The damage fuftained by the merchandizes left in the fhip, when the others were thrown overboard; the dreking the wounds, and maintaining of fuch failors as were wounded in defending the fhip, and the expences of unlading for entering into fome harbour, or into a river, or for putting the veffel a-float again.
The provifions and hire of the failors of a his ftopped in her
voyage

## A V E

## A VE

byage by the order of a fovereign, when the thip was hired by the month, and not for the voyage.
All thefe large and common averages ought to be borne by the thip anid cargo, and to be regulated, upon the whole, in France, at the rate of a fol per livre; or 5 per cent.
The fmatl averages are the loadmanages, towing, and piloting of ihips, for entering into, or coming out of, harbours or rivers; one third of theffe expences muft be borne by the fhip; and two thirds by the cargo.
They do not reckon among averages in France, the fees paid for the llberty of departing, vifiting the hhip; reports; tuns, buoys, or fea-marks, and anchorage. All thefe muft be borne and paid by the mafter of the fhip.
The damages, fuftained by fhips falling foul of one another, ought to be borne and paid in equal proportions by the mafters of both fhips, this not being reckoned any part of the other averages. But yet, if the falling foul of one thip upon another is occafioned through the fault of one of the matters, the damage muft bè made good by him alone.
All thofe averages may be feen in the ordonnance of the marine in France, iflued in Auguft 1681, title 7, of the third book.
Average, fignifics alfo a duty paid for the maintaining of a harbour, by every fhip that enters in it.
Average, according to the merchant's law in England, is ufed or taken for a certain contribution that merchants, and other traders do proportionably make towards their loffes, who have their goods caft into the fea for the fafeguard of the thip, or of the goods and lives of them in the fhip, in the time of a tempeft; and this contribution feems to be fo called, becaufe it is proportioned after the rate of every man's average, or goods carried. Ships being freighted, and at fea, are often fubject to ftorms, and other accidents, in which, by the ancient laws and cuftoms of the fea, in extreme neceffity, the goods, wares, guns, or whatfoever elfe fhall be thought fit, may, in fuch extremity, be flung overboard; but then the mafter ought to confult with his mariners, who, if they confent not, and yet the ftorm and danger continues, the mafter may command, notwithftanding, the cafting overboard what he fhall judge moft fitting for the common fafety of the reft. So likewife goods coming from infected towns, or places, may be caft overboard; and, if an action be brought at common law, the defendant may juftify the lame, by pleading the feecial matter.
If there be a fupercargo, a requeft ought to be made to him to begin firt ; but, if he refufes, the mariners may proceed.
If the fhip fo fortunes as to out-weather the ftorm, and arrives in fafety at her port of difcharge, the mafter, and moft of the crew, mult fwear that the goods were caft over for no other caufe but purely for the fafety of the fhip and lading. The cuftom of clearing that point varies according to the feveral countries or places they arrive at
Where goods are laden above the overlope, or forbidden goods be tranfported; if fuch goods happen to be the caufe of any danger or damage, the mafter fhall bear the lofs; allo he may be profecuted criminally.
King William the Conqueror, and Henry I. made and ratified this law concerning goods caft overboard by mariners in a ftorm, in imitation of the Rhodian law, de jact.
The fhip arriving in fafety, the remainder muft come into the average, not only thofe goods which pay freight, but all thofe that have obtained fafety and prefervation by fuch ejection even money, jewels, and clothes, and fuch like are not exempted.
But thofe things which are borne upon a man's body, victuals, and the like, put on fhip-board to be fpent, are totally excluded from the contribution
The mafter ought to be careful, that only thofe things of the leaft value, and greateft weight, be flung overboard.
In the rating of goods by way of contribution, this order is obferved : if they chance to be caft overboard, before half the voyage be performed, then they are to be efteemed at the price they coft; if after, then at the price as the reft, or the like, thall be fold at the place of difcharge.
The perfon, whofe goods have been caft, is to be careful to have the fame eftimated before the fhip do difcharge, wherein the mafter ought to be affiftant.
Goods are fhipped in Englarid, and a tempeft arifeth, the paffengers, for faving their lives, caft them overboard, and another Englith flip takes them; the owners bring trover, it lies, becaufe delivered upon the land. 2. Rolle's Rep. 498. Cafes v. Tooker.

It is lawful for paffengers to caft goods overboard out of a ferry-boat, in cafe of a tempeft, for prefervation of their lives : fo, if the ferryman furcharge the boat with goods, the owners of the goods hall have their remedy againtt the ferryman in this cafe of a furcharge, but not in the other cafe. 12 Coke 63. 2 Bulftr. 280.
As this law doth take care that this common calamity fhould be borne by all the parties interefted, by a general contribution; fo the common law takes notice of the misfortune, and makes provifion to indemnify the mafter; and, therefore, if the party owner of fuch ejected goods fhall bring an action againit the mafter, or owners of the veffel, the defendant may
plead the fecial matter, and the fane thall bar the phititifi ${ }_{12}$ Coke 63. 2 Bulitr; 280. Bird verf. Aftoot.
But, if the fhip's gear, or apparel, be loft by form, the fame is not within the average, but is accounted like unto a workman breaking or fpoiling his tools; except in the avoiding of a danger, as the flinging the maft overboard, or the hipping the tow-anchor or boat
Goods brought fecretly into the fhip, againft the mafter's or purfer's knowledge, if cjected, no contribution is to be had As the common law looks upon the goods and cargo as a pawn, or pledge, for the freight; fo the marine law looks upon them, ikewife, as a fecurity for the anfwering the average and contribution, and that the mafter ought not to deliver the goods till the contribution is fettled, the fame being tacitly obliged for the one as well as the other.
If, through the rifling of the fhip, or the cafting or unlightening the fhip, any of the remaining goods are fpoiled, either with wet, or otherwife, the fame mult come into the contribution for fo much as they are made worfe.
If it falls out that a fhip, entering into a port or channel, cannot make way, and there be a lightening or difburdening of the fhip, then the contribution falls two parts to the lading, and one third part to the fhip, except the fhip furpaffes in value the lading, or that there is fome bad quality in the fhip itfelf:
But, to prevent that ambiguous queftion, if the party covenants that the goods fhall be delivered at the port covenanted and appointed, then condition makes law.
So fot the pilot's fee, and rifing of the fhip off ground; when there is no fault in the mafter.
If two flitips happen to encounter and crofs each other, and the crew fwear their innocency, contribution muft be made by a juft equality; but, if one perifhes, as there can lee no proportion of the lofs, fo no contribution. The reafon give is, for that, otherwife; a $k$ kipper might, on purpofe, fet an old weak fhip againft a ftrong flip, and, by that means, hedge himfelf into a contribution and recompence. However, this bars not the owners from bringing their action againft the negligent mafter, by which means he may recoop himelf in damage; if it happens at fea, the action, by the civil law is called legis aquilæ. Goodwin ver. Tompkins. Noy. Rep. 148.
If fuch a misfortune happens in the night at fea, the party, if he will completely arm himfelf for his recovery, ought to prove that he made out light, or fire, or otherwife gave notice, by crying or calling out.
If it falls out in the fhip, or veffel, by the indifireet fowing or lading thereof above the birth-mark, that fuch ejection happened, in that cafe it has been ufed by the marine laws that no contribution be made, but fatisfaction is to be anfwered by the thip, malter, or owners
If falt, or corn, be laid loofe, or in an heap, by divers perfons in one fhip, without diffinction, and the mafter delivers to any of them their due fhare, or quantity; but, before the reft receive their fhare, or meafure, the remaining falt, or corn, waihes, or lofes; thofe that hiad the good fortune to have their fhares, fhall enjoy it, without any contribution to the other partners.
If, to avoid the danger of a florm, the mafter cuts down the mafts and fails, and they, falling into the fea, are loft, this damage is to be made good by the thip and lading, pro rata: otherwife, if the cafe happens by ftorm, or other cafualties.
No contribution is to be paid, in cale one fhip ftrike againft another, whereby damage happens; but full fatisfaction is to be anfwered the merchant, in cafe of fault, or mifcarriage, 'in either, or an equal divifion of the damage, in cafe it happens by a cafualty, as above.
If a lighter, or kkif, or the Thip's boat, into which part of the cargo is unladen, for the lightening of the fhip, perith, and he fhip be preferved, in that cafe contribution is to be made; but, if the ihip be calt away, and the lighter, boat, or Ikiff be preferved, then no contribution, or average, is to be had, it being a rule, No contribution but where the fhip arrives in fafety.
If a hip happens to be taken, and the mafter, to redeem the fhip and lading out of the enemies or pirates hands, promifes them a certain fum of money, for performance whereof himfelf becomes a pledge, or captive, in the cuftody of the captor; in this cafe he is to be redeemed at the cofts and charges of the hip and lading, and money, if there be any in her, to be conributed, according to each man's intereft, for his ranfom. So, where a pirate takes part of the goods to fpare the reft, contribution mult be paid.
But, if a pirate takes by violence part of the goods, the reft are not fubject to average, unlefs the merchant hath made an ex prefs agreement to pay it after the thip is robbed.
But, if part of the goods are taken by an enemy, or by letters of mart and reprifil, e contra.
So likewife in form, if the fame is done for prefervation of the remainder.
The mafter may hypothecate the ihip for his own redemption. Lord Raym. Rep. 22.

A fhip was taken by a French privateer, and the mafter of her ranfomed her for 1,8001 . (the mafter having a fhare in the hip, the mate was carried into France as a hoftage for this money. Lord chancellor faid the ranfom-money muft be raifed out of the firft profits, notwithftanding any former mortgage of the fhip; for, if there was a precedent mortgage, what would have become of the fecurity, if the fhip had not been redeemed? After the thip was redeemed, fhe performed her intended voyage, and the freight-money, earned after her redemption, was the firt profits arifing, and out of thefe the ranfom-money is to be fatisfied. This was upon motion. The lord chancellor faid, the infurers always paid part of the ranfom-money. Hil. 7 Anna, in Chancery, Lopes and Winter. In ejectment the mafter, or purfer of the fhip, shall contribute for the prefervation of the hip, and allo the paffengers, for fuch wares as they have in the fhip, be it pearls, precious ftones, and fuch like; and paffengers that have no wares or goods in the fhip, yet in regard they are a burden to the fhip, eftimate is to be made of his and their apparel, rings, and jewels, towards a contribution of the lofs; and generally all things in the fhip, except the victualling and provifions of the fhip, and the bodies of men (unlefs fervants) muft bear a proportionable fhare in the contibution.
The eftimate being made of the goods loft and faved, the price is to be fet down, not for how much they were bought, but how much they might be fold for, at the time when the ejectment was made; and, if any thing be flung into the fea, and endamaged, and afterwards is recovered again, yet contribution is to be made only for the damage.
Contribution is to be paid for the pilor's fee that hath brought a fhip into a port, or haven, for her fafeguard, it not being the place fhe was defigned for, fo to raife her off the ground, when there is no fault in the mafter.
If a maiter of a fhip lets out his fhip to freight, and then receives his complement, and afterwards takes in goods, without leave of the freighters, and a ftorm arifes at fea, and part of the freighters goods are caft overboard, the remaining goods are not fubject to the average, but the mafter mult make good the lofs out of his own purfe.
The goods which are loft are to be valued, and the goods faved are to be eftimated; which being known, a proportionable value is to be contributed by the goods faved, towards reparation of the goods ejected.
In which, regard is always had, not to what might be got by the goods loft, but what the intrinfic damage is by the lofs of the fame; the which are not fo much to be eftimated what they might have been fold for, as what they might coft, or were bought for.
But now the cuftom is general, that goods faved and loft are eftimated according as the goods faved were fold for, freight and other neceflary charges being firf deducted *.

* The cuftom of places varies this modus of eflimating ; the which is done by merchants and mariners, indifferently no. minated by the coart.

If there were plate, jewels, or the like, in a trunk, cheft, pack, or bale, at the time of their ejection, if there be a fupercargo, he ought to give notice, by difcovering of the fame to the mafter or mariners, otherwife he fhall be anfwered in the contribution no more than the bare extrinfic value appeared to be: but the affurers will hardly fare fo well.
If contribution fhall be fettled, and the merchant will not agree, the mafter may detain the lading, for the fame is as tacitly obliged to anfwer that, as the freight; and if, at the common law, the merchant fhould bring an action, the de- ${ }^{-}$ fendant thall bar him, by pleading the fpecial matter.
If goods are calt overboard, and afterwards are recovered, contribution ceafes, faving for fo much as they are damnified, and made worfe, by reafon of fuch ejectment.
Note, Goods calt overboard, to lighten the mip, make no derelict.
And, though neceffity feems to fubject the lading to ejectment, to prevent the ruin and deffruction of the perfons, yet fome lading feems expected; and, therefore, cannon, and other inftruments or provifions, conligned to relieve a city, ought not to be flung overboard; for, in fuch cafe, the law impofeth on every fubject, that he prefer the urgent fervice of his prince, before the-fafety of his life.
The French file thofe effects or merchandizes Averaged. (avariées) which have been damaged, during the voyage, by a form, fhipwreck, running a-ground, or otherwife. Thus they fay, du caffé avariée, de la cochinelle avariée; that is, damaged coffee, or cochineal.
AUGUST, the eighth month in the year, reckoning from January. That month is efteemed one of the richeft in the whole year, becaule of the harveft of wheat, and feveral other forts of corn, which is produced in that feafon; which gave rife to this French proverb, A man has made his Auguft; which proyerb is very much ufed among merchants, to fignify that a man tas been fucceffful in trade, and got an eftate.
A $\because$ IGNON BERRY, the fruit of a fhrub, produced in great plenty near Avignon in France, fomewhat leís than a pea, of
an aftringent and bitter tafte, it's colour green, inclining to wards a yellow. It is much ufed by dyers and painters.
AUNIS, the fmalleft province in France, is bounded on the weft by the ocean; on the north by Poictou, from which it is feparated by the river Sevre; and, on the eaft and fouth, by Saintonge. This province is very fruitful, and well peopled.
La Rochelle, bas been always a very confiderable port and trading town. Without the leave of the governor of the Tower of the Chain, no veffel can enter into the harbour. They drive here a confiderable trade into the inlands of America; and the Englifh, the Dutch, the Swedes, and the Danes, fend here yearly a valt number of hips, to load wine, brandy, falt, paper, and linnen cloths. The merchants here fend all the neceffaries of life into America, and bring back from it the product of thofe countries. Their chief manufacture here is the refining of fugar ; they have alfo fet up of late a manufacture of earthen-ware, which fucceeds very well. Here is a fovereign court for the falt-marhes in the weft, and a court of the mint.
Marans, is a very rich town, and the inhabitants carry on a great trade in corn. They keep here a market once every week, and furnifh the whole province with wheat and meal.
At Surgeres, they keep feveral markets, and drive a confiderable trade in horfes.
AVOIRDUPOIS-WEIGHT, a kind of weight ufed in England, the pound of which is made up of 16 ounces.
This is the weight for the larger and coarfer commodities, viz. groceries, cheefe, wool, lead, hops, \&ic. Bakers who Iive not in corporation towns are to make their bread by avoirdupois-weight ; thofe in corporations by troy-weight.Apothecaries buy their drugs by avoirdupois-weight, but fell by troy.
AURICHALCHUM, among the modern writers, fignifies a factitious metal, commonly called brafs. It is a mixture of copper and calamine-ftone, melted together by a very fierce fire.
AURIPIGMENTUM, or ORPIMENT', is a fcaly mineral fubfance, or glebe. It is extremely flaky, like tale, though it's little fcales eafily feparate from each other. With regard to colour it is of three kinds, viz. (r.) Gold-coloured, or yellow. (2.) Red, or cinnabarine, mixed with yellow; and, (3.) Greenifh, or yellowifh, mixed with a large proportion of earth, and; therefore, the coarfert. All the fpecies are found in the mines of gold, filver, and copper. But the auripigmentum we commonly meet with is the yellow fort. It's tafte is very little, if at all, acrimonious; it diffolves in oil; it flames in the fire, and then yields a garlic odour. By fublimation it yields flowers like thofe of fulphur, having a hard red mafs, or kind of regulus, at the bottom of the fubliming veffel; but, if urged with a ftrong fire, this mafs alfo feems torife, and concretes, on the upper part of the veffel, into a beautiful, red, tranfparent fubftance, like a ruby, leaving only a fmall proportion of a metalline earth behind. It's fumes in burning, being received by copper, render the metal white and brittle, which may give fufpicion of an arfenical quality; and, perhaps, it is of a mixed nature, between common fulphur and antimony, or between fulphur and the milder arfenical fubflances : but it's real nature is not hitherto fufficiently determined; though Dr Hoffman has beftowed fome pains in examining it, and produces arguments to prove it innocent, not only frofic chemical experiments, but alfo trials made upon dogs; but both thefe kinds of trials we know may deceive, or fometimes be fatally transferred from one fubject to another. Under this uncertainty it cannot be advifeable to give it internally; though it is fufpected to be frequently given by certain people, fometimes with good, but often with bad, effects.
It is commonly ufed by painters for a gold colour, and as a depilator, with quick-lime, at the bagnio's; it is alfo an ingredient in the making of fhot, and in the fympathetic inks, which, by their fumes, render certain invifible inks confpicuous. We have feen it in ftalks of a moft vivid, beautiful red, green, and yellow tranfparent colours, brought from abroad, in hopes of obtaining gold from it; but the experiment did not anfwer *.-It has been called, both by the ancients and moderns, realger, red arfenic, and fandaraca: which confufion of names has given occafion to feveral errors.

* See Hoffman's Obfervat. Phyf. Chym. p. 259; 267.

AURUM FULMINANS, or CROCUS of GOLD, is gold in file-duft, diflolved in aqua regia, and precipitated into a brown powder, by oil of tartar per deliquium, poured upon the diffolution. This powder, dried, has much more force, and takes fire fooner than gun-powder. This preparation of gold is efteemed, by the ableft chymifts, as a fudorific, very proper in the fmall-pox, given from two grains to fix. It is likewife good to fop vomiting, and fupprefs the too vigorous operation of mercurial medicines.
AUSTRIA, an archduchy in Germany, has Hungary on the eaft, Bavalia on the welt, Bohemia on the north, and Styria

## A U S

## $A \cup S$

on the fouth. It is a plentiful country, and produces a great quantity of corn and pafture, and of better faffron than what quanes from the Indies, befides all other neceffaries. Though here is wine enough both for confumption and export, yet 'tis fupplied with other rich wines both from Hungary and Italy; fo that at Vienna there are no lefs than thirty feveral forts. They, not having plenty of black cattle, are fupplied with great part of their beef from Hungay.
${ }^{\text {great part of their }}$ Tis commonly diftinguifhed by geographers into Upper and Lower Auftria, and indeed is naturally fo divided by the river Ens, which falls into the Danube.
Lintz, is the capital city of Upper Auftria, has an excellent manufacture of gun-barrels, a good trade in linnen cloth, and two fairs at Eafter and Bartholomew-tide, much frequented by foreigners. From this place to Munich, are many plantations of hops.
Gemund, is a town at the mouth of the Draun, where it falls into the Genuunder-lake. It has a confiderable trade in falt, which is made at Halladt in the neighbourhood, brought hither by the lake, and exported as far as Vienna, which is 118 miles from thence.
Steyer, is a town 20 miles fouth of Lintz, cliefly inhabited by fmiths, cutlers, and other manufacturers in iron; who, by the Danube, fend their wares in great quantities to the neighbouring parts.
Fkeystat, is a town 25 miles north of Lintz, famous for a palatable beer, which is carried to the neighbouring country; and for a fortnight's annual fair, beginning on St Paul's day, which is much frequented.
Krembs, a city 40 miles weft of Vienna, has a great trade, efpecially at it's two yearly fairs, which begin on St James's -and St Simon and St Jude's days, hold each a fortnight, and are frequented by merchants and tradefmen from all parts of Germany, Bohemia, Moravia, Hurgary, and Poland.
Baden, is a place of great refort, becaufe of it's natural baths.
Haimburg, was one of the greateft mart-towns in thefe parts, till the year 1200, when Leopold VI, duke of Auftria, tranfferred it's ftaple and commerce to Vienna.
The duchy of Styria, lying between Auftria and the Save, abounds with wine, fruit, mines of iron, falt, and fuch plenty of corn, that they want vent for it. But the Upper Styria has no wine, fo that they barter wool, butter, cheefe, \&c. for it, with Lower Styria.
Judenburg, on the river Mur, 50 miles wert of Gratz, and 90 fouth of Vienna, has two great yearly fairs, for cattle and other merchandizes, on Afcenfion and St Urfula's days.
Bruck, on the river Mur, is noted for a great cattle fair.
Eisenartz, 40 miles north-weft of Gratz, is famous for it's mines and forges of iron, from whence it has it's name. The mines were difcoverad anno 712, and bave been worked ever fince, without any fenfible decay. They employ 19 mills on two fimall rivers in the neigbbourhood, with a vaft number of labourers, who live here, and fupply the neighbouring parts with this metal, and all Germany with fteel. Here is a yearly fair, where hemp, leather, tallow, and all neceffaries, are bartered for their iron and fteel. Their works were formerly managed by 19 officers; but the emperor Ferdinand II. incor porated thefe mines of Styria and thofe of Auftria, under a lieutemant.
Gratz, lying on the tiver Mur, has two fairs a year, one in the Midient, the other the firft of September, which hold each a fortoight.
At Rakelsburg, on the river Mur, the burghers have the fole privilege of purchafing all the new wines, from Michaelmas to Cathaine-tide. Cuftoms are here paid for goods that come from, and are fent to Hungary.
The duchy of Carinthia, is fupplied with wine from its neishbours.
At Friesach were formerly mines of gold, that have been exhaufted.
LaAs, near the famous lake of Kirknitz, is noted for a breed of well-fhaped torfes.
Uppfr Laubach, on the river Boick, is confiderable, by being a mart for Italian goods, which are brought hither in gleat quantities over the mountains from Goricz, and fent to all parts of Germany.
The pruvince of Windiscmark, though à mountainous barren country, efpecially towards the fouthward, produces corn and excellent uhite wine.
Rudolesworth, on the river Gurck, is famous for the beft wine in thele parts, and at four miles diftance are hot baths, much frequentel by foreigners.
The province of Karstia, is remarkable for a breed of good horles, which are bought up by moft of the Italian nobility.

## Remarks.

At Teifstr, on the Adriatic fea, a foa-port belonging to the imperial hereditary dominions, are made great quantities of falt, and exportel; and the neighbouring country produces good wine, that the Germans call reinfal, which the Venetians buy cheap, and fell for exportation. Here is a large harbour, but 'tis only frequented by fmall veffeis juft to crols Vol. I.
over to Venice; though the late emperor Charles VI, who had no other fea-port in all his hereditary domivions before the treaty of peace at Raftadt, which threw Ltaly, Sicily, and the Spanifh Netherlands into his hands, made this a free port, and gave great encouragement to the fhips and merchants of all nations to come to it, defigning to make it the center of the Auftrian commerce in thefe parts of the world. But, the merchants of Triefte not having a flock, the Venetians themfelves came among them, and caried on that very trade for them, by which they were fo fanguine at one time, as to think of fupplanting even Venice itfelf: for from this port the Venetian merchants ffruck into a new commerce, by the fiver Save to Belgrade, and thence to Sinope in the Black Sea, and likewife to Conftantinople: and the moft that it appears the Germans have yet done here is, to fend fome fhips among the Archipelago illands, from whence they bring back wines, cotton-yarn, fruits, and fome filk, grogram-yarn, camel's hair, and fuch goods. But the grear misfortune which the Auftrians laboured under for carrying on the great trade propofed from this port was, that they bad no fund of goods for exportation, either of their produce or manufacture; the chief they could export, of any value, being the wrought iron made in Carinthia, Styria, and the adjacent countries; which indeed is of great fervice to the Venetians, becaufe they have no iron works near them.
The Venetians alfo have a navigation through Styria, by the river Mur, to the Danube, and fo to Vienna; and they have the like in Carniola, by the great river Save, which runs into Croatia and Hungary. By thefe countries the Venetians receive a great quantity of large black cattle, which are bought lean, or not above half fed, from Croatia, and then trough down to the falt marfhes of Venice, and fed there till they are fat. Some alfo are bought at the feveral fairs on the frontiers of Styria and Carinthia; and they are the beft beef, when fed in the rich lands of Lombardy, that is to be found in thofe parts of the world. Upon the whole theretore, the trade of this new free port is not likely to anfwer the end propofed; yet the merchants here keep up their expectations of trade, and lately talked of erecting fome manufactures of wool and filk, that they might have fomething more to export befides iron.
The houfe of Auftria have a noble revenue from the rich wine made and fold at Profeg, which is about 7 miles nothweft of Triefte.
Wipack, ftanding on the river of the fame name, is alfo famous for it's ftrong wine and horle-fairs, which yield the houfe of Auftria great profit. The wine goes by horfe carriage over the mountains to Camiola, and is from thence conveyed into the empire.
The Bifhoprick of Brixen, though lying among the Alps, abounds with excellent wine. The city of Brixen is the ftation of fome merchants between Germany and Italy. Here their beft flops are kept in vaults, which run from one fide of the flreet to the other.
Tirol, has Swabia and Bavaria on the north, the Grifons and Trent on the fouth, Carinthia on the eaft, and Switzerland on the weft. Here are mines of filver, iron, and copper, but the latter much fhort of what they were formerly, when they conftantly employed 30,000 people, but now not 2000 . From thefe mines of metal, and others of falt, the emperor has a confiderable revenue; and they fill the country with greater numbers of people than it would be able to bear, without the importation of corn from foreign parts.
At Wabtringen, all their fubftance and trade is in cattle. They have no corn but what comes from Bavaria.
Schwatz, three leagues from Infpruck, is noted for mines of filver.
Halle, the fecond city of Tirol, is famous for it's falt wniks, where feveral hundred men are contantly employed, either in the works, or cutting fuel for them. The chief of them are in the mountains, four miles from the town; but the water 'tis made of, after having food a month in the trenches there, is brought to the town by troughs, to be boiled in great pans or cifterns, each 48 feet long, 34 broad, and three deep. Three of them are continually boiling, and one of them refts a week alternately. Mr. Addifon, who was here above 40 years ago, fays, they then made after the rate of 800 loaves a week, each loaf $4 c 0$ weight; and that the emperor, after having defrayed all the charges of working it, cleared but 200,000 crowns a-year.
Thefe falt-works, and a mint eftablifhed here, have rendered this town, though fo near to Infpruck, almoft as populous as that capital. Here they coin a great quantity of fpecie from the filver and copper taken out of the mines of Tirol, in which, 'tis faid, 7000 men, women, and children are conftantly employed, and the water is brought to it by wooden pipes. They drive alfo a great trade in copper and tin, as well as falt; the vent whereof is much promoted by the river Inn, which here becomes navigable.
At Inspruck, the capital of Tirol, was formerly made great fore of falt, but for fome years paft the pits have been dry, which is reckoned a lofs to the city, of no lefs than 200,050 florins a year.
Meran, 30 miles fouth of Infpruck, is a place of good trade.
bolzano,

Bolzano, as it is called by the Italians, or Pozen by the Germans, 12 German miles from Infpruck, is a place of good trade, efpecially at it's four yearly fairs, which hold each a fornight, and to which great numbers of merchants refort from Germany, Switzerland, and Italy, for whofe fake great privileges have been granted to the city. During thefe fairs, merchants are allowed magiffrates and judges of their own, diftinct from thofe of the town; and none are permitted to trade, without being entered in the judge's books, and a certificate of the entry under the feal of the corporation.
At Roveredo, on the eaft fide of Adige, if miles fouth of Trent, and 29 north of Verona, the moft remarkable thing, and what they call the great wonder at Roveredo, is it's fininning houfe for the manufachure of filk, in which they have a great trade here; a fabric being erected to carry it on upon the banks of a little brook, which turns a large wheel that communicates motion to a machine within the houfe, that fpins raw-filk without any body's touching it, farther than to fet it a-going: and it is remarkable, that it throws or winds off, a leaft 600 pounds weight of filk at once, fo that it makes a prodigious quantity in a day. When this filk is dyed, it is manufactured into fatrins, damafks, velvets, and other fluffs, which are fold at the fairs of Bolzano, and from thence tranfported to Germany.

## The AUSTRIAN NETHERLANDS.

They contain the following ten provinces, viz.
The earldom of Artois.
The earldom of Cambrefis.
The duchy of Luxemburg.
The duchy of Limburg.
The earldom of Namur.
The earldom of Hainault.
The earldom of Flanders.
The marquifate of the Holy Empire.
The lordihip of Mechlin.
The duchy of Brabant.
To which may be added the bilhoprick and principality of Liege.
As the provinces of Artois and Cambrefis belong entitely to France, we fall only touch them here occafionally, in the following account of the Auftrian Netherlands, and refer to the particular provinces which belong to France, under their names.
The Auftrian Netherlands are bounded by the United Provinces on the north, by Germany on the eaft, by French Flanders, and by Lorrain, Champaign, and Picardy on the fouth, and by another part of Picardy and the Englifh fea on the weft.
This fpot was once the center of the woollen manufactures, which we have now the fatisfaction to call the Englifh manufactures, originally derived from the Flemings; whofe country was thereby immenfely populous and enriched.
The materials for thefe manufactures, particularly the wool and the fuller's earth, they had from England. As the wool of the Englif by this means brought them in confiderable wealth, they did not fee their error till about the year 1450 , when they began to think, that thefe manufactures might as well be made in England as in Flanders, or the LowCountries; and their own people be employed in this prodigious fcene of traffic, to the enriching of themfelves rather than their neighbours.
On thefe motives, they wifely put a flop to the exportation of wool; the clothing was gradually encouraged in England, by the means of manufacturers obtained from the Netherlands, to inflruct our people in making the cloth, as well as duly managing of the wool for that purpofe.
Though the people of England made a great progrefs in the manufacture, yet 'twas many years before they were able abfolutely to fupply their own confumption. The Flemings had ftill the whole woollen trade to all the reft of the world; and thefe manufactures made at Ghent, Bruges, Bruffels, Lifle, and all the great cities of Flanders, Hainault, Artois, and other provinces on that fide, were vented in France and Spain; and thofe made in Brabant, Utrecht, Holland, Gueldre, and all the provinces on that frde, were fent to Germany, Lorrain, Switzerland, \&c. by the navigation of the Rhine and the Elbe.
By the advantageous war England had with Spain, under the reign of Queen Elizabeth, who exerted the utmolt pitch of policy for the encouragement of commerce, they not only fupplied their own country amply with the woollen manufactures, but began to fupply ofhers; great quantities of fine cloths being exported in her reign, to Turky and Perfia, Venice and Naples
To complete the ruin of the Flemings, in this important manufacture, the exportation of our wool was abfolutely prohibited, and the principal artifts came to England, and fet up their manufactures here. And the Spaniards, at that critical time, being feized with a religious frenzy, perfecuted this people, who fled to England by thoufands, as an afylum ; and, from that period, we may date the effectual eftablifhment of this glorious manufacture in England, and it's deflruction to our predeceffors.

As thefe refugee Flemings were proteftants, and generally manufacturers; fo, in order to carry on their trade bere, according to the great encouragement given them by the queen, they fertled in feveral parts of the kingdom, as were the moft convenient for their purpofe, and eftablifhed fuch manufaclurès in thefe places, as they were bred to in their own country; as the fluff-makers, at Norwich; the coarfe cloth and kerfymakers, at Leeds, Hallifax, and Wakefield; the ferge makers at Exeter; the baize-makers at Colchefter: and there were Dutch churches eftablifhed in all thole places, by Queen Elizabeth's patents for their encouragement.
But, as this antient manufacture could not be fuddenly extirpated abfolutely from among the Flemings in their own country, thofe ingenious and induftrious people kept on fuch manufactures as they were able; as particularly that of coarfetapeftry, made at the city of Arras, in Artois, as allo at Doway, St Omers, and the parts adjacent; of which they continue to make pretty large guantities to this day, as alfo of fome coarfe drugget-ftuffs made at Ypres, and other parts; fome whereof are ufed in England for beds, hangings of rooms, \&c. Thus they fruggled as long as they could.
But, thefe being deprived of their fund of wool, the people were gradually obliged to turn their hands to other things; which brought them to the making of lace and linnen, to filk weaving, and to other bulinefs of various kinds. For the Flemings and Walloons are fo induftrious a people, that, notwithfanding the lofs of this great trade, which was the life of their whole country, yet they have retained many valuable manufactures.
The manufactures, carried on in thefe provinces at prefent, are as follow :

1. Lace, known by the name of bone-lace, of which the fineft and beft of the kind, in Europe, is faid to be made at Bruffels, The variety hereof is very great: and they tell us of lace made in that part of the country, from 30 to 501 . fterling per yard: by which extraordinary improvement they have fo far out-done the French and Italians, and even the Venetians themfelves, that thefe laft have very little trade for their lace, though they were once juftly famed for the fineft in the world.
The principal places for this manufacture are, Mechlin, or Malines, Bruffels, Louvain, Valenciennes, Antwerp, and all the adjacent towns; and it employs a great number of peom ple, efpecially women and children.
2. Fine thread, is another of their manufactures; the great quantity of fine lace requiring a great quantity of fine thread, as their linnens require a proportionable quantity of linnenyarn; and both thefe together conftitute another manufacture of no little concern to thefe people.
3. Their manufacture of linnen is very confiderable. Their linnen confilts of two forts chiefly, viz. Cambricks and lawns. Their cambricks have been made fo fine, as to have been fold from 20 to 30 s . per yard in London. They were formerly made only in the provinces of Artois* and Cambrefis t, from which laft they had their name of cambricks; but, the demand for them being fo great of late years, the whole country has been little enough to carry on this manufacture, efpecially that part of it bordering on France, together with the great cities of Doway $\oint$, Lille $\|$, Mons $\ddagger$, Ypres $\dagger$, Ghent **, and Bruges $\|\|$. Befides thefe cambricks, there is a great manufacture of linlen at Ghent and Bruges, and all the cities upon the Lower Schelde; which manufacture alfo is of a magnitude greater than can eafly be reprefented.

* Artois is a principality of the French Netherlands, fituate between Flanders and Picardy.
+ Cambrefis alfo is in the French Netherlands, fituate on the riCambrefis alfo is in the French Netherlands, fituate on the ri-
ver Schelde, near it's fource, near Valenciennes and Doway.
§ Doway; a city of the French Netherlands, in the principality of Flanders, fituate on the river Scharpe, about 14 miles fouth of Lifle.
II Lifle, in the French Netherlands, is fituate on the river Dente, about 25 miles north of Arras, and 12 miles weft of Tournay; a large populous city, which has not only large manufactures of fire cambricks and linnens, but of filk, in great perfection, and their camblets alfo are moch admired.
$\ddagger$ Mons, a city of the Auftrian Netherlands, capital of the prin. cipality of Hainault, fituate 26 miles fouth-well of Bruffels, and 22 miles fouth eaft of Tournay.
+ Ipres, or Ypres, a city of the Auftrian Netherlands. It has a pretty good trade, chiefly in the filk and woollen manufactures.
** Ghent, a city of the Auftrian Netherlands, capital of the principality of Flanders. Not only the linnen, but the filk and woolien manufactures flourifh here at prefent. They have alfo a great trade for corn, and it is exceedingly well fituated for a foreign commerce, by the numerous rivers and canals.
\#ll Bruges, a city and port town in Auftrian Flanders, fituate is miles eaft of Oftend, and 24 north-wett of Ghent. This was formerly the great flaple for Englifh wool, and has fill the bett forengn trade of any town in Flanders.

Where fo great manufactures are carried on, the yarn and thread which muft be fpun, bleached, twiffed, and otherwife

## A U S

manufactured for every fort of thefe goods, mult employ a vaft multitude of hands; and thofe hands, being thus in full employ, muft confume a prodigious quantity of provilions, and that of courfe mult afford a great trade
4. The fourth manufacture the Flemings are employed in, is that of the woollen, which includes the tapeftry made at Arras, Dourlens, Doway, and the adjacenr country: alfo fome druggets, and fine ftuffs made at Lifle, and in the country near it: moft of which are however confumed among themfelves, though fome go into France.
5. Another manufacture, wherein the Flemings bave of late years very much improved, is that of filk; for they not only make, at prefent, fufficient for their own ufe, but for exportation. Thefe they make now chiefly at Lifle, Bruffels, and Antwerp: and this manufacture was greatly encouraged by the public, infomuch that the Flemings, in the year 1725, began to direct the New Eaft-India company, then attempted to be eftablifhed at Oftend, to bring no more filks into the country, left it fhould prove the means to fupplant and deAtroy their own manufacture of filk, which employed to many thoulands of their people,

## REMARK

It was about the year 1717, when fome perfons who had been in the fervice of the Eaft India company of England, having had a mifunderftanding with the company, in relation to private trade, and relenting the treatment they received upon that occafion, made vigorons attempts to eftablifh an EattIndia company in Flanders, under the protection of the imperial government there, and fo to trade as interlopers, but in the form of an eftabluhed company.
After having conferred with fome eminent merchants in London, it was refolved to try the practicability of this undertaking; and accordingly two captains, and fome merchants, were appointed to go over to Flanders; and, in conjunction with fome other merchants there, to fee what could be done in the affair.
The marquis du Prie was then governor of the Auftrian Netherlands for the emperor; and the merchants who went over, foon found means to acquaint him with the defign: it feems the firft propofals were very fpecious, promifing a great advantage to the country, and a great revenue to the emperor himfelf, on condition of obtaining a charter from his imperial majelty for an exclufive trade, as in England and Holland.
By this application, they obtained of the marquis a licence for one fhip to go to the Indies, carrying the emperor's colours, and with privilege to call themfelves the emperor's fubjects.
Having gained their point thus far, and got fome confiderable merchants in Flanders to join with them, a fabfeription of $200,000 I_{\text {, }}$ was raifed among them, to be enlarged as they gould find encouragement, and to ferve for the ouffet of one fhip firt, refolving to fend away another foon after, and then to enlarge the trade, as they faw fit.
Having made this advance, the merchants and captains returned to England, bought a new Thip upon the ftocks, which was almoft ready to launch, and fitted her out in the river; at one time it was pretended that the was to go to Cadiz, and thence to America, with the Spanifh galleons, and that fhe was fitting for the account of fome merchants in Spain: at other times it was given out that fhe was to go to the Miffiffippi, for account of the French ; then, that he was bought for the French Ealt-India company, and was to go immediately over to Dunkirk, and there cake in goods, or at st Malo's and the like.
But, whatever the pretences were, the thing was carried fo privately, that the hip, taking in her provifions and flores of all kinds, and being victualled for a long voyage, failed for Oftend; the captain and moll of the men being Englifh. She made no flay at Oftend, but to take in the reft of her cargo, and a quantity of money, with orders to touch at Cadiz, and take in the reft there; which was accordingly done.
The fecond thip was bought, fitted, flored, and manned, in the fame manner, in the river Thames, and failed fome months after; no umbrage being as yet taken in England at the defign, at leaft not fo as to obftruct it: though it was at the defign, at leaft not to as to obitruct it though it was not poffible to keep it fo fecret, but that it was known to
our Eat-India company, who obtained a prohibition againt our Eaft-India company, who obtained a prohibition againtt
them, in common with ochers, who pretended to build or them, in common with others, who pretended to build or
buy fhips in England, for the fervice of the French Eaft-India company.
Thefe two hhips returned in the ufual time, richly laden, and made profperous voyages: and the goods, being publickly fold, found a very good market, being mott of them bough by the merchants of England and Holland : fo that the new adventurers were enabled to fit out more fhips, and make handfome prefents to their government; and even fuch as encouraged the emperor, upou farther application, to grant them a charter in form, under his fign manual firt, and afterwards under the great feal of the Auftrian government, with all the accultomed privileges of a trading company.
But, before this was obtained, they fitted out three fhips more, having alfo enlarged their capital to fix millions of guilders, though not all paid in. Thefe thips alfo came home fafe, and richly laden: and now it began to be publifhed in the world, as well what confiderable advantages they had made, as alfo what powers and privileges they had obtained from his imperial majefly; and even their fock began to fell, from his imperial majetty; and even their fock began to fell,
and be transferred as the fock of other companies in England:

## A U S

allo more hhips being yearly fitted out, it appeared that tho trade fo increafed, as gave the other Eaft-India companies, trade io increaled, as gave the other Catt-India
both in England and Holand, no litule uneatinets.
At length the Dutch made ffrong remonArances, as well as At length the Dutch made flrong remonArances, as well as
Bruffels as at Vienna, in order to obtain from the emperor a Bruftels as at Vienna, in order to obtain from the emperor a
revocation of this charter, as did likewife the lins of Grearrevocation of this charter, as did likewife the king of Great-
Britain, by his ambaflador at Vienna, but all to no purpofe: Britain, by his ambaffador at Vienna, but all to no purpefe:
and is was eafy to find by the anfwers at Vienna, that nothing uas to be expected there, the emperor refenting the mating fuch an application; and infifting, that he had as much right to impouer his fubjects to trade to the Edif-Indies, as the tates of Holland, or the king of England, had therrs : taking it ill, that any power or prince fhould pretend to queftion his right, and particularly menacing the Dutch it they flould offer any interruption to the cummerce of his fubjects, During thofe applications, the new aliance octween the emperor and the king of Span, diftingulthed by the neme of the remarkable Vienna treaty, took place, whicit gave fa mach difturbance in Europe; the conieguence wher ou was the forming a counter-alliance between Great-Britain, France and Prufia, concluded at Hanover, and called the Hanover treaty.
Thefe new alliances proved very unhappy to this new ermpany: for the Dutch, acceding after fome time to the Han over treaty, made the diffolution of this new company one of the effential points, without which, they abfolutely se. fufed fo much as to treat of any accommodation with the emperor.
The company, however, having received three thips very rich, and whofe cargoes, public and private, fold for moie than three millions of guilders, difpatched feven more to India, where they had five before; to that they then had twelve fhips actually abroad
Nor did this new company aim only at fecuring to the Flemings a fhare in the commerce of the Eaf ladies; they puhed at various other branches of trade : to which end, they undertook the making of falt by fome new application. 'Iwas faid alfo, that they refolved to eredt a filhery, as well the great as the fmall fifhery, as the Duch diftinguifh them; that is to fay, the whate fibing at Greenland, and he herring fifhery at Shetiand.
But the Hanover allies, particularly the Englifh and the Dutch, continuing inflexible with, regard to the difflving of this new company, the emperor was, at length, under the neceflity of complying; which put an end to the erec tion of another new Eaft-India company in Europe, which would certainly have proved highly detrimental to all the others.

## Further RemAREs.

As thefe manufactures are fo confiderable in Flanders, and employ fuch infinite numbers of people, efpecially in the fpinning and weaving part (for the making of fine bone-lace is a kind of weaving, and is called fo by the makers) fo it has two particular confequences attending it.
I, It keeps the people together in a body; fo that the great multitude of people, which the woollen manufacture firf brought together in thefe provinces, are not feparated or leffened, but the country continues ftill populous to a prodigy ; nor do you fee any idle, or out of bufinefs, and none very poor, or at leaft very few, Thefe are the happy effects of induftry and commerce.
2. This domeftic trade neceffarily creates a great foreign trade, where the fituation will admit of it, which is the cale here; for, although the country is exceeding fruitful, as well in corn as cattle, yet they receive great quantities of provifions from other countries: thus, by the river Schelde, they receive fupplies of corn from Holland, as by the Maefe they alfo do from France, from Germany, and from Lorrain.
By the fea likewife they receive fupplies of fleh, butter, leather, tallow, and other provifions, and that in fuch quantities, that they have not lefs frequently than 200 thips a year laden with butter, ohiefly from Ireland; and fometimes a far greater number, including other provifions, They have alfo no inconfiderable importation of brandy, and of wine, prunes, oranges, and lemons, and other fruits; the firf from France, the other from Portugal and Spain.
It is by means of their exports, that they are eqnabled to pay for thefe imports.
For thefe they have a confiderable trade to France, to Germany, and to Holland, for their lace; for, although in all thofe countries there are greater quantities of lace made, yet, the Flemings fo greatly exceeding them in finenefs and beauty of workmanflip, the French court itfelf and all the principal nobility and gentry, are from thence fupplied, and nothing is to be feen but Bruffels lace; and the like at all the courts in Germany, that of Vienna not excepted.
As moft of thefe countries make fine linnens themielves, and efpecially France, the chief vent for the fine lawns and cambricks made in thofe provinces, is into Great-Britain and Ireland, Spain and Portugal: and the Dutch too, fince the mode of wearing cambricks inftead of muflins has fo thamefully prevailed in England, begin to run into the fame folly, and buy their fine lawns from the Flemings.
So confiderable are the exports of thefe manufactures, that very good judges have eftimated them at no lefs, in fine fifter thread, bone-lace, and linnen, including their lawns and cambricks, than to the value of two millions terling a jear,

Irom thofe provinces we now call the Auftrian Netherlands, including part of the conquered provinces, as that which we call Walloon Flanders, and the province of Artois.
Nor in this account is there included their export of tapeftry, or woollen ftuffs, nor of cotton or filk; of all which they export large quantities into France and Germany. They carry on no inconfiderable trade with England, for leather, malt-fpirits, hats, cutlery, and all manner of wrought iron and brafs, the manufactures of Sheffield and Birmingham. They import, alfo, a good deal of cotton, cotton-yarn, grogram, and goat's hair, and goods of the Turky and Venetian merchants, imported from the Levant; by means of which they have large manufactures in cloths of cotton, fomething like our fuftians and dimitties of Manchefter.
The fituation of this country, interfperfed throughout with navigable rivers, and thefe rivers paffing through innumerable cities and populous towns, implies that there muft be a great inland traffic; and this, indeed, in proportion to the extent of territory, is a prodigious bufinefs.
They have, 'tis true, but one port of confequence, and that is Oftend; as for Newport, it has little trade belonging to it, except that of filhing, which, in the feafon, is very confider.able of it's kind. But this port of Ottend is the principal harbour of Flanders; for the Schelde is fo intirely blocked up at Lillo, that the city of Antwerp hardly merits the name of a port, though otherwife one of the fineft rivers and harbours in the world.
From Oftend is a large canal to the city of Bruges, which is able to carry veffels of 200 tons up to the city; fo that hips pafs direclly to Bruges, without flopping at Oftend, only paffing through it as a port: whence it follows, that there are abundance of merchants at Bruges, as well as at Oftend, and fome tell us more.
From bence the imported merchandizes are difperfed over the whole country, and into others alfo; for fmaller canals pais from Bruges to the Schelde, at the city of Ghent; and from thence canals lie again to feveral other cities; and the river Schelde, the Scarpe, and the Lys tranfport their merchandizes up to Tournay, to Menin, Lifle, and Doway, and again by the north to Antwerp, Louvain, Mechlin, and Bruffels.
From Oftend they have canals likewife within land, and parallel with the fea, to Newport; thence to Ypres one way, and to France and Dunkirk another, and I need not fay whither afterwards, Dunkirk baving an eafy communication, by water, or by land, with all French Flanders, Artois, and even into France itfelf.
In ftating of the commerce of the Netherlands, we ought not to regard what has been done in matters of war and government; what has been yielded to one prince, what to another ; 'tis the trade of the place, not the government, or poffeffion thereof which we are fo ftrictly to regard; and, therefore, Dunkirk ought to be looked on as a part of the Netherlands; and it's trade, confidered as a free port, is indeed the trade of Flanders; that is, as we take Flanders to be a common name, by which we underftand the whole Netherlands, whether French, Flemifh, or Walloon.
Nor is this improper, feeing that, as Dunkirk is a free port, where goods from all parts may be entered and landed dutyfree, the entrance of goods into the Flemifh or the Auftrian divifion of Flanders, by the canal of Furnes, or by any other conveyance, from Dunkirk, is all one as an entrance from the fea: fo that, whenever fhips unload at Dunkirk any goods to be fent into the Auftrian Flanders, it is to the Flemilh trade all one as if imported at Oftend; and the cuftoms to the emperor are payable in the place where the goods firt enter his dominions.
It is the fame with the trade between the provinces of the States-General and the Auftrian Netherlands, the Dutch, by the navigation of the Schelde, carrying on a great commerce with the Auffrian Netherlands. Thefe rivers, which empty themfelves into the Schelde, are blocked up, as the Schelde is allo, by the Dutch, who have forts at the entrance of all paffages, and, in particular, command the grand channel of the Schelde, which goes up to Antwerp, by the ftrong fort of Lillo, as they do the canal up to Ghent, by the fort called the Sas van Ghent, as alfo the canal to Bruges, by the town of Sluyce.
But, as thele forts fhut out the Flemings from a free commerce that way by fea, which, if they did not, Antwerp would again rival the city of Amfterdam; yet thefe forts do not hinder the Flemings from having a great trade with the Dutch, by thefe rivers, and the Dutch with them; and it is by this method that the Dutch carry on a trade between Great-Britain and France, in time of war.
Thus the Schelde is an open port to Flanders, for it's trade to Holland, and with the Dutch, becaufe they can bring nothing in that way but what comes through the hands of the Dutch; but at Dunkirk it is otherwife; for a fhip entering at Dunkirk, fuppofe from Spain or Italy, whofe loading belongs to a Flemif merchant at Ypres or Bruges, the cargo is put on board the bylanders, and carried directly to thefe towns, in the fame manner as, and paying no other cuftoms or duties than, if they had been unloaden at Oftend: and, therefore, Dunkirk is fill as much a port to Flanders, in effect, as Oftend $f_{1}$, and ought, in our account of trade, to be taken in that light.

## A U S

Hence it appears, that thofe are greatly miftaken who think, as mof that fpeak of this part of the world do, that the Flemings have but a trifing foreign trade, and but one fea-port, that of Oftend. It is evident they have, in effeet, many ports, but efpecially Oftend and Dunkirk are, as to all the ufes and purpofes of trade, equally their ports.
It is true, Dunkirk, fince the suin of it's harbour and piers, is not fo good a port for the bringing great fhips into as it was, and as Oftend is, and is likely to be : and this proves what has been often faid, that the demolithing the harbour of Dunkirk was a greater blow to the Flemifh commerce than to the Fiench.
However, the merchants, though with fome difficulty, do find means to unload the large fhips at Dunkirk ftill, by fending hoys and bylanders out into the road to them; fo that the Flemings have yet a confiderable trade by that port, and bring in many goods, efpecially by their coafting trade, as wines, brandies, and other goods from France, by that channel.
Here alfo they carry on a confiderable trade with Spain and Italy, and alfo with Ireland, and fome with England too: which commerce, efpecially that with Ireland, is very advantageous to them; as Ireland, notwithftanding all the encouragement given to the linnen manufacture there from England, yet takes off a great quantity of the fine manufactures of Flanders, fuch as lace, lawns, and cambricks; alfo tapeftry, and fine carpets and carpet work; in return for which, they receive butter, hides, leather, tallow, beef, and filh; and, which is very much to our lofs, wool, and worfted-yarn, fpun in Ireland; which is to be feared is at prefent carried to this country in large quantities: nor can the truth of this be much queltioned, confidering how gainful a trade it is to the Irifh to export, as well as the Flemings to import.
Befides what has been faid at firf, it muft be obferved, that the Flemings have a very confiderable product of fine flax, the growth of their own foil, improved from the induftry of their own people, and of the fineit kind that is to be found any where ; fo that, although it is a prodigious quartity that they ufe in their manufactures, yet they do not fend to Riga and Dantzick, as the Dutch do, mucb lefs do they buy their fine linnen-yarn from Silefia, as the Dutch do, for the woof, or fhoot, of all their fine hollands, and which, therefore, they fay is the caufe that the Dutch hollands are not fo ferviceable and lafting as thofe made in Flanders.
This product of flax employs abundance of their land, as well as a great many hands in gathering, curing, dreffing, and managing it, before it comes to the hands of the fine fpinners, who are fo curious in the fpinning, as to make thofe threads from which the fine lawns and fine bone-lace are wrought.
Nor can the quantity of flax but be exceeding great, becaufe there muft be a vaft deal of coarfe and ordinary fuff in a manner thrown away, in order to drefs the reft to fuch a degree, of finenefs as is neceffary.
Of the coarfer flax, they make a kind of fail-cloth, for the ufe of their bylanders, hoys, and other veffels and boats, upon their inland waters, of which they have a prodigious number. Befides all thefe manufactures, they have been fome years fince creeping into the woollen manufacture, by the means of Irith wool, and what other they certainly procure from England. At Vianden in the dutchy of Luxemburg, they have a confiderable trade in woollen cloth, with which they furnifh the whole duchy. At Limburg and Mons they have no inconfiderable manufactures for woollen ftuffs. At Ghent, in Auftrian Flanders, they have large manufactures of cloths and fluffs; of which it is faid there is fo great a quantity made here, together with filks, that, among the 50 companies of tradefmen, thofe relating to commodities. ff this nature make one third. Nor are Bruges and Courtraty, and Diert and Boldne in Brabant, without a great trade in woollen cloths.
Thefe are the effects of fuffering our neighbours to come at our wool at any rate; and, if what has been faid be true, that they have for fome years paft found a way to bring wool and yarn from England and Ireland, the Flemings, who are a molt induftrious and ingenious people, and the moft addicted to the woollen manulactures of any nation in the whole world, may do us fome injury, as well as other nations, in our faple manufactures: but, if we deprive them of materials, we may effectually prevent is.
There are two things which employ many hands in thefe provinces, and which, though not very confideable in themfelves, are deferving of fome notice.
The one is painting.
It is fcarce credible what a number of people are employed in this fingle article: and, as the fpinning and making bonelace is chiefly the employment of the worren, fo this, and the weaving, is a great part of the employment of the men.
The frincipal places for this are Antwerp, Mechlin, and Louvain, though fome is done at Bruffels. The Flemings, indeed, have a particular genius for painting; and they have now, as well as they bad formerly, fome of the beft mafters. They are remarkable for excelling at defigning, and that there is more humour and fancy in fome of their drawings, than is to be met with either among the French or the Dutch; nay, thut fome of them come up to the Italians themielves.

