lately formed part of the Portuguefe dominions in India. It ought to have been ceded to the Englifh along with Bombay, as part of the dower of Catharine of Lifbon, efpoufed to Charles II. The fulfilment of this article, however, being evaded, the inland remained in poffeffion of the Portuguefe; and notwithltanding the little care they took of it, the revenue of it was valued at 60,0001 . Such was the negligence of the Portugufe government that they took no care to fortify it againft the attacks of the Marattas, from whofe dominions Salfette was only feparated by a very narrow pafs fordable at low water. Here they had only a miferable redoubt of no confegnence, till, on the appearance of an approaching
war with the Marattas, they began to build another, which indeed would have anfwered the purpofe of protecting the illand, provided the Marattas had allowed them to finilh it. This, however, was nut their intention. They allowed them indeed to go quietly on with their works, till they faw them almoft completed, when they came and took poffeffion of them. The Marattas thos became dangerous neighbours to the Englifh as Bombay, until it was ceded to the latter by the treaty concluded with thefe people in 1780 . E. Long. 72. 15. N. Lat. 19.0.

SALSOLA, Glass-wort : A genus of the digynia order, belonging $t$, the pentandria clafs of plants; and in the natural method ranking under the 12 th order, Holoracee. The calyx is pentaphyllous; there is no corolla; the capfule is monofpermous, with a fcrewed feed.

The fpecies are, 1. The kali, which grows naturally in the falt marthes in divers parts of England. It is an annual plant, which rifes above five or fix inches high, fending out many fide branches, which fpread on every fide, garnifhed with fhort awl-haped leaves; which are flelhy, and terminate in acute fpines. The flowers are produced from the fide of the branches, to which they fit clofe, and are encompaffed by fhort prickly leaves; they are fmall, and of an herhaceous colour. The feeds are wrapped up in the empalement of the हower, and ripen in autumn; foon after which the plant decays. 2. The tragus grows naturally on the fandy thores of the fouth of France, Spain, and Italy. This is alfo an annual plant, which fends out many diffufed ftalks, garnifhed with linear leaves an inch long, ending with fharp fpines. The flowers come out from the fide of the ltalks in the fame manner as thofe of the former ; their empalements are blunt, and not fo clofely encompaffed with leaves as thofe of the other, 3. The foda, ifes with herbaceons Atalks near three feet high, fpreading wide. The leaves on the principal ftalk, and thofe on the lower part of the branches, are long, flender, and have no fpines; thofe on the upper part of the ftalk and branches are flender, fhort, and crooked. At the bafe of the leaves-are produced the flowers, which are fmall, and hardly perceptible; the empalement of the flower afterwards encompaffes the captule, which contains one cochleated feed. 4 . The vermicutata grows naturally in Spain, - This hath. fhrubby perennial ftalks, which rife three or four feet high, lending cut many fide-branches, garnilhed with flefhy, oval, acute-pointed leaves, coming ont in clufters from the fide of the bran hes; they are hoary, and have ftiff prickles. The flowers are produced from between the leaves toward the ends of the branches; they are fo fmall as fcarce to be difcerned, unlefs they are clofely viewed. The feeds are like thofe of the other kinds. 5. The rofacea grows naturally in Tartary. This is an annual plant, whofe ftalks are herbaceous, and feldom rife more than five or fix inches high. The leaves are awlThaped, ending in acute points; the empalements of the flowers fpread open : the flowers are fmall, and of a rofe colour, but foon fade: the feeds are like thofe of the other forts.

All the forts of glafs-wort are fometimes promifcuounly ufed for making the fal kali, but it is the third fort which is efteemed beft for this purpofe. The manner of making it is as follows: Having dug a trench

SAL
near the fea, they place laths acrofs it, on which they lay the herb in heaps, and, having made a fire below, the liquor, which runs out of the herbs, drops to the bottom, which at length thickening, becomes fal kali, which is partly of a black, and partly of an afh-colour, very tharp and corrofive, and of a faltifh tatte. This, when thoroughly hardened, becomes like a ftone; and in that ftate is tranfported to different comntries for making of glafs.

SALT, one of the great divifions of natural bodies, but which has never yet been accurately defined. The characteriftic marks of falt have ufually been reckoned its power of affecting the organs of talte, and being foluble in water. But this will not diltinguifh falt from quicklime, which alfo affects the fenfe of talte, and diffolves in water; yet quicklime has been univerfally reckoned an earth, and not a falc. The only diftinguilhing property of falts, therefore, is their cryltallization in water: however, this does not belong to all falts; for the nitrous and marine acids, though allowed on all hands to be falts, are yet incapable of cryftallization, at lealt by any method hitherto known. Several of the imperfect neutral falts alfo, fuch as combinations of the nitrous, muriatic, and vegetable acids, with fome kinds of earths, cryftallize with very great diffculty. However, by the addition of fpirit of wine, or fome other fubltances which abforb part of the water, keeping the liquor in a warm place, 8 c . all of them may be reduced to cryftals of one kind or other. Salt, therefore, may be defined a fubftance affecting the organs of tafte, foluble in water, and capable of cryftallization, either by itfelf or in conjunction with fome other body; and, univerfally, every falt capable of being reduced into a folid form, is alfo capable of cryftallization per fe. Thus the clafs of faline bodies will be fufficiently diltinguifhed from all others: for quicklime, though foluble in water, cannot be cryltallized without addition either of fixed air or fome other acid; yet it is molt commonly found in a folid ftate. The precious ftones, bafaltes, \&c. though fuppofed to be formed by cryftallization, are neverthelefs diftinguifhed from falts by their infipidity and infolubility in water.

But acids and alkalis, and combinations of both, when in a concrete form, are falts, and of the purelt fort. Hence we conclude, that the bodies, to which the name of falts more properly belongs, are the concretions of thofe fubitances; which are accordingly called acid falls, alkaline folls, and neutral falts. Theie laft are combinations of acid and alkaline falts, in fuch proportion as to render the compounds neither four nor alkaline to the talte. This proportionate combination is called faturation: thus the common kitchen-falt is a neutral falt, compofed of marine acid and mineral alkali combined together to the point of faturation. The appellation of neutral falts is alfo extended to denote all thole combinations of acids, and any other fubltance with which they can unite, fo as to lofe, wholly or in great meafure, their acid properties.

But although this general definition of falts is commonly received, yet there are many writers, efpecially mineralogilts, who confine the denomination of falts in the manner we firft mentioned, viz. to thofe fubltances only which, befides the general properties of falts, have the power of cryftallizing, that is, of arranging their patticles io as to form regularly-fhaped bodies, called coyhats, when the water fuperfluous to their concrete exiftence has been evaporated.

The ancient chemifts afferted that falt isas one of sit. the component principles of metals, and indeed if every thing elfe: a doctrine which was attempted to be revived by the late Dr Price of Guildford, who thought it probable that the bafis of all imperfect metals is faline, becaufe Mr Scheele had lately extracted a real acid from arfenic, which, by the addition of a preper quantity of phlogifton, becomes a femimetal. But here the argument will hold only with regard to the femimetals, all of which are volatile in the fire, and therefore may polfibly have a volatile bafis, fuch as all acids are in fome degree: but fome of the imperfect metals, as tin and copper, may be reduced to a calx equally refractory with quicklime itfelf; and even zinc, though volatile in clofe veffels, is yet capable of being reduced to an exceedingly refractory calx called flowers of zinc; and it is to be obferved, that the regulus of arfenic, even in its moft perfect metalline form, cannot be calcined like other metals. The common opinion that metals have an earihy, rather than a faline bafis. feems to be well founded.
The origin of falts is very much, or rather totaliys unknown. Some eminent chemifts, particularly Stahl, have fuppofed that the number of fubitances truly and elfentially faline is very finall; nay, that there is but one faline principle in nature. This principle they fuppofe to be the vitriolic acid, as being the molt fimple and indeftructible of them all. Stahl delivers his opinion on this fubject in the following words: "That he confiders the vitriolic acid as the only fubltance effentially faline; as the only faline principle which, by uniting more or lefs intimately with other fubfances that are not faline, is capable of forming an innumerable multitude of other faline matter, which nature and art fhew us; and, fecondly, that this faline principle is a fecondary principle, compofed only by the intimate union of two primary principles, water and earth.

In fupport of this theory Mr Macquer argues in the following manner: "Every true chemift will eafily' difcover that this grand idea is capable of comprehending by its generality, and of connecting togeher, all the phenomena exhibited by faline fubltances. But we mult at the fame time acknowledge, that when we examine the proofs upon which it is founded, although it has a great appearance of truth by its confiltency with the principles of chemiftry, and with many phenomena, yet it is not fupported by a fufficient number of facts and experiments to afcertain its truth. We might here examine what degree of probability ought to be granted to this theory of falts; but this could not be pro. perly accomplifhed, without entering into long details, and penetrating into the depths of chemitry. We are therefore obliged to relate only what is molt effential to be known concerning tlis grand hypothefis. We may perceive at once, that the former of thofe propofitions, upon which is founded the theory which we mertioned, cannot be demontrated, unlefs it be previoufly proved that every faline matter, excepting pure vitriolic acid, is nothing but this fame acid differently modified, the primary properties of which are more or leis alered or difguifed by the union contrafted with other fubftances. But we confefs, that chemills are not capable of proving decifively this opinion ; which, however, will appear very probable from the following reflections.
"Firf, of all faline matters known, none is fo ftrong,

Salt. fo unalterable, fo eminently poffeffed of faline properties, as vitriolic acid."

The vitriolic acid, when combined with other fubftances, forms vitriolic falts, which vary both in fpecific names and properties according to the various fubftances with which the acid is combined. Thus the vitriolic acid, combined with mineral alkali, forms the falt called Glauber's falt, or fal mirabile. When it is combined with calcareous earths, it forms vitriolic falts with bafes of calcareous earth, which are commonly called felenites. When cumbined with argillaceous earths, it forms alum. When combined with metals, it forms vitriolic falts with metallic bafes, to which the general name vitriols is given; and in commerce are commonly called copperas. The vitriols principally ufed are, 1. The martial vitriol; called alfo Englifh vitriol, green witriol, or green copperas, which is a combination of vitriolic acid with iron. 2. The vitriol cf copper, called allo blue witriol, Cyprian vitriol, or blue copperas; which is a combination of vitriolic acid and copper. 3. The vitriol of zinc, called alfo rubite copperas, and Goflar witriol, which is a combination of the fame acid with a femimetal called sinc. It is a property peculiar to the vitriolic acid, that all the combinations of it, with thofe fubftances with which it can form neutral xalts, are fufceptible of chryftallization.
" Secondly, Amongit the other faline fubtances, thofe which appear moft active and moft fimple, as nitrous and marine acids, are it the fame time thoie whofe properties moft refemble the properties of vitriolic acid."

The nitrous acid, combined with all the fubftances with which it can mix, forms faline fubttances, in general called nitrous falts; fpecifying each particular falt by the name of the fubftance united to the acid. Thus nitrcus acid, with fixed vegetable alkali, forms a faline fubftance called nitre, or jait petre. With mineral alkali, forms cubic or quadrangular nitre. When mixed with metallic fubftances, forms metallic nitres, which are fpecified nitre of gold; nitre of filver, or lunar nitre, lunar cryfonls, and cryfals of jilver, nitrous crytals of mercury; nitre of copper, \&c.
" Thirdly. We may give to pitriolic acid many of the charterterific properties of nitrous acid, by combining it in a certain manner with the inflammable principle, as we fee in the volatile fulphureous acid; and even, according to an experiment of Mr Piech; related. in a memoir coneerning the origin of nitre, which gained the prize of the academy of Berlin, vitriolic acid, mixed with vegetable and animal matters fufceptible of fermentation, is really transformed into a nitreus acid by the putrefaction of theie matters. See Chemistry, $\mathrm{n}^{\circ} 720$.
" Fourthly, The marine acid, although its principles are lefs. known than thofe of the nitrous acid, may be approximated to the charater of vitriolis and nitrous acids by cejtain methods. This acid, after it has been treated with tin and other metallic matters, is capable of forming ether with fpirit of wine, as vitriolic acid does, which it cannot do in its natural fate; and when iron is difolved in it, it feems to be approximated to the nature of nitrous acid. Reciprocally
the approximation of vitriolic acid to the charater of marine acid feems not impoffible. Having once diftilled very pure vitriolic acid upon a confiderable quantity of white arfenic, I was flruck with a trong fmell like that of marine acid, which was not either that of arfenic or of vitriolic acid; for this has no fmell when it is pure."

The marine acid, combined with various matters, forms marine falts, or fimply falts, fpecified by the names of their particular bafes. The fea-falt or kitchen falt, and fal gem, are combinations of marine acid and mineral alkali. When this acid is combined with voiatile alkali, it forms fal ammoniac (A.) With metals it forms metallic falts, called falt of gold, falt of enpper, \&c. according to the various metals combined with the acid. The falt of filver is alfo called luna cornea; the falt of lead is often called plambum corneum; and the falts of antimony, and of arfenic, are known by the names of butter of antimany, and buttar of arjenic.
" Fifthly, Oily vegetable acids hecome fo much Aronger, and more fimilar to vitriolic acid, as they are more perfesly deprived of their oily principle, by combining them with alkalis, earths, or metals; and afterwards by feparating them from thefe fubfances by difillation, and efpecially by frequently repeating thefe sperations. They might perhaps be reduced to a pure vitriolic acid, by continuing fufficiently this method: and reciprocally, vitri lic and nitrous acids, weakened by water, and treated with much oily matters, or fill better with fprit of wine, acquire the characters of vegetable acids. We may fee a remarkable inftance of this in Mr Pott's differtation $D_{e}$ a aicico nitri vinofo. [The mott remarkable experiment in which is related under the article Сhemistry, $\mathrm{n}^{0} 78 \mathrm{I}$.]
" Sixthly, the properties it fixed alkalis feem to be very different from thofe of acids in general, and confequently of vitriolic acid. Yet if we confider that a large quantity of earth enters their compotition; that much of it may be f.parated by repeated folutions and calcinations; and alfo, that by depriving thefe faline fubfances of their earthy principles, they bed come leis fixed, more deliquefcent, and, in a word, more fimilar to vitriolic acid in this refpect;-we fhall not think it improbable, that fixed alkalis owe their faline properties to a faline principle, of the nature of viiriolic acid, but much difguifed by the quantity of earth, and probably of inflammable principle, to which it is united in thefe combinations. The properties of volatile alkalis, and the transformation of fixed alkali, or of its materials, into volatile alkali in putrefaction, and in feveral diftillations, feem to fhow fufficiently that they are matters effentially faline, as fixed alkalis are, and that their volatility which diftinguifhes them proceeds from their containing a lefs quantity of earth, but more attenuated, and a.portion of very fubtile and volatile oil, which enters their compofition. [For fome other particulars relating to the tranfmutation of falts, fee Chemistry, $\mathrm{n}^{\circ} 784$.]
"Befides thefe principal facts, there are many others, too numerous to be even flightly mentioned here; they may be found feattered in the works of chemifts, particularly of Stabl. But perfons who would collect and compare all the experiments relating to this fubject,

[^49]

[621]
SAL
fubject, ought to know, that many of them are nat fufficiently afcertained; and that perbaps a greater number of tiem have not been fufficiently profecuted, and are, proparly fpeaking, only begun. We mult even acknowledge, that many of thofe experiments which we have mentioned, have not been fufficiently profecuted.
" The fecond fundamental propolition of the theory of falts, namely, "That the vitrio ic acid is compounded of only the aqueous and earthy principles, is, like the firt, fupported by many falts which give it a degree of probability, but which do not amount to a complete demonltration. This propofition may be fupporred by the following confiderations.
"Firit, Experience conftautly fhews, that the properties of compound bodies are always the refult of thofe of the component parts of thefe bodies, or rather they are the properties of thefe component bodies modified by one an ther.
"Thus, if a body be compofed of two principles, one of which is fixed, and the ocher volatile, it will have a lets degree of fixity than the former, and a lets volatility than the latter. If it be compofed of two prin. ciples, one of which is fpecifically heavier than the other, its fpecific gravity will be grcater than that of one of them and lefs than that of the other. The fame obfervation is applicable to all the other effential properties, exceptug thofe which deltroy each other; as, for inftance the tendency to combination, or the diffolving power; for thefe latter pioperties are weakened fo much more in the compounds as their principles are more ftrongly united, and in more jult propurtion.
". We obferve, neverthelefs, that the properties of compound bodies are not always exactly intermediate betwixt the properties of the component budies; fur, to produce this nean, the quanticies of each of the component parts mult be equal, which is the cafe in few or no compounds.
" Befides, tome particular circumf nces in the manner in which the principles unite with one another, contribute more or letis to alter the refult of the combined properties: for inftance, experience flotw, that when fere:al bodies, particularly metal, are unitcd together, the fpecific gravities of which are well known, the allay formed by fuch union has not the precife ipecific pruportion of the allayed fubftances; but that in fome allays it is greater and in others lefs. But we are certain, on the other fuie, that thefe differences are too inconfiderable to prevent our difinguilhing the properties of the principles in the compounds which they form, efpecially when they bave very diffrent propertics.
"Thefe things being premifed, when we examine well the properties of vitriolic acid, we thall eatily find that they partake of the properties of the aqutous and of the earthy principles.
" Firlt, When the acid is as pure as we can have it, it is like the pureit witur and the pureft vitrifiable ear ins, free from coluur or finell, and perfecily traufparent.
" Secondly, Although we cannot deprive the vitriolic acid of all the water fuperabundaat to its faline effence, and therefore its precile fpecific gravity has not been determined, we know that when it is well
concentrated, it is more than twice as heavy :ts pure water, and much lefs heavy than any earthy fubitance. "Thirdly, This acid is much hefs fixed than and pure earth, fince, however well it may be concentrated, it may always be entirely diftilled; for which purpofe a much Aronger degree of heat is requifite than for the diftillation of pure water.
" Fourthly, We do not know the degree of folidity of virtiolic acid, or the adhetion of aggregation, which its integrant parts have one to another, becaufe for this purpole the vitriolic acid ought to be deprived of all fuperabundant water: but if we judge of it by the fo lid confitence of this acid when highly concentrated, as we fee from the vitriolic acid called glacia!, the integrant parts of this acid feem fufceptibie of a muck Aronger adhefion than thofe of pure water; but much lefs than thofe of earth, as we fee from the infance of hard itones.
"Fifthly, The union which this acid contrafts with water and with earths, fhows that thefe fubitances el:ter into its compofition; for we know, that in general compounds are difpofed to unite fuperabundantly with the principles which compofe them. All thefe properties of vitriolic acid, which fo ferstly partake, and much more than any other acid, of the properties of earth and of water, are tufficient to induce us to believe that it is compoled of theie two principles; but is has one very emment property, which is common witl: it to neither water nor pure earth, which is, its violenr it to neither water nor pure earth, which is, its violent
and corrofive talte. This property is fufficient to raife doubts, it we could not expiain it trum principles, which feem certain and general, relating to the combination ut bodies.
"We obferve, then, concersing the property now in queltion, that is, of tatte in general, that it can only be conlidered as an irritation made upon the organs of talte by fapid bodies; and if we refect attentively upon it, we thall be convinced, that no fubltance that is
not imprefed by fome impulie can irritate or agitate nut imprefied by tome impulie can irritate or agitate our tenible organs, but by a peculiar furce of its in. tegrant parts, or by their tendency to combination;
that is, by their diliolving power. According to this tegrant parts, or by their tendency to combination;
that is, by their diliolving power. According to this nution, the talte it bouies, or the impreffin made upon cur teutible or gats by their tendency to commation, or by their dillulving power, are the tame property; and we lie accurdingly, that every iolvent ba, a tafte,
which is fo ma h mure itrong as its diflolving power is whinh io fo math h mure throng as its diflolving power is greater; that thofe whole tafte is fo vilent that it amuunts to acrimony, corrotion, and caullicity, when amuluts to acrimony, corrolion, and caullicity, when
appied to any other of the fenfible parts of our body welldes the organs of tafte, extite in them itchng and pain.
"This being premifed, the queftion is, How earth,
in which we perceive no talte nor difolving power, and water, which has but a very weak difolving power, and little or no tahe, thould form by this combination a lubftance, fuch as the vitriolic acid is, powerfully corroive and folven?
"To conceive this, let us confider, firt, that every part of matter has a power by which it combines, or tends to combine, with orher parts - f matter. Secondly, that thus torce, the effests of which are perceptible, in chemical operations, only among the very fimall molecules, or the integ:ant and con!tituent parts of bodics, feems proportionable to the denfity or fpecific gravity of hse gart:. Thisdy, that this teme force in limion

Suit.
Suit.

號
salt. in every integ: ant molecule of matter: that if we confider this ferce as not fatisfied, and confequently as a fimple tendency to combination, it is the greatelt porfible in an integrant molecule of matter perfectly infulated, or attached to nothing; and is the fmallelt poffible, or none, when it is fatisfied by its intimate combination with other parts capable of exhaulting all its action; its tendency being then changed into adhefion.
" Hence we may infer, that the integrant parts of the earthy principle have effentially, and like all the other parts of matter, a force of tendency to union, or of cohefion in union, according to their condition; that as this earthy principle has a much more confiderable denfity or fpecific gravity than all other fimple bodies that we know, we may probably prefume that its primary integrant molecules have a more confiderable force of tendency to union, in the fame proportion, than the integrant parts of other principles; that confequently when they cohere together, and form an ag. gregate, their aggregation muft alfo be ftronger and firmer than that of any other body. Accordingly we fee, that the pureft earthy fubftances, whofe parts are united and form mafles, fuch as, for inflance, the ftones called vitrifiable, are the hardeft bodies in nature. We are no lefs certain, that as the tendency of the parts of matter to unite is fo much lefs evident as it is more exhaufted and fatisfied in the aggregation, the parts of the earthy frinciple being capable of exhaufting mazually all their tendency to union, we may thence infer, that every fenfible mafs of pure earthy matter muft appear deprived of any diffolving power; of tafte; in a word, of tendency to union from the firmnefs of its aggregation. But we may alfo infer, that when thefe primary integrant parts of the earthy principle are not united together in aggregation, then, refuming all the activity and tendercy to union which are effential to them, they mult be the ftrongeft and molt powerful of all folvents.
" Thefe being premifed, if we fuppofe again, with Stahl and the beft chemifts, that, in the combination of the faline principle or of vitriolic acid, the parts of the earthy principle are united, not with each other, as in the earthy aggregation, but with the primary parts of the aqueous principle, each to each, we may then eafily conceive, that the primary integrant parts of the water, having effentially much lefs tendency to combination than thofe of earth, the tendency of thefe latter to union will not be exhaufted, but fatisfied only partly, by their combination with the former; and that confequently a compound mult refult, the integrant parts of which will have a ftrong diffolving power, as vitriolic acid is.
" We may fee from hence how much miftaken chemilts are, who, confidering earth cnly in its aggregation, or rather not attending te this Itate, and not diftinguilhing it from that fate in which the parts of this fame earth are fo feparated from each other by the interpofition of ancther body, that they cannot touch or cobere together, have confidered the earthy principle as a fubltance without force or action, and have very improperly called that a pafive principle, which of all others is the ftrongeft, molt active, and molt powerful.
"However this general theory of falts may conform with the moft important phenomena of chemiltry, we mult acknowledge, that it can only be propered as a fyfematical opinion, till it be evidently demonftrated
by the decifive means employed in chemical demonftrations, namely, by decompofition and recompofition: thus, if we could reduce vitriolic acid to earth and water, and make that acid by combining together thefe two principles; this theory would ceafe to be a fyttem, and would become a demonftrated truth. But we muft confefs, that this theory is lefs fupported by experiment than by argument, from the many dificulties that are inevitable in fuch enquiries. For on one fide, we know that the fimpler bodies are, the more difficult is their decompofition; and on the other fide, the ftronger the aggregation is, the greater is the difficulty of making it enter into a new combination. Thus, as vitriolic acid is very fimple, fince it is a compound of the firt order, it ought frongly to refift decompofition; and as the aggregation of pure earth is the firmeft that we know; it cannot eafily be made to enter as a principle into a new combination with water to form a faline matter. The following are the principal experiments which have been made relative to the fubject.
"Firi, we feem to be certain, from many proofs, that all faline fubftances, comprehending thofe that contain vitriolic acid, as vitriolated tartar, Glauber's falt, and other vitriolated falts which are fufficiently fixed to fupport a perfect drying, or rather calcination, being alternately diffolved, dried, and calcined a number of times, are more and more diminifhed in quantity, and that earth and water are feparated from them each operation. But alkaline falts appear to be fill more fufceptible than any other faline matter of this kind of decompofition.
" Secondly, When nitre is burnt in clofe veffels, fo that we may retain not only all that remains fixed after this burning, but alfo what exhales in vapours, as in the experiment of the clyffus of nitre, we have a proof which feems decifive, that the mineral acid of this falt, which is not very far from the fimplicity of vitriolic acid, is totally decompofed and reduced into earth and water. For if we examine the fixed refiduam in the retort, we find that it is only the alkali that was contained in the nitre, charged with a fuperabundant earth, which is feparable from it by folution and filtration. And if the liquor in the receiver, formed by the vapours condenfed there, be examined, which ought to be nitrous acid; if this acid had not been deftroyed, we find, that, fo far from being acid, it is only pure water, fometimes even charged with a little fixed alkali, which had been raifed by the force of the detonation. Thus nitrous acid is made to difappear in this experiment, and in its place we find only earth and water.
" Thirdly, The phenomena of limeftone, which by calcination and extinction in water acquires faline prom perties that it had not before its attenuation by fire and its combination with water; and alfo the experiment of Beccher, who afferts, that if a vitrifiable fone be alternately made red hot, and extinguifhed in water a number of times, it may be fo attenuated that it fhall be like a faline gelatinous matter; thefe, I fay; fhow that faline matters are actually formed by the intimate combination of the very attenuated parts of earth with thofe of water. We find in the writings of Beccher and Stahl, and particularly in the Specimen Becche. rianum of the latter author, many other obfervations and experiments tending to prove the fame propofition; but we mult confers, that none of the experiments. we have mentioned, excepting that of the decompofition

## Salr.

mote intoletable by the fuffecating odour of the nitromurintic acid (aquat r gia). In order to complete the cryftalization, i cuapurated in the fame vial the remainin licuor. As foon as the vapour appeared, a quantity of carbonic acid was difengaged, and afterwards tome atmofpheric air. The falt which I obtained by cryftalliy,ution after the evaporation was a true muriat of potaff, which did not detonate in the fire. Probably Mr Higgins performed the operation in the way I have defcribed; but he was toe hafty in concluding this falt to be nitre merely becaufe it detonated. I gave an account of this experiment to Mr Kirwan at the time, and foon after communicated it to Profeffor Gadolin, who offered to affift me in repeating the experiment.
" We agreed to employ cryftallized carbonat of foda (mild mineral alkali); and the following was the refult of our experiment. We diffolved fome of this carbonat in a large quantity of water, and we employed two or three hoars a day, for feveral fucceffive days, in introducing into the folution as much oxygenated muriatic gas as was fufficient entirely to faturate it; we then poured the faline liquor into a glafs bafon, and left it covered over to evaporate fpontaneoully. Atter fome time a namber of prifmatic crytals were formed, which detonated in the fire like nitre. They occafioned a brown precipitate from a folution of iron in fulphuric or vitriolic acid; and mixed with fal ammoniac, they gave out a frong ammoniacal odour, accompanied with iome effervefcence, which was to be attributed to the extrication of fixed air daring the mixture. The remaining part of the liquor evaporated again, prodaced frefh cryftals, which, though they certainly lad a faint finell of exygenated muriatic acid, in reality confifted partly of muriat of foda (common falt), and partly of uncombined foda; for they did not detonate, and they precipitated iroa of a light green colour. The liquor which appeared above thefe cryttals, however, had not yet entirely loft the fmell of the oxygenated muriatic acid. Since this, M. Gadolin has made the following experiment, which he commanicated to me. He put two drams of magnefia, faturated with carbonic acid, into an ounce and a half of water, into which he introduced during feveral hours a quantity of oxygenated muriatic gas. The water evidently acquired the odour of the oxy genated muriatic acid. He filtered the liquor, and wafhed and dried that part of the magnelia which had not been diffolved, and which weighed one dram 4.5 ths, fo that the water was found to have diffolved $1-5$ th of a dram. As foon as the liquor began to boill, a ftrong effervefcence was occafioned, fome oxygenated muriatic gas was difengaged, and a fmall quantity of carbonat of magnefia was precipitated. When the 1iquor had become cool, it was filtered, that it might be feparated from the precipitated powder. It had fill the fame odour ; and on being again heated, an effervefcence fimilar to the firt took place, and a frefh quantity of carbonat of magnefia was feparated. This phenomenon appeared every time M. Gadolin boiled the liquor after its cooling, till at laft he had evaporated it to drynefs, when there ftill remained a fmall quantity of magnefia. Hence M. Gadolin concludes, that water, oxygenated muriatic acid, and carbonat of magnefia, form a combination which heat does not decompofe till the vapour of the water carries off the oxygenated muriatic acid, at which time the carbonat of magnefia is precipi-
tated. : In confequence of what we have now retated, we uught to reckon, in addition to the two falts difco. vered by M. Berthollet, another falt, to which, according to the new French nom-nclature, might be given the name murias oxygenatus magnefice liquidur, becaule we cannot obtain it in a concrete form.' The oxygenated muriatic acid appears to enter into a very different, or at leat into a much more intimate, combination with the metals; a fubject which greatly merits the attention of the chemif.

The probability of this propofition is frengthened ${ }^{\text {i }}$ by the theory of M. Berthollet; according to which the mercury in corrofive mariat of mercury (corrofive fublimate) is combined with the oxygenated muriatic acid, fo as tot to be feparated from it without great difficulty.

Common $S_{A L T}$, or Sea-Salt, the name of that falt extracted from the waters of the ocean, which is ufed in' great quantities for preferving provifions, \&c.

It is a perfect neutral falt, compofed of marine or muriatic acid, faturated with mineral alkali. It has a faline but agreeable flavour. It requires about four times its weight of cold water to be diffolved, and nearly the fame quantity of boiling water, according to Macquer. But according to Kirwan, it only requires 2,5 its weight of water to be diffolved in the temperature of fixty degrees of Farenhert. This falt always contains fome part formed with a calcarsous bafe; and; in order to have it pure, it muft be diffolved in diftilled watet ; then a folution of mineral alkali is to be poured' in it until no white precipitation appegrs; then by filtrating and evaporating the folution, a pure common falt is produced. Its figure is perfectly cubic, and thofe hollow pyramids; or tremies as the French call ${ }^{i}$ them, as well as the parallelopipeds formed fometimes in its cryftallization, conffift all of a quantity of fmall cabes difpofed in thofe forms. Its decrepitation on thefire, which tras been reckomed by fome as a characterific of this falt, although the vitriolated tartar, nitrous lead, and other falts, have the fame property, is owing chiefly to the water, and perhaps alfo to the air of its cryitallization.

Its fpecific gravity is 2,129 according to Kirwan.' The acid of tartar precipitates nothing from it. Onfe handred parts of common falt contain thirty-three of real acid, fifty of mineral alkali, and feventeen of water: It is commonly found in falt water and falt fprings, in the proportion of even thirty-fix per cont. It is found alfo in coals, and in beds of gypfom. This fait is unaiterable by fire, though it fufes, and becomes mote opaque : neverthelefs a violent fire, with the free accefs of air, caufes it to evaporate in white flowers, which ftick to the neighbouring bodies. It is only decompofed, as Macquer affirms, by the vitriolic and nitrous acid; and alfo by the boracic or fedative falt. Bat although nitre is decompufed very eafily by arfen:c, this' neutral marine falt is nowife decompofed by the fame. According to $M$ ngez, the fixed vegetable alkali, when caultic, decompofes alfo this marine falt. It preferves from corruption almoft all forts of animal food much. better for ufe than any other falt, as it preferves them without deftroying their tafte and qualities; but when applied in too imall a quantity, it then forwards their corrnption.

Of this molt ufeful commodity there are ample Itores on land as well as in the ocean. There are few countries which

which do not afford valt quantities of rock or foffl falt. Mines ( -1 ) of it have long been difcovered and wrought in England, Spain, Italy, Germany, Hungary, Poland, and other countries of Europe. In feveral parts of the world there are huge mountains which wholly confift of foffil falt. Of this kind are two m untains in Ruffia, nigh Afracan; feveral in the kingdoms of Tunis and Algiers, in Africa; and feveral alfo in Afia; and the whole ifland of Ormus in the Perfian gulf almoit entirely confitts of foffil falt. The new world is likewife ftored with treafures of this ufeful mineral, as well as with all other kinds of fubterranean productions. Moreover, the fea affords fuch valt plenty of common falt, that all mankind might thence be fupplied with quantities fufficient for their occafions. There are alfo innumerable fprings, ponds, lakes, and rivers, impregnated with common falt, from which the inhabitants of many countries are plentifully fupplied therexith. In fome coun rits which are remote from the fea, and have little commerce, and which are not bleffed with mines of falt or falt-waters, the neceffities of the inhabitants have forced them to invent a method of extracting their common falt from the afhes of vegetables. The muriatic falt of vegerables was defribed by Dr Grew under the title of lixiviated marine falt. Leeuwenhoek obtaincd cubical crytals of this falt from a lixivium of foda or kelp, and alfo from a folution of the lixivial falt of carduus benedictus; of which he hath given figures in a letter to the Royal Society, publifhed in No 173. of their Tranfactions. Dr Dagner, in AA. Acad. N. C. vol. v. obf. 150 . takes n tice of great quantities of it which he found mixed in potafhes. And the ingenious Dr Fothergill extracted plenty of it from the aflhes of fern: See Medical Effays, vol. v. article 13 .

The muriatic falt which the excellent Mr Boyle ex. tracted from fandiver, and fuppofed to be produced from the materials ufed in making glafs, was doubtlefs feparated from the kelp made ufe of in that procefs. Kunckel alfo informs us, that he took an alkaline falt ; and after calcining it with a moderate fire, diffolved it in pure water, and placing the folution in a cool cellar, obtained from it many cryitals of a neutral falt. He fuppofes, that the alkaline falt was by the procefs converted into this neutral falt. But it is more reafonable to believe, that the alkaline falt which he applied was not pure, but mixed with the muriatic falt of vegetables, which by this procefs was only feparated from it.
It is doubtlefs chiefly this muriatic falt which, in fome of the inland parts of Afia, they extract from the afhes of duck-weed and of Adam's fig-tree, and ufe for their common falt.

That they are able in thofe countries to make common falt to profit from regetables, ought not to be wondered at, fince in Dehli and Agra, capitals of Indoftan, falt is fo fcarce as ufually to be fold for half-acrown a pound. We may therefore give fome credit to Marco-Polo, when he informs us, that in the inner parts of the fame quarter of the world, in the province Vol. XVI.
of Caindu, lying weft of Tebeth, the ma:ives ufed falt inftead of money, it being fitii made up in cakis, a"d fealed with the ftamp of their prince; and that thicy made great profit of this money by exchancino it with the neighbouring nations for gold ant mulk. "We are alfo told by Ludolfus, in his Hiforia Etbiopica, tlat in the country of the Abyfines there are mountains of falt, the which when dug out is fuft, but foon grows hard; and that this falt ferves them inftead of money to buy all things. The fame is confirmed by Ramufio.
Mr Boyle difcovered common falt in human blood and urine. "I have obferved it (fays Mr Brownrigg), not only in human urine, but alfo in that of dogs, horfes, and black cattle. It may eafily be difovered in theff, and many other liquids impregnated with it, by certain very regular and beautiful itarry Gigures which appear in their furfaces after congelation. Thefe figures I firft obferved in the great froft in the year 1739. The dung of fuch animals as feed upon grafs or grain, doth alfo contain plenty of common falt."
Naturalifts, oblerving the great variety of forms under which this falt appears, have thought fit to rank the feveral kinds of it under certain general claffes; diftinguifhing it, moft uffially, into rock or foffil falt, fea-falt, and brine or fountain filt. To which claftes, others might be added, of thofe muriatic falts which are found in vegetable and animal fubltarces. Thefe feveral kinds of common falt often differ from each other in their outward form and appearance, or in fuch accidental properties as they derive from the beterogene. ous fubftances with which they are mixed. But when perfenly pure, they have all the fame qualities; fo that chemits, by the exacteft inquiries, have not been able to difcover any effential difference between them; for which reafon we flall diftinguifh common falt after a different manner, into the three following kinds, wis. into rock or native falt, bay falt, and white fdlt.

By rock falt, or native fall, is underftood all falt dug out of the earth, which hath not undergone any artificial preparation. Under the title of bay falt may be ranked all kinds of common falt, extracted from the water wherein it is diffolved, by means of the fun's heat, and the operation of the air ; whecher the water from which it is extracted be fea-water, or natural brine drawn from wells and fprings, or falt water fag. nating in ponds and lakes. Under the title of subito falt, or boiled falt, may be included all kinds of common falt extracted by coction from the water wherein it is diffolved; whether this water be fea water, or the falt water of wells, fountains, lakes, or rivers; or water of any fort impregnated with rock-falt, or other kinds of common falt.

The firt of thefe kinds of falt is in feveral countries found fo pure, that it ferves for moft domeftic ufer, without any previous preparation (triture excepted); for of all natural falts rock-falt is the moft abundantly furnifhed by nature in various parts of the world, being found in large maffes, occupying great tracts of land. It is generally formed in ftrata under the furface of the 4 K
earth,

-salt.
arth, as in Hungary, Mufcovy, Siberia, Poland, Cala. bria, Egypt, Ethiopia, and the Eaft Indies. "Ia England (fays Magellan), the falt mines at Northwich are in a high ground, and contain it in layers or frata of various colours, of which the yellow and brown are the moft plentiful, as I have obferved on the fpot, which I vifited in June 1782, in company with my worthy and learned friend Mr Volta, profeifor of Natural Philofophy in the Univerfity of Pavia, and well known by his great abilities, and many difcoveries in that branch of knowledge. The mine into which we defcended was excavated in the form of a valt dome or vault under ground, fupported by various columns of the falt, that were purpofely left to fupport the incumbent weight. And the workmen having lighted a number of candles all round its circumference, it furnifhed us with the moft agreeable and furprifing fight, whilit we were defcending in the large tub, which ferves to bring up the lumps that are broken from the mine, \&c. See the defcription of the famous falt-mines of Wilieczka in Poland, by Mr Berniard, in the fournal de Phyfique, vol. 16: for 1780 , pag. 459 , in which the miraculous tales concerning thofe fubterraneous habitations, villages, and towns, are reduced to their proper magnitude and eftimate." But the Englifh fofirl falt is unfit for the ufes of the kitchen, until by folution and coction it is freed from feveral impurities, and reduced into white falt. The Britifh white falt alfo is not fo proper as feveral kinds of bay falt for curing filh and fuch flefh-meats as are intended for fea provifions, or for exportation into hot countries. So that for thefe purpofes we are obliged, either wholly or in part, to ufe bay falt, which we purchafe in France, Spain, and other foreign countries.

However, it does not appear that there is any other thing requifite in the formation of bay falt than to evaporate the fea-water with an exceedingly gentle heat; ond it is even very probable, that our commonfea-falt by a fecond folution and cryftallization might attain the requifite degree of purity. Without entering into any particular detail of the proceffes ufed for the preparation of bay-falt in different parts of the world, we fhall contentourfelves with giving a brief account of the beft methods of preparing common falt.
$A_{t}$ fome convenient place near the fea-fhore is erected the faltern. This is a long, low building, confifting cf two parts; one of which is called the fore.houfs Brownrigg and the other the pam-bouff or boiling-boufe. The foreon the Art houfe ferves to receive the fuel, and cover the workof Preparing Salt.
narrow edge nigh the top of the furnace; and by means of fhort pillars of caft iron erected upon $\mathrm{it}_{2}$ fupports the bottom of the falt pan; it alfo fills up a confiderable part of the furnace, which otherwife would be too large, and would confume more coals than, by the help of this contrivance, are required. To each chamber of the furnace is fitted a grate, through which the aftes fall into the anh-pits. The grates are made of long bars of iron, fupported underneath by ftrong crofs bars of the fame metal. They are not continued to the fartheft part of the furnace, it being unneceflary to throw in the fuel ro far: for the flame is driven from the fire on the grate to the farthelt part of the furnace; and from thence pafles together with the fmoke, through two flues into the chimney; and thus the bottom of the falt pan is everywhere equally heated.
The falt pans are made of an oblong form, flat at the bottom, with the fides erected at right angles; the length of fome of thefe pans is 15 feet, in breadth 12 feet, and the depth 16 inches; but at different works they are of different dimenfions. They are commonly made of plates of iron, joined together with nails, and the joints are filled with a ftrong cement. Within the pan five or fix ftrong beams of iron are fixed to its oppofite fides, at equal diftances, parallel to each other and to the bottom of the pan, from which they are diflant about eight inches. From thefe beams hang down ftrong iron hooks, which are linked to other hooks or clafps of iron firmly nailed to the bottom of the pan; and thus the bottom of the pan is fupported, and prevented from bending down or changing its figure. The plates moft commonly ufed are of malleable iron, about four feet and a half long, a foot broad, and the third of an inch in thicknefs. The Scots prefer fmaller plates, 14 or 15 inches fquare. Several make the fides of the pan, where they are not expofed to the fire, of lead; thofe parts, when made of iron, being found to confume faft in rult from the fteam of the pan. Some have ufed plates of caft iron, five or fix feet fquare, and an inch in thicknefs; but they are very fubject to break when unequally heated, and flaken (as they frequently are) by the violent boiling of the liquor. The cement moft commonly ufed to fill the joints is plater made of lime.
The pan, thus formed, is placed over the furrace, being fupporied at the four corners by brick work; but along the middle, and at the fides and ends, by round pillars of cait iron called taplins, which are placed at three feet diltance from each other, being about eight inches high, and at the top, where fmallett, four inches in diameter. By means of thefe pillars the heat of the fire penetrates equally to all parts of the bottom of the pan, its four corners only excepted. Care is alfo taken to prevent the fmoke of the furnace from paffing into the boiling houfe, by bricks and ftrong cement, which are clofely applied to every fide of the falt pan. In fome places, as at Blyth in Northumberland, befides the common falt pans here defcribed, they have a preparing-pan placed between two falt pans, in the middle part of the building, which in other works is the fore-houf. The fea-water being received into this preparing-pan, is there heated and in part evaporated by the flame and heat conveyed under it through flues from the two furnaces of the falt pans. And the hot water, as occafion_requires, is conveyed through troughs

## SAL

salt. from the preparing pan into the falt pans. Various other contrivances have been invented to leffen the ex. pence of fuel, and feveral patents have been obtained for that purpofe ; but che falr-boilers have found their old methods the mof convenient.

Between the fides of the pan and walls of the boil-ing-houfe, there runs a walk five or fix feet broad, where the workmen ftand when they draw the falt, or have any other bufinefs in the boiling-houfe. The fame walk is continued at the end of the pan, next to the chimney; but the pan is placed clofe to the wall at the end adjoining to the fore-houfe.

The roof of the boiling-houfe is covered with boards faftened on with nails of wood, iron nails quickly mouldering into ruft. In the roof are feveral openings, to convey off the watery vapours: and on each fide of it a window or two, which the workmen open when they look into the pan whilft it is boiling.

Not far"diftant from the faltern, on the fea-fhore, between full fea and low-water marks, they alfo make a little pond in the rocks, or with ftones on the fand, which they call their fump. From this pond they lay a pipe, through which, when the tide is in, the feawater runs into a well adjoining to the faltern ; and from this well they pump it into troughs, by which it is conveyed into their fhip or ciftern, where it is fored up until they have occafion to ufe it.

The ciftern is built clofe to the faltern, and may be placed moft conveniently between the two boiling houfer, on the back fide of the fore-houfe; it is made either of wood, or brick and clay; it fometimes wants a cover, but ought to be covered with a fhed, that the falt-water contained therein may not be weakened by rains, nor mixed with foot and other impurities. It fhould be placed fo high, that the water may conveniently run out of it, through a trough, into the faltpans.

Befides the buildings already mentioned, feveral ethers are required; as fore houfes for the falt, cifterns for the bittern, an office for his majelty's falt-officers, and a dwelling-houfe for the falt-boilers.

All things being thus prepared, and the fea-water having ftood in the ciftern till the mud and fand are fettled to the bottom, it is drawn off into the falt-pan : And at the four corners of the falt-pan, where the Hame does not touch its bottom, are placed four fmall lead pans called foralch pans, which, for a falt-pan of the fize above-mentioned, are ufually about a foot and an half long, a foot broad, and three inches deep; and bave a bow or circular handle of iron, by which they may be drawn out with a hook, when the liquor in the pan is boiling.

The falt pan being filled with fea-water, a flrong five of pit-coal is lighted in the furnace; and then for a pan which contains about 1400 gallons, the faltbniler takes the whites of three eggs, and incorporates them well with two or three gallons of fea water, which he pours into the falt-pan while the water contained therein is only lukewarm; and immediately dirs it about with a rake, that the whites of eggs may every where be equally mixed with the falt-water.

Inftead of whites of eggs, at many falterns, as at moft of thofe nigh Newcafle, they ufe blood from the butch. s1s, either of fheep or black cattle, to clarify the fea-
water: And at mary of the Scotsfalterns they do not Ait. give themfelves the tronble of clarifying it.

As the water grows hot, the whites of eggs feparate from it a black frothy fcum, which arifes to the furface of the water, and covers it all over. As foon ats the pan begins to boil, this fcum is all rifen, and it is then time to kim it off.

The moft convenient infruments for this purpofe arc fkimmers of thin ath boards, fix or eight inches broad, and fo leng that they may reach above half way over the falt-pan. Thefe fkimmers have handles fitted to them; and the falt-boiler and his affiftant, each holding one of them on the oppofite fides of the pan, apply them fo to each other that they overlap in the middle, and beginning at one end of the pan, carry them gently forward together, along the furface of the boiling lifquor, to the other end; and thus, without breaking the foum, collect it all to one end of the pan, from whence they eafily take it out.

After the water is fkimmed, it appears perfectly clear and tranfparent ; and they continue boiling it brifkly, till fo much of the frefh or aqueous part is evaporated, that what remains in the pan is a ftrong brine almoft fully faturated with falt, fo that fmall faline cryftals begin to form on its furface; which operation, in a pan filled 15 inches deep with water, is ufually performed in five hours.

The pan is then filled up a fecond time with clear fea-water drawn from the ciftern; and about the time when it is half filled, the fcratch-pans are taken out, and being emptied of the fcratch found in them, are again placed in the comers of the falt-pan. The fcrateh taken out of thefe pans is a fine white calcareous earth found in the form of powder, which feparates from the fea-water during its coction, before the falt begins toform into grains. This fubtile powder is violently agitated by the boiling liquor, until it is driven to the cor. ners of the pan, where the motion of the liquor being more gentle, it fubfides into the fratch pans placed there to receive it, and in them it remains undifturbed, and thus the greateft part of it is feparated from the brine.

After the pan hath again been filled up with fea-waser, three whites of eggs are mixed with the liquor, by which it is clarified a fecond time, in the manner before defcribed; and it is afterwards boiled down to a ftrong brine as at firt ; which fecond boiling, may take up about four hours.

The pan is then filled up a third time with clear feawater; and after that, a fourth time; the liquor being each time clarified and boiled dowa to a ftrong brine, as before related ; and the fratch-pans being taken out and emptied every time that the pan is filled up.

Then, at the fourth boiling, as foon as the cryftals begin to form on the furface of the brine, they nacken the fire, and only fuffer the brine to fimmer, or boil very gently. In this heat they conftantly endeavour to keep it all the time that the falt corns or granulates, which may be nine or ten hours. The falt is faid to granulate, when its minute cryfals cohere together into little maffes or grains, which fink down in the brine anc lie at the bottom of the falt-pan.

When moft of the liquor is evaporated, and the falt thus lies in the pan almoft dry on its furface, it is then
time

## SA L

SAL formed by raking the falt to cne fide of the pan into a long heap, where it drains a while from the brine, and is then filled out into barrows or other proper veffels, and carried into the ftore-houfe, and delivered into the ruftody of the warehoufe keeper. And in this manner the whole procefs is performed in 24 hours; the falt being ufually drawn every morning.

In the fore-houfe the falt is put into hot drabs, which are partiiions like ftalls for horfes, lined on three fides and at the bottom with boards, and having a flidingboard on the fore-fide to put in or draw ont as occafion requires. The bottoms are made fhelving, being higheft at the back-fide, and gradually inclining forwards; by which means the faline liquor, which remains mixed with the falt, eafily drains from it ; and the falt, in three or four days, becomes fufficiently dry ; and is then taken out of the drabs, and laid up in large heaps, where it is ready for fale.

The faline liquor which drains from the falt is not a pure brine of common falt, but hath a fharp and bitter talte, and is therefore called bittern; this liquor, at fome work , they fave for particular ufes, at others throw away. A couliderable quantity of this bittern is left at the bottom of the pan after the procefs is finifhed; which, as it contains much falt, they fuffer to remain in the pan, when it is filled up with fea-water. But at each procefs this liquor becomes more flarp and bitter, and alfo increafes in quantity : fo that, after the third or furth precefs is finifhed, they are obliged to take it out of the pan; otherwife it mixes in fuch quantities with the falr, as to give it a bitter tafte, and difpofes it to grow foft and run in the open air, and renders it unfit for domeftic ufes.

After each procefs there alfo adheres to the bottom and fides of the pan a white fony cruft, of the fame calcareous fubtance with that before collected from the boiling liquor. 'This the operators call foneff ratch, diftinguifhing the other found in the lead-pans by the name of powder-firatch. Once in eight or ten days they feparate the fone-fratch from their pans with iron picks, and in feveral places find it a quarter of an inch in thicknefs. If this flony cruit is fuffered to adhere to the pan much longer, it grows fo thick that the pan is burnt by the fire, and quickly wears away.

In M. de Pagés's Travels round the World, we find the following important fact. "I had been anxious (fays that author) to afcertain by comparifon, whether fea-water contains falt in greater quantity under the $t$ crid than under the other zones; and my experiments on this fubject ferved to fhow, contrary to what I expected, that fea. water is impregnated with falt in lefs quantity within than without the tropics." Thefe experiments were made on a hundred pounds of fea-water, taken at the depth of ten fathoms, and weighed in water fcales. M. de Pagés has given a table of thefe experiments, from which it appears that 100 lb . of feawater in $t^{50}{ }^{5} 5^{\prime \prime} \mathrm{S}$. lat. gave $4^{\frac{1}{2}} \mathrm{lb}$. of falt, and in $I^{\circ}{ }^{\circ} 6^{\prime \prime}$ only $3 \frac{2}{2} \mathrm{lb}$. ; and that in 74 N . lat. it gave $4 \frac{3}{\frac{3}{4}} \mathrm{lb}$. and in $4^{\circ} 22^{\prime}$ only $3^{\frac{7}{2}} \mathrm{lb}$. thefe being the higheft and loweft latitudes in which the experiments were made, and alfo the greateft and leaft quantities of falt.

Diuty on SALT, a difinct branch of the king of England's
extraordinary revenue, and confits in an excife of $3^{5}$. 4 d. per bufhel impofed upon all falt, by feveral fatutes of King William and other fubfequent reigns. This is not generally called an excife, becaufe under the management of different commifioners: but the commiffioners of the falt-duties have, by ftatute 1 Ann, c. 21 . the fame powers, and muft obferve the fame regulations, as thofe of other excifes. This tax had ufually been only temporary : but by ftatute 26 Geo. II. c. 3. was made perpetual.

Triple $S_{a l q s}$, a kind of falts formed by the union of three ingredients : the common neutrals being compofed only of two. They are but lately difcovered; and it is chicfly to the induftry of Mr Bergman that we owe the knowledge we have of them. Sometimes we meet even with falts of four ingredients; in which cafe we call the refulting compounds quadruple falts. The molt remarkable of thefe complicated fubltances are the following.

1. Aphronitrum, or mineral alkali, combined with a fmall quantity of calcareous earth. The three ingredients here are fixed air, pure alkali, and calcareous earth. "This falt (fays Cronftedt) is fo ftrongly united with the calcareous earth, that the latter enters with it into the very cryftals of the falt ; though, by repeated folutions, the earth is by degrees feparated from it, and falls to the bottom after every folution." Cartheufer afferts, that, on throwing into its folution in water a fixed mineral alkali, the calcareous earth was precipitated; and on the contrary, by adding oil of vitriol, nitrous acid was expelled, and a Glauber's falt produced; "from which (fays M. Magellan) it is evident, that the aphronitrum is a triple falt arifing from the combination of the nitrous acid with calcareous earthand mineral fixed alkali." Wallerius mentions three fpecies of this falt; viz. one which contains only a mix. ture of calcareous earth with fixed mineral alkali. This, he fays, is the aphronitrum of the ancients; but he thinks that it ought to be rather called aphronatron, as they beftowed the name of natron upon the mineral alkali. The fecond feecies is that defcribed by Cronftede under the title of calcareous nitre. The third is that de. fcribed by Hoffman under the titie of apbronitrum janenfe, into whofe compofition the vitriolic acid enters. It is a kind of Glauber's falt, and is frequently confounded with it.

The aphronitrum of Cronftedt is deferibed by him as appearing on old walls and below vaults, or in places where it cannot be wafhed away by the rain. When it contains any confiderable quantity of calcareous earth, it fhoots into rhomboidal cryitals, a figure frequently affected by the calcareous earth when it hoots into cryftals: but when the aphronitrum is purer, it forms prifmatic cryftals. From thefe circumitances, M. Magellan thinks, that the aphronitrum is not only a triple but a multiple falt; as thefe pieces of old mortar, covered with this white froft, on ancient walls, are the very fame from which the faltpetre-makers extract the mother water of nitre; after mixing with it the vegetable alhes to furnifh the alkali.
2. Common falt with magnefia, or mineral alkali, contaminated by muriatic magnefia. This is a compound of common falt with magnefia, and is very delio quefcont, owing to the compound of magnefia and fpi-

## SAL [ 629 ] S A L

Salt. rit of falt; for neither mineral alkali nor pure fea-falt are at all deliquefcent in the air.
3. Vitriolated magnefia with vitriol of iron, or Epfom falt contaminated with copperas. This, according to M. Monet, is found in fome mineral waters.
4. Native alum contaminated with copperas. This is fometimes found in the aluminous fchiftus, and efflorefees in a feathery form, and is perhaps the plumofe alum of the ancients.
5. Native alum contaminated with fulphur. Dr Wi thering informs us, that this falt is met with about Wednegburg and Bellton, two places in Staffordhire, where the coal-pits are on fire. It fublimes to the furface, whence it may be collected in confiderable quantity during dry or frolty weather. Our author, however, does not certainly affirm that this is a true chemical union, but the parts, he fays, cannot be diftinguilhed by the eye. It is kept in a deliquefcent ftate by an accefs of vitriolic acid.
6. Native alum contaminated by vitriolated cobalt. This is found in fome of the mines of Herregrund and Idria, where it fhoots intolong and flender flaments. M. Magellan fuppofes that this may be the trichites of the Gieeks. On diffolving it in water, the prefence of the vitriolic acid is difcovered by adding a folution of terra ponderofa in muriatic acid; the phlogifticated alkali throws down a precipitate of cobalt, which forms a blue glafs with cobalt or microcofmic falt.
7. Vitriol of copper with iron, the vitriolum ferreo-cupreum cyan:um of Lincæus. It is alfo called Vitriol of Hungary, becaufe found in plenty in that country. Its colour is that of blue mixed with green ; but fometimes the one fhade prevails, and fometimes the other.
8. Vitriol of copper, iron, and zinc, is prepared in Sweden from the water pumped out of the copper mines at Dalame. The copper does not precipitate from a folution of this falt by rubbing it on iron, as is the cafe with the common blue vitriol. Large cryitals of this falt are often found in the water of the copper mines from whence it is prepared.
9. Vitriol ol copper and zinc. This is a quadruple falt, ftyled by Linnæus Vitriolum ferreo-zinceo cupreum cyaneum. Its colour is blue inclining to green ; and it does not precipitate the copper by rabbing on iron, as the common blue viriol loes. It is called the blue vitriol of Goflar. Mungez makes a reparate article of a compound falt mentioned by Wallerius, confilting alfo of a vitriolated copper with zinc, but whofe cryftals are of a fine red cclur, found lately in the mines of Fahlun in Sivedso. He adds, that the pale blue colour of the former falt fhows the predominancy of the copper, by which it is neceffarily diftinguifhed from the latter, where the vitriol is over-faturated. M. Magellan, however, is ct opinion, that the red colour is owing to a proper quantity of iron in a dephlogilticated fate, which has beea overlooked in that compound. To this kind alfo Wallerius reiers the yellowifh vitriol found in Hungiry.
io. Vitriol of iron and zinc; the green vitriol from Griflar in the Hartz; the virrcolum sinceoferreum viride of Linnæus. It is of a pale-green colour.

$S_{\text {aLf-Springs. }}$ Of thefe there are great numbers in different parts of the world, which undoubtedly have their origin from fome of the large collections of foffil falt mentioned under the article Common Saly. See that article, and likewife Spring.

SALTIER, one of the honourable ordinaxies.See Heraldry, p. 452, and Plate CCXXX.

This, fays G. Leigh, in his Accedence of Arms, p. 70. was anciently made of the height of a man, and driven full of pins, the ufe of which was to fcale walls, \&c. Upton fays it was an inftrument to catch wild bealts, whence he derives this word from faltus, i. e. "a forelt." The French call this ordinary fautoir, from fauter "to leap ;" becaufe it may have been ufed by foldiers to leap over walls of towns, which in former times were but low; but fome modern authors think it is borne in imitation of St Andrew's crofs.

SALTING meat for the use of the nafy. The following is the method recommended by the late admiral Sir Charles Knowles. When the ox is killed, let it be fkinned and cut up into pieces fit for ufe as quick as poffible, and falted while the meat is hot. For which purpofe we mult have a fufficient quantity of faltpetre and bay-falt pounded together and made hot in an oven of each equal parts; with this fprinkle the meat at the rate of about two ounces to the pound; then lay the pieces on thelving boards to drain for $2+$ hours ; which done, turn them and repeat the fame operation, and let them lie for 24 hours longer. By this time the falt will be all melted, and have penetrated the meat, and the pieces be drained off; each piece muft then be wiped dry with clean coarfe cloths. A fufficient quantity of common falt muft then be made hot likewife in an oven, and mixed when taken out with about one-third of brown fugar : then the calks being ready, rub each piece well with this mixture, and pack them well down, allowing about half a pound of the falt and fugar to each pound of meat, add it will keep good feveral years.

It is beft to proportion the calks to the quantity $u$ fed at one time, as the lefs it is expofed to the air the better. The fame procefs does for pork, only a larger quantity of falt and lefs fugar mult be ufed; but the prefervation of both depends equally upon the meat being hot when firft falted.

One pound of beef requires two ounces of faltpetre
and iwo ounces of bay-falt, becaufe ic is to be fprinkled twice; an ounce of each to a pound of beef both times. The faltpetre requifite for 100 lb . of beef is $12 \frac{1}{1} 1$, which at 12 d . per lb . is 125.6 d ; and the fame
quantity of bay-falt (for 100 lb . of beef), at three $12 \frac{1}{2} \mathrm{l}$. which at 12 d . per lb . is 12 s .6 d ; and the fame
quantity of bay-falt (for 100 lb . of beef), at three half-pence per lb . is $1 \mathrm{s}$. . 6 d .; of brown fugar and common falt mixed together half a pound is required, the mon falt mixed together half a pound is required, the
former in the proportion of one-third, the latter of twothirds, to a pound of beef. The brown fugar at 8 d . per pound. A hundred pounds of beef will take 250
ounces of it, which cefts 10 s . 5 d . The quantity per pound. A hundred pounds of beef will take 250
ounces of it, which cofts 10 s . 5 d . The quantity of common falt requifite for 100 ib . of beef is 533 om ces which at 2 d . per lb . amounts to 5 s . 6 d . The expence therefore will fand thus.

SALTPETRE, See Chrmistry, ${ }^{\circ}{ }^{7} 740$.
SALTSBURG, an archbifhopric of Germany, in the circle of Bavaria, bounded on the eafl by Stiria and the Upper Autria, on the weft by the county of Tyrol, on the north by the duchy of Bavaria, and on the fouth by the duchy of Carinthia and the bihopric of Brixen. It is faid to be about 100 miles from eall to welt, and upwards of, 60 from north to fouth. With refpect to the foil, it is very mountainous, yielding, however, excellent pafturage, and, in confequence of that, abounding in cattle, and horfes remarkable for their mettle and hardinefs. This country is particularly noted for the great quantities of falt it produces, and its throng paffes and caftles. Here are alfo confiderable mines of gold, filver, copper, lead, iron, and lapis calaminaris, with quarries of marble, and a natural hot-bath. The principal rivers are the Salza, the Inn, the Ens, and Muer; which, as well as the lakes and other freams, are well-ftored with fifh. The peafants here are all allowed the ufe of arms, and trained to military duty. There are no nobles in the country, and moft of the lands belong to the clergy. The fates confift of the prelates, the cities, and towns. Notwithftanding this country is under the power of a popifh eeclefialtic, and the violent, arbitrary, and opprefive manner in which the Proteftants have always been treated, great numbers of them Itill remained in it till the year 1732, when no lefs than 30,000 of them withdrew from it, difperfing themfelves in the feveral Proteftant fates of Europe, and fome of them were even fent from Great Britain to the American colonies. Befides brafs and fteel wares, and all forts of arms and artillery, there are manufactures of coarde cloth and linen here. The archbilhop has many and great prerogatives: he is a prince of the empire, and perpetual legate of the holy fee in Germany, of which he is alfo primate. He has the firt voice in the diet of this circle, and next to the electors in that of the empire, in the college of princes, in which he and the archduke of Auftria prefide by turns. No appeal lies from him either in civil or ecclefiatical caufes, but to the pope alone; and he is intitled to wear the habit of a cardinal. He has alfo the nomination to fee veral bifhoprics; and the canonicates that fall vacant in the months in which the popes, by virtue of the concordat, are allowed to nominate, are all in his gift. His fufragans are the bifhops of Freydingen, Ratifon, Briven, Gurk, Chiemfee, Seckau, and Lavant; and of thefe, the four laft are nominated, and even confirmed by him, and not by the pope. At the diet of the empire, his envoy takes place of all the princes that are prefent, under the degree of an eltctor. His revenue faid to amount to near $2<0,000$ l. a year, a great pait
fion to the fee, the archbifhop rnuit pay 100,000 crowns to Rome for the pall. There is an order of knighthood here, infituted in 171 x , in honour of St Rupert, who was the firf bithop of Saltfburg about the 'beginning of the 8 th century.

Saltsiupg, the capital of a German archbifopric of the fame name, and which takes its own from the river Salza, on which it ftands, and over which it has a bridge. It is a very handfome place, well fortified, and the refidence of the archbifhop. The houfes are high, and all built of fone: the rcofs are in the Italian tafte, and you may walk upon them. The caftle here is very ftrong, and as ftrongly garrifoned, and well provided with provifions and warlike fores. The archbifhop's palace is magnificent; and in the area before it is a fountain, efteemed the largeft and grandef in Germany. The ftables are very lofty; and the number of the horfes ufually kept by the archbifhop is faid to be upwards of 200 . The city, of which one part ftands on a fteep rock, is well built, but the freets are narrow and badly paved, Befides the abovementioned, there are two other fately palaces belonging to the archbifhop, one of which is called the Nuebau, and the other Mirabella. The latter of thefe has a very beautiful garden; and the number of trees in the orangery is fo great, that Mr Keyfler tells us, 20,000 oranges have been gathered from them in one year. The river Salza runs clofe by the walls of this garden. There are a great many other fine ftructures in the city, public and private, fuch as palaces, monafteries, hofpitals, and churches.. In the cathedral dedicated to St Rupert (the apoftle of Bavaria, and a Scotchman by birth), all the altars are of marble of different kinds, and one of the organs has above 3200 pipes. The whole ftructure is extremely handfome. It is built of freefone in imitation of St Pe ter's at Rome. The portico is of marble, and the whole is covered with copper. Before the portico there is a large quadrangular place, with arches and galleries, in which is the prince's refidence and there is a ftatue of Peter. In the middle of this place is an image of the Virgin in bronze ; it is fine, but of an unnatural fize. There are large areas encompaffed with handfome buildings on both fides of the church. In the middle of that which is to the left, there is a moft magnificent fountain of marble, and fome valuable figures of gigantic fize. There is likewife a fountain in that to the right, but it is not to be compared with the former one, and the Neptune of it makes but a very pitiful figure, This town contains many more excellent build. ing and ftatues, which remind one that the borders of Italy are not far diftant. The winter and fummer riding fehools here are noble ftructures. The univerfity was founded in 1620 , and committed to the care of the Benedictines. Befides it, there are two colleges, in which the young noblemen are educated. E. Long. 33. o. N. Lat. 47. 45 .

SALVADORA, in botany: A genus of the monogynia order, belonging to the tetrandria clafs of plants;

Saltfourg, Salvadora:

## S A L

plants; and in the natural method ranking with thofe of which the order is doubtful. The calyx is quadri fid; there is no corolla; the berry is monofpermous; and the feed covered with an antlus or loofe coat.

SALVAGE-mONEY, a reward allowed by the civil and \&atute law for the faving of fhips or goods from the danger of the fea, pirates, or enemies.-Where any thip is in danger of being ftranded, or driven on thore, jultices of the peace are to command the conftables to affemble as many perfons as are neceffary to preferve it; and, on its being preferved by their means, the perfons affilting therein fhall, in 30 days after, be paid a reafonable reward for their falvage; otherwife the fhip or goods thall remain in the cuttody of the officers of the cuftoms as a fecurity for the fame.

SALVATION, means the fafety or prefcrvation of any thing which is or has been in danger, and is generally ufed in a religious fenfe, when it means prefervation from eternal death, or reception to the happinefs of heaven, which is now offered to all men by the Chritian religion upon certain conditions. The Hebrews but rarely make ufe of concrete terms as they are called, but often of abitracted. Thus, inftead of faying that God faves them and protects them, they fay that God is their falvation. Thus the word of falvation, the joy of falvation, the rock of falvation, the fhield of falvation, the horn of falvation, \&c. is as much as to fay, The word that declares deliverance; the joy that attends the efcaping a great danger, 2 rock where any one takes refuge, and where he may be in fafety from his enemy; a buckler, that fecures him from the arm of the enemy ; a horn or ray of light, of happinefs and falvation, \&c. See Theology, \&c.

SALVATOR rosa. See Rosa.
SALVE regina, among the Romanifts, the name of a Latin prayer, addrefled to the Virgin, and fung after complines, as alfo upon the point of executing a criminal. Durandus fays, it was compofed by Peter bilhop of Comportella. The cultom of finging the falve regina at the clofe of the office was begun by order of St Dominic, and firft in the congregation of Dominicans at Bologma, about 1237. Gregory IX. firft appointed it to be general. St Bernard added the conclufion, 0 dulcis ! O pia, \&c.

SALVIA, sage: A genus of the monogynia order, belonging to the digynia clafs of plants; and in the natural method ranking under the 42 d order, Verticillate. The corolla is unequal ; and the filaments placed crofswife on a pedicle. The moft remarkable fpecies are,

1. The officinalis, or common large fage, which is cultivated in gardens, of which there are the following varieties: 1. The common green fage. 2. The wormwood fage. 3. The green fage, with a variegated leaf. 4. The red fage. 5 . The red fage with a variegated leaf. Thefe are accidental variations, and therefore are not enumerated as fpecies. The common fage grows naturally in the fouthern parts of Europe, but is in Britain cultivared in gardens for ufe ; but that variety with red or blackith leaves is the molt common in the Brituth gardens; and the wormwood fage is in greater plenty there than the common green-leaved fage, which is but in few gardens.
2. The tomentofa, generally titled baljamic fage by the gardeners. The ftalks of this do not grow fo upright as thofe of the common fage; they are very hairy,
and divided into reveral branches, which are garnifhed with broad heart-fhaped woolly leaves ftanding upon long foot-ftalks; they are fawed on their edges, and their upper furfaces are rough : the leaves, which are upon the flower-ftalks, are oblong and oval, ftanding upon fhorter foot falks, and are very flightly fawed on their edges; they grow in whorled fikes toward the top of the branches; the whorls are pretty far diftant, but few flowers in each; they are of a pale blae, about the fize of thofe of the common fort. This fage is preferred to all the others for making tea.
3. The auriculata, common fage of virtue, which is: alfo well known in the gardens and markets. The leaves of this is narrower than thofe of the common fort ; they are hoary, and fome of them are indented on thei edges towards the bafe, which indentures have the appearance of ears. The fpikes of flowers are longer tha: thofe of the two former forts, and the whorls are generally naked, having no leaves between them. The flowers are frnaller, and of a deeper blue than thofe of common red fage.
4. The pomifera, with feear-fhaped oval entire leaves, grows naturally in Crete. This hath a fhrubby falk, which rifes four or five feet high, dividing into feveral branches. The flowers grow in fpikes at the end of the branches; they are of a pale blue colour, and have obtufe empalements. The branches of this fage have often punctures made in them by infects, at which places grow large protuberances as big as apples, in the fame manner as the galls upon an oak, and the rough balls on the briar.

All the forts of fage may be propagated by feeds, if they can be procured; but, as fome of them do not perfect their feeds in cold countries and molt of the forts, but efpecially the common kinds for ufe, are eafily propagated by llips, it is not worth while to raife them from feeds.

SALVIANUS, an ancient father of the Chriftian church, who flourihed in the 5 th century, and was well fkilled in the fciences. It is faid he lived in continence with his wife Palladia, as if the had been his fifter; and that he was fo afflicted at the wickednefs of that age, that he was called the Feremiab of the fifth century. He acquired fuch reputation for his piety and learning, that he was named the mafter of the bibops. He wrote a Treatife on Providence; another on Avarice; and fome epiftles, of which Baluze has given an excellent edition; that of Conrade Ritterfhufus, in 2 vols octavo, is alfo eiteemed.

SALUTATION, the act of faluting, greeting, or paying refpect and reverence to any one.

When men (writes the compiler of $L^{\prime} E / p r i t$ des Curiofition Ufages et des Coutumes) falute each other in an ami- of Lititracable manner, it fignifies little whether they move a par. ture. ticular part of the body, or practife a particular ceremony. In thefe actioas chere mat exift different cuftoms. Every nation imagines it employs the moft reafonable ones; but all are equally fimple, and none are to be treated as ridiculous. This infinite number of ceremonies may be reduced to two kinds; to reverences or falutations; and to the touch of fome part of the human body. To bend and prolloate one's felf to exprefs fentiments of refpect, appears to be a natural motion; for terrified perfons throw themlives on the earth when they adore invilible beings. The affectionate touch ot
*alutation, the perfon they falute, is an expreffion of tendernefs. As nations decline from their ancient fimplicity, much farce and grimace are introduced. Superfition, the manners of a people, and their fituation, influence the modes of falutation; as may be obferved from the inftances we collect.

Modes of falutation have fometimes very different characters, and it is no uninterefting fpeculation to examine their fhades. Many difplay a refinement of delicacy, while others are remarkable for their fimplicity, or for their fenfibility. In general, however, they are frequently the fame in the infancy of nations, and in more polifhed focieties. Refpect, humility, fear, and efteem, are expreffed much in a fimilar manner; for thefe are the natural confequences of the organization of the bady. Thefe demonftrations become, in time, only empty civilities, which fignify nothing; we fhall notice what they were originally, without reflesting on what they are.
The firt nations have no peculiar modes of falutation; they know no reverences, or other compliments, or they defpife and difdain them. The Greenlanders laugh when they fee an European uncover his head and bend his body before him whom he calls his fuperior. The inlanders, near the Philippines, take the hand or foot of him they falute, and with it they gently rub their face. The Laplanders apply their nofe ftrongly againft that of the perfon they falute. Dampier fays, that at New Guinea they are fatisfied in placing on their heads the leaves of trees, which have ever paffed for fymbols of friendihip and peace. This is at leaft a picturefque falute.

Other falutations are very incommodious and painful; it requires great practice to enable a man to be polite in an inland fituated in the Straits of the Sound. Houtman tells us, they faluted him in this odd way: "They raifed his left foot, which they paffed gently over the right leg, and from thence over his face." The inhabitants of the Philippines bend their body very low, in placing their hands on their cheeks, and raifing at the fame time one foot in the air, with their knee bent. An Ethiopian takes the robe of another, and ties it about his own wain, fo that he leaves his friend half maked. This cuftom of undrefling on thefe occafions takes other forms; fometimes men place themfelves naked before the perion whom they falute; it is to fhow their humility, and that they are unworthy of appearing in his prefence. This was practifed before Sir Jofeph Banks, when he received the vifit of two female Otaheitans. Their innocent fimplicity, no doubt, did not appear immodeft in the eyes of the virtuofo. Sometimes they only undrefs partially. The Japanefe only t. 'ke off a llipper; the people of Arracan, their fandals in the ftreet, and their llockings in the houle.

In the progrefs of time, it appears fervile to uncover one's felf. The grandees of Spain claim the right of appearing corered before the king to fhow that they are not fo much fubjected to him as the reft of the nation; and (this writer obferves) we may remark, that the Englifh do not uncover their heads fo much as the other nations of Eurcpe. In a word, there is not a nation (obferves the humourous Montaigne), even to the people who, when they falute, turn their backs on their friends, but that can be jultified in their cuftoms. It suult be obferved of the negroes, that they are lovers of
ludicrous actions, and thus make all their ceremonies Salutation. farcical. The greater part pull the fingers till they crack. Snelgrave gives an odd reprefentation of the embaffy which the king of Dahomy fent to him. The ceremonies of falutation confifted in the moft ridiculous contortions. When two negro monarchs vifit, they embrace in frapping three times the m ddle finger.

Barbarous nations frequently imprint on their faluta. tions the difpofitions of their character. When the inhabitants of Carmena (fays Athenxus) would fhow a peculiar mark of efteem, they breathed a vein, and prefented for the beverage of their friend the blood as it iflued. The Franks tore hair from their head, and prefented it to the perfon they faluted: The flave cur his hair, and offered it to his mafter: The Chinefe are fingularly affected in their perfonal civilities: they even calculate the number of their reverences. Thefe are their moft remark ble poftures. The men move their hands in an affectionate manner, while they are joined together on the breaft, and bow their head a little. If they refpect a perfon, they raife their hands joined, and then lower them to the earth in bending the body. If two perfons meet after a long feparation, they both fall on their knees, and bend the face to the earth, and this ceremony they repeat two or three times. Surely we may differ here with the fentiment of Montaigne, and confefs this ceremony to be ridiculous. It arifes from their national affectation. They fubfitute artificial ceremonies for natural actions. Their expreffions mean as little as their ceremonies. If a Chinefe is afked how he finds himfelf in health? he anfwers, Very rwell; tbanks. to your abundant felicity. If they would tell a man that he looks well, they fay, Profperity is painted on your face; or, Your air annaunces your hat titiuffs. If you render them any fervice, they fay; My thanks foould be immortal. If you praife them, they anfwer, Ho w Ball I dare to perfuade myelf of what you fay of me? If you dine with them, they tell you at parting, We bave not treated you ruith fufficient diffinction. The various titles they invent for each other it would be impoffible to tranllate.

It is to be obferved, that all thefe anfwers are prefcribed by the Chinefe ritual, or academy of compliments. There are determined the number of bows; the expreffions to be employed; the genuflections; and the inclinations which are to be made to the right or left hand : the falutations of the mafter before the chair where the ftranger is to be feated, for he falutes it moft profoundly, and wipes the duft away with the fikirts of his robe; all thefe and other things are noticed, even to the filent geftures, by which you are entreated to enter the houfe. The lower clafs of people are equally nice in thefe punctilios; and ambaffadors pafs 40 days in practifing them before they are enabled to appear at court. A tribunal of ceremonies has been erected, and every day very odd decrees are iflued, to which the Chinefe molt religioully fubmit.

The marks of honour are frequently arbitrary; to be feated, with us, is a mark of repofe and familiarity ; to ftand up, that of refpec. There are countries, however, in which princes will only be addreffed by perfons who are feated, and it is confidered as a favour to be permitted to fand in their prefence. This cuftom prevails in defpotic countries: a defpot cannot fuffer without difgult the elevated figure of his fubjects; he is
pleafed

## SAL <br> [633] <br> S A L

Shinte.

pleafed to bend their bodies with their genius : his prefence mult lay thofe who behold him proftrate on the earth : he defires no eagernefs, no attention; he would only infpire terror.

The pope makes no reverence to any mortal except the emperor, to whom he foops a very little when he permits him to kifs his lips.

SALUTE, in military matters, a difcharge of artillery, or frall arms, or both, in honour of fome per. fon of extraordinary quality. The colours likewife falute royal perfons, and generals commanding in chief; which is done by lowering the point to the ground. In the field, when a regiment is to be reviewed by the king or his general, the drums beat a march as he palfes along the line, and the officers falute one after another, bowing their half-pikes or fwords to the ground; then recover and take off their hats. The enfigas falute altogether, by lowering their colours.

Salute, in the navy, a teftimony of deference or homage rendered by the fhips of one nation to another, or by hips of the fame nation to a fuperior or equal.

This ceremony is varioully performed, according to the circumftances, rank or fituation, of the parties. It confifs in firing a certain number of cannon, or volleys of fmall arms ; in ftriking the colours or top-fails; or in one or more general houts of the whole fhip's crew, mounted on the matts or rigging for that purpofe.

The principal regulations with regard to falutes in the royal navy are as follow :
"When a flag-officer falutes the admiral and commander in chief of the fleet, he is to give him fifteen guns; but when captains falute him, they are to give him feventeen guns. The admiral and commander in chief of the flect is to return two guns lefs to flag-officers and four lefs to captains. Flag.officers, faluting their fuperior or fenior officer, are to give him thirteen guns. Flag-officers are to return an equal number of guns to flag-officers bearing their flags on the fame maf, and two guns lefs to the reft, as alfo to captains.
"When a captain falutes an admiral of the white or blue, he is to give him fifteen guns; but to vice and rear admirals, thirteen guns. When a flag-officer is faluted by two or more of his majefty's fhips, he is not to return the falute till all have finilhed, and then to do it with firch a reafonable number of guns as he fhall judge proper.
" In cafe of the meeting of two fquadrons, the two chiefs only are to exchange falutes. And if fingle thips meet a fquadron confilting of more than one flag, the principal flag only is to be faluted. No falutes fhall be repeated by the farme fhips, unlefs there has been a feparation of fix months at leaf.
" None of his majefty's fhips of war, commanded only by captains, flall give or receive falutes from one another, in whatfoever part of the world they meet.
"A flag officer commanding in chief hall be faluted, upon his firt hoifting his flag, by all the fhips prefent with fuch a number of guns as is allowed by the firt, third, or fifth articles.
"When any of his majefty's fhips fhall meet with any Ship or hhips belonging to any foreign prince or ftate, within his majefty's feas (which cxtend to Cape Finifterre), it is expected, that the faid foreign fhips do Vol. XVI
frike their top-fail, and take in their flag, in azknowledgement of his majefty's fovereignty in the feas: and if any thall refufe or offer to refint, it is enjoined to all flag-officers and commanders to ufe their utmolt endeavours to compel them thereto, and not fuffer any difhonour to be done to his majefty. And if any of his majelty's fubjects fhall fo much forget their duty, as to omit friking their top-fail in pafling by his majefty's fhips, the name of the fhip and mafter, and from whence, and whither bound, together with affidavits of the fact, are to be fent up to the fecretary of the admiralty, in order to their being proceeded againt in the admirality court. And it is to be obferved, that in his majefty's feas, his majelty's mip's are in nowife to Atrike to any; and that in other parts, no Thip of his majefty's is to Arike her flag or top-fail to any" foreigner, unlefs fuch toreign thip fhall have firft fruck, or at the fame time frike, her flag or topfail to his majelty's fhip.
" The flag-officers and commanders of his majefty's thips are to be careful to maintain his majelty's honour upon all occafions, giving protection to his fubjects, and endeavouring, what in them lies, to fecure and encourage them in their lawful commerce; and they are not to injure, in any manner, the fubjects of his majefty's friends and allies.
"If a foreign admiral meets with any of his majefty's thips, and falutes them, he fhall receive gun for gun. If he be a vice-admiral, the admiral fhall anfwer with two guns lefs. If a rear-admiral, the admiral and vice-admiral thall return two lefs. But if the fhip be commanded by a captain only, the flag-officer fhall give two guns lefs, and captains an equal number.
"When any of his majefty's fhips come to an anchor in a foreign port or road, within cannon-fhot of its forts, the captain may falute the place with fuch a number of guns as have been cuftomary, upon good affurance of having the fame number returned, but not otherwife. But if the fhip bears a flag, the flag-officer fhall firft carefully inform himfelf how flags of like rank, belonging to other crowned heads, have given or returned falutes, and to infift upon the fame terms of refpect.
"It is allowed to the commanders of his majefty's fhips in foreign parts, to falute the perfons of any admirals, commanders in chief, or captains of fhips of war of foreign nations, and foreign noblemen, or ftrangers of quality, as alfo the factories of the king's fubjects, coming on board to vifit the fhip; and the number of guns is left to the commander, as thall be fuitable to the occafion and the quality of the perfons vifiting; but he is neverthelefs to remain accountable for any exceffes in the abufe of this liberty, If the fhip vifited be in company with other fhips of war, the captain is not to make ufe of the civilities allowed in the preceding arijcles but with leave and confent of the commander in chief or the fenior captain.
" Merchant-hips, whether toreigners or belonging to his majelty's fubjects, faluting the admiral of the fleet, fhall be anfwered by fix guns lefs; when they falute any other flag-fhips, they fhall be anfwered by four guns lefs; and if they falute men of war commanded by captains, they fhall be anfwered by two guns lefs. If feveral merchant-fhips falute in company, no return is to be made till all have finifhed, and then by

Siluzzo fuch a number of guns as fhall be thought proper ; but
II though the merchant-hhips fhould anfwer, there fhall be $\epsilon_{\text {amaneans. }}$ no fecond return.-
"None of his majefty's flips of war fhall falute any of his majefty's forts of caftles in Great Britain or Ireland, on any pretence whatfoever."

SALUZZO, called by the French Saluces, a town and cafte of Italy, in Piedmont, and capital of a marquifate of the fame name, with a bifhop's fee. It is fituated on an eminence at the foot of the Alps near the siver Po, in E. Long. 18. 27. N. Lat. 44. 35. It is fubject to the king of Sardinia.
Saluzzo, the marquifate of, a province of Piedmont in Italy, bounded on the north by Dauphiny and the province of the Four Valleys, on the eaft by thofe of Saviglano and Foffano, on the fouth by that of Cona and the county of Nice, and on the weft by Barcelonetta. It was ceded to the duke of Savoy in 160 I ,
SAMA, a town and fort in the hands of the Dutch on the Gold Coaft of Africa, ftands on an eminence, the fort being watered by the pleafant river of St George, that difcharges itfelf into the fea. The town contains above 200 houfes, which feem to form three diftinct villages, one of which is immediately under the cannon of the Dutch fort St Sebaltian. Des Marchais deems this town to be one of the largeft on the whole coaft, Barbot likewife agreeing with him in its fituation, extent, and number of inhabitants. The fole em. ployment of the natives is fifhing; a circumftance which eafily accounts for their poverty. The government of this place is republican, the magiftrates having the fupreme power, being fubject to periodical changes, and under the authority of the king of Gavi, who feldom however interferes in the affairs of the flate. This prince refides fome leagues diftant from the fea, is rich, and much refpecied by his neighbours.
SAMANEANS, iii antiquity, a kind of magi or philofophers, bave been confounded by fome with the Bramins. They proceeded from Ariana, a province of Perfia, and the neighbouring countries, fpread themfelves in India, and taught new doctrines.

The Bramins, before their arrival, it is faid, were in the higheft period of their glory, were the only oracles of India, and their principal refidence was on the banks of the Ganges, and in the adjacent mountains; while the Samaneans were fettled towards the Indus. Others fay, that the Bramins acquired all their knowledge from the Samaneans, before whofe arrival it would be difficult to prove that the Bramins were the religious teachers of the Indians. The moft celebrated and ancient of the Samanean doctors was Boutta, or Budda, who was born 683 years before Chrift. His fcholars paid him divine honours; and his doctrine, which confifted chiefly in the tranfingration of fools, and in the worfhip of cows, was adopted not only in India, but alfo in Japan, China, Siam, and Tartary. It was propagated, according to M. de Sainte Croix, in Tlibet, in the 8th century, and fucceeded there the ancient religion of Zamolxis. The Samaneans, or Buddifs, were entirely deftroyed in India by the jealous rage of the Bramins, whofe abfurd practices and fables they affected to treat with contempt; but feveral of their books are fill preferved and refpected on the coats of Malabara

We are told, too, that feveral of the Bramin orders have adopted their manner of living, and openly profefs the greateft part of their doctrines. $L^{\prime} E_{\text {zour }} V_{\text {edam }}$, ou Ancien Comment du Vedam, publifhed by M. de S. Croix, Paris 1779. See Bramins.

SAMAR, a Spanifh illand not far from Manilla in Morern the Eaft Indies, is called Samar on the fide which looks Univ. Hif. towards the other ifles, and Ibabuo on that next the vol. viii. ocean. It is like the trunk of a man's body, without p. 157. head or legs. Its grcateft length, from Cape Baliquatan, which, with the point of Manilla, makes the ftrait of St Bernardino, in 13 degrees 30 minutes north latitude, extends to that of Gaignan in in degrees towards the fouth. The other two points, making the greateft breadth of the illand, are Cabo de Spirito Santo, or Cape of the Holy Ghof, the high mountains of which are the firlt difcovered by hips from New Spain; and that which lying oppofite to Leyte weftward, makes another frait, fcarce a fone's throw over. The whole compafs of the ifland is about 130 leagues. Between Guignan and Cape Spirito Santo is the port of Borognon, and not far from thence thofe of Palapa and Catubig, and the little ifland of Bin, and the coaft of Catarman. Veffels from countries not yet, difcovered are very frequently caft away on the before-mentioned coaft of Palapa. Within the ftraits of St Bernardino, and beyond Baliquaton, is the coaft of Samar, on which are the villages of Ibatan, Bangahon, Cathalogan, Paranos, and Calviga. Then follows the flrait of St Juanillo, without which, ftanding eaftward, appears the point and little ifland of Guignan, where the compafs of the ifland ends. It is mountainous and craggy, but fruicful in the few plains there are. The fruits there are much the fame as that of LEYTE; but there is one particular fore called by the Spaniards chicay, and by the Chinefe, who put a great value on it, $j^{f} y z u$, without kernels.

SAMARA, in botany; a genus of the monogynia order, belonging to the tetandria clafs of plants. The calyx is quadripartite, the corolla tetrapetalous; the famina immerfed in the bafe of the petal; the figma funnel-fhaped.

SAMARCAND, or Sarmacand, an ancient and famous town of Afra, capital of the kingdom of the fame name in the country of the Ubeck Tartars, with a caflle and a famous univerfity. The houfes are built with fones, and it carries on a trade in excellent fruits. It is pleafantly feated near the tiver Sogde, a branch of the Amu, E. Long. 69. O. N. Lat. 39.50. This town was the capital of the kingdom of Sogdia in the time of Alexander the Great, when it was called Muracanda. It was afterwards the capital of the empire of Tamerlane the Great. In the time of Jenghiz Khan, it was forced to yield to the arms of that cruel conqueror ; by whom the garrifon amounting to 30,000 men, were butcchered; 30,000 of the inbabitants with their wives and children, were prefented to his generals ; the reft were permitted to live in the city, on paying a tribute of 300,000 dinars or crowns of gold.
SAMARIA (anc. geog.) one of the three larger Cisjordan diftricts, fituated in the middle between Galllee to the north and Judea to the fouth, beginning at the village Ginea, in the Campus Magnus, and ending at the toparchy called Acro3atena ( J fephus). Its

Samar

Samaria.

## SAM

Samaria,
foil differing in nothing from that of Judea; both equally hilly and champuign, both equally fertile in corn and fruit (id.) Called the kingdom of Samaria in Ephraim (Bible); comprifing the ten tribes, and confequently all the country to the north of Judea and eaft and weft of Jordan.

Samaria, the capital city of the isingdom of Samaria, or of the ten tribes. It was bult by Omriking of Ifrael, who began to reign in the year of the world 3079 , and died 3086 ( 1 Kings xvi. 24.) He bought the hill Samaria of Shemer for two talents of filver, or for the fum of L. 68, $: 7: 6$. It took the name of Samaria from Shemer the owner of the hill; though fome think there were already fome beginnings of a city, becaufe, before the reign of Omri, there is mention made of Samaria ( 1 Kings xiii. 32.) in the year of the world 303 c . But others take this for a prolepfis, or an anticipation, in the difcourfe of the man of God, who feaks of Samaria under the reign of Jeroboam.

However this be, it is certain that Samaria was no confiderable place, and did not become the capital city of the kingdom of Iirael till after the reign of Omri. Before hirn, the kings of Ifrael dwelt at Shechem, or at Tirzah. Samaris was lituated upon an agreeable and fruitful hill, andflan advantageous fituation, and was 12 miles from Dothaim, 12 from Merrom, and four from Atharoth. Jofephus fays, it was a day's journey from Jerufalem. Befides, though it was built upon an eminence, yet it mult have water in abundance; fince we find medals ftruck in this city, whereon is reprefented the goddefs Aftarte treading a river under font; which proves it to have been well watered. And Jofephus obferves, that when it was taken by John Hircanus the prince of the Jews, he entirely demolithed it, and caufed even the brook to flow over is ruins, to obliterate all the foot Iteps of it.

The kiucry of Samaria omitted nothing to make this city the ftrongeft, the fineft, and the richeft, that was poffible. Ahab built there a palace of ivory (I Kings xxii. 39), that is, in which there were many ornaments of ivory. Amos defcribes Samaria under Jeroboam II. as :a city funk into all exceffes of luxury and effeminacy (Amos iii. 15. and iv. 1, 2).

Ben-hadad king of Syria built public places or ftreets in Samari. (1 Kings xx. 34.) probably for traffic, where his people dwelt to promote trade. His fon Ben-hadad befieged this place under the reign of Ahab (I Kings xx. 1, 2, 3, \&c.) in the year of the world 3103.

The following year, Ben-hadad brought an army into the field, probably with a defign to march againit Samaria: but his army was again cut in pieces. Some years after this, Ben-latad came a third time, lay down beiore Samaria, and reduced it to fach necetfities by famine, that a mother was there forced to eat her own child; but the city was relieved by a Enfible effect of the protection of God. '

Laftly, it was befieged by Shalmanefer king of Alf;ria, in the ninth year of Hothea kinf of Ifrael (2 Kings xvii. $6,5,8 \mathrm{sc}$ ), which was the fourth of Hezekiah king of Judah. It was taken three years after, in the year of the worlt 3283 . The prophet Holea peaks of the cruchies exercied by Shalmanelor araint the befieged

city was reduced to a heap of ftomes (Mic. i. 6.). The Samaria, Cuthites that were fent by Efar-haddon to inhabit the Samaritans. country of Samaria, did not think it worth their while to repair the ruins of this city; they dwelt at Shechem, which they made the capital city of their fate. They were fill upon this footing when Alexander the Great came into Phœnicia and Judea. However, the Cuthites had rebuilt fome of the houfes of Samaria even from the time of the return from the captivity, fince Ezra then fpeaks of the inhabitants of Samaria (Ezra iv. 17. Nehem. iv. 2.) ; and that the Samaritans, being jealous of the favours that Alexander the Great had conferred on the Jews, revolted from him while this pince was in Egypt, and burnt Andromachus alive, whom Alexander had left governor of Syria. Alexander marched againft them, took Samaria, and put in Macedonians to inhabit it ; giving the country round it to the Jews; and to encourage them to cultivate it, he granted them an exemption from tribute. The king of Egypt and Syria, who fucceeded Alexander, deprived them of the property of this country.

But Alexander Balas king of Syria reftored to Jonathan Maccabæus the cities of Lydda, Ephrem, and Ramatha, which he cut off from the country of Samaria ( 1 Mac. x. 30, 38 , and xi. 28, 34.) Laftly, the Jews re-entered into the full poffeffion of this whole country under John Hircanus the Afmonæan, who took Samaria, and ruined it in fuch a manner, according to Jorephus, that he made the river run through its ruins. It continued in this condition to the year of the world 3947, when Aulus Gabinius, the proconful of Syria, rebuilt it, and gave it the name of Gabiniana. But it was yet but very inconfiderable, till Hercd the Great reflored it to its ancient luftre, and gave it the Greek name of Sebalte, which in Latin is Augufta, in honour of the emperor Augultus, who had given him the property of this place.

The facred authors of the New Teftament fpeak but little of Samaria; and when they do mention it, it is rather in refpect of the country about it, than of the city itfelf. (See Luke xvii, if. John iv. 4, 5.) It was there our Lord had the converfation with the woman of Samaria, that is, with a Samaritan woman of the city of Sychar. After the death of St Stephen, (Acts viii. 1, 2, 3.), when the difciples were difperfed through the cities of Judea and Samaria, St Philip the deacon withdrew into the city of Simaria, where he made feveral converts. When the apoltles heard that this city had received the word of God, they fent Pe ter and John thither, to communicate the Holy Ghoft to fuch as had been baptized. It was there they found Simon Magus, who offered money to the apoltles, being in hopes to buy this power of communicating the Holy Ghoft. Samaria is never called Sebafte in the books of the New Teltament, though Arangers hardly knew it but by this name. St Jerome fajes, that is was thought Obadiah was buied ai Samaria. They alfo thew ed there the tombs of Elitha and of St John the Pupti?. There are fimd many ancient medals that were flucli at Sebale, or Samaris, and fome bifhops of this city have fublatibed to the ancient councils.

SAMARITIS: We have alvady fotien of the Samatans urdr the asticle Cuth. The Samaritans 4 L 2

Sumaritans. are the people of the city of Samaria, and the inhabi$\sim_{\text {tants of the province of which Samaria was the capi- }}$ tal city. In this fenfe, it fhould feem that we might give the name of Samaritans to the Ifraelites of the ten tribes, who lived in the city and territory of Samaria. However, the facred authors commonly give the name of Samaritans only to thofe Atrange people whom the kings of Affyria fent from beyond the Euphrates to inhabit the kingdom of Samaria, when they took away captive the Ifraelites that were there before. Thus we may fix the epoch of the Samaritans at the taking of Samaria by Salmanefer, in the year of the world 3283. This prince carried away captive the Ifraelites that he found in the country, and affigned them dwellings beyond the Euphrates, and in Affyria; ( 2 Kings xvii. 24.) He fent other inhabitants in their ftead; of which the molt confiderable were the Cuthites, a people defcended from Culh, and who are probably of the number of thofe whom the ancients knew by the name of Scythians.

After Salmanefer, his fucceffor Efar-haddon was informed, that the people which had been fent to Samaria were infelted by lions that devoured them, (2 Kings xvii. 25. ); this he imputed to the ignorance of the people in the manner of worfhipping the god of the country. Wherefore Efar-haddon fent a prieft of the God of Ifrael that he might teach them the religion of the Hebrews. But they thought they might blend this religion with that which they profeffed before; fo they continued to worfhip their idols as before, in conjunction with the God of Ifrael, not perceiving how abfurd and incompatible thefe two religions were.

It is not known how long they continued in this ftate; but at the return from the captivity of Babylon, it appears they had entirely quitted the worlhip of their idols; and when they afked permifion of the Ifraelites that they might labour with them at the rebuilding of the temple of Jerufalem, they affirmed, that from the time that Efar-haddon had brought them into this country they had always worfhipped the Lord, (Ezrah iv. $I_{3}$ 2, 3.) And indeed, after the return from the captivity, the fcripture does not any where reproach them with idolatrous worhip, though it does not diffemble either their jealoufy againft the Jews, nor the ill officos they had done them at the court of Perfia, by their nanders and calumnies, or the ftratagems they contrived to hinder the repairing of the walls of Jerufalem.(Nehem. ii. 10, 19. iv. 2, \&c. vi. 1, 2, \&c.)

It does not appear that there was any temple in Sa maria, in common to all thofe people who came thither from beyond the Euphrates, before the coming of Alexander the Gieat into Judea. Before that time, every one was left to his own difcretion, and worfhipped the Lord where be thought fit. Bat they prefently comprahended, from the books of Mofes which they had in their hands, and from the example of the Jews their neighbours, that God was to be worfhipped in that place only which be had chofen. So that fince they could not go to the temple of Jerufalem, which the Jews' would not allow of, they bethought themfelves of building a temple of their own upon mount Gerizim, near the city of Shechem, which was then their capital. Therefore Sanballat, the governor of the Samaritans, applied himfelf to Alexander, and told him he had a fon indaw, called Manaffes, fon to Jaddus
the high-prieft of the Jews, who had retired to Samaria Samaritan!: with a great number of other perfons of his own nation; that he defired to build a cemple in this province, where he might exercife the high-priefthood; that this undertaking would be to the advantage of the king's affairs, becaufe in building a temple in the province of Samaria, the nation of the Jews would be divided, who are a turbulent and feditious people, and by fuch a divifion would be made weaker, and lefs in a condition to undertake new enterprizes.

Alexander readily confented to what Sanballat defired, and the Samaritans prefently began their building of the temple of Gerizim, which from that time they have always frequented, and ftill frequent to this day, as the place where the Lord intended to receive the adoration of his people. It is of this mountain, and of this temple that the Samaritan woman of Sychar fpoke to our Savioury (John iv. 20.) See Ge. rizim.

The Samaritans did not long continue under the obedience of Alexander. They revolted from him the very next year, and Alexander drove them out of Samaria, put Macedonians in their room, and gave the province of Samaria to the Jews. This preference that Alexander gave to the Ifraelites contributed not a little to increafe that hatred and animofity that had already obtained between thefe two people. When any Ifrael ite had deferved punifhment for the violation of fome important point of the law, he prefently took refuge in Samaria or Shechem, and embraced the way of worfhip according to the temple of Gerizim. When the Jews were in a profperous condition, and affairs were favourable to them, the Samaxitans did not fail to call themfelves Hebrews, and pretended to be of the race of Abraham. But no fooner were the Jews fallen into difcredit or perfecution, but the Samaritans immediately difowned them, would have nothing in common with them, acknowledged themfelves to be Phœnicians originally, or that they were defcended from Jofeph and Manaffeh his fon. This ufed to be their practice in the time of Antiochus Efiphanes.

The Samaritans, having received the Pentateuch, or the five books of Mofes, from the prieft that was fers by Efar-haddon, have preferved it to this day, in the fame language and character it was thei, that is, in the old Hebrew or Phœenician character, which we now call the Samaritan, to diftinguifh it from the modern He brew character, which at prefent we find in the books of the Jews. Thefe laft, after their captivity, changed their old characters, and took up thofe of the Chaldee, which they had been ufed to at Babylon, and which they continue ftill to ufe. It is wrong, fays F. Calmet, to give this the name of the Hebrew character, for that can be faid properly only of the Samaritan text. The critics have taken notice of fome variations between the Pentateuch of the Jews and that of the Samaritans; but thefe varicties of reading chiefly regard the word Gerizim, which the Samaritans feem to have purpofely introduced to favour their pretenfions, that Mount Gerizim was the place in which the Lord was to be adored. The other various readings are of fmall importance.

The religion of this people was at firt the Pagan. Every one worlhipped the deity he had been ufed to in his own country (2 Kings xvii, 25, 30, 31.)

## SAM

Sanaritans. The Babylonians worfhipped. Succoth-benoth; the
Cuthites, Nergal ; the Hamathites, Afhima ; the Avites, Nibhaz and Tartak; the Sepharvites, Adram. moelech and Anammelech. If we would enumerate all the names of falfe gods to whom the Samaritans have paid a facrilegious workhip, we fhould bave enough to do. This matter is fufficiently perplexed, by reafon of the different names by which they were adored by different nations, informuch that it would be almoft impof. fible to clear up this affair. See Succoth-menoth, \&c. Afterwards, to this profane worthip the Samaritans added that of the Lord, the God of Ifrael, ( 2 Kings xvii. 29, 30, 31, 32.) They gave a proof of their little regard to this worlhip of the true God, when under Antiochus Epiphanes they confecrated their temple at Gerizim to Jupiter Argivus. In the time of Alexander the Great, they celebrated the fabbatical year, and confequently the year of jubilee alfo. We do not know whether they did it exactly at the fame time with the Jews, or whether they obferved any other epoch ; and it is to little purpofe that fome critics have attempted to afcertan the firft begirning of it. Uuder the kings of Syria they followed the epoch of the Greeks, or that of the Seleucidx, as other people did that were under the government of the Seleucidx. After that Herod had re-eftablifhed Samaria, and had given it the name of Sebafte, the inkabitants of this city, in their medals, and all public aets, took the date of this new eftablifhment. But the inhabitants of Samaria, of which the greater part were Pagans or Jews, were no rule to the other Samaritans, who probably reckoned their years according to the reigns of the emperors they were fubject to, till the time they fell under the jurifdiction of the Mahometans, under which the live at this day; and they reckon their year by the Hegira, or, as they fpeak, according to the reign of Ifhmael, or the Ithmaclites. Such of our readers as defire to be further acquainted with the hiftory of the ancient Samaritans, we refer to the works of Jofephus, where they will find that fubject largely treated of.

As to their belief, it is objected to them, that they receive only the Pentateuch, and reject all the other books of fcripture, chiefly the prophets, who have more exprefsly declared the coming of the Meffiah.Thcy have alfo been accufed of believing God to be corporeal, of denying the Holy Ghoft, and the refurrection of the dead. Jefus Chrift reproaches them (John iv. 22.) with worihiping they know not what; and in the place already referred to he feems to exclude them from falvation, when he fays, that "Salvation is of the Jews." True it is, that thefe words might only figrsify, that the Meffiah was to proceed from the Jews; but the crime of fchifm alone, and a feparation from the true church, was fufficient to exclude them from falvation. The Samaritan woman is a fufficient teflimony that the Samaritans expected a Mefliah, who they hoped would clear up all their doubts (John. iv. 25.) Several of the inhabitants of Shechem believed at the preaching of Jefus Chrift, and feveral of Samaria believed at that of St Philip; but it is faid, they foon fell back to their former errors, being perverted by Simon Magus.

The Samarians at prefent are very few in number triguM Jofeph Scaliger, being curious to know their ufages, plants; and in the natural method rasking under the
wrote to the Samaritans of Egypt, and to the high- samaritans. prieft of the whole fect who refided at Neapolis in Sy. Sambucus. ria. They: returned two anfwers to Scaliger, dated in the year of the Hegira 998. Thefe were preferved in the French king's library, and were tranlated into Latin by father Morin, and printed in Engtand in the collection of that father's letters, in 1682, under the title of Antiquitates Ecclefia Orientalis. By thefe letters it afpears, that they believe in God, in his fervant Mofes, the holy law, the mountain Gerizim, the houre of God, the day of vengeance and of peace; that they value themfelves upon obferving the law of Mufes in many points more rigidly than the Jews thermfelves.They keep the fabbath with the utmoft frictnefs rcquired by the law, without firring from the place the are in, but only to the fynagogue. They go not ou: of the city, and abfain from their wives on that day. They never delay circumcifion beyond the eighth day. They fill facrifice to this day in the temple ou mount Gerizim, and give to the prief what is en. joined by the law. They do not marry their own nieces, as the Jews do; nor do they allow themfelves a plurality of wives. Their hatred for the Jews may be feen through all the hiftory of Jofephus, and in feveral places of the New Teftament. The Jewifh hitorian informs us that under the government of Coponius, one paflover night, when they opered the gates of the temple, fome Samaritans had feattered the bones of dead men there, to infult the Jews, and to interrupt the devotion of the feftival. The evangelifts fhow us, that the Jews and Samaritans held no correfpondence together (John iv. 9.) "The Jews have no dealings with the Samaritans." And the Samaritan woman of Sychar was much furprifed that Jefus talked with her, and afked drink of her, being a Samaritan. When our Saviour fent his apoftles to preach in Judea, he forbad them to enter into the Samaritan cities, (Matt. x. 5.); hecaufe he looked upon them as fchifmatics, and as Atrangers to the covenant of Ifrael. One day when he fent his difciples to provide him a lodging in one of the cities of the Samaritans, they would not entertain him, becaufe they perceived he was going to Jerufaiem. (Luke ix. 52. 53.)" Becaufe his face was as though he would go to Jerufalem." And when the Jews were provoked at the reproaches of Jefus Chritt, they told him he was a Samaritan (John viii. 48.), thinking they could fay nothing more fevere againft him. Jofephus relates, that fome Samaritans having killed feveral Jews as they were going to the feaft at Jerufalem, this occafioned a kind of a war between them. The Samaritans continued their fealty to the Romans, when the Jews revolted from them; yet they did not efcape from being involved in fume of the calamities of their neighbours.
There are fill at this day fome Samaritans at Shechem, otherwife called Naploufe. They have priefts there, who fay they are of the family of Aaron. They have a high-prieft, who refides at Shechem, or at Gerizim, who offers facrifices there, and who declares the feaft of the paflover, and all the other fealts, to all the defperfed Samaritans. Some of them are to be found at Gaza, fome at Damalcus, and fome at Grand Cairo.
SAMBUCUS, elder, in botany: A genus of the

## S A M

the appearance of the ky at or near the time this wind arifeth, have warning of its approach by a thick haze, which appears like a cloud of duft arifing out of the horizon; and they immediately upon this appearance throw themfelves with their faces to the ground; and continue in that pofition till the wind is paffed, which frequently happens almoft inftantaneoully; but if, on the contrary they are not careful or brifk enough to take this precaution, which is fometimes the cafe, and they get the full force of the wind, it is inftant death.

The above method is the only one which they take to avoid the effects of this fatal blaft; and when it is over, they get up and look round them for their companions; and if they fee any one lying motionlefs, they take hold of an arm or leg, and pull and jerk it with fome force; and if the limb thus agitated feparates from the body, it is a certain fign that the wind has had its full effect ; but if, on the contrary, the arm or leg does not come away, it is a fure fign there is life remaining, although to every outward appearance the perfon is dead; and in that cafe they immediately cover him or them with clothes, and adminiter fome warm diluting liquor to caufe a perfpiration, which is certainly but flowly brought about.

The Arabs themfeives can fay little or nothing about the nature of this wind, only that it always leaves behind it a very frong fulphureous fmell, and that the air at thefe times is quite clear, except about the horizon; in the north-weft quarter, before obferved, which gives warning of its approach. We have not been able to learn whether the dead bodies are fcorched, or diffolved into a kind of gelatinous fubltance; but from the flories current about them, there has been frequent reafon to believe the latter ; and in that cafe fuch fatal effects may be attributed rather to a noxious vapour than to an abfolute and exceffive heat. The ftory of its going to the gates of Bagdad and no farther may be reafonably enough accounted for, if the effects are attributed to a poifonous vapour, and not an exceffive heat. The abovementioned wind, Samiel, is fo well known in the neighbourhood of Bagdad and Baffora, that the very children fpeak of it with dread.

SAMOGITIA, a province of Poland, bounded on the north by Courland, on the eaft by Lithuania, on the weft by the Baltic Sea, and on the fouth by Regal Pruffia, being about 175 miles in length and 125 in breadth. It is full of forelts and very high mountains, which feed a great number of cattle, and produce a large quantity of honey. There are alfo very active horfes, in high efteem. The inhabitants are clownifh, but honeft ; and they will not allow a young woman to go out in the night without a candle in her hand and two bells at her girdle. Roffenna and Wormia are the principal places.

SAMOIEDA, a cotintry of the Ruffian empire, between Afratic Tartary and Archangel, lying along Ives's Voy- lar to the defert of Arabia. It blows over the defert the fea-coaft as far as Siberia. The inhabitants are fo
age from in the months of July and Augelt from the north-weft England to quarter, and fometimes it continues with all its violence India in to the very gates of Baglad, but never affects any body 1754. within the walls. Sone years it does not blow at all, 1.54. and in others it appears fix, eight, or ten times, but fillom continues more than a fer minutes at a time. It
cfien fafes with the apparent quicknels of lightning. feljom continues more than a few minutes at a time. It
cfien fanes with the apparent quicknels of lightning. 'lice Arabians and Perfians, who are acquanted with corolla quinquefid; the berry trifpermous.
The moft remarkable fpecies are, t . The nigra, or common black elder-tree, iffes with a tree-ftem, branching numeroully into a large fpreading head, twenty or thitty feet high ; pinnated leaves, of two or three pair of oval lobes and an odd one ; and large five parted umbels of white flowers towards the ends of the branches, fusceeded by bunches of black and other different coloured berries, in the varieties; which are-Common black-berried elder-tree-White-berried elder-Greenberiied elder-Laciniated, or parlley-leaved elder, having the folioles much laciniated, fo as to refemble pardley leaves-Gold-Atriped-leaved elder-Silver-ftriped elder-Silver-dufted elder. 2. The racemofa, racemofe red-berried elder, rifes with a tree-like ftem, branching ten or twelve feet high, having redaifh-brown branches and buds; pinnated leaves of fix or feven oval deeply-fawedlobes; and compound, oval, racemous, clufters of whitifh-green flowers, fucceeded by oval clutters of red berries. This is a refident of the mountainous parts of the fouth of Europe, and is retained in our gardens as a flowering fhrub, having a peculiar fingularity in its oval-cluftered flowers and berries. 3. The Canadenfis, or Canada fhrubby elder, rifes with a ihrubby item, branching eight or ten feet high, having reddifh fhoots; fomewhat bipinnated leaves, often ternate below, the other compofed of five, feven, or nine oval fobes; and towards the ends of the branches, cymofe quinquepartite umbels of flowers, fucceeded by blackifh red berries. All the forts of elder are of the deciduous tribe, very hardy, and grow freely anywhere; are generally free fhooters, but particularly the common elder, and varieties, which make remarkably ftrong, jointed fhoots, of feveral feet in length, in one feafon; and they Hower moftly in fummer, except the racemofe elder, which generally bsgins flowering in April; and the branches being large, fpreading, and very abundant, are exceedingly confpicuous; but they emit a molt difagreeable odour. The flowers are fucceeded in the moft of the forts by large bunches of ripe berries in autumn, which, although very unpalatable to eat, are in ligh eftimation for making that well known cordial liquor called elder wine, particularly the common blackberried elder. The merit of the elder in gardening may be both for ufe and ornament, efpecially in large grounds.

SAMIAN earth, in the materia medica, the name of two fpecies of marl ufed in medicine, viz. i. The white kind, called by the ancients collyrium famitu, being aftringent, and therefore good in diarrhes, dyfenteries, and hæmorrhagies: they alfo ufed it externally in inflammations of all kinds. 2. The brownifh white kind, called aftar famias by Diofcorides; this alfo ftands recommended as an altringent.

SAMIELS, the Arabian name of a hot wind peci
the fea-coaft as far as Siberia. The inhabitants are fo
rude a people that they can hardly pretend to humarity, except in their face and fogure : they have little undertanding, and in many things refemble brutes, for they will eat carrion of every kind. They travel on the fnow on fledges, drawn with an animal like a reindecr, but with the horns of a ftag. Thofe who have feen them affirm, that no people on the earth make fuch fooking figues: insir fature is thort; their fhoulders

Samiels:
H
Samoieda.
and faces are broad, with flat broad nofes, great blubber hanging lips, and faring eyes; their complexion is dark, their hair long and as black as pitch, and they have very little beards; and it is faid that all the Samoid women have black nipples. If they have any religion at all, it is idolatry, though there has been fome attempts of late to convert them. Their huts are made of birch bark fewed together, which is laid upon Itakes fet in the ground, and at the top is a hole to let out the fmoke; the fire is made in the middle, and beth men and women lie naked round them all night.They have little regard to the nearnefs of kin, and take as many wives as they can keep : their only employ. ment is hunting and fifhing.

SAMOLUS, in botany : A genus of the monogynia order, belonging to the pentrandria clafs of plants; and in the natural method ranking under the 2 Ift order, Precia. The corolla is falver-flaped, the ftamina furrounded by fmall fcales at its throat. The capfule is unilocular inferior.

SAMOS (anc. geog.), an ifland at no great difance from the promontory Mycale, on the continent of the Hither Afia, and oppofite to Ephefus; the diftance only feven ftadia (Strabo) ; a free ifland, in compafs 87 miles (Pliny) ; or 100 (Ifidorus) : with a cognominal town (Ptolemy, Horace) ; famous for the worfhip and a temple of Juno, with a noted afylum (Virgil, Strabo, Tacitus) ; and hence their coin exhibited a peacock (Athenæus) : The country of Pythagoras, who, to avoid the oppreffion of tyrants, retired to Italy, the land of freedom. Samos, though not fo happy in producing wine, which Strabo wonders at, all the adjoining iflands yielding a generous fort, yet abounds in all the neceffaries of life. The Vafa Samaia, among earthen ware, were held in high repute. Sannit, the people (Ovid).-The inland is now in the hands of the Turks. It is about 32 miles in length, and 22 in breadth, and extremely fertile. The inhabiants live at their eafe, their taxation by the Turks being moderate. The women are very nalty and ugly, and they never fhift above once a month. 'They are cloathed in the Turkifh manner, except a red coif, and their hair hanging down their backs, with plates of filver or block-tin faftened to the ends. They have abundance of melons, lentils, kidney-beans, and excellent mulkadine grapes. They have white figs four times as big as the common fort, but not fo well talted. Their filk is very fine, and their honey and wax admirable; befides which, their poultry are excellent: they have iron mines, and moft of the foil is of a rulty colour: they have alfo emery fone, and all the mountains are of white marble. The inhabitants are about 12,002 who are almolt all Greeks; and the monks and prielts occupy moft part of the ifland. They have a bilhop who refides at Cora. See Pory. crates.
Onbers
Voyage to
China and the Eaft
Indies.

SAMPAN, is a Chinefe boat without a keel, looking almolt like a trourh; they are made of different di. menfions, but are molly covered. Thefe hoats are as long as floops, but broader, almof like a baking trough ; and have at the end one or more decks of bamboo fticks: the cover or roof is made of bamboo flick, arched over in the fhape of a grater ; and may be raifed or lowered at pleafure : the fides are made of boards, with hitle holes, with hatters inftead of win-
dows : the boards are faftencd on both fides to pof:, which have notches like fteps on the infiles, that the roof may be let down, and $r \in f t$ on them : on bothend; of the deck are commonly two little doors, at laft there is one at the hindmoit end. A fine white fmooth carpet fpread up as far as the boards makes the floor, which in the middle confifts of loofe boards; but this carpet is only made ufe of to fleep on. As thefe boats greatly differ from ours in thape, they are likewife rowed in a different manner : for two rowers, pofting themfelves at the back end of the fampan, work it forwards very readily by the motion of two oars; and can almoft turn the veffel juft as they pleafe : the oars, which are covered with a little hollow quadrangular iron, are laid on iron fwivels, which are faltened in the fides of the fampan : at the iron the oars are pieced, which makes them look a little bent: in common, a rower fits before with a fhort oar; but this he is forced to lay afide when he comes near the city, on account of the great throng of fampans; and this inconvenience has confirmed the Chinefe in their old way of rowing. Intead of pitch, they make ufe of a cement like our putty, which we call clinan, but the Chinefe call it kiang. Some authors fay that this cement is made of lime and a refin exuding from the tree tong yea, and bamboo ockam.

Befides a couple of chairs, they have the following furniture: two oblong tables or boards on which fome Chinefe characters are drawn; a lanthorn for the night-time, and a pot to boil rice in. They have alfo a little cover for their houfehold god, decorated with gilt paper and other ornaments : before him flands a pct filled with alhes, into which the tapers are put before the idol. The candles are nothing elfe than bamboo chips, to the upper end of which faw-duft of fandalwood is ftuck on with gum. Thefe tapers are every where lighted before the idols in the pagodas, and before the doors in the Itreets; and, in large cilits, occafion a fmoke very pernicious to the eyes. Before this idol ftands fome famfo, or Chinefe brandy, water, \&c. We ought to try whether the Chinefe would not like to ufe juniper-wood inttead of fandal-wood; which latter comes from Suratte, and bas almolt the fame fmell with juniper.

SAMSON, one of the judges of Ifrael, memorable for his fupernatural ftrength, his victories over the Philitines, and his tragical end, as related in the book of $\mathfrak{F u}$ uges.

SAMSON's Poff, a fort of pillar erected in a fhip's hold, between the lower deck and the kelfn, under the edge of a hatchway, and fumilhed with fiveral notches that ferve as fleps to mount or defcend, as occafion requires. This poit being firmly driven into its place, not only ferves to fupport the beam and intify the veflel in that place, but alfo to prevent the cargo or materials contained in the hold, from fhifting to the oppofite fide, by the rulling of the fhip in a troalent and heavy fea.

Books of SAMUEL, two canonical broks of the Old Tetament, as being ufually afcribed to the prophet Samuel.

The books of Samuel and the books of Kings are a continued hiftory of the reigns of the kings of Ifrael and Jadah; for which reafon the books of Sarnsil are likewife fyled the firf and ficcnd books of Kin's. Since

Samyda, the ferlt $2+$ chapters contain all that relates to the Sima. Hinory of Simuse, and the latter part of the firlt book and all the fecond include the relation of events that happened after the death of that prophet, it has been fuppofed that Samuel was awnor only of the firt 24 chapters, and that the prophets Gad and Nathan finithed the work. The firf book of Samuel comprehends the tranfactions under the government of Eli and Samuel, and under Saul the firft king; and alfo the acts of David while he lived under Saul ; and is fuppofed to contain the fpace of ror years. The fecond book contains the hiftory of about 40 years, and is wholly fent in relating the tranfactions of.David's reign.

SAMYDA, in botany: A genus of the monogynia order, belonging to the decandria clafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The calyx is quinquepartite and coloured; there is no corolla; the capfule in the infide refembles a berry, is trivalved and unilocular ; the feeds nefting.
Niebuhr's SANA, or SANAA, a large, populous, and handfome Travels by town of Afia, capital of Arabia Felix, is fituated in Heron. Proper Yemen, at the foot of mount Nikkum, on
at the fame time. There is one mariet where oll clothes are taken in exchange for new.

Wood for the carpenter's purpofe is extremely dear through Yemen; and wood for the fire at Sana is no lefs fo. All the hills near the city are bleak and bare; and wood is therefore to be brought hither from the diftance of three days journey; and a camel's burthen commonly colts two crowns. This fcarcity of wood is particularly fupplied by the ufe of a little pit-coal. Peats are burnt here; but they are fo bad, that ftraw mult be intermixed to make them burn.

Fruits are, however, very plenteous at Sana. Here are more than 20 different fpecies of grapes, which, as they do not all ripen at the fame time, continue to afford a delicious refrefhment for feveral months. The Arabs likewife preferve grapes, by hanging them up in their cellars, and eat them almoft through the whele year. The Jews make a little wine, and might make more if the Arabs were not fuch enemies to frong liquors. A Jew convicted of conveying wine into an Arab's houfe is feverely punifhed; nay, the Jews mult even ure great caution in buying and felling it among themfelves. Great quantities of grapes are dried here; and the exportation of raifins from Sana is confiderable. One fort of thefe grapes are without fones, and contains only a foft grain, the prefence of which is not perceptible in eating the raifin.

In the caftle, which ftands on a hill, are two palaces. "I faw (fays Niebuhr) about it fome ruins of old buildings, but, notwithftanding the antiquity of the place, no remarkable infcriptions. There is the mint, and a range of prifons for perfons of different ranks. The reigning Imam refides in the city; but feveral princes of the blood-royal-live in the caftle. The battery is the molt elevated place about thefe buildings; and there I met with what I had no expectation of, a German mortar, with this infeription, Forg Selos Gof. mick, 1513. I faw alfo upon the fame battery feven iron cannons, partly buried in the fand, and partly fet upon broken carriages. Thefe feven fmall camons, with fix others near the gates, which are fired to announce the return of the different feftivals, are all the artillery of the capital of Yemen."

SANADON (Noel Etienne), a Jefuit, was born at Rouen in 1676 , and was a difinguifhed profeffor of humanity at Caen. He there became acquainted with Huet bifhop of Avranches, whofe tafte for literature and poetry was frmilar to his own. Sanadon afterwards taught rhetoric at the univerfity of Paris, and was entrufted with the education of the prince of Conti, after the death of Du Morceau. In 1728 he was made libratian to Louis XIV. an office which he retained to his death. He died on the 2 If September 1733, in the 58 th year of his age.

His works are, 1. Latin Poems, in 12mo, 1715, and reprinted by Barbou, in 8 vo , 1754. His Atyle poffeffes the graces of the Augultan age. His language is pure and nervons; his verfes are harmonious, and his thoughts are delicate and well chofen; but fometimes his imagination flags. His Latin poems confilt of Odes, Elegies, Epigrams, and others, on various fubjects. 2. A tranflation of Horace, with Remarks, in 2 vols 4 to, printed at Paris in 1727 ; but the beft edition of this work was printed at Amfterdam in 1735 , in 8 vols t 2 mo , in which are alfo inferted the
verfions
$\qquad$
$\qquad$
$\qquad$

 which are fill to be feen the ruins of a cafte, which the Arabs fuppofe to have been built by Shem. Near this mountain Alands the caftle; a rivalet runs upon the other fide ; and near it is the Buftan el Metwokkel, a ipacious garden, which was laid cut by Imam Metwokkel, and has been embellifhed with a fine garden by the reigning Innam. The walls of the city, which are built of bricks, exclude this garden, which is inclofed within a wall of its own. The city, properly fo called, is not very extenfive: one may walk round it all in an hour. The city gates are feven. Here are a number of mofques, fome of which have been built by Turkifh pachas. Sana has the appearance of being more populous that it actually is; for the gardens occupy a part of the fpace within the waills. In Sana are only 12 public baths; but many noble palaces, three of the mon fplendid of which have been built by the reigning Imam. The palace of the late Imam El Manzor, with fome others, belong to the royal family, who are very numerous.

The Arabian palaces are built in a fyle of architecture different from ours. The materials are, however, burnt bricks, and fometimes even hewn ftones; but the houfes of the common feople are of bricks which have been dried in the fun. There are no glafs windows, ercept in one palace, near the citadel. The reft of the houfes have, inftead of windows, merely fhutters, which are opened in fair weather, and fhut when it is foul. In the laft cafe, the houfe is lighted by a round wicket, fitted with a piece of Mufcovy glafs; fome of the Arabians ufe fmall panes of fained glafs from Venice

At Sana, and in the other cities of the Eaft, are great fimferas or caravanferas for merchants and travellers. Each different commodity is fold in a feparate market. In the market for bread, none but women are to be feen; and their iittle fhops are portable. The feveral claffes of mechanics work, in the fame manner, in particular quarters in the open freet. Writers go aboct with their defks, and make out brieves, copybooks, and infruct fcholars in the art of writing, all

## SAN

s:aballat, verfions and notes of M. Dacier. Sanadon tranflated $\underbrace{\text { Sanchez. }}$ wh elegance and tafte; but he has not preferved the fublimity of the original in the odes, nor the energy and precifion in the epittles and fatires. In general, his verficn is rather a paraphrafe than a faithful tranflation. Learned men have juftly cenfured him for the liberty which he has taken in making confiderable changes in the order and Atructure of the odes. He has alfo given offence by his uncouth orthography. 3. A Collection of Difoourfes delivered at different times, which affords Atrong proofs of his knowledge of oratory and poetry. 4. A book entitled Prieres at Infrulions Cbretiennes.
SANBALLAT, the chief or governor of the $\mathrm{Cu}-$ thites or Samaritans, was always a great enemy to the Jews. He was a native of Horon, or Horoniam, a city beyond Jordan, in the country of the Moabites. He lived in the time of Nehemiah, who was his great opponent, and from whofe book we learn his hiftory. There is one circumfance related of him which has occafioned fome difpute among the learned, and the ftate of the queftion is as follows: When Alexander the Great came into Phonicia, and fat down before the city of Tyre, Sanballat quitted the interefts of Darius king of Perfia, and went at the head of 8000 men to offer his fervice to Alexander. This prince readily entertained him, and being much folicited by him, gave him leave to erect a temple upon mount Gerizim, where he conftituted his fon-in-law Manaffeh the high-prieft. But this fory carries a flagrant anachronifm: for 120 years before this, that is, in the year of the world 3550, Sanballat was governor of Samaria; wherefore the learned Dr Prideaux (in his Commection of the Hifr tories of the Old and New Teftament) fuppofes two Sanballats, and endeavours to reconcile it to truth and probability, by fhowing it to be a miftake of Jofephus. This author makes Sanballat to flourifh in the time of Darius Codomannus, and to build his temple upon mount Gerizim by licence from Alexander the Great ; whereas it was performed by leave from Darius Nothus, in the 15 th year of his reign. This takes awsy the difficulty arifing from the great age of Sanballat, and brings Lim to be contemporary with Nehemiah, as the Scripture hiftory requires.

SANCHEZ (François), called in Latin Sancius, was of Las Brocas in Spain, and has been dignified by his own countrymen with the pompous titles of le Pere de lu Langue Latine, et le Dogeur de tous les Gans de-lutties. He wrute, 1. An excellent treatife intitled Minerva, or de Caufus Liviruc Latime, which was publithed at Amfterdam in 1714, in 8vo. The authors of the Putirayal Meibocie de la langue Latine have been much indebted to this work. 2. The Art of Speakirg, and the Method of trinflating Authors. 3. Sevcral other learned pieces on grammar. He died in the yoar 1600 , in his 77 th year.
Vol. XVI.

We muft be careful to difinguif him from anoher suithon:... Francois Sanchez, who died at Touloufe in 1632 . This laft was a Portugucle phyfician who fettled at Touloufe, and, though a Chriftian, was born of Jewih parents. He is faid to bave been a man of genius and a philofopher. His works have been collected under the title $0 \frac{1}{2}$ Opera Media. His juncti funt tratiatus quidam pbilofo. pitici non infubiles. They were printed at Touloufe in 1636.

SANCHONIATHO, a Phenician philofopher and hilforian, who is faid to have flourifhed before the Trojan war about the time of Semiramis. Of this mof ancient writer, the only remains extant are fundry fragments of cofmogony, and of the hiftory of the gods and firlt mortals, peferved by Eufebius and Theodoret; both of whom (peak of Sanchoniatho as an accurate and faithful hiftorian; and the former adds, that his work, which was tranflated by Fhilo-Biblius from the Phenician into the Greek language, contains many things relating to the hifory of the Jews which deferve great credit, both becaufe they agree with the Jewifh writers, and becaufe the author received thefe particulars from the annals of Hierombalus, a prief of the god Jao.

Several modern writers, however, of great learning, have called in queftion the very exiftence of Sanchoniatho, and have contended with much plaufibility, that the fragments which Eufebius adopted as genuine upon the authority of Porphyry, were torged by that author, or the pretended tranflator Philo, from enmity to the Chriftians, and that the Pagans might have fomething to flow of equal antiquity with the books of Mofes. Thefe oppofite opinions have produced a controverfy that has filled volumes, and of which our limits would hardly admit of an abftract. We fhall therefore in few words ftate what to us appears to be the truth, and refer fuch of our readers as are defirous of fuller information to the works of the authors (A) mentioned at the bottom of the pare.
The controverfy refpesting $S$ nnchoniatho refolves it. felf into two queftions: i. Was there in reality fuch a writer? 2. Was he of the very remote antiquity which his tranflator claims for him?

