Beaufort, a town in this county, fituated in the ifland of Port Royal, in north latitude 32.23. about 30 , miles to the eaft of Purryfburgh, and 45 from Charles-Town to the fouthweft ; the continent and ifland from that fine capacious harbour called Port-Royal, which might hold the royal navy of England. The ifland whereon the town ftands confifts of near 1000 acres, and is ravigable all round for boats and pettyaugers, and one half of it for thipping, having four fathom water clofe by the high bluff; fo that fhips may load and unload from the fhore, without the affiltance of boats The barhour is fecured by a fort, built fome years fince, on which 12 culverins are mounted; but the town and ifland have no fortifications, nor is the harbour fo well fortified as a place of this impontance deferves, efpecially as it lay fo nigh Spanilh Flotida, and is faid to have been demanded $\mathrm{s}_{\mathrm{y}}$
the Spaniards as a part of their territories. There are not above three-fcore houfes in this town at prefent; but from it's advantageous fituation, and the goodnefs of the harbour, it is expetled that this town will one day become the capital of Carolina. Now Florida is annexed to the crown of Eng. land, this hatbour is rendered of ftill greater advantage. Purry burgh lies in norih latitude 32. 20. This was fettled by Mr Purry, a gentleman of Neufchatel in Switzerland, being encouraged by the government both in England and $\mathrm{C}_{\mathrm{a}}$ rolina, and made a Swifs colony of it; but it has not been properly fupported, though it would have proved highly beneficial to Carolina, being, with Georgia, by it's fituation, a kind of bulwark againtt the inroads of the Jndians, and, perhaps, of the Spaniards and French. It would alfo have been very advantageous to Great-Britain, becaufe a vaft number of Vaudois, who are proteftants, inhabiting the valles of Piedmont, being perfecuted by the king of Sardinia, would have fettled here, as a few of them have done; but the far greater part of them. were difheartened, when they heard what ufage both their countrymen and the Swils had met with there. The Vaudois make very fine filk in their country, and would have very much improved that manufacture in $\mathrm{Ca}_{\mathrm{a}}$ rolina, by which means vaft fums of money, which are yearly fent from England to Italy for filk, would have been faved to the nation. Bur, it feems, for fear of difgufting an Italian prince, we are neither to attempt to make filk ourfelves, nor to import the fine filk of China, which will come at one third of the expence of Italian filk. It is to be hoped, that our new póffeflions in North America; will, by good management be productive of filk as goad as ever came from. Italy or elfewhere.
Colleton County is the next to the north of the former: it is watered by the river Stono, which is joined by a cut to Wadmoolaw River. The north-eaft part of this county is full of Indian fettlements; and the Stono and other rivers, form an ifland, called Boone's Inand, a little below CharlesTown, which is well planted and inhabited. The chief rivers in this county at North Ediftow and South Ediftow. For two or three miles up the latter, the plantations are thick on both fides, and they continue for three or four miles higber on the north fide. On the norti bank of the latier, about 12 miles from it's mouth, fitands $W_{i} l$ lon , by fome called. New London, a little town built by the Swifs.
Berkley County lies to the north of Colleton. The northern parts are not planted, but the toutren are thick of plantations, on account of the two great rivers Cooper and Afhley. On the north coaft there is a little river, called Bowall River, which, with a creek, forms an inland, and off the coaft are feveral ifles, called Hunting Illands, and Sillivant's Ihe. Between the latter and Bowall River, is a ridge of hills, which, from the nature of the foil, is called the Sand-Hills. The river Wando waters the north-welt parts of this county, and has feveral good plantations upon it. It runs into Cooper River, and they both unite their freams with Afhley River at Charles-Town,
Charles-Town is the capital of the province, is built on a neck of land between Afhley and Cooper rivers, but it lies mot on the latter, having a creek on the north fide, and another on the fouth. It lies in north latitude 32. 48. longitude 78. 16. weft, 2 leagues or 6 miles from the fea. This is a market-town, and thither the whole product of the province is brought for fale. Neither is it's trade inconfiderable, for it deals near 1000 miles into the continent; however, it labours under the difadvantage of a bar, that admits no thips above 200 tuns. 'The bar, fays the author of - Harris's Collection, bas 16 feet water at low tide, and there ' is good riding when a fhip is got clofe to the town, and ' the harbour is defended by Johnfon's Fort, which has about ' 20 guns in it, level with the furface of the water.' ' Ahley - River, he fays alfo, is navigable for fhips 20 miles above - the town, and for boats and pettyaugers, or large canoes, - near 40 miles. Cooper River is not navigable for fhips fo - far, but for boats and pettyaugers much farther.'

Crayen County follows next, fill going northwards. It lies along the banks of the river Congaree, or Santee, which Yeparates North and South Carolina. It is pretty well inhabited by Englifh and French proteftants. In this country is Sewee River, where fome inhabitants of New England fettled. Norta Carolina has a peculiar governor, and contains the two following counties :
Cearendon County lies to the north of Santee River. In this county is the famous Cape Fear, at the mouth of the river of the farne name. The Indians in this neighbourhood are reckoned the mof barbarous of any in the province. In this county is Waterey River, or Wynyann, about 75 leagues diftant from Ahley River; it is capable of receivisig large fhips, but inferior to Port-Royal, nor is it yet inhabited.
Albemarie Cuunty is the moft northerly, bordering on Virginia. It is watered by Albemarle River, and is full of creeks on both fides of it, which, for breadth, deferve the name of rivers, but they do not run far into the country. At Sandy Point it divides itfelf into two branches, Noratoke and Notaway, and, in the north point, lies an Indian nation, called the Matacomogs. Next to Albemarle River fouthward is

Pantego

## B R I

Pantegoe River, and between them is Cape Huttoras, Albemarle county was more planted than any of the other, when Carolina was firt fettled, and confifted of near 300 families; but the plantations upon Afhley River, in time, grew upon it fo much, that moft of the planters here removed thither.
Virginia. Under this name was formerly underfood all that tract of land which reached from Norembegua to Florida, and contained the countries at prefent known by the names of New England, New York, New Jerley, Penfylvania, Maryand, and Carolina. The difficulties in fecting this, as well ather of our colonies, being well known, and to be found in their hiftory, it is needlefs, and, indeed, not within the defign of this work, to give thofe tedious narratives.
The Indians who originally inhabited the borders of this province, which retains the name Virginia, were very numerous, of different tribes, and moft treacherous and cruel to the Eng. lifh of all the Indian nations.
The fituation of this country is peculiarly happy and convenient. It bas the river Patowmack on the north-eaft, which reparates in from Maryland; the A tlantic Ocean on the eatt; Carolina on the fouth; and the Apalachian mountains on the weft. It lies from the 36.30 . north latitude, to the $39 \cdot 30$. and between the 74.50. and 79. 20. of longitude weit from London. It's extent from fouth to north, is about 180 miles, and about 140 from eaft to weft.
The air of this country depends much upon the winds: the north and north-weft are either very piercing, or boifterous and ftormy; the fouth eaft and fouth being hazy and fultry. The winter is dry and clear, which makes it very pleafant. Their fpring is comewhat earlier than ours; in April they have frequerit rains; May and June are very pleafant months, the heat being greatly tempered by cooling breezes; July and Auguft are fultry hot, the air growing in a manner ftagnant, which produces great thunder and lightning; in September the weather breaks, and there fall prodigious thowers of rain, when the inhabitants are fickly. 'It ought, however, to be oblerved, that in this, and, indeed, in all our colonies, the climate grows daily better, and thefe thunder-feafons lefs violent; which the inhabitants afcribe to the clearing of the country, by the cutting down woods, which gives the air a freer paffage.
Towards the fea-coaft the fuil is generally low, and, for 100 miles up the country, there is hardly a hill or ftone to be met with, except that here and there fome iron-ftone appears above the furface, and fome banks of a kind of petrified oyfter-fhells, that are of a prodigious thicknefs. The foil in general is a rich fat monld, three feet deep, and under it a oam, of which they make good bricks; but according as the fituation is moift or dry, the foil varies. It is diftinguifhed into three forts, high, low, and marlhy, all which, having fand mixed with them, makes their land warmer than that of Old England. The kighlands are moftly fandy ; however, they are not unfruitful; the foil does not hold in flrength fo long as the lowlands, which are very rich, being a blackifh mould, about a foot deep; and this foil will hold it's ftrength feven or eight crops without mannuring. Their land in general is no way inferior to that of England ; that at the mouths of rivers is moift and fat, and produces rice, hernp, and Indian corn. Thare are veins of a cold, raw, hụngry foil, where huckle berrics, crapn-berries, and chinkapins generally grow : alfo oaks, poplars, pines, cedars, cyprefles, and fweet gums, hockly, fweet myrtle, and live oak, are found here in great abundance. The land up the rivers is of a different kind of foil, and flored with chefnuts, chinkapins, oaks, walnuts, hickories, dog-wood, alder, hazel, fafafras, elm, ath, beech, and poplar. The lands at the heads of the rivers, and their productions, are alfo various, Here are trees of an incredible fize, and plenty of pafture-ground, coal, quarries of ftone, iron and lead mines.
Before the fetling of the Englifh there were nelther horfes, cows, fheep, or fwine; at prefent there is plenty of them all: their thorfés are very ferviceable, and travel at a great rate. They have likewife red deer pretty plenty, hares, beavers, wolves, and foxes. 'They do not want great variety of fowl or fifh,-In February, March, April, and May, Thoals of herrings pour into their very brooks, fome of the fize of ours, but, in the general, confiderably larger.
Though the common way of traffic in this province is by barter, or exchange, of one kind of merchandize for another, or of any for tobaceo, which is the Itaple production of the country, yet there is flirring fome filver coin, both Englifh and Spanifh; and there was confiderably more, "till the lowering the value, tempred people to export it to the other colonies, where it was current for more than in Virginia
The chief of their coins are either gold and filver of the famp of Spanifh America, or Englith money: they have fome Arabian chequins.
The trade of this colony confifis chiefly in tobacco. To fo great perfection is this branch brought here, that the Virginia robacco, efpecially the fwect-fcented, which grows on York River, is reckoned the beft in the world, and is generally vended in England for their home confumption. The other fort, called Oronoac, and that of Maryland, are hotter in the mouth; but it turns to as good account, being in great de-

## BRI

mand in Hollans, Denmark, Sweden, and Germany. Of this commodity 30,000 hogtheads bave been exported ycarly from the port of London, which if 4 1. a hoghead are cleared by them_at foreign markets, it will amount to 120,0,01. per annum; which contributes fo much to diminifh the ballance of thofe trades which we carry on to our difadvantage. Thi is a profitable branch of trade to the Englifh commerce, 7 it employs little lef, than 200 fail of ftout thips every year, our own confumption of this commodity being included; the revenue thercof, as well from Maryland as Jamaica, and arifing to the crown, is not inconfiderable. See Tobacco. Nor is tobacco the only product on of value this country pro duces; they have befides flax, hemp, cotton, and filk they might certainly have, if they were not fo extremely addicted to their ftaple commodity as never to think of any thing eife, if tobacco can be brought to a tolerable market. They have likewife filk-grafs, of which they make very little advantaue, though, no doubt; under proper management, very profit able manufactures might be made it in England, fince it's threads are faid to be finer than flax, and ftronger than hemp. All kinds of naval ftores might be produced in Virginia with great eafe, as well as in great plenty, fuch as plank-timber, mafts, yards, rofin, turpentine, pitch and tar, and iron, which we are obliged to take from other countrics, they having feveral good mines of that metal. There have been rumours of gold and filver mines; but it is certain, that they do not want coals, antimony, and other things of value, in the bowels of that country, which they would not be regard lefs of, if tobacco alone did not wholly ingrofs their application; which is not a little imprudent; fince is too frequentily turns to very indifferent account to the planter: whereas, were they wife enough to obtain other ftrings to their bow they would be more profperous, and could afford to take more of our manufactures in return.
Maryland. This provipce was reckoned part of Virginia 'till king Charles I. made a grant of it to lord Baltimore : and the climate, foil, produce, animals, Sce. in this colony differ very little from thofe of Virginia. In both thefe promvinces the Englifh Jive at large in their feveral plantations, which hinders the increafe of towns. Every plantation, indeed, is a little town of itfelf, and can fubfift itfelf with provifions and neceffaries, every confiderable planter's warehoufe being like a thop, where he fupplies not only himelf with what he wants, but the inferior planters, fervants, and labourers; and has commodities to barter for tobacco, or other goods, there being little money in this province, and little occafion for any as long as tobacco, and their other pro ductions, Chall anfwer all the ufes of gold and fifver in trade. There are here few merchants and thopkeepers, who may properly be called fo; I mean, who live properly by their trades. The tobacco of this province, called Oroonoko, is ftronger than that of Virginia; but it is in great demand in the eaftern and northern parts of Europe, and preferred before the fweet-fcented of fames and York rivers in Virginia. The Maryland planters, finding fo good vent for their com modity at foreign markets, have cultivated it fo much, that the province is thought to produce as much, or more in quantity than Virginia. "The foil is here, at leaft, as fruiful, the country being a large plane, and the hills in it fo eary of afcent, and of fuch a moderate height, that they feem rather and artificial ornament to it, than one of the accidents of nature. The abundance of rivers and bropks are no little help to the fertility of the foil; nor is there any grain, plant, or tree, which grows in Virginia, but thrives as well here.
The number of hips trading hither from England, and other parts of the Britifh dominions, are computed at 150 fail at leaft.
There is no woollen manufacture followed, unlefs in Somerfet county. Their common drink is cyder, which is very good, and, where it is rightly ordered, not inferior to the beft white wine. They have wine brought from Madeira and Fial, rum from Barbadoes, beer, malt, and wines from England. There is plenty of good grapes growing wild in the woods, but no improvement is made of them
This province lies between the 3 th and 4 Ift degrees of north latitude, and 74.20. and 77. of longitude weft from London, and is bounded on the eaft by Uelaware bay and the Atlantic ocean, on the fouth by Virginia, on the weft by that part of the Indian country, which the French claim under the name of Louifiana, and on the north by Penfylyania. Or more particularly, according to Mr Lloyd of Maryland the colony of Virginia, on the weft fide of the bay of Che fapeake, is divided from Maryland by the river Patowmack, and on the eaft by the river Pocamack, 'whofe head lies near the fea to the eaftward. The boundary of the proyince of Maryland begins at the river Patowmack, and ruis along the bay fide northwards, 'till it incerfects a line drawn weft from the mouth of Delaware bay, fituate in 39. 20. degrees north latitude, having for it's bounds to the weft high mountains, and on the eaft the faid bay. The eaftern fide of the proyince of Maryland is bounded on the weft by the bay of Chefapeake, on the eaft by the main ocean, on the north by Detawace bay, and on the fouth by tho river Pocamack which is the line of divifion between it and the colony of

Vitginia, The chief rivers here are Potowmack, mentioned in the fituation of Virginia, Patuxent, and Severn, on the weftern Thore; and, on the other fide, Chiptonk, Chefter, and Saffafras, of the greateft note.
The province of Maryland is divided into eleven counties, fix on the weftern, and five on the eaftern fide of the bay. Thofe on the weftern fide, are St Mary's, Charles, Pringe George, Calvèrt, Anne-Arundel, and Baltimore counties, On the eaft fide of the bay, are Somerfet, Dorchefter, Tailbot, Kent, and Cecil counties.
Pensylvania contains'all that tract of landin America, with all the iflands belonging to it, from the beginning of the 40th to the $43^{\text {d }}$ degree of north latitude, whole eaftern bounds, from twelve miles above Newcaftle, otherwife Delaware town, run all along upon the fide of Delaware river. Thefe bounds and extent were contained in the origimal grant; but Mr. Pen, the proprietary, having afterwards obtained part of Nova Belgia from the duke of York, it was added to the country given in the firft grant, fo that it extends now to the 48 th and $55^{\text {th }}$ minutes of north latitude. It is bounded on the eaft by Delaware bay and river, and the Atlantic ocean; on the north and weft by Canada, on the fouth by Maryland. But if it extends to the 43 degree of north latitude, as is exprefled in the grant, it muft run almoft parallel to New Jerfey and New York, even to the banks of the great Onta-rio-lake.
By it's latitude, Penfylvania is at a like diftance from the fun with Naples in Italy, ard Montpelier in France; but it muft be obferved, that the climates on the continent of America differ much from thofe of the fame latitude in Europe. The fouthern part of Hudfon's-Bay and the Thames are much in the fame latitude; yet the Thames has a mild agreeable climate, Hudfon's-Bay almoft in perpetual froft and fnow. Natural philofophers can eafily account for that difference. The air, however, in Penfylvania, is fweet and clear; the fall, or autumn, begins about the 2 cth of October, and lafts'till the beginning of December, when the winter fets in, which continues till March. Frofly weather and extreme cold feafons are frequently known here; but, as in moft countries where there are fuch feafons, the air is then dry and healthy. The heats are pretty extraordinary in the fummer monchs, of July, Aupuft, and September; but mitigated by cool breezes, which make them very tolerable.
The foil of this province is in fome places a yellow, or black fand, in others a loomy gravel, in others a fat mould, like the vales in England, efpecially near inland brooks and rivers, where the lands are confiderably richer than thofe that lie near navigable rivers.
The chief rivers here are, the river Delaware, which rifes far north, in the Indian country of the Iroquois, takes it's courfe to the fouthward, and, dividing this province from that of New Jerfey, falls into the Atlantic ocean, between the promontories or capes, May and Hentopen, forming at it's mouth a large bay, called alfo Delaware. This river is navigable for above 200 miles, but has a cataract above Briftol, which renders the navigation of it unpracticable to the northward of the county of Bucks. The fecond river is that of Safquahanah, which, rifing likewife in the country of the Iroquois Indians, runs fouth through the middle of the province of Penfylvania, and falls into the Indian bay called Chefapeake, in latitude 39.47. This is navigable for large fhips. The third is the Schoolkill, which, alfo having it's fource in the country of the Iroquois, runs fouth, almoft parallel to the two former rivers, and at length turning to the eaftward falls into Delaware, at the city of Philadelphia; it is alfo navigable for boats above 100 miles up. Thefe rivers, and the numerous creeks and bays in Delaware bay, capable of containing the largeft flects, render this country admirably fituated to carry on a foreign trade.
Here are trees of all forts, oak, red, white, and black afh, beech, Spanifh chefnuts, cyprefs, poplar; gum-wood, hickery, faflafras, fhrubs, fnake-root, farfaparilla, fulop, fpruce, cranberries, wheat, barley, oats, rye, peafe, beans, watermelons, mufkmelons, apples, pears, cherries, apricots, quinces, carrots, turnips, onions, parinips, cucumbers, \&c. are here in very great plenty; as alfo Indian corn, hemp, flax, \&c. It is frequent for one bufhel of corn fown here to yield 40 , often 50 , and 60 buthels. Of animals, here are, for food and commerce, deer, elk, rabbets, racoons, beaver; plenty of oxen, cows, and fheep: of the latter, 'tis common for farmers to have 4 or 500 in a flock. They have alfo beafts both for labour and otherwife. Of fowl, here are fine buftards, 40 or 50 pound weight, pheafants, heath-birds, pigeons, partridges, clouds of black-birds, fwans, geefe, braindes, duck, teal, and fnipe. The fifh are furgeon, herrings, eels, fmelts, and perch, oyfters, crabs, cockles, and mufcles, \&x. The merchandize of this country, with refpea to Europe and America, confifts of horfes, pipe-Itave", pork, beef, and fifh falted and barrelled up, fkins and furs; all farts of grain, wheat, rye, peafe, oats, barley, buck-wheat, Indian corn, Indian peafe and beans, pot-ahes, wax, \&c. and in return for thefe, they import from the Caribee-Illands, and other places, rum, fugar, molafes, filver, negroes, falt
and wine from Great-Britain, houfhold goods and cioathin of all kinds, hard-ware, tools and toys. They have allo fome rice, but no great quantities, and a little tobacco, but of the worf kind. Their trade with the neighbouring Indians upon the continent confifts but in few articles; they receiving of the native Indiant, chiefly ikins and furs of theic wild beafts, for which they exchange with them cooathing. arms, ammunition, rum, and other fipituous liquors, in return. This, as well as other the northern colonies, endeavour to carry on fome trade with the American colonies belonging to other nations : Penfylvania can's be faid to have a ftaple commodity, nor have the inhabitants yet fet up any manufacture of their own.
Philadelphia, the capital of Penfylvania, is extremely well laid out; and were it full of houfes and inhabitants, according to the proprietary's plan, it would be a capital fit for a great empire. It is at prefent a large city, moft commodiouly ficuated between two navigable rivers, Delaware and Schuifkill. The land on which the city flands is high and firm, and the conveniencies of docks and fprings have greatly contributed to the commerce of this place, where many rich merchants now refide. Ships may ride here in fix or feven fathom water, with very good anchorage. The land about it is a dry wholefome level. The great dock is formed by an inlet of the river Delaware, at the fouth corner of the front of the wharfs, and has a bridge over it at the entrance. Scveral creeks run into the city out of the two rivers, and there is no city in Holland that is fo naturally accommodated with fine canals, as this might eafily be. The key is beautiful, about 200 feet fquare, to which a fhip of 500 tons may lay her broadfide. And, as thefe furprizing advantages have already rendered this one of the beft trading towns in the Britifh empire out of Europe, fo, in all probability, it will continue to increafe in commerce and riches, 'till it will have no equal in America.
New Jersey has Delaware river on the fouth-weft, the bay on the fouth-eaft, the Atlantic ocean on the eaft, and New Yark on the north. It lies betwixt north latitude 39. 10. and 4. 35. and betwixt weft longitude 73.46. and 75. 15.' 'Tis in length on the fea-coaft, and along Hudfon's river; i. e. from fouth to north, about 140 miles, and about 80 where broadeft. Eaft Jerfey, before it was united with weft, extended eaft and north all along the fea-coalt and Hudfon's river, which is in north latitude 4 I . and was divided on the fouth and weft from Weft Jerfey, by a line of partition paffing from EggHarbour to Crefwick river, Stony-brook, and the fouth branch of Raritan river. It extends roo miles along the coaft, and by Hudfon's river. The breadth is very unequal, it being in fome places much indented by weft Jerfey; it is, however, the moft valuable part of the country. 'Tis divided inta Monmouth county on the fouth of Raritan river, Middlefex and Effex countres on the north of it, and Berghen county on Hudfon's river.
Monmouth County bas a pretty good town called Middleton, twenty-fix miles fouth of Pifcataway, with out-plantations of tbirty thoufand acres.
Shrewbury, the molt fouthern town, about eleven miles from Middleton, is reckoned the chief of the county, has the fame number of plantations, but more families than Middleton.
Freehold is a town, which has thirty thoufand acres of plantation.
Middlesex County is the moft populous and flourifing for it's plantations, moft of whole proprietors are Scotfmen. It's towns are,

1. Pifcataway, which has forty thoufand acres of land.
2. Woodbridge, has thirty thoufand acres of plantation.
3. Perth Amboy, the capital of the county, is a fweet wholefome place, at the mouth of Raritan river, which runs into Sandy-hook bay, that is able to contain five hundred thips, and is never froze. It is 'fo commodious for trade, that fhips of three hundred tons can come up to the port in one tide, and lie at the merchant's door, and veffels may be built here cheap. The whole plan confifts of a thoufand and feventy acres, as laid out by the Scots proprietors.
Essex, the next county, has above forty thoufand actes of plantation.
Elizabeth, it's chief town, lies three miles within a creek, oppofite to the weft of Staten illand.
Newark, the next town, fix or feven miles to the north, is the mof compact in both the Jerfeys. It has fifty thouland acres laid out for cultivation.
Bergfen County lies on Hudfon's river over-againft New York. This, as well as the other parts of the Jerfeys, is extremely well watered, there being, befides that of Hudfon, the river Hackinfach and Pafaick, and feveral leffer ftreams. The inhabitants are moffly Dutch. They have ten thoufand acres of land affigned them.
West Jersey has not fo many towns, nor is fo well planted, as Eaft Jerfey, yet, by reafon of it's navigable creeks, this province is as commodious for trade as the other, they lying at a convenient diftance, and fome running a great way up into the country.

Cape May County is the only part, which haq the name of a county. This is a tract of land betwixt Cave May, if's moft cafferly point of land, at the mouth of Delaware bay, and Little Egg harbour, dividing the two Jerfey's. Mott of the inhahitans here are filhermen, there being a whalery on both hores of the mouth of Delaware bay. From Maurice river, the next ftream to Cape May, Delaware bay and river water all the fouth-eaft; and fouth and fouth-weft parts of Weft Jerfey. The plantations, fome of which are fo clofe, that they are called a town, lie all along that bay and triver, and moft of them on creeks.
In an illand in the middle of Delaware river oppofite to Philadelphia, lies Bridlington, or Burlington, the capital of the province; in which, though there are few or no plantations within twenty miles of it, the courts and affemblies of Weft Jerfey ufed to be held. It carries on a brifk trade, by it's eafy communication with Philadelphia atid the ocean, by the river Salem, which falls into the bay of Delaware: The town is laid out into fpacious flreets, with commodious keys and wharfs, that will admit thips of two or three hundred tons. Higher up lies Maidenhead, a town of forty or fifty families; and, about forty miles higher, is the country of the Indians, called Miniffuks, who live in a fertile foil, which 'tis expected will be foon inhiabited by our countrymen, becaufe it borders upon New York, and has a communication with it by means of the river Aefopus, which falls into that of Hudfon; near Kingiton.
This province has an eafy communication with Maryland, by a river within eight or nine miles of the bottom of Chefapeake bay; and there was once a project to cut a canal thro' that fpace, but it was fo vehemently oppofed both by Maryland and Virginia, that it did not fucceed.
Upon the whole, the climate, of New Jerfey is fomewhat warmer than that of New England and New York, by being fituate more to the fouth. The foil, proiuce', trade, and the conveniences of rivers and creeks of both provinces, are much the fame with thofe of Penfylvania; but there ate more rivers and creeks in Weft Jerféy than in the eaft, by reafon of it's fituation on Delaware river. The country, which has a better foil than all the colonies round it , and is better cultivated, yields plenty of all forts of grain. The inhabitants are computed at above fixteen thoufand Englifh, men, women, and children; of whom, about three thoufand are men fit to bear arms. The chief trade of New Jerfey confilts in provifions, particularly flour and pork, and great quantities of white peafe, which they fell to the merchants of New Yotk, who export them to the Sugar-Inands. It has alfo fome fur fkins and tobacco for an Englifh market, and train-oil, fill, and other provifions, for Portuga', Spain, and the Canary-Ilands.
As the towns generslly lie up in the country, their trade is chiefly over land to New York. There are from an hundred to two hundred families in a place, and great part of them are Dutch, an induftrious people, and quiet fubjects to the Englifh government, by which they are protected. The increale of it's trade and produce fnay be judged by that of it's number of hands, efpecially negroes, who are ten titnes as many as they were about forty years ago:
New York. This province is divided by Hudfon's river; from the Eaft and Weft Jerfeys on the fouth and fouth-weft, as it is from New England on the north and north-eaft, by a line drawn between Rye and Greenwich. It has alfo part of $\mathrm{Ca}-$ nada on the weft, and on the north thofe Indians, allies to the French, who, being affifted by them in 1746, fell on the frontiers of New York, and did our colonies here great mifchief. 'Tis not above twenty-five miles broad, particularly betwixt Connecticut colony on the eaft, and Jerfey on the weft, and two hundred in length from fouth to north, extending from Long-Ifland in noth latitude, 40 degrees 40 minutes to the lake of Champlain, $44 \frac{1}{2}$, where the French having built forts, have in a manner expelled us from the north part of this country.
The elimate is more temperate, by lying more to the fouth than that of New England, but it is colder here in winter, and hotter in fummer', than in European countries of the fame latitude. The foil is fo fruitful, that one bufthel of wheat has produced an hundred: it's product in general, as well a's it's animals, are the fame with thofe of New England: The favages too of both countries arè very much alike.
The Englifh here deal with the Indians very largely for the fkins of elks, deer, bears, beavers; otters, racoons, and other rich furs; and, in fummer chiefly, they are fupplied by the Indians with venifon, fifh, and fowl, very cheap: for, by means of Hudfon's river, the largett in all our northern colonies, it being navigable even beyond New Albany, near a hundred and fifty miles from New York, and having a communication with the great river of Canada, by a ftream called the Otter river, except an interfice of land-carriage of about fixtecn miles, the Mobawk and Iroquois Indians from The lakes, and divers from the French fettlements, come to the Englifh fettements upon this river, and drive a confiderable traffic.
The otber trade of this colony is to Barbadoes and the Sugarliands, with horfes, beef, finoaked beef, bacon, pork, peafe, Voe. I.
apples, onions, corn; flour, bread, pipe ftaves, for which they recelve fugar, molaffes, rum, ginger, \&c. in return. They have alfo a very profitable commerce from hence to Madeira and the Azores; with pipe-ftaves and fin, for which they load their fhips back with wine and brandy; and there is fcarce a more beneficial trade in all the Englith commerce, they taking off more of our woollen manufactures than all the illand colonies taken together, Jamaica excepted, and return more gold and filver to pay for them.
In fine, it is generally allowed, that there is not a colony in America, which makes a better figure than this for it's trade, or where the people feem to have a greater firit of induftry and commerce, or are better affected to the Englihh thation.
Befides, 'tis agreed; that the inhabitants of the inland part of this country, are our greateft fence againft the French. As the city of New York may be deemed it's frontier garrifon on the foush; againft any invation by fea; fo Schenectida town and fort, in the county of Albany, may well be reckoned it's frontier on the north, againft the French of Canada, and their Indian confederates.
' $\Gamma$ is divided into ten counties; which; going up Hudfon's river from fouth to north, are Richmond, Suffllk, Queen's County, New York County, Chefter, King's County, Orange, Duchefs, Ulfter, and Albany; which laft five counties are faid to be all inhabited by Dutch, or fuch as are of Dutch extraction, befides Statan-Ifland and Long-Inand, before the mouth of Hudfon's river. They are pretty well ftocked with farms, but have not many confiderable towns.
Long Ifland, which is fometimes called Naffaw Ifland, has Statan Ifland, and that in which New York lies, on the weft and north-weft; the colony of Coninecticut on the north; and the Atlantic ocean on the eaft and the fouth. 'Tis not above eighteen miles in breadth, but'tis a hundred and twenty in length; ftretching along Fairfield County in New England; near the mouth of Hudfon's river, furnifhed every-where with convenient barbours; and contains the counties of Suffolk and Richmond; and Queen's County.
The trade drove here is in furs and fikins, tobacco as good as that of Maryland, horfes; beef, pork, peafe, wheat, and all forts of Englifh grain, which are fowed here with very great increafe; and the foil is fo good, that all other fruits and herbs thrive here, together with flax hemp, pumpkins; melons, \&c.
On the fouth fide of this ifland in the winter time, there lie ftore of whales and grampuffes, which the inhabitants catch in their boats, and drive no inconfiderable trade with the oil. An infinite number of feals lie here alfo in the fame feafon; on fome broken marhes, beaches and bars of fand; which likewife yeld excellent oil.
Statan Ifland, which lies to the weft of the former; near the county of New York, is about fourteen miles in length, and eight in breadth, and has a number of good farms and plantations, but no town.
The capital of the whole province is the city of New Yotk; at the fouth end of York county in Manahattan illand (at the mouth of Hudfon's, or the Iroquois river) which inland is 12 miles long, and about 3 broad. This town is reckoned one of the pleafanteft in Britifl America. It has a good harbour, with keys and warehoufes, and employs hundreds of fhips and veffels in it's foreign trade and filheries. The Dutch have fet up mills to faw timber, one of which will do more in a day, than fifty men can.
Kingfon, a town ninety miles up the river, on the weff fide of it, is a pretty well built populous town, inhabited by Englifh and Dutch. Thie river Aefopus, from New Jerfey, falls into Hudfon's near the town, and makes a good communication between the two provinces.
New Albany, called Orange fort by the Dutch, who drove a profitable trade from it with the Indians to Quebec, is a hundred and forty three miles up the river to the north of New York; and is but five miles below the place where the eaft branch of the river leaves the fouthern, and tuns up almoft off the Iroquois; two hundred miles within land. After it's reduction by the Engliih, it was ealled New Albany. This town, confifting of between two and three huindred families; is, for the moft part, inhabited by Dutch. The governor of the northern provinces comes hither often to confer with the Indian fachems or kings; to renew their alliances, to fettle matters of traffic, and to concert meafures againft their common enemy; and it is reckoned the barrier of New York, againft both the French and the Hufons.
Schenedlada, fixteen milles above Albany, but in the county of Albany, is fituate on a river that runs into Hudfor's to the eaft, and in one of the fineft vales of the world; it is compared to that in Nottinghambhire, watered by the Trent. The inhabitants are both Englifh and Dutch. It was almoft deftroyed by the French, and their confederated Indians, towards the clofe of the laft century, and the inhabitants mardered; but they have now Itrengthened it; and the place is much larger and more populous than before. The country betwixt this fort and New York is very fruitful, but inhabited by feveral Indian nations, who are not very induftrious.
Soratogo, about 26 miles to the north of Schenectada, is th:
4 Y
villas
village that was deftroyed in the laft war by the French and Indians, who came upon it by furprize.
New England. This country contains the moft flourifhing and powerful colonies the Englifh have in America; has the Atlantic ocean on the eaft and fouth-eaft, Nova Scotia or New Scotiand, or Acadia, on the north-eaft, the country of the favage Indians on the north, part of Canada on the weft, and New York, with Long-Illand, on the fouth and fouthweif. It extends from north latitude 41 to $4+\frac{1}{2}$, and from longitude 69 to 73, 35. The late Rev. Mr Daniel Neal, who has wrote the beft bittory of this country, fays, that, from Kenneback river to the fouth-eaft boundary of New York, it is three hundred and thirty miles; that the coaft from weft fouthweft, to eaft north-eaft, is a hundred and fixty leagues without the angles; and that it is a hundred and ninety miles, brought from Cape Cod to the north-ealt bounds of New York; but the author of the Britifh Empire in America, tho' he allows it to be near three hundred miles along the coaft, without reckoning the angles, fays, 'tis no where above fifty miles broad in a direct line.
The fummer, feafon here is warmer, though fhorter than ours, and generally accompanied with a clear iky for two months; which renders the country fo wholefome, that none of our plantations fuit an Englifh conffitution better; yet in their winters, which ate longer and feverer than ours, the winds are often very boifterous, and the air is charper than in Old England, though it lies fo much more to the eaft. Naturalifts have imputed this to the large frefl water lakes that lie behind this country to the north-weft, which, being conftantly frozen over in November, occafion that early winter which is commonly felt in all the adjacent country, and is one principal caufe of thofe cold north-weft winds that continually blow here in the winter, and are fo fatal to mariners on the New England coaft in that feafon. Snow generally lies on the ground here, from November to February. June, July, and Auguft are the hotzeft months, during which, the people are greadly peflered with mulkeltoes, bugs, and other infects.
The land next the fea is generally low, and in fome parts marlhy, but farther up it rifes into hills, and on the northeaft it is rocky and mountainous. About the Maflachufet's Bay, the foil is as fat and black as in any part of England; and the firft planters found the grafs in the vallies above an ell high, and rank for want of cutting ; but the up-lands are not fo fruitful, they being for the moft part gravel and fandy, inclining to a clay.
There'are few countries, better watered with fprings, rivers, and lakes, though the latter are not fo large as thofe to the north and the weft. Of it's rivers, which all abound with fif, feven are navigable for feveral leagues, and would be fo farther, were it not for the falls. As, I. Connecticut river, which is navigable a great way with large veffels. It rifes in the north part of New England, and runs almoft directly fouth through the province of it's name, 'till it falls into the fea, after a courfe of at leaft two hundred miles, between the towns of Saybrook and Line, almoft oppofite to the eaft end of Long-Ifland. 2. The Thames, which rifes in fome lake north of the Maflachufet's country, runs alfo directly fouth, and falls into the fea below New London, and to the eaft of the Connecticut. 3. The river Patuxet, which, rifing in the north-weft of the Maflachufet's country, runs foutheaft, through Providence plantation, and falls into a noble bay of the fea, near a town called Swanfey. 4. The great river Merrimech, which, rifing north of New England, runs allo to the fouth, forming a lake on the weft of New Hampfhire; from whence running fouth for near a hundred miles, to the latitude of 4.2.54. it then turns eaft, and falls into the fea between Salifury and Newberry in Effex. 5. The river Pifcataway, which runs from weft to eaft, and falls into the fea near Portfmouth in Hamplaire, with a mouth more like an arm of the fea, and capable of receiving "the largeft fhips. 6. The river Saco, which runs from the north of New Englapd to the fouth, falling into the fea between Cape Porpus, or Porpofes, and Cape Elizabeth, in the province of Meine. 7. The Cafco river, which runs parallel with the former, and falls into a bay of it's own name. To the eaft of thefe are the rivers Saghedock, Kenabeck, Penobfcot, and many more confidcrable ones, which, rifing far to the north, run almoft due fouth, and fall into the ocean to the north-eaft of Cafco bay.
To the convenience of fo many fine rivers, and the plenty of freth water, the number of large populous towns is juftly afcribed. There are fome copper and iron mines.
There is alfo plenty of good timber, but fo much has been cut within ten or twelve miles from the fea, that, 'tis faid, there is a neceffity for a law to prevent the wafte of woods. Oak, elm, afh, cyprefs, pine, chefnut, walnut, cedar, beech, afpin, faflafras, are common here; as are allo fpruce and firtrees, which arr of an extraordinary growth, producing pitch, tar, rofin, and turpentine; alfo mafts, yards, and planks, as the oak does the other fip-timber; fo that more fhips have been built in this province, than in all the ober parts of America. Here is humack, which is ufed by dyers and tan-
ners; and, as there is no want of hides and fikins, nor bark, there is a great manufacture in leather. That, called the fhe-cedar, produces fweet gums, as do other of their trees balms that are medicinal. The dwarf oak grows wild here, and was fent hence to Old England to be cultivated. All forts of garden and orch rd-trees thrive here fo well, that 'tis cafy for a planter to make a hundred hogheads of cyder in a feafon; and the export of apples to the Sugar-Iflands is a conftant article in it's commerce.
They have as good hemp and flax as any in the Daltic; great plenty of all forts of roots, as turnips, parfnips, carrots, radifhes, much larger and richer than ours, though their feeds came originally from hence; good ftore of onions, cucumbers, and pumpkins, but the feeds of their water-melons and fqualhes, which grow here in great plenty, are fuppofed to be brought from Portugal.
They had a great variety of fruits of their own growth, before the Englifh fettled here, and they have univerfalty improved them. Mr Dudly, one of the council in New Ergland, and a fellow of the Royal Society, fays, the peaches here are large, all fandards, and the fivit better than ours; and that they bear commonly in three years from the ftone; that in 1721 , in a village near Bofton of abour forty houfes, they made neas three thouland barrels of cyder; and that fome of their appletrees yield fix or feven barrels, and at the rate of eight or nine buthels to the barrel.
There is a great variety of plants here, different from thnie of Europe; particularly the common favin, which frequently grows wild on the hills; that called the bear-thiftie, very thort and prickly; whofe root with a decoction of cancerroot, and a fort of devil's bit, cures the king's evil. Here's a plant called partridge-berries, an excellent cure for the dropfy; and that called the bleeding-root, to cure the jaundice; together with fome others, of which the late Dr Cotton Mather gave the Royal Society of London a fpecimen.
There is hardly a greater variety of towl any where than in this country, and plenty of beafts both tame and wild, of every uleful kind. Here are alfo abundance of ex ellent hhh, both in the fea and rivers. Whales were often caught formerly between New England and New York; but the whale tifhery is of Jate engrofled in a manner by the NewfoundJanders, though there are ftill valt quantities of fifh of all forts, efpecially cod, taken on this coaft, which are falted and fent to Europe, as well as to the fugar plantations, for the fubfiftance of their negroes as well'as white fervants.
There is farce any fort of Britifh manufacture, whether for ule, ornament, or luxury, but is imported-into New sngland; fo that the exports from Great-Britain :nd Ireland have been'computed by fome to be no lefs than 300,000 I a year. The imports alfo from thence are not of the uniseneficial kind. They fell their fifh to Spaik, Purtugat, and the Streights, the produce of which comes hither in gold and gilver, or bills of exchange. Other returns they make us in mafts, the beft and largeft in the whole world, befides pitch, tar, turpentine, rolin, plank, knees for lhips, and other fpecies of timber for various ufes. Thefe commodities, elpecially pitch and tar, were formerly purchafed of the swede with our crown pieces at exorbitant prices; (fee Naval Stones) but, fince the encouragement given to their importation from New England, they have fell to half their former price. New England alfo imports logwood for the dgeing our woollen goods in quantities for our own ufe, and 2 furplus, with which we furnifh Holland and Hambürgh, Other articles might be mentioned, as whale oil and fins, which are yearly imported from New England in confiderable quantities; and, if not had from bence, they muft be purchafed of the Dutch with ready money, and at much higher prices. New England plants no fugar, indeed, but it affirts our ifland colonies that do; which, without it's belp, could not make it near fo cheap, and in fufficient quantities. For, if the Sugar-Iflands were obliged to fow wheat, and plant as much Indian corn as they wanted, they mult necoffarily plant the fewer canes." From hence they are likewife fupplied with horfes for their mills, timber for their fugar-works, boards, hoops, and ftaves for their cafks, butter, cheefe, oil, tallow, corn, flour, bread, beans, peafe, befides barrel pork, mackarel, and the refure cod-filh.
Nova Scotia, New Scotland, or Acadia, is the eaftern part of the North American continent, and has New England on the fouth-weft ; part of New France, and the river St Lawrence, on the weft and north; the gulph of that name, and Cape Breton ifland, on the eaft; and the Atlantic ocean on the eaft and fouth. According to fome geographers, it extends from the Streight of Canfo and Fronfac (which divides it from Cape Breton illand) weft longitude 60. 15. to the river of Kennebeck, in longitude 69. o. and from Cape Sable in north latitude 43. 37. to Cape Anne, in the river of St Lawrence, in latitude 49.30. It is fo indented in the middle by that called the bay of Funda, that the part of the country which is on the fouth eaft of the bay towards the ocean, is a fort of triangular peninfula, only joined by a fmall ifthmus to the other part, which is not much inhabited or known.

Monf. de Lifle, the famous French geographer, varies muich in the fituation and boundaries of this country. In his map of Canada, publifhed in 1703, Acadia takes in the country of the Etchemins, or Itchemins, who are placed in fome of our maps on the weft fide of the bay of Funda, and a part of the continent larger than the peninfula, extending from latitude 43 to 45 . 20; whereas in Monf. De Lille's general map of America, engraved in 1722, Acadia is confined within the peninfula, and bounded on the north-weft by the Gafpefians country. Father Charlevoix makes it 250 leagues in compafs. Monr. Bellin, engineer and hydrographer to the Marine Office, for the illuftration of Canada, when in French hands, reports the length of it from Cape Canfo on the eaft, to Cape Sable on the weft, according to their way of reckoning, to be eighty leagues. He fays that Mr. Popple's map of this country is not at all correct as to the figure of the ports and bays, and the particular windings of the coafts'; but that it is pretty exact in the longitude and latitude, though it places Cape Canfo twenty minutes too far north.
La fiontan, another French writer, who made a long fay in North America, gives it a much larger extent than the Canada map juft now mentioned, for he includes in it a part of Canada and Gafpefia. According to this author, it is three hundred leagucs in length along the fea-coaft, from Kennebeck, the frontier river of New England, to the ifle Percee, towards the mouth of the river St Lawrence, including the bays of Funda and Chaleurs. But all Acadia, and it's dependencies being now annexed to the crown of England, all difputes of this kind between Great-Britain and France have ceafed.
To proceed, however, at prefent, with the fate of the country, with regard to it's productions and commerce.
Here are, fays baron la Hontan, a great many little rivers, whofe mouths have depth for the largeft hips, with good anchorage; they abound with falmon; and that, in moft of the rivers and the gulphs with which they communicate, there is plenty of cod-fing; that the four,feafons of the year are eafily to be diftinguifhed here, but that the three winter months are extremely cold. La Hontan further obferves, that almolt every part of Acadia yields com, fruit, peafe, and other pulfe; that in feveral places there are MASTS AS strong as those of Norway; and that, if there were occafion, all kinds of shipping might be built here, the oak timber that grows here being better than that of Europe. The baron, who fays here is good hunting, reprefents it in general to be a fine country, the climate tolerably temperate; the air pure and wholfome, and the water light and clear. Charlevoix, another French writer, fays, it abounds with all the neceffaries of life, in every feafon, to fubfirt the inhabitants without much fatigue. Here is plenty of feathered game, fuch as partridges, ducks, teal, and buftards; and that, of the latter, vaft numbers come to all the inlands, and the banks of rivers in April, to build their nefts; where our author fays, they have eggs enough to fubfift the inhabitants at that time, and yet the fpecies does not feem to be much diminithed.
At the end of March the fifh begin to fpawn, when they enter the rivers in fuch fhoals as are incredible. The herrings come up in April, and the flurgeon and falmon in May. Here are multitudes of beavers, otters, and the fifh called bafs, whofe flefh is reckoned as good as veal. In October and November they hunt the two firft, and in January they fifh for the laft. All the coaft of the peninfula from Cape Sable on the weft, to Cape Canfo on the eaft, is lined with fhoals or fand banks. About November, a fort of filh called Pocamo, fuppofed to be a fea-dog, comes and fpawns on the ice, and this is the time when the tortoifes alfo lay their eggs.
The favages, or Indians here, much refemble thofe of New England; they have, indeed, more of their native barbarity and ignorance than their neighbours, who have more dealings whit the French and Englif.
As fome authors have reprefented this to be as indifferent a country as ever was inhabited by Barbarians, we fhall here add what is farther related by F. Charlevoix before-mentioned, in fupport of the above account given of its general fertility. He lays, that Mr. Denys, who publifhed an accurate defcription of this country, in which he refided a long time, and was proprietary and governor for the French king, of the eaft coaft, reports, that one single grain of wheat, sown near la Hurve, producedifoears, very long and so loaded, that they were forced to supfort them with iron hoops. The jefuit adds, that here are mines both of copper, and coal; and that about three fourths of a league from the ifle Monano, which fhews the way into $S_{t}$ John's river, on the north tide of Funda bay, there is a rock of lapis lazuli, which is almoft covered with the fea; and Mr Denys, who faw a piece that had been taken off of it and fent to France, fays it was valued at ten crowns an ounce.
Befides the fifh already mentioned, here are mackarel, pilchards, thad, trout, fea-cows and whales, in fuch numbers, that feveral chip-loads may be taken in a feafon in the port of Monconadi. The rivers here are alfo full of the frenhwater kind.

This country is ftrangely indented; on all fides, with Bays from the rea. The chief is called the bay of Funda. It breaks above 200 miles into the land from Cape Sable, the moft fouthern point of New Scotland, to the ifthmus which joins the peninfula to the continent. According to F. Cterlevoix, 'tis two French leagues over to the river of St John, and has a clean thore, with depth of water enough to carry the largest shifs to the lesserbay, on which fands it's capital, viz.
Annapolis, which lies in a fair clean bay within the bay of Funda, where there are at leaft fix or feven other good harbours. It was called Port-Royal by Monf. De Monts in 1505, when he brought the French colony hither from St Croix; and it had the name of Annapolis in honour of queen Anne, in whofe reign it was taken by the Englifh under colonel Nicholfon. F. Charlevoix fays, this harbour bas but one fault, which is, the diffculty of entering or coming out of it, befides the inconvenience of the frequent fogs here, fo that only one fhip can pafs in or out of it at a time; and that muft be with the ftern foremoft, and with great precaution, by reafon of the flrong currents and tides. This excepted, fays the father, nature has fcarce omitted one thing to make it the fineft harbour in the world. It is two leagues in lehgth, and one in breadth, having a fmall ifland, called Goat-Ifand, almoft in the middle of the baton, which it is faid, is able to contain all the ships in America. It's depth of water is no where lefs than four or five fathom, it being fix or feven on one lide of the ifland, and on the other fixteen or eighteen. The bottom is every-where good, and fhips may be fecure in it from all winds. When the French poffefled it, they often brought their fifhing veffels into it. The place chiefly fubfifs by the traffic of fkins, which the Indians bring down in exchange for European goods. It has alfo a pretty good trade in lumber and fih.
By the laft Definitive Treaty of 1763 , the iflands of Cape Breton, St John's, and Anticorte, and all the Dependencies of Canada are annexed to the crown of Great-Britain. By Cape Breton, England commands the navigation to Canada by the river St. Lawrence, and a moft excellent additional fifhery on this coaft, together with feveral very good harbours for our hipping. This with Canada and all its dependencies, which now belong to this kingdom, cannot fail to prove a confiderable acquifition to our maritime power and fifheries, while it diminifhes that of France in the like proportion. A mof fenfible mortification to our moft formidable rival in trade and navigation See the articles America, Canada, British America, French America.
Newroundland. This illand is of a triangular form, about as big as Ireland, and 3 to leagues, or $93^{\circ}$ miles in circuir. On the north it is feparated from Terra de Labrador, or New Britain, by the ftreight of Belleifle, which runs north eaft, and is about twenty-three miles over in it's narroweft part, On the weft it has the gulph of St Eawrence, and on the fouth and eaft, the weltern, or Atlantic ocean. Cape Race, or Raz, the moft foutherly point of the ifland, lies in north latitude 46.45. the moft northern point is in latitude 51 . 30. So that the greateft length of the ifland, from fouth to north, is 280 miles. Cape Raye, it's moft wefterly point, lies in north latitude 47.35. and, between it and Cape Race, the diflance is about 80 leagues, or 240 miles. Authors differ widely in the account they give of it's climate and produce. Some affert that the iky is almoft conftantly clear and ferene; that here are beautiful forefts and verdant fields, covered with frawberries, \&c. that the buthes are nothing but rafpberries of a delicious tafte and flavour; that here are exceeding good waters, very fruitful vales; and that there is here a kind of rye, which grows naturally with out culture, and is very nourifting; and that the ifle abounds with all forts of game. Others, on the contrary, reprefent it as a frightful country, and affert, that the whole illand is almoft one continued rock, \&c. In order to reconcile thefe oppofite defcriptions, fays F. Charlevoix, we muft diftinguifh the different parts of the ine, which have been vifited by Europeans. It is true, adds he, that the fouthern and eaftern coafts do not commonly enjoy a very ferene Rky , becaufe of their neighbourhpod to the great bank, which is almoft conftantly covered with a thick fog. But in the northern and weftern parts, the fky is very clear, both in fummer and winter. As for the innermoft parts of the country, there is nothing certain concerning them, it being almott imposfible to travel far into the ifland. Among thofe who have travelled fartheft, fome, perhaps, may have obferved beautiful vales, whilft others, who went another way, could perceive nothing but fteep and barren rocks.
The chief, and almoft only, trade and bufinefs here, is fifh: whereof there is fuch plenty in this fea, that all the world almof might be fupplied from it, all forts being taken here in immenfe quantities; but the principal fifhery here regarded is that of cod, whereof at leaft, fix hundred fail of ihips are laden every year for France, Spain, Portugal, Italy, England, and other parts. The main fifhery is on the Great Bank, of which prefently; and on the other banks about this
ifland, as alfo aill along the coaft. The fifing featon is from fpring 'till September
Train oil is drawn off the livers of the fifh, which are thrown up in heaps, when the cod is cured ; and from thence is drawn all the oil that comes from Newfoundland.
There are two forts of trades in this navigation; the one, and perhaps the moft profitable, confidering the rifk is lefs, is that driven by the fifheries themfelves, who only vittual and man their fhips at Biddeford, Pool, Dartmouth, and other weftern ports chiefly; and go away early to fifh; having the hands and the fhips neceffary. The other is, when the mafters fail directly to Newfoundland, to purchafe cargoes of fifh of the above-mentioned fifhers, or of the inhabitants off their ftages: Thefe traders purchafe their cargoes with bills of exchange; at two months date, which are very felliom protefted. The fifh that is fhipped for Great-Britairi and Ireland, is inconfiderable, in compatifon of what is fent to Portugal, Spain, and Italy. Some fin, is alfo fhipped for Barbadoes, and the other Sugar-Iflands. Befides the great profit which particulat metchants make by this fifhery, confidering the feamen it conftantly breeds, the tradefmen it maintains, and the thipping it requires, the increafe of the national flock is no lefs than 3 or 400,000 l. yearly ; for a thip of an hundred tons with the charge only of victual, and filhing-tackle for twenty hands, fhall bring to market in Portugal, Spain, or Italy 30001 . worth of fifh, and clear frequently not lefs than 20001 . to the proprietors; fo that an hundred and fifty fuch hips only will clear $300,000 \mathrm{I}$. and confequently increafe the publick and private ftock fo much. In the ycar 1696, the Englifh, fays Charletoik, had feveral confiderable fettlements here, chiefly on the eaftert coaft of the ifland, and had contrived roads through the woods, for an eafy communication of thefo fettlements with each other. Here were feveral very rich inhabitants, and they traded yearly for $17,000,000$ of lives; that is, above 900,000 l. flerling, confidering the French money was then much higher than it is at prefent.
There are a great many fine bays all round Newfoundland, but thofe on the eaft and fouth coafts are beft known. Thofe on the eaft fide are Bonavift, Trinity, and Conception, which ftretch themfelves to the fouth-weft; Torbay, Capelin, St John's harbour, the bay of Bulls, Frefh-water bay, and others; for there is no fhore in the world better accommodated with excellent harbours, and the bays on the eaft and fouth coafts are fo near each other, that nothing could be more commodious for an eafy communication, were there inhabitants that wanted it. At Bonavifta the Englifh had a fettlement fo well fortified, confidering the country, that after the French had made themfelves maflers of a great part of Newfoundland, in the year 1696, they did not dare to attack that place.
St John's harbour is very fine, and capacious enough for two hundred fail of fhipping ; its entrance is not above half a mufquet thot wide, lies between two very high mountains, and was, in 1696 , defended by a battery of eight guns. On the fouth fhore are the bays of Bifcay, St Mary, Placentia, bay of Fortune, or St Peter's, and the bay of Defhair, going from eaft to weft; but the moft famous and confiderable of them is the bay of Placentia, of which Charlevoix gives the following defcription.
This bay is ten leagues deep, and the harbour is at the bottom of it. The entrance of.it is a narrow channel, through which but one fhip can pafs at a time; but it is deep enough for the largeft veffels, and the harbour can contain a hundred and fifty fhips, which ride there fecure againft all winds, and can filh as quietly as in any river. Before the narrow cbannel, there is a road of a league and half in extent, but expofed to the north-north-wefterly wind, which blows very often upon that coaft, and is almoft conftantly tempeftuous. What makes the channel fo narrow, is a ridge of dangerous rocks, which mutt be left on the right-hand, and above which the French had built a fort, called St Lewis. The currents are very ftrong here, fo that hips muft be towed through the channel.
The great ftrand, or drying place for filh, which is about a league in extent, lies between two fteep hills, one of which, on the fouth-fouth-weft, is feparated from the ftrand by a fmall rivulet, which runs out of the channel, and forms a kind of lake that is called the Little Bay. Here they catch plenty of falmon. The great frand may contain at once vherewithal to load threefcore fhips. There is another leffer ftrand for the ufe of the inbabitants, who fifh all along the coaft. On both thefe places fifh may be laid to dry without danger.
Along the abovementioned rivulet, the French built huts to dry their fifh in rainy weather. The houfes of the inbabitants were near this place, and formed a ftreet, which was the town of Placentia. Fort St Lewis rendered the French formerly mafters of all the fouthern parts of Newfoundland, and of the illand of St Peter, which lie over-againft it, and were inhabited. The people of St Malo ufed to fifh a little farther, at a place called Petit Nord. The cod is lefs there than in the bay of Placentia, but more proper for the Me diterranean and Levant traders.

The great lank of Newfoundland is a vaft mountain, concealed under water, lying about fix hundred leagues weft of France. Mr Denys, author of a good treatife on North America, and a very ufeful book, gives this bank a hundred and fifty leagues from north to fouth: but, according to the moft accurate fea charts, it's fouthern extremity hies in or about the 41 It degree of north latitude, and it's northern extremity in 49. 25. The truth is, that thefe two extremities are fo pointed, that it is not eafy to mark it's limits that way. It's greateft breadth, from eaft to weft, is about ninety marine Englifh leagues, between 42. 30. 51. 30 of longitude weft from London. Some failors have afferted, that they have anchored there in five fathom, which is contrary to the Sieur Denys, who pretends that the depth is twenty-five fathom; it is certain, that in fome places it has fixty.
Whatever be the dimentions or figure of this bank, it is covered with a vaft quantity of fhells, and feveral kinds of finh of all fizes, moft of which Cerve for food to the cod-filh, whofe number here feems to equal the grains of fand on the bank itfelf, Between two and three hundred vefiels have loaded here annually for two centuries, and yet this vaft confumption has produced no alteration in their plenty. It would however, adds Charlevoix; be proper to difcontinue this filhery from time to time, efpecially as the gulph and river of St Lawrence, the coast of Acadia, or Nova Scotia, Cape Breton, and Newfoundland, abound with cod, as well as the great bank: These are true mines, of greater value, as well as cheaper wrought, than those ef Mexico and Perv.
The next bank is called the Green Bank ; the author of the Britifh Empire in America afferts, that it is about two hundred and forty miles long, and a hundred and twenty miles over; but, by the charts, we do not find it above an hundred and twenty miles long, and about fifty over, where broadeft; it lies off the fouth coaft of Newfoundland. The other banks are not conliderable enough to deferve particular notice, and their hape and fituation may be feen in fome good fea-chart, whofe proper bulinefs it is to defcribe fands and foundings.

## Remarks.

By the Definifive Treaty of if63, all Canada, and it's Dependencies, the River. St Lawrence, the coasts of Acadia, or Nova Scotia, and Cape Breton, afe ceded and annexed to the crown of Great Britain; and therefore this treaty has added thofe NEW MINES of treafure to this kingdom; of which we thall daily reap the advantage.; and what well deferves our ferious confideration is, that the treaty which has procured us the benefits, feems to have long fecured them to us, For being now fole mafters of all Acadia, and it's Dependencies, and fole mafters likewife of all Canada and it's Dependencies, what fingle power is now able to contend with us in thefe parts of America? The French will not attempt it by virtue of their poffeffions of the fmall illands of St Peter's and Mi queLON, where it is exprefsly fipulated, that they are not to keep more guard than 50 men for the police, nor to ereat any kind of fortification, thefe iflands being given to France only as a thelter for their fifhermen. Article VI, of the faid treaty.
By the XVIIIth article of the fame treaty, his Catholick Majefty defifts, as well for himfelf, as for his fucceflors, from all pretenfions which be may hive formed, in favour of the Guilpufcoans, and other his jubjects, ta the right of fishing in the neighbourhood of Newfoundland. England, therefore, having no other power to contend with, who poffefs any territories in thefe parts, but France, and thole being fo trivial, they will fcarce attempt to contend with this nation there: but if Spain were to join them in any future rupture with thefe kingdoms, they are not likely to be any great gainers by it ; for our pofleffions in the gulphs of Florida and Mexico, may endanger the lofs of theik Havanna again; and then, perhaps, that may fhare the fame fate that Cape Breton has done.
From this account of the trade of our colonies in North America, I fhall pals on to that of our inland colonies, which we have not already taken notice of.
In regard to that of Jamaica, which is one of the principal, we refer the reader to the Antilles Islands, where we have confidered that already; as we have alfo that of the Bahama and Bermudas Islands, under their proper titles. And although the reft of the inlands, belonging to Great-Britain, are rauked under the general name of the Cas ribbees; yet, in order to take a full view of the trade of Britilh America together, we judge it neceffary, to confider thofe of the Caribrees diftinctly which belong to us. Whereby we fhall omit none under this general article, except the Bahama and Bermudas, and Jamaica; the trade of which latter being much like to that of Barbadoes, we cannot fail having fuch an idea of the whole, as will anfwer our defign in confidering Bitilh America together. See alfo Antilles. The intand of STChristopher's. This afland, callos by our failors St Kitt's, lies between latitude 17. ic. ard 17.40. and the middie of the illand in longitude 62. 40. weit trom

Londort,

London, and is about ten miles north of Nevis, and fourteen leagues from Antigua. Father Tertre, who gives a particular map of it, makes it near eight French leagues, from ealf to weft, and two and a half from north to fouth where broadeft; but the trueft length is twenty-five miles and a half, and the greateft breadth feven: yet in one part, towards the falt-ponds, at the fouth-eaft end, it is but half a mile over. The air here is fultry, but pleafant and healthful, being agreeably tempered with cool breezes. 'Tis reprefented by fome as one of the moit delightful inlands. The foil is light and fandy, and proper not only for the cultivation of tobacco and fugar, but for cotton, ginger, and fruit of all forts. 'Tis well fupplied with fprings, and has fome hot baths. The vallies and fides of the hills are very fertile, but the mountains of a fulphureous compofition, and overgrown for the moft part with palmettoes, cotton-trees, lignum vitæ, and various other forts.
At the fouth-eaft end of the illand, there is an ifthmus that runs into the fea, within a mile and an half of Nevis, where are falt-ponds, which produce a grain that is perfectly white, and more corrofive than the French.
The foil abounds with maiz, pine-apples, tamarinds, plantains, prickled pears, peafe and apples, all differing from ours. Here are two forts of cotton, that grows on a fmall ftalk, and is as foft as down; the other grows on a flrub in a cod, bigger than a walnut. The indigo grows here in cods nine or ten in a bunch, and is very good for dyers. Here are wild fugarcanes four or five feet high, maftic and locuft-trees, gourds, mufk-melonss water-melons, lettice, parfley, and purfain; with the manchinel-tree, and fea-berries of the fize of a muf-ket-bullet, that walh as white as foap. They have a very good fruit called pengromes, another papaw. They have large trees, whofe leaves make good muftard, but they bear no feed. Here are abundance of good figs, together with the caffava-root, potatoes, radifhes, and plenty of cabbages. Though St Chriftopher's is the largeft of all the Leeward Ifands, yet the middle part of it is fo mountainous, that 'tis believed it has not above 24,000 acres of land fit for fugar, of which tis reckoned to produce about 10,000 hogiheads one year with another. 'Tis computed that it makes above three hogheads of this commodity to one of rum ; though, were there a demand for it 'tis able to make a much greater quantity, if we may credit the declaration of a gentleman of diftinction of this illand, to the committee on the fugar-colony bill, Anno 1731, who faid, that himelf alone had made 2000 gallons in one year, and that, if he had encouragement, he could make 20,000 gallons. The great falt-pond here is fuppofed to contain above fourfcore acres. The fun fo exhales it in exceffive hot weather, that the cruft of falt which it leaves at the bottom, exactly refembles pieces of rock cryftal.
It's animals are generally the fame as thofe in the other Ca ribbee -Illands. From May to September here is plenty of tortoifes, guana's, and land crabs, and they abound with other forts of fifh.
The Ifland of Nevis is but three or four miles due fouth-eaft, from the fouth point of St Chriftopher's. It is about fix leagues in circumference, and has only one mountain in the middle of it, which is very high, but has a commodious afcent, and is covered with plantations, and great trees all around, from the fea-fide to the top.
The foil is fruitful, and even more fo than St Chriftopher's. It's product is much the fame as in the other Caribbee-liflands. Sugar, which is the ftaple commodity here as well as there, ferves for all the ufes that money does. All the trade of the illand is managed by it, and pounds of fugar, inftead of pounds fferling, ferve in exchange for other commodities inftead of money. Tobacco, cotton, and ginger, were much cultivated at firft, but of late very trifling; and fuch large quantities of fugar have been made here, that fifty or fixty ghips have been laden with it in a year for Europe.
Mr Smith, rector of St John's town in this ifland, fays, in his Natural Hiftory of thefe illands, that Nevis produces a tree called dogwood, whofe bark is much in requeft for fifhcatching. The fifh moft preferred here is the cavaly, a very firm fea-filh, deep-bodied, which weighs four or five pounds, and taftes like a mackarel. That which is reckoned the richeft is the mud-finh. Here are various kinds of turtle, but none of them eatable except the green.
The fheep of this illand have no horns nor wool, but an hairy and fmooth ikin , and fpotted. Their porkers, being fed with Indian corn, Spanifh potatoes, and fugar-cane juice, are exceeding fweet food, white and fat; and fo are the fowls and turkies, which are fed with the fame diet. Some of thefe, together with geefe and ducks, are brought from the northern colonies; but they have plenty of Mufcovy ducks of their own breeding.
They breed all their other provifions, fuch as rabbets, veal, \&c. but their Irifh falt beef, hams, pickled falmon, fturgeon, and oyfters, are brought to them from Europe, and the northern colonies.
The whites here now are computed at about 3000 , and the negroes at three times that number, of whom at leaft 4000 are employed in the fugar trade.

Vol.I.

Though much hipping comes to it, yet there is no good harbour in the whole illand, nor any good anchoring, $\in x-$ cept on the fouth-weft fide, where are feveral rocks and hoale, between which thips ride with fafery, except in cale of hurricanes, when they put out to fea, and, if poinble, run into Antigua.
The ifland of Antigua. This illand, which lies to the eaft of Nevis and St Chriftopher's, in about $6 I$ degrees, 40 mi nutes of weft longitude, and $\mathbf{1 7}$.30. north latitude, is almoft of a circular form, being about fix leagues from eaft to welt, and near fix from north to fouth, or twenty miles each way, according to fome, and near fixty miles in circumference. 'Tis more remarkable for good harbouts, than all the Enulifh illands in thofe feas, yet fo encompaffed with rocks, that 'tis of dangerous accefs in many parts of it, efpecially for malicry of hhips that are not well acquainted with the coaff.
The climate is hotter than that of Barbadoes, and very liable to hurricanes. The foil is fandy, and much of it overgrown with wood; and, what is worfe, there are but few fprings, and not fo much as a fingle brook' in the illand; fo that it's chief dependance for frefh water is from rain, for which it it is fometimes diftreffed: yet, for all thefe natural difadvantages, 'tis a very confiderable and thriving plantation. It's product is much the fame with that of the other CaribbeeIflands. Sugar, tobacco, indigo, and ginger, were it's principal commodities, when it was firt planted, but the two latter are now feldom cultivated. Their fugar was, at firft, fo black and coarfe, that, our fugar-bakers fcorning to put it into their coppers, it was generally fhipped off for Holland and Hamburgh, where it fetched but 16 s a hundred, when other mufcovado fugar fetched 18 or 19 s . But the planters here have fo far improved their-art, that as good mufcovado fugar is now made here as in any of the fugar-inands, and they have alfo learned the art of claying it.
This ifland contains about 70,000 acres, and produces 16,000 hogtheads of fugar one year with another, but does not make quite half fo much rum as it does fugar, though 'ris fo capable of farther improvement, that 'tis believed, for good reafons, that, if there were proper encouragement, the product of the former might be enlarged one fifth part, and that of the latter near half.
They don't plant any great quantity of tobacco ; but what they do is better than it was formerly, when it was fold for nothing but to make fnuff. The wild cinnamon is faid to grow in their low lands, oi Savanna woods.
This illand has more venifon than any of our other CaribbeeInands, with plenty of fowl and black cattle: it has moft of the animals in the country and on it's coafts, that are common to the other infands.
The Illand of Montsereat lies 25 miles almoft fouth-foutheaft from Nevis, and 20 wefl-fouth-weft from Antigua, 40 north-weft from. Guardaloupe, and 2.40 from Barbadoes. ${ }^{\text {north-welt }}$ Tis of an oval figure, and about 3 leagues in length, and the fame in breadth, and about 18 miles in compafs. It's mountains are covered with cedars, ac-jouc, acomefs, cyprefstrees, the iron tree, and the muik-herb, which grows like brambles, without thorns, and bears yellow flowers, which afterwards turns to cods full of feeds, that fmell like mufk. It's vallies are well watered and fruitful, but it's climate and foil are much the fame with thofe of the other inlands; as are alfo it's animals and commerce. It makes fome fugar, but not fo fine as that of Jamaica and Barbadoes. It's chief produce is indigo, of which great quantities ufed to be exported to England, but it is declined of late years. In thort, it is a well planted illand, and pretty much frequented by fhips; though 'tis fo furrounded with rocks, that the riding before it is very precarious; and it has no place that can properly be called a haven; fo that, in cafe of the approach of a tornado, fhips that happen to be on the coaft, muft immediately put out to fea, and make to St Chriitopher's one way, or Antigua the other.
In 1668 , when the French had taken Antigua, they attacked this ifland with a great force, under M. de la Barre, and, after much lofs, took it, by the treachery of the favages. The Englifh having made a gallant defence, and killed fo many of the brave officers of the French, the enemy fet fire to every thing, except what belonged to the Irifh (whofe governor was the firft who fubmitted); fo that above 40 fugar-houfes, and feveral warehoufes, full of rich merchandize, were deftroyed. This ifland was afterwards reftored to the Engliif, attacked again by the French, and, after plundering and wafting the illand at pleafure, they remove to Guardaloupe. It was ftipulated, however, by the 11 th article of the treaty of peace at Utrecht, that the French hould make the Englifh fufferers fatisfaction for their loffes by this rapine : but it does not appear what they obtained, or whether any thing.
In 1733, this illand fuffered greatly by an hurricane. About three years after this, General Matthews, the governor of the Leeward-Inands, being in perfon upon this illand, an act was paffed, by the governor, council, and affembly, For the more effectual preventing all trade in theie parts, between theBritith fubjects and the French. Which was owing to the complaints of an illicit traffic that had been carried on, between the French and Britifh fugar-illands; contrary to the 4 Z
sith

## B R I

gth and 6th articles of the treaty betwixt England and France, on the 6th of November, 1686; and to an act of parliament of the 6th of his late majefty's reign, intitled, An act for the better fecuring and encouraging the trade of his majefty's iugar colonies in America; and to a particular article in General Matthews's inftructions, by which he was commanded to take care, that none of the French fubjects be allowed to trade from their faid fettements, to any of the inlands under his government, or fifh upon their coafts. Some of our other fugarinlands had connived too much at the infraction of thefe orders; and 'tis obferved, to the honour of this little illand of Montferrat, that it fet a good example to all the other Caribbees, by being the firlt illand which exerted the vigour of it's conflitution, in confirming thefe orders by the abovementioned law of it's own making; in purfuance of which, feveral French Chips were afterwards feized and condemned there, by it's court of admiralty.
The Ifland of Barbadoes. This illand is not only one of the chief of the Caribbees, and the mort confiderable of all the Britifh iflands in America, next to Jamaica, but was alfo the firff fettled, and the mother of all the Britifh fugat-colonies. Geographers differ much about it's fituation. According to the beft fea-charts, it is but 20 leagues eaff from St Vincent, which may be feen from it in a clear day; 25 from St Lucia, and a little more from Martinico; 100 leagues from St Chriftopher's, 60 north from. Trinidado, 80 from Cape de Salines, the neareft part to it on the continent, and but a day and an half's fail from the Dutch colony of Surinam. Mr Bowen, his late majefty's geographer, lays it down betwixt longitude 59. 50. and 60.2. Weft from London; and betwixt north latitude 12. 56. and 13. 16. According to the Rev. and learned Mr Hughes, in his Natural Hiftory of this ifland, the greateft extent of it is from latitude 13.10 . to latitude 13.23. and from Longitude weft of London, 58.49. $\frac{3}{4}$. to longitude $59.2 \frac{3}{2}$.
The climate of this ifland is very hot, efpecially for eight months in the year, but not fo exceffive as in the fame latitude on the continent; becaufe, though they have no landbreezes, yet there are others which arife from the fea with the fun, and increafe as it advances to, but abate as it declines from, the meridian.
There's fcarce a harbour in the ifland, except that of Bridgetown in Carlifle bay; nor a ftream that deferves the name of a river; though there are two on the eaft fide of the ifland, called Scotland river, and Jofeph's river. They have wells of good water, almoft all over the inland, without digging very deep for it; and they have large ponds and refervoirs,. for rain-water. 'Tis for the moft part a plain level country, with fome imall hills, whole woods have been all cut down, to make room for plantations of fugar-canes, which now take up almoft the whole ifland, and render it the mof valuable plantation to Great-Britain for it's fize, that it ever poffefled.
When they firlt began to plant here, they produced a confiderable crop yearly, from three years to nine, without farther trouble, but only weeding and cleaning the foil; and every acre, one with another, yielded io s. a year profit to the national ftock of England, befides what the planters got, and the thoufands that were maintained out of it, both here and there. But the foil, of late years, is not fo fertile as it was; and, to mend it; they employ tame cattle for the fake of manure; but not many; becaufe land employed this way, gives not one tenth of it's value. For the method of cultivating thefe canes, fee the article Sugar.
Here are all forts of oranges and lemons, fweet, four, and Seville, in abundance; the fruit of which is large, and the juice delicious. Citron-trees alfo abound here. With the rind of this fruit, the Barbadoes ladies make the moft delicate cordials and fweet-meats. Limes are in great plenty here. Fruit in general is become a ftaple commodity, fo that fome tons have been imported into England and Ireland in a year. The tamarind and palm-trees were brought here about 70 years ago. Here are the bananas, and the pine-apple, defribed elfewhere, aloes, mongrove, and calabalh-trees; the cotton, cèdar, maftick, and bulley-trees: allo the fugar-apples, fourfop, and Thaddock, defrribed in Jamaica; together with the cocoa-tree, of whofe fhells are made cups, and of the nutchocolate. Other trees and fhrubs of value are, the fig-tree, the caffia-fiftula, the phyfic-nut, the prickled apple, the prickled pear, the pomegranate, the papa, the guava, the cuffard-apple, the macow-tree, the royal palmetto, and the lefs. The lo-cuft-tree, whofe timber is ufed for wind-mills, and other ufes in building; the iron-wood, lignum-vita, red-wood, and prickled yellow wood, the plantain-tree, or fhrub, the an-chovy-apple, the date-tree, the bay-tree, guana-trees, and foap-berries.
Some of the chief plants are ginger, and red pepper of two forts. Here are grapes, but not fo good as in the northern colonies; cucumbers, melons, the fenible plant, the humble plant, the dumb cane; with leeks, and almoft all other roots and garden-ftuff, brought hither originally from England. They abound alfo with curious flowers of moft kinds. They have coach-horfes from Old England, faddle-horfes from New England, and others for carts and common ules, from

Bonavifta, the Cape Verd-Iflands, and Curaflaw. They have, when the wind changes to the fouth-fouth-weft, great flocks of wild fowl come in from the continent; fuch as plovers, curlews, fnipes, wild pigeons, wild ducks, and teal. The neighbouring fea abounds with moft forts of filh, befides the green turtle, which is the moft delicious of all; particularly parrot-fifh, fnappers, red and grey cavallos, terbums, ney-fifh, mullets, mackarel, lobfters, and crabs. In the frefh waters here, are cray-filh, maid-fifh, grigs, prawns, and feveral filh that come into them out of the fea; as cop tamies, fnooks, plaife, dolphins, barricados, king's fig, and the flying-fifh.
The Barbadians trade with New England, Carolina, Penfylvania, New York, and Virginia, not only for lumber, but for bread, flour, Indian corn,' rice, tobacco, falt-beef and pork, fifh, pulfe, and other provifions; with Guinea for negroes; with Madeira for wine; with Tercera and Fayal, for wine and brandy; with the ifles of May'and Curaflaw for falt, and with Ireland for beef and pork. The other goods which they import from Great Britain and Ireland, are of naburgs, which are the chief wear of their fervants and naves $^{2}$ linnens of all forts, with broad cloth and kerfeys, for the planters, their overfeers, and their families; filks and fluffs, for their ladies and houlhold fervants; red caps for their laves male and female, flockings and fhoes of all forts; gloves and hats, millenary ware and perriwigs; laces for linnen, woollen, and filks; peafe, beans, and oats, from our weffern counties, and bitket from London; alfo wine of all forts ftrong beer (which they have alfo from New England) and pale ale; pickles, candles, butter and cheefe; iron-ware for their fugar-works, fuch as faws, files, axes, hatchets, chif fels, adzes, hoes, mattocks, planes, gouges, augres, handbills, drawing-knives, nails, and all forts of leaden ware; powder and fhot, and brafs and copper wares: but Birming. ham wares, though good commodities, foon ruft and canker*, by the evening damps of this climate; and to this moifture of the air 'tis imputed, that clocks and watches feldom go right in this ifland.

* This is what our Birmingham and Sheffield manufacturers fhould be very folicitous to prevent, if any thing in nature could be difcovered that would effectually do it , withoutdefacing the beautiful poliin of iron and fteel.

They import alfo from Great Britain all forts of India goods and toys, coals, pantiles, hearth-ftones, hoops, and every thing proper for an Englifh market, will fell here, the difference of the climate always confidered. Servants who are volunteers, and not tranfports, go off well here, efpecially mechanics; and, if very good ones, are worth 25 and 301.2 piece, for their five years fervitude. Butter, oil, candles, liquors, and provifions, are generally fhipped from hence for this illand, about Michaelmas. The voyage is commonly five or fix weeks outward bound, and fix or feven homeward. The packets generally make it in a month. The planters fend to Guinea guns, powder, and arms, perpetuana's, tallow, \&c: and all wearing apparel, which they have from England; and difpatch fmall veffels thither to bring flaves for their plantations, which require to be recruited every year with 20 or 30 negroes to every 4 or 500 acres.
Madeira wine being the chief drink of the gentry, there are about 3000 pipes of thefe, Malmiey and Vidonia wines, imported into this ifland in a year, either by the London merchants, or the Barbadians themfelves. And 'tis oblervable, that the Madeira wine drank in England, which ufually comes round by Barbadoes in a time of war with France, is better than what comes to us directly from Madeira, which is flat and palied.
In regard to the exports of this ifland, the ftaple commodity is fugars. Before the civil wars, the trade of this ifland ufed to be open and free, and the Dutch fhips came hither to purchafe fugars, as well as the Englifh; which freedom of trade made money very plenty in the colony: but, feveral acts of Parliament having been made after the Reftoration, confining the trade of all the fugar-colonies to Great-Britain and Britifh Ghips only, it rendered London the chief mart in Europe for fugars: and, as more were imported every year than was neceflary for home confumption, the furplus was exported to foreign markets by our merchants; who thereby underfold the Portugueze, who before ufed to fupply all Europe with their Brazil fugars, and, in procefs of time, beat them out of all their fugar-trade to the northward of Cape Finifterre.
In the reign of king Charles II. efpecially about 1676 , the Barbadoes trade aetually employed 400 fail of hips, of 150 tons one with another, every year: and it was computed, that the running cath of the ifland was about $200,000 \mathrm{l}$. and their annual exportation to Great-Britain, in fugar, ginger, indigo, and other commodities, at leaft $350,000 \mathrm{l}$. The money brought into the nation in the year laft mentioned, by the export of the commodities only brought hither from Barbadoes, was allowed to be above $200,000 \mathrm{I}$. and 'twas agreed, that as much, or more, had been gained every year betwixt that time and the Reftoration. It has been computed by a very judicious gentleman, that the nation acquired, at leaf,
two millions of money by Barbadoes", betwixt the years $163^{6}$ and 1656 ; that, in the following twenty years to 1676 , the gain by it mult have been four millions: and our author, allowing for the gradual declenfion of it's trade fince, by many crofs accidents, and particularly by fetting the French fugarcolonies, computing the laft fixty years, viz. from 1676 , to $173^{6}$, at the fame rate as he did the firl twenty years, the gain will then amount to fix millions: fo that, fays he, in the fpace of a hundred years, the inhabitants of Great-Britain have received twelve millions of filver by means of this plantation; and had 50,000 of her inhabitants maintained, all that time, by the people of this colony. It appears, from his remarks on the fate of the fugar-colonies, that the Barbadians, in 1730, exported hither 22,769 hogheads of fugar, each weighing 13 hundted weight; of which, near 18000 hogheads came into the port of London only; and that they made 340,39 I l. clear profit of the whole; becaufe 'twas proved, that the rum and molaffes paid all the charges of a plantation.
As to indigo, which was hipped bence not a great many years ago, there's now little or none made here; but of fraped and fcalded ginger they make great quantities, and have abundance of cotton-fhrubs, a commodity whereof the flaves make hammocks. They alfo fhip lignum vita, fuccats, citron-water, molaffes, rum, and lime-juice, for England.
The inbabitants of this ifland are of three claffes, viz. the mafters (who are either Englifh, Scots, or Irif, with fome few Dutch, French, Portugueze, and Jews) the white fervants, and the black flaves. The mafters are the planters and merchants; both clergy and laity, lawyers, phyficians, \&c. live very elegantly; the white fervants are either by covenant or purchafe, and are of two forts; fuch-as feil themfelves in Great-Britain or Ireland, for four years or more, and fuch as are felons tranfported. When the term of the covenant fervants is expired, the Britifh fervants have each 51. the others but 40 s . Their work is not fo hard as that of our day-labourers, yet their encouragement is greater; and, if they are good for any thing, they may be employed upon their own terms, when their time is out. The fervitude of the blacks is perpetual ; yet great care is taken of them, becaufe, if a negro dies, 'is 40 or 50 l . lofs to the owner: whereas, by the death of a white fervant, he lofes only two or three years wages to another. The bufinets of the blacks lies mofly in the field, excepting thofe who are taken into their fugar-mills, ftore-houfes, and dwelling-houfes; where the handfomeft, neateft maids, are bred to menial fervices, and the clevereft fellows to be coachmen, grooms, and lackeys. Others of them are often employed in handicrafts, as coopers, joiners, mafons, \&cc. A flave who is a good mechanic, is worth 150 , or 200 l . and even 400 l . has been given for a fkilful fugar-boiler. The negroes are purchafed by lots out of the Guinea fhips, after being all viewed ftarknaked, and are allowed two or three wives, that they may propagate and increafe the planter's fock ; for their pofterity to all generations are llaves, unlefs they have their liberties given them.
The Illand of $S_{T}$ Vincent, lies 50 miles north-weft of Barbadoes, and is faid to be of the fame form as Ferro, one of the Canary-Iflands. 'Tis about 8 leagues in length, 6 in breadth, and 18 or 20 in compafs. 'Tis computed to be 10 leagues fouth-fouth-eaft from the Reed river, in the BaffeTerre of St Lucia of this illand. There are feveral mountains on it, with plains at the bottom, which, if cultivated, would be very fruitful.
According to Labat, this ifland has a deep, fat, free foil, capable of producing every thing almoft that can be defired. It has abundance of rivulets and fprings, of the beft water in the world ; large ftraight trees of all the kinds that are produced in America; and tobacco is cultivated here, which is reckoned not inferior to that of Vermé, near the Caraccas; together with mandioca, potatoes, ignamos, gourds, the fineft large melons, and Turky wheat. To which the fame hiftorian adds, when this illand was fuppofed to belong to France, that if any of the French could but agree with fome of the old Caribbeans here for fome pieces of ground, and only apply to the breeding of poultry, fwine, and cabrittoes, they might foon raife a fortune, without firring off the illand; becaufe the Martinicans would not fail to come in their veffels, and take thern off at their owro price, either in money or goods: by which means, fays he, a trade might alfo be opened, to good advantage, with the induftrious negroes of the Cabes-Terre in that ifland; who might be induced, in time, to put themfelves under the French king's protection, and even to pay him tribute. Great profit might allo be made of the timber on this ifland, of which there is a vaft fock of all kinds: and indigo thrives here to a miracle. Nor does he doubt but the foil would be very proper for the cultivation of cocoa-trees, enough even to furnifh the other illands, which carry their money or goods for it to the Spaniards on the coaft of the Carracas.

Remarks.
By the IXth. article of the Definitive Treaty of 1763 ,
this illand of St Vincentr, together with Dominica, and Tobago, which were heretofore termed Neutral Is landa, is ceded in full right to his Britannice Majesty : alfo the illands of Granada and the Granadines, are, by the fame treaty, become British Islands, which before were French:
To obtain which acquifitions to the crown of Great-Britain, the French are, by the faid treaty, to poffefs the other Neutral Island of St Lucia, and to have the conquefts of Martinico and Guadalupe, \&c. reftored.
The many yeats difputes and contentions, that Great-Britain and France have heretofure had concerning thefe Ne $\dot{U}$ tral Islands, are now finally determined in the moft explicit manner; the nature of which difputes may be proper to appear in the fequel of this article; as it ftood in the old edition.

## Dominica

Lies much about half-way between Guardaloupe on the northweft, and Martinico on the fouth-eaft, viz. about 15 leagues from each; extends from north-weft to fouth eaft, and is about 13 leagues in length, and near as much over where broadeft. Labat fays it is from 30 to 35 leagues in compafs. It is divided, like Martinico and Guardaloupe, and fome other of the Caribbee iflands, into the Cabes Terre and BafleTerre, and the foil much of the fame nature. He fays the foil is good, and the llopes of the hills, which bear the fineff trees in the world, are proper for the production of plants; fo that fome have reported it to be one of the beft of the Caribbees, for its fruitful valleys, large plains, and fine rivulets. The Cabes-Terre is watered with a good number of frefh water rivers, abounding with choice fifh. It has a fulphurmountain, like that at Guardaloupe, but not near fo high. There are but two or three places, in that part called BafleTerre, that are tolerable; the moft confiderable of which is called the Great Savanna. It produces mandioca, caffava, bananos, and the fineft figs. They have potatoes and ignamas in abundance, with a great deal of millet and cotton. Here are great numbers of ring doves, partridges and ortolans. They breed hogs and poultry, and of the former two forts of wild ones, defcended from fuch as firft came from France and Spain. Here are the fineft and largeft eels in the world.
The Caribbeans retiring hicher, for molt part, as they were drove out of the other iflands by the Europeans, they are therefore more numerous here than in any of the reft of the Leeward Ilfands; but in 1700 Labat did not compute them at much above 2000 , including women and children. The anchorage is good all round the coaft of Dominica, but it has no good port or bay to retire to ; all the advantage it has, is the fhelter which fhips find behind fome of its capes. The French always oppofed the attempts of the Englifh to fettle here, becaufe it would enable them, in time of war, to cut off the communication betwixt Martinico and Guardaloupe; fo that it ferves for wood and water.
Tobago, another of the Caribbee Iflands in the American ocean, fituated 20 miles north-ealt of the ifland of Trinity, and 120 miles fouth of the ifland of Barbadoes, being about $5 z$ miles long and 12 broad. It is a very defirable and fruitful illand, and capable of producing fugar, and every thing that the beft of the Caribbee Inlands produce.

## Granada.

This ifland, ceded to England, lies in weft longitude 6t degree ${ }^{3}$ 40 minutes, and north latitude 12 degrees; 20 leagues northweft from Trinidade, about 65 miles north-weft from Tobago, and 30 leagues north of New Andalufia on the continent, to which this is the neareft of all the Britilh iflands in the Antilles. It extends from north to fouth in form of a crefcent, being nine or ten leagues in length, and about five where broadeft. Father Tertre judges it to be as big again as St Chriftopher's, and about 24 leagues in compafs. Labat fays, they who have travelled round it, make the circumference at moft 22.
The miffionaries Tertre and Labat give the following account of its natural hiftory. This illand enjoys a good air, and a foil fo fruitful, that all the trees which cover it, both for fruic and timber, are better, ftraiter, higher, and bigger than in the neighbouring iflands, except the cocoa tree, which does not grow fo high here as in the other inlands. It has falt-pits, and abundance of armadillos, whofe flefh is as good as mutton, and the chief food of the inhabitants; befides tortoifes and lamantins. The coaft is full of fine vales, watered with good rivers, moft of which run from a lake at the top of a bigh mountain in the middle of the ifland, where is a low fhore, with good anchorage, at 12 leagues diftance, but an exceeding ftrong current, which both ebbs and flows in a few hours.
There are feveral bays and harbours round the ifland, which ferve for moorings of thips, and the landing of goods; and fome of the harbours are fortified. All the eaft coaft is very fafe, clofe by the fhore, and the ifland is not fubject to hurricanes. In fhort, 'tis capable of producing all the commodities of the climate. Its particular articles, befides cattle and wildfowl, are fugar, ginger, indigo and tobacco, miller and peafe. There are mountains along the flore, and about the harbour
where the habitations are ; but all the reft is a very fine country, and there is good travelling, either for horfe or carriage. Its chief port, called Lewis, flands in the middle of a large bay, on the weft fide of the ifland, which has a fandy bottom, where 1000 barks, from 300 to 400 tons, may ride fafe from ftorms; and the harbour will hold 100 hhips of 1000 tons moored. There is a great round bafon near the harbour, parted from it by a bank, of fand, which, if cut, would be capable of holding a very great number of veffels: but by reafon of this fand-bank, great fhips are obliged to pafs within 80 paces of one of the two little mountains, which are at the mouth of the harbour, and about half a mile afunder. On one of thefe a fort is crected, with a balf moon in front, and othèr regular works, all of good ftone.
Dominica is an inand in the governor of Barbadoes's commiffion; it lies in 50 degrees 30 minutes north latitude, and is about 40 miles long and 40 miles over, where it is broadeft. This illand being a place of little trade at prefent, and ferving occafionally only for wood and water, we fhall only obferve, that, as this nation pretends to have a right of fovereignty; it fhould be maintained in fact, and not only by words and formal orders.
Barbuda is an infland that lies in 17 degrees 30 minutes north latitude. It is about 15 miles long, lying north-eaft from Montferrat.
The land is low and fruitful, and the Englifh began to plant it as early as Nevis, Monterrat, or any other of the Leeward illands, St Chriftopher's excepted; for Sir Thomas Warner, who firt fettled there, placed a fmall colony in this ifland ; but the Caribbeans difturbed them fo much, that they were often forced to defert it and their plantations. There bardly paffed a year but they made incurfions; and the damage the Englifh fuftained made them weary of dwelling in applace where they were fo much expofed to the fury of the barbarians, who diminifhing daily in number, and the Europeans increafing, the Englifh again poffeffed themfelves of Barbuda, where there are at prefent about 1000 or 1200 inhabitants.
The proprietary is the honourable Chriftopher Coddrington, Efq; and he puts in a governor here, having the fame prerogative as the other lords proprietaries in their feveral jurifdictions in America.
This ine has bred great ftore of cattle, and the inhabitants employ themfelves moftly in that fort of hufbandry, corn and provifions coming almoft always to a good market in the fugariffands.
There is plenty of all forts of tame cattle, as in Europe, and the Englifh live here much after the fame manner as they do in the counties of England, only their labour in the field is not fo hard as here, the country being fo much hotter.
Anguilla, Anguis Insula, or Snake-Island, fo called from'its figure, being a long tract of earth, but narrow, winding almoft about, near St Martin's, from whence it may eafily be feen. It lies in 18 degrees 21 minutes.
This country is level and woody, the foil fruitful, and the tobacec that grew there formerly was reckoned very good in it's kınd. The inhabitants were originally poor, and do not feem defirous of being otherwife : for they are the lazieft creatures in the world. Some bave gone from Barbadoes, and the other Englifh Caribbee illands, thither; and there they live, like the firft race of men, without government or religion, having no minifter, nor governor, no magiftrates, nolaw, and no property worth keeping, if a French author is to be believed: L'ifle n'eft pas eftimée valoir la peine qu'on la garde, ny qu'on la cultive; the illand is not thought worth the trouble of defending or cultivating: in which, perhaps, the Frenchman is miftaken; for, the foil being good, if an induftrious people were in poffeffion of it, they would foon make it worth defending.
The way of the prefent inhabitants is to take no care for any thing but food and raiment, which are both ordinary enough. They marry after the old falhion of nature: they have no lawyers to put them to the expence of jointures, nor priefts to fee for licences. Though they are poor, they feem perfectly contented, and may be as bappy as the inhabitants of Peru and Mexico.

## Remarks upon Britifh America in general.

As to the feveral conffitutions of the Britifh colonies in America, we fhall give them in the reprefentation of his majefty's board of trade to the houfe of lords, of January 27, 1733-4, which is as follows:

- Many of the Britifh colonies in America, fay their lorufhips, - are immediately under the government of the crown, name-- Jy Nova Scotia, New Hampthire, the Jerfeys, New York, - Virginia, and the two Carolina's, Bermuda, and the Summer c Iflands, Bahama Iflands, Jamaica, Barbadoes, and the Lee-- ward Iflands.
- Others are vefted in proprietors, as Penfylvania and Mary-
- land, and not long fince the Babama's and the two Carolina's.
- There are likewife three charter-governments, the chief of ' which is the province of Maffachufet's-Bay, commonly call${ }^{6}$ ed New England, the confitution whereof is of a mixed na-
- ture, the power being divided between the king and the peo-
- ple, in which the latter have much the greater fhare; for
$\therefore$ here the people do not only chufe the affembly,-as in other - colonies, but the affembly chufe the council alfo: and the ${ }^{6}$ governor depends upon the aftembly for his annual fupporr, - which bas too frequently laid the governors of this province - under temptations of giving up the prerogative of the crown, 6 and the intercft of Great-Britain.
- Connecticut and Rhode-Ifland are the other charter governments, or rather corporations; where almoft the whole power of the crown is delegated to the pepple, who make an annual election of their affembly, their council, and their governor likewife; to the majority of which affemblies, counciis, and governors refpectively, being collective bodies,
the power of making laws is granted; and, as their charters are worded, they can, and do make laws, even without their - governors affent, and directly contrary to their opinions, no - negative voice being referved to them as governors, in the - faid charter. And, as the faid governors are ánnually chefen, their office generally expires before his majefty's ap6 probation can be obtained, or any fecurity can be taken for - the due obfervance of the laws of trade and navigation, and ' hold little or no correfpondence with our office. It is not - furprizing that governors, confituted like thefe laft men' tioned, fhould be guilty of many irregularities in point of ' trade, as well as in other refpects.
- All thefe colonies, however, by their feveral confitutions,
- have the power of making laws for their better government

6 and fupport, provided they be not repugnant to the laws of

- Great-Britain, nor detrimental to their mother country:
- and thefe laws, when they have regularly paffed the council - and affembly of any province, and received the governor's - affent, become valid in that province; but remain repealable - neverthelefs by his majefty in council, upon juft complaint,

6 and do not acquire a perpetual force, unlefs they are confirm' ed by his majefty in council.

- But there are fome exceptions to this rule in the proprietory ${ }^{6}$ and charter-governments; for in the province of Penfylva-
- nia, they are only obliged to deliver a tranfcript of their laws
' to the privy-council, within five years after they are paffed;
c and, if his majefty does not think fit to repeal them in fix ${ }^{6}$ months from the time fuch tranfcript is fo delivered, it is not 6 in the power of the crown to repeal them afterwards. In 6 the Maflachufets-Bay, allo, if their laws are not repealed 6 within three years after they have been prefented to his ma-- jefty for his approbation or difallowance, they are not re' pealable by the crown after that time.
- The provinces of Maryland, Connecticut, and Rhode-Iland - not being under any obligation, by their refpective contitu-
- tions, to return authentic copies of their laws to the crown,
- for approbation or difallowance, or to give any account of ' their proceedings, we are very little informed of what is
- done in any of thefe governments.
- There is alfo this fingularity in the governments of Con-- necticut and Rhode-Ifland, that their laws are not repealable - by the crown, but the validity of them depends upon their - not being contrary, but, as near as may be, agreeable to the - laws of England.
- All the governors of colonies who at under the king's ap-- pointment, ought, within a reafonable time, to tranfmit home
- authentic copies of the feveral acts by them paffed, that they
- may go through a proper examination: but they are fome-
c times negligent of their duty in this particular, and likewife - pafs temporary laws of fo thort continuance, that they have - their full effect even before this board can acquire due no-
${ }^{6}$ tice of them. Some attempts have been made to prevent 6 this pernicious practice; but, the annual fupport of govern-- ment in the refpective colonies making it neceflary that laws 6 for that purpofe fhould pafs from year to year, the affemblies - have frequently endeavoured in thofe laws, as well as in © others of longer duration, to enact proper propofitions, re6 pugnant to the laws and interefts of Great- Britain, of which - this board have never failed to exprefs their difike to the ' crown, when fuch laws have fallen under their confidera6 tion, and many laws have, from time to time, been repeals ed on that account.
- But as to fuch laws as do not diredly fall within the above - rule, againtt which no complaint is made, and where the - board are doubtful of the effect they may have, it has always c been ufual to let them lic by probationary, being fill under ' the power of the crown to be repealed, in cafe any inconvec nience fhould arife from them.
- It has alfo been ufual, when a law has contained many juft - and neceffary provifions for the benefic of the colony where - it was paffed, intermixed with fome others liable to ob-- jection, to let it lie by, and give notice thereupon to the ' governor of the province, that it fhould be repealed, if he - did not, within a reafonable time, procure a new law, not - liable to the fame objections, to be fubftituted in the place ' thereof.'
I fhall add nothing to the foregoing, on the feveral confitutions, or governments, of our American colonies, but proeced to fpeak in general of their trade, as it relates to the welfare and profperity of Great-Britain.
Their chief commodities, we have feen, are tobacco, furar, molafles, sum, cotton, ginger, indigo, aloes, cocoa, coffee,
rice, dyeing woods, drugs, coppers iron, finh, naval fores, timber, lumber, peltry, (lik and wines in time from Georgia, $\& c$.) and moft others in common with Great-Britain: and as our colonies increafe our navigation, take off our manufaclures and fuperfluities, as are ufelefs and a burden at home, they are juftly looked on to be the greateft fupport of the power and affluence of this nation.
But then it is known, that the manufactures, trade, and navigation, of fome of our plantations, do, or may; interfere with the intereft of this kingdom, and in time may prove very prejudicial to it, if notirremediable. Whereupon it has been rightly obferved; 'That, indeed, colonies are the ftrength * of their mother-country, while they are under good dif - cipline, while they are ftrictly made to obferve the funda-- mental laws of their original country, and while they are - kept dependent on it; but that, otherwife, they are worfe - than members lopped from the body politic, being like of-- fenfive arms, wrefted from a nation to be turned againft it, - as occafion fhall ferve.'

It certainly, therefore, concerns the wifdom of the legifative power of Great-Britain to make a frict and fpeedy inquiry into this matter, to remedy diforders before they grow too obfinate, and to put the government and trade of all our coJonies into fo good and found a flate, that every one may have it's due fhare of nutriment, and thereby be the better fitted and difpofed for the ufes and benefit of the whole body politic, efpecially of Great-Britain, their head, mother, and protectrefs.
From the plain narrative which we have faithfully given of the trade and conftitution of the feveral colonies and plantations in America, belonging to this nation, the reader, I hope, will fee the reafonablenefs of what $I$ am about further to fubmit to confideration on a matter fo highly interefting to thefe kingdoms. And firft with regard to our northern colonies, which we fhall take in the fame order we have defribed them. As
Georgia, with which we began. Though the wifhed-for produce hereof in rice, \&c. interferes with thofe of Carolina, that does not render this colony the lefs eftimable to Britain. Provided the Carolina's, in time, fhould furnifh a competent quantity of rice to fupply all foreign markets, as well as Britain and Ireland, ought this to exclude Georgia from it's fhare of this trade? Becaule Barbadoes, as well as Jamaica, produces fugar, and Maryland, as well as Virginia, tobacco, are we, therefore, to give up either for the fake of the other? From a jealoufy on the fide of, the Carolinians, that the Georgians might prove detrimental to their rice trade, it has been imagined by fome, that every artifice has been fecretly practifed by the one, to prevent the profperity of the other. Huw true this may be, I will not take upon me to fay; but this I may fay, and I hope without offence, that it is greatly to be lamented that an injurious rivalhip has not been better guarded againft. If this has really been one principal caufe of the ill fuccefs of Georeia, will it not afford a leffon of admonition not to be flighted? Does it not fhew the neceffity of regulating our colonies fo as that they may as little interfere with the trade of each other as poffible? and that not only in their infancy, but after they have been cherilhed and grown to maturity? Colonies may be prejudicial to a nation in two lights; 1. When they interfere with the commerce and manufactures of their mother country; and, 2. When they fo interfere with each other, that the one or the other mutt be ruined.
Wherefore the policy, requifite to be oblerved in the fettlement of colonies, feems to be, the confideration of what commodities we are obliged to take from other nations, in order to carry on our own trade and manufactures, and to cultivate thofe within ourfelves, fo far as may be no way repugnant to the national benefit. For the maxim of expecting to fell a'l to other nations, and to buy nothing of them, may prove as detrimental as buying all, and felling nothing; thofe pinciples abfolutely deftroying the tie between nation and nation, which is neceflary to their reciprocal fupport. But, when the ballance of trade is apparently much to the difadvantage of a country, it is wifdom to endeavour to maintain the fame at leaft in equilibrio, if it cannot be turned in favour of the fuffering nation. Upon this maxim it was right to think of the raifing of filk in Georgia, becaufe we are abliged to take large quantities of other nations, in order to carry on that branch of manufacture, and of fuch nation too as does not take a quantity of our commodities any way equivalent to what we take of them. If, therefore, there be a poffibility of fupplying ourfelves wholly, or in part, with filk from our own colonies, ought not every reafonable meafure to be tried to accompligh it? Or is it becaufe Carolina produces a trifle of filk, that Georgia is to produce none? Or is it that we muft be fo complaifant to an Italian prince, to throw away $300,000 \mathrm{l}$. a year, for fear of difobliging him; and, therefore, never attempt to fave fuch out-goings of our cafh? If the truth is, that the climate, after all, will not admit of this production, has not the nation, for many years, been fome how fhamefully abufed, not to fay any thing more fevere? For, in the year 1739, did not Mr Augfpourger, a Swifs, bring over to England a parcel of raw filk from GeorVoz.I,
gia, and depore before a mater in Chancery; That he res ceived it from Mr. Thomas Jones, the truftees ftore-keeper at Savannah, who affured him that it was actually the produce of Georgia? And was not this identical filk hewn at the truftees office, to Mr Danicl Booch, one of the greatell filkweavers in this kingdom; and, alfo, to as eminent a raw filk merchant as any in it; and did they not both deciare; that it was as fine as any Italian filk, and worth at leaft 20 flillings a pound? If I am not greatly mitaken, the latc Sir Thomas Lombe likewife bore teftimony in favour of the filk of this colony, or what was reprefented to him for fuch. And have not the teftimories of thofe gentlemen induced the nation to contribute large futris of money to bring this defign effectually to bear? If filik of the quality abovementioned has, bona fide, been produced in Georgia, why baye not quantities of it been produced; after fo great an expence to do it? Or, if this was an accidental thing, and a very expenfive fingle experiment only, why were not the public made fenfible of every circumftance attending it, that they might not have thrown fo much money away on fo precarious a foundation? But, if filk will not anfwer here in quantities, why hould not rice, or vines, as we have been allo told?
The hiltory of the northern colonies furnifhes is with but too many inftances of the ruin of their advanced fetelements; from their leaving fo large a country as this ūncultivated and uninhabited, for fear of being too near neighbours to the Spaniards or the French. The importatice of this fettlement muft certainly appear, when it is conffered, that it has proved a good expedient for engaging the Indian nations in it's intereff, which inhabit the vaft countries to the weft of Georgia; efpecially confidering the views which the French have had of the fame kind, who thought in a litile time, to have compleated that chaiu of correfpondence; and, indeed, of contiguity, between their colonies of Canada and Louifiana, on which their being formidable to us in North America abfolutely depended; fince, if they had finifhed it, they would have furrounded all our colonies on the continent, from Nova Scotia to Georgia: but, by the fupport of this fettlement on the one fide, and Nova Scotia on the other, has not this contributed fomething to break the link of their intended chain, by ingaging in our intereft occafionally thofe very Indian nations that have been capable of doing them fervice, and injuring ourfelves; particularly the faithful and heroic nations of the Upper and Lower Creeks? If it Chould not be poffible for this colony to anfwer the great ends which we have been told it certainly would, mult it not give thefe Indian nations the meaneft opinion of our underftandings, and the higheft of thofe of our late rivals on the Miffilippi, who we fuffered to deffroy our allies the Nautches, and other Indians, who inhabited near the French fettlements?
Thefe confiderations are fufficient to make the Indian affairs deferve the moft ferious attention of every colony in North America.
The Indians are faid to be a poor, and generally called a barbarous, people, bred under the darkeft ignorance; yet a bright and noble genius difplays itfelf through thofe dark clouds. None of the greateft of Roman heroes have difcovered a greater love to their country, or a greater contempt of death, than thofe people called barbarians have done, when liberty came in competition. Our Indians have, indeed, outdone the Romans in this particular $;$ fome of the greateft of thofe we have known to murder themfelves to avoid fhame or torments; but thefe Indians have refufed to die meanly, when they thought their country's honour would be at flake by it; they have given their bodies willingly to the moft cruel torments of their enemies, to hew, as they have declared, that the five nations in particular confifed of men; whofe courage and refolution could not be thaken. But it muft be faid, to our eternal chame, that we Chriflians have debauched and vitiated the honelt natural morals of thefe people; we having not only bafely defiauded and over-reached them, in our way of traffic, by difhoneft weights and meafures, but we have not always duly protected them as friends and allies againft our common enemies. While our rivals in trade purfued meafures diametrically oppofite; while they ufed every art of policy, juftice, and generofity, to gain over thefe people to their intereft, and we were guilty of injuffice and meannefs towards them, it is no wonder that their affections fhould, in time, be alienated.
In giving my fentiments upon this colony, fome people may, poffibly, imagine that I would infinuate more than I really intend ; and, therefore, before I leave this matter, I think it my duty to declare that I mean no kind of refection on the conduct either of the original truftees to this colony, or their fucceffors, they having generoully fupported the defign with their purfes, their perfons, and their influence. Nor would I be underftood to throw the leaft blemilh upon the character of that worthy genteman who fo zealoufly hazarded bis life upon this occafion. But it is too often the fate of the honeft man to be impored on, or not duly fupported according to his public-fpirited intention. No man can entertain an bigher opinion of the wifdom, as well as the honour, of thole gentlemen who have had the management of this affair : I cannot help thinking, however, but their zeal for their coun-

5 A
try's
try's intereft mult have over-powered their knowledge, when they thought to eftablifh fo important a colony by charitable contributions, or by mean and piece-meal lupports, which hitherto it has only had. I fhould be forry to view this point in a different light from my fuperiors in judgment, yet I cannot help thinking that this colony has been of much more concernment to the nation than many may imagine. $1 t^{\prime}$ 's fituation, I conceive, plainly hews what a guard it may be made againt the Spaniards; and it's capital, Savannah, being diftant from Charles-Town no more than 77 miles fouth-weft, in a direct courfe, and north-weft by eaf about 150 miles from St Auguftin, the capital of the Spanifh Florida, which is the greateft bar to the Britifh trade between this province and the bay of Mexico. Has not Georgia, therefore, been the frontier of all our colonies on this fide North America ? What a check this fettlement, when powerfuily fupported, would be, not only to the Spanilh navigation to thofe parts, but the French attempts for incroaching on the Miffifippi, muft be fo obvious to all who are acquainted with thefe matters, that I fhould have thought it needlefs to have faid a word about it, did I not obferve an unaccountable lukewarmnefs on fo interefting an occafion.
If we can neither raife filk nor rice in Georgia, or if fuch produce fhould be thought to prejudice Carolina, will this territory produce no other articles of commerce, which do not interfere with that valuable province! Will not hemp and flax grow in this climate? Is there no pitch or tar, nor any naval ftores, to be had from this colony? Are there no ftately pines there, no pot-afh n $_{2}$ no furs, or other trafficable ikins, to be had from thence? We are greatly deceived if bees-wax, myrtle-wax, bears-oil, leather, drugs, and dyers wates of divers forts are not produced here.
The neceffity of cultivating a ftrict friendihip with the Indian nations in general, for the prefervation of our colonies, from Georgia to Nova Scotia, is at prefent fo well underftood, that it may be thought impertinent to urge a word on that head: fo it would be, did not a late map of the French dominions in that part of America, publifhed in France by au thority, make it advifeable to to do, and more efpecially, fince the fame has been induftrioully propagated in this kingdom, with a view to deceive every Briton in it : I mean the map' publifhed at Paris by Monfieur D'Anville, in the-year 1746, intited Amérigue Septentrionale, publiée fous les aufpices de Monf. le duc d'Orleans, premier prince du fang; wherein the author has taken upon him with ink and parer to excife a confiderable part of the Brition dominions in North America, and very modefly tack it to thofe of his grand monarch.
That this Frenchman may not be mifled by his fuperlative zeal for his country's intereft, we have taken the liberty to return Monfieur the compliment in his own way, and, therefore, have prefented him with* another map, pointing out fome few hundied leagues wherein the learned gentleman has happened to be miftaken. And
If the learned author would chufe to fet bis Court right upon" this occafion, we defire that he would not only perufe the various charters belonging to the Britifh colonies in North America, but likewife the compacts and treaties made between the Englifh and Indian nations, whofe land they have obtained either by fair purchafe, free gift, or in confequence of honourable alliances.
That our readers, however, may have fome fatisfaction at fo critical a conjungure, we defire they would not reject the fentiments of a noble lord, whillt the famous treaty of Utrecht was upon the tapis. 'I hope, faid he, that Canada, which ' we miffed gaining in war, will be reftored to us at the - peace now in agitation, and that Annapolis Royal, which - we have recovered, will, with the whole country of Nova - Scotia, as far eaftward as the inland of St Paul, for ever re-- main to the crown of Great-Britain. They originally be6 fonged to it in fact, and do of right now.-All that coun' try, on both fides of the river St Laurence, was feized for - the crown, about the clofe of the fifteenth century, by Sir - Sebaftian Cabot, grand pilot to our king Henry VII, and - by him fent to find out fuch parts of North America as were - left undifcovered by Columbus. The French pretend, in-- deed, to a difcovery of it by John Verrazan, a Florentine, - but this was in ———, which, being of a later date, could - give the French king no right to it. King James I, there-- fore, knowing his tile to be good, did, in 1621, make a - grant of this country to Sir William Alexander (afterwards - earl of Stirling) who fettled a colony there by the name of - Nova Scotia, and held poffeffion of it feveral years. Yet, - upon the marriage of king Charles I. with the lady Hen-- rietta Maria, it was, by order of the king, given up to the - French. In 1627 and 28, we got it again, and the north - fide of the river called Canada was given to Sir David Kirk, - who was both proprietor and governor. And the fouth fide - (called by the French Acadie) fell again into the hands of - Sir William Alexander. In 1632, it was given away again, - though the king, when he found the French had poffeffed - themfelves of the whole country, declared publicly, that - he had given away only the forts, and not the foil, and, 6 therefore, attempted to recover it again, but failed: be-

6 fides, the king of France obliged himfelf to pay, in lieu ot the forts, 5000 l. to Sir David Kirk, which he never did; - and his family was thereby ruined.

Cromwell, weighing the premiffes, fent colonel Sedgwick, in 1654, and retook it; and when he made peace with - France the following year, and their ambalfador made preff' ing inftances for the reftitution of it, yet he would not part ' with it, infifting that it was the ancient inheritance of the - crown of England, and did of right belong to it. Where، upon Mr St Eftcount, fon and heir to M. Claude de la Tour, - a French refugee, who bought Nova Scotia of the earl of 6 Stirling, came over into England, and, making out his title, 6 had it delivered to him, and then fold it to Sir Thomas - Temple, who was governor of it till the Reftoration; foon ' after which, king Charles' delivered it up again to the

- French, and Canada with it, where they both refted, to ' the unfpeakable lofs and detriment of the crown of Eng' land and the plantations, 'till colonel Nicholion lately re' covered the former.-From whence it is evident, that both
- Canada and Nova Scotia were the ancient inheritance of
' the crown of England. The only queftion is, whether the
- kings of England had power to alienate thefe countries,
' which, béing incorporated into the crown, were parts of the commonwealth, and defcended to them from their ancceftors? The civilians, and all that have wrote of the law - of nations, have eftablifhed it as a rule, Non alienandx funt ‘ imperii partes. They exprefsly fay, That'a prince can no more alienate any part of his dominions, than the people - may renounce their obedience. Thus Baldwin, Molina, Bodin, Mattheus Parifienfis, Grotius, and Puffendorf. And,
- for our own laws, Sir Robert Cotton, in his preface to The
- Abridgment of the Rolls in the Tower, obferves, That
- our parliaments have, in all times, been careful to refume
- lands alienated from the crown, which they condemned as ' an undue practice, and, therefore, re-united them. If then - it was wrong to difpofe of lands that were the patrimony of - the crown, how much more fo mult it be to give away the - fubjects property, and to alienate part of the empire to a 6 foreign power? If the former were to be inviolable, then - the latter, à fortiori, muft be facred and unalienable. If - it be pleaded, that thefe countries came to the crown by ac' quifition, and, thercfore, may be difpofed of at pleafure; - I reply, fure, that they were not aequired by Charles the - Firft and Second, but came to them both by hereditary de-- fcent : and further, that, if acquifition gives a right of alie' nation, then it is within the prerogative to give or fell Ire-
- Jand, and all the plantations, to any potentate in Europe,
- which I believe no lawyer in Great-Britain will give under
- his hand for law.-- Our title appears equal on both fides of ' the river of St Laurence, that is, Canada on the north, and - Nova Scotia, or (as the French call it) Acadie, on the - fouth. But I mult beg leave to fay, that, in point of in-- tereft, the later is of more confequence to the crown than ' the former: for, when that is in the French hands, it is a ' bridle to the eaftern parts of New England, where the tall ' pines grow, which are yearly brought home in the maft-- flect; and, indeed, where there is fuch a valt quantity of 6 naval ftores, of all forts, as is not to be found in any part ' of the world. I conceive, therefore, that, feeing naval - ftores'are growing fcarce and valuable all over Europe, and - the frength and glory of our nation depends upon them, ' and yet we are at the pleafure of the Rufs and Swede, whes ther we Thall have them or no, and that at their own ex' celfive prices *; furely we fhould take care to fecure what - we bave in America, as an ineftimable treafure. Befides, 6 if we fhould leave this country to the French, we fhall be ' defeated of our ends in turning them out of Newfound-- land; for they will here find as good a fimery as they left - there, and infinitely better harbours, and, confequently, 6 will fill be able to bring their fifh to Europe, and damp ' our markets, as formerly; and we fhall have one fatal dif' advantage more by the bargain, in that we remove them ' from the ifland to the continent, where they have more 'room to fpread and increafe, to the terror of her majelty's - fubjects. In a word then, if we do not effectually pre-- ferve and maintain every inch of land which is compre6 hended under the province of Nova Scotia, our naval ftores ' are gone, our fifhery is extremely hurt, and we lofe the only ' opportunity which we probably may ever have, to eftablifh - the peace and fecurity of all the flourihing Britifh colonies - on the continent ; which I hope her majefty and her mini-- Atry will, in their wifdom, confider."
* The Swedes, in the ycar 1710, eftabilihad a monopoly of pitch and tar, and had their factories at London and Lifbon, sic. and fent the fame in their own hipping to forcign markets, and fet their own price upon it; which firl induced the pailiament to think of encouraging thefe tiings by a'bounty in our own plantations.

Another gentleman of good knowlege and experience, has fince alarmed us much more, and, I fear, not without great and urgent caufe. "The French, fays he, whom all the - world acknowledge to be an enterprizing, great, and poli-- tic nation, are fo fenfible of the advantages of foreign colo-

6 nies, both in reference to empire and trade, that they ufe - all manner of artifices to lull their neighbours afleep with - fine fpeeches and plaufible pretences, whilf they craftily - endeavour to compafs their defign by degtees, though at - the hazard of incroaching on their friends and allies, and - depriving them of their territorics and dominions in time - of profound peace, ahd contrary to the moft folemfi trea6 ties-For, befides their feizing on, and fegling the great tiver Mefchaceb (or Miffifipi) and fome part of the forth - fide of the bay of Mexico, and the claim they leem clan-- deftinely to make to another of our inbabited fofthern co-

* lonies adjoining the eunto, they, in fome of their writings, - boalt, that their colony of Louifiana hath no other bounds - to the north than the Arctic Pole, and that it's limits to the - weft and north-weft are not known much better, but ex-- tead to the South-Sea, Japan, or wherever they fall think * fit to fix them, if they can be perfuaded to fix any at all; ${ }^{6}$ intending thereby to deprive the Britilh nation of all that - valt tract of land fituate between the gulph of Mexico and - Hudfon's-Bay, which includes our province of Carolina,
- (which the French have confidently called Louifiana) the - great lakes, and the whole country of our five Indian na-- tions, with the fur, peltry, and the other trade thereof.
- We are ail fenfible what clamours were raifed at the con-
- ceffons made to France, on the conclufion of the peace of - Utrech. There is fcarce a man well verfed in the intereft - of trade and plantations, but blamed the then miniftry, for - not infifting on the furrender of Canada, as well as Nova - Scotia and Newfoundland, for the fecurity of our northern colonies on the continent of America, and the traffic there-
- of; nor ought they to have allowed them the poffeffion of
- Cape Breton, if they had well confidered or underftood the
nature of the fifhery in thefe feas.
- The hiftory of former ages, and the experience of thefe
- latter times, have informed us, that the French have ever
- been troublefome neighbours, wherefoever they were feat-
- ed : Miftorians afferting, that the natural levity and reft-
leffnefs of their temper, their enterprizing genius, and ambition of extending their dominions, and raifing the glory and grandeur of their monarchs, contribute in great meafure to make them fo. - Wherefore, it is to be hoped, - that the Britilh nation will be fo far from continuing idle
- fpectators of the unreafonable and unjuft ufurpations and
- incroachments of the French on the continent of Americe,
- that they let them know they bave enough already of Ca-
- nada and Cape Breton; and that 'tis expected they aban-
- don their new acquifitions on the Miffiffippi and the bay of
- Mexico, that river and country belonging of right to the
crown of Great-Britain. And, I believe it will fcarce be
- denied, that, at prefent, whilft they are weak, and in the - infancy and confufion of their fettlements in Louifiana, we
- have a much better chance, and are in far better circum-
- fances to put in our claim to, and difpute the right and - poffeffion of, that and other lands, than we fhall be fome
years hence, when they have augmented the number of
their inhabitants, debauched the natives to their party,
- and farther ftrengthened themfelves by fecuing, with forts
and garrifons, the pafles of the rivers, lakes, and moun-
- tains, even though they fhould not have obatined any ad-
vantage over the Spaniards, or enriched themfelves with the wealth of Mexico.
I muft acknowledge, that, in cafe the Britifh nation Thould be to far infatuated, as not to affert their right to this fo - noble, and to them fo ufeful and neceffary, a colony, and
endeavour to regain the poffefion thereof, or fecure at
- leaft, fo much of it as lies on the back of our plantations,
as far weltward as the Miffiffipi, it would be much more
eligible, and for their intereft, that the Spaniards were ma-
- fters of it than the French; we not having fo much rea-
fon to apprehend the fame danger, either to our colonies,
- trade, or navigation, from the firt, as from the laft;
though I am far from admitting the ceffion of it to either
- of them, on any terms whatever, without an abfolute and apparent neceffity.-And I am apt to think, that prodence or palicy will, or ought to prompt us to keep a ballance of power in America, as well as nearer home; and that, as - we have', for above thirty years paft, found it our intereft to check and put a fop to the growing power of France, and fet bounds to their dominions in Europe, we fhall not eafily be induced to allow them to incroach on, and deprive us of our colonies and plantations in America.-The
- Spaniard's are faid to be very uneafy at the fo near neigh-
- bourhoad of the French on the Miffiffpi, and are, per-
- haps, more jealous of the confequences thereof than we - are, though not more than we ought to be; and 'tis prefumed, that, on a proper application and encouragement, 6 they'll join with us to oppofe and difpoflefs them of their - fettlements there, and on the bay of Mexico, left they ren-
- der themfelves fole mafters of the navigation thereof, and, with the affifance of the Indians, make irruptions into the - very heart of their colonies, attack their towns, feize their " mines, and fortify and maintain themfelves therein."
Before we leave the continent of America, it may not be improper to obferve, that the town of Annapolis Royal in Nova

Scotia is reckoned as a barrier to the cplonies of New England, and is of the laf importance to prevent the French joining, in time of war, with the caftern Indians, either by land or fea. In queen Ann's war, white this place was in the hands of the Frerich, it actually was, as the ingenious Mr Dummer jufty files it, the Dunkisk of this part of the world ; continually harbouring fleets of privateers and French cruizers, to the ruin of the filheries, and foreign trade of al the Britig northern colonies; and which will inevitably be the cafe, if France is ever fuffered to obtain any part, or the whole of this important colony, efpecially fince they are poffefled of Cape Breton, In 1744, after the French from Cape Breton had taken and burnt Canfo, at the eaft end almoft of Nova Scotia, their Indians alarmed Aniapolis for a month together, by threatening a general affault, and providing fcaling-ladders, but, the garrion happening opportunely to be reinforced, they retied.
Canfo is a place exceeding convenient for receiving fuccours from France. The harbour is about three leagues in breadth, and confilts of feveral illands, whereof the biggef, which is the middlemof, is near four leagues in compafs, having a fruitful foil, well watered and wbeded. It forms two bays with lafe anchorage, and in the continent, which is very near it, there is a river called Salmon river, becaure of the great plenty of tiofe fifh that are caught there. In hort, the fifhery here is reckoned one of the beft in the wotld. And fo imperious have the French been, that they would nos fuffer any Brituilh fubject to catch or cure fifh here, without paying for a licence from the governor of Cape Breton, though the French have no fort of right to any of thofe iffands or harbours.
Wherefore, the near neighbourhood of Cape Breton to our colony of Nova Scotia is of itfelf fufficient to alarm us, without fuffering them to incroach-an inch upon this our Dunkirk of North America; which would fo add to the ftrength of the French, and weaken that of the Englifh there, that we fhould ever be liable to infults, and our polfeffions thereby renderedever precarious. But,
By the treaty of Utrecht, article the XIIth, The French king hath yielded to the queen of England, and her fucceffors for ever, all Nova Scotia, or Acadia, withall the ancient boundaries, as allo the city of Port Royal, now called Annapolis, and all other things in thofe parts, which depend on lands and iflands, with the dominion, property, poffeffion of the faid illands, lands, and all rights whatoever, by tieaty, or by any other way obtained, \&c. To which the French king added the exclufion of the fubjects of France frem filting on the coafts of Nova Scotia, and within thirty leagues, beginning from Cape Sable, and ftretching along to the fouthweft *. And here it is very neceflary to obferve, that though the reflitution of Cape Breton to the crown of England was, doubtlefs, implied in the terms of this article, as well as that of Nova Scotia; though Cape Breton was always reckoned a part of Nova Scotia, and therein included by the patents; though queen Ann, in her inftrutions to the fate duke of Shrewfbury, when he went ambaflador to France, declared, that he looked upon Cape Breton to belong to her, as a part of the ancient territory of Nova Scotia; yet, by the I $3^{\text {th }}$ article of the treaty aforefaid, the Englifh were batefacedly tricked out of this important, place, which was treacheroully given up to the French, and they were fuffered to keep it, 'till it was taken in the late war by the force of New England, and given to France again, by the late peace made at Aixla Chapelle.

* The article in the treaty of Utrecht, whereby Nova Scotia, or Acadia, is made over by the French to the crown of Great-Britain, is as follows:
- The moft chriftian king fall take care to have delivered - to the queen of Great-Aritain, on the fame day that the - ratifications of this treaty thall be exchanged, folemn and authentic letters, or inftruments, by virtue whereof is - Shall appear, that the ifland of St Chriftopher's' is to be - poffe.fed alone heereafter by the Britilh fubjeets, likewife - all Nova Scotia, or Acadia, wih je's ancient bounda-- ries, as alfo the city of Port Royal, now called Annapolis - Royal, and all other things on thefe parts, which depend - on the faid lands and iflands, together with the dominion - propriety and poffefion of the faid iflands, lands, and - places, and all right whatfoever by treaties or by any other - way obtaified, which the moft chriftian king, the crown - of France, or any the fubjects thereof," have hitherto had - to the faid iflands, lands, and places, and the inhabitants - of the fame, are yielded, and made over to the queen of - Great Britain, and to her crown for ever, as the mort chri-- Alian king doth, at prefent, yield and make over all the - particulars abovefaid; and that in fuch ample manner and - form, that the fubjects of the moit chritian king thall - hereafter be excluded from all kind of tilining in the faid - feas, bays, and other places on the coafts of Nova Scotia, - that is to fay, on thofe which lie towards the ealt, within - 30 leagues, beginning from the iffand commonly called - Sable, inclufively, and thence ftrecching along towards the - fouth.well.'

The province of Nova Scotia, (known in the French map under three denominations, viz. Acadia, Gafpalia, and Main)

Fias been conquered by France from England ; re-conquered by England, from France again; ceded by England to Hirance by treaty; and fully, we fee, receded again, by France to England, by the treaty of Utrecht, for the laft time, without teferve of any part or parcel whatfoever.
If that nation fhould obtain more than their right in this part of America, they may, with the contiguous colony of Cape Breton, \&c. be rendered more powerful in America, than all the other acquifitions the has hitherto ever made there, can poffibly do; becaufe it may for ever fecure to her a fuperiority in the fihery there; fecure the whole fur-trade of the northern part of this continent; afford her feveral of the beft ports, harbours, and materials for building fhips of the greateft force, from whence they may be immediately launched into the ocean ; inftead of their being brought with great difficulty down the river St Lawrence: and, with thefe additional advantages, France will be ever a terror to all our northern colonies upon the continent; and how this mult affect our ifland colonies which depand upon them, is much eafier conceived than can be reprefented.
Befides thefe acquifitions obtained by France, to the prodigious benefit of that nation, and the no lefs difadvantage of our own, have they not turned their eyes alfo to the Miffiffippi, having a view, according to their royal map-maker, of no lefs extent, than to have a communication of commerce from the river St Lawrence to the bay of Mexico? An extenfive defign, indeed, but what will not an all-grafping, reftlefs, and infatiable court aim at? Is it out of our power to check their career, in thofe mighty ftrides to dominion? Our Carolina, Atretching to the mouth of the Miffiffippi, if the country be duly pofleffed and fortified, and proper alliances were made with the Indians, could not that river be rendered ufelefs to them?
As to their title to the country bordering upon that river, 'tis as great a jeft, as their confident pretenfions to lop off a part of our Acadia, or Nova Scotia. Grants from crowns of lands that never were before heard of by the granters, are of no more confideration in juftice and reafon, than the legacies in Diego's will : but, even according to this title, the Englifh have a prior right to the French in the Miffifippi. King Charles the Ift granted all the country between Carolina and that river to the fouthward, which was called Carolina. Sir Robert Heath and his affigns alienated it to the late Dr Daniel Cox, who, in king William's reign, fent two Mips to the Miffiffippi, with 200 people, to make a fettlement; over whom Sir William Waller, fo active in the difcovery of the popifh plot, was to have been governor. Is not this a plain proof, that the Englifin have heretofore at leaft as great a right to the Miffigippi as the French, at leaft to a good part of it, that which lies on the back of Carolina, and extends to the iver's mouth in the bay of Mexico.

## Remarks.

The above contains a fuccinct ftate of the conflant complaints of the wifeft, and honefteft part of this nation, with relation to the precarious condition of our commercial affairs in North America, ever fince the Treaty of Utrechi. But,
The Definitive Treaty of 1763 , has fecured to the crown of Great-Britain, more effectually than ever was done before, all our colonies and plantations upon the continent of America. For all French poffeffion in Canada, and all its Dependencies, and Cape Breton itfelf, the Island of St John, and all Acadia, and its Dependencies, \&c, \&c. are all now abfolutely annexed to the crown of GreatBritain, and that in the moft plain, clear, and unexceptionable manner that words can exprefs the ceffion of fuch acquifitions; and they are guarantied to this nation by the French themfelves, as well as Spain and Portugal, purfuant to the faid Definitive Treaty.
By this treaty, we feem to have rectified all the miftakes, of the Treaty of Utrecht, which have been fo univerfally lamented by the nation ever fince that period. By poffeffing ourfelves of Cape Breton, the Island of St John, and the other Islands in the Gulph, and river St Laurence, $8 \mathrm{cc}, 8 \mathrm{xc}$. and leaving the French no other poffeffion in this part of North America, than thofe of the very trifing inlands of StPeters and Mreuelon, as a thelter for their fifhermen, and this to remain unfortified likewife, fhould feem to put it out of the power of France, to entertain any hopes to be able to difturb or annoy us in thefe parts for a long time; unlefs we fhall fhamefully neglect to fupport and maintain, in the moft effectual manner, all our NEW ACQUIEITIONS obtained by this late treaty. If indeed, we do that, it will leave an eternal ftain and ignominy upon the nation; and it is to be hoped, that fuch men, who thall dare to do fo, will pay for it, with the terrors of the axe, or a gallows. Should France attempt again to difturb our tranquillity in thefe parts, there will now be very little difficulty to exclude them for ever from all liberty to finh on the Banks of Newfoundland; and therefore, I can hardly fuppofe to myfelf, that fo politic a nation will foon run the hazard of fuftaining fuch a further additional lofs to their trade and navigation.

As the fafety of the colonies on the contincnt belonging to Great-Brittain, feems fo well fecured on the Gulph and river of St Lawrence, and in all this part of North America; folikewife do they appear to be no lefs fecured on the Gulph of Florida. For by annexing East and $W_{\text {Lst }}$ Florida to the crown of England, and fecuring to ourfelves by the fame treaty, the port of St Aucustiñe, and Pensacola, and Morille, as well as the Right of Navigation into the Mississippithrough the Gulph of Mexico: by obtaining thefe points, we have fccured as good a Barrier to the fouthern parts of our continental colonies; as we have done to their northern parts by the polfeffion of Cape Breton, and of Canada, and all it's Derenden. cies. And it looks very likely that the French will not foon be in a capacity to annoy us by their navigation in the Gulph of Mexico to the Miffifippi, any more than in the Gulph of St Lawrence. For if they fhould attempt a frefh rupture with us foon, they run the rifk of lofing NEW Orleans, and their liberty. of navigation in the Mifficfippi by means thereof; our fettlements on the Florida Coast, even at Pensacola itfelf, enabling us to extirpate the French entirely out of the Gulph of Mexico. If the Spaniards fould again join them upon fuch an occafion, they alfo are now more likely to repent it than they did by engaging with them in the laft war ; by reafon that we being in poffeffion of Fiorida, are the better able to refent fuch treatment on the part of the Spaniards, than we were before Florida, and the ports of Pensacola, and St Augustine were annexed to the British crown. By the affiftance of thefe ports and poffeffions, together with the Bahama Iflands, Georgia, and Carolina, we are now in a better capacity to obftruct and annoy the SPanish commerce through the Gulph of Floridá. See the articles Bahama Islands, and Florida. If the Spaniards do quartel with us again, they may probably once more experience the lofs of the Havanna; which, if it thould happen again, the court of England may chufe to retain inftead of reftore it, fince in that cafe, the Spaniards might be at a lofs to give us an equivalent. So that we are inclined to think, that Spain would not ealify or foon be induced to join Francer againft Britain, they both being far more likely to be lofers than gainers by fo doing, unlefs England Chould be flamefuly remits in her affairs, and neglect to make the molt of the advantages the has obtained over them by the Definitive Treaty. All our American colonies, as well as our Iflands, Jamaica in particular, are rendered far more fecure than they ever were before. - Thefe things, we think, muft be obvious to every man of candour.
Having traced the meafures and fuccefs of France in regard to this part of Britifh America, it may be time to take a view of what further ftrides they have made, to ftrike at the root of our fugar-iflands, and others, which are alfo fituated in the new world. Upon this occation, I fhall not, at prefent, take a further retrofpection than from 1706 , when Louis XIV, having himfelf formed a fcheme to take the colony of Jamaica, the beft of our fugar colonies, and fent for the famous $M$. Mefnager, as he lays in his Secret Memoirs, 'to draw it up ' in form: when the fcheme was, after feveral alterations, - brought to pleafe the king, he told me, fays Mefnager, he - was extremely fond of that defign, and afked me if I was - willing to go to the king of Spain with it? I made his ma-- jefty fenfible, what an honour I fhould efteem it, to be fent to any part of the world where his fervice required : I think, 6 faid the king, nobody is fo able to tell my grandfon, the - king of Spain, my thoughts in all the patticulars, as you, who - have feen all the alterations, amendments, and additions, * we have made, and know the ground-plot of the whole. - -Accordingly I went to Madrid, and laid the fcheme before ' the king of Spain. But, when he came to debate it in his ' council of ftate, they were fo backward, fo ignorant, con-- ceived fo ill of the defign, and raifed fo many difficultiss, - that I was obliged to fend his majefty word, I thought the - Spanifh court capable of doing nothing for themfelves. The - king was exceedingly vexed, that his propofals were not - received with fo much readinefs as was expected, and callh ed me home again, which I was very well pleafed with; - nothing being more difagreeable to any man who has lived - in France, and efpecially at court, than that ftiff, haughty, 6 unconcerned way, that the Spaniards do all their bufinefis - with.

- This project was in fhort thus: The king propofed to fend - fourteen men of war of the line to the Spanifh Weft-Indies, - to attack the Englifh colony of Jamaica: his Majent's mea-- fures were, that the fhips hould rendezvous as Cadiz, - there to take in provifions, and as many Spanifh feamen, ' as could be had there; from thence to proceed to the Ha-- vanna. This the king ordered, becaufe it would amufe the - Englifb, who would not imagine that the defigp was fo far - out of the way.-The Spaniards made a difficulty of every 'thing; they fpent three weeks in getting over the method - to prevent the Spanilh merchants going to America in our - fhips without licence, and would have had me gone back ' to l'aris for the kirg's band to an engagement, that the

## B R I

## B R I

- French fhips dhould carry no European merchandize with " them ; nay, they would have had the king's mell of war - fubmit to be vifited by the cuftom houfe officers. Then - they fcrupled admitting the men of war into the port of - Havanna, for fear, I fuppofe of, feizing it for the king of - France; as if, when the king had given the king of spain a kingdom, he would have attemped to take fome of it - again from him. - Tired with this impertinent flownefs in - their proceedings, and with the unperforming temper of - the Spaniards, the king, as I faid, gave over the beft de-- fign that was ever laid of that kind, and which could not have failed to have anfwered the end, had no uncommon difafter befallen it from the elements; for, as to the ene* mies, there was no fear of any preparation they could make, becaufe there was no poffibility of their having any notice of it.
- The fhips, as I have faid, were to have their rendezvous at Cadiz, and were to have 6000 men on board of regular troops, to whom the Spaniards were to join 2000, with 20 itariforts; and, after the rendezvous at Cadiz, they 6 were to fail from thence to the Havanna; becaufe it was - his majefty's opinion, if they went to Martinique, or $\mathrm{St}_{4}$ - Chriftopher's, the Englifh would have notice of them, and would immediately arm on all hands to oppofe them; but, as the Havanna was a Spanifh port, between which and the Englifh iflands there was no opportunity of intelligence, it - was the king's opinion, that it was eafy for the fleat to lie - there, and be joined by the other fhips which fhould come - from Martinique, \&c. and the Englifh have no knowledge " of it; which was, indeed, very reafonable: the king's - orders were then, that they fhould rend an exprefs to the - faid colonies at Martinique, to join them with all the armed Cloops, or other fhips they had, and, in a word, with all - the force they could raife, which, as the king faid, he expected fhould be near 4000 men more, with fhips and floops enough to carry them, without reckoning three men - of war which were there already; and, as the king ob-- ferved, he was fatisfied that the 4000 men from Mar-- tinique and St Chriftopher's would be much fitter for fervice, than the 6000 from Europe; for of them his majefty faid, he fhould always expect one half to be fick. With this force, the king's meafures were, that they fbould © fail from the Havanna directly to Barbadoes, and come to - an anchor directly in the road; from whence they were to alarm all the reft of the Engliif iflands, and, by making - preparations to land, they hould at leaft prevent any force from being fent from thence to Jamaica, where the main defign was to make a defcent : after fome time, the whole - army and half the men of war were to fail to Jamaica which is all with a trade-wind and fea-current, leaving - feven or cight men of war at Barbadoes, to keep them - alarmed : the forces were to go directly on thore, and at-
- tack the forts at the point, which there was no doubt, after a hhort battery, they would take fword in hand; after which the whole illand would be reduced of courfe, toc gether with it's booty in merchandize and negroes, which would be immenfe.
- The king was fo wrapt up in this project, that it was no - wonder if he was very much difipleafed with the Spaniards,
- that they had not an equal paffion for it, when it was pro\& pofed by me: and, when I brought his majefty an account of their behaviour, he faid, They are the moft ftupid wife ' people in the world. However, the king, continues $M$ - Mefnager, did not lay afide this project, though he left out - the Spaniards in the execution, and though he changed the sature of the attempt and fcene of action, which was re-- moved to Nevis, \&c. There the enterprize was carried on - with good fuccefs, and our admiral (Ibberville) landed, deftroyed, plundered, \&c. and befides the other booty taken, - and the fpoil done to the enemy, our men took as many - negroes from the Englifh, as they fold afterwards to the Spaniards for 400,000 pieces of eight.'
Though the French have not gained any great point of us by victory, they have by intrigue and treaty duped us in our greateft, our commercial interefts; for the French incroachment on St Domingo, being ceded as a right, was thought of little confequence, but it has proved fuch, that both Spain and Britain have jult reafon to repent to this day; fince, by that means, the Spaniards of that ifland are become little better than hewers of wood and drawers of water to the French; and our trade to Jamaica has feit feverely the eftablifhment of fuch a power, in the tract of navigation through the windward palfige to Europe.
Before the treaty of Utrecht was ratified, and in the very interval between the ceflation of arms in Europe, and the time it was to take effect in America, a French fquadron was cquipped and difpatched privately, to invade, take, and defroy the Britioh Leeward Illands, as the much envied rivals of Fiance in the fugar-trade; and firft Antigua was the deffined facrifice, as the principal, and moft important of thefe iflands to Britain, for it's excellent harbours and fituation in the tract of navigation to the other Leeward Illands, and to Jamaica But Monf. Caffart, who commanded the expedition, failed in the attempt, partly by the vigilance of the inhabitants, and
Val. I.
partiy by fome lucky accidents, but not by our naval power and, afterwards attacking Monterrat, he ruined it fo effec ally, that it is hardly reftored to it's former condition to this day.
The plunder of that ifland falling very fhort of the expence of the expedition; and the French convinced by experience, that open force could not give them a fuperiority in thefe ifland, have, fince the peace of Utrecht, conftantly increafed their poffeffions and power, by incroachments; firf upon Donimico, a fruitful ifland in fight of Montferrat, inhabited by Indians, the aborigines of thefe iflands, who, for feveral generations have been fubjects of England, under a commiffion from I rd Gray, and his fucceffors, and the chief governors of Barbadoes.
Some years after (viz. in 1722) the late duke of Montague, having obtained a grant from the crown, of the iflands of St Lucia and St Vincent (two of the Caribbee Inlands, included for many years in the commiffion of fucceffive governors "of Barbadoes, from the kings of Great-Britain) provided fhips, military ftores, and much people at a great expence, to poffefs thofe illands: but, foon after landing at St Lucia, they were forced off by the French of Martinico, purfuant to an exprefs order of their monarch. Tho' this point is finally fettled by the Definitive Treaty of $7^{6} 3$, yet it may be ufeful to know how the matter ftood before.

The mandate of the French king, to the Sieur Chevalier de Feuquiere, governor and lieutenant-general of the Wind-ward-Inands in America.

- His majefty, having been informed, that the king of Eng. - land has given the lilands of St Vincent and St Lucia to the - duke of Montague, has made his complaint of it in Eng. ' land, and has alledged, that neither the one nor the other ' of there inlands belong to that crown: the firft of thern - ought to remain to the Caribbees, according to a convention - made with that people, and the fecond belongs to France; - who has been willing to fufpend the fetlement of that inand, - on the requeft of the king of England. Notwithfanding ' thefe reafons, his majefty has not been informed, that there - has been any revocation of this grant. On the contrary, - he underftands, that the duke of Montague is preparing to - fend and take poffeffion of thefe iflands, and to tranfport - numbers of families thither. This undertaking being con' trary to the rights of his majefty, his intention is, that in - cafe the Englifh fhould take poffeffion of St Lucia, and - fettle there, the Sieur Chevalier de Feuquiere fhall fum-- mon them to retire in fifteen days, in regard that inland be-- longs to France; and, if they do not depart, he fhall - compel them to it by force of arms. He fhall take care to - charge fome of the wifefl and moft experienced of his offic cers with this expedition: his majefty defires there floould - be as little effufion of blood as pofible; nor will have any - pillage made: he only wifhes the Englifh would retire, and c not polfefs themfelves of a country which belongs to him.'
Done at Verfailles, Sept. 21, 1722.
If the court of France had a juft title to thefe iflands; who can blame fuch a firited mandate? It would be rather commendable, and is well worthy of imitation, by thofe who have a much clearer title, than bare allegations and pofitive affertions, to drive the French out of their incroachments on thofe inlands, as well as on the continent in America. Captain Uring, appointed, by the late duke of Montague, his deputy-governor in this expedition, receiving this manda:e, and the French governor's letter inclofing it, wherein he fignified his intention to obey it ; Mr Uring fent a letter to the governor of Martinico, to acquaint him, that he had orders from the duke of Montague, the lord proprietor, under his Britih majefty's patent, to plant St Lucia, and defend it; but propofed fufpending all acts of hoftility, till they could hear from their refpective courts. At the fame time Mr Uring fent to the captains of two of our men of war, then at Port Royal in Jamaica, defring to know, whether, in purfuance of the letters to them directed from the admiralty, as well as the duke of Montague, he might depend on their affiftance, in cale he was attacked by the French: but they gave him no poftive anfwer, and failed foon after to Barbadoes. Mr Uring alfo wrote to Mr Cox, the prefident of this illand, for his affiftance; to which he anfwered, That he was ready to give him all in his power. It feems, the captain of the men of war did not think the general orders in the grant of St Lucia, to all the governors and commanders to be affifting to the colony, or the inftructions from the admiraty to the fame purpofe, were fufficient to juftify their acting offenfively againtt the French, which muft have brought on a war betwixe the two nations; nor would the governors of our American colonies take thefe general orders and inftructions to be a fufficient warrant for them to begin hoftilities againt the French.
The captains of our men of war not only declined that in an hothle way, for fear of producing i't confequences to $\mathrm{k} u$ rope, but they even refufed to give Mr Uring affiftance towards fortifying and defending the colony by land.

Neverthelels

## B R I

## B R I

Neverthelefs, Mr Uring was very diligent in raifing a fortification on the hill, which he propofed to make defenfible before the fifteen days, to which his removal was limited by the Fiench mandate, were expired. Mean time the French governor kept punctuaily to the letter of his mandate ${ }_{\%}$, and fent betwixt 2 and 300 men, moflly militia of Martinico; who landing at Shoque-Bay in his ifland, within an hour's march of the fort, at a time when fo many of the planters were fallen fick, and fo many others had deferted to the French, that Mr Uring found he had not 80 men left to bear arms; he was compelled to give up the ifland to the French general the marquis de Champigny, upon the following articles, viz. That the Englifh might reimbark all their cannon, fores, arms, baggage, and every thing elfe without moleftation; that the French Mould alfo evacuate it, as well as the Englifh; and that the ifland Chould remain in that abandoned flate 'till the difpute betwixt the two crowns relating to it was decided; but that the fhips of either nation might, at all times, frequent it's ports for wood and water.
In purfuance of this capitulation, Mr Uring, baving embarked whatever he bad landed, demolifhed the fort and barricado, fruck the flag, and carried it aboard; and failed for the ifland of Antigua, after fending the Winchelfea man of war to take a view of the illand of St Vincent, where the planters alfo had orders, from the duke of Montague, to attempt a fettement, in cafe they were driven from St Lucia: and a confiderable reinforcement was, for this very purpofe, arrived from his grace in the mean time at Barbadoes, which we fhall take notice of prefently.
Though, at this juncture, our court might not think it advifeable to refent this behaviour of the French, yet his late majefly king George II. fent the following inftructions to Henry, Worfely, Efq; governor and commander in chief of this ifland, as all his predeceffors had been who were governors of Barbadoes.

- Truifty and well beloved, \&c.
- Whereas the French have for many years claimed a right to - the iflands of St Lucia, and do infift, that the right of the - illands of St Viacent and Dominica, under your govern-- ment, is in the Caribbeans now inhabiting the fame; al-- though we have an undoubted right to all the faid iflands, c yet we bave thought fit to agree with the French court, - that, until our right be determined, the faid iflands thall be - entirely evacuated by both nations. It is therefore our will - and pleafure, and you are accordingly to fignify the fame to c fuch of our fubjects as fhall be found inhabiting any of our - faid illands; that they do quit them 'till the right thall be c determined as aforefaid, within 30 days from the publica-- tion hereof, in each of the faid iflands. And you are to - ufe your bell endeavours, that no fhips whatfoever frequent - the faid illands, during the time aforefaid, except for wood c and water. But it is our will and pleafure, that you do not c execute this order, until the French governor of Martinico - Thall have received the like directions from the French court, - and fhall, jointly with you, put the fame in execution, with-- out exception, \&c.'

$$
30 \text { Nov. } 173^{\circ} \text {. H. Newcastle. }
$$

From thefe inftruations 'tis apparent, that the courts of England and France had come to an agreement about the immediate ftate of this illand; but not as to their right; for our king declares, fully and plainly, that he looked upon his to be wholly unimpeached by this difpute; and fo, to be fure, it was. And it will appear fill more clearly, from the French king's letter on this head, to the governor of Martinico; dated the 26 th of the month following, that the ftate, not the right of this ifland, was the point then fettled.

## - Monfeur de Champigny,

- The Englifh have, for fome time paft, formed pretenfons ' to the ifland of St Lucia, which belongs to me, and to which 'I have an inconteftable right. They have laid the fame - pretenfions to the ifland of St Vincent and Dominica, which - belong to the Caribbeans, natives of the country, accordc ing to the treaty of the 31 ff of March, 1660 , and in the - poffeffion of which it is my intention to fupport them. I ' have, neverthelefs, agreed with the court of England, that, - till the pretenfions are determined, the.faid iflands hall be - evacuated by both nations, \&c.'

In order to know the foundation of the pretenfions of England to this ifland, it may be requifite to give a little of it's hiftory.
The French authors, particularly Labat, fay, that, before 1637, neither French nor Englifh thought of fetting themfelves on this inand, becaufe of the frequent attacks they bad to fuftain from the Caribbeans of the other iflands; and that both nations frequented it for catching tortoife, and building canoes, as an ifland that then had neither governor, fort, nor colony. But both Labat and Tertre, another Fiench author, agree, that the Englifh firf fettled on this ifland in 1637, and lived here eighteen months, or more, without any difturbance from the natives, or others 'till 1639, when the fa-
vages drove them out, for this reafon: An Englioh veffel being becalmed before St Dominica, fome of the Caribbeans of that illand thinking her to be a French thip, becpule the had a French flag, went aboard, as they ufually did the lhips of that nation, and, drinking freely, the captain clapped his fails before the wind, to put off : the favages, fufpecting his defign, endeavoured ro recover their canoes; and, being hindered, leaped over-board, and fwam to their inland, except two, whom the Englifh put in irons, and fold for laves. Thofe who efcaped, complaining of this treachery to the favages of Martinico and St Vincent, they maffacted the Eng. lifh at Barbadoes, Antigua, and others of their new fettlements: and then come to St Lucia in the night time, and, furprizing the Englifh, killed the governor, and moft of the inhabitants; plundered their warehoufes, and did incredible mifchief, which obliged thofe who efcaped to fly to Monderrat. This fo terrified the Englif, that they then gave over all thoughts of fettling again on this ifland.
The civil wars in England breaking out, the Englifh neglected this fettement; and, in 1644, M. de Parquer, the French governor of Martinico, fent 35 or 40 men from Granada, under M. de Rouffelan, well furnifhed with ammunition and provifion, who took poffeffion of the ifland, and built a forr, planted provifions, and cured tobacco. Rouffelan being well beloved by the natives, becaufe he had married one of their women, the French enjoyed a happy tranquility 'till 1654, when he died, and was fucceeded by La Riviere; who, thinking to live with the natives upon as good terms as his predeceffor had done, erected a flately habitation at a greater diflance from the fort; where he had not lived long, ere the favages, hating the neighbourhood of the French, refolved to drive them out of the inland, and killed the French governor, and feveral others alfo who fucceeded him.
In 1658 , Parquet the governor of Martinico, fent over a new governor, Monf. Aigremont. In a few month after whofe arrival, the Englifh attacked the fort, but were beat off : nevarthelefs, the natives deftroyed him in $\mathbf{x} 660$. In 1663, the, Englifh purchafed the inland from the natives by a treaty, which was brought about by the infuence, of Mr Warner, fon of the governor of St Chriftopher's, by a Car ribbean woman. That gentleman, to whom the Englifh had given a commiffion to be governor of Dominica, purfuaded his countrymen to fell St Lucia fairly to the Englifh; and the Englifh fent 14 or 1500 men on board of five men of war ; who, being joined by 6 or 700 Caribbeans in 17 canoes, under the command of Mr Warner, came before this ifland the latter end of June, 5664 , and had the fort, which was only of wood and pallifadoed, delivered to them without refiftance, on condition that Moaf. Bonnarf, then the French governor, with the garrifon, which confiffed at firft bur of 14 foldiers, part of whom had deferted, fhould be tranfported to Martinico, with their cannon, arms and baggage. A bloody flux and famine having foon reduced this colony from 1500 to 89 perfons, among whom was the governor, Mr Cook, and the principal officers; thofe who furvived, abandoned the illand the 6th of January, 1666, after fetting fire to the fort, and difperfed themfelves in the other adjacent colonies:" Two days after a veffel arrived from the lord Willoughby; governor and captain general of Barbadoes, and the other Englif Caribbee Iflands, to the windward of Guardaloupe, with provifions, ammunition, and all neceffaries; but to no parpofe, for the colony was gone.
Though the iflard was thus deferted, yet, even while, it remained in that condition, it was always confidered as a part of the Britifh dominions, was included in every commifion of the governor for the ifland of Barbadoes, and the governor afferted his jurifdiction over it, by frequently going thither in perfon, with great pomp, hoiffing the king's colours, firing guns, and making all figns of fovereignty and dominion which are requifte to maintain a national right.
The French king, alfo, in bis treaties with king Charles II, and king James II, and likewife in thofe of Rylwick and Utrecht, Afipulated to reftore to the king of Great-Britain all the inands, countries, fortreffes, and colonies, which may have been conquered by the moft Chriftian king, and fuch as were in poffeffion of the king of Great-Britain before the war began: which implies an apparent conceffion, that the Englifh firft poffefled this ifland, and had, confequently, a prior right to it, St Lucia being included in the words, all the Britifh dominions. Nor could that right of theirs, we apprehend, be any way invalidated by their being drove out of it, and murdered, as above, by the favages.
Labat, the Frenchman, indeed, would infinuate that the Englifh forfeited their right to it, becaufe, for 20 years after they were drove out of it by the Caribbeans, they neglected to fend men to it; and though, they fay, Parquet, the French governor of Martinique, made a fettlement there, they took no frep to oppofe him, nor did any one thing either on the fpot, or in Europe, to fupport their pretenfions. But who does not fee that this is a bare infinuation only, and does not carry the face of any thing conclufively argumentative, nor proves the leaft defect in our title?
Labat, without obferving that the, treaty abovementioned, by which the Englifh fairly purchafed the lland, curroborated

## B R I

B R I
heir title to it, further informs us, that though in 1664, when the fecond Weft-India company bought this, and other iland, of Parquet's heirs, St Lucia was in the hands of the Englifh, it continued to name governors thereof 'till 1674, but that, by reafon of the ftagnation of the company's trade, during the long wars in 1673 and 1678 , all the inhabitants reired to Martinique, Guardaloupe, and other frong iflands; o that, in 1700, there were none left but carpenters, who ufed to come from Martinique, to build canoes, \&c. without any other inhabitants, of what nation or complexion foever. He adds, that it was afterwards a harbour of run-away foldiers and failors, who found enough here to fubfift them, befides the utmoft fecurity in the natural faftneffes on the brows of precipices, where 10 men might knock 10,000 on the head, by only rolling ftones or ftumps of trees, upon them. ir Hans Sloane fays, that, in 1689, when he was here, it was inhabited by a fmall number of people from Barbadoes, who kept it on account of it's wood, whereof it has great pienty, which the Barbadians' were very much in want of In 1719 , the French king granted this ifland to the marfhal 'Etree, who fent a colony to poffefs, fettle, and plant it. The governor of Barbadoes immediately notified to the commanding officer of the Caid colony, that, as the ifland belonged to his Britannick majefty, if the French perfifted in fettling on it, he thould be obliged to difpoifefs them by force; and, at the fame time, our ambaffador at Paris reprefented the matter with fo much fpirit and juftice, as a violation of the rights of his Britannic majefty, that orders were fent to the marfhal d'Etree's colony to evacuate the illand, which they did accordingly. Three years after this, his late majefty, king George I, granted this ifland, and that of St Vincent, as we have feen, to his grace John duke of Montague: and, from the deduction of particulars given, it appears plain enough, that the Englifh have an undoubted right to this territory: that the French have been no better than intruders here, and as fuch, were obliged to quit it in the reign of king George I, as they had before done in that of king Charles II ; fince which our rights to this ifland have been confirmed by treaties: but their quitting it in 1719, when the marfhal d'Etree's colony evacuated it, by express order of the French king, is the ftrongelt and cleareft proof of all: for, had not their minifters been fenfible of their nation's having no juft pretenfions to St Lucia, it is not to be fuppofed that they would fo tamely have given up their fettlement, after having exerted fo much vigour to prevent ours: and as it was declared, by the mutual evacuation of this ifland in 1722-3, that it could not, or fhould not, prejudice the claim of either, it cannot be alleged, with any fhadow of juftice, to defeat that right, or to be at all derogatory from it, though the profecution of it was thereby, for a time, fufpended.
The French, alfo, ufed every artifice to prevent our poffeffion f the ifland of St Vincent, which was included in the patent of his grace the duke of Montague for St Lucia. They poifoned the natives in our disfavour, making them believe that we came to enlave them, when our intention was quite otherwife. The like policy has been pratifed by this nation to Dominica and Tobago.
And are not the motives to this conduef of the French very apparent? Such is the natural fituation of the Caribbee Inands, that they run in a chain acrofs that part of the weftern ocean which terminates upon the continent of South America. Of that chain Antigua is the northern, and Tobago the fouthern link. The French being poffeffed of Martinique, Guardaloupe, and feveral fmall iflands in the center; and, by late incroachments, have extended their poffeffion to Dominica, St Lucia, St Vincent, and Tobago: fo that France attempted to have the whole chain of Carribbee Illands*, of any value for extent and harbours (except Antigua) which are fituated in the track of navigation to the coaft of Carraccas and Carthagena to the fouthward; and to St Euftatia, St Thomas, Santa Cruz, Porto-Rico, St Domingo, Cuba, Jamaica, Porto-Bello, and all the coaft of New Spain; from thence to the bay of Mexico, and Miffifippi, to the northward. What, therefore, could have hindered the French, in cale of war, from intercepting all the navigation from Europe, in the paffages to thefe feveral ports, whenever the naval power of France fhould be in a tolerable good condition? more efpecially if Antigua fhould allo fall under their dominion, which was far from being impoffible, if it's great port, called Englifh Harbour (the beft of any in that part of the world for the reception and fecurity of a Britifh fquadron) is not well fortified, and the Leeward Inands powerfully protected by our royal navy. For, if Antigua fhould be loft, or it's beft harbour ruined, Montlerrat, Nevis, St Chriftopher's, and all the leffer iflands to the weftward of them, muft, for want of harbours and protection, fall of courfe into the hands of our

* Barbadoes, being to the eaft ward, is not mentioned as in the chain of the Caribbee Illands; but yet, being one of them, is, from it's nearnefs to Tobago, in more imminent danger of invafion from that ifland, whenever it became well fettled by the French, becaufe an armament may be conveyed from one to the other in a very few hours; for the faine reaton the trade of Barbadoes might have been fubject to perpetual interruption from privaterss.
enemies. In that cafe, of what value can" Jamaica be to thin kingdom, when our heets cannot pafs thither without a convoy, fuperior to the naval power of France? And what trade can bear the immenfe expence of fuch convoys? Could Britain with fafety, therefore, reft fatisfied under the ufurpations of France, and, by that means, give it the power of intercepting all the trade of Europe to America? This is now prevented by the Definitive Treaty.
Thus it evidently appears, what influence thefe incroachments of France would have had upon the whole trade and navigation of America in time of war. But this was not all our danger; for by thefe poffeffions of the French, even in times of peace, would have cut off all fupplies of hard timber, without which it is impoffible to carry on the fugar-works of Barbadoes and the Leeward Iflands, but at immenfe expence, from the far diftant colonies of the Dutch on the continent of South America, Berbice and Efequebe : for neither Barbadoes nor the Leeward Iflands produce large hard timber, fit for thefe purpofes, nor even fmall timber enough fit for carts, and other carriages neceffary for plantation ufe; and therefore Barbadoes has, for many years, been fupplied with a good fhare of fuch timber from Tobago, and the Leeward Iflands from Dominica, 'till the French have pretended to lay claim to it. As the Britifh dominions in North America camot furninh timber proper for thefe ufes*, and none now is to be had but from the Dutch, at a great diftance, it follows, that the very exiftence of Britifh fugar-colonies depended upon the courtefy of the Dutch, and that courtefy bought at their own price, befides the expence of a longer toyage; or elfe we muft reclaim immediately all thofe illands which the French have unjuftly. ufurped. If this is not done, our fugar-colonies muft be ruined for want of fupplies of timber, even in times of peace (as has been obferved) and France will, by that means, ingrofs the fugar-trade of the world $\dagger$.
* Oak, or other timber of cold countries, $\mathrm{P}_{\mathrm{p}} \mathrm{lits}$ in the hot climates, and foon decays; befides being fubject to be eaten to a honey-comb, by animals called wood-ants, more deffructive of wood on thore, than worms are to the bottom of fhips when in harbour.
+ That the French have, for many years paft, fupplanted us in the fugar-trade at foreign markers, is certain. By what meafures they gradually and infenfibly did this, and greatly increafed the crade and navigation of their illand colonies in general, fhall be fhewn under the articles $\mathrm{Fremich}_{\mathrm{f}} \mathrm{Ame-}_{\text {- }}$ rica, and Sugar Colonies; but now that valuable branch of our commerce may be effectually retrieved, and the Britifh fugar illands rendered of far more importance to this nation than ever they have been.
Notwithftanding all the agreements made with the French in regard to the evacuation and neutrality of St Lucia, \&c. the war with France was no fooner broke out, but the French feized the ifland of St Lucia as their own in 1744, and fent a governor to it, and a number of men, and 40 cannon, from 12 to $4^{8}$ pounders, and have fince fortified it with two forts, befides batteries; and they had between 2000 and 3000 white prople upon it, and feemed refolved to maintain this ifland, as well as Dominica, St Vincent, and Tobago, although, according to the late treaty of Aix la Chapelle, they were obliged to evacuate the fame, yet this was never complied with.
The French had about 2000 white men, being French, Englifh, and Danes, befides Indians, under a French governor, at Dominica, and had reveral fugar-works on that inand, and raifed great quantities of fugar, indigo, cotton, and other Weft-India products, on this ifland.
They had people alfo at St Vincent's, interfperfed with the the native Indians, with whom they intermarried. They raifed great quantities of tobacco, corn, and coffee, on this inland: and they lately obtained fuch an afcendency over thefe Indians, as to make proclamation in that inland, that no Englinh, Dutch, or Danes, fhall have any commerce with that ifand without a protection from the general of Martinique.
They bad alfo fortified and fettled Tobago fince the peace of Aix la Chapelle, in fite of our naval force in thefe parts *,

The following infructions were given to Robert Lowther, Eff; on the $2_{3}$ d of Febraary, $1714-15$, when he was appointed governor of Barbadoes, St Lucia, Dominica, and St Vincent, and the reft of his majefty's Caribbee Iflands to the windward of Guardaloupe ; which inftructions have been continued to the feveral governors of Barbadnes fince that time. Int. 106. 'If any of the fubjects of a foreign power, or ftate, have already planted themfelves upon any of the iffands of St Lucia, Dominica, St Vincent, or Tobago, cr - Thall hereafter attempt to do the fame, you are to affert - our right to the faid iflands, exclufive of all others; and, in order to hinder the fettiement of any colony there, you are to give notice to fuch foreigners that fhail * pretend to make fuch fettlement, that, unlers they fhall remove in fuch time as you in your difcretion flaill affign, you Thall be obliged by force to difpoffers thems and fend them off the faid ifland.
Infl. iog. ' You are not to encourage any planting, nor to grant to any perfon any lands or tenements which are - now, or hereafter thall be, in our power to difpofe of in - any of our inlands under your government, excepr Barbadoes, until you fhall receive farther o:ders from us

## B R I

B R I
and infifed on it's belonging to the French king. From this laft-mentioned ifland they may invade Barbadoes in one Alretch, and in one night, as it lies fouthwardly of Barbadoes, diftance about 30 leagues.
There attempts of our rivals muft certainly have been undertaken with a defign to fupplant the Englifh in all their 'fugar colonies, becaufe they had before lands in the'r hands fufficient to raife Weft-India products wherewich to fupply all Europe.
Wherefore this conduad of the French, it is humbly conceived, required the utmolt attention: for, if they had been permitted to remain in poffeffion of thefe iflands, it would have been of the utmoft ill confequence to the Britifh nation, by reaion, as obferved, of their fituation: they furround Barbadoes, and are to windward of the Leeward Iflands. What mutt then have been the inevitable doom of our northern colonies and fifheries in America, without our Britifh fugar colonies? and, to carry the confequence in it's natural gradation, what would bave become of our Britifh trade to Africa and America?
According to the late treaty of Aix la Chapelle, it is ftipulated, in the ninth article, as follows, viz.

- Their Britannic and moft chriftian majefties oblige them-- felves to caufe to be delivered, upon the exchange of the - ratifications of the prefent treaty, the duplicates of the or-- ders addreffed to the commifiaries appointed to reftore and - receive refpectively whatever may have been conquered, on - either fide in the Welt Indies; and every thing befides iball - be re-eftablifhed on the foot that they were, or ought to be, - before the prefent war.
- The faid refpective commiffaries fhall be ready to fet out on - the firft advice that their Britannic and moft chriftian maje-- flies hhall receive of the exchange of the ratifications, furnith-- ed with all neceffary inftructions, commiffions, powers, and - orders, for the moft expeditious accomplifhment of their faid ${ }^{6}$ majefties intentions, and of the engagements taken by the " prefent treaty.'
The inlands of St Lucia; St Vincent, and Dominica, were, or ought to have been, neutral, at the time of this treaty, according to a formal evacuation in or about the year 1732, by commiffaries appointed in Barbadoes and Martinique, to repair to St Lucia for that purpofe, in purfuance of exprefs orders from their Britannic and mof chriftian majefties, as beforementioned. The illand of Tobago remained as it was before that war, at the time of the treaty, but was, in barefaced violation thereof, fettled by the French in January 1749-50, under the protection of two French thips of war, which were fent from Breft for that purpofe: and, therefore, were not the French obliged by treaty forthwith to have evacuated this ifland.
Thus have I, from a feries of inconteftable facts, connected in the fimpleft and moft obvious light, and reprefented in the moft candid and unexaggerated manner, thewn the unjuftifiable attempts of France to injure the Britifh rights and porfeffions in America: but it is to be hoped, from the wifdom of his majefty's councils, that all thefe mifchiefs, which look with fo formidable an afpect towards the trade of this nation, have at length been happily prevented by the definitive treaty of 1763.
How far, alfo, the fchemes of this neighbouring nation have had a tendercy to injure the commerce and poffeffion of other powers in America, in order to advance their own, fhall be made appear in it's place. And when other nations, as well as we, enter into a critical examination of fome of their late maps and charts, publifhed by authority, they cannot longer remain infenfible of the machinations that were really forming to their prejudice.
Before we conclude this article, it may be proper to intimate, that, under the general head of Colonies, we fhall confider British America in various other lights, not lefs interefting to thefe kingdoms than what has been already reprefented. Whatever fome may pleafe to think me deficient in, at prefent, upon this occafion, I promife to make them amends under other fubfequent heads, which relate to the commerce of America, particularly under the articles of French America, Spanish America, Plantations and Colonies.

## British America.

The King's Proclamation for the due fettement of our new Britifh Acquifitions in America, purfuant to the Definitive Treaty of February roth if 6 .

## Georger.

Whereas we have taken into our royal confideration the extemfive and valuable, acquifitions in America, fecured to our crown by the late definitive treaty of peace, concluded at Pa . ris the 1oth day of February laft; and being deffirous, that all our loving fubjects, as well of our kingdoms as of our colo nies in America, may avail themfelves, with all convenient fpeed, of the great benefits and advantages, which mult accrue therefrom to their commerce, manufactures, and navigation; we have thought fit, with the advice of our privy council, to iflue this our royal proclamation, hereby to publih and de-
chare to all our loving fubjects, that we have, with the advice of our faid privy council, granted our letters patent, under our great feal of Great-Bitain, to erect, within the countries and iflands ceded and confirmed to us by the faid treaty, four diftinct and feparate governments, filied and called by the names of Quebec, Eaft Florida, Weft Florida, and Grenada, and limited and bounded as follows, viz.
Firf, The government of Quebec, bounded on the Labrador cualt by the river St John, and from thence by a line drawn from the bead of that river through the lake St John, to the fouth end of the lake Nipifim; from whence the faid line croffing the river St Lawrence, and the Jake Champlain, in 45 degrees of north latitude, paffes along the Highlands which divide the rivers that empty themfelves into the faid river $s t$ Lawrence, from thofe which fall into the fea; and allo along the north coaft of the Baye des Chaleurs, and the coaft of the gulph of St Lawrence to Cape Rofieres, and from thence croffing the mouth of the river St Lawrence by the weft end of the inland of Anticofti, terminates at the aforefaid river of St John.
Secondly, The government of Eaft Florida, bounded to the weftward by the gulph of Mexico and the Apalachicola river; to the northward by a line drawn from that part of the faid river where the Chatahouchee and Flint rivers meet, to the fource of St Mary's river, and by the courfe of the faid river to the Atlantic Ocean; and to the eaftward and fouthward by the Atlantic Ocean and the gulph of Florida, including all inlands within fix leagues of the fea coaft.
Thirdly, The government of Weft Fiorida, bounded to-the fouthward by the gulph of Mexico, including all illands within fix leagues of the coaft, from the river Apalachicola to lake Ponchartrain; to the weftward by the faid lake, the lake Maurepas, and the river Miffifippi; to the norchward by a line drawn due caft from that part of the river Miffiffippi, which lies in 31 degrees north latitude, to the river Apalachicola, or Chatahouchee; and to the eaftward by the faid river.
Fourthly, The government of Grenada, comprehending the illand of that name, together with the Grenadines, and the iflands of Dominico, St Vincents, and Tobago.
And to the end that the open and free fithery of our fubjects may be extended to, and carried on upon the coaft of Labrador, and the adjacent inands, we have thought fit, with the advice of our faid privy council, to put all that coaft, from the river St John's to Hudron's ftreights, together with the inands of Anticofti and Madelaine, and all other fmaller illands lying upon the faid coatt, under the care and infpection of our governor of Newfoundland.
We have alfo, with the advice of our privy council, thought fit to annex the iflands of St John's and Cape Breton, or lle Royale, with the leffer iflands adjacent thereto, to-our government of Nova Scotia.
We have allo, with the advice of our privy council aforefaid, annexed to our province of Georgia, all the lands lying between the rivers Atamaha and St Mary's.
And whereas it will greatly contribute to the fpeedy fetting our faid new governments, that our loving fubjects fhould be informed of our paternal care for the fecurity of the liberties and properties of thofe, who are and fhall become inhabitants thereof; we have thought fit to publifh and declare, by this our proclamation, that we have, in the letters patent under our great feal of Great-Britain, by which the faid governments are conftituted, given exprefs power and direction to our governors of our faid colonies refpectively, that fo foon as the fate and circumftances of the faid colonies will admit thereof, they fhall, with the advice and confent of the members of our council, fummon and call general affemblies within the faid governmest refpectively, in fuch manner and form as is ufed and direcged in thofe colonies and provinces in America, which are under our immediate government; and we have alfo given power to the faid governors, with the confent of our faid councils, and the reprefentatives of the people, fo to be fummoned as aforefaid, to make, conftitute, and ordain laws, ftatutes and ordinances for the public peace, welfare, and good government of our faid colonies, and of the people and inhabitants thereof, as near as may be agreeable to the laws of England, and under fuch regulations and reftrictions as are ufed in other colonies; and in the mean time, and until fuch affemblies can be called as aforefaid, all perfons inbabiting in, or reforting to our faid colonies, may confide in our royal protedion, for the enjoyment of the benefit of the laws of our realm of England; for which purpofe we have given power, under our great feal, to the governors of our faid colonies refpectively, to ered and conffitute, with the advice of our faid councils re'pectively, courts of judicature and public juftice within our find colonies, for the hearing and determining all caufes, as well criminal as civil, according to law and equity, and as near as may be agreeable to the laws of England, with iberty to all perfons, who may think themfelves aggrieved by the fentences of fuch courts, in all civil cafer, to appeal, under the ufual limitations and reftrictions to us, in our privy council.
We have alfo thought fit, with the advice of our privy council as aforefaid, to give unto the governors and councils of our faid three new colonies upon the continent, full power and

## B R I

authority to fettle and agree with the inhabitants of our faid new colonies; or with any other perfons who thall refort thereto, for fuch lands, tenements, and hereditaments, as are now or hereafter thall be in our power to difpofe of, and them to grant to any fuch perfon or perfons, upon fuch terms, and under fuch moderate quit-rents, fervices, and acknowledgments, as have been appointed and fettled in our other colonies, and under fuch other conditions as thall appear to us to be neceffary and expedient for the advantage of the grantees, and the improvementand fettlement of our faid colonies.
And whereas we are defirous, upon all occafions, to teflify our royal fenfe and approbation of the conduct and bravery of the officers and foldiers of our armies, and to reward the fame; wre do hereby command and impower our governors of our faid three new colonies, and all other our governors of our feveral provinces on the continent of North America, to grant, without fee or reward, to fuch reduced officers as have ficived in North America during the late war, and to fuch private foldiers as have been or hhall be difbanded in America, and are actually reffiding there, and fhall perfonally apply for the fame, the following quantities of lands, fubject at the expiration of ten years to the fame quit rents as other lands are fubject to in the province within which they are granted, as alro fubject to the fame conditions of cultivation and improvement, viz.
To every perfon having the rank of a field-oflicer, 5000 acres.
To every captain 3000 acres.
To every fubaltern or ftaff-officer 2000 acres.
To every non-commiffion officer 200 acres.
To every private man 50 acres.
We do likewife authorife and require the governors and commanders in chief of all our faid colonies upon the continent of North America, to grant the like quantities of land, and upon the fame conditions, to fuch redaced officers of our nayy of like rank as ferved or boazd our fhips of war in North America at the times of the reduction of Louibourg and Quebec in the late war, and who thall perfonally apply to our reJpective governors for fuch grants.
And whereas it is juft and reaforrable, and effential to our intereft, and the fecurity of our colonies; that the feveral hations of tribes of Indians, with whom we are connected, and who live under our protection, fhould not be molefted or difturbed in the pofleffion of fuch parts of our dominions and territeries as, not having been ceded to or parchafed by us, are referved to them or any of them as their hunting-grounds; we do therefore, with the advice of our privy council, declare it to be our royal will and pleafure, that no governor or commander in chief in any of our colonies of Queber, Eaft Florida or Weft Floridz; do prefume, upon any pretence whatever, to grant warrants of furvey, or pals any patents for land beyond the bounds of their refpetive governments, as defcribed in their commiffions; as allo that no governor or commander in chief in any of our other colonies or plantations in America, do prefume for the prefent, and until our further pleafure be knowns to grant warrants of furvey, or pals patents for any lands beyond the heads or fources of any of the fivers which fall into the Atlantic ocean from the weft and north-weft; or upon any lands whatever, which not having been ceded to or purchafed by us as afofefaid, are referved to the faid Indians, of any of them.
And we do further declare it to be our royal will and pleafure, for the prefont as aforefaid, to referve under our fovereignty, protection and dominion, for the ufe of the faid Indians, all the lands and territories not included within the limits of our faid three new governments, or within the-limits of the territory granted to the Hudfon's-bay company; as $: 1$. fo all the lands and territories lying to the weftward of the fources of the rivers which fall into the fea from the weft and north-weft as aforefaid; and we do hereby ftrictly forbid, on pain of our dipleafure, all our loving fubjects from making any purchafes or fettlements whatever, or taking poffefion of any of the lands above referved, without our fecial leave and licence for that purpofe firft obtained.
And we do further frietly enjoin and require all perfons whatever, who have either wilfully or inadyertently feated themfelves upon any lands within the countries above defcribed, or upon any other lands, which not having been ceded to or purchafed by us, ate fill referved to the faid Indians as aforefaid, forthwith to remove themfelves from fuch fettlements. And whereas great frauds and abufes have been committed in the purchafing lands of the Indians, to the great prejudice of our interefts, and to the great diffatisfaction of the faid Indians; in order therefore to prevent fuch irregulatities for the future, and to the end that the Indians may be convinced of our juftice and determined refolution to remove all reafonable caufe of difcontent, we do, with the advice of our privy council, ftrictly enjoin and require, that no private perfon do prefume to make any purchafe from the faid Indians of any lands referved to the faid Indians within thofe parts of our colonies, where we have thought proper to allow fettlement; but that if at any time any of the faid Indians fhould be inclined to difpofe of the faid lands, the fame fhall be purchafed only for

## B R I

us, in our name, at fome public meeting or antembly of the faid Indians, to be held for that purpofe by the governor or commander in chief of our colony refpectively, within which they fhall lye: and in cafe they fhall lye within the lumits of any proprietary government, they fhall be purchafed only for the ufe and in the name of fuch proprietaries, conformable to fuch directions and infiructions as we or they fhall think proper to give for that purpofe: and we do, by the advice of our privy oouncil, declare and enjoin, that the trade with the faid Indians fhall be free and open to all our fubjects whatever; provided that every perfon, who may incline to trade with the faid Indians, du take out a licence for carrying on fuch trade, from the governor or commander in chief of any of our colonies refpectively, where fuch perfon fhall refide; and alfo give fecurity to obferve fuch regulations as we flall at any time think.fit, by ourfelves or by our commiffaries, to be appointed for this purpofe, to direct and appoint for the benefit of the'faid trade: and we do hereby authorize, enjoin and require che governors and commanders in chief of all our colonies refpectively, as well thofe under our immediate government, as thofe under the government and direction of proprietaries, to grant fuch licences without fee or reward, taking efpecial care to infert thercin a condition, that fuch licence thall be void, and the fecurity forfeited, in cafe the perfon, to whom the fame is granted, Chall refufe or negledt to obferve fuch regulations as we fhall think proper to prefcribe as aforefaid.
And we do further exprefly enjoin and require all officers whatever, as well military as thofe employed in the management and direction of Indian affairs within the territories referved as aforefaid, for the ufe of the faid Indjans, to feize and apprehend all perfons whatever, who, ftanding charged with trealons, milprifions of treafon, murders, or other felonies or midemeanors, fhall fy from juftice and take refuge in the faid territory, and to fend them under a proper guard to the coIony where the crime was committed of which they fand accufed, in order to take their trial for the fame.
Given at our court at St James, the $7^{\text {th }}$ day of October, 1763 , in the third year of our reign.

## Remarks.

Of the different exchanges between our plantations and London.
The various provinces on the continent of North America, and alfo the Leeward Inands and Jamaica, fubject to GreatBritain, have for many years paft varied greatly in the way of reckoning their monies or currencies, from what has been by law eftablifhed in England.

Barbadoes,
Antigua
Antigua,
St Chriflopher':, Nevis, and Montferrat,
Jamaica,
Virginia,
New England paper money̆
New York ditto,
Penfylvania ditto,
Maryland difto
South Carolina ditfo,
North Carolina dittó,

* In Maryland have beenthire kinds of currenciés: contefts for flerling, paid in biths of exebange; contrafis for gold or filver currency, actountad atis $33 \frac{1}{3}$ for 100 I. fienling; and paper currency 220 for 100 l . fterling, as above.

By the term currency, where it is relative to our fugar-inands particularly, and is mentioned without the addition of coin, is meant the payments made in fugar, rum, cotton, molaffes, ginger, indigo, or ofter commodities; the produce of thefe iflands, in contadiftinction to payments made in gold and filver. Thevariation of coins in fome of the illands, and leaving it to the option of a debtor there to pay in what currency he thinks moft for his own advantage, has been productive of great frauds and mifchiefs to trade occafionally; and therefore the fair merchant and planter wifh for nothing fo much as the eftablifhment of one common currency in all the plantations. Cicero complains of the like confufion in the Roman money, where he fays, Jactabatur enim tempo-ribus-illis nammus fre, vit nemo poflet fire quid haberet; that money was fo vatied, and toffed about, that no man could rell how muct he was worth, till the Roman magiftrate reformed it.
The four Leeward Mands, viz. Antigua, St Cbriftopher's, Nevis, and Montferrat, though they bave only one chief go: vernor, have diftinct affemblies; fo that the laws of one inand do not bind any of the others; nor can the whole be bound but by a law made by a general affembly of them all, which no one ifland can afterwards abrogate. There has been no fuch affembly fince the year 1705 , and but one sencral law 5 C
that

## B R I

that ever regulated their currency of coin, which was pafled in the year 1094 , and afterwards confirmed by the crown. As this law was never repealed by a general aflembly; and as no act 'of government in one iffand could fance legatly alter the currency of the coin that had been fettled by the authority of the whole, the legal currency of thefe Leeward Inands coin muft be according to the act of 1694.
By this act, each piece of eight of Seville, Mexico, and Pillar, and each French crown, was to be current and pafs for 6 s . a Peru piece of eight for 5 s. and all monies whatioever to be rated in proportion, except the eighth part of a Peru piece of eight, commonly called a feven pence halfenomy, which fhall pafs for nine pence.
Upon this footing food the currency of the coin in the Leeward illands till 1704 , when, upon a reprefentation to the crown of the different rates at which, by divers indirect practices, the fame 'fecies of foreign coins paffed in the American plantations, (by which means, artful men drew the money from one colony to another, to their own private gain, but to the prejudice of the trade of the whole) Queen Anne, by her proclamation in the faid year, regulated the currency of each individual piece in all the plantations, as follows:

Seville pieces of eight, old plate, Ditto, new plate,
Mexico pieces of eight,
Pillar pieces of eight,
Peru pieces of eight, old plate, Crofs dollars,
Ducatoons of Flanders, - -
Ecus of France, or filver Louis,
Crufadoes of Portugal,
Three guilder pieces of Holland,
Old rix-dollars of the empire,

| Weight. | $\left\{\begin{array}{l} \text { True } \\ \text { value. } \\ \text { Sterling } \end{array}\right.$ | Curt, value abroad, not to exceed |
| :---: | :---: | :---: |
| Pwt. gr. | s. d. | s. d. |
| 1712 | 46 | 600 |
| 140 | $37^{3} 7^{\frac{1}{4}}$ | $4 \quad 9 \quad 2 \frac{2}{3}$ |
| I7 12 | 46 | $6 \quad 00$ |
| 1712 | $4 \quad 6 \frac{3}{4}$ | $6 \quad 00$ |
| 1712 | 45 | $510{ }^{2 \frac{2}{3}}$ |
| 18 O | $44^{3}$ | $5101^{\frac{1}{3}}$ |
| 2021 | 56 | 740 |
| 1712 | 46 | 600 |
| II 4 | $210^{\text {i }}$ | $3 \quad 9 \quad 2 \frac{2}{3}$ |
| $20 \quad 7$ | $5{ }^{5} \quad 2$1 | $6103 \frac{7}{6}$ |
| 180 | $4{ }^{\prime} 6$ | 600 |

The proclamation directed, that the half-quarters, and other parts, pafs in proportion to their denomination, and light pieces in proportion to their weight. This very proclamation was incorporated in, and enforced by an act of parliament, in the 6th of Queen Anne; which wifely eftablifhed a sameNess of currency in all the plantations, and ordained it to be obeyed, under fevere penalties. There was, indeed, a provifo in the act, referving a power in the crown to alter the cur-

## B R I

rency, eiber by proclanation, or by aftenting to fome ad of attembly for that purpofe; but as no fuch proclamation or law has pafled or iflued, with regard to Barbadoes, the Leewaril Inands, or Jamaica, the legal cursency of their coin camot exceed the proportions eftablifhed by the faid act.
When the people of Jamaica had raifed their money, by agreeing to tender and receive it at an uncertain weight, and at 6 s . 3 d . the piece of eight, the lord Carteret, then fecretary of ftate, wrote a letter to the duke of Portland, the governor; wherein he tells him, after complaints made by fome merchants, ' That the trade and credit of the ifland will be - loft, if the variation of The coin be not rectified; it - being a bold attempt in thofe who advifed it, becaufe ex' prefly contrary to the act of the 6th of queen Anne, and the ' 47 th inffruction.'-The fame royal inftruction has been given to all governors of the Leeward Inands, to oblige them to take care, that the act be punctual'y obeyed.
How it has been adhered to, experience has hewn; but to the honour of Barbadoes, it has obferved the law more frictly than any of our colonies, though it has fuffered from the non-obfervance of it, by the people of the Leeward Iflands, who for a confiderable time drew away from Barbadoes their light money, as there purchafed by welght, and pafied it among the Leeward Illands by tale.
At Barbadoes, where the money is current, according to the 6eh of queen Anne, and where the coin is ftable and fixed as their weights and meafures (as indeed it ought to be every where) frefh provifions, fuch as beef, veal, mutton, pork, and other negeffaries of life, have been all more than 70 per cent. cheaper than they have been at Antigua.
Our readers in general, as well as the trader in particular, will be the better enabled to judge of the neceflity of eftabliffing a sameness of currency in our American colonies, by the two following tables. The firft is taken from a report made, and figned by the officers of the mint, to the duke of Newcafte, on the 19th of November 1740, in obedience to an order from the government, confequent on an addrefs of the houfe of commons to his majefty, for the faid officers to enquire into, and afcertain the rates and propartions at which all foreign cold coins afe to be accounted; received or paid, in any of thofe colonies. This table, which fhews the true affays of thofe coins, with their weiget, their value, in ferling, their value in the peantations, \&c. was drawn up, in order to fettle their true currency in the faid colonies, and to fupprefs the fraudulent currencray which they had obtained in the Leeward islands.

For the farther illuftration of an article of fuch importance to the trade and intereft of our American colonies, fee the following Table; thewing how much each of thefe gold pieces have exceeded their values in the Leeward Islands, where they have been paid at the following rates, viz.

| Names of the pieces, as in the above Table of the Mint. | Plantation currency, as fettled by the mint, without the frac. tions. | How current in the plantatione for mary yeart, | \| How much each piece went abave its value, fupporing them all full weight. |

## B R O

BROCADE, or BROCADO, a fuff of godd, Giver, or filk, raifed, and inriched with flowers, foliages, or other ornaments, according to the fancy of the merchant, or manufacturers, who invent new fabhions.
Formerly that word fignified only a fuff wove atl of gold both in the warp and in the woof, or all of filver, or of both mixed together: thence it paffed to thofe fuffis in which there was filk mixed, to raife and terminate the gold or filver flowers. But, at prefent all ftuffs, even of filk alone, whether they be grograms of Tours or of Naples, fattins, and even bare taffeties or luftrings, if they be but adorned and worked with fomer flawers, or other firgures, are called brocades.
The gald or hiver broeades are among the four forts of cloth, on one of which traders, who would be admitted merchants and miffer-workmen of gold, filver, and filk ftuffs in the city of Paris, are obliged to make their mafter-piece of workmanibip, according to the 25 th article of the regulations of the year $166 \%$, concerning the manufaitory of thofe forts of fluffs.
The articles 49 and 50 of the fame regulations, and the 16 th of thofe of Lyons of the fame year, order to make the warp and threads of the brocades of fpun and twiffed filk; and the warp doubled in a flay of $\frac{l_{1}^{1}}{+}$ of an ell, between the felvages, of pure and fane filk, without mixing with it any filk dyed raw, upon pain of forfeiting the ftuffs, and paying a fine of 60 livres for the firft offence, and a gieatet penalty in cafe of a fecond offence.

## Laws of England with regard to B̈rocade.

1. Gold or filver thread, lace, fringe, er other work made thereof; or any thread, lace, fringe, or other work made of, copper, brafs, or any other inferior metal; or gold or filver wire or plate, foreign embroidery, or gold or filver brocade imported, to be forfeited and burnt, and 1001 . paid by the importer, for every parcel fo imported.-_io Ann. cap. 26. §65.-1 5 Geo. II. cap. 20. § 7.-22 Geo. II. cap. 36. § 1. 2. Foreign embroidery, gold or filver thread, lace, fringe, brocade, or other work made thereof, or of gold or filver wire or plate, may not be fold or expofed to fale, or difpofed of by exchange, barter, truck, or otherwife, nor worked or made up in, or upon any wearing apparel, on pain of it's being forfeited and burnt, together with the apparel or other materials; and the offender alfo forfeits 100 l . for every fuch offence.-22 Geo. II. cap. 36. §2.
2. Such goods found and feized in the houfe, warehoufe, or cuftody of any mercer, laceman, haberdafher, upholder, milliner, taylor, or dealer in, vender, or maker up of the faid manufactures, befides being forfeited and burnt, fuch perion, if they were brought or continued there with his knowledge or confent, forfeits rool. for every piece or parcel. 22 Geo . 11 . cap. $36 . \$ 3$.
3. Gold or filver thread, \&c.--Such gaada, after condemnation, are to be publickly burnt, at fuch places as the commiffioners of the cuitoms hall direct,- 22 Geo. II, cap. $3^{6}$. §4. 5. In cafe of any queftion arifing where the goods were manuf ctured, the proof is to lie on the owner, claimer, or perfon profecutéd. - 22 Geo. II. cap. 36 . § 6 .
4. Nothing in this act is to extend to inflict any penalty on the wearer.-22 Gea. II. cap. 36. \$7.
5. Profecutions upon any act prohibiting the importation or fale of fuch goods, mult be commenced within twelve months after difcovery of the offence, or, in cafe of feizure, within three months after feizure.- 22 Geo. II. cap. $3^{6}$. §8.
brokage. See Braferige.
BROKER, a name given to perfons of feveral and very different profeffions, the chief of which are exchange-brokers, flock-brokers, pawn-brokers, and brokers fimply fo called, who fell houthold furniture and fecond-hand apparel.
Exchange-Broxers, are a kind of agents, or negociators, who contrive, prapofe, make, and conclude bargains between merchants and merchants, and merchants and tradefmen, in matters of bills of exchange or merchandize, for which they have fo much commiffion. The French call them agents of bank and exchange, when they meddle only with bills or money, and courtiers, or brakers, when they make bargains for any fort of merchandize, See Acents.

## Laws of England with regard to Brokers,

The exchange-brokers are, by the fatute 10 Ric. II: cap. I. called broggers, the original of which name is from a trader broken, and that from the Saxon broc, which fignifies misfortune, which is often the true reafon of a man's breaking: fo that the broker came from one who was a broken trater by misfortune; and none but fuch were formerly admitted to that employment. They were to be freemen of the city of London, and allowed and approved by the lord mayor and aldermen for their ability and honefly. By the ftatute 8 and 9 Will. III. they are to be licenfed in London by the lord mayor, who gives them an oath, and takes bond for the faithful execution of their offices: if any perfons thall act as brokers without bcing thus licenfed and admitted, they thall for-
feit the fum of 500 l , and perfons employing them 51 . and brokers are to regifter contracts, \& \& c. under the like pénalty ${ }^{-}$ alfo brokers hall not deal for themfelves; on pain ot forfeiting 2001. They are to carry about them a filver medal, having the king's ayms and the arms of the city, and pay 40 s . a year to the chamber of the city. Stat 6 Ann. cap. 16. The exchange-brokers make it their bufinefs to know the atteration of the courle of exchange, to inform merchants how it goes, and to give notice to thofe who have money to receive or pay beyond fea, who are the proper perfons for negociating the exchange with; and ${ }_{2}$ when the matter is accomplifhed, that is, when the money for the bill is paid, and the bill deliyered, they have for brokerage 2 s . for 100 l . fterling.
By ftatute 3 Geo. II. cap. 3. No perfon is to exercife the employment of a broker within the city of Briftol, unlefs he be firft admitted by the mayor, aldermen, and common-council of that city, under fuch reftrictions for his good behaviour, and as to fees, and the number of brokers, as the faid mayor, 8c. Thall think fit. Every broker is alfo to take an oath, and to give bond to the mayor and court of aldermen for the faithful difcharge of his office, and pay ios. as a fee for his admittance, to the town-clerk of Briftol. The mayor and court of aldermen fhall order the names of all fuch brokers, and the places of their habitation, to be affixed on the Tholfel, and in the council-hodfe, àd other public places within the city.
Any perfon acting as broker, not being fworn and admitted, is to forfeit 100 l . and any perfon employing one as a broker, nibt being fworn, fhalt forfeit 50 l .
Every fworn broker is to keep a broker's book, in which he muft enter all the contracts he hall make, within three days after making, with the parties names, on pain of forfeiting 2 E :
Every broker fhall carry about him a medal of filver, on which fhall be his majefty's arms, and, on the reverfe, the arms of the city of Rriftgl, with the name of fuch broker, which medal he fhall produce, if required on the concluding of every bargain by him made, to the parties concerned, on pain to forfeit 51 .
If any fuch broker fhall deal for himfelf, in remittance of money, or buy any goods, to fell again for his own benefit, or hall make proft in buying or felling any goods, \&c. for the benefit of any other perfon, fave in the way of a broker only, he thall forfeit for the firt offence 201. for the fecond offence 501 . and for the third offence rool. and, being convicted of fuch third offence, fhall be incapable to act as a broker within the city of Briftol.
In France, 'till the middle of the 17 th century, they gave the name of broker (courtier) or exchange-broker (courtier de change) to thofe whofe bufinefs it was to intervene between merchants, traders, bankers, and other perfons; to make them borrow or lend money, or find or give bills of exchange. But, fince the decree of the council made in the year 1639 , the name of courtier de change has been changed into that of agent de change, banque et finance; and; even to render thofe offices more honourable, they have added to them, in the beginning of the r8th century, the title of king's counfellor's. See Agent of Exchange. So that, at prefent, the word courtier is confined to thofe only who make bargains of merchandizes,

## REMARKS.

The broker's profeffion is very neceflary in commierce, and renders it more eafy, efpecially in towns of great trade, there to have perfons of a good underftanding, well known and efteemed amongt the merchants, workmen and tradefmen, to give them notice where they may meet with the merchandizes they may have occafion for, or with the materials proper for their feveral works, or for their manufactures; and to find for thofe who have manufactured any ware, or who would fell them, perfons ready or willing to buy or batter them.
Henry III. of France, as we have obferved in the atticle of Agent of the bank, was the firft who erected into an office, or fettled employment, the functions of the brokers, which 'till then had been free: but that erection, or creation, did not take place 'till the following reign; nor was it ever put in practice but with regard to the exchange-brokers; and the fame liberty does fill continue in all the cities of France, except a vety few, where there are eftablifhed brokers, that is, whofe employment is a poof under the government, as at Bourdeaux, where there are fuch fettled brokers for all forts of merchandizes, and at Paris for peculiar forts of merchandizes only.
We may diftinguifi, as it were, two forts of brokers: the one who may be called fimply brokers of merchandizes, and the other brokers of manufactures, workmen, and tradermen.
Their functions are alike; that is to fays they all contrive to make people buy, fell, or barter, for the fake of their commiffion, or brokerage; but the object of their functions is in fome manner different, the former facilitating between merchants the fale of the merchandizes which they have bought
by wholefale, or which the foreign merchants bring to market; and the latter applying themfelves only to procure to the manufacturers, workmen, and artificers, the materials proper for their fevaral manufactories, or works; or to afford them opportunities and means for felling the ftuffs, and other merchandizes, they have worked.
At Paris, which is, as it were, the center of the whole commerce of France, there is hardly a body or company of merchants, or even of tradefmen, that have not their brokers, who are commonly chofen out of their own body, and meddle with no bargains but of fuch merchandizes, or works, which by the fatutes it is lawful for the freemen of fuch of the fix bodies of merchants, or. for thofe of fuch of the other comspanies of arts and trades, to fell or to make refpectively, for which each broker acts.
The brokers of the companies of arts and trades are commonly fuch freemen, who ${ }^{\circ}$ having not wherewithal to fet up fhop, get their livelihood by brokerage, each among two freemen of his own company. But, as for the brokers of the fix bodies of merchants, they are, in fome, appointed by the mafter and wardens, as in the drapers body; but, in others, the broker's profeffion may be followed by any freeman who pleales, provided he does not, at the fame time, follow that of a merchant, which is prohibited by the fecond article of the fecond title of the ordonnance of the year 1673: fo that almoft all the brokers of merchandizes are themfelves merchants, who have left.off trade, or who have not fock enough to carry it on for their own account.
Where the broker's profeffion has been erected into an employment under the government, as at Bourdeaux, and in fome other cities, they alone follow that bufinefs, exclufively of all outher perfons.
At Lyons, which is a free city, and in all the other towns, where there are no companies of arts and trades, any perion may fet up for a broker, provided he conform himfelf to the rules of policy eftablifhed in that refpect, and have the qualifications required by the third article of the fecond title of the fame ordonnance of 1673 .
As for Tours, where there are fuch companies, and in all the other towns where there are any, a broker mult be free of the company, or body, that trade in fuch merchandizes, or workss as he would be a broker of.
We have obferved above, that the brokers of merchandizes, and thofe of the manufacturers and artificers, are the fame; there is, however, a fort of difference between them, which is, that the latter are not obliged to keep regifters and journals, being commonly paid their brokerage content, immediately upon the ftriking of the bargain: whereas it is cuftomary with the former to keep books, wherein they enter all the bargairs they make; and their books are admitted as vonchers in the courts of juftice.
Both thofe brokers are credited upon their word, with regard to the dipputes which are between merchants, manufacturers, workmen, and artificers, concerning the felling, buying, or bartering of the merchandizes for which they have bargained.
They reckon at Paris, among the city officers, who are under the juriddictions of the provoft of the merchants ${ }_{2}$ - and echevins, or aldermen, three forts of brokers:

1. The brokers of horfes, for the carriage of merchandizes by water. They are eftablifhed for the navigation, and take care to examine the horfes ufed to draw the boats up the river, to fet the horfes together, and to oblige the carricrs to repair their boats; or to break up fuch as are no longer fic to ferve.
Thefe brokers differ from thofe horfe-brokers whom we call jockies, or horfe-courfers, and whom the French, alfo, ftile courtiers de chevaux, whofe bufinefs is to take, procure the fellinges buying, or bartering all forts of beafts of burden, for carriage or drawing. The office of thefe brokers is not ereated at Paris into a poft under the government.
2. Sworn wine brokers on the keys, to examisie and tafte all the wines that arrive there. It is their bufinefs to juidge whether the calks have nor been filled or mixed with water, or with fome other noxions liquor, and to give the buyers notice; and to fee the caiks, or tuns, contain the quantity of liquor fet down in the mark put upon them by the gauger:
Thefe brokers have nothing in common with the brokers of wine, brandy, cyder, and other liquars, eftablifhed at Paris by the ancient edicts, nor with thofe created throughout the whole kingdom.
The inth chapter of the ordonnance of the city of Paris, made in the year 1672, explains, in five articles, all the functions of thofe fworn wine-brokers, who are officers of the city.
By the firft, they are obliged to tafte the wines as foon as they arrive, in order to judge of their quality.
The fecond commands them to meet on the keys and places of fale, in a fufficient number, on the days of fale, to make the citizens tafte the wines, if thereto required, and give them rotice of the true meafure and gauging of the cafks.
The third declares, that no man is obliged to employ a winebroker, unlefs he pleafes, but that when a broker has brought
a buyer to merchant, or fworn' feller, he remains anfwerable for the buyer's folvency.
The fourth leaves to a citizen who is prefent"to take, if he pleafes, the bargain agreed upon by a broker for an abfent citizen.
Finally, the fifth fettles, at four queues, of fix muids (or hogfheads) the quantity of wine which a wine-broker, keeping a public houfe, may keep in his cellars at a time, over and above the wine of his own growth, and inheritance, or eftate, which, neverthelefs, he is novallowed to fell, but to his guefts.
3 Brokers of bacon and lard. Thefe are eftablithed to examine thofe forts of merchandizes, as they are landed or unloaded, and to aniwer for their goodnefs to the buyers, and to the feller for the price of bis wares.
They alfo give the name of falt-brokers to petty officers of the gabelle, or falt-duty, who are prefent at the granaries on the days when the falt is diftributed, and furnifh the meters wittr meafures, and with pieces of cloth to pat under them. At Cairo, and in feveral parts of the Levant ${ }^{3}$ they give the name of cenfals to thofe Arabians who da the office of brokers; their manner of negociating the merchants affairs has fomething fo very fingular, that it deferves an article by itfelf. See therefore Censal
There are at Amfterdam two forts of brokers, who are called makkelaars. Some are a kind of officers, and are ftiled fworn brokers, becaule they are fworn before the magittrates, or burgomafters; the others are thofe who, without any commiffion, and without being owned by the magiftrates, take upon themfelves the office of brokers: they are called ambulatory brokers.
There are of the former, that is to fay, of the fworn brokers 375 Chiriftian brokers, and 20 Jews; the others are almolt double that number : fo that there are above 1000 brokers at Amfterdam, both of exchange and merchandize, both fworn and ambulatory.
The only difference there is between thefe two forts of brokers is, that the books and perfons of the fworn brokers are admitted as evidences in the courts of juftice; whereas the ambulatöry brokers, in cafe of a difpute, are not admitted, but, on the contrary, the contracts and bargains they made remain void.
The fees, or brokerage, of the fworn brokers at Amlterdam, which have been fettled by two regulations, the one made in Januaty, 1613 , and the other the 22 d of November, 1623 , are, with regard to bills of exchange, 18 ftivers per roo pounds grofs, of Flemifh, which make 600 guilders, that is to fay, three fivers for every 100 guilders, to be paid half by the drawer, and half by the remitter, that is, by him whols gives the money.
Stock-Brokers, are thofe who are employed to buy and fell fhares in the joint flock of a company, or corporation. As the practice of flock-jobbing has been carried to fuct an excefs as became not only ruinous to a great number of pirvate families, but evert affected, or, at leaft, might foon affect, even the public credit of the nation, the legiflature thought fit to put a ftop to it, or at leaft to bring it within certain bounds, and under fome regulation: and, therefore, the following act was paffed.
By ftatute 7 . Geo. II, cap. 8.: Fect. i. All contracts, upon which any premium fhall be given for liberty to put upon, deliver, accept, or refufe, any pabfic ftock, or fecurities, and 'all wagers, puts and refufls, relating to the prefent or future price of focks, or fecurities thall be void; and all premiums upon fuch contracts, or wagers, fhall be, reftored to the perfon who fhall pay the fame, who fhalt be at liberty, within fix months from the makitig fuch contract, or laying fuch wager, to fue for the Yame, with double coft: and it fhall be lufficient therein for the plaintiff to alledge, that the defendant is indebted to the plaintiff, or has received to the plaintiff's ufe the money, or premium, fo paid, whereby the plaintiff's action accrued according to the form of this itatite, without fetting forth the fpecial matter.
Sect. 2. Perfohs who by this act fhall be liable to be fued, thall alfo be obliged to anfwer, upon oath, fuch bill as fhall be preferred in equity, for difcovering any fuch contract, or wager, and the premium given,
Sect. 3. Provided that the plaintiff, relators; or informers in fuch bill, give fecurity to anfwer coft.
Sect. 4. Every perfon who fhatl make any fuctr contracts, upon which any premium chall be given, for liberty to put upon, deliver, accept, or refufe any public ftock, or fecurities, or any contracts in the nature of puts and refufals; or thall lay any fuch wager (except fuch who hall bona fide fue, and with effect profecute, for the recovery of the premium paid by them; and except fuch who hall voluntarily, before fuit commenced, repay or tender fuch premium, as they flall have recenved; and alfo except fuch who fhall difcover fuch tranfactions in any court of equity) thall forfeit 5 col . and all perfóns negociating, or writing fuch contracts, fhall bikewife forfeit 500 I . which penalties may be recovered by action of debt, or irformation, in any of his majefty's courts of record at Weftminter, one moiety to his majefty, and the ofher moiery to them who thall fue for the fame.