Where they difpofe of them need not be faid, all Chiftendom fending to Antwerp for pittures; and fome of the fineft altarpieces in Spsin, where they are extremeiy curious in their phurch-paintings, are performed by Flemifh mafters, and generally bought at Antwerp.
The Flemings are not only good painters, but the people are univerfally lovers of pictures, and, confequently, their houles are filled with curious pieces; nay, 'tis ordinary to fee good paintings in the meaneft cottages; even the boors will bave them, and tell you fuch a piece is done by fuch a hand, and fuch a mafter, and pride themfelves in their knowledge in that art, and in's profeffors.
And, if the poorer houfes are thus fet off, how may we prefume are the boufes of the rich burghers and merchants adorned ? and ftill more thofe of the gentry and nobility? It is not to be defcribed, or the value of their paintings to be effimated.
The other article is that of fhipwrights: not that the Flemings, who have but two ports, can be fuppofed to build abundance of hips; nor, indeed, can they do it, having no place proper for it, or materials for the work; but, by fhips here, is meant only galliots, hoys, lighters, bylanders, and fuch like veffels, all which they call fchips.
Of thefe they bave fuch great numbers, that there muft be abundance of hands employed in building them, and efpecially in the conftant repairing and refitting, which they are always wanting.
It would be very difficult to make a probable guefs, or to calculate the number, of thefe veffels. In time of war it is frequent to have 7 or 800 of them brought together, for the carrying of provifions, military ftores, ammunition, and the like; and 'tis likely they have not lefs than 20,000 of thefe fort of veffels in all the provinces.
And thefe are all built within themfelves; and it is no little trade that they are obliged to carry on for the fupply of deals, timber, planks, mafts, yards, anchors, iron-works, and other materials for this work, befides pitch, tar, oil, hemp, \&xc.
For this purpofe, indeed, they do not carry on any confiderable trade to Norway, Sweden, or the Baltic, but are generally fupplied by the Dutch, or by fhips directly from Norway and Sweden, the Flemings having very few hips proper for thefe trades.
When thefe things are confidered; we need not wonder how all this great multitude of people, who inhabit thefe provinces, are employed and maintained. The carrying on fuch valuable manufactures muft employ innumerable hands; and the quantity of goods they export muft bring great returns home, as well in goods as money; by which the Flemings are far from being poor. On the contrary, they are generally well-circumftanced, there being very few hands among them but can get their bread; the very children, even from five years old, are ordinarily employed, and earn their maintainance.
In regard to induftry, they are an example to the whole world; there is nothing can live where they ftarve: nothing is idle among them that can fuftain any degree of labour; the women plow and fow, reap and bind; the men threfh, and not only the horfes carry, but the very dogs do the fame, for they are barneffed, and draw their carrs like our horfes, and that not in jeft, or for trifles, but draw, in proportion to their ftrength, very heavy loads; particularly the dogs draw little carts with fowls, fifh, provifions, and efpecially all forts of greens and roots, and garden-ftuff; to the markets. This brings me to fpeak of their provifions, which are in exceeding great plenty, and extremely cheap. This makes labour cheap, and the manufacturers work low; by which means, confidering the firienefs of the goods they make, no nation can underwork them.
The univerfal navigation of the rivers, and the multitude of canals in this country, is a mighty advantage to their trade, and does not a little contribute to render every thing cheap among them: travelling from place to place, and carriage of goods to the feveral markets, coifs fo little, that it is fcarce worth naming.
The plenty of provifions being fo great, is a token of the general fertility of the foil ; and this is not only exerted in the product of corn and flax, but the pafturage is alfo very rich, and they feed abundance of very good cattle, efpecially horfes, very large and ufeful, as well for country fervice as for the mounting their cavalry, only with two exceptions,

1. That they are rather too large, and, confequently, heavy; otherwife, they are very ftrong, and of good firit.
2. That they are generally grey, as being more eafily difcerned by an enemy in fieges, and other occafions, in the dark.
The largeft of this breed are ufed as coach horfes, and have been much efteemed by perfohs of the firf rank, as well for their beauty as for their extraordinary fize; in both which we fee no country excel them. They are not of late fo much yalued as formerly, the fachions and fancies of courts varying. Another product of their land, efpecially of the lower and marfhy grounds, is turf for fuel; for, as the climate is cold, and fometimes feverely fo, and having no coals but what comes from England, fo the country is not able to fupply wood Gufficient for fuch multitudes of yeople. They have, indeed, Vol. I,
large woods in Brabant, Hainault, and the countrien undri the Maéfe, but not equal to the multitudes of families which muft b? fupplied for thieir ordinary fuel, if they burned wood, This is abundantly made up by the turf, which is chiehy made in the Lower Flanders, and the countries bordering upon the frontiers, and is brought by water to Bruges, Ghent, and all the great cities upon the Schelde and the Scatipe, the Denders the Rypel, the Lys, and even to Liile and Douay.
This arti. le is an exceeding great branch of bufinefs; as it employs not only a great number of people in digging and curing the turf, but alfo abundance of veffels, boats, barges, and bylanders, in the carriage of it from one town to another. AUVERGNE, a province in France, is bounded on the north by Bourbonnois; on the eaft by Forez; on the fouth by Rovergne and the Cevennes; and, on the weft, by Upper Limofin, Quercy, and la Marche. Lower Auvergne, which is alfo called Limagne, is one of the moft fruitful countries in the world. Upper Auvergne is not fo fruitful; however, there are here good paftures, where they feed a prodigious quantity of black cattle, which enrich this country, becaufe the fend their oxen and cows, when fattened, to Lyons and Paris; they fell a fo a great many of them to the people of Nivernois, Berry, and Guienne. who make ufe of theni to till the ground. Belides this, they make ín Upper Auvergne a great deal of cheefe, which they fell at Paris, in Britanny, Guienne, and Languedoc, and even abroad. And, as they have a great many iron mines in this country, fo it abounds with firge, where they make all forts of the iron manufacture. Lower Auvergne produces corn, wine, and orher fruits.
At $S_{t}$ Flour is kept a fair, where they fell a great number of mules, which are fent into Languedoc, Spain, and other countries. This is alfo a confiderable mart for rye, the country about it abounding with that fort of corn.
At AURillac is a confiderable trade of thread-laces.
Moft of the inhabitants of Murat are brafiers; they make alfo here a great many thread laces.
At Mauriac they have a pretty good trade, and they keep feveral fairs, in which they fell all forts of cattle, and efpecially horfes, which are reckoned the beft in trance.
The city of Clermont is rich and well peopled.
At Riem is an office for the finances, and a court of the mint.
Thiers is one of the moft populous cities of Auvergne, and moft confiderable for it's trade, which confifts chiefly in iron and fteel wares, paper, cards, pafte-boards, and thread, which they fend all over Europe, and even into the Indies. There is here a confulfhip for the merchants.
Ambert is confiderable by it's trade, and efpecially by it's manufaciory of paper.
The harbour of VIALE, being but a quarter of a league diftant from the city of Maringue, makes it have a pretty good trade, the merchants of the neighbouring country keeping their warehoules bere.
As Pont-du-Chastet is nearer Clermont than Maringue is, and confequently more convenient for the trade that is carried on by water from Auvergne to Paris, it becomes daily more confiderable than Maringue.
Issoire is noted for a good breed of horfes, and is a town of good trade in corn and wine.
Ardes, being fituate on the borders of Upper and Lower Auvergne, in a very fruitful country, is in a manner the flaple town for the trade that is carried on between thefe two parts of the province.
AWARD, is the decifion given by arbicrators, or by an umpire; chofen by them, in cafes referred to be determined by arbitrators. See Arbiter, or Arbitrator.
I. The arbitrators ought to give their award within the time limited by the compromife, and it will be null, if it were given after the faid time is expired; for their power is then at an end, and they are no longer arbitrators.
3. The parties may give power to the arbitrators to prolbng the time; and, in this cafe, their power lats during the time of their prorogation.
4. If the compromife regulates a certain time for inftructing the caufe which the arbitrators are to decide, they cannot give their award, till the faid time is expired.
5. The arbitrators having once given their award, they cannot retract it, nor change any tiling in it : for the compromife was only to give them power to give an inward, and, when that is done, their power is at an end; but their power is not at an end by an interlocutbry fentence *, or an incident in the caufe, and they mag give different interlocutory fentences on fuch incidents, as often as occafion requires.

* An interlccutory fentence is not that which decides the caufe, but only fettes fome intervening or preliminary matter, relating to the matter in difpute.

5. If there are feveral arbitrators named by the compromife, they cannot give their award, unlefs they all fee the procefs, and give judgment of it together : and, although the greater part had given the award in the ablence of one who was named with the others, yet the award would be null, becaufe the abfent perfon ought to have been one of the judges; and, had he beet prefent, he might have been able, by his realoning, to bring the other arbitrators over to his opinien.

Qq
6. The
6. The atrbitrators can judge of nothing elfe befides that which is fubmitted to their judgment by the compromife, and they muft obferve the conditions which are there prefcribed; and, if they judge otherwife, their award is nuil.
Where there appears a manifet error in the body of an award, in fome cafes there may be relief againft it in equity: but where the error does not appear without unravelling of it, and examining into matters of account, not relievable. i Vern. $15^{8 .}$
If $A$ and $B$ of the one part, and $C$ of the other part, fubmit to arbitration, the arbitrators may make an award, not only of matters in difference between A and B jointly, or A and $B$ feparately, and $C$, but alfo of matters between $A$ and B only. I Vern. 259.
An award made, purfuant to an order of court, mult be confirmed, as in the cafe of a mafter's report; and either fide has a liberty to except to it, and, when fo confirmed, the caufe may be fet down for hearing upon the award. Vern, 470. An award fet afide, it appearing the arbitrators were intereffed in the cargo, touching which the award was made. 2 Vern. 25 I.
Arbitrators promife to hear witneffes, but make their award without doing fo. Award fet afide. Ib.
Arbitrators, if they could not agree, were to chufe an umpire. They make no award, and, not agreeing about the perfon to be umpire, they throw crofs and pile who fhould chufe him. The umpire made his award, and it was fet afide, by reafon of his being chofen in that manner. 2 Vern. 485 .
Suppofe the fubmiffion is to three, or any two of them. After all the arbitrators had had feveral meetings, and heard the parties, two of them make an award privately, without notice to the other arbitrator. Award fet afide. 2 Vern. 514 If a fubmiffion is to three, or any two of them, and two by fraud or force exclude the other; that alone, is fufficient to vitiate the award. Ib. 515 .
Private meetings of the arbitrators with one of the parties, and admitting him to be heard to induce an alteration in the intended award is partiality. Ib. 515 .
If arbitrators go upon a plain miftake, either as to law or fact, equity will relieve againft the award. Ib. 705.
A party fubmitting to an award, defired the arbitrator to defer making his award, until he fhould fatisfy him as to fome thinge which the arbitrator took to be againft him ; though this was within two or three days before the time for making the award was out, yet, the requeft not being complied with, the award was held ill. 3 Peer Will. 3 fr. See Arbiter and Arbitration.
AWME, or AUME, a Dutch liquid meafure, containing eight fteckans, or 20 verges, or verteels: equal to the tierce in England, or $\frac{1}{6}$ of a ton of France.
AZIMUTH COMPA $\subseteq S$, an inftrument made in a large box, with jambols, and a broad limb, having 90 deg. diagonally divided with an index and thread, to take the fun's amplitude or azimuth, in order to find the difference between the magnetical meridian, and the fun's meridian, which fhews the variation of the compafs.
AZOGA SHIPS, are thofe Spanifh fhips, commonly called the quickillver fhips, from their carrying quickfilver or mercury from them to the Spanith Weft-Indies, in order to extract the filver out of the mines in Peru and Mexico. But it is a great miftake to imagine, that thefe fhips are abfolutely laden with quickfilver only, that being too ponderous a body.
They are not, ftrictly fpeaking, to carry any goods, unlefs for the king of Spain's account; but they are generally full laden, notwithfanding this regulation; by reafon that the merchants procure fpecial licences of the king to load, upon paying a confideration for fuch licences.
Befides quickfilver, thefe fhips carry alfo fruit and fpice for the king's account, and fometimes military ftores for the forces in New Spain; as alfo iron, which is called the king's merchandize.
Of the ufe and application of mercury in working of the filver mines in Spanifh America, we thall give an ample account under the province of Charcas, in the fouth part of Peru in South America, wherein is a filver mine at the bottom of the mountain of Potofi, which is efteemed the richeft mine that ever was difcovered; and from whence the Spaniards have extracted many hundred hhip-loads of treafure.

AZORES ISLANDS. Thefe iflands, which are feven in number, befides the two fmall ones of Flores and Corvo, Jie in a kind of clufter, on the weftern or Atlantic Ocean, between 37 and 40 degrees of latitude, and 21 and 26 of longitude, weft from London. Thefe iflands are all allowed to be very fertile in corn, wine, variety of fruits, and to breed great quantities of catte.
I. St. Michael's Island, or, as the Portugueze file it, San Miguel, hath feveral good towns, and large villages, well filled with inhabitants, who drive a confiderable commerce, but hath neither harbours'nor rivers, nor any good fhelter for thips. The chief town of this ifland is called Punta del Gado, or Gada, and is confiderable for it's trade.
II. St. Mary's Island, is well fupplied with all kinds of neceffaries, well cultivated and inhabited. The chief manufactory here is a kind of earthen ware, in which they traffic with the other illands.
III. Tercera Island, hath in it no port or haven, where Chips can fafely come in, but that of Angra, which is the capital of the ifland, and hath a convenient harbour. The ifland is very fertile, pleafant, and healhy ; the very rocks, which elfewhere are generally dry and barren, produce bere a good fort of wine, though not comparable to that of Madeira or the Canaries. The land yields plenty of good wheat, and other conn; oranges, lemons, and other forts of fruits; and their pafture-grounds fuch numbers of large oxen, fheep, and other cattle, that here is no want of any neceffaries of life, except oil and falt. They have an extraordinary root, which grows here as big as a man's two fifts, covered with long and fmall fibres, of a goid colour, not unlike filk in foftnefs and finenefs, and which they only ufe to ftuff their beds; but by an ingenious hand 'tis thought might be woven into good ftuffs. The country produces fome excellent timber, particularly cedar, which is here in fuch plenty, that they make their carts and waggons of it. The number of inhabitants in the whole ifland is computed to be 20,000 fouls.
Angra, a city, which is the metropolis of the Azores, is well built and peopled. It is the only fation for fhips in all the feven inands : fo that it is chiefly for the fake of this port that the Portugueze have been fo careful of thefe iflands, and are fo fhy of letting ftrangers approach it; it's fituation being fo exceedingly convenient to refref the fhip that fall to, and from Brazil, and other long voyages. In this city are kept the royal magazines for anchors, fails, cables, and other naval flores in general, for the men of war. The maritime affairs are under the infpection of a proper judge, called defembargador, who hath other officers under him, and entertains a number of pilots, fome to conduct the thips into the harbour, and others to direct them to fprings of frefh water, \&c. The Englifh, Dutch, and French nations have likewife a conful refiding in this city, though their commerce with this, or any other of thefe iflands, be but inconfiderable. The chief commerce of the inhabitants is that of wood, which grows in great plenty in moft of thefe iflands, and corn, and other refrefhments, which merchant-fhips come to take in at this port.
Praya is a pretty confiderable town; and, though it deferves not the name of a fea-port, is yet a kind of road for fhips, and the only one in the ifland next to Angra where they can come to anchor., It is befides a place of trade, and well peopled.
IV. Graciosa, though not above five or fix leagues in circuit, is fored with all kinds of grain, fruits, pafture, cattle, \&c. with which it fupplies the iffand of Tercera.' It is well peopled, but hath no town of any note or bignefs.
V. St George's Island, is chiefly famed for it's ftately cedars, which grow in great plenty in it.
VI. Pico, or Il-Pico, breeds a great quantity of cattle. It's wine is the beft of all the Azores; and, befides cedar and other timber, they have here a kind of wood, which they call teixo, which is reckoned as hard as iron, and, when polifhed, is veined like a tabby, and is red as fcarlet; and with this additional quality, that it grows finer by age : upon all thefe accounts it is fo highly efteemed, that no one is allowed to fell it, unlefs for the king, or with particular leave from his minifters.
VII. Fayal Island, produces great plenty of wood, and is frequented by the Englifh on that account. It alfo breeds great numbers of large cattle, and abounds with variety of good filh.

## Flores and Coryo have nothing worth notice.

Of the Practical Business of the Custom-House, which is placed at the end of every Letter in this Work, in order the better to conform the whole to the portable Book of Rates; That being alphabetically ranged and methodized, the more familiarly to turn to the various fpecies of merchandize imported and exported.

## Of the Origin of the Custom-House Duties.

IN England the moft ancient and principal tribute, or duties, that were paid to our kings, feem to have been thofe upon the portation and importation of merchandizes croffing the ocean. There were of two kinds, and diftinguifhed by cuftoms and prizes, or prizage.

Cuftoms were the duty payable for native commodities exported, particularly wool, wool-fells, and leather, after certain rates, the which were raifed or lowered at the pleafurc of the king, or as occafion required: and, having been payable probably from the origin of the Britifh monarchy, has been dif tinguifhed by the great and ancient cuitoms.-But, according to the prefent acceptation of the word cuffoms, it fignifies the feveral duties which are payable on the importation, as well as exportation, of all goods and merchandizes whatfoever.
Prizes or prizage, was the old duty payable on the importation of foreign goods, not limited to any certain fum of money, but by taking fuch a part thereof in fpecie as the kings thought fufficient for their ufe; paying for the fame fuch a price as they thought reafonable, which was called the king's price. For wines it it was cuftomary to take one ton in ten, upon paying twenty fhillings per ton; and we may realonably enough fuppofe the price for the prizage of other goods was in proportion.
But king Edward I. by the charter called charta mercatoria, remitted this duty of prizage to all merchant-Itrangers; who, in lieu thereof, granted him a duty of three-pence in the pound, called petty cuftom, upon all native commodities, exported, befides the great cuftom paid before, and alfo upon all merchandizes imported, except wines; and upon all wines imported, two fhillings for every ton, being the duty that has been fince called butlerage. And, befides the aforefaid duties, there were, in the reigns of king Edward 1 , Edward II, Edward III, queen Mary, queen Elizabeth, king James I, and king Charles I, collected by virtue of their prerogatives only, feveral occafional or temporary impofitions, after different rates, upon wines, and feveral other goods, imported; wool, cloths, and feveral other goods, exported; which they caufed to be levied by only fending their writs to the collectors of the cuftoms in every port *. But thefe impofitions were fometimes remitted, upon petition of their fubjects in parliament, efpecially when they would grant other aids or fubfidies of greater value; yet when thofe aids, granted in recompence of the occafional impofitions, were fpent, they have been oftentimes again renewed, or others of the like nature impofed.

* This fhews the difference of times, in regard to the liberties of the people of England, before and fince the revolution; before, we find the prince had the command of their purfes without controul, as it werelf but fince, the parliament has controuled the purfe of our princes.

In procefs of time, this unlimited prerogative of the crown, of impofing thofe duties, came to be reftrained, and, in fome meafure, yielded up by the crown to the parliament: for, upon the frequent petitions of the fubjects for the remifion thereof, and their free offers of fufficient fupplies by parliament for all neceffary occafions, Edward III, and the feveral fucceeding kings and queens, by bis example, were contented to fufpend their hereditary duties, and, in lieu thereof, to accept of fuch temporary aids of parliament as thould be judged fufficient for the fupport of the honour and dignity of the crown, the defence of the realm, and the fafeguard of the feas, during their refpective lives: and thefe parliamentary aids were compofed of two feveral and diftinct parts, viz. a tonnage and a poundage.
Tonnage was payable on all wines imported, after the particular rates, and according to the particular methods, preferibed by the feveral laws which granted this duty to the refpective kings and queens; being at firf no more than two Chillings per ton, though, in fucceeding reigns, it was very much increafed.

Poundage was payable on all other merchandizes imported and exported, according to the particular rates and values prefcribed by the feveral laws which granted this duty to the refpective kings and queens; being at firf no more than fix-pence in the pound of the particular rates or values, though, in fucceeding reigns, it was advanced to twelve-pence in the pound. And to this fubfidy of tonnage and poundage there was, alfo, in the later reigns, annexed

A fubfidy of woolen cloth, or old drapery, which was payable upon all woollen cloths exported, after the particular rates, and
in the particular proportions, prefcribed in the refpectlive books of rates.

After the reforation of king Charles II, the aforefaid fubfidies, which had underwent feveral different regulations, were eftablifhed upon the foundation whereon they now ftand, and granted to his majefty during his life, for the defraying of his neceffary expences in guarding and defending the feas againft perfons intending the difturbance of his fubjects in the intercourfe of trade, and the invading of his realm; by an act paffed in the 12 th year of his reign, intitled, A fubfidy granted to the king of tonnage and poundage, and other fums of money, payable upon merchandize exported and imported, referring to, and enforcing, a book of rates of merchandize, \&c. accord= ing to which the faid duties were to be levied and collected.
And upon the model of, and with refcrence to, this fubfidy of tonnage and poundage granted to king Charles $!I$, there have been granted by fubfequent acts of parliament, for the defraying the public expences ordinary and extraordinary, feveral additional fubfidies, impolitions, and new duties; which being to be levied and collected after the manner of the aforefaid fublidys upon the importation and exportation of feveral forts of goods and merchandizes, are ufually comprehended under the general title of cuftoms: and, indeed, thofe duies of cuftoms are now really become a perfect fcience, there having been no lefs than about'forty additional branches, or particular duties; impofed fince the refloration of Charles II:- and the laws prefribing the manner of levying and collectung of thefe duties have fo increafed the number, that the body of cuftom laws is now fwelled to an enormous fize. As they are fo numerous, and many of them made with an eye only to fome temporary purpofes, without regard to the circumftances and regulations prefcribed in prior acts, it too often happens that they frequently claif and interfere, fo that, in many cafes, it is diffeult to fix a particular point: and, as the repeals, expirations and revivals of feveral acts, are fo frequent, that it is often difficult to know whether a law is in force or not; it is ng wonder that they are no better underftood by too many, whofe bufnefs it is to execute them ; and much lefs by merchants, whofe bufinefs it is to know the privileges to which they are legally intitled, and the penalties to which they are fubject, that they might reap the benefit of the one, and avoid the injury of the other.
Thefe confiderations evince the neceffity of reducing the laws relating to the cuftoms, into as narrow a compafs as poffible, and as plain and intelligible as can be. This allo would not only prevent thole tedious computations which the duties often require, but mighf prove inftrumental in putting a ftop to that frequency of cuftom-houfe oaths, which are at prefent required in every ftep that is taken; a practice which fome very wife and good men have lamented. See what I have faid on that head under the article Afridavit.
Befides, this multiplicity of laws renders the complete knowledge of the revenue fo difficult and myfterious, that few, perhaps, of our very reprefentatives themfelves take the trouble neceffary to become mafters thereof, and, confequently, muft be at a lofs to know what meafures to fall in with, when any alteration in this branch of the revenue may be neceflary.

Indeed, the feveral duties of cuftoms are appropriated as a fecurity to the national creditors; which, it has been faid by fome, makes the continuance of thefe identical laws and forms of appropriation in the king's books neceffary. But this does not feem to be an objection of any real weight. The national debts themfelves have undergone various changes, in point of denomination ; and, if the revenues appropriated for their intereft and redemption underwent a change alfo, by uniting various duties into one, for the eafe of the merchant, as well as the officer, this, we humbly conceive, would be no violation of the public faith and credit of the nation. For, although certain duties were impofed as a fecurity to the public creditors; yet, if the authority of the parliament is pleafed to grant that in one total, which is now granted in vatious particular fums, the diftribution or appropriation of the net produce of thofe revenues may eafily be duly appropriated to the payment of intereft to the national creditors.
However, that our defign may prove confiftent with things as they at prefent ftand, and be of immediate ufe, we fhall enter upon an explanation of the manner of computing the duties of cuftoms, purfuant to the laws enacted for that purpole; and, according to our prefent plan, fhall fix upon feveral of the chief cafes that arife in their alphabetical order in the portable Book of rates, under the latter A, for the port of London; the moft
judicious

## Continuation of the Business of the Custom-House.

judicious and accurate of that kind, being that wrote by Mr. Saxby of the cuftom houfe, 1757

But fince the publication of Mr. Saxby's Book of Rates, there bas been a New Subsidy ad of parliament in 1759, of 5 per cent. laid on certain merchandize, which has rendered the Totads of fuch Tabular Duties ufelefs to the importer and exporter in that refpect. Which bath made it neceliary to take notice of this fubfequent act in this new edition of the Dictionary, and to explain therefrom how Mr Saxby's Portable Book of Rates may, notwithftanding, be ufeful to the merchant.

Alfo in the year 1762 , another act took place, for granting feveral additional duties upon Wines imported into this kingdom, \&c. which has likewife rendered the Totals of the faid tabular duties ufeléfs to merchants, with relation to the importation of Wines in general. It has, therefore, become neceffary to apprize the reader of thefe material alterations in the duties of cuftoms, fince Mr Saxby's book was publifhed. And as the requifite brevity of a Portable Book of Rates will not admit of the faid new acts being given therein at large, we fhall here give an ample abftract of the faid two acts, and then explain Mr Saxby's Portable Book of Rates fo intelligibly, that it may be applied to other cafes.

The firft of thefe acts laying the fubfidy of 5 per cent. on certain merchandize contains as follows.- 6 That from and after the 5 th day of April, 1759 , there fhall be raifed, levied, collected, and paid unto and for the ufe of his majefty, his heirs, \&c. for and upan all Tobacco, foreign Linnens, Sugar, and other Grocery, as the fame is charged in the Books of Rates, except Currants; Eaft India goods, except Coffer and raw filks; foreign Brandy and Spirits, except Rum, of the produce of the British Sugar Plantations; and Paper, which fhall be imported or brought into the kingdom of Great Britain; a further Subsidy of Poundage of Twelve Pencein the Pound, according to the Value or Rate refpetively fet upon each of the faid Commodities by the feveral Books of Rates, or any act or acts of parliament relating thereunto; which SUbSidy Thall be paid by the importer of fuch goods and merchandizes, before the landing thereof, over and above all other duties, charged or chargeable thereupon."
Then the faid act declares, that the faid fubfidy fhall be levied and collected in like form and manner, and with fuch allowances, difcounts, drawbacks, \&c. as are prefcribed for raifing, and collecting the fublidy of 5 pounds per centum, granted in the 2Ift year of the reign of Geo. II. intitled, "An act for granting to his majefty a fubfidy of poundage upon all goods and merchandizes to be imported into this kingdom, \&c. \&c.'
Prize goods charged only with the duties payable by act 30 th Geo. II. unlefs taken out of the warehoufes for home confump-tion.-Allowance to be made to the importer of tobacco, on paying down the Duty as ufual ; if the duty fhall not be paid down, the importer fhall give bond for payment thereof, and the importer to be intitled to the ufual allowances and dif-counts.-Drawback of faid duty allowed upon exportation of goods within three Years.--Except for fuch goods, or by any former act or acts, it is declared no Drawback thall be paid or allowed on Exportation.
Drawback of the duty allowed on Paper ufed in printing books in the learned languages in both univerfities, as is prefribed by act io of queen Anne. The like drawback allowed on paper ufed in printing books in the learned languages in the univerftites of Scotland.
Drawback of 3 hillings per hundred weight allowed on fugar refined in Great-Britain, and exported, \&c.
An additional inland Duty to be paid of i Shilling per pound on Coffee, and Nine-pence per pound on Chocolate.-Said duties on Coffee and Chocolate to be paid as the former inland Duties paid thereon into the Office of Excise.
Penalty of counterfeiting the flamps provided on the occafion, or being guilty of any fraud therein, 500l. and one year's imprifonment._-Penalty of vending chocolate without being duly ftampt 20 millings per pound, and forfeiture of the chocolate.

The other act that has made an alteration in the duties of cuifoms, in the Portable Book of Rates, is that made in the year 1762, entitled, An act for granting to his majefty feveral additional duties upon Wines imported into this kingdom, and certain duties on cyder and perry, \&c. which declares, that from and after the $3^{1 \text { n }}$ day of March, 1763 , over and above all other fubfidies, additional duties, and impofitions, whatfoever payable for wines and vinegar imported into Great-Britain, by any adt or acts now in force, there thall be raifed and levied, (before landing thereof) the additional impofitions, rates and duties following, without any difcount or deduction inwards, or drawback on re-exportation afterwards; that is to fay,

For every ton of French wine and French vinegar, imported, the fum of 81 .; and fo after that rate, for any greater or leffer quantity.

Alfo for every ton of all other wines and vinegar imported, the fum of 4 I ; and fo after that rate for any greater or leffer quantity.- The fame to be raifed in fuch manner and form, and under fuch penalics and forfeitures (except as to difcounts
and drawbacks aforefaid) as are mentioned and expreffed in the act made in the firft year of the reign of Jac. Il. entitled, An act for granting his majefty an impofition upon all wines and vinegar imported, \&c.

Damaged and unmerchantable wines exempted from thofe additional duties.

And whereas, by the eighth rule annexed to the Book of Rates, referred to in the act of tonnage and poundage paffed the 12th of Charles the Second, every merchant bringing in any fort of wines into this kingdom by way of merchandize, and making due entries thereof, is allowed 12 per cent. for LeakAGE: and whereas it is of late years become a practice for reveral merchants to lodge Spanifh, Portugal, and other wines, at the illands of Guernfey and Jerfey, and after they have filled up the cafks there, to import fuch wines into this kingdom, and demand the before-mentioned allowance for leakage, notwithftanding the cafks are quite full, to the leffening of his majefty's reverue, and the prejudice of other merchants who import wines directly from the place of their growth: for remedy whereof, and in order to put all merchants upon a more equal footing; be it enacted, that no merchant thall, in refpect to the duties impofed by this act, be allowed 12 per cent. or have any allowance for leakage, upon any wine imported into this kingdom, unlefs fuch wine be imported directly from the country or place of the growth of the faid wine, or the ulual port or place of it's firft fhipping, except Madeira wines imported into this kingdom from any of his majefty's plantations in America; any thing in the faid recited rule to the contrary notwithftanding.
And from and after the 5 th of July, 1763 , there fhall be raifed an additionat rate or new duty of excife upon cyder and perry as follows:
For every ton of cyder or perry imported into Great-Britain from beyond fea, and fo proportionably for a greater or leffer quantity, to be paid by the importer before landing, over and above all other duties payable for the fame, two pounds.

The other part of this act being relative to an inland or excife duty laid on the makers of cyder, we refer to the article cyder, fince the act in that refpect too bas undergone alterations fince the fame took place, by the act here quoted.

## Of the Computation of the Duties of Customs,

 according to the present Book of Rates.Underftanding there will foon be publifhed a Portable Book of Rates by Mr. Saxby, wherein the alterations before made in the duties of cuftom by the faid acts of parliament will be duly noticed; we judge it will only be neceflary for us to explain the methods of computation therein made ufe of, in fuch a manner as may be underftood and applied by merchants, provided any fubfequent alterations refpecting thefe duties Mould take place. This, we apprehend, will be more acceptable to traders than the fwelling this work with a new fett of tables, ready computed, which they will foon have in a Portable Book for that purpofe; and it is to be hoped complete. For it is certainly of more utility and fatisfaction to traders, to be duly informed in the manner of calculation, than to depend on that of others: yet fuch calculations have their ufe; fince, if thofe made by the trader agree therewith, it is a fatisfaction; if not, the trader will be entitled to point out any miftakes that may be made by the officers of the cuftoms to his difadvantage. This is the more neceffary, as the total duties in fuch books are fo liable to vary every tew years.

And, indeed, what renders this the more neceffary, is, that a Portable Book of Rates will hardly admit of fuch an explanation of the methods of computing thofe duties as could be defired, by reafon of it's requifite brevity; though the method taken therein, is perhaps, as good as any other that might be devifed, in relation to it's concifenefs. Yet certain it is, that great complaints have been made by traders, with refpect to it's abftrufenefs and unintelligibility: but I am rather inclined to alcribe that to want of due attention and application in the reader. However, we fhall endeavour to put this matter in the beff light we can, for the fatisfaction of our reader, and thereby enable him to underftand all future Books of Rates.
Previous to which, we defire it may be obferved, that confiftent with the plan of this work, the bufinels of the cuftoms will be treated of at the end of every letter, in the fame alphabetical order as the Portable Book of Rates is obliged to be ranged, for the fpeedy reference to every fpecies of goods therein contained.
2. That we hall felect various examples of the duties, whereby to illuftrate the manner of their calculation.

Of the Tabular Method of ranging the Duties in the Portable Book of Rates.
The reader is defired to oblerve, that the firft column in the Portable Book of Rates, towards the right-hand of the goods or merchandize, reprefents the Rates, in pounds, fhillings, and pence, and parts thereof, to which fuch goods or merchandize are fubject inwards, or on their importation, purfuant to the acts of Parliament of the 12th of Car. II. cap. 4 \&c. and that alfo of the Inth of Geo. I. cap. 7. which are the

## Of the Practical Büsiness of the Custom-House.

ground-work of the fubfequent acts that have been fince made, for fetting of the duties of cuftoms: over which columins is the word Rates.
4. The next column, following to the right-hand of thofe of the Rates, fhews, or fhould fhew, the total net duties paid on fuch goods or merchandizes by Britilh perfons; the next column to the right-hand, dhews, or hlould hew, what duties are to be paid on the fame goods by frangers; and the next right-hand column thews, or fhould thew, how much is no be repaid, or drawn back, on the re-exportation of fuch merchandize by any perfon, if done in time, according to act of parliament.
5. In the laft column in Mr Saxby's Portable Book of Rates, which is marked with the great letters A, D 25 , Ad $1, C_{3}$, $\mathrm{C}_{\mathrm{I}}$, \&c. as in the firft page of the tables of duties, and methodized as before reprefented, is contained the references to the tables, \&c. p. 74, 5, 6, as is placed at the top of the faid laft column.
6. In order for the reader to undertand the ufe of the faid Reference Letters and Figures annexed thereto, it is neceflary to obferve,

That the firft part of the faid Portable Book of Rates contains a concife account of the several Branches of Customs, Subsidiés, Impositions, and Duties payable in Goods and Merchandizes imported into, brought coastwise and exported out of Great-Britain, from the 1 2th Car. II. cap. 4. § 3. 7. to the time when Mr Saxby's Book of Rates was publifhed, which commences from the beginning of his book, and ends at page 72.
To render Saxby's Book of Rates the more intelligible to our reader, we fhall, in the following page, prefent him with the Table and List, therein made ufe of; and afterwards give an explanation of them bath; thefe two confidered connectively, being the mafter-key, to unlock the whole myftery of every portable Book of Rates, ever fince the time of Mr Edgar, who judicioully firlt invented, in the Year 1714, the faid Table and LIST of branches, and printed the fame in his Vectigalium Systema; and ever fince that time the fame Table and List have been made ufe of by thofe officers of the cuftoms, who have wrote upon the computation of the duties of cuftoms; as the late Mr Crouch and the prefent Mr Saxby.

A TABCLE, whereby the referring letters, which are affixed on the right hand margin of the Rates and Duties, exprefs the particular Branches to which any article of goods is liable, by correfpondent numbers refpectively diftinguifhing the feveral Branches, as they ftand in the following List, in the portable Book of Rates.

See Saxby, page (74.)
The following List of the feveral Branches of the Revenue of Customs, as the fame are contained in Saxby's Portable Book, from Page 3 to Page 7 I.

The List.

No
I. Old fubfidy.
II. Petty cuftom.
III. Additional duty.
IV. One per cent. inwards 2. New fublidy.
3. One-third fubfidy.
4. Two-thirds fubfidy.
5. Subfidy, 1747.
6. Subfidies on Spirits.
7. Impoft on wines and vinegar.
8. Impolt on tobacco
9. Impoft, 1600 .
10. Impoft, 1692.
11. Whale-fins.
12. Fifteen per cent on muflins.
13. Spice and pictures, \&c.
14. Additional ficice and pictures.
15. Second 25 per cent. on French goods.
16. Coinage on wine and beer, sc.

## No.

17. Coinage on fpirits.
18. Pepper, raifins, \&c.
19. Sublidy, and one per cent. outwards, \&c.
20. Candles:
21. Additional candles.
22. Coals imported, and coals, \&cc. brought coaftwife.
23. Additional coals imported, 8 c .
24. Coals and culm for churches.
25. Hops.
26. Hides, Ikins, \&c.
27. Additional hides, fkins, \&c.
28. Soap, paper, \&c.
29. Additional foap, paper, \&c.
30. Coals exported.
31. Sailcloth.
32. Wrought plate.
33. Apples.

No.
34. Wine, 1745.
35. Glafs.
36. Linnen-yarn.
37. Gum-Senega.
38. Unrated goods imported, undervalued.

To which nquft be added the laft fublidy branch of 1759; and allo the late duties on wines, and cyder and perry, before fet forth by the act of parliament in the year 1762 .
Notwithftanding, that in every one of the foregoing Branches, it is fully explained in the faid Book of Rates, what fpecies of goods and merchandize are their immediate objects; neverthelefs, as the Branches are become very numerous, and as the feveral fpecies are variouly fubject to more or lefs of theife Branches, it feems hardly polfible by memory, without daily practice, to be expert in an exact application of the proper Branches to the feveral articles of goods and merchandize under their various circumftances of importation, \&c. neither was it poffible, in a book of a portable fize, or much larger, to have provided columns fufficient to arrange all the refpective Branches againft each arricle, as was done in the former edition of my Dictionary. Therefore the following method is made ufe of in the Portable Book of Rates, whereby the BRANCHES due on every article purfuant to the Rates are expreffed by Letters and Figures affixed in the right-hand margin of the columns of Rates and Duties.

## Of the Practical Buisiness of the Custom-Houte:

Before we enter into the explanation of the foregoing List of branches, and the Table, it is to be noted,
That all goods liable to the old Subsidy of poundage on a Rate or Value, when imported bv Strangers; and all goods enumerated in branch II. of the foregoing List, when imported in Ships not belonging to Great-Britain or ireland, or foreign built, are liable to the faid List, branch II.

Goods imported from, or exported to the Medigranean Sea, in Ships ungualified, are liable to branch IV.

Goods of the Manufacture of India or China, unlefs exprefsly charged bigher in the branch $\mathrm{N}^{\circ}$.9. are liable to art. 30. of branch 9 .

Goods of the Product of France, or any French Dominions, unlefs exprefsly charged higher in branches $\mathrm{N}^{\circ}$.g. or 10 or particularly exempted, are liable to art. 36 . of branch 10.
Goods of the Product of France, unlefs particularly exempted, are liable to branch 15 .

An Explanation of the preceding Table and List in Saxby.

The Marginal Letter or letters affixedto any fpecies of goods, (without regarding the figure of any) muft be fought for in the frit column of the table
The letter being found in the table, oppofite thereto in columns following ftand certain numbers, thefe numbers denote their refpective branches in the lift which immediately follows.

As for Example.
I. Suppore the particular branches chargeable on alpifti, or Canary feed, were defired to be known.
Upon recourfe to alpifti in the rates, it will be found, that the marginal referring letter affixed thereto, is $A$.
Oppofite to which letter, in the aforegoing table, are the numbers 1, 2, 3, 4, 5 .
And by the $\mathbf{N}^{\circ}$. $\mathbf{1}$.denotes the old fubfidy, being the parList of the feveral branches 2. - - new ditto, it will be $\left\{\begin{array}{ll}\text { 3. } & \text { one-third ditto, } \\ \text { 4. } & \text { two-thirds ditto, }\end{array}, \begin{array}{l}\text { which that } \\ \text { commodity is }\end{array}\right.$
found, that
But as the impoft 1690 , and 1692 , contain each a great variety of merchandize, it might from thence be difficult to difcover, under what particular head therein fpecifies, many forts of goods are chargeable: that difficulty is therefore obviated by a figure or figures annexed to the marginal letters of any goods liable to either of thofe branches, which figures diftinguirh the particular articles, in that order in which they fand in the refpective branch.
2. Suppofe the feveral branches chargeable on brimftone were defired to be known.
Upon recourfe to brimftone, it will be found, that the marginal letter and figure are B 5 .
Oppofite to the letter B (without regarding the figure 5) in the aforegoing table are the numbers $1,2,3,4,5,9$.
Which, by the List of the feveral branches, as before directed for alpifti, will point out the particular branches to which brimftone is liable; and by the addition of the figure 5 to the letter, it will appear, by confulting the branch Na. 9 , that brimfone is chargeable with the 5 th article of import 1690 .

And where there are two numbers annexed to the letter or letters, the firf has refpect to the impoft 1690 , and the latter to the impoft 1692 , as in the cafe of wrought filks, \& cc .
The method of computing the cuftom-houfe duties will appear from the following examples more intelligibly.
The firft thing therein to be confidered is, what proportion the rate bears to the duty.
The old fubfidy is generally 5 per cent. of the rate, with a difcount of 5 per cent. for prompt payment: there are, however, exceptions to this general rule; but, with refpect to all thofe fpecies of merchandize which fall under the letter $A$ in the table in the book of rates, the old fubfidy is 5 per cent. of the rate, with a difcount of 5 per cent.; fo that wherever you find, by the Reference Column, any fort of goods fubject to the old fubfidy, compute 5 per cent. upon the rate, and you have the grofs old fubfidy; from which deduct 5 per cent. for the difcount thereon, and you bave the net old fubfidy. When you have found this, if the new fubfidy, one third fubfidy, and two-thirds fub--fidy follow, thofe will be eafily found : for, the new fubfidy is the fame as the net old fubfidy; the one-third fubfidy is the onethird of that; and the two-thirds is the two thirds of the fame.

The duties on foreign goods imported confifting of a Poundage and a Tonnage, which are under different regulations, it is neceffary to treat of their computations feparately.
Poundage is underfood to comprehend the cuftoms and other duties payable on all goods imported (except thofe free of duty, or liab'e to Tonnage) being, in moft cafes, levied and collected at fo much in the pound, or per cent. on the refpective Rates or Values, as is fully explained under the feveral branches in the book of rates.
In order to difcover the feveral branches to which any fort of poundage goods are liable, it muft be obferved,

That the faid goods are to be fought for amongft the rates of Merchandizes inwards, in the book of rates, under their proper initial letters, or the gencral head wherein fuch goods are comprehended, or Drugs, Grocery, Linnen, \&cc.

That if the goods are not found to be any where rated, the Values thereof (except goods from India and China) muft be afcertained, as is directed under fuch refpective branch.
That after the amount of the goods at their refpective rates; or according to their values upon oath, is thus difcovered;' you may then proceed to the computation of the feveral branches of the duties to which fuch goods are liable, by the affiftance of the referring Letters, which fand in the right hand margin againft each fpecies of goods, in the portable book of rates, as explained in the following example:
Suppofe, as before obferved, you would know the duties on Alpisti, or Canary-seed; the ufe of the reference letter A in the table has been already explained, and by cafting an eye upon that article, in the table of Merchandize in the book of rates, you find written, The hundred weight, containing $1 \pm 2 \mathrm{lb}$. and in the next right hand column immediately following, that 1. 3: 15, under the act of Car. II. cap. 4, \&c. which denotes, that the Rate fettled by that act upon Alpisti is $1.3:$ is per 112 lb . ; and the reference letter A , in the furtheft right hand column, thews that A LPisti is liable to the foregoing branches ofduties, as exhibited in the preceding table, by the faid letter A, viz. Old Subsidy, New Subsidy, $\frac{1}{3}$ Subsidy, $\frac{2}{3}$ Subsidy, and Subsidy 1747.
The branch of the Oid Subsidy being on this article, 5 per cent. of the Rate, with a difcount of 5 per cent. for prompt payment, the net OLD SUbsidy is firf fourid, and all the reft will be eafy, as before flewn: as for the fubfidy of 1747 , thar is 5 . per cent. more, without any diftount, as has been the practice at the cuftom-houfe.
Now 5 per cent. upon l. $3: 15$, is 3 s. 9 d. the Gross Old Subsidy : and 5 per cent. difcount upon that, is 2 d . $\frac{1}{2}$. This being deducted from the Gross Old Subsidy, leaves for remainder the Net Old Subsidy, which is 3 s .6 d . 3 TheNew Subsidy being the fame, and the $\frac{1}{3}$ and $\frac{2}{3}$ Subsidies equal thereto, the Net Old Subsidy, multiplied by three, gives $10 \mathrm{~s} .8 \mathrm{~d} . \frac{\pi}{4}$. - To this muft be added the Subsidy of 1747 , which being 5 per cent. on the rate, gives the Gross Old Subsidy, and this added to the foregoing branches of duties, makes 14 s .5 d . $\frac{5}{20}$, or $\frac{25}{50}$ of a penny, to be paid by British, as appears according to Saxby.-If thefe computations are rightly underftood, and the proper ufe of the foregoing Table, and branches of duties relative to the Reference LetTERS in Saxby, no one can be at a lofs to compute any subSEQUENT DUTIES in any future acts of parliament; and for the reafons before given, it is neediefs to give frelh ready computed tables of total duties, every time there may be any additional cultom-duties laid on our imports, if the computation of thofe to 1747 are well underftood.
The next ftep to be taken, is to find the $\mathrm{N}_{\mathrm{E}} \mathrm{T}$ DUty to be paid on importation by STrangers. To which end, there muft be added to the Duties paid by British, one quarter of the Gross Old Subsidy.-This being II d. $\frac{1}{4}$, gives
 fent Book of Rates.
And to know what is drawn back on Re-exportation, if within three years from the Importation, accounting from the time of the matter's reporting the fhip, it mult be obferved, that the Drawback is in the general all that has been paid on Importation, except a Moiety of the Net Old Subsidp.

In the example beforeus, the Net Old Subsidy is 3 s. $6 \mathrm{~d} . \frac{3}{4}$; one moiety whereof is 1 s. 9 d. $\frac{7}{20}$, or $\frac{\pi^{3} 50}{5}$ and $\frac{8}{2}$ of a penny; which being deducted from the net duty of $14 \mathrm{~s} .5 \mathrm{~d} . \frac{1}{2}=$, or ${ }^{-\frac{1}{5} 500}$, paid by the Britifh, the remainder is 12 s .7 d . $\frac{17}{2} \frac{1}{2} \frac{1}{2}$, that is to be drawn back on re-exportation. This alfo agrees with SAXBY.

Another Examplf. Suppofe it is required to know the duties upon the importation of the article Andirons, the Pair.

By turning to that fpecies of goods in Saxby, 'tis found, by his tables to the right hand, that they are rated at ios. per Pair, and that by confulting the Reference Letter column, we find A, which, by the TAble and List, they pay the fame duties as Alpisti; and befides that they pay, for every hundred weight of iron, by the affixed Reference Letter D 25 in Saxby, according to the foregoing Table and List, the impost Duty of 1690 ; which Gross Duty is 5 s . per 112 lb . or hundred weight of iron, an allowance of $6 \frac{1}{4}$ being made to the importer for prompt payment, which is $3^{4} \mathrm{~d}$. $\frac{1_{2}}{2}=\frac{7^{5}}{150}$ : this being deducted from the 5 s . leaves the Net Duty of the Impost 1690 to be $4 \mathrm{~s} .8 \mathrm{~d} . \frac{5}{2} 6=\frac{25}{185}$.
After knowing the various duties, according to the RefeRence Letter, compared with the Table and $L_{i s t}$, and the condition of payment, to which thefe goods are liable, you begin their computation thus :
Five per cent, on the rate ios. is 6 d . Gross Old Subsidy. - 5 per cent. difcount thereon is ${ }_{26}$ of a penny; which being deducted therefrom, leaves Net Old Subsidy 5 d. $\frac{1}{2} \frac{4}{0}$; this $\times$ by 3 for the $\frac{\pi}{3}$ and ${ }^{\frac{3}{2}}$ SUbsidies $=1 \mathrm{~s} .5 \mathrm{~d} . \mathrm{a}_{2}^{2}$, with +5 per

## Of the Practical Business of the Custom-House.

cent. gross Subsidy of 1747-5 per cent. on the rate, being od. in the GROSs old SUBSIDY, which added =is. ind. $\frac{2}{\mathrm{~T}}$, the total net Duty paid by British.- To which add $\frac{1}{2}$ part of groos old Subsidy, id. $\frac{1}{2}=2 \mathrm{~s}$. od. $\frac{12}{2}$, the toTAL net Duty paid by Strangers.-And by deducting $\frac{\pi}{2}$ the Net old Subsidy, as in the preceding example, there will remain to be drawn back, in the time limited, as before obferved, by any perfon, $15.8 \mathrm{~d} . \frac{\frac{3}{2}_{5}^{5}}{}$, as you will find, by the infpection of Saxby's tables of total Duties, agaiuft Andi-

## rons.

Another example in letter $A$ of the rotal Duties. What are the duties on Andirons, or. Creepers of Latten, the pound?

By infpection of Saxby's total Duty Tables on the right hand of the merchandize, the Rate appears to be is. per pound, and according to the Reference Letter Column, C 13 compared with. TAble and List, this article pays the FOUR SUbsidies, as before, and that of 1747 : and alfo the impoft ( $1692-3$ ) which is Is. on every 20 s . of the Rate, with a difcount of $6 \frac{1}{4}$ per cent for prompt payment.
Five per cent. on is. $=\frac{12}{2}$ of a penny oross old Sub-sidy-and 5 per cent. thereon $=\frac{1}{2} \frac{2}{6}$ of $\frac{t}{2}$ of a penny; which deducted leaves the net old Subsidy, $\frac{1}{2} \frac{1}{0}$ of a penny; and $\frac{8}{20}$ of ${ }_{2} \times$ by $3=I d$. $\frac{14}{24} \frac{4}{25}$ —to which add the net import (1692-3) which is found thus.-The gross import being for every 20 s . of the Rate is. proceed as follows.- Firft, find the Net impost on the Rate-difount being $6 \frac{1}{4}$ on I s . $=\frac{1}{2} \frac{1}{2} \overline{0}$ of a penny $\longrightarrow$ this deducted, leaves for the NET Impost ( $1692-3$ ) 11 d . $\frac{5}{20}$. - Then, as 2os. Rate is to IId.
 a penny $\frac{2}{2}^{5}$ s of $\frac{1}{2}$; ; which added to the net Duties above,
 the Rate for the Gross Subsidy ( 1747 ), -this is is $s=\frac{I_{2}^{2}}{2}$ of a penny; which added to 2 d . $\frac{55}{2} 6 \frac{5}{20}$, as above $=2 \mathrm{~d}$. $\frac{1}{2} \frac{7}{20} \frac{2}{20}$, the total Net Duties paid by British.

Then to know what is paid by Strangers, add thereto $\frac{7}{\ddagger}$ of the gross old Subsidy, which is $\frac{3}{20}$ of a penny, and you have the anfwer, being 3 d . $\frac{3}{20}$. And,
To find what is drawn back, deduet $\frac{5}{2}$ of the NET old Subsidy. The net old Subsidy being $\frac{11^{2}}{2} \frac{8}{20}$ as before, $\frac{1}{2}$ thereof is $\frac{5}{20} \frac{1}{2} \frac{4}{2}$; which deducted from $2 \mathrm{~d} . \frac{17}{2} \frac{1}{20}$, as above, the remainder will be $2 \mathrm{~d} . \frac{15}{2} \frac{5}{2} \frac{5}{6}=\frac{3}{4}$, the anfwer, according to Saxby.
N. B. It is hardly neceffary to obferve, that when the rotal net Duties are computed for one pound weight, or one hundred weight, \&c. there is no difficulty to compute them for any given quantity, \&c. \&c.
Example 4. Let the net Duties on Wood or Soap Ashes be required.
By infpection of Saxby's Duty Tables to the right-hand of the merchandizes, the RATE is found to be 61. per laft, containing 12 barrels. By the Reference Letter column C 5 , and Table and List this article pays the four Subsidies, and Impost 1692-3, with a difcount of $6 \frac{1}{4}$, and Subsidy (1747) by Saxby.

Five per cent. on 61 . is 6 s . gross old Subsidy, -5 per cent. difcount thereon is 3 d . $\frac{12}{2} 2$. Therefore the NET OLD Subsidy is 5 s .8 d . $\frac{8}{20}$; this $\times 3=17 \mathrm{~s}$. I d. $\frac{1}{10}$ - GRoss Impost (1692-3).——This+17s. Id. $\frac{4}{20}=11$. 2 s .8 d . $\frac{14}{2}$; this +5 per cent. Subsidy (1747) on the Rate $=6 \mathrm{~s}$. makes the net Duty, by Saxby, per British il. 8 s .8 d . $\frac{2}{2} 4$.
To find what is paid by Strangers, add $\frac{7}{7}$ of the gross old Subsidy, viz. ( $=1 \mathrm{~s} .6 \mathrm{~d}$.) to what is paid by British, and the fum will be what is paid by Strangers, viz. il. ios. $2 \mathrm{~d} . \frac{14}{2}$ t, , which agrees with Saxby.——And,
To find what is drawn back, deduct $\frac{1}{4}$ the net old Subsidy therefrom, viz. $2 \mathrm{~s} .10 \mathrm{~d} . \frac{\sigma^{4}}{5}$, which leaves 11.5 s . 10 d . $\frac{3}{2} \circ$ for the remainder, as per Saxby.
There examples containing the principal cales of computation that relate to thefe fpecies of goods and merchandize which fall in their alphabetical order in Saxby's book of rates, under the letter A, it is not neceffary to multiply more, to explain the UsE of the conftant portable book of rates at the cuftomhoufe. For if thefe are duly underftood and attended to, the computation of any alterations that have been made fince, or that ever fhall be made hereafter, may be eafily computed from the aets of parliament made for that purpofe.
Thofe who are not well grounded in thefe computations will be little the better for tables of the total duties ready computed to their hands; nay, they may, as I hall fhew they have done, prove more detrimental.