That there was really fuch a writer, and that the fragments preferved by Eufebius are indeed parts of his hiftory inter polated perhaps by the tranflator (в), we are compelled to believe by the following reafons. Eufebius, who admitted them into his work as authentic, was one of the mot learned men of his age, and a diligent fearcher into antiquity. His conduct at the Nicene council fhows, that en every fubject he thought for himielf, neither biaffed by authority to the one fide, n"r carried cver by the rage of innovation to the other. He had better means than any modern writer can have of fatisfying himfelf with repee? to the authenticity of a very eatraordinary work, which had then but lately 4 II
been
(A) Bochart, Scaliger, Kofius, Cumbriand, Dodwell, StilingHeet, M.neim's Cudworth, and Warburton.
(в) Of this there are indeed feveral provis. Thilo makes Sanchoniatho feak of $B_{j}$ bhus as the moft anc chat ciry of Fhenicia, which, in all probability, it was not. We rcid in the book of Jaderes of Berith or Berytus, the city where Suchoniatho himflf lived; but not of Byhlus, which was the native city of Philu, and to which $h_{1}$ e is therefore partial. Ife makes him likewie talk of the Gaers at a period long before any of the Grecian fatcs were known or probably peopled.

Sanchonia- been trandated into the Greek language, and made getho. $\underbrace{\sim}$
or at leaft in thofe parts of it which he has preferved,
that could induce a wife and good man to obtrude it upon the public as genuine, had he himfelf fufpected it to be fpurious. Too many of the Chriftian fathers were indeed very credulous, and ready to admit the authenticity of writings without duly weighing the merits of their claim; but then fuch writings were always believed to be favourable to the Chriftian caufe, and inimical to the caufe of Paganifm. That no man of common fenfe could fuppofe the cofmogony of Sanchoniatho favourable to the caufe of revealed religion, a farther proof cannot be requifite than what is furnithed by the following extrast.
"He fuppofeth, or affirms, that the principles of the univerfe was a dark and windy air, or a wind made of dark air, and a turbulent evening chaos; and that thefe things were boundlefs, and for a long time had no bound o: figure. But when this wind fell in love with his own principles, and a mixture was made, that mix. ture was called defire or cupid ( $\pi 0 \theta 0$ os).
" This mixture completed, was the beginning of the (urrosecs) making of all things. But that wind did not know its own production ; and of this, with that wind, was begotten $M o t$, which fome call $M u d$, others the putrefaction of a watery misture. And of this came all the feed of this building, and the generation of the univerfe.
"But there were certain animals, which had no fenfe, out of which were begotten intelligent animals, and were called $Z$ ophefemin, that is, the fpies or overfeers of Hea. ven; and were formed alike in the fhape of an egg. Thus thone out $M o t$, the fun and the moon, the lefs and the greater ftars.
"And the air flining thoroughly with light, by its fiery influence on the fea and earth, winds were begott.n, and clouds and great defluxions of the heavenly waters. And when all thefe things firft were parted, and were feparated from their proper place by the heat of the fun, and then all met again in the air, and dafhed agamit one another, and were fo broken to pieces; whence thunders and lightenings were made : and at the firoke of thefe thunders the forementioned intelligent animals were awakened, and frighted with the found; asd male and female ftirred in the earth and in the fea: This is their generation of animals.
" After thefe things our author (Sanchoniatho) goes on faying : Thefe things are written in the Cofmogony of Taautus, and in his memoirs; and out of the conjectures, and furer natural figns which his mind faw, and found out, and wherewith he hath enlightened us.
"Afterwards declaring the names of the winds, norib and fouth and the reit, he makes this epilogue. 'Lut thefe firt men confecrated the plants thooting out of the earth, and judged them gods, and worflipped them; upon whom they themfelves lived, and all their pofterity and all before them : to thefe they made their meat and drink offerings.' Then he concludes: 'thefe were the devices of worlhip agreeing uith the weaknefs and want of boldnefs in their minds."

Let us fuppofe Eufebius to have been as weak and credulous as the darkeit monk in the darkelt age of Europe, a fuppofition which no man will make who knows any thing of the writings of that eminent bifto-
rian; what could he fee in this fenfelefs jargon, which Sanchoniaeven a dreaming monk would think of employing in fuptho. port of Chriftianity? Eufebias calls it, and calls it truly, direct atheifm; but could he imagine that an ancient fyftem of atheifm would contribute fo much to make the Pagans of his age admit as divine revelations the books of the Old and New Teftaments, that he fhould be induced to adopt, without examination, an impudent forgery not 200 years old as genuine remains of the molt remote antiquity ?

If this Phenician cofmogony be a fabrication of Porphyry, or of the pretended tranflator, it muft furely have been fabricated for fome purpofe; but it is impoffible for us to conceive what purpofe either of thefe writers could have intended to ferve by forging a fyttem fo extravagantly abfurd. Porphyry, though an enemy to the Chriftians, was not an atheif, and would never have thought of making an atheilt of him whom lie meant to obtrude upon the world as the rival of Mofes. His own principles were thofe of the Alexandrian Platonilts; and bad he been the forger of the works which bear the name of Sanchoniatho, inftead of the incomprehenfible jargon about dark wind, evening chaos, Mot, the overfeers of beaven in the fbape of an egg, and animation proceeding from the found af thunder, we thould doubtlefs. have been amufed with refined fpeculations concerning the operations of the Demiurgus and the other perfons in the Platonic Triad. See Platonism and PorphyRy.

Father Simon of the oratory imagines * that the Bib.Crit. purpofe for which the hiftory of Sanchoniatho was vol.i. p. forged, was to fupport Paganifm, by taking from it its $\mathbf{I} \downarrow \mathbf{4}$. mythology and allegories, which were perpetually objected to it by the Chriftian writers; but this learned man totally miftakes the matter. The primitive Chriftians were too much attached to allegories themfelves to reft their objections to Paganifm on fuch a foundation: what they objected to that fyftem was the immoral ftories told of the gods. To this the Pagan priefts and philofophers replied, that thefe ftories were only mythologic allegories, which veiled all the great truths of Theology, ELhics, and Phyfics. The Chriftians faid, this could not be; for that the fories of the gods had a fubftantial foundation in fact, thefe gods being only dead men deified, who, in life, had like paffions and: infirmities with other mortals. This then was the objection which the forger of the works of Sanchoniatho had to remove, if he really forged them in fupport of Paganifm ; but, inftead of doing fo, he gives the genealogy and hiftory of all the greater gods, and fhows, that they were men deified after death for the exploits, fome of them grofsly immoral, which they had performed in this world. We have elfewhere (Polytheism, $\mathrm{n}^{\circ} 17$.) given his account of the deification of Cbryfor, and Ouranos, and $G_{e}$, and Hypfflos, and $M H_{u t h}$; but our readers may not perhaps be ill-pleafed to accompany him through the hitory of Ouranos and Cronus, two of his greateit gods; whence it will appear how little his writings are calculated to fupport the tottering caufe of Paganifm againft the objections which were then urged to it by the Chriftian apologits.
"Ouranos (fays he), taking the kingdom of his father, married Ge his fifter, and by her had four fons; Ilas, who is called Cromus; Betylus ; Dagon, who is Situri, or the god of corn; and Allas. But by other wives

Ouranos

## $S \wedge N$ <br> [643] <br> S A N

Sanchonia- Ouranos had much iffus, wherefore Ge being grieved at tho. it and jealous, reproached Ouranos, fo as they parted from each other. But Ouranos, though he parted from her, yet by force invading her, and lying with her when he lifted, went away again; and he alfo attempted to kill the children he had by her. Ge alfo often defended or avenged herfelf, gathering auxiliary powers unto her. But when Cronus came to man's age, ufing Hermes Trilmegiltus as his counfellor and alliftant (for he was his fecretary), he oppofed his father Ouranos, avenging his mother. But Cronus had children, Perfephone and Athena; the former died a virgin, but by the counfel of the latter Athean, and of Hermes, Cronus made of iron a fcymetar and a fpear. Then Her. mes, Speaking to the aliftants of Cronus with enchanting words, wrought in them a keen defire to fight againit Ouranos in the behalf of Ge ; and thus Cronus warring againlt Ouranos, drove him out of his kingdom, and fucceeded in the imperial power or office. In the fight was taken a well-beloved concubine of Ouranos big with child. Cronus gave her in marriage to Dagon, and fine brought forth at his houfe what the had in her womb by Ouranos, and called him Demaroon. Afier thefe things Cronus builds a wall round about his houfe, and founds Byllus the firft city in Phenicia. Afterwards Cronus, fufpecting his own brother Arlas, with the advice of Hermes, throwing him into a deep hole of the earih, there buried him, and having a fon called Sadid, he difpatched him with his own fword, having a fulpicion of him, and deprived his own fon of life with his own hand. He alfo cut off the head of his own daughter, fo that all the gods were amazed at the mind of Cronus. But in procefs of time, Ouranos being in flight, or banifhment, fends his daughter AAlarte, with two other fifters Rhea and Dione, to cut off Cronas by deceit, whom Cronus taking, made wives of thele filters. Ouranos, underitanding this, fent Eimarmene and Hore, Fate and Beauty, with other auxili. aries, to war againft him: but Cronus, having gained the affections of thefe alfo, kept them with himfelf. Moreover, the god Ouranos devifed Batulia, contriving ftones that moved as having life. But Cronus begat on Altarte feven daughters called Titanides or Artemides; and he begat on Rhea feven fons, the youngelt of whom, as foon a; he was born, was confecrated a god. Alfo hy Dione he had daughters, and by Aftarte moreover two fons, Pothos and Eros, i. e. Cupid and Love. But Dagon, after he had found out bread, corn, and the plough, was called Zeus Arotrius. To Sydic, or the juft, one of the Titanides bare Afclcpius. Cronus had allo in Peraa three fons, I. Cronus his father's namefake. 2. Zeus Belus. 3. Apollo."

Is itconceivable, that a writer fo acute as Porphyry, or indeed that any man of common fenfe, either in his age or in that of Philo, would forge a book filled with luch fories as thefe, in order to remove the Chrifian objections to the immoral characters of the Pagan divinities: The very fuppofition is impolible to be made. Nor let any one imagine that Sanchoniatho is here writing allegorically, and by his tales of Ouranos, and Ge, and Cronus, is only perfonifying the beaven, the earth, and time. On the contrary, he affures us, that Ouranos, or Epigeus, or Autochthon (for he gives him all thefe names), was the fon of one Eliaun or Hypfiftos, who dwelt about Byblus, and that from him the ele-
ment which is over us was called baven, on account sanchoniaof its excellent beauty, as the earth was named $G_{c}$ after his fifter and wile. And his tranllator is ve:y angry* with the Neotoric Greeks, as he calls them, be. caufe that, "by a great deal of force and ftraining, they Apud Fr:all laboured to turn all the fories of the gods into allego- $\quad 2$ vang. ries and phyfical difcourfes." This proves unanfwer- $1: b$, I. ably, that the author of this book, whoever he was, did $6^{\circ}$ not mean to veil the great truths of religicn under the cloak of mythologic allegories; and therefore, if it was forged by Porphyry in fupport of Paganifm, the forger fo far miftook the fate of the queition between him and his adverfaries, that he contrived a book, which, if admitted to be ancient, totally overthrew his own catie.

The next thing to be enquired into with refpect to Sanchoniatho is his antiquity. Did he really live ani write at fo early a period as Porphyry and 210 , pretend? We think he did not; and what contibutcs not a little to confirm us in our opinion, is chat ratrk of national vanity and partiality, common to after-timic: in making the facred myfteries of his own cuntry ong: nal, and conveyed from Phenicia into Deypr. 'lois,
 not the forger of the work; for he well knew that the mylteries had their origin in Egypt (fee Mysteries), and would not have fallen into fuch a blunder. He is guilty, indeed, of a very great anachronifm, when be makes Sanchoniatho contemporary with Semiramis, and yet pretends that what he writes of the Jews is compiled from the records of Hierombalus the prieft of the god Jao; for Bochart has made it appear in the highett degree probable $t$, that Hierombalus or Feromb-baal is the $\dagger$ Gens. Jerub-baal or Gideon of fcripture.

Detween the reign of Semiramis and the Trojan war bo k2. lik. a period elapfed of near 800 years, whereas Gideon flou. 2. cap. 17, rithed not above feventy years before the deftruction of Troy. But fuppofing Sanchoniatho to have really confulted the records of Gideon, it by no means follows that he flourifhed at the fame period with that judge of Ifrael. He fpeaks of the building of Tyre as an ancient thing, while our beft chronologers + place it in the time of Gideon. Indeed, were we certain that any writings had been, left by that holy man, we fhould be obliged to conclude, that a large tract of time had intervened between the death of their author and their falling into the hands of Sanchoniatho; for, furely, they could not, in a hort period, have been fo completely corrupted as to give any countenance to his impious abfurdities. His atheiftic cofmogony he does not indeed pretend to have got from the annals of the pricit of Jao, but from records which were depofited in his own town of Berytus by Thoth a Phenician philofopher, who was afterwards made king of Egypt. But furely the annals of Gideon, if written by himfelf, and preferved pure to the days of Sanchoniatho, mult have contained fo many truths of the Mofaic religion, as muft have prevented any man of fenfe from adopting fo impofible a theory as Thoth's, though fanctioned by the greatelt name of profane antiquity. Stillingfleet indeed thinks it moft probable that Sanchoniatho became acquainted with the moft remarkable paffages of the life of Jerub-baal from annals written by a Phenician pen. He obferves, that immediately after the death of Gideon, the Ifraelites with their ufual pronenefs to idolatry, worfhipped Baal berith, or the idol of Berytus,
$4 \mathrm{M}=$

Fon : wit. the town in whin Sanchoniatho lived; an from this circumitance he conclades that there mut have been fuch an intercourfe between the Hebrews and Berytians, that in procefs of time the latter peopla might affume to themiclves the Jerub-baal of the former, and hand down his actions to polterity as thofe of a prieft inflead of a great commander. All this may be true; but if fo, it amounts to a demonfration that the antiquity of Snchoniatho is not fo high by many ages as that which is claimed for him by Philo and Porphyry, though he may fill be more ancient, as we think Vof
*De Hift. fius has proved him to be*, than any cther profane Srec. lib. i. hiltorian whofe writings have come down to us either car. I. entire or in fragments.

But granting the authenticity of Sarchoniatho's hiftory, what, it may be akked, is the value of his fragments, that we hould be at any trouble to afcertain whether they be genuine remains of high antiquity, or the forgeries of a modern impoftor? We anfwer with the illultrious Stillingfleet, that though thofe fragments contain fuch abfurdities as it would be a difgrace to reafon to fuppofe credible; though the whole cofmogony is the groffert fink of atheifm; and though many perfons make a figure in the hiltory, whofe very exiftence may well be doubted; yet we, who have in our hands the light of divine revelation, may in this dungeon difcover many excellent relics of ancient tradition, which throw no feeble light upon many paffages of holy fcripture, as they give us the origin and progrefs of thatidolatry which was fo long the opprobrium of human nature. They furnifh too a complete confutation of the extravagant chronology of the Chaldeans and Egyptians, and fhew, if they be genuine, that the world is indeed not older than it is faid to be by Mofes. We fhall conconclude the article by earneftly recommending to our readers an attentive perufal of Cumberland's Sanchoniaтно.

SANCROFT (William), archbifhop of Canterbury, was born at Frefingfield in Suffolk in 1616; and admitted into Emanuel college, Cambridge, in 1633. In 1642 he was elected a fellow; and, for refufing to take the covenant, was ejected from his fellowhip. In 1660 he was chofen one of the univerfity preachers; and in 1663 was nominated to the deanry of York. In 1664 he was inftalled dean of St Paul's. In this ftation he fet himfelf with unwearied diligence to repair the cathedral, till the fire of London in 1666 employed his thoughts on the more noble undertaking of rebuilding it, toward which he gave 1400 . He alfo rebuilt the deanry, and improved the revenue of it. In 1668 he was admitted archdeacon of Canterbury, on the king's prefentation. In 1677 , being now prolocutor of the convocation, he was unexpectedly advanced to the archbithopric of Canterbury. In 1678 he was committed to the tower, with fix other bithops, for prefenting a petition to the king againft reading the declaration of indulgence. Upon king James Il.'s withdrawing himfelf, he concurred with the lords in a declaration to the prince of Orange for a free parliament, and due indulgence to the Proteftant difenters. But when that prince - and his confort were declared king and queen, his grace refufing to take the oaths to their majenies, he was fufpended and deprived. He lived in a very private manner, till he died in 1693 . His learning, integrity, and piety, made him an exalted ornament to the church.
 licics, taken from Machiavel, Borgin, and other chcica authors; Familia: Letters to Mr North, an 8vo pamphlet; and three of his fermons were printed t:gether tion Sand. after his de.ith.

SANCTIFICATION, the at of fanctifying, or rendering a thing holy. The reformed divines define fansification to he an all of God's grace, by which a perfon's delires and affections are aliensted from the worlu; and by which he is made to die to lim, and to live to righecumess; or, in other words, to feel an abhorrence of all sice, and a love of icligion and virtue.

SANCTION, the authority given to a judicial act, by which it becomes legal and authentic.

SANCIORIUS, a roolt ingenious and learned phyfician, was a profeffor in the univerfity of Padua, in the beginning of the 17 th century. He contrived a kind of ftatical chair, by means of which, after eftimating the aliments received, and the fenfible difcharges, he was enabled to determine with great exactnefs the quantity of infenfible perfpiration, as well as what kind of victuals and drink increafed or diminifhed it. On thefe experiments he erected a curious fyltem, which he publifhed under the title of $D e$ medicina flatica; of which we have an Englim trandlation by Dr Quincy. Sanctorius publifhed leveral other treatifes, which fhewed great abilities and learning.

SANCTUARY, among the Jews, alfo called Sanctum fanctorum, or Holy of bolies, was the holieft and moft retired part of the temple of Jerufalem, in which the ark of the covenant was preferved, and into which none but the high-prieft was allowed to enter, and that only once a-year, to intercede for the people.

Some diftinguifh the fanctuary from the fanctum fanctorum, and maintain that the whole temple was called the fanduary.

To try and examine any thing by the weight of the fanctuary, is to examine it by a juft and equal foale; becaufe, among the Jews, it was the cuitom of the priefts to keep ftone weights, to ferve as ftandards for regulating all weights by, though thefe were not at all different from the royal or profane weights.

Sanctuary, in the Romilh church, is alfo ufed for that part of the church in which the altar is placed, encompaffed with a rail or balluftrade.

Sanctuary, in ancient cuftoms, the fame with Asylum.

SAND, in natural hiftory, a genus of foffils, the characters of which are, that they are found in minute concretions; forming together a kind of powder, the genuine particles of which are all of a tendency to one determinate fhape, and appear regular though more or lefs complete concretions; not to be diffolved or difunited by water, or formed into a coherent mafs by means of it, but retaining their figure in it; tran\{parent, vitrifiable by extreme heat, and not diffoluble in nor effervefcing with acids. Sands are fubject to be varioully blended, both with homogene and heterogene fubftances, as that of talks, \&c. and hence, as well as from their various colours, are fubdivided into, I. White fands, whether pure or mixed with other arenaceous or heterogeneous particles; of all which there are feveral fpecies, differing no lefs in the finenefs of their particles than in the different degrees of colour, from a bright and fhining

Sud. white, to a brownifh, yellowif, greenith, \&c. white. 2. The red and reddifh fands, both pure and impure. 3. The yelluw fands, whether pure or mixed, are alio very numerous. 4. The brown fands, diftinguifhed in the fame mamer. 5. The black fands, whereof there are only two fpecies, viz. a fine fhining greyifh-black fand, and another of a fine fhining reddifh. black colour. 6. The green kind; of which there is only one known fpecies, viz. a coarfe variegated dulky green fand, commun in Virgmia.

Sand is of great ufe in the glafs-manufacture ; a white kind of fand being employed for making of the white glafs, and a coare greenith-looking fand for the green glafs.

In agriculture, it feems to be the office of fand to make unctuous earths fertile, and fit to fupport vegetables, \&c. For earth alone, we find, is liable to coalefce, and gather into a hard coherent mafs, as appears in clay; and being thus embodied, and as it were glued together, is no way difpofed to nourifh vegetables. But if fuch earth be mixed with fand, its pores are thereby kept open, and the earth itfelf loofe, fo as thus to give room for the juices to afcend, and for plants to be nouribed thereby. A vegetable planted only in fand, or in a fat glebe, or in earth, receives little growth or increafe; but a mixture of both renders the mafs fertile. In effect, earth is in fome meafure made organical by means of fand; pores and fpaces, fomething analogous to velfels, being thereby maintained, by which the juices may be conveyed, prepared, digelted, circulated, and at length difcharged. Common fand is, therefore, a very good addition, by way of manure, to all forts of claylands; it warms them, and makes them more open and loofe.

SAND-Bags, in the art of war. See Sacks of Earth.
$S_{A N D}-E_{e} l_{\text {, in }}$ in ichthyology. See Ammodites.
SAND-Floods, a name given to the flowing of fand fo common in the deferts of Arabia. Mr Bruce gives the following accurate defcription of fome that he faw in travelling through that long and dreary defert. "At one o'clock (fays he) we alighted among fome acacia-trees at Waadi el Halboub, having gone twenty-one miles. We were here at once furprifed and terrified by a fight furely one of the molt magnificent in the world. In that valt expanfe of defert from welt and to north-weft of us, we faw a number of prodigious pillars of fand at different diftances, at times moving with great celerity, at others ftalking on with a majeftic flownefs: at intervals we thought they were coming in a few minutes to overwhelm us; and fmall quantities of fand did actually more than once reach us. Again they would. retreat fo as to be almolt out of fight, their tops reaching to the very clouds. There the tops often feparated from the bodies; and thefe, once disjoined, difperfed in the air, and did not appear more. Sometimes they were broken near the middle, as if fruck with a large cannon fhot. About noon they began to advance with confiderable fwiftnefs upon us, the wind being very ftrong at north. Eleven of them ranged along fide of us about the diftance of three miles. The greateft diameter of the largeft appeared to me at that diftance as if it would meafure ten feet. They retired from us with a wind at fouth-ealt, leaving an impreffion upon my mind to which I can give no name, though furely one ingredient ins it was fear, with a confiderable deal
of wonder and afonithment. It was in vain to think of flying, the fiftef horfe or faften failing hip could be of no ufe to carry us out of this dunger ; and the full perfuafion of this rivetted me as if to the ffot where I food, and let the canels gain on me fo much in niy ftate of lamenefs, that it was with fome difficulty $I$ could overtake them.
"The fame appearance of moving pillars of fand refented themfelves to us this day in form and difpolition like thofe we had feen at Waddi Halboub, only they feemed to be more in number and lefs in fize. They came feveral times in a direction clofe upon us, that is, I believe, within lefs than two miles. They began immediately after fun-rife, like a thick wood, and almoft darkened the fun: his rays fhining through them fir near an hour, gave them an appearance of pillars of fire. Our people now became defperate: the Greeks fhrieked out, and faid it was the day of judgment. Ifmael pronounced it to be hell, and the Tucorories, that the world was on fire. I afked Idris if $\epsilon$ ver he had before feen fuch a fight? He faid he had often feen them as terrible, though never worfe; but what he feared moft was that extreme rednefs in the air, which was a fure prefage of the coming of the fimoon." See Simoon.

The flowing of fand, though far from being fo iremendous and hurtful as in Arabia, is of very bad confe. quences in Britain, as many valuable pieces of land have thus been entirely loft; of which we give the followincr inftances from Mr Pennant, together with a probable nieans of preventing them in future. "I have more thar once (fays he), on the eaftern coalts of Scotland, obferved the calamitous flate of feveral extenfive tracts, formerly in a molt flourifing condition, at prefent covered with fands, unfable as thofe of the deferts of Arabia. The parifh of Furvie, in the county of Aberdeen, is now reduced to two farms, and above L. 500 a-year loft to the Errol family, as appears by the oath of the factor in 1600, made before the court of feflion to afcertain the minifter's falary. Not a veltige is to be feen of any buildings, unlefs a fragment of the church.
" The eftate of Coubin, near Forres, is another me. lancholy inftance. This tract was once worth L. 300 a-year, at this time overwhelmed with fand. This ftrange inundation was ftill in motion in 1769 , chiefly when a ltrong wind prevailed. Its motion is fo rapid, that I have been affured, that an apple tree has been fo covered with it in one feafon, that only the very fummit appeared. This ditrefs was brought on about ninety years ago, and was occafioned by the cutting down fome trees, and pulling up the bent or ftar which grew on ti:e fand-hills; which at laft gave rife to the act of 15 George II. c. 33. to prohibit the deftruction of this ufeful plant.
" I beg leave to fuggeft to the public a polible means of putting a flop to thede deftructive ravages. Providence hath kindly formed this plant to grow only in pure fand. Mankind was left to make, in after-times, an application of it fuitable to their wants. The fand-hills, on a portion of the Flinthire fhores, in the parifh of Llanafa, are covered with it naturally, and kept firm in their place. The Dutch perhaps owe the exiftence of part at leaft of their country to the fowing of it on the mobile folum, their fand-banks.
"My humane and amiable friend, the late Benjamis Stillinglest

Stilling fac , Efq; reccommended the fowing of this plant on the fandy wilds of Norfolk, that its matted ronts might prevent the deluges of fand which that country experiences. It has been already remarked, that whereioever this plant grows the falutary effeets are fen obferved to follow. A fingle plant will fir the fand, and gather it into a hillock; thefe hillocks, by the increafe of vegetation, are formed into larger, till by degrees a barrier is made often againt the encroachments of the fea; and might as often prove preventative of the calamity in queltion. I cannot, therefore, but recommend the trial to the inhabitants of many parts of North Britain. The plant grows in mott places near the fea, and is known to the Highlanders by the name of murab; to the Englifh by that of lent ftar, mat-grafs, or marran. Linnæus calls it arundo arenaria. The Dutch call it belm. This plant hath ftiff and fharp-pointed leaves, growing like a rufh, a foor and a half long: the roots both creep and penetrate deeply into their fandy beds: the ftalk bears an ear five or fix inches long, not unlike rye; the feeds are fmall, brown, and roundifh. By good fortune, as old Gerard obferves, no cattle will eat or touch this vegetable, allotted for other purpofes, fubfervient to the ufe of mankind."

Sand-Piper, in ornithology. See Tringa.
Sind-Stome, a genus of fones belonging to the order of faxa; and including all thofe which conifft of fuch minute particles that they cannot eafily be difcerned by the eye. The fpecies enumerated by Cronitedt are,
I. Thofe cemented by a clay, of which there are two varieties; one with porcelain clay, the other with common clay. The former is met with in Sweden under the fratum of coal in a coal-mine in the province of Shone, and is very hard and refractory in the fire, the other is found in the ifland of Gothland.
2. With lime, refembling mortar made with coarfe fand. There are two varieties, one confilting of tranfparent grey-coloured grains of quartz and white limeitone, the other of a loofe texture, hardening in the air; but having the particles too fine to be vifible. The former of thefe is found in Sweden, the latter in France and Livonia.
3. Sand-ltone having its particles bound together by an unknown cement. Of this there are four varieties; 1. Loofe; 2. Somewhat hard; 3. Compact; 4. Very hard; all of them found in different parts of Sweden.
4. Cemented by rult of iron, found in the form of loofe ftones in feveral places.

Cronitedt informs us that the greatelt part of fandftones confift of quartz and mica, being thofe fubftances which moft readily admit of granulation without being reduced to powder. Some years ago the Baron de Dietrich fhewed a fingular variety of fand-tone at Paris. It confifts of fmall grains of hard quartz which ftrike fire with fteel united with fome micaceous particles. It is flexible and elatic, the flexibility depending on the micaceous part and foftnefs of the gluten with which the particles are cemented. This elattic fone is faid to have been found at Brazil, and brought to Germany by his excellency the marquis de Lavradio. There are allo two tables of white marble, kept in the palace of Borghefe at Rome, which have the fame property. But the fparry particles of their fubftance, though tranfparent, are rather foft, and may be eafily feparated
by the nail. They effervefce with aquafortis, and there is alfo a fmall mixture of minute particles of talk cr mica.

Sand-fones are of great ufe in buildings which are required to refilt air, water, and fire. Some of them are foft in the quarry, but become hard when expofed to the air. The loofe ones are malt ufeful, but the folid and hard ones crack in tise fire, and take a polith when ufed as grindfones. Stones of this kind ought therefore to be nicely examined before they are employed for the ufual purpofes. Our author obferves that the working mafins, or fone-cutters, ought to wear a piece of frize or baize before their mouths, to preferve themfelves from a confumption which their bufinefs is otherwife apt to bring on. Limeftone, however, is not obferved to have this effect.

To the lift of fand-ftones Fabroni adds grittone, of greater or lefs hardnefs; moftly of a grey, and fometimes of a yellowifh colour, compofed of a tiliceous and micaceous fand, but rarely of a fparry kind, with greater or leffer particles clofely connected with an argillaceous cement. It ftrikes fire with fteel, vitrifies in a ftrong fire, and is generally indiffoluble in acids. It is ufed for mill-fones, whet-ftones, and fometimes for filtering ftones, as well as for building.

SANDAL, in antiquity, a rich kind of flipper worn on the feet by the Greek and Roman ladies, made of gold, filk, or other precious ftuff; confilting of a fole, with an hollow at one extreme to embrace the ancle, but leaving the upper part of the foot bare.

Sandal, is alfo ufed for a hoe or flipper worn by the pope arid other Romifh prelates when they officiate. It is alfo the name of a fort of flipper worn by feveral congregations of reformed monks. This laft confilts of no more than a mere leathern fole, faftened with latches or buckles, all the relt of the foot being left bare. The capuchins wear fandals; the recollects, clogs; the former are of leather, and the latter of wood.

## Sandal.Wood. See Saunders.

SANDARACH, in natural hitory, a very beautiful native folfil, though too often confounded with the common factitious red arfenic, and with the red matter formed by melting the common yellow orpiment.

It is a pure fubftance, of a very even and regular ftructure, is throughout of that colour which dyers term an orange fcarlet, and is confiderably tranfparent even in the thickeft pieces. But though, with refpect to colour, it has the advantage of cinnabar while in the mafs, it is vafly inferior to it when both are reduced to powder. It is moderately hard, and remarkably heavy; and, when expofed to a moderate heat, melts and flows like oil: if fet on fire, it burns very brikkly.

It is found in Saxony and Bohemia, in the copper and filver mines; and is fold to the painters, who find it a very fine and valuable red: but its virtues or qualities in medicine are no more afcertained at this time than thofe of the yellow orpiment.

Gum.Sandarach, is a dry and hard refin, ufually met with in loofe granules, of the bignefs of a pea, a horfe-bean, or larger; of a pale whitiih yellow colour, tranfparent, and of a refinous fmell, brittle, very inflammable, of an acrid and aromatic tafte, and diffufing a very pleafant fmell whem buning. It is produced from a fuccie;
sundema- a fpecies of the juniper; (fee Juniperus). It flows on. nians. ly from thefe trees in hot countries: but the natives promote its difcharge by making incifions in the bark.

Sandarach is elteemed good in diarrbcas and in hæ. morrhagies.

The varnifh-makers make a kind of varnifh of it, by d.folving it in oil of turpentine or linfeed, or in fisit of wine.

## Pounded Sandarach. See Pounce.

SANDEMANIANS, in ecclefiaftical hiftory, a modern feet that originated in Scotland about the year 1728 ; where it is at this time diftinguifbed by the name of Glaffres, after its founder Mr John Glafs, who was a minifter of the eftablifhed church in that kingdom; but being charged with a defign of fubverting the national covenant, and fapping the foundation of all national eltablifhments by the kirk judicatory, was expelled by the fynod from the church of Scotland. His fentiments are fully explained in a tract publifhed at that time, intitled, "The Teftimony of the King of Martyrs," and preferved in the firt volume of his works. In confequence of Mr Glafs's expulion, his adherents formed themfelves into churches, conformable in their inftitution and difcipline to what they apprehended to be the plan of the firlt churches recorded in the New Teftament. Soon after the year 1755, Mr Robert Sandeman, an elder in one of thefe churches in Scotland, publifhed a feries of letters addreffed to Mr Hervey, occafoned by his Theron and Afpafia; in which he endeavours to fhow, that his notion of faith is contradictory to the feripture account of it, and could only ferve to lead men, profeffedly holding the ductrines commonly called Caloinific, to cftablith their own righteoufnefs upon their frames, inward feelings, and various acts of faith. In thefe letters Mr Sandeman attempts to prove, that faith is neither more nor lefs than a limple affent to the divine teftimony concerning Jefus Chrift, recorded in the New Teftament; and he maintains, that the word faith, or belief, is conftantly ufed by the apofles to fignify what is denoted by it in common difcourfe, viz. a periualion of the troth of any propofition, and that there is no differcnce between believing any common teltimony, and believing the apoltolic teltimony, except thut which refilts from the nature of the teltimony itfelf. This led the way to a contioverif, among thofe who vere called Ca'vini,ts, cuncerning the nature of juititying fai h ; and thole who adopted Mr Sandeman's notion oi $1 t$, and who took the denomination of Sandewhime, fromed themfelves int.) church order, in frict whowinip wih the churches in Scotland, but holding 100 kind of commumon with other churches. The chef oimins and practices in which this fect differs fom othe: Clutian-, are, their weekly adminittration of the Lord's supper ; their love-fealts, of which every member is not only alloried but required to partake, and which conitit of ticir dining together at each other's locules in the intervat between the morning and afternoen fervice; their kifs of chanty ufed on this occafion, at the admimon of a new member, and at other times, when they deem it to be neceifary or proper; heir watly coliection bef.re the Lord's Supper, fur the fipp re of the poor, and defraying other expences; mutual cxhortation ; abltinence from blood and things Hangled; wathing each other's fett, the precept concuming which, as well as other precepts, they under-
ftand literally; community of goods, fo far as that every one is to confider all that he has in his pofleffion and power as liable to the calls of the poor and church; and the unlawfulnefs of laying up treafures on earth, by fetting them apart for any diftant, future, and uncertain ufe. They allow of public and private diverfions, fo far as they are not connected with circumftances really finful; but apprehending a lot to be facred, difapprove of playing at cards, dice, \&c. They maintain a plurality of elders, paftors, or bifhops, in each church; and the neceffity of the prefence of two elders in every act of difcipline, and at the adminiftration of the Lord's Supper. In the choice of thefe el. ders, want of learning, and engagements in trade, \&c. are no fufficient objection ; but fecond marriages dif. qualify for the office; and they are ordained by prayer and fafting, impofition of hands, and giving the right hand of fellowfhip. In their difcipline they are ftrift and fevere; and think themfelves obliged to feparate from the communion and worthip of all fach religious focieties as appear to them not to profefs the fimple truth for their only ground of hope, and who do not walk in obedience to it. We fhall only add, that in every church tranfaction, they efteem unanimity to be abfolutely neceffary. From this abftract of the account which they have publithed of their tenets and praclices, it does not feem to be probable that their number fhould be very confiderable.

SANDERS. See Saunders.
SANDIVER, a whitifh falt, continually calt up from the metal, as it is called, whereof glafs is made; and, fwimming on its furface, is flimmed off.

Sandiver is alfo plentifully throw'n out in the eruptions of volcanoes; fome is of a fine white, and others tinged bluifh or yellowifh.

Sandiver is faid to be detergent, and good for foulneffes of the fkin . It is alfo ufed by guilders of iron.

SANDIX, a kind of minium, or red-lead, made of cerufe, but much inferior to the true minium.

SANDOMIR, a city, the capital of a palatinate of the fame name, in Little Poland, on the Viftula. The Swedes blew up the caftle in 1656 ; and here in 1659 , was a dreadful battle between the Tartars and Ruffians. It is 84 miles fouth-ealt of Cracow. Lat. 49. 26. Long. 20. 10.

SANDORICUM, in botany: A genus of the monogynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the z3d order, Tribillate. The calyx is quinquedentate; the petals five, and linear-fhaped: the nectarium has ton denta, on which the antherx grow; the fruit is a drupa, and five in number, each of which has one feed. There is only one fpecies, qiz. the indicum, a native of Africa and the Eaft Indies.

SANDPU, or SANPOo, the vulgar name of one of the molt mighty rivers in the world. The name it generall: goes by, and by which it is beft known, is that of Eirrrampooter. Of this mon majeftic body of waters we
 Indian Atutiquities. "A An object equally novel and grand now claims our attention; fo novel, as not $t$ : have been known to Europeans in the real extent of it; magnificence before the year 1765 , and fo awful!y grand, that the aftonithed georrapher, thinhing the language of Ir.fe inadequate to convey his conceptica,
mipu, has had recourfe to the more expreffive and energetic $\underbrace{\text { alwich. }}$ nguage of poetry: but

> Dares fretch ber wing Mure herfelf Of rufhing waters; to whofe dread expous mafs Continuous depth, and wond'reus length of courfe, Our foods are rills.
"This ftupendous object is the Burrampooter, a word which in Shanfcrit fignifies the fon of Brabma; for no meaner origin could be affigned to fo wonderful a progeny. This fupreme monarch of Indian rivers derives its fource from the oppofite fide of the fame mountain from which the Ganges fprings, and taking a bold fweep towards the eaft, - in a line directy oppofite to the courfe of that river, wafhes the vaft country of Tibet, where, by way of diftinction, it is denominated Sanpoo, or the river. Winding with a rapid current through Tibet, and, for many a league, amidat dreary dieferts and regions remote from the habitations of men, it waters the borders of the territory of Laffa, the refidence of the grand Lama; and then deviating with a cometary irregularity, from an eaft to a fouth-ealt courfe, the mighty wanderer approaches within 200 miles of the weftern fronties of the valt empire of China. From this point its more direct path to the ocean lay through the gulph rff Siam; but with a defultory courfe peculiar to itfelf, it fuddenly turns to the weft through Affam, and enters Bengal on the north-ealt quarter. Circling round the weftern point of the Garrow mountains, the Burrampooter now takes a fouthern direction; and for 60 miles before it meets the Ganges, its fifter in point of origin, but not its rival in point of magnitude, glides majeftically along in a fream which is regularly from four to five miles wide, and but for its frefhnefs, Mr Rennel fays, might pafs for an arm of the fea. About 40 miles from the ocean thefe mighty rivers unite their ftreams; but that gentleman is of opinion that their junction was formerly higher up, and that the accumulation of two fuch vaft bodies of water, fooped out the amazing bed of the Megna lake. Their prefent conflux is below Luckiporr; and by that confluence a body of frefh running water is produced, hardly equalled, and not exceeded, either in the old or the new hemifphere. So fupendous is that body of water, that it has formed a gulph of fuch extent as to contain inlands that rival the Ine of Wight in fize and fertility; and with fuch refiftlefs violence does it rufh into the ocean, that in the rainy feafon the fea itfelf, or at leaft its furface, is perfectly freh for many leagues out."

SANDWICH, a town of Kent, one of the cinque ports, and which has the title of an earldom. It confits of about 1500 houfes, moft of them old, and built with wood, though there are a few new ones built with brick and flints. It has three long narrow ftreets, paved, and thirty crofs-fteets or alleys, with about booo inhabitants, but no particular manufactory. The town is walled round, and alfo fortified with ditches and ramparts; but the walls are much decayed, on account of the harbour being fo choaked up with fand that a thip of 100 tons burthen cannot get in. E. Long. I. 20. N. Lat. 5 1. 20.

Sandwici-Ilands, a group of illands in the South Sea, lying near New Ireland, were among the laft difcoveries of captain Cook, who fo named them in ho-
nour of the Earl of Sandwich, under whofe adminittra. sandwich. tion thefe difonveries were made. They confilt of eleven iflands, extending in latitude from 18.54. to 22. 15.N. and in longitude from 150 . 54 . to 160 . 24. W. They are called by the natives, Owhybe, Mowee, Ranai, Morotoi, Tahoorowa, Woahoo, Atool, Neebeebeow, Oreeboua, Morotinne, and Tahoora, all inhabited except the two laft. An account of the moft remarkable of which will be found in their alphabetical order, in their proper places in this work. The climate of thefe iflands differs very little from that of the Weft Indies in the fame latitude, though perhaps more temperate; and there are no traces of thofe violent winds and hurricanes, which render the formy months in the Weft Indies fo dreadful. There is alfo more rain at the Sandwich Ifles, where the mountainous parts being generally enveloped in a cloud, fucceflive fhowers fall in the inland parts, with fine weather and a clear $\mathrm{fk} y$, on the fea thore. Hence it is, that few of thofe incornveniencies, to which many tropical countries are fubject, either from heat or moifture, are experienced here. The winds, in the winter months, are generally from eaft-fiuth-ealt to north-eaft. The vegetable productions are nearly the fame as thofe of the cther iflands in this oceang but the taro root is here of a fuperior quality. The bread-fruit trees thrive net in fuch aloundance as in the rich plains cf Otakeite, but produce doulle the quantity of fruit. The fugar-canes are of a very unufual fize, fome of them meafuring eleven inches and a quarter in circumference, and having fourteen feet eatable. There is alfo a root of a bruwn colour, fhaped like a yam, and from fix to ten pounds in weight, the juice of which is very fweet, of a pleafant tafte, and is an excellent fubfitute for fugar. The quadrupeds are confined to the three ufual forts, hogs, dogs, and rats. The fowls are alfo of the common fort; and the birds are beautiful and numerous, though not various. Goats, pigs, and European feeds, were left by captain Cook; but the poffefion of the goats foon gave rife to a conteft between two diftricts, in which the breed was entirely deftroyed. The inhabitants are undoubtedly of the fame racé that poffeffes the illands fouth of the equator; and in their perfons, language, cuftoms, and man* ners, approach nearer to the New Zealanders than to their lefs diftant neighbours, either of the Society or Friendly Iflands. They are in general about the middle fize, and well made; they walk very gracefully, run nimbly, and are capable of bearing very great fatigue. Many of both fexes have fine open countenances, and the women in particular have good eyes and teeth, with a fweetnefs and fenfibility of look, that render them very engaging. There is one peculiarity, characteritic of every part of thefe iflands, that even in the handfomeft faces there is a fulnefs of the noftril, without any flatnefs or fpreading of the nofe. They fuffer their beards to grow, and wear their hair after varicus fafhions. The drefs of boih men and women nearly refemble thofe of New Zealand, and both fexes wear necklaces of fmall variegated thells. Tatowing the body is practifed by every' colony of this nation. The hands and arms of the women are alfo very neatly narked, and they have the fingular cuftom of tatiowing the tip of the tongue. Like the New Ze.handers, they have adopted the method of living togelber in vil. lages, containing from an hundred to two hundrei

Loufes,

## SAN [ 649$]$ SAK

Bandwich. houfes, built pretty clofely together, without any order, even by the inhabitants of the Frivadly Inanis. Tisti: and having a winding path between them. They are natural capacity feems, in no refpect, below the con:generally fanked, towards the fea, with detached walls, mon ftandard of mankind; and their improvemenrs in which are meant both for fhelter and defence. Thefe walls confift of loofe ftones, and the inhabitants are very dexterous in fhifting them fuddenly to fuch places as the direction of the attack may require. In the fides of the hills, or furrounding eminences, they have alfo little holes, or caves, the entrance to which is alfo fecured by a fence of the fame kind. They ferve for places of retreat in cafes of extremity, and may be defended by a fingle perfon againft feveral affailants. Their houfes are of different fizes, fome of them being large and commodious, from forty to fifty feet long, and from twenty to thirty broad; while others are mere hovels. The food of the lower clafs confifts principally of fith and vegetables, to which the people of higher rank add the flefh of dogs and hogs. The manner of fpending their time admits of little variety. They rife with the fun, and, after enjoying the cool of the evening, retire to reft, a few hours after fur-fet. The making of canoes, mats, \&c. forms the occupations of the men; the women are employed in manufacturing cloth, and the fervants are principally engaged in the plantations and filhing. Their idle hours are filled up with various amufements, fuch as dancing, boxing, wreftling, \&c. Their agriculture and navigation bear a great refemblance to thofe of the South-fea inlands. Their plantations, which are fpread over the whole fea-coalt, confift of the taro, or eddy-root, and fweet potatoes, with plants of the cloth-trees fet in rows. The bottoms of their canoes are of a fingle piece of wood, hollowed out to the thicknefs of an inch, and brought to a point at each end. The fides confift of three boards, each about an inch thick, neatly fitted and lafhed to the bottom part. Some of their double canoes meafure 70 feet in length, three and a half in depth, and twelve in breadth. Their cordage, fifh-hooks, and fi@ing tackle, differ but little from thofe of the other iflands. Among their arts muft not be forgotten that of making falt, which they have in great abundance, and of a sood quality. Their inltruments of war are fpears, daggers, clubs, and Dings; and for defenfive armour they wear ftrong mars, which are not eafily penetrated by fuch weapons as theirs. As the iflands are not united under one fovereign, wars are frequent among them, which no doubt, contribute greatly to reduce the number of inhabitants, which, according to the proportion affigned to each ifland, does not exceed 400,000 . The fame fyltem of fubordination prevails here as at the other inlands, the fame abfolute authority on the part of the chiefs, and the fame unrefifing fubmifion on the part of the people. The government is likewife monarchical and hereditary. At Owhyhee there is a regular fociety of priefts living by themfelves, and diftinct in all refpects from the reft of the people. Human facrifices are here frequent; not only at the commencement of a war, or any fignal enterprife, but the death of cvery confiderable chiet calls for a repetition of thefe horrid rites. Notwith. flanding the irreparable lofs in the death of captain Cook, who was here murdered through fudden refentment and violence, they are acknowledged to be of the moft mild and affectionate difpofition. They live in the utmolt harmony and friendlhip with each other; and in horpitality to Arangers they are not exceeded

Voı. XVI.
agriculture, and the perfection of their manufactures, are certainly adequate to the circumftances of their fituation, and the natural advantages which they enjoy.

SANDYS (Sir Edwin), fecond fon of Dr Edwin Sandys archbifhop of York, was born about 156 F, and educated at Oxford under Mr Richard Hooker, author of the Ecclefiatical Polity. In $158 \times$ he was collated to a prebend in the cathedral of York. He travelled into foreign countries; and, upon his return, grew famous for learning, prudence, and virtue. While he was at Paris, he drew up a tract, publifhed under the title of Europe Speculum. In 1602, he refigned his prebend; and, the year following, was knighted by king James I. who employed him in feveral important affairs. He was dexterous in any great employment, and a good patriot. However, oppofing the court with vigour in the parliament held in 162 I , he, with Mr Seldon, was committed to cultody for a month. He died in 1629, having bequeathed 1500 l . to the univerfity of Oxford, for the endowment of a metaphyfical lecture.

Sandys (George), brother of the foregoing Sir Edwin, and youngeft fon of archbifhop Sandys, was born in 1577. He was a molt accomplifhed gentleman; travelled over feveral parts of Europe and the Ealt; and publifhed a relation of his journey in folio, in 1615 . He made an elegant tranflation of Ovid's Metamorphofes; and compofed fome poetical pieces of his own, that were greatly admired in the times of their being written. He alfo paraphraled the Pfalms; and has lett behind him a Tranfation, with Notes, of one Sacred Drama written originally by Grotitus, under the title of Cbriftus Patiens; on which, and Adamus Exul, and Mafenius, is founded Lauder's impudent charge of plagiarifm againt. the immortal Milton. Our author became one of the privy chamber to Charles I. and died in 1643.

SAN Fernando, near the entrance of the Golfo Dolce, in 15 degrees 18 minutes ncrth latitude, has lately been fortified by the Spaniards, with an intent to curb the Mufquito-men, logwood-cutters, and bay-men. It is a very good harbour, with fafe anchorage from the north and eaft winds, in eight fathoms water.

SANGUIFICATION, in the animal œconomy, the converfion of the chyle into true blood. See Blood.

SANGUINARIA, blood-wort, in botany: $A$, genus of the monogynia order, belonging to the polyandria clafs of plants; and in the natural method ranking under the 27 th order, Rboexda. The corolla is octopetalous; the calyx diphyllous; the filiqua ovate and unilocular. There is only one fpeci, i , viz. Uhe canadenfis, a native of the northern parts of America, where it grows plentifully in the woods; and in the fpring, before the leaves of the trees come out, the furface of the ground is in many places covered with the flowers, which have fome refemblance to the wood anemone; but they have ficrt naked pedicles, each fupportiors one flower at tcp. Some of thefe flowers will have 10 or 12 petals, fo that they appear to have a double range of leaves, which has occationed their being termed double flowe:-s; but this is only accidental, ihe fane

Sangukforba, $\underbrace{\text { Sanhedrim. }}$
roots in different years producing different flowers.The plant can bear the open air in this country, but fhould be placed in a loofe foil and fheltered fituation, not too much expofed to the fun.- It is propagated by the roots; which may be taken up and parted, in September, every other year. The Indians paint themfelves yellow with the juice of thefe plants.

SANGUISORBA, greater wild burnet, in botany: A genus of the monogynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 54th order Miffellanea. The calyx is diphyllous; the germen fituated betwixt the calyx and corolla. The mot remarkable feecies is the officinalis, with oval fikes. This grows naturally in moif meadows in many parts of Britain. The ftalks xife from two to three feet high, branching towards the top; and are terminated by thick oval fpikes of flowers of a greyifh brown colour, which are divided into four fegments almoft to the bottom. . Thefe are fucceeded by four oblong cornered feeds. The leaves of this fort are compofed of five or fix pair of lobes placed along a midrib, terminated by an odd one. Thefe are heartthaped, deeply fawed on their edges, and a little downy on their under fides. The cultivation of this plant has been greatly recommended as food to cattle. See Agriculture, $\mathrm{n}^{\circ} 48$, \&c.

SANHEDRIM, or Sanhedrin, from the Greek word $\Sigma$ viefprov, which fignifies a council or affembly of perfons fitting together, was the name whereby the Jews called the great council of the nation, affembled in an apartment of the temple of Jerufalem to determine the moft important affairs both of their church and flate. This council confifted of feventy fenators. The room they met in was a rotunda, half of which was built without the temple, and half within; that is, one femicircle was within the compafs of the temple; the other femicrcle, they tell us, was built without, for she fenators to fit in ; it being unlawful for any one to fit down in the temple. The Nafi, or prince of the fanhedrim, fat upon a throne at the end of the hall, hawing his deputy at his right band, and his fub-deputy on his left. The other fenators were ranged in order on each fide.
The rabbins pretend, that the fanhedrim has always fubfifted in their nation from the time of Mofes down to the deftruction of the temple by the Romans. They date the eftablifhment of it from what happened in the wildernefs, fome time after the people departed from Sinai (Numb. xi. 16.), in the year of the world 2514. Mofes, being difcouraged by the continual murmurings of the Ifraelites, addreffed himfelf to God, and defired to be relieved, at leaf, from fome part of the burden of the government. Then the Lord faid to him, "Gather unto me 70 men of the elders of Ifrael, whom thou knoweft to be the elders of the people, and officers over them; and bring them unto the tabernacle of the congregation, that they may ftand there with thee: And I will come down and talk with thee there; and I will take of the fipirit which is upon thee, and will put it upon them; and they thall bear the burden of the people with thee, that thou bear it not thyfelf alone." The Lord, therefore, poured out his fpirit upon thefe men, who began at that time to prophecy, and have not ceafed from that time. The fanhedrim Tr:s compored of 70 counfellors, or rather 72 , fix out
of each tribe; and Mofes, as prefident, made up the Sanhedrim. number 73. To prove the uninterrupted fucceffion of the judges of the fanhedrim, there is nothing unattempted by the partifans of this opinion. They find a proof where others cannot fo much as perceive any ap. pearance or fladow of it. Grotius may be confulted in many places of his Commentaries, and in his firt book De jure belli $\xi^{\circ}$ pacis, c. 3. art. 20. and Selden ds Synedriis veterum Hebraorum. Alfo, Calmet's Differtation concerning the polity of the ancient Hebrews, printed before his Comment upon the Book of Numbers.

As to the perfonal qualifications of the judges of this bench, their birth was to be untainted. They were often taken from the race of the priefts or Levites, or out of the number of the inferior judges, or from the leffer fanhedrim, which confitted only of 23 judgesThey were to be fkilful in the law, as well traditional as written. They were obliged to ftudy magic, divination, fortune-telling, phyfic, attrology, arithmetic, and languages. The Jews fay, they were to know to the number of 70 tongues; that is, they were to know all the tongues, for the Hebrews acknowledged but 70 in all, and perhaps this is too great a number. Eunuchs were excluded from the fanhedrim, becaufe of their cruelty, ufurers, decrepid perfons, players at games of chance, fuch as had any bodily deformities, thofe that had brought up pigeons to decoy others to their pigeonhoufes, and thofe that made a gain of their fruits in the fabbatical year. Some alfo exclude the high-prieft and the king, becaufe of their too great power; but others will have it, that the kings always prefided in the fanhedrim, while there were any kings in Ifrael. Lafly, it was required, that the members of the fanhedrim fhould be of a mature age, a handfome perfon, and of confiderable fortune. We fpeak now according to the notions of the rabbins, without pretending to warrant their opinions.
The authority of the great fanhedrim was vaftly extenfive. This council decided fuch caufes as were brought betore it by way of appeal from the inferior courts. The king, the high-prief, the prophets, were under its jurifdiction. If the king offended againft the law, for example, if he married above 18 wives, if he kept too many horfes, if he hoarded up too much gold and filver, the fanhedrim had him ftripped and whipped in their prefence. But whipping, they fay, among the Hebrews was not at all ignominious; and the king bore this correction by way of penance, and himfelf made choice of the perfon that was to exercife this difcipline over him. Alfo, the general affairs of the nation were brought before the fanhedrim. The right of judging in capital cafes belonged to this court, and this fentence could not be pronounced in any other place, but in the hall called Lafchat-baggazith, or the ball pared rwith fones, fuppofed by fome to be the $1 \cdot \theta$ osp $\omega \boldsymbol{\sim}$ Q, or pavenent, mentioned in John xix. 13. From whence it came to pafs, that the Jews were forced to quit this hall when the power of life and death was taken out of their hands, 40 years before the deftruction of their temple, and three years before the death of Jefus Chritt. In the time of Mofes this council was held at the door of the tabernacle of the teltimony. As foon as the people were in poffeffion of the land of promife, the fanhedrim followed the tabernacle. It was kept fuccef-

## SAN [651 ] SAN

$\underbrace{\text { Satim. }}_{\text {at Gibeon in the houfe of Obed-edom; and latty, it }}$. was fettled at Jerufalem, till the Babylonith captivity. During the captivity it was kept up at Babylon. After the return from Babylon, it continued at Jerufalems to the time of the Sicarii, or Alfaffins. Then finding that thefe profligate wretches, whofe number increafed every day, fometimes efcaped punifhment by the favour of the prefident or judges, it was semoved to Hanoth, which were certain abodes fituated, as the rabbins tell us, upon the mountain of the temple. From thence they came down into the city of Jerufilem, withdrawing themfelves by degrees from the temple. Afterwards they removed to Jamnia, thence to Jericho, to Uzzah, to Sepharvaim, to Bethtanim, to Sephoris, laft of all to Tiberias, where they continued to the time of their utter extinction. And this is the account the Jews themfelves give us of the Sanhedrim.

But the learned do not agree with them in all this. Father Petau fixes the beginning of the fanhedrim not till Gabinius was governor of Judea, who, according to Jofephus, erected tribunals in the five principal cities of Judea; at Jerufalem, at Gadara, at Amathus, at Jericho, and at Sephora or Sephoris, a city of Galilee. Grotius places the origin of the fanhedrim under Mofes, as rabbins do ; but he makes it determine at the beginning of Herod's reign. Mr Bafnage at firft thought that the fanhedrim began under Gabinius; but afterwards he places it under Judas Maccabxus, or under his brother Jonathan. We fee indeed, under Jo. nathan Maccabrus, (I Macc. xii. 6.), in the year 3860 , that the fenate with the high-prieft fent an embaffy to the Romans. The rabbins lay, that Alexander Janneus, king of the Jews, of the race of the Afmonreans, appeared before the fanhedrim, and claimed a right of fitting there, whether the fenators would or not. Jofephus informs us, that when Herod was but yet governor of Galilee, he was fummoned before the lenate, where he appeared. It mult be therefore acknowledged, that the fanhedrim was in being before the reign of Herod. It was in being afterwards, as we find from the Gofpel and from the Acts. Jefus Chrift in St Matthew (v. 22.) diftinguifhes two tribunals" Whofoever is angry with his brother without a caufe fhall be in danger of the judgment." This, they fay, is the tribunal of the 23 judges. "And whofoever thall fay to his brother Raca, thall be in danger of the council;" that is, of the great fanhedrim, which had the right of life and death, at leaft generally, and before this right was taken away by the Romans. Some thinkt hat the jurididition of the council of 23 extended to life and death alfo; but it is certain that the fanhedrim was fuperior to this council. See alfo Mark xiii. 9. xiv. 55 . xv. I.; Luke xxii. 52, 66. ; John xi. 47. ; Acts iv. 15 . v. 21. where mention is made of the fynedrion, or fanhedrim.
From all this it may be concluded, that the origin of the fanhedrim is involved in uncertainty; for the council of the 70 elders eftablifhed by Mofes was not what the Hebrews undertand by the name of fanhedrim. Befides, we cannot perceive that this eftablifhment fubfifted either under Joithua, the judges, or the kings. We find nothing of it after the captivity, till the time of Jonathan Maccabæus. The tribunals erected by Gabinius were very different from the fanbedrim, which was the Vol. XVI.
fupreme court of judicature, and fixed at Jeruftem; whereas Gabinius eitablifhed five at five different cities. Lafly, it is certain that this fenate w:s in being in the time of Jefus Chrilt ; but the Jews themfelves inform us that they had no longer then the power of life and death (John xviii. 31.)
SANJACKS, a people inhabiting the Curdiftan, or Perfian mountains, fubfifting chiefly by plunder, and the ficanty pittance afforded by their own mountainnus country. "They were much reduced (fays Mr Ives) Ives', "oyby the late balhaw Achmet of Bagdat, who purfued age to $\mathrm{h}_{\mathrm{n}}$ them in perfon to their fubterranean retreats, and de- dia, \&c flroyed many by the fword, and carried off great numbers of prifoners, who were fold for flaves." Notwithfanding this check, in the year 1758 , they were again become fo daring that they would attack cararang of 700 men, and fometimes carry all off. They are faid to be worfhippers of the evil principle.

San juan de Peerto Rico, ufually called Forto Rico, one of the Weft India iflands belonging to Spain, is fituated in about 18 . N. Lat. and between 65.36. and 67.45 . W. Lang. and is abour 40 leagues long and 20 broad. The ifland is beautifully diverlified with wonds, valleys, and plains, and is extremely fertile. It it well watered with fprings and rivers, abounds with meadows, is divided by a ridge of mount inis running from eaft to weft, and has a harbour fo fpacious that the largeft hips may lie in it with fafety. Before the arrival of the Spaniards it was inhabited by 4 or 500,000 people, whe, in a few years, were extirpated by its mercilefs conquerors. Raynal fays, that its whole inhabitants amounts at prefent only to 1500 Spaniard, Meftoes, and Mulattoes, and about 3000 negroes. Thus one of the fineft inlands in the Weft Indies has been depopulated by the cruelty, and left uncultivated by the indolence, of its poffeffors. But it is the appointment of Providence, who feldom permits flagrant crimes to pafs unpunifhed, that poverty and wretchednefs fhould be uniform confequences of oppreffion.

SANICULA, Sanicle, or Self-beal, in botany: A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 45 th order, Umbellate. The umbels are clofe together, almoft in a round head; the fiuit is fcabrous; the flowers of the difk abortive. There are three fpecies, viz. the canadenfis, marilandica, and europea, fonnd in many parts both of Scotland and England. This plant was long celebrated for its heding virtues ; but it is now totally difregarded.

SANIDIUM, in natural hittory, the name of a genus of foffils of the clafs of the felenitx, but neither of the rhomboidal nor columnar kinds, nor any other way diftinguifhable by its external figure; being made up of feveral plain flat plates.

SANIES, in medicine, a ferous putrid matter, iffuing from wounds. It differs from pus, which is thicker and whiter.

SANNAZARIUS (James), in Latin Afius Cincenis Sannazarius, a celebrated Latin and Italian poet, born at Naples in 1458 . He by his wit ingratiated himfelf into the tavour of king Frederic ; and, when that prince was dethroned, attended him into France, where he flaid with him till his death, which happened in 1504. Sannazarius then returned into Italy, where he applied himfelf to polite literature, and particularly $4 \mathrm{~N}_{2}$

Raynal's
Hiftory of the Eaft and Weft Indies, vol. 4th, p. 298.
to Latin and Italian poetry. His gay and facetious humour made him fouglt for by all companies; but he. was fo anfled at the news that Phillibert prince of Orange, general of the emperor's army, had demolifhed his country-houfe, that it threw him into an illnefs, of which he died in 1530 . It is faid, that being informed a ferw days before his death, that the prince of Orange was killed in battle, he called out, "I hall diie contented, fince Mars has punifhed this barbarous enemy of the Mufes." He wrote a great number of Italian and Latin poems: among thofe in Latin, his De Partu Virginis and Eclogues are chiefly ef teemed; and the moft celebrated of his Italian pieces is his Arcadia.

SANTA Cruz, a large ifland in the South Sea, and one of the moft confiderable of thofe of Solomon, being about 250 miles in circumference. W. Long. 130. O. S. Lat. 10. 21.
$S_{A N q_{A}}$ Cruz, or St Croix, a fmall and unhealthy ifland, fituated in about $6_{4}$ degrees weft longitude and 18 north latitude. It is about eighteen leagues in length, and from three to four in breadth. In 1643 it was inhabited by Dutch and Englifh, who foon became enemies to each other; and in 1650 were both driven out by 1200 Spaniards, who arrived there in five fhips. The triumph of thefe lalted but a few months. The remains of that numerous body, which were left for the defence of the inland, furrendered without refiftance to 160 French, who had embarked in 1651, from St Chriftopher's, to make themfelves mafters of the illand.

Thefe new inhabitants loft no time in making themfelves acquainted with a country fo much difputed. On a foil, in other refpects excellent, they found only one river of a moderate fize, which, gliding gently almore on a level with the fea through a flat country, furnifhed only a brackifh water. Two or three Springs, which they found in the innermoft part of the ifland, made but feeble amends for this defect. The wells were for the moft part dry. The confluuction of refervoirs required time. Nor was the climate more inviting to the new inhabitants. The ifland being flat, and covered with old trees, fcarce afforded an opportunity for the winds to carry off the poifonous vapours with which its morafles clogged the atmofphere. There was but one remedy for this inconvenience; which was to burn the woods. The French fet fire to them without delay; and, getting on board their hips, became fpec. tators from the fea, for fexeral months, of the conflagration they had raifed in the ifland. As foon as the flames were extinguifhed, they went on hhore again.

They found the foil fertile beyond belief. Tobacco, cotton, arnotto, indigo, and fugar, flourihed equally in it. So rapid was the progrefs of this colony, that in 11 years from its commencement there was upon it 822 white perfons, with a proportionabie number of flaves. It was rapidly advancing to profperity, when fuch obftacles were thrown in the way of its activity as made it decline again. This decay was as fudden as its rife. In 1696 there were no more than 147 men, with their wives and children, and 623 blacks remaining; and thefe were tranfported to St Domingo.

Some obfcure individuals, fome writers unacquainted with the views of government, with their fecret nego-
tiations, with the character of their minifters, with the interefts of the protectors and the protected, who flatter themfelves that they can difcern the reafon of events amonglt a multitude of important or frivolous caufes, which may have equally occafioned them ; who do not conceive, that among all thefe caufes the mof natural may poffibly be the farthelt from the truth; who after having read the news, or journal of the day, with profound attention, decide as peremptorily as if they had been placed all their lifetime at the helm of the fate, and had affifted at the council of kings ; who are never more'deceived than in thofe circumftances in which they difplay fome thare of penetration; writers as abfurd in the praifes as in the blame which they bellow upon nations, in the favourable or unfavourable opinion they form of minifterial operations : thefe idle dreamers, in a word, who think they are perfons of importance, becaufe their attention is always engaged on matters of confequence, being convinced that courts are always governed in their decifions by the moft comprehenfive views of profound policy, have fuppofed that the court of Verfailles had neglected Santa Cruz, merely becaufe they wifhed to abandon the fmall iflands, in order to unite all their frength, induftry, and population, in the large ones ; but this is a miftaken notion. This determination arofe from the farmers of the revenue; who found that the contraband trade of Santa Cruz with St Thomas was detrimental to their interefts. The fpirit of finance hath in all times been injurious to commerce; it hath deftroyed the fource from whence it fprang. Santa Cruz continued without inhabitants, and without cultivation, till 1733 , when it was fold by France to Denmark for 30,750 l. Soon after the Danes built there the fortrefs of Chriftianfladt. Then it was that this northern power feemed likely to take deep root in America. Unfortunately, the laid her plantations under the yoke of exclufive privileges. Induftrious people of all fects, particularly Moravians, frove in vain to overcome this great difficulty. Many attempts were made to reconcile the interefts of the colonifts and their oppreffors, but without fuccefs. The two parties kept up a continual Atruggle of animofity, not of induftry. At length the government, with a moderation not to be expected from its conftitution, purchafed, in 1754, the privileges and effects of the company. The price was fixed at L. 412,500 , part of which was paid in ready money, and the remainder in bills upon the treafury, bearing intereft. From this time the navigation to the iflands was opened to all the fubjects of the Danifh dominions. Of 345 plantations, which were feen at Santa Cruz, 150 were covered with fugar canes, and every habitation is limited to 3000 Danifh feet in length, and 2000 in breadth. It is inhabited by 2136 white men, by 22,244 flaves, and by 155 freedmen.

SANt/ Cruz, in Teneriff. See Teneriff.
$S_{\text {anta }}$ Cruz, a town of Africa, on the coalt of Barbary, and in the province of Suez and kingdom of Morocco, with a harbour and a fort. The Moors took it from the Portuguefe in 1536 . It is feated at the extremity of Mount Atlas, on the Cape Aguer. W. Long. io. 7. N. Lat. 30.38.

Santa Cruz de la Sierra, a town of South America, and capital of a province of that name in Peru, and in the audience of Los Charcas, with a bifhop's

Santa, fee. It is feated at the foot of a mountain, in a counSantalun. try ab unding in good fruits, on the river Guapy. W. L ing. 59. 35. S. Lat. 20.40.
$S_{\text {anta }}$ Fe de Bogota, a town of South America, and capital of New Granada, with an archbifhop's fee, a fupreme court of juftice, and an univerfity.

The city fituated at the foor of a fteep and cold mountain, at the entrance of a vaft and fuperb plain. In 1774 it contained 1770 houfes, 3246 families, and 16,233 inhabitants. Population mult neceffarily increafe there, lince it is the feat of government, the place where the coin is Atruck, the ftaple of trade; and laftly, fince it is the refidence of an archbihop, whofe immediate jurifdiction extends over 3 I Spanifh villages, which are called towns; over 195 Indian colonies, anciently fubdued; and over 28 miffions, eftablifhed in modern times. This archbifhop hath likewife, as metropolitan, a fort of infpection over the diocefes of Quito, of Panama, of Caraccas, of St Martha, and of Carthagena. It is by this laft place, though at the diftance of 100 leagues, and by the river Magdalena, that Santa Fe keeps up its communication with Europe. There are filver mines in the mountains about the city. W. Long. 60. 5. N. Lat. 3. 58.

GANTALUM, in botany: A genus of the monogynia order, belonging to the offandria clafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The calyx is fuperior; the corolla monopetalous; the ftamina placed in the tube; the figma is fimple; the fruit a berry.

The fantalum, or fanders, grows to the fize of a wal-nut-tree. Its leaves are entire, oval, and placed oppofite to each other. Its flower is of one fingle piece, charged with eight ftamina, and fupported upon the pittil, which becomes an infipid berry, refembling in form that of the laurel. Its wood is white in the circamference, and yellow in the centre when the tree is old. This difference of colour conflitutes two kinds of fanders, both employed for the fame purpofes, and having equally a bitter talte, and an aromatic fmell. With the powder of this wood a palte is prepared, with which the Chinefe, Indians, Perfians, Arabians, and Turks, anoint their bodies. It is likewfe burnt in their houfes, and pields a fragrant and wholefome fmell. The greatef quantity of this wood, to which a tharp and attenuating virtue is afcribed, remains in India. The red fanders, though in lefs eftimation, and lefs generally ufed, is fent by preference into Europe. This is the produce of a different tree, which is common on the coaft of Coromandel. Some travellers confound it with the word of Caliatour, which is ufed in dyeing.

The fantalum album, or white fanders, is brought from the Ealt lndies in billets about the thicknefs of a man's leg, of a pale whitifh colour. It is that part of the yellow fanders wood which lies next the bark. Great part of it, as met with in the fhops, has no fmell or tafte, nor any fenfible quality that can recommend it to the notice of the phyfician.

The fantalum album, or yellow fanders, is the interior part of the wood of the farie tree which furnifhes the former, is of a pale yellowifh colour, of a pleafant fmell, and a bitterih aromatic tafte, accompanied with an agrecable kind of pungency. This elegant wood might undoutedly be applied to valuable medicil pur-
pofes, though at prefent very rarely ufed. Difilled with water, it yields a fragrant effential oil, which thickens in the cold into the confiftence of a balfam. Digefted in pure fpirit, it imparts a rich yellow tincture ; which being committed to difillation, the fpirit arifes without bringing over any thing confiderable of the flavour of the fanders. The refiduum contains the virtues of fix times its weight of the wood. Hoffmat looks upon this extract as a medicine of fimilar virtues to ambergris; and recommends it as an excellent reftorative in great debilities.

SANTAREN, a handfome town of Portugal iin Eftremadura, feated on a mountain near the river Tajo, in a country very fertile in wheat, wine, and oil. They get in their harveft here two months after they have fown their corn. It was taken from the Moor, in 1447 . W. Long. 7. 45. N. Lat. 36. 12.

Santaugustine. See Augustine.
SANTEN, a town of Germany, in the circle "eWeftphalia, and in the duchy of Cleves. It has a handfome church belonging to the Roman Catholics, wherein is an image of the Virgin Mary, which they pretend performs a great many miracles. Here the fine walks begin that run as far as Wefel, from which it is five miles diftant to the north-weft. E. Long. 6. 33. N. Lat. 5 I. 38.
SANTERRE, a fmall territory of France, in Picardy; bounded on the north by Cambrefis, on the eait by Vermandois, on the welt by Amienois, and on the fouth by the river Somme. It is very fertile, and the capital town is Peronne.

SANTEUIL, or rather Santeul (Juhn Baptift de), in Latin Santolius Vicforinus, an excellent Latin poet, was born at Paris in 1530 . Having fiaithed his ftudies in Louis the Great's College, he applied himfelf entirely to poetry, and celebrated in his verfe the praifes of feveral great men; by which he acquired univerfal applaufe. He enriched Paris with a great number of infcriptions, which are to be feen on the public fountains, and the monuments confecrated to pofterity. At length, fome new hymns being to be compofed for the Breviary of Paris, Claude Santeuil his brother, and M. Boffuet, perfuaded him to undertake that work; and he fucceeded in it with the greateft applaufe. On which the order of Clugny defiring him to compofe fome for their Breviary, he complied with their requeft ; and that order, out of gratitude, granted him letters of filiation, with an annual penfion. San. teuil was careffed by all the learned men of his time; and had for his admirers the two princes of Condé, the father and fon, from whom he frequently received favours. Louis XIV. alfo gave him a proof of his efteem, by beftowing a penfion upen him. He attended the duke of Bourbon to Dijon, when that prince $w \in n t$ thither in order to hold the ftates of Burgundy; and died there in 1697, as he was preparing, tu return to Paris. Befides his Latin hymns, he wrote a great number of Latin poems, which have ail the fire and marks of genius difcoverable in the works of great prets.
To Santeuil we are indebted for many fine churchhymns, as abovementioned. Santeuil read the verfes he made for the inhabitants of heaven with ail the agitations of a demoniar. Defpreaux faid he was the

## Sateu: =

devil nhom God compalled to praife faints. He was among the namber of poets whofe genius was as imSnmbline. petuous as his mufe was decent.

La Bruyere has painted the character of this fingul lur and truly original poet in the moft lively colours. " Image a man of great facility of temper, complaifant and docile, in an inftant violent, choleric, paffionate, and capricicus. A man fimple, credulous, playful, volatile, puerile; in a word, a child in gray hairs : but let him collect himfelf, or rather call forth his interior genius, I venture to fay, without his knowledge or privacy, what fallies! what elevation! what images! what latinity! Do you fpeak of one and the fame perfon, you will alk? Yes, of the fame; of Theodas, and of him alone. He fhrieks, he jumps, he rolls upon the ground, he roars, he forms; and in the midft of this tempeft, a flame iffues that thines, that rejoices. Without a figure, he rattles like a fool, and thinks like a wife man. He utters truths in a ridiculous way; and, in an idiotic manner, rational and fenfible things. It is aftonifhing to find good fenfe difclofe itfelf from the bofom of buffoonery, accompanied with grimaces and contortions. What thall I fay more? He does and he fays better than he knows. Thefe are like two fouls that are unacquainted with each other, which have each their turn and feparate functions. A feature would be wanting in this extraordinary portrait, if I omitted faying, that he has at once an infatiable thirft for praife, ready to throw himfelf at the mercy of the critics, and at the bottom fo docile as to profit by their cenfure. I begin to perfuade myfelf that. I have been drawing the portraits of two different perfons: it would not be impolfible to find a third in Theodas; for he is a good man, a pleafant man, an excellent man."

This poet ought not to be confounded with Claude de Santruil, his brother, a learned ecclefiaftic, who alfo wrote feveral hymns in the Paris Breviary under. the name of Santolius Maglioranus, a name given him from his having lived a long time in the feminary of St Magliore at Paris, in quality of fecular ecclefiafic. He was efteemed not only for his poetical abilities, but alfo for his profound erudition and his exemplary piety. He died at Paris, in 1684 , aged 57. He rote feveral other pieces of poetry, befides his hymns, which are printed with his brother's works.

SANTILLANE, a fea-port town of Spain, in the province of Afturias, of which it is the capital. It is feated on the fea-coat, 55 miles ealt of Oviedo, and zoo north-weft of Mädrid. W. Long. 4. 33. N. Lat. 4. 30.

SANTOLINA, lavender-cotton, in botany : A genus of the order of polygamia xqualis, belonging to the lyngenefia clafs of plants; and in the natural method radking under the 49 th order, Compofite. The receptacle paleaceous ; there is no pappus; the calyx imbricated and hemifpherical.

The molt remarkable fpecies are, I. The chamæcypurifus, or common lavender-cotton, which has bsen Irnor known in the Englifh gardens; it was formerly iitled abrotanum fremina, or female fouthernwood, and by the corruption of words was called brotany by the market. people: it grows naturally in Spain, Italy, and the warm parts of Europe. This hath a ligneous ftalk, dividing into many branches, garnifhed with flender hoa-
ry leaves, that are four ways indented, and have a rank, ftrong, odour when handled. The branches are terminated by a fingle flower, compofed of mary hermaphro. dite florets, which are fiftular, cut into five parts at the top, of a fulphur colour, and are included in one com. mon fcaly empalement, having no borders or rays. Thefe are fucceeded by fmall, oblong, friated feeds, which are feparated by fcaly chaff, and ripen in the empalement; the plants love a dry foil and a fheltered fituation. 2. The villofa, with woolly leaves, has a fhrubby ftalk, which branches out like the former, but the plants feldom grow fo tall. The branches are garnifhed very clofely below with leaves haped like thofe of rhe other fort, but Morter, thicker, and whiter; the flowers are much larger, and the brims of the florets are more reflexed; they are of a deeper fulphur colour than the other. It grows naturally in Spain. 3. The decumbens, with linear leaves, is of lower ftature than either of the former, feldom rifing more than 15 or 16 inches high. The branches fpread horizontally near the ground, and are garnifhed with fhorter leaves than either of the former, which are hoary and finely indented; the falks are terminated by fingle flowers, of a bright yellow solour, which are larger than thofe of the firlt fort. 4. The virens, with very long linear leaves, rifes higher than either of the former. The branches are more diffufed; they are flender, fmooth, and garnifhed with very narrow long leaves, which are of a deep green colour, but two ways indented; the ftalks are flender, naked towards the top, and terminated by fingle flowers of a gold colour. 5. The rofmarinifolia, with linear entire leaves, hath fhrubby ftalks, which rife about three feet high, fending out long flender branches, garnifhed with fingle linaer leaves of a pale-green colour. The ftalks are terminated by large, fingle, globular flowers, of a pale fulphur colour. 6. The minor, with linear obtufe leaves, is fomewhat like the fifth; but the branches are fhorter, thicker, , and clofer garnifhed with leaves, which come out in clufters. The flowerftalks are fparfedly difpofed, and have leaves to their top; the flowers are fmall, and of a yellow colour. 7. The chamæmelifolia, with obtufe woolly leaves, hath fhrubby falks, which rife three feet high, garnilhed with broader leaves than either of the former, whofe indentures are loofer, but double; they are hoary, and when bruifed have an odour like chamomile. The leaves are placed pretty far afunder, and the ftalks are garnifhed with them to the top. The ftalks are divided likewife at the top into two or three foot-ftalks, each fuftaining one pretty large fulphur-coloured flower.

All thefe plants may be cultivated fo as to become ornaments to a garden, particularly in fmall bofquets of ever-green ihrubs, where, if they are artfully intermixed with other plants of the fame growth, and placed in the front line, they will make an agreeable variety; efpecially if care be taken to trim them twice in a fummer, to keep them withis bounds, otherwife their branches are apt to ftraggle, and in wet weather to be borne down and difplaced, which renders them unfightly; but when they are kept in order, their hoary and different-coloured leaves will have a pretty effect in fuch plantations.-They may be propagated by planting flips or cuttings during the fpring, in a

## S AP [ 655 ] S A P

border of light frefh earth, but muft be watered and fhaded in hot dry weather, until they have taken root; after which they will require no farther care but to keep them clean from weeds till autumn, when they fhould be tranfplanted where they are defigned to remain : but if the ground is not ready by that time to receive them, it will be proper to let them remain in the border until fpring; for if they are tranfplanted late in autumn, they are liable to be deltroyed by cold in winter.
SANTORINI, an ifland of the Archipelago, to the north of Candia, and to the fouth-weft of Nanphic. It is eight miles in length, and near as much in breadth, and almolt covered with pumice-ftone, whence the foil in general mult be dry and barren ; it is, however, greatly improved by the labour and in. duitry of the inhabitants, who have turned it into a garden. It affords a great deal of barley, plenty of cotton, and large quantities of wine. Fruit is fcarce except figs; and they have neither oil nor wood. The inhabitants are all Greeks, and are about 10,000 in number. Pyrgos is the capital town, and there are feveral little towns and villages. They have but one fpring in the ifland, for which reafon they preferve the rain-water in cifterns. Though fubject to the Turks, they choofe their own magitrates. E. Long. 25-5. N. Lat. 39. Io.

SANZIO (Raphael). See Raphael.
SAO , a territory, called a kingdom, of Africa, on the gold-coalt of Guinea, hardly two miles in length along the fhore. It produces abundance of Indian corn, yams, potatoes, palm-wine, and oil. The inhabitants are very treacherous, and there is no dealing with them without a great deal of caution. It contains feveral villages, of which Sabo is the principal; and the Dutch have a fort here called Naffau.

SAONE, a confiderable river of France, which has its fource in mount Vofgue, near Darney; runs through the Franche Comte Burgundy, Beaujolois; and falls into the Rhone at Lyons. It paffes by Gray, Chalons, and Mafcon.
$S A P$, the juice found in vegetables.
We obferved, when treating of Plants, that it has been long dilputed whether the fap of plants be analogous to the blood of animals, and circulates in the fame manner. We alfo mentioned the conclufions that Dr Hales drew from his numerous experiments, which were all in oppofition to the doctrine that the fap circulates. As the fubject is curious and interelting, and as additional light has been thrown upon it of late years, we wifh to communicate it to our readers as fully as our limits will permit.

As the vegetable economy is fill but imperfectly underftood, and experiments made for tracing the motion of the fap may lead to important difcoveries, we are happy to find, that of late years this fubject has been again revived. Dr Walker, profeffor of Natural Hiftory in the univerfity of Edinburgh, has publifhed in the ift volume of the Philofophical Tranfactions of Edinburgh an account of a courfe of very accurate and ingenious experiments, accompanied with obfervations and conclufions made with a caution which infpires confidence, and is indeed werthy of a difciple of Bacon. He is the firft perfon, as far as we know, who thought of comparing the thermometer with the motion of the fap.

It is well known that in the fpring vegetabics contain a great quantity of fap; and there are fome trees, as, the birch and plane, which, if wounded, will difeharge a great po:tion of it. Whence is this moifture derived? Whether is it imbibed from the atmofphere, or does it flow from the foil through the roots? Thefe are the queftions which require firf to be anfwered; and Dr Walker's experiments enable us to anfwer them with confidence.

He felected a vigorous young birch, 30 feet high and 26 inches in circumference at the ground. He bored a hole jult above the ground on the if of Fe bruary, and cut one of its branches at the extremity. He repeated this every fecond day ; but no moifture appeared at either of the places till the 5 th of May, when a fmall quantity flowed on making an incifion near the ground. He then cut 2 I incifions in the trunk of the tree, on the north fide, at the diftance of a foot from one another, and reaching from the ground to the height of 20 feet. The incifons were folid triangles, each fide being an inch long and an inch deep, and penetrating through the bark and wood. Dr Walker vifited the tree almolt every day for two months, and marked exactly from which of the incifions the fap flowed. He obferved that it flowed from the loweft incifion firf, and gradually afcended to the higheft. The following table will fhow the progrets of the fap upwards, and its correfpondence with the thermometer.

The firt column is the day of the month on which the obfervation was made; the fecond expreffes the number of incifions from which the fap flowed on the day of the month oppofite ; and the third column the degree of the thermometer at noon. Some days are omitted in March, as the incifions, though made on th 5 th, did not bleed till the inth. Some days are alfo paffed over in April, becaufe no obfervation was made on account of rain.

Dr Walker found that the fap afcends through the wood, and ftill more copioufly between the wood and the bark; but none could be perceived alcending through the pith or the bark. He found allo, that when the thernometer at noon is about 49 , or between 46 and 50 , the fap rifes about one foot in 24 hours; that when the thermometer it about 45 at noon, it afcends abcut

## SA P

Say, Bapiadus. $\underbrace{\circ}$
one foot in two days ; and that it does not afcend a all unlefs the mid-day heat be above 40 . He obferved that it moves with more velocity through young than through old branches. In one young branch it moved through feven feet in one day, the thermometer being at 49 , while it moved in the trunk of the tree only feven feet in feven days. Dr Walker has thus explained the seafon why the buds on the extremities of branches unfold firt; becaufe they are placed on the youngett wood, to which the fap flows moft abundantly.

The effects produced by the motion of the fap deferve to be attended to. In thofe parts to which it lias mounted, the bark eafily feparates from the wood, and the ligneous circles may, without dificulty, be detached from one another. The buds begin to fwell and their fales to feparate, while thofe branches to which the fap has not afcended remain clofely folded. When the fap has reached the extremities of the branclyes, and has thus pervaded the whole plant, it is foon covered with opening buds and ceafes to bieed. ${ }^{\circ}$ The bleeding ceafes firft in the upper parts of the tree, and in the lower parts fucceffively downwards, and the wood becomes dry. An inverted branch flows more copioully when cut than thofe which are erect. This is a proof that the afcent of the fap is not occafioned by capillary attraction, for water which has rifen in a fmall glafs tube by this attraction will not defcend when the tube is inverted.

It is evident that there is an intimate comection between heat and the afcent of the fap. It did not begin to flow till the thermometer food at a cortain point: when it fell below 40, it was arrefted in its progrefs. The fouth fide of the tree, when the fun was bright, bled more profufely than the north fide ; and at fun-fet the incifions at the top ceafed to bleed, where it was expofed mof to the cold air, while it fill continued to flow from the incifions next to the ground ; the ground retaining its heat longer than the air.

Sap, in fieges, is a trench, or an approach made under cover of 10 or 12 feet broad, when the befiegers come near the place, and the fire from the garrifon grows fo dangerous that they are not able to approach uncovered.-There are feveral forts of faps; the fingle, which has only a fingle parapet ; the double, having one on each fide; and the flying, made with gabions, \&c. In all faps traverfes are left to cover the men.

SAPINDUS, the soap-berry tree, in botany: A genus of the digynia order, belonging to the octandria clafs of plants; and in the natural method ranking under the 23 d order, Tribilate. The calyx is tetraphyllous; the petals four ; the capfules are flefhy, connate, and ventricofe.

The fpecies are four, the faponaria, fpinofus, trifoliatus, and chinenfis. The faponaria, with winged leaves, grows narurally in the iflands of the Weft Indies, where it rifes with a woody ftalk from 20 to 30 feet high, fending out many branches garnilhed with winged leaves compofed of feveral pair of fpear-fhaped lobes. The midrib has a membranaceous or leafy border, running on each fide from one pair of lobes to the other, which is broadeft in the middle between the lobes; the flowers are prodaced in loofe fpikes at the end of the branches; they are fmall and white, fo miake no great appearance. Thefe are fucceeded by oval berries as large as middling cherries, fometimes
fingle, at others, two, threc, or four are jonned to- Saponaria gether; thefe have a faponaceous fkin or cover, which inclofes a very fmooth roundith nut of the fime form, of a thining black when ripe. The fkin or pulp which furrounds the nuts is ufed in America to walh linen; but it is very apt to burn and deftroy it if oiten ufed, being of a very acrid nature.

Thefe plants are propagated by foeds; they muft be put into fmall pots, and plunged into a bot-bed of tanners' bark. In five or fix weeks the plants will appear, when the glaffes of the hot-bed thould be railed every day in walm weather, to admit frefh air to the plants. In three weeks or a month after the plants appear, they will be fit to be tranfplanted, when they mult be thaken out of the pots, and carefully parted, fo as not to injure their roots, and each planted into a feparate fmall pot, and plunged into the hot-hed again, obferving to thade them from the fun until ther have taken new roat; after which time they muit have free air admitted to them every day when the weather is warm, and will require to be frequently watered.
SAPONARIA, Sopewort, in botany: A genus of the digynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the 22d order, Caryophyllee. The calyx is monophyllous and naked; there are five ungulated petals; the capfule is oblong and unilocular.

There are eight fpecies, the officinalis, vaccatia, cretica porrigens, illyrica, ocymoides, orientalis, and lutea. The officimalis, which is a Britifh plant, has a creeping root, fo that in a fhort time it would fill a large fpace of ground. The ftalks are about two feet high, and of a purplifh colour. The footfalks of the flowers arife from the wings of the leaves oppofite ; they fuftain four, five, or more purple flowers each ; which have generally two fmall leaves placed under them. The ftalk is alfo terminated by a loofe bunch of flowers growing in form of an umbel; they have each a large fivelling cylindrical empalement, and five broad obtufe petals, which fread open, of a purple colour. Thefe are fucceeded by oval capfules, with one cell filled with fmall feeds.-The decoction of this plant is ufed to cleanfe and fcour woollen cloths: the poor people in fome countries ufe it inftead of foap for wafhing ; from which ufe it had its name.
SAPOR, taste. See Taste, and Anatomy, $\mathrm{n}^{\mathrm{p}}$. I 39 .

SAPOTA, Plum, in botany. See Achras.
SAPPERS, are foldiers belonging to the royal artillery, whofe bufinefs it is to work at the faps, for which they have an extraordinary pay. A brigade of fappers generally confifts of eight men, divided equally into two parties; and whilft one of thefe parties is advancing the fap, the other is furnilhing the gabions, fafcines, and other neceffary implements. They relieve each other alternately.

SAPPHIRA, was the wife of a rich merchant in Gueldres, and equally diftinguifhed for her beauty and her virtue: Rhinfauld, a German officer, and governor of the town of Gueldres, fell in love with her; and not being able to feduce her either by promifes or prefents, he imprifoned her hufband, pretending that he kept up a traiterous correfpondence with the enemies of the flate. Sapphira yielded to the paffion of the go-

## $S$ A P [657] GA

5 s.pphire. vernor in order to relieve her hufband from chains; but private orders had already been given to put him to death. His unhappy widow, overwhelmed with grief, complained to Charles duke of Burgundy. He ordered Rhinfauld to marry her, after having made over to her all his poffefions. As foon as the deed was figned, and the marriage over, Charles commanded him to be put to death. Thus the children of a wife whom he had fecuced, and of a huband whom he had murdered, became lawful heirs to all his wealth.
SAPPHIRE, a genus of precious ftones, of a blue colour, and the hardelt of all except the ruby and diamond. They are found in the fame countries with the ruby; alfo in Bohemia, Alface, Siberia, and Auvergne. M. Rome de l'Ifle mentions one found at Auvergne, which appeared quite green or blue according to the pofition in which it was viewed. Crontedt, however, informs us, that the blue fluor fpars are frequently met with in collections under the name of fapphires; and it is certain from Pliny, B. 37. chap. 9. that the fapphire of the ancients was our lapis lazuli. They are feldom found of a deep blue colour throughout; or free from parallel veins; and when they are but flightly tinged, they are named white fapphires. The late unfortunate king of France had one with a fripe of fine yellow topaz in the middle. Some are found half green and half red, and are foliated like the ruby. The fine hard fapphires, called by the jewellers oriental, are of the fame natare with the ruby and tnpaz, excepting the mere circumftance of colour. They are commonly in two oblong hexagon pyramids, joined at their bafe, and pointed at top ; fometimes alio in hexagonical columns.

The finelt fapphires, like moft of the gems, come from the Eaft Indies. Ruffia does not produce the fapphire. In Scotland they are found of a hardne's and luftre equal to the oriental, both light and deep coloured, at Benachie, and Invercauld, Aberdeenfhire; Portfoy in Banfflhire, and many other places. Mr Deuchar, fealengraver in Edinburgh, has in his poffeffion a beautiful fapphire, which was tound in a double cryftal. On one of thefe is cut a head, which was effected with the greateft dificulty, on account of its hardnefs; the other is cut into facets, and has a fine water, and great brilliancy.

The fpecific gravity of thefe precious ftones, according to Bergman, is from $\cdot 3,650$ to 3,940 . According to others the fpecific gravity of the oriental fapphires is 3,994; that of the Brafilian 3,1307; and of thofe from Puy in Auvergne, 4,0769 . When powdered, they are fufible with borax, or microcofmic falt, into a tranfparent glafs; and the fame thing happens on treating them with magnefia alba. They are faid to lofe-their colour by fire, and to become fo hard and tranfparent as fometimes to pafs for diamonds; but Mr Achard found this to be a miftake, and that the true fapphires are not in the leaft altered either in colvur, hardnefs, or weight, by the moft intenfe fire. Thofe of Puy in Auvergne, however, though by their colour and hardnefs they feem to approach the oriental fapphires, lofe both their colour and tranfparency in the fire, becoming black, and even vitrifying, which plainly fhows them to be of a different kind. Engeftroom informs us, that the fap. phires, in their rough or native ftate, generally cryftal. lize in two oblong hexagonal pyramids pointed at top, Voi. XVJ.
and joined at their bafes, but are fometmes found i $i$ :n hexagonal or columnar form.-A good fapphire of ten carats is valued at 50 guineas; if it weighs 20 carats, it is valued at 200 guineas; and, if under ten carats, its value may be found by multiplying the carat at 10 s .6 d. by the fquare of its weight.-Sapphires are preferable to common rubies for jewelling watches, on arcount of the homogeneous hardnefs of their fubftance; fome red ftones refembling rubies being met with, which are not uniformly hard.

SAPPHO, a famous poetefs of antiquity, who for her excellence in her art has been called the Tenth Mufe, was born at Mitylene in the ifle of Lefbos, about 6io years before Chrift. She was contemporary with Stefichorus and Alcæus; which laft was her countryman, and as fome think her fuitor. A verfe of this poet, in which he infinuates to her his paffion, is preferved in Ariftotle, Rhet. lib. i. cap. 9. together with the fair ddmfel's anfwer.
Alc. I fain to Sappho would a wifh impart, But fear locks up the fecret in ny heart.
Sap. Thy downcaft looks, refpect, and timid air, Too plain the nature of thy wilh declare. If lawlefs, wild, inordinate defire, Did not with thoughts impure thy bofom fire, Thy tongue and eyes, by innocence made bold, Ere now the fecret of thy foul had told.
M. la Fevre cbferves, that Sappho was not in her ufual good-humour when the gave fo cold an anfwer to a requeft, for which, at another time, perhaps fhe would not have waited. It has been thought, too, that Anacreon was one of her lovers, and his editor Barnes has taken fome pains to prove it : but chronology will not admit this; fince, upon inquiry, it will be found that Sappho was probably dead before Anacreon was torn. Of the numerons poems this lady wrote, there is nothing remaining but fome fmall fray. ments, which the ancient fcholiafts have cited; a hymn to Venus, preferved by Dionyfius of Halicarnalfus; and an ode to one of her miftreffes $\dagger$ : which laft piece con- $\dagger$ Sec $\mathbf{P}$.n. firms a tradition delivered down from antiquity, that her ry $\mathrm{n}^{\circ} \times 22$ amorous paffion extended even to perfons of her own fex, and that fhe was willing to have her miftreffes as well as her gallants.

Ovid introduces her making a facrifice to Phaon, one of her male paramours; from which we learn, that Sappho's love for her own fex did not keep her from loving ours. She fell defperately in love with Plann. and did all fhe could to win him ; but in vain : upon which fhe threw herfelf headlong from a rock, and died. It is faid that Sappho could not forbear following Phaon into Sicily, whither he retired that he might not fee her; and that during her flay in that ifland fle probably compofed the hymn to Venus, fill extant, in which the begs fo ardently the affiftance of that goddefs. Her prayers, however, proved ineffectual: Phaon was cruel to the laft degree. The unfortunate Sappho was forced to take the dreadful leap; fhe went th the pro. montory Leucas, and threw berfelf into the fea. The cruelty of Phaon will not furprife us fo much, if we reflect, that fhe was a widow (for the had been married to a rich man in the ifle of Andros, by whom thi had a daughter, named Cleis); that he liad never been hand. 40
fome;
S.ratond II
Biraguifa.
fome; that foe had obferved no meature in her paffion to both fexes; and that Phaon had long known all her charms. She was, however, a very great wit, and for that alone deferves to be remembered. The Mitylenians held her merit in fuch high efteem, that they paid her luvereign honours after her death, and Atamped their money with her image. The Romans afterwards erected a noble fatue of porphyry to her ; and in fhort, ancients as well as moderns have done honour to her memory. Voffius fays, that none of the Greek poets excelled Sappho for fweetnefs of verfe; and that the made Archilochus the model of her ftyle, but at the fame time took care to foften the feverity of his expreffion. It mult be granted, fays Rapin, from what is left us of Sappho, that Longinus had great reafon to extol the admirable genius of this woman; for there is in what remains of her fomething delicate, harmonious, and impaffioned to the laft degree.

SARABAND, a mufical compofition in the triple time, the motions of which are flow and ferious.

Saraband is alfo a dance to the fame meafure, which ufually terminates when the hand that beats the time falls; and is otherwife much the fame as the minuet.

The faraband is faid to be originally derived from the Saracens, and is ufually danced to the found of the guitar or caltanettes.

SARACA, in botany; a genus of the hexandria order, belonging to the diadelphia clafs of plants.-There is no calyx: the corolla is funnel-haped and quadrifid; the filaments are on each fide the throat of the corolla; the legumen is pedicellated.

SARACENS, the inhabitants of Arabia; fo called from the word fara, which fignifies a defert, as the greatelt part of Arabia is ; and this being the country of Mahomet, his difciples were called Saracens.

SARAGOSSA, a city of Spain, in the kingdom of Arragon, with an archbifhop's fee, an univerfity, and a court of inquifition. It is faid to have been built by the Phonicians ; and the Romans fent a colony here in the reign of the emperor Augultus, whence it had the 1lame of Cefar Auguftus, which by corruption has been changed into Saragoffa. It is a large, handfome, and well-built town. The ftreets are long, broad, well-paved, and very clean, and the houfes from three to fix fories high. It is adorned with many magnificent buildings; and they rection in large churches, and $i 4$ handfome monafteries, not to mention others lefs confiderable. The river Ebro runs acrofs the place, dividing it into two ; and on its banks is a handfome quay, which ferves for a public walk. The Holy-ftreet is the largeft, and fo broad that it may be taken for a fquare; and here they have their bull-fights: in this ftreet there are feveral noblemen's families, particularly that of the viceroy. The convents are handfome and richly adorned, as well as the churches. The cathedral church is a fpacious. building, after the Gothic talte; but the finelt church is that of Nueftra Signora del Pilar, feated on the fide of the Ebro, and is a place of the greatelt devotion in Spain. They tell us the Virgin appeared to St James, who was preaching the gofpel, and left him her image, with a handfome pilar of jafper : it is ftill in this chuich which they pretend is the firlt in the world built to her honour. This image Atands on a marble plar, with a little Jefus in her arms; but the place is fo dark, that it camot be feen without the affifance of
lamps, which are 50 in number, and all of filver. Sarmne There are alfo chandeliers and baluftrades of maffy filver. The ornaments of this image are the richeft that can be imagined, her crown being full of precious fones of an ineftimable price; in fhort, there is fcarce any thing to be feen but gold and jewels, and a vaft number of people come in pilgrimage hither. The town-houfe is a fumptuous itructure, adorned with fine columns : in the hall are the pictures of all the kings of Arragon; and in a corner of it St George on horfeback, with a dragon of white marble under him. It is feated in a very large plain, where the Ebro receives two other rivers; and over it are two bridges, one of ftone and the other of wood, which laft has been thought the moft beautiful in Europe. A vietory was obtained here over the French and Spaniards in 1710, but it was abandoned by the allies foon after. It is 97 miles welt by north of Tarragona, 137 welt of Barcelona, and 150 north-eaft of Madrid. W. Long. 0.48. N. Lat. 41. 47.

SARANNE. See Lilium.
SARCASM, in rhetoric, a keen bitter expreffion which has the true point of fatire, by which the orator fcoffs and infults his enemy : fuch as that of the Jews, to our Saviour ; "He faved others, himelf he cannot fave."

SARCOCELE, in furgery, a fpuricus rupture or hernia, wherein the tefticle is confiderably turrefied or indurated, like a fcirrhous, or much enlaged by a flefhy excrefcence, which is frequently attended with acute pains, fo as to degenerate at latt into a cancerous. difpofition. See Surgery.

SARCOCOLLA, a concrete juice brought from Perfia and Arabia, in fmall whitifh-yellow grains, with. a few of a reddifh and fometimes of a deep red coluurmixed with them ; the whitelt tears are preferred, as. being the frefheft : its tafte is bitter, accompanied with. a dull kind of fweetnefs. This drug diffolves in watery liquors, and appeans chiefly to be of the gummy kind, with a fmall admixture of refinous matter. It is principally celebrated for conglutinating wounds and ulcers (whence its name oaproro $\lambda \lambda a$ fle $\beta$-glue); ; quality which; xeither this nor any other drag has any jult title to.
SARCOLOGY, is that part of anatomy which treats of the foft parts, vir. the muscles, inteftines, arteries, veins, nerves, and fat.

SARCOMA, in furgery, denotes any flehy excref: cence.

SARCOPHAGUS, in antiquity, a fort of fone coffin or grave, wherein the ancients laid thofe they had not a mind to burn.

The word, as derived from the Greek, literally fignifies fle $/ h$-eaten ; becaufe at firt they ufed a fort of fone for the making of tombs, which quickly confumed the: bodies. See the following article.

Sarcophagus, or Lapis Affus, in the natural hift:ry of the ancients, a flone much ufed among the Greeks in their fculptures, is recorded to have always. perfectly confumed the fleth of human bodies buried. in it in forty days. This property it was much famed for, and all the ancient naturalifts mention it. There was another very fingular quality allo in it, but whether in all, or only in fome peculiar pieces of it, is not known: that is, its turning into fone any thingthat was put into veffels made of it. This is recorded

## Sarcophu- <br> $\underbrace{\text { gus. }}$

Sarcopha- only by Mutianus and Theophraltus, except that Pliny had copied it from thefe authors, and fome of the later writers on thefe fubjects from him. The account Matianus gives of it is, that it converted into fone the Thoes of perfons buried in it, as allo the utenfils which it was in fome places cuftomary to bury with the dead, particularly thofe which the perfon while living moft delighted in. The utenfils this author mentions, are fuch as mult havebeen made of very different materitls; and hence it appears that this fone had a power of confuming not only flef but that its petrifying qua'ity extended to fubftances of very diffe eat kinds. Whether cver it really poffeffed this latt qual!ty has been much doubted; and many, from the feeming improbability of it, have been afraid to record it. What has much encouraged the general difbeiief of it is, Mutianus's account of its taking place on fubitances of very different kinds and texturts; but this is no real objection, and the whole account has probably truth in it. Petrifactions in thofe early days might not be diftinguifhed from incruflations ( $f$ fparry and fony matter on the furfaces o. bodies only, as we find they are not with the general ty of the wor'd even to this day; the incrultations of fpar on moffes and other fubltances in fome of our fprings, bing at this time called by many petrified $m \cdot / s$, \&c. and incrultations like thefe might eatly be formed on fubflances enclofed in veffels made of this tone, by water paffing through its pirss, diflodging from the common mars of the fote, and carrying with it particles of fuch fpar as it contained; and afterwards falling in repeated drops on whatev.r lay in its way, it might again depofit them onefuch fubltances in form of incruftations. By this means, things made of ever fo different matter, which happened to be inclofed, and in the way of the paffage of the witer, would be equally incrufted with and in appearance turned int, Itone, without regurd to the different configuration of their pores and parts.

The place from whence the ancients tell us they had this ftone was Affos, a city of Lycia, in the neighbourhood of which it was dug; and De Boot informs us, that in that country, and in fome parts of the Ealt, there are alfo fones of this kind, which, if tied to the bodies of living perfons, would in the fame manner confume their flefl. Hill's Notes on Theophraftus, p. 14 .

SARCOTICS, in furgery, medicines which are fuppofed to generate flefh in wounds.

SARDANAPALUS, the laft king of Affyria, whofe character is one of the moft infamous in hiftory. He is faid to have funk fo far in depravity, that, as far as he could, he changed his very fex and nature. He clothed himfelf as a woman, and fpun amid!t companies of his concubines. He painted his face, and behaved in a more lewd manner than the moft lafcivious harlot. In fhort, he buried himfelf in the moft unbounded fenfuality, quite regardlefs of fex and the dictates of nature. Having grown odious to all his fubjects, a rebellion was formed againlt him by Arbaces the Mede and Belefis the Babylonian. They were attended, however, with very bad fuccefs at firft, being defeated with great flaughter in three pitched battles. With great difficulty Belefis prevailed upon his men to keep the field only five days longer ; when they were joined by the Bactrians, wh had come to the affiftance of Sardanapalus, but
had been prevailed upin to renounce their allegiance to Sardiais: him. With this reinforcement they twice defeated the troops of Sardanapalus, who thut himfelf up in Nineveh the capital of his empire. The city beld out fur three years; at the end of which, Sardanapalus finding himfelf unible to hold out any longer, and dreading to fall into the hands of an enraged enemy, retired into his palace, in a court of which he caufed a vaft pile of wood to be raifed; and heaping upon it all his gold and filver, and royal apparel, and at the fame time inclofin: his eunuchs and concubines in an apartment within the pile, he fet fire to it, and fo dettroyed himfelf and all together.

SARDINIA, an ifland of the Mediterranean, bounded by the flrait which divides it from Corfica on the north; by the Tufcan fea, which flows between this illand and Italy, on the ealt; and by other parts of the Mediterranean fea on the fouth and welt. It is about I 40 miles in length and 70 in breadth, and cont inins 420,000 inhabitants. The revenue arifes chiefly from a duty upon falt, and is barely fufficient to defray the expences of government ; but it certainly might be confiderably augmented, as the foil produces wine, corn, and onl, in abundance. Moft of the falt that is exported is taken by the Danes and Swedes; the Englifh formerly tonk great quantities for Newfound and, but having found it more convenient to procure it from Spain and Portugal, they now take little or nen:. A profitable tunny filhery is curried on at the fouth-weft part of the inland, but it is menopolized by the Duke $\mathrm{d}=\mathrm{St}$ Pierre, and a few $m$ re people, who happen to be proprietors of the a 1 j , ining la d . Wild boars abound in the tilly parts of the ifland, and here are fome few deer, not fo large as thofe in Britain, but in colour and make exactly the fame. Beeves and theep are alfo common, as well as horfes.

The feudal fyltem fill fubfits in a limited degree, and titles go with their eftates, fo that the purchafer of the latter inherits the former. The regular troops feldom exceed 2000 men; but the militia amount to near 26,000, of whom 11,000 are cavalry. Their horfes are fmall, but uncommonly active. It would be more eafy to beat them in a charge than to overtake them in a march. The country people are generally armed; but notwithltanding their having been fo long under the Spanifh and Italian government, affaffinations are by no means frequent; and yet by the laws of the country, if a man ftabs annther without premeditated malice, within four hours after quarrelling with him, he is not liable to be hanged. On the other hand, the church affords no protection to the guilty. The Sardinians are not at all bigoted; and, next to the Spaniards, the Englifh are their favourites. The whole ifland is fubject to the Duke of Savoy, who enjoys the title of king of Sirdinia. See Cagliari.

There is in this ifland a pleafing variety of hills and valleys, and the foil is generally fruitful; but the inhabitants are a very flothful generation, and cultivate but a little part of $i$. On the coalt there is a filhery of anchovies and coral, of which they fend large quantities to Genoa and Leghorn. This ifland is divided into two parts ; the one, called Capo di Cagliar i, lies to the fouth; and the other Capo-di-Lugary, whic $h$ is feated to the north. The principal towns are Cagliari the capital, Oriltagno, and Saffari.

SARDIS,

## Suther-

 land's Tour up the Straits.Safdis

SARDIS, or Sardes, now called Sardo or Sart, is an ancient town of Natolia in Alia, about 40 miles eaft of Smyrna. It was much celebrated in early antiquity, w:us enriched by the fertility of the foil, and had been the capital of the Lydian kings. It was feated on the fide of mount Tmolus; and the citadel, placed on a lofty hill, was remarkable for its great frength. It was the feat of king Croctus, and was in his time taken by Cyrus; after which the Ferfian fatrapas or commandant refided at Sardis as the emperor did at Sufa. The city was alfo taken, burnt, and then evacuated by the Milefians in the time of Darius, and the city and fortrefs furrendered on the approach of Alexander after the battle of Granicus. Under the Romans Sardis was a very confiderable place till the time of Tiberius $\mathrm{Cx}-$ far, when it fuffered prodigioully by an earthquake. 'The munificence of the emperor, however, was nobly tierted to repair the various damages it then fuftained. Julian attempted to reftore the heathen worlhip in the place. He erefted temporary altars where none had been left, and repaired the temples if any veltiges remained. In the year 400 it was plundered by the Goths, and it fuffered confiderably in the fubfequent troubles of Afia. On the incurfion of the Tartars in 1304, the Turks were permitted to occupy a portion of the citadel, feparated by a ftrong wall with a gate, and were afterwards murdered in their fleep. The fite of this once noble city is now green and flowery, the whole being reduced to a poor village, containing nothing but wretched huts. There are, however, fome carious remains of antiquity about it, and fome ruins which difplay its ancient grandeur. See Chandler's Travels in Afia Minor, p. 251, \&c.

There is in the place a large caravanfary, where travellers may commodiouly lodge. The inhabitants are generally fhepherds, who lead their fheep into the fine paftures of the neighbourisg plain. The Turks have a mofque here, which was a Chriftian church, at the gate of which there are feveral columns of polifhed marble. There are a few Chriftians, who are employed in gardening. E. Long. 28.5. N. Lat. $37.5^{1}$.

SARDONIUS risus, Sardonian Laugbter, A convulfive involuntary laughter; thus named from the herba fardonia, which is a pecies of ranunctilus, and is faid to produce fuch convulive motions in the cheeks as refemble thofe motions w. ich are obferved in the face during a it of laughter. This complaint is fometimes fopecilily tatal. If the ranunculus happens to be the caufe, the cure mult be attempted by means of a vomit, and frequent draughts of hydrom -1 with milk.

SARDONYX, a preciu us fone confilting of a mixture of the chalced ny and carneifan, fomet imes in ftrata, but at other times blended together. It is found, 1 . Striped with white and red frata, which may be cut in (arne) as well as the onyx. 2. White with red dentritical figures, greatly reicmbling the mocha-ftone; but with thits difference, that the figures in the fardonyx are of a red colour, in the other black. There is no real difference, exepting in the circumftance of hardnefs, between the onyx, carnelian, clalced,ny, fardonyx, and agate, notwithilanding the different names beftowed upen them. Mongez informs us, that the yellow, or crange-coloured agates, with a wary or undulating furface, are now commuily called fardonyx. See Car. mebine and Onyx.

SARGUS, in ichthyology. See Sparus. SARIMPATAM, a country of Indoftan, lying at the back of the dominions of the Samorin of Malabar, and which, as far as we know, was never fubdued by any foreign power. Mr Grofe relates, that "it has been conftantly a maxim with the inhabitants of this country never to make any but a defenfive war ; and even then, not to kill any of their adverfaries in battle, but to cut off their nofes. To this fervice the military were peculiarly trained up, and the dread of the deformity proved fufficiently ftrong to keep their neighbours, not much more martial than themfelves, from effectually attacking them."

SARMENTOSA (from farmentum, a long fhoot like that of a vine) ; the name of the 1 th clafs in Linneu's's Fragments of a Natural Method, confifting of plants which have climbing ftems and branches, that, like the vine, attach themfelves to the bodies in their neighbourhood for the purpofe of fupport. . See Botany, p. 459.

SAROTHRA, in botany: A genus of the trigynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 2oth order, Rotacea. The corolla is pentapetalous; the capfule unilocular, trivalved, and coloured.

SARPLAR of Wool, a quantity of wool, otherwife called a pocket or balf fack; a fack containing 80 tod; a tod two fone; and a ftone 14 pounds.In Scotland it is called farpliath, and contains 80 ftone. SARRACONIA, in botany: A genus of the monogynia order, belonging to the polyandria clafs of plants; and in the natural method ranking under the $54^{\text {th }}$ order Mijecellanea. The corolla is pentapetalous; the calyx is double, and triphyllous below ; pentaphyllous above; the capfule quinquelocular ; the ftyle has a ftigma of the form of a fhield.

SARSAPARILLA, in botany. See Smilax.
SARTORIUS, in Anatomy. See there, Table of the Mufcles.

Old SARUM, in Wilrs, about one mile north of New Sarum or Salifbury, has the ruins of a fort which belonged to the ancient Britons; and is faid alfo to have been one of the Roman ftations. Ii has a double intrenchment, with a deep ditch. It is of an orbicular form, and has a very augult look, being erected on one of the moft elegant plans for a fortrefs that can be imagined. In the north-weft angle ftood the palace of the bithop, whofe fee was removed hither from Wilton and Sherborn; but the biftop quarrelling with King Stephen, he feized the caltle and put a garrifon into it, which was the principal caufe of its deftruction, as the fee was foon after remeved from hence to Salifbury in 1219. The area of this ancient city is fituated on an artificial hill, whofe walls were three yards thick, the ruins of which in many places in the circumterence are ftill to be feen, and the tracks of the fireets and cathedral church may be traced out by the different colour of the corn growing where once the city ftood. Here fynods and pariliaments have formerly been held, and hither were the ftates of the kingdom fummoned to fwear fidelity to William the Conqueror. Here alfo was a palace of the Britifh and Saxon kings, and of the Ror man emperors; which was deferted in the reign of Henry III. for want of water, fo that one farm-houfe is al that is left of this aucient city ; yet it is called the $B O$ -
rough of Old Sarum, and fends two members to parliament, who are chofen by the proprietors of certain adSatellite. jacent lands.

In February 1795 a fubterraneous paffage was difo. vered at this place, of which we have the following account in the Gentleman's Magazine for March, in a letter dated Salifbury, Feb. io. "Some perfons of Salifbury on Saturday laft went to the upper verge of the fortification (the citadel), and on the right-hand, after they had reached the fummit, difcovered a large hole. They got a candle and lantern, and went down a flight of fteps for more than 30 yards. It was an arched way feven feet wide, neatly chiffeled out of the folid rock or chalk. It is probable the crown of the arch gave way from the fudden thaw, and fell in. There is a great deal of rubbih at the entrance. It appears to be between fix and feven feet high, and a circular arch overhead all the way. Thefe particulars I learned from the perfon who himfelf explored it, but was afraid to go far!.'er left it might fall in again and bury him. He thinks it turns a little to the right towards Old Sarum houle, and cortinues under the foffe till it reached the outer verge. The marks of a chiffel, he fiys, are vifible on the fide. There are two large pillars of fquaretone at the entrance, which appear to have had a door at foot. They are 18 inches by 27 , of good free-ftone, and the mafon-work is extremely neat. The highelt part of the archway is two feet below the furface of the ground.
" It is all now again filled up by order of farmer Whitchurch, who rents the ground of Lord Camelford, and thinks curiofity would bring fo many people there as to tread down his grais whenever grafs thall be there. I went into it 30 yards, which was as far as I could get for the rubbilh. I meafured it with a lin', and found it extend full izo feet inwards from the two pillars fuppofed to be the entrance; then onwards it appeared to be filled to the roof with rubbill. By nreafuring with the fime line on the furface of the earth, I found it mult gó under the bottom of the outer bank of the outer trench; where I think the opening may be found by digging a very little widy. Whether it was a Roman or a Norman work it is difficult to fay ; but it certainly was intended as a pivate way to go into or out of the cafle ; and probably a fort or ftrong caftle was built over the outer entrance. I looked for inicriptions or coins, but have not heard of any being founl."

## BASSAFRAS. See Laurus.

Bisiles, in miltary drefs, are badges of dilinction worn by the oficers of moft nations, either round their wain or over tacir fhoulders. Thofe for the Britith army are made of crimfon filk ; fur the Imperial aimy crimion and goid; for the Pruffian army black filk and filver ; the Hanoverians yellow filk; the Portuguefe crimfon filk with blue taffels.
SASINE, or SEisin. See Law, No clxiv. $1_{5}$, sic.

SASSA. See Mrrrh, Opocalpisum, and Bruee's Travels, Vol. V. p. $2_{7}$, íc.

SATAN, a n. mie very common in Scripture, means the devil or chief of the fallen angels. See Devil.

SATELLITE, in aftronomy, the fame with a fecondary flanet or rioven.

SATIRE. See Satyr.
SATrapa, or Satrapes, in Perfian antiquity, denotes an admiral ; but more commonly the governor of a province.

SATTIN, a gloffy kind of filk fuff, the warp of which is very fine, and fands fo as to cover the coarfer woof.
SATTINET, a flight thin kind of fattin, commonly ftriped, and ordinarily ufed by the ladies for fummer night-gowns.
SATURANTS, in anatomy, the fame with Absorbents.
SATURATION, in chemifry, is the impregnating an acid with an alkali, or vice wirfa, till either will receive no more, and the mixture will then becone neutral.

SATURDAY, the feventh and laft day of the week, fo called from the idol Seater, worthipped on this day by the ancient Saxons, and thought to be the fame as the Saturn of the Latins.
SATUREIA, sarory, in botany: A genus of the gymnofpermia order, belonging to the didynamia cldis of plants; and in the natural method ranking under the 42d order, Verticillata. The fegments of the corolla are nearly equal ; the flamina ftanding afunder.
Species. 1. The hortenfis, or fummer favory, is an annual plant, which grows naturally in the fouth of France and Italy, but is cultivated in many places both for the kitchen and medicinal ufe. 2. The montana, or winter favory, is a perennial plant growing naturally in the fouth of France and Italy, but is cultivated in gardens both for culinary and medicinal purpofes.

Cullure. Both kinds are propogated by feeds. Thore of the firt kind fhould be fown in the beginning of April upon a bed of light earth, either where they are to zemain, or for tranfplanting. If the plants are to ftand unremoved, they fhould, be fown thinly; but if they are to be tranfplanted, they may be fown clofer. The fecond fpecies may be fowr: upon a poor dry foil, where the plants will endure the fevereft winters, though they are often killed by the froft when planted in good ground. The plants will continue feveral years ; but when they atcold, the fhoots will be fhort and not fo well furnithed with leaves: it will therefore be proper to rafife a cupply of young plants every year.

Uffes. Summer favory is a very warm pungeat aromatic; and affurds in difillation with water a lubtile effemial oil, of a penetrating fmell, and very hot acrid tatte. It yislds litile of its virtues by infufion to aqueous liquors; rcciified fpirit extracts the whole of its taile and fmell, and elevates nothing in diffillatior.

SATURN, in aftronomy, one of the rlanets of our folar fyitem, revolving at the diftance of nore tian 900 millions of miles from the fun. See Astronomy, $\mathrm{n}^{\circ} 31,1 \mathrm{IC}_{4}-109$, 191, and 269.

Dr Hufthl, who has fo much fignalized himf lf by his difcoveries in the ceieflial region, has not cmitted to make his offiveations on this planet, which he confiders as one of the molt e.gaging objects that altroncmy offers to our view. His attention was firt drawn to it in the year 1774, when he faw i's ring refem: ling in ap. pearance a marrow line, extending on both fides not much lefs than the dameter of the planet's difl. Tae obfervaicion was talen with a five und an half feet reHict r

Hictor on the 17 th of March; and on the. 3 d of April, the fame year, when the planet appeared totally deprived of this noble appendage, by ration of the edge of the ring being then turned direstly towards the earth, and invifible on account of its thinners. or incapacity to reflect the light to fuch a d:Atance. During the fucceeding "year, the ring appeared gradually opened, and at laft affumed the thape of an ellipfe. "It thould be noticed (fiys he), that the black difk or belt upon the ring of Saturn is not in the midde of its breadth. Nor is the ring fubdivided by many fuch lines, as has been reprefented in feveral treatifes of aftronomy ; but that there is one fingle, dark, confiderably broad line, belt, or zone, upon the ring, which I have always permanently found in the place where my figure reprefents it."

This zone, which is on the northern part of the ring, does not change its fhape or cclour like the belts of Jupiter, fo that it is probably owing to fome permanent projection. It cannot, however, be the fhadow of a chain of mountains, as it is vifible all round the ring; and there could be no fhades vilible at the ends of the anfre, on account of the direction of the fun's illumination, which would be in the line of the chain; and the fuppofed argument will hold good againft the fuppofition of caverns or concavities. It is likewife evident, that this dark zone is contained between two concentric circles, as all the phenomena anfwer to the projection of fuch a zone. The Doctor gives a figure, reprefenting the planet as it appeared to him on the roth of May 1780; whence we fee that the zone is continued all the way round, with a gradual decreafe towards the middle, anfwering to the appearance of a narrow circular plane projected into an ellipfis. See Philofoph. Tranf. for 1790, p. $3 . \& c$.

It hath been conjectured, that this appearance is owing to a divifion of the ring, or rather that there are two rings about the planet; "tt (fays Dr Herfchel) if one ring, of a breadth fo confiderable as that of Saturn, is juftly to be efteemea the mof wonderful arch that by the laws of gravity can be held together, how improbable mult it appear to fuppofe it fubdivided into narrow lips of rings, which by this feparation will be deprived of a fufficient depth, and thus lofe the only dimenfion which can keep them from falling upon the planet? It is true, indeed, that it may revolve with fuch velocity as greatly to affift its frength, and that in the fubdivifions, of courfe, the different velocities for each divifion may be equally fuppofed to keep them up."

As to the fubftance of the ring, the Doctor fuppofes it to be no lefs folid than that of Saturn himfelf. Thus in the two figures given with the Doctor's Differtation in the Philofophical Tranfactions above referred to, the thadow of the planet is delineated upon the ring as it actually appeared, according to the fituation of the fun; and in like manner we will fee the fhadow of the ring upon the planet: and if we deduce the quantity of matter contained in the planet from the power by which the fatellites are preferved in their orbiss, the ring muft allo be taken into account. It is indeed evident that the ing exerts a very confiderable force upon thefe bodies, fince we find them affected with many irregularities in their motions, which we cannot properly afcribe to any other caufe than the quanticy of matter contained in the ring; or, at lealt, it ought to be allowed to have a proper fhare in producing them.

The ring feems to be endowed with a greater reflec. Saturn. tive power than the body of the planet; and the Doctor gives intances of his feeing part of the ring brighter than Saturn himfelf, as well as of his feeing it plainly through a telefcope which could fcarcely affurd light enourch for the planet. The molt remarkable property of this 'wonderful ring, however, is its extreme thinnefs. "When we were nearly in the plane of the rins" (fays our author), I have repeatedly feen the firf, fecond, and third fatellites, nay even the fiath and feventh, pafs before and behind the ring in fuch a manner that they ferved as excellent micrometers to eftimate its thicknefs. It may be proper to mention a few inftances, efpecially as they will ferve to folve fome phenomena that have been remarked by other altronomers, though they have not been accounted for in a manner confiltently wich other known facts. July 18th 1789 , at $19^{h} 4 I^{\prime} 9^{\prime \prime}$, fidereal time, the firlt fatellite feemed to hang upon the following arm, declining a little towards the north, and I faw it gradually advance upon it towards the body of Saturn; but the ring was not f thick as the lucid point. July 23 d , at $19^{h} 4 \mathrm{I}^{\prime} 8^{\prime \prime}$; the fecond fatellite was a very little preceding the ring; but the ring appeared to be leis than half the thicknefo of the fatellite. July 27 th, at $20^{\text {h }} 15^{\prime} 12^{\prime \prime}$, the fecond fatellite was about the middle, upon the following arm of the ring, and towards the fouth; and the fixth fatellite on the farther end towards the north; but the arm was thinner than either of them. Aug. 29th, at $\mathbf{2 2}^{\text {h }} 12^{\prime} 55^{\prime \prime}$, the third fatelite was upon the ring, near the ead of the preceding $a^{2} \mathrm{~m}$, when the latter feemed not to be the fourth, or at molt the third part of the diameter of the fatellite ; which, in the fituation it was, I took to be lefs than one fingle fecond in diameter. At the fame time, I alfo faw the feventh fatulite following the third, at a little diftance, in the fhape of a bead upon a thread, projecting on both fides of the fame arm. Hence alfe we are fure that the arm appeared thinner than the feventh fatellite, which is confiderably fmaller than the fixth, which again is lefs than the firft. Augult 3 Ift , at $20^{h} 48^{\prime} 26$ II, the pre. ceding arm was loaded about the middle with the third fatellite. October 15 th, at $0^{\text {h }} 43^{\prime} 44^{\prime \prime}$, I faw the fixth fatellite, without obitruction, about the middle of the preceding arm, though the ring was but barely vifible with my 40 feet reflector, even while the planet was in the meridian. However, we were then a little inclined to the plane of the ring, and the third fatellite, when it came near its conjunction with the firf, was fo fituated, that it muit have partly covered it a few minutes after I loft it behind my houfe. In all thefe obfervations, the ring did noc in the leaft interfere with my view of the fatellites. October 16th, I followed the fixth and feventh fatellites up to the very difk of the planet; and the ring, which was extremely faint, did not in the lealt obftruct my feeing them gradually approach the dilk, where the feventh vanifhed at $2 \mathrm{I}^{\mathrm{h}} 4^{6}$ $44^{\prime \prime}$, and the fixth at $22^{\text {h }} 36^{\prime} 44^{\prime \prime}$. There is, however, fome fulpicion, that by a refraction through fome very rare atmofphere on the two planes of the ring, the fatellites might be lifted up and depreffed fo as to become vifible on both fides of the ring, even though the latter Should be equal in thicknefs to the diameter of the fmalleft fatellite, which may amount to 1000 miles.As for the arguments of its incredible thinnefs, which
fume

## $S A T$

Saturn. aftronomers have brought from the fhort time of being invifible when the earth paffes through its plane, we cannot fet much value upon them; for they mult have fuppofed the edge of the ring, as they have alro reprefented it in their figures, to be fquare; but there is the greatelt reafon to fuppofe it either fpherical or fpheroidal; in which cafe evidently the ring cannot dif. appear for any long time. Nay I may venture to fay, that the ring cannot poflibly difappear, on account of its thinnefs; fince, either from the edge or the fides, even if it were fquare on the corners, it muft always expofe to our fight fome part which is illuminated by the rays of the fun; and that this is plainly the cafe we may conclude from its being vifible in my telefcopes during the time when others of lefs light had lof it ; and when evidently we were turned towards the unenlightered fide, fo that we mult either fee the rounding fide of the unenlightened edge, or elfe the reflection of the light of Saturn upon the fide of the darkened ring, as we fee the reflected light of the earth on the darkened part of the new moon. I will not however, take upon me to decide which of the two may be the cafe, efpecially as there are other very ftrong reafons which induce us to think that the edge of the ring is of fuch a nature as not to reflect much light."

Several aftronomers have fuppofed that the ring of Saturn is full of mountains and inequalities, like the moon; and of this opinion Dr Herfchel himfelf was for a confiderable time, till happening to obferve one of thefe lucid points with attention for a confiderable time, he faw it leave the ring altogether, and fhow itfelf as a fatellite never before obferved. With regard to the ring itfelf, he concludes his obfervations in thefe words: "Upon the whole, therefore, I cannot fay that I had any one inltance that could induce me to believe that the ring was not of one uniform thicknefs; that is, equally thick at equal diftances from the centre, and of an equal diameter throughout the whole of its conftruction. The idea of protuberant points upon the ring of Saturn, indeed, is of itfelf fufficient to render their exiftence inadmiffible, when we confider the enormous tize which fuch points ought to be of to render them vifible at the diftance we are from that planet.

With regard to the fatellites, the Doctor informs us, that he was long convinced of the exiftence of a fixth; and had he been more at leifure at the time of his difcovering thofe of the Georgium Sidus, he would probably have completed the difcovery of the fatellites of Saturn alfo. The fixth was firf obferved diftintlly on the 28 th of Augult ${ }_{17} 89$, and the feventh on the 17 th of September the fame year. Thefe fatellites, however, do not occupy the place which we fhould have previoully fuppofed them, being, in fact, the innermoft of the whole. The feventh is next the body of the planet itfelf, and is very fmall. It revolves at the diftance of 27.1366 from the centre of Saturn, and feems to move exactly in the plane of the ring; but the Doctor obferves, that it is exceedingly difficult to make a fufficient number of obfervations on it to determine the revolution exactly. He computes its periodical time at $22^{\mathrm{h}} 40^{\prime} 4^{6 \prime}$. The fixth fatellite is next to the feventh, and revolves at the diftance of $35^{\prime \prime} .058$ from the centre of its primary in $I^{\text {d }} 8^{\text {it }} 53^{\circ} 9^{\prime \prime}$. Its light is confiderably frong, but not equal to that of the firf fatellite of former aftronomers, which lies immediately beyond it.