Sect. $5 \cdot$

## BRO

Seet. 5. No money, or other conifideration, hall be voluntarily given, or received, for compounding any difference for the not delivering, or receiving, any public ftock, or fecurities; but all fuch contracts thall be fpecifically executed; and all perfons, who fhall voluntarily compound fuch difference, fhall forfeit 100 l . one moiety to his majefty, and the other moiety to them who fhall fue for the fame.
Sect. 6. No perfon who fhall fell fock to be deliveted and paid for on a certain day, and which thall be refufed or negleeted to be paid for, thall be obliged to transfer the fame; but it thall be lawful for fuch perfons to fell fuch ftock to any other, and to receive, or recover from the perfort, who firft contracted for the fame, the damage which fhall be fuftained.
Sect. 7. It fhall be lawful for any perfon, who thall buy fock, to be accepted and paid for on a future day, and which thall be refufed, or neglected to be transferred, to buy the like quantity of fuch ftock of any other perfon, at the current market-price, and to recover and receive, from the perfon whe firft contracted to deliver the fame, the damage fur tained.
Sec. 8. All contracts which thall be made for the buying, or transferring, of flock, whereof the perfon, on whofe behalf the contract thall be made to transter the fame, fhall not, at the time of making fuch contract, be actually poffeffed in his own right, or in the name of truftees, fhall be void; and every perfon on whofe behalf, and with whofe confent, any contract fhall be made to fell ftock, whereof fuch perfon fhall not be actually poffeffed in his own name, or in the name of truftees, fhall forfeit 500 l . And every broker; or agent, who fhall negociate any fuch contract, and thall know that the perfon on whofe behalf fuch contract fhall be made, is not poffeffed of fuch fock, fhall forfeit iool.
Sect. 9. Every perfon, receiving brokerage in the buying or difpofing of ftocks, fhall keep a broker's book; in which he thall enter all contracts that he thall make, on the day of making fuch contract, with the names of the principal parties; and fuch broker, who fhall not keep füch book, or fhall wilfully omit to enter ahy fuch contract, thall forfeit 501. This act was made perpetual 10 Geo . II. cap. 8.
Pawn-Brokers. Thefe are perfons who keep fhops, and lend money upon pledges to neceffitous people, and moft commonly at an exorbitant intereft. They are more properly ftiled pawn-takers, or tally-men.
Thefe are meant in the flatute I Jac. i. cap. 2 i . feet. 5 . where it is declared, That the fale of goods wrongfully taken to any broker or pawn-broker in London, Weftminfter, Southwark, or within two miles of London, thall not alter the property.
And fect. 7. If a broker, having received fuch goods, fhall not upon requeft of the owner difcover them, how and when he came by them, and to whom they are conveyed, he fhall forfeit the double value thereof, to be recovered by action of debt, \&c.
As it is thought that there are a great many abufes committed by pawn-brokers, it was hoped, fome few years ago, that the legiflature would have made fome act to regulate their trade, but this remains fill to be done. In Holland
there are very good regulations concerning the pawn-broker's trade.
Brokers, are allo thofe who fell old houfhold furniture, and wearing apparel. They are likewife called fripperers.
BROKERAGE, or BROKAGE; the fee or commifion paid to a broker for his trouble in negocialting Bufihefs between perfon and perfon. See Broker.
Brokerage. Thus they call at Bourdeaux a duty which is raifed on all forts of merchandizes, of what nature foever they be, which are either imported or exported by fea in that city; except, however, thofe merchandizes, on which new duties are laid; on thefe no brokerage is raifed, when it is faid in the decrees, edicis, or declarations, that thofe merchandizes fhall pay no other duties, but thofe laid upon them in the faid decrees, edicts, or declarations.
This duty of brokerage is raifed after two manners, either-as it is fixed or fettled, or by eftimate or prizing.
The merchandizes on which that duty is fettled, are as follow:
All forts of wines, which pay 30 fols per ton.
Brandies, which pay 30 fols per piece, containing 52 verges. Vinegar, 30 fols per ton.
Prunes, 15 fols per piece, or hoghead, weighing 6 hundred weight.
Honey, 30 fols per tun.
Wheat, mixed corn, rye, millet, linfeed, muitard-feed, walnuts, chefnuts, io fols per tun.
Galipot, or turpentine, 30 fols per tun.
As for the duty by eftimation or prize, it is paid for all the other merchandizes, at the rate of one per cent. of their value.
Befides this, there is received, for brokerage duty, the firft tun of freight on every fhip that takes in it's cargo at Bourdeaux, which tun is commonly valued at eight livres on fhips bound for any port of Erance, and at 10 lives on thofe bound

Yol.I.
for foreign countries; or it is rated in proportion to ti. value of the cargo.
It mult be oblerved, that though, in the fair time, the merchants have the liberty to enter their merchandizes, without paying any local duty, yet they are never free from the brokerage duty.
Obferve likewife, that no merchandize imported by land into Bourdeaux pays that duty of brokerage:
For the management of the office of brokerage duty there; of their two officers or commifioners, the one is the receiver, and the other comptrollei. The former keeps two re giffers of receipts, and the other alfo three regifters of comptrol.
The firf regifter ferves to write down all the large acquit tances of the hips which enter, either at what they call the Convoy (fee Conyoys), or at the Comptablie according to their number. They alfo fet down, in that regifter, the 8 or the io livres for freight.
In the fecond regifter are booked the duties of brakerage, either according as they are fettled, or according to eftimate, with the humber of the fhip's declaration.
The third regifter is defigned for entering the duties of brokerage paid for cargoes, where particulars are mentioned, and which are exported by fea.
BRUNSWICK. The dutchy of Brunfwick, taken at large, includes the duchy of Hanover, the principality of Grubenhagen, and counties of Blakenburg and Rheinftein; and is bounded on the fouth by Thuringia and Heffe Caffel; on the weft by the river Wefer, which parts it from the principality of Minden, and the counties of Lippe and Hoy; on the north by Lunenburg; and on the eaft by Magdeburg, and the principalities of Halderfadt and Anhalt. Here are iron mines in the mountains, one of which called Broeken, or Brockfberg, is reckoned the higheft in Germany; at the bottom of which a falt-fpring being difcovered in the time of Julius duke of Brunfwick, he built a fmall town for the workmen, called Julius-Hall, which is now grown rich and large, by their trade in falt, copper-ketles and pots, wire, \&c.
Goslar is fituate in a valley furrounded with mountains, in which are mines both of iron and filver, viz. thofe of Steinberg, Hertzberg, Rammelfburg, Klockenburg, \&\&. The inhabitants are employed either in digging them, or fmelting and refining, tempering, and vending the metals and minerals of all forts; that are dug out of them. The emperor Frederick II, Anno 1235, with conifent of the fates of the empire, granted to Otho 1 , duke of Brunfwick, the ioth of its mines to him, and his defcendants.
Brunswick was once an imperial city, and a rich and powerful Hans-Town, but, after many ftruggles being taken by the duke Rodolph Auguftus, many of the merchants and tradefmen removed to other places;' and many of their noble houfes, watehoifes, and halls, are now empty, or converted to other ufes. The city, however, is fill rich and populous, though much fhort of what it was, when free. Their chief trade is in tanning leather, and in brewing mum from a malt made of barley, with a fmall mixture of wheat, well-hopped. There is one thin weak fort for their common drink; but what they call fhip-mum is fcarce drinkable, 'till it has purged itfelf at fea, by which they tranfport great quantities abroad. There is a fet number of brewers, who have the privilege to make it from Michaelmas to Lady-day, but mult not fell any 'till it be old enough, left it thould lofe it's reputation. Butter and hops are likewife great commodities here, and they have a fweet fort of beer called brewhan. Betwixt the city of Brunfwick, Golar, and Thuringia, is the great mountain of. Hartz, with the towns and rich mines of Rämmelfurg, Wildman, Claufhall, Lantenthall, Cellerfelr, or Zellerfield, and Grinde, or Grunde. Thefe belong in common to the families of Hanover and Brunfwick, but the greateft fhare to the former. There are above 110 that are called capital mines, feveral of which bave many fmaller ones belonging to them. Some of them are worked at the elector of Hanover's charge, and the relt farmed out; fo that they bring in a great revènue, 900,000 dullars having been coined in one year, from that of Claufthall alone; and the adjacent country is well flored with wood for working them They all lie together, according to Moll, in the north-ealt corner of Grubenhagen, on the borders of the bifhoprick of Hildetheim. The mines of Rammelfiurg, a high mountain near the city of Goflar, 43 miles rouith eaft from Hanover, were difcovered in the year $9 ; 2$, by one Ramme, whore horle's foot thrning up a piece of ore, as he Was hunting, the duke Otho I. got a company of Franks, who underftood minerals, to refine the hictal, from whom the neighbouring town of Frankerburg had it's name. The miners increafing, they found out that of Wildman in 1045, and that of Zellerfield, which is the chief, in 1070. Here the overfeer of the mines keeps his court, and pays the workmen every Saturday. The chief minerals in thefe mines are filver, lead, and two forts of copper; one melted from the ore, and the other made by vitriol water, in which, with great art, it is faid, they fteep great plates of iton in troughs. They find
manty other profitable minerals here, though the naufeous fmells are often fatal to the workmen; as, 1. Grey vitriol. 2. The ink-ftone of many colours; from which two, brayed and boiled together, is made green vitriol: 3. Another vitriol, which grows like icicles, and is ufed without any further cleanfing. 4. Blue vitriol from copper ore. 5. White vitriol from lead ore. 6. Mify, of the nature and colour of Brimftone. 7. Brimftone from a peculiar fort of ore, from whence drop the flores fulphuris, which ufually coaguJate like icicles.
BRUNSWICK.LUNENBURG. The dominions of this electorate may be laid out after the following manner, under thefe heads, viz.
The principality of Grubenhagen.
The duchy of Hanover, or Clanenburg.
The duchy of Lunenburg.
The duchy of Saxe Lawenburg.
The duchy of Bremen, including Verden.
The county of Hoya.
The county of Diepholt.
The revenues of the elector rife, 1. From the falt-pits, or fprings that rife within the walls of Lunenburg. 2. From taxes on land, cattle, merchandize, public houles and inns. 3. The greateft revenues arife from the rich mines of filver, iron, and copper. The mines of Clauthall, with thofe of St. Andrew and Allena, yield near 200,0001. a year; but whether this computation is to be underfood as clear of all charges, is not fpecified: fo that, upon the whole, this elector's revenue is calculated to amount to at leaft 400,0001 . a year.

1. The principality of Grubenaagen, is interfected in two parts by the bifhoprick of Hildefheim : that on the eaft fide is bounded on the north by the duchy of Wolfembuttle; on the weft by Hildelheim ; on the ealt by Hartz foreft; and on the fouth by Eisfeld. The weft part is alfo bounded on the north by Wolfembuttle; on the fouth by Oberwaldt; and both on the eaft and weft by Hildefheim. It's foil is very barren, moft of it's treafure being hidden under-ground ; efpecially in the eaft part, where are molt of the elector's mines of filver, copper, and lead ; befides the many forts of minerals. The eaft part is generally inhabited by miners.
Andreasberg is famous for it's rich mines of iron.
Eymbeck drives a confiderable trade in beer, which is in great requeft ; but was more fo, before the fweet malt liquor, called the brewhan, came fo much in vogue.
2. The duchy of Hanover has Grubenhagen, or that which Moll calls Brunfwick-Lunenburg, on the fouth; LunenburgZell on the north; the county of Schawenburg on the weft; and the duchy of Brunfwick Wolfembuttle, and the bifhoprick of Hildefheim on the eaft. 'Tis more fruitful than the country on the fouth fide of it, has fine meadows and fields, breeds excellent horfes, and affords theep and wool for export; and falt and tobacco fufficient for home confumption.
At Hanover are four fairs a year, much frequented by foreigners.
It was once a free imperial city, and a Hans-Town, when it had a flouriming commerce; but it's chief trade now is in that fweet, but muddy liquor, called brewhan, which they fend in great guantities to the neighbouring towns and villages.
Though the citizens of Hamelen have the conveniency of commerce by the river Wefer, yet agriculture is the chief part of their employment and fubfiftence.
3. The duchy of Brunswick-Lunenburg, in which Zell is comprehended, and therefore called Lunenburg-Zell, has the dominions of Brandenburg and Mecklenburg on the eaft; the county of Hoye, with the duchies of Bremen and Verden, on the weft; the territories of Lubeck and Hamburgh, and the duchy of Saxe-Lawenburg, on the north; the duchy of Brunfwick, the bifhoprick of Hildefheim, and the duchy of Calenburg on the fouth. This duchy is for the moft part a barren, fandy defert, and very thinly inhabited. It abounds with woods and forefts, where are produced a great quantity of good fir, oak, and elm, which they fell to the Hamburghers and the Dutch, together with wild fwine, and all forts of deer, amd other venifon, of which there's a great plenty. A great part of it confifts of vaft heaths and waftes, yet in the barren parts the inhabitants keep bees, and make great profit of their honey and wax.
From Zell a trade is carried on to Bremen, by the river Aller. The country round it abounds with woods and forefts, and the product is the fame with that of the duchy of Lunenburg.
Walstrode is a confiderable town, with a good trade in honey, wax, wool, and beer.
Herbutg has great privileges, is populous, and enjoys a pretty good trade, having as convenient a fituation for it as Hamburgh, with a tolerable harbour. 'T is a great thoroughfare from that city to the fouthern provinces.
Eunenburg was formerly one of the Hans-Towns, and an imperial city. It's chief trade is in falt made from fprings, which rife within the walls. The water is greenith, but a mixture of lead purifes it, and makes it preferable to that of all other falt firings. Their falt-houfes are fenced, and con-
flantly guarded, it being the main fupport of the city, a confiderable branch of the elector's revenue, and a conftant enployment for the poor. The falt is the beft in Germany for colour and tafte, and therefore much of it is exported. Thefe falt-works are charged with penfions, payable to thofe in office, to the clergy, and to fchool-mafters.
Schackenburg is a large trading town at the conflux of the Elbe and the Weckt, or Beffe.
4. The duchy of Saxe Lawenburg lies on the north and fouth banks of the Elbe, between Holitein on the weft and north; Mecklenburgh on the eaft; and Lumenburg on the fouth. It abounds in pafture and good cattle; is well fupplied with wood and water, and has fome fmall, but populous, trading towns on the Elbe, befides it's capital.
Lawenburg is well fituated for trade, only it is all engroffed by Hamburgh.
N. B. The reft of the domimions of this electorate, viz. the duchy of Bremen, Verden, the county of Hoya, and the county of Diepholt, will fall in under their proper heads, viz. Bremen, and Westphalia. See Germany, and Hanover. BUBBLE, a cant term, given to a kind of projects for raifing money on imaginary grounds, much practifed in France and England about the years 1719, 1720, and 1721.
The pretence of thefe fchemes was the raifing a capital for retrieving, fetting on foot, or carrying on fome promifing and ufeful branch of trade, manufacture, machinery, or the like. To this end, propofals were made out, fhewing the advantages to be derived from the undertaking, and inviting perfons to be engaged in it. The fum neceflary to manage the affair, together with the profits expected from it, were divided into fhares, or fubfcriptions, to be purchafed by any difpofed to adventure therein.
The furprizing rife of the South Sea fock in the city of London, in the year 1720 , gave birth to thefe projects: for the firf defigners of them gave out thefe propofals, with the hopes of raifing a fum, which they intended privately to be laid out in South Sea fock, expecting by the rife thereof to refund the fubfcribers money, with a great gain to themfelves. Others, improving the hint, opened their defigns with the fame plaulible pretences, but abfolutely with intent to defraud the adventurers of their fubfeription-money, without the leaft view to reftitution.
There was a third kind fomewhat different : the projectors of thefe, to give the thing a better colour, propofed to have books opened, and fubfriptions taken at fome time to come, as foon as the affair fhould be ripe for execution, and for dividing into Thares; but, in the mean time, took money:by way of premium, to intitle perfons to be admitted fubfribers, when the matter was to be Iaid open. Thus feveral thoufands of thares were befpoke in a day, and premiums from one fhilling to fome pounds paid thereon, which the projectors very honeftly put into their own pockets.
There were many and various forts of thefe bubbles, and the nature of them was very extraordinary. Some of them were authorized by patents: in others, the projectors and proprietors were formed into corporations, fome for fifheries, fome for infurances, fome for mining, \&rc. Nay, fuch was the frenzy of the times, that there were bubbles for cleaning the ftreets, others for furnilbing Choes, others for fockings, others for phyfic, others for the maintenance of baftard children; others for the buying bad titles, others for the lending money, \&c. and thus people of all conditions became the eafy dupes of thefe fharping projectors. See the articles Action, Companies, Projector, Stockjobring.

## Remarks.

Bubbles,by which the public have been tricked and deceived, are of two kinds, viz. I. Thole which we may properly enough term trading-bubbles. And, 2. Stock, or fund-bubbles. The former have been of various kinds, and the latter at different times; as in France and England in i719 and 1720, and when any remarkable alterations have been made, with regard to the property of our monied corporations.
In order to give the more pecious colouring to trading-bubbles, they have been generally undertaken by fuch crafty and defigning fellows, who have had art enough to magnify the imaginary gain of their projects, with a view to obtain large fubfcriptions before-hand, that a few of the cunning ones may fuddenly grow immenfely rich, at the expence, and by the unwarinefs of numbers, who mean only to make a reafonable advantage of their money, rather than let it lie dead. As numbers have been egregioully duped and impofed ons and many families ruined and undone by trading fohemes, that bave no foundation but in deceit and villainy, it may be ulefa], efpecially to the growing and unexperienced generation, to throw fome cautions in their way, with refpect to public impofitions of this kind.
Many of thefe nefarious defigns have been carried on by companies, fuch as the York Buildings, charitable Corporation, and too many others, as will fully appear in the fequel of this work. I fhall make a few obfervations, firft tiph trading bubbles, to prewent the public being impofed on here-

7

## B U B

$B$ U B

Afer. Let the nature and extent of the commerce propofed be maturely weighed, as whether it will admit of the capital fock required, and whether lefs would not anfwer the purpofes, and yet yield the adventurers only a reafonable gain; whether the branch of trade is not already over-done; either among ourfelves, or by other nations; whether the public ncouragement obtained is adequate to the bufinefs propored ; and whether it fo interferes with other branches which have conneation therewith, that it's conflitution can be but of fort duration; whether there are not fome latent finifter views in the acting junto, either to make a jobb of their fcheme; or by drawing in numbers into their fubicription at one rate, with defign at the critical time, when they have effectually blinded their encouragers, to difpofe of their fhares at an extravagant real advantage, and leave the imaginary fairy treafure in the hands of the dupes; whether the management of the bufmefs lies in the hands of men of difcernment as well as worth and honour, or whether the leading cabal may not confift only of a few rotten conductors, who glofs over their proceedings with equipage and pageantry, and make ufe of a borrowed property of others, in order to raife a real one to themfelves; whether many wife, upright, and opulent gentlemen may not be made tools of to raife the credit of a chimera, and become the bubble of bubbles, as well as the innocent widow and the orphan, and numberiefs others who have but fmall fortunes, whereon to fubfitt; whether fuch arts may not be made ufe of in the public news-papers, as even to deceive the moft circumfpect as well as the credulous; whether authentic accounts of the profits and loffes of any public enterprizes fhould not be made public, from time to time, for the fatisfaction of the proprietors, and not kept fecret only, in the hands of a few defigning managers; whether the choice of directors ought not to be fo determined by private ballot, as that it may not be known for whom the electors vote; and be made annually, and by lifts of the proprietors, not by lifts formed by the managers themfelves, fo as that the change of hands may go only in a round of thofe who are in the fecret to -
Thefe, 'tis humbly prefumed, are fome of thofe prudential precautions that are requifite to be taken by the public, when great fums of money are to be raifed to profecute any public fchemes whatever, and what every honelt man will readily acquiefce in - There is, indeed, one particular, which I had forgot to intimate; though I judge it not lefs effentially neceflary than any that has been fuggefted.- I mean, the neceffity of proprietors in general making themfelves thoroughy acquainted, from time to time, with the true flate of the ffairs of companies; and that men of the beft fenfe among them, and who never intend to act in the management, hould pretty conftantly attend the public bufinefs, and ferutinize into all tranfactions.-To which end, I would mof humbly fubmit to confideration, That gentlemen of the beft education, and of the moft knowledge of the world, fhould make themfelves complete accountants; otherwife, how is it poffible, that they fhould be capable of examining into the tate of the accounts of public corporations? That I may not be mifunderftood, I would defire to obferve, for the fake of the private gentleman, as well as others, how far I judge this kind of knowledge necellary. A knowledge and readinefs in numerical computation is not the only qualification; for, befides that, the thorough fkill in the method of account-keéping, called debtor and creditor, by the way of charge and difcharge, is indifpenfably requifite; this art being applicable to the tranfactions of public companies, as well as to the affairs of private gentlemen, merchants and other traders. The method of account-keeping by public companies, as well as the public offices, differs, indeed, from that ufed by merchants; but, though there is a difference in the form, there is none in the eflence; a perfon who is grounded in the one, will apply it to the other eafily, and be enabled to detect all fallacies, however fubtilly difguifed
The number of the books, in the office of the accountants, will multiply, according to the nature of the company's tranfactions; but, let them be ever fo numerous, they are all of them reducible to a plain ledger (as I have fhewn, under article Book-Keeping, and Books of Merchants) which, being always polted up, will exhibit the true ftate of the affairs of the greatelt corporations, as familiarly as that of private men. And, why fhould not the ledger, and, indeed, all the other accounts of bodies corporate, be fairly laid before their general courts? Nay, why hould not every proprietor, who is interefted to a certain degree, have the liberty of infpecting the books at certain ftated times, if not at all times? By this means, the man of penctration would be able to difcern how the public bufinefs went on, and would be capable of preparing himfelf to fpeak to the intereft of focieties at their general courts; and, who can do that to good purpofe, without a competent knowledge in the companies negociations? I muft confefs, that I have not difcernment enough to difcover, why the books and accounts of trading focieties, any more than thofe of the public offices, where the flate of the national revenue is regiftered, fhould be kept private, when the intereft of the public requires otherwife ?

Where the tranfactions of great bodies are kepr as they ought to be, by variety of chief officers, and their underling clerks, the various officers and clerks are fuch checks upon each other, that it is cxtremely difficult, though not im pofible, as is known from experience, for frauds to be com mitted by thefe officers.-Thefe, however, have but proved trifling in comparifon to thofe which have been committed, by the mal-adminiftration of the bead officers; by thofe who have had the chief, and, as it were, the fole and uncontroulable direction and government of great bodies. Wherefore, the great lines of conduet are what the propretors fhould vigilantly attend to:
To enable the proprietors in general to make a right judg ment of the ftate of their affairs; why fhould not their ac counts be annually made public, that adventurers may be convinced, what dividend may, and what not be afforded confiftent with the real profperity of the corporation? Would not this be one way to prevent the public being made a bubble of?
The other fpecies of bubbling arifes from the nature of out national debts; for, if between eighty and ninety millions of money are fo tied up, as to remain untransferable, unnegociable, and not to change hands, who could ever be induced to lend the government money upon the froft prefing emergency, even in confideration of the largeft intereft Though parliamentary fecurity gives the real value to the national debt, or the public funds, they would be like the mifer's treafure, uifelefs to the poffefior; or like the undifcovered riches of the earth, did not circulation and credit fet a market price upon them. As the beft things may, fo has the liberty of circulating our furids been greatly abufed; nor can any thing I am afraid, ever effectually prevent thefe general abufes, while our national incumbrances continue, without doing a greater public injury, than can be fuftained by the prefent methods of circulation of the funds:
But, although a public mifchief is not to be abfolutely prevented, a private one, in a great theafure, may, by a proper knowledge, and a competent judgment, to make a feafonable ufe of that knowledge.
But this can only be obtained by thofe, who duly attend to the tranfactions of the great corporations, and from time to time, make proper momento's of the ftate of their affairs: The bulk of the public creditors are widows and orphans, and other ladies and gentlemen who cannot be fuppofed to have any knowledge in public bufinefs. Who then may we rely upon to watch over the conduct of great companies? To put the fole confidence in directors, no one will contend for, who is at all acquainted with what is paft. Who then is fo fit to take care of public property, ats the public proprietors themfelves? Such among thefe, who are of the beft abilities without doors, fhould attend to the conduct of thofe within; fhould call for accounts and vouchers at their general courts, and go to the root of their affairs, before fchemes can be formed and executed to the public detriment. This vigilant infpection, this conftant fcruting of the moft judicious proprietors, who have no fhare in the direction of public companies, is certainly the way to prevent thofe calamities, which have been fo often experienced. That gentlemen may not be deterred from duly entering into enquiries of this kind, we thall, in it's place, endeavour, to the beft of our abilities, to fet the nature, the conftitution, and the tranfactions of thefe corporations in a true light, in order to prevent the creditors of the public, as well as the proprietors of trading bodies, from being impofed upon hereafter.
There is another kind of impofition; to which too many of the proprietors of our public funds are daily liable, not from any malverfation in thofe, whom they have entrufted with the management of their affairs, but from their own voluntary act. I mean, their jobbing in the funds, for the fake of more gain than their intereft or dividends.
Would the proprietors pleale to confider, how few, how very few, in comparifon to their great number, there are; who have, or can have, a competent intelligence and fagacity to trade in the focks to advantage, they would not be fo eafily made tools of upon thofe occafions as they are. Thofe who make flock-dealing their employment, and lie in wait to take advantage of the innocent, the unwary, and ignorant, make it their bufinefs to get fuch intelligence, as will anfwer their end, either by buying or felling focks: and, if fuch can obtain no real intelligence, to occation a fluctuation in the ftocks, they make no great difficulty to invent fuch as will anfwer their purpofe. To which end, 'tis common to propagate one thing in the city, and whifper another at St James's, and write different from either both at home and abroad. Have we not known from critical conjunctures, that letters io ve been forged as coming from foreign correfpondents, with intelligence only to raife or fall ftocks, according to the intention of the forgers? Thefe are fome of the artifices of money-jobbers; who knowing there is not one in a thoufand among the public creditors, that are able to fee through their finefles, or indeed have either opportunity or difcernment to penetrate them, they make a prey of the lels knowing, by alarming their fears, or feeding their hopes. Whereas, were the public creditors more fteady, and lefs

## B U C

B U C
mtimidated for fear of lofs, or elated with a view of gain, by the rife or fall of flocks, they could never be made fuch bubbles of, as thcy almoft daily are: and, 'tis great weaknefs for thofe, who have no opportunity of intelligence which may be relied on, to be ftock-dabblers, or actuated to buy or fell by the nod, the wink, or any other infinuation of a broker, for the fake of his commiffion.
Thefe, I fear, are not the only evils neceflarily attendant upon our national incumbrances; for, while men's minds are engaged in the fhuffing of property from hand to hand among ourfelves only, which makes us never the richer, with all the bufle of thefe tranfactions, they neglect folid and ufeful commerce, which alone can make the nation really richer. However weaithy the greateft of thefe fundjobbers may be, and however much he may plume himfelf upon his treafure, it is the direct way to render all his monied property of little worth; for, the more ftock-jobbing prevails by latent artifices, and the longer the public tranquillity fhall continue, the higher will the premiums rife : and will not this, has it not ever given occafion to the reduction of their intereft; and is there no danger, that they may be actuated to jobb with their flocks, 'till they themfelves become the inftruments of fo reducing their intereft, that their principal will be worth nothing? Perhaps they may flatter themfelves with the trite notion, that, the lower their intereft is, the higher will the price of their lands be: but, when money fhall fetch little or no intereft, what land will they be able to purchafe with it?
This may deferve the ferious confideration of the national creditors. But ftock-jobbing, or flock-bubbling, if you pleate, feems, at prefent, to be brought to a kind of fcience. The gametters meet in Exchange-alley, and, juft as if they were at box and dice, South-Sea, or this or the other fock is the main, which brings in all the bites to fet high; and, when the cullies that are not in the fecret throw at all, they commonly throw out and lofe the box, which the bites take, and the fetters go round, laying moft extravagant odds, upon the fuccefs; but they cog the dice, and nick the main, and fo fweep away all the cafh. Does this kind of traffic enrich the nation? Will fuch arts tend ever to realize the property of the public creditors? I with they would confider their own intereft better, as well as that of the kingdom; for thefe, and other fuch like meafures, I am perfuaded, will foon tend to annihilate all their property.

For what's the worth of any thing?
But juft as much as it will bring.
'Tis for the intereft of the public creditors, that they fhould be faithfully apprized of their prefent fituation; and what is likely to be the fate of their pofterity, fo far as it refpects their monied propertics. This I fhall endeavour to do with all impartiality, and hope to convince them, that nothing can give folid treafure to the nation, and render their properties permanently fecure to their pofterity, but their encouragement of commerce, and contempt of flock-jobbing; that nothing can more effectually prevent their progeny being made the tools and bubbles of defigning men, and make them independent, than to train up, efpecially the younger branches of their families, to commerce, and not to defpife that whereby their anceftors acquired both their landed and monied eftates. See the articles Company, Public Credit, Funds, Money, Actions, Interest of Money, Merchants.
BUCCANEER, one who dries and fmokes fefh or fifh, after the manner of the Americans. That name is particularly given to the French inhabitants of the illand of St Domingo, whofe whole employment is to hunt bulls or wild boars, in order to fell the hides of the former, and the flefh of the latter. Sometimes the word buccaneer fignifies alfo thofe famous adventurers of all the nations in Europe, who join together to make war againft the Spaniards of America; and, under that name, their hiftory has been publifhed, in the year 1686, by Alexander Oliver Oexemelia. But we fhall only fpeak in this place of the buccaneers of St Domingo, and almoft fodely with regard to their trate.

## Of the French buccaneers of St Domingo.

The French buccaneers eflablifhed in St Domingo are of two forts. The buccaneers ox-hunters, or rather hunters of bulls and cows, and the buccancers boar-hunters, who are fimply called hunters, though it feems that fuch a name be lefs proper to them, than to the former, fince the latter fmoke and dry the ferh of the wild boars, which is properly called buccaneering, whereas the former prepare only the hides, which is done without buccaneering.
As they both wear the fame arms and the fame drefs, have the fame followers or attendants, and the fame packs of hounds, and enter into the fame fellowhips amongit themfelves, we fhall not fpeak of them feparately, 'till we have given an account of what is common to both.
The chief part of the buccaneers equipage is a pack of 25 or 30 hounds $s_{2}$ among which they have one or two fetters.

The price of thefe dogs, when the buctancers fell them amongft themfelves, is about 6 crowns, or 18 lives.
Their arms and ammunition, both for war and the chace, for they muft always be prepared for the former, as well as for the latter, becaufe of the neighbourhood of the Spaniards; their fworn enemies) are a gun four feet long, and of a bore proper for balls of 16 in the pound; 12 or 15 pounds of powder, kept in gourds well clofed with wax; a proportionable quantity of fhot, and two ktives in one cafe, to finifh killing the beaft, after it is hunted down, to fkin it, and cut it up. They have their guns from Dieppe and Nantes, and their powder from Cherbourg in Lower Normandy.
Their whole drefs confifts in two ohirts, a pair of breeches, and a kind of linnen frock, or waiftcoat, and a clath cap, or a hat without a brim, except before; their fhoes are made of boar's, or of ox hides, being themfelves the tanners to the leather, and the fhoemakers to make the Thoes.
Lafly, one of the chief parts of the buccaneers furniture, which they never forget, and which is, perhaps; the moft neceffary, is a fmall tent, of very fine linnen, under which they pafs the nights; fheltered from the mulkatoes, which may be looked upon as one of the plagues peculiar to South America, fo much they abound there, and fo troublefome and infufferable is their fting. The cloth of which thore tents are made is fo fine, that, after they have twifted it, they hang over one fhoulder, whence it hangs by their fide, in the form of a bandaleer.
Each buccaneer has his mate, that is to fay, a companion, or comrade, with whom he is in partnerficip of every thing, of dogs, of fervaits, of merchandizes; \&c. But, befides this partnerlhip, which is, in a manner, for life, they alfo enter into other, compofed of more perfons'; for every hunting party they undertake, joining 10 or 12 together, not for the profit, every one hunting for his own private account, but that they may be in a condition to defend themelves againt the Spaniards, when they apprehend any danger of being af faulted.
All that we have obferved relates both to the ox-hunters and to the boar-hunters. What is proper to each of them in particular fhall be next defcribed.

## Buccaneers ox-hunters.

When the buccaneers, who have affociated themfelves together, in order to go a bull-hunting, are arrived at the place where they have agreed to hunt, if they be to continue there fome time, they baild little huts, with palmetto leaves, which the Americans call ajoupas, in' which they pitch their tents.' At break of day every one leaves his hut, and goes to what place he pleafes, giving notice of it however to one another, that they may anfwer each other in cafe of an alarm, or unexpected attack.
In this hunting-march the mafter walks before the fervants, and all the dogs follow in a file, except the fetting-dog, which is to find out the bull, and, for that reafon, is at the head of all. As foon as the beaft is difcovered, the fettingdog gives notice of it, by barking twa or three times, by which the other dogs are animated, who thereupon run after the chace, being followed by the mafter and fervants, who very often keep pace with the dogs.
At the animal's approach, they all 'heiter themfelves, if they can, behind fome large tree, to avoid the fury of the bull, in cafe the mafter, who fhoots firf, does not tay the beall proftrate; for there is nothing more terrible than one of thefe animals when wounded. If the creature falls down, the neareft to it runs and ham-ffrings it immediately, left it thouldrife again; after which the mafter takes out and breaks the four large bones, and fucks the marrow quite hot, which ferves him for a breakfaft: he alfo gives a piece of flefh to his fettingdog, but hinders the other hounds from tafting any 'till the last bealt be killed, left it thould flacken their ardour for their chace. A fervant flays'to finifh faying the beaft, whofe hide he carries to the hut, or to fome other place appointed by his mafter, taking alfo fometimes part of the flefh, if it be a cow they killed, efpecially the udders, which they reckon a delicate morfel, and which the fervant takes care to drefs againft the company comes back from the chace, which commonly does not finih till every one, and even the mafter himidf, be loaded with a hide, and fometimes with twe, if they be not too large and heavy.
If, on their return, they happen to meet with any beaff, they throw down their burden; and, if they kill it, they flay it, and bang the hide on a tree, to hinder the wild dogs from fpoiling it, and fend afterwards a fervant to fetch it.
Being arrived at their hut, every one fpreads a hide on the ground, and faftens it thereto, with 64 wooden pegs, the inner part of the hide outward, which they rub with falt and alhes, well beaten together, to dry it the fooner, which is commonly done in a very few days.
This work being done, they eat what the firft fervant drefled, a palmetto leaf ferving both for difh and plates, and a piece of fharpened wood ferving for a fork; to whet their appetite, which though they do not want, they featon their meat with a fauce, which they call pimentade; it is made with the melted fat fimmed from the por where the meat is $\begin{gathered}\text { build, }\end{gathered}$

## B U C

## $B \cup F$

boiled, feafoned with fome lemon-juice, and a little of that fort of pepper which is called pimento, or Guinea pepper. It is this hunting of the buccaneers, which they renew every day, and which continues the whole year, that furniges France with the finelt hides brought from America.
The buccaneers pur the hides in packs, which they call loads, mixing together hides of full-grown bulls, of young bullocks, and of cows.
Each of thefe loads is compofed of two bull-hides, or of an equivalent, that is to fay, either of two real bull-hides, or of one bull-hide and two cow-hides; or of four cow-hides ; or of three young bullock's hides: three bullock's hides being reckoned equivalent to two full-grown bull's hides, and two cow's hides equivalent to one bull's hide. Thefe bulls they commonly call oxen in France, though they be not

Each load is commonly fold for fix pieces of eight rials, which is a Spanith coin, the French coin beigg but little current, or not at all, in the ifland of St Domingo.

## Buccaneers wild boar-hunters.

Thefe buccancers hunt wild boars after the fame manner as thofe we have juft now mentioned hunt bulls; they have, as we have already obferved, the fame accoutrements, the fame dogs, the fame arms, the fame wearing apparel : the only difference confifts in the animals they hunt, and the manner of drefling the fleth of the wild boars which they kill, and in the trade they make of it
On their return from the chace, each carries his boar to the hut, where, after flaying it, and taking out all the bones, fo as there may remain nothing but the ferh, they cut it all into narrow pieces, according to the fize of the bealt, or the pate they cut.
The feif being thus cut, and placed regularly upon palmetto leaves, they fprinkle very fmall falt over it, and, after it has taken falt, and caft the brine, which requires but 10 or 12 hours, they carry it to the buccan, where they fmoke it, after the manner we fhall defribe hereafter. They commonly ufe the very bones of the beafts they have killed, not only to increafe the fmoke, but alfo becaufe it has been obferved that the fmoke of thofe bones (on account of the volatile falts which exhale from the bones) renders the meat more fightly, and gives it a much better relifh than any other material that might be ufed to fill the buccan with fmoke.
This meat, coming from the buccan, is equally pleafing both to the eye and to the tafte, yielding a very agreeable fimell, and being of a frefh colour, which whets the appetite: fo that many people eat it without any other dreffing, and find it more favoury thari when it is any other way prepared. It is trues indeed, that buccaned meat does not continue long in that ftate of perfection and goodnefs; and even after fix months time it dries to that degree, that it has no longer any but a fharp tafte, and favours of nothing but falt.
This meat is fold by the bundle, or pack, weighing commonly 60 pounds, at the rate of fix pieces of eight per pack. The palmetto leaves ferve to pack it up in, but their weight is deducted, fo that there muft be in each pack 60 pounds of net flefh.
Thefe buccaneers have alfo a great trade of the lard of boars, which they melt, and gather in large pots, which they call potiches. This lard, which is called mantegua, is alfo fold for about eight pieces of eight per pot.
There is a great trade, and a great confumption, of each of thefe merchandizes in the French fettlemerits of the ifland of St Domingo, and in thofe of Tortuga : befides which, they fend great quantities of them to the Antilles, and even into the continent of French America. There is alfo a great deal of it fold for the fupport of the crews of the fhips that come from France for trading, or which the privateers of Tortuga fit out, for cruizing againft the Spaniards.

## Spanifh buccaneers.

The Spaniards, who have large fettlements in the inand of St Domingo, have alfo their buccaneers there, whom they call matadores, or monteros. Their chace has fomething noble, which favours of the Spanifh pride : the huntfman, being on lorfeback, ufes the lance to ftrike the bull, thinking it beneath his courage to fhoot him at a diftance.
When the fervants, who are on foot, have difcovered the beaft, and, with their dogs, have drove it into fome favannath, or meadow, in which the mafter waits for them on horfeback, armed with two lances, that matadore goes and hamflrings it with the firf lance, the head of which is made like a crefcent, or half-moon, and extremely fharp, and kills it afterwards with the other lance, which is a common one. This chace is very agreeable, the huntfiman, making commonly, in order to attack the bull, the fame turns, and the fame cercmonies, which are practifed in thofe feftivals fo famous in Spain, wherein the greateft lords expofe themfelves fometimss to the view of the people, to make them admire their intrepidity and their dexterity, in attacking thofe furious animals: but then it is a very dangerous chace, thofe bulls

Vos. 1.
in their fury running often directly againgt the hunteman, who may think himelf very happy if he comes off only with the lofs of his horfe, and if he is not himfelf mortally wounded.
The Spaniards drefs their hides like the French, who have learnt it from them; and thefe hides being carried to the Havannah, a famous harbour in the illand of Cuba, are part of the trade of that celebrated town. The fota and the galleons farce ever fail touching there', 'on their return from Vera Cruz, and Porto.Bello, and load there thofe hides, which they carry into Spain, where they are fold for Havannah hides, the molt efteemed of all thole that are brought from America into Europe.
The buccan is the name they give to the place where they fmoke the fefh and fifh, after the manner of the favages. It is a lodge, or hut, about 25 or 30 feet in circumference, all furrounded and covered with palmetto leaves.
In the middle of this hut, which has no other opening but the door, there is a large grid-iron, made of.perches of wood, as thick as one's wrift, and feven or eight feet long, which, being put crols-ways, leave openings half a foot fquare. Large forked ftakes, two feet high, fupport that kind of gridiron, from diftance to diftance, and raife it above ground, that wood, or other combuftible matters, may be kindled under it, which produce more fmoke then heat. Over this machine, which the Indians call barbucoa, they put the filh, or fefh, which they would buccaneer.
The Caraibes or Caribbees, of the Antilles, and other Indian anthropophagi, or men-eaters (if any fuch there be) of the continent of America, of whom the Europeans learnt the art of buccaneering flefh and fifh which they would preferve or keep, have, they fay, the cruel cuftom of buccaneering men, as well as beafts: and thus they fmoke and roaft the limbs which they cut from the bodies of the prifoners they make in war, on which they afterwards abominably feaf; as cannot be read without horrour in the accounts, both ano cient and modern, which we have of America, and of the cuftoms and manners of it's original inhabitants.
But then, it muft be obferved, that, if ever they eat any human flefh, it is only that of their enemies, taken in war, and out of a kind of revenge, and by way of triumph. For, as our ingenious voyager, Dampier, fomewhere obferves, there is no nation upon earth but to whom Providence has afforded fufficient food, without being obliged to feed upon .creatures of the fame fpecies with themfelves.
BUCKINGHAMSHIRE is fituate almoft in the center of England. It is divided, on the fouth, from Berkfhire by the Thames; and is bounded on the welt by Oxfordihire; on the north with Northamptonfhire; and, on the eaft, with Bedfordfire, Hertfordhhire, and Middlefex. The chief manufactures of this fhire are paper and bone-lace, the latter of which is Iittle inferior to that of Flanders.
Chipping-Wycomb is reckoned one of the greateft cornmarkets in this part of England. There are feveral mills near it, both for corn and paper. After the wheat is ground, and dreffed at the former, it is fent to Marlow, and put on board the barges for London.
Great Mariow. The chief manufacture of it is bonelace; but it is of much more account for the navigation carried on by the Thames, which brings goods hither from the neighbouring towns, efpecially great quantities of malt and meal from High W ycomb, and of beech from feveral parts of the country, which abounds with that wood more than any other country in England; and for the feveral corn and papermills in that neighbourhood, particularly on the little river Loddon, and three remarkable ones called the Temple-Mills, or the brafs-mills, for making Biftram-Abbey battery-work, viz. brafs kettles, pans, \&c. befides a mill for making thimbles, and another for preffing oil from rape and flax-feed.
Oulney is a little town, noted for the manufacture of bonelace, on the weft fide of the river Oufe.
BUCKRAM, a fort of coarfe cloth, made of hemp, gummed, calendered, and dyed feveral colours. It is put into thofe places of the lining of a garment which one would bave Itiff, and to keep their forms. It is alfo ufed in the bodies of women's gowns; and it often ferves to make wrappers, to cover, or wrap up cloths, ferges, and fuch other merchandizes in, to preferve them, and keep them from the duft, and their colours from fading
Buckrams are fold wholefale by the dozen of fmall pieces, or remnants, each about four ells long, and broad according to the pieces from which they were cut. Sometimes they ufe new pieces of linnen cloth to make buckrams of; but moft commonly old Cheets, and old pieces of fails. They make a great many at Paris, and they get, alfo, vaft quantities from Normandy, particularly from Caen, Roan, and Alençon. BUDZIACK TARTARY, fituated on the rivers Neifter, Bog, and Nieper, having Poland and Ruffia on the north; Little Tartary on the eaf ; the black fea on the fouth; and Beflarabia on the weft; fubject to the Turks. The chief town is Oczakow, and their chief traffic is that of making daily excurfions into the neighbouring plains, to feal Chriftians, and fell them for flaves to the gallies
BUFF, BUFFLE, or more commonly BUFFALO, in Latin BUBALUS, a wild animal, refembling an ox, except that

5 E

## B U L

It is longer and higher. It's horns are very black, it's body very thick, and it's hide very hard. It has fhort and black hair, and hardly any on it's tail, but a great deal on the fore part of it's head, which is very fmall in proportion to the reft of it's body. It's horns are very broad, ir's neck long and thick, it's tail fhort, it's thighs thick and fhort; it is properly a wild ox, which may be tamed, and which they put to labour in Italy, and in feveral other countries, as they do oxen in France; it's female yields milk like a cow.
Buffaloes are very common in the Levant, particularly about Conftantinople and Smyrna. They abound alfo in Africa, and efpecially in the kingdom of Congo. There are likewife a great many in Egypt, but they are not fo fierce as thofe of Europe. The merchandizes they afford to trade, are their horns, their hides, and their hair.
Of the horns are made feveral turner's works, particularly beads for chaplets, and fnuff-boxes, which are pretty much valued.
Of the hides drefled with oil and well prepared, are made a fort of coats, called buffs, or buff fkins, in which the horie and gens d'armes in France are dreffed. They alfo make bandaleers, belts, pouches, gloves, $\&: c$. with buffalo's leather. Buffalo-hides, dried with the hair on, are part of the trade, which the Englifh, French, Italians, and Dutch, drive at Conftantinople, Smyrna, and on the coaft of Africa. They take them up there in return for the merchandizes which they carry thither from their own countries.
When the hides of elks, oxen, cows, and fuch other animals, have been dreffed with oil, like the buffalo-hides, they allo give them the name of buffs, or buff.fkins, and they are put to the fame ufes. Thofe of oxen and cows are the leaft valued, they being moft commonly ufed only to make belts, bandaleers, and pouches.
There are in France feveral manufactories defigned for the drefing of thofe forts of hides, viz. at Corbeil, near Paris, at Niort, at Lyons, at Roan, at Etampes, at Cone, \&c. The firfe eftablifhment of thefe manufactures was owing to the Sieur Jabat, a native of Cologn, who had brought them to the higheft degree of perfection.
Buffalo's-hair, after it is feparated from the hide by means of lime, before it is dreffed with oil, is a fort of flocks, which, being mixed with that of oxen, cows, or fuch other animals, ferves to fuff.
The French give the name of buffletin, both to a young buffalo, and to buff-lkins ready dreffed.
The buffs-hides from the Levant, of which there are three forts, namely, thofe of Alexandria, thofe of Conftantinople, and thofe called buft's-efcars, which are of an inferior fort, are reckoned among the merchandizes which come from the countries and territories under the dominion of the Grand Seignior, of the king of Perfia, and of Italy, and pay 20 per cent. of their value, according to the decree of the 15 th of Auguft, 1685, when they have been landed in foreign countries, and even without being fo landed, when they enter by the port of Roan.
BULGARIA the Great. Bulgaria is divided into Great and Little, or Afiatic and European. The latter, which lies along the fouth coafts of the Danube, having the Black Sea on the eaft, and Macedonia on the weft, is part of Turkey in Europe, and therefore is foreign to this article of Ruffia, and will be fpoken of in it's proper place.
Bulgaria the Great, is that of which we are now going to fpeak, as part of Rufia in Europe. It is bounded on the north by the kingdom of Cafan, on the eaft by Bafhiria, on the fouth by the Samara, which divides it from the kingdom of Aftracan, and on the weft by the Wolga.
This territory is fo little known to us, that we are fcarcely certain whether, or by whom it is inhabited; whether it be populous, fertile, \&c. or the contrary. Some cities, not inconfiderable indeed, we find towards the weftern fide, as Bulgar the capital, advantageoully fituated on the Wolga, and efteemed amongt the moft confiderable cities of Ruffia, 'Tis faid, that the mountains of Caf yield plenty of iron, cryftal, and other valuable ftones.
Bulgaria the Lefs, is bounded on the weft by Servia, on the fouth by Romania and Macedonia, from which it is parted by a ridge of mountains, called Argentaro, or Coftegnaz; on the eaft it has the Black Sea, on the north, Sanfon's maps
bound it by the Danube, but, accorting to Wiflher's ant to Mr Baudrand, it extends beyond that river. The chil product of this country is cattie; of which there are vait herds.
At Sophia the Jews have feveral fynagogues, and drive a very great trade. These are about 100 Roman catholieks, with a prieft, who fays mafs publickly. Molt of thefe are merchants of Ragufa, who trade here, as they alfo do at Belgrade. It is one of the greateft thoroughfares in Turky, fince all they who travel from Conftantinople to Ragufa, Venice, or into Hungary, muft neceflarily pafs through this town.
BULLION, is uncoined gold or filver in the mafs. Thofe metals are called fo, either when fmelted from the native ore and when they are not perfectly refined; or when they are perfectly refined, and when they are melted down in bars or ${ }^{4}$ ingots, in any unwrought body, of any degree of finenefs.
When gold and filver are in their purity, they are fo foft and flexible, that they cannot well be wrought into any fathion for ufe, without being firft reduced and hardened with an alloy of fome other bafer metal.
To prevent the abufes which fome might be tempted to commit in the making of fuch alloys, the leginators of civilized countries have ordained, that there fhall be no more than a certain proportion of a bafer metal, to a particular quantity of pure gold or filver, in order to make them of the finenefs of what is called the ftandard gold or filver of fuch peculiar ftate or nation. See the article Standard of gold and filver.
According to the laws of England, all forts of wrought plate, in general, ought to be made to the legal ftandard: and the price of our ftandard gold and filver is the common rule whereby to fet a value on their bullion, whether the fane be in ingots, bars, duft, or in foreign' fpecie. Whence 'tis eafy to conceive, that the value of bullion cannot be exaetly known, without being aflayed, that the exact quantity of pure metal therein contained may be determined; and confequently, whether it be above or below the ftandard.
In order to underftaind the nature and utility of fuch affay, fee the article Assay.

## Of dealing in bullion filver.

In order to facilitate the arithmetical operations requifite in bulinefs of this kind, the following tables may be helpful; efpecially to thofe who fhould not be very expert at numbers, or to others who would chufe to have a contant check to their calculations; which will fave the time of a double operation by way of proof, or the time of a clerk in fo doing The reader is defired to obferve, that a lb . weight of flandard filver is in ounces, 2 dwts, or penny-weight of fine filver, and 18 dwts of fine copper, which make together iz ounces, or 1 lb . Troy weight, by which gold and filver are bought and fold.

Of the Troy weights.

N. B. In the firft and fecond Tables, the fractions are decimally expreffed; [for which fee the article Arithmetic.] For

## B U L

TABLES for the Computation of B ULLIONSILVER

FIRSTTABLE,
Sheweth filver of any finenefs, reduced to the legal ftandard weight, from 100,00002 , to one grain, and the thoufandth part of a grain.

The ufe of the foregoing Table, for reducing filiver to the ftandard of England.

When you have a report of the affay-mafter, of what quantity of pure fine filver there is in a lb . weight of any bullion, more or lefs than there is in I lb. weight of ftandard filver, the above table will thew how much it will amount to in any quantity of the faid bullion. For the finding out which, obferve the following rules.

1. Reduce the report of better or worfe than ftandard into half-penny weights.
2. Multiply the weight of the builion by the aforefaid halfpenny weights.
3. Collect the product out of the foregoing table.

Having collected the product out of the table, add them together, and the total will be the weight, that muft be added to the firt weight, if it be better than flandard, in order to know the exact ftandard weight. But if the builion be worfe than ftandard, then fubftract the total of the aforefaid additions from the firft weight, and the remainder will be the ftandard weight. See the following examples.
Example 1. To know how much 189 ounces of filver, worfe than flandard, 19 dwts $\frac{1}{2}$ will make, ftandard weight.
Worfe
Multiply by $\frac{2}{39 \text { half dwits. }}$
Multiply I89 ounces the grofs weight
By
39 half dwts.
Collect thefe 737 I ounces out of the foregoing table.
Oz. oz. dts. grs. 1000 pts
7000 makes $15: 15: 7 \cdot 567$
$\left.\begin{array}{lll:l}300 \\ 70 & - & 0: 13 \\ 12 & 0 & 324 \\ 1\end{array}\right\}$ added
$\begin{array}{r}70-0: 3: 3 \cdot 675 \\ 1 \\ \hline 7371\end{array}$
$\overline{7371}$ is $16: 12: 0: 647$ worfe than ftandard filver.
From 189: 0.0:000 the weight
Deduct $\begin{array}{r}16: 12: 0: 647 \text { worfe } \\ \hline\end{array}$
Remains $172: 7: 23: 353$ the ftandard weight.
Example 2. To know how much flandard weight there is in 267 ounces of filver, better than flandard in $\frac{1}{i}$ dwts.

| Better | II ${ }_{2} \mathrm{~d}$ wis |
| :---: | :---: |
| By |  |
|  | 23 the half |
| Mul | 7 ounces |

$\begin{array}{ll}\text { By } & 207 \\ 23 & \text { the half dwts worfe }\end{array}$
Makes 014 I called oz. collect thefe out of he foregoing tavile.
OZ. oz. dt. gr. rocopte
6000 is $13: 10: 6: 486$
$100-0: 4: 12: 108\}$ added
$\left.\begin{array}{cc:c:c:c}40-0: 19: 3 \\ 1 . & 0: 0: & 1: 081\end{array}\right\}$
$6141-13: 16: 14: 918$ better
lo $267: 0: 0: 000$ the grois weight
Add $13: 16: 14: 918$ better
Total $280: 16: 14: 918$ is the ftandard weight-
To calf up Bullion.
Example 3. At 5 s. 2 d. $\frac{1}{8}$ per ounce fandard, to know what 267 oz. 17 dwts. 17 grs .

## SECONDTABLE.

Silver valued by the grofs weight.
It fhewing how much an ounce of filver, of any finenefs is worth more or lefs than an ounce of ftandard filver, to the thoufandth part of a penny from a $\frac{1}{2}$ penay weight, better or worfe than ftandard, to 8 ounces worle.

The fandard prices from five fhillings, to five fhillings and fix-pence $\frac{7}{8}$ per ounce.

See the following Tabies on the other fide.

TABLES for the Computation of BULLIONSILVER.

## S E C O N D T A B L E.

From 5 s. to $5 \mathrm{~s} \cdot \frac{3}{8}$ of a Penny per Ounce Standard.

From $55 \frac{1}{2}$ d. to 5 s. $\frac{7}{5}$ of a Penny per Ounce Standard. at $60 \mathrm{~d} \cdot \frac{1}{2}$ at $60 \mathrm{~d} \cdot \frac{5}{8}$ pat $60 \mathrm{~d} \cdot \frac{3}{4}$ at $60 \mathrm{~d} . \frac{7}{3}$

From 5 s．6d．$\frac{x_{2}}{2}$ to 5 s． 6 d ．$\frac{7}{8}$ per Ounce Standard；

## The ufe of the preceding Table．

When you have a parcel of filver，if it be－finer or courfer than flandard filver，this table fhews，to the 1000th part of a penny，how much an ounce of filver is worth more or befs than an ounce of filver of the goodnefs of flandard．
For inftance，fuppofing that you have flver to lel，that is worfe than ftandard $15 \frac{1}{2}$ dwts，and would know what an ounce of this filver is woth，when ftandard fells at gs． 3 d． per ounce．
To anfwer this queltion，look in the fecond table for the price of flandard，which being fuppoied 5 s .3 d ．per ounce，you will find at the head of fome of the columns：having found the ftandard price，draw down your finger upon the fard column perpendicularly，＂till you have come to the fum that fands even with the $15 \frac{1}{2}$ dwts．in the margin（your filver being fo much worfe than ftandard）and you will find there 4 d ．398， which is the value that the faid filver is worfe than ftandard．

$$
\text { s d. } 1000 \text { pts }
$$

Therefore；from 5：3：000 per ounce flandard．
Subftract－0：4： 398 worfe
The remainder is $4: 10: 602$ ，being the value per ounce of the faid filver．
If the faid filver had been $15^{\frac{1}{2}}$ dwts better than fandard，then you mult have
s．d． 1000 pts
Added the faid $0: 4: 398$
To－$\quad$ ：3： 000 the flandard price
The total，being $5: 7: 3^{89}$ per ounce，is the value of the faid filver above ftandard．

The general rule．
When filver is better than ftandard，add the＇value of the better to the price of flandard；if worle，fubftract the value from it．
So that，at the head of each column throughout the faid table， you will find the flandard prices；and in the margin of each page are fet the quantities of the reports of better or worfe． And，laftly，underneath the faid ftandard prices，even with the faid reports，are fet down，to the thoufandth part of a penny，how much in value an ounce of bullion is worth more or lefs than ftandard filver．－Example．
When ftandard is worth $5 \mathrm{~s} .3 \mathrm{~d} . \frac{3}{8}$ per ounce，filver $18 \frac{1}{2} \mathrm{dwts}$ worfe is worth lefs by 5 d． 28 I ：therefore，to know the value of an ounce of this laft filver，

From $\quad 5: 3: 375$ equal to $\frac{3}{6}$ of a penny，decimally ex－ Subfract o： 5 ：281 worfe［preffed Remains 4：10：og 4 per ounce，the anfwer required． Another Example．
Suppofe that you have filver to fell that is $6 \frac{1}{2}$ dwts better than ftandard，and ftandard is worth at this sime 5 s． 2 d．$\frac{3}{8}$ per ounce，you would know what an ounce of the faid filver is worth．
Look at the top of the table for $5 \mathrm{~s} .2 \mathrm{~d} . \frac{3}{8}$ ，and in the column underneath，even with $6 \frac{1}{2} \mathrm{dwts}$ ，you will find I d． 825 ，that is to fay，the faid filver is worth fo much more than an ounce of ftandard：therefore，
Add－s．d． 1000 pts
To－ $5: 2: 375$ or $\frac{3}{8}$ ，the ftandard price，
This total $5: 4: 200$ is the anfwer，filver of that finenefs being worth fo much．

Silver caft up per the grofs weight．
Example I．To know how much 189 ounces cf filver，worfe than ftandard by $19 \frac{1}{2} \mathrm{dwts}$ ，will amount to，at $5 \mathrm{~s} .2 \mathrm{~d} . \frac{5}{3}$ per ounce ftandard，
s．d． 1000 pts
From
$5: 2: 625$ per ounce
$0: 5: 500 \mathrm{p.2dtable}$

Take for $19 \frac{1}{2}$ dwts worfe． 0：5：500 p．2d table
Remains the value
4：9：125 per ounce

$$
\text { pence } \frac{12}{57} \quad 125
$$

Multiply by
189 oz：
$\frac{1 2 \longdiv { 1 0 7 9 6 6 2 5 }}{210) 8919(8}$
The andwer l． $44: 19: 8 \frac{1}{2}$
Goxd of any finenefs reduced into ftandard weight，by the following table，from $100,0=0$ ounces to one grain，and to the thoufandth part of a grain．

Of the Gold Standard．
Ilb．weight，or one ounce of gold，muft contain
22 carats of fine gold，$\}^{\text {Together they make } 24 \text { carats，or }}$ I carat of fine filver，$\}$ I lb．weight，or 1 ounce Troy 1 carat of fine copper，weight．
N．B．The carat is a term ufed by refiners and plate－workers， and others who deal in gold and filver，by which they fignify a certain compofition of weights，made ufe of in the andying and computing of ftandard gold；and this carat contains either the 24 th part of a pund，or the 2 ith part of an ounce，Troy weight．

## B U L

## B U L

TABLES for the Computation of BULLION GOLD.

A lb, carat is this fubdivided :

An ounce carat is fubdivided thus :

## THIRD TABLE

For reducing gold to flandard.

The ufe of the Third Table foregoing.
When you have got a report of how much fine gold there is in a lb . weight, or an ounce weight of any bullion, more or lefs than there is in a lb . or an ounce of fandard gold, the faid table fhews how much it will amount to in any quantity of the faid bullion. For the finding out of which, obferve the following rules.
I. Reduce the report of better or worfe than ftandard gold into quarter-grains.
2. Multiply the weight of the bullion by thefe quarter-grains. 3. Collect the product out of the third table, and add them together.
4. If it be better than ftandard gold, add to it the grofs weight, and the total will be the ftandard weight; if it be worfe than ftandard, deduct the total of the addition from the grofs weight, and the remainder will be the fandard weight. Example i. To know the ftandard weight of 462 ounces of gold worfe than flandard by 3 grains $\frac{T}{4}$.

$$
\begin{array}{ll}
\text { Worfe } & 3^{\frac{1}{4}} \\
\text { Multiply by } & \frac{4}{13} \text { quarter grains } \\
& \begin{array}{l}
462 \text { the grofs weight } \\
\text { Multiply }
\end{array} \\
\text { By } & 13 \text { the quarter-grains } \\
\text { Make - } & 6006 \text { called ounces. }
\end{array}
$$

Make -

$$
\text { oz. dts. grs. } 1000 \text { pts }
$$

From $462: 0: 0$ - 000 the grols weight
Take $17: 1$ : $5: 999$ worfe
Remain 444r: 18:18:001 the ftandard weight.

Example 2. To know the flandard weight of 596 ounces of gold, worfe s car. 1 gr. ${ }_{+}^{3}$.
car. gr.
$\frac{4}{5}$
$\frac{4}{23}$ quarter-grains, which multiplied by 596 ez. grofs weight; make 13708 , which call ounces.

Collest out of the Table.

$$
\begin{aligned}
& \text { oz. oz. dt. gr. } 1000 \text { pts } \\
& 10000 \text { is } 28 \cdot 8: .4: 363 \\
& 3000 \text { is 8:10:10:909 } \\
& 700 \text { is } 1 \cdot 19: 18 \cdot 545 \\
& 8 \text { is } \frac{0: 0: 10: 909}{38: 18: 20: 726} \\
& \begin{array}{llll}
13708 & 3^{8} & \text { oz. dt. gr. } 1000 \mathrm{pts}
\end{array}
\end{aligned}
$$

From $596: 0 \cdot 0$ : 000 the grols weight,
Take $\quad 38: 18: 20: 726$ worie than ftandard.
Remains 557: 1:3:274 ftandard weight
Example 3. To know how much ftandard gold there is in 67 oz. 19 dwts. II grs. better by 2 grains $\%$.

Gold valued by the grofs weight, fhewing how much an ounce of gold of any finenefs is worth, more or lefs than an ounce of ftandard gold, to the thoufandth part of a penny, from one quarter of a carat-grain better or worfe, to dix carats worfe than ftandard.

The ftandard prices from 3 1. 15 s. to 4 1. 1 s. per ounce.

The ufe of the foregoing Table.
Gold caft up by the grofs weight.
Example 1. To know the intrinfic value of 462 ounces of gold worfe than ftandard by three grains $\frac{x}{4}$, when ftandard is valued at 31.18 s . per ounce.
l. s. d. rooopts

From - - $3: 18 \cdot 0: 000$ per ounce fandard
Take for 3 gr. $\frac{1}{4}$ w.o : $2: 10: 568$ per
The value per ounce $3: 15: 1: 432$
Multiply by

$$
\begin{array}{rl}
3: 15: 1: 432 \\
-a- & 462 \\
\hline 7: 10: 2: 864 \\
225: 7: 1 & 920
\end{array}
$$

$$
1502: 7: 10: 800
$$

Anfwer - - $1735: 5: 1$
The fame proved by the third table.
The frif example, which illuftrates the third table; fhews that 462 ounces of gold, worfe than ftandard 3 grains $\frac{1}{4}$, makes 444 oz .18 dwts . 18 grains ftandard;

And
oz. dts. grs.

444: $18: 18$ at $1.3: 18$ per ounce

$$
\begin{array}{r}
1779: 15: 0 \\
44: 9: 10 \frac{7}{2}
\end{array}
$$

Comes to $1 . \frac{44}{1735: 5: 1 \frac{1}{2}}$
So that you may fee, by the foregoing example, that the third table will prove the fourth in regard to gold, as the firft will prove the fecond, in regard to filver.
Example 2. To know the value of 596 ounces of gold, worfe 1 carat, 1 grain $\frac{3}{4}$, when ftandard is worth $1.3: 15: 5$ per ounce.

The fame proved by the third table.

TABLE.
In the recond example, which explains that table, you wiil find that 596 oz . worfe I car. I gr. $\frac{3}{4}$, make ftandard 557 oz. I dwt. 3 grs. 274.
oz. dts. grs. 1000 pts
557: 1:3:274 at $1.3: 15: 5$ per ounce
1671: 3:4:911
$139: 5: 3: 409$
$\begin{array}{r}11: 12: 3: 409 \\ \text { 11 } \\ \hline\end{array}$
Come to l. $2100: 11: 4: 422$
Example 3. To know how much fterling 67 oz . 19 diwts. 11 grs. of gold, better 2 grains $\frac{\pi}{4}$, will amount to, at 3 l, 17 s .6 d . per ounce fandard.

The fame alfo may be proved by the third table.
Remarks relating to the practical Trade of Bullion:
When gold and filver are in their purity, or as purely refined as the nature of the metals will admit of [fee the article Refining] they are fo flexible, that they cannot be fo well wrought into any form for ufe, without being hardened with an allay [fee the article Allay] of fome bafer metal.
To prevent the abufes which fome might be tempted to commit in the making of fuch allays, the legiflators of well policed countries bave ordained, that there fhall be no more than fach a particular weight of a bafer metal incorporated with the finer, to a certain quantity of pure gold, or filver, in ordet to render them of the finenefs of what is called the ftandard gold or filver of particular countries.
We have already feen what are the rules of this proportion with regard to England. According to law, all forts of wrought plate in general ought to be made in conformity to the ftandard: and the price of the faid ftandard gold and filver is the common rule whereby to value bullion, whether it be in the mafs, bars, duft, or in pieces of foreign money; fo that the true value of bullion cannot be known without being affayed, [fee Assay] the ufe of the affay being accurately to difcover what quantity of allay there is contained in any bullion; more or lefs than there is in fandard gold or filver: for, if there be lefs allay therein than there is in the ftandard, fo much as there is lefs makes the bullion proportionably finer, and, confequently, more valuable, as we have feen by examples, than ftandard. On the other hand, if there be more allay in any bullion than the ftandard requires, fuch bullion will be coarfer, or worfe than ftandard, and, therefore, will be fo much the lefs valuable.
From what has been faid it is obvious, that all who traffic in bullion gold and filver, and foreign coins, \&c. cannot be too delicate in having their aflays made with accuracy, nor too expert in the computations neceffary upon thofe occafions. Bullion being a commodity, like others, there is fome fagacity required in the dealing therein, as well as in others, there being markets where, and feafons when, it is frequently to be bought cheap, and fold at others to an handfone profic.
How gold and filver in bullion, or foreign money, may occafionally be turned to advantage in Holland, \&ic. when the courfes of exchange are favourable, fhall be fhewn under the articles of Gold and Silver, and other beads, to which we fhall refer from time to time, as, the nature of our fubject requires.

Political Remarks upon Bullion,
There has not been any capital article of traffic more generally mifunderftood, perhaps, than what relates to gold and filver, or bullion, which fome would have not to be teckined a commodity, or merchandize, and, theretiore, not permitted to go out, when once brought ino the :ingdom. But thofe who feem to have thought the clearef and deepef upon this matter, have been of a dificrent fentiment; and, in confequence of judging bullion goh or ther to be merdian-

## B U L

## B U I

dize, have contended for it's free exportation, as well as importation.
Thole nations that bring in gold or filver by means of their exports of variety of merchandize, are upon an equal footing with thofe countries that have mines in their poffeffion, and barter their gold and filver for commodities; and, in fuch trading fates, that have no gold or filver mines, gold and filver become a fpecies of merchandize, as well as any other; a merchandize that may beturned in trade with advantage, and, therefore, more valuable in fuch a country, than where they were firft dug from the mines. Induftry, and fkill to improve trade, and the apt fituation of a country for it, afford more real treafure to a people than even the poffeffion of gold and filver mines : nor can any quantity thereof, that may be dug out of the mines, bear a proportion with what may be made to arife from the whole labour of a trading, induftrious, and populous nation. For the national ftock, though fmall at firf, is, by fuch means, ever increafing, and that increafe fili accumulating more and more; fo that the augmentation arifing from fuch' accumulating increale, and the gold and filver gained from other nations in trade for commodities, makes a perpetual addition: which being permanent, fuch nation has no bounds to it's wealth; while other countries that poffers mines, and rely on their produce, generally work them chiefly for the indutrious of other countries, and may become beggars, notwithftanding their firft property of all the gold and filver in the world.
The frict prohibition in Spain againf exporting gold and fil ver, was an early obftruction to their commercial induftry, and rendered that treafure, in a great meafure, ufelefs to the bulk of the people. But if, on the contrary, gold and filver had been allowed commodities, it would, of courfe, have put them upon methods of turning them to more advantage: whereas, while their hands have been bound up by their own laws, the gold and filver brought from thence have been the tools where with other nations have wrought, and gained their riches Had not this miftaken policy diverted their thoughts from an active commerce, they would certainly have been, at this day, a different nation to what they are. At prefent, indeed, they feem to be fenfible of their faux pas, and England, as well as other countries, is likely foon to experience the effects of a different policy, unlefs the takes wife meafures to prevent it, before it is too late.
Should it be objected to this reafoning, that, as we have a great trade for our product and manufactures, and thereby bring in a general ballance of gold and filver, befides other returns in commodities, for our expence, we ought only to carry out tommodities in trade, and let the gold and filver remain among ourfelves, and by our laws prevent the exportation thereof; which is carrying out that treafure again that comes to us by the ballance of our trade.
To this it has been anfwered, that gold and filver are no otherwife of intrinfic value of themfelves, than as they are a fettled and conftant meafure whereby to value commodities of all kinds; which feems manifeft from hence, that in fuch countries, as in Africa, \&c. where they are not the fettled and confant meafure for commodities, they are of no more ufe than any other trafficable commodity; and as particular fpecies of merchandizes in demand throughout the world are to be had, fome at one place, and fome at another; fo gold and filver are commodities wherein moft nations agree, that the difference in the barter of all other commodities is anfwered and made up, and thereby of general ufe almoft every-where; which being thus fubfervient to trade, it is highly injurious, nay, it is it's very deltruction, to take it from that ufe: but as to the imagination of retaining the fame in the nation, without circulating out of it, this muft be a national lofs: for that is keeping fuch a dead flock to that value, which affords no manner of increafe, and is of no more ufe, while it fo continues, to the increale of the public capital (however fhifted in private hands) than the like value offatues, paintings, build ings, \&c. the ufe of it among us ferves to no other end than the convenient tranfacting of payments with one another, in our domeftic negociations; and, when that end is anfwered, the plenty of gold and filver will be rather a national lofs (befides it's lying dead) as it will naturally enhance the price of our own merchandizes to ourfelves, and thereby leffenthe demand for them by foreign nations; and confequently, in time, ruin the trade, and impoverifh the people, by enabling them to puifue only a paffive, inftead of an active general commerce, as has been hitherto the cafe of countries that have depended on their mines, and the miftaken policy of not efteeming gold and filver commodities.
To explain this matter by a familiar infance
Suppofe that our national debts, about feventy millions, were, by fome accident, found under the ruins of Whitehall, in frecies of, filver or gold, and were immediately iffued out to the public creditors; fuch an increafe of treafure, added to what we have already, would not be of that benefit to the kingdom, which fome at firlt view may conceive; for, immediately the intereft of money would, by the rule of proportion, ank to one per cent. or rather to nothing, or elfe all the utenfils of our houfes muft be made of thefe metals, or it muft lie dead in the cafh-cheft, without any profpect of ever re-
moving from thence; for, doubtlefs, fuch who are againd expurting money now, would be of the fame mind then, if their arguments are of practical weightwith themfelves; and what would be the natural confequence of this, unlefs gold and filver were a commodity for export as well as import? By having the greater plenty of money, fhould' we not give the greater wages to the labourer, mechanic, and manufacturer, Scc. and alfo for the native commodities of wool, lead, tin, corn, and fo on? Befides, fuch perfons as now live by making fome fmall intereft of their money, as gentlemen that are fo wife as to lay up fome part of their yearly revenues, widows, and minors, would not only be incapacitated to make any improvement of their money, but mult pay more for their cloaths, and other neceffaries, than they did before. But the greateft misfortune of all is, that there would be no employment for our artizans and manufacturers; for foreign nations, which had not fo much money in circulation, could not afford to buy our manufactures, at the enhanced value which our own plenty of money would raife them to: wherefore, under fuch circumftances, unlefs money was permitted the freedom of going and coming, of exporting as well as importing, according as people's occaftons required, (for no perfon exports money for his pleafure) the nation would not grow the more profperous.
But, upon the fuppofition of fuch plenty of gold and filver, and thole, in every thape being efteemed commodties: upon the fuppofition alfo of difburdening our trade of it's preient taxes, in confequence of the difcharge of our national debts, fuch plenty of money, under a well regulated çommerce, might be made inftrumental fo to univerfalize our trade, by railing an univerfal firit for it among the people, that no nation, without the like capital of ready money, and the like advantage in all other refpects, could work cheaper and underfell us; for the long credit that is now given in trade, for want of ready calh to circulate it, is as heavy a clog on it as our debts and taxes *

* I would by no means be thought to infinuate any thing againit the difcharge of the national debts, and in confequence thereof, leffening the great weight of our taxes: on the contrary, I fhall endeavour to fhew by what meaon the contrary, Ind and gradations thofe incumbrances may, according to my humble judgment, be got rid of, without injury eito my humble judgment, be got rid of, without injury en-
ther to our commerce, the public credit, or to the nather to our com
tional creditors.

But, fhould it be granted convenient for us to keep within ourfelves all the bullion we can acquire, yet long experience has fhewn the impracticability of keeping it by any laws: that could only be effectuated by the good management and regulation of our trade. Though the Spaniards make the exportation thereof death, neverthelefs, in the way of trade, it is exported at noon-day; the ballance they pay for the manufactures of other countries, neceffarily carries away their money, notwithftanding the rigour and feverity of all their penal Jaws to prevent it *. It is, therefore, taking due care that the exportation of our native commodities fhali always over-ballance the importation of foreign commodities, which mult keep our money at home, and that only can do it. For if, upon the ballance of the exports and imports of our other commodities, we are gainers, and thereby payments are made to us in gold and filver, by other countries (for the ballance can be paid us in nothing elfe at laft) that gold and filver being fuffered to be made a commodity to fetch goods from fone other countries, whence we cannot have them for any thing elfe, the re-exportation thereof to other countries would become a beneficial article in our commerce, and return a great ballance in it's own kind, (our trade otherwife, in products and manufactures, ftill over-ballancing, as before) and would add greatly to the national ftock; and, without fuch a freedon in trade, a fuperfluous plenty of bullion, or money, would be rather injurious than otherwife.

* This, alfo, thews the miftaken policy of the Portugueze, in regard to the treatment our merchants have too long recelved at Lifbon; and which too, it is faid, is again revived, to the fcandal of the Portugueze adminiftration; feeing it is fo recent that they owe their whole kingdom to Great-Britain.

If, by the wife regulation of our trade with foreign nations, the ballance is on our fide, and we are gainers by fending out our money to purchafe fuch goods, that may be fold again to other countries, we muft, as I have fhewn under the article Balance of Trade, and alfo the article of British Empire, by fuch an increafe of treafure as this will give us, always be mafters of the exchange all over the world; which is fuch an advantage in trade with any nation, that, although it may only be a trifle in our favour, it has a national tendency arifing from itfelf, as I have hewn, to augment that ballance fill more and more to our emolument.
From what has been faid, it feems pretty evident, that gold and filver, or bullion, in any fhape, ought to be reckoned a commodity, and is to be made ufe of to advantage in trade, as well as other commodities are; and, therefore, ought to have a free exportation, as conducive to the increafe of the
capital ftock of the kingdom. It muft, however, be allowed, that, if we carry on fuch a trade as importing confumable commodities to be fpent among us, more than our own commadities will anfwer in the ballance, which thereby mult be paid in gold and filver, this will certainly be to our detriment by draining us of our gold and filver, without any return, and be attended with a decay of our own manufactures: but, if this fhould be our cafe, it is not to be remedied by any laws againft the exportation of our gold and filver, but by the due regulation of our trade, by retrenching our confumption of foreign merchandizes; by eftablifhing new trades and manufactures in the nation, and by purchaling lefs merchiandize of other countries, and felling more of our owis ; for the exportation of our gold and filver could not be the caufe of fuch our lofs, but the neceflary and inevitable effect of fuch our trade vanity and luxury; which diftinction fhould be attentively and maturely confidered.
There would be little difficulty to corroborate this reaforing with a train of weighty arguments, and to confirm the fame from the concurring fentiments of the ableft fatefmen; but, the letter B fwelling to a length beyond the proportioned defign, I thall refer the other matter to fuch heads as bave congruity with this topic; fuch as the articles of Coin, Goid, Siluer, Money, National Debts, \&c.
Bullion, or foreign coin of gold or filver, may, upon entry, be exported by any perfons, without payment of cuftom or fees. 15 Car. II. cap. 7. fect. 12. See Corn. Entered or fhipped in the name of any other perfor, than the true owner and proprietor, forfeited, or the value. 6 and 7 Wil. III. cap, 17. fect. 14. Seized, proof of it's being foreign, and not melted down in this kingdom, to lie upon the owner, claimer, or exporter. Ditto. See Silver. Foreign coin, imported, may be landed without warrant.
Perfons having unlawful bullion fhall be committed to gbal by one juftice for fix months. Note. It is by one juftice or warden of the company of goldfrmiths, \&c. within the bills of mortality, and by two juftices in any town or place.
Two juftices may grant a warrant, for a conftable to fearch any perfons houfes fufpected to have unlawful bullion, and to break open doors, boxes, \&c. to fearch for, and difcover the fame.
Perfons apprehending clippers, wafhers, counterfeiters, and filers of the current coin of this kingdom, fhall have 40 l . paid them within one month after conviction, on certificate from the judge or juftices before whom convicted.-Perfons guilty, convicting two, fhall be pardoned; and an apprentice, making a difcovery, thall be made a freeman. 6 and 7 W. III.

BUOY, a fea-term, which has fome connection with trade. It is a piece of wood, or of cork, fometimes an empty barrel well clofed, which floats upon the water, being tied to a fmall cable faftened at the bottom of the fea, in order to let pilots and mariners know where the anchors are dropped in the harbours, or where thofe lie, which have been left in the roads, becaufe they could not be taken up; the buoys ferve alfo to hew where there are wrecks funk, or thallow places in the fea, or other impediments which might be hurtful or dangerous to Thips.
All thofe buoys are diftinguifhed by the materials they are made of: the malt-bucy is made with a piece of a maft, or, for want of it, with a fimple piece of wood; the barrel-buoy is made with ftaves, tied together with hoops like a barrel; the cork buoy is made of feveral pieces of cork, tied together with a rope.
A merchant-hip, lying in a harbour, ought to have a buóy at his anchor; and, if any lofs or damage fhould happen for want of it, the matter would be obliged to pay half the damage.
Sometimes the word buoy fignifies a fea-mark, to thew the difficult or dangerous paffages.
When there are any duties or fees to be paid for buoys, the mafters of the Chips are obliged to pay them, they not being reckoned among averages. See Average.
BIJRGUNDY. The duchy of Burgundy is bounded on the eaft by the river Soane, which feparates it from Franche Comte; has Champagne on the north, Nivernois and Bourbonnoss on the weft, and Lyonnois on the fouth. As it is one of the molt fertile countries in France for corn and fruit, fo there is none that produces more excellent wine, than that of Nuis, Charebertin, Beiz, Coulange, Chaflagne, Beaune, and Volenay, all in this province
Auxerre is very well fituated for inland trade, both on account of the river, and it's eafy communication with Paris;
and yet it feems thie inhabitants do not make all the adyant tage they could of that happy fituation. This is the feat of four commiffaries, who take cognizance of all affairs relating to the taille, and futfidies; or aids. Here is allo kept a grad nary for falt.
At SEMUR alfo is a granary for falt; and feveral fairs are kept here in a year, and a market three times a week. The foil of this diftrict is very good, abounding in corn and cattle, of which they drive a confiderable trade; they have alfo very good wine.
Macon is the capital of the country of Mâconnois, famous for it's excellent wine. Here is a public granary of falt.
Bourg. Though this city be not well fituated for trade, yet they keep there a great many fairs; all their trade confifts in horles, cattle; and ikins, which they whiten perfeclly well, and fell to the merchants of Grenoble and Lyons.
BURTHEN, or BURDEN of a fhip, fignifies it's contents, or how much it will carty. This is reckoned by the ton, of two thoufand pounds weight. Thus when we fay, a fhip, burthent a hundred ton, we mean, a fifip capable to carry, in merchandizes, ammunition, provifions, men, and ballaft, a weight of a hundred times two thoufand pounds; or two hundred thoufand pounds weight, or two thoufand quintals: which muff be underftood proportionably of hhips of a thoufand, or of two thoufand toh, which are the largeft ; and, when they are men of war, they are faid to be of the firit or fecond rate, \&c. whole burthen, according to this evaluation, amounts fometimes to above four millions of pounds.
BUSS, a fmall fea veffel ufed by us and the Dutch in the herfing fifhery. They call it in Dutch haering-buys $;$ thefe verfels are commonly from 48 to 60 tons burthen, and fome= times more. They have two fimall fheds or cabins, one at the prow, aHd the other at the ftern: that at the prow ferves for a kitchen.
Each buls has a mafter, ari affitant, a mate, and feamen in proportion to the veffel's bignefs. The mafter commands in chief, and without his exprefs order the nets cannot be caft nor taken up. The affiftant has the command after him, and the mate next, whofe bufiniefs is to fee the feamen rhanage the rigging in a proper manner; to mind thofe who draw in the nets, and thofe who kill, gut, and fecure the herrings, as they are taken out of the fea. The feamen do generally engage for a whole voyage in the lump.
The provifions which they take on board the buffes, confift commonly in bifket, oatmeal, and dried, or falt fifh; the crew being content for the reft with what frefh filh they catch. See Fisheries.
BUTESHIRE, in Scotland, contains two of the weftern ifles, Bute and Arran, which lie in the firth of Clyde, north of Argylefhire, eaft from Cantyre, and weft from Renfrew, Curningham and Kyle. There is a great herring and cod-fifhery on the coaft. Arran has an excellent fafe harbour and bay, on the eaft fide of the ifland.

## REMAREs.

Is it not highly defirable, that our whole fifheries upon the coaft of Scotland, were regulated and improved to the utmoft degree of advantage they will fo eafily admit of? See F1sferies, and Scotiand

BUTLERAGE and PRISAGE. There were originally the only cuftom that was payable upon the importation of wines, and were taken and received by virtue of the regal prerogative, for the proper ufe of the crown: but, for many years paft, there having been granted, by parliament, fubridies, or aids, to the kings of England, and thefe duties not repealed * but confrmed; they bave been pleafed to grant the fame away to fome noblemen, who, by virtue of fuch grant or patent, is to enjoy the full benefit and advantage thereof, and may caufe the fame to be levied and collected in the fame manner as the kings themfelves might, and were formerly wont to do.

* 12 Car. II. cap. 4. fect. 16. 12 th and 27 th Rules of Book of Rates.
Butlerage is a duty of $i s$. for every ton of wine imported by merchants ftrangers; being a compofition (in lieu of the duty of prifage payable in kind by Englifh only) in confideration of the liberties and freedoms granted to them by king John and king Edward the Ift, by a charter called Charta mercatoria *.
* 3 I Edw. I. cap. 1. and $2 . \quad$ 27. Edw. III. cap. 26.

## A Continuation of the Business of the CustomHouse, from the end of Letter A.

THAT the reader may difcern the connection of this part of our defign, he is defired to obferve, that, at the clofe of the letter $A$, we introduced him into a knowledge of the calculation of the duries of customs, according to the method purfued in Sandby's book of rates, by an explanation of the table and lift made ufe of for that purpofe: after which we entered upon divers other particulars requifite to the underfanding of the practical bufinefs of that office.

Since the publication of Mr. Sandby's book of rates, another at of parliament was made in the 32d of Geo. II. intitled, An act for granting to his majefty a fublidy of poundage upon certain goods and merchandizes to be imported into this kingdom; and an additional duty on coffee and chocolate, 8 cc .
The fubfidy is 12 d . in the pound, to be raifed, levied and collected upon all tobacco, foreign linnens, fugar, and other groceries, as the fame is underfood in the book of rates, except currants; Eaft India goods, except coffee and raw filks; foreign brandy and firits, except rum of the produce of the Britifh plantations; and paper, which fhall be imported or brought into the kingdom of Great-Britain, according to the value or rate refpectively fet upon each of the faid commodities by the feveral books of rates, or any act or acts of parliament relating thereunto; which fubfidy fhall be paid by the importer of fuch goods and merchandize, before the landing thereof, over and above all other duties charged or chargeable thereupon.

And it is further enacted and declared, by the authority aforefaid, that the faid fubfidy of poundage by this act impofed, tha!l be raifed, levied, collected and paid into his majefty's exchequer, for the purpofes in this act expreffed, in fuch and like form and manner, and with fuch allowances, discounts, DRAWbacks and exemptions, and under fuch penalties and forfeitures, and according to fuch rules, methods, and DIRECTIONs, as are prefcribed or appointed for raifing, levying, collecting and paying, the fubfidy of five pounds per centum, granted by an act made in the twenty-firft year of the reign of his late majefty, intitled, An act for granting to his majefty a fublidy of poundage upon all goods and merchandize to be imported into this kingdom, 8 ic .- or as are contained in or by any other act or acts of parliament by the faid act of the twenty-firft year of the reign of his late majefty, referred unto, or any of them; and all and every the powers, authorities, rules, directions, penalties, forfeitures, claufes, matters and things now in force, contained in the faid, act made in the twenty-firft year of his late majefty's reign, \&cc. thall be in full force, and be duly obferved, practifed, and put in execution, \&c. for raifing and paying the fubfidy of twelve-pence in the pound, by this act granted, as fully and effecturally to all intents and purpofes, as if the fame or the like powers, authorities, rules, directions, penalties, \&c. were particularly repeated and re-enacted in the body of this prefent act.

The claufe, refpecting the drawback, declares, Provided always, and it is hereby enacted and declared, that in all cafes where any goods or merchandizes, that have paid the fubfidy hereby granted, fhall at any time or times be again exported by any merchant or merchants, within three years from the importation thereof, the subsidy by this act granted, and which shall have been actually paid for fuch goods, wares, or merchandizes, thall, without any delay or reward, be paid in to fuch merchant or merchants who fhall export the fame, or the fecurity vacated; except for fuch goods or merchandizes, as by any former act or acts it is declared, no drawback fhall be paid or allowed upon exportation of.

Then a drawback of three fhillings per hundred weight is allowed on fugar refined in Great Britain, and exported, oath made by refiner, that the fugar fo exported was produced from brown and mufcovado fugar charged by this act, and that he believes, the fame was imported from our plantations in America, and the duty duly paid at the time of importation.

The fame act lays an additional duty of one fhilling per lb . on coffee, and nine-pence per lb . on chocolate, to be collected as the former duties thereon.

## Remarks.

For the nature of computing this additional 12 d . in the pound, fee the Business of the custom-house, at the end of tetter A; which, if undertood, no one can be at a lofs to compute this additional hhilling in the pound, or any other of the like kind ; and we have rather chofe to put the merchant importer in mind of the neceffity of calculating his duties upon goods, according to the acts of parliament, than relying altogether on any ready calculated to his hand.-For the reafon of which, we defire him to confult the conclufion of letter $A$,

And if what is there fuggefted fhould be found to deferve his confideration, he will find, that what is there urged has relation as well to the prefent act of poundage, as it has to that of 1747 ; for as that of 1747 was bottomed upon the 12 th of Charles II. and the merchant importer is intitled to the allowances therein fet foith; and this act is bottomed alfo on that of 1747, he will difcern what he feems to be intitled to by this laft fubfidy-act: but if the importers do not judge it prudent to have this matter only examined into, they muft ufe their own pleafure upon this occafion.-The author has uprightly done his duty, by apprifing the public of what fo materially concerns their intereft, and there he leaves it; thinking it very improper to compute cuftom houfe tables for the payment of duties, which he is doubtful, for the reafons given, whether they are legal or no.

As it would fwell this work to an enormous fize, to a fize even little lefs than double, it will not be expected that we fhould prefent the reader with only volumes of acts of parliaments, which he can have elfewhere at any time.-No; that would be doing him injuftice. -We have interfperfed fome of the effential, which the reader fees the utility of; and when he has occafion to confult any particular act for his own fatisfaction or government, either with relation to the cultom-houfe duties, or the excife, or any other part of the public revenue,-we refer him to Sandby's index at the end of his book of rates, and to the laws of excife; which together are very voluminous, and it would be an impofition on the reader to fill thefe volumes therewith. But what we apprehend effential to be noticed, we have not omitted.

## Of the bufinefs of the Custom-House.

In order to enter into the confintency of this part of our defign, the reader is further defired to attend to what has been faid at the clofe of letter A. In purfuance of what is there promifed, I fhall proceed to fome other parts of the practice of the cuftom-houre.
I. Of the Inward Business, or what relates to the Importation of goods from Foreign Parts into GreatBritain.

In treating of this part of the bufinefs of the cuftoms, it will be neceflary, firf of all, to give directions how to proceed with refpect to fhips, as well hovering on the coalt, as coming withia the limits of any port.

## Ships hovering on the coaft of Great-Britain.

* If flips laden with falt are hovering on the coaft, and not proceeding on their voyage; the officers of the cuftoms may compel them to come into port, and may continue on board till the falt be unladen, or the fhips depart out of port to proceed on their voyage: and, if the falt is refufed to be entered or unladen, or the fhips do not depart within 20 days after they come into port (unlefs permitted by the chief officers of the cuftoms to ftay longer) it is forfeited, with double the value, to be recovered of the mafter.

$$
\text { * } 1 \text { Anne, cap. 21. §.7. } 3 \text { Geo. II. cap. 20. §. z. }
$$

+ If hips or veffels, of the burthen of 50 tons, or under, laden with cuftomable, or prohibited goods, be found hovering on the coaft, within the limits of any port, or if laden with brandy, within two leagues of the Chore, and not-proceeding on their voyages ; the officers of the cuftoms may go on board, and take an account of the lading, and demand fecurity of the mafters by their bonds in treble the value of the goods, to proceed regularly on their voyages.
† 5 Geo. I. cap. 11.§.8. 6 Geo. I. cap. 21.§ 32 . 9 Geo I.
cap. 8. §. 8. 2 Geo. II. cap. 28. §. 3.

## An Hovering Bond.

Noverint univerfi per prarentes, me, H. D. \&c.
Whereas by an act of parliament made in the 5 th year of the reign of George I. intitled, An act againft clandefline running uncuftomed gonds, and for the more effeciual preventing of frauds relating to the cuftoms (which was continued by two other acts, the one made in the cth year of the reign of George $L$. and the other in the 2d of his late majefly's) it is enacied, That where any fhip or veffel, of the burthen of 50 tons or under, laden with cuftomable or prohibited goods, fhall be found hovering on the coaft, within the limits of any pert, and not proceeding on her voyage, wind and weather permitting, the cifictis of the cuftoms may go on board every fuch fhip or veffel, and take an

# Continuation of the Business of the Custom-House: 

account of the lading, and demand fecurity of the matter, or other perfon having the charge of fuch veffel, by his own bond to his majefty, in treble the value of fuch foreign goods, with condition, that fuch veffel (as foon as wind and weather, and the ftate and condition of fuch veffel do permit) fhall proceed on her voyage: and, if fuch mafter, or other perfon, having the charge of fuch veffel, thall, upon fuch demand, refufe to ente into fuch bond; or having entered into fuch, thall not proceed on fuch voyage (as foon as wind and weather, and the condition of the veffel, will permit, unlefs otherwife fuffered to make a onger ftay by the collector for other principal officer in his abfence] of the port where fuch veffel thall be, not exceeding 20 days) then, and in either of the faid cales, all foreign goods on board fuch veffel fhall, and may, by any officer, or officers of the cuftoms, by the direction of the collector, or other principal officers as aforefaid, be taken out of fuch veffel, and forthwith brought on fhore and fecured: and, in cale the faid goods are cultomable, the cultoms and other duties fhall be paid for he farme.
And, as concerning wool, or any prohibited goods, or other goods liable to forfeiture, which may. be found on board fuch veffel, at the time of their unlading as afore aid, the dame are thereby declared to be fubject to forfeiture: and the officers of the cuftoms hall and may profecute the fame, as alfo the veffel, in cafe fle thall be liable to condemnation : and it is in the fame act provided, That after fuch goods are fo taken out of fuch veffel, and brought on Chore, and 'fecured, fuch bonds fo to be given Thall be void, and delivered up, without any fee or reward : and fuch bond, not being otherwife difcharged, fhall, on a proper'certificate, returned under the common feal of the chief magiftrate, in any place or places beyond the feas, or under the hands and feals of two known Britifh merchants upon the place, 'That fuch goods were there landed; or upon proof, by credible perfons, That fuch goods were taken by enemies, or perifhed in the feas (the proof hereof being left to the judgment of the commiffioners of the cuffoms) be vacated and difcharged.
And, by another act of parliament, made in the 6th year of the reign of George I. intitled, An akt for preventing frauds and abufes in the public revenues of excife, cuftoms, ftamp-duties, poftffice, and houfe-money, it is enacted, That where any veffel of the burthen of 50 tons or under, being in part, or fully laden with brandy, fhall be found at anchor, or hovering within two leagues from the fhore, and not proceeding on her voyage (wind and weather permitting) it Shall be lawful for any commander of any of his majefty's (hips of war, frigates, or armed floops, appointed for the guard of the coalts, or for the commander of any yacht, fmack, floop, or other boat or veffel in the fervice of the cuftoms, or for any officer of his majefty's cuftoms, to compe the malter, or other perfon having the charge of fuch veflel, to come into port. And it is declared by the faid act, That fuch mafter, or other perfon as aforefaid, as likewife fuch veffel, and the brandy wherewith fuch veffel is laden in part, or in the whole, fhall be fubject to the fame rules, regulations, penaities and forfeitures, as fuch cargoes, veffels, and the mafters, or others taking charge thereof, which hover within the limits of any port of this kingdom, are, by the aforefaid act of the fifth year of the reign of George I. fubject unto.

And whereas the fhip Betty of Wells, under the burthen of 50 tons, whereof the above-bound H. D. is mafter; bas been found hovering on the coaft of this kingdom, within the limits of the pors of Southampton [or at anchor, or hovering within two leagues of the fhore of the coalts of this kingdom loaden with * 40 hogtheads of French wines, pretended to be bound for Stockholm, in the kingdom of Sweden, or to fome other port or ports in foreign parts: now the condition of this obligation is fuch, That if the faid fhip (as foon as wind and weather, and the condition of the faid Ghip , do permit) fhall proceed to the faid port of Stockholm, or to fome other port in foreign parts: and, if a certificate + be returned under the common feal of the chief magiftrates, in any place beyond the feas, or under the hands and feals of two known Britifh merchants upon the place, that the faid 40 hogtheads of French wines were there landed; or upon proof, by credible perfons, that the faid goods were taken by enemies, or perifhed in the fea: then this obligation thall be void and of none effect, or elfe ihallaremain in full force, effect, and virtue.

Sealed and delivered in the prefence of
H. D.
A. B. Collector.
B. C. Comptroller.

* Or the goods may be endorfed on the back of the bond.

The certificate for the difcharge of fach bonds, mult mention the quantity of goods, and the time when landed.

But if the mafter, upon demand, refufes to give fuch bond, or, having given bond, neglects to proceed on his voyage (unlefs permitted to ftay longer, but not to exceed 20 days) then the laid goods may be taken on fhore and fecured, the duties for thofe that are cuftomable paid, and thofe that are prohibited profecuted: and the goods being thus taken on flore, if bond was given, the fame muft be delivered up: but, if the fhips proceed on their voyage after bond has been given, then the fame mult be difcharged by a proper certificate, under the common feal of
the chief madiftrafe in any place beyond the reas, or under the hands and feals of two known Britifh merchants upon the place tellifying that the goods were there landed; or upon proof, by credible perfons, that the goods were taken by enemies, or perifh. ed in the feas.

## II. Ships coming within the limits of any port of Great-Britain:

With refpect to foreigners thips it is to be particularly noted * that fuch fhips freighted towards Great-Britain, or elfewhere may not be compelled to come into any port of Great-Briain nor to tarry there againft the will of the mafter, \&c. and if fuch Thips come voluntarily, or are driven in, part of the goods may be delivered, and the duties thereof paid, and the fhip be permitted to proceed with the remainder, where the mafter, \& pleafeth, without payment of any duty. And that + hips belonging to foreigners in amity with her majefly, may have the liberty of the Britifh ports, being driven into the fame by ftrefs of weather, or coming to refit, or for fupples of water, or othe neceflaries for their fhips ufe; and may fay in port to anfwe fuch their occafions; and fuch their coming into port fhall not be taken to be an importation of the goods on board, without breaking bulk: but if thips come into port without any vifible occafion, or will ftay there longer than occafion requires, it is prefumption that the intent of coming in was to difcharge there and, therefore, fuch coming in, and ftaying in port, will make an importation of the goods, and fubject the mafter, fhip, and goods; to cuftoms, penalties; and forfeitures, as other thips and goods imported ; and the officers of the cuftoms may deal with fuch fhips as with Britifh hips coming into port to unlade, \&c:

* 28 Edw. III. cap. 13. § 3.20 Rich. II. cap $4 . \$ \mathrm{I}$;
$\dagger$ Opinion of Sir Edward Northey, attorney-general, dated the 3 ift of July, $\mathbf{I F I L}_{12}$.

And when any fhips, coming from foreign parts, arrive at aty port of Great-Britain, the tide-furveyor mult, in his owri perfon, upon their firft entrance within the limits of the port; place a fufficient number of tidefrien on board; according to the burden of the fhips, and the nature of their cargoes; for if the fame confift of wine, linnen, or tobacco, there mult be at leaft three men, and never lefs than two men, upon any one mip: in boarding which tidefmen, it muft be obferved that they have their due turns, and that thofe which are eftablifhed be always employed before the extraordinary men. For the duty of fuch tidefmen; from the time of their being placed on board to the time of their final difcharge, fee the article $\mathrm{O}_{\mathrm{F}}$ ficers of the Customs.

## Of foreign-built fhips.

As * Britifh built fhips (by which is to be uriderflood fhipg built in Great-Britain, Ireland, Jerfey, Guernfey, or the Bris tifh plantations in Africa, or America) are intitled to feveral privileges and advantages, beyond all fuch as are foreign-built; unlefs thofe taken at fea as prize, and lawfully condemned in the high court of admiralty; it may be proper to fhew what requifites are to be performed with refpect to any foreign-built fhips, in order to procure their freedoms: wherefore it muft be obferved, that no foreign built fhip whatfoever (that is, not built in any of his majefty's dominions of Africa, or America, or other than fuch as were bought before the ift of October, 1662, and recorded in the Exchequer) may be deemed, or pafs, as a hip belonging to Great-Britain, or Jreland, or enjoying the benefit, or privilege, of fuch a fhip, although owned or manned by Britifh, except fuch fhips only as are taken at fea by letters of mart, or reprifal, and condemned in the couft of admiralty as lawful prize.

* 12 Car. II. cap. $18 . \$ .7,10.13$ and $1+$ Car. II. cap. 11 . \$. 6

And, before fuch prize-fhips can be intitled to their freedoms, the claimer, or claimers of the property thereof; mult make it appear to the chief officers of the cuftoms at the port next to his or their abode, that he or they are not aliens, and that fuch Chips were, bona fide, and without fraud, bought for a valuable confidetation, \&c. and likewife muft make an entry, and pay duty for fuch veffel: and, for the proof of the property, \&c. it muft be made after the following manner :

An oath in order to procure a prize-flip's freedoma

## Continuation of the Business of the Custom-House:

And, as there are feveral other particular cafes and circumfances which may frequently occur, the following requifites are ftances which may frequening and filling up the bodies of fuch reprorts, viz.
I. Prize, ot other forelign fhips, made free.

If a thip be a prize, or become free by any other means; after the name of the kingdom, \&e. in which fuch fhip is faid to have been laden, there muft be added,-which faid thip was, sc. [fpecifying the particular circumftances of capture and condemnation, or the pretence to freedom by any other title.]

## II. Ships from the Mediterranean Sea:

* If the Chip be Britifh, and comes from any part of the Mediterranean Seas, beyond the port of Malaga, and hath two decks, and doth carry fixteen guns mounted, with two men for each gan; and other ammunition proportionable (which is called an att, or qualified (hip) or if one moiety of her full lading outwards, the jaft voyage, was fifh, laden in any of his majefty's dominions, the goods imported in fuch fhips are not liable to the duty of one per cent. which is payable when fhips are not fo quaified, or laden with fifh: therefore, in thefe cales, after the place's name, there muft be added as follows: viz.
* ${ }_{12}$ Car. II. cap. 11, \&. 35,36 .

If the thip be qualified-which faid thip has double decks from ftem to fern, with 16 [or more, as is the cafe] guns mounted, and other ammunition proportionable.
If the fhip went out with fifh-which faid hip went out from Yarmouth to Leghorn, this laft voyage thither, full laden, [or at leaft one moiety of her full lading] with finh of Britifh taking and curing, and delivered the fame at the faid port of Leghorn.
But, if a hhip that is not qualified, or was not laden outwards with fin, has taken in fome part of her lading beyond the port of Malaga, and fome on this fide; the different places where the goods were taken in muft be particularly diftinguifhed in the report, as indeed in ftrictnefs fhould be practifed in all cafes where a fhip loads at feveral ports: which diftinction may be made as follows :

## Taken in at Leghorn.

A. B. - I a $5 — 5$ cafes —— filk —— Andrew Bird.

## Taktu in at Cadiz.

B. C. -3 a $9 — 2$ bales —— kid-fkins ——Benj. Crofs.

And, if the goods are fuch; that they are liable to forfeiture, or fubject to a different duty, upon account of the place at which they were taken in ; the truth of their being taken in at the particular place alleged by the mafter, muft be confirmed, by making the following addition to the oath of his report, viz.
And that the goods above-mentioned to be taken in at were really there laden on board, and were not landed at nor any other place whatfoever; but have been kept on board the above thip, ever fince the firft fhipping thereof at -

## III. Ships from the Britifh plantations.

If the thip came from the Britifh plantations in America, or Africa, with fugar, tobacco, cotton-wool, indigo, ginger, fuftic, or other dying-wood, rice, molaffes, hemp, pitch, tar, turpentine, mafts, yards, bowfprits, copper-ore, beaver-fkins, or other furs of the growth, production, or manufaciure of any of the faid plantations, to bring fuch goods to Great-Britain, or to fome other of the faid plantations; therefore a cerificate, that fuch fecurity has been given, muft be produced by the mafter at the time of the entry of the fhip; and the fame muft be noted in the report, after the name of the plantation -..... which faid flip gave bond here [or at Jamaica] on the 29th of March, 1730 , to return [or to come] to Great-Britain only.

## The forms of which certificates are as follow:

1. A certificate for a thip that hath produced a certificate in the plantations, of bond being given in Great-Britain, to return to Great-Britain only.

Thefe are to certify all whom it may concern, That Daniel Bright, mafter or commander of the Taviftock of London, burthen 200 tons, or thereabouts, mounted with 88 guns, navigated with 40 men, Engliih built, regiftered at Southampton, and bound for Southampton, hath produced a certificate, bearing date the 2gth of March, 1730 , under the hands and feals of the principal officers of the cuftom-haufe in the port of Southampton, with condition, That if the faid fhip or veffel fhall load any fugar, tobacco, cotton-wool, indico, ginger, fuffic, or other dying wood, as alfo rice, melafles, hemp, pitch, tar, turpentine, ratts, yards, bowfprits, copper-ore, beaver-kkins,

VoL. I.
and other furs of the growth, production, or manufacture of any Britihh planrations in America, Afia, or Africa, the fame commodities flall be, by the faid thip or veffel, carried to fome port of Great Bitain, and be there unloaden and put on fhores the danger of the feas only excepted; and hath here loaden and taken da bdard 290 hogfteads of fugar, io bags of cotton-wool, 50 bags of ginger, 7 calks of indico.
Dated at Kingfton in Jamaica, the 17 th day of May, in the
$4^{\text {th }}$ year of the reign of our foyereign lord king George $\mathrm{II}_{3}$; of Grest-Britain, \&c. Aniro Domini 7730.
C. D. Naval-oficer, D. E. Surveyor, E. F. Searcher; A. B. Collt ctor.
B. C. Comptrolier:
2. A Certificate for a thip that has given bond in the plantations to come to Great-Britain only.

Thefe àre to certify all whom it may concerri, That Danicl Bright, mafter or coinmander of the Taviftock of London, bur-: then 200 tons, or thereabouts, mounted with 18 guns, navigated with 40 men, Englifh built, regiftered at Southampton, and bound for Southamptoin, hath here loaden and taken on board $29^{\prime} 0$ hogheads of fugar, no bags of cotton-wool, 50 bags of ginget, 7 cafks of indico, and hath allo here given bond, with one fufficient furety, in the fum of 20001. ferling, with conditions, that the fatd goods and commodities fhall be by the faid fhip or veffel carried to fome port of Great-Britain, and to no other place, and be there unloaded and put on fhore, the dangers of the feas only excepted.

Dated at Kingfton in Jamaica, the 17 th day of May, in the 4th year of the reign of our fovereign lord George II, king
of Great-Britain, \&c. Annoque Domini 1730.
C. D. Naval-officer, D. E، Surveyor, E. F. Searcher:

## A. B. Collector

B. C. Comptroller:
3. A certificate for a fhip that has given bond in the plantations, to come to Great-Britain; or to go to fome other Britilh plantation:

Thefe are to certify all whom it doth concern, That Daniel Bright; maftor or commander of the Taviftock of London, burthen 200 tons, or thereabouts, mounted with 18 guns, navigated with 40 men, Englifh-built, regiftered at Southampton, hatk here loaden and taken on board 290 hogheads of fugar, 10 bags of cotton-wool, 50 bags of ginger, 7 cafks of indico, and hath here given bond, with one fufficient furety, in the fum of 2000 I. fterling, with conditions, that the faid goods and commodities thall be, by the faid îhip or veffel, carried to fome port of Great-Britain, or to fome other of his Majefty's Britifh plantations, and be there unloaden and put on more, the dangers of the feas only excepted.

Dated at Kingfton in Jamaica, the 17th day of May, in the $4^{\text {th }}$ year of the reign of our fovereign lord George II, king of Great-Britain, \&c. Annoque Domini 1730.
C. D. Naval-officer, D. E. Surveyor, E: F: Searcher,
A. B. Collector.

## B. C. Comptroller.

4. A certificate for a hhip that has paid the duties due in the plantations, by an * act of the 25 th year of the reign of king Charles II, and has given bond in the faid plantations to come to Great Britain, or to get to fome other Britifh plantation.

Thefe are to certify all whom it doth concern, That Daniel Bright, mafter or commander of the Taviftock of London, burthen 200 tons, or thereabouts, mounted with 18 guns, navigated with 40 men, Englifh-built, regiftered at Southampton; and bound for Southampton, hath hete loaden and taken on board 290 hogtheads of fugar, 10 bags of cotton-wool, 50 bags of ginger, 7 calks of indico, for which the rates and duties impofed by the act of the 25th year of king Charles II, $t$ for better fecuring the plantation trade, are fully anfwered and paid; and hath here alfo given bond, with one fufficient furety, in the fum of 2000 l. with conditions, that the faid goods and commodities thall be, by the faid thip or veffel, carried to fome port of Great-Britain, or to fome other of his majefty"s Britifh planta* tions, and be there unloaden and put on thore, the danger of the feas only excepted.
Dated at Kington in Jamaica, the 17 th day of May, in the $4^{\text {th }}$ year of the reign of our fovereign lord George II, king of Great-Britain, \&c. Annoque Domini 1730.
C. D. Naval-officer, D. E. Surveyor, E. F. Searcher;
A. B. Collector.
B. C. Comptroller.

* Cap. 7. 5. 3.
+ Cap. 7. §. 3.
And with refpect to the certificates that are produced for fhips that hath given fecurity in the plantations, it muft be obferved, that at the time of entering fuch hips, and producing the faid certificates, the mafter muft confirm the truth thereof by his oath, which mult be taken on the back of the faid certificate, after the following manner:

Daniel

## Continuation of the Business of the Custom-House,

Daniel Bright maketh oath, That he really became bound to his majefty, at Kington in Jamaica, for the due landing of the goods within-mentioned, as is particularly exprefied in the certificate on the other fide.

Jurat' apud Southampton
rertio die Januarii 1730.
Daniel Bright.
coram
A. B. Collector.

As it is likewife ufual for the mafter of every fhip, coming from the Britifh plantations, with any other goods than thofe before enumerated, in the certificate, No. (I.) and for which fecurity is to be given; to produce a certificate, that his faid hip hath been duly cleared at the cuftom-houfe of fome Britifh plantation. I fhall here infert the form of fuch certificate, being as follows:

A certificate that a fhip, laden with goods not enumerated, was duly entered and cleared in the Britifh plantations.
Thefe are to certify all whom it doth concern, That William Law, mafter or commander of the Endeavour of Britol, burthen 180 tons, or thereabouts, mounted with 12 guns, navigated with 30 men, Englifh-built, regiftered at Southampton, and bound for Southampton, having on board 4000 pipe and hogfhead flaves, 15 bundles of whale-fins, 40 barrels of train-oil, hath entered and cleared in the cuftom-houfe at Bofton in New England, according to law.
A. B. Collector.

Given under our hands and feals of office, this 3oth day of
April, in the 4 th year of the reign of our fovereign lord
George II, king of Great-Britain, \&c. Annoque Domini 1730.
C. Comptroller. B. C. Comptroller.

* And if any fhip from the Britifh plantations in America, has any train-oil or whale-fins on board, in order to adjuft the duty, the place of the owner's abode muft be inferted after the name of the place, thus;

The owners of which fhip are of London, [Bofton, \&cc.]

* ${ }_{25}$ Car. II. cäp. 7. §. 2\%

The foregoing regulations relate to thips coming directly from the Britilh plantations to Great-Britain ; but as rice * may, by a fpecial licence, be laden in Carolina, and carried directly to any part of Europe, fouthward of Cape Finifterre, and there landed, and then the Chip proceed to Great-Britain; this is a proper place to note what is to be obferved on that head, which is,

* 3 Geo. II. cap. 28. §. 4 .

1. That the faid licence having been delivered back to the malter before the departure of the fipip, with the marks, numbers, and contents of each calk endoried thereon, by the collector, comptroller, and naval officer; and they having made two copies of fuch licence and endorfement, and caufed the fame to have been attefted by the mafter, in order to be left with the faid officers; and the faid mafter having obtained a certificate of the conful, or two known Britifh merchants refiding at the place where delivered, teflifying the due landing of fuch rice, and that they verily believe, that no other enumerated goods have been there landed: fuch endorfed licence, and the certificate of landing, muft, upon the mafter's return to Great-Britain, be produced to the officers of the port, where bond was given.
2.     * That one of the aforefaid copies of the endorfement having been tranfmitted; by the officers in Carolina, to the commiffioners of the cuftoms; upon receipt thereof, or of the endorfed licence, the half fubfidy, [and petty cuftom, if the rice be the property of an alien] for the quantity of rice fhipped in Carolina, mult be demanded of the perfon who gave bond, at the time of granting the licence, by the collector that took fuch bond.

* 3 Geo. II. cap. 28. §. 5.
IV. Ships which have taken in goods to be delivered at feveral ports of Great-Britain.
* If a hhip has taken in goods, for feveral ports of GreatBritain, the mafter muft, upon his arrival at the firft port, make his report of the whole cargo, in like manner as if it was ail to be there delivered, diftinguifhing the particular goods that are to be landed at each port, after the following manner.
* Ift rule of book of rates,

For Portfmouth.
C. R.-3a 9 —— cafks madder Charles Revell.

For Chichefter.
N.S.— ı а ло_ Io cafks_linnen —_Nathaniel Smith.

For this port.
A. G.-I a $5-5$ hampers - fpaw-water-Amos Srove, O. L. - I a 20 - 20 balls - fundry goods - Oliver Long,

Whereupon, bulk may be broken, and the cuftoms, \&c. paid for no more than Thall be entered and landed: and, when the mafter fignifies his intention of proceeding to fome other Britifh port, the tide-furveyor muft fend tidefmen along with the fhip to the next port, and a copy of the report made at the firf port muft be tranfmitted to the collector, \&c. of fuch next port, with the particular quantities, qualities, and confignments of the goods there landed, feecified on the back thereof; remembering, that if prifage has been taken, it muft be particularly mentioned, to prevent it's being taken again. The manner of which endorfement fhould be as follows:

## Port of Southampton.

Landed at this port, and for which his majefty's duties have been here paid,
A. G.-I a 5 - 5 hampers-fpaw-water-Amos Grove. O.L._- 1 a $20-20$ bales - fundry goods-Oliver Long. A. B. Collector, B. C. Cuftomer, C. D. Comptroller.

And, when the fhip arrives at the next port, the mafter muft report his whole cargo, in the fame manner as at the former port, mentioning the particular goods which have been there landed, and for which duties have been paid, as fpecified in the endorfement on the firft report, and adding to the oath or affirmation of the mafter, after this, or fome fuch other, mark * otherwife than is particularly above expreffed: and the like mult be performed at every port, till the fhip is wholly unladen,
V. Ships which have taken in goods to be delivered, part in Great-Britain, and part in foreign parts.
If part of a fhip's cargo be taken in, with a defign to be delivered in any port or ports of Great-Britain, and the reff to be delivered in foreign parts, and the flip comes to Great-Britain firt, to deliver the goods taken in with that defign; the matter muft report in like manner, as if the whole cargo was to be there delivered, obferving to add, after the place's name, in his report, now lying in bound for -_, and to diftinguifh what goods are defigned for foreign parts, after the following manner:

The following goods were taken on board, with a defign to be carried to Hoilland, and not to be landed in this, or any other port or place in Great-Britain.
B. K. - I a $30-30$ cafks ——wine - Benj. Kinges

And when the goods defigned are landed, and the duties paid, the fhip may be permitted to proceed to foreign parts, with the remainder of the cargo.

## VI. Ships which have already delivered part of their cargo.

If a fhip has delivered any part of her cargo, fince fhe came from her loading-port or ports, and before ber arrival at any port of Great-Britain; the goods to be delivered muft be parti-: cularly fecified in the report, after the following manner :

$$
\text { Landed at } A
$$

Put on board the Delight in the open fea: Or,
Thrown over-board in a ftorm.
R. S.—_ I. a 2 Thrown over-board in a form. 2 filk

And in thefe cafes there is added to the oath or affirmation of the mafter, otherwife than is particularly above expreffed.

## VII. Ships from Holland with fpice.

* If a fhip from Holland has any nutmegs, cinnamon, cloves, or mace, on board; the licence, granted for the importation of the fame, mult be delivered up to the collector and comptrefler of the port, and be annexed to the mafter's entry or report of bis fhip.
* 6 Geo. I. cap. 21. §46. 8 Geo. J. cap, 18. §. 21.
VIII. Ships from Greenland, \&c.
* If a Britifh fhip comes from Greenland, Davis's Streights, and the adjoining or adjacent feas with whale-fins, oil, and blubber of whales, or feal-oil, and feal-fkins, or any other produce of feals, or other fifh or creatures caught in the aforefaid place; in order to exempt the faid goods from duty, the matter of the veffel muft, at the time of his reporting, make the following oath, either in the body of the report underneath the goods, or on the back thereof:
* 10 Gec . I. cap. 16. §. 1. 12 Geo. I. cap. $\mathbf{2 t}^{\text {t. }}$ §.7:
A. B .

## Continuation of the Business of the Custom - House.

A. B. maketh oath, That the fins, \&c. above [or within] mentioned, are, really and bona fide, the produce of whales and feals caught in the Greenland Seas [or Davis's Streights, or fome other part of the adjacent feas] by the crew of a veffel, whereof the mafter, and one third at leaft of the mariners, were Britifh fubjeds,
Jurat' 2'. die Januarii,
A. B.
B. $73^{\circ}$, coram nobis
B. C. Colecior.
C. D. Comptroller.

## IX. Coafting veffels, which have taken in foreign goods at fea.

* Though foreign goods may not be taken in by any coafting veffels out of fhips at fea, with intent to be fraudulenitly landed in Great-Britain, without payment of duty ; yet it is apprehended that if, in cafe of diftrefs, and without any intention of fraud, but purely for the fecurity of any foreign goods from perifhing, they thould be taken on board a coafter; the mafter muft, upon his arrival in any port of Great-Britain, immediately acquaint the officers therewith, and make a report of his faid veffel, in Jike manner as if fuch veffel had actually taken in and brought the faid goods from parts beyond the feas: in which reports, not only the goods, but the thip out of which they were taken, from whence fhe came, how built, how manned, and where the goods were taken in, muft be particularly expreffed for hays, from Bips which have taken in goods to be delivered, part in Great-Britain, and part in foreign parts.
* 9 Geo. I. cap. 21 . fect. 8.

## X. Uncertainty of any particular goods being on board.

If, upon reporting any veffel, the mafter is doubtful or uncertain of any parcel or parcels of goods being on board, or of the quantities of any goods by tale, he muft make an exception underneath the goods; the laft being a cafe that frequently happens in thips from Norway, by reafon of the difference between the accounts of the mate and the freighter, The form of fuch exception may be as follows:

The above are the quantities of goods taken on board, according to my mate's account ; but the freighter charged me with C. $1 ; 1: 15$ deals more, I am uncertain which account is right.

Signed A. B.

## XI. Omiffions in a report.

When, upon the delivery of any fhip, it appears that any part of the cargo has been omitted in the mafter's report, and he applies to the collector, \&c. to mend the fame; and though the officers have not any reafon to beleve, but that fuch omiffion was through inadvertency, and without any defign of fraud; yet the fame fhould not be permitted, as the law fands; but the honourable the commiffioners are to be acquainted with a true flate of the cafe, and if they are fatisfied, and are pleafed to give leave, then the goods, fo omitted, may be added to the report, after the following manner:
Third day of March, 1730 -_added by the commiffioners Ieave of the twenty-eighth ultimo.
D. S. - 4 - 1 cafe --linnen -David Smith.

Signed--A.B. mafter.
And then the report is fworn to de novo, inferting the particular days underneath that, when fworn to before.
Lafly, it muft be remembered, that if, in any of the aforefaid reports, there are mentioned any fmall calks of wine under 25 gallons, though the fame are, by I Geo. If. cap 17, prohibited to be imported, yet upon fuch cafks being duly reported, and there being no appearance of fraud, the particular cafe and circumftances mult be reprefented to the commiffioners, for their directions, whether it be advifeable to wave the forfeiture, and to accept the duty, or to profecute the fame.

## Remarks.

From thus illuftrating the method of reporting of Ships from foreign parts, it may be neceffary further only to obferve, that, where any privilege * is allowed to Britith-built Chipping, it is meant fhips of the built of Great-Britain, Ireland, Guernfey, Jerfey, or the Britifh fettlements in Africa, Afia, or America, and whercof the mafter, and three fourths of the mariners, are Britih; that is, his majety's fubjects of Great-Britain, Ireland, and his plantations; and three fourths of the mariners fuch during the whole voyage, untefs in cafes of ficknefs, death, \&c.

* 12 Car. If. cap. 18. §.7. 13 \& 14 Car. II. cap. 11.§. 6.

What has been hitherto faid, are the requifites which are to be performed by merchants fhips, upon their arrival from foreign parts: but, with refpect to his majefty's fhips, it muft be oblerved, * that no goods or merchandizes brought from parts
beyond the feas, on board any flaip or veffel of war, nay be unladen, \&c. before the captain, \&ic, has fignified in writing, under his hand, to the collector, \&ic. the nanies of every merchant or Jader of any goods on board the faid fhip, tngether with the number and marks, and the quantity and quality of every parcel of goods, to the beft of his knowledge, and hall have anfwered upon oath to fuch queftions concerning fuch goods, as fhall be publickly adminittered to him by the collector, \&ce. And fuch thip Ghall be liable to all fearchers, and, other rules which merchants fhips are fubject unto; and upon refufal to make fuch entries, the officers of the cuftoms may bring on thore, into his majefty's ftorehoufe, al! goods prohibited or uncuftomed, which they fhall find on board.
Of the aforefaid reports of merchants fhips, two are to be fubfcribed by the mafter; one whereof is to be taken in a book to be kept at the port for that purpofe, and the other on loofe paper, which muft, from time to time be preferved on a file, 'till the end of each quarter: when they are to be tranfinitted to the regifter-general of all fhips belonging to Great-Britain, in order that he may examine whether they are duly foorn to and attefted, and the fhips manned according to the act of Navigation. See Navigation Act.
Having premifed what is neceffary to be obferved in the Entering of Ships from foreígn ports, the next matter to be confidered for the informat on of the merchant, as well as the officer of the cultoms, is the Entering of the Goods therein imported. In relation to which it is to be carefully noted, * that, before a thip has been duly entered or reported as before directied, entries of any merchandizes, whatfoever may not be taken, unlefs the fhip is not defigned for that port, but was actually forced in by fome neceflity, and then only for fmall matters, and upon the mafter's oath, That they are only to fupply neceffaries for the hip: but when the fhip is to deliver the whole, or any part of the cargo, at that port, and in order thereunto the malter has made a regular report of his hip; there may be then accounted an importation of all the goods on board, defigned to be delivered in any port of Great-Britain, fo that the duties payable to the crown, on the importation of fuch goods, are actually become due; and therefore, upon making fuch report at each refpective port $\dagger$, every particular perfon that has any goods on board fuch ihip, muft, with all poffible fpeed, and before the fame may be unladen, make proper entries thereof with the collector, and pay or fecure all the duties to which fuch goods are liable; and fuch entries muft not, upon any pretence whatfoever, be delayed, but muft be actually made, for || tobacco, from the time of the mafter's report of the fhip, and for all other goods, within twenty days: and as the duties be, come due upon the importation of all goods, whether an entry thereof be made or not; therefore, upon refufal or neglect of entry within the aforefaid times, an information, in the nature of an action of debt, may be brought againft the importer, for the duties; more efpecially after the faid thirty or twenty days are expired: but in all cafes of refufal or neglect of making due entries, or where it fhall fo happen, that though due entries are made of the full number of hogtheads, cafks, or other packages of tobacco, yet, perhaps, not more than an half, one third, or one-fourth, $\& \mathrm{cc}$. part of the real quantity contained in fuch packages, are entered, and that the tobacco is not landed or difcharged 'till after the expiration of the thirty days; the importer muft be called upon to perfect his entry, and the commiflioners muft be acquainted therewith, and their directions be obtained, for the officers government.

* Exchequer Rules.- 7 Eliz.
+13 and 14 Car. II. cap. 11. §. io.
Il 9 Geo. I. cap. 21. §. 3 .
And, in making thefe entries, it fhould be obferved, that there muft be expreffed the fhips name, mafter's name, the place from whence arrived, and the importer's name, with the particular kinds and quantities of goods; and on one of the bills of entry [* the warrant] muft be likewife exprefled the marks, numbers, and contents of every parcel of fuch goods as are rated to pay by the piece or meafure, and the weight of the whole parcel of fuch goods as are rated to pay by the weight; which will be only a tranfcript of the merchant's invoice, and may be inferted either on the face of the warrant, as is ufual at the port of London, or on the back thereof, as is practifed at many other out-ports : and, laftly, the warrant being thus completed by the merchant, the fame is to be figned by himielf, or his known fervant, factor, or agent, to teftify, that the goods are not upon aliens, or Atrangers, or denizens account; in which cafe they would be liable to extraordinary duties. But when the goods are declared to be im. ported by, or upon account of $t$, an alien or denizen, fuch fubfrription is not neceffary, becaufe fuch goods are then liable to the highelt duties that can be paid.
* Though it is the practice of the out ports, for the coliector to keep the bill fubfribed by the merchant, \&cc, and from the faid bill to form a warrant for the delivery of the goods; yet the practice of the port of London is, perhaps, the moft confiftent with the plain fenfe and finisi of the law, which is, to jiftent with the plain fenie and ppiric of the law, which is,
malke the bill fubicribed by the merchant, to be the warrant.
$\dagger$ i Hen. VII. cap. 2. §. I. II Hen. VIl. cap. 4. §. 1. $z 2$ Hen. VIII. cap. 8. §. I.

## Continuation of the Business of the Custom-House.

With refpect to the making and fubfribing of merchants entries at the cuftom houre, it , mult be oblerved, that * any Britifh man may cuftum, in his own name, the goods of another Britifh man; fo may one merchant, flranger enter the goods of another merchant ftranger : but he that fo enters the goods of another perfon, that the king loles his duty, forfeits the goods to the king, \&c. and likewife all his own goods and chattels for ever.

* 3 Hen. VII. cap. 7. §. I. i Hen. VIII. cap. 5. §. 3, 4, 5. $2 \&$ and 3 Ed. VI. cap. 22. §. 4, 5. I Eliz. cap. 11. §. 6 . But in Ireland, where the cultoms are mofly under the lame regulations, as in Gredt-Britain ; the act of tonnage and poundage directs, That all goods be entered only in the name of the true owners, \&c.

And, as to the perfons that are to be deemed aliens or ftrangers, they are fuch as are born in foreign countries, under the obedience of a ftrange prince or ftate, and out of the allegiance of the king of Great-Britain * ; or a Britifh man born, who has fworn to be fubject to any foreign prince; though if fuch Britifh born perfon returns to Great-Britain, and there inhabits, he muft be deemed as Britifh, and have a writ out of Chancery for the fame: and likewife $\dagger$ the children of natural born fubjects, though born out of the allegiance of his majefty, \&c. and all children born on board any fhip belonging to, or in any place poffeffed by the South-Sea company, are fo deemed natural born fubjects of this kingdom.

* 14 \& 15 Hen. VIII. cap. 4. §. 2.
$\dagger 7$ Ann. cap. 5. §.8. 9 Ann. cap. 21. §. 53. 10 Ann. cap. 5. §. 1. 4 Geo. II. cap. 21. §. 1, 2,3 .

The aforefaid bills of entry being formed according to the aforegoing directions, and fubfcribed by the merchant, \&c. they will appear in the following form:
In the Delight of Southampton, David Stone, mafter, from Malaga.
On my own proper account and rifque.
Henry Crew.
Or,
[on my own and company's account and rifque.] Or ,
[on Britih account and rifque.]
Signed, Henry Crew.
Or, for Henry Crew.
Signed A. B. fervant, factor, or agent.
Then follows the quantity of the goods.
Which bill being produced to the collector, cuftomer, and comptroller, they are each of them to take copies thereof, in order to compute the duties, if any due: and the faid copies are to be clofed * and numbered in courfe, beginning a new number each quarter.

* It is the practice of fome ports to file the entries of all forts of goods together, and to number them all fucceffively; but moft ports make diftinct numbers, and keep feparate files for the following forts of goods, viz.

Poundage goods (except tobacco.)
Tobacco.
One file for
Spanifh, Portugal, \&c. wines.
French wines.
Rhenif ${ }^{2}$,
Vinegar.
And when the faid officers have computed the duties on their refpective bills or copies, and have agreed the fame, the collector is to receive the duties: whereupon he is to infert them on the bill fubfribed by the merchant, \&c. which having been dated and numbered as the faid officer's copies were, he is to fign his name thereto, and then deliver fuch fubfribed bill to the cuftomer and comptroller, in order to be figned by them alfo: after which, the faid bill is to be directed to the furveyor, and the particular land-waiters appointed to the hip, as a warrant for their examination and delivery of the books.

And the aforefaid copies or duplicates of the entries, taken by the collector, cuftomer, and comptroller, are to be preferved upon feparate files, in order to be entered daily in proper and diftinct books, to be kept by each of them for that purpofe.

For directions in computing the duties, fee my New View of the Britifh Cuftoms, by Tabular Inspection.

And, befides the aforefaid general requifites, thefe further rules and directions are likewife to be obferved with refpect to the entering of the following particular forts of goods.
I. Goods not rated for the fublidies, additional duties, inmports, fecond 25 per cent. on French goods, and additional duty on drugs.
If the goods are not of the produce of * Eaft-India, and are not rated in either of the columns of rates, in my Tabular Sheets, and are liable to daty upon importation, as the fáme muft be levied $\dagger$ according to the value and price of fuch goods, as they fhall be afcertained by the oaths or affirmations of the

[^4]merchant [and not of his fervant, \&cc.] taken in the prefence of the cuftomer, collector, comptroller, and furveyor, or any two of them; therefore, inftead of fubfcilibing the warrant bill as before direfted, the merchant himfelf muft make oath or affirmation thereon, as in the following example:

18th of January, 1750 . No. 19.
In the Providence of London, James Bell, mafter, from Rotterdam.

## Jofeph Grove.

J. G. $\} \begin{aligned} & \text { One box, containing certain unrated toys, at eighteen }\end{aligned}$ No. 3. $\}$ pounds all.
Jofeph Grove maketh oath, That the true value and price of the toys above mentioned, as they are here in Southampton, do not exceed eighteen pounds all, and that he is really the importer and proprietor thereof [or that himfelf and company are really the importers and proprietors thereof, of that they are imported upon Britifh account here, or that he receives the fame upon Britifh account from beyond the feas.]

B. C. Comptroller, Cuftomer, or Surveyor.
IV. Wines

## Continuation of the Business of the Custom - House.

1V. Wines and vinegar, imported.

* As there is a variation in the impolt-duty of wines and vinegar, with regard to the circumftances of the importation, as being for merchandize, private ufe, or retailing; therefore, at the time of entry, proof muft be made by oath on the warrantbill, whether the wines and vinegar, therein mentioned, are imported for fale or private ufe; the form of which proof muft be as in the following example:
* 1 Jac. II. cap. 3. §. 6.
gth of January $1750 .-N o .2$.
In the Delight of Southampton, David Stone, from Malaga. James Gerard.
J. G. $\quad$ Twenty cafks, containing nine tons of Spanifh No. I to 20. $\}$ wine, unfilled for fale.
James Gerard maketh oath, That the wine above-mentioned is imported by way of merchandize, and with intent to fell again, and doth not belong either to vintner or retailer.

Jurat' 9 die Jan.
Signed-James Gerard.
1750, coram
A. B. Collector.
$3^{\text {d of February } 1750 .-N o .9 .}$
In the Neptune of Ipiwich, Arthur Wills, from Oporto.
David Strong.
D. S. $\quad$ Four caks, containing three quarters of a ton of No. 5 to 8. $\}$ Portugal wine, filled for private ufe.
David Strong maketh oath, That the wine above-mentioned is imported for private ufe, and doth not belong either to vintner or retailer.

Jurat' 3 die Fieb. 1750 , coram
A. B. Collector.

But, when wines and vinegars are imported by a retailer, an oath is not neceflary, becaufe they are then chargeable with the highef duty; being not intitled to any difcount out of the im-poft-duty, by virtue of the act which granted the fame: and it muft be remembered, that profeffed vintners, or retailers, may not be permited to enter any wines and vinegars, any otherwife than by retail, though they may be the property of a merchant, and are only configned to them to be fold by wholefale, as merchandize.

## V. Mufcovia or Ruffia linnen.

As Mufcovy or Ruffia linnens are not contented, and to meafure each piece in every bale would be extremely troublefome; it is the practice, in the port of London, to deliver them by the merchant's invoice: and, for that purpofe, a copy of fuch invoice mult be inferted on (either the face or the back of) the warrant, and the truth thereof confirmed upon oath, as in the following example:

25th of January 1750.-No. 29.
In the Alexander of Archangel, foreign built and manned, George Kinger, from Archangel.

A. S. No. y to $6,-$ Six bales, containing fixty-four hundred, an half, and thirteen ells, plain narrow Ruffia linnen, and three thouland nintey three yards of Ruffia diaper napkins, not exceeding half an ell in breadth.

Abel Smith maketh oarh, That the above is a true copy of the contents in the invoice of the fix bales of Ruffia limen above-mentioned, as fent to him from Archangel; and that the faid bales contain no more than feventeen thoufand, nine hundred, forty-five afhins, including the wrappers, to the beft of his knowledge and belief.
Jurat' 25 die Jan. coram
Signed-Abel Smith.
A. B. Colleclor.

## VI. Train-oil and whale-fins from the Britilh plantations.

As train-oil and whale-fins, of, and from the Britifh plantations, are chargeable with much lower duties than if of foreign fifhing, it is the practice of the port of London, to make proof, by oath upon the warrant, that the faid oil and fius are of Britilh taking and curing.

Vol. I.

16th of January 1750.-No. 16.
In the Mary of Yarmouth, James Joy mafter, from New England. M. M. Mathew Martin. No. I to 65 --Sixty-five barrels, containing feven tons of
train-oil.
R. V. I to 10.-Ten bundles, containing tweive hundred weight of whale fins. All of Britifh taking and curing.
Matthew Martin maketh oath, that the train-oil and whalefins above-mentioned are fent him, this deponent, from New England, as of Britif taking and curing.

Jurat' 10 die Jan. 1750, coram Signed-Matt. Martin. A. B. Collector.

## VII. Goods prohibited to be imported for fale.

As many forts of goods are prohibited to be imported into this kingdom, with intent to be fold here; therefore, when fmall quantities of fuch goods are offered to be entered, under pretence that they are only for the importer's own ufe, proof thereof mult be made by oath upon warrant, as in the following example. But if, by the largenefs of the quantities, it may be prefumed they are for fale, they mult not be permitted to an entry.

18th of January, 1750. -No. 20.
In the Providence, of London, James Ball, mafter, from Rotterdam.
B. T.

Benjamin Tunis.
No. I to 65.-Four cafes, containing 450 feet of gally-tiles (being painted ware) for private ufe.

Benjamin Tunis, maketh oath, That the gally-tiles abovementioned are imported for private ufe, and not with intent to be uttered, or fold, in the kingdom of Great-Britain.
Jurat' 18 die Jan. 1750, coram Benjamin Tunis. A. B. Collector.

And in all other cafes, where any thing relating to the duties, or importations, cannot be any otherwife afcertained and determined, the importer's oath mult be taken, according to the nature of the cafe.

## Remarks.

From this fhort furvey of the practical bufinefs of the Cuftomhoufe, fo far as I judge proper to extend the fame at prefent, it appears, that cuftom-houfe-oaths have multiplied in proportion to the multitude of laws which have been enacted, in relation to this great branch of the public revenue. See the articles Affidavit and Oaths, with regard to the Revenue; wherein, under the former head, I have fhewn the danger of multiplying oaths of this kind, and the fentiments of fome great men upon this occafion ; but, while the revenue continues in it's prefent ftate and condition, this frequency of fwearing, I am afraid, will never be laid afide; which, with great reafon, may be looked upon in the light of a grievance, no lefs to be lamented than that of mortgaging and anticipating the Public Funds, in confequence of not raing the whole revenue WITHIN THE YEAR, and thereby preventing the increafe of the weight of our debts, and taxes: by which politic meafures the DUTIEs of Customs, which ought to be laid in the moft delicate and judicious manner [fee the article Customs] as well as all other our Taxes [fee Taxes on Trade] upon our commerce, and occafionably variable, as the circumftances of trade with divers ftates may change; yet they feem to be intailed from generation to generation without any alteration. For the effects of which, fee the articles Customs, Duties, Funds, Trade.
That high duties give encouragement to fmuggling is certain. Where the avoiding high cuftoms makes the profit great, no rifk, no danger, will deter from the attempting it; it is throwing out a bait to a greedy fifh, he will fnap at it, though immediate ruin enfues. This fo greatly injures and difcourages the fair trader, that it either ternpts, or compels him, to turn fmuggler too, and affociate himfelf with thofe numerous examples of depravity we have at this time among our people, who live in a ftate of war with the government, in defiance of laws; whereby an univerfal corruption of manners, and contempt of authority, have prevailed. Befides the atticles of luxury being thofe things that are chiefy fmuggled, as brandy, tea, French wines, laces, filks, \&c. it fpreads their confumption among the lower clafs of people, who are tempted, at a lefs expence, to imitate the luxuries of their fuperiors: and what greatly adds to the public evil is, that the fame fmugglers who fteal thefe foreign luxuries and fuperfluities in upon us, carry off valt quantities of raw wool, to the unfpeakable detriment of our manufactures and the nation. See British America, Erance, Wool.

High duties alfo ruin our manufactures, more efpecially that of the woollen. For fuch cuftoms prevent the bartering away our manufactures for foreign goods, not only for our own confumption, but alfo for exportation; which might enlarge the vent of our own commodities confiderably more than it, at prefent, is: for, if a merchant now exports our woollen goods, and would barter them for wines, the duties on them would amount to

[^5]wore

## Continuation of the Business of the Custom-House.

more than the coft of his woollen goods, which puts him under the neceffity of having a double capital for fuch an adventure, or laying it afide for want thereof; whereby the fales of great quantities of woollen manufactures are loft to the nation.

As high cuftoms enthance the expences of our navigation, mult not freights be railed accordingly? By which, are not the prices of foap, oil, and dyeing materials, ufed in manufacturing our wool, advanced to the manufacturer? And the fieights on the cloths, or ftuffs exported, being alfo raifed, are not thefe additional clogs upon the fales of our woollen goods of all kinds?

High cuftoms ingroffing fo large a thare of the ftocks of our merchants, they are cramped, and deprived thereby of driving that extenfive trade, and vending in foreign countries thofe quantities of our woollen goods, they would otherwife do. Moreover, the rifk of Britifh merchants being greater than in Holland, and their loffes heavier in proportion, as our duties are higher, their bankruptcies muft, and are, more frequent. Does not this very fenfibly affect our manufacturers, who are generally confiderable creditors; for broken merchants are jufly compared to ninepins, one of which feldom falls without beating down feveral others.

Nor does any thing recommend the ufe of the foreign manufactures of fine goods as high duties, by making them expenfive; which vanity, on that account, foon renders falhionable, whilft our own are defpifed, though far fuperior in quality; which is a great difcouragement to our manufactures.

Heavy duties, alfo, are the principal caufe of the fmuggling of wool, becaufe the gain being great by running tea, brandy, and French goods, on account of the cuftoms, hath raifed the contraband trade to a great height; and the fmugglers cannot make their returns in any commodity of fo quick and certain a vent, or that gives fo good a profit, as our wool; -for the French working cheaper, and their wool being coarfer, Englifh and Irifh wools are fo much in demand, that they will give great prices for them, by returns in their own goods, for which reafon they receive vaft quantities, to the ruin of our manufactures.

Great cuftoms on athes, bay-falt, cotton, copper, coals, drugs, foreign foap, flax, fruits, furs, hemp, iron, leather, linnens, oil, paper, rice, tobacco, tallow, threads, tapes, filk, and fugar, being neceffaries of life, or materials of manufacture, muit neceffarily render all our commodities dear, not only to our own people, but to foreigners likewife (thougli our workmen fhould have no excifes to pay), and fuch difcouragements give opportunity to foreigners to fend their manufactures cheaper to foreign markets, and fmuggle them, in defiance of all laws, into our own country, to the ruin of our own manufacturers; for all the above cuftoms are as much taxes on our woollen manufacture as if laid on the wool itfelf; for the workmen muft raife the money on the woollen goods he makes, to pay the duties of what he ufes of the above articles, with the advances thereupon, which are made by all the hands through which they pals before they come to him. By this policy it is that we ourfelves drive away our own manufacturers; and foreigners could not rival the people of fo fruitful a country as Britain, if we did not furnith them with the means, by our high taxes and reftraints, that are always prejudicial to trade, though defigned to advance it, and never effect the thing intended, though fortified with the moft rigorous penal laws : of which Mr Locke gives an infance, in his Confiderations, \&c. p.' 16 . 'It is death in Spain to export money; 6 and yei they, who furnilh all the world with gold and filver, ' have leaft of it among themfelves; trade fetches it away,
' notwithtanding all their artificial and forced contrivances to 6 keep it there: it follows trade, againft the rigour of their laws, - and their want of foreign commodities makes it openly be car" ried out at noon-day.'

It is felony in England to export wool, and yet they, who furnifh all the world with wool, have lealt of the manufacturing of it among themfelves; the fmuggling trade fetches it away, notwithftanding all our artificial and forced contrivances to keep it: it follows the fmuggling trade, againit the rigour of our laws; and our want of taking off the taxes on manufactures makes it openly be carried out at noon-day.

Whence it is evident, that neither death nor banifhment can force trade to an unnatural channel; it may be compared, in one refpect, to water, which cannot be compreffed to a degree beyond it's natural dimenfions; the more force is exerted, the fooner doth the veffel break that contains it, and the water let loofe, never to return. The great De Witt, in his Memoirs, alferts, " That the navigation, the fifhery, the trade and mans-- factures, which are the four pillars of the ftate, fhould not be 6 weakened or incumbered by any taxes, for it is they that give - fubfiftance to the moft part of the inhabitants, and which - draw in all forts of ftrangers; unlefs the neceffity was fo great - that the country was threatened with an intire deltruction ; and - thefe fundamentals fhould be attacked upon the hopes that thefe - taxes would not laft long; at leaft hafte fhould be made, as foon ' as the ftorm was over, to take them off. Again, this diftincc tion fhould be made, that manufactures hould not, or can' not, be taxed at all, becaufe they are not fixed to the country, ' and we muft fetch from foreign countries the ftuffs and mate' rials to work them up.'
High duties fend away our feecie. Britain, having no mines of gold or filver, hath no other means of getting or preferving it's treafure but by foreign trade. As cuftoms confine our trade to mere importation for our own neceffaries, or vanities, and, at the fame time, ruin our manufactures, what we want in exports to ballance the imports, muft be paid in fpecie [fee BalLANCE of Trade] making the ballance of trade every year more and more againft us; for, as we raife the prices of our goods fo high by taxes that foreigners will not take them, and yet continue to import their fuperfluities, which we now chiefly, and, in time, muft intirely pay for with our gold and filver; and our high duties encouraging fmugglers, who have feldom a fettled habitation, or any ftock of our manufactures by them, they carry out great quantities of feecie, to purchafe their cargoes: fuch large draughts make our mints lie idle, but by fits and ftarts; we find our money difappear; and grow fcarcer and fearcer, our trade declines and our people ftarve. To confirm all which further, fee the articles Customs, Excises, National Debts, and Taxes. Upon what folid principles our commerce, and navigation may be advanced, fee, alfo, the articles Artificers, Manufactures, Mechanics, Royal Society, and Trade.
How far the prefent fyftem of the public revenue of this nation appears to be calculated for the intereft, or otherwife, of our commerce, and navigation, fhall be confidered alfo under the article Funds; wherein thall be confidered, more efpecially, the great principle of increafing our debts, and reducing the intereft of the national creditors; for however well-bottomed the Public Credit may feem to be upon this maxim, I am afraid, upon a juft and difpaffionate enquiry, it will turn out otherwife than many gentlemen may flatter themfelves.

## C A B

## $\mathrm{C} \AA \mathrm{B}$

筑is the third letter of the alphabet; it is ufed either alone, or preceded, or followed, by fome other letter, by merchants, bankers, traders, and bookkeepers, as an abbreviation of certain terms, or words, which they are obliged to repeat very often in the articles which they fet down in their journals, or other regifters. Thus, among the French, C figmifies Compte, account; C O, Compte Overt, open account ; C C, Compte Courant, account current; M C, Mon Compte, my account; S C, Son Compte, his account; LC, Leur Compte, their account; N C, Notre Compte, our account, \&c.
CABALISTE, a term of commerce, which is ufed at Thouloufe, and in the whole province of Languedoc. It fignifies a merchant, who does not trade in his own name, but is concerned in the trade of another merchant in chief.
The 24th article of the general regulations of the exchange of Thouloufe, made in the year 1701, for the election of the prior and confuls of the faid exchange, orders, that every merchant, or fon of a merchant, actually trading, fhall be obliged to accept the office of adminiftrator of the fraternity, if he be nominated to it; and that all the cabaliftes, and perfons concerned in the trade of a merchant in chief, fhall alfo be liable to be named and chofen for the faid adminiftration. See the article Anonymous Partnerihip, and Remarks thereon.
CABECA, or CABESSE. The Portugueze, who carry on the trade of filks in the Eaft-Indies, diftinguifh them by the names of cabera and bariga ; that is to fay, head and belly. The cabeça filks are the fineft, the bariga are from 15 to 20 per cent. inferior to them. 'The Indian workmen endeavour to pals them off one with the other, and there is hardly a bale of cabeça but what is mixed with a great deal of bariga : for which reafon, the more experienced European merchants, who carry on that trade, take care to open the bales, and to examine all the flains, one after another. See the article of Silks, where thofe of the Indies are deferibed. The Dutch, who have a great trade in thofe filks, diftinguifh two forts of cabeça's, namely, the moor-cabeffa, and the common cabeffa. The former is fold at Amfterdam for about $21 \frac{1}{2}$ fchellingen grofs, or Flemifh; and the other for about 18.

## Remarks.

The ancient Portugueze, who had extended their trade in the Eaft-Indies, introduced amongft the merchants of thofe countries, that is to fay, among the Banians and the Chinefe, the diftinction of the belt and the worlt merchandizes, by the comparative names of head and belly: for, as they looked upon a man's head as the nobleft, and the belly as the vileft, parts of his body, they do the fame with regard to merchandizes (with a defign, perhaps, to be better underftood by the Indian merchants) filing the beft the head, and the worft the belly, of the fame fort, or kind, of merchandize. This cultom has continued to the prefent time in the Indies: and the European nations, who trade there, follow that cuftom of diftinguifhing the merchandizes in the buying or felling, to make themfelves be better underfood by the Banians and Chinefe.
CABIDOS, or CAVIDOS, a long meafure ufed in Portugal, at Goa, and in other places of the Eaft-Indies, belonging to the Portgueze, to meafure ftufts, linens, \&c.
The cabidos, like the Dutch ell, or that of Nuremberg, contains two feet and II lines, which make $\frac{4}{7}$ of the Paris ell, and the Paris eil makes one cabidos and $\frac{3}{4}$ : fo that feven cabidos make four ells of Paris.
To reduce cabidos's into Paris ells, you muft, ufing the Rule of Three, fay, If feven cabidos's make four ells of Paris, how many Paris ells will fo many cabidos make? And, on the contrary, to reduce Paris ells into cabidos's, you muft fay, If four ells of Paris make feven cabidos's, how many cabidos's will fo many ells of Paris make?
CABINET, a piece of joiner's workmanflip. It is a kind of prefs, or cheft, with feveral doors and drawers, to lock up the moft precious things, or only to ferve as an ornament in chambers, galleries, or other apartments.
There are common cabinets of oak, or of chefnut; varnifhed cabinets of China and Japan; cabinets of inlaid work; fome of ebony, and of other fcarce and precious woods.
The cabinets of Germany were formerly in great repute in France, where they were very much efteemed, on account

Vol. I.
of feveral mechanical rafties and curiofities, which they were filled with in the infide. They ate very much valued in foreign countries, and the Dutch carry fome fill into the Eatt ; but they are almoft enturely out of date in France, as well as the cabinets of cbony, whin came from Veni c.
CABLE, a thick, large, ftrong rope, commonly of hemp, which ferves to keep hiips at anchor: but thcle are commonly called crane-ropes, and are of different fizes. It is alfo faid of ropes which ferve to raife heavy loads, by the help of cranes, pullies, and other engines. The name of cable is ufually given only to fuch as bave at leaft three inches in diameter; thofe that are lefs are only called ropes, of different names, according to their ufe.
Every cable, of what thicknefs foever it be, is compofed of three ftrands, cvery ftrand of three ropes, and every rope of three twifts; the twift is made of more or lefs threads, according as the cable is to be thicker or thinner. The words flrand, rope, and twift, are explained under their proper articles. In the manufaclure of cables, after the ropes are made, they ufe flicks, which they pais firl between the ropes of which they make the ftrands, and afterwards between the ftrands of which they make the cable; to the end that they may all twift the better, and be more regularly wound together : and allo, to prevent them from twining, or intangling, they bang at the end of each frand, and of each rope, a weight of lead, or of ftone.
When the cable is made, and twifted as it ought to be, they untwift three or four turns, that the reft may better remain in their former pofition.
Cables that are too much twifted burt very eafily; and, when they are fpun foft, that is to fay, not fufficiently twifted, they break. See Rope-Maker.
The number of threads, of which a cable ought to be compofed, is always proportionable to its length and thicknefs; and it is by the number of threads that compofe it, and make it's diameter and circumference, that one may judge of it's weight, and, confequently, make an eftimate of it's value, which is an expeditious way of computing the worth of cordage.
A cable of three inches in circumference, which amount to an inch in diameter, is compofed of 48 common threads; and upon that footing are calculated two tables which the Sieur St. Aubin has given us, in his Dictionaire de Marine, to make both thofe operations; which tables we have thought proper to infert in this work, with the neceffary infructions for ufing them, that the reader may want no information on a fubject which none ought to be ignorant of, who are concerned in marine commerce, who fit out merchant-men for their own account, or freight them for the account of others.

A Table of the number of threads of which a cable muft be compofed, with regard to it's circumference, from three inches to 20 , and from 48 threads to i943.

| Inches. |  | Threads. |
| :---: | :---: | :---: |
| 31 | - | 48 |
| 4 | - | 77 |
| 5 | - - | 121 |
| 6 |  | 174 |
| 7 |  | 238 |
| 8 |  | 311 |
| 9 |  | 393 |
| 10 |  | 485 |
| 11 | --.- | $59^{8}$ |
| 12 | --- | 699 |
| 13 |  | 82 I |
| 14 |  | 952 |
| 15 |  | 1093 |
| 16 |  | 1244 |
| 17 |  | 1404 |
| r8 | -- | 1574 |
| 19 | ---- | 1754 |
| 20 |  | 1943 |

In order to find, by this table, how mush a cable of a certain given length ought to weigh; for inflance, a cable between 110 , or 120 fathoms long, you mult meafure the thicknets of the cable in its circumference, and look into the table, to fee how many threads it mun be compofed of, with regard to that circumference; then multiply by tour the num-
ber of threads you have found, becaufe each thread, for making a cable of the propofed length, weighs about four pounds; and the product of that multiplication will give you very near the weight of the cable. Thus a cable of 20 inches in circumference, which, according to the table, mult have 1943 threads, will weigh $777^{2}$ pounds.

A Table to eftimate the weight of a cable, by it's circumference.

By the two foregoing tables may be allo found how many threads are required in every rope, according to the thicknefs one would give to a cable. For inftance, for a cable of three ropes, which is required to be made 18 inches in circumference, you muft put 550 threads in each rope, obferving, however, that, if you would make the cable fomething tighter, or clofer than ordinarily, it will be both fhorter and thinner; and if, on the contrary, you make it loofer, it will be longer and thicker.

## Remark.

It feems that, in the inftance given above, by the Sieur Aubin, we fhould put the word ftrand, inftead of rope, fince a cable being compofed, as he explained it before, of three ftrands, and each ifrand of three ropes, it makes nine ropes for every cable; and, at that rate, the number of threads does not agree with the ropes, but with the ftrands, the latter being really compoied each of 550 threads, or thereabout, and the ropes, reckoning nine to each cable, can have but about 183 threads each.
There is no merchant-fhip, though never fo weak, but has, at leaft, three cables; namely, the chief cable, or cable of the fheet-anchor, a common cable, and a fmaller one. The length of there cables is commonly from 1 ro to 120 fathoms. By flatute $2 x$ Hen. VIII. cap. I2. fect. 2. No perfon dwelling within five miles of the town of Burport, in the county of Dorfet, thall fell out of the market, holden within the faid town, any hemp which fhall grow within the faid five miles, upon pain of forfeiture of the hemp.
Sect. 3. No perfons, other than fuch as fhall dwell within the faid town, fhall make, out of the faid town, any cables, halfers, ropes, traces, halters, or other tackle made of hemp within five miles of the faid town, upon pain of forfeiture of the faid cables, $8 x$.
Sect. 4. Twenty pounds weight fhall be accounted the flone. Sect. 5. Every perfon dwelling within the faid diftance may make cables, and other tackle for their own ufe. This aft to endure to the next parliament. Continued indefinitely by 3 Car. I. cap. 4. 16. Car. I. cap. 4 .
Stat. 35 Eliz. cap. 8. fect. 3. If any perfon thall make cables of old or overworn ftuff, which flall contain above feven inches in compafs, every perfon fo offending fhall forfeit four times the value. And, if any perfon fhall tar any halfers, or other cordage, made within this realm, of fuch old and overworn ftuff, being of leffer affize, and not containing in compafs feven inches, and by retail put to fale the fame, being fo tarred, every perfon fo offending fhall forfeit the treble value, \&c.
Sect. 4. Every perfon which thall offend againt this act, fhall be imprifoned during her majefty's pleafure.
Stat. 6. Ann. cap. 29. fect. 13. Foreign cordage, or cableyarn imported, upon exportation thall have no allowance, or drawback of duties.

## Remarks.

As cables are one of the principal fafeguards to thipping, and the lives of mariners, too much care cannot be taken by all interefted in marine commerce, of this article in particular, and that the above ftatute of Elizabeth fhould be duly executed; having been well informed, that many rogueries are daily practifed in the bufinefs of rope-naking, which occafion great loffes to our merchants and infurers,

C A C
CACAO , or COCAO, the nut of which chocolate is made. That tree is of a middle-fized height and bignefs. It's wood is fpungy, or porous, and very light: it's bark pretty fmooth, and of a cinnamon colour, more or lefs deep, according to the age of the tree.
As the leaves fall but by degrees, and are continually fucceeded by others, the tree never looks bare: it blows at all times, but more plentifuily about the two folftices, than at any other feafon.
Its flowers, or bloffoms, which are very regular, and in the form of rofes, but very fmall, and without any fcent, grow in bunches, between the ftalks of the leaves and the wood, or rather from the places where the old leaves grew, the far of which,- if we may fo call it, is to be feen at the places from whence they fell. A great quantity of thefe bloffoms drop off; and of a thoufand there are hardly ten that fet; fo that the ground under the tree is all covered with thofe falle bloffoms.
Each bloffom hangs from the tree by a pedicle, or ftalk, about half an inch long; the fmaller the blofom is, with regard to the tree and the fruit, the more it appears fingular, and worthy of attention.
When the bud begins to open, one may diftinguifh the calix, the petals, or leaves, and the heart of the bloffoms.
This cacao-tree bears fruit almoft the whole year, which ripens fucceffively. It does not grow on the flender branches, as our fruit in Europe does, but along the body of the mo: ther-branches, which is no uncommon thing in thofe countries, where feveral trees have the fame property, fuch as the apricot-tree, the calabafh or gourd tree, the papayer, 8 cc . The cacao fruit is contained in a pod, or cod, which, from being at firf prodigioufly fmall, grows, in four months time, to the fize and form of a cucumber, pointed at one end, and whofe furface is furrowed like a melon.
The pod, in the firft month, is either red, or white, or mixed with red, or yellow : thefe varieties of colours make three forts of cacao trees, which have no other difference but that, which is not fufficient to eftablifh three different kinds of feccies of cacao-trees: and, therefore, Monfieur Tournefort, after the example of Father Plumier, acknowledges but one kind of them, though the Spanifh writers reckon four of them in Mexico, without any reafon.
Of the firlt we mentioned above, the pod is of a deep red, efpecially when it grows near the fea-coaft, but it becomes clearer and paler, as the fruit ripens.
The fecond, of which the pod is white, is in the beginning of fo clear a green, that it feems quite white; it becomes by degrees of a citron-colour, which, growing deeper from day to day, is at laft quite yellow, when the fruit is come to it's maturity.
The third keeps a medium between the two former; for, as it ripens, the green colour grows paler, and the yellow deeper.
The only diftinetion one can make between the cacao fruit, is, that it comes from three different places, namely, from Caracca, from Maragnan, and from the French iflands; the firft is the moft valued.
The white pods are flatter than the others, efpecially on the fide of the thalk by which they hang from the tree; and thofe cacao-trees are more plentiful bearers than the others. If you fplit one of thefe pods lengthways, you will find it to be about one third part of an inch thick; it is filled with cacao-nuts, the intervals of which, before the fruit is ripe, are replenifhed with a white and firm fubfance, which afterwards changes into a kind of mucilaginous matter, of very pleafant acid tafte: for which reafon, people often delight in putting one of thefe nuts, with the fubftance that furrounds it, into their mouth, which is an agreeable refrefhment, and quenches the thirft; but they take care not to bite it with their teeth, for, if they were to pierce the fkin, or peel off the nut, they would find it extremely bitter. When we examine attentively the inward conftruction of thofe pods, and anatomize, as it were, all its parts, it appears, that the fibres of the ftalk of the fruit, paffing through the pod, divide into five branches, each of which are fubdivided into feveral threads; and every thread terminates at the thick end of one of thofe nuts, making all together a kind of bunch, confifting commonly of $20,25,30$, or 35 nuts, placed the one agdinft the other within the pod, in a wonderful order.
The peel or fkin of fome of thofe nuts being taken off, you meet, with the fubftance of the nut, which appears tender and fmooth, inclining to purple or violet colour, and feemingly divided into feveral lobes, though in reality it has but two, but very irregular, and much entangled the one in the other.
Lafly, if the nut or kernel be cut into two equal parts lengthways, you meet at the extremity of the thick end, a fort of cylindrical grain, : part of an inch long by about $\frac{1}{3}=$ in diameter, which is the true germen, or leed of the plant. The Botanifts call it the plume.
The cacao-tree grows naturally in feveral countries within the torrid zone, but particularly in Mexico, in the provinces

## C A C

## C A C

of Guatimala and Nicaragua, as alfo along the banks of the river of the Amazons, on the coaft of Caracca, that is to fay, from Comoma, or Nova Corduba, to Carthagena, and in the Golden Illand.
The trade of cacao-nuts is carried on by a Spanifh company, fettled upon that coaft.
There come likewife large quantities of cacao-nuts from Maragnan, in the north part of Brazil, by the way of Lifbon, which commonly is worth but half the price of that of Caracca, being fmall and not fo ripe, which gives it a harih tafte: fo that, if chocolate were made of the cacao-nuts of Maragnarionly, it would be too rough and too dry: and, if it were made all of Caracea nuts, it would be too rich, and not keep fo well; but when it is made with one balf of the former, and the other half of the latter, it makes very good chocolate, which will keep well, and come cheaper.
There are alfo cacao-nuts from the ifles of Magdalen in the gulph of St. Lawrence in Canada, which come pretty near to the nuts of Caracca, as well as thofe of Cayenne, which furpafs thofe of the other illands, being plump and fullgrown, and fell almoft for the fame price.
The Spaniards and the Portugueze were the firft, whom the Americans made acquainted with cacao; they made ufe of it many years, without communication thereof to other nations, who had fo little knowledge of it in thofe days, that the Dutch privateers, being ignorant of the value of the prizes of cacao they took, ufed, out of fice, to throw all the nuts into the fea, calling them, by derifion, and in pretty bad Spaniif, cacura de carnera, fheep's treddles.
In the year 1649 , they knew in all the Antilles, but of one cacao-tree, which was planted out of curiofity in the garden of an Englithman, fetted in the illand of St. Croix. In 1655, the Caribbees, who are the farages of the leffer Antilles, fhewed to Monf. du Parquet feveral cacao-trees in the woods of the ifland of Martinico, of which he was the proprietor. This difcovery gave occafion to obferve feveral other trees of the fame kind, in the other woods of that illand ; and the cacao-walks, planted fince then in that inand owe very probably their origin, to the nuts taken from thofe woods. One Benjamin planted there the firft cacao-walk, about the year 1660: but it was not till 20 or 25 years after this, that the inhabitants of Martinico began to apply themrelves to the cultivation of cacao-trees, and to make walks or plantations of them; but we have related above, after what manner they have been fince deftroyed.
The cacao which comes from Caracca, is more unctuous or oily, and lefs bitter, than that of Maragnan;' to which it is preferred both in Spain and in France. But in Germany, and in the noth of Europe, people are of a quite different tafte. After all, the difference there is between the cacaonuts of feveral places is not very confiderable, fince it obliges only to put more or lefs fugar, to temper the greater or leffer bitternefs of that fruit. For it muft be obferved, as we have already hinted, that there is but one kind or fpecies of cacao. As for the external differences obfervable in the nuts, they annot proceed but from the greater or leffer fruitfulnefs of the foil, and the care that has been taken in the cultivation.
The cacao-nuts of Caracca are a little flat, and, by their fize and figure, refemble pretty much one of our large beans. Thofe of St. Domingo, of Jamaica, and of the inle of Cuba, are generally larger than thofe of the leffer Antilles.
The larger and plumper the cacao is, the lefs diminution there is in the roafting and grinding of it, which is a confideration in favour of the cacao of Caracca and Cayenne. Cacao, in order to be good, mult have a very brown and pretty even fkin or peel; and, when it is taken off, the nut or kernel muft appear full, plump, and fhining, of a hazle-nut colour, very dark on the outfide, a little more reddifh within, of a bitterifh and aftringent tafte, without any greenilh or mufty favour; which it acquires, either by being put in a moilt place, or by being wetted with falt-water, in croffing the fea; in fhort, it muft not have any fmell, nor be wormeaten.
Cacao is one of the moft oily fruits which nature produces; and has this wonderful advantage, that it never grows rank, how old foever-it be, as all other fruits do, which have any analogy with this, fuch as walnuts, almonds, kernels of pineapples, piftacho-nuts, olives, \&c.
The Indians, in their firf making of chocolate, took no great trouble about it; they ufed to roaft their cacao in earthen pots, and having afterwards cleared it of the hulks, and bruifed it between two ftones, they made it into lumps or cakes with their hands.
The Spaniards, more ingenious than there Indians, and after their example the other European nations, make choice of the beft and frefheft cacao: they pur about two pounds of it into a large iron-pan, over a clear fire, and ftir it continually with a large lpatula, till it be roafted enough to diveft the nuts eafily of their huiks. which muft be done one by one, putting them by themfilves, taking the utmoft care to throw away all thofe that are worm-eaten or multy, and all the hufks of the good ones; for thefe pellicles never diffolve in any liquor, nor even in the fomach, and fall to the bottom
of the chocolate cups, when the cacao has not been well cleaned.
If the cacao be weighed after it is roafted and ground, there will be found about $\frac{1}{s}$ part diminution, fomething more or lefs, according to the nature and quality of the fruit.
The eacao being thus roafted, and cleaned feveral times, is put again to roaft in the fame iron pan, but over a fire lefs fierce: the nuts muft be continually flirred with a fpatula, till they be equally roafted, and to a requifite degree ; which is known, by their favoury tafte and brown colour, without being black; it is a miftake to think they muf tafte of the burning, and be of a black colour.
The cacao being properly roafted and well cleaned, they pound it in a large mortar, to reduce it into a coarfe mafs ; which they after wards grind on a ftone, till it be of the utmoit finenefs.
When the pafte is fufficiently ground, they put it quite ho into tin moulds, wherein it congeals, and becomes folid in a very little time. The form of thofe moulds is arbitrary: the cylindrical ones, which can hold two or three pounds of chocolate, are the moft proper, becaule, the bigger the cakes are, the longer they will keep good, and are moft eafily managed, when one would fcrape them for ufe. Thefe cakes muft be carefully wrapped up in paper, and kept in a dry place. Obferve, that they are very liable to take any good or bad fcent, and that is proper to keep them five or fix months before they are ufed.
People were formerly very much prepoffeffed againf the effects of cacao-nuts; but the daily repeated experience of their good qualities has prevented them from being out of fathion from a groundlefs prejudice. And, indeed, cacao which is a bitter, alkaline, and very temperate fubftance, is a very fweet and benign food, incapable of doing any harm, eafy of digeftion, and very proper to fupply the exhaufted fpirits, and, indeed, to preferve the health of ancient people, and prolong their days. A proof of the truth of this commendation of cacao is, that the natives of New Spain, and of a great part of the Torrid Zone in America, always took a particular delight in this food, and that, even at this time, all the European colonies fettled in thofe parts, make a furprizing confumption of it. Thefe people take chocolate at all times of the day, and in all feafons, as a confant nutritious food, without diffinction of ages, conflitution, fexes, or conditions, no one ever complaining of the leaft inconveniency arifing from ir, efpecially if a fmall glafs of water be taken after it.
The ufes to which cacao is commonly put, may be reduced to three; it is made into a fweatmear, as the reader will fee prefently; alfo into chocolate, of which we thall fpeak under it's proper article; and there is an oil extracted from it, to which they alfo give the name of butter. That oil is as fweet as oil of almonds, and is made after the fame manner; it is an extraordinary remedy for the cure of burns and fcalds. Some of the Creolian ladies of America ufe it as a paint, to render the complexion frefh, and the fkin foft and fimooth.
There are fome places in America, where the cacao-nuts or grains are ufed as money, but only amongt the natives: they give twelve or fourteen grains for a Spanifh ryal.

## The trade of cacao at Amiterdam.

The cacao of the Caraccas is fold at Amfterdam for 8 ftivers and $\frac{1}{2}$ per pound, more or lefs; when it is in cafks, they allow fo much for tare : but, when it is in bales, the tare is according to the weight. From 100 to 229 pounds, the tare is reckoned two pounds; from 230 to 249 , three pounds; from 250 to any weight above that, four pounds. The ferons to 99 pounds weight, give 8 pounds tare per feron: thofe of 100 pounds and above, 10 per cent.
The cacao of Martinico is commonly in calks, which are tared by the weight; if it be in bags, the fame tare is allowed, as for that of the Caraccas.

## R E M A R K s.

The reader will not be difpleafed, I hope, to meet in this place with an account of cacao, as it is given us by Capt. W. Dampier, from his own knowlege and obfervations, as it will ferve to rectify fome miftakes in what has already been reprefented. 'The cacao-tree, fays he, grows no where in ' the north feas, but in the bay of Campeachy, on Coffa Rica, - between Porto Bello and Nicaragua, chiefly up Carpenter's - river, and on the coaft of Caraccas, as high as the ifle of - Trinidada. In the fouth feas it grows in the river of Guia-- quil, a little to the fouthward of the Line, and in the val-- ley of Collima, on the fouth fide of the continent of - Mexico. Befides thefe, I am confident there is no part 4 in the world where the cacao grows, except in Jamaica, - of which there are now but few remaining, of many and - large walks or plantations of them, found there by the - Englifh at their firft arrival, and fince planted by them; - and even thele, though there is a great deal of care and - pains beftowed on them, yet feldom come to any thing, c being generally blighted. The nuts of the coaft of Ca ' raccas, though !els than thofe of Cofta Rica, which are
$t$ large fat nuts, yet are better and tatter in my opinion, - being fo very oily, that we are forced to ufe water in rub* bing them up; and the Spaniards that live here, inttead of \% parching them to get off the fhell, before they pound or - rub them to make chocolate, do in a manner burn them to c dry up the oil ; for elfe, they fay, it would fill them too 6 much with blood, drinking chocolate as chey do, five or - fix times a day. My worthy friend Mr. Ringrofe commends 6 moft the Guiaquil nut, I prefume, becaufe he had little - knowledge of the reft, for, being intimately acquainted - with him, I know the courfe of his travels and experience.

* Bur I am perfuaded, had he known the reft fo well, as I
* pretend to have done, who have at feveral times beenlong
* uled to, and in a manner lived upon the feveral forts of

6 them above-mentioned, he would prefer the Caraccas nuts

- before any other; yet poffibly the drying up of thefe nuts
- fo much by the Spaniards here, as I faid, may leffen their
* efteem by thofe Europeans, that ufe their chocolate ready - rubbed up. So that we always chufe to make it up ourleves.
- The cacao-tree has a body about a foot and a half thick - (the largeft fort) and 7 or 8 feet high to che branches, which - are large and fpreading like an oak, with a pretty thick,
- fimooth, dark green leaf, fhaped like that of a plumb-tree,
s but larger. The nuts are inclofed in cods as big as both
- a man's fifts put together, at the broad end of which there
- is a fmall tough limber ftalk, by which they hang pendu-
- lous from the body of the tree, in all parts of it from top
* to bottom, fcattered at irregular diftances, and from the
- greater branches a little way up, efpecially at the joints of
* them, or partings, where they hang thickeft, but never on
* the fmaller boughs. There may be ordinarily about 20 or - 30 of thefe cods upon a well-bearing tree; and they have
- two crops of them in a year, one in December, but the
c beft in June. The cod itfelf, or fhell, is almoft half an
$\varepsilon$ inch thick; neither fpungy nor woody, but of a fubftance
- between both; brittle, yet harder than the rind of a lemon,
- like which it's furface is grained or knobbed, but more
- coarfe and unequal. The cods at firf are of a dark green;
- but the fide of them next the fun of a muddy red. As
- they grow ripe, the green turns to a fine bright yellow,
- and the muddy to a more lively beautiful red, very plea-

6 fant to the eye. They neither ripen nor are gathered at
" once: but for three weeks or a month, when the feafon is,

- the overfeers of the plantations go every day about to fee

6 which are turned yellow, cutting at once, it may be, not

- above one from a tree. The cods, thus gathered, they lay
c in feveral heaps to fweat, and then, burfing the fhell with
- their hands, they pull out the nuts, which are the only fub-
- fance they contain, having no ftalk or pith among them,

6and (except that thefe nuts lie in regular rows) are placed

* like the grains of maiz, but fticking together, and fo
- clofely ftowed, that, after they have been once feparated,
- it would be hard to place them again in fo narrow a com-
- pafs. There are generally near a hundred in a cod, in
c proportion to the greatnefs of which, for it varies, the nuts
6 are bigger or lefs.
c When taken out, they dry them in the fun upon matts 6 fpread on the ground ; after which they need no more care, - having a thin hard fkin of their own, and much oil, which - preferves them. Salt water will not hurt them; for we c had our bags rotten, lying in the bottom of our thip, and - yet the nuts were never the worfe.
- They raife young trees of nuts, fet with the great end down' wards, in fine black mould, and in the fame place where
- they are to bear, which they do in four or five years time,

6 without the trouble of tranfplanting. There are ordinarily
6 of thefe trees from 500 to 2000 , and upwards, in a plan-- tation, or cacao-walk, as they call them; and they fhelter
c the young trees from the weather with plantains, fet about
6 them for two or three years, deftroying all the plantains
6y fuch time the cacao-trees, are of a pretty good body, and

- able to endure the heat, which I take to 'be moft pernicious " to them of any thing: for, though thefe vallies lie open to 6 the north winds, unlefs a little fheltered here and there by
- fome groves of plantain trees, which are purpofely fet near
- the fhores of the feveral bays, yet, by all that I could either
- obferve or learn, the cacao's' in this country are never 6 blighted, as I have often known them to be in other places.
' Cacao-nuts are ufed as money in the bay of Campeachy.'
Dampier's voyages, vol. i. page 59-62.
The fame author, in hisDefeription of the bay of Campeachy, page iII, mentions another kind of cacao. 'I have feen, fays he, a fort of white cacao brought from hence (from Villa de (Mofa, in the above-mentioned bay) which I never met with
- any where elfe. It is of the fame bignefs and colour on the
- outfide, and with fuch a thin hulky coat as the other; but the
- inner fubtance is white, like fine flour ; and, when the out-
- ward coat is broken, it crumbles as a lump of flower does.
- Thofe that frequent the bay call it fpuma, and affirm that it

6 is much ufed by the Spaniards in thole parts, to make their chocolate froth. Eut I nevcr yet met with any in England
6 that knew it, except the right honourable the earl of Car-

- bury, who was pleafed to tell me he had feen of it

Father Labat (Nouveaux Voyages aux Ifics François del'Ame-
rique, tom vi. page 384 ) pretends to find fault with this ind aftertion of Dampier, and adds, that he fope with an iof nite number of perfons who traded to Mexico, and on the coafts of Guatimala, Carthagena, and Caraceas, who told him they never heard of that fort of white cacao. But Dampie docs not pretend that he found any of it on thofe coalts; $h$. afferts pofitively that he never faw it but in the bay of Cam peachy; fo that Father Labat's information might be true without affecting in the leaf Dampier's veracity, as to this particular.
Cacao Preferved, or fweet-meats of cacao. They are made in the Antilles, are excellent, and far excel all the fweetmeats made in Europe.
The cacao, which one would preferve, mult be gathered fome time before it be quite ripe; the maturity of this fruit is known by it's pods begimiug to turn yellow ; they muft be chofen, therefore; fome days before they begin to take that colour.
The nuts, which are then delicate and tender, are put to foak in freh clear water, which mufi be changed every morning and every night during five or fix days; after which they ard them with very thin bits of lemon-peel and cinnamon; then they make a fyrup of the fineft fugar, but very thin, wherein they put the nuts: after it is taken from the fire, and fufficiently clarified, they leave them in that fyrup 24 hours. When they are taken out of it, and well dried, they make another fyrup, but thicker, is which they leave them again a whole day. Laftly, afcer they have paffed them thus through five or fix fyrups, they make another, of a greater confitency than the former, wherein they pur mulk, amber, or other perfumes, as people like them; and in this laft fyrap the nuts are kept for ufe.
When they would have them dry, they take them out of the laft fyrup; and, having drained them well, they plunge them into another fyrup very ftrong of fugar, and well clarified, and put them immediately into a flove, where they are candied: F. Labat, from whom this account is taken, obferves, that this fort of fweet-meats requires a great deal of care, and confumes a prodigious quantity offugar: he adds, that the confectioners of the French inands feldom make any, and cannot undertake it, or make it as it thould be, under a crown the pound. Labat Nouveaux Voyages aux lifes de l'Amerique, tom, i. page $185,8 \mathrm{c}$. See alfo Hiftoire naturelle du Cacao, page 94.
Cacao-Walk, or Plantation, is a place where cacao-trees are planted and cultivated. It is a kind of orchard of thofe trees, planted in rows by a line.

## The culture of cacdo in the French inands in America.

The foil proper for making a cacao-walk muft be frefh land, that is to fay, fuch as has not yet ferved for any other crop; the tree which bears the cacao-nut being fo tender, that it wants the whole fap and nourifhment of a newly cultivated ground: for experience has fhewed, that, when the nut is planted in land that is not quite frefh, though it has refted fome years, it does not yield any thing comparable to what it will when the foil is otherwife, nor does the tree live long, and never produces good fruit, nor is ever a plentiful bearer. The ground defigned for this tree mult be very deep, becaule, from what is obferved of the other trees in thefe iflands; it fhoots a great many roots, which grow inceffantly deep into the ground, though, at the fame time, the tree goows upwards, and produces bloffoms and fruit. However, nothing is noxious to it except rocks and ftones, for it will grow pretty well in a fandy, and even in a clayey ground; if it does not meet with it about 7 or 8 feet below the good mould. Another precaution to be obferved is, to plant a cacao-walk in a cool and low foil, near a river, or watered by fome rivulets, or brooks, taking care, above all, that it be not too much expofed to the open air, to the heat of the fun, nor to the wind.
The extent of fuch a plantation fhould be of 200 paces iquares; according to the mealure of thofe inlands, or thereabout; and; if the ground defigned for thofe trees be larger, it is better to divide it into feveral fquares of that extent, and cover them with good frong hedges, than leave it expofed to the above-mentioned inconveniences, if the fquare were too large and too open.
The cacao-walk muft be furrounded with large trees; or at leaft covered by them, on thofe fides from which the fettled winds blow. But yet, as frequent accidents may happen by thofe trees being blown down in high forms, fome choofe to make thofe fences with two or three rows of orange trees, or immortal-wood, which, being pliant, are more proper to refift high winds, or whofe fall, at mof, cannot much injure the cacao-trees which fland near them.
Thofe fences thould alfo be covered with fome rows of bonano's and plantain trees.
The foil being thus, as we have defcribed, mult be dug, or plowed, as deep as poffible, becaufe land that is equally plowed is capable of recenving the rain more uniformly; and alfo, becaufe, being well levelled afterwards, the feveral particulars requifite may be the more eafly made, according to the plan of the plantation.
$\qquad$ To

## CA C

To mak out the divifions, they ufe a line as long as the whole fpace that is to be planted out, with knots at every eighth foot; at each divifion they plant a ftalk, or flick, three or four feet long. Thus having gone along the whole line, they oplant, at eight feet diffance from the place where it firft lay, and go on thus, from eight to eight feet, 'till the whole ground be divided, which form thus a perfect chequer: fo that a fpace of 100 fathoms, or 200 paces fquare, may contain 5685 trees.
Some place the trees at fix feer, or cven but five feet diftance, from each other; but it is certain that their being too clofe hinders their growth, and prevents their producing large fruit, the trees robbing, as it were, one another of part of the fap and nourilhment they want; befides that, they want room to extend their roots, without intangling with each other.
This diflance of eight feet is regulated only with regard to the foil of the leffer Antilles, for, in the large illands, and on the main land, where the foil is deeper and fatter, the diftance between the trees mult be 10 or 12 feet, that the trees, which are commonly larger and thicker, may have all the extent they require.
On the Caraccas coaft they plant the cacao-trees at 12, and even 15 feet, diftance from each other, and they contrive trenches to water them in great droughts; they made once a lucky experiment of this in Martinico.
The walks, or alleys, in the plantation, muft be as ftraight as poffible, not only as that is moft pleafant to the eye, but becaufe one may more eafily obferve the flaves at their work, and gather the fruit, when ripe.
The nuts muft be planted in the laft quarter of the moon, and in rainy weather, or, at leaft, when it is cloudy, and feems inclined to rain. They take the cacao-pods, when ripe, open them, take the nuts out as they want them, and plant them immediately one by one, for fear they fhould dry, which would prevent their fhooting.
All the cacao-trees are raifed by planting the nuts, for it will not grow from cuttings. Care muft be taken to plant none but large nuts; for, fince in the fineft pods there are nuts that mifcarry, it would be imprudent to plant them. You thould, allo, place the thick end of the nut lowermoft; for, if you planted it uppermoit, the tree would grow up crooked: but, though you fhould put the nut flat, the tree would, neverthelefs, come up pretty weil.
They generally put in three nuts round each ftalk, or ftick, three inches afunder, and three or four inches deep; which is eafily done when the ground has been newly plowed, or dug: otherwife, they ufe a dibble, with which they flightly ftir the ground where they would plant the nuts. They plant three nuts round each fick, with no other view but in order to fill up the vacancies, where any happen to milcarry: fo that, if they have all took, when they are about 18 inches or two feet long, they leave only the faireft near each ftick, and take up the two others, to plant where any are wanting, or to form another plantation.
You may make nurferies of cacao-trees, but the trees taken out of them feldom fucceed well, becaufe they, being very tender, cannot be eafily tranfplanted without hurting the roots, which hinders them from growing kindly: wherefore moft of the cacao-trees are firf planted from nuts; and the moft curious, moft experienced, and moft underftanding inhabitants of the iflands, choofe rather to put new nuts in the room of thofe that did not come up, than fupply their defect with plants from a nurfery.
The forching heat of the fun being very noxious to the new$\mathrm{l} y$-raifed cacao-plants, becaufe of their great tendernefs, they never fail planting two or three rows of caffavy, in the middle of the alleys, at the fame time they plaut the nuts; and, 'till the caffavy be large enough to fmother the weeds, which grow naturally in frefh ground, care muft be taken to weed it continually, for nothing is more detrimental to thofe growing plants than thofe weeds, which deprive them of the greateft part of their nourifhment.
After the firft crop of caffavy is taken up, which is at the end of fifteen months, others muft be planted again, but in lefs quantity; that is to fay, but one row in the middle of each alley, adding, however, on both' fides, water melons, common melons; cucumbers, pumkins, potatoes, E* . becaufe thefe plants, having broad leaves, cover the earth, and prevent the growth of weeds. Some plant the caflavy a month before they put the nuts into the ground, which has a pretty good effec, becaule it is the fooner in a condition to ikreen the cacao from the heat of the fun, and to fmother the weeds.
When the cacao-trees are fo far grown as to overfhade the ground, every thing mult be taken up, for nothing will thrive under them
The cacao-nuts are commonly feven, eight, or io days before they appear above ground, according as the weather, more or lefs favourable to them, advances or retards their growth: 15 or 20 days after the plants have begun to bhoot above ground, they are five or fix inches high, and have four or fix leaves, which always grow by pairs. The tree, when 10 or 12 months old, is near two foot high, and has 12 or 14 , or even to 16 , leaves. When it is between 20 and 24

## C A C

months, it arrives to the height of three feet and a half, and; fometimes, to four feet, when the bud, which 'till then always appeared in the center of the two laft leaves, opens, and divides itfelf into five branches, but feldom into fix, and almoft never into feven.
The cylindrical grain of the germen fwelling pufhes downwards the radicle, which becomes afterwards the prop of the tree, and on top the plume is a diminutive of trunk and branches.
When the tree is come to that height, the leaves do no longer grow upon the trunk, butappear on the chief branches, which, as they advance in length and thicknefs; produce other fmaller branches, while, at the fame time, the trunk grows proportionably higher and thicker.
'The cocao-tree, when two years and a half old, begins to blow. It is proper to take off it's frift bloffoms, that the tree may gather frength. At three years and a half they leave a few, becaufe then it bears alseady very fine fruit; when it is four years old, they do no longer pull off any blofioms, becaufe it is then ftrong enough to bear fruit, without prejudicing it's growth. Lafly, when it is fix years old, it is properly in it's vigour.
From the falling of the bloffoms 'till the fruit be perfectly ripe, is about four months. It's ripenefs may be known when the part between the ribs that divide the pods begins to change colour, and become yellow; in which ffate it is fit to be gathered. The whole pod muft have changed colour, the little bud, or knobs, at the bottom, only remaining green. In order to gather the fruit, they difpofe the negrues defigned for this work in fuch a manner that there be one affigned to each row of trees: every negroe has a balket, and, according to the row affigned to him, gathers fuch fruir as is ripe, without meddling with that which wants ftill tome time to ripen, not touching the blofloms.
They ufe no iron infruments for that purpofe, nor do they thake the tree; they only break the ftalk by which the fruit hangs, either twifting it a little with a wooden fork, or pulling it off. As foon as the negroes have filled their bafkets, they carry them to the end of the walk, where they put all the fruit they have gathered in heaps.
When all is thus gathered and heaped, they take the nuts out of the pods, which they firft cut length-ways with a knife, and, bruifing them afterwards with a ftone, or piece of hard wood; and, when the nuts are thus coarfely divefted of the pulp, or mucilaginous fubftance that farrounds them, they houle them.
It is not neceffary to empty the pods, as foon as they are gathered; they may be left in a heap two or three days, without danger of fpoiling: but, if the nuts were to remain in the pods above four days, they would firout, and be fpoiled : wherefore it is neceffary to take them out of the pods, for the lateft, on the morning of the fifth day.
As foon as the nuts are houfed, they put them into large wooden veffels, or troughs, or into a fquare place, made with boards, where they cover them with leaves, and put boards and ftones over them, to keep them clofe and well preffed.
Thus they leave them four or five days, taking care, however, to turn them every morning. In that condition they ferment, and, lofing the whitifh colour they had coming out - of the pods, they become of a dark' red.

It is pretended, that, without this fermentation, they would not keep, but grow mouldy, and would even fprout, if they were put in a damp place : but, as for this laft accident, it is very little to be feared, for, if one fhould but ever fo little delay putting the nuts into the ground, it is certain that they would never fprout.
All that this fermentation produces is, that it divefts the nuts of a fuperfluous humidity they are imbibed with, fo that there remains nothing in them but an oil that preferves them, wherein their goodnefs chiefly confifts.
After the nuts are taken from the place where they have fermented, they are fpread on burdles, or in fhallow boxes, with holes in the bottom, and expofed to the fun to dry, taking care to turn and ftir them now and then, and to put them under fhelter in the night-time, or in rainy or damp weather, water and dampnefs being very prejudicial to them.
Three days of fun-fhine and wind are fufficient to dry them thoroughly; after which they are put into calks, or bags, or in a garret, or granary, 'till there be an occafion to difpore of them.
Cacao-nuts may be kept as long as one pleafes, without dan. ger of fpoiling, provided they be put in a dry place, and expofed to the fun two or three times a year; it is true, indeed, that, as they grow old, they lofe of their oleaginous quality, and, when they are too dry, they have no longer the fame virtue and flavour which they had before.
They who would gain the reputation of felling the beft kind of this commodity, take care, before tney put the nuts into cafks, to feparate by themfelves all fuch as are too frall, ill fed, or flat, which are only lefs pleafant to the eye, and do not yield quite fo much chocolate.
After that manner the cacao-nuts dried in the fun are brought to us into Europe, and fold by the druggifts, who difinguilh
them, without any reafon, into large and fmall Caraceas-nuts, and into large and fmall cacao-nuts of the illands, for in thofe places they know nothing of fuch a diftinction; and it is probable, that the tradefmen who deal in them found their account in culling them out in that manner, for naturally the cacao-nuts coming from the fame tree, and out of the fame nut, are never all of the fame fize.
The pods contain 25 nuts each, and 400 nuts dried make a pound weight, which muit be underitood of the cacao-nuts of the leffer Antilles iflands, thofe of St. Domingo being larger. Sixteen pods produce one pound of dried nuts, and eight only will give a pound of green nuts, which is a confiderable diminution.
The inhabitants reckon their crop but at the rate of a pound, or a pound and a half, per tree, of the gathering made at Chriftmas, and of a pound only at Midfummer, when their trees are from five to eight years old; but, after that period, they may hope for larger crops, efpecially at Chriftmas, when the crop is always better than at Midfummer, becaufe of the rainy feafon which prevails about Chriftmas, and is more favourable to the cacao-trees than dry weather.
It muft be obferved, that, in order to keep thofe trees in a good condition, there are two works to be performed every year, without which they will hardly continue long: the firt is, to earth them up, in order to prevent their young and flender roots from taking the air, and being dried up; the fecond is, to prune the ends of the branches, to make them thoot new ones. The neglect of thefe two precautions has been the occafion that many of the fineft cacao-walks, or plantations, have decayed and perifhed by degrees.
The produce of a cacao-walk is very confiderable, and the expence but fmall: 20 negroes are fufficient to manage a plantation of 50,000 cacan-trees, which may produce, one year with another, 100,000 pounds weight of nuts ; there, at about $4 \mathrm{~d} . \frac{1}{2}$ per pound, the loweft price they are generally ever fold for in America, would produce 1,8751 . fterling.
This whole article has been revifed, and had additions made to it, from the Natural Hiftory of Cacao and Sugar, written in French by a judicious traveller, who had lived 15 years in the American iflands, and who affiduoufly obferved all that he afferts. His book was printed at Paris in the year 1719 ; and the authors of the Journal des Sçavans, for the year 1720, have fpoke of it with great applaufe, as of the moft accurate work on thofe fubjects: Father Labat's account of them is not fo much to be relied on.

## Remarks.

Chocolate, which is made of the cacao-nut, being a commodity of general confumption, every, meafure fhould be tried to cultivate the cacao in the Britih colonies, that we may have no occafion to take any from other nations; which is the chief reafon for my dwelling fo long upon this article.
CAFFILA, a company of merchants, or travellers, or rather a company compoled of both, who join together, in order to go with more fecurity through the dominions of the Grand Mogul, and through other countries on the continent of the Ealt-Indies.
There are, alfo, fuch caffilas, which crofs fome parts of the deferts of Africa, and particularly what is called the Sea of Sand, which lies between the kingdom of Morocco and thofe of Tombut and Gago. This is a journey of 400 leagues, and takes up two months in going, and as many in coming back, the caffila travelling only by night, becaufe of the exceflive heat of that country. The chief merchandize they bring back confifts in gold dult, which they call atibar, and the Europeans tibir.
The caffila is properly what is called a caravan in the dominions of the Grand Signior, in thofe of the king of Perfia, and in other parts of the Eaft. See Caravan.
There is Come difference between a caffila and a caravan, at leaft in Perfia. The caffila belongs properly to fome fovereign, or lord, or to fome powerful company of Europe,' by which effects, or merchandizes, are carried from one place to another, by means of camels, horfes, mules, or affes, which go together in a file, or one after another. It is always led by an officer, who is at the head (as in caravans) under whom are the cameliers, muletiers, \&c. with fome foldiers, all well armed, who efcort the caffila as a treafure, the whole belonging to one mafter. Whereas a caravan is a company of particular merchants, who have each a cerrain number of beafts of burden for their own accoune, and march all together, under the conduct of a chief, whom they are to reward in common. So that all caffilas may be called caravans, but all caravans cannot with propriety be called caffilas.
At Gombron, otherwife called Bander-Abafi, a town and harbour on the Perfian gulph, the Englifh and the Dutch have each of them their caffla, which is larger or fmaller, according as they have occafion. Thefe travel to Ilpahan, and back again, which is a journey of about 170 leagues. It is by their caffilas thefe companies fend mercbandizes from
the Eaft-Indies to the capital of Perfia, where they have ware-houfes, each under a chief: and from thence every caffila brings back, at different times, merchandizes from Perfia, for the Indies, whither they are carried in thips, which crofs all thofe feas.
Caffila fignifies, alfo; in the feveral ports which the Portugueze ftill hold on the coaft of the kingdom of Guzerat, or Cambaya, a finall fleet of merchant fhips, which fail from thofe ports to Surat, or come back from thence, under the convoy of a man of war, which the king of Portugal keeps there for that purpofe,
CAFRERIA, or the country of the Cafres, in the fouthern parts of Africa. It begins at Cape Negroe, about the 15 th degree and 30 minutes fouth latitude; extends from thence fouth-eafterly to the Cape of Good Hope; thence notth eaft to the river Del Spiritu Sancto, about the 25 th degrec of fouth latitude, which river feparates it on the north-eaft from Monomotapa; on the north it reaches almolt to the equator, where it borders on the kingdom of Makoko, or Anziko, and on the north-weft it has Congo, or Lower Guinea, with the kingdom of Benguela. Monfieur Martiniere obferves, that Cafreria is not properly the name of any particular country, and that there is no nation called Cafres, that being, as Ludolf tells us, an opprobrious appellation, given by the Arabs to all thofe who do not profefs the Mahometan religion ; it comes from the Arabic word Cafir, which fignifies an infidel, or unbeliever. The Portugueze, taking the name in a more general fenfe, have called Cafres all thofe nations of Africa who bave, or feem to have, no knowlege of a Deity. Some include the empire of Monomotapa within the country called Cafreria: but the inhabitants of that empire, being much lefs barbarous than the Cafres, and that country being very confiderable, it will be proper to defcribe the trade thereof by ittelf. From the boundaries of Cafreria, as given above, it appears to be a very large country, extending from Cape Negro to that of Good Hope, near 20 degrees, or 1200 Englifh miles, from north to fouth; from the Cape of Good Hope north-eaft to the mouth of the river Del Spiritu Sancto, about 850 miles; and from the fame cape, almoft to the equinectial line, about 29 degrees, or 1740 miles. It's greatelt breadth, from Cape St . Tome to the mouth of the above-mentioned river, is about 900 miles; but, from the tropic of Capricorn, up to the equinoctial line, it's breadth is not much above 600 miles.
Cafteria may be divided into the kingdom of Mataman, the country of Hottentots, Terra de Natal, and Terra dos Fumos. Mataman is bounded by the kingdom of Benguela on the north ; by the river Bravahul on the eaft and fouth; and by the Ethiopic ocean on the weft. It extends from Cape Negro, in fouth latitude 16. 30. to the mouth of the river Bravahul, beyond the tropic of Capricorn, in fouth latitude 24. fo that it's greateft length, from north to fouth, is about $45^{\circ}$ Englifh miles; but it's greateft breadth, from weft to ealf, is not above 260 miles.
About 200 miles to the weft of Cape Negro the climate is pretty temperate; and, though the coaft be very fandy, yet the country is pretty fruitful, and produces a great variety of provifions. The lands are extremely fandy all along the fea-coaft, and the harbours bad, and little frequented. Here are no towns nor cities bordering upon the fea, but only poor fcattering villages.
The country of the Hottentots is bounded on the northweft by part of the river Bravahul; on the north it extends to the tropic of Capricorn; on the north-eaft the river of the Holy Ghoft parts it from the empire of Monomotapa; on the eaft and fouth it has the eaftern ocean; and, on the weft, the Ethiopic ocean.
The Cape of Good Hope, which is the mont famous place for any traffic among the Hottentots, was firft difcovered in the year 1493, by Bartholomew Dias, a Portugueze admiral, in the reign of John II. king of Portugal. The admiral gave it the name of Cabo dos totos los tormentos, i. e. the Cape of Great Sorrows, from the boifferous winds that are almoft continually roaring there. But the king changed that name into Cabo del buonne Efperanza, i. e. the Cape of Good Hope, becaufe, faid he, there was now good hope of making profperous voyages to the Eaft-Indies: and by that-name it has been known in Europe ever fince.
This cape lies in latitude 34.15 , fouth (according to the Prefent State of the Cape of Good Hope, given us by Mr. Koiben, who refided there feveral years, and which was tranflated from the High German into Englifh, and printed in London in 173 II .) After feveral obfervations of ecliples, the fame gentleman found that the longitude of the Cape was 37.55 from the meridian of the Pike of Teneriff, eaft. But, from the authorities of fome later obfervations, which feem to be more accurate, the Cape is laid down in longitude 20. 10. eaft of London.

Though this famous cape was firft difcovered by Dias the Portugueze, yet he only went fo near it as to obferve it's fituation, bays, and anchorings; but the Portugueze never made any fettlement there: nor did the Dutch, who firf vifited it in the year 1000 , immediately difcern all the advanazges arifing from this fituation: wherefore, they only touched thers for many years, in their voyages to and from the Eatt-Indies,
to traffic for provifions. For which purpofe they went, from time to time, in bodies up into the country, and having thrown ip a fmall fort near the harbour, they there fecured themfelves and their purchafers of merchandizes in the night-time; 'till they had fhipped them.
The Dutch made another ufe of the Cape, while things were carried on only in this way, which was a notable contrivance. Every commander going out was provided with a fquare ftone, upon which, at his departure from the Cape, he caufed his own name, that of his thip, and the names of his principal officers, to be fairly cut, together with the day he arrived there, and the day he departed. The ftone with fuch infriptions was buried in a certain place without the fort, and under it was put a tin box, fealed up, containing letters from the captain, and others, to the directors of the Dutch EaftIndia company, together with fuch other letters as any perfons on board thought fir to fend into Europe. This fone and box were taken up the next thip that paffed by the Cape, in her return, and by her conveyed to Holland. And whoever confiders the fituation of the Cape (as a fort of half-way houfe in the taft-India voyage) and the fatisfaction the company, by this means, received, from time to time, concerning the fortune and condition of their fhips; will acknowlege this a very ufeful contrivance.
After this manner the Dutch ufed the Cape 'till the year 1650, when, their fleet anchoring before it for the utual purpole, Mr Van Riebeck, a furgeon belonging to it, had the penetration to difcern the Itill greater advantages which the company might reap from the Cape, by means of a very little cultivation. He oblerved that the country was plentifully focked with cattle; hat the foil was rich, and capable of generous productions; hat the natives were trachable, and the harbour commodious and improveable; and, upon the whole, made a good judgment to what a degree the Dutch trade might be fecured and facilitated by means of this fituation: in a word, he faw that it was highly advifeable for the Dutch to make a fettement
 arnto Holland, helaid them betorethe directors of the Eat India company, who were fo well fatisfied therewith, that immediately after, on a grand confultation on the fame, they came to a refolution to attempt a fettlement at the Cape, with out lofs of time. Upon which, four fhips were immediately rdered for the Cape, with all the materials, inftruments ar tificers, and other hands neceffary in fuch an expedition. Van Riebeck the furgeon was appointed admiral, with a commith ion, on his arrival, to act as governot and commander in chief of the intended fettlement, and with power to treat, manage, and act for the introduction and eftablifhment of the Dutch, in fuch a manner as he thould think fit. Vankiebeck arriving fafely with thofe four thips at the Cape, the natives were fo captivated with the prefents he brought them of brafs, toys, beads, tobacco, brandy, \&c. and fo charmed with his addrefs, that a treaty was no fooner fet a-foot than concluded; wherein it was agreed, that in conideration of fuch quantity of certain toys and commodities to be deliver do the natives, as might coft 50,000 guilders, the Dutch fhould have full liberty to fettle there. This was immediately performed, and the Dutch thereupon took peffeffion of the Cape, which, with a great deal of ceremony, was deliver'd up to them. The traffic of the Dutch with the natives was alio, by the fame treaty, eftablifhed on a good and folid foundation, with many confiderable privileges and regulations for their commercial interefts
In confequence of thefe meafures, the governor raifed a fort, wherein he built dwelling houfes, warehoufes, and an hofpital, for the reception of the fick. To this fort he added proper outworks, to fecure bimfelf from any attacks from the Europeans. But, in procefs of time, fettlers flowing abundantly to the Cape, and trade greatly increafing, the then governor, whofe name was Bax, tonk notice that the company's ftorehoules, which were without the fort, would be quickly too fmall to receive all the company's merchandize at the Cape : he judged, likewife, that there was a neceffity for augmenting the garrifon, fince all the trading nations in Europe faw, and began to envy the Dutch, the advantages they made of the Cape, and that, therefore, it might be juftly apprehended, that one or other of thofe nations would attempt to wreft it from them. Thefe things he reprefented to the court of directors, and propofed to them the ereaing of a new fort, in 2 more advantageous fituation; which was accordingly done, and has been from time to time, fo augmented, that it is at this day a very ftrong and ftately building, and provided with all manner of accommodations for a garrifon. It covers the harbour roundly, and is of admirable defence towards the country ; and the company's ftorehoufes for merchandizes here are very large and commodious. The fettlement being firmly eftablifhed, they increafed and multiplied in people to fuch a degree, that in few years, being ftill joined by new fettlers from Europe, they began to extend themfelves into new colonies along the coaft. They are, at prefent, divided into four principal ones: the firf is at the Cape, where are the grand forts, and the capital city the fetond is the Hallenbogefh; the third the Drakenfton; and
the fourth the Waverifi colony. The Dutch Eaft India come pany has likewife bought, for the future nocreare of the people, al! that tract of land called J enra to Natal, lying between Mofambique and the Cape; for which they paid in toys, cont modities, and utenfils to the value of 30,0 or gui ders: fo that the province is now become of grat extent, and the government of it a confiderable port.
The government of the Dutch colony at the Cape, ftands at pretent; upon the eight following effablithenten; namely, a grand council; a coutt of juftice; a petty court of affiaults, ace. a court of marriages; a chamber of orphans; an ecclefiaf tical council ; a common council ; and a board of militia ; by means of all which, this colony is well regulated and governed. In the neighbourhoud of the Cape are three remarkable hills: the Table-Hill is the higheft of the three. On the tops are feveral fine fprings, the water as clear as cryftal, and of a very delicate tafte. Though at a diftance you difcover on this hill no tokens of fertility, yet, when you afcend it, you are charmed with it's fruitfulnefs: the ftately trees with which it is adorned are hardly to be difcover'd 'till you are juft upon them. On this hill are two groves, between which a filver mine was difcover'd fome years ago. Some ore dug out of it was fent to Hol'and; but, it not yielding, it feemis, fuch a quantity of pure fiver as to induce che company to think that the produce of the mine would anfwer the charge of working it, the mine was clofed up and neglected*. The beauty,
*This mine may probably be wrought to ond pooft fome
yearshence. See the articles Mines and Minfrals.
the variety, the fragrancy of the fiowers, that grow in great plenty, and delicately adorn the tops and itd.s of this hill, are not to be exprefled, fays Mr Kolben; they are more delightful to the eye, and more odoriferous, than any he ever met with in Europe.
The other is called Lyon Hill, which is feparated from the former by a valley, wherenn fands a hut, for the fheiter of two men, pofted there by the government, to give notice to the fortrefs at the Cape of the appearance of any fhip making ini, of which they give fignals to the fort.
The laft of thefe is the Wind-Hill, which abounds with excellent pafture.
Part of the Hottentots have fubmitted themfelves to the Hollanders, and are, therefore, filled the companv's Hottentots. The Dutch fend annually about 50 or 60 perfons to trade with thefe Hottentots, who purchafe their catcte, and give them, in exchange, arrack, tobacco, hemp, and fuch leeds as they have occafion for, by which means a good underflancing is preferved.
The Cafres here traffic with the rovers of the Red-Sea, who bring them manufactures of filk for elephant's teeth; wh rein they greatly abound. Thefe manufactures the Cafres exchange, as hips from Europe touch at the land de Natal, for European commodities, often for tar, anchors, and cordage, which they exchange again with the rovers of the RedSea. The filk, which they do not put off to the Europeans, they difpofe of to the people of Monomotapa.
Terra Dos Fumos is but a very fmall country, which has, the riverDellagoa on the fouth, that parts it from the country of Natal; it has the country of the Naonetas on the weft; the land of Zanguena on the north; and the Eaftern Ocean on the.weft. It fands along the fea-coait, from the mouth of the river Dellagoa to that of Rio de Ladroon, or the river of the robbers.
The moft remarkable places here are Cape Pedras, in latitude 29, beyond which there is a creek, called Potto de Perqueria, or the Fiibing Place. The Europeans have no fertlements for trade here ; and the Cafres whe inhabit this country have neither towns nor villages, nor any fettled dwelling. The inland countries of the Cafres are fo little known, and fo trifingly, therefore, is trade cultivated with them, that it is not to our purpofe to dwell longer upon them than merely to mention them.
To the north of thecountry of the Hottentots is the land of the Mozembo Aculungas which has the kingdom of Mataman on the weft; the Hottentot country on the fouth; Monomotapa on the eaft; and the province of Ohila on the north. Next to this northwards lies the province of Ohila. Further north is the kingdom of Abutua, which is faid to be rich in gold mines.
Dapper fays that this province, which be calls Toraca, or Toroa, and others Butua, begins to the fouth of the mountains of the moon, and extends northwards to the river Magnica, having the river Bravahul on the welt. The town of Fatucoa abounds with gold, filver, and precious flones; and there are two gold mines here at Boro and Quitici, 2 : leagues diftant from Sofale. They are efteemed the richeft in the whole country.
Going higher up to the north-eaf, we find the kingdum of Chicova, abounding, travellers fay, with filver mines.
In regard to thefe, and feveral other barbarous nations, it may be obferved that their gold and filver and precious ftones, \&c. have no tendency, like arts and commerce, to civilize them, and give them any tafte for the ration 1 enjoyments of life. See Remarks on Barbary.

CAHYS,

## C A L

C A L
CAHYS, or CHAYZ, a dry meafure for corn, uled in fome parts of Spain, particularly at Seville and at Cadiz. Four cahys's make a fanega, and 50 fanega's a laft of Amiterdam. Four ancgra's make a cahys which amount to a buhe!.
Cajou. See Acajou.
CALAMANCO, a woollen ftuff manufactured in Brabant, in Flanders, particularly atAntwerp, Lifle, Tournay, Turcoin, Roubdix, and Lannoy. There are alfo, a great many made in England. In France they are of different breadths; fome of $\frac{-7}{7}$, others of $\frac{2}{3}$, of $\frac{7}{12}$, of $\frac{5}{8}$, or of $\frac{5}{1}$, of an ell, all Paris meafure. As for the length of the pieces, there is nothing fettled, the weavers making them longer or fhorter, according as they pleafe, or as they are commifioned by the merchants. This ftuff has a fine glofs upon it, and is checquered in the warp, whence the checks appear only on the right fide. It is commonly wove wholly of wool; there are fome, however, wherein the warp is mixed with filk, and others with goat's hair. There are calamancoes of all colours, and diverfly wrought; fome are quite plain ; others have broad ftripes, adorned with flowers; fome with plain broad ftripes; fome with narrow fripes; and other swatered. This, allo, is no inconfiderable branch of the woollen manufacture of England, both for home wear and freign exportation. See Woollen Manufacture. CALAMINE, or CALAMINARY STONE (Lapis Calaminaris) fometimes alfo called CAD M I A, and erronecufly CALAMITE, is a mineral, or foffil earth, of fome ufe in medicine, but commonly employed by founders to dye copper yellow, that is to fay, to turn it into brafs. See Brass.
There are two forts of calamine, the grey and the red: the former is found in England, Germany, and the principality of Liege, in lead or copper mines. The red calamine is interfperfed with white veins, and is found near Bourges in Berry, and near Saumur in Anjou, where there are quarries quite full of that ftone. Befides thefe two forts of natural calamine, there are allo factitious ones, the beft of which is called Pompholyx; fee that article.
Calamine, either grey or red, does not become yellow but when it is baked like bricks; and it is only after it has been thus baked that it is proper to turn copper yellow, and increafe it's weight, that is to fay, to turn it into brafs.