## Of the Duties of Tonnage.

Tonnage comprehends the Duties payable on wines imported (and the old fubfidy on perry, rape of grapes, cyder, cyder-eager, and vinegar, the impofts on vinegar, and the coinage duties) being by a furm certain on the ton meafure.

All the feveral duries on wines are fully explained under each refpective branch in chap. I. Saxby, wherein are thewn the grofs duties, the difcounts thereon, and the net duties to be paid or fecured (for one ton or one gallon) according to the feveral circumftances of entry and importation; therefore when the branches, to which any fort of wines are liable, are defired to be known, that fort (obferving the particular circum-
ftances of entry and importation) muft be fought for betaeen page 267 and page 275, Saxby; and oppofite thereto will be found a referring Letter, reprefenting the particular branches, as is explained in the following example.

One ton of Spanifh wine, unfilled, for fale, imported into the port of London, by Britifh, in Britifh fhips legally qualified, all duties paid down.

Upon recourfe had to page 269 of Saxby, in the laft column thereof, oppofite to the fort of WINE above defcribed, will be found the reference Letters $Z \mathrm{Z}$, which letters being found in the Table with the List aforefaid, page 74, Saxby, they refer to the Branches of Duties contained in the List $\mathrm{N}^{\mathrm{o}}$ I. III. -2.3.4.7.16.34, each of which Branches of Duties muft be confulted, that the refpective fums due thereon may be exactly charged ; which for the above example will be found to ftand thus,

Total duty to be paid before the laft act $\}$
of parliament of
$25: 18: 313$
1763, on wine and cyder
29. 18: $3^{\frac{13}{28}}$

And fo for any additional duties.
But for the greater eafe and difpatch in computing the duties on Wine, it is the practice to work by Tabies, wherein each Branch is computed net, according to all the refpective circumftances of importation, difcount, \&c. from a gallon to a ton.

After what has been faid, there is no one but may eafily underftand the ufe of the TAble and List in Saxby, by means of the reference Letters and Figures thereto annexed, and thereby can never be at a lofs, to compute any of the duties, according to any fort of alterations that have occorred, or may hereafter, by baving recourfe to fuch acts of parliament as may enadt the fame. We fhall fay no more on this fubject, at prefent, but reprefent fome other parts of the cuftom-houfe bufinefs, by way of familiar initiation thereinto.

Of the Methods of entering Goods at the Custom-House on Importation, with the various Forms of writings requifite on thofe occafions, particularly at the out-ports.
When foreign goods are imported, the mafter of the veffel, upon his arrival, muft go to the cuftom-houfe, and muft report his cargo upon oath *. The merchant may enter and land his goods any time within 20 days, from the day of the mafter's report : to do which in the moft advantageous manner, he muft write and fign five bills of entry ; one whereof muft be in words at length, and is called the warrant; the other four may be in figures $\dagger$.

* The form of a Report Inwards is thus:
[Fee, is. for the deputies, whether the report be made by Englifh or foreigners ; nothing more due to the collector, or any other officer.]
Inwards,
PORT of $\} \begin{gathered}\text { In the fhip } \\ \text { built, property all }\end{gathered}$
In the finp
built, property all $\left.\begin{gathered}\text { men, of which } \\ \| \\ \text { of } \\ \text { about } \\ \text { befides }\end{gathered} \right\rvert\,$
$\substack{\text { tons, with } \\ \text { men and } \\ \text { a man mafter }}$ in
I do fwear that the entry above-written, now tendered and fublcribed by me, is a juft report of the name of my flip, it's burden, built, property, number and country of mariners, the prefent mafter and voyage; and that it doth further contain a true account of my lading, with the particular marks, numbers, quantity, quality, and confignment of all the goods and merchandizes in my faid fhip, to the beft of my knowlege: and that I have not broken bulk, or delivered any goods out of my faid hip, fince her lading in.

Sworn before us the Collector.

## Of the Practical Business of the Custom-House.

Thefe five bills the merchant delivers to the collechor, or his clerk, who will compute the duties, which muft be paid, before the goods are landed. The duties being paid, the warrant is duly perfected, figned, and delivered to the land-waiters, appointed to attend the delivery, together with blue books, wherein an account of the delivery is to be entered. The goods are then landed, examined, and the quantities taken; the manner of doing which will be explained prefently. If the merchant is found to have entered fhort, he muft pafs poft-entries, and pay the duties for the quantities chort entered, in the fame manner as was obferved in paffing the prime entries: but if, upon delivery, an over-entry appears, the merchant may apply to the collector, to have his entries altered, and the overplus duly repaid; which may be done, if he applies, before the collector and comptroller have pofted the entry in the kings's books, upon his making fatisfactory proof that no fraud was committed: but, if the entry be pofted, before he applies, then the duty muft be repaid by certificate of over-entry, in the manner hereafter explained.
It fometimes happens that goods are fent by merchants to fell by commifion, and arrive before the invoice. In this, and fuch like cafes, when the merchant cannot make any tolerable conjecture at the quantities, and perhaps knows not the fpecies, or proper denomination of the goods, the law permits the goods to be landed by bills of fight or view*. The merchant makes a depofit, in the hands of the collector, of as much money as the duties are imagined to amount to, or rather more: then the bill of fight is made out, and given to the proper offcers; who muft examine and take the quantity of the goods, and make their report to the collector the next day, or render themfelves liable to the penalty of rool. in cafe of failure. According to the report the entries are paffed, and the duties paid, in the fame manner as they would have been, had there been no occafion for a bill of fight. If the officers cannot go through the examination in one day, they muft report their day's work to the collector, as being in part of the fight; for which the merchant mult pafs entries, and pay duty, and fo proceed till the whole bill of fight is completed.

* A Blll of Sight.
[One fhilling or two fhillings.]
In the Nereid. B. B. James Wood, from Bremen.
Richard Fonnereat, Britifh.
Two bales of merchandize, quantity and quality unknown. Richard Fonnereau maketh oath, that he hath received no invoice or other account, whereby to afcertain the quantity and quality of the above merchandize.

## Sworn before collector,

R. F.

Forty pounds being depofited in our hands for the duties of the above merchandize, you may permit the bales to be landed to your view and examination, endorfing the contents thereon and returning this warrant in due time to us.

## To the furveyor and land-waiters. <br> Collector. <br> Comptroller.

Goods not rated in the book of rates are often imported ; in which cafe, the duties are to be charged according to the value of the goods upon oath, by which value is to be underftood the value at the port of importation at that time, exclufive of the duty. The merchant is to oblerve, that, if he undervalues his goods, the law impowers the officers to take them and fell them; and, after repaying him the duties, according to the value he fet upon them, together with the faid value, and alfo 10 per cent. thereof, the furplus, if any, is to be applied to the finking fund: fo that merchants are to govern themfelves accordingly, to avoid the confequences of an undervaluation.

Having thus explained the manner of proceeding within doors, the bufinefs without doors comes next under confideration: let us therefore take a view of what paffes on board the fhip and at the keys, in delivering the goods. The tidefmen on board the fhip keep a tally-account of the delivery, in blue books; the Jand-waiters upon the keys, under the infpection of the land-furveyors, enter in their blue books not only the number and quality, but alfo the quantity, of the goods delivered.

The defign of the delivery is to afcertain the quality and quantity of the goods, which is chiefly incumbent upon the landwaiters : who are to take care, that the quantities and qualities of the goods delivered agree with the quantities and qualities entered. The qualities of goods are always known to the merchants; the officers, in determining them, muf rely upon experience, and the defcriptions in the books of rates.

The quantities are to be determined, either by number, weight, or meafure, according as the goods are rated in the book of rates.

To enable either merchants or officers to do this, they fhould be well fkilled in arithmetic, gauging, and menfuration; qualifications io indifpenfably necelfary, that none fhould be admitted, either into a counting-houfe, or cuftom-houfe, without them.

VoL. I.

## Of GOODS rated by NUMBER, or TALE.

Art. I. The Allowances upon Delivery.
When ftockfinh are imported, they are all paffed as titling; which is the leaft fort of that fifh, and liable to the leaft duty: this is in lieu of allowance for damaged or defective finh.

When paper is imported in reams of 20 quires, each quire containing 24 fheets, 6 theets per ream are allowed for outfides. If paper be imported in quires of 25 fhects, as printing paper is, 12 theets per ream to be allowed for outlides.
No other allowances on delivery of goods by tale.
Art. II. Particular Usages and Regulations
Of oranges and lemons, 500 are to be reckoned to the cheff, and 250 to the half cheft, or box, though the chefts and boxes may hold more; and they are to be paffed and entered accordingly, becaufe no allowance is made for damage: but, if the merchant refufes to comply with this practice, the found ones are to be told, and to pay by the thoufand.
Stockfin $-\left\{\begin{array}{l}\text { Titling, } 18 \text { inches long. } \\ \text { Cropling, } 18 \text { to } 24 \text { inches } \\ \text { Lübfifh, above } 24 \text { inches. }\end{array}\right.$

But all paffed as titling. [See allowances above.]
Dagfones - $\quad$ Over, from 3 to four feet.

- Thick, above 6, under 12 inches.
 frall $\left\{\begin{array}{l}\text { Over, under } 3 \text { feet. } \\ \text { Thick, not exceeding } 6 \text { inches. }\end{array}\right.$
Millfones $\quad\left\{\begin{array}{l}\text { Over, above } 4 \text { feet. } \\ \text { Thick, }\end{array}\right.$
,
Tale.
Art. III. Mercantile Terms for Quantities.
A neft - - $\left\{\begin{array}{l}\text { Of pill-boxes, contains } 4 \text { boxes. }\end{array}\right.$
\{ Of neft-boxes, contains 8 boxes.
$\left\{\begin{array}{l}\text { Great, is } 12 \text { times } 12 \text { dóz. or } 1728 . \\ \text { Small, is } 12 \text { doz. or } 144 .\end{array}\right.$
A groce - $-\{$ Small, is 12 doz. or 144. OOf bracelets, is 10 doz. or 120.
A fhock is 60 .
A dicker is 10
A timber, of furs, is. 40 .
Of ftones, is 3 pair.
A laft
Of herrings $\left\{\begin{array}{l}\text { Red, is } 20 \text { cades, each cade } 500 . \\ \text { White, is } 12 \text { barrels. }\end{array}\right.$

## Of GOODS rated by WEIGHT,

ART. I. The allowances proper to this head are two, draught and tare. Draught is to be deducted, and then the tare, where there is any.
The manner of making the allowance for draught, is, for the weigher to call out the full and true grofs weight in the fcale; which is to be entered in the land-waiter's book, and an allowance made for each weigh or fcale, according to the following table.

| Grofs weight. | Allowance for draught: |  |
| :---: | :---: | :---: |
| Under r C. wt. | - - | 1 lb . |
| From 1 to 2 C . | - - | 2 lb . |
| 2 to 3 C. | - - | 3 Ib : |
| 3 to ro C. | - - | 4 lb . |
| 10 to 18 C. | - - | 7 Ib . |
| 18 to 30 C . or upwards | - | 9 lb . |

Tare, is the weight, or an allowance for the weight of cafks; bags, or other packages. For the accommodation of trade; there are in many cafes tares fettled and eftablifhed by cuftom and experience, as you will fee in the following table: however, thefe tares are not to bind the merchant, or officer; if either of them be diffatisfied therewith, they may infift on the goods being thipped and weighed net : and, indeed, in all cafes where it can be conveniently done, it is by much the beft wayo

Cable-yarn, in winch, from Ruffia —— 28 lb .
Linnen-yarn in fats ——_ i2 per cent.
Art. II. Particuear Regulations proper to this head.
Oil in calks pays duty by meafure, but is delivered by weight; the net weight is redeced to gallons, by allowing 7 i half ib. to a gallon.
To diftinguifh packthread from twine, take notice, that twine is twice, packthread thrice, twifted.
Twelve pounds of honcy make a gallon, and forty-two gallons a barrel.
Two hundred pounds are generally reckoned a barrel, in weight; but that weight of fteel is only efteemed half a barrel.
When almonds are imported in fhells, $23^{\text {ds }}$ to be allowed for thells.
When unpolifhed coral is imported, $13^{d}$ is reckoned fragments, and the remaining $23^{\text {ds }}$ whole coral; there being a difference, in the duty, between whole and fragments.

Brifles, though diftinguilhed, in the book of rates, into dreft and undreft, are all paffed as undreft, becaufe none are imported perfectly dreft.

Sixty-three bundles of bulruhhes are reckoned to a load.
Backs for chimnies weighing above I half C . are large; ditto, weighing r half C . and under, are fmall.
Iron chefts, in the book of rates, are difinguifhed into large, middle, and fmall.

Large, are i i qr. yard long.
Middle, 1 yard long.
Small, 3 qrs. yard long.
Old bufhel broken iron, is fuch as cannot be ufed without new forging; if there be any new fpikes, \&cc. intermixed, they muft be feparated, and pay duty, as manufactured iron.

Weights lefs than 2 lb . are not to be ufed in weighing tobacco, fugar, and other graff-goods.

Merchants are to be at no charge in opening and weighing goods duly entered.

Art. III. Mercantile Terms, denoting the quantities by which goods proper to this head are rated.
Wey of falt, is 40 bufhels, each bufhel 84 lb .
Mount of plaifter of Paris, is 3000 lb . wt.
A maft of amber, is 2 I half bb .
Little barrel of anchovies, is to weigh 16 lb . of fifh.

## GOODS rated by MEASURE.

Meafures may be diftinguihed into meafures of length, meafures of capacity, fuperficial meafure, and folid meafure; of which in their order. And, firft, of goods rated by meafure of length.
Art I. If lianens are contented in Flemilh or Dutch ells, two ells in 120 are to be allowed for fhortnefs of meafure.
But, if linnens are contented in Englihh ells, no allowance.
Of French lockrams, two ells in every 120 to be allowed.
The following are the fettled allowances for wrappers.
On Hamburgh
and
men linnen, in packs and bales, $I$ ell in 40 , but not to exBremen linnen,
and alfo $\left(\begin{array}{l}\text { ceed } 120 \text { ells on any one pack, let the packs } \\ \text { be ever fo large. }\end{array}\right.$ and alfo
Heffens canvas,
Dantzick linnens, 4 ells in every 120.
Flanders linnens, 3 ells in every 100.
Hollands duck, 4 ells in every 100; but, if brought loofe, no allowance.

# Of the Practical Business of the Custom-House, 

## Art. II. Particular Usages and Regulations,

Linnens are either contented or not contented; contented is that fort of linnen, the particular length of each piece whereof is inferted in the merchant's invoice, - and alfo marked upon the piece itfelf, or upon a label or ticket affixed to the piece; linnen not contented, is that fort of the particular length of each piece whereof the merchants have no account, nor is the length of each piece marked upon, or affixed to it.
When linnens are contented, the merchant is to infert the true and exact contents, or number of ells, in each bale, or other package, in the bill of entry. When they are not contented, the merchant is to infert in the bill of entry the number of pieces in each bale, or other package; and likewife the total quantity for which duty is paid:
Contented linnens fhort entered, or different in fort or fpecies from the entry, are to be feized; and, if the number of pieces of not contented linnens, in any bale or other package, exceeds the number inferted in the warrant, the fupernumerary pieces are to be feized: if the difference between the total quantity of not contented linnens delivered, and the total quantity entered, be above one ell for every piece, the excefs is to be fopped and fent to the king's warehoufe for the board's directions; but, if the faid difference be under one ell in every piece, then a polt-entry may be admitted.

The land-waiters are to open and examine every parcel of Flemifh and Holland linnens, and Silefia lawns and cambricks; and at leaft one third part of the number of bales, or packs, of all other linnens.

If the contents of any package differ from the contents in the warrant, all the other packages are to be opened and carefully examined.

In examining contented linnens, care is to be taken to meafure fome pieces in every package opened, to fee that the meafure agrees with the number of ells marked on the piece, or on the label.
Three or four pieces, at leaft, in every bale, or other package, of not contented linnens, are to be meafured ; one or two to be chofen by the officer, and the like number by the merchant, by which the contents of the whole bale are to be computed. In cafe of difpute, as many more as are 'neceffary to decide it, are to be chofen and meafured by the officer and merchant, in the manner above-mentioned.

No wrappers are to be allowed upon linnens in chefts, caiks, or fats, nor upon Ruffia linnens.

The number of archeens of Ruffia linnen in every bale, wrappers included, is to be inferted in the warrant by the importer, who is to make oath of the truth thereof: after exammation of the bales, to prevent concealment, the archeens ate to be reduced to Englifh ells, by multiplying them by 57 , and cutting off the two laft figures in the product. On fufpicion of fraud, the officers are to meafure.

The contents of the wrappers of all forts of linnen are to be charged to account in the land-waiterss books; and duty is ta be paid for them, becaufe proper allowances are made in another manner as before mentioned.
If any linnens are ufed as wrappers, which pay a higher duty than the linnens wrapped, and are not particularly diftinguifhed in the warrant, they are to be feized.
The pieces of buckrams, not to exceed 15 yarde
The pieces of bermillions, not to exceed 40 yards.
The half piece of ditto, not to exceed 15 yards.
The piece or knot of bandifring twift, is 32 yards.
The piece $\left\{\begin{array}{l}\text { of caddas, } \\ \text { of check, } \\ \text { of Silefia lawn, } \\ \text { of cambrick and other } \\ \text { lawns, }\end{array}\right\}\left\{\begin{array}{l}36 \text { yards. } \\ \text { Io yards. } \\ \text { from } 4 \text { to } 8 \text { yards. } \\ \text { I } 3 \text { yards. }\end{array}\right.$
Of Flemifh, or $\}$ about 2 yards wide, 6 yards are a tick. Dutch ticks, $\}_{1}$ yard wide, 12 are a tick.
No polt-entry is to pafs for contented linnens, or linnens tated by the piece, without § pecial order from the board. $^{\text {a }}$
When Englifh and Dutch ells are both inferted in the metchant's invoice, the Englifh only are to be regarded.

The duties on feveral forts of linnens differ according to the breadth; the following limitations of breadth are, therefore, to be particularly noted, both by the officer and merchant.

Germany and eaft $\{$ narrow, is not above 78 ths of a yard.
country linnen, $\{$ broad, above 78 ths of a yard.
Ruffia linnen, $\left\{\begin{array}{l}\text { narrow, not above half an Englit. } \\ \text { broad, above half an Enolith ell. }\end{array}\right.$
The breadths of Fle- $\quad$ not exceeding $I$ and $I$ th.
mifh and Dutch Englifh ells
mith and Dutch above 1 and I 8th, and under 2 Englih
linnens are thus
limited for the dif-
limited for the dif- $\quad \begin{gathered}\text { ells. } \\ 2 \text { ells, and under } 3 \text { Englifh ells. }\end{gathered}$
ferent duties, $\quad\left[\begin{array}{l}2 \text { ells, and under } 3 \text { Engliah ell } \\ 3 \text { Englifh ells, and upwards. }\end{array}\right.$
Looking-glaffes in the book of rates are diftinguihed by certain numbers, which fignify the number of inches in the breadth of each glafs.

The following Table may be of fome ufe to diftinguifh linnens.

| Contented linnens. |  |  | Not contented linnens. |  |
| :---: | :---: | :---: | :---: | :---: |

Art. III. Mercantile Terms proper to this head,none.

Of GOODS rated by MEASURES of capacity, liquid, or dry.
Art. I. Allowances upon Delivery
Olives improper in large cafks are to be gauged, and 13 d of the contents allowed for liquor.
Every $\left\{\begin{array}{l}\text { Pipe } \\ \text { Hoghead }\end{array}\right\}$ of wine, which thall be run out, and not abdve 9 inches left therein, thall be accounted outs, and no fubfidy paid for the fame.

Art. II. Particular Usages and Regulations.
If a merchant enters his wines filled, he pays duty only for the net wine contained in the cafk, and has no allowance out of the duties for leakage: when wines are entered unfilled, duty is to be paid for the full contents of the calk, though it may want confiderably of being full; but then the merchant is allowed 12 per cent. out of the duties for leakage.

Therefore, if cafks of $\left\{\begin{array}{l}\text { Rhenih } \\ \text { French } \\ \text { Port, or Madeira, } \\ \text { all other }\end{array}\right\} \begin{aligned} & \text { wines imported } \\ & \text { into }\end{aligned}$
The out-ports want more
than $\left\{\begin{array}{c}\frac{66}{625} \\ \frac{106}{1025} \\ \frac{144}{1425} \\ \frac{6}{59}\end{array}\right\}$ of being full,

The merchant lofes by entering them unfilled. In general, if any cafks of wine, imported into the out-ports, want much more than I tenth of being full, 'tis for the merchant's advantage to enter them filled; otherwife unfilled.
Five flafks, or 7 and 1 half betties of Florence wine, are to be efteemed a gallon. Five bottles of other wines, imported in bottles, to be reckoned to a gallon, unlefs the officers or me:chants think proper to meature.

Jars of oil, ufually palfed at 22,24 , or 26 gallons
A cheft of oil, ufually pafied at 8 gallons.
Barrels of mum, pafled at 48 gailons.
Kegs of fpruce beer, at + gallons.

## Of the Practical Business of the Custom-House.

In cale of leakage, mum barrels and kegs of foruce beer may be filled up, before computation is made.
Tar barrels are to contain 31 and 1 half gallons, and are to be filled up before computation is made for the duties.
Awms of Rhenifh wines are generally pafled at $3^{8}$ and 1 half gallons.
Note. Tomeafure all forts of cafks, fee the article Gaucing.
Art. III. Mercantile Terms for quantities.
$\begin{array}{lll}\text { A ton } \\ \text { A pipe } & - & -\quad . \quad 252 \text { gallons. } \\ 26 \text { gallons. }\end{array}$
An hoghead - $\quad 63$ gallons.
An awm * - 42 gallons.
A barrel of fpruce $\{$ for cuftoms, 42 wine gallons.
beer and mum, $\{$ for excife, 32 wine gallons.
Of apples, tarras, onions, \&c. 3 bufhels.
Note. There is no contradiction in faying here, that an awm is 42 gallons, and obferving before that awms of Rhenifh are paffed at $3^{8}$ and I half gallons: for the exact awm is 42 gailons, or I fixth of a ton; but the awms imported generally contain 38 and I half gallons, and mult be reduced to awms of 42 gallons for the duties. Thus, the exact butt or pipe is 126 gallons; but the butts and pipes imported contain fometimes confiderably more, and fometimes a good deal lefs, than that quantity. Obferve the fame diffinction with refpect to barrels of mum.

## Of G OODS rated by fuperficial and folid meafure.

## Art. I. Allowances,-none.

Art. II. Particular Usages and Regulations.
If balks are above 8 inches fquare, they are to be accounted timber, and meafured.

Five gally-tiles, of 5 inches fquare, are efteemed a foot.
Four gally-tiles, of 6 inches fquare, make a foot.
In computing the contents of round cylindrical timber, onefourth of the girt is taken for the fide of a fquare, and then you proceed as if it was fquare timber.

Round conical timber, as mafts, \&c. is reduced to fquare timber by adding the girt, at the large end, and the girt at the leffer end together, and taking one eighth of the fum for the fide of a fquare.

Unequal-fided timber is reduced to fquare timber, by taking one-fourth of the girt in the middle for the fide of a fquare.

In meafuring pyramidical timber, where ends are parallelograms, the practice is, to take half the fum of the breadths of the two ends for the mean breadth, and half the fum of the thickneffes, for the mean thicknefs; and then to multiply the product of the mean breadth and mean thicknefs by the length.

Thefe cuftomary methods of meafuring timber deviate from the true; but our bufinefs is to give an account of practice. Yet we hall not be wanting to give the complete theory of menfuration, under it's proper article.
Bafket rods pay duty by the bundle, which is to be three feet about the band; if the band, or circumference of the bundle, exceeds three feet, duty muft be paid according to the proportion which the area of a circle, where the circumference is three feet, bears to the area of a circle of any other circumference; and circles are in proportion to one another as the fquare of their circumferences, or, which is the fame thing, as the fquares of their diameters.

The inches of wainfcot boards are computed, in proportion to their lengths and thicknefies, according to the following table.

|  |  | I qr. otanin | Half an inch. | 3 grs. of an in. | 1 1nch. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 12 | $2 \begin{gathered} 4 \text { boards makt } \\ \text { an inch. } \end{gathered}$ | 2 to an inch. | 4 to 3 inches. | 1 to an inch. |
|  | $9$ | 9.6 to 3 inches. | 8 to 3 inches. | 16 to 9 inches. | 4 to 3 inches. |
|  | - 6 | 68 to an inch. | 4 to an inch. | 8 to 3 inches. | 2 to an inch. |

Square feet of Plank are reduced to folid feet, or loads, by the following table.

| hicknefs of plank <br> in inches. | Square feet in <br> folid foot. | Square feet in <br> load. |
| :---: | :---: | :---: |
| 4 | 3 | 150 |
| 3 | 4 | 200 |
| $2 \frac{1}{2}$ | 4,8 | 240 |
| 2 | 8 | 300 |
| 12 | 12 | 400 |
| 1 | 16 | 600 |
| 1 | 800 |  |

Art. III. Mercantile Terms for quantities.
A load of timber, or plank, is 50 folid or cubic feet.
A ton of ditto is 40 cubic feet.
By an inch of wainfcot-board is meant a wainfcoat-board 12 feet long and one inch thick.
Every thing material being thus colleted in a narrow compals, with refpect to the afcertaining the fecies and quantity of foreign goods imported, we fhall proceed to ot er things, not lefs necefliary to the merchant.

It fometimes happens that goods upon delivery are found to have received damage. In this cafe the furveyor and landwaiters are to make their report on the back of the warrant, and return it to the collector and principal officers, who are then to chufe two indifferent and experienced merchants, to view the goods, and upon oath to determine the quantum of the damage. Then the furveyor and land-waiters certify that the goods viewed by the metchants are the fame for which duty was paid: whereupon a certificate of the whole proceeding ${ }^{*}$ is made out, and a proportional abatement of duty is made, and repaid to the merchant, upon his figning the receipt.

* The form of a Certificate of Damage.

## Of Re-Exportation

If foreign goods and merchandizes be exported within three years from the importation, reckoning from the time of the mafter's report, the greateft part of the duties firft paid are drawnback.

The general rule for the drawback, as has been thewn by the examples of computation, is all but the moiety of the old fubfidy; but there are feveral exceptions to this, which fhall be fully explained under the article Drawbacks.
The manner of proceeding at the cuftom-houfe in this cafe is, that a certificate muft be obtained of the payment of the duVol. I.
ties inwards, from the colleftor and comptroller $t$, and proof is to be made, that the goods to be exported are the very fame goods mentioned in the certificate, by the oaths of the exporter, and the merchants through whofe hands they have paffed. The exporter then enters the goods outwards, as in the common way of exportation; which fee under the anticle Exportation, where whatever is effential to the practical bufinefs of a merchant will be found. The cocket granted upon this occafion is called a certificate cocket *, and differs a little in form from common over-fea cockets. Notice of the tiras of hipping is to be given to the fearcher, who attends the fhipping, examines and afcertains the quantity, and returns the cocket endorfed, to the officers who granted it: all other proceedings at clearing the veffel are the fame as have been before explained.

## Of Exportation.

When you intend to export goods to foreign parts, write four bills of entry, in the form below $\ddagger$. Go to the cuftomhoufe, and deliver them to the collector, or his clerk. The duties if any due, will be computed, and demanded; upon payment, a cocket [fee the form |l] certifying the payment of duty, or the regular entry of the goods, if not liable to duty, will be delivered to you, which keep, till you intend to thip the goods. Before fhipptng, deliver the cockef to the fearcher, and give him notice of the time when you intend to fhip them; for no goods are to be landed or fhipped but in the prefence of a proper officer. The fearcher will attend and examine, and count, weigh, or meafure the goods; which done, they are put on board, and the fearcher certifies the quantity fhipped on the back of the cocket, which is then returned to the principal officers with whom it remains till the mafter comes to clear. When the mafter comes, the cockets for all the goods on board are collected, and entered in what is called a report outwards [fee the form below *] upon the mafter's declaring the faid cockets to contain a true account of his whole cargo. To this report the mafter makes oath before the collechor and comptroller, pays his clearing charge, his cockets are delivered, and he is at liberty to proceed on his voyage.

## $\ddagger$ The form of an Outward Entry.

maketh oath, that the corn herein men-
tioned is not relanded, or intended to be relanded, in GreatBritain, or the iflands of Guernfey or Jerfey.
maketh oath, the contents of the certificate abovementioned are true.

## Bond is taken in penalty of

 that thecorn abovementioned (the danger of the feas excepted) fhall be exported into parts beyond the feas, and not be again landed in the kingdom of Great-Britain, or the illands of Guernfey or Jerfes.

The corn abovementioned, viz.
was hipped in the faid fhip, the
day of
Landwaiter,
Searchdr.
The veffel abovementioned is
mafter, and two thirds of the mariners his majetty's fubjects.
The money to be paid for the corn within
mentioned, purfiant to an act of par--
liament for encouraging the exportation
of corn, a aiounts to
Collector, Comptroller.
When there is not money at the port, the collector certifies accordingly, and then delivers the debenture to the exporter, who applies to the commiffioners of the cuttoms for payment, and their fecretary thercapon endories an order to the receiver-general to pay it in a limited time.

As the bounties on corn exported are very confiderable, that article has been thought worthy of fome particular regulations, with refpect to the fhipping it ; which it will not be amifs to note.

When a merchant fignifies his intention to fhip corn, intitled to bounty, entries are not poofed immediately, and a cocket granted, as is ufually done for other goods; but the collector and comptroller grant a fufferance to fhip the intended quantity, directed to the patent-fearcher, furveyor, and landwaiter, who are to attend the meafuring and fhipping thereof. A round frike is to be made ufe of in meafuring the corn, the middle whereof is to be entered upon the edge of the bufhel or meafure, and it is to be paffed over the top of the bufhel with a fwift circular motion: and, for expedition's fake, a tub, containing four Winchefter bufhels, may alfo be ufed in the admeafurement. When the corn is meafured and fhipped, the quantity and quality are to be indorfed on the fufferance, which is to be returned to the collector. The exporter is then to certify the quancity and quality of the corn fhipped, in writing, under his hand; which certificate is to be verified by the oath of one or more creditable perfons; whereupon bond is to be given for exporting the corn, and for bringing a certificate of the landing thereof beyond feas: then entries are to be paffed, and a cocket in due form delivered to the merchant, who is to endorfe the quantity of corn Ihipped thereon, before the fhip is cleared.

The regulations for malt are fomewhat different. Malt may be entered at orice, without a previous fufferance, and bond may begiven at the time of entry. It is then to be meafured and flhipped, as it comes to hand. If the quantity to be fhipped be greater than the quantity entered, the merchant mult make a frefh entry, and give a frefh bond; if lefs, the quantity fhortfhipped is to be endorfed by the mercbant in the bond, a proper exception being made in the condition of fuch bonds for that purpofe.

The barley to be made into malt for exportation is entered with the excife officers, and their certificates of the quantity are to be annexed to the debenture. The bounty is to be allowed for half as much more barley as was fteeped; or, which is the fame thing, the bounty is $3^{\mathrm{s} .9 \mathrm{~d} \text {. per quarter upon the }}$ barley fleeped.

No fees are to be taken for debentures, difpatches, or any other matters relating to the exportation of corn.

When the price of wheat is from 46 s . to 50 s . a quarter, no bounty is to be allowed.

When wheat and rye mixed are exported, bounty is to be paid as if the whole quantity was rye.

Flour exported is to be weighed, and not meafured; 448 lb . is to be allowed to a quarter. It may be weighed and fhipped, as it comes from the mill; or the bran may be feparated, and the fine flour only weighed and Khipped, as the merchant chufes. Weighing porters are to affilt in hipping flour, without charge to the merchants.

No bounty is to be allowed on corn exported for the ufe of his majefty's garrifons, nor on corn fhipped on board fhips for Newfoundland, or any other place, for brewing beer, baking bread, for the voyage.

Ships trading to the Mediterranean mult be provided with Mediterranean paffes from the admiralty. The iteps neceflary to be taken for obtaining them are thefe: the furveyor of the port where the fhip lies muft go on board, and examine and furvey her, and mufter the feamen; then he is obliged to certify, under his hand in writing, to the collector of the port, the burden and built of the veflel, the number of men, diftinguifhing natives and foreigners, the number of guns, what fort of veffel the is, \&xc. The collector, having received this, propofes an affidavit, to be figned and fworn to by the mafter, which contains all the foregoing particulars, and likewife the name of the veffel, mafter, and port bound to, the time when, and place where, fhe was built; to which is added, that the is of Britifh property: that her laft pafs was delivered up; and that the mafter has delivered up all the paffes he ever had befure. This affidavit is tranfmitted to the fecretary of the admiralty, who thereupon fends down a pafs, and a bond for delivering it up, after the voyage is performed. The bond, being duly executed, is returned to the admiralty, and the pafs is delivered to the mafter.

Ships are not permitted to trade to the Britifh plantations, or colonies, until proof be made upon oath, by one or more of the owners, that the hip is Britifh built, and Britifh propety, and the mafter, and at leaft three-fourths of the mariners, Britifh; and that no foreigner, directly or indirectly, bath any intereft therein.
After which the hip is to be regiftered, and a certificate thereof delivered to the mafter. Bond is alfo to be given, with one fufficient fecurity, in the penalty of roool. if the veflel be under yoo tons, or in 2000 l . if the veffel be above that burden; that, if any of the goods of the produce of the faid plantations, enumerated in feveral acts of parliament, be taken on board, they fhall be brought by the faid fhip to Great-Britain, and there landed
This bond may be given either in Great-Britain, or in the plantations, and a certificate of the delivery muft be produced in 18 months from the date of the bond.

Rice and fugar may be carried diredty from the plantations to any foreign ports fouthward of Cape Finifterre, upon obtaining proper licences, and under certain regulations: for the knowledge whereof there is no great occafion in the out-ports: and, therefore, we fhall refer that matter to the bufinefs of the port of London, which we thall treat of under the article Custom-House.

According to this order of proceeding, we fhall, in regard to the out-ports, give the forms, precedents, and inftructions for the execution of every branch of the bufinefs of that revenue; and fully fhew the method of granting, making out, entering, and executing the proper difpatches, and other inftruments; alfo of keeping and making out the feveral books of accounts relating to this branch of his majefty's revenue; and the manner how every other part of each branch is to be performed by the refpective officers.-In a word, the whole upon this part of our defign will fully explain and illuftrate the nature of the office of a collector, cuftomer, comptroller, fearcher, furveyor, land-waiter, coaftwaiter, tide-furveyor, tide-waiter, \&c. directing how each of them are, in their refpedive flations, to execute the feveral laws of the cuftoms, and neither to fuffer the crown to be injured, nor the trading fubject to be oppreffed.
Thefe points will appear, at the conclufion of every letter, after the duties; and alfo under the general heads of cuftoms, importation, exportation, drawbacks, bounties, fublidies, and all fuch articles as are a proper analyfis of this branch of the public revenue; which articles will be duly referred to from time to time.
What we have hitherto faid, in regard to the methods of tranfacting bufinels at the Cuftom-Houfe, relates, as obferved, chiefly to the out-ports, though there ought to be no variation from that of London. And, to the end that the whole bulinefs of thefe ports, together with that of the coalting part, may be thoroughly entered into, we hall, at the end of every letter, where we reprefent the duties, continue to give a connected fyitem of the practice of the cuftoms, as well in refpect to what regards the port of London as the other ports.
Wherefore, at prefent, we fhall only further obferve upon this fubject, that, although the laws direct what duties thall be paid, what penalties inficted, and fome particular requifites that muft be performed; yet they are almoft entirely filent as to the manner and method of levying and accounting for the duties, and of performing and executing of all other requifites and regulations which are neceffary to be obferved, for the greater fecurity

Of the Practical Business of the Custom-House.
of the merchant, and the better to afcertain and fecure his majefty's revénue.

And as form and method are effential to the due execution of all bufinefs in general; fo uniformity is abfolutely neceffary in that of the cuftoms, becaufe it is to be performed at different places, and by different perfons; who being only fo many tranfactors of the fame kind of bufinefs, ought not only to execute it, but render an account of all their proceedings, in the fame manner and form; and therefore we fhall, through the courfe of this defign, interfperfe fuch inftructions and examples, as, it is humbly apprehended, will fully fhew the method of executing the bufinefs of each refpective officer with uniformity throughout the whole: which, together with all the other matter we fhall incorporate, will make a complete fyftem of the whole bufinefs of the Britifh cuftoms, and that in a method more familiar and intelligible to officers, merchants, and gentlemen, wha are defirous to become mafters of this great branch of the revenue, than was ever done before.

Certain Rules, Orders, Directions, and Allowancess, for the advancement of trade, and encouragement of the merchant; as alfo for the regulating as well of the merchants in making of due entries and juft payments of their cuftoms, as of the offcers in all the ports of this kingdom, in the faithful difcharge of their duty: annexed to the Book of Rates referred to in the act of tonnage and poundage, paffed anno 12 Car. II. cap. 4.
I.

Every merchant thall have free liberty to break bulk in any port allowed by the law, and to pay cultom and fubfidy for no more than he thall enter and land; provided that the mafter or purfer of every fuch thip thall firft make declaration upon oath, before any two principal officers of the port, of the true contents of his fhip's lading ; and thall likewife after declare, upon his oath, before the cultomer, collector, comptroller, or furveyor, or two of them, at the next port of this kingdom, where his Chip fhall arrive, the quantity and quality of the goods landed at the other port, where bulk was firft broken, and to whom they did belong.

## II.

All foreign goods and merchandizes (except wines, currants, and wrought filks) firt imported, thall be again exported by any merchant, within three years (as by the $7^{\text {th }}$ Geo. I. cap. 2I. §. 10.) and fuch merchant or merchants as fhall export any fuch foreign goods or merchandizes (except as before excepted) fhall have allowance, and be repaid by the officer which received the fame, the one moiety of the fublidy which was paid at the firf importation of fuch foreign goods and merchandizes, or any part thereof, fo as due proof be firft made, by certificate from the officers, of the due entry and payment of the cuftom and fubfidy of all fuch foreign goods and merchandizes inwards, together with the oath of the merchant's importing and exporting the fame, affirming the truth thereof, and the name of his majefty's fearcher, or under-fearcher, in the port of London, and of the fearcher of any other the out-ports, teftifying the fhipping thereof to be exported. After all which duly performed, in manner before expreffed, the moiety of the fubfidy, firft paid inwards, fhall, without any delay or reward, be repaid unto fuch merchant or merchants who do export fuch goods and merchandizes, within one month after demand thereof: as alfo the whole additional duty of filks, linnen, and tobacco; in manner as before is directed.
The like regulations for repayment of the new fubfidy, 9 and 10 Wil. III. cap. 23. 5. 13.
III.

And, if there be any agreement now in force, which was formerly made by the late commiffioners of the cuftoms and fubfidies, with the merchant-ftrangers, or their factors, or fhall hereafter be made by any commiffioners or farmers of the cuftoms and fubfidies, or any other power (except by confent of parliament) with any merchant or merchant-ftrangers, or their factors, for any foreign goods or merchandizes to be brought into the port of London, or any other port or haven of this kingdom of Great-Britain, and to be exported again by way of compofition; all other merchants, being his majefty's fubjects, thall be admitted into the fame compofition, and not to be excluded from any other privilege whatfever, granted to the frranger by any private agreement, or compofition under the fame conditions, and with the fame reftriction, as thatl be made with the merchant-ftranger.

## IV.

Every merchant, as well Britifh as ftranger, that fhall fhip and export any kind of wines, which formerly have paid all the duties of tonnage inwards, hall have repaid, or allowed unto them, all the duties of tonnage paid inwards : except to the Britifh man 20 s , the ton, and except to the franger 25 s . the ton, upon due proof of the due entry and payment of the tonnage inwards, and of the mipping thereof to be exported, to be made in manner as in the fecond article is mentioned and expreffed.
V.

If any merchant, denizen or ftranger, thall expert any Spanifh or foreign wools, he thall bave liberty fo to do, with this further condition, that fuch Spanifh, or other foreign wools what foever, be not exported in any other hip or veffel whatfoever,
with intent to be carried beyond the feas, out of the kingdom of Great-Britain, than only in Britifh fhipping, upon pain of confifcation.

## VI.

Every merchant, as well Britidh as Aranger, which fhall fhip or export any currants, which formerly were duly entered, and paid the fubfrdy and cuftom inwards, fhall have allowed or repaid unto them, refpectively, all the cuftom and fubfidies paid inwards for the fame (except eighteen pence for every hundred weight to the flranger) upon due proof of the due entry and payment of the cuftom and fubfidy thereof inwards, and of the fhipping thereof to be exported, to be made in manner as in the fecond article is declared.
VII.

If any merchant, having duly paid all duties inwards for foreign goods, in regard of bad fales, fhall be enforced to keep the fame, or any part thereof, in his hands, after the face of three years (as by 7 Geo. I. cap. 21. §. IO.) thall be elapfed; in this cafe, he, or any other perfon, is to be permitted to thip the fame out for the parts beyond the feas (if they think fit), without payment of any fubfidy for the fame outwards, upon due proof that the fame was duly entered, and fublidy paid inwards.
VIII.

Every merchant bringing in any fort of wines into this kingdom, by way of merchandize, who thall make due entries of the fame in the Cuftom-Houfe, fhall be allowed 12 per cent. for leakage.

## IX.

Every hogthead of wine which fhall be run out, and not full feven inches, or above, left therein; and every butt, or pipe, not above nine inches; fhall be accounted for outs, and the merchant to pay no fubfidy for the fame.
X.

If any wines fhould prove corrupt and unmerchantable, and fit for nothing but to diftil into hot-waters, or to make vinegar, then every owner of fuch wines thall be abated in the fubfidy, according to fuch his damage in thefe wines, by the difcretion of the collectors of the cuftoms, and one-of the principal officers: but, by 6 Geo. I. cap. I2. §. I. repealed.
XI.

If any tobacco, or other goods or merchandize, brought into this kingdom, fhall receive any damage by falt-water, or otherwife, fo that the owner thereof fhall be prejudiced in the fale of fuch goods, the principal officers of the Cuftom-Houfe, or any two of them, whereof the colleqior for the time being to be one, thall have power to chufe two indifferent merchants, experienced in the value of fuch goods, who, upon vifiting the faid goods, thall certify and declaie, upon their corporal oaths firl adminiftred by the faid officers, what damage fuch goods have received, and are leffened in their true value, and, according to fuch damage in relation to the rates fet on them in this book, the faid officers are to make a proportionable abatement unto the merchant, or owner, of the fubfidy due for the fame. But, by 12 Ann. cap. 8, §. 8, 10. and 9 Geo. I. cap. 21. §. 4, repealed as to tobacco.

## XII.

The merchant-ftrangers, who, according to the rates and values in the Book of Rates contained, do pay double fubfidy for lead, tin, and woollen cloths, thall alfo pay double cuftom for native manufactures of wool, or part wool; and the faid ftrangers are to pay for all other goods, as well * inwards as outwards, rated to pay the fublidy of poundage, three-pence in the pound, or any other duty payable by charta mercatoria, befides the fubridy.

* This is the duty called petty cuftoms.

But, by 25 Car. II. cap. 6. §. 1, 2, 3. and 9 Ann. cap. 6. §. 3, 5. repealed as to goods imported.
Note, Charta mercatoria, which was firf granted by 3i Edw. T. was confirmed by 27 Edw. III. cap. 26. and the duty of threepence per pound thereby granted, directed to be computed by the contents of the goods, according to the oath of the importer, or letters of credence, without unfealing, or opening: upon penalty of imprifonment by the officers, and quadruple damages to the party grieved, and as much to the king.
XIII.

That the merchants trading in the port of London bave free liberty to lade and unlade their goods at any the lawful keys and places of fhipping and lading of goods, between the Tower of London and London-Bridge, and between fun-rifing and funfetting, from the roth day of September to the Ioth day of March; and between the hours of fix of the clock in the morning, and fix of the clock in the evening, from the 10 th day of March to the Ioth day of September, giving notice thereof to the refpective officers appointed to attend the lading and unlading. goods: and fuch officer as hall refufe, upon due calling, to be prefent, he faill forfeit for every default five pounds, one moiety to the king, and the other moiety to the party grieved, and fuing for the fame. For the lawful keys, fee the article KEys.
XIV.

The merchants of York, King fon upon Hull, Newcaftle upon Tyne, and the members thereof hall be allowed, free of cuftom and fublidy, two of the northern cloths and kerfies in ten, to

# Of the Practical Business of the Custom-House. 

be fhipped in thefe ports in the names of double wrappers, as formerly hath been there allowed them. But, by the inth and 12th Will. III. cap. 20. all woollen manufactures are free.
XV.

The merchants of Exeter, and other weftern ports, thall be allowed, free of fubfidy, one perpetuana in ten for a wrapper, and three Devon dozens in twenty for wrappers, the fame to be fhipped out of the ports of Exeter, Plymouth, Dartmouth, Barnftaple, Lyme Regis, or the members thereof. But, by the II and 12 Will. III. cap. 20. all woollen manufactures are free.

## XVI.

All merchants tranfporting any forts of woollen, whether new or old drapery, as alfo baiz and cottons, fhall be allowed one in ten for a wrapper, free of cuftom and fubfidy. But, by 11 and 12 Will. III. cap. 20. all woollen manufactures are free.

## XVII.

Every merchant hall be allowed upon all goods and merchandizes appointed to pay to any the fublidies of poundage, according to the rule of the Book of Rates, to be imported, five in the hundred of all the faid fubfidies of poundage fo appointed to be paid.

## XVIII.

The officers who fit above in the Cuftom-Houle of the port of London, fhall attend the fervice of their feveral places from nine to twelve of the clock in the forenoon; and one officer, or one able clerk, thall attend with the book in the afternoon, during fuch time as the officers are appointed to wait at the water-fide, for the better deciding of all controverfies that may happen concerning merchants warrants: all other the officers of the outports fhall attend every day in the cuftom-houfe of every refpective port, for difpatch of merchants and fhippers, between the hours of nine of the clock and twelve in the morning, and two and four of the clock in the afternoon.

## XIX.

Every merchant making an entry of goods, either inwards or outwards, fhall be difpatched in fuch order as he cometh; and if any officer, or his clerk, fhall, either by favour or rewards, put any merchant, or his fervant duly attending, by his turn; or otherwife delay any perfon fo duly attending, and making his entries aforefaid, to draw any other rewards or gratuity from him, than is limited in the act of tonnage and poundage [fee Tonnage and Poundage] and the Book of Rates, pafled anno 12 Car. II. cap. 4. if the mafter-officer be found faulty herein, he fhall, upon complaint to the chief officer of the cuftom-houfe, be ftrietly admonithed of his duty; but, if the clerk be found faulty therein, he fhall, upon complaint to the faid officers, be prefently difcharged of his fervice, and not be permitted to fit any more in the Cuftom-Houfe.

## XX

The lord mayor, commonalty, and citizens of the city of London, their officers, or deputics for, and souching the offises of package, fcavage, baleage, or portage of any goods or merchandize of aliens, or their fons born within this kingdom, or unfreemen, imported or exported into or out of the city of London, or the liberties or ports thereof, unto or from the parts beyond the feas, for, or concerning, the receiving or taking of any fees or rates heretofore ufually taken for, or in refpect of the faid offices, or any of them, might and may receive and take the fame, any thing in the act of tonnage and poundage, or the aforefaid Book of rates, or any former act, to the contrary, notwithftanding.

## XXI.

All antient duties heretofore lawfully taken by any city; or town corporate, their farmers, deputies, or officers, under the name of town-cuftom, or the like, for the maintenance of bridges, keys, harbours, wharfs, or the like, thall and may be received and enjoyed as formerly, any thing in the faid act, or any other at or book, to the contrary, notwithftanding.
XXII.

The under-fearcher, or other officers of Gravefend, having power to vifit and fearch any fhip outward-bound, fhall not, without juft and reafonable caufe, detain any fuch hip, under colour of fearching the goods therein laden, above three tides after her arrival at Gravefend, under pain of lofs of their office, and rendering damage to the merchant or owner of the fhip. And the fearcher, or other officer of the cuftom-houfe in any of the outports, having power to fearch and vifit any thip outward-bound, thall not, without juff and reafonable caufe, detain any fuch fhip under colour of fearching the goods therein laden, above one tide after the faid Thip is fully laden and ready to fet fail, under pain of lofs of the office of fuch offender, and rendering damage to the merchant and owner of the fhip.

## XXIII.

Note, The tall timber in balks, which fhall be of eight inches fquare, or upwards, that thall be-imported, or brought from any part beyond the feas into the realm of Great-Britain, fhall be rated according to the meafure of timber, the foot fquare three-pence for the value thereof, and according to that rule fhall pay for fubfidy twelve-pence in the pound according to all poundage; and all under eight inches fquare, and above five inches fquare, thall pay for fublidy according to the rates mentioned in the Book of Rates aforefaid for middle balks, and
all of five inches fquare, or under, hall pay according to the rate of fmall balks.
XXIV.

For avoiding of all opprefion by any of the officers of the cuftoms, in any portiof this kingdom, in exacting unreafonable fees from the merchant, by reaion of any entries, or otherwife touching the fhipping and unifhipping of any goods, wares, and merchandize: it is ordered, that no officer, clerk, or other belonging to any cuftom-houfe whatfoever, fhall exact, require, or receive any other, or a greater fee, of any merchant, or other whatfoever, than fuch as are, or fhall be, eftablifhed by the commons in parliament affembled: if any officer, ot other, fhall offend contrary to this order, he fhall forfeit his office and place, and be for ever after uncapable of any office in the cuftomhoufe.
XXV.

All fees appointed to be paid unto the cuftomer, comptroller; furveyor, or furveyor general in the pott of London, for any cocket or certificate ourwards, fath be paid all together in one fum to that oficer from whom the merchant is to have the cocket or certificate above, in the cultom houfe; and atter the merchant hath duly paid his cuftom and fubfidy. and other duities above, in the cultom-houre, as is appointed by the faid Book of Rates, he is to be mafter of, and keep his own cocket or certificate, until he thall thip out his goods fo entered; when he is to deliver the fame to the head-fearcher, or his majefty's un-der-fearcher in the port of London, or other ports, togecher with the mark and number of his goode.

## XXVI:

The officers of the cuftom houfe for the time being chaliallow and make good unto all perfons all fuch monies as are, or thall be; due unto them for the half fubfidy; and alfo the Algier dufy of foreign goods formerly exported, now due and unpaid.
XXVII.

The duties and fums of money appointed to be paid by the act of fubfidy of tonnage and poundage paffed this parliament, and by the Book of Rates therein mentioned, and no other, fhall be paid to his majefty's officers, during the continuance of the faid act upon goods imported or exported, any law, ftatute, or uage to the contrary notwithtanding. Neverthelefs it is declared, that prizage of wines, the duty called butlerage, and the duty of twelye-pence upoh every chalder of fea-cbal exported from Newcaftle upon Tyne to any other port or ports of this realm, fhall be continued.

Harbottle Grimstone, Baronet,
Speaker of the Houfe of Commons。
Rules, Orders, and Regulations, annexed to the additional Book of Rates, referred to in an act paffed anno if Georgii primi, cap. 7.

## $I_{1}$

Any of the rates aforefaid, or any thing contained in this adt ditional Book of Rates, is not to extend to alter the methods prefcribed by law for afcertaining the values upon fuch unrated goods, wares, and merchandizes imported, as are of the growth; product, or manufacture of the Eaft-Indies, China, or others the: parts within the limits of the charters granted to the united company of merchants of England trading to the Eaft-Indies. II.

To the charging any duty upon fuch forts of wood, plank, or timber, wrought, or unwrought, or any of the goods called Iumber, which are to be imported duty free, by virtue of the act made in the eighth year of his prefent majefty's reign, on the conditions therein mentioned, during the continuance of the faid act.

## III.

To charge any duty upon fuch drugs or other goods ufed in dyeing, which are to be imported duty free, by virtue of another made in the eighth year of his prefent majefty's reign, on the conditions therein mentioned.