The planet Saturn is now obferved to have belts or S.turr. falcix upon its difk as diftinctly as Jupiter. Dr Herfhel, on the $9^{\text {th }}$ of April 1775, obferved a northen belt on his body, inclined a little to the line of the ring. On the ift of May ${ }^{1776}$, there was another belt $\mathrm{cb}-$ ferved, inclined abcut $15^{\circ}$ to the fame $\ln _{2}$ but more to the fouth; and on the fllowing fide came up to the place where the ring croffes the body of the plazet.On the 8th of April two belts were cberved, and thefe continued with variations, and fometimes the appearance of a third belt, till the 8 th of September, when the account of the obfervations was difcontinued. The Doctor remarks, that he generally obferved thefe belts in equatorial fituations, though fometimes it was otherwife. Two conclufions, he fays, may be drawn from the obfervations he made this year. "The firf, which relates to the changes in the appearance of the belts, is, that Saturn has probably a very confiderable atmofphere, in which thefe changes take place, jult as the alterations in the belts of fupiter have been fhewn with great probability to be in his atmofphere. This has al. fo been confirmed by other obfervations. Thus, in cccultations of Saturn's fatellites, I have found them to hang to the difk for a long while before they would vanifh. And though we ought to make fome allowance. for the encroachment of light, whereby a fatellite is feen to reach up to the difk fonner than it actually does, yet without a confiderable refraction it could bardly be kept fo long in view after the apparent contact. The time of hanging upon the difk in the feventh fatellite has actually amounted to 20 minutes. Now, as its quick motion during that interval carries it through an arch of near fix degrees, we find that this would denote a fraction of about two feconds, provided the encroaching of light had no thare in producing the ef. fect. By an obfervation of the firth fatellite, the refraction of Saturn's atmefphere amounts to nearly the fame quantity; for this fatellite remained about 14 or 15 minutes longer in view than it flrculd have done; and as it moves about $2 \frac{3}{7}$ degrees in that time, and its o:bit is larger than that of the feventh, the difference is. inconfiderable. The next inference we may draw from the appearance of the belts on Saturn is, that this planet turns upon an axis which is perpendicular to his ring. The arrangement of the belts, during the courfe of 15 years that I have obferved them, has always followed the direction of the ring, which is what I have called being equatorial. Thus, as the ring opened, the belts began to advance towards the fout , and to fhow an incurvature anfwering to the projection of an equatorial line, or to a parallel of the fame. When the: ring clofed up, they returned towards the north, and are now, while the ring paffes over the centre, exactly ranging with the fhadow of it, on the body, generally one on each fide, with a white belt clofe to it. When I fay that the belts have always been equatorial, I pafs. over trifling exceptions, which certainly were owing to local caufes. The ftep from equatorial belts to a rotation on an axis is fo eafy, and, in the cafe of Jupiter, fo well afcertained, that I fhall not hefitate to take the: lame confequence for granted here. But if there could remain a doubt, the cblervations of June 19 th , 20 th, and $21 \mathrm{ft}, 1780$, where the fame fpot upon one of the belts was feen in three different fituations, would remove it completely."
siturn. $\underbrace{\text { Sturn. }}$

Another evidence that Saturn, as well as the other planets, revolves upon its axis, is drawn from its flattened hape, like that of Mars, Jupiter, and Saturn. On the 31 it of May 1781 , the dilk feemed to deviate as much from a true circle as that of Jupiter, though by the interference of the ring this could not be fo well determined as after an interval of eight years. On the 18th of Augult 1787, the difference between the equatorial and polar diameters was meafured, the mean of three obfervations of the former being $22^{\prime \prime} .8 \mathrm{I}$, of the latter 20".61. From thefe obfervations, it appears that the polar diameter of Saturn is to his equatorial diameter nearly as 10 to II; and that his axis is perpendicular to the plane of the ring.

In a fubfequent paper, the Doctor gives up his reafoning againtt fixed lucid points in the ring, in confequence of having frequently obferved them in fuch fitu. ations as could not by any means be accounted for by the fatellites. He even attempts to invalidate his own arguments abovementioned concerning the valt magnitude of the mountains neceffary to make them vifible at this diftance. "As obfervations (fays he) carefully made fhould always take the lead of theories, I fhall not be concerned if fuch lucid fots as I am now going to admit, fhould feem to contradict what has been faid in my laft paper concerning the idea of inequalities or protuberant points. We tray, however, remark, that a lucid and apparently protuberant point may exit without any great inequality in the ring. A vivid light, for inflance, will feem to project greatly beyond the limits of the body on which it is placed. If, therefore, the luminous places on the ring fhould be firh as proceed from very bright reflecting regions, or, which is more probable, owe their exiftence to the more fiacuating caufes of inherent fires acting with great vinience, we need not imagine the ring of Saturn to be very uneven or diforted, in order to prefent us with fuchappearances. In this fenfe of the word, then, we may fill oppofe the idea of protuberant points, fuch as would denote immenfe mountains of elevated furface.
"On comparing together feveral obfervations, a few trials fhew that the brighteft and beft obferved fpot agrees to a revolution of $10^{\text {h }} 32^{\prime} 15^{\prime \prime} \cdot 4$; and calculating its ditance from the centre of Saturn, on a fuppofition of its being a fatellite, we find it $17 \% .227$, which brings it upon the ring. It is therefore certain, that unlefs we fhould imagine the ring to be fufficiently fluid to allow a fatellite to revolve in it, or fuppofe a notch, groove, or divifion in the ring, to fuffer the fatellite to pals along, we ought to admit a revolution of the ring itfelf. The denfity of the ring, indeed, may be fuppofed to be very inconfiderable by thofe who imagine its light to be rather the effect of fome fhining Huid, like an aurora borealis, than a reflection from fome permanent fubltance ; but its drfapparition, in general, and in my telefcopes its faintnefs, when turned edgewife, are in no manner favourable to this idea.When we add alio, that this ring calts a deep fhadow upon the planct, is very fharply defined both in its outer and inner edge, and in brighenefs exceeds the planet itfelf, it feems to be almoft proved that its coniiltence cannot be lefs than the body of Saturn, and that confequently no degree of fluidity can be admitted fufficient to permit a revolving body to keep in motion for any length of time. A groove might afird a paf-
fage, efpecially as on a former occafion we hava already confidered the idea of a divided ring. A circumftance alfo which feems rather to favour this idea, is, that in fome obfervations a bright foot has been feen to project equaliy on both fides, as the fatellites have been obferved to do when they paffed the ring. But, on the other hand, we oughe to confider, that the fpot has often been obferved very near the end of the arms of Saturn's ring, and that the calculated diftance is confequently a little too fmall for fuch appearances, and ought to be 19 or 20 feconds at lealt. We fhould alto attend to the fize of the fpot, which feems to be variable: for it is hardly to be imagined that a fatellite, brighter than the fixth, and which could be feen with the moon nearly at fill, should fo ofien efape our notice in its frequent revolutions, unlefs it varied much in its apparent brightnefs. To this we mult add another argument drawn from the number of lucid fpots, which will not agree with the motion of one fatellite only; whereas, by admitting a revolution of the ting itfelf in $10^{\text {in }} 3^{2!} 15^{\prime \prime} \cdot 4$, and fuppofing all the fpots to adhere to the ring, and to fhare in the fame periodical return, provided they laft long enough to be feen many times, we fhall be able to give an ealy folution of all the remaining phenomena. See Phil. Tranf, 1790, p. 427.

Saturn, in chemiftry, an appellation giren to lead.

Saturn, in heraldry, denotes the black colour in blazoning the arms of fovereign princes.

Saturn, one of the principal of the Pagan deities, was the fon of Colus and Terra, and the father of Jupiter. He depofed and caftrated his father; and obliged his brother Titan to refign his crown to him, on condition of his bringing up none of his male iffue, that the fucceflion might at length devolve on him. For this purpofe he devoured all the fons he had by his wife Rhea or Cybele: but he bringing forth at one time Jupiter and Juno, the prefented the latter to her huband, and fent the boy to be nurfed on mount. Ida; when Saturn being informed of her having a fon, demanded the child; but in his lead his wife gave him a fone fwaddled up like an infant, which he inftantly fwallowed. Titan finding that Saturn had violated the contract he had made with him, put himfelf at the head of his children, and made war on his brother, and having made him and Cybele prifoners, confined them in Tartarus: but Jupiter being in the mean time grown up, raifed an army in Crete, went to his father's affiltance, defeated Titan, and reftored Sacurn to the throne. Some time after, Saturn being told that Jupiter intended to dethrone him, endeavoured to prevent it ; but the latter being informed of his intentions, depofed his father, and threw him into Tartarus. But Saturn efcaping from thence fed into Italy, where he was kindly received by Janus king of the country, who affociated him to the government : whence Italy obtained the name of Saturnia Tellus; as alfo that of Latium, from latio, "to lie hid." There Saturn by the wifdom and mildnefs of his government, is faid to bave produced the golden age.

Saturn is reprefented as an old man with four wings, armed with a fcythe; fometimes he is delineated under the figure of a ferpent with its tail in its mouth. This is emblematic of the feafons, which roll perpetually in the fome circle. . Sometimes alfo Saturn is painted
with

## S A T [ 665$] \quad$ S A V

Satumalia with a fand.glafs in his hand. The Greeks fay, that Il the fory of his mutilating his father and deftroying $\underbrace{\text { Satyavrata. }}$ his chiluren is an allegory, which fignifies, that Time devours the patt and prefert, and will alfo devour the future. The Romans, in honour of him, built a temple and ceiebrated a feitival, which they called Saturnalia. During this feftival no bufinefs or profeffion was allowed to be carried on except cookery; all diftinctions of rank cealed; flaves could fay what they pleafed to their malters with impunity; they could even rally them with their faults before their faces.

SATURNALIA, in Roman antiquity, a feltival obferved about the middle of December, in honour of the god Saturn, whom Lucan introduces giving an account of the ceremonies obferved on this occafion, thus. "During my whole reign, which latts but for one week, no public bufinefs is done; there is nothing but drinking, finging, playing, creating imaginary kings, placing fervants with their mafters at table, \&c. There fhall be no difputes, reproaches, \&c. but the rich and poor, matters and flaves, fhall be equal," \&c.

On this feltival the Romans facrificed bare-headed, contrary to their cuftom at other facrifices.

SATURNINE, an appellation given to perfons of a melancholy difpofition, as being fuppofed under the influence of the planet Saturn.

SATURNITE, a name given by Mr Kirwan to a new metallic fubftance, fuppofed to be difcovered by M. Monnet. It was met with in fome lead founderies at a place named Poulla ouen in Brittany; being feparated from the lead ore during its torrefaction. It refembles lead in colour, weight, folubility in acids and other properties, but differs from it in being more fufible, brittle, eafily fcorified and volatilized, and likewife not being mifcible with lead in fufion. Meffieurs Haffenfratz and Girond contended, that this faturnite was nothing but a compound of different fubitances, and accordingly gave an analyfis of it as confilting of lead, copper, iron, filver, and fulphur ; the proportions of which mult naturally vary according to the quality of the ore put into the furnace. M. Monnet, however, infifted that the fubftance analyfed by them was not that which he had difcovered; but when he again vifited the mines abovementioned, he could meet with none of the fubftance there which he found before.

SATYAVRATA, or Menu, in Indian mythology, is believed by the Hindoos to have reigned over the whole world in the earlieft age of their chronology, and to have refided in the country of Dravira on the coalt of the eaftern Indian peninfula. His patronymic name was Vaivafzata, or cbild of the fun. In the BhaLavat we are informed, that the Lord of the Univerie, intending to preferve him from the fea of deftruction, caufed by the depravity of the age, thus told him how he was to aet. "In feven days from the prefent time, 0 thou tamer of enemies, the three worlds will be plunged in an ocean of death; but in the midit of the deftroying waves, a large veffel, fent by me for thy ufe, hall fand before thee. Then fhalt thou take all medicinal herbs, all the variety of feeds; and, accompanied by feven faints, encircled by pairs of all brute animals, thou fhalt enter the fpacious ark and continue in it, fecure from the flood on one immenfe ocean without light, except the radiance of thy holy companions. When the fhip fhall be agitated by an impetuous wind, thou Vol. XVI.

Thalt faften it with a large fea-ferpent on my forn; for I will be near thee: drawing the veffel, with thee and thy attendants, I will remain on the ocean, O chiet of men, until a night of Brahmà thall be completely ended. Thou thalt then know my true greatnefs, rightly named the fupreme Godhead; by my favour, all thy queftions. fhall be anfwered, and thy mind abundantly inftructed."' All this is faid to have been accomplithed; and the fory is evidently that of Noah difguifed by Afiatic fiction and allegery. It proves, as Sir William Jones has rightly obferved, an ancient Indian tradition of the univerfal deluge defcribed bý. Mofes; and enables us to trace the connection between the eaftern and weftern traditions relating to that event. The fame learned author has fhown it to be in the higheft degree probable, that the Satyavrata of India is the Cronus of Greece and the Saturn of Italy. See Saturn; and Afiatic Refearches; Vol. I. p. 230, \&c.

SATYR, or Satire, in matters of literature, a difcourfe or poem, expofing the vices and follies of mankind. See Poetry, Part II. Sect. x.

The chief fatiriits among the ancients are, Horace, Juvenal, and Perfius : thofe among the moderns, are, Regnier and Boileau, in French ; Butler, Dryden, Rochefter, Buckingham, Swift, Pope, Young, \&c. among the Englifh ; and Cervantes among the Spaniards.

SATYRIASIS. See Medicine, $\mathrm{n}^{\circ} 372$.
SATYRIUM, in botany: A genus of the diandria order, belonging to the gynandria clafs of plants; and in the natural method ranking under the 42 d order, $V_{\text {erticillata. }}$. The nectarium is fcrotiform, or inflated double behind the flower.

SATYRS (in ancient mythology) a fpecies of de-mi-gods who dwelt in the woods. They are reprefented as monfters, half-men, and half-goats; having horns on their heads, a hairy body, with the feet and tail of a goat. They are generally in the train that follows Bacchus. As the poets fuppofed that they were remarkable for piercing eyes and keen raillery, they have placed them in the fame pictures with the Graces, Loves, and even with Venus herfelf.

SAVAGE (Richard) one of the molt remarkable characters that is to be met with perhaps in all the records of biography, was the fon of Anne countefs of Macclesfield by the earl of Rivers, according to her own confeffion; and was born in 1698 . This con. feffion of adultery was made in order to procure a feparation from her hnfband the earl of Macclesfield : yet, having obtained this defired end, no fooner was her fpurious offspring brought into the world, than, without the dread of thame or poverty to excule her, fhe difcovered the refolution of difowning him; and, as long as he lived, treated him with the moft unnatural cruelty. She delivered him over to a poor woman to educate as her own ; prevented the earl of Rivers from leaving him a legacy of L.6000, by declaring him dead; and in effect deprived him of another legacy which his godmother Mrs Lloyd had left him, by concealing from him his birth, and thereby rendering it impollible for him to profecute his claim. She endeavoured to fend him fecretly to the plantations ; but this plan being either laid afide or fruftrated, fhe placed him apprentice with a fhoemaker. In this fituation, however, he did not long continue: for his nurfe dying, he went to take care of the effects of his fuppofed mother ; and found in
ber

Savage.
her boxes fome letters which difcovered to young Sa vage his birth, and the caufe of its concealment.

From the moment of this difcovery it was natural for him to become diffatisfied with his fituation as a fhoemaker. He now conceived that he had a right to fhare in the affluence of his real mother ; and therefore he directly, and perhaps indifcreetly, applied to her, and made ufe of every art to awaken her tendernefs and attract her regard. But in vain did he folicit this unnatural parent; fhe avoided him with the utmoft precaution, and took meafures to prevent his ever entering her houfe on any pretence whatever.

Savage was at this time fo touched with the difcovery of his birth, that he frequently made it his practice to walk before his mother's door in hopes of feeing her by accident; and often did he warmly folicit her to admit him to fee her; but all to no purpofe : he could neither foften her heart nor open her hand.

Mean time, while he was affiduoufly endeavouring to roufe the affections of a mother in whom all natural affection was extinct, he was deftitute of the means of fupport, and reduced to the miferies of want. We are not told by what means he got rid of his obligation to the fhoemaker, or whether he ever was actually bound to him; but we now find him very differently employed in order to procure a fubfiftence. In fhort, the youth bad parts, and a ftrong inclination towards literary purfuits, efpecially poetry. He wrote a poem; and afterwards two plays, Woman's a Riddle and Love in a Veil: but the author was allowed no part of the profits from the firlt ; and from the fecond he received no other advantage than the acquaintance of Sir Richard Steel and Mr Wilks, by whom he was pitied, careffed, and relieved. However the kindnefs of his friends not affording him a conftant fupply, he wrote the tragedy of Sir Thomas Overbury; which not only procured him the efteem of many perfons of wit, but brought him in 2001. The celebrated Aaron Hill, Efq; was of great fervice to him in correcting and fitting this piece for the ftage and the prefs; and extended his patronage fill farther. But Savage was, like many other wits, a bad manager, and was ever in diftrefs. As falt as his friends raifed him out of one difficulty, he funk into another : and, when he found himfelf greatly involved, he would ramble about like a vagabond, with fcarce a fhirt on his back. He was in one of thefe fituations all the time wherein he wrote his tragedy abovementioned; without a lodging, and often without a dinner: fo that he ufed to fcribble on fcraps of paper picked up by accident, or begged in the fhops, which he occafionally ftepped into, as thoughts occurred to him, craving the favour of pen and ink, as it were jult to take a memorandum.

Mr Hill alfo earnefly promoted a fubfeription to a volume of Mifcellanies, by Savage; and likewife furnifhed part of the poems of which the volume was compo'ed. To this mifcellany Savage wrote a preface, in which he gives an account of his mo:her's cruelty, in a very uncommon ftrain of humour.

The profits of his Tragedy and his Mifcellanies together, had now, for a time, fomewhat raifed poor Savage both in circumftances and credit; fo that the vorld jult began to behold him with a more favourable eye than formerly, when both his fame and life were endangered by a m: ll unhe..py event. A drunken frolic
in which he one night engaged, ended in a fray, and Savage unfortunately killed a man, for which he was condemned to be hanged; his friends earneftly folicited the mercy of the crown, while his mother as earneftly exerted herfelf to prevent his receiving it. The countefs of Hertford at length laid his whole cafe before queen Caroline, and Savage obtained a pardon.

Savage had now loft that tendernefs for his mother, which the whole feries of her cruelty had not been able wholly to reprefs; and confidering her as an implacable enemy, whom nothing but his blood could fatisfy, threatened to harafs her with lampoons, and to publifh a copious narrative of her conduct, unlefs fhe confented to allow him a penfion. This expedient proved fuccefs. ful ; and the lord Tyrconnel, upon his promife of laying afide his defign of expofing his mother's cruelty, took him into his family, treated him as an equal, and engaged to allow him a penfion of 2001. a-year. This was the golden part of Savage's life. He was courted by all who endeavoured to be thought men of genius, and careffed by all who valued themfelves upon a refined tafte. In this gay period of his life he publifhed the Temple of Health and Mirth, on the recovery of lady. Tyrconnel from a languifhing illnefs; and The Wanderer, a moral poem, which he dedicated to lord T'yrconnel, in ftrains of the highelt panegyric: but thefe praifes he in a fhort time found himfelf inclined to retract, being difcarded by the man on whom they were beltowed. Of this quarrel lord Tyrconnel and Mr Savage affigned very different reafons. Our author's known character pleads too ftrongly againft him ; for his conduct was ever fuch as made all his friends, fooner or later, grow weary of him, and even forced molt of them to become his enemies.

Being thus once more turned adrift upon the world, Savage, whole paffions were very ftrong, and whofe gratitude was very fmall, became extremely diligent in expofing the faults of lord Tyrconnel. He , moreover, now thought himfelf at liberty to take revenge upon his mother.-Accordingly he wrote The Baftard, a poem, remarkable for the vivacity of its beginning, (where he finely enumerates the imaginary advantages of bafe birth), and for the pathetic conclufion, wherein he recounts the real calamities which he fuffered by the crime of his parents.-The reader will not be dipleafed with a tranfcript of fome of the lines in the opening of the poem, as a fpecimen of this writer's fpirit and manner of verfification.

Fleft be the baftard's birth ! thro' wondrous ways, He fhines eccentric like a comet's blaze.
No fickly fruit of faint compliance he ;
He! famp'd in nature's mint with ecflacy!
He lives to build, not boaft, a gen'rous race; No tenth crandmitter of a foolifh face.
He, kindling from within, requires no flame,
He glories in a baftard's glowing name.

- Nature's unbounded fon, he ftands alone,

His heart unbias'd, and his mind his own.
-O mother! yet no mother!--'tis to yon
My thanks for fuch diftinguifh'd claims are due.
This poem had an extraordinary fale; and its appearance happening at the time when his mocher was at Bath, many perfons there took frequent opportunitics of repeating paffages from the Baltard in her hearing.

Savage.

[ 667 ]
ing. This was perhaps the firf time that ever fhe difcovered a fenfe of thame, and on this occafion the power of wit was very conficicuous; the wretch who had, with. out fcruple, proclaimed herfelf an adulterefs, and whon had firt endeavoured to flarve her fon, then to tranfport him, and afterwards to hang him, was not able to bear the reprefentation of her own conduct; but fled from reproach, though fhe felt no pain from guilt; and left Bath with the utmof hate, to fhelter herfelf among the crowds of London (A).

Some time after this, Savage formed the refolution of applying to the queen; who having once given him life, he looped the might farther extend her goodnefs to him by enabling him to fupport it.-With this view, he publifhed a poem on her birth-day, which he entitled The Volunteer-Laureat; for which the was pleafed to fend him 50 . with an intimation that he might annually expect the fame bounty. But this annual allowance was nothing to a man of his ftrange and fingular extravagance. His ufual cultom was, as foon as he had received his penfion, to difappear with it, and fecrete bimfelf from his molt intimate friends, till every thilling of the 501 . was fpent; which done, he again appeared, pennylefs as before: But he would never inform any perfon where he had been, nor in what manner lis money had been diffipated. From the reports, howevcr, of f me who found means to penetrate his haunts, it wo uld feem that he expended both his time and his c.lf in the moft fordid and defpicable fenfuality; particularly in eating and dri king, in wlich he would indulge in the molt unfocial manner, fitting whole days and nights by himfelf, in obfcure houfe, of entertainment, over his bottle and trencher, immerfed in fith and fil th, with $f$ arce decent apparel; generally wrapped up in a horfeman's great coat; and, on the wh le, with his very homely countenance, and altogether, exhibiting an
object the mon difgufting to the fight, if not to fome other of the fenfes.

His wit and parts, however, fill raifed him new friends as falt as his mibbehaviour loft him his old ones. Yet fuch was his conduct, that occafional relief only turnifhed the means of occafional excefs; and he defeated all attempts made by his friends to fix him in a decent way. He was even reduced fo low as to be deflitute of a lodging ; infomuch that he often paffed his nights in thofe mean heufes that are fet open for cafual wanderers ; fometimes in cellars amidft the riot and filth of the molt profigate of the rabble'; and not feldom would he walk the ftreets till he was weary, and then lie down in fummer on a bulk, or in winter with his affociates among the afhes of a glafs-houfe.

Yet, amidit all his penury and wretchednefs, had this man fo much pride, and fo high an opinion of his own merit, that he ever kept up his fpirits, and was always ready to reprefs, with ficorn and contempt, the leaft appearance of any light or indignity towards himfelf, in the behavinur of his acquaintance; among whom he looked upon none as his fuperior. He would be treated as an equal, even by perfons of the highef rank. We have an inftance of this prepofterous and inconfittent pride, in his refufing to wait upon a gentleman who was defirous of relieving him when at the loweft ebb of diftrefs, only becaufe the meffage fignified the gentleman's defire to fee him at nise in the morning. Savage could not bear that any one fhould prefume to prefcribe the hour of his attendance, and therefcre he abfolutely rejected the proffered kindnefs. This life, unhappy as it may be already imagined, was yet rendered more unhappy, by the deaih of the queen, in $173^{8}$; which ftroke deprived him of all hopes from the court. His penfion was difcontinued, and the infulent manner in which he demanded of Sir Robert 4. P 2 Walpole
(A) Mr Bofwell, in his life of Dr Johnfon, has called in queftion the ftory of Savage's birth, and grounded his fulpicion on two miftakes, or, as he calls them, falfehoods, which he thinks he has difcovered in his friend's memoirs of that extraordinary man. Johnfon has faid, that the earl of Rivers was Savage's godfather, and gave him his own name; which, by his direction, was inferted in the regifter of the parifh of St Andrew';, Holborn. Part of this, it feems, is not true; for Mr Bofwell carefully inifpected that regiter, bat no fuch entry is to be found. But does this omiffion amount to a proof, that the perfon who called himfelf Richard Savage was an impoltor, and not the fon of the earl of Rivers and the countefs of Macclesfield? Mr Bofwell thinks it does; and, in behalf of his opinion, appeals to the maxim falfum in uno, falfum in omnibus. The folidity of this maxim may be allowed by others; but it was not without furprife that, on fuch an occafion, we found it adopted by the biographer of Johnfon. To all who have compared his view of a celebrated canfe, with Stuart's letters on the fame fubject addreffed to Lord Mansfield, it mult be apparent, that, at one period of his life, he would not have deemed a thoufand fuch miftakes fufficient to invalidate a narrative otherwife fo well authenticated as that which relates to the birth of Savage. The truth is, that the omiffion of the name in tie regiter of St Andrew's may be eafily accounted for, without bringing againf the wretched Savage an accufation of impofure, which neither his mother nor her friends dared to urge when provoked to it by every poffible motive that can influence human conduct. The earl of Rivers would undoubtedly give the direction about regiftering the child's name to the fame perfon whom be entrufted with the care of his education ; but that perfon, it is well known, was the countefs of Macclesfield, who, as fhe had refolved from his tirth to difown her fon, would take care that the direction fhould not be obeyed.

That which, in Johnfon's life of Savage, Mr Bofwell calls a fecond falfehnod, feems not to amount even to a milt:ke. It is there flated, that "Lady Macclesfield having lived for fome time upon very uneafy terms with her hufband, thought a public conteflion of adultery the mof obvious and expeditious method of obtaising her liberty." This Mr Befwell thinks cannot be true; becaufe, having perufed the journals of both hu ules of parliament at the period of her divorce, he there found it authentically afcertained, that fo far from volu: tarily fubmitting to the igneminious charge of adultery, fhe made a frenuous defence by ber coinfel. But what is this to the purpofe? Johnfon has no where faid, that fhe confeffed her adultery at

Walpole to have it reftored, for ever cut off this con-
fiderable fupply; which poffibly had been only delayed, and might have been recovered by proper application.

His diftrefs now became fo great, and fo notorious, that a fcheme was at length concerted for procuring him a permanent relief. It was propofed that he fhould retire into Wales, with an allowance of 501 . per annum, on which he was to live privately, in a cheap place, for ever quitting his town-haunts, and refigning all further pretenfions to fame. This offer he feemed gladly to accept; but his intentions were only to deceive his friends, by retiring for a while, to write another tragedy, and then to return with it to London in order to bring it upon the flage.

In 1739, he fet out for Swanfey, in the Briftol fagecoach, and was furnifhed with 15 guineas to bear the expence of his journey. But, on the 14 th day after his departure, his friends and benefactors, the principal of whom was no other than the great Mr Pope, who expected to hear of his arrival in Wales, were furprifed with a letter from Savage, informing them that he was yet upon the road, and could not proceed for want of money. There was no other remedy than a remittance; which was fent him, and by the help of which he was enabled to reach Brifol, from whence he was to proceed to Swanfey by water. At Briftol, however, he found an embargo laid upon the fhipping; fo that he could not immediately obtain a paffage. Here, therefore, being obliged to ftay for fome time, he, with his ufual facility, fo ingratiated himfelf with the principal inhabitants, that he was frequently invited to their houfes, diftinguifhed at their public entertainments, and treated with a regard that highly gratified his vanity, and therefore eafily engaged his affections. At length, with great reluctance, he proceeded to Swanfey; where he lived about a year, very much diffatisfied with the
diminution of his falary; for he had, in his letters, treated his contributors fo infolently, that moft of them withdrew their fubfcriptions. Here he finifhed his tragedy, and refolved to return with it to London : which was ftrenuoully oppofed by his great and conftant friend Mr Pope; who propofed that Savage hould put this play into the hands of Mr Thompfon and Mr Mallet, in order that they might fit it for the fage, that his friends fhould receive the profits it might bring in, and that the author fhould receive the produce by way of annuity. This kind and prudent fcheme was rejected by Savage with the utmoft contempt.-He declared he would not fubmit his works to any one's correction ; and that he would, no longer be kept in leading-ftrings. Accordingly he foon returned to Briftol, in his way to London ; but at Briftol, meeting with a repetition of the fame kind treatment he had before found there, he was tempted to make a fecond ftay in that opulent city for fome time. Here he was again not only careffed and treated, but the fum of 301 . was raifed for him, with which it had been happy if he had immediately departed for London: But he never confidered that a frequent repetition of fuch kindnefs was not to be expected, and that it was poffible to tire out the generofity of his Briftol friends, as he had before tired his friends everywhere elfe. In fhort, he remained here till his company was no longer welcome. His vifits in every family were too often repeated; his wit had loft its novelty, and his irregular behaviour grew troublefome. Neceflity came upon him before he was aware ; his money was fpent, his clothes were worn out, his appearance was thabby, and his prefence was difgultful at every table. He now began to find every man from home at whofe houfe he called; and he found it difficult to obtain a dinner. Thus reduced, it would have been prudent in hin to have withdrawn from the place; but prudence and Savage were never
acquainted.
the bar of either houfe of pariliament, but only that her confeffion was public; and as he has taught us in his Dictionary, that whatever is notorious or generally known is public; public, in his fenfe of the word, that confeffion certainly was, if made to different individuals, in fuch a manner as fhowed that fhe was not anxious to conceal it from her hufband, or to prevent its notoriety. She might, however, have very cogent reafons for denying her guilt before parliament, and for making a ftrenuous defence by her counfel; as indeed, had fhe acted otherwife, it is very little probable that her great fortune would have been reftored to her, or that the could have obtained a fecond hufband.

But Mr Bofwell is of opinion, that the perfon who affumed the name of Richard Savage was the fon of the fhoemaker under whofe care Lady Macclesfield's child was placed; becaufe "his not being able to obtain payment of Mrs Lloyd's legacy muft be imputed to his confcioufnefs that he was not the real perfon to whom that legacy was left." He muft have a willing mind who can admit this argument as a proof of impofture. Mrs Lloyd died when Savage was in his ioth year, when he certainly did not know or fufpect that he was the perfon for whom the legacy was intended, when he had none to profecute his claim, to thelter him from oppreffion, or to call in law to the affiftance of juftice. In fuch circumftances he could not have obtained payment of the money, unlefs the executors of the will had been infpired from heaven with the knowledge of the perfon to whom it was due.

To thefe and a thoufand fuch idle cavils it is a fufficient anfwer, that Savage was acknowledged and patronized as Lady Macclesfield's fon by Lord Tyrconnel, who was that lady's nephew; by Sir Richard Steel the intimate friend of colonel Brett, who was that lady's fecond hufband; by the Queen, who, upon the authority of that lady and her creatures, once thought Savage capable of entering his mother's houfe in the night with an intent to murder her; and in effect by the lady berfelf, who at one time was prevailed upon to give him 501 . and who fled before the Satire of the Baflard, without offering, either by herfelf or her friends, to deny that the author of that poem was the perfon whom he called himfelf, or to infinuate fo much as that he might $\neq / f i b l y$ be the fon of a fhoemaker. To Mr Bofwell all this feems frange: to others, who look not with fo keen an eye for fuppofitious births, we think it mult appear convincing.
savage. acquainted. Heftaid, in the midit of poverty, hunger, and contempt, till the miltrefs of a coffee-houfe, to whom he owed about eight pounds, arrefted him for the debt. He remained for fome time, at a great expence, in the houfe of the fheriff's officer, in hopes of procuring bail; which expence he was enabled to defray, by a prefent of five guineas from Mr Nafh at Bath. No bail, however, was to be found; fo that poor Savage was at laft lodged in Newgate, a prifon fo named in Briftol.

But it was the fortune of this extraordinary mortal always to find more friends than he deferved. The keeper of the prifon took compaffion on him, and greatly foftened the rigours of his confinement by every kind of indulgence ; he fupported him at his own table, gave him a commodious room to himfelf, allowed him to Itand at the door of the gaol, and even frequently took him into the fields for the benefit of the air and exercife: fo that, in reality, Savage endured fewer hardfhips in this place than he had ufually fuffered during the greateft part of his life.

While he remained in this not intolerable prifon, his ingratitude again broke out, in a bitter fatire on the city of Briftol; to which he certainly owed great obligations, notwithfanding the circumftances of his arreft; which was but the act of an individual, and that attended with no circumftances of injuftice or cruelty. This gatire he entitled London and Briftol delineated; and in it he abufed the inhabitants of the latter, with fuch a fpirit of refentment, that the reader would imagine he had never received any other than the moft injurious treatment in that city.

When Savage had remained about fix months in this hofpitable prifon, he received a letter from Mr Pope, (who ftill continued to allow him 201 . a-year) containing a charge of very atrocious ingratitude. What were the particulars of this charge we are not informed; but, from the notorious character of the man, there is reafon to fear that Savage was but too juftly accufed. He , however, folemnly protefted his innocence; but he was very unulually affected on this occafion. In a few days after, he was feized with a diforder, which at firft was not fufpected to be dangerous : but growing daily more languid and dejected, at lait a fever feized him; and he expired on the ift of Augult 1743, in the 46th year of his age.

Thus lived, and thus died, Richard Savage, Efq; leaving behind him a character ftrangely chequered with vices and good qualities. Of the former we have feen a variety of inftances in this abitract of his life; of the latter, his peculiar fituation in the world gave him but few opportunities of making any confiderable difplay. He was, however, undoubtedly a man of excellent parts; and had he received the full benefits of a liberal education, and had his natural talents been cultivated to the beft advantage, he might have made a refpectable figure in life. He was happy in a quick difcernment, a retentive memory, and a lively flow of wit, which made his compary much co eted; nor was his judgment both of writings and of men inferior to his wit : but he was too much a flave to his paffions, and his paffions were too edflly excited. He was warm in his friendfhips, but implacable in his enmity; and his greateft fault, which is indeed the greateft of all faults, was ingratitude. He feemed to think every thing due
to his merit, and that he was little obliged to any one - Savage. for thofe favours which he thought it their duty to confer on him: it is therefore the lefs to be wondered at, that he never rightly eftimated the kindnefs of his masy friends and benefactors, or preferved a grateful and due fenfe of their generofity towards him.

The works of this original writer, after having long lain difperfed in magazines and fugitive publ cations, have been lately collected and publifhed in an elegant edition, in 2 vols $8 v o$; to which are prefixed, the admirable Memoirs of Savage, written by Dr Samuel Johnfon.

Satage is a word fo well underflood as fcarcely to require explanation. When applied to inferior animals, it denotes that they are wild, untamed, and cruel; when applied to man, it is of much the fame import with barbarian, and means a perfon who is untaught and uncivilized, or who is in the rude fate of uncultivated nature. That fuch men exift at prefent, and have exifted in moft ages of the world, is undeniable: but a queftion naterally occurs refpecting the origin of this favage ftate, the determination of which is of confiderable importance in developing the nature of man, and afcertaining the qualities and powers of the human mind. Upon this fubject, as upon moft others, opinions are very various, and the fyftems built upen them are confequently very contradictory. A large fect of ancient philofophers maintained that man fprung at firlt from the earth like his brother vegetables; that he was without ideas and without fpeech; and that many ages elapfed before the race acquired the ufe of language, or attained to greater knowledge than the beatts of the foreft. Other fects again, with the vulgar, and almof all the poets, maintained that the firft mortals were wifer and happier, and more powerful, than any of their offspring ; that mankind, inftead of being originally favages; and rifing to the ftate of civilization by their own gradual and progreffive exertions, were created in a high degree of perfection ; that, however, they degenerated from that flate, and that all nature degenerated with them. Hence the various ages of the world have almoft everywhere been compared to gold, filver, brafs, and iron, the golden having been always fuppofed to be the firft age.

Since the revival of letters in Europe, and efpecially during the prefent century, the fame queftion has been much agitated both in France and England, and by far the greater part of the mof farhimable names in mo. dern fcience have declared for the original favagifm of men. Such of the ancients as held that opinion were countenanced by the atheiftic cofmogony of the Phenicians, and by the early hiftory of their own nations; the moderns build their fyftem upon what they fuppofe to be the contitution of the human mind, and upon the late improvements in arts and fciences. As the queftion mult finaily be decided by hiftorical evidence, before we make our appeal to facts, we fhall confider the force of the modern reafonings from the fuppofed innate powers of the human mind; for that reafoning is totally cliferent from the other, and to blend them together would only prevent the reader from having an adequate conception of either.

Upon the fuppofition that all mankind were originally favages, deftitute of the ufe of fpeech, and, in the ftricteft fenfe of the words, mutum ot turpe pecus, the

Savage. great difficulty is to conceive how they could emerge from that flate, and become at laft enlightened and civilized. The modern advocates for the univerfality of the favage ftate remove this difficulty bya number of inftincts or internal fenfes, with which they fuppofe the human mind endowed, and by which the favage is, without reflection, not only enabled to diftinguilh between right and wrong, and prompted to do every thing neceffary to the prefervation of his exiftence, and the continuance of the tpecies, but alfo led to the difcovery of what will contribute, in the firt inftance, to the eafe and accommodations of life. Thefe inttincts, they think, brought mankind together when the reafoning faculty, which had hitherto been dormant, being now roufed by the collifions of fociety, made its obfervations upon the confequences of their different actions, taught them to avoid fuch as experience fhowed to be pernicious, and to improve upon thole which they fonnd beneficial ; and thus was the progrefs of civilization begun. But this theory is oppofed by objections which we know not how to obviate. The bundle of infincts with which modern idlenefs, under the denomination of philofophy, has fo amply furwifhed the human mind, is a mere chimera. (See In stinct.) But granting its reality, it is by no means fufficient to produce the confequences which are derived from it. That it is not the parent of language, we have fhown at large in another place (fee Language, $\mathrm{n}^{\circ} \mathrm{r}-7$. ); and we have the confeffion of tome of the ableft advocates for the original favagifm of man, that large focieties muft have been formed before language could bave been invented. How focieties, at leaft large focieties, could be formed and kept together without language, we have not indeed been told; but we are af. fured by every hiftorian and every traveller of credit, that in fuch focieties only have mankind been found civilized. Among known favages the focial forge is very much confined; and therefore, had it been in the firt race of men of as enlarged a nature, and as fafe a guide, as the inftinetive philofophers contend that it was, it is plain that thofe men could not have been favages. Such an appetite for fociety, and fuch a direftor of conduct, inftead of enabling mankind to have emerged from favagifm, would have effectually prevented them from ever becoming favage ; it would have knit them together from the very frit, and furnifhed opportunities for the progenitors of the human race to have begun the procefs of civilization from the moment that they dropt from the hands of their Creator. Indeed, were the modern theories of internal fenfes and fecial affictions well founded, and were thefe fenfes and affections fufficient to have impelled the firft men into fociery, it is n it eafy to be conceived how there could be at this day a favage tribe on the face of the earth. Natural caufes, operating in the fame disection and with the fame force, mult in every age froduce the fame effesis ; and if the focial affections or the firte mortals impelled them to fociety, and their reafoning faculties immediately commenced the procefs of civilization, furely the fame affections and the fame faculties would in a greater or lefs degree have had the fame effcet in every age and on every tribe of their numerous offspring; and we thould every where obferve mankind adsancing in civilization, inftead of ftanding tiill as they oten do, and fometimss retreating by a retrograde mozion. This, hewever, is far from being the cafe. Hordes of favages exilt in al-
moft every quarter of the globe; and the Chinefe, who savage. have undoubtedly been in a ftate of civilization for at leaft 2000 years, have during the whole of that long period been abfolutely ftationary, if they have not loft fome of their ancient arts. (See Porcelain). The origin of civilization, therefore, is not to be looked for in human inflincts or human propenfities, carrying men forward by a natural progrefs; for the fuppofition of fuch propenfities is contrary to fact; and by fact and hiltorical evidenre, in conjunction with what we knaw of the nature of man, milt this great queftion be at laft decided.

In the arricle Religion, $\mathrm{n}^{\circ} 7$. it has been thewn that the firt men, if left to themelves without any in. flruction, inflead of livirg the life favages, and in procifs of time advancing towards civilization, mult have perithed before they acquired even the ufe of fome of their fentes. In the fame article it has been fhown ( $n^{9}$ 14-17.), that Mores, as he is undoubtedly the oldeft hiftorian extant, wrote likewife by inmediate infpiration; and that therefore, as he reprefents our firlt parents and their immediate defcendants as in a ftate far removed from that of favages, it is vain to attempt to deduce the originality of fuch a tate from hypathetical theories of human nature. We have, indeed, heard it obferved by fome of the advocates for the antiquity and univerfality of the favage fate, that to the appeal to revelation they have no objection, provided we take the Mofaic accourt as it ftands, and draw not from it conclufions which it wi.1 not fupport.

They contend, at the fame time, that there is no argument fairly deducible from the book of Genefis wlich militates againft their polition. Now we beg leave to remark, that befides the reafoning wlich we have atready uied in the articie juft referred to, we have as much pofitive evidence againt their pofition as the nature of the Molaic hittory could be fuppofed to afford.

We are there tolt that God created man after his own image ; that he gave him dominion over every thing in the fea, in the air, and over all the earth ; that he appointed for his food various kinds of vegetables; that he ordained the Sabbath to be obferved by him, in commemoration of the works of creation ; that he prepared for him a garden to till and to drefs; and that, as a teft of his religion and fubmifion to his Creator, he forbade him, under fevere penalties, to eat of a certain tree in that garden. We are then told that God brought to him every animal which had been created; and we find that Adam was fo well acquainted with their feveral natures as to give them names. When too an helpmate was providid for him, he immediately acknowledged her as bone of his bone, flefh of his flefh, and called her woman, becaufe fhe was taken out of man.

How thefe facts can be reconciled to a flate of ignorant favagifm is to us abfolutely inconceivable; and it is indeed ftrange, that men who profefs Chriftianity fhould appeal to reaton, and fick by its decition on a queftion which revelation bas thus plainly decided againft them. But it is agreeable to their theory to believe that man rofe by flow fleps to the full uie of his reafoning powers. To us, on the other hand, it appears equally plaufible to fuppofe that our firlt parents were created, not in full maturity, but mere infants, and that they went through the tedious procefs of childhood and youth,

Savage. youth, \&c. as to fuppofe that their minds were created weak, uninformed, and uncivilized, as are thofe of favages.
But if it be granted that Adam had a tolerable fhare of knowledge, and fome civilization, nothing can be more natural than to fuppofe that he would teach his defcendants what he knew himfelf; and if the Scriptures are to be believed, we are certain that fome of them poffeffed more than favage knowledge, and better than favage manners. But inftead of going on to further perfection, as the theory of modern philofophers would lead us to fuppofe, we find that mankind degenerated in a moft aftonifhing degree; the caufes of which we have already in part developed in the article Polytheism, $n^{0} 4$, \&c.

This early degeneracy of the human race, or their fudden progrefs towards ignorance and favagifm, appears to lead to an important confequence. If men fo very foon after their creation, poffeffing, as we have feen they did, a confiderable fhare of knowledge and of civilization, inftead of improving in either, degenerated in both refperts, it would not appear that human nature has that ftrong propenfity to refinement which many philofophers imagine; or that had all men been originally favage, they would have civilized themfelves by their own exertions.

Of the ages before the flood we have no certain account any where but in Scripture; where, though we find mankind reprefented as very wicked, we have no reafon to fuppofe them to have been abfolute favages. On.the contrary, we have much reafon, from the thort account of Mofes, to conclude that they were far advanced in the arts of civill life. Cain, we are told, built a city; and two of his early defcendants invented the harp and organ, and were artificers in brafs and iron. Cities are not built, nor mulical inftruments invented. by favages, but by men highly cultivated: and furely we have no reafon to fuppofe that the righteous poterity of Seth were behind the apoltate defcendants of Cain in any branch of knowledge that was really ufeful. That Noah and his fanily were far removed from favagifm, no ons will controvert who believes that with them was made a new covenant of religion ; and it was unqueftionably their duiy, as it mult otherwife have been their wiih, to communicate what knowledge they polfelfed to their polterity. Thus fur then every canfiftent Chriftian, we think, mult determine againit original and univerfal favagifm.

In the prelininuy difourfe to Sketches of the Hiftory of Man, Lord Kames would inter, from fome futs which he ftutes, that muny pairs of the human race were at firlt crated, of very different forms and natures, but all depending entirely on their own natural talents. But to this it atement he rightly obferves, that the Mofaic account of the Creation oppofes infuperable objections. "Whence then (iays his Lordhip) the degeneracy of all men into the favage tate? To acm count for that difmel catailrophe, mankind mult have fufiered fime dreadful convulion." Now, if we niftake not, this is taking for granted the very thing to be proved. Wive deny that at any period fince the crea. tion of the world, all men were funk into the fate of favages; and that they were, no proof has yet been brought, nor d.. we know of any tiat can be brou ht, unlefs our faflionable philefophers choofe to prop their
theories by the buttrefs of Sanchoniatho's Phenician

## Sarag:

 cofmogony. (See Sanchoniatho.) His Lordfhip, however, goes on to fay, or rather to fuppofe, that the confufion at Babel, \&c. was this dreadtul convulfion: For, fays he, " by confounding the language of men, and fatttering them abroad upon the face of all the earth, they were rendered favages." Here again we have a pofitive affertion, without the leaft fhadow of proof; for it does not at all appear that the confufion of language, and the fcattering abroad of the people, was a circumftance fuch as could induce univerfal favagifm. There is no reafon to think that all the men then alive were engaged in building the tower of Babel; nor does it appear from the Hebrew original that the language of thofe who were engaged in it was fo much changed as the reader is apt to infer from our Englifh verfion. (See Philology, $\mathrm{n}^{0} 8-16$.). That the builders were fcattered, is indeed certain ; and if any of them were driven, in very fmall tribes, to a great diftance from their brethren, they would, in procefs of time inevitably become favages. (See Polytheism, $n^{\circ} 4-6$, and Language, $\mathrm{n}^{0} 7$. ); but it is evident, from the Scripture account of the peopling of the earth, that the defcendants of Shem and Japheth were not fcattered over the face of all the earth, and that therefore they could not be rendered favage by the cataltrophe at Babel. In the chapter which relates that wonderful event, the generations of Shem are given in order down to Abram; but there is no indication that they had fuffered with the builders of the tower, or that any of them had degenerated into the fate of favages. On the contrary, they appear to have poffeffed a confiderable degree of knowledge; and if any credit be due to the tradition which reprefents the father of Abraham as a ftatuary. and himielf as fkilled in the fcience of aftronomy, they muft have been far advanced in the arts of refinement. Even fuch of the pofterity of Ham as either emigrated. or were driven from the plain of Shinar in large bodies fo far from finking into favagifm, retained all the accomplithments of their antediluvian anceltors, and became afterwards the inftructors of the Greeks and Ro. mans. This is evident from the hiftory of the Egyp. tians and other ealtern nati ns, who in the days of Abraham were powe, ful and highly civilized. And that for many ages they did not degenerate into barbarifn, is: apparent from its having been thought to exalt the character of Mofes, that he was learned in all the wifdom. of the Egyptians, and from the wifdom of Solom: 11 having been faid to excel all the wildom of the ext country and of Egypt.Thus decided are the Scriptures of the Old Teftament: againft che univerfal preva.ence of favagifm in that period. of the world; nor are the mof authentic Pagan writers of antiquity of a different opinion. Mochus the Pienician*, Democritus, and Epicurus, appear to be *Strabo, the firft champions of the favage tate, and they are lib. xvii. followed by a a umerous body of poets and rhapfodifs, Diog. Laamong the Greeks and Romans, who were unqueltion- ert. Vita ably devoted to fable and fiction. The account which they have given of the origin of man, the reader will find in another place (fee Theology, Part i. fect. I.) : But we hardly think that he will employ it in fupport of the fafaionable doctrine of original favagifm. Againt the wild reveries of this finool are pofted all the leaders of the other fects, Greeks and barbarians; the philo-

fophers
$\underbrace{\text { Surage. fophers of both Academies, the fages of the Italian and }}$ Alexandrian fchools; the magi of Perfia; the Bramins of India, and the Druids of Gaul, \&c. The: teftimony of the early hittorians among all the ancient nations, indeed, who are avowedly fabulifts, is very little to be depended on, and has been called in queftion by the moft judicious writers of Pagan antiquity. (See Plutarch Vita Thef. Jub init. Thucyd. 1. 1. cap. I. Strabs, 1. if. p. 507. Livy Pref. and Varro ap. Auguft de Civ. Dei.). The more populous and extenfive kingdoms and focieties were civilized at a period prior to the records of profane hittory: the prefumption, therefore, without taking revelation into the account, certainly is, that they were civilized from the beginning. This is rendered further probable from other circumitances. To account for their fyftem, the advocates of favagifm are obliged, as we have feen, to have recourfe to numerous fuppofitions. They imagine, that fince the creation dreadful convulfions have bappened, which have fpread ruin and devaltation over the earth, which have deftroyed learning and the arts, and brought on favagifm by one fudden blow. But this is reafoning at random, and without a veftige of probability: for the only convulfion that can be mentioned is that at Babel, which we have already flown to be inadequate.

Further, it does not appear that any people who were once civilized, and in procefs of time had degenerated inte the favage or barbarous ftate, have ever recovered their pritine condition without foreign aid. From whence we concluse, that man, once a favage, would never have raifed himfelf from that hopelefs ftate. This appears evident from the hiftory of the world; for that it requires frong incitements to keep man in a very high ftate of knowledge and civilization, is evident from what we know of the numerous nations which were famed in antiquity, but which are now degenerated in an aftonifhing degree. That man cannot, or, which is the fame thing, has not rifen from barbarifm to civilization and fcience by his own efforts and natural talents, appears further from the following facts. The rudiments of all the learning, religion, laws, arts, and fciences, and other improvements that have enlightened Europe, a great part of Afia, and the northern coaft of Africa, were fomany rays diverging from two points, on the banks of the Euphrates and the Nile. In proportion as nations receded from thefe two fources of humanity and civilization, in the fame proportion were they more and more immerfed in ignorance and barbarifm. The Greeks had made no progrefs towards civilization when the Titans firt, and afterwards colonies from Egypt and Phenicia, taught them the very elements of icience and
bitants of Europe. Even weftern Europe itfelf, when Savage, fank in ignorance during the reign of monkery, did not recover by the efforts of its own inhabitants. Had not the Greeks, who in the ijth century took refuge in Italy from the cruelty of the Turks, brought with them their ancient books, and taught the Italians to read them, we who are difputing about the origin of the favage flate, ard the innate powers of the human mind, had at this day been grofs and ignorant favages ourfelves, incapable of reafoning-with accuracy upon any fubject. That we have now advanced far before our matters is readily admitted; for the human mind, when put on the right track, and fpurred on by emulation and other incitements, is capable of making great improvements : but between improving fcience, and emerging from favacifm, every one perceives there is an immenfe difference.

Lord Kames obferves, that the people who inhabit a grateful foil, where the necelfaries of life are eafily procured, are the firft who invent ufeful and ingenions arts, and the firf who figure in the exercifes of the mind. But the Egyptians and Chaldeans, who are thought to fupport this remark, appear from what we have feen to have derived their knowledge from their antediluvian progenitors, and not from any advantages of fituation or frengti of genius. Befides, the inhabitants of a great part of Africa, of North and South America, and of many of the iflands lately difcovered, live in regions equally fertile, and equally productive of the neceffaries of life, with the regions of Chaldee and Egypt; yet there people have been favages from time immemorial, and continue ftill in the fame ftate. The Athenians, on the other hand, inhabited the moft barren and ungrateful region of Greece, while their perfection in the arts and fciences has never been equalled. The Norwegian colony which fettled in Iceland about the beginning of the 8 th century, inhabited a moit bleak and barren foil, and yet the fine arts were eagerly cultivated in that dreary region when the reft of Europe were funk in ignorance and barbarifm. Again, there are many parts of Africa, and of North and South America, where the foil is neither fo luxuriant as to beget indolence, nor fo barren and ungrateful as to deprefs the fpirits by labour and poverty ; where, notwithftanding, the inhabitants fill continue in an uncultured ftate. From all which, and from numerons other inflances which our limits permit us not to bring forward, we infer that fome external influence is neceffary to impel towards the civilization of favages; and that in the hiltory of the world, or the nature of the thing, we find no inltance of any people emerging from barbarifm by the progreflive efforts of their own genius. On the contrary, as we find in focieties highly cultivated and luxurious a ftrong tendency to degenerate, fo in favages we not only find no mark of tendency to improvement, but rather a rooted averfion to it. Among them, indeed, the focial appetite never reaches beyond their own horde. It is, therefore, too weak and too confined to difpofe them to unite in large communities; and of courfe, had all mankind been once in the favage ftate, they never could have arrived at any confiderable degree of civilization.

Inftead of trufting to any fuch natural progrefs, as is contended for, the Providence of Heaven, in pity to the human race, appears at different times, and in dif-
$\$_{\text {avays }}$, Serent countries, to have raifed up fome perfons endowed Savanim- with fuperior talents, or, in the language s, poctry, fome la- Iar. heroes, demi-gods, or god-like men, who having themfelves acquired fome knowledge in nations already civilized, by ufeful inventions, legiflation, religious inftitutions, and moral arrangements, fowed the firft feeds of civilization among the hordes of wandering difunited barbarians. Thus we find the Chinefe loos up to their Fohee, the Indians to Brahma, the Perfians to Zoroafter, the Chaldeans to Oanes, the Egyptians to Thoth, the Phenicians to Melicerta, the Scandinavians to Odin, the Italians to Janus, Saturn, and Picus, and the Peruvians to Manco. In latter times, and almoft within our own view, we find the barbarous nations of Ruffia reduced to fome order and civilization by the aftonifhing powers and exertions of Peter the Great. The endeavours of fucceeding monarchs, and efpecially of the prefent emprefs, have powerfully contributed to the improvement of this miglity empire. In many parts of it, however, we fill find the inhabitants in a fate very little fuperior to favagifm ; and through the moft of it, the lower, and perhaps the middling orders, appear to retain an al*See Ruf- moft invincible averfion to all further progrefs*. A fact fia. which, when added to numerous others of a fimilar na- ture which occur in the hilfory of the world, feems to prove indifputably that there is no fuch natural propenfity to improvement in the human mind as we are taught by fome authors to believe. The origin of favagifm, if we allow mankind to have been at firf civilized, is eafily accounted for by natural means : The origin of civilization, if at any period the whole race were favages, cannot, we think, be accounted for otherwife than by a miracle, or repeated miracles.

To many perfons, in the prefent day efpecially, the doctrine we have now attempted to eftablifh, will appear very humiliating ; and perhaps it is this alone that has prevented many from giving the fubject in patient a hearing as its importance feems to require. It is a faftionable kiad of philofophy to attribute to the hu. man mind very pre-eminent powers; which fo flatter our pride, as in a great meafure, perhaps, to pervert our reafon, and blind our judgment. The hiftory of the werld, and of the difpenfations of God to man, are certainly at variance with the popular doctrine refpecting the origin of civilization; for if the luman mind be poffeffed of that innate vigour which that doctrine attributes to it, it will be extremely difficult to account for thofe numerous facts which feem with irre. fiftible evidence to proclaim the contrary ; for that unceafing care with which the Deity appears to have watched over us; and for thofe various and important revelations He has vouchfafed to us. Let us rejoice and be thankful that we are men, and that we are Chriftians; but let not a vain philofoply tempt us to imagine that we are angels or gods.

Savage-Ifand, one of the fmall iflands in the South Sea, lying in S. Lat. 19. 1. W. Long. 169. 37. It is about feven leagues in circuit, of a good height, and has deep water clofe to its fhores. Its interior parts are fuppofed to be barren, as there was no foil to be feen upon the coaft ; the rocks alone fupplying the trees with humidity. The inbabitants are exceedingly warlike and fierce, fo that Captain Cook could not have any inter. courfe with them.

SAVANNA-la-Mar, a town of Jamaica, fituated in Vox. XVJ.
the county of Cornwali in that inant.-It is the county- Sivaman, town, where the aflize-courts are held, the latt Tucflays S.vary. in March, June, September, and December. It has lately been ornamented by an elegant court-houfe, and contains about 100 other licues. It belorgs to We!!moreland parilh, in which are $\varepsilon_{9}$ fugar of aces, wo cher eftates, and 18,000 flates.

SAVANNAH, a port of entry and pondown in Georgia, formerly the metropolis of that ftate. It is fituated in Chatham county, o: the fouth fide cf Sava nah river upor a high fandy bluff, elevated about 50 feet above the river, and 17 miles above its confuence with the ocean. The town is regularly laid ou', in the form of a parallellogram, and contains 2,500 inhabitants; about 80 or 90 of thefe are Jews. The public buildings are a Prefbyterian, an Epifcopalian, a German I, utheran church, a Jewih fynagogue, and a courthoufe. It is 120 miles from Augufta, and 878 S . W. by S. of Philadelphia. W. Long. 1oi. 20. N. Lat. $3^{2}$. o.

Sarannah, a large navigable river of Georgia, which is formed by the union of the Tugelo and Keowee rivers, that rife in the Appalachian mocntains; thefe confluent rivers affume the name of Savannsh, which purfuing a S. E. courfe, paffes by Peterfburg, and receives from the N. W. Broad river, a confiderable fream, thence continuing a S. E. courfe, enters the Atlantic, in Lat. 32. after palling by Auguita, Ebenezer, and Savannah: to the latter it is navigable in large veffels, having generally i 6 feet water at half-tides, and in boats of 100 feet keel, carrying 80 or 90 hogheads of tobacco, to Augufta, where it is about 250 yards wide, and from to to 15 feet deep. The navigation is obftructed about 3 miles above Auguita, by falls, but after paffing thefe it is navigable to the mouth of Tugelo river. In high floods the falls are frequently paffed by loaded boats. The great number of logs and fumps which are concealed under water, have often overfet boats; and render the navigation of this river fomewhat dangerous. In the year 1790 nearly 200 hogheads of tobacco were $\ln$ ft in paffing down the river.

SAVARY (James), an eminent French writer on the fubject of trade, was born at Done, in Anjou, in 1622. Deing bred to merchandize, he continued in trade until 1658; when be left off the practice, to cultivate the theory. He had married in 1650 ; and in 1660, when the king declared a purpofe of affigning privileges and perfions to fuch of his fubjects as had twelve children alive, Mr Savary was not too rich to put in his claim to the royal bounty. He was afterwards admitted of the council for the reformation of commerce; and the orders which paffed in 1670 were drawn up by his inAructions and advice. He wrote Le Parfait Negociant, 4 to ; and, Avis et confeils fur les plus infyortantis matieres du Commerce, in 4 to. He died in 1600 ; and out of 17 children whom he had by one wife, left ir. Two of his fons, James and Philemon Lewis, laboured jointly on a great work, Ditonaire Univerfille du Commerce, 2 vols folio. This work was begun by James, who was infpector-general of the manufactures at the cuftomhoufe, Paris; who called in the affiftance of his brother Philemon Lewis, although a canon of the royal church of St Maur ; and by his death left him to finifh it. This work appeared in 1723, and Philemon afterwards added a third fupplemental volume to the former. Poftlethwayte's Englifh Dictionary of Trade 4 Q

## 

Savary. and Commerce, is a tranflation, with confiderable improvements, from Savary.

Savary, an eminent French traveller and writer, was born at Vitre, in Brittany, about the year 1748. He ftudied with applaufe at Rennes, and in 1776 travelled into Egypt, where he remained almoft three years. During this period he was wholly engaged in the ftudy of the Arabian language, in fearching out ancient monuments, and in examining the national manners. After making himfelf acquainted with the knowledge and philofophy of Egypt, he vifited the illands in the Archipelago, where he fpent 18 months. On his return to France, in 1780 , he publifhed, 1. A Tranflation of the Koran, with a chort Life of Mahomet, in 1783 , 2 vols 8vo. 2. The Morality of the Koran, or a collection of the molt excellent Maxims in the Koran; a work extratted from his tranflation, which is efteemed both elegant and faithful. 3. Letters on Egypt, in 3 vols 8 vo , in 1785 . In thefe the author makes his obfervations with accuracy, paints with vivacity, and renders interefting every thing he relates. His defcriptions are in general faithful, but are perhaps in fome inftances too much ornamented. He has been juftly cenfured for painting modern Egypt and it inhabitants in too high colours. Thefe letters, however, were bought up by the curious public, and read with pleafure and advantage. Encouraged by this flattering reception, he prepared his letters upon Greece. He died foon after at Paris of a malady contracted from too intenfe application. A fenfible obltruction in the right lobe of the liver had made a decifive progrefs, which the return of fummer, fome fimple medicines, a frifit regimen, and travelling, feemed to remove.

On his return into the country adjacent to Paris, his health however was till doubtful; for it is well known that when the organization of one of the vifcera has been much deranged, deep traces of it will ever remain. His active mind, however, made him regardlefs of his health, and he conceived it his duty to profit by thofe appearances of recovery which he experienced at the clofe of the fummer and the beginning of autumn, to put into order his travels into the inlands of the Archipelago, intended as a continuation of his letters on Egypt. His warmth of temper was exafperated by fome lively criticifms which had been made on his former productions, and he gave himfelf up to ftudy with a degree of activity of which the confequences were fufficiently obvious. An obltruction in the liver again took place, and made a new progrefs; his digeltion became extremely languid; fleep quite forfook him, both by night and by day; a dry and troublefome cough came on; his face appeared bloated, and his legs nore and more inflamed. The ufe of barley-water and cream ot tartar itill however promoted, in fome degree, the urinary fecretions, and afforded fome little glimmering of hope. In this fituation he returned to Paris in the beginning of the year 1788 ; to attend to the publication of bis new work concerning the inands of the Archipelago, particularly the ille of Candia. He had then all the fymptoms of a dangerous droply, which became fill more alarming from the very exhaufted fate of the vifcera. The right lobe of the liver was extremely hard and fenfible. The patient had fiverings without any kegulatr returns, and his itrength was undermined by a beetic fever. At the fame time fill more uneafy fymp-
toms took place, thofe of a dropfy in the cheft; but the circumftances which deftroyed all hope, and annonnced his approaching diffolution, were a fevere pain in the left fide, with a very troublefome cough, and a copious and blocdy expectoration (in bepaticis, fays Hippocrates, /pu tum cruentum mortiferum); his refpiration became more and more difficult ; his ftrength was exhaufted, and his death took place on the 4 th of February 1788 , attended with every indication of the moft copious overflowing in the cheft, and of an abfcefs in the liver.-Thus was deAtroyed, in the vigour of his age, an author whofe character and talents rendered him worthy of the happieft lot.

Mr Savary's genius was lively and well cultivated; his heart warm and benevolent; his imagination vigo: rous; bis memory retentive. He was cheerful and opens: and had fo great a talent for telling a fory, that his company was not lefs agreeable than infruefive. He did not mingle much with the world, but was fatisfied witheperforming well the duties of a fon, of a brother, and of a friend.

SAUCISSE, or SAUCrsson, in mining, is along. pipe or bag made of cloth well pitched, or fometimes of leather, of about an inch and a half diameter, filled with powder, going from the chamber of the mine to the en-. trance of the gallery. It is generally placed in a wooden pipe called an auget, to prevent its growing damp. It ferves to give fire to mines, caflions, bomb-chefts; \&c.

Saucrsson, is likewife a kind of fafcine, longer than the common ones; they ferve to raife batteries and to repair breaches. They are alfo ufed in making epaviements, in ftopping paffages, and in making taverfes over a wet ditch, \&rc.

SAVE, a river of Germany, which has its fource in Upper Carniola, on the frontiers of Carinthia.-It tuns through Carniola from weft to eaft, afterwards feparates Sclavonia from Croatia, Bofnia, and part of Servia, and then falls into the Danube at Belgrade.

SAVER krout. See Croute.
SAVERNAKE-FOREST is fituated near Marlhorough in Wilthire, and is 12 miles in circumference, well ftocked with deer, and delightful from the many viltas cut through the woods and coppices with which it abounds. Eight of thefe viftas meet, like the rays of a ltar, in a point near the middle of the foreft, where an octagon tower is erected to correfpond with the vif tas; through one of which is a view of Tottenham Park, Lord Ailefbury's feat, a ftately edifice erected after the model, and under the direction, of the modera Vitruvius, the earl of Burlington, who to the frength and convenience of the Englifh architectore has added the elegance of the Italian.

SAVILE (Sir George), afterwards marquis of Halifax, and one of the greatelt tatefmen of his time, was born about the year 1630; and fome time after bis return from his travels was created a peer ${ }_{3}$ in confideratrun of his own and his father's merits. He was a frenuous oppofer of the bill of exclulion; but propofed fuch limitations of the duke of York's authority, as fhould difable him from doing any harm either in church or Itate, as the taking out of his hands all power in ecciefiaftical matters, the difpofal of the public money; and the power of making peace and war; and lodging thefe in the two houres of parliament. After that bill was rejented in the houle of lords, he preffed them, though without fuccefs, to proceed to the limitation of
savin the duke's power; and began with moving, that during the king's life he might be obliged to live five lundred miles out of England. In Auguit 1682 he was created
a marquis, and foon after made privy-feal. Upon King James's acceffion, he was made prefident of the ccuncil ; but on his refufal to confent to the repeal of the telt, he was difmiffed from all public employments. In that affembly of the lords which met after king James's withdrawing himfelf the firf time from Whitehall, the marquis was chofen their prefident; and upon the king's return from Feveriham, he w'as fent, together with the earl of Shrewfbury and lord Delamere, from the prince of Orange, to order his majelty to quit the palace at Whitehall. In the convention of parliament he was chofen fpeaker of the houfe of lords, and ftrenuoully fupported the motion for the vacancy of the throne, and the conjunctive fovereignty of the prince and princefs; upon whofe acceffion he was again made pri-vy-feal. Yet, in 168 g, he quitted the court, and became a zealous oppofer of the meafures of government till his death, which happened in April 1695. The rev. Mr Grainger obferves, that "he was a perfon of unfettled principles, and of a lively imagination, which fometimes got the better of his judgment. He would never lofe his jelt, though it fpoiled his argument, or brought his fincerity or even his religion in queftion. He was defervedly celebrated for his parliamentary talents; and in the famous conteft relating to the bill of exclufion was thought to be a match for his uncle Shaftefhury. The pieces he has left us fhow him to have been an ingenious, if not a malterly writer; and his Advice to a Daughter contains more good fenfe in fewer words than is, perhaps, to be found in any of his contemporary authors." His lordhip alfo wrote, The Anatomy of an Equivalent; a Letter to a Diffenter; a Rough Draught of a Now Model at Sea; and Maxims of State; all which were printed together in one volume 8 vo.-Since thefe were alfo publifhed under his name the character of king Charles II. 8 vo ; the Character of Bifhop Burnet, and Hitorical Obfervations upon the reigns of Edward I, II. III. and Richard II. with Remarks upon their faithful Counfellors and falfe Favourites.

SAVIN, in botany. See Juniperus.
SAVIOUR, an appellation peculiarly given to Jefus Chrift, as being the Meffiah and Saviour of the world. See Jesus.

Order of St Shvour, a religious order of the Romifh Church, founded by St Bridget, about the year 1345, and fo called from its being pretended that our Saviour himfelf declared its conftitution and rules.to the found. refs. According to the confitutions, this is principally founded for religious women who pay a particular honour to the holy virgin; but there are fome monks of the order, to adminilter the facrament and fpiritual aififtance to the nuns.

SAUL the fon of Kifh, of the tribe of Benjamin, was the firft king of the Ifraelites. On account of his difobedient condu?, the kingdom was taken from his family, and given to David. See the Firlt Book of Samuel.

Saul, o herwife called Paul. See Paul.
SAUMUR, a confiderable town of France, in Anjou, and capital of the Saumarois, with an ancient caftle. The town is fmall, but pleafantly fituated on the Loire, acrofs which is a long bridge, continued through a number of illun?. Saumur was ancionly a molt im-
portant pafs over the river, and of confequence was sumters froquently and fiercely difputed by either party, curing the civil wars of France in the fixteenth century. The fortifications are of great ftrength, and Henry the Fourth, on the reconciliation which took place between him and Henry the Third, near Tours, in 1589 , demanded that Sanmur fhould be delivered to him, as one of the cities of fafety. The caftle overlooks the town and river. It is built on a lufty eminence, and has a venerable and magnificent appearance, and was lately ufed as a prifion of ftate, where perfons of rank were frequently confined. The kings of Sicily, and dukes of Anjou of the houfe of Valois, who defcended from John king of France, often refided in the caltle of Saumur, as it conltituted a part of their Angevin dominions. E. Long. o. 2. N. Lat. 47. 15.

SAUNDERS, a kind of wood brought from the Eaft Indies, of which there are three kinds; white, yellow, and red. See Pterocarpus and Santalum.

SAUNDERSON (Dr Robert), an eminent cafuift, was born at Rotherham, in Yorkfhire, on the Igth September 1587, and was defcended of an ancient family. He attended the grammar-fchool at Rotherham, where he made fuch wonderful proficiency in the languages, that at 13 it was judged proper to fend him to Lincoln college, Oxford. In 1608 he was appointed logic reader in the fame college. He took orders in 1611, and was promoted fucceffively to feveral benefices. Archbifhop Laud recommended him to king Charles I. as a profound cafuilt ; and that monarch, who feems to have been a great admirer of cafuiftical learning, appointed him one of his chaplains in 163 r. Charles propofed feveral cafes of confcience to him, and received fo great fatisfaction from his anfwers, that at the end of his month's attendance he told him, that he would wait with impatience during the intervening in months, as he was refolved to be more intimately acquainted with him, when it would again be his turn to officiate. The king regularly attended his fermons, and was wont to fay, that " he carried his ears to hear other preachers, but his confcience to hear Mr Saunderfon."

In 1642 Charles created him regius profeffor of divinity at Oxford, with the canonry of Chrift charch annexed: but the civil wars prevented him till 1646 from entering on the office; and in 1648 he was ejected by the vifitors which the parliament had commiffioned. He muft have food high in the public opinion; for in the fame year in which he was appointed profefor of divinity, both hcufes of parliament recommended him to the king as one of their truftees for fettling the affairs of the church. The king, too, repored great confidence in his judgment, and trequently confulted him about the ftate of his affairs. When the parliament propofed the abolition of the epifcopal form or church-government as incompatible with monarchy, Charles defired him to take the fubject under his confideration and deliver his opinion. He accordingly wrote a treatife entitled, Epifcopacy as eftablifhed by law in England not prejudicial to regal power.

Dr Saunderfon was taken prifoner by the parliament's troops and conveyed to Lincoln, in order to procure in exchange a Purisan divine named Clark, whom the king's army had taken. The exchange was agreed to, on condition that Dr Gaunderfon's livins $4 Q^{2}$
fhould

## SAU

$\underbrace{\text { Saunderfon fhouid be reftored, and his perfon and property remain }}$ unmolefted. The firf of thefe demands was readily unmolefted. The firt of thefe demands was readily
complied with : and a ftipulation was made, that the fecond fhould be obferved; but it was impofible to reftrain the licentioufnefs of the foldiers. They entered his church in the time of divine fervice, interrupted him when teading prayers, and even had the audacity to take the common prayer book from him, and to tear it to pieces.

The Honourable Mr Boyle, having tead a work of Dr Saunderfon's entitled De juramentiobligatione, was fo much pleafed, that he inquired at Bifhop Barlow, whether he thought it was poffible to prevail on the author to write Cafes of Confcience, if an honoraty penfion was affigned him to enable him to purchafe books, and pay an amanuenfis. Saunderion told Barlow, "that if any future tract of his could be of any ufe to mankind, he would cheerfully fet about it without a penfion." Boyle, however, fent him a prefent of 501 . fenfible, wo doubt, that, like the other royalifts, his finances could not be great. Upon this Saunderfon publified his book De Confientia.

When Charles II. was reinftated in the throne, he recovered his profefforthip and canonry, and foon after was promoted to the bilhopric of Lincoln. During the two years and a half in which he poffeffed this new office, he fpent a confiderable fum in augmenting poor vicarages, in repairing the palace at Bugden, \&c. He cied January 29, 1662-3, in his 76 th year.

He was a man of great acutenefs and folid judgment. "That faid and well-weighed man Dr Saunderfon (fays Dr Hammend) conceives all things deliberately, twells upon them difcreetly, difcerns things that differ exactly, paffeth his judgment rationally, and expreffes it aptly, clearly, and honefly." Being akked, what books he had read moft? he replied, that "he did not read many books, but thofe which he did read were well chofen and frequently perufed." Thefe, he faid, were chiefly three, Atiltotle's Rhetoric, Aquinas's Secunda Secunde, and Tully's Works; efpecially his Offices, which he had not read over lefs than 20 times, and could even, in his old age, recite without book." He added, that " the learned civilian Dr Zouch had written Elementa juris prudentia, which he thought he could alfo fay without book, and that no wife man could read it too often."

It will now be proper to give a hort account of his workj. I. In 1655 he publifhed Logica Artis Compendium, which was the fy fem of leftures he had delivered in the Univerfity when he was logic-reader. 2. Sermons, amounting in number to 36 , printed in 1681 , folio, with the author's life by Walton. 3. Nine Cafes of Confcience refolved; firft collected in one volume, in 1678, 8ro. 4. De juramenti obligatione. This book was tranlated into Englifh by Charles I, while a prifoner in the Ile of Wight, and printed at Lindon in 1665, 8.vo. 5. De Olligatione confcientia. 6. Cenfure of Mr Antony Afcham his book of the confufions and revclutions of government. 7. Pax Ecclefic concerning Predeftination, or the five points. 8. Epifcopacy, as eftablifhed by Law in England, not prejudicial to the regal power, in 1661. Befides thefe, he wrote two Dilcourfes in defence of Ufher's writings.

Saunerson (Dr Nicolas), was born at Thurlfone in Yorkfire in 1632, and may be confidered as a
prodigy for his application and fuccefs in mathematical Saurderion literature in circumfances apparently the nof unfavourable. He lof his fight by the fmall-pox before be was a year old. But this difafter did not prevent him from fearching after that knowledge for which nature had given him fo ardent a defire. He was initiated into the Greek and Roman authors at a free fchool at Penniton. After fpending fome years in the ftudy of the languages, his father (who had a place in the excife) began to teach him the common rules of arithmetic. He foon furpaffed his father; and could make long and difficult calculations, withour having any fenfible marks to affif his memory. At 18 he was taught the principles of algebra and geometry by Richard Went of Undoorbank, Efq; who, though a yentleman of fortune, yet, being Atrongly attached to mathematical learning, readily undertook the education of fo uncommon a genius. Saunderfon was alfo affifted in his mathematical Audies by Dr Nettleton. Thefe two gentlemen read books to him and explained them. He was next fent to a private academy at Attercliff near Sheffield, where logic and metaphyfics were chiefly taught. But thefe fciences not fuiting his turn of mind, he foon left tho academy. He lived for fome time in the country without any inflructor; but fuch was the vigour of his own mind, that few inftructions were neceffary : he only required books and a reader.
His father, belides the place he had in the excife, poffeffed alfo a fmall eftate; but having a numerous family to fupport, he was unable to give him a liberal education at one of the univerfities. Some of his friends who had remarked his perfpicuous and interefting manner of communicating his ideas, propofed that he hould attend the univerfity of Cambridge as a teacher of mathematics. This propofal was immediately put in execution; and he was accordingly conducted to Cam. bridge in his 25 th year by Mr Jofhua Dunn, a fellowcommoner of Chrift's college. Though he was not received as a member of the college, he was treated with great attention and refpect. He was allowed a chamber, and had free accefs to the library. Mr Whifon was at that time profeffor of mathematics; and as he read lectures in the way that Saunderfon intended, it was. naturally to be fuppofed be would view his project as an invation of his office. But, inftead of meditating any oppof on, the plan was no fonner mentioned to him than he ga:e his confent. Saunderfon's reputation was to a fpread throuzh the univerfity. When his lectures were announed a general cmiofity was excited to hear fuch intu ate mathematical fubjeats explained by a man who had been blind from his infancy. The fubject of hi, lectures was the Principia Matbematica, the Optics, a"d Arijumetica Univi;Falis of Sir Ifrac Newton. He vas aciordingly attended by a very numerous audience. It will appear at firt incredible to many that a bind $1, \cdots n$ thould be capable of explaining optics, whici requires an accurate knowledge of the nature of light and colours; but we muft recollect, thet the theory of vition is taught entirely by lines, and is fubjet to tie rilles of ceometry.
White thus creployed in explaining the principles of the Newtonian p ilifophy, he became known to its illuftri us autior. He was alf intimately ycquainted with Halley, $C$.es, De Moivre, and other eminent mathematicians. When Whiffon was removed from his

## S A U [ 677 ] S A V

Szunderion profefforfhip, Saunderfon was univerfally allowed to be the man beft qualified for the fucceffion. But to enjoy this sffice, it was neceffary, as the flatutes direct, that he fhould be promoted to a degree. To obtain this privilege the heads of the univerfity applied to their chancellor the duke of Somerfet, who procured the royal mandate to confer upon him the degree of mafter of arts. He was then elected Lucafian profeffor of mathematics in November 1711 . His inauguration fpeech was compofed in claffical Latin, and in the fyle of Cicero, with whofe works he had been much converfant. He now devoted his whole time to his lectures, and the infruction of his pupils. When George II. in 1728 , vifited the Univerfity of Cambridge, he expreffed a defire to fee Profeffor Saunderfon. In compliance with this defire, he waited upon bis majelty in the fenatehoufe, and was there, by the king's command, created doctor of laws. He was admitted a member of the Royal Society in 1736.

Saunderfon was naturally of a vigorous conftitution ; but having confined himfelf to a fedentary life, he at length became fcorbutic. For feveral years he felt a nambnefs in his limbs, which, in the fpring of 1739 , brought on a mortification in his foot; and, unfortunately, his blood was fo vitiated by the fcurvy, that affiftance from medicine was not to be expected. When he was informed that his death was near, he remained for a little fpace calm and filent; but he foon recovered his former vivacity, and converfed with his ufual eafe. He died on the sith of April ${ }_{1739}$, in the 57 th year of his age, and was buried at his own requet in the chancel at Boxworth.

He married the daughter of the reverend Mr Dickens, rector of Eosworth, in Cambridgefhire, and by her had a fon and daughter.

Dr Saunderfon was rather to be admired as a man of wonderful genius and affiduity, than to be loved for amiable qualities. He fpoke his fentiments freely of characters, and praifed or condemned his friends as well as his enemies without referve. This has been afcribed by fome to a love of defamation; but perhaps with more propriety it has been attributed by others to an inflexible love of truth, which urged him upon all occafions to fpeak the fent wents of his mind without difesife, mis without confideriag whether this conduct would pleare or give offence. His fentiments were fupp fed unfavourable to reveale: religion. It is faid, that he a inged he could not know God, becaufe he was blind, and could not fee his works; and that, upon this, Dr Holmes replied, "Lay your hand upon yourfelf, and the organization which you will feel in your own body will diflipate fo grofs an error." On the other hand, we are informed, that he had defired the facrament to be given him on the evening before his de. th. He was, however, feized with a delirium, which rendered this imp:fible,

He wrote a fyttem of algebra, which was publifhed in 2 volumes 4 to, at London, after his death in the year 1740, at the cxpence of the Uriverfity of Cambrige.
Or Saunderion invented for his own ufe a Palpable Arithmetic; that is, a method of performing operations in arithmetic folely by the fenfe of touch. It confifted of a table raifed upon a fmall frame, fo that he could apply his hands with equal eafe above and below. On this table were drawn a great number of parallel lines
which were crofled by others at right angles; the edges Saunderfon of the table were divided by notches half an inch dif. tant from one another, and between each notch there were Savonarn: Give parallels; fo that every fquare irch was divided in. to a hundred little fquares. At each angle of tl: fquares, where the parallels interferted one another, a hole was made quite through the table. In each hole he placed two pins, a big and a fmall cne. It was by the various arrangements of the pins that $S$.underfo? performed his operations. A defcription of this me. thod of making calculations by his table is given under the article Blind, $n^{\circ} 38$, though it is there by miftake faid that it was not of his own invention.

His fenfe of touch was fo perfect, that he could difcover with the greateft exactnefs the Alighteft inequality of furface, and could diftinguith in the mot finifhed works the fmalleft overfight in the polifh. In the cabinet of medals at Cambridge he could fingle out the Roman medals with the utmolt corresinefs; he could alfo perceive the flighteft variation in the atmofphere. One day, while fome gentlemen were making obfervations on the fun, he took notice of every little cloud that paffed over the fun which could interrupt their labours. When any object paffed before his face, even though at fome diftance, he difcovered it, and could guefs its fize with confiderable accuracy. When he walked, he knew when he paffed by a tree, a wall, or a houfe. He made thefe diftinctions from the different ways his face was affected by the motion of the air.

His mufical ear was remarkably acute; he could diftinguifh accurately to the fifth of a note. In his youth he bad been a performer on the flute; and he had made fuch proficiency, that if he had cultivated his talents in this way, he would probably have been as eminent in mufic as he was in mathematics. He recognixed not only his friends, but even thofe with whom he viaz Alightly acquainted, by the tone of their voice; and he conld judge with wonderful exactnefs of the fize of any apartment into which he was conducted.

SAVONA, a large, handfome, populous, and ftrorg town of Italy, in the territory of Genoa, with two caithes, and a bifhop's fee. It contains feveral handfome churches and well-built ftructures. It was taken by the king of Sardinia in 1746 , at which time it had a capacious. harbour ; but the people of Genoa, being afraid that it would hurt their own trade, choaked it up. It is feated on the Mediterranean fea, in a well-cultivated country, abounding in filk and all kinds of gocd fruit. E. Lery. 8. 14. N. Lat. 44. 21.

SAVONAROLA (Jerome), a famous Italian monk; was born at Ferrara in 1452, and defcended of a noble family. At the age of 22 he affumed the habit of a Dominican friar, without the knowledge of his parents, and diftinguifhed himfelf in that order by his piety and ability as a preacher. Florence was the theatre where he chofe to appear ; there he preached, confeffed, and wrote. He had addrefs enough to place himfelf at the head of the faction which oppofed the family of the Medici. He explained the Apocalypfe, and there found a prophecy which foretold the deftruction of his opponents. He predicted a renovation of the church, and declaimed with much feverity againt the clergy and the court of Rome. Alexander VI. excommunic::ted him, and prohibited him from preaching. He deriled the anathermas of the Pope: yet he forbore preaching

Savonarola for fome time, and then refumed his employment with more applaufe than before. The Pope and the Medici family then thought of attacking him with his own weapons. Savonarola having polted up a thefis as a fubject of difputation, a Francifcan, by their inftigation, cficed to prove it heretical. The Francifcan was feconded by his brother friars, and Savonarola by his; and thus the two orders were at open war with each other. To fettle the difpute, and to convince their anagonits of the fuperior fanctity of Savonarola, one of the Dominicans offered to walk through a fire; and in order to prove his wickednefs, a Francifcan agreed to the fame experiment. The multitude, eager to witnefs fo extraordinary a fpectacle, urged both parties to come to a decifion ; and the magiftrates were conitrained to give their confent. Accordingly, Saturday the th of April 1498 was fixed for the trial. On that day the champions appeared; but when they faw one another in cold blood, and beheld the wood in flames, they were feized with fear, and were very anxious to ercape by any fubterfuge the imminent danger into which they had rafhly thrown themfelves. The Dominican pretended he could not enter the flames without the hoft in his hand. This the magiftrates obltinately refufed to allow; and the Dominican's fortitude was not put to the reft. The Francifcans incited the multitude againf their opponents, who accordingly affaulted their monaltery, broke open the gates which were fhut againtt them, and entered by force. Upon this, the magiftrates thought it neceffary to bring Savonarola to trial as an impoftor. He was put to the torture, and examined; and the anfwers which he gave fully evinced that he was both a cheat and a fanatic. He boafted of having frequent converfations with God, and found his brother friars credulous enough to believe him. One of the Dominicans, who had fhared in his fufferings, affirmed, that he faw the Holy Ghoft in the thape of a dove, with feathers of gold and filver, twice in one day alight on the fhoulder of Savonarola and peck his ear; he pretended alfo that he had violent combats with demons. John Francis Picus earl of Mirandula, who wrote his life, affures us, that the devils which infefted the convent of the Dominicats trembled at the fight of friar Jerome, and that out of vexation they always fuppreffed fume letters of his name in pronouncing it. He expelled them from all the cells of the monaftery. When he went round the convent fprinkling holy water to defend the friars from the infults of the demons, it is faid the evil fpirits fpread thick clouds before him to prevent his paffage.-At length, the pope Alexander VI. fent the chief of the Dominicans, with bifhop Romolino, to degrade him from holy orders, and to deliver him up to the fecular judges with his two fanatical affociates. They were condemred to be hanged and burned on the 23 d May 1498. Savenarola fubmitted to the execuion of the fentence with great firmnefs and devotion, and without nttering a word refecting his innocence or his guilt. He was +6 years of age. Immediately after his death, his Confeltion was publifhed in his name. It contained mary extravagancies, but nothing to deferve fo fevere and infamous a punifhment. His adherents did not fail to atuibute to him the power of working miracles; and foltrong a veneration had they for their chief, that they precerved with pions care any parts of his body which t:ef could fnatch from the flumes. The earl of Mirandu.
la, the author of his life, has defcribed him as an eminent faint. He gravely informs us, that his heart was found in a river ; and that he had a piece of it in his poffelfion, which had been very ufeful in curing difeates, and ejecting demons. He remarks, that many of his perfecutors came to a miferable end. Savonarola has alfo been defended by Father Quetif, Bzovius, Baron, and other religious Dominicans.

He wrote a prodigious number of books in favour of religion. He has left, i. Sermons in Italian; 2. A Treatife entitled, Triumphus crucis; 3. Eruditorum Cor: fefforum, and feveral others. His works have been publifhed at Leyden in 6 volumes 12 mo .

SAVORY, in botany. See Satureia.
SAVOUR. See Taste.
SAVOY, a duchy lying between France and Italy, and which takes its name from the Latin Sabaadia, altered afterwards to Saboia, and Sabojia.

This country was anciently inhabited by the Celtes, whofe defcendants therein were fubdivided into the Allobroges, Nantuates, Veragri, Seduni, Salaffi, Centrones, Garocelli, and fome others of inferior note.Of all thefe the Allobroges were the mof confiderable. The reduction of thefe tribes, in which Julius Cæfar had made a great progrefs, was completed under Augultus. Afterwards this country fhared the fate of the reft of the weftern empire, and was over-run by the northern barbarians. The Burgundians held it a confiderable time; but when or how it firt became a diftinct earldom under the prefent family, is what hiftorians are not agreed about: thus much, however, is certain, that Amadæus I. who lived in the 12 th century, was count of it. In 1416, Amadæus VIII, was created by the emperor Sigifmund duke of Savoy; and Victor Amadrus firlt took the title of king of Sicily, and afterwards of Sardinia. See Sardinia. Savoy was lately conquered by the French, and added to the republic as the eightieth department. As this arrangement, though decreed by the convention to laft for ever, may probably be of fhort duration, we fhall write of the duchy as of an independent flate. Savoy, then, is bounded to the fonth by France and Piedmont; to the north by the lake of Geneva, which feparates it from Switzerland; to the weft by France; and to the eaft by Piedmont, the Milanefe, and Switzerland; its greatef length being about eighty-eight miles, and breadth about feventy-fix.

As it lies among the Alps, it is full of lofty mountains, which in general are very barren: many of the higheft of them are perpetually covered with ice and fnow. The fummit of thofe called Montannes $A T_{\mathrm{s}} u$. dites, "t the curfed mountains," are faid to be more than two Englifh miles in perpendicular height above the level of the lake of Geneva, and the level itfelf is much higher than the Mediterranean. In fome few of the valleys there is corn-land and pature, and a good breed of cattle and mules; and along the lake of Geneva, and in two or three other places, a tolerable wine is produced. Mount Senis or Cenis, betwreen Savoy and Piedmont, over which the highway from Geneva to Turin lies, is as high, if not higher, than the Mentagnes Maudites; but of all the mountains of the Alps, the higheft is mount Rochmelon, in Piedmont, between $F$ frtiere and Novalefe. The roads over thefe mountains are very tedious, difagreeable, and dangerous, efpecially as luge mulas of fnow, c.lled by the Italians avalanches,

## Savor.

avalanches, and fragments of rocks, frequently roll down into them from the impending precipices. The way of travelling is either in fledges, chairs, or on the backs of mules: in fome places the path on the bri: k of the precipices is fo narrow, that there is but juft room for a fingle perfon to pafs. It begins to fnow on thefe mountains commonly about the beginning of October. In fummer, in the months of July, Auguf, and September, many of them yield very fine grafs, with a great variety of flowers and herbs; and others box-wood, walnuts, chefnuts, and pines. The beight and different combinations of thefe mountains, their towering fummits rifing above one another, and covered with fnow the many cataracts or falls of water, the noife and rapidity of the river Arc, the froth and green tincture of its water, the echoes of its numerous Itreams tumbling from cliff to cliff, form altogether a very romantic fcene. Thefe mountainous tracts, notwithflanding their height, are not altogether free from thunder in fummer, and are alfo much expofed to thick clouds, which fometimes fettle unexpectedly on them, and continue feveral days. There are fome wolves among the thickets; and they abound with hares, rupicapras or chamois, and marmottes. In the lower parts of Savoy, there are alfo bears, wild boars, deer, and rabbits; and among the defolate mountains are found great quantities of rock-cryftal. In the glacieres or ice-valleys, between the high mountains, the air is extremely cold, even in the months of July and Auguf. The furface of thefe ice-valleys looks like a fea or lake, which, after being agitated by fierce and contrary winds, has been frozen all at once, interferfed with hideous cracks and chafms. The noife of there cracks, when firt made by the heat of the noon day fun, and reverberated by the furrounding rocks and mountains, is aftonifhing. The height of the impending mountains is fuch, that the fun's rays feldom reach the ice-valleys, except a few hours in the middle of fummer. The avalanches or fnow-balls, which the leaft concuflion of the air will occafion, tumble down the mountains with amazing rapidity, continually increafing, and carrying all before them. People have been taken out alive, after being $b$ ried feveral days under them. The moun. tatuous nature of this duchy renders the plough an ufelefs int ument of agriculture. The peafants break up the hungry foil with the pickaxe and fpade, and to improve it carry up mould and dung in bafkets. For the purpofe of preferving it from drought in the fpring and fummer, they cut fmall refervoirs above it, the water of which may be let out at will; and to prevent the earth from giving wav, break the declivity of the mountains by building walls on the fide for its fupport, which frequently aflume the appearance of ancient firtification, and are a very pleafing deception to travellers. The Savoyard, carry their better fort of cheefe into Piedmont, as the flavour is much efteemed there; but they gain more by their fkins of bears, chamois, and bouquetins ( $a f_{p}$ ) and pheufunts, which they carry in great numbers to Turin.
The chief :ivers are the Rhone, which, on the fide of Geneva, feprrates Savoy from France; the Ar:e, which has fome particles of gold in its fands; the Ifere, the Seran, the Siers, and the Arc. There are alfo a great many lakes in this country, which yield
plenty of fifh, but nene of them are very large, trgether with meticiral and reciprocating $f_{4}$ rings a di.t baths.

The language of the common people is a corruri French; but the better fort, and thofe who live in the great cities, fpeak as good French as they do in Puis itfelf.

In their temper, however, and difpofition, the $S_{1}$. voyards reiemble the Germans more than the Fiench, retaining ftill much of the old German honefty and fimplicity of manners, which no doubt is partly owin;; to the poverty and barrennefs of the country. To this. alfo, joined to their 1 ngevity and the fruitfulneefs of their women, which are the effects of their cheerful difpofition, healthy air, activity, temperance, and fobriety, it is owing that great numbers of them are obliged to go abroad in queft of a livelihood, which they earn, thofe at leaft who have no trades, by fhowing marmottes, cleaning fhoes, fweeping chimneys, and the like. It is faid, that there are generally about 18,000 of them, young and old, about Paris. In fummer they lie in the ftreets, and in winter, forty, fifty, or fixty of them lodge together in a room : they are fohoneft that they may be trufted to any amount. The children are often carried abroad in bafkets before they are able to walk. In many villages of Savoy there is hardly a man to be feen throughout the year, excepting a month or two. Thofe that have families generally fet out and return about the fame feafon, when their wives commonly lie in, and they never fail to bring home fome part of their fmall earnings. Some of them are fuch confummate mafters of economy, that they fet up fhops and make fortunes, and others return homewith a competency for the ref of their days. An old man is often difpatched with letters, little prefents, and fome money, from the younger fort, to their parents and relations, and brings back with him frefh colonies, letters, meffages, and news. The cultivation of their grounds, and the reaping and gathering in of the harveft and vintage, are generally left to the women and children ; but all this is to be undertood of the mountainous parts of Savoy. Great numbers of the mountaineers of both fexes are faid to be lame and deformed; and they are much fubject to a kind of wens, which. grow about their throats, and very much disfigure them, efpecially the women ; but that is the only inconvenience they feel from them.

The nobility of Savoy, and the other dominions of the king of Sardinia, labour under great hardhips and reftrictions, unheard of in other countries, which we. have not room here to particularize. A minute account of them will be found in Mr Keyner's Travels. In fhort, the king has left neither liberty, power nor much property, to any but himfelf and the clergy, whofe overgrown wealth he has alfo greatly curtailed.

No other religion is profeffed or tolerated in Savey but that of the church of Rome. The decrees, how:ever, of the council of Trent are not admitted; ncr are the churches afylums for malefactors.

This duchy is divided into thofe of Chablais, Gene vois, and Savoy Proper, the counties of Tarantaile and. Maurienne, and the barony of Faucigny.

SAURIN (James), a celebrated preacher, was born at Nifmes in 1677, and was the fon of a protertant lawyer of confiderable eminence. He applied to his itudies

Givev $\underbrace{\text { Sauir. }}$ $\underbrace{\text { Saurir. }}$

 .

 -

 .

$\qquad$

Sauria,
with great fuccefs; but at length being captivated with a miiitary life, he relinquifhed them for the profeffion of arms. In 1694 he made a campaign as a cadet in lord Galloway's company, and foon afterwards obtained a pair of colours in the regiment of colonel Renault which ferved in Piedmont. But the duke of Savoy having made peace with France, he returned to Geneva, and refumed the ftudy of philofophy and theology under Turretin and other profeffors. In i 700 he vifited Holland, then went to England, where he remained for feveral years, and married. In 1705 be returned to the Hague, where he fixed his refidence, and preached with the moft unbounded applaufe. To an exterior appearance highly prepoffeffing, he added a ftrong harmonious voice. The fublime prayer which he recited before his fermon was uttered in a manner highly affecting. Nor was the attention excited by the prayer diffipated by the fermon: all who heard it were charmed; and thofe who came with an intention to criticife, were carried along with the preacher and forgot their defign. Saurin had, however, one fault in bis delivery; he did not manage his voice with fufficient fkill. He exhaufted himfelf fo much in his prayer and the beginning of his fermon, that his voice grew feeble towards the end of the fervice. His fermons, efpecially thofe publifhed during his life, are diftinguifhed for juftnefs of thought, force of reafoning, and an eloquent unaffected flyle.

The firt time that the celebrated Abaddie heard him preach, he exclaimed, "Is it an angel or a man who peaks?" Saurin died on the 30th of December, 1730, aged 53 years.

He wrote, 1. Sermons, which were publifhed in 12 vols 8 vo and 12 mo ; fome of which difplay great genius and eloquence, and others are compofed with negligence. One may obferve in them the imprecations and the averfion which the Calvinifts of that age were wont to utter againft the Roman Catholics. Saurin was, notwithftanding, a lover of toleration : and his fentiments on this fubjeet gave great offence to fome of his fanatical brethren, who attempted to obfcure his merit, and embitter his life. They found fault with him becaufe he did not call the pope Anticbrif, and the Romilh church the wwhore of Babylon. But thefe prophetic metaphors, however applicable they may be, were certainly not intended by the benevolent religion of Jefus to be bandied about as terms of repreach; which would teach thofe to rail who ufe them, and irritate, without convincing, thofe to whom they were applied.

Saurin, therefore, while he perhaps interpreted thefe metaphors in the fame way with his oppofers, difcovered more of the moderation of the Chritian fpirit. Five volumes of his fermons were publifhed in his life, the reft have been added fince his deceafe.
2. Difcourfes Hiftorical, Critical, and Moral, on the moft memorable Events of the Old and New Teftament. This is his greateft and mott valuable work. It was printed firt in two volumes folio. As it was left unfinifled, Beaufobre and Roques undertook a continuation of it, and increated it to four volumes. It is full of learning: it is indeed a collection of the opinions of the belt authors, both Chrifian and Heathen; of the philofophers, hiftorians, and critics, in every fubject which the author examines. 3. The State of Chriftianity in France, 1785, 8vo. In this book he difcuffes
many important points of controverfy, and calls in quettion the truth of the miracle faid to be performed on La Foffe at Paris. 4. An Abridgment of Chriftian Theology and Morality, in the form of a Catechiim, $1722,8 \mathrm{vo}$. He afterwards publifhed an abridgment of this work.

A Differtation which he puolined on the Expediency of fometimes difguifng the Truth, raifed a multitude of enemies againit him. In this difcourfe his plan was, to tate the arguments of thofe who affirm that, in certain cafes it is lawful to difguife truth, and the anfwers of thofe who maintain the contrary. He does not determine the queftion, but feems, however, to incline to the firf opinion. He was immediately attacked by feveral adverfaries, and a long controvery enfued; but his doctrines and opinions were at length publicly approved of by the fynods of Campen and of the Hague.

The fubject of this controverfy has long been agitated, and men of equally good principles have fupported oppofite fides. It would certainly be a dangerous maxim that fallhood can ever be lawful. There may, indeed, be particular cafes, when the motives to it are of fuch a nature as to diminifh its criminality in a high degree; but to leffen its guilt is a very different thing from jurtifying it by the laws of morality.

Saurin (Jofeph), a geometrician of the academy of Sciences at Paris, was born at Courtoufon in the principality of Orange, in 1659. His father, who was a minifter at Grenoble, was his firft preceptor. He made rapid progrefs in his ftudies, and was admitted minifter of Eure in Dauphiny when very young: but having made ufe of fome violent expreffions in one of his fermons, he was obliged to quit France in 1683 . He retired to Geneva, and thence to Berne, where he obtained a confiderable living. He was farcely fettled in his new habitation, when fome theologians raifed a perfecution againit him. Saurin, hating controverfy, and difgufted with Switzerland, where his talents were entirely concealed, repaired to Holland. He returned foon after to France, and furrendered himfelf into the hands of Boffuet bifhop of Meaux, who obliged him to make a recantation of his errors. This event took place in 1690. His enemies, however, fufpected his inncerity in the abjuration which he had made. It was a general opinion, that the defire of cultivating fcience in the capital of France had a greater effeat in producing this change than religion. Saurin, however, fpeaks of the reformers with great afperity, and condemns them for going too far. "Deceived in my opinions concerning the rigid fytem of Calvin, Ino longer regarded that reformer in any other light but as one of thofe extravagant geniufes who are carried beyond the bounds of truth. Such appeared to me in general the founders of the reformation; and that juft idea which I have now obtained of their charaster has enabled me to hake off a load of prejudices. I faw in molt of the articles which have feparated them from us, fuch as the invocation of faints, the worthip of images, the diftinction of meats, \&c. that they had much exaggerated the inevitable abufes of the people, and imputed thefe to the Romifh church, as if fanctioned by its doctrines. Befides, that they have mifreprefented thofe doctrines which were not connected with any abufe. One thing which furprifed me much when my eyes began to open, was the falfe idea, though in appearance

Saurin.

## SAU

Suurin full of refpecit, for the word of God, which the reform. 1 ers entertained of the perfection and perfpicuity of the Sauvayefia. Holy Scriptares, and the manifen mifinterpretation of paffages which they bring to fupport that idea (for that mifinter pretation is a point which can be proved). Two or three articles still raifed fome objections in my mind againft the Romifh church; to wit, Tranfubfantiation, the adoration of the facrament, and the infaliibility of the church. The adoration of the facrament I confidered as idolatry, and, on that account, removed from her communion. But foon after, the Expofition of the bihop of Meaux, a work which can never be fufficiently admired, and his Treatife concerning changes, reverfed all my opinions, and rendered me an enemy to the Reformation." It is faid alfo, that Saurin appeafed his confcience by reading Poirct's Coyitationes rationales. This book is written with a view to vindicate the church of Rome from the charge of idolatry.

If it was the love of diftinction that induced Saurin to return to the Romifh church, he was not difappointed; for he there met with protection and fupport. He was favourably received by Louis XIV. obtained a penfion from him, and was treated by the Academy of Sciences with the moft flattering refpect. At that time (1717), geometry formed his principal occupation. He adorned the fournal des Savans with many excellent treatiles; and he added to the memoirs of the Academy many interefing papers. Thefe are the only works which he has left behind him. He died at Paris on the 29th December 1737 , in his 78 th year, of a fever. He married a wife of the family of Croufas in Switzerland, who bore him a fon, Bernard Jofeph, diftinguifhed as a writer for the theatre.

Saurin was of a bold and impetuous fpirit. He had that lofty deportment which is generally miftaken for pride. His philofophy was auftere; his opinions of men were not very favourable; and he often delivered them in their prefence : this created him many enemies. His memory was attacked after his deceafe. A letter was printed in the Mercure Suiffe, faid to be written by Saurin from Paris, in which he acknowledges that he had committed feveral crimes which deferved death. Some Calvinift minifters publifhed in 5757 two or three pamphlets to prove the authenticity of that letter; but Voltaire made diligent enquiry not only at the place where Saurin had been difcharging the facerdotal office, but at the Deans of the clergy of that department. They all exclaimed againfan imputation fo opprobrious. It mult not, however, be concealed, that Voltaire, in the defence which he has publiffed in his general hiftory of Saurin's conduct, leaves fome nnfavourable impreffrons upon the reader's mind. He infinuatec, that Sausin facrificed his religion to his intereft; that he piayed upon Boffuet, who believed he had converted a clergyman; when he had only given a little fortune to a ph:lofopher.

SAURURUS, in botany: A genus of the tetragy. nia order, belonging to the heptandria clafs of planss; and in the natural method ranking under the fecond order, Piperice. The calyx is a catkin, with uniflorous fcales : there is no corolla; there are four germina, and four monofpermous berries.

SAUVAGESIA, in botany: A gent:s of the monogynia order, belonging to the pentandria clafs of $\mathrm{f}^{\text {lants }}$; and in the natural method ranking with thofe Vol. XVI.
of which the order is doubtful. The corolla is pentn- S.ursur petalous and fringed ; the calyx pentaphyllous; the nectarium the fame, having its leaves placed alternately with the $p$ tals ; the capfule unilocular.

SAUVEUR (Jofeph), an eminent French matle. matician, born at La Fleche in 1658 . He was abfolutely dumb until he was feven years of age ; and even then his organs of fpeech did not difengage themfelves fo freely, but that he was ever after obliged to fpeak with great deliberation. Mathematics were the only ftudies he had any relifh for, and thefe he cultivated with extraordinary fuccefs; fo that he commenced teacher at 20 years of age, and was fo foon in vogue, that he had prince Eugene for his fcholar. He was made mathematical profeffor in the royal college in 1686; and ten years after was admitted a member of the Academy of Sciences. He died in 1716 ; and his writings, which confift rather of detached papers than of connected treatifes, are all inferted in the Memoirs of the Academy of Sciences. He was twice married; and by the laft wife had a fon, who, like himfelf, was dumb for the firlt feven years of his life.

SAW, an inftrument which ferves to cut into pieces feveral folid matters; as wood, fone, ivory, \&c.

The beft faws are of tempered iteel ground bright and fmoorh : thofe of iron are only hammer-harderied: hence the firf, befides their being ftiffer, are likewife found fmoother than the laft. They are known to be well hammered by the ftiff bending of the blade; and to be well and evenly ground, by their bending equally in a bow.
$S_{\text {ant }} f f$. See Pristis.
SAXE (Maurice count of), was born the 13 th October 1696. He was the natural fon of Frederic Auguftus II. elector of Saxony, and king of Poland, and of the countefs of Konigfmarc, a Swedifh lady, celebrated both for her wit and beauty. He was educated along with Frederic Augultus the electoral prince, afterwards king of Poland. His infancy announced the future warrior. Nothing could prevail on him to apply to his Atudies but the promife of being allowed, after he had finifhed his tafk, to mount on horfe-back or exercife himfelf with arms.

He ferved his firft campaign in the army commanded by prince Eugene and the duke of Marlborough, when only twelve years old. He fignalized himfelf at the fieges of Tournay and Mons, and particularly at the battle of Malplaquet. In the evening of that memorable day, he was heard to fay, "I'm content with my day's work." During the campaign of 1710, prince Eugene and the duke of Marlborough made many public encomiums on his merit. Next year the young count accompanied the king of Poland to the fiege of Stralfund, the ftrongeft place in Pomerania, and difplayed the greateft intrepidity. He fwam acrofs the river in fight of the enemy, with a piftol in his hand. His valour fhone noleís conficicuous on the bloody day of Gaedelbufck, where he commanded a regiment of cavalry. He had a horfe killed under bim, after he had three times rallied his regiment, and led them on to the charge.

Soon after that campaign, his mother prevailed on him to marry the countefis of Lubin, a lady both rich and beautiful. This union lated but a fhort time. In $17=1$, the count procured a cififlution of the marriage : 4R
a Atp
a fep of which he afterwards repented. The counteis left him with regret; but this did not prevent her from marrying foon after. The count of Saxe was too fond of pleafure and variety to fubmit to the duties which marriage impofes. In the midtt, however, of the pleafures in which he fometimes indulged, he never loft fight of his profefiion. He carried along with him wherever he went a library of military books; and even when he feemed moft taken up with his pleafures, he never failed to fpend an hour or two in private ftudy.

In 1717 he went to Hungary, where the emperor had an army of 15,000 men under the command of prince Eugene. Young count Saxe was prefent at the fiege of Belgrade, and at a battle which the prince gained over the 「urks. On his return to Poland in 1718 , he was made a knight of the golden eagle.

The wars in Europe being concluded by the treaties of Utrecht and Poffarowitz, count Saxe went to France. He had always profeffed a partiality for that country. French, indeed, was the only foreign language which during his infancy he was willing to learn. He fpent his whole time during the peace in ftudying mathematics, fortification, and mechanics, fciences which exactly fuited his genius. The mode of exercifing troops had fruck his attention when very young. At 16 he invented a new exercife, which was taught in Saxony with the greateft fuccefs. Having obtained a regiment in France in 1722, he formed it himfelf according to his new plan. From that moment the Cbevalier Follar, an excellent judge of military talents, predicted that he would be a great man.

In 1726 the States of Courland chofe him for their fovereign. But both Poland and Ruffia rofe in arms to oppofe him. The Czarina wifhed to beftow the duchy on Menzikoff, a happy adventurer, who from a paltry-cook's boy became a general and a prince. Menzikoff fent 800 Ruffians to Milan, where they befieged the new-chofen duke in his palace. Count Saxe, who had only 60 men, defended himfelf with aftonifhing intrepidity. The fiege was raifed, and the Ruffians obliged to retreat. Soon after he retired to Ufmaiz, and prepared to defend his people againtt the two hoftile nations. Here he remained with only 300 men, till the Ruffian general approached at the head of 4000 to force his retreat. That general invited the count to a conference, during which he intended to furprife him, and take him prifoner. The count, informed of the plot, reproached him for his bafenefs, and broke up the conference. About this time he wrote to France for nen and money. Mademoifelle le Couvreur, a famous actrefs, pawned her jewels and plate, and fent him the furn of 40,000 livres. This actrefs had formed his mind for the fine arts. She had made him read the greater part of the French poets, and given him a tafte for the theatre, which he retained even in the camp. The count, unable to defend himfelf againf Ruflia and Poland, was obliged in the year 1729 to leave his new dominions, and retire into France. It is faid that Anne Iwanowa, duchefs dowager of Courland, and fecond danghter of the czar Iwan Alexiowitz, had given him hopes of marriage, and abandoned him at that time becaufe fhe defpaired of fixing his wavering paffion.This inconftancy lof him not only Courland, but the throne of Ruffa itfelf $\mathrm{F}_{2}$ which that Princefs afterwards Glled.

Count Saxe, thus Atript of his territories, devoted himfelf for fome time to the ftudy of mathematics. He compofed alfo, in 13 nights, and during the intervals of an ague, his Reveries, which he corrected afterwards. This book is written in an incorrect but forcible ftyle; it is full of remarks both new and profound, and is equally ufeful to the foldier and the general.

The death of the king of Poland his father, in 1733 , kindled a new war in Europe. His brother, the elector of Saxony, offered him the command of all his forces, but he preferred the French fervice, and repaired to the marechal of Berwick's army, which was encamped on the Rhine. "Count," faid that general, who was preparing to attack the enemy's entrenchments at Etlinghen, "I was going to fend for 3000 men, but your arrival is of more value than theirs." When the attack began, the count, at the head of a regiment of grenadiers, forced the enemy's lines, and by his bravery decided the victory. He behaved at the fiege of Philipfburgh with no lefs intrepidity. For thefe fervices he was, in 1734, rewarded with the rank of lieutenant-general. Peace was concluded in 1736 ; but the death of Charles VI. emperor of Germany kindled a new war almolt immediately.

Prague was befieged by the count of Saxe in $174 \mathrm{r}_{\mathrm{g}}$ near the end of November, and taken the fame month by affault. The conqueft of Egra followed that of Prague. It was taken a few days after the trenches were opened. This fuccefs gave fo much joy to the Emperor Charles VII. that he wrote a congratulatory letter to the conqueror with his own hands.

In 1744 he was made marechal of France, and commanded a part of the French army in Flanders. During that campaign he difplayed the greateft military conduct. Though the enemy was fuperior in number, he oblerved their motions fo fkilfully that they could do nothing.

In January 1745, an alliance was concluded at War. fovia between the queen of Hungary, the king of England, and the States of Holland. The ambaffador of the States General, meeting marechal Saxe one day at Verfailles, afked his opinion of that treaty. "I think (fays he), that if the kingroy mafter would give me an unlimited commiffion, I would read the original at the Hague before the end of the year." This anfwer was not a bravado; the marechal was capable of performing it.

He went foon after, though exceedingly ill, to take the command of the French army in the Low Coun. tries. A gentleman, feeing the feeble condition in which he left Paris, anked him how he could in that fituation undertake fo great an enterprife? "The queftion (replied he) is not about living, but fetting out."Soon after the opening of the campaign, the battle of Fontenoy was fought. Marechal Saxe was at the point of death, yet he caufed himfelf to be put into a litter, and carried round all the polts. During the action he mounted on horfeback, though he was fo very weak that his attendants dreaded every moment to fee him: expire. The victory of Fontenoy, owing entirely to his vigilance and capacity, was followed by the reduction of Tournay, Bruges, Ghent, Oudenarde, Oftend, Atb, and Bruffels : this laft city was taken on the 28 th February 1746; and very foon after the king fent to the marechal a letter of naturalization conceived in the mof flattering

## S A X

sare. ~
flattering terms. The fucceeding campaigns gained him additional honours. After the victory of Raucoux, which he gained on the inth October 1746, the king of France made him a prefent of fix pieces of cannon. He was, on the 12 th of January of the following year, created marechal of all the French armies, and, in 1748, com-mander-general of all thofe parts of the Netherlands which were lately conquered.

Holland now began to tremble for her fafety, MaeAtricht and Bergen-op-Zoom had already fallen, and nothing but misfortunes feemed to attend the further profecution of the war. The States General, therefore, offered terms of peace, which were accepted, and a treaty concluded on the 18 th October 1748.

Marechal Saxe retired to Chambord, a country feat which the ling of France had given him. Some time after he went to Berlin, where the king of Pruffia received him as Alexander would have received Cæfar.On his return to France, he fpent his time among men of learning, artifts, and philofophers. He died of a fever, on the 30 th November 1750, at the age of 54 .

Some days before his death, talking to M. Senac his phyfician about his life, "It has been (fays he) an excellent dream." He was remarkably careful of the lives of his men. One day a general officer was pointing out to him a polt which would have been of great ufe. ${ }^{66}$ It will only colt you (fays he) a dozen gremadiers." "That would do very well," replied the marechal, "s were it only a dozen lieutenant-generals."

It was impoffible for marechal Saxe, the natural brother of the king of Poland, elected fovereign of Courland, and pofleffed of a vigorous and reftefs imagination, to be deftitute of ambition. He conftantly entertained the notion that he would be a king. After lofing the crown of Ruffia by his inconltancy in love, he formed, it is faid, the project of affembling the Jews, and of being the fovereign of a nation which for 1700 years had neither poffeffed chief nor country. When this chimerical idea could not be realized, he caft his eyes upon the kingdom of Corfica. After fuiling in this project alfo, he was bufily employed in planning a fettlement in fome part of America, particularly Brazil, when death furprifed him.

He had been educated and died in the Lutheran religion. "It is a pity (faid the queen of France, when fhe heard of his death) that we cannot fay a fingle De profundis (prayer for the dead) for a man who has made us fing fo many Te Deums." All France lad mented his death.

By his will, which is dated at Paris, March r, 1748 , he directed that his body fhould be buried in quicklime: "that nothing (fays he) may remain of me in this world but the remembrance of me among my triends." Thefe orders, however, were not complied with; for his body was embalmed, put into a leaden coffin, which was inclofed in another of copper, and this covered with one of wood, bound about with iron. His heart was put into a filver siit box, and his entrails into another coffin. Louis XV. was at the charge of his fúneral. By his order his corpfe was interred with great pomp and fplendor in the Lutheran church of St Thomas, at Strafburgh, on the 8th of February 1751.

The marechal was a man of ordinary ftature, of a robaft conftitution, and extraordinary frength. To an

6831 S A X
afpect, noble, warlike, and mild, he joined the excel. Saxifraga. lent qualities of the heart. Affable in his manners, and difpofed to fympathice with the unfortunate, his generofity fometimes carried him beyond the limits of his fortune. On his death-bed he reviewed the errors of his life with remorfe, and expreffed much penitence.

The beft edition of his Reveries was printed at Paris 1757 , in 2 vols $4^{\text {to. }}$ It was compared with the greatelt attention with the original manufcript in the king's library. It is accompanied with many defigns exactly engraved, and a life of the author. The Life of marechal Saxe was written by M. d'Efpagnac, 2 vols. 12 mo . This hiftory is written in the panegyrical ftyle, The author is, however, impartial enough to remark, that in the three battles upon which the reputation of marechal Saxe is founded, he engaged in the molt favourable circumftances. "Never did a general (fays he) ftand in a more advantageous fituation. Honoured with the confidence of the king, he was not reftrained in any of his projects. He always commanded a nume-
rous army: his foldiers were fteady, and his efficers poffeffed of great merit."

SAXIFRAGA, Saxifrage, in botany : A genus of the digynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the 13th order, Succulentix. The calyx is quinquepartite; the corolla pentapetalous; the capfule biroftrated, unilocular, and polyfpermous.

There are 38 fpecies; of which the molt remarkable are, 1. The granulata, or white faxifrage, which grows naturally in the meadows in many parts of England. The roots of this plant are like grains of corn, of a reddifh colour without ; from which arife kidney fhaped hairy leaves, ftanding upon pretty long footitalks.The ftalks are thick, a font high, hairy, and furrowed: thefe branch out from the bottom, and have a few fmall leaves like thofe below, which fit clofe to the falk: the flowers terminate the ftalk, growing in fmall clufters; they have five white petals, inclofing ten ftamina and the two Atyles. There is a variety of this with double flowers, which is very ornamental. 2. The pyramidata, with a pyramidal ftalk, grows naturally on the mountains of Italy. The leaves are tongue-hhaped, gathered into heads, rounded at their points, and have cartilaginous and fawed borders. The ftalk rifes two feet and a half high, branching out near the ground, forming a natural pyramid to the top. The flowers have five white wedge-fhaped petals, and ten ftamina, placed circularly the length of the tube, terminated by roundifh purple fummits. When thefe plants are ftrong, they produce very large pyramids of flowers, which make a fine appearance. 3. The punstata, commonly called London pride, or none-fo-pretty, grows naturally on the Alps, and alfo in great plenty on a mountain of Ireland called Mangerton, in the county of Kerry in that ifland. The roots of this are perennial ; the leaves are oblong, oval, and placed circularly at bottom. They have broad, flat, furrowed footfalks, and are deeply crenated at their edges, which are white. The ftalk rifes a foot high, is of a purple colour, Atiff, flender, and hairy.
It fends out from the fide on the upper part feveral flort footfalks, which are terminated by white flowers fpotted with red. 4. The oppofitifolia, grows natural$4 R_{2}$

## SAX [ [ 684 ] SAX

$\because: s x=$ Sixnery.

Is on the Alps, Pyrenees, and Helvetian mountains: It is alfo found pretty plentifuly growing upon Ingleborough hill in Yorkfhire, Snowdon in Wales, and fome oher places. It is a perennial plant, with Italks trai.ing upon the ground, and are feldom more than two inches long, garnifhed with fmall oval leaves ftanding oppofite, which lie over one another like the fcales of $\mathfrak{f i n h}$ : they are of a brown-green colour, and have a refemblance of heath. The flowers are produced at the end of tle branches, of a deep blue; and thus make a pretty appearance during their continuance, which is great part of March and the beginning of April. All thele fpecies are eafily propagated by offsets, or by part. ing their roo:s.

SAXO Grammaticus, defcended from an illuitrious Coxe'sTra- Danif (A) family, was born about the middle of the 12 th vels into Denmark. century. Stephens, in his edition of Saxo-Grammaticus, printed at Sorcë, indubitably proves, that he mult have been alive in 1156 , but cannot afcertain the exact place and time of his kirth. See Stephens's Prolegomenat to the Notes on Saxo-Grammaticus, p. 8, to 24 ; alfo Holberg, vol. i. p. 26 g.; and Mallet's North. Antiq. vol. i. p. 4. On account of his uncommon learning, Saxo, was diftinguihed by the name of Grammaticus. He was provoft of the cathedral church of Rofkild, and warmly patronized by the learned and warlike Abfalon, the celebrated archbifhop of Lunden, at whofe inftigation he wrote the Hittory of Denmark. His epitaph, a dry panegyric in bad Latin verfes, gives no atcount of the era of his death, which happened, according to Stephens, in 1204. His hiftory, confifting of 16 books, begins from the earlieft account of the Danifh annals, and concludes with the year 1180 . According to the opinion of an accurate writer, the firlt part, which relates to the origin of the Danes, and the reigns of the ancient kings, is full of fables; but the eight laft books, and particularly thofe which regard the events of his own times, deferve the utmoft credit. He wrote in Latin; the ftyle, if we confider the barbarous age in which he flourihed, is in general extremely elegant, but rather too poetical for hiftory. Mallet, in his Hiftoire de Dannemarc, vol. i. p. $18:$, fays, "that Sperling, a writer of great erudition, has proved, in contradiction to the affertions of Stephens and others, that Saxo. Grammaticus was fecretary to Abfalon; and that the Saxo provolt of Refkild was another perfon, and lived earlier."

SAXONY, the name of two circles of the German empire, an electorate, and a duchy of the fame. The lower circle is bounded to the fouth by the circle of Upper Saxony, and a part. of that of the Upper Rhine; to the north, by the duchy of Slefwick, belonging to the king of Denmark, and the Baltic; to the well, by. the circle of Weitphalia and the north fea ; and to the eaft by the circle of Upper Saxony. The ftates belonging to it are the dukes and princes of Magdeburg and Bremen, Zell, Grubenhagen, Calenburg, Wolfenbuttle, Halberftadt, Mecklenburg-Schwerin, Mecklen-burg-Gufto, Holftein-Gluckitadt, Holitein-Gottorf,

Hildeheim, Saxe-Lawerburg; the archbinopric of Lubeck; the principalities of Schweriu, Ratzeburg, Blankenburg, Ranzau; the Imperial cities of Lubeck, Gotzlar, Muhihaufen, Nordhaufen, Humburg, and Eremen. The dakes of Bremen and Magdeburg are alternately directors and fummening princes; but, ever fince the jear 1682, the diets which ufed generally to be held at Brunfwick or Lunenburg have been difcon. tinued. Towards the army of the empire, which, by a decree of the empire in 168 I , was feitled at 40,000 men, this circle was to furnilh 1322 horfemen and 2701 foot; and of the 300,000 in rins granted to the imperial cheft in 1707, its quota was 31,271 florins; both. which affefments are the fame with thofe of Upper Sax. ony, Burgundy, Swabia, and Weftphalia. This circle at prefent nominates only two affeffors in the chamber. judicatory of the empire, of one of which the elector of-Brunfwick-Lunenburg has the nomination, who muft be a Lutheran, and is the ninth in rank. The inhabitants of this circle are almolt all Lutherans.

The circle of Upper Saxony is bounded by that of Franconia, the Upper Rhine, and Lower Saxony ; and alfo by the Baltic fea, Prufia, Poland, Silefia, Lufatia, and Bohemia. It is of great extent, and contains the following ftates, viz. the electors of Saxony and Brandenburg, Saxe-Weimar, Saxe-Eifenach, Saxe Cobourg,: Saxe-Gotha, Saxe Altenburg, Saxe-Querfurt, the Hi ther and Farther Pomerania, Camin, Anhalt, Quidlenburg, Gernrode, Walkenried, Schwarzburg, Sonderlhaufen, Schwarzburg. Rudolfadr, Mansfeld, Stolberg, Barby, the counts of Reuffen, and the counts of Schonberg. No diets have been held in this circle fince the year 1683. The elector of Saxony has always been the fole fummon. ing prince and director of it. Moft of the inhabitants prolefs the Prote?tant religion. When the whole empire furnifhes $40,000 \mathrm{men}$, the quota of this circle is 1322 horfe and 2707 foot. Of the 300,000 florins granted by the empire in 1707, it contributed oaly 31,271 florins, 28 kruitzers, being rated no higher than thofe of Wefphalia, Lower Saxony, Swabia, and Burgandy, though it is much larger. Agreeable to a refolution. and regulation in 1654, this circle nominates now only two affeflors of the chamber-court.

The electorate conifits of the duchy of Saxony, the greatelt part of the margravate of Meiffen, a part of the Vogtland, and the northern half of the landgravate of Thuringia. The Lufatias alfo, and a part of the country of Henneberg, belong to it, but are no part of this circle. The foil of the electoral dominions lying in this circle is in general exceeding rich and fruitful, yielding corn, fruits, and pulfe in abundance, together with hops, flax, hemp, tobacco, anifeed, wild faffron, wood; and in fome places woad, wine, coals, porcelain clay, terra figillata, fullets earth, fine fhiver, various forts of beautiful marble, ferpentine ftone, and almolt all the different fecies of precious fones. Sulphur alfo, alum, vitriol, fand, and free-fone, falt-fprings, amber, turf, cinnabar, quickfilver, antimony, bifmuth, arfenic, cobalt, and other minerals, are found in it. This country,

Saxony.

Saxony. country, befides the above articles, contains likewife valuable mines of filver, copper, tin, lead, and iron; and abounds in many places with horned cattle, fheep, horfes, and venifon. The principal rivers by which it is watered are the Elbe, the Schwerze-Elter, the Mulde, the Saale, the Unltrut, the Weiffe-Eliter, and the Pleiffe. Thefe rivers, as well as the lakes and rivulets, abound in fifh; and in the White-Eller are found beautiful pearls. This electorate is extremely well cultivated and inhabited, and is faid to include about 250 great and fmall $t$, wns, upwards of 5000 villages, 196 royal manors, and near as many royal caftles, befides private eftates, and commanderies. The provincial diets here contift of three claffes. The firit is compofed of the prelates, the counts, and lords, and the two univerfities of Leipfic and Wittenberg. To the fecond belong the nobility in general; immediate or mediate, that is, fuch as ftand immediately under the fief-chancery or the aulic judicatories, and fuch as are immediately under the jurifdiction of the amtman. The third ciafs is formed of the towns in general. The general provincial diets are ordinarily held every fix years; but there are others called frection diets, which are convened commonly every two years. We would here obferve, that not only thefe diets, but thofe in moft of the other fates of Germany, are at prefent extremely infignificant and unimportant, retaining little more than the fhadow of their former power and privileges; for even the petty princes, though they depend upon their more potent neighbours, and muft be careful not to give them any umbrage, are almof as abfolute in their refpective territories as the grand feignior himfelf. As to religion, it was in this country that the reformation took its rife in the 16 th century, to which it hath ever fince adhered, according
*See Reformation, $n^{5} 8$. to the doctrines of Luther*. The two late electors, when they embraced ropery in order to qualify themfelves to be elected kings of Poland, gave the meft fo- lemn affurances to their people, that they would inviolably maintain the eftablifhed religion and its profeffors in the full and free enjoyment of all their ecclefiaftical rights, privileges, and prerogatives whatfoever, in regard to churches, worfhip, ceremonies, ufages, univerfities, fchools, benefices, incomes, profits, jurifdictions, and immunities. The electoral families ftill continue Roman Catholics, though they have loft the crown of Poland, for which they at firft embraced Popery. With refpect to ecclefialtical matters, the country is divided into parifhes, and thefe again into fpiritual infpections and confiftories, all fubordinate to the ecclefialtical council and upper confiltory of Drefden, in which city and Leipfic the Calvinits and Roman Catholics enjoy the free exercife of their religion. Learning flourifhes in this electorate ; in which, befides the free-fchools and gymnafia in moft of the chief towns, are the two celebrated univerfities of Wittenburg and Leipzig, in the laft of which are alfo focieties for the liberal arts and the German language, with bookfellers and printers of the greateft eminence. A great variety of manufactures are alfo carried on in this country. The principal are thofe of fine and coarfe linen, thread, fine lace, paper, fine glaffes and mirrors; porcelain, equal if not fupe+ See Por- rior to that of Chinat; iron, brafs, and fteel wares; macelain, $\mu^{2}{ }_{2}^{23}, 24$. nufactures of gold and filver, cotton, wool, and filk ; gloves, caps, hats, and t..peftry ; in which, and the natural productions mentioned above, together with dye-
ing, an important foreign commerse is carried on. A
Saxory. great addition has been made fince the year 1718 to the electoral territories, by the extincticn of the collateral branches of Zeitz, Merfeburg, and Weiffenfels, whole duminions devolved to the elder electoral branch, defcended from the margraves of Meffen. The filt of thefe, who was eledior of Saxony, was Fredenict the Warlike, about the beginning of the 15 th century.