## Remarks.

That excellent metallurgilt, Dr. Ifaac Lawfon, was the firt who difcovered that the lapis calaminaris is really the ore of zink ; they both having the remarkable property of converting copper into brafs: yet they have been treated as different fubftances by the writers on thefe fubjects. Zink, alfo, is generally confounded with bifmuth, though in reality a different body; but, the reguline matter of both thefe minerals having a very great external refemblance, the vulgar have not diftinguifhed them; whence we hear of many ores of zink, which only mean ores of bifmuth.
Lapis calaminaris, the general ore of zink, is a fpungy fubftance, of a lax and cavernous texture, yet confiderably heavy.' It is of no determinate thape or fize, but is found in mafles of very various and irregular figures, with rugged, uneven, and protuberant furfaces. It is of a pale brownilh-grey, but it is lax, and of a fpungy texture, and is often found yellow, or reddifh.
Though this fubftance is the genuine ore of zink, yet that mineral is not confined to this alone, but is frequently mixed among the matter of the ores of other metals, particularly that of lead; which is the cafe, as I have often feen, in Flinthire in North Wales:
Our artificers have Jong been acquainted with zink, under the name of fpelter; but no one has been able, 'till of late, to make any conjeckure at what was it's origin; and fome accurate metallurgifts have acknowledged, that they have every where fearched after the ore of zink in vain, particularly in England. We have much brought, alfo, from the Eaft Indies, under the name of tutenage, yet nobody ever knew from what, or how it was produced there; but the learned doctor before-mentioned, obferving that the flowers of lapis calaminaris were the very fame with thofe of zink', and that it's ef fects on copper were alfo the fame with thofe of that metal, never ceafed his endeavours 'rill be found the method of feparating pure zink from that ore.
Lapis calaminaris, as obferved above, is ufed in medicine; externally in cerates for burns, and in collyriums for the eyes: it's reguline matter ferves much better for the purpofe of curning copper into brafs, than the crude ore, and is ufed with leifs trouble.
There is great reaion to believe, that all the zink, or tutenage, brought from the Eaft-Indies, is procured from calamine; and we have now on foot, at home, a work eftablifhed by the great difcoverer of this ore, which will probably, very foon make it unneceflary to bring any zink from elfewhere into England.
We have mines of calamine at Wrington in Somerfethire, and in other places. It is generally dug in barren rocky ground, it's courfes running generally from eaft to weft. When dug, it is wafhed or buddled, as they call it, in a running water,
which carries off the impure and earthy parts, leaving the lead, calamine, and other foarry parts at bottom; then they put it into a fieve, and haking it well in water, the lead mixed with it finks to the bottom, the fparry parts get to the top, and the calamine lies in the middle. Thus prepared they calcine it in a reverberatory furnace, or oven, four or five hours, ftirring and turning it all the while with iron rakes, This done, they beat it to powder, and fift it, picking out of it what fones they find; and thus it is fit for ufe.
CALAMUSVERUS, called allo CALAMUS AMA. RUS, is a kind of ruth, or rather flag, of the bignefs of a goofe-quill, two or three feet high, divided with knots, from which the leaves arife, and bearing on the top umbels, load. ed with yellow flowers. It's principal and almoft only ufe is in Venice treacle.
This flag grows in the Levant, whence it is brought to Marfeilles, fometimes whole and fometimes in bundies, about half a foot long. It muft be chofen thick, frelh, cleared from it's root and branches, and in bundles. It ought to be grey, reddifh without, and whitifh within; it's marrow, or pith ought to be white; it muft break into flinters, and be of a bitternefs unfufferable to the tafte.
Lemery does not fay that it comes from the Levant, but from the Eaft-Indies; and that, as this calamus is fcarce, they fubftitute the calanius amarus, commonly called calamus aromaticus, inftead of it, to make Venice treacle, and other compofitions.
This calamus verus is called in Englinh the fweet cane, or fweet fmelling flag, and grows' in feveral parts of England. It is much ufed as a cephalic and ftomachie, efpecially aga $n$ n complaints arifing from a cold weak fomach. see A corus.
CALCULATION, the art of reckoning, or cafting up any accounts by numbers. Computation is a word fynonymous therewith.
It is proverbial among traders to fay, that an error in calcu lation is not to be admitted; that is to fay, that no advantage is to be taken from the errors that may have crept inadvertently into accounts, but that juftice may be done by reclifying them.
They fay, likewife, that a merchant, or trader, has been miftaken in his calculation, or accounts, when he has happened to take falfe meafures, and has not fo well fucceeded in his undertakings as he expected.
CALCULATOR, one who calculates, or cafts up any thing by numbers, or algebra, \&c. it is feluom ufed in fpeak ing of thofe who calculate mercantile accounts, but commonly enough of aftronomers, who calculate ephemerides. or make other aftronomical fupputations. In mercantile affirs we generally fay Accomptant; fee that article.
CALENDAR, an almanack, containing the order of the days, weeks, months, and feftivals, or holy-days, in the whole year.
The Gregorian calendar is the ancient one, as it was reformed, or corected, by pope Gregory XIII, by a bull of the month of December 158 I , but which did not take effect 'tull Otiober 1582 . By this new calendar 10 days were at once fubtracted from, or flruck out of, the year; fo that the next day after the 4th of October, which ought to have been the $s$ th, was thatyear reckoned the 15 th, and thus it has always continued fince.
The Roman Catholics have ufed that calendar ever fince it was reformed, and feveral Proteftant ftates, which at firt refufed to accept it, and fill followed the old one, have at aft admitted it, moft of the princes of that religion having ordered, towards the latter end of the 17 th century, that it hiould be ufed in their dominions, as being more convencut, and more certain.
'The Englifh, however, 'till lately, continued to reckon the days of their years according $t$, the old calendar, when', 'rill the laft year of the laft century, made a difference of to days between the old and new calendar ; and, fuce that year the difference is of II days, becaufe the yenr 1700 was a leap-year, according to the old calendar, but not accord. ing to the new. All merchants, bankers, and traders, who deal with fuch Proteftants as have not yet admi ted the dew calendar, ought to be acquainted with that diffee ence, becaufe of the days on which their bills of exchange become due. Calendar, a machine ufed in manufactories, to preía certain woollen and filk fuffs, and lianens to make them, fm:oth, even, and glofly, or to give them waves, or water them, as may be feen in mohairs and tabbies.
The calendar is compofed of two thick cylinders, or rollers, of very hard and polifhed wood, round which the ftuff which are to be calendered are rolled very fmooth.
Thefe rollers are placed crofs-ways, between two very thick boards of polifhed wood, which are longer than they are broad; fome call them tables.
The undermof board, which ferves as a bale for the uhole machine, is fixed, and placed level, on a folid foundation of brick-work. The uppermoft board is moveable, though loaded with large ftones, cemented together, weighing 20,000 pounds, or more.
A cable wound round the tree, or axis, of a large wheel,
fomething

## C A L

CAE
fomething like that of a crane to raife fones, and tied with ftrong rings to this uppermoft board, ferves to move it, tometimes one way, fometimes another, according as the men who walk in the whecl fet it a going. It is this alternate motion, together with the prodigious weight of the uppermoft board of the calendar, that renders the ftuffs fmooth and glofly, or gives them the waves, by making the cylinders on which they are put, roll with great force over the undermolt board.
When they would put a roller from under the calendar, to put on another, they only incline the undermoft board of the machine.
The dreffing alone, with the many turns they make the fuffs and linens undergo in the calendar, gives the waves, or waters them, as the workmen, call it. It is a miftake to think (as fome have afferted it, and, among others, Mr. Chambers) that they ufe rollers with a fhallow indenture, or ingraving, cut into them.
There is at Paris a very extraordinary calendar, called, by way of eminence, the royal calendar. It was made by the order of the late Monfieur Colbert, minifter and fecretary of flate, and fuperintendant of the arts and manufactures of that kingdom.
The undermoft table of this calendar is a block of very well polifhed marble, and the uppermoft is lined underneath with a copper-plate, all of a piece, and extremely well polifhed, wherein it differs from the other calendars, whofe tables, or boards, are commonly of wood only.
There are fome calendars without wheels, which are moved by a horfe, tied to a wooden bar, which turns fometimes to the right, fometimes to the left, a great pole, placed upright ; at the top of which, about a kind of drum, is wound a cable, the two ends of which, being faftened to the two ends of the uppermoft board of the calendar, fet it a going. The calendars moved by horfes are not reckoned fo good as thofe with wheels, the latter having a more uniform and certain motion.
At Paris none but the mafter-dyers of the beft dye have the liberty of keeping calendars at their houfes; at Amiens, and in other places, every one may have them who pleafes.
Calendar fignifies, alfo, a fmall black infect, which gets into corn, and devours it fo as to leave nothing but the huiks. Befides the detriment thofe vermine caufe to the corn they get into, they, allo give the flour made of it a very bad tafte.
They give the name of calendared corn to that which has been devoured by thofe infects, which they fift, or bolt, afterwards, to expofe it to fale; but it is in no efteem, and fells very indifferently.
CALF, the young one of a cow, and an animal too well known to want a particular defcription.
A fill-born calf is that which came dead out of the cow's womb; a fucking calf is that which ftill fucks, and has not yet eat any grafs or hay; a grazing calf that which eats grafs and hay.
River calves, in France, are very fat fucking calves, which are fed in the neighbourhood of Roan in Normandy, where the paltures are excellent.
The maw of a calf is a fmall bag, found in a calf's body, full of curdled, or four milk, which is called runnet (or rennet by fome) and is ufed to turn milk into curds, of which cheefe is made.
Though it feems that calves ought to be confidered only with regard to their fefh, which is fold in the fhambles for food, yet it affords two forts of commodities for trade, namely, the Ikin, or hide, and the hair.
The calves hides are prepared by the tanners, tawyers, curriers, and leather-dreffers, who fell them to the fhoemakers, faddlers, bookbinders, and fuch other artificers who ufe them in their feveral works. The curried calves hides which are produced and manufactured in England, are reckoned the beft. Vellom, which is a fort of parchment, is made with the fkin of a ftill-born calf, or of a very young fucking calf. The tawyer begins the preparing of it, which is finifhed by the parchment-maker
Calves hair is mixed with that of oxen and cows, to ftuff faddles, and fome houfehold furniture of little value.
The bookfellers and bookbinders fay, that a book is bound in plain calf, to fignify that the calf's fkin that covers it is whitifh, without being marbled, nor fpotted with red or black.
Calves-Leather dreffed with fumach, is calves leather curried -black on the hair fide, to which they have given a red colour with fumach on the fefh-fide. The mafter-girdlemakers ufe that fort of leather.
Calves-Leather from England. There is in France a great trade of that fort of leather, which is dreffed and prepared in England, and which they have in vain attempted to imitate in other places.
There was, neverthelefs, formed at Paris, in the year 1665, a company of men of bufinefs, of whom the Sieurs de Saille, Monginot, and du Vodal, were the chief, who undertook to eftablifh a manufactory of thofe leathers, in the fuburb of St. Marcellus.
Monfieur Colbert, to whom France is obliged for fo many other commereial eftablifhments, hoping he could be able to
Vol. I.
rupport this, which would have proved very advantageous to the kingdom, by faving above $2,000,000$ of livres per annum, which are fpent in buying thofe foreign learhers, cauled letters patent to be granted to the undertakers, containing an exclulive privilege for the manufaclure of thofe calves-leathers, according to the manner of thofe in England. But the company, after having for four or five years carried on this manufacture, under the name of one Bonnet; a tanner of Paris, to whom thofe privileges were granted, was obliged to give over this undertaking, by which the undertakers lof above 100,000 livres.
However, the fetting up of this company, though it met with fuch bad fuccefs, procured a great advantage to the merchants who carry on the trade of true Englifh calves-leather: for, till that time, the Englifh never.fuffered the French, nor any other foreigners, to buy up any of their calves-leather, but from 25 to $3^{6}$ pounds weight per dozen, it being prohibited to export any out of England from 36 to 45 pounds per dozen, under the penalty of having one's writt cut off.
But, when it came to be known in England that this com pany, in cafe it fhould fucceed, would abfolutely ruin their trade of calve-ikins, the greateft demand for which was from France, the government of England not only took off the prohibition, and gave foreigners leave to buy up calves-leather of all weights and qualities, but alfo lowered the duty of exportation from 12 s. to 3 ; and, the better to fecure to the Englifh nation fo profitable a branch of trade, they revived, and caufed to be executed, the ancient ordonnances of the police relating to the proper dreffing and preparing of this commodity, which, as it was thought in England, would render the imitation of them in France pore difficult fill.
It is not, however, impofible for the French to arrive at a perfect way of dreffing that fort of leather; but then the fkins of calves fed and killed in France, and particulaly in the neighbourhood of Paris, are not fo proper for it as thofe of the Englifh calves.
The chuef reafon is, that the fkins, or hides of calves in France, are too fmall and too weak, a defect which it is not poffible to remedy, becaufe it is a natural one; for the calves in England are ftronger, the moment they are calved, than they are in France when a fortnight old.
There is another reafon alleged for this alfo, which is a pretty weighty one indeed, but as it only relates to the police, it might be eafily remedied; which is, that, in France, calves are weaned too young, being feldom fuffered to fuck above three weeks, or even but a fortnight; and being alfo killed too foon, which binders them from growing and gathering ftrength; fo that, when their hides are dreffed after the EngJifh manner, they can never bave the weight and quality neceffary to be employed in the feveral works in which they who manufacture in leather commonly ufe them: whereas the calves in England are fuffered to fuck fix weeks, and even more, and are feldom killed but when they are very ftrong. The laft wars between the two kingdoms have engaged the French to find out fome method whereby they might be able to make fhift without the Englih calves-leather, and they prepare fome at prefent, which, for goodnefs, come very near to thore of England.
CALIN, a kind of metal finer than lead, but inferior to tin. It is very common in China, Cochinchina, Japan, Siam, \&c. It is commonly ufed in the Eaft-Indies for covering the roof of houfes, as we do lead in Europe; they likewife make of it feveral pieces of furniture. The tea-boxes which come from China are made of calin. They alfo make coffec-pots of it, fome of which are even brought into Europe.
Is it not a mixture of tin and lead, and fome other mineral, as zink, \& c. rather than a metal of a new kind?
CALKING, or CAULKING, is to drive oakam, or fpun yarn, or fomething of that kind, into the feams of the planks, or rather leaks of a thip, to keep the water out. This is done with a mixture of tallow, pitch, and tar, as low as the fhip draws water; but it is not put on till the leaks, or feams, have been well ftopped with oakam; that is to fay, old ropes untwifted, and made again into a heap of hemp, which they drive with main force into the feams, or leaks; after which they do it over with the mixture abovementioned. They drive the oakam in with an iron inflrumenc called a calking-iron: it is made like a chiffel; fome are broad, fome round, and others grooved.
CALLICOE, a kind of linen manufacture, made of cotton, chiefly in the Eaft-Indies. Thete is a great trade in the province of Bengal in this commodity, which is tranfported in prodigious quantities into Perfia, Turkey, Arabia, Mufcovy, and all over Europe. Some of them are painted with flowers of various colours; and the women in the Indies make veils and fcarfs of them, and, of fome, coverlets for beds, and handkerchiefs. They make another fort of this manufacture, which they never dye, and hath a ftripe of gold and filver quite through the piece, and at each end, from the breadth of one inch to 12 or 15 , they fix a tiffue of gold, filver, and filk, intermixed with flowers; both fides are alike. They make, alfo, other forts of cotton cloths at Brampour, becaute there is no other province in all the Indies which has greater quantities of cotton.

## C A L

## C A L

At Seconge they are fuid to make the beft fort of callicoes; in all other parts the colours are neither fo lively nor lafting, but wiar out with often wafhing; whereas thofe made at Seconge grow the fairer, the more you walh them. This is laid to arife from a peculiar virtue of the river that runs by the city, when the rain falls; for the workmen, having made fuch prints upon their cottons as the foreign merchants give them, by feveral patterns, dip them into the river often, and that fo fixes che colours, that they will always hold. Theic is alfo made at Seconge a fort of calicut, fo fine, that, when a man puts it on, his fkin thall appear as plainly through it as if he was quite naked; but the merchants are not permitted to tranfport it, for the governor is obliged to fend it all to the Great Mogul's feraglio, and the principal lords of the court, to make the fultaneifes and noblemens wives fifts and garments for the hot weather.
The city of Baroche, alfo, is very famous for trade, on account of the river, which has a peculiar quality to whiten their callicoes, and which are, therefore, brought from all parts of the Mogul's territories thither for that end.
This manufacture is brought into this nation by the EaftIndia company, which is re-exported by private merchants to other parts of Europe and America.

## Remarks.

The general wear of fained or printed India callicoes in this nation having, in the year 1719, become a general grievance, and occafioned unfpeakable diftrefs and calamity upon our own manufacturers, efpecially the weavers, the following acts of parliament very julfly took place, to prevent the wear of this manufafturre.
By flat. 7 Geo. I. cap. 7. If any perfon fhall ufe, or wear, in any apparel, any printed, painted, ftained, or dyed callicoe, being convicted theres by the oath of one or mure witnefles, before a juftice of peace, they ghall forfeit the fum of 5l. to the informer; and, upon complaint withia fix days after the offence, the juftice to fummor the party accufed, and proceed to examination, and, on due proof, caufe the penalty to be levied by diftrefs and fale of goods, \&c.
If any mercer, or draper, thall expofe to fale any fuch callicoe, or any bed, chair, window-curtain, or other furniture, made up, or mixed with callicoe (unlefs it be for exportation) every fuch perfon thall forfeit the fum of 201. and perfons ufing the fame are liable to the like penalty: but callicoes made into furniture in families are exempted; and this act Shall not extend to callicoes dyed all blue.
One moiery of the penalties inflicted, where they exceed 51. fhall be paid to the informer, and the other to the poor, recoverable by action of debt, \&c. within fix months.
Nor to extend to linen-yarn, or cotton-wool, manufactured and printed in Great Britain, provided that the warp thereof be intirely linnen-yam. See Linnen Cloth.
Callicoe-Printing. The ftaining, painting, or printing of callicoe, was a bufinefs which employed great numbers of people before the preceding act of parliament took place; and fince the printing and ftaining of our own cottons, linnens, \&ic. hath been fo much in fafhion, that our linnen printers, in general, are not lefs numerous than before the faid act took effect. It appears highly probable that the Indians, for making the fine, bright, and durable colours wherewith their callicoes and chinches are ftained, ufe metalline folutions; for, fome ftained callicoes having been kept for 40 or 50 years, the bright colours have been oblerved to eat out the cloth, exactly in the fame manner as the corrofive, acid firits, which diffolve metals, are found to do. Whence, to imitate their richeft and nobleft colours, we are directed to ufe proper metalline folution, made fomething after the manner of the following experiment.

## Experiment.

The method of preparing a metalline colour from gold and tin. Diffolve gold in AQUA REGIA [fee that article] and dilute the fine yellow folution with a large proportion of fair water; to the mixture add a fufficient quanticy of a faturated folution of tin, made alfo in aqua regia at feveral times; and a moft beautiful red, or purple coloured powder, will foon precipitate to the bottom of the containing glafs. Decant the liquor, and dry the powder; a few grains whereof, being melted along with white chryftalline glafs, will tinge the glafs throughout of an extremely fine purple, or ruby colour".

* See Cafluas de Auro, p. 105. By means of this experiment the ancient art of faining glafs red, long fuppofed to be loft, feems at prefent to be reftored. All the colours are eafly given to glafs [fee the article Glass] but this feems to bave been kept in very few hands till lately; and may be confiderably diverfified, fo as to introduce a grateful variety of beautiful red and purple colours in glafs, tor the makıng of curious artificial ftones, and for divers other purpofes, as we thall fhew hercafter.
It hould feem, alfo, that the art of callico-printing, which wants a red colour equally perfect with the biue it has obtained, might hence be furnithed with fuch a red; though
there is reafon to fufpeet that it might prove too dear for ordinary ufe. Yet this experiment may be a key to others of a fimilar nature, which may come cheap enough for this, and various other ufeful purpofes in trade. For as the perfection of this art confifts in difcovering fixed, bright, and permanent colours, not fubject to change for the wurfe in the open air, fuch colours hould rather be expected from mineral or metalline fubfances, than from thofe of the vegetable and animal kingdoms, which ufually afford fubjects of too lax and alterable a texture, for fine durable colours, unlefs they could be fone way fubftantially fixed. Eise Pruffian Blue, and Dyeing.
It would be a farther perfection, not only in this art, but alfo in the art of painting, to prepare the fineft colours withou: employing either acid or alcaline falts, which ufually fubject colours to change, or elfe are apt to prey upon the cloth, or canvas, as we fee in verdigreafe, the blue and green cryftals of copper, \&c. Whence we are directed, (I.) To fearch for menflruums that are neither acid, alkaline, or faline. (2.) For fuch metalline or mineral calxes, precipitates, or powders, as will not lofe their colours by being well wahed, to get out their falts, (3.) To prepare certain metalline matters by calcination, or the bare affiftance of fire ; and, (4.) To look put for native colours, wheren no faline matter abounds.
It may be worth the trying, whether certain metals are not foluble by triture, with the pureft oils ufed in painting, and fuch as contain neither acid nor alkaline falts; or whether mere water, the white of eggs, faiiva, gum-water, milk, 3 c . may not, by the fame means, be made to diffolve them; fo as that the metalline particles may be left behind upon calicoes, cloths, \&c. when the aqueous or mucilaginous matter is dried, or wathed away from them. But no great effect can be rationally expected in fuch attempts, unlefs the triture be long continued, and mills, or other well-adapted engines, be ufed for the purpofe: for we find, in all inflances, that metals muft be reduced to very fine particles, before they will tinge, or colour.
The pigments, or colours, obtained by cryftallization, fuch as the blue and graen vitriols, or cryftals of copper, \&\&. cannot be deprived of their aqueous, or faline parts, by a dry air, or by wafhing, without fuffering extreme alterations, or being left in the form of a grofs, terreftrial matter, differently coloured frem what they were at firft. Thus the fine green cryftals of iron, by being expofed to the air, become white, and, when well wahed in water, lofe their greennefs, and turn to a reddifh, or yellow-coloured ochre, or earth: and, if deprived of their faline and aqueous parts, by a ftrong diftillation, they leave behind a brown, or red caput mortuum, which, being wafhed in water, affords not a green, but a brown-coloured pigment, or kind of Spanifh brown. And, as this holds proportionably of other colours obtained by cryftallization, there are little hopes of procuring durable pigments by that operation, which fhall be of the fame colour with the cryftals themfelves; though, after being well walhed, different colours may be thus procured.
Metalline and mineral matters are reducible to a confiderable degree of fubtilty, or fmallinefs of parts, by fire, or dry calcination, fo as to leave them durably poffeffed of their native, or adventitious colour. Thus la is lazuli, by being calcuned, becomes the fine, durable, rich blue, called ultramarine: light ochre, by the fame treatment, becomes. ight red, or the moft ufful flefh-colour in painting; [fee C....OURs] lead, by calcination, becomes durably red; and ron durably brown. But a proper method feems wanting for the dry calcination of the nobler metals of gold and filver; though, for the ufes of gilding, \&ic. thefe nobler metals are eafily made to give colours, by dipping linnen rags into their refpective folutions, then drying the rags, and fetting them on fire, fo as that they may burn to afhes; whereby a dry and fine metalline powder is readily obtained.
Many native mineral pigments, or durable tinging fubfances, are already difcovered, thar do not abound with falts; fuch as ochre, both yellow and red, cinnabar, or vermilion, zaffora, manganefe, \&c. and, doubtlefs, many others might be found in countries that abound with mites, or where a proper fearch is made after new mineral fubtances. For thefe, if filfully managed, will fupply the place, at an eafy charge, of many other expenfive materials, that are, at prefent, made ufe of, for want of more knowledge in the mineral kingdom, and more judgment in the nature of'mineral and metalline folutions. See the articles Dyeing, Minerology, Metallurgy.
How ufeful in callicoe-printing, painting, dyeing, \&cc. many middle minerals of little worth may be rendered, fhould feem to be inferred from the following EXPERIMENT:
Take an ounce of the abovementioned manganefe, and pulverize it to a tolerable fubtilty; to this put four ounces of clarffied falt-petre, that has been once melted thoroughly in a crucible, or four ounces of clarified falt of tartar: melt them together in a crucible, 'till the falt hath liffolved the manganefe as thoroughly as it can do by fufion. When effectually done, pour the mals into an earthen vefiel; which let fland while it is near cold, but not quite fo, for that will

## CAL

mar the operation. Having in readinefs two or thte Florence flatks, filled with a clear foft water, put a finall part of the mafs' into one of the flafks, about half full of water, and continue putting in fo much of the mafs 'till ypu find the water of a grafs-green colour: after which, add more waten o the folution, till it appears of a deep red; and fo continue adding water more and more, 'till the whole grows quite colourlefs. The water having thus diffolved all the falt, the matter of the manganefe, which gave the tindure, will gradually fubfide at the bottom, free from all falts, in a brownifycoloured powder. This mineral fubftance, which is, ot a fixed tinging nature, may, by this preparatory means, be made ufe of in callicoe-printing, without any corrofive falt, or fpirit, to render the colour permanent, which greatly injures the quality of commodities.
The proper application of this, and a great variety of other xperiments, which I have made upon all forts of bodies, have reafon to believe, will greatly contribute to the fubfantial improvement of variety of arts and trades. See Metalurgy, Minerology.
CALLIFORNIA is fituate betweén in 6 and 138 degrees of weft longitude, and between 23 and 46 degrees of north atitude. It fies almoft in the form of a cone reverfed. It was a matter of doubt for a long time, whether it was an ifland or a peninfula, but difcovered to be the latter by Father Caino, or Kins, a German Jefuit, who landed in Callifornia from the inland of Sumatra, and paffed into New Mexco, without crofing any other water than Rio Azul, or the Blue River, about north latitude 35 .
The more fouthern part was known to the Spaniards foon after their difcovery of Mexico; for Cortez difcovered it in 1535 ; but they did not 'till very lately penetrate far into it, contenting themelves with the pearl fifhery on the coalt. But our Sir Francis Drake landed there in 1578 , and took pofleffion of Callifornia for his miftrèfs, queen Elizaberh, by the name of New Albion; the king of the country actually invefting him with it's fovereignty, and prefenting him with his own crown of beautiful feathers; and the people, thinking the Englifh to be more then men, began to facrifice to them, but were reftrained *.

* Does not this give the Englifi a jufter right to the poffeffion of this colony than the Spaniards can pretend to by a flight difcovery only, and late flight poffefion fince; Sir Francis having taken fair poffeffion, in the name of our immortal Elizabeth, and been folemnly invefted with it's fovereignty? Though the Englifh have never yet attempetd to fettle any colonies here, yet, if the revival of our right fhould ever become neceffary; we feem to have a much betrer plea than the Spaniards. And as this nation has many years taken every advantage of us, by infult and depredation, and has, for above thefe 20 years, amufed us with flameful and dilatory negociations, it may not be ufelefs, perhaps, to think of the revival of every kind of right to which we have any claim or pretenfions; in order, at leaft, to make proper ufe thereof, to obtain that indifputable tight and feconity of trade and navigation to and from our longpoffeffed colonies in America; though the wifdom of the nation fhould not judge it advifable to eniarge our poffeffons in he new world, without further provocation from the Spaniards. Hints of this kind being national, we think necefiary to fuggeft them as they naturally arife, becaufe it will too evidently appear, throughout the courfe of this work, from facts inconteftable, that we fland in need of reviving even every co lourable right to our trade and poffefions, fince our real and undoubted ones are daily called in queftion. See the articles Britifh America, Biscay, Spanish Ambrica, Logwood, French America. Under which heads, together with orhers we fhall from thence refer to, will be flewn, ac cording to the fentiments of the ableff fatefmen,. how we may be enabled fo to deal with the Spaniards, in the way of trade as to ftand lefs in need of their friendilip.

It is bounded on the north by a continent unknown; on the eaft by the province of New Mexico, and the gulph of California, which fome call the Purple or Red Sea ; and by the South Sea on the fouth and weft. Though it lies for the moft part in the temperate zone, there are great heats on the coaft in the fummer, but the inland part is very temperate; and though in the winter it is pretty cold, it is judged to be a healthy country.
In refpect to the foil, the mountains are well wooded, and the plains well wateres; they abound with fruit-trees, and are capable of bearing all forts of Europeańn grain. Here are deer, of which two kinds are peculiar to the country; all forts of fowl and birds, common in Europe or the Indies; a prodigious plenty of fea and river fifh, particularly cray-fifh, which are taken out, and kept in refervoirs: there is befides, one of the greateft pearl-fifheries in the world; and it is thought to have mines. It has two confiderable rivers, viz. Rio Colerado, and Rio du Carmel; with feveral other fmalhrivers, and variety of fine ports, both on the eaft and weft fides, with innumerable bays, creeks, and roads, which is the reafon of it's having been fo much frequented by our privateers in the South Seas.
Such of the natives who live on the eaft fide, on the Purple ©hore, are great enemies to the Spaniards; but in other parts

## C A M

of the peninfula, they feem very hofpitable to all Atrangers It is obfervable of this country, that, after the rainy feafon is over, a great quantity of dew falls in the mornings, in April, May, and June, which not only renders the land exceeding fruitful, but, fettling upon rofe leaves, candies and hardens like manna, and is fweat as fugar, though not fo white and pleafant to the eye. In the heart of the country there are plains of falt quite firm and clear as cryftal, which, confidering the extraordinary quantity of fifh of all forts that are found there, might prove of unfpeakable advantage to any civilized. people, who were poffeffed of the country.
Here is alfo excellent pafturage in all feafons, for great and frall cattle. The banks of the rivers are covered with wil lows, reeds, and wild vines; and there is abundance of xica mes here, better tafted than thofe of any part of New Mexi co. On the mountains there grows mercale:, a fiuit peculiar to this country, which is gathered all the year round. Almbit every feafon there is plenty of piltachoes, of curious kinds, and figs of different colours. The trees are beautiful, and particularly thole called by the natives palo fancto. It yields a great quanity of fruit, and a moft exccllent periume is extracted therefrom.
Callifornia breeds fourteen forts of grain, which the natives feed on. They likewife ufe the roots of trees and plants, particularly the Yyuca, wherewith they make a fort of bread. They have alfo excellent fikiret, and a fort of ficarlet, or French beans, of which they eat great quantities, together with pumpions and water-melons, of a prodigious fize. In fhogt, the foil is fo rich, that many plants bear fruit three times a"year. Here are lions, wild cats, and various other wild beafts, like to thofe of New Spain. And, befides ftags, hares, rabbets, \&c. there is a fpecies of animals not found in Europe, which may be called cheep, becaufe they fome what refemble them in thape
The inland country, efpecially towards the north, is populous. It is but lately the Spaniards had any fettlement at all on this peninfula; and what they have is only a village, near Cape Lucar, at the fouth end of it, which is called Callifornia. The Manilla fhips touch here fometimes in theis courfe to Acapulco, and it is like to become a confiderable place in time, by their trading with the Indians for pearl.
There are many fmall inlands on the coafts of this peninfula both in the South Sea and in the Purple Sea, fuch as the iflands of St Catherine, St Clement, Paxoras, St Anne, and the inland of Cedars, fo called from the great number of thofe trees that grows on it, of an uncommon fize. The iflands moft known are three, which lie off St Lucar, towards the Mexican coaft, and are called Las Tres Marias, or 'The Three Marys. They are but fmall, have good wood and water, abundance of game, fuch as fowls and hares, a wholefome fruit called penquin, as large as a pullet's egg, and falt-pits like thofe, of Callifornia; and, therefore, the Englith and French pirates have fometimes wintered here, when cruizing in the South Seas. It is to be obferved, that Capt. Dampier propofed feeking a north-weft paflage, by doubling Cape Blanco, the moft northern point in Callifornia
CAMBAYA, or GUZURATTE, a kingdom in the Mogul empire : lies fouth of the gulph of Indus, Tatta, and Jeffelmere; north of the Indian Sea, and the kingdom of Decan; and weft of Chandis and Chitor. It is cut in the middle by the guiph of Cambaya, which runs north-eaft; fo that, the greateft part of it is formed into a peninfula by that and the gulph of Indus. Thevenot fays it is the pleafanteft province of Indoftan, abounds with corn, and all the fruits common to Europe and the Indies, particularly the moft delicieus melons. It has ftore of cattle, fowl, and fifh, and feveral forts of pulfe, \&c. and is fo well watered, that it looks verdant all the year. Nor does the foil produce only all the neceflaries of life, but great plenty of cotton, indigo, opium, aloes, and many other drugs; as alfo cryftals, cornelians, rubies, faphires, agates, topazes, jafper, and variety of other precious fones.
The inhabitants have not only a great traffic with their commodities, by it's navagable rivers, but make fine cotton linnen, filks, gold and fiver ftuffs, jewels, and plate, cabinets, \&c. the exportation whereof inrich the inhabitants.
Cutchnaggen is the firf town fouth of the river Indur, which feparates it from Sindy, or Tatta province, and is a place of fome trade, and produces corn, cotton, coarfe cloth, and cheak, or fhell fifh.
Sangama, the next province, alfo produces cotton and corn, as all the kingdom of Guzpratte does. Notwithftanding, this place admits of no trade, not even at jt's fea-port Baet, which, though it be a fafe and commodious harbour, gives refuge and protection to a medley of criminals, who fly their country for fear of juftice. They itrive to board all hhips they can come at, by failing as pirates.
Jigal, another fea-port, ftands on a point of low land, called by it's own name. This city is the feat of the Miogul's governor, and makes a pretty good figure from the fed, bur, being a place of no trade, is jittle known, as is the cafe of all other places that are deftitute of trade.
Mangaroul, a maritime town, where once there was an Engtin factory for trade, juit under the tropic of Cincer. It's
trade confifts in exporting of coare callicoes, white and dyed, wheat, pulfe, and butter, and has a market for pepper, fugar, and the betel-nut. It is inhabited by Banians.
Paten, Pate, or Petan, between Mangerol and Din, is a great town on this coaft, between Chevar and Corymar, which had formerly a very large trade, and has fill a confiderable manufacture of filk.ftuffs and coarfe callicoes; but is much decayed, fince the trade was ruined by the roads being greatly infefted with robbers.
Paremain is a pretty large trading town, not far off, on the fame coaft, producing the fame commodities.
Div, Dew, or Dio, which is the next port, and the fouthermoft land on Guzuratte, is an illand, three miles long, and two broad, with a city at the entrance of the gulph of Cambaya. It is feparated from the main by a narrow channel, over which is a fone bridge, and is the frongett place belonging to the Portugueze in the Eaft-Indies. It has a good fafe harbour and had formerly a large trade; but, fince the Englifh, Dutch, and French fetted in Cambaya and Surat, it is much decayed. The bulk of the inhabitants are Banians, there being but few Portugueze there, and but few of the former of any fortune, by reafon of the oppreffion of the Portugueze to fuch as are monied men. Provifions are very cheap here, and coral is the chief article of their traffic, it being not only greatly ufed by the Indians, but alfo by the eaftern Cartars, who come hither to fetch it.
GogA, is a large trading town, io leagues within the gulph, on the weft fide of it, which was burnt by the Portugueze. It has a fafe harbour for the largeft fhips, and ftrangers have a free commerce here in the merchandizes proper for importation to, or exportation from Guzarat.
Gambaya, or Cambaut, a city which gives name to the gulph, lies near the bottom of it, and in the neck of the peninfula, 47 miles fouth-weff of Amadabat, and 12 leagues northcaft from Goga. It is a place of much better ftructure than the cities of Indoltan commonly are, and has been a city of fuch traffic, as to be called the Cairo of India; but, though it's trade is decayed, by the fea's being retired half a league from it, fo that great fhips cannot come within three or four leagues of it, yet both the Englifh and Dutch have ftill a factory here. It ftands on a river formed by the overflowing of the Indus into the bay, and is ftill a place of great trade, though not half inhabited. It contributes very much to the wealth and grandeur of Surat, to which it is fubordinate, and Chares the advantages of the great city of Amadabat, becaufe what it exports by fea comes hither for the moft part, and is carried by the Surat fhipping all over India, except what European Chips carry for Europe.
The product and manufactures are inferior to thofe of few towns of India. It abounds in grain, cattle, cotton, and filk. The cornelian and agate ftones are found in its rivers, and, as many travellers fay, in no other of the world, though they have quarries alfo of the latter at Nimroda, a village, four leagues from the town. Of the former they make rings, and flones for fignets; of the latter, cabinets, bowls, cups, fooons, hafts for fwords, daggers, and knives, buttons and ftones to fet in fnuff-boxes. They embroider the beft of any people in the world, and cheir fine quilts were formerly brought to Europe. In the fuburbs, which are almoft as large as the town, there are manufactures of indigo. The Dutch fhips do not come hither till the end of September, becaufe there is a violent wind on this coaft in the beginning of that month, fo that it is hardly poffible to efcape a fhipwreck. There are, likewife, dangerous banks in the gulph, which prove fatal to the brigantines that trade from hence to Surat, befides the coafts being infefted by Malabar pirates.
Bradera is a large town on the eaft fide of the gulph, unBrader the tropic of Cancer, 50 miles fouth-eaft of Cambaya town, and at leaft 55 from Amadabat, and about 15 leagues north of Baroach, in a country producing cotton, wheat, barley, rice, \&c. and fo abounding with lacque, that one village, called Sindickera, produces every year about 250,000 pounds weight of it.
SURAT, the greateft place for trade and commerce in all the Mogul's dominions. It lies in eaft longitude 72. 20. latitude 21. 30. Here are factories of Englifh, Dutch, and French; 21. 30. Englifh have the greatelt hare of it's commerce. Their chief, or governor, lives in the fate of a little prince: they enjoy greater privileges here than any other nation, Alfo, under the governor of this factory and bis council, all the Jittle detached factories which the Englifh India company have fettled within the country, and all their factories on this coaft, and that of Malabar, as far as Ceylon, are directed, Surat being the head fettlement on this fide, as fort St. George is on the other. It is above 115 miles fouth of Cambaya, and about 10 from the $f=a$. When the Euglifh firf eftabluhed their commerce here, which was about the beginning of the fixteenth century, they were highly efteemed in the country; but the Portugueze, preterding then to a fole right to the trade, difturbed the Englifh in theirs, murdering the people, and taking all their fhips and veffels they could; but the Englifh were foon after feverely revenged on them, by an intire vitior', wherein they killed above 1500 Portugueze, with the lofs of only 20 of their own men.

Surat was but an inconfiderable place till the fettlement made here by the Englifh, and by other nations foon after them: then, indeed, it became a large town in a few years.
The inhabitants are computed at about 200,000 , among whom are many very rich, both Mahometans and Gentiles, who, however, do what they can to conceal their wealth, for fear of tempting the avarice of the Great Mogul, or his governors, to fleece them at pleafure. The revenues of the province are kept here. Thofe arifing from the cuftomhoufe, which is the richeft in India, as well as from the landrents and poll-tax, one with another, from 1690 to 1705 , amounted to $162,500 \mathrm{l}$. a year. There is no book of rates here, as in China, but all things are indifferently charged ad valorem. The cuftoms in the emperor's books are but 2 pes cent. from the Mahometans, 3 and $\frac{3}{4}$ from the Chriftians, except the Dutch, who pay but $2 \frac{x}{2}$, and 5 per cent. from Gentiles. They punifh thofe who defraud the cuftoms by whipping, and not by forfeiture of the goods. The land pays ${ }^{\frac{3}{4}}$ of it's product in corn, and the poll about a crown a head; the Chriftians only are exempt from this tax. The Moors, Banians, Armenians, Arabs, and Jews, drive a much more confiderable trade here than the Europeans.
The moft numerous body in this city are the Banians, who are either merchants, bankers, brokers, or acomptants, collectors, and furveyors, but few or none handicrafts. Some of them who appear very mean and beggarly, carry rough diamonds about them for fale, to the value of feveral thoufand pounds; for they are fuch money-lovers, that they will traverfe the whole town to get a half-penny. Their manufacturers are chiefly weavers, and make moft of the filks and fluffs that are wrought in Surat.
The foil on the land fide is very fertile, but towards the fea it is fandy and barren. They have, however, great plenty of provifions, and thofe cheap. They are expert in the art of fip-building, and take the dimenfions of all the new Englifh veffels, in order to follow the model, if they approve it, in the next veffels they build; but they by no means approve of the high fterns of the Dutch. Their fhip-building is altogether with teak, a firm and durable kind of timber; but, inftead of caulking the feams, they rabbet the planks, and let them one into another fo dexterounly, with hammer and oakham, that they are exceeding tight. They make ufe of coire, or cacao-nut cordage, and have anchors and guns from Europe. Sometimes they procure Englifhmen for their pilots, but are always manned with Lafcars, who are failors fitteft for the climate, hired cheap, and eafily maintained.
The Englifh India company's affairs here are managed by a prefident and council, with different degrees of inferior fervants, as fenior and junior merchants, factors, \&c. who live in good credit. The four principal officers of the company are, the accomptant, warehoufe-keeper, purfer-marine, and fecretary; but, in the extent of the prefidency, the company has above a hundred fervants. Offenders here, if refractory, are fent home; but capital criminals are fent to Bombay, and tried by the laws of England. The prefident, who, as intimated, fuperintends the company's fettlements on the wefl and north of India, lives in great fplendor, is refpected almoft as much as the governor, and is chofe by the company. His grand council confifts of five members, who are generally chofen out of the company's factors; and from this council is commonly elected the deputy governor of Bombay, and the agent of Perfia. There are many young clerks, or apprentices, here to the company, who ferve them a term of years, and, according to their behaviour, rife gradually to be factors, merchants, and chiefs of fa\{lories. Thefe have their diet and lodging in the factory, as well as falaries, and fome of them have the liberty of trading in India from port to port; and thofe of good credit, who have not a capital, may borrow money to trade with of the Banians, at 25 per cent. bottomry [fee Botтomry] of which in fome voyages, they make cent. per cent. There are alfo here free merchants, to whom the company grant licences to carry on a coalting trade; many of whom, alfo, borrow large fums on bottomry of the Banians.
Mr. Lockyer thinks this city the propereft place in India for the refidence of a virtuofo, here being a conflux of the rarities of the coafts of Africa and Malabar, Arabia, Perfia, and Indoftan, 8 cc . befides the great collection of agates, cornelians, and other ftones of Cambaya, always to be found in it's bazar. Their flreets are lined with fhops of great variety of merclandize ; their artifts are very ingenious, efpecially in inlaying and working in ivory, which is always a faple commodity here, though vaft quantities are imported hither every year from the coaff of Africa, \&ic. infornuch that there muft be a furprizing confumption thereof in the Mogul's dominions. The goods proper for this place from Europe are, wine in chefts, beer in calks and bottles, fine hats, worfted ftockings, and a few wigs for the Europeans; fmall fhot, lead, iron, cafeknives, fint-glafs, rofe-water, cochineal, red and white lead, the fineft knives and fword-blades, long and hhort, toys, \& C. for the country merchants; befides which, our Eaft-India company fends coarfe cloths, and feveral other woollen manufactures; and cloth is exported from hence to Bantam. A cheft of winc confifts of io bottles, each containing about five

## C A M

quarts ; or of two carboys, which, one with another, hold out five gallons each. A cheft of rofe water confifts of 24 bottles. The beft is of a fine amber colour, and will keep feveral years, if properly prepared. The merchandizes proper for Surat, from Perfia, are galbanum, ammoniacun, affafcetida, gum clemi, tragacanth, and other drugs, apricots dried without the ftones, Perfia brandy, coffee, rich filks, carpets, leather, lapis-tutix, piftachia-nuts, ruinus, dates, almonds, pruneila's, raifins black and red, rofe-water, wines of Schiras, Afhee, and Kiffrufh, and worm-feed. Thefe goods are, in a great meafure, the produce of the Perfian province of Carmania, where the Englifh have a factory for the fake of it's fine wool for hats. They are brought in caravans to the gulph of Ormus, where they are put on board Englifh and Dutch veffels, at great freight, for Surat. And Mr. Lockyer, who gives the rates of the freight, obferves, that this is a main branch of our India company's profit, becaufe their hips are rarely difpatched from thence for Surat but they are as deeply laden as they can fwim, not only with paffengers, but vaft quantities of pearl, and other treafures, on board, fomecimes to the value of 2 or 300,000 1. fo that he looks upon Englifh hips from Perfia to Surat, in the latter end of October and November, to be the richeft veffels on that fide of the globe. He fays the Dutch, though they have alfo a great deal of freight hither from Perfia, fend fo many fhips together that they are feldom above half full. The goods proper for Surat from China are, quickfilver, vermillion, grees tea, copper, tutanaque, fugar, and it's candies; fweetmeats, camphire, China roots, China ware, rhubarb, lacquered ware, umbrela's, damaik, and all forts of toys, falt-petre, bees-wax, fugar, \&c. will turn to account from Bengal; as well as rice and cardamum from Panola, a French factory, and Telichery, an Englifh factory on the Malabar coaft; and Goa arrack, of about $13^{\frac{1}{2}}$ rupees a hogftead, will fetch double the price, both here and at Bombay. Cowries and little fea-fhells are imported hither from Siam and the Phillipine iflands; gold and elephants teeth from Sumatra, in exchange for corn, drugs, and Carmenia wool from Perfia, and for coffee from Mocha.
The inland factories fubject to this are, Amadabat, where they purchafe filks and gold atlafles; Agra, where they have indigo; Chuperti, where they have coarfe cloths; Sering, where they have chints; Baroche, where they have baftas, broad and narrow dimitties, and other fine callicoes; Bombay, and Rajapore, where they have falloes; Carwear, where they have dungares, and the heavieft pepper; and Calicut, where they have fpice, ambergreafe, granate, opium, and falt-petre. At the Dutch factory are fold fices, imported from Batavia, for part of which product they fend back coarfe cloth for their planters, and, for the reft, money. All forts of merchants goods are expofed in the open air in the Caftle-Green, both day and night, except during the monfoons; and here the bales are made ready for the lhipping. It is a great difadvantage to the European factories here that they are fo much in the power of the Moors, that, if any of their veffels are taken by pirates, they expect fatiffaction; 'till which is done, they frequently block up their factories with a body of troops. The Surat gold being efteerned extremely fine, it fells in Europe for a better price than moft others; and their filver furpaffes that of Mexico. None of it's coin has been known to be clipped or debafed. All the foreign coin the Mogul officers can lay hold of is melted down, and caft into roupees, with the image of the reigning emperor, after whofe death they fink in value r or 260 ths. There is an harbour near the village Suhella, or Sovally, which the failors call Swalley-Hole, 30 miles north of the town. The entrance to it is full of banks, which, at low water, are al molt dry, and it is near half a mile broad. Here all fhips bound to Surat formerly anchored; but, fince 1666, none have had the privilege, except the Englifh and the Dutch, who have each a port here, with yards, warehoufes, gardens, \&c. which gives them an opportunity of running goods al mof as they lift. While the flips lie here, which is commonly from September to March, the Indians, Perfians, Armenians, and Turks, pitch their fraw huts along the coaft like a fair; where they fell callicoes, fattin, procellane, cabinets of mother of pearl, ebony, ivory, agate, turquoifes, heliotropes, plantanes, arrack, \&cc. Thevenot fays, that, fince the abovementioned prohibition, the fhips of other nations lie at the bar, 12 miles below Surat, becaufe though fmall craft can go up to it, veffels of burden cannot enter the river 'till unladen, and at a fpring tide.
The cuftom-houfe waiters have 18 d . and the boat-men 15 d for every paffenger, who mult alfo pay $2 \frac{1}{2}$ per cent. for what gold and filver they have about them; and the next day they muft pay the duties abovementioned for their cal gres. During the feafon of the fhipping, efpecially from January to April, Surat is Yo full of ftrangers, that lodging is fcarce; but from May to September there are fuch dreadful forms of wind, thunder, and rain, that, before they come the traders quit this coalt. In the neighbouring felds they have groves of trees, from whence they draw a liquor, like toddy, much drank by the feamen and the Moors, when fwectened with black fugar. Of this fugar, infufed in water, and mixed with fplit raifns, they alfo make vineg r. They prepare othen liquors
Vol.I.

## C A M

by diftilling rice, tarry, fugar, and dates. That called the fenfitive plant is common hele; and they have plantations of tobacco and fugar cances.
Damana is a Portugueze factory, the fecond they have in the Indies, and dependent, as their o her Indian factories are, upon Goa. The chief trade of the place is incorn and rice and feveral villages and iflands belong to it, which pay tri bute to the Portugueze. Captain Hamilton fays, that, though it was formerly a place of good trade, it is now a poor one Thevenot fays, they make an excellent fort of bread here of rice, as well as other corn; and that their drink, which is only the water of a thank, is very good: they have beef and pork; but Gamelli fays they are ill tafted; that their fith, which are but indifferent at the beft, are very fcarce; and that they have no oil, even for fauce, but that of cocoa.
Bacaim, Bassaim, or Bassein, 18 leagues along the fhore, to the fouth of Damaan, is another Portugueze factory, which according to Dellon, is four times bigger than Damaan, and has even more people of fathion than Goa. The coaft produces oil and cocoa-nuts; and the adjacent country, for 15 miles, abounds with pleafant fruit-gardens, and plantations of corn and fugar-canes, which are cultivated and watered by the Moors, Gentiles, and Chrifians, whodwell in the neighbouring villages. Captain Hamilion fays it is a place of fimall trade, becaufe moft of it's riches lie dead, and buried in their churches, or in the hands of country gentlemen of pleafure. The town is about half a league from the illand Salfette, which inlet ferves it as a harbour, on the eaft fide, for fmall veffels, but has not water enough for great thips. Between this and Dumaan there are feveral rivers and villages, under the fuperintendency of Surat; as Dumbals, a place of little confequence, either in trade or manufacture; Nunfaree, where is a good manufacture of cotton cloth, both coarfe andin fine; Gundavea, where they cut and export great quantities of teak-timber, of excellent ufe for building of houfes or fhips; Seragoung, a river about four miles from Dumaan, is noted only for being the boundary of the Mogul's dominions on the fea fide.
The moft noted inland towns on the fea-coaft are,
Amad-Abat, Amed-Abat, or Armad-Abat; it is allo called by fome Amandabat, or Amadover. It fands 18 leagues north of Cambaya, and 168 miles norch of Surat. It is a large ftrong city, the capital of the province, and the feat of the Mogul's viceroy, who has the title of rajah, or prince, lives in very great fplendor, and maintains 12,000 horfe, and 50 elephants, for the king's fervice.
The Englifh have a handfome lodge here, with convenient courts and warehoufes, full of the linnen goods of Lahor and Deli. Thevenot fays, the Dutch merchants had alfo a factory, and dealt chiefly in painted callicoes. Pelfart, the Dutch factor, fays, that when he was here, all forts of curious Indian cloths, fattins, filks, and ftuffs, formerly brought from China, culhions wrought with gold wire, fpikenard, affa feetida, and other drugs, white fugar, and fuffs of Patana and Bengal, \&c. were imported hither from Agra; and that they exported farves for turbans, women's headdrefles wrought with gold, velvet, fattins, cocoà-nuts of Malabar, European cloth, lead, pewter, vermillion, quickfilver, and fpices of all forts, which they bought of the Dutch at Surat. Mandelfoe fays, there was farce any nation in the world, or any commodity in Afia, but might be feen in this city. They have a prodigious manufactory for filk and callicoes, as well as of gold and filver brocades; but they are both flight and dear, fo that the inhabitants chiefly ufe China filks, which are finer and cheaper. He tells us, alfo, that, in the time that he was there, they dealt greatly in tuffata's, carpets, fugar in powder or candy, cummin, honey, locque, opium, borax, ginger, mirabolans, tamarinds, and other preferved fruits, falt-petre, fal ammoniac, and indigo. They traffic likewife in di monds, which are brought from Vifapour, with ambergreafe and mufk from Pegu, Bengal, Mofambique, and Cape Verd. All goods exported or import$\epsilon d$ are cuftom-free, except 15 d which is p id for every waggon to the Mogul's receiver. Ogiloy fays, this is one of the four cities which the Mogul honours with his court; and Mandelfoe, that it has 25 large towns under it's juriddiction, befides 2,998 villages. The adjacent country, whach is like a wildernefs, abounds with all kind of fllow deer, roe bucks, wild affes, boars, hares, panthers, tame bufffloes, tgeers, and elephants. Their water is good; and, as they have no wine, they drink the liquor of the cac.o-tree, in which they abound, and a kind of aqua vita, better than ours, which they make of rice, fug r , and dates.
The beft indigo is faid to be made in this place, in pits of 80 or 100 paces round, and made of lime, which grows as hard as marble. Tavernier fays, they fill them balf full of water, and then up to the brim with the herb which relembles cor hemp; others fay it is like a yellow parfnip, and rifes fix or feven feet high, with branches like a reed. The flower is like that of the thille, and the feed like foenugreek. They cut it three times a ycar, firft when it is about, three teet high, within half a foot of the ground. Atter they have ftripped the leaves off of the ftalk, they bruife and ffir them in the water, till it is as thick as mud; and, after a few days fet-

## C A M

## C A M

tling, draw off the water, fill bafkets with the lime, and make it up in pieces like children's tops, or in flat cakes, and afterwards dry them in the fun. The merchants break the pieces, to obferve the colour and fmell, in both which the beft refembles our violets. Then it is fifted, to feparate the duft, during which the fifters ftop their noftrils, keep a little cloth before their faces, with little holes for their eyes, and drink milk every half hour, to preferve them from the piercing quality of the duft; which, notwithftanding all their precautions, makes them fpit blue for a good while. Tavernier fays, that he laid an egg by thefe fifters in the morning, which, when he broke at night, was bluequite through. The natives are very apt to cheat the merchants in this commodity, by adulterating it with a blue fand; fo that, to prevent the impolition, they burn fome pieces of each parcel, when the indigo turns to afhes, but the fand remains. The indigofields are left fallow every fourth year. See Indigo.
The meidan, or market-place, of Amadabat, is one of the largeft and moft agreeable of all the Indies, having on both fides two rows of palm and tamarind-trees, intermixed with orange and lemon-trees, under which the merchants have their fhops, expofe their wares to fale, and carry on their trade.
The Banians, moft of whom are bankers, have very great bufinefs here in the way of exchange. There is not own of any note in the Grand Mogul's dominions, and even in all the Indies, but they can make remittances to, which is very convenient for the merchants, becaufe travelling is very dangerous throughout all Indoftan, unlefs it be in caravans; and the fea alfo is, infefted by the pirates of Malabar, who cruize in the Indian Sea, as the corfairs of Barbary do in the Mediterranean, and part of the ocean.
The Englifh and Dutch, when they have a mind to go to Amadabat, are ufed to fet out with the caravans that go thither from Surat, and afterwards with thofe of Amadabat to Agra, when they have any bufinefs in that capital of the whole empire.
Amadabat is the place where the Englifh and Dutch get all their linnens printed, and their falt-petre refined; and from the fame city come all the blue linnens which are fent into Perfia, Arabia, the kingdom of the Abyffines, to the Red Sea, the coaft of Melinda, to Mofambique, Madagafcar, Java, Sumatra, Macaffar, and to the Moluccoes.
The curent coins of Surat are rupees and pic's; yet, in accounts, they reckon rupees, ana's, and pic's; viz. 16 pic's. to one ana, and four ana's to one rupee; 'Venetians and gubbèrs have no fettled rate; we fold the former, fays Lockyer, for four rupees, one ana, one pic; and the latter for 4013 rupees. Thefe are both of the fame weight, which is here one per cent. larger than in Gombroon.
They ufe different weights in buying and felling, which are appropriated to particular forts of goods; as bezoar by the tola, which is neareft eight penny-weights Troy, and is divided into 32 vols; diamond-bolt by the ruttee of $17 \frac{1}{2}$ grains; Agra mukk by the feer; and bulky commodities by the maund, and candy boroch. I cannot tell, continues the fame gentleman, how the fmall weights rife into the feer, but they commonly reckon 40 feer to a maund, and 20 maund to a candy. Pepper, affa fretida, dry ginger, benjamin, turmeric, tyncell, and faltpetre, have 42 feer to the maund. Aloes, brimftone, copperas, long pepper, dammer, ftick-lacque, and wormfeed, have 44 feer to the maund: coho-feeds and myrrh, $42 \frac{1}{2}$, and opium, $40{ }_{4}^{3}$ feer to the maund: fo that, in all bargains where the weight may be difputed, it is neceflary to agree how many feer fhall go to the maund. I would not be undertood to mention the above as always delivered at thofe rates; but rather to fhew how they have been, and may again be expected: remembering that, for the moft part, goods wherein there is no wafte, as copper, quickfilver, vermillion, ivory, Lahor indigo, tutanaque, \&rc. are fold 40 feer to a maund, which holds out $37 \frac{1}{3}$ pounds Englifh, or three maund to 100.
Mufk Agra in cod was worth 25 rupees per feer, which, at 40 feer to $37 \frac{5}{3}$ pounds, is 14 ounces, 14 drams, $\frac{56}{65}$. Long bezoar, $2 \frac{1}{2}$ to 3 rupees per tola, is, at the higheft, $7 \frac{1}{2}$ rupees per ounce Troy. Quickfilver at 60 rupees per maund is reckoned very cheap: Goa arrack 25 to 30 rupees per 100: Mexico 221 rupees per 100 dollars: pillar, $212 \frac{1}{2}$ rupees per 100 dollars: Perfian abaffees, 56 rupees per roo pieces*. See the articles East-India Trade, East-India Company.
*This account was given by Mr. Lockyer, 1711 , dedicated to the right honourable John earl Paulet.

CAMBIO, an Italian word, which fignifies exchange. It is pretty commonly ufed in Provence, and fome other nations, and particularly the Dutch have alfo adopted it. See the article Exchange.
CAMBIST, a name given in France to thofe who trade in notes and bills of exchange, and who conftantly attend the public meeting-places of the merchants, in order to know the courfe of exchange upon the feveral foreign places, in order to draw or remit at a proper feafon, and negotiate either money or bills. The word cambift, though a term of antiquity, is even now a technical word, of fome ufe among the merchants,
traders, and bankers. Some derive it from the Latin word cambium (or rather cambio) which fignifies I exchange, or barter. Some authors pietend that cambium in Latin fignifies the public place where the trade of exchanging is carried on; but I camot find that it imports fuch fignification. Others derive cambift from the Italian word cambio, which fome take for a verb, fignifying I exchange, but of which Veneroni makes only a fubftantive, that fignifies the exchange. See the article Cambio.
CAMBRESIS, a province in France, bounded on the notth and eaft by Hainault; on the weft by Artois; and on the fouth by Picardy. It is a fmall province, about 16 miles in it's greatelt breadth from north to fouth, and 25 leagues from eaft to weft.
Though the foil in this province be fomewhat dry, yet it is very good and fruitful, and produces moft forts of grain, and flax, the thread of which is fo fine, that it has occalioned the fetting up here a manufacture of curious lawns, callod cambricks, [fee Cambricks] from the-capital city of this province. There are alfo excellent paftures here, efpecially for horfes and theep, the wool of which is extremely fine, and very much efteemed. They had vines formerly, but the wine they produced was fo indifferent, that they have been obliged to deftroy the vineyards.
The inhabitants, in general, have great vivacity, and a genius well turned for the fciences; they are, alfo, laborious, careful, and induftrious.
CAMBRICK, is a feecies of linnen made of flax, very fine and white. This fort of linnen derived it's name originaily from the province of Cambrefis, in the French Netherlands, and from the city of Cambray, which is the capital thereof, where thefe linnens were firft manufactured. Cambricks made in France, at prefent, are not confined to Cambray only ; they are alfo made at Valenciennes, Arras, Bapaume, Veroins, St, Quintin, Noyon, and divers other places in the provinces of Hainault, Artois, and Picardy.
The manufacture of French cambricks hath long fince preved of extraordinary, indeed of unfpeakable benefit and advantage to that kingdom. For many years, it appeared, that England did not, in this article, contribute lefs than two humdred thoufand pounds per annum to the intereft of Frange; which, calculated from the peace of Utrecht to the taking place of the late act of parliament, did not, in that period of time, amount to lefs than between fix and feven millions of money; which round fum, added to our further national expence for other forcign cambricks and lawns, proved motive fufficient to induce the parliament of Great Britain, to enad the following falutary laws, to prevent this great exhauftion of our wealth.

## Laws of Exgland with refpect to Cambricks.

By 18 Geo. II. it is enacted, That, after the 24 th of June, 1748, it hall not be lawful for any perfon to wear in GreatBritain, in any garment whatfoever, any cambrick or Freich lawn, under the penalty of 5 I. to the informer for every offence, being convicted by oarh of one or more credible witneffes, before any one or more juftice or juftices of the peace, who are required, upon any complaint or information upon oath of fuch offence, within fix days after commitment, to fummon the party accufed, and, upon his or her appearance or contempt, to examine the fact: and upon due proof thereof, cither by confeffion, or by oath of one or more eredible witnefs or witneffes (which oath the juftices are required to adminifter) to determine the fame, and, on conviction, to caufe the penalty, by warrant under his or their hand and feal, to be levied by diffrefs and fale of the offeridet's goods, 8 c . rendering the overplus (charges deducted); the party fiay appeal to the jultices at next quarter-feffions, giving fix days notice thereof to the profecutor, which jutices at the faid feffions are finally to determine the fame.
Any perfon after the faid 24 th of June, 1748 , who fiall vend, utter, feli, and expofe, any cambricks or French lawns, made or not made up (except for tranfportation only) and thall be thereof convicted; thall forfeit 5 1. to be recotered as aforefaid.
If any perfon, after the faid 24 th of June, 1748 , be profe. cuted for wearing any cambricks, \&c. and fuch perfon thall difcover, on oath before a juftice of the peace, the perfon who fold fuch cambricks, \&c. to fuch perfons fo wearing the fame, fuch perfon, fo difcovering, is thereby freed from all forfeitures for wearing fuch cambricks, \&c. hall be liable to the faid penalties, and thall be recovered in rianner aforefaid. That, after the Ioth of May, 1745 , no cambricks, or French lawns, fhall be imported ineo any part of Great-Britain, until proof upon oath (or affirmation, if a Quaker) by the importer, at the time of entering the fame, before a proper officer of the cuftoms (which nath the officer is impowered to adminitter) either that the fame are the fole property of the importer, or other his majefty's fubjects, and that no foreigner hath any property or concern therein; and, in that cale, proof Thall be given by the importer to the fatisfaation of the faid officers, that the fame were really fhipped for importation, before the 1 oth of May, 1;45.

## C A M

After Auguft 1, 1745, no foreign cambrick to be imparted without proof aforefaid, that they were fhipped for direct inportation before the faid day.
It fhall be lawful to import into any part of Great-Britain, after the firt of Auguft, 1746, any canbricks or French lawns, or other linnen whatfocver, of the kind ufually entered under the denomination of cambricks, upon oath or affirmation by the importers, that they are intended for exportation only, and that the fame are the property of his majefty's fubjects. And alfo upon the importer's giving fecurity or bond to the fatisfaction of the commiffioners or chief officers at the place of importation, to the ufe of his majefty, his heirs, \&c. in double the value of the goods imported, and which bonds, oaths, \&c. the proper officers are required to receive and adminifter, for the payment of 51 . for every piece of cambrick and French lawn, which thall not be ex ported out of this kingdom within three years after the entry. Fieces loft by fire, \&cc. not liable to the penalty of 5 l . for not being exported.
By 21 Geo. II. for avoiding fome doubts which might arife by 18 Geo. II. it is enacted, That, if any perfon or perfons, who after the 24th of June, 1748, and before the 25 th of March 1749, fhall be profecuted for wearing any cambricks or French lawns, fhall make an affidavit, or bring fufficient proof, or by the oath of the hufband or wife, of the party accufed, or by the oath of any credible perfon, before one or more juftice, \&c. of the peace, that the fame was bought on or before the faid $24^{\text {th }}$ of June 1748 , fuch wearer thall be difcharged from any penalty inflicted by the faid act.
That after the faid 24 th of June 1748 , if any wearer of cambrick or French lawns,' who thall be profecuted by the faid recited act for wearing the fame, and who fhall have purchafed the fame after the 24 th of June 1748 , fhall difcover, to the fatisfaction of the juftice or juttices, the feller of fuch cambricks, \&c. and likewife, that the fame was fold after the $24^{\text {th }}$ of June 1748 , fo as fuch feller fhall be convicted; and become liable to the penalties inflicted by fuch aet; then fuch wearer, fo profecuted, fhall be difcharged from any penalty by the faid act.
That, whenever any perfon informed againft for wearing fuch cambrick, \&c. fhall be excufed from the penalty by ditcovering the feller, the penalty, inflicted on fuch feller, fhall go to the perfon who informed againt the wearer.
Penalties, incurred by a feme covert, to be levied on the goods of the hufband.
If any milliner, fempftrefs, or other perfon, fhall for hire, after the $24^{\text {th }}$ of June 1748 , make up any cambrick or French lawn, fuch perfon fhall be liable to the like penalties as the fellers are liable to, by the faid 18 Geo . II. and the penalties to be applied in the like manner as the fame are directed to be profecuted; levied, and applied by this, or the, faid recited act.
Quakers to make affirmation, and every corrupt affirming liable to the fame penalties, as if the matter had been declared on oath.

## REMARKs.

Thefe acts of the legifature are fufficiently declarative of the national injury we long fuftained, by the importation of French cambricks and lawns; and does it not fill well deferve the public enquiry, whether the remedy provided hath been adequate to the difeafe? Under the article of Great-BriTAIN, I bave fhewed how the balance of trade is fill againft this nation, with thofe countries from whence we take foreign linnens; and therefore, that the apparent intereft of the kingdom calls aloud for further attention to this article. If it be confidered, that the importation of foreign manufactures gives employment to the poor of other countries, and enriches thofe in proportion as it impoverimes our own, and makes our poor Itill poorer ; does it not become the wifdom of the nation to fave thefe out-goings of our treafures, efpecially with nations that take confiderably lefs of our commodities than we do of theirs?
It muft be matter of indifferency to the dealers in foreign linnens of every clafs, in what kind of linnens they traffic, provided they gain as much by the one, as they do by the other. If the traders in foreign linnens could be put into a way to have equal advantages by trading in Scotch and Irifh linnens, as they do, at prefent, by foreign, what motive could induce them to carry on a commerce injurious to the nation, and not more beneficial to themfelves? Does fubftituting the wear of mullins inftead of foreign cambricks, and lawns, effectually anfwer the national end of the aft of parliament? If we pay as much to the Eaft-Indians for this manufacture, as we did to France and Germany for their cambricks and lawns, how is the nation bettered? How is the money faved that we fent out of the kingdom for foreign manufactures, which, I conceive, to be the great end of the act of parliament? If this change of manufacture only does not anfwer the national end propofed; if alfo French cambricks and lawns are palmed upon the nation, under any other evafive denomination; ought not this matter to be fill further enquired into, 'till the grievance may be effectually redrefled, according to the true
intent and meaning of the act ? Since we have made fuch extraordinary advancement in the quality of Scotch and lrifh cambricks, does not the effectual remedy to.this public evil lie in our own hands; and that only by the fimple expedient of making it generally fathionable to wear thofe linnens, which we are able to make among ourfelves? When laws fail of cheir defired effects in cafes of this nature, there is an eafy way to prevent our legiffators from being difappointed in their good intention, namely, To make it fafhionable to pay due regard to the firit of their own laws: and this is abfolutely in their power, however otherwife it may fometimes be; 10 prevent due obedience being paid to their wifeft laws. If. our legifators themfeives would, by their great example, encourage the wear of fuch cambricks as we can make ourfelves, would not this prove more effectual to fupprefs the imporiation of foreign linnens, than all the written laws, and rigorous penalties, that can be devired? Many wife men have thought, that it concerns even the wifdom of the legillature to interpore in the making of fafhions in general, and not leave an affair, of fo great influence, to caprice and bumour. The excellency of our Scotch, Irifh, and Englih linnens of all kinds, depending upon the quality of the Fiax, the delicacy in Spinninf, Bleaching, and Designing, fee thefe feveral articles, together with that of Linnens.
CAMBRIDGESHIRE, a county in England, bounded on the weft by Huncingdonhire and Bedfordhire; on the fouth by Hertfordhire and Effex; on the north by Lincolnflire; and on the eaft by Norfolk and Suffolk.
It's air and foil are very different, according to it's different parts. About Cambridge and all the fouth and eaft parts, the air is judged to be very falubrious; in the life of Ely it is reckoned damp and foggy. The foil in general is extremely fruitful.
The chief commodities of this country are, excellent corn, efpecially barley, of which they make confiderable quantities of malt. They abound in fine cattle, butter, faffron; colefeed, hemp, fih, and wild fowl.
The principal manufactures of this county are paper and bafkets.
It's greateft rivers are, I. The Oufe, which rifes in Northamptonflire, and, after having watered the counties of Bucks and Bedford, runs through this county from welt to eaft, dividing it into two parts, and is navigable from Cambridge to Lynn in Norfolk, where it falls into the Ocean. 2. The river Cam, which rifes in Hertfordhire, and falls into the Oufe at Streatham-Meer, near Thetford. 3. The Welland, which comes out of Northamptonhire, and runs into the German Ocean through the $W$ afh. The others that deferve mention are, the Glene, the Witham, and the Grante. That called Moreton's-Leam, now Peterborough River imbanked, is navigable from Wifbich to that city.
The principal place of general trade here is Sturbridge, where there is a fair, the moft famous in the whole kingdom, both for people and wares. Some years ago it was reckoned the Jargeft in Europe; and, though it is fomewhat leffened of late, it is fill very confiderable. This fair is kept in a large corn-field, near Cafterton and Cambridge, which extends about half a mile fquare to the river Cam. It is an eftablifhed cuftom, that, if the field be not cleared of corn by fuch a day in Auguft, the fair-keepers have the liberty to trample it under foot, to build their booths; and, on the other hand, if they have not cleared the field by fuch a day in September, the plowmen may re-enter with plough and cart.
There is one principal row in the fair called Cheapfide, after the name of that in our great city of London, where are almoft all the trades of London, with coffee-houfes, taverns, eating-houfes, \&ac. which are all kept in tents and booths. The number of thefe, ranged as if they were fo many ftreets, furpafs many towns as much in extent, as they do fome whole provinces in traffic, efpecially in the articles of wool and hops, there having been fold here of the former 50 or 60,0001 . at one fair; and as to the latter, there is fo large a quantity, that they ingrofs a great part of the whole field to themrelves; and the price they are fold at here is a pretty near ftandard to govern the prices elfewhere in England.
Befides thefe, there is an area of 80 or 100 yards fquare, called the Duddery, peculiar to wholefale dealers in woollen goods, where they have room to bring in waggons, to load and unload, and to take down and open their packs before their booths, which are fo large that the infides may well enough be compared to fo many Blackwell-Halls, being warehoufes well ftored with goods. It has been faid, and l believe $w$ th great truth, that there has been a hundred thoufand pounds worth of woollen manufaclures in lefs than a weck's time. At this jubilee of commerce, if I may be a lowed the expreffion, here meet with chearfulnefs the traders of every claf, whofe bufinefs gives bread and employment to thoufands of our fellowcreatures. Here we find the clothiers from Lancaltire and Yorkfhire, with cloths, kerieys, cottons, pennifons, and Manchefter goods of all forts; alfo every kind of upholfter's wares, and Norwich fuffs in abundance, befides the duroys, druggets, and the like manufactures of Devonfhire, from Exeter, Taur.ton, Briftol, and other parts in the weft.
The wool is chicly bought up by the manufac?urers of Nor-
folk, Suffolk, and Effex, and the hops by the dealers of Suffolk, Norfolk, Cambridge, Huntingdon, Northampton, Liacoln, Leicefter, Rutland, and even Stafford, Warwick, and Worcefter. It is no little advantage to this fair that the river Grant, or Cam, which runs clofe by the north-weft fide of the fair, in it's courfe to Catnbridge and Ely, is navigable; by which means all heavy goods are brought by water-carriage from London, \&cc. firft to the port of Lynn in Norfolk, from thence in barges to the Oufe, from the Oufe into the Cam, and fo to the very edge of the fair.
In like manner the heavy goods are fent from hence by water to Lynn, and there fhipped for the Humber and Tine, for the north of England, and even Scotland. Befides the goods bought and fold at this fair, very large commiffions in every branch of commerce are then negociated for other parts of the kingdom.
So great is the concourfe of people at this rendezvous of commerce, that it is common to fee even 50 London hackney coaches there, which ply night and morning to carry people to and from Cambridge; befides the wherries, which are actually brought from London in waggons, to ply upon the river Cam, and to carry people up and down from the town and fair.
At this time a court of juftice is held here every day by the magiftrates of Cambridge, who proceed in a fummary way, as is the practice of pye-powder courts; fo that the fair is like to a well-governed city, without the diforder and confufion with which fo great a concourfe of people is generally attended.
When the wholefale bufinefs of the great hurry of the fair is over, the country gentry flock to it from all parts adjacent, and lay out a great deal of money in toys, drolls, puppet-fhews, rope-dancing, and the like diverfions, which pread a univerfal gaiety among all countenances, the vatural confequences of commerce and innocent amufement.

## Remarks:

Our tradefmen of London being under the difagreeable neceffity of fending riders, at a great expence, to promote their bufinefs, into the country, fhews the ufe and neceffity of fairs in the way of trade. But, as this is a fubject of more concern than the generality have an idea of, I haill defer what I have to fay thereon 'till I come to the article Farrs, where I hall thew what is doing abroad, and what ought to be done at home, in that fhape.
CAMBODIA, in the Ealt-Indies, is a kingdom that lies on the eaft fide of the kingdom and gulph of Siam, having the Indian Ocean on the South; Cochinchina on the eaft ; and Laos kingdom, and the Kamois mountains, on the north. Moll makes it 400 miles, others only 310 from north to fouth, where longeft, and about 210, where broadeft, but it grows very narrow towards the north. The weft part is mountainous and defert, but the midland lies low, and has the river Menemcon, or Mecon, running through the whole from north to fouth, which annually begins to fwell on the Ift of June, rifes io or 12 feet, and, in July and Auguft, overflows the neighbouring lands.
The country abounds with rice, corn, oranges, citrons, mangoes, cocoa, and other Indian fruits, together with peafe, butter, and oil. Here is alfo plenty of japan-wood, rendalwood, aquila-wood, ficklack, lacque for japaning, and many forts of phyfical drugs. The country produces fine gold alfo, cambogia of a gold colour, in rolls; raw filk, at about 120 dollars per pecul ; and elephants teeth, of which the largeft are from 50 to 55 dollars. Captain Hamilton fays, flefh and filh are the only things that may be bought without a permit from the king, and they are fo plentiful and cheap, that the captain fays, he bought a bullock, which was between 4 and 500 weight, for a Spanifh dollar, and that I40 pounds weight of rice may be purchafed for eight-pence: but poultry are fearce.
The country abounds in amethyfts, garnets; faphires, cornelians, chryfolites, cats-eyes, properly called acates, and there are, alfo, thofe called milk and blood-ftones, allum and fugar.
They will not fuffer the Dutch to fettle factories in this country, but are very defirous of trading with the Englifh. Mr. Hamilton fays, that, when he came for this purpofe to Ponteamafs, he fent his fupercargoe, with prefents to the king, who received him in great fate, fitting on a throne like a pulpit, with his face veiled below his eyes, and gave him free leave to trade. And the king, having taken fome time to obtain the confent of his guardian, the king of Cochinchina, invited the Englifh to fettle in his country, and to erect factories, or forts, in any part of his dominions, to protect their trade.
The Englifh merchants had thoughts of fettling a factory at Cambodia, the captital city, 'ill 1705, when the people rofe upon them, and deftroyed that which they had at the inland of Paulo Andore, and burned their houfe, very few of the merchants efcaping with their lives; fo that our people have not been very forward to fettle here fince, efpecially as they have been permitted to eftablifh factories in China, which the

Dutch are not. To make themfelves amends for this; tie Dutch fettled their trade at this place, which, by the communication of rivers, and coafting veffels, fands very convenient to furnifh them with the principal commodities of China, which they bring away to Europe, without the trouble of going farther north to fetch them ; for the river of Camboya has a northern branch, that, according to the Atlas Maritimus, is navigable a great way towards Cochinchina and the bay of Tonquin, with which, by that means, they have a correfpondence; but it is not fo much to their advantage as a direct trade to China would be, the goods being, as it were, all bought at fecond-hand, befides being attended with the extra-charge of land-carriage.
Cupangsoap, fays capt. Hamilton, is the firft fea-port we come to in this country, which affords elephants teeth, ficklack, and the gum gambouge; but there is no free trade here without a licence from the court of Cambodia.
Ponteamas, is the next place, which had a very good trade for many years, having the conveniency of a pretty deep, but narrow river, which, in the rainy feafons of the fouth-weft monfoons, has communication with Banfac, or Cambodia River: this conveniency brought the foreign commerce from Cambodia to this place, where it flourifhed pretty well 'till 1717, when it was plundered and burnt by the Siam ficet. Captain Hamilton fays, that few cared to trade to Cambodia, becaufe the navigation was long and troublefome, which the reader will oblerve to be quite contrary to the foregoing affertion by the Atlas Maritimus, though the author fays, in another place, that hips muft warp up againft the current at leaft I8c miles: tut this contradiction feems to be owing to his not clearly diftinguifhing between the eaftern branch and the weftern, of which the former is beft.
There are feveral illands that lie off the coalt of Cambodia, but none inhabited, becaufe it is infefted by pirates, though there is one about three leagues weft, called Guadrol, that is three leagues long, and one broad, which has good qualifications for a fettlement, fuch as fine fandy bays, that are good harbours, plenty of wood and water, and a foil that is black and fat.
There are feveral fmall uninhabited iflands, alfo, between. Ponteamas and the weft entrance of the Cambodia river. The largeft of thofe is Pullo-Penjang, which confifts of eight inlands in a clufter, in 30 fathom water, that form a good harbour : Pullo-Ubi, which. is the eaftermoft, affords good mafts for thipping, and is the center of navigation for thefe feas, efpecially from Siam, Bantam, and Batavia, to the river Cambodia. Pullo-Condore, is the largeft and higheit of four or five illands, about 40 leagues eaft of Pullo-Ubi, 20 fouth and by eaft from the weftermoft mouth of the river Cambodia. Though Capt. Hamilton fays it is a bad place for a colony, producing nothing but wood, water, and fifh, and having but two harbours, neither of them good; yet the Englifh fettled here in 1702, when the factory of Chufan, upon the coaft of China, was broke up; but, having bargained with fome Maccaffers, natives of the inland of Cabebes, to ferve for foldiers, and help to erect a fort, and not difcharging them at three years end, according to their contract, they rofe in the night, and murdered every Englifhman they found in his bed.
They have a little rice, fome potatoes, and very good banana's, but little elfe grows on the ifland, except fome fine trees on the mountains, which afford timber for mafts, \&c. particularly one of a very large kind, whofe leaves and bark much refemble a chefnut, and the wood is extremely hard. There runs from it a fort of rofin, which they procure by making a cavity in the trunk, three or four feet above ground, wherein, at a certain feafon of the year, they kindle a fire, which makes the rofin liquify into the bottom, as into a receiver. With this rofin they make flambeaux, which they burn in the ftead of candles. Dampier calls it pitch, and others oil, becaufe the matter is at firft liquid, and is of the colour of the oil of nuts, though afterwards it turns whitifh, has the confiftency of butter, and a very agreeable fmell *.

* Is it not certain, that many vegetable productions will af. ford a more healthful, pleafant, and agreeable matter for making of candles than tallow i As nothing is more difagreeable to many, and therefore, perbaps, no way wholefome to any, than the fnuff of a candle when juit extinguifhed; fo, while burning, there conftantly evaporates a fume that may not be falubrious. The myrtlentree affords fine candles, and of an exhilarating fcent.
Martiniere fays, the Englifh bought this inland in the lat century, becaule it has a good harbour, and lay convenient in the way to China; but, on their being maflacred, as above, when their fort was demolifhed, the ruins of which are ftill to be feen, it reverted to the king of Cambodia.
The inhabitants employ themfelves for the moft part in fifh. ing, making the oil of tortoifes, flambeaux, planks for the fides of their veffels, and in making brine for falting fmall finh like anchovies, which abound in this fea.
CAMLET, or, as fome 'fpell it, CAMBLET, a plain fuff, compofed of a warp and woof, and which is manufactured on a loom with two treddles, as limens and ftamines are.

The camlets are either longer or fhorter, broader of narrower, according to their feveral kinds and qualities, and the places where they are manufactured. There are canulets of all fores: Come in goar's hair, both in the warp and woof, others, in which the warp is of hair, and the woof hall hair and half filk; others again, wherein both the warp and woof ate of wool : and, lafly, fome of which the warp is of wool, and he woof of thread.
Some are dyed in thread; that is to fay, that the materials both of the warp and of the woof were dyed before they were wove, or wrought on the loom : others are dyed in the piece; others are marbled, or mixed; fome are ftriped, fome waved, or watered, and fome figured.
Camlets are proper for feveral ufes, according to their different kinds and qualities. Some ferve to make garments, both for men and women; fome for bed curtains, and other boulhold furniture, altar curtains, and other church ornaments, in France.
The places, under the King of France's dominion, where they rake the greatef quanticies of camlets, are, Lifle in Flanders, Arras in Artois, Amiens in Picardy, La Neuville near Lyons, and fome places in Auvergne. In time of peace the French do alfo import fome from foreign countries, particularly from Bruffels, Holland, and England, the latter of which are very much efteemed.
Lafty, there are filk camlets of feveral colours, efpecially crimfon, carnation, or flelh-colour, and purple, which are manufactured at Venice, Florence, Milan, Naples, and Lucca; but thefe are properly tabbies and taffeties, difguifed under the name of camlets.
The watered camlets of Verona, which are alfo called Verona carpets, may more properly be called a kind of tabbies.
Lifle furnifhes a great quantity of camlets, fome all of hair, others all of wool, both warp and woof; their breadth molt commonly is half an ell, or half an ell wanting $\frac{x}{x}$, each piece meafuring 21 or 22 ells in length, Paris meafure. Thefe camlets are wove white, and afterwards dyed of feveral colours, and then pafled under the hot-prefs, to make them fmooth, and give them that luftre which is obfervable in them
They allo manufacture at Line, and in fome other places of French Flanders, a prodigious quantity of fmall camlets, or camelotines, which are very narrow and very light: thefe are chiefly defigned for Spain, The Dutch give feveral names, and even pretty odd ones, to thofe camlets; the chief of which names are, the amparillas, or nonpareille, polunitte, polomit, or polomitte, \&c.
The camlets of Arras are commonly very coarfe, having a very round grain, more like that of barracans than that of common camlets. Moft of them are manufactured white, afterwards dyed, and than calendered. Some are half an ell, and others three quarters and a half wide. The pieces are commonly 20 ells long, Paris meafure.
They make a great many camlets at Amiens, whofe names and qualities are different.
The filft, which are reckoned the beft, are called camiets after the manner of Bruffels, becaufe they, in a manner, imitate the true Bruffels camlets in the weaving, length, breadth, and materials they are made with.
The fecond are a fort of fmall narrow barracans all of wool, which they fometimes call camlets with twifted thread, or camlets with a coarfe grain.
The third are called camlets quinettes, whofe thread of the woof is but one fingle thread, very much twifted. It is all of wool : the piece is half an ell wide, and 2I ells long, Paris meafure. They are commonly wove white, than dyed feveral colours, and afterwards preffed, or calendered, hot.
The fourth go under the name of fmall ftriped camlets, becaule they are ftriped with feveral colours length-ways, from the head to the end of the piece. They are half an ell wide, and the pieces meafure from 21 to 22 ells, Paris meafure. They are likewife paffed under the hot-prefs, as the quinettes camlets.
They make likewife at Amiens fome fmall camlets of thread and wool, half an ell wide: but there are few of thefe.
The camlets of Amiens, whofe warp is of hair and wool, and the woof all of hair, are $\frac{2}{3}$ of an ell wide, and in length from $3^{2} \frac{3}{4}$ to $3^{8} \frac{3}{4}$.
There are fome, allo, whereof the warp is of filk and wool twilted together, and the woof of wool: they are alfo $\frac{3}{4}$ wide.
By a decree of the king's counfel of fate, made the $17^{\text {th }}$ of March, 1717, for regulating the manufactures of Amiens, whofe weavers have no particular ftatutes, it is ordered :
I. That the warp of camlets all of wool, after the manner of Bruffels, fhall confift of 840 threads: that they fhall be half an ell wide between the lifts, and 36 ells long.
II. That the camlets inriched with two threads of filk, after the manner of Holland, thall have about 1100 threads in the warp, be half an ell broad, and from $3^{6}$ to 40 ells long.
III. That the warp of the fuperfine camlets, Bruffels fathion, Thall be of goat's hair fpun, or of camel's hair, with two threads of filk, and have between 1300 and 1500 threads; the woof to be double of goat's or camels hair, of the fame length and breadth as the former.
Vol.I.

## C A M

IV: The friped camlets, and the plain ones of a changeable colour, muft have 396 threads in the warp, be half an ell wide between the two lifts, and $2 \mathrm{I} \frac{1}{2}$ long, coming from the loom, that they may afterwards be full. 21 ells long, according to the egulations of the year 166 g .
They ufed formenly to make at Amiens a fort of extraordinary camlets, which they called bangmers. It was wrought with quares, or with wave, and wove on a loorn with feven or eight treddles. The warp and woof were of wool, and the figures of white Epinay thread. There was a pretty great confumption of thefe camlets in France; and they ufed, alfo, to fend confiderable quantitic, of them into foreign countries, efpecially into Portugal. Bur, at prefent, they make hardy any, they being ablolutely gone out of fathion.
The camlets of la Neuville are much like thofe of Bruffels, and almoft equally efteemed; whence they are conmonly called camlets after the manner of Bruffels. Their moft ufual breadth is half an ell and half a quarter, and the pieces are commonly from 35 to 40 ells long, Paris meafure. France is obliged to the Sseurs Claude and Jofeph Verdun, two brothers, for the eflablifhment of this marufacture.
The camlets of Auvergne do not much differ from the ftriped camilets and quinettes camlets of Amiens, but are coarfe, and of an inferior quality.
The 18th article of the general regulations for the manufactures, made in Auguft, 1669 , and the decrees of the council of the 19 th of February, 1571 , and the 11 th of March, 1673 , have fettled the length and breadth of the feveral forts of camlets that ase made in France.
The camlets of Buffels are either variegated or plaini, without any ftupes and figures. They ate commonly half an ell and half a quarter wide, or $\frac{2}{3}$ of an ell, and from 35 to 60 ells long, Paris meafure. There are fome all of hatr, both in the warp and woof; fome whereof the woof is of hair, and the warp half of hair, of the fame colour with the woof, and half of filk, of another colour ; which renders the camlet variegated, that is to fay, that every thread of the warp is compofed of two threads, the one of hair, and the other of filk, well twifted together. The Bruffels camlets ate commonly calendered, and excel both in goodnefs and beauty above thofe made in France, and even in Holland and in England, though the latter come pretty near them, and are very much efteemed.
Figured camlets are thofe of a fingle colour, on which have been ftamped, or imprinted, various figures, flowers, foliages, 8 cc . This is pefformed with hot irons which are a kind of moulds, that are paffed under a prefs at the fame time with the ftuff. The figured camlets come only from Amiens and Flanders. The trade of them was formerly pretty confiderable; at prefent there are but few of them fold, which ferve commonly for church ornaments, or for making fome hduf hold furniture.
Waved camlets are thofe on which a kind of waves have been impreffed; as on tabbies, by making them pafs feveral times under the calender.
Water camlets are fuch, which, being taken from the loom, undergo a certain preparation with water, after which they are put into the hot-prefs, that renders them fmooth and gloffy.
They who make camlets, and the merchants who deal in then, ought to be very careful that they do not acquire any falfe or bad plaits, becaufe it is very difficult to get them out again; which gave occafion to this French proverb, That man refembles a camlet, that is to fay, he bas taken his plait; intimating, that he has got an ill habit, of which it is impoffible to cure him. All forts of camlets, even thofe of Holland, muft enter France only by the ports of Calais and St. Vallery, according to the decrees of the 8 th of December, 1687 , and the 3 d of July, 1692.
CAMP. The Siamefe, and fome other nations in the Eaft Indies, give the name of camps to the quarters which they affign to the foreigners who come to trade with them. In thefe camps every nation forms, as it wete, a particular town, where they carry on all their trade. They not only keep their warehoufes and Thops there, but alfo live in thefe camps, with their families, their factors, and agents. The Europeans are free from that fubjection at Sian, and almoft every-where elfe, and are at liberty to dwell in the cities, or in the fuburbs, as they judge it moft convenient for their trade.
CAMPHIRE, or, as fome write it, CAMPHOR, a body of a particular nature, peculiar to itfelf, which is neither a refin, nor a volatile falt, nor an oil, nor a juice, nor a bitumen, nor a gum, but a mixed fubftance, dry, white, tranfparent, and brittle, of a flrong and penetrating fmell. It is eafily evaporated in the air if it be a little hot. It is very inflammable, and cannot be eafily extinguifhed, burning even in water and in fnow: wherefore, camphire appears to be chiefly compofed of an inflammable principle rarified, mixed with fome aqueous particles, and a very fubtile and attenuated earth.
Camphire may probably be extracted from all plants (even from thofe of Europe) which abound with an effential oil; yet it would differ with regard to the fmell, always retaining that from which it is extracted. The reader may lee, in the

Philofophica

## C A M

Philofophical Tranfactions, how Mr. Neuman, a celebtated chymit of Berlin, extracted eamphire from thyme.
Camphire is divided into natural and fistitious, or artificial. Natural camphire comes two ways: I. It is to be found in the illands of Borneo and Sumatra, in certain feafons of the year, berween the wood and the bark of a tree, which looks pretty much like falt; it is the moft excellent and moft precious of all, being, as it were, diffilled by the heat of the fun. It differs from the other forts, in not evaporating in the air. It is allerted, that this tree produces hardly one ounce of camphire, for which reafon it is worth above a hundred times more than the fictitious camphire of Japan, and there is but very little of it, if any, exported out of the country. The fecond fort of natural camphire runs from incifions made in the trunk and chief branches of a very thick tree which grows in feveral parts of the Eaft-Indies, but chiefly in the ifland of Borneo.
The fictitious camphire is that of Japan. The tree from which they obtain it is very large and thick; they call it cufnoiky in that country. It produces fine leaves, which, when full grown, become, by degrees, of a beautiful yellow. They fmell very much of camphire, efpecially the fruit, which hangs either fingly, or in couples, by a long ftalk. It is of a bright green, round, fhort, very near of the figure of a common acorn, and is furrounded with a fhell of a deep green. There is abundance of thefe trees in the weftern parts of Japan, namely, in the province of Satzuma, and in the ifles of Goths: This tree grows fometimes to fuch a bignefs, that two perfons could hardly grafp it. The Japanefe know how to cut dextroully part of it's root, of which they make very pretty little tables. In order to get the camphire, they cut the remainder of the root, and the moft tender hoots, into fmall bits of the bignefs of one joint of a finger: thefe they boil in water during 48 hours, in large iron or copper kettles, over which they put covers, in the fhape of alembics, hollow, with long necks, which ferve to keep and fop the camphire which rifes with the fteam, by means of the fire. When all is cool again, they gather the camphire, and keep it for ufe. But, as this is the work of the countrymen in Japan, where this drug is fo little valued that they hardly prepare any, unlefs the Dutch merchants give commiffion for it in the preceding year, it is no wonder that this operation thould be performed in a very grofs manner, and that fome fmall particles of the wood fhould be mixed with the camphire; for which reafon the Dutch refine it either to feparate the wood from it, or, if it be of the fecond natural fort, to remove the earth, or fand that mixed with it, whilf it diftilled from the tree, or was added to it to increafe its weight. The Dutch, fays Monfieur Garcin, have places on the weffern coaft of Sumatra, which afford them a great deal of camphire, and is the beft in all the Eaft-Indies, efpecially that which grows at Baros, whence, allo, comes the beft benzoin. Though there be a great deal of camphire in Japan, yet the Japanefe have fo great a value for that of Baros, which the Dutch carry to them, that they buy it very dear of the latter, for that of Japan is good for little in comparifon to the other; and as it is cheap the Dutch buy it, and mix it with that of Sumatra, and, being thus mixed, it looks pretty fine.
The difference of thefe two forts of camphire, when crude, is not, perhaps, fo great as may be commonly imagined. The Dutch underfand perfeclly well how to purify and refine this matter, and give it a proper form, of which the Japanefe are perfectly ignorant.
This is the reafon why the latter, who would have good and well-purified camphire, buy that of the Dutch at a very high price; and the Dutch, in their turn, are fond of that of the Japanefe, becaufe it is very cheap, and they know how to refine it, wherein they find their account.
In Europe the merchants give the name of crude camphire to that which is brought from the Indies in fmall loaves, or lumps, fuch as are formed and found at the foot of the tree in which the incifions were made. Camphire in that condition muft be chofen in pieces that are brittle, white, clean, dry, and of a good fcent, and, being crumbled, it muf look like common white falt.
The Sieur Pomet, in his General Hiftory of Drugs, charges the French artiffs with being either unwilling, or uncapable, to refine camphire, and chufing rather to have recourfe to the Dutch, than to perform themfelves the fublimation of it; which, however, does not feem very difficult, according to the method prefcribed by that author.
The manner of refining camphire, as defcribed by Pomet and Lemery, in the Memoirs of the Royal Academy of Paris, for the year 1705.
Crude camphire is refined in order to clear it of fome earth, or fand, that was mixed with it as it fell from the tree. To effect which, it is put into a matrafs, or any other fublima-, tory veffel, being firft well broke and pounded. When the veflel is half full, you fop, or fhut it Alightly, and put it over a middling fire; which immediately urges the moft fubtile parts of the camphire upwards, whereby it is at laft intirely fublimated, except the caput mortuum, reckoned worth nothing, which remains at the bottom of the velfel. When

## C A M

the fublimation is compleated, you have a refined camphire, white, tranfparent, and as fine as that which the Dutch prepare, and in bits more or lefs large, according to the quantity of crude camphire you have made ufe of. It is liquefied after fublimation by a moderate heat, and caft afterwards into moulds, to give whatever form the operator pleafes.
Amongft the camphire refined after that manner, there remains commonly a fmall portion of it extremely white, in fmall grains, which could not incorporate with the reft, but is neve thelefs of a good quality.
Refined camphire muft be chofen the whiteft, the cleareff, the leaft footted, clear, light, friable, of a ftrong, penetrating, difagreeable fmell, burning intirely, without leaving the leaft remains; and as little broke as poffible; though, for ufe, camphire in fmall bits is not worfe, than that which is more large and entire.
It is not very eafy to adulterate this drug: but what may make fome difference, with regard to it's goodnefs, is it's being more or lefs purified or refined.
In order to preferve this fubflance, and prevent the evaporation, it muft be put into bran or linfeed, that this feed, by it's vifcofity or clamminefs, may retain the particles of camphire, and prevent their diffipation: for the traders therein obferve that this drug, without fomething of the like care, diminifhes by being kept *.

* Quere, Will not the bran, or the linfeed, deftroy the quality of refined camphire, though they may not diminith it's quantity? Is there not fuch a magnenifm in bodies, as to attract, imbibe, or repel the virtues of each other i efpecially between fuch oleaginous and aqueous bodies as linfeed and camphire: May not fo dry and hufky a body, as bran, abforb the fubtile firit of the camphire, and greatly in jure it's virtues, though it hould not leffen ir's weight, the quality, perhaps, having little affinity with the quantity of matter?
They extract from camphire, by means of firit of nitre, a fort of oil of an amber colour, very much efteemed for curing rotten bones. If the reader is curious to know fomething more concerning this fort of oil, he may confult Monf. Lemery's work, who is thought to have handled this fubject better than any body elfe.

## REMARKs.

## Experiments on Camphire.

I. Take one ounce of alcohol *, and by degrees add thereto an ounce of folid camphire; all which it will nearly diffolve, in a very fhort time, without any ebullition, or apparent alterations of fluidity, or tranfparency. After which, pour in a large proportion of fair water, which weakening the folution, and uniting with the alcohol, will caufe it to let go the camphire, that now all rofe white, folid, and perfect, to the top of the mixture.

* Alcohol is an highly rectifed fpirit of wine, a liquor obtainable from vegetable fabjects, by fermentation, diftiliation, and relification: [fee the article Distililation.] It appears related to oil, becaufe totally inflammable; and, when carefully examined, to be the effential oil of the vegetable, intimately broke and ground in, among the par-
ticles of water; fo as to form one uniform liquor, not eafily feparable again into different parts.
From this experiment, we learn, that an highly rectified firit of wine hath the power of diffolving about it's own weight of camphire; which when duly examined, appears to be a particular kind of volatile, or effential oil, congulated into a white and folid fubftance. And, as fuch an oil, it is plentifully diffolved in alcohol.
This alcohol is a capital menftruum in chymiftry, and fitted to diffolve rofins, as well as oils. Though it does not thus mix inextricably with either, but leave them feparable again, by the bare addition of water, which it diffolves more readily than either oil or rofin; and, therefore, lets them go to join with this, according to the law of precipitation: For, whenever one body has diffolved another, and a third be added to the folution, which third has a greater relation to either of the former, than they have to each other, their union is feparated, and the third body diffolved, inftead of the firt or fecond, one of which is at liberty to rife, or fall to the bottom, according to it's fpecific gravity: as we faw remarkably in the prefens experiment, where the camphire, diffolved in the firit of wine, was foon made to float upon the furface, by the addition of water, which has a greater appetite of union, or relation, to fpirit of wine, than that fpirit has to camphire. And the phyfical reafon hereof may appear, from what was jut now faid of the compofition of this firit, it's being an intimate mixture of water and volatile oil.

## Experimentill.

A facile and fimple method of preparing a fafe and effectual fudorific from camphire.
If an ounce of refined camphire be beat and ground in $\approx$ marble mortar, with two ounces of blanched almonds, the camphire will be thus fubtilly divided, and brought inito a

## CAN

uniform and conliftent mafs, fit for the forming of pills, boJuffes, $8 c$. fo as to be commodioully taken in the way of a fudorific, difcutient, or perfirative remedy; the dofe whereof may be affigned, betwixt the limits of three grains and forry, or two fruples.
Sudorific, perfiritative, and alexipharmic/medicines, make a large part of the common difpenfatories: 'tis judged, that their places may be advantageoully fupplied by a few powerful ones of approved virtues; among which, this of camphire is efteemed as a principle one, or, at leaft, fuperior to Gafcoign's powder, lapis contrayervæ, bezoar, \&c. whofe virtues, at beft, appear to be fmall.
The virtues of camphire are not, indeed, univerfally agreed on by phyficians; fome efteeming it hot, others cold; fome of great, others of little efficacy: but the cafe is not to be decided by authorities, but experience, which feems to declare, that camphire is one of the moft powerful, moft immediate, and moft innocent perfpiratives, fudorifics, and alexipharmics, hitherto known: for a large dole of it, fuptore a fcruple, or more, though given diffolved in fpirit of wine, to a healthy perfon, does not increafe the pulfe, or excite a preternatural heat; but rather caufes coolnefs and compofure, with a gentle fweating, or increafe of perfiration. So little have the virtues of this medicine been underftood, or fo little can the virtues of medicines in general be deduced from their apparent properties, or reafoning a priori! The natural and medicinal hiftory of this drug well deferves to be traced: it appears to be an effential oil, of peculiar properties; though fome would have it a rofin, others a gum. Certainly it ftands alone, as a matter fui generis; a body wherein the nature of rofins, gums, and effential oils, are concentrated in fome degree. It is, perhaps, one of the moft difcutient and fubtile remedies hitherto difcovered, in the whole materia medica. Whence it proves highly anodyne, perfinative, anid prefervatory. And, from certain obfervations and experiments, it hath been judged, that, if all the virtues of this concrete were fufficiently known, with regard to it's external as well as internal application, it might effectually fupply the place of numerous other drugs and preparations, to the eafe and advantage of pharmacy. See the article Pharmacy.
In cafes both of the recent and inveterate lues venerea, this medicine, fkilfully prepared and applied, has been recommended to be ufed inftead of the common fudorific decoction of the woods. It may alfo be advantageoully mixed along with the balfams, or fine turpentines, commonly ufed at the clofe of that diftemper, as the balfam capivi, \&c. Some phyficians have recommended it in all inflammatory, putrid, peftilential, and even maniacal, difeafes. And whoever bas the fecret of prudently joining this fimple medicine along with nitre, perbaps, performs cures fcarce to be expected from other medicines frequently ufed for the fame purpofes. See the article Nitre.
CANADA, a colony in North America, belonging to the French, before the Definitive Treaty of 1763 , which has annexed Canada and all it's dependencies to the crown of Great-Britain. See the article America, where the reader will find the Definitive Treaty of 1763. We thall let this article ftand as it did in our laft edition, that the better judgment may be made of our affairs in America; at prefent. The limits of this large country are varioully fixed by geographers, fome extending them quite from Florida to the northern boundaries of America, or from 33 to 63 degrees north latitude (Robbe) though Canada, properly to called, and diftinguifhed, be only a fmall province of this whole tract, and feated on the fouth and eaft of the river St. Lawrence, and eaft of it's mouth. Others bound it on the north, by the land called Labrador, or New Britany; on the eaft by the northern fea and New England, \&c. on the fouth by Florida, and on the weft by New Mexico, and the unknown tracts north of it. According to which, it will extend itfelf from the 25 th to the 53 d degree of latitude, and from 76 to 93 of weft longitude : but it's greateft extent is commonly taken from fouth-weft to north-eaft ; that is, from the province of Padoau, in New Spain, to Cape Charles, near the bay of St. Laurence, which is reckoned near 900 leagues. Baron Hontan makes it to reach only from 39 to $\sigma_{5}$ degrees of latitude'; that is, from the routh fide of the Jake Erie to the north fide of Hudfon's-Bay, and in longitude from the river Miffiflippi to Cape Rare in Newfoundland; but it is plain from the more recent furveys, publifhed by Monf. Bellin, that the province of Louifiana is, by this French geographer, made to reach farther, by a great many degrees weftward, than the river abovementioned; though, how far the French think proper to make it, no one can decide, but they are fure always to take elbow room enough, notwithftanding they may happen, in this part of the worid, to incroach a fcw hundred leagues now and then upon the Englifh, whom they would gladly extirpate from adl North America. See the articles British America, French America, and our maps of America, compared with thofe of the Sieur $D^{\prime}$ Anville *.

- It is obfervable, in our attention to the conduct of the court of France, that they are very folicitons fo dextroully to

## C AN

moculd and fahion their royal geographers and hydrographers in their office of marme, that all their maps and feacharts mąy molt accurasely quadrate with their political yftem of incroachment opon the territories of other nations. For glaring inflances of which, fee our maps of North and South America, compared with thofe of the Sieur D'Anville hat were executed under the patronage of the French courts and our articles of British America, French America? Sp̈anisy America; fee allo our maps of Africa, where it will appear, how fhamefuly the French have wi hin thefe ew years, incroached upon Brith ionts and priviege of trade' feveral hundred le Bribe and trides ar Mofambue upon the , and afe the Ponkig $f$ what is publicly faid and believed be the Portagueze, $f$ what is publicly faid and believed, be true.
The expence of the French court, in regard to the late artic'e of map, and chart-making, hath been faid to exces awenty houfand pounds ferling. See Le Neptune Oriental, ou Ro:t ier General des côtes dés Indes orientales \& de la Chine, enrichi de cartes hydrograrhiques tant géneral que particuheres, \&c. Par Monf. D'Après de Munevillerte. - This nation is not accuftomed to be profufe of their cafh, without the view of an ample equigalent in return: and it is a pretty artful, though imperceptible, way of obtaining compentation, by firt putting their geographers upon autienticating their imaginary rights, by pen and ink, that they may verify and confirm their extraordinary accuracy, by actual pofteflion.

As it's extent is fo great both in length and breadeh; it's temperature, climate, foil, \&c. cannot but vary accordingly : all that part which is inhabited by the French, and which is moftly along the banks of the great river St. Lawrence, is, generally fpeaking, exceffive cold in winter, though hot in fummer, as moft of thofe American tracts commonly are, which do not lie too far to the northward. The reft of the country, as far as it is knowni, is interfected with large woods, lakes, and rivers, which render it ftill colder; it has, however, no inconfiderable quantity of good fertile lands; which, by experience, are found capable of producing corn, barley, rye and other grain, grapes, and fruit, and indeed, almoft every thing that grows in France; but it's chief product is tobacco, which it yields in large quantities:
There is likewife plenty of ftags, elks, bears, foxes, martins, wild cats, and other wild creatures in the woods, befides wild fowl and other game: The fouthern parts, in particular, breed great numbers of wild bulls, deer of a fmall fize, divers forts of roebucks, goats, wolves, -\&c. a great variety of other animals; both wild and tame.
The meadow grounds, which are all well watered, yield excellent grafs, and breed great quantities of large and fmall cattle; and, where the arable land is well manuited, it produces large and rich crops. The mountains abound with coal mines, and fome, we are told, of filver, and other methls, though we do not learn that yet any great advantage is made thereof. The marihy grounds, which are likewife very extenfive, fwarm with otters, beavers, and other amphibious creatures, and the rivers and lakes with filh of all forts.
The lakes here are both large and numerous; the principal of which are thofe of Erie, Michigan, Hufon, Superior, Frontenac, or Opravia, Nipiffing, Temifcaming, befides others of a fmaller fize; but the largelt of them is that which they name Superior, or Upper Lake; which is fituate the farthef north, and is reckoned above 100 leagues in length, and about 70 , where broadeft, and hath feveral confiderable iflands on it : the chief whereof are the Royal Ine, Philipeau, Pont Chartrain, Maurepas, St. Ann, St. Ignatius, the Tonerre, or Thunder-Inand, and a good number of fmaller ones, efpeci ally near the coafts.
The whole country abounds with very large rivers, which it is endlefs to enter into a detail of ; the two principal are, thofe of St. Lawrence, and the Miffiffippi. The former of which abounds with no lefs variety than plenty of fine finh, and receives feveral confiderable rivers in it's courfe. The entrance into the bay of St. Lawrence lies between the Cape de Retz, on the ine of Newfoundland, and the norti cape in that called the Royal Illand, or more commonly Cape Breton. That of the Miffifippi, which runs through the greatef part of the province of Louifiana, from north to fouth, is called by the French the river of St. Louis, and by the natives of Mifchifipi, Miffffippi, and Mefchagamifii, on account of the vaft tract of ground which it overflows at certain Ceafons; and by the Spaniards alfo called La Paliffada, from the prodigious quantities of timber which they fend down upon it in floats to the fea. It is navigable above 450 leagues up from it's mouth. The fpring head of this river is not yet fatisfactorily known ; but 'tis certain, that it difcharges itfelf into the gulph of Mexico by two branches, which form an ifland of confiderable length.
Canada, in it's largeft fenfe, is divided into eaftern and weft ern, the former of which is commonly known by the name of Canada, or New France, and the latter, which is of much Jater difcovery, Louifiana, in honour of the late Lewis XIV. The eaftern Canada contains the following provinces, viz. 1. Canada, properly fo called. 2. Sanguenay. 3. Acadia. 4. Atrurumbeg. 5. New England. 6. New Holland. 7. New Sweden; the five laft of which having been difmembered from it fome time fince; fo that there are but two provinces

## C A N

## CAN

In this eaftern Canada, that now belong to the Fiench, viz. Canada Proper and Sanguenay.
The former of the fe, including all to the north and welt of the great river and lakes, contains the 28 tribes following, (which, however, we fhall not take upon us to give a minute defeription of, feeing it would take up too much room) viz. f. Quovatovata, 2. llitiois. 3. Quioquibac. 4. Miamis. 5. Attiquemeques. 6. Makontens. 7. Aentordac. 8. Ontovagarmis. 9. Errahonanoate, io. Hurons. ir. Chiantonati. 12. Outaovatz. 13. Chavuarear. 14. Enchek. 15, Aoflendi. I6. Nipifirinians. I7. Eachiriovacheon. 18. Taranton. 19. Quionontarcon. 20. Algonkins. 21. Elfovataizonon. 22. Oavechiflaton. 23. Skiarenons. 24. Aftakouvanda, Oronons. 25 Nadoveffoveronons. 26. Kiriftinoas. 27. Iramnadous. 28. Jaetous. But, at prefent, it is divided into the 13 following provinces, moft of them named from their capital towns or forts, viz. x. Gafpe. 2. St. Jean Ine. 3. Mifcon Ifle. 4. Richlieu. 5. The three rivers, or Treable river. 6. Mont-Real Ine. 7. Fort Frontenac. 8. De Conti. 9. St. François. 10. Nôtre Dame des Anges. ir. St. Alexis. 12. St. Michael. 13. St. Jofeph.
Sanguenay contains the four following nations or tribes, viz.

1. The Efquimaux. 2. Berfiamites, or Oupapinachois. 3. Oumionquois; and 4. Cocouchaquois, and is divided into the fix following provinces, or cantons, called fo from their chief towns or forts, viz. Quebec, a bifhoprick. 2 Silleri. 3. Tadouffac. 4. Port-neuf, or New Port. 5 Chichequedec. 6. Port St. Nicholas. Thefe three laft, together with Port-quartier, belong to the Efquimaux, of which we fhall feak more fully in it's proper place. The numerous wild nations of thefe parts are enumerated by Baron Hontan, to whom we refer the reader for a particular account.
Canada Proper, is by far the moft confiderable province of all New France, the farther fubdued, the beft peopled, and the beft cultivated.' It hath on the north the Terra de Labrador, Hudion's-Bay, and New Wales. On the eaft the great river Sanguenay divides it from the province of that name; on the fouth the great province of Louifiana, and the Iroquois, and Etechemins; as to the northern boundaries, they are not known, and muft be left to time to difcover. This province is allowed to have greater plenty of beavers, and larger and finer, than any other that are bred throughout Canada. Thefe, as well as the caftors, are very much valued, not only for their furs, but the latter for it's teflicles, which have been, from long experience, found to be an efficacious remedy againft feveral difeafes, efpecially thofe of the hylteric kind; and accordingly the natives carry on a large commerce of both. The river Canada abounds with variery of fifh, efpecially carp of a prodigious fize, and white porpoifes as large as oxen, befides great quantities of crocodiles, and other amphibious creatures.
This colony is faid by fome to amount to 80,000 French, who live in plenty and tranquillity. They are free from all taxes, and have full liberty to hunt, fifh, feil timber for fuel or building, to fow and plant as much land as they can cultivate. Their greatef hardfhip is the winter cold, which is there fo exceffive from December 'till April, that the greateft rivers freeze over, and the fnow lies commonly two or three feet deep on the ground, though this part lies no farther north than from 40 to 48 degrees of latitude.
Treable River, or the Three Rivers, fo called from the three rivers which join their currents about a quarter of a mile below it, and fall into the great one of St.Lawrence, is the capital of the French government in New France, and much reforted to by feveral nations, which come down thefe rivers to it, and trade with it in various kinds of furs. The town here is furrounded with pallifades, and advantageoully fituated in the center of the country, and confequently free from the incurfions of the favage Iroquois. It is the refidence of the governor, who keeps a major under him, and hath a monaftry of recolleEts, who are the curates of the place. It was formerly the common empory, where the wild natives brought their furs, and other commodities, for fale, before the Englin feized it, and their fettlement at Mont Real. .The colony was again reftored anno 1635, and the Monks who had fettled a miffion there, returned to it, anno 1673. The country about it is pleafant, and fertile in corn, fruits, \&ec. and hath a good number of lordifips and handfome feats. On each fide of the river ftands, a valt number of genteel houfes, fcarce above a gun-fhot from each other, and the river is full of pleafure and fifher-boats, which catch vaft quantities of finh.
Mont Real is fituated on an ifland of the fame name, in the river of St. Lawrence, about 14 leagues long, and 4 wide, where broadeft, and very fertile in corn, fruits, \&c. This town drives a prodigious trade with the natives, whofe chiefs go firft to pay their duty to the governor, and make him fome prefents, in order to prevent the prices of goods which they come for, being raifed to an exorbitant height. This concourfe begins about June, and fome of them come hither from places diffant above 500 leagues; the fair is kept along the banks of the river, where thefe natives exchange their commodities with the French; and there are placed centinels, at proper diftances, to prevent the diforders which might otherwife happen from fuch valt crowds of different na.
tions. This concourfe lafts for near thrce months. The natives bring thither all forts of furs, which they batter for guns, powder, ball, great coats, and other garments of the French manufacture, iron and brafs work, and trinkets of all forts.
Sanguenay, a province in the eaftern Canada, and is divided on the weit from that properly fo called, by the river of it's name. It hath on the north-eaft the nation called Kileftinaos, or Creftinaux ; on the north-weft that of the Efquimaux ; on the fouth-eaft it is bounded by the river St . Lawrence, and on the fouth-weft by that of Sanguenay, at the mouth of which is the town of. Three Rivers before-mentioned. It's extent is computed from this laft-mentioned town, which is the frontier of Canada Proper, quite to the farther end of the bay called the Seven Illes.
The territory and lands on each fide of the river were found fo indifferent, and the colony that fettled at Tadouffac fuffered fo much there, that it quite difcouraged the French for a long time from fettling; but at length, upon their failing up as high as Quebec, they found fuch encouragement, as has teen productive of their prefent profperity there.
The river of Sanguenay fprings from the lake St. John, and falls into that of St. Lawrence, at the town of Tadouflac. Tha haven is capable of containing 25 men of war, and hath a good anchorage and fhelter from ftorms, it being of a round figure and deep, and furrounded at a diftance with very high rocks. 'Tis needlefs, in a work of this kind, to dwell Ionger on the defcription of this province, it being much the fame, as to it's foil, climate, and inhabitants, with that of Canada Proper laft defcribed. It is remarkable, indeed, for 'an extraordinary plenty of marble of feveral kinds, infomuch that not only the principal towns, forts, churches, and palaces, but even the houfes of private men are built of it. Quebec is the capital of this province, and the other principal places are, Sillery, Tadouffac, Port-neuf, Beau-port, St. Ann, Chicheque de Port, St. Nicholas, Port Cafter, and Necouba, Quebec, the metropolis of all Canada, and an epifcopal fee, is in lat. 46.53 . and weft long. 70. 40. and fituate on the confluence of the rivers St . Lawrence and St. Charles, or the little river, and on the north fide of the former, and about 140 leagues from the fea. The haven is large, and capable of containing at leaft an too hips of the line; and the great river whereon it ftands, though about four leagues wide, doth here fhrink itfelf at once to the breadth of about a mile, and it is on that account, that the name of Quebec was given, which in the Algonkin Indian language, it feems, fignifies a Thrinking or growing narrower, which is a natural etymology enough of the name.
Tadoussac, and it's port, hath been taken notice of, in our brief defcription of the river Sanguenay; and all that needs to be added, is, it's being a place of great, refort and traffic, both for the wild natives and for the French, much in the manner that hath been already obferved.
The Esquimaux, or Eskimaux, are one of the fierceft, and hitherto unpolifhed, people in all North America. They are feated on the moft eaftern verge of it, beyond the river of St. Lawrence, and fpread themfelves up north and eaft into the large tract of land, called Terra de Labrador, overagaint Newfoundland, from 51 to 53 degrees of north latitude, and from 52 to 63 , or more, of weft longitude. Their chief trade is in furs of divers forts, for other European goods.
The Beisiamites, are feated on the weft of the Efquimaux, and are divided from them by the river of St. Margaret, and run along the north coaft of the river St. Lawrence, overagainft Canada. They are a people much refembling the Efquimaux, and carry on a traffic with the French of the fame kind.
The Iroquors, are the moft confiderable and beft known of all the Indian nations hereabouts. They are feated along the north fide of the lake Ontario, Frontenac, and along the river of their name, which is that which carries the waters of the lake into the river of St. Lawrence. They are bounded on the north by the nations called Algonkins and Outavais, and the French fettements at and about Montreal; on the eaft and fouth-eaft by New England, New York, Jerfey, \&c. on the fouth by part of Canada Proper, and the lake Erie; and on the weft by that of the Hurons, and the canal between thefe two lakes, They are fo advantageoufly fituated between the Englifh and French, that they can join forces either with the higheft bidder, or with thofe who can keep them in the moft fubjection.
Their foil is high and rich, their water-melons, pumpions, \&c. very large, iweet, and of a fine colour and flavour; but they are too proud and lazy, to give themfelves much trouble about cultivating their lands, which is, perhaps, the caufe of their producing fo little. Their way of traffic is no way unlike to what we bave before deforibed.
The Illinors, inhabic near the lake and river of that name. They live in villages at a great diftance from each other, on the marky plains, on both fides of the river, near which are large woods and hills, covered with a delightful verdure about nine months in the year, whilft the current thereof, which is moftly fouth-weft, is fo fmooth and agreeable, that veffels of a conliderable fize may fail up and down it with eafe and $\begin{array}{r}\text { fafery, }\end{array}$

## C A N

fafety, for a courfe of 120 leagues, before is falls into that of the Miffifippi.
The lands on each fide afford fuch plenty of paflure, that they are covered with herds of large and fmall cattle, as well as goats, deer, and other beafts of the wilder kind. The river fwarms with water-fowl of divers fpecies, fuch as fwans, geefe, cranes, duck:, \&c.
They are great friends to the French, as they protect them from the other Indian nations, with which they are at enmity, and deal with them with honour and honefty, and inviolably regard their alliances with thefe people. Are not thefe the natural means to attach thefe people to their intereft, both with regard to their trade and poffeffions?
Louisiana. This vaft tract, according to the moft modeft of the French geographers, is bounded on the fouth by the gulph of Mexico, on the north by the Illinois, laft defcribed, and by the territories of the Parniaflus, Paoducas, Ofages, Tiontetecagas, Chavanons, and other Indian nations: on the eaft by part of Florida, Georgia, and Carolina, and on the weft by New Mexico and New Spain.
It extends itfelf from north to fouth about 15 degrees, that is, from 25 to the 40 th north latitude, and from ealt to weft about 10 or II , that is, from 86 to 96 , or 97 , according to Charlevoix. Monf, de Lefle gives thefe boundaries a much larger extent, efpecially on the north fide, where they make it contiguous to Canada, laft defribed; fo that part of it is bounded, according to him, by New York, Pensylvania, Virginia, \&c. and on the weft by the rivers called Rio Bravo and Salado. According to Le Seur, another French writer, the northern boundaries of Louifiana may reach as far as the northern pole. Neither are thofe on the northweft lefs uncertain, the Miffouri, a great river which gives name to a vaft tract of land unknown, flowing from that point into the Miffiffippi, about four Jeagues above it's mouth ; fo that if we except the fouth, where the fea bounds it, all the reft muft be left an uncertainty; and fo indeed it is likely to remain, 'till proper perfons be appointed to fettle thofe boundaries, on the eaft with the Englifh, and on the weft with the Spaniards: 'till then they will ever be liable to difputes, and, perhaps, to a continuing fluctuation, according as either of the three nations fhall have opportunity to enlarge their own conquefts, or incroach upon their neighbours.
The moft confiderable nations in Louifiana, are the Chicaches, Chikai, or Chicas, Maubilians, Clamcoats, Cenos, Cadedaguio's, Ibitoupas, Tahuetas, Vacea, and many others. Their various rivers, frequently overflowing, render the counzry in general extremely fertile and pleafant. Nothing is more delightiful than their meadows, which are fit for feed of 2ll kinds. In fome parts, the foil yields three or four crops in a year, for the winter confifts only in heavy rains, without any nipping frofts. Almoft all forts of trees that Europe affords are to be found here, befides variety of others unknown to us; and fome of them very effimable, fuch as their tall and admirable cedars, a tree that diftils gum, which is faid to excel all our European nobleft perfumes, and cot-ton-trees, which are of a prodigious height. The whole country abounds with an infinite variety of game, fowl, cattle, and, indeed, every thing that life can defire. See the article Louisiana by itfelf.

## REMARKs.

How far the limits of the country the French intend to paffefs, may extend, is not yet known, and may, perhaps, remain a fecret, 'till they are pleafed to oblige us with an eclaircifement in their way. That part of it which was granted to Monf. Crozat, is bounded by New Mexico, and the lands of the Englifh of Carolina, Weft and Eaft; and by the river Illinois, and the gulph of Mexico, North and South; wherein if it be meant, as no doubt it is, that all the tracts of land not actually poflefled by the Spaniards of Mexico, and the Englifh of Carolina, though claimed refpectively by both, fhall be comprehended, it will take in more than two thirds of the gulph, and reckoning from St. Fe, in New Mexico, to our molt wefterly fettlements in Carolina, about 24 degrees of longitude, or 1440 miles, and, from the mouth of the Illinois to that of the Mifflippi, 150 or 160 leagues in a ftraight line.
But this is only a part of Louifiana, which the king of France (by a refervation expreffed in the patent) may enlarge, when he thinks fit, the whole extent of that immenfe country reaching the South-Sea, Japan, and the Frozen Ocean. Father Hennepin, in the account he dedicated to king William, of his travels through a great part of it, politively afferts, that Japan is contiguous to the Northern America (the great Gravius was alfo of this opinion) and that an ealy pallage may be infallibly found out, from Louifiana to the South-Sea, through rivers that run beyond the Miffifippi, deep enough to carry thips of great burthen; and be farther offered in return back in his majefty's fervice, to make the difcovery. That great prince would, in all likelihood, have accepted the propofal, and improved it to the advantage and glory of England, had it not been for his alliance with Spain, which likewiie proved fatal to the fettlements of the Scots in Darien, If is a melancholy confideration, that fo noble an enterprize,
Vol. I.

Pounded on juft and honourable motives, and carried on with invincible zeal and bravery, fhould have been difcouraged, betrayed, and ruined, and the French at the fame tir epermitted to build forts, and plant colonies, under the command of Monf. D'lberville, in a country to which both England and Spain had a much better title, 'Tis true, indeed, that Monf. D'lberville's commiffion impowered him only to eftablifh the colonies, and maintain the garrifons, which had preferved the polfeffion of what was acquired to the crown of France by Monf. Defale; but one of the forts having been entirely razed by the Spaniards, and the garrifon carried off 2 and the other abandoned fome years before the date of this commiffin, the right infifted on, by virtue of that pofleffion was extinguifhed: befides, if the charters granted by the crown of England, to the lords proprietors of Carolina, be allowed to be of any validity or force, it may be doubted whether a poffeffion, of much longer continuance, could devolve any right on the French.
The miffionaries, who have had the moft perfect knowlege of Louifiana, give us fo exalted an idea of it's uncommon beauties and productions, that one would take it for the Frenchman's paradife. So temperate is the clime, that the inhabitants enjoy a continual fpring; the foil is fo fertile, that (as Father Hennepin told king William) it yields , wo crops every year, without plowing or fowing
Mr . Gage, who lived twelve years in the kingdom of Mexico in his defcription of New Gallicia, informs us, that the Spa niards were continually at war with the Indians, who inhabited the northern part of that province, for the fake of the filver mines in their territories, fearing left the Englifh from Virginia (for Carolina was not then planted) thould be beforehand with them, in gaining the poffeffion of thefe hidden treafures, He farther adds, thar he has often heard the Spaniards exprefs their furprize, that the people of that colony Should prefer a little paultry tobacco (as he terms it, before the invaluable advantages they muft expect to draw from fuch an eafy conqueft.
But the chief glory of Louifiana is the famous Miffifippi, in many refpects the fineft river in the world; it is free from fhoals and cataracts, and navigable within 60 leagues of it's fource : the clannel is every-where deep, and the current gentle, except at a certain feafon, when, like the Nile, it floods, It's banks are adorned with a delightful variety of meadows and groves, and inhabited by almont two hundred ifferent nations, whom the French found tractable to their meafures. Our American feamen affert, that feveral of their rivers are fit to receive fhips of the largeft burthens, and have feveral fafe and commodious harbours,
What renders the Miffiffippi more confiderable, is a great number of other large and navigable rivers, that run from the eaftward and weftward, and mix at laft with it's ftream. Of the firft Monf. Defale, in the account he prefented to Count Frontenac of his voyage, on this river, a'ffirms, there are fix or feven, 300 leagues each in length, that fall below the Illinois; and propofes it as a matter of the laft importance, that the difcovery of them fhould be carried on, to prevent the Englifh of Carolina from interfering with the French in their commerce with the Indians, fince fome of thefe rivers take their rife from the Apalachian Fills, not far from our fettlements in that colony:
As it can hardly be imagined, that the French will fo far ne, glect their intereft, as not to continue their vigorous efforts for eftablifhing their commerce in this part of the world; fo - tis evident enough, that thefe fettlements, whether we have war or peace with the French, will not only prove hurtful, but, I am afraid, deftructive at laft to our Britim plantations, and thereby weaken, in a very fenfible manner, the ftrength and power of England, by drying the ftreams that convey thither the greateft part of their wealth.
When the French have drawn a line along the borders of our fettlements in every province, from St. Lawrence to the Miffifippi, and built forts to fecure the moft convenient paffes on the lakes and rivers that form the communication, they will effectually cut off all intercourfe and trafic between us and the Indians inhabiting the inland countries, and likewife compel thofe who are neighbours and allies, by reafon of the abfolute dependance they muft have on the French for their liberty of hunting and filhing, to fall under their fubjection, or farve; and, befides the incroachments on the rights of the Englifh in America, and the lofs of a beneficial trade with the Indians in Canada, which has greatly inriched the French. Befides thefe hardGaips, we muft expect to fuffer continual incurfions and depredations from the favages on our frontiers with whom we fhall not be able to make either a real peace or manage a fucceffful war, confidering the advantages thefe favage nations bave over'the Europeans, by their way of fight ing in the forefts on the continent.
Experience has thewn there fentiments not chimerical, as appears from the plan that La Hontan prefented to the court of France, by order of Count Frontehac, for deffroying the Iroquois Indians, a warlike and numerous people, who have manifefted their atrachment to the Britifh interef:
If the French be allowed, fays a judicious writer, to poffefs themfelves of all Canada and Louiliana, as they bave chriflened

## C A.N

C A N
it, and a war hould break out between the two crowns, the French will find is a matter of no great difficulty, with the affiftance of the Indians, to invade from thence and Canada all the Englifh plancations at once, and drive the inhabitants into the fed.
The reader will eafily perceive, by calting his eye upon our map of America, that St. Lawrence and the Muffigupi, with the $\left.\right|_{\text {akes }}$ and rivers that run between them, furround by land all the provinces on the main of America, belonging to the crown of Great-Britain; and that from the branches of thefe great rivers, and fome falling into the lakes Champlain and Errie, a fafe and direct paflage may be found out almolt to every one ef them, by means of other large rivers, with which the whole country abounds.
I'hrough fome of thefe channels the French have heretofore made many defcents from Canada upon our northern colonies, deffroyed our fettements, and laid wafte entire provinces: nor could the inhabitants of New York have fecured themfelves from the fatal confequences of the like attempts; but by the fingular bravery of the Mohacks, who galled the French fo fenfibly, that they obliged them to retire within 60 leagues of Quebec, and fue for peace on any terms. And that they may eafily penetrate the fame way into thofe Englifh colonics that lie to the fouthward, particularly Virginia and Carolina, and fome rivers that run from the fame fide into the Miffifippi, is obvious by their own accounts, and the difcoveries of our Indian traders, who range over thele parts of the continent.
All the plantations England is poffeffed of in this part of the world lie naked to every attack by land, we having no forts or garrifons to defend our frontiers; which, if we are not miftaken in point of judgment, may one day deferve the attention of our fuperiors. The number of our people here are but inconfiderable, compared to the tract of land they inhabit; their dwellings, except toward the fea, are fattered at a great diftance from each other. In thort, there feems to be little protection for us to rely on, except that of the Indians; and, from the little care that has been taken to attach them to our intereft, I am afraid there is no great dependance to be made on their friend hir
It was very extraordinary, that no effectual meafures until lately were taken to fettle and fortify Nova Scotia, the only province in America belonging to the crown that can be made a fufficient barrier to cover any of our plantations from the invafions of the French, and check their motions on that fide by fea and land; and yet, if the dread of many true friends to the kingdom is not groundlefs, there feems too much rea fon to believe, that a part of this province may one day be difmembered from us, and tacked to the French Canada. See Eritish America, where will be feen how the French have heretofore treated us in refpect to this province, and the fifhery at Canceaux. And, if ikilful and judicious perfons are not employed to draw the imaginary line, in order to fix the boundaries, according to treaty, we muft expect that our trade to thefe parts will be attended with the like mifchiefs it has been. Without this is done, the controverfy can never fairly be decided at Paris or London.
Though the French in Canada have neither exceeded us in numbers, nor the reft of their countrymen in bravery, never thelefs it is certain, they have gained upon us for many years paft. Nor will this feem any matter of wonder, to one who ferioufly reflects on the conftitution and form of their government, and the encouragement they have from the crown of France, and their dexterous way of managing the Indians. It has been a maxim conftantly obferved by all princes and Iftates who have planted colonies, or fubdued nations, to keep them united under the command of particular governors, and in fubordination to others, who prefided over the whole, to the end that juftice might be impartially adminiftered, feditions prevented, or eafily fuppreffed, and each inferior government frengthened and fupported by the reff. In the Roman empire, which contained 120 provinces, and near 300 colonies, we find only four prefects, or chief governors, under the emperor; in the kingdoms of Peru and Mexico two; and in Canada, to which Louifiana is added, but one. And, left it fhould be imagined that an extenfive command muf neceffarily be attended with arbitrary power, it may be affirmed, with a great deal of truth, that the governor-general of Canada is more effectually reftrained from breaking in, either upon the rights of the crown, or thore of the fubject, than the mof petty governors, being liable to the check of the intendant in the firft cale, and of the fovereign council in the laft.
Befides guards and garrifons, fuch hath been the policy of that nation, that confiderable bodies of regular troops have been employed in the fervice of the colony, without the leaft burden or charge to the planters: al civil officers, as well as military, have certain yearly penfions fettled upon them, and none are admitted into places of the greatef trult, but fuch who have diftingsifhed themfelves at the court of France by their merit, under whofe adminiltration the country is become extremely populous and profperous. This extraordinary increafe is, in a great meafure, to be afcribed to their intermarrying with the Indians, whom, by this means, they firmly engage in
their intereft. In every tribe there are fome miffionary priefts and, thuugh few of the favages have been made thorough con verts to their religion, yet, in all other matters, they liok upon there fathers as tutelar gods, and are intirely directed by their counfels.
On the other hand, the country poffeffed by the Englifh in America feems to be much in the fame Aate Britain was at the firft entrance of the Romans, for as that ' was divided (to - ufe the words of Sir William Temple) into feveral nations - each governed by its own kings and particular princes, dif-- ferent in their ends and councils, it was more eafily fub" dued by united forces : for, Dum finguli pugnabant, univerf - vincebantur; i. e. While they fought in fingle bodies, the c whole illand was conquered:' Co in America, to draw the parallel no farther, we have thirteen colonies, at leaft, feverally governed by their refpective commanders in chief, according to their peculiar laws and conftitutions. It would be too tedious, and foreign to my defign, to confider the feveral forts of government effablifhed in thefe provinces, and the different views and interefts they have to purfue; nor would $I$ by any means, give the reader occation to think that I am an enemy to thofe liberties and privi'eges mont of them enjoy by the favour of the crown: I thall therefore only obferve, that next to being independent one of another, nothing weakens our plantations more, nor expofes them to greater dangers in times of war with France, than the unkilful adminiftration (to call it no worfe) of thofe who are appointed governors of many of them, and are left to truft to providence for their fubliftence. I will not fay that all who go thither, like thofe in Davids camp, are in debt or diftrefs, and, confequently, unfit to ad. vance matters of public intereft ; but we find fome in London who can inform us, that, in time of war, the Indians have been fupplied with powder and hot, the French with provifions, and the Spaniards with naval ftores. Themiftocles faid, that he could not play on a fiddle, but underftood how to make a little city a great one; but fome of thefe fiddling gentlemen, by keeping up parties and factions, and oppreffing the people under colour of his majelty's authority, have made flourifhing colonies poor ones.
And here may be mentioned another fet of officers, who are fettled in every province, by commiffions from England, but without any falaries annexed to the ample powers they are invefted with. Thele are judges, advocates, legitters, and markhals of admiralty, who, having nothing to depend upon but the fees of court, and being altogether unqualified for fuch employments, by promoting litigious actions, and pronouncing unjuft decrees, have brought our trade under a very fenfible decay. It is to be lamented that fo uleful a court, in thefe parts, thould not be better eftablihed. If the nation confidered how much their intereft depends upon the profperity of the plantations, and, at the fame time, what difcouragements they lie under by the means of fuch volunteer governors, judges, Eric. fome of which have been known to ule their commiffions as fome do letters of reprifals, they would order thefe grievances to be redreffed.
To give a more diftinct view of the difference between co. lonies depending abfolutely on the crown, and fuch as are granted by patents or charters, with refpect to the refiftance they are able to make in time of war, we need only compare Virginia and New York with New England and Catolina. Virginia was planted anno 1584, at the charge, and by the direction, of the incomparable Sir Walter Raleigh, who took poffeffion of it in the name of queen Elizabeth. In the year 1606, a commiffion was granted to fome noblemen and merchants to advance the fettlements under the government of captain Smith, who was fucceeded by lord Delaware. Since that time the colony bas flourifted greatly, having been fupplied with great men for their governors, who not only kept the Indians in fubjection, but acquired to the crown New York, Nova Scotia, and all the coumries lying to the fouthward of St. Lawrence, which has proved of extraordinary emolument to the nation.
New York bas been no lefs happily governed; they have inviolably maintained their alliance with the numerous nations of the Iroquois, and, by that means, preferved the tranquillity of their country.
On the contrary, the inhabitants of New England and Carolina have frequently found the favages implacable enemies; for which, perhaps, the chief reafon has formerly been, that the governors of thefe colonies have not had authority enough to prevent the unfair treatment which the Indians have frequently complained of, as defrauding them in their traffic by falie weights and meafures, and by neglecting to make them due fatisfaction, when they have been wronged. In fhorl, that perfon ought to be a cunning man who treats with the Indians, and, therefore, the French leave that bufinefs to the Jefuits.
lo conclude this point; as his majefty's dominions on this continent are cantoned into fo many petty, independent fates, or commonwealths, whereof there is fcarce one that can expect effectual relief or affittance from another, in the moit imminent danger; as the inhabitants of each colony are unable to defend themfelves againft a powerful army of French and Indians, and the adminiftration of fome of them is too

## C A N

weak and unfeady to be confided in; and it feems not very probable, from our prefent fyltem, that we fhould ever, perhaps, fucceed in engaging the Indians on our fide, fo as to ballance the weight of thofe allied to the French; it feems to follow pretty evidently, that, fome time or other, the Miffiffippi may drown our fettlements on the main of America
Another circumftance that attends the French fetting in the Louifiana, with refpect to us, is their being thereby, in fome degree, mafters of the gulph of Mexico, and confequently may one day be in a condition to ruin our trade to Jamaica; they being already in poffeffion of a great part of Hifpaniola, and having fortified their fettlements at the mouth of the Miffifippi, the Havannah and Vera Cruz may alfo fall into their hands. From what has been obferved under the article British America, it is apparent that they have had their eye upon Jamaica; and, as we find how tenacious they are to polfers themfelves of whatever they can of the Leeward and Caibbee inles, and are vigoroully augmenting their marine, it is more than probable that they will, fome time or other, if they meet with no check in time, gain fuch an af cendant in America, as to extirpate the Englifh out of it. And what a figure we thall then be able to make in commerce, and as a maritime power, is more eafly imagined than defcribed. If thefe are idle dreams, then numbers of men of the befl fenfe in the kingdom, nay, in Europe, are not awake; for it is the fentiment of too many, that the French are now taking large ftrides towards making a conqueft of this ifland, it being the only power that has thwarted all their projects for univerfal empire. Thofe who would laugh us out of our fecurity, deferve to be laughed at themfelves, when they are reminded how near the French, in the lalt war, were of conquering our neighbouring provinces, our natural allies, and what confufion they put us into, by only flightly cherifhing a handful of rebels.
When the French have effectually planted their whole territories from Canada all along the Miffiflippi, and fecured themfelves in the ifland colonies they aim at, will they not be able to fupply the markets of Europe with tobacco, fugar, and every fecies of commodities produced in our plantations, at a much cheaper rate than we can? For, befides the goodnefs of the foil, and the induftry and frugality of the French, wherein they greatly exceed us, are not their planters furnifhed with neceffaries from France, and negroes from Guinea, fa cheaper than ours? [See the article French America, and French and British African Trades.]
Thole who are bred up in the hofpitals (whereof there is a prodigious number in France) are fent to America for planters, and every fingle man of thefe is obliged to marry an Indian woman. And, to enable them to trade among themelves, they had a fupply of $25,000,000$ in bank- bills granted them, by an arret of the 16 h of July, 1719. [See the articles British America, French America, and Colonies British.

## Remarks

The definitive treaty of 1763 , baving annexed Canada and all its dependencies to the crown of Great Britain, and alfo Florida and Louisiana, and fetted their limits and boundaries, [See the article America, where is contained the faid treaty at large] we may expect that, in a few years, the whole face of the commerce of our British North American Colonies will be changed, and all thofe fears and apprehenfions we fo jufly had of the power and machinations of our French rivals here be difipated. For by the ceffion of all Canada and its dependencies to Great Britain, and the very trifling poffeffions the French at prefent enjoy, of the fmalliflands of St. Peter, and MieueLON, for a fhelter only for their fithermen at NewfoundLAND, cannot enable that nation from thence to annoy this, in any of our territories of Canada and its dependencies. Stripped as France now is of Cape Breton, called, very properly, the Dunkirk of North America, they are deftitute of every place, by the means whereof, they are capable to rendezvous any formidable naval power to do us any great injury in this part of the woild, if we take due care to keep all our territories in this part of America, in a proper plight and condition, and thall be able to defend them by our maritime force. By the definitive treaty we feem likewife to have fecured to ourfelves the fafe and uninterrupted navigation to and from our colonies in America, bo:h from Spain as well as France. By our fettlements at Mobille and Penfacola, in Florida, and the right of navigation into the Miffifippi, in the Gulph of Mexico ; by our fettlements of St. Auguftine and St. Mattheo, in the Gulph of Florida, together with our fituations at the Bahama Islands, and at Georgia and the Carolinas; we cannot but hope we fhall be more able to annoy the trade and ravigation of Spain and France, on any future rupture between them and us, than they will be to hurt ours. See the articles Florida and Bahama IsLands, and thofe other articles to which from them we refer. We feem, therefore, to have pretty well fecured our North American colonies by fea, from north to fouth, by virtue of the definitive treaty: the difficulty, and the only one we labour under, is to fecure our North American colonies from the infults and ravaeses of the Indians, who lie to the weltward of thofe colonies. All proper meafures will, doubt-

## C A N

lefs, be taken by the government of Great-Britain to mollify thofe people, in our favour, and to attach them mont effefually to our intereft. This will now be the more eafily accomplifhed, fince the boundaries between us and France are now afcertained by TREATY, which they never were before with regard to this part of the new world. Our right of navigation to and from the withilippi through the Culph of Mexico, will enable us to annoy our Indian enemies, as well as to aid and affit our friends: our new colonies with daily gather ftrength, which in conjunclion with the afffance of our old, promife fair to render our whole range of Britifh plantations not only more fecure, but more flourifhing and profperous than they ever were before. See the articles AMErica, British America, Colonies, Plantations, Florida, Bahama Islands.
CANARY ISLANDS, lie to the well of the coaft of Biledulgerid in Africa, between the 27th degree and 10 minutes, and the 29 th and 50 minutes, of north latitude; and between the 12 th and the 17 th. 50 . of longitude weft of London.
Thefe illands have been fubject to the crown of Spain fince the year 1417. The air thereof is generally good, though hot, and the foil fertile, producing wheat, barley, millet, and excellent wine, which is tranfported thence to molt parts of Europe, but more particularly to Great. Britain. There are, alfo, abundance of pomegranate, pepper, fig, citron, and orange-trees; they yield, likewife, fugars, dragon's-blood, and fome other fort of gums.
There are twelve of thefe inands, but only feven of note: we Thall give a diflinat defcription of them, fo far as confifts with the fope of our defign.
I. Lanzarola, or Lancerola, formerly Canturia (according to Barbot) lies in the 29 th degree, 35 minutes, of north latitude, and 12. 3 . longitude weft of London. It is about I3 leagues long from north to fouth, 9 in breadth, and 40 in compafs. It is parted by a ridge of mountains, which afford nothing but pafture to hheep and goats; but the vallies produce very good wheat and barley, though pretty fandy and dry. Here are alfo affes, kine, camels, and good horfes.
II. Fuerte Ventura, or Forte Ventura, lies under the 29th degree of north latitude, and under the $13^{\text {th }}$ and $14^{\text {th }}$ of longitude, eaft fróm London. It is about 25 leagues long from fouth-weft to north-eaft; its breadth very irregular. The foil is partly mountainous, and partly champain, abounding in wheat and barley. There are feveral brooks of frefh water along the coaft, and foft crooked trees on their banks, that yield gums, of which they make white falt. There are palmtrees, which bear dates; olive and maftic-trecs, orchel-weed for dyeing, and a fort of fig-trees, which yield a balm as white as milk, that is of great virtue in feveral medicines. They make cheefe of their goat's milk, of which this illand breeds above 50,000 yearly. Their flefh is very good; the inhabitants make great profit of their fkins and fat. The harbours here are only fit for middling veffels.
III. Great Canaria, or Canary, lies under the 28 th degree of north latitude, and the 14th and 1 gth of longitude, weft from London. It is in compars about 40 leagues; it is very fruitful, and remarkable for its excellent wines, which bear its name. It abounds alfo in melons, apples, oranges, citrons, pomegranates, figs, olives, peaches, and plantanes; as alfo with fir, dragon, and palm-trees, and likewife with wild fowl.
IV. Teneriff lies under the 28 ih and 29 th degrees of north latitude, and under the 16 th and 17 th of longitude weft from London. It is about 18 leagues long, and 8 broad, and cbiefly remarkable for its peak.
Oratavia lies on the weft fide of the ifland, and, being the chief fea-port for trade, the principal Englifh merchants refide there, with their conful. The port is but ordinary at beft, and very bad, when the north-weft winds blow.
The true Malmfey wine is produced in this ifland, and that near the town of Laguna is faid to be the beft in the world. Here is, alfo, Canary wine, and Verdona, or green wine. The Canary grape grows chiefly on the weft fide of the inand, and, therefore, is fent to Oratavia. The Verdona wine is ftrong-bodied, harfher, and fharper than the Canary. It is not fo much efteemed in Europe, but is exported to the WeftIndies, and will keep beft in hot countries. This fort of wine is made chiefly on the eaft fide of the inland, and thipped off at Vera Cruz.
Befides thefe wines, here is, alfo, fore of grain, as wheat, barley, and maiz, which they often tranfport to other places. Here are, likewife, papahs, apples, pears, plums, cherries, pomegranates, citrons, oranges, lemons, limes, pumpkins, onions, efteemed the beft in the world, Ew. They are well ftocked with horfes, cows, mules, theep, goats, hogs, conies, and plenty of deer. Nor is there any want of poultry or fifb. All the Canary inles have of thefe commodities more or lefs. V. Gomera lies to the weft of Teneriff, under the 28 th degree of north latiude, and the 18 th of longitude, weft of London. It is about 22 leagues in compafs, though but eight in length. It has a pretty good haven, and a town of the fame name. The country is high, feeds fmall cattle, produces dra-gon-trees, and is incompaffed with great deep roads.
VI. Ferro, called Hierro by the Spaniards, is the moft wefterly of all the Canaries, and hes under the 27 th and 281 h

## C A N

degrees of north latitude, and under the 18 th of Jongitude, weft of London. It is 10 leagues long, five broad, and about 25 in compafs. The foil is dry and barren in fome parts for want of water. This ifland is particularly famous from the French navigators placing their firt meridian in the center of it (Barbot), as the Dutch did theirs through the Prak of Teneriff: but, at prefent, moft geographers reckon the firft meridian from the capital city of their own country, as the Englifh from London, the $\stackrel{F}{ }$ rench from Paris, $\mathcal{F}^{\circ} c$.
VII. Palma lies to the north of Teneriff, under the 2gth degree of north latitude, and under the 18 th of longitude, weft of London. It is about feven leagues in breadth, 10 in length, and 26 in compafs. Here is the mountain of goats, from whence, it is faid, the illand took its original name of Caferaria. It has a town of its prefent name, and a fafe harbour, well frequented for wines, which fome reckon the beft of the Canaries, and like the Malmfey. They are tranforted thence to the Weft Indies, and other places. The beft comes from the neighbouthood of a place called Brenia, from whence they export above 12,000 pipes a year. I here are here four fine fugar engines.

Remarks.
Thefe illands of the Canarics, befides the rich product and commerce of them, are of great ufe to the Spaniards by their fituation. Here the Spanifh fleets of galleons and flotas from Old Spain to New generally rendezvous, when outward bound, for frefh water and frefh provifions, and wine, whereby they have a confiderable help forward in their voyage; and, at their return, they appoint to rendezvous here, to meet with news from Europe, to know if ic be peace or war, and whether they hall proceed for Cadiz, wait for convoy, or go for the north to make other ports for fecurity : and fometimes, in cale of war in Europe, a fquadron of men of war is fent hither to meet and fecure them. The illands are not fo well furnifhed, indeed, to fecure the galleons and rich fleets from Spain, becaufe, efpecially at Teneriff, where the fhips ordinarily meet, they have no good harbour to receive and defend the fhipping; nor is the road, which is open, the beft of its kind: but the general remedy of the failors, in cafe of a threatening form, or an enemy, is to go off to fea, where they have fea-room to help to flruggle with, or to run for the Azores, or other illands, where pretty good harbours are to be had.
They have fome tolerable fortifications on thore, and fome good batteries of guns planted on proper landing-places, which are one of their fecurities. But the ftrength of thefe inlands confifts chiefy in this, that no troops care to make any effort upon the land, left, while they are on fhore, the wind fhould frefhen at fea, and the Mips be obliged to go off, and leave them; in which cafe they are fure to be diftreffed for want of provifions, and, perbaps, to be all loft.
Thefe iflands yield a pretty confiderable revenue to the king of Spain yearly in wine, of which the quality is not only extraordinary, but the quantity large. In regard to other products in general, they are fometimes not competent for the fuftenance of the illanders, who, therefore, are frequently under the neceffity of being fupplied with corn from Spain, or New England.
CANDIDATE. We bave no other word in our language to exprefs what the French ftile afpirant. It fignifies, in general, one who fets up for any place, poft or office; but it is faid more particularly, in France, of apprentices, who would become mafters, or freemen, either in one of the fix bodies of merchants, br in any of the other companies of arts and trades: that is, they are candidates for the freedom of any peculiar company.
Candidate to the freedom, in any of the fix bodies of traders at Paris, is he, who being of a proper age, and having completed the time of his apprenticefhip, and ferved afterwards with a mafter as a journeyman, according to the police of France, would become a mafter himfelf, and take up his freedom.
No man can be admitted to his freedom in any of the bodies of merchants, unlefs he is full 20 years old, and produce the indenture and certificates of his apprenticefhip, and of the fervice he afterwards performed with his mafters. If the contents of the certificates fhould not prove true, the candidate would lofe his right to the freedom, and the mafter who gave fuch a certificate would be condemned to a fine of 500 livres, and the other certifiers to 300 livres each.
The candidate is to be examined upon book-keeping by fingle and double entry, upon nates and bills of exchange, upon the rules of arithmetic, the qualities of the merchandizes, fo-far as they relate to that branch of trade he intends to follow; and every other effential requifite proper to manifeft his fkill and accomplifhment for the bufinefs he would follow. For the better regulation hereof, all private perfons and companies are forbidden to accept or receive from the candidates any prefents, or any other fees, but fuch as are appointed by the flatutes, under what pretence or colour foever it might be, under penalty of a fine, which cannot be lefs than 100 livres. The candidate is alfo forbidden to give any fealt or
treat, upon pain of having his reception declared abfolutely void.
Befides thefe general rules, extracled from the third, fourth, and fifth aricles of the firit title of the ordonnance made in France, in the year i 573 , every one of the fix bodies of merchants has fome rules, or fatutes, peculiar to themfeives, either with regard to the time of the appreaticeflip, or to the number of years a young man is to ferve with a matter as a journeyman; and, laftly, with regard to the matter-piece of workmanihip, to which fome are fubject before they can be admitted; and, as they are not mentioned in the ordonnance, we prefume it will be acceptable to the reader to find them here, that he may fee, at one view, all the obligations to which a candidate to fuch freedom is liable, in any of the fix bodies of merchants.
In the body of drapers, which is efteemed the firf of the fix companies, the candidates are not obliged to the performance of any mafter piece of workmanfhip to thew their qualifications; it is enough that they ferved a merchant-draper three whole years as apprentices, and two years, after the end of their apprenticefhip, as clerks, or journeymen, which make five years in all.
Though the apothecaries, grocers, druggits, confectioners, and wax-chandlers, make but one body, which is the fecond of the fix, yet the candidates are obliged to the performance of different things, according to the particular profefion they would follow in that body.
They who would be apothecaries, for example, are obliged to have been four years apprentices, and have ferved fix years more with the mafters, which make in all 10 years; befides which, they are ftrictly examined, and under the neceffity of giving fatisfactory teftimony of their abilities for the profeffion.
As for thofe who would folliow the bufinefs of grocers, druggifts, wax-chandlers, or confectioners, they are obliged but to three years apprenticefhip, and to ferve the maters three other years in the capacity of a journcyman, in all fix years; and they are not bound to any mafer piece.
In the body of the merchant-jewellers, which is the third, the candidates are not obliged to perform a mafter-piece; it is enough, to olstain their freedom, that they ferved a mafterjeweller three years as apprentices, and three years more as journeymen, in all fix years.
In the body of the merchant-furriers, or fell-mongers, whitch is the fourth, the candidates muft prove their apprenticemip, and that they have afterwards ferved with mafters: they muit have ferved four full years as apprentices, and four years as journeymen, in all eight years, and are obliged to the performance of a mafter-piece.
They who would take up their freedom in the body of the hofiers, which is the fifth company, ought to have been apprentices five years, and to have ferved five other years as journeymen, in all 10 years, and mult undergo the mafterpiece.
Laftly, they who would be made free of the fixth and laft body of merchants, which is that of the gold and filverfmiths, muft prove their apprenticefhips, and the time they ferved as journeymen; the former is to be of eight years, and the latter of two years, 10 years in all: befides which, they are obliged to make a mafter-piece, and to give fecurity for 1000 lives. See Apprfntice.
The Candidates to the freedom, in the companies of arts and trades, have alfo their rules and ftatutes, relating to the time of the apprenticefhip, to that of ferving as journeymen, to the mafter-piece, \&c. but almoft all of them are different, according to the feveral profeffions, and to the works made in them. See the articles where the feveral companics are mentioned, with the fubftance of their refpective flatutes.
CANDLE, a fmall raper of tallow, wax, or fperma-ceti, the wick of which is commonly of feveral threads of cotton, fpun and twifted together.
A tallow candle, to be good, muft be half fheep's, or ewe's tallow, or rather goat's tallow, and half ox, or cow's, tallow, melted together and well purified. It is prohibited by the regulations in France to mix any other tallow or greafo with them, and particularly hog's tallow, which laft makes the candles gutter, and always gives an offenfive fmell, with a black thick fmoke, which is h:ghly pernicious.
There is at Paris, as alfo in feveral of the chief cities in France, a company of tallow-chandlers, erected into a corporation, to whom alone it is lawful to deal in candles, either in the making or felling them.
Befides the freemen of this company, who are obliged to undergo an apprenticefhip, and to perform a mafter-piece, there are, alfo, at Paris, iz privileged tallow-chanders, following the court, who are admitted by the high provolt of the hotel, and have the right, with the other freemen of the company, to make and fell all forts of candles.
There has been, for a long time, at Paris, a famous manufacture of candles, fet up in St. Anthony's fuburb, by the Sieur Le Brez: but, the time of privilege which be had obtained being expired, the making of thefe candles is become part of the trade of the company of tallow-chandlers, who have now the right to make them. However, the Sieur Le Brez, who
is free of that company, ftill continues that trade, with good fuccefs, having this advantage over the other tallow-chandlers, that his candles are efteemed much better for their whitenefs, for their firmnefs of the tallows and for the brightnefs of the Jight they give.
There are two forts of tallow-candles, the one dipped, and the other moulded. The former are the common candles, the invention and ufe of which are very ancient in France; the others are the candles of the Sieur Le Brez's mianufacture, mentioned above, who either invented, or improved and perfelled them.

## The method of making candles in general.

After the tallow has been weighed, and mixed in the proportions fet forth in the ordonnances, or regulations, mentioned in the beginning of this article, it is cut into very frall pieces, that it may melt the fooner; for the tallow in lumps, as the chandlers receive it from the butchers, is too difficult to melt, and would be in danger of burning, or turning black, if ii were left too long over the fire.
When the tallow is perfectly melted, and well ikimmed, they pour a certain quantity of water into it, proportionable to the quantity of tallow. This ferves to precipitate to the bottom of the veffel the impurities of the tallow, which may have efcaped the fkimmer. Obferve, however, that there muft be no water thrown into the tallow defigned for the three firit dips, becaufe the wick, being fill quite dry, would imbibe the water, which makes the candles crackle in burning, and renders them of bad ufe.
The tallow, thus melted, is poured into a tub, through a coarfe fieve of horfe-hair, to purify it flill more. At the lower part of the tub there is a copper or brafs top, two or three inches above the bottom, by which the liquid tallow is drawn out on occafion.
The tallow, thus prepared, may be ufed after it has fettled about three hours; it will continue hot, and in a condition to be ufed, during 24 hours in fummer, and 15 or 16 in winter; but, when the weather is too cold, care mult be taken to keep it warm, either by covering it, or putting it near the fire.
Before they begin to melt the tallow, they are ufed to prepare a quantity of wicks, fufficient to take up all the tallow they intend to melt.
The wicks are made of fpun-cotton, which the tallow, chandlers buy in fkains, and which they wind up into bottoms, or clues.
The bottoms of cotton made for the wicks of candles, commonly weigh half a pound; the wicks confift of two, three, or four threads, according to the quality and fize of the candles, it being equally prohibited by the ordonnances of France to make the wicks too thick or too thin.
By the gth and roth of Anne, certain duties are granted in England on Candles and Sope.
Makers of candles are not to ufe melting-houfes without due entry thereof at the Excife-Office, on pain of 100 L. And to give notice of making candles to the excife officer for the duties, and of the number, \&c. or fhall forfeit 501. Removing the candles before weighed by the officer, or mixing them with others, 8 c . is liable to penalties. See the article Cambodia, a note there about CANDIEs.
Candle. A fale, or auction, by inch of candle, is when a fmall piece of candle being lighted, the by-ftanders are allowed to bid for the merchandize which is felling; but, the moment the candle is out, the commodity is adjudged to the laft bidder.
CANDO, CANDI, or CONDI, a long meafure ufed in feveral parts of the Eaft-Indies, and particularly at Goa, the capital city of the fettlements which the Portugueze fill enjoy there.
The cando of Goa is 17 Dutch ells and $\frac{7}{5}$, per 100 , longer than the ells of Babel and Baffora, and $6 \frac{1}{2}$ than the varre, or ell of Ormus.
Silk and woollen ftuffs are meafured by the varre, and linens by the cando. The cando, or condo, ufed in the kingdom of Pegu, is equal to the ell of Venice.
CANE, a walking-flick. That which we intend to give an account of at prefent, is called by the Dutch rolting. It is a reed brought from the Eaft-Indies. There is a great trade of them at Paris and at London. It is cuftomary to adorn them with a head of gold, filver, agate, ivory, amber, and even fometimes inriched with precious ftones, and, frequently, the head is only of forme fort of wood. Sometimes, inftead of a head, they put a fpying-glafs on the top of the cane.
Some are without knots, and very frooth and even; that is, when the reed was grown fo long that the difance between two knots was large enough to make a cane. Others are full of knots, about two inches diftant from each other ; thefe laft have very little elafticity, and will not bend fo well as the others.
Laftly, there are canes made of feveral forts of precious wood, as ebony, St. Iucia's wood, rofe-wood, \&c. Thefe, indeed, are nothing but flicks, but, as they ferve for the fame purpofes as canes, they have got that name.

Vod. I.

CAnes bf Betigal. The moft beautiful canes which the Eutc peans bring into England and France, \&c. come fonm $\mid=1$ gal. Some of them ate fo fine, that people wotk ciem veffle, or bowls, which, being varnilied over the thenc. with black or yellow lacka, or of fome other coiour, will hed liquors, as well as glafs; or China ware does; and the Indic. ufe them for the fame purpofes:
Thefe bowls are made much after the fame manner as to. fine ofier bafkets that they make in France and in Handisis, and which are very much effeemed on account of the delicacy of the workmanhip.
There are canes, alfo, that are fit into harrow bits, and ferve to make rattans, which were formerly greatly ufed in the making of cane-chairs, and hoops for the ladies, in feveral parts of Europe.
CANE is alfo a long meafure, which ferves to theafure bodies extended in length, as cloths, ferges, linens, and other fuch merchandizes. It is longer or horter, according to the feveral countries and places where it is ufed.
At Montpelier, and in all Lower Languedoc, as alfo in Provence, in the country of Avignon, and in Dauphiné, the cane is 6 feet and $\frac{3}{4}$ of an inch long, which male an ell and $\frac{2}{3}$ of Paris: fo that three canes of Montpelier make 5 ells of Paris. This cane isfubdivided into eight fpans; or palms.
In order to reduce the canes of Montpelier into Patis ells; the common rule of proportion is thus ufed; faying, If 3 canes of Montpelier make 5 ells of Paris, what will any other number of canes of Montpelier make in Paris ells? If, on the contrary, you would reduce Patis ells into canes of Montpelier, you mult fay, If $\$$ ells of Patis make three canes of Montpelier, how many canes of Montpelier will fo many ells of Paris make? This method may ferve; alfo, to reduce the canes of other places into Paris ells, and the ells of Paris into the canes of thofe places.
Obferve, that the ufe of the cane has been prohibited in Languedoc and Dauphiné, by two decrees of the king's council of flate, given the $24^{\text {th }}$ of June, and the 27 th of October, 1678 ; and that, according to thofe decrees, they muft ufe in thofe provinces the Paris ell, inftead of the cane, in the buying and felling of ftuffs.
At Naples the cane is of 6 feet 10 inches and ${ }_{7}$, which make an ell and $\frac{15}{5}$ of Paris; fo that 17 canes of Naples make 32 ells of Paris.
The cane of Thouloufe, and of all Upper Languedoc, and even of fome cities in Guienne, is equal to the varre of Arragon; it is of five feet five inches and a half, which make an ell and a half of Paris; fo that two canes of Thouloufe make three ells of Patis.
Cane is allo faid of that which has been meafured with a cane, as a cane of cloth, a cane of mullin, \&c.
CANE, a fugar cane, is the reed with the juice of which fugar is made. See Sugar.
CANICA, a fort of fpice, which grows in the illand of Cubas It is a kind of wild cinnamon, but its tafte is more like that of cloves than of cinnamon. It is alfo ufed in medicine, where they fubflitute it in the room of calfa. It is a pretty faleable commodity in the Spanifh iflands.
CANNON, a piece of ordnance made of metal, of a cylindrical form, and bored through its whole length, which is loaded with powder and ball, to ferve in attacking of ftrong places, in battles, either by fea or by land. There are in France feveral royal founderies for the cafting of cannon. See Foundery.
Cannon, and other pieces of ordnance, as well as their carriages, and all that ferve to load or fire them, are contraband goods, the exportation of which is prohibited through the whole extent of the kingdon, territories, and deminions of the French king, according to the ordonnance of the year 1687, under the penalty of forfeiting the goods, paying a fine, and fuffering other punifhments, according to the nature of the cafe.
Cannon, with letter-founders and printers, fignifies allo the largeft fize of the letters they ufe. See Letter-Founderi and Printer.
CANOE, a frall boat made of the trunk of a tree bored hollow, and fometimes allo of pieces of bark fewed together. It is ufed by the natives of America to go a fifhing in the fea, or upon fome expedition, either by fea, or upon the rivers and lakes. The negroes in Guinea, and even many nations in the Eaf-Indies, ufe alfo canoes. The French in Canada have likewife learnt the ufe of them, and go in canoes to the habitations of the favages, and carry them European commodities, which they exchange for kins and furs, \&oc. Thefe canoes are made only of the bark of trees, chiefly of birch : two men are fufficient to manage fuch a canoe: and, when the falls of the rivers oblige them to land, they carry the canoe and merchandizes on their fnoulders, till they come above or below the fall, according as they go up or down the rivers or lakes. The largeft canoes, made of the bark of trees, rarely hold above four perfons.
The canoes, made of the trunk of one tree, keep that name as long as they are fo foall, that not above three or four people cango in them. When they are larger, thofe of the Americans are called pirogues, and thofe of Guinea eham.

6 G
The

The canoes of the favages, about Davis's-Streights, are more extraoruinary. They are feven or eight feet long, and two broad; compofed of fmall flicks of a very pliant wood; in the form of a hurdle, and covered with feal-thins: every canoe holds but one man, who firs in a hole made in the middie of the canoe. I he reader may fee a more particular defcription of the canoes, in the third chapter of the Decouverte d'un grand païs en l'Amerique Septentrionale, inferted in the gth volume of the Collection of the voyages to the North, in French.
CANTARO, a weight ufed in ltaly, and particularly at Leghorn, to weigh fome forts of merchandizes.
There are three forts of cantari, or quintals: one weighs I 50 pounds, the other I5I, and the third 160 . The firt ferves to weith allum and cheefe; the fecond for fugar; and the laft for wool and cod-fifh. The other merchandizes are fold by the 1 co weight, or by the pound. Lead, wood of Campeachy, or logwood, or that called Brazil, \&c. and other wood, are fild by the 1000 weight. The pound of Leghorn is of 12 ounces, mark weight; and that of Paris, Amfterdam, Strafburgh, and Befançon, where the weight is the fame, of 16 ounces, alfo mark weight: and, at that rate, the'e three forts of cantari ought to yield at Paris as follows, viz.
The contaro of 150 pounds, 103 pounds and 8 ounces.
That of isi pounds, 104 pounds and 3 ounces.
And that of 160 pounds, 110 pounds, 6 ounces, 3 drachms, and fomething more. This Jaft makes 136 pounds at Marfeilles.
Cantaro, is alfo a meafure of contents ufed at Cochin; there are three forts of them, whofe difference is only of a few pounds. Thcy ufe the one or the other, according to the fiveral merchandizes they would meafure. Commonly, the cantaro is of 4 rubis, and the rubi of 32 rotolis.
CANTHARIDES, a fpecies of fy, or rather beetle.
This fly, whofe venom is very violent, is green and hining : its green, however, is mixed with a little blue and yellow, of a golden colour; which makes is appear of a variable and agreeable colour; but it has fuch an unpleafant and difagreeable forell, that it is not prudent to admire the colours to prejudice the fmell.
The phyficians, who compofe fome of their remedies with poifons, make fome of thofe which are called topic medicines, with thefe venomous flies. Amongft others, they make a plaifter of them for the tooth-ach; they alfo enter into the compofition of the beft blifters. The farsiers likewife ufe them very much, for the cure of feveral diftempers in horfes, particularly the farcy.
The country people about Paris carry thither almoft all the cantharides, which are ufed by the apothecariés and the farriers; there are fome, however, imported from foreign parts. Thofe of Italy, which are bigger than the others, are not ufed in France. They ufe the fmall ones which are fold by the druggifts.
When thefe flies are gathered, they kill them with the fleam of hot vinegar, and then dry them in the fun.
The cantharides muft be chofen frefh, dry, and quite whole: they will not keep much above three years, without fpoiling, and turning to dult, and then they are good for nothing.
CANTIMARONS, or CATIMARONS, a kind of float or raft, ufed by the inhabitants of the coaft of Coromandel to go a fifhing, and to trade along the coaft. 'They are made of three or four fmall canoes, or of trunks of trees dug hollow, tied together with ropes of cocoa, with a triangular fail in the middle, made of mats. The perfons who manage them are almoft half in the water, there being only a place in the middle a little raifed to put in their merchandizes; which laft particular muft be underftood only of the trading cantimarons, and not of thofe that go out a fifhing.
CANVAS, a very clear unbleached cloth of hemp or flax, wove very regular in little fquares. It is ufed for working tapeftry with the needle, by paffing the threads of gold, filver, filk, wool, through the intervals or fquares.
Moft of the canvas for tapeftry, which is fold at Paris, is made in the neighbourhood of Monfort l'Amours, and particularly at a place called Mefril.
There is coarfe, middling, and fine canvas: the fineft are generally made of flax, and the others of hemp. All the pieces of canvas are 45 ells long, Paris meafure. But their breadth is very unequal, fome being a quarter of an ell wide, others a quarter and a half, half an ell, half an ell and $\frac{1}{1}$, half an ell and $\frac{1}{8} ; \frac{2}{3}, \frac{3}{7}$, and $\frac{3}{4}$ and an half of an ell, Paris meafure. There are, however, fome from 30 to 45 ells long, by 2 ells wide: but the weavers make none of that fort, unlefs they are befpoke by the merchants.
Though tapeftry feems no great object of trade, yet, befides what is ufed at Paris, and in the other great cities of France, they allo export fome into foreign countries, particularly into England, Poland, and fome other places in the north of Europe.
Canvas is alfo a coarfe cloth of hemp, unbleached, fomewhat clear, which ferves to cover women's flays, alfo to ftiffen men's cloaths, and to make fome other of their wearing apparel. Thefe canvaffes are $\frac{5}{6}$ of an ell broad, and from

501060 ells long, Paris meafure: they are fold by the current ell.
Canvas is alfo a very coarfe cloth of hemp unbleached, which ferves to make towels. This fort of canvas is made in Normandy, in the neighbouthood of Alençon, and in Perche, towards Montagne. It is commonly 60 ells long, and $\frac{7}{T^{2}}$ of an ell broad, Paris meafure.
Canvas, or Kanefas. Thus the Dutch call a fort of very coarfe cloth made of hemp, very ftrong and very clofe, which are made in Holland, and ferve to make fails for hipping. Thefe cloths are fold by rolls, or pieces about 28 eils long, and near $\frac{2}{3}$ of an ell wide, Paris meafure. The French buy but few, not to fay, none of thefe cloths of the Dutch.

Remarks.
The frequent loffes, fome years fince, of the fails of our fhipping, as well among the royal navy, as merchant-men, proved a great difadvantage to the nation. This was generally allowed to be then owing to the canvas that was manufalured in England, and which came far fhort of what we had from Holland, as to ftrength and goodnefs. But our own canvas is lately very much improved, and the importation from Holland, in confequence thereof, greatly diminifhed. And this, it is to be earnettly hoped and defired, will foon be the cafe, in regard to every fpecies of the linnen manufacture. CAP-MERCHANT, in a trading thip, is the fame officer, who is called purfer in a man of war. The French call him writer (ecrivain); he is appointed by the merchants to whom the fhip belongs, to take care that nothing be emberzled nor fquandered away.
By the laws of France, the cap-merchant is obliged to have a regifter, or journal, marked with a flouriih at the beginning and end by an officer of the admiralty, of the place from whence he is to fail, or if there be no fuch officer there, by two of the chief owners of the Ghip.
That regifter contains an exact and particular iaventory or account of the whole hip's cargo, as tackling, apparel, arms, provifions, merchandizes, $\mathcal{F}^{\circ} \mathrm{C}$. In this book are likewife fet down the names of all the paffengers, if there be any; the freight that is agreed upon, the lift of the whole crew, with their age, qualities, wages, and falaries; an account of what has been bought for the fhip's ufe, fince her departure, $E^{\circ}$. the confumption of provifions and ammunition, in fhort, all that relates to the expences of the voyage. In this regifter, are entered all the refolutions of the merchants, captains, pilots, and others, who have a right to vote upon emergencies; the names, ages, and qualities of thofe who die, and if poffible, the nature of the diftemper that carried them off.
In a word, nothing happens or is done on beard a trading veffel, but an accurate and careful cap-merchant fets down in his book, which cannot be kept too regularly; fince, in cafe of need, it may be produced as a voucher before a court of juftice.
The cap-merchant, in the above-mentioned nation, doth alfo perform the office of a recorder in criminal proceffes, to take informations; and of a notary, to draw up and witnefs the laft wills of thofe who die on board, and make an inventory of what they leave.
To prevent all frauds or impofition in this latter cafe, he is obliged to depofit, into the records of the admiralty, the minutes, or originals of all the faid informations, wills, and inventories, four and twenty hours after the fhip's return.
The cap-merchant cannot leave the thip till the voyage is finifhed under the penalty of lofing all his wages, and paying an arbitrary fine.
In fuch hips whole cargo is not confiderable enough to bear the expence of a cap merchant, the matter himfelf, or the mate, if thereto requefted by the mafter, performs the office of a cap-merchant.
CAPER, is both the flower and fruit of the plant or Arub which is called the caper buth.
This plant, which is branchy and thorny, trails on the ground, and fpreads very much in a circular manner. It delights in chinks and crevices of old walls or rocks, and in defert barren places. It's leaves are very round. It's hower, when opened, is white, but before it blows, it is green, in the fhape of a fmall round olive, with a ftalk. This bud is properly the fruit of the caper bufh, which people preferve in vinegar, or in falt, and of which there is a pretty confiderable trade, as a pickle.
Father Le Breton, in his Defcription of the chief plants of America, inferted in the Memoirs of Trevoux, for the year 1732, Eic. defcribes this plant otherwife. It is, fays he, a thrub, whofe ftalks or thanks rife to the height of feven or eight fect; the bark is dyed with violet or purple; the leaves are large, firm, fhining, nervous, wrinkled, and dry. The flower confins of four leaves, expanded in the form of a frall rofe, the middle of which is filled with a tuft of ftamina. The top of the piftil is haped like a peftle, and becomes a fruit in form of a filiqua, near a foot long, which opens lengthways fiom one end to the other. The feeds, which are fhaped like a kidney, are covered with a mucilaginous

Cubtance, , proper to clean linnen; for it makes the water lather like unto foap*.

- May it not deferve the attention of our linnen manufacturers, in Scotland and Ireland, to think of materials for the bleaching of linnen that will come cheaper than what they. at prefent ufe? See Bleaohing. Linneks.

CAPHAR, a duty which the Turks raife on the Chriftians, who carry or fend merchandizes from Aleppo to Jerufalem, and other places in Syria. This duty of caphar was firf impofed by the chrifitians themfelves, when they were in poffeffion of the holy land, for the maintenance of the troops which were planted in difficult paffes, to obferve the Arabs, and prevent their incurfions: but the Turks, who have continued and increafed that duty, make an ill ufe of it, taking occafion from thence to affront the chriftian travellers and merchants, extorting arbitrary and confiderable fums from them to defend them, as they pretetid, againft the Arabs; with whom neverthelefs they keep up a fecret intelligence, favouring their excurfions, pillage, and plunder:
CAPITAL, amongft merchants, bankers, and traders, fignifies the fum of money which individuals bring to make up the common ftock of a partnerthip, when it is firf formed. It is alfo faid of the fock which a merchant at fiff puts into trade, for his 'account. It fignifies likewife the fund of a trading company or corporation, in which fenfe the word ftock is generally added to it. - Thus we fay, the capital flock of the bank, $\mathcal{F}_{c} c$.. The word capital is oppofed to that of profit or gain, tho' the profit often increafes the capital, and becomes itfelf part of the capital, when joined with the former.
CAPLAN, a fort of fmall fifh, which abounds in thofe places where they finh for cod: there is particularly great, plenty of it on the coaft of Placentia in Newfoundland. They'ufe it to bait the hooks of the lines, with which they firh for cod.
CAPSTAN, CAPSTANE, or CAPSTERN, is an engine compofed of a roller, or cylinder, placed perpendicu-
larly to the horizon; and fupported by flrong pieces of timber. The capftan on fhip-bioard, by means of a cable that winds round the cylinder, and of two leavers or Bars; which are put acrofs the head of it, and moved by men, ferves to draw or heave up the weightieft burthens, which are faftened to the end of the rope.
The chief ufe of capftans on board hhips, is to tow them and to weigh the anchors.
They ferve alfo upon large boats on the river Seine, to tow them againft the ftream through bridges, by faftening the end of the cable to the iron-rings, which are commonly fixed in the middle of the bridges. The capftan is allo ufed to take out of veffels very large pieces of marble, or free-ftone, and convey them to the places where they are to be wrought, when they are too large, and too heavy to be put into' carts.
CAPTAIN of Merchantmen. See Cơmmanders of Merchantmen.
CARACOLI, a kind of metal, of which the Caribbees; or natives of the Leffer Antilles, make a fort of ornament, in the form of a crefcent, which they call caracoli. This metal comes from the main land, and the common opinion is, that it is a compound of filver, copper, and gold, fomething like the Cotinthian brafs of old. Thefe metals are fo perfectly mixed and incorporated together, that the compound which refults from them, it is faid, has a colour that never alters, how long foever it remains in the fea, or under ground. It is fomething brittle, and they who work it are obliged to mix a. large proportion of gold with it, to make the compound more tough and malleable under the hammer.
The Englifh and French filverfmiths have made feveral experiments theredn, in order to imitate this metal; they who come neareft to it, put to fix parts of filver three of copper, and one of gold : The fkilful found this imitated mixture, thpugh very fine, yet much inferior to that among the favages.
Father Labat, from whofe relatioti this article is extracted, is of opinion that the caracolitis a fimple metal as produced from the mines, and afterwards refined. They make with it in the French American iflands rings; buckles, heads for canes, rand fuch other fmall works.
CARAGI. Thus they call, in the Grand Signior's dominions, the duties of importation and exportation paid on merchandizes.
It muft be obferved, that the duty of importation is paid but once, and only at the cuftom-houfe where the merchandizes are firf unloaded. If they be not fold, the importer, or owner, is at liberty to carry them to any other place, where, by producing the firf receipt for the duty paid, he is free from any other Euftom-houfe duty.
Caragi, is alfo the name of the cuftom-houfe officers who receive the duties. The general or chief officer, or direfor, of the cuftom-houfe, is called caragi-bachi.
CARAGROUCH, a filver coin of the empire, weighing nine drachms, which does not amount to guice a French crown of three livres Tournois. It goes at Conftantinople for 120 afpers: there are four forts of them, which are all equally current, and of the fame value.

CARAMANGOE, a drug which comes from China, and is proper to be ufed in medicine. The Tonquinefe value it very much. That which the Chinefe carry into Tonquin cofts theri at Canton but fix taels and two mas; and they fell it again for 12 tuels and five mas.
CARANNA, or KARANNA, a very farce gum, which comes from New Spain. The trees from which it runs are like the palm-tree. When it is frefl, it is whire, but, as it grows ftale, it becomes greyifh, inclining to green, in which condition it is fent into Europe, where the white is feldom to be met with. It is brought in lumps, wrapped up in reedleaves, or blades. To be of the beft quality, it muft be foft; and of a pleafint aromatic frell, and as white as fnow. As this gum is very dear, it is feldom fold unadulterated, and other forts are often fubfituted in it's ftead, which have not the fame properties. When applied to the head, it has an extraordinary virtue to relieve it from pain, which renders it highly valuable. It produces the fame effects in the joints, and is fo much efteemed in medicine, that it is become a proverb in pharmacy to fay, Whatever the tacamatiaca has not cured, the caranna will,
The Americans make a balm of it, which they pretend is a fovereign remedy for the cure of wounds, and the hromorrhoids or piles.
CARAPACE, a thick, folid, and firm fhell, which covers the turtle, or tortoife, and to which adhere thofe fine tranfparent fhells which are known under the name of tortoifefhell, and of which fnuff-boxes and feveral forts of inlaid works are made.
CARAT, or CARACT, is the common name of the weight which reprefents what degree of finenefs gold is of.
The mint-mafter, or cuftom, have fixed the purity, or perfection of gold, at 24 carats, though it is not poffible fo to purify and refine that metal but it will fill want about one fourth part of a carat in abfolute purity and perfection; that is to fay, gold cannot be fo refined but there will remain fuch a proportion of inferior metal, or allay, therein. .See Al. lay
The carat is divided into $\frac{1}{4} \frac{1}{8}, \frac{1}{15}$, and $\frac{x}{3}$. There degrees ferve to diftinguifh the greater or leffer quantity of allay therein contained. For inftance, gold of 22 carats is that which has two parts of filver, or of any other metal, and 22 of fine gold. See the articles Allay; Agela Regia, Bullion, Gold, Refining; under which heads, the whole bufinels relating to all kinds of dealings in gold will be amply explained and illuftrated, from it's firtt refining from the native ore to it's various ufes in all fhapes whatroever.
Carat, which the Spaniards call Quilate, is alfo a certain weight, which goldfmiths and jewellers ufe, wherewith to weigh precious ftones and pearls. This carat weighs fout grains, but fomething lighter than the grains of marc-weight. Each of thefe grains is fubdivided into $\frac{1}{2} ; \frac{1}{4}, \frac{1}{8}, \frac{1}{4}, 6 \cdot 8 \mathrm{c}$. and upon that footing the price of pearls and precious ftones is rated and fixed. 'Tavernier afferts, that the Grand Mogul's famous diamond, which is reckoned the biggeft in the world, weighs 279 carats and ${ }^{2} 8$.
In Spain the carat, or quilate, is alfo of four ghains : three carats make a tomin, eight tomins a caftillan, fix caftillans and two tomins one ounce, and eight ounces a mare: but the marc of Spain is about $\frac{7}{7}$ lighter than that of France.
CARAVAN, or CARAVANNE, in the Eaft, fignifies a company, or affembly, of travellers and pilgrims; and more particularly of merchants, who, for their greater fecurity, and in order to affift each other, travel together through the deferts, and other dangerous places, which are infefted with Arabs, or robbers. This is the true origin of thefe affociations.
There is a chief, or aga, who commands the caravan, and is attended by a certain number of janifaries, or other militia, according to the countries from whence the caravans fet out; which number of foldiers mult be fufficients to defend them, and conduct them with fafety to the places for which they are defigned, and on a day appointed. The caravan encamps every evening, near fuch wells or brooks as their guides are acquainted with; and there is as ftrict a difcipline obferved upon this occafion as in armies in times of war
Their beafts of burden are horfes, but moft commonly camels, who are capable of undergoing a very great fatigue, eat but little, and, above all, can be three, four, five, lix, or even feyen days, without drinking, to which they are broke, when very young.

## REMARXS.

Of the caravans of Africa.
The caravan of Nubia goes twice a year into Egypt. It paffes through Gary, a place on the leff bank of the Nile, three or four days journey on this fide of Dongola. There the merchants of Sannar, the capital of Fungi, thofe of Gondar, the capital of Ethiopia, and many others from divers parts of Africa, meet at a certain time, when they know the caravan is to arrive. Then, fetting out from Gary, the caravan leaves the banks of the Nile, and, croffing the deferts of Lybia, arrives, after a march of 13 daya, into a valley, which
is 30 leagues long. This valley, which extends almoft from north to fouth, is planted with palra-trees, and very well cultivated, becaufe there is good water to be found by digging only one foot deep in the ground.
After fome days reft in this agreeable place, the caravan marches a whole day between feep mountains, in an even but narrow road; after which it arrives in a narrow pafs, through which it crofies that chain of mountains which runs along the Nile on the fide of Lybia, and comes at laft to Manfelout, a town in Upper Egypt, where the duties to the prince are paid in black flaves, and where the caravan meets the Nile again, for the firt time from it's fetting out from Gary.
The firft danger in fo difficult a march is, that the caravan being to crofs immenfe plains of fand, where it is impoffible to obferve or difcover the leaft track of a road, if the guides Chould happen to lofe their way in thofe unknown countries, he provilion of water, neceffary to conduct them directly to the place where they are to find more, muft infallibly fail them by fuch a delay, which is frequently of feveral days journey. In fuch a-cafe, the mules and horfes die with fatigue and thirft in thofe burning deferts; and even the camels, notwithftanding their extraordinary power to fubfift without water, foon meet with the fame fate; and the people of the caravan, wandering in thofe frightful deferts, generally perifh alfo.
The danger is infinitely greater fill, when a fouth wind happens to rife in thofe fandy places. The leaft damage it occafions is to dry up the leather budgets in which is kept the provifion of water for the journey. This wind, which the Arabs file poifoned, does often ftifle, in a moment, thofe who have the misfortune to be then travelling: to prevent which they are obliged to throw themfelves immediately on the ground, putting their faces clofe to the burning fand, which furrounds them on all fides, and covering their heads with fome linnen for that purpofe, left, by breathing, they fhould wallow infallible death, which this wind diffeminates every where within it's cower of circulation.
Notwithtanding thofe dangers, trade, and the defire of gain, makes a multitude of people run thofe hazards, in order to become opulent by their traffic.
There arrives likewife at Cairo, every year, a numerous ca ravan from Tripoli, to which the merchants of Algiers, Tunis, and Morocco join themfelves, as well as thofe who would go in pilgrimage to Mecca, though devotion be not the only motive of their journey. This caravan is much lefs numerous on it's return, becaufe the greateft part of thofe merchants who went by land, with only money, or very fine merchandizes for fale, having employed their effects at Mecca in buying Indian commodities, which are bulky, embark at Alexandria, and return by fea to Algiers.
There come likewife every year into Egypt feveral caravans from Syria, but the time of their arrival, or of their fetting out, is not fixed. The journey of thofe caravans is neither fo difficult nor fo dangerous as thote of the others, becaufe the deferts which feparate thefe two countries, are croffed in three days, and water here is not fearce. They meet even on that road with feveral caravanferas, in which the travellers and their catile are furnifhed gratis with all neceffaries: fo that thefe caravans enjoy all poffible conveniences, efpecially the rich people among them, who, neverthelefs, live very foberly during their journey.
Thefe are the moft famous caravans which go into Egypt, on the account of trade, according to Monfieur Mallet, in his laft letter concerning the defcription of Egypt.

Of the caravans of Afia; extracted partly from Monfieur Bugnon's account.
In order to form a caravan, it is neceffary to have the permiffion, in writing, of a fovereign prince, approved, and, as it were, authenticated at leaft by two other fovereign princes of the neighbourhood. That permifition muft comprehend the number of men, carriages, and quantity of merchandizes, of which the caravan is to be compofed. Thofe merchants to whom the caravan belongs, appoint its officers, and regulate every thing that relates to it's policy or government during the march.
There are commonly four principal officers, namely, the caravanbachi, or head of the caravan, the captain of the march, the captain of ftay, or reft, and the captain of the diffribution. The firft has the uncontroulable command and authority over all the others, and gives them his orders; the fecond is abrolute during the march; the third exerts his authority only when the caravan ftops, and encamps in fome place; the fourth orders the difpofition of every part of the caravan, in cafe of an attack and a battle. Befides which, this military officer has alfo, during the march, the infpection over the diftribution of the provifions, which is conducted, under his management, by feveral inferior officers, who are obliged to give fecurity to the malter of the caravan, each of them having the care of a certain number of men, elephants, dromedaries, \&c. which they undertake to conduct, and furnifh with provifions at their own rifk, according to the agreement flipuiated.

The fifth officer of the caravan is the paymafter,
who has under him a great many clerks and iaterpre
keep accurate journals of whatever happens; and it is by tus... journals, fugned by the fuperior officers, that the owners of the caravan judge whether they have been well or ill ferved and conduted.
Another kind of officets are the Arabian mathematicians, without whom no caravan will prefume to fet out, there being commonly three of them in the large caravans. Thefe officers perform the functions both of quarter-mafters and of aids de camp, leading the troops when the caravan is attacked, and deftining the quarters where the caravan is regulated duly to encamp.
They diftinguifh five forts of caravans; the heavy caravans, compofed of elephants, dromedaries, camels, and horfes; the light caravanis, which have but few elephants ; the common caravans, where there are none of thofe animals; the horfe-caravans, in which they ufe neither dromedaries nor camels; and, Jafly, the fea-caravans, that is to fay, a number of merchant-fhips, under the convoy of fome men of war: fo that it may be obferved, that the idea of a caravan is not wholly reftrained to the land, but there are marine ca. ravans alfo.
The proportion obferved in the heavy caravans is as follows: when there are 500 elephants, they put 1000 dromedaries, and 2000 horfes at leaft; and then the efcort is compofed of 4000 men on horfeback. There are two men required for leading one elephant, five for three dromedaries, and feven for eleven camels. This multitude of fervants, together with the officers, and the paffengers, whofe number is not fixed, ferve to fupport the efcort in cafe of a fight, and render the caravan more formidable, and, therefore, more fecure. The paffengers, indeed, are not, according to the laws and ufages of this mercantile cavalcade, obliged to fight; but, in cafe they refufe it, they are not intitled to any provifions whatever from the caravan, even though they fhould offer to pay an extra price for them.
The officers and fervants are paid every Monday, unlefs it be a new or full moon, in which cafe the payment is put off till the next day: they begin with paying the meaneft of the fervants.
Every elephant is mounted by what they call a nik, that is to fay a lad nine or ten years old, brought up to that exercife, who drives the elephant, and pricks it now and then, in order to fire it, in a fight. The fame lad loads alfo the firearms of two foldiers, who mount the elephant with him.
The day appointed for fetting out is never altered.
In order to be better able to bear the great heat, the traders ufe drawers and flockings, made of a fort of cotton, extracted, as fome travellers tell us, from that kind of frone which the ancients called amianthus, which, being daly beaten and prepared, is proper to be fpun, and is faid to be incombutible. See Amianthus.
As moft of the Arabian princes have no other means whereby to fubfift than their robberies, they keep fpies, who give them notice when the caravans fet out, which they fometimes attack with fuperior force, affaulting chiefly the centre, in order to feparate the company, and carry off, if poffible, the vanguard, wherein they pretty often meet with good fuccefs: When they are repulfed, they generally come to fome agreement, the conditions of which are pretty well performed, efpecially if the affailants prove to be natives of Arabia; but, in cafe the caravan be beat, it is abfolutely plundered of all it's treafure, and the whole convoy made flaves; but they thew a little more mercy to foreigners: fometimes the taking of one caravan only is enough to enrich thofe princes.
As the plague rages very often in the Eaft, they are obliged to ufe great precautions, to prevent the caravans from carrying that dreadful diftemper into the places through which they pafs, or from being themfelves infected therewith; wherefore, when they arrive near a town, the inhabitants and the people of the caravan have a folemn conference, concerning the ftate of their health, and very fincerely communicate to each other the ftate of the cafe, if there be really any danger to feas on either fide. When on either fide they have juft reaton to fufpect any contagious diftemper, they amicably agree that no communication whatever fhould be fuffered between them; and, if the caravan ftands in need of provifions, it is conveyed to them over the walls of the town, and that with the utmoft precaution.
The profits made by the commerce of there caravans, whilft upon the march, are often incredible; and our author relates, that, by feveral barters and exchanges of merchandizes, often repeated, a friend of his had gained 20,000 crowns, which had coft him only a gold watch of 30 Louis d'ors, that he gave, in exchange for two rough diamonds, to a merchant of the caravan with which he travelled.
Thefe extraordinary profits, which are common enough, engage a great number of perfons to join with the caravans, and renter the toil and inconveniencies of the journey lefs infupportable: and, indeed, thofe fatigues are not fmall. Thefe travelling merchants muft refolve to accept every-where fuch provifions, and other conveniencies, as they find, and not
permit delicacy and eafe to get the better of their defire of honelt gain by fuch traffic : a trader muft, like an herore general, not mind the frightful contulion of languages and nations, the fatigues of long marches, nor the exorbitant duties and impofts pard at certain places; nor do the gallant enterprizing traders regard the audacious robberies and fubtile tricks, to which they are expoled among that mulcitude of vagabond, who frequent the caravans, with no other view but to live at the expence of the weak and incautious. Thefe latt inconveniencies, indeed, may be prevented, at lealt with regard to the moit prectous merchandizes, by putting them into the ftrong and curious trunk of the caravan, which, like many in Europe, have variety of curious locks, that cannot be opened but by thofe who know the knack of them.
There fet out from Erzerum, the capital of that part of Armenia which is under the dominon of the Grand Signor, a great many caravans, fome more, fome lefs numerous: there are fome which confilt of Armenians only; fuch are thofe which carry filks to Tocat, and to Conitantuople: thefe commonly fet out in September.
The caravans of Siberia, at prefent, enter into the territories of China, by Selinginfkoy, fituated $m$ the, 2 d degree of north latitude, on the eaftern bank of the river Selmga, by virtue of the lalt treaty of comnerce between Rulia and the emperar of China; whereas formerly they ufed to pals through Ner zinkoy and Argun. We wall feak of chele caravans in the account of the conmerce of Mutcovy.
There are allo fea-caravans, elt blifhed for the fanie realons, and the fame ufes, for inftance, that of Conltantioope for Alexandria. See the articles Persia, Turky, and other places in the eaft where they ufe caravans; fee ailo Caffila.
CARAVANIER, is he who leads the canels, and other bealts of burden, which are commonly ufed in the caravans in the Eaft. CARAVANSERA, or KARAVANSERA, a place ap pointed for receiving and luading the caravans. It is com monly a large fquare building, in the middle of which there is a very fpacious court. Under the arches, or piazza's, that furround it, there runs a $b_{a n k}$, or elevation, raifed fome feet above the ground, where the merchants, and thofe who travel with them in any capacity, take up their lodging., as well as they can, the beafts of burden, being tied to the foot of the bank. Over the gates that lead into the court, there are fometimes iittle rooms, which the keepers of the caravanieras let out, at a very high price, to fuch as have a mond to be private.
The caravanferas in the Eaft are fomething in the nature of our capital inns in Europe, with this difference, however, that, in the caravanferas you meet with little acommodations or provifion, either for man or beaft, but are abliged to carry almoft every thing with you.
Molt of thele buildings are owing to the charity of the Mahometans; and the greateft lords, either out of devotion, or vanity, fpend prodigious fums in founding them, efpecidlly if they happen to be in dry, fandy, and defert places, whither the water is to be conveyed fiom a great ditance, at a vaft expence; for there is never a caravanfera without a well or fpring of water There are few large towns in the Eaft, efpecially in the dominions of the Grand Signior, the king of Perfia, and the Grand Mogel, but have fome of thofe buildings. The caravanferas of Conftantinople, I paban, and Agra, the capitals of the empires of Tu-ky, Perfs, and Mogul, are the mof famous, with regard both to their number and magnificence. In thefe the foreign merchants have moit of their warehoufes; for in thefe three cities there are feveral caravanferas, which, befides the common conitruction, as above defcribed, have Ceveral fafe and convenient aparments, both for the merchants and their merchandizes.
The emperor Mahomet IV. caufed fuch caravanferas to be built at fome diftance lrom one another between Confantinople and Damafcus, and appointed confiderable revenues for their maintenance. There all $t$ avellers, be they Chriftians, Jews, or Mahometans, are tqually well received.
There are alfo at Cairo in Egypt, very fine caravanferas, which ate always full of merchandizes and people; this is a motive that engages the great lords of that country to build fuch edifices, becaule they offord them no mconfiderable revenues. The Nubians, Abyffinians, and other nations of Africa, who refort to Cairo, have there each their particular caravanfera, where they alw ys lodge. The fame mult be obferved of the merchants of Aleppo, Dainafcus, Conitantinople, and other trading towns. 7 hefe caravanferas are efteemed facred dwellings, where it is not permitted to infult any perion, or to pillage any of the effecis, which are depolited there. They even carry their precautions fo far, as not to fuffer any man who is not married to lodge there, becaufe they are of opinion, that a man who has no wife is more dangerous than anather. It is to the intereft of the proprietors of thele fort of caravanferas, that the travellers are indebted for the good order and fecurity they meet with : this is what Monf. Mallet tells us.
The caravanferas of Schiras and Cafbin, two confiderable towns in Perfia, have allo a very great reputation, and little inferior to thole of the capital.
Befides the caravanferas which in the Eaft ferve inftead of great inns, and furnif accommodations for the merchants, VoL. I.
there are fome alfo at Ifpahan, which may be filed bazars, or arched balls, where there are thops and warch .ules, whenein teveral forts of merchandizes and delicate pieces if worknanhip are e poled to hale in the day time, and locked up at mght; and for which the keeper of the aravanctia anfwers, in contuderation of a certain fee or peryultae.
The caravanferafkeer (thus the keeper thereof is calied) d es alfo keep an account of all the merchandizes that are fild upon truit; tor he is obliged to book them regulanly in his regiter, with the n.mes of the buyers and ferlers. He allo, is to de mand the payment of the fums due to the merchast, for what has been fold in the caravanfera, on the feller's paying two per cent.
CARAVANSERASKEER, the Iteward or keeper of a caravanfera. See the foregoing article.
CARBEQUI, or ASPER of COPPER, a coin which is current in the province of Georgra in Afa, particularly at Teflis, the capital of it; 40 carbequi's ma e an abay, and io carbequ's a chauuri, See Abagi.
CARBUNCLE, a name fometimes given to a red precious fone, more commonly cailed a ruby. But it is never caled a carbuncle, when it's weight does not exceed qa carats.
The ancients beheved, and have written fo many extaorinary, romanuc, and incredulous tales, relatang to the tactitious carbuncle, as they called it; and the moderns, who have fpoke of it on their authority, have added to many idle inve tons of the rown, ariling from a warm, prepoflifed, and enthuliafti: imagitation, that, rather than deicribe them, itconGifte more with the tenour of this work to umit all fuch relations. CikD, a fort of inftrument or comb, conpol a of a great number of fmall pieces, or points of iron wire, a littc in cuivated hike hooks towards the middle, and tattened very clolely together by the feet, in rows. A piece of thick leather, which keeps them faft, is nalled by the edgus on a flat prece of wood, which is an oblong lquare, abuut a foot long, and near half a foot broad, with a hanule placed in the midule, on the edge of the longeit fide: there are always two cards between which are put the m terials that are to be woried
Thefe cards are of very great ule in the manafactortes, where they ferve to comb, difentangle, and range the wool and fuch other materials, in order to put them in a condition to be fpun, by the manufacturers of cloths, ftuff-, ftock ings, hair, \&c. or to be ufed unfpun in reveral other works, in much the fame manner as the woul and the hair, which the hatters employ in the manufacturing of hats.
The trade of thefe cards made in France is very confiderable, They allo import a great many, and pretty good ones, from foreign countries, efpeciafly from Holland; the [e are finaller than thole that are made in France, but are very much efteemed.
The beft cards made in France, are thofe at Paris, where the carders only mount them, the wood on which they are mounted, being fent thither from Troyes in Champagne.
After thofe of Paris, the cards of Roan and Dreux are reckoned the beft: the other places in France where they are made, are Remorentin, Bourges, Aubigny in Richemont. Yvoyeles-prez in Berry, Orleans, Troye, Elbeuf, Chateauroux, Beauvais, Tours, Poictiers and St, Maixant.

R EMAR K :
Cards for wool, in England, may not be imported, nor the wire taken out of old ca!ds be put into new leather and boa ds, in order for faje, upon forfeiture thereof, or of the, value, if not feized.
But may be amended for the proprietors own ufe, or for tranfportation only. 3 Edw. IV. i Rich. III. 39 Eliz. 3 Car. I. 14 Car. II. 2 W . and M.

Carders, fpinners, weavers, fullers, Theermen, and dyers, not performing duty in their occupations, fhall yield, to the party grieved, double damages, to be commitred thll payment. One juftice to hear and determine complaints.
Carders, combers, forters, fpinners, or weavers conveying away, imbezzling, detaining any wool or yarn, delivered by the clothier, or any other perfon, fall give the party grieved fuch fativfaction, as two juftices, mayor, \&c. Shall think fir; if not able, or willing to make fatistaction, for the fuft offence to be whipped, or fet in the flocks in fome market-town, or in any town where the offence is commisted; the fecond offence to incur the like, or fuch further punifhment by whipping, \&c. as juftices thall think proper. Convotion by one witnels on oath, or confeffion.
Card, playing cards, are little pieces of fine thin palteboard, made of leveral fheets of paper pafted the one over the other, and cut afterwards into pieces in the form of an oblong fquare of feveral fizes, but moft commonly (in England) three inches and a half kng, and two and a nalf brood; on which are printed feveral poonts and figures. A certain number or affemblage of them ferve to play feveral games. A full pack confif:s of 52 cards.
A pack is always wrapt up in a piece of paper, on which are printed the name, fign, dwelling.place, and fometimes the motto of the maker: whthe libel of the famp-office in tngland, fignifying that the fix-penny ftamp duty has been paid and that there is a penalty of 10 l. for every pack fold unlabelled. In France they ca!l a parcel of fix packs un dizain, a grofs is of 12 fizains, or $7^{2}$ packs.

## C A R

The manner of making playing cards.
The moulds or blocks for thefe cards are exactly like thofe that were ufed for the firf books: they lay a fheet of wet or moift paper on the form or block, which is firft lightly done over with a fort of ink, made with lampblack diluted in water, and mixed with fome ftarch to give it a body; they afcerwards rub it off with a round lift. The court-cards are coloured by means of feveral patters, ftiled ftanefiles. Thefe confift of papers cut through with a penknife, and, in thefe apertures or openings, they apply feverally the various colours, as red, black, \&ec. Thefe patters are painted with oil colours, that the brufhes may not wear them out: when the patter is laid on the pafteboard, they flightly paf; over it a brufh full of colour, which, leaving it within the open ings, forms the face or figure of the card.

## REMARK.

Cards and dice may, upon fufficient recurity, be exported without payment of the flamp duty, io Ann. rap. 19. feet. 170. 5 Geo. I. cap. 19. fect. ult.

Playing-cards may not be imported, 10 Ann. cap.ig. fect. 165. CARDAMOMUM, or CARDAMUM, a medicinal plant and feed, which is aromatical, and is ufed in the compofition of Venice treacle.
There are three forts of cardamums, the largeft, the middlefized, and the fmalleft; which the druggifts commonly call cardamum majus, medium, and minus. The largeft cardamomum is nothing but the conmon grain, or feed of paradife, a fort of pepper which grows at Rio Sextos, Petit Dieppe, and other parts on the coalt of Africa. They have long ufed it in France, whilft the pepper of the Indies was fcarce, becaufe it came by the Mediterranean, and they could not get it at firft hand, but by very long voyages.
The phyficians who tried it, when it was firft brought into France by the fhips of Dieppe and St. Malo, found it not much different from the Indian pepper, except it's being tharper and hotter. There is fill a pretty great trade of it.
The plants which produce the largeft cardamomum, and is called by the fame name, has green leaves. It's fruit is a kind of pod, or fig, of a pretty fine red; the feeds it contains is a grain of paradife, or fmall pepper, for it is alfo called by that name. It is of a triangular figure, reddifh on the outfide, and white within, of a tharp and pungent tafte, and of an agreeable fcent, efpecially when it is frefh.
Some fell it mixed with true Indian pepper. The inle of St . Mary, near the great ilfand of Madagafcar, and Caramboul in that illand, produce the largeft cardamomum in very great plenty.
The leaves of the middle-fized cardamomum are indented, end in a point, and grow three on a ftalk, like trefoil or clover-grafs. The pods are two or three inches long, and of a triangular form, fomewhat channelled and fattened at the end. It is a trailing plant, which does not rife much from the ground. This kind is feldom feen in France. It is taken indifferently for the fmalleft fort.
The fmalleft kind is gathered in the kingdom of Cananor, in the country of Malabar, on a mountain fix or feven leagues diftant from the fea, which is faid by travellers to be the only place in the world, where it is to be met with. It's pods that are triangular, of a greyifh white, a little ftriped, are much fmaller than thofe of the middle-fized, and contain a fharp rough fubftance, which looks like meal, though it be really feed.
The foil where this plant grows, produces a very large income, for it requires neither plowing nor fowing. All the trouble required is, to burn the weeds after the sains are paft. The fun dries them in a little time, and their afhes are a fufficient manure, to make the foil produce the cardamomum. Almott all this cardamomum, which is the moft valued and the molt precious, is fold and confumed in the Eaft, becaufe the eaftern nations never think their rice well feafoned, unlefs it be with this fpice. Some of it, however, is brought into Europe, and the druggifs in France buy it of the Eng. lifh and Dutch. The latter confume a great deal of it, becaure they take a delight in chewing it.
We meet wish the cardamomums of Java, in the catalogues of the cargo of lhips of the Dutch Ealt-India company, which come from Batavia. And Nicholas de Graf, in his voyage to the Eaft-Indies, obferves, that fix cardamomum plants of Cananor do not equal one of Ceylon, where they grow very large and thick.
ARDED, as carded cotton, carded hair, carded wool, is cotton, hair, or wool, which has been worked with the inftrument called a card. A card-full of cotton, of wool, \&ic. is the cotton or wool taken from both the cards, after they have been paffed feveral times over each other.
CARDER, a workman who cards wool, hair, cotton, \&c. At Paris, the carders are a particular company of tradefmen. Their rules or ftatutes are written in the thirtieth folio of the parchment book or regitter of the ordonnances and ftatutes, called the little cahier, or book, which is depofited in the chamber of the king's attorney in the Chatelet: thefe ftatutes have been confirmed by letters patent of Lewis XI.
dated the $24^{\text {th }}$ of June, 1467 , and increafed, and again confirmed, by letters patent of Lewis XIV. given in September 1688, and regiftered in the parliament the 22d of June 1691 By the rules and ftatutes of this company, no man can be made free of it, unlefs he has been three years an apprentice, and ferved one year more with a mafter as a journegman: he is likewife obliged to perform a mafter-piece of workmanhip, fuch as is appointed by the jurymen of the trade, who may chufe for that purpofe one of the following works. I. To make two or threc cards full of wool or cotton 2. To prepare a quarter of a pound of cotton on the hurde, with a bow. 3. To fpin with a fpinning-wheel, matches proper for wax candles. 4. To card wool on the furnace. There are always, at the head of the carders company, three fworn freemen, whole bufinefs is to watch and take notice of the abures and mifdemeanors that might be committed by any of the trade, and to defend the company's right and intereft. Thefe jurats are chofen from year to year, that is to fay, two in one year, and one the next, and foon. The laft chofca jurats are to take care of the fraternity.
Befides the power granted in France, to the freemen carders of Paris, by their flatutes, for carding and preparing wool and cotton, for cutting all forts of hair, for making cloth, fpinning cotton-matches, and making cards; they have alfo by the fame ftatutes, the liberty of dyeing, or caufing to be dyed, at their own houfes, all forts of wool, in black, mulk colour, and brown. But, by a decree of the council of ftate, of the soth of Augult $1 ; 00$, they are forbidden to take off, cut, or card any hare's hair, and even to have the kins of thofe animals in their houfes, becaufe the haters are not allowed to ufe any hare's hair in the manufacture of hats.
CARDING, is the combing, difentangling, and preparing wool, with the inftruments called cards defcribed above, that it may be fit for making the feveral works it is defigned for, They alfo card wad, cotton, flax, hair, and other materials proper for feveral forts of manufactures.
Before the wool be carded, it muft be greafed with oil, of which one fourth part of the weight of the wool is required for that which is defigned for making the woof of ftuffs, and the eighth part for that of the warp.
By the regulations for the manufactures in France, made in Auguft 1669, the clothworkers are forbidden to ufe iron teazles, to runge or lay the nap or hair on the furface of the cloth; but they muft sfe teazles made only with thifle.
CARD-MAKER, one who makes cards for carding wool, \&c. See Card and Carder.
Card-maker and Seller, he who makes and fells playingcards. See Cards, Playing-Cards.,
The card-makers of thefe cards, at Paris, are a pretty ancient and confiderable company. The ftatutes, by which they are ftill governed, were drawn up, towards the latter end of the reign of Henry III. according to an edict of that prince, made in December 1581, by which it was ordered to revife and renew the ftatutes of all the bodies and companics of arts and trades; but they were not approved and authorized before the year 1594, the fixth year of the reign of his fucceffor king Henry IV. which delay was occafioned by inteftine diforders and the civil wars of the League.
Thefe ftatutes are reduced into 22 articles, to which fome more wete added in the year 1613 , under the reign of Lewis XIII, and in 168 , under Lewis XIV
By the firft article it is ordered, That no man thall carry on the bufinefs of a card-maker, nor keep a fhop in the city and fuburbs of Paris, unlefs he be a freeman of the company.
The fecond orders, That no one Chall be admitted to take up his freedom, unlefs he has been an apprentice under a freeman during four years, and ferved afterwards three years as a journeyman.
The third mentions the qualifications an apprentice ought to have, in order to be made free, viz. The enquiry that is to be made of his life and morals by the jurats; the obligation he i, under to perform a malter-piece of workmanibip, which confifts in half a grofs of fine cards; the place where he is to perform it, namely, in the houfe of one of the jurats; and the falary or fee due to the jurats who were prefent at it, which amount in the whole to 40 fols Parifis for each of them under the penalty, for thofe who demand or receive more, of paying four times the fum, and being deprived of their place of jurats.
By the fourth it is ordered, That no man fhall be allowed to follow the bufinefs of a card-maker in the city and fuburbs of Paris, unlefs he keep a workdbop open to the ftreet, and be admitted a freeman of the company.
The fifth orders, That no mafter fhall have above one apprentice at a tume, or two at moft, who muft be bound for four years before a notary-public; and it declares, that no mafter fhall have the liberty to take two apprentices, unlefs he keep at leaft five or fix journeymen commonly at his houfe: however, any mafter is at liberty to take a fecond apprentice, the laft year of the time of the fint.
By the fixth, The mafters are forbidden to turn over any apprentice, without giving noticis of it to the jurats, who are to keep a regiller of it.

## C A R

The feventh declares, That the mafter's children may leart the trade at their father's houfe, without being bound apprentices to them, and yet become thereby intitled to the privileges of the trade.
The eighth grants to the mafter's daughters the liberty to carry on the trade after their father's death, without undergoing any apprenticefhip, and to ferve as journey-women with any mafter.
The ninth and tenth grant to the mafter's or freemen's widows, the enjoyment of their hulband's privileges, as long as they continue widows; with this exception, however, that they cannot bind new apprentices, but only continue to keep thofe who began their time with their late hufbands.
By the eleventh, all mafters are forbidden to carry, or fend to be fold, any cards at saverns or inns, and commands them not to fell them any where but in their fhops, unlefs they be fent for by the citizens.
The twelfth orders, That no freeman of the company fhall fiti, os expofe to fale, any fine cards, unlefs they be made of fine thin pafteboard on each fide, and the colours be of indigo and vermillion, upon pain of forfeiture.
By the thirteenth, the hours for working are regulated; namely, to begin at five in the morning, and end at' 10 at night, and not later, through all the feafons of the year, except with regard to apprentices, when there is any work which might be foiled by lying by.
The fourteenth relates to foreign cards, which mult be viewed, examined, and marked by the jurats, before they be expored to fale.
By the fifteenth, the jurats are forbidden to bring any action, or commence a law-fuit, concerning the regulations of police, or relating to any matter of trade, without firft giving notice of it to the company.
The fixteenth orders all the freemen of the company to have each his particular mark, differing from that of any other, containing their name, firname, and fign, without being at liberty to ufurp names, marks, counter-marks; figns, or motto's of others ; which marks they mall be obliged to receive from the jurats, at the time they take up their freedom, and muft be different from the marks, counter-marks, and figns of their fathers, mafters, or predeceflors ; the marks thus received from the jurats fall be placed on a board fixed up in the chamber of the king's attorney, in the Chatelet.
By the feventeenth, all-journeymen and fervants, receiving wages, are forbidden to leave their matters before they have ferved them a whole month; nor can the mafters give them any work before they are difcharged by thofe whom they ferved before.
The eighteenth grants the freedom of the company to any journeyman who marries a freeman's daughter, and regulates The fees they are to pay on taking up their freedom, upon the fame footing as they are paid by freemen's fons.
The nineteenth treats of the number and election of the jurats: they are to be but two, one of whom is to be changed every year, fo that each of them continue two years in office. The election is to be made the Thurfday next following the feftival of Epiphany, by the whole company, which, for that pharpofe, is to meet before the king's attorney, at his chamber in the Chatelet of Paris. Thefe jurats are to make all fearches and vifitations neceffary concerning matters relating to the company's trade.
The twentieth fpeaks of thofe who work in chambers, not being freemen; and orders, that they fhall either leave off working at that trade, or enter with mafters as journeymen, on the conditions above-mentioned, unlefs they rather chufe to take up their freedom.
The twenty firft orders, That, when there fhall arrive any merchandizes belongirg to that trade, but not bought by foreign merchants, all the freemen of the company thall be fummoned to be prefent at the fale of them, to buy any, if they have a mind to it.
Laitly, the twenty-fecond forbids all freemen to employinury workman who is not of the trade, and has not ferved an apprenticefhip.
After the death of Henry IV. Lewis XIII. ordered that a duty chould be paid the bodies of merchants, and the companies of arts and trades, for the confirmation of their ftatutes. The company of the mafter-card-makers was the firt who paid that duty; whereupon they not only obtained the confirmation of their ancient ftatutes, but alfo the allowance of four new articles, drawn up by themfelves, and examined and approved by the provolt of Paris, to be obferved and executed, and have the fame force as thofe of the year 1594.
Thefe four articles are as follow, viz.
Firft, That henceforth all the freemen of the company fhall be obliged to put their name and firname, with the fign and motto they have chofen, upon the knave of clubs of every pack of cards, both broad and narrow, upon pain of forfeiting the fame, and paying a fine of 60 livres.
Secondly, All card-makers in the cities, and other places of the kingdom, are forbidden to make, counterfeit, invent, or falify, either directly or indirectly, the moulds, prints, figures, and other characters, of the faid cards, which the card-makers of Paris have always enjoyed and ufed, on pain of forfeiting

## C A R

the faid cards, and all other merchandizes that mighe be packed up with them, and paying a fine of 50 livres.
Thirdly, All freemen card-makets, and fuch as hall take up their freedom hercafter, are ordered to make all the cards both broad and narrow, according to the moulds and prints which the mafters ufe at prefent, and of the fame lengith and breadth; and for that purpore they fhatl be obliged to take the mealure of the cuts they intend to have cut, or engraved, from the ftandards that are to be' kept by the jurats of the company, under the penalty of forfeiting all the cards otherwife made, of having all their moulds broke, and paying a fine of 60 livres.
Fourthly, All mafters are prohibited from making any of thofe cards called in French maitreffes carfes; either broad or narrow, but out of the pickings of the fine cards, under the penaly of forfeiting the faid cards, and a fine of 10 liveres.
The letters patents by which thefe four articles are conftrmed, were granted in February ${ }^{1613}$.
The card makers having been difturbed in their privilege of buying and felling all forts of paper, by other companies who trade in the fame commodities, were confirmed and fupported in it by a decree given the 22d of February, 168 I : it is the fubftance of this decree which the jurats who were trufted with the edition of their fratutes, added to thofe of the year i594, as a twenty-fifth article, though there was near a whole century between the two regulations.
The laft article declares, That the card makers bave a right, and are in poffeffion, of buying and felling all forts of paper, after the ufual manner, according to the dectiee of the parliament, given the 22d of February, 168 s .
CARDIGANSHIRE, in Wales, has Merioneth and Montgomeryihire, in North Wales, on the north ; Pembroke and Carmarthenflire on the fouth; Radnor and Brecknockhhire on the eaft; and is wathed on the weft by the Irilh Sea.
It is 40 miles in lepgth, and 18 in breadth, according to Templeman, who gives it an area of 6 g miles. Others make the length, from Cardigan to Plynlimmon on the north-eaft, but 36 miles, and but 16 or 17 where broadeft ; and fome no more than 32 .from fouth to north, and but 15 from eaft to weft.
It's air varies as the foil does; for, in the fouth and weft parts, which are more on a level than moxt parts of Wales, the air is mild and wholefome, and the foil fruifful. The northern and eaftern parts, which are mountainous, are both barren and bleak; yet, in the worff parts of the fhire; there is pafture, in which are bred flocks of fieep, and confiderable herds of cattle; in the vales are feveral fpacious lakes.
Coals and other fuel, indèed, are fcarce, but there are feveral rich lead mines (the ore whereof often appears above ground) and fome there are which produce filver. Here is plenty of river and fea filh, and of fowl, both tame and wild; nor is there any fcarcity of corn; lime to manure their land they are obliged to fetch from Carmarthenthire. This county is fo remarkably full of cattle, that fome catl it the nurfery for all England fouth of Trent; though this is no great algument of it's fertility; becaufe it is well enough known that mountains or moors will breed, though not fatten, cattle.
It's principal rivers are the Teivi, the Rydal, and the Itwyth. The former wanders, as if it were loft among the rocks and mountains, till it comes to Straetfleur, where it begins to run regularly to the fouth-weft, by Tregaron and Bangor, and, making an angle weftward, falls into the Irith Sea below Cardigan. The Rydal fifes in the fouth-weft fide of the Plynlimmon mountain, and runs fouth and fouth-weft, till it falls into the Irifh Sea, jointly with the river Iftwyth, which rifes beyond the lead mines, on the north-eaft of Cardiganflire, and runs near on the fame point with the Rydal, till it comes near Aber-If wyth, where it falls into the Irinh Sea.
Cardigan, fiuate at the mouth of the Teivi, leading into Pembrokefhire, is a large, ancient, and populous borough, whofe chief trade is to Ireland; to which, and to divers other parts, it exports lead from it's harbour, to the great advantage of the neighbouring country.
Cardigan Bay is a very large gulph of the fea, bearing, far from the land, ftretching north and fouth from Cardigan Point to Barfey Ifland, about 12 leagues north. There are feveral little tide-havens, and places in it, only fit for fmall veffels, and moft of them are barred, and fcarce worth naming, here being neither trade, nor any port fit for it.
At the north part, in a deep bight, there is a bay within a bay, a long gulph running in north-weft by north, and, at the fartheft end, it is called Pulhelly Bay, near which I have feen feveral confiderable lead mines. At the bottom of it there is a fmall river, which comes into the fea with a full channel, and makes a pretty good haven, called Traeth Haven. On the north fide of the bay there is good iting from feven to ten fathom water, and it is often made ule of by thips in ftrefs of weather, bound either to or from Ireland. If a north-weft wind blows hard, fhips bound from Chefter to Dublin, which are frequently drove back, and glad to run for Barley and this bay; and, in a fouth-weft wind, it has been the fame with the coal hips bound from Swanzey for Dublin.
Aberistwyth, a town fituate on the river Rydal, at the

## C A R

## CAR

mouth of the river Iftwyth. It is a populous and rich place, but dark and fmoaky, fo that the people look as if they had lived continually in the coal or lead mines. It is reckoned the moft populous town in the county; it is pretty large, has a good market, and a thriving trade, both in lead and fifh, efpecially whiting, cod, and herring.
Lianbedor-Vawr, is a well built town, has a good market, but a poor harbour, and therefore no great trade.
Llanbadarn St. Peter, or Pont Steffan, a fmall town leading to Carmarthenfbire, and accommodated with good entertainment for travellers. Here is a great narket for heifers, cows, calves, and fheep, from the end of April to the beginning of July.
CARGADORS, a name which the Dutch have borrowed from the Portugueze, and which they ufe to fignity a kind of brokers, whofe only bufinefs is to find freight for fhips outward bound, and to give notice, to the merchants who have commodities to fend by fea, of the fhips that are ready to fail, and of the places for which they are bound. See ShipBroker.
If the cargador, to whom the mafter of the fhip addreffes himafelf, meets with a full cargo for it, he agrees for the pice with the merchant who wants it; if, on the contrary, be finds only feveral parcels, or bales, of merchandizes, not fufficient for a whole cargo, he difperfes bills upon the exchange and caufes feveral of them to be pofted up, according to the following model, which, for inftance, is fuppofed to relate to the cargo of a fhip bound for Koniglberg.