## IV.

- And whereas it may happen that feveral goods and merchandizes may be imported which are omitted to be rated in the Book of Rates, made in the twelfth year of the reign of king Charles II. or in the additional Book of Rates, or in fome particular acts of parliament, in fuch cafe, the value and price of fuch goods and merchandizes for the old fubfidy (other than of thofe of India; Perfia, or China) Chall be afcertained by the oath or affitmation of merchants, in the prefence of the cuftomer, collector, comptroller, and furveyor, or any two of them; and the better to prevent frauds, and that all merchants may be upon an equal foot in trade, the collector and comptroller, or other proper officers of the cuftoms, may open, view, and examine fuch goods and merchandizes, paying duty ad valorem, and compare the fame with the value and price thereof fo fworn to or affirmed; and if, upon fuch view and examination, it fhall appear that fuch goods or merchandizes are not valued by fuch oath or atfirmation according to the true value and price thereof, according to the true intent and meaning thereof; that then, and in fuch cafe; the importer and proprietor fhall, on demand made in writing by the cuftomer or colleftor and comptroller of the port where fuch goods or merchandizes are entered, deliver, or caufe to $\mathrm{U} u-3$ A

## Of the Practical Büsiness of the Custom-House:

be delivered, all fuch goods and merchandizes into his majjelfy's warchoufe at the port of importation, for the ufe and benefit of the crown; and, upon fuch delivery, thecuftomer and collector of fuch ports, with the privity of the comptroller, 化敛, out of any money in the hands of fuch cuftomer or collector, arifing by cuftoms, or other duties belonging to the crown, pay to fuch importer or proprietor the value of fuch goods and merchandizes fo fworn to, or affirmed, for the faid old fubfidy, as aforefaid, together with an addition of the cuftom and other duties, paid for fuch goods, and of ten pounds per centum to fuch value, taking a receipt for the fame from fuch importer or proprietor, in full fatisfaction for the faid goods, as if they had been regularly fold; and the refpective commiffioners of the cuftoms thall caufe the faid goods to be fairly and publickly fold for the beft advantage, and, out of the produce thereof, the money fo paid, or advanced as aforefaid, that be repaid to fuch cuftomer or collector, with the privity of the comptroller, to be replaced to fuch funds from whence the fame was borrowed, and the overplus (if any) Chall be paid into his majefty's Exchequer, towards the finking fund, by the title of unrated goods, imported, and undervalued.

Spencer Compton,
Speaker of the Houfe of Commons.

## REMARKS.

A fhort Enquiry, whether the Merchants of Great-Britain are not intitled to a Discount of 5 per cent. upon the payment of the fubfidy of 5 per cent. at the Cuftom-houfe, given to the king, by act of parliament made in the year 1747: which Discount the merchants have never received from the year 1747 to the prefent time? and whether allo the merchants are not intitled to difcount in confequence of the laft Subfidy in 1759. _Likewife, fome obfervations on other interefting matters relative to the duties of cuftoms.

## The Subfidy act of 1747 is intitled,

" AN act for granting to his majefty a fubfidy of poundage upon all goods and merchandizes to be imported into " this kingdom; and for raifing a certain fum of money by an" nuities and a lottery, to be charged on the faid fubfidy, \&zc." The claufe in the faid act that grants this additional fubfidy of twelve-pence in the pound, or 5 per cent. runs as follows, viz. And be it enated, \&c. That, over and above all fubfidiés of - tonnage and poundage, and over and above all additional du' ties, impofitions, and other duties whatfoever, by any other - act or acts of parliament, or otherwife howfoever aiready due and payable, or which ought to be paid to his majefty, his heirs 'or fucceffors, for or upon any goods or merchandizes, which 6 from and after the firt day of March, which fhall be in the 6 year of our Lord 1747, fhail be imported or brought into the vingdom of Great Britain, one further fabfrdy of pound age, of twelve-pence in the pound,. fhall be paid to his majettys, his heirs, or fucceffors, upoh all mamer of goods or merchandizes to be imported, or brought into this reatim, or any of his ma: - jefty's dominions to the fame belonging, at any time or times - after the faid firf day of March 1747, by the importer. of fucb - goods or merchandize as the fame are now particularly and re-- pectively rated and vakred, in the refpective Books'of Rates - referred to by the acts of the $\mathbf{2}$ th year of the reign' of king © Charles II. and the Inth year of his late majefty, or by any ' other act or acts of parliament, and fo after that rate or value, ' or which do now pay any duty ad valorem.'

Then follows the claufe in the faid act, fignifying hotw, and in what manner, the aforefaid duty of 5 per cent. is to be ld $\rightarrow$ vied.
'And be it enacted by the authority aforefaid, That the fub-- fidy of poundage hereby granted, fhall berraifed, levied, and 'collected by tlie refpective officers of his majefty's cuftoms in 'this kingdom, under the management and direction of the re' fpective commiffioners of the cuftoms for the time beitg; and - fhall be brought and paid, or anfwered into the receipt of his - majety's exchequer, for the purpores in this adt mentioned - (fuch additional charge as thall be neceffary for the management ' of this revenue only excepted) and that all and every the "claufes, powers, Directions, penalties, forfeitures, mat"ters and things" whatfoever, contained in the faid act of the " 12th year of the reign of king Charles IH. or any other laws " or ftatutes whatfoever now in force for raifing, levying, col" lecting, anfwering and paying, the fubfidy of tonnage and " poundage thereby granted, thall be practised, and put in " execution, for the ralfing, levying, fecuring, collecting, an" fwering and paying the fubfidy of poundage by this act grantst ed, as fully and effectualiy, to all intents and pur${ }^{4}$ pofes, as if a.l and every the faid claufes, powers, Direc-
© Trons, penalties and forfeitures were pariticularly repeated " and again enacted in the body of this prefent act."

The obfervations that I would crave leave to make upon this levying claufe, as well as that preceding the fame, are as follow, viz.
I. That the act of parliament made in the 12 th year of king Charles II. and alfo in the rith year of king George I. are made the clear and exprefs bafis and foundation of this latter fubfidyaft of the year 1747: and that as the merchant-importers are liable to all the penalties and forfeitures therein contained, for " the raiing, levying, fecuring, collecting and anfwering and " paying the faid fubfidy of 1747 :" fo likewife are they entitled to every advantage, privilege, and allowance gratted by the prior acts, " as fully, and effectually (according to the words of "the act of 1747), to all intents and purpofes, as if all and " every the faid claufes, powers, and Dibections were parti"cularly repeated, and again enacted in the body of this prefent "act granting the fubfidy of 1747." In a word; there being no exception in this latter aft to any of the rights and privileges granted for the benefit of trade, and the advantage of our merchants, in the two former acts; the mercantile intereft chould feem to be entitled to the very fame under the latter, as under the two former acts.
II. The next point of enquiry is into thofe claufes, powers, and directions, which relate to the carrying the faid act of 1747 into execution, as well in regard to the rights and privileges of our merchants ${ }_{5}$ as to the penalties and forfeitures to which they are liable, with refpeet to the faid acts of Charles 11, and George I. as before obferved
III. Now, according to the act of Charles II. aforefaid, the fixth fection of chapter the $4^{\text {th }}$ of the faid act, according to the Statutes'at large, explains what are thofe exprefs and particular claufes, powers, and directions, which relate to the carrying the faid act into execution, as well for the government of merchants therein, as of the officers of the cuftoms.

The fixth fection of the aforefaid act, which explains this matter, runs in the following words: "And becaufe no tates can - be impofed upon merchandize, imported or exported by fub-- jects or aliens, but by common confent in parliament, Be it - further enacted and declared by the authority aforefaid, That ' the rates intended by this prefent act, fhall be the rates men-- tioned and expreffed in one Book of Rates, intituled, "The "rates of merchandize:" That is to fay, The fubfidy of ton' nage, the fubfidy of poundage, and the fubfidy of woollen - cloths, or old draperies', as they are rated and agreed on by the - commons houfe of parlidment, fet down and expreffed in this - book, to be paid according to the tenor of the act of tonnage - and poundage, from the 24th day of June incluively, in the - inth year of his majefty's reign, during his majefty's life, and - fubfcribed with the band of Sir Harbottle Grimftone, baronet, - fpeaker of the houife of commons: which faid Book of Rates, - compofed and agreded on by your majefty's faid commons, and ' alfo every article, rule, and claufe therein contained, fhall be ' and remain, during your majefty's life, as effeckual to all in' tents and purpofes, as if the fame were included particularly in ' the bedy of this prefent act.' ———This act was continued afterwards from time to time, until the 6th of queen Anne, and by that act, cap. 2. fect. 2. continued for ninety-fix years, and afterwards is continued for ever by i George I. cap. 12.

The rules to direct the merchants. and the officers of the curtoms, in relation to the faid act of Charles II. cap. 4. fect. 6. and which rules are figned by the faid Sir Harbottle Grimftone, Bart fpeaker of the houfe of commons, are entitled in the faid Book of Rates; as follow; viz. "Certain rules, orders, directions, and "Ahlowances, for the advancement of trade and encourage"s ment of the merchant, as allo for the regulating as well of the " merchants in making of due entries and juft payments of their "s cuftoms, as of the officets in all the ports of this kingdom, in "the faithful difcharge of their duty."——And as the act of Charles II. has continued in force, and is made to do fo for ever, as before obferved, the aforefaid certain rules, \&c. \&gned by Sir Harbottle Grímfone; baronet, and before given at large, continue in full force alfo.
But thefe certain rules: are well known to every merchant as being contaimed, or ought to be contained in every Book of Rates that hás been ever fince printed by his majefty's printer, or by others, as was the cafe, 1. of the Old Book of Rates, and of every book of reputation printed fince : as, 2. that printed in 1702, Mr Carcafe in 1725. and Crouch's feveral editions ever fince, and Mir Saxby's Book of Rates.
By the feventeenth article of the rules aforefaid, figned by Sir Harbottle Grimftone, it is declared, ' That every merchant ' Thall be allowed upon all other goods and merchandizes ap' pointed to pay to any the fubfidy of poundage, according to the 'rule of this'book,' to be imported, five in the handred of all the - faid fubfidies of poundage fo appointed to be paid.

And as the faid act of 1747 hath made no exception whatever to the feventeenth article of the faid rules of the Book of Rates; but that act is grounded abfolutely upon the fame rules, orders, directions, and allowances in this refpect as that of Charles II. aforefaid is, it feems to be plain, that the merchant-importers are no lefs intitled to 5 per cent. difcount upon the fubfidy of 1747, than upon the old fubfidy of Charles II. and the other fublequent fubfidy acts.

# Of the Practical Business of the Custom - House. 

But the faid fubfidy act of the year 1747, is grounded alfo upon that of the 1 th of George I. And that act of the Irth of George I. being grounded upon that of Charles II. with refpect to the feventeenth article of the rules aforeiaid (there being no exception thereto, in the words of the act; this is a further confirmation, that the laft fubfidy-ad intitles the mer-chant-importer to the faid difcount of 5 per cent. as well as that act of the isth of George I. does.

The claufe in the act of the 1 ith of George I. that grounds the fame upon the faid act of Charles II. is as follows, viz.

- And be it enacied by the authority aforefaid, that in lieu - of the faid former rates and duties ad valorem, repeated bythis cact; there fhall from and after the faid 25 th day March, 1725 , - be payable, and paid for the faid old fubfidy, the feveral rates - and duties mentioned and expreffed in one Book of Rates, in6 titled, an Additional Book of Rates of goods and merchan-- dizes ufually imported, and not particularly rated in the - Book of Rates referred to in the att of tonnage and poun-- dage, made in the 12 th year of the reign of king Charles II. - with rules, orders, and regulations, figned by the right honourable Spencer Compton, efq; fpeaker of the honourable c Houfe of Commons. The faid rates and duties to be paid - upon importation of the faid goods and merchandizes refpec-- tively, into any port or place within this kingdom, and fo in < proportion for any greater or leffer quantity; which faid laft mentioned Book of rates, compofed and agreed on by your ‘ Majefy's faid Commons, and every " article, rule and claufe ${ }^{6}$. thercin contained, fhall be and remain, during the continu"ance of the faid firt recited act of tonnage and poundage, of "full force, and thall be put in execution, as fully and ef"fectually, to all iutents and purpofes, as if the fame was par"t ticularly inferted in the body of this prefent act."

There laft words of the act of the inth of George I. fhow, That the act of Charles was the foundation thereof, as well with refpect to all the privileges, and advantages made to the merchantimporters, as every thing elfe.therein contained that is not ex prefliy excepted: and that particular advantage of the 5 per cent. difcount not being excepted in the faid act of George I. the merchants bave enjoyed the fame ever fince with regard to the Additional Book of Rates.- And confequently, as the fub-fidy-act of 1747 declares, that the faid two acts of Charles II. and George I. are the foundation of that laft act ; and there is no exception whatever made to the difcount of 5 per cent. allowed; the merchants fhould feem to be as legally entitled to the fame under the one as under the other.
And what appears further to confirm the fame is, that the fubfidy, commonly called the New Subfidy, granted the gth and ioth of William and Mary; and alfo the one-third fub-fidy-act, granted the 2d and 3 d of queen Anne; and the twothirds fubhidy-act, granted the $3^{\text {d }}$ and 4 th of queen Anne, being all of them grounded on the act of the 12th of king Charles II. and no exception therein made, to the feventeenth article of the General Rule aforefaid, that grants the merchant-importer the difcount of 5 per cent. they have according, uninterruptedly enjoyed the fame, under all thefe Subsidy-Acts from Charles IId's time, to the year 1747: and why they are not intitled to the fame legal allowance, does not appear from this fubfidy act of 1747.

Witb refpect to unrated Eaft-India goods, there is a claufe in the adt of 1747 , which declares, "That the 5 per cent. paid "s on the grofs price, as fold at the candle, fhall be without "any allowance or deduction whatfoever."—_But with refpect to the general payment of the 5 per cent. upon all other goods, there is no exception in the act, that the fame fhall be paid without any allowance or deduction; but the aft exprefsly deciares, "That all and every the claufes, powers, directions, ' penalties, forfeitures, matters, and things whatfoever con-- tained in the faid act of the 12th of Charles II. fhall be ap-- plied, practifed, and put in execution for the collecting the - faid duty, as if all and every the faid claufes, powers, direc"tions, \&xc. were particularly repeated, and again enacted in the c body of this prefent act."-And if a point fo materially interefling to the merchant-importers as the allowance of 5 per cent. difrount upon payment of this fubfidy of 1747, before the landing of the goods, was to have been excepted; it certainly would have been exprefsly fo.
What fill further corroborates this is, that, in the allowance of the drawback, upon goods exported by certificate, the officers of the cuftoms have allowed the merchants no more than one-half-part of that net fublidy, as if they had been actually allowed the difcount of 5 per cent. upon the fubfidy of 1747 : whereas the fecond article in the rules, orders, and directions, and allowances made to the merchants in the Book of Rates, declares, 'That all foreign goods and merchandizes (except wines, currants and wrought filks) firft imported, fhall be ' again exported by any merchant within three years (as by the ' 7 th of George I. cap. 21. § 10 .) and fuch merchant or mer-- chants as fhall export any fuch foreign goods or merchandizes "(except as before excepted)" fhall have allowance and be re"paid by the officer that received the fame, the one moiety of " the fubfidy which was paid at the firt importation of fuch foreign goods and merchandizes, or any part thereof, fo as " due proof be firf made by certificate from the officers of the
' due entry and payment of the cuftom and fubfidy of all fuch ' foreign goods and merchandizes inwards, \&c.-After all ' which duly performed, "the moiety of the fublidy firf paid "' inwards, ©hall, without any, delay or reward, be repaid unte "fuch merchant or merchants, who do export fuch goods and " merchandizes within one month, after demand thereof:" ' as alfo the whole additional duty of filks, linnens, and tobacco, in manner as before is directed.'
Now, fuch having been the practice of the Cuftom-houfe ever fince the fubfidy of 1747 was granted, as to allow the drawback of no more than one moiety of the net duty, after deducting the difcount of 5 per cent. on the faid fubfidy of 5 per cent. and not one moiety of the grois fubfidy, which the merchant actually paid; this confirms, that it is a miftake at the Cuftom-houre, not to allow the difcount, fince they deduet it by the drawback, as if it had been allowed.

There feems likewife to be another great miftake made in the execution of this act to the difadvantage of the merchant; which is, that the ad exprefsly declares, That the whole duty of 5 per cent. fhall be drawn back upon exportation of the goods within three years; which is an exception to the fecond article of the rules before quoted.

On this poine the words of the act run as follow, viz.
'Provided always, and it is hereby enacted and declared by ' the authority aforefaid, That in all cafes where any goods or - merchandizes, that have paid the fublidy hereby granted, thall - at any time or times be again exported, by any merchant or ' merchants, within three years from the importation thereof ' the fublidy by this act granted, and which thall have been ac' tually paid tor fuch goods, wares, or merchandizes, thall, ' without any delay or reward, be repaid unto fuch merchant ' or merchants, who thall export the fame, or the fecurity va' cated; except for fuch goods or merchandizes, as by any for' mer aet or acts of parliament it is declared no drawback thal ' be paid or allowed upon exportation, and except, as is herein ' after excepted, in relation to prize goods.'
Henceit appears obvious, it is apprehended, that the whole, and not a moiety only of the fubfidy paid, is to be drawn back; and this being an exception from the fecond article of the general rules for the government of merchants and the officers of the cuftoms; we find it is exprefsiy mentioned: and if the merchants had, not been intitled to the drawback of the whole fubfidy paid, that matter would have been left to the direction of the fecond general rule aforefaid: and if likewife the merchants had not been intitled to the difcount of 5 per cent. this would certainly have been alfo mentioned exprefsly in the act, that the feventeenth article of the general rules, which allows the difcount, might not have remained in full force.
If thefe fuggeftions are right, the merchants will take the proper meafures to right themfelves; if not, the Writer will be obliged to thofe, who will explain the matter, becaufe it not only nearly concerns the intereft of the merchants of the kingdom in general, in thefe particular cafes, but in many others, that more confiderably affect the intereft of this refpectable body of the community: and therefore, if it is an overfight, it ought at leaft to be rectified as foon as may be, for reafons that thall be communicated, when it appears to be fo: And if it is not, the miftake of the obferver hereof will be excufed, fince it proceeds from a regard to juftice, that the merchants may have their legal due, according to act of parliament, as they are fubject to it's penalties, whenever they violate the fame.

If what has been reprefented fhould prove true, the evil to the mercantile intereft will not terminate in the fubfidy of 1747 only; but like a fault in the firft concoction, will run thro' every fubfequent fubfidy act; for it affects every future fubfidy that hall be enacted upon the foundation of that of 1747 . As the fubfidy act of 1747 is grounded upon that of the 12 th of Charles II. and that of the 1 th of George I. folikewife is the later fubfidy act of 1759, grounded upon that of 1747 : and therefore as the mifakes committed at the Cuftom-houfe, in carrying the faid aft of 1747 into execution, have not been reftified, the fame is continued in the act of 1759 . This being the care, the like miftakes will probably be perpetuated in all future fublidy ants that fhall be grounded upon that of 1759, unlefs the merchants hould take the proper meafures to conteft the point before the barons of the Exchequer.- For the laft additional fubfidy of 5 per cént. for the year 1759, granted upon certain goods and merchandize imported, fpecified in the act, is to be levied and paid into the Exchequer, in the fame manner as the fublidy of 5 per cent. granted by the 2ift of George II. in the year 1747.
The words of the fubfidy act of 1759 are, 'That the faid ' fubfidy of poundage, by this aft impofed, thall be raifed, le' vied, collected, and paid into his majefty's exchequer, for the ' purpofes in this act exprefied, In such like Form and - Manner, and with such Allowances, Discounts, - Drambacks, and Exemptions, and under such - Penalties and Forfeitures, and according to - such Rules, Methods and Directions as are pre-- fcribed or appointed for raffing, levying, collecing, and pay-- ing the fubfidy of 5 pounds per centum, granted by an aft - made in the 2 Ift year of the reign of his prefent majefty, or ' the fubfidy act of $17+7, \& c$. And all and every the Powers, 'Authorities, Rules, Directions, Penalties, for-

## Of the Practical Business of the Custom-House.

cfeitures, Clauses, Matiters and Things nowin - Force, contained in the faid act, made in the year 1747, or 6 any other act or acts of parliament, in the faid act refer-- red unto, or any of them, for the raifing, levying, © collecting, and paying the Subsidirs thereby granted, fhall - be in Fuli Force, and be duly oblerved and practifed, ${ }^{6}$ and put in execution, throughout this kingdom, for raifing, - levying, collecting, and paying the Subsidy of 5 per cent. - by this act granted, as fully and effectually to all intents and - purpofes, as if the fame or the like powers and authorities, - Rules, Directions, Penalties, and Forfeitures, - Clauses, Matters, and Things, were particularly re' peated, and re-enacted in the body of this prefent act.'Then the exceptions that are made in this act of 1759 exprefly follow.
As fuch is the nature of thofe fubfidy acts for the payment of duties upon foreign goods and merchandizes imported into this kingdom, that the one act depends on the other, with regard to the general Rules and Directions, or the payment whereof, at the Custom-House, and referred to in the former parts of this enquiry; and when exceptions are made to thofe general Custom-House Rules and Directions, they are, or ought to be always exprefsly mentioned in diftinct Clauses of the Act; it became requifite to quote the original Subsidy 'Act of the 12 th of Charles II. and that of George I. whereon all subsequent Subsidy Auts have been founded, to the end that they may be borne in mind, on this occafion. For otherwife the fubject can never know the Rights and Privileges to which he is legally intitled, or guard againft thofe penalties to which he is liable.

Let it be fuppofed, that in carrying the fubfidy act of 1759 into execution, the officers of the cuftoms hhould exact the same Duties upon all goods imported, as was done by the act of 1747, this would certainly prove an egregious impofition upon all the Merchant-Importers of Great-Britain, becaufe the act reftrains the additional fubfidy of 1759 to Tobacco, foreign Linnen, Sugar, and other Grocery, as the fame is understood in the Book of Rates, except Currants; East-India Goods, except Coffee and raw Silks; foreign Brandies and Spirits, except Rum of the produce of the British Sugar Plantations; and Paper, which thall be imported, and brought into the kingdom of Great-Britain, \&c.-II, I fay, the officers of his majefty's cuftoms fhould exact Duries upon all other goods that are plainly underfood to be excepted, and not liable to the faid fubfidy of 1759 , it would certainly be a violation of the act, and an impofition upor the fubject : and moft certainly it is a violation of the Subsidy Acts of Parliament of 1747, and of that 1759, to deprive the merchant-importers of any of their Privileges and Allowances upon importation of merchandize, to which the General Rules of the

Book of Rates legally entitle them. For if the merchants of Great-Britain are thus deprived of fo material an Allowance upon all dry Goods as 5 per Cent، Discount on the Rates, by the act of 1747 , may they not, by the fame Cus-tom-House Authority, be alfo deprived of every. other Discount and Privilege to which they have a legal right, and which is granted them by virtue of the General Rules and Allowances, contained in the Book of Rates, and authorized by parliament, as well as any thing elfe therein expreffed? May not merchant-importers be deprived, (i.) Of their 5 per Cent. Discount allowed them upon the Uld Subsidy Rates? (2.) Of their 5 per Cent. Discount allowed them upon the New Subsidy: (3.) Of their 5 per Cent. Discount allowed them upon the One-third Subsidy: and (4.) Of their 5 per Cent. Discount allowed them upon the Two-thirds Subsidy : may not the merchant-importers, I fay, with as much reafon, be deprived of the FOUR PREceding Discount Allowances on the rates, made to them by parliamentary authority, as be deprived of their R1GHTs and Discounts on the Subsidy of 1747 , and that alfo on the Subsidy of 1759 ? Nay, may not our merchant importen alfo be deprived of their Discounts allowed them by parliamentary authority upon the feveral Impofts of 1690 , and 1692 ? And would not this, in effect, be abrogating all thofe clauls given in favour of our merchants by Parliamentary Authority, by that of the Cuftom-houfe, in direct oppofition thereto? And if what has been reprefented, with refpect to the Drawbacks allowed to our merchants on the re-exportation of certificate goods, fhall appear to be true likewife; the loffes our merchants have already fuftained, will amount to a very confiderable fum; and if thefe practices are perpetuated, the evil will daily increafe.
'Till thefe matters are rectified, all Books of Rates ufed at the Cuftom-houle, and calculated without due regard ha: to acts of parliament, are wrong, and are a great injury to our merchants in general; and therefore, I have judged it more equitable to defift from giving any computed Tables of DuTIE8, according to the practice of the Cuftom-houfe, left the fame fhould be a fanction to wnat the Author, for the reafons before given, thinks is not right.-Of this, the Author declared his opinion fome years ago, when this matter ought to have been duly enquired into, and he publickly fuggefted his doubts upon this point foon after the year 1747; and repeated them again after the year 1759. And if proper notice has not been taken of what has been urged by thofe whofe immediate intereft it is fo to do, he has the fatisfaction to have done right in his own eyes, and is very indifferent about what others may think of it; unlefs it be fhewn to be groundlefs; and that not having been done in fo many years, there feems but too much reafon to prefume that his obfervations are not unjulififable. see our article Subsidy.

## B A D

## B A H

BA A T, in the language of the Siamere, and Tical in that of the Chinefe, is a weight in thofe kingdoms. The baat weighs about half an ounce.
BACALIAU, or BACCALAO. See Barcailao. BACHELOR, in French BACHELIER, a name, which, in fome of the fix corporations of traders at Paris, is given to the elders of them, and to thofe who have ferved the feveral offices, and have a right to be called by the mafters and wardens, to affilt them in the affairs of the corporatoon, particularly in what relates to the mafter-piece of workmanfhip of fuch who are candidates for the freedom of the company.
In the company of the merchant-fellmongers and furriers, the mafter-piece muft be performed in the prefence of four wardens, who are obliged to call to their affiftance four bachelors of that corporation, namely, two bachelors mer-chant-fellmongers and furriers, and two bachelors of the matter-piece, as they are called.
In the hofiers, cap and glove-makers companies, the mafterpiece of workmanflip muft be performed in the prefence of four wardens and bachelors of the corporation.
The word bachelor is ufed alfo in the fame fenfe in moft of the other companies of arts and trades, in the city and fuburbs of Paris.
BACK-MAKER, is one who makes liquor backs, underbacks, coolers, malh-tuns, working-tuns, \&c. for the brewers. The workmanfhip is partly carpentry, in a particular manner, for it muft be tight enough to hold liquor; and partly cooperage, viz. the mafh-tun, or vat, which is hooped.
There are not many of this trade, and it requires chiefly ftrength, with a little art. A fmall ftock of ftuff, befides tools, will fet a man up tolerably well; but, with 200 or 300 I . he will make a good figure in bufinefs.
BADEN, a county in Switzerland, fituate between the northern extremities of the cantons of Bern and Zurich, and extends on one fide where the Aar falls into the Rhine, and on the other fide to fome villages beyond the Rhine. For extent, it is as large as fome of the fmall cantons, and has a more fruitful foil. 'Tis watered with three navigable rivers, the Limmat, Rufs, and Aar; bears corn and other fruits, and produces wine in many places along the Limmat. In the mountains from Cappelefhof to Enderigen are mines of iron.
Baden, it's chief town, called Upper Baden, is famous for it's baths, for which it was celebrated fo long fince as our Saviour's time, according to Tacitus. The waters are hot in a third degree, being impregnated with much fulphur, with a mixture of allum and nitre. They are good for drinking, as well as bathing, in fevers, phthifics, vertigoes, and particularly for diforders peculiar to the fair fex, and even fterility. Their baths bring a concourfe of people, which is the chief livelihood and bufinefs of the town.
Zurzach, about nine miles north of Baden, is a fine, an tient, fpacious burrough, on the banks of the Rhine, which is remarkable principally for its fairs, on the Monday after Trinity-Sunday, and on the firf of September, where very confiderable quantities of goods are fold by the merchants of Germany, France, and Italy, in a very fhort time.
BADGER, a wild four-footed beaf, a little bigger than a fox, to which it bears fome refemblance; it has alfo fomething of the hog and the dog.
The badger, dwells in burrows, and lives upon infects, carrion, and fruit. It ftinks very much, and grows fat by fleeping, like the dormoufe. It's age is known, by the number of holes it has under it's tail, there appearing a new hole every year.
Though this animal feems not to be of much ufe in trade, yet it affords three forts of merchandize. It's fkin is of the common peltry, called wild. It's fat is fold by the druggifts, and is reckoned good for pains in the loins, and for the ficiatica, or hip-gout: and it's hair ferves to make pencils or brufhes for limners and gilders.
BADIANE, or BADIAN. It is the feed which the anife tree bears, that grows in China. The tree is thus called, becaute it's wood fmells like anife-feed. The Chinefe fome times give their tea an aromatic tafte with that feed. Some of the Dutch do the fame in the Indies, in imitation of them. In the year 1722, it was fold at Peking from 12 to 15 fun per gin, which was reckoned extremely dear, according to the journal of Monf. Lange, who refided at the court of Chima.
Yei.I.

BAETAS ; thus the Spaniards and Portuguefe call that foit of woollen ftuff; which is not croffed, and which in France is called baguette, or bagette.
BAFFETAS, or BAFTAS, a cloth made entirely of coarfe white cotton-thread, which comes from the Eaft-Indies: Thofe of Surat are the beft. They are from 13 French ells and $\frac{3}{4}$ to 14 long, and $\frac{7}{8}$ broad. There are alfo fome which meafure but $\frac{5}{6}$ of an ell, or even but $\frac{1}{2}$ of an ell in breadth. Thefe naarrow baffetas are called Orgagis, Gaudivis, Nerindes, and Dabouis, according to the names of the places where they are manufactured.
There are alfo narrow-white baffetas, which meafure 1 ? ells and a half in length, by half anell in breadth.
Broad-white baffetas, 14 ells by ${ }_{4}^{3}$.
Broad-brown and natrow-brown baffetas. There two laft forts are made of raw thread, that is, which was never wetted or blanched. The former are 14 ells long; by $\frac{r_{2}}{2}$ an ell broad ; the latter are of the fame length, and $\frac{3}{4}$ in breadth.
BAGS, are ufed in moft countries, to put feveral forts of coin in, either of gold, filver, brafs, or copper. They make in France bags of piftoles, of louis-d'ors, bags of a thoufand livres, or crowns, bags of fmall pieces of filver coin, \&c.
Bankers and others, who deal much in cutrent czfh; fhould be very exact in labelling their bags of money; that is to fay, in tying a ticket or note at the mouth of the bag, fignifying the coin therein contained, the fum total, it's weight; and of whom it was received. Tare is allowed for the bag: The French always allow 5 fols per bag of rooo livers:
Bags of filver coin in France are generally given and received, without counting their contents, people referring commonly to their weight: but, if there fhould be found any deficiency in the bags, he who received them, has a right to return them, within eight days after the payment was made, according to an antient cuftom eftablifted among the traders in money, provided the name of the perfon who gave the bag in payment.be fet down upon the ticket, and the weight be anfwerable to that which was wrote upon it, by the perfon who paid it.
Bag is alfờ ufed, to fignify different quantities of certain cortmodities: A bag of almonds, for inftance, is about three hundred weight, of anifeed from 3 to 4 hundred, of pepper from I $\frac{x}{4}$ to 3 hundred, of goats-hair from 2 to 4 hundred; of cotton-yarn, from $2 \frac{1}{4}$ to $4 \frac{1}{4}$, \&c:
BAGAUZ. Thus they call; in the Antilles iflands, the fugar-canes, after they have paffed through the mill; they keep them under cover in fmall huts; in order to ufe them; whien dry, for boiling the fugar. Thefe huts are called the bagauz huts.
As foon as thefe bragauz are taken from between the firt and third roller, two or three negro women bind them up in bundles, which they pile up under the covers. In cafe the bagauz be not long enough to be made up into bundles, as being too much broken, they carry them in large bafkets to a corner of the mill, where the horfes, oxen, and hogs, come and eat them.
Sometimes whien they are ftraitned for fuel, they only dry them in the fun for three or four hours, which is fufficient to make them fit for burning. In fome places, where they have plenty of wood, they ferve only to burn under the firft boilers; but, where wood is fcarce, they keep them for the two laft, and under the firft they burn ftraw; and the dry leaves of the canes.
BAHAMA, or LUCAYA ISLANDS. There illands lie moft eafterly of all the Antilles in America, and to the north of the ifle of Cuba, and eaft and fouth-eaft from the Spanifh Florida, ftretching from north-eaft to fouth-weft, between the 2 Ift and 28 th degrees of north latitude, and between 72 and 8I of weftern longitude; fo that they lie fo much out of the courle of thips bound for the American continent, that they were not taken notice of by our Englih till anno 1667.

The ifland of Bahama, from which the reft take their general name, is fituated in latitude 26, 45, north, and at the diftance of between 15 and 20 leagues eaf from the peninfula of Florida, and about 8 or 10 weff from the ifland of Lucaya, or Lucayonequa, from which it is divided by a channel, riotwithftanding its breadth, is very dangerous; and full of rocks and fands.
The ifland is computed, by fome, about 13 leagues long and 8 broad; by others 50 miles in length and about 16 in breadth, and in feveral places not half that width. It is 3 A
efteemed

## B A H

efteemed extremely pleafant and fruitful, the air ferene and temperate, and the foil remarkably rich, being watered with a multitude of fprings and brooks, Formerly it produced plenty of guaiacum, faffafras, farfaparilla, and red-wood, which were all deftroyed by the Spaniards; fo that it's chief production at prefent is Indian wheat, fowl, and a particular fort of rabbet; the reft of their provifions, and other neceffaries, they are obliged to have from Carolina, whence they are enabled, both here and in the ifland of Providence, to affift the fhipping that are driven upon their coafts by the tempeituoris weather, and the impetuofity of currents, with what they want, which is the greateft branch of their trade.
On the north of Bahama and Lucayonequa, lies the great Bahama bank of fand, which extends itfelf northward up to the 27 th degree 30 minutes, and is furrounded with rocks. That which is called the great fand-bank of Bahama-lies on the north of the ifle of Cuba, and is terminated by the Long-Ifland; on the north-eaft by the ffreight of Exuma and the ifland of Cigateo; on the north by that of Providence, or Abacoa, and that of Andros is quite furrounded with it.
It is bounded on the weft by the inles of Mimbres and Bimini, the former of which is rather a prodigious rock, much dreaded by failors; and therewith fome other rocks, equally dangerous, bound it in a line parallel to the north-well coaft of Cuba, from which it is feparated by the old canal of Bahama, or arm of the fea, between the laft-named ifland and the bank of Bahama.
Befides this old canal, there is another called the Streight of Bahama, lying between the coaft of Florida and the Lucayonequa ifland. This hath one of the moft impetuous currents northwards of any in thefe feas. It's waves run with fuch violent rapidity, that neither wind nor oars can ftem it; fo that though the wind be fair, and the fhip in full fail, yet they cannot enter it till a certain feafon: and, if it be contrary, they are carried away by the current. By reafon of which the Spanifh hips are compelled to wait their opportunity to pals this ftreight from the Havannah homewards, which is computed 166 leagues in breadth, and it's length, from the Cape of Florida northwards, 45 ; which hews of what extraordinary importance the Bahama Inands might be rendered to England by the advantage which might be made of them by us againft the Spaniards, provided they were put in a due offenfive and defenfive condition, to anfwer fo good a purpofe, when occafion requires.
The next ifland of extent, and in all other refpects the moft confiderable, is that of Abacoa, now Providence, which is the refidence of the governor, and lies in the center of fome hundreds of others. Several authors reckon them between 4 and 500 , fome of which are very large, even i 60 miles in length, and others no bigger than knolls or rocks, rifing above water ; which fhews how dangerous and dreadful it is to be forced amongit them by tempeftuous weather. This illand lies in latitude 24,30 , north, and is about 28 miles long, and II broad, where it is wideft. (Harris's Collections.) Some, however, make it 18 leagues in length, and about 7 in breadth. (De L'Ife.) It hath the fmall one of Lucayonequa on the north; that of Alebaftres on the eaft ; the northern point of that of Andros on the weft; and the great bank of Bahama on the fouth. It's chief commerce, like that of Bahama, arofe from the misfortunes of thofe flips that were driven, on it's coafts, or in a winter voyage for the continent of Amcrica were forced to put in for provifions. They likewife made fome advantage by the wrecks which were thrown upon their coaft. The provifions, wherewith they fupply fhipping, they have from Carolina; fo that, at prefent, they are a great relief to diftreffed mariners. The ifland produces little elfe but falt and Brafiletto wood, which they carry to Carolina in about eight days, but are ten at leaft in returning from thence, by reafon of the ftrong current in the gulph of Florida: they fow peafe and Indian wheat, the former of which is fit to gather in fix weeks, the other in twelve. This inland abounds with variety of finh, fowl, trees, and vegetables, before unknown to us; and our Philofophical Tranfactions (Vol. II.) add, that whales have been found dead on the fhore, incompaffed with feerm, and that one of thefe whales is worth fome hundreds of pounds.
This, and the other Bahama, on account of their ufeful fituation, were judged to be fo neceffary for the fecurity of our trade in the Weft-Indies, that the parliament of England have not thought it unworthy of their care, as well to have it cleared of pirates, as to defend it againft both the Spaniards and the French, who know it's fituation extremely convenient either to annoy or affift their commerce. In queen Anne's war, both the Spaniards and French overran and plundered the Bahama inands twice; whereupon, in March 1714, when the adminiftration of England had as little the intereft of commerce at heart as any thing elfe but their own, the houfe of Jords addreffed her majefty that the illand of Providence might be put into a pofture of defence. Their lordhips, obferving, It would be of fatal confequence,
if the Bahama Inands thould fall into the hands of an enemy: they therefore humbly prayed her majefty to take thofe iflands into her own hands, and give fuch orders for their fecurity as in her royal wifdom fhe fhould think fit. But nothing was done: and for the future regard of fuch who may have it in their power to promote the welfare of our Britifh plantations in America, it is not improper to remember, that their lordihips, four years after, took notice of that neglect, in an addrefs to his late majefty king George: There were not any the leait means ufed in compliance with that advice for fecuring the Bahama Iflands; and that then the pirates had a lodgment, with a battery, on Harbour Ifland, and that the ufual retreat and general receptacie for the pirates are at Providence. Hereupon his majefty was pleafed to give directions for diflodging thofe pirates, and making fettlements and a fortification for it's fecurity and defence.
The other iflands, though very many in number, are hardly worth defcribing: we fhall only name the moft confiderable of them. Befides thofe of Bahama, Providence, Eleuthera, and Harbour Inland, are thofe of Lucayonequa, Andros, and Cigateo, which may be termed of the fecond magnitude. Thofe of the third are Guanahani, Yumeta, Samana, Mayagnana, Yuma or Exuma, Ynagua, Caicos, and Trian-gulo.- The reft are rather barren rocks than iflands. But, of thofe' of the fecond and third ranks, Herrera affirms, that fome of them are ftill inhabited; and Baudrand affirms, that they are ftill polfeffed by their ancient inhabitants. Be that how it will, whenever occafion offers, our poffeffion of them will eafily put it in the power of England to lay hold on the reft; and they certainly deferve our attention. For,

## REMARKS.

The Bahama Iflands lying near to Hifpaniola, and to that port of fo great importance to the Spaniards, the Havannah, in the ifland of Cuba, where the Spanifh galleons and flota alwaýys rendezvous, with all their treafure, before they return to Europe, having the gulph of Florida to the weft, and the Windward-Paflage to the eaft, of them ; their fituation, in time of peace, is capable of great improvement in trade, and has always been a good retreat for difabled fhips, blown from various parts of the continent of America.
But in time of war with any power in there parts, efpecially with Spain, the Bahama Iflands are of the higheft concernment to this kingdom, cruizers' and privateers from thence being more capable to obftruct and annoy the Spanifh trade homeward-bound, than all that are ftationed at the reft of the Britifh colonies in America; and indeed fince the Definitive Treaty of 1763 has annexed Florida to the crown of Great Britain, and this nation is become mafters of the port of St. Auguftine, in the gulph of Florida, thefe iflaños will prove of more utility to us than before; for thefe, together with our other new acquifitions of PENsacola, Mobile, and our right of navigation in the Mississippi, will moft certainly, in cafe of any future rupture with Spain, render the whole trade and navigation of the Spaniards far more precarious than ever the farme was beffore in the great gulphs of Mexico as well as Florida, and thereby proportionally diminifh the importance of the Havaninah itfelf to Spain. The Spanifh navigation in this part of the world feems furrounded now in fuch a manner, as to render all our Britifh poffeffions that are any thing contiguous to each other near thefe gulphs mutually aiding and affifing to each other in cafe of need.
As the Bahama iflands are very proper for the reception of fmall cruizers, not exceeding 40 guns; fo, if the public fervice fhould require larger veffels to be employed in thofe parts, the harbour of Port-Royal in South-Carolina, on the other fide of the gulph of Florida, would be capable of receiving fhips of any fize or number; and, in concert with thofe cruizers from the Bahama's, would prove of greater advantage to this nation than has ever yet been experienced.
Port-Royal, being the fouthermoft frontier of our pofferfions on the continent, is likewife fo advantageoully fituated, that fhips ftationed there, at St. Auguftine and at the Bahama's, would lie very conveniently, not only to guard our northern colonies, but to affemble a force, if occafion thould be, to attack any power in thofe parts. From hence, alfo, our fugar iflands may be more conveniently relieved, and in a much fhorter time, than they could by any naval force ftationed $7 t$ Jamaica. And, if the American colonies were put on a proper footing to affint and fupport each other, a fquadron, at this South-Carolina Port-Royal, will always be a check to our ncighbouring rivals, and give us the fuperiority in this part of the world.
The galleons for the Havannah, in their paffage through the gulph of Florida, may very eafily be intercepted by a quadron ftationed at the faid port and St. Auguftine, affifted by fuch private advices as the fame veffels belonging to Providence may conftantly be able to furnifh them with; but there is no inftance that the king's fhips, ftationed at

Jamaica,

Jamaica, have ever intercepted the galleons or flota in their return home ; for they have either had notice from Jamaica before our fquadron appeared, or, when they have feen our fhips cruizing for them, they have lain fafe and quiet at the Havannah till the Engliih have been tired out, and.retreated through ficknefs, or for want of provifions, or elfe carried with the ftream through the gulph, and then the Spanifh fleets have foon followed, and efcaped us.
The Bahama inlands were for many years a neft of pirates, and were never in any condition of defence till Captain Rogers was fent thither in 17 I 8 , with the late king's commiffion, as governor, with a fmall force, at the crown's expence; before which they had been plundered above 30 times by the Spaniards, who well knowing that there is no place can give them fo much difturbance in their trade, is the true reafon why the Catholic king demanded them in 1728 . But Capt. Rogers had the good fortune to recover the iflands from the pirates who had fettled there, and alfo to defeat the Spaniards, who, after three feveral preparations, at more than $100,000 \mathrm{l}$. expence, attacked him with 2000 men; which force he repulfed, and burned two of their fhips of war in their retreat, though he had no fupport from any other colony but what he engaged on his own perfonal credit.
From whathas been faid it appears, that the Bahama Illands are of far greater confequence to this nation than ever they were before the Definitive Treaty; and, fhould they ever become a prey to any other power, they would proye a dangerous annoyance to our trade, and an irreparable lofs to the Britifh plantations, as our affairs are at prefent circumitanced in America.
BAHAR, BAHAIRE, or BARRE, weights ufed in Ternate, Malaca, Achem, and in feveral other places of the Eaft-Indies.
There are two of thefe weights; the one called the great, and the other the little bahar. With the great babar they weigh pepper, cloves, nutmegs, ginger, cin 3 mon, and other fpice. It contains 100 catis; the catis 26 taels, or $3^{8}$ ounces and an half, Portugal weight; each tael being reckoned an ounce and a half of that weight. So that the great bahar is reckoned to weigh 550 pounds of Portugal, which amount to 48 r pounds and 4 ounces of Paris, Strafburg, Amfterdam, Befançen, \&c. or 524 poundes, 9 ounces, Averdupois weight.
With the little bahar they weigh quickfilver, vermillion, ivory, filk, murk, and other valuable merchandizes. This bahar contains alfo 200 catis, but each catis is but of 22 taels, or 32 \& ounces Portugal weight; fo that the bahar amounts only to 458 pounds 13 ounces of Portugal; which make 4017 ounces of Paris weight, or about 437 pounds, 9 ounces, Averdupois weight.
The bahar of China is of 300 catis, which make only 200 of Malaca, each catis of China containing but 16 taels. The tael, weighing a riac and an half of eight, is of 10 mas, or mafes, and each mas of 10 condorins.
The bahar of Mocka, a city of Arabia, weighs 420 pounds. Fifteen traffels make a bahar. By that weight coffee is fold.
BAILE. Thus they ftile, at Conttantinople, the ambadador of the republic of Venice, who refides at the Porte.
Befides the political ftate of affairs with which the Venetian minitter is charged, he acts the part of a conful for that republic at Conttantinople, and they who are denominated confuls, eftablifhed in the ports of the Levant, are properly fpeaking under him, and act as vice-confuls.
BAILLOQUE, or BAYOQUE. Thus the French call thofe oftrich-feathers, which are naturally of a dark brown colour, mixed with white. Thefe kind of feathers are feldom dyed, but are generally ufed by the feather-dealers juft as they are plucked from the bird; they only wath them with foap, to give them fome ghofs, and make them brighter. Thefe bailloque feathers are the leaft valued.
BAIOCO, a copper coin current at Rome, and throughout the whole ftate of the church. Ten baiocos make a julio, and a bundred a Roman crown.
BAKERS. This is a very ancient as well as ufeful trade; and the moft general and extenfive branch of it is that of making, as well as baking, houfhold or family bread; though there are feveral others, as,
Bifcuits-baking, which is chiefly to prepare in a particular manner for long-keeping what is commonly called feabifcuit, or bread.
Of' French bread, fo called for it's peculiar delicacy; who alfo make various forts of the nicer fweet, as well as infipid, bifcuits, \&c.
Of ginger-bread, or fweet-fipiced bread, and cakes of feveral kinds.
Of thefe three laft there are but few of each, there not being fuch a general call for their produce, as for the common bread; the bakers of which, indeed, are many in number, yet not fo numerous, but that moft of them get a decent main:enance, if careful, and fome acquire handfome eftates. The principal expence they are at, when they fet up, is that of building their ovens, one of which will coft 201. and upwards, according to the fize; next to this, is their fock
of four ${ }^{4}$ and faggots : fo that 2 or 300 I . will ferve very well to begin with.
Their emplayment is even mentioned by Mofes (Gen. xi. 2.), therefore, in all probability, had it's firt rife in the eaft : and they were a brotherhood in England before the year 1155 , in the reign of king Henry II, though the white bakers were not incorporated till 1307, by king Edward the IId, and the brown bakers not till 162 I , in kin's James the Ift's time. Their hall is in Harp-lane, Thames-ftreet; and their court-day on the firf Monday of the month.
Arms. Gules, a ballance between three garbs, Or; on a chief barry wavy of fix, argent and azure, the hand of juftice glorified, and iffuing out of clouds proper (holding the faid ballance) between two anchors of the fecond.
Motto. Praife God for all.
King Henry IV. granted, by charter, to the mayor and commonalty of London, the affize of bread, beer, ale, \&c. victuals, and things faleable in the faid city; which is likewife granted by feveral other charters of our kings.
The ftat. 5 I Hen. III. was made for regulating the affize of bread, and bakers, not obferving the affize, were to be fet in the pillory.
By a late ftatute, the afize of bread is limited, in proportion to the price of wheat, and mayors, \&c. may, in the day time, enter any houfe, hop, or bake-houfe, of any baker or feller of bread, to fearch for, view, weigi, and try, all or any of the bread, there found ; and, if the bread be wanting in the goodnefs, deficient in baking, under weight, or fhall confift of any fort that what is allovied, the fame bread fhall be feized and given to the poor: allo a penalty of 40 s . is inflicted for want of weight, \& 8 c . Stat. 8 Ann. c. 18.
But by i Geo.I. c. 25. bakers are to pay 5 s. for every ounce deficient in weight, and 2 s . 6 d . if under an ounce. Bakers felling bread in peck, half-peck, or quartern loaves, at a higher price than fet by the lord mayor of London, \&c. fhall forfeit io s. Stat. 3 Geo. II. c. 29.
There is at Paris a corporation of bakers who ftile themfelves mafter-bakers.
This corporation, is pne of the moft ancient, which was eftablifhed in that city, with the right of having fworn wardens and matters, and long enjoyed the privilege of having a juriddiction peculiar ; before which, all alfairs relating to it's government, and the execution of it's fatutes, or bylaws, were brought, which was before the chatelet, and the lieutenant of the police, who have the cognizance of the affairs of all the other corporations.
That court, of which the great pantler of France was the head, confifted of a lieutenant-general, a king's attorncy, a recorder, and feveral uthers. It was in the name of that high officer of the crown, that all their ftatutes and regulations were iffued, apprentices and mafters, or freemen, admitted, and all oaths adminiftred. To him alfo belonged all the fines paid by thofe who are admitted into the corporation: which rendered the office of the high pantler as profitable as it was honourable, it being one of the molt antient offices of the monarchy.
The jurifdiction of the high pantler being fupprefled under the reign of Lewis XIV, by an edict iffued in Auguft 17 II, the corporation of the bakers in the city and fuburbs of Pa ris was reduced to the fame flate with the other bodies corporate, and, like them, it is fubject to the jurifdiction of the provoft of Paris, and of the lieutenant-general of the police.
The mafter-bakers of Paris boaft, that they had their ftatutes under the reign of queen Blanche, mother of St. Lewis, Hugh d'Athies being then high pantler: and yet the ftatutes they followed, when the employments of lieutenant-general and other officers of the king's pantry were fuppreffed, were not more antient than the year 1560, the firf of king Charles IX, though indeed it appears, that they had ftatutes as early as the reign of Charles VI.
The new ftatutes, which were promifed to them in the edict of Auguft 171 I , for uniting the mafter-bakers of the fuburbs with thofe of the city into one corporation, meeting with oppofition from time to time, both from the duke of Brifac, high pantler, with regard to the indemnification that was granted him, and from feveral particular mafters, and other perfons concerned in that re-union, and not being yet (in 1719) quite completed; that corporation of united mafters continued to be governed, partly according to it's antient ufage, and partly according to it's new letters patents.
That regulation which is but interlocutory, as it were, relates chiefly to the number of jurats, the years of apprenticefhip and journeymanhip, and the fines, regulated by the laft letters patents, for the admifion of apprentices and mafters, and for the vifitations.
There are fix jurats, three of whom are chofen every year, which was not done in the years 1718 and 1719 , the hieu-tenant-general of the police having ordered, that there fhould be no new clection, till the conteft was determined.