This elector ftyles himfelt duke of Saxeny, Juliers, Cleve, and Berg, as alfo of Engern and Weitphaha, arch-marfhal and elector of the Holy Roman empirc, landgrave in Thuringia, margrave of Meiflen, and ct Utper and Lower Lufatia, burgrave of Magdeburg, princely count of Henneberg, count of La Mark, Raveniberg, Barty, and Hanau, and lord of RavenAtein. Among the electors he is reckoned the fixth, as great-marihal of the empire, of which he is alfo vicar, during an interregnum, in all places not fubject to the vicariate of the count palatine of the Rhine. He is moreover fole director of the circle; and in the vacancy of the fee of Mentz claims the directoriam at the diet of the empire. His matricular affeffment, on account of the electorate, is 1984 florins, befides what be pays for other diftricts and territories. To the cham-ber-courts he contributes, each term, the fum of 1545 rix-dollars, together with 83 rix-dollars and 62 kruitzers on account of the county of Mansfeld. In this electorate, fubordinate to the privy-council, are various colleges for the departments of war, foreign affairs, the finances, fiefs, mines, police, and ecclefiaftical affairs, together with high tribunals and courts of juflice, to which appeals lie from the inferior. The revenues of this elector are as confiderable as thofe of any prince in the empire, if we except thofe of the houfe of Auf. tria. They arife from the ordinary and extraordinary fubfidies of the flates; his own demefnes, confifting of 72 bailiwics; the import on beer, and the fine porcelain of the country; tenths of corn, fruit, wine, \&i. his own filver mines, and the tenths of thofe that belong to particulars: all which, added together, bring in a yearly revenue of betwixt 700,000l, and 800,0col. yet the electorate is at prefent deeply in debt. The regular troops commonly amount to 20,000 men, ex. clufive of the militia of the ban, the arriere-ban, and the body of miners and hunters, who are obliged in time of war to bear arms. The whole electorate is divided into circles.

The electoral circle, or the duchy of Saxony, is bounded by the circles of Meiffen, Leipzig, and Thu. ringia, the principality of Anhalt, the marche of Brandenburg, and Lufatia. The principality of Anhalt lies acrofs it, and divides it into two parts. Its greatelt length and breadth is computed at about 40 miles; but though it is watered by the Elbe, the Black-Eltar, and the Mulde, it is not very fruitful, the foil for the moft part confifting of fand. It contains 24 towns, three boroughs, betwixt 400 and 500 villages, 164 noblemen's eftates, II fuperintendencies, three infpections, under one confiftory, and in prefecturares or diftricts. The prefent duchy of Saxony is not to be counfounded with the old ; for the latter was of a much greater extent, and contained in it thofe large tracts anciently called Eaftphalia, Engern, and Weftphalia, of which the electoral circle was no part, but was taken by Albert the. Bear, margrave of Salziredel, from the Venedi. His

Saxony. fon Bernard obtaining the dignity of duke of Saxony from the emperor Frederic I. the name of duchy was given to this country; and the electorial dignity having been afterwards annexed to the duchy, it acquired thereby alfo the name of the electoral circle.

The country of Saxony is remarkable for being the mother of the prefent Englifh nation; but concerning the Saxons themflelves, previous to that period, we have very few particulars. The Saxons (fays Mr Whitaker) have been derived by our hiftorians from very different parts of the globe; India, the north of Afia, and the foretts of Germany, And their appellation has been equally referred to very different caufes; the name of their Indian progenitor, the plundering difpofition of their Afiatic fathers, and the fhort hooked weapons of their warriors. But the real origin of the Saxons, and the genuice derivation of their name, feem clearly to be thefe.

In the earlier period of the Gallic hiftory, the Celte of Gaul croffed the Rhine in confiderable numbers, and planted various colonies in the regions beyond it. Thus the Volcæ Tectofages fettled on one fide of the Hercynian foreft and about the banks of the Neckar, the Helvetii upon another and about the Rhine and Maine, the Boii beyond both, and the Senones in the heart of Germany. Thus alfo we fee the Treviri, the Nervii, the Suevi, and the Marcomanni, the Quadi, the Venedi, and others, in that country ; all plainly betrayed to be Gallic nations by the Gallic appellations which they bear, and all together poffeffing the greatelt part of it. And, even as late as the conclufion of the firft century, we find one nation on the eaftern fide of this great continent actually fpeaking the language of Gaul, and another upon the northern ufing a dialect nearly related to the Britifh. But as all the various tribes of the Germans are confidered by Strabo to be zephtabi Iu入arat, or genuine Gauls in their origin; fo thofe particularly that Tived immediately beyond the Rhine, and are afferted by Tacitus to be indubitably native Germans, are exprefsly denominated ranarat, or Gauls, by Diodorus, and as exprefsly declared by Dio to have been diftinguifhed by the equivalent appellation of Celta from the earlieft period. And the broad line of nations, which extend. ed along the ocean, and reached to the borders of Scyshia, was all known to the learned in the days of Diodorus, by the fame fignificart appellation of $\mathrm{r} \alpha \lambda \alpha \pi \alpha$, , or Gatls.

Of thefe, the moft noted were the Si-Cambri and Cimbri; the former being feated near the channel of the Rhine, and the latter inhabiting the peninfula of Jutland. And the denominations of both declare their original: and fhow them to have been derived from the common ftock of the Celtr, and to be of the fame Celtic kindred with the Cimbri of Englifh Somerfetfhire, and the Cymbri or Cambrians of Britin Wales. The Cimbri are accordingly denominated Celice by Strabo and Appian. And they are equally afferted to be Gauls by Diodorus; to be the defcendants of that nation which facked the city of Rome, plundered the temple of Delphi, and fubdued a great part of Europe and fome of Afia.

Iminediately to the fouth of there were the Saxons, extending from the ifthmus of the Cherfonefus to the current of the Elbe. And they were equally Cel-
tic in their origin as their neighbours. They were denominated Ambrones as well as Saxons; and, as fuch, are included by Tacitus under the general appellation of Cimlri, and comprehended in Plutarch under the equal one of Celto-Scythe. And the name of Ambrones appears particularly to have been Gallic ; being common to the Saxons beyond the Elbe, and the Ligurians in Cifalpine Gaul; as both found to their furprife, on the irruption of the former into Italy with the Cimbri. And, what is equally furprifing, and has been equally unnoticed by the critics, the Welfh diftinguifh England by the name of Loeger or Liguria, even to the prefent moment. In that irruption thefe Saxons, Ambrons, or Ligurians, compofed a body of a more than 30,000 men, and were principally concerned in cutting to pieces the large armies of Manlius and Cæpio. Nor is the appellation of Saxons lefs Celtic than the other. It was originally the fame with the Belgic Sueffones of Gaul ; the capital of that tribe being now intitled Soifons by the French, and the name of the Saxons pronounced Saijen by the Welfh, Safon by the Scotch, and Safenach or Saxfenach by the Irifh. And the Sueffones or Saxones of Gaul derived their own appellation from the pofition of their metropolis on a river, the ftream at Soifons being now denominated the Aifne, and formerly the Axon; Ueff-on or Axon importing only waters or a river, and S-ueff-on or S-ax-on the waters or the river. The Sueffones, therefore, are actually denominated the Ueffones by Ptolemy; and the Saxones are actually intitled the Axones by Lucan.

Thefe, with their brethren and allies the Cimbri, having been more formidable enemies to the Romans by land, than the Samnites, Carthaginians, Spaniards, Gauls, or Parthians, in the fecond century applied themfelves to navigation, and became nearly as terrible by fear They foon made themfelves known to the inhabitants of the Britifh ifles by their piracies in the northern channels, and were denominated by them Lochlyn or Lochlynach; lucd.lyn fignifying the people of the wave, and the $D$ being quiefcent in the pronunciation. They took poffeflion of the Orkney iflands, which were then merely large fhoals of fand, uncovered with woods, and overgrown with rufhes; and they landed in the north of Ireland, and ravaged the country. Before the middle of the third century they made a fecond defcent upon the latter, difembarked a confiderable body of men, and defigned the abfolute fubjection of the ifland. Before the conclufion of it, they carried their naval operations to the fouth, infefted the Britifh channel with their litile veffels, and made frequent defcents upon the coaft. And in the fourth and fifth centuries, acting in conjunction with the Picts of Caledonia and the Scots of Ireland, they ravaged all the eaftern and fouth-ealtern fhores of Britain, began the formal conqueft of the country, and finally fettled their victorious foldiery in Lancamire.

SAY, or SAYE, in commerce, a kind of ferge much ufed abroad for linings, and by the religious for fhirts; with us it is ufed for aprons by feveral forts of artificers, being ufually died green.

SCAB. See Itch and Medicine.
Scab in Sheef. See Sheep.
SCABIOSA, Scabious, in botany : A genus of twe monogynia order, belonging to the tetrandria clafs
scabrita of plants; and in the natural method ranking under the 4 th order, Aggregata. The common calyx is polyphyllous; the proper one is double fuperior ; the receptacle is paleaceous or naked. The moft remarkable fpecies are, 1. The arventis, or meadow-fcabious, grows naturally in many places of Britain. It hath a ftrung, thick, fibrous root, fending out many branching ftalks, which rife to the height of three feet; the lower leaves are fometimes almoft entire, and at others they are cut into inany fegments almoft to the midrib. The flowers are produced upon naked foottalks at the end of the branches; they are of a purple colour, and have a faint odour. 2. The fuccifa, or devil's bit, grows naturally in woods and moilt places. This has a fhort tap-root, the end of which appears as if it was bitten or cut off, whence the plant has taken its name. The leaves are oval and fpear-fhaped, and fmooth; the flalks are fingle, about two feet high, garnifhed wilh two leaves at each joint ; they generally fend out two fhort foct-ftalks from their upper joint, ftanding oppofite, which are terminated by purple flowers.-Both thefe have been recommended as aperient, fudorific, and expectorant ; but the prefent practice has no dependence on them.
SCABRITA, in botany: A genus of the monogynia order, belonging to the tetrandria clafs of plants. The corolla is monopetalous, and falver-fhaped; there are two feeds emarginated fuperior; the calyx is truncated.
SCEVOLA (C. Mucius), a young Roman of illuftriou, birti, is particularly celebrated in the Roman hiftory for a brave but uniucceffful attempt upon the life ot $\ddagger$ orfena king of Hetruria, about the year before Chrif 504. See the article Rome, ${ }^{0} 71$.
Schevola, in botany: A genus of the monogynia order, belonging to the pentandria clafs of plants. The corvlla is monopetalous; the tube flit longitudinally; the border quinquetid and lateral. The fruit is a plum inferior and monofpermous; the nucleus bilocular.
SCAFFOLD, among builders, an affemblage of planks and boards, fultained by treffels and pieces of wood fixed in the wall; whereon mafons, bricklayers. \&c. ftand to work, in building high walls, and plafterers in plaftering cielings, \&c.

Scaffold, alfo denotes a timber-work raifed in the manner of an amphitheatre, for the more commodious viewing any fhow or ceremony: it is alfo ufed for a little thage raifed in fome public place, whereon to behead criminals.
SCALA-nota (anciently Neapolis), called by the Turks Kou/badafe, is fituated in a bay, on the flope of a hill, the houfes rifing one above another, intermised with minarees and tall flender cypreffes. "A ftreet, through which we rode (fays Dr Chandler $\dagger$ ), was hung with goat-fkins expofed to dry, died of a mott lively red. At one of the fountains is an ancient coffin ufed as a ciftern. The port was filled with fmall craft. Before it is an old fortrefs on a rock or iflet frequented by gulls and fea-mews. By the water-fide is a large and good khan, at which we paffed a night on our return. This place belonged once to the Ephefians, who exchanged it with the Samians for a town in Caria."
SCALADO, or Scallabe, in the art of war, a furious affault made on the wall or rampart of a city, or other fortified place, by means of ladders, without carrying on works in form, to fecure the men.

SCALD cream, fometimes alfo called Clouted cream : a curious method of preparing cream for batter, almoft peculiar to Devonfhire. Dr Hales, in Philofophical Tranfactions, volume 49, page 342, 1755, part Ift, gives fome account of the method of preparing this delicate and luxurious article : other writers alfo fpeak of it. With an elucidation or two, we fhall nearly quote Mr Feltham's account from the Gentleman's Magazine ${ }_{2}$ volume 61. part 2. It is there obferved, that the purpofe of making fcald-cream is far fuperior butter that can be procured from the ufual raw cream, being preferable for flavour and keeping; to which thofe accurtomed are fo partial, as feldom to eat any other. As leaden cifterns would not anfwer for fcalding cream, the dairies moftly adopt brafs pans, which hold from three to five gallons for the milk ; and that which is put into thofe pans one morning, flands till the next, when, without difturbing it, it is fet over (on a trivet) a fteady brik wood fire, devoid of fmoke, where it is to remain from feven to fifteen minutes, according to the fize of the pan, or the quantity in it : the precife time of removing it from the fire mult be particularly attendect to, and is, when the furface begins to wrinkle or to gather in a little, fhowing figns of being near the agitation of boiling, which it mult by no means do ; it is then inftantly to be taken off, and placed in the dairy until the next morning, when the fine cream is thrown up, and may be taken for the table, or for butter, into which it is now foon converted by flirring it with the hand. Some know when to remove it from the fire by founding the pan with the finger, it being then lets. fonorous; but this is only acquired by experience. Dr Hales obferves, that this method of preparing milk will take off the ill tafte it fometimes acquires from the cows feeding on turnips, cabbage, \&c.

SCALDS, in the hitory of literature, a name given by the ancient inhabitants of the northern countries to their poets; in whofe writings their hiltory is recorded.
SCALE, a mathematical infrument confifting of feveral lines drawn on wood, brafs, filver, \&c. and varioully divided, according to the purpofes it is intended to ferve; whence it acquires various denominations, as the plain fcale, diagonal fcale, plotting fcale, \&c: See Geometry.

Scale, in mufic, fometimes denominoted a gamut, a diagram, a feries, an order, a diapafon. It confilts of the regular gradations of found, by which a compofer or performer, whether in rifing or defcending, may pafs from any given tune to another. Thefe gradaticns are feven. When this order is repeated, the firt note of the fecond is confentaneous with the loweft note of the firf ; the fecond of the former with the fecond of the latter; and fo through the whole octave. The fecond order, therefore, is juitly efteemed only a repetition of the firf. For this reafon the fcale, among the moderns, is fometimes limited to an ocfave; at other times extended to the compafs of any particular voice or inftrument. It likewife frequently includes all the practical gradations of mulical found, or the whole number of octaves employed in compofition or execution, arranged in theis natural order.
SCALENE, or Scalenous Triangle, foalenum, in geometry, a triangle whofe fides and angles are unequal. See Glometry.

Mufcles.

SCALIGER (J̇ulius Cæfir), a learned critic, poer, phyfician, and philofupher; was born at the cafte of Ripa, in the territories of Verona, in 1484: and is faid to have been defcended from the ancient princes of Verona, though this is not mentioned in the letters of naturalization he obtained in France in 1528 . He learned the firit rudiments of the Latin tongue in his own country; ${ }^{\prime}$ and in his 12 th year was prefented to the Emperor Maximilian, who made bim one of his pages. He ferved that emperor 17 years, and gave fignal proofs of his valour and conduct in feveral expeditions. He was prefent at the battle of Ravenna in April 1512, in which he had the misfortune to lofe his father Benedict Scaliger, and his brother Titus; on which his mother died with grief: when being redaced to neceflitous circumftances, he entered into the order of the Francifcans and applied himfelf to ftudy at Bologna; but foon after changing his mind with refpect to his becoming a monk, he took arms again, and ferved in Piedmont. At which time a phyfician perfaaded him to ftudy phyfic, which he did at his leifure-hours, and alfo learned Greek; and at latt the gout determined him, at 40 years of age, to abandon a military life. He foon after fettled at Agen, where he married, and began to apply himfelf ferioufly to his ftudies. He learned firt the French tongue, which he fpoke perfectly in three months; and then made himfelf malter of the Gafcon, Italian, Spanifh, German, Hungarian, and Sclavonian : but the chief object of his fudies was polite literature. Meanwhile, he fupported his family by the practice of phyfic. He did not publifh any of his works till he was 47 years of age; when he foon gained a great name in the republic of letters. He had a graceful perfon, and fo ftrong a memory, even in his old age, that he dictated to his fon 200 verfes which he had compofed the day before, and retained without writing them down. He was fo charitable, that his houfe was as it were an hofpital for the poor and fick ; and he had fuch an averfion to lying, that he would have no correfpondence with thofe who were given to that vice; but, on the other hand, he had much vanity, and a fatirical firit, which created him many enemies. He died of a retention of urine in 1558. He wrote in Latin, I. A Treatife on the Art of Poetry. 2. Exercitations againt Carden : which works are much efteemed. 3. Commentaries on Ariftotle's Hiftory of Animals, and on Theophraftus on Plants. 4. Some Treatifes on Phyfic, 5. Letters, Orations, Poems, and other works.

Scaliger (Jofeph Juttus), one of the molt learned critics and writers of his time; he was the fon of the tirmer, and was born at Agen in France in 1540. He Itudied in the college of Bourdeaux ; after whicf his father took him under his own care, and employed him in tranfcribing his poems; by which means be obtained fuch a talte for poetry, that before he was 17 years old he wrote a tragedy upon the fubject of Oedipus, in which he introduced all the poetical ornathenis of fyle and fentiment. His father dying in 1558 , he went to Paris the year following, with a defign to :uply himfelf to the Greek tongue. For this purpofe he for two montlus attended the lectures of Turnebus; but finding that in the ufual courfe he fhould be a long
time in gaining his point, he fhut himfelf up in his clo. fet, and by conttant application for two years gained a perfect knowledge of that language. After which he applied to the Hebrew, which he learned by himfelf with great facility. He made no lefs progrefs in the fciences; and his writings procured him the reputation of one of the greatelt men of that or any other age. He embraced the reformed religion at 22 years of age. In 1563, he attached himfelf to Lewis Caftiegnier de la Roch Pozay, whom he attended in feveral journeys; and in 1593, was invited to accept of the place of honorary profeflor of the univerfity of Leyden, which he complied with. He died of a dropfy in that city in 1609. He was a man of great temperance; was never married; and was fo clofe a ftudent, that he often fpent whole days in his ftudy without eating ; and though his circumftances were always very narrow, he conftantly refufed the prefents that were offered him. He publifhed many works; the principal of which are, I. Notes on Seneca's Tragedies, on Varro, Aufonius, Pompeius Feftus, \&c. 2. His Latin Poems. 3. A Treatife de Emendatione Temporum. 4. Eufebius's Chronicle with Notes. 5. Canones Ifagogici; and many other works. The collections intitled Scaligeriana, were collected from his converfations by one of his friends; and being ranged into alphabetical order, were publifhed by Iface Voflius.

SCALLOP, in ichthyology. Sé Pecten.
In the Highlands of Scotland, the great fcallop fhell is made ufe of for the flamming of milk. In old times, it had a more honourable place; being admitted into the halls of heroes, and was the cup of their feftivity when the tribe aflembled in the hall of their chieftain.

SCALPEL, in furgery, a kind of knife ufed in anatomical diffections and operations in furgery.

SCALPER, or Scalping-Iron, a furgeon's inftrument ufed for fcraping foul carious bones.

SCALPING, in military hiftory, a barbarous cuftom, in practice among the Indian warriors, of taking off the tops of the fcalps of the enemies' fkulls with their hair on. They preferve them as trophies of their victories, and are rewarded by their chiefs according to the number of fcalps they bring in.

SCALPRA Dentalia, inftruments ufed by the furgeons to take off thofe black, livid, or yellow cruls which infeft the teeth, and not only loore and deftroy them, but taint the breath.

SCAMMONY, a concreted vegetable juice of a fpecies of convolvalus, partly of the refin, and partly of the gumkind. See Convolvulus.

The beft fammony comes from Aleppo, in light fpongy maffes, eafily friable, of a fhining afh-colour verging to black ; when powdered, of a light grey or whitin-colour: an inferior fort is broughe from Smyrna, in more compact ponderous pieces, of a darker colour, and full of fand and other impurities. This juice is chiefly of the refinous kind; rectified firit difolves five ounces out of fix, the remainder is a mucilaginous fubftance mixed with drofs; proof-fpirit totally diffolves it, the impurities only being left. It has a faint unpleafant fmell, and a bitterifh, fomewhat acrimonious, talle.

Scammony is an effecacious and ftrong purgative. Some have condemmed it as unfafe, and laid fundry ill qualities to its charge ; the primcipal of which is, that

3sandalum its operation is uncertain, a full dofe proving fome II. times ineffectual, whilft at others a much fmaller one occafions dangerous hypercatharfes. This difference, however, is owing entirely to the different circum-

They confited in taking frightful lenp:, cilmbing up the iteepeft rocks, fighting naked with (ffenive weapons, wrefling with the utmof fury ; fo that it was ufual to fee tifem grown up to be robult men, and terrible in the combat, at the age of 15 . At this ea.ly age the roung men became their own malers; which they did by receiving a fword, a buckler, and a lance. This ceremony was performed at fome public meeting. One of the principal men of the affembly named the youth in public ; after which he was obliged to provide for his own fubfiftence, and was either now to live by hunting, or by joining in fome incurlion againft the enemy. Great care was taken to prevent the young men from too early connections with the female fex; and indeed they could have no hope to gain the affection of the fair, but in proportion to the courage and addrefs they had fhown in their military exercifes. Accordingly, in an ancient fong, we find Bartholin, king of Norway, extremely furprized that his miftrefs fhould prove unkind, as he could perform eight different exerciles. The children were generally born in camps; and being inured from their infancy to behold nothing but arms, effulen of blood, and flaughter, they imbibed the cruel difpofition of their fathers, and when they broke forth upon other nations, behaved rather like furies than like human creatures.
The laws of this people, in fome meafure refembled thofe of the ancient Lacedemonians. They knew no virtue but bravery, and no vice but cowardice. The greatelt penalties were inflifted on fuch as fled from battle. The laws of the ancient Danes declared fuch perfons infamous, and excluded them from fociety. Among the Germans, cowards were fometimes fuffocated in mud ; after which they were covered over with hurdles, to fhow, fays Tacitus, that though the punifhment of crimes hould be public, there are certain degrees of cowardice and infamy which ought to be buried in oblivion. Frotho king of Denmark enafted, by law, that whoever folicited an eminent poft ought upon all occafions to atlack one enemy, to face two, to retire only one Atep back from three, and never to make an actual retreat till affaulted by four. The rules of juftice themfelves were adapted and warped to thefe pre. judices. War was looked upon as a real act of juftice, and force was thought to be an inconteltible title over the weak, and a vifible mark that God had intended them to be fubject to the ftrong. They had no doubt but that the intentions of the Deity had been to eftablith the fame dependence among men that takes place among inferior creatures; and, fetting out from this principle of the natural inequalily among men, they had from thence inferred that the weak had no right to what they could not defend. This maxim was adopted with fuch rigour, that the name of divine judgement was given not only to the judicatory combat, but to conflicts and battles of all forts; victory being, in their opinion, the only certain mark by which providence enables us to diftinguifh thofe whom it has appointed to command others.-Lafty, their religion, by annexing eternal happinefs to the military virtues, gave the utmoft poffible degree of vigour to that propenfity which there people had for war, and to their contempt of death, of which we fhall now give fome inftances. We are informed that Harold, furnamed Blaatand, or Blue-tooth, a king of Denmark, who lived in the be-
themfelves to cold, fatigue, and hunger. Even the
rery fports of youth and childhood were dangerous. themfelves to cold, fatigue, and hunger. Even the
very fports of youth and childhood were dangerous.

Vol. XVI. flances of the patient, and not to any ill quality or irregularity of operation of the mediciae: where the intelines are lined with an excellive load of mucus, the fcammony paffes through without exerting itfelf upon them; where the natural mucus is deficient, a fmall dofe of this or any other refinous cathartic irritates and inflames. Many have endeavoured to abate the force of this drug, and correct its imaginary virulence, by expofing it to the fume of fulphur, diffolving it in acid juices, and the like; but this could do no more than deftroy as it were a part of the medicine, without making any alteration in the reft. Scammony in fubftance, judicioufly managed, ftands not in need of any correc. tor: if triturated with fugar or with almonds, it becomes fufficiently fafe and mild in operation. It may likewife be conveniently diffolved by trituration in a ftrong decoction of liquorice, and then poured off from the froces: the college of Wertemberg affures us, that by this treatment it becomes mildly purgative, without being attended with gripes, or other inconveniences; and that it likewife proves inoffenfive to the palate. The common dofe of fammony is from three to twelve grains.

SCANDALUM Magnatum, in law, is a defamatory fpeech or writing to the injury of a perfon of dignity; for which a writ that bears the fame name is granted for the recovery of damages.

SCANDERBEG, the furname of George Caftriot king of Albania, a province of Tarkey in Europe, dependent on the Ottoman empire. He was delivered up with his three elder brothers as hoftages, by their father, to Amurath II. fultan of the Turks, who poifoned his brothers, but fpared him on account of his youth, being likewife pleafed with his juvenile wit and amiable perfon. In a fhort time he became one of the moft renowned generals of the age ; and revolting from Amurath, he joined Hunniade Corvin, a molt for midable enemy to the Ottoman power. He defeated the fultan's army, took Amurath's fecretary prifoner, obliged him to fign and feal an order to the governor of Croia, the capital of Albania, to deliver up the citadel and city to the bearer of that order, in the name of the fultan. With this forged order he repaired to Croia; and thus recovered the throne of his anceftors, and maintained the independency of his country againft the numerous armies of Amurath and his fucceffor Mahommed II, who was obliged to make peace with this hero in 1461. He then went to the atiffance of Ferdinand of Arragon, at the requeft of lope Pius II. and by his affifance Ferdinand gained a complete victory over his enemy the count of Anjou. Scanderbeg died in 1467.

SCANDEROON. See Alexandretta.
SCANDINAVIA, a general name for the countries of Norway, Sweden, and Denmark, anciently under the dominion of one prince. The inhabitants of thefe countries, in former times, were exceflively audicted to war. From their earlieft years they applied themfelves to the military art, and accuftomed

Scandina- ginning of the ninth century, had founded on the
via.
coafts of Pomerania a city named 7 fulin or 7 fomburg. coafts of Pomerania a city named $\mathcal{F}$ ulin or 7 Fom/burg. To this place he fent a colony of young Danes, beftowing the government on a celebrated warrior called Palnatoko. In this colony it was forbidden to mention the word fear, even in the moft imminert dangers. No citizen of Jomiburg was to yield to any number of enemies however great. The fight of inevitable death was not to be taken as an excufe for fhowing the fmalleft apprehenfion. And this legiflator really appears to have eradicated from the minds of moft of the youths bred up under him, all traces of that fentiment fo natural and fo univerfal, which makes men think on their deltruction with horror. Nothing can fhow this better than a fingle fact in their hiftory, which deferves to have place here for its fingularity. Some of them having made an irruption into the territories of a powerful Norwegian lord, named Haquin, were overcome in fpite of the obftinacy of their refiftance; and the molt diftinguifhed among them being made prifoners, were, according to the cuftom of thofe times, condemned to death. The news of this, far from afficting them, was on the contrary received with joy. The firt who was led to punifhment was content to fay, without changing countenance, and without expreffing the leaft fign of fear, "Why fhould not the fame happen to me as did to my father? He died, and fo muft I." A warrior, named $T$ horcbill, who was to cut off the head of the fecond, having afked him what he felt at the fight of death, he anfiwered, " that he remembered too well the laws of Jomßurg to utter any words that denoted fear." The third, in reply to the fame queftion, faid, "he rejoiced to die with glory; and that he preferred fuch a death to an infamous life like that of Thorchill's." The fourth made an anfwer much longer and more extraordinary. "I fuffer with a good heart; and the prefent hour is to me very agreeable. I only beg of you (added he, addrefling himelf to Thorchill) to be very quick in cutting off my head; for it is a queftion often debated by us at Jomburg, whether one retains any fenfe after being beheaded. I will therefore grafp this knife in my hand ; if, after my head is cut off, I frike it towards you, it will fhow I have not loft all fenfe; if I let it drup, it will be a proof of the contrary. Make hafte, therefore, and decide the difpute." Thorchill, adds the hiftorian, cut off his head in a moft expeditious manner; but the knife, as might be expected, dropt from his hand. The fifth fhowed the fame tranquillity, and died rallying and jeering his enemies. The fixth begged of Thorchill, that he might not be led to punifhment like a fheep: "Strike the blow in my face (faid he), I will fit fill without thrinking; and take notice whether I once wink my cyes, or betray one fign of fear in my countenance : for we inhabitants of Jomiburg are ufed to exercife ourfelves in trials of this fort, fo as to meet the ftroke of death without once moving." He kept his promife before all the fpectators, and received the blow without betraying the leaft fign of fear, or fo much as winking with his eyes. The feventh, fays the hiforian, was a very beautiful young man, in the flower of his age. His long hair, as fine as filk, floated in curls and ringlets on his fhoulders. Thorclill afked him, what he thought of death? " I receive it willingly (faid he), fince I have fulfilled the greatelt duty of life, and have feen
all thofe put to death whom I would not furvive. I only beg of you one favour, not to let my hair be touched by a llave, or ftained with my blood."

Neither was this intrepidity peculiar to the inhabitants of Jomburg; it was the general character of all the Scandinavians, of which we fhall only give this further inflance. A warrior, having been thrown upon his back in wrefling with his enemy, and the latter finding himfelf without his arms, the vanquifhed perfon promifed to wait, without changing his pofture, till his antagonift fetched a fword to kill him; and he faithfully kept his word.-To die with his arms in his hand was the ardent wifh of every free man ; and the pleafing idea which they had of this kind of deatlı led them to dread fuch as proceeded from old age and difeafe. The hittory of ancient Scandinavia is full of inftances of this way of thinking. The warriors who found themfelves lingering in difeafe, often availed themfelves of their few remaining moments to fhake off life, by a way that they fuppofed to be more glorious. Some of them would be carried intn a field of battle, that they might dif in the engagement. Others flew themfelves: many procured this melancholy, fervice to be performed by their friends, who conflaered it as a moft facred duty. "There is, on a mountain of Iceland, (fays the author of an old Iceland romance), a rock fo high, that no animal can fall from the top and live. Here men betake themfelves when they are afllicted and unhappy. From this place all our anceftors, even without waiting for ficknefs, have departed into Eden. It is ufelefs, therefore, to give ourfelves up to groans and complaints, or to put our relations to needlefs expences, fince we can eaflly follow the example of our fathers, who have all gone by the way of this rock."-When all thefe methods failed, and at laft when Chriftianity had banifhed fuch barbarous practices, the difconfolate heroes confoled themfelves by putting on complete armour as foon as they found their end approaching.

SCANDIX, Shepherds Needle, or Venus Combs in botany : A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 45th order, Umbellaic. The corolla is radiating; the fruit fubulated; the petals emarginated; the florets of the difc frequently male, The moft remarkable fpecies is the odorata, with angular furrowed feeds. It is a native of Germany; and has a very thick perennial root, compofed of many: fibres, of a fweet aromatic tafte like anifeed, from which come forth many large leaves that branch out fomewhat like thofe of fern, from whence it is named fweet-forn. The ftalks grow four or five feet high, are fiftulous and hairy; the flowers are difpofed in an umbel at the top of the faik, are of a white colour, and have a fweet aromatic frent.-This fpecies is eafily progagated by feeds, which, if permitted to fcatter, will fupply an abundance of young plants, that may be put into any part of the garden, and requireno care.

SCANNING, in poetry, the meafuring of verfe by feet, in order to fee whether or not the quantities be duly obferved. The term is chiefly ufed in Greek. and Latin verfes, Thus an hexameter verfe is fcanned by refolving it into fix feet; a pentameter, by refolving. it into five feet, \&c.

SCANTO,

## S C A

SCANTO, or Spavento, a fudden impreffion of horror upon the mind and body. It is extremely dreaded by the inhabitants of Sicily; and the wild ideas of the vulgar pars of the inhabitants refpecting it are almolt incredible, and their dread of a fudden thock is no lefs furprizing. There is farce a fymptom, diforder, or accident, they do not think may befal the hum an frame in confequence of the fcanto. They are periuaded that a man who has been frightened only by a dog, a viper, fcorpion, or any other creature, which he has an antipathy to, will foon be feized with the fame pains he would really feel, had he been torn with their teeth or wounded with their venomous fing; and that nothing can remove thefe nervous imaginary pangs but a Itrong dofe of dilena, a fpecies of cantha. rides found in Sicily.

SCAPE GOAT, in the Jewifh antiquities, the goat which was fet at liberty on the day of folemn expiation. For the ceremonies on this occafion, fee Levit. xvi. 5, 6, \&c.

Some fay, that a piece of fearlet cloth, in form of a tongue, was tied on the forehead of the fcape-goat. Hoff: Lex. Univ. in voc. Lingua.

Many have been the difputes among the interpre. ters concerning the meaning of the word fcape-goat; or rather of azazel, for which foape-goat is put in our verlion of the Bible.

Spencer is of opinion, that azazel is a proper name, fignifying the devil or evil dæmon. See his reafons in his book De leg. Hebr. ritual. Differt. viii. Among other things, he obferves, that the ancient Jews ufed to fubftitute the name Samaël for Azazel; and many of them have ventured to affirm, that at the fealt of expiation they were obliged to offer a gift to Samael to obtain his favour. Thus alfo the goat, fent into the wildernefs to Azazel, was underitood to be a gift or oblation. Some Chriftians have been of the fame opinion. But Spencer thinks that the genuine reafons of the ceremony were, I. That the goat, loaded with the fins of the people, and fent to Azazel, might be a fymbolical reprefentation of the miferable condition of finners. $\quad 2$. God fent the goat thus loaded to the evil dæmons, to fhow that they were impure, thereby to deter the people from any converfation or familiarity with them. 3. That the goat fent to Azazel, fufficiently expiating all evils, the Ifraelites might the more willingly abltain from the expiatory facrifices of the Gentiles.

SCAPULA, in anatomy, the fhoulder, or fhoulierbone.

Scapula (John), the reputed author of a Greek lexicon, Audied at Laufanne. His name is recorded in the anpals of literature, neither on account of his talents nor learning, nor virtuous indultry, but for a grofs atl of difingenuity and fraud which he committed againt an eminent literary character of the 16 th century. Being employed by Henry Stephens as a corrector to his prefs while he was publifhing his Thefaurus fingue Grace, Scapula extracted thofe words and ex. plications which he reckoned moit ufeful, ccmprifed them in one volume, and publifhed them as an original work, with his own name.

The compilation and printing of the Thefaurus had cof Stephens immenfe labour and expence; but it was fo much admired by thofe learned men to whom he had
fhown it, and feemed to be of fuch effential imporinace stapuiar to the acquitition of the Greek language, that he rea- $\underbrace{\text { sarabsus. }}$ fonably hoped his labour would be crowned with honour, and the money he had expended would be repaid by a rapid and extenfive fale. But before his work came abroad, Scapula's abridgement appeared ; which, from its fize and price, was quickly purchafed, while the Theturus itfell lay neglected in the author's hands. The confequence was a bankruptcy on the part of Stephens, while he who had occafioned it was enjoying the fruits of his treachery. Scapula's Lexicon was firft printed in 1570 , in 4 to. It was afterwards enlarged, and publifhed in folio. It has gone through feveral editions, while the valuable work of Stephens has never been reprinted. Its fuccefs is, however, not owing to its fuperior merit, but to its price and more commodious fize. Stephens charges the author with omitting a great many important articles. He accufes him of mifunderltanding and perverting his meaning; and of tracing out abfurd and trifing etymologies, which he himfelf had been careful to avoid. He compofed the following epigram on Scapula:

## Quidam $\varepsilon \pi i \tau \varepsilon \mu \nu \omega v$ me capulo tenis abdidit enfem Eger eram a Scapulis, fanus et buc redeo.

Doctor Bulby, fo much celebrated for his knowledge of the Greek language, and his fuccefs in teaching it, would never permit his fcholars at Weftminter fchool to make ufe of Scapula.

SCAPULAR, in anatomy, the name of two pair of arteries, and as many veins.

Scapular, or Scapulary, a part of the habit of feveral religious orders in the church of Rome, worn over the gown as a badge of peculiar veneration for the Bleffed Virgin. It confifts of two narrow flips or breadths of cloth covering the back and the brealt, and langing down to the feet.-The devotees of the fcapulary celebrate its feftival on the roth of July.

SCARAB历US, the Beetle, in zoology, a genus of infects of the coleoptera order: the antennæ of the beetles are of a clavated figure, and fiffile longitudinally ; and their legs are frequently dentated. There are 87 fpecies; all, however, concurring in one common formation of having cafes to their wings, which are the more neceffary to thofe infects, as they often live under the furface of the earth, in holes which they dig out by their own induftry. The cafes prevent the various injuries their real wings might fuftain by rubbing or crufhing againft the fides of their abode. Thefe, though they do not affilt fight, yet keep the inter nal wings clean and even, and produce a loud buzzing noile when the animal rifes in the air.

If we examite the formation of all animals of the beetle kind, we fhall find, as in thell fifh, that their bones are placed externally, and their mufcles within. Thefe mufcles are formed very much like thofe of quadrupeds; and are formed with fuch furprifing ftrength, that, bulk for bulk, they are a thoufand times ftronger than thofe of a man. The ftrength of thefe mufcles is of ufe iu digging the animal's fubterra. neous abode, whither it mof frequently returns, even after it becomes a winged infect capable of flying.

Befides the difference which refults from the fhape and colour of thefe animals, the fize alfo makes a confiderable one; fome beetles being not larger than the
scarabrus head of a pin; while others, fuch as the elephant beetle, are as big as one's fif. But the greateft difference among them is, that fome are produced in a month, and in a fingle feafon go through all the ftages of their exiftence; while others take near four years to their production, and live as winged infects a year more.

The may-bug, dorr-beetle, or ceck-chaffer, has, like all the reft, a pair of cafes to its wings, which are of a reddifh brown colour, fprinkled with a whitifh duft, which eafily comes off. In fome years their necks are feen covered with a red plate, and in others with a black ; thefe, however, are diftinct forts, and their difference is by no means accidentał. The fore-legs are very fhort, and the better calculated for burrowing in the ground, where this infect makes its retreat. It is well known, for its evening buzz, to children; but ftill more formidably introduced to the acquaintance of the hulbandman and gardener, for in fome feafons it has been found to fwarm in fuch numbers as to eat up every vegetable production.

The two fexes in the may-bug are eafily diftin. guifhed from each other, by the fuperior length of the tufts, at the end of the horns, in the male. They begin to copulate in fummer ; and at that feafon they are feen joined together for a confiderable time. They fy about in this flate, the one hanging pendant from the tail of the other. It has been fuppofed, that, like frails, they are hermaphrodites, as there feems to be a matual infertion.

The female being impregnated, quickly falls to boring a hole into the ground, wherein to depofit her burden. This is generally about half a foot deep; and in it fhe places her eggs, which are of an oblong fhape, with great regularity, one by the other. They are of a bright yellow colour, and no way wrapped up in a common covering, as fome have imagined. When the female is lightened of her burden, fhe again afcends from her hole, to live, as before, upon leaves and vegetables, to buzz in the fummer evening, and to lie hid among the branches of trees in the heat of the day.

In about three months after thefe eggs have been thus depofited in the earth, the contained infect begins to break its fhell, and a fmall grub or maggot crawls forth, and feeds upon the roots of whatever vegetable it happens to be nearef. All fubftances, of this kind, feem equally grateful; yet it is probable the mother infect has a choice among what kind of vegetables fhe flall depofit her young. In this manner thefe voracious creatures continue in the worm fate for more than three years, devouring the roots of every plant they approach, and making their way under ground in queft of food with great difpatch and facility. At length they grow to above the fize of a walnut, being a great thick white maggot with a red head, which is feen moft frequently in new turned earth, and which is fo eagerly fought after by birds of every fecies. When largeft, they are found an inch and a half long, of a whitifh yellow colour; with a body confifting of twelve fegments or joints, cn each fide of which there are nine breathing holes, and three red feet. The head is larger in proportion to the body, of a reddifh colour, with a pincer before, and a femicircular lip, with which it cuts the roots of plants, and fucks out their moifture. As this infect
lives entirely under ground, it has no occafion for Scarabave. eyes, and accordingly it is found to have none; but is furnifhed with two feelers, which, like the crutch of a blind man, ferve to direet its motions. Such is the form of this animal, that lives for years in the worm ftate under ground, fill voracious, and every year changing its ikin.

It is not till the end of the fourth year that this extraordinary infect prepares to emerge from its fubterraneous abode, and even this is not effected but by a tedious preparation. About the latter end of autumn, the grub begins to perceive the approaches of its transformation: it then buries itfelf deeper and deeper in the earth, fometimes fix feet beneathi the furface; and there forms itfelf a capacious apartment, the walls of which it renders very fmooth and fhining by the exertions of its body. Its abode being thus formed, it begins foon after to fhorten itfelf, to fwell, and to burf its laf fkin in order to affume the form of a chryfalis. This, in the beginning, appears of a yellowih colour, which heightens by degrees, till at laft it is feen nearly red. Its exterior form plainly difcovers all the veltiges of the future winged infect, all the fore parts being diftinctly feen; while, behind, the animal feems as if wrapped in fwaddling clothes.

The young may-bug continues in this flate for about three months longer; and it is not till the beginning of January that the aurelia divefts iffelf of all its impediments, and becomes a winged infect completely formed. Yet fill the animal is far from attaining its natural ftrength, bealth, and appetite. It undergoes a kind of infant imbecility; and unlike moft other infects, that the inftant they become flies are arrived at their flate of full perfection, the may-bug continues feeble and fickly. Its colour is much brighter than in the perfect animal ; all its parts are foft ; and its voracious nature feems for a while to have entirely forfaken it. As the animal is very often found in this ftate, it is fuppofed, by thofe unacquainted with its real hiftory, that the old ones, of the former feafon, have buried themfelves for the winter, in order to revifit the fun the enfuing fummer. But the fact is, the old one never furvives the feafon; but dies, like all the other winged-tribe of infects, from the feverity of cold in winter.

About the latter end of May, thefe infects, after having lived for four years under ground, burt from the earth when the firit mild evening invites them abroad. They are at that time feen rifing from their long imprifonment, from living only upon roots, and imbibing only the moiture of the earth, to vifit the mildnefs of the fummer air, to choofe the fweeteft vegetables for their banquet, and to drink the dew of the evening. Wherever an attentive obferver then walks abroad, he will fee them burfting up before him in his pathway, like ghofts on a theatre. He will fee every part of the earth, that had its furface beaten. into hardnefs, perforated by their egreffion. When the feafon is favourable for them, they are feen by myriads buzzing along, hitting againf every object that intercepts their flight. The mid-day fun, however, feems too powerful for their conftitutions: they then lurk under the leaves and branches of fome fhady tree; but the willow feems particularly their mof favourite food; there they lurk in clufters, and feldom quit

## S C A [ 693 ] S C A

scarabreus. quit the tree till they have devoured all its verdure. In thofe feafons which are favourable to their propagation, they are feen in an evening as thick as flakes of fnow, and hituing againf every object with a fort of capricious blindnefs. Their duration, however, is but fhort, as they never furvive the feafon. They begin to join fhortly after they have been let loofe from their prifon; and when the female is impregnated, fhe cautiounly bores a hole in the ground, with an inftrument fitted for that purpofe with which the is furnifhed at the tail; and there depofits her eggs, generally to the number of threefcore. If the featon and the foil be adapted to their propagation, thefe foon multiply as already defcribed, and go through the various fages of their centemptible exiftence. This infect, however, in its worm itate, though prejudicial to man, makes one of the-chief repafts of the feathered tribe, and is generally the firft nourifhment with which they fupply their young. Hogs will root up the land for them, and at firft eat them greedily; but feldom meddle with them a fecond time. Rooks are particularly fond of thefe worms, and devour them in great numbers. The inhabitants of the county of Norfolk, fome time fince, went into the practice of deltroying their rookeries; but in proportion as they deftroyed one plague, they were peftered with a greater; and thefe infeets multiplied in fuch an amazing abundance, as to deltroy not only the verdure of the fieids, but even the roots of vegetables not yet fhot forth. One farm in particular was fo injured by them in the year 1751, that the occupier was not able to pay his rent ; and the landlord was not only content to lofe his income for that year, but alfo gave money for the fupport of the farmer and his family. In Ireland they fuffered fo much by thefe infects, that they came to a refolution of fetting fire to a wood, of fome extent, to prevent their milchievous propagation.
" Neither the feverelt frofts in our climate (fays Mr

Rack), nor even keeping them in water, will kill them. I have kept fome in water near a week; they appeared motionlefs; but on expofing them to the fun and air a few hours, they recovered, and were as lively as ever. Hence it is evident they can live without air. On examining them with a microfcope, I could neyer difcover any organs for refpiration, or perceive any pulfation. When numernus, they are not deftroyed without great difficulty ; the beft method is, to phagh up the land in thin furrows, and employ children to pick them up in bafkets; and then ftrew falt and quick-lime, and larrow in. Alout 30 years fince I remember many farmers crops in Noifolk were almof ruined by them in their grub.flate ; and in the next feafon, when they took wing, the trees and hedges in many pariihes were ftripped bare of their leaves as in winter. At firt the people ufed to brufh them down with poles, and then fweep them up and burn them. One farmer made oath that he gathered So bufhels; but their number feemed not much leffened, except juft in his own fields."

The fcarabæus carnifex, which the Americans call the tumble-dung, particularly demands our attention. It is all over of a dufky black, rounder than thofe animals are generally found to be, and fo frong, though not much larger than the common black beetle, that if one of them be put under a brafs candieflick, it will caufe it to move backwards and forwards, as if it were by an
invifible hand, to the admiration of thofe who are not Scarabæas, accuftomed to the fight: but this frength is given it for much more ufeful purpofes than thure of exciling human curiofity ; for there is no creature more laburious, either in feeking fubfiftence, or providing a proper retreat for its young. They are endowed with lagacity to difcover fubfittence by their excellent fmelling, which directs them in flights to excrements jult fallen from man or beaft, on which they intantly drop, and fall unanimoully to work in forming round balls or pellets thereof, in the middle of which they lay an egg. Thefe pellets, in September, they convey three feet deep in the earth, where they lie till the approach of fpring, when the eggs are hatched and burft their nefts, and the infects find their way out of the earth. They affift each other with indefatigable induftry in rolling thefe globular pellets to the place where they are to be buried. This they are to perform with the taik foremolt, by raifing up their hinder part, and fhoving along the ball with their hind feet. They are always accompanied with other beetles of a layger fize, and of a more elegant ftructure and colour. The breaft of this is covered with a fhield of a crimfon colour, and hining like metal; the head is of the like colour, mixed with green ; and on the crown of the head ftands a fhining black horn, bending backwards. Thefe are called the kings of the beetles; but for what reafon is uncertain, fince they partake of the fame dirty drudgery with the reft.

The elephant:beetle is the largeft of this kind hitherto known; and is found in South America, particularly in Guiana and Surinam, as well as about the river Oroonoko. It is of a black colour; and the whole body is covered with a very hard thell, full as thick and as ftrong as that of a fmall crab. Its length, from the hinder part to the eyes, is almolt four inches; and from the fame part to the end of the probofcis or trunk, four inches and three quarters. The tranfverfe diameter of the body is two inches and a quarter; and the breadth of each elytron, or cafe for the wings, is an inch and three-tenths. The antennz or feelers are quite horny; for which reafon the probofcis or trunk is moveable at its infertion into the head, and feems to fupply the place of feelers; the horns are eight-tenths of an inch long, and terminate in points. The probofcis is an inch and a quarter long, and turns upwards; making a crooked line, terminating in two horns, each of which is near a quarter of an inch long; but they are not perforated at the end like the probofcis of other infects. About four-tenths of an inch above the head, on that fide next the body, is a prominence or fmall horn; which, if the reft of the trunk were away, would caufe this part to refemble the horn of a rhinoceros. There is indeed a beetle fo called; but then the horn or trunk has no fork at the end, though the lower horn refembles this. The feet are all forked at the end, but not like lobiters claws. See Plate CCCCXLIV.

SCARBOROUGH, a town of the North Riding. of Yorkhire, feated on a fteep rock, near which are fuch craggy cliffs that it is almoft inacceffible on every fide. On the top of this rock is a large green plain, with two wells of frefh water fpringing out of the rock. It has of late been greatly frequented on account of its mineral waters called the Scarlorough-Spa; on which account it is mucli mended in the number and beauty of the buildings. The fpring was under the cliff, part of

Scarbe
which fell down in 1737, and the water was lolt; but in clearn ${ }_{5}$ away the ruins in order to rebuild the wharf, it was recovercd, to the great joy of the town. The waters of Scarborough are chalybeate and purging. The two wells are both impregnated with the fame principles, in different proportions; though the pursing well is the moft celebrated, and the water of this is ufually called the Scarborough water. When thefe waters aie poured out of one glais into another, they throw up a number of air-bubbles; and if they are thaken for fome time in a phial clofe ftopped, and the phial be fuddenly opened before the commotion ceafes, they difplode an elaftic vapour, with an audible noife, which fhows that they abound in fixed air. At the fountain they have a brifk, pungent, chalybeate tafte; but the parging water taltes bitterifh, which is not ufually the cafe with the chalybeate one. They lofe their chalybeate virtues by expofure and by keeping; but the purging water the fooneft. They both putrefy by keeping; but in time recover their fweetnefs. Four of five half pints of the purging water drank within an hour, give two or three eafy motions, and raife the fpirits. The like quantity of the chalybeate purges lefs, but exhilarates more, and paffes off chiefly by urine: Thefe waters have been found beneficial in hectic fevers, weakneffes of the fomach, and indigeition; in relaxations of the fyftem; in nervous, hylteric, and hypochondriacal diforders; in the green ficknefs, fcurvy, theumatifm, and athmatic complaints; in gleets, the fluor albus, and other preternatural evacuations; and in habitual coftivenefs. Here are affemblies and balls in the fame manner as at Tunbridge. It is a place of fome trade, has a very good harbour, and fends two members to parliament. E. Long. o. 3.N. Lat. 54: 18.

SCARDONA, a fea-port town of Dalmatia, feated on the eaftern banks of the river Cherca, with a bithop's fee. It has been taken and retaken feveral times by the Turks and Venetians; and thefe lalt ruined the fortifications and its principal buildings in 1537; but they have been fince put in a fate of defence.
"No veltiges (fays Fortis) now remain vifible of that ancient city, where the ftates of Liburnia held their affembly in the times of the Romans. I however tranfcribed thefe two beautiful infcriptions, which were difcovered fome years ago, and are preferved in the houfe of the reverend Canon Mercati. It is to be hoped, that, as the population of Scardona continues increa. fing, new lands will be broken up, and confequently more frequent difcoveries made of the precious monuments of antiquity. And it is to be wifhed, that the few men of letters, who have a fhare in the regulation of this reviving city, may beftow fome particular attention on that article, fo that the honourable memorials of their ancient and illultrious country, which cnce held fo eminent a rank among the Liburnian cities, may not be loft, nor carried away. It is almoft a fhame, that only fix legible infcriptions actually exilt at Scardona; and that all the others, fince many more certainly muft have been dug up there, are either miferably broken, or loft, or tranfported to Italy, where they lofe the greatelt part of their merit. Roman coins are very frequently found about Scardona, and feveral valuable ones were fhown to me by that hofitable prelate Monfignor Trevifani, bilhop and father of the rifing fertlement. One of the principal gentlemen of the place was fo kind as to
give me feveral repulchral lamps, which are marked by
the name of Fortis, and by the elegant form of the letters appear to be of the beft times. The repeated devaltations to which. Scardona has been expoled, have left it no traces of grandeur. It is now, however, beginning to rife again, and many merchants of Servia and Bofnia have fettled there, on account of the convenient fituation for trade with the upper provinces of Turkey. But the city has no fortifications, notwith. ftanding the affertion of P. Farlati to the contrary." E. Long. 17. 25. N. Lat. 43. 55.

SCARIFICATION, in furgery, the operation of making feveral incifions in the flkin by means of lancets or other inftruments, particularly the cupping inftrument. See Surgery.

SCARLET, a beautiful bright red colour.
In painting in water-colours, minium mixed with a little vermilion produces a good fcarlet : but if a flower in a print is to be painted a fcarlet colour, the lights as well as the fhades fhould be covered with minium, and the fhaded parts finifhed with carmine, which will produce an admirable fcarlet.

## Scarlet-Fever. See Medicine, no 230.

SCARP, in fortification, is the interior talus or flope of the ditch next the place, at the foot of the rampart.

Scarp, in heraldry, the fcarf which military commanders wear for ornament. It is borne fomewhat like a battoon finifter, but is broader than it, and is continued out to the edges of the field, whereas the battoon is cut off at each end.

SCARPANTO, an illand of the Archipelago, and one of the Sporades, lying to the fouth-welt of the infe of Rhodes, and to the north-eaft of that of Candia. It is about 22 miles in length and 8 in breadth; and there are feveral high mountains. It abounds in cattle and game; and there are mines of iron, quarries of marble, with feveral good harbours. The Turks are matters of it, but the inhabitants are Greeks.

SCARPE, a river of the Netherlands, which has its fource near Aubigny in Artois, where it walhes Arras and Douay; after which it runs on the confines of Flanders and Hainault, paffing by St Amand, and a little after falls into the Scheldt.

SCARRON (Paul), a famous burlefque writer, was the fon of a counfellor in parliament, and was born at Paris about the end of the year 1610 , or in the beginning of the fucceeding year. His father marrying a fecond time, he was compelled to affume the ecclefiaftical profeffion. At the age of 24 he vilited Italy, where he freely indulged in licentious pleafures. After his return to Paris he perfifted in a life of difipation till a long and painful difeafe convinced him that his conftitution was almoft worn out. At length when engaged in a party of pleafure at the age of 27 , he loft the ufe of thofe legs which danced fo gracefully, and of thofe bands which could paint and play on the lute with fo much ele. gance. In the year 1638 he was attending the carnival at Mens, of which he was a canon. Having dreffed himfelf one day as a favage, his fingular appearance excited the curiofity of the children of the town. They followed him in multitudes, and he was obliged to take fhelter in a marh. This wet and cold fituation produced a numbnefs which totally deprived him of the ufe of his limbs; but notwithitanding this misfortune he continued gay and cheerful. He took up his refidence at

## SCA [695] SCA

## Scarron.

Paris, and by his pleafant humour foon attracted to his houfe all the men of wit about the city. The lofs of his health was followed by the lofs of his fortune. On the death of his father he entered into a procefs with his mother-in-law. He pleaded the caufe in a ludicrous manner, though his whole fortune depended on the decifion. He accordingly lott the caufe. Mademoifelle de Hautefort, compaffionating his misfortunes, procured fur him an audience of the queen. The poet requefted to have the title of Valetudinarian to her majefty. The queen fmiled, and Scarron confidered the fmile as the commiffion to his new office. He therefore affumed the title of Scarron, by the grace of God, unworthy valetudinarian to the queen.

Cardinal Mazarine gave him a penfion of 5 co crowns; but that minifter having received difdainfully the dedication of his Typbon, the poet immediately wrote a Mazarinade, and the penfion was withdrawn. He then attached himfelf to the prince of Condé, and celebrated his victories. He at length formed the extraordinary refolution of marrying, and was accordingly, in 1651, married to Mademoifelle d'Aubigné (afterwards the $\mathrm{f}_{\mathrm{d}}$ mous Madam de Maintenon), who was then only 16 years of age. "At that time (fays Voltaire) it was confidered as a great acquifition for her to gain for a huiband a man who was disfigured by nature, impotent, and very little enriched by fortune." When Scarron was queftioned about the contract of marriage, he faid he acknowledged to the bride two large invincible eyes, a very beautiful thape, two fine hands, and a large portion of wit. The notary demanded what dowry he would give her ? Immediately replied Scarron, "The names of the wives of kings die with them, but the name of Scarron's wife fhall live for ever." She reftrained by her modefty his indecent buffooneries, and the good company which had formerly reforted to his houfe were not lefs frequent in their vifits. Scarron now became a new man. He became more decent in his manners and converfation: and his gaiety, when tempered with moderation, was fill more agreeable. But, in the mean time, he lived with fo little economy, that bis income was foon redaced to a fmall annuity and his marquifate of Quinet. By the marquifate of Quinet, he meant the revenue he derived from his publications, which were printed by one Quinet. He was accuftomed to talk to his fuperiors with great freedom in his jocular ftyle. In the dedication to his Don $\mathfrak{F}$ aphet d"Armenie, he thus addreffes the king. "I fhall endeavour to perfuade jour majelty, that you would do yourfelf no injury were you to do me a fmall favour; for in that cafe I fhould become more gay: if I thould become more gay, 1 fhould write fprightly comedies: and if I fhould write fprightly comedies, your majelty would be amufed, and thus your money would not be loft. All this appears fo evident, that I fhould certainly be convinced of it if I wete as great a king as I am now a poor unfortunate man."

Though Scarron wrote comedies, he had neither time nor patience to fudy the rules and models of dramatic poetry. Ariftotle and Horace, Plautus and Terence, would have frightened him ; and perhaps he did not know that there was ever fuch a perfon as Arifophanes. He faw an open path before him, and he followed it. lt was the fathion of the times to pillage the Spanifh writers. Scarron was acquainted with that
language, and he found it eafier to ufe the materials which were already prepared, than to rack his brain in inventing a fubject ; a reftraint to which a genius like his could not eafily fubmit. As he borrowed liberally from the Spanifh writers, a dramatic piece did not coft him much labour. His labour confifted not in making his comic characters talk humoroufly, but in keeping up ferious chatacters; for the ferious was a foreign language to him. 'The great fuccefs of his Fodelet Muir' was a valt allurement to him. The comedians who acted it eagerly requefted more of his praductions. They were written without much toil, and they procured him large fums. They ferved to amufe him. If it be neceffary to give more reafons for Scarron's readinefs to engage in thefe works, abundance may be had. He dedicated his books to his filter's greyhound bitch; and when fhe failed him, he dedicated them to a certain Monfeigneur, whom he praifed higher, but did not much elteem. When the office of hiftoriographer became vacant, he folicited for it without fuccefs. At length Fouquet gave him a pention of 1600 livres. Chriftina queen of Sweden having come to Paris, was anxious to fee Scarron. "I permit you (faid fhe to Scarron) to fall in love with me. The queen of France has made you her valetudinarian, and I create you my Roland." Scarron did not long enjny that title: he was feized with fo violent a hiccough, that every perfon thought he would have expired. "If 1 recover (he faid), I will make a fine fatire on the hiccough." His gaiety did not forfake him to the laft. Within a few miautes of his death, when his domeftics were fhedding tears about him, "My good friends (faid he), I fhall never make you weep fo much for me as I have made you laugh." Juft before expiring, he faid, "I could never believe before that it is fo eafy to laugh at death." He died on the 14th of October 1660, in the 51 ft year of his age.

His works have been collected and publifhed by Bru. zen de lis Martiniere, in 10 vols 12 mo , 1737. There are, 1. The Eneid traveftied, in 8 books. It was afterwards continued by Moreau de Brafey. 2. Typhon, or the Gigar tomachia. 3. Many comedies; as, Jodelet, or the Mafter Valet ; Jodelet cuffed; Don Japhet: d'Armenie; The Ridiculous Heir ; Every Man his own Guardian ; The Foolifh Marquis; The Scholar of Salamanca; The Falfe Appearance; The Priace Corfaire, a tragi-comedy. Befides thefe, he wrote other pieces in verfe. 4. His Comic Romance in profe, which is the only one or his works that deferves attention. It is written with much purity and gaiety, and has contributed nct a little to the improvement of the French language. Scarron had great pleafure in reading his works to his friends as he compoed them : he called it trying his works. Segrais and another of his friends coming to him one day, "Take a chair (fays Scarron to them) and fit down, that I may examine my Comic Romance." When he obferved the company laugh, "Very well (faid he), my book will be well received fince it makes perfons of fuch delicate tatte laugh." Nor was he deceived. His Romance had a prodigious run. It was the only one of his works that Boileau could fubmit to read. 5. Spanifh novels tranflated into French. 6. A volume of Letters. 7. Poems; confilting of Songs, Epiftles, Stanzas, Odes, and Epigrams. The whole collection abounds with fprightlinefs and gaiety. Scarron

Scene,
can raife a laugh in the moft ferious fubjects; but h:s fallies are rather thofe of a buffoon than the effuflions of ingenuity and tafte. He is continually falling into the mean and the obfcene. If we thould make any exception in favour of fome of his comedies, of fome paffages in his Eneid traveftied, and his Comic Romance, we muit acknowledge that all the reft of his works are only fit to be read by footmen and buffoons. It has been faid that he was the molt emincat man in his age for burlefque. This might make him an agreeable companion to thofe who chofe to laugh away their time; but as he has left nothing that can influct polterity, he has but little titie to pofthumous fame.

SCENE, in its primary fenfe, denoted a theatre, or the place where dramatic pieces and other public hows -were exhibited; for it does not appear that the ancient peets were at all acquainted with the modern way of changing the fcenes in the different parts of the play, in order to raife the idea of the perfons reprefented by the attors being in different places.

The original fcene for acting of plays was as fimple as the reprefentations themfelves: it confilted only of a plain plot of ground proper for the occafion, which was in fome degree fhaded by the neighbouring trees, whofe branches were made to meet together, and their vacancies fupplied with boards, fticks, and the like; and to complete the fhelter, thefe were fometimes covered with fkins , and fometimes with only the branches of other trees newly cut down, and full of leaves. Afterwards more artificial fcenes, or fcenical reprefentations, were introduced, and paintings ufed inttead of the objects themfelves. Scenes were then of three forts; tragic, comic, and fatyric. The tragic fcene reprefented itately magnificent edifices, with decorations of pillats, ftatues, and other things fuitable to the palaces of kings: the comic exhibited private houfes with balconies and windows, in imitation of common buildings: and the fatyric was the reprefentation of groves, mountains, dens, and other rural appearances; and thefe decorations either turned on-pivots, or flid along grooves, as thofe in our theatres.

To keep clofe to nature and probability, the fcene Ghould never be fhifted from place to place in the courle of the play : the ancients were pretty fevere in this refpect, particularly Terence, in cóme of whofe plays the fcene never fhifts at all, but the whole is tranfacted at the door of fome old man's houfe, whither with inimitable art he occafionally brings the actors. The French are pretty frict with refpect to this rule; but the Englilh pay very little regard to it.

Scene is alfo a part or divifion of a dramatic poem. Thus plays are divided into acts, and acts are again fubdivided into fcenes; in which fenfe the fcene is properly the perfons prefent at or concerned in the action on the ftage at fuch a time; whenever, therefore, anew actor appears, or an old one difappears, the action is changed into other hands; and therefore a new fcene then commences.

It is one of the laws of the ftage, that the fcenes be well connected; that is, that one fucceed another in fuch a manner as that the fage be never quite empty till the end of the act. See Poetry.

SCENOGRAPHY, (from the Greek, oxuva foene, and rpaqndefcription), in perfpective, a reprefentation of a body on a perfpective plane; or a defcription thereof
in all its dimenfions fuch as it appears to the eye. See
${ }^{3}$ septic. Perspective.

BCEPTIC, $\sigma=n \pi i x a s$, from oxs $\pi \tau a \mu a$, "I confider, look about, or deliberate," properly fignifies confulera. tive and inquiftive, or one who is always weighing reafons on one fide, and the other without ever deciding between them. It is chiefly applied to an ancient fect of philofophers founded by Pyrrho (fee Pyrrho), who, according to Laertius, had various other denominations. From their malter they were called Pyrrbonians; from the diftinguifhing tenets or characteriftic of their philofophy they derived the name of Apore ici, from anoperv, " to doubt;" from their fufpenfion and hefitation they were called epheaici, from emex $\chi i v$, "to flay or keep back;" and laftly, they were called zetitici or feekers, from their never getting beyond the fearch of truth.

That the fceptical philofophy is abfurd, can admit of no difpute in the prefent age; and that many of the followers of Pyrrho carried it to the molt ridiculous height, is no lefs true. But we cannot believe that he himfelf was fo extravagantly fceptical as has fometimes been afferted, when we reflect on the particulars of his life, which are fill preferved, and the refpectfal manner in which we find him mentioned by his contemporaries and writers of the firft name who flourifhed foon after him. The truth, as far as at this diftance of time it can be difcovered, feems to be, that he learned from Democritus to deny the real exiftence of all qualities in bodies, except thofe which are effential to primary atoms, and that he referred every thing elle to the perceptions of the mind produced by external objects, in other words, to appearance and opinion. All knowledge of courfe appeared to him to depend on the fallacious report of. the fenfes, and confequently to be uncertain; and in this notion he was confirmed by the general firit of the Eleatic fchool in which he was educated. He was further confirmed in his fcepticidm by the fubtilties of the Didlectic fchools, is: which he had been inftrutted by the fon of Stilpo; choofing to overturn the cavils of fophittry by recurring to the doetrine of univerfal uncertainty, and thus breaking the knot which he could not unloofe. For being naturally and habitually inclined to confider immoveable tranquility as the great end of all philofophy, he was eafily led to defpife the diffenfions of the dogmatilts, and to infer from their endlefs difputes, the uncertainty of the queftions on which they debated; controveriy, as it has often happened to others, becoming alfo with refpect to him the parent of fcepticifm.

Pyrrho's doctrines, however new and extraordinary, were not totally difregarded. He was attended by feveral fcholars, and fucceeded by feveral followers, who preferved the memory of his notions. The moft eminent of his followers was Timon (See Timon), in whom the public fucceffion of profeffors in the Pyrrhonic fchool terminated. In the time of Cicero it was almoft extinct, having fuffered much from the jealoufy of the dogmatifts, and from a natural averfion in the human mind: to acknowledge total ignorance, or to be left in abfotute darknefs. The difciples of Timon, however, ftill continued to profefs fcepticifm, and their notions were embraced privately at lealt by many others. The fchool itfelf was afterwards revived by Pto'æmeus a Cyrenian, and was continued by 再nefidemus a contemporary of $\mathrm{Ci}_{\mathrm{i}}$ cero, who wrote a treatife on the principles of the Pyrrhonic philoLophy, the heads of which are preferved by

Photius.

## SCE

sceptic. Photius. From this time it was continued through a $\underbrace{\sim}$ feries of preceptors of little note to Sextus Empiricus, who alfo gave a fummary of the fceptical doctrine.

A fyftem of philofophy thus founded on doubt, and clouded with uncertainty, could neither teach tenets of any importance, nor prefcribe a certain rule of conduct ; and accordingly we find that the followers of fcepticifm were guided entirely by chance. As they could form no certain judgment refpecting good and evil, they accidentally learned the folly of eagerly purfuing any apparent good, or of avoiding any apparent evil; and their minds of courfe fettled into a ftate of undifturbed tranquillity, the grand poftulatum of their fyftem.

In the fchools of the iceptics we find ten diftinct topics of argument urged in fupport of the doctrine of uncertainty, with this precaution, however, that nothing could be pofitively afferted either concerning their number or their force. Thefe arguments chiefly refpect objects of fenfe : they place all knowledge in appearance; and, as the fame things appear very diferent to different people, it is impoflible to fay which appearance moft truly expreffes their real nature. They likewife fay, that our judgment is liable to uncertainty from the circumftance of frequent or rare occurrence, and that mankind are continually led into different conceptions concerning the fame thing by means of cuffom, law, fabulous tales, and eftablifhed opinions. On all thefe accounts they think every human judgment is liable to uncertainty ; and concerning any thing they can only affert, that it feems to be, not that it is what it feems.

This doubtful reafoning, if reafoning it may be called, the fceptics extended to all the fciences in which they difcovered nothing true, or which could be ablolutely afferted. In all nature, in phyfics, morals, and theology, they found contradictory opinions, and inexplicable or incomprehenfible phenomena. In phyfics, the appearances they thought might be deceitful ; and refpecting the nature of God and the duties of morality, men were, in their opinion, equally ignorant and uncertain. To overturn the fophiftical arguments of thefe feeptical reafoners would be no difficult matter, if their reafoning were worthy of confutation. Indeed, their great principle is fufficiently, though thortly, refuted by Plato, in thefe words. "When you fay all things are incomprehenfible (fays he), do you comprebend or conceive that they are thus incomprehenfible, or do you not? If you do, then fomething is comprehenfible; if you do not, there is no reafon we fhould believe you, fince you do not comprehend your own affertion."

But fcepticifm has not been confined entirely to the ancients and to the followers of Pyrrho. Numerous fceptics have arifen alfo in modern times, varying in their principles, manners, and character, as chance, prejudice, vanity, weaknefs, or indolence, prompted them. The great object, however, which they feem to have in view, is to overturn, or at leaft to weaken, the cvidence of analogy, experience, and teltimony; though fome of them have even attempted to fhow, that the axioms of geometry are uncertain, and its demonitrations inconclufive. This laft attempt has not indsed been often mate; bat the chief aim of Mr Hume's philofophical writings is to introdice doubts into every branch of phyfics, meta ${ }^{\prime} \cdot y / j u s$, bifory, etrics, and ibsology. It is neediafs to give a fpecimen of his reafonings in fupport of modern feepticifm. The moft important of them have

Vor. XVI.
been noticed elfewhere (fee Miracle, Metaphysics, Scepticifm and $\mathrm{P}_{\text {hilosophy, }} \mathrm{n}^{\circ} 4 \mathrm{I}$.) ; and fuch of our readers as have any relifh for fpeculations of that nature can be no ftrangers to his Effays, or to the able confutations of them by the Doctors Reid, Campbell, Gregory, and Beattie, who have likewife expofed the weaknefs of the feeptical reafonings of Des Cartes, Malbranche, and other philofophers of great fame in the fame fchool.

SCEPTICISM, the doctrines and opinions of the fceptics. See the preceding article.

SCEPTRE, a kind of royal ftaff, or batoon, borne on folemn occafions by kings, as a badge of their com. mand and authority. Nicod derives the word from the Greek oxntrpor, which he fays originally fignified " a javelin," which the ancient kings ufually bore as a badge of their authority; that inftrument being in very great veneration among the heathens. But $\sigma \times n=\tau \rho o y^{2}$ does not properly fignify a javelin, but a faff to reft upon, from $\sigma \times n \pi \tau \omega$, innitor, "I lean upon." Accordingly, in the fimplicity of the earlier ages of the world, the fceptres of kings were no other than long walking-ftaves : and Ovid, in fpeaking of Jupiter, defcribes him as refting on his feeptre (Met. i. v. ${ }^{1} 78$. ) The fceptre is an enfign of royalty of greater antiquity than the crown. The Greek tragic and other poets put fceptres in the hands of the moft ancient kings they ever introduce. Jutin obferves, that the fceptre, in its original, was an hafta, or fpear. He adds, that, in the molt remote antiquity, men adored the bafle or fceptres as immortal gods; and that it was upon this account, that, even in his time, they ftill furnifhed the gods with fceptres.-Neptune's fceptre is his trident. Tarquin the Elder was the firft who affumed the fceptre among the Romans. Le Gendre tells us, that, in the firf race of the French kings, the fceptre was a golden rod, $a_{1-}^{3-}$ molt always of the fame height with the king who bore it, and c-ooked at one end like a crozier. Frequently inftead of a fceptre, kings are feen on medals with a paim in their hand. See Kegalia.

SCH ÆFFERA, in botany: A genus of the tetrandria order, belonging to the diœcia clafs of plants; and in the natural method ranking with thofe that are doubtful. The calyx is quadripetalous; the corolla is quadripetalous, quinquepetalous, and often wanting; the fruit is a blocular berry with one feed. Of this there are two fpecies, buth natives of Jamaica; and grow in the lowlands near the fea: viz. i. The Completa. 2. Laterifora.

SCHAFFHAUSEN, a large, handfome, and Atrong town of Swilferland, capital, of a canton of the fame name, with a caftle in the form of a citadel. It is well built, with fine large ftreets, and adorned with feveral founda:i ns; and the greateft part of the houfes are painted on the outfide. It is well frifified, and the ca. thedral is the largeft church in Swifferland; befides which, the minitter, with the monaftery adjoining there. to, the arfenal, the town-houfe, the \&reat clock (which fhows the courfe of the fun and moca with their eclipfes), and the ftone bridge over the Rhine, are well worth the obfervation of a traveller. That river is of great confequence to the inhabitants with regard to trade. E. Leng. 8. 5 I. N. Lat. 47 . 39 -

The Canton of Schaffhasen, in Swifferland, is bounded on the north and weft by Suabia; on the eaft by the canton of Zurich, and the bihoprick 0 Con-

S bodule, fance; and on the fouth by the fame, and by Thurgaw. Schetle.

It is 22 miles in length, and 10 in breadth; but pro-
duces all the neceffaries of life, as wine, fifh, wood, flax, horis, fheep, wool, black cattle, and deer. The principal town is of the fame name.

SCHEDULE, a fcroll of paper or parchment, annexed to a will, leafe, or other deed; containing an inventory of goods, or fome other matter omitted in the body of the deed.-Tbe word is a diminutive of the Latin (ched $a$, or Greek $\sigma \chi \neq \delta^{\prime} n$, a leaf or piece of paper.

SCHEELE (Charles-William), was born on the $19^{t h}$ of December 1742, at Stralfund, where his father kept a fhop. When he was very young, he received the ufual inftructions of a private fchool; and was afterwards advanced to an academy. At a very early age he fhowed a frong defire to follow the profeffion of an apothecary, and his father fuffered him to gratify his inclinations. With Mr Bauch, an apothecasy at Gottenburgh, he paffed bis apprenticelhip, which was completed in fix years. He remained, however, fome time longer at that place, and it was there that he fo excellently laid the firf foundations of his knowledge. Among the various books which he read, that treated of chemical fubjects, Kunckel's Laboratory feems to have been his favourite. He ufed to repeat many of the experiments contained in that work privately in the night, when the reft of the family had retired to reft. A friend of Scheele's had remarked the progrefs which he had made in chemiftry, and had afked him by what inducements he had been at firlt led to ftudy a fcience in which he had gained fuch knowledge? Scheele returned the following anfwer: "The firlt caufe, my friend, arofe from yourfelf. Nearly at the beginning of my apprenticeflip you advifed me to read Neuman's Chemiftry ; from the perufal of which I became eager to make experiments myfelf; and I remember very well how I mixed together, in a conferve-glafs, oil of cloves and fuming acid of nitre, which immediately took fire. I fee alfo fill before my eyes an unlucky experiment which I made with pyrophorus. Circumftances of this kind did but the more inflame my defire to repeat experiments." After Scheele's departure from Gottenburg, in the year 1765 , he obtained a place with Kalitrom, an apothecary at Malmo. Two years afterwards he went from thence to Stockholm, and managed there the fhop of Mr Scharenberg. In I773, he changed this appointment for another at Upfal, under Mr Loock. Here he was fortunately fituated; as, from his acquaintance with learned men, and from having free accefs to the Univerfity Laboratory, he had opportunities of increafing his knowledge. At this place alfo he happily commenced the friendfhip which fubfifted between him and Bergman. During his refidence at this place, his Royal Highnefs Prince Henry of Pruffia, accompanied by the Duke of Sunderland, vifited Upfal, and chofe this opportunity to fee the Academical Laboratory. Scheele was accordingly appointed by the Univerfity to exhibit fome
chemical experiments to them. This office he under- sthecle. took, and fhewed fome of the moft curious proceffes in chemiftry. The two Princes afked him many queftions, and expreffed their approbation of the anfwers which he returned to them. The Duke afked him what countryman he was, and feemed to be much pleafed when Scheele informed him that he was born at Stralfund. At their departure they told the profeffor, who was prefent, that they fhould efteem it a favour if he would permit the young man to have free accefs to the Laboratory, as often as he chofe, to make experiments.

In the year 1777 Scheele was appointed by the Medical College to be apothecary at Koping. It was at that place that he foon fhowed the world how great a man he was, and that no place or fituation could confine his abilities. When he was at Stockholm he fhewed his acutenefs as a chemift, as he difoovered there the new and wonderful acid, contained in the fparry fluor. It has been confidently afferted, that Scheele was the firf who difcovered the nature of the aerial acid; and that whilft he was at Upfal he made many experiments to prove its properties. This circumftance might probably have furnifhed Bergman with the means of handling this fubject more fully. At the fame place he began the feries of excellent experiments on that remarkable mineral fubftance, manganefe; from which inveftigation he was led to make the very valuable and interefting difcovery of the dephlogifticated marine acid. At the fame time he firft obferved the ponderous earth.

At Koping he finifhed his differtation on Air and Fire; a work which the celebrated Bergman moft warmly recommended in the friendly preface which he wrote for it. The theory which Scheele endeavours to prove in this treatife is, that fire confifts of pure air and phlogiton. According to more recent opinions (if inflammable air be phlogitton), water is compofed of there two principles. Of thefe opinions we may fay, in the words of Cicero, "Opiniones tam varia funt, tamque inter fe diffidentes, ut alterum profecto fieri potefl, ut earum nulla, alterum certe non poteft ut plus una, vera fit." 'The author's merit in this work, exclufive of the encomiums of Bergman, was fufficient to obtain the approbation of the public ; as the ingenuity difplayed in handling fo delicate a fubject, and the many new and valuable obfervations (A) which are difperfed through the treatife, juftly entitled the author to that fame which his book procured him. It was fpread abroad through every country, became foon out of print, was reprinted, and tranflated into many languages. The Englifh tranflation is enriched with the notes of that accurate and truly philofophic genius Richard Kirwan, Efq.

Scheele now diligently employed himfelf in contributing to the Tranfactions of the Academy at Stockholm. He firl pointed out a new way to prepare the falt of benzoin. In the fame year he difcovered that arfenic, freed in a particular manner from phlogifton, partakes of all the properties of an acid, and has its peculiar af. finities to other fubftances.
(A) Scheele mentions in this work, in a curfory way, the decompofition of common falt by the calx of lead. Mr Turner, a gentleman who happily unites the fkill of the manufacturer with the knowledge of the philofophic chemilt, has alfo all the merit of this difcovery, as he obferved the fame fact, without having been indebted to Scheele's hint on this fubject. Mr Turner has done more; he has converted this difcovery to fome ufe in the arts; he produces mineral alkali for fale, arifing from this decompofition; and from the lead which is united to the marine acid he forms the beautiful pigment called the patent yellow

Scheele.
In a Differtation on Flint, Clay, and Alum, he clearly overturned Beaumé's opinion of the identity of the filiceous and argillaceous earths. He publifhed an Analyfis of the Human Calculus. He fhewed alfo a mode of preparing mercurius dulcis in the humid way, and improved the procefs of making the powder of Algaroth. He analyfed the mineral fubftance called molyblena, or flexible black lead. H; difcovered a beautiful green pigment. He fhowed us how to decompore the air of the atmofphere. He difcovered that fome neutral falts are decompofed by lime and iron. He decompofed plumbago, or the common black lead. He obferved, with peculiar ingenuity, an acid in milk, which decompofes acetated alkali; and in his experiments on the fugar of milk, he difcovered another acid, different in fome refpects from the abovementioned acid and the common acid of fugar. He accomplifhed the decompofition of tungftein, the component parts of which were before unknown, and found in it a peculiar acid earth united to lime. He publifhed an excellent differtation on the different forts of $x$ ther. He found out an eafy way to preferve vinegar for many years. His inveltigation of the colouring matter in Pruffian blue, the means he employed to feparate it, and his difcovery that alkali, fal ammoniac, and charcoal, mixed together, will produce it, are ftrong marks of his penetration and genius. He found out a peculiar fweet matter in expreffed oils, after they have been boiled with litharge and water. He fhewed how the acid of lemons may be obtained in cryftals. He found the white powder in rhubarb, which Model thought to be felenite, and which amounts to one-feventh of the weight of the root, to be calcareous earth, united to the acid of forrel. This fuggefted to him the examination of the acid of forrel. He precipitated acetated lead with it, and decompofed the precipitate thus obtained by the vitaiolic acid, and by this procefs he obtained the common acid of fugar; and by flowly dropping a folution of fixed alkali into a folution of the acid of fugar, he regenerated the acid of forrel.-From his examination of the acids contained in fruits and berries, he found not one fpecies of acid alone, viz, the acid of lemon, but another alfo, which he denominated the malaceous acid, from its being found in the greatelt quantity in apples.

By the decompofition of Bergman's new metal (fiderite) he fhewed the truth of Meyer's and Klaproth's conjecture concerning it. He boiled the calx of fiderite with alkali of tartar, and precipitated nitrated mercury by the middle falt which he obtained by this operation; the calx of mercury which was precipitated was found to be united to the acid of phofphorus; fo that he demonitrates that this calx was phofphorated iron. He found allo, that the native Pruffian blue consained the fame acid. He difcovered by the fame wcans, that the perlate acid, as it wis called, was not an acid fui gentris, but the phofphoric united to a fmall quantity ot the mineral alkali. He fugcetied an improvement in the procefs of obtaining magnefla from isplom falt; he advifes the adding of an equal weight of common falt to the Epfom falt, fo that an equal weight of Giauber's falt may be obtained: but thi, will not fucceed unlefs in the cold of wister. Thefe are the valuable cifcoveries of this great philofopher, which are to be found in the Tranfactions of the Royal So.
ciety at Stockholm. Moft ot his effays have been publifhed in French by Madame Picardet, and Monf. Morveau of Dijon. Dr Beddoes has alfo made a very va. luable prefent to his countrymen of an Englifh tranfla. tion of a greater part of Scheele's differtations, to which he had added fome ufeful and ingenious notes. The following difcoveries of Scheele are not, we bs. lieve, publifhed with the reft. He fhewed what that fubftance is, which has been generally called 'the earth of the fluor fpar.' It is not produced unlefs the Huor acid meet with filiceo us earth. It appears from Scheele's experiments to be a triple falt, confifting of flint, acid of fluor, and fixed alkali. Scheele proved alfo, that the fluor acid may be produced without any addition of the vitriolic or any mineral acid: the fuor is melted with fixed alkali, and the fluorated alkali is decompofed by acetated lead. If the precipitate be mixed with charcoal duft, and expofed in a retort to a ftrong heat, the lead will be revived, and the acid of fluor, which was united to it, will pafs into the receiver poffeffed of all its ufual properties. This feems to be an ingenious and unanfwerable proof of its exiftence.

He cbferved, that no pyrophorus can be made unlefs an alkali be prefent; and the reafon why it can be prepared from alum and coal is, that the common alum always contains a little alkali, which is added in orier to make it cryftallize; for if this be feparated from it, no pyrophorus can be procured from it. His laft differtation was his very valuable obfervations on the acid of the gallnut. Ehrhart, one of Scheele's moft intimate friends, afferts, that he was the difcoverer of both of the acids of fugar and tartar. We are alfo indebted to him for that matherpiece of chemical decompofition, the feparation of the acid of phofphorus from bones. This appears from a letter which Scheele wrote to Gahn, who has generally had the reputation of this great difcovery. This acid, which is fo curious in the eye of the chemitt, begins to draw the attention of the phyfician. It was firlt ufed in medicine, united to the mineral alkali, by the ingenious Dr Pearfon. The value of this addition to the materia medica cannot be better evinced than from the increafe of the demand for it, and the quantity of it which is now prepared and fold in Londm.

We may famp the character of Scheele as a philofopher from his many and important difcoveries. What concerns him as a man we are informed of by his friends, who affirm, that his moral character was irreproachable.

On the 19th of May 1786, he was confined to his bed; on the 2 ift he bequeathed all of which he was poffeffed to his wife (who was the widow of his predeceffor at Koping, and whom he had lately married) ; and on the fame day he departed this life. So the world loft, in lefs than two years, Bergman and Scheele, of whom Sweden may juftly boaft; two philofophers, who were beloved and lamented by all their contemporaries, and whofe memory pofterity will never ceafe moft gratefully to revere.

SCHEINER (Chritopher), a German mathematician attronomer, and Jefuit, eminent for being the firft who difcovered fpots on the fun, was bornat Sc'iwaben in the territory of Middleheim in 1575 . He firlt dificoveted fpots on the fun's difk in 16it, and made oijfervations on thefe phenomena at Rome, with at length reducing them to order, he publifhed them in ${ }^{-}$e eot. folio in 1630 . He wrote alfo fome fmaller thinas 4 T 2
rentiag

Schecle, Scheiner.
relating to mathematics and philofophy; and died in 1690.

SCHELD, a river which rifes on the confines of Picardy, and runs northeaft by Cambray, Valenciennes, Trurnay, Oudenarde, \&c. and receiving the Lis at Givent, runs eall by Dendermond, and then north, to Antwerp: below which city it divides into two branches, cae called the Wefler-Scbeld, which feparates Flan©ers from Zealand, and difcharges itfelf into the fea near Fuibing; and the other called the Ofer Sebeld, which runs by Bergen-r. $\cdot$-zo m, and afterwards between the iRands Beveland and Schowen, and a little below falls into the fea.

SCEEMNITZ, a town of Upper Hungary, with three caftles. It is famous for mites of filver and other metals, as alfo for hot baths. Near it is a rock of a fhining blue c lour mixed with green, and fome fpots of yellow. E. Leng. 19. o. N. Lat. 48.40.

SCHERARDiA, in botany; a genus of the monogyn:a order, le looging to the tetrandria clal of plants. The cor la is monctetasuand fumel-haped; there are two three-toothed feed:.

SChetland. Sie Shetland.
SCHEUCHZERIA, in botany: A genus of the arigynia order, blonging to the hexandria clafs of plants; and in the natural method ranking under the fifth order, Trifecatoidec. The caly x is fexpatite; there is no corolla, nor are there any fyles; there are three inflated and monofpermous capfules.

SCHIECHS, or Schech, among the Arabs, is a name applied to their nobles. "Among the Bedouins," fays Niebuhr, "it belongs to every noble, whether of the highelt or the loweft order. Their nobles are very numerous, and compofe in a manner the whole nation; the plebeians are invariably actuated and guided by the fchiechs, who fuperintend and direct in every tranfaction. The fchiechs, and their fubjects, are born to the life of fhepherds and foldiers. The greater tribes rear many camels, which they either fell to their neighbours, or employ them in the carriage of goods, or in miliary expeditions. The petty tribes keep flocks of theep. Among thofe tribes which apply to agriculture, the fchiechs live always in tents, and leave the culture of the:r grounds to their fubjects, whofe dwellings are wretched hats. Schiechs always ride on horfes or dromedaries, infpecting the conduct of their fubjects, vifiting their friends, or hunting. Traverfing the defert, where the horizon is wide as on the ocean, they perceive travellers at a diftance. As travellers are feldom to be met with in thofe wild tracts, they eafly difcover fuch as pafs that way, and are tempted to pillage them when they find their own party the frongeft."

SCHINUS, in botany: A genus of the decandria order, belonging to the diocia clafs of plants; and in the natural method ranking under the 43 d order, Dumofa. The male calyx is quinquefid; the petals five. The female flower is the fame as in the male; the berry tricoccous.

SCHIRAS, or Schirauz, a large and famous town of Peria, capital of Farfiftan, is three miles in length from eaft to weft, but not fo much in breadth. It is feated at the norih-weft end of a fpacious plain furrounded with very high hills, under one of which the town tands. The houles are built of bricks died in the fun; the xcofs are flat and terraced. There are 15 handfome
mofques, tiled with fones of a bluifh green colour, and lined within with black polifhed marble. There are many large and beautiful gardens, furrounded with walls fourteen feet high, and four thick. They contain various kinds of very fine trees, with fruits almoft of every kind, befides varicus beautiful flowers. The wines of Schiras are not only the belt in Peria, but, as fome think, in the whole world. The women are much addieted to gallantry, and Schiras is called an eartbly paradije by tome. the ruins of the famous Perfepo. lis are 30 miles to the north-eaft of this place. E. Long. 56. o. N. Lat. 29. $3^{66}$

SCHISM, (trom the Greek, oxifma, olif, fifure), in its qeeneral ac.eptation figniñes divifion or feparation; Jut is culiay ufed in fpeaking of fepatations happening from diverfi, of opinions among people of the fame relegion a.al: ith.

Tius we fay the fobifn of ten tribes of Judah and Benjamin, the fobjom of the Perfians from the Turks and other il i hometans, \& .

A noug cocletiaftical authors, the great chifm of the Weit is that which happened in the tumes of Clement VII. and Urban II which divided the caurch fur 40 or 50 years, and was at length ended by t..e election of Martin V. at the cuuncil of Cuntanc.

The Romanilts number 34 fchime in their church.
 tion of religion in that kingdom. Ihofe of the church of England apply the term foilifin to the feparation of the nonconf.rmits, viz the pretbyterians, ind-pen. dents, and anabaptilts, for a further reformation.

SCHISTUS, in mineralogy, a name given to feveral different kinds of ftones, but more efpecially to fome of the argillaceous kind; as,

1. The bluifh purple fchifus, fchifus tegularis, or common roof-flate. This is fo foft that it may be flightly fcraped with the nail, and is of a very brittle lamellated texture, of the fpecific gravity of 2,876 . It is fufible per fe in a ftrong beat, and runs into a black fcoria. By a chemical analyfis it is found to confit of 26 parts of argillaceous earth, 46 of filiceous earth, 8 of magnefia, 4 of calcareous earth, and 14 of iron. The dark-blue flate, or fchitus fcriptorius, contains more magneffa and lefs iron than the commoa purple. fchiltus, and effervefces more brikkly with acids. Its fecific gravity is 2,701 .
2. The pyritaceous fchifus is of a grey colour, brown, blue, or biack; and capable of more or lefs decompolition by expofare to the air, according to the quantity of pyritous matter it contains and the fate of the iron in it. When this laft is in a fumi-phlogificated fate it is eafily decompofed; but very flowly, or not at all, if the calx is much dephlogiticated. The aluminous fchiflus belongs to this fpecies.
3. The bituminous fchifus is generally black, and of a lamellated texiure, of various degrees of hardnef, not giving fire with flee!, but emitting a frong fmell when heated, and fometimes without being heated. MI. Magellan mentions a fpecimen which burns like coal, with a ftrong fmell of mineral bitumen, but of a yellowifh brown, or rather dark afh-colour, found in Yorkfhire.This kind of fchiftus does not fhow any white mark when fcratched like the other fchilus.

SCHMEDELIA, in botany: A genus of the digynia order, belonging to the octundria clafs of plants.

## SCH

Schoens- The calyx is diphyllous; the corolla tetrapetalous; the bates II Schomberg ma pedicellated, and longer than the fower.
SCHOENOBATES (from the Greek, $\sigma \chi 0 \%$, $a$ ropi; and $\beta_{\text {avai }}, I$ walk), a name which the Greeks gave to their rope-dancers : by the Romans called funambuli. See Rofe-dancer and Funambulus.

The fobcenobates were flaves whofe malters made money of them, by entertaining the people with their feats of activity. Mercurialis de arte gymnafica, lib. III. gives us five figures of foce:iobatis engraven after ancient ltones.

SCHOENUS, in botany: A genus of the monogynia order, belonsing to the tiandria clafs of plants; and in the matural method ranking under the 3 dorder, Calmaric. The glurics are paleaceous, univalved, and thickfet; there is ro corolla, and only one roundifh feed between the elan es.

SCHOLASTIC, fomething belonging to the fchools. Sice Scnol.

Scholistic Divinity, is that part or fpecies of divinity which clears and difcuffes quetions by reafon and arguments; in which fenle it it inds, in foms meafore, oppofed to pofitive ivinity, which is founded it the authority of fathers, councils, \&c. The fchool-divinity is now fallen into contempt ; and is fcarce regarded any where but in fome of the univerfites, where they are itill by their charters obliged to teach it.

SCHOLIAST, or Commentator, a grammarian who writes fcholia, that is, notes, gloffes, \&c. upon ancient authors who have written inthe lear. ed languages. See the next article.

SCHOLIUM, a note, annotation, cr remark, occafionally made on fome paffage, prop ofition, or the like. This term is much ufed in geometry and other parts of mathematics, where, after demonftrating a pre pofition, it is cultomary to point out how it might be done fome other way, or to give fome advice or precaution in order to prevent miftakes, or add fome particular ufe or application hereof.

SCHOMBERG (Frederic-Armand duke of), a difinguiihed officer, fprung from an illuftrious family in Germany, and the fon of count Schomberg by an EngJith lady, daughter of lord Dudley, was born in $\mathbf{1} 608$. He uas initiuted into the milhary life under Frederick. Henry prince of Orance, and afterwards ferved under his fon William Il. of Orange, who highly etteemed him. He tren repaired to the court of France, where his reputation was fo well known, that he obtained the grovernment of Gravelines, of Furnes, and the iurlounding countries. He was reckoned inferior to no general in that kingdom except marefchal Turenne and the prince of Condé ; men of fuch exalted eminence that it vas no difyrace to acknowledge their fuperiority. The French court thinking it neceffary to dimifh the fower of Spain, fent Schomberg to the afiftance of the Purtuguefe, who were engaged in a war with that country refpecting the fucceffion to their throne.Schombeng's military talents gave a turn to the war in favour of his allies. The court of Spain was obliged to folicit for peace in 1668, and to acknowledge the houfe of Braganza as the juft heirs to the throne of Portugal. For his great fervices he was created count Mentola in Portugal; and a penfion of 5000 l. was beftowed upon him, with the reverfion to his heirs.

In 1673 he came over to England to command the
army ; but the Engliih at that time being difgufted Schomber with the French nation, Schomberg was fulpected of coming over with a defign to corrupt the army, and bring it under French difcipline. He therefore found it neceflary to return to France, which he foon left, and went to the Netherlands. In the month of June 1676, he forced the prince of Orange to raife the fiege of Maeftricht ; and it is faid he was then raifed to the rank of marefchal :f France. Bot the French Didio. naire Hi?orique, whofe information on a point of this nature ought to be authentic, fays, that he was invefted with this honour the fame year in whinh he took the fortrefs of Bellegarde from the Spaniards while ferving in Portug.al.

Upon the revocition of the edict of Nantes, when the perfccution commenced againll the Proteltant, Schomberg, who was of that perfuation, requeited leave to retire into his own country. This requell was refufed; but he was permitted to talie rofuge in Purtagal, where he had reafon to expect he would be kindly received on account of palt fervices. Dut the religious zeal of the Portuguefe, th ugh it did not prevent them from accepting afgitance from a heretic when their king tom wa threatened with fubverfon, could not permit them to give him thelter when he came for protection. The inquibition interfered, and obliged the king to fend him away. He then went to Holland by the way of England. Having accepted an invitation from the elector of Brandenburg, he was invefted with the government of Ducal Pruffia, and appointed commander in chief of the elector's forces. When the prince of Orange f:iled to England to take poffeffion of the crown which his father-in-law James II. had abdicated. Schomberg obtained permition from the elector of Brandenburg to accompany him. He is fuppofed to have been the author of an ingenious ftratagem which the prince employed after his arrival in London to difcover the fentiments of the people refpecting the revolution. The ftratagem was, to fpread an aldrm over the countiy that the Irifh were approaching with fire and fword. When the prince wa eftablifhed on the throap of E:igland, Schomb=rg was appointed commander in ${ }^{\text {º }}$ chief of the forces and mater of the ordnance. In April 1689 he was made knight of the garter, and naturalized by act of Parliament; and in May following was created a baron, ent, marquis, and duke of the kingdom of England, by the name and title of baron Teys, earl of Bretford, marquis of Harwich, and duke of Schomberg. The Houfe 'of Cimmons voted to him L. 100,000 as a reward for his fervices. Of this he only received a fmall part; but after his death a penfion of L. 5000 a-year was beltoved upon his fon.

In Augult i 689 . he was fent to Ireland to reduce that kingdem to vedience. When he arrived, he found himfelf at the head of an army confifting only of 12,000 . foot and 2000 horfe, while king James commanded an armv three times more numerrus. Schomberg thought it dangerous to engage with fo fuperi $r$ a force, and being dilappointed in his promifed fupplies from England, judged it prudent to remain on the defenive. He therefore pofted himfelf at Dundalk, about five or fix miles ditance from James, who was encamped at Ardee. For fix weeks he remained in this, pofition, withour attempting to give battle, wh le from the wetnefs of the feafon he loft nearly the half of his army. Schomberg was
much blamed for not coming to action ; but fome excellent judges admired his conduct as a difplay of great military talents. Had he rifked an engagement, and been defeated, Ireland would have been loft. At the famous batile of the Boyne, fought on the ift July 16go, which decided the fate of James, Schomberg paffed the river at the head of his cavalry, defeated eight fquadrons of the enemy, and broke the Irifh infantry. When the French Proteltants lof their commander, Schomberg went to rally and lead them on to charge. While thus engaged, a party of king James's guards, which had been feparated from the reft, paffed Schomberg, in attempting to rejoin their own army. They attacked him with great fury, and gave him two wounds in the head. As the wounds were not dangerous, he might foon have recovered from them ; but the French Proteftants, perhaps thinking their general was killed, immediately fired upon the guards, and fhot him dead on the fpot. He was buried in St Patrick's cathedral.

Bifhop Burnet fays, Schomberg was "a calm man, of great application and conduct, and thought much better than he fpoke; of true judgment, of exact probity, and of an humble and obliging temper."

SCHOOL, a public place, wherein the languages, the arts, or fciences, are taught. Thus we fay, a grammar fchool, a writing fchool, a fchool of natural philofophy, \&c.-The word is formed from the Latin fchola, which, according to Du Cange, fignifies difcipline and correction; he adds, that it was anciently ufed, in general, for all places where feveral perfons met together, either to ftudy, to converfe, or do any other matter. Accordingly, there were fohola palatina, being the feveral pofts wherein the emperor's guards were placed; fchola fcutariorum, fobola gentilium, \&c. At length the term paffed alfo to civil magiftrates; and accordingly in the code we meet with fchola chartulariorum, fchola agentium, \&c.; and even to ecclefiaftics, as fibola caitiorum, fchola facerdotum, \&c.

The Hebrews were always very diligent to teach and fudy the laws that they had received from Mofes. The father of the family fudied and taught them in his own family. The Rabbin taught them in the temple, in the fynagogues, and in the academies. They pretend, that even bef.re the deluge there were fchools for knowledge and piety, of which the patriarchs had the direction.They place Adam at their head, then Enoch, and laftly Noah. Melchifedec, as they fay, kept a fchool in the city of Kajrath-fepher, otherwife Hebron, in Paleftine. Abraham, who had been inftructed by Heber, taught in Chaldea and in Egypt. From him the Egyptians learned aftronomy and arithmetic. Jacob fucceeded Abraham is the office of teaching. The fcripture fay, he was "a plain mandwelling in tents;" which, according to the Chaldee paraphrat, is, " that he was a perfect man, and a minifter of the houfe of doctrine,"

All this, indeed, muft be very precarious and uncertain. It cannot be doubted but that Mofes, Aa$r(n$, and the elders of Ifrael, influcted the penple in the wildernefs, and that many good Ifraelites were very induftrious to inftruct their families in the fear of God. But all this does not prove to us that there were any fuch fchocls as we are now inquiring after. Under Joflua we fee a kind of academy of the prophets, where
the children of the prophets, that is, their difciples,
School. lived in the exercife of a retired and aultere life, in ftudy, in the meditation and reading of the law of God. There were fchools of the prophets at Naioth in Ramah; i Sam. xix. 12. 20, \&c. See the article ProРнет.

Thefe fchools, or focieties of the prophets, were fucceeded by the fynagogues. See the article Synagogue.

Charity-Schoozs are thofe fchools which are fet apart by public contributions or private donations for the inftruction of poor children, who could not othervife emjoy the benefits of education. In few countries are thefe more numerous than in Great Britain, where charity and benevolence are characteriftic of the nation at large. They following is a fummary view of the number of charity fchools in Great Britain and Ireland, according to the beft information at prefent, 1795.

|  | Schools. | Boys. | Girls. |

Sunday-Schools are another fpecies of charicy-fchools lately inftituted, and now pretty common in Great Britain. The inftitution is evidently of the firft importance; and if properly encouraged mult have a very favourable effect on the morals of the people, as it tends not only to preferve the children of the poor from fpending Sunday in idlenefs, and of confequence in diffipation and vice, but enables them to lay in for the conduct and comfort of their future life a ftock of ufeful knowledge and virtuous principles, which, if neglected in early life, will feldom be fought for or obtained amidtt the hurry of bufinefs and the cares and temptations of the world.

The excellent founder of Sunday-fchools was Mr. Raikes, a gentleman of Gloucefterihire, who, together with Mr Stock, a clergyman in the fame county, and who, we believe, was equally inftrumental in the bulinefs with Mr Raikes, fhewed the example, and convinced many of the utility of the plan. From Gloucef. terfhire the inftitution was quickly adopted in every county and almoft every town and parifh of the kingdom; and we have only further to remark on a plan fo generally known, fo much approved, and fo evident. ly proper, that we hope mea of eminence and weight will always be found fufficienty numerous and willing to befow their time and countenance in promoting it to the utmoll of their power.

## S C H

Schooner, Schorl.

SCHOONER, in fea-language, a fmall veffel with two mafts, whofe main-tail and forefail are fufpended from gaffs, reaching from the maft towards the ftern, and 1 retched out below by booms, whofe foremoft ends are hooked to an iron, which clafps the malt fo as to turn therein as upon an axis, when the after-ends are fwung from one fide of the veflel to the other.

SCHORL, a precicus ftone of the fecond order, of which the varieties are, Siberian, ruby coloured, reddifh, green, brown, blue, and black; mother of emerald, dark green; lapis crucifer, or the crofs fone; bar fchorl; horn blend, black, green, or blue; Cianile, blue fchorl; Thumjiun; Laxman's quadrangular fchorl. Tranfparent fchorl is chryftallized in polygonal prifms, generally with four, fix, or nine fides; fome of them are fo fiue as to pafs for gems of the firlt order, efpecially for the emerali. In the femitranfparent fchorls there are likewife forme of great beaty, as the ruby coloured, lately difcovered in Siberia by counfellor Herman, in a bed of redelifh argilla, mixed with fragments of felt fpath, quartz, and mica, on a low granite mountan. The bed of argilla is evidently produced by the decompofition of granite; which operation Herman fuppofes mult have fet at liberty the ruby fchorl formerly pent up in the chiuks of fiffures of the decompofed part of the mountain. The difcovery is quite new, no fuch frecies being before known, as it is as hard as the firt order of precious ltones, the diamond excepted, takes a fine polifh, and equals in colour the oriental raby, though nut in tranfparency.

Its fructure is made up of fine cylindric columns, like needles collected into bundles or treffes, lying one on another in diferent directions, whillt each individual column is made up of fine plates or laminæ, like the gems. It is fufible perfe into a white tranfparent glais, and melts imperfectly with borax when calcined, as it does with micrucofmic falt and mineral alkali, in to a fmall vitreous globe, with little fpots of a white enamel col our. Acids have no effect uponit, even when calcined. Laltly, it lofes its colour in the fire, atter having firt turned blue. The mother of emeralds is likewile a femitranfparent fchorl, in the opinion of fome able naturalitits, although Mr Born allerts it to be a jade, we know not upon what authority.

The itructure of the fimitranfparent fichorls, and fome of the traniparent that are not fo perfectly didphanous as to conc-al their texture, is obfcurely fparry ; but that of the opaque is either filamentous, like afbeilos, or hard and brittle like threads of glafs, or it is compofed of fcales. Of this laft kind is that called born ileud, which is generally gren or black; but there is a beautiful variety of it found on the mount St Gothard, in Switzerland, of a fine $\mathfrak{k y} y$-blue colour covered with filver tad.. Bar fcherl has been $f$ und on the Carpathian mountains chryftalized in prifms. Lapis crucifer, or the crofs fone, is found fometimes near Brazil in Switzerland, and there named Tauffstein, or chriltening itone ; but oftener at Thum in Saxony, and therefore named there Thumftein. It is a fchorl in torm of a crois: that of Brazil confifts of two hexagonal chryitals. The exact cryftallization of the other is unknown to us

Molt countries produce fchorls. Ruffia is particulanly rich in fichorls. 1 is even difficult to point out all the different places of the empire which produce them;
but we fhall take notice of thofe moft remarkable, particularly new difcoveries. The ruby-coloured fchorl mentioned above was found by Mr Herman at Sarapouliky, a village in the government of Perm, ten verts from Mourfinfky Slabode, in Siberia. The Siberian infpector, Mr Laxman, has lately difcovered in the mountain Alpeftria, on the river Sleudenka near the lake Baikal, the following new fchorls, Firft, a green tranfparent fchorl, of fo brittle a nature as not to bear carriage without breaking into fmall pieces truncated. Pallas is pofitive in declaring this dark green fchorl a hyacinth. This laft has often fome of the fmall yellowith white garnets fticking in it, defrribed in the article Garnet, where an account will be found of the fpecies of matrix that contains them all. Schorls are likewife found in the mountains and mines of Nifelga, Krafnavolok, and Sondala, as likewife between the Onega Lake and White Sea. Black fchorl is likewife found near the White Sea, and in the Altai, Ural, and Daurian mountains.

None of the tranfparent fchorls have been found in Scotland as far as we have heard; but many varieties of the opake kinds have been found in various places, particularly in the ifland of Arran, where there is a bed of greenifh horn like fchorl of immenfe extent near the harbour of Lamlafh.

Fine fecimens of fchorl are dear ; the ruby fchorl from Siberia, 25 to 50 rubles a ring flone; the green, when fine, from 15 to 30 . The high price of the ruby fchorl is owing to its novelty and rarity; and of the green, is owing to its paffing for an emerald. The fpecific gravity of fchorl is 3,6 .

SCHOTIA, in botany: A genus of the monogynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the 33 d order, Lomentacea. The calyx is femiquinquefid ; the corolla has five petals, which are equal ; the tube is turbinated, carnous, and perfiftent. The legumen pedicellated, and contains two feeds; there is only one fpecies, viz. the fpeciofa, or African Lignum vita.

SCHREBERA, in botany: A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The calys is quinquepartite; the corolla funnel fhaped, with the filaments in the throat, and having e.ch a fcale at the bafe.

SCHREVELIUS (Cornelius), a laborious Dutch critic and writer, wino has given the public fome editions of the ancient authors more ele ant than correct: his Greek Lexicon is elteemed the beft of all his works. He died in 1667.

SCHULTENS (Albert), profeffor of Hebrew and of the ealtern languages at Leyden, and one of the moft learned men of the 18 th century, was born at Groningen, where he fudied till the year 1706 , and. from thence continued his ftudies at Leyden and $U$ trecit, Schultens at length applied himfelf to the fudy of Arabic books, both printed and in manuffript; in: which he made gre t progrefs. A fhort time after he became minitter of Waifenar, and two years after profelfor of the ealtern tongues at Franeker. At length he was invited to Leyden, where he taught Hebrew and the eattern languages with extraordinary reputation till his death, which happened in 1750 . He wrote many learned works; the primcipal of which

Schotiz II Schultenc.

Schurman are, 1. A Commentary on Job, 2 vols 4to. 2. A
\& $\underbrace{\text { Schwarts. }}$ via Hebraizandi. 4. Animadrerfiones philologica $\mathcal{F}$. critice ad varia loca Vetiris Teffamenti. 6. An excellent Hebrew grammar, \&c. Schultens difcovered in all his works found criticifm and much learning. He maintained againft Gouffet and Drieffen, that in order to have a pertect knowledge of Hebrew, it its neceffary to join with it, not only the Chaldee and Syriac, but more particularly the Arabic.

SCHURMAN (Anna Maria), a moft extraordinary German iady. Her natural genius difcovered itfelf at fix years of age, when the cut all forts of figures in paper with her fciffars without a pattern. At eight, the learned, in a few days, to draw flowers in a very agreeable manner. At ten, fhe took but three hours to learn embroidery. Afterwards the was taught mufic, vocal and inftrumental; painting, fculpture, and engraving; in all of which the fucceeded admirably. She excelled iv: miniature-painting, and in cutting portraits upon glafs with a diamond. Hebrew, Greek, and Latin, were fo familiar to $h \in r$, that the mof learned men were altonifhed at it. She fpoke French, Italian, and Englifh, fluently. Her hand-writing, in almoft all languages, was fo inimitable, that the curious preferved fpecimens of it in their cabinets. But all this extent of learning and uncommon penetration could not protect her from falling into the errors of Labadie, the famous French enthufiaft, who had been banihed France for his extravagant tenets and conduct. 'To this man the entirely attached herfelf, and accompanied him wherever he went; and even attended him in his laft illnef, at Altena in Hol. ftein. Her works, confifing of De vite bumane termino, and Difertatio de ingenii mulielris ad ciocirinam et meliores literas aptitudine, and her Letters to her learned correffondents, were printed at Leyden in 1648; but enlarged in the edition of Utrecht, 1662 , in 12 mo , under the following title:A.M. Schurman Opufcula Helrea, Graca, Latina, Gallica, Profuica, et Metrica. She publifhed likewife at Altena, in Latin, A Defence of her attachment to Labadie, while fhe was with him in 1673 ; not worth reading. She was born at Cologne in 1607, but refided chiefly in Holland, and died in Frielland in 1678 .

SCHALBEA, in botany: A genus of the angiofpermia order, belonging to the didynania clafs of plants. The calyx is quadrifid, with a fuperior lobe; the lowermoft longeft, and emarginated.

SCHWARTS (Chriftopher), an eminent hiforypainter, born at Ingolftadt in 1550 , who was diftinguithed by the appellation of the German Rapbael. He learned the firit principles of the art in his own country, but finithed his ttudies at Venice; when he not only made the works of Titian his models, but had the advantage of receiving fome perfonal inftruction from that illufrious mafer. His performances wert fron in the higheft efteem; as his manner of painting was very different from what the Germans bad been accuftomed to before that time: he was, there$\mathrm{f} \times \mathrm{re}$, invited by the elector of Bavaria to his court, and appointed his principal painter.' He died in 1594; and his molt capital works, as well in frefco as in oil, are in the palace at Munich, and in the churches and convents.

SCHWARTENBURG, a town and caftle of Ger- Schwartenmany, and circle of Upper Saxony, in the landgravate of Thuringia, and capital of a county of the fame name belonging to a prince of the houfe of Saxony. It is feated on the river Schwartz, 20 miles fouth ealt of Erford, and 35 north of Cullembach. E. Long. 11. 27. N. Lat. 50. 45.

SCHWARTZEMBERG, a town of Germany, in the circle of Franconia, and capital of a principality of the fame name. The caftle is feated on the river Lec, 5 miles north-weft of Nuremberg, and 20 ealt of Wertzburg, fubject to its own prince. E. Long. 10. 27. N. Lat. 49. 43.

SCHWEIDNITZ, a ftrong town of Germany, in Silefia, and capital of a province of the fame name, with a cafte. It is the handfomelt ti wn of Silefia, next to Breflaw. The ftreets are large, the church fine, and the houfes well built. The fortifications are not very confiderable, and the royal palace is turned into a convent. All the magiftrates are Roman Catholics; but moft of the inhabitants are Proteftants, who have a church without the town, as alfo a public fchool and bells. It is feated on an eminence on the river Weifritz, 27 miles fouth-eaft of Lignitz, and 22 fouthweft of Breflaw. E. Long. 16. 48. N. Lat. 50. 46.
SCHWEINFURT, a very ftrong, free, and imperial town of Germany, in Franconia, with a magnificent palace, where the fenators meet, who are in in number. The environs are rich in cattle, corn, and wine; the inhabitants are Proteftants, and not very rich. However, they carry on a large trade in woctlen and linen cloth, goofe-quills, and feathers. It is feated on the river Main, 27 miles north-eaf of Wirtzburg, and 22 welt of Bamberg. E. Long. 10. 25 . N. Lat. 50.4.

SCHWENKFELDERS, a denomination o? Chriftians, fo called after Cafper Schwenkfeld von Offing, a noted nobleman, in the fixteenth century. He was born 1490, in the Pricipality of Liegnitz in Silefia. He fudied feveral years at Cologn and other univerfities, after this he was in fervice by the duke of Munfterberg, and Brieg, until he was difabled by bodily infirmities from attending the bufinefs of that court. He then applied himfelf to divinity; about this time the reformation was begun in Germany, which attracted his whole attention. The chief reformers, Luther, Melanchton, \& c . he held in high efteem, but was decided in his opinion, that they fill retained feveral relicks of popery in their doctrine.

He differed from Luther about the eucharift, in which he could not agree with him, that the body and blood of Chrift were materially prefent in the Lord's fupper, whether in bread or wine : The words of Chritt, Matt. xxvi. verfe 26, and 28, "This is my body : this is my blood," he took in this fenfe: That as bread and wine are a fubtantial nourihment of our bodies in this natural life, fo were likewife the body and blood of our Savidur, a fubftantial nourifhment to the fouls of the faithfuls in the new fpiritual life received from above. The object of this fupper among Chriftians, fhould be the remembrance of their Saviour's unbounded love, and to fhow his death. Schwenkfeld wrote I2 Queftions to Luther, concerning the impanation of the body of Chrit, which he anfwered in his ufual rough fyle, telling him that he fhould not irritate the church

## SCH

schwenk- of Chrift, that the blood of thoie he fhould feduce, Telders. would fall upon his head. Notwithftanding this, he ftill expoltulated with Luther, and defired a candid examination of his arguments, which fo irritated Luther, that he wrote a very indecent maledifury letter to Schwenkfeld.

He wrote about 90 treatifes and pamphlets in German and Latin, on religious fubjects, molt of which were printed, and are yet extant, though whole editions were confifcated and deftroyed; he had an extenfive correfpondence all over the empire, with perfons of every rank and defrription. The moft material of his Letters were printed, whereof three large folio volumes are yet left : in his writings he difplayed a penetrating judgement, with a true Chriftian moderation. He often declared in his writings, that it was by no means his object to form a feparate church, expreffing an ardentdefire to be ferviceable to all Chriltians of whatever denomination; but his freedom in giving admonition to thofe whom he thought erroneous, brought on him the implacable enmity of Proteltants and Papifts: His writings were forbid to be printed; fuch as were printed, were often confifcated and deftroyed; and his perfon was in danger from his perfecutors. He died in the city of Ulm 1562, in the 72 d year of his age; his learning and exemplary piety is generally acknowleged, even by his bittereft antagonifts (A).

After his death, there were rumbers of people in different parts of Germany, who thought themfelves convinced that his doctrine was right and orthodox; they were generally called Schwenkfelders, and were eyerywhere reproached and perfecuted at the inftigation of the eftablifhed clergy : The greateft numbers of them were in Silefia, particularly in the ptincipalities of Leignitz and Jawr. The eftablifhed clergy here being Lutherans, ufed every intrigue to opprefs them; in particular if they affembled for religious worthip, they were thrown into prifons and dungeons, where many of them perifhed.

Such was often their fate, until in 1719 the Jefuits thought the converfion of the Schwenkfelders an object worth their attention. They fent mifionaries to Si lefia, who preached to that people the faith of the emperor; they produced imperial edicts that all parents hould attend the public worlhip of the milfiona: ries, and bring their children to be inftructed in the holy catholic faith, under fevere penalties: The Schwenkfelders fent deputies to Vienna, to folicit for toleration and indulgence, and though the emperor apparently received them with kindnels and condefcenliun, yet the Jefuits hal the addrefs to procure another imperial edict, ordering that fuch parents as would not bring every one of their children to the mifionaries for intruction, fhould at latt be chained to the wheel barrow, and put to hard labour on the public works, and their children fhould by force be brought to the monafteries. Upon this, many familics flod in the night into Lufatia and other parts of S.txony, leaving behind them their effects, real and perfonal, (the roads being befet in the day time by guards to top all emigrants); of there in 1734, a imali num. ber emigrated over Altona and Holland into Penn-
a religious fociety.
The laft mentioned edict was not put in its fulleft rigour by the miffionaries, till after the death of Charles VI. when another ediat was publifhed, which threatened the total extermination of the remaining Schwenkfelders, from which they were unexpectedly relieved by the king of Pruffia making a conqueft of all Silefia, who immediately publifhed an edict in which he recalled all thofe Schwenkfelders that were emigrated, and promifed them their eflates, with toleration and protection not only in Silefia, but in all other parts of his dominions.
SCHWENKFELDIA, in botany: A genus of the monogynia order, belonging to the pentandria clafs of plants; and in the natural method ranking with thofe that are doubtful. The calyx is quinquefid; the corolla funnel-fhaped ; the fligma parted into five; the berry quinquelocular, with a number of feeds. Of this there are three fpecies, viz. 1. Cinerea, 2. Afpera; 3. Hirta. The two firlt are natives of Guiana, the other of Jamaica. The leaves of all of them are remarkably rough, and flick to the fingers or clothes.

SCHWENKIA, in botany: A genus of the monogynia order, belonging to the diandria clafs of plants, The corolla is almoft equal, plaited at the throat, and glandulous; there are three barren ftamina ; the capfule bilocular and polyfpermous.

SCHWINBURG, a town of Denmark, on the eaftern coaft of the ifland of Fionia, over-againft the iflands of Arroa and Langeland. E. Long. 10. 55. N. Lat. 55.8.

SCHWITZ, or SwItz, a canton of Swifferland, which gives name to them all. It is bounded on the welt by the lake of the four cantons, on the fouth by the canton of Uri, on the eat by that of Glaris, and on the north by thofe of Zurich and Zug. Its principal riches confift in cattle, and the capital town is of the fame name. This is a large, handfome place, feated near the lake of the four cantons, in a pleafant country among the mountains. E. Long. 8. 4r. N. Lat. 47. 2.

SCIACCA, anciently called Therma Selinuntia, in Sicily, derives its prefent denomination from the Arabic word Scheich. It is a very ancient place, being mentioned in the account of the wars between the Greeks and Carthaginians, to the latter of whom it belonged. It is defended by ancient walls and the caftle of Luna. It fands upon a very fteep rock, hanging over the fea, and excavated in every direction into prodigious magazines, where the corn of the neighbcuring territory is depofited for exportation; there is no harbour, but a fmall bay formed by a wooden pier, where lighters lie to load the corn which they carry out about a mile to fhips at anchor.
The town is irregularly but fubftantially built, and contains 13,000 inhabitants, though Ansico's Lexice: Tppografbicum fays the lalt enumeration found only 9484. His accounts do not take in ecclefiatics, and feveral denominations of lay perfons.
SC[AENA, in ichthyology, a genus belonging to the order of thoracici. The membrane of the gills 4 U
seitica. has fix rays; the opercula and whole head are fcaly. There are five fpecies.

SCIATICA, the hip-gaut. SeeMedicine, n9 207. SCIENCE, in philofophy, denotes any doctrines deduced from felfevident principles.

Sciences may be properly divided as follows; i. The knowledge of things, their conftitutions, properties, and operations: this, in a little more enlarged fenfe of the word, may be called $\phi$ osssn, or natural philofopby; the end of which is fpeculative truth. See Philosophy and Physics.-2. The fkll of rightly applying thefe powers, giartion: The moft confiderable under this head is ethics, which is the feeking out thofe rules and meafures of human actions that lead to happinefs, and the means to practice them (fee Moral Philosophy); and the next is mechanics, or the application of the powers of natural agents. to the ufes of life (fee Mechanica).-3. The doctrine of figns, cruetwrikn; the moft ufual of which being words, it is aptly enough termed $\operatorname{logi}$. See Logic.

This, fays Mr Locke, feems to be the moft general; as well as natural, divifion of the objects of our underftanding. For a man can empioy his thoughts about nothing but either the contemplation of things themfelves for the difcovery of truth; or about the things in his own power, which are his attions, for the attainment of his own ends; or the figns the mind makes ufe of both in the one and the other, and the right ordering of them for its clearer information. All which three, viz. things as they are in themfelves knowable, actions as they depend on us: in order to happinefs, and the right ufe of figns in order to knowledge, being toto coelo different, they feem to be the three great provinces of the intelledual woorld, wholly feparate and diftinct one from another.

SCILLA, the seulle, in botany: A genus of the monogynia order, belonging to the hexandria clafs: of plants; and in the natural method ranking under the ioth order, Coronarid. The corolla is hexapetalous and deciduous; the filaments filfform.

The moft remarkable fpecies is the maritima, or feaonion, whofe roots are ufed in medicine. Or this there are two forts, rne with a red, and the other with a white root; which are fuppofed to be accidental varieties, but the white are generally preferred for medicinal ufe. The roots are large, fomewhat oval fhaped, compofed of many coats lying over each other like onions; and at the bottom come out feveral fibres. From the middle of the root arife feveral hining leaves, which continue green all the winter, and decay in the foring. Then the flower-ftalk comes out, which rifes two feet high, and is naked half-way, terminating in a pyramidal thyrfe of flowers, which are white, compofed of fix petals, which. fpread open like the points of a far. This grows naturally on the fea-fhores, and in the ditches, where the falt water naturally flows with the tide, in molt of the warm parts of Europe, fo cannot be propagated in gardens; the froft in winter always deftroying the roots, and for want of falt-water they do not thrive in fummer. Sometimes the roots which are bought for ufe put forth their ftems and produce flowers, as they lie in the druggifs fhops.-This root is very naufeous to the talte, intenfely bitter, and fo acrimonious, that it ulcerates the fkin if much handled. Taken internally, it powerfully fimulates the folids, and
promotes urine, fweat, and expectoration. If the dofe is confiderable, it proves emetic, and fometimes purgative. The principal ufe of this medicine is where the prima vix abouad with mucous matter, and the lungs are oppreffed. by tenacious phlegm. It has been recommended in hydropic cafes, taken in powder, from four to ten grains in a dofe, mixed with a double quantity of nitre. The molt commodious mode of exhibiting this root is as a bolus or pill. Liquid forms are too difagreeable to molt people; though this may be remedied in fome degree by the ad: dition of fome aromaric diftilled waters. It yields the whole of its virtues to aqueous and vinous menltra, and likewife to vegetable acids.

SGILLY, of Silley, a clufter of fmaly ifiands and: rocks, fituated in the Atlantis-Ocean, in W. Long. $7^{\circ}$. $\mathrm{N}_{\mathrm{L}}$ Lat. $50^{\circ}$.

Thefe illands were firf called Cafiterides, or the Tin Ifles, from their being rich in that metal. The common opinion is, that this is a Greek appellation; which: in the moft obvious fenfe is true: Put as the Phoenicians.were familiar with the metal, and with the country that produced it, before the Greeks knew any thing of either, it is very likely they introdaced the names of both from their own language. Strabo fays thefe iflands were ten in namber, lying clafe together, of which only one was uninhabited : the peosple led an erratic, life, lived upon the produce of their cattle, wore an ander-garment which reached down to their ankles, and over that another, both of the fame colour, which was black, girt round a little below the brealt with a girdle, and walked with ftaves in their hands. The riches of their iflands were tin and lead, which, with the fkins of their cattle, they exchanged, with foreign merchants, that is, the Phonicians from Cadiz, for earthen-ware, falt, and utenflls made of brafs. An author of as great or greater antiquity, feems to include a part at lealt of Cornwall amongt thefe iflands; or rather he fuggefts, that they were not perfect iflands except at full fea; but that at ebb the inhabitants paffed from one to another upon the fands, and that they even tranfported their tin in large fquare blocks upon carriages from one ifland to another. He farther takes notice, that fuch as inhabited about Belerium (the Land's End) were in their converfation with flrangers remarkably civil and courteous. Other ancient writers ityle there illands Hefperides, from their weftern fituation, and Oefrymnides, afferting that t're land was extremely fertile, as well as full of mines; and that the people, though very brave, were entirely addicted to commerce, and boldly paffed the feas in their lea her boats:

The Romans were exceedingly defirous of having a fhare in this commerce, which the Phœuicians as carefully laboured to prevent, by concealing their navigation to thefe illands as much as it was in their power. At length, however, the Romans prevailed; and Publius Craffus coming thither, was fo well ple ifed with the induftry and manuers of the people, that he taught them various improvements, as well in working their mines, which till that time were but flallow, as in carrying their own merchandife to different markets. There is no rbom to doubt that they followed the fate of the reft of Britain, and particularly of Cornwall, in becoming fubject to the Roman empire. We find them called in the Itinerary of Antoninus, Sigdeles; by

Sulpitius,

Sulpitius, sillence: and by Solinus they are termed Silures. All we know of thern during this period is, that their tin trade continued, and that fometimes fateprifoners, were exiled, or, to ufe the Roman phrafe, relegated hither as well as to other inlands.

When the legions were withdrawn, and Britain with its dependencies left in the power of the natives, there is no reafon to queftion that thefe iflands fhared the fame lot with the reft. As to the appellation which from this period prevailed, the ordinary way of writing it is Scilly; in records we commonly find it fpelt Silly, Silley, or Sulley; but we are told the old Britilh appellation was Sulleh, or Sylleh, which fignifies rocks confecrated to the fun. We have not the leaft notice of any thing that regards them from the fifth to the tenth century. It is, however, with much appearance of truth conjectured, that fome time. within this fpace they were in a great meafure deftroyed by an earthquake, attended with a finking of the earth, by which moft of their lowlands, and of courfe the greatelt part of their improvements, were covered by the fea, and thofe rich mines of tin which had rendered them fo famous fwallowed ap in the deep. They have a tradition in Cornwall, that a very extenfive tract of country called the Lione/s, in the old Cornilh Lethoufow, fuppofed to lie between that country and Scilly, was loft in that manner; and there are many concurrent circumftances which render this probable. In reference to thefe infonds, the cafe is fill fronger ; for at low ebbs their ftone-inclofures are fill vifible from almoft all the inles, and thereby afford an ocular demonftration that they were formerly of far greater extent, and that in remoter ages their inhabitants mult have been very numerous, and at the fame time very induftrious. This fufficiently proves the fact, that by fuch an earthquake they were deftroyed; and that it happened at fome period of time within thofe limits that have been afligned, appears from our hearing nothing more of their tin trade, and from our having no notice of it at all in any of our ancient chronigles, which, if it had fallen out later, from their known attention to extraordinary events, muft certainly have happened.

It is generally fuppofed, and with great appearance of truth, that king Athelftan, after having overcome a very powerful confederacy formed againit him, and having reduced Exeter, and driven the Britons beyond the river Tamar, which he made the boundary of their Cornifh dominions, paffed over into thefe iflands, (then furely in a better flate than now, or they would not have been objests of his vengeance), and reduced them likewife. Hittory does not inform us, that the Danes ever fixed themfelves in thefe inlands; but as their method of fortifying is very well known, it has been conj:ctured that the Giant's Caflle in the ifle of St Mary was erected by them; and i. deed, if we confider the convenient fituation of thefe illands, and the trade of piracy which that nation carried on, there feems to be nothing improbable in that conjecture. It is more certain that there were churches erected in thefe illes, and that there were in them alfo many monks and hermits, before the conqueft.

The fertility of the illands is much infifted upon in all the accounts; and it is exprefsly faid of St Mary's that it bears exceeding good corn, infomuch that if nesn did but caft corn where fwine had rooted, it
pould come up. There is mention made of a breed of wild fwine, and the inhabitants had great plenty of fowl and fifh. But notwithftanding the fertility of the country, and the many commodities that men had or might have there, it was neverthelefs but thinly peopled; and the reafon alligned is, becaufe they were liable to be frequently fpoiled by :French or Spanifh pirates. In Leland's time, one Mr Davers of Wilthire, and Mr Whittington of Gloucefterfhire, were proprie. tors of Scilly, and drew from thence, in rents and commodities, about 40 merks a-year.

The inhabitants at that juncture, and long before, appear to have carried on a fmall trade in dried $\mathbb{k}$ ate and other fifh to Bretagne, with which they purchafed falt, canvas, and other neceffaries. This feems to be the remains of a very old kind of commerce, fince, for many ages, the people of that country, thofe of the Scilly ines, and the people of Cornwall, looked upon themfelves as countrymen, being in truth no other than remnants of the ancient Britons, who, when driven out by the Saxons, took refuge in thofe iflands, and in that part of France which had before been called Armorica, and from hence Ityled Bretagne, Brittany, or Little Britain, and the people Bretons. This, in all probability, was a great reliaf to thofe who dwelt in thofe ifles; who, during the long civil war between the houfes of York and Lancalter, had their intercourfe with England fo much interrupted, that if it ihad not been for this commerce with their neighbours on the French coalt, they might have been driven to the lait diftrefs.