## For Konigłerg.

- The fhip lies before the Oude Stad's-Herberg, or the Old City-Inn.
- Captain Teunis (Anthony) Alopfe, of Vlieland, thall fail - (by God's leave) with his pink, an exceeding good failer, called the Shepherd, mounted with fix guns, and other war-- like ammunitions in proportion: if any be willing to give - him any merchandizes, or other effects, he will receive and - deliver them faithfully.
- Apply to Teunis Blok, broker, and to Peter Fleyms.
*N. B. Nothing fhall be laden before notice is given to - the cargadors, nor before the freight is agreed upon; - and the bills of lading are to be fent with the mer-- chandizes.'

When the merchant has agreed about the freight of his merchandizes with the twa cargadors, or with one of them, he procures a permit for exportation from the cuftom-houfe, and fends them on board by his own waterman, who brings him back a receipt from the mate to whom he has delivered them. In this receipt the mate declares that he has received, on board of fuch a fhip, fo many bales, fo many tons, or fo many pieces of merchandize, with fuch a mark; after which the merchant writes three or four bills of lading, of the fame tenor, which he gives to the cargador, together with the mate's receipt: the cargador caules the bills of ldding to be figned by the mafter of the thip, who keeps one for himfelf, and returns the others to be delivered to the merchant. See Bills of Lading.
When any merchandizes are to be landed, which are fent by fea to Amfterdam, the cargadors commonly give notice to the merchants of the atrival of the fhips: and then the merchant to whom any merchandizes are directed, caufes them to be declared by the convoy-looper (that is to fay, by the cuftom houfe officer whom he is ufed to employ) who brings him the permit for landing, which he need only give to his waterman, or to bis cooper, who go and take out the merchandizes, and carry them to fuch a place as the merchant has appointed.
When there is on board a thip any commodity which no body claims, or when the perfon to whom it is directed is unknown to the cargadors, one of the fervants belonging to the exchange is ordered to give notice by public cry, for fevesal days following, upon the exchange, that there are fuch merchandizes, with fuch mark and number, \&c. on board fuch a fhip, coming from fuch a place, laden by fuch a one, and directed to fuch a perfon, and that he who has got the order, or bill of lading, muft come and demand them; that otherwife they will be lodged in a warehoule at the owner's expence.
It muft be obferved, that, when a merchant receives by any fbip fuch merchandizes as are fubject to leakage, if there be any cafks empty, or near it, fo that they be not worth the freight that fhould be paid fer them, he is not obliged to take them, but may leave them for fuch a part of the freight, which he deducts from that which he is to pay for the whole number of calks directed to him.
But, if they be dry merchandizes, which were well-conditioned, when laden, but were injured or fpoiled by fone accideat which happened during the voyage, the merchant to whom they are configned muft not fail, when they are unr lading, to enter a proteft, or make a verbal procels of the condition in which he received them, to the end that they may be reckoned among the large averages, which be could
not obtain, if he omitted that formality. See Averanae Laftly, with regard to fuch merchandizes as are liablis to putrify, or fpoil of themfelves, without any external aecident, fuch as raifins, figs, chefluts, \&c. the freight muft be paid for them' a if they were in a good condition.
CARGO, fignifies commonly all the merchandizes and ef fects which are laden on bo rd a fhip, exclufive of the fol diers, crew, riuging, ammunition, provifions, guns, \&c. though all thefe things load it fometimes more than the merchandizes.
We fay, that a fhip has it's cargoe, when it is as full of merchandizes as it can hold ; that it has half it's cargo, when it is but half full; that it brings home a rich cargo, when is is aden with precious merchandizes, and in great quantity; that a merchant has made the whole cargo of a hip, or only ane half, or one quarter of the cargo, when he has laden, the whole fhip at his own expence, or only one half, or one fourth of it.
CARLINA, CAROLINA, or CHAMELEON ALBUS, a medicinal plant, reckoned to be a fovereign remedy againft poifon, and againft the plague: it is alfo ufed for curing feveral other diftempers.
There are two forts of carlina's, the white and the black, which hardly differ in any thing but the colour, and in that the white fort thoots no ftem, whereas the black grows pretty tall.
Sone authors, and among others Mathicius, in order, perhaps, to render this plant more precious and efteemable, derive it's name of Carolina from Carolus Magnus, Charies the Great ; and affert that it was difcovered to that emperor by a miraculous vifion in order to cure bis troops of the plague, which made a great havock in his camp. (Lemery obferves only, that, under that emperor's reign, this plant was found to be good againft the plague.)
Let this be real or fauulous, there is, at prefent, no occafion to have recourfe to miraculous interpofition to find the two forts of carlina's in the mountains of the Alps and the Pyrenees, and in the Golden Mountain of Auvergne. They grow there fo plentifully, that the peafants feed partly on their roots, and on that kind of artichokes which they produce.
The white carlina has a root about an inch thick, and ope or two feet long; it is brown, and chopped on the outlide: it's leaves are of a pale green, indented, and prickly; thyy are placed circularly on the ground, above which they da not rife much. The flower is flat, of four or five inches dameter ; it rifes from the middle of the plant, without being fupported by any falk; it is thaped like a baton, or rather like an artichoke, bordered with fome narrowed and peaked leaves; it is of a yellow, carnation, and purpurine colour: it's feed s like that of wild faffron.
The black carlina is abfolutely like the white, except that it grows up into a flalk, or ftem, and that it's leaves are of a deeper green. There is, however, another fort, whofe flowers are of a purple colour; but it is known to the moft ikilful botanifts only, the druggifts felling chiefly the roots of the black and white forts. Thele roots, in order to be good, ought to be frefh, plump, of a fweet tafte, and aromatic fmell. The root of the black fort differs from that of the white, only in being half open, and not fo heavy.
CARLINO, a fmall filver coin, which is current in the kingdom of Naples, and in Sicily. The carlino is worth about 3 d. $\frac{3}{4}$.
CARMARTHENSHIRE, a county in Wales, bounded on the eaft with the fhires of Brecknock and Glamorgan; the Severn Sea, or St. George's Channel, on the fouth; Pembrakefhire on the weft; and Cardiganilhire on the north, from which it is feparated by the river Teivy.
According to Templeman, it is about 40 miles in length, 27 in breadth, and has an area of 869 fquare miles. Others make it's greateft length, from north-weft to fouth-ealt, to be 35 , and where broadeft, from eaft to weft, but 20 miles, which makes the circumference about 102 miles, or an area of about 700,000 acres.
It lies in the diocefe of St. David's. The air here is reckoned milder and wholefomer that in moft of the neighbouring counties; and the foil, not being fo rocky and mountainous, is more fruitful, efpecially in corn and grafs, coals and lime, and it is pretty well cloathed with wood, and watered with about 28 rivers, large and fmall.
The chief of the rivers are, the Towy, the Cothy, and the Tave. The former comes into the north-eaft fide of this county from Cardiganflire, where it rifes, and, running fouth and fouth-welt through the county, falls into the Englith Channel, about eight miles below Carmarthen. This river fupplies the inhabitants plentifully with fifh and fowl, elpecially falmon.
The Cothy rifes on the north fide of Carmarthenihire, and runs fouth, for the moft part, till it joins the Towy, about five miles ahove Carmarthen.
The Tave, or Teivy, rifes in Cardiganfhire, and is the boundary between this county and that.
Carmarthen, fituate upon the tiver Towy, is an induftrious, thriving, and populous town, of great relorr, and drives a confiderable trade. The river whereon it tands is naviguble
for veffels of 100 tons, quite up to the town, where is a very commodious key. This place is not only fupplied with fifh from its river, but with great plenty of fifh, fowl, \&c. from the adjacent country. There is fuch a firitit of politenefs, as well as induftry, that fome have called it the London of Wales.
Kidwely, a town on a valt bay, called Tenby. It is a mayortown, and had formerly a good hare in the cloathing trade; but the harbour, being too much choaked up with fand, hath been very detrimental to the town, which, at prefent, is frequented only with fifhermen.
Llandilovawr, is a pretty good town, on an afcent, with the river Towy at the bottom. This parifh is 13 miles long, and 7 or 8 broad; It's markets are for corn, cattle, and other provifions.
Llangham, Llanham, or Talcham, ftands on the Towy, near it's influx into the fea; is a pretty good town, with fome imall veffels belonging to it, and an indifferent trade by fea. Llanalityy, or Lanelly, fands on a river, or creek of the fea, not far weft from the Og , which feparates this county from Glamorganihire. It is a pretty good town, much traded to for fea-coal.
CARMELINE WOOL, of the vicunna, which is alfo called baftard wool. - It is the fecond fort of wool produced by the animal which the Spaniards call vicunna.
CARMEN, are fuch who keep carts, in order to carry goods and merchandizes of all forts, for traders of every condition who may have occafion for them.
Carmen, porters, watermen, or others, affifing in the landing of goods, without a warrant and an officer, may be apprehended, by a warrant from a juftice of the peace; and, being convicted by the oath of two winnefles, may, for the firft offence, be committed to jail, till they find fecurity for their good behaviour ; and, for the fecond offence, to lie in prifon two months, without bail, or till they be difcharged by the court of Exchequer, \&sc. or pay 51. to the fheriff. All other regulations, relating to carmen employed in the city of London, are fo well known by thofe who employ them, that we fhall leave out every thing of this kind, in order to make room for what is of more important ufe, lefs known, and, therefore, we hope far more acceptable, than what is in the vade mecum of every trader.
CARMINE, a very lively red colour, as it were velvety, ufed by painters in miniature, and fometimes by painters in oil, but feldom by the latter, becaufe of it's exorbitant price. Carmine is the moft precious and valuable commodity that is gathered from the cocheneal mefteque : it is a fecula, or powder, which fettles at the bottom of the water, wherein cocheneal, couan, and antour have been put to fteep, and well mixed together : they fometimes add rocou, but it gives the carmine too much of an orange caft. See Cocheneal. To be excellent, the carmine muft be in powder almoft impalpable, of a high colour, neatly and faithfully prepared. Some make carmine with Brazil or Fernambouc wood, well beat in a mortar, and afterwards fteeped in white vinegar: the frum which arifes from this mixture, after it has been boiled, is the carmine; but it does not at all come up to the beauty of the former fort.
The woollen-drapers make ufe of carmine, to colour and hide thofe places in the fcarlet cloth which remain whitifh after dyeing and napping.
CARNARVONSHIRE, a county in Wales, bounded on the fouth by Merionethfhire and the Irifh Sea; on the eaft by Denbighłhire, from which it is feparated by the river Conway; it is wafhed on the weft and north by the Irifh Sea; and. on the north-weft it is fronted by the Ine of Anglefey. Mr Templeman makes the length 47 , the breadth 25 miles, and gives it an area of 459 fquare miles, which is computed by others at 370,000 acres.
It has a fharp piercing air, and abounds, in the middle efpecially, with fuch difmal rocks and vaft mountains, the tops of which are covered with fnow feven or eight months in the year, that they may claim the name of the Britifh Alps. Yet is is tolerably fertile, particularly in barley; and great herds of cattle, 角eep, and goats are fed on the mountains. That part towards Ireland is fo fruitful, and alfo fo populous, that it gives place to few flires in North Wales. The vallies between the hills are both pleafant and fruitful; and both the rivers and coafts abound with fifh.
Carnarvon Town, fands on the channel that feparates this thire from the Ine of Anglefea, and has a beautiful profpect to the ifle ; it is a fmall, but clean, well-built town, and well inhabited, by people very courteous to ftrangers, and the market is well fupplied with corn, and all forts of provifions. There is a ferry from hence to Anglefey, and from thence a direat road to Holyhead, in the way to Ireland.
Carnaryon Bay, lies between two points, at the fouth entrance of the channel, which runs between the Main and the Ine of Anglefey. Here is a tolerable harbour; for, though it has a bar, where there is not above feven or eight feet at low water, yet the tide rifes fo high, that, at half-food, almoft any thips may go in or out; however, it is proper to take a pilot. There is very good anchoring in Carnarvon Bay off the bar, in 5 or 15 fathom.
Vol. I.

Bangor, or Banchor, lies at the nortli end of the fame frith, or arm of the fea, which is the paffage to Anglefey, where it has a harbour for boats. This town is, at prefent, of little note, except for being the feat of a birhop.
Conway, or Aber-Conway, fituate at the mouth of the river Conway. This town, though the pooreft, is notwithftanding the pleafanteft in the county, for it's bignefs, ftanding on the fide of a hill, on the banks of a fine navigable river, which empties itfelf about two miles off into the fea, at the entrance of that arm of it which parts Anglefey from the main land.
It is reckoned the moft beautiful river and port on all this fide of Britain; the river, which is able to receive fhips of almoft any burden or number, and to bring them up to the town, being a fine ftraight channel, broad as the Thames at Deptford, and deep, yet fafe and fecure from winds; but the town is old and decayed, and only fhews what it might be, and what the want of trade has brought it to; for poverty in all places is the neceffary confequence of the want of commerce, as manifeftly appears in numberlefs inftances throughout this work: which ought to convince every man in this kingdom, without cavil or controverfy, that he who is an enemy to trade and commerce, is a friend only to barbarifin and lavagenefs, that alone having polifhed and civilized the human fecies, and made Brions different from the brutifh Hottentots of the Cape. See Barbary, and Remarks thereon.
Pwl-Heli, or Salt-Pool, is a little town in the peninfula, on the fouth fide of the county, ftands between two rivers, on the eaftern thore, whofe market is for corn and other provifions, and hath a fmall trade by fea. The bay, to which it gives name, receives one of the rivers with a full channel, where it makes a pretty good haven, called Traath Haven, which we mentioned in Cardiganfhire.
CARNATION, a very lively red colour, thus called from caro, fleh, becaufe it is like the colour of live flefh newly cut, wherein it differs from what we call fefh-colour, which is paler, and refembles flefh, covered with the white fkin, and animated with a natural vermilion.

## REMARKS.

The regulations made in France in Auguft 1669, for dyeing filk, wool, and thread, order that filks to be dyed of a CARnation and Rose Colour fhall be fteeped in allum, and dyed with pure Brazil wood; wool, and flocks of wool, to be dyed with madder, without mixing any fuftic with it: and thread with Brazil, Fernambouc, or other fuch wobd, and rocou.
CAROBES, a fort of beans, which grow plentifully in the illand of Cyprus: moft of the inbabitants live upon them; and, notwithftanding the great confumption they make of them, this pulfe, or, as fome call them, this fruit, makes fill a great part of the trade of that ifland, whence they fend yearly great quantities of it, in fmall veffels, to all the iflands of the Archipelago.
This fruit is the fame with the Carouge. See that article. CAROLINA, a province in North America, belonging to the crown of Great Bitain. See British America.
CAROLUS, a fmall copper coin, with a little filver mixed with it: it was thus called becaufe it began to be ftruck in France under the reign of king Charles VIII.
The carolus was worth 12 deniers, when it ceafed to be current. It had been higher before, which muft, however, be underftood according as it had more or lefs filver mixed with it: for there have been Carolus's, and, amongft others, thofe of Lorrain, which were from five deniers, or penny-weights, and 20 grains, to three penny-weights and one grain fine; thofe of France and Burgundy had, at moft, but two pennyweights and 18 grains fine, except the carolus's ftruck under the reign of Francis $I$, which had five penny-weights and four grains fine. Thofe which are ftill current in trade in Lorrain, or in fome neighbouring provinces, go under the name of French fols, for 12 or 15 deniers.
The half-carolus's are alfo of different value, and of feveral degrees fine, in proportion to the carolus's. Thofe with three flowers de luce in bar, which are called old half-carolus's, have three penny-weights and 15 grains fine, and the new ones only two penny-weights and fix grains.
CARPET, a fort of covering of ftuff, or other materials, wrought with the needle, or on a loom, which is part of the furniture of a houfe, and commonly fpread over tables, or laid upon the floor.
They make feveral forts of carpets in France, and in other countries, of both which there is a confiderable trade.
There is at Paris a manufactory of carpets, after the manner of Perfia, which are but little inferior to the true Perfian carpets, not to fay, that they are even finer. They are, as it were, velvety, and do perfectly well imitate the carpets which come from the Levant.
France is obliged to the Sieur Dupont, upholfterer in ordinary to king Lewis XIII, and to his difciple Simon Lourdet, for the eftablifhment of that incomparable manufactory.
Henry IV, by his warrant, dated the 4 th of January, 1608,

## C A R

## C A R

rettled them at fuft in the galleries of the Louvre, which he had built; and Lewis XIII, gave them, in 1631, the houfe called de la Savonnerie. This eftablifhment was regulated three years before this, and the two undertakers fettled it under the infpection of Monfieur de Fourcy, fuperintendant of the king's buildings, and of the manufactories of the kingdom, by virtuc of a decree of the council of ftate, given the 17 th of April, 163 r .
In the year 1635 , the Sieur Dupont publifhed a finall treatife upon this fort of manufacture, and gave it the following title, Stromatourgie, ou de l'excellence de la manufacture des Tapis de Turquie: that is, Stromaturgia, or of the excellency of the manufacture of Turky Carpets. This treatife is not only curious, for thofe who would fpeculatively trace arts of this nature to the root, but is very ufeful and inftructive for all artifts who would undertake to fet up fuch a manufactory.
Lewis XIV. being informed, towards the latter end of his life, that this manufactory, formerly fo famous, was upon the decline, and in a very bad condition, and being willing to fupport fo confiderable an eftablifhment, which was fo much for the intereft of trade, granted to it,- by his edict of January, 1712, the fame privileges which that of the Gobelins enjoyed, by virtue of the edict of November 1667, which privileges are fet forth in to articles.
The firft article fettles the name of this manufactory, which is to be called The royal manufactory of the fürniture belonging to the crown, for carpets made after the manner of Perfia and Turky: which title was to be put up over the chief gate of the houre of the Savonnerie.
The fecond puts this manufactory under the goyernment and dependency of the director-general of the king's buildings, of a particular director, and of a comptroller : thefe two laft to be appointed by the director-general.
The fourth fettles a fum of 250 livres per annum for the maintenance of each of the children, who fhall be chofen by the director-general, to be educated and inftructed in the faid manufactory.
The fifth and fixth particularly mention the privilege's to be obtained by the pupils, as, for inftance, that of gaining the freedom of tapeftry-makers.
Finally, the four laft articles contain the privileges of the mafters and workmen of this manufactory, which are, amongft others, being exempted from lodging foldiers in 12 houfes appointed for their dwelling in the neighbourhood of the Savonnerie, as alfo from guardianfhip, trufteefhip, the watch, 8 cc . and from all poll-taxes; and, laftly, their right of committimus* at the Court of Requefts of the Hotel, as being commercial efficers of the king's palace.

The right of committimus is a right, or privilege, which the king of France grants to the officers of his hounhold, and to fome other perfons, whom he declares to have taken under his protection and fafoguard, of pleading in the firf inflance before the Court of Requefts of the Hotel, or Palace, in all matters, either merely perfonal, or real, or mixed, and to bring before that court all the caufes that might be depending before other judges. Furetiere.

The abovementioned carpets, imitated from thofe of the Leyant, are made after the manner of a tiflue, whofe warp and woof contain very tight the filk and wool, which, being cut very clofe, form a kind of velvet, or plufh : they are alfo mixed with gold and filver thread, frizzled, or curled, which adds to their beauty, and increafes their price.

## REMARKs.

Amidt numberlefs other extraordinary encouragements given by the court of France for the eftablifhment of new manufactures, this is one that has not proved the leaft beneficial to that kingdom; it not only preventing fo large an importation of the Turky carpets, but has furnifhed them with a general manufacture for exportation. Are not theie the natural and obvious meafures to give bread to their own poor, and to cultivate the arts of commerce to the laft perfection?
The chrifening this eftablifhment with the title of the royal manufaCtory, \&c. and putting the fame under the infpection of a fuperintendant of the manufactories of the kingdom*, and proper officers under him, and generally fupporting the defign with the public purfe, was giving it fuch a fanction, that it could not mifcarry; fince they had materials and artifts to carry the fame to a great perfection. See the articles Artificers, Manufacturers, Mechanics.

* This high officer, diftinguifhed by the title of fuperintendant of the arts and manufagories of France, wich other proper fubordinate officers, hath proved of unfpeakable benefis and advantage to the manufactures of that kingdom.
Might it not prove of the utmof confequence to the trade and manufactures of thefe kingdoms, if fome fuch officers were eftablifhed by authority, as guardians of the Britifh manufatures in general; who fhould lay before the parliament whatever merited public encouragement, as being too much for private underrakings? Was an infitation of this kind made a matter of folid and uncorruptible ufe, what might not be expected from it?

They make other forts of carpets at Roan, the capital of Normandy ; at Arras, the capital of Artois; and at Felletin, a fmall town in Lower Marche; thefe are called tapeitrycarpets. Thofe of Tournay are called carpets of Moucat The carpets imported into France from foreign countries, ar thofe of Perfia and Turkey, the latter either hairy or fhom that is to fay, with long or with fhort hair. Thefe are moft commoniy imported by the way of Smyma, where there are three forts of them.
Some of thefe are called mofquets, and are fold by the piece from fix piafters to 30 piafters per piece, according to the fize and finenefs.. Thefe are the moft beautiful of all.
Others are ftiled pic-carpets, becaufe they are fold by the fquare pic. They are the largeft of all thofe that come from the Levant. They are commonly fold for half a piafter per fquare pic.
The moft ordinary fort are called cadene, and may be worth from one piafter to two piafters the carpet.
There are alfo carpets made in England, which are ufed either as foor-carpets, or to make chairs, and other houfhold furniture *,

- By the natural induftry and fikll of our Britifh artift, we have, indeed, at length, got inta the way of making very good carpets; and, if we are not yet arrived at the like perfection of our neighbours, for want of the like public en couragement, we fhould, notwithftanding, be content wilh what we can make at home; for, if people will buy them this kind of encouragement will, in time, anfwer the end at leaft for home confumption: theugh, was fomething done by authority to animate our manufacturers, they would make a greater proficiency in ten years, than otherways in half a century; which would furnifh the nation with more commodities to fell, and lefs to buy.

There are likewife carpets of Germany, fome of which are made of woollen ftuffs, as ferges, and others of the like fort: thefe are called fquare carpets. Others are of wrol alfo; but wrought with the needle, and pretty often embelifihed with filk: laftly, there are carpets made of dog's hair.
We fhall not mention here thofe fine carpets of painted chintzes which come from the Eaft-Indies, becaufe we give an account of them in another place.
CARRIAGE, a vehicle ferving to convey peifons; goods merchandizes, and other things, from one place to another. There are private and public carriages, as allo land and water carriages., See Carrier.
Private carriages are thofe which private people keep at their own expence, for their own conveniency, and that of their families; as thefe have no relation to trade, it is needlefs to give an account of them in this work.
Public carriages are thofe which every one is fres to make ufe of, on paying to much a head for perfons, or fo much per pound weight for goods', merchandizes, or other effects.
There are again two forts of thefe carriages, fome of which no man can keep, or let out, at leaft in France, but by virtue of a privilege; fuch are the waggons, carts, covered waggons, and horfes belonging to, or under the direction of the Poft-Office; as alfo the ftage-coaches and boats which fet out on a fet day, for certain towns in the provinces, and likewife poft-chaifes, calafhes, litters, and hories.
The other public carriages are thofe which every one is at liberty to have, keep, and let out, after what onener, and to whom he pleafes; fuch are drays, cars without racks, the waggons and carts ufed by carriers, higglers, and others. Water-carriages are, in general, all thofe veffels which ferve to carry perfons or merchandize by fea, rivers, lakes, or canals, whether failed, rowed, or drawn by men or by horfes; but the word carriage is feldom ufed, when we fpeak of fhips, frigates, or other large veffels, which fail over the fea. In France, the chief of the water-carriages are the ftageboats, barges, barks, wherries, boats, fmall and large tenders, and feveral other forts of veffels, which have different names, according to the rivers whereon they are ufed, or the provinces where they were built; all thefe water-carriages ferve to tranfport, from place to place, wood, wine, corn, fpices, falt, and other forts of drugs and merchandizes. Land-carriages are either machines invented to carry more conveniently, and in greater quantity or number, perfons, and bales, chefts, tuns, cafks, 8 cc . of merchandizes, drawn by feveral forts of animals, according to the different countries, or thofe animals which carry men, or on whofe backs are put fuch loads as they are able to bear.
The land-carriages, which are molt commonly ufed in France, and in the greateft part of Europe, for carrying men or merchandizes, are coaches, chariots, calafhes, berlins, and waggons, with four wheels; or chaifes, carts, and drays, with two wheels only. Thefe machines are drawn by horfes, mules, buffaloes, or oxen. In winter, when the earth is covered with fnow, they ufe alfo fledges, efpecially in the northern countries; and in fome parts, as in Lapland and Siberia, they are drawn by rein-deer, which are a kind of ftags; every where elle, they are molt commonly drawn by horfes,

## C A R

## C AR

All the animals we have been mentioning, except the reindeer, are alfo proper to carry burthens on their backs, efpecially the mules, which are of great ufe, particularly in mountainous countries, they being very fure-footed. In the caravans of Afia, and the caffilas of Africa, they ufe camels and dromedaries, See the articles Caffila, and Carayan.
In fome parts of America, and particularly in Peru and Chili, the vigonnas, lamas, and alpagnas, which are three forts of beafts, of the bignefs of a middle-fized afs, but not fo frong, are uled, not only to carry wine, and other commodities, but alfo the mineral ftones of the gold and filver mines, fo common in that part of America. Laftly, the palanquin, which is carried on the fhoulders of two, four, or fix men, and the litter which is carried by two mules, are alfo carriages, but ferve for travellers only. The former is ufed in the Eaft-Indies, and the latter in moft parts of Europe.

## REMARK

## Carriages from Alexandretta to Aleppo

Some particulars relating to the carriages, on which merchandizes are tranfported from Alexandretta to Aleppo.
All the merchandizes which arrive at Aleppo, whether they come thither from Alexandretta, where they arrive by fea, or are brought by land from fome other parts of the grand feignior's dominions, or from thofe of the king of Perfia, are carried to Aleppo on camels, horfes, or mules; which obliges the merchants who trade thi:her, to make their cheft or bales of fuch a weight, and packed up after fuch a manner, that they may be proper to be carried on the backs of thofe animals, that they may not be obliged to unpack them, upon their arrival at Alexandretta.
The horfes and mules commonly carry two bales, weighing between 50 and 55 rottolis of Aleppo, which amount to 400, or 425 pounds of Amfterdam.
As to camels, their load, divided alfo into two bales, may be from 70 to 75 rottolis, which is alout one third more than what horfes or mules can carry.
The Englifh, French, and Dutch merchants always reckon upon that weight, there being feldom any bales that weigh any thing more.
Carriage fignifies alfo the money or perquifite that is to be paid for carrying goods or merchandizes either by water or by land, in carts, waggons, ftage-coaches, or on horfeback. For inftance, we fay paid fo much for carriage from Cambridge to London. With regard to pertons, we ufe the word fare ; whereas the French employ the word voiture, both with regard to perfons, and to goods or merchandizes. For carriage by fea we ufe the word fraight, or freight. See Freight.
Letter, or Bill of Carriage, is a writing given to a carrier, or to the mafter of a waggon, cart, or other carriage, containing the number and quality of the pieces, chefts, bales, \&ic. of merchandizes which he is entrufted with, that he may demand the payment of the carriage from thofe to whom the merchandizes are directed, and that the perfon who reccives them, may fee whether they be delivered to him in a good condition, in the fame number as they were given to the carrier, or on the day fet down in the bill of carriage.
In commerce by fea, the writing or regifter in which are fet down the merchandizes and paffengers on board a merchantman, is called Charter-party, or Bill of Lading. See thofe two articles.

## REMARKS,

The principal Laws of England in regard to Carriage. By the ftatute 3 Will. \& Mar, cap. 12. fect. 24. the juftices of peace of every county, \&c. are required, at their quarterfeffions after Eafter yearly, to affers the prices of land carriage of goods to be brought into any place within their jurifdiction, by any common carrier : and the rates to certify to the mayors and other chief officers of the market-towns, to be hung up in fome public place. And no common carrier fhall take above the rates, upon pain of 5 l. to be levied by diftrefs and fale of goods, by warrant of any two juftices, where fuch carrier thall refide, to the ufe of the party grieved.
If any carrier fhall travel with waggon, wain, cart, or carriage, with above fix horfes, oxen, or other beafts (except it be for carrying hay, ftraw, corn, coal, timber, materials for building, ftone, ammunition, or artillery) he fhall forfeit 51. to be levied by diftrefs and fale of any of the faid beafts, in three days; to be employed one moiety for the repairing of the highwavs, and the other to the profecutor, being an inhabitant in the parih where the offence was committed, by ${ }^{\text {flat. }} 9$ Ann. cap. 18.
Perfons employed in the driving, or affifting in the driving, with more than fix horfes, are liable to the fame penalty, by flat. 9 Ann, cap. 18.

The fame ftatute enacts, That any perfon or perfons, may difcover and profecute them who draw more than fix horfes, \&c. and feize and diftrain all or any of the horfes, \&c. and deliver the fame to the furveyors of the highways, or other officers of the place; and, if the 5 l. be not pait in three days, the diffrefs is to be fold, and the money delivered to the juftice to be diftributed.
Surveyors of the highways; or other parifh-officers, refufing or neglecting to deliver the money, by them received, to the juftice, forfeit 20l. to be levied by diftrefs and fale; for want of differfs, to be committed to the common goal 'till payment. One moiety of the forfeiture to the informer, the other to be laid out in repairing the highways. Stat. 9 Ann. eap. 18.
If any perfon refufe or neglect to carry a horfe, \&c. fo diftrained to the furveyor or other parifh-officer, he likewife forfeits 201 , to be levied and difpofed ut fupra.
Surveyors of highways neglecting to put 6 Ann, or any other law for repairing highways, in execution, forfeit 5 l.
By ftat. I Geo. I. no travelling waggon, \&zc, with any burthen, \&c. (other than before excepted) fhould at any time be drawn in any common highway, with above five horfes, \&c.
But by the ftat. 5 Geo. I. this act is altered, and it is enafted, That no travelling waggons, for hire, fhall be drawn with more than fix horfes, either in length, or in pairs, or fideways; and no travelling cart to have more than chree horfes, upon pain of forfeiting all the horfes above fix in the waggon, and three in the cart, with all geers, accoutrements, \&c. to the ufe of the feizer.
The horfes, \&c, are to be delivered to the conftable, or other parifh-officer; and oath to be made of the offence before a juftice of peace, who is thereupon to iffue his precept to the conftable, \&c. to redeliver the horfes feized.
Travelling waggons are to be bound with ftreaks or tire, two inches and a half in breadth, at lealt when worn, or not to be drawn with above three horfes, on pain of forfeiting all the horfes exceeding that number, with the geers, \&c. ftreaks fet on with rofe-headed nails, liable to the fame penalty. Perfons hindering the feizure of horfes, to be committed for three months, and forfeiciol, to be levied on their goods, if not paid in three days, by warrant from one juftice. Carriages employed in hulbandry, and carrying chepfe, butter, or any one tree, or piece of timber, or any one ftone, or block of marble, caravans, and covered carriages of noblemen and gentlemen, for their private ufe, or timber, ammunition, or artillery, for his majefty's ufe, are excepted.
Perfons, profecuted for any matter done in execution of this act, may plead the general iflue, and give this act and the rpecial matter in evidence, and recover full cofts.
By ftat. 6 Geo. I. cap. 6. it is enacted, That no perfon fhall carry, in the cities of London or Weftmintter, or within io miles thereof, in carts or waggons, having their wheels bound with iron, at any one load, any more than 7 hundred and $\frac{x}{2}$ of bricks, one chaldron of coals, 12 facks of meal, of 5 buihels to the fack, and 12 quarters of malt: and, if any perfon fhould act contrary, he forfeits one of the borfes, with the geers, 8 cc . to any one who will feize the fame. The penalties to be levied and applied in the fame manner as thofe by 5 Geo. I. relating to carriages drawn on the highway. Oath to be made of the offence before a juftice of peace, who, on conviction, is to order the forfeiture to the feizer, \&c. By an act of 3 Geo. I. the power of reforming abures, and of fettling the rates of water-carriage on the Thames, \& \%c. is vefted in the commifioners therein named for nine years, vide the act.
Truftees appointed by feveral acts of parliament for repairing the highways through England, or any five of them, af:er the 29th of September, 174I, may caufe engines to be erected at any of the turnpikes, and, by writing under their hands, may caufe all carriages paffing the turnpikes to be weighed with their loading, and may demand and take, over and above the toll already granted, 20 s. for every hundred weight, above 6000 pounds weight. The money to be applied to the mending the highways.
The fame remedy is given by diftrefs, \&c, as for the other toll.
If any perfon driving any cart, dray, or waggon in the ftreets of London and Weftminfter, Southwark, and other ftreets and lanes within the bills of mortality, fhall ride upon fuch cart, \&c. not having fome other perfon on foot to guide the fame, fuch offender being convicted before the alderman of the ward, or a juftice of peace, by oath of one witnefs, fhall forfeit 10 s . to be levied by diftrefs, \&c. one moiety to the informer, the other to the poor; and, in default of payment, to be fent to the houfe of correction for three days. A common carrier may refufe to admit goods into his warehoufe, before he is ready to take his journey. : Raym. 652.

## Taylor verfus

It was adjudged by Holt, chief juftice, upon a trial of nifi prius at Hertford, 4 Aug. I Ann. reg. That if goods be delivered

## C A R

## C A R

to a carrier, and he does not deliver them according to the direction given him; upon demand of the goods from him, and refufal by him to deliver them, trover lies againft him; or an action upon the cafe lies againft him upon the cuftom. But if the goods be delivered to a fervant of the carrier, or to his warehoufe-keeper, and they are not delivered, \&c. an action of trover does not lie againf the carrier, \&c. without an actual converfion by him. Raym. 792. Caribeee Islands. See British America.
A carrier or hoyman is anfwerable for all loffes, except thofe which happen by the act of God, or the enemies of the king. Ibid. gi8. See our articles Roads and Rivers.
CARRIER, one who carries merchandizes or other goods from one place to another, in waggons, carts, or other wheel-carriages.
Merchandizes in bales, chefts, \&c. or of a folid fubftance and bulky, pay by the weight fo much per pound, for carriage. Thofe that are liquid, as wine, brandy, cyder, beer, \&x. pay commonly fo much per cafk, according to it's fize. The carriers in France, unlefs they be accompanied by thofe who trufted them with goods, or by fome perfon in their name, are to take with them the bill of carriage of the merchandizes they have laden; the permits, if it be wine, brandy, or any other liquor; the receipts from the cuftomoffices by which they pafs, and paff-ports, if there be occafion, and if they are to go through an enemy's country.
They are alfo obliged to pay toll on the road, wherever it is due, either for carriages and horfes, or for merchandizes; with liberty, however, to demand the payment back, in cafe they did not agree to carry the goods, free from all charges, to the place for which they are defigned.
Finally, the carriers anfwer for all damages, which the merchandizes may fuffer through their fault; and with regard to other damages, for which, by the ordonnances and regulations, they cannot be anfwerable, they are obliged to get a verbal procefs or declaration of them, drawn up before the magiftrates, who live neareft to the place where fuch accidents happened.
Carrier, in France, in a larger fenfe, fignifies any perfon who undertakes to carry from one place to another perfons, merchandizes, writings, gold, filver, wine, wood, timber, $\& c$. and even prifoners, for a certain price, either fettled by the magiftrates, and officers of the police, or by fpontaneous agreement between the carrier and the merchants, or others who would employ them.
In this extenfive fignification of the word, are comprehended not only the carriers properly fo called, as the mafters of waggons and carts, and thofe of barges and boats, who carry goods freely throughout all France, either by land or by water, but alfo the meffengers or poft-men, the mafters of ftage-coaches, thofe who let out horfes, the farmers of ftageboats, the poft-mafters, and other forts of carriers, who are farmers, and have peculiar privileges and licences.

## REMARKs.

The liberty of carrying goods by land or by water has always been confidered, not only as very advantageous to trade, but even as abfolutely rieceffary to fupport it, and make it flourifh in France. This reafon has always difappointed the attempts of the farmers of the king's revenues, who being unacquainted with, or regardlefs of, what may promote or prejudice commerce, have often endeavoured to farm out all the public carriages. And, indeed, the erecting of fo many offices or poits of carriers, comptrollers, weighers, vifitors, intendants, fuper-intendants, clerks, and commiffaries of carriers, which were made from time to time, have generally been as foon fuppreffed, as they have taken effect; as appears from the feveral edicts, declarations, and decrees of the 30 th of September, 1634 , the 16 th of May, 1635 , the 20th of March, 1655, the 29th of March, 1656, the 12th of April, 1657, the 29th of July, and the month of Ottober, 1658 , and the 18 th of June, 1659.
But although thefe offices have been fuppreffed, and the carriers reftored to their antient freedom of carriage, yet moft of the duties, which had been annexed to thofe offices, ftill fubfift, and have been added to the king's farms; and it is partly for that reafon, that all carriers, who carry bales, chefts, \&c. belonging to merchants, traders, or other perfons, are obliged to make their carriages pals by the offices of the cuftom-houfe, and thofe of the king's farms, in order to pay thofe duties, which have been kept up for the king's ufe *.
*Thefe reftrictions upon carriage, being as fuddenly taken off as impofed, feem calculated only for the fake of the revenue, not for the benefit of trade, becaufe all $t+x e s$ upon carriages of merchandize muft ultimately terminate upon trade.

This liberty or freedom of carriage both by land and by water does not, however, confift in an entire independency: for though the carriers be not united into a company or corporation, yet they have rules or regulations, which they are obliged to regard for the pullic fecurity, and as a kind of dif-
cipline, which they are obliged to follow among themfelves, and in their dealings with others.

An abftract of fome of the principal laws of France, in regard to carriage.

1. All perfons who have wherewithal to keep boats, barges, or carts and horfes, may fet up for carriers, either by land or by water, without any grant, permiffion, or licence. 2. Their fetting out and arrival are not fixed to certain days, nor to or from certain places.
2. Laftly, there is no fettled price for the carriage of merchandizes or other goods, but the carriers make an agreement with the merchants, or other pertons, for the price, which may be more or lefs, according as the circumftances vary.
That liberty with regard to the price of carriage is fo confiderable, and of fo great importance to trade, that the fix bodies of the merchants of Paris, in a memorial prefented, in 1701, to monfieur de Chamillard, then comptroller-general of the finances, for the execution of the regulation of 1678 , concerning carriages, which were ftruck at by the declarations and decrees of 1681 and 1684, call that liberty the right arm of trade, and did not fcruple to affert, that what coft them 25 or 30 livres carriage by the meffengers, fagecoaches, and waggons farmed out, coft them but fix hivres by the common carriers, becaufe of the fixed or fettled price which the farmer-carriers never leffened, and of the voluntary price which they ufed to agree upon with the others, and which the merchants as well as the carriers might fette as they pleafed.
The chief regulations relating to the carriers, particularly to thofe who arrive at, or fet out from Paris, are the regulations contained in the fecond and third chapters of the ordonnance for the city of Paris, given by Lewis XIV, in December, 1672 , concerning carriers by water; and the regulations of the 25 th of June, 1678 , concerning landcarriers.
The ordonnance of aids given in June, 1680 , that of the 22d of July, 1681, and that of February 1687, relating to the five great farms, as alfo feveral decrees of the council, and, among others, thofe of the 25 th of July, 1684, and the 29th of May, 1688, contain likewife feveral articles, relating both to land and water carriers, and particularly to their bills of carriage: from all thefe ordonnances, regulations, and decrees, we thall extract only the moft important particulars, and fuch as are of a moft common practice.
The chief articles of the ordonnance of the city of Paris, made in the year 1692, which relate to the water-carriers, are the $1,2,3,5,7,8$ and 9 th of the fecond chapter, and the $6,7,8,9,11,12,14,15$ and 16 th' of the third.
By the firft article of the fecond chapter it is lawful to carry goods and merchandizes every day in the year, except on the four folemn feffivals, which are Chriftmas-day, Eafter-day, Whit-funday, and All-Saint's-day.
The fecond forbids navigation upon the rivers, but between the rifing and fetting of the fun, and not to fet out in ftomy weather.
The third and fifth regulate the paffage through bridges and narrow paffes, made by banks and fluices, as alfo the meeting of veffels in the rivers; and orders that veffels going down the ftream muft moor. by the fhore, 'till thofe that go up be got through the bridges and narrow paffes; but, if they meet in the middle of a river, thofe that go up muft moor by the Chore, to let thofe pafs which go down.
The feventh fpeaks of goods loft by bad weather, and thofe that are loft by the waterman's fault; and orders, that in the former cafe the carriers fhall not be anfwerable for the lofs of the goods, upon giving up their veffels and tackle within three days: but in the latter cafe they are to anfwer for the damages and interefts.
The eighth article forbids all carriers to fet out from the keys where they loaded, without bills of carriage, under the penalty of lofing the price for carriage; but, in cafe the merchant or owner of the goods refufe to deliver the bill of carriage, the carrier, on proving fuch a refufal, is credited upon his word, both as to the quantity of the goods, and the price agreed upon for carriage.
Laftly, the ninth explains what is to be contained in the bills of carriage, for which fee that article above.'
The fixth article of the fecond chapter of the fame ordonnance orders, that the carriers Chall give notice to the owners, or their factors, of the arrival of their merchandizes, twentyfour hours after they are come to the keys, and produce to them their bills of carriage, in the margin of which is to be fet down, by the faid owners or factors, the day on which they were produced.
The feventh gives leave to the carriers to land the merchandizes, after the owners or factors to whom the bills of carriage are directed, have been fummoned to fend for their goods.
The eighth regulates what proceedings are to be had, and before what perfons, when, after the fummons mentioned in the foregoing article, the proprietor or his factor refufe to accept the bill of carriage, and to receive the merchandizes.

The eleventh article regulates the time, during which veffels laden with corn, wine, hay, wood, coals, and other meichandizes, are to continue at the keys, which is fectled at a fortnight for all thefe veffels, except thofe laden with wines, which are to continue a whole month at the keys. It is alfo ordered, that, in cafe the merchandizes could not befold within the limited time, the carriers fhall be paid for that delay, and their veffels reftored to them in a good condition. The twelfth obliges the carriers to deliver the merchandizes by tale or meafure, only in cafe they were trufted with them after the fame manner, and this claufe be inferted in the bill of carriage : yet, if the merchant had put a perfon on board the veffel to watch, for the prefervation of the merchandizes, the carrier is not bound to anfwer for the number, quantity, or meafure.
By the fourteenth, the merchandizes are anfwerable to the boats, as foon as they are moored to the keys, and as long as they remain in the fald boats.
By the fifteenth, on the contrary, the veffels are anfwerable for the merchandizes, in cale they have fuffered any damage by the carrier's fault, or in cafe he does not deliver the whole of what he was entrufted with.
Laftly, the fixteenth article allows to the merchant, for whom the veffel was laden, all the merchandizes that are found on board, over and above what is fet down in the bills of carriage; but the merchant is, however, obliged to pay carriage for that overplus, which turns to his advantage.
The decree of the council made the 25 th of June, 1678 , for regulating the functions of meffengers, mafters of ftagecoaches, and carriers, by land, contains twenty-one articles, four of which only, viz. the 6th, 13th, 14th, and 20ch relate to the carriers.
By the 6th thcy are forbidden to carry any letters, except the letters or bills of carriage of the merchandizes and other goods they are entrufted with, which bills muft even be delivered open to them.
The 13 th and isth give leave to all private receivers, farmers of the king's demains and farms, and to all merchants, traders, and others, to fend their money, merchandizes, and other goods, being their property, by the horfes, carts, or other carriages belonging to fuch carriers, as they fhall think proper to employ.
By the 20th, all meffengers and mafters of ftage-coaches are forbidden to moleft the carriers in following their bufinefs, on condition that the latter do obferve the edicts, declarations, decrees, and regulations.
A fecond decree of the council, dated the 8 th of Auguft, 168 I , and again a third given the 23 d of January, 1684, both obtained by the credit of a great minifter, who owned moft of the public carriages, or had a fhare in the profit of them, deprived the carriers of the liberty of unloading the merchandizes on the road, of carrying gold, filver, and jewels, which, before thofe edicts, they were free to carry; and obliged them, when their own horfes happened to fail on the road, to ufe hired horles, the farm of which belonged to that great minifter, who was at that time fuper-intendant of the poft, or poft-mafter general throughout the kingdom : but all thefe reftraints being either againft the eftablifhed cuftom, or againft the regulations made in the year 1678 , and alfo very prejudicial to trade, as tending to a monopoly of carriage in general ; the fix bodies of the merchants of Paris, the traders of Lyons, thofe of Moulins in Burgundy, and of feveral other confiderable trading-towns, joined in a petition with the land and water carriers of thofe and of many other cities; whereupon there was a fourth decree of the council, given the 2d of April, ryor, which, explaining that of 1684 , reftores to the merchants and traders of the kingdom the liberty, they always enjoyed before, of directing their chefts, bales, \&c. to the correfpondents, being merchants or others, they might have, for the fake of trade, in the feveral towns of the kingdom, to fend afterwards the faid cheits, bales, \&c. provided they weighed above fifty pounds, to the places they are defigned for, by fuch carriers as the faid correfpondents fhall judge moft convenient.
As the bills of carriage are thus neceflary for carriers, both by land and by water, and as they are equally ufeful to the carriers, for fecuring the price of their carriage, and the payment according to their agreement, and to the traders and other, perfons for the fecurity of their merchandizes and effects; and to the receivers of the aids, and of the king's farms, for receiving the duties due on fuch merchandizes, \&rc. fo there is nothing more exactly fettled and regulated by the ordonnances, either of aids, or of the five great farms, and by a great many decrees, than the neceflity and form of the faid bills of carriage.
The 2 d and $3^{\text {d }}$ articles of the $3^{d}$ title, and the ift article of the 7 th title of ordonnance of aids, made in June 1680, order, that all wines be accompanied with double bills of carriage, made before a notary, or other public perfon; that they be filled up by the fame hand; 'that they mention the place where the wine was loaded, the name, dwelling-place, and quality of the propriecor, of the place for which it is defigned, and of the perfon to whom it is directed; and that thefe bills be examined by the officers of the cuftom-houfes,
VOL I.
Vol. I.
through which the carriage is to pafs, upon pain of forfeiture and a fine.
The decrees of the council of July the 25 th, 1684 , and May the 2gth, 1688 , regulate the lame with refard to the bills of carriage for brandies, which are fold or carried from one place to another.
The $2 \mathrm{~d}, 4^{\text {th }}$, and $5^{\text {th }}$ articles of the title of the duties on feafifh, either freih, dried, or falted, do likewife order the cutriers who carry the faid fifh defigned for the city of Paris, to take fuch bills of carriage, befure they load the filh ar the fea-port towns, or other places fiom whith they fet out, to prefent them to the cuftom houfe officers of the faid ports, to be there regiftered and comptrolled: or, if there be no fuch officers on the for, to have them paffed before the notary public, tabelliere, or recorder of the place; which bills ought to contain the quality and quantity of the commodity, the place for which it is deligned, the name of the commiffioner or merchant who fends it, and the name of the perfon to whom it is directed.
Lafly, to prevent all inconveniencies which might arife from the falfification or forging of bills of carriage, the ordonnance of July the $22 \mathrm{~d}, \mathrm{I} 681$, articles 21 itt and 22 d , of the common title of the king's farms, orders, That they who thall hav falfified or forged bills of carriage, be for the firft offence rentenced to be whipped, and banifihed for five years from the election or diftrict, where the offence was committed, and pay a fine, which fhall not be lefs than one fourth part of their ettate; and, for the fecond offence, they thath ie 'condemned for nine years to the gallies, and pay a fine not leis than one half of what thev are worth.
CAR I, a land-carriage with two wheels, and drawn common'y with horfes, to carry heavy goods from one place to another. A cart-load is the quantity which a cart can carry : thus we fay, a cart-load of hay, \&cc.
The ufe of carts being very common and convenient for the carriage of all forts of commodities, the officers of the police in France, and even the king's council, have not judged it unworthy their care andatiention to regulate the functions, and often to fettle the price thereof, in order to prevent monopolies and combinations to the prejudice of trade.
The king by his edicts, declarations, and decrees of his council, has regulated all that relates to the carriages and carriers, without the city of Paris, as the reader may fee under thofe articles; where alfo we have given fome account of what relates to the carriages in England. See Carriage and Carrier.
As to what concerns the carriers and carmen of Paris, particularly thofe who work on the keys of that capital city, it is regulated by feveral articles of the fourth chapter of the ordonnance of that city made in the year 1672.
The 17 th article of that ordonnance commands all carmen, and other land-carriers, to be on the keys at the hours of fale, with their carts or drays, and horfes put to them, that they may be ready to carry merchandizes at the rates fettled by the provoft of the merchants and echevins, forbidding them exprefly to dernand any greater fum, under the penalty of being whipped.
By the 18 th, they and their fervants are ordered to load themfelves the goods upon thcir carts or drays, except. wood, corn, hay, and coals, for the loading and unloading of which, there are proper officers appointed; forbidding all wharf-porters, who ply on the keys, to meddle with the lading of any merchandizes on carts or drays, and to demand any thing from the merchants or citizens, upon pain alfo of being whipped.
The rgth forbids all carmen from affociating together in a confufed and irregular manner, but they are to keep a due rank or order on the keys, and not to refufe working for thofe who chufe them, and offer them the fetled hire, under the fame penalty.
The 2oth orders, that, once every fix months, there be polted up in fome vifible places on the keys, by the care of the king's attorney for the city, a paper, containing the rates of the wages of the faid carmen and carriers, as fettled by the provoft of the merchants, and by the echevins.
By the 22d, they are made anfwerable for the lofs or damage of any goods, happening by their fault, or by that of their fervants.
The $23^{\mathrm{d}}$, in order to prevent retailers from carrying of more goods than they are permitted to do by the regilations, forbids all carmen the loading of their carts, but in the prefence of the citizen who employs them, under the penalty of a fine.
The 24th commands them not to fet out from the key, 'till the feller be paid, or have otherwife agreed with the buyer, upon pain of anfwering for the goods in their own name.
Laftly, to prevent the carmen from difturbing the citizens in the enjoyment of ther rights and privileges, th: 25th article gives leave to the latter to get the gonds and provifions, which they caufed to befent to them by water, landed by their own fervants, and to be carried home in their own carriages, if they think fit, without their being obliged to employ the public carmen; the latter being likewife prohibited, on pain

## C A R

of being whipped, to do any work on the keys, unlefs they be chofen and employed by the citizens.
CARTWRIGHT, with us fignifies only a man who makes carts: but the French word charron, which anfwers to it, has a more extenfive fignification; it implying as well a workman who makes coaches of all forts, waggons, litters, calafhes, berlins, carriages for the army, and for cannon, drays, fledges, and other fuch carriages, or requifites belonging thereunto.
The company of the mafter-wheelwrights-coachmakers of the city and fuburbs of Paris, is very numerous: which may be eafly inferred, from the almoft incredible number of coaches and other wheel-carriages, which are feen in that capital city of the kingdom, and which fome reckon to be above fifteen thoufand. The antiquity of this company cannot, however, be traced up higher than the reign of Lewis XII. who gave the firft ftatutes to the matter-wheelwrights, whom he erected into a body corporate by his letters patent, dated the 15 th of October 1498.
Thofe convenient vehicles, called coaches, being invented, or brought to a degree of perfection in the beginning of the next century, and becoming afterwards very common, they not only added, to the name of charron (wheelwright) which the freemen of that company bear, the appellation of coachmakers, which they have borne ever fince, but it was alfo thought proper to renew and amend their ftatutes, becaufe of the great variety of work which this new invention had introduced amongft the mechanics*.

* By this and numerous other inftances throughout this work, it appears, that laws and regulations, in regard to trade, have firft taken their rife, from the natural and neceflary practices of thofe who are engaged in trade and the mechanic arts themfelves: wherefore, the legiflators of trading nations cannot be too minutely informed of the peculiar circumftances selating to all traders, from the loweft mechanic to the fupreme merchant: how otherwife can it be poffible, that their laws fhould fo coincide with the nature of thefe particular trades and arts, as duly to promote the public intereft of the whole? A knowlege, therefore, in the pratical aits of traders, cannot be unbeconing the greateft men in a country that fubfifts by commerce; for thofe who attempt to realon upon trade, without this preliminary fcience, muft ever be in the dark; they may make laws one year, and fupprefs them the next; which only ferve to confound and perplex the people, and injure trade inftead of promoting perplex The making of laws for the regulation of trade, without a proper knowlege of trade, is not lefs abfurd, than out a proper knowlege of trade, is nor thers fages, who have pretended to eftablifh philofophy, thore fages, who have pretended to eltablith philolophy,
without experimental knowlege; which for centuries filled without experimental knowlege; which for centuries nlled
the world with ideal and imaginary, intead of real and the world with ideal and imaginary, intead of real and
folid fience. Has not this been the true caufe of our folid fience. Has not this been the true caufe of our making and unmaking laws relating to commerce and navigation, wranglings, and controverfial fcribbling upon this great fubjee? Has not this led men rather into the fuperficial knowlege of metaphyfical whims, fabtilties, and ridiculous diftinctions, than into ufeful knowlege, that wiltbear the teft, and advance the honeft induatry and happinefs of mankind?

The moft confidcrable of thefe new regulations, compofed chiefly of thofe of the year 1498, were made in 1623. They were given to the company by Lewis XIII. who granted them alfo, in October that fame year, letters patent for confirming their eftablifhment.
But, as thefe ftatutes did not prove fufficient to prevent or determine an infinite number of difputes, which arofe daily between the freemen of this company, and thofe of the fadlers, harnefs-makers, turners, upholfterers, ironmongers, carriers, people who let out coaches, \&xc. the parliament, before whom thefe difputes were daily brought, declared at laft by a decree of the 16th of July 1667, that the mafters cartwrights hould appear before his majefty, in order to obtain new ftatutes.
Thefe newregulations, abtained under the reign of Lewis XIV, and regiftered in the parliament the 20th of November, 1668, are thofe by which the freemen of this company are governed at prefent; for the alterations made in them between the years 1691 and 1713, on account of feveral offices and employments newly created, and incorporated with the company, do not relate, or, at leaft, very little, to the government of the company, but only to the augmentation of the fees for apprenticefhip, freedom, vifitations, \&c. in order to pay off the fums borrowed by the company, and paid into the king's exchequer, by virtue of the edicts for creating thofe new offices, and of the decrees of the council for incorporating them. Thefe ftatutes are compofed of 50 articles, whereof the 2gth, 30 th, $33^{\mathrm{d}}, 36 \mathrm{th}, 37$ th, $39^{\text {th }}$, 41 ft , and $43^{\mathrm{d}}$, regulate what the freemen of every company, whofe buffinefs has fome connection with that of the cartwrights, and which have been mentioned above, may, or may not, concur with the maftercartwrights. The reft of the articles contain the whole method of government of cartwrights amongtt themfelves, extracted partly from the ftatutes of 1498 , and from thofe of 1623, and partly from the feveral decrees of parliament, and the fentences of the Chatelet, given, fince the year 1623, to the year 1668 .

## C A R

The company of the mafter-cartwright-coachmakers is governed by four jurats, or wardens, who cannot be elected into that office, unlefs they do actually dwell within the city of Paris, and have been ftaff-bearers and adminiftrators of the brotherhood of St Eloy, the patron of the company. Two new jurats are chofen every year, in the room of two old ones, who, on their going out of office, are obliged to give an account of their wardenflhip, before eight ancient bachelors, two modern ones, and two young freemen.
As long as the jurats continue in office, they may advance each of them a fum not exceeding 50 livres, for the prefling emergencies of the company, by which they are afterwards reimburfed out of a capitation, or poll-tax, which is to be impofed upon every freeman: but they are neverthelefs forbidden to pafs any decree, or fentence, concerning the corporation, without having firft fummoned together the number of bachelors and freemen fixed for the fettling of their accounts.
The apprenticefhip is of four years, as well as the journeymanhip; the former with the fame mafter with whom the apprentice was bound before a notary public, and the latter with fuch a mafter as the journeyman thinks fit. The apprentice it moreover obliged to pay five livres for the fee of the brotherhood, the very day on which his indenture is figned.
No frecman can have above one apprentice at a time: he may, however, take a fecond when the firft has ferved half his time out.
Whoever would be made free of the company, muft perform a mafter-piece of workmanhip, unlefs he be a freeman's fon, or has married a freeman's widow, or daughter; in which cafes he is only obliged to a trial, and even without any expence.
The jurats and the ancient bachelors prefcribe the mafterpiece to him who would obtain his freedom; but yet all the freemen may be prefent at it. If he be found capable, he takes the oath, and receives his letters of freedom; but not 'till he has paid the fees due to the officers of the Chatelet, the vacations of jurats and bachelors, and the fees of his admiffion: all which were fettled at 600 livres, but has been much increafed, particularly for the freemen without qualifications, fince the year 1691 .
If the perfon who would take up his freedom does not well perform his mafter-piece, he is fent back, to ferve two years longer with a freeman, to be afterwards admitted, in cafe he be then found capable.
No mafter can have above one fhop open to the ftreet; but yet every one is at liberty to have, befides this, a yard in fuch place of the city, or fuburbs, as he thinks proper.
The number of journeymen is not limited; yet it is unlawful to intice any away, or to take a journeyman from another mafter, or widow-miftrefs, without his or her confent.
The jurats have a power to vifit not only the fhops and workplaces of the mafters, but alfo the keys where the timber for cartwrights work arrives: but fuch freemen as have ferved the office of jurats, and freemen's widows, are exempted from paying the fees for fuch vifitations.
All the timber for cartwright's work brought to Paris for the account of foreign merchants, either by water or by land, is to be unloaded on the keys within the walls of the city, and remain there three working days; nor can it be carried off before fix o'clock in the morning in fummer, and eight in the winter. No freeman is at liberty to meet foreign merchants bringing goods to Paris, under the penalty of paying a fine, and forfeiting the goods bought: they may, nevertheleis go, or fend to buy, all forts of timber for cartwright's work, either yet fanding, or ready cut, and caule it to be brought and put up into their wharfs, or timber-yards.
Laftly, to prevent all the abufes which might happen in the making of carriages for coaches or carts, and other new works of the faid cartwrights, they are obliged, under the penalty of an arbitrary fine, to mark them with their particular mark, even thofe that are made by their apprentices, or journeymen.
Cartwright's Timber, is that which is ufed by the cartwrights and coachmakers. The timber is of two forts, particularly elm-timber, which is chiefly ufed in cartwright's work, namely, the round timber, and the hewn timber.
The round timber is that which is fill in logs, or blocks, that is to fay, which has not yet been fquared with the faw, and has the bark upon it fill; but has, neverthelefs, been cut to a certain length, proportionable to the works in which the cartwrights would ufe it.
Hewn timber is that which has been fquared with the faw, and reduced to the thicknefs and fize proper for other works of the cartwrights.
With the round timber they make the naves, or focks, of the wheels, the coach-beams, the jaunts, \&c. The hewn timber ferves to make the coach-ftandards, poles, beams, \& c .

Rules concerning round elm timber.
The round timber for naves, or ftocks of wheels, ought to be fix feet and a half high, and to inches diameter, at leaft, at

## C A S

## C A S

the thinneft end ; thofe pieces which are from 12 to 16 inches diameter are reckoned the beft, becaufe they may ferve for the largelt cart-wheels.
The round timber for axle-trees muft be fix feet long, and fiom feven to eight inches diameter.
The pieces defigned for poles ought to be of feveral fizes, according as they are intended for coaches, or for other carriages. Thofe for coaches mult meafure from ro to is feet in length, and the others from 12 to 15 , without any knots, and be well bent.
well bent.
Tor the jaunts, the pieces muft be two fect eight or io inches long, or even three fect.

## Rules for the hewn timber ufed by cartwrights.

The pieces of timber for fupporting the ftandard of a coach muft be cut fix feet and a half long, fix or feven inches broad, and four or five inches thick.
The ftandards of fix feet feven or eight inches long, five or fix inches broad, and three or four inches thick.
And the poles nine feet long, three inches and a half fquare at the fmalleft end, and four inches at the thickeft end.
It muft be obferved, that there are feveral other pieces of elm timber ufed in the cart-wright's bufinefs; which they themfelves cut, the timber-merchants leaving feveral pieces, in the form of round timber, of divers fizes and lengths, for which there are no fettled rules, the workmen chufing them at the fales, or in the timber-yards, according as they find them proper for the feveral works wherein they would ufe them.

## Other timber for cartwrights.

The afh timber is commonly cut into fandards and poles: fome of it is alfo left in pieces of round timber, proper to make thofe forts of carriages on which they carry wine in France. Thefe pieces of round afb timber ought to be from Io to 18 feet long, and eight or nine inches diameter.
The yoke-elm timber is commonly cut into axle-trees, and other pieces in which elm is ufed; but it is feldom employed but in thofe provinces where elm is fcarce.
Of the branches of eim and yoke-elm, which are not large enough to be left in round timber, or cut for the feveral pieces of cartwright's work mentioned above, they commonly make the fpokes of wheels, though they make them alfo fometimes of other wood, and particularly of oak.
CASAN, CAZAN, or KASAN, a kingdom in Mufcovian Tartary, which the Ruffians call Czarftwo. Caraufkoy was formerly fubject to it's own princes, who were efteemed powerful monarchs, but was fubdued by the Czar Bazilowitz, to which was added the kingdom of Aftracan; fince which, thefe two kingdoms have been looked on as the two richeft jewels in the Czarifh diadem: this of Cafan, on account of it's extraordinary richnefs and fertility; that of Aftracan, on account of it's vaft and valuable traffic.
Cafan is bounded on the north by the provinces of Vaitka, laft defcribed, and Permia; on the eaft by the Tumæan Tartary ; on the fouth by Barkiria, Bulgaria, and Aftracan; on the weft by the Lower Novogorod and Mufcovy, properly fo called. It is watered by the two rivers Wolga and Kama, which run through it, and inrich both it's foil and ir's traffic.
Casan, a large and populous city, the feat of a Ruffian metropolitan. It is fituate on a fine fpacious plain, on the river Cafauka, about feven verftes from the place where it falls into the Wolga, in latitude 58. 38 . It is excellently well fituated for being well fupplied with all manner of neteffaries and provifions, by land and water, and which are here in great plenty and cheapnefs.
CASE-HARDENING. The art hereof is a leffer degree of fteel-making, and practifed by baking, calcination, or cementation, of razors, files, knife-blades, \&c. in a kind of oven, or other clofe vellel, frratified with powdered charcoal, and hoofs and horns of animals, fo as to exclude the air; and thus, by calcining with the ingredients in occlufo, or in a veffel, oven, or furnace, where the open air cannot affect the fubject, a coat of fteel is given to inftruments fome depth below their furface.
On the other hand, iron becomes fofter by a more gentle and longer-continued ignition; whereby it acquires a kind of fpunginefs, which, however, is again condenfed, upon quenching the metal in cold water: but, to render it more foft and ductile, the way is to quench it in a decoction of animal excrements, either thofe of men or brutes, or in fale urine, or in the juice of onions; by which means iron may be fo mollified, as to become fit for the graver.
CASH, in commerce, fignifies the fock of money which a merchant, trader, or banker has at his difpofal, wherewith to trade (fome derive it from the French caife, a trunk or cheft to lock up money in). Thus we fay, the cafh of fuch a banker amounts to ten, twenty, or thirty thoufand pounds.

## REMARKs.

The management of the cafh of a feparate or joint trader, in fociety or partnerfhip, is of the utmoft confequence to render their trade fuccefiful. With regard to the former, he fhould always have his eye upon that effential account, in order to anfwer all demands, and to procure payment of debts, when due.
Among partners, the conduct of their traffic fhould be fo divided between the concerned, as to fuit each other's talents and difpoition. Thus the bufinefs fhould be divided between them, both with regard to the buying and felling of merchandizes, keeping the cafh, and the ledger; and feeing to what particular part of the bufinefs each is moft fitly adapted. He who is of an active ftirring temper, is more proper for buying and felling, than he who is of a more fedate difpofition, and loves eafe and reft. Therefore the more active fhould be employed in the buying and felling of merchandizes; the more fedate in keeping the ledger and calh; becaufe, having lefs vivacity, he may be more circumfpeet in the management of fedentary bufinefs, than if he were more active.
And, indeed, the fuccefs of partnerihips depends, in a great meafure, on the prudence and good order of him who keeps the cafh and the books; which'confifts in keeping the books without the leaft confufion, in knowing inftantaneoufly what is due to the partnerfhip, or what it owes, and in calling in debts regularly, to anfwer all emergencies.
The moft important of all is the management of the cafh. That does not confift only in receiving and paying, which is very eafy: he who manages it is to take care of many other things, from which the whole profperity of the partnerflip mult proceed. For which reafon he is to mind two things chiefly; firft, that there be always money enough in cafh to pay the bills of exchange, which their correfpondents and manufacturers draw upon them; and, in cafe they keep manufactories, the bills or notes for monies borrowed, in order to buy the requifite materials, and to pay workmen, that the courfe of bufinefs may by no means be interrupted.
Secondly, he muft call in the debts regularly; for, as the cafh exhaufts, it muft be timely replenifhed.
Laftly, he who keeps the account of cahh, ought to be like a good pilot, who wifely forefees the florms that may happen, during the time of the partnerfhip, particularly if they have manufactories which depend on the faftion; fuch as wrought ftuffs, that are in vogue, according as people's fancy leads them, and for which there is not the fame demand at all times. They who deat, for inftance, in gold, filver, filk, and flowered ftuff, if there happen to be a public mourning for the death of a fovereign prince, or any of the royal family, will find the fale of fuch goods at a fand ; and yet they muft duly pay what they owe, and fill uphold their manufactories, which muft by no means ftand fill, upon fuch a temporary occafion.
This is a very bad time for thofe fort of traders ; their merchandizes remaining dead in the warehoules; their debtors, who deal by retail, not being able to pay what they owe, becaufe their trade is alfo at a tand; yet their creditors will be paid, and thus the cafh becomes inevitably exhaufted.
When this is the cafe, he who keeps the cafl ought timely to think of prudential expedients, in order to raife money. To which end there are three that naturally prefent themfelves; the firft is, to apply to the debtors; the fecond, to negotiate bills of exchange; and the third, to have recourfe to particular friends.
At fuch conjunctures little dependance is to be made on the company's debtors, becaufe they are not able to pay, by reafon of the ftagnation of their branch of trade; yet this is a time in which they muft be ufed with tendernefs and indulgence, that they may not be neceffitated to break.
The credit for negotiating bills of exchange is uncertain, it depending on the caprice of men, more efpecially at fuch critical times; fo that little frefs is to be laid upon it at fuch ticklifh times.
The fafeft expedient, at fuch conjunctures, feems to be to have recourfe to particular friends, who are monied-men, and who will not refufe to lend a trader, if they can do it with fafety.
All thefe confiderations will occur to the fenfible man of bufinefs, who has the conduct of the calh, in order to fupport his trade and credit, that he may not be furprized: for which purpofe, he ought always to have before him a ballance or account of the company's debtors and creditors, that he may know the thate of their affairs, in order to call in the active debts, or to renew the bills or notes for the paffive debts, when fuch bills or notes are become due. And, in cafe the money fails, he muft be very diligent in both thefe particulars, and examine very carefully, whether thofe whom they intruft with merchandizes, are punctual in their payments; whether they be careful and prudent in-their way of bufinefs, in order not to truft them too much, or imprudently; for it is of the laft importance to be well acquainted with the circumftances and credit of thofe with whom we deal.

## C A S

C A S

The partner who keeps the cafh ought to know, that, if he be negligent in calling in the adive debts, he does too great and irreparable prejudices to the partnerfhip. "The firft is, that a merchant, who is able to pay to-day, will perhaps prove infolvent to-morrow, and may break by fome unforefeen accident; whereby a part, not the whole of the profit, which the partners thall have made, may be loft. The fecond is, that there being no money in cafh, if the partners are obliged to borrow any, the high intereft, they muft pay, will fwallow up all their profit, and very often their capital alfo. Thefe plain obfervations may be of no little advantage, efpecially to the young and unexperienced traders.
Cash of Loans, in French, caiffe des emprunes. Thus they called in France a public cafh, which was eftablifhed at Paris in the H6tel of the king's united farms, where all forts of perfons, of what quality and condition foever, both natives and foreigners, were allowed to carry their money, in order to improve it, and whence they could take it out again at the expiration of the term mentioned in the promiffary notes ; which the king's farmers-general gave them, and which were figned by four members of the company appointed for that purpofe.
Thefe forts of promiffary notes, wherein the name of the perfon who paid the value was left blank, were made payable to the bearer a year after date; and the intereft for the whole year was not paid, 'till the notes became due, which were then either renewed, or paid off both intereft and principal.
This cafh account was inftituted, not only to render the management of his majefty's farms the more eafy, but to afford private people an opportunity of laying out their money with fome profit, till they could difpofe of it more advantageoully.
This cafh of loans was firft eftablifhed in October, 1673 , under the reign of Lewis XIV, Monfieur Colbert being then comptroller-general of the finances. It continued feveral years, being as ufeful to the ftate, as to private people; the former meeting with ready fupplies in the wars, wherein France was then engaged; and the latter a quick ufe of their money, with a fafe intereft: but this cafh was neverthelefs fuppreffed towards the latter end of the feventeenth century, and the capital reimburfed to the owners, with the intereft due thereon.
The conveniency of this cafh, which had been fo long experienced, together with the immenfe expence which the ftate was engaged in, towards the beginning of the eighteenth century, in order to fupport the acceptance of the laft will, which Charles II, king of Spain, had made in favour of the duke of Anjou, made the minifters refolve to revive that bank, though with fome difference with regard to the intereft for the fums depofited; which was paid at a higher rate in the new cafh of loans, than it had been in the old one. This fecond cafh of loans was eftablifhed in 1702, by virtue of a declaration of the king, dated the 1 r th of March, that fame year.
By that declaration the intereft was fettled at the rate of 8 per cent. per annum. It was afterwards raifed to so per cent. by a new declaration of the 25 th of March 1705; but, after that, it was lowered again, and reduced to 6 per cent. by a third declaration of the 14 th of Oetober, 1710 ; upon which footing it continued till the year 1715 , when it fell again to 4 per cent.
As thefe promiflary notes came, through the misfortunes of the times, to amount to immenfe fums, it was refolved, in the year 1713 , to pay off both the principal and intereft; for the latter had not been paid regularly for fome years, and the creditors had not been at liberty to take out their principal, as they ought to have been, according to the firft fcheme of this cafh of loans.
The firft reimburfement of thefe funds was ordered by a declaration of the king, dated the 3 d of October that fame ycar 1713, at the rate of fix millions of livres per annum ; which were to be paid monthly, to fuch of the creditors, on whom the lot fhould fall, for their notes were to be drawn out by lot, in the form and manner prefcribed by that declaration.
This method of reimburfement was altered at the end of a year, and by a new declaration iffued the 15 th of December, 1714 , the reimburfement was fettled at $\frac{1}{20}$ per annum; fo that in twenty years time the whole principal money, and all the intereft due on the promiflary notes of the cah of loans, would be entirely difcharged.
Six months after this, another declaration, given the 7 th of May, 1715, made fome new alterations, not only in the method of paying of thofe notes, but alfo in the intereft they bore, which was now réduced to 4 per cent. It was alfo ordered, that a certain number of the notes fhould be drawn by lot every quarter of a year, in the prefence of two of his majefties commiflaries, to be entirely reimburfed and paid off, both intereft and principal, from fuch funds as were appointed by that declaration.
This declaration was juft begun to be put in execution for the quarter of July, when an edict was ilfued in Auguft, that fame year, by which the cafh of loans and it's promiflary
notes were entirely abolifhed and fuppreffed, and at the fame time were created five millions of perpetual annuities on the Town-houfe, or Guild-hall of Paris, at 4 per cent. for reimburfing the faid promiffary notes; which were to be paid off, fome entirely, and others only by halves, according as they had been negotiated, or not negotiated; which was to be fettled by the commiffaries of the council.
Lewis XIV. dying in the beginning of September following, and the new adminittration taking other meafures for paying off the national debts, Lewis XV, under the regency of Philip duke of Orleans, iffued a declaration the 7 th of December, that fame year, by which all the royal bills and notes, of what nature foever they might be (which did confequently include. the promiffary notes of the calh of loans) were converted into bills of the fate (billets d'etat) for which his majefly made himfelf fecurity; promifing to pay regularly intereft upon them, at the rate of 4 per cent. per annum, 'till he could fucceffively pay off the principal, by the moft convenient means. This declaration, which was only preparatory, was explained by another, dated the ift of April, 1716, which fettled the converfion of all the royal bills at 250 miltions of bills of the ftate, and regulated upon what footing each kind of paper, or note, was to be liquidated by the commiflaries of the council.
By this reduction the promiffary notes of the calh of loan were brought under three claffes:
The firft was of thofe, the value of which, had been originally paid in ready money, or partly in money, and partly in paper ; thefe were reduced to three fourths.
The fecond of fuch notes, for which no real value had been paid, but which had been iflued out fome years before, to be negociated with a confiderable lofs: thefe were reduced to two fifths.
Laftly, the third clafs contained all thofe notes, which it was notorious had been negotiated in the latter, and in the preceding reign, at above 80 per ćent. difcount: thefe were reduced to one fifth.
Since this declaration, there has been no mention made in France, either in trade or otherwife, of the notes of the cafh of loans; and they have been, under the general name of notes, or bills of the ftate, paid off or annihilated, by the feveral methods appointed fince by his majefty for thofe forts of bills; and which we have mentioned above, in the article of the feveral forts of bills, which are fill, or have been, formerly current in trade, both within the kingdom, and with foreigners.
Cash of Credit was a cafh eftablinhed in France, in behalf of thofe country traders, who bring wine and other liquors to Paris.
This cafh was firft eftablifhed in September, 1719. The edict orders, that the foreign traders and pthers fhall be at liberty to receive there immediately the price of their wine and liquors, and take credit there, on paying a difcount or intereft of fix deniers per livre; but yet, they who tal:e no credit there, fhall not be obliged to pay any fuch difcount.
As this new cafh met with very little favour from the winemerchants, it was thought proper to give it, if pofille, fome fanction, by a decree of the council, dated the 4 th of April, 1722; and afterwards, by letters patent of the 28 ith of June, regiftered in the court of aids the 14th of Augult that fame year: but, all this proving fill infufficient, there was a fecond decree of the council, iffued the 27 th of September, 1723 , which gives a very particular account of the benefits which the wine-merchants may reap from this caff, and of the manner how it ought to be managed.
His majefly declares firf, that the fund of this calh fhall be formed from the money arifing out of the duties, re-eftablifhed by the decrees of the 2oth and 22d of March, 1722, and by the declaration of the $15^{\text {th }}$ of May following
In this calh all country traders, and others in general, have liberty to take the credit, that is to fay, to borrow the money, they have occafion for; which, however, is not to exceed the value of half the wine, or liquors, they have brought to Paris, either by land or by water.
The intereft, or difcount, which was to be paid for taking credit there, was fix deniers per live (which is two and a half per cent.)' but they who did not take credit there could not be obliged to pay that difcount.
The credit for wine was eftablified merely by a fingle deed, or bond, figned by the party, and wrote in a regifter of large fampt paper, kept for that purpofe, and marked with a peculiar fiourifh by the provoft of the merchants.
After the reimburfement of the firft credit, or money lent, which was always to be paid before any other debt, out of the money arifing from the firt fale of the wine, a fecond credit was to be granted to the merchant, and then a third, and even more afterwards, on his paying the fame intereft, or difcount, of fix deniers per livre: but the money lent was never to exceed half the value of the wine remaining to be fold.
Upon reimburfing the firft credit, or money lent, the veflels of wine, which had been marked with the mark of the cafh of credit, were unmarked again, by cutting a crofs-bar on

## C A S

the print of the former mark, and muft be marked again cyery time a new credit was taken; that is to fay, eyery time money was borrowed again upon the wine.
The wine-merchants, their partners, factors, or agents, had always the liberty to manage as they pleafe the wine on which they borrowed money, as that on which they borrowed none, except with regard to the delivery of it, after they fold it; for they could not deliver it but in the cafhier's prefence, who was to take back the money lent, out of the produce of the fale.
After the reimburfement of all the money lent, the bond which the merchant figned on the regifter was to be difcharged, and the cafhier to give him a certificate, declaring, that the money arifing from the fale was delivered to him; but, in cafe part of the money only was repaid, a memorandum, or note, was to be written, both in the certificate and in the regifter of the cafh, of the fums which were received on account.
The wines of credit, that is to fay, thofe whereon money was borrowed, which, after the price they fold for, had been put into the hands of the cafhier, while removing from the places where they had been depofited, were to be unmarked by the infpectors, keepers of fuch depofits, and of the mark of the cafh, and not by any other perion; his majefty ftrictly forbidding all merchants, factors, agents, coopers, and others, having the management of the wines in the faid places, to unmark themfelves any wine of credit, upon pain of forfeiting the fame, and paying a fine of 100 livres for every cafk of wine.
If there were any veffels of wine of credit in a bad condition, which could not be mended, the wine was to be tranfvafated into another veffel, in the prefence of one of the clerks of the cafh, who was to mark that new veffel, and the ftaff of the old veffel, on which the mark had been put, was alfo to have been broke in his prefence.
Lafly, his majefty orders that the money lent by the cafl on wine fhould be paid before any other debts, of what nature foever they might be ; and, in cafe the wine was feized, no fale of it fhould be made, or ordered, but with an exprefs condition and provifo of paying the money lent, before any other, even before the expences of any law-fuit, feizure, or execution.

There have been divers other expedients and artifices made ufe of in France, for the fupport of private and public credit. See the Article Credit, both Private and Public.

## Remarks, in a national light.

From the circulation of the cafh of private traders, or gentlemen, we may, in fome meafure, judge of that of a nation, and what quantity is competent for the circulation of the commerce thereof. To trace things from their firft principles. Before the ufe of money, we may naturally enough confider the proprietors of lands as employing flaves, fervants, or vaffals, to procure them the conveniencies of life. On this fuppofition, the proprietors muft have as much allowed them of the produce of the land as was neceflary to maintain them and their children.
Since the ufe of money, it is further natural to judge, that, when it's quantity, by altercations, gradually found out a par, or proportion, to the other commodities, the land-proprietors allowed thofe who worked for them fo much money per annum, or per diem, as anfwered to their fubfiftence, and that of their children, according to the manner of living to which they were ufed. If the proprietors gave them lefs, they could not fubfift; if they gave them more, others would have offered themfelves to work for them cheaper; by which the proportion of men's wages in money was readily, found out.
In the like manner the uncertain wages of all undertakers have found out their proportion, according to the gain and manner of living wherewith thofe of that order contented themfelves.
Suppore an equal quantity of cafh, or money, to circulate conftantly in a place, the proportion of money which every body brings to market, according to the means of fubfifting which he hath, naturally keeps the altercations at market (creteris paribus) in a uniform fituation; and the variation of prices, in the ordinary commodities of conftant confumption, proceed only from little inequalities, when fome inhabitants fpend more in one week than they do in another.
But the greater variations proceed from good or bad years of vent, and the plenty or fearcity of the commodities.
To come to the nature of the circulation of money, let us confider the proprietor of a large landed eftate, which he keeps in his own hands, and who has all forts of labourers, fervants, tradefinen, overfeers, \&c.
Let it be fuppofed, alfo, that feveral of thefe overfeers and tradermen, to whom the land-proprietor ufually gave an allowance in commodities, for their maintenance, and the propagation of children [fee the article Barter] have, by their œeconomy, from time to time, faved a good part of the
said commodities, and then exchanged them with Americans
Vol. I.
for money, at fuch price as has been determined in the altercations between them. Let it be imagined, likowie, that all the inhabitants on the faid eftate are fond of fit ver, and willingly receive is as a pledge for any commodities they lend to, or barter with each other; and reciprocally take it and give it, in abfolute barter, finding it fo generally in requeft, that they may have their commodities for it again, with little variation of prise, whenever they want them.
Let us fuppore a fixed quantity of this money circulating on this eftate, as 2000 ounces of filver, and that fabdivided into feveral fmall pieces, as is the current money in a ftate.
If the proprietor himfelf has purchafed thefe 2000 ounces of filver from the Americans, or dug them out of bis ow: ground, it will come to the farne thing, provided he exchanges and barters them with the other inhabitants, his dependens, for the commodities which the land produces; and whereby they all fubfift.
Let it be again conceived, that the proprietor, to avoid the trouble of keeping his eftate in his own bands, and employ= ing fo many different overfeers, labourers, tradefmen, \&c. cbufing to live out of his own landed eftate, and lets in parcels, to feveral of his own overfeers, on the ordinary foot that lands are let in England; and that he leaves the tradermen to fet up as undertakers, for the fupplying, as they can, the inhabitants, and himfelf and family. Suppofe the quantity of money at which he lets his eftate, be rooo ounces of filver per annum.
It is the general opinion in England, that a farmer makes three rents; viz. the principal rent he pays the proprietor; a fecond rent for the charge of his farm, and the wages of his fervants; and a third rent for himfelf and family, whereon to fubfift, and for the education of his children, This opinion is founded on experience, which hews, that, of a farm of 300 acres, of equal goodnefs, the produce of ioo acres fold at market is fufficient to pay the principal rent to the landlord, or proprietor. But in France and Germany, and other countries, the proportion feems different; in feveral parts of France, the proprietors have two-thirds of the produce of the land free, which makes the farmers, and all dependent on thern, live fo much the worfe*.

- This fhould give our farmers and country people, in general, à juft notion of the difference, by living under a French governmentt and an Englifh one, according to the fteady conflitution of our kingdom ; which, agreeably to the judgment of the wifett and beft of men, can as litele fubtift by abiolute monarchy, as by republicaniim or oligarchy.
In this ceconomy the tradefmen, who have fet up for undertakers, buy of the farmers, \&c, their materials; the clothier buys wool of the farmer, the tanner hides, the baker wheat, the butcher oxen, fheep, \&c. the land-proprietor, for the ufe of his family, buys what he wants of all thefe, who ars fuppofed to have each of them a portion of the 2000 o of filver to fet up.-And, as the land-proprietor is paid 1000 ounces of filver by his farmer once a year, he pays the faid quantity of money to them for that wherewith they fupply him, by which they are reimburfed the fums they had advanced in their undertakings, and find alfo a maintenance for themfelves and children.
The actors in regard to the fecond rent, viz. the tradefmen and undertakers, fmiths, carpenters, $\& \mathrm{cc}$. fo far as they are affitant to the farmer; the labourers, fervants, \&c. belonging to the farmer; pay and receive of the farmer, and of one another reciprocally, 1000 ounces per annum, according to the fuppofition.
The farmers themfelves, who are the actors in regard to the third rent, and have a third part of the produce of the eftate free, fuppofing they fave and lay up nothing, create alfo for extraordinary expences for the education of their children, or for the better conveniency of living, a circulation alfo of 1000 ounces of filver per annum, according to this fuppofition: and fo, upon the whole, if the eftate be let for 1000 ounces of filver per annum, it feems to requite 3000 ounces of filver to carry on the circulation of the three rents, if the payments be made once a year.
But, as it frequently bappens that the farmer pays the J1bourers in villages with corn and commodities for their work, that fach part of their land as maintains the farmer's horfes requires no circulation, or barter in money ; that the fubfiftence of the farmer's fervants and family requires no money, fince they often kill their own meat, and brew their own drink, and bake their own bread; and fince no more money feems requifite than for what the undertakers and tradefmen do, and there being little of that required in villages, but for cloathing, carpenters work, fmiths work, and the taylors, thoemakers, and the like: whereas all the proprietor's expence in his family, fince he has no land in his own hands, is fupplied by the undertakers; from which confideration it fhould feem, that the circulation of the two laft rents does not require near fo much money as the fiagle reat of the pro-
prietor,

## C A S

prictor, which is the principal fource and caufe of the circulation of money.
Yet I will fuppofe, that the circulation of the two laft rents, together, are equal to that of the firft rent.
So that, if the produce of all the land and labour in the eftate in queftion is equal to 3000 ounces of filver, the exchange and bater of the faid produce among the actors of the threc rents will require but 2000 ounces of filver to carry on the circulation of the whole, and make all the payments once a year.
But, if the land proprietor flipulates the payment of his rent with the farmer once in fix months ; and if all the payments, made by the actors in the three rents, are alfo made once in fix months; 1000 ounces, in two payments, will anfwer 2000 ounces in one payment.
And, if all the payments are made quarterly, 500 ounces will anfwer the whole circulation; and it often happeris, that the farmers pay but a quarter's rent to the proprictors at a time, and 'tis obfervable in the country, that there is feldom more money in villages than what will anfwer a quarter's rent.
And, as the different kinds of the products of land feem to anfwer and correfpond to the four feafons of the year, it feems natural to judge, that the wheels of cafh-circulation and barter of commodities are fet a-going four times in a year, and in many countries the rents are ftipulated to be paid quarterly.
Now, if we fuppofe this land-proprietor and feveral others to live together in the common center of their lands, where they form a city, and draw thither moft of the undertakers and tradermen, who fupply their families, and one another. As almoft every thing is carried on and fupplied in a city by undertakers, fo almof all the barter requires money; but then, on this fuppofition, the circulation of money is very quick, all the undertakers and tradefmen commonly paying their workmen and journeymen once a week, and feveral families paying their expences daily at market.
But thefe fmall parcels of money, which go and come fo frequently and quick in feveral fmall rivulets of barter, are gathered together again in lumps, by the undertakers, as bakers, butchers, brewers, \&c. and paid to the farmer, from whom all commodities are bought; and then are again paid quarterly to the land-proprietors, out of whofe hands they are again fpread into the rivulets of barter: and, thefe payments made, the proprietors feem to be the principal object to judge by, of the quantity of money in circulation, there being no great fum required for the circuation of the other two rents. Cities are efteemed to contain half the inhabitants of a ftate, and to make more than half the confumption of the produce of the land.
Though the detail of the circulation of money in a ftate be indefinite, yet it appears from what has been faid, that it is not incomprehenible, and 'till fome body has the curiofity to examine the faid detail, and endcavours to come at better knowledge of the proportions, of it, I hall lay it down as my opinion and conjecture of the matter in general, That the real caft or money, neceffary to carry on the circulation and barter in any ftate, is nearly one third part of all the annual rents of the proprietors of the faid ftate.
Whether money be fcarce or plenty in a ftate, this proportion will not change, becaufe, if it be fcarce, the proprietor will fell his land for lefs money; and, if it be plenty, he will fell it for more, and this will always hold good in the longrun. But, if the circuiation of money be fower or quicker generally in a fate, the proportion of money, required in circulation, will be more or lefs.
According to this fuppofition, if 2000 ounces of filver ferved to carry on all the circulation on the eftate we confidered, the proprietors rents ought to have been 6000 ounces, and the three rents equal in value to 18,000 ounces, and confequently the money which carries on the circulation and barter in a flate, may be efteemed equal in value to the ninth part of the annual product of the lands of the faid ftate. Sir William Petty, in a manufcript.written in 1685 , fuppofes frequently, that the circulating money in a ftate is equal to the tenth part of the annual product of the land; and, though he affigns no reafons any-where for fuch a conjecture, it looks to me, as if his great experience and fagacity had let him into that proportion.
As his fuppofition differs from what has been fuggefted but $\frac{1}{x}$, I fhould readily come into his notion, if it were able to lead me into any ufeful knowledge; whereas in fixing a proportion between the circulating money in a ftate and the rents of the proprietors, whereof the fum may be known by an exact land tax, the knowlege of the actual fum of money requifite in circulation may be attained.
T is eafy to conceive, that foreign trade requires no great additional fum to carry on it's circulation in a flate, when the ballance of trade is equal. [See Balance of Trade.] In this cafe, the goods and commodities exported pay the value of thofe that are imported; when the proprietors confume the foreign commodities, they pay the undertakers of the foreign trade what they had advanced for them; and there pay the fame value to the undertakers of the exported
good;, which compenfate the imported ones ; this is all paid out of the firf rent: and, where the ahors in the two other rents confume foreign commodities, the money, becclify for the circulation of the faid rents alfo, is fufficient to anfwer it.
All the influence fureign trade feems to have upon the circulation of money in a ftate is, that it fometimes retards it; and makes it pals through the hands of more undertakers and brokers, than it otherwife would do.
If the proprietors of land at Paris wear Genoa velvets to the value of 10,000 ounces of filver, and thefe velvets are coilpenfated by 10,000 ounces value in French cloth, the proprietors out of their rents pay the velvet merchant, as undertaker, 10,000 ounces; he pays the fum to the Genoa bainker or remitter; he pays the fame to the cloth merchant, who fonds French cloih to Genoa on his vills of exchange. But, if the proprietors at Paris wore cloth infead of the velvets, they would pay diredly the 10,000 ounces to the cloth merchant, and fo that money would not go through fo many hands;' 'ris in this fenfe only that foreign trade can ateat the circulation of money. See more under the articles Cisculation, Credit, Money.
CASHIER, be who keeps the cafh, or the money, which it is his buffnefs to receive and pay.
CASHOO, a medicinal and aromatic drug, which, is reckoned among perfumes.
All that has been yet afferted, with regard to the compofition and origin of this drug, is entirely fabulous : here follows an account, which will fufficiently acquaint the phyficians, apothecaries, and druggifs, with what they ought to know of it. Cafhoo is certainly extracted from a tree, which is called catef in the country where it grows. That country is a province of Indoftan, or the Mogul's empire, which is called Behar; the capital of it is Patna. This proviare, which the famous river Ganges croffes, lies a hundred leazues above the kingdom of Bengal. Cathoo is properly nothing but an cxtract made by a decoction and maceration of the parts of that tree, and rendered folid by evaporation. There are two forts of fimple, cafloo, the rough, and the purified or refined; the latter is a compound of purified cafioo rielx ed with aromatic drugs, and made into lozenges of feveral fizes, the biggeft of which are as large as a half-crown piece. This cathoo is made for the ufe of the Indians, who chew it either alone, or mixed with pinnng, or areca. Rough cafhoo is a commodity, which is brought down the Ganges as far as Bengal, whence it is diftributed by means of trade throughout all the Indies, where there is a great confumption of it; and to the Europeans, who fend it into Europe, but mefly purified; for caftoo is never ufed rough, neither in the Indies nor elfewhere.
They purify the cathoo to different degrees, according to the ufe which the Indians would make of it. It appears, that the cafloo which comes into Europe, is purified to the fift degree only:
The word cafhoo is an abbreviation of that of catechoo, or catechu, according to the pronunciation and manner of feelling of the Poltugueze; for, in their language, the letter a has the fame found as our oo, or the French diphthong ou (and eh is pronounced like of in Englid). So that cafhooin Englifh, cachou French, and catecbu Portugueze, are pronounced nearly after the fame manner. It appears plainly from thefe obfervations, that the word catechu is a compound of two words ufed in the language of the country where the cathoo-tree grows, namely, from cate, which is the name of that tree, and chou, chu, or 1200 , which fignifies the juice extracted from that tree.
The illuftrious Monf, De Juffieu, of the royal academy of fciences, and profeffor of botany in the royal:garden ar $\mathrm{Pa}_{-}$ ris, has given an account of the cathoo, in the Memoirs of that academy for the year 1720 , with a view to give the public a perfect knowlege of it. He afferts in that account, that cafloo is nothing but an extract of areca. He tells us further, That the obfervations, made there upon caftoo; are chiefly owing to Monf. Albert, chirurgeon-major fettled at Pondicherry on the coaft of Coromandel (where he died about the year 1725) which obfervations agree with the opinion of Helbigius quoted by Dale, and with that of Cleyer. It is pity that this chirurgeon, who was to be depended upan, as Monf. De Juffeu bas done, fhould have fo illy obferved the drug, which occafioned that account. It is true, indeed, that in fome places on the fea-coaft, where the areca-iree grows, the Indians have attempted to make a fort of extrao from areca, to imitate cahoo; which they could the eafier do, as it has the fame, or very near the fame, aftringent quality. Yet they make very little of it, either becanfe its tafle is very different, or becaufe it is blacker, and does not yidd much folid matter, which makes it as dear as the true cafthoo; and further, that fpurious cafhoo is never expofed to fale. It is true alfo, that, in the maritime places, there are lome perfons, who purify rough cafhoo with an infufion or fight decotion of areca; whence it is thought better than that which is purified by diffolving it in common water. The cafhoo being diffolved, they filtrate or pafs it through a piece of hamen, and give the requifite confifency by evaporation.

When it is diffolving, and they would prepare it for fale, they add to it feveral lorts of aromatic drugs, according to the tatte they would give it, to render it more compoied and mure odoriferous. . All thefe things may have milled Monf. Albert.
In order to demonftrate in the cleareft manner, that cafhoo is not made of areca, let the following obfervations be confidered. I. In thofe countries where the areca-tree grows, which are all near the fea-coalt, they make no true cafhoo, but get it from other places. 2. At Bengal, though it be pretty near the fea, whence cafhoo is exported in fhips, there grow no areca-trees, becaufe that country is too far north; for the areca tree will hardly grow beyond the $15^{\text {th }}$ degree of latitude, nothing being more hurfful to it than drought and cold. 3. The areca which is carried to Bengal by fea for fale, is dearer there than rough cafhoo; and one feldom meets wish boh thefe drugs there at the fame price, nameiy, of five or tix ruppees per man. 4. Laffly, the country where the cathoo-tree grows lies in the 28th, 29th, or 3 oth degree of north lacitude; fo that it grows about 300 leagues more nor h -weft than the areca-tree; and yet it comes from thence, as well as opium, for the ufe of ail thofe coafts, and of all the Eaft-India illands, where there is a prodigious confumption of it, where people are exceffively fond of chew ing aftringent drugs, of everal kinds, mixed wih aromatics, efpecially pinang, or areca. The cafhoo-tree is, pernaps, kind of acacia. Cafhoo was formerly thought to be an earth of Japan: But Monf. Boulduc, of the Royal Academy of Paris, thewed, in 1709, by it's analyfis, or chymical refolu tion, that it is intirely a vegetable fubftance, without any earth. It appears from thefe obfervations, which are Monf Garcin's, that truth comes not to us from diftant countries but with great difficulties, and that whole ages are fometimes required to find it out.
Cafhoo is very much valued in medicine. Amongf other effects afcribed to it, it is reckoned to fop the cough, and to ftrengthen the fomach; befides which, it fweetens the breath, when being reduced into an impalpable powder, and mixed with ambergreafe, and mucilages of gum-adragant, it is made into paftils. Cafhoo muft be chofen of a tanned red on the outfide, of a bright red within, very fhining, and not burnt. Kompfer obferves, that they prepare at Odowara perfumed cafhoo, of which they make pills, fmall idols, flowers, and feveral other figures, which they put into little boxes for fale. The women are very fond of it, and ufe a great deal of it, becaufe it faftens the teeth, \&c. This thickened juice is carried to Japan by the Dutch and the Chinefe; and, after it has been prepared at Macao, or at Odowara, mixed with amber, camphire of Borneo, and other drugs, they buy it again, to carry it to other places.
CASSAVA, CASSAVE, CASSAVI, or CASSADA, the root of a ihrub, which the French call MANIOC, MAGNIOK, or MANIOQUE, and the Englifh MANIHOT. Thefe roots, being rafped and baked, are what is properly called caflava, or flour of manihot, and are ufed by all the natives of America inftead of bread. 'They plant-cuttings of this lirub in new grounds defigned for cacao-walks; not only becaufe they are abfolutely neceffary to a planter for the food of his negroes, but alfo to prevent the growing of weeds, and to fhade the young cacao-plants, as they come up, whofe tender hhoots, and even their fecond leaves, would not otherwife be able to ftand the exceffive heat of the fun: for which reafon they delay planting the cacao-nut 'till the manibat or caflava-firub be grown high enough to fhade them. See Cacao.

Remarks.
This fhrub is very crooked, and full of knots : it's wood is foft and brittle : it grows very eafily from cuttings. There are feveral forts of it, of different colours, fome more forward and more fruitful than others. The flower confifts of five leaves, expanded in the form of a fmall rofe. The fruit is a treble capfula, faftened to a foot-ftalk : each capfula contains an oval nut, or fone, with a brittle, marbled, and fmooth fhell, the almond of which is of the fame figure, and oily. The bark of this fhrub is fo thick, and fo full of fap, that, being expofed to the air and fun, it is feveral months before it becomes quite dry. It is very common to fee bits quite out of the ground, which neverthelefs fhoot out buds. They generally put up the caffava-roots within a year, or thereabout, after planting; at the foot of evcry fhrub are found feveral roots, of a flefhy fubftance, without any fenfible fibres: they are more or lefs thick, according to the nature of the plant, and the goodnefs of the foil. They wafh thefe roots in a great deal of water, to clean them from earth; and, having feraped the peel off, as we do carrots, they rafp them with large copper rafps, almoft after the fame manner as quinces are rafped, to take the juice out. They afterwards put the rafpings into a bag made of coarfe cloth, or rufhes, and place them under a prefs, to fqueeze out all the moifture, which is hurtful to animals, and even poifonous. They then take it out of the bags, and fift it through a fieve, made after
the manner of the favages, and drefs it two ways to make: the caffava-bread, or four of manihot.
Firit, when they would make caffiva-bread, they fpread fome ot this fifted flour, or meal, upon an iron placed over a clear fire, and, fqueczing it with the flat of the hand, they make a large cake of it, about $\frac{1}{3}$ of an inch thick, by 20 or 24 inches diameter; and, when it is baked on one fide, they turn it on the other; and, if they would keep it for fome time, they dry it afterwards in the fuh.
Secondly, when they would make whit they call caffava-meal or flour, they put it, being rafped, prefied, and fifted, as before, into a large copper pan, with a flat bottom, of four feet diameter, and five or fix inches deep, mounted on a furnace of brick-work. They ftir it continually with a worden pecl, that it may not fick to the pan, and be equall, baked, This flour is pretty much like bread coarfely crumbled, and will keep a long time in a dry place. The favages make ns flour of manihot; they eat only caflava cakes, which they bake every day, becaufe, when it is quite hot, it is much more delicate and pleafant to the tadte than when it is cold.
When the caffava-juice is left to featle in a velie, there falls to the bottom of it a fecula, or fediment, which hey call moullache, or mucha ho, in Spanifh, as if you fhould fay, the child of manihot; this they put to dry in the fun. It is as white as fnow, and they make pretty good cakes of it, which are called crack.inss.
The landreffes ufe this fecula inftead of farch, to frarch linneri with; and fome inhabitants of America mix one third of it with two thirds of wheat-lour, and make bread of it, which is very white, and very well tafted. Hintuire nit. du cacao \& du fucre, and Obfervations critique d'un bolanifte habitant des ifles occidentales de l'Amerique, fur les plantes decrites par le P. Labat dans fon voyage aux iles, inferted in the Mem. de Treyoux for the year $1730^{\circ}$, p 132.
CASSIA, a phyfical'druy, which purges gently, and is communly prefcribed by the phyficians and apothecaries of France, and particula:ly by thofe of Paris.
There are four forts of caffia, which have all near the fame properties, and almoft the fame figure, they being all black or brown fiticks, of feveral fizes and lengths; bur thefe four forts will be found to be very different, if we compare together the divers trees which produce them.
Thele four forts are, caffia of the Levent, caffia of Eeypt, caffia of Brazil, and caffia of the Antilles.
I he caffia of the Levant is the fruit of a very high tree, whofe bark is of an ahh colour, and it's wood very folid, anci of a very clofe texture. Near the center, or middle of the tree, the wood is of an ebony black, and yellowifh towards the bark.
This caffia-tree thoots it's roots like the wilnut-tree, and has broad leaves. of a pretty fine green. It's flowers, or bloffoms, are yellowith, and produce a fruit, which is a kind of pod, long, round, mafly, of a red colour, inclining to black. When the pod is ripe, it is full of a black and fiweetifh pith, contained in imall cells of a ligneous fubfance; with this pith is moxed a very hard feed, in the form of inall white kernels, fhaped like a heart: thefe are the feeds of the tree: This caffia muft be chofen new, in thick heavy ticks, not hollow, of a tanned colour, whofe rind, when broke, is thin and white within, and full of a black and velvety pulp, of a fweet tafte, witbout-any four or mufty favour. This caffia comes by the way of Marfeilles.
The caffia of Egypt is very much like that of the Levant, with regard both to the tree and to the fruit; except that the tree grows taller, and it's leaves are much narrower, and that the fruit is flenderer, and has a more tender rind. It is brought to Marfeilles from Grand Cairo, and ought to be chofen like that of the Levant.
The caffia of Brazil is the thickeft of all; there is fome whofe pods are four or five inches round, or even more.
The tree which bears it has long and narrow leaves, a little roundifh at the end, and placed with a wonderful fymmerry on both fides of the flender branches from which they hang. The flower is a kind of rofe, confifting of four or five leaves; from the center of the flower arifes a piftil, with two or three threads. This caffia is not commonly to be met with in the fhops of the grocers and druggifts of Paris, there oeing few who have any of it but out of curiofity.
Laftly, the caffia of the Antilles, or of the French inlands in America, is that which is moft commonly fold and ufed at Paris, whither it is fent from thofe iflands.
The caffia-cree of thofe iflands grows eafily from cuttings; it comes up very quickly, and is a plentiful bearer, 1 's's wood is whitifh, pretty foft, but extremely tough: it's bark is grey, and very rough. This tree grows very till: its leases are long and narrow, and of a pale green : it bears yellow flowers, in large bunches, which are fucceeded by filiqua's, or pods, in which the caffia, which is, as lt were, the pith, or marrow of them, is contained. Thefe pods hang from the branches like bundles of candles, 12, 15 , or even 20 of them together: they are green before they are ripe. One may know, by their blacknefs, when it is time to gather them. As for their thicknefs and length, it depends on the age of
the tree, and the foil in which it is planted. The longer, thicker, and heavier the cafia-pods, or fticks, are, the more the cafia is valued.
The caffia tree is a native of thofe iflands; that is to fay, that it was not tranfplanted there from any other place. It's fruit was formerly one of the belt commodities of thofe inlands but, fince the number of thofe trees has been increafed to an excet:, that trade is very much decayed.
There is nothing to be cbierved with regard to the choice of this caffia, but what has been already faid of that of the Levant. We fiall add, however, that, if a perfon would have it from Rochelle, Nantes, or Dieppe, it is proper that he fhould give orders to his factors, or correfpondents in thofe towns, to chufe it new, without any mixture of what is ftale, and without having been buried, the better to preferve it ; and to have it placed lengthways and neatly in the boxes, or veffels, wherein it is to be tranfported, to prevent the fticks from breaking.
They give the name of caffia in fticks, or caffia fiftula, to that whofe pod is intire, and out of which the pitch has not yet been taken. For ufe, the pitch, or pulp, is taken out and fifted. This mult be had both of knowing and creditable apothecaries, or you mult have it fifted in your prefence; for it is very common to meet at moft of the apothecaries Chops with old caffia, fifted or boiled with fugar, in order to preferve it.
The greateft demand for caffa in France is at Paris, there being but little of that drug confumed in the provinces of that kingdom.
In the Levant, and in the Antilles, they preferve green caffia, and the flowers of the caffia-tree, which produce almoft the fame effects as the common caffia. Thefe purging, comfits muft be chofen frefh; it's fyrup muft be boiled up to a confiftency, and tafte neither acid nor mufty.
Cassia Lignea. Some authors underftand by that name the caffia in fticks, or the caffia fiftula. But the true caffia lignea is a kind of cinnamon, or bark, much refembling the true cinnamon, which, like that, grows no where but in the ifland of Ceylon. Diofcorides calls it caffia dura.
This bark fhould be thin, deep-coloured, of an agreeable, biting, and aromatic talte: but, how good foever it may be chofen, it comes nothing near true cinnamon; for which reafon there is no great demand for it by itfelf; nor would there, perhaps, be any, if the druggitts, being greedy after fordid or unjuft gain, did not mix it with true cinnamon; an impofition which deferves punifhment: for four pounds of caffia lignea do not coft fo much as one pound of true fine cinnamon. However, the former is ufed in the compofition of Venice treacle. See Cinnamon.
CASSIDONY, a mineral and precious fone, with veins of feveral colours: they make vafes of this ftone. Some imagine that thefe vafes, which the ancients called murrina, and which they valued very much, were made of caffidony: others pretend they were a kind of porcelain, or China ware. See Porceiain.
CASSONADE, or CASTONADE, cafk fugar, or fugar put into calks, or chefts, after the firf purification, but which has not been refined. It is fold either in powder or in lumps: the whiteft, and of which the lumps are the largeft, is the beft. Many imagine that it fweetens more than loaf fugar; but then it is certain that it yields a great deal more fcum. See Sugar.
CASTILLANE, or CASTELLAN, a gold coin, which is current in Spain. It is worth 14 rials and 16 deniers, or 3 livres and ro fols French money, upon the footing as it antiently was.
Castillane is alfo a weight ufed in Spain for weighing gold; it is the hundredth part of a pound Spanifh weight, which is one feventh per cent. lighter than the pound ${ }_{i}$ mark-weight of Paris.
Fifty caftillanes make a mark, 6 caftillanes and 2 tomins an ounce; 8 tomins make a caftillane; every tomin is of 12 grains, and the carat contains 4 grains.
The caftillane is allo in ufe at Bueynos Ayres, in the mines of Chili and Potofi, and throughout all Spanifh America.
What they commonly call a weight of gold in Spain, is always underftood of the caftillane. So that, when they fay, ten thoufand weight of gold, it is as much as if they faid, the weight of ten thoufand gold caftillanes.
CASTILLE. New and Old Caftille, and Eftramadura, in the kingdom of Spain, are parts of one province, rather than diftinct provinces. New Caftille is bounded on the north by Old Caftille, from which it is every way divided by mountains, which are only known by the rames of the countries through which they run. On the eaft it is parted from Eftramadura by another chain of them, called Guadalupe and La Sorene; on the fouth from Andalufia, by there called Sierra Morena, and by an imaginary line from Murcia; and on the eaft, by the river Segura, and mountains of Almanza and Requene from Valencia; and from Arragon, by thofe of Mayao, Daroka, and Malina. The length of thiskingdom, from fouth to north, is about 180 miles, and pretty near the fame in breadth, where it is widet, but in's figure is irregular in the latter.

The country being all inland, and furrounded with fuch mountains, which contract the fun's rays, as it were, into a focus, and at the fame time fupprefs the free paffages of the cooling fca-breezes, it's climate is confequently hotter in fummer, and colder in the winter, than thofe which lie along the fea-coafts, under the fame latitude. It is, neverthelefs, very healthy, and it's foil generally fertile, producing abundance of wheat and other grain, plenty of wine, oil, fruit, and herb; feeds a great quanticy of cattle, all forts of fowl, wild and tame; and is very well fupplied with variety of fifh, and green pafture, by the many rivers that ran through it.
This province, large as it is, and the principal of the whole kingdom, has, neverthelefs, but fix cities, one archbifhopric, and one bifhopric. But it is fufficiently compenfated, (I.) By it's famed metropolis Madrid, which, though no. city, is yet efteemed one of the fineft and moft opulent towns in the world; (2.) By the celebrated univerfity of Complutum, now Alcala de Henarez; and (3.) By the noble archbifhopric of Toledo, reckoned the moft opulent in the univerfe, after that of Rome, and now poffeffed by one of the royal family. To all which we may add, that New Caftille has likewife a confiderable number of fine, large, and rich towns, not inferior to any in Europe.
Madrid, the refidence of the kings of Spain, and capital of the whole monarchy, is feated in the very heart of Spain, on the banks of the little river Manzanares, and in a wholeforme and fertile foil.
Toledo is built on a high, fteep, and craggy rock, almoft inacceffible on all fides, and made much more fo by the courfe of the river Tagus, now Tajo, which encompaffes is almoft round.
The plain about it is fpacious, fertile, and delightful, and fo well watered by the Tagus, one of the moft confiderable rivers in Spain, that it produces corn, wine, oil, fruits, and every thing that can be defired either for conveniency or delight. The air here is particularly ferene, clear, and healthy ; on which account, and the extraordinary plenty, variety, and cheapnefs of provifions, which fell much cheaper than in any inland market of Spain, here refide many noble families, befides gentry, learned and religious perfons, ftudents, \&c. a much greater number of merchants, tradefmen, and artificers, efpecially in the filk and woollen manufactures; which two branches alone are faid to have employed near 10,000 hands.
Cuanca, Cuanza, is fituate in the mountainous part of New Caftille, called La Sierra, on the eaftern fide of it. It ftands on a hill, difficult of accefs, on the high road between Madrid and Valentia. It is watered on one fide by the Xucar, on the other by the Huecar; fo that the plain abounds with fine gardens, orchards, and pafture ground. The Tad gus, Xucar, Cabrial, and Turio rivers, running acrofs this territory, fertilize the land, and make fruitful every thing that life and luxury can defire.
Guadalaxara is the capital city of a territory called AlCarria, feated on the banks of the river Henarez. It has handfome ftreets and ftately houfes, delicate fprings and fountains, curious gardens and orchards, and plenty of provifions of all forts. It is about 30 miles to the north-eaft of Madrid, and accounted an healthy and delightful fituation.
Huet a-Guela is fituate in a pleafant plain, by which zuns the fine brook Cada, which bubbles out of the ground at a fmall diftance, and yet is ftrong enough to turn 17 corn and feveral fulling mills. The territory about it is large, fertile, and delightful, and produces, befides all neceffaries for life, a very confiderable quantity of faffron annually. It itands weft-fouth-weft from Madrid about 60 miles, and fomewhat more from Toledo weft-north-weft.
Cividad Real lies in a deep bottom, that, for want of a current to carry off the waters, which come pouring down the adjacent hills, after a violent rain, it is in continual danger of being overflowed. Notwithftanding the badnefs of it's fituation, yet the city is very populous, and carries on feveral manufactures, and is particularly famed for making of gloves. It no ways confifts with a work of this kind, to enumerate all the other towns in this province, that are no way confiderable for their trade or manufactures. - On this province, therefore, I fhall only make the following

## Remarks.

In Madrid has been fet up a manufacture of tiffues, luteftrings, and other filks, no lefs curious in the workmanfhip, than in the colours and mixtures, in imitation of the fabrics of Lyons in France; and this manufacture has produced fuch as the late king himfelf was not ahamed to wear.
This fuccefsful eftablifhment in Spain has been owing to workmen, and a famous dyer from the city of Lyons, procared by his late majefty, at the charge of his own royal revenue; and to the encouragement of a houre and fupplies of money, which he ordered to be advanced in the infancy of the undertaking, giving alfo a monthly penfion of 15 doublons to the mafter-dyer, and 12 doublons to the head manufacturer.

Without

## C A S

Without the gates of Madrid has been raijed alfo a fabric of prime tapeftry, in imitation of thofe of Flanders, by a mafter and workmen, whom his majefty procured from that country, at the charge of the treafury; and they continue in this important manufactory, working for the royal palaces, having the encouragement of houles, workfhops, and indulgences, which his majefty granted them.
And notwithltanding there be not yet in either of the fabrics a competent number of matters and workmen, for the confiderable confumption of this kingdom; yet the main difficulty has been furmounted, which is fettling and bringing the manufactures to the perfection already mentioned; for it is an eafy thing to enlarge, or add to what we have begun, and already eftablifhed upon a good footing.

- By this plain fact, fays a celebrated Spanilh author, in - the very face of the court, many perfons might ( be undeceived, who believe and propagate a notion (up-- on what grounds I know not) that in this kingdom we - cannot arrive at the perfection we have feen in thefe and - other manufactures, either on account of the delicacy of - the work, as if there was neithergenius to invent, nor hands ' to execute in Spain; or for colours, as if his majefty's pros vinces did not really fupply the principal and beft materials - for them ; or from our water, which they fuppofe not pro' per for them, even when both the declaration of foreign - artificers, and experience, fhews it to be very fit for dying - all forts of colours; and it is alfo certain, that, notwith - ftanding foreigners introduced thefe curious fabrics, many - Spaniards now join in them, and already make them in - equal perfection *.
- By thefe very meafures the great Colbert laid the foundation for the prefent flourifhing trade of France. See the article Britain. And, by thefe and the like maxims of policy, Spain is likely to raife her trade and navigation to wha pitch they defire. See the articles Biscay, Catalonia and Spain. Do we not fee that Spain is daily drawing away ingenious artificers from various parts of Europe, a well as Great-Britain ? Wherefore, is it not the intereft of thefe kingdoms to give all fitting encouragement to ingenious artificers and mechanics, to keep them at home, to prevent their lofs from impoverifhing our own nation, and enriching our rivals, by their commerce and navioation? See the articles Artificers, Manufactures, MechaNics and fuch other heads we from thofe fhall refer to.
< The grand fabric of fine cloths at Guadalaxara is wholly - owing to the vigilance and protection of his majefty, - though there has not been yet, in the management of it, < the good ceconomy, which is requifite, and has been di-- rected by his majefty's orders. But one great.point has been < obtained, that many of the good workmen employed in thefe < manufactures are Spaniards, and fome, who have been - bred up in them, have difperfed into other parts of the king-- dom, which is the principal advantage refulting from the - arrival and introduction of foreign mafters and workmen; ' therefore no frruple ought to be made of bearing the ex'pence of their journcy, and their frift fettlement.' [BriTons! permit me to do myfelf the honour earneftly to recommend to you to cherifh and carefs your ingenious Artificers, your Mechanics, your Manufacturers, that no inducements may prevail with thefe moft ufeful fubjects of the three kingdoms to abandon their native country, to inrich others, and ruin their own!]
* And it well deferves our notice (continues this wife Spa-- niard) that it has been found by experience in Guadalaxara, ' and other parts of Spain, that the Spanifh women, and even *the very young girls, fpin wool better and quicker than the \& miftrefles of foreign families that inftructed them, and - were brought over for that purpofe.
- By means of due fupplies and encouragement from his - majefty to Don Jofeph de Aguada, knipht of the order of - Calatrava, for the fabric of cloths in Valdemero, the Spa' niards have alfo gained the point of manufacturing them ' in that town, as fine as thofe of England, and of good * colours and mixtures; as is manifert from the approbation - they have received from his majefty, who has worn them 'himfelf upon feveral occafions*.
-This again is following the example of Lewis the XIVth of France, who, by the very fame means enabled his fubjects, firft, to fupply his oun kingdom with the woollen manufatture, and afterwards encouraged them to fupplant England at foreign markets. 'Tis certain, from this policy of the court of Spain, that we muit lofe the greatert part of the trade of both Old and New Spain. Does not this merit the conideration of the aidom of the nation?

This is but a fight fketch of what has been done in Spain, in regardito their trading interefts.- Hear what this noble Spaniad further urges, and which is now duly attended to af the court of Spain :-_ ' It is out of difpute, fays he, - upon another occafion, that the commerce, we have many - years carried on with other natione, has been very injurious Vol. I.
' to the Spanifl monarchy; and the caufe, whence our da' mage has arifen in the fame commerce, has been pointed ' out. So that it will be eafy to conccive, that, in order to - promote our own intereft, and polfefs the great and happy - confequences, which we aim at, and we are invited to, ' and enabled to obtain from the great plenty, and fuperior 'quality, of our materials and fruits, we ought to labour, ' with zeal and addrefs, in all thefe meafures, that can avail ' towards felling more commodities and fruits to foreigners, - than we buy of them, for here lies all the fecret, good con-- duct, and advantage of trade [fee our article Britain, or -Great-Britain] or at leaft, that we be upon a par ' in the barter of commodities, which might be even fuffici' ent for the conflitution of this kingdom. For', by virtue of ' it, there would be detained, in Spain, the greateft part of ' the wealth that comes from the Indies, and thefe kingdoms - be conftantly rich and powerful. Nor ought we ever to ' lofe fight of this maxim, that the vaft treafues, which ar' rive at Cadiz from thefe parts, contribute nothing to our ' relief or advantage, but will rather be turned againft this ' monarchy, fo long as they pafs, directly from the fame port, ' to the rivals of the crown, \&c.'
Old Castille, a kingdom in Spain, borders all the way on the fouth to New Caftille, from which it is divided by a ridge of mountains, which change their names according to the places they are in. By that chain which is called Sierra de Tablada, and by thofe of Pica and Banos, from Eftramadura on the weft; and by thofe of Avila and Pernia, with the fmall rivers of Carrian, Pifuergia, and Heban, from Leon on the north-weit. It is parted again on the north from Alturias and Bifcay, by another ridge of hills branching out from the Pyrenees, only in the center; between thefe two provinces, it has a narrow fip of land, which reaches quite to the bay of Bifcay, whereon it has feveral fea-ports.
The climate here differs fomewhat from that of New Caftille, by reafon of the country being more mountainous, which makes the 'feveral parts of it vary, according to their fituation, the vallies being exceffive hot, the upper grounds proportionably cold and bleak; and others, according as the proximity of the hills fends down refrefhing gales, or caufes a greater reflection of the fun. Upon the whole, the foil is good in general, in fome fenfe or other, the plains yielding plenty of all forts of grain, fruit, wine, and other provifions; the fides of the hills good pafture for their numerous cattle, and their fummits timber for building and fuel. Some of thefe mountains are fo high, as to be covered with fnow at the top all the fummer, which is carried and fold to the towns to cool their wine, which is a ufual thing in Spain. The natives are, for the moft part, grave, fmart, witty, and polite, but ambitious afferters of the antiquity and nobility of their families. The gentry, in general, are more follicitous about thefe trifles, and the politenefs and purity of the Caftilian language, than they are to cultivate the noble arts of traffic; which would more effectually preferve the antiquity of their families, and delicacy of their manners and language, than what they prefer.
I fhall leave fuch delicacies to be elaborately reprefented by others of a different tafte; they don't fuit mine at prefent. Segovia is the chief city for commerce. It is fituate in a low valley, at the foot of a ridge of mountains, and encompafled on the north by the river Erefma, on the fouth by the brook Clamores, and the river Frio, which runs through the midft of it.
The city ftands on a noble eminence, is rich, populous, and opulent, thro' not only the great number of rich and noble families, who make their chief refidence there, but much more fo by the large commerce, manufactures, and other trades which are carried on here. Here are 25 corn-mills, 14 ful-ling-mills, various paper-mills, and three places on a fine river, made extremely convenient for cleanfing of their wool. The principal mint of Spain is fixed in this city, which, when it works, can coin 30,000 ducats per day. Here is alfo good printing-paper made, but the woollen manufacture is here the beft, and the moft confiderable in all Spain; for here is a vaft quantity of the fineft wool made from innumerable flocks, that are raifed in the neighbouring plains, and the cloth that is made here, is efteemed the beft in all the world, and in higheft requeft both at home and abroad.
Here are alfo fundry other manufactures and trades carried on with great induftry and fuccefs; and this city has this peculiar excellent regulation, that it fuffers no perfons to live a loofe and idle life; all muft work, if they will eat; and no perfons are here fuffered to beg.
Siguenza is likewife a noble and opulent city, is excellently well fituated, and ferilized by the river Henarez, which waters the verdant plains round about, fo that they abound with corn, wine, pafture, and all kinds of fruits, game, fowl, \&c. They have admirable mineral and medicinal frings, which are much reforted to.
There are four fea-port towns in this province on the bay of Bifcay, Laredo, St Andero, Caftro de Urdiales, St Vincents de la Barguera; which are well walled, and have good harbours for thips of fmall bulk, each under the govenment of
a Cor-
a Corregidor, who is alfo captain-general, which is a port of honour and profit.
CASTING, in foundery, is the running of a melted metal into a mould, prepared for that purpofe. Sce Foundery, Iros, and Lead.
CASTOREUM. The liquor contained in the little bags or purfes, at the bottom of the os pubis of the beaver or caftor, and not in it's tefficles, as the ancients imagined, fince it is found in the females as well as in the males. See Beaver. The lsquor contained in the two upper bags is a refinous, flabby fubftance, adhering to the fmall fibres of the bags, of a greyifh colour without, yellowifh within, inflammable, of a ftrong, penetrating, and difagreeable fcent; this is the true caftorcum: being expofed to the air, it hardens by dcgrees in a month's time, and becomes browner, brittle, and friable: but, if you would have it become hard fooner, you need only hang the bags, in which it is contained, in the chimney, and leave them there a few days, and they will foon dry, and you may eaflly know, by hardling the bags, whether the fubftance in them is become folid and dry.
The two lower bags are placed, the one on the right, and the other on the left fide of the anus. They contain an unctuous and adipous fubftance, which looks like honey; it is of a pale yellow colour, of a ftrong foetid fmell, like that of the caftoreum, but fomething weaker and fainter: this liquor condenfes, as it grows ftale, and becomes of the confiftency and colour of tallow. When it is frefh, the phyficians afcıbe wonderful properties to it; but, when old, it grows black, and turnis into a ftrong poifon.
One meets at the merchants with bags of caftoreum, fome larger, fome fmaller, according as the beaver, from which they were taken, was of a greater or leffer magnitude. The beft come from Dantzic ; the caftoreum of Canada is much inferior.
The bags muft be chofen large, heavy, of a brown colour, of a ftrung penetrating fmell, full of hard, brittle, friable matter, yeilowifh, brown, interlaced with very thin membranes, and of a harp tafte. Care muft be taken that it has not been mixed with honey, or any other drugs, to fwell the bags, which may be known by fqueezing them; thofe which have been adulterated being fofilh, and yielding a liquid and ftinking honey: but the natural ones are heavy and hard, of a penetrating fmell, and full of fmall filaments or threads. Befides the Venice treacle and mithridate, in which caftoreum is ufed, it is alfo employed in feveral hyfteric and cephalic medicines. An oil is likewife drawn from it, which is called oil of caftor, or beaver; and, whilft it is in it's liquid unctuous ftate, it is ufed as an ointment for the cure of feveral diftempers. See Beaver.
CATALONIA, a principality in Old Spain, is bounded on the north by the Pyrenees, by which it is parted from the province of Rouffillon in France; on the weft by Arragon and a imall part of Valentia : from the firft of thefe it is parted by the rivers Nagnera and Maturana, and a ridge of hills, and from the latter by the river Genia. On the fouth and eaft it is wafhed by the Mediterranean, and hath many a convenient fea-port along thefe fhores.
The inland part is a mixture of plains and mountains; that part next to France is the moft mountainous, but further in it abounds with delightful and fpacious plains. The climate, which reaches from 41 to 43 degrees of north latitude,- and from one degree to 3.20 min . eaft longitude, is therefore neither fo hot as Andalufia, nor fo cold as Afturia, and the north part of Spain; being moreover fheltered on the north by the Pyrenees, and on the eaft by the fea. This temperature, joined to the many ftreams and rivers with which the country abounds, makes it exceeding fertile and delightful. It's product, which is here in great plenty, is excellent wheat, rich wine, fweet oil, exquifite honey, delicious fruits of moft kinds, abundance of cattle, fwarms of fowls, wild and tame, vaft quantities of deer, hares, rabbets, and all other game; good hemp, fine flax, faffron, variety of corn, and other grain, herbs, \&c. a confiderable quantity of filk, fine wool, filh of all forts, and in very great plenty; quarries of marble, alabafter, 'and jafper-ftone, coral from the fea, falt, and many other commodities.
Barcelona is the capital city of this province, and is inferior to few in Europe, that are not the courts of princes. It is delightfully feated on the Mediterranean coaft, a little below the gulph of Lyons in France, and opens to the fea in a beautiful femicircle, which, together with it's eminence and caftle, and the beauty of it's fumptuous edifices, afford an engaging profpect, to the fhipping, efpecially as it ftands between two confiderable rivers, the Lobregal and Befes.
The coaft it fands upon is a good fafe road; and the port, though rather too fmall, hath yet rendered it a place of great trade, efpecially when Indian commodities were brought from Turkey and Egypt, through the Mediterranean. It's territory round it is ftored with all neceffaries for fuftenance and delight, as wheat, and pther kinds of grain; oil, rich wines, fruit of all forts, cattle, fowl, honey, wood, and game of moft forts.
Ierragona, the fecond city in this province, ftands commodioufy lituate near the coaft of the Mediterranean, on
the brink of a pleafant hill, at the foot of which is a fafe and convenient harbour for fmall thips, between the river Gaya and Francoli.
The climate here is fo temperate, and the foil of fo rich and warm a quality, that the trees bear fruit and bloflom in the coldeft months. The country here in general is adorned with delightful gardens, orchards, and country-feats; the fields abound with corn, wine, oil, flax, hemp, and fruits of moft kinds in very great perfection; with all kinds of fowl, and game, and fift for the fea. It ftands above 50 miles fouthweft of Barcelona, and about 45 eaft from Tortofa.
Tortosa is fituate on the banks of the Ebro, not far from the fea, and has a good bay formed by that river, that comes up almof to the walls of this city. It's fituation is about 12 miles from the frontiers of the kingdom of Valentia, in the midft of a pleafant wood, and has a ftately bridge over the river.
Without this city is a beautiful plain 18 miles long, and 6 in breadth, watered with the Ebro, and producing corn, wine, oil, fruit, timber for Chipping, great quantity of palm-trees, with cattle, fowl, game, and other neceffaries, befide fill in abundance, which is here made into farcenets. Here is no want of curious fprings, which fertilize the plain, and amply fupply the city with water, befides quarries of marble and jafper, and falt-pits.
Lerida, another antient city on the borders of this province next to Arragon, fituate on the banks of the siver Segre, which falls into the Ebro, a few miles below it. The country here is pleafant and fertile, abounding with all kinds of provifions, and the city is famed, among other things, for making excellent gloves.
URGEL lies between two high mountains, not far from the Pyreneès, and on the banks of the Segre, about 90 miles diftant from north-weft Barcelona. It's territory is furprizingly fruitful, yielding an hundred fold of corn and other grain, with extraordinary quantities of almonds and other fine fruit, and feeds multitudes of cattle.
Girona lies along the fide of a hill, in the eaft-part of this province, about 21 miles from the fea, and about 60 northeaft from Barcelona. The river Ter wafhes the walls of this city. It's productions around are much the fame with Urgel.
Vicque, a fmall city, but pleafantly fituated in a kind of peninfola, formed by the rivers Ter and Naguerra, which almoof encompals it. It ftands near 36 miles north of Barcelona, and adjacent to a fertile and delightful plain. About 6 miles from the city is the mountain Moffen, where are found excellent white and purple amethyfts and topazes. They are dug out of a fat, reddifh, or yellowih earth, and the beft fort of thefe laft are thofe of the deepeft violet. In fome neighbouring mountains are likewife found gold, emeralds, and other curious ftones, but in fo fmall quantity, that they fearce anfwer the end of fearching for. On the fhore of the late Silles, near this city, arealfo found fome good topazes.
Solsona ftands on the river Cardona, in the heart of this province, at the foot of a mountain, and in a pleafant plain, about 60 miles north-weft from Barcelona, and near the like diftance from Terragon. In regard to objects of commerce, it affords little elfe but vaft quantities of dried peaches, which are packed away hence into feveral parts.
Balaguer is pleafantly fituate on the river Segre. Between this place and Lerida is a fmall town named Terrofio, whofe fituation, whether from the ferenity of the air, or any peculiar virtue from it's foil, is reckoned fo extraordinarily falubrious, aś even to curemad folks, though ever fo raging and furious.
Cardona ftands about 60 miles diftant from Barcelona, near which city is a mountain of falt, which yields an annual revenue to the duke proprietor of 30,000 piects of eight. The falt is tranfparent, and, when powdered, is exceeding white. Thefe are the cities of note in this Spanifh province, which have any productions, or commodious fituation for commerce.

## REMARKS.

Mere narratives alone of the trade of this, or the other part of the world, not affording that idea of the true fenfe and firit of peculiar courts, in regard to their commercial views and intentions, the reader willobferve, that, wherever a fuitable occafion naturally offers, I have endeavoured to fuggeft not only fomething tending towards the national interefts, but what may prove of perfonal benefit and advantage to practical traders in general.
The fyftem of the Court of Spain having taken a new turn of late years, in relation to the commeree and navigation of that kingdom; and which muft foon very fenfibly affect all Britifh mercbants and traders, who have dealings, in any fhape, with that nation, and alfo importantly affeet the trading intereft of Great-Britain in general ; 1 judge it no way repugnant to the nature of this work, to apprize the public of what is doing in foreign countries, with refpect to trade.

And whatever I fhall occafionally reprefent, or urge upon that head, I hope will be candidly judged of ; as being intended in a national, and no other light. When fatts are ingenuoully ftated, and reafoning deducible therefrom modeftly and difpaffionately inforced, I am willing to flatter myfelf, that no man, in the three kingdoms, can have reafon to be difgufted. If I am miftaken in point of judgment, in giving my humble fentiments upon a great variety of very delicate and complicated points of a national nature, I perfuade myfelf, that I fhall meet with candour from the fenfible and honeft part of mankind, who always make due allowances, when they are convinced of the uprightnefs of the intention.
It is as little in my power, as in my difpofition, to infinuate any thing that might have the leaft tendency to embroll the public affairs. It is every man's duty to do otherwife, who is a friend to his country and the conftitution. It becomes every individual, who profefles thefe principles, and has ever given teftimony thereof, to contribute all in his power, not to leffen, but to add to the weight and dignity of his country, when the is injured and oppreffed by other nations. And, if this fhould ever be the cafe of thefe kingdoms, long experience hath proved, that drawing the fword; upon every fuch occafion, is not the way to redrefs grievances. This can only be done, to good purpofe, by the peaceable arts of commerce; for it is this, and this only, that can put us above infults; it is not plunging ourfelves into wars, and increafing our incumbrances, that can right us, if we may judge from paft experience, but we may always right ourfelves, by means of the fipitit of commerce wifely conducted.
Every nation hath an equal right with ourfelves to make all advantage, by trade, of their lawful territory and natural fituation. This is no juft caufe for anger; but it ought to infpire emulation.
The Spaniards are about to cultivate thofe arts of trade, which they have long neglected, and been reproached and ftigmatized on that account. The confequence of which muft be, that they will take lefs of the Britifh produce and manufacture, as well as lefs of thofe of other nations. This will prove a national lofs, but not irretrievable. For, if we take lefs of their product, in proportion, as they diminifh the importation of our commodities, will not this prevent any national injury? And if our traders cannot gain fo much by Spanifh products, when we take lefs, they muft avail themfelves by other branches of traffic. If the ftriking out of any new and important branches of commerce requires public encouragement at their commencement, let traders ftate their wants; let them properiy and dutifuily apply to the great reprefentative of the nation, and certainly they will not be denied what is nationally, though they may, what is perfonally, interefting. Let the arts of commerce, thofe national, thofe truly important arts, be but as much cultivated in thefe kingdoms, as the arts of wrangling, party, civil and religious frife have' been; and I could almoft prefume to prophefy, that, if we lofe one branch of trade, we may gain another equivalent: and I hope, nay, I fhall zealouly endeavour, that this work may prove inftrumental to bring the ftudies of commerce' into more general efteem in the nation than hitherto they may have been; the confequence whereof, I may reafonably hope, will be productive of variety of new bránches of trade, as well as tend to improve many of the old. Under the head of Biscay, I have juft opened the fcene of Spanifh policy, that is foon likely to difplay iffelf. What that nation is about to do in Catalonia, as well as other provinces, let the Patriot-Spaniard * fpeak for himfelf.

- Don Geronymo de Uztariz.
- I am fatisfied, fays he, that there is now in the kingdom ' of Valencia above 2000 looms of filk and wool; in the ' principality of Catalonia, above 500 ; and, in the king' 'dam of Granada, 1000, including both forts; and there - are alfo in other provinces manufactures of filk, though not 'very confiderable; and, in almoft all of them, no contemp' tible number of looms for the feveral fabrics of wool, fuch - as the middling and coarfe cloths, bays, ferges, camblets, *droguets, \&c. One may, I think, without rahnefs, fuppofe ' the filken and woollen iooms, that are now in Spain, to be ' 10,000 . Now thefe, with the 60,000 new ones that have 6 been imagined to be fet up, would amount to 70,000 ; and ' one may reckon 14,000, or about $\frac{1}{5}$ part of them to be - filk looms: and the remaining 56,000 of,fine, middling, ' and coarfe wool, of which laft there is no lefs con-- fumption.
'I have already remarked, that in every filk and woollen ' loom, taken together, there might be yearly manufactured ' to the value of 700 dollars, including the expence of mate${ }^{6}$ ' rials and dyeing goods. In this eftimate I am moderate, as ' well to ftand clear of every thing that might feem forced, ' either in the facts, or the reafoning. But, as precifenefs is ' neceflary in calculations, I fhall here produce that made, a ' few years ago, by the prefident and infpectors of the filk ' manufacture in the city of Seville, which is as follows:
- That, in every loom of entire tiffue, there is yearly ' wrought up 100 weight of filk, and 220 ounces of leaf fil-
- ver or gold, more or lefs. Thefe manufa Tures yield 150 - yards, which, at the moderate price of 3 duablons, amounts - to 450 doublons.
© In each luom for midding tilite, 150 pounds of fik, and ' 159 ounces of metal yeaily, and thefe wrought up yearly ' 190 yards, which, at the rate of 2 doublons a yard, amount - to 380 doublons
- In every loom for brocades, 200 pounds of filk, and be' tween 70 and 80 ounces of metal, which are manufagtured ' annually into 300 yards, and, at a doublou and a half per ${ }^{6}$ yard, make 450 doublons.
' In a loom of double taffeta, there is ufed 280 pounds of 'filk annually, which wrought up produce 1800 yards - and, at the rate of to reals de vellon, will amount to $3 n 0$ 6 doublons.
' In every loom of fingle taffeta, is expended 200 pounds of ' filk yearly, with fmall difference, and they yicld above - 3000 yards, which at the sate of 6 reals de vellon, are ' worth 300 doublons.
' ln every loom of plain or friped fattins, there is ufed yearly ' 200 pounds of filk; which woven yield 1200 yards, and * at the rate of 16 reals a yard, one whth another, the whole ' amount will be 300 doublons.
' In every loom of damafk, there is yearly expended 280 ' pounds, which wrought up produce 1200 yards, and at 'the rate of 29 reals, one with another, are worth 400 - doublons.
- Though fome perfons, continues our writer, may be a - little jealous of thefe calculations; and willing to reduce 6 them even $\frac{7}{6}$ or $\frac{1}{5}$, it muft be acknowledged, that after this - reduction, there will be manufalured annually in every ' loom, one with another, to the value of a 1000 dollars, in-- cluding the price of the materials. So that in the 14,000 ' looms appropriated to frytk, out of the 70,000 for this com' modity and wool, there would be manufachured to the ' amount of' 14 millions of dollars; not forgetting that there - is a fluctuation in the prices from year to year, according ' to the quantity of filk and fruits, and from uther accidents, - that ufually raife and fall the markets.
'From the information of people of experience, and to be - relied upon, we find that in every woollen-loom, one with s another, allowing.for the difference between fine, middling, ' and coarfe cloths, there can be yearly manufactured to the - value of above joo dollars, including the materials. Hence ' there would be annually wrought up in the above 56,000 - woollen looms, to the amount of 39 millions, which, added 'to the 14 millions produced by the filk manufactures, would - make 53 millions of dollars.
' It may be obferved, indeed, that all pofitions, founded on - principles that are not quite determinate, are liable to fome ' uncertainty : however, they do not fail of affording light, ' by their approaches to truth ; efpecially, when fome of the - principles whereon they are founded are certain.
- From what I fhall offer ellewhere upon the number of in' habitants in Spain, it will be found that it contains near - $7,500,000$ fouls; and though there be many of thefe that ' yearly expend in manufactures of filk and wool, or of both - forts, above 100 ctowns, without any regard to linnen, it c is alfo known, that the greateft part of the inhabitants of - both fexes are found to be dreffed in middling and coarle - cloths, and that every fuit lats them about two years. ؛ And when we confider that the country people, and mec cbanics, take up for a fuit fix yards of ordnary cloth ' (which is narrower than the fine) this, at 15 reals a yard, - will amount to fix dollars, and that two dollars more will - be neceffary for linings, the whole commodity will coft eight - dollars yearly ; and, upon fuppofition a fuit of cloaths fhall - wear, two years, there will be expended by every individual - four dollars a year. But, as it is alfo certain that many of ' thefe wear a cloak and a cap, the annual expence of every - one of this clafs may be flated, in thefe commodities, at 6 five dollars.
' Nor fhould it be unobfervel, that younger boys and girls, s of the lower clafs, will not expend, in cloaths, four dollars ' yearly; the fame, alfo, will happen to a great number of - women, exclufive alfo of linnen; but, in confideration there ' are many of both fexes that yearly expend in commodities of ' filk and wool from 20 to 100 dollars, and more, I am per-- fuaded that, for every one of the $7,500,000$, one with an-- other, we may fairly calculate their annual expence, in both c commodities, at four dollars and a half, which, fur the ' whole, will amount to fomething above $33,000,000$ of 'dollars: and, if we deduct this fum from the $53,000,000$, - the fuppofed value of the fabrics manufactured in the above © 70,000 looms, there would remain to us, of both commo-- dities, the value of $20,000,000$. And, by means of this ' overplus, one may, I think, furnifh his majefty's Indies - both with the filks they are in want of, and alfo the fine - cloths that go thither from Europe, fince they have no oc'cafion for ordinary cloths, by having them in plenty from ' their own fabrics. Nay, 1 am apt to believe, that, after 6 the neceflary fupplies from Spain and the Indies, there will - fill remain confiderable quantities of the above filks and - fine cloths, for exportation to fevcral kingdoms and coun-

## C A T

- tries in Europe, efpecially thofe of the north, that yield no 6 filk, and but very little of fine wool.
- By this, and other wife provifions, we fhould accomplifh - the grand point of felling others more commodities and - fruits than we buy. 'For, even by the fingle provifion of - fetring up the 60,000 looms above mentioned, there would ' be, after fupplying the kingdom of Spain, and the Indies, c fo many goods left, as would fuffice, and even be more than ‘ a ballance for the fpices, linnens, bacalao*, and other cured - fifh, we are obliged to have from foreign parts, for our faft-- days; though the laft article from abroad might be con' fiderably reduced, by taking fuch fleps'as fhall be propofed c in another place $\dagger$.
* See the articles Biscay and Spain.
+ Thefe we fhall occafionally fhew, with humble expedients propofed, to guard againft any injury that this nation may fuftain thereby.
- After the fuppofed exportation of our filks and woollen clöths, - we fhould ftill have the benefit of our wines, brandies, oils, ' raifins, and other fruits, that are more than we confume - ourfelves, and go abroad in confiderable quantities, befides ' a great many fmall wares, that might be made of the ex' cellent iron of Bifcay, and other provinces, both for home ${ }^{\prime}$ and foreign confumption; and great quantities of chryftal - and foap, that might be manufactured in thefe kingdoms, ' by means of the fofa and barilla *, which they abound - with, and are acknowledged to be of fuch fuperior quality, - that thefe two ingredients are eagerly defired by all nations - in Europe, and in preference to all other fought after, and ' exported from Spain.
* A new manufacture of Caftille foap, according to the real Spanifh manner of making it, forne of the ingredients whereof are faid to be fola and barrilla, is lately fet up in this kingdom, and is faid to meet with extraordinary encouragement. This, I have been well informed, has been introduced into the nation, by a late Turky captain of a merchantmar, who many years ufed that trade with great reputation. See SoAp.
- Moreover, the quickfilver, copper, tin, and other profit© able metals, which his majefty's dominions yield in great ' plenty, merit our confideration; as alfo, that in many 6 parts the foil is peculiarly adapted to the growth of flax s and bemp, materials very advantageous, and will furnifh - us with rigging and fail-cloth, both for our own, and the - fupply of other countries.
- By thefe natural means, and which the conftitution of thefe 6 kingdoms renders very practicable, there would not only © be prevented the extraction of many millions of gold and - filver, but there might come in from foreign countries a - confiderable quantity of money.
- But, fhould we fucceed no farther than to detain all, or a - moiety of the treafures that come from the Indies, and have ' hitherto gone directly to other kingdoms, Spain ferving them - only for a paffport, we thould then have that plenty, increafe - of people, ftrength, and other advantages, we are now defti-- tute of, by the defertion and decay of the manufactures above' mentioned, and which it is in our power to revive, enlarge, ' and improve, by granting fome indulgences, and making 6 a judicious reform of the duties upon expoits and imports. - For, though the commodities now exported from Spain are - few, there would then go abroad large quantities; and, - were they to pay no higher duty than $2 \frac{\pi}{2}$ per cent. of their - value, the cuftoms would yield more than at prefent. Nay, © as the country would be rendered more populous by means ' of the manufactures, there would enfue an increafe of the ' revenue, arifing out of the more frequent fales and pur' chafes, and a large confumption of commodities and fruits: ' and, what is a natural confequence, a better cultivation ' and produce from our lands, and an improvement in all ' mechanic arst. To all which ought to be added, as a fure ' and fettled principle, that though the treafury fhould not - be fo vifibly augmented, and go hand in hand with the - wealth of the fubjects, it would not be poffible, under the - obligation and tender regard we have for the king, to leave - him poor, while we ourfelves are rich.
- Moreover, let us always recollect, when we think of this ' effential point, of re-eftablifhing and enlarging our manu-- factories, that we ought not to be difcouraged by the lan'guage of certain low-fpirited perfons, that believe there is ' not fufficient number of people in Spain to execute this " grand project ; for it hall be demonitrated, that, by means ' of thofe that now are here, and fuch as commerce will al' ways bring along with it, there will be a fufficient number ' for this, and other provifions for the relief of the kingdom.' This is a fketch only of what is about to be done in Spain; and ought it not to roufe and alarm us? What other extraordinary meafures that nation is meditating, which may prove detrimental to the Britifh trade, fhall appear in it's proper place.
CATERGI, is the name of the public carriers in the Grand Signior's dominions. There is a remarkable particular to be obferved with regard to them, which is, that whereas in

France, and every-where elfe, the merchants, or travellers, give earneft to thofe who are to carry them, their baggage, or merchandizes; in Turky it is the carrier who gives earneft to the merchant, and others, as a fecurity that he will certainly carry their goods, or not fet out without them.
CATHNESSHIRE, in Scotiand, is alfo called the fhire of WEIK. It is the moft northern of all Scotland, has the ocean on the eatt ; Strathnaver and Sutherland, from which it is divided by Mount Orde, and a range of hills as far as Knocklin, and by the river Hallewdale, on the fouth and fouth-weft; and on the north it is divided from the Orkney Inands by Pentland Frith. It comprehends all the country beyond the river Neffe, and the loch into which it fiows; and all the tract to the eaft of the Mountain Orde was anciently called Cateyneffe, and afterwards Cath-neffe. It is 35 miles from north to fouth, and about 20 in breadth: Templeman, who extends it about fix miles more in both, gives it an area of 690 fquare miles. Here are a few woods of birch, but they are little more than coppices.
In the foreft of Moravins and Berridale, is great plenty of red-deer and roe-bucks, and they have good ftore of cows, fheep, goats, and wild fowl. At Dennet there is lead, at Old Urke copper, and iron ore at feveral places ; but grazing and fifhing are the chief fupports of the inhabitants.
The fhire is much indented by the many windings and breakings of the thore. The whole coaft, except the bays, confifts of high rocks, and many promontories at the weft end of the fhire, pointing north to the opening of Pentland frith.
The fea here is very dangerous, even in calm weather, except at ftated times, by reafon of the many vortexes, owing to the repulfe of the tides from the fhore, and their paflage between the Orkney Ifles. The inland country is mountainous, but, towards the coaft, it is low, and produces corn enough both for the natives and for exportation; but, the foil being very moift and clayifh, their harveft is late, and the corn not fo good as that of Rofs and Sutherland. Their fring is turf, for want of coal, yet all other neceffaries are cheap. There is plenty of parture in the fields and vallies, with good fowling and hunting in the mountains, and fifhing in their tivers and lakes, as well as the fea.
The fhire is alfo populous, and has many fmall towns' and villages. Provifions, efpecially corn, cattle, and fifh, are io plentiful here, that it is faid to be the cheapeft market in the world, and that a man may live better upon 501 . a year in this country, than he can in the fouth upon 2001 .
The people here are fo induftrious, that, in fome places, particularly from Weik to Dumbeth, which is about 12 miles, where there is no harbour, or bay, but one continued tract of rugged hard rocks, yet they have forced feveral harbours by art, and have made various laborious conveniencies, for the purpofe of falting and drying fifh for the market, which turn to as good account as their lands in general do.
Weik, is a royal burgh, and market town. It ftands on the eaf fide of the country, at the mouth of Murray Frith, where it falls into the German Ocean, and has a tide-harbour for fmall veffels; but it is not much frequented, as not being fo fafe as another about a mile to the north eaft.
Thurso, which lies oppofite to it, on the weft fide of the Thire, is a fecure place for fhips of any burden to ride in. A fmall river runs by the eaft fide of it, called the Water of Thurfo, in which there is a good finery for falmon, which keep in this river all the year long; fo that they are to be had even in the winter-feafon, by breaking the ice. They take feveral horfe-loads at a time, either by going into the water with nets, or by the contrivance of creels; with barred doors, carried from one fide of the water to the other, and fo made, as to let in the fifh, and there to keep them. At one draught of the net they fometimes take above 300 fine falmon.
CATTLE, a collective word, which fignifies the four-footed animals, which ferve either for tilling the ground, or for food to men. They are diftinguifhed into large or black cattle, and fmall cattle: of the former are horfes, bulls, oxen, cows, and even calves and heifers; amongt the latter are rams, ewes, Sheep, lambs, goats, kids, \& zc .
Cattle are the chief ftock of a farm: they who deal in cattle are filed graziers.
$L_{A} w s$ of England in regard to cattle.
The keeping, feeding, and felling of cattle, being regulated in this nation by feveral acts of parliament, we fhall give here an abftract of thofe acts.
Stat. 3 and 4 Edw. VI. cap. 19. fect. i. No perfon thall buy any oxen, fteers, runts, kine, heifers, or calves, but only in open fair or market, and fhall not fell the fame again alive, at the market or fair where he bought the fame, upon pail of forfeiture of doable the value,
Sect. 2. Provided that it thall be lawful for all perfons to buy oxen, \&c. out of fair or market, for provifion of their houlehold, team, or dairy.
Sect. 3. No butcher fhall buy fat oxen, fteers, runts, kine, heifers, calves, or fheep, and fell the fame again alive, upon pain of forfeiture of every fuch ox, \&ic.
Sect. 4. Every butcher may buy fat oxen, feers, runts, kine, beifers, calves, and theep, out of fair or market, fo that fuch

## C A T

## C A V

butcher fell not the fame again alive. The one moiety of all which furfeitures fhall be to the king, and the other moiety to him that will fue for the fame. This act, which was to endure to the end of the next parliament, was continued indefinitely by 3 Car. I. cap. 4. and 16 Car. I. cap. 4. Stat. 2 and 3 Phil. \&t Mar. cap. 3. fect. 2. Every perfon which thall keep or feed above fix-fcore fheep for the moft part of the year upon his feveral paftures, or farms apt for milch kine, and wherein no other perfon hath common, fhall yearly, for every three-fcore theer fheep, keep one milch cow, and thall rear up yearly for every fix-fcore theep one calf, upen pain of forfeiture for every month 20 s . for every cow fo nut kept, and twenty fhillings for every calf not reared.
Sect. 3. Every perfon which upon his feveral paftures fhall keep above 20 oxen, runts, fchrubs, fteers, heifers, or kine, hall, for every ro beafts, keep one milch-cow, and rear yearly, and keep for one whole year, one calf for every two milch-kine, upon the pains afore-rehearfed, except the calves die within the year: the one half of which forfeitures thall be to the king and queen, and the other half to the party that within one year after the offence will fue for the fame in the courts of record, or before the juftices of peace, at their general feffions.
Sect. 4. This act thall not bind any perfon to keep milchkine, nor to breed calves, for fuch theep, or other beafts, as he fhall keep to be fpent in his own houfe. This act to endure for feven years : but was made perpecual i 3 Eliz, cap. 15.

Stat. 7 Jac. I. cap. 8. fect. 2. The ftatute 2 and 3 Phil. and Mar. cap. 3. Thall extend to all grounds apt for mikh-kine, and not to be laid open to common at any time of the year. Stat. 18 Car. II. cap, 2. fect. 1. Importation of cattle is a public nufance, and fhall be fo adjudged; and if any great cattle, fheep, or fwine, or any beef, pork, or bacon (except for the neceflary provifion of hips, in whis his the fame fhall be brought, not expofing the (ame to fale) fhall be iuported, it thall be lawful for any conitable, tithingman, headborough, churchwardens, or overfeers of the poor, to feize and keep the fame eight and forty hours, in fome public place where fuch feizuse thall be made; within which time, if the owners, or any for them, fhall make it appear unto fome juftice of peace, by oath of two witneffes, that the fame were not imported from beyond the feas, the fame hall be delivered: but, in default of fuch proof, the fame to be forfeited, one half to the ufe of the poor of the parifh, the other half to his ufe that fhall feize the fame.
Sect. 3. Nothing in this act fhall hinder the importation of cattle from the Ine of Man, fo as the number of the faid cattle do not exceed 600 head yearly, and that they be of the breed of the Ine of Man, and be landed at the port of Chefter. Sect. 4. This act to continue feven years : made perpetual by 32 Car. II. cap. 2.
Stat. 20 Car. II. cap. 7. fect. 3. Any inhabitant of the liberties, parifhes, and places, where importation of cattle, beef, \&c. fhall be, may take the cattle and goods fo imported, and, atter feizure, thall deliver them to the conftable, tithingman, headborough, churchwardens, and overfeers of the poor, \&c. to be kept and difpofed in the manner in this act, and in the at 18 Car. II. cap. 2. mentioned
Sect. 4. If no feizure fhall be made by the officers or inhabitants of the liberty. \& $\mathbf{c c}$. where fuch cattle or goods shall be firf imported, then fuch liberty, \&cc. and the inbabitants thereof, neglectiag, to make feizure, fhall forfeit 1001 . for the ufe of the houfe of correction within the county, or liberty: and the monies fo forfeited, and other forfeitures which are to accrue to the poor, fhall be accounted for, as the overfeers of the poor are to account by the ftatute 43 Eliz. cap. 2 . Sect. 5. Every veffel, with all her tackle, in which any cattie, beef, \&c. Shall be imported, and out of which they fhall be put on thore, Thall be forfeited; and it thall be lawful for any perfon, within one year after fuch inportation, to feize the veffel, and make fale thereof to the beft advantage; and one half of the monies thall be to the ufe of the poor of the parifh where the fame fhall be feized, the other half to his ufe that thall feize the fame. And it fhall be lawful to any juftice of peace of the county, or chief officer of the porttown where fuch importation thall be, or where any of the cattle, beef, \&c. fo imported hhall be brought, by warrant to caufe to be apprehended all the maters and feamen having charge of, or belonging to fuch veffel, and every other perfon emplayed in the landing, or taking care of the faid cattle, beef, $\$ \mathrm{cc}$. and them to commit to the common jail for three months.
\$ect. 6. As ofter as it hall happen that any cattle, beef, \&c. after the firft feizure, fhall be found in any other parifh, or place, it fhall be lawful for the conttable of fuch other parifh, or place, to feize and difpofe the fame as forfeited; the one moiety to the ufe of the poor of fuch other parifh, the other to the ufe of fuch officer who fhall feize the fame; any former feizure in any other place notwithftanding.
Sect. 7. If any action, \&c. be profecuted for any thing done by colour of this or the aforefaid act, and it fhall not be proved to the jury, that the caufe of fuch action, \&c. did
arife within fuch county where fuch action is laid, the defendant thall be found not guilty.
Sect. 8. If any action, \&ec. Chall be profecuted for any thing done in purfuance of this, or the aforelaid a $a$, the perfons fued may plead the general iffue, and if the plaintiff, \&c. thail be nonfuited, \&c. the defendants fhall have treble col. . Sect. xo. If any perfons dhall wilfully and fraudulently agree to evade the forfeitures upon importation of catule or goods in this act fpecified, and the fame fhall be put in execution, every fuch perfon thereof indicted, or prefented within one year after fuch offence, and being convicted, fhall incur the pains contained in the flatute of premunire, 16 Ri h. II. cap. 5. Stat. 22 Car. II. cap. I 3. fect. 6 . There hall be paid, for every ox or fteer that fhall be exported, is. and no zore. Sect. 7. It fhall be lawful for any perfon to export cows or heifers, paying for each is. and alfo to export fwine or hogs, paying for each hog 2 d .
Sect. 8. It fhall be lawful for any perfon to export, by way of merchandize, horfes or mares to any part in amity with his majefty, paying for each 5 s .
Stat. 32 Car. II. cap. 2. feet. 3. Any perfon may feize cattle and goods imported contrity to ftat. I 8 Car. IL. cap. 2.
Sect. 5. Every feizer of fuch cattle, fheep, or fwine, fhall, within fix days after conviction, caufe the fame to be killed and the hides and tallow thall be to the ufe of the feizer, and the remainder fhall be diftributed amongt the poor of the parifh by the churchwardens and overfeers, upon notice to be given them by the feizer.
Sect. 6. In cafe the feizer, or the churchwardens and overfeers, fhall fail in their duties in the execution of this act, every of them fhall forfeit 40 s . for every one of the great cattle, and 10 s . for every fheep or fwine; one moiety to the poor of the parifh, and the other to the informer ; to be levied by diftrefs and fale of goods, by wartant of a juftice of peace where the offence fhall be committed, upon confeffion of the party, view of the juflice, or oath of one witnefs; and, for want of diftrefs, the offenders to be committed to the common jail for three months, without bail.
Sect. 8. To mutton or lamb fhall be imported, fubject to the like feizures and penalties as are appointed againft the importation of beef, pork, or bacon.
Sect. ro. If any great cattle, theep, or fwine, fhall be feized in purfuance of this, or the aforelaid act, and afterwards thall be removed into, and found alive in any other parifh or place, the fame fhall be liable to the fame feizure, and the feizer and poor of the place have the like benefit, and the proof be in cumbent upon the owner, as if fuch cattle had never before been feized.
Sect. Ir. If any Englifh, or other cattle, driven or intermixed with Jrifh cattle, fhall be feized together with them, fuch cattle fo intermixed and feized flall be deemed Irifh.
CAUDEBEC, a fort of hats, thus called from the town of Caudebec in Normandy, where they manufacture a great many of them. They are made of lamb's wool, of the hair or down of oftriches, or of camel's hair. See Hats.
CAVIARY, CAVEER, or CAVEAR, the fpawn or hard roes of Sturgeon, made into fmall cakes an inch thick, and of a hand's breadth. There are falted and dried in the fun. The Italians fettled at Mofcow drive a very great trade in this commodity throughout that empire, becaufe there is a prodigious quantity of flurgeons taken at the mouth of the Wolga, and of the other rivers which fall into the Cafpian fea.
After the caviary has been falted and dried, it is fent up that river to Mofcow, whence it is diftributed throughout all Ruffia; and is in great efteem by the Mufcovites, becaufe of their three lents, which they keep with a fuperfitious exactnefs.
There is alfo a pretty large quantity of it confumed in Italy; and they begin to be acquainted with it in France, where it is reckoned no defpicable difh on the beft tables.
The French and Italians get the caviary from Archangel, a port in Mofcovy; but they feldom get it at the firft hand: they commonly buy it of the Englifh and Dutch, but efpecially of the latter, who drive the greateft trade in Mofcovy. Good caviary fhould be of a reddifh brown and dry. It is eat with oil and lemon juice.
The beft caviary of Mofcovy is made with bolluca, a finh from about eight to ten feet long, which is catched in the Cafpian fea. This caviary is by far preferable to that which is made of the fturgeon's rows, and is delicious, when frefh made.
There is likewife a great deal of caviary brought from the Black Sea, particularly from Afoph and Kilia, two towns of great trade; the one fituated at the mouth of the Tanais or Don, and the other near the mouth of the Danube. This caviary is made of the hard roes of feveral finhes, particularly, of the fturgeon. That which is fold at Conftantinople comes chiefly from Afoph, from whence there is fent, one year with another, to that capital of the Turkifh empire, about ten thoufand butts or hogheads, each butt weighing 7 quintals and a half.
As caviary is not rated in France, it pays there a duty of importation at the rate of 5 per cent. of it's value, according to
the effimate which is made in an amicable manner, agreeable to the laft article of the tariff of 1664 .
CEDAR. The cedar of mount Libanus (or Lebanoti, as it is called in our Englifh tranlation of the bible) is famous in the Holy Scripture. This is reckoned one of the firft and largelt trees in the world: it grows to a prodigious height; is thick, ftraight, and raifed pyramid-wife ; it's bark is even and fmooth; it's wood very hard, beautiful, folid, inclining to a brown colour, and, as it were, incorruptible: with this precious timber was built Solomon's temple and his palace. We read alfo in the Holy Scriptures, how many cities this king of the Jews gave to king Hiram, in payment for the ce-dar-timber, which he fent him for that magnificent ftructure, without being yet able to fatisfy him to his mind.
The cedar-tree pufhes out branches at the diftance of to or in feet from the ground. They are large, and at a diftance from each other. It's leaves are pretty much like thofe of rofemary. It is an ever-green, and lives very long, but dies, as foon as it's top is cut off. The leaves ftand upright, and the fruit hangs down; that fruit is a fmall cone, like that of the pine-tree, except that it's rind is thinner, fmoother, and more open. The feed is like that of the cyprefs-tree.
There are fill fome cedars on mount Libanus, but in fmall number, above and to the eaft of Biblos and Tripoli. 'There are none to be feen any where elfe on thofe mountains. But it is very probable, that there were a great many more form merly, fince their timber was ufed in fo many confiderable works. There are fome cedars alfo growing in fome parts of Africa, in the ifle of Cyprus, and in that of Crete or Candia. Jofephus, the Jewifh hiforian, afferts, that Solomon planted fo large a quantity of cedars in Judea, that they were as numerous as the fycamore-trees, which are very common in that country.
They ufed that timber not only for beams, and for the boards which covered the buildings, and made up the cielings of the apartments, but they put it likewife into the body of the walls, fo that there were, for inftance, three rows of fone, and one of cedar-wood. They alfo made ftatues of it, when they would have them laft a long time. It is ufed to make fine turners and inlaid work, and in fome floors and ceilings of royal palaces, and other ftately edifices; but, in thofe places where it grows, it is employed in land and fea-buildings, like common timber.
During the hotteft feafon of the year, there runs naturally, and without any incifion, from the trunk and large branches of this tree, a white, clear, and tranfparent refin, which is called cedar-gum, or mafticine-manna, which hardens and forms itfelf into grains like maftic. The largeft trees do hardly yield fix ounces of it a day.
When the gum has done running of itfelf, they make incifions into the tree, from whence iffues afterwards an unctuous liquor, which dries, as it runs along the trunk of the tree. This is the refin of cedar, which is to be fold at the druggifts thops; it is of a fine yellow colour, friable, lucid, tranfparent, and of a good fmell.
Laftly, the cedar furnifhes alfo a third fort of drug, called turpentine, or refin of cedar: it is a liquor clear, like water; of a ftrong penetrating fcent, contained in fmall bladders or veficles, which the exceffive heat of the fun caufes to rife on the trunk of the tree. Thefe gums and refins of cedar are feldom to be met with in France.
Mr Miller obferves, that what we meet with in the Scripture of the lofty cedars, can be no ways applicable to the ftature. of this tree; fince, by the experience we have of thofe now growing in England, as alfo from the teftimony of feveral travellers, who have vifited thofe few remaining trees on mount Libanus, they are not inclined to grow very lofty, but, on the contrary, extend their branches very far: to which the allufion made by the pfalmift agrees very well, when he is defcribing the fourifhing ftate of a nation : they fhall fpread their branches like the cedar-trees.
Ranwolf, in his travels, fays, there were not at that time (i. e. anno 1574.) upon mount Libanus, more than 26 trees remaining, 24 of which ftood in a circle; and the other two, which ftood at a fmall diftance, had their branches almoft cunfumed with age; nor could he find any younger trees coming up to fucceed them. Thefe trees, he fays, were growing at the foot of a fmall hill, on the top of the mountains, and amongft the fnow. Thefe having very large branches, they do commonly bend the tree to one fide, but are extended to a great length, and in fo delicate and pleafant order, as if they were trimmed and made even with great diligence; by which they are eafily diftinguifhed from firtrees. The leaves, continues he, are very like to thofe of the larch-tree, growing clofe together in little bunches, upon fmall brown fhoots.
Maundrell, in his travels, afferts, there were but 16 large trees remaining, fome of which were of a prodigious bulk; but that there were many more young trees of a fmaller Gize: he meafured one of the largeft, and found it to be twelve yards fix inches in girt, and yet found, and thirtyfeven yards in the fpread of it's boughs. At about five or fix yards from the ground it was divided into five limbs, each
of which was equal to a great tree. What Maundrell has related was confirmed to Mr Miller, by a worthy gentleman of his acquaintance, who was there in 1720 , with this differerice only, viz. in the dimenfions of the branches of the largeft tree, which that gentleman meafured, and found to be twenty-two yards diameter. Now, whether Maundrell meant 37 yards in circumference of the fpreading branches, or the diameter of them, cannot be determined by his expreffions, yet neither of them will agree with the abovementioned gentleman's account.
Monfieur le Bruyn reckons about thirty-five or thirty-fix trees remaining upon mount Libanus, when he was there, and would perfuade us it was not eafy to reckon their number. He alfo fays, their cones do fome of them grow dependent; which is abundantly confuted by the abovementioned travellers, as alfo from Mr Miller's own experience; for all the cones grow upon the upper part of the branches, and ftand erect, having a ftrong woody central fyle, by which it is firmly annexed to the branch, fo as with difficulty to be taken off; which central ftyle remains upon the branches, after the cone is fallen to pieces, fo that they never drop off whole, as the pines do.
The wood of this famous tree is accounted proof againtt all putrefaction of animal bodies (but fee the end of this article). The faw-duft is thought to be one of the fecrets ufed by thofe mountebanks, who pretend to have the embalming myftery. This wood is alfo faid to yield an oil, which is famous for preferving books and writings; and the wood is thought, by lord Bacon, to continue above a thoufand years found. It is likewife recorded, that, in the temple of Apollo at Utica, there was found timber of near two thoufand years old. And the flatue of the goddefs, in the famous Ephefian temple, was faid to be of this material alfo, as was molt of the timberwork of that glorious ftructure.
This fort of timber is very dry, and fubject to folit ; nor does it well endure to be faltened with nails; therefore pins of the fame wood are much preferable.
Dampier tells us in his voyages (vol. I. p. 29.) that there are cedars in St Andreas, a fmall uninhabited nland, near that of Providence, to the weftward of it, in 13 degr. 15 min . north latitude, and from Portobello north-nurth weft, about 70 leagues. Jamaica alfo is well fored with cedars of it's own, chiefly among the rocky mountains. Thofe of St Andreas grow likewife in ftony ground, and are the largeft that ever Dampier knew, fays he, or heard of; the bodies alone being commonly 40 or 50 feet long, many 60 or 70 , and upwards, and of a proportionable bignefs. The Bermudas are alfo well ftored with them; fo is Virginia, which is generally a fandy foil. Our author faw none in the Eaft-Indies, nor in the South-Sea, except on the ifthmus of Pa nama. There is alfo plenty of ftraight large cedars in the Maria's, three uninhabited iflands in north latitude, 21 deg. 40 min .40 leagues diftant from cape St Lucas in Ca lifornia.
They make in America periagoes and canoes of cedar, and thefe are the beft of any: they are nothing but the tree itfelf, made hollow boatwife, with a fiat bottom; the canoe is generally fharp at both ends, and the periago at one only, with the other end flat. But what is commonly faid of cedar, that the worm will not touch it, is a miftake; for our author afferts, that he has feen of it very much worm eaten. As Dampier has given us no particular defcription of the cedars he mentions, we cannot determine whether they be of the fame kind with thofe of mount Libanus, or with thofe mentioned in the next article.
Cedar of Phoenicia, otherwife called Small Cedar, OxyCEDRUS, is a kind of cedar, which grows in Phoenicia and Cilicia; it is pretty much like the juniper-tree, for which reafon fome give it that name.
There are three forts of this tree, according to Lemery, which have different names in Latin. The trunk and branches of the firft fort are crooked and knotty; it's wood is reddifh, and yields a fmell like that of the cyprefs-tree; it's leaves are narrow, pointed, tougher, and fharper than thofe of the juniper-tree, always green, and like thofe of the cyprefstree. It's catkins have feveral fmall fcales, and at the foot there are come membranaceous cods or pods, full of duft. The fruit grows upon the fame foot with the catkins, but at a diftance from them; it is a berry, which, as it ripens, grows yellow, fomewhat flefhy, odoriferous, of a pleafant tafte, each of which contains commonly three ligneous and hard ftones, round on top, and fiattened on the other fide; each fone includes an oblong feed. In hot countries there iflues from this tree a gum, which is called vernix.
The fecond kind, called Cedrus minor altera, differs from the firlt in this, the tree is not fo tall, and the berries are larger.
The third fpecies is called Cedrus Hifpanica procerior, folio maximo. The taller Spanifh cedar, with very large leaves. It grows much higher than the other forts; it's berries are larger, and of a black colour.
Thefe cedars grow in hot countries, and in the plains along the Mediterranean, in Italy, Spain, Provence, and Langue-

## C E S

doc. They are ever-greens; their wood is odoriferous; their leaves are good for the fomach; and their berries, which are called cedrides, are a cordial.
They extract from the cedar-wood, by the retort, after the common manner, a black oil; which is thought to be the true oil of cada, otherwife called cedria; inftead of which, as it is very fcarce, they ufe the oil extracted from the large and fmall juniper-tree, or the clear oil of the pitch, which has kept the name of oil of cada. The true oil of cada is a fovereign remedy for the cure of a morphew; it is likewife ufed with good fuccefs for curing the fcab, or itch, in horfes; oxen, or other cattle.
From the trunk of the oxycedrus is extracted, by incifion, a very clear and tranfparent gum, which is the true fandarac, but is feldom to be met with in France, or elfewhere, where they fubfitute in it's fead the gum of the junipertree.
CEDRA, or CEDRAT, a kind of citron-tree, the fruit of which has a very agreeable fmell. That name is alfo fometimes given to the citron it produces.
Thefe trees grow plentifully in Italy, where they make a liquid comfit with the fmall citrons, or cedrats, which they preferve intire, and a dry fweet-meat with the large cedrats, which they cut into quarters to preferve.
Cedrat-water, which is in high efteem in France, on account of it's excellent perfume, and perhaps too hecaufe, it is very fcarce, is made with the zefts, or fmall thin pieces, cut from the furface of the peel of the fruit, before it be quite ripe by fqueezing thefe zefts they exprefs the juice out, which they receive on a piece of glafs, from whence it runs into fome veffel that is held under it. Some call it Barbadoeswater, but improperly: for cedrat is the pure juice of the citron, or lemon-peel; whereas Barbadoes-water is a mixture of brandy, or other firits rectified, and not the pure cedrat-water, or juice.
CENSAL, a word ufed on the coaft of Provence in France, and in the ports of the Levant. It fignifies the fame thing with the word broker; that is to fay, one whofe bufinefs is to procure to merchants and traders the buying and felling of their commodities, and who intervenes alfo lometimes in other mercantile tranfactions, as negociating bills of exchange. See Agent, and Brokers.
The merchants and traders commonly pay one half per cent. to the cenfal for brokerage.
Moft of the cenfals of the Levant, particularly they who act as brokers at Grand Cairo, are Arabs by nation. The contracts they make between the European merchants and thofe of the country, are intirely carried on with thew and grimace: it is a perfect comedy, when the cenfal would oblige an European merchant to pay to his countrymen the price demanded at firft for any commodity, or, at leaft, to abate very little of it.
When the European has made his offer, which is always below the price demanded by the feller, the Arabian cenfal pretends to fall into a violent paifion, he bawls and howls like a madman, or enthufiaft, and comes up to the merchant, as though he would feize him by the throat, and frangle him, though he never touches him. In cafe this firft feene does not fucceed to his wifhes, he quarrels with himfelf, tears his cloaths, beats his breaft foundly with his fift, and, rolling himfelf on the ground, he cries out, like a furiofo, that an honourable merchant is infulted, that his wares were not ftolen, to be fo unconfcionably undervalued, and difpofed of at fo low a price. Finally, as the European merchant, who is ufed to that burlefque way of trading, continues fedate and unmoved, and keeping to his firft offer, the cenfal becomes quiet alfo, and, giving his hand to the merchant, embraces him very clofe, as a token that the bargain is ftruck, and concludes the farce with faying, Halla quebar, Halla quebir, i. e. God is great, God is very great: which words be pronounces with as much coolnefs and tranquillity, as though he had not juft before counterfeited all the contortions and howlings of a man poffeffed with an evil fpirit.
CENT, fignifies properly a hundred, being an abridgment of the word centum ; but it is often ufed in commerce to exprefs the profit or lofs arifing from the fale of any commodity: fo that when we fay, there is to per cent. profit, or io per cent. lofs, upon any mercbandize that has been fold, it is to be underfood that the feller has either gained or loft ten pounds on every hundred pounds of the price at which he bought that merchandize, which is $\mathrm{T}^{\mathrm{I}}$. of profit, or $\frac{1}{\mathrm{~T}} \mathrm{o}$ of lofs, upon the total of the fale.
To gain 100 per cent. (or sent. per cent.) in trade, is the doubling of one's capital: to lofe 50 per cent. is to lofe one half of it.
Cent, is alfo ufed in the trade of money, and fignifies the benefit, profit, or intereft of any fum of money, which is laid out for improvement. Thus we fay, money is worth 4 or 5 per cent. upon exchange; that is to fay, it brings 4 or 5 pounds profit for every hundred pounds laid or lent out. Cent, is alfo ufed with regard to the draughts, or remittances of money, made from one place to another. Thus we fay, it will coft $2 \frac{1}{2}$ per cent. to remit money to fuch a city.

When we fay that a broker, or exchange-agent; takes orte eighth per cent. fee or perquifite, for the contracts or bargains that are made by his means and interpofition, it is to be underftood that there is to be paid to him the eighth part brokerage of a pound, which is 2 s. 6 d . for every hundred pound he caufed to be negociated. The one eighth per cent. is commonly paid by both the contracting parties; that is to fay, by him who gives, and by him who receives, the money; fo that the brokers get $\frac{x}{8}$, or $\frac{2}{4}$ per cent. for every bargain, which amount to 5 s. or $\frac{1}{4}$ of a pound, for every 1001 . and 2 1. 10s. for every 10001.
When an agent, or factor, fets down at the bottom of an invoice, which he fends to his principal, 2 per cent. commiffion, it fignifies that he takes, or charges for his trouble in tranfacting the bufineis, and. advancing his money, fo many times two pounds, as there are hundreds of pounds in the fum total of the invoice. It muft be obferved, that the fo much per cent. for commifion is taken on the whole amount of the invoice; that is to fay, both on the principal price of the commodities bought, and on the charges and expences incurred on account of the fame, as duties paid, porterage, package, poftage of letters, $8 t c$.
In che books, and other writings of merchants, bankers, and traders, the fo much per cent. is fet down by abbreviation: for inftance, $2 \mathrm{p}^{\mathrm{r}} \mathrm{o}$, or $2 \mathrm{p}^{\mathrm{t}} \mathrm{c}^{\mathrm{t}}$, which fignifies 2 per cent.
CERUSE, or CERUSSE, otherwife called CALX of LEAD. It is white lead reduced into powder, and diluted with water on porphyry. They make it into a pafte, of which they form, in moulds, fmall ioaves, or cakes, of a pyramidical figure, which they dry afterwards, the better to carry them abroad. The workmen wrap them up in blue paper, rather than in any other, to make the cerule appear whiter.
The painters ufe cerufe both in oll and water colours, with gum-water, and it makes a beautiful white. It is alfo the chief ingredient ufed in the paint for the ladies.
Cerufe is a dangerous poifon, when taken inwardly; it has even bad effects externally, of which the ladies fhould take the greateft care, fince it fpoils the eye-fight and the teeth of thofe perfons who ufe it for beautifying the face; and, befides a great many other inconveniencies it occafions, it feems to haften old age, by making the wrinkles appear on the face fooner than they would ocherwife do.
The Venetian cerufe is efteemed the beft fort of all, yet there is the leaft confumption of it, which is owing, perhaps; to it's being very dear. They ufe at Paris, and in all France, as well as in other foreign countries, hardly any other cerufe but that of England and Holland. The former is the worft fort, the latter is fomething better. They are both made with white lead and white chalk; and, the chalk of England being lefs white, and the Engliih mixing more of it with the cerufe than the Dutch do, is the reafon of their different degrees of goodnefs. To judge of it's quality, it muft be chofen very white, both within and without, fine, clean, foft, and friable. That is the worft kind which breaks the eafieft, as wanting the due texture and adhefion. See White Lead.
CESSION. It is a merchant's or tradet's giving up, in cafes of bankruptcy, or yielding to his creditors all his goods, both moveable and immoveable, either voluntarily, or by a fentence of a court of juftice, to avoid a warrant for feiting his perfon, which they otherwife might obtain againft him.
There are two forts of ceffion, the voluntary and the judicial.
In France the voluntary ceffion is, when a merchant, or trader, finding himfelf incapable to pay his creditors intirely, yields and makes over to them all his effects whatfoever, which ceffion muft be confented to, and voluntarily accepted by his creditors: this is performed by a deed, which is called the contract of ceffion of goods.
He who makes a voluntary ceffion is obliged to give to his creditors a true account of all his effects and goods, both moveable and immoveable, without the leaft exception, and to get his contragt of ceffion made with thofe who figned it voluntarily, allowed and authorized by a court of juftice, and to have it declared common to thofe who refufed to fign it.
Though this voluntary ceflion be accepted by the creditors, it is neverthelefs infamous to him who made it ; becaufe it is looked upon as a real bankruptcy, which renders that perfon incapable of ever obtaining a public employment, unlefs he afterwards intirely pays his creditors, and obtains letters of rehabilitation in Chancery.
A debtor; who has made ceffion of his goods to his creditors, who accept valuntarily, without being forced to it, is difcharged from all debts generally, nor can they have any action againft him, nor any demand on the goods or effects he may have acquired after luch ceffion.
The judicial ceffion is that which is made by a merchant, or trader, who is actually kept in prifon by his creditors, and who, being abfolutely incapable to fatisfy them, petitions a court of juftice for leave to make ceffion. This judicial ceffion is certainly compulfive on the part of the creditors, fince

## C H A

C H A
the debtor is commonly allowed the benefit of a ceffion by an order from the judges, notwithftanding the oppofition made by the creditors to prevent it ; which renders this ceflion more infamous fill than that which is voluntary.
He who makes ceffion is obliged to make it before the judgesconfuls of the place of his refidence, the court fitting; and, in cafe there be no coniuls, before the common affembly of the town ; and this he is obliged to do bareheaded, perfonally, and not by proxy, or attorney, unlefs in cafe of ficknefs, or for fome other lawful reafon: he is obliged to declare his name, firname, quality, and dwelling-place, and that he was admitted to make ceffion of all his goods; which declaration is to be publifhed by the recorder, and wrote in the public table, agreeably to the ordonnance given at Moulins by Charles VIII, the 28th of December, 1490, art. 34 ; to that given at Lyons by Lewis XII, in June, 1510, art. $7^{\circ}$; to that of Lewis XIII, of January, 1629 , art. 143 ; and to that of Lewis XIV, of March, 1673 , tit. 10, art. I.
According to cuttom, he who makes ceffion ought to be conducted by a tipftaff, or other officer of juftice, to the public place, on a market-day, there to publifh, in the prefence of fuch officer, the ceffion he has made, of which publication the officer is to draw up a verbal procefs.
There are fome cafes wherein a man cannot be admitted to enjoy the benefit of ceffion: as (I.) In cafe of a fraudulent bankruptcy.
(2.) For the remainder of an account of guardianfhip; which is an adjudged cafe, by a decree of the 17 th of May, 1608.
(3.) When a foreigner had not obtained letters of naturalization, or a declaration to that purpofe, art. 2. of tit. 10, of the ordonnance of 1673 .
(4.) A natural-born Frenchman againft a foreigner'; thus adjudged by three decrees, of the 18th of April, 1566, 5 th of December, 1591, and 17 th of Auguf, 1598 .
(5.) For public money.
(6.) For falfe fale. Decree of February the 8th, 16 II.
(7.) They who have money intrufted with them by order of a court of juftice.
(8.) For harvefts of corn. Decree of the 28th of March, 1583.
(9.) They who by an agreement with their creditors have obtained a delay of payment, and have received fome remittances from them. Decree of the IIth of February, I6if, (10.) They who have obtained letters of refpite. Decree of the 8th of February, 16 Ir.
(II.) And for wine fold by a citizen in his cellar. Decree of the inth of July, confirmed by another decree of the 12 th of April, 1612 .
(12.) A debtor cannot renounce, or give up the benefit of ceffion, by a bond entered into with his creditors. Decree of the 22d of November, 1599.
(13.) The goods acquired by a judicial ceffionary, after his ceffion, either by inheritance, gift, or otherwife, are always bound to his creditors, to the full payment of what remains due to them: but yet they cannot attach his body.
Formerly, he who made ceffion was obliged to wear a green cap, which was to be bought by his creditors; and if he were met with abroad by any of his creditors, without having the green cap on his head, fuch creditor had power to put him in prifon again. This has been adjudged by feveral decrees: neverthelefs this cuftom has been abrogated, particularly with regard to fuch ceffionaries who have acted bonâ fide, and without fraud.
The ordonnance of Lewis XIII, made in January, 1629, declares, That they who thall make ceffion, becaufe they have been ruined by loffes in trade, and who thall be found honeft, thall not be fubject to infamy : yet, notwithftanding the declaration in this ordonnance, this kind of ceflion does ftill pals for difhonourable in the general opinion of men; and they who made fuch ceffions are never chofen to any public poft or office: fo that one may fay that ceffion is a kind of civil death; but yet, when a ceffionary has entirely paid his creditors, he may be reinftated, by letters from the fovereign. See the article Bankruptcy.
CESSIONARY, he who accepts the ceffion, or transfer of any thing, or to whom it is made.
Cessionary, is alfo a merchant, or any other perfon, who yields or makes over all his goods and effects to his creditors, either by the authority of a court of juftice, or voluntarily. See above Cession.
CHALDRON, a dry meafure ufed in England for coals; it contains twelve facks, or 36 bufhels heaped up, according to a buthel which is fealed and kept at Guildhall in London. The chaldron fhould weigh 2000 pounds.
CHAMBER, is faid, efpecially in France, of thofe places where fome affemblies are held, either for the adminiftration of juftice, or for treating of other bufinefs either, public or private. The grand chamber, the chambers of inquefts and requefts, the chamber of accounts, and feveral others, eftablifhed in the palace of Paris and elfewhere, are of the number of the firft. The chambers of commerce, the chambers of affurance, the royal or fyndical chamber of the bookfellers, are of the laft fort.

We thall hereafter give an account of the chief chambers which relate to trade, to merchants, to bodies and companies of arts and trades, both in general and particular.
$\mathrm{C}_{\text {hamber }}$ is faid, not only of the place where fome affemblies are held, but alfo of the affemblies themfelves.
Chamber of Commerce, is an alfembly of merchants and traders, where the affairs relating to trade are treated of, The general eftablifhment of chambers of commerce, in fe. veral of the chief cities in France, was made the 30 th of Auguft, 7 OI; but the particular eftablifhments were nat made'till fome years after, and moft of them were eftablifhed at different times, as the interefts' of commerce made abfolutely neceffary. There were, however, before the above mentioned year, fome cities in this kingdom, that enjoyed the privilege of having a chamber of commerce. The city of Marfeilles, amongtt others, had one eftablifhed feveral years before, in imitation of which, that of Dunkirk, which is alfo anterior to the general eftablifhment, was erected by an edic: of Lewis XIV, in the month of February 1700.
The chamber of Dunkirk is compofed of a prefident and four counfellors, two of whom are chofen amongft the echevins, actually in office, and two amongft the moft eminent merchants and traders, who have already borne the office of echevin , and that of penfionary.

Of the nature of thefe commercial eftablifhments.
Thefe fix perfons meet twice a week in one of the rooms of the town-houfe, in order to confer together on the moft proper meafures requifte to be taken, to make the trade of their own town flourifh, to increafe both the inland and foreign trade of the whole kingdom, and to receive all information and propofals ufeful to any branches of traffic whatfoever; of all which they keep a regitter, as well as of their own refolutions: of which they fend extracts every three months to the intendant, if he be on the fpot, or, in his abfence, directly to Court, on any preffing emergency.
It is alfo the prefident of this chamber, or, in default of him, the eldeft of the confuls, who gives certificates for the exportation of fuch merchandizes, as cannot be exported without them.
The eftablifhing a royal council of commerce at Paris, in the year 1700 , occafioned the fetting up of chambers of commerce in the other chief towns of the kingdom, in, 1701.

In the firf fcheme of that council, the king thought proper to compofe.it of fix commiffaries or deputies from his council of ftate, and of twelve of the chief merchants of Paris, and of the provinces; namely, two of that capital, and one of each of the following cities, viz. Lyons, Roan, Bourdeaux, Marreilles, Rochelle, Nantz, St Malo, Lille, Bayonne, and Dunkirk ; to whom was afterwards added, by a decree of the council of September that fame year, a deputy from the province of Languedoc, and confequently of the city of Montpelier.
To the end that thefe merchants might be thoroughly informed of all that relates to the trade of the feveral provinces for which they are deputed, his majefty afterwards judged it neceffary to eftablifh thefe diftinct chambers of commerce, with which they might correfpond, and which Chould furnifh them with memorials, and all propofitions which the council was. maturely to weigh and confider.
So wife and national a defign gave occafion to the decree of the council, given the 30 th of Auguft, 1701, which indeed was only a pretiminary to the eftablifhment of the chambers of commerce; by which it was ordered, that the merchants and traders of Lyons, Lifle, Roan, Bourdeaux, Rochelle, Nantz, St Maio, and Bayonine, as well as the province of Languedoc, fhould fend, on the 15 th of October following, their opinions concerning the moft proper and moft advantageous method of eftablifhing fuch chambers in their refpective cities. Marfeilles and Dunkirk were not named in the decree, becaufe there was already a chamber of commerce eftablifhed in each of thefe cities.
Of the Chamber of Commerce in the city of Lyons. This is the furft of all the chambers that were eftablihed, by virtue of the decree of the 30 th of Auguft, 170 .
The general affembly of the provoft of the merchante, and of the echevins, both of thofe actually ferving, and of thofe who had ferved that office before, together with the chief traders chofen by the four bodies of merchants, being held the 20th of February 1702, and their refolutions being fent to Court, the king iffued a decree, dated the 2oth of July that fame year, for the eflablifhment of the chamber of commerce in that city.
By that decree, the chamber was compofed of the provot of the merchants, of one echevin being a trader, of an exconful merchant, of a merchant draper, of two bankers, or two filk merchants, of a merchant grocer, or a merchant of gold lace, and of a mafter-weaver of the company of the filkworkers, having actually looms at work; all theefe, together, were filed the Directors of the chamber of commerce. In the abfence of the provoft of the merchants, the echevin is chairman, and, in the abfence both of the provoft of the mer-
chants and of the echevin，the exconful takes the chair．The clamber meets once a week in the town－houfe．
The general affembly for the elections is held every year，on the 15 th of December；and in this alfembly they chufe four new directors，fo that every one remains but two years in office，nor can any one be continued but for two other years． The ele⿻コ一⿻上丨又 at Paris is made jointly by the corporation of the city，and the chamber of commerce，which have both the fame fecre－ tary．
Tary．defray the charges of the chamber，they take yearly 30,000 livres，out of the common cath of the city， 8000 of which are defigned for the falary of the deputy to the council of commerce，and 2000 for that of the fecretary：the reft is employed in paying the expences of the office；in diffribut－ ing two filver medals to each of the directors，at the end of every meeting；and giving alfo a gold medal weighing five louis－d＇ors to＇every one of them going out of office，as alfo to the deputy，when he ceales to perform the functions of that poft．
There were two particular chambers of commerce eftablifhed in the year 1703．The one the igth of June at Roan，and the other the $2 g$ th of December at Touloufe．

Chamber of Commerce at Roan．
This is compofed of the prior，two judges confuls in office， the procurator fyndic，and five merchants or traders，who have altogether the title of fyndics of the commerce of the province of Normandy．
This chamber meets once a week in the confular houfe．
The election of new fyndics is made every year in Decem－ ber；two new fyndics are chofen one year，and three the next，and thus alternately；fo that every fyndic continues at leaft two years in office；he may even be continued two other years，but never for any longer time．
The nomination of a deputy to the Royal Council of Commerce is made jointly by the chamber，and by thofe who have borne the offices of judge，confuls，and fyndics． The fecretary，who muft be a merchant of fkill and abilities， or at leaft muft have been in trade，is chofen every other year，and may be continued．
The deputy＇s falary is fettled at 8000 livres per ann．and 4000 are defigned for that of the fecretary，for pens，ink，and pa－ per，for fuel，candles，\＆cc．as alfo for the diftribution of two filver medals to each of the fyndics，at the end of every meeting，and for a gold medal，to them and to the deputy， when they go out of office．
Towards fettling a fund for thefe expences，the fame decree eftablifhes a tariff of certain duties，which are to be paid，not only at Roan，but throughout the whole province of Normandy； and one of the fyndics is appointed treafurer，for the receiv－ ing and diftributing the money arifing from thofe duties，and he is accountable to the chamber only．
Finally，no contract made upon the exchange is of any force， ＇till it has been propofed to the chamber，and approved by it．

## Of the Chamber of Commerce at Touloufe．

This is compofed of feven perfons，befides the fecretary； namely，the prior of the exchange，who is chairman；the two confuls of the exchange for the time being ；and four merchants，either wholefale dealers or retailers，either noble－ men or others，who are ftiled deputies．
The noblemen，when any are elected into thefe commercial inftitutions，fit on the prior＇s right hand，and in his abfence the eldeft of them takes the chair．
The meeting of the chamber，wherein the fyndic of the pro－ vince of Languedoc has a right to fit，when he pleafes，is kept in the houfe of the exchange once a week．
Two of the deputies are changed yearly；they may be con－ tinued for two other years，but not againft their inclinations； and they who have been deputies once，may be chofen again after lome years interval；in cafe of an equality of votes， the election is determined by drawing lots．
＇The contracts made upon the exchange have no authority＇till they are approved by the chamber．
Laftly，the ftates of the provinces of Languedoc pay yearly a fum of 600 livres，both for the fecretary＇s falary，and for the other charges and expences of the chamber．But the de－ cree，by which this chamber is eftablifhed，mentions neither the deputy to the royal council of commerce，nor his falary．

Of the Chamber of Commerce of Montpęlier．
This was eftablifhed by a decree of the king＇s council of ftate，given the 15 th of January， 1704.
The number and qualities of the perions who compore it， their name，rank，and functions，the place and days of their meetings，the election of the deputies，the fum which the ftates of the province furnifles yearly，for bearing the expences of the chamber；＇in fhort，ail that relates to it＇s authority and prerogatives is fo much like what wa have related of the chamber of Touloufe，that I judge it fuperfluous to enter into further particulars．We need only add，that，if the de－ cree does not mention the deputy to the royal council of com－

Vom．I．
merce，it is，becaufe the king confented，according to the re－ folution of the ftates of the province of Languedoc of the I2tin of January，1703，that the fyndic－general of the faid province，whofe turn it fhould be to be fent as deputy to the court，fhould alfo perform the funstions of deputy to the royal council of commerce，though he were no trader；with liberty，however，to the ftates，to appoint，when they hoould think proper，a merchant to fill up the place of deputy of the province to the royal council of commerce．

Of the Chamber of Commerce at Bourdeaux．
This is one of the laft that was inftituted．The decree of the council，by which it＇s eftablifhment was ordered，is dated the $25^{\text {th }}$ of May， 1705.
It is compofed of the judges and conifuls of that city，toge－ ther with fix metchants actually trading，or who have fol－ lowed trade，and had due experience thercin，they being fub－ jects of the king，or naturalized：they are intitled Directors of the commerce of the province of Guyenne．
They have a fecretary to regifter their refolutions；and one of the directors is appointed treafurer，to receive，out of the general income of the province of Guyenne， 4086 liveres per ann．which were before paid yearly by the king，for annual wages，granted to the bodies and companies of merchants and traders of the city of Bourdeaux，and have been appro－ priated by the general affembly of the faid bodies and com－ panies，beld the 5 th of September，for defraying the charges and expences of the chamber．
That fum is employed in paying the fecretary＇s falary，in providing pens，ink，and paper，fire，and candles；filver medals；two of which are given to each deputy every af－ fembly－day，which is held in the houfe of the exchange； and in gold medals for the directors going out of office； and for the deputy to the royal council of commerce，when he has executed his office．
The directors are chofen yearly，three at every time：all the other rights，functions，prerogatives，and authority of this chamber，particularly with regard to the agreements made upon the exchange，are like what has been related more at large in the account of the chamber of Touloufe．

## Of the Chamber of Commerce at Rochelle．

This is one of thofe whofe eftablifhment was delayed the longeft．It was made in ifio，by virtue of a decree of the council，dated the 2 rft of October，and given upon the re－ folution of the affembly of the merchants of that city，and by the advice of Monf．Begon，intendant of juftice and of the finances，within that diftrict．
The chamber confifts of a director，four fyndics，and a fe－ cretary，who are all to be elected，except the firft nomina－ tion，which is made by the king．
Thirty merchants of that city are fummoned together every year，to chufe the director and two fyndics；fo that the di－ rector continues one vear in office，and each fyndic two years． The fecretary，who is appointed by the chamber，is changed every other year，and may be continued．They mult all be merchants actually trading，or who have been in trade，fifteen years at leaft＊．
＊Does not this article in particulat，among various others couched under this head，indicate the moft judicious and tendereft care of the commerce of France？
The chamber meets but once a week，in the confular houfe． To this chamber，together with thirty merchants fummoned for that purpofe，belongs the right of appointing a deputy to the council of commerce，eftablifhed at Paris．And to the chamber alfo，but without the affiltance or intercourfe of the other merchants，belongs the right of approving the agree－ ments＇made upon the exchange，that they may be in force． ＇The charges of the chamber and the fecretary＇s falary are fettled at two thoufand livres per ann．and the deputy＇s fa－ lary，as well as the funds for defraying all thefe expences， are left to the king＇s will，who orders them as he thinks fit． Laftly，the director，fyndics，and deputy，receive，at their going out of office，a gold medal worth 60 lives，and at every affembly are diftributed，to all who are prefent，two fil－ ver medals weighing 6 penny－weights，each．
The intendant of Rochelle has a right to affif at thofe affem－ blies when he pleafes，and to take the chair．

Chamber of Commerce in the city of Lifle．
This was not eftablifhed＇till the 23 d of July，i714．The un－ fortunate events of the laft years of the war in regard to the fucceffion of Spain，the famous fiege of that city，which was taken in 1708 by the army of the princes confederated againit France and Spain，after a very long and bloody defence，had prevented Lewis XIV．from beftowing fooner on this city that mark of his favour，and of his being well pleafed with the zeal and loyalty of it＇s inhabitants．But，as foon as this important city had been reftored to France by the treaty of Utrecht，a chamber of commerce was immediacely eftablifh－ ed there，the plan of which had been formed fo ion as the year 170 I．

That chamber is compofed of a dire tor, who is chairman, and four fyndics, who were appointed the firft time by the king. Two new fyndics are chofen every year, in the room of two who go out two years in place
None can be choten director, unlefs he has been a fyndic. At the meetings, the fyndics of noble extraction have the precedency of the others.
In cafe they who are fummoned to vote at the elections be chofen themfelves, they are obliged to accept the office, unlefs they have a lawful excufe.
The chamber meets in the town-houfe or Guildhall of the city every Thurfday, from ten in the forenoon 'till twelve. For the election of a deputy to the royal council of commerce are fummoned, belides the director and fyndic, twenty eminent citizens.
The mercantile contracts, pade upon the exchange, cannot be of force 'till approved by this chamber.
The charges of the fecretary's falary, and for fire, candles, poftage, \&c. wherein are comprized the diftribution of two filver medals, made every affembly-day to the director and syndics, and that of a gold medal of the value of 60 livres to the director and fyndics, and to the deputies, when they go out of office, are lettled at 2000 livmes per ann.
The deputy's falary is left to the king's pleafure, and the fum appointed to him, as well as the above-mentioned 2000. livres, are charged upon the flock and income of the city.
Laftly, the director and fyndics, as long as they are in office, enjoy the fame exemption of duties, as the magiftrates and other members of the government, with regard to the provifions they fpend in their families *.

- Is not this very encouraging to thefo gentemen duly to attend the public fervice of trade, in thole uff ful capacities?

## Remarks on thofe Chambers of Commerce in France.

The inflitution of thefe chambers of commerce in France, for the benefit of trade, had been attended with all the fuccefs that could be wifhed for by that kingdom. And, indeed, the more minutely we fhall trace this politic flate, in the purfuit of her trading interefts, the more, I am perfuaded, muft every man, of the leaft knowlege in public affairs, admire the wildom of their councils, and be the lefs furprized at the progrefs of their commerce and navigation before the late Definitive Treaty of 1763 .
As no great defigns take effect in kingdoms, without being firft ftarted and efpoufed by perfonages of fuperior abilities and zeal for their country's intereft; fo this was the cafe in regard to thofe commercial eftablifhments, which may be gathered from the following memoirs:
Cardinal Richlieu's advice to Lewis XIII. in relation to naval power and trade.

- A great ftate muft never refent an injury, without being - able to revenge it; and therefore England being fituated as - it is, unlefs France is powerful in Thips, the Englifh may at' tempt whatever they pleafe to our prejudice, without the - leaft fear of a return. They might hinder our filhing, ' difturb our trade, and, in blocking up the mouths of our - rivers, exact what toll they pleafe from our merchants. - They might land without danger in our illands, and even - on our coalts. Finally, the fituation of the native coun' try of that haughty nation not permitting them to fear the - greateft land forces, the ancient envy they have againft - this kingdom, would apparently encourage them to dare - every thing, fhould our weaknefs not allow us to attempt - fomething to their prejudice. Nature feems to have, of-- fered the empire of the fea to France, by the advantageous - fituation of her two coafts, equally provided with excellent - havens, on the ocean, and on the Mediterranean. Britany ' alone contains the fimeft in the ocean; and Provence, which - has but 160 miles extent, has many larger and fafer than - Spain and Italy together, \&ic.--It is a common, but a very ' true faying, that, as fates are often enlarged by war, fo - they are commonly enriched in time of peace by trade. - The wealth of the Hollanders, which, properly fpeaking, ' are only a handful of men, reduced into a corner of the - earth, in which there is' nothing but waters and meadows, - is an example and proof of the ufefulnefs of trade, which - admits of no conteftation. Though that country pro-- duces nothing but butter and cheefe, yet they furnifh all - the nations of Europe with the greatelt part of what is ne' ceflary to them. Navigation has made them fo famous, - and fo powerful throughout the whole world, that after ' having made themfelves mafters of the trade of the Eaft-- Indies, to the prejudice of the Portuguefe, who had been - long fettled there, they have cut out a great deal of work - for the Spaniards in the Weft-Indies. In England, the ' greateft part of thote, whofe circumfances are the leaft - eafy, maintain themfelves by common fifheries; and the - moff confiderable drive a greater trade in all the parts of ' the world, by the manufactures of their cloth, and by the \& fale of lead, tin, and fea coal, which are productions of

6 their country. The kingdom of China, the entrance into ' which is allowed to nobody, is the only country in which ' which is allowed to nobody, is the only country
' that nation has no place fettled for their trade.

- Trade will be the eafier for us, in that we have a great num-- ber of feamen, who hitherto have been obliged to feek out - employment among our enemies, having none at home, - and we have made no other ufe of them hitherto, but to get - falt-fifh and herrings. But having wherewith to employ our ' mariners, inftead of being conftrained to ftrengthen pur ' enemies, by weakening ourfelves, we fhall be able to carry ( into Spain, and other countries, that which they have hi' therto brought to us, by the affiftance of our men who ferve 'them, \&x.'-Thus far the cardinal: and the following preambles will demonftrate the force of this mighty genius, fince France has benefited by his forefight and counfels, all that he himfelf did fo prophetically wif, where he fays to his prince, 'If my fpirit, which will appear in thefe - memoirs, can, after my death, contribute any thing to-- wards the regulation of this great ftate, in the management - of which your majefty has been pleafed to give me a greater - Ghate than I deferve, I thall think myfelf infinitely happy.'

Tranflation of the preamble of an edict of Lewis XIV. given at St Germains en Laye, in the month of March 1673 , concerning commerce.

- Lewis, by the grace of God, king of France and Navarre, ' to all prefent and to come, health. As trade is the fpring and fountain of the public abundance, and of the plenty ' of particular perfons, it has been our care, for many years, - to render. it flourifhing in our kingdom: having, for that ' effect, effablifhed feveral companies amonght our fuojects, by whofe means they are provided with the commodities ' of the remoteft countries, which formerly they only re-- ceived by the intromiffion of foreign nations; and having ' allo caufed a great number of thips to be built and antred - for the advancement of commerce and navigation, and - employed the force of our arms both by land and fea, to - maintain it's freedom: thefe things having in every refpeet ' the fuccefs we expected, we have thought ourfelf obliged - to provide for their continuance, by neceffary regulations, ( \&c.. For thefe caufes, \&c. we have faid, declared, and ordained, \&c.'

An arret of the king's council of ftate, for eftablifhing a council of commerce, June 29, 1700; from the regiffers of the council of ftate.

- The king having at all times been fenfible of what impor-- tance it was to the welfare of the ftate to favour and protes - the commerce of his people, as well within the kingdom ' as out of it, his majefty has, on divers occafions, iffued - feveral edicts, ordinances, declarations, and arrets, and - made many ufeful regulations upon that fubject : but the - wars which have intervened, and the multitude of indif-- penfable cares which took up his majefty's thoughts, 'till - the conclufion of the laft peace, not allowing him to con© tinue the fame application thereto; and bis majefty being 6 more difpofed than ever to grant a particular protection to ' commerce, to fhew his efteem of the good merchants and ' traders of his kingdom, and to facilitate to them the means ' of making commerce flourifh, and extending it: his ma-- jefty judges, that nothing can be more capable of producing - this effect, than the forming a council of commerce, which - fhall be wholly attentive to the examining and promoting ' whatever may be moft advantageous to commerce, and to ' the manufactures of the kingdom. Which his majefty be-- ing defirous to fettle, the report of M. Chamillart, counfel' lor in ordinary of the royal council, comptroller-general of - the finances, being heard; the king, being in his council, - has ordained, and ordains, that, for the future, a council ' of commerce fhall be held, at leaft once every week; which - fhall be compofed of M. Dagueffeau, counfellor in ordi' nary of ftate, and of the royal council of the finances; of - M. Chamillart, counfellor of the faid royal council, and comptroller-general of the finances; of the count de Pont-- chartrain, counfellor to the king in all his councils, fecre-- tary of ftate, and of his majefty's orders; of M. Amelot, - counfellor of fate; of M. d'Hernothon and Bauyn d'An-- gerviliers, counfeliors to his majefty in his councils, maf-- ters of requefts in ordinary of his houfhold ; and of twelve - of the principal trading merchants of the kingdom, or fuch ' who thall have been a long time engaged in commerce: ' that, of this number of trading merchants, two fhall always ' be of the town of Paris, and that cach of the other ten © fhall be taken from the towns of Rouen, Bourdeaux, Lyons, - Marfeilles, Rochelle, Nantes, St Malo, Lifle, Bayonne, and © Dunkirk. . That in the faid council of commerce fhall be 'difcuffed, and examined, all the propofitions and memorials - which fhall be fent to it: together with the affairs and dif-- ficulties which may arife concerning commerce, as well by - land as by fea, within the kingdom and out of it, and con-- cerning works and manufactures; to the end that, upon ' the report which fhall be made to his majefty, of the refo-- lutions which thall have been taken thereupon in the faid
c council of commerce, his majefty may order what thall be - moft advifeable. His majefty's will and intention is, that - the choice and nomination of the faid trading merchants, - who are to be of the faid council of commerce, thall be made - freely, and without clandeftine caballing, by the corpora-ction-magiftrates of the town, and by the trading merchants s in each of the faid towns. That thofe who thall be chofen cto be of the faid council of commerce, be men of known - probity, and of capacity and experience in matters of com-- merce ; and that for this purpofe the town-magiftrates, and - the trading merchants, of the towns abovementioned, fhall caflemble in the month of July next, in each refpective town-- boufe, to proceed to the faid election : fo that the trading c merchants, thus elected and named, may be able to arrive - at Paris, or where the court Mall rètide, by the end of - September following, to begin their functions the firft day of October. That the faid elections fhall be for one year s only, and thall be renewed yearly, in the manner above - mentioned; with a provifo, that the time of fervice in the - faid council may be prolonged, if it fhall be judged proper - fo to do. His majeity ordains, that the forenamed comp-- troller-general of the finances fhall nominate two perfons s interefted in his majefty's farms, to be called to the faid - council, when the nature of affairs fhall require. And, for - fecretary of the faid council of commerce, his majefty has - nominated M. Cruau de la Boulaye, counfellor to the king, - corrector in ordinary in the chamber of accounts; who
- Thall take care to keep an exact regifter of all the propo-- fitions, memorials, and affairs, which fhall be brought - before the faid council; as alfo of the refolutions which - Thall be taken therein; copies whereof he fhall deliver, - according as he fhall be ordered by the faid council. Done - in the king's council of ftate, his majefty prefent, at Ver© failles, the 2gth day of June, 1700. Signed Philypeaux; ' and fealed.'
Tranlation of the preamble of an edict of the prefent king of France, dated at Fontainbleau in the month of October, 1727
- Lewis, by the grace of God, king of France and Navarre, ' to all prefent and to come, greeting. The care which the c late king, our moft honoured lord and great-grandfather, ' took for the increafe of our illands and colonies, the pains - we ourfelf have taken, after his example, fince our ac-- ceffion to the crown, the expences already incurred, and 'thofe which we are at annually for thofe iflands and colo' nies, with-a view to maintain and fecure the faid illands * and colonies, and to increafe the navigation and commerce " of our fubjects, have had all the fuccefs we could expect < from them; infomuch that our iflands and colonies, which ' are confiderably increafed, are capable of fupporting a con-- fiderable navigation and commerce, by the confumption ${ }^{6}$ and fale of the negroes, goods, and merchandize, which ' are brought to them by the chips of our fubjects, and by - the cargoes of rugars, cocoa's, cottons, indigoes, and - other products of the faid iflands and colonies, which they - there take in exchange, in order to import the fame into - the harbours of our kingdom, \&x. For thefe caufes, - \&c.’