The apprentices are bound to ferve five years following, and, after their time is out, they are obliged to live four years more with the mafters as journeymen, before they cant be admitted to make their mafter-plece of workmanhhip, from which however, the mafters, or freemens fons are exempted.
The antient mafter-piece of the French baker was a kind of fmall loaf, which they called chapter-bread: it was made of the fineft flour, not only well kneaded, but alfo beaten for fome time with two fticks, whence it was alfo called beaten bread, pain broyé. Their new mafter-piece is light or fpungy bread, and white bread.
As for the fines, which have been greatly increafed, becaufe this new united company of mafter-bakers was obliged to have all the officers appointed for the companies of arts and trades, fince the year 1691 , to the year 1709 , which could not be entirely effected till the year 17 Ir , on account of the objections and reprefentations of the lord high pantler; thofe fines, I fay, are not to continue upon the fame foot they are at prefent, but till the fums borrowed for the payment of thofe offices be entirely reimburfed.
The union of the mafter-bakers of the city of Paris, with thofe of the fuburbs into one corporation, was attempted in the year 1678 , by virtue of an edid of Lewis XIV, iffued in December that fame year, for uniting the feveral companies of the fuburbs with thofe of the city, profeffing the fame arts and trades; but the union of the mafterbakers could not yet be effected, as has been obferved above.
The edict for that union is to this effect. Namely: That all the bakers fettled in the fuburbs of Paris, except that of St Anthony, and other privileged places, hould be united with thofe of the city, fo as to make up, for the future, but one and the fame corporation, under the jurifdiction of the lieutenant-general of the police, according to the ftatutes to be made for that purpofe, if needful.
That, in confequence of this union, the bakers fettled in the fuburbs of St Germain, St Michael, St James, St Marcellus, St Victor, \&c. who could prove their freedom in the fuburbs, fhould pay 220 livres; that the journeymen and apprentices, who could alfoprove their indentures, and the time of their ferving, either with mafters in the city, or with thofe in the fuburbs, fhould pay 330 livres; and that thofe who would take up their freedom, without a proper qualification, fhould pay 440 livres; without being exempted from the fines, which by the edicts of 169 r , 1694, 1702, 1704, 1706, and 1709, were to be paid to the offices of jurats, auditors of accounts, treafurers, comptrollers of weights and meafures, recorders of enrollments, comptrollers of the figniatures of the regifters, and keepers of the records. Thefe are the offices, which we obferved above to have been fince incorporated with the united company of bakers.
The fame edict fuppreffes and abolifhes the offices of lieute-nant-general, king's attorney, recorder, and ufhers of the pantry, giving leave to the ufhers, who were actually in office, to continue to act for the remainder of their lives; and ordering, that for the future, all mafter-bakers, either in the city or in the fuburbs, fhould be admitted by the king's attorney of the chatelet, as is practifed with regard to admiffion of mafters or freemen of all the other companies.
Finally, in the fame edid, there is a provifion made to indemnify the duke of Brifac, high pantler of France, who by the fuppreffion of his jurifdiction loft the fines, which time out of mind belonged to him, for the admiffion of mafters and apprentices.
It is this indemnification granted to the high pantler, that amounts to above 100,000 livres, whereof the company has already paid above two thirds, which long delayed the regiftering and execution of the letters patents granted to the two united companies.
By the antient and new ftatutes of the mafter-bakers of the city and fuburbs of Paris, they alone have a right to fettle there, to keep fhop, and to fell bread, either light, white, houfhold, \&c. and that no other fhall attempt to do the fame, upon pain of having all his bread feized, and paying a fine of 600 livres; without prejudice, however, to the liberty granted at all times, to the country-bakers; fuch as thofe of Goreffe, Corbeil, Charenton, 8 cc . to bring bread, either by land or by water, for the provifion of the city, on market days, and to expofe it to fale in public places.
The days, called market-days at Paris, are Wednefdays and Saturdays: and, as for thofe places where country-bakers are at liberty to fell bread, there were, till the year 1709 , but feven or eight of them, and there the moft celebrated markets at Paris. But in that year, more remarkable for a featcity of wheat and other grain, than the kingdom of France ever experienced, the officers of the police thought proper to appoint feveral other places for the fale of country bread; fo that there are now at Paris almoft as many places, where country bread is fold on market-days, as
there are places fit for the purpofe, in all parts of this great city.
The feveral forts of bread, which the bakers at Paris are allowed to make and fell, are light and fpungy bread, houfhold and white bread, and what they call-chapter-bread, which is a delicate fort, chiefly defigned for the canons. Under the titie of light or fuingy are reckoned all thofe nice loaves and rolls made with inilk, butter, cream, yeaft, \&x. to which the French give feveral odd or humourous names, which cannot be well rendered in Englifh, without long circumlocutions.
It has, however, happened, now and then, efpecially in times of dearth, that the parliament, or the officers of the police, have reduced the bakers bread to two forts only. We meet with inftances of it in the years 1436 and 1437; and fince again, in the remarkable year 1709 , upon the petition of the attorney-general, the court of parliament revived that regulation, for which, by-good providence, the city of Paris had had no occafion during near three centuries. The arret, or decree, by which bread was reduced to two forts only, bears date the 7 th of June of that fame year 1709. It is thereby ordered, that the bakers of the city and fuburbs, as well as of other places within the provofthip, vifcounty, and prefidial- of the chatelet of Paris, fhall not bake nor expofe to fale in their fhops, or in the markets, but two forts of bread only; namely, white and houfhold bread. That the white bread hould be made of the fineft flour of wheat-meal, of half of white-meal after the flour, and half of fine oatmeal; and that the houfhold bread hould be made one half of white meal after the flour, and half of coarfe meal ; that is to fay, part of that which is got after the firft bolting, and part of that whichcomes from the laft bolting; the whole under the penalty of having the bread feized, of a fine of 1000 livres, and being deprived of freedom and profeffion, and even of a greater punifhment, if the nature of the crime required it.
By the 10 th article of the 6 th chapter of the ordonnance of the city of Paris, made in the year 1672 , concerning the fale of corn, all bakers of large and fmall loaves are forbidden to take every day from the keys above two muids (or 10 quarters) of wheat, and one muid (or five quarters) of meal. And, by the French king's declaration of the Ift of September 1699, they are alfo forbidden to buy either corn or meal, within the diftance of eight leagues from Paris, except on the keys, and in the markets of that capital city; with liberty, however, to buy both beyond the limits of eight leagues; but then they are obliged to produce certificates of the meafures eftablifhed in thofe places, where they bought them, containing an account of the quantity of corn and meal they bought; under the penalty of forfeiting both, and paying a fine of 300 livres. The bakers are by their ftatutes obliged to mark upon each loaf the number of pounds it weighs, and the weight mufe anfwer that number, upon pain of forfeiture and fine.
BALASTRI. Thus they call, at Smyrna, the fineft gold cloths that are manufactured at Venice, and which the Venetians carry into the ports of the Levant.
BALAUSTINES (in French BALAUSTES) are the flowers and blofforns of the wild pomegranate-tree. There are two forts of them, the fine and the common. 'The latter have but little virtue, and are therefore unufed in medicine, where the former are of ufe, being reckoned aftringent. Both forts are brought from the eaft, and are properly one and the fame drug. But the fine balauftines are adorned with their bloffoms; whereas the common fort have only their pecou, pod or bud, in the form of a pretty thick rind, which contains the bloflom, before it grows, or fupports it, when opened.
The balauftines muft be chofen fine, frefh, broad, of a fine velvety red, and, if poffible, without pecou, and without duft.
BALAZEES, or SAUVAGAZEES of Surat, are white cotton cloths, manufactured in that city of the Grand Mogul's empire, and in it's neighbourhood. They are 13 : French ells in length, by $\frac{2}{3}$ in breadth.
BALE. It is faid of merchandizes wrapped up, or packed up in cloth, and corded round very tight, after they have been well garnifhed with ftraw or hay, to'keep them from breaking, or to preferve them from the weather.
Moft of the merchandizes capable of this kind of package, that are fent to fairs, or defigned to be exported into foreign countries, ought to be in bales, and too much care cannot be taken in packing them up, to prevent their being fpoiled, or any way damaged.
The bales are always marked and numbered, that the merchants to whom they belong, may eafly know them.
When they fay, to fell merchandizes in bales corded, it fignifies to fell them in the grofs, upon a fhew or fample, without unpacking them, or taking off the cords.
The French give the name of bale goods to certain hard wares, and other forts of merchandize, which come to Paris from divers countries, and particularly from Forez, a
province of France, and are commonly made by bad workmen, and of indifferent materials. They give them that name, to diftinguif them from thofe that are bofpoke, and made by good workmen. Whereas, in Englifh, we call bale goods, all fuch as are imported or exported in bales.
The French alfo give the name of bale-carriers to thofe hawkers and pedlars, who travel up and down the country, felling wares, which they carry in fmall bales br packs, upon their backs.
A bale of Paper is faid of feveral reams together, in a kind of fmall bale. The number of reams is not equal in all. The bales defigned for Conftantinople, do not contain commonly above twelve reams. There is hardly any other paper that is fold in bales, but that with three creicents, which is manufactured at Marfeilles, and fent to Conftantinople. That with a crown, and that with a fmall crofs or croflet, which are alfo fent into the Levant, are fold by what the French call ballon.
A bale of dice, with the French, is a fmall bundle or parcel, made of paper, and containing one or more dozens of dice.
A fmall bale (in French ballot) is a parcel of merchandizes, though the French do alfo fometimes give the name of ballot to large bales.
The ballots, or fmall bales of fome forts of goods, confift commonly of a certain number of parcels, fkains, or pieces. The bale of yarn, in France, contains from 15 to 18 parcels, each parcel weighing three or four pounds.
The word ballot, or bale, is alfo ufed in the trade of buccaned flefh, which trade is carried on by the buccaneers of St Domingo. Each parcel of that flefh, or meat, moft commonly is of 60 pounds neat meat, exclufive of the package.
BAL LANCE, or BALANCE, is one of the fimple powers in mechanics, which difcover the equality or difference of weights in heavy bodies.
Ballance of a watch, or clock, is that part of it which regulates the beats. The circular part of it is called the rim, it's fpindle the verge, to which belong the two pallets, or lever, which play in the teeth of the crown-wheel in pocketwatches; that ftrong ftud in which the lower pivot of the verge plays, and in the middle of which one pivot of the bal-lance-wheel plays, is called the pottance vulgarly, I fuppofe for potence (it being ftrong) or portance, as Dr Hook calls it in his Heliofcope. The bottom of this is called the foot; the middle part, in which the pivot of the ballance-wheel turns, is called the nofe; the upper part, the fhoulder of the portance. The piece which covers the ballance, and in which the upper pivot of the ballance plays, is the cock. The fhell-fpring, in the new pocket-watches, under theballance, is the regulator, or pendulum-fpring.
Ballance [in the accounts of merchants] is, when the debtor and creditor fides of any diftinct account are equal. When that is the cafe, fuch account is faid to be ballanced.
Ballanice of a merchant's or trader's books. This is a branch of the art of accountanthip. In the method of keeping the books of traders, according to that admirable art of charge and difcharge, by double entry, fuch books, if kept as they ought to be, will be always fit for a general ballance. For fuch is the excellency of that method, that the books of themfelves muft be neceffarily upon a ballance on the whole, though not in every diftinct account, throughout the ledger. But the nature here of will be fhewn under the article of Mercantile Accountantship.
Ballance of trade. That which is commonly meant by the ballance of trade, is the equal importing of foreign commodities, with the exporting of the native. And it is reckened that nation has the advantage in the ballance of trade, that exports more of the native commodities, and imports lefs of the forcign. The reafon of this is, that, if the native commodities be of a greater value that are exported, the ballance of that account muft be made up in bullion or money; and the nation grows fo much richer, as the ballance of that account amounts to.

## R E M A R K S.

It hath been a great debate, how the ballance of our foreign trade fhall be computed, and, what methods we fhould take whereby to know it. It has been thought by fome, that the moft proper way to make a true judgment therein is, by taking an account from the cuftom-houfe books of our exports and imports; but this is a very uncertain way of reckoning: for all forcign goods that are imported, paying a confiderably greater duty than the native goods exported, there can be no computation of the ballance of trade from the difference of the fum of money that is paid, at the cuftom-houfe, for the foreign goods imported, and the naṭive exported. But, fuppofe there fhould be an allowance made, in cafting up the account, for the greatnefs of the duties that the foreign goods pay more than the native; yet that can be no advantage in difcovering the ballance of trade; becaufe they cannot difcover by the cuftom-houfe books, what the native goods that are exported are fold for in foreign countries: for the ballance of trade muft arife from the value of the goods that are fold, and not from the quantity that are exported or
Vel. I.
imported. And that is known only to the merchant that fefte the goods, and it is not for his intereft to acquaint others with it, and thereby difcover the profits of his trade.
Befides, as toour imports, the builion, and fuch things of value, are not entered at the cuftom-houfe; and, with refpect to our exports, as many of them go out cuftom free, the entrres there made of them cannot be depended on: but, if by that means a more exact account of our exports and imports could be had, yet, fince fo great a part of the trade of this king dom is driven by exchange, and fuch vaft quantities of commodities are imported from our plantations for account of the inhabitants there, the produce whereof they leave here as a ftock at home, and that they arc fupplied hence with fo many things for their own confumption, I cannot fee how any computation can be this way made of our general trade, much lefs of that we drive with any particular nation, the commodities, which we receive at one place, being often carried to another: and, as to the profits we make by the freight of our hhips, that does not at all appear from the cuftom-houfe books.
Befides, it is well known, that merchants to fave themfelves the trouble and fee of taking out another cocket, frequently enter much larger quantities of goods than they actually export; and other fictitious entries are often made of certain commodities, in order to raife the value of them, from the appearance of the great quantities exported, and the lefs remaining to be fold,
Thefe fictitious entries are often increafed by the practice of owners and mafters of fhips, to encourage the merchants to load goods on a thip, put up on a general freight, with the hopes that fhe will be very foon difpatched; and, I believe, it is not unufual for merchants themfelves to put this in practice fometimes, to fupport their declining credit; or to give them the reputation of being greater dealers than they really are: fo that the largeft entries may be, when the feweft goods are exported.
To thefe uncertainties of making any judgment of the quantities of goods fo exported, from the entries, we mult add. the impoffibility of making any reafonable eftimate of the value of the goods fo exported, becaufe of the variety ot different kinds and pieces of them. For inftance, no man can make an eftimate of the value of perpets, Auffs, long and fhort cloths, from the quantities only, when they differ in their price more or lefs, as one is to four, or five; fo that he may be very eafily miftaken fome hundred thouland pounds every year.
In order, therefore, to know whether a nation gains or lofes by it's trade, the courfe of exchange has been judged the fureft criterion. We having had occafion to treat fomething of this matter, under the article of the arbitration of the foreign exchanges, 'tis neceffary that the reader fhould be referred thither, the principles, upon which that notion is founded, being there reprefented. In addition to which, the following animadverfions may be further ufeful.
If the ladies of quality of Paris, for inftance, are fond of Bruffels lace, and confume of it yearly to the value of 100,000 oz. of filver, about 150 pounds weight of flax, which grew upon a quarter of an acre of land, will anfwer this value : this will require the yearly labour of 2000 women, for the feveral parts of the work. The undertaker, or principal lacemanufacturer at Bruffels, will fet thefe women to work, and pay them their daily wages. They will buy of the butcher, baker, brewer, \&c. their neceffaries, and thefe will pay the value to the farmer, and he will pay his rent to the land proprietor in Brabant, whore land is applied to produce the neceflary maintenance for thefe women: and, if they confume in their maintenance the produce of three acres per head, here will be 6000 acres in Brabant, employed for the ufe and maintenance of the lace-women.
The families at Paris, where the lace is worn, muft pay their money at Bruffels; to anfwer this expence; and alfo enough to anfwer the lace-merchant's maintenance, with his family and fervants, and the intereft and rifque of the advance of his money; all which will be found in the price they give for the lace: and this money mult be fent in fpecie from Paris to Bruffels, if France fends no commodity to Brabant to anfwer and compenfate this debt.
But, if on the other hand, the land-proprietors and nobility in Brabant, and others, are fond of Champagne wine, and confume thereof annually the value of 100,000 ounces of filver; if the muid of Champagne wine, being tranfported to Bruffels, cofts there 60 oz . of filver; if an acre of vineland produces in Champagne four muids, this quantity of wines, which fells for $100,000 \mathrm{oz}$. will require $4166^{2}$ acres for it's production; befides, about 1000 carriage horfes for the tranfportation to Bruffels; which at two acres of land for the maintenance of each horfe, makes 2000 acres more. And fo there will be $6166_{3}^{2}$ acres of land in Champagne, applied to the production of thefe wines, and the tranfport horfes; and confequently, fo much taken from the maintenance of the French inhabitants.
Thefe wines will pay and compenfate the value of the lace, by bills of excharge between the wine-merchants in Cham-
pagne,
pague, and the lace-merchants at Bruffels, or between the bankers, who are the brokers and medjators of payments of this kind.
Tho $e$ wines which are drank in Brabant, will fave the produce of about 4000 acres of land in Brabant, which otherwife would have been employed to produce beer, \&ic. and fo France not only lofes the produce of $6166^{2}$ acres of land, in this commerce or exchange, but faves to Brabant 4000 acres ; and, upon the whole, the lofs is no lefs to France than $10,166^{2}$ acres; for which it receives the produce of no more than one quarter of an acre.
If the circulation of money in Brabant be equal to that in France, the land and labour employed about the lace will be equal to the land and labour employed about the wine; and the produce of the land given in payment to the undertaker, or lace-merchant in Bruffels, and to the lace-women, \& c. will be equal to the land given in payment to the wine-merchants in Champagne, to the labourers employed in the production of the wine, to the carriers, \&c. and to the land that goes to the production of the wines, the maintenance of horfes, \&c.
But, if the quantity of money circulating in Brabant be treble to that circulating in France, as the exchange is made by the evaluation in money, one third part of the land and labour in Brabant will anfwer, and correfpond in value to the whole land and labour in France; and the product of one acre in Brabant will exchange for that of three acres in France of equal goodnefs. Befides this difadvantage in the prefent example, the $\frac{1}{3}$ part of the land in Brabant will be applied to the maintenance of the inhabitants of that country; whereas the $4166_{\frac{2}{3}}^{2}$ acres, which produced the wine in Champagne, are alfo applied to the maintenance of the French inhabitants.
By this example we fee a branch of luxury carried on in France, which indeed fupports a commerce, maintains vintners, wine-merchants, horfes for carriages, wheelwrights, \&c. circulates the farmer's rent in Champagne, with that of the proprietor in Paris: and yet, upon the whole, this trade is difadvantageous to France, diminifhes it's inhabitants to the number of at leaft 1500 fouls, and is of no ufe or emolument to that kingdom: But, on the other hand, it turns to very good account to Brabant, where the land is by this means applied to the maintenance of its own inhabitants; and where they have the produce of 4000 acres of ground in France, brought to them without any charge or difadvantage.
From the method of enquiry followed in this example, we may examine the advantages or difadvantages of every particular branch of trade with any foreign country, when the ballance appears equal.
When contefts arife concerning the national advantage or difedvantage of any branch of foreign trade, it would be eafy to put the truth in a clear light, by examining the feries of facts, according to the method herein fuggefted.
It will always appear by fuch enquiries, that the exportation of minerals and manufactures, \&c. are advantageous; fince the land and labour which produce them are applied to the fupport of the inhabitants at home; but that the exports of the fruits and products of the earth are difadvantageous for the contrary reafons, except where a good year has produced a great furplufage of them, beyond the yearly confumption of the inhabitants: and, when the returns for mincs and manufactures exported, confift in other mines and manufactures imported, by examining which maintain more inhabitants, or more ufeful ones to the ftate, there will be no difficulty in determining on which fide the advantage lies. In general, whenever there arifes a doubt or difficulty about trade, the method to decide the controverfy effectually, will be to compute the land and labour, as in the preceding example, inftead of being hurried away with general maxims and received notions of trade.
To know when the nation really profpers by its general commerce, being a matter of great concernment to the community, it may be ufeful to purfue this point a ftep further. Various characteriftics hereof may be affigned; but there are but two, perhaps, which can be depended on; and thofe are the courfes of exchange and the price of bullion.
To the end that our meaning may be conveyed with perfpicuity, let it be fuppofed that the city of Chalons fur Marne in Champagne pays yearly, to the king's receiver there, 10,000 ounces of filver; and that the Chalons wine-merchants fell at Paris, by their correfpondents, wines to the value of 10,000 ounces of filver, fuppofing the ounces of filver of the fame value in livres at Chalons as at Paris.
The livres at Paris are to be fent in fpecie to Chalons, and the livres at Chalons are to be fent to Paris; but the trouble may be faved on both fides, by exchange. The wine-merchants correfpondents will carry their livres to the cuffomhoufe, and take there in exchange a refcription, order, bill, or bills of exchange, upon the receiver at Chalons; which bills they will endorfe to the wine-merchants, and they will receive upon them the like quantity of livres,
Or, the receiver of Chalons will pay his liveres to the winemerchants, and take their bills of exchange, on their corre-
fpondent at Paris, which he will endorfc to the treafurer of the cuftoms, who will receive the fum of livres on the faid bills. The fame method may be pradifed tetween the wine-merchants at Chalons and the ftewards of the Paris land-proprietors, who have eftates near Chalons; and, if the returns be confiderable, bankers will fet up at Paris and at Cbalons, to make the remittances, and fupply the necelfaiy bills of exchange between thofe two cities: and as, on this fuppofition, the fame fum of livres at Chalons is exchanged by the like fum at Paris, the exchange of money will be faid to be at par.
But, if the quantity of wines, and other commodities fent from Chalons to Paris, and fold there, exceed in their value the king's revenue at Chalons, and the commodities fent from Paris to Chalons, which are confumed and fold there, by the fum of 5000 ounces of filver, the Paris bankers will fend this fum to Chalons in fpecie; and the expence of the carriage of this money will fall upon the wine-merchants, and others, at Chalons, who have this fum in cafh in the hands of their correfpondents at Paris, and want to have it at Chalons: they, therefore, will order their correfpondents to remit it to them ; but the banker at Paris, who has no money at Chalons, will refufe to give his bills on his correfpondent banker there at par, and demand 102 livres for his bill on Chalons for xoo livres: if they will give him that price, he will draw for it upon his correfpondent, and 'fend him the money in fpecie, to aniwer the payment; and as the muft pay a liver for the carriage of every 100 livres, or 1 per cent.' he will fill have I per cent. for his own and his correfponding banker's commiffion: and, in this cafe, the exchange at Paris for Chalons will be 2 per cent. above par, as the exchange of Chalons for Paris will be 2 per cent. under par: and, if Chalons be indebted to Paris, the exchange will be the reverfe.
From this example, which may be applied to any two cities in the fame ftate, it appears that the variation of exchanges between two places, where the fame coin is ufed, is known by, fo much per cent. over, or under par; that the place where the exchange is above par has the ballance of trade againft it, and that the place where the exchange is under par has the ballance in its favour, or due to it. In this there is no myftery.
If the city of Bourdeaux owes 100,000 ounces of filver at Paris, and fends wines and brandies to Holland for 100,000: and, if Holland fends fpecie to Paris for 100,000 ounces, the bankers at Bourdeaux fend their bills on Holland to Paris, for 100,000 ounces due to Bourdeaux; and with thefe the fpecie-merchants at Paris remit and pay the 100,000 ounces they owe to Holland; in thefe cafes, the exchange between Bourdeaux and Paris, Bourdeaux and Holland, and Paris and Holland, will be all at par; there will be no variation but what proceeds from the commiffion of the negociators concerned in the returns.
But, in regard that the coin in France is reckoned by livres, fols, and deniers, and in Holland by forins, ftivers, and groots; that the coin in ufe in Holland differs in the ftandard, bulk, and mark, from that ufed in France, the computation of the exchange is made by the exchanging fo many Dutch groots for a French exchange crown; which, at firf view, does not feem to denote that the exchange is fo much per cent. over or under par, but in reality it is fo; and the banker concerned in the Dutch exchange knows how to evaluate this par in the fale of French crowns and Dutch groots.
So that the exchange between Paris and Amfterdam is, in effect, carried on juft as it is between Paris and Chalons; only with this difference, that the accounts are kept in another gibberifh, and that the charge and rifque of fending money from Paris to Amfterdam, is greater than that of fending money from Paris to Chalons. When the ballance of trade with Amfterdam is againft Paris, the exchange at Paris will be from 5 to 6 per cent. above par by bills on Amfterdam; whereas it will feldom exceed 2 per cent. above par for Chalons.
Whether France pays livres, fols, and deniers, for rials of plate and marvadees, new or old, of Spain; for crufadoes or millrees of Portugal; for guilders, rixdollars, or mark-lubs, in the north; for pounds, fhillings, and pence ferling; for marks, piafters, and ducats of Italy; the par of the exchange is always ounce for ounce of filver, or rather of gold, that being of eafier carriage, and moft commonly tranfported in the payment of the ballance of trade; and the computations and evaluations of the exchange will fquare every where with our firf example.
If France owes a ballance in trade to Flanders of 100,000 ounces; Flanders to Holland of 100,000 ounces; Holland to England of 100,000 ounces; England to Spain of 100,000 ounces; Spain to Italy of 100,000 ounces; Italy to Germany of 100,000 ounces; Germany to France of 100,000 ounces; the exchange may be carried on at par between all thofe countries, without any tranfportation of gold or filver. But, as the ballance of trade grows due gradually from one country to another, by an importation of commodities, the variation of/exchanges follows the fame proportion.
For example: if Holland fends into England in January, the value of 100,000 ounces in merchandize, and receives from

England,

England, in that month, but the value of 50,000 ounces, the merchants of London, who owe this fum at Amferdam, will offer the negociator money for his bills on Amfterdam; and be having no money due to him there, and refufing to draw, the merchant will offer him 1,2 , to 3 per cent. above par, in the language of cxchange : then the negociator will draw on his correfpondents on thofe terms; and fend over the money to him to anfwer the payment, and get the 3 per cent. for the charge of fending the money, the rifque, and for his commifion : and when this ballance is paid, by fending the money, the exchange will fall again to par.
From thefe examples and reflectiens it is plain, that the courfe of exchange indicates where the ballance of trade lies, fince their variation is proportionable to the ballance with any country diftinctly. But, as the Spanifh exchange may be in favour of France, and theDutch exchange at the fame time againf France, the courfe of exchange will not fhew whether F rance receives more money from Spain than it fends to Holland; and, confequently, it will be but conjecture to judge, from the courfe of exchange, whether France gains or lofes in the general ballance of trade.
But, as France keeps up the current fpecie at a higher price in the mint than bullion, if the negociators of money are forced to fend out the current fecie in payments to foreigners, this will thew moft of the bullion is already gone, and that the general ballance is againft France: and in England, if bullion, which is allowed to be exported, grows dearer than fland ard, it is alfo a plain fign that the general ballance is againft England. So that the only rule, whereby we can make a judgment of the ballance of general trade, feems to be from the courfe of exchange and the price of bullion.
Though the courfes of exchange commonly follow the propor tion of goods exported and imported, which form the ballance of trade; yet, if particular people fend their money fomone country to another to lay out at interelt, it will have the fame effect in exchange as a ballance of trade; with this difference only, that it brings home an annual intereft, and the principai may be called back: whereas the money acquired in the ballance of trade is clear gain to the nation. The fums alfo fent for the payment of armies and alliances, and for the maintenance of foreign ambaffadors and travellers, have al fo the fame effect upon exchanges as a ballance of trade; but the natural and conftant courfe of the valuation of exchanges is the ballance of trade. Exchange, at fome times, may rife and fall every week, and, at particular times of the year, run high againft a nation, and at other times, run as high on the contrary: as againft a vintage, a great mart, or public fale; the exchange may run higher to Bourdeaux, Franckfort, or Holland, upon an Eaft-India fale; at other times, the exchange may have run to the fame places as much on the contrary: and no exchange can run high confantly againft a nation; for then merchants who trade to that country muft always be lofers; and it cannot be fuppofed that perfons will always trade to a country where they muft always lofe.
That the price of exchange is a criterion of the ballance of trade, I have fhewed to be the fentiments of thofe eminent merchants of London, whohad a fhare in writing of the Britifh Merchant, a gainft the treaty of commerce made with France at Utrecht; [fee the article Aríitrations of Exchanges.] and lately the fame has been cited to the like purpofe in a tract faid to be wrote by the late Sir Mathew Decker ${ }^{*}$; which we mention to fhew, that the opinion of thofe, who have been efteemed good judges of trade, coincides with what has been fuggefted upon this head.

- An Eflay on the caufes of the Decline of the foreign Trade confequently of the Value of the Lands of Britain, \&c.

## By. Caftaing's. Paper of February 3, 1740.

London gave to Genoa, for a dollar -
to Venice, for the ducat banco
to Leghorn, for the dollar
d.

By Sir Ifaạc Newton's Tables.
Genoa, the par is 54 d .
Lofs to England, about 1 per cent.
Venice, the par is 49 d .492 decim .
Lofs to England, about $3 \frac{1}{2}$ per cent.
Leghorn, the par is 5 Id .69 decim.
Gain to England, about 2 per cent.
To Genoa and Venice the ballance is againft us, and favourable only a fmall matter to Leghorn.

February 3, 1740.
London gave to Libon for the millree 65 d .
The par is 67 d .166 decim. Gain to England about $3 \frac{1}{4}$ per cent.
London gave the pound fterling to Antwerp for 35 s . 10 d. the par is 35 s 17 decim.
Gain to England about 2 per cent

London gave the pound fterling to Amfterdam for 34 s. ind. the par is 36 s . 59 decim.

Lofs to Engliand about $4 \frac{1}{2}$ per cent.
London gave the pound tierling to Hamburgh for 33 s. ird. the par is 35 s . 17 decim.
Lofs to England about $3 \frac{1}{2}$ per cent.
From hence it appears, that, according to the courfes of exchange between England and other countries, the national lofs or gain may be determined as clearly as a matter of this delicacy will admit. To which end, fee the article StanDARD of foreign coins, or their intrinfic values: and, if to thefe obfervations we add that of the price of bullion, a good judgment may be made how the general ballance of trade may ftand from time to time.
Mr Mun, the merchant, on trade, fays, the exchange being againft a nation is of advantage to that hation; and fuppofes, if 100 l . at London is worth no more than gol. of the fame money at Amfterdam, the Dutch to fend $500 ; 000$ l. of goods to England, and the Englifh 400,000 of goods to Holland, it follows, that the money due to the Englith at Amfterdam will ballance 440,0001 . due to the Dutch at London: fo 60,0001 fterling pays the ballance
Mr Mun did not confider, that the Dutch goods worth 500,000 l. when exchange was at the paf, are worth at London 555.5551. when gol. at Amfterdam is worth 1001 . at London; and the 400,000l. of Englifh goods in Holland are ouly w-rth 360,0001 . that fum being equal by exchange to 400,0001 . in England. So, in place of England's having an advantage of 40,000 . as he alledges, by the exchange being againft her, fhe pays 95,5551 . more than if exchange had been at the pa-.
When exchange is above the par, it is not only paid for the fum due on ballance, but affects the whole exchange to the place where the ballance is due. If the ballance is 20,000 . and the fum exchanged by merchants who have money abroda, with other: whoare owng, or have occafion fur money there, be 60,0001 . the billis for the 60,0001 . are fold at, or near, the fame price with the 20.0001 ., for ballance. It likewife affects the exchange to countries where no ballance is due. (Ex.) If the exchange between Scotland and Holland is 3 per cent above the par againft Scotiand, between Eng'and and Holland at the par, though no ballance is due by Scotland to England, yet the exchange with England will rife; for rool. in England, remitted to Scotland by Holland, will yield 103I. fo between Scotland and England it may be fuppofed to be had at 2 per cent. being lefs trouble than to remit by Holland.
Goods are fold to foreigners according to the firft coft. (Ex.) If goods worth ioo I. in Scotland, are worth 1301. in England, thofe goods will be exported, 30 per cent. being fuppofed enough for the charges and profit. If the price of there goods lower in Scotland from 1001 . to 80 l. the price in England will not continue at 130 ; it will lower proportionably, for either Scots merchants will underfel one another, or Englifh merchants will export thefe goods themfelves. So if they rife in Scotland from 1001 . to 1201. they will rife proportionably in England, unlefs the Englifh can be ferved with thofe goods cheaper from other places, or can fupply the ufe of them with goods of another kind. This being fuppofed, it follows that,
By fo much as exchange is above the par, fo much all goods exported are fold cheaper, and all goods imported are fold dearer, than before. (Ex.) If a merchant fends goods yearly to England firft coft, charges, and profit 6000 l. money in England of the fame ftandard with money in Scotland, and no ballance due; but a ballance due to Holland, raifing the exchange 3 per cent, above the par to Holland, and affecting the exchange to England 2 per cent. 5882 1. 7 s: in England pays for the goods, that fum, by exchange, being equal to 6000 l. in Scotland : fo that a ballance due to Holland, by raifing the exchange to other countries, occafions a lofs to Scotland of in7l. 13 s. on the value of 6000 . of goods fent to England.
Englifh goods are fold fo much dearer. (Ex.) If an Englifh merchant fends goods yearly to Scotland, firft coft, charges and profit, 60001 . 6120 l . muft be paid for thefe goods in Scotland, that being only equal to 60001 . in England. If the exchange had been at par, the Scots goods fent to England would have fold for In 71.13 s. more, and the Englifh goods fent to Scotland for 1201 . lefs.
Thus to all places with which exchange is above the par, goods fent out are fold for fo much lefs, and goods brought from thence are fold fo much dearer, as the exchange is above the par, whether fent out, or brought in, by Scots or foreign merchants.
The merchant who deals in Englifh goods gains no more than when exchange was at the par, though he fells dearer; nor the merchant who deals in Scots goods lefs, though he fells cheaper; they have both the fame profit as when exchange was at the par. Scotland pays 2 per cent more for Englifh goods, and England 2 per cent. lefs for Scots goods: all, or a great part of the lofs, falls at laft on the landed-man, in Scotland, and it is the landed-man in England, has all, or a great part of the benefit.

Nations, finding the export of money, or bullion, to pay the ballance due by trade, a lofs of fo much riches, and very detrimental to commerce, foould difcourage the import of fuch goods as the people could beft want, by prohibition of their confumption; induftry fhould be encouraged, and all meafures ufed to lower the price of labour, and, in proportion, the neceflaries of life, whereby the native product and manufactures will be improved and increafed, and the overplus exported will be greater.- Thefe methods will make trade and exchange equal, and turn the ballance in favour of a nation. But, inftead of thele means, fome nations prohibit bullion and money to be exported, which can have no other effect than to raife the exchange equal to the hazard fuch laws occafion, which added to the export of money or bullion, may be fuppofed at 3 per cent. more: and as thefe laws by the effect are hurtfu, making all goods exported fell yet 3 per cent. cheaper, and all goods imported 3 per cent. dearer; the ftridter they are executed, the higher will the exchange ftill rife, and prove the more nátionally injurious. The ballance muft neverthelefs be fent out in money or bullion, by the merchants who owe it.
Suppofe the money of England, Scotland, and Holland, of the fame weight-and finenefs; Scotland to trade with no other places; the exchange at the par: the yearly export from Scotland firft coft 300,0001 . charges and profit 30 per cent. goods imported 280,000 . charges and profit 30 per cent. one half of the trade to be carried on by Scots merchants, the other half by Englifh and Dutch.
Due to Scotland for one half of the
exports carried out by their own \{1.195,000 merchants
Due for the other half carried out by $\{1.150,000\} 1.345,000$
the Englifh and Dutch Due by Scotland to England and

Due for goods imported by Scots merchants
The expence of Scotfmen abroad,
$\left.\begin{array}{l}\text { more than of foreigners in Scot- } \\ \text { land }\end{array}\right\} 1.40,000$
If this is fuppofed the yearly ftate of the trade and expence of Scotland, there will be a ballance due of 17,000 l. and, unlefs the Scots retrench the confumption of foreign goods, fo as to import lefs, or retrench the confumption of their own goods, fo as to export more, or increafe and improve their product, fo as the export be greater or more valuable; or retrench in their expences abroad; fince that ballance muft be paid, it will go out in money or buliion, and occafion the exchange to rife 3 per cent. the prohibition on the export of money 3 more, if Scotfmen export it; the nation faves the ro201. exchange on the 17,000 l. of ballance due, which is loft, if Englifh merchants export it ; but the lofs fuch a rife in exchange occafions on the goods, is more confiderable. The 195,000 I. due abroad for goods fent out of Scotland by Scots merchants, will be paid with 183,962 l. Englifh or Dutch money, that fum being equal by exchange at 6 per cent. to 195,0001. in Scotland. The 150,000 l. due for firft coft of goods carried out by Englih or Dutch merchants will be paid with 141,5101. Englifh or Dutch money, that fum being equal to 150,0001 , in Scotland. The 182,0001 . due by Scotland for goods imported by Englifh and Dutch merchants, will come to 192,9001. in Scotland; and the 140,000 1. firft coft of goods brought home by Scots merchants, will come to $148,400 \mathrm{l}$. in Scotland. So the account will run thus:

Due to Scotland for goods exported _- - $\begin{aligned} & \text { 1. 183,962 } \\ & \text { Brought from abroad, firft coft _- } \\ & \text { B40,000 }\end{aligned}$ Brought from abroad, firft coft - - - - - 140,000
Ballance of expence abroad - - - - 40,000

Due to Scotland abroad - - - 3,962
Due by Scotland for goods imported by Englifh and Dutch
Englifh and Dutch take back in goods

1. 192,920

Due to Englifh and Dutch in Scotland
150,000
Due to Englifh and Dutch in Scotland - - - 42;920
3,9621. due abroad to Scotland in Scots money - 4, 199
Remains due by Scotland - - - $1 . \overline{3^{8,721}}$
So the rife in the exchange of 3 per cent. by the ballance due of 17,0001 . and 3 more by the prohibition on the export of money, occafions a lofs to Scotland of 21,7211. and makes the next year's ballance 38,721 l. though the trade be the fame as before: of which 21,72Il. loft by exchange, one half would be faved, if money were allowed to be exported.
Since the exchange being 6 per cent. above the par, occafions the lofs of 21,721 . then raifing the money 8 and $\frac{3}{3}$ per cent. having raifed the exchange with England to I4 per cent. and with Holland to 30 , makes the lofs proportionably greater. Scots goods being fuppofed to continue at the fame prices they
were fold for, before the money was raifed, or not to rife in the fame proportion with the money; for, when exchange was at par, 1001 . of Scots goods were fold abroad for 1301 . Englifh money; but II4l. Englifh money, being now equal by exchange to 1301 . in Scotiand, the Scots merchant can afford to fell the fame quantity of goods for 114 l. that he fold before at 130 l . and have the fame profit: fo foreign goods worth abroad 1001 . and fold in Scotland for 1301 . when exchange was at the par, cannot be fold now for lefs thah 1501. in Scotland, that fum being equal only to 1301 . Englifh money, and the merchant's profit is no greater than when he fold the fame quantity of goods for 1301 .
It may not be improper to confider what confequences would attend the lowering the money to the Englifh fandard, and allowing it to be exported.
The former fate of trade is fuppofed to be carried on one half by Scots merchants, the other half by Englifh and Dutch; but, as moft of the trade is carried on by Scots merchants, let this ftate of trade be confidered accordingly: the one or the other will clear the main queftion.
The ftate of trade and exchange fuppofed at $\mathrm{r}_{5}$ per cent. to England, and 30 to Holland; the whole export of Scotland to be $300,000 \mathrm{l}$. of which $50,000 \mathrm{l}$. carried out by Scots merchants, fold at 30 per cent profit and charges 325,0001 .

There will be a ballance due to Scotland of
17,992
As this ballance due to Scotland would bring exchange to the par, and 3 per cent. on the Scots fide, 3 more, becaufe money in England, fuppofed to be prohibited exportation, 1001. in Scotland would be worth Io61. in England, and proportionably in other places: fo the ftate of trade would then be thus:
Due in Englifh money for 325,000 firft coft,
eharges and profit of Scots goods, fent out
by Scots merchants, and 50,000 1. exported I. 397,500
by foreigners
Of this fpent abroad - - - Imported from abroad - - $\quad$ 306,086

Ballance then due to Scotland 51,414
If the yearly export be as great as fuppofed, and the ballance only 20,000 . then lowering the money to the Englifh ftandard will make a ballance due of 51,4141 . though the money is not allowed to be exported.
From hence it will be eafy to conceive how highly detrimental to our trading intereft the exchange being againft us muft inevitably prove; and, when once it is fo, it is eafy to conceive that it contributes to keep itfelf 'fo.
The exchange with Holland being generally againft England in time of peace, and more fo in time of war, affects this kingdom more difadvantageoully, perhaps, than has been thoroughly weighed and confidered: for as Amfterdam is made the center of negotiations by bills between Great-Britain and many other parts of Europe, with which we carry on a large commerce (viz. with Ruffia, Sweden, Denmark, and moft parts of Germany) the rate of exchange between us and Holland being to our difadvantage, mult virtually, in the like proportion, affect thofe money-negociations between us and thofe countries; and how really prejudicial

## B A L

that proves is not ealy to fay: for, if the Dutch exchange being againft us has a tendency to infuence thofe exchanges between Holland and Rufija, Sweden, Denmark, and many parts of Germany to our disfavour alfo (we having no direct exchange to thofe places ourfelves) : if this is the ftate of the cafe, 'and in confequence thereof, as has been thewed we receive lefs for our exports to thofe places, and pay the dearer for what we import from thence, the injury muf be confiderable. Befides, if the Dutch cxchange has thefe injurious effects on our trade to thofe countries, whatever other bufinefs we negociate by exchange, by the way of Holland, muit prove to our far greater difadvantage than if that exchange was in our favour, as has been thewn.
As we allow bullion and foreign gold and filver to be openly exported in England, the courfe of exchange between London and Holland, or Hamburgh, cannot rife, perhaps, above 5 or 6 per cent. as long as we have any bullion, or foreign gold and filver to export; for the courfe of exchange between two countries can farce ever rife much above the value of the rifque and charges of fending gold and filver from the place where the bill is drawn to that where it is to be paid.
But, as at firf view many may not difcern the certainty of this obfervation, it flould be confidered that, if the remitter be a perfon who thoroughly underftands trade, he will not allow, for any bill, an exchange much above the value of the rifque and charges of fending his money over in bullion or foreign gold and filver; becaufe, if he finds he muft pay an exchange above this value, he will, in common prudence, chufe to remit in fpecie, rather than by bills of exchange. But as fome remitters may not care to deal in the exportation of gold and filver, and are therefore willing to allow a profit over and above the value of the rifque and charges, to thofe who do, whenever this profit rifes fo high as to be fufficient to anfwer the merchant's trouble in drawing, and their rifque and charges in letting their money lie in foreign correfpondents hands, till they find an opportunity to draw for it; we may depend on it, that thofe who deal this way, will export gold and filver in fpecie, in order to get a profit by drawing and felling bills of exchange.
Now the value of the rilque and charges of exporting bullion, or foreign gold and filver, from Britain to Holland, Hamburgh, or Flanders, may, I reckon, be about two or three per cent. and the profit of it fuffice for anfwering the merchant's trouble in drawing; and his rifque and charges in letting his money lie in a foreign correfpondent's hand, till he finds an opportunity to draw for it, may, I believe, be about 2 or 3 per cent. more; therefore the exchange between London and either of thefe countries can fcarce ever be above 5 or 6 per cent. This is confirmed by experience ; for we find the exchange between London and either of theie places feldom rifes above 5 or 6 per cent.
With refpect to France, indeed, the value of the rifque and charges of fending gold or filver to Paris, whith is the chief ftaple of France for bills of exchange, is much greater, becaufe of the land carriage from any of the ports of that kingdom to Paris, and becaufe of the uncertainty of fending it when there is the greateft occafion for it. Thefe are the true reafons far the courfe of exchange between London and Paris being frequently about 10 per cent. to our difadvantage; but fince a weekly correfpondence by fhipping or floops has been opened between London and Dunkirk, Calais, or Boulogne, we find feveral quantities of gold and filver have been entered for, exportation to France, which may lower the courfe of exchange in our favour, or at leaft prevent it from rifing fo much to our difadvantage, without diminifhing in the leaft our lofs upon the ballance of our trade with France.
From thefe confiderations it feems evident, that the courfe of exchange can rarely rife much above the value of the rifque and charges of fending gold or filver to the place where the bill is to be paid: wherefore, if the courfe of exchange between this country and any other be againtt us, it may be allowed to be almoft a certain indication that the ballance of trade is againft us; but it cannot be allowed to be a certain indication of the quantum of that ballance, becaufe, as I have fhewn, whenever the courfe of exchange rifes much above the value of the rifque and charges of exporting gold and filver, fuch quantities of thefe two metals will be exported as muft foon bring the exchange back to it's natural courfe. To determine the exact quantum of this ballance is, I believe, impoffible, unlefs our accounts of import and export were much more truly and regularly kept at every one of our ports than they can be by the laws now in being. The obvious caufes which confpire to kecp the Dutch exchange in our disfavour are, (i.) The intereft-money we pay them for the millions they have in our funds, exclufive of our commifion for tranfacting their bufinefs therein, as public creditors. (2.) By reafon of the commiflion we pay them for negociating the money tranfactions between us and thofe countries before intimated. (3.) By their having the exchange in their favour, and, in confequence thereof, paying lefs for the merchandize they take of us, and we more for thofe which we take from them, and from thofe countries with which we tranfact bufinefs by the means of the Hollanders:
and, while thefe caufes fubfift, the effect mult be the fame From fuch view of the matter it appears, that onc of the greateft evils to the trade of this nation is that of being indebted to foreigners; and the greateft advantage to their trade is to be our national creditors. Although this evil cannot be removed till thofe debts in particular are difcharged, yet 'tis time for us to think of faving the commiffion we pay them for being our brokers.
To which end, I would humbly fubmit it to the confideration of our moft fkilful and experienced merchants, whether it is not practicable to eftablifh more direct courfes of exchange than we have, efpecially to thofe places we now do bufinefs with through the medium of the Dutch exchange. For, if this thould be practicable, our traders will not only fave the commiffion which they pay, but they and their correfpondents will do the like alfo for tranfacting their bufinefs.
And thefe favings on our fide may be attended with the following confequences: (I.) They will enable us to afford our native commodities cheaper at foreign markets, thereby increafe their vent, and contribute to prevent rivals from fupplanting us. (2.) The faving, alfo, on the fide of our foreign correfpondents, will enable them to afford their merchandizes cheaper to us. (3.) This parfimony on both fides will prevent the Dutch exchange being the medium of difadvantage to both.
Of what benefit it may prove to the Britifh merchant to fpeculate where the ballance of trade lies, as well between one foreign nation and another as between his own and others, has been fhewed, under the head of the Arbitration of the foreign exchange; to which we refer. But this will be further exemplified and illuftrated throughout the courfe of our defigni.

## Further Remarks,

How advantageous this knowledge in the ballance of trade and exchange between nations may prove to the fate in general, is manifeft from the difcernment and fagacity of Si Thomas Grefham, an eminent merchant and citizen of London. This gentleman lived in the time of King Edward Vİ, who was confiderably indebted to the merchants of Antwerp, for money borrowed at intereft, to fupply the exigencies of the fate. Payment of intereft, at that time, being an incumbrance to the nation it could but very ill fuftain, various expedients had been confulted by the king and his council to difcharge thofe debts; which, being due to foreigners, brought great contempt upon the crown, and the public credit of England. The meafures which had been fuggefted for repayment were, either to tranfport fo much treafure out of the realm, or to remit the fame by way of exchange.
The kingdom being already greatly exhaufted of it's gold and filver, the former was impracticable, without being ruinous to trade, by depriving the nation of a due quantity of money rieceffary for circulation; and, the exchange between England and Antwerp being at no more than 16 fchillings per pound of our currency, negociating the debt by foreign bills would have funk the exchange ftill more to our difadvantage: in confequence whereof the exportation of our gold and filver in general, in the way of trade, would have been equally augmented as if we had exported the fame in that fhape at firit: yet, for the nation to continue in debt, was ftill increafing the evil; more efpecially fo, as the creditors were foreigners, and the intereft therefore fent out of the kingdom. Befides, the creditors infifted on their money, or a compliance with fuch ufurious meafures, for a prolongation of the time of payment, as would have brought fo high indignity upon the nation, as to have difabled them from borrowing more money but upon the moft fcandalous terms.
And yet more money the government wanted, inftead of being in a capacity to difcharge the old debts. Under thefe circumftances the nation was greatly perplexed, and no meafures could be thought of whereby to extricate the kingdom from thofe embarraffments, till Sir Thomas undertook the affair; by whofe great knowledge in the trade of nations; in the exchanges, and where the ballance between country and country lay, he exonerated this kingdom from it's weighty incumbrances, without fending any money out of it.
And, although the exchange was then at fixteen fchillings, he fo wifely conducted this negociation, that he paid of the king's debts as they fell due, at an exchange of twenty and twenty-two fchillings per pound; whereby the king faved no lefs than an hundred thoufand marks clear, by this great merchant's knowledge in the ballance of trade between nation and nation.
By thus raifing the exchange fo much in favour of England, at that critical conjuncture, the price of all foreign commo.e dities fell proportionably, which experimentally confirmed what had been faid before. Thefe meafures fuyed the king= dom in general, and that in a very little time, no lefs than between three and four hundred thoufand pounds fterling more; a round fum at this time of day, but would now be near four times the amount, in proportion to the different values of moner.

## B A L

## B A L

Nor did the advantages to the nation, from the fkill and alilities of this great Englifh merchant, terminate here only. For, as when tie exchange was fo greaty to the difadvantage of England, gold and fiver wene daily exported out of the kingdom in great plentry fo by wiely raifing it, in the coure of his money-r cegociations for the fervice of the fate, he cauled the fame to be brought back again, to the great emolument of the whole trading interef.
Nor did the wifdom of Sir Thomas's counfels, from his profound knowledge in commercial affairs, prove only of the $\mathbf{h}_{\mathrm{g}}$ heit honour and advantage to king Edward's reign, but to thofe of his fucceffors, queen Mary and queen Elizabeth, bu th of thofe princeffes having made choice of him for the management of their affairs of trade and money. With queen Elizabeth he was in fo high efteem, that the not only knighted him, a matter of very high dignity in thofe days, but honoured him in every refpeet, and came in perfon to the exchange of London, which he had erected for the convenience of the merchants, and honour of that fplendid metropolis, and caufed the fame to be proclaimed by heralds and a trumpet The Royal Exchange: and Sir Thomas was afterwaids honoured with the character of The Royal Merchant.
The reafon for taking notice of this matter is, with a view to obreive, that the practical arts of trade have not only been atten.ed with as great eftates as were ever acquired by any other means, but that the ftudies of commerce, and the moncy-affairs of the nation, in a political light, have been attended fiequently with as great honour and glory as any other ; which might be fhewn in a multitude of inflances. And, indeed, the ftudies of the liberal arts, and all other branches of literiture, are of little benefit to the fate, unlefs they tend to promote honeft induftry, and fuch arts as are ufefyl to commerce in fome fhape or other. 'Tis that alone which can make every individual Britain bappy, and the kingdom refpectable throughout the world : for the ballance of trade will ever enable Gieat. Biitain to hold the ballance of powcr. And how the one may be always preferved in our favour, in order to maintain the other, is the great end and defign of this Britifh Dictionary of Commerce, and the earneft defire of the author.
And now it may not be altogether ufelefs to conclude this point with the obfervations of the ingenious author of a treatife. intitld Britannia Languens, which fays, "That the ${ }^{6}$ paffages to other preferments are made fo open and eafy, c at prefent; I mean all thofe that depend upon literature, c in which our youth are led from ftep to flep, by all mann' ner of encouragements: firft, by the multitude of our - late endowed free-fchools, where every ordinary man's fon 6 is taught latin, Greek, and febrew, for a fmall matter, - and then is above manufacture; then we have two mighty' endowed univerfities, where there will, at leaft,' be hope of ' preferment, let the throng be never fo thick, and thence - they have farther and more comfortable profpects; and, - in the mean time, live eafy, and at little or no charge, as - fervitors, or on fmall ftipends, till they become fcholars - of houfes, \&xc. Others of thefe free-fchool boys grow - pon-men of all forts; and all thefe are a fort of gentlemen-- like wajs of living, which intitles them to be called mafters, ' which gives a main temptation both to parents and chil-- dren, who, on the other hand, fee the contemptible, and - too often miferable, condition of our poor clothworkers, - and other ordinary artificers, who, at the beft, are called 6 mechanic fellows: and, what is yet further mifchievous is, ' that our youth thus educated, never reading any thing of ' manufacture, exportation, or importation, in Homer and - Virgil, or their college notes, and being from thence car-- ried to other ftudies, which have no cognation with trade, - can ordinarily bave no fenfation of the advantages of it; ' like bowls which have a rub at hand, the farther they go ' the more they are divided from the mark: whence it hath c unfortunately enfued, that our men of learning are either - genierally filent in this matter, or elfe, being inclined to 6 think it the fole concern of the dirty and fervile part of the ' people, fpeak of it with contempt, and fome with reflec-- tion; by whom moft others being influenced, we are fitl 6 pretending to be more accurate in logic and metaphyfical - philofophy (which, howfoever otherwife ufeful, do not add - two-pence a year to the riches of the nation), we continue - to fqueeze all the Yaplefs papers and fragments of antiquity; 6 we grow mighty well acquainted with the old heathen - gads, towns, and people; we prize ourfelves in fruitlefs ' curiofities; we turn our lice and fleas into bulls and pigs, - by our magnifying glaffes; we are fearching for the world - in the mcon with our telefcopes; we fend to weigh the - air on the top of Teneriffe; we invent pacing faddles, and - gimcracks of all forts; all which are voted ingenuities, 6 whilft the notions of trade are turned into ridicule, or ' much out of fafhion.'

Of the application of this knowlege to the ufe of the merchant, and the foreign banker or remitter by exchange. From the nature of the trade and circumflances of particular nations, comparatively confidered, 'tis obvious enough
that the ballance of trade muft be in favour of fome, and coniequently to the difadvantage of others: 'tis the bufinefs ther fore, of the merchant of good credit and correipondence to fpeculase on his advices, how the exchanges may ftand with regard to the baltance' of trade, between certain nations wherewith he may hold correfpondence. And tixe reafon hereof is grounded on the fame principle as fpeculations on commodities; for it being one of the great articles of foreign commerce to purchafe, at proper fealons, the produce and manufactures of foreign countries, when they are cheap, to fupply other countrics, when and where the fame will fell dear; in like manner the dealer in exchange takes his occafion to purchafe bills, when and where they are cheapeft, and difpofe of them, where deareft: for, exchange being the reprefentarive of money, fuch tranfactions are no more, in effect, than dealing in money, or gold and filver, or other commodities; and where bills, their fubftitutes, can be bought cheapeft, and fold deareft, it is the fame thing as buying gold or filver, or other commodities, cheap, and felling them fo dear as to yield a profit fufficiently inducing to trade in them. There are two lights wherein this matter may be confidered as, ( 1.$)$ The iotrinfic values of foreign monies, when compared with each other, and with the courfes of exchange. (2.) By comparing the extrinfic values together, according to the currency of the exchange. Of the former we have juf given inftances, by comparing the par of foreign monies with the courfes of exchanges. To the other we have fpoken under the article of the Arbitration of Exchanges, to which we refer for the further explanation of what we would intend to communicate, in regard to purtical commerce, by merchants or foreign bankers. See allo the articles Exchange, Coin, and fuch other heads as we fhall from thence refer to.

Of the ufe of this knowlege to the national commerce.
The national ufe to be made of ftudying where the ballance of trade lies, with regard to our own nation, is to know with what countries the ballance is to our difadvantage; that is, to what counties we pay more for their commodities which we import, than we receive of them f.r our native commodities which we export : the end of this enquiry, with refpect to the publick intereft, is to leffen our imports, and increate our exports; or to fell to fuch country at lealt as much as we buy of them, and fo increafe our fales, if practicable. The meafures proper to be taken for this purpoie muft be different according to the different circumftances of nations; and the nature and confequences of the trade carried on with them, confidered in every view that it will admit of. ' Thefe meafures muft be particular, and well-timed
There are, alfo, general principles, which are certain to prevent the ballance being fo much in our disfavour as it is with fome countries, and which may have a tendency to turn that to our advantage which is at prefent againft us. By what meafures this end may be anfwered, will appear throughout the courfe of this work.
B A L L A S T, a quantity of fones, grayel, or fand, laid in a fhip's hold, to make her fink to a certain depth into the water, and fail upright, by making her to be of a proper weight. The ballaft is fometimes one quarter, one third, or an half, according to the difference of the cargo, and the bulk of the Mip.
The ordonnance of the marine (in France) made in Auguft 168 I, art. I and 6 , of the 4 th title of book 4 , orders all captains or mafters of flips, as foon as they get into harbour, to make their deciaration to the admiralty of the quantity of ballaft they have on board; they being forbidden to caft it out in ports, canals, bafons, or roads; nor can it be carried by the unballafters, but to fuch places as are appointed for that purpofe.
BALLIAGE, a duty payable to the city of London, for all goods and merchandizes of aliens or denizens, born within the allegiance of the Britifh crown, being the fons of aliens, born under foreign allegiance, granted, together with the duties of fcavage, package, and portage, to the mayor and commonalty, and citizens, by their charter, dated the 5 th day of September, in the 16 th year of the reign of king Charles II, confirmed by the 20th rule of the book of rates, and by 2 W. and M. c. 8.