The Scilly, or Silley iflands, lie due weft from the Lizard about in leagues; welt and by fouth from the old Land's End, next Mount's Bay, at the diftance of 10 leagues; and from the weftern Land's End, they lie weft-fouth-weft, at the diftance of fomething more than nine leagues. There are five of them inhabited; and that called Sampfon has one family in it. The largeft of thefe is St Mary's, which lies in the north latitude of 49 degrees 55 minutes, and in the longitude of 6 degrees 40 minutes wett from Greenwich. It is cwo miles and a half in length, about one and a half in breadth, and between nine and ten miles in compafs. On the weft fide there projects an ifthmus, Beyond this there is a peninfula, which is very high; and upon which fands Star Caftle, built in 1593, with fome outworks and batteries. On thefe there are upwards of threefcore pieces of cannon mounted; and for the defence of which there is a garrifon of an entire company, with a mafter-gunner and fix other gunners. In the magazine there are arms for 300 iflanders, who, when fummoned, are bound to march into the fortefs. Underneath the caftle barracks and lines fands Hugh Town, very improperly built, as lying fo low as to be fubject to inundations. A mile within land ftands Church Town, fo denominated from their place of worfhip; it confilts of a few houfes only, with a court-houfe. About two fuxlongs ealt of this lies the Old Yown, where there are more houfes, and fome of them very convenient dwellings. The number of inhabitants in this illand is abcut 600 or 700 ; and it produces to the lord proprietor 3001 . per annum.

Trefcare lies directly north from St Mary's, at the diftance of two miles. It was formerly ftyled $S t$ Nicholas's ifland ; and was at leaft as large as St Mary's, though at prefent about helf the fize. The remains
scilly. $\rightarrow$ of the abbey are yet vifible, the fituation well chofen, with a fine bafon of frefh water before it, half a mile long and a furlong wide, with an ever-green bank high enough to keep out the fea, and ferving at once to preferve the 1 ind, and fhelter the abbey. In this pond there are mof excellent eels, and the lands lying round it are by far the belt in thofe iflands. There are about half a fcore fone houfes, with a church, which are called Dolphin Town; an old caltle built in the reign of Henry VIII. called Oliver's Caftle ; and a nèw block-houle, raifed out of the ruins of that caftle, which is of far greater ufe. This ifland is particularly noted for producing plenty of the finelt famphire, and the only tin works that are now vifible are found here. There are upon it at prefent about 40 families, who are very indultrious, and fin more wool than in St Mary's. Its annual value is computed at 801 . a-year.

A mile to the eaft of Trefcaw, and about two miles from the moft northern part of St Mary's, lies the ifle of St Mastin's, not much inferior in fize to that of Trefcaw. . It very plainly appears to have been formerly extremely well cultivated; notwithftanding which it was entirely deferted, till within fomewhat lefs than a century ago, that Mr Thomas Ekines, a confiderable'merchant, engaged fome people to fettle there. He likewife caufed to be erected a hollow tower twenty feet in height, with a pire of as many feet more; which being neatly covered with lime, ferves as a day. mark for directing thips crofling the channel or coming into Scilly. St Martin's produces fome corn, affords the beft pafture in thefe iflands, nourihhes a great number of heep, and has upon it in families, who pretend to have the fecret of burning the beft kelp, and are extremely attached to their own ifland. As a proof of this, it is obfervable, that though fome of the inhabitants rent lands in St Mary's, yet they continue to refide here going thither only occafionally.

St Agnes, which is alfo called the Light-boufe Ifland, lies near three miles fouth-weft of St Mary's; and is; though a very little, a very well cultivated ifland, fruitful in corn and grafs. The only inconvenience to which the people who live in it are fubject, is the want of good water, as their capital advantage confifts in having feveral good coves or fmall ports, where boats may lie with fafety; which, however, are not much ufed. The light-houfe is the principal onnament and great fupport of the ifland, which ftands on the mof elevated ground, built with ftone from the foundation to the lanthorn, which is fifty one feet high, the gallery four, the farh lights eleven feet and a half high, three feet two inches wide, and fixteen in number. The floor of the lanthorn is of brick, upon which tands a fubftantial iron grate, fquare, burred on every fide, with one great chimney in the canopy-roof, and feveral leffer ones, to let out the fmoke, and a large pair of fmith's bellows are fo fixed as to be eafily ufed whenever there is occafion. Upon the whole, it is a noble and commodious fru\&ture; and being plaftered white, is a ufeful daymark to all fhips coming from the fouthward. The keeper of this light-houfe has a falary from the Tinity, houfe at. Deptford of 40 l. a year, with a dwellinghoufe and ground for a garden. His affiftant has 201. a-year. It is fupplied with coals by an annual fhip; and the carriage of thefe coals from the fea-fide to the light-houfe is looked on as a confiderable benefit to the poor inhabitants. They have a neat little church, built
by the Godolphin family. There are at prefent 50 houleholds in the ifland, which yield the proprietor 401 . a-year.

Brebar, or, as pronounced, Bryer ifland, lies northweft of St Mary's, and to the welt of Trefcaw; to which, when the lea is very low, they fometimes pafs over the fand. It is very mountainous, abounds with fea and land fowls, excellent famphire, and a great variety of medical herbs. There are at prefent thirteen families, who have a pretty church, and pay $30 \%$. a-year to the proprietor.

South from hence, and weft from Trefcaw, ftands the illand of Samplon, in which there is not above one. family, who fubfilt chicfly by the making of kelp: To the weftward of thefe there lie four iflands; which contain in the whole 360 acres of merdow and arable land. The eafern ifles, fo denominated from their pofition in refpect to St Mary's; contain 123 acres; and there are alfo feven other rocky and ficattered illands, that have each a little land of fome ufe; and befides thefe, innumerable rocks on every fide, among which we mult reckon Scilly, now nothing more than a large, ill-fhaped, craggy, inacceffible ifland, lying the fartheft north-weft of any of them, and confequiently the seareft to the continent.

The air of thefe illands is equally mild and pure; their winters are feldom fubject to froft or fnow. When the former happens, it lats not long; and the latter never lies upon the ground. The heat of their fummers is much abated by fea-breezes. They are indeed frequently incommoded by fea fogs, but thefe are not unwholefome, Agues are rare, and fevers more fo. The molt fatal diftemper is the fmall-pox; yet thofe who live temperately furvive commonly to 2 great age and are remarkably free from digeafes.

We muft now pafs to the fea, which is of more confequence to thefe ifles than that fmall portion of land which is diftributed amongtt them. St Mary's harbour is very fafe and capacious, having that ifland. on the fouth ; the eaftern inlands, with that of St Mar. tin, on the eaft ; Trefcaw, Brehar, and Samfon, to the north; St Agnes and feveral fmall inlands to the weft. Ships ride here in three to five fathom water, with good anchorage. Into this harbour there are fourinlets, viz. Broad Sound, Smith's Sound, St Mary's. Sound, and Crow Sound: fo that hardly any wind can blow with which a fhip of 150 tons cannot fafely fail. through one or other of them, Crow Sound only excepted, where they cannot pafs at low water, but at high there is from 16 to 24 feet in this paffage. Befides. thefe there are two other harbours; one called New Grynfey, which lies between Brehar and Trefcaw, where fhips of 300 tons may ride fecurely. The other is called Old Grynfey, and lies between Trefcaw, St: Helen's, and Theon, for fmaller thips. The former is guarded by the batteries at Oliver's Cafle ; the latter by the Blockhoufe, on the eaftern fide of Trefcaw, called Dover. Small coalters bound to the northward have more convenient outhers from thefe little harbours than from St Mary's, where, at the weft end of Hugh Town, there is a fine pier built by the prefent earl of Godolphin, 430 feet long, 20 feet wide in the narroweft part, and 23 in height, with 16 feet of water at a fpring, and ro at a neap tide; fo that under the fhelter of this pier, veffels of 150 tons may lie fecurely, not only clofe to the quay, but all along the ftrand of the town.
scilly. In this harbour, and in all the little coves of the everal ifles, prodigious quantities of mackarel may be fcaught in their feafon; alfo foal, turbot, and plaife, remarkably good in their kind; and ling, which from its being a thicker fifh, mellower, and better fed, is very jufly preferred to any caught nearer the Britifh coalts. Salmon, cod, pollock, are in great plenty, and pilchards in vaft abundance. To thefe we may add the alga marina, fucus, or ore-weed, which ferves to feed both their fmall and great cattle, manures their lands, is burned into kelp, is of ufe in phyfic, is fometimes preferved, fometimes pickled, and is in many other refpects very beneficial to the inhabitants, of whom we are next to fpeak.

The people of Scilly in general are robult, handfome, active, hardy, induftrious, generous, and goodnatured; fpeak the Englifh language with gieat propriety; have ftrong natural parts (though for want of a good fchool they have little education.), as appears by their dexterity in the feveral employments to which they are bred. They cultivate molt of their lands as well as can be expected under their prefent circumftances. They are bred from their infancy to the management of their boats, in which they excel; are good fifhermen, and excellent pilots. Their women are admirable houfewives, fpin their own wool, weave it into coarfe cl th, and knit tockings. They have no timber of their own growth, and not much from England; yet they have many joiners and cabinet-makers, who, out of the fine woods which they obtain from captains of thips who put in here, make all kind $\varepsilon$ of domeftic furniture in a very neat manner. They are free from the land-tax, malt-tax, and excife; and being furnifhed with plenty of liquors from the veffels which are driven into their roads for refrefhment, for neceffary repairs, or to wait for a fair wind, in return for provifions and other conveniences; this, with what little fifh they can cure, makes the beft part of their trade, if we except their kelp, which has been a growing manufacture for thefe fourfcore years, and produces at prefent about 500 l, per annum.

As to the civil government, it is adminiftered by what is called the Court of Twe've; in which the commayder in chief, the proprietor's agent, and the chaplain, have their feats in virtue of their offices: the other nine are chofen by the people. Thefe decide; or rather compromife, all differences; and punifh fmall offences by fines, whippings, and the ducking ftool: as to greater enormities, we may conclude they have not been hitherto known; fince, except for the foldiers, there is no prifon in the iflands. But in cafe of capital offences, the criminals may be ,tranfported to the county of Cornwall, and there brought to juftice.

The great importance of thefe iflands arifes from their advantageous fituations, as looking equally into St Gecrge's Channel, which divides Great Britain from Ireland, and the Englifh Channel, which feparates Britain from France. For this reafon, moft fhips bound from the fouthward ftrive to make the Scilly iflands, in order to fteer their courfe with greater certainty. It is very convenient alfo for veffels to take fhelter amongt them; which prevents their being driven to Milford Haven, nay fometimes into fome port in Ireland, if the wind is ftrong at eaft ; or, if it blows hard at northweff, from being forced back into fome of the Cornith Iharbours, -or even on the French coalts. If the wind

Thould not be very high, yet if unfavourable or unfeady, as between the channels often happens, it is better to put into Scilly, than to beat about at fea in bad weather. The intercourfe between thefe two channels is another motive why fhips come in here, as choofing rather to wait in fafety for a wind, than to run the hazard of being blown out of their courfe ; and therefore a frong gale at ealt feldom fails of bringing thirty or forty veffels, and frequently a larger number, into Scilly; nat more to their own fatisfaction than to that of the inhabitants. Ships homeward-bound from America often touch there, from the defire of making the firft land in their power, and for the fake of refrefhment. Thefe reaforis have an influence on other fhips, as weil as Britifh; and afford the natives an opportunity of fhowing their wonderful dexterity in conducting them fafely into St Mary's harbour, and, when the wind ferves, through their founds. Upon firing a gun and making a waft, a boat immediately puts off from the neareft ifland, with feveral pilots on burd; and having with amazing activity dropped one of them into every fhip, till only two men are left in the boat, thefe return again to land, as the wind and other circumftances direet, in one of their little coves.

Refpecting a current which often prevails. to the weftward of Scilly, Mr. Rennel has publifhed fome obfervations of much importance. "It is a circumtance (fays: he) well known to feamen, that hips, in coming from the Atlantic, and teering a courfe for the Britifh channel, in a parallel fomewhat to the fouth of the Scilly iflands, do notwith fanding often find themfelves to the north of thofe iflands; or, in other words, in the mourh, of St George's or of the Briftol channel. This extraordinary error has paffed for the effects either of bad fteerage, bad obfervations of latitude, or the indraught of the Brifol channel : but nóne of thefe account for it fatisfactorily ; becaufe, admitting that at times there may be an indranght, it cannot be fuppofed to extend to Scilly; and the cafe has happened in weather the moft favourable for navigating and for taking obfervations. The confequences of this deviation from the intended tract have very often been fatal ; particularly in.. the lofs of the Nancy packet in our own times, and that of Sir Cloudefley Shovel and others of his fleet at the. beginning of the prefent century. Numbers of cafes, equally melancholy, but of lefs celebrity, have occurred; and many others, in which the danger has been imminent, but not fatal, have fcarcely reached the public ear.. All of thefe have been referred to accident; and there. fore no atempt feems to have been mads to inveftigates, the caufe of them.
"I am, however, of cpinion, that they may be imputed to a fecific caufe; namely, a current: and I thall therefore endeavour to invefigate both that and its ef. fects, that feamen may be apprized of the times when they are particularty to expect it in any confiderabledegree of flrength ; for then only it is likely to nccafion michief, the current that prevails at ordinary times being probably too weak to produce an error in the reckoning, equal to the difference of parallel between the fouth part of Scilly and the traft in which a commander, prudent in his meafures, but unfufpicious of a current, would choofe to fail."

The original caufe of this current is the prevalenee of wefterly winds in the Atlantic, which impel the waters along the north coaf of Spai:, and accumulate.

## SCI

them in the Bay of Bifcay; whence they are projected along the coaft of France, in a direction north-weft by weft to the weit of Scilly and Irsland. The major af figns ftrong reafons for the exifence of this current between Uihant and Ireland, in a chart of the tracts of the Heetor and Atlas, Eaft India fhips, in 1778 and 1787. The following remarks on the effect of this current are abridged from the author's work, which is well worthy the perufal of all failors and flipmafters.

Ift, If a chip croffes it obliquely, that is, in an eaft by fouth or more foutherly direction, fhe will continue much longer in it, and of courfe be more affected by it, than if he croffed it more directly. The fame confequence will happen if the croffes it with light winds. 2 dly, A good obfervation of latitude at noon would be thought a fufficient warrant for running eaftward during a long night; yet as it may be poffible to remain in the current long enough to be carried from a parailel, which may be deemed a very fafe one, to that of the rocks of Scilly, it would appear prudent, after experiencing a continuance of ftrong wefterly winds in the Atlantic, and approaching the Channe! with light foutherIy winds, either to make UThant in time of peace, or at all events to keep in the parallel of $48^{\circ} 45^{\prime}$ at the high eft. 3 dly, Ships bound to the weftward, from th. : mouth of the Channel, with the wind in the fouth weft quarter, fhould prefer the larboard tack. 4thly, ik izjor Rennel approves the delign of removing tiae lighthoufe of Scilly (if it be not already meved) to the fouth-weft part of the high rocks. 5 thly, He recommends the fending a veffel, with time-keepers on board, to examine the foundings between the parallels of Scilly and Ufhant; from the meridian of the Lizard Point as far weft as the moderate depths extend. A fet of timekeepers, he obferves, will effect more in one fummer, in skilful hands, than all the fcience of Dr Halley could do in the courfe of a long life.

In time of war, the importance of thefe iflands is fill more confpicuous; and it is highly probable, that they afforded the allies a place for affembling their fleet, when the Britons, Danes, Scots, and Irifh, failed under the command of Anlaff, to attack King Athelftan; which convinced him of the neceffity of adding them to his dominions. Upon the like principle, Henry VIII. when upon bad terms with his neighbours, caufed an old fortrefs to be repaired; and Queen Elizabech, who had more to fear, diretted the conitruetion of a cafle, which, in part at lealt, fill semains. But the moft fingular inftance of the detriment that might arife from thefe iflands falling into other hands than Bri ifh happened in 1651 , when Sir John Gienville took fhelter in them with the remains of the Cornifh cavaliers. For the depredations committed by his frigates foon made it evident that Scilly was the key of the Englifh commerce; and the clamours of the merchants thereupon rofe fo high, that the parliament were forced to fend a fieet of fifty lail, with a great body of land-forces on board, under Sir George Ayicue and admiral Blake, who with great difficulty, and no inconfiderable lofs, made themfelves maters of Trefcaw and Brehar; where they erected thole lines and fortifications near the remains of the old fortrefs that are called Oliver's Cafle. But at length, finding that litule was to be done in that way, they chofe to grant Sir John Crenville a molt honourable capitulation, as the fureft means to recover places of fuch con-
fequence : with which the parliament were very little fatisfied, till Mr Blake gave them his reafons; which appeared to be fo well founded, that they directed the articles he had concluded to be punctually carried into execution.

SCIO, or chio, a celebrated illand of the Archipelago (fee Chio.) It is 32 miles long and $I_{5}$ broad, is a mountainous but very pleafant country. The prin. cipal mountain, called anciently Pelineus, prefents to view a long lofty range of bare rock, reflecting the fun; but the receffes at its feet are diligently culcivated, and reward the hufbandman by their rich produce. The flopes are clothed with vines. The gr ves of lemon, orange, and citron-trees, regularly planted, at once perfume the air with the odour of their blofloms, and delight the eye with their golden fruit. Myrtles and jafmines are interfperfed, with olive and palm-trees, and cypreffes. Amid thefe the tall minarees hife, and white houfes gliter, dazzling the beholder. The inhabitants export a large quantity of pleafant wine to the neighbouring inands, but their principal trade is in filks. They have alfo a fmall commerce in wool, cheefe, figs, and maftic. The women are better bred than in other parts of the Levant; and though the drefs is odd, yet it is very neat. The partridges are tame, being fent every d.y into the fields to get their living, and in the evening are called back with a whittle. The town called Scio is large, pleafant, and the beft built of any in the Levant, the houfes being beautiful and commodious, fome of which are terrafled, and others covered with tiles. The fteets are paved with flint-ftones; and the Venetians, while they had it in their poffeffion, made a great many alterations for the better. The.cafle is an old citadel built by the Genoefe, in which the Turks have a garrifon of 1400 men. The harbour of Scio is the rendezvous of all fhipping that goes to or comes from Confantinople, and will hold a fleet of fouricore veffels. They reckon there are 10,000 Turks, 100,000 Greeks, and 10,000 Latins, on this ifland. The Turks took it from the Venetians in 1695 . Scio is a bilhop's fee, and is feated on the fea-fide, 47 miles weft of Smyr. na, and 210 fouth-weft of Conftantinople.

There are but few remains of antiquity in this place. "The molt curious of them (fays Dr Chandler) is that which has been named without reafon the School of Homer. It is on the coall at fome diftance from the city northward, and appears to have been an open temple of Cybele, formed on the top of a rock. The mape is oval, and in the centre is the image of the goddefs, the head and an arm wanting. She is reprefented, as ufual, fitting. The chair has a lion carved on each fide, and on the back. The area is buunded by a low rim or feat, and abour five yards over. The whole is hewn out of the mountain, is rude, indiftinct, and probably of the moft remote antiquity. From the flope higher up is a fine view of the rich vale of Scio, and of the channel, with its fhining iflands, beyond which are the mountains on the mainland of Afia."
SCIOPPIUS.(Gafpar), a learned German writer of th 17 th century, was born ai Neumark in the Upper Palatinate on the 27 th of May 1576. He fudied at the univerfity with fo much fuccefs, that at the age of 16 he became an author; and publifhed books, fays Ferrari, which deferved to be admired by old men. His difpofitions did not correfpond with his genins. Naturally pafionate and malevolent, he aflaulted without

## S C I

scioppius mercy the charafter of eminent men. Fie abjured the fyitem of the Proteftants, and became a Roman catholic about the year 1599 ; but his charecter remained the fame. He polfefled all thofe qualities which fitted him for making a diftinguifhed figure in the literary world; imagination, menory, proiound learning, and invincible impudence. He was familiar with the terms of reproach in molt if ihe languages. He was entirely ignorant of the manners of the world. He neither fhowed refpect to his fuperiors, l:or did he buhve with decency to his equals. He was poffered with a frenzy of an uncommon hind.: he was indeed a perfect.firebrand, forttering around him, as if for his amufement, the moft atrocious calumnies. Jofeph Scaliger, above all others, was the object of his iatire. That learned man, havi'g drawn up the hiftery of his own family, and deduced. its gencalogy fr m princes, was feverely attacked by Scioppun, wh, ridiculed his high pretenn fions. Scaliger in his turn wrote, a book intilled; The Lie and Parentage of Gafper Scioppius, in which he inf.rms us, that the father of Scioppius lat been fucceflively a grave-digger, a journeyman fationer, a hawker, a foldier, a miller. and a brewer of beer. We are told that his wife wa: long kept as a miftrefs, and at length iorlaken by a dubauched man whom fhe foliowed to Hungary, and obliged to return to ber huband; that then he treated her harfhly, and condemned her to the loweitioffices of fervitude. His danghter ton, it is faid, was as difrrderly as her muther: that after the flieht of her kuband, who was going to be burned for fome infanour crime, the became a c mmon proftitute; and at length grew fo fandal ous, thist the was committed to prifon. Thefe fevere accufations againft the family of Scioppius inf imed him with more eagernefs to attack his antagonil anew. He collect:d all the caJumnies that had been thrown out acain!. Sealiger, and formed them into a huge volume as if he had intended to crufh him at once. He treated with creat contempt. the King of England, Jamen I. i i his Ecclefigficus, \&c. and in his Collyrium Regium Britannice Regi graviler ex oculis laboranti nunere miffum; that is," An Eye-falve for his Britannic Majafty." In one of his works he had the audacity to abufe Henry IV. of France in a molt fcurtilous manner, on which account his book was burned at Paris. He was hung in effigy in a farce which was seprefented before the kiug of England, but he gloried in his h!ihonour. Piovoked with his infolence to their fovereipn, the fervan's of the Englifh ambaffad,r af. faulted him at Madri', and corrected him feverely; but he balled of the wounds he had received. He publimed more than thirty defamatory libels ag.inft the Jefuits; and, what is very furprifing, in the very place where he declams with mon virulence agant that fo. ciety, he fubicibes his own nime with expreffions of piety. I Galner Scionpius, already on the brink of the grave, and ready to appour before the tribunal of 7 fous Cbriff to give on acoont of my works. Towards the end of his life he employed himfelf in tudying the Apralypfe, and affirmed hat he had found the key to that myftrions book. He fent fome cf his expolitions to Cadinal Mazarine, but the cardinal did not find it convenient to read them.

Ferrari tells us, that during the laft fourteen years of his life he thut $h$ if fef up in a farall apartment, where he devoted himfelf folely to fudy. The fame writer
acquaints us, that he could repeat the Scriptures almoit entirely by heart; but his good qualities were eclipfed by his vices. For his love of flander, and the furious afitults which he made upon the molt eminent men, he was called the Cerberus of literaturc. He accnles even Cicero of ba:barifms and improprieties. He died on the 19th. November 1649, at the age of 74, at Padua, the only retreat which remained to him from the mulaitude of enemies whem he had created. Four hundred books are afcribed to him, which are faid to difoover great genius and learning. The chief of thefe are, 1: Verefunitium LiJn IV. ${ }^{15}$ G, in 8 vo. 2. Commentarius de arte ritica, 1661 , in $¥ v o .3$. Di fua ad Cutholicos mijatione, 1660 , in 8vo. 4. Noistiones Critica in Pise lrum, in Priatia, Patavi:, 1664 , in 8 vo .5 Suf. pectarum lacionum Lisni V. 1664, in Sv:. 6. Cluf ficum belli facri, 1619, in 4 to. 7. Collyrium rigium, 1611, in 8v.. 8. Granmatica Pbilofopbica, 1644 , in 8vo. 9. Relatio ad Reges at Principes de Stratigerizalibus et Societaits Fefin, 164.1 , in 12 mo . This latt menti ned book was publithed under the name of Alphonfo de l'argas. He was at firlt well difpofed $t$ o the Jefuits; but thefe fithers on one occafion oppofed him. He prefented a petition to the diet of Ratifbonne in 1630 , in order to o tain a pention; but the Jeluits, who were the confurs both of the emperurand the electors, had influence to prevent the petition from being granted. From that moment Scioppius turned his whole artillery againft the Jefuits.

SCIPIO (Pablius Cornelius), a renowned Roman general, fus named Africanus, for his conquefts in that country. His other fignal military exploits were, his taking the city of New Carthage in a firgle day; his complete victory over Hannibal, the famous Carthaginian general; the defeat of Syphax king of Numidia, and of Antiochus in Alia. He was as eminent for his chaltity, and his generous behaviour to his prifoners, as for his valuur. He ied I \&o B. C. aged about 51

Scipio (Lucius Bornelius), his brother, furnamed Ajaticus, for his cumplete viotory over Antiochus at the battle of Magnefia, in which Antiochus. lolt 50,000 infantiy and 400 cavalry. A triuniph, a d the furnime of Afraticus, were the rewards of his valour. Yet his ungrateful countrymen accufed him, as well as his brother, of peculation; for which he was fined: but the public face of bis effets proved the falrebood of the charge; for they did not produce the amount of the fine. He flurithed abont $190 \mathrm{~B} . \mathrm{C}$.

Scipio (Publion Emilianus), was the fon of Paulus Emitus; but being adopted by Scipio Africanus, he was called Sjipio Aicic inus junior. He howed himfelf worthy of adoption, following the footlteps of Scipio. Atricanus, whim he equalled in military fame and public virtue. His chief vestories were the conquelt of Carchage and Numantia; Yot thefe fignal fervices to. his country coulá not protect him fr m an untimely: fate. He was lirangied in his bed by order of the Decemviri, who dreajed his popularity, 129 B. C. aged 56.

SCIRO, an ina da of the Archipelago, to the welt of Mytitene, to the northeea.t of iveropont, and to the fouth-ent of Sriati. It is 15 miles in length, and 8 in breadth. It is a mountaincus countiy, but has no mints. The vines make the beauty of he iflanch and the wine is escellent; nor do the natives want 1

Scirocho
II Sciurus, $\underbrace{\text { Sciurms. }}$
wrod. There is but one village; and that is built on a rock, which runs up like a fugar loaf, and is io miles from the harbour of St George. The inhabitants are all Greeks, the cadi being the only Turk among them.

SCIROCHO, or Sirocho, a name generally given in Italy to every unfavourable wind. In the fouth-weft it is applied to the hot fuffocating blafts from Africa, and in the north-eaft it means the cold-bleak winds from the Alps.
, SCIRPUS, in botany: A genus of the monogynia order, belonging to the triandria clafs of plants; and in the natural method ranking under the 3 d order, Ca lamaria. The glumes are paleaceous, and imbricated all round. There is no corolla; and only one beardlefs feed.

SCIRRHUS, in furgery and medicine, a hard tumor of any part of the body, void of pain, arifing, as is fuppofed, from the infpiffation and induration of the fluids contained in a gland, though it may alfo appear in any other part of the body, efpecially in the fat; being one of the ways in which an inflammation terminates. Thefe tumors are exceedingly apt to degenerate into cancers.

## SCITAMINE.E. See Botany, p. 459.

SこIURUS, the seUirrel ; a genus of quadrupeds belonging to the order of glires. It has two fore-teeth in each jaw, the fuperior ones fhaped like wedges, and the inferior ones compreffed. There are in fpecies; of which the moft remarkable are,

1. The oulgaris, or common fquirrel, with ears terminated with long tufts of hair; large, lively, black eyes; head, body, legs, and tail, of a bright reddifh brown; breaft and belly white; hair on each fide the tail lies flat. In Sweden and Lapland, it changes in winter into grey. In Ruffia it is fometimes found black. In many parts of England there is a beautiful variety, with milk white tails.-This feccies inhabits Europe and North America, the northern and the temperate parts of Afia: and a variety is even found as far fouth as the ifle of Ceylon. It is a neat, lively, active animal ; lives always in woods: in the fpring, the female is feen purfued from tree to tree by the males, feigning an efcape from their embraces; makes its neft of mofs and dried leaves between the fork of two branches; brings three or four young at a time; has two holes to its neft ; fops up that on the fide the wind blows, as Pliny jufly remarks; lays in a hoard of winter provifion, fuch as nuts, acorns, \&c.; in fummer, feeds on buds and young fhoots; is particularly fond of thofe of fir, and the yonng cones; fits up to eat, and ufes its forefeet as hands; covers itrelf with its tail ; leaps to a furprifing diftance; when difpofed to crofs a river, a piece of bark is its bat, its tail the fail ; is in great plenty in Dummilet, and there called Conn. Boys frequently norfe this beautiful and active animai under cats. "There are three creatures, the fquirrel, the fieldmoufe, and the bird called the nutbatch, which live rach on hazel nuts; and yet they open them each in a diferent way. The firf, after rafing off the fmall end, plits the fhell in two with his long fore-teeth, as a man does with his knife; the fecond nibbles a hole with his teeth, fo regular as if drilled with a wimble, and yet fo fmall, that-one would wonder how the kernel can be extracted through it; while the laft pecks:
an irregular ragged hole with its bill; but as this artift has no paws to hold the nut firm while he pierces it, like an adroit workman, he fixes it, as it were, in a vice, in fome cleft of a tree, or in fome crevice; when, ftanding over it, he perforates the fubborn fhell. While at work, they make a rapping noife, that may be heard at a confiderable diftance." White's Selborne.
2. The cinereus, or grey fquirrel, with plain ears; Plate hair of a dull grey colour, mixed with black, and often tinged with dirty yellow; belly and infides of the legs white; tail long, buhy, grey, and Ariped with black : fize of a half.grown rabbit.-Inhabits the woods of Northern Afia, North America, Peru, and Chili. They are very numerous in North America, do incredible damage to the plantations of maize, run up the ftalks and eat the young ears. Defcend in valt flocks from the mountains, and join thofe that inhabit the lower parts; were profrribed by the provinces, and a reward of three-pence per head given for every one that is killed. Such a number was deftroyed one year, that Pennfylvania alone paid in rewards L. ${ }^{8} 8000$ of its currency. Make their nefts in hollow trees, with mofs, fraw, wool, \&c. Feed on maize in the feafon, and on pine-cones, acorns, and matts of all kinds : form holes under-ground, and there depofit a large flock of winter provifion. Defcend from the trees, and vifit their magazines when in want of meat ; are particularly bufy at the approach of bad weather; during the cold feafon keep in theirneft for feveral days together; feldom leap from tree to tree, only run up and down the bodies; their hoards often deftroyed by fwine; when their magazines are covered with deep fnow, the fquirrels often perifh for want of food; are not eafily fhot, nimbly changing their place when they fee the gun levelled; have the actions of the common fquirrel; are eafily tamed; and their flefh is efteemed very delicate. Their furs, which are exported under the name of petit-gris, are valuable, and ufed as linings to cloaks.
3. The niger, or black fquirrel, with plain ears; fometimes wholly black, but often marked with white on the nofe, the neck, or end of the tail; the tail fhorter than that of the former; the body equal. It inhabits the north of Afia, North America, and Mexico; breeds and affociates in feparate troops; is equally numerous with the former ; commits as great ravages among the maize; makes its neft in the fame manner, and forms, like them, magazines for winter food. The fineft are taken near the lake Baikal, and about Bargu-zinfkoi-oftrog, upon the Upper Angara, in the diftrict of Nertfchinfk, which are the beft in all Siberia; thefe continue black the whole year, the others grow rufty in fummer.-There is a variety with plain ears; coarfe fur mixed with dirty white and black; throat and infide of the legs and thighs black; tail much forter than thofe of fquirrels ufually are; of a dull yellow co. lour, mixed with black; body of the fize of the grey fquirrel. It inhabits Virginia; the planters call it the cat fquirrel.
4. The favus, or fair fquirrel, with the body and tail of a flaxen colour ; of a very fmall fize, with plain round ears, and rounded tail. Inhabits the woods near Amadabad, the capital of Guzurat, in great abundance, leaping from tee to tree. Linneus fays it is an inhabitant of South America.
5. The firiatus, or ground fquirrel, with plain ears;

## S C I

Sciunts. ridye of the back marked with a black freak; each fide with a pale yellow ftripe, bounded above and below with a line of black; head, hody, and tail, of a reddifh brown; the tail the darkeft : brealt and belly white; nofe and feet pale-red; eyes full.-Inhabits the north of Affa, but found in the greatef abuodance in the forefts of North America: They never run up trees except they are purfued, and find no other means of efcaping: they burrow, and form their habitations under ground, with two entrances, that they may get accefis to the one in cafe the other is Aopped up. Their retreats are formed with great k kil , in form of a long gallery, with branches on each fide, each of which terminates in an enlarged chamber, as a magazine to fore their winter provifion in; in one they lodge the acorns, in another the maize, in a third the hickery nuts, and in the laft their favourite food the chinquapin chefnut. They very feldom fitir out during winter, at lealt as long as their provifions laft ; but if that fails, they will dig into cellars where apples are kept, or barns where maize is fored, and do a great deal of mifchief ; but at that time the cat deftroys great numbers, and is as great an enemy to them as to mice. During the maize barvelt thefe fquirrels are very bufy in biting off the ears, and filling their mouths fo full with the corn that their cheeks are quite diftended. It is obfervable that they give great preference to certain food; for if, after filling their mouths with rye, they happen to meet with wheat, they fling away the firl, that they may indulge in the laft. They are very wild, bite feverely, and are fcarcely ever tamed; the kins are of little ufe, butare fometimes ufed to line cloaks.
6. The glis, or fat fquirrel, with thin naked ears; body covered with foft afh-coloured hair; belly whitith ; tail full of long hair: from nofe to tail, near fix inches; tail, four and a half: thicker in the body than the common fquirrel.-Inhabits France and the fouth of Europe ; lives in trees, and leaps from bough to bough; feeds on fruits and acorns; lodges in the hollows of trees; remains in a torpid ftate during winter, and grows very far. It was efteemed a great delicacy by the Romans, who had their gliraria, places conftructed to keep and feed them in.
Fig. 2.
7. The fagitta, or arrow fquirrel, with a fmall romd head, cloven upper lip : fmall blunt ears, two fmall warts at the utmolt corner of each eye, with hairs growing out of them: neck fhort: four toes on the fore feet; and inftead of a thumb, a flender bone two inches and a half long, lodged under the lateral membrane, ferving to flretch it out: from thence to the hind legs extends the membrane, which is broad, and a continuation of the fkin of the fides and belly : there are five toes on the hind feet; and on all the toes, fharp compreffed bent claws : the tail is covered with long tairs difipofed horizontally ; colour of the head, body, and tail, a bright bay ; in fome parts inclining to orange : breait and belly of a yellowills white: length from nofe to tail, eighteen inches; tail, fifteen.-Inhabits Java, and others of the Indian iflands: lexps from tree to tree as if it flew: will catch hold of the boughs with its tail. Niewhoff, p. 354. defribes this under the name of the flying cat, and days the back is black.
8. The volans, or flying fquirrel, with round naked ears, full black eyes, and a lateral membrane from the fore to the hind legs : tail with long hairs difpofed hot-

## Vol. XVI.

zontally, longeft in the middle: its colur above, a bruwnith alh; beneath, white tinged with yellow: much lefs than the common fquirrel. Inhabits Finland, Lapland, Poland, Ruflia, North America, and New Spain: lives in hollow trees: fleeps in the day: during the night is very lively: is gregarious, numbers being found in one tree: leaps from bough to bough fometimes at the di. ftance of ten yards; this action has improperly been called flying, for the animal cannot go in any other direction than forward; and even then canrot keep an even line, but finks confiderably before it can reach the place it aims at: fenfible of this, the fquirrel mounts the higher in proportion to the diftance it wifhes to reach : when it would leap, it fretches out the forelegs, and extending the membranes becomes fpecifically lighter than it would otherwife be, and thus is enabled to fpring further than other fquirrels that have not this apparatus. When numbers leap at a time, they feem like leaves blown off by the wind. Their food the fame as the other iquirrels. They are eafily tamed: bring three or four young at a time. See fig. $3 \& 4$, the one reprefenting the animal in what is called a fying, the other in a fitting, pofture.

SCIURUS, in botany: A genus of the monogynia order, belonging to the diandria clafs of plants; and in the natural method ranking with thofe that are doubtiul. The calyx is quinquedentate; the corolla bilabiated; the filaments are barren; the capfules five, and joined together ; bivalved, unilocular, with one feed. Of this there is one fecies, viz. aromatica, a native of Guiana.
SCLAVONIA, a country of Europe, between the rivers Save, the Drave, and the Danube. It is divided into fix counties, viz. Pofegra, Zabrab, Creis, Warafr den, Zreim, and Walpon, and belongs to the houfe of Auttria. It was formerly called a kingdom; and is very narrow, not being above 75 miles in breadth; but it is 300 in length, from the trontiers of Auftria to Belgrade. The eaftern part is called Ratzia, and the inhabitants Ratzians. Thefe, from a particular notion, are of the Greek church. The language of Sclavonia is the mother of four others, namely, thofe of Hungary, Bohemia, Poland, and Ruffia.
SCLERANTHUS, in botany: A genus of the digynia order, belonging to the dodecandria clafs of plants, and in the natural method ranking under the 22 d order, Caryophyllit. The calyx is monophyllous; there is no corolid; there aye two feeds contained in the calyx.

SCLERIA, in botany: A genus of the tetrandria order, belonging to the monociia clafs of plants; and in the natural method ranking under the 4th order, Gram:na. The calyx has a gluma, with from two to fix valves; the flowers numerous; the feed a fort of nut, fmall, oblong, and fhining. There are fix fpecies, all of them natives of the Weft Indies.
SCLEROTICS, medicines proper to harden and conflidate the fifin of the parts to which they are ap. plied; as purflain, boufeleek, fla-wort, garden nightthade, \&c.
SCOLOPAX, in ornithology, a genas belonging to the order of grallx. The back is cylindrical, obtufe, and longer than the head ; the noftrils are linear; the face is covered; and the feet have four toes. There are 18 fpecies; of which the following are the principal.

$$

$$

s. The

S: sicpaz.

1. The arquata, or curlew, frequents our fea-coafts and marfhes in the winter time in large flocks, walking on the open fands; feeding on thells, frogs, crabs, and other marine infects. In fummer they retire to the mountainous and unfrequented parts of the country, where they pair and breed. Their eggs are of a pale olive colour, marked with irregular but diftinct fpots of pale brown. Their flefh is very rank and fifhy, notwithitanding an old Englifh proverb in its favour. Curlews differ much in weight and fize ; fome weighing 37 ounces, others not 22 : the length of the largeft to the tip of the tail, 25 inches; the breadth, three feet five inches; the bill is feven inches long : the head, neck, and coverts of the wings, are of a pale brown; the middle of each feather, black; the breaft and belly white, marked with narrow oblong black lines: the back is white, fpotted with a few black ftrokes: the quill-feathers are black, but the inner webs fpotted with white; the tail is white, tinged with red, and beautifully barred with black; the legs are long, ftrong, and of a bluifh grey colour ; the bottoms of the toes flat and broad, to enable it to walk on the foft mud, in fearch of food.
2. The phoopus, or whimbrel, is much lefs frequent on our thores than the curlew ; but its haunts, food, and generalappearance, are much the fame. It is obferved to vifit the neighbourhood of Spalding (where it is called the curiew knot) in valt flooks in April, but continues there no longer than May; nor is it feen there any other time of the year : it feems at that feafon to be on its paffage to its breeding place, which Mr Pennant fufpects to be among the highlands of Scotland. The fpecific difference is the fize; this never exceeding the weight of 12 ounces.
3. The ruficola, or woodcock, during fummer inhabits the Alps of Norway, Sweden, Polith Pruflia, the march of Brandenburg, and the northern parts of Europe: they all retire from thofe countries the beginning of winter, as foon as the frofts commence; which force them into milder climates, where the ground is open, and adapced to their manner of feeding. They live on worms and infects, which they fearch for with their long bills in foft grounds and moilt woods.Woodcocks generally arrive here in flocks, taking advantage of the night or a mift : they foon feparate; but before they return to their native haunts, pair. They feed and fly by night; beginning their flight in the evening, and return the fame way or through the fame glades to their day retreat. They leave England the latter end of February, or beginning of March; not but they have been known to continue there accidentally. Thefe birds appear in Scotland firlt on the eaftern coalts, and make their progrefs from eaft to welt. They do not arrive in Breadalbane, a central part of the kingdom, till the beginning or middle of November; nor the coalts of Nether Lorn, or of Rofsfhire, till December or January : they are very rare in the remote Hebrides, and in the Orkneys. A few ftragglers now and then arrive there. They are equally farce in Caithnefs 'This fpecies of woodcock is unknown in North America: but a kind is found that has the general appearance of it; but is fcarce half the fize, and -wants the bars on the brealt and belly. The weight of the woodcock is ufually about 12 ounces; the length near 44 inches; and the breadth, 26 ; the bill is three
inches long, dufky towards the end, reddifh at the bafe; Scolopax. tongue flender, long, Charp, and hard at the point; the eyes large, and placed near the top of the head, that they may not be injured when the bird thrufts its bill into the ground; from the bill to the eyes is a black line; the fore-head is a reddilh afh colour ; the crown of the head, the hind part of the neck, the back, the coverts of the wings, and the fcapulars, are prettily barred with a ferruginous red, black, and grey; but on the head the black predominates : the quill feathers are dulky, indented with red marks. The chin is of a pale yellow; the whole under fide of the body is of a dirty white, marked with numerous tranfverfe lines of a dufky colour. The tail conlifts of 12 feathers, duiky or black on the one web, and marked with red on the other; the tips above, are afh-coloured, below white; which, when fhooting on the ground was in vogue, was the fign the fowler difcovered the birds by. The legs and toes are livid; the latter divided almoft to their very origin, having only a very fmall web between the middle and interior toes; as thofe of the two fpecies of fnipes found in England.
4. The agocepbala, or godwit, weighs 12 ounces and a half; the length is 16 inches; the breadth 27 ; the bill is four inches long, turns up a little, black at the end, the reft a pale purple; from the bill to the eye is a broad white ftroke; the feathers of the head, neck, and back, are of a light reddifh brown, marked in the middle with a dufky fpot ; the belly and vent feathers white, the tail regularly barred with black and white. The fix firf quill-feathers are black; their interior edges of a reddifh brown; the legs in fome are dulky, in others of a greyifh blue, which perhaps may be owing to different ages; the exterior toe is connected as far as the firlt joint of the middle toe with a ftrong ferrated membrane. The male is ditinguifhed from the female by fome black lines on the breaft and throat; which in the female are wanting. Thefe birds are taken in the fens, in the fame feafon and in the fame manner with the ruffs and reeves $\dagger$; and when fattened are + See efteemed a great delicacy, and fell for half a crown or Tainix. five thillings a piece. A tale of the fame fpecies is placed in the net. They appear in fraall flocks on our coalts in September, and continue with us the whole winter they walk on the open fands like the curlew, and feed on infects.
5. The glotit, or greenfhank, is in length to the end of the tail, 14 inches ; to that of the toes, 20 ; its breadth, 25. The bill is two inches and a half long; the upper mandibl. Blick, fraight, and very flender; the lower reflects a little upwards; the head and upper part of the neck ate ath-coloured, marked with fmall duky lines pointing down; over each palfes a white line; the coverts, the fcapulars, and upper part of the back, are of a brownifh afh colour; the quill-feathers dufky, but the inner webs fpeckled with white; the breaft, belly thighs and lower part of the back, are white ; the tail is white, marked with undulated dufky bars; the inner coverts of the wings finely crofled with double and treble rows of a dulky colour. It is a bird of an elegant fhape, and focall weight in proportion to its dimenfions, weighing only fix ounces. The legs. are very long and flender, and bare above two inches higher than the knees. The exterior toe is united to the middle toe, as far as the fecond joint, by a ftrong

## S C O

3 colopax, membrane which borders their fides to the very end.-Scolopen- Thefe birds appear on the Englith coafts and wet dra. grounds in the winter-time in but fmall numbers.
6. The calidris, or red-thank, is found on moft of our thores; in the winter-time it conceals itfelf in the gutters, and is generally found ingle or at moft in pairs. It breeds in the fens and marfhes; and flies round its neit when difturbed, making a noile like a lapwing. It lays four eggs whitifh tinged with olive, marked with irregular fpots of black chiefly on the thicker end. It weighs five ounces and a half: the length is 12 inches, the breadth 21 ; the bill near two inches long, red at the bafe, black towards the point. The head, hind part of the neck, and fcapulars, are of a dufky alh-colour obfcurely fpotted with black; the back is white, fprinkled with black fpots; the tail elegantly barred with black and white; the cheeks, under fide of the neck, and upper part of the brealt, are white, ftreaked downward with dufky lines; the belly white; the exterior webs of the quill-feathers are dufky; the legs long, and of a fine bright orange colour ; the utmoft toe connected to the middle toe by a fmall membrane ; the inmolt by another ftill fmaller.
7. The gallinago, or common fnipe, weighs four ounces; the lengen, to the end of the tail, is near 12 inches; the breadth about 14 ; the bill is three inches long, of a dulky colour, flat at the end, and often rough like fhagreen above and below. The head is divided lengthwife with two black lines, and three of red, one of the laft paffing over the middle of the head, and one above each eye: between the bill and the eyes is a dufky line; the chin is white; the neck is varied with brown and red. The fcapulars are beautifully Ariped lengthwife with black and yellow ; the quill-feathers are dufky ; but the edge of the firlt is white, as are the tips of the fecondary teathers: the quill-feathers next the back are barred with black and pale red; the brealt and belly are white; the coverts of the tail are long, and almolt cover it ; they are of a reddifh brown colour. The tail confilts of 14 feathers, black on their lower part, then croffed with a broad bar of deep orange, another narrow one of black; and the ends white, or pale orange. The vent feathers are of a dull yellow; the legs pale green; the toes divided to their origin. In the winter-time fnipes are very frequent in all our marlhy and wet grounds, where they lie concealed in the rufhes, \&c. In fummer they difperfe to different parts, and are found in the midft of the higheft mountains as well as of the low moors; their nelt is made of dried grafs; they lay four eggs of a dirty olive colour, marked with dufky fpots; their young are fo often found in England, that we doubt whether they ever entirely leave that ifland. When they are difturbed much, particularly in the breeding feafons, they foar to a valt height, making a fingular bleating noife; and when they defcend, dart down with valt rapidity : it is alfo amuling to obferve the cock, while his mate fits on her eggs, poife himfelf on his wings, making fometimes a whiftling and fometimes a drumming noife. Their food is the fame with that of the woodcock; their flight very irregular and fwift, and attended with a Ihrill ficream. They are moft univerfal birds, found in every quarter of the globe, and in all climates.

SCOLOPENDRA, in zoology, a genus of infects belonging to the order of aptera. The feet are very
numerous, being as many on each fide as there are s:olopen$j$ uints in the body; the antennx are fetace us: there re two jointed pappi, and the budy is depreffed.-Thefe infects are very formidable and noxious in the warm countries, where they grow to the length of a quarter of a yard or more, though in this climate they feldom grow above an inch long. The fcolopendra is alfo called the centipes from its number of feet. In the Ealt Indies it grows to fix inches in length, and as thick as a man's finger: it cunfilts of many joints; and from each joint proceeds a leg on each fide : they are covered with hair, and feem to have no eyes; but there are two feelers on the head, with which they find out the way they are to pafs: the head is very round, with two fmall tharp teeth, with which they inflict wounds that are very painful and dangerons. A failor that was bit by one on board a thip felt exceffive pain, and his life was fuppofed to be in danger; but by the application of rualted onions to the part he recovered. The bite of the fcolopendra morfitans § in Jamaica is § See Plate faid to be as poifonous as the fiting of a fco:pion. - ccecxus. Some of the fpecies live in holes in the earth : others under ftones, and among rotten wood; fo that the removing of thefe is exceedingly dangerous in the courtries where the fcolopendræ breed.-Thefe infects, like the fcorpion, are fuppofed to be produced perfect from the parent or the egg, and to undergo no changes after their firlt exclution. They are found of all fizes; which is a fufficient reafon for beliesing that they preferve their firlt appearance through the whole of their exiftence. It is probable, however, that, like moft of this clafs, they often change their flains; but of this we have no certain information. The fcolopendra forficata is the largelt in this country, of a dun colour, fmooth and compofed of nine fcaly fegments, without reckoning the head. The feet are 15 in number on each fide, and the lalt longer than the reft, and turned backwards, form a kind of forky tail. The antenns are twice the length of the head, and confilt of 42 fhort fegments. The infect's progreflive motion is very quick, and fometimes ferpentine. It is found under ftones on the ground, under flower-pots and garden boxes.

SCOLYMUS, in botany: A genus of the polygamia æqualis order, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the 49 th order, Comfofite. The receptacle is paleaceous; the calyx imbricated and prickly, without any pappus.

SCOMBER, the Mackerel, in ichthyology, a genus belonging to the order of thoracici. The head is fmooth and compreffed, and there are feven rays in the gill membrane. There are ten fpecies;-of which the moft remarkable are the following.

1. The fcomber, or common mackerel, a fummer-fifh of paffage that vifits our fhores in valt fhoals. It is lefs ufeful than other fpecies of gregarious fifh, being very tender, and unfit for carriage ; not but that it may be preferved by pickling and falting, a method, we believe, practifed in many places, where it proves a great relief to the poor during winter. It was a fifh greatly efteemed by the Romans, becaufe it furnifhed the precious garum, a fort of pickle that gave a high relifh to their fauces; and was befides ufed medicinally. It was drawn from different kinds of fifh, but that made from the mackerel had the preference: the beft was made at

Scomber. $\rightarrow$

Carthagena, valt quantities of mackerel being taken near an adjacent ine, called from that circumftance Scombraria, and the garum, prepared by a certain company in that city, bore a high price, and was diftinguifhed by the title of garum fociorum. This fifh is eafily taken by a bait; but the beft time is during a frefh gale of wind, which is thence called a mackerel sale. In the Spring the eyes of mackerel are almoft covered with a white film; during which period they are half blind. This film grows in winter, and is caft the beginning of fummer. It is not often that it exceeds two pounds in weight, yet there have been inftances of fome that weighed upwards of five. The nofe is taper and fharp pointed; the eyes large; the jaws of an equal length; the teeth fmall, but numerous. The form of this fifh is very elegant. The body is a little comprefled on the fides : towards the tail it grows very flender, and a little angular. It is a moft beautiful fifh when alive; for nothing can equal the brilliancy of its colour, which death impairs, but does not wholly obliterate.
2. The thunnus, or tunny, was a fifh well known to the ancients: it made a confiderable branch of commerce : the time of its arrivalin the Mediterranean from the ocean was obferved, and flations for taking them were eftablifhed in places it moft frequented.

There are fill very confiderable tunny fifheries on the coalt of Sicily, as well as feveral other parts of the Mediterranean; where they are cured, and make a great article of provifion in the adjacent kingdoms.They are caught in nets, and amazing quantities are taken; for they come in vaft fhoals, keeping along the fhores. See Tunny-Fisherr.

They frequent the Britifh coafts, but not in fhoals like the tunnies of the Mediterranean. They are not uncommon in the lochs on the weftern coalt of Scotland; where they come in purfuit of herrings; and often during night frike into the nets, and do confiderable damage. When the fifhermen draw them up in the morning, the tunny rifes at the fame time towards the furface, ready to catch the fifh that drop out. On perceiving it, a frong hook baited with a herring, and faftened to a rope, is intantly flung out, which the tunny feldom fails to take. As foon as hooked, it lofes all finit; and after a very little refiltance fubmits to its fate. It is dragged to the fhore and cut up, either to be fold frefl to people who carry it to the country markets, or is preferved falted in large calks. The pieces, when frefl, look exactly like raw beef; but when boiled turn pale, and have fomething of the flavour of falmon.

One that was taken when Mr Pennant was at Invetary in 1769 , weighed 460 pounds. The fin was feven feet ten inches long: the greatelt circumference five feet feven; the lealt near the tail one font fix. The body was round and thick, and grew fuddenly very flender towards the tail, and near that part was angular. The irides were of a plain green : the teeth very miFute. The tail was in form of a crefeent; and two feet feven inches between tip and tip. The fkin on the back was fmooth, very thick, and black. On the belly the fcales were vifible. The colour of the fides and belly was filvery, tinged with crrulean and pale purple : near the tail marbled with grey.

They are known on the coalt of. Scotland by the
name of mackrelfure : Mackrel, from being of that gemus; and fure, from the Danifh, for " great."

SCONE, a town of Scotland, remarkable for being the place where the kings were anciently crowned. W. Long. 3. 10. N. Lat. 56. 28. Here was once an abbey of great antiquity, which was burnt by the reformers at Dundee. Kenneth II. upon his conquef of the Picts in the ninth century, having made Scone his principal refidence, delivered his laws, called the Macalpin laws, from a tumulus, named the Mote Hill of Scone. The prefent palace was begun by the earl of Gowrie ; but was completed by Sir David Murray of Gofpatrie, the favourite of king James VI. to whom that monarch had granted it; and the new poffeffor in gratitude to his benefactor put up the king's arms in feveral parts of the houfe. It is built around two courts. The dining room is large and handfome; and has an ancient and magnificent chimney-piece, and the king's arms, with this motto:

## Nobis bac invidta miferunt centum fex proavi.

Beneath are the Murray arms. In the drawing room is fome good old tapeftry, with an excellent figure of Mercury. In a fmall bed-chamber is a medley frip-ture-piece in needle-work, with a border of animals, pretty well done, the work of queen Mary during her confinement in Loch Leven Caftle. The gallery is about 155 feet long, the top arched, divided into compartments filled with paintings in water-colours. The pieces reprefented are various kinds of huntings ; that of Nimrod, and king James and his train, appear in every piece. Till the deftruction of the abbey, the kings of Scotland were crowned here, fitting in the famous wooden chair which Edward I. tranfported to Weftminfter abbey, to the great mortification of the Scots, who looked upon it as a kind of palladium. Charles II. before the battle of Worcefter, was crowned in the prefent chapel. The old pretender refided for fome time at Scone in 1715 ; and his fon paid it a vifit in 1745.

SCOPARIA, in botany : A genus of the monogynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 40 th order, Perfonato. The calyx is quadripartite; the corolla the fame, and rotaceous; the capfule unilocular, bivalved, and polyfpermous.

SCOPER, or scupper Holes, in a fhip, are holes made through the fides, clofe to the deck, to carry off the water that comes from the pump.

SCOPOLIA, in botany : A genus of the octandria order, belonging to the gynandria clafs of plants ; and in the natural method ranking under the irth clafs, Sarmentacea. The calyx is diphyllous; the coroila quadrifid ; the antherx coalefce in two columns, one placed above the other. Of this there is only one fpecies, viz. the Compofta.

SCORBUTUS, the Scurvy. See Medicine, no 8. SCORDIUM, or Water-germander, in botany, a fpecies of Teucrium.

SCORIA, or D Doss, among metallurgifs, is the recrement of metals in fufion; or, mare determinately fpeaking, is that mafs which is produced by melting metals and ores: when cold, it is brittle, and not diffoluble in water, being properly a kind of glafs.

## SC O [ 717 〕 SC 0

 there being fcorpions yellow, brown, and aft coloured; others that are the colour of rutty iron, green, pate yellow, black, claret colour, white, and grey. There are four principal parts diftisguithable in this animal ; the head, the brealt, the belly, and the tail. The forpion's head feems, as it were, jointed to the breath ; in the middle of which are feen two eyes; and a little more forward, two eyes more, placed in the fire part of the head: thole eyes are fo fall, that they are fcarcely perceivable; and it is probable the animal has but little occafion for feeing. The mouth is furnifhed with two jaws: the undermoft is divided into two, and the parts notched into each other, which ferves the andmab as teeth, and with which it breaks its food, and thrusts it into its mouth: there the fcorpion can at pleafure pull back into its month, fo that no part of them can be feen. On each fide of the head are two arms, each composed of four joints; the lat of which is large, with ftrong muscles, and made in the manner of a lobster's claw. Below the break are eight articulated legs, each divided into fix joints; the two hindmolt of which are each provided with two crooked claws, and here and there covered with hair. The belly is divided into fever little rings: from the lowsit

of which is continued a tail, comported of fix joints, which are briftly, and formed like little globes, the lat

Bcorificam sion, Scorpio,

SCORIFICATION, in metallurgy, is the art of reducing ${ }^{5}$ a body, either entirely or in part, into coria.

Plate cccexiv,

r

## S C O

Scorpio. whom it refides. In fome of the towns of Italy, and in France, in the province of Languedoc, it is one of the greatelt pefts that torments mankind: but its malignity in Europe is trifling, when compared to what the natives of Africa and the eall are known to experience. In Batavia, where they grow twelve inches long, there is no removing any piece of furniture, without the utmolt danger of being flung by them. Bofman affures us, that along the Gold Coalt they are often found larger than a loblter; and that their fting is inevitably fatal. In Europe, however, they are by no means fo large, fo venomous, or fo numerous. The general fize of this animal does not exceed two or three inches; and its fting is very feldom found to be fatal. Maupertius, who made feveral experiments on the fcorpion of Languedoc, found it by no means fo invariably dangerous as had till then been reprefented. He provoked one of them to fting a dog, in three places of the belly where the animal was without hair. In about an hour after, the poor animal feemed greatly fwollen, and became very fick; he then caft up whatever he had in his bowels ; and for about three hours continued vomiting a whitifh liquid. The belly was always greatly fwollen when the animal began to vomit; but this operation always feemed to abate the fwelling ; which alternately fwelled, and was thus emptied, for three hours fucceflively. The poor animal after this fell into convulfions, bit the ground, dragged himfelf along upon his fore-feet, and at laft died, five hours after being bitten. He was not partially fwollen round the place which was bitten, as is ufual after the Ating of a wafp or a bee; but his whole body was inflated, and there only appeared a red fpot on the places where he had been itung.

Some days after, however, the fame experiment was tried upon another dog, and even with more aggravated cruelty : $\zeta$ et the dog feemed no way affected by the wounds : but, howling a little when he received them, continued alert and well after them; and foon after was fet at liberty, without fhowing the fmalleft fymptoms of pain. So far was this poor creature from being terrified at the experiment, that he left his own mafter's houfe, to come to that of the philofopher, where he had received more plentiful entertainment. The fame experiment was tried by frefh fcorpions upon feven other dogs, and upon three hens; but not the fmallelt deadly fymptom was feen to enfue. From hence it appears, that many circumftances, which are utterly unknown, maft contribute to give efficacy to the fcorpion's venom. Whether its food, long fafting, the feafon, or the nature of the veffels it wounds, or its ftate of maturity, contribute to or retard its malignity, is yet to be afcertained by fucceeding experiment. In the trials made by our philofopher he employed fcorpions of both fexes, newly caught, and feemingly vigorous and active. The fuccefs of this experiment may ferve to thew, that many of thofe boafted antidotes which are given for the cure of the fcorpion's Iting, owe their fuccefs rather to accident than their own efficacy. They only happened to cure when their fting was no way dangerous; but in cafes of actual malignity, they might probably be utterly unferviceable.

The fcorpion of the tropical climates being much larger than the former, is probably much more venomous. Helbigius, however, who refided for many years
in the eaft, affures us, that he was often flung by the fcorpion, and never received any material injury from the wound : a painful tumor generally enfued; but he always cured it by rubbing the part with a piece of iron or ftone, as he had feen the Indians practife before him, until the flefh became infenfible. Seba, Moore, and Bofman, however, give a very different account of the fcorpion's malignity : and affert, that, unlefs fpeedily relieved, the wound becomes fatal.

It is certain, that no animal in the creation feems endued with fuch an irafcible nature. They have often been feen, when taken and put into a place of fecurity, to exert all their rage againft the fides of the glafs veffel that contained them. They will attempt to fting a ftick when put near them: and attack a moufe or a frog, while thofe animals are far from offering any injury. Maupertius put three forpions and a moufe into the fame veffel together, and they foon ftung the little animal in different places. The moufe, thus affaulted, food for fome time upon the defenfive, and at lalt killed them all, one after another. He tried this experiment, in order to fee whether the moufe, after it had killed would eat the fcorpions; but the little qua. druped feemed fatisfied with the victory, and even furvived the feverity of the wounds it had received. Wolkamer tried the courage of the fcorpion againft the large fpider, and inclofed feveral of both kinds in glafs veffels for that purpofe. The fuccefs of this combat was very remarkable. The fpider at firlt ufed all its efforts to entangle the fcorpion in its web which it immediately began fpinning; but the fcorpion refcued it: felf from the danger, by ftinging its adverfary to death: it foon after cut off, with its claws, all the legs of the fpider, and then fucked all the internal parts at its leifure.-If the feorpion's 1 kin had not been fo hard, Wolkamer is of opinion that the fpider would have obtained the victory; for he had often feen one of thefe fpiders deftroy a toad.

The fierce fpirit of this animal is equally dangerous to its own fpecies; for fcorpions are the cruellelt enemies to each other. Maupertius put about 100 of them together in the fame glafs; and they fcarce came into contact when they began to exert all their rage in murual deftruction: there was nothing to be feen but one univerfal carnage, without any diftinction of age or fex; fo that in a few days there remained only 14 , which had killed and devoured all the reft.

But their unnatural malignity is still more apparent in their cruelty to their offspring. He inclofed a female fcorpion, big with young, in a glafs veffel, and fhe was feen to devour them as faft as they were excluded: there was but one only of the number that efcaped the general deftruction, by taking refuge on the back of its parent; and this foon after revenged the caufe of its brethern, by killing the old one in its turn.

Such is the terrible and unrelenting nature of this infect, which neither the bonds of fociety nor of nature can reclaim : it is even afferted, that, when driven to any extremity, the fcorpion will often deftroy itfelf. The following experiment was ineffectually tried by Maupertius : "But," fays Mr Goldfmith, "I am fo well affured of it by many eye-witneffes, who bave feen it both in Italy and America, that I have no doubt remaining of its veracity. A fcorpion, newly caught,
$\underbrace{\text { Scorpia. }}$

Scorpio, is placed in the midf of a circle of burning charcoal $\underbrace{\text { Scorpiurus. and thus an egrefs prevented on every fide: the fcor- }}$ pion, as I am aflured, runs for about a minute round the circle, in hopes of efcaping: but finding that innpoffible, it ftings itfelf on the back of the head; and in this manner the undaunted fuicide inftantly expires."

It is happy for mankind that thefe animals are thus deftructive to each other; fince otherwife they would multiply in fo great a degree, as to render fome countries uninhabitable. The male and female of this infect are very eafily diftinguifhable; the male being fmaller and lefs hairy. The female brings forth her young alive, and perfeit in their kind. Redi having bought a quantity of foorpions, felected the females, which, by their fize and roughnefs, were eafily diltinguilhable from the reft, and putting them in feparate glafs veffels, he kept them for fome days without food. In about five days one of them brought forth 38 young ones, well-fhaped, and of a milk-white colour, which changed every day more and more into a dark rufty hue. Another female, in a different veffel, brought forth 27 of the fame colour; and the day following the young ones feemed all fixed to the back and belly of the female. For near a fortnight all thefe continued alive and well : but afterwards fome of them died daily; until, in about a month, they all died except two.

Were it worth the trouble, thefe animals might be kept living as long as curiofity fhould think proper. Their chief food is worms and infects; and upon a proper fupply of thefe, their lives might be lengthened to their natural extent. How long that may be, we are not told; but if we may argue from analogy, it cannot be lefs than feven or eight years; and perhaps, in the larger kind, double that duration. As they have fomewhat the form of the lobfter, fo they refemble that animal in catting their fhell, or more properly their fkin; fince it is fofter by far than the covering of the lobiter, and fet with hairs, which grow from it in great abundance, particularly at the joinings. The young lie in the womb of the parent, each covered up in its own menubrate, to the number of 40 or 50 , and united to each other by an oblong thread, fo as to exhibit altogether the form of a chaplet.

Such is the manner in which the common forpion produces its young: but there is a fcorpion of America produced from the egg, in the manner of the fipider. The egis are no longer than pins points; and they are depofied in a web, which they fpin from their bodies, and carry about with them, till they are hatch. ed. As foon as the young ones are excluded from the fhell, they get upon the back of the parent, who turns her tail jver them, and defends them with her fting. It feems prob.ble, therefore, that captivity produces that unnatural difpofition in the fcorpion which induces it to deftroy its young; fince, at liberty it is found to protect them with fuch uncealing affiduity. For the various modes of preventing the fatal confequences of the bites of thefe and other noxious animals, we refer to Mofeley's treatife ab, ve quoted.

Scorpio, Scirpion, in altronomy, the eighth fign of the zodiac denoted by the character $m$. See Astronomy.

## Scorpion Fly. See Panorpa.

SCORPIURUS, Caterfillars, in botany: A genus of the decandria order, belonging to the diadelphia
clafs of plants; and in the natural method ranking un. Scorzonera; der the 32 d order, Papilionacea. The legumen is con- Scot. tracted by incifions on the infide betwixt every two feeds, revoluted sound.

There are four fpecies; the moft remarkable of which is the vermiculata, a native of Italy and Spain. It is an annual plant, with trailing herbaceous ftalks, which at each joint have a fpatular-fhaped leaf with a long foot-Italk. From the wings of the leaves come out the foot flalks of the flowers, which fuftain at the top one yellow butterfly flower, fucceeded by a thick twifted pod having the fize and appearance of a large caterpillar, from whence it had this title. This has long been preferved in the gardens of Britain, more on account of its odd fhape than for any great beauty. It is propagated by fowing the feeds on a bed of light earth; and when the plants come up, they mult be kept free from weeds and thinned, fo that there may be a foot diftance between them.

SCORZONERA, Viper-grass, in botany: A genus of the polygamia æqualis order, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the 49 th order, Compofite. The receptacle is naked; the pappus plumy; the calyx imbricated, with fcales membranaceous on their margins.

The moft remarkable fpecies is the hifpanica, or common fcorzonera, which is cultivated in the gardens of this country, both for culinary and medicinal purpofes, The root is carrot-shaped, about the thicknefs of a finger, covered with a dark brown fkin, is white within, and has a miiky juice. The ftalk rifes three feet high, is fmooth, branithing at the top, and garnifhed with a few narrow leaves, whofe bafes half embrace the ftalk. The fowers are of a bright yellow colour, and terminate the ftalks in faly empalements compofed of many narrow tongue-fhaped hermaphrodite forets lying imbricatim over each other like the fcales of a fifh, and are of a bright yellow colour. After thefe are decayed, the germen, which fits in the common empalements, turns to cblong cornered feeds, having a roundifh ball of feathered down at the top. This plant is propagated by feeds; and mult be carefully thinned and kept free from weeds, otherwife the plants will beweak.

The roots of fcorzonera were formerly much celebrated for their alexipharmic virtues, and for throwing out the fmall-pox; but have now almoft entirely loft their character: however, as they abound with an acrid juice, they may fometimes be of ufe for ftrengthening the vifcera, and promoting the fluid fecretions.

SCO' $\Gamma$, a cuitomary contribution laid upon all fubjects, according to their abilities. Whoever were affeffed in any fum, though not in equal proportions, were faid to pay foot and lot.

Scor (Michael) of Balwirie, a learned Scottifh au. thor of the $13^{\text {th }}$ century. This fingular man made the tour of France and Germany; and was received with fome difinction at the court of the emperor Frederic II. Having travelled enough to gratify bis curiofity or his vanity, he returned to Scotland and gave himfelf up to Rudy and contemplation. He was fkilled in languages; and, confidering the age in which he lived, was no mean proficient in philoforhy, matheras. tics, and medicine. He tranflated into Latia from the Arabic, the liftory of animals by the celebrated phy*
fician Avicern. Its publhed the while works of Antotic, with notes, and affated much to reation on the principles of that great philofophtr. He vrote a bouk concerning The Sore's of Nature, in which he treats oi generation, phyfiognomy, and the fugns by which we judge of the temperaments of men and women. We have alfo a tract of his On the Nature of the Sua and Mona. He there fpeaks of the grand operation, as it is termed by alchymitt:, and is exceedingly folicitous about the projected purwder, or the phillojother's Hons. He likewife publifhed what he calls Merfa PbiIo fopicica, a treatife replete with aftrology and chiromancy. He was much admired in his day, and was even furpected of magic; and had Roger Bacon and Cornelius Agrippa for his panegyritts.

Scor (Reginald), a judicious writer in the r6th century, was the younger fon of Sir John Scot of Scot's-hall, near Smeethe in Kent. He ftudied at Ha:t-hall in the univerfity of Oxford; after which he retired to Smeethe, where be lived a fudiaus life, and died in 1599. He publifhed, The perfeat platform of a Hop.gard.n; and a book entitled, The Difcovery of Withcraft ; in which he fhowed that all the relations concerning magicians and witches are chimerical. This work was not only cenfured by king James I. in his Damonelogy, but by feveral eminent divines; and all the copies of it that could be found were burnt.

SCOTAL, or Scotale, is where any officer of a foreft keeps an ale houfe within the foreft, by colour of his office, making people come to his houfe, and there fpend their money for fear of his difpleafure. We find it mentioned in the charter of the foreft, cap. 8. "Nullus foreftarius faciat Scotallas, vel garbas colligar, vel aliquam collectam faciat." 8c. Manwood, 216. -The word is compounded of foot and ale, and by tranfpofition of the words is otherwife called alefhot.
scoter. See Anas, no 6.
Nova SCOTIA, or Neru Scotland, one of the Briifh fertlements in North America, fituated between $43^{\circ}$ and $49^{\circ}$ north latitude, and between $60^{\circ}$ and $67^{\circ}$ weft longitude, is bounded by the river St Laurence on the north; by the gulph of Sc Laurence and the Atlantic ocean on the ealt ; by the fame ocean on the fouth; and by Canada and New England on the welt,-In the year $5-84$, this' province was divided into two governments. Ti'te province and government now fyled New Erunfwick is bounded on the weftward of the mouth of the river St Croix, by the faid river to its fource, and by a line drawn due north from thence to the fouthern boundary of the province of Quebec, to the northward by the faid boundary as far as the wefiera, extremity of the Eay de Chaleurs, to the ealward by the faid bay to the gulph of St Laurence to the bay called Bay Verte, to the fouth by a line in the centre of the Bay of Fundy, from the river St Croix aforefaid, to the mouth of the Mufquat river, by the faid river to its fource, and from thence by a due eaft line acrofs the Ifthmus into the Bay Verte, to join the eaftern lot above defcribed, including all iflands within fix leagues of the coaft.
The chief rivers are, the river of St Laurence, which forms the northern boundary. The rivers Rifgouche and Nipiliguit run from weft to eaft, and fall into the bey of St Laurence. The rivers of St John, Paffa. maquadi, Penoifcot, and St Croix, which run from
north to fouth, fall into Fundy Bay, or the faa a little to the eaftward of it.

The feas, adjoining to it are, the Atlantic ocean, Fundy Bay, and the gulph of St Laurence. The letifor bays are, Chenigto and Green Bay upon the ifthmus which joins the north part of Nova Scotia to the fouth; and the Bay of Chaleurs on the north-ealt ; the Bay of Chedibucto on the fouth-eatt ; the Bay of the Illands, the Purts of Bart, Chebucto, Profper, St Mar. garet, La Heve, port Maltois, port Ryfignol, port Vert, and port Joly, on the fouth; port La Tour on the fouth-eaft ; port St Mary, Annapolis, and Minas on the fouth fide of Fundy Bay, and port Rofeway, now the molt populous of all.-The chief capes are, Cape Portage, Ecoumenac, Tourmentin, Cape Port, and Epis, on the eaft; Cape Fogerie and Cape Cancean on the fouth-eaft; Cape Blanco, Cape Vert, Cape Theodore, Cape Dore, Cape La Heve, and Cape Negrn, on the fouth; Cape Sable and Cape Fourche on the fouth-weft.-The lakes are very numerous, but have not yet received particular names.

The face of the country, when viewed at a diflance, prefents a pleafingly variegated appearance of hills and valleys, with fcarcely any thing like mountains to interrupt the profpect, efpecially near the fea. A nearer approach difcovers thofe fublime and beautiful fcenes. which are fo far fuperior to the gaudy embellifhments of art. Immenfe forefts, formed of the talleft trees, the growth of ages, and reaching almoft to the clouds, everywhere cover and adorn the land: Their leaves falling in autumn, add continually to that cruft of mofs, vegetables, and decaying wood, that has for many centuries been accumulating; whilt the rays of the fun, unable to pierce the thick flade which everywhere co. vers the ground, leaves it in a perpetual fate of damp and rottennefs; a circumfance which contributes, in no fmall degree, to increafe the fharpnefs of the air in winter.
The clouds, fying over the higher grounds, which. are covered in every direction with one valt foreft, and arrefted by the attraction of the woods, fill the country with water. Every rock has a fpring, and every fpring caufes a fwamp or morafs, of greater or lefs extent in proportion to its caufe : hence it is, that travelling becomes almont impracticable in fummer, and is feldom attempted, but in the fall of the year, when winter begins to fet in, and the ground is already frozen.

The land througbout the peninfula is in no part mountainous, but frequently rifes into hills of gradual afcent, everywhere clothed with wood. From thefe arife innumerable fprings and rivulets, which not crily fertilize and adorn the country, but have formed, in the midf of it, a large lake or piece of frefh water, which is of various depths, and of which, however, little more is known, than that it has upou its borders very large tracts of meadow-land highly improveable. That part of the province which is beyond the Bay of Fundy, and extends to the river St Laureice, riites alfo gradually as we advance from the fea quite to Canada, but is, however, hardly anywhere mountainous. Its lands are for the molt part very rich, particularly at a diftance from the fea; and its woods abound with the hardeft and loftieft trees.

Though this country, like Canada, is fubject to leng
inova sicotia.
and ievere winters, fucceeded by fudden and violent heats, often much greater than what are felt in the fame latitudes in Europe, yet it cannot be accounted an unhealthy climate. The air in general in winter is very tharp, frolty, and dry ; the $1 \mathrm{k} y$ ferene and unclouded, by which every kind of exercife adapted to the feafon is rendered pleafant and agreeable. The fogs are frequent near the fea, but feldom fpread themfelves to any clifance inland.

The winter commonly breaks up with heavy rains, and the inhabitants experience hardly any of the delights of the fpring, which in England is accounted the moft agreeable featon of the year. From a lifelefs and dreary appearance, and the gloomy fcenes of winter wrapped around the vegetable world, the country throws off its difguffful attire, and in a few days exhibits a grand and pleafant profpect ; the vegetation being inconceivably rapid, nature paffes fuddenly from one extreme to another, in a manner utterly unknown to countries accultomed to a gradual progreffion of feafons. And, Atrange as it may appear, it is an acknowledged $f_{a} \mathcal{E}$, a fact which furnifhes a certain proof of the purity of the air, that thefe fudden changes feldom, if ever, affect the health of itrangers or Europeans.

In this country agriculture has yet made but fmall progrefs. Nova Scotia is almoft a continued forelt, producing every kind of wood which grows in the neighbourins flates of New England. Four-fifths of all the lands in the province are covered with pines, which are valuable not only for furnifhing malts, fpars, lumber for the fugar plantations, and timber for building, but for yielding tar, pitoh, and turpentine, commodities which are all procured from this ufeful tree, and with which the mother-country may in a few years eafily be fupplied.

All the various fpecies of birch, beech, and maple, and feveral forts of fruce, are found in all parts in great abundance; as alfo numerous herbs and plants, either not common to, or not known in, England. Amongt thefe none is more plentiful than farfaparilla, and a plant whofe root refembles rhubarb in colour, tafte, and effects; likewife the Indian or mountain tea, and maiden-hair, an herb much in repute for the fame purpofe, with thrubs producing ftrawberrics, rafpberries, and many other pleafant fruits, with which the woods in fummer are well fored: Of thefe wild productions the cherrries are beft, though fmaller than ours, and growing in bunches fomewhat refembling grapes. The daffafras tree grows plentifully in common with others; but amongtt them none is more ufeful to the inhabitants than a fpecies of maple, diftinguilhed by the name of the fugar tree, as affording a cinfiderable quantity of that valuable ingredient. See Sugar.

Amongft the natural productions of Nova Scotia, it is neceffary to enumerate their iron-ore, which is fuppofed equally good with that found in any part of America.

Lime-ftone is likewife found in many places: it is extremely good, and is now much ufed for building: independent of which, it gives the farmers and landholders a great advantage for improving the ground, as it is found by experience to be one of the moft approved things in the world for that purpofe.

Several of the ufeful and molt common European fruits have been planted in many places; fo that the
province now produces great quantities of apples, fome pears, and a few plums, which are all good of their kind, efpecially the former. The froaller fruits, fuc! as currants, goofeberries, \&c. grow to as great perfection as in Europe; and the fame may be faid of all the common and ufeful kinds of garcien plants. Among thefe their potatoes have the preference, as being the moft ferviceable in a country abounding with fifh; and indeed they are not to be exceeded in goodnefs by any in the world. The maize, or Indian corn, is a native of much warmer climates; and, though planted here, never arrives at more than two-thirds of its natural bignefs; a defect which arifes as well from the hortnefs of the fummer as the gravelly nature of the foil. Tobacco may likewife be cultivated with eafe in Nova Scotia, as it is already everywhere in Canada, from Lake Champlain to the inle of Orleans, for the purpofe of internal confumption.

This country is not deficient in the animal produc. tions of the neighbouring ftates, particularly deer, beavers, and others. Wild fowl, and all manner of game, and many kinds of European fowls and quadrupeds, have from time to time been brought into it, and thrive well. At the clofe of March the filh begin to fpawn, when they enter the rivers in fuch fhoals as are incredible. Herrings come up in April, and the fturgeon and falmon in May. But the moft valuable appendage of New Scotland is the Cape Sable coaft, along which is one continued range of cod-fifhing banks and excellent harbours. This filhery employs a great number of men, in fome feafons not lefs than 10,000 , when 120,000 quintals will be caught, of which 40,000 may be exported. Thefe, at the lowelt price, mult bring into the colony L. 26,000 Sterling, either in cafl or in commodities neceffary to the inhabitants.

Notwithftanding the comparatively uninviting ap. pearance of this country, it was here that fome of the firf European fettlements were made. The firf grant of lands in it was given by James I. to his fecretary Sir William Alexander, from whom it had the name of Nowa Scotia or New Scotland. Since that period it has frequently changed hands from one private proprietor to another, and from the French to the Englihh nation backward and forward.

It was in 1604 that the French firt fettled in Nova Scotia, to which they gave the name of Acadia. Inftead of fixing towards the eaft of the peninfula, where they would have had larger feas, an eafy navigation, and plenty of cod, they chofe a fmall bay, afterwards called French Bay, which had none of thefe advantages. It has been faid, that they were invited by the beauty of Port Royal, where a thoufand hips may ride in fafety from every wind, where there is an excellent bottom, and at all times four or five fathoms of water, and eighteen at the entrance. It is more probable that the founders of this colony were led to choofe this fituation, from its vicinity to the countries abounding in furs, of which the exclufive trade had been granted to them. This conjecture is confirmed by the following circumftance: that both the firt monopolizers, and thofe who fucceeded them, took the utmoft pains to divert the attention of their countrymen, whom an unfettled difpofition, or neceffity, brought into thefe regions, from the clearing of the woods, the breeding of cattle, fifhing, and every kind of culture; choofing rather to $4 Y$

engage the induftry of thefe adventurers in hunting or in trading with the favages.

This colony was yet in its infancy when the fettlement, which has fince become fo famous under the name of Nerv England, was firt eftablifhed in its neighbourhood. The rapid fuccefs of the plantations in this new colony did not much attract the notice of the French. This kind of profperity did not excite any jealoufy between the two nations. But when they began to fufpect that there was likely to be a competition for the beaver trade and furs, they endeavoured to fecure to themfelves the fole property of it, and were unfortunate enough to fucceed.

At their firft arrival in Acadia, they had found the peninfula, as well as the forelts of the neighbouring continent, peopled with fmall favage nations, who went under the general name of Abenakies. Though equally foad of war as other favage nations, they were more fociable in their manners. The miffionaries eafily infinuating themfelves among them, had fo far inculcated their teners, as to make enthufiafts of them. At the fame time that they taught them their religion, they infpired them with that hatred which they themfelves entertained for the Englifh name. This fundamental article of their new worfhip, being that which made the ftrongeft impreffion on their fenfes, and the only one that favoured their paffion for war, they adopted it with all the rage that was natural to them. They mot only refufed to make any kind of exchange with the Englifh, but alfo frequently difturbed and ravaged the frontiers of that nation.
This produced perpetual hoftilities between the New Englanders and the French rettlers in Acadia, till that province was, at the peace of Utrecht, for ever ceded to the Englifh, who feemed not for a long time to difcover the value of their new acquifition. They reftored to it its ancient name of Nova Scotia; and having built a flight fortification at Port-Royal, which they called Annapolis in honour of Queen Anne, they contended themfelves with putting a very fmall garrifon into it. In procefs of time, however, the importance of Nova Scotia to the commerce of Great Britain began to be perceived; and at the peace of 1749 , the miniftry offered particular advantages to all perfons who chofe to go over and fettle in Acadia. Every foldier, failor, and workman, was to have 50 acres of land for himfelf, and ten for every perfon he carried over in his family. All non commiffioned officers were allowed 80 for themfelves, and 15 for their wives and children; enfigns 200; lieutenants 300 ; captains 400 ; and all officers of a higher rank 600 ; together with 30 for each of their dependents. The land was to be tax free for the firft ten years, and never to pay above one livre two fols fix deniers* for fifty acres. Befides this the government engaged to advance or reimburfe the ex-
gether made up 7006 tons. They confructed three floops, which did not exceed ino tons burden. Their exportation for Great Britain and for the other parts of the globe did not amount to more than 729,850 livres 12 fols 9 deniers $\dagger$. Continuing, however, true $\dagger$ About to its allegiance when the other colonies threw of the $L_{8} \cdot 3 \cup, 4 \mathrm{Ie}$, dominion of Great Britain, it has now become a place 8 s . Io d . of great confequence both to the mother-country and Sterling. the Weit Indies. Its fhipping and feamen are rapidly increafing, as well as its produce, which affords the pleafing profpect of being able to fupply itfelf with all the neceffaries of life. The number of perfons who have abandoned their habitations in the more fouthern ftates, and fettled either there or in Canada, cannot be eftimated, by the molt moderate calculation, at lefs than 80,000 ; and it is without doubt the molt convenient in point of fituation of any province in America for a maritime power of Europe to be poffeffed of.

Scotia, in architecture, a femicircular cavity or channel between the tores in the bafes of columns.

SCOTISTS, a fect of fchool-divines and philofophers, thus called from their founder $\mathcal{F}$. Luns Scotus, a Scottifh cordelier, who maintained the immaculate conception of the virgin, or that the was born without original fin, in oppofition to Thomas Aquinas and the Thomifts.

As to philofophy, the Scotilts were, like the Tho mifts, Peripatetics (fee Peripatetics) ; only diltinguifhed by this, that in each being, as many different qualities as it had, fo many different formalities did they diftinguifh; all diftinet from the body itfelf, and making as it were fo many different entities; only thefe were metaphyfical, and as it were fuperadded to the being. The Scotifts and Thomifts likewife difagreed about the nature of the divine co-operation with the human will, the meafure of divine grace that is neceffary to falvation, and other abitrufe and minute queftions, which it is needlefs to enumerate.

SCOTLAND, the country of the Scots, or that part of Great Britain lying to the north of the Tweed; is fituated between the $54^{\text {th }}$ and 59 th degrees of north latitude, and extends in length about 278 miles, and in fome places near 180 in breadth; containing an area of 27,794 miles. On the fouth it is bounded by England; on the north, eaft, and weft, by the Deucaledonian, German, and Irifh feas.

It is extremely difficult to give any fatisfactory ac. Origin of count of the origin of the appellation of $S_{\text {cots }}$, from the name, which the country has derived its name. It has puzzled the moft eminent antiquaries, whofe conjectures ferve rather to perplex than to clear up the difficulty. Nor is this to be wondered ar, when Varro and Dionyfius could not agree about the etymon of Italia, nor Plutarch and Solinus about that of Rome. All that we know with any degree of certainty, concerning the appellation of Scot, amounts to this-That it was at firft a term of reproach, and confequently framed by enemies, rather than aflumed by the nation diftinguilhed by that name. The Highlanders, who were the genuine defcendants of the ancient Scots, are abfolutely ftrangers to the name, and have been fo from the beginning of time. All thofe who fpeak the Gaelic language call themfelves Albanich or Gael, and their country Alba or Gaeldochd.

The Picts, who poffefed originally the northern and

Scotia, Scotland. pences of paffaze, to build houfes, to furnifh all the neceffary inftruments for fifhery or agriculture, and to defray the expences of fubliftence for the firt year. Thefe encouragements determined 3750 perfons, in the month of May 1749, to go to America, in hopes of bettering their fortune.

Thus encouraged, the province of Nova Scotia began to flourifh, though in 1769 it fent out only 14 vefiels and 148 boats, which together amounted to 7324 tons, and received 22 velfels and 120 boats, which to.

s.otland. eaftern, and in a latter period alfo the more fouthern, divifion of North Britain, were at firf more powerful than the Caledonians of the weft. $I_{t}$ is therefore probable, that the Picts, from a principle of malevolence and pride, were ready to traduce and ridicule their weaker neighbours of Argyle. Thefe two nations fpoke the fame language, the Gaelic. In that language Scot, or Scode, fignifies a corner or fmall divifion of a country. Accordingly, a corner of North Britain is the very name which Giraldus Cambrenfis gives the little kingdom of Argyle, which the fix fons of Muredus king of Ulfter were faid, according to his information, to have erected in Scotland. Scot in Gaelic is much the fame with little or contemptible in Englifh; and Scotlan, literally fpeaking, fignifies a fmall flock; metaphorically, it ftands for a fmall body of men. (Dr Macpherfon's 1)iffert.)

Others obferve, that in the fame language the word Scuit fignifies a zvanderer, and fuppofe that this may have been the origin of the name of Scot; a conjecture which they think is countenanced by a paffage in Am. mianus Marcellinus (l. xxvii.), who characterizes the men by the epithet of roaming; "per diverfa vagantes." (Mr Macpherfon, and Mr Whitaker).

All that we can fay is, that for fome one of the reafons couched under the above difparaging epithets, their malicious or fneering neighbours, the Picts or the Britons, may have given the appellation of Scots to the anceftors of the Scottifh nation.

At what time the inhabitants of the weft of Scotland came to be diftinguilhed by this name is uncertain. Porphyrius the philofopher is the firlt who mentions them, about the year of the Chriftian era 267 ; and towards the middle of the 4 th century we find them mentioned with other Britifh nations by Am. Marcel-
2 linus, in the paffage above referred to.
people.
The origin of the Scots has been warmly difputed by many antiquaries of note ; particularly by Mr Macpherfon and Mr Whitaker. The firft contends, that they are of Caledonian, the latter, that they are of Irifh extraction. Each fupports his pofition with fuch arguments and authorities, that an impartial inquirer is almolt at a lofs which of their opinions he ought to efpoufe. What appears moft probable is, that they are both partly in the right and partly in the wrons. -The Scots feem to have been originally defcended from Britons of the fouth, or from Caledonians, who being preffed forward by new colonies from Gaul, till they came to the weftern fhore of Britain, paffed over from thence into Ireland, probably about 100 years before the Chriftian era. About the year of Chrift 320, they returned again into Britain; or at leaft a large colony of them, under the conduct of Fergus, and fettled on the weltern coafts Caledonia, from whence they had formerly migrated. As early as the year $3 \div 0$, we find them affociated with the Piets in their expeditions to the Roman province; and for 90 or 100 years after, their ravages are frequently mentioned by the Roman and Britifh writers. Whithkr's bifl. of the Britons, 284).
Fxtent of
territory.
The territory of the ancient Scots, before the anneration of Pictavia, comprehended all that fide of Cale- donia which lies along the north and weftern ocean, from the frith of Clyde to the Orkneys. Towards the ealt, their dominions were divided from the Pictifh
territories by thofe high mountains which run irom, seotire: Dumbarton to the frith of Tain.- In procefs of timie the Scots, under the reign of Kenneth the fon of Alpin, became fo powerful as to fubdue entirely their neighbours the Picts, and gave their own denomination to all Caledonia, Pictavia, and Valentia; all which are fill comprehended under the general name of Solland.

Like thofe of all other nations, the hiftorians of Scotland affume too great an antiquity for their country-
men; however, they are much lefs extravagant in this refpect than many others. By them the reign of Fergus, the firt Scots monarch, is placed in 330 B . C. He was the fon of Ferchard an Irifh prince; and is faid to hove been called into Scotland by the Caledonians. to affift them againit the fouthern Britons; with whom they were then at war. Having landed on one of the Albudæ or weftern ifles, he had a conference with the Caledonians, whofe language and manners he found to be the fame with thofe of his countrymen. Having then landed in Scotland, and taken the field at the head of his new allies, he engaged the Britons under their king Coilus. Victory declared in favour of the Scots; Coilus was defeated and killed; and from him the province of Kyle firlt received its name. After this Fergus was declared king of the Scots, with the folemnity of an oath. But he did not long enjoy his new dignity: for having been recalled to Ireland to quiet fome commotions there, he was drowned, by a fudden tempelt, on his return, at a place in Ireland called from him Knock-Fergus, or Carrick-Fergus; i. e. Fergus's Rock.

Fergus was fucceeded by his brother Feritharis, to the prejudice of his two fons Ferlegus and Mainus. This, we are told by the ancient Scottifh writers, was done in conformity to a law, by which it was ordained, that whilf the children of their kings were infants, one of their relations who was reckoned the moft fit for the government fhould be raifed to the throne, but that after his death the fovereignty fhould return to the fons of the former king. This was the cafe at prefent ; however, Ferlegus, impatient for the crown, made a formal demand of it from his uncle. The difpute being referred to an affembly of the fates, Feritharis was confirmed on the throne; and Ferlegus would have been condemned for fedition, had not his uncle interpofed. However, he was imprifoned; but having made his efcape, he fled firlt to the Picts, and then to the Britons, in order to excite them againit Ferith.ris. With both he failed in accomplifing his purpofe: but, in the mean time, his uncle being fabbed in his bed, the fufpicion fell upon Ferlegus, who was thereupon fet afide from the fucceffion, and died in obfcurity, the throne being conferred upon his brother Mainus.

The reigns of Mainus, Dornadill, and Nothat, afford nothing remarkable, excepting that Dornadill, who was a great hunter, inftituted the laws of hunting in his country. Nothat was killed in a battle with Reuther his nephew; upon which the latter was immediately invefted with the fovereignty. A bloody war enfued, in which both parties were reduced to the laft estremity, and glad at length to conclude a peace. The fate of Reuther is not known; but it is generally fuppofed that he ended his life in the year 187 B . C.
The reigns of Reutha, Thereus, Jafina, and Finnan,
afford

Scotland. afford no remarkable tranfactions, excepting that under the laft we find the firft beginnings of the Scottifh parliament ; as he enacted, that kings fhould do nothing without the confent of their grand council.After him followed Durtus, Even, and Gillus, whofe reigns afford nothing of confequence. Even II. the nephew of Finnan, who fucceeded Gillus, is faid to have built the towns of Innerlochy and Invernefs. He overcame Belus king of the Orkneys, who had invaded Scotland; and was fucceeded by his fon Eder, in whofe time Julius Cæfar invaded the fouthern parts of Britain. Eder is faid to have alfilted the Britons againft the common enemy. He was fucceeded, after a reign of 48 years, by his fon Even III. who is reprefented as a moniter of cruelty and luft. Not content with having 100 noble concubines of his own, he
6 d he king hould have could maintain, and that the king the nobles the concerning like with the daughters of their tenants. Nor was he marxiages. lefs remarkable for his cruelty and rapacioufnefs, which at laft occafioned a rebellion; and Even was dethroned, imprifoned, and put to death.

We meet with nothing memorable in the hiftory of Scotland from this time to that of Agricola, excepting that the famous Caractacus, who was carried prifoner to Rome, is faid to have been one of the Scortilh monarchs; which, however, feems not very probable, as the Romans in his time had not penetrated near fo far as Scotland. The invafion of Agricola happened during the reign of Corbred, called by the Roman hilto-

7 Invation of Scotland by Agricela. queft of the fouthern parts, and in a great meafure civilized the inhabitants, formed a like plan with regard to Scotland. It is probable, that at this time the Caledonians or Sc ts were rendered more formidable than ever they had been, by the acceffion of great numbers from the fouth; for though the Romans had civilized the greateft part, it cannot be doubted that many of thofe favage warriors, difdaining the pleafures of a peaceable life, would retire to the northward, where the martial difpofition of the Scots would better fuit their inclination. The utmon efforts of valour, however, were not prowf againft the difcipline of the Roman troops, and the experience of their commander. In the third year Agricola had penetrated as far as the river Tay; but the particulars of his progrefs are not recorded. The following year he built a line of forts between the friths of Forth and Clyde, to exclude the Caledonians from the fouthern parts of the inland; and the year after, he fubdued thofe parts which lay to the fouth and weft of his forts, namely, the counties of Galloway, Cantyre, and Argyle, which at that time were inhabited by a peopl: called Cangi, though fome hitorians place thefe as far fouth as Chefhire in England, and the north part of Wales. This fuppofition, however, can fcarcely be admitted, when we confider that Tacitus exprefsly informs $\mathrm{us}_{2}$ that the people whom Agricola conquered had never before been known to the Romans.

Agricola fill purfued the fame prudent meafures by which he had already fecured the poffeffion of fuch a large tract of country, that is, advancing but flowly, and building forts as he advanced, in order to keep the people in ohedience. The 6 cots, though commanded
by their king, who is faid to have been well acquainted Scotland. with the manner of fighting and difcipline of the Romans, were yet obliged to retreat; but at laft, finding that the enemy made fuch progrefs as endangered the fubjugation of the whole country, he refolved to cut off their communication with the fouthern parts, and likewife to prevent all polfibility of a retreat by fea. Agricola, though folicited by fome of his officers, refufed to retreat; but divided his troops into three bodies, having a communication with each other. Upon this, Galgacus refolved to attack the weakelt of the three, which confifted only of the ninth legion, and lay at that time, as is faid, at a place called Lochore, about two miles from Loch-Leven in Fife. The attack was made in the night: and as the Komans were both unprepared and inferior in number, the Scots penetrated into the heart of their camp, and were making a great flaughter, when Agricola detached fome light-armed troops to their affiftance; by whom the Caledonians in their turn were routed, and forced to fly to the marihes and inaccefifible places, where the enemy could not follow them.

This engagement has been magnified by the Roman hiftorians into a viftory, though it can farce be admitted from the teftimonies of other hiftorians. The Romans, however, certainly advanced very confiderably, and the Scots as conftantly retreated, till they Great viccame to the foot of the Grampian mountains, where tory gained the Caledonians refolved to make their laft fand. In hy the kom the eighth year of the war, Agricola advanced to the mans. foot of the mountains, where he found the enemy ready to receive him. Tacitus has given us a fpeech of Galgacus, which he has undoubtedly fabricated for him, in which he fets forth the afpiring difpofition of the Romans, and encourages his countrymen to defend themielves vigoroully, as knowing that every thing valuable was at ftake. A defperate engagement accordingly enfued. In the beginming, the Britons had the advantage, by the desterous management of their bucklers : but Agricola having ordered three Tungrian and two Batavian cohorts, armed with fhort fwords, and embofled bucklers terminating in a point, to attack the Scots, who were armed with long fwords, the latter foon found thefe weapons ufelefs in a clofe encounter ; and as their bucklers only covered a fmall part of their bodies, they were eafly cut in pieces by their adverfaries. The moft forward of their cavalry and charioteers fell back upon their infantry, and difordered the centre: but, the Britons endeavouring to out-flank their enemies, the Roman general oppofed them with his horfe; and the Caledonians were at laft routed with great flaughter, and forced to fly into the woods, whither the Romans purfued with fo little caution, that numbers of them were cut off. Agricola, however, having ordered his troops to proceed more regularly, prevented the Scots from attacking and cutting off his men in feparate parties, as they had expected; fo that this victory proved the greateft froke to the Caledonians that they had hitherto received. This battle is fuppofed by fome to have been fought in Strathern, half a mile fouth from the kirk of Comrie; but others imagine the place to have been near FortingalCamp, a place fomewhat farther on the other fide of the Tay.

Great as this victory was, it feems not to have been

## Sco [725] SCO

$\underbrace{\text { Scotland. productive of any folid or latting advantage to the Ro- }}$ mans; fince we find that Agricola, inftead of putting an end to the war by the immediate conqueft of all Caled nia, retreated into the country of the Forefti, commonly fuppofed to be Forfarfhire, though others imagine it to have been the county of Fife. Here he received hoftages from part of the Caledonians; and ordered part of his fleet to fail round Britain, that they might difcover whether it was an ifland or a continent. The Romans no fooner had left that part of the country, than the Caledonians demolifhed all the $f$ rts they had raifed: and Agricola being foon after recalled by Dom,tian, the further progrefs of the Roman arms was ftopped; Galgacus proving fuperior to any of the fuccelfiors of that general.
From the time of Agricola to that of Adrian, we know little of the affairs of Scotland, excepting that during this interval the Scots mult have entitely driven the Romans out of their country, and reconquered all that uact which lay between Agricola's chain of forts and Carlifle on the weft, and Newcafle or TinmouthBar on the eatt; which Adrian, on vifiting Britain, a view to fhut out the barbarians; which, however, did not anfiwer the purpofe, nor indeed could it be thought to do fo, as it was only built of turf, and guarded by no more than 18,000 men, who could not be fuppofed a fufficient furce to defend fuch an extent of fortification.
On the departure of Adrian, he left Julins Severus as his lieutenant: but this man though one of the greatelt commanders of his age, did not carry his arms to the northward of Adrian's wall; and this long interval of peace gave to much fecurity to Mogold the Scottifh monarch, that he degenerated into a tyrant, and was murdered by fome of his noblemen. 'The only inftance of his tyranny which is produced, however, is a law by which it was enacted, that the eftates of fuch as were condemned thould be forteited to his exchequer, without any part thereof being alloted to their wives and children ; an act which fubtiits almoft in its full force to this day in Great Britain and the beft regulated Luropean government.

In the reign of Antoninus Pius, the proprator Lollius Urbius drove the Scots far to the northward, and repaired the chain of forts built by Agricola, which lay between the Carron on the frith of Forth and Dunglafs on the Clyde. Thefe were joined together by turf walls, and formed a much better defence than the wall of Adrian. However, after the death of Antoninus, Commodus having recalled Calpurnius Agricola, an able commander, who kept the Scots in awe, a more dangerous war broke out than had ever been experienced by the Romans in that quarter. The Scots having paffed the wall, put all the Romans they could meet with to the fivord : but they were foon repulfed by Ulpius Marcellus, a general of confummate abilities, whom Commodus fent into the ifland.-In a fhort time the ty rant alfo recalled this able commander. After his departure, the Roman difcipline in Britain fuffered a total relaxation; the foldiery grew mutinous, and great diforders enfued: but thefe were all happily removed by the arrival of Clodius Albinus, a perfon
of great ikill and experience in military affairs. His Scotasc. prefence for fome time refrained the Scots within pro. per bounds: but a civil war breaking out between him and Severus, Albinus croffed over to the continent with the greatelt part of the Roman fotces in Britain; and meeting his antagonif at Lyons, a dreadful battle enfued, in which Albinus was utterly defeated, and his army cut in pieces. See Romes, $\mathrm{n}^{\circ}{ }^{3} 375$.
The abfence of the Roman forces gave encouragement to the Scots to renew their depredations, which they did with fuch fuccefs, that the empercr became apprehenfive of lofing the whole ifland ; on which he determined to go in perfon and quell thefe troublefome enemies. The army he collected upon this occalion was far more numerous than any the Romans had ever fent into Britain; and being commanded by fuch at able general as Severus, it may eafily be fuppofed tha: the Scots mult have been very hard preffed. The pa: ticulars of this important expedition are very imperfectly related; however, we are affured that Severu; loft a vaft number of men, it is faid not lefs than 50,000 , in his march through Scotland. Notwith. flanding, he penetrated, it is faid, to the mof northern extremity of the iland, and obliged the enemy $t$, yield up their arms. On his return, he built a much flronger fortification to fecure the frontiers againf the enemy than had ever been done before, and which in fome places coincided with Adrian's wall, but extended farther at each end. But in the mean time, the Scots, provoied by the brutality "f the emperor's fon Caracalla, whom he had left regent in his abfence, again took arms: on which Severus himelf took the field, with a defign, as it would feem, to extirpate the whole nation; for he gave orders to his foldiers "not t" fpare even the child in the mother's belly." The event of his furious declaration is unknown : but in all probability the death of the emperor, which happened foon after, put a Itop to the execution of this revenge; and it is certain that his fon Caracalla, who fucceeded Severus, ratified the peace with the Scots.
During ali thefe important tranfactions, Scotland was governed by Donald I. who is faid to have been the frft Chritian king of this country. From him to the time of Eugene I. no remarkable occurrence offers; but under the latter, the Roman and Pictilh forces were united againtt the Scots. The Picts were commanded by their king, named Harguff; and the Romans by Masimus, who mudered Valentinian III. and afterwards affumed the empire $f$. The allies defeated Eagene in the county of Galloway; but Maximus being obliged to return fouthward on account of an infurrection, the Picts were in their turn defeated by the Scots. Next year, however, Maximus marched ayaint the 3 See Scots; who being now reduced to extremity, brought 536 . into the field not only all the men capable of bearing arms, but the women alfo. In this engagement the Picts would have been utterly defeated, had not they been fupported by the Romans; but Eugene being killed, with the greatelt part of his nobility, the Scots were defeated; and fo well did the conquerors improve their vistory, that their antagonifts were at laft totally driven out of the country. Some of them took refuge in the Ætbudx iflands, and fome in Scandinavia and Ireland, from whence they made frequent defcents upon Scotland. The Piets were at artt mightily pleafed

## S C O

12
They repurn under fergus II.
with the vistory they had gained over their antagonifts:
but being commanded to adopt the laws of the Romans, and to choofe no king who was not fent them from Rome, ty bean to repent of their having contributed to the expulfion of the Scots; and in the year $4^{2 I}$, when Autulphus king. of the Goths fent over a body of exiled Scots to Britain, under Fergus, a defcendant of the royal family of Scotland, the Pists immediately joinsd them againf the common enemy. The confequence of this was, that the Britons were pulfed to the lait extremity ; and the Romans being obliged, on account of the inundation of northern barbarians who poured in upon them, to recal their forces from Britain, the inhabitants were reduced to the mof miferable fituation that can be imagined. In the time of Fergus II. they were obliged to give up all the country which lies to the north of Adrian's wall; and the reign of Grimus or Graham, the fucceffor of Fergus, they were obliged to write that remarkable letter to Rome, intitled, "The groans of the
$\dagger$ Sse Eng- Britons $\dagger$." This, however, not being attended with land, $\mathrm{m}^{0} 27$. fuccefs, the Britons were obliged to call in the Saxons to their affiftance. By thefe new allies the Scots were defeated in a great battle, and their king (Eugene) drowned in the river Humber; which put a fop for fome time to thefe incurfions.

Hitherto we have feen the Scots very formidable enemies to the fouthern Britons. But when the Saxons became the enemies of the Britons, the Scots joined in a frift alliance with the latter; and the famous king Arthur is faid to have been affifted by the Scots in all his battles with the Saxons : neither does it appear that this league was ever diffolved again, though the united efforts of the Scots and Britons were not fufficient to preferve the independency of the latter.
The next remarkable event in the hiftory of Scotland is the war with the Picts, which took place in the ninth
king of Northumberland. Edwin accepted the money; but pretending to be engaged in other wars, he refured the affitance which he at firt promifed. Brudus, not difmayed by this difappointment, marched refolutely againgt his enemies; and the two armies came to an engagement near Dundee. The fuperior fkill of the Scots in military affairs was about to have decided the vittory in their favour, when Brudus bethought himfelf of the following ftratagem to preferve his army from deftruction. He caufed all the attendants, and even the women who attended his army, to affemble and flow themfelves at a diftance as a powerful reinforcement coming to the Pifts. This fruck the Scots with fuch a panic, that all the efforts of Alpin could not recover them; and they were accordingly defeated with great flaughter. Alpin himfelf was taken prifoner, and foon after beheaded by order of the conqueror. This execution happened at a place now called Pit-alpy, but in former times Bas-alpin; which in the Gaelic language fignifies the death of Alpin. His head was afterwards fuck upon a pole, and expofed on a wall.

Alpin was fucceeded by his fon Kenneth II. who being a brave and enterprifing prince, refolved to take a moft fevere revenge for his father's death. The Scots, however, were fo difpirited by their late defeat, that they were exceedingly averfe to any renewal of the war : while, on the other hand, the Picts were fo much elated, that they made a law by which it became death for any man to propofe peace with the Scots, whom they refolved to exterminate; and fome of the nobility were expelled the council on account of their oppofition to this law. The confequence of this was, that civil diffenfions took place among them, and a bloody battle was fought between the oppofite parties, before the Scots had thought of making any further refiftance.

By thefe diffractions Brudus, who had in vain endeavoured to appeafe them, was fo much affected, that he died of grief; and was fucceeded by his brother Drufken. -The new prince alfo failed in his endeavours to accommodate the civil differences; fo that the Scots, by gaining fo much refipite, at laft began to recover from their confternation; and fome of them having ventured into the Pictifh territories, carried off Alpin's head from the capital of their dominions, fuppofed to have been Abernethy. In the mean time, Kenneth found means to gain over the nobility to his fide by the following ftratagem; which, however ridiculous, is not incredible, if we confider the barbarifm and fupertition of that age. Having invited them to Stratagem an entertainment, the king introduced into the hall of Kenneth where they flept a perfon clothed in a robe made of to renew the fkins of fifhes, which made fuch a luminous appearance in the dark, that he was mittaken for an angel or fome fupernatural meffenger. To add to the terror of thofe who faw him, he denounced, through a fpeaking trumper, the moft terrible judgments, if war was not immediately declared againt the Pitts, the murderers of the late king. In confequence of this celeftial admonition, war was immediately renewed with great vigour. The Picts were not deficient in their preparations, and had now procured fome affiftance from Eng. land. The firt battle was fought near Stirling ; where the Picts, being deferted by their Englifh auxiliaries, were utterly defeated. Drufken efcaped by the fwift.

## 14

 The Scots defeated, and their king killed. -$\underbrace{\text { Scotland. }}$
$\qquad$

[^60]

[^61]

[^62] century. The occafion of the quarrel was, that Dongal king of Scolland pretended a right to the Pictifh throne; which, however, was rejected by the Picts: upon which both parties had recourfe to arms; but when every thing was ready for the campaign, Dongal was drowned in croffing the river Spey.

At this time the dominions of the Scots comprehended the weftern illands, together with the counties of Argyle, Knapdale, Kyie, Kintyre, Lochaber, and a part of Breadalbane; while the Picts poffeffed all the reft of Scotland, and part of Northumberland; fo that the Picts feem to have been by much the moft powerful people of the two. However, the Scots appear to have been fuperior in military fkill; for Alpin, the fucceffior of Dongal, having engaged the Pictifh army near Forfar, after an obftinate engagement defeated them, and killed their king, though not without the lofs of a great number of his own men. The Picts chofe Brudus, the fon of their former king, to fucceed him; but foon after depofed and put him to death, on account of his ftupidity and indolence. His brother Kenneth flared the fame fate on account of his c .wardice; till at laft another Brudus, a brave and fpirited prince, afcended the throne. Having raifed a powerful army, he began with offering terms of peace to the Scots; which, however, Alpin rejetted, and infifted upon a total furrender of his crown. Brudus on this endeavoured to procure the affifance of Edwin

## SCO

scotland. ne's of his horfe, and a few days after made application to Ke neth for a ceffation of hoftilities; but as the Scoliilh monarch demanded a furrender of all the Pictuh dominions, the treaty was inftantly broken off. Eenneth purfued his good fortune, and conquered the counties of Merns, Angus, and Fife; but as he marched againft Surling, he received intelligence that thefe counties had again revolted, and cut off all the garrifons wnich he had left, and that Drulken was at the head of a confiderable army in thefe parts. On this Kenneth haftened to oppofe him, and a negociation again took place. The refult was equally unfavourable with the reft. Kennieth infifted on an abfolute furrender of the counties of Fife, Merns, and Angus; which being refufed, both parties prepared for a decifive battle. The engagement was very bloody and defperate, the Picts fighting like men in delpair. Drulken renewed the battle feven times; but at laft was entirely defeated and killed, and the counties in difpute became the immediate property of the conqueror.

Kenneth did not fail to improve his victory, by reducing the reft of the Pictilh territories; which he is faid to have done with the greatef cruelty, and even to have totally exterminated the inhabitants. The capital, called Camelon (fuppofed to have been Abernethy), held out four months; but was at laft taken by furprife, and every living creature deftroyed. This was followed by the reduction of the Maiden Cafte, now that of Edinburgh; which was abandoned by the garrifon, who ted to to Northumberland.

After the reduction of thefe important places, the reft of the country made no great refiftance, and Kenneth became mafter of all the kingdom of Scotland in the prefent extent of the word; fo that be is juitiy to be efteemed the true founder of the Scottifh monarchy. Befides this war with the Picts, Kenneth is faid to have been fuccefsful againlt the Saxons, though of thefe wars we have very little account. Having reigned 16 years in peace afier his fubjugation of the Picts, and compofed a code of laws for the good of his people, Kenneth died of a fittula, at Fort Teviot, near Duplin in Perthfhire. Before his time the feat of the Scots government had been in Argylethire; but he removed it to Scone, by transferring thither the famous black ftone fuppofed to be the palladium of Scotland, and which was afterwards carried off by Edward I. of England, and lodged in Weftminfter abbey.

Kenneth was fucceeded by his brother Donald, who is reprefented as a man of the worft character; fo that the remaining Picts who had fled out of Scotland were encouraged to apply to the Saxons for affiltance, promifing to make Scotland tributary to the Saxon power after it fhould be conquered. This propofal was accepted; and the confederates invaded Scotland with a powerful army, and took the town of Berwick ; however, they were foon after defeated by Donald, who took alfo their fhips and provifions. This capture proved their ruin; for fome of the thips being loaden with wine, the Scots indulged themfelves fo much with that liquor, that they became incapable of defending themfelves; the confequence of this was, that the confederates rallying their troops, attacked them in that ftate of intoxication. The Scots were defeated with exceffive flaughter. Twenty thoufand of the common
foldiers lay dead on the fpot; the king and his princi-
pal nobility were taken prifoners; and all the country sotlane. from the Tweed to the Forth became the property of the conquerors. Still, however, the confederates found themfelves unable to purfue their viftory farther ; and a peace was concluded, on condition that the Saxons fhould become mafters of all the conquered country. Thus the Forth and Clyde became the fouthern boundaries of the Scottifh dominions. It was agreed that the Forth fhould from that time forward be called the Scots fea; and it was made capital for any Scotfman to fet his foot on Englifh ground. They were to ereet no forts near the Englifh confines, to pay an annual tribute of a thoufand pounds, and to give up 60 of the fons of their chief nobility as hoftages. A mint was erected by the Saxon prince named Ofbreth, at Stirling ; and a crofs raifed on the bridge at that place, with the ful. lowing infcription, implying that this place was th: boundary between Scotland and England :

## Anglos a Scotis feparat crux iffa remotis: <br> Arma biciftant Bruti, flant Scoti jub bac cruce tuti.

After the conclufion of this treaty, fo humiliating to the Scots, the Piets, finding that their intereft had been entirely neglected, fled to Norway, while thole who remained in England were maflacred. Donald fhared the common fate of unfortunate princes, being dethroned and thut up in prifon, where he at laft put an end to his own life in the year 858.-In jultice te. this unhappy monarch, however, it muft be obferved, that the character of Donald, and indeed the whole account of thefe tranfactions, relts on the credit of a fingle author, namely Boece; and that other writers reprefent Donald as a hero, and fuccefsful in his wars: but the obfcurity in which the whole of this period of Scottifh hiftory is involved, renders it impoffible to determine any thing fatisfactory concerning thefe matters.

Donald was fucceeded by his nephew Conftantine, the fon of Kenneth Mac Alpin, in whofe reign Scotland was firf invaded by the Danes, who proved fuch formidable enemies to the Englifh. 'This invalion is faid to have been occafioned by fome exiled Picts who fled to Denmark, where they prevailed upon the king of that country to fend his two br:,thers, Hurgar and Hubba, to recover the Pictifh dominions from Conftantine. Thefe princes landed on the coaft of Fife, And by ${ }^{37}$ where they committed the mof horrid barbarities, not the Dines. fparing even the ecclefialtics who had taken refuge in the ifland of May at the mouth of the Forth. Con. ftantine defeated one of the Danilh armies commanded by Hubba, near the water of Leven; but was himlelf defeated and taken prifoner by Hungar, who caufed him to be beheaded at a place fince called the Devil's. Cave, in the year 874 .

This unfortunate action coft the Scots 10,000 men : but the Danes feem not to have purchafed their victory very eafily, as they were obliged immedi. tely afterwards to abandon their conquefts, and retire to their own country. However, the many Danifh monuments that are ftill to be feen in Fife, leave no room to doubt that many bloody fcenes have been acted here between the Scots aud Danes befides that abovementioned.

Conftantine was fucceeded by bis brother Lth, fur. named the Swift-footed, from his agility. Concerning: him we find nothing memorable; indeed the accounts are fo confufed and contradictory, that it is impoffible

The Scots
defeated by the saxons.

Scotland. to form any decifive opinion conceming the tranfactions of this reign. All agtee, however, that it was but flort; and that he was fucceeded by Gregory the fon of Dong:1, contemporary with Alfred of Engiand, and that borth princes defervedly acquired the name of Great. The Danes at their departure had left the Piets in poffeffion of Fiie. Againlt them Gregory immediately marched, and quickly drove them into the north of England, where their cotfederates were already matters of Northumberland and York. In their way thither they threw a garrifon into the town of Berwick; but this was prefently reduced by Gregory, who put to the iwoid all the Danes, but fpared the lives of the Picts. From Berwick, Gregory purfued the Danes into Northumberland, where he defeated them ; and paffed the winter in Berwick. He then marched againtt the Cumbrians, who being moftly Picts were in alliance with the Danes. Them he eaffly overcame, and obliged to yield up all the lands they had formerly poffeffed belonging to the Scots, at the fame time that he agreed to protect them from the power of the Danes. In a fhort time, however, Conftantine the king of the Cumbrians violated the convention he had made, and invaded Annandale; but was defeated and killed by Gregory near Lochmaben. After this vietory Gregory entirely reduced the counties of Cumberland and Weftmoreland, which, it is faid, were ceded to him by Alfred the Great ; and indeed the fituation of Alfred's affairs at this time renders fuch a ceffion by no means improbable.

We next find Gregory engaged in a war with the Irifh, to fupport Donach, an Irifh prince, againft two rebellious noblemen. The Irifh were the firt aggreffors, and invaded Galloway; but being repulfes with great lofs, Gregory went over to Ireland in perfon, where the two chieftains, who had been enemies to each other before, now joined their forces in order to oppofe the common enemy. The firt engagement proved fatal to one of their chiefs named Brian, who was killed with a great number of his followers. After this victory Gregory reduced Dundalk and Drogheda. On his way to Dublin he was oppoifed by a chieftain named Cozneil, who fhared the fate of his confederate, being alfo killed, and his army entirely defeated. Gregory then became guardian to the young prince whom he came to affift, appointed a regency, and obliged them to fwear that they would never admit into the country either a Dane or an Englifhman without his confent. Having then placed garrifons in the frongeft fortreffes, he returned to Scotland, where he built the city of Aberdeen; and died in the year 892, 1) at his caftle of Dundore in the Garioch.

Douald III. Gregory was fucceeded by Donald III. the fon of Conftantine, who imitated the virtues of his predeceffor. The Scots hiftorians unanimoufly agree that Northumberland was at that time in the hands of their countrymen; while the Englifh as unanimoufly affirm that it was fubject to the Danes, who paid homage to Alfred. Be this as it will, however, Donald continued to live on good terms with the Engliih monarch, and fent him a body of forces, who proved of confiderable advantage to him in his wars with the Danes: The reign of Donald was but fhort; for having marched againf fome robbers (probably no other than the Danes) who had invaded and ravaged the counties of

Murray and Rofs, he died at Forres foon after, having defeated and fubdued them in the year 903. He was fucceeded by Contantine III. the fon of Erh the Swittfooted, concerning whom the mof remarkable particular we find related is his entering into an alliance with the Danes againt the Englifh. The occation of this confederacy is faid to have been, that the Englih monarch, Edward the Elder, finding the Scots in poffeflion of the northern counties of England, made fuch extravagant demands upon Conftantine as obliged him to ally with the Danes in order to preferve his dominions in fecurity. However, the league fub filted only for two years, after which the Danes found it more for their advantage to refume their ancient friendhip with the Englifh.

As foon as Conftantine had concluded the treaty with the Danes, he appointed the prefumptive heir to the Scottifh crown, Malcolm, or, according to fome, Eugene the fon of the late king Donald, primee of the fouthern counties, on condition of his defending them againft the attacks of the Englifh. The young prince had foon an opportunity of exerting his valour: but not behaving with the requifite caution, he had the misfortune to be defeated, with the lofs of almoft all his army, he bimfelf being carried wounded out of the field; and in confequence of this difalter, Conftantine was obliged to do homage to Edward for the poffef. fions he had to the fouthward of the Scots boundary.

In the beginning of the reign of Athelitan the fon of Edward the Elder, the northern Danes were encouraged by fome confpiracies formed againf that monarch to throw off the yoke; and their fuccefs was fuch, that Athelftan thought proper to enter into a treaty with Sithric the Danifl chief, and to give him his daughter in marriage. Sithric, However, did not long furvive his nuptials; and his fon Guthred, endeavouring to throw off the Englifh yoke, was defeated, and obliged to fly into Scotland. This brought on a feries of hoftilities between the Scots and Englifh, which in the year 938 iffued in a general engagement. At this time the Scots, Irilh, Cumbrians, ani Danes, were confederated againit the Englifh. The Scots were commanded by their king Conftantine, the Jrifh by Anlaf the brother of Guthred the Danifh prince, the Cumbrians by their own fovereign, and the Danes by Froda. The generals of Athelitan were Edmund his brother, and Turketil his favourite. The Englifh attacked the entrenchments of the confederates, where the chief refiftance they met with was from the Scots. Conftantine was in the urmoft danger of being killed or taken prifoner, but was refcued by the bravery of hits foldiers: however, after a moft obltinate engagement, the confederates were defeated with fuch flaughter, that the flain are faid to have been innumrrable. The con- lifh. fequence of this victory was, that the Scots were deprived of all their poffeffions to the fouthward of the Forth; and Conitantine, quite difurited with his mis. fortune, refigned the crown to Malcum, and retired to the monaltery of the Culdees at St Andrew's, where he died five years after, in 943 .

The diftrefles which the Englifh fuftamed in their fublequent wars with the Danes gave the Scots an opportunity of retrieving their affairs; and in the year 944, we find Malcolm, the fucceffor of Conftantine, invefted with the fovereignty of Northamberland, on con.

22
New invafions of the Danes.
dition of inis holding it as fief of the crown of England, and affifting in defence of the northern border. Soon after the conclufion of this treaty Malcolm died, and was fucceeded by his fon Indulfus. In his reign the Danes became extremely formidable by their invafions, which they now renewed with greater fury than ever, being exafperated by the friendflip fubfifting between the Scots and Englifh monarchs. Their firt defcent was. upon Eaf Lothian, where they were foon expelled, but croffed over to Fife. Here they were a fecond time defeated, and driven out; and fo well had Indulfus taken care to guard the coafts, that they could not find an opportunity of landing; till having feemed to fteer towards their own country, the Scots were thrown off their guard, and the Danes on a fudden made good their landing at Cullen, in Banffshire. Here Indulfus foon came up with them, attacked their camp, and drove them towards their fhips, bet was killed in an ambufcade, into which he fell during the purfuit. He was fucceeded by Duflus, to whom hiftorians give an excellent character; but, after a reign of five years, he was murdered in the year 965 . He was fucceeded by Culen the fon of Indulfus, who had been nominated prince of Cumberland in his father's lifetime, as heir-apparent to the throne. Fie is reprefented as a very degenerate prince; and is faid to have given himfelf up to fenfuality in a manner almoft incredible, being guilty of incontinence not only with women of all rarks, but even with his own fifters and daughters. The people in the mean time were fleeced, in order to fupport the extravagance and luxury of their prince. In confequence of this, an affembly of the flaies was convened at Scone for the refettling of the government; but on his way thither Culen was affatinated, near the village of Methven, by Rohard, thane or fheriff of Fife, whofe daughter the king had debauched.

The provocations which Culen had given to his nobility feem to have rendered them totally untractable and licentious; which gave an occafion to a remarkable revolution in the reign of Kenneth III. who fucceeded Culen. This prince, being a man of great refolution, began with relieving the common penple from the oppreffions of the nobility, which were now intolerable ; and this plan he purfued with fo much fuccefs, that having nothing to fear from the great barons, he ordered them to appear before him at Lanerk; but the greatelt part, confcious of their demerits, did not attend. The king fo well diffembled his difpleafure, that thofe who came were quite charmed with his affability, and the noble entertainment he gave them; in confequence of which, when an affembly was called next year, the guilty were encouraged to appear as well as the innocent. No fooner had this affembly met, however, than the place of meeting was befet with armed me:. The king then infurmed them that none had any thing to apprehend exceptir, fuch as had heen notorious of. fenders; and thefe he ordered to be immediately taken into cuftody, telling them, that their fubmitting to public juftice mult be the price of their liberty. They were obliged to accept the king's offer, and the criminals were accordingly punifhed according to their deferts.

About this time Edgar, king of Englane, finding himfelf hard preffed by the Danes, found means to unite the king of Scotland and the prince of CumberVol. XVI.
land along with hinfelf in a treaty againft the Dane:; which gave occafion to a report that Kenneth had become tributary to the king of England. This, how. ever, is utterly denied by all the Scots hiftorians; who affirm that Kenneth cultivated a good correfpondence with Edgar, as well becaufe he expected affitance ia defending his coafts, as becaufe he intended entirely to alter the mode of fucceffion to the throne. About this time the Danes made a dreadful invafion. Their origis nal intention feems to have been to land on fome part of the Englifh coafts ; but finding them probably too well guarded, they landed at Montrofe in Scotland, committing everywhere the moft dreadful ravages. Kenneth at that time was at Stirling, and quite unprepared; however, having collected an handful of troops, he cut off many of the enemy as they were ftraggling up and down, but conld not prevent them from befieging Perth. Neverthelefs, as the king's army conftantly increafed, he refolved to give the enemy battle. The fcene of this action was at Loncarty, near Perth. The king is faid to have offered ten pounds in filver, or the value of it in land, for the head of every Dane which fhould be brought him; and an immunity from all taxes to the foldiers who ferved in his army, provided they fhould be victorious: but, notwithftanding the utmoft Defeats the efforts of the Scots, their enemies fought fo defperate. Danes. ly, that Kenneth's army mult have been totally defeated, had not the fugitives been ftopped by a yeoman and his two fons of the name of Hay, who were coming up to the battle, armed with fuch rultic weapons as their condition in life afforded. Buchanan and Boece inform us, that thefe countrymen were ploughing in a field hard by the fcene of action, and perceiving that their countrymen fled, they loofed their oxen, and made ufe of the yokes as weapons, with which they firlt obliged their countrymen to ftand, and then annoyed their enemies. The fight was now renewed with fuch fury on the part of the Scow, that the Danes were ut. terly defeated ; and, after the battle, the king rewarded Hay with the barony of Errol in the Carfe of Gowrie, ennobled his family, and gave them an armorial bearing alluding to the rultic weapons with which they had atchieved this glorious exploit.

In the year 994, Kenneth was murdered at the in- Kenueth ftigation of a lady named Fenella, whofe fon he had murdered. caufed to be put to death. The morder was perpetrated in Fenella's caltle, where the had perfuaded the king to pay her a vifit. His attendants waited long near the place; but being at length tired out, they broke open the doors, and found their king murdered : apon which they laid the caftle in afhes; but Fenella efcaped by a poftern. The throne was then feized by an ufurper named Conftantinc; who, being killed in battle after a reign of a year and an lalf, was fucceeded by Grime, the grandfon of king Duffus; and he again was defeated and killed by Malcolm the fon of Kenneth, the lawful heir of the Scottifh throne. After this victory, however, Milcolm did not immediately affume the fir vereignty ; but afked the crown from the nobles, in confequence of a law paffed in the reign of Kenneth, by which the fucceffion to the throne of Scotland became hereditary. This they immediately granted, and Maicolm was accordingly crowned king. He joined himAif in ftrict alliance with the king of England; and proved fo fuccefsful againft the Danes in England, that

Sweno

## Scotlan I.

 $\rightarrow \sim$27

Sweyn their king refolved to direct his whole force againit him by an invation of Scotiand. His firft attempt, however, proved very unfuccefful ; all his foldiers being cut in pieces, except fome few who efcaped to their hips, while the lofs of the Scots amounted to no more than 30 men. But in the mean time, Duncan, prince of Cumberkend, having neglected to pay his homage to the king of England, the latter invaded that country in conjunction with the Danes. Malcolm took the field againt them, and defeated both; but while he was thus employed in the fouth, a new army of Danes landed in the north at the mouth of the river Spey. Malcolm advanced againft them with an army the thing but the blind impulfes of fury, were almoft all cut to piedes; Malcolm himfelf being defperately wounded.
By this victory the Danes were fo much elated, that they fent for their wives and children, intending to fetthe in the country. The caftle of Nairn, at that time thought almoft impregnable, fell into their hands; and the towns of Elgin and Forres were abandoned both by their garrifons and iuhabitants. The Scots were everywhere treated as a conquered penple, and employed in the moft fervile offices by the baughty conquerors; who, to render the caftle of Nairn, as they thought, abfolutely impregnable, cut through the fmall ifthmus which joined it to the land. All this time, however, Malculm was raifing forces in the fouthern counties; and having at laft got an army together, he came up with the Danes at Murtloch, near Balveny, which appears at this day to have been a frong Danifh fortification. Here he attacked the enemy; but having the 28 misfortune to lofe three of his general officers, he was
int defeat again obliged to retreat. However, the Danilh geneagain obliged to retreat. However, the Danifh general happening to be killed in the purfuit, the Scots were encouraged to renew the fight with fuch vigour, that they obtained at laft a complete vitory; but fuffered fo much, that they were unable to derive from it all the advantages which might otherwife have accrued.

On the news of this ill fuccefs, Sweyn ordered two fleets, one from England and another from Norway, to make a defcent upon Scotland, under the command of Camus, one of his moft renowned generals. The Danes attempted to land at the mouth of the Forth; but finding every place there well fortified, they were obliged to move farther northward, and effected their purpofe at Redhead in the county of Angus. The caftle of Brechin was firft befieged; but meeting with a fout refiftance there, they laid the town and church in afhes. From thence they advanced to the village of Pambride, and encamped at a place called Kartoddo.

Malcolm in the mean time was at hand with his army, sotian'. and encamped at a place called Barr, in the neighbour-
hood of which both parties prepared to decide the fate hood of which both parties prepared to decide the fate The Dancs of Scotland ; for as Moray and the northern provinces agaia dewere already in the poffeffion of the Danes, it was evi- feated. dent that a victory at this time mult put them in poffeffion of the whole. The engagement was defperate, and fo bloody, that the rivulet which proceeds from Loch Tay is faid to have had its water dyed with the blood of the flain; but at laft the Danes gave way and fled. There was at that time in the army of Malcolm, a young prince of the name of Keith (a). He purfued Camus; and having overtaken him, engaged and killed him; but another Scots officer coming up at the fame time, difputed with Keith the glory of the action. While the difpute latted, Malcolm came up; who fuf. fered them to decide it by fingle combat. Ir this fecond combat Keith proved alfo victorious, and killed his antagonift. The dying perfon confeffed the juttice of Keith's claim ; and Malcolm dipping his finger in his blood marked the thield of Keith with three ftrokes, pronouncing the words Veritas vincit, "Truth overcomes," which has ever fince been the armorial bearing and motto of the family of Keith ( $\bar{B}$ ).