## Further Remarks.

It would exceed the bounds of the article I am upon, to give the reader any juft idea of the meafures taken, froma time to time, by the deputies of the council of trade in France, and of their judicious memorials, occafionally prefented to the royal council. Nor would they appear in their proper light, by being given in a mere hiftorical way, in a collective view only, without taking into confideration, at the fame time, fuch effential circumitances as tend fully to difplay and illuftrate their utility and importance. Wherefore, we fhall referve thofe tranfactions for their proper heads, in order to give them their due weight, conffiftent with our narrative of facts recorded throughout this work.
I cannot, however, but take notice of an anecdote that has lately come to my knowlege, in regard to the proceedings of this ufeful body in France.-A gentleman of known character and honour, and who many years enjoyed a poft of confiderable truft and profit under the crown, thought it might be of fome fervice to the interefts of the trade of this nation, to make fome of the proceedings of the council of commerce in France public in the Englifh language; and, accordingly, he tranflated them with that intent, and prefented them to fome of the principal people then in the adminittration, judging that they night be as asceptable to them in particular, as he intended them to be to the public in general.-But, to his great furprize, was told, that they muft by no means be made public; and, therefore, they were fupprefled for above 20 years, and but a fmall part of chem has ever yet been made public, before the whole were incorporated through this dictionary -Is it not extraordinary that any thing which might have a tendency to the intercfts of our raffic fhould be ftifed ?The application of the minifters of France, from Richlieu to the prefent day, to the care of trade, is not only unqueftionably'glaring and manifef, but the good effects of their regu-
lations abundantly confirm it to the whole world. : The fur'prizing fuccefs of the French in navigation (to which, in - our fathers days, they were almoft abfolute ftrangers) is © principally owing, fays a judicious writer, to the excellent laws and ordonnances which have of late years been efta-- 'blifhed in that kingdom, for the regulation of all maritime 'affairs; in which their fummary and eafy method of pro-- ceeding has been found to be very beneficial to all that have - had occafion to be concerned in it. For, the government - finding that the only means to have a powerful navy, was to ' encourage trade and navigation amongft private perions, ' nothing was omitted that could in any manner tend to the ' advancement of commerce.-And, indeed, if we confider 'the prodigious increafe of the naval frrength of France, we ' muft acknowlege that they have been extremely induftrious 6 in promoting trade: and, if we examine the means they ' have ufed, we fhall find them to be fuch as feldom, if ever, ' miffed of the defired fuccefs, becaufe particular care is taken ' to remove all manner of impediments that might obftruat 'the progrefs and improvement of navigation *.-I hope no ' man of fenfe will take amifs what I here fay to the advan' tage of the laws and conftitutions of France, as if I thereby - feemed to have lefs refpect than I ought to have for thofe of ' England: though the French are enemies to us, we fhould ' not be fo much enemies to ourfelves as to reject the ufe of - good laws, merely becaufe they are in force armongt them, - or have been devifed by them. Whatever our practice may - be, I can affure you, that they are never the lefs taken with ' good laws, for being enacted in bad governments: for, on - the contrary, they have, in the matter of trade, confulted ' all the laws and ftatutes in force in any place of Europe; of - which, retrenching what was fuperfluous or inconvenient, ' and fupplying what was deficient with proper regulations - for every fubject, they have certainly compiled the moft - complete fyftem of laws for trade and navigation that ever - Europe faw. Nor would it, in the leaft, be any difhonour * to us to follow their example, in things fo worthy of imi'tation, fince the world acknowleges the reafonablenefs of - that ufeful maxim,

- Fas eft \& ab hofte doceri.'
*They take care that their laws and ordonnances are as well executed as wifely adapted.

The eftablifhment of the lords commiffioners of Trade and Plantations, in this kingdom, is certainly a noble inftitution, and fuch, perbaps, from whence the chambers of commerce in France, as well as that of the royal council, for the regulation of trade, might probably have been derived. It hath, however, with all humble fubmiffion, been greatly lamented, by many hearty friends to the intereft of our trade, that we have not fome other kinds of eftablifhment for the fame laudable purpofes to act in fubordination to the Board of Trade, by laying, from time to time, before their lordhips, during the recefs of parliament, what may be requifite for the confideration of the legillature annually, relative to concerns of trade and navigation.
' For the better encouraging of the trade of this kingdom, 'fays the ingenious Mr Cary, late merchant of Briftol, in ' his Difcourfe on Trade, addreffed to the Speaker, and to the ' honourable the Houfe of Commons, I think it well worthy ' the thoughts of a parliament, whether a flanding commit' tee, made up of men well verfed therein, fhould not be ap-- pointed; whofe fole bufinefs it fhould be to confider the - flate thereof, and to find out ways to improve it ; to fee - how the trades we drive with foreign kingdoms grow more ' or lefs profitable to us; how, and by what means, we are ' out-done by others in the trades we drive, or hindered from ' inlarging them; what is neceffary to be prohibiced, both ¢ in our exports and imports, and for how long time; to © hear complaints from our factories abroad, and to corref' pond with our minifters there, in, affairs relating to our ' trade, and to reprefent all things rightly to the government, ' with their advice what courles are proper to be taken for ' its encouragement; and generally to ftudy by what means ' and methods the trade of this kingdom may be improved, - both abroad and at home.

- If this was well fettled, the good effects thereof would foon - be feen; but then great care mult be taken, that thefe ' places be not filled up with fuch who know nothing of the - bufinefs, and thereby this excellent inftitution become only - a matter of FORM AND EXPENCE.
- In the management of things of much lefs moment, we ' employ fuch who are fuppoled to underftand what they - undertake, and believe they cannot be carried on without - them; whilft the general trade of the nation (which is the ' fupport of our all) lies neglected, as if the coggs that di-- rect it's wheels did not need fkill to keep them true : - trade requires as much policy as matters of - STATE, and can never be kept in a regular motion by ac' cident; when the frame of our trade is out of order, we - know not where to begin to mend it, for want of a fet of ' experienced builders, ready to receive applications, and ' able to judge where the defect lies.
- Such a committee, as this, will foon appear to be of great * ufe and fervice, both to the pariament in framing laws re-- lating to trade, and alfo the government, in the treaties r of commerce they may make with foreign nations.
- As to the firft, it has fometimes been thought, that, when ' that great and glorious affembly, the parliament of Great-- Britain, hath meddled with trade, they have left it worle - than they found it; and the reafon is, becaufe the laws re* lating to trade require more time to look into their diftant - conlequences than a feffions will admit; whereof we have © had many inftances.
- To begin with the French trade; in the 22d Car. II. a ' new impoft was laid on wines, viz. 81. per ton on the -French, and 121 . per ton on the Spanifh and Portugueze: - this difference (with the low fubfidies put on their linnens by
- former acts, in refpect to thofe of other places) was a great 6 means of bringing the ballance of that trade fo much againft " us, thar the parliament, in the 7 th and 8 th of Will. III, ' thought fit to make an act, which, in effect, prohibited all c trade with that nation for 2I years, by laying a great duty ' on the importations thence, in order to prevent a corre-- fpondence, 'till the trade fhould be better regulated.
\& In the $14^{\text {th }}$ Car. II. logwood was permitted, by act of - parliament, to be imported, paying 5 l. per ton duty: the - fame act repeals two ftatutes of queen Elizabeth, againft simporting and ufing it in dyeing here, and fets forth the 6 ingenuity of our dyers, in finding out ways to fix the cos lours made with it; and yet, at the fame time, gave a - drawback of 31 . . 15 s. per ton on all that fhould be exported:
- whereby foreigners ufe it fo much cheaper in their manu-
- factures than ours can here; which proceeded from a too 6 hafty making that law, and being advifed, or rather abufed,
< by thofe who regarded more their own intereft than that of - the nation.
c By an act made I Jac. II. an impoft of 2s. 4 d. per cent. ' was laid on mufcovado fugars imported from the planta-- tions, to be drawn back at exportation. The traders to the < plantations firred in this matrer, and fet forth, That fuch ' a duty would difcourage the refining them here, by hinderc ing the exportation of refined, fugars, which was then con-- fiderable, and carry that manufacture to Holland and Flan-- ders; but the commiffioners of the cuftoms prevailed againft cthem, and the bill paffed: the fatal confequences whereof " foon appeared; for the exporters of mufcovado fugars - drawing back 2 s .4 d . per cent. by that act, and 9 d . per - cent. by the act of tunnage and poundage, foreign mar-- kets were fupplied with refined fugars from other places - cheaper, by about 12 per cent, than we could furnifh the'm - hence; by which means we were beat out of that trade: ' and, though the duty of 2 s .4 d . per cent. was not con-- tinued, on the expiration of that act, by the parliament $2 d$
- Will. and Mar. as they did the 3 d . per pound on Tobacco,
- the bad effects thereof being then apparent, yet it is difficult
- to retrieve a loft trade, trading nations being like expert ge-
t nerals, who make advantages of the miftakes of each other, ' and take care to hold what they get.
- By a flatute $4^{\text {th }}$ and 5 th Will. and Mar. 20s. per ten was
c laid on lapis calaminaris dug here and exported, on an in-
' formation given to the houfe of commons, that it was not ' to be had any where elfe; the merchants, concerned in ex6 porting that commodity, made application, and fet forth, - That fuch a duty would bring in nothing to the crown, - but be a total bar to it's exportation; yet the ad paffed,
and we were like to have made a fatal experiment; for,
- 'till the ftatute of the 7 th and 8th of the fame king, which ' reduced the duty to 2 s . per ton, the exportation ceafed; s and, in the mean time, thofe places which had been dif-- couraged from digging and calcining it, becaufe we underfold them, fet again to work, and fupplied the markets c where we vended ours.
- What injury was done by the act made in the gth and, roth -Will. III. for the more effectual preventing the importation - of foreign bone-lace, \&c. doth fufficiently appear by the pre' amble of that made in the IIth and I2th of the fame reign, for repealing it, three months after the prohibition of our woollen manufactures in Flanders (which was occafioned c by it) fhould be there taken off.
( I mention thefe things with great fubmiffion to the judg' ment of that glorious affembly, the wifdom and ftrength - of the nation; to whom I only prefume, with all humility,
* to offer my thoughts, that it would very much tend to the < putting matters of trade into a true light before them, if - they were firt referred to a body of men, well verfed in the ' true principles thereof, and able to fee through the fophifti-- cal arguments of contending parties, to be by them confi-- dered, and well digefted, before they received the fanction of a law.
- And, as to foreign treaties, I do not think our trade hath ' been fo much bettered by them as it might have been,' for 6'want of fuch a committee; the reprefentations made by ' private merchants (who gene ally differ according as their - interefts clafh with each other) tending rather to diftract,
' than to inform the government; which would not be, if
- their firft applications were made to an experienced com-
mittee, who had judgment enough to fubtract out of them ' what was proper to be offered; by which means, our de' mands might be rendered fhort and comprehenfive.' See the articles France, French America, British America, Marine Laws, Artificers, Manufacturers, Mechanical Arts.
Chamber of Affurance, or Infurance, is a fociety, or affembly, of feveral perfons, merchants, traders, bankers, and otheis, to carry on the bufinefs of infuring. See Assurance. Policies and contracts of affurance, or bottomry, had been many years ufed in France, and long expericnce had fufficiently proved how ufeful they were to trade and navigation, and efpecially to fuch as undertake long voyages; fince, by paying a fmall fum of money for infuring their thips and goods, they prevented great loffes, and even fometimes their intire ruin : yet, before the year 1668, this bufinefs of infuring was not carried on but in the maritime towns of France, and it was then judged moft advantageous to fettle it in the capital. There were indeed, before that time, fome meetings of affemblies of infurance: but, as they were held only by private perfons, and were not authorized by the king's letters patents, they had but little credit, and their policies were neither many, nor for confiderable fums.
It was, therefore, by a decree of the council of ftate, dated the 5 th of June the fame year 1668, that Lewis XIV, then reigning, granted leave to the merchants, traders, infurers, and infured, and other perfons of the city of Paris, properly qualified, who, for fome time paffed, had begun to meet for tranfacting the bufinefs of infurance and bottomry, to continue their meetings, and even to fet up an office, which was to be filed the office of infurance: over the door of which fhould be put the following infcription: The chamber, or office, of infurances and bottomries, eftablifhed by the king; and, on the 16 th of the fame month, the lieutenant-general of the police ordered, by a fentence, that the faid decree of the council fhould be regifered in the rolls of that court.
This chamber was not brought at once to a degree of perfection; but, in 1671, the partners, or affociates, to the number of above 60 , of the richeft merchants, bankers, traders, and citizens of Paris who had a great credit in trade, made in their general affembly, held the 4th $^{\text {th }}$ of December, a regulation, which was authorized by a decree of the council, given the roth of the fame month, and regiftered in the rolls of the police by a fentence of Monf. de la Keynic, lieutenantgeneral of the faid police, the 16th of the fame month of December.
This regulation contains, in 23 articles, the whole government, or adminiftration, of the Chamber of Affurance.
The four firft articles related to the eftablifhing of the general and particular offices; the laft of which is filed the chamber of council.
The fifth fettles to the number of five the particular commiffaries, or judges, for the affairs referred to it by the general office, in which number are included the judges, who report the cafes in a fummary way; and to nine for affairs a little more confiderable; all which judges, however, are to be named by the prefident, and confented to by the parties concerned.
The fixth orders the general affemblies to be held on two Fridays in the month, every fortnight; and the eleventh treats of the particular affemblies which are to meet on the other Fridays.
By the feventh it is ordered, that a catalogue fhall be made of the infurers and infured, with their names and dwellingplaces, to be put in the hall of the chief office.
The eighth fettles the diftribution of filver medals, to be given to 30 of the moft ancient, who fhall be prefent at the general affemblies, at the rate of four to each, there being no diftribution to be made in the particular affemblies, according to the exception fet down in the eleventh article.
The ninth and tenth appoint the prefident, and treat of the meetings of the infurers and infured.
The 12th, 13 th, 14 th, 15 th, 16 th, 18 th, and 21 If 'regulate the functions of the regifter; the manner of keeping the books; the order to be obferved in drawing up and clofing the policies; the carefulnefs, diligence, and difintereftednefs. with which the regifter ought to deliver the deeds and extracts of the chamber; his correfpondences with the fea-port towns, and his own, his cafhier's, or under-cafhier's affiduous attendance at the office.
The 17th orders the judges appointed by the chamber to conform their fentences not only to the conditions fet down and determined in the policies, but alfo to follow in every thing the ordonnances, regulations, ways and cuftoms, of the fea. The 20th declares by whom the oath is to be adminiftred, when required.
The 22d contains regulations concerning the prayers and maffes to be faid for the infurers and infured after their death.
Laftly, by the $23^{\text {d }}$, the chamber appoints a regifter, and refolves that his majefty hall be humbly petitioned to order the authorizing of this regulation, by a decrece of the fuperior council.

## C H A

The chamber added afterwards feveral other articles to thefe regulations, and explained and amended fome others: and all thofe regulations, wherein the public was concerned, were authorized by decrees of the council.
There is a decree of the 13 th of September, 1672 , for leaving the infured at liberty to chufe their debtor; it onders, alfo, that the policies be diftributed among the infurers with prudence and honefty.
Another decree of the 26th of Auguit, 1673 , forbids the infurers and infured to carry the difputes arifing among them, on account of policies of infurance and bottomry, before the ordinary courts of juftice; but obliges them to chufe arbitrators, among thofe who compofe the chamber, to be their judges.
There is a chird ediet, of the it th of January 1675 , relating to the infurances made on a friend's account, and for finding out, when required, the true names of the perfons for whom any thing was infured.
Things continued in that condition'till the year 1683 , when the chamber judging, by the few policies they made out, that it was proper to eftablifh the company upon another footing, devifed feveral projects for fetting up another fociety, upon the fame foundation of the former. But there paffed three years before this fociety was quite formed, when it was eftablifhed by virtue of an edict of the king, given in the month of May, 1686, and regiftered that fame year in parliament, the 3oth of the fame month; by which edict was erected and regulated a general company for infurances and bottomries in the city of Paris.
That edict of creation contains, in 29 articles, the conditions under which the king was pleafed to eftablifh this new company. The chief of thefe articles are, the fecond, which fettles the number of affociates, or partners, at 30 only; the fourth, which orders that the company fhall have a capital fund, or fock, of 300,000 livres, divided into 75 actions, or thares, of 4000 livres each, and regulates the time during which the company is to continue at fix years; the tenth, which orders that the policies of infurance fhall contain a claufe, by which the parties concerned fubmit themfelves to an arbitration, in cafe of any difpute. The isth mentions the appeals from the fentences of the arbitrators, and orders that they fhall be finally determined by a counfellor of ftate, the lieutenant-general of the police, and the provort of the merchants. The 18 th declares, that they who fhall enter into the partnerfip and commerce of infurance, fhall not be degraded from their nobility. The 22d eftablifhes and fettles the fees of the regifter. The 25 th forbids all perfons, but fuch as are members of the company, to carry on any commerce of infurance and bottomry in the city of Paris. The 27th leaves the merchants traders, and other private perfons of the cities of Roan, Nantes, St Malo, Rochelle, Bourdeaux, Bayonne, Marfeilles, \&c. at liberty to continue the bufinefs of infuring, but only upon the fame footing as it was before the date of the edict. Laftly, the 28 th gives the partners leave to draw up amongft themfelves fuch articles and rules as they fhall think proper for the management of the affairs of their partnerfhip, on condition, neverthelefs, to get them authorized by a decree of the council.
In confequence of the latt mentioned article, the partners made a contract among themfelves, on the 20th of May, which contains the terms and regulations under which they enter into partnerfhip; thefe are fet forth in 43 articles, the moft important of which are as follow:
By the firf, the company fettles the number of the partners at 30 , and it's duration at fix years.
The fecond eftablifhes the flock of 300,000 livres, ordered by the edict.
The fixth and twelfth regulate the election of five directors, their power and meetings.
In the $13^{\text {th }}$ it is agreed that the general affemblies fhall be held on Tueldays,every week; and, in the 14 th, that the directors fhall meet every Monday, Wednefday, and Friday. The 16th treats of the books to be kept, of which there are to be feven.
In the 24th they fpeak of arbitrations.
In the 28th mention is made of the general account of the fhips, on which the company thall have lent money, or made infurances, which is to be drawn up every year in December.
The 2gth treats of the dividend of 10 per cent. to the profit of the partners, which is to be paid every year, on the 5 th of January.
The 30 th, 3 ift, $3^{2 d}$, and $33^{\text {d }}$ articles explain the value and quality of the actions, or hares.
The 34 th, 35 th, 36 th , and 38 th treat of the cafh and the cafhier.
Lafly, by the 44th the company retains the liberty of mak-
ing, for the future, new refolutions and by-laws, as occafion hall require, and to get them authorized.
This firft regulation, having the force of a contract, was approved, and the execution of it ordered by a decree of the council, given the 6th of June, 1686 . See the article Assurance.
CHAMPAGNE, a province in France, is bounded on the north by Hainault and Luxemburgh ; on the eaft by Lorrain
and Franche Conté ; on the fouth by Burgundy ; and, on the weft, by the Ifle of France, and by Soiffonnois. It lies between the $47^{\text {th }}$ degree and 30 minutes of latitude, and the 50 th degree and 10 minutes; and from the 3 d degree of longitude eaft of London to the 6th. It's form is like that of the feetion of a pyramid, the bafis of which lies towards Burgundy, and is about 40 leagues long: it's point, fituate towards the Low countries, is 15 leagues; and it's height, from the bor ders of Burgundy to the Netherlands, about 45 leagues. It is watered by the Seine, the Marne, the Aifne, the Aubre, the Veffe, and feveral others of Iefs note. The Meufe, or Maes, has it's fping in this province ; but it foon runs into the duchy of Bar, which it crofles from north to fouth, and returns into this province, and paffes by Sedan and Charleville ; whence it runs through the county of Namur, bifhopric of Liege, and duchy of Guelderland, into Holland, where it falls into the fea near the Briel.
The air here is extremely wholfome, the foil dry and chalky fo that it produces but little wheat, much rye, and chiefly an excellent fort of light wine, the moit delicate in all France, wel! known under the name of Champagne. There are here very good paftures, and the country contains very large plains. It is bordered in many places with noble forefts and mountains, affording not only great variety of game, but mines of iron and metals, of divers kinds. The chief trade of the inhabitants confifts in corn,' wine, and iron, which is tranfported to other parts of the kingdom by means of their rivers, feveral of which are navigable.
Champagne Proper contains,

1. Troyes, the capital city of the province, fituate on the Seine, 20 leagues diftant from Patis to the fouth-eaft, 23 from Rheims to the fouth, 20 from Dijon to the north-weft, and ro from Sens to the eaft. It is an ancient city, and one of the moft confiderable for it's manufactures, which confift in linnen cloths, fuftians, dimities, ferges, druggets, tanning of leather, bleaching of wax, \&c. Their trade formerly was fo confiderable, that feveral foreign princes would accept of no other fecurities for the fums they were to be paid by the French kings, but thofe of the merchants of Troyes*: but the trade hereof, in regard to their manufactures, being removed to other parts of France, that city is not near fo fplendid as heretofore, which is frequently the cafe of many cities and trading towns in other nations, as well as France.

* Does not this thew the dignity and importance of mercbants to a trading nation? See the article Commerce.

2. Chafons, or Chaftoons sur Marne, is another city of trade, pleafantly fituated, in an agreeable plain, on the river Marne, about 17 leagues diftant from Troyes to the north, and 28 from Paris to the eaft. There are two fmall rivers, or brooks, which run through this city, and fall into the Marne, a little beyond it. It is divided into three parts, viz. the city itfelf, the inland formed in it by the river Marne, and the borough.
They have a pretty good trade here for oats, which they fend to Paris. Formerly they fold very confiderable quantities of wine; but that branch of trade is now removed to Rheims. Some years ago they fet up a manufactory of fhalloons, and other thin woollen ftuffs, which fell very well, both within the kingdom and in foreign parts.
3. Ay, is alfo fituate on the river Marne, and remarkable only for the excellent wine produced in it's neighbourhood, and which is greatly efteemed, both in France and in other countries.
4. Rheims, or Reims, fituate in the middle of a plain, where the river Veffe wafhes part of it's walls, which are extended in compafs about an hour's journey. It is diftant 25 leagues from Paris to the north-eaft, ten from Soiffons to the eaft, 22 from Troyes to the north, and 8 from Chalons to the north-weft.
The chief trade here is that of wine, and of feveral thin woollen ftuffs, or mixed with filk, manufactured in this city. Rethelois, or Mazariny, lies near the borders of Luxemburgh, and the country of Liege, in the northern part of Champagne. Part of this country is covered with woods, where there are a great many forges, for the manufacture of iron; the reft abounds in paftures, and is watered by various rivers, the moft confiderable whereof is the Aifne.
Rethfl, or Retel, the capital of Rethelois, lies on the river Aifne, 7 leagues diftant from Rheims to the north, 9 from Rocroy to the fouth, and the fame from Sedan to the fouth-weft. They make here the fame forts of ftuffs as at Rheims, but they are not reckonied of fo good a quality.
Sedan, ftands on the eaft fide of the river Meufe, near the borders of Luxemburgh, 9 miles diftant from Rethel to the north-eaft, and 5 from Charleville to the eaft. It is one of the keys of the kingdom, and, confequently, of the utmoft importance.
They make here a great quantity of woollen cloths, which are as much efteemed as thofe of Holland, and of which they have a confiderable traffic; they alio make ferges and thread laces: but thefe manufactures are not fo confiderable as be-

Fore the moft cruel and perfidious perfecution * of the pioteftants, and the revocation of the edict of Nantes.

* Ought not thefe wicked religious principles to give the true frends of liberty, the Proteltants of this kingdom; as well as thofe of all others, the higheft dereltation of a French government, who will facrifice not only the liberty, but even the trade of their fubjects, for the Caurch's fake? which Thews that this neighbouring nation only encourages trade to inrich the fubjects for a tume, that they may poffefs the more to be fleeced of, when it is the will and pleafure of their grand -

Perthois, or Pertois, is fituated along the banks of the river Marne, between Campagne Proper and the duchy of Bar. It's chief cities are,
m. Vitri-le-François, fituate on the river Marne, 7 leagues above Chalons. This city ftands on a plain; it is very populous, and has a confiderable trade, chiefly in corn, which renders it very opulent. It is the feat of a bailiwick, a prefidial court, and a granary for falt. The Marne, which here begins to be navigable, is of great advantage to the inhabitants, to tranfport their corn to Paris.
2. St Dizier, or Disideripolis, is fituated in a plain, on the river Marne, 6 leagues from Virri-le-François to the eaft, Befides the Marne, this city is watered by another rivulet, which fprings about two leagues higher, towards Bar-le-duc. On the fouth and north of this place there are large forefts, which afford timber for all veffels on the Marne, which are built at St Dizier, in the neighbourhood of which there are alfo a great many forges for the iron manufacture; all which afford a pretty good trade to this city. There is alfo here a granary for falt.
There are fome other fmall towns and cities in this province, which would be tedioufly difagreeable to enumerate, fince they carry on little trade to be taken notice of.
CHARTER-PARTY, an influment or writing drawn between merchants and mafters of fhips, or between the owners and merchants, containing the feveral articles or particulars of their agreement, in regard to freight, and the carriage of merchandizes by fea.
See the form of a charter-party of affreightment, at the end of this article.
A charter-party is made in confequence of the affreightment of a fhip, and the freight is the money agreed to be paid for the carriage of merchandizes by fea.
Ships are freighted either by the ton, or by the great ; and, in refpect to time, the freight is contracted for at fo much per month, or at a fum certain for the whole voyage. If a fhip freighted by the great ihall be caft àway, the freight is loft; but, if a merchant agrees by the ton, or at fo much for every piece of goods, and by any accident the hip is caft away, if part of the goods are faved, fome are of opinion, that fhe ought to be anfwered her freight pro rata: and, when a fhip is infured, and fuch a misfortune happens, the infured commonly transfer thefe goods over to the affurers, towarts a fatisfaction of what they make good, by virtue of their fubfcriptions.
If a fhip is freighted after the rate of 201. per month, that the fhall be out, to be paid after arrival in the port of London; and the fhip is caft away coming from the Downs, but the lading is all preferved, the freight, in this cafe, fhall be paid: for the money becomes due monthly by the contract, and the place mentioned is only to afcertain where the fame is to be paid; the fhip is intitled to wages, like unto a labourer or mariner that ferves by the month, who, if he dies: in the voyage, his executors are to be anfwered pro rata. Befides, the freight is due by intendment of law, on the bringing up of the commodities to the port of London, and their delivery there, and not of the fhip. Mol. Jur. Maritim. 224, 225.
A contract is made'between a merchant and a mafter of a Thip, that, if he carries the merchant's goods to fuch a port, he will then pay him fo much money for freight: in making the voyage the fhip is robbed by pirates, and part of her lading loft, and afterwards the remainder is brought to the port of difcharge : here the fum agreed on for freight is not due, the agreement not being performed on the part of the mafter, and this is a conditional contract. But it is otherwife by the civil. law; for, thereby, the fame is a danger of the feas, which, if not expreffed in naval agreements, yet is naturally implied, and there was no default in the mafter or his mariners: and had thefe goods, which the pirates carried away, been thrown overboard in ftrefs of weather, it would not have worked a difability in the mafter to receive the fum agreed on ; becaufe, both by the common law, and the law marine, the act of Grod, or that of the enemy, fhall not have an effect to work a wrong in actions private: but a pirate is efteemed an enemy in our law. I Brownl. 2 I. I Co. Rep. 97.
It was covenanted by chaster-party, that a fhip fhould return within the river of Thames by a certain time (danger of the feas excepted) and after in the voyage, within the time for the return, the fhip was taken upon the fea by pirates, fo that the mafter could not return to the river Thames at the
exact time mentioned in the agreement: here, in the cafc of Pickering and Berkley, it was refolved, that this impediment was within the exception; and the words, danger of the feas excepted, intend as well any danger upon the feas by pirates and men of war, as dangers of the feas by fhipwreck, tempetts, or the like. And in this cafe, before judgment was given, a certificate of merchants was read in court, by order of Roll juftice, that the taking by pirates are amongit merchants accounted perils of the fea. Stiles's Rep. 132. 2 Roll. Abridg. 248.
If in cafe of a freight a time is fixed and agreed on between the merchant and a mafter of a fhip, \&c. for the commencement and fnifhing of the voyage; it may not be altered by the fupercargo, without a fpecial commiffion from the merchant : if it be agreed, that the mafter fhall fail from London to any part abroad, in two months, and freight is accordingly agreed on, though the mafter doth not arrive at the port within the time, if he begins the voyage during the two months, the freight fhall become due. So where an agreement is made for the fhip to fail the firft fair wind, or opportunity, and does not, yet afterwards breaks ground, and arrives at her port, the freight will be due; for departure intitles the mafter to the freight, and to fay the fhip did not depart with the next wind, is but a circumftance, which, in ftrictnefs of law, is not traverfable: but, if a mafter fhall weigh anchor, and proceed in his voyage, after a certain time agreed on for his departure, he is liable to make good all cafualties at fea, and misfortunes whatfoever. Pafch. 2. Car. I. Poph. 16 I.
In mutual covenants between a mafter of a fhip and a merchant, wherein the mafter of the fhip covenanted to fail with the firft fair wind to Barcelona, and that the mariners fhould attend with a boat to relade the fhip, and then he would return with the firt fair wind to London, and there unload and deliver the goods; and the merchant covenanted to pay him fo much for freight, and fo much a day during his ftaying in port there for demurrage ; and declared that he failed at fuch a time with the firft fair wind, and fo on according to the agreement: to this the merchant pleaded, as to the freight, that the fhip did not return directly to London, but went to Ali cant and Fangier, and made divers deviations, whereby the goods were fpoiled; and, as to the demurrage, the fame was occafioned by the negligence of the mariners, in not attending with the boat to relade the Ihip.-But the plea was held infufficient, and the plaintiff, the mafter of the hip, had judgment ; for the covenants are mutual and reciprocal, upon which each hath his action againft the other, and cannot plead the breach of one covenant in bar of another; and therefore the merchant, the defendant, ought by action to recover his damages fuftained. 3 Lev. Rep. 4 r. Hill. 13 Car. II. If the freighter of a fbip Ihall put on board prohibited or unlawful nterchandizes, by which the Thip is detained, or the voyage impeded, he fhall anfwer the freight contracted for: and when a fhip is out at fea, and taken by an enemy, if aft terwards fhe be retaken by another fhip in amity, and reftitution is made, whereupon the proceeds in her voyage, the contract for freight is not determined; for, though the taking by the enemy divefted the property out of the owners, yet by the laws of war that poffeffion was defewfible; and, being recovered in battle afterwards, the owners became re-invefted : fo that the contract, by fiction of law, is of the fame validity, as if the fhip never had been taken; and the entire freight becomes due accordingly. Styles 220. 7R. 2. Statham Abr. 54:
Where a fhip is freighted out and in, no freight is due 'till the whole voyage is performed; fo that, if the fhip be caft away coming home, the freight outwards as well as inwards becomes lioft: but if goods and merchandize are fully laden aboard, and, the fhip having broke ground, the merchant after that on confideration refolves not to adventure, but will anlade again; by the law marine the freight is deferved. If a fhip in her voyage happens to become unable to perform it, without any fault in the mafter, or the mafter or fhip be arrefted by fome foreign prince or ftate, the mafter may repair his fhip to make her capable of the voyage, or may freight another fhip: and, if the merchant will not agree to the fame, then the freight will be due for fo much as the fhip hath earned, for otherwife the mafter is anfwerable for all damages that fhall happen. And therefore, if the fhip to which the goods are tranilated perifh, the mafter mut anfwer ; but, if both the fhips perifh, then he is difcharged : and if the thip be in a finking condition, fo that there is an extreme neceffity, the goods may be put into any empty veffel palfing by, which in all appearance feems fufficient; and, if that fhip finks or perifhes, he is there excufed. Leg. Oleron. and Rhod. Trin. 9 Jac. I. B. R. 1 Brownl.
If part of the lading be on fhipboard, and, through fome miffortune happening to the merchant, he has not his full lading aboard at the time agreed, the mafter is at-liberty to contract with another, and thall have freight by way of damage for the time thofe goods were on board; for thefe agreements are in law upon a condition precedent, and any failure as to compleat lading will determine the farme, unlefs afterwards affirmed by the maller's confent: this is the higheft juftice,

## C H A

## C H A

that the fhip and maiter thould be free m thete cales; and that by the delay of the merchant, on Ghipping a fmall quantity of goods, the mafter may not lofe the feafon of the year, or be defeated of the opportunity of paflage. Moll. 2i8, 2 Ig. And, on the other hand, if the veffel is not ready, and part of the goods are on hipboard, the merchant may hip the remainder of his goods aboard another veffel, and difcharge the firft mafter; and may alfo recover damages againft fuch mafter or the owners for the reft, which is grounded upon the like reafon as the former: though, by the marine law, chance, or fome other notorious neceffity, will excufe the mafter; but then he lofeth his freight till fuch time as he breaks ground, and until that time he fuitains the lofs. of the flip. But, if the fault be in the merchant, he is to anfwer for the damage to the mafter and the fhip; or, according to the Rhodian laws, fhall be obliged to provide for the hip's crew ten days at his own charge; and, after that, fhall pay the full freight : and, if there be any damage afterwards, the merchant muft run the rifque of that, and not the mafter or owners. By our common law, it feems to be otherwife; for, fo long as the mafter kath the goods on fliphoard, he is to fee them forth-coming. Leg. Oleroh. c. 21. Mich. ${ }_{10}$ Car. I. 3 Cro. Rep. 383.2 Cro.
Where a fhip is not ready to take in, or the merchant not ready to lade aboard goods, the parties are at liberty; but neverthelefs the perfon damnified on either fide may bring an action againft the other, to recompenfe and make fatisfaction for the detriment fuftained: it has been held, that, by the common law of England, the party thus damnified by action of the cafe thall recover damages on the agreement; and by the nayal laws of Rhodes, if there be an agreement, and earneft given thereon, but no writing made, and the fame is broke by the merchant, he lofeth his earneft; and if it be broke by the owners of the fhip, or the mafter, they forfeit double the earneft given. Leg. Rhod. art. Ig.
If any thip or veffel is freighted from one port to another, and fo to divers ports, on what is called a trading voyage, this is all but one voyage, if it be in conformity to the char-ter-party or agreement: and generally the touching at feveral ports by agreement imports not a diverfity, but a voyage entire; but, if the fhip otherwife puts into any other port than what fhe was freighted to, the mafter, by the laws of Oleron, fhall anfwer damage to the merchant; unlefs he be forced in by ftorm, enemies; or pirates, and then he muft fail to the port agreed at his own expence. And where a mafter freights out a hip, and afterwards privately takes in other goods, unknown to the firft laders, he fhall lofe his freight; and if here it falls out, that any of the freighters goods for the fafety of the fhip fhall be caft over-board, the reft of the merchandize fhall not be fubject to the average, but the mafter out of his own purfe fhall make good the fame, Leg. Oleron, Leg. Naval. Rhod. c. 25. See Average. Leakage occafioned by ftorm may in common cafes come into an average : and if freight be taken for an hundred tons of wine, and twenty of them leak out, fo that there is not above eight inches from the buge upwards, the freight notwithftanding becomes dae; and one reafon thereof is, becaufe from that gauge the king can demand his cuftoms; but if they be under eight inches, in the opinion of fome, the freighters may chufe to refign them to the mafter for freight, and thereby be difcharged: but moft perfons conceive otherwife, and hold, that if all the wine had leaked out, (if there was no fault in the mafter) there is no reafon the fhip fhould lofe her freight ; for the freight arifes from the tonnage taken, and in fome places abroad, particularly at Bourdeaux, the mafter is not allowed to ftow the goods, but it is done by a particular officer appointed for that purpofe. Hill. $26 \& 27$ Cat. II. in B. R.
In cafe a fhip fhall be freighted for two hundred tons, or any other number of tons more or lefs, adding or thereabouts, this addition is commonly underfood to be within five tons, the moiety of the number ten, whereof the whole number is compounded. If a charter-party is made, reciting the thip to be of the burthen of one hundred and fifty tons, and freight is agreed for at a fum certain, to be paid at her return; the fum agreed chall be paid, though the fhip falls thort of that burthen ; and, if no burthen is expreffed, the fum mutt be paid: but, if a fhip freighted by the ton thall be found lefs than the burthen mentioned, there fhall be no more paid thatrfor the real tons. Lex. Mercat. Malines, 100. And the lading of a fhip, in conftruction of law, is bound for the freight, which, in point of payment, fhall be preferred before any other debts to which the goods fo laden are liable, though fuch debts as to time were precedent to the freight; and the actions touching the fame the law conftrues favourably for the fhip and the owners. Where a merchant unadvifedly takes freight, and contrals with a mariner that is not 2 mafter of a fhip, he has no remedy againft the owners if a lofs enfues: but the mariner may be fubject to an action. 3 Keb. Rep. 444. 4 Inft. 146.
A mafter of a hip is not bound to anfwer freight to the owners for paffengers, where it appears that they are not able to pay: and if freight be concracted for the tranfport-
ing of womet, and they happen in the voyige to be delivered of children on fhipboard, no freighe becomes due for fuch children. If any paffenger dies aboard; the mafter of the thip is obliged to inventory his effects; and, if none lays claim to them within a year, the mafter becomes proprietor of the goods, but defeafible. Moll: 22 r.
If freight be contracted for the lading of certain cattle from Dublin to Weft-Chefter, and fome of them die before the fhip's arrival there, the whole frelght fhall be paid, as well for the dead as the living: fo where flaves, \&ic. are fent aboard gencrally, and no agreement is made for lading or tranfporting them. But if a contract be for tranfporting flaves or cattle, or that the mafter fhall have fo much for every head or paffenger, there arifes due no more freight than only for fuch as are living at the fhip's arrival at her port of difcharge, and not for the dead. Ibid.
Freight is governed by the contract, when reduced into a writing, commonly called a charter-party, executed between the owners and merchant, or the matter in behalf of himfelf and owners, or himfelf and the merchant, or between them all: in which the mafter or owners generally covenant to provide a pilot, and other officers and mariners, and all things neceffary for the voyage, and for the taking in and delivering out of the lading: And the charter-party doth fettle the agreement of the parties, and what is to be paid by the merchant for the freight, as the bills of lading do the contents of the cargo; [fee Bilis of Lading] and binds the mafter to deliver the goods in good condition at the place of difcharge; and, for performance, the mafter obliges himfelf, fhip, tackle, and furniture, to fee the fame done and performed. Lex. Mercat. Malines, 99 . The common law always conftrues charter-parties, as near as may be, according to the intention and defign of them, and not according to the literal fenife of traders, or thofe that merchandize by fea, but they muft be regularly pleaded. And, if the mafter of a fhip enters into a charter-party for himfelf and owners, the mafter in that cafe may releafe the freighters, without advifing with the owners: though if the owners let out to freight fuch a fhip whereof A. B. is mafter; and he only covenants at the bottom and fubfribes his name, here his'releafe will not bind or affect the owners of the fhip, but their releafe on the other hand fhall conclude the miatter; and the reafon is, for that he is not a proper party to the indenture of chatter-party. Trin. 29 Eliz. B. R. 2 Inft. 673 . If without agreeing for the freight, by charter-party, any goods are put on board, the mafter fhall have freight accord ing to cuftom; and if the goods fhall be fent to the fhip fecretly, without the mafter's knowlege, the fame may be rubjected to what freight the mafter thinks fit. And as to the mafters's anfwering for any goods and merchandize, when coffers, packs, or veffels, or other marked goods are delivered clofe packed or fealed, and afterwards fhall be received open and loofe, the mafter is to be charged for it until on due trlal he be acquitted thereof; alfo he muft anfwer for the damage which rats do in a fhip to any merchandize, for want of kecping a cat, as well as any other damage. Lex Mercat. Malines, ro2.
And, concerning the marking of goods, both the common law and the civil law have great refpect to it, in relation to the fetting the property of the merchandize in the right owner; fo that if one man thall ufe the mark of another, to the intent to do him damage, or bring him into any trouble, action of the cafe lies. 2 Cro. Rep. 47 I. But this relates more to home trade in general, and to afcertain the goodnefs of commodities, than to goods ufually freighted to fea.
A Charter-party of affreightment is drawn in the following form:
This charter-party indented, made, concluded and agreed upon, this day of, \&c. in the year of our Lord, 8 cc . between A. B. of, \&c. mariner, mafter, and owner, of the good fhip or veffel called, \&c, now riding at anchor at, \&c. of the burthen of 200 tons, or thereabouts, of the one part, and C. D. of, \& xc . merchant of the other part, witneffeth, That the faid A. B. for the confiderations herein after-mentioned, hath granted and to freight letten, and by thefe prefents doth grant and to freight let unto the faid C. D: his executors, adminiftrators, and affigns, the whole tonnage of the hold, ftern-fheets, and half deck of the faid fhip or veffel called the, $8 x$. from the port of London to, \&c. in a voyage to be made with the faid hip, in manner hereafter mentioned, (that is to fay) to fail with the firft fair wind and weather that thall happen after, \&uc. or before, \&c. next, from the faid port of London, with the goods and merchandize of the faid C. D. his factors or affigns, on board to, \&c. aforefaid (the daggers of the leas excepted) and there unlade and make difcharge of the faid goods and merchandizes, and deliver all the laid goods in good condition, and as they were delivered to him; and alfo fhall there remain with the faid thip the fpace of 2.1 days, and take, into and aboard the fame fhip again, the goods and merchandizes of the laid C. D. his factors or affigns, and thall then return to the port of London with the faid goods, in the time, \&c. limited for the end of the faid vogage: In confideration whereof, the faid C. D.

## C H A

## C H E

for himfelf, his executors and adminiftrators, doth covenant, promife, and grant, to and with the faid A B. his executors, adminiffrators, and affigns, by thefe prefents, that he the faid C. D. his executors, adminiftrators, factors, or affigns, fhall and will well and truly pay, or caufe to be paid, unto the faid A. B. his executors, adminiftrators, or affigns, for the freight of the faid hip and goods, the fum of, \&c. (or after the rate of 41 . of, \&c. the ton, for every ton of goods and merchandizes that fhall be unladen, of and from the faid Thip, or at the rate of, \&c. monthly, accounting the months as they fhall fall out in the kalendar, for every month that the faid thip thall be in performing the faid voyage, and fo in proportion for a fhorter time than a month, to commence from, \&c. and continue 'till the fhip's return to, \&c.) within 21 days after the faid hip's arrival, and goods returned and difcharged in good condition at the port of London aforefaid, for the end of the faid voyage: and alfo fhall and will pay for demurrage (if any fhall be by the default of him the faid C. D. his factors or affigns) the fum of \&c. per day, daily and every day, as the fame flall grow due. And the faid A. B. for himfelf, his executors and adminiftrators, doth covenant, promife, and grant, to and with the faid C. D. his executors, adminiftrators, and ar figns, by thefe prefents, that the faid hip or veffel fhall be ready at the port of London, to take in goods by the faid C. D. on or before, \&c. next coming : and the faid C.D. for him felf, his executors, \&c. doth covenant and promife, within ten days after the faid fhip or veffel fhall be thus ready, to have his goods put on board the faid fhip, to proceed on the faid voyage; and alfo on the arrival of the faid fhip at, \&ct within ten days, to have his goods ready to put on board the faid hip, to return on the faid voyage. And the faid A. B for himfelf, his executors, and adminiftrators, doth further covenant and agree, to and with the faid C. D. his executors, adminiftrators, and affigns, that the faid fhip or veffe now is, and, at all times during the faid voyage, fhall be, to the beft endeavours of him the faid A. B. his executors and adminiftrators, and at his and their own proper cofts and charges, in all things made and kept ftiff, ftaunch, ftrong, well apparelled, furnifhed and provided, as well with men and mariners, fufficient and able to fail, guide, and govern the faid thip, as with all manner of rigging, boats, tackle, furniture, provifion and appurtenances, fitting and neceffary for the faid men and mariners, and for the faid fhip during the voyage aforefaid. And laftly, for the performance of all and fingular the covenants, grants, articles, and agreements, herein contained, on the part and behalf of the faid A. B his executors or adminiftrators, to be done and performed, the faid A. B. binds himfelf, his executors and adminiftrators, and efpecially the faid fhip, with her tackle, apparel, and furniture, unto the faid C. D. his executors, adminifrators, and affigns, in the penal fum of roool. of lawful money of Great-Britain, by thefe prefents. In witnefs whereof the parties above-named have to this prefent charter party interchangeably fet their hands and feals, the day and year firf above written. For more matter upon this head, fee the articles Freight, Commanders of Ships, Shipping, Marine Affairs.

In regard to the peculiar forms of charter-parties, it muft be oblerved, that they are various, like other legal written infruments, according to the conditions of the agreements made upon thefe occafions.
Some of the principal ordonnances of France, in regard to charter-parties, are as follow, viz.
I.

All articles for freighting of fhips fhall be reduced into writing, and agreed to by the merchants that freight, and the matter or owners of the 'hips freighted.
II.

The mafter fhall obferve the orders of his owners, when he freights the fhip at the place of their refidence.
III.

The charter-party fhall contain the name and burthen of the veffel, the names of the mafter and freighters, the place and time of the lading and unlading the freight, the time the veffel is to ftay at the refpective ports, and the convention about demurrage; to which the parties may add fuch other conditions as they pleafe.
IV.

The time of the lading and unlading the goods thall be regulated according to the cuftom of the refpective ports, except it be determined by the charter-party.

V .
If a fhip be freighted by the month, and the times of the freight be not regulated by the charter-party, it fall only fommence from the day that the fhip fhall fail.
VI.

He who, after having received a fummans in writing to fulfil the contract, refufes it, or delays it, thall make good all the lofs and damage.
VII.

But if before the departure of the fhip there fhould happen an cmbargo, occafioned by war, reprifals, or otherwife, with
the country whither the fhip is bound, the charter-party fhall be diffolved without any damages or charges for either party, and the merchant fhall pay the charges of lading and unlading his goods; but, if the difference be with one another, the charter-party fhall be valid in all it's points.
VIII.

If the ports be only fhut, and the veffels ftopped by force for a time, the charter-party fhall fill be valid, and the mafter and merchant hall be reciprocally obliged to expect the opening of the ports and the liberty of the hip, without any pretenfions for damages on either fide.
IX.

However, the merchant may, at his own charge, unlade his goods during the embargo, or fhuting up of the port, upon condition either to lade them again, or indemnify the mafter. X.

The mafter fhall be obliged, during the voyage, to have aboard the charter-party, and the other neceflary deeds concerning his lading.

## XI.

The fhip, rigging, and tackle, and the freight of goods laded, fhall be refpectively, affected by the conventions of the charter-party.
CHEMISTRY, as defined by that great mafter thereof, Boerhave, is an art which teaches the manner of performing certain phyfical operations, whereby bodies cognizable to the fenfes, or capable of being rendered cognizable, and of being contained in veffels, are fo changed, by means of proper inftruments, as to produce certain determined effects, and, at the fame time, difcover the caufes thereof, for the fervice of various arts.

## REMARKs.

This being a branch of bufinefs of great extent in itfelf, as well as beneficial to various arts and trades, it is neceflary to be taken notice of in a work of this nature. We fhall, therefore, treat the fubject in a manner fuitable to our general defign. To which end, I fhall not trouble the man of bufinefs with what he may find in other authors, if his curiofity fhould lead him further than I would prefume to give him an idea of. Such people of bufinefs who have not had fomething of a tafte for philofophic arts, which tend to promote general traffic and navigation, may think this a part of knowlege ufelefs to them in their commercial province, and therefore defpife it.
To difabufe and undeceive traders upon this occafion, we need only enter a little into the nature of chemiffry, and it's important utility to a great variety of arts and trade will glaringly difplay itfelf.
The whole of chemiftry may be comprehended under the art of refolving bodies into their principles *, and of conftituting new compounds from thofe principles, by means of fire, air, water, earth, and particular menfruums: fo that the one may properly enough be diftinguiftred by analytical, the other by fynthetical chemiftry; the former reduces bodies to their component matters, the latter puts thefe component matters together again, in various manners, and thereby forms a large fet of new productions, that would be abfolutely undifcoverable in nature, without the interpofition of this art. Such productions, for inftance, are brandy, foap, glafs, vitriol, \&c.

* By principles the found praftical chemift does not undertand the original particles of matter, whereof all bodies are, by the mathematical and mechanical philofophers, fuppofed to the mathematical and mechanical philofophers, fuppoled to
confift. Thofe particles remain undifcrnable to the fenfe, conifft. Thole particles remain unciicernable to the fenie, though afifted with the moft finithed inftruments; nor have
their figures and original differences been determined by a their figures and original differences been determined by ${ }^{2}$
joft induction. Leaving to other philofophers the difquijuft induction. Leaving to other philofophers the diqui-fition of primary corpuicles, or atoms, whereof many bocisly
and worlds have been formed in the fancy, we fhall only fay, that genuine chemiftry contents itfelf with groffer principles, which are evident to the fenfe, and known to produce effects in the way of corporeal inftruments. Thefe principles are fufficient to anfwer the end of practical chemiftry, which confints in experiments, and the explanation of facts, and fenfible objects. But, when once men leave the oracles of fenfe, and introduce metaphyfical fpeculations into chemiltry, it is then the art becomes a corrupt fountain of hypochefis and illufion, which ever has, and ever will, only diftract, inftead of juftly inftructing mankind in matters of folid ufe and advantage.
To become, therefore, the ufeful and judicious chemift, the rute is, to keep clofe to information of the fenfes, the laws of induction, and the ufe of material and fenfible principles. -Thefe fenfible principles, as far as we know them, are expreffed by the common words water, earth, fall, fulphur, and mercury.
Though thefe definitions may be inadequate, yet they af ford fignificant marks, whereby they may be readily known and ditinguifhed for ordinary ufe. Jun definitions can only be drawn from a full and perfect difcovery of the nature and properties of bodies, which does not feem to be in the power of man to know ; nor do we meet with thele princlples in a pure and perfect fate, unmixed with other bodies. When they appear to the fenfes to be thus far purified, they are the principles we mean, or what are emphatically called chemical principles, though they may be every one of them deftructible in that form; but then they ceafe to be chemical principles.

To explain our.meaning by experiments, fo as to be underfood by thofe who have never been converiant with thefe hings, (for there is no myftery in them) people of the plaineft fenfe are the beft turned to underftand plain truths, founded on the plain and unqueftionable authority of their fenfes.
The experiments I have pitched on being the moft familiar I could meet with, I hall make choice of them. The attentive reader will eafily difcern their application to other fubjects.

## EXiperimenti.

That vegetables are refolvable, by fire, into four of the chemical principles, viz. water, oil, falt, and earth.

Take two pounds of wormwood, cut fmall, and put it into a glafs retort, in a fmall fand-heat; diftil with degrees of fre, and a frequent change of receivers, and you will obtain ( I .) an aqueous liquor; and (2.) an oil. Taking out the remainder, and burning, or calcining it, in the open air, it will turn to a grey kind of afhes; which, boiled in fair water, will, (3.) communicate a falt tivereto. Let the folution fland at reft for forme time; decant the clear liquor, and evaporate the fuperfluous water, and the falt will be obtained in a dry form ; and (4.) there will remain, at the bottorn of the water, an earchly fubftance, wherein the afhes were boiled.
This experiment, being duly attended to, is very inftructive, and fhews that the chemical principles, before-mentioned are not imaginary, or fictitious things, but things palpable, and evident to the fenies: for we have here a water, an oit; a falt, and an earth, all afforded us by a vegetable fubject.
This experiment may be made general, without much variation : for all the vegetable fubjects, hitherto examined in thi manner, refolve themfelves into the fame general principles; they differ only (1.) in refpeet of the kind of falt, which in fome is more volatile, in others more fixed ; in fome acia *, in others alkaline $\dagger$ : and (2.) In the nature or particular properties of the oil; which, in fome plants, is more thin and fluid, in others more grofs and vilcous, \&c. But all the principles thus obtained agree to the general definitions above laid down. So that there appears to be no vegetable in nature but what is thus refolvable into water, oil, falt, and earth.

* By acids are meant all thofe things that tafte four; as vinegar, tartar, juice of crabs, lemons, \&rc. fpirit of nitre, fpirit of falt, \&c. and which, when mixed with a due proportion of alkali, conftitute a natural body, wherein neither acid nor alkali prevails; whence it alters not the colour of fyrup of violets.
+ Alkali, is a word of extenfive fignification, and chemically denotes a large tribe of bodies: for all bodies may be chemically confidered under three tribes, or as being either alkalies, acids, or neutrals. Alkalies have this effential property, that, when mixed, or united with acids, they conftitute nettrals. But a more common indication of an alkali is, that it turns fyrup of violets green, as an acid turns' it red; whillt the admixture of a neutral body does not alter the colour of that fyrup. Thus pot-afh, falt of tartar, and all fxed vegetable falts, as likewife all volatile animal falts and fpirit, are arificial alkaties; as chalk, the teftaceous bodies, \&c. are natural alkalies. Thus, in the vegetable kingdom, onions, leeks, gartic, muftard, \&c. are alkaline; as forrel, wood-forrel, the juice of lemons, oranges, verjuice, \&c. are acid. Their difference, allo, is manifeft from the tafte, when the habit of thus diftinguilhing them is required.

Toobtain thefe principles pure, we muft (r.) Separate all the oil that may chance to remain fufpended in the water. This is effected in a confiderable degree by the filtre; which, being kept continually filling up, fo as that the lighter oil may not come in contact with the paper, the aqueous part is thus tranfmitted tolerably free from oil. (2.) But ftill there may remain fome fmall proportion of oily and faline matter therein. If the faline matter be acid, the way to deftroy it is, by mixing a little chalk, or any pure and fixed alkaline falt, with the liquor, whereby, alfo, more of the oil will be fet at liberty: fo that, being now filtred again, and gently diftilled with a foft heat, the aqueous part will rife much purer and pais for water in the judgment of the fenies. (3.) If the plant were alkaline, and an alkaline falt abounds in the liquor, let it be made neutral with one that is acid; and thus, again, the water may be feparated pure, by means of the filtre, and rediftillation. This is the method of manifefting to the fenfes that the chemical principle water is naturally lodged in, and may be feparated from, all vegetable fubitances.
In order to procure the fulphur or oily principle pure, the unctuous matter obtained by this general procefs may be walhed from its adhering falts, and grofler earth, in warm water, barely by fhaking them in a glafs together ; then feparating the oil from the water, by means of the common feparating glafs *, where, if the oil be fpecifically heavier than water, it finks to the bottom, and may be fuffered to run
Vol. I.
out firf: if fpecifically lighter, it floats at top, and may, by the finger applied to the bottom of the glafs, or other contrivance, be kept behind, when all the wacer and feculent parts are run from it.

* Separating glafs, is a bellied glafs, open at top, and ending in a hollow thembelow; fo that a mixture of oil and water being poured into it, and funfered to refl 'rill they feparate, the water may be feparated from the oil.

To obtain the faline principle pure; (r.) If it be of the volatile urinous kind, the matter may be diffolved in water, and made to pais the filtre, then fet, in a gentle heat, to fublime; for it will thus rife, and leave the water behind, as being much more volatile than that. (2.) If it be required fitl purer, the beft method hitherto known is, to fublime it from finely pulverized chalk; then to faturate it with a clean fpirit of fea falt, fo as to convert it into a true fal-ammonac which being mixed with falt of tartar, and now again fet to fublime, the volatile falt will thus rife again highly purified, fo as long to retain it's whitenefs, (3.) But, if the faline matter obtained be of the fixed kind, the method of purifying it is, to diffolve it in fair cold water fuffer the folution to fubfide, then decant the clear liquor, and evaporate it in a clean iron pan, or glafs veffel, 'till, with continual ftirring, it becomes dry and white. (4.) Or, to purify it ftill further, and render it perfectly white, let it be put into a clean crucible, and expofed for a while amidft the flame of burning charcoal, without melting.
Laftly, to obtain the earthy principle in in's purity, let it be thoroughly calcined, boiled in feveral waters, to get out all it's falt, and then dry it over a clear fire, or in the fun. Apd when thefe feveral operations are performed in perfection, it is then we obtain what we properly mean by the chemical principles of vegetables.
And though it be not always neceffary for the purpofes of che mifiry, or the common calls of life, to bring thefe principles to the degree of purity here mentioned, yet there are many cafes that ablolutely require them to be fo purified; otherwife the operations wherein they are employed may eafily mifcarry, which we defire fhould be noted, as one confiderable reafon of the failure of particular experiments and operations, both in chemiftry itfelf, and many of the chemical arts, of glais-making, diftillation, \&c.

## The ufes of this experiment

are numerous; we hall touch on a few of them. (1.) We may learn from it, that thefe chemical principles abound in different quantities in different vegetables, or in the fame, at different feafons or times of growth. For inftance, olives, almonds, mace, \&ic. contain fuch an over-proportion of oil, to the other principles, that it may be copioufly obtained barely by preffure. The vine, in the fpring, affords a larger proportion of fixed alkaline falt than at any other feafon; and the fame holds of the wood ufually burnt for pot-afh. And thus we find that the aqueous and faline principles prefide in vegetables in the fpring, but the oily in the fummer and the autumn; that all young plants abound more with water than fuch as are full grown: and that oil is moft plentifully contained in the oldeft trees, and thofe of the colder climates: whence we are directed to the proper times and feafons, and places, for felling the timber defigned for pitch, pot-afh, fuel, and charcoal, \&c. ${ }^{3}$. This, duly attended to, may be of great advantage to our plantations.
By applying this experiment to different vegetables, it has been found that vegetables are naturally diftinguifhable into two grand tribes, viz. the acid and the alkaline; the firft affording a volatile acid, the other a volatile alkali, upon dry diftillation. Thus guaiacum, cedar, box, cinnamon, cloves, forrel, mint, balm, \&c. afford an acid; but garlick, leeks, onions, horfe-raddifh, fcurvy-grafs, muftard, \&cc. afford an alkali; which, when rectified, is hardly diftinguifhable from that of animal fubftances, fo as nearly to refemble the firit and falt of harthorn
This experiment alio fhews us the methods of making, or procuring, tar, charcoal, fixed falt, and elementary earth, from vegetables; four capital particulars in ufeful arts and trades. Tar is the fcorched oil of unctuous wood, forced out by fire, as the grofs oil is in the prefent experiment. Charcoal is wood burned clofe to blacknels. Soap, a mixture of fixed falt and oil; glafs, a mixture of earth and fixed falt; and elementary earth makes all the tefts and copels for the refining of gold and filver. See Refining.
The prefent experiment fhews, alfo, the nature of vegetable fumes; whereby, in the way of animal curation, filh and flefh are long preferved free from putrefaction or corruption for wherever green wood, or any acid vegetable matter is burned, the acid particles go off with the froke, and in this form penetrate and lodge in animal fubflances expofed thereto ; whereby this moke adts upon thern in the fame manner as the fume of firit of fea-falt, or nitre, would do. Apd whether it be not a nitrous acid which thus tinges the hams, herrings, \&c. red in drying, may deferve examination.

6 Q
This

## C H E

This experiment fhews that the force of fire is not fufficient to reduce ai vegerable fubftance to afhes, without the help of air; and that fo long as the fixed oil, which caules the blacknefs, remains in a vegetable coal, it will afford no fixed falt by decoction in water: whence we have a rule in the making of pot-afh, and all the fixed falts whatever, to a greater advantage, by thoroughly calcining the fubject, fo as to leave no fixed oil behind. This may prove a matter of great ufe, both at home and in our plantations.
And hence we are, allo, inftructed in the phyfical nature of a vegetable coal, and fee how it may have fuch confiderable effects upon metals, in the nature of a flux, fince we find it contains a fixed oil, firmly united to the matter of a fixed alkali : whence, to ufe this coal, as a flux, is the fame thing as to ufe a fixed falt, intimately united with a fixed oil, which may operate powerfully upon ores, as we fhall fhew under the arricles Metallurgy, and Iron.

## Experiméntil.

That animal matters are refolvable, by fire, into the four chemical principles, water, oil, falt, and earth.
Take four pounds of animal bones, that have been well boiled, to feparate their marrow, or fat, and then thoroughly dry them, and break them into fimall lumps: put them into an earthen retort, to which lute a glafs receiver, and diftil with a degree of heat, in a naked fire. There will firt come over, in drops, an aqueous limpid liquor, which referve apart, by changing the receiver; then, increafing the fire, there will come over white fumes, a volatile falt, and a quantity of oil. When the veltel is cool, the bones will be turned black in the retort; but, being calcined in a naked fire, with the admifion of the free air, they are turned white : then, boiling thefe white alhes in water, you will find, by evaporation, that they communicate no fixed alkaline falt thereto.
This experiment is general, or fucceeds, with little variation, in all other animal fubjects, whether they be flefh, blood, rerum, fifh, birds, whites of eggs, horn, hair, hoofs, fllk, or the like; the principal difference being only that thefe fubftances refpectively contain more or lefs earth, water, falt; and oil.

The ufes and application of this experiment.
The principles feparated by the prefent experiment appear to be, in general, the fame with thofe before gained from the vegetable fubject: they may be feparately purified and made elementary, after the fame methods as are there directed. Thus, by comparing the productions of both proceffes together, we thall find that we have a water, an oil, a falt, and an earth, in both cafes. But in this cafe all the falt is volatile, the afhes containing no fixed falt at all: whence this appears to be the principal chemical difference between vegetable and animal fubjects, that the vegetable kind yield a fixed falt by calcination; and the animal kind one that is volatile by diftillation. But this holds only of the acid fpecies of vegetables; for the alkaline fpecies yields little or no fixed falt upon calcination : fo that, between the alkaline tribe of veretables and the whole animal kingdom, there feems to be little difference, neither in this, or any other chemical refpects. But, though fome difference fhould be found between the animal and vegetable oils, as there is thought to be in the making of foap, and fome other inftances; yet the principles of animal and vegetable fubjects may be juftly reputed the fame, as both equally agree to the general definitions of water, oil, falt, and earth, when their feveral principles are reduced to the fame degrees of purity.
And hence fome advantages might be derived to ufeful arts and trades, by making the fubjects of one kingdom ferve inftead of thofe of the other, when one is cheaper than the other. Thus a volatile firit and' falt, like thofe of harthorn, may be drawn from the alkaline fpecies of vegetables, and all putrified plants; at leaft from bones purged of their fat by boiling in water. So folid foap is made of vegetable oils as well as of animal fats; and a volatile animal, and a volatile vegetable falt, may be each feparately converted into falammoniac, at a cheap rate.
Whence we learn, that the correfpondent animal and vegetable principles may, in many cafes, be ufed for one another, fo as to render volatile falts and oils cheaper, and leften the expence attending their ufe in particular arts and trades; which is the great end we aim at, by familiarly leading the reader into fome knowlege of this art, upon the right and fundamental principles thereof.

## EXPERIMENTIIT.

That certain mineral, or metallic bodies, may contain four of the chernical principles, viz. fulphur, falt, earth, and mercury.
Take two ounces of native cinnabar, reduced to fine powder, and mix it with fix ounces of quick-lime; put the whole into an earthen retort, and diffil into a bafon of water; you
will find a quantity of tunning mercury at the botom thercof.
The matter remaining behind in the retort, being boiled in a lixivium of pot-afh, and the folution precipitated with allum, thus lets fall a fine kind of bimftone, called lac fulphuris, which will fublime into true flowers of brimftone, that may be melted and run into a roll. This brimftone alro being burned, in the common method, under a glafs bell, refolves into an acid liquor, leaving an uninflamable terreftrial matter behind ; which, beng treated as an ore [ce Ores] fometimes affords a fmall proportion of metal, either of iron or copper.

The ufe of this experiment.
This is very inftrulive, and might lead to confiderable difcoveries. It fhews, that a true running mercury may lie concealed in metallic ores, or ftony earths, where thofe who have no knowlege of this art, would not fufpect; for native cinnabar is but an ore of mercury, confifting, as we fee, of two different matters, fulphur and quickfilver ; which are feparable by diftillation with quick-lime, or iron filings, and fometimes by long boiling in a ftrong alkaline lixivium. This experiment might be profitably applied, perhaps, to marquifites, mundics, and valious other mineral fubftances, and ftony fulphureous matters, that are rejected as worthlefs. We may alfo obferve, from this experiment, that, as common brimfone refolves itfelf into an acid liquor, and an earthy matter, we find that certain mineral metallic fubftances will, by a proper analyfis, afford the four chemical principles abovementioned, viz. running mercury, fulphir, falt, and earth. But it is not fuppofed to hold univerfally, that all mineral fubftances thould afford a running mercury upon their analyzation; but fuch of them only as are properly metallic. Upon the whole, therefore, it may be concluded, that the five principles, viz. water, earth, falt, fulphur, and perhaps mercury, are the true chemical principles of vegetable, animal, and mineral fubftances.

Of fynthetical chemiftry, or the art of recompofing bodies after their analytical diffolution.
This is extremely dificult to effect univerfally; yet it may be done in fome cafes, fo as that the recompofed body thall be perfectly undiftitguifhable, by the fenfes, from that which had never been feparated by the fire. And, if the art of chemiftry were perfect, it would be able thus to recompore, at leaft in fome tolerable manner, all the bodies it divides. But, this branch of chemiftry being rather of philofophical * than ordinary ule, we fhall only give one inftance of it in regard to brandy, which will convey an idea to our meaning.

* It would, however, thew an extreme perfection and power in the art of chemiftry, to be able to do this; and prove, either that bodies might be taken to pieces by the fire, without altering, or injuring their natural parts; or, at leaft, that any accidental alteration, brought upon them by the analy fis, might eafily be rectified, or abolifhed, by a recompofition.

## Experiment.

Brandy refolved into it's component parts, and recompofed.
( I .) To a pint of brandy let be added half a pound of dry falt of tartar; then fet the containing glafs in a gentle heat of fand, where you will obferve the falt to diffolve into a liquor, by attracting to itfelf the water of the brandy, leaving a fpirit of wine floating on the top. This fpirit was decanted upon a little more dry falt of tartar, and found that this fecond falt fcarce relented. Then, pouring the fpirit into a glafs receiver, it was diftilled gently over, and thus obtained a highly rettified fpirit of wine. (2.) In the fame manner was diffilled the faline folution, left behind upon decanting the firit; and thus obtained the water of the brandy in confiderable purity, leaving the falt of tartar in a dry form behind. (3.) Lattly, were mixed the fpirit and the water together; and the brandy was found recompofed, without any confiderable alteration. See Brandy, Rum.

## It's ufe.

From hence we may judge of the recompofition of wine, after it's fipirit, or brandy, has been diftilled from it; and, alfo, of the recompofition of vinegar from it's frisit and refiduum; both by means of a new fret, or a light fermentation: and, if the operation in thefe cafes be dextroufly performed, the recompofition will be juft and perfect. To perform many operations of this kind complet;, proper intermediate fubftances are requifite, which are either fermentable, or in a fermenting ftate; fuch as a little new wine, fugar, juice of the grape, or the like ; for thefe fubftances, coming to work on the liquor, lay hold both of their aqueous, fpirituous, and faline parts, fo as to bring them into the fate of mixture, or arrangement, wherein their perfection, as wines and vinegars, depends. And how far this method of recompofition may be extended, feems hitherto little confidered.

In the prefent experiment for the recompofition of brandy, there are two confituent parts concerned, viz. alcohol and phlegm, which renders the feparation and combination fo puch the eafier and more exact ; nor is there any occafion here for an intermediate fubftance, to procure, or recover, he natural union, becaufe alcohol readily mizes with water, barely by fhaking, and this as intimately as is neceffary to the conititution of brandy.
This experiment fhews an ufeful method of obtaining firit of wine from brandy, without diftillation; and may be practifed o great advantage in the large way of bufinefs, by adding potaft to the brandy once diftilled, and brought to a fize commonly called three-fifths, that is, three parts alcohol and two of water: for the pot-afh fo employed is eafly recoverable, without much lofs, barely by boiling the lixivium in an iron pot, where, being made dry, it will ferve for the fame purpofe again. This light experiment may prove of eminent ervice where large parcels of brandies are to be rectified in a fmall compafs of time.

## REMARKS.

It is not our intention, under this general head, to give any thing of a fyftem of chemiftry; but the application of it to a great number of important arts and trades will appear throughout this work, as, indeed, it has done already, and that in fuch a light as will not only lay a foundation for the improvement of numerous branches of trade already eftabiifhed, but tend to the inveftigation of new arts and new trades: for chemiftry, fkilfully applied, may be juftly faid to be the great parent of numberlefs branches of commerce, and numberlefs arts, whereby to render them more beneficial to thofe therein concerned.
So that chemiftry, thus adapted to the intereft of the men of bufinefs, will free it from that difefteem it bas met with from many, which has proceeded from a want of knowing it's proper office, extent, and ulefulnefs; and from the frequent mifapplication of it to things of a delufory or phantaftical nature, whereby well intentioned perfons have been egregioully impofed upon, by attful and defigning villains; who, under the confident pretence of fuperlative knowlege in this art, have extorted money from the unexperienced, and have proved themfelves as fuperlatively ignorant in the art, as infamoully deteftable in their conduct *. This is the abule of the art.

- And here I am free to acknowlege, that I was, fome years fince. Shamefully impofed on by one of thofe chemical jugglers, who go to and fro feeking whom they can devour As ir may be a uleful precaution to guard others againft the like impofition, it may not be unacceptable to relate the cafe. I was interefted in partnerfhip with an eminent merchant of the city of London, in a large manufature of lead, which was fettled in the north of England. The perions, who had induced us to this undertaking, making extraordinary pretenfions to fuperior fkill in the arts of fmelting and refining of that metal, we were prevailed on to follow the directions ; who put us to no little expence in buildings, fuitable to their intended fchemes of operation. - The gen tleman with whom I was concerned, and myfelf, being, at that time, quite ignorant in matters of this nature, we relied on the extraordinary judgment of our fmelter and refiner, whom we foon found to be only pretenders, and intended to live upon us, as long as they could carry on their delufion.-From this, and fome other circumitances of grofs deceit in the fame way, upon my partner and felf, 1 was, from that time, determined to make chemiftry, both in theory and practice, one branch of my fludy; and accordingly 1 confulted lord Bacon, Boyle, Boerhaave, Sh:w, Geoffroy, Lemery, \&c. and the tranfactions of atl the philofophical focieties of Europe ; and, at the fame time, added practice to my theory, from the beft information I could obtain. Thefe meafures have led me to fuch a difcernment in this branch of philofophy, as I flater myfelf, w.ll enable me not only to point out the means to prevent others being impoied on, but to hew bow this art may be appled to the advancement of feveral important branches of trade, according to the fentimenis of thofe who have excelled herein. In the mean time, I fhall only defire the reader to pay what regard he thinks proper, to the following fhort rules for his conduct in this art, the fubftance of which is given us by that great mafter thereof, the learned Dr Shaw.

Let the firft rule be, with care and diligence, to oblerve the procefles ufed by nature, in the production of all thofe things we would endeavour to imitate : for nature, as a moft expert chemilt, employs the very inftruments which men alfo employ, viz. fire, water, air, and earth.
To illuftrate this rule by an example; it appears, by numerous inftances, that there is an acid or faline liquor naturally contained in the bowels of the earth; which acid, there mixing with various kinds of earthy matters, as a menfruum, changes their natures, or makes them appear under different forms. Hence common brimftone, allum, the native vitriol, \&c. feem to have their origin.
For by an exact fcrutiny, and attentive confideration, it appears, that, when this general acid diffolves a certain bituminous earth, it makes brimftone; when a chalky earth, allum;
when iron or copper, vitriol, \&c. And accordingly, by ufing the fame kind of general acid (which may be procured by burning brimftone under a glafs bell) in the farne manner as nature feems to employ it, we can likewife, by art, produce brimftome, allum, or vitriol, when and where we pleafe And thus, if we could univerfally difcover the proceffes and inftruments which nature em, livy; in the production of her effects, we fhould have certain rules for imitating her.
Our fecond rule is, to gain a habit of eransfering, diverffying, enlarging, and improving an experiment, 'till it ends in fome certain ditcovery, either of light to the underftanding, or of ufe in life; one of which poins all juft experiments will end in, when duly profecuted, and judicioully weighed and confidered.
For unfuccefsful experiments are no lefs inftructing than thole that fucceed, which ought to be well remarked. The head muft in all cafes co-operate with the hand, ; fo that the mind fhould be ever cafting atout to difcover the caufes of failure, as well as of fucceif. This is-a fagacity which may be procured by ufe, and turned into a habit of invention and difcovery: fo that no fingle experiment fhall be performed but fome advantage will be immediately derived from it; nor no experiment be made, without fome folid grounds of hope for fuccefs.
The third rule to make this art to turn to advantage, with regard to the improvement of any branch of trade that we may have in view, is, to profecute experiments in an orderly feries; and to let the inquiry fuit the genius ahd temper of the enquirer, fo that it may be profecuted by him with vigour and pleafure.—.This hath been the practice of the greateft mafters in this art.
Thus, if any one fhould be averfe to the ure of fire and furnace, he may ftill improve chemiftry and arts, or perform many ferviceable chemical cperations, without much apparatus or expence, or without the utenfils and inftruments commonly employed in that art: which may therefore be as conveniently practifed within a ftudy or a parlour, as in a laboratory. For there are many chemical enquiries, that may be profecuted without the ufe of fires and furnaces: and even fuch difpofitions as are more delighted with fpeculation than practice, may greatly contribute to the improvement of chemiftry, by forting, ranging, and digefting experiments into tables; fhewing what they prove, and how far they reach; how far they fall fhort, and how they may be carried farther: others might, to advantage, employ themfelves upon drawing things of ufe in life, from the experiments already known and publifhed: and, laftly, others might from a due confideration of experiments, deduce new directions and rules of pradice for producing in a fure and contant manner, much greater effects than are ufually hoped for.
CHESHIRE, or the county palatine of CHESTER, is divided from Lancaltire on the north, by the river Merfee; has a corner of Yorkifhire on the north-eaft, Derbythire and Staffordihire on the eaft and fouth-eaft', Shrophire and part of Flinthire on the fouth, and Derbyhire, the weft of Flintflire, and the Irifh fea on the north-weft corner, where a Cherfonefe, fixteen miles long and feven broad, is formed by two creeks of it, which receive all the rivers of the county. The air of this county is reckoned healthy, being more ferene and mild than that of Lancafhire, and the foil for the moft part good. On the borders of Staffordfhire and Derbyfhire 'tis full of rifings, though the hills are not of any great height. Thiere's a peculiar fort of ground in this fhire, which the inhabitants call moffes, a kind of moorifh boggy earth, very fat and ftringy, out of which are cut turfs in form of bricks, and dried in the fun for fuel.
The chief rivers are the Dee, the Weaver, and the Merfee. The Dee abounds with falmon, and fprings from two fountains in Wales, and is obferved never to ovet fow by rain, but by the fouth-wef wind. It enters this county at Grafton, and runs north to Chefter, where it falls into the Irifh fea by Park-Gate, which is the fouthern creek of the Cherfonefe. The Weaver rifes in Shrophire, and, after a courfe of eighteen miles from fouth to north, makes an angle at Nantwich, turns weft, and runs into the northern creek of the Cherfonefe, as does alfo the Merfee, which runs from the north-eaft.
Befides rivers, this hire has a great number of meres and lakes, which abound with carp and tench, trout, eels, \&c. Here are fo many parks, that few gentemen of any confiderable eftates are without them ; and the forefts of Delamere and Macolesfield are very wide, and for the moft part very woody.
The product of this county is more particularly cheefe and falt. It's cheefe is commended as the beit in England, ex cept fuch as have tafted the Cheddar cheefe of Someriethire. But all the cheefe that palfes for Chefhire at London, and other places, is not made in this county; for great part of it comes out of Wales, where fome pretend the goats, as well es the cows, are milked for that ufe.
The county affords great plenty of corn, fleih, fifh, and of the moft delicate falmon. It drives a confiderable trade, not only by importing, but by returns, as having within itfelf falt-pits, mines, and metals. The grafs of this county, fays

Canden

Camden; has a peculiar good guality; fo that they make great tore of cheefe, more agreeable, and better relifhed, than thofe of any other parts of the kingdom, even when they procure the fame dairy-women to make them.
Chester, or, as 'tis commonly called, West Chester, from it's weftern fituation, to diftinguifh it from many other Chefters in the kingdom. 'Tis a large, fine, well built city, and full of wealthy inhabitants, who, by it's neighbourhood to the Severn and to Ireland, carry on a very confiderable trade; fo that the fhopkeepers here have good bufinefs, look with chearful countenances, and the gentry are remarkably holpitable. 'They have great fairs here every year, to which abundance of merchants and tradefmen refort, but particularly from Brittol and Dublin.
Nantwich is remarkable for it's falt forings, which in fome places, fays Dr Jackion, are not above three or four yards deep, but the pit in this townifip. is full feven. In two places at Nantwich, the forings break up fo to the meadows, as to fret away not only the grafs, but part of the earth, which has a falt liquor ouzing, as it were, out of the mud. The fprings are about three miles from the fea, and generally lie along the river Weaver; yet there is an appearance of the fame vein at Middlewich. Under the article Salt, we fhall fhew the whole procefs, with fuch remarks as may be uieful.
CHILI. This kingdom lies along the coaft of the South-Sea, from the 25 th to the 45 th degree, 30 minutes of fouth latitude; and from the 65 th to the $73^{\text {d }} 20$. of longitude weft from London, comprehending the whole country fo called by the Spaniards, and not being confined to that only fettled by them. It is bounded on the north by Peru; on the eaft by Tucuman, a province of Paraguay, and part of Terra Magellanica; on the fouth by part of the fame Terra Magellanica; and on the weft by the South-Sea. It's greateft leagth, from north to fouth, amounts to 1230 Englifi miles. It's breadth is various; it may be faid to extend 120 leagues from eaft to weft, though in many places it is not above 20 or 30 leagues broad, which is in the general it's extent from the fea to the Cordillera mountains, or Sierre Nevada de jos Andes. Some writers give it a different extent, which, by no means, confifts with the nature of our work, to defcend into tedious criticifms about.
As this country lies to the fouth of the equinoctial line, the feafons are oppofite to thofe in the oppofite part of the henifphere, though not exactly. - The weather in the general is fteady and contant, without fudden changes all the fpring, fummer, and autumn. In winter there are, indeed, degrees of heat and cold, as the days differ in length and fhortnefs, according to the degrees of longitude and courfe of the fun, which caufes the fame variations as in Europe, though in oppofite months.
Few of the fruits of Peru, Mexico, and of all the continent of America, will thrive according to Ovaglie, though they bring thither plants, feeds, or fettings, thefe countries being within, Chili without the tropics: for which reafon the fruits of Europe take very well in Chili, and bear extraordinarily. The wines are noble and generous.-The Mufcadel is efteemed the beft.
This country abounds with mines of gold, filver, copper, tin, quickfilver, and lead. Of the copper of Chili are made all the great guns for Peru, and the neighbouring kingdoms. There is no great call for lead, for quickfilver lefs, Peru affording tolerable quantities. The filver mines are not very much wrought, becaule thofe of gold are wrought to more profit. They are fo plenty, and fo rich, that from the confines of Peru, to the extreme parts of the kingdom, as far as the freights of Magellan, there are few parts wherein they do not difcover fome. All travellers, who have given any account that may be relied on, greatly extol the riches of this part of the world ; the fame is cone by thofe who have navigated the ftreights of Magellan, though with too much exaggeration.
The other produce of this country confifts in cattle of all kinds, of which they fend a great many mules to Potofi; tallow, hides, and dried fifh, they export into Peru; cordage and tackling, with which all the fhips in the South-Seas are furnifhed from Chili; for hemp grows no where about thefe parts but in Chili. Cocoa nuts grow wild here in the mountains, and in great plenty. Almonds, and other the garden products that do not grow in Peru, are carried thither with handfome profit.
The diftrift called Imperial is a bifhopric, and contains feveral cities, fea-port towns, and other places.
Imperial, which gives name to the biflopric, lies in fouth latitude 38. 30. and longitude 72. 15. weft of London. It ftands in one of the mof agreeable fituations of the whole country, on a pleafant river called the limperial, from the city. It is about 130 miles diffant from Conception, 10 or 12 from the fea, and 33 from the city of St Jago. All the territory of the city of Imperial is very fruifful, bearing corn, and all forts of fruit and pulfe, though the black grapes do not ripen fo kindly as the white ones and mulcadines. The country is partiy hills and partly vallies : the former are of eafy afcent, with good pafture and fhelter for cattle. The land does not
feem to require much watering, it having frequent and large dews that fertilize it.
The river Imperial is large, and runs a great way up into the country, and the banks of it are well inhabited by Indians but it's mouth affords no good harbour for fhipping of any burthen, for the flats there are within three fathoms and a half of depth.
La-Conception, otherwife called Penco, is feated at the edge of the fea, at the bottom of a bay of the fame name, on the eaft fide of it, in lat.' 36.42 .53 . and in long. 73. weft of London. It has on the eaft high mountains, from which come two little rivers, that run acrofs the town. Fruits of all kinds are here fo plentiful, that they are obliged to thin them, otherwife the branches would break, nar could the fruit come to maturity. The country in which the town of Conception is feated, abounds in all things, not only to fupply the neceffaries of life, but alfo containing infuite wealth, according to Frezier.
Otorno, an inland town, on the northern bank of the river Rio Bueno, about 45 miles from Baldivia, towards the foutheaft, and as many from the fea-coaft to the eaft. The country about it is not fruitful, and produces hardly any of the neceffaries of life. But it is very rich in gold mines; for which reafon the town is populouss De Noort tells us,' that this town is in about 42 degrees of fouth latitude, is larger than Baldivia, has a Spanifi governor, and that they make here woollen ftuffs and linnen cloths.
Chiloe, a confiderable inland on the coaft of Chili, fies in fouth latitade 44. or rather from $4 z$ to 44 . The fouth part is divided from the continent by a narrow fea, and the continent there makes a bay. The coaft is very fubject to tempeftuous weather, efpecially in March, for then the winter begins, and people cannot put to fea; fo that they muft winter there contentedly, 'till the return of fummer.

- Excepting wine, this inland produces all neceifafy refrefthente and provifions; and there are alfo large quantities of ambergreafe found here. About this ifland there are forty more, which take their names from it.
Villa Rica is about 10 miles diftant from the Cordiliera mountains, is feated on the weftern bank of a lake, called Malabauguen by the Indians, which is three leagues long from eaft to weft, and two broad from north to fouth. The foil about this city is, very fruitful : it is a clay ground, of which they make very good bricks. Moft of the inhabitants of this town work in wool, and make very good cloth and linen waiftcoafts.
Angol, or Villa Nufva de los Infantes, is about 100 miles from Conception to the fouth-eaft, and about 32 from the Cordillera. It ftands in a very large open plain; the land is very fertile; fruits ripen very well; there is good wine, and good ftore of raifins dried in the fun, figs, and other dried fruits; and vaft quantities of tall cyprefles, which yield a very fweet-fcented wood, of which they make a gum-lack.
La Serena, or Copuimbo, lies in fouth latitude 29. 54. 10. and in longitude 73.35 .45 . weft from the obfervatom at Paris. The river Coquimbo runs winding through this town, almoft every-where fordable, fupplying it with water, and frethening the adjacent meadows, after having run from the mountain, where, in it's paffage, it fertilizes variety of vales, whofe foil refufes no fort of tillage.
Peter Valdivia, who made choice of this pleafant fituation he the year 1544; to build a town on, which might ferve for a retreat in the paffage from Chili to Peru, being charmed with the delicioufnefs of the climate, he called it la Serena, to which it had more right than any other place in the world, the name fignifying the ferene, there being here continually a ferenc and pleafant tky.
The difcovery of the mines of Copiapo, and the vexations of the chief magiffrates, have contributed towards unpeopling this part of Chili. Though thefe mines are near 100 leagues from Coquimbo by land, feveral families are gone thither to fettle, which hath left this place fo bare of people, that there are not above 300 men fit to bear arms, not including the neighbourhood. The fertility of the foil, however, keeps abundance of people in the adjacent country, whence they bring corn annually to load four or five thips, of about 400 tons burden, to fend to Lima. They alfo fupply St Jago with a large quantity of wine and oil, efteemed the beft along the coaft. Thefe provifions, together with fome few hides, tallow, and dried flefh, are all the trade of that place, where the inhabitants are poor by reafon of their flothfulnefs, and the few Indians they have to ferve them.
In winter, when the rains are fomewhat plentiful, gold is fourid in almoft all the rivulets that run down from the mountains, and would be found all the year, if they had that help, About to leagues to the ealtward of the town, are the wafhing places of Andacol, the gold whereof is faid to be 23 carats fine. [See the article Goud.] The works there always turn to great advantage, when there is no want, of raif. The inhabitants confidently affirm, that the earth breeds; that is, that gold is continually growing; becaufo, $60^{\circ}$ or 80 years after it has been wanhed, they find almoft as much gold as they did at firft. In that fame vale, befides the wafhing-places, there are on the mountains fo many gold mines, and fome of

## C H I

## C H 1

tiver, that they would employ 40,000 men, as Frczier was informed by the governor of Coquimbo; and they propofed to fet up mills there, but wanted labourers.
The copper mines are alfo very common, three leagues northeaft from Coquimbo. They have wrought a long time at a mine, which fupplies almoft all the coaft of Chili and Peru, with utenfils for the kitchen. It is affirmed, that there are alfo mines of iron and quickfilver.
Copiapo, lies about 175 miles to the north of La Serena. There are gold mines directly above the town, and others at two or three leagues diftance, whence they bring the ore on mules to the mills, which are within the town. In the year 1713, there were fix of thofe mills they call trapiches, fays Frczier, and they were making a feventh of that fort, which they call the royal engine, with hammers and pounders: by means of thefe, properly applied, they are able to grind ten times as much as by the trapiches; that is, fix chefts a day, each cheft yielding 12 ounces more or lefs. It muft yield two there they fay, at leaft to pay the coft. The ounce of gold is fold here for about 12 or 13 pieces of eight each.
Befides the gold mines, there are about Copiapo many mines of iron, copper, tin, and lead, which they do not work. There are alfo confiderable quantities of loadftone and lapis lazuli, which the people in general do not know to be of any worth. There is, 14 or 15 leagues from Copiapo, a place where there are many lead mines. On the high mountains of Cordillera, there are mines of the fineft fulphur; it is taken pure from the vein, without needing to be cleanfed. All the country here is full of mines of fal gemm. Saltpetre is no lefs plentiful, being found in vales an inch thick on the ground.
De la Mocha is an ifland that lies a fmall diftance from the coaft, almoft oppofite the mouth of the river imperial. The natives are inveterate enemies to the Spaniards, from whofe cruelty they fled and peopled the illand. Sir John Narborough places this inland in latitude 38.30 . and fays, that the Spaniards told him there is gold here, but the natives will not part with it.
St Mary's ifland, is fituate almoft over-againft the town of Conception, not many miles from the fhore. It abounds with fruit-trees, corn, potatoes, fheep, and hogs.
Juan illand, or that of John Fernando, lies in latitude 34. 45 about 200 leagues from the main, according to Dampier; but Capt. Sharp places it in 33.40. It is full of hills and plealant vallies, which, if manured, would probably produce any thing proper for the climate. The woods afford divers forts of trees, fome large and good for timber, for building, but not fit for mafts.
CHINA. The vaft, ancient, and opulent empire of China is fituate on the moft eaftern verge of the Afiatic continent. It is bounded on the north by eaft and weft Tartary, from which it is divided by a prodigious wall of 1500 miles in length, and partly by high, craggy, and inacceffible mountains. On the eaft it is bounded by the eaftern ocean, on the weft by part of the Mogul's empire, and India extra Gangem, from which it is parted by ridges of other high mountains, and fandy deferts; and on the fouth, partly by the kingdoms of Lao, Tonquin, Ava, and Cochinchina, and partly by the fouthern ocean, or Indian fea, which flows betwixt it and the Philippine illands. It is of fuch great extent, that it reaches in latitude from 20 to almoft 43 degrees; fo that it's length from fouth to north is about 1400 miles. But, if we take China in it's utmort extent, either in length or breadth, the former muft be taken, from it's north-eaftern frontier of Xai-yven in the province of Lyaouton, unto the laft city of the province of Youn-nam, called Chyen-tyen, Kioun-min-fou; and then it's greateft length will be about 400 German, or 1600 Englifh miles; and if to thefe be fill added the ifland of Hay-nan, which belongs to China, and lies on the fouth of the province of Quan-tong, two degrees more mult be added to it's extent, and it mult then be reckoned from the 18 th degree inftead of the 20th; fo that it's utmoft length, including that ifland, will be 1800 miles. It's breadth likewife may be reckoned to a much greater extent; and, if it be meafured from the town of Nimpo, a feaport in the province of Che-kien, to the utmoft boundaries of Su-chuen, it will amount to 315 German, or 1260 of our miles.
In general, the country is moflly temperate, except only towards the north, where thefe parts are intolerably cold, not fo much from their fituation, as from the ridges of mountains that run along them, and are exceffive high, and commonly covered with deep fnows.
As China extends itfelf through fo many different climates, and is in fome parts mountainous, and in others champaign, the foil muft differ accordingly : yet fuch expert and diligent mafters of agriculture are the people there, that they leave no fpot uncultivated. As they abound with artificial canals and refervoirs for watering and fertilizing their low lands, fo they have been no lefs induftrious with refpect to their high ones : firft, by levelling a great many of them, wherever the labour and number of hands could compafs it to advantage. Secondly, by levelling and flatting the very fummits of many of their mountains, in order to make thein bear variety of
Vol. I.
grain, pulfe, \&c. And, thirdly, by dividing their declivin ties into fo many flat fages as they could conveniently bear a by which means the waters, whecher of rain and dew, or of the fprings that come down from the tops, have a proper time to foak into the ground, and to nourifh the feed fown, inftead of rooting it up, and wafhing it down, as they do in other countries, by the violence of their defcent along theif nataral declivity. It is no fmall delight to travel through the lower vallies, and behold thofe fides of the mountains cut into fuch number of terraces one over the other, and all covered up to the top with variety of corn, fruits, \&c. Thefe mountains are nothing near fo hard and ftony as our's are, but rather of a foft porous nature ; and, what is ftill more furprizing, may be dug with eafe fome hundreds of feet deep: fo that the falts which tranfpire through thefe pores, prove a conftant and excellent manure to thefe artificial grounds. But, where the mountains are rocky; they content themfelves with planting them with all forts of fruit, and other trees, according to the nature of the ground. They are no lefs curious and careful in improving every fort, by fuch manure as is proper to it ; by which means, as well as by their abundance of water, and warmnefs of the climate, their ground yields them in fome countries two, and fometimes three plentiful harvelts in a year:
The product of the country is corn and grain of all forts, and in great plenty; and very rich pafture grounds, whereon they breed prodigious quantities of cattle; filk, cotton, honey, wax, fruits of all forts that we have in Europe, and feveral others that are not known here, and all exquifite to the fight and tafte. They have oranges, grapes, figs, pomegranates, ananas, and many others in as great perfection, as in any part of India: game is in great plenty and variety; particularly bears, boars, buffaloes, deer of feveral kinds, whofe furs are a profitable commodity: befides thefe, they have great numbers of elephants. Tygers are here very numerous and fierce, and extremely dangerous, thefe feeking their prey commonly in large droves. The leopards, and other wild creatures ${ }_{2}$ are here in great quantities, befides various kinds, which are not to be found in many other countries. The mufk-cat, which carries that noble perfume in a kind of bladder under it's navel, is caught here, and is in great efteern: as for horfes, camels, oxen, fwine, and other creatures, which are common with us in Europe, they have them in no lefs abundance there, particularly mules, which are here wild, and fitter to eat than for other ufes. Birds, fuch as eagles, cranes, ftorks, birds of paradife, pelicans, peacocks, pheafants, geefe, fwans, ducks, and a numberlefs variety of others. As for fifh, there can be no doubt but that the multitude of rivers, canals, and lakes, as well as the fea that runs along the fouth-eaft coaft of the country, mult fupply them with the greateft plenty and variety of it. Befides thofe, moft of the great and rich people have large canals and ponds filled with them for their own ufe: but thofe who are moft curious in thefe kinds of filh ponds, adorn them with one particular kind, which they call the gold and filver fifh, becaufe of their colour.
This ftrange and beautiful fpecies is about the Jength of one's finger, and thick in proportion: the male is of a delicate red from the head to the middle, and from thence to the tail of a bright colour, which by far exceeds the fineft gilding: the female is white, and hath a tail like a nofegay; which, with part of it's body, fhines like polifhed filver. They generally fwim near the furface of the water, and give a moft exquifite brightnefs and variety to it, and multiply fo falt, that if care be not taken of their eggs, which float upon the water, the whole furface will be covered with them: but they are exceedingly tender, and eafily killed, by heat or cold, ftrong fmells, thunder, or the report of a cannon. The way of preferving thefe eggs, is to take them gently out of the water, and put them in fmall veffels, well fheltered from wind, rain, and cold, 'till they are hatched by the fun, and grown to about an inch in length; when they may, with Cafety, be removed into their primitive refervoirs, where they are juftly admired as a wonder of nature.
The Chinefe filks are not only the fineft and moft valued in the world, but they have them in fuch abundance, as to fuffice this whole populousnation for cloathing and houfhold furniture, and to admit of prodigious exportations into foreign countries. They have likewife plenty of fugar, tobacco, and oil extracted, not from olives, but from feeds: valt quantities of olives, of a different kind from our's, yet of a fine tafte, though either unfit to produce, or not thought worth extracting oil from them : excellent wines, fome extracted from grapes, others from rice, others from quinces and other fruits, palm and other trees: camphire, ebony, fanders-wood, oak, pine, and other lofty and ftraight trees, are found in great abundance, efpecially on thofe mountains which are not otherwife cultivated. Thefe are fo fine and fraight, that they ferve for all forts of buildings both at land and fea. The emperor builds all his thips with the fineft of them, and hath them brought in prodigious quantities from all parts, fome of them above goo miles difance, partly by land and partly by water, in fuch long floats as reach feveral miles in length. Some of them are of fuch height and thick -

6 R

## C H I

## C H I

nefs, that they are ufed for columns in his palaces, and other public buildings. The timber merchants carry on a prodigious trade therein : they cut off all the fuperfluous branches, and faften 80 or roo of the trees together; and they that have the care of conveying them from place to place, build them little houfes upon the float, and exercife their trade, drefs their victuals, \&c. upon them. Thefe are afterwards fold at proper places for building of fhips, barges, and other veffels, as well as for boufes in the cities and towns. The low country abounds with variety of canes, junks, bamboes, \&c. of exquifite beauty; with vaft quantities of medicinal roots, fuch as china-root, rhubarb, gen-fen, and many more ; and, among a valt variety of fhrubs, that fo much efteemed of late in Europe, called tea, of which we Mall fpeak prefently.
The mountains abound with variety of metals and minerals; among the former, they have feveral mines of gold and filver, but which their emperors fuffer not to be dug, but only permit fuch, as have a mind, to gather what particles of the former are wahhed down by the rivers, and are found fticking on the banks, or caught by fleeces, and other frainers, laid acrofs the water; for we are told there are vaft quantities of thefe brought down from the mountains, and that there are great multitudes of people, who live wholly upon this bufinefs; 'and that they find even fome of that metal among the fand and mud of thofe rivers.
As for the common pretence, that their monarchs will not have thefe mines of filver wrought, becaufe the people fhould not be forced to fuch llavilh work, it is a mere illufion: it is more- likely that they either keep them in cafe of need, or, rather, perhaps, to keep down the price of labour, which would rife in proportion to the quantity of circulating money. Whereas by this policy, I have been informed, that their workmen in general have not above five farthings fterling per day; which makes fuch immenfe quantities of their produce and manufacture circulate throughout the world.
Their mountains have alfo mines of copper, lead, iron, quickfilver, \&c. which are digged and manufactured in great quantities; and with great neatnefs and curiofity; befides which, they bave fome others, which are mixed in a peculiar manner, and which are kept as a great fecret among them: fuch for inflance is that fo famed one, called tonbaga, or donbaga; which is of the colour of very pale brafs, or dull kind of tin, but to which they afcribe feveral extraordinary virtues ; particularly thofe of expelling poifon, foopping hxmorrhages, and the like, by the bare wearing of a ring or necklace made of it.
Their mountains in fome parts afford likewife plenty of pitcoal, and variety of minerals. But, of all the products of this country, the tea is that which deferves moft of our notice, as 'tis become fo favourite a commodity among us. The Chinefe neither drink it in the manner we do in Europe, nor any thing near fo flrong, but ufe it only as their common drink. It is reckoned, among them, a fingular diluter and purifier of the blood; a great ftrengthener of the brain and ftomach, and promoter of digeftion, perfpiration, and other fecretions; particularly a great diuretic, and cleanfer of the reins and urethra. They drink it in great quantities in high fevers, in fome forts of cholics, and other acute difeafes; think it a fure though flow remedy againft chronic ones, from it's admirable quality of fweetening and diluting the blood.
There are feveral kinds of tea which grow in China, fome finer, fmoother, and more fragrant than others, according to the foil they grow in, but all originally the fame; and thefe are called by different names, either from the towns or provinces where they gather it ; as that named finglo, which is a moft elegant fort, and much in ufe in China among the richer fort of people. Others are denominated from their peculiar fort of colours or qualities; as particularly the vowi, or as others call it, bohi, or bohe, [bohea tea] fo called, not from the mountains of Fokyen, where the beft of that fort is faid to grow, but from it's brown or dark colour. The laft is the moft efteemed in China, both for it's tafte, flavour, and medicinal quality; and is given in great quantities to fick people and valetudinarians. See the article TeA.
The moft confiderable of their rivers are, (I.) The Ky-am, or blue river, or, as others interpret it, the Son of the fea, which rifes in the kingdom of Tibet, near the frontiers of the Mogul's dominions, about 34 degrees 50 minutes S. latit. and crofles the country from eaft and weft, paffing through Su-chan, Hun-quam, and Nan-kin, and falls into the fea three leagues below Kiam-nin, over-againft the ifland of Commin. It begins it's courfe fouthward, then turns eaftward, through the whole country, 'till it falls into the fea caft of Nan-kin, in latitude 32, from a courfe of about 2100 miles; or, as Le Compte hath computed, 1200 miles in the whole. Near it's mouth it is computed about half a league in breadth, and it's courfe rapid and dangerous. It hath many illands in it, which yield a great revenue to the emperor, and produce great quantities of bulrufhes, which fupply the want of other fuef.
2. The Ho-ambo, or the Yellow River, is fo called, becaufe after rains efpecially it is of that colour, and extremely muddy. It hath it's rife near the extremity of the mountains,
which divide the province of Su-chan from Tartary, near the frontiers of the Mogul; and, continuing it's courfe along the great Chinefe wall, rups twice through it into China, between the provinces Xanfi and Xenff. It runs next thiough that of Hanam, and, after having croffed part of that of Nan-kin, and a courfe above 1900 miles, it at length difcharges itfelf into the eaftern fea, not far from the nouth of the Ky -am, in latitude 34. The ftream thereof is fo fwift and ftrong; that the veffels which are towed up againft it, require a great number of men or horfes.
There are many other great rivers of the fame nature, alike rapid and muddy; fome of which have great cataracts of valk height, and make a noife like continued claps of thunder.There is one always as red as blood, another that glitters by night, occafioned by the great quantity of precious flones contained in it, for which it is ftiled the pearl-river. There is a third near Fomin, which turns blue in harveft, at which time the inhabitants are ufed to dye that colour. We are told of another near Pan-gay, whofe waters are fo light, that they will bear no timber: thofe of another near Ching-tien, are faid to be fweet- Icented; and that called Kin-xa, or Golden river, is fo named, on account of the great quantity of gold fand it has. There is one in the province of fokien, whofe water is, green, and is affirmed to turn iron into copper, which they will believe who are witneffes of it; that called Xo, or Cho, is faid to cure divers difeafes; but the moft remarkable is, one that yearly rifes upon a certain day, with fuch a prodigious high tide before the city of Hang-chen, that multutudes of people, crowd from all parts, to fee fo furprizing a phenomenon, which neither their own, nor European philofophers, 'tis laid, have yet accounted for. Thefe waters being almoft every-where brackifh; they are forced to correet them with tea.- They fupply the people in the inland part with falt, which is made, by paring off the fuperficial earth of the muddy fhores, drying it in the fun, rubbing it fmall, and throwing it into a pit, which they cover with falt water, and afterwards draining it into jars, and boiling it 'till they bring it to a proper confiltency: but, in the maritime parts, they' make falt of fea-water, after the ufual way. Their mountains alfo produce many falts, excellent quarries of fone, fome of marble, fo curioully variegated with landkips, \&c. as if drawn by defign with a pencil. Several other forts are eftcemed for their fine colour and hardnefs, fome of which bear a noble luftre like diamonds; and others, when burnt, yield a metal, of which they make fwords and other weapons. We are told of oihers of a precious kind, fhaped like a fwallow, others of great efficacy in divers difeafes.-The province of Quangli is famed for a yellow earth, which has the virtue of expelling poifon, and, by outward application, to cure the bite of venomous creatures. Some forts of earth they have of a fine vermillion colour, and others of a delicate white, which the ladies ufe for paints. In feveral places of, the empire, they prefs a fort of lime from the bark of a tree,' which is tough like pitch, and which, when mixed with proper coloprs, ferves to paint their houfes, cabinets, and other utenfils, and hath a fine luitre and fimoothnefs like glals. The lime is what they call giran, but is more commonly known amongt us under the name of japan-work, becaufe that which comes from Japan far exceeds any that is made in China, both in luftre and hardnefs, as well as in the fine variety of paintings upon it. This fecret the Chinefe are fo jealous of having difcovered by foreigners, that they have poifoned feveral, and fome of our nation, whom they fufpected to have pried too clofely into it.
Befides the common bees-wax, they have another fort, the cleareft and whiteft in the world ; which is producèd by an infect no bigger than a flea, on the top branches of fome particular trees, where thefe little creatures lay their eggs, which in the fpring turn into fmall worms. The propietors of thefe trees gather this wax and make it into cakes, which are quite traniparent. The inhabitants of Xantung put theie worms into large canes, and fell them to the adjacent provinces, and make a confiderable profit of them.
The Chinefe are doubtlefs a very ingenious and induftrious people, as appears by all their fine manufactures daily brought into Europe ; fuch as their wrought filks, cabinets, and other japanery, their curious porcellane; though in this they are excelled by the Japanefe, and are ftill likely to be more fo by the Saxons and Germans, where a new manufacture of that kind is lately fet up, which exceeds them both, elpecially in the beauty of the painting. The admirable cultivation of their land, their great and many canals, and variety of magnificent ftructures, are further teftimonies of their genius and induftry: to which we may add, what feems now generally agreed on all hands, that they have had the ute of the mariner's compafs, of gun-powder, and the art of printing, for many centuries: infomuch that there are not thofe wanting who have affirmed, that they were all three brought from thence into Europe, either by Paul the Venetian, or by fome orher channel. And, indeed, with refpect to the daff, whoever confiders that the firf effays of Fauftus, who invented, or rather improved that art, were done upon wooden blocks, in the fame way as has been done in China from time immemorial,
immemorial, will be apt to own, that theirs gave the fint notions to Europeans, though they have fince fo infinitely furpafled them. They are likewife mafters of feveral arts and fciences, though not to the perfection we are; but they vaJue themfelves extravagantly, and defpife others highly, which is a great blemifh to their characters.
Pe-ke-li, Pe-kin, or Pekim, is the metropolis of this empire, and fignifies the northern royal refidence, in oppofition to Nankin, which is the fouthern one. This city hath, from time immemorial, been one of the principal of the empire, though under different appellations, which we leave others to enter into. This, and the province under it, are efteemed the mort populous of all the reft, the latter, according to the toyal regifters, containing $4: 8,900$ families, or $3,450,000$ fouls, who pay yearly tribute to the emperor, befides thole that are exempt from it, as officers, foldiers, priefts, monks, \&c. and their families.
'The province of Pe-ke-li, however, is far from being the moft fertile or delightful; though the greateft part be flat, plain, and arable, yet fome of it is quite barren, and others fandy and gravelly, and produce but fmall crops of any fort. The air is healthy, but cold and keen in the winter, from the dry north winds that blow thither from the bleak regions of Tartary ; infomuch that the rivers are frozen deep enough for the heavieft carriages to go over them.
Though this province produces little of it's own, in comparifon of the reft, yet it hath plenty of every thing it wants brought to it from other provinces, not only on account of the court, but by exprefs orders from the emperor.
Pekin now confifts of two large cities, befides fuburbs, viz. the old and the new ; the former may be called the Tartarian city, becaufe wholly inhabited by the Tartars, who drove the Chinefe out of it; and the latter the Chinefe city, they being moftly of that nation who refide in it.
Ham-chew, and fome other neighbouring cities of this province, are near as large and populous; and Nankin is itill more fpacious, and more peopled : infomuch, as Le Compte fays, you have fcarce got out of one city, which you would think the largeft in the empire, but you are in another equally large; fo numerous and opulent are the cities of China! And what is extraordinary is, the incredible plenty and cheapnefs of all things in this vaft metropolis. All manner of merchandizes and treafures of the Indies are tranfported hither from all parts, by means of the Eaftern Sea, and the royal canals. Several thoufands of royal thips, befides a prodigious number of others, belonging to private perfons, are continually employed in fupplying both court and city with every thing that can be wifhed for, eithev for conveniency or luxury; and though fituate in a barren country, yet, from its furprizing abundance, hath given rife to a proverb, That, though nothing grows about Pekin, yet it never knows the want of any thing.
Xantum, Xanton, Xantong, Shanton, the next province to Pekin, lies on the fouth-eaft of it. It's climate is much milder, and foil more fertile, and bears fuch plenty of corn, and other grain, rice, pulfe, \&c. that the crop of one year is fufficient for feveral years fuftenance to it's inhabitants. It breeds, alfo, great multitudes of cattle, and abounds with wild and tame fowl, fifh, \&c. and produces a great quantity of filk, of which, befides the common fort, that is fpun by the worms, they have another kind, which is found upon bufhes and trees, and is fpun by a creature not unlike our caterpillars; and of both thefe they drive a confiderable trade, by means of the great river Ci .
Xansi, or Shansi, another province, is fituate on the weft fide Pekeli. It is far from being as confiderable as either of the former, but is full as fertile, and as populous in proportion to it's extent. It is in fome parts very mountainous, but interfected with fertile plains, whilf the hills abound with variety of fruit, and other trees, and forefts of great extent and ufe. They have here, alfo, plenty of vines, whofe grapes make a good liquor ; but they chiefly dry the grapes, in order to fend them into other parts of China.
$X_{\text {ensi, }}$ or Shensi, is a province contiguous to that of Xanfi, and full weft of it. It is the largeft in the whole empire. The foil is rich and fertile, in arable and pafture lands; the latter breed numerous herds of large and fmall cattle; but, as there often happens a fcarcity of rain, the drought is apt to breed vaft flights of caterpillars, grafhoppers, and other infects, which do infinite damage to their productions. It is adjoining on the weft to the kingdom of Thebet, which extends itfelf quite to the Mogul's empire. A great intercourfe and commerce is carried on by that means with the merchants of thofe countries, efpecially with the city of Zunning, which makes it a place of very confiderable traffic.
The climate of this province is, in the general, ferene and healthy; the foil is fo well watered by rivers, brooks, and artificial canals, as well as by the vaft number of hands employed in it, that it produces plenty of every thing, either for life or pleafure. Here are rich mines of gold; which, though according to the policy of the Chinefe, are not permitted to be opened, yield great quantities of that metal to numerous families, who are employed in gathering that only which is
wafned down by their rivers, and of which we have had oc. cafion to fpeak before.
Ho-nan province. The climate is fo temperate and ferene, and the foil fo fertile, and well-watered, that it abounds with corn, rice, fruits, and all kinds of neceffaries for life and delight, and might be ftiled, fay fome, a kind of terreftrial paradife. There are, indeed, fome high mountains fcattered, but thefe have their peculiar produce: fome are covered with a fine variety of lofty trees, others abound with metals or minerals; fo that there is farce a fpot that is not turned to great advantage. It is famed for a lake, which draws great numbers of thofe who follow the filk manufacture, it's delicate waters giving it an inimitable luftre.
NAN-kin, or NANG-king, is a province which, both for it's fituation, fertility, opulence, and commerce, and for baving been formerly the imperial refidence, is inferior to few in the empire. This is the more probable, if we confider the commodioufnefs of it's harbours on the fea-coalts, and the great rivers that run through, or contiguous to it.-To all which we may add the vaft number of merchant-ihips, or, indeed, rather of whole fleets, that refort thither from all parts of Afia. There are few mountains in the whole province, except towards the fouth; all the reft is fruiful champain, abounding with all neceffaries and luxuries of life. It alfo produces prodigious quantities of filk and cotton; which employ fuch a valt number of hands, that, in the city of Xan-gay, and in the towns and villages under it, they reckon no lefs than 200,000 weavers in the latter of thele manufactures. And their artifts are fo ingenious, that it is obferved of this province, That whatever is worked in it, either of filk, cotton, \&cc. and bears the ftamp of it, feils at a much higher price than what is done in other parts of the empire.
Nan-kin, Nang-king, the metropolis, and formerly filed the ftately, opulent, and non-fuch, \&c. ftands in latitude 32, and eaft longitude from Pekin 2. 20. and is by far the largeft and moft populous in all the Chinefe empire, though it's decay is very vifible fince the removal of the imporial city, and grand courts and tribunals to Pekin, and much more fo, fince it came into the hands of the inveterate Tartars.
The territory about the city is not only very fertile and de* lightful, but abounds with fuperb ftructures, which heighten the profpect of the delicate orchards and gardens wherewith it is furrounded. This opulent city, befides the ordinary tribute, fends every year to the emperor at Pekin, with a view to ingratiate itfelf to the Tartarian monarch, five fhips, laden with the fineft filks, cloths, and other manufactures; which fhips are fo refpected by the mariners, that all others lower their fails to them. There are other veffels that conftantly go from hence with fine filh to the emperor, covered with ice to keep it frefh.
Suchen-fu, or, as others call it, Chien-cheu, is another capital in this province; which is fo populous and rich, that travellers, at firft view, are apt to think it the biggeft and moft opulent in the whole country. Neither is it agreed which has the preference, this or Nan-kin. Le Compte fays, that a man who will ftand but a few minutes by the water-fide, and behold the valt multitudes that come and go to buy merchandizes, or pay the cuftoms, would imagine it to be a fair, to which the whole Chinefe empire was crowded. The emperor's fleet, which confifts of 9,999 yonks, or veffels, paffes annually from this port to Peking, to carry the trí ute, in money and merchandize, of the fouthern provinces thither,
This city carries on a vaft trade, not only with moft cities in China, but allo with Japan, from which it is parted only by a narrow channel. The brocades and embroideries made in this city are the moft in requeft, they being not only the fineft but the cheapeft, in proportion to their quality.
Che-ky-ang is reckoned the next maritime province to that of Nan-king. It is little inferior to any in the empire, with refpect to advantageous fituation, extent, populoufnefs, or opulence. The whole country is fo beautifully variegated with hills, vales, and fruitful plains, watered, fertilized, and inriched with fuch great numbers of canals, and large and fmall rivers, that it abounds with whatever can be defired. It is populous to a prodigy, and fo well cultivated, that there is no fpot but is turned to advantage. The very mountains are adorned with unfpeakable variety of trees, but efpecially of the mulberry kind, over which hang an infinite number of filk-worms, that a furprizing quantity thereof is produced; infomuch that they export vaft quantities thereof to Japan, the Philippine Iflands, to India, and even to Europe, befides what is confumed by it's numerous inhabitants ; which is fill in fuch abundance, that two or three fuits of filk cloaths will hardly coft fo much as one of wool. To this we may add, that as they have found, by long experience, that the filkworms which feed on the tendereff leaves yield the fineft filk; fo they take the moft care to have a conftant fupply of young mulberry-trees for that purpofe, and produce the largeft quantity of that which they can fell the moft of to foreign nations: fo wife and politic are thefe people in conducting their trading interefts.
Hang-chew, the firf metropolis of Chekyang, It's fituation

## C H I

## CHI

For trade is fo advantageous, efpecially on account of it's vaft number of canals and noble rivers, that it drives a very confiderable commerce in feveral manufactures, efpecially in it's filk, which is efteemed the fineft in the world. This city has feven others of the fecond and third rank, which are likewife very rich and populous.
Nimpo, another celebrated capital of Chekyang, ftands on the confluence of the rivers of Kin and Yaw. The entrance into the port is fomewhat difficult, efpecially for large vefiels, there being but 15 feet of water at the bar in the fpring-tides. It fuffered greatly in the late wars, but hath recovered itfelf fince, and keeps a good garrifon. About 20 leagues off at fea, is the ifland of Chew-fhaw, whofe port is pretty good, but not conveniently fituate for trade. Here it was our Englifh put in at their firft arrival, not being able, at firt, to find their way to Nimpo, among fo many iflands as were along the coaf. It was formerly much frequented by the Portugueze ; it drives a great trade at prefent with Japan; and it was partly on that account that our Englifh Eaft-India company once endeavoured to have eftablifhed a commerce with that town. They drive a great trade here in falt-fifh and flefh.
Shusan, or Chew-shang, lies over-againt Nimpo, about ro leagues eaft from it. It is well-built and inhabited, fince the Chinefe fled thither from the Tartars, upon their invafion of China. It hath no lefs than 72 cities, fituate along the coafts, or within the bays, all well-peopled, and driving pretty. confiderable commerce. The principal one, called alfo Chewfhang, is walled and populous, and it is the place where our Eaft-India company traded, as they were not allowed to go with their fhips to Nimpo. This trade began anno 1700 with this town, which has a very fafe and convenient bay, and lies in latitude 30.5 .
Kian-si is a large and fruitful province, well-peopled, and the plains fupply the inhabitants with all the neceffaries of life. The country abounds with rivers, large and navigable, particularly that of Cau, which divides it in the midft. The vaft number of it's canals and lakes afford plenty of fifh, which is extremely cheap. The mountains of this province are no lefs rich in fome commodities or other, fome being covered with wood, others producing gold, filver, lead, iron, and tin, befides variety of ufeful minerals, fimples, and medicinal herbs. The filk is here fine, and manufactured in large quantities. Rice is no lefs plentiful and excellent, and the wine made of it is much admired by the Chinefe.
Nang-chang-fu was once a famed and opulent city, 'till deftroyed by the Tartars, though it hath, by degrees, recovered fome part of it's former grandeur, by means of it's fine canals and rivers, which facilitate it's commerce, particularly that of it's China ware, wrought at Zau-chew-fu, a city under it's jurifdiction, and which is in greater requeft than what is made in other parts of China. It's peculiar beauty confifts in it's extraordinary whitenefs, yet without fhining, and it's having neither blue, nor any colours painted upon it, fo that ftrangers cannot be mittaken about it. This peculiar excellency is allowed to be owing to that of the water *, the fame materials not producing the like, when mixed with any other. The territory about it is rich, and well cultivated every-where. They breed a prodigious number of hogs, which are brought hither for fale.

* If this be true, owr China-makers foould duly attend to the purification of their water. Though the water may fomething contribute to this, yet I am inclined to think that this delicate whitenefs depends upon quite other priaciples, and that this is only thrown out by the fubtile Chinefe, as a blind to the Europeans. See the article Porcelan.

Hu-queng, or Hu-quam, is another inland province, adjoining on the weft to Kian-fi. It is very large, and little inferior to any in fertility, healthinefs, and opulence, it being a flat rich foil, interfected with numerous fine rivers, which facilitate it's commerce, as well as fertilize the lañd.The province is fo rich and fruitful, as to be filed the granary of China, the land of fifh, rice, corn, \&c. infomuch that it's numerous inhabitants tranfport vaft quantities of thofe commodities annually into other provinces. But the greateft produce here is cotton, which grows, and is manufactured in vaft quantities. It hath alfo very noble pafture-grounds, on which they feed a prodigious number of cattle.
The mountains bave mines of excellent cryftal, fome metals and minerals, particularly talc ; to fay nothing of the numberlefs pines that grow on them, and are in univerfal ufe among all the Chinefe architects, in their moft fately buildings. Gold is found here alfo among the fand, which their rivers and torrents wafh down from the hills; and which laft have alfo mines of iron, tin, tuttenage, $8 x c$. There are great quantities of paper made from the numerous bamboos that grow in the low lands; and in the plains are feen furprizing quantities of thofe little worms which produce the wax, in the fame manner as the bees do the honey.
Vu-cheng-fu, the metropolis of the whole province, is a very large populous city, and reforted to by a great number of vef-
fels, which drive a confiderable commerce with it. It at prefent vies with moft cities of China for largenefs, wealth and magnificence. The circumadjacent territory is rich and fruitful, and abounds with rivers and canals. It is terminated at fome diftance by mountains, that produce a fine cryftal, and others covered with, ftately trees. Befides thefe, there may be faid to be a foreft of mafts of trading veffels, ranged along the river Kyang; befides others of fmaller fize, which extend themfelves feveral miles on each fide, infomuch that there are feldom reckoned fewer than 8 or ro,000; and it is remarkable, that the river Kyang, though above is 50 leagues from the fea, is here full three miles wide, and deep enough to bear the largeft thips.
Vu-cheng is not only the capital of the whole province, but of the northern diftrict; and being feated, as it were, in the center of the whole empire, hath an eafy communication with every part of it.
SEN-chev is another large and fruitful province, extending weftward to the mountains of India. It abounds with rice, cotton, filk, and, in the general, is exceeding fruitful. It's mountains, befides variety of woods, yield feveral mines of quickfilver, tin, \&c. Here, alfo, are produced large quantities of rhubarb, China-root, and other medicinal drugs.
There are divers other capital provinces in China; but, the produce and manufactures in general are much the fame it is needlefs to dwell longer upon them. We thall, therefore, only fay fomething to their fhipping, and their coaftingtrade, deferring their trade to Europe 'till we come to the refpective European nations interefted therein, under the articles of their various trading companies, as East-India Company, Dutch East - India Company, \&c. and France, for a communication of trade between that empire and China, by the means of caravans. See Caravans.
The Chinefe flipping, fays the Abbe Lambert, differ as much from ours as their drefs. They pretend to have had it from the remoteft antiquity, and that fome thoufand years ago they had failed over all the Indian feas, and difcovered the Cape of Good Hope, though they then knew nothing of the compafs, whatever they did afterwards. They have hips of all ranks, but fo different in make from ours, that they are chiefly fit for rivers, but not fo good for fea. They ufe a valt number of flat-bottomed barks, of a prodigious fize, fome of which, called floating villages, have a great many houfes and families on board, who follow their refpective occupations, and feldom or never go on fhore. Thofe belonging to the emperor, nobles, and governors of provinces, refemble caftles, and are divided into grand apartments, for all the ufes of ftate and convenience.
The largeft Chinefe veffels of war are from an 150 to 300 tons burden. They are, properly fpeaking, but flat boats, with two mafts. They do not exceed 80 or go feet in length, and 60 or 70 in breadth. The mafts, fails, and rigging of thefe veffels are ruder than their built; for their mafts are made of trees, no otherwife fafhioned than by lopping off their branches.
Thefe veffels have neither mizen-maft, bowfprit, nor top-gallant-maft. All their mafts are the main-maft and the fore-maft, to which they fometimes add a fmall top-gallantmaft, which is not of great ufe. The main-maft is placed almoft where we place ours, and the fore-maft is on the forecaftle. The proportion of the one to the other is generally as two to three, and that of the main-maft to the veffel is nearly fo, being generally more than two-thirds of the length of the veffel. Their fails are made of mats of bamboo, a kind of canes common in China [fee Bamboo] ftrengthened every three feet by an horizontal rib of the fame wood. At top and bottom are two pieces of wood; that above ferves as a yard; that below, made in form of a plank, more than a foot broad, and about fix inches thick, retains the fail, when they want to hoift or furl it. Thefe veffels are by no means good failors; however, they hold more wind than the Europeans. This is owing to the ftiffnefs of their fails, which do not yield to the wind: but, as the conftrution of them is not advantageous, they lofe the advantage they have in this point over ours.
The Chinefe do not caulk their fhips with pitch, as in Europe; their caulking is made of a particular gum, and is fo good that the veffel is kept dry by a well or two in the hold: they have as yet no knowledge of the pump. Their anchors are not iron, as ours, but are made of a hard and weighty wood, which they call iron-wood. They pretend that thofe anchors are much better than thofe of iron, becaufe, fay they, thofe lait are fubject to bend, which never happens to thofe of wood.
They have neither pilot nor matter. The fteerfman conducts the fhip, and gives orders for the working. However, they are pretty good failers, and good coafting pilots; but very bad ones in the main fea. They feer by that point of the compafs which leads directly to the place they are bound to, without minding the hocks the veffel receives. This oegligence, or rather ignorance, proceeds from their not making long voyages.

China, ${ }^{\circ}$ till of late, might be looked upon as a moniarchy wholly fevered from the reft of the world; neither fuffering ftrangers to fet foot into it, nor their fubjects to vifit foreign parts. They drive, indeed, a great and conftant traffic among themfelves; every province being ambitious of communicating it's products and manufactures to the other, in order to keep all hands profitably employed. This had been their policy, even from the remoteft times of their monarchy; but, at prefent, they have thought better of it, and, by opening a com merce with other countries, have increafed the means of inriching their own. They now not only fuffer, but encourage, both near and diftant nations, particularly Europeans, to come and trade with them, and bring them their moit valuable commodities; and, at the fame time, allow their own people to difperfe themfelves into a great number of foreign parts, whither they carry their filks, porcelan, japan, and other curious manufactures and knicknacks, as well as their tea, medicinal roots, drugs, fugar, and other produce. Thèy trade into moft parts of India; they go to Batavia, Malacca, A chem, Siam, \&c. efpecially to the iflands of Japan and Manillas, which are but a fmall diftance from them; and from which they bring, among other things, great quantities of filver and gold; and that which comes from Mexico to the Philippine Inands, by the Pacific Ocean, is carried to Canton, and thence difperfed through the whole empire. No wonder then if it is fo opulent and powerful, when all the four parts of the globe contribute to make it fo.
The Chinefe, from remoteft antiquity, exported the growth and commodities of their country, chiefly raw filk, wherein it abounds, all over the Eaft. It is from thence they were, by the Greeks and Romans, called Seres. They traded particularly to the kingdoms and illands fituate beyond Sumatra and Molucca to the eaft. Since the late Tartarian conqueft, many of them, unwilling to conform to the orders iffued by their conquerors, to thave their heads after the manner of the Tartars, left their native country, and fettled in the fame kingdoms and inlands which, 'till then, they had frequented only as traders. They had, alfo, from time almoft immemorial, carried on a commerce with Japan, though but fmall, and with few yonks. For, under the reigns of fome former emperors, China was, as Japan now is, fhut up, and kept from all commerce with foreign nations, and the inhabitants trictly forbid, under fevere penalties, to export the growth of the country, or to have any communication with their neighbours. Neverthelefs, thofe who lived along the feacoafts, and in the neighbouring iflands, found means, though with fome difficulty; and in private; to fit out a fmall number of yonks, and now and then to pafs over to the kingdoms and illands which lay neareft, whereof Japan was one. Things flood thus, when the late Tartarian conqueror of China, and his fucceffor, the now reigning monarch of that mighty empire, thinking that it would very much conduce to the honour of his fubjects, and to the advantage of his dominions, for the future, to permit a free and undifturbed commerce, refolved to fuffer his fubjects to trade abroad, and to give foreigners free accers to his dominions.
The Chinefe have, ever fince, exported the produce and commodities of their country to a much greater quantity than before, and enlarged their trade and commerce, as with moft eaftern nations, fo particularly with their neighbours the Japanefe, by whom they had been all along received as welcome guefts, and tolerated, becaufe of the affinity there is between the те ligion, cuftoms, books, learned languages, arts and fciences of both nations. Formerly they frequented the harbour of Ofacca, and others lefs fecure, becaufe of the frequent cliffs, rocks, and fhoals, which rendered the whole navigation that way exceedingly difficult and dangerous, and wholly impracticable for fhips of any bulk. The Portugueze, fome time af ter, hewed them the way to that of Nagafaki, which is not only more fecure, but was, in many other refpects, much more advantageous. The refort of merchants to this place, who came from all parts of the empire to trade with the Portugueze, was too great not to engage the Chinefe to put in there, preferably to other places. At laft, orders coming from court, importing that the harbour of Nagafaki fhould be, for the future, the only one open to foreigners in all the Japanefe dominions, fixed them there. Ever fince, the Chinefe, as well thofe who live in China, as others who were, by the late Tartarian conqueft, difperfed into the neighbouring countries and iflands, beyond the Ganges to the eaft, traded to Nagafaki, either upon their own account, or that of their principals, for fome time, with all the liberty they could poffibly defire.
They came over when, and with what number of people, yonks and goods, they pleafed. So extenfive and advantageous a liberty could not but be very pleafing to them, and put them upon thoughts of a furer eftablifhment; in order to which and for the free exercife of their religion, they built three temples, according to the three chief languages fpoken by them, each to be attended by priefts of their own nation, fent over from China. The number of Chinefe, and Chinefe yonks, foon increafed to that degree, as made the fufpicious and circumfpect Japanefe extremely jealous of them. For, to mention only fome late inftances, there came over to Nagafaki,

Vol. I.
in the years 1683 and 1684, at leaft 200 Chinefe yonke a year, every one with no lefs than 50 people on board, (at prelent they are not permitted to have more than 30 bands on board each yonk) fo that no lefs than 10,000 people came over from China to Nagafaki every year. Some of the Iargeff yonks, befides the neceflary hands, brought over numbers of paffengers, and other private perfons, who came to trade upon their own account; and feveral of them had from fifty to four-fcore, and fometimes 100 men on board.
Whoring, which is 1trictly forbid in China, being openly permitted in Japan, many young rich perfons came over to Japan, purely for their pleafure, and to fpend fome part of their money with Japanefe wenches, which proved very beneficial to this town. Not long ago a Tartarian mandarin came over ;with a very numerous retinue, and in quality of admiral of a fmall fleet of fix yonks; but he was obliged forthwith to return to China; for the Japanefe gave him to underitand, that their country would nor bear any other commanders and mandarins but fuch as were natives of it. The liberty which the Chinefe for fome time enjoyed in this country, was too great to continue long without alteration, and it quickly came to a fatal end.
The Japanefe had notice given them that the Jefuits, their mortal enemies, who had been banifhed from Japan for ever, were favourably treated at the court of the then reigning Tartarian monarch of China, by whom they had liberty granted them to preach and propagate the gofpel in all the extent of his vaft dominions: fome books relating to the Roman catholic religion, which the fathers of the fociety had found means to print in China, in the language of that country, were brought over to Japan, among other Chinefe books, and fold privately; which made the Japanefe apprehenfive, that, by this means, the Chriftian religion, which had been exterminated with fo much trouble, and the lois of fo many thoufanid perfons, might be revived again in the country. Some fufpicion of Chriftianity was thrown even on the importers of thefe books; and, if they were not looked upon as actual converts, they were thought, at leaft, to be favourably inclined to the Roman catholic religion. For thefe feveral reafons, which were of great moment with fo jealous and apprehenfive a nation, it was propofed at court to reduce the extenfive liberty of the Chinefe to a narrower compafs, and to put them much upon the fame foot with the Dutch, both with regard to their trade and way of life. The thoughts of the court tending at firft to alter the ftate of the Chinefe trade, and afterwards to hut up their perfons, as they had done the Dutch at Defima, and to make their fettlement fubject to the fame rigorous regulations and narrow infpection which ours labour under, were ftrongly fupported by the arrival of the mandarin above-mentioned, and the daily increafe of the Chinefe and Tartars fufpected of Chriftianity, the very worft thing they could have been fufpected of. And as to the firft, I mean the regulations concerning their trade, that fame year 1685 , in which the Dutch had been reduced to the fum of 300,000 thails, or 300 chefts of filver per annum, the court thought fit to limit, alfo, the Chinefe to a certain fum, beyond which none of their goods fhould be fold. This fum is not to exceed 600 chefts of filver, that is, 600,000 fummome, or thails, and according to the Dutch way of computation, 21 tons of gold.
It was ordered, at the fame time, that the goods that might be reafonably fuppofed to yield 600,000 thails, Thould be brought over on board 70 yonks at furtheft, and this according to the following divifion, made by the Japanefe themfelves: 17 yonks from the province Hoksju, or Foktsju; 16 from Nankin; 5 from the city and province of Canton; 5 from Nefa; 4 from Sintsjeu; 4 from the illand Aymo, or Ayman, and the coaft of the neighbouring continent of China; 3 from Kootz, or Kootsja; 3 from the kingdom of Siam, or Sijam; 2 from the kingdom of Tunquin; 2 from Cammon; 2 from the kingdom of Cambotiga, or Cambodia; 2 from Takkafagga, otherwife Talwaan, upon the ifland Formofa; i from Fudalam, fituate below Kaktsju; i from Kootsii, or Cofijnfina; and I from Tani, which is one of the moft confiderable of the Kuiku Ilands: befides fome others, After this manner the Japanefe have thought fit to divide the allowed number of yonks among the Chinefe, fettled in the feveral kingdoms and illands above-mentioned. They admit alfo one from Siakkatarria, or Batavia, and one from Proking, or Deking; which two laft fhould be either added to the foregoing, to make up the number of 70 , or elfe admitted in lieu of fuch as ftaid too late, or were caft away in their voyage; and yet, notwithftanding the great accuracy and nice circumfpection of the Japanefe, the Chinefe will frequently impore upon them. Thus, for infance, fome of the yonks that come to Nagalaki early in the year, after they have difpofed of their cargoes, return to clean, and to be new painted and varnifhed; then they take in another cargo, and other hands on board, and fo make the voyage twice the fame year, without the Japanere being able to difcover the cheat. Others go to the province Satfuma early in the year, as if they had been caft thither by chance, or ftrefs of weather; difpofe of what goods they can, then hafte back to take in a new cargo, and fo go up to Nagafaki. If in going to Satfuma they
are met by the Japanefe guard de coafts, which, by order of the government, cruize in thofe feas, to hipder the natives from carrying on a muggling trade, they will then alter their courfe, as'if they had been, againtt their inclinations, caft out of it, and proceed directly on their voyage to Nagafaki, as the only harbour foreigners are permitted to put into.
As to the fecond of the two above-mentioned points, which the court had in view with regard to the Chinefe nation, I mean to fhut them up, as they had done the Dutch at Defima , that was not put in execution till three years after; for they as yet enjoyed ample liberty, till the year 1688, when the fine garden of Sije Slugu Fefo, late fteward of the imperial lands and tenements about Nagaraki, was affigned them for their habitation. This garden was pleafantly feated, almoit at the end of the harbour, not far from the fhore and town. It had been maintained with great expence, as the emperor's own property, and was curioully adorned with a great number of fine plants, both native and foreign, the profeffor himfelf having been a great lover of botany. Upion this fpot of ground feveral rows of fmall houfes were built, to receive the Chinefe, every row covered with one common roof, and the whole furrounded with ditches, pallifadoes, and ftrong, well-guarded, double gates. All this was done with fo much expedition, that the fame place which, at the beginning of February, was one of the pleafanteft gardens, had already, towards the latter end of May, the horrible afpect of a ftrong prifon, therein to fecure the Chinele, who, into the bargain, muft pay ever fince a yearly rent of 1600 thails for $i t$. Whenever they come to Nagafaki, they muft live here; and fo great is their covetoufnefs and love of gain, that they fuffer themfelves to be as narrowly watched, and as badly, if not worfe accommodated, that the Dutch are at Defima. However, there are fome remarkable differences to be obferved with regard to the accommodation of the Dutch and Chinefe. Thefe are, 1. The Chinefe are not allowed the favour of being admitted into the prefence of the emperor, as the Dutch are once a year; but, intead of this, they fave the trouble and charges of a journey of three months, and of fo many prefents which muft be made to his imperial majefty and his minifters. 2. They bave victuals and provifions brought and offered them to fale at the very gates of the factory; whereas we muft be at the expence of maintaining a whole company of commiffioners for victualling, all natives of Japan. 3. Being looked upon as private merchants, and withal increafing the bad opinion the Japanefe have of them, by the frequent difputes and quarrels arifing among them, they are not treated with fo much civility as we are, by their infpectors, guards, and interpreters, who made no icruple now and then to cane them, by way of punifhment for fmall mifdemeanors. 4. They have no director of their trade conftantly refiding there, as the Dutch have; but, when the fale of their goods is over, they go on board their yonks, leaving in the mean time their boufes empty.
They have three fales a year, at three different times; one in the jpring, when they difpofe of their cargoes of twenty yonks, another in the fummer for thirty others, and another in autumn again for twenty. What other yonks come over beyond this number, or after the fale is over, muft return without fo much as being fuffered to unlade. Their cargoes confift in raw filk from China and Tonquin, and all forts of filken and woollen ftuffs, which are likewife imported by the Dutch. They alfo import fugar from feveral parts of the Eaft-Indies, calamine-ftone from Tonquin, for making of brafis or brazier's wares; turpentine (from wild piftachotrees) ; gum, myrrh, agate, and calamback-wood, from Tfiampa, Cambodia, and the neighbouring countries; the precious camphire of Baros from Borneo; the precious Chinefe root Nifin, or Ninfeng (wild fugar-root) from Corea, feveral other drugs and medicines, fimple and compound, from China, befides feveral philofophical and theological books printed in China. As to thefe books, it happened, that fome relating to the Chriftian religion, which were compofed and printed by the Jefuits in China, llipt in among the reft. When this was firt found out by the Japanefe, they obliged the proprietor of the books to teftify in the moft rolemn manner, that he was not a Chriftian himfelf, and that he did not bring over thofe books defignedly, and knowing what they were ; then, to make him more circumfpect for the future, they fent him back with his yonk and whole cargo, without permitting him to difpofe of any one part of it. Upon this it was ordered, that for the future all the books whatfoever, imported by the Chinefe, thould be firf examined, and one of each kind read and cenfured, before they fhould have leave to fell them. This office of cenfors, with a competent yearly allowance, bath been given to two learned men of this town; one whereof is father Prior of the monaftery Siutokus, who is to read and cenfure all ecclefiaftical books; the other is Sjutos, philofopher, and phyfician to the Dairi, as be ftiles himfelf, who is to read and cenfure all the philofophical, hiftorical, and other books. This latter gentleman relides at Tahajamma, and wears long hair, which he ties together behind his head, as the cuftom is among the philofophers, phyficians, and furgeons of the country.

The proccedings, at the fale of the gonds imported by the Chinefe, being nearly the fame with the Dutch, I need noe add any thing to tbat defcription. It muft be obferved only, that as the voyage of the Chinefe is fhorter than that of the Dutch, and not expofed to fo many dangers, nor liable to io great an expence, the government in confideration of this hath laid a much greater duty upon all their commodities, viz 60 per cent. to be paid by the buyer, for the benefit of the feveral officers concerned in the management of the Chinefe trade, and of other inhabitants of Nagafaki, amongtt whom this money is afterwards diftributed. This great duty is the reafon, why their profits are not fo confiderable as that of the Dutch, the buyers, by whom the duty is to be paid, being not willing to offer great prices for them. It has been ordered befides, ever fince the reduction of that trade, that the money paid in for their guods fhould not be exported, as it was done formerly, in copper or filver money, but fhould all be laid out again in copper, and manufactures of the country; fo that they are not now permitted to export one itzebo ${ }_{3}$ or one farthing of Japanefe money.
As foon as a yonk has difpofed of that part of her cargo, which in the diffribution hath been affigned her for her portion, the funaban (or guard-fhips, which as foon as the comes into the harbour are pofted on both fides of her) attend her out of the harbour, till fhe gets to the main fea. The day before her departure, the Chinefe Neptunus, or fea idol, was fetched from the temple, where he was kept from the time of the yonk's arrival, and is with great pomp and ceremony, under the found of timbrels and other mufical inftruments, carried on board. This idol is unknown in Japan, and not worfhipped by the Japanefe.' Chinefe failors carry him along with them in all their voyages, and make great vows to him, when they are in danger. Every evening a gilt paper is lighted before him, and thrown into the fea as an offering, with ringing of bells, and playing upon mufical inftruments. If they made a good voyage, particularly if they efcaped fome confiderable danger, they play wejjangi, or comedies, at night in the open ftreet, for his diverfion. They are likewife laid to facrifice to him fwine and other animals, the fefh whereof they afterward eat. For this reafon they never facrifice cows to him, becaufe they have a great veneration for this animal, and religioully abftain from eating it's flem. The Chinefe merchants returning commonly with a good quantity of undifpofed books on board, they are frequently followed by Japanefe fmugglers, who buy the remainder of their goods at a low price: but thefe unhappy wretches are almoft as frequently caught by the Japanefe cruizers, and delivered up to juftice at Nagafaki, which conftantly proves fevere and unmerciful enough to them.
There is another company of merchants from the Kiuku, or Siquejo illands, who are permitted to carry on a particular trade to the province Satzuma. By the Kiuku, or Siqueja illands, muft be underftood that chain of illands, which run down from the fouth-weft coaft of Satzuma, towards the Philippine iflands. The inhabitants fpeak a broken Chinefe, which evinces their original defcent from China. The Chinefe at all times traded to thefe iflands. After the late Tartarian conqueft of China, many came over with their families to fettle there, and were well received by the inhabitants, as old acquaintance and countrymen. Some time ago thefe iflands were invaded and conquered by the prince of Satzuma, under whofe fubjection they fill remain. Though they look upon the prince of Satzuma, as their conqueror or fovereign, to whofe bugjos, or lieutenants, they pay fome finall part of the produce of their fields, by way of a tribute, yet they will not acknowlege the fupremacy of the Japanefe emperor. They fend over every year a prefent to the Tartarian monarch of China, in token of fubmiffion. Though they might be looked upon, in fome meafure, as fubjects of the Japanefe emperor, yet they are, as to their trade, treated like other foreigners. They are ordered to go to the harbour of Satzuma, and not to prefume to frequent any other in the Japanefe dominions. The import and fale of their goods has been likewife limited to the yearly fum of 125,000 thails, beyond which nothing fhould be fold. Neverthelefs they difpofe of much greater cargoes, through the connivance of the Japanefe directors of their trade, who are themfelves no lofers by it. The goods imported by them are all forts of filks and other ftuffs, with feveral other Chinefe commodities, which they bring over from China on board their own yonk; fome of the produce of their own country, as corn, rice, pulfe, fruits; ovamuri, a ftrong fort of brandy, made out of the remainder of their crop; takaragai and fiamagai, that is, pearl-hells, and that fort of fmal) fhell called cowries in the Indies, which are brought chiefly from the Maldive nlands to Bengal and Siam, where they go for current money. Out of thofe which are imported into Japan by the inhabitants of the Kiuku iflands, upon the fhore whereof they are found in great plenty, is prepared a white check varnifh, which boys and girls paint themfelves withal. They likewife import a fort of large flat fhells, polifhed and almoft tranfparent, which the Japanefe make ufe of inftead of windows, and to thelter themfelves againft rain and cold; fome farce flowers and plants in pots, befides feveral other things.

## REMARKs.

The port of Canton has not been long in repute with our India company, but the merchants of Madrals have fome years preferred it to Amoy, where they experienced the extravagant demands, charges, and abuies of the Mandarins, ready to fwallow up the whole profits of a voyage. -Here, [at Canton] a whole fleet may be freighted without danger of overftaying the monfoons for a cargo, which is highly beneficial to the company.
In this trade, 'tis proper to conceal your money. The advantage received from it is keeping the hoppos and their officers from exactions, the knowlege of your riches might induce them to, it being in their power to retard or expedite your affairs.
Nothing is of fo weighty confideration in this traffic, as the judicious making of contracts.-To mix, as was formerly the cafe, $\frac{3}{4}$ or $\frac{2}{3}$ filver with your goods, is inconfiftent with the company's intereft, many" of the company's fupercargoes having experienced, that the fame things could have been bought with the money only.-Therefore a downright fale, though you cannot get the full value of them in barter, is the beft way to be free from the vexations you will otherwife labour under.-Here oblerve, lead, which is a material commodity, and the only one the company ufed to gain by, is always efteemed as ready money.
China ware, pictures, fans, and lacquered ware, are better bought out of the fhops than in contract, unlefs you can ftay till a parcel is got ready; for thefe it is proper to referve a confiderable fum of money, more than will clear the other contracts and inveftments.-By no means fint yourfelf in cahh, but rather keep too much, than lefs than will ferve your occafions.
Your factory being free for every one to bring in his goods, you muft expect to be daily vifted by the greateft fharpers in China: fome with one thing; fome another to fell; wherefore, to deal with them, you hould have your wits about you, till you have detected two or three of the ringleaders, which, for the future, will check their roguifh fpirits, and intimidate others from impofition.-There is nothing like punifhing a Chinefe in his pocket.-Unroll and mealure the filks, which are fometimes of two or three colours, and are often deficient in their dimenfions.-Never weigh your filver by their dotchins, for they have ufually two pair, one to receive, the other to pay by.-In weighing, fee the beam is not longer on one fide than the other, and take an equal number of draughts of both fcales.--Some have two holes in the ends of the beam, or notches for the fcales to hang in ; which, as they ufe them, will augment or diminifh the weight, as fuits theirinterefts.-In others the ends are to be let out, or drawn in imperceptibly, which has the fame fraudulent effect.But the leaft perceptible artifice of this kind is, when the nut, or center of the beam wherein it hangs, is made to slide; a quarter of an inch added to one, and taken from the other fide, will make a fenfible alteration.-In the dotchin, an expert weigher will cheat 2 or 3 per cent. by placing and fhaking the weight, and minding the motion of the pole only, without any other help. - To detect thefe, the beft way is to try every thing by your Englifh weights, without the affiftance of any but your own people.-In fine, bal lance the fcales often, and they will not ftick wax on the bottom of them, which otherwife they may attempt to do. In package be very wary: if you truft to them, it may be ill done, the goods changed, or fhort in tale. -They have heretofore fhewn nolittle dexterity in imitating chefts, boxes, and canifters, in fhape, mark, and even in feals, and finding means to change them for the originals; and there is always reafon to fufpect new inventions of this kind, they being wonderfully fruitful in thefe arts of deceit.-The Europeans having been fo often bit by thefe fuperlative fharpers, too much care cannot be taken of them.
In all payments take receipts, and mention on them where the Chinefe live, who receive the money;-which will make them cautious how they deviate from their agreements, and put bad goods upon you. For, though they may be rogue cnough in their hearts, they don't care to appear fo in writing 'Tea grows in China, Tonquin, and Japan, but it is feldom exported from the latter; perhaps for want of fill to cure it, or that it is not fo good in quality.- From Canton it is a profitable commodity to all parts of the world, where they have the knowlege of it, efpecially green tea.-Bohea is of little worth among the Moors and Gentoos of India, Arabs and Perfians; probably, becaufe they have not been ufed to it; that of 45 tale would not fetch the price of green tea of 10 tale a pecul. Yet many virtues are afcribed to the bohea.There are feveral ways to know the rood from the bad which the buyer fhould be well experienced in. - It ought to frell and tafte well, look all of a colour, and be very dry, crifp and brittle.-The beft opens fooneft in hot water, and, the oftener it colours it, the itronger and better it is.-Small lackifh leaves and dirty are figns of a bad fort.
singloe, or common green tea, is a fmall lead-coloured leaf; the beft fort has a freflh frong flavour peculiar to itfelf.-For trial, chew it, and, the greener it is, the betterit is.一Or, put
an equal quantity of feveral forts into different fizabic pots of water, and that which holds longeft of a pale amber coloin. may juftly be preferred, for the worf turns brownifh terwards put frefh water to it, 'till it has quite loft it's virtue, and then if none of the leaves turn brown, or dark-coloured, you may depend on the goodnefs of it; the contrary flew ing it to be old, ill cured, and on the decay.
Imperial or bing tea, is a large loofe leaf, of a very light green, when chewed; and, being infuled, leaves the water very pale : it yields a pleafant fimell, but not fo ftrong as the fingloe; it is the lighteft fort of all, and takes up a great deal of room in a thip.-If it once lofes it's cripnefs, 'twill never recover; a pecul of tough or damp tea in China is not worth the freight in Englànd.
'Tis not enough to know and purchafe the beft tea: for, without good management in it's package and ftowage on board of ihip, all your care may be jendered fruitlefs. - The company are fo thoroughly fenfible of this, that they are very pariicular in their orders to their fupercargoes about it. The following paragraph of their real inftruttions contains all that is neceflary on that head :
' Tea is a commodity of that general ufe here, and fo nicely ' to be managed in it's package, to preferve it's flavour and ' virtue, that you cannot be too careful in putting it up: ${ }^{\text {a }}$ take fpecial care, therefore, it be well clofed in tutenague, ' then wrapped up in leaves, and fo put into good tubs of 'dry well feafoned wood, made tight and clofe enough, to ' preferve it from all manner of fcent, which it is very fub-- ject to imbibe, and thereby become of no value here: but ' you muft be fure that the wood of your tubs have no frent, ' whether fweet or unfavoury, that will fpoil the tea; fo ' will camphire, mufk, and all other ftrong-fcented commo' ditics: wherefore no fuch fmell muft come into the fhip, ' at leaft near the tea. For the like reafon, take care the ' tutenague be well cured of the fmell of the foldering oil - before ufing. Bring no tea in fmall pots, 'twill not keep. - Be fure the tea you bring be very new, and the beft of it's - fort, remembering that, in this and every other commodity, 'the worft pays as much freight as the beft, and many times ' the fame cuftom. Keep the tea in the cooleft place of the ' Chip; what is put in the hold, open the hatches in fair ' weather to give it air, as often as you have opportunity; ' but you will fee, by the captain's inftruction, we have re' quired that our tea be flowed between decks, abaft the after ' hatch-way with a bulk head, and a little gang-way made 'for paffage, which do you fee done accordingly; it being ' now peace, we are refolved to difpenfe with our old orders, ' in this particular, of ftowing no goods' between decks, ' when fo great an advantage will accrue, as the preferving 'the tea, a very confiderable árticle in the profit and lofs of 'that commodity.'
Quickfilver is beft tried by fraining through a white cloth, three or four times double, or fhamoy leather ; the beft leaves no drofs nor filth behind. - Or fet a little in a fpoon over the flame of a candle, and it will foon evaporate, leaving a white, yellow, or black fpot; and, as it excels in the former, fo is it pure and free from lead, or other mixtures. Vermilion in cake's is not to be counterfeited, but it may be foul; the beft is clean, flaky, and of a fhining or glittering crimfon colour, extraordinary beavy, and in large bright pieces, or lumps, two or three inches thick; never purchafe it in powder, it being liable in that ftate to great adulteration. China-root fhould be large, found, and weighty, without worm-holes, white or reddin within; there's no difference with refpect to colour, in point of quality.
The beft rhubarb is firm and folid; what comes from China is often deficient in both.
Tonquin muik in cod is of a dark brown or liver colour, ftrongfcented, and appears in fmall round grains. If it proves gritty between the teeth, 'tis a certain fign of it's bad quality, and an extraordinary weight gives grounds for a fufpicion of roguery. A bodkin or fcoop will beit difcover the mixture of fand, lead, or other ingredients ufed to augment the weight.-If 'tis 'mixed with goat's blood, 'twill not flame in burning like the genuine mufk, which leaves whitifh or grey afhes, inftead of thofe that are dirty and dark.-Old and decayed mulk the Chinefe rarely offer by itfelf; therefore examine the parcel well, that none of a faded colour be inter-mixed.-It fhould not be quite dry, and, if very moift, 'twill lofe much in weight; wherefore both extremes are to be vigilantly guarded againft.- Upon the whole, 'tis feldom a beneficial article in this branch of trade: for, confidering the prime coft, lofs in drying, China duty, freight, cuftom in England, the company's charges, and the price 'tis generally fold at in London, there's oftener lofs than gain to be got by it.
Raw filk is fo nice a commodity, that 'tis no eafy matter to judge within 4 or 5 per cent. of it's true value. It hoould be carefully oblerved, that both infide and out perfectly ayree, that it be ungummed, neither damp or in any refpect difcoloured. Great delicacy thould be ufed in the parkigo to preferve it, and the clofer it is, the greater advantage you'll have in the freight.

Wrought

Wrought filks are cheap and good, of innumerable forts, farhions, flowers, and prices : as damafks, fattins, taffaties, paunches, pelongs Tonquin and Canton, gelongs, gawfe, old-flowcred damafks, velvets, palampores, embroideries, \&cc Sattins and damaks thould be of brifk lively colours for the European markets, and of flowers no ways refembling European figures; and care fhould be taken that they are full weight, according to agreement.
Tonquin pelongs are the fineft; thofe made at Canton are longer and broader. White paunches ought not to owe the beauty of their whitenefs to brimftone, which may be tried with a frong fillip of the finger. Gillongs are a kind of filk crape, ufed by the officers of the army and navy for neckcloths in time of war, but not in conftant demand.
Gilt-paper-flowered-filks make a fine thow till they are worn in the rain, or damp with fweat: the fmall-fowered, and where the paper does not appear much on the backfide, are moft valuable. The velvets of China are of different length and breadths, and often rotten with age, épecially black. Palampores and embroideries are eftimable for their largenefs, finenefs and figures, for the purchafe of which there are no accurate directions to be given; the judgment of the buyer muft determine him.
Nanquin goods are generally well made, and hold out the lengths; nor need you fuffer in others, provided you merit the character of a careful man at firft coming among thofe traders; otherwife, he that is ignorant of the qualities will be certainly bit.-Pack every fort in chefts by itfelf; fet the rolled pieces up an end; wrap them all in paper; leave a note of the contents on the top, and burn your mark on both fides of the cover.
Copper in bars, in the form of ficks of fealing wax, is better than in plates; but the Japan copper is beft of all: though in Gombroon and Mufkat the merchants make no difference The clofer and redder it looks within, on being broke, the better it is. There is no trufting to outward appearance: for, being heated red-hot, and quenched in common urine, it will receive a high red colour, that may deceive you. It is ufually packed a pecul in a cheft, covered with mats, and bound with fplit rattans.
Allum ; the beft is clear, dry, and free from dirt.
China camphire, is in fmall, white, tranfparent grains, a little bigger than fea-fand; which being clofe packed, and heated in the fhip's hold, coagulate into 'a Iump before it comes home. In chefts or tubs it will wafte; therefore the beft way to bring it is in China jars, or tutenague.
Sugar and Sugar-candy are forted into head, belly, and foot, which bear each a price proportionably greater than the other. Cochinchina affords of the latter the beft in the world, being white, and as clear as cryftal.
Thefe are commodities a little experience will gain a thorough knowlege in, and prevent impofition.
Fans are in the greateft perfection at Nanquin, from whence they are brought to Amoy, and this market, for fale. There are great quantities made all over China; yet there is a fenfible difference in the workmanfhip. The people of Amoy, having had the longeft and greateft commerce with us, know beft what will pleafe, and accordingly employ the fineft workmen in the provinces, and provide it againft the arrival of the Englifh fhips: for which reafon not only the beft fans, but the beft pictures, toys, and lacquered ware have always been brought from that port: but, of late years, their beft lacquermen have been drawn to Canton, which has rendered this a mart, more famous than ever the other was, for good workmanfhip of thefe kinds, as it has always likewife excelled in the filk manufactures. Before you fet out, learn what fize and fafhion is' moft taking, and provide yourfelf accordingly. Pictures are valued for the livelinefs and brifknefs of the colours, and variety of figures. Odd fancies commonly hit the general tafte; and the Chinefe do not feem to have any tafte for pieces of gravity.
Lacquered ware fhould be without fpecks, fmooth, and of fo fhining a black that you may eafily fee your face in it, the figures in raifed work, and well executed; the bottoms, fides, and corners found; and nothing fhould be chofen but what is ufeful : the gold work fhould not come off with light rubbing, nor the fubftance of bowls, bafons, \&c. be too thick. The fineft, indeed, comes from Japan, but at fo dear a rate, that it rarely turns to account, any more than the coarfeft, which our own artifts can greatly excel: therefore the beft China is advifable. Pack it tight in chefts, or boxes, left it receive damage by the fhip's motion; for the finalleft part, worn or rubbed off, makes a great alteration in the value.
Porcelan, or China ware, is fo tender a commodity, that good admonitions are as, requifite for package as purchafe. The beft of this alfo comes from Japan, which the fine Nankin ware fo well imitates, that it muft be a man of judgment and experience to diftinguifh one fort from the other.
The Japan porcelan is heavieft, of the coarfeft grain, and freeft from fpecks, or rifings in the bottom; has five or fix regular knobs, in large pieces, which are never obferved in the other; and the gold and colours are delicately laid on: but the ground is feldom fo white as the fine China. There is
but little of is to be found in the fhops, it being generally ton dear for our market. However, the following forts, or what we call Nanquin japan, will turn to good account,- Try every piece with a fmall ftick, to difcover the cracks, and take ny thing of that which has the leaft fire-flaw or difcolour; otherwife you may agree to be allowed fo much in the whole,' or per cent. for damage.
For more matter upon this head, in regard to carrying on the Eaft-India trade in general to the beft advantage, we fhall reprefent it under thole various heads to which we have heretofore referred. See our Maps of Afia.
CHOCOLATE, which is diluted in warm water, in order to make a nourifhing liquor, is a pafte, whofe chief ingredient is the powder of cacao-nuts, which are taken out of a long fhell fhaped like a cucumber; and to thefe nuts there is an additional mixture of fome particular drugs. The Mexicans, in whofe country the cacao-tree grows in the greateff abundance, take the nuts and mix them with Indian corn, and fuch fugar as they extract from their canes, adding a few, feeds of rocou, which are coloured with the fineft vermilion in the world. They grind all thefe ingredients between a couple of fofies, and work the mixture into a pafte, which they eat dry, when they are hungry, and diffolve it in warm water, when they want to quench their thirf.
The Spaniards, who find this compofition very beneficial and acceptable, and know it to be a commodity of fure confumption, are fo induftrious to bring it to perfection, and make it extrémely valuable, that at prefent a fmall garden, planted with cacao-trees, is worth above twenty thoufand crowns to the proprietor. Complaints are made, that the Spaniards mix with the cacao-nuts too great a quantity of cloves and cinnamon, befides other drugs without number. The grocers at Paris ufe. few or none of thele ingredients, and have much lefs regard for mufk and atrbergreafe, which a number of people are fond of to infatuation; they only chufe out the beft nuts, which are called Caracca, becaufe they are brought from the ports adjoining to the city of Caraccas in Terra Firma of America; with thefe nuts they mix a very frall quantity of cinnamon, the frefheft vanilla *, and the fineft fugar, but very feldom any cloves; and they now have the art of making fuch chocolate as is univerfally cfteemed.

* Vanilla is a fhell full of a lufcions juice, and little black feeds of a moft agreeable odour. It is gathered in America, and efpecially in New Spain, froma a tree of the fame name.

Chocolate, ready made, or cacao-pafte, prohibited to be imported after the 24th of June 1724, upon forfeiture, with double the value, and the package, ro Geo. J. cap. 10. fect. 2. -Made in Great-Britain, the makers to enter it at the next office in writing, and upon oath; if within the bills of mortality, every week; and in any other part of Great-Britain, every fix weeks, upon forfeiture of 501.10 Geo. I. cap: 10. fect. I. Made or fold in Great-Britain, the pound avoirdupoife pays 1 s .6 d. - To be paid by the maker, if within the bills of mortality, within one week, and in any other part of Great-Britain, within fix weeks after entry.-To be under the management of the commiffioners of the Excife, and their judgment to be final.-This duty to be levied by the powers, and under the penalties of the laws of excife on liquors; and all penalties to be fued for and recovered by the fame ways and means.-The duty not paid within the time limited, the penalty is 501 . and not to deal till the duty be cleared off, upon forfeiture of treble the value; ro Geo. I. cap. ıo. fect. 18.-To be inclofed in papers, containing one pound each, and muft be produced at the office where entered, to be ftamped, 10 Geo. I. cap. 1o. fect. 19.-Counterfeiting the ftamp, or felling it (knowingly) with fuch a ftamp, or affixing ftamped papers taken from chocolate that has paid the duty, on fuch as has not, the penalty 501 . and twelve months imprifonment, so Geo. I. cap, 10. fect. 22. and 1 i Geo. I. cap! io. fect. I3.-Damaged by lying by, may be opened in the prefence of the officer, and the ftamps returned; and, after worked'over again with frefh chocolatenuts, be reftamped, upon paying duty only for what is added, II Geo. I. cap. 30. fect. I4.-But proof muft be made before the collector, or a juftice of peace, that the duties for the cacao-nuts have been paid, and that the chocolate had been formerly entered, in Geo. I. cap. 30. fect. I5.-Upon three days notice, given in writing to the officer of the divifion, private families may be permitted to make chocolate for private ufe; provided that not lefs than half an hundred weight of cacao-nuts be made into chocolate at one time, ${ }_{1} 1$ Geo. I. cap, 10 . fect. 23 and 25.-But, within three days after finifhing, mut be entered upon oath, brought to be ftamped, and duty paid, upon forfeiture of treble the value, 10 Geo. I. cap. 10. fect. 24.-By the act of $3^{2}$ of Geo. II. a further additional duty of 9 d . per pound is laid on chocolate, to be levied and paid as the former duties. See Cacao.
CINNABAR, is the moft valuable of all the ores of mercury. It is a moderately compact fubftance, extremely heavy, and of a bright red colour. It is fometimes found in large malles,
fometimies in fmall fpangles, in earths or fldies: The places where native cinnabar is produced in plenty are chietly in Spain and Hungary, and fome parts of the Eaft-Indies. For medicinal ufes native cinnabar is to be chofen of the brighteft red, the heavieft that can be found, and fuch as has no flony or earthy matter adhering to it. The moft experienced naturalifts and phyficians have for thofe ufes given the preference to the factitious, which is, in effeet, the fame lubftance; with this difference only, that the one is prepared by nature, in the bowels of the earth, the other in the laboratory of the chemift. The factitious has this advantage, that the quantity of mercury contained in it is certainly known, which in the native can only be conjectural ; and we are fure alfo of the former, that it contains nothing but mercury and fulphur, which is more than we can always be certain of with regard to the native.
The native cinnabar very eafily parts with it's quickfilver, on diftillation, with the addition of iron filings, or quick-lime: the fulphur, indeed, is not fo eafily feparated from this mineral; but, if it be boiled in a lixivium of wood-afhes, or rather decrepitated nitre, it will eafily be precipitated, by the addition of vinegar. The medicinal virtues of the native or factitious cinnabar, for they are the fame thing when the native is pure, are very great. Our ableft phyfficians have experienced it to be good in epilepfies, and in all complaints of the head and nerves; it is affirmed by fome eminent phyficians, that it is the moft fovereign remedy, even in cafes of lunacy, if properly prepared.
It is generally found, in it's pure and fluid ftate, lodged in the accidental cavities of hard ftone, and that often in confiderable quantitics. There are, alfo, feveral fpecies of earth, peculiarly a red lifh marl, and a pale brown clay, in which the quickfilver is lodged, and fometimes in the pureft cryftalline ftones.
It is alfo frequently found in a bluifh indurated clay, and fornetimes in a greenifh, or olive-coloured, talcky fone, in which it runs in farlet veins. Thefe, and the variety of other appearances of this mineral, whether in fpots, ftains, or blended among the fubftance of the matter into which it falls, are of the number of the ores eafily known; but there is another wherein there is not the leait appearance of rednefs; this is a greeniih, orange-coloured, or blackifh ftone, for it eafily affumes all thefe colours, and, when broken, has very little brightnefs, and nothing of the appearance of cinnabar. From all thefe ores the mercury is eafily procured, by diftillation in large retorts, with iron flings, or quick-lime, as before intimated

## The proceís is as follows:

Let the retort be well coated, and of a peculiar form, having the neck very long, and turned down at the end, fo that the glafs recciver may be applied perpendicularly to it; and the quantity of the ore ought to be what will fill about two-thirds of the cavity of the retort: it fhould be foplaced that none of the fluid adhering to the neck may fall back into the belly, but that every particle collected muft neceffarily run down into the receiver.
'The retort is to be fet on a raifed hearth, with a fuitable bed of fand, to keep it fteady; a ftone is to be placed at it's front, to fupport it's neck, and keep the fire from reaching the recipient, and the recipient is then to be applied with cold water in it, the nofe of the retort being received an inch or two into the water.
In this ftate a fire of charcoal is to be made about the retort, it firft at a diftance, gradually to feafon it to the fire, but, by degrees, it mult be brought nearer: the retort is to be kept Пightly red-hot for about an hour: more or lefs time is to be allowed to this operation, according to the quantity of the ore, and it's richnefs, the poorer ores requiring a greater heat. When the veffels are cold, the quickfilver will be found at the bottom of the water, in the receiver. This opesation may be performed in a fand-heat; but then it is neceffary that the bottom of the furnace be kept red-hot during the time, and that the retort immediately touch it ; but with this caution it does not do fo well as when the feveral parts of the retort and the ore are equally heated. When there is little or no fulphur in the ore, there needs no addition to it, it running very readily thus out of the retort; but, when it is of the cinnabarine kind, iron or lime muft be added, and the fire be made a great deal fronger. See the article Mercury.
CINNAMON. The cinnamon of our fhops is a thin bark, always brought to us rolled up into a fort of little tubules, or pipes; thefe are from the thicknefs of a goofe-quill to that of a man's thumb, and fometimes larger; and in length they are often two or three feet. The bark itfelf is alfo very different in thicknefs, as well as the rolls, or tubes, it forms itfelf into. It is fometimes of the thicknefs of a crown-piece, or more, but ufualiy not thicker than a fhilling: fometimes we meet with it as thin as paper. It's furface is tolerably fmooth and even, but not glufly: it's texture fibrous, and moderately firm; it breaks, however, tolerably eafy, and is not very heavy. lt's colour is brownifh, with a mixture of red. Ir Vol. I.
is of an extrëmely fragrait and aromatic fmeli, and of ang acrid and pungent but very agreeable talte.
The greatef deceits that are practifed in the fale of cinnamon are, the felling fuch as has already had it's effential oil diftilled from it, and been dried again, and the impofing the caffia lignea in it's place. The firft of thefe cheats is difcovered by want of pungency in the cinnamon; the fecond, that the caffia, when held a little time in the mouth, becomes mucilaginous, which the true cinnamori riever does. Our cinnamon is the interior or fecond bark of the tree which produces it: the people who collect it take off the two barks together, and immediately feparating the outer one, which is rough, and has very little fragrancy, they lay the other to dry in the fhade, in an airy place, where it rolls itfelf up into the form we fee it in.
It's root is large, and divided into many branches, and it penetrates very deep into the ground: it's bark is of a reddifh grey without, and red within: it's fmell is like that of camphire, very ftrong, but the woody part has no fmell at all. The trunk is thick, and divides into a multitude of branches: the bark is green at firft, but it grows reddiih with age, and wraps itfelf clofe to the wood, but it is covered with a greyifh, loofe, and chapped rind: it is of a faintly aromatic tafte, while frefh, but acquires a very pungent one in drying: the wood is whitifh, firm, and without imell. The leaves refemble thofe of the bay-tree, but they are larger, being four inches, or thereabouts, in length : they ftand on moderately long pedicles, and though of no very remarkable fmell while frefh, they become very fragrant in drying, and have the true fmell of the cinnamon-bark; by which they are diftinguifhed from the malabathrum-leaves, which otherwife greatly refemble them. The flowers are fmall and whitifh; they ftand in clufters at the end of the branches, and are fucceeded by little berries, of an oblong figure, green at firft, butafterwards bluifh, and fpotted with white: thefe ftand in little hollow greenifl cups; they confift of a thin rind, inclofing a foft gieenifh pulp, of an auftere, aftringent, and fubacid tafte, under which is an oblong, thin, and brittle ftone, containing a kernel of the fame fhape, and of a reddifh colour.
The tree grows in Ceylon fo plentifully, that the woods and forefts are full of it. The bark intended for ufe is taken from the branches of three years growth, or thereabouts. They take it off in fpring and autumn, when the quantity of fap between it and the wood makes it loofe. The branches thus ftripped remain bare two or three years; but afterwards they acquire a new covering, of the fame kind with the former. There is a thin membrane very obfervable on the inner furface of the cinnamon, when frefh taken from the tree, and which even is diftinguifhable with us, if carefully enquired after. This is truly a third bark of the tree. It is of a vaflly more acrid tafte than the reft, and is what alone contains the oil of the drug. Hoffman, who was at the pains of feparating fome of it, found that it yielded, on diftillation, fix times as much oil of cinnamon as the common cinnamon taken in the grofs.
The ancients have treated very largely of a drug which they call cinnamon, and of another very nearly allied to it, which they call caffia. Many have fuppofed their cinnamon and caflia to be the produce of two different trees; that their cinnamon is now wholly unknown to us, and that their caffia was the fame with what we now call cinnamon. Their accounts of thefe fpices are but little to be depended upon: they only received them from merchants, unwilling, perhaps, as well as unable, to give them true information about the origin of a drug of fuch value. It appears, upon the whole; that our cinnamon, and their cinnamon and caffla, are all three of the fame kind. Their own accounts of their caflia prove it to be the fame with our cinnamon; and, from the fame accounts, it is alfo eafy to learn, that their caffia and cinnamon were the produce of the fame tree, but that the cinnamon was the fmaller branches, cut off and fold to them, wood and bark together; and their caffia, the bark of the fomewhat larger branches of the fame tree, ftripped off and fold feparate.
The trade of cinnamon feems to have been carried on a great while in this double manner, till at length it was found bet ter to flrip even the fmaller branches, and to bring over only the bark, which is the cuftom continued to this day; only we have changed the terms, and made the word cinnamon applicable to, and expreflive of the bark, inftead of the name caffia, by which they called it.
The ancients had feveral kinds of caffia, differing in colour, degree of pungency, and other circumfances, which they called afyphe, mold, and gifer, and by other names. Their cinnamon they alfo diftinguilhed, in the fame manner, into the mofilitic, the mountain, the black and the white cinnamon. But all thefe are not to be fuppofed to have been the barks of different fipecies of the cinnamon-tree; they were only different in trifing accidents, and were no other than the ftrippings of the fame fpecies of tree, fome of the larger, and others of the fmaller branches, and fome from the trees of one part of the eaft, and others from thofe of another. There
is as much diference, even now, between the cinnamon of Ceylon and that of Malabar and Java, between that which grows in good forl, and that of bad, and between that of the cultivated, and that of the wild trees, as between the feveral kinds of cinnamon defcribed by the ancients under their vasious names.
All the virtues attributed by the antients to their cinnamon are found in ours: it is an aftringent in the primæ viæ; but, in the more remote feats of action, it operates as an aperient and alsxipharmic: it fops diarrhoens, and it promotes the menfes, and haftens delivery: it ftrengthens the vifcera, affifts concoction, difpels flatulencies, and is a very pleafant cordial. It may be given in powder, from 10 grains to 20; but it is more frequently given in form of decoction, tincture, or infufion. Befides it's being an ingredient in many of the compofitions of the fhops, it is in fuch efteem as to be given in form of a fimple and fpirituous water, a tincture, and an effential oil.
CIRCULATION, in it's common acceptation, fignifies the act of moving round, or in a circle. The light wherein I fhall confider this article, as confiftent with the tenor of our work, is as follows:

## Remarks.

The circulation of all the goods and commodities in a ftate is carried on by undertakers, and all at an uncertainty.
The farmer who fows his corn, and feeds his flocks upon his farm, does not know what price the commodities will bear, fince they may be fcarce or plenty in a ftate, according to the goodnefs or badnefs of the feafon : if there be a great plenty, there will be too much for the confumption of the year, and an overplus to ferve the next year; and fo the farmer's commodities will be cheaper: if there be a fcarcity, they will be dear. Thus the farmer is an undertaker, who carries on his bufinefs at an uncertainty.
The confumption of the farmer's commodities not being in his village only, but a good part of it in the neareft city, he cannot go to the city, and fit down there, to retail his commodities, without neglecting the bufinels of his farm: nor will the proprietors of the city, or the artifans and mechanics, and others there, buy fo much of his commodities as they will confume in their families in a year ; their families may increafe or decreafe within the year, and they may confume fometimes more, fometimes lefs, of each commodity, and few or none of them are able to lay up a year's provifion for their families: fo that feveral others fet up for undertakers, and give a certain price for the farmer's commodities, and refell them at an uncertain price. Such are the merchants of corn, wool, wine, butchers, tanners, \& cc. and all thefe undertakers work at an uncertainty; and bankruptcies happen frequently among them. It is impoffible for any of them to know the confumption of the city be is in, becaufe he cannot know the increafe or decreafe of the inhabitants within the year, and becau'e the fame families confume fometimes more and fometimes lefs of each kind in a year ; and, becaufe of the rival undertakers in the fame trade, fome find more favour and confidence from their cuftomers than others.
In like manner the undertaker who has bought the farmer's wool at a certain price, is not fure of the price he fhall have for it from the undertaker of the woollen manufacture. That price may vary in proportion to the plenty or icarcity of wool, with regard to the demand for it's confumption; and this confumption cannot be previoully known or computed. In feveral families they do not know themfelves how long the fancy will hold them to wear the fame cloaths, nor what fort of cloth they will wear next. The undertaker of the manufacture runs the fame hazard, bellides that of the change of mode, and faflion, which may occation his having feveral unfafhionable ftuffs lie upon his hands, to be fold off at under prices. The retailers and fhopkeepers of all kinds are alfo undertakers, and fell at an uncertainty; what encourages and maintains them in a ftate is, that their cuftomers, or the confumers, chufe to give fomething more to find what they want ready to their hand, when they have the fancy or means to buy, than to make a provifion of thofe things at the firlt hand; for, fome of the confumers want means to make a yearly provifion beforehand, and few care to confine their fancy, which is fo liable to vary, when, for a fmall addition of price, they may pleafe themfelves, and determine their humour in a fhop, at the very time they come to the confumption. Thus no body cares to befpeak cloth for his family at the manufacturer's a year beforehand, when he may, for a fmall matter more, pleafe himfelf, when he has occafion, at a wool-len-drafer's fhop. The undertakers become confumers and cuftomers one in regard to the other : the woollen-draper to the wine-merchant, or brewer, and the wine-merchant to the woollen-draper; and thus is carried on the indefinite circulation of traffic in focieties.
The other undertakers, as mine-adventurers, merchants of all kinds, whether adventurers or fhop-keepers, undertakers of public houfes, coffee-houles, paftry-cooks, hackney coaches, \&cc. fublift by undertaking at an uncertainty, and proportion
themfeives in number to the demand of the confumers and cuftomers. -If there be too many hackney coaches with regard to the cuftomers who employ them, tome of them muft break, or put down their coaches; if too few, new ones will be erected.
The mafter tradefmen, or undertakers, who keep journeymen at work, as thoe-makers, taylors, peruke-makers, \&c. and the undertakers of their own labours, as tinkers, chimneyfweepers, water-carriers, \&ac. fubfilt alfo at an uncertainty, and proportion themfelves in number to the demand, and to their cuftomers. If a water-carrier keeps an account of what he earns in one year (fuppofe 201.) and in another year (fuppofe 151.) it will anfwer the fame thing as if he were faid to bave 20I. wages from his cuftomers in one year, and 151. in another: but, as he is an undertaker, his wages are uncertain.
The like may be faid of higher undertakers of their own labour, or fcience, as painters, phyficians, lawyers, \&cc.
From thefe inductions and explications, which may be applied, with a little variation, to all orders of men in fociety, it appears, that every body in a ftate is either an undertaker, or at wages, though their ranks and functions be very different. The courtier, who has a penfion, the general, who has pay, and the fervant, who has wages, fall under the fame denomination: all others in a ftate are undertakers, or fubfift at uncertain wages.
But the prince and proprietors of land alone are independent in a ftate, and thofe from whom the fubfiftanee and riches of all other ranks of men flow. And, whereas the land is commonly in the hands of the gentry and nobility, it is not furprizing that the notion of gentlemen and noblemen has ever had fo great an influence in the world.
But if any undertaker, or perfon at high wages, has faved wealth; that is, if any has a magazine of corn, wine, wool, lead, tin, copper, filver, gold, or any other commodities or goods that have an intrinfic value, or conftant vent, he may fo far be efteemed wealthy and independent, though he has no land. With thefe he may buy all conveniencies of life, and make a better figure than if he had a fmall portion of land, and may even become a land-proprietor: but thefe goods are more variable in their value than land, and more in danger of being loft; and it fhould not be forgot, that they have been acquired, one way or other, by the weight and influence, or at the expence of the proprietors of lands. From all that has been faid, I think it appears, that the machine of circulation of traffic in a fociety, which is principally concerned in eating, drinking, cloaching, and the other conveniencies of life, is carried on among us in Europe by undertakers, all at an uneertainty; and that, though political focieties and cities feem, from the indefinte numbers of people of different ranks, flations, and occupations which compofe them, to have fomething wonderful and incomprehenfible in their cconomy; yet it feems that the grand machine is commonly carried on with uncertainty, and that every thing finds it's own proportion, well or ill, according to chance or caprice, without any peculiar intellectual conduct, whereby the fociety of commerce and circulation is governed.

## Of the Circulation of money.

In confequence of what has been faid under the article of Cash, we fhall further add, in regard to the circulation of money; That we may confider the money which goes out of the landproprietor's pocket, and is fpread into the feveral rivulets of barter in circulation; out of which it is again gathered into the farmer's purfe, to make another quarter's payment to the land-proprietor, according to what has been urged under the head of cafh, as before intimated.
If, purfuant to our example, the farmer has paid 1500 ounces of filver to the proprietor, and he pays out 115 ounces a week, while, on the other hand, the farmer gathers together 115 ounces a week, there will be but 115 ounces, properly fpeaking, in motion; and at fix weeks end, when the proprietor has but $75^{\circ}$ ounces left, the farmer will have collected together the other 750 ounces: fo that the whole 1500 ounces (with II 5 ounces that are every week in circulation) are always kept up, and only paid and put in motion once a quarter. But this feldom happens to be the cafe in a ftate; for money is fpread out into the little channels of trade without rule or proportion, and likewife gathered together without any proportion. There fame 1500 ounces àre often paid away by feveral people to the land-proprietor, as foon as he has reccived them, and are not accumulated again together till near the end of the quarter, when the farmer receives them in a lump from the corn-chandler, woollen manufacturer, \&ce. in exchange for his commodities, which enables him to pay the landlord another quarter's rent. In this interval of time, thefe 1500 ounces may have gone to and fro in an hundred rivulets of barter, and helped on the circulation of the other two rents, as well as the principal rent they are underftood to make the payment of.
This would, methinks, make it probable, that a leis proportion of money, even than that which we have fuppofid,
might carry on the general circulation and barter necenfary in a fate: the following argument feems to frengthen the fame notion.
All barters that are made by evaluation in a fate, require no ready moncy. If the woollen-draper fells the baker 100 ounces of fiver value of cloth, and the baker fupplies the ounces of frver value of cloth, and the baker fuppites the ket, or current price, it is fo much bartered without money. Of thefe barters by evaluation there are feveral carried on in a flate where trade, credit, and honefly flourith [fee the Ar. ticle Barter ] there are many of them ufed in the country, as well as in the cities: but I am to obferve they could not be carried on, if the barters againft money at markets, and the altercations, which fix the par between money and commodities, did not firft naturally find out the price of things: fo that, when in a village a certain quantity of corn is bartered and exchanged for a certain quantity of iron, the evaJuation is made of the corn and of the iron, according to the prices they bear at the neareft market.
The more barters are made by evaluation in a ftate, the lefs ready money generally feems requifite to carry on the circulation. If the woollen-draper fupplies the wine-merchant with the cloth neceffary for the confumption of his family, at the current price; and the wine-merchant fupplies the woollen-draper with the wine his family confumes, alfo at the current price; and if they truft one another in accounts, when they come to fettle their faid accounts, at the year's end; all the money required to carry on this trade will be the fum which pays the difference.
The barters by evaluation are moft carried on by the undertakers and mafter tradefmen, and between the farmers and labourers, and others who affift them: fo that they feem principally to help the circulation of the two laft rents; whereas the circulation of the firt rent mult be always carried on by ready money, except when the land-proprietor confumes part of his farmer's commodities in kind, and allows it out of his rent, as is much practifed in Italy. The Milanefe nobility have a quantity of hay fent in by their farmers, in part of their rent, for the maintenance of their coach-horfes, \&c. and a quantity of wheat, which they exchange with the bakers for the bread they confume in their families, befides wine, \&c. and thefe evaluations help out the circulation of the firft rent.
From what has been faid, it fhould feem to be inferred, that honefy and confidence in dealings in a fate keep forward the barters by evaluation, and, confequently, make money go farther in circulation ; and experience tells us, that, when credit fails, the circulation is clogged, and money grows farcer.
Another circumfance, which helps circulation greatly, is goldfmiths and banks, as the bank of England, that of Amfterdam, of Venice, of Genoa, \&c. Thefe prevent a great fum from being kept in private hands without motion, and accelerate circulation.
Thefe reafons feem to confirm that the circulation in a flate may be carried on with lefs money than what I have laid down under the article Cash: but the following reafons may, perbaps, feem to counter-ballance them in fome meafure. - Provident faving people, of all ranks and orders, lay up money, fome to enable them to marry, fome to give portions to their children, and all againft an evil day; and this money they keep up till it makes a fum fit to bring them an intereft. Several covetous and fearful people lay up and bury money: the money and eftates of minors and of pleading parties, depofited in the hands of the lawyers, makes no fmall fum ; to which it may be added, that not only feveral proprietors, but alfo that feveral undertakers, fervants, and workmen, have always fome money, more or lefs, in their hands, which are never fo empty but that a part of the old money ftill remains, after they have received the new.
It is very difficult to make an eftimate of fuch articles, but they fufficiently prove, in general, that a confiderable fum of the circulating money in a ftate may be efteemed to lie always without motion. If a gentleman makes it his remark, that he never had lefs money in his hands than 201. at any time through the whole year, it is plain he might have kept the fame individual 201. by him without motion all that year; and that fo much may be efteemed to have lain by without circulation. It alfo happens that feveral large payments are made between undertakers, as well as at the terms farmers pay their rents, though thefe may very well be made out of the money required for the circulation of the two laft rents. Upon the whole; I fhould think my conjecture, from what has been faid under the article Cash and here, is not very wide; viz. That the money which carries on the whole circulation of a fate, is near the quantity of one third part of all the annual rents of the proprietors of the land; where the proprietors have one half or two thirds of the produce of the land, and where the circulation is not much helped by barters and by evaluations, the quantity of the money muft certainly be greater.
CITRON, $a$ fruit which comes from hot countries : the bark CITRON, a fruit which comes from hot countries
is yellow, wrinkled, and of an agreeable fmell.

We fhall feak of them heie only with relation to the commerce therein, and the traffic made of their juice or bark.
The moft part, whether fweet or harp, that are fold in France, are got by druggifts and grocess from fome parts on the river Genes, amongft others, from St Remo, or from fome of the cities in the kingdom of Sardinin, as Nice and Mentone ; whence they are brought by fea to Marfeilles, and afterwards fent to Paris, and elfewhere.
At St Remo and Mentone the vent of citron is not without the confent of the council of the city, and that twice a year, at moft thrice, according as the crop proves, but ufually in May and September.
They fell thofe only that will not pafs through an iron ring, the fize of which is regulated by public authority; the reft are rejected as too fmall, and ufed only for the juice, which is brought to Avignon and Lyons in barrels, for the dyers. Great quantities of the juice are brought from Sicily into France, for the fame ufe; but they bring but few citrons, being not in much efteem.
As to the citrons brought from Nice, there is not that care taken about them; but who will, may buy them, according to time and quality, be they big or listle.
They fell two forts of the oil of citron; the one, which is much efteemed, and called the effence of cedar, which is made of the citron-peel, or of their rind rafped; the other, which is a common oil, greenifh, clear, and fragrant, is made of the lees at the bottom of the cafks, in which the citron-juice is fet to fine. Fifty pounds of the lees, which are called alfo baechas, ufually produce but three pounds of oil. The perfumers make ufe of thefe oils, efpecially the effence of cedar. The vinegar of cedar, which the perfumers atro ufe, and is much efteemed in France, is the juice exprefled from a cer-- tain kind of citrons half ripe, which come from Borghere, near St Remo.
Small candied citrons, dry and moift, and great citron-peels, alfo candied, are brought from the Madeiras. The finall citrons thould be tender, green, and frefh; the great peels fhould be chofen new, in little flices, clear and tranfparent, green on the out-fide, well glazed within, plump, eafy to cut, and not pricked.
It is faid that numbers of negroes are employed at Martinico in candying citrons.
Citronnate is the citron-peel candied, and cut into pieces, to be fent abroad. Sorbec is made of the citron-juice and fugar: the beft comes from Alexandria.
Syrup of lemons is the fame thing with fyrup of citron. By the druggifts it is called fimply fyrup of citrons; but the apothecaries fell it by the name of fyrup of lemons.
There are at Tonquin two forts of citrons, or lemons, yellow and green; but both fo tharp and acid, that it is impoffrble to eat them without prejudice to the ftomach. However, they are not ufelefs to the Tonquinefe, any more than to the other Indians; for they not only ufe them, as we do aqua fortis, to clean copper, tin, and other metals, which they intend to prepare for gilding, but allo for dyeing, efpecially filks.
Another ufe they make of them is to whiten linnen; and they put it in all their lixivia, particularly for fine ftuffs, which gives them an admirable whitenefs and beauty, as may be obferved chiefly in all the cotton ftuffs which come from the ftates of the Mogul, and are whitened, as we Europeans imagine, with the juice of thofe forts of lemons.
CIVET, a kind of perfume, which bears the name of the animal 'tis taken from, and to which 'tis peculiar.
The civet cat is a little animal not unlike a cat, excepting that it's nofe is more pointed, that it's claws are lefs dangerous, and has a different cry.
'Tis known to be a quadruped common in Africa, the Indies, Peru, Brazil, New Spain, Guinea; that Belon, and after him fome moderns, among others M. Perrault, in his Memoirs of Natural Hiftory, acknowlege the civet-cat to be the hyena of Ariftote, and have called it the odoriferous hyena : others take it for a kind of wild cat, and call it felis zibethica, becaufe the perfume it bears the Arabians call zibet; whence it has it's French name civette. The Guinea civet pretty much refembles that of the Levant, but what they call occidental civet is nothing like it.
Caftellus, Fallopius, Thomas Bartholine, and even M. Perrault, have fpoken but fuperficially of the bag and perfume of that animal. 'Twill therefore be after the obfervations of M. Morand, in the Memoirs of the Royal Academy of Sciences for the year 1728 , that we can talk knowingly hereon, and more juftly than M. Savary; of which we fhall felect the moft remarkable particulars.
The bag is fituated between the anus and pudenda of the animal, much in the fame manner as the beavers carry their caftoreum. It hangs outwardly between the thighs of the civet-cat. 'Tis pretty large. In fhort, 'tis a cavity inclofed in a thick cover, and hath a long opening without refembling the vulva.
The whole thicknefs of the covering is formed by an infinity of fmail grains, which are the glandules through which the odorous liquor is filtred. Viewing thefe grains with a mi-
croicope:
crofcope, M. Morand hath difcovered, that they are accompanied with an infinite number of follicules, or little purfes, that contain the liquor already filtred. In that liquor, which is fingular, are little hairs here and there without order. They have no roots vifible to us, nor are united with each other.
The cavity of the bag is poffefled by two kinds of clews of fhort filk, foaked in the odorous liquor, which looks like a white oil.
On compreffing the fubftance of the covering, there ouzes through che pores, or rather excretory ducts of it's internal membrane, an odorous oil, which falls into the cavity of the bag ; it comes out, not by feparate drops, but in a continued ftream.
We are not fufficiently acquainted with the nature of the civet-cat, to know on what occafion it emits it's oil, or what ufe it makes of it; but we fee the mechanifm is intended to prevent a perpetual flux ; the filken clews doing the office of a fponge, which holds the liquor it has imbibed till expreffed from it.
There is a great trade of civet at Calicut, at Baffora, and in other parts of the Indies, and in Africa, where the animal that produces the perfume is found. Live civet-cats are to be feen alfo in France and in Holland, but 'tis faid by fome, they have been only brought from the Levant. The French feldom keep them but as a rarity. As to the Dutch, who keep a great number, they draw the civet from them for fale, and 'tis what furnifheth a part of that brought from Holland. Before thefe animals had been feen in Europe, and obfervation made on the manner of extracting the perfume, 'twas commonly believed, on the relations of fome travellers, to be only the fweat of the animal, when irritated; and thofe who love the inftructive and diverting amufement of travels, may perhaps remember to have read fome, who confidently affirm, that they fhut the civet-cats in iron-cages; and that, after having beat them a long time with rods, they gather with a fpoon, through the bars of the cage, and from between the thighs of the animal, the fweat or foam, which the anger and agitation have there produced; and that, without fuch piecaution, the animal weuld give no perfume. Experience hath fhewn us the falfity of this relation ; and 'tis now no longer doubted, that the civet is an unctuous and thick liquor, found naturally in a bag, which that fpecies of Afiatic, or African cat, hath between the anus and pudenda, as we have mentioned before.
Civet muft be chofen new, of a good confiftence; that is to fay, neither too hard nor too foft, of a white colour, a ftrong and difagreeable fcent. In fine, fince in the Levant, without feeing it extracted itfelf, we run a rifk of having fo phifticated civet, we may well not expect to have it more pure in Europe: neither are we to give much credit to thofe little infcriptions, whether printed or written, which the Dutch ufually put on the pots of civet, as a certificate of their fidelity, and the purity of the perfume: befides, it being very difficult to difcover the fraud, the fafeft way is not to buy it but of dealers of known reputation.
'Tis little ufed in medicine, but very much by the confectioners and perfumers, who ought not, however, to ufe it but with moderation, left in lieu of an agreeable odour, they excite the contrary.
CLACKMANNANSHIRE, in Scotland, is bounded on the north by the Ochill-Hills, on the fouth by the frith of Forth, on the eaft with part of Perthlhire, and on the weft with part of Stirlingthire. 'Tis a plain fertile country towards the Frith, but the reft is fitter for pafture, though that below the Ochill-Hills abounds both with pafture and corn. About Alloa and Clackinannan there are many coal-pits, which, together with their falt, they export in great quantities, not only to Edinburgh, but even to England, Holland, and France : for it yields the beft and moft coals of any part of Scotland, and is that we diftinguifh in England by the name of Scotch coal.
${ }^{\prime}$ Tis watered with the river Devan, which runs fix miles through the fhire.
Clackmannan, the burgh or chief town, ftands on a rifing ground, the cafte whereof is a ftately dwelling, with fine gardens and inclofures. But,
Alloa, or Alloway, is the moit confiderable town, and is a fea-port, the laft in the Forth, where that river falls into the arm of the fea, called the Firth.
It has a very confiderable trade, with feveral good fhips; and divers manufactures are erected there, all relating to the bufinefs of navigation and commerce: as (I.) Sail-cloth, which is made here full as good as the Holland's duck, and better than the canvas or fail-cloth of Ruffia, or Poland. (2.) A large rope-walk and warehoufe of naval ftores for the hemp and tar, \&c. imported from Ruffia, Livonia, Norway, \&c. from which laft, alfo, deals are imported; and here are four faw-mills employed in cutting and fitting them. Moreover,

## REMARKs.

A factory was lately fettled at this place for the merchants of Glafgow, who, not being very far diftant by land-carriage,
have erected warehoures for fowing their tobacco, furar, and other goods of their importing from the Britifh colonics in America, to be ready for re-exportation to Holland, Hamburgh, Bremen, the Baltic, London, or wherever elfe they are wanted; and alfo for ftowing fuch commodities, as they import from Sweden, Ruffia, Livonia, \&c. till they are demanded elfewhere : fo that Alloway bids fair, in time, to be the chief mart-town of all the inland parts of Scotland, and one of it's moft confiderable fea-ports; for the river here is as broad as at London- Bridge, the water deep, and the tide flows fo ftrong, though it be fo far from the fea, that fhips may lay their fides to the wharf, which is at fome diftance from the town, and deliver and relade with the leaft diff. culty imaginable.
There are falt pans all along this fhore for boiling of falt, which is fetched away in great quantities, by hips that bring other goods from Bremen, Hamburgh, the Baltic, Norway, 8 cc .
CLAYS, are earths pretty coherent, weighty, and compact, 1tiff, vifcid, and ductile, while moift; fmooth to the touch, not readily diffufible in water, and when mixed, not readily fubfiding in it.

## Of the white, tough, heavy clay.,

This is very beautiful, and when pure perfectly white, beavy , and of a fine texture ; when moift, it is ductile, fiff, and vifcid; when cut, leaves a kind of fhining furface; when dry, it becomes tolerably hard, and of a fmooth and even fuperficies, except where made irregular by heterogeneous bodies that are mixed with it. Being examined by the microfcope, if clean and pure, it appears of a regular, firm texture : but in the mafs it difcovers a mixture of adventitious particles of fand, fragments of fhells, \&c.-Makes a brifk ebullition with aqua fortis.-It burns with a tolerable heat to a fnow-white colour, and pretty hard, but vitrifies in a violent fire to a kind of green fubftance.-This earth was anciently found on the fhores of Egypt, Syrene, and the illand of Crete.
It was efteemed in painting among the antients. At prefent it feems to be little fought after, perhaps, for want of knowing it's quality.

> Of the light, friable, white clay.

This is of a fnow-white, and does not contract that yellownefs from the air, which other white clays do on their furface. 'Tis dry and not ductile, while in the ftratum; it is of a fmooth fuperficies, foft to the touch, and ftains the fingers in handling; it flowly diffufes itfelf in water, adheres pretty firmly to the tongue, and leaves a grittinefs between the teeth.-It makes no effervefcence in aqua fortis.-In a moderate fire it burns to an additional hardnefs without much change of colour, but in a violent one it gives a pale green glafs.
Much of it is dug in the ifle of Wight, and is ufed for to-bacco-pipes; though not having a due tenacity, it requires another coarfe earth to be mixed with it ; which is

## The hard, heavy, white clay.

This is a denfe, ponderous, compact earth, of a dull white, and pretty clofe texture, of a fmoothih furface, and not eafily breaking between the fingers; it melts flowly in the mouth, and is not eafily diffufible in water; it burns to a white colour, and very hard; in a violent fire it gives a foul green glafs. This alfo is dug in the Ine of Wight, and divers other parts of England, and is chiefly ufed in pipemaking.

## The white tough clay

Is a firm and fiff matter, very compact and ponderous; it is vifcid, and cuts with a fhining furface, which is fmooth and even, though not glofly; it does not adhere to the tongue, and is difficultly diffufible in water. It makes no effervefcence with acids, and, in the fire, burns to a yellowifh-grey, without any tendency to rednefs, but in a violent fire affords a deep green glafs.
It makes an excellent brick of a remarkable frength and hardnefs, and of a pale grey; but, like other fine clays, it requires much more working than the ordinary loams ufed in brick-making do; and, if not well worked, will crack and fhrink in the drying, fo as not to be faleable; for which reafon 'tis feldom worked, notwithftanding the excellence of the brick it makes: but 'tis probable that it might be ufed for making clinkers for the pavement of ftables, \&ic. and the floors of ovens, which might-turn to a better account than making of bricks.

Of the finooth greyifh-white clay.
This is very hard and dry, of a clofe and fine texture, and confiderable weight; while in the ftratum, it is of a pale grey, hard, not tough or vifcid, but crumbling into feparate clods in the digging; when dry, it becomes paler and whiter, and of a fmooth hining furface; pretty readily diffufible in water, and, feparated by that means, depofits a fmall quantity of fine, but very bard matter.

## C L A

## C L A

It generally lies near the furface, and over other clays; there is great plenty of it in various parts of the kingdom, and, gough hitherto it may not have been much ufed, yet it though hitherto it may not have been making a coarfe earthen-ware fit for gardener's pots, and other fuch-like ufes.

## Of the heavy grey clay:

This is hard and brittle, of an equal texture, ànd weighty; while in the ftratum, it is of a duiky bluifi colour, but dry, bard, and crumbling into thin, Hat pieces, as if compofed of diftinct ftrata; when dry, it is a compact mafs, of a pale bluifh afh-colour, and a fmooth and fhining furface: In the fre it crackles and flies into thin flakes of a pale yellowifhfed; in a violent fire it gives a whitifh glaifs. 'Tis frequent in many parts of the kingdom, and may deferve trying for various ufs.

Of the foft, grey, alkaline clay.
This is an impure matter, moderately heavy, and of a loofe exture; in the ftratum it is of a dulky grey, and more or lefs ftreaked with a pure yellow clay; it cuts pretty regularly into mafles, with a fmooth furface; when dry, it becomes a little paler in colour, ahd of a rough furface. It difficultly diffolves in water, and depofites a fmall quantity of a pale yellow fand. It raffes a violent ebullition with aqua fortis, and burns to a confiderable hardnefs, and a fair reddifh colour : in a violent fire 'tis converted into a pale bluifh-green glafs.
Many parts of the kingdom afford it, and in Staffordfhire in particular 'tis ufed in the potter's ware, though not unmixed with other forts.

The foft, afh-coloured, heavy clay.
This is a loofe fubftance, of a coarfe irregular texturé, and confiderably weighty. It is of a deep dirty afh-colour, variegated with a mixture of a coarle deep yellow clay: it is not very ftiff or vifcid, yet cuts pretty evenly with the fpade, and thews an equal furface; when dry, it is of a paler colour, not very hard, but of an firegular rough furface; it eafly breaks between the fingets, and does not flain the hands; it is more readily diffufible in water than moft other clays. It makes no effervefcence in aqua fortis; in a moderate fire it acquires a reddifh-brown colour, without much hardnêfs; in a violent one it is converted into a coarfe green glafs. It is found in various counties in England, and ufed in Staffordthire by the potters : but this and the former earth are neither of them alone fit for the potter's ufe; they are mixed with fome of the puter and fiffer clays to break their texture, and make them eafier to work.

Of the fmooth, purple and white, indurated clay:
This fpecies is compofed of extremely fine particles, of a firm, equal, and regular texture, and of a great weight. While in the ftratum, 'tis very hard, and will not cut even with the fpade as moft of the clays will, but breaks irregularly into lumps of different fhapes and fizes, and becomes harder by lying in the air. It is of a perfectly fine, fmooth, and glofly furface, fofter to the touch than any of the other tearths, and does niot ftain the fingers in handling, but drawn along a woollen cloth, or any other rough fubftance, leaves a very whitilh line, fine and clean: it is in colour white, beautifully veined with purple of different degrees of deepnefs; it is of fo fine a ftructure of parts, that, if cut into thin pieces, it is in fome degree tranfparent. It is very difficultly diffufible in water; examined by the microfcope, it appears one regular and uniform mafs, a little more opaque in the purple parts than in the white, and fo perfectly equal in all it's parts, that the beft glaftes can difcover no blemilh in it's texture. It burns to a great hardnefs and white colour, and in a violent fire to a pure white glafs. It is dug in many parts of Cornwall, Devonfhire, and the neighbouring counties. Several celebrated naturalifts and experimental philofophers have recommended this in particular, for imitating the fine porcelane-ware of China: but, as it is liable to vitrification, I am afraid of itfelf it will ever fail in the trial : it may very probably make a very fine and delicate earthen-ware, and, by mixture with other fuitable earths, may probably make an ordinary fort of porcelane.

## The fmooth, green and white, indurated clay.

It is the hardeft of all the earths. While in the fratum, it is too firm to be dug with fpades, and, when it has laid fome time in the open air, becomes of an almoft fony confifterice. 'Tis of a compact and regular texture, confiderably heavy, and of a very fmooth and flining furface; in colour 'tis of a grevilh-white, with a greater or leffer admixture of green; it does not ftain the fingers in handling, but, drawn along a rough furface, leaves a fine flender white line. It is more traniparent than the laft deferibed, and more difficulty diffufible in water than even that; it makes no effervefcence with acids, acquires a great degree of hardnefs, and almoft perfectly white colour in the fire; and yields in a violent one a coarfe greenifh glafs, with a faint caft of the purple.
Vol. I.

The ancients had it principally from Egypt, but 'tis now found plentifully in Italy, Germany, Saxeny, and the illand of Sardinia, but no where more fo than in France; particularly about Briançon, whence'tis there commonly called the Brianęon chalk.
The ancients had it much in eftem in medicine, but 'tis in no ufe that way among the moderns.

## The pale yellow vifcid clay, with blue fpots:

This is a perfectly fine and very valuable clay, of a compact texture, and confiderable gravity. In the ffratum 'tis of a pale yellow colour, and veined with blue of a tough vifcid texture; and eafily cuts through with a fpade, and hews of an equat and gloffy furface. When dry, 'tis mbderately hard, of fomething paler colour than while in the Itratum, and of a fmooth even furface. It is pretty eafily diffufible in water; in a moderate fire it burns to a great hardnefs, and very beautiful red, and in a violent one runs to a coarfe bluifh-green glafs.
In Staffordfhire they actount it one of their beft earths, and uife it in mixture for their pots; and in Northamptonihire they work it alone for the finelt and thinneft, as mugs, dibhes, \&ic. it being a very fine tough fort of clay, ductile to a great degree, and taking the glaze well: the fame is in various other counties in England:

The dufky, bluifh-brown, tough clay:
This is a very ufeful earth; of a fliff and ecmpact texture, and very weighty; in the ftratum 'tis of a dufky blackifhbrown colour, confiderably hard, yet cutting even with the fpade, and of a glofly furface, generally fprinkled with fmall fhining particles; when dry, it becomes of a paler colour and very hard, and the glittering particles are more vifible; it diffures flowly in water; in a moderate fire burns to a fair red colour, and in a fierce one vitrifies to a deep green fubftance.
It is dug in moft counties in England ; it is ufed in Staffordfhire among the potters, but it's principal ufe is in the making of tiles, for which 'tis efteemed fo excellent, as to have excluded the ufe of any other clay; it containing no fand makes it endure the weather better than the brick earths; and it's tough texture makes it bend into all the neceffary forms for tiling.

## The hard, pale, brown clay:

This is a hard, yet lefs heavy clay, than moft of the preceding; it is of a rough but firm fructure, generally full of fhining particles; in the ftratum it is of a dulky brown, and is very firin and hard, not to be cut even through with a fpade, but breaking into irregular maffes; when dry, it becomes very pale, almoft of a ftony hardnefs, of a rough furface; not ftaining the hands; it is very dificilety diffufible in water ; it burns to a great hardnels, andd a ferruginedus red, or rather purple; in a violent fire it becomes a pale green glafs.
'Tis dug almoft all over the kingdom, and imakes in Staffordthire a very valuable kind of ftrong veffels, with an admixture of fome of their tougher clays:

The hard, tough; whitifh-blue clay.
This has been affirmed by fome to be the earth of which the fine China ware is made: It is an extremely fine and beautiful earth, of a very pale bluifh-white, remarkably ponderous, and of a compact and even texture. It is foft to the touch; not to be broken between the fingers, does not fain the hands, but, drawn over a rough furface, leaves a fine flender white line : thrown into water, it makes no ebullition, but flowly diffuef, and in time wholly breaks in it, and is reduced to a fubitance like thick cream, at the bottom of the veffel. In the fire it burns to a fnow-white; in a sury violent one it generates a pale bluifh-white glafs.
It is dug in fome peculiar parts of China, but, it is faid, is not common there; and, where the pits are, is kept a great fecret from all foreigners; it is now faid to be the earth of which the fine ware of that kingdom is made, and feems likely to be a very noble clay for fome fuch ufe ; but probably that ware is not made of any'one fubftance alone, but of a mixture of various, and thofe alfo, perhaps, meliorated in an artificial manner.

## Remarks:

Many may think it trifing to dwell fo long upoh an article of fo little confequence to trade, as they may imagine that of clays. But, if they are pledfed to confider the extchfivenefs of the pottery-art alone, they will not find this indeter a contemptible fubject. 'Tis well known the great advantage the Hollanders have reaped by their Delft-ware; and the advances we have made, in our own nation, have proved of no inconfiderable benefir to the concerned and the public, in not only having peiented the importation of Dutch wares, but the confumption of the China amongft the mals of the people.

That the nature of earths and clays is well deferving our regard, may be urged from the unfpeakable advantage the Chinefe and the Japanele have reaped thereby, for ages paft; and this univerfal manufacture could only have taken it's rife from the knowlege of fuch, who did not think matters of this nature below their contemplation; judging, doubtlefs, that nature affords nothing but what may be of fome utility to mankind. The Europeans, in confequence of the advantages reaped by the Indians, have made fucceisful attempts of the like nature; and we find that Drefden has beat China or Japan, and that the fane manufacture is lately eftablifhed in France, with all fuitable public encouragement, and, as we are informed, is likely to outdo the Saxons. Nor have our own countrymen being negligent in imitating the ware of China; and although they bave not had the honour of thofe national encouragements, that the monarchs of France and Saxony have given to their manufacturers, yet it muft be acknowledged, they have made extraordinary adiances, arid it is to be hoped they will meet with the encouragement of the government as well as the people.
From what has been obferved, it muft naturally occur to the land-proprietor, that he may frequently experience as great benefit to be made by clays, marls, loams, \&c. as he may by his lands, confidered in an arable or pafture ftate. This has been experienced by many. And, if, what has been faid be duly attended to, there can be no difficulty in making a judgment of the value of all forts of clays: the familiar ufe of his fenfes, common water, a crucible, and aqua fortis, to which he may add a microfcope, if he pleafes, will enable him to make a right judgment in matters of this nature, which will more fully appear, throughout the courfe of this work.
Clays being well burnt, have been found by late experience to make a fertile manure.
CLERK, in the way of trade and bufinefs, is one who exercifes any function with the pen. Perfons under this reputable denomination being numerous, they may deferve more notice, in a work of this kind, than that of a mere general defcription of the nature of their office.