BALLIN ; thus they call, at Bourdeaux, at Bayonne; and other trading towns of the province of Guienne in France, what at Paris, and elfewhere, they call emballage, or packing, \&cc.
In the wool trade at Bayonne they deduct fo much for packing upon every bale, which amounts from II to 14 pounds weight, according as the packing-cloth is more or lefs coarfe, or the bale larger or fmaller.
BALLON, or BALON, a fort of brigantine ufed in the kingdom of Siam, to navigate up and down the rivers, and carry on the inland trade. It is made of the trunk of one fingle tree, in an hollow manner, and is managed with oars. Thefe veffels are of feveral fizes, according to the dife they are defigned for. The king has fome to take his pleafure upon the water, and thefe are not lefs than 100 or 120 feet long, and 6 or 7 broad, and have 100 rowers on each fide. Nothing can be more ftately than thofe ballons in which the kings of Siam thew themfelves now and then to their fubjects, with fuch pomp as infpires them with a religious awe, not to fay downright adoration.
Ballon, which is alfo called Ballot, in the glafs trade of Lorrain, fignifies a certain quantity of glafs-plates, fmaller or greater, according to their quality. The ballon of white glafs contains 25 bundles, of fix plates per bundle; but the
bailon of colcured glafs is only of 12 bundles and $\frac{1}{2}$, and of 3 plates to a bundle.
Ballon, is alfo a term ufed in the paper trade. The paper of Marfeilles, called paper with the little crofs (à Ia croizette) of which large quantities are fent to Conflantinople, is fold by the ballon, containing 24 reams. The bal lon of paper with the crown, which is manufactured in fome places of Provence, and is alfo very proper for the Levant trade, where it is fold for Venice paper, contains but 14 reams. BALM, or BALSAM, a kind of gum, of great repute in phyfic and furgery, which is liquefied, or diffolved, by means of fpirit of wine, or with oil. It is reckoned a lovereign remedy for the cure of wounds, and of feveral diftempers. The ladies alfo make a very great account of it, becaufe, by mixing it with the yolk of an $\mathrm{e}_{\mathrm{e}} \mathrm{g}$ and fpirit of wine, they make an excellent paint.
There are many forts of balm, if we will reckion in that clafs all the remedies and drugs to which empirics or quacks, or even phyficians and furgeons, pretend to give that name. Such are the apoplectic balm, the ftomachic, the bezoardic, the hyfteric, the vulnerary, the magiftrac, and many more: but, the natural balms for excellency are pioperily but two forts; namely, the balm of the Levant, and the balm of Peru; though under the general name of balm are reckoned feveral other gums.
The Balm of the Levant, which is accounted the moft excellent, though that of Peru be not, perbaps, lefs efficacious, iffues from an incifion made in a tree that bears the fame name, and grows in Egypt and in Judæa. It is fo precious as to be part of the particular property belonging to the Grand Seignior himfelf.
That tree, which is as tall as the pomegranate tree, fhoots forth a great many branches. It's leaves are like thofe of rue, but always green: it's bloffoms are white, formed like ftars, and produce fmall pointed berries, each of which contains a frmall almond, or kernel.
The incifion, from which this admirable gum iffues, is made in the dog-days. The juice, which at firft is liquid, thickens afterwards, and becomes fuch as it is feen in Europe. Few perfons can boalt to have it pure; for, on account of the high price it bears, it is adulterated almof as foon as it comes from the tree.
The figns of its being unmixed and excellent are pretended to be as follow; viz. that it's fcent be frong and penetrating; that the gum be frefh; that it be not four; that it be eafily diffolved; aftringent and lharp to the tafte, and that it leave not the leaft foot on woollen cloth. It's true colour is yellow, inclining to gold, and it's feent has fomething of the citron.
Balfamum is the Latin name of the tree whence the balm iflues; opo-balfamum is the juice which diftils from the tree, that is to fay, the balm; carpo-balfamum is the fruit, and xylo-ballamum the wood. All thefe words, though of a foreign language, have been introduced into the French tongue, and the merchant druggifts ufe them in the trade of thofe commodities.
The carpo-balfamum is ufed in the compofition of Venice treacle, but is of no other ufe in phyfic. 'It muft be chofen freih, of an aromatic tafte, and a pleafant fcent.
The xylo-balfamum, as well as all the other merchandizes that come from the tree which produces balm, is imported into France from Cairo, by the way of Marfeilles, in fmall faggots, or bundles; it is nothing but the cuttings of that precious tree, or the wood of fuch as die by fome accident. It is ufed in the troches of hedycroum. It ought to be in fmall knotty rods; the rind muft be red, the wood white, refinous, and aromatic.
There is alro the Balm of Mecca, which is a dry and white gum. It is pretty much like white copperas, efpecially when it is fale. That balm is brought from the famous city of Mecca, on the return of the caravans of the Mahometan pilgrims and merchants, who go to pay their devotions at the native place of their falfe prophet. It has all the properties of the balm of Judæa, and it is, very probably, the fame, which is become hard, and has altered it's colour.
It feems to be a miftake to make two forts of balm of the Levant and of Mecca, for they appear to be the fame, as being gathered after the fame manner, and from the fame tree. If that of Mecca proves harder or drier, it is, becaufe it is older, and more hardened by heat ; for it grows very hard in hot climates, accordingly as it is left open, or well preferved. It may be kept frefher in cellars, or more moift fubterraneous places. That of the Levant and of Judxa, which is commonly the neweft or frefheff, and confequently the moft liquid, feems to thofe, who are not well acquainted with it, of a different kind, becaufe it is whiter, and fofter. That which is old and thick is more yellow. Perhaps the Turky merchants are glad that it fhould then be thought to come from Mecca, that they may fell it the dearer on that account.

## REMARKS.

It may be imagined, from this account of Monfieur Savary, that there fill comes balm from Egypt; but it is an error that ought to be exploded, according to Monfieur Maillet's
account, in his defcription of Egypt. It was, fays he, in the garden of Matarca, a large village near Cairo, that the famous balm grew, which entered into the compofition of the chrifm which the Coptic Chriftians ufed in the baptifm of their children, the kind of which is now intirely loft. It is not; however, quite 200 years fince ftems of it were ftill to be feen, in a little clofe of that garden, wherein a bafha of Egypt had caufed them to be locked up, being perfuaded that this precious fhrub deferved a moft particular care. Thofe ftems were not then above a foot high, and about an inch thick; and, indeed, it is faid that every where elfe the balm-trees are never thicker, and that they do not grow above two or three cubits high. From that weak ftem fhooted feveral fimall twigs, very thin, garnifhed with leaves of a moft beautiful green, which grow always in odd numbers upon every branch. The trunk, or ftem, was incompaffed with a double rind, or bark. The firf or outward rind was of a reddifh colour, covered another, much thinner, and perfectly green. Thefe two rinds tafted greatly of frankincenfe and turpentine, being bruifed between the fingers, and fmelled almoft like cardamum. The wood, which thofe two rinds covered, was white, and had no more tafte or fmell than that of common trees. One particular remakable in this fhrub was, that it muft be pruned or cut every year like the vine. It was, perhaps, in that feafon that they gathered the precious juice, fo much celebrated of old. Monfieur Maillet does not think that this balm was like that of Mecca; for the latter runs from the trees like all other refinous matters, whereas the balm of Egypt was gathered after another manner.
As there is a private gentleman who has favoured the public with an account of the nature, ufe, and virtues of this balm, we prefume that the reader will not be difpleafed to meet with an extract of it in this place.
The method of preparing the balm of Mecca, commonly called White Balm, it's ufe and virtues.
The white balm diftils and drops from a tree which grows between Medina and Mecca. The tree from which it drops is very fcarce, which is the reafon of the high price that this balm bears in Europe. That tree is fomething like the turpentine-tree, and the liquor which iffues from it fmells like turpentine, but is more fweet and pleafant. That which drops from old trees is thicker than that which comes from young ones, but their effects are the fame. When the liquor is not clear and tranparent, it is often owing to the veffels in which it was gathered and brought over; but it is never the worfe in point of quality.
This balm may be adulterated feveral ways; but then there are likewife feveral methods to find it out : we fhall mention but one, which is plaineft and fafeft.
In order to make that trial, you fhould caufe a drop or two of the liquid balm to fall into a glafs full of clear water: if the drop goes to the bottom without rifing again to the furface of the water, or, if it continues in a drop, like oil, it is a proof that the balm is adulterated: if, on the contrary, it fpreads upon the furface of the water like a very thin cobweb, fcarce vifible to the eye, and, being congealed, it may be taken up with a pin, or fmall ftraw; the balm is pure and natural.
When the balm is too thick to be taken out of the bottle, you need only put it near the fire, the lealt heat in the world eafily liquefying it : care mult be taken that the bottles be not quite full, left they Chould break; for that liquor is very apt to rarify, and confequently to increafe it's volume, and fo prefs hard againft the glafs.
The two chief ufes of white balm are, the one for health, and the other for beauty. It is the latter which properly raifes the price of that liquor, beczufe of the pomatums and virginal milk that are made with it, for preierving and beautifying the ladies complexion. However, we fhall fpeak here only of its medicinal ufe, and of the method of preparing the balm, either to apply it outwardly for the cure of wounds, or for taking it inwardly in potions or pills for feveral diftempers: for the cure of which it is judged proper by eminent phyficians.
This balm being taken inwardly, is efteemed by many phyficians, good in pains of the ftomach, in the reins, the cholic, weaknefs in the lungs, and want of appetite. For all thefe ailments it is taken in pills; there pills are made, by pouring a few drops of balm into pulverized fugar, more or lefs, according to the violence of the diftemper, but never above four: they are rolled in the powder, till they be quite covered with it; in that condition, the patient fwallows them, after which he muft drink balf a glafs of red or white wine, fome tea or coffee, or a bafon of broth. You may alfo put the balm into any liquor which you drink, but, as it is very clammy, is apt to ftick to the teeth or the palate.
As for the cure of wounds, it is applied upon them, after they have been well wafhed with wine, taking care to bring the lips of the wound clofe together, to prevent fcars. It's effect is almoft infallible, and fucceeds commonly in lefs than 24 bours.
This balm is reekoned a fure remedy for deafnefs, and is
thought to cure it, by making a drop or two of it fall into the ear.
It has been found by experience to be good for the cure of ulcers, they being walhed with warm wine, before the balm be applied to them.
Care muft be taken always to ufe this balm, without putting it over the fire.
Balm of Peru. There are three forts of it, or, rather, they are but one and the fame fort under three different names. Thefe names are, the balm of incifion, the dry balm, and the balm of lotion. They are all produced by the fame tree, which does not grow very tall, and whofe leaves are indented like thofe of the nettle.
The balm of incifion is a whitifh and clammy rofin, which drops from the tree by an incifion made into it, and afterwards thickens and becomes hard.
The dry balm is reddifh, and diftils from the end of the branches, the top of which is cut off, and to which they faften little veffels, called, in Peru, cochines and maracas; into thefe veffels the liquor drops, which at firft is as white as milk, and grows reddifh only, becaufe it is expofed to the fun.
Finally, the balm of lotion is black. It is made of the bark, fmall twigs, and leaves of the tree, cut, bruifed, and boiled together.
The white balm of Peru is a fovereign remedy for frefi wounds; for the cure of which no other falve has yet been ufed. It muft be chofen very white, and, approaching rear to the opo-balfamum, is often miftaken for that.
The balm of Peru is fold at Amfterdam, in pots or in bottles; it cofts generally there from 7 to 8 guilders per pound. The deduction for prompt payment is one per cent. and tare is allowed for the pots and the bottles.
The dry balm, in order to be of the beft fort, ought to be red, 'odoriferous, and very dry, as is hinted by it's name. It is chiefly ufed for making virginal milk, which is much better than that which they make of benzoin and forax.
The balm of lotion is alfo ufed for the cure of wounds, like the white balm; and is pretty much valued by the perfumers, on account of it's excellent fmell. It ought to be thick blackifh, of a pleafant feent, and not adulterated with oil of fweet almonds.
Some authors would make us believe, that on the banks of the river of the Amazons there grows a plant called copayba, which produces a balm much fuperior to that of the Levant and Peru.
It is the fame with the copaii mentioned hereafter; for to make two forts of balm of them is a miftake, arifing only from the different manner of feelling that word in different languages.
Befides thefe two forts of balm of the Levant and of Peru, which mult be looked upon as the only true forts, the druggifts fell alfo balm of capaii, balm of Tolu, balm ftiled liquid amber, and a fourth fort, which they call new balm.
The balm of copaii, otherwife copaif, and campaif or copahu, comes from Brafll and Guiana. It is fent from Portugal into France, in earthen bottles, pointed at one end. It is to be met with in plenty at the druggifts in Holland, where it is called copaiva. It is in the form of oil, either clear or thick. The former fort is clear and white, and of a refinous fcent. The latter inclines a little more to the yellow, or gold colour. It is an excellent remedy for the cure of wounds.
This balm is a great deal better than that which comes from the conft of Carraccas. It is the fame in effect, though lefs liable to be mixed with other forts of oil, which increafe it's quantity, and confequently leffen its virtues. The Indians of Guiana and Peru are probably more honeft than thofe of Carraccas. For it is obferved, that the balm of the latter is clearer, not of fo deep a colour, and lefs odoriferous'; which perhaps is owing to it's being mixed with fome other oil, or to it's being extracted by many incifions made in the trees at the time the fap was rifing; whereas that of Guiana (when not yet ftale, which makes it grow yellow and thick) is naturally of a deeper and higher colour; it's ficent is more aromatic, and it's effects are quicker and more certain and efficacious. This is extracted from the Chevalier des Marchais's voyages to Guiana, (in French) Tom. III. page 24.
This fame balm was at firft in very great repute, but it is far from being fo excellent as that of the Levant. It was thought a fpecific medicine for the gonorrhoea; but it is certain, according to a great many phyficians, that in thofe cafes it did more harm than good, by it's etherial and heating quality. The Englifh and Dutch begin alfo to be undeceived, as to the ill ufe they have made of it. The plant which produces this balm, may grow on the banks of the Amazon river, as well as in Brazil, fince thofe two countries are very near each other. This obfervation, with that on the error of the different names of this balm, and that on the balm of the Levant and of Mecca, were made by Monfieur Garcin.
The balm of Tolu is a liquid rofin, which, as it grows old, becomes, both in confiftency and colour, like Flanders glue newly made. It drops alfo by incifion from fome trees, which grow in New Spain, where the inhabitants receive it in fmall veffels made of tlack wax. This balm is very

## B A N

farce in France, but they may have it imported thither from England. In order to be good, it ought to be frefh, of an agreeable and penetrating fcent, pretty much like the balm of Judza. As it grows old, it becomes of the confiftency of the dry bahm.
The balm, fited liquid amber, is a clear and reddifh rofin, which comes from certain trees in New Spain, which are called oçoçol by the natives. The bark of thole trees is very thick, and their leaves like thofe of ivf.
This balm is called liquid amber alfo, becaufe it very much refembles ambergreafe, and the beft ought to have the fame fcent : befides which, it ought to be clear, and of a yellowifh colour inclining to gold, when new, but reddifh, when old.
The new balm is liquid, and is called oil of liquid amber; that which is old is thick, and is ffiled balm of liquid amber. They both come from Spain in barrets. It is at prefent as fcarce in France, as it was common formerly. This balm is an excellent remedy for the cure of wounds, and efpecially of a fiftula in ano.
They formetimes fell oil of St John's wort, or of chamomile, inftead of oil of liquid amber. We mention the oil of chamomile under the article of Orl. As for that of St John's wort, which may be ftiled a true balm, after it has been made for fome time, it is compofed of the flowers of St John's wort, and olive-oil expofed to the fun during the great heat of the dog-days. The beft is that, to which fine turpentine and faffron is added.
The new balm, which is fo fearce in France, that hardly any thing of it is known there but it's name, and which is not to be met with, but in the lhaps of fome curious druggifts, comes pretty near the balm of Tolu, both in fmell and colour. It is fqueezed after the fame manner as oil of laurel, and is extracted from fmall red berries, which are found common enough in the iffe of St Domingo. They grow in clufters or bunches upon trees, the leaves of which are very broad and long, extremely green on the outfide, but only a little greenifh in the infide. They tell wonders of that balm, but it's reputation is, perhaps, owing to it's fcarcity only. There is a mineral balm found in a mine in Italy, upon which F. Caltagna, a jefuit, publithed his obfervations and experiments in the Philofophical Tranfactions, for the year 1697, No. 79, art. 3. The reader may alfo fee in the fame Tranfactions, for the year 1666, No. 8. art. 4, an obfervation upon the mineral balm, found in Alface.
Monfieur Geoffroy, of the Royal Academy of Sciences atParis, baving fet fire to orne natural balms, fuch as thofe of Capaii and Mecca, obferved, that, being burned, they fpread into the air a perfume, which, being weakened to a certain degree, becomes very fweet, extends pery fax, and continues a pretty long while. It is chiefly the balm of Capaii, that has that agreeable property. See the Memoirs of that academy for the year 1726.
White balm is reckoned one of thofe merchandizes that come from the Levant, from Barbary, and other countries and territories under the dominion of the Grand Seignior, the king of Perfia, and Italy; upon which it is ordered in France to raife a duty of twenty per cent. of their value, according to a decree of the council of the 1 th of Auguft 1685.
BAMBOE, or BAMBOU, as they fell that word in the Indies, and not bamboue. It is a plant which multiplies very much by it's root, from which fprings a ramous or branchy tuft, after the manner of fome gramina, or, to fpeak more naturally, after the manner of the European reeds; for the bamboe is of the kind of reeds, as well as the fugar-cane. The Indian bamboe is the largef kind of cane that is known. It is of an extraordinary heighth and bignefs, when it bearsit's bloffom: each fhoot or cane is often, towards the bottom, of the bignefs of a man's thigh, and decreafes gradually to the top, where it bears a bloftom or flower, like our reeds, in their proper feafon. The bamboe grows in all the maritime countries of the Eaft-Indies. Monfieur Lemery calls it a tree, whofe leaves refemble thofe of the olive-tree. But John Bauhin, from whom he has extracted his defcription, has mifled him: for it is not a tree, though it grows very high, even to 20 or 25 feet, and fometimes to 30 . It's leaves are ike thofe of other canes or reeds, except that they are not fo long nor fo broad at their bafe, as thofe of the other kinds: they are but half a foot long, and their breadth, towards the middle, is an inch, or fomething more. With thefe canes of bamboe the Indians build their houfes, and make all forts of furniture, in a very ingenious manner. The wood of thefe canes is fo hard and ftrong, that they ferve very well to make piles for fupporting their little houfes, built over rivers, which have a gentle courfe, as if it were over ßlanting waters. They alfo make with this wood all forts of utenfils for their kitchens and tables. The thickeft bamboes ferve to make the flicks or poles, with which the flaves or other perfons carry thofe forts of litters, which are called palanquins, and are of fo common an ufe, and fo convenient in all the eaft. They likewife make of that wood a kind of pails, in which the water keeps extremely cool. The walking-canes - which we fee in Europe, are the firf and fmalleft fhoots of the iambors. The Malays and thofe Chinefe, who are dif-
's. I.
perfed in the Moluccoes and Sunda illes, ufe the young fmall thoots of the bamboes preferved in vinegar after their man. ner, with very ftrong or peppered ingredients. This they call achior-bamboe: For they give the name of achior to all that is preferved in vinegar; and, to diftinguifh it, they add to that name of achior that of the thing preferved. See Achia. Two pieces of bamboe of a certain bignefs, being rubbed hard againft each other after a certain manner, will produce fire; and, when the Indians cannot get any by other means, they obtain it that way.
BAMFFSHIRE, in Scotiand, is feparated on the fouth from that part of Buchan, which belongs to Aberdeenfhire; by the water of Ugie; on the eaft it has the water of Dovern, and the German ocean; on the weft the water of Spey, and the county of Murray; on the fouth-wef. it has Badenoch, and the Brae of Mar; and on the north, Murray Frith.
The climate and foil are much the fame, as in Aberdeenflire, The chief places here; are,
I. Cullen, a gaod market-town and ancient royal burgh; on the coaft of the Frith of Murray, and the capital of that little diftrict called Boyne, which is fruitful on the coaft, but elfewhere mountainous, with large quarries of fotted marble.
2. Bamff, on the fame coaft, at the mouth of the Dovern is a county-town, and royal burgh, but has little trade, except from it's corn and falmon-fifhing, the townifmen being fonder of tillage than of commerce.
3. Frazerburg, a fea-port on the coaft of Murray Frith, reckoned the chief town of the diftrict of Buchan, It has an excellent pier and bulwark, which renders it as fafe and commodious as any on the eaft coaft; fo that 30 fail of fhiping may fecurely winter here at a time. The water, at full fea, is 18 or 20 feet
4. Balveny, is a mountainous diftrict, on the weft-fide of the fhire, upon the river Spey, abounding with pafture and wood, and particularly notedfor a rock that is productive of hones, and whetfones enough to ferve the whole illand; fo that the people here cover their houfes with them inftead of flate. Here are alfo found veins of that ftone, of which they make allum, and here are fprings of allum-water.
5. Strathyla, to the north-eaft of Balveny, is fruitful in corn and grafs, and bas fuch plenty of lime-ftone, that they build their houfes with it. The inhabitants are confiderable gainers by felling their lime for cattle and fine linnen-yarn, at a weekly market, in the village of Keith, on the river Dovern.
6. Strathavin, is on the river Avin, falls into the Spey; which is more inclined to pafture than corn.
BA N, a fort of fmooth and fine mulin, which the Eniglifh im port from the Eaft-Indies. The piece is almoft a yard broad, and runs about 20 yards and a half.
Ban, or Bann, is, according to Mr. Savary, an old Saxon word, which fignifies to banifh, profcribe, or outlaw a perfon, to interdict him of water and fire, a punifhment formerly in ule among the Romans; to condemn a man for contumacy, that is, for default or want of appearance, if his perfon cannot be come at. In this fenfe they fay; to put a man or a prince to the ban of the empire; that is to fay, to banifh him, or cut him off from being a member of the empire. At Paris, a rogue whofe crime is not capital, is condemned to go out of the city, county, and provofthip, for a certain number of years, and he is commanded to keep his ban, or banifhment, under fuch and fuch perialties.
Others are of opinion, that ban is a Britifh word, which fignifies noife and clamour. Others derive it from the Saxon pan, which fignifies any thing that is fpread; and hence the words ban and band are taken for a flag.
BAN, in general, is faid of a public cry or proclamation. Hence the notice given publickly of the fale of fome merchandizes, is called ban in French, efpecially when the notice is given by beat of drum. They alfo ufe the fame word for the public cry of loft goods, with a reward offered for the recovery of them. We have kept the word ban, or banns, in out language, to fignify a proclamation made at the head of a body or troop, by the found of trumpet, or beat of drum, for the obferving of martial difcipline; as alfo to give a folemn notice of marriage contracts, made in the parifh churches of the contracting parties.
BANCO, an Italian word which fignifies bank, It is coms monly ufed to fignify the bank of Venice.
BAND, a fmall weight of about two ounces, ufed in fome parts of the coatt of Guinea, to weigh gold-duft.
$B$ ANIANS, the Dutch write BEN JANS, a kind of Tndi-ans difperfed over all Alia, through whofe hands paffes almoft the whole trade which the Europeans carry on in thofe parts. They are the third fect of the heathens who dwell in the Eaft-Indies. The Banians and the Chinefe are the greatef traders in the Indies, to whom muft alfo be added the Jews and the Armenians, who are greatly difperfed over thofe parts. But the moft confiderable trade is carried on by the Banians, in the whole peninfula on this fide the Ganges. They are extremely filful and cumning in commerce. What Furetiere tells us of the Banians, relates to almoft all the fects of the Indians, or heathens in thofe parts. He has extracted it from an inaccurate hiftory, written by Henry Lloyd,

3 D
an Englifhman. The Banians may be ranked with the Armenians and the Jews, for their experience and 1 kill in all kinds of cominerce.
There are a great many Banians in Perfia, and efpecially at Ilpahan and Bender-Abaffi ; the chief of them are very rich, but their riches do not hinder them from applying themfelves to trades, even the meaneft, if any thing is to be got by them. Moft of them follow brokerage; and moft of the brokers of the Englifh, Dutch, and French companies, are of that nation. For the reft, they are very honeft, and have almoft conftantly in their hands the ftock and cafh of thofe companies.
They are likewife bankers, and there are few places in the Eat-Indies, for which they cannot furnifh bills of exchange. They have alfo a fort of ftanding cafh or bank, where perfons may depofit their money, and take it out again whenever they pleafe.
BANKING, (accoring to Savary) is a traffic or commerce in money, which is remitted from place to place, from one city to another, by correfpondents, and by means of bills of exchange.
The word bank is faid by fome to be derived from the Italian banca, which comes from banco, a bench, becaufe formerly, in all the trading cities of Italy, banking was publickly exercifed in open places or exchanges, where all thole who carried on that trade, had feats or benches, on which they ufed to fit down to reckon their money, and write their bills of exchange.
Some authors add, that, when a merchant happened to fail, they ufed to break his bench, either as a mark of infamy, or to put another in it's flead: and they pretend, that, from the breaking of the bench, come the words of bankrupt and bankruptcy.
In France, it is not requifite that a man be a merchant, in order to carry on banking : for that trade is permitted to all forts of perfons, and even to foreigners. Hereby is meant foreign banking, or dealing by exchange.
In Italy, the trade of banking does not derogate from nobility, efpecially in the republics; which is the reafon, why moft of the younger fons of the quality apply themfelves to that employment, in order to fupport their families. And, indeed, it is certain, that the noblemen of that country, and particularly of Venice and Genoa, are thofe, who for many ages paft have been the chief bankers in France, as well as in the other countries of Europe.

## Remarks on Banks and Banking.

It cannot be doubted but that the beginning of traffic was by exchanging one commodity for another, as men could beft fuit each other's occafions.
But the neceffities of men being fo various and different, in refpect of the quantity and quality of requifites, money was inflituted as the mof convenient medium for commerce, whereby people might procure whatfoever they ftood in need of in quantities, according to their exigencies.
This changed the term of bartering into that of buying and felling; yet all trading, at length, refults into nothing but a general barter. For, he that fells any thing to receive money for it, purchafes again fuch things as he requires with the fame money.
Money then becoming the principal engine for circulating the bulk of commerce, it's application to trade is proper to be confidered.
Money is ufed in the minuter kinds of dealings, as retailing, \&c. when it is commuted for all kinds of labour, and to furnifl the neceffary provifions for daily ufe. This requires it's being divided into the fmalleft denominations of the fpecies, as into fhillings and pence: fo that this way of dealing is not capable of being tranfacted by bills and affignments. Money is allo employed in the more extenfive and wholefale way of trading, wherein large fums are negociated; and this occalions frequent payments from one trader to another.
In which payments, although, ftrictly fpeaking, ready cafh be required, as often as contracts are made; yet, as commerce in general confifts in the mutual dealings and tranfactions of many traders, it may often fo fall out, by means of interchangeable debts and credits, that divers traders may fatisfy each other's occafions without making any payments in fpecie, by transferring their debts to each other: whence came that ufeful accommodation in traffic, of giving bills and affignments, which is commonly called paper credit. For the clearer underftanding whereof, we may give the following inftance of the mutual dependencies of trade.
The Turky merchant, we'll fuppoif, buys cloth of the clothier; the clothier buys wool of the Spanifh merchant; the Spanifh merchant buys fugar and ginger, \&c. of the WeftIndia merchant; the Weft-India merchant buys ftuffs and filks of the mercer; the mercer buys wrought filks of the filk-weaver; and the filk-weaver buys filk of the Tarky merchant; and each of thefe deal to the value of 200 l . or upwards. In this cafe, all thefe tranfactions may be carried on without money. The Turky merchant gives the clothier a bill for 200 I. on the filk-weaver; the clothier gives the fame
bill in payment to the Spanifh merchant; he gives it to the Weft-India merchant; he again gives it to the mercer; and laftly, the nercer delivers up the bill to the filk-weaver, in difcharge of fo much of his debt to him: and thus fix traders are all fatisfied their refpective debts, without the actual payment of any money: which likewife illuftrates, that trade is but a general barter.
But, when fuch mutual conveniéncies do not occur, traders ufually receive their money in fpecie; and fo pay it from one to another.
Yet this way of payment is attended with many inconveniencies, as the trouble in counting of the money, hazard in fecuring it from the attempts of robbers, and lofs from truft ing it with unfaithful fervants: for the prevention of all which, cities of large commerce have very naturally introduced the ufe of banks.
A bank then may be properly defined' a common repofitory, where many perfons ayree to keep their cafh, to be always ready at their call or direction.
We are farther to confider, that there are banks of various kinds, and different in the nature of their conftitutions and eftablifhments.
Some are inftituted wholly on the public account, and put under the direction of the magiftrates, who are obliged to take fuch care of the management, that the money or bullion depofited therein, fball always be kept for the ufe of the proprietors, and thall never be let out for profit or advantage; of this kind is the famous bank of Amfterdam, which is ad miniftered with fo great a ftrictnefs and fidelity, that it is faid, a magiftrate, who was one of the directors of it, was fentenced to death, for making ufe of a fum of money but for one day, though he paid it in the next. Wherefore, from an opinion the proprietors entertain of the equity of it's adminiffration, they judge themfelves fo fecure, that their money lies always ready to anfwer their demands, that they feldom draw out large funs, but make their mutual payments, by transferring the fums from one man's account to another: and from this great eafe and convenience it is come to pals, that payments made by affignments on this bank are valued from 3 to 5 and 6 per cent. above the payment of money in specie, which difference, between the bank and current money, is called the agio.
A fecond fort of banks is fuch as confift of a company of monied men, who, being duly eftablifhed and incorporated by the laws of their country, agree to depofit a confiderable fund or joint ftock, to be employed for the profit and advantage of the whole fociety, in all thofe ways of dealing, which are compatible with the nature of fuch an undertaking: as borrowing upon their own credit, and lending money upon good fecurities; buying and felling bullion gold and filver, and foreign fpecie; difcounting bills of exchange, or other fecure debts; receiving and paying the cafh of other traders; of which kind is the bank of England.
A third fort is the banks of private men, or partnerfhips, who deal in the fame way as the former, upon their own fingle ftock or credit; and fuch are the Lombard-ftreet, or other bankers, as they are called.
As to the firft kind, 'tis certain, that nothing can be fo infallibly fafe, as where the value is always kept ready in fpecie; and here alfo the eafe and fecurity of traders are effectually provided for, in the receipts and payments of their money: but yet this kind of bank is fo much the lefs uffeful to the public, as it can neither be helpful to the government on emergencies, nor to traders, in accommodating theo with money.
The fecurity of the fecond kind confifs in the certain knowlege of it's fund, or ftock, the folidity of it's inflitution, and the incorruptible fidelity of it's management; wherein it is always the intereft of the concerned to give the public the utmoft fatisfaction: and, in this refpect, the bank of England muft be fecure beyond all apprebenfion to the contrary, as well by reafon of the great fums they have lent the government upon the faith of a Britifh parliament, which is fufficient always to keep them above all fufpicion of failure, as from the known Rkilful and profitable management of thofe who have been fucceffively concerned in the direction. Befides, as an incorporated body, they are not, like private men, fubject to death. And, as this kind of bank has all the conveniencies of the former, it has alfo this beyond it, that it's capacity of lending money is an invaluable accommodation to the community, fince it will always have a tendency to the keeping low the intereft of money, and being an effectual and permanent check to ufury, which is the greateft bane to our trade and navigation.
The nature of the third kind is, in all refpects, the farme with the fecond, but much fhort of it in point of fecurity, becaufe the ability and integrity of private men in trade, are things whereof the public can have no certain affurance, being only founded upon opinion, and the appearance that men make in the world: and, as it is very natural for private men to be tempted with fpecious views of profit and advantage, fo they are frequently induced to launch out beyond the power of their own ftock, and to hazard the eitates of their creditors: whereby, when they come to fuftan lofs

## B A N

and difappointments in their dealings, they not only bring ruin upon themfelves, but involve many others in the like calamity, who have entruted them with the keeping of their money: of this we have feen but too many examples.
It muft, however, be acknowledged, that the man of judgment and fagacity, as well as fteady honour and honelfy, may as fecurely be trufted in this capacity with the greateft treafure as any body of people whatfoever; and that there are fuch gentlemen among thofe who are concerned in this way of banking, we have had large experience; and efpecially in that great time of famine (if we may fo call it) whilft the money was recoining in King William's reign, when feveral of the private bankers, and to their eternal honour be it remembered, managed their affairs with fuch penetration and integrity, that they continued to make their payments, and maintained their credit, even beyond the bank of England at that time. Whence 'tis apparent, that private banking alfo is of great utility and convenience in trading cities; and, indeed, is as neceffary a check upon the bank, as the latter is upon them, to prevent high intereft, and exorbitant pre miums of any kind, as well to the government as the public. By what has been faid, it may fufficiently appear, that nothing but ready money can be a proper foundation for a bank that the fecond kind is the moft ufeful and extenfive, to all the conveniencies of the public, and of commerce; and that it's bufinefs is to keep the calh of traders, or others, to deal in bullion, exchanges, and difcounts, and to lend upon fecurities, but upon none but fuch as are morally certain, and for fhort time of payment; or which, upon occafion, may be readily exchanged again for money: on the contrary, that fuch a bank ought never to purchafe or lend money upon lands, as well becaufe of the hazards of titles, as of the tedioufnefs and uncertainty of repayments: leaft of all. fhould a bank deal in merchandize, becaufe of the rifque of adventuring, the dubioufnefs of profits, and the length of time for returns: it ought, indeed, to be always ftrictly reftrained from the buying and felling merchantable commodities, by reafon of the great injury which might thereby arife to trade in general, from an uncontroulable monopoly.
It may be here requifite to take notice of that erroneous notion entertained by fome, that banks and bankers engrols the money, hoard it up, and hinder it's circulation in trade; but, if fuch will confider this matter in it's true light, they will eafily be convinced, that the money lodged in banks, and in the hands of bankers, is the moft conftantly employed of any; for, though the fpecie fhould lie ftill 'till called for, yet the notes given out for it's value, are continually circu-
lating; whereby is done abundantly more fervice to trade, than if the fame lay dormant in private hands; and yet the neceffities of the depofitors are effectually anfwered.
Nor fhould we omit obferving the miftake of thofe, who have imagined, that lands fettled to a competent value, might be erected into a bank, and would become fo certain and reputable a fund, that, if bills were iffued to the value of above three times the ufual purchafe of the lands, they might obtain a currency, upon the affurance, that, two thirds of the clear rents of the lands paying off yearly fuch a proportion of the bills, the whole number of them would be paid off and funk in 100 years. Or, to render this more intelligible; that lands of 150 l. per ann. being fettled upon a land-bank for the payment of 1001 . clear every year, bills for 10,0001 . might be iffued thereupon, whereof 1001 . being difcharged yearly, the whole would be cleared, and the land revert to the proprietor, at the end of 100 years; and it has been fuppofed practicable, with the help of a little circulating money, to give thefe bills fuch a currency at the firft, as io induce the public, in a little time, to efteem them as money, becaufe they would all certainly be paid in time.
We might well fuppofe, that the abfurdity of this project was at firt fight too evident to deceive mankind, had we not experienced, that many people were once drawn in to fquander away their money, upon an attempt to put this imaginary fcheme into prastice: it may not, therefore, be time mifpent, if, while we are on this fubject, we detect the fallacy of this notion, in order to guard the public from being again impofed on by fuch chimera's.
Let it then be confidered, that all things bought and fold are valued at a certain price, ftandard, or meafure, in refpect to the current money of the country.
Thofe commodities, which are called ftaple, have a pretty certain eftablithed price; from which, they rarely vary much for a feries of years, unlefs on extraordinary occafions: fuch as lead about id. $\frac{1}{4}$ a pound, or gold, reckoned, about 41 per ounce, and the lands of Englartd valued, on an average at about 20 years purchafe; which makes 1501 . per ann worth 30001 . and an annuity of 1001 . per ann. for 100 years, fecured to be paid by lands of a competent value, may be efteemed at about 19001 .
The firt principle, in dealing, is to know the worth and value of conmodities; and no man will give more for at thing than he efteems it worth
As money then is the medium of commerce, and as bills, of whatfoever kind, are always to be taken as fo much moner, (being only intended, as has been already fhew, to excufe
the frequent receiving and paying it) any perfon not interefted in fuch a bank, who takes 10,000 . value in their bills, either buys them or receives them in payment for fo much due to him, and is fure, that neither he nor his affignees can ever receive more for them, than 100 l . per ann. for 100 years fucceffively; and the that will give 10,0001 . for fuch an annuity, which might have been purchafed for about 19001 . would have been accounted as wife, as he that would have given 5 s . per 1 b . for lead, or 201 . per ounce for gold, or 166 years purchafe of lands.
The miftake of this project feems to arife from an imagination, that becaure 'tis common for trading banks to obtain fo great a credit, that their bills may pafs through many hands, before they come to be paid; whereby a great rumning credit in their bills may be circulated with a far lefs fum in money; that therefore this land-bank alfo would in time arrive to the fame reputation.
This confidence may feem to be confirmed, from the further obfervation, that young tradefmen are frequently trufted with goods to two or three times the value of their own proper ftock or worth; wherefore, it may be neceflary to conider the difference of thefe two kinds of credit.
He that fells goods upon credit, always makes fuch a price as Thall fufficiently compenfate for the time of the truft, and from thence arifes a principal part of his gain; but then he fo orders his affairs, that the money conftantly coming in from his debtors, may be fufficient to anfwer all demands of his creditors, whereupon his own reputation depends. Now, if this tradefman, for faving the trouble of receiving and paying money, lodges his money in a bank, expecting no intereft or profit thereon; 'tis in confidence, that it lies always as ready there to anfwer his note at demands, as if it lay at home in his own coffers in cafh : and he is very fenfible, that, if he meets with any difappointment in this, he hazards his own credit.
But banks gain their credit from their exaetnefs and punctuality, in being ever ready to pay off all their bills, as falt as they are demanded; from whence people entertain an opinion,' that either they keep the greateft part of their money always by them, or at leaft that they deal fo warily, as to be able to command it all upon fhort warning. But the traderman gives large credit to his debtor, becaufe he gains by it ; and though he trufts his money to the keeping of the bank, yet it may not be faid that he gives credit to it in the fame fenfe as he does to the former, becaufe he always depends upon having his money, every moment, to anfwer his emergencies.
And thus, though traders will ever efteem the bills of thofe banks equal with ready money, when they believe the fock is always fufficient to pay them off on demand; yet they will never be perfuaded to accept bills, as current payment, from fuch a bank as this we are fpeaking of, where they are fure before hand, that the fund propofed is fo far deficient, a not to be worth one fifth part of the value which is to be if fued out in bills.
There are fome, however, that have propofed a much more rational fcheme for the conflituting of what they would call a land-bank, which is by fettling a competent value in lands, to remain as a fixed fund of credit for the undertaking, and to raife thereon a confiderable fum of money, to lie always ready for the circulating of their bills: but, if we fhall ftrictly examine this alfo, it will be found, perhaps, that lands can neither be fitly applied in this way. For,
We are to obferve, that trading banks may make ufe of their credit in a twofold manner : the one is, as they borrow for a certain time, on condition to pay intereft for it: the other is, when they take upon them the truft of keeping other people's money, for which they give their bills pay able at demand. For the latter, a middling fund or fock may be fufficient, as we fee by the large credit frequently given to yoùng bankers, from an opinion of the prudence and honour of the men: for the former there ought always to be a vifible fund, amply competent for the lender to ground his fecurity upon.
But, as no one will fay that land alone is a practicable fund for a bank, without a proportionate fum of money conjoined with it, we fhall obtain a clearer view of this point, if we confider the reafon why land alone can never be a competent fecurity for a bank.
Land and money are the two mighty fources from whence property increafes, and improvements of property fow; and, though they both fall into the ocean of wealth or riches, yet they glide through different channels. Land produces it's increafe by cultivation, but always remains fixed and immoveable: money, on the contrary, gains nothing by lying ftill, but makes it's increafe and inprovement by being continually employed in trade, and toffed from hand to hand. Land, for the moft part, takes up the whole year for the bringing about ir's return, but money may be returned ten or twenty times in the year: whence it may naturally be inferred, that the profts arifing from the employment of money, muft be much greater than from the produce of land.
Thofe whio are buly in trade, and know how to employ their whole fock, have cften occafion to boriow money,
but never think of purchafing lands, or letting out their money at intereft ; and 'tis fuch who ufually keep their cafh in banks, where it may be ready at their call: but, when men grow rich, and weary of bufinefs, they incline to lay out their money in lands, and to lend it upon proper fecurities; they feldom deal with banks, unlefs they buy ftock, becaufe, as they have no fudden occafions for their money, they chufe to let it lie out long upon good fecurity, aiming at higher intereft than banks ufually give.
Suppofe a trader takes the bill of this kind of land-bank, and wants the money to divide into leffer payments, but, when he comes to receive it, is told by the manager of the bank, that, at prefent, they can only pay him the intereft; and for the principal he may be confident that it is fecured by as good lands, and as fafe a title, as any in England; the trader may well anfwer, that his dealing is not in ufury, and that, if he cannot have the money, when he wants it, to fupply his daily occafions in trade, he is not able to carry on his bufinefs, which is much more profitable to him than the intereft of money, or rents of lands; and, therefore, that he will return the bill, and never meddle with any more of the like. Thus 'tis plain that a bank of lands can never prove effectual, without a fufficient fund of money to fupport it.
Let us fee in what light this matter will appear, when it is furnifhed with a fock of money; and fuppofe that lands to the value of one million are fettled for the fund of a bank, upon the credit whereof bills bearing intereft are given out to voluntary lenders, for 750,0001 . which is to the utmoft ufual extent of the fecurity; and this fhall be the moneyftock, provided for the circulation of the bills.
And if the managers fhall act fo equitably as to extend their credit no further in dealing than is adequate to their capital, does not fuch a bank become as perfect a money-bank as any other, and the lands no otherwife concerned than as if fo much money were borrowed in the common way of mortgage? for it is manifeft that the, lands would have no manner of operation in fuch like negociations.
But, if they fhall adventure to extend their credit beyond the power of this money-capital, and that to fuch a degree as to have any dependence on the remaining value of the lands, this will be effectually the fame thing as mortgaging the lands twice over; and, as the man who fhould do this would incur the cenfure of being a knave, people would avoid dealing with him; fo, if the bank fhould be difcovered in this practice, all people would foon withdraw their credit; and, though it thould not be difcovered, the action is neverthelefs difhonef, becaufe there is a poffibility that a general demand may fall upon the bank, and then fuch traders who happen to come toward the latter end, mult at beft content themfelves with land fecurity, when fuch a difappointment of the ready money happens as they had provided for the making of their own payments: this may prove of that fatal confequence to fome as to deftroy their credit, and ruin their families.
Upon the whole, men may, if they think fit, mortgage their landed eftates for the raifing of money to be employed in banking; and with that money they may eftablifla a competent fund for a reputable bank; but 'till they can find a way to tofs lands from hand to hand, and divide them into as many particles as they can do a bag of money, lands cannot honeftly be brought to bear any fhare of the banking trade, in the light we have been confidering the matter: whence we may with fome confidence conclude, that nothing elfe ought to be underftood of a bank but that it is a repofitory of cafh, or other ftaple moveable treafure; and that therefore, no other fund can fitly be applied to banking except real ready money, or what is always capable readily to produce it.
Although it may appear, at firft view of this fubject, that lands and money might be united in the conftitution of a bank, yet, from the confideration of the different natures, qualities; and accidents of thofe two fubjects, it is apparent that their improvements are made by fuch different ways as are peculiar to each, and that, therefore, they can never be capable of being blended and confolidated into one and the fame application, with regard to commerce ; and yet it muft be acknowledged, that, when the reft of this nation fhall grow fo wife as to imitate the Weft Riding of the county of York, by inffituting a general regiftry for the fecuring of titles, the lands of England will be brought to the neareft capacity of refembling ready money, that the nature of the fubject can admit: and, if ever fuch a national land-bank as we have been fpeaking of fhould take place, this is the preparatory ftep which alone could eftablifh it.

## Further Remarks on Banking.

Let us fuppofe a goldfmith, or a banker, fets up for keeping people's cafh for them upon notes, payable on demand; if an hundred gentlemen, or land-proprietors, who keep a provifion by them of money, lodge it in fuch bankers hands, and take out fuch part of it as they occafionally require, but replace it when their rents come in : if thefe fums amount to 100,000 ounces of filver, it may happen that not above

10,000 ounces of the whole money fhall be wanted, of called for out of the goldfmith's hands during the whole year ; and, if he has credit enough to raife money upon exigencies, he may commonly venture to lend out at intereft 90,000 ounces all the year round, and not keep above one tenth part of the furss he gave his notes for, in his hands, to anfwer the calls upon him : by which means 90,000 ounces, which would otherwife have been kept up during the year, will circulate in traffic.
If an hundred gentlemen put all their rents, as they receive them, into a goldfmith's hand, and only draw weekly for the common expences of their families; and if the fums amount to 100,000 ounces of filver per quarter ; the goldfmith will be able to lend out more money for a fhort time in the beginning of the quarter, than towards the end of it; and he can only afford to lend out for the whole year fo much as he finds by experience is left in his hands at the end of every quarter.
If the perfons who keep money in the goldrmith's hands are undertakers, or dealers in bufinefs, who commonly put in large fums, and as commonly draw them foon out of his hands, to anfwer the demands of their bufinefs; fuch goldfmith will often find, that, if he lends two-thirds of his cafh, the demands upon him will exceed the one-third he has in his hands; and to he muft haftily re-borrow money at difadvantage, to anfwer thofe calls; and, therefore, experiefice will thew him, that he cannot prudently venture to lend out above one half of the caft, for which he has given his notes.
From thefe examples it is apparent, that the quantity of money a goldfmith may be able to lend out of his cafh, is proportionable to the methods of acting of thofe who depofit their money in his hands. Whence it follows, that one goldfmith may be able to lend out $\frac{10}{}$, when another cannot afford to lend out $\frac{1}{2}$; and this may be the cafe, though we fuppore the credit of both equally good.
A well-conftituted national bank having a better reputation than a private goldfmith, the largeft fums, and fuch as are not foon called for, are commonly lodged thete. If the national bank makes payments, and keeps money upon transfers, as that of Amfterdam, Venice, \&c. it is fafer than bank-bills becaufe thefe may be falfffed; but it is not fa generally convenient, becaufe the attendance on the transferbooks is troublefome, and many will take bank-bills in payment who wrould not be at the trouble of going to the bank for a transfer: befrdes, payments in bank-notés may be made in the country, but the transfers require being on the fpot. Money is only neceflary in barter, where men of bufferefs are fo concerned that payments by evaluation may anfwer, in moft cafes, and in thofe of minute payments, as for eating, drinking, cloathing, \&c. The building of a houfe alfo requires ready money for the weekly payment of the workmen employed in it.
Let us fuppofe that 10,000 ounces of filver have been laid out in building of the faid houfe: if the undertaker who built it, and laid out that money, letts it for 500 ounces a year, he fhall, in 20 years, get in his original money, in fmall payments, which he laid out for the comtion fuftenance of his family; but, if he fells the houfe for 10,000 ounces, may be paid in bank-bills, and in bank-transfers; but need not be paid any part in money, till it is wanted for eating, drinking, cloathing, \&cc. for himfelf and family, or for thofe to whom he affigns it. If he lays it out in a mortage, the payment may be made in bank-bills, or transfers, and no part is required in money till it is turned fomewhere to minute payments, for family neceflaries.
The gentleman who borrows money on his eftate, if it be to pay great debts, will alfo make payment in bank-bills; but, if he applies it to building, the money muft be taken out gradually for the maintenance of his workmen; as, if he owes it to undertakers of any branches of bufinefs, they will apply the money to their employments: and, let this enquiry be carried on never fo far, it will be found, that no money in feecie is abfolutely required till you come to eating, drinking, cloathing, \&c. or to minute payments, and therein fpecie muft neceflarily be applied. And the ufe of banks is to keep hand-money circulating in the channels of minute payments, and to hinder it from ftagnating, or being kept up in large parcels, for any confiderable time.
'Tis pretty difficult to judge what proportion of celerity in circulation a national bank, or banks, may give the money of a flate; but, if I have been rightly informed in regard to the circumftances of the bank of Venice, it may give fome ufeful light into this matter.
The revenues of the ftate of Venice, which amount to about $4,000,000$ ounces of filver per annum, are payable in bankmoney, or in transfers at the bank of Venice; and the ftaterevenue, collected even at Bergamo, remote from Venice, when it is brought into that capital, is to anfwer in bank. All bargains and negociations between dealers above a certain fum are invalid, if not paid in bank: and the money conftantly paid and repaid, in thefe transfers, keeps up naturally a circulation of transfers of 800,000 ounces of filver. If a man, who has credit on the transfer-books, wants fpecie for minute payments, he will find another who has gathered

## B A N

fpecie from minute paymente, and wants a transfer, wherewith to make a large payment: and, fo far as that fum of 800,000 ounces, the money and transfers are found to keep up an equilibrium. Time and experience brought this to up an
light.
The money was firf lodged in the bank of Venice, for the credit given in the transfer-books: the government, in their wars, lpent the money depofited, and their further niecefficies obliged them to give new transfers in the bank, for the fervice of the war, without any money being depolited. Thefe transfers were enlarged to about $1,600,000$ ounces of filver; and then it proved that there were more transfers than money, and the price of transfers againft money fell above 20 per cent. of the original value, and, confequently, the yearly revenues of the fate diminighed in proportion as they were venues of the
To remedy this diforder, the fate borrowed money on the revenue, and contracted the transfers gradually, by paying them off, till they came to anfwer the original price at market; and this equilibrium was not difcovered till the transfers were reduced to about 800,000 ounces.
If we fuppofe the proprietors rents in the ftate of Venice amount to 21 millions of ounces of filver per annum, and the circulating money from 7 to 8 millions, the advantage of circulation gained by the bank of Venice will not exceed the eighth part of the circulating money in the ftate; and the fervice they receive by the bank is reduced to this, that from 7 to 8 millions of moncy, with the help of the bank, anfwer as well as 7 to 8 millions, added to the 800,000 ounces in money, without any bank; and the benefit which the government have obtained by the bank of Venice has been this, that they have borrowed $8 \mathrm{co}, 000$ ounces, for which they never pay any intereft.
From this example it appears, that the advantage gained in the circulation of the money of a nation by banks, and goldfmiths or bankers, is not fo great in proportion as is commonly believed; and the proportion of fuch advantage feems to be lefs in a great kingdom than in fo fmall a ftate as that of Venice. For, as banks and goldimiths give a circulation to a fmall part only of the real money of the nation, which would otherwife be locked up in particular people's hands, the quicknefs they give to circulation cannot bear a great proportion to the whole circulating money of a nation. 'To judge farther to what greater degree banks may be ufeful for the fupport of the public and private credit of a nation, and to the reduction of the intereft of public funds, and the national rate of intereft, fee the articles Credit, [Pyblic Credit], Money, Interest, Funds.
From what has been faid, the general nature of banking muft, by this time; be pretty well underfood, both with regard to particular banks, as well as private bankers. And, although credit in this way of dealing will go great lengths, yet there muft always be.kept a proportion of cafh fufficient to give every one his money on demand, who comes for it; and that bank or banker that begins a foundation of credit in this way, ought not to extend it above $\frac{1}{7}$ part beyond his hard money; every one muft be afraid to truft that bank, or banker, who would venture fo far as to referve but a fourth part in ready cafh for the circulating notes payable at fight; but it is plain, that fome proportion muft be always referved; and, whatever that thall be, fo much will the real adyantage of this kind of credit fall fhort of fo much ready money.
It is true, that this is one of the principal branches from which the profit of banking arifes; neverthelefs, it muft be ufed tenderly, and with great difcretion, it being ever precarious and uncertain; and we may oblerve that all the wary and judicious undertakers in this way preferve their credit fo far within compafs, as to be always prepared againft a run (as it is called); fo we may be confident, that as a body of people are generally more circumfpect, and lefs apt to be tempted by every view of advantage, than private men, the bank of England is the leaft likely of any to hazard their credit beyond their reach; and it is certain this corporation always keep themfelves fo well provided with ready cafh to anfwer all demands, as that but a moderate proportion of that large credit, which they have defervedly obtained, can be made ufe of by them to their real advantage. For no body of men, any more than a private man, will dare to deal fo freely with the
befl credit in the world as tey might do with the like fum in money; and, confequently, thofe muft be egregiauly miftaken who think that the one can te as much relied on an the other, or Aretched beyond a reafonable limitation.
There are other ways whereby bankers may be ufeful to commerce, than thore which are ordinarily practifed. Having thewn, under the articles of Artificers, Anonymous Partnerihip, and Asphaltum, by, what natural meafures our mechanics and manufactures may be improved, and what encouragement hould be given to the inventors of new difcoveries for the advancement of our commerce, as alfo how beneficial to this end the Royal Society of London max be rendered; it may not be ufelefs to obferve here, that fuch who are happily formed for inventions of this kind, frequently ftand in need of a fuitable fund of money to carry their defigns into execution,
Bankers dealing in money may be inftrumental to forward many new inventions, after, as has been fhewn under the article Asphaltum, the certainty and utility of fuch difcoveries thall be duly afcertained by the Royal Socie:y: for, after the deliberate approbation of that learned body, we may prefume that no fraud or impofition could be intended.
The monjed man, feeking proper opportunities for the improvement of his money, he can very rarely meet with fo beneficial occafions as by encouraging fuch underratings, let them be either improvements upon old inventions, or quite new difcovcries. ut then this is not propofed to be done at the rate of the national intereft, but that thoie who advance the money fhall be intitled to a certain fhare in the profits; and, according to the nature and extent to which fuch art or manufacture may be carried on, one, two, three or more bankers, or monied men, who could act in concert, and confide in each other, might fet thefe new inventions a-foot; and in cafes where, for the rifque of a few hundred pounds, at the commencement, defigns can be fet on foot for the public emolument, which may produce to the firft encouragers many thoufands, and, in their confequences, many millions to the flate, it is impolitic that there fhould be any obftrucion to a practice of this nature. For nothing can be more teafonable than that thofe who hazard their money flould be intitled to a flare of the profis, without incurrin, the cenfure of ufury, or any other injurious imputation from the eye of the law, though their advantages hould turn out at the rate of 10 or 20 per cent. per annum, or more, which is deemed otherwife in cafe of bottomries, \&c. Tior fhould it be deemed difhqnourable, in perfons even of the firl iank, thua to engage in fuch undertakings; yet engagements of this kind may be more fuitable to men of bufinefs than to others, who, for want of due knowledge and experience in the conduct of affairs of this nature, may render them abortive, notwithftanding the gooduefs and benefit of the defign wherein they might embark.
From what has been faid it appears, that the bufnefs of domeftic banking is a traffic in money, in bullion gold or filver, or foreign fpecie, difcounting bills of exchange, promiffory. notes, and in dealing in the funds, in drawing or remitting money from one inland trading city or town to another, for the accommodation of traders, and keeping calh for other people, \&c.
Befides this kind of bankers, which are common with us in England, Scotland, and Ireland, there is another feecies, which may be properly diftinguifhed by the name of foreign bankers, as not dealing in the way of thofe domeftic ones before defcribed, but trafficking largely in the negociation of foreign bills of exchange; and that not only in the natural courfe of their other mercantile concerns, in commodities and in fhipping, \&c. but who make a kind of a difting branch of bufinefs this way, in dealing confiderably by exchange with many countries of Europe. Thefe, with us, ge-
nerally are called remitters, though in France and Italy they are named bankers; and, in thofe countries, fome of them deal a little in the domeftic, as well as foreign way of banking.
The foundation of this foreign way of banking depends upon a thorough fkill in the exchanges; and this confifts in knowing when to draw, or remit, to the beft advantage, amidf all the trading cities of Europe. Sepe the article Ap, bitration of Exchange.