The fhattered remains of the Danifh forces reached their fhips; but being driven back by contrary winds, and provifions becoming fcarce, they put alhore 500 men on the coaft of Buchan, to procure them fome food: but their communication with the fhips being foon cut off, they fortified themfelves as well as they could, and made a defperate refiftance; but at laft were all put to the fword. The place where this maffacre happened is ftill called Crudane; being probably an abbreviation of Cruor Danorum, the blond of the Danes, a name impofed on it by the ecclefiaftics of thofe days.

Sweyn, not yet difcouraged, fent his fon Canute, af- Anether | 3 r |
| :---: | terwards king of England, and one of the greateft war- invafion. riors of that age, into Scotland, with an army more powerful than any that had yet appeared. Canute landed in Buchan; and, as the Scors were much weakened by fuch a long continued war, Malcolm thought proper to act on the defenfive. But the Scots, who now thought themfelves invincible, demanded to be led on to a general engagement. Malcolm complied with their defire, and a battle enfued; in which though neilher party had much reafon to boalt of victory, the Danes were fo much reduced, that they willingly concluded a peace on the following terms, viz. That the peace conDanes fhould immediately depart Scotland; that as cluded. long as Malcolm and Sweyn lived, neither of them fhould wage war with the other, or help each others enemies;

## S C O

scotland. and that the field in which the battle was fought fhould be fet apart and confecrated for the burial of the dead. Thefe ftipulations were punctually fulfilled by Malcolm, who built in the neighbourhood a chapel dedicated to Olaus, the tutelar faint of thefe northern nations.

After all thefe glorious exploits, and becoming the fecond legiflator in the Scottifh nation, Malcolm is faid to have ftained the latter part of his reign with avarice

33 and oppreffion ; in confequence of which he was murdered at the age of 80 years, after he had reigned above 30. This affaffination was perpetrated when he was on his way to Glamis. His own domettics are faid to have been privy to the murder, and to have fled along with the confpirators; but in paffing the lake of Forfar on the ice, it gave way with them, and they were all drowned, their bodies being difcovered fome days after. The latter part of this account is confirmed by the fcuiptures upon fome ftones erected near the fpot; one of which is fill called Malcolm's grave-fone ; and all of them exhibit fome rude reprefentations of the murder and the fate of the affaffins.
Malcolm was fucceeded, in the year ro34, by his grandfon Duncan I, but he is faid to have had another grandfon, the famous Macbeth; though fome are of opinion that Macbeth was not the grandfon of Malcolm, but of Fenella who murdered Kenneth III. The firlt years of Duncan's reign were paffed in tranquillity, but domeflic broils foon took place on the following occafion. Banquo, thane of Lochaber, and anceftor to the royal family of Stuart, acted then in the capacity of fteward to Duncan, by collecting his rents; but being very rigid in the execution of his office, he was way-laid, robbed, and almoft murdered. Of this outrage Banquo complained as foon as he recovered of his wounds and could appear at court. The robbers were fummoned to furrender themfelves to juftice; but inflead of obeying, they killed the meffenger. Macbeth reprefented this in fuch frong terms, that he was fent with an army to reduce the infurgents, who had already deftroyed many of the king's friends. This commiffion he performed with fuch faccefs, that the rebel chief put an end to his own life; after which Macbeth fent his head to the king, and then proceeded with the utmoft feverity againt the infurgents, who were compofed of Irihmen, Iflanders, and Highlanders.
This infurreation was fcarcely quelled, when the Danes landed again in Fife; and Duncan put himfelf at the head of an arny, having the thanes Macbeth and Banquo ferving under him. The Danes were commanded by Sweyn king of Norway, and eldeft fon of Canute. He proceeded with all the barbarity natural to his nation, putting to death men, women, and children who fell in his way. A battle was fought between the two nations near Culrofs, in which the Scots were defeated: but the Danes purchafed their victory fo dear!y, that they could not improve it ; and Duncan retreated to Perth, while Macbeth was fent to raife more forces. In the mean time Sweyn laid fiege to Perth, which was defended by Duncan and Banquo. The Danes were fo much diftreffed for want of provifions, that they at laft confented to treat of a peace, provided the preffing receffities of the army were relieved. The Scots hiftorians inform us, that this treaty was fet on foot in onder to amufe Swey $n$, and gain time for the

Aratagem which Duncan was preparing. This was no other than a barbarous contrivance of infufing intoxcating herbs into the liquors that were fent along with who ${ }^{36}$ the other provifions to the Danifh camp. Thefe fopo- defeated. rifics had their intended effect ; and while the Danes were under their influence, Macbeth and Banquo broke into their camp, where they put all to the fword, and it was with difficulty that fome of Sweyn's attendants carried him on board; and we are told that his was the only fhip of all the fleet that returned to Norway. It was not long, however, before a frelh body of Danes landed at Kinghorn in the county of Fife: but they were entirely defeated by Macbeth and Banquo. Such of the Danes as efcaped fled to their hhips ; but before they departed they obtained leave to bury their dead in Inchcolm, a fmall illand lying in the Forth, where one of their monuments is fill to be feen.
Thus eaded the formidable invafions of the Danes; after which Duncan applied himfelf to the adrniniftration of juftice, and the reformation of the manners of his fubjects. Macbeth, however, who had obtained great reputation by his fuccefs againft the Danes, began to form ambitious defigns, and to afpire to the crown itfelf. The fables relating to his ufurpation are fo well known from the tragedy compofed by Shaks. fpeare which bears the name of Macbeth, that we fhall not take notice of them here; but only obferve, that at laft Duncan, not knowing he had fo dangerons an enemy near his perfon, whofe fchemes required to be watched, was murdered at Invernefs by Macbeth, who fucceeded him in the throne.
During the greateft part of the reign of the ufurper, Malcolm, the true heir to the crown of Scotland, kept clofe in his principality of Cumberland, without any thoughts of afcending his father's throne. Macbeth for fome time governed with moderation, but at laft became a tyrant. Becoming jealous of Banquo, the moft powerful fabject in his dominions, he invited him to an entertainment, and caufed him to be treacheroufly murdered. His fon Fleance was deftined to the fame fate, but efcaped to Wales. After him Macduff, the thane of Fife, was the molt powerful perfon in Scotland; for which reafon, Macbeth determined to deftroy him. On this Macduff fled to France; and Macbeth cruelly put to death his wife, and children who were yet infants, and fequeftered bis eftate. Macduff vowed revenge, and encouraged Malcolm to attempt to dethrone the tyrant. Macbeth oppofed them with his whole force; but being defeated in a pitched battle, he took refuge in the mof inaccefible places of the Highlands, where he defended himfelf for two years; but in the mean time Malcolm was acknowledged king of Scotland, and crowned at Scone.

The war between Macbeth and the new king continued for two years after the coronation of the latter ; but at laft he was killed in a fally by Macduff. However the public difturbances did not end with his life. His followers elected one of his kinfmen named Lullact. furnamed the Idint, to fucceed him: but he not being able to withland Malcolm, withdrew to the north, where being purfued, he was killed at Effey in Strathbogie, after a reign of four months.
Malcolm being now eltablifhed on the throne, began with rewarding Macduff for his great fervices; and conferred upon his family four extraordinary privileges.

## SCO

Sootland. 1. That they Thould place the king in his chair of tate at the coronation. 2. That they fhould lead the van of all the royal armies. 3. That they fhould have a regality within themfelves: and, 4 . That if any of Macduff's family fhould happen to kill a nobleman 'unpremeditately, he fhould pay 24 marks of filver, and, if a plebeian, 12. The king's next care was to reinftate in their fathers poffeffions all the children who had been difinherited by the late tyrant ; which he did in a convention of his nobles held at Forfar. In the time of William the conquercr, we find Malcolm engaged in a dangerous war with England, the occafion of which was as follows. On the death of Edward the Confeflor, Harold feized the throne of England, to the prejudice of Edgar Atheling the true heir to the crown. However, he created him earl of Oxford, and treated him with great refpect ; but on the defeat and death of Harold, William difcolvered fome jealoufy of Edgar. Soon after, William having occafion to pay a vifit to his dominions in Normandy, he appointed Edgar to attend him, along with fome other noblemen whom he fufpected to be in his intereft; but on his return to England, he found the people fo much difaffected to his government, that he proceeded with great feverity, which obliged great numbers of his fubjects to take refuge in Cumberland and the fouthern parts of Malcolm's dominions. Ed ar had two filters, Margaret and Chriftina: thefe, with his two chief friends, Gofpatric and Martefwin, foon made him fenfible how precarious his life was under fach a jealous tyrant, and perfuaded him to make preparations for flying into Hungary or fome foreign country. Edgar accordingly fet fail with his

41
Entertains Edgar an Englifh prince. mother Agatha, his two fifters, and a great train of Anglo. Saxon noblemen; but by frefs of weather was forced into the frith of Forth, where the illuftrious exiles landed at the place fince that time called the 2 zuen's Ferry. 'Malcolm no fooner heard of their landing than he paid them a vifit in perfon; and at this vifit he fell in love with the princefs Margaret. In confequence of this, the chief of Edgar's party repaired to the court of Scotland. William foon made a formal demand of Edgar ; and on Malcolm's refufal, declared war againt him.
William was the mof formidable enemy the Scots had ever encountered, as having not only the whole force of England, but of Normandy, at his command. However, as he had tyrannized molt unmercifully over his Englifh fubjects, they were much more inclined to affift his enemies than their own prisce; and he even found himfelf obliged to give up the county of Northumberland to Gofpatric, who had followed Edgar, upon condition of his making war on the Scots. This nobleman accordingly invaded Cumberland; in return for which Malcolm ravaged Northumberland in a dreadful manner, carrying off an immenfe booty, and inviting at the fame time the Irith and Danes to join him.

Even at this time the Danes kept up their claims upon the crown of England, fo that they could not be tuppofed very zealous for the intereft of Edgar. The Irifh were alfo interefted in advancing the caufe of Harold's three fons, who had put themfelves under their prote $C$ tion; and befides, their chief view feems to have been to obtain plunder at the expence of any party. However, as all thefe views tended to the pulling down of William's power, an union was formed againat him;

## $732 \quad 1$

but when they came to particular Aipulations, the Seotlant. parties immediately difagreed. The three fons of Hareld, with a body of Iriih, made a defcent upon Somerfethire, and defeated a body of Englifh; but the Irifh England having thus obtained an opportunity of acquiring fome booty, immediately retired with it, after having ravaged the country. The Danes landed at the mouth of the Humber from 40 fmall fhips, where they were joined by Edgar and his party; and had the allies been unanimous, it is probable that William's government would have been overthrown.

By this time William had taken from Gofpatric the earldom of Northumberland, and given it to Robert Cummin one of his Norman barons; but the Northumbrians having joined Gofpatric, and received the Danes as their countrymen, murdered Cummin and all his followers at Durham, where they had been guilty of great cruelties. After this they laid fiege to the forts built by William in Yorkthire; but not being able to reduce them, the Englifi, Scots, and Danes, united their forces, took the city of York itfelf, and put to the fword three thoufand Normans who were there in garrifon; and this fuccefs was followed by many incurfions and ravages, in which the Danes and Northumbrians acquired great booty. It foon appeared, hcwever, that thefe allies had the intereft of Edgar no more at heart than the Irifh ; and that all the dependence of this fordorn prince was upon Malcolm, and the few Englifhmen who had followed his fortune; for the booty was no fooner obtained, than the Danes retired to their thips, and the Northumbrians to their habitations, as though they had been in perfect fafety. But in the mean time William, having raifed a confiderable army, advanced northwards. He firft took a fevere revenge upon the Northumbrians; then he reduced the city of York, and put to death all the inhabitants; and perceiving that danger was fill threatened by the Danes, he bribed them with a fum of money to depart to their own country.
Malcolm was now left alone to encounter this formidable adverfary; who, finding himfelf unable to oppofe fo great a force, withdrew to his own dominions, where he remained for fome time on the defenfive, but not without making great preparations for invading England once more His fecond invafion A 44 took place in the year ro71, while William was employ- invafian. ed in quelling an infurrection in Wales. He is faid at this time to have behaved with the greateft cruelty. He invaded England by Cumberland; ravaged Teefdale; and at a place called Hundreds-keld, he maffacred fome Englifh noblemen, with all their followers. From thence he marched to Cleveland in the north-riding of Yorsflire; which he alfo ravaged with the utmoft cruelty, fending back the booty with part of his army to Scotland : after which, he pillaged the bifhopric of Durham, where he is faid not to have fpared the moft facred edifices, but to have burnt them to the ground. In the mean time Gofpatric, to whom William had again ceded Northumberland, attempted to make a diverfion in his favour, by invading Cumberland: but being utterly defeated by Malcolm, he was obliged to fhat himfelf up in Bamborough cafle; while Malcolm returned in triumph with his army to Scotland, where he married the princefs Margaret.

The next year William, haying greatly augmented

## SCO

Scotland.
his army, invaded Scotland in his turn. The particu. ars of the war are unknown ; but it certainly ended mach to the difadvantage of the Scots, as Malcolm agreed to pay him homage. The Englifl hiltorians contend that this homage was for the whole of his dominions; but the Scots with more fhow of reafon affirm, that it was only for thote he poffeffed in England. On the conclufion of the peace, a crofs was erected at Stanmore in Richmondfhire, with the arms of both kings, to ferve as a boundary between the poffefions of William and the feudal dominions of Malcolm. Part of this monument, called Re-crofs, or rather Roy-crofs, or The crofs of the kings, was entire in the days of Camden.

This peace between Malcolm Canmore and William produced the greateft alteration in the manners of the Scots. What contributed chiefly to this was the excellent dipofition of queen Margaret; who was, for that age, a pattern of piety and politenefs : and next to this was the number of foreigners who had fettled in Scotland; among whom were f, me Frenchmen, who laid the foundation of that friendhip with the Scots which lafted for ages. Malcelm himfel, alfo, though by his ravages in England he feems naturally to have been a barbarian, was tar from being averfe to a reformation, and even fet the example himfelf. Dapring her hufband's abience in England queen Matgaret had chofen for her confeffor one Turgot, whom the alfo made her affiftant in her intended reformation. She began with new-modelling her own court; into which the introduced the offices, furniture, and manner of living, common among the more polite nations of Europe. She difmiffed from her fervice all thofe who were noted for immorality and impiety : and charged Turgot, on pain of her difpleafure, to give his real fentiments on the flate of the kingdom, after the beft inquiry he could make. By him the was informed, that faction reigned among the ncbles, rapine among the commons, and incontinence amung all degrees of men. Above all, he complained that the kingdom was deftitute of a learned clergy, capable of reforming the people by their example and doctrine. All this the queen repretented to her hurband, and prevailed upon him to fet about the work of reformation immediately; in which, however, he met with confiderable oppolition. The Scots, ac. cuftomed to opprefs their inferiors, thought ill reftrictions of their power vere as many fleps towards their dlavery. The introduction of foreign offices and titles confirmed them in this opinion; and fuch a dangerous infurrection happened in Miray and fome of the northenn counties, that Malcolm was obliged to march againt the rebels in perfon. He found them, indeed, very formidable; but they were fo mach intimidated by his refolution, that they intreated the clergy who were among them to intercede with the king in their favour. Malcolm received their fubmiffion, but refufed to grant an unconditional pardon. He gave all the common people indeed leave to return to their habitations, but obliged the bette: fort to furrender themfelves to his pleafure. Many of the moft guilty were put to death, or condemned to perpetual imprifonment ; while others had their eflates confifcated. This feverity checked the rebellious fpirit of the Scots, upon which Malcolm returned to his plars of reformation. Still, bowever, he found himfelf oppoicd even in thofe abulcs,
which were molt obvious and glaring. He durlt net sartind. entirely abolifh that infamous practice of the landlord claiming the firtt night with his tenant's bride; though, by the queen's influence, the privilege was changed into the payment of a piece of money by the bridegroom, and was afterwards known by the name of mer. cheta mulierum, or "the woman's merk." In thofe days the Scots were without the practice of faying grace after meals, till it was introduced by Margaret, who gave a glafs of wine, or other liquor, to thofe who remained at the royal table and heard the thankfgiving; which expedient gave rife to the term of the grace. drink. Befides this, the terms of the duration of Lent and Eafter were fixed; the king and queen beftowed large alms on the poor, and the latter wafhed the fect of fix of their number; many churches, monalteries. \&c. were erected, and the clerical revenues augmented. However, notwithftanding thefe reformations, fome hiforians have complained, that, along with the manners of the Englifh and French, their luxuries were alfo introduced. Till this reign the Scots had been remarkable for their fobriety and the fimplicity of thei: fare; which was now converted into excefs and riot, and fometimes ended fatally by quarnels and bloodifed. We are told, at the fame time, that even in thofe days, the nobility eat only two meals a-day, and were ferved with no more than two difhes at each meal; but that their deviation from their ancient temperance occafioned a diminution of the ftrength and fize of the people. - In the year 10'7, Malcolm again invaded England; England but upon what provocation, or with what fuccels, is again ine, not weli known. But in 1088, after the death of vaded. the Conqueror, he again efpoufed the caufe of Edgar Atheling, who had been reduced to implore his affiltance a fecond time, when William Rutus afcended the throne of England. At the time of Edgar's arrival, Malcolm was at the head of a brave and well-difciplined army, with which he penetrated a great way into the country of the enemy; and, as it is faid, returned to Scotland with an immenfe booty. Some hiftorians tell us, that in this expedition Malcolm met with a defeat, which obliged him to return ; and indeed this is not a little countenanced by others, who fay, not indeed that he was defeared, but that it was the will of God he fhould proceed no farther. But, be this as it will, William refolved to revenge the injury, and prepared great armaments both by fea and land fur the invation of Scotland. His fuccefs, however, was not anfwerable to the grearnefs of his preparations. His flect was dafhed to pieces by forms, and almoft all on board of it perithed. Malcolm had alio laid wafte the country through which his antagonif was to pafs, in fuch an effectual manner, that William lolt a great part of his troops by fatigue and famine ; and, when he arrived in Scotland, found limfelf in a fituation very little able to refift Malcolns, who was advancing againft him with a powerful army. In this diftrefs, Rufus had recourfe to Robert de Mow- The Enfbray earl of Northomberland, who diffuaded kim from lif army venturing a battle, but advifed him by all means to in treat open a negociation by means of Edgar and the other dangerEnglifh noblemen who refided with Malcolm. Edgar undertook the negociation, on condition of his being reItored to his eftates in England; but met with more difficulty than he imagined. Malcolm had never yet recognized the right of William Rufus to the throee
$\underbrace{\text { scotlan. }}$ of England, and therefore refufed to treat with him as a fovereign prince; but offered to enter into a negociation with his brother Robert, furnamed Curt bofe, from the fhortnefs of his legs. The two princes accordingly met; and Malcolm, having fhown Robert the difpoftion of his army, offered to cut off his brother William, and to pay to him the homage he had been accultomed to pay the Conqueror for his Englifh dominions. But Robert generoufly anfwered, that he had refigned to Rufus his right of primogeniture in England; and that he had even become one of Wil-

## 49

 liam's fubjects, thereby accepting of an Englifh eftate. An interview with William then followed, in which it was agreed that the king of England Ihould reftore to Malcolm all his fouthern poffeffions, for which he fhould pay the fame homage he had been accuftomed to do to the Conqueror, that he fhould reftore to Malcolm 12 difputed manors, and give him likewife 12 merks of gold yearly, befides reftoring Edgar to all his Englifh eftates.This treaty was concluded in Lothian, according to the Englifh hiftorians; but at Leeds in Yorkfhire, according to the Scots. However, the Englifh monarch looked upon the terms to be fo very difhcnourable, that he refolved not to fulfil them. Soon after his departure Edgar and Robert began to prefs him to fulfil his engagements; but receiving only evafive anfwers, they paffed over into Normandy. After their departure, William applied himfelf to the fortification of his northern boundaries, efpecially Carlifle, which had been deftroyed by the Danes 200 years before.-As this place lay within the feodal dominions of Malcolm, he complained of William's proceeding, as a breach of the late treaty; and foon after repaired to the Englifh court at Gloucefter, that he might have a perfonal in-
50 terview wihh the king of England, and obtain redrefs. Honilities On his arrival, William refufed him admittance to his resommen- prefence, without paying him homage. Malcolm ofced. fered this in the fame manner as had been done by his predeceffors, that is, on the confines of the two kingdoms; but this being rejected by William, Malcolm returned to Scotland in a rage, and prepared again for war.
The firlt of Malcolm's military operations now proved fatal to him ; but the circumftances of his death are
$\underset{\text { Malcolin }}{5 \mathbf{r}}$ killed at the fiege of Alnwick caff:c.
pened in the year 1093, the throne was ufurped by his Scotland. brother Donald Bane; who, notwithftanding the great ${ }_{52}$ virtues and glorious atchievements of the late king, had The throne been at the head of a frong party during the whole of ufurped by his brother's reign. The ufurper, giving way to the Donald barbarous prejudices of himfelf and his countrymen, ex. Banepelled out of the kingdom all the foreigners whom Malcolm had introduced, and obliged them to take refuge in England. Edgar himfelf had long refided at the Englifh court, where he was in high reputation; and, by his intereft there, found means to refcue his nephew young Edgar, the king of Scotland's eldeft fon, out of the hands of the ufurper Donald Bane. The favour he fhowed to him, however, produced an accufation againft himfelf, as if he defigned to adopt young Edgar as his fon, and fet him up as a pretender to the Englifh throne. This accufation was preferred by an Englifhman whofe name was Orgar ; but, as no legal proofs of the guilt could be obtained, the cuftom of the times rendered a fingle combat between the parties unavoidable. Orgar was one of the ftrongelt and moft ac. A fingle tive men in the kingdom; but the age and infirmities combat. of Edgar allowed him to be defended by another. For a long time none could be found who would enter the lifts with this champion; but at laft one Godwin of Winchefter, whofe family had been under obligations to Edgar or his anceftors, offered to defend his caufe. Orgar was overcome and killed: and, when dying, confefled the falfehood of his accufation. The conqueror obtained all the lands of his adverfary, and Willam lived ever afterwards on terms of the ftrictelt friendhhip with Edgar.
This combat, trifling as it may feem to us, produced very confiderable effects. The party of Edgar and his brother's (who had likewife taken refuge at the Englifh court) revived in Scotland, to fuch a degree, that Donald was obliged to call in the Danes and Norwegians to his affitance. In order to engage them more effectually to his intereft, the ufurper yielded up or the Orkney to them the Orkney and Shetland iflands; but when and Shethis new allies came to his affiftance, they behaved in land illands fuch a manner as to become more intolerable to the to the Scots than ever the Englifh had been. This difcon- Danes. tent was greatly increafed when it was found that Wil. liam defigned to place on the throne of Scotland a natural fon of the late Malcolm, named Duncan, who had ferved in the Englifh armiés with great reputation. Donald attempted to maintain himfelt upon the throne by the affiftance of his Norwegian allies; but, being abandoned by the Scots, he was obliged to fly to the inles, in order to raife more forces; and in the mean time Duncan was crowned at Scone with the ufual folemnity.

The Scots were now greatly diftreffed by two ufurpers who contended for the kingdom, each of them fupported by a foreign army. One of them, however, was foon difpatched. Malpedir, thane of Mearns, furprifed Duncan in the caftle of Mentieth, and killed him; after which he replaced Donald on the throne. The affection of the Scots, however, was by this time entirely alienated from Donald, and a manifeft intention of calling in young Edgar was hown. To prevent this, Donald offered the young prince all that part of Scotland which lay to the fouthward of the Forth; but the terms were rejected, and the meffengers, who brought

## Scotland:

56
brought them were put to death as traitors. The king
of England alfo, dreading the neighbourhood of the Norwegian*, interpofed in young Edgar's favour, and gave Atheling the command of an army in order to reftore his nephew. Donald prepared to oppofe his enemies with all the forces he could raife; but was deferted by the Scots, and obliged to flee : his enemies purfued him fo clofely, that he was foun taken; and being brought before Edgar, he ordered his eyes to be put out, condemning him at the fame time to perpetual banifhment, in which he died fome time after.

The hiftorians of thefe times ifform us, that this revolution was owing to the interpolition of St Cuthbert, who appeared to Edgar, informing him that he fhould prove vietorious, provided he repaired next day to his church, and received bis banner from the hands of the canons; which he accordingly did, and proved ever afterwards a mofl grateful votary to his patron. During his reign a ftrict triendhip fublited between the courts of England and Scotland; cowing to the marriage of Henry I. of England with the Princefs Matilda, fifter to Edgar. This has given occafion to the Englifh hifluians to alfert that Edgar held the kingdom of Scotland as a feudatory of Henry; and to this purpofe have forged certain writings, by which Edgar acknowledges "That he held the kingdom of Scotiand by gift fiom his Lord William king of England; and with confent of his faid lord, he gives to Almighty Gov, and the church of Durham, and to the glorious bifhop of St Cuthbert, and to bithop William, and to the monks of Durham, and their fucceffors, the marfions of Berwick and Coldingham, with feveral other lands poffelfed by his father Malcolm: and this charter is granted in the prefence of bifhop William, and Turgot the prior ; and confirmed by the crofles of Edgar his brother, and other noblemen." But that thefe writings are forged, ap. pears from the non-exiftence of the original charter, and from their being related in quite a different manner by fome other authors.- For the fame purpofe a feal has been forged of Edgar fitting on horfeback, with a fword in his right-hand, and a fhield on his left arm, within a berder of France. But this laft circumftance is a fufficient proof of the forgery; fince, in the fame repufitory in which this feal is kept, there are five charters of the fame Edgar which are undoubtedly genuine; and on the feals belonging to them he is reprefented fiting on two fwords placed acrofs, with a feeptre in one hand, a fword in the other, a royal diadem on his head, with this infriptinn round it, Scotorum Basileus, which the beft Englifh antiquaries allow to have been a tille deno ii, independency.

After a reign of nine years, Edgar died at Dundee, in the year 1107: and was fucceeded by his brother Alexander I. furnamed the Fierce from the impetuofity of his temper. On his acceflion to the throne, however, the Scots were fo ignorant of his true character, on account of his appearance of piety and devotion, that the northern parts of the kingdom were foon fill. ed with ravages and bloodhed, by reafon of the waro of the chieftiins with each cther. Alexander immediately raifed an army, and marching into Moray and Ros-fhire, attacked the infurgents feparately; and having fubdued them all, he put great numbers of them rigidly. to death. He then fet himfelf to redure the excrbilant power of the nobles, and to deliver the common people
from the opprefion under which they groaned. A re- Scorland. markabie intance of this appeared on his return fiom the expedition juft now mentioned. In paffing through the Mearns, he met with a widow, who complained that her huband and fon had been put to death by the young earl their fuperic. Alexander immediately alighted from his horfe, and fwore that he would not remount him till he hav inquired into the jultice of the complaint; and, finding it to be true, the offender was hanged on the fpot. Thefe vigorous proceedings prevented all attempts at cpen rebellion; but produced many confpiracies among the profligate part of his private fubjects, who had been accultomed to live under a more remifs government. The moft remarkable of thefe Narrowly took place while the king was en $\begin{gathered}\text { aged in building the ercares }\end{gathered}$ caftle of Biledgar, fo called in menory of his bruther affafins. Edgar, who had laid the foundation-ftone. It was fituated in the Carfe of Gowrie, which, we are told, had formerly belonged to Donald Bane, but afterwards came to the crown, either by donation or forieiture. The confpiraturs bribed one of the king's chamberlains to introduce them at night into the royal bed-chamber: but Alex:nder, alarmed at the noife, drew his fword, and killed fix of tiem; after which, by the help of a knight named Alcxander Carron, he efcaped the danger, by fleeing into Fite. The conipirators chiefly refided in the Mearns, to which Alexander once more repaired at the head of an army; but the rebels retreated northwards, and crofled the Spey. The king purfued them acrofs that river, defeated them, and brought to jultice all that fell into his hands. In this battle, Carron diitinguifhed himfelf fo eminently, that he obtained the name of $S_{k \text { i imgeour }}$ or Skrimzeour; which indeed is no other than the Englifh word /kirmi//zar or forgter.

The next remarkable tranfaction of Alexander's reign, His exas recorded by the Englifh hittorians, was his journey ploits in into England, where he paid a vifit to Henry I. whom England. he found engaged in a war with the Weich. The occafion of it was this: Henry had planted a colony of Flemings on the borders of Wales, in order to keep that turbulent pecple in awe, as well as to introduce into his kingdom the manufactures for which the Flemings were $f \downarrow m$ us. The Welch, jealous of this growing colony, invaded England; where they defeated the earl of Chefter and Gilbert Strongbow, the two moit powerful of the Englifh fubjects. Alexander, in virtue of the fealty which he had fiworn for his Englifh p.fferfions, readily agreed to lead an army into Wales. There he defeated one of the chiefiains, and reduced him to great fruits ; but could not prevent him from efcaping to Gritith prince of North Wales, with whom he was clofely allied. Henry alfo marched againf the enemy, but with much worfe fuccefs in the field than Alexander ; fir he loft two-thirds of his army, with almoft his whole baggage, by fatigue, famine, and the attacks of the Welch. This lofs, however, he made up in fome meafure by his policy; for having found means to raife a jealoufy between the two Welch chiefs, he induced them to conclude a peace, but not without reftoring all his lands to the one, and paying a confiderable fun of money to the other. Alexander died in 112.4 , after a reign of feventeen years; and was buried at Dunfermline.

This prince, dying a bachelor, was fucceeded by his kipy David younger brother David; who in:effered in the affairs with the

## S C O $[736] \quad$ s Co

asotland. of England, and took part with the emprefs Maud in res the civil war fhe carried on with Stephen. In II36, David met his antagonif at Durham; but as neither party cared to venture an engagement, a nepociation took place, and a treaty was concluded. This, however, was obferved but for a fhort time; fur, in the following year, David again invaded England, on fome frivolous pretences: He defeated Stephen at Rozburgh; and forced him to retreat precipitately, after lofing one half of his army. Next year he renewed his invation ; and, though he himfelf was a man of great mildnefs and humanity, he fuffered his troops to commit fuch outrages, as firmly united the Englifh in oppofition to him. His grand-nephew William cut in pieces the vanguard of the Englifh army at Clithero; after which he ravaged the country with fuch cruelty, that the inhabitants became exafperated beyond meafure againft him. New affociations were entered into againft the Scots; and the Englifh army receiving great reinforcements from
the fouthward, advanced to Northallerton, where the famous ftandard was produced. The body of this ftandard was a kind of box which moved upon wheels, from which arofe the maft of a hlip furmounted by a filver crofs, and round it were hung the banners of St Peter, St John de Beverly, and St Wilfred. Standards of this kind were common at that time on the continent of Europe; and fo great confidence had the Englifh in this fandard, that they now thought themfelves invincible. They had, however, a much more folid ground of confidence, as being much better armed than their antagonifts. The armies met at a place called Caston Moor. The firlt line of the Scots army was compofed of the inhabitants of Galloway, Carric, Kyle, Cunningham, and Renfrew. Theete by fome hiftorians are called Picts, and are faid to haye had a prince of their own, who was a feudatory to David. The fecond line conifited of the Lothian men, by which we are to tenderitand the king's fubjects in England as well as the fouth of Scotland, together with the Englifh and Normans of Maud's party. The third line was formed of the clans under their different chieftains; but who, were fubject to no regular command, and were always impatient to return to their own country when they had acquired any booty. The Englifh foldiers having anged themfelves round their fandard, difmounted from their horfes, in order to avoid the long lances which the firt line of the Scots army carried. Their front-line was internixed with archers; and a body of cavalry, ready for purfuit, hovered at fome diftance. 'The Piets, befides their lances, made ufe of targets; but, when the Englifh clofed with them, they were foon diforwered and driven back upon the centre, where David commanded in perfon. His fon made a gallant reliftance, but was at laft forced to yield: the laat line feems never to have been engaged. David, feeing the viftory decided againf him, ordeted fome of his men to fave themfelves by throwing away their badges, which it feems Maud's party had worn, and mingling wihh the Englifh; after which he himfelf, with his fhattered furces, retreated towards Carlifle. The Eng-
63 lith hiforians fay, that in this battle the Scots were to-
ploits performed on either fide; and a peace was concluded, by which Henry prince of Scotland was put in poffeffion of Huntingdo: and Northumberland, and took an oath of fealty to Stephen. David continued faithful to his niece the emprefs as long as he lived; and died at Carlifle in the year 1553 , after a glorious reign of fomewhat more than 29 years.
David was fucceeded by his grandfon Malcolm IV. furnamed the Niaiden, on account of his continencee. He appears to have been a weak and fuperfitious prince, and died of a depreffion of fpisits in the year 1165. He was fucceeded by his brother William I. who immediately entered into a war with Henry II. of England, on account of the earldom of Northumberland, which had been given up by Malcolm; but Hen- of Eyry it ry, finding his affairs in a very embarraffed fituation, confented to yield up this county, on William's paying. him homage, rather than continue the miferies of war. In $11_{72}$, he attempted to avail himfelf of the unnatural war which Henry's fons carried on againft their father, and invaded England. He divided his army into three columns : the firtt of which laid fiege to Carlifle; the fecond he himfelf led into Northumberland; and the king's brother, David, advanced with the third into Leicefter fhire. William reduced the caftes of Burgh, Appleby, Warkworth, and Garby; and then joined that divifion of his army which was befieging Carlifle. The place was already reduced to fuch ftraits, that the governor had agreed to furrender it by a certain day, provided it was not relieved before that time : on which the king, leaving fome troops to continue the fiege, invefted a calle with fome of the forces he had under his command, at the fame time fending a flrong reinforcement to his brother David; by which means he himelf was left with a very fmall army, when he received intelligence that a frong body of Englifh under Robert de. Stuteville and his fon were advancing to furprife him.-William, fenfible of his inability to relift them, retired to Alnwick, to which he inftantly laid fiege; but in the mean time acted in fuch a carelefs and unthinking manner, that his enemies actually effected their defigns. Having dreffed a party of their foldiers in Scots habits, they took the king himfelf prifoner, and carried him, with his feet tied under the belly of a horfe, to Richmond Cafte. He was then He is take carried in chains before Henry to Northampton, and prifoner by ordered to be tranfported to the caftle of Falaife in the Englifh Normandy, where he was fhut up with other flate pri- to do hofoners. Soon after this an accommodation took place mage for between Henry and his fons, and the prifoners on both hiskingfides were fet at liberty, William only excepted, who dom. bore his confinement with great impatience. Of this Henry took the advantage, to make him pay homage for the whole kingdom of Scotland, and acknow= ledge that he held it only as a feu of the crown of England; and, as a fecurity, he was obliged to deliver into the hands of Henry all the principal forts in Scotland, vis. the caftles of Roxburgh, Berwick, Jedburgh, Edinburgh, and Stirling; William at the fame time agreeing to pay the Englifh garrifons which were put into thefe caftes. Daviu, the king's brother, with 20 barons, who were prefent at the ligning of this fhameful convention, were put into the hands of Henry as hoftages for William's good faith; after which the king was fet at liberty, and returned to Scotland.

## $\mathrm{SCO} \quad[737] \quad \mathrm{SCO}$

Scotland. $\underbrace{\text { Scotland. }}$

The affairs of Scotland were now in the greatelt confufion. The people of Galloway, at the head of whom were two noblemen or princes called Otbred and Gillert, had taken the opportunity of afferting their independency on the crown of Scotland; and, having expelled all the Scots officers out of the country, they demolifhed all the forts which William had erected in their country, and put to death all the foreigners. But in the mean time a quarrel enfuing between the two chiefs, Othred was murdered by Gilbert, who immediately applied to Henry for protection.

Henry, in order to give all poffible fanction to the convention betwixt him and William, fummoned him to meet him and his fon at York. William obeyed the fummons, and along with him appeared all the great nobility and landholders; who confirmed the convention of Falaife, fwore fealty to Henry, and put themfelves and their country under his protection. In the mean time, Gilbert, who was at the head of the rebels in Galloway, had offered to put himfelf and his people under the protection of the king of England, and to pay to Henry 2000 melks of filver yearly, with 500 cows and as many hogs, by way of tribute: however, Henry, that he might oblige his new feudatory William, refufed to have any concern in the affair. On this, William ordered his general Gilchtilt to march againft him ; which he did with fuch fuccefs, that Gilbert was entirely defeated, and Galloway again reduced under the dominion of Scotland. Very foon after this victory, Gilchrilt fell under the king's difpleafure on the following occafion. He had married Matilda, fifter to William ; and on fufpicion, or proof, of her incontinence, put her to death at a village called Maynes, near Dundee. The king being highly difpleafed at fuch a grofs affront to himfelf, fummoned Gilchrit to take his trial for the murder: but as the general did not choofe to make his appearance, his eftates were confifcated, his caftes demolifhed, and he himfelf banifhed. He took refuge in England ; but as it had been agreed in the convention between William and Henry that the one fhould not harbour the traiterous fubjects of the other, Gilchritt was forced to return to $\$$ cotland with his two fons. There they were expofed to all the miferies of indigence, and in perpetual fear of being difcovered, fo that they were obliged to fkulk from place to place. William, on his return from an expedition againtt an ufurper whom he had defeated, happened to obferve three ftrangers, who, though difguifed like ruftics, appeared by their noble mien to be above the vulgar rank. William, who firft difcovered them, was confirmed in this apprehenfion, by feeing them ftrike out of the high road, and endeavour to avoid notice. He ordered them to be feized and brought before him. The oldeft, who was Gilchrift himfelf, fell upon his knees before him, and gave fuch a detail of his misfortunes as drew tears from the eyes of all prefent; and the king reftored him to his former honours and eftates. From the family of this Gilchrift that of the Ogilvies is faid to be defcended.

The Scots continued to be in fubjection to the Englifh until the acceffion of Richard I. This monarch being a man of romantic valour, zealoufly undertook an expedition into the Holy Land againft the Turks, according to the fuperfition of the times. That he Vol. XVI.
might fecure the quiet of his dominions in his abtucs, he determined to make the king of Scotland his friend; and for this purpofe, he thought nothing could be mere acceptable than releafing him and his fubjects from that fubjection which even the Enclifh themfelves confidered releafed and as forced and unjuft. Howeyer, he determined not to horage hy lofe this opportunity of fupplying himfelf with a fum Richard. 1 . of money, which could not but be abfolutely neceflary in fuch an expenfive and dangerous undertaking. He therefore made William pay him 10,000 merks for this releafe : after which he entered into a convention, which is fill extant ; and in this he acknowledges, that " all the conventions and acts of fubmiffion from William to the crown of England had been extorted from him by unprecedented writings and dureffe." This tranfaction happened in the year 1189 .

The generofity of Richard met with a grateful return from William; for when Richard was imptifoned by the emperor of Germany in his return from the Holy Land, the king of Scotland fent an army to affift his regency againft his rebellious brother John, who had wickedly ufurped the throne of England. For this Richard owned his obligation in the higheft degree; but William afterwards made this an handle for fuch high demands as could not be complied with. Neverthelefs, the two monarchs continued in friendfhip as long as Richard lived. Some differences happened with king John about the poffefion of Northumberland and other notthern counties: but thefe were all finally adjufted to the mutual fatisfaction of both parties; and William continued a faithful ally of the Englifh monarch till his death, which happened in the year 1214 , after a reign of 49 years.

William was fucceeded by his fon Alexander II. a Alexanyouth of 16 . He revived his claim to Northumber. der II. land and the other northern counties of England; but John, fuppofing that he had now thoroughly fubdued the Englifh, not only refufed to confider the demands of Alexander, but made preparations for invading Scotland. John had given all the country between Scotland and the river Tees to Hugh de Baliol and another nobleman, upon condition of their defending it againf the Scots. Alexander fell upon Northumberhind, which he eafily reduced, while Jolin invaded Scotland. Alex- War with ander retired to Melros, in order to defend his own John king country ; upon which John burnt the towns of Wark, of England. Alnwick, and Morpeth, and took the flrong caftes of Roxburgh and Berwick. He next plundered the abbey of Coldingham, reduced Dunbar and Haddington, ravaging the country as he paffed along. His next operation was directed againft Edinburgh; but being oppofed by Alexander at the head of an army, he precipitately marched back. Alexander did not fail to purfue ; and John, to cover his retreat, burnt the towrs of Berwick and Coidingham. In this retreat the kins of England himfelf fet his men an example of barbarity, by fetting fire every morning to the houfe in which he had lodged the preceding night. In fhort, fuch defolation did John fpread all around him, that Alexander found it impoffible to continue his purfuit ; for which reafon he marched weftward, and invaded England by the way of Carlifle. This place he took and fortified; after which he marched fouth as far as Richmond, receiving homage from all the great barons as he went

5 A slong.

Scotland. $\rightarrow$ ravages, and obliged to return through Weftmoreland to his own dominions.

When the Englifh barons found it neceffary to put themfelves under the protection of Louis, fon to the i.ing of France, that prince, among other acts of fovereignty, fummoned Alexander to do him homage; but the latter being then engaged in the fiege of Carlifle, which had fallen into the hands of king John, he could not immediately attend. In a fhort time Alexander found himfelf obliged to abandon this enterprife: after which he laid fiege to Barnard-cafle; but being baflled here alfo, marched fouthwards through the whole kingdom of England, and met Louis at London or Dover, where the prince confirmed to him the rights to Northumberland, Cumberland, and Weftmoreland. He continued a faithful ally to Louis and the barons in their wars with John; and, in 1216, brought a frefh army to their affifance, when their affairs were almoft defperate. This once more turned the fale againft John ; but he foon after dying, the Englifh eafily be. came reconciled to the government of Henry III. and the party of Louis dwindled every day, till at laft he was obliged to drop all thoughts of being king of England.

As long as Louis continued in England, Alexander proved faithful to his intereft; but, in 1217, he was on fuch good terms with Henry as to demand his eldeft fifter, the princefs Joan, for a wife. His requeft was granted, and in 1221 he efpoufed the princefs; while his eideft fifter Margery was married to Hubent de Burgh julticiary of England, and his fecond fifter to Gilbert earl Marfhal, the two greateft fubjects in England.

As long as the queen of Scotland lived, a perfect harmony fubfifted between the Scots and Englifh: but in 1239 queen Joan died without children; and Alexander foon after married Mary, the daughter of Egelrand de Coucy, a young and beautiful French lady, by whom he had a fon named Alexander, in 1241. From this time a coolnefs took place between the two courts, and many differences arofe ; but no hoftilities were commenced on either fide during the lifetime of Alexander,

Immediately after the death of his father, Alexander III. took poffefiion of the throne. He is the firf of the Scots kings of whofe coronation we have any particular account. We are told, that the ceremony was performed by the bihop of St Andrew's, who girded the king with a military belt, probably as an emblem of his temporal juridiction. He then explained in Latin, and afterwards in Gaelic, the laws and oaths relating to the king; who agreed to and received them all with great appearance of joy, as he alfo did the benediction and ceremony of coronation from the cime prelate. After the ceremony was performed, a Highlander, probably one of thofe who went under the denomination of Sannachies, repeated on his knees before the throne, in his own language, the genealogy of Alexander and his anceftors, up to the firf king of
ander, notwithltanding lis youth, replied with great
fevife and modefty, that his bulinefs in England was matrimony; that he had come thither under Henry's protection and invitation; and that he was no way prepared to anfwer fuch a difficult queftion.

Henry feems to have been encouraged to make this attempt by the diftracted fate of the Scots affairs at that time; for, during the minority of the king, the nobility threw every thing into confufion by their diffenfions with one another. The family of Cummin were now become exceedingly powerful; and Alexander II. is blamed by Buchanan for allowing them to obtain fuch an exorbitant degree of power, by which they were enabled almoft to fhake the foundation of government. Notwithftanding the king's refufal to fubmit to the homage required of him, they imagined that Henry's influence was now too great; and fearing bad confequences to themfelves, they withdrew from York, leaving Henry in full poffeffion of his fon-in-law's perfon. Henry, however, to fhow that he deferved all the confidence which could be repofed in him, publicly declared, that he dropped all claim of fuperiority with regard to the crown of Scotland, and that he would ever afterwards act as the father and guardian of his fon-inlaw ; confirming his affurances by a charter. Yet when Alexander returned to Scotland, he found they had made a ftrong party againft his Englifh connections. 'They now exclaimed, that Scotland was no better than a province of England; and having gained almolt all 1 the nobility over to this opinion, they kept the king and queen as two ftate-prifoners in the caftle of Edinburgh. Henry had fecret intelligence of thefe proceedings; and his queen privately fent a phyfician whom fhe could truft, to inquire into her daughter's fituation. Having found means of being admitted into the young queen's prefence, fhe gave him a molt lamentable account of her fituation. She faid, that the place of their confinement was very unwholefome, in confequence of which their health was in imminent danger ; and that they had no concern in the affairs of government. Hiftorians do rot inform us by what means they were reduced to this difmal fituation ; only in general, that the Cummins ufurped the whole power of the ftate. Henry did not well know how to act. If he proceeded at once to violent meafures, he was afraid of the lives of his daughter and fon-in-law; and, on the other hand, by a more cautious conduct, he left them expofed to the wicked attempts of thofe who kept them in thraldom, fome of whom, he very well knew, had defigns on the crown itfelf. By advice of the Scots royalits They are on the crown itfelf. By advice of the Scots royalifts, fet at liber-
among whom were the earls of Dunbar, Fife, Strath- ty by Henerne, Carric, and Robert de Bruce, Henry aflembled his ry. military tenants at York, from whence he himfelf ad. vanced to Newcaftle, where he publifhed a manifefto, difclaiming all defigns againtt the peace or independency of Scotland; declaring, that the forces which had been collected at York were defigned to maintain both; and that all he meant was to have an interview with the king and queen upon the borders. From Newcaftle he proceeded to Wark, where he privately difpatched the earl of Glocefter, with his favourite John Manfel, and a train of trufty followers, to gain admiffion into the cafle of Edinburgh, which was then held by John Baliol and Robert de Rofs, noblemen of great influence both in England and Scotland. The Earl and Manfel
seotland. gained admittance into the caftle in difguife, on pretence of their being tenants to Baliol and Rofs; and their followers obtained accefs on the fame account, without any fufpicion, till they were fufficiently nume. rous to have maftered the garifon, had they met with any refiftance. The queen immediately informed them of the thraldom and tyranny in which the had been kept ; and among other things declared, that fhe was ftill a virgin, as her jailors obliged her to keep feparate from her hurbind. The Englith, being mafters of the cafte, ordered a bed to be prepared that very night for the king and queen; and Henry, hearing of the fuccefs of his party, fent a fafe-conduct for the royal pair to meet him at Alnwick. Robert de Rofs was fummoned by Henry to anfwer for his conduct ; but throwing himfelf at the king's feet, he was punifhed only by the fequeftration of his eftate, as was John Baliol by a heavy fine, which the king of England referved entirely to his own ufe.

Alexander and his queen were attended to Alnwick by the heads of their party; and when they arrived, it was agreed that Henry fhould act as his fon-in-law's guardian; in confequence of which, feveral regulations were made in order to fupprefs the exorbitant power
of the Cummins. That ambitious family, however, were all this time privately ftrengthening their party in Scotland, though they outwardly appeared fatisfied with the arrangements which had been made. This rendered Alexander fecure ; fo that, being off his guard, he was furprifed when afleep in the caftle of Kinrofs by the earl of Menteith, who carried him to Stirling. The Cummins were joined in this treafon by Sir Hugh de Abernethy, Sir David Lochore, and Sir Hugh de Barclay; and, in the mean time, the whole nation was thrown into the utmoft confufion. The great feal was forcibly taken from Robert Stuterville, fubtitute to the chancellor the bifhop of Dunkeld; the eftates of the royalifts were plundered; and even the churches were not fpared. The king at laft was delivered by the death of the earl of Menteith, who is faid to have been poifoned by his wife, in order to gratify her paffion for a young Englifh gentleman named Yobn Ruffel. This charge, however, was never proved ; but it is certain that ihe earl died at a juneture very criticul for Scotland, and that his death difconcerted all the fchemes of his party, which never afterwards could make head againf the royalifts.

Alexander being thus reftored to the exercife of regal authority, acted with great wifdom and moderation. He pardoned the Cummins and their adherents, upon their fubmitting to his authority; after which, he applied himfelf to the regulation of his other affairs : but a form was now seady to break upon him from another quarter. We have already feen, that the ufurper Donald Bane, brother to Malcolm Canmore, bad engaged to deliver up the illes of Orkney and Shetland to the king of Norway, for affifting him in making good his pretenfions to the crown of Scotland. Haquin, the king of Norway, at this timae alleged, that thefe engagements extended to the delivering up the iflands of Bute, Arran, and others in the Frith of Clyde, as belonging to the Ebudx or Weftern inles; and as Alexander did not think proper to comply with thefe demands, the Norwegian monarch appeared with a fleet of 160 fail, having on board 20,000 troops,
who landed and took the caftle of Air. Alexander im. sootland. mediaiely difpatched ambaffadors to enter into a treaty with Haquin ; but the latter, flufhed with fuccefs, would hearken to no terms. He made himfelf matter of the illes of Bute and Arran ; after which he paffed over to Cunningham. Alexander, prepared to oppofe him, divided his army into three bodies. The firt was ccmmanded by Alexander high fteward of Scotland (the great grandfather of Robert Il.) and confifted of the Argyle, Athol, Lenox, and Galluway men. The fecond was compofed of the inhabitants of Lothian, Fife, Merfe, Berwick, and Stirling, under the command of Patrick earl of Dunbar. The king himfelf led the centre, which confifted of the inhabitants of Pertifhire, Angus, Mearns, and the northern counties.-Haquin, who was an excellent commander, difpofed his men in order of battle, and the engagement began at a place called Largs. Both parties fought with great refolution ; but at laft the Norwegians were defeated with dreadful laughter, no fewer than 16,000 of them being killed on the fpot. The remainder efcaped to their fhips; which were fo completely wrecked the day after, that Haquin could fcarce find a veffel to carry him with a few friends to Orkney, where he foon after died of grief.

In confequence of this victory, Owen or John king of the inand of Man fubmitted to Alexander; and his example was followed by feveral other princes of the iflands belonging to the Norwegians. Haquin's fon, Magnus, a wife and learned prince, foon after arrived in Scotland with frefh reinforcements, and propofed a treaty : but Alexander, inftead of liftening to an accommodation, fent the earls of Buchan and Murray, with Allen the chamberlain, and a confiderable body of men, to the weftern illands, where they put to the fword fome of the inhabitants, and hanged their chiefs for having encouraged the Norwegian invafion. In the mean time, Magnus returned to Norway; where a treaty was at laft concluded between him and Alexander. By this Magnus renounced all right to the contefted inlands; Alexander at the fame time confenting to pay him 1000 merks of filver in the fpace of two years an 100 mairs eas, and 100 yearly ever atter, as an acknowledge- the ilinds meat for thefe inlands. To cement the friendthip more of Shetfirmly, a marriage was concluded between Margaret land, Ont. the dau ${ }_{0}$ hiter of Alezander, and Eric the fon and heir of Magnus, who was alfo a child; and, fome years after, when the parties were of proper age, the marriage was confummated.

From this time to the acceffion of Edward I. of England, we find nothing remarkable in the hiftory of Scotland. That prince, however, proved a more cruel enemy to that country than it had ever experiences. Alexander was prefent at the coronation of Edward, who was then newly arrived from the Holy Land, where he had been on a crufade. Soon after this Alexander paid him homage for his Englifh eftates; particularly for the lands and lordfhip of Penrith and others, which Henry had given him along with his daughter. He proved an excellent ally to Edward in his wars againft the French; and the latter paffed .a charter, by which he acknowledged that the fervices of the king of Scotland in thofe wars were not in confequence of his holding lands in England, tut as an ally to his crown. Even at this time, however, Edward 5 A .2

Norwegiaus.
scotland. Had formed a defign on the liberties of that kingdom; Defigne of acknowledging the fuperiority, by which he referved Edwardf. his right to the homage of the kingdom of Scotland, sagaint the when it fhould be claimed by him or his heirs. The liberties of Scothapd.
bifhop of Norwich fuggefted this faivo: and this was the reafon why Alexander would not perform the ho-
mage in perfon, but left it to be performed by Robert Bruce earl of Carric ; Alexander ftanding by, and exprefsly declaring, that it was only paid for the lands he held in England.-No acts of holtility, however, took place during the lifetime of Alexander, who was killed on the 19th of March 128.5 , in the 45 th year of his age, by his horfe rufhing down the black rock near Kinghorn as he was hunting.

Both before and after the death of Alexander, the great fubjects of Scotland feemed to have been fenfible of Edward's ambitious defigns. On the marriage of Margaret with Eric prince of Norway, the flates of Scotland paffed an aft obliging themfelves to receive ber and her heirs as queen and fovereigas of Scotland. Edward at that time was in no condition to oppofe this meature, in which the Scots were unanimous; and therefure contented himfeif with forming factions among the leading men of the country. Under pretence of refuming the crofs, he renewed his intrigues at the court of Rome, and demanded leave from the pope to collect the tenths in Scotland; but his holinefs replied, that he could make no fuch grant without the confent of the government of Scotland. On the death of Margaret queen of Norway, her daughter, in confequence of the act abovementioned, was recognized by the ftates as queen of Scotland. As the was then but two years old, they came to a refolution of excluding from all fhare in the government, not only Edward I. but their queen's father; and they accordingly eftablifhed a regency from among their own number, confifting of the fix following noblemen; viz. Robert Wifhart bifhop of Glafgow, Sir James Cummin of Badenoch, feniot, James lord high iteward of Scotland, who were to have the fuperintendency of all that part of Scotland which lay to the fouth of the Forth; William Frater bithop of St Andrews, Duncan M•Duff earl of Fife, and Alexander Cummin earl of Buchan, who were to have the direction of all affairs to the north of the fame river.-With thefe arrangements Eric was exceedingly difpleafed, as confidering himfelf as the only rightful guardian of his own child. He therefore cultivated a good correfpondence with Edward, from whom he had received confiderable pecuniary favours; and perceiving that the fates of Scotland were unanimous in excluding all foreigners from the management of their concerns, he fell in with the views of the king of Eng. land, and named commiffioners to treat with thofe of

Edward upon the Scots affairs. There negociations terminated in a teaty of marriage between the queen of Scotland and Edward prince of Wales, young as they both were. This alarmed the fates of Scotland, who refolved not to fuffer their queen to be difpofed of without their confent. It was therefore ayreed by the commiffioners on both fides, to acquaint them with the refult of their conferences, and to demand that a deputation fhuld be fent up for fettling the regency of Scotland, or, in other words, for pucting the fovereign power into the lands of the two kings. As the
two parties, however, were within the prohibited de- Scotland. grees of confanguinity, being firft coufins, a difpenfatiun was applied for to Pope Boniface, who granted it on condition that the peers of, Scotland confented to the match.

Though the Scots nobility were very much againft this match, they could not refufe their confent to it when propofed by the father and grand-uncle of their young queen. They therefore appointed the bifhops of St Andrew's and Glafgow, with Robert Bruce lord of Annandale, and John Cummin, to attend as their der puties, but with a falvo to all the liberties and honours of the realm of Scotland; to which Edward agreed. Thefe deputies met at Salifury with thofe of England and Norway; and it was at laft agreed, i. That the young queen fhould be fent from Norway (free of all marriage-engagements) into England or Scotland. 2. That if the queen came to England, the fhould be at liberty to repair to Scotland as foon as the diftractions of that kingdom fhould be fettled: that fhe fhould, on her arrival in her own dominions, be free of all matrimonial contracts; but that the Scots fhould engage not to difpofe of her in marriage without her father or Edward's confent. 3. The Scots deputies promifed to give fuch fecurity as the Norwegian commifioners fhould require, that the tranquillity of the nation fhould be fettled before her arrival. 4. That the commiffioners of Scotland and Norway, joined with commiffioners from England, fhould remove fuch regents and offcers of flate in Scotland as fhould be fufpected of difaffection, and place others in their flead. If the Scots and Norwegian commiffioners fhould difagree on that or any other head relating to the government of Scotland, the decifion was to be left to the arbitration of Englifh commiffioners.
The party of Edward was now fo ftrong in Scotland, that no oppofition was made to the late agreement, in a parliament held at Brechin to deliberate upon the fettlement of the kingdom. It is uncertain whether he communicated in form to the Scottilh parliament the pope's difpenfation for the marriage : but mof probably he did not; as, in a letter written to him by the fates of Scotland, they mention this as a matter they heard by report. On the whole, however, they highly approved of the marriage, upon certain conditions to which Edward was previoufly to agree; but the latter, without waiting to perform any conditions, immediately fent for the young queen from Norway. This exceedingly difpleafed Eric, who was by no means inclined to put his daughter into the hands of a prince whofe fincerity he fufpected, and therefore fhifted off the departure of the princefs till he fhould hear farther from Scotland. Edward, alarmed at this, had again recuurfe to negociation; and ten articles were at laft drawn up, in which the Scots took all imaginable precautions for the fafety and independency of their country. Thefe articles were ratified by Edward on the 28th of Augult 1289 ; yet, even after the affair of the marriage was fully fettled, he loft no time in procuring as ftrong a party as he could. At the head of thete were the bifhop of St Andrew's and John Baliol. That prelate, while he was in England, was highiy carefied by Edward, from whom he had great expectations of preferment; and Baliol, having great eftates in England, confidered the latter as his fovereign. The bifhop,

## SCO

## 741

Scotland. fhop, on his return to Scotland, acted as a fpy for Edward, and carried on with him a fecret correfpondence; informing him of all public tranfactions. It appears from this correfpondence, that the Scots were far from being unanimous as to the marriage. Bruce earl of Annandale fufpected, for fome reafon or other, that the young queen was dead; and, foon after Michaelmas 1290, affembled a body of forces, and was joined by the earl of Mar and Athol. Intelligence of thefe commotions was carried to Edward by Baliol ; and the bifhop of St Andrew's advifed Edward, in cafe the report of the queen's death fhould prove true, to march a body of troops towards iscotland, in order to fecure fuch a fuccellor as he thouglit proper.

Edward, in the mean time, confented to allow ambaffadors to be fent from Scotland to bring over the young queen; previous to which, he appointed the biOhop of Durham to be lieutenant in Scotland for the queen and her future hulband; and all the officers there, both civil and military, obliged themfelves to furrender their employments and fortreffes to the king and queen (that is, to Edward) immediately on their arrival in Scotland. But while the mot magnificent preparations were making for the reception of the young queen, certain intelligence of her death was received; but it is not certainly known whether this event happened before the arrival of the ambaffadors in Norway or after her departure from that country.

The Scots were thrown into the utmof confternation by the news of their queen's death; while, on the

A number
of compe-
titors for
the crown. other hand, Edward was as well prepared as if he had known what was to happen. The ftate of Scotland at this time indeed was to the lalt degree deplorable. The act of fucceffion eftablifhed by the late king had no farther operation, being determined by the death of the queen; and fince the crown was rendered hereditary, there was no precedent by which it could be fettled. The Scots, in general, however, turned their eyes upon the pofterity of David earl of Huntingdon, brother to the two kings Malcolm the Maiden and his fucceffor William, both of whom died without lawful iffue. The earl had three daughters. Margaret, the eldeft, was married to Allan lord of Galloway; the only iffue of which marriage was Derverguill wife to John Baliol, who had a fon of the fame name, a competitor
for the crown. The fecond daughter, Ifabella, was married to Robert Bruce; and their fon Robert was a candidate likewife. The third daughter, Ada, had been married to Henry Haltings, an Enrlifh nobleman, and predeceffnr to the prefent earl of Huntingdon. John Haltings, the fon of this marriage, was a third competitor ; but as his claim was confeffedly the worft of the three, he only put in for a third of the kingdom, on the principle that his mother was jointheir with her two fifters (c). Several other cla mint: now ftarted up. Florence earl of Holland pretended to the crown of Scotland in right of his great grandmother Ada, the eldeft lawful fifter of William, fometime king; as did Robert de Pynkeney, in the right alfo of his great grandmother Marjory, fecond fifter of the fame king William. Patrick Gallightly was the fon of Henry Gallightly, a baftard of William ; William de Roís was defcended of Lfabel; Patrick carl of March, of Ilda or Ada; and William de Vefci, of Marjory; who were three natural datughters of king William. Roger de Mandeville, defcended from Aufrie, another natural daughter of William, alio put in his claim ; but the right of Nicolas de Soulis, if baltard:could give a right, was better than the former. His grandmother Marjory, the wife of Allon le Huifier, was a natural daugher of Alexander II. and confequently fifter to Alexander III. John Cummin lord of Badenoch derived his claim from a more remote fource, viz. Donald Bane, who ufurped the crown about 200 years before this time; but he was willing. to refign his pretenfions in favour of John Baliol. The latter indeed had furely the beft right; and, had the fucceffion been regulated as it is in all hereditary kingdoms at this day, he would undoubtedly have carried it. Bruce and Haftings, however, pleaded that they were preferable, not only to John Baliol, the grandchild of Margaret, but alfo to Derverguill her daughter and his mother, for the following reafon. Derverguill and they were equally related to their grandfather earl David : fhe was indeed the daughter of his eldeft daughter; but the was a woman, they were men ; and, faid they, the male in the fame degree ought to fucceed to fovereignties, in their own nature impartible, preferable to the female.

Notwithtanding this number of candidates, however,
(c) The pedigree of the three principal competitors will be fully underftood from the following fcheme. David I. King of Scots.

Scotland.
ever, it was foon perceived, that the claims of all of them might be cut off excepting two, viz. Baliol and Bruce, of whom the former had the preference with refpect to hereditary right, and the latter as to popularity. Baliol had ftrongly attached himfelf to Edward's party; which being by far the moft powerful in Scotland, gave him a decided fuperiority over Bruce. The event was, that Edward, by his own party moft probably, though, fome fay, by the unanimous voice of the Scots parlidment, was appointed to decide between the two competitors. It foor appeared, however, that Edward had no mind to adjudge the crown to any perfon but himfelf; for, in an affembly held at Norham on the 1oth of May 1291, Brabanzon the chief juftice of England informed the members, "That his mafter was come thither in confideration of the ftate of the realm of Scotland, which was then without a king, to meet them, as direct fovereign of that kingdom, to do juftice to the claimants of his crown, and to eftablifh a folid tranquillity among his people; that it was not his intention to retard juftice, nor to ufurp the right of any body, or to infringe the liberties of the kingdom of Scotland, but to render to every one his due. And to the end this might be done with the more eafe, he required the affent of the fates cx abundante, and that they fhould own him as direct $f_{0}$ vereign of the kingdom; offering, upon that condition, to make ufe of their counfels to do what juftice demanded." The deputies were aftonifhed at this declaration, and replied, that they were by no means prepared to decide on Edward's claim of fuperiority; but that Edward ought previoully to judge the caufe between the two competitors, and require homage from him whom he fhould choofe to be king. Edward treated this excufe as trifling, and gave them till next day to confider of his demand. Accordingly, on that day, the affembly was held in Norham church, where the deputies from Scotland infifted upon giving no anfwer to Edward's demands, which could be decided only by the whole community; reprefenting, at the fame time, that numbers of the noblemen and prelates were abfent, and that they mult have time to know their fenfe of the affair. In confequence of this, Edward gave them a delay of three weeks; which interval he employed in multiplying claimants to the crown of Scotland, and in flattering each with hopes, if he would acknowledge his fuperiority. But when the affembly met, according to appointment, on the 2d of June following, they found the place of meeting furrounded by a numerous army of Englifh. Edward had employed the bifhop of Durham to draw up the hiftorical evidence of his right to the crown of Scotland; which has fince been publifhed. In this paper mention is made of the fealty and homage performed by the kings of Scotland to the Anglo-Saxon kings of England; but no fufficient evidence is brought of any fuch homage being actually performed. As to the homage performed by the kings of Scotland from the time of William the Conqueror to that of the difpute between Bruce and Baliol, the Scots never denied it; but they contended, and indeed with juftice, that it was performed for the lands which they held from the crown of England; and they alleged, that it was as far removed from any relation to a fealty or homage ierformed for the crown of Scotland, as the homage
paid by the Englifh monarchs to the crown of France Scotand: was removed from all relation to the crown of England. With regard to the homage paid by William king of Scotland to Henry II. of England, it was not denied that he performed it for the whole kingdom of Scotland: but they pleaded, that it was void of itfelf, becaufe it was extorted when William was a prifoner to Henry; and they produced Richard I.'s charters, which pronounced it to have been compulive and iniquitous.

But, however urgent thefe reafons of the Scots might be, Edward was by no means difpofed to examine into their merits. Inftead of this, he clofeted the feveral pretenders to the crown; and having found them all ready to comply with his meafures, he drew up the following charter of recognition to be figned by them all.
"To all who fhall hear this prefent letter.
" We Florence earl of Holland, Robert de Bruce The candi lord of Annandale, John Baliol lord of Galloway, John dates fign Haftings lord of Abergavenny, John Cummin lord of an alfent. Badenoch, Pattick de Dunbar earl of March, John Vefci for his father Nicholas Soulis, and William de Rofs, greeting in the Lord:
"Whereas we intend to purfue our right to the kingdom of Scotland; and to declare, challenge, and aver the fame before him that hath moft power, jurifdiction, and reafon to try it ; and the noble prince Edward, by the grace of God king of England, sc. having informed us, by good and fufficient reafons, that to him belongs the fovereign feigniory of the fame: We therefore promife, that we will hold firm and fable his act; and that he fhall enjoy the realm to whom it fhall be adjudged before him. In witnefs whereof, we have fet our feals to this writing, made and granted at Norham, the Tuefday after the Afcenfion, in the year of Grace 1291. "
Edward then declared, by the mouth of his chancellor, that although, in the difpute which was arifen between the feveral claimants, touching the fucceffion to the kingdom of Scotland, he acted in quality of fovereign, in order to render jultice to whomfoever it was due; yet he did not thereby mean to exclude himfelf from the hereditary right which in his own perfon he might have to that crown, and which right he intended to affert and improve when he fhould think fit: and the king himfelf repeated this proteftation with his own mouth in French. The candidates were then feverally called upon by the Englifh chancellor, to know whether they were willing to acknowledge Edward's claim of fuperiority over the crown of Scotland, and to fubmit to his award in difpofing of the fame; which being anfwered in the affirmative, they were then admitted to prove their rights. But this was mere matter of form; for all the force of England was then affembled on the borders in order to fupport the claims of Edward, and nothing now remained but to furnilh him with a fufficient pretence for making ufe of it. He obferved, that the Scots were not fo unanimous as they ought to be in recognifing his fuperiority, and that the fubmitfion, which had been figned Edward by the candidates, was not fufficient to carry it into ex-demands ecution; for which reafon he demanded that all the forts poffefion in-Scotland-hould be put into his poffeffion, that he might of all the refign them to the fuccelsful candidate.

Which is agreed to by the ftates.
compliance with this laft demand of Edward, the regency of Scotland without hefitation yielded to it alfo; for which they gave the following reafons. "That whereas they (the ftates of Scotland) had, with one affent, already granted that King Edward, as fuperior lord of Scotland, fhould give fentence as to their feveral rights and titles to the crown of Scotland, \&c. but as the faid king of England cannot put his judgement in full execution to anfwer effectually without the poffeflion or feifin of the faid country and its caflles; we will, grant, and affent, that he, as fovereign lord thereof, to perform the things aforefaid, fhall have feifin of all the lands and caftles in Scotland until right be done to the demandants, and to the guardians and community of the kingdom of Scotland, to reftore both it and its cafles, with all the royalties, dignities, franchifes, cuftoms, rights, laws, ufages, and poffeffions, with their appurtenances, in the fame ftate and condition they were in when he received them; faving to the king of England the homage of him that fhall be king ; fo as they may be reftored within two months after the day the rights fhall be determined and affirmed; and that the profits of the nation which fhall be received in the mean time fhall be kept in the hands of the chamberlain of Scotland that now is, and one to be joined with him by the king of England ; fo as the charge of the government, caftles, and officers of the realm, may be deducted. In witnefs whereof, \&c."

For thefe reafons, as it is faid, the regency put into the hands of Edward all the forts in the country. Gilbert de Umfreville alone, who had the command of the caftles of Dundee and Forfar, refufed to deliver them up, until he fhould be indemnified by the ftates, and by Edward himfelf, from all penalties of treafon of which he might afterwards be in danger.

But though Edward had thus got into his hands the whole power of the nation, he did not think proper to determine every thing by his own authority. Intead of this he appointed commiffioners, and promifed to grant letters-patent declaring that fentence fhould be paffed in Scotland. It had been all along forefeen that the great difpute would be between Bruce and Baliol; and though the plea of Cummin was judged frivolous, yet he was a man of too much influence to be neglected, and he agreed tacitly to refign it in favour of Ba. liol. Edward accordingly made him the compliment of joining him with Baliol in nominating 40 commiffioners. Bruce was to name 40 more ; and the names of the 80 were to be given in to Edward in three days; after which the king was to add to them 24 of his own choofing. The place and time of meeting were left in their own option. They unanimoufly pitched upon Berwick for the place of meeting; but as they could not agree about the time, Edward appointed the $2 d$ of Augult following. Soon after this, the regents refigned their commiffions to Edward; but he returned them, with powers to act in his name; and he nominated the bifhop of Caithnefs to be chancellor of Scotland; joining in the commifion with him Walter de HemondeSham an Englifhman, and one of his own fecretaries. Still, however, he met with great difficulties. Many of his own great men, particularly the earl of Gloucei: ter, were by no means fond of increafing the power of the Englifh monarch by the acquifition of Scotland; and therefore threw fuch obftacles in his way, that he
was again obliged to have recourfe to negociation and
intrigue, and at laft to delay the meeting until the 2 d of June in 1292 : but during this interval, that he might the better reconcile the Sico:s to the lofs of their liberty, he propofed an union of the two kingdoms; and for this he iffued a wit by virtue of his fuperionity.

The commiffioners having met on the fecond of June 1292, ambaffadors for Norway prefented themfelves in the affembly, demanding that their matter fhou'd be admitted into the number of the claimants, as father and. next heir to the late queen. This demand too was admitted by Edward, after the ambafladors.had acknowledged his fuperiority over Scotland ; after which he propofed that the claims of Bruce and Baliol fhould be previounly examined, but without prejudice to thofe. of the other competitors. This being agreed to, he ordered the commiffioners to examine by what laws they ought to proceed in forming their report. The difcuffion of this queftion was attended with fuch difficulty, and the opinions on it were fo various, that Edward once more adjourned the affembly to the 12 th of October following; at which time he required the members to give their opinions on the two following points : 1. By what laws and cultoms they ought to proceed to judgment; and, fuppofing there could be no law or precedent found in the two kingdoms, in what manner? 2. Whether the kingdom of Scotland ought to be taken in the fame view as all other fiefs, and to be awarded in the fame manner as carldoms and baronies? The commiffioners replied, that Edward ought to give jultice conformable to the ufage of the two kingdoms ; but that if no certain laws or precedents could not be found, he might, by the advice of his great men, enact a new law. In anfwer to the fecond quefion they faid, that the fucceffion to the kingdom might be awarded in the fame manner as to other eftates and great baronies. Upon this, Edward ordered Bruce and Baliol to be called before him ; and both of them urged their refpective pleas, and anfwers, to the follow. ing purpofe.

Bruce pleaded, 1. That Alexander II. defpairing: of Pleas of heirs of his own body, had declared that he held him to be the true heir, and offered to prove by the teftimony of perfons Atill alive, that he declared this with the ad. vice and in the prefence of the good men of his kingdom. Alexander III. alfo had declared to thofe with whom he was intimate, that, failing iffue of his own body, Bruce was his right heir. The people of Scotland had taken an oath for maintaining the fucceffion of the neareft in blood to Alexander III. who ought of right to inherit, failing Margaret the Maiden, of Norway and her iffue.-Baliol anfwered, that nothing could be concluded from the acknowledgment of Alexander II. for that he left heirs of his body ; but made no anfwer to what was faid of the fentiments of. Alexander III. and of the oath made by the Scottifh : nation to maintain the fucceffion of the next of blood.
2. Bruce pleaded, that the right of reigning ought to be-decided according to the natural law, by which : kings reign; and not according to any law or ufage in force between fubject and fubject: That by the law of nature, the neareft collateral in blood has a right to the crown; but that the conftitutions which prevail among vaffals, bind not the lord, much lefs the fovereign : That although in private inheritances, which

[^63]

3 ot'and.

## $\longrightarrow$

are divifible, the eldeft female heir has a certain prerogative, it is not fo in a kingdom that is indivifible; there the neareft heir of blood is preferable whenever the fucceffion opens.-To this Baliol replied, that the claimants were in the court of their lord paramount; and that he ought to give judgment in this cafe, as in the cafe of any other tenements, depending on his crown, that is, by the common law and ufage of his kingdom, and no other. That by the laws and ufages of England, the eldeft female heir is preferred in the fuc ceffion to all inheritances, indivifible as well as divifible.
3. It was urged by Bruce, that the manner of fuccelfion to the kingdom of Scotland in former times, made for his claim ; for that the brother, as being neareft in degree, was wont to be preferred to the fon of the deceafed king. Thus, when Kennerh Macalpin died, his brother Donald was preferred to his fon Conftantine, and this was confirmed by feveral other authentic inftances in the hiftory of Scotland. Baliol anfwered, that if the brother was preferred to the fon of the king, the example proved againft Bruce; for that the $f$ n, not the brother, was the nearelt in degree. He admitted, that after the death of Malcolm III. his brother ufurped the throne; but he contended, that the fon of Malcolm complained to his liege lord the king of England, who difpoffeffed the ufurper, and placed the fon of Malcolm on the throne; that after the death of that fon the brother of Malcolm 1II. again durped the throne; but the king of England again difpoffeffed him, and raifed Edgar, the fecond fon of Malcolm, to the fovereignty.
4. Bruce pleaded, that there are examples in other countries, particularly in Spain and Savoy, where the fon of the fecond daughter excluded the grandfon of the eldelt daughter. Baliol anfwered, that examples From foreign countries are of no importance; for that according to the laws of England and Scotland, where kings reign by fucceffion in the direct line, and earls and barons fucceed in like manner, the iffue of the younger fifter, although nearer in degree, excludes not the iflue of the eldeft fifter, although more remote; but the fucceffion continues in the direct line.
5. Bruce pleaded, that a female ought not to reign, as being incapable of governing: That at the death of Alexander III. the mother of Baliol was alive; and as fhe could not reign, the kingdom devolved upon him, as being the neareft male heir of the blood royal. But to this Baliol replied, that Bruce's argument was inconfiftent with his claim : for that if a female ought not to reign, Ifabella the mother of Bruce ought not, nor muft Bruce himfelf claim through her. Befides, Bruce himfelf had fworn fealty to a female, the maiden of Norway.

The arguments being thus Itated on both fides, Edward demanded an anfwer from the council as to the merits of the competitors. He alfo put the following queltion to them: By the laws and ufages of both kingdoms, does the iffue of the eldeft fifter, though more remote in one degree, exclude the iffue of the fecond fifter, though nearer in one degree? or ought the nearer in one degree, iffuing from the fec nd filter, to exclude the more remote in one degree iffuing from the eldelt fifter? To this it was aniwered unanimoufly, That by the laws and ufages of both kingdoms, in every heritable fucceffion, the more remote in one de-
gree lineally defcended from the eldeft fifter, was pre- Scotland ferable to the nearer in degree iffuing from the fecond fifter. In confequence of this, Bruce was excluded from the fucceffion; upon which he entered a claim for one third of the kingdom : but being baffled in this alfo, the kingdom of Scotland being determined an indivifible fee, Edward ordered John Baliol to have feifin of Scotland; with this caveat, however, "That this judgment fhould not impair his claim to the property of Scotland."

After fo matty difgraceful and humiliating concef- Who is fions on the part of the Scots, John Baliol was crown- crowned at ed king at Scone on the 30 th November 1292 ; and Scone. finithed the ceremony by doing homage to the king of England. All his fubmiffions, however, could not fatisfy Edward, as long as the leaft fhadow of independence remained to Scotland. A citizen of Berwick appealed from a fentence of the Scots judges appointed by Edward, in order to carry his caufe into England: But this was oppofed by Baliol, who pleaded a promife made by the Englifh monarch, that he fhould " obferve the laws and ufages of Scotland, and not with- Haughty draw any caufes from Scotland into his Englifh courts." behaviout Edward replied, that it belonged to him to hear the of Edward. complaints made againit his own miniters; and concluded with afferting his right, not only to try Scots caufes in England, but to fummon the king of Scotland, if neceffary, to appear before him in perfon. Baliol had not fpirit to refit ; and therefore figned a molt difgraceful inftrument, by which he declared, that all the obligations which Edward had come under were already fulfilled, and therefore that he difcharged them all.

Edward now thought proper to give Baliol fome marks of his favour, the moft remarkable of which was giving him feifin of the Ifle of Man; but it foon appeared that he intended to exercife his rights of fuperiority in the moft provoking manner. The firlt inftance was in the cafe of Malcolm earl of Fife. This nobleman had two fons, Colban his heir, and another who is conftantly mentioned in hiftory by the familyname of Macduff.-It is faid, that Malcolm put Macduff in poffeffion of the lands of Reres and Crey. Malcolm died in 1266 ; Colban his fon, in 1270 ; Duncan the fon of Colban, in 1288 . To this laft earl, his fon Duncan, an infant, fucceeded. During the nonage of this Duncan, grand-nephew of Macduff, William bifhop of St Andrew's, guardian of the earldom, difpoffeffed Macduff. He complained to Edward; who having ordered his caufe to be tried, reftored him again to poffeffion. Matters were in this fate when Baliol held his firf parliament at Scone, Ioth February 1292. There Macduff was cited to anfwer for having taken poifeffion of the lands of Reres and Crey, which were in pofeffion of the king fince the death of the laft earl of Fife. As his defences did not fatisfy the court, he was condemned to imprifonment; but an action was referved to him againit Duncan, when he fhould come of age, and againt his heirs. In all this defence, it is furprifing that Macduff fhould have omitted his ftrongeft argument, viz. that the regents, by Edward's authority, had put him in pofeffion, and that Baliol had ratified all things under Edward's authority. However, as foon as he was fet at liberty, he petitioned Baliol for a rehearing; but this being refufed, he appealed

Sontland. of war, after having fworn never to bear arms againft $9^{8}$
Baliol's renunciation of his ullegiance to England. England.
In the mean time, Baliol, by the advice of his parliament, folemnly and openly renounced his allegiance to Edward, fending the following declaration.
" To the magnificent prince, Edward, by the grace of God, king of England; John, by the fame grace, king of Scotland.
*Whereas you, and others of your kingdom, you not being ignorant, or having caufe of ignorance, by your violent power, have notorioufly and frequently done grievous and intolerable injuries, contempts, grievances, and frange damages aginft us, the liberties of our kingdom, and againft God and juttice ; ciling us, at your pleafure, upon every flight fuggeftion, ou: of our kingdom; unduly vexing us; feizing our cafles, lands, and poffeffions, in your kingdom; unjuftly, and for no fault of ours, taking the goods of our fubjects, as well by fea as land, and carrying them into your kingdom; killing our merchants, and others of our kingdom ; carrying away our fubjects and imprifoning them: For the reformation of which things, we fent our meffengers to you, which remain not only unredreffed, but there is every day an addition of worfe things to them; for now you are come with a great army upon the borders, for the difinheriting us, and the inhabitants of our kingdom ; and, proceeding, have inhumanly committed flaughter, burnings, and violent invafions, as well by fea as land : We not being able to fuftain the faid injuries, grievances, and damages any longer, nor to remain in your fealty or homage, extorted by your violent oppreffion, we reftore them to you, for ourfelf, and all the inhabitants of our kingdom, as well for the lands we hold of you in your kingdom, as for your pretended governiment over us."

Edward was prefented with this renunciation by the hands of the intrepid Henry abbot of Aberbrothwick; and as it was favourable to his political views, he received it rather with contempt than anger. "The foolifh traitor," faid he to the abbot, "fince he will not come to us, we will go to him." The abbot had been perfuaded by his enemies, of whom he had many in Scotland, to prefent this letter, in hopes that Edward would have put him to death; but he had addrefs enough to efcape fafe out of his hands, without receiving any other anfwer.

Though this feheme of 1 enunciation had been con- Scotlans. certed fome time before, the declaration was not fent to Edward till after the laking of Berwici: The fate of Scotland, however, after it, was foon decided. The Earl of March had taken part with Edward, but the countefs betrayed his caftle of Dunbar into the hands of the Scots. Edward fent a chofen body of troops to recover the place. The whole force of Scotland oppofed them on the heights above Dunbar; but leaving their advantageous polt, and pouring down on their enemies in confufion, they were difperfed and deleated.

The caltle of Dunbar furrendered at difcretion; that of Roxburgh followed the fame example; the cafte of Edinburgh furrendered after a fhort fiege ; and Stirling was abandoned. The Scots, in the mean time, were guilty of the greated extravagances. During the fhort interval between the lofs of Berwick and the defeat at Tunbar, an order was made for expelling all the Englifh eccleffaltics who held benefices in England; all the partizans of England, and all neutrals, were declared traitors, and their eftates confifcated. But the great fucceffes of Edward foon put an end to thefe impotent acts of fury. Baliol was obliged to implore the mercy of the conqueror. Divelted of his royal ornaments, and bearing a white rod in his hand, be performed a moft humiliating penance ; confeffig, that by evil and falfe counfel, and through his own fimplicity, he had grievoufly offended his liege lord. He recapitulated his various tranfgreffions, in concluding an alli.ance with France while at enmity with England; in contracting his fon with the niece of the French king ; in renouncing his fealty; in attacking the Englifh territories, and in refifing Edward. He acknowledged the jultnefs of the Englifh invafion and conquelt ; and therefore he, of his own free confent, refigned Scotland, its people, and their homage, to his liege-lord Edward, 2d July 1296.

The king of England purfued his conquefts, the barons everywhere crowding in to fwear fealty to him, and renounce their allegiance with France. His jour- Scotland ney ended at Elgin, from whence he returned fouth- fubdued. ward ; and, as an evidence of his having made an abfolute conqueft of Scotland, he carried off from Scone the wooden chair in which the kings were wont to be crowned. This chair had for its bottom the fatal tone regarded as the national palladium (D). Some of the charters
(D) "This ftone is thus defcribed by W. Hemingford, T. i. p. 37. "Apud monafterium de Scone pofitus erat lapis pergrandis in ecclefia Dei, juxta magnum altare, concavus quidem ad modum rotunde catbedra confecturs, in quo futuri reges loco quafi coronationis ponebantur ex more. Rege itaque novo in lapide pofito, miffarum folemnia incepta peraguntur, et preterquam in elevatione facri dominici corporis, femper lapidatus, manfit." And again, T. i. p. Ioo. "In redeundo per Scone, procepit tolli et Londoniis cariari, lapidem, illum, in qua, ut Aapra dictum eft, Reges Scotorum folebant poni loco coronationis fux et hoc in fignum reoni conquefti et refignuti," Wallingham mentions the ufe to which Edward put this fone: "Ad Wefmenafterium tranfulit illum, jubens inde fieri celebrantium cathedram facerdotum." This account of the fatal fone is here tranfcribed, that it may be compared with the appearance of the fone that now bears its name at Weftminfter.

Fordun has preferved the ancient rhymes concerning it ; L. xi. c. 25 .
" Hic rex fic totam Scotiam fecit fibi notam,
Qui fine menfura tulit inde jocalia plura, Et pariter lapidem, Scotorum quem fore fedem Regum decrevit fatum; quod fic inolevir, Ni fallat fatum, Scori quocunque locatum lnvenient lapidem, regnare tenentur ibidem."

## SCO

Rotiand. charters bclonging to the abbey were carried off, and the feals torn from others: " which," fays Lerl Hailes, " is the only well-vouched example which I have found of any outrage on private property committed by Ldward's army. It is mentioned in a charter of Robert I. and we may be affured that the outrage was not diminilhed in the relation."

On the 28th of Augult 1296, Edward held a parliament at Berwick, where he received the fealty of the clergy and laity of Scotlancl. It is faid, that while the Englifh monarch was employed in the conquett of Scotland, he had promifed the fovereignty to Robert Brace, lord of Annandale, in order to fecure his fidelity ; but being put in mind of his promife, he anfwered, "Have I no other bufinefs but to conquer kingdoms for yon?" Bruce filently retired, and paffed his days in obfcurity. Among thofe who profeffed their allegiance at this parliament was Robert Bruce the younger, earl of Carrick. After this, Edward took the molt effectual methods of fecuring kis new conquen. He ordered the eftates of the clergy to be reftored; and having received the fealty of the widows of many of the Scottifh barons, he put them in pofferfion of their jointure-lands, and even made a decent provifion for the wives of many of his prifoners. Yet, though in every thing he behaved with great moderation towards the Scots, he committed the government of certain diftricts, and of the chief caftles in the fouth of Scotland, to his Englifh fubjects, of whofe fidelity and vigilance he thought himfelf affured. In order to conciliate the affections of the clergy, he granted to the Scottifh bifhops, for ever, the privilege of bequedthing their effects by will, in the fame manner as that privilege was enjoyed by the archbifhops and bihops of England. In honour of the "glorious Confelfor St Cuthbert," he gave to the monks of Durham an annual penfion of 40 pounds, payable out of the revenues of Scotland, by the tenure of maintaining, before the thrine of the faint, two wax-tapers of 20 pounds weight each, and of diftributing twice a-year one penny each to 3000 indigent perfons. At lalt, having fettled every thing, as he thought, in tranquillity, he departed for England, with all the pride of a conqueror.

The tranquillity eftablithed by Edward, however, was of fhort duration. The government of Scotland at that time required many qualities which Edward's vicegerents had not. Warremne, earl of Surry, who had been appointed governor, took up his abode in England, on pretence of recovering his health. Creflingham, the treafurer, was a voluptuous, proud, and felfilh ecclefiaftic ; while Ormefby the jufticiary was hated for his feverity. Under thefe officers the adminittration of Ldward became more and more feeble; bands of robbers infefted the highways, and the Englifh government was univerfally defpifed. At this critical moment arofe Sir
tifh fables, and by which indeed his real exploits are fo much cbfcured, that it is difficult to give an authentic relation of them. The molt probable account is, that
le was the gounger fon of a gentleman (Wallace of swin! Ellerflie) in the neighbourhood of Patler. Having been outliwed for fome offence (generally fuppofed to have been the killing of an Englifhman), he affociated with a few companions, of fortunes equally defperate with his whn. Wallace himfelf was endowed with great frength and courage, and an active and ambitious fipit; and by his aliability, eloquence, and wifdom, he maintained an authority over the rude and undifciplined multitudes who flocked to his fiandard. In May 1297, he began to infelt the Englifh quarters; and being fuccefsful in his predatory incurfions, his party became more numerous, and he was joined by Sir William Douglas. With their united forces, thefe two alies attempted to furprife Ormefby the jufticiary, while he held his courts at Scone; but he faved himfelf by a precipitate flight. After this the Scots roved over the whole country, affaulted caftles, and maffacred the Englifh. Their party vas joined by many perfons of rank; among whom were Robert Wifheart bifhop of Glafgow, the Steward of Scotland and his brother Alexander de Lindfay, Sir Richard Lundin, and Sir Andrew Moray of Bothwell. Young Bruce would have been a vaft acceffion to the party; for he poffeffed all Carrick and Annandale, fo that his territories reached from the frith of Clyde to Solway. But the wardens of the weltern marches. of England fufpected his fidelity, and fummoned him to Carlifle. He obeyed, and made oath on the confecrated hoft, and on the fword of Becket, to be faithful and vigilant in the caufe of Edward; and to prove his fincerity he invaded with fire and fword the eftate of Sir William Douglas, and carried off his wife and children. However, he inltantly repented of what he had done: "I truft (faid he), that the pope will abfolve me from an extorted oath;" on which he abandoned Edward and joined the Scottifh army.

All this time Edward was in France, not in the leaft fufpecting an infurrection among people whom he imagined he had thoroughly fubdued. As foon as he received the intelligence, he ordered the earl of Surry to fupprefs the rebcls; but he declining the command of the army himfelf on account of his health, refigned it to his nephew, Lord Henry Percy. A great army, 104 to his nephew, Lord Henry Percy. A great army, Diffenfions
fome fay no fewer than 40,000 men, was now affembled, of the with which Percy marched againft the Scots. He icots. found them encamped at Irwin, with a lake in their front, and their flanks fecured by entrenchments, fo that they could not be attacked without the utmolt danger. The Scots, however, ruined every thing by their diffenfions. Wailace was envied on account of his accomplifhments, which had raifed his reputation above the other officers, whofe birth and circumftances were higher than his. His companions accordingly became jealous, and began to fuggelt, that an oppolition to the Englifh could only be produstive of farther national deftruction. Sir Richard Lundin, an officer of great rank, formed a party againft Wallace, and went cver to idward with all his followers. He attempted to juit y . 5B2
his

This was the ftone which Gathelus fent from Spain with his fon when he invaded Ireland, which king Fergus won in Ircland, brought over with him, and placed at Scone. As the moft proper authority for atory of this nature, fee Ai's of Si: Wham Wullaci, by Blind Harry, B. i. c. .s.
$\underbrace{\text { Scotland. bis treachery, by faying, "I will remain no longer of }}$ a party that is at variance with itfelf;" without confidering that he himfelf, and his party, were partly the occafion of that variance. Other leaders entered into a negociation with the Englifh. Bruce, the Steward and his brother Alexander de Lindefay, and Sir Wil. liam Douglas, acknowledged their offences, and made fubmiffions to Edward for themfelves and their adhe-
$\xrightarrow{105}$ them fabmit to the Englifh.
ro6 out.

This fcandalous treaty feems to have been negociated by the bilhop of Glafgow, and their recantation is recorded in the following words.-"Be it known to all men: Whereas we, with the commons of our country, did rife in arms againt our lord Edward, and againlt his peace, in his territories of Scotland and Galloway, did burn, flay, and commit divers robberies; we therefore, in our own name, and in the name of all our adherents, agree to make every reparation and atonement that fhall be required by our fovereign lord; referving always what is contained in a writing which we have procured from Sir Henry Percy and Sir Robert Clifford, commanders of the Englifh forces; at Irvine, 9th July 1297." To this inftrument was fubjoined, "Efcrit a Sire Willaume;" the meaning of which lord Hailes fuppofes to be, that the barons had notified to Sir William Wallace their having made terms of accommodation for themfelves and their party.

Edward accepted the fubmiffion of the Scottifh barons who had been in arms, and granted liberty to thofe whom he had made prifoners in the courfe of the former year, on condition that they fhould ferve him in his wars againft France. The inconftancy of Bruce, however, was fo great, that acknowledgments of fubmiffion or oaths of fealty were not thought fufficiently binding on him ; for which reafon the bilhop of Glafgow, the Steward, and Alexander de Lindefay, became fureties for his loyalty and good behaviour, until he fhould deliver his daughter Marjory as an hoftage.
Wallace alone refufed to be concerned in thefe fhameful fubmifions; and, with a few refolute followers, refolved to fubmit to every calamity rather than give up the liberty of his country. The barons had undertaken to procure his fubmiffion as well as their own ; but finding that to be impoffible, the bifhop of Glafgow and Sir William Douglas voluntarily furrendered themfelves prifoners to the Englifh. Edward, however, afcribed this voluntary furrender, not to any honourable motive, but to treachery. He afferted, that Wifheart repaired to the caftle of Roxburgh under pretence of yielding himielf up, but with the concealed purpofe of forming a confpiracy in order to betray that caftle to the Scots; and in proof of this, Edward appealed to intercepted letters of Wifheart. On the other hand, Wallace, afcribing the bifhop's conduct to traiterous pufillanimity, plundered his houfe, and carried off his family captives.

Immediately after the defeation of the barons at Irvine, Wallace with his band of determined followers artacked the rear of the Englifh army, and plundered their baggage; but was obliged to retire, with the lofs of 1000 men. He then found himfelf deferted by almoft all the men of eminence and property. His army, however, increafed confiderably by the accefion of numbers of inferior rank, and he again began to act on the offenfive. While he employed himfelf in befieging
$74^{8} \mathrm{~S} \quad \mathrm{SCO}$
the cafle of Dundee, he was informed that the Eng. Scotlant. lifh army approached Stirling. Wallace, having charged the citizens of Dundee, under the pain of death, to continue the blockade of the cafte, haftened with all his troops to guard the important paflage of the Forth; and encamped behind a rifing ground in the neighbourhood of the abbey of Cambuikenneth. Brian Fitz-Allan had been appointed governor of Scotland by Edward; but Warenne, whe waited the arrival of his fucceffor, remained with the army: Imagining that Wallace might be induced by fair means to lay down his arms, he difpatched twv, friars to the Scottifh camp, with terms of capitulation. "Return," faid Wallace, " and tell your mafters, that we came not here to treat but to affert our right, and to fet Scotland free. Let them advance, they will find us prepared." The Englih, provoked at this aniwer, demanded impatiently to be led on to battle. Sir Richard Lundin remonftrated again? the abfurdity of making a numerous army pafs by a long narrow bridge in prefence of the enemy. He told them, that the Scots would attack them before they could form on the plain to the north of the bridge, and thus certainly defeat them: at the fame time he offered to fhow them a ford, which having croffed with 500 horfe, and a chofen detachment of infanity, he propofed to come round upon the rear of the enemy, and by this diverfion facilitate the operations of the main body. But this propofal being rejected, the Englifh army began to pafs over ; which was no fooner perceived by Wallace, than he rufhed down upon them, and broke them in a moment. Creffingham the treafurer was killed, and many thoufands were flain on the field, or drowned in their flight. The lofs of the Scots would have been inconfiderable, had it not been for that of Sir Andrew Moray, the intimate friend and companion of Wallace, who was mortally wounded in the engagement. The Scots are faid to have treated the dead body of Creflingham with the utmoft indignity; to have flead him, and cut his fkin into pieces, which they divided among themfelves; while others tell us, they ufed it for making girths, and faddles.

The viftory at Stirling was followed by the furrender of Dundee cafle, and other places of ftrength in Scotland; at the fame time the Scots took poffefion of Berwick, which the Englifa had evacuated. But as a famine now took place in Scotland by the bad feafons and miferies of war, Wallace marched with his whole army into England, that he might in fome meafure relieve the neceffities of his countrymen by plundering the enemy. This expedition lafted three weeks, during which time the whole tract of country from Cockermouth and Carlifle to the gates of Newcalle was laid wafte with all the fury of revenge and rapacity ; though Wallace endeavoured as far as poffible, to reprefs the licentioufnefs of his foldiers.

In 1298, Wallace affumed the tite of "Governor of Scotland, in name of king John, and by confent of the Scottifh nation;" but in what manner this office was obtained, is now in a great meafure unknowin. In a parliament which he convoked at Perth, he was confirmed in his authority ; and under this title he conferred the conftabulary of Dundee on Alexander furnamed Skrimgeour and his heirs, on account of his faithful aid in bearing the royal flandard of Scotland. This.

108 Jealoufy between Wallace and the barons.

109
Scotland
again in. vaded by Edward.
probation of the Scottilh nobility, 29th March 1293. From this period, however, we may date the very great jealoufy which took place between Wallace and the nobles who pretended to be of his party. His elevation wounded their pride ; his great fervices reproached their inactivity in the public caufe; and thus the counfels of Scolland were perplexed with diftrult and envy, when almolt its very exiftence depended on unanimity.

In June t298, Edward, who had all this time been in Flanders, returned to England, and fummoned the Scottifh barons, under pain of rebellion, to attend him in parliament; and, on their difobeying his fummons, he advanced with his army towards Scotland. His main force, commanded by himfelf, affembled at Berwick; but a body of troops, under the earl of Pembroke, having landed in the north of Fife, were defeated with great lofs by Wallace, on the r2th of June. The fame month Edward invaded Scotland by the way of the eaftern borders. No place refifted him except the caftle of Dirleton. After a refolute defence, it furrendered to Anthony Beck, bifhop of Durham.

Meanwhile the Scots were affembling all their ftrength in the interior part of the country. Few barons of eminence repaired to the national ftandard. They whofe names are recorded, were John Comyn of Badenoch, the younger ; Sir John Stewart of Bonkill, brother to The Steward; Sir John Graham of Abercorn; and Macduff, the grand-uncle of the young earl of Fife.Robert Bruce again acceded to the Scottilh party; and with his followers guarded the important calle of Air, which kept the communication open with Galloway, Argylefhire, and the ifles.

The aim of Edward was to penetrate into the weft, and there to terminate the war. He appointed a fleet, with provifions, to proceed to the frith of Clyde, and await his arrival in thofe parts. This precaution was abfolutely neceflary for the fubfiftence of his numerous army in a country impoverifhed and walte.

Waiting for accounts of the arrival of his fleet, he eftablifhed his head-quarters at Templelitton, between Edinburgh and Linlithgow.

A dangerous infurrection arofe in his camp. He had beltowed a donative of wine among his foldiers; they became intoxicated; a national quarrel enfued.In this tumult the Welch flew 18 Englifh ecclefiatics. The Englifh horfemen rode in among the Welch, and revenged this outrage with great flaughter. The Welch in difgult feparated themfelves from the army. It was reported to Edward, that they had mutinied, and gone over to the Scots: "I care not," faid Edward, diffembling the danger ; "let my enemies go and join my enemies ; I trult that in one day I fhall chatife them all."

Edward was now placed in molt critical circumflances. As the fleet with provifions had been detained by contrary winds, he could not venture to advance, neither could he fubfift any longer in his prefent quarters. T'o retreat would have fullied the glory of his arms, and expofed him to the obloquy and murmurs of a difcontented people. Yet he fubmitted to this hard neceffity. Abandoning every profpect of ambition and revenge, he commanded his army to return to the eaftern borders. At that moment intelligerce arrived that the Scots were advanced to Falkirk,

Edward infantly marched againft then;. Ilis anmy scation... lay that night in the fields. While Edward nept on $\underbrace{-}$ the ground, his war-horfe frimk him anci brole iwo of his ribs. The alarm arofe, that the kincr vas womed. Ther who knew not the caufe, repeated the cry, "The king is wounded; there is treafon in the camp; the enemy is upon us." Edward mounted on horfeback, and by his prefence difpelled the panic. With a fortituce of firit fuperior to pain, he led on his troops. At of bittle break of day, the Scottith army was defcried, forming on a flony field at the fide of a fmall eminence in the neighbourhood of Falkirk.

Wallace ranged his infantry in four bodies of a circular form. The archers, commanded by Sir John Stewart, were placed in the intervals. The horfe, amounting to no more than a thouland, were at fome diftance in the rear. On the front of the Scots lay a morafs. Having drawn up his troops in this order, Wallace pleafantly faid, "Now I have brought you to the ring, dance according to your flill."

Edward placed his chief confidence in the numerous and tormidable body of hordemen whom he had felected for the Scottilh expedition. Thefe he ranged in threc lises. The firt was led by Eigot earl Marhal, and the earls of Hereford and Lincoln; the fecond by the bifhop of Durham, having under him Sir Ralph Balte. of Drayton; the third, intended for a referve, was led by the king himfeif. No mention is made of the difpofition of his infantry: it is probable that they wate drawn up behind, to fupport the cavalry, and to annoy the Scots with their arrows and other milfile wed. pons.

Bigot, at the head of the firft line, rufhed on to the charge. He was checked by the morals, which in his impetuofity he had overlooked. This obliged him to incline to the folid ground on his left, towards the right flank of the Scottifh army. The bifhop of Durham, who led the fecond line, inclined to the right, turned the morafs, and advanced towards the left flank of the Sc tifh army. He propofed to halt till the referve fhould advance. "To mafs, bifhop," cried Baffet, and inftantly charged. The flook of the Englifh cavalry on eack fide was violent, and gallantly withitood by the Scotifh infantry ; but the Scottifh cavalry, difmayed at the number and force of the Englifh men-at arms, immediately quitted the field. Stewart, while giving orders to his archers, was throw: from his horfe and flain. His archers crowded round his body and perifhed with him. Often did the Englifh frive to force the Scotifh circie. "They could not penetrate into that The Ir wood of fpears," as one of their hiltoriaris fpeaks. By defeated repeated charges, tile outermoft ranks were brought to with grat. the ground. The Englifh infantry inceffantly galled faughtis. the Scots with fhowers of fones and arrows. Nacduff and Sir John Grabam fell. At length the Scots vere broken by the numbers and weight of the Englifh couvalry, and the rout became univerfal.

The number of the Scots flain in this batte munt have been very great. As is commonly the cafe, it is cxaggerated by the hiftorians of the victors, and reduced too low by the hiforians of the vanguifhed.

On the fide of the Inglifin the lofs was inconidarable. The only perfens of note who fell were Brian le Jay, mafter of the Englifh Templars, and the prior of Torw

phichen in Scutlan l, a knight of another order of religious foldiery ( E ).
The Scots in their retreat burnt the town and cafle of Stirling. Edward repaired the caftle, and made it a place of arms. He then marched to the weft. At his approach, Brace burat the caftle of Ayr, and retired. Edward would have purfued him into Carrick; but the want of provifions ftepped his further progrefs. He turned into Annandale, took Bruce's caftle of Lochmaben, and then departed out of Scotland by the weftern borders.

Here may be remarked the fatal precipitancy of the Scots. If they had fudied to protract the campaign, intead of hazarding a general action at Falkirk, they would have foiled the whole power of Edward, and reduced him to the neceffity of an inglorious retreat.

In 1299 Edward thought proper to releafe John Baliol the unfortunate king of Scotland, whom he had kept clofe priioner ever fince the year $\mathbf{1 2 9 6}$. Before this time Baliol had ufed the mon difgraceful methods to recover his liberty. He had folemnly declared, that "he would never have any intercourfe with the Scots; that he had found them a falfe and treacherous people; and that he had reafon to fufpect them of an intention to poifon him." However, notwithltanding all his proteftations, Edward ftill detained him in captivity; but at laft releared him at the mediation of the pope, though after a fingular form: He ordered the governor of

## $\left.75^{\circ}\right] \quad \mathrm{SCO}$

Dover to convey him to the Frencla coaft, and there Scotland. to deliver him to the papal nuncio, "wilh fall power to the pope to difpofe of Baliol and his Englifl eltate." In confequence of which he was conveyed to Witfand, delivered to the nuncio in prefence of a notary and witneffes, and a receipt taken for his perfon. Notwithftanding this abject ftate, however, the Scots continued to own him for their king, and to affert their national independency. Tho' the misfortune at Falkirk had deprived them of a very confiderable estent of territory, they were fill in poffeffion of the whole country beyond the Forth, as well as the county of Galloway. By general confent William Lamberton bifhop of St An* drew's, Robert Bruce earl of Carrick, and John Cummin the younger, were chofen guardians of Scotland in name of Baliol. Wallace at this time was reduced to the condition of a private man; nor had he any longer the command of the Scots armies, nor any fhare in their councils.-The new guardians undertook to reduce the caftle of Stirling, and Edward prepared to defend it. The Scots pofted themfelves at the Torwood, and chofe The Scots pofted themelves at the Torwood, and chofe Edward have raifed the fiege without diflodging them; which retire. finding it impoffible for him to do, he returned home in difguft. Next year he invaded Scotland on the weft fide, wafted Annandale, and reduced Galloway; but the Scots being now taught by experience to avoid a general action, chofe their pofts with fuch ikill, that Ed-
(e) "This account of the action at Falkirk, extracted from Lord Hailes's Annals, is drawn, his Lordhip informs us, from the teftimony of the Englifh hiftorians. "They have done jultice (he obferves) to the courage and fteadinefs of their enemies; while our hiftorians reprefented their own countrymen as occupied in frivolous unmeaning contefts, and, from treachery or refentment, abandoning the public caufe in the day of trial.
"It would be tedious and unprofitable to recite all that has been faid on this fubject by our own writers from Fordun to Abercrombie. How Wallace, Stewart, and Comyn, quarrelled on the punctilio of leading the van of an army which food on the defenfive: How Stewart compared Wallace to 'an owl with borrowed feathers' : How the Scottifh commanders, bufied in this frivolous altercation, had no leifure to form their army: How Comyn traiteroufly withdrew with 10,000 men : How Wallace, from refentment, followed his example: How by fuch difaltrous incidents, the Scottifh army was enfeebled, and Stewart and his party abandoned to deftruction. Our hiftories abound in trafh of this kind: 'There is fcarcely one of our writers who has not produced an invective againft Comyn, or an apology for Wallace, or a lamentation over the deferted Stewart. What diffenfions may have prevailed among the Scottifh commanders, it is impoffible to know. It appears not to me that their diffenfions had any influence on their conduet in the day of battle. The truth feems to be this : The Englifh cavalry greatly exceeded the Scottifh in numbers, were infinitely better equipped and more adroit : the Scottifh cavalry were intimidated, and fled. Had they remained on the field, they might have preferved their honour; but they never could have furned the chance of that day. It was natural, however, for fuch of the infantry as furvived the engagement, to impute their difafter to the defection of the cavalry. National pride would afcribe their fight to treachery rather than to pufillanimity. It is not improbable that Comyn commanded the cavalry : hence a report may have been fpread, that Comyn betrayed his country ; this report has been embellifhed by each fuccefilve relator. When men are feized with a panic, their commander muff from neceflity, or will from prudence, accompany them in their flight. Earl Warrenne fled with his army frum Stirling to Berwick ; yet Edward I. did not punifh him as a traitor or a coward.
"The tale of Comyn's treachery, and Wallace's ill-timed refentment, may have gained credit, becaufe it is a pretty tale, and not improbable in itfelf: but it amazes me that the fory of the congrefs of Bruce and Wallace after the battle of Falkirk fhould have gained credit. I lay afide the full evidence which we now poffefs, 'that Bruce was not, at that time, of the Englifh party, nor prefent at the battle.' For it muft be admitted, that our hiftorians knew nothing of thofe circumitances which demonitrate the impoffibility of the congrefs. But the wonder is, that men of found judgment fhould not have feen the abfurdity of a long convenfation between the commander of a flying army, and one of the leaders of a victorious army. When Fordun told the fory, he placed a' narrow but inacceflible glen' between the fpeakers. Later hillorians have fubfituted the river Carron in the place of the inacceffible glen, and they make Bruce and Wallace talk acrofs the river like two young declaimers from the pulpits in a fchool of rhetoric."
scotland. ward could not penetrate farther ; and the fame year a truce was concluded with the Scots, to continue till Whitfunday 1301 .
114 Whitanday 1301.
The crown This year a new competitor appeared for the crown of Scotland of Scotland. Boniface VIII. in a bull directed to Edclaimed by ward, averred, that Scotland belonged anciently, and Poireboni- did fill belnng, to the holy fee; and fupported his exface VIII. travagant claim by fome ftrange anthorities; fuch as, that Scotland had been miraculoully converted by the relics of St Andrew : after which he proceeded to fhow the futility oi Edward's pretenfions, and that Scotland never had any feudal dependence on Englund. He required Edward to fet at liberty all the Scottifh eccleflaftics, particularly Wifheart bithop of Glafgow, and to remove his officers from the patrimony of the church : "But (added he) fhould you have any pretenfions to the whole, or any part of Scotland, fend your prcctors to me within fix months; I will hear and determine according to jutice; I take the caufe under my own peIr5 culiar cognizance."
Hispreter- This iiterpolition of the pope had probably been fions an-
fwered by
Edward
and his
parliament. procured by Scottifh emiffaries at the court of Rome; but, however ridiculous his pretenfions might be, they afforded matter of very ferious confideration to Edward. . After fpending a whole winter in deliberations, Edward and his parliament made feparate anfwers to the pope. The anfwer of the parliament was to the following purpofe: All England knows, that ever fince the firlt eftablifhment of this kingdom, our kings have been liege-lords of Scotland. At no time has the king. dom of Scotland belonged to the church. In ten. porals, the kings of England are not amenable to the fee of Rome. We have with one voice refolved, that, as to temporals, the king of Eugland is independent of Rome; that he fhall not fuffer his independency to be quetioned; and therefore, that he fhall not fend commiffi ners to Rome. Such is, and fuch, we truft in God, ever will be, our opinion. We do not, we cannot, we mult not, permit our king to follow meafures fubverfive of that government which we

army. have fworn to maintain, and which we will maintain."

The king entered into a more full refutation of the pope's arguments ; and having, as he thought, anfwered them fufficiently, he marched again into Scotland: but, by the mediation of France, another truce was concluded, to laft till St Andrew's day 1302.

After the expiration of the truce, Edward fent an army into Scotland, under the command of John de Segrave. This general divided his troops into three bodies; but, keeping them fo far diftant that they could not fupport each other, they were all engaged and defeated in one day by the Scots, near Rollin (fee Rosun). This, however, was the hif fuccefsful exploit of the Sccts at this period. The pope deferted them; and the king of France concluded a peace with England, in wl i: h all mention of the Scots was indultrioully avoided; fo that they were left alone to bear the whole weight of Edward's refentment, who now invaded their country in perion with a mighty army. He met with no refiltance in his progrefs, except from the cafle of Brechin, which was commanded by Thoma's Maul, a brave and experienced officer. He held out for 20 days againlt the whole power of the Englifh army ; but at laft, being mortally wounded, the place capitulated.

From thence he poceeded northwari, acioding to fome hiftorians, as far as Caithefs. He then returned towards the fouth, and wintered in Dunfermline. In that place there was an abbey of the Boneuictine ader, a buildirg fo fpacious, that, according to an Englifh hiftorian, three fovereign princes with all their retinue might have been lodsed conveniently within its precincts. Here the Scottifh nobles fometimes held their alfemblies. The Englifh foldiers utterly demolifhed this magnificent fabric.

The only fortrefs thet remained in the poffeffion of the Scots was the caltle of Stirling, where Sir Whliam Oliphant commanded. To protest this fingle rlace of refuge, Comyn altembled all his forces. He polted his army on the fouth bank of the river, in the neighbourhood of Stinling, there to make the latt Itand for the national liberty. 'The Scots fondly inaremed, that Edward would attempt to force the fallitge, as the impetuous Creffingham had attempted in circumtances not diffimilar. But the prudence of Edward fruftrited their expectations. Having difcovered a ford at fome diftance, be croffed the river at the head of his whole cavalry. The Scots gave way, and difperfed themfelves.

All refources but their own c urage bad long failed them; that laft retource failed them now, and they hattened to conciliate the favour of the conquero:: Previous to this, Bruce had furrendered himielf 10 John de St John, the Englifh warden. Comyn and his followers now fubmitted to Edward. They fit. pulated for their lives, liberties, and ctates : referving always to Edward the power of inflicting pecuniary mulets on them as he fhould fee fit.

From the general conditions of this capitulation, the following perfons were excepted: Wihheart bifhop of Glafgow, the Steward, Sir John Soulis, David de Graham, Alexander de Lindefay, Simon Frafer, Thomas Bois, and Wallace. With refpest to them, it was provided, that the bilhop of Glafgow, the Steward, and Soulis, fhould remain in exile for two years, and fhould not pafs to the north of Trent; that Graham and Lindefay fhould be banifhed from Scolland for fix months; that Frafer and Bois fhould be banifhed for three years from all the dominions of Edward, and fhould not be permitted, duing that fpace, to tepair to the terricories of France. "As for William Wallace, it is agreed, that he fhall render himfelf up at the will and mercy of our fovereign lord the hing, if it fhall feem good to him." Thefe were all the conditions that the Scottilh nation ftipulated for the man who had vanquifhed the Englif at Stirling, who had expelled them from Scotland, and who had once fet his country free!

Amid this wreck of the nationai liberties, Wallace fcorned fubmiftion. He lived a free man : a free man he refolved to die. Frafer, who had too oft complied with the times, now caught the fame heroic fentiment:But their endeavours to roufe their countrymen were in vain. The feafon of refiftance was path. Walace perceived that there remained no more hope; and fou ? $\mathrm{n}^{\circ}$ out a place of concealment, where, eluding the vongeance of Edward, he might filcotiy lament over his fallen country.

Edward affembled at St Andrew's what is caled a parlisun, man

- otiand.

3rotan!.

125 The calle of Stirling rediteed, andssentland fubdad.
pariainert. Wallace, Frafer, and the garrion of Stirling, were fummoned to appear : They appeared not, and lentence of outlawry was pronounced againlt them. Edward now prepared to befiege the caltle of Stirling; and, forefeeing that the reduction of this place would be attended with confiderable dificulty, he ftrip. ped the abbey of St Andrew's of the lead which covered it, in order to employ the metal in bullets for his battering machines. Oliphant was folemnly fummoned to furrender; but in vain. Edward drew out all his artillery, and battered the walls with ftones of 200 pounds weight. The befieged, however, defended themfelves with obftinacy, and killed a great number of the Englifh: but at lalt they were obliged to furrender: and Edward, looking upon the conquelt of Scotland as now complete, fet out for York, and from thence to Lincoln.

Though Edward had thus met with all the fuccefs he could defire in his expeditions againt the Scots, he could not but perceive that his dominion over them
T22 mult be very precarious, as long as he held them in Elward at- the fubjection of a conquered people. He refolved tempts an union between the two kingdoms in vaill. therefore once nore to renew his attempts for an union of the two kingdoms. He began with taking into favour the bifhop of Glafgow, Robert Bruce, and John Mowbray, who, next to Bruce and the Cummings, was amongft the greatef of the Scottifh nobility. To them he recommended the fettling the affairs of their country, but in fuch a manner as to leave it in his power to effect the propofed union with England. This fcheme, however, was by no means agreeable to Bruce; who had now no other competitor for the crown but Cumming, who was in a great meafure incapable of oppofing his defigns : neither indeed could it ever be made agreeable to the bulk of the nation; and therefore came to nothing at latt. Scotland, however, was fubdued. Its inhabitants had renounced every idea of afferting

123
Wiace
berayed, and execu$t \in d$. their liberty, and only ftrove to make their court to the conqueror. Wallace alone remained an exception. Edward, who had received into favour thofe who had proved traitors over and over again, fhowed a mean revenge againt the only man who difcovered a fteady and ho. nourable fpirit, and whofe friendihip feemed worth the courting. Ralph de Haliburton, a prifoner, offered his affitance for difcovering Wallace; and for this purpofe he was granted a temporary liberty: but what he did in this very difhonourable employment is unknown. Certain it is that Wallace was difcovered, and betrayed into the hands of the Englifh, by Sir John Menteith, as is commonly fuppofed; who is alfo faid to have been the intimate friend of Wallace, though without any jult foundation. Be this as it will, however, this celebrated and heroic patriot was arraigned at Weltminfter as a craitor to Edward, and as having burnt villages, formed catles, and flaughtered many fubjects of England. Wallace denied his ever having been a traitor, and indeed with truth ; for he had always been the avowed enemy if Edward, and had not at any time owned al legiance to him. But whatever his defences might have been, they were of no avail with a judge who had refolved on his deftruction. Wallace was condemned to die a traitor's death, and the fentence was executed with the utmoft rigour! In his laft moments he affersed that independency which a degenerate nation had renounced. His head was placed on a pinnacle at Lon-
don, and his mangled limbs were difinbutect over the sootland, kingdom.

After the death of Wallace, Edward thought of nothing but fettling the affairs of Scotland as a conquered country; however, he took care to preferve the ancient for fettling forms as far as was confitent with the dependent fate the Scots of the nation. It has been faid, indeed, that Edward effairs. abrogated all the Scottifh laws and cultoms, and endeavoured to fubtitute the Englifh in their flead; but this is denied by others. Lord Hailes gives us at length the record with refpect to thefe laws, in the following words. "And, with refpect to the laws and ufages of the government of Scotland, it is ordained, that the cuflom of the Scots and the Brets thall for the future be prohibited, and be no longer practifed. It is alfo ordained, that the king's lieutenant fhall forthwith affemble the good people of Scotland : and that, at fuch af. fembly, fhall be read over the ftatutes made by David king cf Scots, and alfo the additions and amendments which have been made by other kings; and that the lieutenant, with the affiftance which he fhall then have, as well of Englifhmen as of Scots, fhall amend fuch of thefe fatutes and ufages as are plainly againft the laws of God and reafon, as they beft may in fo thort a fpace, and in fo far as they can without confulting the king; and as to matters which they cannot undertake to correct of themfelves, that they be put in writing, and laid before the king by the lieutenant, and any number of commiffioners, with parliamentary powers, whom the Scots fhall think fit to choofe. That they fhall meet with commiffioners appointed by the king, and finally determine as to the premiffes."

This is the record by which it is generally fuppofed that the law of Scotland was abrogated. But Lord Hailes is of opinion, that the ufage of the Scots and Brets Did mot here mentioned was fomething different from the com- abrogate mon law of the land. "We know (fays he) from our the ancient ftatute book, that the people of Galloway had certain ufages peculiar to themfelves; Stat. Alex. II. c. 2. One was, that caufes were tried among them without juries [Quon. Aitach. c. 72. 73. placed in fome ancient MSS. among LL. David I. c. 15.], and this may probably have been the ufage which Edward abolithed. The people of Galloway were fometimes diftinguifhed by the name of Scots : thus the wild Scot of Galloway is an exprefion to be found in ancient inftruments, and is pro. verbial even in our own days. The ufage of the Brets, I take to be what relates to the judge called brithibh, or brehon; in Ireland, brehan; and confequently, that the thing here abolifhed was the commutation of punifiments by exacting a pecuniary mule."

An indemnity was now granted to the Scots 126 certain conditions. Various fines were impofed, from granted to one to five years rent of the eftates of the delinquents, the Scots. One year's rent was to be paid by the clergy, excluding the bifhop of Glafgow; two by thofe who were more early in their fubmiffions than Comyn; three by Comyn and his affuciates, and by the bifhop of Glaijow; fuar years rent was to be paid by Wiliiam de Baliol and John Wifheart ; and five by Ingelram de Umfravile, becaufe they had ftood out longer. Three years rent was alfo paid by the vaffals of Baliol, Wifheart, and Umfraville. Thefe fines were to be paid in moieties. The perion taxed was to pay half his income annually: and thus Umfraville, taxed in five years rent, was al-

Scotland. prefs refervation to Edward of all the royal demefnes which Baliol might have alienated. There was alfo an exception for thofe who were already in cuftody, and thofe who had not yet fubmitted.

127 Ovethrow land of the Eng- - Within four months that fyltem was overthrown, lifh govern- which the inceffant labour of fifteen years had eftablifhment. ed by craft, diffimulation, and violence, with a walte of treafure, and the effufion of much blood. The caufes of this event are related as follows. Derverguill of Galloway had a fon, John Balicl, and a daughter named Marjory. John Comyn was the fon of Marjory, and, fetting Baliol afide, was heir to the pretenfions of Derverguill. He had for many years maintained the conteft againft Edward; but at laft laid down his arms, and fwore fealty to the conqueror; and as Baliol had repeatedly renounced all pretenfions to the crown of Scotland, Comyn might now be confidered as the rightful heir. His rival in power and pretenfions was Bruce earl of Carrick. This young nobleman's grandfather, the competitor, had patiently acquiefced in the award of Edward. His father, yielding to the times, had ferved under the Englifh banners. But young Bruce had more ambition, and a more reftlefs fpirit. In his earlier years he acted upon no regular plan. By turns the partifan of Edward and the vicegerent of Baliol, he feems to have forgotten or fifled his pretenfions to the crown. But his character developed itfelf by degrees, and in maturer age became firm and confiftent. According to the traditionary report, Bruce made the following propofal to Comyn: "Support my title to the crown and I will give you my eftate ; or give me your eftate, and I will fupport your's." The conditions were properly drawn out and figned by both parties; but Comyn, either through fear or treachery, revealed the whole to Edward. On this the king fhowed Bruce the letters of his accufer, and queftioned him very hard;

128
Edward's defins againft the family of Bruce. but the latter found means to pacify him by mild and judicious anfwers. Notwithttanding this, however, Edward ftill fufpected him, though he diffembled his fentiments, until he fhould get the brothers of Bruce into his power, and then deftroy all the family at once. The king having drank freely one evening, informed fome of his lords that he had refolved to put Bruce to death next day. The earl of Gloucefter, hearing this refolution, fent a meffenger to Bruce, with twelve pence and a pair of fpurs, as if he had meant to reftore what he had borrowed. Bruce underftood the meaning of his meffage, and prepared for flight. The ground was co-

Bruce
makes his
eícape,
vered with fnow, which would have difcovered his flight ; but, it is faid, that Bruce ordered his farrier t' invert the fhoes of his horfes, and immediately fet out for Scotland in company with his fecretary and groom. In his way he obferved a foot-paffenger whofe behaviour feemed to be fufpicious, and whom he foon difcovered to be the bearer of letters from Comyn to the Englifh monarch, urging the death or immediate imprifonment of Bruce. The latter, filled with refentment, immediately beheaded the meflenger, and fet forward to his caftle of Lochmaben, where he arrived the feventh day after his departure from London. Soon after this he repaired to Dumfries, where Comyn happened at that time to refide. Bruce requefted an interview with him Yos. XVI.
in the convent of the Minorites, where he reproached him with his treachery. Comyn gave inm the lie, and Bruce inftantly fabbed him; after which he hatenel

Scotland. $130^{\circ}$ out of the convent, and called "To horfe." His at- Ird kills tendants, Lindiay and Kirkpatuick, perceiving Liry john ©apale, and in exteme agitation, inquitel how it was with myn. him ? " Ill (replied Biuce); I doubt I have llain Cumyn." "You doubı!" cried Kirlpatrick; on faying which, he rufhed into the place where Comyn lay, and inftantly difpatched him. Sir Rober: Comyn, a reixin: , attempted to defend his kinfman, and lhared his fate. Bruce had now gone fo far, thit it was in vain to think of retracting ; and therefore fet himfelf in oppofition to Edward in good earnelt. The jufticiaries were then holding their court at Dumfries; who kearing what had happened, imagined their own lives to b s in danger, and barricaded the doors. Bruce ordered the houle to be fet on fire: upon which they furrendered; and Brace granted them leave to depart out of Scotland without moleftation.

The above account of this cataftrophe is taken from Opinion of the Scots hiftorians; thofe of England differ in many LordHailes particulars. Lord Hailes fuppofes both to be wrong, concerning and that the true circumftances of the quarrel are unknown. "My opinion (fays he) is, that Bruce, when he met Comyn at Dumfries, had no intention of embraing his hands in his blood, nor any immediate purpofe of afferting his right to the crown of Scotland; that the flaughter of Comyn was occafioned by a halty quarrel between two proud-fpirited rivals; and that Bruce, from neceffity and defpair, did then affert his pretenfions to the crown."
The death of Comyn affected the Scots varioully, according to their different views and interefts. The relations of the deceafed viewed it as a cruel affaffination, and joined with Edward in fchemes of revenge. Some who wifhed well to the peace of their country, thought that it was better to fubmit quietly to the government of the Englifh, than to attempt a revolution, which could not be effected without much danger and bloodfhed ; but, on the other hand, the friends of Bruce now faw the neceffity they were under of proceeding to the coronation of the new king without lofs of time. Thell $\mathbf{I}_{3} 2$ coronation of the new king without lofs of time. The Robert
ceremony was theiefore performed at Scone on the 25 th crowned of March 1306, in prefence of two earls, the bifhops of lking of St Andrew's and Glafgow, the abbot of Scone, John a woman. de Athol, and John de Menteith. It had been cultomary, fince the days of Macbeth, for one of the family of Fife to put the crown on the king's head; and Brace found the prepoffefion of the Scots in favour of this circumftance fo ftrong, that he was obliged to feck for an expedient $t$. fatisfy them. Macduff the earl of Fife was at that time in England, where he had married a near relation of Edward. His fifter was wife to the earl of Buchan, cne of the heads of the family of Comyn, and confequently the determined enemy of Robert. By an uncommon effort of female patriotifm, fhe poltponed all private quarrels to the good of her country, and in her hufband's abfence repaired, with all his warlike accoutrements, to Bruce, to whom fhe delivered them up, and placed the crown upon his head. This crown is faid to have been made by one Conyers an Englifhman, who narrowly efcaped being punifhed for it by Edward.

The king of England received intelligence of all thefe 5 C - pro.
croffed Lochlomond in a fmall crazy boat, he was dif- Scotlands covered by his truty friend the Earl of Lenox, who had been profcribed in England, and now lived in a kind of exile on his own eftate. The meeting between thefe friends was very affecting, and drew tears from the eyes of all prefent. Lenox, who had heard nothing of Bruce's misfortunes, furvilhed him and his half-famihhed attendants with plenty of provifions: but being foon made fenfible that it was impoffible for them to live in a place where they were well known, and furrounded by enemies, Bruce refolved to feek out fome more fafe habitation. For this purpofe Sir Neil Campbell had already provided fhipping ; but our adventurers had fcarcely fet fail, when they were purfued by a large fquadron of the enemy's fleet. The bark which carried the earl of Lenox efcaped with the utmof difficulty to Cantire, where Bruce was already landed: and, at their meeting, both agreed that their perfons fhould never afterwards be feparated while they remained alive.
${ }_{i t h}^{137}$

- In the mean time Edward having compromifed fome differences with his Englifh fabjects, refumed his old project of entirely fubduing Scotland ; and his intention now appears to have been to divide the lands of fuch as he fufpected of difaffection among his Englifh followers he ordered a proclamation to be made, that all who had any title ta the honour of knighthood, either by heritage or eftate, fhould repair to Weftminitter to receive all military ornaments, their horfes excepted, ${ }^{336}$ Meets with the earl of Lenox;

proceedings with aftonifhment ; and without delay fent a body of troops under the command of Aymer de Valence earl of Pembroke, to fupprefs the rebellion. Bruce cmitted nothing for his defence. He had always been confidered by his countrymen as a promifing accomplifhed young nobleman, but firmly attached to Edward's perfon and government; for which reafon he had not been trufted by thofe independent patriots who joined Wallace. But their confidence was now gained by his rendering himfelf fo obnoxious to Edward, that no poffibility of a reconciliation was left; and he foon faw himfelf at the head of a fmall army. With thefe, who confifted of raw and unexperienced foldiers, Bruce formed a camp at Methven near Perth, which laft was the head-quarters of the enemy; but knowing the diladvantage under which he laboured from the inexperience of his men, he refolved to act upon the defenfive. The Englifh general at laft fent Bruce a challenge to fight him, which was accepted; but the day before the battle, was to have been fought by agreement, the Scots were attacked by furprife, and totally defeated. Bruce behaved with the greatelt valour, and had three horfes killed under him. Being known by the flaughter which he made, John Mowbray, a man of great courage and refolation, rulhed upon him, and catching hold of his horfe's bridle, cried out, "I have hold of the newmade king !" but he vas delivered by Chritopher Seaton. Some Scottifh hiftorians have afferted that on this occafion all the prifoners of note were put to death; but others inform us, that though Edward did fend orders to that purpofe, the Englifh general pardoned all thofe who were willing to fwear fealty to his mafter : however, it is certain, that after the battle of Methven, many prifoners were hanged and quartered.