## REMARKS.

Introductory to which general character, I would refer the reader to the articles Accountant and Book-keeper; the latter of which having relation, more particularly, to the clerks of merchants and traders in general, I fhall now make a few obfervations on thofe belonging to another clafs of people of bufinefs: I mean thofe gentlemen, who are placed in the public offices belonging to the crown revenue.
Although the whole plan of the management of bufinefs in thefe great offices is wifely regulated, and every part of the whole executed, according to fuch regulation ; and although the clerks of every diftinction are tied down to adhere inviolably to certain eftablifhed rules, forms, and ufages, in order to preferve that uniformity, connection, and check with and upon each other, for the prevention of fraud, and the facilitating of the public bufinefs; yet every gentleman, who enters into fuch a fituation, fhould not, methinks, look upon himfelf in the light only of a tranfcriber of common forms and precedents : for I think this is much below the character of one in this ftation, though, at firft, it may only be an inferior one. I would therefore, with all refpect to thefe gentlemen, take leave to recommend, efpecially to the more juvenile clafs, not only a defire to become mafters of that branch to which they may be allotted, but to gain as much knowlege as they can of thofe other branches, which may have a more immediate and neceflary connection therewith. For, as the public bufinefs muft be conducted according to ftrict form, fo an expertnefs in all the forms that have a direct dependency on each other, will render a clerk highly acceptable to his fuperiors; who, for their own eafe, will often advance fuch a young gentleman, by reafon of his qualifications, to ferve them in more capacities than one: this has proved the cafe of many, who have had nothing but their merit to rccommend them. $\qquad$ But many of thefe places being filled by the younger fons of gentlemen of diftinction, if they become friends enough to themfelves to addaccomplifhment to the weight of their family-intereft, fuch a fituation may prove far more to their honour and intereft, than otherwife it might do. For; although mere intereft will too often place a man in a poft that he is no way qualified for, yet thefe people are never fuffered to be the ftamina that fupport the execution of the public affairs; 'tis the intelligent, experienced clerk, fecretary, accountant, or commiffioner, that muft hold the rudder or bufinefs cannot go on: and fuch will maintain their places, let minifters be changed ever fo often, till they forfeit them by mifconduct. So that, however intereft may get the better of merit, yet merit has very often got the better of intereft, in the capacities I am fpeaking of.
And if the great offices of the kingdom were looked upon by gentlemen of condition, in the light of proper nurferies to their younger fons, in order to initiate them gradually into public bufinefs, they might, I am inclined to believe,
anfwer a good end; provided they had a previous, fuitable erudition, to make the moft advantageous ufe of their fitua-tion.-The fame obferyations will hold good alfo, in regard to all great corporations, where good clerkihip is required; the nature, and accomplifhments for which, in every capacity, will appear throughout this work.

## CLOCK-MAKER is the workman who maketh clocks.

The clock-makers in Paris make one of the communities of arts and trades. They received their frrt flatutes in the year 1483, about the end of the reign of Lewis XI, which were confirmed to them in 1544, by Francis I; in 1554, by Henry II; in 1572, by Charles IX; and, in 1600, by
Henry IV.
Thofe ftatutes are divided into twenty-four articles, the mon effential of which we fhall take notice of
The apprenticefhip is eight years, during which each mafter can take but one apprentice; and he may take a fecond, after the expiration of the feventh year of the firft apprentice. If a mafter's fon is bound as an apprentice to another, and not to his father, he is to finilh and compleat the time for which he has bound himfelf.
None can be received as mafter, who hath not made fome mafter-piece of workmanfhip, which, at leaft, ought to be an alarm clock; and fulfilled the time of his indentures, and produced a difcharge from the mafter whom he ferved. Mafter clock-makers are not to efface or change the names on pieces of clock-work, not of their own making, on pain of confifcation and fine.
Jewellers, to whom it is permitted to traffic in all forts of merchandizes, may not, however, buy or fell any clock-ware, which hath not been previoufly infpected and marked by the wardens of the faid company, with permifion to the faid wardens to infpect at the houfes of all, and thofe who are within the privileges of the royal palace.
Mafters are permitted to make, or caule to be made, all forts of clock-work, be it in gold, filver, or other metal, as they thall find convenient, without being examined or moleted by the mafter goldfmiths, on pain of 1500 livres fine on thofe who thall incroach on their rights, agreeably to the decree of council of the 8th of May, 1643 ; with prohibition, according to the faid decree, to every mafter or journeyman goldfmith, or any other, to intermeddle, in the trafic or fale of any workmanfhip of that profeffion.
To determine the works pertaining to the art of clockmaking, and which 'tis lawful for the mafter clock-makers to make or caufe to be made; it is enacted by the laft article of the faid ftatutes, that every movement having the pinion of a wheel, and going by fpring and by counterpoife, is reckoned a branch of this profeffion.
In the year 1707, the offices of comptroller-vifitors of weights and meafures, and of the regifters of the company, were incorporated. By the letters patent of thofe re-unions, the king granted to the company feveral new articles for their regulation. By the frift, the rights of the four annual vifitations are reduced to 30 fols each, 7 fols 6 deniers of which belonged to thofe jurats who fhould be employed as infpectors.
The jurats are to render an account of their office 15 days after they fhall have quitted it, and the election of the new ones to be annually 15 days after the feaft of St Elloi, in prefence of the elders, and other mafters, according to cuftom.
Conformable to the regulations of arts and trades; 'tis Lawful for all mafters of the faid company to fettle themfelves in fome city, borough, and place of the kingdom, as to them fhall feem good, particularly at Lyons, Rouen, Bourdeaux, Caen, Tours, and Orleans, and there, with full liberty to ex ercife their profeffion, on producing only their reception into the fraternity of the city of Paris.
All mafters of the company are prohibited to lend their name to any journeyman or retailer whatfoever, for the exercife of the faid profeffion, on pain of 550 lives fine; and, in cafe of failure, they are liable to deprivation of the freedom, if it fhall be fo adjudged by the lieutenant of the police.
All journeymen foreigners, refugees, and others working in pretended privileged places, are obliged to withdraw from thence eight days after the publication of thefe prefents duly regiftered, and to repair to work in the houfes of lawful maftcrs, with prohibition to the faid journeymen to work in a room, and to have furnaces, on pain of corporal punifhment.
Befide the mafter clock-makers, of whom we have fpoken, there are at Paris two other forts of clock-makers; the one, which are officers of the king's chamber; and the other, which have apartments in the galleries of the Louvre. Thefe are not fubject to the infpection of the jurats, and have, moreover, the privilege of taking apprentices, who are intitled to the freedom, and may be received as others, with this difference only, that they are exempt from the payment of fees.
As to thofe of the galleries of the Louvre, they are artificers, whether French, or ftrangers, fkilful in clock-making, to whom the king grants an apartment in the galleries of his caftle of the Louvre, where they enjoy many prerogatives, by virtue of letters patent from Henry IV, wha was the firf
of the kings of France that honoured ufeful arts, even to the lodging in his palace workmen of diftinguifhed ingenuity.
As the body of clock-makers is very confiderable at Geneva, confifting of about 600 mafters, it may be worth while to fee what are their ftatutes, or ordinances.
There fhall be two lords of the council, commiffioner-infpectors of this art, to prefide in all their affemblies, whether general, of the whole body, or of the jurats only, as well as in thofe for delivering in the accounts, and difoofing of their money, and to authorife their refolutions.
There fhall be four jurats chofen from amongit the citizens, or burgeffes, mafters of the art, two of whom, who thall have been therein two years, fhall go out of the office, and two new ones fhall be chofen in their flead; and to this end the jurats, and thore who fhall have officiated in that capacity, fhall name four matters, viz. two which fhall have already paffed the office, and two who have not; and thefe fuall be prefented to the body convoked for that purpofe, to be by them chofen by a majority of voices.
The office of jurats is to fee that the ordinances relating to the art are duly obferved, and to take care there be no trefpafs; wherefore, they are obliged to vifit the artificers, at eaft forr times a year, with power to feize their work, that is not agreeable to the prefent ordinances, to make their report of it to the lords commifioners, and to punifh the trefpaffers, according to the exigence of the cafe.
No one fhall be received as apprentice to this art, who is not a citizen, burgefs, or native of the city, and full twelve years of age, and upon paying the ufual fees.
Apprentices may not difcontinue their apprenticefhip, without lawful caufe, on pain of ferving their time over again. Workmen who are not mafters, may not work but with thofe who are, nor make any piece of new work, or mend other for their own account, on pain of forfeiting them, and 25 crowns finc ; one third to the informer, one third to the box, and the remainder to the lords commiffioners and jurats; nor may the mafters permit their workmen to work any where but in their own dwelling-houfe, or to work on their own account, on pain of fine at pleafure.
Whofoever would be received mafter, fhall addrefs himfelf to the lofds commiffioners and to the jurats, that at his requeft they may affemble the body of mafters, to appoint him a mafter-piece of workmanfhip which fhall be an alarmclock, or a repeating one; unlefs on good confideration he be difpenfed with by the council, and only a plain watch required, which he is to make within four months, at one of the jurats own houfes; and he thall not make any other piece of work, or difcontinue that without permiffion, on pain of fine at difcretion.
No journeyman may prefent himfelf to be received mafter, unlefs he be a citizen, burgefs, or native of that city, full twenty-four years of age, and hath wrought two years as journeyiman, from his àpprenticefhip and his being regiftered, excepting the fons of maffers difpofed to make their mafterpiece in a repeater, who may be admitted at the age of twenty-one, unlefs for fome confideration of merit, or other reafon, it fhall feem good to the lords commiffioners to grant á difpenfation.
Whofoever has made his mafter-piece of workmanihip, thall addrefs himfelf, as above, to the lords commiffioners and jurats, that they may affemble the body of mafters, to whom he fhall prefent his work for their examination; and; if found worthy to be admitted a mafter, fhall pay for his reception 21 crowns, 5 of which go to the lords commiffioners, 5 florins to the company's box, and the reft to the four jurats, and thofe four who laf quitted their office, without any other expence on that occafion.
If any citizen or burgefs, who thall be eftablifhed out of the city, in any place diftant therefrom above 20 leagues, and thall return thither to work as a mafter, he mult produce the teftimonials of his freedom from the place where he has been admitted thereto, with due approbation of his conduct, and that he is at leaft 40 years of age; in which cafe he fhall be acknowledged as a mafter, without producing a mafter-piece of workmanfhip, on paying the ufual fees. Journeymen and apprentices, who fhall have wrought in places or cities not diftant above 20 leagues, may not return thither to work, without it's being made known to the lords commiffioners and jurats, in order to their payment of 25 crowns fine, prohibiting all mafters to give them work, on pain of fine at difcretion.
Mafters, who hall inftruct more than one of their children in their profeflion, may not, during the time of their apprenticefhip, take any other apprentice.
All mafters or privileged perfons, who employ any fervile fervant, are enjoyned not to permit them to work at their trade, or to teach them to perform any part thereof appertaining to the art, on pain of 20 crowns fine, one third to the informer.
No mafter may take for his journeyman any who have ferved their time in neighbouring places, within 20 leagues round, on pain of 10 crowns fine, and lofs of his freedom.

No mafter fhall feduce or allure by promife, money, or otherwife, the fervant of another, on pain of io crowns, and of cofts and damages.
No one fhall buy of apprentices or journeymen any work begun or finifhed, nor lend them money on it, on pain of 25 crowns fine, and lofs of what they have given for it
No mafter may receive an apprentice, who hath not his difcharge in due form ; nor the journeyman of another mafter, without his confent, or without it's being well known and approved, on pain of fine at difcretion.
All workmen of the faid art, as alfo all engravers, gilders, and others concerned in clock-making, are prohibited to work, or caufe to work, with thofe who are not mafters, on pain of 25 crowns fine, and moreover, for thofe who are mafters, lofs of their freedom.
All mafters, having work ordered, fhall be obliged to deliver it well performed, and in good condition, within the time agreed upon, on pain of 25 forins forfeiture for every watch, and, in cafe of failure, fufpenfion of freedom for a year.
Whofoever thall have pledged or fold any works which fhail be entrufted with him, fhall be punifhed as the cafe requires, and even with lofs of freedom.
All perfons, as well of the faid art, as others, whofoever they be, are prohibited to caufe to be made and buy, directly or indirectly, any foreign piece of finihed clock-work, white or gilt, or to bring into the city to deal therein, under any pretence whatfoever, on pain of forfeiture, and 100 crowns fine, and to mafters lofs of freedom, and feverer punifhment in cafe of failure; nor are they to fend any furniture, or any kind of materials tending to finifhing the work, on the like penalties. All mafters to whom they fhall offer them, or who fhall fee expofed to fale foreign works, either gilt or not, of any kind, are enjoined to feize and carry them to the lords commiffioners, to be adjudged according to that article, excepting large pendulums, not comprifed in the aforefaid rule.
Alfo all who are notcitizens, burgeffes, or mafters of the faid art, are prohibited to negociate in the city any clock-work, on pain of forfeiture, and 10 crowns fine; none but citizens and burgeffes being permitted to keep open fhop.
All mafters are alfo prohibited to fettle themfelves out of their diftrict, in neighbouring places, to work there, on pain of privation of freedom.
It is alfo prohibited to make or ufe any box or equipage of gold or filver, without the ftamp of the loids commiffioners, and which is not of the fabric of that city; as alfo to ufe any which have not the mafter's name, on pain of forfeiture and fine of 25 crowns to thofe who trefpafs: prohibiting others on like penalty, to put on watches any dial-plate, which hath not the faid ftamp, excepting enamelled dial-plates, the ufe of which is permitted.
All mafters, journeymen, and others, are prohibited to inftruct, or caufe to be inftructed, their wives and daughters in the trade of clock-making, on pain of lofs of freedom to mafters, and 50 crowns fine to others.
All women and girls are likewife prohibited from working in clock-making; the fine 50 crowns, and forfeiture of their works and utenfils; they being only permitted to do the drudgery, make the needles, pillars, chains, keys, and to divide the wheels and the fufees, and to gild the watches.
Very exprefs prohibitions are made to all citizens, burgeffes, natives, or inhabitants, tutors or governors, and to all, who have government of children, not to put them apprentices to the trade of clock-making without the city, the diftance of 20 leagues round, on pain of 500 florins fine, and, on default thereof, to caufe their children to return within the time thall be affigned them by the lords commiffioners, who prefide over the faid profeffion, to be punifhed as the cafe fhall require.
No perfons are to concern themfelves in the brokage of clockmaking, without permiffion firf had and obtained from the lords commiffioners; the faid brokers fhall give 100 crowns fecurity, and take oath to perform their office faithfully, not to trade on their own account, alone or in company, nor to favour one to the prejudice of another; and, in cafe any foreign piece of work fall into their hands, to depofit the fame with the lords commiffioners.

## Remarks.

Laws of England relating to Clock-making.
Stat. 9 and 10 , Will. III. c. 28, §. 2. no perfon fhall export, or endeavour to export out of this kingdom, any outward or inward box, cafe, or dial-plate, of gold, filver, brafs, or other metal, for clock or watch, without the movement in or with every fuch box, $\& \mathrm{cc}$. made up fit for ufe, with the maker's name engraven thereon; nor any perfon fhall make up any clock or watch, without putting their name and place of abode or freedom; and no other name or place, on every clock or watch, on penalty of forfeiting every fuch box, cafe, and dial-plate, clock and watch, not made up and engraven as aforefaid, and 201 . one moiety to the king, the other to them that fhall fue for the fame.

## C LO

That the mechanic arts in general have been productive of very great benefits and advantages to commerce and naviga= tion, will be denied by no one, who is at all acquainted with fubjects of this nature : and although the world is highly indebted to the k kill, ingenuity, and experience of the practical workmen themelves, for the extraordinary advances they have made therein; yet it is equally certain, that workmen are not lefs indebted to the mechanic philofopher; to the ftudent, who has feculatively conceived, in the mind, what the artizan executes with the hand: nor would the mere theory of the mechanic, or any other arts, profit fociety, if we had not dexterous artificers to reduce to manual practice what the philofopher hatches in his ftudy: fo that in the mechanic, as well as other arts, the theory and practice fhould ever be united, for the ufeful purpofes of trade and commerce.
But it is rare, very rare, indeed, that both the theoretical and practical knowledge unite in one and the fame perfon. Yet we bave experienced this not to be unexampled with regard to the bufinefs of clock and watch-making, in thefe two incomparable artifts, the late Tompion, Graham, \&cc. and the living Ellicot, and others, who have done honour to this nation in their profefion, and rendered the clocks and watchea of England in higher eftimation throughout the world, than thofe of any other nation. And yet the perfection to which thefe great artifts have arrived, does not appear to be owing to any petuliar laws for the public regulation, or any public rewards for the encouragement of their art. Genius's, in deed, of the firft rank, may foar above all difficulties, without being fpurred on by political inftigation; but this is the cafe of but few, in compatifon to the whole body of our mechanics and artificers; and, therefore, we have feen that, in France and Geneva, very extrordinary care is taken to bring up this clafs of people, that their workmanhip may do honour to their country, and promote it's commercial profperity. Whether, therefore, to prevent any degeneracy among Britifh artificers, and to excite them to emulation to excel in thefe and fuch-like arts, whereupon our traffic is founded, may not one day call for due attention from the wifdom of the nation, is humbly fubmitted. See the articles Artificers, Mechanics, Manufacturers, and Royal Society of London.
Monfieur Savary pretends to match the French watchmakers againft the Englifh-He afferts, that, if the Englifh be in any condition to difpute with them, they owe it entirely to the great number of French workmen, who took Thelter bere, upon the revocation of the edict of Nants.That three fourths of the watches, made in England, are the work of Frenchmen.-From what authorities he fays this, we know not: but it need not be told Englifhmen that it is falle; there not being one French name, that we know of, among all our celebrated watchmakers: nor, in the body of watchmakers, is there one eighth part French, according to Mr Chambers.-There are, I am very fenfible, many French refugees, as well as many Germans, who are extraordinary artitts in various principal branches of the watch.jnaking bufinefs.-But I never heard of any great mafters amongft them here, that have obtained the character equal to thofe, whofe names I have mentioned.-If there were, and they had come to my knowlege, I fhould not be wanting in paying all regard due to their merit, becaufe I look upon thofe proteftant foreigners, who have taken up their abode among us, as part of ourfelves, and have greatly contributed to advance the trade of the nation, as I fhall fhew hereafter.
It is certain the French prefer our watches to their own; infornuch that, to have them with the more eafe, a number of Englith workmen were invited, or rather inticed, over in 1719, and eftablifhed with great countenance at Verfailles, under the direction of the fanious Mr Law.-But the eftablifhment, though every thing promifed well for it, fell to the ground in lefs than a year's time.-M. Savary imputes it's fall, intirely, to that ftrong prejudice of the French people, in behalf of the Englifh workmen, and to the opinion, that the watches did not come from England. But the truth is, the workmen fent over, being moft of them men of loofe characters, grew diffolute, quarrelled with the priefts, infulted the magiftrates, and were difmiffed of neceffity.
CLOCK.WORK. It is probable that in all ages fome infruments or other have been ufed for the meafuring of time; but the earlieft we read of is the dial of Ahaz.
Some pretend to give a defeription of this dial of Abaz: but, it being mere conjecture, and little to my purpofe, I fhall not trouble the reader with the various opinions about it.
Among the Greeks and Romans there were two ways chiefly ufed to meafure their hours. One was by clepfydra, or hour glafles; the other by the folaria, or fun-dials. They had alfo a vefli, having a little hole in the bottom, which was fet in the courts of judicature, full of water; by which the lawyers pleaded. This was, fays Phavorinus, to prevent babbling, that fuch as feak ought to be brief in their feeeches.

As to the invention of thofe water-watches (which were, no doubt, of more common ufe than only in the law-courts) the invention of them is attributed, by Cenforinus, to P. Cornelius Nafica; the cenfor Scipio Nafica, Pliny calls him, and fays, That he was the firft that meafured, by water, the hours of the night, as well as the day; and that clock he dedicated within doors, in the year U. C. 595 ; which time fell in about the time of Judas Maccabrus, about 150 years before Chrift The other way of meafuring the hours, with fun-dials, feems, from Pliny and Cenforinus, to have been an earlier invention than the laft. Pliny fays, ' That Anaximenes Milefius, the - fcholar of Anaximander, invented dialling; and was the firf ' that fhewed a fun-dial at Lacedemon.' Vitruvius calls him Milefius Anaximander. This Ariaximander, or Anaximenes was cotemporary with Pythagoras, fays Laërtius, and flourifhed about the time of the prophet Daniel.
But enough of thefe ancient time-engines.
There were other horological machines, which, whether pieces of clock-work or not, I leave to the reader's judg ment
The firft is that of Dionyfirus, which Plutarch commends for a very magnificent and illuftrious piece. But this might be only a well delineated fun-dial.
Another piece is that of Sapor, king of Perfia. Cardan faith it was made of glafs; that the king could fit in the middle of it, and fee it's ftars rife and fet. But, whether this fphere was moved by clock-work, or whether it had any regular motion, does not clearly appear.
The laft machine.I fhall mention, is one defcribed by Vitruvius, which feems to be a piece of watch-work, moved by an equal influx of water.
Among divers feats which this machine performed (as founding trumpets, throwing ftones, \&c. one ufe of it was, to Shew the hours (which were unequal in that age) through every month in the year.
The inventor of this famous machine, Vitruvius fays, was one Ctefibius, a barber's fon of Alexandria; which Ctefibius flourifhed under Ptolemy Euergetes, fays Athenæus, 1. 4. and, if fo, he lived about 140 years before our Saviour's days, and might be cotemporary with Archimedes.
Thus having given a fhort account of the ancient ways of meafuring time, we fhall fay fomething more particularly of watch and clock-work; which is thought to be of a much later invention than the forementioned pieces, and to have had it's beginning in Germany, within lefs than 200 years. It is very probable that our ballance-clocks, or watches, and fome other automata, might have their beginning there; or that watch and clock-work (which had long been buried in oblivion) might be revived there: but that watch and clock-work was the invention of that age purely, might be proved falfe, if we were difpofed to enter inte a detail of that matter.

Some general rules and directions for the calculations necef-
fary in making thefe machines, afcording to Mr Derham's Artificial Clock-Maker.
§. I. For the clear underftanding of which, it muft be obferved, that thofe automata, whofe calculation is intended, do by little interftices, or ftrokes, meafure out longer portions of time. Thus the ftrokes of the ballance of a watch meafure our minutes, hours, days, \&c.
Now to fcatter thofe frokes among wheels and pinions, and to proportionate them, fo as to meafure time regularly, is the defign of calculation. For the clearer difcovery of which, it will be neceflary to proceed leifurely and gradually.
§. 2. And in the firft place you are to know, that any wheel, being divided by it's pinion, fhews how many turns that pinion hath to one turn of that wheel. Thus a wheel of 60 teeth, driving a pinion of 6 , will turn round the pinion 10 times in going round once: 6)60(IO.
From the fufee to the ballance the wheels drive the pinions; and, confequently, the pinions run fafter, or go more turns, that the wheels they run in. But it is contrary from the great wheel to the dial-wheel. Thus, in the laft example, the wheel drives round the pinion 10 times; but, if the pinion drive the wheel, it muft turn 10 times to drive the wheel round once.
§. 3. Before I proceed further, I muft fhew how to write down the wheels and pinions; which may be done either as vulgar fractions, or in the way of divifion in vulgar arith metic. For example: a wheel of 60 , moving a pinion of 5, may be fet down thus, $\frac{50}{5}$; or rather thus, 5$) 60$; where the uppermoft figure, 60 , or numerator, is the wheel, the lowermoft, or denominator, is the pinion : or, in the latter example, the firf figure is the pinion, the next, withour the hook, is the wheel.
The number of turns which the pinion hath in one turn of the wheel, is fet without a hook, on the right-hand; as, $5) 60(12 ;$ i. e. a pinion of 5 , playing in a wheel of 60 moveth round 12 times in one turn of the wheel.

A whole movement may be noted thus, $\frac{4}{36}, \frac{5}{5},{ }_{5}^{5},{ }_{5}{ }_{5}$, ${ }^{1} 7$ notches in the crown-wheel. or rather, becaule it will be eaffeft to conceive, as you fee here in the

## 5) $55(11$

5) $45(9$
6) $45(9$
$5) 40(8$
7) $40(8$ line, is the pinion of report 4 , the dial-wheel the p, the dial-wheel 36 , ber, under the line, is 5 , the pinion; 55 is the great wheel, and 1 I turns of the pinion it driveth: The third numbers are the fecond wheel; \&xc. the fourth the contrate-wheel, \&c. and the fingle number 17 , under all, is the number of the crown-wheel.
By the §. 2. before, knowing the number of turns which any pinion hath in one turn of the wheel it worketh in, you may allo find out how many turns a wheel or a pinion hath, at a greater diftance; as the contrate-wheel, crown-wheel, \&c. for it is but multiplying together the quotients, and the number produced is the number of turns. An example will make this matter plain : let us chufe thefe three 5) 55( I I numbers here fet down; the firft of which hath in 5) 45 (9 tuins, the next 9 , and the laft 8 . If you multiply $5,40(8$ II and 9, it produceth 99, for 9 times II is 99 ; that is, in one turn of the wheel 55 , there are 99 turns of the fecond pinion 5 ; or the wheel 40 , which runs concentrical, or in the fame arbor with the fecond pinion 5 : for, as there are II turns of the firft pinion 5 , in one tutn of the great wheel 55 , or (which is the fame) of the fecond wheel 45 , which is on the fame findle with that pinion 5 ; fo there are 9 times in turns in the fecond pinion 5 , or wheel 40 , in one turn of the great wheel 55 . If you multiply 99 by the laft quotient 8 (that is, 8 times 99 is 792 ) it thews the number of turns which the third and laft pinion 5 hath: fo that this third and laft pirion turns 792 times in one turn of the firf wheel 55 . Another example will make it ftill more plain. The example is in the margin. The turns are 10,9 , and 8 : thefe, multipiied as be-
 pinion 6 (which is the pinion of the third wheel 40 , and runs in the fecond wheel 54) turns 90 times in one turn of the firf 80: This laft product 90 , being multiplied by 8 , produces 720 ; that is, the pinion 5 (which is the pinion of the crown-wheel I 5) turns 720 times in one turn of the firft wheel of 80 teeth.

* By the quotients I commonly mean the number of turns; which number is fet on the right hand, without the hook, which number is fet on the right hand, without the hook,
as is hewn in the laft paragraph; which I note here now, as is hewn
once for all.

8. 5. We may now proceed to that which is the very groundwork of all; which is, not only to find out the turns, but the beats, allo, of the ballance, in thofe turns of the whieels. By the laft paragraph having found out the number of turns which the crown-wheel hath in one tutn of the wheel you feek for, you mult then multiply thofe turns of the crownwheel by it's number of notches, and this will give you half the number of beats in that one turn of the wheel; half the number of beats, I fay, for the reafons in the following fixth fection. For the explication of what hath been faid, we will take the example in the laft fection: the crown-whéel there has (as hath been faid) 720 turns to one turn of the firft wheel : this number, multiplied by $I_{5}$ (the notches in the crown-wheel) produces 10,800 , which are half the number of ftrokes of the ballance in one turn of the firlt wheel 80 . The like may be done for any of the other wheels, as the wheels 54 or $40:$ but I Chall not infift upon thefe, having faid enough.
I fhall give but one example more, which will fully and very plainly illuftrate the whole matter. The example is in the margin, and it is of the old 16 hour watches, where4) $32(8$ in the pinion of report is 4 , the dial-wheel 32 , the great wheel is 55 , the pinion of the fecond wheel 5) 55 (II is 5 , 8 xc . the number of notches in the crown-wheel 5) $45(9$ are 17 ; the quotients, or number of turns in each,
5) 40 ( 8 are, $8, \mathrm{xi}, 9,8$ : all which being multiplied, as before, make $6,33^{6}$; this number, multiplled by 17 , produceth 107,712 ; which laft fum is half the number of beats in one turn of the dial-wheel. The half number of beats, in one turn of the great wheel, you will find to be 13,464 : for 8 times 17 is 136 , which is the half number of beats in one turn of the contrate-wheel 40; and 9 times 136 is 1,224 , the half beats in one turn of the fecond wheel; and II times 1,224 is 13.464 , the half beats in one turn of the great wheel 55 : and 8 times this laft is 107,712 , before named. If you multiply this by the two pallets, that is, double it, it is 215,424 , which is the number of beats in one turn of the dial-wheel, or I 2 hours. If you vould know how many beats this watch hath in an hour, it is but dividing the beats in 12 hours into 12 parts, and it gives 17,952, which is called the train of the watch, or beats in an hour. If you divide this into 60 paits, it gives 299 , and a little more, for the beats in a minute: and fo you may go on to feconds and thirds, if you pleafe.
Thus I have delivered my thoughts as platy as I can, that I may be well underftood, this being the very foundation of Vol. I.
all the artificial part of clack-work ; and, therefore; let thê young practitioner exercife himfelf thoroughly in it, in more than one example.
§. 6. The ballance, or fwing, hath two ftrokes to every tooth of the crown-wheel: for each of the two pallets hath it's blow againft each tooth of the crown-wheel; wherefore a pendulum that fwings feconds, hath it's crown-wheel only 30 teeth.

The way to calculate, or contrive, the numbers of a piece of watch-work.
Having, in the laft fection, led on the reader to a general knowlege of calculations, I may now venture him further into the more oblcure and ufeful parts of that art : which I thall explain with all poffible plainnefs; though lefs brevity than I could wifh.
§. I. Two wheels and pinions, bf different numbers, may perform the fame motion: as a wheel of 36 drives a pinion of 4 , all one as a wheel of 45 , drives a pintiun of 5 , or as a wheel of go drives one of 10 ; the curns of each are 9 : therefore,
§.2. In contriving a piece of work, you may make ufe of one wheel and one pinion, or many wheels and many pinions, provided that the many wheels and many pinions have the fame proportion that the one wheel and one pinion have; an example or two of which will make the matter plain. Suppofe, inftead of a wheel of 1,440 teeth (too large a number for one wheel) and a pinion of 28 leaves, you had rather make ufe of three wheels and pinions, you may make ufe of three wheels of 36,8 ; and 5 , and of three pinions of 4, 7, and I; which, being multiplied together continually, make the two fums; viz, 36 times 8 is 288 , and 5 times that is $1 ; 440$; and 4,7 , and I , fo multiplied, makes 28 , the very fum of the one wheel and one pinion.
Or you may, by fection one, make ufe of different numbers; which will perform the fame motion, although they reach not the fame numbers. As, in the wheel 1,440 and pinion 28 , there are 5 I $^{\frac{3}{7}}$ turns, new any number of wheels and pinions that will effect the fame number $51 \frac{3}{7}$ turns, will perform the fame motion as that one wheel and one pinion. Future examples will make all plain.
In placing the wheels and pinions it matters not in what order they are fet, nor, indeed, which pinion runs into which wheel; only for beauty and convenience they place them orderly, according to their different fizes and numbers.
\$: 4. If in breaking your train into parcels (of which prefently) any of your quotients thould not pleafe you; or if you would alter any other two numbers, which are to be multiplied together; you may vary them by this rule: divide * your twô numbers by any other two numbers, which will meafure them, and then multiply the quotient by the alternate divifors; the product of thefe two laft numbers, found, fhall be equal to the product of the two numbers firf given. Thus, if you would vary 36 times 8 , divide thefe by any two numbers that will evendy mealure them, as 36 by 4 , and 8 by 1: the fourth part of 36 is 9 , and 8 , divided by 1 , gives 8; multiply 9 by 1 , the product is 9 ;'and 8 , multiplied by 4, produceth 32 : fo that, for $3^{6}$ times 8 , you fhall 9 have found 32 times 9 . The operation is in the $36 \times 8$ marging, that you may fee, and apprehend it the 4 I better. Thefe numbers are equal, viz. 36 times 8 is equal to 32 times 9 , both producing 288 . If you $32 \times 9$ divide 36 by 6 , and 8 by 2, and multiply as, before is faid, you will have, for 36 times 8,24 times 12 , equal to 288 alfó.

* Outhred Autom. \$. $\mathbf{z}_{3}$.

If this rule feem to the unikilful reader hard to be underftood, let him nöt be difcouraged, becaufe he may do without it, although it may be of good ufe to him that would be a more compleat artift:
§. 5. Becaufe in the following paragraphs I thall have frequent occafion to ufe the rule of three, or rule of propbrtion, it will be neceffary to flew the unflilful reader how to work this ufeful rule.
If you find three of four numbers thus fet, with four foots after the fecond of them, it is the rule of proportion; as in this example $: 2: 4:: 3: 6$; i. e. as 2 is to $4::$ fo is 3 to 6 . The way to work this rule, viz. by the three firft numbers to find a fourth, is, to multiply the fecond number and the third together, and divide their product by the firf. Thus 4 times 3 is I2, which 12 , divided by 2 , gives 6 , which is the number fought for, and ftands in the fourth place.
You will find the great ufe of this rule hereafter; only take care to bear it in mind all along. But, if there fhould be occafion for any farther inftructions in the rule of tbree, I refer the reader to the article Aritimieric.
8. 6. To proceed. If, in feeking for your pinion of report, or by any othermeans, You happent to have a wheel and pinion fall out with crofs numbers, too big to be cut in wheels, and yet nor to be altered by the former rules, you may find out two numbers of the fame, or a near proportion, by the fol-

$$
6 \mathrm{X}
$$

lowing

## C L O

## C L O

lowing rule, viz. as either of the two numbers given is to the other : $:$ fo is 360 to a fourth; divide that fourth number, as alfo 360 , by any aliquot parts, as $4,5,6,8,9,10,12,15$ (each of which numbers does exactly meafure 360 ) or by any one of thore numbers that brings the quotient neareft to an integer, or whole number. Thus, if you had thefe two numbers, 147 the wheel, and 170 the pinion, which are too great to be cut in fmall wheels, and yet cannot be reduced into lefs, becaufe they have no other common meafure but unity: fay, therefore, according to the laft paragraph, as 170 is to 147 , or, as 147 is to $170::$ fo is 360 to a fourth number fought: in numbers thus, $170: 147:: 360: 311$; or, $147: 170:: 360$, or 416 . Divide the fourth number and 360 by one of the foregoing numbers, as 31 and 360 by 6 , it gives $5^{2}$ and 60 . In numbers it is thus: 6$)_{360\left(60^{\circ}\right.}^{311} 5^{2}$ Divide by 8 it is thus, 8$)_{360(45}^{3 \text { i }(39}$. If you divide 360 and 416 by 8 , it will fall out exactly to be 45 and 52.8$)_{416(52 ;}^{360(45}$ wherefore, for the two numbers 147 and 170 , you may take 52 and 60 , or 39 and 45 , or 45 and $52,8 \mathrm{cc}$.
§. 7. I thall add but one rule more before 1 cone to the practice of what hath been laid down; which rule will be of perpetual ufe, and confifts of thefe five particulars:

1. To find what number of turns the fufee will have, thus: As the beats of the ballance in one turn of the great wheel, or fufee (fuppofe 26,928 ) is to the beats of the ballance in one hour (fuppofe 20,196) :: fo is the continuance of the watch's going in hours (fuppofe 16) to the number of the turns of the fufee 12 . In numbers it will fand thus:

$$
26,928: 20,196:: 16: 12 .
$$

By fection 4, you may remember, that you are to multiply 20,196 by 16 ; the product is 323,136 . Divide this by 26,928 , and there will arife 12 in the quotient, which muft be placed in the fourth place, and is the number of turns which the fufee hath.
2. By the beats and turns of the fufee to find how many hours the watch will go, thus:
As the beats of the ballance in one hour are to the beats in the turns of the fufee, fo is the number of the turns of the fufee to the continuance of the watch's going. In numbers thus: $20,196: 26,928:: 12: 16$.
3. To find the ftrokes of the ballance in one turn of the fufee, fay, As the number of turns of the fufee is to the continuance of the watch's going in hours, fo are the beats in one hour to the beats of one turn of the fufee. In numbers it is thus:

$$
12: 16:: 20,196: 26,928 .
$$

4. To find the beats of the ballance in an hour, fay thus: As the hour of the watch's going is to the number of turns of the fufee, fo are the beats in one turn of the fufee to the beats in an hour. In numbers thus:

## 16:12::26,928:20,196.

5. To find what quotient is to be laid upon the pinion of report, fay thus: As the beats in one turn of the great wheel are to the beats in an hour, fo are the hours of the face of the clock (viz. I2, or 24) to the quotient of the hour-wheel, or dial-wheel, divided by the pinion of report, i. c. the number of turns which the pinion of report hath in one turn of the dial-wheel. In numbers thus:

26,928:20,196: : $12: 9$.
Or rather, to avoid trouble, fay thus: As the hours of the watch's going are to the number of the turns of the fufee, fo are the hours of the face to the quotient of the pinion of report. In numbers thus: $16: 12:: 12: 9$. If the hours of the face be 24 , the quotient will be 18 ; thus:

## $16: 12:: 24$. 18.

N. B. This may be made ferve to lay the pinion of report on any other wheel: As the beats in one turn in any wheel are to the beats in an hour, fo are the hours of the face, or dial-plate of the watch, to the quotient of the dial-wheel, divided by the pinion of report, fixed on the fpindle of the aforeraid wheel.

CLOTH, in traffic, fignifies a manufacture made of wool, wove on the loom; the expreffion is applicable alfo to other manufactures made of hemp or flax, \&c.-but, in a more particular fenfe, it implies a web or tiffue of woollen threads interwoven, fome whereof, called the warp, are extended in length from one end of the piece to the other; the reft, called the woof, difpoled acrofs the firt or breadthwife of the piece. Cloths are of divers qualities, fine or coarle.
The goodnefs of cloth confifts in the following particulars. (r.) That the wool be of a good quality and well dreffed. (2.) It muft be equally fpun, carefully obferving that the thread of the warp be finer and better twifted than that of the woof. (3.) The cloth muft be well wrought, and beaten on the loom, fo as to be every-where equally compact.
4.) The wool mult not be finer at ane end of the piece than in the reft. (5:) The lifts mult be fufficiently iftrong of the fame length with the ftuff, and confift of good wool, hair, or oftrich-feathers, or, which is ftill better, of Dain dog's-hair. (6.) The cloth mult be free from knots and other imperfections. (7.) It muft be well fcoured with fuller's earth, well fulled with the beft white foap, and afterwards wafhed in clear water. (8.) The hair or nap muft be well drawn out with the teazel, without being too much opened. (9.) It muft be fhorn clofe, without making it threadbare. (IO.) It muft be well dried. (II.) It muft not be tenter-ftretched, to force it to it's juft dimenfions. (12.) It muft be prefled cold, not hot preffed, the latter being very injurious to woollen cloth.

The manner of manufacturing in France white cloths which are intended for dyeing.

The beft wools for the manufacturing of fine cloths are thofe of Spain, particularly thofe of Segovia. To ufe thofe wools to the beft advantage, they muft be fcoured with a liquor compofed of three parts fair water, and one of urine. After the wool has continued long enough in the liquor to foak and diffolve the greafe, it is drained and well wathed in running water. When it feels dry; and has no fmell but the natural one of the fheep, it is faid to be duly fcoured.
After this it is hung to dry in the hade, the heat of the fun making it harfh and inflexible. When dry, it is beat with rods upon hurdles of wood, or on cords, to cleanfe it from duft and the groffer filth; the more it is thus beat and cleanfed, the fofter it becomes, and the better for fpinning After beating, it muft be well picked, to free it from the reff of the filth that had, efeaped the rods.
It is now in a proper condition to be oiled, and carded on large iron cards, placed flopewife. Olive-oil is efteemed the beft for this purpofe; one fifth of which fhould be ufed for the wool intended for the woof, and a ninth for that do figned for the warp.
After the wool has been well oiled, it is given to the fininers, who firft card it on the knee with fmall fine cards, and then fpin it on the wheel ; obferving to make the thread of the warp fmaller by one third than that of the woof, and much compacter twifted, there being greater inconvenience in twifting it too loofe than too tight: to which end, the latter fhould be fpun with the band open, or uncrofled, and the former with it croffed:
The thread thus fpun, reeled, and made into fkeins, that defigned for the woof is wound on little tubes, pieces of paper, or rufhes, fo difpofed, as that they may be eafily put in the eye of the chuttle. That for the warp is wound on a kind of large wooden bobbins, to difpofe it for warping: When warped, it is tiffened with fize, the beft of which is that made of fhreds of parchment, and, when dry, is given to the weavers, who mount it on the loom.
The warp thus mounted, the weavers, who are two to each loom, one on each fide, tread at the fame time alternately on the treddle, firft on the right ftep and then on the left, which raifes and lowers the threads of the warp equally; between which they throw, tranfverfely, the fhuttle from the one to the other. And every time that the fhuttle is thus thrown, and a thread of the woof * inferted within the warp, they frike it conjointly with the fame frame wherein is faftened the comb or reed, between whofe teeth the threads of the warp are paffed, repeating the ftroke, as often as is neceffary; in fome cloths no lefs than twelve oi thirteen times, viz. fir with the warp open, and feven fhut.

* One of the moft ufful inventions, perhaps, known in lutman fociety, is that of weaving with the warp and woof. The warp, which the Latins call the ftamen, is the bafe and foundation of the ftuff: it confifts of a number of lorg twifted threads extended on a loom, fome whereof are raifed up, and others depreffed alternately, in order to ieceive and catch hold of thother thread called the woof, which is thrown through them by means of a Chutte, an inftrument wi:h two points, and in the figure of a boat. Weaving with the warp and woof is more expeditious than that of any other way; it is alfo mon convenient and the fittel to be diverfified, according to the exigency of the feafons, and the tafte of nations and particular perfons, Hence proceeds that infinite number of different kinds of linnens, woollens, ferges, cloths, camblett, taffcta's, damaks, velvets, and other fuffs, whofe names vary according to the materials they are made of, and the different mixtures of the threads

It is obfervable, that, the more the threads of the woof are fruck againtt each other, the clofer the cloth is: hence it bccomes enabled to fuftain the violence of the fulling-mill, as well as of the teazel, or fulling-thitle, without fretting or opening. The weavers having continued their work 'till the whole warp is filled with woof, the cloth is finithed: it is taken off the loom, by unrolling it from the beam whereon it had been rolled, in proportion as it was wove; and now given to be cleanfed of the knots, ends of threads, ftraws, and other filth, which is done with littie iron nippers.

## C L O

## C L O

In this condition it is carried to the fullery, to be fcoured with urine, or a kind of potter's-clay, well cleanfed and fteeped in water, put along with the cloth in the trough, wherein it is fulled.
The cloth, being again cleared from the earth or urine, by wahning it well in water, is returned to the former hands, to have the leffer filth, fmall ftraws, and almoft imperceptible knots taken off as before: then it is returned to the fuller, to be beat and fulled with hot water, wherein a fuitable quantity of foap has been diffolved for the occafion. The foap moft efteemed is the Caftile, or the white foap of Genoa. After fulling it is taken out to be fmoothed, or pulled by the lifts lengthwife, to take out the wrinkles and crevices occafioned by the force of the mallets or peflles falling on the cloth, when in the troughs.
The fmoothing is repeated every two hours, 'till the falling be finifhed, and the cloth brought to it's proper breadth; afer which it is wafhed in clear water, to purge it of the foap, and given wet to the carders, to raife the hair or nap on the right-fide, with the thiftle or weed; wherewith they give it two rubs or courfes, the firft againft the grain, the fecond with the grain.
After this preparation the clothworker takes the cloth, and gives it it's firft cut or theering. After which, the carders refume it, and, after wetting, give it as many more edurfes with the teazel as the quality of the ftuff requires; always obferving to begin againft the grain of the hair, and to end with it; as alfo to begin with a fmoother thiftle, proceeding ftill with one fharper and fharper, as far as the fixth degree. After thefe operations the cloth, being dried, is returned to the clothworker, who fheers it a fecond time, and returns it to the carders, who repeat their operation as before, 'till the nap be well ranged on the furface of the cloth, from one end of the piece to the other.
It muft be obferved, that it is abfolutely neceffary the cloth fhould be wet, while in the hands of the carder; to which end it is fprinkled with water from time to time.
The nap finifhed and the cloth dried, the clothworker gives it as many cuts as he thinks requifite, for the perfection of the ftuff. It muft be obferved alfo, that all the theerings muft be on the right-Ilde except the two laft, which muft be on the other; and that the cloth cannot be-too clofe for theering.
The cloth, thus wove, fcoured, napped, and fhorn, is fent to the dyer. Which performed, it is wahhed in fair water, and the worker takes it again, wet as it is; lays the nap, with a brufh, on the table, and hangs it on the tenters; where it is ftretched both in length and breadth, fufficiently to fmooth it, fet it fquare, and bring it to it's proper dimenfions, without ftraining it too much; obferving to brufh it afrefh, the way of the nap, while a little moilt on the tenters. When quite dry, the cloth is taken off from the tenters, and brufhed again on the table, to finifh the laying of the nap: after which it is folded, and laid cold under a prefs, to make it perfectly fmooth and even, and give it a glofs.
The glofs is given by laying a leaf of vellum, or cap-paper, in each plait of the piece, and over the whole a fquare plank of wood: whereon, by means of a lever, the fcrew of a prefs is brought down, with the degree of force judged requifite, with regard to the quality of the cloth. In France and Holland, none but fcarlets; greens, blues, \&cc. receive this laft preparation, blacks being judged better without it.
Laftly, the cloth being taken out of the prefs, and the papers removed, it is in a condition for fale or ufe.
With regard to the manufacture of mixed cloths, or thofe wherein the wools are firf dyed, then mixed, fpun, and wove of the colours intended, the procefs, except in what relates to the colour, is mofly the fame with that juft reprefented.
The method of adjufting the mixture, is by firft making a felt or flock of the colours of the intended cloth, as a fpecimen: the wool of each colour is weighed, and, when the fpecimen is to the manufacturer's mind, he mixes, for ufe, a quantity in the fame proportion; eftimating each grain of the fpecimen at 20 pounds weight of the fame wool, in the cloth to be made.
Thus, for example, if he would mix three colours, viz. cof-fee-colour, feuille-mort, and the pale blue, the firft to be the prevailing colour, he weighs the quantity of each: for inftance, 70 grains of the firft, 25 of the fecond, and 20 of the third; then multiplies each by 20 pounds of wool; and, thus, again, 1400 pounds for the coffee-wool, 500 pounds for the feuille-mort, and 400 for the pale blue.
The wools of the fpecimen, thus weighed, are mixed, oiled, carded, moittened with clear water, rubbed with black foap, and in this flate wrought a long time with the hands, 'till they be reduced into a piece of felt ufed by hatters.-It is then rinfed in water, to purge out the oil and foap; and, when dry, the nap is carded out with the teazel ; then fhorn again 'till the ground appear, and the feveral colours be dif-coverable.-Laftly, wetting it a little and prefing it, he examines it well, and, if he is not fatisfied with it, makes anwher felt; if he is, he proceeds to mix his wools: when fo
done, it is beat on hurdles, cleaned, oiled, carded, fpun wove, \&c. as in the white cloth.

For thofe who would chufe to have a connected idea of the ufual terms of woollen manufacturers, will find them in what follows, ranged according to the order of the oporation.
The wool is wathed,
Either in heaps, in ftanding water; or in the coyriddle, in running water;
Or in tubs full of river water.
To prepare the bath or fuds, is to let the wool foak in water, 'till it has thickened the water in the tub, by difcharging it's greafinefs and falt in it. Thence it is, that infects leek clean wool, and will not touch that which retains it's natural moifture.
Wool in the greafe, is that which nill preferves it's natural greafnefs. This is better for keeping, becaufe the moth will not get into it.
A walhing of wool, is a heap of wool, taken out of the tub, and fet to drain in the air.
To wafh the wool alive, is to wafh it on the fheep's back before fleering.
The fheers are fciflars made of one piece of fteel, which forms the bow and two blades. The bow is a femicircle, from whence the two blades ftretch forward. Thefe are preffed clofe to each other; and cut the wool under the workman's fingers, and then fly back by the fipring of the bow.
A tod of wool is what is cut off of the fkin of the fheep, beginning at the legs, and ending at the head.
A fieece is the tod gathered ap into a focket. Out of trade, a fleece fometimes fignifies a fheep fkin, with the wool on: The puthes are wool finter thà the reft, which fhoot out by little tufts in different places. They are plucked off the fheep before fheering,
In the province of Berry this lalt name is given to the wool, which is taken of the thighs?
The breechings are thofe, which are fo hard and clotted, that they are of the confintence of felt. They are alfo called clottings, becaufe the beaft, efpecit?!!y when fick; dirts and clots them; by lying much on one fide.
Pelled wool is that, which comes off from fcabby theep.
Sprazeley or crudly wool is the young hungry wool, which fhobts out before the old is fhorn.
Locks or breeching are long white hairs, as fiff as badger's hair.
All thefe forts of wool are bad br rejected. Yet they ought not to be thrown away as ufelefs. They are ufed in very coarfe works, fuch às ordinary rugs.
Clipping is cutting off the coarfe ends of the wool, before it is wafhed. Thefe ends are called locks.
The fleece-wool is that, which hath been fhorn off the fheep, while alive.

## The lamb's wool is that cut off lambis.

The glover's-wool is the wool which the leather-dreffer takes off the kin , after the fheep is killed.
The fell-wool is the wool Itripped off fheep, which died of fome diftemper. The ufe of this fort is prohibited. In forting Segovia wool it is diftinguifhed into firlf, fecond, and third. The fame order is oblerved in the forting of Spanifh wool in general.
As to the other forts of wool, the only difinction that is made, is into the high wool, which is the longeft, and is generally referved for combing; and the low wool, which is ufually carded. However, the long wool, when it is to make cloth, is alfo carded, becaufe it does better fo than when combed.
Fine wool unfcoured is only fit for the marker, and not for working. In order to work it, in fome cales they begin by wafhing and combing it; in others, by getting out the greafe by boiling, in order to wafh and comb it afterwards: and there are other cafes ftill, in which it is firft dyed, then carried to the river, and thence to the comber.
The fcouring boiler, or copper, has a crofs-bar on it, to fupport the wool taken out of the water. There are allo poles to ftir the wool, pefles to pound or beat it, hooks to draw it out, bafkets to hold and carry it to the river, where the cleaning of it is finifhed.
Common wool, which has been wathed on the fleep's back, ought, before working, to be carefully examined, picked off the locks or clipped, and cleanfed of all refufe.
In fome manufactories, wool is wrought whole; in others, it is dyed before working.
For dyeing wool, the fame utenfils are requifite as for fcouring.
The ingredients are the preparatory and colouring materials. Setting the copper is to put the neceflary ingredients into it. Handling the wool is to open it, by flirring it with the poles, in order to make every part of it take the colour equally. Increafing the boiling is to inlarge the fire.
Cooling the wool is to fpread it out in the air.
If the wool has been only grounded or galied; that is, if it has only had it's firf dip, or the firt thiture of galls, cop-

## C L O

C $\mathrm{L} O$
peras, or other ingredients, whether preparatory or colourng; then it muft be brought in from the airing to the copper, to be there revived by a fecond dip, which brightens the dye; or to be lowered by a new mixture, which either diminifhes it's luftre, or gives it another teint; or, in fine, to give it a deeper caft of the fame colour.
To beat the wool, whether dyed or white, is to fpread it on a hurdle, and to open it's texture, by whipping it with fwitches, in order to make it fit for combing, or carding and fpinning.
For combing wool they ufe
A little furnace, which ferves to warm the combs, A vice and hook to fix combs,
A pair of combs, which are two little boards, almbof fquare, Afuck with teeth of iron wire, fome a little longer than the others. Each comb has it's handle.
A hammer, to put in and take out thefe teeth.
A brafs hollow tube, to mend them when out of order. A file, to point them when blunt.
A windlas, to twift the wool foaked in foap-water, before it be put in the comb.
A tub, in which the foap is diffolved.
To comb wool, is to comb the wool that has been fprinkled with oil, in order to wafh it afterwards.
A certain quantity of wool is given by weight to the workmen.
A beating is a parcel of wool beaten on the hurdles.
A fliver is a proper quantity of wool put into the teeth of the comb.
To difcharge it, is to take out the fliver, after having moved the right comb backward and forward on the left, and the left on the right.
The carding is the quantity of wool that fticks to each comb, and is fufficiently combed; after a certain number of movements of one comb on the other. There are always two cardings, as well as always two combs.
A diftaff is two cardings joined together; which make up a fufficient quantity for the diftaff.
The hort wool, which cannot be wrought together, by combing, is not loft. It goes to the card.
To brimftone the wool, is to fufpend the feveral fkins over the brimftone room.
The brimftone fove is a little fove well clofed, and cemented at top, to whiten the wool by the fumes of brimftone burning in a pan.
When dyed wool is combed, they begin by mixing it, according to the tafte and ikill of the mafter workmen.
The differcnt colours are effaced by the judgment in mixing them, whereby there refults a new colour.
The comber follows a certain rule, in the quantity of each colour he takes for each combing. On which depends the uniformity of the colour required.
Carded wool is broke in a different manner from combed wool. It paffes through two tools, called cards, which are two little quadrangular pieces of board, three or four times as broad or tall, with a handle to each, and thick-fet with fmall crooked wires. The cards are changed, beginning by the wideft, and ending with the clofeft, in order to break the wool, and mix the colours the better.
Spinning is of two forts.
'Twifted thread is fpun by the findle or little reel, from combed wool, and ferves for the warp, which is the ground of the little ftuffs. The name of warp is alfo given to the threads running lengthwife in a piece of cloth; and which make the ground of it.
The llack-fpun is made by the great wheel from carded wool, and is called the woof or thute. The woof crofles the threads of the warp, and may be called fhute, with regard to a fuff that has a pile.
The thread of the work in cloths is generally called backthrown, becaufe being made from carded wool, as well as the woof, it is likewife fpun by the great wheel, but with the circumftance of croffing the wheel-ftring: which has a double good effect, viz. to make a thread fomewhat better twifted, and Atronger, and give it a different twift from that of the woof; whereby they thicken better in the fulling-mill. Stuffs may be divided into three forts, tammy, ferge, and cloth.
Tammy, or ftuffs of two tammies, are made of thread of warp upon thread of warp, that is, the warp is of twifted thread, and the woof of the fame, both made from combed wool.
Serge is made of flack-fpun; or carded wool, on a warp of tammy, or combed wool.
Cloth is made of the two laft threads, that is, both the warp and woof are of the thread fpun from carded wool, and very little twifted, in order to make a more fubftantial and woolly ftuff.
Thefe three fundamental forts are fubdivided into a vaft number of others, according to certain qualities added to them, and different ways of working.
To weave is to work at the loom, or to make ftuff. One weaver is fufficient to make tammy and ferges; becaufe, as thefe little ftuffs are not wide, the fame workman can throw
his fhuttle with his right-hand between the threads of the warp, and receive it with his left, in order to throw it the contrary way. But cloths and blankets, being very wide, are wrought by two weavers, one of whom throws the thuttie, the other receives and throws it back; and they go on thus alternately with as much regularity, as if the work was done by the two hands of the fame man.
The loom is compofed of feveral parts, whereof the chicf are the loom-pofts and crofs-bars.
The three rolls or rollers, viz. the little one, the cane one. The warp is at firft faftened at one end of the loom, on the leaft of thefe rollers, and at the other end is rolled on the fecond cylinder, which is thicker, and is called the cane-roll: according as the warp is filled with woof, the ftuff is to be rolled under the loom in the knee-roll; and at the lame time the fame length of the thread of the warp is unrolled off the cane-roll, as that of the ftuff rolled on the knee-roll.
The batten is a large moveable frame, fufpended on two pins at the top of the loom, to move freely backwards and forwards, under the workman's hands, who, after every throw of the fhuttle, or thread of the woof, Atrikes in this thread, more or lefs, with the batten or reed.
The reed or comb is made of two rods, with a long row of teeth of reeds, or brafs wire. It is placed at the lower part of the batten. Every thread of the warp pafies fingly, between two teeth of the reed: that fo the batten may move without breaking the threads, and frike in the toof equally, without leaving any part of it irregular.
The lams are behind the reed. Each lam is compofed of two vergees, or laths, whofe length fhould be the width of the ftuff, and of little ftrings, ftretched from one vergee to the other, which are called leifhes; In the middle of each leifh there is a loop, or little ring, of thread, horn, or glafs, to receive one of the threads of the warp, which pals through the loops of one lam; and between the leifhes or threads of the other lam; and thofe which pafs through the loops of the fecond lam play freely between the threads of the firft, fo as to be able to defcend, while the other afcends: and thus thefe two lams being, near their ends, faftened to a common cord, pafled round a pulley at top, and at bottom to another cord, which fupports a treddle, lying under the workman's feet; if he lowers the fore-lam with his left foot, the other lam muft rife up: the reverfe happens upon a contrary motion. If there are a greater number of lams, to vary or figure the ftuff, certain parcels of threads are thus raifed arrd lowered at a time, whereby divers openings are made, to teceive the throw of the fhuttle. As often as the foot is changed, and the warp receives a new throw of the woof, the batten clofes it, more or lefs, according to the quality of the ftuff. When the increafe of the ftuff hinders the play of the batten, there is as much of the warp rolled off the cane-roll, as of the ftuff rolled on the lower great cylinder.
Concerning the manner of guiding the threads of the warp, through the rings of the jack, on the warping-mill; of managing the feparation of the threads of the portee; of uviting feveral portees into one chain; and of making one entire warp of them all; of brufhing, or moiftening it with fize, to make the threads glide eafier in working; of mounting it on the loom, by faftening it in a groove of the little roller; of paffing the threads in good order through the teeth of the reed, and then dividing thefe fame threads, and making fome of them go through the loops of one lam, and between the leifhes of the next, and others between the leifhes of the firf, and through the loops of the fecond; of fixing and maintaining the divifions of the threads, by the infertion of feveral rods; which prevent their mixing; of facilitating, in fine, the uhwinding and play of the warp and woof, by the ufual precautions, and proper tools : thefe operations are eafily comprehended at firft fight. But their number is fo great, that, if the workmen did not ufe great difpatch, by every one confantly plying to his own part, fheep's wool either would never be converted into clothing, or would bear too bigh a price for the common people*. Let us not remain unacquainted with what fhews the greateft induftry, after the play of the lams,

* Since fuch exquifite dexterity in the manual operation is required by all any way practically concerned in the woollen manufaciure, do not all our national advantages, arifing from the woollen manufacture, depend upon our maintainfrom the woollen manufacture, depend upon our mainain
ing a fucceflion of the beft artifts and manufacturers, who ing a fuccelion of the beit artilts and manufacturers, who
are to act in every part hereof? for they are not bred in a few are to act in every part hereof? for they are not bred in a few
years. Ought not the wifdom of the nation to be alarmed years. Ought not the wifdom of the nation to be alarmed
at thofe daily artifices which are ufed to decoy and inftigate our artits and manufacturers out of the kingdom, to the emolament of other countries, and the certan ruin of this : And can any thing effectually do this, but giving then ill due and reafonable encouragenent to prevent their forfaking the kingdom?
The fhuttle is a piece of hard wood, that runs tapering to 3 point at both ends, and has a cavity in the middle, called th. box, or chamber, for receiving the quills.
The quill is a fmall pipe of reed, on which a proper quantity of the thread of the woof has been wound, and which plays on the hutte-pin.

## C L O

## C L O

The fhutte-pin is an iron wire, which runs through the quill, and with it is fet in the chamber of the fhuttle. It is put in, fecured, and taken out, by the different action of a foring at the end of the chamber, where the fhuttle pin is placed.
Alaced. which flips through a hole, or cye, in the fide of the fhuttle, and has been faitened to the lizier, muft run off the quill, which runs round as the fhuttle goes on. When this quill is emptied, another is put in it's place; and the ends of the解 ut knoting, only taking care to manage the throw of the huttle, fo as to be fure of keeping both thofe ends of the woof together.
The head of the piece is fome few inches of the ftuff, made with a different fort of woof from the reft. The names of the workmen and place are wrought in it, in France efpecially : and afterwards the lead-feals are put to it, which are, ought to be, a teftimony of it's being examined, and found to be of good materials, and of the breadth and quality required by the laws for the refpective forts.
The temple is compofed of two flat notched rulers, fecured one over another by a fliding ring, and having pins and points their ends. The workman fattens the two ends, full of points, or fpikes, to the two liziers, or lifts, which are the outer threads of the width of the ftuff, and by bringing the vergees, or laths, more or lefs forward, he keeps the ftuft conftantly of an equal breadth.
If he did not take care to temple his fuff, the woof would Arink unequally, and bring the threads of the warp nearer cogether in fome places, and in others farther afunder; but, by removing his temple from time to time, to keep it near the laft throws of the woof, he ftrikes the woof in upon a fquare, and to as to make it receive the flroke of the batten equally in every part.
The workman continues to throw the fhuttle, to temple, and to wind off, alternately. When he is come to the end of the piece, he takes another fort of thread for the woof, as he had done at beginning it, and makes a ftripe of a different coour, for the names 'and feals, as above. Thefe two ends are called the head and the fag-end.
To fteam a little ftuff, as is done at Amiens, Rheims, and Le Mans, is to render it fupple, by expofing it to the fteam of boiling water, in a fquare kettle, or copper, where it is haid, till on it's roller, with other pieces. This operation difpofes it for dreffing well.
The fullery is a water-mill, for working great mallets on fuffs, either to cleanfe them, or thicken them to the confiftence of felt.
The ftocks, or fuller's pots, are hollow veffels, to hold the ftuffs, which are continually turned under the frokes of the mallets.
The leavers, or prominent bars, are the ends of pieces of timber, that run through the axle-tree, or arbour of the wheel, and which, as they pafs, catch the heads of the mallets, raife them up, and let them fall, as they go off.
To earth the ftuff, is to rub it wich fuller's earth.
To beat it in the earth, is to full the ftuff with the earth on it, letting a water-cock run on is.st the fame time.
To fcour cloh, is to full it, after foaping it with black foap which carries off all fpots.
To clean ftuff, is to full it without water, 'till it has acquired the utmoft thicknefs it is capable of, and beyond which it runs into a pap.
When fluffs come from the fulling-mill, they are aired, that is, hung out.
The pieces brought from off the poles, or tenters, ought to be made up, that is, properly folded on a table; then gummed at every fold, by fprinkling the backfide with a folution of gum arabic in water.
To ftretch the ftuff, is to pafs it from one roller to another, keeping it conftantly of the fame breadth, over a brafier, by means of an iron bar, on which it flides; whereby the heat penetrates, and breaks it's ftifnefs : and, by thus paffing feveral times from one roller on another, it is rendered pliant in every part alike.
There are fome ftuffs that are unrolled and rolled without fire: but it is always allowed to fuch as are to be dreffed very well.
The effects of this ftretching are, I. To fmooth, or take out the bad folds; 2. To gum the whole piece equally, by the fire's fpreading the moifture every-where, which evaporates, and leaves the gum behind. 3. To ftretch the whole in an uniform manner, which is of great confequence in the wear of ituffs.
They are folded near a good fire.
They are leafed, by putting a leaf of pafteboard hot, between every two folds.
They are put between two thick boards of box, which take in the whole pile of foids.
They are left 10 or 12 hours in a ftrong prefs: and this is repeated three or four times.
They are vifited for the laft time; and, after drawing out the two ends, called the head and fag-end, the lead-feals, Vol. I.
tickets, and other marks are put on, which denote the quality, breadth, length, dye, and other things pefcribed iy the laws. Then they are put into the prifs again, and titched, by fecuring the folds loolely with thread, run timough the liziers.
There are fome other praClices, peculiar to different manufactories; but they all tend to the fame end.
Cloth is not ftretched on the rollers; but, after having been fulled, teazled, tentered, or hung on the rack, fhorn twice, cottoned, and the pile laid fmooth one way, it is gummed, or folded on leaves, put to the prefs, the leaves are changed, and, inftead of thick coarfe pafteboards, other thinner and finoother, called cards, are put between the folds: it returns to the prefs, or elfe to the calenders, which gives it it's laft glofs.

Of fome of the principal laws of England, with regard to the manufacture of woollen cloth.

The woollen manufacture has, for feveral ages, been the care of this kingdom; infomuch that near a hundred feveral acts of parliament have, from time to time, been made to fupport, regulate, and encourage it.
Clothiers fhall pay their work-folks in ready money, and not in wares, on pain of forfeiting treble damages, or fums due tofuch work-folks; and fhall deliver them wool according to due weight: forfeiture on every default 6 d .
Every juftice of peace, conttable, \&c. to hear and determine fuch complaints, with power to commit the offender, 'till the party agurieved be fatisfied. 17 Edw. IV. c. i.
By ftat. 1. Geo. I. c. I5. the penalty of clothiers impofing goods on their work folks in lieu of money, is 40 s . jultices of peace, and head officers, to appoint and fwear officers, for the due obferving of the ftat, of 3 and 4 Edw .IV. c. 6 . concerning the well ordering of cloth, with power to fearch ac cordingly: forfeitures to be divided between the king and overfeers.
No overfeer, duly chofen, to refufe the office, on pain of 40s. and once every quarter to make due fearch, on pain of 101. None thall interrupt overfeers in their office, on pain of 201 . None fhall take advantage of the forfeitures given by this act, unlefs fuit be commenced within one year after they accrue. 3 and 4 Edw. III. c. z. Cloths faulty in weight or meafure, expofed to fail by retail, forfeited; to be divided into three parts, the firft to the king, the fecond to the juftice, and third to the informer. Perfons not trying cloths to be bought and fold, and not feizing and prefenting them, if faulty, forfeit double the value of the cloth.
Note, All ftatutes repugnant to this repealed. Two juftices of the county, and chief magiftrates in corporations, impowered to hear complaints. 3 and 6 Edw. VI, c. 6.
Two juftices in counties, and chief officers in corporations, to appoint and fwear overfeers and fearchers for faulty cloth. Juftices may fearch after and feize ropes, winches, and engines uféd for ftretching northern cloths: who oppofe, forfeit 101. 39 Eliz. c. 20. and, by 21 Jac. .. overfeers may do the like.
All penalties for want of length, breadth, or weight, to be equally divided into three parts; one to the fearchers, and two to the poor of the parifh. See ftat. 21 Jac . I. c. 18. how to be recovered. Thefe penalties under power of juftices of peace.
Two juftices in a county, and chief officer if in a corporation, with another, may order fatisfaction (double value by i Ann.) or the offender to be whipped and put in the ftocks. A forter, carder, comber, fpinfter, or weaver of wool, found guilty by confeffion, or cath of one witnefs, of embezzling or detaining wool, and the receiver, is liable to the fame punifhment. 7 Jac. I. c. 7.
Juftice negligent in appointing overfeers, or otherwife, in his duty, according to 39 Eliz. forfeits 51 .
Juffices have power to determine thefe offences in their feffions; and to be convicted by juftices of affize, upon proof of two witneffes, if negligent.
Two juftices may call before them any fufpected of making deceitful cloth ; who is found guilty fhall forfeit 5 l. or fuffer imprifonment, 21 Jac. I. c. 18.
Overfeer, when chole, on refufal, forfeits 51 . and to be committed 'till paid, by 39 Eliz. c. 20. He mult fearch once a month for defects in the northern cloths, 39 Eliz c. 20. And muft fix a leaden feal to each cloth, containing the length and breadth, which exempts from further fearch. And any other perfon taking away fuch feal without warrant, and convicted by oath of two witneffes, or verdic, forfeits for the firft offence iol, for the fecond 201; one part to the king, another to the informer, and the third to the poor of the parifh ; and the offender to ftand in the pillory, 39 Eliz. c. 20. Any perfon, befides the ovelfeer, fixing a feal without a warrant, is liable to the fame penalties. A fearcher may enter any houfe, or other place, to find bad cloth, and, if he find any, fhall ftamp the word (faulty) on the feal; but be mutt not fearch cloth fearched before, on pain of 51 . See ftat . 12 Car. II. c. 22. relating to the manufacture of bays at Colchefter.

## C L O

## C L O

Yorkfhire cloths muft be of lengths and breadths prefcribed by 7 Ann. c. 13. and I Geo. I. c. I5. on penalty of 20 s . conviction before one juftice, by oath of the overfeer of cloth, or any other witnefs.
Owner of every fulling-mill fhall affix a feal of lead, with his name, and length and breadth of cloth, when wet, on penalty of 20 s . Every perfon who takes off, defaces, counterfeits, or alters the figures on the feal of the cloth before fold, or that ftretches-or ftrains cloth when wet, more than allowed by the act, or occupier of the fulling-mill caufing to be milled in any one fock, at the fame time, more than one whole, or two half broad-cloths, forfeits 20s. conviction as before, penalty to the poor of the pariih, where, \&c. and informer. Not paying in feven days, to be levied by diffrefs and fale; or fent to the houfe of correction; information in ten days; appeal to quarter-feffions, \&c. 7 Ann. c. ${ }^{13}$. By 10 Ann. c. r6. all mixed or medley broad-cloth thall be meafured at the fulling mill, after it is milled, by the mafter of the mill, who fhall firft take oath (refufal 2ol. penalty by I Geo. I. c. I5.) before fome juftice, that he will truly perform fuch meafuring (the juftice to give him a certificate of his having fo done) and fhall fix to it, before carried away, a feal of lead, and rivet the fame, with his name fampt, mentioning in figures the length and breadth, for which the owner thall pay him a penny. The numbers fo ftamped to be a rule of payment to the buyer, except any part be damaged, and taken off, and then the teft to be again meafured, fealed, \&xc.
If the mafter of the mill refufe or neglect to affix fuch feal, or any perfon afterwards' take it off, deface, or alter the figures before the cloth is fold; and if the buyer refufe to accept the fame, according to fuch meafure; the offender, convicted on oath, forfeits 20 s. (by I Geo. I. c. 15. 201.) for each cloth.
No clothier, fuller, \&c. after fuch cloth is fully wet, fealed, and ftamped, fhall ftretch it above one yard in twenty yards length, or above one nail in a yard in breadth, on penalty of 20 s .
Every mill-man to keep in his mill a table, or board 12 feet long, and 3 feet wide, whereon the cloth fhall be creffed, and laid plain, with the length of a yard marked thereon, with one inch more, viz. 37 inches long, and in default thereof he forfeits $10 l$.
Every clothier, cloth-maker, \&c. fhall make payment in money for work done, and not impofe goods or wares, on forfeiture of 20 s .
Offences herein to be heard and determined by one or more juftices where committed (the juftice not to be concerned in the matter of the complaint) on oath of one witnefs; all penalties are one half to the informer, and the other to the poor of the parifh. Payment, refuled for fourteen days after conviction, to be levied by diftrefs; or the offender committed to gaol, or houfe of correction, 10 and 12 Ann. c. 20, 21.

This act not to extend to any cloth made or manufactured in the county of York, nor to invalidate any of the powers contained in the ftat. 7 Ann. for afcertaining the lengths and breadths of woollen cloth made in the county of York.
All mixed or medley cloth hall, at the buyer's inftance, be put into water, and then meafured by two indifferent perfons, one chofen by the buyer, the other by the feller; if rhey cannot agree, a third to be chofen; he refufing, the keeper of Blackwell-hall, in London, to determine it, being firf fworn before fome juftice to admeafure truly ; if not in London, then by the magiftrate or chief officer of fuch place where, \&xc. as aforefaid; 6 d . for meafuring to be paid by the buyer: if not the length or breadth mentioned on the feal, every fuch clothier, \&c. to forfeit the fixth part of the value, conviction on oath before one juftice. Owner or mill-man of any fulling-mill, refufing to take oath for true admeafuring cloth, $\& x$. or to fix a feal of lead, with his name, \&c. or to enter in a book in manner aforefaid, forfeits 20 s . to Chrift's Hofpital, if in London; if elfewhere, to the poor, \&cc. Note, the forfeiture of 201 . difchargeth the forfeiture of 20 s . buyer of, \&c. to give two days notice to the feller, that his cloth Chall be wetted for proof or admeafurement. Mixed or medley broad-cloths to be ftamped with the watch. meafure, or feal of the mafter, \&c. by whom wetted. Clothier felling fuch cloth, before fealed and flamped as aforefaid, forfeits the 6th part of the faid cloth.
Perfons aggrieved may appeal to quarter-feffions, who may finally determine and give cofts. Not to affect any factor or his agent, only employed in the fale of, \&c. All perfons concerned in the woollen manufacture to pay their fervants in money, not in goods or wares, on penalty of 40 s . to be recovered and difpofed as before. Yorkfhire cloths, called, \&c. fhall be of fuch meafure, \&c. See the act, on penalty of 20 s . and 40 s . penalty for any perfon to put any other name on his cloths than his own, I Geo. I. c. 15 .
on his cloths than his own, I Geo. I. c. 15 .
Any juftice, overfeer, 8 cc . may fearch for tenters, \&c. for the firt offence he may deface them, for the fecond fell them, 48 Eliz. c. 10.
Juftices, on information, muft execute this law in feven days, on penalty of 51 . Clothiers refufing to pay wages affeffed at
the feffions, and convitted before two juftices, forfeits ros, to the party grieved, I Jac. I. c. 8.
By ftat. 12 Geo. I. all contracts, \&c. and all by-laws, in unlawful clubs and focieties, between wool-combers or weavers, on any account relating to their craft, are illegal and void; and any concerned, keeping up fuch combination, being convicted on oath, fhall be fent either to the houfe of correction, not exceeding three months, or ta the common goal.
By ftat. 13 Geo. I. no maker of mixed medley or white cloth thatl ufe any warping-bars, but only of the meafure and length following, viz. every long warping-bar to be in length three yards three inches, and no more; and every round warping-bar four yards and four inches round, and no more; the thrums at the end of the bars not to exceed 18 inches in length, on forfeiture of rol.
Every maker to give out wool, yarn, \&c. by weight, at the rate of 16 ounces to the pound, and to receive back the fame by the fame weight without fraud, on forfeiture of Iol . No clothier fhall ufe any ends of yarn, wefts, or other refufe (flocks and pinions only excepted) by working them up again, on pain of 31.
Profecutions to be heard by two or more jultices-and the "penalties levied by diftrefs under their warrants, or the offender committed, not exceeding three months, or 'till fatiffaction is made.
All difputes relating to work, wages, \&c. between clothier and weaver, to be heard by two or more juftices, where the difpute fhall arife, who are to fummon the parties, examine, \&c. and give fuch fatisfaction and cofts, as to them fhall feem reafonable, to be levied by diftrefs, \&c.-
Perfons aggrieved may appeal to next quarter-feffions, on fix days notice given in writing of fuch appeal; the orders and cofts there given to be final, and levied by diftrefs, \&c.
On information on oath, that any perfons are (or are fufpected to be) guilty of any of the faid ill practices, any two or more juftices are to iffue out their warrants to any conftable, 8 cc . directing to enter any houfe, or other fufpected place, to fearch for and examine ali bars and weights ufed by any clothier or maker of woollen cloths; who forfeit 51 . on interrupting fuch officer in the execution of his office. Any peaqceofficer by warrant may fearch any end-gatherer, his bag, or other convenience, for ends of yarn, wefts, \&c. which if found (flocks and pinions only excepted) he fhall carry him before one or more juftices where he fhall be found, and on conviction hall be deemed a dangerous and incorrigible rogue, and punifhed as directed by ftat. 12 Ann .
Every maker fall pay the weaver according to the number of yards that the chains are laid on the warping-bars, on forfeiture of 51 .
Every owner of tenters or racks in the counties of Gloucefter, Wilts, and Somerfet, fhall meafure his tenters, \&c. and mark in figures the true length in yards upon the top bar; and on the forefide, each yard 36 inches, to which fhall be added one inch in lieu of the over meafure, on pain of 51 .
Juftices for the faid counties, in their Eafter quarter-feffions to chufe certain ikilful men for infpectors yearly, allowing each not exceeding 301. per annum, which infpectors faall, at reafonable times, infpect every mill, hop, \&c. of clothiers, mill-men, and others, and to meafure every tenter, and cloth before it be carried thence; ftamping his name on a lead-feal, to be furnifhed by the maker, and fixed on every cloth, regiftering the clothier's, or other perfon's name, the number, length, \&c. of every cloth made in their divifions: clothiers, makers, \&cc. refufing the infpector's entrance, forfeit rol, and an infpector acting againft his oath 201 ,
Every maker of mixed or medley woollen broad-cloth Jhall pay to the infpectors 2 d . a piece for every cloth he makes, before the cloths are fent away from the mills; and the infpectors, every three months, muft pay the money to the treafurer of the county, to be applied by direction of the quarter-feffions, towards the falaries of infpectors; every millman, fending home cloths not infpected, forfeits 40 s , for every piece.
This act not to make void any powers given by charter, or act of parliament, to the corporation of clothiers in the city of Worcefter.
Every profecution for clothiers paying their labourers, in any other manner than in money, fhall be commenced within three months next after the offence committed.
Any perfon, fued in purfuance of this act, may plead the general iffue, and give this act, and the fpecial matter, in evidence; and if the plaintiff be nonfuited, \&cc. or a verdict be for the defendant, he fhall recover treble cofts.

## Yorkhire cloths.

Stat. 4 and 5 P. and M. c. 5. contains variety of directions and penalties; but they are recoverable by action, \& c c . Stat. 39 Eliz. c. 20. was made for the counties north of Trent, and directs, fealing, length, breadth, and weight, and prohibits overftraining, or deceitful ftretching or tentering And overfeers appointed by the juftices, to vifit houfes, sc. where cloths are; and if not found fealed, \&c. they are forfeited, and the overfeers may feize, and prefent them to the
juftices at the quarter-feffions, to be difpofed as the flatute directs.
By ftat. 7 Ann. c. 13. any clothier in Yorkhire making, or expofing to fale, broad-cloths, which, after well fcoured and expoiled, fhall be lefs than five quarters and a half within the lifts, and an end or half-cloth lefs than 23 yards in length, and a long or whole cloth lefs than 46 yards in length; and whole thick kerfers, and whole thick plains, lefs than 77 yards and an half long, and three quarters and a half broad, when fully wet; forfeits 20 s . for every inch wanting in breadth ; and for every yard the long cloths thall exceed 46 yards, and the half cloths 23 yards; and for every half yard the thick kerfeys, and thick plains, fhall be fhorter than 17 yards and an half. Mill-man in Yorkfhire, not fixing a feal of lead riveted and flamped, , with his name at each end of the cloth; before it is carried from the mill, containing the number of yards and inches in the cloths, in length and breadth, when wet, fcoured and milled; or if any other perfon take off, deface, counterfeit, or alter the figures, before the cloth is exported, or fold to retailers, or ftretch a piece of cloth more than an inch in breadth in a quarter of a yard, or piece of broadcloth more than a yard in length in 20 yards, or the whole thick kerfeys, and whole thick plains, more than half a yard in every 17 yards and a half; or any fuller, milling or fulling in one fock, at the fame time, more than one whole broad-cloth, or two half broad-cloths, fhall, for every offence, forfeit 20 s . The conviction to be on oath of any fearcher of cloth for Yorkfhire, or of one witnefs before a juftice, \&c. who is neither a merchant or trader in the woollen manufacture. The forfeiture, not paid within feven days, to be Tevied by diftrefs and fale of goods, by warrant of the juftice, \&ic. before whom the offender was convicted half to the informer, the other to the poor of the parifh, \&c. or to be fent to goal, or houfe of correction. The penalties to be inflicted within ten days after the offence committed or difcovered.
By ftat. 1 Geo. I. c. 15 . all Yorkfhire cloths, called whole thick kerfeys, whole thick plains, huggabags, and brokenquilled kerfeys, not to be under 18 yards in length, or lefs than three quarters and an half broad, by the ftandard yard-wand, when fully wet, and to be fealed as Yorkfhire cloths are directed by the act 7 Anne, and under the fame penalties. Any clothier, \&c. felling cloths wanting one inch in breadth, or half a yard in length, forfeits 20 s ; or ftretching them above an inch in a quarter of a yard, or above half a yard in length, forfeits the like; or fixing other mark than his own chriftian and furname, and place of refidence, forfeits 503 . to be levied as mentioned in that act.
Penalties to be inflicted within twenty-one days.
By ftat. if Geo. I. every woollen broad-cloth made in the Weft Riding of the county of York, whether it be an end or half cloth, or a long or whole cloth, being well fcoured and fully milled, to be five quarters and half by the ftandard yardwand in breadth, within the lifts in the water, being fully wet ; and every fuch cloth, called an end, not to exceed in length 24 yards, nor a whole cloth 48 yards.
Any clothier convicted of making or felling cloths not of the faid breadths, or which exceed the faid lengths, hall for every inch fhort of breadth, and yard exceeding in length, forfeit 20 s . But cloth in fome parts of it (not exceeding one fifth of the whole length) falling fhort in the breadth, without wilful default of the maker, may be fold without incurring any penalty.
All woollen broad-cloth fhall be meafured at the fulling-mill, after 'tis fully milled, fcoured, and thoroughly wet, by the mafter of the mill, who is to take an oath to meafure it truly, who thall rivet a feal of lead, to be furnifhed by the clothier, at each end of the cloth, with his name at length, and the length and breadth of the cloth in figures, for which he fhall be paid 2 s. a quarter. Mill-man, failing herein, forfeits 51. If a buyer fulpect the cloth, in fix days after delivery, he may, on two days notice to the feller, wet the cloths four hours, and caufe to be meafured by two indifferent perfons, or a fit perfon nominated by the next juftice, to be fworn; and, if found deficient one fifth in length, the feller thall forfeit one fixth part of the cloth to the poor; and the buyer at liberty, within three days, to return the cloth to the feller, and be repaid all the money and charges afcertained on bis oath, and recoverable by warrant from one or more jufices, not dealers in woollen cloth.
Any clothier not weaving his name and place of abode at length into the head of his cloth, or expofing to fale without fuch mark, or altering the feals, \&c. forfeits 51.
Every woollen broad-cloth fhall be dreffed in all parts alike, and every cloth-dreffer's name affixed in lead, on pain of 51. Owners of tenters to mark the lengths in figures on the top bar of every tenter, on forfeiture of 51 . for every tenter not fo numbered.
Juftices may appoint fearchers, with a falary not execeding 151. per ann. who may, by direction of a juftice, enter in the day-time into any mill-houfe, fhop, \&c. to fearch for cloth over-ftretched, and meafure any they fufpect; refifting them is rol. penalty, and 5 l. to the owner, if the fearcher difcover any frauds.

Every fearcher to be fworn to act to the beft of his fall; if contrary, fhall forfeit 20 l. But he is not to examine cloth packed up for exportation, unlefs by warrant on oath of witnefles on fufpicion of fraud ; if none be found, the informer to pay the merchant 5 s . for each cloth fo unpacked.
None who have not ferved feven years (clothicrs widows and perfons marrying them excepted) thall make any broadcloths in the faid Weft Riding, on forfeiture of 101 . for every month.
None fhall ufe cards of iron-wire or other metal in dreffing cloth; on pain of 501 . but information to be within twenty days. And all convictions for offences to be on oath of one or more witneffes, by one or more juftices. The penalties to be divided between the informer and poor of the parifh; not paid within ten days, to be levied by diftrefs, \&c. under warrant of the juftices, or be committed to the houfe of correction.
Perfons aggrieved may appeal to the quarter-feffions on ten days notice.
All actions to be brought in Com. Ebor, and not elfewhere. Perfons fued may plead the general iflue, 8 cc . and recover treble cofts.
By ftat. II Geo. II. every maker of narrow woollen cloth, within the Weft Riding of Yorkfhire, to weave the initial letters of his name on every piece he makes (white kerfeys and half thicks excepted;) and, when fully wet, to be meafured at the fulling-mill both by the millman and fearcher. Each of whom thall affix a feal of lead, with name, length, $\& c$. on pain of 201 . to the mafter, and 51 . to the millinan and fearchers refpectively.
Every piece of the faid cloth thall be meafured by the maker, after'tis brought from the mill, before it be put on the tenters; if fhort of the meafure ftamped at the mill, to be remeafured and re-ftamped by the millman, on penalty of gs . Any dealer in fuch cloth, after Auguft I, 1728, flretching the fame more than one inch in a yard in length, and two inches in three quarters of a yard in breadth, to forfeit for the firft half yard in length, or inch in breadth, ios. for every half yard, or half inch, 20 s.
Any perfon taking off, defacing, or counterfeiting the feals, or letters woven in the cloth, before fold or cut by the retailer, or exported, forfeits 40 s .
A fum not exceeding 2 d . for every piece, to be afcertained by the quarter-feffions aforefaid, to be paid by the maker, to whom the juftices fhall appoint, for defraying the expence of obtaining and executing the act, as the juftices fhall appoint. And the millman, fearcher, or other perfon appointed, may detain the cloth, 'till fuch money be paid; and, on non-payment for eight days, may fell what will fatisfy the fame.
All offences againft this act thall be inquired of by a juftice of the Riding, on oath of a credible witnefs, and notice fiff given to the party accufed; the penalties of conviction, the charge of it being firft deducted, to go one balf to the informer, the other to the treafurer of the Riding for the purpofes of the act. And, if not paid within ten days, to be levied by diftrefs, \&c. or be committed to the houfe of correction for one month.
Profecution againft millman, \&c. to be in eight days, and againft clothier, \&c. one month, and all profecutions for penalties in one month after the offence.
Perfons aggrieved may appeal to the next quarter-feffions, who may allow cofts, and their order to be final.
Clothiers may make their narrow cloths of what length and breadth they think fit.
Such cloths made in the faid Weft Riding, as are milled in the counties of Lancafter, Chefter, or Derby, muft be brought to the next fulling-mill, \&c. under the penalty above. Actions mult be commenced in Com. Ebor, and all perfons, \&c. may plead the general iffue; and, if judgment be againft the defendant, the penalty to have treble cofts, to be deemed a public act.
See the ftat. $1_{4}$ Geo. II. touching the better regulating of officers in the cloth trade, and the better ordering of cloth in the Weft Riding of Yorkthire.
For more matter on this head, fee the article Woor.
REMARKS.
To avoid being prolix, I fhall not particularize the various penfions, indulgences, and other extraordinary encouragements, that have liberally been given in France, from time to time, to engage many Rkilful mafters and artificers of various kinds, who have undertaken to fet up fabrics of cloths, \&c. that now flourifh in that kingdom; for the improvement of which it appears from an arret of 1664 , that Lewis XIV. yearly appropriated a million of livres; (which, according to the value of money at that time, was confiderably more than at prefent; ) exclufive of indulgences in the cultoms, and feveral other ways.

- I have, fays M. Savary, already had occafion, more than ' once, and fhall hereafter be obliged, to fpeak of feveral - mafters, that have made themfelves famous in France, by - fetting up different forts of manufactories. This would - be a proper place to take notice of the many perfons, erri-

## C L O

6 nent for undertakings of this kind, fince the French turned their thoughts this way, and particularly fince the reign of - Henry IV. but, as they are very numerous, I fhall attempt - only to give fome account of two, who are fo much di-- ftinguifhed in their profeffion, and to whom France is fo

- far obliged, that they no longer envy the beautiful cloths, - black as well as other colours, that are made in Spain, * England, and Holland, fince they themfelves have fet up s this fabric, and raifed it to the utmoft perfection. One of thefe is Nicholas Cadeau, to whom the manufacture of Se-- dan owes ir's birth and perfection; the other Joffe Vanrobaie, who fet up that of Abbeville, which has been, and "ftill is, in high reputation.
The former, a native of France, entering into partnerfhip * in the year 1646 , with John Binet and Yves de Marfeilles, \& wo merchants of Paris, rich and able as himfelf, obtained - a patent granted at Fontainbleau, for his new manufacture, - in the month of July the fame year.
'I. By this patent, the partners obtained the privilege of being, for the fpace of 20 years, the fole directors of the - manufacture of woollen cloths, black as well as all other colours, that hould be made after the fabric and manner - of Dutch cloths.
\& 2. The three dircctors and their children, that were already, * or thould hereafter be born, were made nobility, and ho-- noured with all the titles and privileges the noble families of France enjoy.
(3. A fpecial commiffion was granted to them and their - iflue, during the 20 years of their patent.

4. Their foreign workmen were declared denizens, and - both the French and foreigners difcharged from all taxes, - fubfidies, quartering of foldiers, \&c. and the fame immunity - was alfo extended to the houfes or lodgings of the directors, ( and every place, where the fabrics thould be carried on.
5. The cloths made in their manufactory were exempt from - being vifited by the civil officers, or the mafters and wardens - of the trading companies; and the king referved to himfelf ' the right of judging all offences againft this ordinance, ( if any fhould happen.
c 6. They were allowed to fet up a brewery for malt liquor, 6 both for the ufe of themfelves, their family and clerks; cand alfo to fell it to their workmen without paying any ex<cife, tax, 8 cc . during the faid 20 years.
6. Laftly, his majefty, willing to add profit to thefe ho' nours, not only gave an annual penfion of 500 livres to - each of the three directors during life, but alfo granted - them the fum of 8000 livres yearly, during the 20 years of - their patent. This he gave as a donation to them and their cheirs, to relieve the great expence fuch an eftablifhment ' could not fail to engage them in at firf.
© One may fay, that the fuccefs went far beyond the hopes - we at firft conceived of this new manufactury. The cloths - which go under the name of Sedans, from the city where - the fabric was fet up, may juftly be efteemed the moft beau-- tiful of the kind, if thore of Abbeville, I am going to - fpeak of, had not a party, that contend at leaft for an - equality.
-The exclufive privilege of the Sieur Cadeau was upon the - point of expiring, when Mynheer Joffe Vanrobais, a Dutch - merchant, made a propofal to fet up a new manufacture of - fine cloths, at Abbeville in Picardy, in imitation of thore of - Spain and Holland.

- The patent he obtained in the month of October 1669 , - contains the following remarkable claufes.
- I. That he flould fet on foot 30 woollen looms, with as - many fulling-mills as fhould be neceffary, and procure 50 - Dutch workmen to be employed in the manufactory.

6 2. That there be granted paffports to the workmen, and - an exemption from the duties, for the looms, cloths, wool, - and other neceffaries in this eftablifhment.

- 3. That proper places be affigned him for erecting two < fulling-mills, one of them a wind-mill, the other a water-- mill, and fuch buildings as thould be wanted for the fabric, 6 and to lodge the workmen, with full liberty to chufe the - faid workmen, even dyers, brafiers, carders, fheerers, \&c. - and without any of the companies having power to difturb - him under a protence the faid workmen are not free.

6 4. That he himfelf, his children, partners and workmen, - that are foreigners, be declared denizens of France, and * exempt from all taxes, fubfidies, city impofts, and quar-- tering of foldiers.

- 5. That he be allowed to build, at his own expence, for - the ufe of his family and workmen, a brewery exempt alfo ' from excife, or other taxes.
6 6. Laftly, to encourage this eftablifhment, and defray in - part the expences the projector would be at in fetting out, - the king not only gave him, as a free donation, the fum of - 12,000 livres paid at one time, and the quantity of eight - minots of falt for every year of the 20 , which his patent - contained, at the price fold to the merchants, but alfo - 2000 livres for every loom he fhould fet up within the three - firft years. However, thefe laft fums were granted him - but as a loan, and were to be repaid without intereft.

## C L O

6 Jofeph Vanrobais, having punctually furnled bis engage ' ments, obtained, in 4681 , a renewal of his patent for 1 ' years longer, in his name, and that of liaac Vanrobais, bis - eldeft brother, on condition of fetting up 50 looms inftend ' of 30 , and, in confideration of this, the king inade him - free gift of 20,000 livres, over and above the 80,000 - livres which the loan amounted to, that had been lent him - during the three firf years of his former patent.

- In 1698, a third renewal was alfo granted for 10 years to - Mefl. Ifaac and Jofeph Vanrobais, brothers and fons of the ' projector, who had mounted 80 looms in their manufactory, ' In thort, the looms in this manufactory exceeding 100 in - the year 1708, and Jofeph Vanrobais, in partnerfhip with - his brother Ifac's widow, ambitious of raifing new build - ings, and extending farther this happy and great eftablifh' ment, which has not perhaps it's like, obtained the fame 6 year a continuation of their patent for 15 more, with new - privileges and immunities for themfelves, their workmen ' and partners. The king allo, in favour of the partners, ' gave the nobility leave to enter this affociation, without it's ' being any imputation upon their honour.'
Thus far the author extends his account touching the woollen manufactories of Sedan and Abbeville. As to the tapeftry, and other curious manufactures that have been fet up, and ftill continue in the Gobelines, , he feaks thus
- By the name of the Gobelines, we mean a manufactory ' eftablifhed in Paris, at the end of the fuburbs of St Marcel - for the fabric of the royal tapeftry and furniture.
- The houfe where this manufacture is now carried on, was © built by two brothers, whofe names were Gobelines, that - firft brought to Paris the fecret of that beautiful fcarlet dye - which has preferved their name, as well as the little river - Bievre, on whofe banks they erected their building, and ' which ever fince has fcarce been known at Paris by any - other name, than that of the river Gobelines.
' In the year 1667 , this place changed it's name from the - folly of the Gobelines, which it had hitherto borne, to ' that of the' royal hôtel des Gobelines, by virtue of an edift, 6 Lewis XIV. publifhed the fame year, in the month of - November.
- The promoter of this eftablifhment was moif Monr. Colbert, - fuperintendant of the buildings, gardens, arts, and manu-- factures of France, of whom it is not poffible to fay too ' much, or give too high a commendation, in a Dictionary ' of Commerce, fince he has done fo much to make it flou'rifh in this kingdom, and to fpur on the French to extend ( it to foreign countries, even to the moft diftant nations.
- The royal palaces he had quite rebuilt and ornamented, ' particularly the Louvre and the Thuilleries, the latter of ' which had been finithed under his direction, and the mag-- nificent and inimitable front of the other was almoft raifed, 6 put this minifter, who was always attentive to the glory of 6 his king and country, upon thinking how to procure fur' niture, fuitable to the grandeur of the fuperb buildings the - king had 'ordered to be erected.
- With this view Monf. Colbert collected together fome of ' the molt able workmen of the kingdom in all forts of ma-- nufactures and arts, particularly painters, tapeftry-weavers, ' engravers, goldfmiths, and workers in ebony. He invited - alfo into France many of the above profeffions, who were - moft famous in foreign countries. For thefe he obtained ' honourable privileges and confiderable penfions; and, in - order to render the eftablifhment he projected more fecure, - prevailed upon the king to make a purchafe of the hotel des - Gobelines for the manufactory, and to prefcribe fuch rules, ' as would infure the continuance, and fettle the manage-- ment of it.
- The edict of 1667 , which we have mentioned above, gave ' the finifhing hand to this project, by the 17 articles it - contains.
' After the preamble of the ediot, in which is inferted that ' of Henry IV. in 1607, for fetting up a manufacture of ' tapeftry in the fame fuburbs of St Marcel, and the declara' tions and rules laid down in confequence of it, the king ordains and decrees,
- 1. That the manufacture of tapeftry and other works be - eftablifhed in the hôtel, called des Gobelines, and the houfes - and parts depending upon it, and belonging to his ma' jefty; and that over the principal gate be fet up a marble - with this infcription under the arms of France, The - Royal Manufactory of the Crown-Furni6 ture.
- 2. That the faid manufactures, and whatever depends upon ' them, be under the conduct and adminiftration of the Sieur 'Colbert, fuperintendant of the buildings, arts, and manu' factures of France, and his fucceffors in that office.
-3. That the particular direction of it be under the care of the Sieur le Brun, in quality of director, and, in cafe of a ' vacancy, under another director of abilities and fkill in the " art of painting, appointed by the fuperintendant of the b buildings, to form defigns for the tapeftries, fculpture, and " other works, to fee them put in execution, and have the - conduct and infpection of the workmen.

## C L O

C. L O
4. That the fuperintendant of the buildings, and the director under him, take care to fupply the manufactory - with good painters, mafters in the art of tapeftry, gold-- fmiths, founders, engravers, lapidaries, carvers in ebony and wood, dyers and other rood workmen in all the arts and crafts eftablifhed in the faid hotel.
6 5. That there be every year drawn out and ftated an ac' count of the mafters and workmen by the faid fuperinten-- dant, in order to their having their wages and flipends fettled, and paid by the treafurer of the buildings.
6. That there be maintained in the faid manufactory 60 - children at the expence of his majefty; and, for the fupport - of each of them, that there be paid to the director $25^{\circ}$ - livres, by the faid treafurer, in the fpace of five years; viz ' in the firft year 100 lives, the fecond 75 , the third 30 , ' the fourth 25 , and the 5 th 20 livres.
7. That the children, from their admiffion into the faid -7. That the children, from treir admifion into the faid

- houfe, be put into the feminary of the director, over which - he fha!l appoint a mafter-painter under himfelf, who fhall - have the care of their education and inftruction, with an ' intent, that they fhall be afterwards put apprentice to sthe mafters of the feveral arts and trades fettled in the faid - hôtel.

8. That the faid children, after an apprenticefhip of fix - years, and four years fervice more in the faid manufacto-- ries, even apprentices to goldfmiths, though they fhall not - be fons of mafters, be qualified to take and keep a hop in ' their feveral arts and trades, both in Paris, and any other - town in the kingdom, without being obliged to undergo - an examination, or do more than prefent themfelves be-- fore the mafters and wardens of their refpective arts and " trades, for admiffion into the company without any charge, - upon a fingle teftimonial of the faid fuperintendant of the ${ }^{6}$ buildings.

* 9 . However, that fuch of the faid children as fhall have - been employed for a year in the manufactures of the faid
- hôtel, with the confent of their fathers and mothers, and 6 fhall after that time go away without leave from the fupercintendant, be incapable of being free of the trade, at which - they had been employed in the hottel.
- 10. That the workmen who fhall have been employed fix - years together in the faid manufactories, be admitted in like - manner to be mafters in the ufual form as above, upon the ' certificate of the fuperintendant of the buildings.
' 11 . That the workmen employed in the faid manufacto4 ries be diftributed in houfes near the hôtel des Gobelines, - and that 12 of the faid houfes which they thall inhabit, - have centinels, and be exempt from quartering foldiers.
*12. That foreign workmen employed, and actually ferving - in the faid hôtel, happening to die, pollefs the privilege of - natives, and their effects go to thofe that fhatl legally in-- herit; and that fuch of the faid foreign workmen as fhall - have laboured there for ten years, be alfo reckoned true and - native French, notwithftanding they fhalt have left the ma-- nufactory after the faid term; and their inheritance be dif* pofed of as above, without any need of letters of naturaslization, or other proof than an extract of the prefent * edict, and a certificate from the fuperintendant of the - buildings.
- 13 . That all the faid workmen be exempt from warden. - fhips, charges, watch and ward of the city, and other pub-- Jic or perfonal offices, fo long as they be employed in the - manufacture, unless it be their own choice.
- 14. That they be equally exempt from all taxes and im-- pofts, even though they fhould have gone out of places - taxable, and in which they had even been affeffed.
' 15 . That it be allowed the director to fet up breweries in - proper places to fupply the workmen with beer, without - any obftruction from the company of brewers, or being - obliged to pay any tax.
- 16. And that the workmen may not be interrupted in their - labour by law-fuits, which they, their families, or do-- meftics, may have in feveral or different jurifdictions, his - majefty appoints the mafters of the hôtel for the time be-- ing, to take cognizance of them upon the firf action; - and, after an appeal, the parliament of Paris,
' 17 . Lafty, all merchants and other perions, of whatever - quality or condition they may be, are prohibited from - buying or importing the tapeftrics of foreign countries, or ' to fell or vend any foreign manufacture, except what was * at that time in the kingdom, under the penalty of confif'cation of the fame, and a fine of half the value of the' tapeftry confifcated.
It is from this royal. manufactory des Gobelines, that fo - many curious works of all forts have proceeded, which 'ferve for ornament to Verfailles and Marly, royal palaces ' that will always raife the admiration of foreigners, and be - fine monuments of the grandeur of that potent prince for * whom they were built, furnifhed, and ornamented. In - this hôtel there have been alfo educated fo many able work-- men who have gone out of it fince ir's firt foundation, and been diftributed all over the kingdom, and efpecially - in the capital, where they have adranced the polite arts to Vol. I.
- To high a degree, that the Frenth farce any longer ens ' or lament the curious works of the Greeks and Romans.
' One 'may fay alfo, that tapeftries were advanced to tive ' higheft perfection during the fuperintendance of Monif. ' Colbert and Monf. Louvois; and it is a point in doubt, ' whether England or Flanders have produced any thing fu'perior to Alexander's battles; the four feafons, the four ' elements, the royal palaces, and the hilfory of the princi' pal acts of Lewis XiV. from his marriage to the firt con' queft of Franche Compte, wrought at Gobelines; from the 'defigns of the famous Monf. Le Brun. The fame may ' be faid with juftice of the tapeftries Monf. Jouvois caufed ' to be made during his fuperintendancy, after the moft ' beautiful originals in the king's cabinet, of Raphael, Julio - Romano, and other famous painters in the fchools of Italy, - which he caufed to be drawn in larger dimenfions by the - moft able-French painters, fuch as La Foffe, the two Coý' pels, father and fon, Jouvenet, Perfon, and many otheis ' that were at that time.'
By thefe and the like wife and profound meafures, France has been enabled to fupplant Great-Britain and Holland in the manufacture of cloth, which they have certanly carried to a very extraordinary perfection.
The care and thoughts the minifters of France have employed for promoting their own manufactories, and turning every article of their commerce to the national advantage, is fo very remarkable, that more rational methods could not have been taken, if they had been bred merchants, and their hearts wholly fet upon regulating their conmerce: whereas; with us, it hath been rare to find any who would allow themfelves the time to think properly on thefe fubjects; infomuch that when many things bave been propofed, which would apparently tend to the advantage of our commerce, they have been laid afide as things not worthy of notice. But I am in hopes, that my poor labours in the public fervice may fomewhat contribute to induce perfons of diftinction to pay a little regard to a fubject, which can only give a permanent value to their landed eftates, and render their monied property fecure to their pofterity.

Of the meafures which have been taken of late years in Spain, to encourage the making of cloth, and other of the woollen manufactures.
The reader will obferve; that, in many parts of this work, I have kept a watchful eye upon whatever is doing in foreign countries, that may prove any way detrimental to the trade of thefe kingdoms.- 'Tis therefore that I have endeavoured, as occafion offered, to point out what is doing at prefent in Spain, in regard to commerce, and to thew how far we hay be affected by fuch meafures. But, as nothing of this kind can be fuddenly brougbt to perfection, it may be neceffary to take a fuccinct review of the foundation of what is now hatching in Spain, -to the high injury of this nation.
The late king of Spain, October 23, 1718. was pleafed to difpatch the tollowing decree to the council of the finances: ( Don John de Goyeneche, having reprefented, that by great ' induftry, and at a confiderable expence, he had founded in 4 his own town of Olmeda de la Cebollo, feveral fabrics of - cloths, buffs, fhamois leather, hats, and other commodi' ties, that are ufually imported from abroad, as alfo in - New Baztan, and that he had done all this at his own ' charge: praying that an indulgence might be difpenfed; for ' a time, to the faid town and it's jurifdiction, in the royal ' taxes which it is now charged with, for the better improve' ment and continuation of them, I thought proper to fend - a perfon of integrity and confidence to the faid town of - Olmeda and it's diftrict, to examine into the pretenfions of ' this memorial; and as it has been found, that, in the faid 6 town of Olmeda, there were on foor 26 looms, which an ' nually manufaclure to the amount of 50,000 yards of cloth, ' refernbling that which comes from France for the cloathing - of the troops; that he had imported the faid looms from ' that kingdom at his own charge, for the ufe of the principal ' manufacturer, granting him freely the materials, building - him a houfe, and providing all rhe neceflary utenfils; that ' he has alfo fet up fix other looms, for the fabric droguets - and fcarlets, fuch as thofe of Valdemero, in which are ' employed many perfons of both fexes, introducing and - communicating thefe arts to the natives of Spain ; and has - laid the foundation of a good building for an hofpital, and ' another for a feminary, which.he offers to endow for the - reception and education of boys, to be employed in the faid - fabrics; that, in the place called New Baztant, he has - built 22 fubftantial houfes of ftone and mortar, a very - fpacious church, and a houfe contiguous; and has alfo a - diftillery for brandy and hungary-water; a fabric for buff, ' fhamois leather, foldiers hats, both middling and firte, - with all proper utenfils, tan-pits, and other things necef - fary to fupport thefe manufactories, allowing, at prefent, ' all the profits to the manufacturer; and that he has, at the ' fame time, fet up looms for filk handkerchiefs, ribbons, ' and girdles, fuch as are made in Valencia, having drawn - over the principal manufacturers, with their wives, chil-
dren, and families from France, and the North, and col - lected together all fuch as he found ufeful in Spain, with -great induftry, labour, and expence, and fettled various - other trades, making fuch provifion as ought to be in a 6 town well fupported and regulated, by tranfporting thither, at his own charge, families of peafants, giving them a fuf-- ficiency to live upon, and fupplying them with tools for © the cultivation of thofe lands that were barren and deferted; 'that he is buiiding an inn, for the better entertainment of ' travellers; and, at the fame time, has repaired the road ' to Madrid, making a new way for carriages, and fhorten' ing it where it could be done, and has built a bridge over the river Tajuna, all at his own charge; as alfo a chapel, ' where the workmen, who live remote from the town, may ( hear mafs; and has raifed feveral plantations for the refrefh" ment and advantage of the whole; that the village of Ol' meda, exclufive of the workmen, contains 18 families, and, ( for their poverty, are rated but at 13 and a half, and pay ' annually, for their compofition, to the royal revenues, 30 doublons, befides the alcavalas and cientos, which concern ' the faid Don John de Goyeneche; and as I am defirous of 'Shewing the grateful acknowlegments due to the zeal, ex' pence, and induftry which have raifed this new town, and ( the faid fabrics, to the general benefit of thefe kingdoms, - and my intereft, and that others may be encouraged to imitate an example fo laudible and uletul, I have relolved, that - to the faid village of Olmeda de la Cebolla, to the town of (New Baztan, and all other places within it's jurifdiction, - no augmentation be made, nor fhall be made, to the taxes - paid by the whole diftrict at this'time, during the term of 30 years, in order to eftablifh, confirm, and improve thele - fabrics, and the new town which has been fettled there. ' It fhall be examined by the council of the finances; and, when it appears what fum they annually pay to all the revenues, taxes, and duties, the infruments neceffary for " putting it in execution, haall be difpatched.
His majefty, February 14, 1719 , vouchfafed to iffue out another decree, refpecting the fame manufactories, as follows:

- In confideration that Don John de Goyeneche had founded
in the village of Olmeda, and in New Baztan, and it's ju' rifdiction, various fabrics and manufactories; I was pleafed, 6 by a decree of October the 23 d lalt year, to order that the - faid village, and it's jurifdiction, fhould not, for thirty years, be charged higher to the royal duties than what they were found actually to pay at that time; and now I have ' refolved, that neither the natives of this kingdom, who fhall ' apply themfelves to the manufactures which the faid Goy' eneche has introduced in Olmeda, New Baztan, and it's ju-- rifdiction, nor the innkeepers and Ghopkeepers that fupply them with provifions, fhall find the faid occupation any im6 pediment, or bar, to their obtaining the honourable employments of the republic, which can be enjoyed by the - ftate, or degree, of labradores; and that all the manufac-- tures of the faid fabrics be, at the fame time, exempt for - thirty years from the alcavalas, cientos, and other duties, in " every city, town, or place, where the firft fale of them fhall chappen, and enjoy alfo an immunity from the duties of ports, cuftom-houfes, and tolls; and this exemption from the alca-- valas, cientos, \&c. is to be underftood, and obferved in the form, and under the reftrictions, the fame was indulged to - Don Jofeph Aguado, for the cloths of his fabric in Valde© mero; and it is alfo my intention, that the faid immunity ' extend to duties of importation upon all the utenfils that ( fhall be wanted for the feveral fabrics, the bran, and paftel - for djeing, beaver-fkins and camels-hair for hats, and fighc oil for making buff, but to be alfo difpenfed under the fame - reftictions it was granted to the faid Aguado. And, at the - fame time, I have granted to the faid Don John de Goye' neche, the privilege of purchafing, at prime coft, any ma' terials of wool, filk, ikins, \&c. that he fhall want for his s fabrics, or manufactures, and which fhall have been bought - up for exportation, but not fuch as fhall have been bought - for other manufactories, or by natives of thefe kingdoms 6 for their own ufe; but upon condition, that it be within "the fpace of one month after thore goods thall have been < bought, which he fhall thus take at prime coft ; and for - which Goyeneche is obliged to pay the price, with coft and - charges, to the very city, town, or place, where they thall * be at the time of his claiming them. It fhall be examined 6 by the council of the finances, who hall difpatch the or-- ders that are proper for putting it into execution, as far as ' relates to them.
By means of thefe, and other encouragements difpenfed by his majefty, have been eftablifhed, enlarged, and improved, thefe fabrics, in the manner explained in various parts of this work; and a greater progrefs is ftill expected from the warm zeal and vigorous application of Don John de Goyeneche in this important concern, who, in conducting it, has hewn more regard for the public, than his own private intereft; for it is certain, that, in the firft years of fuch eftablifhments, the expence runs higher than the gains, as many have found by experience.
His majefty, in his royal palace of Balfain, was pleafed to grant the city of Valladolid an indulgence for their manufac-
tures, mentioned in the following decree, difpatched July I 8, 1722 , to the council of the finances:
- The board of trade, by virtue of an order, in which I had - enjoined them to confider of ways and means to revive the - trade of thefe kingdoms, and prevent that which foreigners ' carry on in the Indies, has reprefented to me, that fome - improvement has been made to it by the city of Valladolid, - which propofes to make an addition to their prefent man, ' factories of 50 looms annually, for 20 , fucceffive yearnu'each of the fabrics of gold, filver, filk, and wool, provided, - during fuch time, no alteration be made in the fum charged - upon the city to the alcavalas, cientos, and millones, and - that it continue upon the footing, and pay to thefe duties, ' revenues, and taxes, the fame it did in the year 17 , ' when the city, and the places united with it, were diftin-- guifhed from the general farm of the province, by the fepa-- rate compofition and contract which the city and it's com-- panies made, both for the payment of the alcavalas and - cientos (which, to the end of the fame year I7 13 , was - ftated fum, by virtue of the privilege it bad for that purpofe) c and for an equivalent to the millones; and as it has in view ' the important affair of re-eftablifhing manufactures in thefe - kingdoms, in order to revive it's trade, and that the com-- modities confumed in it may no longer be fupplied by fo-- reigners, and that they be allo prevented from introducing - their goods into the Indies; for, if thofe provinces be once - fupplied by goods made in this kingdom, it will follow, ' they will no longer fend them from other places; being de-- firous, at the fame time, that the faid city of Valladolid, - by means of new fabrics, may recover itfelf out of the rui' nous fituation it at prefent labours under, and which has - been owing to the decayed trade, and the unhappy circum-- tances of the times. Having conformed in every thing to - this provifion as the faid board of trade has propofed it to - me, I have refolved, that, in confequence of it, the coun:cil of the finances, and court of the millones, do make ' due provifion, that from the iff of January of this prefent ' year, to the end of that which comes in 1741, and com-- prehends 20 years, for which this indulgence is to continue - in force, that no demand be made upon the faid city for ' itfelf, and the places that are incorporated with it, for the - alcavalas, cientos, and millones, above what it was charged © in the faid year 1713 , by the contract at that time made for ' the payment of them, by the fame cities and it's compa' nies, under the exprefs condition, that, to obtain this ad'vantage, and continue it for the time abovementioned, it - be obliged to lay before that council, and the court of the ' millones, at the end of every one of the faid 20 years, fuf-- ficient proof of having fulfilled it's part, by erecting the looms ' it has propofed to do, in the form and manner to which - it thall be obliged by the faid board of trade. It hall be ' laid before the council of the finances, and the court of ' the millones, in order to be carried into execution.'
This provifion of his Catholic majefty has fo happily fucceeded, that thofe very manufactories, encouraged by his gracious indulgence, and cherifhed by an eafy and ready market for their commodities, owing as well to their goodnefs and reafonable price, as the advantageous fittuation of Valladolid, in the center of Old Caftille, and fome other provinces, have already been confiderably enlarged and improved.
Though his majefty has granted feveral other privileges and indulgences in favour of different manufactories, I forbear to take notice of all of them here, not fo much from their being fo very numerous, but, as they are very much alike, a repetition may feem idle; and, therefore, I fhall only hint at fome of thefe, and other provifions of his majefty, directed to the fame end.
In Madrid has been fet up a manufacture of tiffues, luteftrings, and other filks, no lefs curious in the workmanhip, than in the colours and mixtures, in imitation of the fabrics at Lyons in France; and this new manufacture has produced fuch as her majefty was not athamed to wear.
This happy and fuccefsful eftablifhment in Spain has been owing to workmen, and a famaus dyer, from the faid city of Lyons, procured by his majefty, at the charge of his own royal revenue, and to the encouragement of a houfe, and fypplies of money, which he ordered to be advanced in the infancy of the undertaking, giving alfo a monthly penfion of 15 doublons to the mafter-dyer, and another of 12 doublons to the head manufacturer.
Without the gates of Madrid has been raifed alfo a fabric of prime tapeftry, in imitation of thore of Flanders, by a marter and workmen, whom his majefty procured from that country, at the charge of the treafury; and they continue in this important manufactory, working for his royal palaces, having the encouragement of houfes, work-hops, and indulgences, which his majefty has granted them. And, notwithftanding there be not in either of the fabrics a fufficient number of mafters and workmen, for the confiderable confumption of this kingdom, yet the main difficulty hias been furmounted, which is fettling and bringing the manufacture to the perfection already mentioned; for it is an ealy thing to enlarge, or add to what is already eftablifhed upon a good footing. By this plain fact, in the very face of the
court; many perfons might be undeceived, fays the fage Spaniard, Uztariz, who believe and propagate a notion (upon what grounds I know not) that in this kingdom we cannot arrive at the perfection we have feen in thefe and other manufactures, either on account of the delicacy of the work, as if there was neither genius to invent, nor hands to execute, in Spain ; ur for the colours, as if his majefty's provinces did not really fupply the principal and beft materials for them ; or from our water, which they fuppofe not proper for them, even when both the declaration of foreign artificers, and experience, fhews it to be vary fit for dyeing all forts of colours; and it is alfo certain, that notwithftanding foreigners introduced there curious fabrics, many Spaniards now join in them, and already make them in equal perfection. The grand fabric of fine cloths at Guadalaxara is wholly owing to the vigilance and protection of his majelty, though there has no: been yet, in the management of it, the good aeconomy which is requifite, and has been directed by feveral of his majelty's orders. But one great point has been obtained, tisat many of the good workmen employed in there manufactories are Spaniards, and come who have been bred up in them, have difperfed into other parts of the kingdom, which is the principal advantage refulting from the arriyal and introduction of foreign mafters and workmen: therefore no fcruple ought to be made of bearing the expence of their journey, and their firff fettlement. And it well deferyes our notice, that it has been found by experience in Guadalaxara, and other parts, that the Spanilh women, and even the very young girls, fpin wool better and quicker than the miftreffes of foreign families that inftructed them, and were brought over for that purpoie.
By means of a patent, continues the fame Spanifh Don, and Supplies from his Catholic majefty to Don Jofeph de Aguada, knight of the order of Calatrava, for the fabric of cloth in Valdemero, we have allo gained the point of manufacturing them in that town, as fine as thofe of England, and of good colours and mixtures, as is manifeit from the approbation they have received from his majelty, who has worn them upon feveral occafions.

## Further Remarks.

Upon the whole, in regard to the manufacture of woollen cloth, it is notorious, that France has long fince not only fupplied themfelves, but have, more or lefs, fupplanted us in everal of the capital markets of Europe, where we had much larger vent for that fpecies of manufacture. - And we have alfo feen from the teffimony of an able Spaniard himelf, that his Catholic majefty is actually purfuing the fteps of France; and that not only in this grand particular, but in great variety of others. [See the articles Biscay, Catalonia, and Spain].
Nor has the cloth manufacture of this nation a little fuffered of late years, and is likely to fuffer more and more by thefe potentates : there are many others, likewife, that we ufed far more largely to fupply therewith than we do at prefent; the Swedes and the Danes, the Auftrians and the Pruffians, have followed the example of the Hollanders, and fettled manufactures of this kind, to our unfpeakable detriment; and our exports of eloth to Ruffia do not increafe.
Before we obtained the woollen manufacture in this kingdom, the Flemings we know had the whole in their hands, by means of our wool [fee the article Austrian Netherlands] ; and, as it fifted hands from them to $\mu s$, fo we fhould not be too fanguine in flattering ourfelves with the impoffibility that it fhould ever change hands again, from us to others : it may, at leaft, be divided among a number of hands, and that will prove equally detrimental to us. The fpirit that at prefent prevails throughout the whole world for manufactures and commerce in general, fhould not fuffer this nation to lieep in a dull fecurity of preferving the interefts of trade, without vigilantly purfing them. When we fee the impending danger, and are thoroughly convinced of it's injurious confequences, I make no doubt but we have wife and upright, and active and powerful men enough in the kingdom, who will beftir themfelves in behalf of commerce, and will throw in the whole weight of their power to affit, and give dignity to every adminiftration that is refolute to pro-
CLOVE. The clove is a fruit gathered, while unripe, and dried for ufe. It fomewhat refembles a nail in figure; of a rough furface, and dulky brown colour, and has on the top a round body, the bignefs of a pepper-corn. It's fmell is extremely fragrant and aromatic, the tafte acrid and pungent. The largeff and darkeft-coloured are to be chofen, and which feel oily, when prefled.
They were not known to the ancient Greeks, but the Arabians were well acquainted with them.
The tree producing them is peculiar to the MoluccaIflands, where the Dutch cultivate great quantities, whence moft of the European markets are fupplied. It grows upwards of 20 fcet in height, and it's leaves refenble thofe of the bay-tree
in hape in hape

The cloves are gathered from Ottober to the midnte of February, partly by the hand, and partly by means of longtwigs, with which they ftrike them off. They are laid on hurdles, as foon as gathered, and a fmall fire made under them; ind afterwards dried in the fun.
When frefh, they give a fragrant thick oil, on preflure; on' diftillation, a vait quantity of an aromaic oil, part light and yellowifh, which comes firtt over, but the remainder reddifh; and finks in water
Cloves are much ufed in foods, and make an ingredient int moft family wines, or fpirituous cordials. In medicine they are carminative, and are good againft all cephalic diforders from cold caufes. They ftreng then the fight, and will alone cure many kinds of head-achs. They are alfo cardiacal, and good againft crudities of the ftomach; as alfo provocatives to venery, and alexipharmic: the dofe from three grains to fix or eight, but are fldum ufed fingly, or in their crude ftate. There is an effential oil madefron them, per defcenfum, poffeffing all their virtues, and much uel, buth in ex ternal application to carious bones, and as a remedy for the tooth-ach, and internally as an ingredient in the rougher cathartic pills.
The antophylli, or ripe cloves, are rarely in the fhups; the Dutch preferving them, while frefh, with fugar, as a fweetmeat, and are fond of them after meals, to promote digeftion. CLOUGH, or DRAUGHT, in trade, an allowance generally of two pounds in every 100 weight, for the turn of the fcale, that the commodity may hold out weight, when fold by retail.
COACH, a commodious vehicle for travelling, fo well known in this kingdom to need nodefcription. Their invention was owing to the French, about the reign of their Francis I. They have, like other things, been brought to their prefent perfection by degrees : at prefent they feem to want nothing, either with regard to eafe or magnificence. Lewis XIV. of France made divers fumptuary laws for reftraining the exceffive richnefs of coaches, prohibiting the ufe of gold, filver, \&c. therein ; but they have been neglected.
Coach-making, with the variety of carriages for the like ufe, is an ingenious bufinefs, the greateft part $0^{\prime}$ it not being very laborious, and never more in ufe than at this time, fome of our nobility and gentry even now taking pride in driving themfelves:
They were incorporated into a company in the year 1677 , in the reign of king Charles II. and have a ftand in St. Paul's Church-Yard, in which they fit to attend the lord mayor of London on the day of his intallation.
COAL. That which we call pit-coal is an inflammable foffil, a folid, dry, opake fubftance, found in large ftrata, $f_{\mathrm{p}}$ litting horizontally more eafily than in any other difection, of a glofiy hue, foft and friable, not fufible, but eafily inflammable, and leaving a large refiduum of alhes.

## Of the hard, dufky, black coal.

This is one of the fpecies of coal in common ufe in London, and many other parts of the kingdom, and is called Scotch coal, though that name is not ftrictly applied to this fpecies alone; but the following kind, more diftinctively called Welch coal, is often fold under the fame denomination. It is a confiderable firm and compact fubftance, of a moderately clafe texture, and pretty heavy: it is naturally of a rough, rugged, and dufty furface, and is ufually feen in flat maffes, though it naturally conftitutes large and continued ftrata; but, being of a laminated ftructure in thefe, it naturally breaks into maffes of this thape in the digging, and thefe more readily fplit, or break horizontally, than in any other direction, though by no means regularly or evenly in that. It is rough and harlh to the touch, and of a fude and rough furface: it is of a very ftrong and deep black, but not at allglofly, and, when broken, is much lefs fo than any other coal.
It makes no effervefcence with acids.
Examined by the microfeope, it appears of a tolerable compact and clofe texture, of an irregularly laminated Aructure, and confiderably bright.
It is very readily inflammable, and burns bifkly, giving a bright white flame, and burning away very quick into afhes, not into cinders, in the manner of the common coal. This is owing to its being more purely bituminous, and regularly inflammable, the maffes of the common coal becoming extinct before they are half confumed, thefe never going out'tll they are wholly burned away.
It is dug in great quantities in many parts of the king dom ; about Limington there is fo much of it, and fuch quantities are fent from thence, that in many places it is called Limington coal.

The hard glofly coal.
This is a fpecies of coal fometimes fold in London under the name of Scotch coal, but known in many parts of this kingdom under the name of Welch coal, and is much efteemed for it's burning with lefs fmoke than any other kind.
It is a very firm and compact body, of a clore, even, and regular texture, and confiderably heavy; it is of a toleratily
fraooth

## COA

## COA

fimooth furface, and foft to the touch, and is ufually brought to us in $m$ derately large and irregular flat lumps. In the earth it compofes very large and thick frata, which being of a luminated ftructure, it naturally falls into maffes of this thape in breaking. It is the hardeft of all the fpecies of coal, but it is not nearly fo hard as the ampelites: it breaks more eafily horizontally than in any other direction, though not regularly or evenly in that, and, when frefh broken, is very bright and glofyy, and of a very fine decp black.
It makes no effervefcence with aqua fortis.
Examined by the microfcope, it appears of a very remarkable even texture, and of a laminated ftructure, being compofed of numerous fmall and thin plates, or flakes, laid clofely on one another, and each of thefe of many other, much thinner and finer; the microfcope fhews, however, fome parts of thefe thinner flakes to be much purer, blacker, and more glofy than the reit.
It is dug in vaft quantities in Wales, and in many parts of England; it is very readily inflammable, and burns with a bright, viiid, white flame, and almof wholly without fmoak, but does not confume fo faft as the former \{pecies, or burn away at once to afhes, but makes cinders, like the common. It is fo remarkable for it's burning without fmoak, that, in fome parts of the kingdom, and in general in Wales, they make malt with it without previous burning.

The friable gloffy coal.
This is a fubitance extremely well known, being the common firing of London, and of the greateft part of the kingdom. It is dug in different degrees of purity and goodnefs in different places; and the fineft of this kind is known, among the dealers in coal, by the name of Tanfield-Moor coal, the place where it.is dug.
It is a friable fubftance, of a fmooth and even texture, and but moderately heavy, being much lighter than either of the former fpecies, though heavier than the cannel, or ampelites: it is of an irregular and uneven furface, and ufually comes to us in large thick maffes, in various fhapes, but not remarkably fat. It conftitutes immenfe ftrata in the earth, and is in thofe of an irregularly-laminated ftructure, and thence is naturally raifed in broad and flat, rather than any other fhaped pieces; but thefe are fo brittle, that they are eafily broken tranfverfely, and, therefore, feldom retain long their original flat form. It is fmooth on the furface, and fomewhat foft to the touch, and is of lefs hardnefs than any other coal: it breaks with a tolerable even, and very remarkably bright furface, and is of a fine deep fhining black. It makes no effervefcence with aqua fortis.
Viewed by the microfcope, it appears of an irregular laminated ftructure, and clofe texture, and of a very remarkable brightnefs.
It is very readily inflammable, and does not burn foon to afhes.
lt is dug about Newcaftle in England, whence it has it's name of Newcaftle coal, and in vaft plenty in a great many other parts of the kingdom.

## Of charcoal

Another fpecies of coal is that which we diltinguifh by the name of charcoal, and which may be properly faid to be an artificial kind of fuel. The procefs whereby it is made is by calcining or charring of wood, in a kind of occlufo; for, the fuel being fo covered with earth, as only to admit of the inflammability of the wood, the fulphur, that would otherwife evaporate, becomes in a great meafure fixed on the fame body, and thereby renders the fuel of confiderably greater Atrength, than the crude wood of itfelf would be: this is owing to faving the oleaginous quality of the fuel, which in crude wood goes off. It is therefore that this is made ufe of in divers metallic operations, with more fuccefs than the crude wood can be. This is an article of confiderable advantage to many Englifi gentlemen, whofe eftates confift in wood lands.

## Of the trade of charcoal in France.

All the charcoal fold in the city of Paris is brought thither, either by land or water, and the carriage, as weil as the general traffic therein, are under divers regulations, the chief of which are as follow:
'The coal, defigned for Paris from the neighbouring provinces, muft be carried directly thither, without fopping elfewhere, by the way for fale.
Being arived at Paris, or where-elfe intended, the price thereof is fixed from three days to three days; the meters, on arrival of the coal, being obliged, for that purpofe, to confult the magiffrates.
The dealers therein are obliged to fell what comes by water in their boats, by their wives, children, and fervants, and not by agents.
All wet charcoal is prohibited to be fold, or that which is too imall, or otherwife defective, without being examined by the proper officer.

Charin, or the finaller fort of coal, mult be fold fepatrately, the price of which alfo muft be fixed by the inagiftrate: A certain number of boats only are permitted to expofe their commodity to fale, at one and the fame time.
The dealers herein are obliged to have their coal equally 3 nd in all parts, to prevent impofition.

## Of pit-coal.

This is a merchandize in which there is a great trade is France. The lockimiths, farriers, and other artificers, who are obliged to heat their iron to bammer it on an anvil, can't do without it. In England it is the common firing. Places where it is moftly got in France are in Auvergne, the mines of Braflac, near Brionde, in the fame province; St Stephen in the foreft, the Niverneze, Bourgogne, Concourfon in Anjou, the neighbourhood of Mezieres and Charleville. (In 1740, were difcovered at Doué, near Saumure, mines of coal that promife greatly. M. D. Janfac laid the plan of different ways for conveying it on the Loire.)
Great quantities of it come alfo from foreign countries, as out of Hainault, and the country of Liege.
England furnithes a confiderable quantity of it, which comes ufually by way of Rouen. This laft is moft efteemed; tho' many pretend, that what comes from the mine in Auvergne is not inferior to it; and others give the preference to that of Hainault, becaufe it is fatter, and burns longer.
There are certain officers appointed in the parts of Paris where coals are fold and uttered, called fworn coal-meters. Befide thofe who trade by wholefale in pit-coal at Paris, there are two other forts of dealèrs in it; the one called recail home-dealers, the other foreign dealers, who, as foon as their merchandize is difpofed of, return home for a freth loading: the former refide in the city, and there retail the coal, of which they have boats loaded in the provinces by their agents, who fend them to Paris.
'The difference of trade, carried on by thefe two forts of dealers, confifts herein, that the former have permiffion to keep ftore-houfes, to depofit their coal in for fale : whereas the foreign dealers are obliged, as foon as they arrive at certain wharfs and bavens, to fell directly, without landing. But thefe have the preference of the others; as to the fale at the wharfs, the burgefs-dealers not being permitted to expole their coal to fale, 'till the foreigners have fold; which, however, is no otherwife to be underfood, than as there is a fufficiency of foreign merchandize to fupply the city.
By a general regulation of both the prices, that which is fet at the firft expofing it to fale, is not to be augmented; and that if, during the fale, any dealer makes abatement, he fhall be obliged to fell at that abated price.
By an order of council of the 6th of September, ryor, concerning merchandizes of Englifh, Scotch, and Irifh growth, the cuftoms inwards for coal coming from thofe countries, are fixed at 30 s . the barrel, conformable to the order of the $3^{\text {d }}$ of July, 1692 , for all forts of coal coming from foreign countries.
Pit-coal from Flanders and Hainault, and paffing through the provinces of Champagne and Picardy, have been included in the fame order of the $3^{\text {d }}$ of July. But, the mafters of the forges of thofe two provirces having reprefented the great prejudice that had accrued from it, the king, by a decree of the 1gth of June, 1703, enacted, that, for the future, the cuftoms inward on coals coming from Flanders and Hainault, Chould be to the magittrates of Picardy and Champagne, but 10 s . the barrel of 300 pound weight, inftead of 30 s .

## Stone-coal.

This, which fome very improperly confound with pit-coal, though they have nothing common, but their inflammability, is a mineral ftone, dry, and fulphureous, divers quarries of which are found in many provinces of France, particularly in the Nivernois and Bourbonnois. It is a kind of blackifh pumice-ftone, but more clofe, lefs fpongy, and much harder and heavier than the true pumice-ftone. It is commonly fold in great pieces, fomewhat like the Holland's turf, but of a lefs regular figure. The fire it makes is lively, and lafts pretty long; but the vapour is hurtful, and of an infufferable frmell to thofe who are not ufed to it. It ferves for almoft all the fame ufes as pit and charcoal; and the trade in it is not inconfiderable, where the other two forts are fcarce.
Wood having become very fcarce and dear at Paris in 1714, fome boat-loads of fone-coal were brought, which prefently fold very well at the wharfs, the people crouding thither; and even many good houfes made trial of it in their ftoves and anti-chambers; but the malignity of it's vapours, and fulphureous fmell, foon gave them a diftafte to it; and, the fale of the firft boats not fucceeding, the new dealers in it brought no more to fupply Paris. The wholefale vend of it is by the quintal, and it is retailed by the pound.
It is fome time fince ftone-coal has been difcovered in the neighbourhood of Laufanne in Switzerland ; and ufed there, inftead of wood, in the falt-pits.

Sonic of the laws of England relating to the coal-trade.
Keels in the port of Newcaftie are to be meafured by commiffioners, befote carriage of coals, on pain of forfeiture, H. V. c. 10.

9 The fack of coal to contain four bufhels of clean coal. 7 Ed . VI. . 7 .

Sea-coals brought into the river Thames and fold, to contain thirty-fix buthels heaped to the chaldron, and one hundred and twelve pounds the hundred, on pain of forfeiture. The lord-mayor of London, \&c. may fet rates or prices upon coals fold by retail. Retailers refufing to fell at thofe rates, officers may enter wharfs, \&x. by force, and make fale at the rates appointed, 16 and 17 Car. II. ᄃ. 2. Extended to all counties, 17 Geo. II. c. 35 .
Commifioners to be appointed by the king for meafuring and marking of keels, boats, carriages, \&c. for coals in Newcaftle. Keels, \&c. carrying coals before meafured and markad, to be forfeited, with the coals; removing or altering marks, to forfeit 10 l .
Coals imported to pay $5^{s}$. per chaldron duty, and culim $1 s$. and coals fold by the ton, $5^{\text {s. }}$ per ton; to be paid at the place of importation. Two mariners allowed to every hundred ton of hhipping, prefs-free; preffing them to forfeit 101. Nine hips of war to convoy the coal-trade, 6 and 7 Will. III. c. $\mathbf{I}$.

This itatute takes off the duties fupra, and impoles a duty of 5 s . per ton, or. 7 s . 6 d . per chaldron for coals fold by mealure, to be paid by the importer for coals brought from Scotland, or any parts beyond féa. For coals laid on board in Englifh ports $3^{\text {s. }} 4 \mathrm{~d}$. per ton, and 5 s . per chaldron, and is. per chaldron for culm fhipped in this kingdom, 9 and io W. III. с. 13 .

Coals exported in foreign bottoms to pay to $s$. per chaldron, in Britifh bottoms only 3 s. per chaldron, 6 Ann. c. 22:: Thisact grants an additional duty of 3 s . per ton, and 4 s . 6 d . per chaldron for foreign coals; and 3 s . per chaldron for waterborn coals, appropriated to a lottery, 8 Anne c. 4 .
Welih coals, \&cc. exported to Ireland, \&c. to pay 1 s . per chaldron; to the plantations, 2 s . Coals imported from foreign parts, 2 s . per ton, and 3 s . per chaldron; carried from port to port, iss, 4d. per ton, and 28. the chaldron. Granted for 32 years, 9 Ann. c. 6.
Contracts between coal-owners, mafters of fhips, \&c. for reftraining the blaying of coals, 8 cc . are void; and parties to forfeit 1001. factors, 501. mafters of veffels, 201. certificafes to be made of lading, \&c. For falfe ones to forfeit 10 l; Selling coals for other forts than they are, to forfeit 50 . Not above fifty laden colliers to continue in the port of Newcaftle, \&c. on pain of 501 . Work-peaple in the mines not to be employed who: are hired by others, under the penalty of 51 . 9 Ann. c. 28.. By 12 Ann. c. 17 . is"granted a duty of 1 d . per chaldron for coals and culm; and 2d. for every ton of Thipping coming into the port of London (except thofe colliers, fifhing vefiels, scc.) for the repair of Dagenham breach. No buyer of coals to act as agent for any mafter or owner of a thip importing coal, under the penalty of zool. And coalowners felling one fort for another, or any particular coals in preference of others, fhall forfeit 5001 . Coal-facks to be fealed and marked, and be four feet and two inches long, and twenty-fix inches broad, on pain of 20\%. And fellers of coals Ghall keep a buthel edged with iron, and fealed and ftamped, and put three bufhels to a fack; ufing other meafures, to forfeit 501 . Penalties above 51 , recovered by action of debt; and under, before jultices of the peace, \&c. 3 Geo. II. c. 26 The price of coals not to be inhanced in the river Thames, by keeping turn on delivery, \&c. on pain of 1001.4 Geo. II. c. $3^{\circ}$.

The lord-mayor and court of aldermen are impowered to fet the price of all fea coals imported into London, and ports addjacent, for one year; and perfons felling coals out of any veffel, yard, or warehoufe, for a higher price, fhall forfeit 368. per chaldron, to be levied by diftrefs, by watrant of two juttices, \&c. And if any perfon, vending coals at Newcaftle, refufe to put on fhip-board a loading of coals, on tender of payment of the price there, he is liable to the forfeiture of rool. recoverable by action or information, it Geo. II. c. 15 .

For preventing frauds in the admeafurement of coals wiffin the city and liberty of Weftminter, that part of the duchy of Lancafter adjoining thereto, the parifhes of St Giles in the Fields, St Mary le Bon, and fuch part of the parifh of St Andrew Holborn, as lies in the county of Middlefex, two principal land coal-meters are appointed, who are to take an oath for the due execution of their office, and appoint a fufficient number of labouring coal-meters to attend at whatfs and warehoufes to meafure out coals there, who are alfo to take an oath for the due execution of their office. A lighterman is not to break bulk, but in the prefence of a meter or the confumer. All contracts for coals, direaty from any lighter to the confumer (not being lefs than five chaldron) hall be for pool-meafure, and loaded feparately in the craft, and delivered without being meafured, unlefs the buyer defire it. Coals fold for wharf meafure, to be meafured in the Vol. I.
prefence of a labouring coal-meter, as by ftat. 16, i7 Car, If. The feller to pay 2 d . per chaldron to the labouring coal meter, and the like to the principal land coal-meter, who are to deliver tickets of the names of the buyer, feller, quantity, and price of the coals, day, \&c. which ticket is to be delivered by the carman to the confumer, who is thereupon to pay for the metage. Carman altering, or not delivering the ticket, forfeits 51 . Carts loaded with above eight bulhels, fent without fuch ticket, the fender to forfeit 5ol. and the driver 51. Meter making falle tickets, or falfe meafure, rendered incapable of atting as a meter, and to forfeit 51 . No quantity above eight bufhels to be delivered, but in the prelence of a meter; and, if the buyer fhall be difatisfied with the meafure under this act, the coals, on acquainting the fel ler or carman during the delivery, and before he is dificharged, may be re-meafured by a fea-coal-meter; the carman, on notice in writing of the buyer's being diffatisfied with the meafure, fhall not depart 'till a fea-coal-meter cau be produced, 19 Geo. II. c. 35 .

## REMARK.

The coal-trade of England, that is, carrying coals from Newcaftle, Sunderland, Blith, and other adjacent places in the north; as alfo from the Firth of Edinburgh in Scorland, and other places thereabouts, to the city of London, and to the poft towns on the coaft all the way, as well on this fide of Newcaftle north, as up the channel as high as Portfmouth weft, is a prodigiotis article, and employs abundance of hipping and feamen; infomuch that, in a time of urgent neceffity, the colliery navigation alone has been able to fupply the government with a body of feamen for the royal navy, able to man a confiderable fleet at a very fhort warning, and that without difficulty, when no other branch of trade would do the like.
Likewife the Whitehaven collieries in Cumberland, belonging to the honourable Sir James Lowther, Bart. furnifh feveral counties in Ireland with coals, and conitantly employ upwards of 2000 feamen; " which alfo is a noble nurfery for the royal navy of this kingdom. The port of Swanzey in Wales fupplies the coaft of Devomhire, and other counties thèreabouts.
The pit-coals fufficiently fupply not only all the ports, but by means of thofe ports, and the navigable rivers, all the adjacent counties, very far inland, between the port of Newcaftle and the river Thacthes; as Whitby, Scarborough, Hull, with the port of Grimby $t$ as for the Humber, the Hull, on which the town of Full is fituated, the Oufe, and even all the rivers thereabouts, they are indeed an exception to this courfe of the trade, and are principally fupplied by boats from the inland counties of Derby and Nottingham, by the Trent; and from the town of Wakefield, by the Calder, to the very city of York, upon the Oufe; from whence alfo all the reft of the rivers and town's on that fide are furnifhed. But this is but of late years, and fince the river Calder was made navigable, and a duty laid on the Newcaftle coals.
The many thoufands of men employed under-ground in there collieries, as well as thofe employed in the lard-carriage, render this, as a domeftic branch of traffic, ftill the more important to the kingdom. Nor are thefe all the national benefits, which arife from the coal-trade; large quantities hereof being annually exported both to France and Holland. And it muft be obferved, that the riches, acquired to thefe kingdoms by this branch of trade, are like thofe treafures, which are obtained out of the fea by our filheries, they being all certain real profit, without any lofs to the kingdom, and giving employment to prodigious numbers of our people.

Further Remarks.
The wafte and deftruction which has been of the woods in Warwick, Stafford, Worcèfter, Hereford, Manmouth, Glocefter, Glamorgan, Pembroke, Shropfihire, and Suftex, by the iron works, is not to be imagined. The fcarcity of wood is thereby already 'grown fo great, that where cord-wood has been fold at five or fix fhillings per cord, within thefe few years, it is now fifen to upwards of twelve and fourteen fhillings; and in fome places is all confumed.- And, if fome care is not taken'to preferve our timber from thefe confuming furnaces, we fhall certainly foon ftand in need of OAK no fupply the royal navy, and allo of fhipping tor the ufe of the merchant; to the great difcouragement of fhip-building and navigation, upon which the fafety and figure of thefe kingdoms, as a maritime power, depend.
It is generally allowed, that, within about thefe feventy years, Ireland was better fored with Oak-timber than England; but feveral gentlemen from hence, as well as thofe refiding there, fet up iron works, which, in a few years, fwept away the wood to that degree, that they have had even a fearcity of fmall fuff to produce bark for their tanning, nor fearce timber for their common and neceflary ufes.
Their diftrefs has been fo great, that they have been forced to fend to England and elfewhere for bark, and to Norway, \&c. for building timber; and fuffer their harge hides to be expprted

7 A
ro Holland, Germany, and Flanders, where, to a great lofs in that manufactory, they have been tanned.
Now, if the quantity of bar-iron, which is at prefent made in England and Ireland, could be manufactured in larger works with our pit-coal, or fome peculiar forts thereof, thefe iron-works would be tranfplanted to the pit-coal, or the coal brought to the iron-works, and the growth of our woods, for a time, be duly promoted.-Or, for the fake of thefe gentlemen's eftates, which may confit in woodlands, and are contiguous to fuinaces already erected, thofe furnaces might be obliged to confume fuch a quantity of wood, in conjunction with the pit-coal, in the manufacture of iron, as would do no injury to the wood-land eftates, and prevent that fcarcity of wood and oak, which is now complained of
Moreover, if this difcovery was made, as England, Scotland, and Ireland would, by means thereof, be enabled to fupply themfelves with the general manufacture of iron, from the ore to the bar, this would prevent, we apprehend, from the provifo before-intimated, the wood-land gentlemen from fuftaining any injury by fo ufeful a difcovery; and the eftates of the pit-coal owners would be enriched in proportion to the additional confumption of, this kind of fuel throughout the three kingdoms.
Encouragement, indeed, has been given to our plantations; for the making of pig and fow-iron; but we' do not think that this meafure has yet operated fo fuccefsfully, as to diminifh our importation of the quantity of foreign bar-iron: nor are our woods fufficient to fupply the three kingdonss with this manufacture, made even from the American pig and fow, provided they were able at prefent, amply to fupply Great-Britain and Ireland therewith. So that the difcovery of making bar-iron from the pit-coal fuel, or in conjunction with what wood-fuel we have among ourfelves, fitl feems very defireable; provided, by means thereof, it can be made near as cheap as it is imported from foreign countries.
But fince fuch a difcovery cannot be carried into execution in great works, without being known to every one; and fince alfo, that a common patent, in a manufacture of this kind, is more liable to be invaded and violated, than fome of a different nature, by others who would envy fo great a difcovery, wherein they were not interefted: Quere, therefore,

1. Whether it might not become the wifdom of the nation to grant fome reafonable public reward and encouragement, by act of parliament, to whomfoever thall make the difcovery, by the means of pit-coal fuel to fupply England, Scotland, and Ireland with bar-iron, fo cheap as it is imported from foreign countries? And, Quere,
2. Whether fuch pretended difcoverer, or difcoverers, fhould not be obliged to make, or rather caufe to be made, in his or their ablence, 500 tuns, or more, of fuch bar-iron, before he or they are intitled to any part of the public reward whatioever, that thall be given by parliament for that purpofe?
COBALT. It is a kind of marcafite, or grey mineral, of an obfcure white, fomewhat refembling a French-plate, and the pyrites, though fomewhat nore obfcure, and contains a white arfenic, and fixed earth; it changes into a blue glafs, when mixed with flint, and ftony cinders. Bifmuth is alfo drawn from it; and that kind of azure, which painters ufe with white-lead, for a blue, and that ferves to give the requifite bluifh caft to farch. It is faid alfo to contain ufually fome copper, and a little filver. There are many mines of it in Germany, particularly in Saxony, in the territories of Schneebourg, and of Annebourg; it is found alfo in Alface and the Dauphinate.
On the outfide of the mines of cobalt is found a kind of mineral, of the colour of the ftreaked rofe, called the flower of cobalt.
The beft way to difinguifh this mineral, is to turn it into glafs; for the glafs of the pyrites is black; of copper, red ; of filver, white; whereas that made with cobalt is fapphire. Cobalt being taken out of the mine, the heterogencous matter is feparated from it with a hammer; it is calcined in a vaulted kiln, large, and flat at bottom, ftirring it continual$y$, that the fire may thoroughly pervade it, and feparate the arfenic; this is done 'till it ceafes to fmoke. Then they calcine very pure and choice flints, which, while hot, are calt into cold water, to render them malleable, after which they beat and reduce them to powder. With three parts of thefe and one of ftony cinders to make it run, they ufually mingle one part of calcined cobalt ; this mixture is put into great pots, and fet in a furnace to be turned into glafs, a very trong fire being made for 8, 10, and even 12 hours; the mixture being diligently ftirred, that it may be equally fluid throughout; when it is as fluid as it will be, they take it out with an iron ladle, and caft it into a copper full of cold water. The glafs, being thus rendered more friable, is broke by a hammer that goes by water, and is afterwards paffed through a brafs fieve: what won't pals is broken a-new, and reduced to a very fine powder. They wafh it afterwards, to feparate the fandy and other heterogeneous particles, as alfo what whitifh, afh-coloured powder, called efchel, and a blue powder called blank tarbe. It is afterwards put into veffels for fale: and, as there are different forts, fo the prices likewife are various; and the veffels have different marks, as $O$. C.
for the ordinary fort, M. C. for the middling, F. C. for the fine, F. F. C. for the finer, and F. F. F. C. for the very fineft fort, which is exceeding valuable and farce. See Arsenic,
COCHENEAL is a drug ufed in dying and medicine. It is a body of an irregular figure, but always oblong, convex on one fide, and a little concave on the other; it has feveral tranfverfe furrows, like the incifures on the backs of infeas. It is very light, and fo friable, as eafily to crumble between the fingers. It's colour is a pretty deep purple, and a ftrong crimfon internally. It is chiefly brought from Mexico.
There are two forts of it ; the martigne, which is effeemed the fineft, both for dying and medicine; and the wild, which is lefs valuable. This difference, in the fame animal, is oocafioned only by the extraordinary care that is taken of the one, by being fupplied with food of a proper kind; the other living in a wild flate of nature, without the like care.
Though this drug hath long been in ufe, yet it's hintory, like that of many others, is not yet, perbaps, fully known. lt, being collected at Mexico, at a certain feafon of the year, from a particular plant, was long thought to be only the feed of that plant; and thoic who difcovered it to be an animal, were laughed at. This was the cafe of Pomet, who defpifed Plumier, who firft declared it of the animal kind. So much of it, however, hath been difcovered, by expanding it's parts in water, and otherways examining it by microfcopes, that it is an infect, having fix legs, and a probofis deffined for extracting the juice of the plant whereon it fubfíts.
Reaumur was tha firft who afcertained to what clafs of the animal nature this infeci belonged. This author, after eftablithing his clafs of gall-infects, creaturts that the leaft of all other animals appear to be fuch, eftablifhes a fecond clafs, nearly approaching to the former, but one degree, at leaft, a)ove them, in their approaches to the characters of animal life, found in other living creatures. - There he calls progallinfects. They pals a great part of their life fixed immoveably to fome part of a plant, as the gall-infects do, but they never lofe their figure like thefe creatures, but may always be known for animals.-Of this clafs is the cocheneal judged to be, an infect of fuch confequence as an article of commerce, that it is not left to breed and propagate at random, but the nicelt management is applied to every feafon and circumftance of it's multiplication.
The plant on which the cocheneal is found, and raifed by the Spaniards, is defcribed by botanifts under the name of opuntia major. It is compofed wholly of leaves of an oval thick body, joined end to end, and running into ramifications by means of new ones, which grow out fide-waps.- The flower is moderately large; the fruit refembles our fig in fhape, it is full of a crimfon juice, which tinges the urine crimfon after eating it. To thispurple juice, the cocheneal owe their delicate colour; the fame infects having been obferved by Plumier on other plants, and on all thefe without colour. The Mexicans plant the opuntia all around therr habitations, for the fake of the cocheneal, which they propagate thereon with great care, and make feveral collections in the year.
Upon the approach of the rainy feafon, the collection of cocheneal is over for that year; then they take care for the next year's ftore. From the caution of the Spaniards in this refpect, we are, in a great meafure, let into the hiftory of this infect. At the coming on of the wet feafon, they cut 'off the pieces of the opuntia, on which there are any confiderable number of thefe animals, which are not yet arrived at their maturity.-They houfe them, and preferve them from all mifchief.-The opuntia, like the other fucculent plants, remain frefh a long while after it is cut from the root or ftem; the pieces thus cut off remain fucculent for the rainy, feafon; at the end of this time, the infects are found fo well grown, that they are ready to bring forth their young.
The people now prepare for the multiplying thefe for the next year's crop; they make a fmall kind of nefts in the thape of thofe of birds, either of mofs, or of the thready matter of their cacao-nuts, or any other the like fubftance; into each of thefe nefts they put I2 or 14 of the infects, and they then carry them out, and place them between the leaves of the opuntia's, the plantations of which they take care to have, at that time, in very good order.- The thorns of the opuntia make thefe nefts eafly fixed, and in this manner they people their whole plantation in a few days; though the quantity is not fmall that they place on them; for thefe very cocheneals of the nefts make their firft crop, which is gathered not long after. They place generally two or three of thefe nefts, that is to fay, they allow between 30 and 40 infects to the jointing of every leaf of the plant to the next. The free air has fuch an effect on tbefe infects, that, within three or four days after their being expofed to it, they bring forth their young in the neft. Every mother produces feveral thoufands of thefe, which are at that time as finall as the minuteft mite. The young infects leave the nefts after a little time, and run about the plant ; they foon after, however, fix themfelves, fome on one part, forae on another of it;
but they always chufe the moft fucculent part, and thofe which are leaft expofed to the wind. They remain fixed to the place they choofe, never firring from it 'till they have acquired their full growth, and are themfelves ready to bring forrh young. In all this time they never crode the leaves of the plant; they only fuck part of it's juices, by means of their probofcis.
In the cclder countries, where the cocheneal infest is raifed, they always cover with matting, for fome time, the plants on which they have placed the nefts, and where the young infects have fixed themfelves.
So defencelefs an animal, as the cocheneal in it's fixed ftate, muft needs be a prey to a number of other creatures : there are multitudes of infects that feed on them : but the people who raife thent are at infinite pains to keep the plants clear of all hoftile infects. There are many crops of cocheneal in a year. The firft is, that of the parent animals placed ins the nefts; this is a gathering made very eafly; the creatures never leave the nefts they were placed in; when they have brought forth their young, they die there, and there is no more trouble necefiary than the taking the nefts off the plant, and fhaking them out.
The fecond gathering is of the infects, which had been brought forth by there, and have fixed themfelves on the feveral parts of the plants, as before mentioned.
This is about three months after the former; in this time, a little more or lefs, according to the favourablenels or badnefs of the feafon, thefe young infects have acquired their full growth, and many of them are bringing forth their young. The Indians diflodge thefe from the plants, by means of a little hair pencil, tolerably fiff, and fixed in a wooden bandle, brufhing them off by this means, and catching them as they fall.
They are very careful, in this fecond gathering, not to ftrip the plants wholly of the infects; they carefully leave a great many of the old ones, and they never difturb the young already produced by the others. The third crop is furnighed by thefe young ones, and thofe which are brought forth by the parent animal, they leave there.-This happens at about three months end, at which time their young ones are found to be full grown, and are gathered as the former, leaving a fore behind, as in the former gathering. Not long after this third gathering of the cocheneal, the rainy feafon ufually comes on. The young infects brought forth by thofe they leave on the plants at the third gathering, are what they find on the leaves, which they at this time cut off and preferve, during the wet feafon, in their houfes, to be placed in nefts on the plants, as foon as this is over, and to furnifh three or four fucceffive crops the enfuing year.
They make a laft gathering, at the time when they cut off the leaves for houfing: they cut off only fo many as they judge will be fufficient for the real produce; but the reft of the plant is alfo full of the infects, and there are yet on it many of the old, or parent animals, which they left there on the third gathering. The Indians, when they have houfed what quantity they like, make a gathering of thefe: they are not at the pains of diflodging them fingly with a pencil, as the others; but they brufh over the whole plants in a carelefs manner, fo that there fall off many fragments of the fpines, $\& c$. with the cocheneal, which are mixed with the old cocheneal and the young of various fizes : this is of much lefs value than the other more carefully picked cocheneal. The Spaniards call this granille.
The parent animals of the former gatherings would, if not prevented, live many days after they were diflodged from the plant, and would bring forth their young, which, being very fmall and nimble, would get away in great quantities, and a great part of the weight of the cocheneal would be loft. To prevent which, the Indians, as foon as they have finifhed their gathering, deftroy the creatures.
They have feveral ways of killing them: fome do it by plunging the bafket in which they are into boiling water, and afterwards drying them in the fun. Others have a fort of ovens builf in a coarle way, on purpofe for this occafion; they put the cocheneal into thefe, as foon as gathered, and give juft fuch a heat as is enough to kill them. Thefe ovens they call remercales.
The Indian women have alfo a kind of flat ftones, under which they kindle a fire, and then place them on their cakes, or loaves, of maize bread : thefe they call comales; and fome ufe thefe to kill the cocheneal infects in the fame manner. The difference in colour of the cocheneal we receive, is principally owing to the different methods thus ufed to kill the infects, and to the different degrees of heat the Indians venture to give them. The cocheneal, while living, is ufually covered with a cottony, or downy matter, in the manner of gall- infects. Thofe which are killed by means of hot water lofe a great part of that powder in the operation. Thofe, on the contrary, which are killed in the temercales, or ovens, retain this powdery matter, and become of a greyilh colour, mixed with crimion; and, finally, that which is dried on the comales, or baking-ftones, runs a great hazard of being burned, and generally becomes blackifh. The Spaniards, who are very nice in their diftinctions of the cocheneal, call
that which has been killed in water, and loft it's greynefs, renegrida; that which has been killed in the temercales, they call, from it's marbled appearance, jafpeade ; and the laft, which is generally over-baked and blackifh, negra.
The dead parent animals of the firft crop of the year, which they take out of the nefts they had put them in, lofe much more of their weight in drying than any of the fucceeding crops; four pounds of thefe dry to one pound; of the others, three pounds frefl generally afford a pound dry. The impregnation of the cocheneal infect is the fame with that of all other infects of the gall-infect and progall-infedt clafs. All the creatures which we have been defcribing as fixed on the opuntia, and as gathered from cocheneal, are females. The males of the fame fpecies are different animals; they are little flies, no way refembling the cocheneal, though produced by the fame mothers. The extreme fmallnefs of the young cocheneals prevents any body's obferving that fome of them have wings, or rudiments, at leaft, of wings at that time; and, as they afterwards grow up and appear fo very different from the reft, they are fuppofed to be creatures of another kind, accidentally fallen on the fame plants.
The people who take care of the cocheneal, all agree in abferving, that, at the time when that infeed is grown to it's full fize, there are always feen on the fame plants a number of little winged creatures, which they call butterfies; but it is eafy for fuch incurious obfervers to miftake a fly with wing not tranfparent, and thefe fo large as to cover the whole body, as is the cafe of the male kermes infect, for a butterfly. Thefe flies are much fmaller than the cocheneals, and are feen continually marching among, and walking over them : they all have a firm belief, that thefe flies make the cocheneals conceive; and, indeed, the whole is fo analogous to what happens for the impregnation of the kermes, that there is little room to doubt but that the Indians are in the right.
The quantity of cocheneal brought annually into Europe is immenfe : it is computed that there is not lefs than eight or nine hundred thouland weight annually imported from Spanifh America.
It is a fingular circumftance attending cocheneal, that it is not liable to decay. People who have made collections of infects, know how difficult it is to preferve them, let whatever art be employed; other lefs infects get into their bodies, and eat them. On the other hand, cocheneal preferved in a box, with no particular care at all, will keep ever fo long unhurt, and, after ever fo great a time, is as fit for all purpofes either of dyeing or medicine as at firf.
Mr Neufville procured fome cocheneal which had, by all accounts, remained in the ftorehoufe whence be had it 130 years, and which was then perfectly good. And Mr Marchand of Paris produced before the royal academy fome cocheneal, put up by his father in a box, the date on which thewed that it was 60 years before, and which was as good as any cocheneal of the laft year.
Cocheneal is efteemed a great cordial, fudorific, alexipharmic, and febrifuge. It is alfo greatly ufed by the painters and dyers, the high crimfon colour it affords being fcarce equalled by any thing, and making, according to their different management of it, all the degrees and kinds of red.

## RemARKs.

As this nation expends fuch large fums annually with the Spaniards in this article, Thould it not excite us to it's cultivation in our own colonies, if poffible? I am well informed, that an eminent merchant of the city of London received a letter not long fince from Cales, in Spain, that gives an account the Spaniards intend to prohibit the importation of Britifh linnens into OId Spain. And the other meafures that court is now taking, in order to promote their own trade and navigation, at the expence of that of Great-Britain, certainly ought to alarm this nation, and put us upon every meafure to take lefs of foreign products and manufactures, fince we are likely daily to fell lefs of our own.

## Further Remarks.

Since, by the late definitive treaty of 1763 , we have fo greatly extended our acquifitions in America, efpecially on the continent; and, amongit the reft, the late Spanish Florida is ceded to the crown of Great-Britain: it is now judged, that fome of our own poffeffions will furnifh us with this very important article, ufed in the fcarlet dye, and other kinds of red dyes. See Dyeing.
COCHINCHINA, or WEST CHINA, as the name implies, or the CHINESE COCHIN, was fo called by the Portugueze, to diftinguifh it from Cochin on the Malabar coaft. Including Chiampa on the fouth, which, though reckoned part of Cambodia, is a province, or at leaft tributary to Cochinchina, it extends from north latitude $I$ I degrees 30 minutes, to 16 degrees 10 minutes, being, according to Moll, 300 miles from north to fouth, and 150 , where broadeft, from eaft to weft. It is bounded on the north by Tonquin; by the fea of China on the eaft; the Indian Ocean on the fouth; and on the weft by Cambodia, and a ridge of riountains, inhabited

## C O C

## COD

by a favage people, called Kemois, who live independent of any govermment, becaufe thcir hills are inacceffible. Cochinchina was formerly a part of the kingdom of Tonquin, but fince is become a teparate kingdom.
As it lies upon a flat, as well as Tonquin (though it is reckoned more temperate, as being more open to the fea) it is annually overflowed in the like manner; confequently the feafons are the fame, and the foil equally fruitful in rice, which needs no manure but the mud left by the inundations from the mountains of the Kemois, which renders it fo fruitful, that they have three harvefts in a year. Thefe inundations happen once a formight; at which time they have their greateft fairs and markets, becaufe they can eafily tranfport goods from one place to another by their boats.
Father Borri, the Jefuit, fays, they have fugar-canes, and the fame fruits as in India, all the year round, particularly oranges, ananas, bananas, melons, the can, gnoo, glacca, and durion, delicious fruits, peculiar to this and the neighbouring countries.
The country produces no grapes, and, therefore, inftead of wine, they dink arac, or a liquor diftilled from rice. They abound with wild and tame cattle, fowl and fifh. They make a fauce of falt filh fteeped in water, which they barrel up in great quantities; it taftes like muftard, and ferves as a whet to their rice. They make the fame ufe of arac and betel as the other Indians, and they have fome tobacco. They have valt woods of mulberry-trees, which run up as faft as our hemp. Their filk is not fo fine as the Chinefe, but ftronger. They have the beft timber in the world, particularly a fort which abounds in the mountains, and is called the incorruptible tree, becaufe it never rots under earth or water, and is fo folid that it ferves for anchors: $:$ one fort is black, and another red. They are exceeding tall, ftraight, and fo big, that two men can fcarce fathom them.
They have, alfo, on the mountains of the Kemois, a tree of a moft fragrant fcent, which is fuppofed to be the fame with lignum aloes. This, being reckoned the beft product of the country, is engroffed by the king, and is fold here from five to I6 ducats a pound. It is highly valued both in China and Japan, where the logs of it are fold for 200 ducats a pound, to make pillows for the king and nobility; and, ameng thofe Indian nations which continue to burn their dead, great quantities of it are confumed in the funeral piles. The young trees called aquila, or eagle-wood, are every one's property, which makes the old ones, called calamba, fo fcarce and dear. They have oak and large pines, for the building of fhips; fo that it is to the Chinefe of much the fame fervice as Norway is to England. In the general, they have the fame kind of trees and plants, and the fame fort of animals; as there are in Tonquin.
They have mines of gold, as well as of diamonds; which they do not efteem fo highly as pearl. They make great account alfo of their coral and amber. In all the provinces there are great granaries, and large quantities of rice in them, which is frequently above 30 years old. One of the greateft rarities in thefe parts, efpecially in grand entertainments, is a ragout made of the eatable birds-nefts, which fome fay are only found in Cochinchina, and others, in four inands only that lie on it's coaft. Thofe delicate birds-nefts making a large article of trade in this part of the world, we have taken notice of it under it's proper article.

## Remarks.

The merchants of Tonquin, Cambodia, China, Macao, Japan, Manilla, and Malacca, trade hither with plate, which they exchange for the commodities of the country. The Portugueze are the moft favoured here of any Europeans, The natives fell not only a vaft quantity of filk and aquila-wood, as already mentioned, to the Chinefe, but the latter fetch from hence abundance of timber and plank for fhip-building. The Cochinchinefe themfelves not being inclined to travel, feldom fail out of the fight of their own fhore, but purchafe many trifles from foreigners, at great rates, particularly combs, needles, bracelets, glafs pendants, \&cc. They are very fond of our hats, caps, girdles, fhirts, and other cloaths, and, above all, fet a great value on coral. The country has many large inlets of the fea, and above 60 convenient landing-places, which neverthelefs, Eays captain Hamilton, are not much frequented by ftrangers. The Dutch having formerly put off fome falie dollars at Quinham, in payment for filks, and other China ftuffs, the people feized their factors, and put one of them to death; for which, the next time the Dutch came upon this coaft, they burned a town, and put the inhabitants to the fword.
Their coin is round pieces of brafs, with the king's arms and enfigns ftamped on them, and a hole through the middle, which ferves to ffring them, as they do by thoufands, every thoufand being worth two crowns.
It is divided into five provinces, exclufive of the kingdam of Champi ; viz. Limuva, Cachiam, Quangum, Quignan, or Pulocambi, and Renam; and in this order, they lie fouth of one another.

3

Captain Hamilton fays, the fea-coaft is 700 miles in extent, from the river Cambodia to that of Quambin, and that it is very deep. According to him, it is a country much larger and richer than Cambodia, the inhabitants more brave and converible. The Cochinchinefe draw one half of the cuttom and taxes raifed in Cambodia by commerce and merchandizing; but they give little encouragement to ftrangers to trade-with them: fo that they fend their gold, raw filk, and drugs, to difpole of chicfly to Cambodia, aud fome to Canton, Johore, and Batavia.
M. Choif, in the Journal of his Voyage to Siam, fays, there are kings tributary to the king of Cochinchina. The king formerly gave leave to the merchants in China and Japan to build a city at Faifo, and on a bay, latitude 16, longitude $108 \frac{1}{2}$; which is divided into two parts, each under it's own government and laws ; fome call it Haifo, and place it in the province of Caccian, or Cacchian, and fay it is the principal port frequented by foreigners, there being, a fair here for about four months every year, to which the Chinefe import very confiderable quantities of plate, as the Japanefe de of filk; from whence the king draws a large revenue by cuftoms and impofts, and the people reap vaft profit
Borri fays the bay ftands on two inlets to the fea, which are at firft three or four leagues diftant from one another, 'ill, having run feven or cight leagues, they join in one ftream, where the veffels, meet that come in both ways.
When the Dutch firft came hither, the Portugueze af $M a c a o$ fent an embally to the king of Cochinchina, to defire him to exclude them from his country, as mortal enemies to their nation: but the Dutch having landed, while the ambafiador was at court, and fent prefents, which were well received, the king granted them a free trade; whereupon the Portuguèze ambaflador charged him with breach of his word, and ftamped.on the ground, to hhew his refentment. Mean time, the king had ordered the Dureh to land their goods againf the fair as well as the Portugueze; but, while they were on the river in boats, the king's galies deftroyed moft of them, alleging the Dutch were notorious pirates, and he forbad them his country any more. On the other hand, he offered the Portugueze, to whom he had beern a conftant friend, three or four leagues of the fruitfulleft part of his country Touron for building a city; which, according to our author, would be of the greateft confequence to the Portugueze, for the defence of fuch fhips as paffed toward China, and for harbouring a lleet, to be kept in readineds againf the Dutch, who pafs this way to China and Japan.
Other cities and towns mentioned by travellers are, (r.) Caccian, a royal feat in the province of that name, and reforted to by the Chinefe for trade. The Sanfons place it 35 miles fouth-eaft of Faifo, and the bay of Tonquin; and Borri fix or fevén legues from Touron. $r$ (2.) Sanfo, formerly a marttown, but yow decayed, becaufe its harbour is choaked with fand. (3.) Neoceman; which Borri fays is five miles long, and half a mile broad, in the province of Pulo-Cambi. In the way to the kingdom of Chiampa, we come to a country to which Martiniere gives the name of the Defert of Cochinchina, comprehending partof the kingdom of Cambodia, which has the mountains of the Kemois and Chiampa, on the fouth. Chiampa has the fea on the eaft and fouth, and the town which gives name to it on the fea-coaft, in latitude $\pm \frac{1}{2}$.
There are feveral iflands on the coaft, of which captain Hamilton fays, thofe neareft the thore are not dangerous. But as they have no commerce, we fhall take no notice of them. COD $\quad$ fis $H$, is fo well known that I fhall not fpend woids to defcribe it.
It is excellent food, when frefh, and being well prepared and falted, will keep fome time. Salted ced is the chief branch of the trade of falt-finh, which is very confiderable throughout Europe and America.
There are two forts of it, the one, called frefh, or white-cod, and the other dry, or prepared, and fometimes melwel, or kneeling, which, is the farme fort of fifh, bat diffexently falted and prepared for keeping, and what the Dutch call fockfilh.

## Frefh Cod.

The fifhery thereof is in the bay of Canada, on the great bank of Newfoundland; and on the ifle of.St. Peter, and the infe of Sable. The filhery elfewhere is inconfiderable. The veffels ufed are double-decked, and carry from 100 to 150 tons, and bring from 30 to 35,000 cod at moft, for fear of fpoiling before brought to France, efpecially thofe firt caught, unlofs falted with great care.
They are fitted out, belides the neceflary provifion, with utenfils for the fifhery.
Thofe of 100 tons have commonly from 20 to 22 hands, including the mafter and boys; and thofe of I 50 tonis 25 hands: and fo of others in proportion
The mof effential part of the fifhery is, to have a mafter who knows how to cut up the cod, one who is fiuled to take the head off properly, and, above all, a good filter, on which the preferving of them, and, confequently, the fuccefs of the voyage, chititly depends.

It is faid the Bifcayans *, fifhing for whales, difcovered firt the greater and lefler Cod-Bank, a century before Chrifopher Columbus's expedition, as well as Canada, and the new land of Bacalao, or Cod-Fifh; and that it was a Bifcayan Newfoundlander who firf reported it to Columbus, according to feveral cofmographers.

* See the article Biscay, and Remarks thereupoǹ.

Others alcribe the difcovery of it to a native of St Malo, named James Cartier, who is faid, in effeet, to have directed the Britons to it. But, be this as it will, it is certain, fince this difcovery, all the European nations that trade by fea have efteemed a difcovery of this important nature the moft certain and advantageous branch of trade.
This great bank is about 25 leagues from Newfoundland, about 150 long, and 50 broad.
The merchants of the fands of Olone, in Lower Poictou, inTereft themfelves moft of all the French in this fifbery, and with the moft fuccefs, though their city be fmall, and haven bad, having had fome years 100 veffels.
Other places are Bourdeaux, Marenne, Rochelle, Pornic in the duchy of Retz, Granville, Havre de Grace, Dieppe, Hornfleur, and other places on the coaft of Normandy; but thefe laft trade little in time of war, becaufe of the rifque there is in going out and in, the Channel being commonly full of privateers.
The accuftomed wages of the mafter and crew are one third of the fifh they bring.
The beft, fatteft, and largeft cods are thofe caught on the fouth of the great bank; and are, therefore, chiefly referved for Paris, where there is a great-confumption of them. Thofe caught on the north fide are commonly fmall, and fell for much lefs.
The beft feafon is from the beginning of February to the end of April; the fifh, which in the winter retire to the deepeft water, coming then on the banks, and fattening extremely.
What is caught from March to June keeps well ; but thofe taken in July, Auguft, and September, when it is warm on the banks, are apt to fpoil foon.
Some veffels fail from France in September, and return in January, for the Lent markets; but they rundthe rifque of bad voyages, not only on account of the gales in the Newfoundland feas, which are commonly very boifterous, but that the fifh, alfo, being much fpent by the rigour of the weather, quit the great bank, which, during the milder feafons, they frequented; fo that only few are then to be found, and thole moftly very lean and indifferent.
The voyage is made fometimes in a month or fix weeks, at others not under four or five-months. When Lent draws on, and the fifhermen have got half, or two-thirds of their lading, they haften back, thofe who firft arrive getting to the beft market ; fo that often they return with lefs.
Some are lucky enough to make a fecond voyage, while others are fill fifhing, and forced to return with a fmall lading at laft.
Every fifher takes but one at a time; the moft expert will take from 350 to 400 in a day; but that is the moft, the weight of the fifh, and a greatcoldnefs on the bank, fatiguing very much. It is falted directly: when the head is taken off, and it is opened and gutted, the falter fows them in the bottom of the hold, head to tail, in beds a fathom or two fquare, laying layers of falt and fifh alternately, but never mixing filh caught on different days. When they have lain thus three or four days, to drain off the water, they are replaced in another part of the fhip, and falted again; after which they are no more meddled with.
They are differently forted, according to the places where they are delivered and fold.
At Nantes are four forts: firt, the great cod, the 100 of which fhould weigh 900 pounds; fecondly, the middling cod, the 100 not weighing above 600 pounds; thirdly, the frnall cod ; and, fourthly, the refufe cod.
The forting at Rochelle and Bourdeaux is much the fame as at Nantes; only they do not reckon the frnall cad among the refure, whereas at Nantes they do.
At Nantes, and moif other ports in France, frefh cod is counted and fold at the rate of 124 , or 62 couple, the hundred; but at Orleans, and in Normandy, they give 132 cod to the hundred: at Paris only 108.
The greateft quantity comes from Nantes, the river Loire moft conveniently tranforting them to other cities; and they are very cheap there, except in war time.
Frefh cod is alfo imported into France from Holland and Iceland, in March, April, and May, in barrels weighing from 250 to 300 pounds, the one falted dry, the other in pickle : the firft are beft, becaufe the pickle, being apt to change, fpoils the fifh.
The barrelled cod is commonly thick, and cut in pieces; it is called fometimes cabillaud; what comes from Iceland is lefs than that from Holland. A laft confifts of 12 barrels.

## Dried cod-fifh.

In this commerce veffels of all burdens are ufed in France, but they are commonly large. As they can be died only in

VoL. I.
the fun, the veffels depart from March to the end of April; that they may have the furnmer for their work.
Thefe veffels carry out meal, brandy, bifcuit, peafe, beans, fyrup of fugar, fome ftuffs, cloths; and a few other goods, which they truck with the inhabitants of the French colonies for their dried cod, their roes, and their oils.
The reddeft is ufually moft in efteen.
They bait their hooks with herrings, of which great quantities are taken on the coaft of Placentia.
Mort of the veffels that go to the coaft of Petit Nord return ufually to Marfilles, and the ports in Italy and the Levant; where having fold their fifh, they take in goods, either on their own account or on freight.
The wages here are the fame as thofe of the frefl cod-fifhery, viz. one third of the fifh they bring, with this difference, that if advance is made to the crews of the other filhery, it is difcounted, at a rate agreed on between them, deducting the principal and intereft from the amount of their thare Thofe who go to Petit Nord have alfo one third; and, when the filh is fold in the Levant, ant the veffels iecurn laden to the weft, they pay them by the month, from the day they begin to take in their fecond lading.
The cod defigned for falting, though of the fame kind with the frefh cod, is much lefs, and, therefore, fitter for keeping, the falt more eafily penetrating it. The fifhery of both is much alike; but this is moft expenfive, as they carry more hands, and are longer out; but they ufe one half lefs falt. As the mafters arrive, they unrig their veffels, पleaving only their mates, with feven or eight men, and go on fhore to work in a tent, covered with branches of trees, and fome fails, and on a fcaffold of great trunks of pines, 12, 15, 16, and often 20 feet high, commonly from 40 to 60 feet long, and about one third in breadth. Here the chief work of $f_{3}$ lting is performed.
When the fifh hath taken falt, they wafh and hang it to drain on rails; when drained, it is laid on kinds of fages, which are fimall pieces of wood fixed acrofs, and covered with branches of trees, having the leaves ftripped off, for the better paffage of the air.
When they begin to bedry, they lay them ten or tweive thick, to keep in the heat, increafing the heap every day to 20 or 25: then they are carried to the fhore, where they are laid thinner, and turned every day. Lafty, they falt them again, beginning with thofe firf falted, and pile them in great heaps, where they remain till they lade them on board.
They pile them in the veffel on branches of trees, laid upon the ballaft, and round the Chip, with mats, to keep them dry.
The Bifcayants are accounted the moft expert of all others in this firhing; wherefore the metchants of Bayonne and St John de Luz fend hither feveral fhips, befide what go from Rochelle, Nantes, and St Malo.
It is fold in mof places by weight, excepting what is too moift and broken, which is fold by tale; as alfo in the ports of Normandy, where it is fold at the rate of 66 couple, or 132 cod , to the $100^{\circ}$; at Paris, alfo, as the frefh cod is. There are four kinds of merchandize belonging to the codfifh, in which there is fome traffic, viz. the zounds, the tongues, the roes, and the oil drawn from the livers. The firft is falted at the filhery, together with the finh, and put up in barrels from 6 to 700 pounds. The tongues are done in like manner, and brought in barrels from four to 500 pounds.
Thefe are in no great efteem at Paris, or any other part of the kingdom; the chief confumption being in Burgundy and Champagne.
The roes are alfo falted in barrels; they ferve to throw inta the fea to take fifh, efpecially pilchards, and are greatiy ufed on the coaft of Bretagne, where that fifhery is confiderable. The oil comes in barrels, from 4 to 520 pounds. Much of it is fent to Geneva : it is alfo ufed in France by the tanners, and even to burn, when the oil'of nuts and train-oil is fcarce. An excellent kind of little cod, not unlike what they call lingue, is caught on the north of Scotland, towards the coaft of Buchan, at a place called Battrag. It is falted and dried in the fun, on the rocks, and fometimes in the chimney.
It is moftly confumed where caught, and in other neighbouring places.

## REMARKS.

We have here a 依etch of the trade of France with regard to the filhery of cod on the banks of Newfoundland; from whence we may make a tolerable judgment of the advantages which have derived to the navigation and commerce of that nation by this fifhery, fince the remarkable æra of the treaty of Utrecht*, which gave them the right of fifhing on the banks of Newfoundland, and drying their cod upon ttages there : from which, if they had been then excluded, Great-Britain would have preferved fuch a proportion of this trade in her own fcale, as was then thrown into that of France; which would have made no little difference, in point of benefit, to the trade of this kingdom. See the articles Fisheries, Newfoundland.

ground

## COD

## C O F

cround their privilege of fighing at Newfoundland, and of drying their cod upon flages there erected.

- Art. 13. The ifland called Newfoundland, with the adja-- cent illands, fhall, from this time forward, belong of right * wholly to Britain; and, to that end, the town and fortrefs - of Placentia, and whatever other places in the faid illand - are in the poffeflion of the French, fhall be yielded and - given up, within feven months from the exchange of the - ratifications of this treaty, or fooner, if poffible, by the - moft Chritian king, to thofe who have a commiffion from - the queen of Great- Britain for that purpofe.
- Nor fhall the mofl Chrifian king, his heirs and fucceffors, - or any of their fubjects, at any time hereafier lay claim © to any right to the faid ifland and iflands, or to any part c of it to them. Moreover, it thall not be lawful for the - fubjects of France to fortify any place in the faid inand of - Newfoundland, or to erect any buildings chere, befides - ftapes made of boards, and huts neceffiary and ufual for - drying of fifh; or to refort to the faid illand beyond the - time neceflary for fifing and drying of fifh. But it hall - be allowed to the fubjects of France to catch fifh, and to - dry them on land, in that part only, and in no other be-- fides that, of the faid inland of Newfoundland, which - ftretches from the place called Cape Bonavifta, to the - northern point of the faid inland; and, from thence, run ning down by the weftern fide, reaches as far as the place - called Point Riche. But the inland called Cape-Breton, * as allo all others, both in the mouth of the river of $\mathrm{S}_{\mathrm{t}}$ - Lawrence, and in the gulph of the fame name, the ll here* after belong of fight to the Fsench; and the moft Chriftian King fhall have all manner of hberty to forify any place * or places therein.'

By means of an indulgence of this, that was weakly or wickedly granted to the French by this treaty, they have ever fince exceedingly increafed their fifhery to Newfoundland, as well on the coaft as on the great bank; the confequences whereof, to our misfortune, we have too fenfibly felt. But, as if the privilege of fifhing was not enough to have granted them, they obtained, likewife, that, in the fifhing feafon, they may refort to the very ifland of Newfoundland itfelf, and erect ftages, \&c. to cure and dry their fifh there.
In the tenth year of the reign of Charles I. liberty was granted to the French of curing and drying fifh at Newfoundland, but they paid a tribute for fo doing. Since the peace of Utrecht, they not only paid no tribute, but, by their neighbourhood at Cape-Breton, obliged us to keep a garrifon at Newfoundland, to prevent our being furprized there.

## REMARKs.

But the cafe is widely altered between Great Britain and France, fince by the Definitive Treaty of 1763, the French are now abfolutely deprived of the powerful fortifications of Cape-Breton, and of the poffefions of all $\mathrm{C}_{\mathrm{A}}-$ nada and its Dependencies; and are now entitled to no poffeffions contiguous to Newfoundland, except the very imall iflands of St Peter's and Miquelon, and which the VIth article of the Treaty fays, 'The king of Great - Britain cedes the Iflands of St Pierre and Miquelon, - in full right, to his Moft Chriftian Majefty, to ferve as a - Chelter to the French filhermen; and his faid Chriftian - Majefty engages not to fortify the faid iflands, to erect no - Buildings upon them, but merely for the convenience of - the Fishery, and to keep upon them a guard of fifty ' MEN only for the police.'
Great Britain enjoying by the faid treaty, at prefent, the full right of possession, of all other places adjacent to the Newfoundland fifheries, and France poffeffing only the before-mentioned two very fmall iflands, and thofe under fuch reftrictions and limitations as the treaty has provided; theredoes not feem any great likelihood that it yill foon be in the power of the French to difturb the Britifh fubjects in this part of North America.-We feem to have nothing to dread from France in thofe parts but their SmugglingTRADE; and the fame treaty having reftrained them from fifhing within a certain diftance from the coafts, a proper care taken on our parts to keep Guarda Coftas there, may pretty effectually prevent fuch practices. A vigilant look-out to oblige the French, at firft, to adhere inviolably to the treaty, will deter them from any very detrimental pradtices of this fort: and if they fhould here grofly deviate from the fenfe of the treaty, it feems now to be in the power of this nation to chaftize them for fo doing, without much expence at any time, and that, perhaps, by depriving them of the right of fifhing at or near Newfoundland at all. I cannot therefore but be of opinion, that fo wife and politic a kingdom will be cautious in the fteps they fhall take, left they fhould hereafter be for ever excluded from the Newfoundland fifheries.-This will prove a check upon them. For they are fo extremely fenfible of the prodigious advantage of this fifhery, and fo very intent upon purfuing it, that, from their firft attempts to make themfeives confiderable at fea, they have had it perpetually in view.-They firft obtained leave to fifh, upon paying a duty of 5 per cent. Afterwards they got that acknowledgment relinquilhed. -Not content with this, they went further fill; they procured a ceffion to
be made to them of the inand of Cape Breton, a maiden fifhery, that had fcarce ever been touched before; wherras that of Newfoundland is greatly exbaufted, and alfo feveral iflands in the gulph of St Lawrence. Still difcontented, they further obtained the liberty of curing and drying their fiih, fetting up ftages, and reforting to our inland of Newfoundland, during the time it is of any ufe to refort th ther that is, during the filhing feafon.-They, indeed, delivered us up the pofleffion of Placentia, and fome other places in Newfoundland; but they took care to have a much better place yielded to them in lieu thereof; with this extraordinary favour to them more than to us, that they have the liberty granted them to frequent our illand of Newfoundland, and erect fages, \&c. but we had not the privilege allowed us of doing the fame on any of their inlands, or on the ifland of Cape Breton, which they had exprefs permifion granted them to fortify, as they pleafed.
Great Britain having now poffeffed herfelf of $\mathrm{C}_{\text {ape }}$ Breton, and all the frong places in thefe parts of America, the cafe is quite changed from what it was.- The importance of Cape Breton alone to the French Newfoundland fifheries appearing by the following letter, it may not be amifs to infert it.

Copy of a Jetter written by Monf. de Pontchartrain, to Monf. the duke de Gramond, from Fontainbleau, September ig, 1713.
' I have received, Sir, the letter you did me the honour to - write me the $3^{\text {d }}$ of this month, with two letters that were - directed to you by the inhabitants of St Jean de Luz and ' Sibour, upon the fubject of their fifhery of dry fifh. From ' the account I have given the king of their demand, his mac jefty directed me to write, by his order, to Monfieur the ‘duke d'Aumont, his ambaffador extraordinaty at London, ' to afk of the queen of Great-Britain a permifion for them ' to go the next year to Placentia, and the liberty to continue 6 their fifhory in Alli the ports and harbours upon the coaft of - Newfoundland. I hall give myfelf the honour to acquaint ' you with Monfieur the duke d'Aumont's anfwer. I agree ' with you, Sir, that the country of la Bour will fuffer very ' much, hould they be deprived of their liberty of carrying on ' their fifhery of dry fifh; and you will be perfuaded of the ' attention I have to procure to the merchants that drive this ' commerce, the means to continue them in it, when I have ' informed you, that the king fent from Rochford, in the ' month of May laft, one frigate to go and lay the firt foun-- dation of an eftablifhment in the ifland of Cape Breton, - where filh is much more abundant than at the illand - of Newfoundland, and where one may take the fifh, and ' manage the drying thereof eafily. This frigate arrived, June - 26, at Placentia, from whence fhe was to contime her - courfe for Cape Breton, to which place I have caured to c be tranfported 100 men, to begin the fettlement. Ifis ma-- jefty will fend, in the beginning of the year, three fhips, to ' tranfport thither the garrifon of Placentia, and the inhabis tants of the ifland of Newfoundland, and to put the laft hand to the eftabliihment of that port. The merchants of ' this kingdom may. then fend all fuch fhips as they fall ' think fit to order, for the fifing of dry fifh, and for the < oils that are made from the fifh on the faid ifland. This fa-- vour ought to animate the merchants that drive this com' merce, to carry it on with vigour, from the advantage they ' will draw from it. This is all I have been able to do in - their favour, I defire you to be perfuaded of the great fin' cerity wherewith I have the honour to be.'-See America and Fisheries, \&c.
COFFEE, whofe good effects are univerfally efteemed, is the berry of a fmall tree, which formerly was known in no country but the kingdom of Yaman in'Arabia; and as the feeds, which are found in the heart of the fruit, are qualified to clear the head, and relieve it from fleepinefs, when they have been infufed in water, the Arabian monks are faid to be the firt who made ufe of them, that they might be able to perform their nocturnal devotions without drowfinefs. This artificial drink came eafily into repute among thofe nations that frequently invent new liquors to regale themfelves inftead of wine, which the law of Mahomet has prohibited among them. Some Turkin doctors at firft oppoied the introduction of this liquor, and declared it to be too fpirituous, and almof as inebriating as wine itfelf; but the muftif foon removed this difficulty, and coffee was vindicated from the imputation of any vinous quality, and was allowed to be lawful liquor. It was then publickly drank at Conftantinople and Cairo, from whence it has been tranfmitted to us about 60 years ago.
It is a great pity that this ufeful and popular feed cannot be fown, with any fuccefs at leaft, in our fouthern provinces, fay the French; but it will not fucceed either there, or in any other part of the kingdom, by reafon it fhould be fown immediately after it has been gathered. It was formerly imagined, and feveral people are ftill perfuaded, that the Arabians of Brokka drenched the berries in a brine, or fome lixivious liquor, before their exportation, to prevent their beins fown with any fuccefs, and that they themfelves micht not be

## C O I

C O I
deprived of the profit of this plant, by it's propagation in other regions. But, fince fome of the trees have been tranfported to the Ife of Bourbon, as well as to Batavia and Holland, and likewife from Holland to France, where they have been cultivated in a fuccefsful manner, we have been convinced that the feeds of this plant will never profper, if their plantation be delayed ever fo little. Thofe that were gathered at Amfterdam, and fent to Paris, were unfuccefsful; but all fuch as were gathered at Amfterdam, or in the king's gardens, from little trees which had been planted there, proved very thriving, when care was taken to fet them the moment they were gathered.
The coffee-tree may be feen in the royal garden of France, where it's height does not exceed five or fix feet, and it's ftem is about an inch in thicknefs; but it rifes to the height of 40 feet in Arabia and Batavia, though it's thicknefs feldom exeeeds five inches. It is always covered with flowers and fruit. It fhoots out, through the whole length of it's ftem, a growth of branches, which are exactly oppofite to each other, and in different pairs, one of which croffes the other. The leaves, which refemble thofe of the common laurel, are alfo ranged in couplets; at the bottom of thefe fring the fragrant flowerbranches, which have a near fimilitude to thofe of jafmin, and have five chives in their center. The berry, or fruit, which appears after thefe, is not much unlike a hard cherry in it's colour and fhape: the fleff, which is not difagreeable, ferves as a tegument to a couple of thells, each of which contains a feed. One of thefe is frequently abortive, becaufe it's due fecundity is feldom imparted to it in the flower feafon; the other grows ftronger, and receives a better nourifhment. Some perfons infufe all the fruit, after it has been dried;
others chufe the fhells; but the beft and moft ufeful method is only to infufe the berries, when they have been moderately róafted in a veffel of varnifhed earth, which is always preferable to one of brafs or iron. The berries are judged to be fufficiently roafted when they begin to affume a violet hue, and difcharge an oil of an agreeable fcent. The coffee which is newly ground has always the moft virtue; and, when it is infufed in boiling water, it lofes fewer of it's volatile parts than when it is immediately poured into cold water: When the heat of the fire raifes the powder to the edge of the cof-fee-pot, it is precipitated with a few drops of cold water.
It is the opinion of our beft and moft experienced phyficians that coffee promotes digeftion, and corrects tharp humours, when it is drank after meals. Several perfons prefer it in the morning, for it's diflipation of vapours, and other diforders of the head, and for imparting a livelinefs to the fpirits. Every one knows how much the repofe of the night is hazarded by the repeated ufe of this liquor in the fame day, and what precautions are taken to correct the bitter flavours of it's falts with milk and fugar, and bread ; fugar is a conftant ingredient, bread is proper when this liquor is drank in a morning, and milk is neceffary for thin conftitutions, which would otherwife be injured by the falts.
Thofe which are reckoned beft, are the fmall and greenifh berries, and efpecially thofe which difpenfe an agreeable fcent, and are tranfmitted to us from Cairo by the way of Matfeilles: they are much more efteemed than the large and inodorous fecies, which is tranfported to us over the acean.
The ifland of Jamaica affords very good coffee; and other of our ifland colonies would afford very good, was due care taken to cultivate it.
COIN.

Sir Ifaac Newton's TABLE of the affays, weights, and values of moft foreign filver and gold coins, actually made at the Mint, by order of the privy-council. With notes and explanations, fhewing the methods of keeping accounts in thofe cities, on which negociations in bills are ufually made; and a calculation of the real or intrinfic par of exchange.

## FOREIGN SILVER COINS.

The piater of Spain, or Seville piece of 8 reas, now reduced to 10 The new Seville piece of eight
The Mexico piece of eight
The Pillar piece of eight
The Peru piece of eight, coarfer, but of uncertain allay
The old ecu of France, or piece of 60 fols Tournois
The new ecu, or piece of 5 livres, or 100 fols
N. B. The ecu of France fhould be 2 dwts worfe by law.

The crufado of Portugal, or ducat worth 400 reas, now marked and raifed to 480 reas The patacks, or patagons, of Portugal, worth 500 reas; now marked and raifed to 600 The ducaton of Flanders, or piece of 60 fols, or patars
The patagon of Flanders, or crofs dollar, or piece of 48 patars
The ducaton of Holland, or piece of 63 ftivers
The patagon leg dollar, or rix dollar of Holland, or' piece of 50 ftivers
The three guilder piece of Holland, or piece of 60 ftivers
The guilder florin, or piece of 20 ftivers
The ten fhelling piece of Zealand, or piece of 60 ftivers
The lion dollar of Holland, or $\frac{2}{3}$ of the ducaton
The ducaton of Cologn
The rix dollar, or patagon, of Cologn
The rix dollar, or patagon, of the bifhop of Liege
The rix dollar of Mentz

## C O I

A TABLE fhewing into how many fhillings a pound weight of filver hath, at feveral times, been coined; from Mr Lowndes, and Bifhop Fleetwood. Very ufeful for the readers of Mr Rapin's Hiftory of England.

Which ftandard has continued ever fince.
For the computation of foreign monies into fterling moriey, fee the articles Exchange, Arbitration, and all the chief States and Empires in Europe, under their ordinary denomination, as France, Holland, \&c. \&c.

An explanation of the foregoing tables of Coins.
For underftanding the ufe of this table, it is to be obferved, That the Englifh pound Troy contains 12 ounces; one ounce 20 pennyweights; one pennyweight 24 grains; and one grain 20 mites.
The prefent Englifh flandard for gold coin is 22 carats of fine gold, and two carats, or $\frac{1}{T_{2}}$, of alloy.
The filver coin contains II ounces two pennyweights fine filver, and 18 pennyweights of alloy, in the pound.
The firf column of the preceding table expreffeth the finenefs of the affayed piece; the letter $B$ fignifying better, and W worfe, than the Englifh ftandard.
The fecond column, the abfolute weight of the piece.
The third column, it's ftandard weight, or it's quantity of ftandard metal.
The fourth column, it's value in Englifh money.
For example: in the fecond article of filver coin, the new Seville piece of eight is $I \frac{3}{2}$ pennyweight in the pound worfe than the Englifh ftandard weight, 13 pennyweights, 21 grains, and 15 mites of fterling filver; and is in value 43.1 I decimal parts of a penny.
In the royal mint a pound of ftandard gold is cut, or divided, into $44 \frac{1}{2}$ parts, each a guinea, at which rate a guinea will weigh 5 pennyweights, nine grains, $.43^{82}$ parts.
They were firft coined in king Charles 2 d 's reign, and went for 20 Ihillings, and had their name from the gold whereof they were, being brought from that part of Africa called Guinea, which the elephant on them likewife denotes.
By the par of exchange is meant, the precife equality between any fum or quantity of Englifh money, and the money of a foreign country, into which it is exchanged, regard being had to the finenefs as well as to the weight of each.
And becaufe this paper may be of ufe to others befides merchants, who defire to know the ftate of our foreign trade, or bur fituation as to tranfactions in money with other countries ; feeing the exchange with them, unlefs where fubfidies are paid to princes abroad, armies or fleets maintained, or the dividends or fale of our ftocks belonging to foreigners may have influence; I fay, the courfe of exchange indicates the ttate of our commerce, as truly as the pulfe does that of the human body; and, for the ufe of fuch gentlemen, there is here fubjoined an account (in thofe countries with whom we exchange) of the feveral denominations in which accounts are kept, as likewife the real courfe of exchange, from Caftaign's Paper, as it ftood March 28, 1729.
In Holland, or the Seven United Provinces, accounts are kept in guilders, ftivers, and penings, or grofs. One guilder being equal to 20 ftivers, and one ftiver to 16 penings, or two grofs; fix of their guilders they reckon equal to one pound, or 20 fchillings Flemifh, on which laft the exchange between London and thofe countries is always computed, and not on the guilder, though they are, by the above account of the feveral denominations, eafily reduced one into the other. The real fpecies are the rix dollar, valued at 50 ftivers; the ducatoon $=63$ fivers; but, though this be the current value of that piece, it is received at the bank of Amfterdam only at 60 ftivers, which makes the difference, called agio, really of 5 per cent. between bank and current money.

Vos. I.

The par of exchange between Englifh and Dutch money is eafily found, thus, as, by Sir Ifaac's table, the ducatoon of Holland is worth intrinfically 65.59 d. Englifh, which is received at the bank, as has been already faid, at 60 flivers, or three guilders, and confequently is equal to 10 fchillings Flemifh; therefore, by the rule of three, as 65.59 d . Englifh is to ros. Flemifh, fo is 240 d , in a pound Englifh to a fourth number, which will be found to be 36.59 s. Fleminh; and fo much bank money at Amfterdam thould be received for one pound, or 240 pence ferl. This is the real par: and whatever is received more or lefs than this, is gain or lofs to England. In this, and the other calculations of the par, regard is had only to the coined filver of the feveral countries, and not to the accidental price, or value, that filver in bullion may be, for this never is long the fame.
In Flanders, or the Ten Provinces, accounts are kept either as in Holland, or in pounds, fchillings, and pence Flemifh. One pound Flemifh $=20$ fchillings, and one fchilling $=12$ pence; the rix dollar here only 48 ftivers. In reducing the money of this country into that of Holland, you are to obferve, that one pound Flemith, as it is called, is $=$ to 'fix guilders, and, of confequence, one fchilling Flemifh $=$ fix flivers, or 12 grofs, one fiver being $=$ two grofs.
Antwerp having been formerly the chief city of trade of the whole Seventeen Provinces, we exchange even upon Holland to this day in Flepailh money. In fome parts of Flanders they divide the fhilling into patars, inftead of pence, fix whereof go to a fhilling,
In Hamburgh, accounts are kept in marks lubfh; a mark is $=16$ fchillings; a fchilling is $=12$ pence, or deniers: a rix dollar is $=$ three marks, or 48 fchillings lubfh: but there is a difference between bank money and Hamburgh currency; bank money is 16 per cent. better. In exchange for London, they give fo many fchillings and groots Vlamifh for a pound fterling, 8 July, 1740,34 fchillings, two groot Vlamifh, which is bank money, and makes 12 marks 13 hillings banco.
Leghorn. They.keep their accounts in crowns of gold, which is divided into 20 folds, each fold into 12 deniers. A crown of gold, which they mark thus $\in$, is divided otherwife into $7 \frac{1}{2}$ liras $;$ and a dollar, or piafter, of exchange, is $=$ fix liras, a ducat = feven liras̀.
Venice. They have two forts of ducats, one banque, and the other courant, the latter 20 per cent. worfe, or as the agio rules, than thofe called bank ducats; each of them are divided into 124 foldi, or 24 gros, or fix liras four fols, for they account likewife by liras, foldi, and picoli, as we do in pounds, fhillings, and pence; fo that they have two forts of liras, though each divided in the fame manner; one lira di gros is $=$ ro ducats. A fequin being $=17$ liras, and worth, by Sir Ifaac's table, 9 s .5 .7 d . fterling. Say therefore, If 17 liras give 9 s .5 .7 d . what will 7 liras 8 foldi a ducat of bank give? Anfwer, 49.492 d .
Genoa. Accounts are kept in liras; fols, and deniers, fummed by 20 and 12, as we do, which are reduced into dollars, or piafters, of 96 fols.
In France, accounts are kept in livres, fols, and deniers; one livre is $=20$ fols, and one fol $=12$ deniers.
In exchanging with that country we pay fo many pence fterling for their crown, by which crown is always meant 3 lirres, or 60 fols, though they have not always any coined piece of filver precifely of the value of 3 livres; therefore this ideal or nominal crown, is to be diftinguifhed from the coined, or seal piece of filver, which paffes likewife under the name of a crown, or ecu, but, for diftinction's fake, is called un ecu d'argent, or ecu blank, or a crown of fo many livres, for this crown in fpecie may be double that of account, or exchange, and then, confequently, the crown in exchange is paid in France by the half of that real or fpecie crown.
The exchange between France and other countries varies more than any other, owirig to the frequent alteration of their coin, which is done by the king's arret, wherein he declares and orders, how many crowns in fpecie, or livres, fols and deniers, are to be coined at his mints out of the mark, as they call it, or eight of their ounces of filver; but this mark is only 7 oz .17 pwt 12 gr . Eriolifi weight; which, at 5 s . 2 d . is worth only $1.2: 0: 8 \frac{1}{4}$ fterling.
By the arret in France, of i 5 June, 1726 ; the king orders, that there thould be coined out of the mark $8 \frac{3}{5}$ crowns, each crown to pafs for 6 livres; that is, the mark, when coined, to pafs for 50 livres 5 fols : from whence we have this equation, that 50 livies 5 fols French are intrinfically worth, or $=1.2: 0: 8 \dot{\mp}$; from thence the par of exchange on the crown, or 3 livres French, may be deduced; for, if 50 liveres 5 fols be $=1.2: 0: 8 \frac{1}{5}$, whatever is paid more or lefs than this is lofs or gain, and, confequently, as the courfe of exchange then was, by the aceount fubjoined from Caftaign's Paper, France had the advantage of about 10 per cent. This fhews their ignorance who, in books printed on this fubjeet, pretend to note the par of exchange with France; as if their coin always remained the fame; whereas there is no other way than by an aClual affay, and weighing their fpecies at the time, or feeing the king's arret: and indeed that exchange is fo variable, that I have known it, within the fpace of but a few years, from 5 .

Engilih

## CO I

## C O I

Englifh to near 60d. for their crown of three livres; the firlt indeed was payable in their bank-notes, then in great difcredit, viz. Anno 1720.
In Madrid, Cadiz, Sevile, and all Spain, accounts are kept in maravedies, 34 of which is $=$ to a rial, and 272 to a piafter, or piece of $\frac{8}{6}$ rials new plate, or 10 of vellon. The piftole of gold is $=$ to 4 pieces of $\frac{8}{8}$. A rial of plate is worth 34 maravedies of plate, as a rial of vellon is worth 34 maravedies of vellon; fo that thofe two terms of plate and vellon, in Spain, not only lignify the different metals of filver and copper, but the difference in accounts of money, for the piece of $\frac{8}{8}$ which is only $=272$ maravedies of plate, is $=510$ maravedies of vellon ; fo they fay a rial of plate, or a rial of vellon; a maravedie of plate, or a maravedie of vellon; though the laft is only a fmall copper coin.
Another oblervation to be made on the exchange with Spain, is, the alteration in the augmenting their fpecie; the dollar or piaftre, which formerly went for 8 rials, being now raifed to 10; fo that London exchanging upon the piece of eight of 8 rials on that country fill as formerly, the alteration in the courfe of exchange fhould be in proportion thus, if io rials of plate, or a dollar, be worth 54 d . fterling, what is 8 rials worth? An\{w. 43.2 d .
Lifbon. Accounts are kept in reas, whereof 1000 go to what they call a millrea, which is no real coin but money of account ; a crufado of filver is 480 reas. But, as moft payments are made in gold and few or none in filver, the meeda being worth only $26 \mathrm{~s}, 10.4 \mathrm{~d}$. the rule to find the par will be as follows, if 4800 reas, for fo many are in a moeda, give 26 s .10 .4 d . what will 1000 or one millrea give? Anfwer, 5 s .7 .166 d . which is near 2 per cent. in our favour.
The following table needs no explanation to merchants, but, to fuch as are not, they are to be informed, that it is a copy of a paper ufually printed twice a week, by an eminent ex-change-broker, or by one who is daily informed by the feveral dealers in exchange, of the current prices of the monies of the feveral countries we deal with in that way, and is looked upon to be very exact.
2. There are different ways among merchants of negotiating bills of exchange, according to the cuftom of the countries abroad on which they are drawn; for example, if a bill is demanded on Amfterdam, Rotterdam, Antwerp, or any other of the feventeen provinces, or on Hamburgh, the negetiation is always meant to be on the pound feerling, and then the queftion or bargain to be made is, how many fchillings and pence Fleminh are to be received in thofe parts for each pound fterling, and as this varies according to the demand, and one receives fometimes more, fometimes lefs, it is termed, by fome writers on this fubject of exchange, giving the certain for the uncertain, though not fo properly. On other countries it is the reverfe of this, for a piece of a certain value or denomination is ftipulated to be delivered abroad, and the agreement to be made is, how much Englifh money is to be paid here for that piece of foreign coin; thus we exchange with France on their crown or three Jivres Tournois, with Spain on their piece of eight, with Portugal on their millrea, \&c. as may be feen in the paper fubjoined.
Laftly, It is to be obferved, that the value or prices of Englifh money towards the left-hand are the rates at which bills were actually negotiated on the exchange of London the poftday of that date, and that the column towards the right-hand is the par or intrinfick value, by which may be known at any time which has the advantage, this or the country we exchange with.
Courfe of exchange by Caftaign's paper, 28 March, 1729 , the intrinfic or par at 5 s .2 d .

## Of the augmentation and diminution of Coin in denomination.

Under the article Money, I fhall endeavour to fhew the effects of the increafe and decreafe of the actual quantity of circulating money in a ftate; what I propofe to confider, at prefent, is the nominal increafe and decreafe of money, as it hath been commonly practifed in France.
Let the ounce or crown of filver in France be at 4 livres, and then let a recoinage be made with a new ftamp; let an edict be iffued, ordering the new ftamped ounce to pafs for 5 livres in payments, while the old famped ounce fhall con-
tinue to pafs but for 4 livres, and in a minth or two to be decried and made bullion, to be recived only at the mint, like other bullion, at 4 livres the ounce.
If the general ballance of trade be at this time againt Frame, this difpofition of the coin will prove foon incffestual ; for, as in this cafe there is money due to foreigners, the moneyexparters will at firtt give 4 livers 5 fols in new mency for an old crown, or for an ounce of bullion; and then 4 hr . 10, 4 liv. 15,4 liv. 17,6 , becaufe the old coin is as good in foreign countries as the new, and fo the intention of the edict for the recoinage will be null and eluded: for, although the ignorant people may at firft keep to the tenor of the edict, yet, as the money exporters offer them more for their old coin than the mint, they will fell it under the rofe, or make evafive bargains againft the law.
This will be the cafe, if the general ballance of trade be againft France at the time of the recoinage; but, if the ballance be in favour of France, a good part of the old coin will be carried to the mint, according to the intention of the edict, to be recoined; for, though feveral money-proprictors will lock up the old fpecies, and chufe to keep it by them without intereft for a year or two, rather than lofe 20 per cent. of their weight, yet, as there is no domand for the old fpecies for exportation, thofe who do not leck it up; thave no way to employ it, but to carry it to the mint: all undertakers and confumers muft do fo for the neceffary exigences of barter, and the foreigners who have money payable in France, having none of the new ftamp, muft fend their bullion to the mints in France by their correfpondents, to pay their debts. Let us fuppofe $10,000,000$ ounces of filver of 4 livres, or $40,000,000$ of livres, carried on the circulation in Paris before the recoinage; that $2,000,000$ ounces are locked up, and that $8,000,000$ ounces are gradually recoined at the mint ; thefe 8 millions, new itamped at 5 livres, will make $40,000,000$ of livres in circulation, and confequently a livre will go as far now as before, though it be one fifth part lighter: 'but, if about a year after the old coin is alfo raifed to 5 livres the ounce, and the money locked up comes into circulation, there will be then $50,000,000$ of liveres in circulation, though fill no more than $10,000,000$ of ounces of filver, and confequently commodities will be dearer in denomination, or in livres, though till of the fame price as before, in weight of money:
Let us again fuppofe the coin to be diminifhed by an edict : fol, or I per cent. monthly for 20 months, when the ounce, or coin of 5 livres, thall be reduced to 4 livres, thefe will be, and commonly are, the confequences.
The undertakers of the foreign trade will, from the faci lity they find of borrowing, as they fancy, without intereft, bring in large quantities of foreign commodicies for the confumption of two or three years fometimes, and at high prices, fo raifed and enhanced by the greatnefs of the demand: on the other hand, the undertakers of the French commodities will raife the price of them, and chufe to keep their goods by them, rather than fell them for a fpecies that diminifhes monthly, unlefs they can raile the price in proportion to the fall of money. Thus not only the foreign commoditics, but alfo the home commodities in France, rife extravagantly in their price, during the diminutions; and this dearncfs of the French commodities makes the foreigners buy as little of them as poffible.
From thefe two operations it is plain, the ballance of trade ought to turn againt France, during the time of the diminutions, and 'tis remarkable, that the exchange with foreign places, in thefe circumftances, is 8 to 12 per cent. to the difadvantage of France: fo violent is the demand for the exportation of money. In the mean time, the French puhlic funds rife in value, and the king is enaliled, by the fear people have of lofing by the diminution, to borow gotd fums upon which he is content to lofe the diminuticons hinelf; but, in order to retrieve part of that lofs, he commonly makes a recoinage and augmentation, a out the end of the time fixed for the diminutions.
At this-juncture, the money in the Fing's coffers is locked up, 'till it can be iflued in the new augmented coin. Several money-proprietors, not on'y keep up their furns at this time, but alfo long after the augmentation, rather than exchange them for new money at 20 per cent. lols in the wei hat. Geat fums, as we obferved, have been exported in the paymeit of the ballance of trade, and confequently the fearcity of money in France at the clofe of the diminution, and beginning of the augmentation, is fo great, that barter and trade are in perfect convulfions.
T is not furprizing, that, in thefe circumftances, all commodities grow vaftly cheap in France; they have foreign commodities for the confumption of feveral years, and their own commodities unexported by foreigners, and lying on their hands, are in great plenty. On the other hand, money, though lighter fince the augmentation, is excefively fcarce, and the king iflues it out of the mint for the payment of his troops, officers, \&c. barely for their futtenance. So that the increafe of the money in denomination does not after, even nominally, the diminution of it's quantity by exportation and boarding.