## Remarks.

Whoever is tolerably acquainted with the nature of accountanthip, by debtor and creditor, according to the true principles of double entry, will eafily perceive, from the ledger account, thus exhibited in miniature, how the profits of banking arife. I have chofen this manner of reprefentation, with a view to anfwer a trebie end: (r.) To give a lively idea of the nature of the bufinefs to thofe who are not acquainted therewith, (2.) To give a fketch of the fundamental principles whereby the accounts of all bankers, and trading banks, ought to be regulated and adjufted. (3.) To habituate gentemen, as well as people of bufinefs, whofe affairs require accurate account-keeping, to the more ready and facile way of keeping their accounts themielves, or directing their clerks to do it, according to the principles of reafon and art.

The explanation of the foregoing theet.
x. The reader is defired to obferve, that thofe difinct accounts reprefent both a debit fide and a credit, in order to be duly charged on one fide, and difcharged on the other, according as the nature and reafon of the tranfaction fhall require.
2. That the figures annexed at the beginning of each line, written under any diftinet account, are placed to fignify the dates, when fuch bufinefs was tranfacted.
3. That no fum of money is to be pofted, or placed to the debit of any account, but the fame fum muft be placed to the credit of fome other account of the fame date, with which it has an equitable conformity. And, thefe dates being reprefented by the annexed figures, the eye will be eafly caft from the debits to their correfponding credits.
4. The column prefixed next to the money column, on the debit fide, hhews, in all ledgers kept according to the method of double entry, upon what folio the proper credit ftands, in order to expedite reference from the one to the other.
The reafon of the firft, fecond, and fourth particulars require no explanation, but the third may, which fhall be done in a familiar and rational manner: and, indeed, this is the only method of accountanthlip that is founded on reafon; for, although that of fingle entry may, with care, anfwer fome purpofes well enough, yet it is generally founded in confufion, and, therefore, is to be avoided by all, who deal largely, if they would keep the full view of their income and out-go before them.
Now the method of double-entry-accountanthip is bottomed on the plaineft reafon, and upon the principles of keeping accounts always in an exact ballance; for if, according to the rhird obfervation, there is always as much money placed on the debit fide of your accounts in general, as there is on the credit of them in general, it is certain that fuch accounts will always remain in a balance upon the whole; and, confequently, every difinct account will be fit for the like balance; fince, if the whole is conftantly in à ballance, the feveral parts whereof the whole confifts cannot be otherwife.
Such is the nature of commerce of any kind, that fomething muft be dealt in, and fomebody muft be dealt with: whence it is, that there can no debit arife in the nature of bufinefs, but reafon will inftantly point out it's correfponding credit, in order to maintain the ballance.
If you receive money of a perfon, it mult proceed from one or other of the following caufes:

1. Either becaufe he owed it you, for fome property before received. Or,
2. That he prefents it by way of gift or donation. -Or , 3. 7 hat it falls to you in a legal way.

If the firft be the cafe, and you would keep your money right, you charge, or debit, your money, or cafh account, as it is now called, for all you receive; and, if the perfon of whom you received that money owed it you, and ftood debtor for it in your accounts, as he ought, then, upon payment thereof, it is reafonable that he fhould be difcharged, or have credit for the fum you have received: by doing of which you keep both your money and perfonal accounts in a right fate: but, if you only credit or difcharge the perfon for what you receive, and do not charge or debit your money account for what you have received, your money, or cafh account, can never ballance. This is too frequently the beginning of deftruction to many people's affairs; for they weakly imagine, that, if they keep right with the accounts of the perfons with whom they have dealings, that is fufficient, their account of cafh relating only to themfelves, and, therefore, their whole income and out-go of money need not be duly ftated. By this neglect many good fortunes have been fquandered away, and the perfons themfelves have not known how, when their affairs bave been brought to the teft of a commiffion of bankruptcy.-But the method we recommend, keeping a trader's or a gentleman's affairs always in a ballance, thefe evils may be guarded againft.
If the money received be by way of free gift, here is an increafe of your eftate, and that muit appear upon'your books, or your books will not rightly reprefent your affairs at that point
of time, nor, confequently, the fublequent changes they may undergo.
For this increafe of eftate, if it be in money, you debit your cafh, and eredit your capital fock. If it confilts in the ,public ftocks, you debit thofe diftinct ftocks, for their value at that time, and credit your capital flock. If it confifs in a part money, and a part ftock, you debit each for their refochive values, and credit your capital ftock by both. By this means it is obvious, that your accounts all the way continue in a ballance, and are a faithful mirrour, wherein to behold the ftate of your affairs'; and all changes and alterations that your affairs can poffibly undergo, will, in the like manner, admit of proper debits and credits, in conformity to each other. To apply thefe plain principles to the bufinefs of banking, and the explication of the accounts before us.
Numbers (1), (2), (3), (4), on the credit fide of capital fock, hew that the fuppofed banker had, at the commencement of his bufinefs, in cafh 20,000 l., in South-Sea flock, which coft him 2302 l. ios. in Eaft-India ftuck, which coft him ; 6rpl. 10 s ., in bank-ftock, 4r77l. 10s. Thus thefe divers diftinct accounts are debited for their refpective fums, and capital fock is credited by them for the total; which might have been done in one fingle line, by divers accounts; but I have pofted them feparately, to render what I would fay the more incelligible to thofe who are unacquainted with this method of account keeping. Whence it is plain, that there is the fame total placed to the debit of thefe feveral accounts, as there is to the credit fide' of capital fock, and, therefore, thefe accounts are in a ballance, and fo far thew the true ftate of affairs at one view. And, if a banker's ftock conlifted in a hundred particulars, they might all be exhibited at one glance of the eye, by proper debits and credits, in the fame manner.
Numbers (5) and (6) on the debit fide of caftr fhew, that fuch banker has received of A B 1000 I . in money, as a depofit in his hands for his account, to be drawn out at plesfure; for which he debits his ca'h, and credits A B, whereby his money account is right, the perfon's account is right, and his books are in a ballance.
Number ( 7 ) on the debit of A B's account, and on the credit fide of calh, fhews that $A B$ bas drawn out of his banker's hands 50 l . for which A B being debited, and caih credited, both A B's account, and the' account of cafh, are right, and the books are fill iti a ballance.
Number (8) is an infance of the fame kind with thofe of (5) and (6). Thefe inftances are fufficient for all of the fame nature.
Number (9), on the debit of gold, and on the credit of cafl, fhews, that fuch banter has purchafed, at $1.3 .: 17:$ io per ounce, 1000 ounces of gold in bars, and paid for it 389 rl . 13 s. 4 d.; fo that the account of gold being debited for the fame, and calh credired, the accounts of gold and money are right, and the books in a ballance.
Number (io) on the debit fide of cafh, and on the credit fide of gold, fhews that 500 ounces of bar-gold have been fold at 1. 3: $77: 11 \frac{1}{2}$ per ounce for ready money. This keeps the account of money right, as alfo that of gold.-The inner columns of the gold account fhew the quantity bought on the debit, and the quantity fold on the credit, and, confequently, will always thew the quantity remaining, and the profit or lofs arifing by fuch dealing.
Number (II) on the debit of gold, and on the credit of calh, fhews, that 500 ounces of gold in coin has been bought and paid for at l. $3: 17: 11$ per ounce, amounting to 1947 l . 18 s .4 d.
Number (12) againit the debit of filver, and the credit of cafh, hews that 1200 ounces of pillar pieces of eight have been bought for ready money, at 5 s .5 d . per ounce, which amount to 325 I. - And number ( 13 ) on the debit fide of cah , and the credit fide of filver, fhews that the fame 1200 ounces of filver have been fold at 5 s . 5 d . $\frac{1}{2}$, amounting to 327 I. 10 s.; fo that the account of filver being ballanced in quantity, by fubtracing the debit from the credit, you will eaflly fee the profit.
Number (r4), on account of bills of exchange, and the credit of cafh, fhews that fuch banker has difcounted a bill of exchange of 6000 Horins, drawn from Amherdam, payable to one in London, at $35 \mathrm{~s}, 4 \mathrm{~d}$. per $£$. fterl. being l. $566: 1: 8$ fterling, difcounting at $4 \frac{1}{2}$ per cent. for one month 10 days, makes the money advanced $1.503 \vdots 5: 1$. - And number (15) on the debit of cafh account, and on the credit of the bills of exchange, fhews that fuch was paid when due I. $566: 1: 8$ whereby the account of money is kept right; and that of bills of exchange fhews the profit obtained by difcounting this ar ticle, which would be the fame in method in a thoufand examples of the like nature,
Number ( 16 ) on the debit fide of lottery tickets, and credis of cafh, fhews that 1000 of them were bought at 10 l .- And numbers (17) and (18) on the debit of cafh, and the credit of lottery tickets, fhew, that 560 of them were fold at 101.15 s . and 340 at 1. II: $: 2: 6$; whereby the number of which the drawing was ftood, appears, and thit the profit or lofs on the whole will be apparent upon that account, and the books all the way on a ballance.

Number (ig), on, the debit of lottery tickets, and the credit fide of calh, Shews that 20001 . has been borrowed of the banker, at the rate of 5 por cent for three months, on the pledge of 250 tickets. And number (20), on the delit of cafh and credit of lottery tickets, thews that the faid 20001. with interef, has been paid; whereby the accounts are all the way rightly kept, and fhews the advantage, or otherwife, on thofe adventures.
Number (2r), on the debit of jewels, and on the credit of cafh, fhews that fuch banker has lent 2000 l. on a box of jewels, marked F G, at 5 per cent. per annum
Number (22), on the debit of cafh, and the credif of jewels, Shews that 2100 . has been received for the principal and intereft of the fum for one year. The furplufage on the credit, being gain, may be paffed to the credit of the account of intereft, if it is thought proper to keep fuch a diftinct account, or to the account of profit and lofs, as an intermediate account to that of capital ftock, into which it ultimately falls, at the general ballance of the accounts,
Number ( $z_{3}$ ), on the debit fide of the account of bottonry, and the credit of calh, fhews that roool. has been lent to J C, captain of the _-_Indiaman; at 40 l . per cent. on that account.
Number ( 24 ), on the debit of call, and the credit of bottomry accounts, fhews that the principal and profit have been received, 1400 I. - This account will always chew the profit or lofs that arifes upon fuch-like occafions.
By number (25), on the debit of promiflary notes, and the credit of cafh, it appears that a note of hand, drawn by CN , payable to FP, three months after date, has been difcounted, having two months to run, at 5 per cent. per ann. The fum advanced on the note being $1.495: 16: 8$.
Number (26), on the debit of cath, and the credit of promiflary notes, thews that the g 00 l , has been received, and, confequently, fo far as the credit of all accounts of this nature exceeds their debits, is the net profit upon thefe refpective articles of bufinefs in the banking way:
Number (27), on the debit of $\mathrm{L}, \mathrm{M}$ and NO , and the credit fide of cafh, thews that 1000 , at 5 per cent. per ann. has been lent them, upon their joint bond, for three months. When this bond was taken up, is fhewn by number (28), where calh is charged with the receipt of the primcipal and intereft, and the joint bondfmen difeharged in conformity. The difference between the debit and credit of their perfonal account fhews the intereft made.-And, if any extra-premiums are made by thefe, and the like kind of occurrences, they are generally paffed to the debit of cafh, and the credit of capital flock, that they need not appear by explicit accounts, to clerks, but only as a fecret negociation between the tranfactors.
Number (29), on the debit of the Duke and Prince Frederic privateers, in comp. and on the credit of cafh, fhews that 50001 . has been expended on thofe. veffels, by way of advenqure for a quarter part of the banker's advance. And number (30), on the debit of calh, and the credit of Duke and Prince Frederic privateers, is contained 3 c,000l. the fum received as one quarter part of the prize-money. By deducting the debit from the credit of fuch accounts, fhews the net profit on thefe enterprizes, or the credit from the debit, if loffes attend them. -The lofs or gain is paffed to the account of profit and lofs, and the ballance thereof terminates in the increale or diminution of the article of capital ftock.
Number (31), on the debit of bank ftock, and the credit of cafh, fhews that 1000 l. has been lent upon the pledge of 8001 . bank ftock, at 5 per cent.
Number ( $3^{2}$ ), on the debit of cafh, and the credit of South-Sea-ftock, fhews that 20001 . of that fock has been fold at 116, which, on the debit of that account, appears to have been bought at in 5 --whereby the profit is clear on that account.
Number (33), on the debit of cath, and the credit of India ftock, fhews that 3000 . flock has been fold at $187_{4}^{3}$, which was purchaied at $187 \frac{1}{1}$, as is feen by the debit, io that the profit is plain.
Number (34), on the debit of cafh, and the credit of bank flock, thews that 3000 . flock has been di pofed of, at $139 \frac{7}{8}$, which, by the debit, was bought at $139 \frac{1}{5}$ : fo that profits on thefe accounts are apparent. Which inftances are as fufficient as numberlefs others, to thew the nature of the buftnefs, as well as the method of accounts proper for the purpofe. By this method of accountanthip all defirable fatisfaction is obtained, in the mof concife manner that is polfible.
If you would know the ftate of your caßh, 'tis only adding up the debit and the credit, and fubtracting the credit fide of payments from the debit fide of receipts, and the remainder thews the money in hand.
If you would know whether your dealings in the funds have turned to account, 'tis only throwing your eye on the debit and credit of thofe diftinct accounts, and if the whole, which was purchafed, is difpofed of, the gain or the lofs will be evident, by fubtracting the fum total of that fide which is leaft from that which is greateft.
In regard to thofe perfons who keep cafh with the bankers, the credit of thofe perforat accounts thews, what money was

Vol. I.
from time to time depofited, the debit, what was occafionalip drawn out, and, confequently, the difference hews how the accounts fland.
In the fame eafy manner, are found the profits or lofes aetending the trafricking in gold and filver, in the difcounting of bills of exchange, or dealing in lottery-tickets, jewels by purchafe or pledge, bottomies, promifliary notes, loans on perfonal fecurities, in privateering, pledges of ftock, or whatever elfo may bo prudent for the banker to be concerned in. From what has been faid, nothing can be more plain, than that accounts kept in this manner, according to the double entry method, are always in a ballance, by reafon there is, upon the whole, always as much pofted to the debit as to the credit: fo that the fum total of the debit and credit fides of the whole ledger muft be equal : and, if fo, 'tis eafy to conceive, that the differences between the diftinct accounts will terminate in a general ballance alfo: that is to fay, if the debit fides be the greateft fums, and the crexiic be deducted therefrom, and the difference placed to the account of ballance, the fum total of thefe differences will be equal to the fum total of the differences of thefe account, whofe credits thall exceed their debits. From which plain principles of reafon, the moft confufed and perplexed accounts may bo always ballanced.
But here it may be ufeful to obferve, that although the accounts muft neceffarily ballance, by reafon of the equality of debits and credit; yer it does not from thence follow, that fuch accounts are juftly flated, and truly reprefent the condi? tion of people's affairs. For there may be very great fallacy and impofition, by the flating of accounts aitfully, under falfe and deceitful heads; yet thofe accounts fhall as duly bal? lance, as thore which are fairly and honefly flated, by reafon of their being kept according to the method of dnuble entry; but this argues no imperfection in the art: for fictitious entries may be as regularly flated and ballanced as real ones. And, if peop'e will keep double fetts of books, the one to thew the real fate of their affairs, and the other the fraudulent and fetitious, there is no judging; by the latter ${ }_{2}$ in what condition a man's affairs are. And I wifh that there may not have been egregious impofitions put upon the public by fictitious and Cophifical accounts, notwithftanding their appearing with the fpecious face of a ballance.
But how, and in what manner thefe impofitions are to be de tected, I fhall thew under the head of Mercantile Accountantship. At prefent I thall only obferve on this article, that, if perfons are thoroughly fkilled in this method of account-keeping, they may fuit the number as well as the manner of keeping all thofe books, which may be proper auxiliaries to the grand and effential book, which I have been defcribing, the ledger. For, fuitably to the nature of a perinn's tranfactions, the elegant accountant will accommodate thefe books. The merchant requires more auxiliary books than the bankers; and one merchant more than another, according to the circumftances of his negotiations; but they muft all terminate in an accurate ledger, that is always fit for a genuine ballance. This is the reafon wherefore I have chofe to illuftrate the bufinefs of banking by this book only, rather than at prefent to perplex the reader with a tedious defeription of a multitude of books, which might have prevented his having fo thorough an idea of what we intended to communicate in a familiar manner.
Notwithtanding, as if may be neceffary for many readers to know the nature and ufe of the various auxiliary books practifed in accounts, I fhall defribe them under the article of Book-Kerping; but he is the beft accountant that makes ufe of the feweft,
From-what has been faid in regard to the nature and accounts of private bankers, a very good idea may be obtained of the nature of the bufinefs of the bank of England; of what ufe they make of people's money, and confequently in what manner their profits arife.
And as, in a bank fa conflituted, it is requifite that the method of keeping their accounts flould be as accurate as poffible; fo, in the œconomy and management of that corporation, their accounts are exqüliftely well képt, and the variety of checks render it extremely difficulr, if not almoft impoffible, to defraud them by any machinations among their fervants. And had thofe worthy and honeft gentlemen; the late Meff. Woodwards, bankers in Exchange-Alley, London been thoroughly mafters of accounts themfelves, and regulated their books in that concife manner, which this admirable are will admit of, the cataftrophe which unhappily befel them could never have happened, notwithftanding the extenfivenef of their tranfactions; nothing being a more efficacious prefervative againfl misfortunes.
For the fate of the refpective banks in Europe, fee them un der the particular places wherein they are eftablifhed: as that of London, Amfterdam, Genoa, Venice, Hamburgh, Paris, Eic. ; our reafon for which is, that, when we come to defribe the commerce of thofe places, the utility and importance of their peculiar banks, confidered connectively therewith, will appear in their proper light: and, from this prevous account of the nature of banking, the conftitution of all kinds of banks throughout Europe may be the better judged of

BANKRUPT;

## B A N

BANKRUPT, is Faid, bv fome, to be derived from the French word banque, which fignifies menfa in Latin, and route is the fame as veftigium; and this term is faid to be taken originally from the Roman menfriit, which were fet in public places, and, when a traderman flippd away, with an intention to deceive his creditors, he left only fome vefligia, or figns, of his table, or fhop behind. But a bankrupt, with us, fignifieth generally either man or woman, that, livihg by buying and filling, hath gotten other perfons goods into his or her hands, and concealeth himelf, from his creditors, or commits other acts, which make him a bankrupt, according to the ftatutes in that cafe made and provided.
Stat. i Jac. l. c. 15. a bankrupt is thus defcribed, wiz. all and every perfon who thall ufe the trade or merchandize, by way of bargaining, excbange, bartering, or otherwife, in grofs, or by feeking his or her living by buying and felling, who fhall depart his houre, or abfent -himfelf, or fuffer himfelf to be arrefted for any debr, either for money delivered, wares fold, or other good confideration, or fhall fuffer himfelf to be outlawed, or go to prifon, or fraudulently procure himfelf to be arrefted, or his money or goods attached, or make any fraudulent conveyance of his lands, goods, or chattels, whereby his creditors may be defeated in the recovery of their juft debts, or, being arrefted for debt, thall lie in prifon fix months, or more, upon fuch arreft or detention, thall be adjudged abankrupt.
It is not buying and felling of land, but of perfonal things, that will make a man liable to be a bankrupt; nor is it beying only, or felling only, but both. Every one that gets his living by buying and felling in trade and merchandize, may fall under a flate of bankruptcy, upon hisfailing. But adventurers in the Eaft-India company, members of the bank of England, or of the South-Sea company, fhall not be adjudged bankrupts in refpect of their ftock, $\mathcal{E}_{i}$. Alfo no perfon concerned as re-ceiver-general of taxes, Eic. Ghall be a bankrupt.
If a merchant gives over his trade, and fome years after becomes not folyent for money owed while a merchant, he is a bankrupt: but if it be for new debts, or old debts continued on gew fecurity, it is otherwife. I Vent. 5, 29. A banker, who has many people's money in his hands, refufes payment, yet keeps his thop open, and, as often as he is arrefted, gives bail; by this means he may give preference of payment to his friends; and if, when he has done, he runs away, fuch payment fhall ftand againft a commifion of bankruptcy. Farrelf. Rep. 139.
If, after a plain act of bankruptcy, one goes abroad, and is a great dealer, yet this will not purge the firf act of bankruptcy ; though, if be pays off, or compounds with, his creditors, he is become a new man. I Salk. Iro.
Where there are two partners in trade, and one breaks, you fhall not charge the other with the whole, but the eftate belonging to the joint trade ought to be divided, $\xi^{\circ} \mathrm{c}$. Mod. Rep. 45.
Acts difcharging bankrupts, fhall not difcharge any partner in trade, or one jointly bound with the bankrupt. I Danv. Abr. 686.

A merchant-trader indebted keeps in another man's houfe, or on Chip-board, is adjudged a keeping in his houfe: but a withdrawing muft be on purpofe to defraud creditors; and, if a man goes fometimes at large, fo as he may be met with one time or other, it will excufe him.
The commiffioners of bankrupts have a power to, adjudge a man a bankrupt; yet, in an action, the jury muft find whether he was fo or not. I Danv. 687.
He that is a bankrupt to one creditor, is accounted in law a bankrupt to all the creditors; and, being once adjudged fo , is always fo to the reft of the creditors. 22 Car. I. B. R.
Commiffoners may commit a bankrupt refufing to be examined, $\xi^{\circ} c$. till he fubmit himfelf to be examined. I Salk. 151. But the commiffioners are not to commit a bankrupt for not difcovering his eftate, without examining him on interrogatories, I Lill. Abr. 202. They are to examine the bankrupt upon interrogatories; and they have power to examine others, as to what they know of any perfons carrying away any part of the bankrupt's eftate. 5 Mod, 309 . Commiffioners of bankrupts have power to fell, grant, and affign, but they cannot bring an action; for their affignees mult generally bring all actions. I Mod. 30.
The creditors have a right to the bankrupt's goods, by the act of bankruptcy, and thereby they are bound; though, till affignment by the commifioners, the property is not tranf, ferred out of the bankrupt. I Salk. Io8. The commiffioners are to fell all the bankrupt's lands in fee, for life, or years, Ėi. and it will be binding againt the bankrupt and his ifiue. x Lill. Abr. 204. They may fell all entailed lands in pof-, feffion, reverfion, or remainder, except entailed in the crown, of the gift of the king; and this fhall bind the iffue in tail, and all others, which a common recovery might cut off. Ibid. 205. But fales of the bankrupt's, lands by commiffioners are to be by deed inrolled. If a bankrupt grants bis lands or goods in the names of other perfons, the commiffioners, notwithfanding, may make fale of them: hut not lands, Eic, conveycd bona fide, before the party, became a bankrupt. Wood's latt. 310. And no purchafe of lands thall be

## B A N

impeached, unlefs the commiffion of bankrupt be fued out within' five years' after a man becomes bankrupt. Lands beld by a bankrupt in jointenancy; may be fold as to the moiety: alfo lands which a man hath in right of his wife (but not her dower) lands devifed to a bankrupt the commifioners may fell. The commiffioners have power to fell lands mortgaged, on tender and payment of the mortgage-money. 2 Rep: 25. And affignees of the commiffioners have the benefit of covenants of re-entry, $\xi_{c}$. on lands.
All the goods and chattels of the bankrupt, which he was poffefled of at the time of his becoming bankrapt, may be fold by the commiffioners, and notwithttanding the bankrupt fell them in marker overt. Sale of goods by a bankrupt, after an act of bankruptcy, may be avoided by the commiffioners of bankruptcy; and they may, in this cafe, bring trover for the goods, or debr, or affumplit for the value, EFic. 3 Salk. 60 :
Offices of inheritance may be fold, but not offices of truft, annexed to the perfon for life. Affignees may bring actions for debt due to the bankrupt, in their own name, Egc. But if the commiffion be not taken out within fix years, directed by law for fuing of debts, and the affignment made within that time, a defendant in an action may plead the fatute of limitations: if the commifion be taken out in fix years, the ftatute preferves the debt, being to relieve creditors againf fraud, E ${ }^{\circ}$. I Saund. 37.
When money is obtained by judgment in an action of debt, and the plaintiff becomes bankrupt, and a commifion of bankruptcy is taken out againit him, though the fheriff may bring the money into court, it thall be delivered to the plaiztiff, and not the aflignee of the commifion, unlefs he takes out a fcire facias againft the defendant, in order to try the bank ruptcy. I Vent. 193. A plaintiff that hath a defendant's body in execution, whd becomes bankrupt, fhall not' come in to be relieved by the flatutes: but, if the plaintiff recover damages, $\xi_{c}$. againft the defendant, and hath judgment, and then the defendant becomes bankrupt, the plaintiff is a creditor; for it is a debt due to him, and action of debt lies on the judgment. I Cro. 166.
If a debtor to a bankrupt pays him his debt voluntarily, he mult pay it over again; but it is otherwife in cafe of payment by compulfion of law. 2 Vent. 258 . Where one trufts a bankrupt after be becomes fuch, he Gall not be relieved as a creditor. Sureties or bail, when they have paid the debt, may come in as creditors; but mortgagees, or perfons that have a pledge of the bankrupt's goods, having fecurity for their debts in their hands, are not creditors within the fatutes. Thofe who attach goods of the bankrupt, are to come in as cteditors. If an executor becomes bankrupt, a legatee is to be creditor. And aliens, as well as denizens, may come in as creditors; for all ftatutes concerning bankrupts extend oo aliens, who thall be fubject to the laws againft bankrupts, Goc. Hob. 287. ffat. 21. Jac. I.
The' commiffioners, after fale of the bankrupt's eftate, are to make diftribution among the creditors contributing to the commifion, firf making the bankrupt bis allowance ${ }^{\circ}$, ${ }^{\circ} \mathrm{c}$. And, in the diftribution of the bankrupt's entate, no refpect is to be had to debts upon judgment, recognizances, or fpecialities, beyond other debts. After four monthss and diftribution made, no creditor can come in to difturb it; but he may come in for the refidue, of which no diftribution is made. I Danv. 693. And the court of chancery hath fometimes allowed creditors to come in after diftribution, upon particular circumftances which have happened; and the lord chancellor ordered the exaction of the commiffion to be fufpended. Chan. Rep. 307.
If the commiffioners refufe to pay a creditor his proportionable part, he may bring an action of debt, or be more properly relieved in Chancery: where the commiffoners do not purfue the acts of their commiffion, the party injured muft bring his action, and fet forth the finding of the commifficners, that the debtor is a bankrupt. But, if a commiflion is not duly obtained againit a perfon, he may traverfe, by faying that he is not a bankrupt. 8 Rep. 12 I .
An innkeeper being allo part owner of a thip, and having 5 I 1 . ftock in the fhip, abfoonded : Eyre juftice held, as to the fhare of the fhip, that was nothing; for that is not a flock in "potentia to trade with, that will make a bankrupt; but there muft be a trading therewith in facto. And he held that an innkeeper could not be bankrupt, for he is not like a trader; he muft receive all comers, and feed them and lodge them, taking a reafonable rate; which if he do not, he is indictable. Holt C. J. concurred, and that he is not taken notice of in law, as a trader, but as an hoft, hofpitator; and he is paid not merely for his provifions, but alfo for bis care, pains, protection, and fecurity; and he buys meat and drink, not for fale or trading, but for accommodation, And an innkeeper cannot make a contract ad libitum; nor does he buy or fell at large, but to guefts only; and the chief-juftice held, that wherever a man buys or fells under a particular reftraint and limitation, he is not a feller within the ftatute, as a commiffioner of the navy, and fo of a farmer, Salk. wo. Vide Shower 3 Mod. $3<6$.

## BAN

A genteman of the Temple went from hence to Lifbon, where he turied factor, and traded to England, and broke. Blencoe argued that the ftatutes about bankrupts did not extend to perfons out of the realm; the fubject of them is cafes of arperions out outries, and departing out of the realm; and the reft, outlawres, I which extends to aliens, is only aliens refident 21 ft Jac. I. which extends to aliens, is only aliens rendent here; yet the court held him a bankrupt, by reaton of his trading hither and back again, which gained him a credit here. Per cur, on a trial at bar. Salk. ino.
Upon an iffue directed out of Chancery, whether bainkrupt or not at fuch a time, it was held perHolt C. J. that, if H . commits a plain act of bankruptcy, as keeping houfe, \&c. though he after goes abroad, and is a great dealer, yet that will not purge the firf act of bankruptcy, but he will ftill remain a bankrupt: but, if the act was not plain, but doubtful, then going abroad and dealing, Eo $i$. will be an evidence to explain the intent of the firft'act: for, if it was not done to defraud creditors, and keep out of the way, it will not be an act of bankruptcy within the ftatute: Alfo, if after a plain act of bankruptcy he pays off, or compounds with, all his creditors, he is become a new man, Salk. 110 .
Equity will not compel a man to difcover what goods he really bought of a bankrupt after the bankruptcy, and before the commiffion fued, whese the party has no notice of the bankrupicy. Vernon, cafe 23.
If a man voluntarily pays money to a bankrupt after he becomes fuch, it is in his own wrong, and he may be forced to pay it again; but it is otherwite, if a bankrupt recover it againft him by a courfe of law. Vern. cafe so. p. 94 .
Some of alderman Backwell's creditors, having upon a pe tition to the lord keeper, obtained a commiffion of bankruptcy againft him; the commiffoners found him a bankrupt, and made an affignment, and the aldernian dies in Holldind. His fon and heir agrees with all the creditors, who had petitioned for this commiffion, and thereupon obtains a fuperfedeas; afterwards the other creditors hearing of it, they petition the lord keeper to grant a procedendo, becaule a commifion being once granted, and an affignment made, that was a truft for all the creditors of alderman Backwel, that chould come in within the four months, which they intended to do, and infifted that the commiffion could not be regularly difcharged till after the four months were paft; and, though it had been fometimes done in other cafes, yet that was where the creditors might have the fame benefit by a new commiffien; but, in this cafe, the bankrupt being dead, if this commiffion fhould ftand fuperfeded, the creditors were without remedy; and infifted this was a fraud and contrivance between the heir and the other creditors, to defeat them of their juft debts, and ought not to be countenanced in equity : and that they relied upon it, that they might at any time, within the four months, have come in, and have had the benefit of the com: miffion, otherwife they would themfelves have petitioned for a commiffion againft him.
But the lord keeper declared, that in any cafe where all the creditors that petition'd for a commiffion, would afterwards agree to have it difcharged, he would never feruple to difcharge that commifion ; and in this cafe mentioned how inconvenient it would be to revive the commiffion; for alderman Backwell had traded confiderably, fince fuch time as the commiffioners had found him a bankrupt, and that all̆ the compofition-money that his fon had paid to his father's creditors muft be refunded, and that many other inconveniences would enfue ; and that he had all along determined with himfelf not to revoke this fuperfedeas, but had deliberated upon it, that the other creditors might make the beft terms they could with the heir, and when they have been fairly offered, if they ftood in their own light, they mult blame themfelves for it: and declared he would not revoke the fuperfedeas, nor grant a procedendo. Vern. cafe 205.
A baukrupt before he became fuch, having made a mortgage of his eftate, the affignees of the flatute bring an ejectment for recovery of the lands comprized in the mortgage: The mortgagee refules to enter, but fuffers the bankrupt to take the profits, and to fence againt the affignees with this mortgage.
Lord keeper. The mortgagee fhall be charged with the profits from the time of the ejectment delivered.
Another point in this cafe was, that that bankrupt having bought land, and all the purchafe money not being paid, the aflignees would have had the vender come in as a creditor under the ftatute, for the remainder of his purchafe money.
Per cur. In this cafe there is a natural equity, that the land fhould fland charged with fo much of the purchafe money as was not paid, and that without any fecial agreement for that purpofe. Vern, cafe 262.
In an indebitatus affumplit the defendant pleaded, that the plaintiff was bankrupt, and therefore the defendant could nat pay, for fear a commifion fhould be fued, Eic. Upon demurrer, judgment for the plaintiff. Lord Raymond, p. 469.
It was ruled by Treby, sbief-juftice of the Common-Pleas, at Nifi Prius at Guildhall, upon evidence in trover, brought by the plaintiff againft the defendant, after argument of the counfel on both fides, ( I.) That it is not neceflary to prove that the perfon, upon the petition of whom the commiffion

## B A N

of bankruptcy was granted, was a creditor of the bankrupt s becaufe, upon view of the flatutes, they do not require tiat. (2.) That it is not neceflary to prove that the bulkrupt was indebred in rool. though the praclice has been fo to do; becaufe, though the chancellor frequently, before he gralits a commifion of bankruptcy, requires fuch proof, yet it is only matter of difcretion in him. Lord Raym. 724.
It was ruled by Holt, chief-juftice of the King's. Bench, $2 t$ Nifi Prius, at Guldhall, upon evidence in a tual, 1. Thar, if the goods of $A$ be feized upon a fieri facias iflued upon a judgment obtained againt $A$, and after the feizure, $A$ becomes bankrupt; this act of bankruptcy, cannot affect the goods levied in execution, as aforefaid; but, if A was a bankrupt. before the feizure, and after the bankruptcy the fheriff, upon a writ of feri facias to him direted, upon a judgment obtained againft $A$, feizes the goods, and fells them, and a commifion of bankruptcy is granted, and the faid soods affigned by the commiffioners, the affignee of the commitioners may maintain trover againtt the vender of the good; but no action will lie againt the fheriff, becaute he obeyed the writ. . 2. If a trader hearing that a writ of feri facias was iffued againft him, to the intent to preferve his goods from beng levied in execution, clandeftinely conveys them out of his houfe, and conceals them privately, that does not amount to an act of bankruptcy. 3. That a feizure of part of the goods in a houfe, by virtue of a fieri facias in the name of the whole, is a good feizure of all. 4. It was refolved in this cafe, that if the goods of A are feized upon a fieri facias, and fold to B bona fide upon a valuable confideration, though $B$ permits $A$ to have the goods it his poffefion, upon condition that $A$ thall pay to $B$ the money as he hall raife it by the fale of the goods, this will not make the execution fraudulent; and in fuch cafe, a fubfequent act of bankruptcy by A will not defeat the fale. But, though the original debt was juff, yet. if the execution was fraudulent, viz. upon any truft a fubfequent act of bankruptcy will defeat it. Lord Raym. 724, 5.
A plea of bankruptcy at large muft fet forth the petition, and the debts owing to the petitioning creditors. Lord Raym. 1548.

A bond given by a bankrupt to leave his wife a fum of money, in cafe of furvivorfhip, is not difcharged by the certificate. Lord Raym. 1549.

## Lord Lanesborough \& al' verfus Jones.

Samuel Jones, Efq; borrowed 1500 l . of Coggs the goldfinith, on mortgage, and Coggs owed about 34001 . to Jones, upon his the faid Cogys's notes; the notes were payable to the bifhop of London, Hatton Compton, and the faid Samuel Jones, or order, but this was in truft for the faid Samuel Jones; and the bifhop, Hatton Compton, and Samuel Jones had ail indorfed the notes which were in the cultody or power of Jones; and Jones went to demand the money of Coggs, who agreed to allow Jones 5 l. per cent. for the mopey on the notes, till payment.
Coggs failed afterwards; and an act of parliament was made for the vefting the effects and eftate of Coggs in truftees (the plaintiff, lord Lanefborough, and others) who were to act in nature of commiffioners and truftees for the creditors of Coggs, and they infifted that Jones, the mortgager, hould pay all the mortgage-money, but that, as to the money due on Coggs's notes, Jones hould come in, under the commifion, only pro rata with the reft of the creditors.
But decreed by lord Chancellor Cowper, with great clearnefs, that in regard by the fatute of 4 Ann. cap. 17. fect. 11 . it is enacted, that, where there is mutual credit between a bankrupt and another, only the ballance fhall be paid: fo, in this cafe, here was a plain mutual credit, viz. Coggs gave credit to Jones on the mortgage, and Jonés gave credit to Coggs on his notes, and, therefore, the ballance only fhould be paid; and this claufe in the ftatute was not to be conftrued of dealings in trade only, or in cafe of mutual rumning accounts, but that it was natural jultice and equity, that, in all cales of mutual credit, only the ballance fhould be paid, and that the commifioners or truftees, in this aft of parliameat, hould not be in a better condition then Coggs himfelf would have been in; that if, inftead of the prefear bill which was to forclofe the mortgage, Coggs' himielf, before his bankruptcy, had brought fuch a bill, furely no more than the ballance fhould have been allowed him; and there was no reafon that Jones fhould fuffer by the accident of Coggs's bankruptcy; neither could the commiffioners, or, if Coggs had been in the cafe of a common bankrupt, could the affignees, be in a better condition than Coggs himfelf would have been in.
But if $A$ and $B$ are joipt-traders, and $J S$ owes $A$ and $B$, on their joint account, 1001 . and $A$ owes the faid $J S$ 100 l . on his feparate account, I $S$ cannot deduct fo much as A's proportion of the 1001 . comes to, out of the joint debt; for that the copartnerflip debts of $A$ and $B$ are to be firft paid ( 2 Vern. 293. 706.) before any of the feparate debts; hut, if there be a furplus beyond what will pay the partnerfhip-debts, then out of A's fliare of the furplus, J S may deductit the feparate debt of $A$. I Peer Will, cale 84 .

## Miles verfus Witliams \& Ux.

The wife dum fola enters into a bond and then maries, after which tie hufband becomes a bankrupt; this debt by virtue of the ftat. of 4 and 5 Ann. cap. 17, is difcharged by fuch bankruptcy. I Peer Will. cafe 37.
In like manner debts due to the wife dum fola, though unrecovercd, are, on the husband's bankruptcy, affignable by the commiffioners. Ibid.

## Ex parte Mackernefs. On petition.

J S, a weaver, fold Mackernefs, a mercer, fome filk for ro3l. and, at the fame time, took two notes from Mackernefs for payment thereof (fill.) one note for 501 . payable at a day fince paft, and another note for 53 l . at a day yet to come.
Before the Jaft day of payment incurred, J S, took out a commiffion of bankruptcy againft Mackernefs, who was really a bankrupt, but petitioned to fet the commifion afide, as irregularly taken out, it being taken out at the fingle petition of JS, to whom only 501 . and not io31. was then due; and the flatute 5 Ann. cap. 22. requires, that, if a fingle creditor fues out a commifion, a debt of 100 l . muft be due to him; if two creditors fue it out, there muft be 1501. due to them; if three, or more, there muft be 2001 . or more, due them.
Whereupon the lord Chancellor fuperfeded the commifion, as irregular. I Peer Will. cafe 58 .
*See the flatute of 7 Geo I cap. 31. whereby fuch creditors by note, or bord, payable ar a fume day, are admitted to prove thitir notes, \&c. and are inititled to a proporionable part of the bankrupt's eftate, though they muft nor juin ifuing forth the commiffion till fuch their detts become payable. However by the $5^{\text {th }}$ of his late majefly, perfons having bills, bonds, or notes, payable at a tutare day, may join in petitioning for commifions.
So creditors by bond, before day of payment cannot take out a commiffion of bankruptcy, nor ought any proceeding to be had upon fuch commifion. Peer Will. cafe 178.
A bankrupt, though in poffefion, yer, if impowered to difpofe of goods in truft for another, they are not liable to the bankruptcy, either in law or equity. Copeman ver. Gallant. I Peer Will. cafe 8 r .
An hufband, before he has received the wife's fortune, becomes a bankrupt, the affignees fhall not receive it without making fome provifion for the wife. I Peer Will, cafe 100 . Jacobion \&zal' verfus Williams.
Though a creditor comes into a commiffion of bankruptcy, and proves his debt, and is prevailed on to be an affignee (be'ing informed that otherwife he hould lofe bis debt); yet, if the bankrupt has no eftate, the creditor may take the bankrupt in execution, if he will wave any benefit of the flatute. $r$ Peer Will. cafe 163.
The reafon of a creditor's coming in under a commiffion of bankruptey, and proving his debts, may be to oppofe the bankrupt's being difcharged. Ibid.
No election, in cafe of a creditor's coming in under the commiffion, to be paid out of the bankrupt's effects, if no effects. Ibid.
Argument of fraud, if the commifion be fued out by the bankrupts father, in order to difcharge the bankrupt. Ibid. A bankrupt's wife cannot be examined againft her hulband, to prove hi's bankruptcy; though by the ftatute of 2 IJ Jac . I. the be made examinable touching the difcovery of her hufband's effects. 1 Peer Will. cafe 178 .
A bankrupt himfelf, by ftat. 5 Geo. I, may be examined touching his own bankruptcy. Ibid.
If one of the reafons for the commitment be illegal, and the party to continue in cuftody till the thing fo illegally required of him be done, the whole commitment is naught. Ibid.
The creditors of a bankrupt who come into the commifion, fhalt not imprifon the bankrupt for not paying the debt. Ibid. A creditor petitions againft the allowance of a b-ankrupt's certificate, upon which the bankrupt gives him a bond for payment of his whole debt, in confideration of withdrawing his petition ; equity will not relieve againft this bond. 1 Peer Will. cafe 181. Lewes verfus Chafe.
A trader feized of lands in fee gives judgment to $B$, and then fells the land to $C$, and afterwards becomes a bankrupt; though the judgment-creditor cannot come in for more than his proportion with the bankrupt's creditors, whether he may not extend the lands in C , the purchafer's hand, C having purchafed before the bankruptcy, and this not prejudicing the creditors. So if $A$, the trader, gives judgment to $B$, and articles for a valuable confideration to fell to C , and then becomes a bankrupt, it feems the judgment fhall bind the lands in the bands of C , who articled to buy them; but, whatever money the purchafer was to pay the bankrupt, the lame fhall be liable to the bankruptcy. I Peer Will. cafe 212. Olebar verius Fletcher and the duke of Kent.
A bankrupt, before his barkruptcy, gave a note to A for 3 col. payable to order. $B$ buys in the note for 501 . yet $B$ is a legal creditor for 1001 , and may fue out a commiffina a-

gaiuft the bankrupt; fecus of an affignee of a bond, he not being the legal creditor, or if the indorfement were after the bankruptcy. i Peer Will. cafe 229. Ex parte Lee.
Where a bankrupt, after a certificate allowed, is fued for a debt due before his bankruptcy, the court, on the circumftances of the cafe, will relieve, though it will not relieve on a matter purely of mif-pleading. 2 Peer Will. cafe 13 , Blackhall verfus Combs, upon an appeal from a decree ar the Rolls, A draws a bill payable to B on C in Holland, for roql. C accepts the fame; afterwards A and C become bankrupts, and $B$ receives 40 . of the bill out of C's effects; after which he would come in as a creditor for the whole 100 l . out of A's effects: B permitted to come in as a creditor for 601. and the mafter directed to fee whether the other 401 . Was paid out of A's effects in C's hands, or out of C's own effects; if the latter, then C is a creditor for this 40 l . alfo; but, if out of A's effects, then 401 . of the 1001 . is paid off. 2 Peer Will. cafe 2 I. Ex parte Ryfwicke.
Buying and felling fock will not make one a bankrupt. 2 Peer Will. cafe 86, pleadings. Colt verfus Netterville.
One devifes lands in fee to his daughter, being a feme covert, for her feparate ufe, without appointing any truftees; the hufband is a tradefman, and becomes a bankrupt, yet the devifed premifles are not fubject to the bankruptcy. 2 Peer Will. cafe gI. Bennet verfus Davis.
A creditor coming in under a commifion of bankruptcy, though only to prove his debt, and oppofe the bankrupt's obtaining his certificate, yet he fhall not fue the bankrupt at law, unlefs he will wave all benefit of the commiffion; not only as to the dividends, but as to his voting againft the bankrupt's gaining his certificate. 2 Peer Will. cafe 123. Anonymous.
A trader contracted with the Eak-India company, at one of their fales, for the purchafe of a parcel of Eaft-India goods, to be paid for at a future day, and, before the day. of payment, became a bankrupt.
Lord Chancellor : Fommerly, in cafe a trader contrakled a debt payable at a future day, and afterwards (but before the day of payment) became a bankrupt, this not being a debt until after the bankruptcy, at which time the bankrupt could not do any act to alien or leffen his eftate, to the prejudice of his creditors, fuch contract was held void, and the creditor not allowed to come in for a fatisfaction under the commiffion.
And in fome cafes it was thought hard, that if one, on the buying of goods, or for other valuable confiderations, fhould give a note under his hand, payable at a future day, and actually had the goods delivered to him, or the money lent him, and, before the day of payment, the debtor fhould become a bankrupt, that in this cafe the creditor could not come in under the commifion with the reft of the creditors; wherefore, for the remedying of this, the ftatute of 7 Geo. I. cap. 31. was made. But the prefent cafe is not within that ftatute, becaufe the goods were not delivered, nor was the contract figned by the party *.

* See the flatute, in which there are no exprefs words to this purpofe.
At this day, if a bond or note be given by a trader upon a contingency, and before it happens, the trader becomes a bankrupt, and then the contingency happens, this is not within the aft, neither fhall the debt arifing $\dagger$ after the bankruptcy be fatisfied under the commiffion.
$\dagger$ But, if the contingency lappens before the bankrupt's eflate
be fully diftributed, fuch creditors hall come in pro rata.
A gives a promiflary note for 2001. payable to $B$, or order. $B$ indorfes it to $C$, who indorfes it to $D$. $A, B$, and $C$ become bankrupts, and D receives five fhillings in the pound, on a dividend made by the affignees againt $A$. D thall come in as creditor for 150 I. only, out of B's cffecis, and, if D paid contribution-money for more than 150 l . it fhall be returned. 2 Peer Will. cafe 129 . Ex parte L: fevre.
A goldfrith, after fhutting up his fhop, being greatly in debt, configned his flock in the wine trade, in which he was concerned, to J S, being a particular creditor, and, to fecure his debt, without the knowledge of J S, becomes a bankrupt the very next day; J S brings a bill, to have the benefit of this affignment, and decreed for him. 2 Peer Will. cale 137. Small verfus Oudley \& al'.
No fuch thing as an equitable bankrupt, but it muft be a legal one. Ibid.
There may be reafon to prefer one creditor to another. Ibid.
The time when the affignment was made is not material, fo as it be before the bankruptcy, but the juftnefs of the debt is marerial, 1 bid.
No objection, that the affignment was made by the trader without notice to the party, for this fhews it was done without the creditor's importunity. Ibid.
But, if the affigrment be of the bankrupt's whole eftate to prefer any creditor, this feems to be void. Ibid.
A trader, on marriage, gives a bond to a truftee to fecure roool. to the wite, if he furvive bim; the trader becomes tion made for it, nor hhill it fop the diftribution, in regard it may never be a debt; with the fame reafon an obligee in a bottomry-bond fhall not, before the return of the fhip, come in under a commiffion of bankruptcy; but, in either of thefe cafes, if the contingency happens before the bankrupt's eftate be jufly diftributed, fuch creditor thall come in for his proportion. z Peer Will. cafe 159. Ex parte Cafwell, ex'parte Cazaler, ex parte Bateman.
But, in the cafe abovementioned of the bond, the obligee, if if he declares upon his bond only, will be barred; fecus, if he fets forth in the declaration as well the condition as the bond. Ibid. Two joint traders becoming bankrupts, firf there is a joint commifion taken out, and commiftioners aftign, afterwards feparate commiffions and affignments made under them ; the court held, that the affignment of the commiffioners under the firft commiffion conveyed away all the bankrupts eftate, both jaint and feveral ; and, confequently, that the conveyance under the feparate commiffion was void. 2 Peer Will. cafe 160 . Ex parte Cook.
It is a refolution of convenience, that, in cafe of joint traders becoming bankrupts, the joint-creditors fhall be firlt paid out of the patmerfhip-effets, and the feparate creditors out of the feparate effects; and if any furplus of the partnerfhipeffects, after all the partnerhip-debts are paid, the feparate creditors to come in, and fo vice verfa, the partnerhip-creditors to come in on a furplus of the feparate eftate. Ibid.
Two joint traders becoming bankrupts, firft there was a joint commifion, and the commiffioners affign; afterwards feparate commiffions and afignments under them: the court held that the affismment under the firft commilion conveyed all the bankrupts eftate, both joint and feveral, and, confequently, that the conveyance under the feparate commifion was void. Jbid.
One fues out a commifion of bankruptcy, and for fix months, keeps it, without doing any thing upon it; the court, for this reafon only, fuperfeded the commiffion, though it was executed, and the trader found a bankrupt before any application to fuperfede it. 2 Peen Will. cafe 177 . Ex parte Pulefton. An affignee under a commifion of bankruptcy dies very much indepted by bond, \&c. and the creditors of the bankrupt petitioned that the adminiftrator of the affignee might account before the commiffioners, he having fome of the bankrupt's effects in fpecie in bis hands; but the adminiftrator denying it upon oath, and fwearing that thefe were debts by fpecialty beyond the affets, the court thought this proper for a bill, and not for a fummary way of accounting before commiffioners. 2 Peer Will. cafe 178 . Ex parte Markland.
On a joint commiffion againft two partners bankrupts, the feparate creditors, though they have taken out feparate commiffions, thall yet be at liberty to come in to oppofe the allowing of the certificate. 3 Peer Will. cafe 7. Horlley's Cafe. Where two partners are bankrupts, and a joint commiffion is taken out againt them, if they obtain an allowance of their certificate ; this will bar as well their feparate as their joint creditors. Ibid.
So on the other hand, if there be two partners, and one of them becomes a bankrupt, and on a feparate commiffion being fued out againft him, his certificate is allowed, this does not only difcharge the bankrupt of what he owed feparately, but alfo of what he owed jointly, and on the partnerShip account : becaufe, by the act of parliament, the bankrupt, upon making a full difcovery, and obtaining his certificate, is to be difcharged of all his debts. Now the debts he owes jointly with another, are equally his debts as what he owes on his feparate account; confequently he is to be difcharged of both his joint and feparate debts; and fo it has been determined by the judges of B. R. by the lord chancellor Parker, ex parte Yale, 3 July, riz2r. Ibid.
On a joint commiffion, the joint creditors are firf to come in on the partnerfhip effects, and, if there remains a furplus, then the feparate creditors are be admitted. Ibid.
A contingent intereft, or poffibility in a bankrupt, is affignable by the commiffioners. Devife to fuch of the children of $A$ as thall be living at his death; A has iffue $B$, who, becoming a bankrupt, gets his certificate allowed; after which A dies; this contingent intereft is liable to the bankruptcy, forafmuch as the fon, in the father's life-time, might have releafed it. 3 Peer Will. cafe 30 . Higden \& al' verfus Williamfon.
Though the affignee of the effects of a bankrupt claims under the act of parliament, yet, as the ftatute of limitations might be pleaded againft the bankrupt, by the fame reafon it is pleadable againft fuch affignee. 3 Peer Will. cafe 33. SouthSea company verfus Weymondfell.
One not in debt, nor then a trader, makes a voluntary fettlement on a child, and afterwards becomes a trader and a barikrupt; this fettlement not liable to the bankruptcy, 3 Peer Will. cafe 75, Lilly verfus Oborn.
If $A$ and $B$ are bound in a bond jointly and feverally to $J S$, he may elect to fue them jointly or feverally; but, if he fues them jointly, he cannot fue them feverally, for the pendency of the one fuit may be pleaded in abatement of the other:

Vos. 1.
by the fame reaion, if A and B , joint traders, become bankrupts, and there are joint and feparate commiffions taken out againft them, and $A$ and $B$, before the bankruptcy, become jointly and feverally bound to J S ; JS may chufe under which commiffion he will come, but hall not come under both. 3 Peer Will. cafe ir 3. Ex parte Rowlandfon.
If three are bound jointly and feverally, the obligee cannot fue two of them jointly, for this is fuing them neither jointly nor feverally. Roll, Abr. 148.
If two joint traders owe a partnerfbip-debt, and one of the parners gives a bond as a collateral fecurity, for payment of this debt; here the joint debt may be fued for by the partnerthip creditors, who may likewife fue the bond given by one of the traders. 3 Peer Will. cafe 113 . Ex parte Rowlandfon. A Choemaker is allowed to be within 13 Eliz, cap. 7. be living by his credit, in buying leather, and felling it wrought, Cro. Eliz. 268. Cro. Jac. $5^{8} 4$. Cro. Car. 3r. 3 Mod. $33^{\circ}$. A weaver and dyer are within the flatute, for they get their living by buying and felling. Cro Jac. 584 .
If one covenant with the king to victual the fleet at a certain rate, and for that ufe buys a great quantity of provifion, sic. though with the furplus he victuals merchants, this will not make him a trader within the act, it being one act only, and not a continued trading. I Vent. 270. 2 Show. 270. Sir Thomas Littleton's cafe.
A carpenter that fells wrought timber feems to be within the ftatuté. 3 Mod. 155.
The buying part of a fhip makes no trading, it being no buying or felling within the ftatute, but the party's in carriage for himelf is an evidence of trade and merchandizing. - If a man repairs a hhip, on the credit of the bottom, and takes a fhare therein for debt, and employs the fhip in carriage, it bas been held, as this is compulfory, only to obtain bis debt, and not the way the party hath put himfelf in to get his livelihood, that this thall not be taken as an evidence of trading, t Sid. 4 II. I Vent. 29. 2 Show. 268. 2 Keb. 487.
A man's buying and felling do not bring a man within the ftatutes, they intending fuch as gain the greateft part of their living thereby.-A farmer bought and fold cattle; it was adjudged that he was not a bankrupt, becaufe he only fells the profits raifed from the land. March 35. Cro. Jac. 549. I Danv. Abr. 687.
If a man contract a debt, while a trader, and leaves off, and lives on his eftate, and afterwards abficonds for this debt, he is a bankrupt, he living by his trade, when the debt was contrated.--But, if a merchant leaves off his trade, and after contracts-debts, and then fells off the furplufage of his goods, but hath no trading correfpondence, he is no bankrupt. Palm. 325. I Vent. 5. 3 Lev. 17. I Sid. 4 II. Sir Robert Cotton's cafe. But, where the fame cafe comes on again, the cout held that he was a bankrupt, otherwife the mifchief wouldjbe great ; for men cannot take notice, when another withdraws his trade. I Vent. 166.
The trader gives over trade, and then contracts debts, and goes into trade again on a new fock, on the petition of fuch intermediate creditors he cannot be made a bankrupt, he not being trufted on the credit of his trade. I Sid. 41 I . 2 Show. 268. I Vent. 5-But, if fuch a perfon leaves goods in the hands of another, to be difpofed of, and is partner with him in the lofs or gain, he may be a bankrupt, he carrying on trade by proxy. Palm. 325.-But having a joint ftock does not make a bankrupt, without proof of difpofal thereof; for other wife no commerce is driven. 3 Keb. 487.
The trader becomes fecurity for another; he is a bankrupt within the ftatute, becaufe he is trufted on the reputation of his fock and dealing, as well where he is fecurity, as where he contracts for his own debts. Palm. 325 .
If a man keeps his houfe for a long time, this does not make him a bankrupt; but, if he conceal himfelf within his houfe but for a day or hour, to delay or defraud his creditors, he is a bankrupt. Palm. 325.
If there be a procefs out againit a merchant, and he keeps houfe to prevent arref, and after goes out to market, and other places, but, hearing of a new procefs, keeps houfe again, and after goes out again at large, he is no bankrupt; the act of bankruptcy being purged by his going abroad. Cro. Eliz. 13. Godb. 25. 1 Lev. 13. 2 Sid 177.
If A commits a plain act of bankruptcy, as keeping houfe, \&c. though he after goes abroad, and is a great dealer, yet that will not purge the firlt act of bankruptcy; but, if the act was doubtful, then going abroad and dealing explains the intent of the firlt act, and that it was not done to defraud creditors, and keep out of the way.-If, afier an act of bankruptcy, he pays off or compounds with his creditors, he is become a new man.
If a man permit himfelf to be outlawed, to deffaud his creditors, it is a caufe of bankrupicy: fo that, on a fpecial verdict, if a jury find that he was outlawed, and do not find that it was to defraud creditors, that will not make him a bankrupt. I Keb. II. Bradford's cafe.
A commiffion of bankruptcy muft be granted by my lordchancellor, lord-kecper, or commiffioner of the great fea!, on application of creditors. 2 Chan. Ca. 190.