This difaiter almoft gave the finithing ftroke to the affairs of Bruce. He now found himfelf deferted by a great part of his army. The Englifh had taken prifoners great numbers of women whofe hubands followed Bruce; and all thofe were now ordered, on pain of death, to accompany their hufbands. Thus was Bruce burdened with a number of ufelefs mouths, and found it hard to fubfift. The confequence was, that moft of his men departed with their families, fo that in a few days his army dwindled down to 500 . With thefe he retreated to Aberdeen, where he was met by his brother Sir Neil, his wife, and a number of other ladies, all of whom offered to follow his fortune through every diff. culty. But, however heroic this behaviour might be, it put Bruce to fome inconvenience, as he could fcarce procure fubfiftence; and therefore he perfuaded the ladies to retire to his caftle of Kildrommey, under the protection of Sir Neil Bruce and the Earl of Athol. In the mean time the defertion among Bruce's troops continued, fo that now he had with him no more than 200 men; and as winter was coming on, he refolved to go into Argylehire, where Sir Neil Cimpbell's eftate lay, who had gone before to prepare for his reception.

Is diftreffed alter this defeat.

In his way thither he encountered incredible difficulties; and fome of his followers being cut off at a place called $D_{\text {alry, }}$ the reft were fo difheartened, that they all forfook him, excepting Sir Gilbert Hay, Sir Jamics (fometimes called Lord) Douglas, and a few domeftics. Bruce, however, kept up the fpirits of his little party by recounting to them the adventures of princes and patriots in circumftances fimilar to his own. Haying from his royal wardrobe. As the prince of Wales came new invaunder this denomination, he was the firt who inder-Scotland went the ceremony ; which gave him a right to confer the like honour on the fons of above 300 of the chief nobility and gentry of England. The prince then repaired at the head of this gallant train, to Edward; who received them, furrounded by his nobility, in the moft folemn manner. The king then made a fpeech on the treachery of the Scots, whofe encire deftruction he vowed. He declared his refolution of once more heading his army in perfon; and he defired, in cafe of his death, that his body might be carried to Scotand, and not buried till lignal vengeance was taken on the perfidious nation. Having then ordered all prefent to join him within fifteen days, with their attendants and military equipages, he prepared for his journey into Sentland. He entered the country foon after Bruce's defeat at Methven. The army was divided into two bodies; one commanded by the king himfelf, the other by the prince of Wales, and, under him, by the earls of Lancalter and Hereford, with orders to proceed northwards, and penetrate into the councries where the gaves with northwards, and penetrate into the countries. Where the greatcruels
intereft of Bruce was frongeft. As he pafled along, ty. Edward caufed all that fell into his hands, whom he fufpected of favouring Bruce's party, to be immediately executed. The Bifhop of Glafgow was the only exception to this barbarity; he was taken, but had his life fpared on account of his function.

In the mean time, as the prince of Wales continued his march northwards, Bruce's queen began to be alarmed for her own fafety. She was advifed to take fanctyary at the fhrine of St Duthac in Rofshire; but there fhe was made prifoner by William earl of Rofs, who was of the Englifh party. By Edward's order the Sion of

I4 Kildrommey caftle taken, and the garrifon maffacred.

142 of Robert preferved $f$. She was to be conveyed to the manor of B"ultewick ; to have a waiting woman and a maid-fervant, advanced in life, fedate, and of good converfation : a butler, two men-fervants and a foot-boy for her chamber, fober, not riotous, to make her bed : three greyhounds when The inclines to hunt ; venifon, fifh, and the faireft $l_{1}$ :ufe in the manor. In I 308 , the was removed to another prifinn; in 13 I2, he was removed to Windfor cafle, 20 fhillings per week being allowed for her maintenance. In 3 I4, , he was committed to Rocherter calle, and was not fet at liberty till the clofe of that year.

The only fortrefs which Bruce poffeffed in Scotland was the calle of Kildrommey; and it was foon befieged by the earls of Lancatter and Hereford. One Ofburn treacheroully burnt the magazine; by which means the garrifon, deltitute of provifions, was obliged to furrender at difcretion. The common foldiers were hanged; Sir Neil Bruce and the earl of Athol were fent prifoners to Edward, who caufed them to be hanged on a gallows 50 feet high, and then beheaded and burnt. The countefs of Buchan, who had crowned King Robert, was taken pifoner; as was Lady Mary Bruce, the king's filter. Some hiftorians fay, that Edward ordered thefe two ladies to be thut up in wooden cages, one to be hung over the walls of the caltle of Roxburgh, and the other over thofe of Berwick as public fpectacles: but Lord Hailes only tells us that the countefs of Buchan was put into clofe confinement in
were put to death; among whom were Thomas and Alexander Bruce, two of the king's brothers, and John Wallace, brother to the celebrated Sir William. Bruce himfelf, in the mean time, was in fuch a defpicable fituation, that it was thought he never could give more difturbance; and it was even reported that be was dead. All his misfortunes, however, could not intimidate him, or prevent his meditating a mof fevere revenge upon the deftroyers of his family. He frit removed to the caltle of Dumbarton, where he was hofpitably received and entertained by Angus lord of Kintyre ; but, fufpecting that he was not fafe there, he failed in three days to Rachrim, a fmall ifland on the Irifh coaft, where he fecured himfelf effectually from the purfuit of his enemies. It was during his flay in this illand, that the report of his death was generally propagated. Notwithftanding this, his party increafed confiderably ; and, even when he landed on this ifland, he was attended by 300 men. However, after having lived for fome time in this retreat, being apprehenfive that the report of his death might be generally credited among his friends in Scotland, it was refolved to attempt the furprife of a fort held by the Englifh under Sir John Hatings, on the ifle of Arran. This was performed with fuccers by his two friends Douglas and Sir Robert Boyd, who put the greatelt part of the garrifon to the fword. The king, hearing of their fuccefs, paffed over into Arran; but, not knowing where his people relided, is faid to have found them out by blowing a horn. He then fent a trufty fervant, one Cuthbert, into his own country of Carrick ; with orders, in cafe he found it well affected ${ }_{5} \mathrm{C} 2$
(F) M. Weftminiter, p. 455. fays, " Capitur etiam et illa impiifima conjuratrix de Buchan, de qua confultus rex, ait, Quia gladio non percuflit, gladio non peribit; verum, propter illicitam conjurationem quam fecit, in domicilio lapideo et ferreo, in modum coronæ fabricato, firmiflime obltruatur, et apud Bervicum fub dio forinfecus fufpendatur, ut fit data, in vita et poft mortem, fpeculum viatoribus, et opprobrium fempiternum." Other Englifh hiftorians, copying M. Weftminfter, have faid the fame thing. We cannot, therefore, blame Abercrombie for faying, "She was put in a wooden cage fhaped like a crown, and in that tormenting polture hung out from high walls or turrets to be gazed upon and reproached by the meanelt of the multitude :" Vol. I. p. 579. Hemingford, Vol. I. p. 221 . relates the fory in a manner fomewhat different. He fays, that the earl of Buchan her huband fought to kill her for treafon; but that Edward reftrained him, and ordered her to be confined in a wooden cage.

The intentions of Edward I. touching the durance of the countefs of Buchan, will be more certainly learned from his own orders, than from the report of $M$. Weftminfter. His orders run thus: "By letters under the privy-feal, be it commanded, that the chamberlain of Scotland, or his deputy at Berwick upon Tweed, do, in one of the turrets of the faid cafte, and in the place which he fhall find moft convenient, caufe conltruct a cage Arongly latticed with wood (de fuif, i. e. beams of timber or palifades), crofs-barred, and fecured with iron, in which he fhall put the countefs of Buchan. And that he take care that the be fo well and fafely guarded there, in, that in no fort the may iffue therefrom. And that he appoint one or more women of Berwick, of Englifh extraction, and liable to no fufpicion, who ball minifter to the faid countefs in eating and drinking, and in all things elfe convenient in ber lodging place. And that he do caufe her to be fo well and Itrictly guarded in the cage, that fhe may not fpeak with any one, man or woman, of the Scottifh nation, or with any one elfe, faving with the women who fhall be appointed to attend her, or with the guard who fhall have the cuftody of her perfon. And that the cage be fo conftructed, that the countefs may bave therein the converience of a decent chamber (efement de chambre courtoife) ; neverthelefs, that all things be fo well and furely ordered, that no peril arife touching the right cuftody of the faid countefs. And that he to whom the charge of her is committed fhall be refponfible, body for body; and that he be allowed his charges." $F_{x d e r a}$, T.ii. p. 1014.

Such were the orders of Edward I. and be furely was not a man who would fuffer his orders to be difobeycd. Here, indeed, there is a detail concerning the cuftody of a female prifoner, which may feem ridiculoufly minute, but which is inconfitent with the ftory related by $M$. Weftminfer and other hiforians. To thofe who have no notion of any cage but one for a parrot or a fquirrel, hung out at a window, we defpair of readeriag this man. date intelligible.
to his caufe, to light a fire on a certain point near his cafte of Tunberry, whence it could be difcerned in Arran. Bruce and his party perceived the fignal, as they thought, and immediately put to fea. Their voyage took up but little time; and as Bruce had now

T44
And the
caftle of
'Tunberry 400 men along with him, he refolved immediately to act on the offenfive. His firt exploit was to furprife his own cafle of Tunberry, which had been given, along with Bruce's eftate, to lord Henry Percy. Him he drove out, along with the Englifh garrifon; but, in the mean time, he met with his fervant Cuthbert, who gave him difagreeable intelligence. This man had met with very little encouragement on his landing in Scotland; in confequence of which he had not lighted the fire agreed upon as a fignal of his fuccefs, that which Bruce had obferved having been kindled by accident. He alfo told him, that the Englifh were in full pofieflion of the country, and advifed his mafter to be upon his guard. Soon after this the king was joined by a lady of fortune, who brought along with her 40 warriors. By her he was firft particularly informed of the miferable fate of his family and relations; which, inftead of difheartening, animated him the more with a defire of revenge. However, he did not immediate-

I45 Douglas re- attempt the recovery of his eftate of Douglas-dale, as covers his Bruce himfelf had recovered his in Carrick. In this own eflate. expedition Douglas was joined by one Thomas Dick- fon, a man of confiderable fortune, and who gave him intelligence concerning the ftate of the country. By his advice he kept himfelf private till Palm Sunday; when he and his followers with covered armour repaired to St Bride's church, where the Englifh were performing divine fervice. The latter were furprifed, but made a brave defence ; though, being overpowered by numbers, they were at laft obliged to yield. DougLas, without farther refiftance, took poffeffion of his own cafle, which he found well furnifhed with arms, provifions, and money. He deftrcyed all that he could not carry with him, and alfo the cafle itfelf, where he knew that he mult have been befieged if he had kept it.

While Bruce and his friends were thus fignalizing themfelves, and fruggling with the Englifh under fo many difadvantages, $i t$ is natural to think that they mult have met with many dangerous and difficult adyentures. Many of thefe, indeed, are related by the Seots hiftorians; but moft of them have the appearince of fables, and it is now impolfible to diftinguifh the true from the falfe; for which reafon we fhall pafs them all over in filence, confining ourfelves only to thofe facts which are at once important and well authenticated.

In 1307, the earl of Pembroke advanced into the weef of Scotland to encounter Bruce. The latter did not decline the combat; and Pembroke was defeated.
146 Three days after this, Bruce defeated with great flaughThe Eng- ter another Englifh general named Ralph de Montherlith twice Robert,
defeated hy k mr laid fiege to the cafte for fome time, but retired kuy laid fiege to the caftle for fome time, but retired at the approach of fuccours from England. This year the Englifh performed nothing, except burning the monaftery at Pailley. Edward, however, refolved fill to execute his utmoft vengeance on the Scots, though he had long been retarded in his operations by a tedious and dangerous indifpofition. But now, fup.
pofing that his malady was decreafed fo far that he scotlant: could fafely proceed on his march, he offered up the horfe-litter, in which he had hitherto been cartied, in the cathedral church of Carlife; and, mounting him. felf on horfelack, proceeded on the way towards Solway. He was fo weak, however, that he could advance no farther than fix miles in four days; after which he expired in fight of Scotland, which he had fo often devoted to deftrucjon. With his dying breath Death ${ }^{147}$ he gave orders that his body fhould accompany his Edward I. army into Scotland, and remain unburied until the country was totally fabdued; but his fon difregarding this order, caufed it to be depofited in Weftminfer abbey.
The death of fuch an inveterate enemy to the Scottifh name, could not fail of raifing the fpirits of Bruce and his party ; and the inactive and timid behaviour of his fon Edward II. contributed not a little to give them frefh courage. After having granted the guardianfhip of Scotland to his favourite Piers de Gavefton earl of Pembroke, whom his father had lately banifhed, he advanced to Cumnock, on the frontiers of Airfhire, and then retreated into England; conferring the office of guardian of Scotland upon John de Bretagne earl of Richmond, a fortnight after he had beftowed it on Gavefton. He was no fooner gone than Bruce invaded Galloway. The inhabitants refufing to follow his Robert de flandard, he laid walte the country ; but was defeated, feated in and obliged to retire northwards by the guardian. In Galloway. the north he over-ran the country without oppofition ; and foon began to move fouthwards again in order to repair his late difgrace. He was encountered by Comyn earl of Buchan with an undifciplined body of Englifh, whom he entirely defeated and difperfed. But about this time he was feized with a grievous diftemper, which weakened him fo much, that no hopes were left of his recovery. In this enfeebled fituation, he was attacked by the earl of Buchan and John Mowbray an He defeets Englifh commander, who had affembled a body of the Englifh troops in order to efface their late difhonour. The in his arn, armies met at Inverury in Aberdeenfhire. Bruce was and recotoo weak to fupport himfelf, and therefore was held vers fron 12 upon horfeback by two attendants: but he had the dangeare. pleafure of feeing his enemies totally defeated, and purfued with great flaughter for many miles; and it is reported that the agitation of his fpirits on that day proved the means of curing him of his difeafe. This battle was fought on the 22d of May 1308.
The king of Scotland now took revenge of his enemies, after the manner of that barbarous age, by wafting the country of Buchan with fire and fword. His fucceffes had fo raifed his character, that many of the Scots who had hitherto adhered to the Englifh caufe, now came over to that of Robert. Edward, the king's brother invaded Galloway, and defeated the inhabitants of that country. John de Se John, an Englifh commander, with 1500 horfemen, attempted to furprife Succeffes of hin him ; but Edward having received timely information Bruce. of his defigns, ordered the infantry and meaner part of his army to entrench themfelves ftrongly, while he himfelf, with no more than 50 horfemen, well armed, under cover of a thick mift, attacked his enemies, and put them to flight. After this he reduced all the fortreffes in the country, and totally expelled the E. glifin from it About this time alfo, Douglas, when roving about the mountainous

Scotland. tainous parts of Tweedale, furprifed and made prifoners Thomas Randolph the king's nephew, and Alexander Stewart of Bonkhill, who had hitherto continued inimical to the interefts of Robert. Randolph was conducted to the king, but talked to him in an haughty ftrain ; upon which his uncle put him into clofe con-
$15 I$ The lord of Lorn de- Lorn, a divifion of Argylehire. It was this noblefeated, and man who had reduced the king to fuch ftraits after his his cafle defeat at Methven; and he now refolved to take ample taken. revenge. Having entered the country, the king arri-

152

fuccefs.
ved at a narrow pafs, where the troops of Lorn lay in ambufh. This pafs had a high mountain on the one fide, and a precipice wafhed by the fea on the other ; but Robert having ordered Douglas to make a circuit and gain the fummit of the mountain with part of the army he entered himfelf with the reft. He was immediately attacked; but Douglas with his men rufhed down the hill, and decided the victory in favour of the king ; who foon after took the caftle of Dunftaffnage, the chief refidence of this nobleman.

While Robert and his affuciates were thus gaining the admiration of their countrymen by the exploits which they daily performed, the Englifh were fo unfettled and fluctuating in their counfels, that their party knew not how to act. Edward fill imagined that there was a poffibility of reconciling the Scots to his government : and for this purpofe he employed William de Lambyrton, bifhop of St Andrew's, who, after having been taken prifoner, and carried from one place of confinement to another, had at laft made fuch fubmiffions, as procured firf his liberty, and then the confidence of Edward. This ecclefiaftic having taken a moft folemn oath of fidelity to Edward, now refolved to ingratiate himfelf, by publifhing againit Robert and his adherents a fentence of excommunication, which had been refolved on long before. This, however, produced no effect; and the event was, that in I 309, through the mediation of the king of France, Edward confented to a truce with the Scots. This pacific difpofition, however, lafted not long. The truce was fcarcely concluded, when Edward charged the Scots with violating it, and fummoned his barons to meet him in arms at Newcaflle; yet, probably being doubtful of the event of the war, he empowered Robert de Umfraville, and three others, to conclude a new truce ; declaring, however, that he did this at the requelt of Philip king of France, as his dearelt father and friend, but who was in no fort to be confidered as the ally of Scotland.

The new negociations were foon interrupted. They were again renewed; and in the beginning of the year 1310 the truce was concluded, but entirely difregarded by the Scots. The progrefs of Bruce now became very alarming. The town of Perth, a place at that time of great importance, was threatened; and to relieve it, Edward (rdered a fleet to fail up the river Tay: he alfo commanded the earl of Ullter to affemble a body of troops at Dublin, and from thence to invade Scotland ; his own butons were ordered to meet him in arms at Berwick. About the end of September, he entered Scotland : paffed from Roxburgh, through the foreR of Srikirk, t.. Biggar ; from thence he penetrated into Renfrew; and turning back by the way of

Linlithgow, he retreated to Berwick, where he conti- Scotland: nued inactive for eight months.

During this invafion, Robert had carefully avided a battle with the Englifli; well knowing, that an invafion undertaken in autumn would ruin the heavy armes cavalry, on which the Englifh placed their chief dependence. His caufe was alfo favoured by a fcarcity which prevailed at this time in Scotland; for as magazines and other refources of modern war were then unknown, the Englifh army were greatly retarded in their operations, and found it impoffible to fubfit in the country.

The fpirit of enterprife had now communicated it- Linlithyow felf to all ranks of people in Scotland. In 13 II, the cafle furcalle of Linlithgow was furprifed by a poor peafant named William Binnock. The Englifh garrifon were fecure, and kept but a flight guard; of which Binnock being informed, concealed eight refolute men in a load of hay, which he had been employed to drive into the caftle. With thefe, as foon as the gate was opened, he fell upon the feeble guard, and became malter of the place ; which was difmantled by Robert, as well as all the other caftles taken in the courfe of the war.

Edward now refolved to invade Scotland again ; and for this purpofe ordered his army to affemble at Roxburgh. But Robert, not contented with defending his own country, refolved in his turn to invade Eng. land. He accordingly entered that country, and cruelly ravaged the bifhopric of Durham. He returned loaded with fpoil, and laid fiege to Perth. After remaining fix weeks before that place, he raifed the fiege, but returned in a few days; and having provided fa. ling ladders, approached the works with a chofen body of infantry. In a dark night he made the attack: and having waded through the ditch though the water flood to his throat, he was the fecond man who reached the top of the walls. The town was then foon taken; atter which it was plundered and burnt, and the fortifications levelled with the ground. This happened on the 8 th of January 1312.

Edward was now become averfe to the war, and re. newed his negociations for a truce; but they fill came to nothing. Kobert again invaded England; burnt great part of the city of Durham ; and even threatened to befiege Berwick, where the king of England had, for the time, fixed his refidence. He next reduced the caftles of Butel, Dumfries, and Dalfwinton, with many other fortreffes. The caltle of Roxburgh, a place of the utmof importance, next fell into his hands. The walls were fcaled while the garrifon was revelling on the eve of Lent. They retreated into the inner tower; but their governor, a Frenchman, having received a mortal wound, they capitulated.

Randolph, the king's nephew, who had been imprifoned, as we have already obferved, was now received into favour, and began to diftinguilh himfelf in the caufe of his country 157 Edinburgh fo clofely, that all communication with the of Edinneighbouring country was cut off. The place was burgh tacommanded by one Leland, a knight of Gafcony; but ken ly the garrifon fufpectir sis fidelity, imprifoned him in Randolit. a dungeon, and chofe another commander in his fead. One William Frank prefented himfelf to Randolph, and informed him how the walls might be fcaled. This man in his youth had refided in the caftle; and having

## 155

 Robert invades Eugland, and takes Purth on his rctura. prifed by the Scots.Scotlnad. rac
an intrigue with a woman in the neighbourhood, had been accultomed to defcend the wall, during the night, by means of a ladder of ropes; whence, by a fteep and difficult path, he arrived at the foot of the rock. Randolph himfelf, with 30 men, undertook to fcale the caltle walls at midnight. Frank was their guide, who Atill retained a perfect memory of the path, and who finf afcended the wall. But before the whole party could reach the fummit, an alarm was given, the garrifon ran to arms, and a defperate combat enfued. The Englifh fought valiantly till their commander was killed; after which they threw down their arms. Leland, the former governor, was releafed from his confinement, and entered into the Scottifh fervice.

InI3I3, king Robert found the number of his friends increafing with his fucceffes. He was now joined by the earl of Athol, who had lately obtained a grant of lands from Edward. This year, through the media-

158 Robert invades England, and infe of Man. tion of France, the conferences for a truce were renewed. Thefe, however, did not retard the military operations of the Scots. Cumberland was invaded and laid wafte : the miferable inhabitants befought Edward's protection; who commended their fidelity, and defired them to defend themfelves. In the mean time, Robert, leaving Cumberland, paffed over into the ifle of Man, which he totally reduced. Edward found great difficulties in raifing the fupplies neceffary for carrying on the war; but at laft overcame all thefe, and, by the beginning of the year 1314 , was prepared to invade Scotland with a mighty army. In March he ordered his fhips to be affembled for the invafion; invited to his affiftance Eth O'Connor, chief of the Irifh of Connaught, and 26 other Irifh chiefs; fummoned them and his fubjects in Ireland to attend his ftandard, and gave the command of thefe auxiliaries to the earl of Uilter. His barons were fummoned to meet him at Berwick on the irth of June; and 22,000 foot-foldiers, from the different counties of England and Wales, were required by proclamation to aflemble at Wark.

In the mean time, the fucceffes of the Scots continued. Edward Bruce had reduced the caftles of Rutherglen and Dundee, and laid fiege to the caftle of Stirling. The governor of the place agreed to furrender, if he was not relieved before the 24 th of June 1314; and to this Edward agreed, without confulting his brother. The king was highly difpleafed with this rafh treat - - , which interrupted his own operations, allowed the Englifh time to affemble their utmoft force, and at laft obliged him either to raife the fiege or to put all on the event of a fingle battle. However, he refolved to abide by the agreement, and to meet the Englifh by the appointed day, Having appointed a general rendezvous of his forces between Falkirk and Stirling, he found their number to amount to fomewhat more than 30,000 , befides upwards of 15,000 of an undifciplined rabble that followed the camp. He determined to wait the Englifh in a field which had the brook or burn of Bannock on the right, and Stirling on the left. His chief dread was the Arength and number of the Englifh cavalry, and thefe he took every method to oppofe. The, banks of the brook were fteep in many places, aud the ground between it and Stirling was partly covered with wood. The king commanded many pits, of about a foot in breadth and two or three fest deep, to be dug in all places where ca-
valry could have accefs. From the defcription given Scotiand. of them by the hiftorians of thofe times, there feem to have been many rows of them, with narrow intervals. They were carefully covered with brulhwood and fod, fo that they would eafily be overlooked by a rafh and impetuous enemy. It is faid by fome authors, that he alfo made ufe of caltrops, to annoy the horfes in the moft effectual manner.

On the 23 d of June, the Scots received intelligence of the approach of Edward, and prepared to decide of the the fate of their country. The front of their army ex- Scots, tended from the brook called Bannockburn to the neighbourhood of St Ninians, pretty nearly upon the line of the prefent turnpike-road from Stirling to Kilfyth; and the ftone in which the king is faid to have fixed his ftandard is fill to be feen. Robert commanded all his foldiers to fight on foot. He gave the command of the centre to Douglas, and Walter the young fteward of Scotland ; his brother Edward had the command of the right wing, and Randolph of the left; the king himfelf taking charge of the referve, which confitited of the men of Argyle, Carrick, and the iflanders. In a valley to the rear, faid to be to the weftward of a rifing ground now called Gilles-bill, he placed the baggage, and all the ufelefs attendants on his army.

Randolph was commanded to be vigilant in preventing the Englifh from throwing fuccours into the caltle of Stirling; but 800 horfemen, commanded by Sir valry deRobert Clifford, made a circuit by the low grounds to feated by the eaft, and approached the caftle. The king, per- Randolph. ceiving their motions, chid Randolph for his inadvertency, on which the latter haftened to encounter that body. As he advanced, the Englifh wheeled to attack him. Randolph drew up his men in a circular form, holding out their fpears on every fide. At the firft onfet Sir William Daynecourt, an Englifh commander of diftinguifhed valrour, was killed; but Randolph, who had only a fmall party with him, was furrounded on all fides, and in the utmolt danger. Douglas perceived his danger, and requeited the king to let him go to his affiftance. Robert at firft refufed, but afterwards confented with reluctance. Douglas fet out without delay; but as he approached he faw the Englifh falling into diforder; upon which he called to his men to ftop, and not diminilh the glory of Randolph and his men by fharing their victory.

Robert was in the front of the line when the van- An Eng guard of the Englifh appeared. He was meanly dref- linh knight fed, with a crown above his helmet, and a battle-ax in killed in his hand. Henry de Bohun, an Englifh knight, arm- fingle comed cap-a-pee, rode forward to encounter him. Robert bat by king did not decline the combat, and ftruck his antagonift fo violently with his battle-ax, that he is faid to have cleft him down to the chin; after which the Englifh vanguard retreated in confufion. The Scottifh generals are faid to have blamed their king for his raflnefs in thus encountering Bohun; and he himfelf, confcious of the juftice of their charge, only replied, "I have broke my good battle-ax."

On Monday the 24th of June, the whole Englifh Commanarmy moved on to the attack. The van, confifting of ders of the archers and lancemen, was commanded by Gilbert de Englifh arClare earl of Gloucetter, nephew to the Englifh king, and Humphry de Bohun conitabie of England ; but the ground was fo narrow, that the reft of the army had not

## SCO

[ 759 fufficient room to expand itfelf; fo that it appeared
the Scots as confifting of one great compact body. The main body was brought up by Edward in perfon, attended by Aymer de Valence earl of Pembroke, and Sir Giles d'Argentine, two experienced commanders. Maurice abbot of Inchaffray, placing himfelf on an eminence, celebrated mafs in the fight of the Scottifh army. He then paffed along the tront, barefooted, with a cillcifix in his hands, and in few words exhorted the Scots to fight for their rights and liberty. The Scots fell down on their knees; which being perceived by Edward, he cried out, "They yield! See, they implore mercy." "They do," anfivered Umfraville, one of his commanders, "they do implore mercy, but not from
us. On that field they will be viclorious or die."

## 165

 The Englifhentirely defeated.As both parties were violently exafperated againt each other, the engagement began with great fury. The king of Scotland, perceiving that his troops were grievoully annoyed by the Englifh archers, ordered Sir Robert Keith the marifchal, with a few armed horfemen, to make a circuit and attack the archers in flank. This was inftantly accomplifhed; and as the weapons of the archers were ufelefs in a clofe encounter, they could make very little refiftance, at the fame time that their flight fpread diforder through the whole army.

Robert now advanced with the referve: the whole Englifh army was in the utmof confufion; for the defeat of the archers had decided the victory in favour of the Scots. The young and gallant earl of Gloucefter attempted to rally the fugitives, but was thrown from his horfe, and cut in pieces, which increafed the general confufion. At this critical moment, the numerous attendants on the Scottifh camp, prompted by curiolity or the defire of plander, iffued from their rctirement. The Englifh miftook them for a body of frelh troops coming to the affiftance of their enemics, and fled with precipitation on all fides. Many fought refuge among the rocks in the neighbourhood of Stirling cafte, and many were drowned in the rivers. Pembroke and Sir Giles d'Argentine bad never quitted Edward during the action; but now, feeing the battle irretrievably loft, Pembroke conftrained the king to quit the field. D'Argentine refufed to fly. He was a man of great valour, and had a high reputation in Scotland. According to the vulgar opinion, the three molt eminent worthies in that age were the emperor Henry of Luxemburg, Robert Bruce, and Giles d'Argentine. He is faid to have thrice encountered two Saracen warriors in Paleftine, and to have killed them both each time. His valour now availed him but little; for rufhing into the midt of the Scots army, he was inftantly cut in pieces. Douglas, with 60 horlemen, purfued Edward clofe. At the Torwood he met Sir Laurence Abernethy, who was haftening to the Englifh rendezvous with twenty horfe-

166 Edwarl
elic.ipes to Dunhar, and thence to England. men. The latter foon abandoned the caufe of the vanquifhed, and joined Douglas in the purfuit of Edward, who fled to Linlithgow. He had fcarcely arrived there, when he was alarmed by the approach of the Scots, and again obliged to $\mathrm{fl}_{j}$. Douglas and Abernethy followed him with fuch affiduity, that (as lord Hailes choofes to Latinize the expreffion of an ancient hiftorian) ne vel mingencii locus concederctur; but notwithfanding their utmolt efforts, Edward got fafe to Dunbar, where he was received by the earl of March, who protected him till he could be conveyed by fea to England.

Such was the decifise battle of Banncibum, lie sotand. greatelt defedt the Englifh ever fultaised ircm tie Scots. On the fide of the latter no pelfons of note were flain, excepting Sir William Vipr nt, and Sir Waler Rofs the favourite of Edward Bruce; and fo grievonilly was Eitward afflited by the death of this man, that lie ciclaimed, "O that this day's werk were undons, fo Refs had not died!" On the Englilh fide were flain 27 bdo ${ }^{167}$ rons and bannerets, and 22 taken prifonery ; of kights Leofe of the there were killed 42, and 60 taken prifoners; of ciquiies Engliih in there fell 700 ; but the number of the common men who the luatle of were killed or taken was never known with any certain- burn. ty. The Welfh who had ferved in the Englifh army were fcattered over the country, and crueily butchered by the Scottifh peafants. The Englifh, who had taken refuge among the rocks in the neighburhood of Stirling, furrendered at difcretion: the caltle was furrendered, and the privy-feal of England fell into the bands of the king of Scots. The fpoils of the Englifh camp were immenfe, and enriched the conquerors, alons with the ranfom of many noble prifoners who fell into their hands. Robert fhowed much generofity in lis treatment of the prifoners who fell to his fhare. He fet at liberty Ralph de Montbermer, and Sir Marmaduke Twerge, two officers of high rank, without ranfom; and by humane and generous offices alleviated the misfortune of the reft. The dead bodies of the earl of Gloucetter and the lord Clifford were feat to Englanu, that they might be interred with the ufual folemnity. There was ine Batton, a Carmelite friar and poer, whom Edward is faid to have brought with him in his train to be fpectator of his atchievements, and to record his triumphs. Baton was made prifoner ${ }_{2}$ and obliged to celebrate the viftory of Robert over the Engiili. 'This he did in wretched Latin Rhymes; which, hwwever, procurca ! lis liberty. After the battle of Bannochbarn, the canl of Hereford retreated to the cafle of Bothwell, where he was befieged by Edward Bruce, and foon obliged to furrender. He was exchanged tor the wife, fifter, and Thicking: daughter of the king, the young earl of larr, and the family fet bilhop of Glafgow.

The terror of the Englifl after the defcat at Bannockburn is almoft incredible. Walfingham affert, that many of them revolted to the Scots, end affifted them in plundering their own country. "The Englifh," fays he, "were fo bereaved of their wonted intrepidity, conntung that an hundred of that nation would have fled fom tion of the two or three Scofmen." Edward Bruce and Dough bigifih. entered England on the eaftern fide, mvaged Northinberland, and laid the bifhopric of Durham under contribation. From thence they proceeded to Richmond, laid Appleby and fome other towns in afhes, and icturned home loaded with plunder. Edward fummoned a parliament at York, in order to concert means for the public fecurity; and appeinted the earl of Pembroke, formerly the guardian of Scotland, to be guardian of the country between the Trent and the 'Tweed. Robert, however, fent ambaffadors to treat of a peace but the Scots were too much elated with their good fortune to make conceffions, and the Englifh were not yet fufficiently humbled to yield to all their demands. The ravages of war were again renewed : the Scot, continued their iucurtions into England, and levied contributions in different places.

In I3 5 , the Englifh affars feemed a little to resire.

## S C O [ 760 ] S C o

Secthat. The Scots, indeed, plundered Durham and Hartlepool;

170 Expedition of Edward Bruce into Jreland.

175 He is defeated and killed.
but they were repulfed from Carlinle, and failed in an attempt on Berwick. The Irifh of Ulfter, oppreffed by the Englifh government, implored the affiftance of Robert, and offered to acknowledge his brother Edward as their fovereign; who accordingly landed at Carrickfergus on the 25th of May 1315, with 6000 men.This was an enterprize evidently beyond the power of Scotland to accomplifh, and which could not but be perceived by Robert. However, there were motives which induced him to confent. The offer of a crown, though ever fo vifionary, inflamed the ambition of Edward Bruce, whofe impetuous valour made no account of difficulties, however great. It might have been deemed ungenerous, and perhaps would not have been politic or fafe, to have rejected the propofals of the Irifh for the advancement of his brother, to whom the king owed more than he could repay. Befides, the invafion of Ireland feemed a proper expedient for dividing the Englifh forces. The event proved unfortunate. Edward, after performing and fuffering more than could almoft have been expected from human nature. was at laft defeated and killed by the Englifh, as is related under the article Ireland, $\mathrm{n}^{\circ} 42$.

The king himfelf had gone over into Ireland, in order to affif his brother in attempting the fubjection of that country ; and during his abfence the Englifh had

Unfuccefsfulattempts of the Eng-lifhonScotland. land. The earl of Arundel invaded the foreft of Jed. burgh with a numerous army; but being drawn into an ambufcade by Douglas, he was defeated with great lofs. Edmund de Cailaud, a knight of Gafcony and gover-
nor of Berwick, invaded and walted Teviotdale; but while he was returning home loaded with fpoil, he was attacked, defeated, and killed by Douglas. Soon after this, intelligence was conveyed to Douglas that one Robert Neville had boafted that he would encounter him whenever he faw his banner difplayed. Douglas did not long delay to give him an opportunity. He advanced to the neighbourhood of Berwick, difplayed his banner, and burnt fome villages. Neville, provoked at thefe ravages, took the field, encountered Douglas, and was defeated and killed. By fea the Englifh invaded Scotland, and anchored off Inverkeithing in the frith of Forth, where they foon after landed. Five hundred men, under the command of the earl of Fife and the fheriff of that country, attempted to oppore their landing, but were intimidated by the number of their enemies. William Sinclair bifhop of Dunkeld Blappened to meet the fugitives; and having by his reproaches obliged them to rally, he led them on again to the charge, and drove the Englifla to their fhips with confiderable lofs. For this exploit Robert conferred the title of the king's biflopo on Sinclair; and he was long remembered by his countrymen on this account.

In 1317, after king Robert had returned from his Irih expedition, a bull was iffued by the pope (John XXII.) commanding a two years truce between England and Scotland, under pain of excommunication. Two cardinals were difpatched into Britain to make known his commands; and they were privately empowtred to inflitt the higheft fpiritual cenfures on Robert Brace, or whomfoever elfe they thought proper. About the beginning of September 1317, two melfengers were surt to Tobers by the cardinals. The king gave them
a gracious reception; and after confulting with his barons returned for anfwer, that he very much defired a good and perpetual peace, either by the mediation of the cardinals, or by any other means. He allowed the open letters from the pope, which recommended peace, to be read in his prefence, and liftened to them with due refpect. But he would not receive the fialed letters addreffed to Robert Bruce governor of Scotland, alleging, that there might be many of his barons whofe names were Robert Bruce, and that thefe barons might probably have fome fhare in the government. Unlefs, therefore, the letters were addreffed to him as king of Scotland, he could not receive them without advice of his parliament, which he promired immediately to affemble on the occafion. The meffengers attempred to apologife for the omiflion of the title of King. "The holy church was not wont," they faid, "during the dependence of a controverfy, to write or fay any thing which might be interpreted as prejudicial to the claims of either of the contending parties." "Since then," anfwered the king, "my fpiritual father and my holy mother would not prejudice the caufe of my adverfary haviour of by beftowing on me the appellation of king during the Robert. dependence of the controverfy, they ought not to have prejudiced my caufe by withdrawing that appellation from me. I am in poffeftion of the kingdom of Scotland; all my people call me king ; and foreign princes addrefs me under that title; but it feems that my parents are partial to their Englifh fon. Had you prefumed to prefent letters with fuch an addrefs to any other fovereign prince, you might perhaps have been anfwered in a hariher ftyle; but I reverence you as the meffengers of the holy fee."

The meffengers, quite abafhed with this reply, changed the difcourfe, and requefted the king that he would confent to a temporary ceffation of hofilities; but to this he declared, that he never would confent, while the Englifh daily invaded and plundered his people. His counfellors, however, informed the meffengers, that if the letters had been addreffed to the king of Scots, the negociations would inftantly have been opened. This difrefpectful omiffion they imputed to the intrigues of the Englifh at the court of Rome, hinting at the fame time that they had received this intelligence from Avignon.

When the mefrers hap thefe proceedings, the latter determined to proclaim clained in the papal truce in Scotland; in which hazardous of-Scotland. fice they employed Adam Newton, guardian of the monaftery of Minorites at Berwick, who was charged with letters to the clergy of Scotland, particularly to the bihop of St Andrew's. The monk found the king encamped with his army in a wood near old Cambus, making preparations for affaulting Berwick. Perfonal accefs was denied to the king; but the monk, in obedience to his mafters, proclaimed the truce by the authority of the pope. The king fent him for anfwer, that he would liften to no bulle, till he was treated as king of Scotland, and had made himfelf mater of Ber* wick.
${ }^{176}$
The poor monk, terrified at this anfwer, requefted which is either a fafe conduct to Berwick, or permiffion to pafs difr, garded into Scotland, and deliver his letters to the Scottif by theking, clergy. Both were refufed; and he was commanded to leave the country without lofs of time. He fet out for Berwick; but in his way thither was attacked by robbers,

## S C O

S.otland. robbers, or fume who pretended to be fo. By them he was Atripped and robbed of all his parchments, together with his letters and in!tructions; the robbers alfo, it is faid, tore the pupe's bull, without any regard to its fanctity.

In 1318, king Robert proceeded in his enterprize againt Berwick, but refolved to employ artifice as well as force in the redustion of it. A citizen of Berwick, by name Spaliz\%, having been ial ufed by the governor, refolved to revenge himfelf; and therefore wrote a letter to a certain Scottifh lord, whefe relation he had married, offering on a certain night to betray the polt where he kept guard. The nobleman communicated this important intelligence to the king. "You did well," faid Robert, "in making me your confident; for if you had told this either to Randolph or Douglas, you would have offended the one whom you did not truft : Both of them, however, fhall aid you in the execution of the enterprize." The king then commanded him to repair to a certain place with a body of troops; to which place he alfo gave feparate orders to Douglas and Randolph to repair at the fame hour, each with a body of troops under his command. The forces thus cautioufly affembled marched to Berwick, and, affited by Spalding, foaled the walls, making themfelves mafters of the town in a few hours. The garrifon of the caftle perceiving that the number of Scots was but fmall, made a defperate fally with the men who had fled into the cafle from the town; but, after an obflinate conflict, they were defeated and driven back, chiefly by the extraordinary valour of a young knight named Sir William Keith of Gallon.-This happened on the 28th of March 1781318.

## Who inradt Eng- King Robert no fooner heard of the fuccels of his

 orces againft the town, than be haftened to lay fiege to land with great fuccefs. the caltle of Berwick. This was foon obliged to capitulate ; after which the Scots entered Northumberland, and took the caftles of Wark, Harbottle, and Mitford. In May, they again invaded England, and penetrated into Yokihire. In their progrefs they burnt the towns of Northallerton, Boroughbridge, Scarborough, and Skipton in Craven, forcing the inhabitants of Rippon to redeem themfelves by paying 1000 merks: after which they returned to Scotland with much booty; and, as an Englifh hiftorian expreffes it, "driving their prifiners before them like flocks of theep."This year the interpofition of the pope was obtained againgt Robert, with a view to intimidate the Scottith nation ; and the two cardinals refiding in England were commanded to excommunicate Robert Bruce and bis adberents, on account of his treatment of the meffergers of the holy fee, and his affault of Berwick, after a truce had been proclaimed by the papal authority.This fentence was accordingly put in execution, though Robert had certainly been excommunicated once, if not oftener, before. Meffengers were fent from Scotland to Rome, in order to frocure a reverfal of the fentence; but Edward difpatched the bifhop of Hereford, and Hugh d'Efpencer the Elder, to counteract this negociation, informing his holinefs at the fame time of certain intercepted letters which had been written from Avignon to Scotland; upon which the pope ordered all the Scots refiding at Avignon, and all of that place who had correfonded with Scotland, to be taken into cuftody.

Vo:. XVI.

The moft remarkable tranfacticn of this year, how sicatiand. ever, was the defeat and death of Edward Bruce in Ireland; of which an account is given under the article Ireland, $\mathrm{n}^{\circ}$ 42. His body was quartered, ard diftributed for a public fpectacle over Ireland : and hi; head was prefented to Edward by John lord Bermingbam the commander of the Englifh army, in retuin fior which fervice, he was rewarded with the tit!e of Earl of Lowth.

In the mean time Edward, who had fummoned a parliament to meet at Lincoln, was obliged to prorogue it on account of the Scottifh invalion, and to affemble an army at York for the defence of his cour.try. At Michaelmas it was determined, in a parlia. ment held at London, that every city and town in England thould furnifha certain proportion of men completely armed. Thus a confiderable body of troops was foon raifed; but, when they affembled at York, their party-animofities and mutual diftruft roic to fuch art height, that it was found neceffa:y to fend them back to their habitations.

In 1319, Edward, having fucceded fo well in his negociations with the court of Rome, refolved to make fimilar attempts with other powers to the prejudice of the Scottifh nation. Accoidingly he requeted the count of Flanders to prohibit the Scots from entering his country: but to this requeft he received the following remarkable reply: "Flanders is the common country of all men; I cannot prohibit any merchants from trafficking thither, for fuch prohibiticn would prove the ruin of my pecple." Finding himfelf baf. Edward fled in this attempt, the Englifh monarch once more again iadetermined to have recourfe to war; and with this vades Siotview commanded his army to affemble at Ncweaftle up. ${ }^{1 a 2 d}$. on Tyne, on tlee 24th of July 1319: but before he proceeded, he requefted the prayers of the clergy for the fuccefs of his expedition; and to render their prayers the more effectual, he at the fume time demanded from them a great fum of money by way of loan.

Every thing being now in readinefs, the Englifh 18 r r army approached Berwick, which was commanded by Walter the Steward of Scotland. Thi nobleman had long apprehended an attack from the Englifh, and had by the taken every means of defence in his power. The enemy, however, confiding in thei nunibers, made a general affault ; but were repulfed on the 7 th of Sep. tember, after a long and obitinate contef. Their next attempt was on the fide $o$ vards the river. At that time the walls of Berwick were of an iaconfiderable height; and it was propofed to bring a velfel clofe to them, from whence the troops might enter by a draw. bridge let down from the malt. But the Scots anncyed the affailants fo much, that they could not bring this veffel within the proper diftance; and at the ebh of the tide $i$ : grounded, and was burnt by the befiesed. -The Englifh had then recourfe to a new-invented engine which they called a fow, but for what rearon is unknown. In many particulars it refembled the tefludn arietaria of the ancients. It appears to have been a gine called large fabric compofed of timber, and well-roofed, having ftages within it, and in height furpating the wall of the town. It was moved upon wheels, and ferved for the double purpofe of conducting the miners to the foot of the wall, and armed men to the form. This machine was counteracted by one conltructed by Jol'n 5 D

Crab,

- Motic.11,

335
The ratg )! ha defeat - 1 a.d the fizge of terwick sifid.

Crat, a Tlinitn engineer in the Scois fervice. This was a kind if moreable cranc, whereby great fones mig. t be railed on high, and then let fall upon the enemy. The Englifh made a general affault on the ganter towards the fea, as well as on the land fide ; fo thit the garrifon, exhaulted by continual fatigue, could thare maintain their pofts. The great engine mored (1) to the walls; and, though fones were inceffantly difcharged actaial it from the crane, their effect was in fmall that all hofe of pratervag Berwick was lift. At lengh a kuge trone firuck is with fuch force, that the beams give way, and the Scots pouring down com. buht'es ufon i:, it was reduced to alles. The Eng. Hh, inwever fiil continued the atack. The Seward, disha ichere of 100 men, went from poit to polt, rebeving thefe whe were wounded or unfit for combat. One foldier of the referve only remained with him when $\because$ alam was giventiat the Englifh had burnt a bar3.er at the potcalled it NIarys, P-finfed themfelves of t'e dravtridge, and fired the gate. The Steward fonetal thithor, called down the grard from the ram. fart, radered the gate to be fet cpen, and ruihed out t.pon the snomy. in defperate combat enfued, and conthoced :ill the dife of the day, when the Ergliff commandis whitrew their troups.

Normithandiref this brave defence, it was evident that the town coud not hold oet long without a fpeedy rehif; and Febert could not, wih any probability of furcois atack the forified camp of the Englifh. He therefore deiermined to make a powerful diverfion in England, in cricr to cblige Edward to abandon the undertaking. By order of the ling, 15,000 men entered Englind by the wettern marches. They had con. certed a Ilan for carrying off the queen of England Sun her refidence near York; but being difappointed in this attempt they laid wate Yorkfhire. The archl.here of York haltily collected a numerous tody of - mions and ecclefiatics, with whom he encountered the Scots at Mitton, near Borough-bridge, in the northsiding of Yorkhire. The Englifh were inftantly routcd: 200 were left dead on the field, and great part of thole who fled perifhed in the iver Swale. In this a dion 300 ecclefatics lof their lives. The news of this fuccefsful inroad alarmed the befiegers of Berwick. The barons whofe eftates lay to the fouthward remote from the Scottifh depredations were eager for continuing the fiege. But they were oppofed by thoie of the north; who vere no leis eager to abandon the enterprife, and return to the detence of their own country. With them the eall of Lancafter concurred in opinion; tho, underftanding that his favourite manor of Ponteraft was cxpofed to the ravages of the Scots, departed vith all his adtherents. Edward, upon this, drew off ile remainder of his army, and attempted to intercept liande!ph and Douglas; but they cluded lim, and returned in fafety to Scotland.

The unfuccefsful event of this lat attempt induced LSward ferionfly to think of peace; and accordingly a sruce between the two nations was concluded on the 2 in of December 1319; which interval of tranquillity the Scots made ufe of in addrefling a maniffeto to the pope in jutification of their canfe. This was drawn ip in a pirited manner, and made a very confiderable ai-eration in the councils of Rome. The pops, forefeing that Robert wouk not be terrified into fubmif
fions, ordered Edviard to make peace with him in the teft manner he could. A negociation was accordingly fet on foot, which foon terminated ineffectually; the truce was cot renewed, and in 1322 a mutual invafion took place. The Scots penetrated into Lancafhire by Ergland the weftern marches; and, after plundering the country, quan iniareturned home with an extraordinary booty ; while Ed, ded liy the ward made great preparations for an expedition into Siots, and Scotland, which took place in Auguft the fame year. by the In this, however, he was not attended with fuccefs. Englih. Robert had caufed all the catile to be, driven off, and all the effects of any value to be removed from Lothian and the Merfe; fixing his camp at Culrofs, on the north fide of the frith of Forth. His orders fur removing the cattle were fo punctually obeyed, thar, at: cording to common tradition, the only prey which fill into the hands of the Englifh was a lame bull at Tranent in Eaft Lothian. Edward, however, ftill proceeded, and penetrated as far as Edinburgh, but vithout any hopes of fubduing the kingdom. His provitions being confumed, many of his foldiers perifhed for want; and he was obliged at laft to retire without having feen an enemy. On their retarn, his foldiers burnt the abbeys of Holyrood, Melrofs, Dryburgh, \&c. killed many of the monks, and committed other facrileges: but when they returned to their own country, and began again to enjoy a flentiful living, they indulged themfelves in fuch excefles as were productive of mortal difeafes; infomuch that, according to an Englifh hiftorian, almolt one half of the great army which Ed. ward had brought from England with him were dellroyed either by hunger or gluttony.

No fooner were the Englifh retired than they were purfiaed by the Scots, who laid fiege to the cafte of Norham. Edward lay at the abbey of Biland in Yorkfhire, with a body of troops advantageoully polled in the neighbourhood. The Scots, invited, as is faid, by fome traitors about the king's perfon, attempted to furprife him; and it was with the utmolt difficulty that he made his ffcape to York, abandoning all his baggage and treafure to the enems. The Englifh camp was fuppofed to be acceffible only by a narrow pafs, but Douglas undertook to force it, and Randolph prefented himfelf as a volunteer in this dangerous fervice under his friend Douglas. The Highlanders and men of the Inles climbed the precipice on which the Englifh camp food, and the enemy were driven out with great lofs. The EngThe Scots purfued them to the very gates of York, ed and dri-walted the country without conttoul, and returned home ven out of unmolefted.

Edward, difheartened by repeated loffes, agreed to a ceffation of arms " with the men of Scotland who were engaged in war with him," But the king of Scotland would not confent to it in that form; however, he gave his confent; on the proper form being employed, to which Edward now made no objection. This treaty was concluded on the 30 th of March 1323, and was to endure until the 12 th of June 1336 . It was agreed, that, during the continuance of it, no new fortreffes hould be $T$ end berected in Cumberland, to the north of the between Tyne, or in the counties of Berwick, Roxburgh, or Eqgand Dumfries; and by a very fingular article it was provied, that "Bruce and the people of Scotland might procure abfolution from the pope; but in cafe there was no peace concluded before the expiration of the

Scctland. truce, that the fertence of excommunication Thould re.
diers now began to murmur: and it was rivised o: in s:rtidn. to proceed fouthwards. The king proclaimed a revar! twin of lands, to the value of ico l. yearly for life, to the ts obiate 1 perfon who thould firft ditcover the enenif "ch ary to offres ground, where they might be attacined;" and many reward fore knights and efquires fiwam acrofs the siver on this difcovering ftrange errand. The army continued its march for whe three days without any news of the Scots; but on the fuarth day, certain accounts of them were broughe by an efquire, Thomas Rokefby: whoreported, ih it " tl : Scots had made him prifoner; but that ibeir leaders, underftanding his bufine?s, had fet bim at liverty; faying, that they had remained for eight days on the fame ground, as ignorant of the motions of the Englifh as the Englith were of theirs, and that they were defrous and ready to combat." With this man for their guide, the Englifh foon came in view of the Scots. They were advantageoufly polted on a rifing ground, having the river Were in front, and their tanks fecured by rocks and precipices. The Englith difmounted anit advanced, hoping to allure the Scots from their $\mathbb{G}$ ren: poft; but in vain. Edward then fent a heraluto Ran. dolph and Douglas, with a meffage in the ftyle of chivalry: "Either," fays he "fuffer me to pafs the river, and leave me room for ranging my forces; or do you pafs the siver, and I will leave you room to range yours; and thus fhall we fight on equal terms." To this the Scottifh commanders anfwered, "We will do neither. On our road hither we have burnt and fpoiled the country; and here we are fixed while to us it feem; good; and if the king of England is offended let lim come over and chaflife us."

The armies continued in fight of each other for two days; after which the Englifh, underftanding that their enemies were diftrelfed for provifions refolved to maintain a clofe blockade, and to reduce them by famine. Next day, however, they were furprifed to find that the Scots had fecretly decamped, and taken poit two miles up the river in ground fill itronger, and of more difficule accefs, amidit a great wood. The Enzlilh encamped oppofite to them near Stanhope park. At midnight Douglas undertook a moft defperate enterprife, fomewhat refembling thofe of the ancient heroes. With 200 horfemen he approached the Englifh camp, and he kins and the rounds. Having thus eluded the centinels, he falfed on to the royal quarters, overthrew every thing that oppofed him, and furioully affalted tha king's tent. The domeftics of Edward defperately defended their malter ; and his chaplain, with many others of his houfehold, were flain. However, the king himfelf efcaped; and Douglas, difappointed of his prey rufhed through the enemy, and effected a retreat with inconfiderable lofs.--The following day, the Englifh learnes from a prifoner, that orders had been ilfued in the Scottifh camp for all mon to hold themfelves in readincfs that evening to follow the banner of Douglas: on which, apprehending an attack in the night, they prepared for battle, lighting great fires, and keeping a llrift watch; but in the morning, they were informed by two trumpeters whom they had taken privieers, that the Scots had decamped before midnight, and were returning to heir cun cuuntry. This report could farcely be creand retarn aita country. This report dits d , and the army remained for fome hours in order owa courn. of baitle; but at length fome fouts having crofed the try.
pretenfions to the crown. The young prince bad refided on his paternal eftate in Normandy, neglected and forgotten; but in 1324 was called to the court of England, for the purpofe, undoubtedly, of fetting him up as a rival to young David Bruce, in cafe his father, now broken with fatigues, fhonld die in a fhort time. The negaciations for peace, however, ftill went on; but the commilfoners appointed for this purpofe made hut the commiflioners appointed for this purpore made
little progrefs, by reafon of demands for feudal fovereignty fill made by the Englifh. The reconciliation
with the church was alfo broken off, by reafon of the reignty fill made by the Englifh. The reconciliation
with the church was alfo broken off, by reafon of the Scots keeping poffeffion of Berwick. This had been taken during the papal truce; and Robert thought proper ftill to lie under the fentence of excommunication rather than to part with fuch an important fortrefs.

In the beginning of the year 1327 , Edward II. was depofed, and fucceeded by his fon Edward III. then in his $15^{\text {th }}$ year. He renewed the negoc:ations for peace, and ratified the truce which his father had made ; but hearing that the Scots had refolved to invade England if a peace was not immediately concluded, he fummoned his barons to meet him at arms at Newcaftle, and fortified York.-We are not certainly informed of the reafons which induced the Scots at this time to difregard the truce; however, it is certain, that on the 15 th of June 1327, Douglas and Randolph invaded England by the weften marches, with an army of
$20,0 c o$ horfemen. Againtt them Edward III. led an England by the weften marches, with an army of
$20,0 c o$ horfemen. Againtt them Edward III. led an army, confiting, at the loweft calculation, of 30,000 men, who affembled at Durbam on the 13 ih of July. men, who affembled at Durbam on the izin of July.
The Scots proceeded with the utmolt cruelty, burning and deftroying every thing as they went along; and on the 3 th of the fame month, the Enghil! difcovered them by the fmoke and flames which marked their progrefs. They marched forward in order of battle towards the quarter where the fmoke was perceived; but, mecting with no enemy for two days, they concluded that the Scots had retired. Difencum. bering themfelves then of their heavy baggage, they refolved by a forced march to reach the tiver Tyne, and, ty polting themfelves on the north bank of and, ty polting themfelves on the north bank of
that river, to intercept the Scois on their return. On the 2 oth of July, the cavalry having left the inOn the 20 oh of Jaly, the cavalry having left the in-
fantry bihind, crofed the river at EIaidin: but before the reft of the army could come up, the tiver was fo fivelled by fadden rains, that it could no longer be
firded; and thus the troops rem.ined civided for fefivelled by fudden rains, that it could no longer be
firded; and thus the troops rem.uned civided for feveral days, without anyaccommodation for quarters, and in the greate!t want of previtiuns and forage. The fol. - m ( vive." The theaty was ratified by Robert, under the yle of the king of Scotland, 7 th of June 1323. The next care of Robert was to reconcile himfelf to the church, and to obtain from the pope the title of king, which had been folong denied him; which at lalt,
though not withour great difficulty, was obtatacd. This year a fen was born to the king of Scotland at Dunfermline, and named David. The court-poets of the time foretold, that this infant would one day rival his father's fame, and prove victorious over the Englith. Bat farce had this futare hero come into the world, when a rival began to make his appearance. ohn Baliol, the unfortunate king of Scotland, had long been dead; but left a fon named Edward, heir to his

Scotlant.

river, retumed with certain intelligence that the Scottifh camp was totally deferted: which when the young king of England was certainly informed of, he burf into tears; for the enterprife, which thus terminated in difappointment and difnonour, had crft an immenfe flam. Eve:y preparation had been made for oppofing an eneny, and auxiliaries had even been procured at a mof enormous expence fiom Hainaul:. Thefe auxi1 arics confifed of beavy-armed cavalry; and they were now fo much worn cut, that they could farcely move. Their horfes were all dead, or had become unferviceable, in a campaign of three weeks; fo that they were chijged to procure borfes to convey themfelves to the $f$ wh of Figland. Edward having refted at Durham for fome days, marched to York, where he difbanded h:s army, Barbour a Scets hiftorian, relates, that there was a morafs in the rear of the Scottifh camp, which le calls th:e trio mile morafs; that the Scots made a way over it wich bruhbood, removing it as they went along, that the Englifh might not purfue them by the fame way. The Englifh hiftorians are filled with deferiptions of the frange appearance of the deferted camp of the Scots. They found there a number of fkins Aretched between fake, which ferved for kettles to boil their meat ; and for bread, each foldier carried aiong with him a bag of oatmeal, of which he made cukes, toalting them upon thin iron plates, which appear to have been part of their armour.

On the return of Douglas and Randolph, the king led his army againft the eaftern borders, and befieged the cafle of Norham. However, in 1328, Edward, wearied out with continual loffes and difapointments,
confented to a perpetual peace between the two kingdoms on the following conditions. I. The fone on which the kings of Scotland were wont to fit at the time of their coronation, fhall be reftored to the Scots. 2. The king of England engages to employ his good offices at the papal court for obtaining a revocation of all fpiritual procefles depending before the holy fee againft the king of Scots, or againft his kingdom or fibljects. 3. For thefe caufes, and in order to make reparation for the ravages committed in England by the Scots, the king of Scots hall pay 30,000 merks to the king of England. 4. Reftitution thall be made of the poffeffions belonging to ecclefiaftics in either kingdom, whereof they may have been deprived during the war. 5. But there fhall not be any reftitution made of inheritances which have fallen into the hands of the king of Englated or of the hing of Scots, by reafon of the war between the two nations, or through the forfeiture of former poffeffors. 6. Johanna, filter of the king of England, fhall be given in marriage to David, the fon and heir to the king of Scots. 7. The king of Scots fhall provide the princefs Johanna in a jointure of 20col. yearly, fecured on lands and rents, according in a reafonable eltimation. 8. If either of the parties thall fail in performing thefe conditions, he fhall pay 2000 pounds of filver to the papal treafury.

This peace, ratified at Northampton, is flyled ignominious by the Englifh hiftorians, and the marriage of the Scots prince to the king of England's fifter, denominated that bafe marriage ; becaufe at this time all preteafons to fovereignty over Scotland were given up, though they had in vain attempted to eftablilh them
by a ruinous war of $20^{\circ}$ years. The marriage of the in- Srothand. fant prince was celebrated on the 12 th of July 1328 .

On the 7 th of June 1329 died Robert Bruce, un- King Roqueftionably the greateft of all the Scottifh monarchs. bert dies.
His death feems to have been occafioned by the exceffive fatigues of military fervice; and his difeafe, called by the hiftorians of thofe times a leprofy, was probably an inveterate fcurvy, occafioned by his way of living. He died at the age of 55 . He was married to Ifabella, daughter of Donald the tenth earl of Marr; by whom he had a daughter named Marjory married to Walter the fteward of Scotland; whofe huband died in 1326. The fecond wife of Robert was Elifabeth, the daughter of Aymer de Burgh earl of Uliter. By her he bad a fon, David II.; a dangh. ter named Margaret, married to William earl of Sutherland; another, named Matilda, married to an efquire named Thomas Ifaac ; and Elizabeth, married to Sir Walter Oliphant of Gaik. He had alfo a natual ion named Robert.

That king Robert I was a man of urqueftionable virtue and humanity, as well as unequalled in the knowledge of the military art, muft be evident from many particulars already related. The only queftionable part of his character is his fevere punifhment of a confpiracy formed againt him in the year 1320; a relation of which, to avoid interrupting our detail of more im-him portant matters, we huve deferred till now.-The chief of the confpirators were William de Soulis, whote an. ceftor had been a candidate for the crown of Scotland; the countefs of Strathern, and fome other perfons of high rank. The countefs difcovered the plot ; after which Soulis confeffed the whole, and was punithed with perpetual imprifonment ; as well as the countefs, notwithftanding her having made the difcovery. Gilbert de Malyerb and John de Logie, both knights, and Richard Brown an efquire, were put to death as traitors but the perfon moft lamented was Sir David de Brechin, for his bravery flyled the flower' of cbivalry. He was nephew to the king, and ferved with great reputation againft the Saracens. To him the conipirators, after having exacted an oath of fecrecy, revealed their defigns. He condemned their undertaking, and refufed to thare in it; but did not difcozer it on account of the oath he had taken. Yet for this conceal. ment he was tried as a traitor, condemned and executed, without regard to his perfonal merit or his relation to the king. The confpirators were tried before the parliament at Scone in 1320 ; and this fellion, in which fo much blood was fhed, was long remembered by the vulgar under the name of the black parliament. Whether there was any thing real in this confiracy, or whether the king only made ufe of this pretence to rid himfelf of fuch as were obnoxious to him, cannot now be known with certainty.

After the death of Robert, the adminiftration was 200 affumed by Randolph, in confequence of an act paffed Randolp? in 1318 , by which he was appointed regent in cafe of appointed the king's death. In his new charafter he behaved regent. himfelf in a moft exemplary manner ; and by impartially difcharging the dutifs of his ftation, and rigidly adminiftering juttice, he fecured the public tranquillity in the molt perfect manner. A fevere exercife of jultice was now rendered net only neceffary , but indifpenfable.

During

## SCO

\$ootland. During a long courfe of war, the common people had been accuftomed to plunder and bloodfhed; and having now no Englifh enemies to employ them, they robbed

201
IIs excel-
lent adminintration. and murdered one another. The methods by which Randolph repreffed thefe crimes were much the fame with thofe which have been adopted in latter times; for he made the counties liable for the feveral robberies committed within their bounds. He even ordered the farmers and labourers not to houfe the tools employed by them in agriculture during the night-time, that the fheriir's nfficers might be the more vigilant in fecuring them. Ha gave crders for feverely punifhing all vagabonds, and obliged them to work for their livelihond; making proclamation, that no man fhould be admitted into a town or borough who cuuld not earn his bread hy his labour. Thefe regulations were attended with the molt falutary effects. A fellow who had ficreted his own plough-irons, pretending that they were ftolen, being detected by the fheriff's officers, was intantly hanged. A certain man having killed a prieft, went to Rome, and obtained abfolution from the pope; after Which be boldly returned to Scotland. Randolph ordered him to be tried, and, on his conviction, to be executed: " Becaufe," faid he, "althongh the pope may grant abiolution from the fpiritual confequences of 202 fin, he cunot fcreen offenders from civil punithment."

Doaglas
fets out for his he hit might be deponted in onf Sanour fepulchre be Holy at Jerufalem ; and on this errand the great commander Douglas was employed, who fet fail in June 1330 with a numerons and fplendid retinue. He anchored off

Sliys in Flinders, the great emporium of the low countriec, where he expected to find companions in bis pilgrimpes but learning that Alphonfus XI. the young king of Lenn and Caftile, was engaged in a war with Omin the Moor he could not refult the temptabon of fighting againg the enemies of Chriftianity. He met with ar honnurable reception at the court of Spain, and read!y obtined leave to enter into what was thought the common caure of Chriftianity. The spaniards firl case in fight of their enemy near Theb:, a calle on the frontiers of Andalulia, towards the kingdom of Grabad. The Moors were defeated; but Ionglas giving way to his impetuous valnur purfued
the enemy too eagerly, and throwing among them the cafket which contained the heart of his fovereign, cried out, " Now pals thou onward as thou wert wont ; Douglas will follow thee or die." The fugitives ral- 203 lied and furrounded Douglas; who, with few killed by followers, was killed in attempting to refcue Sir Wal- in Spain. ter St Clair of Roflin. His body was brought back to Scotland, and interred in the church of Douglas. His countrymen perpetuated his memory by beltowing upon him the epithet of the good Sir Yames Douglas. He was one of the greateft commanders of the age; and is faid to have been engaged in 70 battles, 57 of which he gained, and was deleated in 13 .-Of him it is reported, that meeting with an officer at the court of Alphonfus, who had his face quite disfigured with fears, the latter faid to him, "It altonifhes me, that you, who are faid to have feen fo much fervice, fhould have no marks of wounds on your face."" "Thank heaven," anfwered Douglas, "I had always an arm to protect my face."

In 1331, Edward Baliol began to renew his preten. Etward fions to the crown of Scotland, about the fame time Baliol that David II, and his confort Johanna were crowned at Scone ; which ceremony was performed on the 24 th of November. Some hiftorians relate, that he was excited to this attempt by one Twynham Lowrifon, a perfon who had been excommunicated for refufing to do penance for adultery, and afterwards was obliged to fly on account of his having way-laid the official, beat him, and extorted a fum of money from him. But however this may be, it is certain, that in this year differences began to arife with England, on the following account It load been provided by an article of the treaty of Northampton, that "Thomas lord Wake of Ledel, Henry de Beaumont, called earl of Buchan, and Henry de Percy, fhould be reftored to their eftates, of which the king of Scots, by reafon of the war between the two nations, had taken poffeffion." This article had been executed with ref the other two; and though Edward had repeatelly complained of this neglest, he could not obtain any fatisfacion ( c ).

The difinherited barons now ref lved to invade Scotland, though their force confitted of no more than 3000 infantry,
(c) As this is an import int period of hifory, we thall here tranfcribe the opinion of lord Hailes concerning the caufes of this tlange delay of executing an article feemingly of little importance where a nation was concerned. "By the treaty of Northamptor," fays he, "all the claims of the Englith barons to inheritances in Scotland were difregarded, exceping thofe of Henry de Percy, Thomas lord Wake of Ledel, and Henry de Beatumont. Percy procured fatistaction : but the others did not.
"Henry de Beaunont, in the reign of Edward II. had affociated himfilf with the nobility againt the D'Efpenfers, and on that accu:t had fuffered imprifonment and exile. He aided queen Ifabelia in the invafion which proved the caufe of the depolition, captivity and death of her hufband. Although, under the adminiftration of Mortim:r, he had obtained a hare in the partition of the foils of the D'Efpenfers, he perfifed in oppofing the ineafures of the new favourite; and although his own interefts were fecuted by the treaty of Northampton, he boldly exclamed againlt the injuftice done to the other barons by that treaty. He joined the princes of the blood royal in their attempt to refue the young king from the hands of Ifabella and her minion, and place him. in their own; and, on the fallure of that ill-advifed confpiracy, he again took refoge in for cign parts. It appears thit lord Wake, having fellowed the pelitical opinions of Henry de Beaumont, was involved in like calamiiies and difgrace. While the queen-dowager and Mortimer retained their influence, the claims of thofe twis barmis were altogether overlo ked: But within forty-eight hours after the execution of Mortimer, a porempto:y demand was made by Edward III. to have their inheritance reftored.
"The demand was unexpeted and alarming. Madeat the very moment of the fall of Ifabella and Nrortimer,
infantry, and 400 men at arnis. Edward would not permit them to enter Scorland by the ufual way, as he himfelf did not yet choofe openly to take part in their cuarrel. For this reafon they were obliged to take thipping, and linded at a place called Raven/bare, Raven/pur, or Raven/burgh, at the mouth of the Humber ( H ). Randolph, having intelligence (f the Eiglifh preparations, had marched an army to the frontiers of Eaft Lothian; but, being afterwards informed of the naval armament, he marihed northwards; but died at of July 1332. With him died the glory of Scotland. The earl of Marr, a man whofe only merit confifted in his being related to the royal family, was chofen to fuc-
ceed him in the regency:-Edward, in the mean time, fell upon a moft curious expedient to fhow the juftice of his caufe. In March ${ }^{2} 33^{2}$, he had publifhed a prohibition for any perfon to infringe the treaty of Northampton. The difinherited lords had been fuffered to embark, exprefsly for the purpofe of invading Scotland, after this prohibition was publifhed. After they were gone, Henry de Percy was empowered to punifh thofe who thould prefume to array themfelves in contempt of his prohibition; and becaufe he undertood that the Scots were arming in order to repel thofe invaders whom Edward had indirectly fent againft them, he empowered 206 Henry de Percy to arm againf them.
Baliol lands" On the 3 Ift of July, Edward Baliol and his affociat King- ates landed in the neighbourhood of Kinghorn, on the horn, and defeats the Scots.

Forth ; routed the Earl of Fife, who oppofed them ; and marched next day to Dunfermline. Having then ordered his fleet to wait for him at the mouth of the Tay, he proceeded northwards, and encamped on the Miller's acre at Forteviot, with the river Earn in front. Nothing, however, could be more dangerous than his fituation at prefent, and his deftruction would have been inevitable. The eatl of Marr was encamped with a nu-
merous army on the oppofite ban's of the river Earn, Sootand. in the neighbourhood of Duplin; and another, nearly 207 as numerous had advanced from the fouth, through the 1 in in the Lothians and Stirlinghire, and fixed its quarters at utmof danAuchterarder, eight miles to the welt of Forteviot. gacrin the Hiftorians differ as to the number of the two armies. ncighborrFordun fays, that the regent had with him 30,000 hood of men, and the earl of March as many; and that Balinl had between 500 and 600 men at arms, that is, horfemen completely armed. Hemingford reckons each of the Scots armies at 40,000 , and Baliol's at 500 armed men. Knyghton fays, that Balicl, when he landed in Fife, had 300 armed men, and 3000 more of difierent furts ; but that he had in all only 2500 men in his camp at Earn. In this defperate fituation, the Englifh general formed a defign of attacking the Scots in their camp. They were directed to a ford by Andrew Murray of Tullibardine. The Scots kept nu watch, but abandoned themfelves to intemperance and riotous mirth; while their enemies, led by Alexander Moubray, croffed the river at midnight. They afcended a rifing greund, came unperceived on the right flank of the Scottifh army, and made a dreadful flaughter. At the firtattack, young Randolph halted with 300 men at arms to oppofe the enemy ; and being feconded by Murdoch earl of Menteith, Alexander Frafer, and Rcbert Bruce natural fon to the late king, he gave a check to the Englifh, and maintained the combat on equal terme. But now the regent himfelf, along with the whole multitude rufhed for ward to batile without the lealt order: fo that while the hindmoft preffed on, the foremoft were thrown down, trodden upon, and fuffocated. The flaughter lafted many tours, and the remains of this vaft army were utterly difperfed. Many men of eminence were killed ; among whom were Donald earl of Marr, author of the whole cataftrophe; Thomas earl of Moray, Murdoch earl of Menteith, Robert eall or Carrick, Alex-
and in behalf of men who had loudly protefed againft the treaty of Northampton, it indicated a total and perilcus change in the fytem of the Englifi
" RandoIph, of late years, had beheld extraordinary vicifitudes in England. The D'Efpenfers alternately periecuted and triumphant, and at length abafed in the duft. The fugitive Mortimer elevated to fupreme authority, victorious over the princes of the bloody-royal, and then dragged to a gibbet. Hence it was natural for Randolph to wifh, and even to look, for fome new revolution, which might prove more favourable to the Scctifh interefts. Meanwhile, with great reafon and good policy, he delayed the reftitution of the inheritances claimed under the treaty of Northampton, in behalf of the avowed oppofers of that treaty.
"Befides, it was necefiary for Randolph to be affured that the Englifh, while they urged the performance of one article of that treaty, did, on their patt, fincerely purpofe to perform its more important articles, by continuing to acknowledge the fucceffion in the houfe of Bruce, and the independency of the Scottifh nation.
"Of this, however, there was much reafon to doubt. For the Englifh king had taken Baliol under his protection, and had grarted him a paffport to ccme into England, with permiffion to refide there during a whicle year ( 1 oth October 1330). Thefe things had no friendly or pacific appearance.
"Be this as ii will, the event too fatally jultified the apprehenfions of Randolph; for, while Edward III. was demanding reftitution of the eflates referved by the treaty of N rithampton, his fubjects were arming in volation of that treaty.
"It is remarkable, that, on the $2_{4}$ h March 1331-2, Edward appears to have known of the botile aficciation of the difinherited barons. His words are, 'Quia ex relatu accepimus plurimorum, quod diverfi homines de regro nofro, et alii (meaning Baliol and his attendants), pacem inter nos, et Robertum de Bras, nup $\leq$ Resem Scotcrum, initam et confirmatam infringere machinantes, diverfas congregationes hominum ad armo indies faciunt, ef, per mischias regni nofri, diftam terram Scotix, ad ean modo guerrino impugnuaisium, ingredi in'endut :' Foodera, T.iv. p 5 Ir. And yet, on the 22 d April followirg he demanded reftitution of the mheritance of lord Wake, one of the barons in arms;" Fixelera, T. iv. p. 5 y 8.

Alexander Frafer, and Robert Bruce. The naughter of the infantry and of the men at arms was vory great; the molt probable accounts make it 2000 men at aims, and upwards of 13,000 common fuldiers. The lofe of the Englifh was inconfiderable.

The day after this victory, Bahiod took polfemion of Perth; and, apprelending an attack from the earl of IA wech, creled the ditch $t$., be cleared, and the town to be furtihed witi palintoes. The firl information which the earl received of this dreadful defeat was from a common mlli, who fle form the place mortilly wound.d. Vhen this poor wret.h cane up, he lad teme to d, mo more than is thow his wounds; af. ter which he fell down and expied. On his arrival at the field of battle, he found a deedrnd onfirm tion of the inteliacence given by the ollia. $;$; in it fead of takirg his matures with :ory prademe, l.e and hiv men hu rica on headhag to Perth, actuated only by a bhad impulfe to severee. At firf they desened to affult the flace; but their learts failing hem, they next determined to redice i i by famine. This, however, could not be done unicis the Soon were matters at fea. One John Crab, a Flemith enginecr (who had ditinguifhed himfelf by deftroying the famou, engine called the fow at the fiege of Berwick), had continued for many years to annoy the Englifh on the eatern coafts. After the blockade of Peth was frmed, he came with ten valfels to the mouth of the Tay, where the Englith fleet wac, and tonk the fip belonging to HenIy de Deaumont; but foon after all his ten velfels were burnt by the Encuth in a general engagement. Af. ter this the blockad: of Perth was raifed, the earl of March difbanded his army, and Edward Baliol wa, crowned king of $S$ sotiand at Scone, on the 24 th of September 1332.
'ithe new inonarch was mo fonner put in poffefion of the kingdom, than he lift Peth in the hands of the earl of Fife, while he himfelf reramed to the fouthern parts of the kingdum. Dut the party of king David was far from beiog extinguihed. Baliol was faace grone, when the town of Perih was furprifed, and its fortifications razes, by James Frafer, Simon Frafer, and Robert Keith. The earl of Fife was made prifrime with his frmily and valfals. Andrew Murray of Tollibardine, wirs !ad dirested the Enclith to a ford on the river Eirn, was pat to drath as a trator. Such of the Seots as ftill atheced to the intereft of their infant prince, chose Sir Andrew Murray of Bothrell rexeat. Ile was a brave and aetive man, but had not a, $j$ er fulficient force to attempt any thing ounfider210 abla.
His fhame- Io the mem time, Palin beluwed in a molt fandaful bchavi-lous manner. At Rosburgh, he made a $f$ limn firr eur.
rend $r$ of the libettes of Scotland: acknowiedged Ed. ward for his liege-lud; and, as if this had not been fufficient, he became bound to put him in polletion of the twa, cafle, and terituy of B.rwick, and of other lands on the marches, extending in all to the yearly value of 2000 !. "on accoun'," as the inltrument bears, "of the erat honour and emoluments which we have frocurd through the fige one of our lord the king, and by the powerful and acceptable aid which we have wecived from his good fubjects" Iie alfo proffered in many the princefs J , hana, whom he confl , whb betrotied to Nut Pruce, and to add 5001 . to
her joinsure; and this under the penalty of 10,0001 .
to be appropriated as a portion to the young lady, or otherwife cifpofed of for her behoof. He further eirgaged to pruvide for the maintenance of David Bruce as the king of England fhould advife ; and, lafly, be became bound to ferve Edward in all his wars, excepting in England, Wales, and Ireland, for the fpace of a year tosecher, with 200 men at arms, and all at his own charges; and he bound his fucceffors to perform the like fervice wih 100 men at arms. But afterwards Edward having engaged to maintain him on the throne of Scotland, Bathol bound bimfelf to ferve him in all his wars whatever.

Though the greatelt part of the nation fubmitted to this fhameful treaty, it roufed the ind gnation of thare who wihed wall to the liberties of their country. John, the fecond fon of Rand lph, now earl of Moray. by the dath of his brother; Archibald, the youngelt brother of the renowned D )uglus; together with Si mon Frafer, affembled a body of horfemen at Moffat in Annandale; and, fuddenly traverfing the country, alfaulted Baliol unexpectedly at Annan. His brother Batiol furHeary made a gallant refiftance for fome time; but prifed, and was at laft overpowered with numbers, and killed, to- driven out gether with feveral other perfons of difinction. Baliol of seothind? himfelf cfcaped almolt naked, with fearce a fingle attendant, and fled to England. After his departure, the Scots began to make depredations on the Englinh frontiers. Edward iffued a proclam tion, in which he folemnly averred, that the Scots, by their holtile depredations, had violated the peace of Northampton. Baliol, in the mean time, being juined by fome Englifh barons, retur ed to Scotland ; took and burnt a caftle where Robert de Colville commanded; and, eftablifh. ing lis quarters in ine neighbourhood of Roxburgh, began to make preparations for befieging Berwick. Jult after his arrival, Archibald Douglas, with 3000 men, invaded England by the weftern marches, plundered the country, and carried off much booty; in revenge for which, Sir Anthony de Lucy made an inroad into Scotland, defeated and took prifoner Sir William Douglas, celebrated in hiftory by the appeltation of the lnight of Liduldidale, whom Edward caufed to be put in irons. About the fame tim:, Sir Andrew Murray the regent attacked Baliol, with a view to difcomfit him before the reinforcements which he expected out of England could arrive. A fharp conflitt eiffued at Roxburgh, in which the regent, attempting to refcue a foldier, was taken frifoner: and thus Scotland was at once deprived of its two ableft commanders.

Archiba'd Douglas was now declared regent; and Edward prepared to invade Scotland, in order to take vengeance on its inhabitants, as he faid, for the wrongs they had done, and tio feek fuch redrels as might feemz good to himfelf. He crdered poffefin n to be taken ff the ifle of Man ia his own name; and foon arter made it over to Sir William de Montigue, who had fome claim of inheritance in it. The chief defign of Edward in this expedition, how ever, was $t$ obtain pofleffon of the town of Berwick, which had been aready ceded to hin by Baliol. This appeared to berw 25 the Scots a place of m in 1 if $\mathrm{im}_{\mathrm{p}}$ mane than it did to befieged bs Ed vard; and therefore they took all the procartions the wate in their power to prevent the lofs of it. Lize carl ad hin. Much was apponted to comm und he cultic, and Sir

$\underbrace{\text { s-ntlard. Willi } m \text { Keith the town. The Scots made an obli- } 13,500 \text { of the commons lightly armed, amounting in all scothnes. } . ~ . ~ . ~}$ nate defence; yet it was evident that they mult foon have yielded of they had not been relieved. At length the regent, with a numerous army, appeared in the neighbourhood. He endeavoured to convey fuccours into the town, or to provake the enemies to quit the advantage of the ground, and engage in battle. But all his efforts were in vain ; the E:glith obltructed every paffage, and ftond on the defenfive.

The regeat then entered Northumberland, walted the country, and even antaulted Bamborough cafte, where Philippa the young queen of England had her refidence. He fondly imagined that Edward III, would have abandoned the fiege of Berwick, after the example of his father, in circumitances nut diffimilar. Edward neverthelefs perfevered in his enterprife.

During a general affault, the town was fet on fire, and in a great meafure confumed. The inhabitants having experienced the evils of a fiege, and dreading the worfe evils of a ftorm, implored the earl of March and Sir William Keith to feek terms of capitulation. A truce was obtained; and it was agreed, that the town and cafte fhould be delivered up on terms fair and honourable, unlefs fuccours arrived before the hour of vefpers on the igth fuly.

It was fpecially provided, " that Berwick fhould be held as relieved, in cafe 200 men at arms, in a body, thould force their paffage into the town."

By the treaty, Sir William Keith was permitted to have an interview with the regent. He found him
to 14,655 .

With him Knyghton appears to concur, when his narrative is cleared from the errors of ignotant or carelets trannfcribers.

It is probable, however, that the fervants who tended the hories of perfons of diltinction, and of the men at arms, and the ufelefs followers of the camp, were more mumerous than the actual combatants.

The Englifh were advantageounly pelted on a rifing ground at Halydon, with a marlhy hollow in their front. Of their particular difpofition we are not informed, further than that Baliol had the command of one of the wings.

It had been provided by the treaty of capitulation, "That Berwick fhould be confidered as relieved, in cafe 200 men at arms forced their paffage into the town." This the scottih men at arms attempted; but Edward, aware of their purpofe, oppofed them in perfon, and repulfed them with great llaughter. The Scottifh army rufhed on to a general attack; but they had to defcend into the marihy hollow before mounting the eminences of Halydon. After having ftruggled with the difficulties of the ground, and after having been inceifantly galled by the Englih archers, they reached the enemy. Although fatigued and difordered in their ranks, they fought as it became men who had conquered under the banners of Robert Biuce. The Englifh, with equal valour, had great advantages of fituation, and were better difciplined than their antagonifts. The earl of Rofs led the referve to attack in flank that wing where Baliol commanded; but he was repulfed and flain. There fell with him Kenneth earl of Sutherland, and Murdoch earl of Menteith.

In the other parts of the field, the events were equal- 217 ly difafterous. The regent teceived a mortal wound, The Scots and the Scots everywhere gave way. In the field, and and the during a purfuit for many miles, the number of flain regent and prifoners was fo great, that few of the Scottifh killed. army efcaped.

Befides the earls of Rofs, Sutherland, and Menteith, there were among the flain Malcolm earl of Lenox, an aged baron; he had been one of the foremolt to repair to the ftandard of Robert Bruce, and his laft exertions were for his country ; Alexander Bruce earl of Cartick, who atoned for the thort defection from the family of his benefactor ; John Campbell earl of Athole, nephew of the late king; James Frafer, and Simon Frafer ; John de Graham, Alexander de Lindefay, Alan Stewart, and many other perfons of eminent rank.

The fteward had two uncles, John and James. John was killed, and James mortally wounded and made prifoner (1).

The regent, mortally wounded, and abandoned on the field of battle, only lived to fee his army difcomfited fand himfelf a prifoner.

This victory was obtained with very inconfiderable lofs
(1) Fordun, J. xiii. c. 28, relates, that Sir James Stewart was flain ; the Englifh hiftorians, that he was mortally wounded and made prifoner. It may be remarked, that at Halydon, two Stewarts fought under the banner of their chiefs; the one Alan of Dreghorn, the paternal ancellor of Charles 1. and the other James of Rofyth; the paternal anceftor of Oliver Cromwell.

Sotland. he lidi taken the place, and put the garrifon to the tword; however, his utmolt efforts were at lat baffled, and be was obliged, notwithftanding his oath, to defilt.

In the mean time, the regents affembled a parliament at Dairfy, near Cupar in Fife; but no plan of defence could be fallen upon, by reaton of the animofities and factions which prevailed among the barons. Through the mediation of the French, fome terms of peace were propofed; but being rejected by the Englifh, Edward again invaded Seotland, cruelly ravaging the country with one army, while Baliol and the earl
224 of Warrenne did the fame with another. Soon afier Count Guy this invafion, count Guy of Namur landed at Berwick of Namur with a confiderable number of men-at arms in the ferdicieacd and t.lken priconer. vice of the Englifh. He advanced to the neighbourhood of Edimburge; but was defeated and taken prifoner by the earls of March and Nioray, and Sir Alexander Ramfay. In this engagement, one Richard Shaw, a Scottif efquire, was fingled out by a combatant in the army of count Guy, and both pierced each other with their fpears; the ftranger being Aripped, was difcovered to be a woman. The earl of Moray treated Guy with the greatent refpect, not only allowing him and the remainder of his trocps to depart from Scotland without moleftation, but even attending him to the borders, accompanied by Willam Douglas and his brother James. On his return, William de Preffen, warden of the calle and foref of Jedburgh, attacked and defeated his party; James Douglas was killed, the earl himfelf taken prifoner, and carried into England.

Thus was the Scottifh nation once more reduced to the brink of ruin. Alexander de Mowbray, Geffrey de Mowbray, and fome others, pretending powers from " the earl of Athol and Robert the Steward of Scotland," concluded a treaty with Edward at Perth ; the fubfance of which was, that all the Scots thould receive pardon; and have their fees, lands, and offices reftored, excepting thofe who by common affent in parliament fhould be excluded. The liberties of the church and the ancient laws and ufages of Scotland were to remain in full force. All offices were to be filled with Scotfmen, excepting that the king fhould appoint whom

226
The earl of The earl of Athol now began to perfecute with the Athol di- utmolt fury thofe who wifhed well to the caufe of Scotfeated and builled. land. With 3000 men he befieged the callle of Kildrommey, which had hitherto been the great refuge of king David's party. Sir Andrew Murray of Bothweil refolved at all events to attempt the refcue of his wife and family, who were thut up in this caftle. With 1100 men he furprifed Athol in the foreft of Kilblain. 'The eari's men, feized with a panic, fled and difperfed themfelves; on which their commander, refuling to accept of quarter, was killed. Sir Andrew Murray then affembled a parliament at Dunfermine, where he was immediately appointed regent.

In I 320 , the king of England perceiving that the Scots were taken ueder the pairanage of France, ;efolved to invade their country, and crufh them at once before they could have any aftifance from their new allies. In this expedition he penetrated as far as Invernefs; but the Scots, commanded by Sir Andrew Murray, avoided coming to a general action; fo that Edward could not effect any thing of confequence.

The inhabitants of Aberdeen attacked one "Thomas Rofheme, who had landed at Dunottar. They were defeated; but Rofheme fell in the action. Edward chafifed the vanquifhed feverely for their temerity, and laid the town in ahes. He then began to repair the caftles whofe fortifications had been demolifhed by king Robert. He put ia a flate of defence the cafles of Dunottar, Kinclevin, Lawriefon, Stirling, Bothwell, Edinbureh, and Rrxburgh; greatly augmented the fortifications of Perth, and left a confiderable body of troops in the place. The Scots began to reduce thefe caftles as foon as Edward was departed; and in 1337, under Sir Andrew Murray, invaded Cumberland. No great exploits, however, were now performed on either fide. Edward being :mployed in preparations for invading France, bad little leifure to attend to the affairs of Scotland; and the Scots, divided among themfelves, and deftitute of thofe leaders under whom they had acquired fo much glory, could not now annoy their enemies as formerly. The molt remarkable tranfaction Dunbar was the fiege of the caftle of Dunbar, belonging to the caftle unearl of March. The Englifh commander was the earl of Salifbury. The earI of March was abfent; but his wife, the daughter of Randolph, from her complexion commonly called Black Agnes, undertook to defend it in her hufband's ablence. The Englifh again employed that buge machine called a forw, formerly mentioned in our account of the fiege of Berwick: it met with the fame fate now as at that time; an huge ftone, let fall upon it from the top of the walls, crufhed it to pieces. The Englifh, baffled in every attdck, turned the fiege into a blockade; but Sir Alexander Ramfay having found means to enter it with 40 refolute men, the garrifon made a fally, and cut in pieces the advanced guard of the enemy. The Englifh, difheartened by fo many misfortunes, abandoned the enterprife.

In 1338, Sir Andrew Murray the regent died, and was fucceeded in his office by Robert the Steward of Scotland. In 1339 he reduced the town of Perth and the caltle of Stirling ; and gained over to the Scottiff intereft William Bullock, governor of the caftle of Coupar : after which, having expelled the enemy from every polt to the northward of the Forth, he employed himfelf in fettling the affairs of the nation as well as he could.

In 1341, the caftle of Edinburgh was furprifed by a device of Sir William Bullock. According to his appointment, one Walter Currie of Dundee privately re ceived into his hip the knigbt of Liddefdale, with William Frafer, Joachim of Kinbuck, and 200 refolute men. Currie calt anchor in Leith road, pretending to be an Englifh Chipmafter, who had a cargo of wine and provifions, with which he propofed to furnifh the commander of the caftle. His barrels and hampers were brought to the caftle gate, and fuddenly thrown down in fuch a manner as to obftruct the fhutting of it. Currie and his men then flew the centinels; and the knight of Liddefdale, with a party who lurked in the neighbourhood, rughed in, overpowered the garrifon, and made themfelves matters of the place.-On the 4 th of March this year, the king aad queen arrived from France, and landed at Inverbervie in Kincardinelhire.

In 1342, Sir Alexander Ramfay took the ftrong fortrefs of Roxburgh; for which important fervice the king beftowed on him the change of heriff of Teviotdale, at

$\qquad$

## SCO

scotland. that time held by William Douglas knight of Liddef. dale. The king's liberality proved fatal to Ramfay: for from that time Donglas became his implacable and inveterate enemy; and having, after a pretended reconciliation, unexpectedly furprifed him with three of his friends, he put them inftantly to death, carrying off Ramfay himfelf to his caftle of the Hermitage, where he caufed him to be farved to death in a molt barbarous manner. The unhappy man was confined in a room, over which was an heap of wheat; a few grains of which were let fall every day through a hole, not as many as would fupport life, but as would protract it for a time, and make him longer fenfible of the agonies of hunger ; and in this miferable fituation he furvived 17 days. About the fame time Sir William Bullock was put to death by Douglas in a fimilar manner ; nor was King David at that time in a capacity to punifh fuch atrocious cruelties committed by fo powerful a fubject.

In the mean time, David having raifed a powerful army, prepared to take a fevere revenge of the Englifh, from whom he had fuffered fo much. Edward was at that time in France, but commanded Baliol to raife all the militia beyond the Trent: which order, however, produced but little effect ; fo much was this meanfpirited prince defpifed by the Englifh. David invaded Northumberland without oppofition, and ravaged the country ; but was obliged to raife the fiege of Newcaftle, which was commanded by Sir John Nevil, an excellent officer. David, exafperated at this repulfe, entered the bifhopric of Durham, which he ravaged in the moft cruel manner. However, on the approach of Edward with a powerful army, the Scots thought proper to retire ; and a two years truce was agreed upon.

This pacification was but fhort-lived. In I 345 the Scots again prepared to invade England, while Edward took all neceflary meafures for oppofing them : however, this year the Scots were fuccefsful, ravaging Weftmoreland, and burning feveral towns. The year ended with a new truce between the two nations; and hoftilities were not renewed till 1346 , when David entered England with an army of 50,000 men. His firlt exploit was the taking of the fortrefs of Liddel, and maffacring all whom he found in it. The commander, Sir Waltet Selby, capitulated with a Scots knight for his life; but the bargain being difapproved of by David, he ordered two of Selby's fons to be ftrangled in his prefence, and then the father's head to be cut off. From thence the Scots marched to Lancroft, which they plundered ; then paffing into Northumberland, they pillaged the priory of Hexham, but fpared the town, that it might ferve as a magazine. Three other towns, Corbridge, Durham, and Darlington, were fpared for the fante reafon. In his march to Durham, it is faid that he would have made the county a defert, had not fome of the monks paid him a contribution of a thoufand pounds to fpare their eftates : however, according to Knyghton, every Englifhman who fell into David's hands was put to death, unlels he could redeem his life by paying three pence.

To put a ftop to the cruelties of this barbarous invader, the queen of England, in her huband's ablence, aflembled a powerful army, which was divided into four bodies; the firlt commanded by Lord Henry Percy; the fecond by the archbifhop of York; the
third by the bibop of $\underline{L}$ incoln, the lurd Moubray, an $s$ otiant. Sir Thomas Rokeby ; and the fourth and principal divifion was headed by Edward Baliol. -The king of Scotland headed a chofen battalion, compoled of the flower of his nobility, and the auxiliaries with which he had been fupplied by France. The ligh Iteward of Scotland headed the fecond line; and the third was commanded by the earls of Moray and Douglas. While the Englifh were approaching, Lord Douglas and Sir David Graham Nirmifhed with ther, but were defeated with the lofs of 500 of their men; which feemed an omen of the difafter that was about to enfue. The general engagement began between the archers on both fides; but the Englifh being much fuperior in the ufe of the bow, the feward of Scotland advanced to the relief of his countrymen. The Englifh archers, unable to bear his attack, fell back upon Lord Heary Percy's divifion, which was thus put in confufion, and would have been totally defeated, had not Baliol advanced to their relief with a body of 4000 horfe. The fteward was then obliged to retire ; by which means the flank of that divifion commanded by David, and which was then engaged with another line of the Englifh, was left expofed to an attack. Baliol perceived the advantage; and, without purfuing the fteward, attacked the king's divifion, which was immediately cut in pieces or difperfed. David was left with about 80 noblemen and gentlemen, but fill maintained the fight with obftinacy; $\begin{gathered}\text { The } S \text { sots } \\ \text { defeated, }\end{gathered}$ nor would be yield even when wounded in the head and therr with an arrow, expecting every moment to be relieved king taken by the fteward and that line of his army which was fill prifoncr. entire under the Lords Moray and Douglas. At laft finding himfelf totally overpowered, he attempted to retreat, but was overtaken by a party under one John Copeland.' This captain, endeavouring to feize the king, had two of his teeth ftruck out by a blow of his gauntlet; but at laft, finding it in vain to refif, the king was obliged to give up his fword and furrender himfelf a prifoner.-After he was taken, Baliol attacked and totally routed that divifion of the Scottifh army which had hitherto remained entire under the Lords Moray and Douglas. In this battle the Scots loft a great number of their nobility, and 15,000 common foldiers. Many perfons of the firft diftinction were allo taken along with the king; and had it not been that the elcape of the Scots was favoured by the avarice of the Englifh foldiers, who neglected the purfuit in order to plunder, farce a fingle Scotiman would have returned.

King David, after this unfortunate battle, was car- Account of ried to the caftle of Bamborough, where he was kept king David with fo much privacy, that for fome time it was not aftcr the known where he was, or that he had been taken pri- battle. foner. As foon as the truth was known, the queen of England demanded the royal prifoner from Copeland; but the latter pofitively refufed to part with him even to the queen, unlefs fhe could produce an order to that purpofe under Edward's hand and feal. This refolute behaviour was refented by the queen, and a complaint made to the king ; in confequence of which Copeland was fummoned to appear belore Edvard, after having refigned David to the cuftody of Lord Nevil. The Englifh monarch, at that time in France, approved of all that he had done, rewarded him with 5001 . a year, and fent him back to England with the honour of

Sothans.
kighthool. Duvid was then eforted by Copeland, attended, ir is faid, by 20,000 men, from the caltle of Ogle in Northumberland, till the Lord Nevil, by indenture, delivered him into the hands of Sir Thomas Rokiby, fheriff of Yorkhhire. In the fame pompous manner he was conducted all the way to London, which he entered on a black courfer. He was received in the capital. with the greatell folemnity by the lord mayor and other magiftrates, the city-companies under arms lining all the freets through which he paffed, the houfes loaded with fpectators, who expreffed a generous concern for his captivity. Being arrived at the Tower, he was delivered, by indenture likewife, to the cuftody of the conftable, the Lord John Darcy, on the 2 d of 239 January 1347.
Batiol Baliol now, encouraged by the misfortune of his.rimakes ano- val, made an effort once more to eftablifh himfelf on ther attempt on the crown of Scotland. the throne of Scotland; and before the end of the year reduced the caltles of Hermitage and Roxburgh, the forelt of Ettric, the Merfe, with the counties of Annandale, Teviotdale, and Tweeddale. The Scots continued faithful to the caufe of their king, notwithftanding his misfortune, and chofe the Steward for the guardian of the kingdom. He behaved with a prudence equal to the high ftation he filled : veverthelefs the progrefs of Baliol was fo rapid, that it is fcarcely probable he could have maintained his ground, had not Edward again confented to a truce; which, however, feems to have been ill obferved on the part of the Scots. In fact, though both Scots and Englifh hiftorians are filent as to

240 The Scots particulars, we find, that about the end of the year recover the 1348 , all Scotland was recovered out of the hands of sreateft the Englifh ; excepting Berwick, Roxburgh, Hermitage, part of and Lanric, which was part of Baliol's hereditary eftate, their counary. and defended by him with an army. The Scots hiftorians inform us, that the Englifh, in revenge for the damages done to their country by the breach of the peace, proclaimed a tournament and other military exercifes at Berwick, to which they invited the Scots; but in their way thither the latter fell into an ambufcade, and were all cut in pieces.
241
The years 1349 and 1350 were remarkable only for a dreadful plague which invaded Scotland, after having ravaged the continent of Europe. According to Fordun, one-third of the people of Scotland perified at this time. The patient's flefh fwelled exceedingly, and he died in two days illnefs; but the mortality chiefly affected the middling and lower ranks of people. The fame dreadful calamity continued throughout the years 1351 and 1352; occafioning a ceffation of arms not only in Scotland, but throughout all Europe.

All this time king David remained a prifoner in England; for though feveral treaties had been propofed, they bad hitherto come to nothing, becaufe the Englifh monarch inflited upon being indemnified for the ravages the Siots had committed in his territories. At laft it was agreed, that the king of Scotland fhould be immediately fet at liberty, on paying 90,000 merks for his ranfom, by equal proportions, within the face of nine years: That 10,000 merks, being the firft proportion, Chould Le paid at the fealt of Candlemas next to come, the fecond at Candlemas 1357, and fo on till complete payment fhonld be made of the whole: That, during the faid face of nine years, there fhonld be a truce between the two kingdoms: That 20 Scots gentlemen,
of the beft families in the kingdom, thould remain in England as holtages and fureties for the faid fum; and that, if any fart thereof was not paid at the precife time appointed, then David fhould remain a prifoner in England till it was paid; or, if he was detained by any juft caufe, that the lord high iteward, the lord Douglas, John of the Ifles, and others of the highelt rank, fhould come and fupply his place.
'Thefe terms were rejected by the Scots nobility, and, Ri jected by in 1355, war was recommenced with England, at the inftigation of France, who fent 40,000 crowns to Scotland as a fupply for defraying the expences.

With this fum the guardian, having raifed an army, once more took the field; but not before the Englifh had deftroyed the Lothians and Dougladdale. A battle was fought on Nefbit-moor: in which the Englifh being drawn into an ambufcade, were totally defeated. The next attempt of the Scots was againft the town of Berwick, which they defigned to furprife by an efca- Berwick lade. They met, however, with fuch a vigorous refift- taken by ance, that many perfons of diftinction were killed. the Scots. However, the attack proved fuccefsful; but the acquifition was of no great importance as the caftle fill held out. Edward, in the mean time, hearing of the lofs of the town, hurried back from France to London. Here he ftaid but three days, and-marched northward to raife the fiege. He reached Durham on the 23d of December 1355 , where he appointed all his military tenants to meet him on the ift of January 1356. On the 14th Retaken of the fame month he arrived before Berwick, which byEdward. was inftantly retaken; but the Scots were allowed to depart for their own country. The reduction of this place produced an extraordinary effect : for Baliol now perceiving that Edward meant not to eftablifh him on the throne of Scotland, but to retain in his own poffeffion as many places of that country as he could, came at laft to the refolution of giving up to the king of England the whole of Scotland. This indeed was no more than a form, becaufe at that time he was not poffeffed of the kingdom. However, the ceremony was performed at Roxburgh; and Baliol prefented his crown Baliol reand fome earth and fones by way of inveititure. Ba- kingdom of liol in return was to have a revenue of 2000 pounds a- Scotland to year; and as Edward was at the head of an excellent Edward, army; he had little doubt of being able to force the Scots to fubmit.

The affairs of Scotland were now in a very critical fituation ; and it was neceffary to gain time. For this reafon Edward was amufed with a negociation; and to this he the more willingly liftened, as he was at that time waiting for his fleet, from which be had great expectations. A little time, however, difcovered the depeit The Sots plainly told Edward, that they would Wh ${ }^{247}$ die rather than fubmit to his demands; and he, in re- a fur.ous turn threatened a moft dreadful revenge. His fleet in invafion. the mean time arrived in the Frith of Forth ; the mariners deftroyed and pillaged all that was within their reach, without fparing even the facred edifices, carrying off the ftatues of the bleffed virgin, loading the monks with chains, and committing every thing in thofe days called impiety and facrilege. Edward had by this time marched as far as Haddington, but was obliged to re, ceive provifions all the way from his fleet; for the Scots had defolated the country through which he pafled. During his march his army was haraffed, and

Scotlant. 248 But is obi, ged to return with out accomplifling any tbing.
his foragers cut off, fo that he was redaced to diftrefs; and at laft his Heet being totally deftroyed by a ftorm, he was ob:iged to return to England without accomplifhing any thing.
In the mean time the prince of Wales, who had been left by his father to carry on the war in France, defeated and took prifoner John king of France, at the battie of Poictiers. In this battic were 30.0 Scots, who had gone over as auxili ries to the French monarch, and who fuffered extremely. However, the fuccefs of Edward, infead of rendering him haughty, feemed to have a contrary effect ; and, by the mediation of Pope Innocent, a truce for two years was concluded with France, in which the Scnts were comprehended. During this interval the ranfom of the king of Scots was fettled at 100,000 merks, to be paid in ten years; for which 20 holtages were to be given as formerly. In confequence of this treaty, Divid at laft obtained his liberty in 1358 ; and Edward laid afide all hopes of ever fubduing Scotland. As for Baliol, he was now funk in oblivion; and it is not kaown what became of him, or when he died.

David, though now reftored to liberty, found himfelf greatly embarraffed with the payment of fuch a large fum as had been ftipulated for his ranfom; the kingdom of Scotland being then in a moit miferable and exhaufed fituation. After fending his queen; and going into England himfelf, he could obtain no greater favour than a refpite of a few months for the payment of the fecond moiety ; fo that he was a laft contrained to afk affiltance from Trance. This could fcarcely be expested in the diftreffed fituation of that kingdom; however, it
was at laft agreed, that 50,000 marks fonold be paid siocisnt. to Scotland, in cafe the Scots would confent to rerjew the war the following year. Neither party, however, kept their word; and David, being till greatly diftreffed about the remainder of his ranfom, at laft entered into a very extraordinary negociation with Edward, by which he confented that the king of England fhould be his fucceffor to the throne of Scorland. But this negociation was defeated through the inviac:ble hatred which the Scots bore to an Eugling goverror. David then, being entirely unable to difcharge the remainder of hi, ranfom, was noliged to enter into a new treaty; by which the kingdom of Scotiand became indebted to Edward the fum of 100,000 pounds ferling, to be paid by equal proportions within the fpace of 25 years, during which there fhould be a truce between the two nations.

From this time we meet with little more of any moment in the reign of king David. After the death of his queen Johanna, the filter of Edward, he married a Scots woman, of mean birth, named Margaret Logia; but by neither of his wives had he any children. Queeu Margaret he divorced, on what pretence is not known; however, fhe left the kingdom, and complained perfonally to the Pope, who treated her as David's lawful wife, and enjoined her humand to receive her as fuch under the moft fevere penalties. What effect thefe threats had on the king is not known ; but it is certain that Margaret never returned to Scotland; and, on the 22d of February 1371, David himfelf died, leaving the kingdom to his nephew Robert Stewart, the firt of that family who fat on the throne of Scotland (k)

(k) Concerning the origin of the Stewart family, we have the following account by the Scots hiftorians. Fleance, the fon of the celebrated Banquo, after his father's murder by Macbeth, fled into Wales, where he had a fon named Walter, by a princefs of that country. Atter the reltoration of Malcolm Canmore, this Walter returned to Scotland, where he was promuted to the high Itewardhip, a dignity held by fervice, and which intitled the pofleffer to all the privileges of a baron. Walter was now diftinguifhed, from this office, by the title of Water the Stewart, which defcended to his pofterity; and Steward, afterwards Stewart, or Stuart, became their furname.

On this fubject Lord Hailes has the following remarks. "Our hiftorians have recorded the achievements of Walter the Steward of Scotland in the reign of Malcolm III. He is faid to have been the father of Alan, and the grandfather of that Walter who was indeed Stewart of Scotland in the reign of David I. and Malcolm IV. It may perhaps be afcribed to ftrange prejudices, or to a fpirit of fcepticifm, when I declare, that hitherto I have feen no evidence that fuch a perfon as Walter Stewart of Scotland, in the reign of Malcolm III. did ever exilt.
"We are gravely told, "That Walter the fon of Fleance, the fon of Banquo, Thane of Lochaber, having killed a man at the court of Griffith, prince of Wales, fought refuge with Edward the Confeffor ; and having killed another man at Edward's court, fought refuge with Alan the Red, earl of Brittany : That, on the No:man invafion, he came to England with the earl of Brittany, and fignalized himfelf at the battle of Haltings is 1066: That the earl of Brittany, by his firit wife Emma, daughter of Siward earl of Northumberland, had an only child Chrifina; and that he beltowed her in marriage on the young hero." This is the ftory which, after various improvements fince the days of Boece, has had the good fortune to obtain credit.
"That Walter, before he had well attained to the age of manhoed, fhould have flain two men in private quarrels, is a circumftance improbable, yet poffible; and therefore I object net to it. But his alliance with the earl of Brittany cannot be fo eafily admitted.
"Alan, furnamed lo Roux, a younger fon of Eudo earl of B ittany, was one of the gallant adventurers who came over with William the Conqueror; be had mither teritoriss nor court. 'The hitorians of Britiany pofitively affert that he had no children. Befides, it is hard to lay by what accident Alan le Reux fhould have become acquainted with Emma the daughter of Siward earl of Northumberiand! I fuppofe that our hin... sians invented this alliance, in order to Arengthen the conuection between Walter the Stewart and Mal. colm III.
"Arcorbing

## Scotland.

 $\cdots$Some authors tell us, that at the acceffion of Robert II. his title was difputed by William earl of Douglas. If any fuch claim was preferred, an affembly of the States fet it afide, and it was refolved that Robert fhould be crowned at Scone; and to take away for the future all difputes concerning the facceffion, a particular act was framed, by which the kingdom was fecured to Robert and his heirs.

The new king being thus eftablifhed on the throne, endeavoured to renew the war with the Englifh, in (r. der to recover from them the town of Berwick, and fome other places on the borders. In this, however,
he failed; and as 56,000 pounds of David's ranfom ftill remained unpaid, Robert bound himfelf to difcharge it at the rate of 4000 marks every midfummer. He then propofed an alliance with France; but the tetms demanded by that kingdom being, that Scotland fhsuld be obliged to make war with England whenever France flhould require it, Robert could not by any means be induced to confent to fach a requifition, which would have obliged him to break through the moft folemn treaties, whenever the king of France flould think proper to break with England. A new treaty, there-
fore, was entered into, by which it was provided, that neither Scotland nor France fhould be obliged to make war with England; and by another claute, that the difpenfation or authority even of the pope himfelf fhould never free the kings or kingdoms of France and Scotand from the obligations they lay under to allitt one another, as often as required, in oppofition to the kingdom of England. In cafe of a competition for the crown of Scotland, the king of France and his heirs were to take care that no Englifh influence was ufed; but that the matter being by the greateft and beft part of the nation decided conformably to the laws and eftablifhments of Scotland, he fhould with all his power defend and affift the perfon fo eftablifhed. Laftly, it was agreed that no Frenchman fhould ever henceforth ferve for wages, or otherwife, againt Scotland, nor any Scotfman againt France.

This laft article occafoned a recal of all the Scots war ${ }^{254}$ from the Englifl armies, which Edward looked upon twixt the to be a prelude to an invafion. He accordingly iffued Scotsand writs for affermbling all the militia in the north of Eng- Englifh berderers land. At this time an invincible hatred fubfifted between the neighbouring people of both nations, which

"According to one account, the genealogies of their families ftand thus: Siward eatl of Nothamberland *.
$\frac{\text { Emma=Alan earl of Brittany. }}{\text { Chriftina=Walter the Stewart. }} \xrightarrow{\text { Another daughter=Duncan king of Scots. }}$
*Thus Walter the Stewart and Malcolm III. were coufins-german.
4. According to ancther account, the genealogy of their families ftands thus:
$\frac{\text { Siward Earl of Northumberland. }}{\text { Emma=Alan Earl of Brittany. }}$
$\frac{\text { His ifter=wife of Duncan. }}{\text { Malcolm III. }}$
"Thus the mother of Walter the Stewart and Malcolm III. were coufirs-german.
"Ir is faid that, "Walter the Stewart had a fon, Alan, alfo Stewart of Scotland." The evidence of this is to be found in a charter granted by Earl Gofpatrick, and in another charter granted by his fon Waldeve Earl of March, at Dunbar. In them Alden, or Aldan Dapifer, is mentioned as a witnefs; that is, fay our antiquaries, Allian, the Stetuart of Scotiand.
"This is the fundamental propofition on which the genealogy of the houfe of Stuart, as it is commonly underftood, mray be faid to reft. It will be remarked, that this hypothefis takes it for granted, that Alden or Allan, and Alan, are the fame; upon what authority I know not. The Alden mentioned in the two chaters feems to have been the flewart of Earl Gofpatrick, and of Earl Waldeve, not the ftewart of Scotland.

To the charter by Earl Gofpatrick, there are eight witneffes: ' Andrew the arch-deacon, ; Adam his brother; Nigel the chaplain; Ketel the fon of Dolphin; Ernald; Alden the Sterwatt (Dapifer); Adam the fon of Alden; Adam the fon of Gofpatrick.' Is it poffible for credulity itfelf to believe, that the Alden placed fo low in fuch company, was the bigh hlewart of Scotland, a man at leaft as honourable as Gofpatrick himifelf? I can have no doubt, that the witneffes to this charter were the dependents or houfehold-fervants of Earl Gofpatrick; and. that if we interpret Nigelius Capellanus to be Nigel the earl's chaplain, we muft interpret Aldenus Dapifer to be Alden the earl's Atwart.
"To the charter granted by Earl Waldeve, there are nine witneffes. Alden Dapifer is the feventh in order. There are only three among them who feem to have been landed men: 'Elias de Hadeftandena (probably

Haffenden),

[^67]

extended not only through the lower ranks, but had pervaded the higher claffes alfo. The inhabitants of the borders, indeed, paid very little regard to the orders of their refpective fovereigns; fo that daily hotilities were committed by them upon each other when there was peace between the fovereigns. The in: abitants of thefe countries had eft +blifhed with one another certain conventions, which have fince been collected, and go by the name of the Border-luws. The families of Douglas and Piercy, whofe citates lay cont guous to one another, were at perpetual variance. It had been common for the borderers of both kingdoms, during a truce, to frequent each others tairs; and a fervant of the earl of March had been killed in a fray at that of Rexburgh, which was fall in the hands of the Englifh. Juftice for this murder was demanded from lord Percy; but he flighted the complaint. On this the earl of March, with his brother the earl of Moray, affembling their followers, entered the next fair that was held in Roxburgh, plundered and burnt the town, and killed all the Englifh who fell into their hands.' The Englifh borderers were ordered to lay wafte the lands of the earl of March ; but, in their way thither, deftroyed the
eflate of Sir John Gordon, a man of great property in the fouth of Scotland. Sir John in his turn invaded England, from whence he drove off a large booty in cattle, and a number of prifoners. In his retreat he was attacked by a body of frefh troops under Sir John Lifburn, at a place called Caram. An obftioate encounter followed. The Scots were fiye times repulfed; but at laft they renewed the charge with fuch fury, that they made Lifburn, his brother, and feveral other perfons of difinstion, priimeners, together with all their
furviving foldiers. On this Lord Percy with 7000 men fons of didinstion, pritmers, together with all their
furviving foldiers. On this Lord Percy with 7000 men encamped at Duns, in the 'oonth of Scotland ; but was obliged to retire, probably for want of fubfiltence for
his army. In the mean time, Mufgrave, the governor obliged to retire, probably for want of fubfilence for
his army. In the mean time, Mufgrave, the governor of Berwick, who had been ordered to join Percy with a detachment from the garrifon, was on his march ina detachment from the garrion, was on his march in-
tercepted, defeated, and taken prifoner by Sir John Gordon; ;after which the border war hecame general on
both fides. The iffue of thefe difturbances is but little Gordon ;-after which the border war hecame general on
both fides. The iffue of thefe difturbances is but little known; however, in 1377, we find them raging with more violence than ever. The fair of Roxburgh was once mire the feene of action, and the town was again
burnt down by the Scots. Lord Percy, who was now once more the fcene of action, and the town was again
burnt down by the Scots. Lord Percy, who was now

 earl

Hurenden), William de Copland, and William de Hellebat (q. Elbattle); all the three are placed before Alden Dapifer.
"It has been remarked, "That in thofe days the title of flewart or dapifer was too high a title to be given to the retainer of an earl.' I anfwer, that the Saxen Chronicle, anno 1093, fays, 'Morael of Boebbahurh was thaes eorles Aiward,' i. e. Morel of Bamborongh was this earl's flewart, or the ftewart of Robert earl of Northumberland. Belides, to a charter granted by Earl Gofpatrick the Elder, Lambertus Dapifer is a witnefs. If Lanbertus Dapifer, in a charter of Gofpatrick the Elder, implies Lambert the flewart of the family of March, why fhould Aldenus Dapifer, in the charters of the fon and grandion of Gofpatrick, imply the ferwant of Scotiand?
"I believe that no defender of the common hypothelis will anfwer this objection, by pretending that Lambertui Dapifer was indeed ftewart of Scolland. Such an anfwer would leave no ronm for Walter fewart of Scotland, who is held to have been a diltinguihed perfonage in the reign of Malcolm III.
" It is curions to fee upon what light grounds our antiquaries have eftablifhed the connection between Al denus Dapifer and the houfe of Stewart. Walterus filius Alani appears to have flourifhed in the reign of David I. In the reign of Malcolm IV. he is termed Dapifer. Hence it has been rafhly concluded, that $\mathrm{Wa} /$ torus Dapifer filius Alani was the fon of that Aldenus Dapifer who is a witnefs to the charters of Gofpatrick and Waldeve.
" I perfuade myfelf, that Alden Dapifer, and Alen the father of Walter ftewart of Scotind, in the reign of Malcolm IV. were different perions; and that they had nothing in common but the chriftian name, if indeed they had that in common.
"S.me of my readers may demand, "Who then was Alen the father of Walter, fewart of Scotland in the reign of Malcolm IV.?'
"I can only anfwer this quetion by demanding, 'Who was the father of Martach Earl of Marre in the reign of Malcolm III.; of Gilchrift Earl of Angus in the reign of Alexander I.; of Fergus Lord of Gallovay in the reign of Malcolm IV.; or of Frikinus de Moravia, anceftor of the family of Sutherland, in the reign of William the Lion? Or, t' keep in the fuppofed line of the royal family of Stewart, "Who was the father of Banquho Thane of Lochaber?'
"Many anfwers may no doubt be made to this laft queftinn. Kennedy fays, that the father of Banqulno was one of the feven fons of Corc king of Munfter; Sir George M•Kenzie, Of Ferquhard, the fon of Kenneth III.; and Simpfon, The fon of Ferquhard Thane of Lochabar, the fon of Kemeth, the fon of Murdoch, the fon of Duir, the fin of Eth king of Scotland.
"It is remarkable, that Abercrombie relates all thofe contradictory fories, without ever fuipecting the natural inference arifing from them, 'That if noble perfons are not fatisfied with a long pedigree, proved by authentic initruments, they muft believe in flattering and ignorant fictions; and that if they foorn to wait for the dawn of record to enlighten their defeent, they mult bewilder themielves in dark and fabulous genealogies.'
"In the reign of David I. before the middle of the 12 th century, the family of the Stewarts was opulent and powerful. It may therefore have fubfited for many ages previous to that time ; but when, and what was its commencement, we cannot determine."
somand. -rer

Burwick taken and sctaken,
earl of Northumberland, refulved to take fignal vengeance. He ravaged the Scots borders, particularly the earl of March's eftate, for three days, at the head of 10,000 men. Some time after this, the Scots infurgents became powerful enough to furprife Berwick; which, however, was quickly retaken by the Englifh, who foon atter invaded Scoulind. In this expedition, however, they fucceeded fo ill, that Percy thought proper to defift from his expedition. The Scots in the mean time began hoftilities by fea, under one Mercer, an experienced failor; but he bad the misfortune to be taken prifoner by the Englifh, with all his flect. In 1379, England was afflicted with a dreadful plague, of which the Scots took advantage to invade the country. The Englifh hiltorians tell us that they behaved with the utmolt barbarity, killing and plundering the defencelefs inhabitants without mercy.

This predatory war continued, generally to the difadvantage of the Englifh, till the beginning of November i 380 , when a truce was concluded, to continue for a year; which, however, related only to the borders. This truce, like the others, was but very indifferently obferved; fo that, in $\mathrm{I}_{3} 83$, new negociations were fet on toot: but, in 1384 , the war was renewed with greater fury than ever. In the fpring, the earls of March and Douglas took the caftle of Lochmaben, and intercepted a rich convoy which the Englifh were fending to Roxburgh; burnt to the ground the caltle of Wark, and cormmitted fuch devaltations in the north of England, that feveral gentlemen offered to refign their eltates to king Richard, becaufe they were not able to defend them againit the Scots. The duke of Lancafter entered Scotland at the head of an army; but the inhabitants had removed every thing valuable, fo that he marched on to Edinburgh without accomplifhing any thing of confequence. On his return he was haralfed by flying parties of Scots, who deftroyed a confiderable number of his men. This year alfo the French fent a body of auxiliaries into Scotland. The earls of Northumberland and Nottingham entered Scotland with an army of 10,000 horfe and 6000 archers; but retired, after having committed fome devaftations in the fouthern counties. The Scots revenged themfelves by laying wafte all the northern part of England to the gates of Newcaftle. Berwick was taken by the Scots, and foon after furrendered for the fum of 2000 niarks. A truce was then, as ufual, concluded; but in the mean time king Robert was meditating a moft levere blow againt the Engli?h.
of Duke of having come to the invafion of ders, claimed the fovereignty of the town of Ghent; Eugland projected.
but they refufed to fubmit to him, and in this refufal were protected by king Richard II. of England. On this the duke of Burgundy propofed to the French court to invade England in concert with the Scots.This being agreed to, a fleet was fitted out at Sluys; on board of which John de Vienne, the French admiral, embarked, carrying along with him 50,000 pounds in gold, which the duke of Burgundy advanced in order to be diftributed in Scotland, where the admiral arrived fafe with a confiderable reinforcement, together with fupplies of all kinds of military Itures. Two thoufand auxiliaries, of whom 500 ware men at-arms, arrived with this fleet; and 400 fuits of complete ar-
mour were brought along with them, in order to be sootlard. diftributed among the braveft of the Scots.

257
The Scots were for a fhort time elated with the great 3 nt comes attention which had been paid them by the French to notiang. king; but, in the mean time, the Flemings having revolted, the French abandoned the Scots to fuftain the whole weight of the Englifh refentment, that they themfelves might employ their arms in Flanders. King Richard took the field with a more numerous army than had ever been muftered in England before. Hoftilitie; were begun by the Scots, who, according to cuftom, invaded the northern parts of Eigland, and carried off a confiderable booty : however, in their retreat, they were in the utmof danger of being cut off by the duke of Lancalter, who had been fent with an army to intercept them. The Englifh army proceeded northwards; but could accomplifh nothing, on account of the country. being defolated, till they came to Edinburgh, which they laid in afhes. Being, however, inceffantly harafsed by parties of the enemy, they were obliged to retreat.

Nothing remarkable bappened till the year 1387, when, after a Chort truce, the war was renewed with frefh fury. Northumberland and Weltmoreland were ravaged by the earls of Fife and Douglas, and Lord Nithldale defeated a body of 3000 Englifh; after which he formed the plan of invading Ireland, the inhabitants of which had of late been very active againft the Scots. In 1388, Douglas obtained permiffion to raife a body of forces for this invafion; and having landed in fafety, defeated the Irifh, plundered the town of Carlingford, and loaded fifteen fhips with the booty. From thence the Scots failed to the ille of Man, which in like manner was plundered and laid wafte; after which they returned with their booty to Loch Rian in Scotland.

Encouraged by this fuccefs, Robert determined to $\mathrm{Fn}^{2} 5^{8}$ proceed on a more enlarged plan. Having affembled a invaded by parliament at Aberdeen, a double invafion of England two Scots was refolved upon. Two armies were raifed ; the one, armies at confifting of 25,000 men, commanded by the earls of once. Mentieth and Fife, Douglas lord of Galloway, and Alexander Lindfay; the other army, confifting of the like number, was commanded by the earls of Douglas, March, Crawford, Moray, the lord high Conftable of Scotland, and other perfons of diftinction. The former entered Cumberland, and the latter Northumberland, both which countries they laid wafte, and both armies were to meet within ten miles of Newcaftle. The Englifh were thrown into the greateft confternation. Newcaltle was defended by the earl of Northumberland, whofe age and infirmities rendered him incapable of taking the field; but his place was abundantly fupplied by his two fons Henry and Ralph, the former of whom is known in Englifh hiftory by the name of Hot/pur. The town was garrifoned by the flower of the Englifh nobility and gentry, as well as the inhabitants of the adjacent countries, who had fled thither for refuge. Douglas felected 2000 foot and 300 horfemen out of the two armies, and encamped on the north fide of the town, with a view, according to the Scots hiftorians, of forming it next day. In the mean time, he was chalftorming it next day. In the mean time, he was clal- ${ }^{25}$.
lenged by Hotlpur to fight him hand to hand, with ingle con:Tharp ground ipears, in fight of both armies. Douglas bat beaccepted the challenge, and Percy was urhorfed the tweet earl firt encounter, and obliged to take refuge within the and Henry port- percy *:

## S C O

portallis or gate of the town ; from whence Douglas brought off his antagonit's lance, with a pennon affixed to it, and fwore in his hearing that he would carry it into Scotland. Next day Douglas attempted to form the town; but, being repulfed in the attack, he decamped in the night. Percy, breathing furious revenge, purfued and overtook the Scots at Otterburn. His arrival was quite unexpected, fo that the principal commanders of the Scottilh army were fitting down to fupper unarmed. The foldiers, however were inftantly prepared for battle ; but in the hurry neceffarily attending a furprife of this kind, Douglas forgot to put on his cuirafs. Both leaders encouraged their men by the moft animating fpeeches; and both parties waited for the rife of the moon, which happened that night to be unufually bright. The battle being joined on the moon's firt appearance, the Scots began to give ground; but, being rallied by Douglas, who fought with a battle-ax, the Englifh, though greatly fuperior in number, were totally routed. Twelve hundred were killed on the fpot; and 100 perfons of difinction, among whom were the two Percies, were made prifoners by Keith marifchal of Scotland. On the fide of the Scots the greatelt lofs was that of the brave earl Douglas, who was killed in confequence of going to battle without his armour, as above related. It was this fingle combat between Douglas and Percy, and the fubfequent battle, which gave rife to the celebrated bullad of Chevy Chace.

In the mean time the bilhop of Durham was march. ing towards Newcaftle with an army of 10,000 men; but was informed by the runaways of Percy's defeat, which happened on the 2 Ift of July 1388 . In a council of war it was refolved to purfue the Scots, whom they hoped eafily to vanquifh, as being wearied with the battle of the preceding day, and laden with plunder. 'Ihe earl of Moray, who commanded in chief, having called a confultation of his officers, refolved to venture a battle. The prifoners were almoft as numerous as the whole Scots army ; however, the generals required no more of them than their words of honour that they fhould continue inactive during the battle, and remain prifoners fill. This condition being complied with, the Scots drew out their army for battle.Their rear was fecured by marfhes, and their flanks by large trees which they had felled. In fhort, their appearance was fo formidable, that the Englifh, dreading to encounter a refolute enemy fo frongly fecured, retired to Newcafte, leaving the Scots at liberty to continue their march to their own country.

Robert being now oppreffed with age, fo that he conld no longer endure the fatigues of government, the adminiltation of aftairs devolved upon his fecond fon the earl of Fife; for his eldeft fon was by nature indolent, and befides lame by an unlucky blow le had received from a horfe. Early in the ipring of 1389 , he invaded England with fuccefs: but the fame year a truce was concluded, to laft from the igth of June 1389 to the 16 th of Auguft 1392 ; in which the allies of both crowns were included. This truce was violently repured by the :obility, who fufpected their king of being too much under French infuence. Upon this the court of Yrance thought proper to fend over ambaffadors to perfuade the nobility to comply ; informing them, that in cafe of a refufal, they could exp:ct no

[^68]affifance either of men or money from the continent. suctw. With difficulty they prevailed, and peace between Eng. land and Scotland was once more reftored. Scarci, however, was this truce finifhed, when the pexce of the nation was moft fcandaloufly violated by Robert's thir i fon the earl of Buchan. This prince having a quarrel with the bifhop of Murray, burnt down the fine ci. thedral of Elgin, which has been called by hiftriant the lanthorn and ornament of the north of Scotland. The king for this crime caufed his fon to be imprifoned; and a civil war would have been the confequence, had it not been for the veneration which the Scots retained for their old king. However, they did not long enjoy Robert II. their beloved monarch; for he died on the $19^{\text {th }}$ of dies, and April 1390, in the 75 th year of his age, and the 19 th is in inceed- ed Roo of his reign.

On the death of Robert II. the crown devolved upon his eldeft fon John; but the name being thought unlucky in Scotland, he changed it for that of Robert, though he was till called by the commonalty Roturt Fobn Fernxier. He had been married to Annabella, the daughter of Sir John Drummond, anceltor to the noble family of Perth; and was crowned along with his confort at Scone, on the $13^{\text {th }}$ of Augult 1390. He confirmed the truce which had been entered into with England, and renewed the league with France; but the beginning of his reign was difturbed by the wars of the petty chieftains with each other. Duncan Stew- 263 art, fon to Alexander earl of Buchan, who had died in of the earl prifon for burning the cathedral of Elgin, affembling of Buchan. his followers under pretence of revenging his father's death, laid wafte the county of Angus. Walter Ogilvy; the fheriff of Angus, attempting to repel the invaders, was killed, with his brother and 60 of their followers. The king then gave a commilion to the carl of Crawford to fupprefs them; which he foon did, and moft of them were either killed or executed. The followers of the earl of Buchan were compofed of the wildeft Highlanders, diftinguifhed by the tille of Catterenes, which anfwers to that of banditti. That fuch a race of peo- the Ant of ple exited is arem from ? it is it is not eafy to determine how they obtained their fubfiftence, being void of the knowledge of agriculture and of every civil art. There is fome reafon to believe that many of them came from the Weftern Ines; and that they or their ancefors had emigrated from the eaftern parts of Ireland. The lands they inhabited were never cultivated till towards the middle of the lait century; and, according to the moft authentic acccunts, they lived entirely upon animal food.
The earl of Crawford's fuccefs againft the followers of Buchan encouraged Robert to intruft him with a commifion for fubduing other infurgents by whom the peace of the country was difurbed. The mon remarkable of thefe were the Clan Chattan and Clan Kcy. As Dattie beboth thefe tribes were numerous and brave, Crawford champiumur was not without apprehenfions that they might unite of the clam againft him as a common enemy, and defeat him if he ciattin attempted to fupprefs them by force. He propofed, Kay. therefore, that the two rival clans fhould each choofe 3 ? men, to det.rmine their differences by the fword, without being allowed the ufe of any other weapen. The king and his nobility were to be feecacors of the combat; the conquered clan were to be pardoned for all their former offences, and the conquerors honoured

S:otland. uthe the royal favour. This propofal was readily accepted by both parties, and the north inch of Perth was to be the fcene of action. But, upon mullering the combatants, it was found that one of them, belong. ing to the clan Chattan, had abfented bimfelf. It was propofed to balance this difference by withdrawing one of the combatants from the clan Kay; but not one of them could be prevailed on to refign his place. At laft one Henry Wind, a faddler, though no way connected with either party, offered to fupply the place of him that was abfent, on condition of bis receiving a Frerch crown of gold (about 7 s. 6 d . Sterling) which was immediately paid him. The combat then began with incredible fury ; but at laft, through the fuperiur valour and ikill of Henry Wind, vietory declared in favour of the clan Chattan. Only ten of the conquerors, befides Wynd, were left alive; and all of them defperately wounded. Of the ckan Kay only one remained; and he haying received no hurt effaped by fwimming actofs the Tay.