Now the foreigners, finding the French commodities cheaper by 50 or 60 per cent. than before, will buy large quantities of them, while the French, on the other hand, want to buy nothing from the foreigners, and fo the ballance of trade, which was againft France during the diminutions; turns in it's favour about the time of the augmentations.
And this turn, it fhould feem, ought to bring back into France the money exported, but it is to be confidered, that the French bought the foreign goods at high prices, and now fell their goods at very low prices; and fo, upon the whole of thefe operations, the French are grear lofers. On the contrary, the French undertakers bought foreign commodities for the confumption of feveral years, and the foreigners who fear to lofe by the diminutions in their own councry, do not go fo far, and their undertakers or merchants only buy reafonable large quantities, without over-trading themfelves by borrowing of money. And thus it happens the ballance of trade againft France is ftrong and violent at the time of the diminutions, but the ballance, which turns in favour of France at the time of the augmentations, is flower and more regular. Though the new fecies after the augmenta ion is current at 20 per cent. above the price of the old fpecies and bulion, at the mints in France; yet the foreigners will fend bullion to be recoined in the French mints at 20 per cent. lofs in the weight, becaufe they have no new coin to fend, and that they find the French commodities from 50 to 60 per cent. cheaper than before, out of which they can afford to lofe the 20 per cent. tax at the mint.
It has been obferved, that the Hollanders, who, in the time of the diminutions, fold the French merchants tea and fpices, have had the fame commodities fent back to them after the augmentation, for about $\frac{2}{3}$ of the original coft in Hol land, and that the tax of the mint has come out of the faid $\frac{2}{3}$ fent in fpecie to Paris from Holland.
From what has been faid, it feems pretty apparent, that the king may levy a tax of 20 per cent. or more upon all the money carried to the mint, and that a great part is carried in at that difadvantage, when the ballance of trade is in favour of France.-That, if an augmentation on recoining is made after diminutions, the ballance of trade will be naturally in favour of France, - And that the faid tax at the mint is levied at the expence of the French fubjects only, and not of foreigners, who find the cheapnefs of French commodities an advantage; not only proportionable to the faid tax, but confiderably exceeding it. And experience fhews, that foreigners who travel in France, find their account better to fpend their money there;, while the tax of 20 per cent. is levied at the mint, than when the old and new coin are at the fame price, and the ballance of trade equal or in favour of France, For, in this cafe, all the money in Fratice enters into circulation, and enhances the price of commodities.
Nor does the tax at the mint only fall upoti the Fretich fubjects, but it hurts them in the ballance of trade, when the hew coin is counterfeited in foreign parts, and fent into France. For, in this cafe, the foreigners get 20 per cent. from the French fubjects for nothing, and yet have their commodities at low and cheap prices. And fo much as they get by falfifying the French new coin, diminifhes the fum due to the French nation in the ballance of trade.
${ }^{3}$ Tis eafy to conceive, that while the ballance is due to France, and the tax of 20 per cent. levied at the mint, the rule of foreign exchange with France muft be taken from the par of the price of bullion at the mints in France, ourice for ounce, and not ounce for ounce of new coin; this tax, being a force and reftraint on trade for the time it is practicable, makes an exception to the rule of exchanges we have laid down elfewhere in one refpect; though, as an ounce of filver in bullion or old fpecie is worth in France fo much at that time, an ounce, fent from a foreign country thither, will be juft worth the fame, and the exchange will be fixed upon that par, and confequently the rule of exchanges, laid down in this work, will ftand univerfally true. See the articles Ballance of Trade, Cash, Circulation; Exchange, Money.
However, the inifchief of this reftraint on triade, as we have oblerved, falls wholly upon France; and it muft furprize every one, who maturely confiders the matter, to hear, that even a minifter of the finances in France fhould alledge, that this tax was a mighty advantage France maintained againft foreigners, who were forced to pay 120 ounces̃ for every 100 ounces they owed in France: and fuppore it might be continued as long as the French govetnment thought fit. But, if the inductions we have made were not fufficient to prove the miftake of thefe notions, it would be fufficient to prove the error in the firt of them, from this fingle fact; That France is always lower and in greater diftrels at the times it makes that feeming advantage by foreign trade, than at any other time, all other circumflances being equal. Now it feems to be a matter of furprize, that whereas the augmentations and diminutions in Fiance were fo conftantly practifed for above 30 years, and that France loft confiderably in all thefe operations, as has been explained; and that many other ways of lev ing money for the king would be lefs prejudicial to the fubject; I fay, it feems furprizing,
that the effects of thefe operations have not proved more fatal to France than they have appeated to be.
But it is to be obferved, that bankrupteies in France occafioned by the diminutions, whereby foreigners have often loft greatly, have frequently faved France very large fums: nothing clears a ballance due to foreign nations falter, than the bankruptcy of the undertakers and dealers concerned in it. In the year 1715 , there were ig foreign dealers in 20 broke in France. Of 27 dealers for foreign parts in the little city of Rochelle, 24 were broke in that year. And, of about 200 bankers at Paris, not above three or four ftood it. After the South-Sea frenzy in England, the bankruptcies faved the nation above four millions of ounces, which otherwife mult have been made good to foreigners.
But this is a forry way of clearing the ballance of trade and 'tis apparent upon the whole, that the diminutions and augmentations in France, not only contribute to the impoverifhing the kingdom, but keep it commonly under great uneafineffes, difficulties, and diftractions.

Of the augmentation or diminution of the $\mathrm{C}_{\text {rin }}$ in denomination, to fix a par between Gold and Silver.
The proportion of the value between gold and filver, has varied in different ages and countries; according to the quantity of thefe metals.
Before the difcovery of the plate mines in the Wett-Indies, an ounce of gold in Europe was equal in value to ten ounces of filver; but, fince filver has been brought in great quantities out of New Spain, it was found in the altercations at market in Spain, that an ounce of gold was equal to 16 ounces of filver, and the value of gold and filver was fixed by law in that proportion; and the fame rule was kept to nearly in the other countries of Eutope, allowing fome fmall differences for the conveniencies of barter, and the management of fome directors of mints. The Eaft-India trade brought in gradually fome little variation in this par, by exporting filver and bringing home gold; and, fince that, the difcovery of the Brazil gold mines has influenced it fill more:
In Japan, the proportion of gold to filver is r to 8, in China I to 10, in the Mogul empire I to 12, and fo weftward as you come nearer to the filver mines, as t to 13 , to 14 ; $\& \mathrm{c}$. But, as the quantities of gold began to increafe in Europe beyond the proportion of thofe of fiver, this laft matal grew again in requeft, and fold in the altercations at an agio or profit againtt gold (upon the foot of the par of 1 to 16 ) of 2, 3, 5, 8 per cent. The French, in order to have a larger quantity of filver in circulation, as it is fitter in barter than gold, fixed the proportion of their gold coin to their filver coin in 1700 , as 1 to 15 : but the Englifh let the old par remain, and the coins to find their own proportion in the altercations at market: but then, finding the inconveniencies of this in barter, where filver paffed in coin for lefs than it did at the market; and, confequently, obferving that no filver remained in circulation but fuch as was worn, in order to preferve fome for the common circulation and barter, they fet themfelves to conifider of fixing a new par between gold and filver.
This might have been eafily done, perhaps, if they bad agreed to give filver coin that value by law, which it found at market by the agio given for it in exchange for gold; and if the ounce of ftandard filver, which fold for 5 s. $5^{\text {I }}$ d. had been coined to pafs at a proportionable price by law, having regard to avoid fractions.
And in regard the fame caufes, which raifed an agio upon filver, long fubfifted, they might reafunab:y, for that time, have put the coin at 55 . 6d. by law, fince it was nearly worth that at market.
But, inftead of that, it was determined by Sir Ifaac Newton's reprefentation to the treafury to lower gold, and in confequence guineas were reduced from 21 s .6 d . to 21 s . This reduction did not bring the proportion near enough, and the mifchief was only a little eafed but not cured; and no filver for a long time was coined at the Tower, but fome South Sea fhillings under the old ftandard, which was, 'tis conceived, very neceflary, and ought to have been done at firft.
Though the reduction of gold was not fo netural, perhaps, as the raifing the value of filver (or rather giving filver in coin the value it had at market); yet it would have equally antwered the end of fixing the par neceflary between thefe metals, if the reduction had been great enough. But fill it would have been; as in effect it was, a difadvantage to England, with regard to foreigners.
The foreigners remitted all their money in the Englifh funds in gold or guineas at 21 s .6 d . If they fent any part in filver, they had the market-price for it, 5 s. 4 d. to 5 d. $\frac{1}{2}$; and, if we fuppofe their capitals in the Englifh funds to amount to no mbre, at that time, than only 5 millions fterling, they paid for them in guineas at 21s. 6 d . or fomething equivalent, $4,651,163$ guineas; and they received for them at 21 s . $4,761,904$ guineas, which was a clear lofs of 110741 guineas.
If it fhould be objected that foreigners remitted thsir funds by bills of exchange, it might be anfwered, that would have
been the fame thing as remitting them in guineas of $2 \mathrm{r} s .6 \mathrm{~d}$. fince that operation would bave hindered the exportation of fo many guineas at 21 s .6 d . or fo much filver at $5 \mathrm{~s} .5 \mathrm{~d} . \frac{1}{2}$ per ounce; and i have taken notice of this frivolous objection, becaufe fome grave writers have ufed it on the like occafions. If it fhould be objected, that filver is the true old money of England by law, and as fuch ought not to be altered, I anfwer in that cafe, that gold ought to have been merchandize as in China, and not money by law: if that had been the cafe in England, guineas would not have paffed at market for above 20 s .8 d . and there would have been no need of fixing any par between thefe metals; but, as the cafe ftood, guineas were money at 21 s .6 d . and no body could refufe them at that price: and, as filver grew in requeft above the value or proportion given it by law, it is humbly fubmitted, whether or no a law ought not to have been made to give it that value, which the market gave it. And all laws for fixing the proportion of gold and filver were made in confequence to the market-price in all ages, for there was no other rule but the market-price whereby to find their proportion. The lowering of gold was, indeed, for the advantage of the revenue, the landed men, and the proprietors of the ftocks; and feems only to have been to the difadvantage of the farmers and others, who had payments to make in weightier money than before, and of the Englifh nation in general with refpect to foreigners.
The proportion between gold and filver, in England, is $15 \frac{1}{5}$ to I. The Englifh gold coin is 22 carats fine, and $44 \frac{1}{2}$ guineas are cut out of a pound Troy: the filver coin is II ounces 2 penny-weights fine; that is, there are 18 penny-weights of alloy in the pound Troy, and 62 fhillings are cut out of the pound. Whence the value of the pound weight of fine gold will amount to 50 . 19 s. 5 d . $\frac{1}{2}$ fterling, and the value of the fame pound weight of fine filver to 31.7 s . and fomewhat more than a farthing, viz. 67.027 s . Confequently fine gold is to fine filver as $15 \frac{1}{5}$ to $x$, whereby it appears that gold is higher, and filver lower rated in England, than in any other nation in Europe.
In Spain and Portugal, indeed, the proportion of gold to fllver, in their coin, is as 16 to 1 ; but, as this high price of gold carries away their filver, and there is, on that account, for the moft part a premium of 6 per cent. on payments in filver, it comes to the fame thing, as if gold was to filver there really as $15 \frac{1}{2}$ '5 to I. So that we may fay, without exception, gold is higher valued in England than any where elfe in Europe. The confequence of which is the draining the kingdom of it's filver; and therefore 'tis humbly fubmitted, if it may not be highly neceflary fome how to remedy fuch an evil.
Some, indeed, have obferved, that laws, which fix and fettle the proportion between gold and filver coins, are very prejudicial : to fupport which they reafon thus,
For as metals themfelves, fay they, vary here in value weekly as the proportion changes abroad, one or other of our coins muft be carried away with lofs to the nation, as is often the cafe with our filver coins; as for example: A pound of ftandard filver is coined into 62 s . fo that one pound and $\frac{1}{62}$ thereof makes 63 s . and exchanges for three guineas. By Caftaign's paper of February 3, 1740, ftandard filver was at $5^{\text {s. }} 7 \mathrm{~d} . \frac{1}{2}$ per ounce, which makes, for 1 pound and $\frac{1}{6}$, 68 s .7 d . $\pi^{4}=$, being above $5 \mathrm{~s} .7 \mathrm{~d} . \frac{4}{67}$, which is more than the currency; almoft 9 per cent. lofs to us, and gain to foreigners, who carry away our filver coin. Can we wonder at the fcarcity of it, when we make it fo profitable an article to be carried away? Mr Locke obferves, in his Confiderations, \&c. p. 167 : ' If your law fet it, i. e. the proportion ' of gold to filver, at 15, when it is at the free market rate ' in the neighbouring countries as 16 to I , will they not - fend hither their filver to fetch away your gold at $f_{10}$ lofs ' to you? Or, if you will keep it's rate to filver as 15 to 1 , ' when in Holland, France, and Spain, it's market value is ' but 14, will they not fond hither their gold, and fetch ' away your filver at $\frac{1}{15}$ lofs to you? This is unavoidable, - if you will make money of both gold and filver at the fame - time, and fet rates upon them by law in refpect of one - another.'

Sir Ifach Newton's Reprefentation relating to the coin of England, in the year 1717.
An attempt was made this feffion of parliament to lower the value of guineas. Mr Aillabie, then chancellor of the Exchequer, having taken notice of the great fcarcity of filver coin, occafioned chiefly by the exportation of filver and importation of gold, propofed, that a ipeedy remedy might be put to the growing evil, by lowering the value of gold fpecies. Upon this the king was addreffed for the reprefentations made by the officers of the mint, to the treafury, in relation to the gold and filver coins. Accordingly Mr Lowndes prefented to the houfe feveral papers relating to the coins, and particularly Sir Ifaac Newton's reprefentation to the lords of the treafury; which being referred to before, we prefume it will not be unacceptable to the reader:

* In obedience to your lordfhips order of reference of Auguft - 12 , that I fhould lay before your lordfhips a fate of the
gold and filver coins of this kingdon in weight and fine' nefs, and the value of gold in proportion to filver, wit? ' my obfervations and opinion, and what method may' be ' beft for preventing the meling down of the filver cona ; - humbly reprefent, that a pound wight Troy of Gold, it ' ounces fine, and 1 ounce allay, is cut into $44{ }_{i}^{\prime}$ guineas ' and a pound weight of filver, 11 ounces 2 pennyweight ' fine, and 18 pennyweights allay, is cut into 62 s ${ }^{6}$ according to this rate, a pound weight of fine gold is worth
- 15 pounds weight, 6 ounces, 17 pennyweights, and 5 grain 6 of fine filver, reckoning a guinea at ri. Is. 6 d . in filve - money. But filver in bullion exportable is ufually worth 62 d . or 3 d . per ounce more than in coin. And, if at 6 medium fuch bullion of ftaridard allay be valued at $5 s$ at 6 per ounce, a pound weight of fine gold will be 5.4 d. - pounds weight, II ounces, 12 pennyweights, 9 grains of - fine filver in bullion. And, at this rate, a guinea is worth - but fo much filver as would make 2os. 8d. When fhips ' are lading for the Eaft-Indies, the demand of filver for ex - portation raifes the price to 5 s .6 d . or 5 s .8 d . per outice - or above; but I conider not thofe extraordinary cafes.

A spanimh pittole was coined for 32 reas, or 4 pieces of 8 ' reas, ufually called pieces of eight, and is of equial allay, 6 and the 16 th part of the weight thereof. And a doppio - moeda of Portugal was coined for ten crufadoes of filver, - and is of equal allay, and the 16 th part of the wcight

- thereof; gold is therefore, in Spain and Portugal, of fixteen
- times more value than filver of equal weight and allay, ac-- cording to the ftandard of thofe kingdoms; at which rate, - a guinea is worth 22 s'. Id. But this high price keeps - their gold at home in good plenty, and carries away the - Spanilh filver into all Europe; fo that at home they make 6 their payments in gold, and will not pay in filver without ' a premium. Upon the coming in of a plate-fleet, the ' premium ceafes, or is but fmall; but, as their filver goes - away and becomes fcarce, the premium increafes, and is - moft commonly about 6 per cent. which being abated, $\rightarrow$ a 'guinea becomes worth about 20 s. 9 d . in Spain and Por© tugal.
- In France, a pound weight of fine gold is reckoned worth
- 15 pounds weight of fine filver; in raifing or falling their - money, their king's edias have fometimes varied a little 6 from this proportion, in excefs or defect ; but the varia - tions have been fo little, that $I$ do not here confider them - By the edict of May 1709, a new piftole was coined for ' 4 new lewiffes; and is of equal allay, and the 1 gh part - of the weight thereof, except the errors of the mints. And ' by the fame edict, fine gold is valued at 15 times it's weight ( of fine filver, and at this rate a guinea is worth 20 s .8 d . $\frac{1}{2}$ - I confider not here the confufion made in the monies in ' France, by frequent edicts to fend them to the mint, and - give the king a tax out of them; I confider the value only - of gold and filver in proportion to one another.
- The ducats of Holland and Hungary, and the empire, - were lately current in Holland among the common people c in their markets and ordinary affairs, at 5 guilders in $f_{p e-}$ - cie, and 5 ftivers, and commonly changed for fo much - filver monies in three guilder pieces, and guilder pieces, as guineas are with us, for 2 I s. 6 d . fterling; at which rate ' a guinea is worth 20 s. 7 d. $\frac{1}{2}$.
- According to the rates of gold to filver in Italy, Germany, - Poland, Denmark, and Sweden, a guinea is worth about - 20 s . and 7 d .6 d .5 d . or 4 d . for the proportion varies a little within the feveral governments in thofe countries. In
- Sweden, gold is lowett in proportion to filver, and this - hath made that kingdom, which formeily was content with - copper money, abound of late with filver, fent thither (I - fufpect) for naval ftores.
- In the end of king William's reign, and the firt year of - the late queen, when foreign coins abounded in England, - I caufed a great many of them to be affayed in the mint, ' and found by the affiays *, that fine gold was to fine filver © in Spain, Portugal, France, Holland, Italy, Germany, and ' the northern kingdoms, in the proportions above-menc tioned, errors of the mints excepted.
* See the foregoing table of Sir Ifaac Newton's affays, weights, and values, of foreign filver and gold coins.
- In China and Japan, one pound weight of fine gold is - worth but 9 or 10 pounds weight of fine filver; and, in the - Eaft-Indies, it may be worth 12 . And this low pitice of c gold, in proportion to filver, carries away the filver from - all Europe.
- So then, by the courfe of trade and exchange between na-- tion and nation in all Europe, fine gold is to fine fiver as - $14 \frac{4}{5}$, or 15 to one; and a guinea, at the fame rate, is worth between 20 s. 5 d. and 20 s .8 d . $\frac{1}{i}$, except in ex-- traordinary cafes, as when a plate-fleet is juft arrived in - Spain, or fhips are lading here for the Ealt-Indies, which - cafes I do not here confider. And it appears by experience ' as well as by reafon, that filver flows from thole places ' where it's value is loweft in proportion to gold, as from - Spain to all Europe, and from all Europe to the Eaft-Indies - China, and Japan; and that gold is moft pleatiful in
cthore places, in which it's value is higheft in proportion to - filver, as in Spain and England.
- It is the demand for exportation, which hath raifed the - price of exportable filver abour 2 d . or 3 d . in the ounce - above that of filver in coin, and bath, thereby created a - temptation to export or melt down the filver coin, rather (than give 2 d . or 3 d . more for foreign filver; and the de-- mand for exportation arifes from the higher price of fil-- ver in other places than in England, in proportion to ' gold, that is, from the higher price of gold in England © than in other places, in proportion to filver, and therefore - may be diminifhed by lowering the value of gold in proportion to filver. If gold in England, or filver in the - Eaft-Indies, could be brought down fo low as to bear the 'fame proportion to one another in both places, there would c be here no greater demand for filver than for gold to be ' exported to India: and, if gold were lowered only fo as ' to have the' fame proportion to the filver money in Engcland, which it hath to filver in the reft of Europe, there (would be no temptation to export filver rather than gold to any wther part of Europe: and, to compafs this laft, 6 there feems nothing more requifite, than to take off about s 10 d . or 12 d . from the guinea, fo that the gold may bear * the fame proportion to the filver money in England, which s it ought to do by the courfe of trade and exchange in Eu' rope; but, if only 6 d . were taken of at prefent, it would <diminifh the temptation to export or melt down the filver'coin, 'ald by the effects would fhew hereafter, better than can appear at prefent, what further reduction would be < moft convenient for the public.
- In the lait year of king William, the dollars of Scotland, © worth about 4 s .6 d . i , were put away in the north of \& England for 5 s. and at this price began to flow in upon © us; I gave notice thereof to the lords commiffioners of the
ctreafury, and they ordered the collectors of taxes to forbear
© taking them, and thereby put a ftop to the mifchief.
- At the fame time, the louis d'ors of France, which were © worth but 17 s. and three farthings a-piece, paffed in Engc land for 17 s . 6 d . I gave notice thereof to the lords com-- miffioners of the trealury, and his late majefty put out a
- proclamation that they fhould go but at I 7 s . and there6 upon they came to the mint, and $1,400,0001$. were coined cout of them; and, if the advantage of 5 d . one farthing a (louis d'or fufficed, at that time, to bring into England fo 'great a quantity of French money, and the advantage of
- three farthings in a louis d'or to bring it to the mint, the
s advantage of 9 d . halfpenny in a guinea, or above, may
chave been fufficient to bring the great quantity of gold
s which hath been coined in thefe laft 15 years, without any
- foreign filyer.

Some years ago the Portugal moidores were received in the 6 weft of England at 28 s . a piece; upon notice from the
mint that they were worth only about 27 s. 7 d ., the lords commiffioners of the treafury ordered their receivers of ' taxes to take them at no more than 27 s .6 d . Afterwards, ' many gentlemen' in the weft fent up to the treafury a pe-- tition, that the receivers might take them again at 28 s . ' and promifed to get returns for this money at this rate, al-- ledging, that when they went at 28 s . their country was ' full of gold, which they wanted very much : but the com-- miffioners of the treafury confidering, that at 28 s . the na-- tion would lofe 5 d . a-piece, rejected the petition. And, - if an advantage to the merchant, of 5 d . in 28 s . did pour ' that money in upon us, much more hath an advantage to ' the merchant of 9 d . halfpenny in a guinea, or above, been ‘ able to bring into the Mint great quantities of gold with' out any foreign filver, and may be able to do fo ftill, 'till ' the caufe be removed

- If things be let alone 'till filver-money be a little fcarcer, ' the gold will fall of itfclf; for people are already backward ' to give filver for gold, and will, in a little time, refufe to ' make payments in filver without a premium, as they do ' in Spain, and this premium will be an abatement in the ' value of gold: and fo the queftion is, whether gold fhall - be lowered by the government, or let it alone 'till it falls - of itfelf, by the want of filver-money?
- It may be faid, that there are great quantities of filver in ' plate, and, if the plate were coined, there would be no c want of filver-money: but I reckon that filver is fafer from - exportation in the form of plate than in the form of mo" ney, becaufe of the greater value of the filver and farhion ' together; and, therefore, I am not for coining the plate, - 'till the temptation to export the filver-money (which is a 'profit of 2 d . or 3 d . an ounce) be diminifhed: for, as - often as men are neceffitated to fend away money for an-- fwering debts abroad, there will be a temptation to fend - away filver rather than gold, becaufe of the profit, which ' is almoft 4 per cent. And, for the fame reafon, fo-- reigners will chufe to fend hither their gold rather than - their filver.

Mint-office, Sept. All which is moft humbly fubmitted to 21, 1717. your lordifips great wifdom,

Isaf Newton.

As this is a point of no little importance to the interefls of commerce, I would not willingly omit any ufeful matter, that may give due light into it; and therefore fhall quote the fentiments of the celebrated Marquis Belloni, mercliant and banker at Rome, in his Differtation on Commerce, which has been publifhed fince the commencement of this work.
I. Though, fays he, we have already fhewn what is under + food by the proportion between gold and filver, and how that was fettled at it's firft inftitution; yet, as it is a matter of the greateft confequence to trade, and, when not duly regarded, may greatly diftrefs a fate; it is necefiary to dwell longer on this fubject, and obferve the various cafes, in which the alteration of this proportion cannot fail to produce fome remarkable effects.-When gold and filver aflumed the form of money, both thefe metals had affixed to them a determinate value: and though, in former ages, the proportion betwen them was fo fettled, that every ounce of gold was equivalent nearly to 12 ounces of filver; yet afterwards, when Ame rica was difcovered, gold came to be of fuch efteem, that the ounce was equal nearly in value to 15 ounces of filver.This was occafioned, we may believe, by the greater increafe of filver from the mines. As this regulation was founded on the greater or leffer quantity of one of thefe metals, the prefent proportion of it to 15 dces not feem fo well adjufted as might be wihbed. Becaufe, from the prefent fcarcity of filver, which is owing to the great fums of that coin that are carried to the Eaft-Indies, the cuftom of working large quantities of filver into plate, and to the decreafe in the produce of the mines, the price of gold feems to be raifed too high; and it were much to be wifhed, that it were reduced to it's juft proportion.
2. The equality between gold and filver being duly adjufted, all other interior kinds of money, of the fame flandard would be fubjected to the fame rule, whereby many inconveniencies and mifchiefs would be prevented. For it is not poffible to difregard this proportion, but the certain lofs of the one or the other of the feecies mult enfue; fince, either of them being raifed in its extrinfic value, the other will be carried out of the kingdom, or wrought into plate. But, before we explain the effects, which proceed from the want of this proportion, it may be proper to refute a certain opinion, prevalent in moft countries, which is, that, in regulating the current value of money among ourfelves, we ought to have regard to the practice of neightouring coun-tries.-This is a miftake of fo capital a nature, that it is of the laft confequence to have it quite obliterated from the minds of men. And, though fome endeavcur to eftablifh this error' by the fimilitude of a river, which, raifed above it's banks by the additional water of a land-flood, overflows two ftates, and thereby obliges that which lies on the lower ground, for it's own fecurity, to keep a watchful eye over that which lies higheft, and on the banks of the fame river; it may be anfwered, thay this fimilitude has no relation to the prefent purpofe; and that, fetting afide the cafe of which we took notice, that it would be the intereft of all Europe to alter the proportion that now obtains between the two metals, that are the materials of money, in all other particular circumftances no variation ought to be admitted therein. And it is very eafy to demonftrate, that, in regulating the current value of the coin of a kingdom, it is of no moment to regard the conduct of neighbouring ftates,
3. For if we fuppofe, for example's fake, a kingdom in which the values of the metals are fo adjufted, that, according to the common fyftem of kingdoms, the gold and filver are rated in a due proportion to each other ; and that, with refpect to trade, it is alfo upon an equal footing with foreign countries: if, I fay, matters are thus fettled within the kingdom, I do not fee what reaton it can bave to apprehend any difadvantage or injury from it's neighbours.-.On the contrary, if the circumftances of a neighbouring country, in confequence of having it's money-fyftem regulated by a wrong proportion, could have any influence on this kingdom, it muft certainly be to it's benefit rather than otherwife. If we fuppofe, that in a neighbouring principality the mo-ney-fyftem is fo regulated, that either of the two fpecies is rated too high in refpect of the other ; it will follow, that the fpecies which is eflimated below the juft proportion, will remove out of this principality, and be carried in great quantities into the neighbouring kingdom, in lieu of the fpecies that will go into the former, as the price of the money that has the greatelt intrinfic value. To make this matter more intelligible by an inftance, let us fuppofe, that in any place the money-fyftem is fo conftituted, that gold is eftimated at a lower rate in refpect of filver, than the juft and exact proportion between thefe metals doth admit; in this cafe, the gold will go out of that country, and at the fame time that it moves into another, and draws the filver-money from thence; it will carry into the latter a profit equal to the difference between the price the gold is rated at in the former, and it's true intrinfic value. And, if the kingdom that receives this great advantage, be alfo fuppofed to adopt the ufual pratice of eftimating foreign money, at no more than

Vol. 1.
the fimple price of gold or filver in bullion, as the rules of a well regulated mint require, it will alfo gain an additional profit from the metal itfelf fo imported. But whereas, at the fame time that this kingdom reaps fo much profit, it will be expofed to one particular inconvenience, viz. that, while it abounds with gold, it will, in fome meafure, labour under a fcarcity of filver, it will be no dificult matter to remedy any difadvantage, that by this means may be occafioned to trade : for, by bringing down the foreign gold in this fame kingdom to the proportion which prevails in the neighbouring flates, the end will be attained.
4. But, becaufe this affair of money is a matter of fuch importance, that it ought not to be paffed over in a fuperficial manner, but be thoroughly examined into, before we proceed to other things relating to the neceffity of a proportion in commerce; it will be proper to make fome reflections on the cuftom whereby, to keep the money of a kingdom within itfelf, it has been ordered and inforced by laws, that no money be carried out of the kingdom, And, becaule it is my intention to lay down, with candor and fincerity, what may be of the greateft ufe to promote commerce and good ceconomy in fates and kingdoms, I muft fay, yet without defign to offend againft the reverence that is due to the regulations of thofe that are at the helm of affairs in ftates and republics, that this prohibition, if other prudent meafures, proper to promote the end, be not employed, will not prove an effectual remedy, See the articies Ballance of Trade, Circulation, Cash.
5. And, feeing the defign is to prexent the exportation of money, another, quethod, in my opinion, ought to be purfued, and that is, tather to have recourfe to such Expedients as may contribute to preserve the ballance of trade [and this, I will humbly prefume tof fay, is the whole tenor and defign of this Univerfal Dictionary of Trade and Commerce, to Great-Britain and Ireland, and it's Colonies and Plantations in America, and it's fettlements in the Eaft-Indies and Africa] fince it is moft certain, that, whenfoever the commerce of a flate ftands upon this equal footing, it's money muft of confequence continue in it; but, when the equilibrium is difturbed, and the ballance is againft the ftate, it's money muft be carried to foreign nations to pay for the excefs of goods imported, above thofe that have been exported; and, to conclude, if the ballance of trade is in it's favour, the money muft not onty continue in it, but alfo increafe and multiply. [See the articles Great Britain, British America, Money, Exchange.] Since then, this: is the true fate of the matter; and that from the three cales we have propofed, the effects already intimated muft neceffarily follow; it is very evident, that the remedies which confift merely in prohibiting the exportation of money, do not reach the caufe and root of the diftemper, nor prevent the evils that fpring from the prevalence of a passive commerce. [See the article Bullion.]
6. And, to give a more convincing proof of the truth of this, let us fuppofe a kingdom, whofe paffive commerce is greater than it's active, and that the fubjects are fo obedient to their prince, that they carry not one farthing out of his dominions: what will follow in fuch a cafe? Suppofing that the ballance of trade is againft that kingdom, and that it has contracted a debt to foreigners; unlefs thefe foreigners, by a frange and unexpecied generofity, fhould think proper to remit the whole of that fum of money, which they bave a right to exact, for the excefs of the commodities imported above the value of the goods exporred out of that kingdom ; the price of exchange will, in this event, rife fo high to the prejudice of the fubjects thereof, that if money be not exported in great quantities, and no other means be left for paying the debt but that of exchange, the fubjects will be reduced to fuch diftrefs, for want of commodities to difpofe of for relieving their credit, that, to cancel the debts they have contracted for goods, they will be obliged to return thofe very goods which they have purchafed for their own confumption. While, on the contrary, ftrangers, who have contracted any debt in that kingdom, or want to raife money for purchafing goods, will have the advantage of exchanges as much under par, as the fubjects of the faid kingdom will find them raifed above it in other markets, to the benefit of foreigners. In this fituation of affairs, if the fovereign of that kingdom thall exert himfelf to fop the courfe of money, which will natusally go out of his dominions, and rather chufe to apply'a direct, though unnatural, remedy to this evil, which is but an effect-of the pafive commerce his fubjects are engaged in, and the active trade carried on by foreigners, than to think of proper means to cut off the caufe and root of the diftemper, every one fees to how little purpofe his pains will be beflowed. From all which we are put under an indifpenfable neceffity to conclude, that there is not a better, nor more certain means, to keep money from going out of a kingdom, than to take particular care, that commerce with other kingdoms be confantly kept upon an equal footing at leaft, and that an exact and true proportion be preferved between gold and filver.
7. This opinion of ours, with regard to the provifion which ought to be made for moncy, is confirmed by that celebrated
expreffion of the famous M. Colbert of France; for this great man ufed to fay, That whenever a kingdom has the Ballanee offoreign Trade against it, and is ergaged in a paffiye commerce, fuppofing it were poffitic, that, in fuch a cafe, a wall could be drawn quite round it, to prevent the exportation of money; if the LEAST HOLE is left in that wall, we ought to conclude, that, by this very hole, the money would find it's way out.
8. Since we have already proved, that thefe two things, to wit, the keeping of commerce conftantly in æquilibrio, and maintaining an exact proportion between gold and filwer, are effential points of good conduct, with regard to the prefervation of money; and fufficiently hewn how, by the prevalence of pafive commerce, money comes to move out of a kingdom into other ftates; we mult now proceed to examine how, without the influence of a particular flate of commerce, we thall here fuppofe to be in æquilibrio, a mere variation from the juft proportion that ought to be obferved between gold and filver, with refpect to other nations, may be the occafion of very great difadvantages to a kingdom in the affair of money. Suppofe then, that in a particular kingdom, we imagine, a money-fyftem prevails, that hall raile the gold above 't's real value, and that in this regulation, inflead of the common proportion of it to 15 that now obtains, an ounce of gold is allowed to be equivalent to 16 ounces of filvet: fince fuch an alteration would raife the gold $6 \frac{2}{3}$ per cent. above it's value, and reduce the filver to juft fo much below it's worth: it is evident, that this increafe of the current price of gold would natarally catale the filver to be exported out of that kingdom; and, as gold would be imported in it's ftead, and increafe greatly, the nation muft unavoidably lofe $6 \frac{2}{3}$ per cent. of all the filver that would be thus exported.
9. On the other hand, fhould the filver-money be raifed above it's value, fo that 14 ounces fhould be elteemed equivalent to an ounce of gold; while the proportion fhauld ftand thus, the fliver-money would nat only continue in the kingdom, but alfo increafe greatly, and the gold coip would be exported in the fame proportion, and the nation would lofe upon it $7 \frac{2}{7}$ per cent. Moreover, from either of thefe variations, two abfirditios would follow; the one is, that both the prince and the people would lofe of that part of their monied-property $6_{3}^{2}$, if the above difproportion fhould fall upon the gold coin's and $7 \frac{5}{7}$, if it fheuld fall upon the filves The other inconvenience would be, that there would be no fpecie to circulate in the kingdom but either gold only, ox filver only, according as the one or the other of thefe metals fhould happen to be eftimated above it's true proportion.
10. As we have feparately confidered two evils in coinmerce the one when the ballance thereof is againft a kingdom, and the other when the exact proportion between gold and filver is not duly regarded, and have thewn what lofs may be fuftained by means of either fingly, without the concurrence of the other; let us now examine of what dangerous confequence thefe two diforders may prove to the public ftock, when they meet together in the fame kingdom. Let us then fuppofe a ftate is in fuch a fituation, that it lies under the weight of a paffive commerce with foreign nations ${ }_{2,3}$ and, at the fame time, in it's regulations with regard to money, matters are fo difpofed, that, neglecting the common proporsion of 15 ounces of filver to 1 of gold, they allow 16 ounces of the former for one of the latter ; it is certain, that, in fuch 2 difpofition of affairs, this kingdom will be expofed to two great difadvantages; whereof that will certainly be the greatef, which proceeds from it's having the ballance of trade againt it; for, thereby, the foreign exchanges will rife high, by which means the money of that kingdom will be carried into other flates in greater or fmaller quantities, ${ }^{26}$ this ballance of trade is more or lefs againft it: the other difadvantage will be, that, by reafon of the extravagant price of gold, the filver will be carried out of the kingdom. Moreover, a difadvantage arifing from the firt of thefe caufes will be, that this kingdom will lofe fo much of it's effective cafh, as will amount to the price of all thofe commodities which are brought fiom abroad, above the proportion of the goods that are exported out of it ; and a fecond, proceeding from the like caufe, will be, that in this lofs will be conprehended another, by which the kingdom, on account of the difference of the price, arifing from the difproportion of gold above filver, will lofe $6 \frac{2}{3}$ per cent. and to the former two we may add a third lois, confifing in the farcity of filver coin, which is moft commonly ufed in domettic trade. II. On the other hand, if the filver money is raifed above it's intrinfic worth, the fame confequence will follow with refpect to gold coin. For, if we fuppole a regulation made, by which 14 ounces of filver, and no more, : Thall be accounted equivalent to an ounce of gold, immediately atter it's value is thus diminifhed, the gold coin will be carried out of the kingdom; and, befides the lofs the kingdom fuftains by the ballance of trade being againft it, fuch kingdom will lofe likewife by the expoitation of gold $7!$ per cent. over and above the fcarcity of gold it will labour under,
12. Befides, whether the difproportion luppofed to be in* troduced into the money-fyftem affect the gold or filver coin,
in either cafe the kingdom will fuffer alike: to avoid which difadvantages, reafon fhould feem to require, that thefe two metals be regulated in their proportion, according to that fyftem, which ought to ferve as a conftant and univerfal rule to all, and is the general practice of the kingdoms of Europe; that is, to fix unalterably the proportion betwcen gold and filver, taking the meafure thercof, with refpect to more or lefs, from the moft confiderable and diftinguifhed parts of Europe; it being proper to take our rules in this matter from fuch, and, indeed, feveral kingdoms have already taken thofe proper methods, to prevent the fearcity of filver.
13. And becaufe it feems to be of fome ufe to confider all the poffible circumftances of a kingdom, which, for example's fake, we are allowed to fuppofe, that we may inquire into the confequences that will follow from each of them; in order to fatisfy the defires of thofe who have a curiofity to know the various effects of the feveral conditions of any ftate, let another fituation of a kingdom be propofed. - Suppofe then that this kingdom, by having the ballance of trade againft it, is fubjected to a paffive commerce with foreigners; but, with regard to in's regulations in the affair of money, fuppofe them to be fuch, that the juft proportion is oblerved between the two metals: how would we know what will follow from this fituation of affairs? This will be a new fort of diforder, and worfe, perhaps, than any other; fince it is manifeft, that both the gold and filver will be equally carried out of fuch a kingdom ; whence fo great lofs and detriment will follow, that it will be proper to fhut up the mint, and coin no more money. For, as the ballance of commerce is fuppofed to be againft the nation, it will keep the exchange high, in proportion to the excefs of the paffive above the active commerce of the ftate: and, as gold and filver bullion muft be purchafed abroad, which can only be done by exchange, thefe materials will coft more than the money to be made out of them ; for though, with refpect to money, it is the presogative of the prince to determine the weight, finenefs, and value, notonly of gold, but alfo of filver coin; yet he has not the right of fixing the price of thofe metals in bullion, this privilege belonging folely to commerce, which alfo regulates the courfe of exchange. Wherefore from hence, and what has been already faid, it may very plainly appear how the coining of money, in fuch circumftances, muft be attended with inevitable lofs.- It now remains that we fhew, how it may come to pafs that, fuppofing a kingdom has the ballance of trade againft it, and that the proportion which ought to obtain between the two metals is not obferved in it, money may, notwithfanding, continue to be coined, for fome time, without difadvantage. For,
34. Suppofe that, in this variation from the true proportion between the two fpecies; the gold happens to be overvalued; in this cafe, as has been often obferved, it will follow of confequence, that the gold will remain in the kingdom, and the filver will be carried out of it, in greater or lefs quantities, according to the greatnefs of the ballance of commerce that is againft it, and the degree of the fuppofed variation from the proportion that ought to fubfilt between the two metals. Mean time, becaufe the filver coin will bear a greater price abroad, and will be exported to pay the debt contracted to foreigners, for want of commodities to compenfate thofe that were imported; the ballance of trade being thus difcharged, by the filver fo experted, the exchanges will be kept low, and, by means thereof, gold may be purchafed to be coined into money. - But this will coft no lefs than, in the firft place, the lofs of all the filver coin, and, after that, of the gold alfo, if the ballance of trade ftill continues againft the nation; and then, the exchanges rifing ftill higher and higher, the kingdom will fall daily into greater and greater diftrefs. And what we have faid of gold may, with the fame juftice, be faid of filver, if it is raifed above it's worth; fince, from the overvaluing of filver, the fame kind of effects will follow which have been obferved already, when we fuppofed gold to be raifed above it's juft rate.
15. But, becaufe what we have hitherto offered will be of little ufe, if, after having difcovered the fources of national lofs and diftress, we cannot fall upon the means for applying proper remedies: wherefore, that thefe obfervations may not fetve merely to gratify 4 vain and fruitlefs curiofity, we fhall, throughout the courfe of this practical and political Dictionary of Commerce, humbly propofe expedients for bringing into a proper method thofe things that may be amifs in a ftate, or at leaft not altogether confiftent with good order and government; which, poffibly, may be capable not only of fatisfying the defires of fuch as want to have a thorough knowlege of commerce, but alfo furnifh proper bints to thofe who may be zealous to eftablifh, upon a folid foundation, and, at the fame time, ftrengthen and improve the riches and power of a nation. See the articles Arbitration of Exchanges, Ballance of Trade, Britain, or Great-Britain, Cash, Circulation of Money, Exchange, Money, and fuch other heads to which from thofe we fhall refer.

The laws of England relating to Curn.
Py 20 Ed. I. morchants are prohibited from trafficking with
money, and importing clipped coin, \&:c. on pain of fu:feiture.
Gold or filver plate, or coin, not to be exported withcut incence, on pain of forfeiture. Search to be made for falfe coin imported. 9 Ed. III. с, i.
Money not to be impaired in weight or allay. 25 Ed. III. c. ${ }^{1} 3$.

No coin to be current but the king's own, and any perfen may refufe foreign coin. 27 Ed . 111. c. I4.
Foreign coin not to be curient in England, but to be melted down. ${ }^{1} 7$ Rich. H. c. i.
Coin or plate found in the cuftody of perfons ready to pats the feas, or in any hi ;, to be forf(ited to the king. $2 \mathrm{Hen}$. IV. c. 5 .

By 3 Hen. V. c. 6. it was finf made treafon to clip or file money.
Gold to be received in payment by the king's weight. 9 Hen. V. c. 11.
Mint-mafter to keep to his allay, and receive filver at the true value, on pain of double damages. 2 Hen. VI. c. 12.
Coins of gold and filver to continue current notwithitanding fome of them are cracked or worn, but not if they are clipped. Monies clipped to be exchanged at the Mint. Coin tranfported to Ireland above 6 s 8 d . or Irih coin inported above 3s. 4 d. to be forfeited. A circle to be made round the outfide of money. 19 Hen. VII. c. 5. Halfpence and farthings to have ftamps; and, when the bullion is under 1001 . the owner to have a tenth part in halfpence. $I_{4}$ and $\mathrm{I}_{5} \mathrm{H}$. VIil. c. 12 .

Counterfeiting, impairing, \&c. of coin, or foreign coin made current, is made high trealon, by 14 Eliz. c. 3,4 . and 18 Eliz. ᄂ. I, 7 .
Silver coin melted down to be forfeited, and double value. 13 and 14 Car. II. c. 31.
Gold and filver delivered into the Mint, to be affayed, coined, and delivered out, according to the order and time of bringing in. A duty of 10s. per ton on wine, beer, \&c. and 20 s . for brandy imported, granted for the expence of coinage, which is not to exceed in officers, 8 cc .3000 l . per annum. 18 Car. II. c. 5.
The $25^{\text {th }}$. ${ }^{\text {Car. }}$. II. c. 8. directs the levying of the duties fupra, \&c. and the 18th Car. II. revived and continued by I Jac. II.
The $3^{\text {d, }} 5^{\text {th }}$, and rath of Will. III. c. 7. continue the two former.
Refufing to receive cracked money in payment, to forfeit 51. 4 and 5 Will. \& Mar. c. 16.
Advancing unclipped money to forfeit 101 . for every 20 s. Buying or felling clippings or filings, 5001 , penalty. Perfons melting coin to be impriloned fix months, befides forfeiture, \&c. Perfons apprehending money-coiners, clippers, \&c. to have 401 . reward; and guilty perfons difcovering two others to be pardoned, 8 cc .6 and 7 Will. III. c. 17 .
Perfons bringing plate to the Mint to be coined, not to pay for coinage, but to have the fame weight of money delivered out. Perfons keeping public boufes to have no manufactured plate but fpoons. Molten filver, or bullion, not to be fhipped off without a certificate from the lord mayor, that oath bas been made it is foreign bullion, under the penalty of 2001. and officers may feize the bullion as forfeited. Gold or filver not exceeding 200,0001 . may be exported by a licence. Guineas not to go for more than 22 s. 7 and 8 Will. III. c. 19.

Hammered filver coin brought to the Mint to be received at 5 s .4 d . per ounce. Rectivers of taxes, \&c. to receive money at 5 s .8 d . per ounce 'till fuch a time, afterwards at 5s. 2d. only. Coin not clipped within the innermoft ring to be received in tale, and not by weight. 8 Will. III. c. 2. Monies received by the Mint, \&c. at 5s. 4 d . per ounce, and 5 s .8 d . per cunce, to be delivered back to the bringers in, and receivers, \&c. to be paid into the exchequer with an allowance of the deficiency in recoining; filver plate, \&c. to contain in ounces and ro penny weights of fine filver in every pound, and to be marked with the two fuift letters of the worker's name, on pain of forfeiture. Plate received at 5 s .4 d . per ounce to be melted down. 8 and 9 Will. III. c. 7 . 8 . By 8 and 9 Will. III. c. 26. it is high treaton to make any tamp, die, mould, \&c. for coining, except by perfons employed in the Mint, \&c. conveying fuch out of the Mint, the fame; colouring metal refembling coin like gold or filver, or marking it on the edges, is likewife treafon; and mixing blanched copper with filver, to make it heavier, and look like gold, or receiving or paying counterfeit milled money, is felony, 8 and 9 Will. MII. c. 26.
Hammered filver coin may be refufed in payment, as not being the lawful coin of this kingdom. 9 Whll. III. c. 2.
Any perfon may cut, break, or deface pieces of filver money fufpected to be counterffit, or diminifhed otherwife than by wearing; but if they appar to be money, \&c. Ball fand to the lofs. 9 and io Will. III. L. 2 I ,
No perfon to make or coin any farthings or halfpence, or pieces to go for fuch, of copper, under the penalty of 51 . for every pound weight. 9 and io Will. III. c. 33 .
By 4 and 5 Ann. c. 22 the lord treafurer is impowered to
iffue, out of the monies arifing by the comage duty, the fum of 5001 . above the fum of 3000 . allowed yearly for the ufe of the Mint.
The 7 Ann. c. 24. makes 8 and 9 Will. III. c. 26. perpetual; and continues 18 Car. II. c. 5. for feven years.
On a fcarcity of filver coin, for remedy, guineas were funk to. 2 Is . by proclamation. 3 Geo . I.
The coinage duty on wine, beer, \&xc. and brandy imported, is continued; and the Treafury to caufe money to be applied for defraying the expences of the Mint ; fo as with the coinage duties it exceed not 15,0001. a year for England and Scotland. 4 Geo. II. c. 12.12 Geo. II. c. 5.19 Geo. II. c. 14. Perfons counterfeiting broad pieces of gold, or uttering them knowingly, to be guilty of treafon. 6 Geo. II. c. 26.
Wafhing, gilding, or altering the impreffion of any real or counterfeit hilling or fixpence, or brals-money, to make the one pafs for a guinea or half-guinea, or the other for a fhilling or fix-pence, is high treafon. Knowingly uttering falfe money, for the firft offence fix months imprifonment, for the fecond two years imprifonment, and the third felony without benefit of clergy. If any perfon, knowingly uttering falfe money, fhall have about him any other falle money, or within ten days after utter any other falfe money, he fhall fuffer a year's imprifonment ; and coiners of halfpence or farthings to fuffer two years imprifonment, \&c. 15 Geo. II. c. 28.
COLONIES. Under the article Britain, or GreatBritain, and that alfo of British America, I have confidered the plantations in certain lights, confiftent with the intereft of the nation in general, as well as that of our planters and merchants concerned in the commerce of thofe plantations in particular.-I fhall here confider them in other lights, confonant to the fame principles.

## Remarks.

It has been a matter of doubt with fome, whether our colonies in America have not proved prejudicial to Great-Britain ; and a moot point with others, whether any advantage to it. It is certain, that a country which takes no care to encourage an acceffion of ftrangers, will, in a courfe of years, find plantations of pernicious confequence.- The colonies in America have proved highly detrimental to the Spaniards; but this is owing to the nature of their government; the Inquifition frights away ftrangers, their monafteries prevent marriages, and there is no provifion at all to repair what their colonies drain them of: whereas the Hollanders, who fend out greater numbers every year than the Spaniards, are not depopulated by it ; their conftitution inviting more over to them than they fend abroad; and in the Britifh colonies all foreigners may be made denizens for an inconfiderable charge; whereby many of all nations are encouraged to (ettle and plant in our Indies; the crown thereby gains fubjects of them and their pofterity, and the nation gains wealth by their labour and induftry. There is alfo reafon to think, that, for fome years, the plantations have fent, of their offspring, and the perfecutions abroad have brought over to his majefty's dominions, as many people as went from them. Wherefore, we may fafely advance, that our trade and navigation are greatly increafed by our colonies, and that they really are a fource of treafure and naval power to this kingdom, fince they work for us, and their treafure centers here.
It is true, indeed, if a breach of the act of navigation, or any other beneficial ad relating to our plantations, hould be connived at, or broke through in any particular that would prove injurious to the kingdom, even our own plantations may become more profitable to other nations than to this; but, while the governors, and the other officers under the crown, whofe bufinefs it is to take care hereof, do their duty, they can never prove detrimental to the nation.
By infiffing that no breach in the navigation, or other act of the legillature, thould be made, which has been enacted for the mutual benefit of England and her colonies, I would not have it inferred, that I am againft permitting the inhabitants of our colonies to trade with each other, or that they fhould be probibited to trade to the colonies of foreign nations, or carry their product, according as the law at prefent tolerates, directly to foreign countries. For, by our colonies trading, under judicious national reftrictions, with thofe of other nations, we, in fome meafure, render foreign colonies and plantations the colonies and plantations of Great-Britain; which brings me to obferve, that all laws in our fouthern plantations which lay high duses on fugar, indico, ginger, andother Weft-India commodities, imported into them, when impartially confidered, will be found not only prejudicial to them, but to the general trade and navigation of their mother kingdom; and therefore it is our intereft, and hould be our care, that no laws laying fuch duties fhould remain in force, or be paffed for the future. For
The inhabitants, by carrying on a trade with their foreign neighbours, do not only occafion a greater quantity of the goods and merchandizes of Europe being fent from hence to them, and a greater quantity of the product of America to be fint from them hither, which would otherwife be carried from, and brought to Europe by forcigners, but an increafe
of the feamen, and navigation in thofe parts; which is of great ftrength and fecurity, as well as of great advantage, to our plantations in general.
The commodities they bring from the countries wherewith they trade, whether indico, cocheneal, logwood, and other dyeing-woods, cotton-wool, faffaparilla, and other drugs, \&c. are fuch as are either re-exported from Great-Britain, or ufeful to us in working up our own manufactures, or fuch as we should need, and muft fend for, at a much dearer rate, from the mother-country of thofe people with whom our's may trade in America.
And though fome of our colonies are not only for preventing the importation of all goods of the fame fpecies they produce, but fuffer particular planters to keep grear runs of land in their poffeffion uncultivated, with defign to prevent new fettlements, whereby they imagine the prices of their commodities may be affected; yet if it be confidered, that the markets in Great-Britain depend on the markets of all Europe in general, and that the European markets in general depend on the proportion between the annual confumption and the whole quantity of each fecies annually produced by all nations; it muft follow, that whether we or foreigners are the producers, carriers, importers, and exporters of American produce, yet their refpective prices in each colony (the difference of freight, cuftoms, and importations confidered) will always bear proportion to the general confumption of the whole quantity of each fort, produced in all colonies, and in all parts ; allowing only for the ufual contingencies that trade and commerce, agriculture and manufactures, are liable to in all countries.
If this be admitted, then it muft certainly be the true intereft of our colonies, as well as of their mother-kingdom, to enlarge their fettlements, and to fuffer the produce of foreign plantations, in Englifh Ihipping, to be imported to and exported again from Great-Britain; for narrow-limited notions in trade and planting are only advanced by, and can only be of ufe to, particular perfons, but are always injurious to the public interefts, in preventing the full employment of our own people, and giving our rivals and competitors in trade the opportunity of employing greater numbers of theirs, producing greater quantities of merchandizes, and underfelling us at foreign markets.
If a trade thould be carried on, by which the procuet of our colonies (except liquors and provifions) fhould be fold to foreigners, and our colonies, in return, receive the goods and merchandizes of any foreign country in Europe, for confumption among them, it would certainly be greatly prejudicial to the trade and navigation of Great-Britain ; but this is pretty well provided againft by the act of navigation, and other fubfequént acts, and, if not fufficiently fo, the wifdom of the nation will doubtlefs occafionally enaft fuch laws as fhall prove effectual in this refpect.
The produce of our American colonies may be confidered under two heads, viz. thofe that produce commodities of a different nature to this kingdom, and thofe that produce commodities of the fame nature.- Thofe under the firf clafs, are Virginia, Maryland, Barbadoes, Antego, Montferrat, Nevis, St Chriftopher's, and Jamaica, whofe products are tobacca, fugar, indico, cotton, ginger, and fundry kinds of drugs and dyeing woods.-Thofe under the fecond clafs, are New England, New York, Carolina, Penfylvania, \&c. whofe products are beef, pork, bread, beer, peafe, rice, \&c. cod-fifh, mackarel, \&c. mafts, boards, ftaves, \&uc. furs, pitch, tar, turpentine, train-oil. The product of the firft is of a different nature to what is produced from the lands of Great-Britain; and, of the quantities thereof imported, fuch a part has been annually re-exported, as hath proved one great means of the ballance we have had from abroad, with thofe countries which take large quantities of our plantation commodities. The produce of the other is not of a different nature, unlefs rice, train oil, \&c. and might be fent, indeed, to our fugar-colonies from-Great-Britain.
But, however the countries under the latter head may interfere with the produce of this kingdom, yet it is certainly highly the intereft of Great-Britain to preferve, increafe, maintain, and encourage it's colonies on the continent of America, fince the French, as I have fhewn under the article British America, have fettled, and are daily increafing their colonies and plantations upon the fame continent, and contiguous thereunto, as if they aimed either at wrefting them out of our hands, or fo awing them as to render them of little ufe to us. [This was the cafe of France, with regard to Britain, before the Definitive Treaty of i763.] See America. And, if thefe colonies fhould ever fall into French hands, it will not be poffibie, I apprehend, to maintain a ballance of trade and power in America; and who will imagine that we can mannain them, after that, in Europe? The value of tobacco from Virginia and Maryland, annually imported from thence, exclufive of the cuftoms, is computed at 600,0001 . about two-thirds of which are re-exported; and the like value of the fugars, indico, ginger, cotton, \&c. annually imported from our ilfand colonies, is $1,300,0001$. about one-third of which is alfo re-exported.
It is computed, likewife, that there is exported from GreatBritain and Ireland, to the feveral colonies belonging to the
crown in America, to the value of 850,000 : and that the importations from them all, including filver and gold, \&cc. are to the value of $2,600,000 \mathrm{l}$. fo that, over and above what we fend to our colonies in our manufagures, produce, and foreign commodities, we have a ballance, in return thereof, to the value of $1,750,0001$. which centers and remains among us, and is not like fuch a ballance in foreign trade, as muft be carried out again directly in money, or in bills of exchange, to any other part of the world.
It is true our northern colonies do not make us returns of themfelves in proportion to what they take annually from us, and yield commodities of little value, and yet have moft drained us of people; but, if it were otherwife, the trade of our illand colonies could not, perhaps, be carried on to fo great advantage to their mother-country; for thofe foils which produce the moft eftimable commodities, are not fo proper to cultivate for corn, beef, pork, peafe, \&c. But, if they were, their hands are much more beneficially employed for the intereft of Great-Britain. Befides, the fouthern plantasions, in time of war, would be deflitute of many neceffaries, or obliged to employ their hands in planting provifions, \&c. were it not for the vicinity of the northern colonies.
It may be faid, indeed, that thefe provifions might be furnifhed from Great-Britain, but at fo dear a rate, as would, perhaps, much difcourage thofe plantations; for, befides their being all confiderably dearer, fo fome kinds of them could neither be fo good nor fo freh.
Though our northern colonies may furnifh our fouthern with provifions, which might be fent from hence, yet they make it ample compenfation by taking from it variety of manufactures, all forts of cloaths and furniture, much oftener renewed, and as good as the fame number of people could afford to have at home. Whether, therefore, the northern colonies are beneficial to Great-Britain or no, depends on making a right ballance between the commodities we fend thither, and the provifions we might fend to the fouthern colonies, if they were not fupplied by the northern.- But the prefent courfe of trade feems moft nationally advantageous, by reafon that the provifions which we might fend to Barbadoes, \&c. would be the unimproved product of the earth, as grain of all kinds, or falt beef, pork, \&c. whereas the goods we fend to the northern colonies, are fuch whofe improvements may be juftly faid, one with another, to be near four-fifths of the value of the whole commodities, as apparel, houfhold-furniture, $\&<c$.
If our northern colonies thould pretend to fet up manufactures, and fo cloath, as well as feed, their neighbours and fellow-fubjects in the fouthern colonies, their nearnefs and low price would give them fuch advantage over this nation, as might prove of pernicious confequence. But this fear feems remote, unlefs they are difcouraged from raifing provifion, \&c. and materials in general for variety of manufactures; as were the people of Virginia and Maryland, for fome time, in planting tobacco, by the high impofitions laid upon it's importaion into this kingdom; who, in feveral counties in thefe colonies, made fhoes, flockings, hats, linnen and woollen goods, not only for their own, but the ufe of their neighbours. Which it is our intereft to prevent, and to encourage them in planting, and fuch other branches of trade as interfere with the trade of other countries, not with that of our own.-This seems to be the natural way torender colonies useful to their mothercountry; and a neglect in this great point to MAKE THEM QUITE OTHERWISE.
Thofe who may be any way doubeful whether our colonies and plantations have been, or ftill are beneficial to thefe kingdoms, thould confider what the condition of this country was before we bad any plantations: in regard to which I think it may be truly affirmed, that it was very low and defpicable. In the victorious reign of Edward III. there was a ballance of trade ftruck, and delivered into the Exchequer, by which it appeared, that the exports of one year exceeded the imports by $1.255,214: 13: 8$; which, for that time, was a large fum. At the time queen Elizabeth entered upon the government, the cuftoms produced 36,0001 . a year. At the Reftoration, they were let to farm for 400,0001 . and produced confiderably above double that fum before the Revolution.
The people of London, before we had any plantations, and but very little trade, were computed at about r00,000.At the death of queen Elizabeth, they were increafed to 150,000, and are now about fix times that number.-In thofe days we had not only our naval ftores, but our fhips from our neighbours. Germany furnifhed us with all things made of metal, even to nails; wine, paper, linnen, and a thouland other things, came from France. Portugal furnifhed us with fugar; all the products of Alnerica were poured into us from Spain; and the Venetians and Genoefe retailed to us the commodities of the Eaft-Indies, at thcir own price.-In Chort, the legal intereft of money was 12 per cent. and the common price of our lands 10 or 12 years purchafe. We may add, that our manufactures were fow, and thofe but indifferent; the number of Englifh merchants pory fmall, and the whole dhipping of the nation much infe-
Vol. I.
rior to what now belongs to the northern colenics only, $\rightarrow$ Thefe are certain facts. But, as foon as we began to extend our trade, and to make plantation-fettlements abroad, the face of our affairs changed; the inhabitants of the city of London doubled before the end of the latt period, and were again doubled before the end of this; our fhipping increafed in a ftill greater proportion; we coined, within 20 years after that queen's death, about five millions at the Tower; in 20 years after that feven millions, and in the next 20 years eight millions; which are indubitable proofs, that we had gained a prodigious ballance of trade in our favour.
The next matter to be confidered is, what our condition has. been fince we have eftablifhed colonies and plantations? And, with refpect to this, I may venture to affirm that it has altered for the better, almoft to a degree beyond credi-bility.-Our manufactures are prodigioully increafed, chiefly by the demand for them in the plantations, where they at leaft take off one half, and fupply us with many valuable commodities for re-exportation, which is as great an emolument to the mother-kingdom as to the plantations them felves.
Inftead, alfo, of taking the quantities of foreign commodities from other nations, as we were wont to do, we actually, by means of our plantations, export thole very goods, and fometimes to the very fame nations from whence we formerly imported them; fugar, rum, tobacco, are the fources of private wealth and public revenue, which would have proved fo many drains, that would have impoverifhed us, had they not been raifed in our own colonies.-It is now no longer in the power of the Ruffians to make us pay what they pleafe for hemp and flax.-The Swedes cannot, as they have heretofore done, compel us to pay their own prise, and that too in ready money, for pitch and tar; [fee the article Naval Steres] nor would it be in their power to diftrefs us, fhould they attempt it, by raifing the prices of copper and iron.-Logwood, and other dyeing woods, are funk 75 per cent-lndico, and other materials for dyeing alfo, are in our power, and at moderate prices.-In fine, the advantages are infinite that redound to us from our American empire, where we have, at leaft, a million of Britifh fubjects, and between 1500 and 2000 fail of thipping conftantly employed; and they will daily increafe in confequence of our new American acquifitions, by the definitive treaty of 1763 . [See the article Amprica.]-Such have been the fruits, fuch is the condition of our plantations, and let any man doubt of the benefits refulting from them to this nation, if he can.
When our colonies were in their infancy, they were fome burden to this nation; änd this muft ever be the cafe of all plantations at their firf fettlement. But the national benefit has proved fo unfpeakably greater, when compared with the first expence, or any other fince to protect them, that it bears no manner of proportion, and is almoft beyond the power of computation. Paft experience, therefore, fhews how impolitic it is to defert infant colonies, whofe eftablifhment has been undertaken upon well-grounded motives, for the fake of a few thoufand pounds beyond what might be expected, when they are likely to repay their mother-country in a ten thoufand-fold degree.-Lord Bacon fome where fays, That nothing is more mean and ignominious to a nation, than to defert an infant colony, whofe eftablifhment has been undertaken upon juft and reafonable expectations. See the article British America.
The next point to be taken notice of is, the improvements and additional benefits that may be fill made in, and accrue from, our plantations. We ought, in this refpect, to confider of what great extent that country is which we at prefent poffers in the new world, to which this inland does not bear greater proportion than the county of Norfolk to the whole kingdom of Great-Britain and Ireland conjointly confidered, fince our new acquifitions. Whence we may conceive what room there is for improvements in fo valt a tract of territory.
Some of our fettlements on the continent, indeed, fuch as Canada, New England, New Yoik, Penfylvania, Maryland, and Virginia, are tolerably well peopled; Nova Scotia * is not yet well fettled; New Britain is an extenfive country, and capable of being turned to our advantage. It is fo far from being fettled, that it is fcarce known to us. The fame may be faid of all the country bordering on Hud-fon's-Bay.

* Canada and it's dependencies mult neceflarily take reafonable ume to well people.
As to the fouthern continent colonies, as the Carolinas and Georgia, and the Floridas, East and West, muft inevitably prove unfpeakably beneficial to Great-Britain. See Bahama-Islands, Florida, and Mexico.
The iflands of Bermudas and Barbadoes are pretty well peopled, as alfo moft of the Leeward Iflands; but there are feveral illands to which we have as good a ticle as to any of thefe, that are not fettled at all, though, from the natura 8 E
of their climate, foil, and fituation, they are fuperior to moft of thofe of which we are poffeffed, as fhall be fhewn hercafter *.
> * Hereby I meant the Neutral Islands, which are at prefent happily annexed to the crown of England, exeept St Lacia; and, in liea of that, we have obtained the iflands of Granada and the Granadines.

'The noble inand of Jamaica, which of itfelf would inrich any country to which it belonged, is not duly cultivated. So that, our colonies may become a greater fource of treafure than hitherto they have giveni us.
To acconplifh which end, the ineafures are obvious.-The fint is, improving fuch of our colonies as are already well fettled; the next, providing for the thorough planting fuch as are at prefent but very indifferently, or fcarce at all, peopled. - In refpest to the firt, nothing feems more advantageous than providing every colony with fome ftaple commodity, which does not interfere with other of our colonies, and which Europe, and the reft of the world, ftand in need of.-This would make the inhabitants of thofe colonies eafy, and render them certainly inftrumental to promote the folid intereft of their mother-kingdom.
Virginia and Maryland are poffefled of the tobacco trade; in which, if any cafe, encouragement, or advantage, can be granted them, moft certainly they deferve it. [See the article Tobacco.] With refpect to New England, Penfylvania, New York, and the Jerfeys, effectual ways and means fhould be found to augment their commerce with England directly, by promoting their defire and ability to furnifh us with all kinds of naval fores, and with what iron we are not able to furniif ourfelves, but are obliged to take from foreign nations. See the article Iron.
There was, as to pitch and tar, a confiderable bounty given, and for many years, indeed, produced no effect, which, for a time, might poffibly countenance an opinion, that the friends to the plantations were too fanguine in their notions on that head ; but experience fhewed the contrary. For, the circumftances of the public making it neceffary to try how far this might be practicable, it very foon appeared that the thing could be eafily done; and, upon fending over perfons well experienced in the methods of making pitch and tar, the people in the colonies foon fell into it, and fuch quantities were imported, as not only fupplied our wants, but enabled us to fupply thofe of feveral neighbours; and then, upon a fuppofition that the trade was effectually eftablifhed, the bounty was difcontinued. And what was the confequence of this meafure! Truly, the importation of thefe commodities from Pruffia, Sweden, and Norway, was revived; for the people of thofe countries, building large bulky fhips, peculiarly proper for tranfporting thefe commodities, by navigating thefe fhips cheaper than we can do ours, are thereby able to underfell pur countrymen in the colonies, by three or four thillings in a barrel : fo that, to preferve this trade, there grew a neceffity of granting a new bounty upon pitch and tar from America, or laying a new duty upon what was imported from the north. See the article Pitch and Tar.
The fame may be faid with regard to iron, of which, at prefent, we import near double as much from Sweden and Rufia, as is fold to all the reft of Europe, for which we pay moftly iry ready money; yet no queftion can be made of the practicability of bringing the beft part of the iron we want fiom our plantations; which fhould, by all means, be done, if it can, 'till we are capable amply of fupplying ourfelves, by the means of our pit-coal fuel, if a difcovery of that nature fhould ever be made. See the articles Coals and Iron.
In regard to hemp and flax, it is fuppofed that the Ruffians exported to England, and all other parts, above the value of a million a year. If hemp and flax be fo valuable a product for merchandize with them, there feems to be a much greater profpect of it's being fo to ourfelves, by raifing them effectually in our plantations, becaufe they will not be fubject to any land-carriage, but fhipped immediately from the place of growth ; becaufe land is cheaper in our plantations, than in the fouth parts of Ruffia. The climate, being equal with that in Egypt and Italy, is fuppofed to produce hemp and flax preferable to theirs.
With reffect to the products of fugar and tobacco, 'tis matter of fact, according to Sir Jofiah Child, that every white man employs four at home, that is to fay, finds them work to fupply him with utenfils requifite for his work. Now, if fugar and tobacco employ fuch a number of hands, at home, certainly every perfon employed in the plantations, in railing and dreffing of hemp and flax, muft, by his labour, return more than twice the advantage that can be produced by fugar and tobacco, for they are manufactured in the plantatiens: the refining the fugar, and cutting the tobacco, with the litle quartity that is rolld excepted. Whereas flax ant hemp are materials for employing all idle hands; and, of confequence, the pror's rates will foon be abated, and the mation, in a little time, will find what they yearly fay thereb, will be more than fuffient to encourage the people to begin that employment to effestual purpofe.

And, if once we cone to be fupplied with hemp and flax by the aforefaid methods, every place will be filled with flaxdreffers, and the overfeers of the poor in every parifh, where the wool-fpinning trade is not carried on, may very eafly come at hemp and flax, which they will find as profitable to them, as the woollen is to the other; for many inconveniences have attended one manufacture interfering with another; befides, there witl be an intercourfe of trade created, by one part of the kingdom fupplying the other with diftinct mathufactures. This will contribute to give full employment to the whole kingdom, and an univerfal chearfulnefs to every body: for the poor are never happier, than when they have full employment; and, when they are employed, riches are diffufed throughout the whole nation.
Certain it is, that there is no want of timber of every fort, for houses, no lefs than ship-building, in our Britifi North American colonies, the whole taken into confidera. tion, fince the definitive treaty of 1763 . Our Norway trade has too long drained this kingdom of immenfe fums of fpecie, for deal-boards, timber, spars, BAULKs, and fome IRON; they take from us our guineas, our crown paeces, and bullion, and but little of ous tobacco, and a few coarle woollens of no value. The Danes fupply not only Great-Britain, but Holeand, France, and Spain, with fo great a quantity of fir-TimERR, DEALS, \&c. that they do not load therewith fo few as 2000 hips a year, and return feven-eighths, at leaft, of the value, in ready money; and they carry away, perhaps, the greateft quantity of our current coin of any trade whatever; they coveting chiely our crown and balf-crown pieces, which pals more carrent in Norway than they do in England itfelf. For the fupply of Britain and other nations with the feveral feecies of timber beforementioned, the Danes build large bulky hips; and why may not we at prefent, by means of our North American colonies, fupply ourfelves with that timber we have fo long taken from the Danes, at the expence of a ballance of trade to the difadvantage of this nation, of no lefs than between 3 and 400,000 pounds per annum.
To the products of hemp and flax, we may add, that potafhes, cocheneal, filk, and cotton, are the produce of Eaft Florida in particular; which will, prove a very eafy and profitable employment for women and children, as indigo, rice, and other valuable commodities, will be raifed by the ftrength of the men. So that the reader will eafily difeern, that there is no difficulty at all in the way of enabling there nothern colonies to pay us for our manufactures, and therefore nothing fhould prevent their fetting beartily about it.-The fame obfervations will, in a great meafure, hold good with regard to our fouthern inland-colonies, fuch as the planting in great plenty coffee, tea, cacao, indico, and the florub that produces cocheneal [fee thefe articles]; but, above all, we fhould by no means forget filk, for reafons that have already been given under the article British America: at prefent we thall only obferve, that there is great and extraordinary conveniency attends the cultivation of the laft-mentioned commodity; that as it is proper for the fame foil and climate, as hemp and flax, fo they may be both carried on together; the filk harveft, as it is called, being over before the hemp and flax are ripe. For more matter upon this head, fee the article Silk:
As to our fugar-illands, though they have already a faple commodity of very great value, yet this fhould not hinder us from confidering how that commodity may be fill rendered more ufeful, both to the planters, and to Great-Britain in general; and how far alfo other things are capable of being improved in thefe inlands. It was the opinion of Sir Jofiah Child, that fugar may be made as much the commodity of this nation, as the gold and filver of Peru and Mexico are the peculiar treafures of Spain. The reafons he gives are very cogent, but it is certain that we have not yet fallen upon the right method of reducing his doctrine into practice, fince, inftead of exporting one half of the fugar we bring home, as we formerly did, we do not, at prefent, export much above one fixth, and this, not from any diminution in the general demand, but becaufe new markets have been found, at which foreigners can buy cheaper. The French, in particular, have fo greatly improved their fugar-illands, as to have done us great injury in this capital branch of trade at foreign markets; -which, I am afraid, was owing to our fugar-trade labouring too long under many very gieat difficulties and difcouragements, both at home and abroad.Indeed, the wifdom of the legiflature has removed many of them; but, when the channel of any branch of trade has been diverted, it is no eafy matter to bring the fame into it's former current. To effectuate this, however, all hands fhould be fet to work, and all arts tried; and, 'till thefe ficceed, our fugar-planters hould endeavour to bring other cominodities to market. But, bow the fugar-trade of our colunies may be greatly advanced, Ithall endeavour to fhew under the article Sugar.
It has been computed, by fome, that there is not lefs than a million and a half of white people in our plantations, whech compritation has been judged by others fomewhat of the
higheit;
higheft ; perhaps it may be fo, but, without doubt, it would be our intereft to have two millions of white people there, and more, and no Negroe flaves at all; for, with all fubmiffion to better judges, I cannot help thinking the flavetrade as nationally difadvantageous, as it is inhuman, cruel, and unchriftian-like. See Negroes and African Trade. Nor do I apprehend, that rendering our colonies populous in whites, inftead of blacks, would either drain the Britifh dominions, or at all endanger the dependency of our colonies upon their mother kingdom. On the contrary, Iam of opinion with thofe, who have thought, that the increafe of people in the plantations, as it would increafe our American trade in general, fo it would certainly increafe the number of our people at home, and that the methods proper to be taken for the better peopling our colonies, and improving them, would infalibly render them more dependent on their mother-kingdom.
Though the igeneral propofition, that the number of the people is the riches of a country, be true, yet it is true only of induftrious and ufeful people; and it is in this fenfe, and this only, that the number of people in Holland is quoted as an example: fo that, if there be in any country numbers of people ufelefs, they are fo far from contributing to the wealth of that country, that they are one great caufe of it's poverty. Now, it is certain, that though this nation might become more powerful and more rich, by being more numerous in people than it is; yet there is not any more probable means of accomplifhing this, than by employing our ufeful hands, which, perhaps, may be eafier done abroad, in our plantations, than at home. We have prodigious numbers of vagabonds throughout the kingdom, who live no one knows how; there cannot therefore be any cruclty in fending thefe people, where they fhall be compelled to labour, and thereby maintain themfelves, and become ufeful to others. Many people are daily convicted of fmall crimes, and, from the ignominy of the conviction and punifhment, rendered defperate, and come to the gallows: it would certainly be good policy, as well as charity, to put them in the way of honeft labour, before they become fuperlatively wicked.-Multitudes are, from time to time, releafed out of prifon by acts of grace, and many private acts of benevolence, which let them at liberty; but, at the fame time, leaves them in a little better condition than the liberty of ftarving; and who can fay, that it would not be highly laudable to find out means for giving thefe people bread as well as freedom? I make no doubt, but there are people enough in there kingdoms, who have liberal hearts as well as weighty purfes, and who would be glad of an opportunity to raile a proper fund for fending thefe people abroad; not like tranfports or negroes, but like unhappy Britons, with due provifion for their comfortable maintenance in their paflage, and a proper reception in the places they are fent to.-This, as it is a very natural, fo it bids fair for a very effectual way to eafe our poor's rates, prevent robbers and murderers, ftock our colonies with labpurers, and enlarge the trade of the nation.

- Colonies, in the EAst or West Indies, fays the judi-- cious Mr Magens, fo far as they take off the ufeful and la-- borious, weaken and divide the mother-country; however, - fome make even this a queftion, as the fparing of certain - numbers, who cannot find means of doing much, is the - caufe of others living better when they are gone, and of - marrying and propagating their fpecies more freely, as is - rarely the cafe of men in diftreffed circumftances. But, - not to extend this argument farther, it is certainly true, * that where-ever large colonies are to be planted, it is more - politic to encourage foreigners, than to tranfplant too - many of the natives: but it may be juftly obferved, that - both England and France have many people that do more * harm than good at home, and may either of them fpare - fome thoufands annually, and Itrengthen themfelves by it - at home and abroad; but it muft be admitted, that induf-- trious foreigners are a happy acquifition.
- Spain admits none, or rarely any foreigners in America; - and that country being rich and charming to it, multitudes - of the natives reforted thither; and the Spaniards, at the - beft not being a very prolific people, they have much - weakened and expofed their country; by which means, - they who were formerly dreaded for their power, are now - fimply refpected for their wealth, and in no other manner - have any influence on the affairs of Europe.'

But, in doing this, great confideration flould be ufed, that there be nothing in it of chame, and as little of compulion as may be. The terms ought to be fuch, as may encourage people in difrefs to accept them, and the accepting them might be in the nature of a fuperfedeas to all criminal profecutions, not of a capital nature. They fhould be fent abroad for a term of years, or 'till they could repay a certain fum of money to the corporation intrufted with the management of this fcheme, and confiderable rewards thould be given to fuch as behaved well, and gained a competent fettlement during the time limited for their remaining abroad; and, if to this, certain honorary preferments were added, it might anfwer very good purpofes. Thefe are the outlines only of a great defigr, perhaps, not unworthy the attention of the
legiflature, who; poffibly, mas think a tax on pu®lic diver= fions, and divers other particulars, a reafonable fund for fuch a fervice; there being nothing more juft, than that luxury fhould contribute to relieve neceffity; and that thofe who are able to be idle, fhould be made willing to help thofe that mult work.
No trades deferve fo much our care to procure and preferve, and encouragement to profecute, as thofe that employ the moft flupping; although the commodities carried be of fmall value in themfelves, as a great past of the commodities from our colonies are. H'or, beffdes the gain accruing by the goods, the freight in fuch trades, often more than the value of the goods; is all profit to the nation; and they bring with them a great accefs of feamen and riaval prowefs, the natural ftrength and fecurity of this kingdom.
Colonies and plantations are both ftrength and riches to their mother-country, while they are obliged inviolably to regard her laws: and while ours have Britioh blood in their veins, relations in Great-Britain, and a true fenfe of the invaluable bleffing of Britifh liberty, and can get by trading with us; the ftronger and greater they grow, the more the crown, as well as the kingdom, will gain by them; nothing but our arbitrary treatment of them, and our mifgovernment, can make them otherwife than beneficial to the nation in general.
In former times, thofe who were intrufted with the chief power in our colonies, have granted fuch large tracts of land, as well to themfelves as others, that many planters have been, and are at prefent, prevented from inlarging their plantations, whereby the increafe of fettlers has been prevented, and people in general difcouraged from going thither as formerly. It has long been really matter of fad complaint, that in moft of our colonies there is no land, though in moft of them fuch vaft quantities uncultivated, left near any fettlement, that is unpatenteed, or not granted to fome particular perfon; which may deferve the attention of the public wifdom, whether we confider the lofs that has already enfued, and muft enfue to this kingdom, by fuch large tracts of land remaining uncultivated; and which the proprietors either cannot or will'not fettle and plant, or fell, but on moft exorbitant terms; which affuredly mult be repugnant to the intention of the crown; for thefe grants of land were certainly given to be cultivated, and not to be monopolized, in order to raife their value upon other induftrious planters, whofe lands might be contiguous to them, and would gladly cultivate them fo, as to render them beneficial to the nation as well as themfelves.
Numbers of men are to be preferred to the largenefs of dominions ; 'tis the increafe of hands, and the right employment of them, as we have obferved, wherein confifts the profperity and happinefs of our nation; and fure it is an egregious invafion on the liberty and property of other Britifh fubjects, that perfons who have great tracts of land in America, will neither fettle or fell but on the moft extravagant conditions; and therefore is it not highly reafonable, that fuch fhall be obliged by the laws to do either the one or the other; whereby induftrious planters who would increafe their plantations, or others who would become fuch, may be enabled to do fo on reafonable terms?
The grants of fuch great tracti of land have too often been procured on very eafy terms, and frequently upen wrong fuggeftions; many hold fome thoufands of acres a piece, and thofe largely furveyed; fome patents are faid to contain double the quantity of land mentioned, or intended to be granted; whence it is that fo many thoufand acres are taken up, but, not planted. - This drives away the inhabitants and lervants bred up only to planting, into parts where their labour is not fo profitable, either to the crown or to the kingdom, as it would be in our colonies, efpecially in thofe not producing commodities that are of Britifh growth: befides, fuch practices are the chief caufe, that fome have had no better fuccefs, or made no greater progrefs in fettlements, and therefore is a grievance that calls aloud for immediate re-drefs.-The French fuffer nothing of this kind in their plantations : however fo little I may approve of fome of the maxims of the French conftitution, yet the cafe of their trade and plantations may deferve our notice; they oblige every thip or veffel, bound to any of their colonies, to carry fuch a number of perfons, in proportion to it's tonnage or freight, paffage free; not permitting any perfon to take up more land than te fhall plant or manure in a limited time, or is neceflary for him to his planting; and furnifhing petfons who will become fettlers, with negroes, and all materials and requifites wanting in making fettlements, and only obliging them to repay the public out of the produce, one third of what is produced, 'till thereby the fum advanced' be fully repaid.-T. hefe, among nany other wife meafures, have occafioned the rapid progrefs that the French have made in their American cominerce. See Frincta America.
The general good of the community is ever to take place of that of any particular perfons; and therefore, if thefe large tracts of land in the hands of any of his majefty's fubjects, which remain uncultivated, were but fettled, the benefit to Great-Bitain would prove ineffably great; for it would not only be an encouragement to our neceffitous people chear-
fully to refort thither, but add proportionate ftrength to our colonies, greater variety to their productions, and enable them to fell as cheap as our American competitors at foreign markets; all which will prove, not only the grand prefervative, but the general increafe of our whole plantation commerce in the new world.
As the increafe of people muft neceflarily occafion an increafe in the confumption of all kinds of manufactures, fo, the greater any country's demands are for them, the greater will be it's trade; and the more will the mother-country, as well as the plantations, become opulent and powerful.
The want of falling into meafures fomewhat adequate to thofe of the French beforementioned, together with the falfe and narrow notions entertained by too many of our planters and others; in regard to the engroffing of immenfe quantities of land, and keeping them barren and ufelefs, are highly detrimental, and may, in time, be abfolutely ruinous to the Britifh intereft in America, if the utmof policy is not exerted, to render both our new and old American colonies profperous.
Although fome American land-proprietors and planters imagine, that, the fewer the fettlements are, the better will the produce of their plantations fell; yet, as this is a principle that mult render our plantation-products dearer and dearer, can any meafures more effectually tend to enable our rivals in the American trade to fupplant us at foreign markets? Are not thefe planters and land-proprietors laying the certain foundation of ruin and deftruction to our Ameican intereft, and confequently to their own properties in the end?
Would they lay afide fuch notions and fchemes, which have been, and fill are, pernicious and deftructive, and fall upon ffectual meafures for the increafe of people, and better fettlement of their countries, their own interef would not only be the better fecured and promoted, but thofe of their motherkingdom. I would by no means be underfood, as propofing to level the property or rightful poffeffions of any perfons interefted in our plantations; my intention is only to fhew the neceffity of reftraining fuch methods as have been formerly practifed, of taking up large tracts of land, and to compel thofe who have taken them up, either to fettle or fell them; fo that thefe practices may no longer prove a bar to the induftry of others, and that our colonies may prove a lafting revenue to the crown, an inexhauflible fund of treafure to Great-Britain, and the certain means of multiplying our feamen and increafing our navigation.
It is certain, that from the very time Sir Walter Raleigh, the father of our Englifh colonies, and his affociates, firf projected thefe eftablifhments, there bave been perfons who have found an intereft in mifreprefenting or leffening the value of them. When the intention of improving thefe diftant countries, and the advantages that were hoped for thereby, were firf iet forth, there were fome who treated them not only as chimerical, but as dangerous: they not only infinuated the uncertainty of the fuccefs, but the depopulating the nation, if it thould be contary to their expectation. Thefe, and other objections, flowing either from a narrownefs of underftanding or of heart, have been difproved by experience, which hath fhewn, that what was then propofed was practicable in itfelf, profitable in it's confequences, and attended with none of thofe evils, which thore pufillanimous or illintentioned people apprehended, or pretended fo to do.
The difficuities which will always attend fuch kind of fettlements at the beginning, proved a new caufe of clamour, and ever will ; many malignant fuggeftions were made about facrificing fo many Englifhmen to the obftinate defire of fettling colonies in countries, which then produced very little advantage. But, as thefe difficulties were gradually furmounted, thofe complaints vanifhed.-No fooner were thefe amentations over, but others arofe in their ftead; when it could be no longer faid that the colonics were ufelefs, it was alledged that they were not ufeful enough to their mothercountry; that, while we were loaded with taxes, they were ablolutely free; that the planters lived like princes, while the inhabitants of England laboured hard for a tolerable fub-firtance.-This produced cuftoms and impofitions upon plantation-commodities, which, if grievous to the plantations, muft turn to our difadvantage as well as theirs, and coniequently become dctrimental to both.
At prefent there is a great change in the face of affairs in thefe parts of the world, which has produced a change in the fentiments of thofe who are fettled there, and ought likewife to produce a change in our conduct.-The principal point in this change was, the furprifing growth of the French power in America, before the laft definitive treaty, and their arduous and unwarrantable attempts daily to aug. ment their ftrength there, in order to have gained the ballance of trade and power into their own hands, in this part of the world; which appeared from the true and undifguifed flate of the cafe, as I have given it under the article of BRItish America, and which I thall further corroborate under the article French America, and in divers other parts of this work, that have a connection with each other.
If we had confidored, that in the reign of Charles II. when France had very little trade, and her colonies were of no
great confequence, the was then almoft a match for all Europe befide, and that too when the maritime powers wese in the mont flouriming condition; we might have eafly foreleen to what a beight her power would increafe with the addition of colonies and commerce.-But we did not fufficiently provide againft an evil, which of all others we ought moft to have apprehended.
The very thing that had hitherto hindered us from conceiving as we ought to do of our danger in this refpect, would have convinced us, if we had viewed it in the right light, and reafoned upon it as became us. If we experience that, in conjunction with the greatelt powers upon the continent, we have not been able, for thefe fixty years paft, to fet any bounds to the ambition of France in Europe, what limits were we like to fet to her power in America, when it came to bear any proportion there, to what the has attained here, but by giving an effectual check to her career of commerce and power in the new world, as we feem to havedone by the definitive treaty of 1763 ?
The nature of their government, though it makes their fubjects lefs happy, renders their colonies the more formidable, and enables the prince to protect them more effectually, and to grant them, from time to time, greater encouragements; fo that we need not wonder they have overcome fo many difficulties, or that the trade of the French iflands fhould be fo much more confiderable now, than it was at the peace of Utrecht.-We may likewife be affured of this, that, the more their trade increafes, the more it will be encouraged; becaufe of the fteady and uniform conduct of the French miniftry, to emulate each other in the care and protection thereof.
As to our apprehenfions in regard to the French colonies, time has fhewn they were but too well founded; our fettlements on the continent, as I have fhewn, were furrounded by them; the correfpondence between Canada and Louifiana was in fome manner fettled; and ${ }_{2}$ though a little more time might have been requifite to perfect the defigns they had formed on that fide ; yet, if we had not obtained the peace we have done by the definitive treaty, they would have in few years perfected them, and then we fhould have found our circumftances very uneafy. This muft appear plain and certain to every man, who will turn his thoughts to what we lave urged throughout this work: we fhould not therefore admire, that thofe who both felt and faw it, exprefled themfelves with fome warmth upon this topic.

## Remarks.

Before I conclude this article, it may be ufeful, I apprehend, to obviate fome objections that have been too frequently made againft due encouragement being given to our Britifh colonies; one of which is, that, if they fhould be encouraged, they would grow, fhake off the Englifh government ${ }_{2}$ or attempt an independency of this kingdom.
To diffipate fears and jealoufies of this kind, we defire it may be obferved,

1. If we confider the fituation of our colonies, which now ftretch all along the coaft of North America, and are feparated from each other by great rivers, a very little to guard thore paffages would make it impracticable for people the moft defperately inclined to unite in one body.
2. As the fubfiftance of thefe colonies is the fupplying chiefly our fugar plantations with flour, bifcuit, pipe-ftaves, fifh, and other provifions, the prohibiting them that commerce would foon prove their deftruction, there being above 800 veffels belonging to the province of New England only, that are employed in the coatting and fifhing trade.
3. It is to be confidered, that our colonies are under different governments. Maryland and Penfylvania have their refpective proprietary governors, and the Jerfeys and New York alfo their diftinct governors.-New England has alfo a diftinct government from the reft, \&c. Is it eafily practicable, therefore, for thofe different governments to form a defign of defection from England, without being difcovered, and betraying one another?
New England has formorly, indeed, thewed an uncommon ftiffnefs, very different from that regard they ought to have had for their mother-country, or a true fenfe of the protection and tendernefs which have been extended to them; but, we apprehend, what has heretofore been done, was rather owing to the perfonal cavils and machinations of fome men who affected popularity, than to any general intention to aim at independency. It is certain, that the moft judicious and opulent amongft them bighly detefted fuch proceedings.
But, if New England fhould ever prefume to attempt to be independent of this kingdom, the fopping their fupplying the fugar iflands, and their coafting and fifhing trades, would fo diftrefs them that they would not long be able to fubfift, and the thare they poffefs of that trade would fall into the hands of the other colonies, which would greatly inrich them, and, perhaps, irrecoverably impoverifh New England. But, if fome turbulent men chould ever be capable of raifing a fpirit of defection among them, a fquadron of light frigates would antirely cut off their trade; and, if that did not
effectually anfwer the end, the government of England would be compelled, contrary to their lenity, to do what other nations do of choice, viz. place ftanding forces amnong them, to keep them in fubjection, and oblige them to raife money to pay them. Thefe things are not fuggefted from the leaft apprehenfion, that thefe people will ever be fo infatuated, but to fhew the confequences that may reafonably be prefumed to follow from fo rafh and impolitic an at tempt.
Some perfons have heretofore infinuated that this colony might one day put themfelves under the protection of fome foreign potentate; which muft be either France, Spain, or Holland. In regard to the two former, the firit of perfecution which preval!s under their government, without any other reafon, feems fufficient to diflipate apprehenfions of this kind. Moreover, the defpotic power of thofe nations differs fo greatly from the mild and gentle government of England, that the very perfons who fhould be unhappily firited to raife fuch difturbances, would themfelves tremble at the thoughts of a change from the happy fate of freedom and liberty, to that of arbitrary will, perfecution, and tyranny: fo that there could be no hopes left but from Holland ; and, as we lie between them and New England, it is not very likely that fuch an enterprize fhould prove fucceffful ; nor would a change of this nature any ways meliorate the condition of thefe people.
Although fears and jealoufies of this kind fhould be abfulutely groundlefs, yet there are fome who have apprehended mifchiefs of another nature, that may enfue from giving effectual encouragement to our plantations for the raifing of hemp flax, pot-afh, pitch and tar, indico, filk, iron, \&cc. \&c. \&cc. for that, as foon as they fhall be eftablifhed in the methods of producing thefe rough materials, they will certainly fet up thofe manufactures with which we now fupply them, and thereby deprive us of thofe advantages we are intitled to reap from their eftablifhment.
But it is to pe hoped, that the parliament of England will ever keep a watchful eye over our plantations, in regard to a matter of fuch important concernment to this kingdom; for, if thefe attempts are not effectually reftrained, they will ever occafion fuch heart-burnings between our colonies and their mother-country, as may, and certainly will, prove injurious to both. But keeping our planters to the raifing fuch materials for our Britifh manufactures, as we are neceffitated to take at prefent from foreign nations and their colonies, will effectually prevent jealoufies and mifunderftanding between Britons and her American brethren, and give mutual ftrength, riches, and power, to both.
Are not fuch the natural means to render thefe kingdoms, and her plantations, more and more independent of other ftates and empires, with refpect to their maritime and commercial intereff? And do we not daily experience the neceflity of fuch policy being fteadily and vigoroufly purfued?
Have not moft of the nations of Europe interfered with us, more or lefs, in divers of our faple manufactures, within half a century, not only in our woollen, but in our lead and tin manufactures, as well as our fifheries? Shall not the Britilh colonies be effectually encouraged to raife raw filk for our Britifh manufacturers to work up, when his Pruffian majefty, it feems, is about to do fo in his German dominions, which are deftitute of thofe benefits and advantages for the purpofe, that our colonies enjoy? Shall we be obliged to take hemp and flax, and other naval ftores, from foreign countries, when our own colonies, if effectually promoted, will certainly afford us all that we want? Shall we impori iron, pot-afh, indico, cocheneal, dyeing woods, cacao, coffee, and drugs of various kinds, of foreign nations, when we can have them within ourfelves? Shall our linnen manufacture in Scotland and Ireland be cramped, or labour under any difadvantages for rough materials fuitable to their manufactures, when our Britifh America is able to produce them, either in one colony or another? Why fhould we not encourage the building of large bulky fhips in our plantations, fuch as are ufed by the Danes and Swedes, in order to import part of our timber, if we cannot the whole, from our continent colonies?
Let our plantations have every encouragement, that will interfere only with the commercial intcrefts of foreign nations, and with thofe more efpecially who have rivalled and fupplanted us in the fugar, and other our plantation branches of trade; and they will be far more beneficially employed, than to think of fetting up the manufactures of their motherkingdom, or fhaking off their dependency: nothing, I am perfuaded, will induce them to either of thefe, but the want of being promoted, in due fublerviency to the intereft of Great-Britain.
Thefe kingdoms, with it's dependencies, is doubtlefs as well able to fubfift within itfelf, as any nation in Europe: we are as happily fituated, all our territories confidered together, as any nation in the whole world, and a conflitution fuperior to any throughout the globe; we are bleffed with an induftrious and enterprizing people, accomplifhed for all the arts of commerce, war, or peace: we have provifions in abundance, and thofe of the beft fort, and are capable of raifing more than fufficient for double the number of inhabitants: we have
Vos. I.
the beft materials for cloathing, and fand in need of nothing, either for ufe or luxury, but what we have at home, or night have from our colonies (which will demonftrably appear throughout this undertaking: fo that we might create fuch an intercourfe of trade among ourfelves, and between us and our plantations, as would maintain a prodigious navigation even though we traded to no other parts. See the articles America, Britain, Great Britain, Plantations.
And, if our colonies, by means of all the encouragement which they require, became as populous in white people as they are capable of, and were not permitted at all to interfere with the manufactures of Great Britain, would they not import an additional quantity of manufactures from us, proportionate to the number of their inhabitants; and which they would be enabled to pay for, by means of thofe rough materials wherewith they furnifhed England, Scotlánd, and Ireland ? And although, in confequence of taking thefe particulars before enumerated from our own plantations, we fhould take lefs of the fame from foreign countries; and, although thefe countries fhould retaliate upon us, and take lefs of Bri tifh products and manufactures; yet we fhould gain as much, if not more, by encouraging of our plantations, rather than thofe foreign nations; becaule we, at prefent, pay a great annual ballance to many of thefe countries, which ballance being faved, that would abfolutely center within ourfelves and our colonies. Nay, 'tis reafonable to believe, that our plantations, being brought to fuch a flourihing ftate and condition, would enable us to fupply, in part, other foreign countries with their productions.
Nor would our maritime power, and the number of our feamen, be diminifhed by this policy; for our conftant navigation to and from our own colonies would, perhaps, prove as good a nurfery for our royal navy, as that we carry on with thofe foreign nations, from whom we take fuch commodities as might be raifed in our own plantations: and, as our naval power is the grand bulwark whereon we muft ever rely, to maintain our happy independency, as a free and a trading people, why need we be afraid to difoblige other nations, by taking lefs in value in their commodities than they do of ours? Which maxim, we humbly conceive, ought to be the pole-ftar, whereby the government of our plantations fhould be fteered. However, it would not be pclitic, perhaps, to put our plantations upon raifing the whole of thefe commodities, which we at prefent take from other countries, wherewith we drive a trade nationally beneficial; but what objection can be made againft raifing thofe materials in our own colonies, which we now take from thefe countries with which we carry on a commerce nationally difadvantageous? In order to judge of the real imminent danger our colonies and plantations were in before the Peace, fee the articles British America, French America, Spanish America; and the articles France and Spain. And, that we may take a view of this important fubject in every light it will admit of, we fhall re-confider it under the article Plantations, Sdgar Colonies.
For the regulation of the trade of our Britifh Colonies, the following act of parliament paffed in the year 1763, which being very important, we judge the whole of it requifite to be given.

An Act for granting certain duties in the British ColoNies and Plantations in America; for continuing, amending, and making perpetual, an act paffed in the fixth year of the reign of his late majefty king George the fecond, (intitled, An act for the better securing and encouraging the trade of his majesty's sugar colonies in America;) for applying the produce of fuch duties, and of the duties to arife by virtue of the faid act, towards defraying the expences of defending, protecting, and fecuring, the faid colonies and plantations; for explaining an act made in the 25th year of the reign of king Charles II. (intituled, An act for the encouragement of the Greenland and Eastland trades;) and for altering and difallowing feveral drawbacks on exports from this kingdom, and more effectually preventing the clandeftine conveyance of goods to and from the faid colonies and plantations, and improving and fecuring the trade between the fame and Great Britain.

- Whereas it is expedient that new provifions and regulations
- fhould be eftablifhed for improving the revenue of this
- kingdom, and for extending and fecuring the navigation ' and commerce between Great-Britain and your majefty's ' dominions in America, which, by the peace, have been
- fo happily enlarged: And whercas it is juft and neceffary,
- that a revenue be raifed, in your majefty's faid dominions
' in America, for defraying the expences of defending, pro-
- tecting, and fecuring the fame; we, your majefty's moft - dutiful and loyal fubjects, the commons of Grear Britain - in parliament afembled, being defirous to make fome pro* vifion, in this prefent feffion of parliament towards raiing - the faid revenue in America, have refolved to give and - grant unto your majefty the feveral rates and duties herein ${ }_{7} \mathrm{~F}$

## C O L

## C O L

after mentioned; that, from and after the 29th day of - Sepiember 1764 , there fhall be raifed, levied, collected, - and paid unto his majefty, his heirs and fucceffors, for and upon all white or clayed sugars, of the produce or manufacture of any colony or plantation in America, fot under the dominion of his majesty, his heirs AND successors; for and upon indico, and coffee of Foreign produce or manufacture; for and upon all - wines (except French wine); for and upon all wrought silks, Bengals and stuffs, mixed with silk or herba, of the manufacture of Persia, China, or East India, and all callico, painted, dyed, printed or - ftained there; and for and upon all foreign linnen < cloth called cambrick and French lawns, which - Thall be imported or brought into any colony or plantation in America, which now is, or hereafter may be, under ' the dominion of his majefty, his heirs and fucceffors, the - feveral rates and duties following ; that is to fay,

- For every hundred weight avoirdupois of fuch foreign - white or clayed fugars, one pound two fhillings, over and - above all other duties impofed by any former act of parlias ment.
- For every pound weight avoirdupois of fuch foreign indico, fix pence.
- For every hundred weight avoirdupois of fuch foreign cof-- fee, which fhall be imported from any place except Great
- Britain, two pounds nineteen fhillings and nine pence
- For every ton of wine of the growth of the Madeira's, or - of any other ifland or place from whence fuch wine may
- be lawfully imported, and which fhall be fo imported from
- fuch illands or places, the fum of feven pounds.
- For every ton of Portugal, Spanifh, or any other wine,
( (except French wine) imported from Great Britain, the - fum of ten fillings.
- For every pound weight avoirdupois of wrought filks,
- Bengals, and ftuffs, mixed with filk or berba of the ma-
- nufacture of Perfia, China, or Eaft India, imported from
- Great Britain, two fhillings.
* For every piece of callico, painted, dyed, printed, or ftained, in Perfia, China, or Eaft India, imported from
- Great Britain, two fhillings and fix pence.
c For every piece of foreign linnen cloth called Cambrick, 6 imported from Great Britain, three ihillings.
6 For every piece of French lawn imported from Great Bri-
* tain, three fhillings.

And after thofe rates for any greater or lefler quantity of fuch goods refpectively.

- And it is hereby further enacted, by the authority aforefaid,

6 That from and after the faid 29th day of September 1764,
c there flball allo be raifed, levied, collected, and paid, unto

- his majeity, his heirs, and fucceflors, for and upon all cof-
fee and pimento, of the growth and produce of any Bri-
tish colony or plantation in America, which fhall
c be there laden on board any Britifh fhip or veffel, to
6 be carried out from thence to any other place whatfoever,
- except Great Britain, the feveral rates and duties follow-- ing; that is to ray,
- For every hundred weight avoirdupois of fuch Britifh coffee, feven fhillings.
For every pound weight avoirdupois of fuch Britifh pi' mento, one halfpenny.
6 And after thofe rates for any greater or leffer quantity of fuch goods refpectively.
- And whereas an act was made in the fixth year of the reign
c of his late majefty king George the fecond, intituled, An
act for the better fecuring and encouraging the trade of his
' majefty's fugar colonies in America, which was to continue
- in force for five years, to be computed from the 24th day
- of June 1733, and to the end of the then next Seflion of
parliament; and which, by feveral fubfequent acts, made in
the 11 th, the 19 th, the 26 th, the $2 g$ th, and the 3 ift years - of the reign of his faid late majefty, was from time to time continued; and by an act made in the firft year of the reign
- of his prefent majefty, was further continued until the end - of this prefent feffion of parliament; and although the faid
act hath been found in fome degree ufeful, yet it is highly
- expedient that the fame fhould be altered, enforced, and
- made more effectual; but in confideration of the great di-
- flance of feveral of the faid colonies and plantations from
- this kingdom, it will be proper further to continue the faid
- Act for a fhort fpace, before any alterations and amend-
ments fhall take effect, in order that all perfons concerned
may have due and proper notice thereof: Be it therefore enacted, by the authority aforefaid, that the faid act, made ( in the fixth year of the reign of his late majefty king George the fecond, intituled, An act for the better fecur-
- ing and encouraging the trade of his majefty's fugar colo-
nies in America, fhall be, and the fame is hereby further
- continued until the 3oth day of September 1764 .
- And be it further enacted, by the authority aforefaid, That

6 from the 29th day of September 1764 , the faid act, fub-

- ject to fuch alterations and ameadments as are herein after
c contained, fhall be, and the fame is hereby made per-
spetual.
And be it further enacted, by the authority aforefaid, That
in lieu and inftead of the rate and duty impofed by the faid act upon molafles and fyrups, there fhall, from and after the faid 29 th day of September 1764, be raifed, levied collected, and paid unto his majefty, \&c. for and upon every gallon of molafles or fyrups, being the growth, product, or manufacture of any colony or plantation in America, not under the dominion of his majefty, his heirs or
fucceflors, which thall be imported or brought into any co-
lony or plantation in America, which now is, or hereafter 6 may be, under the dominion of his Majefty, his heirs or ' fucceffors, the fum of three pence
- And it is hereby further enacted, by the authority afore-- faid, That the faid rates and duties hereby charged upon
- fuch foreign white or clayed fugars, foreign indico, foreign
' coffee, wines, wrought, filks, Bengals, and ftuffs mixed
- with filk or herba, callico, cambricks, French lawns, and
foreign molaffes or fyrups, imported into any Britifh Ame-
' rican colony or plantation, thall be raifed, levied, collect-
6ed, and paid, in the fame manner and form, and by fuch rules, ways, and means, and under fuch penalties and for-
' feitures, (not otherwife altered by this act) as are mentioned and expreffed in the faid act of parliament, made in
6 the fixth year of the reign of his late majefty king George
- the fecond, with refpect to the raifing, levying, collecting,
- and payment of the rates and duties thereby granted; and
- that the aforefaid duties hereby charged upon Britifh coffee

6 and pimento, exported from any Britifh colony or planta-
tion, fhall be raifed, levied, collected, and paid, in the
fame manner and form, and by fuch rules, ways, and
' means, and under fuch penalties and forfeitures, as are
mentioned and referred unto in an act of parliament rade

- in the 25 th year of the reign of king Charles the fecond,

6 intituled, An act for the encouragement of the Greenland ' and Eaftland trades, and for the better fecuring the plan-

- tation trade, with refpect to the raifing, levying, collect-

6 ing, and payment of the rates and duties thereby granted upon the feveral goods therein particularly enumerated;
' and that all powers, penalties, provifions, articles and

- claufes, in thofe acts refpectively contained and referred ' unto, (except in fuch cafes where any alteration is made - by this act) fhall-be obferved, applied, practifed, and put 6 in execution, for the raifing, levying, collecting, and an-
( fwering the refpective rates and duties granted by this act, ' as fully and effectually, as if the fame were particularly - and at large re-enacted in the body of this prefent act, and

6 applied to the rates and duties hereby impofed; and as

- fully and effectually, to all intents and purpofes, as the
- fame could have been at any time put in execution, for the
- like purpofes, with refpect to the rates and duties granted - by the faid former acts.
- Provided always, and it is hereby further enacted by the - authority aforefaid, That, if the importer of any wines
- Chall refufe to pay the duties hereby impofed thereon, it
- fhall and may be lawful for the collector, or other proper
' officer of the cuftoms where fuch wines thall be imported,
" and he is hereby refpectively required to take and fecure ' the fame, with the caiks or other package thereof, and to - caufe the fame to be publickly fold, within' the fpace of ' twenty days at the molt after fuch refufal made, and at fuch ' time and place as fuch officer fhall, by four or more days
' publick notice, appoint for that purpofe; which wine fhall s be fold to the beft bidder, and the money arifing by the - fale thereof thall be applied, in the firt place, in payment - of the faid dutics, together with the charges thit fhall have c been occafioned by the faid fale; and the overplus, if any, ' fhall be paid to fuch importer, or any other perfon autho6 rized to receive the fame.
$\leq$ Provided alfo, That if the money offered for the purchare - of fuch wine, fall not be fufficient to difcharge the duty ' and charges aforefaid, then, and in every fuch cafe, the - collector or other proper officer, fhall caufe the wine to be - ftaved, fpilt, or otherwife deftroyed, and fhall return the ' calks or other package wherein the fame was contained to 6 fuch importer.
* And it is hereby declared and enacted, That every piece of - callico intended to be charged with the duty herein before 6 mentioned, if of the breadth of one yard and a quarter, or 6 under, fhall not exceed in length ten yards; and if above 6 that breadth, fhall not exceed fix yards in length; and that - every piece of cambrick and French lawn thall contain ' thirteen ells each, and fhall pay duty for the fame in the te
- proportions for any greater or leffer quantity, arcording to ' the fum herein before charged upon each piece of fuch - goods refpectively
- And it is hereby further enacted, by the authority aforefaid, c That all the monies which, from and after the 2gth day of - September 1764, fhall arife by the feveral rates and duties ' herein before granted; and alfo by the duties which, front 6 and after the faid 20th day of September 1764, Thal! be ' raifed upon fugar and paneles, by virtue of the faid act ' made in the fixth year of the reign of his fid late majelty - king George the fecond, (except the neceflary charges of - tailing, collecting, levsing, recovering, anfwering. paying, - and accounting for the fame) fhall be paid into the receint - of his majefty's exchequer, and fhall be entered feparate
- and apart from all other monies paid or payable to his ma-- jefty, his heirs or fucceffors; and fhall be there referved, - to be from time to time difpofed of by parliament, towards - defraying the neceflary expences of defending, protecting, - and fecuring the Britilh colonies and plantations in A-- merica.
- And it is hereby further enacted, by the authority aforefaid, - That from and after the tenth day of September 1764, - upon the exportation of any fort of wine (except French - wines) from this kingdom to any Britifh colony or planta' tion in America, as merchandize, the exporter thall be - paid, in lieu of all former drawbacks, a drawback or al-- lowance of all the duties paid upon the importation of fuch c wine, except the fum of three pounds ten hillings per ton, - part of the additional duty of four pounds per ton, granted c by an act made in the laft feffion of parliament, intituled, c An act for granting to his majefty feveral additional du-- ties upon wines imported into this kingdom, and certain - duties upon all cyder and perry, and for raifing the fum c of three millions five hundred thoufand pounds by way of - annuities and lotteries, to be charged on the faid duties) ; c and alfo except fuch part of the duties paid upon wines c imported by frangers or aliens, or in foreign fhips, as ex© ceeds what would have been payable upon fuch wines, if 6 the fame had been imported by Britifl fubjects, and in 6 Britifh fhips, any law, cuftom, or ufage to the contrary - notwithftanding ; which drawback or allowance fhall be c made in fuch manner, and under fuch rules, regulations, ' penalties, and forfeitures, in all refpects, as any former - drawback or allowance, payable out of the duties of cur-- toms upon the exportation of fuch wine, was, could, or * might be made, before the pafing of this act.
- Provided always, and it is hereby further enacted, That 6 upon the entry. of any fuch wine for exportation to any 6 Britifh colony or plantation in America, and before any - debenture fhall be made out for allowing the drawback - thereon, the exporter thall give bond, with fufficient fecu-- rity, to his majefty, his heirs and fucceffors, to be ap-- proved of by the collector, or other principal officer of the © cuftoms at the port of exportation, in treble the amount - of the drawback, payable for the goods, that the fame and cevery part thereof thall (the danger of the feas and ene-- mies excepted) be really and truly exported to, and landed - in, fome Britifh colony or plantation in America; and that - the fame fhall not be exported, or carried to any other - place or country whatioever, nor relanded in any part of - Great Britain, Ireland, or the iflands of Guernfey, Jerfey, c Alderney, Sark, or Man, or either of them : and fuch - bonds fhall not be delivered up nor difcharged until a cer-- tificate fhall be produced, under the hands and feals of the - collector, or other principal officer of the cuftoms at the 6 port or place where fuch goods fhall be landed, teftifying 'the landing thereof: and the condition of fuch bond thall - be, to produce fuch certificate in eighteen months from the - date of the bonds (the dangers of the feas and enemies ex-- cepted).
- And it is hereby further enacted, by the authority aforec. faid, That from and after the firft day of May 1764, no 6 part of the rate or duty, commonly called the old fublidy, - Chall be repaid or drawn back, for any foreign goods of - the growth, production, or manufacture of Europe or the - Eaft Indies, which fhall be exported from this kingdom to c any Britifh colony or plantation in America, (wines, white 6 callicoes, and mullins, only excepted); any law, cuftom, - or ulage, to the contrary notwithftanding.
- And it is hereby further enacted, by the authority aforefaid, : That from and after the tenth day of September 1764 , - upon the exportation of any fort of white callicoes or muf-- lins, except as herein after is mentioned, from this king-- dom to any Britifh colony or plantation in America, be-- fides the one half of the rate or duty commonly called the - Old Subfidy, which now remains and is not drawn back - for the fame; there alfo thall not be repaid or drawn back - the further fum of four pounds fifteen fhillings for every - hundred pounds of the true and real value of fuch goods, ' according to the grofs price at which they were fold at the - fale of the United Company of Merchants trading to the - Eaf Indies, being the third part of the net duties granted 6 theicon refpectively by two feveral acts of parliament, the - one made in the eleventh and twelfth year of the reign of - king William the third, intituled, An act for laying fur* ther duties upon wrought filk, mulins, and fome other - commodities of the Eaft Indies, and for enlarging the time - for purchafing certain reverfionary annuities therein men' tioned; and the other made in the third and fourth year of - the reign of queen Anne, intituled, An act for continuing * duties upon low wines, and upon coffee, tea, chocolate, - fpices and pictures, and upon hawkers, pedlars, and petty - chapmen, and upon mullins; and for granting new duties - upon feveral of the faid commodities, and alfo upon calli - coes, China ware, and drugs ; any law, cuftom, or ufage, - to the contrary notwithftanding.
- Provided always, and be it further enacted by the autho-- rity aforefaid, That until the firft day of March 1765 , ' upon the exportation from this kingdom, to any Britifh
colony or plantation in America, of fuch white cal'icoes ' or mullins only as were fold on or before the 25 th dy of - March 1764, at the fale of the United Company of Mer-- chants trading to the Eaft Indies, fuch and the fame ' drawbacks thatil be allowed as are now payable upon the ' exportation of the faid goods.
- And be it furcher enacted, by the authority aforefaid, That ' if any merchant or other perfon lhall, from and after the - firft day of May 1764, enter any goods for exportation to ' parts beyond the feas, other than to the faid Britifh colo-
' nies or plantations in America, in order to obtain any
- drawback not allowed by this act upon the exportation of
- fuch goods to the faid Britim colonies or plantations; and
' the faid goods flall neverthelefs be carried to any Britifh ' colony or plantation in America, and landed there, con' trary to the true intent and meaning hereof, that then and in fuch cafe the drawback fhall be forfeited, and the 6 exporter of fuch goods, and the mafter of the fhip or ${ }^{6}$ veffel on board which the fame were loaden and exported, 6 fhall forfeit double the amount of the diawback paid or ' to be paid for the fame, and alfo treble the value of the - faid goods.
- And it is further enacted, by the authority aforefaid, That
- from and after the faid firf day of May 1764, if any goods ${ }^{6}$ not allowed to draw back any part of the old fubfidy, or ${ }^{6}$ any other duty by this act, fhall be entered for exportation ' from this kingdom to any other place beyond the feas, ex6 cept to fome Britifh colony or plantation in America, in ' every cafe where the exporter is required, by any law now ' in force, to fwear that fuch goods are not landed or in-- tended to be landed in Great Britain, Ireland, or the Ifle ' of Man, there fhall alfo be added to, and included in,
6 the oath upon the debenture for fuch goods, "any Britiih
"colonies or plantations in America."
- And be it further enacked, by the authority aforefaid, That - from and after the 29th day of September 1764, no rum or - fpirits of the produce or manufacture of any of the colo-- nies or plantations in America, not in the poffeffion, or - under the dominion of his majelty, his heirs or fucceffors, 6 fhall be imported or brought into any of the colonies or - plantations in America, which now are, or hereafter may - be, in the poffieffion, or under the dominion of his majetty,
c'his heirs or fucceffors, upon forfeiture of all fuch rum or
- firits, together with the fhip or veffel in which the fame - fhall be imported, with the tackle, apparel, and furniture - thereof, to be feized by any officer or officers of his ma-- jefty's cuftoms, and profecuted in fuch manner and form - as herein after is expreffed ; any law, cuftom, or ufage to - the contrary notwithftanding.
- And it is hereby further enacted and declared by the au-- thority aforefaid, That from and after the 2 gth $^{\text {th }}$ day of - September 1764 , nothing in the before recited act made in ' the fixth year of the reign of his late majefty king George - the fecond, or any other act of parliament, fhall extend, ' or be conftrued to extend, to give liberty to any perfon or - perfons whatfoever to import into the kingdom of Ireland, - any fort of fugars, but fuch only as fhall be fairly and bona - fide loaden and hipped in Great Britain, and carried di6 rectly from thence in fhips navigated according to law.
- And for the better preventing frauds in the ingortation of
' foreign fugars and paneles, rum and firits, molafles and
- fyrups, into any of his majefty's dominions, under pretence 6 that the fame are the growth, produce, or manufacture of ( the Britifh colonies or plantations, it is further enacted, by 6 the authority aforefaid, That, from and after the 29 th day 6 of September 1764, every perfon or perfons loading on - board any fhip or veffel, in any of the Britifh colonies or - plantations in America, any rum or fpirits, fugars or pa6 neles, molafles or fyrups, as of the growth, produch, or manu-- facture of any Britilh colony or plantation, hhall, before the - clearing out of the faid fhip or veffel, produce and deliver to - the collector, or other principal officer of the cuftoms at the - loading port, an affidavit figned and fworn to before fome - juftice of the peace in the faid Britifh colonies or planta-- tions, either by the grower, maker, or fhipper of fuch ' goods, or his or their known agent or factor, expreffing, - in words at length, and not in figures, the quality of the - goods fo fhipped, with the number and denomination of - the packages, and defcribing the name or names of the - plantation or plantations, and the name of the colony - where the fame grew, or were produced and manufactured; ' which affidavit fhall be attefted, under the hand of the faid - juftice of the peace, to have been fworn to in his prefence, - who is hereby required to do the fame without fee or re-- ward: and the collector, or other principal officer of the - cuftoms to whom fuch affidavit flaill be delivered, fhal - thereupon grant to the mafter, or other perfon having the - charge of the fhip or veffel, a certificate under his hand ' and feal of office, (without fee or reward) of his having - received fuch affidavit purfuant to the dirfctions of this - act; which certificate fhall exprefs the quality of the goocis - flipped on board fuch hhip or veffel, with the number and - denomination of the packages : and fuch collector or other ' principal officer of the cuftoms thall alfo, (without fee or - reward) within thirty days aiter the fallirs of the fhip or
- veffl, tranfmit an exact copy of the faid affidavit to the - Tecretary's office for the refpective colony or plantation - where the goods were fhipped, on forfeiture of five - pounds.
- And it is further enacted, That upon the arrival of fuch - fhip or veffel into the port of her difcharge, either in Great - Britain, or any other port of his majefty's dominions, where - fuch goods may be lawfully imported, the mafter, or other - perfon taking the charge of the thip or veffel, fhall, at - the time he makes his report of his thip or cargo, deli-- ver the faid certificate to the collector, or other principal - officer of the cuftoms; and make oath before him, that - the goods fo reported are the fame that are mentioned in - the faid certificate, on forfeiture of one hundred pounds; - and if any rum or fpirits, fugars or paneles, molaffes or < fyrups, thall be imported or found on board any fuch thip - or veffel, for which no certificate fhall be produced, or - which fhall not agree therewith, the fame fhall be deemed ( and taken to be foreign rum and fpirits, fugar and pa' neles, molaffes and fyrups; and -fhall be liable to the fame "duties, reftrictions, regulations, penalties and forfeitures, - in all refpects, as rum, fpirits, fugar, paneles, molafles ' and fyrups, of the growth, produce or manufacture of - any foreign colony or plantation would refpectively be - liable to by law.
- Provided always, That if any rum or firits, fugars or pa* neles, molafes or fyrups, hall be imported into Great - Britain from any Britifh colony or plantation in America, - without being included in fuch certificate as is herein be-- fore directed; and it fhall be made to appear to the fa' tisfaction of the commiffioners of his majefty's cuftoms at - London or Edinburgh refpectively, that the goods are t really and truly the produce of fuch Britifh plantation or - colony, and that no fraud was intended ; it thall and may in - fuch cafe be lawful for the faid refpective commiffoners to - permit the faid goods to be entered, upon payment of the - like duties as fuch goods would be liable to if this law c had not been made.
c And whereas, by an act of parliament made in the twelfth - year of the reign of king Charles the fecond, incituled, - An act for encouraging and increafing of fhipping and na6 vigation, and feveral fubfequent acts of parliament which - are nowin force, it is, amongft other things directed, that - for every fhip or veffel that fhall load any commodities, c in thofe acts particularly enumerated, at any Britilh plan-- tation, being the growth, product or manufacure thereof, - bonds chall be given with one furety to the value of one - thoufand pounds, if the fhip be of lefs burden than one * hundred tons, and of the fum of two thoufand pounds if - the fhip be of greater burthen; that the fame commodi-- ties fhall be brought by fuch fhip or veffel to fome other - Britifh plantation, or to fome port in Great Britain : not-- withitanding which, there is great reafon to apprehend fuch - goods are frequently carried to foreign parts, and landed - there. And whereas great quantities of foreign molaffes c and fyrups are clandeftinely run on fhore in the Britifh - colonies, to the prejudice of the revenue, and the great - detriment of the trade of this kingdom and its American - plantations; to remedy which practices for the future, be ' it further enacted, by the authority aforefaid, that from and < after the 29th day of September 1764, bond and fecurity c in the like penalty fhall alfo be given, to the collector or c other principal officer of the cuftoms at any port or place s in any of the Britim American colonies or plantations, with - one furety, befides the mafter of every fhip or veffel that * fhall lade or take on board there any goods not particu-- larly enumerated in the faid acts, being the product or ma-- nufacture of any of the faid colonies or plantations; with - condition, that in cafe any molaffes or fyrups, being the - produce of any of the plantations not under the dominion - of his majefty, his heirs and fucceffors, fhall be laden on - board fuch fhip or veffel, the fame fhall (the danger of c the fcas and enemies excepted) be brought, without fraud 6 or wilful diminution, by the faid fhip or veffel, to fome of - his majefty's colonies or plantations in America, or to - fome port in Great Britain; and that the mafter or other - perfon having the charge of fuch fhip or veffel, fhall im-- mediately upon his arrival at every port or place in Great - Britain, or in the Britih American colonies and planta-- tions, make a juft and true report of all the goods laden - on board fuch hip or veffel, under their true and proper de-- nominations; and if any fuch non-enumerated goods hhall c be laden on board any fuch thip or veffel, before fuch bond - Ghall be given, the goods fo laden, together with the fhip s or veffel and her farniture, fhall be forfeited, and fhall and - may be feized by any officer of the cuftoms, and profe-- cured in the manner herein after directed.
* And it is hereby further enacted, by the authority aforefaid, * That every mafter, or perfon having the charge of any - fhip or veflel, fhall, before he departs from any Britifh - colony or plantation where he receives his lading, take a * certificate, under the hands and feals of the collefor or tother principal officer of the cuftoms there (which certi-- Scate fuch officers are hercby requared to grant without fee

6 or reward) that bond hath been given purfuant to the di ' rections of this or any other act of parliament as the cafe ' fhall require; and the mafter, or perfon having the charge - of fuch flup or veffel, fhall keep fuch certificate in nis ' cuftody till the voyage is compleated; and thall then de. - liver the fame up to the collector or other chicf officer of ' the cuftoms, at the port or place where he fhall difcharge - his lading, either in Great Britain or in any Britifh Ame - rican colony or plantation, on forfeiture of one hunded - pounds for each and every offence.

- And it is hereby further enacted, That if any Britifh nuip c or veffel, laden as aforefaid, with any goods of the pro-- duce or manufacture of any Britifh colony or plantation ' in America, or baving on board any molafles or fyrups, c the produce of any foreign colony or plantation, fhall be - difcovered by any officer of his Majefty's cuftoms, within ' two leagues of the fhore of any Britifh colony or planta-- tion in America,' and the mafter or perfon taking charge ' of fuch thip or veffel fhall not produce a certificate, that - bond has been given, purfuant to the directions of this or ' any other act of parliament, as the cafe may require; or 6 if he fhall not produce fuch certificate to the collector or 6 other chief officer of the cuftoms where he fhall arrive, either - in Great Britain or any Britifh American colony or plan-- tation, fuch fhip or veffel, with her tackle, apparel and
- furniture, and all the goods therein laden hall be farfeited,
' and fhall and may be feized and profecuted as herein after - is directed.
- And it is hereby further enacted, by the authority afore-
- faid, That the faid bond directed to be given by this act,
- with refpect to fuch non-enumerated goods, fhall continue

6 in force for one year from and after the completion of the

- voyage ; and in cafe no fraud fhall appear within that time,
' it fhall be lawful for the commiffioners of his majelty's ' cuftoms, or any four or more of them, to direct the fuid - bond to be delivered up.
- And it is hereby further enacted, by the authority aforefid,
' That from and after the 29th day of September 1764, all ' coffee, pimento, cocoa nuts, whale fins, raw filk, hides ' and fkins, pot and peanl afhes, of the growth, production c or manufacture of any Britifh colony or plantation in - America, fhall be imported direaly from thence into this - kingdom, or fome other Britifh colony or plantation, un' der the like fecurities, penalties and forfeitures, as are par6 ticularly mentioned in two acts of parliament, made in the - twelfth and twenty-fifth years of the reign of king Charles
- the fecond, the former intituled, An act for the encou-
- raging and encreafing of fhipping and navigation; and - the latter intituled, An act for the encouragement of the c Greenland and Eaftland trades, and for the better fec curing the plantation trade, or either of them, with re-- fpect to the goods in thofe acts particularly enumerated; - any law, cuftom or ufage to the contrary notwithtanding.
6 And it is hereby further enacted, by the authority aforefaid,
- That from and after the 29th day of September 1754, no - iron nor any fort of wood, commonly called lumber, as - fpecified in an act paffed in the eighth year of the reign of
- king George the firft, intituled, An act for giving further c encouragement for the importation of naval ftores, and
- for other purpofes therein mentioned, of the growth, pro-
- duction or manufacture of any Britifl colony or planta' tion in America, fhall be there loaden on board any fip - or veffel, to be carried from thence, until fufficient bond - fhall be given, with one furety befides the matter of the - veffel, to the collector or other principal officer of the ccuftoms at the loading port, in a penalty of double the 6 value of the goods, with condition, that the faid goods Thall not be landed in any part of Europe except Great Britain; which bonds fhall be difcharged in the manner
' hereafter mentioned ; that is to fay, for fuch of the faid goods as fhall be entered for, or landed in Great Britain, the condition of the bonds chall be, to bring a certificate c in difcharge thereof, within eighteen months from the - date of the bond; and within fix months for fuch of the - faid goods as fhall be entered for, or landed in any of the - Britifh colonies or plantations in America; which refpec-- tive certificates fhall be under the hands and feals of the - colleftor or other principal officer of the cuftoms, refident 6 at the port or place where fuch goods thall be landed, - teftifying the landing thereof; and for fuch of the faid - goods as fhall be entered for, or landed at, any other place - in America, Africa or Afia, to bring the like certificate, ' within twelve months, under the common feal of the chief ' magiftrate, or under the hands and feals of two known - Britifh merchants refiding there; or fuch bond or bonds ' Thall be difcharged, in either of the faid cafes, by proof - upon oath made by credible perfons, that the faid goods were taken by enemies, or perifhed in the feas.
c And for the better preventing frauds, in the importation cr ' exportation of goods that are liable to the payment of du' ties, or are prohibited, in the Britifh colonies or plana' tions in America, it is further enacted, by the auchority - aforefaid, That from and after the 2gth Day of September
- i764, no goods, wares or merchandizes; of any kind whatfoever, thall be thipped or laden on board any flip or * veffel in any of the Britifh colonies or plantations in Ame-- rica to be carried from thence to any other Britih colony - or plantation, without a fufferance or warrant firft had - and obtained from the collector or other proper officer of c the cuftoms at the port or place where fuch goods thall be c intended to be put on board; and the mafter of every - fuch fhip or veffel fhall, before the fame be removed or - carried out from the port or place where he takes in his - lading, take out a cocket or cockets', expreffing the quan-- tity or quality of the goods, and marks of the package fo - laden, with the merchants names by whom hipped and - to whom conligned; and if they are goods that are liable c to the payment of any duty, either upon the importation - into, or upon the exportation from the faid colonies or a plantations', the faid cocket or cockets hall likewife di-- ftinctly fpecify, that the duties have been paid for the - fame, referring to the times or dates of entry and pay-- ment of fuch duties, and by whom they were paid; which - cocket or cockets fhall be produced by the mafter of fuch - fhip or veffel, to the collector or other principal officer of - the cuftoms, at the port or place where fuch hip or veffel - fhall arrive, in any of the Britifh colonies or plantations in - America, before any part of the goods are unladen or put on - Thore: and if any goods or merchandizes fhall be fhipped - as aforefaid without fuch fufferance, or the veffel fhall de-- part and proceed on her voyage without fuch cocket or - cockets, or the goods fhall be landed or put on fhore be-- fore fuch cocket or cockets are produced at the port or - place of difcharge, or if the goods do not agree in all re-- ipeds therewith, the goods, in any or either of thefe cafes, - fhall be forfeited and loft; and any officer of his majefty's - cultoms is hereby impowered to ftop any fuch fhip or vef-- fel, bound as aforefaid, which fhall be difcovered within - two leagues of the fhore of any of the faid Britifh colo-- nies or plantations in America, and to leize and take from - thence all the goods which fhall be found on board fuch - thip or veffel for which no fuch cocket or cockets thall be - prodyced to him.
- And whereas Britifh veffels arriving from foreign parts at - feveral of the out ports of this kingdom, fully or in part - laden abroad with goods that are pretended to be deftined - to fome foreign plantation, do frequently take on board - fome fmall parcels of goods in this kingdom, which are - entered outwards for fome Britifh colony or plantation, - and a cocket and clearance thereupon granted for fuch - goods, under cover of which the whole cargoes of fuch < veffels are clandeftinely landed in the Britifh American do-- minions, contra'y to feveral acts of parliament now in - force, to the great prejudice of the trade and revenue of - this kingdom; for remedy whereof, be it further enacted, c by the authority aforefaid, That, from and after the firft - day of May 1764 , no thip or veffel fhall, upon any pre-- tence whatfoever, be cleared outwards from any port of - this kingdom, for any land, ifland, plantation, colony, - territory or place, to his majefty belonging, or which - fhall hereafter belong unto, or be in the poffeffion or un-- der the dominion of his majefty, his heirs or fucceffors, in - America, unlefs the whole and entire cargo of fuch fhip c or veffel fhall be, bona fide, and without fraud, laden and - Thipped in this kingdom; and any officer of his majefty's - cuftoms is hereby impowered to flop any Britifh fhip or - veffel arriving from any port of Europe, which fhall be - difcovered within two leagues of the fhore of any of the - faid Britifh colonies or plantations in America, and to - feize and take from thence, as forfeited, any goods (except * as herein after mentioned) for which the mafter, or other - perfon taking the charge of fuch thip or veffel, fhall not - produce a cocket or clearance from the collector or proper * officer of his majefty's cuftoms, certifying, that the raid - goods were laden on board the faid thip or veffel in fome - port of Great Britain.
* Provided always, that this act fhall not extend, nor be - conftrued to extend, to forfeit, for want of fuch cocket - or clearance, any faltladen in Europe, for the fifheries in - New England, Newfoundland, Penfylvania, New York - and Nova Scotia, or any other place to which falt is or - Mhall be allowed by law to be carried; wines laden in the - Madeiras, of the growth thereof; and wines of the - growih of the weftern iflands, or Azores, and laden there; - nor any horfes, viduals, or linen cloth, of and from Ire-- land, which may be laden on board fuch fhips or veffels. - And it is bereby further enacted, That if any perfon or - perfons fhall counterfeit, rafe, alter or falfify any sffidavit, - certificate, fufferance, cocket or clearance, required or di-- rected by this act ; or thall knowingly or willingly make ' ufe of any affidavit, certificate, fufferance, cocket or clear' ance, fo counterfeited, rafed, altered or falfified, fuch per-- fon or perfons thall, for every fuch offence, forfeit the - fum of five hundred pounds ; and fuch affidavit, certifi-- cate, fuffirance, cocket or clearance, fhall be invalid and - of no effect.
- And whercas, by an adt of parliament made in the ninth Vos. I.
${ }^{6}$ year of the reign of his late majefty king George the fe= c cond, intituled, An aEt for indemnifying perions who 6 have been guilty of offences againft the laws made for fe' curing the revenue of cuftoms and excife, and for enforcing ' thole laws for the future; and by other acts of parliament
- fince made, which are now in force, in order to prevent
- the clandeftine landing of goods in this kingdom, from
- veffels which hover uponi the coafts thereof; feveral goods
' and veffels, in thofe laws particularly mentioned and de-
- fcribed, are declared to be forfeited, if fuch veftels are
- found at anchor, or hovering within two leagues of the
- fhore of this kingdom, without being compelled thereto
- by neceffity or diftrefs of weather; which laws have been ' found very beneficial to the publick revenue: And where-
as, if fome provifion of this fort was extended to his Ma-- jefty's American dominions, it may be a means of pre-- venting an illicit trade therewith, and tend to enforce an ' act made in the twelfth year of the reign of king Charles - the fecond, intituled, An act for the encouraging and ' increafing of hipping and navigation; and another act ' made in the feventh and eighth years of the reign of king William the third, intituled, An act for preventing frauds, 6 and regulating abufes in the plantation trade, fo far as
thofe laws do prohibit any goods or commodities to be - imported into, or exported out of, any Britifh colony or ' plantation in America, in any foreign thip or veffel; c to which end therefore, be it enacted by the authority 6 aforefaid, That, from and after the 29th day of September ' 1764 , if any foreign fhip or veffel whatfoever thall be - found at anchor, or hovering within two leagues of the - fhore of any land, illand, plantation, colony, territory or ' place, which fhall or may be in the poffeffion, or under 6 the dominion of his majefty, his heirs or fucceffors, in - America, and fhall not depart from the coalt, and pro-- ceed upon her voyage to fome foreign port or place, with-- in forty-eight hours after the mafter or other perfon taking
' the charge of fuch fhip or veltel fhall be required to do, - by any officer of his majefly's cuftoms, unlefs in cafe of - unavoidable neceffiry and diftrefs of weather, fuch thip or - veffel, with all the goods therein laden, fhall be forfeited c and loft, whether bulk fhall have been broken or not; 6 and fhall and may be feized and profecuted by any officer ' of his majefty's cuftoms, in fuch manner and form as - herein after is expreffed.
- Provided always, that nothing herein contained fhall ex-- tend, or be conftrued to extend, to any fhip or veffel be-
c longing to the fubjects of the French king, which fhall
6 be found fifhing, and not carrying on any illicit trade, on
' that part of the ifland of Newfoundland which ftretches
- from the place called Cape Bonavifta to the northern - point of the faid ifland, and from thence running down - to the weftern fide, reaches as far as the place called Point - Riche.

6 And in order to prevent any illicit trade or commerce be-
' tween his majefty's fubjects in America, and the fubjects of the Crown of France, in the iflands of Saint Pierre and - Miguelan, it is hereby further enacted, by the authority ' aforefaid, That from and after the 29th day of Septem-- ber 1764 , if any Britifh hip or veffel thall be found ftand' ing into, or coming out from either of thofe illands, nr ' hovering or at anchor within two leagues of the coafts - thereof, or thall be difcovered to have taken any goods or

- merchandizes on board at either of them, or to have been ' there for that purpofe, fuch thip or veffel, and all the ' goods fo taken on board there, fhall be forfeited and loft, ( and fhall and may be feized and profecuted by any officer ' of his majefty's cuftoms; and the malter, or other perfon - having the charge of fuch thip or veffel, and every per-
- fon concerned in taking any fuch goods on board, hhall - forfeit treble the value thereof.
- And toprevent the concealing any goods in falfe packages, c or private places, on board any dhip or veffel arriving at c any of the Britifh colonies or plantations in America, - with intent to their being clandeftinely landed there, be it - further enacted, by the authority aforefaid, That from and 6 after the 29th day of September 1764, all goods which ' fhall be found concealed in any place whatfoever on board 6 any fuch fhip or veffel, at any time after the mafter there6 of fhall have made his report to the collector, or other pro' per officer of the cuftoms, and which fhall not be com-- prifed or mentioned in the faid report, fhall be forfeited - and loft, and fhall and may be feized and profecuted by ' any officer of the cuftoms; and the mafter, or other per-- fon having the charge or command of fuch thip or veffel, - (in cafe it can be made appear, that he was any wife con-- fenting or privy to fuch fraud or concealment) fhall for-- feit treble the value of the goods fo found.
- And it is hereby further enacted, by the authority aforefaid,

6 That from and after the 29th day of September 1764 , if

- any goods or merchandizes. whatfoever, liable to the pay-- ment of duties in any Britifh colony or plantation in Anre' rica, by this or any other act of parliament, fhall be - loaden on board any fhip or veffel outward bound, or fhall
c be unfhipped or landed from any thip or veffel inward
7 G
6 bound,

6ound, before the refpective duties due thereon are paid, agreeable to law, or if any prohibited goods whatfoever - fhall be imported into, or exported out of any of the faid colonies or plantations, contrary to the true intent and - meanmg of this or any ocher act of parliament, every perfon who thall beaffifting or otherwife concerned, either in the loading outwards, or in the unfhipping or landing inwsus, fuch goods, or to whofe hands the fame fhall - kinown ly come after the loading or unfhipping thereof, Ghalt, for each and every offence, forfeit treble the value of - fuch gioods, to be eftimated and computed according to ( the beft price that each refpective commodity bears at the c plare where fuch offence was committed; and all the - boats, horfes, cattle and other carriages whatfoever, made - ufe of in the loading, landing, removing, carriage or cons veyance of any of the aforefaid goods, fhall alio be forfeited and loft, and thall and may be feized and profe-- cuted by any officer of his majefty's cuftoms, as herein after mentioned

- And it is hereby further enacted, by the authority aforefaid, That from and after the 29 th day of September 1764 , if any officer of his majefty's cuftoms fhall, directly or in -- directly, take or receive any bribe, recompence or reward, - in any kind whatfoever, or connive at any falfe entry, or make any collufive feizure or agreement, or do any other - att or deed whatfoever, by which his majefty, his heirs - or fucceffors, fhall or may be defrauded in his or their du-- ties, or whereby any goods prohibited fhall be fuffered to ' pafs either inwards or outwards, or whereby the forfeitures ' and penalties inflicted by this or any other act of parlia-
- ment relating to his majefly's cuftoms in America may be
- evaded; every fuch officer therein offending, fhall, for

6 each and every offence, forfeit the fum of tive hundred
" pounds, and be rendered incapable of ferving his majefty - in any office or employment, civil or military. And if - any perfon or perfons whatfoever thall give, offer, or promile to give, any bribe, recompence or reward, to any
6 officer of the cuftoms, to do, conceal, or connive at any

- act, whereby any of the provifions made by this or any
- other act of parliament, relating to his majefty's cuftoms
in America, may be evaded or broken, every fuch perfon
- or perfons fhall, for each and every fuch offence, (whether

6 the fame offer, propofal or promife be accepted or per( formed or not) forfeit the fum of fifty pounds.

- And whereas, by an act of parliament made in the feventh - and eighth years of the reign of king William the third,
- intituled, An act for preventing frauds and regulating
- abules in the plantation trade, all governors or command-
' ers in chief of any of his majefty's colonies or plantations
- are required to take a folemn oath, to do their utmoft,

4 that all the claufes, matters and things contained in that c act, and feveral other acts of parliament therein referred
© to, relating to the faid colonies and plantations, be punc(tually and bona fide obferved, according to the true in6 tent and meaning thereof. And whereas divers other good C laws have been fince made, for the better regulating and - fecuing the plantation trade, be it further enacted, by the 6 authority aforefaid, That all the prefent governors or < commanders in chief of any Britifh colony or plantation - fhall, before the 29th day of September 1764, and all 6 who hereafter thall be made governors or commanders in c chief of the faid colonics or plantations, or any of them, - before their entrance into their government, fhall take a

- folemn oath, to do their utmof that all the claufes, mat-
< ters and things, contained in any act of parliament here-
- tofore made and now in force, relating to the faid colonies c and plantations, and that all and every the claufes conG tained in this prefent act, be punctually and bona fide - obferved, according to the true intent and meaning there-
of, fo far as appertains unto the faid governors or com-- manders in chief refpectively, under the like penalties,
- forfeitures and difabilities, either for neglecting to tak
- the faid oath, or for wittingly neglecting to do their duty
- accordingly, as are mentioned and expreffed in the faid re-
- cited act made in the feventh and eighth years of the reign
- of king William the third; and the faid oath hereby required to be taken, hall be adminiftred by fuch perfon or 6 perfons as hath or have been, or thall be, appointed to - adminifter the oath required to be taken by the faid act - made in the feventh and eighth years of the reign of king - William the third.
- And be it further enacted, by the authority aforefaid, That ' all penaltes and forieitures herein before mentioned, which Thall be incurred in Great Britain, fhall and may be pro-- fecuted, fued for and recovered, in any of his majefty's - courts of Record at Wefminfter, or in the court of Exche-- quer in Scolland refpectively, and (all neceffary charges - for the recovery thereof being firf deducted) fhall be di' vided and applied, one moiery to and for the ufe of his c majefty, his heirs and fucceffurs, and the other moiety to 6 the feizer or profecutor
- And it is hereby fuither enacted and declared, That from 6 and after the 2gth day of September 1764 , all fums of - money granted and impoled by this act, and by an act
' made in the 25 th year of the reign of king Charles the fecond, intituled, An act for the encouragement of the - Greenland and Eaftland trades, and for the better fecuring - the plantation trade, as rates or duties; and alfo all fums ' of money impofed as penalties' or forfeitures, by this or ' any other act of parliament relating to the cuftoms, which ' thall be paid, incurred or recovered, in any of the Brition - colonies or plantations in America; fhall be deemed, and - are hereby declared to be fterling money of Great Britain; c and fhall be collected, recovered and paid, to the amount - of the value which fuch nominal fums bear in Great Bri-- tain; and that fuch monies thall and may be received and 6 taken, according to the proportion and value of five fhil. - lings and fix pence the ounce in filver; and that all the c forfeitures and penalties inflicted by this or any other act ' or acts of parliament relating to the trade and revenues of ' the faid Britifh colonies or plantations in America, which © fhall be incurred there, fhall and may be profecuted, fued - for and recovered, in any court of record, or in any court - of admiralty, in the faid colonies or plantations where ' fuch offence fhall be committed, or in any court of vice - admiralty which may or fhall be appointed over all Ame6 rica (which court of admiralty or vice admiralty are here-- by refpectively authorized and required to proceed, hear - and determine the fame) at the election of the informer or - profecutor.

4 And it is hereby further enacted, That all penalties and 6 forfeitures fo recovered there, under this or any former " act of parliament, fhall be divided, paid and applied, as - follows: That is to fay, after deducting the charges of - profecution from the grofs produce thereof, one third part c of the net produce thall be paid into the hands of the - collector of his majefty's cuftoms at the port or place where

- fuch penalties or forfeitures fhall be recovered, for the ufe ' of his majefty, his heirs or fucceffors; one third part to - the governor or commander in chief of the faid colony or - plantation; and the other third part to the perfon who - fhall feize, inform and fue for the fame; excepting fuch - feizures as fhall be made at fea, by the commanders or c officers of his majefty's fhips or, veffels of war duly au-- thorized to make feizures ; one moitty of which feizures, - and of the penalties and forfeitures recovered thereon, firft - deducting the charges of profecution from the grofs pro' duce thereof, fhall be paid, as aforefaid, to the collectors ' of his majefty's cuftoms, to and for the ufe of his majefty, - his heirs and fucceffors, and the other moiety to him or "them who thall feize, inform and fue for the fame; any
- law, cuftom or ufage to the contrary notwithftanding;
- fubject neverthelefs to fuch diftribution of the produce of - the feizures fo made at fea, as well with regard to the - moiety herein before granted to his majefty, his heirs and
- fucceffors, as with regard to the other moiety given to the
- feizer or profecutor, as his majefty, his heirs and fucceffors,
- fhall think fit to order and direct, by any order or orders of ' council, or by any proclapation or proclamations, to be ${ }^{6}$ made for that purpofe.
- Provided always, and it is hereby further enacted, by the - authority aforefaid, That if the produce of any feizure ' made in America, fhall not be fufficient to anfwer the ex-- pences of condemnation and fale; or if, upon the triall of - any feizure of any fhip or goods, a verdict or fentence - fhall be given for the claimant; in either of thofe cafes, - the charges attending the feizing and profecuting fuch hip 's or goods, hall and may, with the confent and approbation ' of any four of the commiffioners of his majefty's cuitoms, c be paid out of any branch of the revenue of cultoms ' arifntg in any of the Britifh colonies or plantations in - America; any thing in this or any other act of parlia-- ment to the contrary notwithftanding.
- And it is hereby further enacted, by the authority afore-- faid, That from and after the faid 2gth day of September ' 1764, no perfon fhall be admitted to enter a claim to any - fhip or goods feized in purfuance of this or any other act 6 of parliament, and profecuted in any of the Britifh co-- lonies or plantations in America, until fufficient fecurity - be firft given, by perfons of known ability in the court ' where fuch feizure is profecuted, in the penalty of fixty ' pounds, to anfwer the cofts and charges of profecution; - and in default of giving fuch fecurity, fuch thip or goods - fhali be adjudged to be forfeited, and fhall be condemned. - And it is hereby further enached, by the authority afore-- faid, That from and after the $2 \mathrm{~g}^{\text {th }}$ day of September ' 1764, if any fhip or goods fhall be feized for any caufe of 6 forfeiture, and any difpute fhall arife, whether the cuftoms - or duties for fuch goods have been paid, or the fame have - been lawfully imported or exported, or concerning the - growth, product or manufacture of fuch goods, or the - place from whence fuch goods were brought; then and in ' fuch cafes, the proof thereof fhlld lie upon the owner or - claimer of fuch thip or goods, and nor upon the officer ' who thall feize or fop the fame; any law, cuftom or - ufage to the contrary notwithftanding.
- And be it further enacted, by the authority aforefaid, That
- from and after the 29 th day of September 1764 , in cale

- any information hall be commenced and brought to trial - in America, on account of any feizure of any fhip or - goods, as forfeited by this or any ocher act of parliament - relating to his majefty's cuftoms, wherein a verdict or - fentence fhall be given for the claimer thereof; and it - fentence fhall appear to the judge or court before whom the fame - hhall appear to the judge, or court before whom the fame
- the judge or court before whom the fame fhall be tried
- fhall certify, on the record or other proceedings, that there
- was a probable caufe for the profecutor's feizing the faid
- thip or goods; and in fuch cale, the defendant fhall not
- be intitled to any cofts of fuit whatfoever, nor fhall the
- perfons who feized the faid flhip or goods be liable to any
- action, or other fuit or profecution, on account of fuch
- feizure; and in cafe any action, or other fuit or profecu-
* tion, fhall be commenced and brought to trial againft any
- perfon or perfons whatfoever, on account of the feizing
- any fuch thip or goods, where no information fhall be
- commenced or brought to trial to condemn the fame, and c a verdict or fentence fhall be given upon fuch action or - profecution againit the defendant or defendants, if the - court or judge, before whom fuch action or profecution - fhall be tiied, hall certify in like manner as aforefaid, that
- there was a probable caufe for fuch feizure; then the plain-
- tiff, befides his fhip or goods fo feized, or the value there-

6 of, fhall not be intitled to above two pence damages, nor

- to any cofts of fuit; nor thall the defendant, in fuch - profecution, be fined above one fhilling.
- And be it further enacted, by the authority aforefaid, That
- if any action or fuit hall be commenced either in Great
- Britain or America, againft any perfon or perfons, for any
- thing done in purfuance of this or any other act of parlia-- ment relating to his majefty's cuftoms, the defendant - or detendants in fuch action or fuit may plead the * General Iffue, and give the faid acts and the fpecial - matter in evidence at any trial to be had thereupon, and - that the fame was done in purfuance, and by the authoc rity of fuch act; and if it hall appear fo to have been - done, the jury fhall find for the defendant or defendants; - and if the plaintiff thall be nonfuited, and difcontinue his - action, after the defendant or defendants fhall have ap-- peared; or if judgment thall be given upon any verdiet or * demurrer againft the plaintiff, the defendant or defendants - Ghall recover treble cofts, and have the like remedy for the ' fame, as defendants have in other cafes by law.'
COMMANDERS, or CAPTAINS of trading fhips, are fuch head officers, as have the chief direction and command of merchant-men, as well with refpect to the proper fecurity of the cargo, as to the part of navigating the veficl.

## Remarks.

As the fuccefs of merchants, in their foreign adventures, depends on the fecurity of the navigation of fhipping, fo too much precaution cannot be taken in regard to the qualifications of their commanders : and that not only in relation to their fkill and experience in the art of navigation, but their honour and honefty, late, as well as paft experience having fhewn, that they are not always proof againft fraud and corruption; though, for their number, and the peculiarity of their employment, there is not, in the general, as the great Mr Locke has obferved, a more upright body of men in the three kingdoms. See the articles Assurances and AffiDavit, with Remarks thereon.
But, befides integrity and knowlege in navigation, I would defire leave to recommend it to thofe gentemen, that fome knowlege in accounts is what they fhould by no means be deficient in. For want of which, they too frequently give great trouble and vexation to their merchants and owners, and, perhaps, may have very often injured themfelves as well as their employers.
Nor is it ufelefs to the captains of trading velfels to be acquainted with the peculiar forms of tranfacting bufinefs with confuls, notaries, \&c.
Another moft effential qualification alfo to thefe gentlemen is, that of the art of navigation; which feeming to be rendered more concife and eafy than any thing I ever met with, from the following difcovery, which fell into my hands lately, and has not (as I have been informed) yet been made public, in the fhape it now is, I have been requefted to fubmit the fame to the public confideration, and particularly in a fhort addrefs to all commanders of fhips, \&xc. which, as the art of navigation is perfectly compatible with a work of commerce, I judge it may not prove unacceptable ; and more efpecially fo, as it contains another attempt to difoover the longitude at fea. This, indeed, has been fo long attempted in vain, that many are of opinion, that it will fcarce ever be difcovered. Whether what follows is really any advance that way or not, is fubmitted to general confideration; and more particularly to the fair and candid trial and experience of all Commanders and Masters of Ships, as well in the fervice of the royal navy, as that of merchants; and it is moft humbly reguefted by the author, and many public-fipirited gentlemen, that thofe who dhall have tried and experienced at fea the
truth of the proponition (if there be any truth in it) trould be generous enough to communicate the fame by letter, poft paid, to the author, the Rew. Mr. Richard Locke, to be left at Mr. R. Horiefield, bookfeller in London. It is furthermore humbly defired, that fuch gentlemen, who fhall be pleafed to give themfelves this trouble, would fign their names and places of abode, that the author may perfonally pay his duty to them for the trouble they may have given themfelves.
The title of the work is as follows: The New and Univerfal Problem to difcover the Longitude at Sea, further explained and illuftrated. In which is geometrically demonftrated, that not only the Longitude and Courfe, but alfo the Diftance run, is corrected by the fame obfervation of Latitude and Diftance run. With a general challenge to all the Mathematicians in the world to confute it, or hew any other Method of difcovering the Longitude at Sea, that may be depended upon. By Richard Locke, a Clergyman and Reader to the Hon. Society of Lincoln's-Inn.

A paper printed in the London Evening Poft, January 24, 1751. To the Hon, the Commiffoners appointed to inrpect the Longitude, and to the Public in general, this Problem for finding the Longitude at Sea is humbly fubmitted by the author, Richard Locke.

Whereas the author having made three feveral voyages to America, with a view, in a great meafure, to difcover the longitude: the firft was with a good watch and an inftrument to take true time, which he did to a great exacinefs: the fecond was by an eclipfe of the moon, with an equal certainty; but neither of thefe methods can be depended upon at fea: and the third, by a problem, by which the longitude, in the dead reckoning, is corrected by the fame obfervation that the latitude is, and to the fame certainty, without any regard to lee-way, currents of the fea, or variation of the compafs: and, becaufe it is a problem of univerfal benefit to mankind, I fhall communicate the practical part to the public, referving the explication and demonftration of this, and the other two methods, to a more convenient opportunity.
There are few that ufe the feas, but know how to correct the latitude in the dead reckoning, by an obfervation: as if the latitude, in the dead reckuning, is lefs than in the obfervation, they add the difference to the latitude, and bence find the longitude, by adding the fame proportionable difference; and, if lefs, by fubtracting in both cafes; which is very er roncous, and quite contrary to the truth : for, if the dead reckoning is found lefs than in obfervation, 'tis plain the courfe was taken too much, and diffance too little, by reafon of the lee-way, currents of the fea, or variation of the compafs: fubtract therefore the difference from the longitude, this will give the true courfe anfwering to the obferved latitude, and hence the true longitude: but if lefs, as when the courfe is too little and the diftance too much, from the fame caufes, add the difference to the longitude, and it will give the true longitude and latitude. To inftance in numbers; fuppofe, in the dead reckoning, the latitude is found to be 10 leagues and the longitude 15, but by an obfervation the latitude is found 15 , fubtract the difference from the longitude, and, adding it to the latitude, it will make the longitude 10 , and the latitude 15 ; this, according to the ufual way of correction, would have made the longitude 20: but, if the latitude in the dead reckoning is 15 , and only no in the obfervation, and the longitude 10 , add the difference to the longitude, and the true latitude is 10 , and longitude 15; which, according to the common correction, would have been only 5 , probatum eft, and which may eafily be demonftrated by the problem. And the author hopes, that as he hath freely thus imparted his fcheme to the public, if it is found true in general practice, as it is in fpeculation, and as he hath found it in practice himfelf, he fhall be intitled at leaft to fome advantage of the promifed reward; as it hath been very difficult and expenfive to him in the difcovery, by ftudy, travelling, and hindering him in his temporal affairs ; and he further defires thofe who may make a trial of it, to be careful in working up their latitude and departure, and efpecially of making obfervations; for, as much as they mifs in obferving the latitude, fo much they will mifs in the longitude, and no more, as he hatls expermentally found, in the laft vayage to America. Laus fill Deo.

Jan. 23, 1750-1.
Richard Locke.

## INTRODUCTION

Having put out an advertifement in the London Evening Poft of January 24,1751 , concerning a new univerfal problem to find the longitude at fea; wherein I only mentioned the practical part, and what I had found to be true, in a voyage from Virginia to England, without giving any explication or demonftration of the problem, referving thefe thins for a more convenient opportunity: but finding that this method could not give that fatisfaction to the public as muf neceffirily be expected in a matter of fo much confequence to the world;

## C O M

and befides this difcovery of a method to find the longitude at fea, capable of demonftration, is what hath, for many ages, cmployed the ingenious and inquifitive part of mankind, though they generally looked too high, by fearching for that among the ftars which can only be had here upon this earth. Led by thefe motives, I was refolved to publifh the explication and demonftration of this problem, and let it take it's fate in the world, as every one is at liberty to examine it; and this will put an end to thofe difficulties, and efpecially queftions, that have been propofed to me about it; for now it mult ftand or fall, as by time and expetience it fhall be found true or falfe.
The great reward promifed for a difcovery of it hath encouraged many ingenious attempts, and, no doubt, but very much improved the practical part of navigation; for a profpect of reward is a certain fpur to indultry; and I cannot deny but that it was a great inducement to me, to be at fome expences, and to bear with thofe many difficulties, as I muft necellarily be expofed to, in ftudy, and travelling to make thofe experiments, as I fhall now freely impart to the world, and only referve to myfelf the firf and laft flift of life, which is hope.
Having alway's a great defire to mathematics, from my firft ftudying them in a college here in England, I applied myfelf to the ftudy of the longitude, and publifhed a pamphlet of it, fome years ago; after that I was introduced in the company of the famous Dr Halley, and I propofed the fcheme to him; he afked me, if I had been to fea to try it? I told him I bad been to Italy by fea, but not with a defign of difcovering the longitude: I was thoroughly fatisfied with the queftion, and defigned then not to concern myfelf any more about it; but meeting with fome difappointments in the affairs of life, which is but the common fate of all mankind, I was again refolved to go abroad, and try my fortune in other parts of the world ; and, in a great meafure, with a view to make fome new difcovery about the longitude.
The firf voyage that $I$ made was from Portmouth to Antigua, as chaplain of a man of war. I had then no other view of difcovering it but by a very good watch, and a double equinoctial dial, to take true time, by which I could find the time at fea as well as at land. At Portfinouth I put my watch to the true time of the fun, and made no other obfervations before we came into 29 degrees of latitude: I firft made the obfervation for latitude, and by the fame inftrument, fome time after, I took the hour of the day, and found it $42 \mathrm{mi}-$ nutes after 2 o'clock; the watch food then at 14 minutes after 4 ; the difference of time was r hour, 32 minutes, equal to 23 degrees of longitude weft, as the time of the day was before the time of the watch; and, when we made Antigua, I found the difference between the watch and obferved time to be 3 hours, 56 minutes, equal to 59 degrees of longitude weft. By this trial I found the longitude might eafily be difcovered by this method, if it was poffible to find a regular movement to difcover true time; but this hath been hitherto impracticable, and I am apt to think will always be fo.
Some time after this I made another voyage to America, and lived for fome years at a town called Lancafter, in Penfylvania; and, February 13, 1747, I obferved a total eclipfe of the moon, which began there a little after 10 o'clock, and ended about as much before 2 , the 14 th day in the morning; hence I concluded, that the middle of the eclipfe, or full moon, was about 12 o'clock, or midnight; in this eclipfe at London I found, by tables made for that meridian, that the oppofition, or full moon, was February 14, at 52 minutes after 4 o'clock in the morning. Thefe 4 hours 52 minutes in time are equal to 73 degrees 15 minutes in degrees, which anfwers very near to the computed difference, which is reckoned to be 75 degrees, equal to 5 hours in time; but this method cannot any way be depended upon to find the longitude at fea, as there are fo few eclipfes of the fun or moon. Some, indeed, have imagined, that, if the place of the moon could be calculated and obferved to a great exactnefs, it would be a great he!p towards the difcovery of the longitude at fea : but even this would be impracticable, and not to be depended upon; for the moon doth not always appear ; and it's motion, or receffion from the fun, is fo little, that it doth not amount to above 30 feconds, equal to two minutes in time, in one hour, which is equal to 15 degrees in longitude, and that is but two feconds for one degree, that it is impolible by any inftruments to make fuch nice obfervations, efpecially at fea, where the fhip is always in motion: and there are no other obfervations by which it may be done, unlefs by the fatellites of Jupiter, and thefe are invifible without the help of telefoopes, which are in that cafe wholly ufclefs at fea. Wherefore we muft neceffarily have recourfe to mechanical principles ; and, as diftances in furveying, and all mechanical operations, are meafured on land: ©o, by proper methods, it might be done to as great certainty, or at leaftwife as much as fhall be neceflary, at fea. There have been feveral methods invented and made ufe of; but what feems to be the beft, is that of the log-line and half-minute glafs, commonly ufed by the Englifh; and by this problem it is demonftrated, that, if the true diftance is given, the longitude, or eafing and wefling, may be found with as much certainty as the latitude is ly oblervation, without any regard to the variation of the
compafs, lee-way of the fhip, or currents of the fea ; becaufe it is corrected by the fame obfervation that the latitude is The demonftration is founded on the principles of Euclid. Upon thefe confiderations, and meeting with fome difappointments, it put me upon a third trial of finding the longitude in a mechanical way; and having got an inftrument made, fomething like a finical quadrant, with moving labels, by which triangles both plain and oblique may be calculated, much fooner than by logarithmo or fcales, and much better, as I thought, than by the tables of latitude and departure; I was refolved to inake a third voyage to America, with a defign to end my days there; but God, in his good providence, was pleafed to order it otherways. In the voyage I wholly depended upon the diftance run, without any certain method of correcting it; only allowed 50 feet between each knot, and the glafs to be 30 feconds. Uponafking how the log-line was divided? I was told by 45 feet, and the glafs was 30 feconds, to keep the dead reckoning before the fhip; and from hence I concluded to fubtrakt to miles out of every 100, and 100 miles out of every 1000 , which is according to the proportion of $45: 50$. A little before we made the land, I told the mate that we were 960 leagues weft from the Lizard; he feemed to take little notice, and rather laughed at it; but a furgeon on board the fhip, hearing me, laid a bottle of wine upon the reckoning, and got it: the journal I have by me, I made it, according to their divifion of the log-line, to be 3300 miles from the Lizard to Cape Henry in Virginia, and, fubtracting 100 out of every 1000 , made it juft 3000 miles, or 1000 leagues. The reckoning was fo exact, that they gave it out in Virginia that I had found the longitude, though I had no other method at that time than what is mentioned before, ${ }^{*}$, which was wholly to depend upon the diftance rum, allowing the divifions of the line to be 50 feet, and the glafs 30 feconds.
I was fettled in a parifh in Virginia; but my health was fo much impaired by age, and the change of climates, that I could not well perform fuch long tedious journies as are required in their parifhes; and meeting with obher difficulties and perfecutions, and efpecially the great fcarcity of food and raiment; befides the great number of negroes that are there, which has made it a mere neft of thieves, and renders the country very difagrecable; and, having at the fame time difcovered this problem, I thought it would be very envious in me to conceal a thing of fo much benefit to the public, as it was by the goodnefs of God freely difcovered to me. Upon thefe confiderations, I thought it was better to come home than to live in mifery there; and in the paffage, to make a thorough trial of it. I only took the diftances as entered in the $\log$-book, without examining into the glafs or log-line, not doubting but that, as I corrected the latitude by obfervation, fo I could correct the longitude by this problem, which I found to anfwer beyond expect ation; for I made it juft 3003 miles from Cape Henry to the Lizard, or 1001 leagues, as I have now the journal by me, which was but three miles difference between going and coming, though I was fenfible, by the obfervations of latitude, that their logline and half-minute glafs were very much out, as well as keeping bad courfes.
And, by this laft voyage, I find that not only the latitude is corrected by the obfervation, but alfo the longitude and diftance are corrected by this problem, to the fame certainty, as I made no allowances for the diftance run, as in the other voyage. This is what is evident in fpeculation, and will appear fo upon a clofe examination of the problem; but I cannot expect that the truth and ufefulnefs of it thould depend upon this one voyage, but upon the general experience and practice of the world.
I muft own I was advifed not to publiih it, before I had fome promife of a reward; but to whom could I apply, that would take any notice of a bare propofal, after fo many attempts as have been made, and all to no purpofe? And if this hould prove true in practice, as it is in feeculation, and as I have found it in practice, I doubt not of the generofity of my country; they certainly will allow me fome premium, or it will be a great difcouragement to pofterity ever to attempt any thing for the public good.
Speramus quæ volumus, fed quod accederit, feramus.
I cannot deny but formerly I publifhed feveral attempts about the longitude; but I had not then that experience and trial as I have fince had in this, though I always imagined that it might be done fome fuch way, as I publifhed it in a Mifcellany of Mathematics; wherein I attempted the fquaring of the circle, and found out a new and nearer proportion than of $7: 22$, which is $8: 25$, or that 3 diameters $\frac{1}{8}$ are equal to the circumference, and a problem to double, triple, \&cc the cube, the correction of time, and in it likewife a method to find the diftance run, without the help of an half-minute glafs, \&c. And this diftance run, and a good obiervation of latitude, are all the requifites that are neceffary in narigation, for every thing elie is corrected by this problem, to a mathematical certainty, and even the diftance by a good obfervation. But time and experience tries all things. Laus Deo.

## C O M

 C 0 M

An explanation and demonftration of the new and univerfal Problem, to find the Longitude at fea, by the fame obfervation, and with the fame certainty, that the latitude is: and is now farther demonftrated, by fhewing how the diflance is correEted, by adding or fubtracting the lines of longitude and latitude, which makes it equivalent to a fpherical triangle; and illuffrated, by demonfrating the abfolute impoffibility of determining it by the common method ; and that there is not the leaft error in determining it by the problem. The impoflibility of finding it by obfervation is Shewn in the introduction. And,

1. If the longitude could be found by obfervation, without an imaginary or dead reckoning, as the latitude is, yet it would always be neceflary to keep this reckoning at fea, by reafon of cloudy weather, that fometimes obfervations cannot be made for weeks together.
2. The dead reckoning is the eftimation of the fhip's way, with refpect to longitude and latitude, by the help of a logline and half-minute glafs, or any other method made ufe of at fea, to find the diftance run, and a compais for the angle of the courfe.
3. In order to calculate this reckoning, they form an imaginary right-angled triangle, the perpendicular to reprefent the meridian or latitude, the bafe the longitude or departure, which are the miles of eafting or wefting from the meridian, and the hypothenule the diftance run. Let ABC (fig. I.) be the triangle, AB the difference of latitude, BC the longitude, and $A C$ the diftance run. In this triangle the angle $A B C$, made by the latitude $A B$, and longitude BC , is always right, let their courfes and diftances be never fo intricate, io as to pafs and repafs the fame meridian. The perpendicular, or latitude $A B$, is found by obfervation; the diftance run, AC, by the half-minute glafs and log-line, which is done with as much certainty as is neceffary to find the longitude, becaufe even the diftance is naturally corrected by the problem, as will appear afterwards.
4. The proportion of the log-line and half-minute glafs. A geometrical mile is equal to $69+$ Englifh miles; hence to find the proportions of the log-line and half-minute glafs : for as one degree is 69 miles one minute; in degrees, is equal to 6000 feet. One minute of time is the 60th part of an hour, a half-minute is the 120 th part; hence divide the 6000 feet by 120, it gives 50 feet for the half-minute glafs; and, as many 50 feet as the line runs out in one balf-minute, fo many miles will the fhip's way be in one hour; and if the line be more or lefs than 50 feet, or glafs than 30 feconds,

Vol. I.
proportional allowances muft be made, as 30 to 50 are the proportions, as mentioned in the introduction.
5. Hence, when the latitude and diftance run are given, the longitude is found independent of the angle of the courfe, by prop. 47. Eucl. x. wherein he demonftrates, that the fquare of the hypothenufe of a right-angled triangle is equal to the fquares of both fides, including the right-angle; or, to apply it to navigation, the fquare of the diftance run is equal to the fquates of the longitude and latitude; and as the latitude and diftance are given, the longitude is found, by fquaring the diftance rum, and fubtracting the fquare of the latitude, the fguare root of the remainder is the longitude: the angle of the courfe is found by cafe 5 . of right-angled plain triangles. And, if the lines of longitude and latitude are given, the diftance run is likewife given, for the fquares of thefe lines are equal to the fquare of the diffance: this is for a fingle courfe.
6. But, before we proceed to the problem for correaing a traverfe, it will be neccflary, by way of lemma, to premife a propofition of Euclid, to prove, that if, in a right-angled triangle, part of one fide be taken away, and added to the other, the fquares of the two fides are fill equal to the fquare of the hypothenufe; but, as thefe lines are equal, or unequal to one another, their fquares added together are more or lefs; hence their root, or the hypothenule, is longer or fhorter, which naturally corrects the diftance, and is thus demonffrated.
Euclid, in prop. 4. b. 2, demonftrates, that if a line A $b$ (fig. 2.) be any way divided, as in $c$ or $d, \& \mathrm{c}$. the fquare of the whole line is equal to the fquares of both the parts, and to two rectangles contained under the parts. And, in fchol. and coroll. of prop. 5. of the fame book, he demonifrates, that if the line be equally divided in $c$, and unequally in $d$, the fquares of the equally divided line are lefs than the fquares of the unequally divided one, and the rectangles greater. See the prop. in Euclid.
7. But to apply this lemma, and demonftrate how the taking from one fide, and adding to the other, will only make the hypothenufe longer or fhorter, though the fides are always of the fame length. Let the fides AB and AC of the quadrant $A B C$, (fig. 3.) be equally divided in $L, K, I$, and $\mathrm{M}, \mathrm{N}, \mathrm{O}$, and the lines $\mathrm{KD}, \mathrm{ND}$, \&c. be drawn; hence the fquares, and confequently the fides of the fquares, are all equal : let the fide $A B$ be equally divided in $K$, and unequally in $I$, and let $A K$ and $K D$, equal to $A K$ and $K B$, be made the two fides of the rectangle AKD; hence the fquares of $A K$ and $K D$ are equal to the fquare of $A D$; but 7 H
fuppofe

## C OM

Tappole FD taken from KD, and added to AK, then AI and $I E$ are equal to $A K$ and $K 1$, by axiom 2, and 3 Euclid, , and the fquares of $A I$ and $I E$ equal to the fquare of $\Delta E$; but the fquares of $A I$ and $1 E$ are greater than the iquares of AK ard KD , by the lentma or coroll. hende thear root, or the hypothenufe AE is longer than AD.
This makes no alteration in the prablem, but only ndturaily corrects the diftance at the fame time the longitede and courfe are alfo corre $\mathcal{t}$ ted by the problem, and it is what makes the triangles in the traverfe equivalent to fpherical thiangles; for thefe hypothenufes $\mathcal{A} E, \triangle D, A G, \& i c$, which are parts of the radii of circles, fincreafe and decreafe by mean of the fquares and powirs of lines, as the chord $\mathrm{BC}, \& \mathrm{c}$. of the quadrant; though the lines including the right angle, as AK and KD , AI and IE, \&oc. whofe fquarcs are equal to the fquares of the hypothenufes $A D, A E$, \&cc. are alwayk equal to the whole radius, or $A B$, and hence equal to one anothicr, as $A K$ and $K D$, \&c. are equal to $A B=A I$ and $I E$, \&c. (Sce the fig.) Hence, the greater the difference is, between the obferved and imaginary latitude, the greater are the errors in the courfe and diftance,' as is cuident from the nature. of triangles and power of lines, as they aro here cexplaited and applied.

## 8. But to proceed, and apply this to the traverfe, as corrected

 by an obfervation, and this new problem; for what anfwers in a fingle triangle, will anfwer likewife in a traverfe of never fo many triangles; for as, diftances cannot always be meafured upon one courfe, by reafon of contrary winds, wherefore they have recourfe to the compafs, to find the ant gles of the feveral courfes, and, by the diftances, to calculate the longitudes and latitudes, and, adding thetn together, to make one generdl reckoning, which is called a-traverfe.But the variation of the compars, the lee-way of the fhip, currents of the fea, befide bad fteering, render the angle of the courfe very uncertain, and confequently not to be depended upon at fea.
And there are two cafes, in which the latitude is affected by thefe errors; which are, that the latitude in obfervation is either more or lefs than the latitude in the traverfe, or dead reckoning.
And thele are the two eafes which are to be, corresed by the new problem and the obfervation of latitude, with rcfpect to longitude, courfe, and diftance; for, if the latitude ty the obfervation is the fame as the latitude in the traverfe, it is evident, that the courfe and diffance were true, as the latitude in the traverfe is calculated from them, and from what was faid in the fingle courfe, by the 47. Eucl. I.
9. In the finft cafe, when the obferved latitude is more than the imaginary one, let AKD be the imaginary triangle, AK the latitude, AD the diftance run, and D AK the angle of the courfe, the longitude KD is found by cafe 1 . of plain triangles, or by prop. 47. Eucl s. But fuppofe, by obfervation, the latitude is found to be more, or at $I=A I$, to make the fquares of the obferved latitude and longitude equal to the fquare of the diftance, fubtract the difference of the latitudes, or FD equal to KI, from KD the longitude, and add it to AK the latitude, then AI is the latitude, as by obfervation, and IE =KF the corrected longitude, for their fquares are equal to the fquare of AE , the true diftance run ; but as the fquares of AI and IE, or IB, are greater than the fquares of $A K$ and $K D$, or $K B$, by the lemma, hence their root or diftance AE is longer than AD , though the lines $A K$ and $K D$ are equal to $A I$ and IE; and hence the longitude, courfe, and diftance, are corrected by the obfervation of latitude and diftance run: and, as the true courfe is IAE, it is evident, the courfe DAK in the traverfe was taken too much, and diftance AD too little.
Cafe 2, which is the reverfe of the former: let the latitude in the traverfe be lefs than the latitude in the obfervation; as fuppofe AIE the triangle, AI the latitude, AE the diftance run, and EAI the angle of the courfe, by which the langitude 1 E is found by cale 1 . of plain triangles, or by prop. 47. Eucl. 1. But fuppofe, by obfervation, the latitude is found to be at $K$, or equal to $A K$, to make the fquares of the obferved latitude and longitude equal to the fquare of the diftance, fubtract IK the difference between the obferved and imaginary latitude, and add it to the longitude IE, or make KD equal to KI and IE: hence AK is the latitude, according to obfervation, and K D the corrected longitude, their iquares beine equal to the fquares of AD ; and hence AD is the true difance run: but as the fquare of AK and KD , or KB , are lefs than the fquares of AI and IE, or IB, though the lines are equal by the lemma, hence their root, or the diftance AJ, is lefs than the diftance AE; hence the longitude, courfe, and diftance, are corrected by the obfervation of latitude, and diftance run ; the true angle of the courte was DAK; and hence it is plain, the compuicel ccurfe EAI was too little, and diftance run AE too much.
10. A farther illuftration of this now problem will appear, by fhewing the abfolute impoffibility of determining the longitude at fea, or even at land (for the longitude might as well be found at land as at fea, by the diftance and difference of latitude) without the help of this uniserfal problem, fince it
cannct be done by obfervation at fea, fo as to be depended upon, as mentioned in the introduction; and that this method is equivalent to an obfervation of longitude.
There are but two ways of correcting a traverfe by the obfervation of latitude, either by the lines of the triangle, or by the angle of the courfe. To correct by the lines, is what is done by this new problem, but the angle of the courfe is fo uncertain, as mentioned before, that there can be no dependance upon that method, as will further appear, by comparing both methods in the two cafes, when the latitude is more or lefs; and by this will be made a proper application of this now problem to practice.
Cafe . When the latitude in obfervation is tefs than the latitude in the traverfe, let BAC (fig. 4 , ) or S. by W. $=11$ deg. 15 min . be the imaginary courfe, and let AC the diftance run, be given to miles : hence, by cafe 7 . of trigonometry, or by the tables of the diffeqence of lat. and dep . the lat. $A B$ is 9,8 , and the long. $B C_{1} 1,9$ miles, or in integer numbers 9 and 2: but fuppofe, by obfervation, the latilude is found to be at D , or equal to $\mathrm{AD} 1,9$ or 2 miles, according to the common method of correction by the angle, the triangles $A B C$ and $A D G$ being fimilar, hence $A B$ : $\mathrm{BC}: \mathrm{AD}: \mathrm{DG}$, or $9: 2:: 2,4$ tenthis, and hence the diftance run, $A G$, is only 2,2 , which is impoffible, for that was given 10 miles.
But to correct it by the new problem, or the lines, fubtract the difference between the latitude in obferivation, and the latitude in the traverfe, or DB from AB, and add to it the longitude $B C$, or make $D E$ equal to $D B$ and $B C$, hence AD is the lat. according to obfervation, DE the longitude corrected by the problem, and $A E$ equal to $A C$ the diftance run, as was given: for $A B$ ind $B C$ are equal to $A D$ and $D E$, for $D B$ and $B C$ are equal to D.E by conatrigion, and $A D$ is common to botb: hence $A E$ is cqual to $A C$ the given diftance run. In numbers, fubtract 7 , the difference of ihe latitudes, from 9, the remainder 2 is the obferved latitude; add that 7 to 2 the longitude, it makes 9 for the corrected longitude, and hence the diftance run is 10 , as was given. The courfe is found, by cafe 5 , to be W. by S. $=78$ degr. 45 min. Thefe propofitions are univerfal, and will anfwer in all courfes.
In the fecond cafe; when the lat. in obfervation is more than the latitude in the traverfe, let the courfebe EAD, W. by S. $=78 \mathrm{deg} .45 \mathrm{~min}$. A E the diftance run 10 miles: hence by cafe 7 . of trigonometry, or by the tables of the diff. of lat. and dep. DE the longitude in integer numbers is 9 miles, and AD the latitude 2 miles. But fuppofe, by an obfervation, the latitude is found to be $A B$, or 9 miles, according to the common method of correction, or by the angle, as the triangles are fimilar, $A D: D E:: A B: B F$, or $2: 9:: 9: 40+$, and the diftance run AF is 42 , which is impoffible, for the diffance run is only given 10 miles. But, to correct it by the problem, fubtract BD the difference between the obferved and imaginary latitude from $D E$ the longitude, and add it to DA the imaginary lat. and the lat. is AB according to the obfervation, and the longitude BC , as correAted by the obfervation and diftance run; for $A B$ and $B C$ are equal to $A D$ and $D E$, hence $A C=A E$ is the true diftance, as was given, the angle of the courfe S . by W. $=$ I 1 degr. 15 min .
In numbers, fubtract 7 , the difference of the latitudes, from 9 the longitude, and add it to 2 the latitude, which makes the latitude 9 according to the obfervation, and the longitude 2 as corrected by the obfervation and diftance run: hence the diftance is 10 , as was given by 47 Eucl. 1. the angle of the courfe is found, by cafe 5 . of trigonometry, to be $S$. by W. $=11 \mathrm{deg} .15 \mathrm{~min}$.
In the firft cafe, the longitude corrected according to the common method, in only failing 10 miles, is above 8 miles too little; and, if it had been roo miles, it would be above 80 miles too little. In the fecond cafe, it is above 30 miles too much; and, if it had been roo miles, it would have been above 300 miles too much; and not the leaft error in correcting it according to the problem.
This is the uncertainty of determining the longitude by the common method, and, without fome correction, the art of navigation in determining the longitude is ufelefs, or mere guefs-work, fince it cannot be found by obfervation, as the latitude is: though this correction, by the obfervation and the problem, is equivalent to an obfervation of longitude; for the longitude, courfe, and diftance, are corrected by the fame obfervation as the latitude is, as muft evidently appear upon a clofe examination of the problem, by the principles of Euclid.
The truth and ufefulnefs of this univerfal problem depends only upon two mechanical principles of making a good obfervation of latitude, and meafuring the diftance run, without any regard to currents, lee-way, or variation of the compafs, for thefe are corrected to a mathematical certainty, as any one acquainted with mathematical reafoning, and cepecially as applied to navigation, in this new and univerfal problem, might eafly perceive.
And thus a fhip might be carried round the world, even without a compafs, if they can but make proper obfervations of

## C O M

latitude, and meafure a good diftance, and mifs no more in longitude, or eafting and wefting, than they do in latitude, by the help of this problem, with the obfervation of latitude, and the diffance run: for fhould they lofe their compafs, or fhould it prove erroneous, as it frequently doth, let them make an imaginary courle, and by the diftance run calculate an imaginary triangle; and, if the imaginary latitude is more than the obierved one, fubtract the difference from the imaginary latitude, and add it to the longitude; if lefs, fubtract the difference from the longitude, and add it to the latitude, and this will give the true latitude and longitude of the fhip, according to the obfervation of latitude and diftance run; for, by the problem, the obferved latitude, and corrected longitude are always equal to the longitude and latitude in the traverfe. This problem is univerfal for all courfes, as I had fome trial of it in a voyage from Virginia to England. Upon the 28 th of November, 1750 , being on board the Gloucefter, captain Whiteing commander, by the reckoning correcied by the problem, we were 2988 miles eaft from the capes of Virginia, in long. 69 deg . I8 min. the latitude, by obfervation, 49 deg. 24 min. I told the captain we were certainly near the longitude of the Lizard ; they ftifly maintained, that we were feveral degrees, at leaft 7 , to the weft of the Land's End; within a few hours we made the caftermoft point of the Lizard, and it is well we did, for we had a great florm from the S. W. that night; and I do really think, that I miffed no more in longitude than in obfervation of latitude, though there was a very bad dead reckoning kept the whole voyage. But,
12. What is meant by the longitude in the problem, is only the miles of eating or wefting, or the departure from the meridian. To turn thefe miles into degrees of longitude, requires a different method; the latitude' is at once determined by the oblervation, becaufe the motions of the fun and ftars are regular from the eaft to the weft, and the lines of latitude are parallel and equiditant round the globe in both hemifpheres; but the lines of longitude decreafe in both hemifpheres from the equator, till they meet in the poles, which makes the longitude different in every degree of latitude.
By miles here are meant geometrical miles, of $69+$ Englifh miles to one degree on the equator, equal to 60 geometrical miles, and may be found, by proportion, without the help of Mercator's tables: for, as circles are to one another as the fquares of their diameters, their fegments are in the fame proportion by 2 Eucl. 12; hence the quadrant 90 : is to the fquare of one degree of longitude on the equator :: as the complement of the latitude: is to the fquare of one degree in that latitude. For inflance, to know the miles of one degree in the latitude of 50 deg . fquare the 60 equatorial miles, and by proportion $90: 3600:: 40: 1600$, the fquare root is 40 , the miles to one degree in the latitude of 50 deg . and dividing the miles of eafting or wefting by the miles of one degree of longitude, if in the fame latitude, will give the degrees of longitude. But, if in different latitudes, divide by the miles of the middle latitude; two inftances will be fufficient to thew the ufe of it in all cafes. For fuppofe two places in the latitude of 50 to be 3400 miles diftant, the miles of longitude in that latitude are 40 ; by which divide the 3400 miles, the difference of longitude is 85 degrees. The reverfe is to find the miles between two places 85 deg. diftant in the latitude of 50 deg . multiply the 85 by 40 , and it gives 3400 miles.
Let the other inftance be of two places in different latitudes, as the Lizard in the latitude of 50 deg . and Cape-Henry, in Virginia, in the lat. of 37 deg . the miles of long. at the Li zard are 40 , and at Cape-Henry 46 to a degree; thefe added are 86, the half is 43 : the diftance between the two places is about 3000 miles, which divide by 43 , the degrees are 69 deg .33 min . The reverfe is to find the miles by the deg., multiply the 69 by 43 , and add the 33 miles; it gives 3000 miles, the departure or longitude.
I fhall conclude with inftances in both cafes; as when the latitude is more or lefs in the traverfe than in the obfervation, in which will be fhewn the mothod made ufe of in working the traverfe, and correcting it by an obfervation of latitude; by which means the eafting or wefting of the fhip is known to as much certainty by the diftance run, and the problem, as the northing or fouthing is known by the obfervation of Jatitude; and this is all that is neceffary to carry a fhip to any part of the world. The latitude and departure are found by the 7 th cafe of plain trigonometry, when the courfe and diftance are given, or by the firf cafe of plain failing in the mariner's new calendar; or it may be done by proportion, without tables or fcales, by fquaring the diftance; and 90 or the right-angle: is to the fquare of the diftance : : as the courfe: is to the fquare of the longitude, or complement of the courfe is to the fquare of the letitude: the fquare root is the Iongitude or latitude. I fhall put down part of the traverfe that I made from Virginia to England, as mentioned before. On the 26th of November we were 2716 miles eaft from the capes of Virginia, long. 63 deg. 17 min . lat. by ubferv. 50 deg. 28 min .

## COM

| Day. | Coute | Dift. | E. | in/N | N S. | Obfer. | Corr ${ }^{\text {d }}$ | D: |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ${ }^{26}$ | 3.E.by E. | 134 | 110 |  | -70 | 50\%,28 | 2716 | $53^{\circ}, 17$ |
| 27 | $\begin{gathered} \text { S.E.by E. } \\ \text { E. S. E. } \\ \text { E. by S. } \\ \text { E. S. E } \end{gathered}$ | $\left.\begin{array}{\|r\|} 28 \\ 8 \\ 80 \\ 15 \end{array} \right\rvert\,$ | $\begin{gathered} 23 \\ 7,9+ \\ 78 \\ 14 \end{gathered}$ |  | $\begin{aligned} & = \\ & = \\ & \hline \end{aligned}$ |  |  |  |
| 28 |  |  | 232,4 | - | - 104 | 49 ${ }^{\circ}, 24^{\prime}$ | 2988 | $67^{7}, 18$ |

The longitude was 232 miles eaft, and the latitude in the traverfe 104 miles fouth. By obfervation, the latitude the 26 th was 50 deg. 28 min ., and the 28 th 49 deg. 24 min ., their difference is 64 , and fubtracted from 104 , is 40 miles lefs than in the traverfe; wherefore, according to the problem, add 40 to the longitude $232=2.72$, and this, added to 2716 , is equal to 2988 in deg. 69,18 , which was the time I told the captain that we were near the longitude of the Lizard, and made the eaftern point a very few hours after; but, if the correction had been made according to the common method, the reckoning would have been 80 miles lefs, befides other corrections that were made through the whole voyage: for, every time we had an obfervation of latitude, I always corrected the longitude by that obfervation and the problem; and it is probable, had I not made thefe corretions, the reckoning might have been as fhort as theirs was, and we chould not have endeavoured to make the land, which muft have been of very dangerous confequence from the great ftorm we had from the S. W. that night. Laus foli Deo* But, if the difference between the two obfervations had been more than the latitude in the traverfe, the difference muft have been fubtracted from the longitude, and added to the latitude; for the latitude in the traverfe mull always be made equal to the latitude by obfervation.
Thus in a traverie by the problem, the latitude is corrected by obfervation, and by the latitude the longitude is corrected, and by the obferved latitude and corrected longitude the true diftance is found out, by fquaring the longitude and latitude, and extracting their fquare root, which gives the true diftance by the lemma. Laus foli Deo.
I fhall conclude with this Laus foli Deo, and a challenge to all the mathematicians in the world to confute it, or fhew any other method of determining the longitude at fea, to be depended upon with any certainty : and I affirm, that this method is quite new, and never publifhed by any author before the 24th of January, 1751, when I firt publifhed it in the London-Evening-Poft. I experimentally know this to be true and eafy: and if it cannot be confuted, or thewn to be defective in any material point, the reward in honour, confcience, and juftice, belongs to the difcoverer. See Longitude.
COMMERCE being the fubject of this work, it may be neceflary to fay fomething on this head; not by way of declamation, which is as neediefs as haranguing learnedly on the benefit of air, rain, and fun-fhine, when nature requires them; but in order to fhew, that the province of a trader is not fo contemptible a clafs of the community, as fome would affect to make it.
A general complaint of the decay of trade, and a humour in many of the better fort of people, to make awkward and illgrounded excufes for breeding their children up to it ; together with a tendency to prefer what is called the profeffions, as law, divinity, and phyfic, to merchandize; fhould induce us to examine on what foundation this way of judging was eredted. And, the more it is looked into, the lefs caufe will there be for fo feeble a way of thinking; for there is not only lefs likelihood for a man to raife himfelf to any degree of eminence in the profeffions, than by trade; but alfo that the road to honour and preferment is as open, where the merit is equal, in trade, as in law, divinity, or phyfic ; and that many more eftates of confideration* are acquired, and even with lefs obloquy, from the one than from the others.

* Mr Locke obferves, that trade is a furer and fhorter way to riches, than any other. Locke's works, vol. ii. p. 8. folio.

Suppofing an eminent trader arrives only at the office of lordmayor; in that capacity alone he becomes right-honourable, and invefted with the facred character of a judge, both in capital and civil matters, and precedes even the chancellor, and all other judges and officers of the crown*. Alfo, in cafe of an interregnum, is the chief magiftrate in the realm $\dagger$.

* The high rank of mayor is not merely confined to the city, for at a coronation, which is our prime ceremony of diftinction, the mayor walks next but one to the prince of Wales.
+ Upon the death of the king, the lord mayor is faid to be the prime perfori of England. For when king James I. was invited to come and take the Englifh crown, upon the

## C OM

## C O M

death of queen Elizabeth; Sir Robert Lee, then lord-mayor, fublcribed in the firlt place, before all the great officers of the crown, and all the nobility. Seymour's Survey of London, vol. i, pag, 35 . And late inftances of this kind happened on the abdication of king James II, when the mayor committed, by his warrant, the lord Jefferies to prifon, then chancellor of England, and a peer of the realm. About which time alfo, Sir John Chapman, mayor of London committed Sir Robert Wright, lord chief jultice of England, to the gaol of Newgate, which fuily evidences the great eminence of this office. See the hiftory of that time. Englifh Baronerage, Ed. 1741, vol. v. p. ıo6.

And wife and great traders have arrived at the dignity of lordchancellor, have been created peers of the realm, knights of the garter and bath, bannerets, and privy-counfellors. Which is as much as can be affirmed either of lawyers or divines, and more than can be proved, perhaps, in one fingle inftance, of the followers of phyfic.
Trade, by the conflitution of our country, both with refpect to it's public and private, it's ancient and modern, it's general and particular, laws, is certainly no degradation whatever; and it may with ftrict truth be affirmed, that commerce is that alone, by which our nation fupports it's head, and what renders us of that confequerice with foreign powers as we are. And if the following trade had here ever degraded (which, in effect, it never did) yet it is conceived that the brave fland, which was lately made by the citizens of London, to fupport the credit and honour of the nation, and the proteftant fucceffion, fhould be a fufficient caufe alone to make traders efteemed by all degrees, as gentlemen of worth; and not only ro, but as a people and body of men, the moft refpectable and fitteft to be encouraged of any in thefe realms, and a full proof to all intents and purpofes, that merchandize is a worthy and honourable employment.
It would greatly exceed the limits to which I am confined, to enter into the antquity and honour of trade among the Egyptians, Jews, Greeks, and Romans. Wherefore, we fhall only examine on what footing of honour trade ftood with our anceftors; and how it is now, or hould be efteemed with us.-To begin with the leginative power, there is no body of people, who have fo large a fhare allotted in it as traders. Our houle of commons confints of knights and burgeffes; but the former, who are to confider the landed-intereft, are but few, when compared with the latter. There are no more than two allowed for any county, for many * only one; but moft trading towns fend one or more burghers to parliament, to look to their trading intereft; and thefe the law (which is termed right and reaton) intends to be fuch in the refpective towns as live there, and underfand the intereft, and are concerned in the benefit of the manufacture eftahlinhed in that burgh or town $\dagger$, for which they are chofen; and not ftrangers, who, perhaps, are too often elected for their money.
*The counties fend 80 knights, the cities 50 citizens, and the boroughs 334 burghers.

+ In the proclamation for calling a parliament in 1620 , advice is given firl to caft their eyes on knights and gentlemen, that are a light and guide in their county; then, on eminent lawyers, and fubftantial citizens and borgeffes; fuch os are interefted, and have a portion in the eftate. And nct to difvalue or difparage the houfe with bankrupts, and neceffitous perfons that want long parliaments only for protection; with lawyers of mean account and eftimation; young men, that are not ripe for grave confultations: mean dependants on great perfons, that may be thought to fpeak urder their command; and fuch-like obfcure and inferior perfons. Lord Bacon's works, vol. iv. page 707. See alfo Statute, I Henry V. ch. I.

This was the juft fcheme of our wife anceftors, and doth evidently prove how high a value is fet on trade by the conftitution of our government: nor is this all, for it fhall be fhewn, that trade doth neither by the laws of the land, or honour, in the lealt detract from gentility; but, on the contrary, that great traders have frequently been admitted by our princes into the upper houfe of parliament; that they have been appointed privy-counfellors for their wifdom; and have, as obferved, been created not only knights, but baronets, knights of the garter, and bath, bannerets, barons, and earls; which touft fully demonftrate that trading was not only formerly, but is, even now, of the greateft confequence to the Englifh mation; and never did, or can, by our laws or cuftoms, detact from any man or family; but, on the contrary, that a great part of our nobility are immediately defcended from great traders.
Verteran, the Englifh antiquary, in his Titles of honour*, mentions, that in old times, if a merchant fo thrived, that he was able to crofs the feas thrice, he was ever after reputed a right-woithy Thein, and capable of higher advancement; fo that from hence it appears, that traffic, at that time of day, ennobled it's followers, who were not fo before : and, itll lately, every man who had 4ol. a year in land, was qua-
fified to be a knight, and from thence came the term of knight's fee with us. But as king Charles bafely mifufed this law in his wants $\dagger$, compelling every man, who had that qualification, to become a knight, or to compound ; it was; for that caufe, ranked among the chief grievances of his reign, and therefore was abolifhed by act of parliament at the Reftoration, as may be found in the hiftories and fatutes of thofe days.
$\dagger$ Clarendon, fpeaking of this abure, fays, ${ }^{\text {© }}$ By this ill huf " bandry, the king received a valt fum of noney from al - perfons of quality, or, indeed, of any reafonable condi - tion, throughout the kingdom, upon the law of knight" hood; which, though it had it's foundation in right, yet, ' in the circumflances of proceeding, was very grievous; and - no lef's projects of all kinds, many ridiculous, many fan 'dalous, all very grievous, were fet on foot.' Clar vol page 67.

The learned Camden* obferves, that Richard II. advanced Michael de la Pole, a mérchant, to the honour of earl of Suftolk, and made him chancellor of England. He was the fon of William de la Pole, the firft mayor of Kingfton upon Hull; who, upon account of his great wealth, had the dig nity of a banneret conferred upon him, and was alfo made fecond baron of the exchequer by Edward III. 'However, ' fays Camden, his being a merchant did no how detract from ' his honour. For who knows not that even our noblemens 'fons have been merchants? nor will I deny that he was ' nobly defcended, though a merchant.'

* Czmden's Britannia, page 376 .

This Michael de la Pole was alfo knight of the garter, as Vincent *, in his Review of Brooke, obferves; and that he could not have been fo, at that time of day, by the ftatutes of the order, had he not been a gentleman of three defcents, as he was, being the fon and grandion of a knight, but that knight a merchant. ' From whence, fays he, it follows, ' that Mercatura non derogat nobilitati; that is, Trade is ' no abatement of honour.'

## * Page 700.

As it here may be afked, What conflitutes a gentleman with us? fo the reply is eafy: being a gentleman is being intitled to bear arms *. And Mr Camden obferves, that the diftinction of a gentleman of coat-armour (or an upftart) and a gentleman of blood, is the bearing of arms from the grandfather; and that he who bears arms from his grandfather is, to all intents and purpofes, a gentleman of blood; for which caufe it is requifite, by the fatutes of the Bath, that every knight, before his admiffion, proves that he is fo qualified; which done, it carries with it, if his merit be equal to the thing, a paffport alfo to the order of the Garter.

* Noritia Anglicana, p. 24. alfo judge Doddridge's Honour's Pedigree, p. 147. Smith de Repub. Angl. \& Fortefcue, fol. 82.

Guillim, in his chapter of Gentlemen, fays, They have their beginning either of blood, as that they are born of worfhipful parents; or that they have done fomething, either in peace or war, whereby they deferve to bear arms, and be accounted gentlemen. He farther fays, chap. 24. If a gentleman be bound an apprentice to a merchant, or other trader*, he hath not thereby Joft his gentility; and he defires it may be remembered, for the honour of trade, that Henry VIII. thought it no difhonour to him, when he quitted his queen, to take to his wife Anne, the daughter of Thomas Bullen, fometime mayor of London. To which may be added the thought that the firft William, who founded our royal race, was only the grandfon of a tanner.
' A young gentleman, whofe father had been an apprentice in London, but of a good family, was infulted in company for this very thing, as if he was no gentleman born, innplying that his father's apprenticefhip had corrupted his blood. The father was fifred at this not a little, and was determined to bave this matter fully fifted: for which purpofe, Philpor the herald fet himfelf to fudy this point deeming it very fis to be refolved. And, in his book called - the City's Advocate, he determines, that an apprentice in - London is no diflonour nor degradation, but rather an honour and degree; and that it is very foolifh to embafe ho-- nour and indutry with difgracefal cenfure, and unjult not to - encourage it with praife and worflip, as the ancient poencourage it with praife and worfhip, as the ancient to
licy of England did, and doth, in conflituting corporation', - licy of England did, and doth, in conftituting corporation,
efpecial members thereof with notes of nobility.' Strype.
We flall now give the names of divers confiderable traders, who have been advanced to high honours, or pofts of truft, by our refpective princes; which may be found in the following lift, mentioned by Seymour, in his Survey, vol. ii. page 74 .
Sir John Blunt, mayor of London, made knight of the Bath with Edward prince of Wales, $34^{\text {th }}$ of ${ }^{*}$ Edward I.
*See Wotton's Baronets, vol. iv. p. 67 g .

Sir Godfrey Fielding, mercer, and mayor of London 1452, was made of the privy council to Heary VI. and Edward IV. Sir Thomas Coke, draper and mayor, 1462 , the 5 th of Edward IV. was made knight of the Bath, and afterwards a banneret, by that king.
Sir Matthew Philip, goldfmith, and mayor 1463 , was made a knight of the Bath, and a banneret, the 1oth of that reign. In 1464, Sir John Gilliot, merchant, lord mayor of York, was made a knight of the Bath *,

* See a catalogue of the mayors of York, printed by Step. Buckley, 1664, p. 28.
Sir Ralph Jofline, draper, and mayor 1465; made knight of the Bath, and afterwards a banneret *.
* Stow, page 419.

Henry Weaver, fheriff of London, 1461, made a knight of the Bath *.

* Stow's Ann. page 419.

Sir John Young, grocer, made a banneret in the field.
Sir William Home, fadler, and mayor 1487, made a banneret by Henry VII.
Sir John Percival, merchant-taylor, and mayor 1490, made a banneret by Henry VII.
Sir John Shaw, goldfmith and mayor, made a banneret by Henry VII.
Sir John Allen, mayor, 1528, made a privy-counfellor by king Henry VIII. *

* Baker's Chronicle, page $2 g 6$.

Sir Thomas More, who was fheriff of London about the year ${ }^{15} 1^{3}$, was afterwards chancellor of England, and of the privy-council to Henry VIII. *

* See Hollinghed's Hiftory, vol. ii. p. 341, 7 11, $93^{8,}$ \& c. Sir William Acton, made a knight and baronet, when fheriff of London, 1628.
Sir Thomas Adams, mayor 1646 , made a knight and baronet; and, fince that time, many great traders in every reign have been advanced to that dignity: which may ferve to fhew, that trade with us is nftentimes the high road to honour. And now it fhall be demonftrated alfo, from Dugdale, and others, that many great traders have even been created peers of the kingdom, and that divers antient peers are defcended from great traders.
It is affirmed by fome hiftorians, that Robert Harding, who was created baron Barkley by king Henry, was a citizen of Brifol *.
* Baker's Chronicle, p. 58. and Dugdale's, vol. i. p. 351 .

Thomas Legge, citizen and fkinner of London, was twice mayor thereof; he married Elizabeth, one of the daughters of Thomas Beauchamp, earl of Warwick: which fhews, that, even in thofe dainty times, the firft nobility thought it no degradation to match themfelves with eminent traders. This Thomas Legge was direct anceftor to the earl of Dartmouth*.

* Collins's Peerage, vol. iii. page 100.

Sir Michael de la Pole, merchant, was created earl of Suffolk, chancellor of England, and knight of the garter *.

* Vincent on Brooke, p. 700 . and Rapin, vol. iv. p. 406.

Sir Stephen Brown, grocer, twice mayor of London, in $\mathrm{r}_{43} 8$ and 1448 , and anceltor to the lord vifcount Montague *:

* Seymour's Survey, vol. ii. p. $7^{2}$ and 74. alfo Wotton's Baronets, vol. iii. p. 5 .

Thomas Bullen, grandfon of Jeffery Bullen, mercer, and mayor of London, created vifcount Rochfort, and earl of Wilthire and Ormond.
Sir William Holles, mayor in $1539^{*}$, whofe great-grandion, Sir John Holles, was created earl of Clare, and afterwards duke of Newcaffle.

* Stow, in his Survey of London, fays, that William Holles, who built Coventry-Crofs, was a baker ; but Mr Gervafe Holles, his grandfon; denies it. In Seymour's lift of the mayors of London, though the trades of moft of the other mayors are fpecifed, his is omitted. However, it is agreed on all hands, that he built Coventry-crofs, and was the greatgrandfather of the earl of Clare. Concerning this difference is is of little importance, for, the lower his beginning was, the greater his merit thereby appears. Sie Dugdale's Warwickhire, vol. i. p. 143 .

Sir Edward Onborne, clothworker, and mayor of London 1583 , and anceftor of the prefent Duke of Leeds. This Sir Edward Ofborne jumped out of a window on the bridge, into the Thames, to fave his mafter's daughter's life, who was afterwards his wife *.

* See th's fory at large, attelted by the duke of Leeds, in Seymour's furvey of London, vol. ii. p. $7^{8 .}$
Sir Baptift Hicks, mercer of London, created lord Hicks and vifcount Camden, the $4^{\text {th }}$ of Charles I. Was anceftor to the
prefent earl of Gainfborough *. Wotton, in his Baronetage', obferves, that this Sir Baptif Hicks was one of the firft citizens that kept a fhop after his knighthood; upon which, in 1607, he had fome difpute with an alderman about it, and allo a conteft for precedency, ftanding on his knighthood; which matter came at laft to be decited by the earl marilut.
* Dugdale's Earonetage, page 462 .

Sir Ralph Dormer, mercer, was mayor of London in 1529 ; of which family, was Dormer earl of Carnarvon, as is allo th: prefent lord Dormer*.

* Dugdale's Bar. p. 428. fee alfo Collins's Peerage, vol. iv. page 97.
Thomas Cromwell, earl of Effex, and knight of the Garter, fon of Thomas Cromwell, a blackfmith of Putney. Sir William Capell, draper, and mayor of London in 1503 , was anceftor to the prefent earl of Effex *.
*Seymour's Survey, vol. its p. 79. and Dugdale's Bar. vol. ii. page 466.
Sir Richard Rich, mercer, and mayor of London $\mathrm{I}_{44} 1$, and anceftor of the Riches, earls of Warwick and Holland, and the baronets *.
*. Dugdale's Bar. vol. ii. page 387.
Sir John Coventry, mercer, and mayor of Loridon 14.25, and anceftor of the prefent earl of Coventry *,
- Dugdale's Bar. vol. ii. page $4^{\text {© }}$.

Lionel Cranfield, merchant of London, was by James I. for his great abilities, made mafter of the requefts; afterwards mafter of the king's wardrobe, then mafter of the wards, a privg-counfellor, lord-treafurer, and earl of Middlefex *.

* Dugdale's Bar. vol. ii. page $4^{66 \%}$

Sir William Fitzwilliams, a merchant-taylor, and fervant fome time to cardinal Wolfey, was chofen alderman of Breadflreet ward in London, anno 1506; and, going afterwards to dwell at Milton in Northamptonthire, he entertained there the cardinal, his former mafter, then in his misfortunes; for which being queftioned by the king, he anfwered, that he had not done it contemptuoully, but becaufe he had been his mafter, and partly the means of raifing his fortune: with which anfwer the king was fo well pleafed, that he knighted him, and made him a privy-counfellor. In his laft will he gave to king Henry VIII. his large fhip, with all her tackle; to Sir Thomas Writhefly his collar of the garter, together with his beft George, fet with diamonds; and to his brethren, the merchant-taylors, his beft ftanding cup. He died anno 1542, and his will was proved the 16 th of February that year. This eminent citizen of London, at his death, was knight of the garter, lord-keeper of the priyy-feal, and chancellor of the duchy of Lancafter, and was the immediate anceftor to earl Fitzwilliams. See Seymour, vol. i. p. 240. alfo Stow's Survey of London, p. 89 .
To this lift may be added many more infances, but thefe may fuffice, as England has few better houfes amongt the nobility than fome of thofe noble families; and many of which titles ffill live in their defcendants.
Trade is fo far here from being inconfiftent with the character of a gentleman, that trade in England makes gentlemen, and has peopled this nation with nobles and gentlemen tob: for, after a generation or two, the children of traders, or at leaft their grand-children, come to be as good gentlemen, ftatefmen, parliament-men, privy-counfellors, judges, bifhops, and noblemen, as thofe of the highelt birch and the moft antient families; and nothing too high for them: thus the late earl of Havertham was originally a merchant, the prefent earl of Tilney's grandfather the fame, as well as the great-grandfather of the prefent duke of Bedford, and numberlefs others. And why fhould not ommerce, as well as law and divinity, or the fword, be a road to the higheft honours? Is the grandeur of this nation owing to wars? This has not fo much as helped it: what conquefts have we made abroad? what new kingdoms are added to the Britifh empire! We have reduced no neighbouring nations, nor extended the pofleffion of our monarchs into the ffates of others: we are butted and bounded as we were in queen Elizabeth's time: the Dutch, the Flemings, the French, are in view, of us, as they were then; we have fubjected no new provinces or people to our government; with few exceptions we are almoft for dominions where king Edward I. left us; nay, we have loft all the dominions which our antient kings for fome hundreds of years held in France ; fuch as the rich and powerful provinces of Normandy, Poictou, Gafcony, Britany, and Aquitain; and, inftead of beine inriched by war and victory, we have, on the contrary, been torn in pieces by civil wars and rebellions, as well in Ireland as in Encland, and that feveral times to the ruin of the richeft families, and the flaughter of our nobility and gentry; nay, to the deftruction even of monarchy itfelf, and this many years at a time, as in the long bloody wars between the houfes of Lancafter and York.
Thefe things prove abundantly that the prefent greatnefs of the Britilh nation is not owing to war and conqueft; and

## C O M

## COM

that it can be owing to the profefion of law, or divinity, no one will fay: what can it be owing to then but to our trade and commerce?
The fplendor, the power, and dignity of Great-Britain, being thus raifed by trade, it muft be unaccountable folly and infatuation to leffen that one article in our efteem, which is the only fountain from whence we all, take us as a nation, are railed, and by which we are inriched and maintained. The Holy Scriptures, fpeaking of the riches and glory of the city of Tyre, which, at that time, was the emporium of the world for foreign commerce, from whence all the filks and fine manufactures of Perfia and India were exported all over the weftern world, fay, that her merchants were princes, and her traffickers the honourable of the earth: and, in another place, By thy traffic thou haft increafed thy riches. And certain it is, that nothing but our traffic has increafed our riches, and given that illuftrious fplendor to our Britifh nobility and gentry.
As all things are preferved, and. brought to a greater degree of perfection, by the fame means by which they were firf eftablifhed; fo, without due attention to the intereft of trade, when-all nations are, more or lefs, plucking at that fhare we have, muft not this nation dwindle in wealth and power, while it's neighbours are rifing in both? To what degree this nation is really declining, and others increafing in commerce, hath already appeared in this work, beyond contradiction, from facts and teftimonials not to be overthrown by any declanatory artillery of the fubtileft fophifts; and the fame will be more and more glaringly confpicuous throughout this undertaking. And,
When the nobility and gentry of thefe kingdoms are pleared to confider the honour of trade, and how numerous and how diftinguilhed the noble and honourable families are that have rofe to the higheft dignitues thereby, in wealth, and in knowledge of the nation's true intereft; when others of our illuftrious nobles and gentry, who have been advanced to the pinacle of grandeur by other channels than thofe of commerce, fhall alfo be pleafed to confider, that it is trade alone which gives a value to their landed eftates, and adds to the glory of their fovereign, as well as of themfelves; none among them, I am perfuaded, can treat a fubject of fuch confideràtion with indifferency, nor look upon trade in a contemptaous light. For, after all the machinations and intrigues of politics that thefe kingdoms have, or can purfue, experience ever has, and ever will evince, that a tenacious regard to our commercial interefts, both at hrome and abroad, will prove the great pillar of the ftate. - And $I$ am glad, I rejoice, to find this confirmed in the prefent fentiments of a great and able minifter, whofe long experience in public bufinefs has brought him to a thorough knowledge of this great truth; and, therefore, in the breeding up one of his own fons, has not only given trade the preference, but endeavoured to infpire our young nobility to purfue ftudies which tend to the promotion of the national commerce.
This hath been lately done in a pamphlet in favour of the woollen manufacture, faid to be written by the right honour-able-Horatio Walpole, fen. Efq; intitled, The complaints of the manufacturers, relating to the abufes in marking the Gheep, and winding the wool, in a letter to the marquis of Rockingham; who, though a young nobleman, but lately of age, exerted himfelf, the firt time of his appearance in the houfe of Jords, in a very diftinguifhed manner, in favour of the woollen manufacturers of this kingdom; an example, which the honourable author of the before-mentioned treatife, from a true zeal to the commercial interefts of his country, recommends to others of our young nobility: And here I cannot but obferve, that this young nobleman follows the example of his renowned anceftor, the memorable earl of Strafford, who laid the firft foundation of the linnen manufacture in Ireland, by fowing great quantities of flax for feed, and fetting up feveral looms at his own expence, to invite the Irifh to follow that trade without prejudice to Englan'd which has proved, and is at this day, the greatelt benefit and fupport of that whole kingdom.
As commerce, from what has been obferved, has proved the fource of all the bleffings which this nation enjoys, and the rife of fo many great families, and of great numbers more, as I could eafily hew; fo, the more country-gentlemen breed their younger children * to it, the likelier fuch families are to be continued, and become ufeful to the public.