While thefe internal broils were going on, the truce which had lately been concluded with England was fo. ill obferved, that it became neceffary to enter into frelh negociations. Thefe, like others which had taken place before, had very little effect. The bordcrers on both fides had been fo accultomed to ravage and plunder,

 ir to Scotland. that they could not live in quict. King Robert alfo was thought to be too much attached to the king of England. He had introduced the new title of duke, which he beftowed firft on the prince royal ; but making an offer of that honour to one of the heads of the Douglas family, it was rejected with ditchain. That powerful family had never loft fight of an ancient claim they had upon the caftle of Roxburgh, which was nill in the poffeffion of the Englifh; and this year the fon of the earl of Douglas, Sir William Stewart, and others, broke down the bridge of Roxburgh, plundered the town, and deftroyed the forage and corn there and in the neighbouring country. The Englifh applied for fatisfaction; but obtained none, as the confufion which involved the kingdom by the depofition of Richard II. and the accefion of Henry IV. prevented them from having recourfe to arms, the only argument to which the Scots patriots in thofe days would lifen.No fooner was the cataftrophe of Richard known in Scotland, than they refolved to avail themfelves of it; and invading the north parts of England, demolithed the caftle of Wark, and laid the neighbouring country under contribution. The fituation of Henry's affairs did not admit of his refenting this infult. He contented himfelf with nominating his brother the earl of Weftmoreland, to treat with the Scots about a truce or peace; or, if that could not be obtained, to make a mutual agreement, that the towns, of Dumfries in Scotland, and Penrith in England, thould be free from holtilities daring the war. To this propofal the Scots paid no regard; and being encouraged by the court of France, who refented the depofition a Richard, they renewed; tieir ravages in Enghind. In 1400, the king of Englund called a parliyment, in order to coniult on the moft proper means of repelling the Scottifh invafions; and in this he was greatly affifted by the divifions of the Sents. among themfelves. The duke of Rothefay, the heir-
apparent of the crown, was now grown up to man"s seotland. eftate, and it was thought proper to provide a fuitable 206 confort for him. The king is faid to have fcandaloufly Mercenary put up his fon's marriage at auction, and offered him behaviour to the lady whofe father could give him the higheft of Robert price. The earl of March was the highelt bidder; and advanced a confiderable fum in ready money, on condition that his daughter hhould become the royal bride -This fordid match was oppofed by Douglas, whe propofed his own daughter the lady Margery. So degenerate was the court of Scotland at this time, that neither the king ner the duke of Rothefay oppofed this propofal of a new match, becaufe it was to be purchafed with a frefh fum; and they even refufed to indemnify the earl of March for the money he had already advanced.

As the duke of Albany fided with Douglas, a council of the nobility was privately affembled, which annulled the contract of the lady Elizabeth Dunbar, the earl of March's daughter, in favour of the lady Margery, daughter to the earl of Douglas ; but without taking any meafures for repaying the money to the earl of March. The continuator of Fordun informs us, that the earl of Douglas paid a larger fum for his daughter's fortune than that which had been advanced by the earl of March, and that the earl of Douglas's daughter was married to the duke of Nothefay : that, before the marriage was celebrated, March demanded that the money he had advanced floould be reimburfed; but receiving an unfatisfactory anfwer, he declared, that as the king had not fulfilled his bargain, he would bring unexpected calamities upon the country. Aceordingly he fled into England, leaving his caftle of Dunbar to the cuftody of his nephew Robert Maitland, who foon after put it into the hands of the earl of Douglas, called in hiftory Archibald the Grim, from the fermefs of his vifage.

As foon as Robert heard of the revolt of the earl of March, be fent ambaffadors demanding back his fubject; but the requert was difregarded. On the other hand, the earl of Match demanded repoffeflion of the cafte of Dunbar, pleading, that he had committed no aģ of treafon, but had come to England under a fafe conduct from king Henry, on purpofe to negociate his private affairs : but this requeft was difregarded; upon which he fent for all his family and followers to Eegland, where they joined him in great numbers. This produced a war between the two king- Invafion of doms. The earl of March with Henry Percy fur. Scoland by named Hotpur, invaded Scotland, penetrating as far Henry as Haddington, and carrying off great numbers of the ${ }^{\text {percy. }}$ inhabitants into captivity. From thence they went to Peebles, and then to Linton, ravaging the country all the way as they paffod along. They next befieged the caftle of Hales, and took feveral of the neighbouring forts ; but Archibald the Grim, or rather his fon, having raifed an army againft them, they were fruck with terror, and fled to Berwick, to the gates of which they were purfued by the Scots, At this time the Scottifh admifal, Sir Robert Logan, was at fea with a fquadron ; but mifcarried in an attempt he made upon fome Englifh flips of war that protected their fleet when fiftiing upon the coaft of Scorland. After this the Englifin plundered the Orkney illands; which, though belong-

SCO
stotand. ing to the crown of Norway, were at that time go. $\sim_{\text {verned, or rather farmed, by Sinclair the Scots earl of }}$ Orkney and Caithiefs.
All this time the earl of March continued under the protection of the king of England. He had received repeated invitations to return to his allegiance : but all of them being rejected, he was proclaimed a traitor; and the Scottifh governor made a formal demand of him from king Henry. With this the latter not only refufed to coniply, but renewed his league with the lord of the Illes. He pretended alfo, that at this time he had intercepted fome letters from the Scotiif regency, which called him "a traitor in the highelt degree;" and he alleged this as a reafon why he protested not only the earl of March but the lord of the Ines.

On the 25 th of July 1400, the earl of March renounced his homage, fealty, and fervice, to the king of Scotland, and transferred them to Henry by a formal indenture. For this the earl was rewarded with a pen-
269 fion of 500 merks Sterling, and the manor of Clipe.
Henry IV. fone in Sherwood foreft. Henry now began to reprojecs the vive the claim of homage from the kings of Scotland, colqueft of and even to meditate the conquelt of the kingdom. scotiand. He had indeed many reafons to hope for fuccefs; the principal of which were, the weaknefs of the Scottilit government, the divided ftate of the royal family, and the diffenfrons among the chief nobility. For this purpofe he made great preparations both by fea and land; but before he fet out on his journey, he received a letter from the duke of Rothefay, full of reproaches on account of the prefumptuous letters which Henry had addreffed to Robert and his nobility. The letter was addrefled by the duke to his adverfary of England, as the Scots had not yet recognized the title of Henry to the crown of England. Towards the end of it the duke, according to the cuftom of the times, defited Henry, in order to avoid the effurion of Chriftian blood, to fight him in perfon with two, three, or an hundred noblemen on a fide. But this challenge produced no other anfwer from Henry, than that "he was furprifed that the duke of Rothefay thould confider noble blood as not being: Chrifitian, fince he defired the effufion of the one and not of the other." Henry arrived at Leith on the very day in which he had appointed the Scottifh nobility to meet him and pay their homage, and conclude a peace between the two crowns. In all probability, he expected to have been joined by great numbers of the difcontented Scots; and he flattered the Englifh with a promife of raifing the power and glory ot their country to a higher pitch than it bad ever known. Under this pretext, he feized upen the fum of 350,000 pounds in ready money, befides as much in plate and jewels, which had been left by Richard in the rogal treafury. He raifed alfo valt contributions on the clergy and nobility, and likewife on the principal towns and cities. At laft, finding that neither his vaft preparations, nor the interelt of the earl of March, had brought any of the Scots to his ftandard, he formed the fiege of Edinburidh cafte, which was defended by the duke of Rothelay, and, as fome fay, by the earl of Douglas. The duke of Albany, brother to king. Robert, was then in the field with an army, and fent a letter to king Henry, promifing, that if he would remain where he was for fix days, he would give

## 779 」

SCO
him battie, and force him to raife the fiage, or wre bis S ectiant life. When this was vritte., the duke was at Calder. muir ; and Henry was fo nuch planfed with the letter, that he prefented the herald who delivered it with his upper garment, and a chain of gold; promifing, on his royal word, that he would remain where he was until the appointed day. On this occation; bowever, the duke forfeited his honour ; for he fuffered fix day; to elapfe without making any attempt on the Englih army.
Henry, in the mean time, pufled on the fiege of Edinburgh caftle ; but met with fuch a vigoreus reathance from the duke of Rothefay, thiat the hopes of reducing it were but fmall. At the fame time he was informed that the Welfh were on the point of rebellion under the famous chieftain named Owen Glindower. He knew alfo that many of the Englifh were highly diffatisfed with his title to the crown, But fails andisfied with his title to the crown; and that he ow- in his ated his peaceable poifeffion of it to the moderation of tempt. the earl of March, who was the real heir to the unfortunate Richard, but a noblemran of no ambition. For thefe reafons he concluded it beft to raife the fiege of Edinburgh caftle, and to return to England. He then agreed to a truce for fix weeks, but which was afterwards prolonged, probably for a year, by the commiffioners of the two crowns, who met at Kelfo.

In 1401, Scotland fuffered a great lofs by the death of Walter Trail, the archbillop of St Andrew's, a mont exemplary patriot, and a perfon of great influence. Archibald Douglas the Grim had died fome time before', and his lofs was now feverely felt; for the king himfelf, maturally feeble, and now quite difabled by his age ard infirmities, was fequeflered from the world in fuch a manner, that we know not even the place of his refidence during the laft invafion of Scotland by the Eng. lifh. This year alfo queen Arnabella died, fo that none remained who might be able to heal thofe divifions which prevaited among the royal family. Robert duke of Albany, a man of great ambition, was an enemy to the duke of Rotheiay, the heir-apparent to the crown; and endeavoured,for obvious reafons, to imprefs his father with a bad opinion of him. This prince, however, appears to have been chargeable with no mifdemeanou: of any confequence, excepting his having debauched, under promife of marriage, the daughter of William Lindfay of Roffy. But this is not tupported by any credible evidence ; and, though it had been true, cond never juflify the horrid treatment he met with, and which we are now about to relate.

One Ramorgny, a man of the vileet principles, but Coulpipracy an attendant on the duke of Rothefay, had won his againft the confidence; and, perceiving how much he refented the dukc of conduct of his uncle the duke of Albany, had the vil- Kothefigy. lany to fuggeft to the prince the difpatching him by affaffination. The prince rejected this infamous propofal with fuch horror and difpleafure, that the villain, being afraid he would difclofe it to the duke of Albany, informed the latter, under the feat of the mof inviolable fecrecy, that the prince intended to murder him; upon which the duke, and William Lindfay of Rofly his alfociate in the treafon, refolved upon the prince's death. By practifing upon the doating king, Lindfay and Ramorgny obtained a writ directed to the duke of Alba. fiy, impowering him to arreft his fon, and to keep him under relfraint, in order for his amendment. The fame $5 \mathrm{~F} 2 \quad$ traitors

Scotland. traitors had previoully poffeffed the prince with an ap-
prehenfion that his life was in danger, and had perfuaded him to feize the cafte of St Andrew's, and to keep poffeffion of it during the vacancy of that fee. Robert had nominated one of his baftard brethren, who was then deacon of St Andrew's, to that bifhopric: but being ne perfon no way fitted for fuch a dignity, he decined the honour, and the chapter refufed to elect any other during his lifetime; fo that the prince had a profpect of poffeffing the cafle for fome time. He was riding thither with a fmall attendance, when he was arrefted between the towns of Nidi and Stratirum (according to the continuator of Fordun), and hurried to the very cafte of which he was preparing to take poffeffion.

The duke of Albany, and the earl of Douglas, who was likewife the prince's enemy, were then at Culrofs, waiting the event of their deteftable confpiracy; of which they were no fooner informed, than they ordered a ftrong body of ruffians to carry the royal captive from the caftle of St Andrew's; which they did, after clothing him in a ruffet cloak, mounting him on a very forry horfe, and committing him to the cuftody of two

272 Who is ftarved to death. execrable wretches, John Selkirk and John Wright, who were ordered by the duke of Albany to farve him to death. According to Buchanan, his fate was for fome time prolonged by the compaffion of one of his keeper's daughters, who thrut thin oat cakes through the chinks of his prifon-walls, and by a woman who, being a wet nurfe, found means to convey part of her milk to him through a fmall tube. Both thefe charitable females were detected, and put to death; the young lady's inhuman father being himfelf the profecutor. The prince himfelf died a few days after, on Eatter-eve, his hunger having impelled him to devour part of his own flefh.

In the mean time, Robert, being yet ignorant of the murder of his fon, had renewed, or rather confented to renew, hoftilities with England. On the expiration of the truce, Henry had fent a commiffion to the earls of Northumberland and Weftmoreland, to of fer the Scots any terms they could reafonably defire; but every offer of this kind being rejected, there was a neceffity for renewing hoftilities. The earl of March had received another penfion from Henry, on condition of his keeping on foot a certain number of light troops to act againft the Scots. This had been done; and fo effectually did thefe now annoy their enemies, that the earl of Douglas was obliged to take the field againt them. By dividing his men into fmall parties, he repreffed the depredations of thefe invaders; and Thomas Haliburton, the commander of one of the Scottifh parties, made incurfions into England as far fiderable booty. This encouraged another chieftain, Patrick Hepburn, to make a fimilar attempt : but being elated with his fuccefs, he remained too long in the enemy's country; fo that the earl of March had time to fend a detachment to intercept him on his return. This produced a defperate encounter, in which Hepburn was killed ; the flower of the youth of Lothian, who had attended in this expedition, were cut off, and farce a fingle Scotfman remained unwounded.

On the news of this difafter, the earl of Douglas applied to the duke of Albany for aflifance. He was
immediately furnifhed with a confiderable army, according to fome, confifting of 10,000; according to others of 13,000 ; and according to the Englifh hiftorians, of 20,000 men. Murdoc, the fon of the duke, attended the earl on this expedition, as did alfo the earls of Mo. ray, Angus, Orkney, and many others of the chief nobility, with 80 knights. The Scots on this occafion conducted themfelves with the fame imprudence they had done before. Having penetrated too tar into the country, they were intercepted by the Englifh on their return, and obliged to engage at a place called Homeldon, under great difadvantages. The confequence was, that they were utterly defeated, and almot the whole army either killed or taken.

Henry Hotfpur, to whom this victory was chiefly owing, refolving to purfue the advantage he had gained, entered the fouthern parts of the kingdom, and laid fiege to a caftle called Cocklawys, on the borders of Te viotdale. The caftle was for fome time bravely defend. ed : but at laft the governor entered into a treaty, by which it was agreed to deliver up the caltle, in cafe it was not relieved by the king or governor in fix weeks; during which time no additional fortifications were to be made. But while the Englifh were retiring, one of Percy's foldiers pretended that the Scots had broke the capitulation, by introducing a mattock into the place. The governor, hearing of this charge, offered to fight any Englifhman who thould engage to make it good. A champion was accordingly fingled out, but was defeated by the Scotfman ; and the Englifh army retired according to agreement. The matter then being debated in the Scottifls council, it was refolved to fend relief to the caftle. Accordingly the duke of Albany, with a powerful army, fet out for the place; but before he came there, certain news were received of the defeat and death of Hotipur, at Shrewbury, as related under the article England, $n^{\circ} 182$.

In the year 1404, king Henry, exceedingly defirous of a peace with Scotland, renewed his negociations for that purpofe. Thefe, however, not being attended with fuccefs, hoftilities were ftill continued, but without any remarkable tranfaction on either fide. In the mean time, king Robert was informed of the miferable fate of his eldeft fon the duke of Rothefay; but was unable to refenc it by executing juftice on fuch a powerful murderer. After giving himfelf up to grief, The Scottherefore, for fome time, he refolved to provide for the tifh prince, fafety of his fecond fon James, by fending him into Jamus, fent France. This fcheme was not communicated to the butistaken duke of Albany; and the young prince took fhipping by the with all imaginable fecrecy at the Bafs, under the care Englifh. of the earl of Orkney. On his voyage he was taken by an Englifh privateer off Flamborough-head, and brought before Henry. The Englifh monarch having examined the attendants of the prince, they told him that they were carrying the prince to France for his education. "I underftand the French tongue (replied Henry), and your countrymen ought to have been kind enough to have truited me-with their prince's education." He then committed the prince and his attendants clofe prifoners to the tower of London. The news of this difafter arrived at the caftle of Rothefay in the ifle of Bute (the place of Robert's refidence) while the king was at fupper. The news threw him into fuch an agony of grief that he died in three

Their defeat at Homeldon.

## S C O

Scotland.
278
The duke of Albany regent.
days, the 29th of March 1405, after having reigned near 15 years.

By the death of Robert, and the captivity of the prince, all the power devolved upon the duke of Albans, who was appointed regent by a convention of the ftates affembled at Scone. The allegiance of the people, however, to their captive prince could not be fhaken; fo that the regent was obliged to raife an army for the purpofe of refcuing him. Henry fummoned all his military tenants, and made great preparations : but, having agreed to treat of a final peace with Ireland and the lord of the Ifles, the regent laid hold of this as a pretence for entering into a new negociation with the Englifh monarch; and a truce was concluded for a year during which time all differences were to be fettled. In confequence of this agreement, Rothefay, king at arms, was appointed commiffary-general for the king and kingdom of Scotland ; and in that quality repaired to the court of England. At the time when the prince of Scotland was taken, it feems that there had been a truce, $h$, wever ill obferved on both fides, fublifting between the two nations. Rothefay produced the record of this truce, which provided that the Scots fhould have a free navigation; and in confequence of this, he demanded jutice of the captain and crew of the privateer who had taken the prince. Henry ordered the matter to be inquired into: but the Englifh brought their complaints as well as the Scots; and the claims of both were fo intricate, that the examination fell to the ground, but at the fame time the truce was prolonged.
Schemes of In the end of the year 1409, or the beginning of Henry 1410, the war was renewed with England, and Henry againt Scotland.
prepared to Arike a fatal blow which he had long meditated againft Scotland. He had, as we have feen, entered into a league with the lord of the Ifles, where a confiderable revolution then happened. Walter Lefley had fucceeded to the eftate and honours of the earl of Rofs, in right of his wife, who was the heir. By that marriage, he had a fon named Alexander, who fucceeded him; and a daughter, Margaret, who was married to the lord of the Ines. This Alexander had married one of the regent's daughters; and dying young, he left behind him an only daughter, Euphane, who was deformed, and become a nun at North Berwick. Her grandfather, the regent, procured from her a refignation of the earldom of Rofs, to which the was undoubted heir, in favour of John earl of Buchan, but in prejudice of Donald lord of the Inles, who was the fon of Margaret, fifter to the earl Alexander, and confequently the neareft heir to the eftate after the nun. Donald applied for redrefs; but this fuit being rejected, he, with his bruther J $\ln$ n, fled into England, where he was moft gracioully received by king Henry. According to the inftructions given him by the Englifh monarch, Donald returned to his own dominions in the Ines, where he raifed an army, and paffing over into Rofsfhire, violently feized on the eftate in difpute. In a fhort time he found himfelf at the head of 10,000 Highlanders; with whom he marched into the province of Moray, and from thence to Strathbogie and Garioch, which he laid under contribution. Advancing towards Aberdeen, with a view to pay his troops with the plunder of that city, which was then a place of confiderable trade; he was met by the earl of Marr, whom the re-
gent had employed to command againft him, at a vil. Scetland. lage called Harlaw, in the neighbourhood of Aber- $\underbrace{}_{280}$ deen. A fierce engagement enfued, in which great Battle of numbers were killed on both fides, and the vietory re- Harlaw. mained uncertain: but Donald, finding himfelf in the midtt of an enemy's country, where he could raife no recruits, began to retreat next day; and the fhattered ftate of the royal army preventing him from being purfued, he efcaped to his own dominions, where in a fhort time he fubmitted, and fwore allegiance to the crown of Scotland.
In the mean time, Henry continued the war with Scotiand, and refufed to renew the truce, though frequently folicited by the Scots. He had now, how- The earl ever, fuftained a great lofs by the defection of the earl March reof March, who had gone over to the Scots, though turns to his the the hiftorians have not informed us of his quarrel with to Scotthe Englifh monarch. On his return to Scotland, he land.
had been fully reconciled to the Douglas family, and now ftrove to diftinguifh himfelf in the caufe of his country. This, with the countenance which was fhown the Scots by the court of France, a bull publifhed by the pope in their $\mathrm{f}_{\mathrm{d}}$ vour, and the vigorous behaviour of the regent himfelf, contributed to reduce Henry to reafon; and we hear of no more hoftilities between the two nations till after the death of the Englifh monarch, which happened in the year 1413 .

In 1415, the truce being either broken or expired, the Scots made great preparations for befieging Berwick. The undertaking, however, came to nothing ; all that was done during the campaign being the burning of Penrith by the Scots, and of Dumfries by the Englifh. Next year a truce was agreed upon, and a treaty entered into for the ranfom of King James; which was fo far advanced, that the Englifh king agreed to his vifiting Scotland, provided he engaged to forfeit 100,000 pounds Sterling in cafe of his failure to return by a certain day. For reafons now unknown, this treaty was broken off, and vaft preparations were made for a new invafion of Scotland; which, however, was executed with fo little fuccefs, that it became known among the common people of Scotland by the name of the fule raid, or the foolifh expedition.
In 1420, died Robert duke of Albany, regent of Scotland, at the age of 80 ; and fuch was the veneration which the Scots had for his memory, that his poft of regent was conferred upon his eldeft fon Murdoch, though a perfon no way qualified for that ftation.The war with England was now difcontinued; but in France Henry met with the greateft oppofition from the Scots auxiliaries, infomuch, that at laft he proclaimed all the Scots in the fervice of the Dauphin to be rebels againf their lawful foverci, 3 , and threatened to treat them as fuch wherever he found them. It was not long before he had an opportunity of putting this menace in execution; for the town and cafle of Melun being obliged through famine to capitulate, one of the articles of capitulation was, that all the E glifh and Scots in the place fhould be refigned to the abfolute difpofal of the king of England ; and, in confequence of his refolution abovementioned, cau,cd t $\mathrm{si}^{\circ}$ nt , Scots foldiers wh) were found in the place to be hanged as traitors. In 1421, Henry returned to England, and with him James the Scots king. On his

283 His cruelty othe sion
b C.
Scothani. ~ arrival there, he was isfermed that the Scots, under the earl of Douglas, had made au irruption into England, where they had burned Newark, but had been forced to return to their own country by a peftilence, though a new invation was daily expected. Inftead of refenting this infult, Henry invited the earl of Douglas to a conference at York; in which the latter agreed to ferve him daring life, by fea and land, abroad or at home, againft all living, except his own liege-lord the king of Scotland, with 200 foot and as many horfe, at his own charges; the king of England, in the mean time, allowing an annual revenue of 2001 . for paying his expence in going to the army by fea or land.

At the fame time, a new negociation was fet on foot for the ranfom of king James; but he did not obtain his liberty till the year 1424. Henry V. was then dead; and none of his generals being able to fupply lis place, the Englifh power in France began to decline. They then became fenfible how neceffary it was to be at peace with Scotland, in order to detach fuch a formidable ally from the French intereff. James was now highly careffed, and at his own liberty, within certain bounds. The Englifh even confulted him about the manner of conducting the treaty for his ranfom ; and one Dougal Drummond, a prieft, was fent with a fafe conduct for the bilhop of Glafgow, chancellor of Scotland, Dunbar earl of March, John Montgomery of Ardrofian, Sir Patrick Dunbar of Bele, Sir Rabert Lawder of Edrington, Sir William Borthwic of Borthwic, and Sir John Forreftor of Corforphin, to have an interview, at Pomfret, with their mafter the captive king of Scotland; and there to treat of their common interefts. Moft of thefe noblemen and gentlemen had before been nominated to treat with the Englifh about their king's return; and Dougal Drummond feems to have been a domeftic favourite with James. Hitherto the Scottifl king had been allowed an annual revenue of ; 00 pounds : but while he was making ready for his journey, his equipages and attendants were increafed to thofe befitting a fovereign; and he received a prefent from the Englifh treafury of 1001 . for his private expences. That he might appear with a grandeur every way fuitable to his dignity, at every flage were provided relays of hories, and all manner of filh, flefh, and fowl, with cooks and other fervants for furnifhing out the mon fumptuous royal entertainment. In this meeting at Pomfret, James acted as a kind of a mediator between the Englith and his nwn fubjects, to whom he fully laid himfelf open; but, in the mean time, the Englifh regency iffued a commiffion for fettling the terms upon which James was to be reftored, if he and his commifioners fhculd lay a proper foundation for fuch a ireaty. The Englifh commiffioners, were the bifhops of Durham and Worcelter, the earls of Northumberland and Weftmoreland, the lords Nevil, Cornwal, and Chaworth, with mafter John Wodeham, and Robert Waterton. The inftractions they received form one of the moft curious paffages of this hiftory; and we fhall here give them, as they are necelfary for confirming all we have faid conceraing the difpofitions of the two courts at this juncture.

Firf, To make a fdint oppofition to any private conference between the king of Scotland and the Scotch commifioners.

Secondly, To demand that, before the faid king fhall have his full liberty, the kingdom of Scolland thould pay to the Englifh government at leaft thirtyfix thoufand pounds as as equivalent, at two thoufand pounds a-year, for the entertainment of King James, who was maintained by the court of England, and not to abate any thing of that fum ; but if poflble to get forty thoufand pounds.

Thirdly, That if the Scots flould agree to the payment of the faid fum, the Englifh commifioners fhould take fulficient fecurity and hoftages for the payment of the fame; and that if they hould not (as there was great reafon for believing they would) be fo far mollified, by fuch eafy terms, as to offer to enter upon a thegociation for a final and perpetual peace between the two people, that then the Englifh foould propofe the fame in the moft handiome manner they could. Farther, that if fuch difficulties fhould arife as might make it impracticable immediately to conclude fuch perpetual peace, that the. Englifh ambaffadors fhould, under pretence of paving a way for the fame, propofe a. long truce.

Fourthly, That in cafe the Englifh commifioners fhould fuccoed in bringing the Scots to agree to the faid truce, they fhould further urge, that they fhould not fend to Charles of France, or to, any of the enemies. of England, any fuccours by fea or land. Farther, that the faid Englifh commitioners fhould employ their utmolt endeavours to procure the recal of the troops already furnibed, by the, Scots to France. The Eng. lifh are commanded to infift very frenuoufly upon this point, but with difcretion.

Fifthly, If the Scots.fhould, as a further bond of amity between the two nations, propofer marriage between their king: and fome noblemonsan of England, the Englifh commifioners are to make anfwer, "That the king of the Scots is well acquainted with many noblewomen, and even thofe of the blood-rcyal, in England; and that if the king of the Scots fhall pleate to open his mind more freely on that head, the Englifh. commiffioners fhall be very ready to enter upon conferences thereupon." But (continues the record) in cafe. the Scotch commifioners. fhould make no mention of any fuch alliance by marriage, it will not appear decent for the Englifh to mention the fame, becaufe the women of England, at leaf the noblewomen, are not ufod to offer thomfelves in marriage to men.

Sixthly, If there fhould be any mention made concerning reparation of damages, that the commiflioners fhould then proceed upon the fame as they fhould think moft proper; and that they fhould have power to offer fafe-conduct to as many of the Scots as fhould be demanded, for to repair to the court of England. Thofe infructions are dated at Wefminfer, July 6th 1423.

Nothing definitive was concluded at this treaty, but that another meeting fhould be held at York inftead of Pomfret. This meeting accordingly took place. The Englifh commifioners were, Thomas bifhop of Durham, chancellor of England, Philip bifhop of-Winchefter, Henry Percy earl of Northumberland, and Mi: John Wodeham. Thofe for Scotland were, William bifhop of Glafgow, George earl of March, James Douglas oi Balveny, his brother. Patrick abbot of Cambuikemneth, John abbot of Balmerino, Sis Patzick Dun-

## SCO $[783 \mid \quad \mathrm{SCO}$

Gcothand. bar of Bele, Sir Robert Laader of Edrington, Mr George Borthwic archdeacon of Glafgow, and Patric Houtton canon of Glafjow. On the tenth of September, after their meeting, they came to the following agrcement

Firlt, That the king of Scotland and his heirs, as an equivalent for his entertainment white in England, fhould pay to the kiog of England and his heirs, at London, in the church of St Paul, by equal proportions, the fum of forty thouland pounds Stering.

Secondly, that the firft paymetit, amouming to the fum of ten thourand marks, fhould be made fix months after the king of Scotland's entering his own kingdom; that the like fum fhould be paid the next year, and fo on during the face of $f_{1} x$ years, when the whole fum would be cleared; unlefs, after payment of forty thou fand merks, the latt payment of ten thoufand fhuuld be remitted, at the intreaty of the molt illuftrious prince Thomas duke of Exeter.

Thirdy, That the king of Scotland, before entering his own kingdom, fhould give fufficient hoftages for performance on his part. But, in regard that the Scots plenipotentiaries had no inftructions concerning hoftages, it was agreed,

Fourthly, That the king of Scotland fhould be at Branfpath, or Durham, by the firf of March next, where he thould be attended by the nobles of his blood, and other fubjects, in order to fix the number and quality of the hoftages.

Fifthly, That to cement and perpetuate the amity of the two kingdoms, the governor of Scotland fliould fend ambafiadors to London, with power to conclude a contract of marriage between the king of Scotland and fome lady of the firt quality in England.

James, it is probable, had already fixed his choice upon the lady Joan, daughter to the late earl of Somerfet, who was fon to John of Gaunt duke of Lancafter, by his fecond marriage; but he made his people the complimert, not only of confulting their opinion, but of concluding the match. The commifioners, after their agreement at York, proceeded towards London; and Thomas Somerville of Carnwath, with Walter Ogilvy, were added to their number. Being arrived at that capital, they ratified the former articles, and undertook for their king, that he fhould deliver his ho. Aages to the king of England's officers, in the city of Durham, before the laft day of the enfuing month of March; that he fhould alfo deliver to the faid officers four obligatory letters, for the whole fum of 40.000 l . from the four burghs of Edinburgh, Perth, Dundee, and Aberdeen; that he thould give his obigatory letter to the fame purpofe, before removing from Durham, and thould renew the fame four days after his arrival in his own kingdrm; that the hoitages $m$ ight be changed from time to time for others of the fame fortune and quality; that if any of them fhould die in England, others thould he fent thither in their room; and that while they continued to Itay in England, they thould live at their own charges.

The marriage of James with the lidy Joan Beaufort was celebrated in the beginning of February 1 q24. The young king of Encland prefented him with a fuit of cloth of crold for the cetemony; and the next day he received a legal difcharge of 10,000 pounds, to be deducted from the 40,000 at which his ranfom
was fixed, and which fum was given as the marriage portion of the lady. The ceremony being performed, the king and queen fet our for Durham, where the hoftages were wating; and arrived at his own dominions, along with the earl of Northumberland and the chief of the northern nobility, who attended him with great pomp. On the 20 of of April the fame gear, he was crowned at Scone; after which ceremony, he followed the example prastifed by other fovereigns at that time, of knighting feveral noblemen and gentlemen.

During the dependence of the treaty for James's releafe, the Scots had emigrated to France in fuch numbers, that no fewer than 15,000 of them now appeared in arms under the duke of Touraine; but as the hiltory of the war in that country has already been given under the article France, we fall take no farther notice of it at prefent, but return to the affairs of Scotland.

On his return James found himfelfin a difagreeable fituation. The great maxim of the duke of Albany, when resent or had been to maintain himelt in power $S$ sotia:d by exempting the lower cials of people from taxes of every kind. This plan had been continued by his fon Murdoch; but as the latter was deftitute of his father's abilities, the people abufed their happinefs, and Scotland became fuch a fcene of rapine, that no commoner could fay he had a property in his own eftate. The Stewart family, on their accefion to the crown of Scotland, were polfefled of a very confiderable patrimonial eftate, independent of the ftanding revenues of the crown, which confifted chiefly of cuftoms, wards, and reliefs. The revenues of the paternal eftate, belonging to James, had they been regularly tranfmitted to him, would have more than maintained him in a fplendour equal to his dignity, while he was in England; nor would he in that cafe have had any occafion for an allowance from the king of England. But as the duke of Albany never intended that his nephew fhould return, he parcelled out among his favourites the efate of the Stewart family, in fuch a manner that James upon his return found all his patrimonial revenues gone, and many of them in the hands of his beft friends; fo that he had nothing to depend on for the fupport of himfelf and his court but the crown revenues abovementioned, and even fome of thefe had been mortgaged during the late regency. This circumftance, of itfelf fufficiently difagrecable, was attended with two others, which tended to make it more fo. The one was, that the hoftages which had been left for the king's ranfom in England, being all of them perfons of thie firft rank, were attended by their wives, families, children, and equipages, which rivalled thofe of the fame rank in Engiand, and drew a great deal of ready monef ont of the nation. The other circumftance arofe from the charge of the Scots army in France; where Charles, who har never been in a condition to fupport it, was now reduced to the utmoft neceflicy: while the re denues of J imes himfelf were both fcanty and precarious. T o remedy thefe iaconveniences, therefore, the ling obtained from his pailiament an act obliging the fleviffs of the reffective counties to inquire what lands and eftates had zelonged to his ancefors Duvid II. Robert II. and Robert III. ; and James formed a redution of refiming thefe lands wherever they conid be difeovered, without regard to perfons or circomltanees. On this cecafion
soethand, occafion many of the moft illuftrious perfonages in the ple; but it was inftantly broken, and the cominirators 287 kingdom were arrefted: the duke of Albany, with his Several of two fons, and the earl of Lennox the duke's father-inthe nobility law, were put to death, though their crimes are not fpeexecuted. cifad by hiftorians. Buchanan mentions arbarounly fent to the countefs of Lennox the heads of her father, huiband, and fons; for the following more barbarous reafon, that in the bitternefs of her grief fle might drop fome expreffions tending to involve others in the fame cataftrophe. The countefs, however, calmly faid, "That, if the charges againft the criminals were proved, they deferved their tate."

James now proceeded with great Spirit to reform the abufes which had pervaded every department of the ftate, protected and encouraged learning and learned men, and even kept a dairy in which he wrote down the names of all the learned men whom he thought deferving of his encouragement. James himfelf wrote fome poetry; and in mufic was fuch an excellent compofer, that he is with good reafon looked upon as the father of Scots mufic, which has been fo much admired for its elegant fimplicity. He introduced organs into his chapels, and a much better fyle of architectare into all buildings whether civil or religious. Neither did he confine his cares to the fine arts, but encouraged and protected thofe of all kinds which were ufeful to fociety; and, in fhort, he did more towards the civilization of his people than had been done by any of his pre. deceffors.
In the mean time the truce continued with England. James, however, feemed not to lave any inclination to enter into a perpetual alliance with that kingdom. On the contrary, in 1428, he entered into a treaty with France; by which it was agreed, that a marriage fhould be concluded between the dauphin of France, atterwards Louis XI. and the young princefs of Scotland; and fo great was the neceffity of king Charles for troops at that time, that he demanded only 6000 forces as a portion for the princefs.

The reft of the reign of James was fpent in reform-
ing abufes, curbing the authority of the great barons, and recovering the royal eftates out of the hands of ufurpers. In this, however, he ufed fo much feverity, perpetratas at laft murdered, in the year ${ }^{5} 437$. The Robert Grahame, who was connected with the earl; and who was difcontented on account of his lofing the eftate of Strathern, which had been re-annexed to the crown ; and Robert, grandchild and heir to the earl of Athol, and one of the king's domettics. The king had difmiffed his army, without even referving to him. felf a body-guard, and was at fupper in a Dominican convent in the neighbourhood of Perth. Grahame had for fome time been at the head of a gang of outlaws, and is faid to have brought a party of them to Perth in the dead of the night, where he pofted them near the convent. Walter Straton, one of the king's cupbearers, went to bring fome wine to the king while at fupper; but perceiving armed men ftanding in the paffage, he gave the alarm, and was immediately killed. Catharine Douglas, one of the queen's maids of honour, ran to bolt the outer door; but the bar was taken away by Robert Stuart, in order to facilitate the entrance of the murderers. The lady thruft her arm into the fa-
rulhed in upon the king. Patric Dunbar, brother to the earl of March, was killed in attempting to defend his fovereign, and the queen received two wounds in attempting to interpofe herfelf betvixt her hufloand and the daggers of the affafins. James defended himfelf as long as he could; but at lait expired under the repeated itrokes ci his murderers, after having received 28 wounds.
After the murder of James $I$. the crown devolved Succeedupon his fon James II. at that time only feven years of age. A parliament was immediately called by the queen-mother, at which the noft cruel punifhments were decreed to the murderers of the late king. The crime, no doubt, deferved an exemplary punifhment; but the barbarities inflicted on fome of thofe wretches are fhocking to relate. Within lefs than fix weeks after the death of the king, all the confpirators were brought to Edinburgh, arraigned, condemned, and executed. The meaner fort were hanged; but on the earl of Athol and Robert Graham the molt cruel torments were inflicted, fuch as pinching with hot irons, diflocation of the joints, \&c. The earl of Athol, had befides, a crown of red-hot iron put on his head; and was afterwards cut up alive, his heart taken out, and, thrown into a fire. In fhort, fo dreadful were thefe punifhments, that Reneas Sylvius, the pope's nuncio, who beheld them, faid, that he was at a lofs to determine whether the crime committed by the regicides, or the punifhment inficted upon them, was the greater.

As the late king had prefcribed no form of a regency in cafe of his death, the fettlement of the government became a matter of great difficulty as well as importance. Archibald earl of Douglas, who hid been created duke of Touraine in France, was by far the greatef fubject in the kingdom; but as he had not been a favourite in the preceding reign, and the people were now difgufted with regencies, he was not formally appointed to the adminiftration, though by his high rank he in fact enjoyed the fupreme power as long as he lived ; which, however, was but a hort time. He died the far ( 148 ) $\operatorname{Sir}$ Aiexander Living Suprene
 of Callendar was appointed'to fucceed him as governor vided beof the kingdom, that is, to have the executive power, tween the while William Crichton, as chancellor, had the direc- ${ }_{\text {and }}$ governor tion of the civil courts. This was a moft unfortunate cellor of partition of power for the public. The governor and the kingchancellor quarrelled; the latter took poffeffion of the dom. king's perfon and the caftle of Edinburgh, to neither of which he had any right ; but the former had on his fide the queen-mother, a woman of intrigue and fipirit. Her fon was fhut up in the caftle of Edinburgh; and in a fhort time there was no appearance either of law or government in Scotland. The governor's edicts were counteracted by thofe of the chancellor under the king's name, and thofe who obeyed the chancellor were punifhed by the governor; while the young earl of Douglas, with his numerous followers and Gependent:, was a declared enemy of both parties, whom he equally fought to deftroy.

The queen-mother demanded accefs to her fon, which The queenCrichton could find no pretext for denying her; and mother fets fhe was accordingly admitted with a fmall train into her fon at the cafle of Edinburgh. She played her part fo well, libety.

## $S \mathrm{CO} \quad[785] \quad \mathrm{SCO}$

Scotland. and diffembled with fo much art, that the chancellor, imagining the had become a convert to his caufe, treated her with unbounded confidence, and fuffered her at all hours to have free accefs to her fon's perfon. Pretending that the had vowed a pilgrimage to the white church of Buchan, fhe recommended the care of her fon's perron, till her return, to the chancellor, in the moft pathetic and affectionate terms; but, in the mean time, fhe fecretly fent him to Leith, packed up in a clotheschelt ; and both the and James were received at Stirling by the governor betore the efcape was known. As every thing had been managed in concert with Livingiton, he immediately called together his friends; and laying before them the tyrannical behaviour of the chancellor, it was refolved to beliege him in the caftle of Edinburgh, the queen promifing to open her own granaries for the ufe of the army. The chancellor forefaw the form that was likely to fall upon him, and fought to prevent it by applying to the earl of Douglas. That haughty nobleman anfwered him in the terms already mentioned, and that he was preparing to exterminate both parties. The fiege of Edinburgh caltle being formed, the chancellor demanded a parley, and to have a perfonal interview with the governor; which the latter, who was no flranger to the fentiments of Douglas, readily agreed to. Common danger united them in a common caufe; and the chancellor refigning to the other the cuftody of the caftle and the king's perfon, with the higheft profeffions of duty and loyalty, the two competitors fwore an inviolable friendfhip for each other. Next day the king cemented their union, by confirming both of them in their refpective charges.

The lawlefs example of the earl of Douglas encouraged the other great landholders to gratify their private animofities, fometimes at the expence of their honour as well as their humanity. A family-difference happened between Sir Allan Stuart of Darnley, and Thomas Boyd of Kilmarnock; but it was concluded that both parties fhould come to a peaceable agreement at Polmaifthorn, between Linlithgow and Falkirk, where Stuart was treacheroufly murdered by his enemy. Stuart's death was revenged by his brother, Sir Alexander Stuart of Beilmouth, who challenged Boyd to a pitched battle, the principals being attended by a retinue which carried the refemblance of fmall armies. The conflict was fierce and bloody, each party retiring in its turn, and charging with frefh fury; but at laft victory declared itfelf for Stuart, the bravelt of Boyd's attendants being cut off in the field. About this time, the iflanders, under two of their chieftains, Lauchlan Maclean and Murdoc Gibfon, notorious freebooters, invaded Scotland, and ravaged the province of Lenox with fire and fword. They were oppofed by John Colquhoun of Lufs, whom they flew, fome fay treacheroully, and others, in an engagement at Lochlomond, near Inchmartin. After this, the robbers grew more outrageous than ever, not only filling all the neighbouring country with rapine, but murdering the aged, infants, and the defencelefs of both fexes. At laft, all the labouring hands in the kingdom being engaged in domeftic broils, none were left for agriculture ; and a dreadful famine enfued, which was attended, as ufual, hy a peftilence. James was now about ten years of age ; and the wifelt part of the kingdom agreed, that
the public diareffes were owing to a total difrefpect of the royal authority. The young earl of Douglas never had fewer than 1000 , and fometimes 2000 horfe in his train; fo that none was found hardy enough to controul, him. He pretended to be independent of the king and his courts of law ; that he had a ight of judicature upon his own large eftates; and that he was entitled to the exercife of rogal power. In confe. quence of this he iffued his orders, gave protections 10 thieves and murderers, affected to brave the king, made knights, and, according to fome writers, even noblemen, of his own dependents, with a power of fitting in parliament.

The queen-mother was not wholly guiltefs of thofe abufes. She had fallen in love with and married Sir James Stuart, who was commonly called the Black Knight of Lorn, brother to the lord of that title, and a defcendant of the houfe of Darnley. Affection for her hulband caufed her to renew her political intrigues; and not finding a ready compliance in the governor, her intereft inclined towards the party of the Douglaffes. The governor fought to ftrengthen his authority by refloring the exercife of the civil power, and the reverence due to the perfon of the fovereign.

The conduct of the lord Callendar was in many refpefts not fo defenfible either as to prudence The queenWher mother and When the queen expreffed her inclination that her huf- her hufband might be admitted to fome part of the adminiftra- band imstion, the governor threw both him and his brother prifoned, the lord Lorn into prifon, on a charge of undutiful practices againft the ftate, and abetting the earl of Douglas in his enormities. The queen, taking fire at her hufband's imprifonment, was herfelf confined in a mean apartment within the cafle of Stirling; and a convention of the Itates was called, to judge in what manner the was to be proceeded againt. The cafe was unprecedented and difficult; nor can we believe the governor would have carried matters to fuch extremity, had he not had ftrong evidences of her illegal behaviour. She was even obliged to diffemble her refentment, by making an open profeffion before the ftates, that fhe had always been entirely innocent of her hufband's practices, and that the would for the future behave as a peaceable and dutiful fubject to the laws and the fovereign. Upon making this purgation (as Lindfay calls it), The was releafed, as alfo her hufband and his brother, being bailed by the chancellor and the lord Gordon, who became fureties for their good behaviour in the penalty of 4000 merks. The governor was afterwards accufed of many arbitrary and partial ås of power : and indeed, if we confider his fituation, and the violence of the parties which then divided Scotland, it was almolt impoffible, confiltently. with his own fafety, to have exerted the virtues either of patriotifm or moderation.

The chancellor was exceedingly vexed at the fmall regard which the governor paid to his perfon and dignity, and fecretly connected himfelf with the queenmother ; but in the mean time he remained at Edin. burgh. The king and his mother continued all this time at Stirling; where the governor, on pretence of confulting the public fafety, and that of the king's perfon, maintained a ftrong guard, part of which attend. ed James in his juvenile exercifes and diverfions. The queen-mother did not fail to reprefent this to her 5 G fon

But are re-

5 otlan 1 fon as a reftraint upon his liberty; and obtained his 295 The chanccllor gets the king's perfon into his hands. confent to put himfelf into the chancellor's hands. The latter, who was a man of activity and courage, knew well how to avail himfelf of this permiffion; and croffing the Forth in the dark with a ftrong body of horfe, they furrounded the king as he was hunting next morning by break of day. It was eafy to perceive from the behaviour of James, that he was no franger to the chancellor's attempt; but fome of the king's guard offering to difpute the poffeffion of his perfon, Sir William Livingfton, the governor's eldett fon, reftrained them, and fuffered the king to depart quietly. This furprifal happened on a day when the governor was abfent from Stirling; and the chancellor, to make fure of his royal acquifition, entered Edinburgh at the head of 4000 horfe, where the king and he were received by the citizens with loud acclamations of joy.

The governor flowed no emotion at what had happened; on the contrary, he invited the cbancellor to an interview, and fettled all differences with him in an amicable manner. The young lord Douglas, however, continued to brave both parties. As if he had been a , fovereign prince, he demanded by his ambaffadors, Mal- colm Fleming of Cumbernauld, and Allan Lawder, the inveltiture of the fovereignty of Touraine from Charles the feventh of France; which being readily granted him, ferved to increafe his pride and: infolence. The firf fruts of the accommodation between the two great officers of fate was the holding of a parliament at Edinburgh, for redrefling the public diforders occafioned by the earl of Douglas; and encouragement was given to all perfons who had been injured to make their complaints. The numbers which on that occafion reforted to Edinburgh were incredible; parents, children, and women, demanding vengeance for the murder of their relations, or the plunder of their eftates; till, by the multiplicity of their complaints, they became without remedy, none being found bold enough to encounter the earl of Douglas, or to endeavour to bring him to a fair tritl. The parties therefore were difmiffed without relief, and it was refolved to proceed with the haughty earl in a different manner. Letters were written to him by the governor and chancellor, and in the name of the flates, requefting him to appear with his friends in parliament, and to take that lead in public affairs to which they were entitled by their high rank and great poffeffions. The manner in which thofe letters were penned made the thoughtlefs earl confider them as a tribute due to his greatnefs, and as proceeding from the inability of the government to continue the adminiftration of public affairs without his countenance and direction. Without dreaming that any man in Scotland would be fo bold as to attack him, even fingle or unarmed, he anfwered the letters of the chancellor and governor, by affuring them that he intended to fet out for Edinburgh : the chancellor, on pretence of doing him honour, but in reality to quiet his fufpicions, mes him while he was on his journey; and inviting bim to his caftle of Crichton, he there entertained him for fome days with the greatelt magnificence and appearance of holpitality; The earl of Douglas believed all the chancellor's profeffions of friendinip, and even fharply checked the wifeft of his followers, who counfelled him not to depend too much on appearances, or to trul his brother and himfelf at
the fame time in any place where the chancellor had power. The latter had not only removed the earl's fufpicion, but had made him a kind of convert to patriotifm, by painting to him the miferies of his country, and the glory that muft redound to him and his friends in removing them. It was in vain for his attendants to remind him of his father's maxim, never to rifk himfelf and his brother at the fame time: he without befitation attended the chancellor to Edinburgh ; and being admitted into the cafle, they dined at the fame table with the king. Towards the end of the entertainment, a bull's head, the certain prelude of immediate death, was ferved up. The earl and his brother Is put to $f$ farted to their feet, and endeavoured to make their death with efcape : but armed men rufhing in, overpowered them, his brother. and tying their hands and thofe of Sir Malcolm Fle. ming with cords, they were carried to the hill and beheaded. The young king endeavoured with tears to procure their pardon; for which he was feverely checked by his unrelenting chancellor.

In 1443, the king being arrived at the age of 14, declared himfelf out of the years of minority, and tnok upon himfelf the adminifitration of affairs. He appears to have been a prince of great fpirit and refolution; and he had occafion for it. He had appointed one Rcbert Sempil of Fulwoud to be chief governor of the caftle of Dumbarton; but he was killed by one Galbraeth (a noted partizan of the earl of Douglas), who feized upon the government of the cafle. The popularity of the family of Douglas having fomewhat fubfided, and the young earl finding himfelf not fupported by the chief branches of his family, he began to think, now that the king was grown up, his fafeft courfe would be to return to his duty. He accordingly repaired to the king at Stirling; and voluntarily throwing himfelf at his majefty's feet, implored his pardon for all his tranfgreffions, and folemnly promifed that he would ever after fet a pattern of duty and loyalty to all the relt of his fubjects. The king, finding that he infifted on no terms but that of pardon, and that he had unconditionally put himfelf into his power, not only granted his requeft, but made bim the partner of his inmoft councils.

James had always difliked the murder of the earl of Douglas and his brother; and the chancellor, perceiving the afcendency which this earl was daily gaining at court, thought it high time to provide for his own fafety. He therefore refigned the great feal, and retired to the caftle of Edinburgh, the cuftody of which he pretended had been granted to him by the late king during his life, or till the prefent king fhould arrive at the age of 21 ; and prepared it for a fiege. The lord Callendar, who knew himfelf equally obnoxious as Callendar, who knew himfelf equally obnoxious as turbances
Crichton was to the earl of Douglas, and that he could in Siotnot maintain his footing by himfelf, refigned likerrife land, all his pofts, and retired to one of his own houres, but kept poffeffion of the caftle of Stirling. As both that and the cafle of Edinburgh were royal forts, the two lords were fummoned to furrender them; but inftead of complying, they juftified their conduct by the great power of their enemies, who fought their deftrution, and who had been fo lately at the head of robbers and outlaws; but promifed to furrender themelves to the king as foon as he was of lawful age (meaning, we fuppofe ${ }_{2}$ either 18 or 21 ). This anfwer being deemed

Scotland.
contumacious, the chancellor and the late governor, with his two fons Sir Alexander and Sir James Living. fton, were proclaimed traitors in a parliament which was fummoned on purpofe to be held at Stirling. In another parliament held at Perth the fame year, an act paffed, that all the lands and goods which had belonged to the late king fhould be poffeffed by the prefent king to the time of his lawful age, which is not fpecified. This act was levelled againt the late governor and chancellor, who were accufed of having alienated to their own ufes, or to thofe of their friends, a great part of the royal effects and jewels; and their eftates being confifcated, the execution of the fentence was committed to John Forrefter of Corftorphin, and other adherents of the earl of Douglas.

This fentence threw all the nation into a flame. The caftle of Crichton was befieged; and being furrendered upon the king's fummons and the difplay of the royal banner, it was levelled with the ground. It foon appeared that the governor and chancellor, the latter efpecially, had many friends; and in particular Kennedy bifhop of St Andrew's, nephew to James the firlt, who fided with them from the dread and hatred they bore to the earl of Douglas and his family. Crichton thus foon found himfelf at the head of a body of men ; and while Forrefter was carrying fire and fword into his eftates and thofe of the late governor, his own lands and thofe of the Douglaffes were overrun. Corftorphin, Abercorn, Blacknefs, and other places, were plundered ; and Crichton carried off from them more booty than he and his adherents had loft. Particular mention is made of a fine breed of mares which Douglas had loft on this occation. That nobleman was fo much exafperated by the great damages he had fuftained, that he engaged his friends the earl of Crawford and Alexander Ogilvy of Innerquharity, to lay walte the lands of the bifhop of St Andrew's, whom he confidered as the chief fupport of the two minifters. This prelate was not more confiderable by his high birth, than he was venerable by his virtue and fanetity; and had, from a principle of confcience, oppofed the earl of Douglas and his party. Being confcious he had done nothing that was illegal, he firft admonifhed the earl of Crawford and his coadjutor to defitt from deftroying his lands; but finding his admonitions ineffectual, he laid the earl under an excommunication.

That nobleman was almoft as formidable in the northern, as the earl of Douglas had been in the fouthern, parts of Scotland. The Benedictine monks of Aberbrothwic, who were poffeffed of great property, had chofen Alexander Lindfay, his eldeft fon, to be the judge or bailiff of their temporalities; as they themfelves, by their profeffion, could not fit in civil or criminal courts. Lindfay proved fo chargeable, by the great number of his attendants, and his high manner of living, to the monks, that their chapter removed him from his polt, and fubfticuted in his place Alexander Ogilvy of Innerquharity, guardian to his nephew John Ogilvy of Ainley, who had an hereditary claim upon the bailiwick. This, notwithftanding their former intimacy, created an irreconcileable difference between the two families. Each competitor ftrengthened himfelf by calling in the affiftance of his friends; and the Lord Gordon taking part with the Ogilvies, to whom he was
then paying a vilit, both parties immediately muitered
scotind in the neighbourhood of Aberbrothwic. The earl of Crawford, who was then at Dundee, immediately polled to Aberbrothwic, and placing himfelf between the two armies, he demanded to fpeak with Ogilvy; but, before his requelt could be granted, he was hilled by a common foldier, who was ignorant of his quality. His death exafperated his friends, who immediately rulhed on their enemies; and a bloody conflict enfued, which ended to the advantage of the Lindfays, that is, the earl of Crawford's party. On that of the Ogilvies were killed Sir John Oliphant of Aberdagy, John Forbes of Pitlligo, Alexander Barclay of Gartley, Robert Maxwel of Teling, Duncan Campbell of Campbelfether, William Gordon of Burrowfield, and others. With thofe gentlemen, about 500 of their followers are faid to have fallen ; but fome accounts diminifh that number. Innerquharity himfelf, in flying, was taken prifoner, and carried to the earl of Crawford's houfe at Fin. haven, where he died of his wounds; but the Lord Gordon (or, as others call him, the earl of Huntley) efcaped by the fwiftnefs of his horfe.

This battle feems to have let loofe the fury of civil difcord all over the kingdom. No regard was paid to magiftracy, nor to any defcription of men but that of clergy. The moft numerous, fierceft, and belt allied family, wreaked its vengeance on its foes, either by force or treachery ; and the enmity that actuated the parties, tifled every fentiment of honour, and every feeling of humanity. The Lindfays, fecretly abetted and ftrengthened by the earl of Douglas, made no other ufe of their victory than carrying fire and fword through the eftates of their enemies; and thus all the north of Scotland prefented fcenes of murder and devaltation. In the weft, Robert Boyd of Duchal, governor of Dunbarton, treacheroufly furprifed Sir James Stuart of Achmynto, and treated his wife with fuch inhumanity, that fhe expired in three days under her confinement in Dumbarton caftle. The caftle of Dunbar was taken by Patrick Hepburn of Hales. Alexander Dunbar difpoffeffed the latter of his cafle of Hales ; but it was retaken by the partifans of the carl of Douglas, whofe tenants, particularly thofe of Annandale, are faid to have behaved at that time with peculiar fiercenefs and cruelty. At laft, the gentlemen of the country, who were unconnected with thofe robbers and murderers, which happened to be the cafe with many, fhat themfelves up in their feveral houfes; each of which, in thofe days, was a petty fortrefs which they vistualled, and provided in the beft manner they could for their own defence. This wife regulation feems to have been the firf meafure that compofed the public commotions.

The earl of Douglas, whofe power and influence at court fill continued, was fenfible that the clergy, with the wifer and more difinterefted part of the kingdom, confidered him as the fource of the dreadful calamities which the nation fuffered; and that James himfelf, when better informed, would be of the fame opinion. He therefore fought to avail himfelf of the juncture, by forming fecret but frong connections with the earls of Crawford, R.fs, and other great noblemen, who wanted to fee their feudal powers reftored to their full vigour. The queen dowager and her huband made little or no figure during this feafon of public confufion: fhe

## S C O

Surland. had retired to the caftle of Dunbar, while it was in Hepburn's poffeffion, where the died foon after. She left by her fecond hufband thxee fons; John, who in 1455 was made earl of Athol, by his utesine brother the king; James, who under the next reign, in 1469 , was created earl of Buchan'; and Andrew, who afterwards became bifhop of Muriay. As the earl of Douglas was an enemy to the queen.dowager's hulband, the latter retired to England, where he obtained a pals to go abroad, with 20 in his train; but being taken at fea by the Flemifh pirates, he died in his confinement.

The great point between the king and Sir William Crichton, whether the latter fhould give up the caitle to his majefty, remained fill undecided; and by the advice and direction of the earl of Douglas, who had been created lord-lieutenant of the kingdom, it had now fuffered a nine months fiege. Either the frength of the cafte or an opinion entertained by Douglas that Crichton wonld be a valuable acquifition to his party, procured better terms for the latter than he could otherwife have expected; for he and his followers were of. fered a full indemnity for all palt offences, and a promife was made that he thould be reftored not only to the king's favour, but to his former polt of chancellor. He accepted of the conditions; but refufed to act in any public capacity till they were confirmed by a parliament, which was foon after held at Perth, and in which he was reftored to his eftate and honours. By this reconciliation between Douglas and Crichton, the former was left at full liberty to profecute his vengeance againft the Lord Callendar, the late governor, his friends and family. That vengeance was exercifed with rigour. The governor himfelf, Sir James Dundas of Dundas, and Sir Robert Bruce of Clackmannan, were forced to fave their lives by the lofs of their eftates; but even that could not preferve their liberty, for they were fent prifoners to the cafle of Dunbarton. The fate of Alexander, the governor's eldeft fon, and of two other gientlemen of his name and family, was fill more lamentable; for they were condemned to lofe their heads. Thofe feverities being inflicted after the king had in a manner readmitted the fufferers into his favour, fwelled the public outcry againit the earl of Douglas. We have in Lindfay an extract of the fpeech which Alexander Livingfton, one of the moft accomplifhed genthemen of his time, made upon the fcaffold, in which he complained, with great bitternefs, of the cruel treatment his father, himfelf, and his friends, had undergone ; and that he fuffered by a packed jury of his enemies.

The king being now about 18 years of age, it was thought proper that a fuitable confort fhould be provided for him ; and, after various confultations, Mary, the daughter of Arnold duke of Gueldres, was chofen, at the recommendation of Charles king of France, though the marriage was not completed till fome time Invafion of after. This produced an immediate rupture with Eng. Scotland land. The earls of Salifbury and Northumberland en$b$ the Eng- tered Scotland at the head of two feparate bodies. The 1.ih. Firmer burnt the town of Dumfries, as the latter did that of Dunbar ; while Sir John Douglas of Balveny made reprials by plundering the county of Cumberland, and burning Alnwick. Upon the return of the Englifh armias to their cwn country, additional levies were made, and a freft invafion of Scotland was refolved up-
on under the earl of Northumberland, who had along with him a lieutenant, whom the Scots of thofe days, from the buthinefs and colour of his beard, called Magnus with the red mane. He was a foldier of fortune, but an excellent officer, having been trained in the French wars; and he is faid to have demanded no other recompenfe for his fervices from the Englifh court, but that he fhould enjoy all he could conquer in Scotland. The Scots, in the mean time, had raifed an army command. ed by George Douglas earl of Ormond, and under him by Wallace of Craigie, with the Lords Maxwell and Johnfton. The Englifh having paffed Solway Frith, ravaged all that part of the country which belonged to the Scots; but hearing that the earl of Ormond's army was approaching, called in their parties, and fixed their camp on the banks of the river Sark. Their advanced guard was commanded by Magnus; their centre by the earl of Northumberland ; and the rear, which was compofed of Welch, by Sir John Pennington, an officer of courage and experience.

The Scots drew up in three divifions likewife. Their The battle right wing was commanded by Wallace, the centre by of sark. the earl of Ormond, and their left wing by the Lords Maxwell and Johniton. Before the battle joined, the earl of Ormond harangued his men, and infpired them with very high refentment againt the Englifh, who, he faid, had treacherounly broken the truce. The fignal for battle being given, the Scots under Wallace rufhed forward upon their enemies: but, as ufual, were received by fo terrible a difcharge from the Englifh archers that their impetuofity mult have been ftopped, had not their brave leader Wallace put them in mind, that their forefathers had always been defeated in diftant fights by the Englifh, and that they ought to trult to their fwords and fpears; commanding them at the fame time to follow his example. They obeyed, and broke in upon the Englifh commanded by Magnus, with fuch fury, as foon fixed the fortune of the day on the fide of the Scots, their valour being fuitably feconded by their other two divifions. The flanghter (which was the more confiderable as both parties fought with the utmof animofity) fell chiefly upon the divifion commanded by Magnus, who was killed, performing the part of a brave officer; and all his body-guard, confifting of picked foldiers, were cut in pieces.

The battle then became general: Sir John Penning- The ${ }^{302}$ ton's divifion, with that under the earl of Northumber- lin entirel land, was likewife routed; and the whole Englifh army, defeated. fruck by the lofs of their champion, fled towards the Solway, where, the river being fwelled by the tide, numbers of them were drowned. The lofs of the Englifh in flain amounted to at leaft 3000 men. Among the prifoners were Sir John Pennington, Sir Robert Harrington, and the earl of Northumberland's eldent fon the Lord Percy, who lon his own liberty in forwarding his father's efcape. Of the Scots about 600 were killed ; but none of note, excepting the brave Wallace, who died three months after of the wounds he had received in this battle. The booty that was made on this occafion is faid to have been greater than any that had fallen to the Scots fince the battle of Bannockburn.

The reft of the hiftory of this reign confilts almolt entirely of a relation of the cabals and confpiracies of the great men. The earl of Douglas had entered into a

## Sco

Scotland. confederacy with the earls of Crawford, Moray, and 303 Rebellion of the carl of Douglas and whers.

Rofs, and appeared on all occafions with fuch a train of followers as bade defiance to royal power itfelf. This infolence was detelted by the wifer part of the nation; and one Maclellan, who is called the Tutor of Bomby, and was nephew to Sir Patrick Gray, captain of the king's guard, refufed to give any attendance upon the earl, or to concur in his meafures, but remained at home as a quiet fubject. This inoffenfive behaviour was by the eal confidered as treafon againt himfelf; and violently feizing upon Macl-llan's houfe and perfon, he fent him clofe prifoner to the caftle of Douglas. As Maclellan was a gentleman of great worth and reputation, his uncle Gray applied earneftly to James in his favour ; and fuch was that prince's regard for Maclellan, that he wrote and figned a letter for his releafe, addreffed to the earl of Douglas. Upon Gray's delivering this letter to Douglas at his caftle, the latter feemed to receive it with the higheft refpect, and to treat Gray with the greateft hofpitality, by inviting him to dinner; but, in the mean time, he gave private orders that Maclellan's head fhould be ftruck off, and his body expoled upon the green before the caftle covered with a linen cleth. After dinner, the earl told Gray, that he was ready to obey the king's commands; and conducting him to the green, he thowed him the lifelefs trunk, which he faid Gray might difpofe of as he pleafed. Upon this, Gray mounted his horfe. and trulted to his fwiftnefs for his own fafety; for he was purfued by the earl's attendants to the gates of Edinburgh.

The confpiracy againft James's government was now no longer a fecret. The lords Balveny and Hamilton, with fuch a number of other barons and gentlemen, had acceded to it, that it was thought to be more powerful than all the force the king could bring into the field. Even Crichton advifed James to diffemble. The confederates entered into a folemn bond and oath never to defert one another during life; and, to make ufe of Drummond's words, "That injuries done to any one of them fhould be done to them all, and be a common quarrel; neither fhould they defilt, ro their beft a bilities, to revenge them : that they fhould concur indifferently againt whatfoever perfons within or without the realm, and fpend their lives, lands, goods, and fortunes, in defence of their debates and differences whatfoever." All who did not enter into this affociation were treated as enemies to the public; their lands were deftroyed, their cffects plundered, and they themfelves impriforied or murdered. Drummond fays, that Douglas was then able to bring 40,000 men into the field; and that his intention wass to have placed the crown of Scotland up. on his own head. How far he might have been influenced by a fcene of the fame nature that was then paffing between the houfes of York and Lancalter in Erig. land, we fhall not pretend to determine; though it does not appear that his intention was to wear the crown himfelf, but to render it defpicable upon his fovereign's head. It is rather evident, from his behaviour, that he did:not affect royalty; for when James invited him to a conference in the caftle of Stirling, he effered to comply provided he had a fate conduct. This condition plainly implied, that he had no reliance upon the late act of parlianent, which declared the proclamation of the king's peace to be a fufficient fe-
curity for life and fortune to all his fubjects; and there Scothad. is no denying that the fafe conduct was expedited in the form and manner required.

This being obtained, the earl began his march towards Stirling with his ufual great retinue ; and arrived there on Shrove-Tuedday. He was received by the king as if he had been the beft of his friends, as well as the greatelt of his fubjects, and admitted to fup with his majefty in the caftle, while his attendants were difperfed in the town, little furpecting the catafropie earl of that fullowed. The entertainment being over, the king told the earl with an air of franknefs, "That as he was now of age, he was refolved to be the father of all his people, and to take the government into his own hands; that his lordihip, therefore, had no reafon to be mader any apprehenfions from his old enemies Callendar and Crichton; that there was no occafion to form any confederacies, as the law was ready to protect him; and that he was welcome to the principal direction of ai fairs under the crown, and to the firlt place in the royal confidence; nay, that all former offences done by himfelf and his friends hould be pardoned and forgot."

This fpeech was the very reverfe of what the earl of Douglas aimed at. It rendered him, indeed, the firt fubject of the kingdom; but fill he was controulable by the civil law. In fhort, upon the king's peremptorily putting the queftion to him, he not only refufed to diffolve the confederacy, but upbraided the king for his government. This produced a paffionate rejoinder on the part of James; but the earl reprefented that he was under a fafe conduct, and that the nature of his confederacy was fuch, that it could not be broken but by the common confent of all concerned. The king infilted upon his fetting the example ; and the earl continuing more and more obftinate, James fabbed him with his dagger; and armed men rulhing into the room, finifhed the Daughter.

After the death of the earl of Douglas, the confederacy came to nothing. The infurgents excufed themfelves as being too weak for fuch an enterprife; and were contented with trailing the fafe conduct at a horie's tail, and proclaiming, by tumpets and horns, the king a perjured traitor. They proceeded no farther ; and each departed to his own habitation, after agreeing to affemble with frefh forces about the beginning of April. James loft no time in improving this fhort refpite; and found the nation in general much better difpofed in his favour than he had reafon to ex. pect. The intolerable epprefirons of the great barons made his fubjects efteem the civil, far preferable to the feudal, fubjection: and even the Douglaffes were divided among themfelves; for the earl of Angus and Sir John Douglas of Dalkeith were among the molt forward of the royalifts. James at the fame time wrote leticrs to the earl of Huntley, and to all the noblemen of his kingdom who were not parties in the confederacy, befides tiee ecclefjaftics who remained firmly attached to lis prerogative. Before the effect of thore letters could be known, the infurgents had returned to Stirling (where James itill wifly kept himfelf upon the defenfive) ; repeated their infolences, and the opprobrious treatment of his fafe conduct ; and at laft they plundered the town, and laid it in ahes. Being till unable to take the caftle, partly through their own divifions, and pariy through the diverfity of the opera.

## SCO

erotland.
tions they were obliged to finpply, they left Stirling, and deftroyed the eftate of Sir John Douglas of Dalkeith, whom they confidered as a double traitor, becaule he was a Douglas and a good fubject. They then befieged his cafle : . but it was fo bravely defended by Patrick Cockburn, a gentleman of the family of Langton, that they raifed the fiege; which gave the royal party farther leifure for humbling them.

All this time the unhappy country wass fuffering the moft cruel devaltations; for matters were now come to fuch extremity, that it was neceffary for every man to be a royalit or a rebel. The king was obliged to keep on the defenfive; and though he had ventured to leave the caltle of Stirling, he was in no condition to face the rebels in the field. They were in poffefion of all the ftrong paffes by which his friends were to march to his affiftance; and he even confulted with his attendants on the means of efcaping to France, where he was fure of an hofpitable reception. He was diverted from that refolution by bihop Kennedy and the earl of Angus, who was himfelf a Douglas, and prevailed upon to wait for the event of the earl of Huntley's attempts for his fervice. This nobleman, who was defcended from the Seatons, but by marriage inherited the great eftates of the Gordons in the north, had raifed an army for James, to whofe family he and his anceftors, by the Gorduns as well as the Seatons, had been always remarkably devoted. James was not mitaken in the high opinion he had of Huntley; and in the mean time he iffued circular letters to the chief ecclefiaftics and bo-dies-politic of his kingdom, fetting forth the neceffity he was under to proceed as he had done, and his readinefs to protect all his loyal fubjects in their rights and privileges againf the power of the Douglaffes and their rebellious adherents. Before thofe letters could have any effect, the rebels had plundered the defencelefs houfes and eftates of all who were not in their confederacy, and had proceeded with a fury that turned to the prejudice of their caufe.
The indignation which the public had conceived againft the king, for the violation of his fafe conduct, began now to fubfide; and the behaviour of his enemies in fome meafure juftified what had happened, or at leaft made the people fufpect that James would not have proceeded as he did without the flrongett provocation. The forces he had affembled being unable, as yet, to act offenfively, he refolved to wait for the earl ot Huntley, who by this time was at the head of a conGiderable army, and had begun his march fouthwards. He had been joined by the Forbefes, Ogilvies, Leflies, Grants, Irvings, and other relations and dependents of his family; but having advanced as far as Brechin, he
was oppofed by the earl of Crawford, the chief ally of the earl of Douglas, who commanded the people of Angus, and all the adherents of the rebels in the neighbouring countries, headed by foreign officers. The two armies joining battle on the 18 th of May, victory was for fome time in fufpenfe; till one Colofs of Bonnymoon, on whom Crawford had great dependence, but whom he had imprudently difobliged, came over to the royalifts with the divifion he commanded, which was the beft armed part of Crawford's army, confifing of battie-axes, broad-fwords, and long fpears. His defection gave the fortune of the day to the earl of Huntley, as it left the centre flank of Crawford's army en-
tirely expofed to the royalifts. He himfelf lof one of scotland. his brothers ; and fled with another, Sir John Lind. fay, to his houfe at Finhaven, where it is reported that he broke out into the following ejaculation: "That he would be content to remain feven years in hell, to have in fo timely a feafon done the king his mafter that fervice the earl of Huntley had performed, and carry that applaufe and thanks he was to receive from him."

No author informs us of the lofs of men on either fide, though all agree that it was very confiderable upon the whole. The earl of Huntley, particularly, loft two brothers, William and Henry; and we are told, that, to indemnify him for his good fervices, as well as for the rewards and prefents he had made in lands and privileges to his faithful followers, the king beftowed upon him the lands of Badenoch and Lochaber.

The battle of Brechin was not immediately decifive The rebe!in favour of the king, but proved fo in its cenfequences. hion fupThe earl of Moray, a Douglas likewife, took advantage preffele of Huntley's abfence to harafs and ravage the eftates of all the royalifs in the north; but Huntley returning from Brechin with his victorious army, drove his enemy into his own county of Moray, and afterwards expelled him even from thence. James was now enicouraged, by the advice of his kinfman Kennedy bifhop of St Andrew's, to whofe firmnefs and prudence he was under great obligations, to proceed againt the rebels in a legal manner, by holding a parliament at Edinburgh, to which the confederated lords were fummoned; and upon their non-compearance, they were folemnly deçlared traitors. This proceeding feemed to make the rebellion rage more fiercely than ever; and at laft, the confederates, in fact, difowned their allegiance to James. The earls of Douglas, Crawford, Or- 1)nuglas mond, Moray, the Lord Balveny, Sir James Hamilton, crawford, and others, figned with their own hands public mani. \&e. feftoes, which were pafted on the doors of the principal churches, importing, "That they were refolved never to obey command or charge, nor anfwer citation for the time coming ; becaure the king, fo far from being a juft matter, was a bloodfucker, a murderer, a tranfgreffor of hofpitality, and a furprifer of the innocent." It does not appear that thofe and the like atrocious proceedings did any fervice to the caufe of the confederates. The earl of Huntley continued viftorious in the north; where he and his followers, in revenge for the earl of Moray's having burnt his cafte of Huntley, feized or ravaged all that nobleman's great eflate north of the Spey. When he came to the town of Forres, he burnt one fide of the town, becaufe it belonged to the earl, and fpared the other, becaufe it was the property of his own friends. James thought himfelf, from the behaviour of the earl of Douglas and his adherents, now warranted to come to extremities; and marching into Annandale, he carried fire and fword through all the eftates of the Douglaffes there. The earl of Crawford, on the other hand, having now recruited his ftrength, deftroyed the lands of all the people of Angus and of all others who had abandoned him at the battle of Brechin; though there is reafon to believe, that he had already fecretly refolved to throw himfelf upon the king's mercy.

Nothing but the moft obftinate pride and refentment could have prevented the earl of Douglas, at this time, from taking the advice of his friends, by returning to

[^71]

Scotland. his duty; in which cafe, James had given fafficient intimations that he might expect pardon. He coloured his contumacy with the fpeciuus pretext, that his brother's fate, and thofe of his two kinfmen, fufficiently inftructed him never to trult to James or his minilters; that he had gone too far to think now of receding; and that kings, when once offended, as James had been, never pardoned in good earnett. Such were the chicf reafons, with others of lets contiquance, which Drummond has put into the mouth of D:uglas at this tin Ilmes, after his expedition into Amandale, found the ieafon too far advanced to continue his operations; and returaing to Edinburgh, he marched northwards to Angus, to reduce the earl of Crawford, who was the fecond rebel of power in the kingdom. That nobleman had nitherto deferred throwing himfelfat the king's feet, and bad refumed his arms, in the manner related, only in hopes that better terms might be obtained from James for himfelf and his party. Perceiving that the earl of Douglas's obftinacy had cooled fome other lords of the confederacy, and had put an end to all hopes of a

Crawford. the country, when the earl and fome of his chief fol

309
Broken by lowers fell on their knees before him on the road, bareheaded and barefouted. Their dreary looks, their fuppliant poftures, and tie tears which ftreamed abundantly from the earl, were expreffive of the molt abject contrition ; which was followed by a penitential fpeech made by the earl, acknowledging his crimes, and imploring forgivenefs.

James was then attended by his chief counfellors, particularly bithop Kennedy, who, he refolved, fhould 310 have fome fhare in the favour he meant to extend to the who is re- earl. He arked their advice; which proving to be on ceived into the merciful fide, James promifed to the earl and his £avour.
followers reflitution of all their eftates and honours, and full pardon for all that had palfed. The earl, as a grateful retribution for this favour, before the king left Angus, joined him with a noble troop of his friends and tollowers ; and, attending him to the north, was extremely active in fuppreffing all the remains of the rebellion there.
Earl Doug- The fubmiflion of the earl of Crawford was followed Jus fub- by that of the earl of Douglas; which, however, conrebels again.
mits, but tinued only for a fhort time. This powerful noblemin
rebels fonn relumed his rebellious practice's and, in the year 1454, raifed an army to fight againtt the king. The king erected his ftandard at St Andrew's; marched from thence to Falkland; and ordered all the forces of Fife, Angus, and Strathern, with thofe of the northern parts, to rendezvous by a certain day at Stirling ; which they did to the number of 30,000 . Douglas affembled his forces, which amounted to 40,000 , fome fay $60,000 \mathrm{men}$, on the fouth fide of the river Carron, about half way between Stirling and Abercorn. However, notwithftanding this fuperincity of force, the earl did not think it proper to fight his fovereign. Bifhop Kenneds, the prelate of St Andsew's, had advifed the king to divide his enemies by offering them pardon teparately; and fo good an effect bad this, that in a few days the carl found himfelf deferted by all his numerous ammy, excepting about 100 of his nearelt friends and domeltics, with whom he retired towards England. His
friends had indeed advifed him to come to a battle im. Scotiand. mediately; but the earl, for reafons now unknown, refufed. However, in his journey fouthward, he raifed a confiderable body of forces, confifting of his own te. nants, of cutlaws, robbers, and borderers, with whom he renewed his depredations on the loyal fubjects of the king. He was oppofed by the earl of Angus, who, though of the name of Douglas, continued firm in the royal caufe. An engagement enfued at Ancram-muir ; Ho is cnwhere 贝ouglas was entirely defeated, and he himfelf tirely dewith great difficulty efcaped to an adjacent wood, featid. What his fate was after this battle does not appear ; but it is certain that his eftates were afterwards forfeited to the king.

353
The reft of the reign of James II. was fpent in ma-King TH!. king proper regulations for the good of his people. In killed by 1460 he was killed at the fiege of Roxburgh caltle, by accident. the burfting of a cannon, to which he was too near when it was difcharged. This fiege he had undertaken in favour of the queen of England, who, after lofing feveral battles, and being reduced to diftrefs, was obliged to apply to James for relief. The nobility who were prefent concealed his death, for fear of difcouraging the foldiers; and in a few hours after, the queen appeared in the camp, and prefented her young fon, James III. as their king.

James III. was not quite feven years of age at his ac- Jamis ill. ceffion to the crown. The adminitration naturally devolved on his moth r ; who puffed the fiege of Roxburgh caftle with fo much vigour, that the garrifon was obliged to capitulate in a few days; after which the army ravaged the country, and took and difmantled the caitle of Wark. - In 1466, negociations were begun for a marriage between the young king and Margarat princefs of Denmark; and, in 1468 , the following conditions were Atipulated. I. That the annual rent $h$ therto paid for the northern Itles of Orkney and Shetland fhould be for ever remitted and extinguifhed. 2. That king Chritiern, then king of Denmark, fhould give 60,000 florins of gold for his da"ghter's portion, whereof 10,000 thould be paid before her departure from Denmark; and that the iflands of Orkney fhould be made over to the crown of Scotland, by way of pledge for the remainder ; with this exprefs provifo, that they fhould return to that of Norway after complete payment of the whole fum. 3. That king James ihould, in cafe of his dying before the faid Margaret his fpoufe, leave her in poffelfion of the palace of Linlithgow and caftle of Down in Menteith, with all their appurtenances, and the third part of the ordinary revenues of the crown, to be enjoyed by her during life, in cafe the thould choofe to refide in Scotland. 4. But if he rather chofe to return to Denmark, that in lieu of the faid liferent, palace, and callle, the fhould accept of 120,000 florins of the Rhine; from which fum the 50,000 due for the remainder of her portion being deduced and allowed, the flands of O:kney thould be reannexed to the crown of Norway as before.

When thefe articles were agreed upon, Chriltiern found himfelf unable to fulfil his part of them. Being at that time engaged in an unfuccefofill war with Swe. den, he could not advance the 10,000 florins which lie had promiled to pay down as part of his du!ghter's for tune. He was therefore obliged to apply to the plenipotentiaries to accept of 2000 , and to the a farther

316 The Scotifh plenipotentiaries, of whom Boyd earl of Difgrace of Arran was one, gratified him in his requelt; and this the earl of conceffion is thought to have proved fatal to the earl. Arran's fa- Certain it is, that his father was beheaded for treafonmaly. able practices alleged to have been committed long before, and for which he produced a parliamentary indemnity to no purpofe : the earl himlelf was divorced from his wife the king's fifter, and obliged to live in perpetual exile, while the countefs was married to another.
${ }_{3}^{317}$ Beginning of James's misfor. tunes.

In I476, thofe misfortunes began to come on James which afterwards terminated in his ruin. He had made his brother, the duke of Albany, governor of Berwick; and had entrufted him with very extenfive powers upon the borders, where a violent propenfity for the feudal law ftll continued. The Humes and the Hepburns, then the molt powerful fubjeets in thofe parts, could not brook the duke of Albany's greatnefs, efpecially after he had forced them, by virtue of a late act, to part with fome of the eftates which had been inconfi318 derately granted them in this and the preceding reign. Is infatuat- The pretended fcience of judicial attrology, by which eafies happened to be incredibly infatuated, was the eafieft as well as molt effectual engine that could work their purpofes. One Andrew, an infamous impofor in that art, had been brought over from Flanders by James; and he and Schevez, then archbifhop of St Andrew's, concurred in perfuading James that the Scotch lion was to be devoured by his own whelps; a prediction that, to a prince of James's turn, amounted to a certainty.
The condition to which James reduced himfelf by his belief in judicial aftrology, was truly deplorable. The princes upon the continent were fmitten with the fame infaruation; and the wretches who befieged his perfon had no fafety but by continuing the delufion in his mind. According to Lindfay, Cochran, who had fome knowledge of architecture, and had been introduced to James as a mafter-mafon, privately procured an old woman, who pretended to be a witch, and who heightened his terrors by declaring that his brothers intended to murder him. James believed her ;

In hopes of furprifing him, he treated his weaknefs, exafperated him fo much, that the earl giving a farther loofe to his tongue in railing againt his brother's unworthy favourites, was arrefted, and committed to the cafle of Craig Miller; from whence he was brought to the Canongate, a fuburb of Edinburgh, where he fuffered death.

The duke of Albany was at the cafte of Dunbar wife in his power. In hopes of furprifing him, be marched to Dunbar : but the duke, being apprifed of his coming, fled to Berwick, and ordered his cafle of Dunbar to be furrendered to the lord Evendale, though not before the garrifon had provided themfelves with boats and fmall velfels, in which they efcaped to England. He ventured to come to Edinburgh ; where James was fo well ferved with fies, that he was feized,
and commtted clofe prifoner to the caftle, with orders scotand. that he fhould fpeak with none but in the prefence of his keepers. The duke had probably fulpected and provided againft this difagreable event; for we are told that he had agents, who every day repaired to the cafte, as if they had come from court, and reported the fate of matters between him and the king, while his keepers were prefent, in fo favourable a light, that they made no doubt of his foon regaining his liberty, and being readmitted to his brother's favour. The feeming negociation, at laft, went io profperoufly on, that the duke gave his keepers a kind of a farewell entertainment, previous to his obtaining a formal deliverance; and they drank fo immoderately, that being intoxicated, they gave him an opportunity of efcaping over the caftle wall, by converting the fheets of his bed into a rope. Whoever knows the fituation of that fortrefs, mult be amazed at the boldnefs of this attempt;' and we are told that the duke's valet, the only domef. tic he was allowed to have, making the experiment be-:fore his matter, broke his neck : upon which the duke, lengthening the rope, flid down unhurt; and carrying his fervant on his back to a place of fafety, he went on board a fhip which his friends had provided, and efcaped to France.

In 1482, the king began to feel the bad confequences of taking into his favour men of worthlefs characters, which feems to have been one of this prince's pernicious foibles. His great favourite at this time was Cochran, whom he had raifed to the dignity of earl of the king's Mar. All hiftorians agree that this man made a moft great fainfamous ufe of his power. He obtained at laft a li- vourite. berty of coinage, which he abufed fo much as to endanger an infurrection among the poor people; for he iffued a bafe coin, called black money by the common people, which they refufed to take in payments. This favourite's skill in architecture had firft introduced him to James ; but he maintained his power by other arts ; for, knowing that his mafter's predominant paffion was the love of money, he procured it by the meanelt and moft oppreffive methods. James, however, was inclined to have relieved his people by calling in Cochran's money; but he was diverted from that refolution, by confidering that it would be agreeable to his old nobility. Befides Cochran, James had other favourites, whofe profeffions rendered them fill lefs worthy of the royal countenance; James Hommil, a taylor, Leonard a blackfinith, Torfifan a dancing-mafter, and fome others. The favour fhown to thefe men gave fo much offence to the nobility, that, after fome deliberation, they refolved to remove the king, with fome of his leaft exceptionable domeftics (but without offering any violence to his perfon) to the caltle of Edinburgh; but to hang all his worthlefs favourites over Lawder-bridge, the common place of execution. Their deliberation was not kept fo fecret as not to come to the ears of the favourites; who fufpecting the worf, wakened James before day-break, and informed him of the meeting. He ordered Cochran to repair to it, and to bring him an account of its proceedings (L). According to Lind-
(L) Lindfay's defcription of this uptart's magnificence is very particular, and may ferve to give the reader. an idea of the finery of that age. "Cochran (lays he), the earl of Mar, came from the king to the council"

## $\mathrm{SCO} \quad[793] \quad \mathrm{SCO}$

scotland.
fay, who feems to have had very minute information as to this event, Cochran rudely knocked at the dour of the church, juft after the aflembly had finithed their confultation; and upon Sir Robert Doaglas of Lochleven (who was appointed to witch the door) informing them that the earl of Mar demanded admittance, the earl of Angus ordered the duor to be thrown open; and rulhing upon Cochran, he pulled a mafly gold chain from his neck, fajing, that a rope would become him better: while Sir Robent Douglas ftripped him of a coltly blowing horn he wore by his fide, as was the manner of the times, telling him he had been too long the hunter of mifchief. Cochran, with aftonifhment, anked them whether they were in jelt or earnelt; but they foon convinced him they were in earneft by pinioning down his arms with a common halter till he fhould be carried to execution.

The earl of Angus, with fome of the chief lords, attended by a detachment of troops, then repaired to the king's tent, where they feized his other favourites, Thomas Prefton, Sir William Rogrrs, James Hummil, William Torffifan, and Leonard : and upbraided James himfelf, in very rude terms, with his mifconduct in government, and even in private life, in not only being counfelled by the above minions, but for keeping company with a lady who was called the Daify. We know of no refiftance made by James. He only interceded for the fafety of a young gentleman, one John Ramfay of Balmain. Cochran, with his other worthlefs favourites, were hanged over Lawder-bridge before his eyes; and he himfelf was conducted, under an eafy reftraint, to the caltle of Edinburgh.
James, though confined, behaved with great fpirit; and even refuled to pardon thofe who had confined him, or who had any hand in the execution at Lawder. At laft, however, he was relieved by the duke of Albany, who, at the queen's defire, undertook to deliver her hufband from confinement. This he accomplifhed as fome fay, by furprifing the caftle of Edinburgh; though, according to others, the gates were opened, upon a formal requifition made for that purpofe liy two heralds at arms. After he had obtained his liberty, the king repaired to the abbey of Holyroodhoufe with his brother, who row acted as his firft minifer. All the lords who were near the capital came to pay him their compliments ; but James was fo much exafperaterd at what had happened, that he committed 16 of them prifoners to the caftle of Edinburgh. After his releafe, James granted a patent to the citizens of Edinburgh, and enlarged their privileges.

In 1487, James finifhed fome fecret negociations in which he had engaged with Henry king of England fome time. The principal artirles agreed on between the two monarchs were, That king James's fecond fon Vol. XVI.
floould marry Catharine the third daurhter of Ed- Sorat. ward IV, and fiter to the princofs Elizabcih, now queen of England; and that James himfelt, who was now a widower, thould marry queca Elizabeth. A hird marriage was alfo to be concluded between the dule cif Rothelay and another daughter of Edward IV. Tinat in order to thefe treaties, and for cnding all controveifies concerning the town of Berwick, which the king as Scotland defired fo much to poflefs, a congreis theuld ba held the enfuing year.

But in the mean time a moff powerful confeder:cy was formed againt the king; the origin of which was as follows. James was a great patron of architenure derac; and being pleafed with the firuation of Sirling catie, againat the he refolved to give it all the embellifhments which thet king. art cculd beftow ; and about this time he made it the chief place of his refidence. He raifed within it a hall, which at that time was deemed a noble ftructure: and a college, which he called the chapel-royal. This college was endowed with an archdean who was a bifhop, a fubdean, a treafurer, a chanter and fubchacter, with a double fet of other officers ufally belunging to fuch infitutions. The expences neceffary for maintain. ing thefe were confiderable, and the king had refolves to affign the revenues of the rich priory ct Coldinghara for that purpole. This priory had been generally he!c. by one of the name of Hume; and that family, throug! length of time, confudered it as their property: they thee efore ftrongly oppofed the king's intention. Thi difpute feems to have lated fome years: for the former parliament lad paffed a vote, annexing the priory to the king's chapel-royal ; and the parliament of this year had paffed a flatute, ftrictly prohibiting all perfons, firitual and temporal, to attempt any thing, directly or awing t.. indirectly, contrary or prejudicial to the faid union and a quarre annexation. The Humes refented their being fripped family of of fo gaid 1 a revenue, the lofs of which affected moft Hum . of the gentlemen of that name ; and they united them. felves with the Hepburns, another powerful clan in that neighbouroood, under the lord Hales. An affociation was foon formed; by which both families engaged to fland by each other, and not to fuffer any prior to be received for Coldingham, if he was not of one of their furnames. The lords Gray and Drummond foon joined the afluciation; as did many other noblemen and gentlemen, who had their particular caufes of difcontent. Their agents gave out, that the king was grapping at arbitrary power; that be had acquired his popularity by deep hypocrify; and that he was refolved to be fignally revenged upon all who had any hand in the extcution at Lawder. The eal of Angus, who was the foul of the confederacy, advifed the confirators to apply to the old earl of Douglas to head them : but that nobleman was now dead to all ambition, and intead 5 H
(which council was holden in the kirk of Lawder for the time), who was well accompanied with a band of men of war, to the number of 300 light axes, all clad in white livery, and black bends thereon, that they might be known for Cochran the earl of Mar's men. Himfelf was clad in a riding-pie of black vely,t, with a great chain of gold about his neck, to the value of 500 crowns; and four blowing horns, with both the ends of gold and filk, fet with frecious fones. His horn was tipped with fine gold at every end, and a precions fone, cal'ed a leryl, hanging in the midlt. This Cochran had his heumont borne before him, overgitt with gold ; fo were all the reft of his horns; and all his pallions (pavilions or tents) were of fine canvas of filk, and the cords thereof fine twined filk ; and the chains upon his pallions were double overgilt with gold."
scotand.
of encouraging the confpirators, he pathetically exhorted them to break off all their rebellious connections, and return to their duty; exprefing the molt fincere contrition for his own paft conduct. Finding he could not prevail with them, he wrote to all the numerous friends and defcendants of his family, and particularly to Dourlas of Cavers, fherif of Teviotdale, diffuading them from entering into the confpiracy; and fome of his original letters to that effect are faid to be fill extanc. That great man furvived this application but a fhort time; for he died without iffue at Lindores, on the 15 th of April 1488 ; and in him ended the firlt branch of that noble and illultrious houfe. He was remarkable for being the mof learned of all the Scots nobility, and for the comlinefs of his perfon.

James appears to have been no ftranger to the proceedirgs of the confpirators: but though he dreaded them, he depended upon the protection of the law, as they did upon his pufllanimity. His degeneracy in this refpect is remarkable. Deicended from a race of heroes, he was the firlt of his family who had been branded with cowardice. But his conduct at this time fully juftifies the charge. Inftead of vigoroufly fupporting the execution of the laws in his own perfon, he thut himfelf up in his beloved cattle of Stitling, and raifed a body-guard; the command of which he gave to the iurd Bothwel, mater of his houfehold. He likewife iffued a proclamation, forbidding any perfon in arms to approach the court ; and Bothwel had a warrant to fee the fame put into execution. Though the king's proceedings in all this were perfectly agreeable to law, yet they were given out by his enemie; as fo many indications of his averfion to the nobility, and ferved only to induce them to parade, armed, about the country in more numerous bodies.

The connections entered into by James with Henry alarmed the confpirators, and made the $\mathrm{a}^{*}$ refolve to Strike the great blow before James could avail himfelf of an alliance that feemed to place him above all oppofition either abroad or at home. The acquifition of Berwick to the crown of Scotland, which was looked upon to be as good as concluded; the marriage of the duke of Rothefay with the daughter of the dowager and fifter to the confort queen of England; and, above all, the frict harmony which reigned between James and the ttates of his kingdom, rendered the confpirators in a manner defperate. Befides the eall Angus, the earls of Argyle and Lenox favoured the conlpirators; for when the whole of James's convention with England is confidered, and compared with afterevents, nothing can be more plain, than that the fuccefs of the confp:rators was owing to his Englih connections; and $t$ iat they made ufe of them to affirm, that Scotland was foon to become a province of England, and that James janended to govern his fubjeets by an Englifh force.Hhofe $f_{i}$;ecious allegations did the conipirators great ervice, and inclined maty, even of the moderate party, to their caufe. They foon took the field, appointed their rendezvoufes, and all the fouth of Scotland was in arms. James continued to rely upon the authority of his parliarnent; aid fummoned, in the terms of law,

If fet at de-repeated breaches of the peace. The confpirators, far flate by from paying any regard to his citations, tore them in the confi- pieces, buffeted and otherwife maltreated the meffen5ubis,
gers, and fet the laws of their country at open defiance. Scothand Even north of the Forth, the heads of the looufes of Gray and Drummond fpread the fpirit of difaffection. through the populous counties of Fife and Angus: but the counties north of the Grampians continued firm in their duty.

The duke of Rothefay was then a promifing youth about fifteen years of age; and the fubjecting the kingdom of Scotland to that of England being the chief, if not the only caufe urged by the rebels for their appearing in arms, they naturally threw their eyes upon that prince, as his appearance at their head would give frength and vigour to their caufe ; and in this they were not deceived. James in the mean time, finding the inhabitants of the fouthern provinces were either engaged in the rebellion, or at beft obferved a cold neutrality, embarked on board of a veffel which was then lying in the frith of Forth, and pafled to the north of that river, not finding it fafe to go by land to Stirling. Arriving at the caltle, he gave orders that the The 33 r duke of Rothefay (as forefeeing what afterwards hap- of Rothepened) fhould be put under the care of one Schaw of fay put Sauchie, whom he had made its governor, charging him into connot to fuffer the prince upon any account to depart out finement. of the fort. The rebels giving out that James had fled to Flanders, plundered his equipages and baggage before they paffed the Forth; and they there found a large fum of money, which proved to be of the utmont confequence to their affairs. They then furprifed the caftle of Dunbar, and plundered the houfes of every man to the fouth of the Forth whom they fufpected to be a royalift.

James was all this time making a progrefs, and holding courts of juftice, in the north, where the great families were entirely devoted to his fervice, particularly the earls of Huntley, Errol, and Marfhal.Every day brought him frefh alarms from the fout'l, which left him no farther room either for delay or deliberation. The confpirators, notwithitanding the promifing appearance of their affairs, found, that in a fhort time their caufe muft languifh, and their numbers dwindle, unlefs they were furnifhed with freh pretexts, and headed by a perfon of the greatelt authority. While they were deliberating who that perfon fhould be, the earl of Angus boldly propofed the duke of Rothefay; and an immediate appication was made to Schaw, the young prince's governor, who fecretly favoured their caule, and was prevalied upen by a confiderable fum of They are money to put the prince into their hands, and to declare headed by for the rebels.

James having ordered all the force in the north to af- Rothefay. femble, hurried to Perth (then called St John's town), where he appointed the rendezvous of his army, which amounted to 30,000 men. Among the other noblemen who attended him was the famous lord David Lindiay of the Byres (an officer of great courage and experience, having long ferved in fureign countries), who headed 3000 foot and 1000 horie, molly raifed in Fifefhire. Upon his approaching the king's perfon, he prefented him with a horfe of remarkable fpirit and beauty, and informed his majefty, that he might truft his life to his agility and fure-tootednefs. The lord Ruthven, who was Cheriff of Strathern, and ancefor (if we miftake not) to the unfortunate earls of Guwry, joined James at the head of 3000 well armed men.-

The

$\underbrace{\text { Soctlands. The whole army being affembled, James proceeded to }}$ 334 Stirling ; but he was altonithed, when he was not only Jamisaf. denied entrance into the cafte, but faw the guns puintfembles his ed againit his perfor, and underfood, for the firft time, n:my. that his fon was at the loud of the reble. Schaw pre-
tended that the duke of Rothery had been carried off againft his will: but the king's anfwer was, "Fye, traitor, thou hatt deceived me; and if I live I fhall be revenged on thee, and thon fhalt be rewarded as thou haft ferved." James lay hat night in the town of Stirling, where he was joined by ail his army; and underflanding that the rebels were atvancing, he formed his line of battle. The aurl of Athnl his uncle, who was trufted by both partizs, propoled an accommodation; which was accordingly effecit!, if we are to believe Abercromby, and cther hiltorians; tut we kiow not the terms, for none are mertioned on either fide.fames is faid to have diiled on lis part ; but had there been any grounds for fuch a cinarge againft him, there can fcarcely be a doubt but that the sebels would have publihed them. That a treaty was entered into is pait difpute; and the eanl of Aticl furrendered himelf as a holtage into the handis of the reba's.

James was fenfible of the advantage which public clamour gave to his enemies; and he applied to the kings of France and England, and the pope, for their interpofition. His holinefs named Adrian de Caftello for his nuncio on that occafion; ard the two kings threatened to raife troops for the fervice of James. Je, by a fatality not uncommon to weak princes, left the ftrong caflic of Edinburgh, where he might have been in dafety till his friends, who had difperied themfelves upon the faith of the late negociation, could be reaffembled; and crolling the Forth, he made another attempt to be admitted into the calle of Stirling ; but was difappointed, and infirmed that the rebels were at Torwood in the $n$.ighbouhood, and ready to give him battle. Fe was in pofifion of the calle of Blacknefs; his admiral, Wood, commanded the Forth; and his loyal fubjects in the north were upon their march to join him. Hawthornden fays, that the rebels had made a fhow of difmifing their troops, that they might draw James into the field; and that while he remained at Blacknefs, he was attended by the earls of Montrofe, Glencaim, and the lurds Maxweh and Ruthven. To give his northern troops time to join him, he propofed a negociation; but that was foon at an ond, upon the rebels peremptorily requiring him to reigg his crown to his fon, that is, to themelves.

The rebels had been inured to war. They confinted chiefly of bordcrers, well armed and difciplined; in which they had the advantage of the king's Lowlend's fubiects, who had not been accultomed to arms. What the numbers on both fides were dues not clearly appear; but it is probable that the forces of lames were fuperior to the rebels. They were then at Falkirk; bui they foun pafled the Carnon, encamped above the bridge near Torwood, and made fuch difpofitions as rendered a battle unavoidable, unlefs James would have difperfe! his army, and gone on board Wood's thips: but he did not know himelf, and recomes to a folved on a battle. He was encamped at a fmall brook Comes to a then. the great liruce had defeated the Englifh under Edward the fecond. The earl of Menteith, the lords

Erfine, Graham, Ruthen, and Maxwell, command- Scoilns. ed the fint line of the king's army. The fecond was commanded by the carl of Glencairn, who was at the head of the Weftland and Highland men. Tt: earl of Crawford, with the lord Boyd and Lindray of Byres, commanded the rear, wherein the king's m:it? ftrength confilted, and where he himfelf appeared in perfon, completely armed, and mounted upon the fise horle which had been prefented to him by Lindfay.

The firt line of the royalits obliged that of tie rebels to give way; but the latter being fupported bs the Annandale men and borderers, the firt and fecond line of the king's army were beat back to the third. The little courage James poffeffed had forfaken him at the firtt cnet; and he had put fpurs to his horfe, intending to gain the banks of the Forth, and to go on board one of Wood's fhips. In paffing through the village of Bannockburn, a woman who was filling her pitcler at the brook, frightened at the fight of a man in armour galloping full fpeed, left it behind her; and the Is throwa horfe taking fright, the king was thrown to the ground, and carried, bruifed and maimed, by a miller and his wife, into their hovel. He immediately calicd for a prieft to make his confellion; and the rultics demanding his name and rank, "I was (faid he incautioully) your king this morning." The woman, overcome with aftonifhment, clapped her hands, and running to the doccalled for a priett to confefs the king. "I am a pricit (faid one palling by), lead me to his majefty." Being introduced into the hovel, he faw the king com vered with a coarfe cloth; and kneeling by him, he afked James whether he thought he could recover, if properly attended by phyficians? James anfwering in the affirmative, the villain pulled out a dagger, and thabbed him to the heart. Such is the dark account we are able to give of this prince's unhappy end. The name of the perfon who murdered him is faid to have been Sir Andrew Borthwick, a prieft, one of the pope's knights. Some pretend that the lord Gray, and others that Robert Stirling of Keir, was the rigicide; and even Buchanan (the tenor of whofe hifory is a juftitication of this murder), is uncertain as to the name of the perfon who gave him the fatal blow.

It is probable that the royalifts loft the battle through the cowardice of James. Even after his flight liis troops fought bravely; but they were damped on re. ceiving the certain accounts of his death. The prince, young as he was, had an idea of the unnatural part he was acting, and before the battle he had given a frict charge for the fafety of his father's perfon. Upon hearing that he had retired from the field, he fent orders that none fhould purfue him ; but they were inetfectual, the rebels being fenfible that they could have no fafety tut in the king's death. When that was certified, haftilities feemed to ceafe; nor were the royalits purfued. The number of flain on both fides is uncertain; but it mult have been confiderable, as the earl of Glencairn, the lords Sempil, Erkine, and Ruthven, and other gentlemen of great eminence, are mentioned. As to the duke of Rothefay, who was Gric 339 of 1 now king, he appeared inconfolable when he beard of fin for hio his father's death; but the rebels endeavoured to efface death. his grief, by the profution of honours they paid lien when he was recognized as king.

The remorfe and anguifh of the young king, on re-

## seutlanis.

Wood.
flesing upon the unnatural part he had acted, was in. expreffible ; and the noblemen who had been engaged in the rebellion became apprehenfive for their own fafety. The cataftrophe of the unfortunate James III. however, was not yet become public; and it was thought by many that he had gone aboard fome of the fhips belonging to the Scottif admiral Sir Andrew Wood. James, willing to indulge hope as long as it was poffible, defired an interview with the admiral; but the latter refufed to come on fhore, unlels he had fufficient hoftages for his fafety. Thefe being delivered, Sir Andrew waited upon the king at Leith. He had again and again, by meffages, affured him that he knew nothing of the late king; and he had even offered to allow his fhips to be fearched: yet fuch was the anxiery of the new king, that he could not be fatisfied till he had examined him in perfon. Young James had been long a ftranger to his father, fo that he could not have diftinguifhed him eafily from others. When Wood, therefore, entered the room, being fruck with his noble appearance, he afked him, "Are you my father ?" "I am not," replied Wood, burting into tears; " but I was your father's true fervant, and while I live I fhall be the determined enemy of his murderers." This did not fatisfy the lords, who demanded whether he knew where the king was. The admiral replied; that he knew not ; and upon their queftioning him concerning his manccuvres on the day of battle, when his boats were feen plying backwards and forwards, he told them, that he and his brother had determined to affilt the king in perfon; but all they could do was to fide fome of the royalifts in their fhips. "I would to God (fays he), my king was there fafely, for I would defend and keep him ikaithlefs frum all the traitors who have cruelly murdered him: for I think to fee the day to behold them hanged and drawn for their demerits." This firited declaration, and the freedom with which it was delivered, fruck the guilty part of the council with difmay; but the fear of facrificing the hoftages procured Wood his freedom, and he was fuffered to depart to his fhips. When he came on board, he found his brother preparing to hang the two lords who had been left as holtages; which would certainly have been their fate, had the admiral been longer detained.

Wood had fearcely reached the fhips, when the lords, calling the inhabitants of Leith together, offered them a large premium if they would fit out a fufficient force to deftroy that bold pirate and his crew, as they called Wood; but the townfmen, who, it feems, did not much care for the fervice, replied, that Wood's hips were a match for any ten fhips that could be fitted out in Scotland. The council then removed to Edinburgh, where James IV. was crowned on the 24 th of June 1487.
$\mathrm{m}_{\mathrm{me} \text { regi- }}^{34 \mathrm{I}}$ In the month of October this year, the nobility and others who had been prefent at the king's coronation, converted themfelves into a parliament, and paffed an parliament. act by which they were indemnified for their rebellion againt their late fovereign; after which, they ordered the aft to be exemplified under the great feal of Scotland, that it might be producible in their juftification if called for by any foreign prince. They next proceeded to the arduous talk of vindicating their rebellion in the eyes of the public; and fo far did they gain upon the bisg by the force of Alttery, that he confented to fum-
mon the lords who had taken part with his father, before Scotlani. the parliament, to anfwer for their conduct. In conftquence of this, no fewer than 28 lords were cited to appear at Edinburgh in the fpace of 40 days. The Trial of firt upon the lif was the lord David Lindfay, whofe Lord 1Daform of arraignment was as follows. "Lord David vid LindLindfay of the Byres, anfwer for the cruel coming fay of againft the king at Bannockburn with his father, giving him counfel to have devoured the king's grace here prefent; and, to that effect, gave him a fword and a good horfe to fortify him againft his fon. Your aniwer hereto." Lord Lindfay was remarkable for the bluntnefs of his converfation and the freedom of his fentiments; and being irritated by this charge, he delivered himfelf in fuch a manner concerning the treaton of the rebellious lords, as abarhed the boldelt of his accufers. As they were unable to anfwer him, all they could do was to prefs him to throw himfelf upon the king's clemency; which he refufed, as being guilty of no crime. His brother, Patrick Lindfay, undertook to be his advocate, and apologized upon his knees for the roughnefs of his behaviour, and at laft obferved an informality in the proceedings of the court; in confequence of which Lindfay was releafed, upon entering into recognizance to appear again at an appointed day: however, he was afterwards fent prifoner by prifoncd. the king's order, for a whole twelvemonth, to the caftle of Rothefay in the Ifle of Bute.

The regicides now endeavoured to gain the public favour by affecting a ftrict adminiftration of juftice. 344 The king was advifed to make a progrefs round the The now kingdom, attended by his council and judges; while, parliament in the mean time, certain noblemen and gentlemen were affests poappointed to exercife juRtice, and to fupprefs all kinds ${ }^{\text {pularity- }}$ of diforders in their own lands and in thofe adjoining to them, till the king came to the age of 2 I . The memory of the late king was branded in the mott op. probricus manner. All juftices, heriffs, and fewarts, who were poffeffed of heritable offices, but who had taken up arms for the late king, were either deprived of them for three years, or rendered incapable of enjoying them fur ever after. All the young nobility who had been difinherited by their fathers for taking arms againft the late king, were, by act of parliament, refored to their feveral tuccefions in the moft ample manner. At laft, in order to give a kind of proof to the world that they intended only to refetle the flate of the nation, without prejudice to the lower ranks of fubjects, who did no more than follow the examples of their fuperiers, it was enacted; "That all goods and effects taken from burgeffes, merchants, and thofe who had only perfonal eftates, or, as they are called, unlanded men, fince the battle of Stirling, were not unly tobe reftored, but the owners were to be ind mnified for their loffes; and their perfons, if in cult dy, were to be fet at liberty. Churchmen, who were taken in arms, were to be delivered over to their ordilances, to be dealt with by them accorcing to the law." The cafte of Duncar was orderad to be dem.lifhed; and forme ftatutes were enacted in favour of commerce, and for the exclufion of foreigners.
Thefe laft acts were piffed with a view to recompence the boroughs, who had been very active in their oppofition to the late king. H wever, the lords, before they diffolved their parliament, thought it neceffa-

Scotland. ry to give fome public teftimony of their difapproving
Act rela- therefore enacted, "That as the king was now of an tive to the age to marry a noble princefs, born and defcended of $a$ ling's mar- nolle and nor Rhipful bouje, an honcurable embally fhould
ridge. 346 able obtacle, however, lay in the way of this embaffy. They are . The pope had laid under an interdict of all thofe who had oppofed by appeared in arms againlt the late king; and the party
the Pope. who now governed Scotland were looked upon by all the Pope. be fent to the realms of France, Brittany, Spain, and ocher places, in order to conclude the matter." This embalfy was to be very fplendid. It was to confilt of a bifhop, an earl, or lord of parliament, a fecretary, who was generally a clergyman, and a knight. They were to be attended by 50 horfemen ; 5000 l . was to be allowed them for the difcharge of their embafy, and they were empowered to renew the ancient league between France and Scotland; and, in the mean time, a herald, or, as he was called, a trufty fquire, was fent abroad to vifit the feveral courts of Europe, in order to find out a proper match fir the king. One confiderthe powers of Europe as rebels and murderers. The embafly was therefore fufpended for a confiderable time; for it was not till the year i49r that the pope could be prevailed upon to take off the interdict, upon the mof humble fubmiffions and profeffions of repentance made by the guilty parties.

In the mean time, the many good quaiities which difcovered themfelves in the young king began to conciliate the affections of his people to him. Being confidered, however, as little better than a prifoner in the hancis of his father's murderers, feveral of the nobility made ufe of that as a pretence for taking arms. The $m$ forward of thefe was the earl of Lenox, who with 2000 men attempted to furprife the town of Stirling; but, being betrayed by one of his own men, he was defeated, taken unawares, and the caftle of Dumbarton, of which be was the keeper, taken by the oppofite party. In the north, the earls of Huntley and Marfhal, with the Lord Forbes, complained that they had been deceived, and declared their refolution to revenge the late king's death, Lord Forbes having procured the bloody fhirt of the murdered prince, diplayed it on the point of a lance, as a banner under which all loyal fubjects fhould lift themfelves. However, after the defeat of Lenox, the northern chieftains found themfelves incapable of marching fouthwards, and were therefore obliged to abandon their enterprife. fends five flips for this purpofe,
34)

Who act piratically, and are all taken by Sir Andrew Wood.

Henry VII. by Henry VII. of England, who made an offer to Sir Andrew Wood of five hips to revenge it. The admiral accepted the propotal ; but the Englifh behavirg as pirates, and plundering indifcriminately all who came in their way, he thought proper to feparate himfelf from them, yet without offering to attack or oppofe them. Upon this, James was advifed to fend for the admiral, to offer him a pardon, and a commiffion to act againit the Englifh freebooters. Wood accepred of the king's offer; and being well provided with ammuntion and artillery, he, with two fhips ، nly, attacked the five Englifh velfels, all of which he took, and brought their crews prifone:s to Leith, for which he was nobly rewarded bi his majefty.

This conduct of Wood was hi hly refented by the kirg of England, who immediately vowed revenge.

The Scottifh admiral's fhips had been fitted out for
commerce as well as war, and Henry commanded his belt fea-officer, Sir Stephen Bull to intercept him on his teturn from Flanders, whether he had gone upon a commercial royage. Wood had no more than two fhips with hirn : the Englifh admiral had three; and thofe much larger, and carrying a greater weight of metal, than the Scottifli veffels. The Englifh took their fation at the illand of May, in the mouth of the Frith of Forth, and, having come unawares upon their enemies, fired two guns as a fignal for their furrendering themfelves. The Scottif commander encouraged his men as well as he could; and finding them determined to ftand by him to the lalt, began the engagement in fight of numberlefs fpectators who appeared on both fides of the frith. The fight continued all that aay, and was renewed with redoubled fury in the morning; but, in the mean time, the ebb-tide and a fouth wind had carried both fquadrons to the mouth of the Tay. Here the Englifh fought under great difaivantages, by reafon of the fand-banks ; and before they could get clear of them, all the three were obliged to fubmit to the Scots, who carried them to Dundee. Wood treat- But is ${ }^{35}$ ed his prifoners with great humanity ; and having after- ken with wards prefented them to King James, the latter diimif- all his fed them not only without ranfom, but with prefents to the officers and crews, and a letter to King Henry. To this Henry returned a polite amfwer, a truce was concluded, and all differences for the prefent were ac. commodated.

James all this time had continued to difplay fuch moderation in his government, and appeared to have the advantage of his fubjects fo much at heart, that they became gradually well affected to his government, and in 1490 all parties were folly reconciled. We may from thence date the commencement of the reign of James IV.; and the next year the happinefs of his kingdom was completed, by taking off the pope's interdict, and giving the king abfolution for the hand he had in his father's death.

Tranquillity being thus refored, the negociations concerning the king's marriage began to take place, but met with feveral interruptions. In 1493, Henry VII. propofed a match between the king of Scotland and his coufin the princefs Catharine. James was too much attached to France to be fond of Englifh connections, and probably thought this match below his dignity; in confequence of which the propofal was treated with contempt. However, notwithltanding this ill fucMarriage , Henry made another offer of alliance with James; treaty with and, in 1495, propofed a marriage betwixt him and his England. eldeft daughter Margaret. This propofal was accepted : but the match feems not to have been at all agreeable to James; for, at the very time in which he was negociating the marriage, be nit only protected Perkin Warbeck, the avowed enemy and pretender to the crown of Henry, but invaded England on his account. This conduct was highly refented by the Englifh parliament; but Henry himfelf forgave even this grofs infult, and the marriage negociations were once more refumed. The bride was no more than ten years and fix months old; and being only the fourth degree of blood from James, it was neceffary to procure a difpenfation from the pope. I his being obtained, a treaty of perpetual peace was concluded between the two nations:

Scutard. 553 $\therefore$ perpetual peace with that nation.

354
Nagnificence of the royal nuptials.
nations, on the 1 it of July 1503 , being the firt that had
taken place for 170 years, fince the peace of Northampton, concluded between Robert I. and Edward III.

One of the great ends which Henry had in view in promoting this marriage, was to detach James from the French intereft : no fooner, therefore, was the treaty figned, than he wrote to his fon in-law to this purpofe; who, however, politely declined to break with his ancient ally. On the 16 th of June, the royal bride fet out from Richmond in Surry, in company with her father, who gave her the convoy as far as Collewefton, the refidence of his mother the countefs of Richmond. After paffing fome days there, the kinc refigned his caughter to the care of the earls of Sury and Northumberland, who proceeded with her to the borders of Scotland. Here a rumber of the company were permitred to take their leave ; but thofe who remained ilill made a royal appearance. At Lamberton church they were met by James, attended by a numerous train of his nobility and officers of ftate. From Lamberton they proceeded to Dalkeith, and next day to Edinburgh; where the nuptials were celebrated with the reateft fplendor. On this oceafion, it is faid that the Scots furpafed all their gueft in extravagance and luxury: which muft have been owing to the great intercourfe and commerce which James and his fubjects maintained with foreign courts and countries.
After the celebration of the nuptials, James appears
to have enjoyed a tranquillity unknown almoft to any of his predeceffors; and began to make a confiderable figure among the European potentates. But the mag. nificence of his court and embaffics, his liberality to ftrangers and to learned men, his coftly edifices, and, above all, the large fums he laid out in fhip-building, had now brought him into fome difficulties; and he fo far attended to the advice and example of his father-inlaw, that he fupplied his neceffities by reviving dormant penal laws, particularly with regard to wardfhips and old titles of eitates, by which he raifed large fums. Though he did this without affembling his pariiament,
yet he found agents who juftified thofe procecthers, in suotened. the fame maner as Epton and Dudley did thofe of Henry, under the fanction of haw. At laft, however, touched with the fufferings of his fulieas, be odem all profecutions to be fopped. He cien went favile: for, fenfible of the deteftation into which his father-in-law's avarice had brought himfelf and his admintitation, he ordered the minilters who had advifed him w thofe fhameful courfes to be imprifoned ; and fome of them, who probably had exceeded their commific:, actually died in their confinement.

About this time, James applied hirnfer, with incre- Applies dible affiduity, to the building of fhips; cre of which, the himfelf to St Michael, is fuppofed to have been the largen tien mertine in the world ( m ). He worked with his own hands in building it; and it is plain, from lis condute, that he was afpiring to be a maritime powcr, in which lie was encouraged by the excellent feamen which Scotlard then produced. The firt effay of his arms by fea was in favour of his kinfman John king of Denmark. This prince was brother to Margaret queen of Scotlan: ; and had partly been called to the throne of Sweden, and partly poffeffed it by force. He was oppofed by the adminiftrator, Sture, whom he pardoned after he was crowned. Sture, however, renewing his rebellion, and the Norwegians revolting at the fame time, John found himfelf under fuch difficulties, that he wis forced to return to Denmark; but he left his queen in poffeffion of the cafle of Stockholm, which the bravely defended agzinft Sture and the Swedes. This heroic princefs became a great favourite with James; and icveral letters that palfed between them are fill extant. The king of Denmark, next to the French monarch, was the favourite ally of James; who, eally in his reign, had compromifed fome differences between them. It likewife appears, fre $m$ the hiftories of the rorth, that both James and bis father had given great affllance to his Danifh majefty in reducing the Norwerians; and he refolved to become a party in the war againt the Swedes, and the Lubeckers who afifted them, if the former
(m) Of this hip we have the following account by Lindfay of Pitfcottie. "In the fame year, the king of Scotland bigged a great fhip, called the Great Miclael, which was the greateft fhip, and of moft ftrength, that ever failed in England or France. For this fhip was of fo great fature, and took fo much timber, that, except Falkland he wafted all the woods in Fife, which was oak-wood, by all timber that was gotten out of Norway; for the was fo firong, and of fo great length and breadth (all the wrights of Scotland, yea, and many other ftrangers, were at her device, by the hing's commandment, who wrought very bufily in her: but it was a year and day ere fhe was complete); to wit, fhe was twelve fcore feet of length, and thirty-fix foot within the fides. She was ten foot thick in the wall, outted jefts of oak in her wall, and boards on every fide, fo fark and fo thick, that no cannon could go through her. This great fhip cumbered Scotland to get her to the fea. From that time that the was afloat and her mafts and fails complete, with tows and anclo:rs effeiring thereto, the was counced to the king to be thirty thoufand pounds of expences, by her artillery, which was very great and coftly to the king, by all the reft of her orders; to wit, fhe bare many cannons, fix on every fide, with three great baffils, two behind in her dock, and one befure, with three handred hot of fmall artillery, that is to fay, myand and battret-falcon, and quatter-falcon, flings, peftelent ferpetens, an i double-dogs, with hagtor and culvering, cors-bows and hand-bows. She had three hundred mariners it fail her ; fhe had fix icore of gumers to ufe her artillery; and had a thoufand men of war, by her captain, fhippers, and quarter-mafters.
"When this thip paft to the fea, and was lying in the road, the king gart fhoot a cannon at her, to effay ha: if the was wight; but I heard fay, it deared her not, and did her little fkaith. And if any man believe that this defcription of the fhip be not of verity, as we have written, let him pafs to the gate of Tillibardin, and there, afore the fame, ye will fee the length and breadth of her, planted with hawthorn, by the wright that helped to make her. As for other properties of her, Sir Andrew Wood is my author, who was quarter-mafter of her ; and Robert Bartyne, who was mafter-fhipper."

Scotlas:. fent an ambaffador to offer his mediation between John and his fubjects. The mediation was accordingly accepted of, and the neguciations were opened at Calmar. The deputies of Sweden not attending, John prevailed with thofe of Denmark and Norway to pronounce fentence of forfeiture againt Sture and all his adherents. In the mean time, the fiege of the caftle of Stockholm was fo warmly prefled, that the garrifon was diminilhed to a handful, and thofe deftitute of al! kind of provifions; fo that the brave queen was forced to capitulate, and to furrender up the fortrefs, on condition that the would be fulfered to depart for Denmark; but the capitulation was perfidiounly broken by Stuse, and the was confined in a monittery.

It was on this occalion that James refolved to employ his maritime power. He wrote a letter, conceived in the ftrongelt terms, to the archbithop of Upfal, the primate of Sweden, exhorting him to employ all his authority in favour of the kinf ; and another letter to the Lubeckers, threatening to declare war againf them as weil as the Swedes, if they jointly continued to ainit the rebels. According to Hollinhed, James, in confequence of king Joln's application, gave the command of an army of 10,000 men to the earl of Arran, who replaced John upon his throne. Though this does not frictly appear to be truth, yet it is certain, that, had it not been for James, John mult have funk under the weight of his enemies. Sture, whofe arms had made great progref, hearing that a confiderable armament was fitting out in Scotland, and knowing that James had prevailed with the French king to affit John likewife, agreed to releafe the queen, and to conduct her to the frontiers of Denmark; where he died. By this time, Jimes's armament, which was commanded by the earl of Arran, had fet fail; but perceiving that all matters were adjulted between John and the Swedes, the fhips returned fooner than James expected, "which (fays he, in a very polite letter he wrote to the queen upon the occa(ion) they durf not have done, had they not brought me an account that her Danifh majelly was in perfe? health and fafety." The feverity of John having occafioned a frelh revolt, James again fent a fquadron to his affitance, which appeare $\dot{d}$ before Stockholm, and obliged the Lubeckers to conciude a new treaty.
jumes, having thas honourably difcharged his engane nenis with his uncle the king of Denmark, turncd his atention tovards the Flemings and Hollanders, who had infulted his flag, on account of the affitance he had afforded the duke of Gucldres, as well as from motives of rapacioufnefs, which difinguifhed thofe trader, who are faid not only to have plundered the Scots fips, but ts have thrown their crews overboard to conceal their villany. James gave the command of a iquadron to Barton; who put to fea, and, without any ceremony, treated ali we Datch and Flemiifh traders who fell into his hands as pirates, and fent their heads io hog!heads to James. Soon after, Barton returned to Scotland, and brouglit with him a number of rich prizes, which rendered his reputation as a feaman famous all over Europe.- James was then fo much refpected upon the cuather, that we know of no refentment fhown
either by the court of Spain, whofe fubjects thofe vie- Scollans. therlanders were, or of any other power in Europe, for $\underbrace{\text { Ecoler }}$ this vigorous procseding.

359
The peace with England continued all the time of Caufe of Henry VII. nor did his fon Henry VIII, though he quarrel had not the fame reaton as his father to keep well with the Scots, for fome time fhew any difpofition to break with them. A breach, however, did very foon take place, which was rever afterwards thoroughly made up.

About 30 years before, one John Barton (a relition, probably, to the famous Barton) commanded a trading veffel, which was taken by two Portuguefe feacaptains in the port of Sluys; and the captain, wich feveral Scotchmen, were killed in endeavouring to de. fend their property. The action was efteemed cowar:ly as well as piratical, becaufe it was done under the protection of a large Portuguefe fquadron. The thip and the remaining part of the crew, with the cargo, were carried to Portugal, from whence no redrefs could be obtained ; and James III. granted letters of marque to John and Robert Bartons, heirs to the Barton who had been murdered. Upon the acceffion of James IV. to the crown of Scotland, the letters of marque were recalled, and a friendly correfpondence was entered into between James and his Portuguele majelly. No redrcfs, however was to be had from the latter; and Robert Barton being made a prifoner, and his thip a prize, he was detained in Zealand, till James procured his deliverance, by applying in his favour to the empercr Maximilian. Sir Andrew Barton took part in the quarrel and having obtained a like letter of marque, he made dreadful depredations on the Portuguefe trade, and, according to Englifh authors, he plundered many Englifh thips, on pretence of their carrying Portuguefe property, and made the navigation of the narrow feas dangerous to Englifhmen. The court of London received daily complaints of Barton's depredations ; but Henry being at this time very averfe to a quarrel with James, thefe complaints being heard with great coldnefs at this council.board. The earl of Surry had then two fons, gallant noblemen ; and he declared to Henry's face, that while he had an eftate that could furnifh out a hip, or a fon who was capable of commanding one, the narrow feas flould not be infefted. Henry could not difcourage this generous offer ; and letre:s of marque were accordingly granted to the Ewo young noblemen, Sir Thomas and Sir Edward How. ard. The prizes that Barton had taken had rendere. his hips immenfely rich, confequently they were heavy laden, and unfit for fighting; while we may eafily fuppole, that the thips of the Howards were clean, and of a fuperior force in every refpect to thofe of Barton. After encountering a great deal of foul weather, Sir Thomas Howard came up with the Lyon, which was commanded by Sir Andrew Barton in perfon; and Sir Edward fell in with the Unicorn, Barton's other fip. The event was fuch as might be expected from the inequality of the match. Sir Andrew B.aron was killed, while he was animating, with his whitile, his rento hold out to the lat ; and both the Sotch fhips beins taken, were carried in triumpla to London, with theie crew's prifoners.

In the article Roration, the fmall Italic $\int$, which has been inadvertently ufed intead of the large $\int a$ marks a fluent, or the fum of fluxionary quantities.

DIRECTIONS for placing the PLATES of Vol. XVI.

[^0]:    Virgil's
    purgatory.

    For there are various penances enjoin'd, And fome are hung to bleach upon the wind;
    Some plung'd in waters, others purg'd in fires,
    Till all the dregs are drain'd, and ruft expires;
    Till nothing's left of their habitual fains,
    But the pure ether of the foul remains.

[^35]:    has been already obferved; and the operation of uniting them with a permanent twift is called laying or clofing, the latter term being chiefly appropriated to cables and other very large cordage.

    Lines and cordage lefs than $I \frac{x}{2}$ inches circumference are laid at the fpinning-wheel. The workman faftens the ends of each of two or three yarns to feparate whirl-hooks. The remote ends are united in a knot. This is put on one of the hooks of a fwivel called the loper, reprefented in fig. 6. and care is taken that the yarns are of equal lengths and twift. A piece of foft cord is put on the other hook of the loper ; and, being put over a pulley feveral feet from the ground, a weight is hung on it, which fretches the yarn. When the workman fees that they are equally fretched, he orders the wheel to be turned in the fame direction as when twining the yarns. This would twine them harder ; but the fwivel of the loper gives way to the ftrain, and the yarns immediately twift around each other, and form a line or cord. In doing this the yarns lofe their twift. This is reftored by the wheel. But this fimple operation would make a very bad line, which would be flack, and would not hold its twift; for, by the turning of the loper, the ftrands twif immediately together, to a great difance from the loper. By this turning of the loper the yarns are untwifted. The wheel reftores their twift only to that part of the yarns that remains feparate from the others, but cannot do it in that part where they are already twined round each other, becaufe their mutual preffure prevents the twift from advancing. It is, therefore, neceffary to retard this tendence to twine, by keeping the yarns apart. This is done by a little tool called the top, reprefented in fig. 7.

    It is a truncated cone, having three or more notches along its fides, and a handle called the ftaff. This is put between the Atrands, the fmall end next the loper, and it is preffed gently into the angle formed by the yarns which lie in the notches. The wheel being now turned, the yarns are more twifted, or bardened $u p$, and their preffure on the top gives it a flrong tendency to come out of the angle, and alfo to turn round. The workman does not allow this till he thinks the yarns fufficiently hardened. 'Then he yields to the preffurc, and the top comes away from the fwivel, which immediately turns round, and the line begins to lay.Gradually yielding to this preffure, the workman flowly comes up towards the wheel, and the laying goes on, till the top is at latt clofe to the wheel, and the work is done. In the mean time, the yarns are fhortened, both by the twining of each and the laying of the cord. The weight, therefore, gradually rifes. The ufe of this weight is evidently to oblige the yarn to take a proper degree of twif, and not run into kinks.

    A cord or line made in this way has always fome tendeney to twilt a little more. However little friction there may be in the loper, there is fome, fo that the of a laid line is permanent, and not like that upon thread doubled or thrown in a mill, which remains only

    #### Abstract

    turns which the cord has made in the laying are not enough to balance completely the elafticity of the yarns; enough the weight being appended caufes the frands to be more neariy in the direction of the axis, in the fame manner as it would itretch and untwift a little any rope to which it is hung. On the whole, however, the twift