* Mr Locke, after recommending it to people to bring up their children to fome trade, adds' 'But if the miftaken - parents, frightened with the name of trade, fhall have an averifon to any thing; of this kind in their children, yet
- he recommends the teaching them merchants accounts, as * a fcience well becoming every gentleman.' Locke'sWorks, vol. ii. page 95 . folio.
The importance of an idle, ufelefs, younger brother, is very finely fet forth by Mr Addifon, in his character of Will Wimble, who. greatly laments the folly of fome great families *,
* Lord Bacon affigneth the true caufe of this, in faying, That nobility of birth commonly abateth indoftry; and he that is not indultrious envicth him that is. Bacon's Works, vol. iii.
that had rather fee their chidren farve like gentemen, than thrive in a profeflion or trade, that they think is beneath their quality. 'This humour, fays he, fills feveral parts of Europe with pride and beggary $t$.; but it is the happinefs of a trading nation, like ours, that the younger fons, though - incapable of any liberal art or profeflion, may be placed in Guch a way of life, as may, perhaps, enable them to vie c with the beft of their families.' © When I have, continues c he in another place, been upon the Exchange, I have often ' fancied one of our old kings ftanding in perfon, where he is reprefented in effigy, and looking down upon the wealthy 6 concourfe of people with which that place is every day - filled. In this cale, how would he be furprized to hear all (the languages of Europe fooke in this little fpot of his former dominions, and to hear fo many private men, who in ' his time would have been the valfals of fome powerful ba-- ron, negaciating like princes, for greater fums of money 6 than were formerly to be met with in his royal treafury!
+ Lord Bacon faith, That trade enableth the fubject to live plentifully and happily; and that the reakm is. nuch inriched of late years by the trade of merchandize. Bacon's Works, vol. iii. pages 329,573 , and 580 . And elfewhere he files the merchants vena porta; and fays, "If they flou-- rifh not, a kingdom may have good limbs, but will have - empty veins, and flourifh Ditte.
- Trade, without inlarging the Britifh dominions, has given 6 us a kind of an additional empire ; it has multiplied the ' number of our riches, made our landed eftates infinitely - more valuable than they were formerly, and added to them ' an acceffion of other eftates, as valuable as lands themfelves.' And in another place he fays, 'It is the great advantage of - a trading nation, as there are very few in it fo dull and - heavy who may not be placed in ftations of life which may - give them an opportunity of making their fortunes. A well-- regulated commerce is. not like law, phyylic, or divinity, - to be overfocked with hands; but, on the contrary, flou' rihhes. by multitudes, and gives employment to all it's proc fellors. Fleess of merchantmen are fo many fquadrons of - floating hops, that vend our wares and manufactures in ' all the markets of the world, and find out chapmen under ' both the tropics.'
The learned bifhop of Cambray gives us alfo his fentimants on this fubject, in the charatter of Narbal, in his account of the Phonicians *, by whom it is fuppofed the learned archbifhop meant the Englifk. - You fee, fays he, the powser'of 6 the Phoenicians, who have rendered themrelves puiflant to - all their neighbouring nations, by the grandeur of their - fleets. Trade, which they carry to the furtheft quarters of 6 the earth, has fo enriched themi, that they furpafs the mont "flourifhing people in glory:' And again, inftructing Telemachus how to eftablifh a flourifhing trade in Ithača, 'Do, - fays he, as thofe people do, receive, with kindnefs and with c eafe, all ftrangers; let them find in your harbours fafety c and convenience, free from reftraint, and never fuffer ' yourfelf to be overcome, at any time, either with pride or c avarice; the true way to get much is never to be too co-- vetous, and even fometimes to forego gain. , Make your-- felf beloved of all ftrangers, and even bear with flight in-- converiencies from them; fear to excite jealoufy by your - pride; be ftedfatt to follow the laws of commerce, whith 6 are fimple and eafy; and fuffer not your fubjects; on any c account, to infringe them. Keep a ftrict hand over the - fraud, negligence, or vain glory of the merchants, whirh 6 ruins commerce, in ruining the traders'themfelves; and, - above all things, never attempt. to confine commerce to ' your own proper interef.'
* Vide Les Amantures de:Telemaque, lib. 3. P. 36.

This may be fufficient to.fliew; how clearly, this great prelate faw the advantage accruing from a free trade; and his countrymen, the French, have very greatly increafed theirs, by following many of thefe wife maxims, to our infinite difadvantage.
But even foreigners themfelves make a very great diftinction and difference in our favour, betwixt an Englifh trader, and thofe of other nations. To this effect writes the baron de Polinitz *, a perfon well known in moft of the courts of Europe: ' In England, fays he; the nobility intermarry - with traders daughters, as they do in France; however, a great diftinction fhould be made between the one and the © other. In England, merchants are fometimes fprung of 6 the greateff houfes in the kingdom: and it has often hap6 pened, that younger branches of noble families, who have - been brought up to tradé, by the right of fucceffion have - become peers. And frequently it falls out, that, when a - lord efpoufes a merchant's daughter, fhe may be bis cqu-- fin, or at leaft a lady of a good family.

* Memoirs de Baron de Polinitz, vol. iv. p. 237
- What is the true origin, fays the ingenious Abbé Le Pluche, s in order to fupport the fpirit of-commerce in France, 6 of the folendor and honours which attend the condition of - noblemen? Is it not the juft and well-grounded perfualion 6 of their being born to promote the public good? 'Tis,
indeed, in that view; that new honours and new rewards are befowed upor the man who has preferved atown, a body - of troops, a corporation, or the life of a fingle citizen, - dear to his country. It is prudence and activity that ralfe f a man out of the common claft, when his virtues have - been exerted for the good of the fate. For foorn attends the braveft man, who is only a pyrate or a duelift. What - regard ought we not then to entertain for a gentleman, - who, with capacity, attempts the eftablifhment of an ad-- vantageous colony; or the ádvancement of thofe in a län-- guifhing condition? Deffitute as we noty. begin to be of - large timber for ftip building, what gratitude fhould we - not be bound to have forone, who would make it his taik - to carry to Louifiana a fufficient number of either vaga-- bonds or voluntéers, there to work the lofty wöods which - that land is covered with, by fopping, with pile-w̄ork and -dykes, the inundations of the Miffifipi; of by building - for us flips upon the foot; of in fhort, by yearly ballaft-- ing, with a number of the fintelt oaks, the fhips that fhould - be fent thither from the ffocks of Breft or Rochefort! - What value does not the ftate exprefs for the man, who, at
- the approach of a great fcarcity of corn, embarks with all c hafte with one or more flipis, and timely brings bäck from 6 the ports of Dantzic or London, or, from the coalt of Barc bary, a firf provifion of corn, which he prudently caufes 4 to be followed by fifl more abundant fupplies! However, c it is not neceflary, in ofder to render himfelf agreeable to c the public, that a man fhould have cut armies to pieces, or - given bread to the whole ftate.
- Has he not nourified multitudes, and peeferved whole pro-- vinces fromeendlefs calamities, when he his', by advances - of money, or by a wife management, eftablithed or main-- tained three ftuds of horfes, that will help the operations < of hufbandry, and remount, the cavalry; or great forges of c anacknowled ged beriefit; or large manufactures, or plan-- tations of wood in-ufelefs grounds ; or plantations of mad-- der, of woad, of fouic, of geneflrol, of greening weed, of - white mulberry-trees; or any other fuch works, that will - fupply a multitude of families with enployment, and feed a a great many otters', whom agriculture alone could not © fufficiently maintain?
- Let us caft our eyes upon the cafte of St Gobin * formerly c a heap of ruins, a paltry decayed country houfe. It em-- ploys now above five hundred workmen within it's walls, - and gives fubffiance without, to five hundred families of - the atfacent places, by fupplying theni with work, or by - brying their commodities. Not to mention the money * which that manufacture brings us from foreign counitries.
- Poffrbly a knight-errant will, with indignation, fee the
- abodes of the anclent worthies employed for manual works.
$\varepsilon^{2}$ The laty people of the neighbourhood, obliged to buy - wood fomewhat dearer than before, will, perhaps, curfe an c eftablifitment which is the real profperity of that country. But, cant judgments like there beat examination?* Public good ought to be the rule of our eftem, as it is the foun-- dation of true nobility:

Aimmufadiure of ran and blownglaffesin France, betwixt Laon, La Fere, and Chauny:

- Lewis XIV thought it fo, when coming from the end of - the Low-Countries to the affiftance of Allace, which was - now feized'upon, he went feveral leagues out of his road, © purpofely to to hour with his vifit the works of St Gobin, cof which he would have the particular account given him. - Lewis XV.. was of the fame opiniont, when the granted the - fineft prerogattves, and the moft advantageous diftinctions, - to the eftablifhers of the manufactures of Abbeville and Se* dan. I' omit many others. It was not in hopes that the c defcendants of Mefieurs Cadeau and Van Robais chould - Beftow their flocks to buy fome indolent poft; and at laft - live nobly by living idly; but rather on condition that thefe - families would continue to maintain thereby an activity ${ }^{*}$ truly ufeful to the ftate; by multiplying ufeful correfpond${ }^{5}$ ences with foreign countries, and by procuring a liveithood - to thburânds of citizens. The manufáqure of Abbeville - does alone employ above two thoufand five hundred, with" in the fpace of a thoufand fquare feet̃, and imparts 'its -' plenty to all places round about.
- Outr French are now fo far from taking any fáncy to Englifh "or Dutch ftuffs, or from fending their money to London to Chave a pendulum-clock, that our chamber and pocket * clock work is. the only one now in ufe among us; and - much valued by the firangers themfelves, both for it's ex$\checkmark$ actnefs and neatnefs. Our woollen cloth and fmall ftuffs - are of very common ufe at Mllan, Libons, and Cadiz, in all the Levant, and efpecially in the French and Spanidh colonies. Now I'would afk, if a gentleman will do lefs - good and honour to France, by making an army of work-- men go in good order, and by improving by his oblerva-- tions, a machine much defired, or a ftaff equivalent to the * product of the beft lands, than if he had defended a poft at - war, or got together again the remains of a company dif-- perfed and put in confufion? It is eafier to run two or three
rifis in one's life, than to maintain by a fubborn unthaken - vigilance, and to improve by new experiments, a colony, a f ftud of horfes, or any one of thole employments that gives - bread to the multitude:
- Pray confider, on the one hand, the narrow views of a gentleman's younger fon who is poor, and charged with 'the management of a poultry-ytud, or the villainy of a Tharper who borrows or pilfers money on all fides to live : and, on the other, the fagacity, the gentility, the eleva tion of mind, and the whole liberal carriage of a gentle-- mian, who accounts to himfelf in his clofet for the pro duct of a fuccefsfil employment. He always appears with - all the decency faitable to him. Every body courts him
- he gives life and fhelter to all under his protection. Which
' of thefe lias degenerated? Doubtlefs the gentleman who c ruins himfelf by gamintg and debauchery. But, on the c Sther hand; how truly the nobility of a Roufleau* or a - Julienne + deferves univerfal refpect! It is by ferving the - public that we may become dear to it. Thus it is, that 6 our younger children, inftead of being a weight upon their 6 elder brothers, might fielp to fupport both them and their - fffters, and introduce into a family, very often funk in debts, the affiftance and filendor of the moft lawfully ac6 quired riches.
* Mr Rouffean, director of a large manuffacture of woollen cloth at Sedan.
f Mr De Jolienne; dire\&or of the manufacture of woollen cloth at the Gobelinss
- But it is not only our noble families that would gain muchs, - by having fome branch of the wholefale trade culivated c by their younger brothers. The ftate itfelf would infal6 libly find, in this wife practice, an endlefs nurfery of ex6 cellent men. A young gentleman, inwardly urged on by 6 his birth, will leave no fone untufned to keep out of the common clafs, and will always make the moft honourable - ufe of his riches; by affording to the military man, his ' neighbour, the affiftance of a kind advance of money, or - by decorating his country with embellithments of the ut6 moft utility. However, it is a known matter of fact, that great enterprizes preceded by good ftudies, and by travels " judicioully employed, are both the fchool and the trial of - all talents.
- I have another thing to obferve to you; concerning the - advantage and the refources of commerce, viz. That noble © families, by fcorning that kind of commerce to which they ' are invited both by the king and ftate, deprive themfelves - of the occafions of becoming dear to mankine, and leave - to merchants the whole advantage of the nobleft enter© prizes. The fentiments of noblemen grow meaner and 6 narrower together with their circumfances; and it is na-- tural, on the contrary, to fee merchants have the greateft - views, and raife themfelves to the nobleft actions, in proc. portion as their knowlege and wealth increafe. This may s' be proved by both reafontand example:
- It would be needlefs to quote inftances of the-fite kind: ' they are reckoned by thoufands. As to the merchants, ' whoti a laudable induftry has enabled to ferve their counc try, and at laft to fit on a level with the nobility; in-- ftead of quoting recent facts known to every one, let us ' go higher up to remote ages, and bortow our examples ' from the great. It is with private families;as with whole - cities, and even republics. The firit of commerce be-- comes the fource of induftry and opulence. Hère we may 6 recal the degree of flendor to which the cities of Tyre and - Carthage were raifed by a fet of plain merchants. As long © as thefe towns remained only trading towns, they were 6 active, happy, and agreeable to the whole world. They ' committed a grofs miftake, and worked their own ruin, 6 when the firitit of conquefts fucceded to the fimple defire - of felf-prefervation. The cities of Genoa and Venice have - been raifed only: by merchants, and the diminution of their - former profperity is barely the decay of their commerce, 6 occafioned by the aggrandizement of that of the Porte - gueze in the Indies; by the introduction of the Englifh into - the Mediterranean : I will add, and by the pageantry - of certain families, who put too great a diftance between ' nobility and induftry. So long as the counts of Flanders 6 careffed and made much of the workers of woollen ftuffe; - and the undertakers of manufactures of cloth and camblets, ' nothingicould be compared to the wealth of the cities of a Bruges and Glient. The indifference which was after-- wards flrewn for thefe works, deftroyed them, and threw - both towns, already reduced to the product of their lands, - which were excellent, into a ftate of mediocrity, from 6 which they have never recovered. The workmen, loaded 6 with impofitions and infults, carried their woollen cloth to - England and Antwerp, where they introduced wealth, to - which thofe places were yet ftrangers; and, to this fpirit of - traffic, which daily improved, are we to attribute the gran-- deur and magnificence of London. The face of England c is totally changed, firft by the fabric of it's wool, and af6 terwards by the multiplication of it's chipping. The entire
decay
¢ deday of Antwerp came from the retiring of it's workmen to Amfterdam, and from the fupprefing of it's fhipping, - which is loit together with it's harbour.
© The city of Hamburgh being menaced, as well as all the < Hans. Towns, with a quick deftruction of it's wealth, by ' the neceffity of fharing the commerce of the Baltic with - many nations, which had not been feen meddling with - it before, has had the fkill to extend the feveral branches c of it's induftry to other feas, and recover it's former - vigour.
- Holland receives from, and fends embaffadors to, crowned - headis. It ranks with the moft diftinguifhed fates, and is ' behind none of them for the plenty of both the neceffary cand the agreeable, for the boldnefs of it's enterprizes, and ' the wifdom of it's government. And what are the Dutch c but a fet of merchants, who take a pride in being fuch ? c Let us, according to the defires of certain fyftematical 6 men, bring them back to their primitive condition. We - Thall find a handful of fifhermen, of cheefemongers and c foldiers, groping in the dirt of that country, naturally un-- fit to be inhabited. But that time is over; fince the fpirit c of commerce has fpread itfelf over that little corner of the c world, it has affumed another face. The waters have been ${ }^{t}$ carried off: the grounds of their habitations are daily - raifed, and rendered firmer and firmer. Their towns be' come models of neatnefs and conveniency: the draining of - the lands has even brought in gardening and hulbandry. - Add to this, multitudes of inhabitants: an eager emulation ' in all arts, the moft perfect marine; and the greateft ho-- nours paid to the art military and refined politics; all in - fhort, has been introduced there with commerce, which - works the prefervation and glory of families as well as of 6 whole ftates. I would afk now, if the nobility can do ' greater things, or ever be difparaged by operations of this ' kind?
- I fhall add but two more inftances of the grand views in-- fpired by commerce and experience. The firft is that of - James Cour, a merchant of the city of Bourges, who had - alone a more extenfive commerce than all the merchants of
- France had together in his time; and by his wife coun-- fels, as well as by the certainty of his cafh, humbled the - houfe of Burgundy, infured the crown of France to the - lawful heir Charles VII, and by him to the branches of - Valois and Bourbon his fucceffors.
- The other inftance is that of the merchants of St. Malo, - who, being exalperated by the unjuft requeft which the - congrefs of Gertruydenberg made to Lewis XIV, of em-- ploying his troops to force his grandfon, Philip V, to abandon the crown of Spain, to which the teftament of Charles II had called him, joined the profits they had juft made in - the commerce of the Spanifh colonies in America, and - brought thirty-two millions in gold to the foot of the throne, at a time when the finances had been exhaufted by - a long feries of unhappy events. Thefe thirty-two millions © timely diftributed in the mints of France, re-animated the war and all payments. The houfe now reigning in the * kingdoms of France, Spain, and Naples, will never forget - the agitation it was in at that time, and the happy means - of maintaining it's rights found in that crifis, in the zeal ' of thofe merchants. If tradefmen have made fo noble a ufe - of their riches, what helps ought not the ftate to expect, - when treafures fhall be owing to the cares and ingenuity of 'gentlemen? The king and the commonwealth, on the ( contrary, have no fentiments, nor any fervice to expect - from one who thinks his idlenefs a means to keep his no-- bility; juft as the church has nothing to hope from a be-- neficed man, who argues upon and weighs the merit of an - actrefs, or grounds upon principles the beft manner of - patching a face.
- Pleafures, amulements, and idlenefs, may, among a cer-- tain fet of people, affume an outfide of nobility. But men - who are as good citizens as they are truly noble, have a - very different way of thinking. The habit of doing no-
- thing has no other efficacy but that of adulterating our
- fentiments; and the ftate is no lefs grateful for the fervice

6 of ingenuity and prudence, than for thofe of courage and c intrepidity. In fhort, it is the prefervation of the flate 6 which conftitutes our glory.

- I know my own way of thinking, and how to fet bounds to
- my own defires. But I fhould think myfelf equally happy - as a father, if my advices had rendered my eldeft fon a Tu" renne, and made a James Cœur of the youngeft.'
Thus we have an idea of the fentiments of the French in regard to commerce, and how follicitous fome of their wifent men and warmeft patriots are to promote a fpirit fo ufeful to the ftate. And,
Since trade feems to be the moft certain dependency of the younger branches of our Britifh gentry, and the leaft precarious road to fortune, honour, and independency in all refpects, it is to be hoped, it is to be ardently wifhed and defired, as well for the interefts of private families, as that of the three kingdoms in general, that none will think their quality above engaging in it, either in one capacity or another.

Of the order of Merchants engaged in Commerce.
As this clals of traders is fuperior to that of any other, and the employment, as we have feen, is of fo high credit and dignity, as to raife thofe concerned in it to the fupreme pofts of truft and honour in the kingdom, no one bred to it Chould methinks, be deficient in any ufeful of ornamental branch of knowlege, that hath a tendency to render the character as confpicuoufly amiable, as it is importantly beneficial, to the community. Upon which occafion, I conceive, the fentiments of Sir Francis Brewfter, an eminent merchant of the city of London, in the reign of king William III, will not be unworthy the judicious reader's attention. In his Eflays on Trade and Navigation, part the firft, in the Preface, he makes the following obfervations: ' I think it, - fays he, a mortal diftemper in trade (not to be cured in the - firft concoction) that we have fo few men of univerfity

- learning converfant in true mercantile employments : if
- there were as much care to have men of the beft heads and ' education in it, as there is in the laws, the nation would ' fetch more from abroad, and fpend lefs in law-fuits at ' home. We have it reckoned up by the infallible author, ' as the glory of a city, That her merchants were princes ' and nobles; their bufinefs and tranfactions in the world, ' with fuch, is more than belongs to any other fet of men: ' would it not then be the honour of a nation, as well as 6 profit, to have men of the beft fenfe and learning in the - foreign negoce of a kingdom? If fuch had been in the - trade of thefe kingdoms, it feems reafonable to believe, we - had not loft the moft confiderable navigating trade and employment of our feamen.
- It would be an aftonifhing obfervation, to men of any coun-
- try but our own, to fee more heads employed in Weftmin-
' fter-Hall to divide the gain of the nation, than there are
- hands on the Exchange to gather it together. I have fome-
- times thought, that if thefe kingdoms lay under the con-
c fufion and unintelligiblenefs of underftanding in trade, as
' the builders of Babel did in languages, we might, without
- the fin of thefe arrogant architects, erect fuch towers in
- trade, as might overtop the univerfe in that myftery. We
' fee how all arts and fciences have been improved in this
- kingdom, within the compafs of one century, but, amongt ' them all, the merchant's part the leaft; and the reafon is - plain, men of fmall learning and moderate underftandings - are generally put in it: for, though there are fome of exc cellent parts and clear heads among them, yet the major ' part are not fo polifhed: I fpeak not this to abate the re-- fpect that I fhall always think is due to the profeffion, and

6 all men in it; but we know it is the vanity of the nation ;

- fcarce a traderman but if he have a fon, that a country
- fchoolmafter tells him would make a fcholar, becaufe he
c learns his grammar well, but immediately paffes the ap-
' probation of his kindred, who judges it pity fo hopeful a - youth fhould be loft in trade; the univerfity is the only foil c fit for him to be planted in.
- By fuch difpofition of the youth of our nation, many a - good tradefman is loft, and poor fcholars in every refpect ' made; and, if this humour prevails in mechanics, and c men of ordinary quality, much more, and with better ' pretenfions, it affects our gentry; to be fure the eldeft fon
- is above trade, and, if the younger be of a quaint and ftu-
- dious temper, they are thought fit for the law, not many
- for the pulpit; which, I confefs, I likewife think a mif-
- take in our gentry: had we more of them in the clergy, - we fhould have fewer to defpife, that might be better buil-- ders of houfes than of the church.
- But, to return to what I oblerve of the improvement in - all the employments in the kingdom, I fee none that have c arrived to that vaft increafe as thofe in the law: this, perc haps, is accounted an evil ; but I will not quarrel with the - Iong-robe; I hope it will be no offence to wifh them - amongit us, but not with their bar-gowns ; they would, in - my opinion, look better in a Counting-House than in 6 the Temple; and had the humour of our anceftors run c that way, as much as it did for the law, there might have ' 'been as great an enlargement in maritime traffic and na' vigation, as there is now of the laws: I prefume none will - fay, that they began with equal numbers; trade had the ' primogeniture, and fet forth with the employment of the ' people, before there could be work for lawyers; and I be-- lieve thofe of the beft value amongft: them do not think - their growth and gain contribute to either, in the advan${ }^{6}$ tage of the nation; though, without the profeffion, there - can, be no fecuring property; but perhaps the numbers make * more work than there would be, if they were lefs. Ham-
c burgh, though a place of great trade, allows but two: and, 6 though our foreign plantations are filled with men of no - better principles than they leave behind them, yet they - have few among them who raife their fortunes by the law; - for which no reafon can be given, but that there is not a - foundation and nurfery for that profeffion, to breed up men ' of learning and ingenuity in.
- I have been the longer on this fubject, becaufe there feems - to me an expedient in this matter; and that is, to make - fuch provifion for noblemen and gentlemen's children, as - may be equallf reputable with the imn of court, for young - gentlemen to come to from the univerfities, and, with lefs - gentlemento their expence in feven years ftudying the law, - become expert in' trade.
- To be thus mantaged : in each maritime city and confide-
- rable part of the kingdom; to have a college built, in - which there maty be fome perfons of experience in trade, to - teach and direct in the myftery of it, to all parts of the world: and, that they may have the practice as well as theo-- ry, that every perfon entering himfelf into the fociety, - may be obliged to bring in a thoufand pounds fock, which - will make a capital, perhaps, of 20 or 30,0001 . fterling, - to trafic with in thirty cities, \&cc. Tn the kingdom: they © to be obliged to fpend five years in this fociety, and at the - end of that term. to receive the principal they brought, - allowing the cafualty of profit and lofs as it happens: go-- ing thus out, they will be entered in trade, and probably - have a fund to begin with; and by this means träde will - fall into the hands of gentlemen, perfons of learning and - confideration in the nation; and jikewife preferve from - misfortunies numbers that now mifcarry in their fudies of
- the law, through ill converfation, and having no employ-- ments.
- To this project (a word now traduced to contempt, though - in itfelf of good fignification both for peace and war) I forefee two objections that will be made, and they are - thefe:
- Firft, This will make too many merchants.
- Secondly, That this will leave no room for younger bro-
* thers, that have nothing to prefer them in the world, but
- a fmall fum to put them apprentice to a merchant, by which
- they often raife their fortunes in the world.
- To the firt $I$ anfwer, That the evil of having too many
\& merchants, is, in the numbers that are bred up from ap-
- prentices, many of which, coming into bufinefs without
- funds, ftrain their-credit, which, to keep above water, they
- are forced to venture at all ways that have but a probability
- of fuccefs, to keep themfelves in bufinefs; and then, to
- comply with their credit, often fell to lofs, which, in the
cend, brings them to misfortune, and that begets an opinion
* that there are too many traders; whereas the true reafon is
- the want of fock, not number of merchants.
- The fecond objection, That this will hinder merchants
- from taking apprentices, is in part anfwered in the firft,
- that their numbers prejudice trade: but there is a further
- confideration in this matter, and that is, two forts of youth
- ftand candidates for a mercantile education; gentlemen * with a capital, others of lefs quality, with none. I think a it will admit of no queftion which fhall be preferred; and - that the other may be more profitably employed for the - nation and themfelves, in trades that require more labour - and lefs ftock.
- But, after all I have faid, my wifhes are greater than my - expectation, to fee trade thus courted in a kingdom, that
- treat it as fome do their wives, confidering them no far-
- ther than to the production of a legitimate pofterity, re-
- fefving their careffes and delights for a mifs; fo the hu* mour of this age.feems to incline, whilft foreign commerce a is neglected, and men's thoughts and defigns run after of-- fices and employments in the ftate; to pay which, fpi-- der-like, the nation fpins out her bowels to catch flies; c and the fimile goes farther, fuch food turns into poi-- fon, where it feeds men faulty in their morals; and fuch 6 too often fupplant better men, or find ways to be prefer* red before them. To fay this will be no offence to de* ferving men; and, for others, I fhall only defire them to - fufpend their refentments, until they hear what I have to fay - elfewhere, and then they will have more reafon, becaufe it - will cone in my way to be more particular, when I come - to lpeak of the trade of Ireland; in which there have of - late been fuch notorious demonftrations, how ill men in of-- fices and places of truft may ruin and deftroy a kingdom, as * admits of no defence. I bave, for this, the authority of - both houfes of parliament, in their addreffes to the king: - and the infallible author tells us, that he who hath faid to ' the wicked, Thou art righteous, the people will curfe, na"tions fhall abhor him.'

## REMARKs.

Of the gentleman's knowledge in trade.
The gentleman, who has made the knowladge of trade one branch of his ftudy, will be capable of judging for himfelf, which of his family have the beft turned genius to engage with credit and honour in the practice thereof, and in what capacity therein a fon may render himfelf the moft confpicuous. This is no little advantage, as well as fatisfaction to a family; for it is not always fafe to rely on the loofe and indifferent advice of others, in matters whereon the interef and happinefs of families depend. And,
Vol. I.

If all the principal clafes of commerce be flocked with the younger branches of perfons of the beft families and fortunes; and the heads of thofe families allo become the zealous patrons and advocates of trade, in the feveral capacities of magiftrates, ferrators, judges, and nobles; the interefts of trade witl never be neglected, or luke-warmly efpoufed: the commerce of the nation will never be left to traders themfelves, to cut out national branches, at the hazard of their own fortunes, and by dint of their own fagicity: no, all the able heads in the kingdom will be conftantly engaged, ambitiouly engaged in the guardianfhip of our trade and navigation ; becaufe the fudy of it will convince them, that nothing elfe will prove a permanent fupport of then and their families; which will multiply the number of our nobles and gentry, and, what is moft defirable, will taftingly uphold their dignity and independency.
There is no branch of knowledge but may, if duly applied, contribute fo to form and embellifh the human mind, as to render men the more ferviceable to fociety: and whoever is defirous to be ufeful, and to diftinguifh himfelf in any eminent capacity, will make his natural and acquired abilities fubferrvient to that chief end, and fet no greater value on any ace complifhment, than as it is conducive to that, or fome other end, beneficial to his country or his family.
What end can men, of the firft rank and condition, propofe to themfelves better than that of making millions of their fel-low-creatures happy? And what, in a land of liberty, fike this, can anfwer that glorious intention better, than the promotion of commerce; every man's property here being duly fecured, when thus acquired?
If the comprebenfivenefs of the fubjea, and the difficulty in underftanding many very complicated points, relating to the intereft of trade, can be any motive to applications of this kind; I am apt to believe, this ftudy will furnifh more knotty and intricate problems, than many are aware of. Certain 1 am, that upon trial it will be found no eafy tafk to reduce knowledge of this kind to it's demonftrative principles, and to be capable of applying thefe principles, according to the occafional exigencies of the ttate. We have, indeed, hums bly endeavoured at fomething of the former; how we have, and fhall be able to fucceed, is fubintted to the oandid and judicious. Humanum efterrare; at errores feliciter retractare vere divinum eft.
I have endeavoured to make practical trade, and it's natural circulation in a flate, the foundation of what is fuggefted argumentatively; for I judge it as irrational and abfurd to reafon upon trade, without making the practice of traders the bafis thereof, as to philofophize without experimental knowlege; the theory and practice (or rather the political and practical confideration of trade) fhould go hand in hand, as well as the theory and practice in other fciences; for practical trade, and facts arifing confequentially from it's national circulation, muft be the touchtone of all political refearches : that is to fay, in other words, the theory of trade, confidered in a national light, muft be founded in the practical ways and method of carrying it on.
Nor is this two-fold knowledge of tráde of ufe only, as we humbly conceive, to the heads of our greatelt families, and to thefe younger brancbes, who may fall into any trading employment, but it nay prove of no little utility, honour, and advantage, to fuch younger fons of our moft diffinguifhed families, tho are defigned for any pofts of honour in foreign countries; futh as confuls, prefidents, and ambafladors, 8 cic. or to fuch who may be invefted hereafter with the high character of Plenipotentiary, in order to negotiate treaties of commerce with other powers, wherein the intereft and honour of the kingdom, as well as the glory of our fovcreign, is always nearly concerned.

## COMPANIES.

The origin of the companies of the city of tondon, viz, the principal twelve, of the time of their being incorporated, and by what kings and queens: as likewife the names of all the other companies.

1. The mercers (though then trading for the moft part in ftuffs of the native growth) were enabled to be a company, and permitted to purchafe 20l. per anaum lands, in the 17 th year of king Richard the fecond's reign, Anno Domini 1393. 2. The grocers (though at that time greatly inferior to what they now are) called pepperers before, were incorporated, by the name aforefaid, in the 2oth year of king Edward III, Anno Dom. 1345.
2. The drapers, for the moft part woollen, were incorporated in the $17^{\text {th }}$ of king Henry VI, Anno 1630, having been a fraternity from the time that king Ed. III. fo earnefly promoted the woollen manufacture, by admitting the Flemings, and other nations, the free ufe of manual eperation within his dominions: that fo his fubjects might learn the craft, and not be beholden to other nations, to work the growth of our own country, and pay them extraordinary rates, by the advance of exportation and importation, for what might be otherwife ordered to the advantage and glory of our own nation, by fet-
ting many thoulands of poor people on work, otherwife incapable of getting whereby to fublift.
3. The fifhmongers (a vocation no lefs advantageous to this kingdom by their incouragement of the filhing-trade) were, in former times, two companies, viz. ftock-fifhmongers, and falt-fifhmongers; but, in the begioning of the reign of Henry VIII, Anno 1509, did bear their arms as at prefent they do, and in the 28th year of that king, Anno 1536, were united and incorporated in one body without difinction.
4. The goldfmiths (an ancient craft, fol may rightly term it, for formerly thofe that fold worked likewife their own plate) were incorporated and confirmed in the 16th year of king Richard IId's reign.
5. The fkinners had the favour to be incorporated in the firft year of the reign of king Edward III, Arno 1327 , and were made a brotherhood in the i8th year of king Richard IId's reign.
6. The merchant taylors had their firft patent of arms granted by Sir Thomas Holne, clarencieux king at arms, being then called taylors, and linnen-armourers, viz. in the 21 ft of king Edward IV, Anno 1480 ; and fince incorporated by Henry VII, by the name of merchant-taylors, viz. in the 17th of his reign, Anno 1501.
7. The baberdafhers; or hurrers, formerly fo called, were incorporated a brotherhood of St Catharine, in the 26th of Henry VI, Anno 1447, and, by the name of merchants haberdahers, confirmed in the 17 th year of Henry VII.
8. The falters had their arms, and, as many fuppofe, were confirmed in the 20th year of Henry VIII, 1530, being a company of good efteem.
9. The iron-mongers had the favour to be incorporated in the 3d year of king Edward IV, Anno 1462, at which time they were greatly increafed, and the mines of our nation much improved.
10. The vintners, formerly called wine tunners, were incorporated in the reign of king Edward III, after he had conquered all Normandy, and by that means ingroffed moft of the French vintage; but were not confirmed 'till the 15 th of Henry VI.
11. The cloth-workers had their arms granted by Thomas Benolt, clarencieux, in the 22d year of Henry VIII, but the time of their incorporation is uncertain.
Thofe that remain, are thefe, whofe names I fhall only recite; the dyers, brewers, leatherfellers, pewterers, barbers, furgeons, armourers, white-bakers, wax-chandlers, tallow-chandlers, cutlers, girdlers, butchers, fadlers, carpenters, cordwainers, painters, curriers, mafons, plumbers, innholders, founders, embroiderers, poulterers, cooks, coopers, bricklayers and tylers ; bowyers, fletchers, blackfmiths, joiners, plaifterers, weavers, fruiterers, fcriveners, bottlemakers, and horners; ftationers, marblers, wool-packers, farriers, payiers, lorimers or loriners, brown-bakers, wood-mongers, upholfterers, turners, glaziers, clerks, watermen, apothecaries, and filkthrowlters.
All of thefe are fraternities, and moft of them incorporated, and have charters of privilege, and large immunities, though, in the days of our forefathers, many of them were not known, not having brought their feveral trades and crafts to perfection, for many of which they were obliged to be beholden to flrangers; but the natives of this kingdom being naturally ripe-witted, and of a toward genius, foon became arts-mafters, and out-did their teachers; fo that, at this day, no nation under heaven can exceed them (if the materials be alike) in all refpects.
But having given the reader an account of the refpective companies, whofe induftry at home improved, to a miracle, what is brought to them from diftant lands, I fhall proceed to give a relation of the refpective merchants, whofe traffic by fea firft intiched the land, whilf the land finds them wherewithal to drive on their commerce with all nations, from whence any valuable merchandize was brought. But, before this, I think it would be neceflary to relate the firft incorporation of the merchants of the ftaple, who once were the chiefeft boaft, and moft profitable to this nation: nor, indeed, lefs profitable to others, as France, Flanders, Holland, Saxony, and many other countries, the chief mart being eftablifhed at Calais, a little before taken from the French, by king Edward III, the profit of our Englifh. wool then chiefly obliging the Flemings to join with us, againft their potent neighbour.

## Of the firf Companies that were eftablifhed in this kingdom for the benefit of foreign trade.

However injurious companies with joint ftocks, and incorporated with exclufive privileges, may, at this time of day, be reckoned to the nation in original; yet it is certain, that they were the general parent of all our foreign commerce, private traders upon their own bottom being difcouraged from hazarding their fortunes in foreign countries, 'till the methods of traffic had been firf of all fettled by joint flock companies. From this principle it is, that we find feveral nations now that are endeavouring to improve their trade, and eftablifh
or increafe maritime power, by the means of joint tock companics.

The bodies, of merchants that were at firft incorporated for thofe purpofes in England, were as follow :

1. The merchant-adventurers were incorporated by king Edward IV, from which time they traded with good fuccefs Edthe reign of queen Elizabeth, who, for a further encourage ment of their induftry, not only confirmed, but enlarged their privileges.
2. The merchants of Ruffia or Mufcovy, having improved their trade and commerce in that remote kingdom, to the inriching their native country, were incorporated by king Ed ward VI, greatly encouraged by queen Mary, and had their confirmation, with an enlargement of their privileges, from queen Elizabeth.
3. The merchants of Elbin were incorporated by queen Eliza beth, and by her greatly encouraged; fhe, like a wife queen and patronefs of trade and navigation, well knowing, that by traffick alone the kingdon could be inriched, her revenues improved, and the rendered formidable to her arpiring neighbours: but, by fome difguft, the trade of Elbin was tranfplanted to Hamburgh, and other free ports and cities.
4. The Turky merchants, or merchants of the Levant, were likewife incorporated by the fame princefs, and were confirmed in their privileges by.king James, with large additions. 5. The merchants of Spain , or more properly Spanifh merchants, or fuch of our nation as traded to Spain, were incorporated by queen Elizabeth.
5. The Eaft-India merchants were alfo incorporated by that princefs, Anno 1600.
6. In the latter end of queen Elizabeth's reign, and the beginning of king James's, the Eafland, Greenland, and French metchants, were fettled in companies and traded with great fuccefs, building many fhips, continually employing feveral thoufand perfons in the management of their affairs, exporting commodities of our own growth, and importing the productions of other countries.
7. There were likewife a company of Virginia, or Welt-India merchants, whofe great induftry and fagacity tended to the firt fettling and improvement of our colonies in America. And moft nations that make any confiderable figure in trade at prefent, made ufe of the like kind of policy, in the firf eftablifhment of their foreign traffick.
But, fince the tride of this kingdom and the number of traders have increafed, and the methods of affurance of hipping and merchandize, and navigation to all parts of the known world, have become familiar to us, thefe companies, in the opinion of moft men, have been looked upon in the light of monopolies; and, therefore, their privileges have from time to time been leffened, in order to eftablith an abfolutely free and general trade; and experience hath fhewn, that the trade of the nation has advanced, in proportion as monopolies have been laid afide.
But, whether it may, or may not, be for the national interefts of trade, to continue fome fpecies of companies, with exclufive privileges, fuch as the late Royal Affiento, \&ic. we fhall confider, when we come to fpeak of the conftitution, nature, and ftate, of the feveral trading companies, under their refpective names, which now exift in Great-Britain, and other parts of the world. See thefe feveral companies, as the East-India Company, the South-Sea Company, the Turky Company, \&c. See alfo the articles Monopolies, Credit, Public Credit, Stockjobbing.

## Remarks.

As Sir Jofiah Child is efteemed the ableft advocate for fome kind of trading companies with joint ftocks and exclufive privileges, I judge it neceffary to quote his fentiments thereupon at large; intending to give them a thorough examination under the articles of thofe refpective companies which he fpeaks of that are in being, Sir Jofiah's fentiments are as follow:

- Companies, fays he, of merchants, in his time, are of two - forts, viz. companies in joint ftock, fuch as the Eaft-India - company, the Morocco company, which is a branch of the - Turky company, and the Greenland company; the other - forts are companies who trade not by a joint ftock, but - only are under a government and regulation; fuch are the - Hamburgh company, the Eafland company, the Muf-- covy company.
- It has for many years been a moot cafe, whether any in. ' corporating of merchants be for public good or not.
6 J. That for countries with which his majefty has no al-- liance, nor can have any, by reafon of their diffance, or - barbarity, or non-communication with the princes of - Chriftendom, \&c. where there is a necefity of maintain-- ing forces and forts (fuch as Eaft-India and Guinea) com-- panies of merchants are abfolutely neceffary.
c 2. It feems evident to me, that the greateft part of thofe two - trades ought for public good to be managed by joint flocks.

3. It is queftionable to me, whether any other company of merchants are for public good of hurt.

- 4. I conclude, however, that all reftrictions of trade are nought, and confequently that no company whatfoever, 6 whether they trade in a joint ftock, or under regulation, - can be for public good, except' it may be eafy for all or any of his majefty's fubjects to be admitted into all or any of the faid companies, at any time, for a very confiderable fine; and that if the fine exceed 201. including all charges of admiffion; it is too much, and that for thefe reafons.
t. Becaufe the Dutch, who thrive beft by trade, and have the fureft rules to thrive by, admit not only any of their - own people, but even Jews, and all kind of aliens, to be - free of any of their focieties of merchants, or any of their - cities or towns corporate.

2. Nothing in the world can enabletis to cope with the Dutch in ány trade, but increafe of hands and fock, which a a general admiffion will do; many hands and much flock being as neeceflary to the profferity of any trade, as men and money to warfare.
3. There is no pretence of any good to the riation by com-- panies, but only order and regulation of trade; and, if 'that be preferved (which the admiffion of all that will come s in and fubmit to the regulation, will not prejudice) all the good to the nation that can be hoped for by companies is obtained.

- 4. The Eaftland, befides our native commodities, confume - great quantities of Italian, Spanifh, Portugal, and French - commodities, viz. oil, wine; fruit, fugar, fuccads; fhu-
- mack, \&c. Now in regard our eaft country merchants of England are few, compared with the Dutch, and intend principally that one trade out and home, and confe-- quently are rot fo converfant in the aforefaid commodi-- ties, nor forward to adventure upon them, and feeinig that - by the company's charter, our Italian, Spanifh, Portugal, a and French merchants, who underftand thofe commodi-- ties perfectly well, are excluded thole trades, or at leait,
- if the company will give them leave to fend out thofe goods,
- are not permitted to bring in the returns; it follows, that
- the Dutch muft fupply Denmark, Sweden, and all parts of

6 the Baltic, with moft of thofe commodities; and fo it is in © fact.
5. The Dutch, though they have no Eaftland companies, yet have ten times the trade to the eaftern parts as we; c and, for Italy, Spain, and Portugal, where we havè no companies, we have yet left full as much, if not more 6 trade, than the Dutch. And for Rufia and Greenland, * where we have companies (and I think eftablifhed by act - or acts of parliament) our trade is in effect wholly loft, c while the Dutch have, without companies, increafed theirs
6 to above forty times the bulk of what the refidue of ours now is.
\& From whence may be inferred,

- I. That reftrained limited companies are not alone fuffic cient to preferve and increafe a trade.
- 2. That limited companies, though eftablified by áct of - parliament, may lofe a trade.
- 3. That trade may be carried on to any part of Chriften-- dom, and increafed without companies.
' 4. That we have declined more, at leaft have increafed lefs, - in thofe trades limited to companies, than in others where - all his majefty's fubjects have had equal freedom to trade. - The common objections againft this eafy admiffion of all - his majefty's fubjects into companies of merchants, are,
- Object. r. If all perfons may come into any company of * merchants on fuch eafy terms, then young gentlemen, fhop* keepers, and divers others, will turn merchants, who thro'
- their own undkilfulnefs will pay dear for our native commo-- dities here, and fell them cheap abroad; and alfo buy foreign * commodities dear abroad, and fell them here for lefs than their - colt, to the ruin of themfelves, and deftruction of trade.
- 1 anfwer, Firft, Caveat emptor, let particular men look to - themfelves, and fo doubtlefs they will in thofe trades for * which there are now companies, as well as they do in others - for which there are no companies.
* It is the care of law-makers firt and principally to provide - for the people in grofs, not particulars; and, if the confe-- quence of fo eary an admiffion thould be to make our manu-- factures cheap abroad, and foreign commodities cheap here, * as is alledged, our nation in general would have the advan-- tage both ways.
- Object. 2. If all thould be admitted, \&c. Mhopkeepers, bec ing the retailers of the fame commodities the company im' ports, would have fo much the advantage of the merchant, - that they would beat the merchant wholly out of the trade. - I anfwer, Firft, We fee no fuch thing in Holland, nor in - the open trades; viz. France, Spain, Portugal, Italy, and - all our own plantations; neither can that well be; for to - drive a retail trade, to any purpofe, requires a man's full - ftock, as well as his full attendance, and fo does it to drive the trade of a merchant, and therefore few can find ftock - and time to attend both; from whence it follows, that, - of the many hundreds which in my memory have turned
merchants, very few continued lons to follow both, but commonly, after two or three years experience, betook themfelves wholly to merchandizing, or returned to the fole exercife of their retail way; but whether they do or do nof; concerns not the nation in general, whofe common intereft is to buy cheap, whatever appellation the feller has, whether that of a mere merchant, gentleman, or a Chopkeeper.
- Object, 3. If hopkeepers and other unexperienced perfors may,turn merchants, \&c. they will through ignorance neglect buying and fending out our native manufactures, and will fend out our money, or bills of exchange, to buy foreign commodities, which is an apparent national lofs.
- I anfwer, that thopkeepers are, like all other men; led by their profit, and, if it be for their advantage to fend out manufactures, they will do it without forcing; and, if it be for their profit to fend over money of bills of exchange, 'they will do that, and fo will merchants as foon and as much as ther.
Object. 4. If any be admitted, \&c. what do we get by 6 our feven years fervice, and the great fums of money our - parents gave to bind out apprentices to merchants, \&c. and who will hereafter bind his fon to a merchant?
' I aniwer, the end of fervice, and giving of money with 6 apprentices, I have always underftood to be the learning - of the art or fcience of mierchandizing, not the purchafing of an immunity or monopoly to the prejudice of our coun' try; and that it is fo, is evident from the practice, there being many general merchants that are free of no particu-- lar company; who can have as large fums of money with ' apprentices, as any others that are free of one or more - particular companies of merchants; and many merchants it that are free of particular companies, to whom few will - give any confiderable fums of money with apprentices, the ( proportion of money given with apprentices not following the company a merchant is free of, but the condition of
( the mafter, as to hiis more or lefs reputed fkill in his call-- ing, thriving, or going backward, greater or leffer trade, ' well or ill government of himfelf and family, \&ic:
© Object. 5. If all fhould be admitted on fuch eafy terms, ' will not that be manifeft injuftice to the companies of merchants, who, by themfelves or predeceffors, have been at ' great difburfements to purchafe privileges and immunities ' abroad, as the Turky company and the Hamburgh com' pany have done?
- I anfwer, that I am yet to learn that any company of mer-- chants not trading with a joint ftock, fuch as the Turky,
- Hamburgh,' Mufcovy, and Eafland companies, ever pur-- chafed their privileges, or built and maintained forts, caf-
' tles, or factories, or made any wars at their own charge; © but I know the Turky company do maintain an ambaffador ' and two confuls, and are fometimes neceffitated to make - prefents to the Grand Seignior, or his great officers; and 6 the Hamburgh company are at fome charge to maintain 's their deputy and minifter at Hamburgh ; and I think it \& would be great injuftice that any fhould trade to the places 6 within their charters, without paying the fame duties or le-- vations towards the company's charge, as the prefent ad${ }^{6}$ venturers do' pay; but I know not why any fhould be bar-- red from triding to thofe places, or forced to pay a great ' fine for admiffion, that are willing to pay the company's - duties, and fubmit to the company's regulation and orders - in other refpects.
' Object. 6: If all may be admitted as aforefaid, then fuch ' numbers of chopkeepers and others would come into the - fociety of merchants, as would by the majority of votes fo - much alter the governors, deputy, and affiftants, of the re-- fpective companies, that ignorant perfons would come into - thofe ruling places, to the general prejudice of thofe trades. - I anfwer, Thofe that make this objection, if they be mer-- chants, know there is very little in it; for that it is not to be 6 expected that twenty fhopkeepers will conse into any one - company in a year, and therefore can have no confiderable - influence upon the elections; but, if many more fhould - come in, it would be the better for the nation, and not - the worfe for the company, for that all men are led by 6 their intereft ; and it being the common intereft of all that c engage in any trade, that the trade fhould be regulated and - governed by wife, honeft, and able men, there is no doubt - but moft men will vote for fuch as they efteem fo to be, 6 which is manifeft in the Eaft-India company, where nei-- ther gentlemen nor fhopkeepers were at firft excluded, nei6 ther are they yet Lept out, any Englifhman whatfoever be*ing permitted to come into that company that will buy an' * action, paying only five pounds to the company for his ad' miffion, and yet undeniable experience has convinced all ' gainfayers in this matter ; that company, fince it's having - had fo large and national a foundation, having likewife had - a fucceffion of much bettet governors, deputies, and affift6 ants, than ever it had upon that narrow bottom it frood ' formerly;' when none could be admitted to the freedom of - that company for lefs than a fine of fifty pounds; and the - fuccefs has been anfwerable, for the firft company fettled ' upon that narrow-limited intereft, although their ftock was

6 larger

- larger than this, decayed and finally cane to ruin and de-- ftruition; whereas, on the contrary, this being fettled on - more rational, and confequently more juft, as well as more " profitable primciples, bas, through God's goodnefs, thriven ' and increaled to the trebling of their firt flock.'
CONNAUGHT, a province in lreland, is feparated from the province of Leinfter on the eaft by the Shannon, which alfo parts it from Munfter on the fouth and fouth-eaft; has the province of Uliter, and a part of the Weftern-ocean, on the norih and north-weff; and the main ocean on the weft. It is 130 miles in length, from Cape Lean, the moft fouth point of Thomond, to the north parts of Letrim; about 84 in breadth, from the eaft point of Letrim to BlackHarbour in the weft part of Mayo; and about 500 in circumference, containing, according to Mr Templeman, an area of 6072 fquare miles.
In fome places it is verdant and agreeable, in others gloomy and dangerous, being pretty thick fet with bogs and woods, and the air not fo clear as elfewhere, by reafon of the vapeurs and foggy mifts. The foil is fruitful enough, and abounds with cattle, deer, hawks, and honey. It has many convenient bays and creeks for navigation, but few rivers of confiderable note befides the Shamion. The chief are, I. May, in the county of Mayo, which, for a little way, divides it from Sligo, and falls into the ocean by Mayo and Killaka. 2. The Suc, divides Rofcommon into Gallway, and falls into the Shannon, near Clonefert. 3. The Drofos, a river in the county of Thomond, which falls into the Shannon eaft of Clare; and, 4. Gyll, a fmall river in Gallway, which riuns into the bay of that name.
Gallway, the county, has part of Rofcommon, King's County, and Tipperary (from which laft it is parted by the Shannon) on the eaft and fouth-eaft; the main ocean on the weft; Mayo, Meath, and Rofcommon, on the north and north-eaft : and Thomond on the fouth: it being much of a warm, lime-ftone foil, which rewards the induitry both of the hufbandman and the fhepherd; it abounds in genieral with corn, patture, and cattle.
Gallway, the county town, flands on an illand, by the fall of the lake Corbes, or Lough Corrib, into the bay of it's own name. It is a very ffrong, neat, rich city, the capital of all the weft part of Ireland, and the third, if not the lecond, city of the kingdom; nor is it inferior a a any of the reft in wealth, it being fo well feated for commerce, not only to France and Spain, but to the Weft-Indies, on a large, fafe, and delicate harbour; called the bay of Gallway, capable of a valt fleet of fhips, that it has been efteemed as the greateft place of trade in all the kingdom. The buildings, efpecially the public ftructures, are generally of ftone, handfome and lofty, built almoft round, in form of towers, and inhabited by a fet of as fubitantial merchants and fhopkeepers as moft cities in the three kingdoms, in proportion to it's magnitude; and the merchants in general here have a confiderable Chare of commerce to moft of the trading parts of Europe. The harbour, indeed, lies a little way off from the city, fo that the goods are delivered by lighters; but it is fo fmall a diftanee, that it is no obftruction to the commerce.
Gallway Bay, which runs above 30 miles up the country, has innumerable harbours and roads on every fide, and is one of the nobleft entrances in the world, were there, fay fome, a fuitable conflux of fhips and trading towns; but there does not feem any great occafion for more than what belongs to Gallway itfelf. It is Iheltered at the mouth of the fouth iffes of Arran, through which are three paffages for fhips, befides the north paffage at the mouth of the bay. In the feafon here is a very confiderable herring fifhery.
Among it's many harbours', is that particularly called Batterbay, as fine an harbour as moft in Europe for it's extent. It is four miles in length, is narrow, but has a very fafe entrance. It is a mile, in fome places two miles-broad, a deep channel, 10 or 12 fathom water, and not lefs than five clofe to the fhore on both fides. It has good anchorage, without any rock or thoal; but here are no towns, no fhips, no trade, which is the fate of all this coaft.
Mayo County, has a fea upon the weft and north; is bounded on the fouth and fouth-eaft by the county of Gall way; by Rofcommon on the eaft; and on the north-eaft by Slego. It is mountainous and rough on the fides next the fea, but in other parts has pafturage, and it is well focked with cattle, deer, hawks, and honey, and watered with many large and diverting lakes and rivers.
In the north-weft corner of the county there is a fort of peninfula, joined to the main land by a narrow itthmus, on the north fide whereof lies Broad-haven, which is a bay with a good harbour. About feven miles crofs the bay lie two illands, fafe againft winds, but not frequented, except when fhips are forced in by a tempeft. There is a good falmon fifhery in a river which falls into a bay north of thefe inlands. Roscommon County, has Mayo and Gallway, with the river Suc between them, on the weft; King's County, and part of Gallway, on the fouth and fouth-eaft; Slego and Letrim on the north and north eaft; and Longford, Eaft Meath, and part of King's County, on the eaft, together with part of Letrim, from which it is feparated by the Shannon. This
county is for the moft part a champain and fruitful count ${ }^{-} \mathrm{v}$, which, with little cultivation, yields plenty of corn, grafs, and is well ftocked with cattle.
Slego, or Slico County, lies full upon the fea to the north and north-weft, where it is alfo bounded by the river Trobis, which fprings from the Lough Ern in Ulifer. It has Mayo on the weff; part of that county, and Rofcommon, on the fouth; and the county of Letrim on the eafl. It is divided from the two laft mentioned counties by the Curlew Mountains, and the river Suc. Great part of this county is mountainous and boggy ; but it's lower grounds and bottoms have a good foil, both for the ploughman and the grazier.
Slego Town, is a borough, or market town, and the onig town of note in the county. It has a very commodious harbour, and fhips of 200 tons may come up to the town-key. The town is populous, but not large; nor is the trade here confiderable, though much better than many of the other places beyond it.
Letrim County, has Slego, and part of Rofcommon, on the weft and fouth-weft; Donnegal-Bay on the north; Longford and Leinfter on the fouth-eaft; and the counties of Fer managh and Cavan, in Uliter, on the eaft and north-eak. It is a wild mountainous country, and fuil of rank graft, which feeds an infinite number of cattle ; and Camden, even in his time, lays above 120,000 have been grazing in this narrow county at one time; and, fince, their number is faid to have greatly increafed.
CONSULS; among the Romans they were chief officers, yearly chofen, to govern the city of Rome: but long fince abrogated. Our confuls abroad take care of the affairs and interefts of merchants there, where they are appointed by the king, as at Lifoon, \&s.
A trial before them was formerly the dernier refort; and merchants courts, called prior and confuls, eftablifhed in France, Italy, and Germany, to determine caufes in the moft fummary way, to avoid interruption of traffic; and this authority at Roan was very great and extendive.
By the laws of France, he that Chall bbtain letters pasent to be conful in the Levant, and other trading fea-ports of the Mediterranean, under the Grand Seignior, is to make intimation of it in the affembly of merchants where he is eftablifhed, to be recorded in the offices of the confulfhip and admiralty, \&sc. and fhall take the oath required. They are to call to the affemblies they fhall hold, all the merchants of their nation, captains and patrons, upon the place; and, as to their jurifdiction, they are to conform to the cuftoms and treaties made with the princes where they refide; to keep exact memoirs of their proceedings, and fend once a year to the fecretary of ftate for maritime affairs.
By the treaty of Utrecht between Great-Britain and Spain, the conful refiding in the king of Spain's dominions thall be named by our king, with as full power as any former conful. The eftates of the Englifh dying inteftate in Spain fhall be inventoried by him, and intrufted with two or three merchants, for fecurity and benefit of the proprietors and creditors. The ftatute 9 Geo. II. c. 25 . enacts, That it thall be lawful for perfons appointed by the conful at the ports of Cadiz and St Mary's in Spain, with the majority of the Britifh merchants and factors there, to receive from all Englifh and Irifh fhips, trading there, any fums of money not exceeding one rial plate per ducat, on the freight of goods and merchandize (except tonnage goods) there imported, and on all tonnage goods, not exceeding two rials plate per ton; and all their bills of lading thall fpecify to pay the fame, under denomination of contribution, as by act of parliament, \&c.
And all Britifh or Irifh commanders trading to the faid ports, and delivering there, fhall, within ten days after their arrival, deliver a manifefto upon oath, Ipecifying the particulars of the cargo, and to whom configned; which oath is to be adminittered by the conful, or whom he fhall appoint, and the clearances outwards detained by him, 'till payment of the money is made; and, any departing without his clearances, the conful, on fuch mafter's return to any port in the king's dominions, may have an action at law againt him for the faid money.
All monies raifed to be applied to the relief of fhipwrecked mariners, and other diftreffed perfons, his majefty's fubjects, and other charitable ufes, as appointed by the conful, 8 cc . The conful thall, alfo, as occafion requires, call a general meeting of the Britifh merchants and factors; the majority of whom fhall order all matters relating to the premiffes.
The 1oth Geeo. II. e. 14. is for collecting at the port of Leghorn certain frall fums, ufually contributed by the merchants trading there, for relief of thipwrecked mariners, captives, \&c. appointed by the conful and majority of the merchants there.
The money to be one third of a livre per ton, or bale, on goods imported, payable by all Britifh mafters trading there, which they fhall be reimburfed by their freighters, or thofe to whom the goods are configned, or the receivers: and mafters, not fpecifying the payment in the bills of lading, fhall be anfwerable for the fame: and, where no fuch bill appears, or the tonnage is not fettled, to be valued by two indifferent merchants there, one to be chofen by the conful, the other
by the commander, within ten days after unlading; and, if they do not agree, an umpire, being a Britifh merchant, thall be cbofen, to determine the valuation in three days, and then fuch money to be paid.

Of the confuls of the French Nation more particularly.
Article 1. No perfon to call himfelf conful of the French nation in foreign countries, without having our commiffions, which fhall not be granted to any under the age of thirty years.
2. The confulifip becoming vacant, the moft ancient of the deputies of the nation in office, for the time, fhall officiate, till we take order about it.
3. He that fhall obtain our letters to be conful in the fea-port towns and places of trade in the Levant, and other places of the Mediterranean, under the Grand Seignior, fhall caufe intimation thercof to be made in the affembly of merchants where he is eftablifhed, and caufe them to be recorded in the chancery and offices of the admiralty, and chamber of Marfeilles, and thall take the oath required.
4. We enjoin the confuls to call to the aflemblies which they fhall hold for the affairs of commerce, and of the nation in general, all the French merchants, captains, and patrons upon the place, who fhall be obliged to affift thereat, under pain of an arbitrary fine, applicable to the redemption of captives. 5. The artificers and feamen, fettled in thofe ports, fhall not be admitted to fuch affemblies.
6. The refolutions of the niation fhall be figned by thofe which have affifted at them, and put in execution by order of the conful.
7. The deputies of the nation fhall be obliged, after their time is expired, to be accountable to the conful for the monies they have handled, and for their intermiffions for the common intereft, in prefence of the new deputies, and the moft eminent merchants.
8. The conful fhall fend, every three months, to the lieutenant of the admiralty and the deputies of commerce of Marfeilles, a copy of the deliberations taken in the affemblies, and of the accounts given in by the deputies of the nation, to be imparted to the aldermen, and confidered by them and the deputies of commerce, if need be.
9. The confuls fhall keep exact and faithful memoirs of the important office of their confulfhips, and fhall fend them once a year to the fecretary of fate for maritime affairs.
10. We forbid the confuls to borrow, in the name of the nation, any fums of money of Turks, Moors, Jews, or other perfons, under any pretence whatfoever; and even to affefs thofe of the nation, except by virtue of a general refolution in writing, which fhall contain the reafons and the neceffity of it ; if otherwife, they fhall pay it themfelves.
ir. We forbid, under pain of extortion, to levy greater duties than thofe allowed them, or to exact any at all of the mafters and patrons of fhips, who fhall only come to an anchor in the ports and roads of the places of their eftablifhment, without lading of unlading any goods.
12. And as to their jurifdiCtion, as well in matters criminal 2s civil, the confuls thall conform themfelves to the cuftoms and the treaties made with the fovereigns of the places where they refide.
13. The decifions of the confuls thall be executed by provifion, in matters civil, in giving bail; and definitively, and without appeal, in criminal matters, if there be no corporal punifhment to be inflicted; the whole providing that they be given in prefence of the deputies and four eminent men of the nation.
14. And, where the crime deferves a corporal punifhment, they fhall prepare the procefs, and fend it, with the criminal, in the firf fhip belonging to any of our fubjects returning into our kingdom, to be.judged by the officers of the admiralty of the firft port where the fhip hall break bulk.
15 . The confuls, after making enquiry, and with advice of the deputies of the nation, may banifh out of the places of their eftablifhment the French that are of a fcandalous life and converfation. We enjoin our captains and mafters to embark them upon the order of the conful, under pain of 500 livres fine, applicable to the redemption of captives.
16. The confuls may put in as well for the exercife of the chancery, as for the execution of their own fentences, and - other acts of juftice, fuch perfons as they think capable of thofe pofts, to whom they fhall adminifter an oath, and for whom they fhall be in a civil fenfe refponfible.
17. The fees for the acts and orders of the chancery fhall be regulated by them, with the advice of the deputies of the French nation, and of the moft antient merchants; which thall be put up in the moft apparent place of the office, and an extract thereof fhall be immediately fent by every conful to the lieutenant of the admiralty and the deputies of trade at Marfeilles.
18. The appeals from the fentences of the confuls, eftablifhed as well in the ports of the Levant, as upon the coafts of Africa and Barbary, thall be carried before the parliament of Aix; and all the others, to the parliaments neareft to the places where the fentences are given.
Vol. I.
19. In cale of conteflation between the confuls and the mer: chants, either in the Levant, or upon the coafts of Africa and Barbary, for their private affairs, they fhall have recourfe to the court of admiralty at Marfeilles.
20. The conful thall be obliged to take an inventory of the goods and effects of fuch as die without heirs upon the place, and alfo of the effects faved from fhipwreck; with which he Thall charge the chancellor under the inventory, in the prefence of two eminent merchants, who fhall fign it.
2I. But, if the defunct had conftituted an attorney to receive his effects, or if any factor prefent himfelf with bills of lading for the goods that are faved, the effects fhall be delivered to them.
22. The conful fhall be obliged to fend forthwith a copy of the inventory of the goods of the defunct, or the effects faved from hhipwreck, to the officers of the admiralty, and the deputies of trade at Marfeilles, whom we enjoin to acquaint them concerned.
23. No inftruments written in foreign countries where there are confuls, thall be of any value, if they be not made authentic by them.
24. Teftaments received by the chancellor, within the extent of the confulihip, and in the prefence of the conful and two witneffes, and figned by them, fhall be deemed authentic.
The firf jurifdition of confuls, eftablifhed in France, was that of Thouloufe; the edict of it's eftablifhment in the month of July 1549, in the reign of Henry II; that of Paris was not created 'till 14 years after, in November 1563 , by an edict of Charles IX. They were afterwards eftablifhed in all the other principal trading cities of the kingdom, whofe names follow in alphabetical order, with the dates of fuch creations.

The ordonnance of March 1670 declares the edict of their eftablifhment in Paris common for all the feats of judges and confuls of the kingdom, and all other edicts and declarations concerning confular juridiction, inrolled in the parliaments. In Paris, and feveral other cities, is a judge and four confuls; in others a judge and only two confuls.
In Touloufe, Rouen, and fome other cities, they are called prior and confuls.
At Bourges, the judge is called judge-provof.
At Rouen, and in fome other places, there is a fupernumerary conful, who adts as procurator to the king, but he has no deliberative voice.
Every confular juricdiction hath it's regifter and it's cryers. The judges and confuls of Paris hold their fittings behind St Mederic, in a particular place called the conful's, or confular houfe.
They give audience there thrice a week, morning and afternoon, on Monday, Wedneiday, and Friday.
Their decrees are not of force but in writing. They extend to corporal confraint, and are executory to the amount 7 L.

## CON

of 500 livres, any oppofition or appeal whatever notwithflanding; and the appeals, lodged there, go directly to the great chamber of the parliament.
No procurators are fuitors to the jurifdiction of confuls, every one may plead his caufe there. Even thofe who cannot appear, or who have not capacity to defend themfelves, are permitted to employ whom they think fit.
There are, however, in the confular jurifdictions, perfons allowed by the judge and confuls, to defend parties; but they have no other retribution for their falaries and vocations, than what is given them voluntarily, by thofe who intruft their caufes with them
In order to have a perfect knowledge of the confular jurifdiction, it's privileges, the manner of proceeding there, the matters within it's cognizance, and the perfons Gubject to it, recourle may be had to the edict of Charles IX, of 1563 ; to the ordonnance of the month of April, 1667, tit. 16; of March, 1673, tit. 12.; and to the regulations and orders that have been made concerning it: which is the eafier, as an exact collection of them was printed by Dennis Thierry, in I705, by the care of the judges and confuls of Paris, who have added to it a very ufeful and clear inftruction.
There are four qualifications neceffary for the obtaining the confulfip at Paris, and in feveral other places. As ift, To have been, or to be actually, a merchant. 2dly, To be a native of the kingdom. $3^{\mathrm{dly}}$, To be an inhabitant of that city. And 4 thly, To be of an unblemifhed character.
The firft judge conful ought to be at leaft 40 years of age, the others 27 , on pain of nulliry to their elections. It having been thus decreed for all the confular jurifdictions of the kingdom, by order of the king's council of ftate, of the 9th of September 1673 , in conformity to the king's edict of February 1672 , which regulates the age of other officers of judicature.
No one may be elected firft judge, who hath not before been conful: and the office of each held but a year, and they may not be continued under any pretence whatever.
When any one is elected firf judge or conful, there is no difpenfation from performing his office; and, on refufal, he may be conftrained in the fame manner as is practifed with regard to other offices of the city.
If any of thofe in office are neceffarily' obliged to be abfent for fome confiderable time, they muft acquaint the conful, and afk leave; in which cafe, fome elder is chofen to offciate in their abfence.
If any die during their confulihip, others are elected in their place.

## The order and ceremonies ufed at Paris, in the election of a

 judge and four confuls of the merchants.Three days before the election, which is ufually held on the eve of Candlemas-day, the judge and confuls in office iffue a commifion, commanding all the old judges and confuls, mafters and wardens of the fix companies of merchants, \&c. to meet on the eve for the election in the judiciary hall of the confuls, to affist and accompany them in a proceffion to church, $8 x$. At return from which, the judges and confuls in charge take their feat, and the regifter or his deputy, having read the commiffion, call by name the aforefaid perfons there affembled, receiving from them, in their caps, billets given to them on return from church, containing the name of each voice; and their oath being taken by the judge in charge, to proceed fincerely at the election, and to chufe perfons capable, and of probity; the billets are all balloted, and Shuffled in the regifter's, or his deputy's cap, whence the judge takes thirty, rejecting the reft; which thirty, with the judge and confuls in office, are the electors,
Of thefe 30 billets, two are drawn, viz. one by the judge, the other by the firft conful; and the perfons named in them are fcrutators of the election, and placed with the regifter and his deputy, on the feat where they ufually write.
Then the acting judges and confuls name, with a loud voice, the perfons to whom they give their voice; afterwards the two fcrutators give theirs, and then the firf of them calls one after another the names in the 28 remaining billets, who are electors: thefe give their voice, which is written by the regifter and his deputy, and publickly counted in prefence of the fcrutators.
When it happens that two of the elected have a like number of voices, their names are written on two billets of equal fize, which are balloted in the regifter's cap; and the firit, which is drawn by the judge, hath the preference.
The election being ended, the judge and confuls in charge declare thofe who are elected ; and, being accompanied with the regifter and cryers, proceed to give an account of the election to the firft prefident, and who appoint them a day, to prefent the new elected perfons to the court, to take their oath.
On the day appointed, they are prefented by the procuratorgeneral, or by one of the general advocates, the former judges and confuls quitting their office; who, with the new elected ones, after the oath taken, return to the confular houfe; where, after mafs, the new ones are inftalled in their
feats by the old ones, who ftay with them to affift them that morning.
The week after the election, the judge and confuls iffue cornmiffions to the companies of merchants, willing them to eledt a certain number of merehants from their body, to attend the confular houfe in turn, weekly, on the days of audience, and other extraordinary days commanded, to affift them with their advice, in certain particular affairs.
The merchants, thus elected by the companies, are ufually named countellors of the confuls.
Thefe counfellors are to attend regularly in the confular hall, on fet days: or they incur a fine, from which they cannot be difcharged without legal caufe.
Their office is to examine the accounts of the parties in a feparate chamber, and to make their report of it immediately before the audience.
Art. I. The number of judges and confuls, in Paris, thall continue fixed at five, viz. one judge and four confuls, as it hath been 'till now.
2. It being our will, that agreeably to the edia of November, 1563 , the judge and confuls, for the time being, do, at the end of the year, affemble to the number of 60 merchants citizens, from the feveral companies, who, in conjunction with the five in office, and no others, fhall elect 30 from among them, who, without leaving the place, hall proceed with the faid judge and confuls, firft to the election of a new judge, and after of four confuls, two whereof to enter on the office, with two who hall remain of the preceding election ; the two others to enter after fix months, reckoning from the day of the election, when the two remaining of the preceding election hall quit; neither of them entering on their office, 'till after the oath taken in the great chamber of the parliament, in the ufual manner.
3. The judge fhall always be chofen, as ufual, from among the old confuls, who, as well as the four confuls to officiate with him, thall be of different companies and trades, nor of the fame company with thofe elected at the farge time with him, or with whom he fhall officiate for the face of fix months, according to the laft article.
4. That for eftablifhing the order already prefcribed, after enrollment of thefe prefents, the judge and confuls, actually in place, convene to the number of 60 merchants of the faid city, as prefcribed above, to elect in like manner 30 , who flall proceed forthwith to the election, as well of a new judge, as of four confuls, which judge fhall officiate to the end of January 17.29 ; of the confuls, two fhall enter immediately witin the two older confuls actually in place, the other two not'till Auguft of the prefent year; at which time the two remaining of the election in 1727 thall go out thofe who enter in Auguft to remain 'till Auguft 1729, all after taking the oath aforefaid, \&cc. This form to be ufed for the future in all elections, injoining our court of parliament to fee it done.

## Of the prior and confuls of Touloufe.

The city of Touloufe owes the eftablifhment of the merchants exchange, and of the prior and confuls who have the direction of it, to king Henry II.
The letters patent for this creation were given at Paris, in July 1549 :
Till then it's commerce had been in truth very flouribing, much owing to the advantage of it's rivers, the continual concourfe of ftrangers, and, above all, the happy genius and induftry of it's inhabitants.
One thing only was wanting to fecure and augment a commerce already fo great, which was an exchange, where merchants might meet to communicate of their affairs, and a particular jurifdiction to determine their differences, fuch as at Anvers and Lyons, then the moft famous cities of Europe for the riches and extent of their negotiations.
To procure therefore this advantage to Touloufe, Henry II. eftablifhed there a common exchange, after the form of that at Lyons, and with the fame franchifes, privileges, and liberties.
By the fame edict, a confular juridiction was alfo eftablifhed, confitting of a prior and two confuls, to be elected every year, for the deciding all differences on account of merchandize, exchanges, affurances, accounts, \&c. arifing among merchants, to be immediately carried by appeal to the court of the parliament of the faid city; the king neverthelefs permitting the faid prior and confuls to call, to the judgments of proceedings within their cognizance, fuch perfons as they fall think fit.
Moreover, they are permitted, but only with confent of all or moft part of the merchants, to improve, affels, and levy, money neceflary, as well for the purchafe, building, and maintaining a place for the faid exchange, as for repairing rivers, havens, and paffages.
This edict was regiftered in the court of the parliament of Touloufe, December 23, ${ }^{-1549}$.
About two years after, were iffued letters patent of the 27 th of May ${ }^{5} 55 \mathrm{I}$, as well for the regulation of the election of prior and confuls of the new exchange, as to confirm the extent of their jurifdiction. It confifts of ten articles.

The firft imports, that the election be made every year by plurality of voices of the electors, to be merchants dwelling in that city, and othes ftrangers (that is to fay, houfekeepers) refiding at the time of the election.
The fame article fettles the bounds of the jurifdiction, on the foot of that of confervator of fairs of Lyons; Brie, and Champagne.
The fecond eftablifhes what is called at Touloufe the council of the retinue, permitting the prior and confuls to take with them fuch a number of merchants as they fhall think neceflary, be it twenty and more, to proceed on judgments in relation to merchandizing, and to fee to the execution of their decrees.
The third and fourth contain the inftruction of procefles, and the execution of decrees made in them, as well in the diftrict of the parliament of Touloufe, as elfewhere.
The fifth fubjects to the faid jurifdiction of the prior and confuls, not only the merchants, bat alfo their factors, correfpondents, commiffaries fent for traffic, as well within as out of the kingdom, as is practifed in the confervation of Lyons; in order to obviate the expences; which would be confiderable, were the merchants obliged to purfue their factors, correfpondents, and commiffaries, in different diftricts, and before different judges.
The fixth mentions the fines to which the parties fentenced are liable, of which one moiety fhall be to the king.
By the feventh, merchants of the exchange are permitted to appoint an advocate or procurator fyndic, to have charge of the aftairs of the exchange, to conduct their proceedings to the beft advantage, as well before the prior and confuls, as any other judges.
The eighth permits, in like manner, the faid merchants to meet together for the elections and other common affairs, as often as they pleafe, without being obliged to ank any other permiffion.
The ninth fpeaks of merchandizes the growth of Languedoc, Louragais, and other places, particularly woad, for the good culture and dreffing of which, the king permits the merchants of the faid exchange to fend vifitors and infpectors, to make their report to the prior and confuls, who on the faid report fhall take cognizance of any abufes committed.
The tenth and laft article ordains the eftablifhment of a regifter to fign all judgments and decrees of the prior and confuls, which fhall be executed as expreffed jy the letters patent, granted by Francis I. to the city of Lyons, in February 1535, faving the appeal in the dernier refort to the parliament of Touloufe. The nomination of a regifter was fince confirmed to the prior and confuls, by other letters patent of the 15 th of June 1551 .
The court of the parliament of Touloufe, having made a difficulty of enregiftering thefe laft letters in form of regulation, the king gave letters mandatory, the 9th of September 1551, for the faid enregiftry, which was at length made the 8 th of March of the following year, with this reftriction, however, that where the proceeding thall be by conftraint, arreft, and imprifonment of perfons, the faid imprifonment thall not take place againft their heirs or fucceffors.
After the death of Henry II, Francis II, his fon, confirmed to the prior and confuls of Touloufe the rights which had been before granted them. The letters of confirmation are of the 20th of March 1559 .
The elections continued almoft a century, conformable to the articles of regulation in 1551 ; but fome abufes creeping in fince, and divers contefts arifing on the quality of the candidates, themerchants, who had been principal magiffrates, claiming preference of thofe who had not, the affair was laid before the parliament of Touloufe, and afterwards referred to the council, where, after depending above fifty years, and more than fifteen decrees both of council and parliament, fometimes in favour of the capitouls *, and fometimes of the merchants, who had not been fuch; a definitive decree of the king's council was at length given in June 1700, enafting,
*The chief magiffrates of Toulonfe are fo called.
That the ediCt of July 1549, for erecting the exchange of Touloufe, together with the letters patent of 1551 , flould be executed according to their form and tenor: importing, that all good and loyal merchants inhabiting the faid city of Touloufe, whether they have been capitouls or not, hhould be indifcriminately elected at the changes of the prior and confuls of the faid exchange, and that, in cafe of conteft or trefpafs againft the prefent decree, all jurifdiction hereof to be referred to the parliament of Touloufe, with prohibition to the parties to refer again to the council.
The body of merchants of the exchange, in purfuance of this decree, having petitioned the parliament for leave to meet for the making a new regulation, capable of re-eftablifhing peace among them, ss well on the fubject of elections, as of other things relating to the police, and jurifdiction of the exchange, of which having obtained permiffion by a decree of the IIth of December 1700, the general affembly began to be held the 8th of April 1701.
During the three fittings of this aflembly, the regulation was
formed, which hath ever fince been obferved in the exchange of Touloufe.
'Tis compofed of 47 articles, which may be reduced to feven claffes, viz: i. Of elections, confifting of 10 articles. 2.-Of the retinue, which hath feven: 3. Of precedences; in three articles. 4. Of thofe who may be, or who are excluded, alfo in three articles. 5. Of bailiffs-of the king's chapels, in three articles. 6. Of audiences and formalities to be obferved in the judgments there given, in 15 articles. 7. Of the fyndic, in fix articles:

The following is an extract of what is moft important in thefe feven claffes:

## Of the elections.

That of the prior and confuls is to be on the 28 th of November yearly. The nine perfons out of whom the three new officers are to be chofen, are to be prefented by the prior and confuls in office, and to be principal merchants, trading in their own name, and on their own account, and to be good and loyal fubjects, and houfekeepers in the city of Touloufe. They are to be chofen indifferently, from among the merchants who have been capitouls, or who have not.
They may not be related, within the degree of the ordonnance, to thofe who make the nomination, and muft have ferved at the exchange, ten years at leaft, in quality of judges-counfellors of the retinue.
None may hold the faid offices twice fucceffively, at leaft without confent of the body, had in a general affembly.
A merchant may be chofen firft conful, without having been fecond conful, and prior, without having been either firf or fecond.
The election is to be by the general body of principal merchants, and foreigners of the diffrict, who fhall be then at Touloufe.
After the election, thofe who are chofen are to take oath before the prior and confuls, or on their refufal before the judges-counfellors, who hold the next place after them. None may refure to accept the charge, or perform the office, after being chofen.

## Of the retinue.

There are a certain number of merchans, called judgescounfellors of the retinue, chofen by the prior and counfellors, to affift in rendering juftice during their year, and, with their advice, to fuperintend all affairs, as well of the exchange as of the general body of meschants.
They are to be 60 in number, actually eminent merchants, good and loyal inhabitants of Touloufe, taken from the different companies that compofe the general body of merchants of that city.
The prior and confuls are to agree between themfelves in the choice of the 60 , otherwife they are each to name 20.
The merchants, chofen for the retinue, are to take the oath in the month of their election, unlefs prevented by abfence or illnefs; on default, they are to be razed out of the lift, and others put in their place.
They affift at the exchange, and in the affemblies, as well general as particular, in a gown and band, at leaft if they have not been priors or confuls; in which cafe, they have a right to be there in the ufual robe of the jurifdition.

## Of the feffions.

Thofe who have been priors or confuls, precede all other merchants, as well at the exchange, as on every other occafion.
The elder priors take the right-hand of the officiating prior, next to the firt conful ; and the elder confuls at the left, next to the fecond conful, both according to the date of their elections: which rules their rank alfo, when the prior puts to the vote.
Thofe who have been neither priors nor confuls, oblerve no rank or precedence, and place themfelves indifferently as they enter the affemblies.

Of thofe who may offer themfelves at the election, or who are excluded.
No merchant may be chofen prior or conful, if indebted to the exchange : op the contrary, the creditors of the exchange and body of merchants have a right to ftand candidares. The treafurer hath alfo the fame right; but, if chofen, he is to deliver the flock he hath in his hands, to the new treafurer who thall be chofen in his room. As alfo to deliver his accounts and vouchers to commiffaries appointed to examine them; on failure, he is to be fufpended the offices of prior or conful, 'till thefe two obligations are fatisfied.

Of the bailiffs or treafurers of the chapel royal.
Thefe are in number four, and ferve jointly during the year; they are named immediately after the election of the prior and confuls, each bailiff naming his fucceffor.
During their year of fervice, they have a deliberative voice at the exchange.

## CON

They are to be actually tradefmen, or fons of tradefmen, working at their father's trade. The partners of the pritici pal merchants, may alfo be made bailifts; all who have been priors or confuls, are excluded;
The baliffs have charge of the fervice in the king's chapel, and of the diftribution of the white wax, ufually given to thofe of the retinue who affift at high mals.

Of the audiences and formalities of judgments.
The audience is to be on all days not holidays, at three o'clock in the afternoon, from Eafter to All Saints, and at two from All Saints to Eafter.
It holds commonly two hours, and longer, if the cafe; or the common good, require it:
The prior and confuls are to hold the court, and, in their abfence; -he who holds the firt place aftet the officers.
The divifions which happen in the audience, may be fettled by the firft of the judges-counfellors that enters, unlefs the affembly fees fit to name three merchants for the decifion.
The minute-book is to be figned by him who hath been prefident, and, when judges are to be appointed for any affair, they are to be named by the prefident.
In cafe of refufal of fome one of the judges, the party refufing muft give to the prefident a memorial, containing his reafons; and, if it relate to an affair of the audience, the parties fhall be permitted,' after 'the pleadings and before judgment, to give the reafons of their refufal. This article has been reformed.
The number of judges granted is not to exceed twelve, thie third part of whom to be taken indifferently from among the ancient priors and confuls, and the reft of the merchants, without comprehending the prior and confuls in office.
The protefts for bills of exchange may be made either by a notary, or a cryer, or ferjeant, or by the cryer of the confular jurifdiation; in which protefts the faid bills of exchange fhall be copied, with the orders and acceptances, if any; which fhall be left figned to the party, conformable to the ordonnance of 1673, and the edict of Auguft 1664. That, in all the proceedings of the juriddiction of the exchange, the faid ordonnances and ediets be obferved.
The articles of that clafs alfo mention what is depofited, the inventory of the regifters, bundles and papers, which are in the regiftry of the jurifdiction of the exchange, and alro the reference of affairs, whether before a judge-counfellor in the cities of the diftrict, or fyndic, or other advocate.

## Of the fyndic.

The fyndic of the exchange of Touloufe, is always taken from among the molt eminent advocates of parliament; and he is not to be chofen or changed, when thought proper, but in a general affembly.
In order to the election, the prior and confuls convene three advocates, whom they think fitteft for the employ; from thefe three the fyndic is chofen in a general affembly, by a plurality of voices.
By the oath which he takes before the prior and fyndic, he promifeth to procure the good, profit, honour, and advantage of the jurifdiction, and to defend it againft all oppofers. The fyndic may not prefide in any audience, or judgments of procefs by report to the affembly of the exchange; wherefore, to avoid ftrife in point of precedence, he has always his place on a feat at the right fide of the table where the reports are made.
Laftly, he is enjoined to act in all affairs of the company as he fhall fee fit, and under the orders of the prior and confuls. The 47 thand laft article of the regulation enjoins, that, in the general meetings of the exchange, they fhall always carry the current regifter of deliberations, to enter therein thofe which fhall be taken in the faid meetings; which fhall be figned by the prior and confuls, declaring thofe null which fhall not be inferted in the regifter, with prohibition to the regifter to draw up any otherwife, on pain of being proceeded againft according to law.
By confent of the general meeting of the zift of December 1701 , the 19 th and $34^{\text {th }}$ articles of the preceding regulation, one of which regulates the fittings, and the fecond concerns the exceptions of the judges, were reformed; and, with refpect to the firft, it was ordained that the prior and confuls of each year fhould precede thofe of the following; and as to the fecond, that the caufes of the exceptions might be propofed before or after the pleading, at the choice of the parties.

## Judges-confuls of Bourdeaux.

The city of Bourdeaux owes the eftablifhment of it's confulfhip to Charles IX. it was created in 1563 , by an edict given at Paris, in the month of December of the fame year. The edict confifts of 22 articles; one part of which refpects the election of the officers of that new juridiction, the other it's cognizance. The moft efliential of which we thall abridge here.
The firf election is by the mafters and jurats of Bourdeaux, in a meeting of 50 merchants, convoked for that purpofe. The judges elected were only three; of whom one was
called judge of the merchants, and the two others confuls; which hath ever fince been obferved, with this difference only, that, in the following elections, there have been required only 40 electors.
In order to be elected, he mult profefs, commerce, be a natiye of the kingdom, and an inhabitant of Bourdeaux.
The change of thefe three officers is aipnual, none of whom may be continued more than a year, on any pretence whatfoever.
About the end of the year, the judges-confuls meet, and, being affifted by 40 merchants citizenss proceed to a new election.
In order to which, the 40 convened chufe forthwith 20 to be electors, who, without going from the place, are, with the three officers about to quit, then to name thofe who are to fucceed, on pain of making void the election."
The new elected officers take the oath before their three predecellors.
The judges confuls are prohibited to take or receive any thing; under the pretence of fees, or otherwife, on pain of the crime of extortion.
They name their regifter, and are permitted to chufe fome perfon of experience tofill that place, a merchant, or other whom they think proper, who is to make his duplicates on paper, and not on parchment, and not to itake for his falaries and vacations more than 10 deniers Tournois for every leaf, on pain of corporal punifhment. This article hath heen fince deviated from by a fubfequent tarif.
Laftly, their fentences are definitive, and not fubject to an appeal, for fums under, 500 livres ;' and thofe who are fubject to them cannot be relieved but in the parliament of Bourdeaux.
By the fame edict it is ordained; there fhall be eftablified at Bourdeaux a place of exchange, like thofe of Lyons, Touloufe, and Rouen, to be called the common place of merchants, with the fame privileges, franchifes, and liberties, as in thofe cities ; and, that the merchants" might have a convenient place to meet in, and confer on their affairs, permiffion is given them to purchafe a houfe, with money raifed by impoft on the faid merchants, as fhall be fettled by commiflaries for that purpofe.
The place to be open from nine in the morning to eleven, and from four in the afternoon 'till fix ; during which time all bailiffs, or fheriffs officers, \&c. are prohibited to exercife their functions in regard to civil affairs.
This edict was inrolled in the parliament of Bourdeaux the 27 th of April, 1564.
The abfence or illnefs of the judge and confuls often interrupting the fittings of the confulfhip, againf which no provifion being made by the aforefaid edict, the king (CharlesIX.) ordained by a declaration of the 22 d of July, 1566 , thitt, in cafe of illnefs, ablence, exception, or other lawful hipdrance of the faid judge and confuls, one of the three officers, aflifted by the oldeft merchants called to council, or, in defect of the three officers in charge, the two eldeft of the merchants, might attend the difpatch of juftice, and their decrees be of the fame force as if given by the judge and confuls. Thefe merchants are chofen annually by the judge and confuls; they are called the elect of the council, and have the fame jurifdiction in the exchange of. Bourdeaux as the "judges-counfellors of the retinue have in that of Touloufe.
The rights, privileges, and franchifes, granted the judge and confuls of Bourdeaux, by letters patents of 1563,1565 , and 1566 , were confirmed anew, in 1596 , by Henry IV. and they to be exempt, during the year of their office, from all other public offices; and the exchange, and its officers, to enjoy the fame power with thofe of Paris, Orleans, Bourges, Troyes, and Angers.
Lewis XIII. in like manner confirmed the rights of their jurifdiction, efpecially with regard to the decrees for fums under 500 livres, which are declared fubject to no appeal, prohibiting the parliament, and other judges, to moleft them, or interfere with their right of decifion.
The 22d article of the edict of 1563 had fixed the falaries of the regifter at io deniers Tournois the leaf; but, a century having induced great changes and abufes, M. Dagueffeau, intendant of Guienne in 1668 , formed a tarif for it's regu, lation.
Another was afterwards made in 1682, but by private authority of the judge and confuls only, that occafioned divers contefts: which being reprefented to the king in council, a new tarif was formed, with prohibition to regifters, or other deputies, to take, for the future, more than is therein allowed, on pain of incurring the guilt of extortion.
Since the eftablifiment of the two free fairs of Bourdeaux, the foreign traders that come thither have been accultomed to fet out their wares along the ftreets in fuch quarters of the city as they fhould think fit, which caufed much confufion. It being reprefented to the king that it would be more for the good of commerce to re-unite the faid foreign traders in fome certain place, and that for the future they might not expofe their wares but in the court of the exchange; an order was made in 1653, that, during the two fairs held at

Bourdeaux,

## CON

CON
Bourdeaux, their wares fhould be fot out there, and no where elie, being the moit commodious place for that purpofe.
Which order having been peaceably executed, and the exchange drawing great profit from the rents of the fhops, the farmer of the king's revenue, envying the merchants herein, claimed it as part of the demefnes; but the judge and confuls upheld the body of merchants in the property of the faid houre, and defeated the farmer's claim.
Consuls, are alfo officers of the king, appointed by commiffions, in the fea-ports of the Levant, on the coafts of Africa, Barbary, Spain, Portugal, and other forcign countries, where there is any confiderable trade.
Thefe commiffions are not granted to any under 30 years of age.
There is alfo a vice-conful, deputed by the conful to act in his place, where he cannot be in perfon.
When the confulfhip is vacant, the oldeft of the deputies then in office, is to officiate as conful, 'till one be appointed by the king.
He who obtains the king's letters to be conful in any city or place of trade in the Grand Seignior's dominions, and other places in the Mediterranean, is to make publication of it in the meeting of the merchants where he is appointed.
The conful is to call, to the meetings affigned by him for the general affairs of commerce, all merchants, captains, and owners of fhips in the ports; who are to affilt him herein, on pain of fine at difcretion, to be employed for redemption of captives.
Neither artifans nor failors are admitted to thefe affemblies; and the refolutions there taken are to be figned by them who have affifted therein, and to be executed by command of the conful.
The deputies of the nation, at the expiration of their time, are to render an account to the council how they have managed the money and common affairs, in prefence of the new elected deputies, and of the fenior merchants.
Every three months the conful is to fend to the lieutenant of the admiralty, and deputies of the commerce of Marfeilles, a copy of the confultations in the allemblies, and of the accounts rendered by the deputies of the nation, to be communicated to the cheriffs, and to be by them and the deputies of commerce debated, if neceflary.
The conful is to keep an exact and faithful memorial of the important affairs of his confullhip, and every year to fend it to the fecretary of fate, who hath the juridiction of maritime affairs.
The conful is not to borrow, in the nation's name, any fums of money of Turks, Moors, Jews, or others, under any pretence whatfoever, or even to affers thofe of the nation, unlefs by common confent, with the caufes and neceflity, on pain of paying in his own name.
The conful is alfo prohibited, on pain of incurring the crime of extortion, to levy greater fees than are granted to him, or to require any of mafters and owners of fhips, who anchor in the ports and roads of his eftablifhment, without lading or delivering any goods there.
As to the jurifdiction, as well in civil as criminal matters, the confuls are to conform to the cuftoms, and to the capitulations made with the fovereigns of the places of their eftablimment, and theit fentences to be executed provifionally in civil matters, in giving bail; and definitively, and without appeal, in criminal cales, when there is no corporal punifhment, provided it be done in concert with the deputies and four eminent perfons of the nation ; and, when he inHicts corporal punifhment, the procels is to be drawn up, and fent with the criminal, in the firft veffel of the king's fubjects returning to France, to be judged by the officers of the admiralty of the firft port where the veffel is to unlade. Till I 722 , the police concerning the decrees of the confuls in civil matters, contained in the I 3 th article of the ordinance in Auguft 1681, had always been obferved, and, as much as poffible, thole decrees illued with the deputies and four eminent perfons of the nation.
But the king, being informed that, for the mof part, there were confulthips where these were not perfons capable of affifting in the proceedings, the cognizance whereof belonged to them; to prevent this, his majefty ordained by a declaration, in the faid year 1722, That the confuls of the French nation in foreign countries might, for the future, give their fentence on civil matters, in conjunction with the two deputies of the nation, or, on their default, two of the principal French merchants; and their decrees to be put in execution as before.
The conful hath power, on information made, and by advice of the deputies of the nation, to caufe all Frenchmen whofe hives and conducts are found to be fcandalous, to depart from the places of their fettlement; and captains and mafters of French vefiels are to take them on board, on the conful's order, on pain of 500 livres fine, for redemption of captives. The conful hath power to appoint, as well for the exercife of the chancery as for the execution of his judaments, and other

Vol. I.
acts of juftice, perfons whom he fhall think proper, who are to take the oath, and for which he is civilly refpoufibie. The rights of the acts and difpatches of the chancery of the confulfhip, which have been regulated by the coniul, with advice of the deputies of the nation, the extraed of which hath been fent to the licutenant of the admiralty, and to the deputies of commerce of Marfeilles, are to be written in a book, and placed in the moft public part of the chancery. The appeals from the fentences of confuls, eftablifhed as well in the ports of the Levant, as on the coalts of Africa and Barbary, are to be referred to the pariament of Aix; and all others to the neareft parliament.
When contefts happen between the confuls and merchants, both in the Levant and on the coatts of Africa and Barbary, on their private affairs, the parties are to apply to the admiralty of Marfeilles.
The conful is to make an inventory of the grods and effects of thofe who die without heirs, as alfo of effects faved from fhipwreck, with which he is to charge the chancellor, at the foot of the inventory, in prefence of two eminent merchants, who are to fign with him: but, if the deceafed hath appointed an executor to collect his effects, or if a commiffioner who takes charge of goods faved, offers himfelf, the effects are to be delivered again to thetr.
The conful is to fend, as foon as poffible, a copy of the inventory of the deceafed's goods, or of thofe faved from fhipwreck, to the officers of the admiralty, and to the deputies of commerce of Marfeilles, to notice it to the interefted perfons.
Acts made in foreign countries, where there are confuls, are of no validity in France, if not made legal by them; and wills received by the chancellor within the diftrict of the confulfhip, in prefence of the conful, and of two witneffes, and figned by them, are accounted ratified.
Policies of affurance, bottomries, and all other maritime contracts, may be paffed in the chancery of the confulihip, in prefence of two witneffes, who are to fign.
The chancelior is to have a regifter, and marked on each leaf by the conful and oldeft deputies, in which he is to write the debates and acts of the confulfip, to enroll the policies of aflurance, the obligations and contracts he hath received, bills of lading, policies of affurances, aćts of bottomries, 8 cc . which are depofited in his hands by the mariners and paffengers; accounts agreed on by the deputies of the nation; and the wills and inventories of effects left by decealed perfons, or faved from fhipwreck; and generally, all acts' and proceedings made in quality of chancellor.
Mafters of veffels who arrive at ports where there are confuls of the French nation, are, on their arrival, to reprefent the place of their departure, to make report of their voyage, and to take from them, on departing, a certificate of the time of their arrival and departure, and of the ftate and quality of their lading.
The French confuls are in the nature of ambaffadors, or envoys of France, at the courts on which their confulfhips depend.
It is they who fupport the commerce and interefts of the nation, whofe caufes they are obliged to undertake on all reafonable occafions.
It is they who are to difpofe of the fums given, and prefents that are to be made, to the lords and principal perfons of the places, to fecure their protection, and put a ftop to, or prevent, the opprefions or infults fhewn to ftrangers by the people of the country, on every the flighteft occafion, to exact fomething from them. Thefe kind of difburfements are at expence of the whole nation.
The confuls have dues affigned them. In fome places their dues are on all merchandize brought and unladen by the French within their diffriet, and on what is imported and exported, and that at fo much per cent. of their valuc. In other places they have fo much per cent. on the freight, either at the arrival or departure of the fhips; that is to fay, of thofe that load and-untoad; for thofe which only anchor in the harbours and roads are exempt from thofe dues, as before oblerved.
There are confuls, or vice-confuls, of the French nation, in the principal trading cities of Spain, Jtaly, Portugal, of the North, and in all or moft of the ports of the Levant, and of Barbary.
They continue ufually in time of peace only; for as fon as war is declared, and trade ftopped, they are to return home. Formerly France had a conful in Holland, and Holland one in France; but, by the treaty of trade and navigation made between thofe two nations the 20th of September, 1697 , no conful is to be admitted on either fide for the future.
Moft foreign nations, whole trade is confiderable, have confuls alfo, in the fame places and ports as the French, efpecially the Englifh and Dutch, with juriddiation, \&tc. fomething the fame as thofe of France; and, if they were more fo, they would prove of far more important fervice to their refpective countries. They are commonly diftinguifhed by adding the name of their nation.

There was alfo formerly a conful at Satalia; but, that port not being thought canfiderable enough to entertain one, the confulfhip was re-united to that of Aleppo, by an order of council of July 16 g .
The fame order eftablifhed one at Jerufalem, where there had been none before. The motives to this laft eftablifhment were, to give the French, and all Catholics in that holy city, the fuccours they'might expeet from the protection of his moft Chriftian majefty.
It has already been obferved, that the conful's dues are in fome places on the goods, and in others on the bottoms.
That difference, as alfo the different qualities of goods from thofe ports, preventing the uniformity, and, confequently, caufing great difficulties in the gathering them, which obflructed the commerce of the French in the Levant; Lewis the XIV th, by the fame order of 1691 , fuppreffed all their dues, with prohibition to exact any for the future from merchants and mafters of French thips and veffels, under pretence of falary, interpreter, or any other whatfoever, on pain of being guilty of extortion. Permitting them, neverthelefs, ftill to receive the faid dues from frrangers trading to the Levant, under the banner and protection of France; not for themfelves, but for the profit of the chamber of commerce of Marfeilles. And, in order to defray the expences for which the faid dues were granted to the confuls, the king enacted, That, from the ift of January 1692, it fhould be levied on all merchandizes coming from the Levant, Candia, Archipelago, the Morea, and Barbary, at their arrival in the haven of Marfeilles, in regard to veffels that fhould end their voyage there; and, on thofe who fhould end their voyage in Italy, or ellewhere, it fhould be paid to the deputies of the nation refiding in the ports. And, in cafe the faid veffels bave been laden in different ports, in the fame voyage, then to pay at the rate of thofe of the ports where they have touched, and where the rates are higheft. Excepting, however, fhips that touch at Conftantinople and Smyma, who are to pay the new right, in the fame proportion they have been accuftomed to pay the right of cottimo *, which is to be paid, as before, with the taid new right.

* A term of commerce ufed by the French in the ports of the Levant, fignifying a duty impofed by the conful, and applied to the Fiench Levant coutpany.
lt is from the produce of this new right the king would have the provifion for the confuls affigned; to be fixed at Io,000 livres, and remitted yearly from quarter to quarter, by the fheriffs and deputies of Marfeilles, to the deputies refiding in the faid ports, to be paid and employed conformably to the tarif.

The king enacting moreover, that, in regard to the extraordinary expences, they fhall not be fixed by the confuls, but purfuant to a deliberation of the body of the nation, affembled for that purpofe in the accuftomed manner; prohibiting them to deliver their ordinance of payment otherwife, interdicting in like manner them, their officers, and doneftics, to trade directly or indirectly, on pain of privation of their confulfhip, and 3000 livres fine.
The rights of the French confulhips in Spain have alfo been regulated fince the year 1660, by an order of the zoth of January.
For a long time thefe rights were received by the confuls at the rate of one half per cent. on goods belonging to the king's fubjects, coming in. or out of the ports of Spain, where the conful refided; they from time to time obtaining, according to their credit and favour, commiffons for the payment of this right to them.
But the king being informed that this right could not be exacted in any port of Spain, without fenfible prejudice to his fubjects trading there; and moreover, that the old cuftom was, for the confuls to receive only fome fmall. fums on every French fhip arriving there; revoked and amulled all commiffions, 'till that time granted to any confulfhips of Spain for the right of one half per cent. and prohibiting the bearers of them to meddle with the office of the faid confuls; as alfo them, and all others invefted with the office of confuls, to levy the faid right, under pretence of thofe commiffions: enacting, that, for the future, the faid confuls fhould receive for their rights as follows, viz.
Thofe in the ports of the provinces of Bifcay and Galieia, 24 rials of plate for every French fhip and bark.
Thofe of the ports of Huelus, Seville, San Lucar de Barameda, Port St Mary, and Cadiz, 70 rials of plate for every fhip; and 32 rials for every bark, feytie, and polacre.
Laftly, thofe of all the ports fituated within the ftreights of Gibraltar, as far as Catalonia, and that included, 36 rials of plate for every fhip, and 24 for every bark, feytie and polacre, to be received, on the lading or unlading of the faid fhips, in manner as had been always practifed before the war between the two crowns.
It may not be unacceptable to recite here the ordinances of Lewis XIV. one of July 1686, the other of February the year following, relating to the French confuls in foreign countries.
By the firft, the king having been informed that his confuls, refiding in the ports of his allies, gave certificates not only to the French dwelling out of the kingdom, but even to foreigners, who by that means failed fecurely, without fear of the Barbary corfairs, to whom the king had given peace; which deprived his fubjects of the advantage that they ought to have in trade over other nations, who had not thofe paffports ; to remedy this abufe, prohibited all French confuls to give fuch certificates, for the future, on any pretence whatfoever; enjoining his ambaffadors and refidents in the fates where the faid confuls are eftablifhed, to fee the faid ordinance obeyed.
By the fecond, the king ftrictly prohibits all mafters and failors of his fubjects fhips, being in foreign parts, from going before the judges there, on account of differences they may have with each other, on pain of punifhment for difobedience; enjoining them to apply to the confuls there eftablifhed, who are to adminifter the moft fpeedy and fummary juftice to them in their power, and without coft.

## Of the nature of the confular power in Spain.

The confulfhip court in Spain is conftituted of a prior and confuls. Before the difcovery of the Weft-Indies, this court of the confulhips was erected in the cities of Burgos, Barcelona, Valencia, Saragoffa, and the town of Bilboa: afterwards, the trade increafing fo confiderably at Seville, it was eftablimed there under the emperor Charles $V$. and confirmed by his fon king Philip II. under feveral ordinances. By the firf inftitution, the merchants of Seville trading to the WeftIndies were to chufe every year a prior and two confuls; but, experience proving it inconvenient that they fhould all three come into the employment together, it was ordered, in the year 1588, that he who had been fecond conful one year, fhould be firt conful the next, and fo only a prior and fecond conful was erected.
The prior and conful here caufe proclamation to be made on the fecond day of the year in the India-Houfe, at the townhall and exchange, for all thofe who will be prefent at the chufing of electors, to appear the next day afier the Epiphany in the hall of the confulfhip, which is in the India-Houfe. The day after the Epiphany, the judge of the appeals, prior and confuls, meet with all the merchants trading to the Weft-Indies, at two in the afternoon, at the chamber of the confulfhip; where, in the prefence of a notary, every one delivers in the names of 30 traders, written down, to the judge of appeals, who puts them into a box, to compare them at laft.
The prefident of the India-Houle may and ought to be prefent, and then the papers with the names are delivered to

## C O N

C O N
him ; yet this does not exclude the judge of appeals, without whom no election can be made. Before I proceed to give an account of the form uled in the election, it will not be amifs to acquaint the reader, that it has often been put off, for fome time, by reafon of the prior and confuls in being having fome matter of moment to determine, whereof they had full knowledge, and which would take up new ones much time to be duly informed in. But,
This prorogation cannot be made without exprefs order from the council of the Indies. In the year 1608 it was propofed to chufe a prior for two years, and the confuls for three; but this did not take effect. There has alfo been an attempt made to alter the form of the election, which not fucceeding need not be mentioned.
None are allowed to vote but married men, widowers, or houfekeepers, who are above 25 years of age, excluding all fervants, clerks, and ftrangers; but, as to thefe laft, neither their fons nor grandfons are allowed to elect, or be elected. The day alter the eledtors are chofen, they are to meet in the fane chamber of the confulfhip, where every one fhall fwear before the judge of appeals, prior, and confuls, that they will proceed in their election according to confcience, and name fuch perfons as they believe will be zealous for the honout of God, do juftice, and ftudy the general good of the community. At leaft 20 or 30 of the electors muft be prefent to make the election. Having taken the oath as above, every one delivers in the perfon's name in writing, for whom he votes to be prior, to the prefident, if there; otherwife to the judge of the appeals, who throws them into an urn, then takes them out again, and, being laid on the table, the fecretary counts whether there be as many as electors prefent.Then_the prefident, or judge, opens and reads them, the fecretary fetting down how many votes every man has; and he who has the majority carries the point.
If any two have equal votes, the judge of appeals decides the matter. The prior and confuls of the foregoing year have no vote, unlefs they be chofen electors. The conful is chofen in the fame manner. As foon as elected, the judge of appeals tenders the oath to the new prior and conful, thatthey will duly exercife their office for the fervice of God and the king, the advantage of the traders, and do impartial juftice; which done, the old ones quit their places, and the new ones take poffeffion of them. The whole tranfaction is recorded by the fecretary, and figned by the prefident, judge of appeals, late prior and conful, and all the electors prefent. The electors continue for two years. If any one of them be fick, or abfent upon any other lawful account, he may fend his vote in writing, fealed up. It is not permitted to chufe father and fon, two brothers, two partners, nor thofe that were prior and conful together fome years before, to exercife thofe employments.
Merchants trading to the Weft-Indies, who farm or infure the cuftoms, may not be candidates for prior or conful; or, if they farm, after they are in poffeffion of thefe places, they forfeit them. The prior and conful that go out remain as counfellors to thofe that come in, and the electors chufe five deputies to affif them in all their bufinefs. Thofe that are chofen prior, conful, counfellor, or deputy, and refufe to ftand, are fined 50,000 maravedies, and obliged to ferve the office too. They are obliged to fit thrice a week, that is, on Mondays, Wednerdays, and Fridays, two hours at a time; in winter from nine to eleven, in fummer from eight 'till ten ; and, if any of thefe days be a holyday, the fitting is put off 'till the next day. The prior and one conful, or the two confuls without the prior, may difpatch the fame bufinels as if all three were together, provided they agree in their opinions; for, if they differ, then the prior, or eldeft conful of the foregoing year, or the next in authority, is admitted, and has a cafting vote. The fame is done when two of the three do not agree in judgment. All three ought never to be abient, at once, but, if they are, then thofe of the foregoing year act as if they were in prefent poffeffion. By grants from the emperor Charles V. and his fon prince Philip, in his name, the prior and confuls have authority to try all caufes relating to merchandize carried to the WeftIndies, or brought thence by merchants, companies, or factors ; to buying and felling bills of exchange, negociating affurances, adjufting matters of accounts, freight, or factorage, and all other things belonging to the trade of the Indies or Spain, and in all civil caufes abont meum and tuum; but, if the trial be criminal, they are to refer it to the chamber of juftice in the India-Houfe. And this power is privative, fo that any trader may refufe to fubmit to any then in court, and the prior and conluls thatl put a ftop to any proceedings of this nature...-Only thofe are allowed the privileges and immunities of merchants, who trade by fea, and fell by wholefale, which emplayment is looked upon as honourable; whereas thofe that fell by retail are accounted mean in comparifon to the others, and, accordingly, are excluded from this corporation of traders to the Indies.
This court of confi.ihip, airo, is auchorized to take cognizance of all bankers, or others, that break. Factors of merchants trading to the Weft-Indies, though they live out of Seville, may be obliged to appear before the court of
confulfhip, to give an account of what they have been intrufted with: The prior and confuls are to be refpected as the king's judges, and may fine any perfon that fhall fail therein, as far, as 30,000 maravedies, provided the perfon that received the affront does not vote in his own behalf; but, if the affront was more than words, then the court of the India-Houfe fhall punifh the offender according to law. The prior and confuls may fummon all, or any of the traders, for affairs relating to the confulfhip, and fine fuch as thall refufe to come. They are allowed a lawyer, as afleflor, with a falary, a door-keeper, or cryer, as alfo the chufing their alguazil and efcrivano, the efcrivano's of flota's and armadas, but thefe to be approved of by the prefident. They have a fecretary, and a keeper of the exchange, comptrollers, receivers, and other officers. They may fend any perfon or perfons to court about their bulinefs, and affign them an allowance all the while they are following of it. They had formerly the chief management of the flota's and armada's, but, at prefent, only propofe what ftowage will be requifite. They have a full power to execute all fentences given by them, and, therefore, are allowed an alguazil of their own; and all perfons are required not to obitruct, but to be aiding and affifting to them, that their bufinefs may be fpeedily difpatched, without the delays caufed by lawyers. From the court of confulfhip there lies an appeal to the judge by office, or commiffioner of the IndiaHoufe, yearly appointed for this purpole by the king, who, together with two fuch India merchants as he Ohall think fit; having fworn to do impartial juftice, fhall decide the matter, as is ufual among merchants, without bills or anfwers, or any writiags of lawyers, but only upon matter of fact made out; and, if they ratify the judgment given, there lies no further appeal ; but, if they reverfe the former decree, and either party require it, the fame judge of appeals is to grant a review, aflociating to himfelf two other merchants, who are to be fworn as the two others were, and their refolution is final, fo that there is no appeal from their judgment. The appeal from the prior and confuls mult be brought within five days after judgment given, and fo the recond appeal, in cafe the firft judgment be reverfed. The judge of appeals if he think fit, may advife with a lawyer, but is not obliged to it.
The court of confulthip is to take an account of thips caft away in the Welt-India voyage, and to particularize where they were loft, and what plate or merchandize was faved. Then the prefident and commiffioners of the India-Houfe fend their orders to the magiftrates where their fhips were caft away, for fecuring the effects, which being brought the prior and confuls fhall receive what belongs to the merchants trading to the Weft-Indies incorporate, to deliver it to them ; but that which appertains to other merchants not incorporate, is to be delivered them by order of the chamber of direction. If hips be loft in the Weft-Indies, the king's officers there take charge of what is faved, or elfe the magiftrates of the place, and return the value to the India-Houfe; where it is delivered to the owners. This court may appoint perfons in all the ports of the Indies, to fee their ordinances fulfilled. Their papers are to be kept in a cheft, with three keys, the prior and each conful to keep one, that none may be taken away without the knowledge of them all. The prior and confuls are fubordinate to the India.Houfe, but no way to be molefted by the commiffioners in the execution of any thing that belongs to them. The court of confulfhip is ever joined, in all public acts, with that of the India-Houfe, as the body to the head; and, when the prior and confuls come into the chamber of direction, they fit upon the bench up the fteps, on the right-hand, and have a bench covered with a carpet in the chapel, to hear fermons; but, when they go to other churches, they have chairs on the righthand, the comptrollers of haberia's, or the duty for convoys, being on the left, and the vifitors fit on the right, below the confuls. When they appear abroad in public, the vifitor's coach goes firft, then that of the comptrollers of haberia's; then that of the confuls, next the judges, or commiffioners, of both chambers, and laftly the prefident.
All commodities, fhipped for the Indies, are to pay'one in the thoufand, above other duties, for the proper ufe of the court of confulfhip, which appoints a receiver for it, who is to give an account of the produce to the prefident and commiffioners, as alfo of the other revenues coming in, as office-fees, and fome fettled revenues. Whofoever has traded to the Indies above a year, or fends for the firft time to the value of above 1000 ducats, is obliged to pay this one per thoufand. The king has granted the court of confulfhip the perpetual government of the exchange. In all matters relating to trade, generally the commiffioners of the India-Houfe take the advice of the prior and confuls, who, upon all occafions, have been very ferviceable to the crown, advancing very confiderable fums of money, as rieceffities have required.

REMARKS
From the foregoing narrative, in regard to the nature of the confular office, as exercifed by the Eng'ifh, the French, and

## CON

## CON

the Spaniards, it is obvious that their inftitution is a kind of curit-merchant, to determine affairs relating to commerce in a fummary way.
With regard to France and Spain, this office, we may obferve, is to be confidered in a two-fold light, that is to fay, in a domeftic, as well as a foreign one; but, in refpect to England, only in the latter, we having no confular eftablifhment within the kingdom, derived from our own laws and conflitution, to fettle and adjuft matters of difpute and controverfy between traders in thareafy, unexpenfive, and fummary manner, that thole other nations have julged requifite to inftitute. Confuls, indeed, who are refident iri England from foreign States, act upon the fame principles as our Britifh confuls that refide in foreign States; but thefe are not our own domeftic confuls, fuch as are eftablifhed in feveral of the provinces of France, or of the nature of that office, as we have defcribed the fame to be excrifed in Spain. For thefe are a fpecies of courts of judicature, eftablifhed and fet apart wholly to confider of, and determine upon, matters of trade and navigation, as well between natives and natives, as between natives and foreigners.
Inftitutions of this kind, as eftablifhed in France," certainly anfwer very good purpofes to the trading interefts of that kingdom, in two effential refpects; (I.) As they prevent tedious litigations at law between traders; and, (2.) As they bring the confular courts familiarly acquainted with the affairs of commerce, which renders their decifions eafy to the court, and no way vexatious or expenfive to the fubject. For, as thefe determinations are all recorded in thefe courts, from time to time, when any point occurs that may not have been determined by their predeceffors, or which may be a new cals, they have from an index of references, immediate recourfe to cafes, as fimilar as they can find, and form a judgment therefrom, in the manner that our courts of law make their decifions, from confulting a fimilitude of cafes of their learned predeceflors, and weighing them confiftently with the fundamental principles of law. But, thefe confular courts being reftrained merely to matters of trade, they become more Ikilful, judicious, and expert, in this one fpecies of cates, than any court could poffibly be, wherein they undertake the decifion of cales of every kind. Nor are courts of this nature eftablifhed only in France and Spain, but, in moft other trading nations, mercliant-judges are appointed for the trying of merchants affairs fummarily. And, perhaps, if fuch courts were duly eftablifhed and authorized in Great-Britain and Ireland, they certainly might and would prove highly beneficial, not only according to the opinion of fome of the moft judicious merchants this-kingdom ever had, but according to the fentiments of our ableft ftatefmen, who have well underftood the nature of trade, and have been for removing all clogs and obftructions to it's profperity. This matter, however, we hall not here enter into, but defer it's connideration to the article MerchantCourt, where we fhall give the fentiments of thofe who have favoured a defign of this nature, fhew how thefe eflablifments are regulated in foreign countries, and humbly fubmit our own remarks to the reader's judgment.
As the affairs of our trade, and the interefts, rights, and privileges of our merchants and feamen in foreign countrics, are ordinarily left to the conduct of our Britifh confuls, they cannot be too well qualified for this province : "nor is it of lefs dignity and honour to our merchants refiding in other counties, to our maffers of hips, and to our feamen in general, than benefit and advantage to them, and to our trade in general, to have perfons of abilities appcinted for ftations of to great importance to the kingdom. There have been inftances of fome gentlemen that have been appointed in this capacity, who, being well qualified for their poft, and having a happy talent at reconciling differences between their countrymen and foreigners, and fupporting their ftation with a becoming dignity, have prevented great broils and heartburnings between kingdom's, which might have broke out into a flame, had the proper accomplifhments been wanting for fuch a truif.
Befides, a conful being always on the fpot, daily converfant with the practice of trade, and with the traders of thore nations, as well as of his own, if he is a man of difcernment, he will not be at a lofs to difcover what difficulties and difcouragements the trade of his own nation labours under, and what advantages our rivals may have over us, by an infraction of treaties, which may be winked at, highly to our difadvantage, and greatly to the benefit of our competitors. But a conful of judgment and fagacity, who does not keep at fuch a diftance from practical traders, as an ambaffador, may have greater opportunities of knowing our grievances ia commerce, and of pointing out the proper way and means to redreis them, than onte who reprefents his fovereign in a Fuperior capacity. Wherefore it feems reafonable, that gentlemen of this clafs fhould have appointments from the government, as well as thofe other privileges to which they are intitled, as in Turkey, a certain duty on the goods loaded and unloaded; and others a ftipend on the fhipping enly.
And, with all humble fubmiffion to my fuperiors in judg-
ment, I would beg leave to fuggef the following queltions. 1. Whether the capacity of a confulfhip may not be looked upon as a proper preparatory fation to that of an ambanddor in ordinary at foreign courts, efpecially where the intereft of our trade is always at ftake?
2. Whether a gentleman, having acted in this fation, in a manner no way derogatory to the intereft and honour of his country, may not reafonably be prefumed to underffand our commercial interefts better than one whog has never had ofportunities of being practically informed in affairs of this naure; and whether a pel fon thus qualified, and by means of ai fuitable appointment from the government, way not be better enabled to fupport the dignity of the office than is done in general-at prefent, give proper intelligence, in regard to matters of commerce, either to ambalfadors in ordigary or extraordinary, and to the adminiftration, \&c. and thereby far more contribute to the intereft of trade than they cap at prelent?
3. Whether, if this polt was conflituted as introductory to a higber flation under the crown; it might not prove an inducement to the younger branches of our moft noble and honourable families to make the fuidies of commerce one effential part of their erudition?
4. Whether, if this praftice was introduced, many of the fons of thole bohourable families would not chufe to be bred merchants, in order firft to become confuls, and afterwards refidents, envoys, anbaffadors, \&c. at foreign courts?
5. Whether thofe young perfons of great families and diftinction would not hereby reap far greater benefits and advantages by travel in this manier into forcign countries (for coufulhips might be fo judicioufly fhifted from time to time, fo as to give a young gentlerfan of erudition an opportunity of feeing feveral of the principal nations in Europe, and underftanding their trade) and thus, by his travel and experience in the trade of various nations, be able to accumulate fuch a fund of commercial knowlege, as could not fail to accomplifh him to reprefent his fovereign hereafter, with all defireable dignity and fplendor at foreign courts, return to his, native country with applaufe, and become as conficuous for the care and protection of the trade of his country at home, as he was abroad ?
6. Whether this might not prove the means of rendering the name of a merchant as honourable in this kingdom as if ever ought to be, according to what is reprefented under the article of COMMERCE and whether, in confequence hereof, we might not hope to fee the grand reprefentative of the nation filled with thofe who underftand trade, as well foreign as domeftic, and fiom whom, when they had done with the practice of it, we might expect the foundeft judgment, in regard to the commerce of the nation ingeneral, and his majefty the beft councils upon thofe important occafions? See the article Merchant-Court.
CONTRIBUTIONS and AVERAGES, [fee AvERAGE.] is commonly ufed by the law-merchant, for that contribution which is made towards lofies fuftained, where goods are caft into the fea for the fafeguard of the thip, \&c. during a tempeft: 'tis fo called, becaufe allotted after the rate of every man's goods aboard.
By the antient laws and cuftoms of the fea in a ftorm, on extreme neceffity, the goods, wares, guns, \&c. may, by confulting the mariners, be thrown overboard for prefervation of the hip; and, if they confent not, the mafter may, notwithitanding, command the cafting overboard what goods, \&c. he fhall think fitting, for fafety of the reft, if the danger continues: but; if there be a merchant or fupercargo aboard, on requeft he fhould begin firft; then the mariners, who Chall anfwer double, if they embezzle to their own ufe. And, if the merchant refufe, the mafter and mariners may proceed wichout him, taking cate that things of leaft value and greateff weight be flung overboard: if the fhip happen to arrive fafe at her port, the mafter and greateff part of the crew are to make oath, that the goods were caft overboard for fafety of the fhip; the remainder, whether they pay freight, muft come into the average.
All the parties interefted are to bear the lofs by a general contribution; and a mader, or purrer, Thall contribute for prefervation; alfo the paflengers for what they have in the Thip; and where they have $n 0$ goods, in regard they are a burtben to it, 'tis faid, an eflimate fhall be made of their apparel, rings, \&c. towards a contribution for the lofs; and generally money, jewels, cloaths, and all things (except the cloaths borne on a man's body, or victuals, \&ic.) are liable to contribution and average. And the goods loft thall be valued, and allo thoferaved ; which being known, a proportionable value thall be contributed by the goods faved, towards reparation of thofe lolt; and, if any of the goods faved are fooiled or injured, the fame mult come into the contribution for the damage received.
If there happen to be plate, 8 cc . in cheft or bale, at the time of cafting over the goods, and a fupercargo aboard, he is to notice it to the mafter or mariners.
And, as to the eftimation in thefe calcs, fome have held, that regard is had, not to what might be got by the goods lon, but the damage futtained, and are thenefore to be valued only

## CON

CON
at what they coft: but others fay, they are to be valued at what they might be fold for, when caft overboard. According to the Lex Mercatoria of Malins, this order is to be obferved; if caft overboard before half the voyage is performed, they are to be valued at the price they colt; bur, if after, at the price of the reft, when fold. And the cuftom is now general, for the goods faved and loft, to be eftimated at what thofe faved are fold for, freight and other neceflary charges firft dèducted.
If a hhip's gear or apparel be loft. by ftorm, 'tis not within the average, unlefs in the avoiding a danger, as flinging the maft overboard, \&c. ' which is' to be made good by the fhip and lading pro rata. The laws of Oleron ordain, that in fuch cafe the mafter is firft to confult thofe aboard, who have goods and merchandize in the veffel.
But, if any perfons aboard defire the mafter to put into any port for fear of pirates, and in:going out he lofes anchors or cables, they fhall pay for them.
The goods caft overboard to lighten the fhip make no derelict, fo as to be forfaken, or wilfully caft away. If fuch goods fhipped in England are taken up by another Englifh hip at lea, an action lies to recover the goods: and any being thrown overboard, and afterwards recovered, the contribution ceafes, faving for the damage received. If, before they are recovered, the owner hath had an average, he is to reftore the money, deducting for the lofs by the damage.
Some fea ordonnances require fuch of the fhip's utenilis to be firft thrown overboard, as are not of the greateft fervice, then the feamens chefts, and after them other things: yet fome things feem to be excepted in fome cafes, as cannon and other inftruments, or provifions to relieve a city in time of war, the law preferring the urgent fervice of the prince, to the fubject's life.
If a thip be indifcreetly laden above the birth-mark, and an cjection happen, no contribution thall be made, but fatisfaction made by the fhip's mafter or owners. Or if forbidden goods be put on board, and happen to be the caufe of damage, the mafter thall bear the lofs, and may alfo be profecuted; or, if he take in things without leave of the freighters, and a ftorm arife, in which part of their goods are thrown overboard, he only fhall anfwer it; nor thall contribution be had for goods brought fecretly on board, unknown to the mafter or purfer, if they are ejected.
If, a fhip being taken at fea, the matter, to get the fhip and lading out of the enemy's hands, engages to pay a fum of money, and furrenders himfelf as a fecurity, he fhall be redeemed at the coft and charges of the fipip and lading, according to every man's intereft, by a contribution; as allo if a pirate takes part to fpare the reft; but, if by violence, the reft are not fubject to average, unlefs fo agreed by the merchants: though, where an enemy takes goods, the remainder fhall be liable to average.
Contribution is to be paid for the pilot's fee, that hath brought a fhip into port for her fafeguard; and likewife for raifing the thip off the ground, when there is no fault in the mafter. And, if damage be received by two fhip's ftriking againt each other, and there be no fault in either, contribution is to be made by a juft equality; but, if there be fault on either fide, full fatisfaction fhall be made the merchant injured: if one fhip perifhes, as the lofs cannot be proportioned, there can; be no contribution; as otherwife a perfon might fet an old weak thip againit a ftrong one, for an extraordinary recompence. Alfo this hinders not the owners of a fuffering thip from bringing their action to recover damage; but, if done in the nighr, the party muft prove he made out light or fire, or gave other notice, by crying or calling out. As the common law efteems the fhip's cargo fecurity for the freight due, fo the maritime law adjudges them for the average, 'till which is fettled, the mafter is not to deliver them; if therefore the merchant will not agree to it when fettled, the mafter may detain the lading; and may bar any action at law in that cafe, by pleading the fpecial matter.
If a lighter, or the fhip's boat, having part of the cargo, periif, and the fhip be faved, contribution is to be made; but, if the contrary bappen, none is recoverable.
Where paffengers caft goods out of a ferry-boat, in a tempeft, to preferve their lives, the owners fhall have no remedy; unlefs the boatman have furcharged the boat, againft whom they may have an action.
After a general fhipwreck is no contribution. An average is paid to mafters, for taking care of goods, expreffed in the bills of lading. See Bilis of Lading.
CONVOYS at fea, and CRUIZERS, for the better fecuring the trade of this kingdom.
A convoy fignifies one or more men of war, to accompany and protect merchant-hips in time of war ; and cruizers are hips of war appointed to crofs the feas to and fro, particularly on the coafts of this kingdom, for clearing the fame from enemies.

## REMARKS

Containing fome cafes determined in our courts of judicature, relative to Convoys, $\& c$.
A hip, infured to a certain place abroad, was warranted to Vol. I.
depart with convoy: and, being loft, an action of the care was brought, wherein the jury found a feecial verdict to this purpofe, viz. That the fhip departed out of the river Thames under convoy; from which fhe was feparated about the Ille of Wight by bad weather, and put in at Torbay, and was de tained there by contrary winds; that the mafter, expecting to meet the convoy, failed out, but could not meet with her for Atrefs of weather; that the fhip was taken by the French, and fo loft, \&c. Here the queftion was, concerning the true meaning of thofe words; viz. Warranted to depart with convoy?
The counfel for the plaintiff inffited, that no more was intended than a departure with convay, at firft fetting out which being provided, and fo found by the verdict, they had fulfilled their warranty. And that what the mafter did afterwards, ought not to prejudice the plaintiff; for the mafter is in nature of a common carrier, to convey goods from one port to another; but as 'tis here found, he did not milbehave himfelf, for he came forth to meet his convoy, and did endeavour it, but was hindered by ftrefs of weather. And fuppofe the words had been, warranted to depart with convoy, and fo to continue to the end of the voyage (dangers of the fea only excepted) if the fhip fhould happen to be taken by the enemy, that is a danger at fea; or if the convoy leave her, being commanded another way by the king; or in cale fhe be affaulted and will not fight; the infurers fhall lofe nothing in either of thefe cafes : for the words fignify, that all neceffary care fhall be taken to preferve the thip which was done in this care.
For the defendant it was faid, that by thefe words, the fhip ought to go all the way with convoy, and not from the river only, where there is no danger from an enemy, for that could never be the meaning or intention of the parties, and that the fhould be left at fea where there is danger. This agreement is but a parole contract, and muft be conftrued according to the minds of the parties, and not according to the ftriet fenfe of the words: as, when a perfon is obliged to fecure a thing under fuch terms and circumftances, the manner of the promife muft be obferved and purfued. So if a promife be made to deliver goods at London, and for that purpofe they are put in a boat, which is afterwards loft, though the party ufed his endeavour, that fhall not difcharge him, becaufe, having undertaken the thing on his part, he ought to perform it.
'T'is found by the jury, that the mafter departed out of the bay, to meet the convoy, which muft be to fail with and be protected by her the reft of the voyage. Here was a feverance by bad weather: now the fhip might have come up to the convoy, or that to the fhip; fhe did not ftir 'till the thip was taken, therefore, the other parties being to provide convoy, here is a breach of the agreement on their fide, which will hinder their bringing this action, efpecially as 'tis an enire agreement, and no precedent condition.
The court declared, that the word depart is only terminus a quo; and, if the fhip had departed from London, and came back again by fraud, that had been no departure within the intention of this agreement. But, as 'tis found, the voyage was begun with convoy: the feparation afterwards by firefs of weather, both endeavouring to fave themfelves, and afterwards to find each other; and there being no fraud found in the mafter; judgment was given for the plaintiff. Though it might have been otherwife determined, if the convoy had run from the fhip, and by that means the had been taken. By 6 Ann. c. r3.' 'tis enacted, That, for the better preferving fhips employed in the trade of Great-Britain, over and above the fhips of war for the line of battle, and convoys for remote parts, forty-three men of war fhall be employed as cruizers, viz. fix third rates, twenty fourth rates, thirteen fifth rates, and four fixth rates, to cruize in fuch fations as the lords commiffioners of the admiralty thall direct; nine to be on the north-eaft of Great-Britain, and three on the north-weft coafts thereof. To be careened at leaft three times a year, and the feamen not to be turned over to any other fhips : but on neceffity, any of the faid cruizers, by appointment of the Iord admiral, \& c . to be employed in the line of batde on this fide of Cape Finitterre; otherwife to be always ufed in home cruizing, except when they are careening or refitting.
The lord high admiral, or commifioners of the admiralty, to appoint a commiffioner of the navy, or other perion, to fupervife thefe cruizers, and fee all neceffaries be immediately provided when they come into port, and, when refitted, to order them to fea again. And they fhall fend up to the admiralty, whehin eight days of the meeting of the parliament, an account digefted into eight columns, relating to the faid hips. And the lord admiral, \&c. hall, every year during the war, appoint the aforefaid fhips to be cruizers or convoys on this fide Cape Finitterre; and, when any happen to be taken or loft, another of the fame rate to be appointed to fupply it's room.
If any fhip of war, privateer, \&c. fhall be taken as prize, and fo adjudged in the courts of admiralty, the officers and feamen, a atually then on board, fhall, after condemnation, have the fole intereft in it to their own ufe, without being
further accountable ; the prize to be fold by thofe whom they fhall under their hands and feals appoint, and the whole produce divided among them as directed by proclamation.
But, if the lord high admiral, \&zc. Thall think fit to take into her majefty's fervice any fuch prize-fhip, it fhall be appraifed by officers appointed: and, on producing fuch appraifement, with a certificate of the delivery of the flip fo taken, the commiffioners of the navy hall make out bills for paying the full value, to be diftributed as aforefaid.
And, for a further encouragement, the treafurer of the navy thall pay, upon bills made forth by the commiffioners of the navy, to the officers, feamen, and others, on board any man of war, \&c. in fuch action, 5 l. for every man that was living on board the fhip taken as prize, at the begiming of the engagament ; the number to be proved by the oaths of three or more of the chief officers, \&zc. belonging to the prize at the time of her being taken, before the mayor, or chief magiftrate of the port whither fuch prize is brought: who is required to adminiter fuch oath, and forthwith grant a certificate without fee or reward. On producing which certificate, and a copy of the condemnation, the commirfioners fhall, within fifteen days, make out bills for the amount of fuch bounty, payabile to the captors, to be divided among them, according to the proclamation.
Nothing herein fhall exempt any fhips, goods, or merchandize, taken as prize, from payment of cuftoms, or being fubject to fuch reftrictions as the fame are liable to by the laws of the realm : but, when brought into port, thall be unladen in prefence of the cuftom-houfe officers for fuch port, and kept in her majefty's warehoufes 'till appraifed and fold. The captors may bring appraifers to view, appraife, and buy them at reafonable times, and, when fold, the cuftoms to be paid before delivery, \&c.
All appraifements and fales of fuch thips and goods to be made by agents named in equal numbers by the commander, officers, and feamen; if the captain appoints one or more perfons, then the other officers, or majority, fhall name the like number, and all the flip's campany, the fame number, to act in their behalf. And after fale public notice to be given, of the day appointed for payment of the feveral hares, after which, if any remain in the agent's hands, or be not legally demanded within three years, it fhall go to Greenwich hofpital.
And the bills, made out, fhall be payable to the agents appointed, to be diffributed as abovementioned.
If any officer or feamen thall break bulk on board, or embezzle any of the goods, tackle, \&c. he fhall forfeit treble the value of all fuch goods, \&ce. one third to Greenwich hofpital, the other two thirds to the informer.

A proclamation iffued purfuant to this act, appointing the diftribution of prizes taken, and the bounty for taking fhips of war, \&c.
By which was ordered, That the net proceed of all prizes, and bounty-money for prifoners taken, be divided into eight equal parts; whereof three eights to the captain, one eighth thall go to a flag-officer, if actually on board. To the marine captains, fea lieutenants, and maiter, one eighth, to be equally divided among them. The marine lieutenants, boatfwain, gunner, purfer, carpenter, mafter's mate, furgeons, and chaplain, one eighth. The midfhipmen, carpenter's mates, boatiwain's mates, gunner's mates, yeoman of the fheets, coxfwain, quarter-mafter, quarter-mafter's mates, furgeon's mate, yeomen of the powder-room, 'and ferjeants of marines, one eighth. The trumpeter's, quarter-gunners, carpenter's crew, tteward, cook, armourer, fteward's mate, cook's mate, gunimith, cooper, fwabber, ordinary trumpeter, barber, able feamen, ordinary feamen, volunteers by letter, and marine foldiers, two eighths.
Every captain of a man of war, taking any prize, is, as foon as may be, to tranimit to the navy-board a true lift of the names of all the officers, \&c. on board, at the taking of fuch prize.
And in cafe any fea captain, inferior commiffioner, \&c. belonging to any thip of war, be abfent at the time of the capture, their fhare fhall be caft into thofe allowed to the trumpeter, quarter-gunners, \&c.
The commiffioners of the navy are required, after condemnation of the prize, to examine the before-mentioned lift by the fhip's mufter-book, and fee that it agrees in all points, and, upon requeft, fhall forthwith grant a certificate of the truth of any lift, to the agents named by the captors ; and, on application, are to give the faid agents all fuch lifts as they fhall find requifite, and to be otherwife aiding and affitting to the faid agents as fhall be neceffary.
And the agents, appointed to make fales of the prizes, fhall notice the day and place for payment of the fhares, in the London Gazette, that the notification of three years within which the fhares are to be demanded, or to go to Greenwich hofpital, may be afcertained.
By order of council, made in the reign of king William III, and afterwards confirmed by queen Anne, a method was directed to be obferved by the commanders of men of war, \&c. in examining and fecuring the prifoners taken on board pri-
vateers, for the more exy conviction of traitors and pirates, being Britifh fubjects, found in privateers belonging to the enemy.
All prifoners fufpected as fuch to be carefully examined, and fuch as own their country, fhall fign their examinations : alfo three or four of the fhip's company fhall take particular notice of fuch as confefs themfelves born Britifh fubjects, or are furpected to be fo by their language; or any other circumftances, to the end they may fpeak pofitively on a trial.
On taking any privateer, the papers, particularly the commiffion, and roll de l'equipage, are carefully to be fecured, and after particular notice taken of them, and being figned by three or four of the fhip's crew, that they may be able to prove the fame, if required : they are to be tranimitted to the judge of the admiralty at Doctor's-Commons.
If no commiffion be found, all the prifoners are to be carried before fome magiftrate as foon as brought on fhore, with fuch witneffes as are thought requifite, who can fpeak to the manner of capture, $\& \mathrm{Kc}$. and thereupon all the faid prifonters thall be committed as pirates.
The captains, officers, and failors, of all fhips appointed to convay merchants fhips or others, fhall duly attend upon that charge without delay, according to their inftructions; and whofoever fhall neglect their duty in this eafe, and rot defend the fhips and merchandize in their convoy, or flitll extort any reward, from any merchant or mafter of fhip for convoying fuch fhips belonging to his majefty's fubjects, thall be obliged to make reparation of the damage, as the court of admiralty fhall adjudge, and fhall be otherwife punifhed by a court martial. 13 Car. II. confirmed by 22 Geo. II.
Cruizers are commonly the beft failing chips, appointed by the admiralty in certain Jatitudes, in order to meet with and deftroy the enemy; they are commonly of the fmalleft rates, and muft on no account leave their ftations during the time for which they are appointed, except obliged fo to do by ftrefs of weather, or damage. 'It was enacted by 6 Ann. that, befides the line of battle fhips, forty and thifee others thould be employed as convoys and cruizers for the preferrvation of the merchants hipping; four of which were to be third rates, fixteen faurth rates, and the reft of competent ftrength to protect our trade.
See the article Assurance, the latter part, in regard to Convoys.
COPIES of Authors. Under the articles Book and Book. SELLER, we have endeavoured to thew the reafonablenefs and equity of a law for-the afcertaining of literary property, as an encouragement to men of letters to devote their time to the fervice of the public, by compoling, printing, and publifhing their works. And, having referred from thofe heads to the article of Copies, we fhall here conclude what we have to urge further on that matter.
There is not, perhaps, in nature, a principle more juf, more unexceptionable, and rational, than that every individual fhould be intitied to the effects of his own labour and induftry; and it is the duty as well as intereft of the community to protect him therein : nor can any thing prove a greater obftacle and difcouragement to learning and fcience, than the infecurty and precarioufnefs of this kind of property; and therefore nothing can be more detrimental to civil fociety, which is upheld by literature, and muft degenerate into a ftate of favage barbarifm and brutality without it; which is the condition of all countries, where learning is contemned.
It is not every one, indeed, that thands in need of turning author for gain's fake; people of large and independent fortunes, when they are difpofed to ferve the public in that capacity, commonly prefent their copies to bookfellers, or to fome favourite to whom their worth may be an acceptable prefent. But there are but very few, when compared to the number of others, who have been obliged to ftudy and publifh their performances, from the reafonable and laudable motives of private as well as public intereft and advantage. For perfons, qualified and follicitous to ferve communities this way to any lafting purpofe, are feldomengaged in active life for their fupport and maintenance; nor are fuch ftations rarely compatible with a life of clofe ftudy, which muft be a life of felitude and retirement from that hurry and action required in the ordinary concerns of mankind.
Perfons thus naturally turned to contemplation, and fpontaneoufly excluding themfelves from all benefits derived from the other ways of fubfiftence, have they not as good a right to the fecurity of their literary property, as men have to any other kind of property whatfoever? Nay, as property of this kind is liable to be artfully pirated, either by piece-meal, or by curtailing, or enlarging with trifing additions, emendations, and corrections, as they are too often very falliy called ; does not being thus liable to public plunder and outrage render literary property precarious enough, though the wifdom of the legillature fhould interpofe to make the ftrongeft law to fecure it?
The expence of a perfon's education, and the many years fevere ftudy and application, as well as general converfation, that every man muft have the benefit of, before he is capable of producing any work of literature, whereby he can fubfift with decency, fufficiently fhews how much more hazardous
the cafe of fuch men is, who are defirous to be ufeful in this capacity, than that of any other clafs in the community. To deny fubjects, who thus devote themfelves to the public fervice, a due protection for their literary property by the laws, is tacitly to deny the utility of books and literature, to ftrike at the foundation of all feminaries, colleges, and univerfuties, for the promotion of letters: is it not in effect to declare rather in favour of the life of a favage-negro or Indian, than that of a civilized Briton?

- Although all learning, as the great lord Bacon obferyes, c fhould be referred to action, yet we may here eafily fall into - the error of fuppofing the fomach idle, becaufe it neither - performs the office of motion, as the limbs; nor of fenfe, - as the head; though it digefts and diftributes to all the - other parts; in like manner if a man thinks philofophy - and univerfality but idle ftudies, he does not confider that * all profeffions are from thence fupplied.' For more matter on this head, fee the articles Book and Bookseller.
COPPER-Mines, are in various patts of the world more or leis. The moft noted are thofe which Dr Edward Brown gave an account of to the Royal Society. They are as follow: Hern-Ground is a little town in Hungary, feated very high between two hills, upon a part of land of the fame name, an Hungarian mile diftant from Newfol. In this town is the entrance into a large copper-mine very much digged.
I went in through a cuniculus, called Tach-ftoln. The fteep defcents are made by ladders or trees fet upright, with deep notches or ftairs cut in them to flay the foot upon. They are not troubled with water, the mine lying high in the hill: but they are molefted with duft and damps.
The veins of this mine are large, many of them cumulate, and the ore very rich : in an hundred pounds of ore, they ordinarily find twenty pounds of copper ; fometimes thirty or forty, half copper, and even to fixty in the hundred. Much of the ore is joined fo faft in the rock, that it is feparated with great difficulty. There are divers forts of ore, but the chief difference is between the yellow and the black; the yellow is pure copper ore, the black contains alfo a proportion of filver.
They find no quickfilver here; the mother of the ore is yellow, and the copper ore heated, and caft into water, maketh it become like that of fome fulphureous baths.
They feparate the metal from the ore with great difficulty. The ore commonly paffes 14 times through the furnace: fometimes it is burned, and other times melted, fometimes by itfelf, and fometimes mixed with other minerals and it's own drols.
There are divers forts of vitriol found in this mine, green, blue, reddifh, and white. Thepre is alfo a green earth, or fediment of a green water called berggrun; there are likewife ftones found of a beautiful green and blue colour, and one fort on which turcoifes have been found, therefore called the mother of the turcois.
There are alfo two fprings of a vitriolic water, which are affirmed to turn into iron copper; they are called the Old and New Zimcut; thefe frings lie deep in the mine : the iron is ordinarily left in the water 14 days ;,I took divers pieces formerly iton, now appearing to be copper, out of the Old Zimcut; they are hard within the water, and do not totally lofe their figure, and fall into powder ; they will eafily melt without the addition of any other fubftance.
They make handfome cups and veffels out of this fort of copper.
There is a heap of copper ore by Darwent, near Kefwick; but, I fuppofe, the weather hath eaten out all the copper that was in it: it is reported by Mr Davies to Dr Lifter, that the thicknefs of the vein at Gouldfcope in Newlands was fix feet; there are no fhafts now in being, either at Newlands or Caldbeck; there are divers adits, but they are uflefs, the workmen have wrought down the ore far below them; there is part of an adit wrought at Caldbeck, but it is uncertain what it coft finifhing; for fome fone may be wrought for 20 s. a fathom, and fome of it may prove fo hard, that it may coft rol. a fathom.
A roool. ftock will be enough to begin with, to get ore at Caldbeck mines, and then there muft be melting-houres built, which coft 500 l . or more; and, before copper be made ready for fale at the market, and the work come to pay itfelf, it will be fix or feven years at leaft, and by that time 10,0001 . will be ftock little enough.
The firft work that was found, and wrought by the Dutchmen in Conifton-Fells, is called low work; by an account given to Dr Lifter. It hath a ftulm or fhaft to draw water from the mine. This work was left good, and hath been wrought from the day to the evening end of the faid work, forty fathoms, or thereabouts; the feam or vein of copper ore, then left, was above three quarters of a yard thick of good ore; which feam or vein did go from the evening end to the morning end of the faid work, and was efteemed 200 fathoms betwixt, wrought as the vein went; and was, when left, all near of a breadth or thicknefs. The copper ore, in this work, was mixed with fome filver or lead ore.
The fecond work, called white work, or new work, about forty fathom from the firft; was wrought about ten fathom
deep; the feam, then left, was about twenty two inches of good copper ore.
The third is called tung-brow, a little diftant from the laft, being wrought about thirty fathom, and the feam about two feet thick of the like ore.
The fourth is called God's-bleffing, or thurdlehead, being wrought about thirty fathom, and being from the laft mine about a mile, the thicknefs of the feam of ore above a yard, when left off, and thought to be much of it gold ore.
The fifth, called hen-cragg, is a mile from the laft, wroughe about two fathoms; a fmall feam, but excellent ore.
The fixth work is called fumy-work, at Lever's-water, at the water-fide ; and, a little above that, Hanch Clocker's work; a little above that, George Tower's and WilliamDixon's work; Bartle Clocker's work; near the laft, Richard Tower's work; then John Saclock's work, and Hanch Mire's work; being in all feven works, and lie all together, and about a mile from the fifth work abovefaid; and wrought about ten or twelve fathom; the feam of ore about fixteen inches thick; the ftone very foft, and the ore very rich, and much of the faid ore green. If the turn was drained, it is thought that all thefe feven works would come into one, and that it would be the beft work that ever was in thefe parts.
The feventh work is called gray-cragg-beck, wrought but a little, the feam about eighteen inches thick, of as good ore as any of the other works.
The eighth is called John Dixon's work in Brumfel, was wrought about two fathom, the feam about twenty-four inches thick, and efteemed the beft ore, except God's-bleffing; it is about half a mile from the laft work.
The ninth work is called the wide work, or Thomas Hirn's work, wrought about 60 fathom, and left a feam above 26 inches thick, when the work was given over, of very good ore. It has a fhaftor pump to draw the water away, and it is from the laft work about two miles.
The tenth work is called three-kings in Tilburthwait, being three works, and wrought about forty fathom a-piece, the feam being about fourteen inches of very good ore,
Thefe are all the works that have been wrought in ConiffonFells: moft of them have fmall feams near the copper, of a grey fort of ore in fmall threads.
There are lately difcovered three veins in Torverwel, and about ten in other places, and all within two miles of the firft work in Conifton-Feils, and as hopeful as thofe that have been wrought in.
When the ore that was got at Conifton came to be fmelted at Kefwick, they found it fo much to exceed the copper ore of either Caldbeck or Newlands, that they let fall thefe works, and fent the workmen to Conifton-Fells; fo that there were 140 men kept conftantly at the works there; and the ore that they got, did fufficiently furnifh and fupply the fmelthoufes at Kefwick.
The rate that was given for getting of copper ore, was according to it's goodnefs, from 8 s . a kibble, to 2 s .6 d . every kibble being near a horfe-load in weight, it being firft beaten very fmall, wafhed and fifted through an iron fieve, then meafured or weighed.
There was near the firlt work a flamp-houfe, which went by water; and feveral perfons were employed to bring the refufe from each work, that the miners did throw away, to the ftamp-houfe, where it was ftamped, wafhed, and ordered, and they had 2 s .6 d . for their pains.
Of the fmelting and refining of copper from it's native ore.
Under the article Assay, I have fhewed the moft facile methods of making trials in fmall quantities of all kinds of ores, in order to afcertain their value, either with regard to the purchafe, or the fale of them in large quantities. I fhall now fhew how the copper ores may be managed in the great works, fo as to be duly fmelted and refined for their copper.

## REMARKs.

Previous to which, I judge it eligible to take notice of what the learned Mr Boyle fays in regard tofluxes in general, which are made ufe of in the feparation of metals from their ores: ' I muft not omit, fays that great man, that though many, - who make trials of ores, value their own flux powders, or - fuch as are cried up by others; yet they commonly feem ' to expect nothing from thofe they prefer, more than that ' they fhould facilitate the fufion of the ore, as that which c being once done, the metalline part will feparate by it's - own weight, or, as it were, fpontaneoully. But yet, chaving purpofely examined the matter more nicely, and - compared the quantities of metal obtained from two por-- tions, of equal weight, of the fame ore, we found thofe ' proportions confiderably differed ; though that which yield-- ed leaft metal, was fluxed down with a coftly and well ' adapted powder. And I doubt not, but from other me-- talline ores, a greater quantity of pure netal is obtainable, - by fome flux powders, that are but little employed, or - known, than by others that are much more common and - famous. Thus two equal portions of the fame lead ore, - clear of fpar, being the one reduced with a due weight of - nitre and tartar fulminated together, afforded me a much

- lefs proportion of malleable lead, than the other, by means - of half, or a quarter the quantity of flings of iron. And, - to inftance in a much more precious mineral than lead ore, - I tried the like with fome ounces of good native cinnabar, - finely pulverized; by adding to one half a fixed alkali of - tartar, and to the other a different flux-powder, we ob-- tained from the former twice as much mercury as we did 6 from the latter, though diftilled with a fixed alkali, even ' of a mineral nature.'
Thele obfervations of that great experimentalift in philofophy being attended to, it becomes the fmelter in large works as well as the fmall affayer of ores, to confider well what kind of flux is the beft adapted to the quality of the ore he is about to work upon. For there are divers forts of copper, as well as of other ores; that is, the metal may be fometimes mixed with a fony, fparry, fandy, arfenical, or fulphureous matter, \&c. for, according to the nature of the heterogeneous matter wherewith the metal is entangled by nature, the metallurgit muft accommodate his fluxing materials, otherwife he may be liable either to vitrify part of the netal, or fo foorify the fame, and lock it up in it's impure matter, that he cannot feparate it, efpecially where tons of ore are worked at a time, but at a very great expence, and fornetimes, indeed, at the expence of the ruin of his furnace. This I have feen done by fome unikilful people, when they have been fmelting ores in the great works, fomething different in their nature to what they had been ufed to.
Wherefore, in order to make a right judgment what fluxing materials are the beft adapted to the nature of the ore, when wrought in the large way, it is requifite that judicious affays be previoully made; in order to determine not only which affords the greateft quantity of metal, but which feparates the fame in the pureft manner, and neareft to it's defired ftate of malleability, and alfo which expedites the fuffibility, becaufe of the faving of fuel in the courfe of the operation: and, without thofe previous allays, it is by no means advifeable to fmelt large quantities of ore, that have never been fmelted before by the operators. But perfons well experienced in thefe things will, at the fight of an ore, make a very good judgment, whether it is of the hard or the foft kind, and what methods are proper to be taken therewith, as by mixing various forts together, or by fuiting their fluxing materials accordingly.

Of the general methods of feparating copper from it's ore. After a proper affay, the ore is treated according to the fubftances with which it is mixed. If it abounds with filver, 'tis firft gently warmed or calcined, 'till a great part of the fulphur goes off in fume. At Gollaw in Germany, they firft break the ore in pretty large lumps, then burn it in an open fire of wood and charcoal; after which they beat it fmaller, and warm it twice again: and thus make it fit for the firft furnace, where it is melted into a ftony red matter, called copper-ftone ; which, being again roafted and melted, becomes black copper ; this they roaft again, in order ftill more to free it from it's fulphur, and now it is in a fit flate to be nealed for it's filver; which they extract, by adding four parts of lead to one of the black copper, then melting them together in a ftrong fire, and cafting the mafs into moulds, where it hardens into blocks. Thefe are carried to another furnace, and buried in charcoal; giving only a gentle heat, 'till the lead and filver melt and run away together into the receiver, leaving the copper-blocks unmelted behind, which are thus honey-combed and drained of their filver; but ieft capable of being brought to tough and malleable copper, by repeated fufion. In the Hungarian mines we have feen, that Dr Brown tells us, they fometimes burn the ore, and fometimes melt it; and this fometimes by itfelf, and fometimes mixed, with other minerals and it's own drofs.
The purification of copper chiefly depends upon totally freeing it from it's fulphur, which may be done for the more curious ufes, by melting it feveral times with fixed alkali's, nitre, or borax.
After the heterogeneous parts kave been thrown off, as before directed, from the proper earth of the ore, the pure metal then remains to be feparated from this earth by fufion. But there are two difficulties, at leaft one or other of them always found in this affair. For, (I.) This proper mineral earth, how fluxible foever it may prove in gold and filver, yet fcarce comes up to the fufibility of the pure metal; but is apt rather to flow thick and fluggif, unlefs the fire be very intenfe indeed: but 'tis plain, that, if this fubftance remains vifcous, the molecula of the metal cannot fink through it, in order to form a metalline mals at the bottom. (2.) Sometimes only a very fmall quantity of pure metal lies concealed in a vaft body of fuch adhering earth, or wrapped up with the matter of other metals; whence one of thefe two inconveniencies muft arife, viz. either that the fmall quantity of metal cannot well, under fo great a load of recrement, come into a little mafs; or elfe, if it could, it muft of neceffity be fo violently agitated and tofled about by the ftrong fire required to keep oo large a bulk of flag in fufion, as in the ebullition to be again involved, as it were, in little dreps or bubbles among the pappy mafs of the fcoria.

Thefe two inconveniences have their two remedics. (1.) The firft is, to add fuch fubftances as promote vitrification, and, at the fame time, caufe a thin flux of the vitrified body. Such fubltances are, for the large work, fand, fluxile mud, alkaline falts, tartar, nitre, \& Ec . and, for the fmall, glafs of lead, a little borax, or any compound flux-falt, the bafis whereof are commonly tartar and nitre. (2.) The fecond is, to add a metal itfelf. This is a common way, and feems greatly improveable, if it can be brought to anfwer the expence. In this tafe, as a greater mafs of metal cannot, by the fame fire, be fo much agitated and toffed about as a lefs, or, if it could be agitated as much, yet all it's particles would cohere more firmly in a large mafs than in a frall one; hence, by fuch an addition of metal, the little mafs that would otherwife be with diffculty collected from the feveral falling particles of the melted matter, is artificially enlarged, fo as to cover the whole bottom of the melting-pot; in confequence whereof, all the fingle metallic particles that fall afterwards, are eaffly catched and detained below, by the large metalline mals, which there lies ready to receive them.
Copper, being in itfelf of difficult fufion, requires fuch a fire as is able to melt it's glafly fcoria fufficiently thin, at the fame time that it is melted itfelf; and this it does, unlefs the fints fhould prove very obftinate indeed. Hence bare fufion, fometimes, without any other affiftance, will bring out this metal from it's ore, and throw it down into a mafs, the fooria here flowing fo thin, as readily to fuffer the metalline particles to fink through it; but, when the ore is more ftubborn, it's feparation may be promoted by metalline, or other additions, as abovementioned.
In fhort, the difficulty of thus feparating the metal from it's proper earth, is principally found in the ores of filver, gold, and copper; but lead and tin, being very fufible bodies, are muchi eafier melted from their adhering mineral matter. See the articles Assay, Metalilurgy, Orfs.
COPPERAS, COPPERAS STONES, which fome call GOLD STONES, are found on the fea-hore in Effex, Hamphire, and fo weftward. There are great quantities in the cliffs, but not fo good as thofe on the fhore; where the tides ebb and flow over them.
The beft of them are of a bright, fhining, filver colour ; the next, fuch as are of a rufty deep yellow; the worf, fuch as have gravel and dirt in them, of a fadder umber colour.
In the midft of thefe ftones are fometimes found the fhells of cockles, and other fmall hell-fifhes, fmall pieces of the planks of fhips, and pieces of fea-coal.
In order to the making of copperas, they make beds, according as the ground will permit; thofe at Deptford are about 100 feet long, 15 feet broad at the top, and 12 feet deep, fhelving all the way to the bottom.
They ram the bed very well, firft with ftrong clay, and then with the rubbinh of chalk, whereby the liquor, which drains out of the diffolution of the ftones, is conveyed into a wooden fhallow trough, laid in the middle of the bed, and covered with a board; being alfo boarded on all fides, and laid lower at one end than the other, whereby the liquor is conveyed into a ciftern under the boiling-houfe.
When the beds are indifferently well dried, they lay on the ftones about two feet thick.
Thefe ftones will be five or fix years before they yield any conffderable quantity of liquor ; and, before that, the liquor which they yield is but weak.
They ripen by the fun and rain : yet experience proves, that the watering the ftones, although with water prepared by lying in the fun, and poured through very fmall holes of a was tering-pot, doth retard the work.
In time thefe fones turn into a kind of vitriolic earth, which will fwell and ferment like leavened dough.
When the bed is come to perfection, then once in four years they refrefh it, by laying new fones on the top.
When they make a new bed, they take a good quantity of the old fermented earth, and mingle it with new flones, whereby the work is haftened. Thus the old earth never becomes ufelefs.
The ciftern beforementioned is made of ftrong oaken boards, well jointed and caulked. That at Deptford will contain $7^{00}$ tons of liquor. Great care is to be taken that the liquor doth not drain through the beds, or out of the ciftern. The beft way to prevent the fame, is to divide the ciftern in the middle, by oaken boards, caulked as before; whercby one of them may be mended in cafe of a defect.
The more rain falls, the more, but the weaker, will be the liquor ; the goodnefs whereof is tried by weights prepared for that purpofe. Fourteen penny-weights is rich; or, an egg being put into the liquor, the higher it fwims above the liquor, the fronger it is: fometimes the egg will fwim near half above the liquor.
Within one minute after an egg is put in, the ambient liquor will boil and froth, and, in three minutes, the fhell will be quite worn off.
A drop of this liquor, falling on the manufactures of hemp, Aax, or cotton-wool, will prefently burn a hole through it ${ }_{2}^{\text {fas }}$ alfo in woollen and leather.
Out of the aforefaid ciffern, the liquor is pumped into a boiler

## C O P

of lead, about eight feet fquare, containing about 12 tons, which is thus ordered. Firft they lay long pieces of caft iron, 12 inches fquare, as long as the breadth of the boiler, about 12 inches one from another, and 24 inches above the furface of the fire. Then croffiwife they lay ordinary flat iron bars, as clofe as they can lie, the fides being made up with brickwork. In the middle of the botton of this boiler is laid a trough of lead, wherein they put at firft 100 pounds weight of old iron.
The fuel for boiling is Newcaftle coals. By degrees, in the boiling, they put in more iron, amounting in all to 1500 pounds weight in a boiling. As the liquor waftes in boiling, they pump in frefh liquor into the boiler; whereby, and by a defect in ordering the fire, they were wont to be above 20 days before it was enough; when that is, they try, by taking up a fmall quantity of liquor into a fhallow earthen pan, and obferving how foon it will gather and cruft about the fides, thereof. But now of late, by the ingenious contrivance of Sir Nicholas Crifp, the work is much facilitated; for, at his work at Deptford, they boil off three boilers of ordinary liquor in one week; which is done firft by ordering the furnace fo, as that the heat is conveyed to all parts of the bottom and fides of the furnace.
Then, whereas they were wont to pump cold licuor into the boiler, to fupply the wafte in boiling, whereby the boiler was checked fometimes ten hours, Sir Nicholas's work hath now a veffel of lead, which he calls a heater, placed at the end of the boiler, and a little higher, fupported by bars of iron, as before, and filled with liquor, which, by a conveyance of heat from the furnase, is kept near boiling hot, and fo continually fupplies the wafte of the boiler, without hindering the boiling. Thirdly, by putting due proportions of iron from time to time into the boiler; as foon as they perceive the liquor to boil flowly, they put in more iron, which will foon quicken it. Befides, if they-do not continually fupply the boiling liquor with iron, the copperas will gather too the bottom of the boiler, and melt it; and fo it will do, if the liquor be not prefently drawn off from the boiler into a cooler, fo foon as it is enough.
The cooler is oblong, 20 feet long, nine feet over at the top, five feet deep, tapered towards the bottom, made of tarras. Into this they let the liquor run, fo foon as it is boiled enough. The copperas herein will be gathering, or hooting, I4 or 15 days, and gathers as much on the fides as in the bottom, viz. about five inches thick. Some put buthes into the cooler, about which the copperas will gather; but at Deptford they make no ufe of any.
That which fticks to the fides, and to the buifes, is of a bright green, that in the bottom of a foul and dirty colour. In the end of is days they convey the liquor into another cooler, and referve it to be boiled again with new liquor. The copperas they fhovel on a floor adjoining, fo that the Hiquor may drain from it into a cooler.
The fteam which comes from the boiling is of an acrimonious friell.
Copperas may be boiled without iron, but with difficulty ; without it the boiler will be in danger of melting. Sometimes, in Airring the earth upon the beds, they find pieces of copperas, produced by lying in the fun,
The common green vitriol, or Englifh copperas, is made at Deptford in the following manner, from pyrites, which are round, ponderous, clofe ftones, of a dufky colour on the outfide, but having their inner fubftance radiated like a ftar, from the center to the circumference. They originally yield no tafte of vitriol, and are found along the fhores of Effex , Suffex, \&cc. When calcined, they yield a fume like that of brimfone, and leave a red calx, containing iron, behind. Expofed to the open air in heaps, for a length of time, they feem to ferment, heave, fwell, crack, and fall to pieces, and then yield a white downy efflorefcence, of an acrid ftyptic tafte: and thus the white fubitance of the ftone feems to diffolve, and fall to duft, of a faline, vitriolic, and fulphureous tafte and fmell.
A heap of thefe ftones, two or three feet thick, they lay in a bed, well rammed: where, being turned once in fix months, in five or fix years, by the action of the air and rain, they begin to diffolve, and yield a liquor, which is received in pits, and hence conveyed into a ciftern in a boiling houfe, The liquor at length being pumped out of the ciftern into a leaden boiler, and a quantity of iron added thereto, in two or three days the boiling is compleated, care having been taken all along, to fupply it with frelh quantities of iron, to reftore the boiling, whenever it feems to abate; when boiled fufficiently, it is drawn of into a cooler, with fticks acrofs, where it is left 14 or 15 days, to fhoot.
It appears that the diverfity of colours in vitriols arifes from the difference wherein the falt, or acid, is received; in blue, the falt is joined with copper; in green, with iron; in white, with calamine, or fome ferrugineous earth, mixed with lead or tin. As to red vitriol, called colcothar, it's colour is adventitious, and feems to arife from a calcination which the vitriol undergoes, either by art, or fome fubterraneous fire. This is not only fupported by the natural hiftory of vitrioi, but feems to be confimed by numerous analyfes made of the

Vor.. I

## C OR

feveral kinds of vitriol, and the artificial preparation of thent upon fuch principles; fo that it may pretty fafely pafs for a general truth, that all vitriol confifts of water, a metalline part, and an acid combined : that the water gives the tranfparency, or cryftalline form ; that the acid diffolves the metal, and thus gives the colour; and that all three are thus united together.

## It's ufes.

The ufes of copperas are numerous, It is the chief ingredient in the dyeing of wool, cloths, and hats black, in making ink, in tanning and dreffing leather, \&c. And from hence is prepared oil of vitriol, and a kind of Spanifh brown for painters.
C ORAL is a plant of a peculiar ftructure and figure: it is met with in the fhops in fmall branched pieces: they are of a pale red colour, of a hard and fony nature, very heavy, and have neither fmell nor tafte.
Thefe are the fragments of the coral plant ; the larger pieces are ufed for other purpofes, and are dearer, but thefe poffefs as much virtue. The plant grows not only on rocks and ftones, but on fea-fhells, and on any folid body it meets with at the bottom of the water.
When frefh taken out of the fea, it has much more virtue than after it has been kept for years in the fhops.
It is evident, from many experiments, that it is not, as fome fuppofe, a mere terreftrial abforbent; it plainly contains particles of a bituminous, faline, and urinous nature: which, however, are found in greater perfection, when frefh, than after keeping. We ufe it as an aftringent and abforbent in diarrhœeas, the fluor albus, and hæmorrbages, but only in conjunction with other medicines of the fame intention.
The beft method of preparing a real tincture of coral is, by extracting the red colour with oil of annifeed, then diftilling of the greater part of the oil, adding oil of tartar to the remainder, and evaporating the whole to a dry mafs, on which fpirit of wine is to be poured, to extract the tincture.
We hear of white coral in the fhops, which many fuppofe of greater virtues than the red; but what we meet with under this name, is a fpecies of another fed plant, the madrepora. The feveral fpecies of it in the fhops, under the name of white coral, are all light and hollow, and marked with holes on the outfide. A chemical analyfis thews it cannot poffers the virtues of the red, whatever people may imagine, for it 'yields no oil or bituminous matter on diftillation, but only a valatile urinous firit.

## Of the Coral Fisherv.

Red coral is found in the Mediterranean, on the thores of Provence, from Cape de la Couronne, to that of St Tropez; about the ifles of Majorca and Minorca; on the fouth of Si . cily; on the coafts of Africa; and laftly in the Ethiopic Ocean, about Cape Negro,
The divers fay that the little branches are found only in the caverns whofe fituation is parallel to the earth's furface, and are open to the fouth.
In Provence they ufe two machines in fifhing for it. The one, which pulls it from the rocks, is a large wooden crofs, in the center of which is a heavy leaden ball, and it is fuftained by a very long and frong cord. At each extremity of the crofs is fixed a round net. When it is let down into the water, where the divers have found there is plenty of coral, he that guides it pufhes one or two arms of the crofs into the cavities, which entangles the coral in the netting, and thofe who are in the boat break it, and draw it out of the water.
The other machine ufed for drawing coral out of the deepeft waters where they fifh for it, is a very long beam, at the end of which is fixed an iron ring, a foot and an half in diameter, having a reticular bag, with two round nets on each fide. This beam is faftened, by two very long ropes, to the ftem and ftern of the boat. It is let down to the bottom by means of a plummet fixed to it, and is directed into the deep caverns by the boat's motion. The ring breaks off the fmall branches on the top of the caverns, and the nets entangle and retain the others. Sometimes they find branches that weigh three or four pounds weight, but it is feldom. The reafon they find large branches but rarely, is becaufe they have liberty of fifhingstoo often, that the plants have not time to attain their full growth, which requires fome years,
As they fifh at random, where they think there is large coral, they break the young farigs they meet with there, forcing their inftruments to and fro, in hopes of getting the large branches, which does not always anfwer their end: though they commonly prefer a quantity in weight to the bignefs of the pieces, becaufe they agree with their mafters for fo much the pound.
The manner of fifhing for coral being nearly the fame whereever it is found, it will fuffice to inftance in that ufed at the Baftion of France, where a great quantity is got, under the direction of the company eftablifhed at Marfeilles for that fifhery.
The fiffers, who come yearly at the feafon to fifh for the company, bring nothing but themfelves, every thing needful 70
being

## COR

being fuund them, even to the boats and veffels, and delivered to them fitred for fea, with fails, anchors, $\& \mathrm{c}$. of all which they are to give an account at their return.
There are feven or eight men to a boat, one of whom is the patron, or proprietor. When the net is thrown by the cafter, the reft work the veffel, and help to draw the fame in.
Before the filhers go to fea, they are allowed advance-money, and have fore of provifion, and cordage for their engines, on terms flipulated.
They are agreed with, alro, for the price of the coral, which is fometimes more, fometimes lefs, a pound; and they engage, on pain of corporal punifhment, that neither they nor their crew fhall embezzle any, but to deliver it to the proprietors.
When the filhery is ended, which amounts, one year with another, to 25 quintals of coral for each boat, it is divided into 13 parts, of which the proprietor hath four, the cafter two, and the other fix men one each; the thirteenth belongs to the company, for payment of the boat furnifhed them. The coral-fining is both fatiguing and dangerous. The fifhers, having bound two rafters of wood crofs-wife, and fixed leads to them, wind a quantity of hemp loofely about it, intermingled with fome large netting. This inftrument is let down where they think there is coral, which being ftrongly entangled in the hemp and netting, they pull it up again; for which even fix boats are fometimes required; and if, in bauling in, the rope happens to break, the fifhermen run the hazard of being loft.
Large quantities of it are ufed for necklaces, chaplets, and other like works, to adorn the cabinets of the curious; and feveral nations have a particular efteem for it, efpecially the Japanefe, who prefer it to any of the moft precious ftones. Coral is part of the traffic of Marfeilles. Bracelets and necklaces of it are made only there and at Genis, and fell very well up the Levant. Befide the red coral and white, which are the moft common, there is fome alfo of a rofe-colour and Hefh-colour, fome half red, half white, brown, \&c. which laft comes from America, the others being commonly found in the Mediterranean, and on the Barbary coaft.
There is a kind of wood, called in Europe coral-wood, from the livelinefs of it's colour, much refembling that of coral. It grows in the American iflands, chiefly in thofe called the Windward lflands. Some druggifts fell it for faunders, though it hath none of it's properties but the colour. It is a fit wood for turners and inlaid work.
There are, alfo, in thefe illands, two kinds of trees fo called, their fruit being as red as coral, except one little black fpot, where the bud is. The grocers and druggifts call them red, or American peas; they are extreme bitter, and fome pretend that, feeped in lemon-juice, they will folder gold and filver, like borax.
CORASAN, or KHORASSAN, including the kingdom of Balk, has Perlian Irack with Aftrabad on the weft, from which 'tis parted by a large defert; Farfiftar, with Segeftan, on the fouth; the Grand Mogul's dominions on the eaft and north-eaft, and Ufbeck Tartary on the north. It is very populous and fruitful, and produces the beft manna in the world. Herat is an ancient and confiderable city, has a very good trade, being reforted to by the Indian merchants. They make here very fine tapeftry, and abundances of rofe-water.
CORDAGE; the term is ufed in general for all forts of cord, whether fmall, middling, or great, made ufe of in the rigging of fhips.
Cordage, cable-laid, as the feamen term it, is made with nine ftrands, i. e. the firft three ftrands are laid flack, and then three of them being clofed together make a cable or cablet; the fame for tacks, but they are laid tapering.
Cordage, hawfer-laid, is made only with three ftrands. Cordage, ftays, are cable-laid, but made with four flrands as cables are with three, with an addition of an heart which goes through the center of them.
The price of cordage and cables at St Peterfburgh, in 1742, was I rouble 20 copecs the poude.
Cordage ftuped, is that which, having been put in a tub in a very warm place, hath caft out it's moifture.
White cordage, is that which hath not yet been tarred.
Cordage tarred in fpinning, is that which is made of ropeyarn ready tarred.
Cordage tarred in the fove, is that which hath paffed thro' hot tar in coming out of the flove. Every quintal of cordage may take about 20 pounds of tar.
Cordage re-made, is that which is made of ropes ufed before. Cordage, when very old, is ufed for oakum to caulk the feams of hips with.
Change cordage, is that kept in referve, in cafe what is in ufe fails.
When a rope is faid to be fix inches, 'tis to be underftood of it's circumference. A rope of 60 threads, is one compofed of fo many rope-yarns.
Cordage is ufually made of fpun hemp: the great number of veffels built and fitted out at Amfterdam, either for war or trade, occafion a great commerce of all forts of cordage neceflary for them. All which fells by the fchippont of 300 pounds.

The fchippont of cordage of neat hemp cofts ufually 56 forins that of Koningfberg about 58 florins, that of Mufcovy from 30 to 47 florins, Deductions for weight and prompt payment are one per cent. on each.
The quantity of cordage ufed in rigging a veffel is almof in conceivable. Every rope hath it's name and particular ufe.

## REMARK

As the quantity of cordage is fo very extraordinary that is ufed in our own veffels and fhipping both at home and abroad and as alfo the quantities ufed by all the Europeans, Ameri cans, and Afiatics, is immenfely great; too much encourage ment cannot be given to the growth of hemp in our own colonies and plantations; to the end that we might by that means, at leaft, amply fupply ourfelves, if we could not ob tain any fhare in the fupply of other nations. See the ar ticles Cable, Colontes, and Hemp.
COREA, a kingdom fituate on the moft eaftern part of China, between it and Japan. 'T is a large peninfula, bounded on the weft by the Yellow Sea, on the eaft by that of Japan, on the fouth by the Chinefe ocean, and on the north by the king dom of Nienche, which belongs to Tartary.
The country towards the north is but barren, mountainous, and full of wild beafts: but the fouthern part is rich and fertile, and breeds quantities of large and fmall cattle, fowl and game of all forts, as well as filk, cotton, flax, and the like; all which are manufactured there, except filk, which they have not the art of dreffing for weaving, but fend it unwrought, either to China or Japan, the only two countries they trade with. Some of their mountains produce gold and filver, and their fea pearls and other fine fifh.
Their coafts are very difficult of accefs, being full of helves, rocks, \&c. very dangerous to thofe who are not acquainted with them.
CORN; hereof are feveral fpecies, fuch as wheat, rye, and barley; millet and rice; oats, maiz, and lentils, peafe, and a number of other kinds. Each of thefe has it's ufefulners and propriety.

## REMARK S.

Wheat, which is the ftrongeft nourifhment, feldom fucceads but in foils that are hot or vigorous, or at leaft marthy. Rye profpers in a moderate foil, and fometimes is contented with the lighteft. Barley, oats, buck-wheat, and millet, thrive in a fandy ground, and will grow in the beft foils, if they haye been well pulverized.
Strong foils require much cultivation, and are fatisfied with a light manure; but lands that are thin, demand a ftrong manure, and light culture.
Arable lands are generally ranged into three divifions, nearly equal. One is fown before the winter-feafon, with wheat and rye, or elfe with meflin, which is a mixture of both. The fecond muft be allowed a winter's fallow, and may be fownin the fpring with the fmaller grain, as oats and barley, \&xc. The third divifion is fuffered to lie fallow, but is not therefore altogether unactive; for, befides fome kinds of hufbandry beftowed on it, 'tis continually receiving frelh fupplies, it acquiring a richnefs from the fnows, and is moiftened by the dews and rains ; and even the winds impart prolific falts and juices to it. So that it's inactivity is a feries of preparatives, and an acquifition of materials for new productions. The firf tillage is in autumn, on lands that have produced a harveft of March grain. This operation only prepares the earth in a proper manner, deftroying the fprouting weeds. Some farmers defer it to the end of winter:
The fecond is in fpring, and in fome places at Midfummer. The third precedes the feafon for fowing. Sometimes a tranfverfe ploughing is required befides.
When the feed is fown, the earth is fcattered lightly over it, by means of a harrow, in ftrong foils; but, in light foils, they ufe a little plough, that the earth may more effectually cover the feed.
Manure is as important as tillage. 'Tis fometimes required for the beft lands, and is always necelliary to thofe that are weak. A good foil is not dunged for fmall grain, but a weak one will not produce it without manure.
Though manure is of various kinds, there being hardly any refufe fubftance but what is of ufe herein ; none has more prolific qualities, than the foil fwept from populous cities; efpecially thofe where a great number of kitchens, and dyers of wool, are continually difcharging into the ftreets a fat and oily fediment, which is very beneficial to corn. In thoit, all matter whatever, capable of producing large quantities of falts, will communicate fertility, when properly difpofed upon lands.
Corn for feed fhould be well chofen, and firt fteeped in a lixivious liquor: but fome hufbandmen only mix their corn with bruifed lime, and fow both together. The fpecies that are fown before the winter feafon, are the autumnal wheat, barley, and rye, which laft is the food of the poor people, and thrives in the worft foils, and drieft years. Starch-corn, or autumnal barley, is fown before the winter feafon. 'Tis cut in June, and is ferviceable to the poor people, 'till harveft fupplies them with their winter provifion.

The fmall grains fown in March, are oats and barlcy, lentils and little round beans. The firt is an important article in commerce, being the chief food of horfes.

## Of the method of preferving Corn.

Corn is very different from fruits, with refpect to the manner of it's prefervation; and is capable of being preferved in public granaries, for preffing occafions, and of being kept for feyeral centuries.
The firft method is to let it remain in the fiike, the only expedient for conveying it to the iflands and provinces of America. The inhabitants of thofe countries fow it in the ear, and raife it to maturity by that precaution; but this method of preferving it would be attended with feveral incenveniencies among us. Corn is apt to rot or fprout, if any the leaft moifture is in the heap. The rats likewife infelt it, and the detriment is frequently very great, before 'tis difcovered. And our want of ftraw allo obliges us to feparate the grain from the ear.
The fecond is to turn and winnow it frequently, or to pour it through a trough, or mill-hopper, from one floor to another, whence 'tis again raifed by a crane, to the upper floor. Being thus moved and aired, every fifteen days for the firft fix months, 'twill require lefs labour for the future, if lodged in a dry place. But, if through neglect mites be permitted to ilide into the heap, they will foon fwarm like ant-hills, and reduce the corn to a heap of duft. This mult be avoided therefore, by moving the grain anew, and rubbing the places adjacent with oils and herbs, whofe frong odour may chace them away, for which garlic and dwarf-elder are very effectual. They may be likewife expofed to the open fun, which immediately kills them; or a brood of chickens let in, who, 'tis faid, will quit the grain to prey upon the mites, as faft as they appear.
When the corn has been preferved from all impurities for the fpace of two years, and has exhaled all it's fire, it may be kept for forty, fifty, or even a hundred years, by lodging it in pits, covered with ftrong planks, clofely joined together ; but the fafer way is to cover the heap with a thin furface of quick lime, which fhould be diffolved, by fprinkling it aver with a fmall quantity of water. This caufes the grains to fhoot to the depth of two or three fingers, and inclofes them with an incruftation, through which neither air nor infects can penetrate.
In the year 1907, a magazine of corn was opened in the citadel of Mentz, which had been ftored up in * 1578 , and the bread made of it proved very good. The Abbe de Louvois, travelling to the frontiers of Champagne, faw in the caftle of Sedan, a heap of corn, which had been lodged there an hundred and ten years, and preferved, notwithftanding the moilture of the place, which at firft made it fprout above a foot deep. The leaves and firft fhoots of the ftems, wanting air began to rot, and funk down upon their roots; which glutinous compoft, incorporating with the grains beneath, and growing dry, hardened into a very thick cruft, which preferved the reft of the heap. Some of the bread made of it was fent to court, and proved extraordinary good.

* Memoirs de l'Acad. des Sciences, 1708.

The following obfervations made by the Abbé Pluche and Mr Needham, and tranfmitted to our Royal Society, affording fome light into the nature of this vegetable, they may not prove unacceptable to many.
Having with the affiftance of the microfcope, fays the Abbé, viewed the fmut of corn, I obferved the ftalks were all fpotted and pricked with fmall burnings : now as the fmuthappens after a fine rain, followed by a bright funhhine, the caufe of this evil is, that the focus of thofe very fmall drops is juft near them, and on the falk that fupports them: wherefore the fun's rays, collected in this point, muft there burn; which dries up the \#talk, and prevents the ear from graining.
The fecond remark is on the corn that grows up into ears, the grains of which are for the moin part full of meal, quite black. With the microfcope I faw, all around or above thefe black grains, fmall long bodies, rolled up, and having each a pedicle; which I found to be the flowers that could not reach their due form, or come forth and ripen; fo that the grain being deprived of this help, could not develope it's germ, and produced only a black meal, for want of the unfolding of certain veffels.
The third remark is, the reafon that invites thruthes or farlings under the legs of black cattle grazing in a pafture. Not being able to get near them, I obferved them at a diftance with a good glafs. I faw all thefe birds thruft their heads and half their bodies down into the grafs, in fuch manner that their tails remained erect in the air, as that of a duck upon diving, which makes me think, that thofe birds feek after worms in the earth; and that they gather about the cattle, becaufe as they are large animals, upon trampling on the ground, they oblige fuch worms to come forth, as happen to be preffed under the weight of their hoofs.
Upon opening lately the fimall black grains of fmutty wheat, fays Mr Needham, which they here diftinguifh from blighted
corn, the latter affording nothing but a black duf, into which the whole fubftance of the ear is converted; I perceived a foft white fibrous fubftance, a fmall porton of which I placed upon my object-plate: it feemed to confift wholly of longitudinal fibres bundled together; and you will be furprized, perhaps, that I fhould fay, without any the leaft fign of life or motion I dropped a globule of water upon it, in order to try if the parts, when leparated, might be viewed more conveniently when, to my great furprize, thefe imaginary fibres, as it were, inftantly feparated from each other, took life, moved irregularly, not with a progreffive, but twifting motion and continued fo to do for the fpace of nine or ten hours, when I threw them away.
I am fatisfied they are a fpecies of aquatic animals, and may be denominated worms, eels, or ferpents, which they much refemble. This, if confidered, will appear to be fomething very fingular: but $I$ have fince repeated the experiment $f e$ veral times, with the fame fuccefs, and gratified others with a fight of it.
Of the maxims of France and other parts in regard to CORn.
In France, corn of the growth of the kingdom is reckoned as a contraband commodity; and may not be exported, how plenteous foever the crop, without permiffion, either gene ral or particular, purfuant to the old or new ordonnances in that behalf made, among others of 1577 and of 1699 , on pain of forfeiture, and 500 livres fine.
The general permiffions for exportation are ufually granted by order of council for a certain time, as fpecified therein. There is alfo another fort of general permiffions granted in like manner, but not extending beyond the kingdom; on declaration made to the intendants of the places it is fent to and certificates of the arrival and delivery there.
In times of dearth and fcarcity, as that which happened in France in 1709 , other permiffions more general are granted for parts within the kingdom, as were the orders of Auguft and September that year, which permitted a free trade in all forts of grain, even of meal and pulfe, as well from city to city, and market to market, as from one province to another throughout the whole kingdom, without being obliged to give notice, or to obferve any of the ufual formalities. As to particular permiffions, they are pafforts figned by a fecretary of fate, bearing the perfons names to whom they are granted; the quantity and quality of the corn ; the ports by which it is to pafs, or to be fhipped; the place intended for, and other the like circumftances.
There have been many ordonnances and royal declarations made in France for government of the inland trade herein, and the quality of the perfons that may ufe it.
The moft noted and important are thofe of Charles IX, 1567 , Henry III, 1577 , and Lewis XIV, 1699 ; befides a great number of others, moftly in 1709 , a year fo fatal to France, by the entire lofs of all it's corn, as fcarce to be repaired by the many wife regulations which the prudence and care of the magiftrates caufed to be publifhed almoft every day.
In the ordonnance of Auguft 1699, amongt other articles, merchants of the kingdom may import corn from foreign countries; and in times of plenty export it, by virtue of general or particular permiffions; and all combinations among corn-merchants, whether refiding in the fame or different cities, are prohibited on pain of 2000 livres fine, and being declared incapable of trading in corn for the future. And all, both merchants and others, are probibited to enhance or buy corn or other grain, while green and before the harveft, on pain of 3000 livres fine, and corporal punifhment; and all fuch bargains are declared null, even thofe made fix months before the date of the declaration.
Befides thefe general ones, the city of Paris hath alfo particular regulations, concerning corn brought thither by water, made in 1672 . In which all dealers, trading on the river for the fupply of Paris, are prohibited to buy ftanding corn, on pain of forfeiture to the feller, and fine to the buyer. And dealers may not buy grain or meal within ten leagues of the city.
The dealers, \&c. are obliged, immediately on the arrival of their grain or meal, to prefent their bill of parcels to the fworn corn-meters, who are faithfully to regifter it, and carry copies every Monday to the recorder of the city. Dealers may not land or houfe their corn if mufty or heated, or if the boat be in danger, but it muft remain in the boat 'till fold. Citizens of Paris may put the corn and meal of their own growth, or which is brought for their provifion, into granaries. The magazines of Dantzick are fo valt, and always fo well filled, that, in Tome years, 800,000 tons of corn are exported from that city: it's merchants have an exclufive privilege for all the corn of Poland brought into their city, and the Dantzickers are obliged to buy whatever quantity is brought, at a price fixed by the magiftrate.
The magazines of Amfterdam are not lefs confiderable than thofe of Dantzick; few cities having a greater corn-trade, there being even a feparate exchange, where many thoufand dealers meet every day, that trade on!y in corn; and hath nothing in common with the general exchange, from which it is diffant a quarter of a league.

## COR

Corn is very plentiful and to very cheap in China, becaule they prefer rice for their bread; that a man may buy enough for about a fhilling to fuftain him a month.

## The laws of England relating to Corn.

Corn, the quarter to contain 8 bufhels ftriked, each bufhel containing 8 gallons. 15 Rich. II. cap. 4. fect. I. II Hen. VII. cap. 4, fect. I. 22 Car. II. cap. 13 . fect. I. And grain imported, the old fubfidy was increafed from the original duty, granted by 12 Car. II. cap. 4, to the following duty per quarter Winchefter meafure, when they did not exceed the refpective prices, oppofite to each fpecies, viz.

|  | Prices. |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Wheat - |  | - | 5 |  |
| Rye |  | $\bigcirc$ | 4 |  |
| Barley and mal |  | 0 | 2 |  |
| Buck-wheat | 28 | 0 | 2 |  |
| Oats | - 13 | 4 |  |  |
| Peafe and bean | 32 |  |  |  |

15 Car. II. cap. cap. fect. 3. But by 22 Car. II. cap. 13. was further increaled.
Imported-Juftices of the peace for the feveral counties, at every quarter-feffions, are to give in charge (in open court) to the grand jury, to make enquiry and prefentment, upon their oaths, of the common market prices of middling Englifh corn; which prefentment is to be made in open court, and certified by the juftices in writing to the chief officer and collector of the cuftoms, to be hung up publickly in the cuftom-houfe, that the duties may be collected according to the faid prices. 5 Geo. II. cap. 12. fect. 1, 2, 3.
In the city of London, the mayor, aldermen, as juftices, in the months of October and April, are to determine the prices of middling Englifh corn, by the oaths of two or more honeft perfons fkilled in the prices, being neither cornchandlers, mealmen, factors, or merchants, \&xc. interefted in the corn, but fubftantial houfekeepers, living in Middlefex or Surry, having each a freehold eftate of 201 . or a leafehold of 501 . per ann. or by fuch other ways and means as they fhall think fit, and to certify the fame as above. I Jac. II. cap. Ig. fect. 3, 4. 5 Geo. II, cap. cap. 12. fect. 4.
But, juftices omitting or neglecting to determine the prices, the collector of the cuftoms muft receive the duties according to the loweft prices of the feveral forts rated by the act of 22 Car, II. cap. i3. 2 Geo. II. cap. 18. fec. 3 .
As to wheat, rye, barley, malt, beans, peafe, and all other forts of corn and grain, ground or unground, and bread, bifcuit, or meal, they may be exported free of all duties. I2 Car. II. cap. 4. fect. 12.11 and 12 W. III. cap. 20. fect. 4. I Ann. cap. 12. fect. 2.5 Ann. cap. 27 . fect. I. 6 Ann. cap. 19. fect. 1. 7 Ann. cap. 7. fect. 28.

Exported, the bounty and regulations of
The bounty on Corn exported.

## C O R

When the above forts of corn, either ground or unground, do not, at the port of exportation, exceed the refpective prices in the firft column, and fhall be fhipped on board any Britifh fhip, whereof the mafter, and at leaft two thirds of the mariners, are Britilh fubjects; in order to be exported to parts beyond the feas, the exporter is to be allowed the refpective bounties in the fecond column: provided a certificate in writing, under the hand of the exporter, containing the quantity and quality of the corn, be firft brought to the collector of the port, and the truth thereof confirmed by the oath of one or more credible perfon or perfons, and bond be given by the exporter, in the penalty of 101 . for every ton of oatmeal, or 40 buthels of beer, alias bigg, and 200l. at leaft for every 100 tons of all the other forts (i. e. 8 s . per quarter) that the fame fhall be exported into parts beyond the feas, and not be re-landed in Great-Britain, or the illands of Guernfey or Jerfey. 1 W. and M. cap. 12. fect. 2, 5 Ann. cap. 29. fec. 10. 3 Geo. II. cap. 7 . rect. 15.
In order to adjuft the quantity for which the bounty is to be paid, the corn is to be admeafured by the proper officers of the cuftoms, who, for the greater expedition, may make ufe of a tub or meafure, containing four Winchefter bufhels; or, if the faid corn be intended to be exported in facks, they are to chufe two out of any number not exceeding twenty facks, and fo in proportion, and thereby compute the whole quantity: but, if exported from London, may be meafured by the fworn meters, from whofe certificate the fearchers may certify the quantity fhipped for exportation. 2 Geo. II, cap. 18. fect. 4, 5 .

But, with refpect to malt, the bounty is to be allowed after the rate of thirty quarters, and no more, for every twenty quarters of barley, or other corn or grain entered and made into malt for exportation; as thall appear by a certificate from the officer, with whom the corn or grain, intended to be made into malt for exportation, was entered. 3 Geo. II. cap. 7. fect. 14, 15.
The aforefaid bounty to be paid by the collector of the port, upon demand made by the exporter : unlefs he has not fifficient money in his hands, and then (except for bigg and oatmeal) he is to certify the fame to the commiffioners of the cuftoms, who are to caufe the money to be paid by the re-ceiver-general within three months. I W. and M. cap. 12. fect. 2.. 12 and 13 W. III. cap. io. fect. 91. 5 Ainn. cap. 29. fect. IO- 3 Geo. II. cap. 7 . fect. 15 .
The aforefaid bond, given for exportation, may be delivered up to be cancelled, upon producing a certificate under the common feal of the chief magiftrate, in any place beyond the feas, or under the hand and feal of two known Britilh merchants, teftifying that the corn was there landed, or upon proof by credible perfons, that it was taken by enemies, or perifhed in the feas, I W. and M, cap. 12. fect 2. 5 Ann. cap. 29. fect. 10.
Malt, re-landed in Great-Britain, is forfeited, with treble the value, befides the penalty of the bond. 3 Geo. II. cap. 7. fect. 15. and fince continued yearly with the malt-act.

The bounty on fpirits, drawn from barley, malt, or other corn, exported.
For every ton of firits drawn from barley, malt, 1. s. d. or other corn, there fhall be paid to the exporter, by the commiffioners of the cuftoms, or the proper officers belonging to them, when barley is at 2.4 s . per quarter, or under; on fuch proof of the exportation thereof, as is directed by the act of I W. and $M$. for the encouraging the exportation of corn, out of the duties liable to the payment of the bounties on corn exported, 1 l. ros. and fo in proportion for a greater-or lefler quantity.

## COR

## COR

An account of the true market-price of wheat and malt at Windfor, for above 100 years. Began and publifhed by William Fleetwood, bifhop of Ely, fron 1646 to $1700^{\circ}$; and fince continued in the fame mannet to the year 1752.

N. B. In this computation you are to know, that in every year there are two prices of corn, the one at Lady-Day, the other at Michaelmas; both which are put together, and the half is taken for the common price of that year. In the price of malt, the tax of 6 d . per buihel is not charged, which is an addition of 4 s . to every article of the malt, from the commencing of the malt-tax.

## REMARKs

The bounty which has been allowed upon corn making, at prefent, a topic of converfation among the landed and trading intereft, in regard to ir's continuance, or otherwife; and, being likely to be brought before the parliament the enfuing feffion, it may not be unufeful to give a flate of the argument, as it hath hitherto paffed without doors pro and con. In a treatife faid to be written by the late Sir Matthew Decker, Bart. on the caufes of the decay of our foreign trade, he obferves, That the laws which give a bounty on exported corn, fifh, and flefh, are very prejudicial to our manufactures. For,

- Wages depending on the high or low price corn, fifh, and
- fleth bear, the bounties on their exportation ferve only to - feed foreigners cheaper than our own people, to run away * with our crade: the pretence of encouraging tillage by a - bounty on corn can have no weight now, fince our great c improvements in bubbandry, much lefs if we erected maga-- zines in every county, againft times of fcarcity: foreigners - never buy provifions 'till they want them, and then they ' mult have them, whether we give bounties or no.' The Britifh Merchant, vol. ii. p. 247, fays, 'If we were to become a province to France, we fhould be obliged to give a - bounty on wool, as we do on our corn, that France might
' have it cheaper than our people.' And, in p. 400, ' he com6 putes the value of the manufacture in our woollen goods in ss general!, at thitee times the value of the wool. - Now I ap6 ped to all men of fenfe, whether it be not much more pre-- judiciad, in this cafe, to feed the workmen choaper, than to fell cheaper the materials; the manufacture being as - three to one in our woollen trade only, a bounty on ex6 ported wool, though abfurd and defrutaive, ftops there: 6 But-bounties on exported corn, filh, and felh, felve to feed - the French cheaper than our own people, to run away not ' only with our woollen, but alfo with our filk, linen, and - iron manufactures, and every thing elfe we can underazke, 6 all trade, all navigation. Is not this conduet molt ablurd, ' moft deftructive? Could we have acted more fervilely; had ' we become a province to France; or, racher, if not this - the way to make us fo? All attempts to comfine our wool - at home muft prove vain, until our people are wed of 6 taxes, monopolies, and ill-judged laws, equallyy with or be" yond foreigners; for, while the French can underwork us 6 fo much, they can afford to give vaft prices for our wool; 6 and what effect any prohibition will have againht valt pro-- fits, the reader may judge,' \&cc.

In confirmation of this itrain of reafoning, it has been further urged, That, thould the public employ one man a whole year in a piece of work, to be fent abroad, and given away, this would plainly be to lofe the value of one man's labaur: but the tofs would be exactly the fame, if twelve mena ghould be fo emplayed for a month; or if one twelfth part of the whole year's work fhould be given away.
Suppofing then, that the bounty makes the price of our corn abroad lefs by one twelfh part than it would atherwie be, it is evident that the nation gives dway one part in twelve of all the labour employed in growing this corn, and exporting it, and of the rents of the land on which it grows. To give a bounty on corn exported, is, therefore, nothing lefs than to hire our people to work for foreigners, not for the beneficial purpofes of felling to them goods of all kinds perfectly manufactured, and at their market-price, but to make a neceffary of life the cheaper to their manufacturers, feamen, and labourers of every kind.
There are two reafons for the continuance of the bounty, which feem to be moft fpecious: one is urged by the farmer and land-owner, the other by the trader; each of them neglects the intereft of the other, and miftakes his own. The farmer fays, that, without a bounty, no corn will be exported; and that, without an exportation, he could not pay his rent. But he here neglects the intereft of trade, which requires that corn, and all provifions, fhould be as cheap as poffible: for whatever makes them dear, mult male labour dear allo, and moft leffen the fale of our manufactures in foreign markets. And, if the farmer thinks this of no importance to him, he miftakes his own intereft: his particular trade, as well as others, requires that labour thould be cheap ; and the general trade of the nation cannot be hurt, but he muft fuffer with it : for, if our trade decreafes, the number of our people mult decreafe alfo; and nothing can fupport the farmer's bufinels in any country but a great number of inhabitants: this enables him to join together the trades of farming and grazing: his cattle improve his ground, and make it produce more corn, and at lefs expence, than any other method of hufbandry. But he will never feed cattle where he cannot fell them; and he cannot fell them where there are not people to eat them. This will explain the improvements which have been made in our lands fince the Revolution.
As our trade, and the number of our people, have increafed, the farmer has found a greater demand for beef, mutton, butter, \&c. and the ftock which he keeps to anfwer this great demand, manures his land without expence; and, by enabling him to grow on all his lands grafs and corn alternately, makes the crops of both more plentiful. Heuce it is, that common fields have been inclofed, barren heaths converted to tillage, old paftures broken up, and the farmers in general enabled to pay their advanced rents. Thus all the improvements in farming, and the value of our lands, depend on the increale of trade; and the bounty allowed on the exportation of corn can never be of fervice to the farmer or the land-owner, if it is prejudicial to the trader.
Let us fee, therefore, what the trader fays to it. -He objects, that, by taking away the bounty, and, confequently, making our corn cheap, the induftry of the common people will be leffened. To give this objection the more weight it is faid, that the traders in our manufacture-towns find the greateft difficulty in carrying on their bufinefs, upon every extraordinary call from abroad, for our manufactures : that the workmen proportion the value of their labour to the demand for the manufactures; and, when the price of three days labour will maintain their families a week, will not work lix days; and, if the neceffaries of life were to be had at a cheaper rate, the cafe would be fill worfe. It muft be allowed, that this is true with regard to all labour in England, where a monopoly is given to every kind of manufacture, and the trader are not allowed to employ fuch-hands as they think fit and able to work for them, but are confined to fuch only a the law has qualified : but it is very manifet, that, in all countries

## C O R

where induftry is not reftrained, the plice of provifions muft affect the price of labour. And,
This will always be diminifhed, when the neceffaries of life grow cheaper; and the objection fhews not that the increafe of the price of corn, by a bounty on it's exportation, is beneficial to trade; but that there is another evil in our law, which we fhould endeavour to remove: the evil confifts in the various difficultics and difcouragements which are put upon induftry. Many trades a man may not lawfully exercife, who has not ferved an apprenticclhip : others he may not join together: at others he may not work within the limits of a corporation. It would be endlefs to enumerate all the laws of this kind: we need only obferve of them, that every effect they cann poffibly have muft be detrimental to trade: for every man, if not reflained by law, would pais from one employment to another, as the various turns in trade thould require, and would always be employed in the bufinefs for which be was beft fitted, or in which he was moft wanted. In this cafe, either all trades would have a fufficient number of workmen, or would equally want them ; and the confequence of fuch a general want would be nothing elfe but drawing hither great numbers of foreigners; whereas our prefent reftraints often put it in the power of workmen to demand higher wages than their work deferves, and thus prevent the fale of our manufactures abroad.
There is no complaint more common among our merchants, than that foreigners underwork us in almoft every kind of manufacture ; and can we be furprized at it? when the general tendency of our laws is to make labour dear at home, and cheap abroad; when we either forbid our people to work, or oblige them to work in fome difadvantageous manner; when we lay all our taxes on trade, or, which is ftill worfe for trade, on the neceffaries of life; and when we contrive to feed the labourers, manufacturers, and feamen of foreign countries, with our corn, at a cheaper rate than our own people can have it? , To raife the price of corn at home, in whatever manner it is done, is the fame thing as to lay a tax on the confumption of it; and to do that in fuch a manner as leffens the price of it abroad, is to apply this tax to the benefit of foreigners. If then we confider the mifchiefs that the bounty on corn does to trade and farming; in their true light, we may venture to pronounce, that a general excife on all the bread we eat, could pot be attended with more pernicious confequences.
Others, who have endeavoured to maintain the reafonablenefs of taking away the bounty, argue from this principle, That the price of wheat in England has been lower' fince the bounty was granted than before, and compare the prices of wheat, as they food from the feveral mediyms taken upon different numbers of years, fince the bounty was firf allowed in the year 1689, with the prices found from mediums, taken upon equal numbers of years before the bounty took place; which effimation is taken from the foregoing account of binop Fleetwood, which is generally efteemed accurate.
The price of wheat per quarter, upon a medium taken on 43 years, from 1646 , being the firl year the account commences, to 1688 , the year before the bounty was allowed, appears to be at the rate of

1. $2: 10: 8$

From the medium taken on 43 years, from 1689 , being the firft pear the bounty was allowed, to
I73I, the price of wheat per quarter appears to be
l. $1: 18: 0$

An annual lofs to the farmer fince the be nnty took place
1.0:12:8

From 1699 to $\mathbf{4} 688$, being the laft 20 years be-
fore the bounty was allowed, the price of wheat
per quarter was, at a medium,

1. $2: 6: 2$

From 1726 to 1745 , being the laft 20 years in
this account, the price of whent, at a medium,
per quarter, was
An annual lofs to the farmer in price fince the

1.0 7: in

The medium on wheat for 14 years, from
675 to $\times 688$, was per quarter - 1.
The medium of wher for 14 years, from $1-2: 5: 4^{\frac{2}{x}}$
to 1745 , mas of wheat for 14 years, from 1732
An annual lofs to the faimer in price fince the
bounty touk place

1. $0: 9: 9^{\frac{3}{4}}$

Moreover it is obfervable, that, from the year 1689 , being the year when the bounty was firf granted, to the year 1745 , when the account ends, containing the fpace of 57 years, the farmer has received amually 8 s. 5 d. per quarter lefs for his
wheat than it bore, one year with another, for 43 years preceding the year when the bounty was firft allowed.
If the prices of bariey, and other kinds of curn, had been ftated in the bifhop's account; we, might have been enabled to have made the fame computations on them, which would have fhewn how the mediums flood upon them; and it is reafonable to believe that they would appear, upon fuch eftimate, to be lowered confiderably in the prices, fince the bounty.
If the freight from London to Holland be deducted, which is Is. 5 d . $\frac{1}{2}$ per quarter, out of 2 s .6 d . which is the bounty
 ment given to the merchant to export barley; which en couragement is at the rate of $1.7: 7: 11$ per cent. So lihe wife with regard to wheat; when the price of wheat is at Il. 4 s . per quarter, deducting the freight, which fuppofed to be Is. 5 d. $\frac{1}{2}$ per quarter, out of the bounty of 5 s . per quarter, the remainder, 3 s .5 d . $\bar{z}$, is the encouragement given by the bounty per quarter to export wheat, which, in the way of trade, is at the rate of $1.14: 15$ I per cent. So that in the cafe of barley it appears, that, whatever the corn-merchant will allow out of chis 1.7:7: ir per cent. to tempt the foreigners to buy our corn, that allowance, whatever it be, whether 4 the rate of 2,3 , or 4 per cent. will be the advantage that every fuch foreigner will have, in his manufactory of barley of Englifh growth, over the Englifh manufacturer of the fame commodity at every foregn market. And 1. I4: $15:$ i per cent. we fee, is the encouragement which the bounty on wheat gives to the merchant: whatever proportion of this encouragement, whether it be $5,6,8$, or 10 per cent. he may chufe to allow out of this to the foreigner; juft fo much cheaper will the foreigner be enabled to work, and fell his manufacture, than an Englifhman can.
What is fill more grievous in this cafe is, that we always find it very difficult, if not impoffible, in all cafes where there is any confiderable degree of difproportion in the price of a foreign manufacture and our own, to prevent, by any penal laws, fuch manufacture from being run in upon us.
That the running of the foreign manufacture of this kind has increafed upon us ever fince the bounty took place, appears from the many laws which have been made, ever fince that time, to prevent the foreign manufacture of this kind from a vent in our home-market.
If this be a true reprefentation of the ill effects of this bounty befides the lof ofcafioned by it to the nation in general, how great is that which it immediately brings on the farmer? and how can we, withput taking off this bounty, pretend to make any regulation for raifing the price of firituous liquors, to prevent the melancholy effects that arife from the excefs in the ufe of them?
But, if the bounty be withdrawn, a check will be given to the introduction of any fuch foreign-manufactured liquors; and we may then venture, properify and fafely, to lay fome further additional duty upon our own, which will increafe their price, and, confequently, it will be eafier to fupprefs that general depravity and debauchery in thefe liquors that fo univerfally prevails among the poor, even among our mechanics and manufagturers.
If, notwithftanding what has been urged, that the farmer has fold his wheat at the annual rate of $8 s_{r} 5$ d. per quarterlefs, fince the bounty was allowed in the year 1689 , than he did before for the courfe of 43 years preceding that time, it may be faid, that Holland, or any other particular country, will be furnifhed with eorn from other parts of Europe, inftead of buying our's and fo continue their manufactory of fíituous liquors: and that, as the Englifh manufacturers of this kind have never yet gained any vent at a foreign market, it is a mere chimæra to expect they ever fhould gain fuch vent.
In anfwer to this, it may be faid, that, when the price of corn in England is lower than it is in Holland, and in other foreign market or markets, our corn will have a vent at fuch forcign market or markets, without the affifance of a bounty ; and that, in fact, Holland buys our corn for no other reafon than becaule it buys it cheaper, or as cheap, as it does of any other country: and all other countries that purchafe it of us are moved by the fame confiderations: that, in fact, corn has been, of late years, produced in England with as little, or lefs expence, than in any part of Europe, notwithftanding the many difadvantages under which farming labours from feveral laws, meant, indeed, for it's encouragement, but, in truth, very injurious to it's true intereft *.

* Such, for inftance, is reckoned, by fome, the law prohibiting the importation of great cattle, which raifes their price exceflively, and is, therefore, a palpable hindrance to the farmer's purchafing fach nurmbers of then as he could conveniently fatten, or otherwife make a profit of; which he now lofes; and this lofs is accompanitd with another, that of their manure, which annallly leffens his crops of corn: -The farmers allo nearly and fenfibly feel the want of a free market at home, which Smithfe'd crramily is not.The probibition on raw hides is likelvife thought to be an injury to the farmer, as it difcourages the manufacture of leather at home, and promotes it abroad ; and, confequenty, lefiens the farmer's pricefor raw hide 3 , and confiderab y leffens
the number of hands in England, which as neceffarily cecreafes manufactures of this and other kinds; and manu factures are ultimately the fupport of farming
To fay, as fome do, that becaufe poffibly we never have had any vent for our manufacture of firituous liquors in any foreign markets, that therefore we can never arrive at fuch per fcction in goodnefs and cheapnefs as to gain one, feems roundlers, and only a mere ipfe dixit, unlefs it can be proved that our laws, in regard to trade, direct fuch regulations as give a fair trial to the induftry and capacities of the people: but we have not yet made any fuch effectual triat, nor is it perhaps, pofible to make it as long as the bounty fhall remain. Our Britifi diftilery is arrived at great perfection and what lengths they might go, under proper regulations, is not ealy to fay
Thus I have candidly and impartially ftated the argument for withdrawing the bounty. I fhall now attempt to do equal juftice to the other fide of the quettion, and fubmit the whole o the judgment of thofe who may make a national ule of it. The demonftration which is faid to be given of the prejudice of this bounty to the national wealth, is not convincing from the comparifon drawn of giving away the labour of a man, nor is it a juft fimile: for it is not true that the bounty is given away to foreigners; it is our own land-owners, and our own' people at home, who receive all the benefits of it: for it is by means of the bounty alone that we are enabled to fupply foreign markets as cheap as other corn-countries do ; without it we fhould not have fold near fo much to the French even this year ; they having purchafed very large quantitie elfewhere, and at cheaper rates, notwithftanding the bounty. And, when the merchant here makes an eftimate of the advantage of exporting corn, from the flate of markets abroad, he would very rarely find encouragement for the undertaking without the bounty, by which he efteems the coft fo much leffened ; for there are divers charges of collecting and fhipping grain, of freight and fale, \&xc. that greatly enhance the price, and make it come dearer to the confumer. Wherefore, it is by means of the bounty alone that our lands are improved, common fields incloled, barren heaths converted o tillage, and old paltures broken up; and it is the bounty alone that enables the farmer to pay his advanced rent, though fome afcribe all thefe benefits to quite a different, and al together an infufficient caufe. The bounty was wifely defigned by our anceftors, to make England the chief granary of Europe ; and the event has verified their excellent difcernment, by bringing in millions of money into the kingdom, which we could have never had reaton to expect, while other countries, without this bounty, could have underfold us. And, as the riches of a nation depend upon the multitude of inhabitants ufefully employed ; 1o, without thefe improvements of the land there muit have been les work, and would, confequently, have been lefs people in the kingdom. Since then it is the bounty which has fo much increafed the value of our lands, according to the intention of parliament, in wifely granting it, the withdrawing it muft have the contrary effect; for then the farmers mult be undone, and the corn-trade be abfolutely. loft to the kingdom, or there muft neceffarily be a reduction of rents of more than 30 per cent. which will fcarcely be relifhed by the land-owners, even if totally exempted from the land-tax, which does not feem very likely foon, if ever to be the cafe. Nor would fuch a declenfion in the value of lands fail to make ftrange havock in the kingdom; for, though the bounty bas greatly encreafed the value of lands, yet every purchafer of land buys that advantage ; and, as the bounty is of more importance to the and than would be, perhaps, even a total exemption from a and-tax, though the ballance in the prefent fituation is greaty in favour of the revenue: it feems, therefore, for the gene ral intereft of the nation, that the old laws be continued; and as they have fo much increafed the trade and riches of the nation, it is wifdom to know when we are well in fo important a circumftance, and not attempt an alteration, left the point hould be miftaken, and other nations get this trade out of our hands : for, wihout the bounty, we have little reafon to expect but a very fmall fhare of it, unlefs in times of very exraordinary plenty at home, and of extreme want abroad, Which may but feldom happen together.