The power of eommiffoners of bankrupts is, by virtue of the feveral atts of parlament, which oughe to be purfued, as they are fubject to the action of the party grieved, for he hath no other remedy. 4 -Intt. 277.-But if, in their proceedings, they commit fome minuke, which appears to be only an error of their judgment, they fhall not be lidale to an action. Comb. 39r.
Though on exatnining of perfons according to 13 Eliz. cap. 7 . by commifioners, yet a bill for the difcovery of the fanie matters may be filed againtt them in Chancery. 2 Chan. Ca. 73.-They muft difclofe and anfwer directly to the queftions put. I Vent. 3?4.
A was fummoned before commifioners of bankrupts, and the queftions afked him were, (I.) To give an account of all matters which he knew concerning the bankrupt's effate. (2.) When, and in what manner, did he aid the bankrupt in carrying away his effects, or in embezzling or concealing the fame, to which he refuled to anfwer, becaufe the firt was too general, and the fecond tended to accufe himfelf, and bring him within the 13 Eliz, cap. 7. which gave a penalty of double the value of the goods, againt him who conceals them; for which refufal the commifioners committed him; and their warrant of commitment concluded, that he fhould be committed until he conform to the authority of the commiffioners. On habeas corpus brought by A againft B . R. the court inclined that a witnefs was not to pay univerfal obedience to all queftions alked him by the commiffoners; nor was he to anfwer any thing which tended to accufe himfelf; but for the conclufion of the warrant of commitment, they held clearly that he fhould be difcharged; for the act directs, that he fhall remain without bail until he fubmit to the commiffioners to be examined; which being a particular authority, and in reftraint of liberty, ought to be conftrued ftrictly, and the very words of the flatute purfued. 5 Mod. 390: Bray's cafe. Com. 308,3 c9. S. C. I Salk. 390, 39I. S. C. Creditors, upon what fecurity foever they be, come in all equal, unlefs fuch as have obtained actual execution before the bankruptcy, or had taken pledges for their juft debts; and the reafon is, becaufe from the act of bankruptcy all the bankrupt's eftate is vefted in the commifioners, who are eftablifhed as courts of juftice touching the bankrupt's eftate, and before whom the creditors mult authenticate their debts, in order to receive their dividends; and, therefore, they muft equally admit all perfons to make proof of their debts; but fuch as have pawns or mortgages have a property in the thing fo pledged, precedent to the tranlation of the property to the commiffioners; in which cafe they have only an equity of redemption, and are in no better condition than the bankrupt himfelf; that the bankrupt, before the affignment of the commiffioners, has fuch a property as will maintain an action for the recovery of the goods. I Salk. Io8.
If a man commits an act of bankruptcy, and after continues in poffefion of his lands for four years, and then fells, and after commits another ad of bankruptcy, and two years after a commiffion is taken out, \&c. this fale fhall ftand, for the a \& of bankruptcy by which the fale is to be avoided mutt be done within five years before the commiffion fued out. 3 Lev. 13, 14. I Keb. II, 12, 722. 2 Sid. 69, 114, 196.

If $A$, having committed an act of bankruptcy, keeps on his trade, and four years after binds his fon apprentice with a goldfinith, and pays with him 120 l. and two years after a commiffion is taken out againft $A$, this money is not affignable by the commiffioners, being paid fo long before the commiffion, and without fraud. 3 Lev. 50. Skin. 22.
If a man purchafes a copyhold to himfelf and wife for life, remainder to his fon and his heirs, and two years after he becomes a trader, and four years after a bankrupt, there being no fraud in this cafe, nor any intent to deceive creditors, the intereft of the wife and heir of the bankrupt cannot be defeated by this att of bankruptcy. Cro. Car. 550. Grifp. \& Part. I Jones 438, 439. March 37 .
If the father conveys to his children, to fecure them money given by their grandfather, if it can be proved the father had effects of the grandfather's in his hands at the time of the execution of the deed, it fhall not be avoided. I Mod. 76. But, if there be no confideration, a fettlement on his wife and children fhall be conftrued a fettlement on himfelf; and fuch an intereft vefts in the affignees. Style 289. An obligation taken in the name of another, to the ufe of a bankrupt, is fuch an intereft in the bankrupt, that the commiffioners may affign it, and after fuch affignment the obligee cannot releafe it. Palm. 505.
A man devifes his lands, which were in mortgage, to be fold, and the furplus of the money to be paid his daughter, who married one that foon became a bankrupt, and the commiffioners affigned this intereft of his wife's; the hulband died, and the affignees brought their bill againft the wife and truftees, to have the land fold, and the furplus of the money paid them; but the court would not affif in ftripping the wife (who was wholly unprovided for) of this intereft, but difmiffed the bill. Abr. Eq. 54.
A puts out 10001 . at intereft to the Eaft-India company, and takes bond for it in the name of $\mathrm{J} S$, his wife's rela-
tion; A becomes a bankrupt; JS is fummoned befiere the commiffioners, but, before examination, he tellls us the EifIndia company that the money was not his, but that they flould pay it to the perfon who brought the bond; A's wife brings the bond, and has the money paid her; equity will not relieve againft it. Preced. Chan. 18.
A legacy of $1000 \%$, was given to one after the death of her mother, when fhe fhould attain the age of 21 years, and the defendant was appointed truftee for the raifing and payment thereof out of certain lands; the legatee was drawn to marry one who foon proved a bankrupt, and the commifioners affigned his effects, and gave him a certificate of his conformity. - The affignees biought a bill againft the truftees for 1000 l . who infifted that the affignees could be in no better condition than the hufband; and that, if he were plaintiff, he could not prevail without making a fuitable provifion on his wife; that this legacy being a double contingency, viz. of the death of the mother, and the legatee's arriving at the age of 21 years, at the time of the bankruptcy, was not fuch an intereft as could be affigned; and the court held that, though both contingencies have fince happened, yet thefe being fince the affignment of the bankrupt's eftate, and, fince obtaining bis certificate, he was now difcharged as a bankrupt; and this portion could not pafs without a new affignment, which the commiffioners could not make, their commifion being determined; and fo difmiffed the bill. Ca. in Eq. Abr. 54
If a fieri facias is taken out, and indorfed according to the ftatute, and delivered to the heriff, and after, the fame day; the defendant becomes a bankrupt, and the heriff levies 400 l . of the goods of the defendant, and pays it to the plaintiff, yet the commiffioners may affign thele goods notwithitanding, \&cc. for, by the delivery of the writ to the fheriff, the goods are bound in no other manner than before the flatute they were bound from the tefte of the writ; and by the delivery of the writ the execution is nor ferved or executed. I Lev. 67, 191, 192. I Keb. 930, 932. I Sid. 271. Cro. Eliz. 174.
Though the bankrupt's eftate is transferred to the affignees, yet muft they purfue the fame remedies for the recovery of it as the bankrupt himfelf; therefore, if a debt upon a fimple contract due to the bankrupt is affigned, an action of debt will not lie againlt the executor of the debtor, but the affignee muft bring his action on the cafe. Cro. Car. 187. I Jones 223. The plaintiff declares upon an affumpfit for 43 l . is. and fets forth an affignment of the debts of the bankrupt, mentionat ${ }^{\text {© }}$ in quadam fehedula continen' predict' fummam 431. Is. and the jury find he was indebted only 4 I . I s. which he promifed, \&c. and that the commifioners affigned debita pred' in quadam fchedula continen' præd' fummam 43I. is. and, if this is the fame promife, concludes for the plantiff. Allen 28, 29. Style 62. S. C. Raym. S. C. cited.
If there be a joint bond to $A$ and $B$, and $A$ becomes a bankrupt, \&c. the affignee cannot bring an action alone; but if affigned to $B$, he alone may bring an action, being intitled to one moity in his own right, and to the other for the benefit of creditors, by virtue of the affignment. i Lev. 17. 1 Keb. 167 . Raym. 6, 7.

In affumpfit the plaintiff declared, as affignee under a commiffion of bankruptcy awarded againft J $S$, who became a bankrupt, \&c. and that the defendant was indebted to $J S$, $\$ c \mathrm{c}$.- On demurrer to the declaration it was objected, that it was uncertain, it not being hewn how J S became a bankrupt, viz. and that impleading fimony, the particular act muft be fet forth; but it was held well enough in this cafe, the ftatutes mentioning the word bankrupt, but in the flatute againft fimony no mention is made of the word; befides, in this cafe, the plaintiff is a ftranger to the bankrupt, and it cannot be prefumed that it lies in his knowledge how he became a bankrupt. Carth. 29. Pepys \& Low. Comb. ro8. S. C. That the affignee muft lay the promife to be made to the bankrupt. Vide 6 Mod. 13 I .
If the commiffioners make a fraudulent diftribution, it may be fet afide in Chancery. 2 Vern. 158, 162 . For the cafes, which have been on the flatute relating thereto, 13 Eliz. cap. 7. Vide 2 Co. 26. 8 Co. 98 . B. I Jones 203. 2 Sid. 177. Godb. 195. How diftribution is to be under a joint commiffion taken out againft partners, vide I Chan. Ca . 193. 2 Vem. 293, 706.

## Higden verfus Watkinfon. Michael. 6 Geo. II. in Chancery.

W R, by his will, gave to his wife for life all his lands, \&c. and after her deceafe to his daughter, Elizabeth Watkinfon, for her life, remainder to B S and J S, and their heirs, in truft, to fell the premiffes, and to pay the money arifing by fuch fale to the children of his faid daughter Elizabeth, thatThould be living at her death.
The teftator died in 1720.-The wife entered and enjoyed till 1726 .- Elizabeth, the daughter, entered and enjoyed till 1729, and then died, - In r 126 a commifion of bankruptcy iffued againft William Watkinfon, the defendant's only fon of Elizabeth, and the commiffioners affigned his eftate, and, in 1728, he had bis certificate.-The queftion was, whether the reverfionary intereft of William Watkinfon was fufficient

to in thle the alfignees to it, when it thould come in poffer. fion.-York, attorney-general, infifted, that, as it was fuch an interef as the bankrupt himelf might difpore of, the affignees were intitled to it, under the ftatutes of Henry VIII. and queen Elizabeth, which give the commifioners power to and queen filizn all fuch intereft as the baukrupt could have lawfuliy difpoled of : and the ftatute of 21 James I. fays the fatutes already made thall be conftrued largely for the benefit of the creditors, - That the alfignees have the fame liberty, right, and benefit of performing any covenants as the bankrupt himfelf had; and that there were feveral cafes in ferjeant Goodwin's book to that purpofe. - That the word lawfully thall include equitable as well-as legal interefts. -That there was a cale to tbis purpofe determined by the mafter of the Rolls, lord chancellor, and houfe of lords, which was that of Theobald and Dufay, i Vern. 7. where A, poffeffed of a term, devifed it to his wife for life, remainder to his two daughters, and there affigns, for the refidue. - The hufband of one of the daughters affigned his intereft to Theobald, during the life of the wife of the teflator, which was held to be good againft his wife.-That affignees are intitled to" a bond due to the wife, while the was fole, becaufe the hufband might havedifpofed of it by releafe, and therefore, as the bankrupt might well have difpofed of this intereft, he hoped the affignees were well intitled to it.
Note, This caule came to be reheard before the lord chancellor, from a decree of the mafter of the Rolls for the affignees, which was affirmed.

## Degols verfus Warid, to Feb. 1733, Chancery,

Lord chancellor faid, that an original will cannot be made ufe of here as evidence in relation to the perfonal eftate, but the probate of the will in the firitual court muft be read for that purpofe. - This caufe came on to be reheard from a decree of the late lord chancellor.- The firft objection to the decree was, that Mr. Ward was a bankrupt, and, therefore, thofe creditors ought to have come in under the commiffion, and were not proper here, as it appeared the commiffion was taken out by covin, and lord chancellor faid that fhould not hinder the honeft creditors from having their remedy.-As to the reft, the dec̣ree directed an eftate, which John Ward had tonveyed to Ralph Ward, to be fold for payment, in the firt place, of what hould appear to have been really advanced by Ralph Ward, and then of the plaintiff's debts.The cafe was thus upon an account ftated between John Ward and Ralph Ward.-There was a ballance of 60001. due to Ralpb, and 5452 1. due from him to John.- John took a note for the fum due to Bim payable to bis fon Knox Ward, and, in fatisfaction of the ballance due to Ralph, he conveys to him and heirs an eftate of 200 I . a year, and very confiderable allum-works, the poffeffion whereof had been in Ralph, as a truftee for John.- Lord King was of opinion this conveyance was fraudulent, and within the intention of the flatute of king James, againft fradulent con-veyances.- It was objected to the decree, that this matter was properly triable at law, and not in this court- Lord chancellor thought it might be proper to be examined at law; yet this court might take notice of fuch a fraud, and therefore affirmed the decree, and ordered the plaintiff the depofit. -Mr. Verney prayed a receiver might be appointed, as Mr. Ralph Ward had been to long in poffefion; but, as great part conlifted in works, which could not be well managed by a receiver, and it appearing that the eftate was decreed to ftand as a fecurity for what thould be due to Ralph Ward on a note for 1200 l. as well as the ballance, it was refufed.

## Bracey verfus Dorfon. Michael. 7 Geo.II. K. B. Nov. 16, 1733.

A B. becomes a bankrupt, but, before any affignment made, the commiffioners of the land tax feized his goods, according to the fummary way directed by the act of parliament.The commifioners of bankruptey fent their warrant, and attached the goods in the bailiff's cuftody. - The queftions here were, firit, whether, as the act of bankruptey was committed before the feizure of the goods, the affignment fhould by relation veff the goods in the aftignees, as if this had been the cafe of a common perfon? - The next queftion was, whether, as this was a cafe in which the crown was concerned, it differed from that of a common perfon?
Lord Hardwicke delivered the opinion of the whole court on the 28th of June following.-That, if this had been the cafe of a common perfon, the affignment would bind the goods by relation, although taken in execution, unlefs after fale and the delivery of the money to the plaintiff. - But, as this was a cafe of the crown, it differed much from that of 2 common perfon: for the king cannot come in under a commiflion for a diftributive Ghare of a bankrupt's eftate.-And, unlefs' an act of parliament particularly mentions the king, he fhall not be bound by it. - That it is agreed on all hands, that an extent fhall bind the goods, even from the tefte, and Why fhall not the commiffioners warrant, from the time of feizing the goods under it? for, by the act of parliament, the commidioners have this power of feizing the collector's
eflates given them (the colleftor being confidered as the officer of the parifh, for that the parioh is anfwerable, if he make default; and the receiver-general is the officer of the crown) wherefore the court is of opinion, that the king, by the feizure under the warrant' of the commiffioners of the land-tax, gaired fuch a lien upon the goods, that thereby they became bound, as againft Il other perfons. - That the crown is not $b$ und by the ass made concerning bankrupts. -That it hath been determined, as in the cafe of Hanbury, 2 Show. 432 , that, where an extent comes before the affignment, it would be good againf the affignees.-But that the crown is bound from the time of affignment; for by the affignment the property of the goods is altered, and they are vefted in other perfons, i. e. the affignees, -That an extent, at the fuit of a common perfon, fhall not bind the crown till it is aclually executed. - That in the cafe of Payne and Pitt, I Salk. 180, the king hall have preference to a common creditor.-And when he has feized gonds, no perfon thall take them in execution, without firf fatisfying the king's debt; and cited the cafe in Cro. where it is faid a liberate. Shall bind in the cafe of a common perfon, from the time of taking the goods under the extent, and that the goods, when taken by the crown, were in pawn, as it were-fo that no perfon could have them without fiff paying the money they were charged with.-The court was of opinion with the defendant, and ordered the plaintiff to pay the cofts of a nonfuit, this being an action of trover, brought by the alfignees againft the receiver-general, for the goods taken by the warrant of the commiffioners of the land-tax.

## Biddlecome verfus Maflow. Hill. 16 Geo. II. 28 February.

A man having bequeathed the refidaum of his perfonal eftate to the wife of J S , who did not appear to have been then indebted to any perfon whatfoever. - Soon after, J S agreed to fettle, and did fettle and affign this refiduum to truftees, for the feparate ufe of his wife, but with a provifo that the truftees might, in their difcretion, at any time after, lend any part of the money to J S, to employ in trade.-Before the making the fettement, J S received too l. part of the refiduum, and, after making the fettlement, the truftees lent him 4001.-After this, J $S$ contracted fevetal debts, and became a bankrupt, - The bill was brought by the truftee againft the bankrupt, and his affignees, that they might be admitted creditors for the 500 l . under the commiffion. Per lord Hardwicke chancellor. This fettlement, being made before the bankrupt was indebted to any perfon, appears to be a fair fettement, and not to be avoided as fraudulent by the ftatute of 13 Elizabeth, and held, as to the 4001 . that the plaintiffs ought to be admitted creditors under the commifion, but that the 100 l . ought to be confidered as a pay* ment to the hulband, and decreed accordingly.
N. B. The truftees had applied to the commifioners, \& c. under the commiffion, to be admitted creditors, but wereg rejected.

## Bromley verfus Child. Michael. 17 Geo. II.

A commifion of bankruptcy had iffued againft Sir Stephen Evans, about 30 years ago, and fome time fince it was difcovered that the bankrupt had a much better eftate than what was fufficient to pay all'his debts; and now the queftion was, whether the creditors fhould be allowed intereff for their debts, out of the furplus?-It was argued for the reprefentatives of the bankrupt, that the debt claimed, being approved and allowed, is after like a judgment, which thall never carry intereft for the money adjudged, and that, the bankrupt in this cafe having obtained bis certificate, the furplus, after payment of the debts proved, ought to be paid over to the reprefentatives of the bankrupt, without any deduction being made for the intereft of the debts proved.
For the creditors it was argued, that the furplus eftate, now in queftion, is not an eftate acquired by the bankrupt, after the obtaining his certificate, but is part of the eftate originally affigned over by the commilfioners to the affignees.That the creditors have as much right to be paid intereft for their debts, as they have to be paid their principal.-That 'intereft-money is the common damages for detaining of money; and is but as the fruit of the branch.- That the bankrupt's certificate in the prefent cafe was only obtained, by the bankrupt from the commifioners, and was not confirmed by the chancellor till after the bankrupt's death.
Lotd Hardwicke chancellor obferved, that this queftion had come before him upon a petition: but that he had directed a billto be brought in refpect that; if he had determined it then, no appeal would have laid from his determination, as it now does, being brought in queftion in a caufe in court.
As to the certificate, he declared that he thought the fame valid, though not confirmed, till after the bankrupt's death. For that the privileges arifing from it are of fuch a nature, that the reprefentatives of the bankrupt may take advantage of them as well as the bankrupt himfelf. - That the certificate is to be confidered in the nature of a releafe, it's force arifing from the confent of the creditors.
It has been objected on the fide of the reprefentatives, that they ought not to be bound by the proof made by the creditors

## B A N

B A N

Wefore the commifioners, which is a proof only upon their own oaths; but, I think, that after this great length of time, they ought to be bound by that.- The oath of the party is always, in cafes of this kind, allowed in the firf inflance, as fufficient to prove the debt claimed; and though they may be controverted before the commifioners, and the greas feal may be applied to, to have an enquiry directed, yet fuch application or objections are to be made in a reafonable time. The commiffion may be proceeded in, or renewed, notwithtanding the death of the bankrupt.
Then as to the main queftion decreed, That the feveral creditors fhould be paid interelt for their delots, before the furplus is paid over by the affignees to the reprefentatives of the bankrupt, but that the bond creditors fhould not be paid intereft added to their debt beyond the fpecialties of their bonds. I Vern. 350.-The commifioners have a mixed right of jutifdiction, legal and equitable, to be exercifed by a found difcretion, and all the ftatutes plainly imply this, and parzicularly the flatute of the Izth of Elizabeth.-The commiffioners, at fift, always prefume a failing fund, but, when the contrary happens, intereft is to be confidered as part of the debt; it is a kind of penalty for the non-payment. - The whole effate of the bankrupt is vefted in the affignees for payment of the debts. - To lay intereft ought not to be paid, would be to difcharge the fund before the debt paid.-It has been argued, that, as the eftate ceafes to carry interef, no intereft ought to be charged on it; but this argument is fal-lacious.-Suppofe the eftate does produce intereft, thall fuch intereft be paid over to the bankrupt, before the creditors are fully paid? The words vefting the bankrupt's eftate in the commiffoners; viz. all that the bankrupt may lawfully part with, includes eftates tail, which the bankrupt may part withal by recovery, and that the ffatute enabling the commifioners to difpofe of eftates tail in the bankrupt, is to be underftood of eftates tail in him where there is a precedent eftate for life, which eltates tuil, by reafon of the precedent eftate for life, the bankrupt could not part with, nor the commiffioners, or the affignees before the flatute.

## Jones verfus Brown. Mich. 18 Geo. II. i744.

The bill in this cafe was by the plaintiff, as affignee under a commifion of bankruptcy, to have the benefit of an eftate charged to belong to the bankrupt, which the bankrupt, before any act of bankruptcy, in confideration of 600 l . paid to bim by his wife's brother, and of 400 l . promifed by the brother to be further paid, had conveyed to truftees, to the ufe of himfelf for life, remainder to his wife for her life for her jointure, remainder to other truftees for a term of 99 years, remainder to the firft and other fons, \&c. of the bankrupt by his wife, and, this fettlement being made after marriage, it was infifted not to be good, as againft the creditors.-And, if it was good, yet that, there being no truft declared of the 99 years term, it refulted back to the ufe of the bankrupt, the granter, and confequently that the affignees had a right to difpofe of this term fubject to the eftate for life to the wife.
Lord Hardwicke, chancellor, held the fettlement to be upon a valuable confideration, and good, and that the term fhould not refult back to the bankrupt, as a beneficial term; but that it oughr to attend the inheritance, according to the limitations in the fettlement.
In this cafe, where the fettlement was produced on the fide of the defendants, it appeared to be an indenture of releafe, and thereupon the counfel for the plaintiffs called for the leafe for a year, and, the defendants not being able to thew any, it was infifted for the plaintiffs, that this was no conveyance.-But, Lord Hardwicke, chancellor, without fuffering it to be argued, declared, that the want of the leafe for a year would not in equity, whatever it might at law, vitiate the conveyance, for that, if no leafe for a year at-all had been made, it is a defect that a court of equity ought to fupply, where the conveyance appears to have been made, as in this cafe, upon a valuable contideration.

## Pattinden verfus Micho, 20 June 1735, Chancery.

The fum of goo l. being a legacy left Rodbear's wife, was, upon his marriage, vefted in truftees, to pay the intereft to Rodbear for life, then to his wife for her life, and, after both their deaths, to their children.-Rodbear borrowed of the truftees 300 l . and, after fome time, paid them 2061 . and afterwards became a bankrupt. - The affignees bring their bill to have the intereft of this 206 l . paid to them by the truftees for the ufe of the creditors.- The defendants infifted, that the affignees ought to pay them the who'e 94 l. remaining in the bankrupt's hands, before they could be intitled to receive any part of the intereft. - And it was agreed on all hands, that, if the bankrupt himfelf had brought the bill, he could not have the intereft without firf paying the 941 . The defendants infifted, that, as the affignees ftood in the place of the bankrupt, they could have no other relief than he himficlf might have had.
Lord chancellor faid the claufe in the act of parliament for Atting one debt againt another, when there was an account
depending, extended only to fuch as were due at the time of the bankruptcy. - That affignees did not always ftand exactly in the fame place as the bankrupt, though they did in feveral cares.-As where a legacy is given to the bankrupt's wile, there the affignees cannot receive that legacy without doing what the bankrupt himfelf mult be obliged to do; that is, to make a fettlement upon the wife of it.-In fome cafes, they ftand on different footings, as where, under the commiffion, all debts come in equally, though they affect the bankrupt himelf one befcre another; and was of opinion, that the aflignees were intided to receive the intereft of the 2061. without firf paying the 941 .

In this cafe there was a joint commiffion taken out againft Rodbear and his partner, and lord chancellor faid, that, if this 941 . was a feparate debt, the truftees would be intiled to retain the intereft, unlefs the 94 l. was paid; and gave directions, that, if the affignment was of the feparate eftate, the intereft was to be paid; but, if it was an affignment of the joint eflate, the bill to be difmiffed with cofts on either fide.But, if the affignees brought a new bill, with liberty to apply for their cofts of this fuit.

## Stephens verfus Sole, 5 July 1736, Cbancery.

William Tappenden, fon-in-law to the plaintiff, made a mortgage for fecuring to the plaintiff 14001 . and intereff, dated 1729, of a leafehold eftate, and' three hoys; and afterwards, in 1733, became a bankrupt.-Plaintiff' brought bis bill againft the affignees to have fatisfaction for this money, or that the defend ants might be foreclofed. - Tappenden continued in poffeffion of the leafehold eftate, and navigated the hoys, and appeared as the vifible owner to the time of his bankruptcy, and during that time made an ablolute bill of fale of one of the hoys to one of his fervants, to protect him from being preffed.-Sollicitor general, Verney, and Melmouth infifted, that this mortgage was void,' as againft the creditors, by the ftatute of king James, the bankrupt continuing in. poffefion of the hoys, and appearing as vifible owner of them, to the time of the bankruptcy.-The flatute of $21 \mathrm{Jac} . \mathrm{I}$. chap. 19. § II. fays,-Be it enacted, That if at any time hereafter any perfon or perfons thall become bankrupt, and, at fuch time as they fhall become bankrupt, fhall, by the confent or permiffion of the true owner, or proprietary, have in ther poffeffion, order, and difpofition, any goods or chattels, whereof they fhall be reputed owners, and take upon them the fale, alteration, or difpofition, as owners, that in every fuch cale the commiffioners are-to difpofe thereof as fully as any other part of the bankrupt's eftate; and, in §. I3, the commiffioners have a power to difpofe of the bankrupt's effate, goods, \&ic. in mortgage, upon tender of the money before the condition broken.- They infifted that this cafe was within the inconvenience provided againft by the act of parliament, feeing it gives the bankrupt a falfe credit, in order to the defrauding of his creditors.- Melmouth cited Twine's cafe, in the third report of Fazakerly for the plaintiff, urging that it would be very inconvenient to tradefmen if they were obliged to difpofe of their goods, whenever they wanted to raife a fum of money.-As to the falfe credit, it is true the bankrupt has a credit by continuing in poffeffion, but, at the fame time, his eftate is increafed as much as by the money he received; and it would be very hard if the creditors fhould have the benefit of the plaintiff's money, and yet at the fame time take his fecurity from him.-He infifted that the fection before cited intended only fuch goods, the property of which was abfolute in another perfon, and not fuch goods as were mortgaged, becaufe in the I $3^{\text {th }}$ fection it is faid in what manner the commiffioners are to difpofe of lands or goods in mortgage.
Lord chancellor faid, that as this was not a fraudulent tranfaction, as to the leafehold effate, it cannot be faid that the mortgage of the hoys is to be confidered as fraudulent, and therefore Twine's cafe is different from this, as there was the appearance of fraud in that cafe.-As to the hoys, the fingle queftion is, whether this tranfaction is within the fatute of king James.-The bankrupt continued in poffeffion, and made an abfolute bill of fale to one of his fervants, and appeared the vifible owner, but paid the intereft for the 1400 l . pretty regularly. If this had been an abfolute bill of falc to the plaintiff of thefe hoys, and the bankrupt had continued in poffeffion of them afterwards, there could have been no doubt but that would have been within the act of parliament; but, in the prefent cafe, the bill of fale is fubject to a redemption, and the abfolute property is certainly not in the mortgagee. - Yet in law the mortgagee is confidered as abfolute owner. - Therefore the fafeft way, faid his lordfhip, is to confider this as within the meaning of the act of parliament, though he faid, at the firft view of the cafe, his opinion was otherwife.-In this view of the cafe it appearing that the leafehold eflate and hoys were not worth the money they are charged with by the mortuagee, what reafon could there be that the plaintiff fhould let the poffefion continue in the bankrupt, when his intereft became abfolute?' - Tis true it was kind to the bankrupt; but why hould other perfons fuffer by his kindnefs? And, fince fomebody mult fuffer, it is moft reafonable he who by his laches occations this queftion,

Ghould be the perfon.-This claufe is not built fo much upon the fraud, as the inconvenience that would arife, if perfons were to appear as vifible owners of things which do not belong to them-The other fection, in relation to mortgages, does not alter the confruction of this claufe, defendants fubmitting to be foreclofed of the leafehold effate--Ordered the mafter to fet a value upon it, and the plaintiff to come in for the refidue under the commifion, and no colts on either fide

The fubfance of the ftatutes in England relating to bankrupts, is as follows.

According to the flatute of 13 Eliz. cap. 7. perfons liable to bankruptcy are thofe, who having exercifed trades by buying and felling wares, depart the realm, conceal themfelves, or permit themfelyes to be fallly arrefted, to defraud creditors.-T The lord chancellor, upon a complaint in writing againt a bankrupt, appoints commiffioners to fell the bankrupt's lands, as well copy as free, annuities, goods, chattels, debts, \&cc.Commifioners have power to convene perfons fufpected to have any of the bankrupt's effects.-Perfons refufing to difclofe, or detaining lands, \&c. to forfeit double the value.-If the perfon indebted abfent himfelf after five proclamations by commiffioners, to be out of the king's protection, and perfons concealing him to be imprifoned and fined. -The creditor not fatisfied, may afterwards take his courfe at law.
Stat. I Jac. c. 15. By this fatute a creditor fhall be received, if he comes in, in four months.- Grants of lands, \&c. of a bankrupt, in other men's names, except to children upon marriage, or for a valuable confideration, void.-If, upon warning left at the ufual place of refidence three times, the bankrupt does not appear, five proclamations to be made, \&c -Refuling to be examined, fhall be committed.-Committing perjury to 10 l. prejudice of creditors, to ftand in the pillory.-Perfons fufpected to detain any of the eftate, not appearing, to be arrefted; and fill refufing, to be committed. -Commiffioners may affign debts, \&c. to the creditors and proceed to execution, though the bankrupt dies.-Commiffioners to render the bankrupt an account, and pay overplus, \&c.
Stat. 21 Jac. I. cap. 19.-Trading perfons and fcriveners getting protection, except of members of parliament ; per tons endeavouring to compel creditors to take lefs than their due, or to gain time beyond fix months, and efcaping, \&c. adjudged bankrupts.-Bankrupt's wife to be examined on oath.-Bankrupt fraudulently concealing to fand in the pil-lory.-Commiffioners may break open a bankrupt's houfe, chefts, \&c.-Another man's goods in the bankrupt's pof feffion to be diftributed.-No refpect to be had to debts upon judgment, recognizances, or fpecialties, beyond other debts Stat. 12 and 14 Car. II. cap. 24, 9, \&c.-10 W. III. cap. 44. Adventurers in the Eaft-India or Guinea company; and no member of any fociety or company to be adjudged a bankrupt, in refpect of his fock; and the ftock not liable to foreign attachment.
Stat. 5 Geo. II. cap. 30. Bankrupts not fubmitting to be examined thirty days after notice, and not difcovering how they have difpofed of their goods, and all books, papers, \&cc. and delivering up to the commiffioners all fuch eftate, \&c. except their wives and children's neceflary wearing apparel; to fuffer as felons.- Lord chancellor may enlarge the time for furrendering to fixty days.-Commiffioners to fend for perfons, \&c. not appearing, or refufing to be fworn, to be committed.-On certificate of the commiffioners, the bankrupt to be apprehended.-Perfons conforming, to be allowed 5 l. per cent.-No advantage to bankrupts giving above 1001 . in marriage with children, unlefs at the time they could fatisfy their debts.
Bankrupts removing, concealing, or embezzling any monies or effects to the value of 201. guilty of felony.-Commiffioners to affign to fuch as fhall be chofen by the major part of the creditors.--Affignees before appointed refufing to affign over to them, to forfeit 100 l .-Affignees or the major part of them, to compound with debtors.-No commiffion of bankruptcy to be iffued out, unlefs the debt of one creditor petitioning amounts to 150 l . or of three amount to 2001 . - And bond to be given in 2001 . penalty, to prove the party a bankrupt.-Receivers-general of taxes, \&c. to have no benefit of thefe acts.
Stat. 10 Ann. cap. 15. The defcriptions of a bankrupt in the act 21 Jac. I. being prejudicial to trade, this fature makes all defcriptions of bankrupts void.-But no fale of eftates to be impeached.
Stat. 5 Geo. II. cap. 30. Bankrupts, within thirty days after notice, thall furrender themielves to commiffioners, and con form to the flatutes. - The commiffioners to call before them perfons, who can give account of achs of bankruptcy, \&c. -Truftees for the bankrupt and others, are to difcover trufts, \&xc. or forfeit 100 . - Three feveral meetings fhall be appointed by the commiffioners; who are to certify to the lord chancellor, that the bankrupt hath conformed; and four parts in five, in number and value of creditors, to fign the certificate--Commiffioners, \&sc. to be inrolled, at an of Vob. 1.
fice erected for that purpofe; and the commifione's to have 20 s . per diem, \&c.
Stat. 6 Geo. I. cap. 2 r. and 7 Geo. I. cap. 3r. A bankrupt in prifon, on execution for debt, to be difcharged producing his cortificate.-And perfons having bills or notes on bank rupts, due at a day to come; are inticled to dividends, allowing difcount, at 5 l. per cent.
Stat. 5 Geo. II, cap, 30 . Bankrupts not furrendering in fortytwo days, and not difcovering eftates, adjudged guilty of felony; but the lord chancellor may enlarge this time fifty days further.-They are to deliver all books of accounts; writings, \&c. to affignees on oath; and be allowed 51 . per cent, not above 200 l. if pay ros. in the pound, and 71. 10 s . per cents. not above 250 l . if pay 12 s .6 d . in the pound, \&c.-And the body of the bankrupt only, not his future eftate, to be difcharged; except he pays 15 s . per pound.-Four parts in five, in number and value of creditors, are to fign certificates, \& ci.-Bonds or notes given to confent to any certificates, to be void; and, if any creditor fuing out any commifion, has privately more than others; the commifion fhall be furperfeded.-Bankrupts to be apprehended on a commiffion iffued, \&c.-Perfons that difcover their eftates, allowed 5 l. per cent. - And concealing trufts, fhall forfeit 1001 . and double value.-Notice mult be given to creditors to meet and chufe aflignees, prove debis, \&c. but none to vote where a debt is under 10 l . - New affignees may be chofen by the creditors; and affignees after the end of foar months, and within twelve, to account, and dividend to be made; and there may be a fecond final dividend in eighteen months, \&c.-Commifioners to take an oath, allowed 20 s . a day, and nothing for expences; and attornies bills to be adjufted by a mafter in chancery, \&c.
Bankers, brokers, and factors, are fubject to ftatutes of bankruptcy; but no farmer, grazier, or receiver-general of taxes, fhall be deemed a bankrupt. Stat. 5 Geo. II. c. 30. continued by flat. 16 Geo. II. c. I7. until 29 Sept. 1750, \& c c. No perfon who is bona fide a creditor of any bankrupt for, or in refpect of, goods bona fide fold to fuch bankrupt, or of any bill of exchange bona fide drawn, negociated, or accepted by fuch bankrupt, in the ufual ordinary courfe of trade, fhall be liable to repay to the affignee any money which before the fuing forth of fuch commiffion was bona fice, and in the ufual courfe of trade, received by fuch perfon of fuch bankrupt, before the perfon receiving the fame thall have notice that he is become bankrupt, or is in infolvent circumftances.
The obligee in any bottomry or refpondentia bond, and the affured in any policy of infurance made and entered into upon a valuable confideration bona fide, thall be admitted to claim, and after lofs to prove his debt, as if the lofs had happened before the date of the commiffion againft the obligor or infurer; and the bankrupt fhall be difcharged from fuch bond and policy, and have the benefit of the feveral fatutes againft bankrupts, as if the lofs had happened, or the money had become payable, before the date of the commencement. Upon thefe ftatutes, the preceding, and all other adjudications in our courts of law and equity are founded, the judges being the proper expolitors of all acts of parliament. The variety of cales, which have occurred upon this fubject, is fo great, as to fill a large volume alone. Wherefore, we have only felected the more effential; and added fome new cafes, which have not yet been autlientically reported, and which we have been favoured with from thofe, whofe judgment in taking them may be depended on. More, we ap prehend, will not be expected of us in a work of this nature.

The laft act of parliament made in regard to bankrupts.
Whereas merchants, bankers, brokers, factors, fcriveners, and traders, within the defription of the ftatutes relating to bankrupt;, having privilege of parliament, are not compeliable to pay their jult debts, or to become bankrupts, by reafon of the freedom of their perfons from arrefts upon civil procefs; and fome doubts have alfo arifen, whether in cafes of bankruptcy, a commiffion can be fued out during the continuance of fuch privilege; to remedy which inconveniencies, and to fupport the honour and dignity of parliament, and good faith and credit in commercial dealings, which require, that in fuch cafes the laws thould have their due courfe, and that no fuch merchants, bankers, brokers, factors, fcriveners, or traders, in cafe of actual infolvency, fhould by any privilege whatever, be excmpted from doing equal juftice to all their creditors: be it enacted by the king's moft excellent majefty, by and with the advice and confent of the lords firitual, and temporal, and commons, in this prefent parliament affembled, and it is hereby enacted by the authority of the fame, that from and after the eleventh day of May, one thoufand feven hundred and fixty-four, it fhall be lawful for any fingle creditor, or two or more creditors, being partners, whofe debt or debts fhall amount to one hundred pounds or upwards, and for any two creditors, whofe debts thall amount to one hundred and fifty pounds or upwards, or any three or more creditors, whole debts fhall amount to two hundred pounds or upwards, of any perfon or perfons deemed a merchant, banker, broker, factor, ferivener, or trader or traders, within the defcription of the acts of parliament relating to bankrupts, having privilege

## B A N

## B A N

of parliament at any time, upon affidavit or affidavits being made and filed on record in any of his majefty's courts at Weftminfter, by fuch creditor or creditors, that fuch debt or debts is or are juftly due to him or them refpectively, and that every fuch debtor, as he or they verily believe, is a merchant, banker, broker, factor, fcrivener, or trader, within the defcription of the ftatutes relating to bankrupts, to fue out of the fame court fummons, or an original bill and fummons, againft fuch merchant, banker, broker, factor, fcrivener, or trader, and Cerve him with a copy thereof; and if fuch merchant, banker, broker, factor, fcrivener, or trader, thall not, two months after perfonal fervice of fuch fummons, (affidavits of the debt or debts having been duly made and filed as aforefaid) pay, fecure, or compound for fuch debt or debts, to the fatisfaction of fuch creditor or creditors, or enter into a bond in fuch fum, and with two fuch fufficient fureties, as any of the judges of that court, out of which fuch fummons Chall iffue, Shall approve of, to pay fuch fum as fhall be recovered in fuch action or actions, together with fuch cofts as fhall be given in the fame, he fhall be accounted and adjudged a bankrupt from the time of the fervice of fuch fummons; and any creditor or creditors may fue out a commiffion againit any fuch perfon, and proceed therein in like manner as againt other bankrupts
Provided always, and it is hereby declared, that this act thall not extend, or be deemed or conftrued to extend, to any fuch debt or debts as aforefaid, contracted before the eighth day of March, one thoufand feven hundred and fixty-four ; any thing herein before contained to the contrary thereof, in any wife notwithftanding. And be it further enacted by the authority aforefaid, that if any merchant, banker, broker, factor, fcrivener, or trader, fhall after the laft day of this feffion of parliament, commit any act of bankruptcy, that then, and in fuch cafe, any creditor or creditors as aforefaid, may fue out a commiffion of bankrupt againft fuch merchant, banker, broker, factor, fcrivener, or trader; and the commiffioners in fuch commiffion, and other perfons, may proceed thereon in like manner, as againft other bankrupts; any privilege of parliament to the contrary notwithftanding. Provided neverthelefs, and be it enacted, that nothing in this act fhall fubject any perfon intitled to privilege of parliament to be arrefted, or imprifoned, during the time of fuch privilege, except in cafes made felony by the acts relating to bankrupts, or any of them.

## Remarks

## The light wherein bankruptcies are confidered in France.

The French make a diftinction between a bankruptcy and a failure, they judging the former defigned and fraudulent, a merchant thereby wickedly intending to wrong his creditors, by not furrendering his effects, till he bad fecreted or embezzled the beft part of them: whereas a failure is deemed involuntary and inevitable, and always occafioned by real misfortunes. They reckon that a man has failed from the moment he does not pay, when due, the bills of exchange, which he has acceptev, or does not return the money to thofe whom he may have furnifhed with bills, which are returned protefted; or does not difcharge his promiffary notes, when payable; either by reafon of misfortunes in trade, or that he cannot get in his effects in time to comply with his obligations. Such a failure (or ftoppage of payment, as we frequently term it in England) though it greatly ftaggers and impairs a trader's credit and reputation, yet it does not brand him with that infamy fixed on a fraudulent bankrupt, provided he pays his creditors to the full, according to the time and terms of agreement his creditors fhall grant him.
There is another kind of failure, which differs from a fraudulent bankruptcy, and yet is reckoned more infamous than that which we have been mentioning. This is, when a merchant baving loft the greateft part of his eftate, either by Thipwreck and the capture of his veffels, or by the bankruptcy and failure of others; or by the villainy of partners, or any other acsidents, is obliged to caufe his creditors to lofe part of what be owes them, and to require time for payment of the refidue.
When a merchant difappears, without any lawful or apparent caufe, and is not feen upon the Exchange, this is faid to be a failing of prefence and credit; whence the wurd failure is derived.
The bankruptcy or failure, in France, is reckoned to commence from the day on which the debtor withdraws or abfconds, or on which his effects are fealed.
Thofe who have made a failure, are obliged to give to their creditors a flate of the account figned of whatever they poffefs, of all they owe, and of all that is due to them, and to reprefent before them all their books of accounts in due form; otherwife they will be deemed fraudulent bankrupts.
If any one has in any manner aided or affifted a fraudulent bankrupt, he incurs the penalty of a fine of 1500 livres, and pays double the amount of all he has been inftrumental to fecrete, or demand beyond what is due to him; all which Mall be applied to the advantage of the creditors, according to the ordonnance of the month of March 1673.

There is a declaration of the king of the 18 th of Novembe 1702, which requires that all conveyances of transfers upon the effects of merchants, who have failed, provided they were not executed ten days, at leaft, before the failure is publickly known; and likewife all deeds and obligations as they Ihall execute before a notary, to the advantage of any one of their creditors, or to contract new debts, fhall be null and void. Moreover, all fentences given againt them, fhall not procure to fuch creditors any right or preference before other creditors, who have only notes, or bills of exchange, or fuch like papers, to produce as vouchers of their refpective debts; unlefs the faid deeds and bonds were made, or the faid fentences given, ten days, at leaft, before the failure was publickly known.
By another declaration of June the 13 th, 1716 , all merchants, traders, bankers, and others, who break, are obliged to depofit a particular account, the truth of which muft be duly attefted, of all their effects moveable and immoveable, as alfo of all their debts, together with all their books of accounts and vouchers, into the rolls-office of the confular jurifdiction of their dwelling-place, or of the next place; in default of which they fhall not be admitted to make any contrak, agreement, compofition, \&c. with their creditors, nor to make an advantage of any fafe-conduct granted them by their creditors; but fhall be liable to be extriordinarily profecuted as fraudulent bankrupts, by the attornies-general, or their deputies, and even by any one of their creditors, without the confent of the reft. His majefty declaring, how ever, that he does not pretend hereby to infringe, in the leaft, the privileges of the confular jurifdiction of Lyons, which thatl be preferved and kept as ufual.
The ordonnance of Henry IV. publifhed in the year 1609, and that of Lewis XIV. iffued in 1673 , require fuch bankrupts to be proceeded againft extraordinarily, and punithed with death, who wilfully and wickedly fecrete their effects or fecure them under borrowed names, by falfe fales, and fictitious transfers.

## How bankrupts are confidered in Holland.

The Dutch have the fame idea of the word bankrupt, as the French, they underftanding thereby a trader who breaks to grow rich, by defrauding of his creditors: they likewife make the fame diftinction between a failure and a bankruptcy, as the French. In the former cafe they are without mercy, in the other they are very merciful and benevolent, when accompanied with the circumftances of real misfortunes, and not with want of integrity or œconomy.
In order to make due inquifition into the affairs of thofe who fail in any fhape, they have eftablifhed, at Amfterdam, a court which they call de Kamer van de Defolate Boedels, or the Chamber of Defolate Funds ; the ordonnance in regard thereunto is as follows.

1. This court confifts of five capable perfons, who are chofen annually, by the lords juftices, two of whom muft be elected from the elder aldermen of the city, and the reft muft be well experienced in commerce.
II. Two of thefe commifioners, at leaft, are continued for three years fucceffively, and no longer, and the election of the reft is made as the commiffioners of other'courts are.
III. Thefe commiffioners meet daily to attend the affairs of infolvents.
IV. When there happens any infolvent in the city of Amfterdam, or under its jurifdiction, either by death, or failure, the commiffioners immediately go with their fecretary, and take an exact inventory of all the effects, and fecure them for the benefit of the creditors: they alfo take poffeffion of the books and papers belonging to the party.
V. After which they appoint cwo or more truftees, to get in all the effects and debts belonging to the infolvent, either within or without the jurifdiction of the city or country.
VI. Before they proceed to the fale of the infolvent's effects', they commonly flay about fix weeks, or longer, if the infolvent, or relations of the deceafed, defire it, that time may be had to accommodate things with the creditors; during which notwithffanding, the truftees ufe the utmoft diligence to get in all debts due to the infolvent, and to procure every advantage to the creditors.
VII. And, to the end that affairs of this kind may be proceeded in with regularity, all merchants or others, who have failed heretofore, or are infolvable, or who fhall happen to fail hereafter, and their heirs, may fummon all the creditors before this court, and in the prefence of the faid commiffioners, or the greateft part of them, after a true declaration of the fate of their affairs, and their active as well as paffive debts, they may endeavour to agree for the payment of a part or the whole, or to give fecurity for payment at fuch time as the parties thall think reafonable.
VIII. The minority of the creditors fhall herein be governed by the majority, which fhall be three quarters of the creditors, and two thirds of the debt; or two thirds of the creditors, and three quarters of the debt.
IX. But thofe for whom fecurities are given, fhall not be admitted to the agreement, but only the fecurities themfelves,

## BAN

which hall have a perfonal act for their indemnity, and even the fame right as the perfonial creditors.
X. All who deciare themfelves creditors of an infolvent, hall be obliged to make appear what is due to them; before the commifiopers.
XI. No agreement begun between an infolvent, or any one in his behalf, and his creditors, fhall be concluded without the confent of the commiffioners.
XII. An agreement between infolvents, or their heirs, on the one part, and their creditors on the other, being made under fufficient fecurity, and figned by the creditors, or the greateft part of them, they and their effects thall be difcharged by the court, and be ar liberty to trade, receive and pay, the fame as before the failure, on paying the commifioners the expences they have been at, according to their difcretion: notwithfanding which, if it be afterwards difoovered that one creditor has been gratified to the derriment of the reft, thefe agreements are difannulled.
XIIL. The perfonis failing and their fecurities fhall be bound to depofit fuch agreement with the commiffioners, for the fecurity and advantage of the creditors who have not yet figned it, and allo the money they have agreed to pay, that the creditors may receive the fame of the commifioners, when they come to fign the agreement on their part.
XIV. However, if it be found that an infolvent or his heirs have acted fraudulently ing making the agreement, or after fuch agreemert thall be known to have concealed any books or papers, or copveyed away their effects, or made any underhand agreement with any one of the creditors, fuch diftharge given by the commiffioners fhall not only be fet afide, but the parties fhall be punihed according to the nature of the cafe. XV. And thofe who fhall combine with the infolvent, and pretend to be creditors, when they are not fo, or thofe who make demand of a greater fum than is really due to them, with de-
frgh to wrong the jult creditors, and give advantage to the infolvent, thall be punifhed as deceivers, and alfo condemned to pay, as their-own debt, all the true creditors.
XVI. After the expiration of the fix weeks aforefaid, or longet, according to the difcretion of the commifioners, and no agrecement having been made between the infolvent and his creditors, the triftees thall, without further delay, proceed to the fale of the effects, both moveable and immoveable; the latter being to be difpofed of only by the aldermen, within the firft of November and the fecond of February. But the merchandize, furniture, and other effects, muft be fold publicly by auction, at the pleafure of the commif,froniers. Bút in cafe there is any merchandize which may be .judged neceflary to be kept unfold, by reafon of an appearance of a rife in the price thereof, or for any other good adauf, which the truftees-fhall' reprefent to the commiffioners, the fale of fuch merchandize fhall be poftponed for fome time, but not otherwife.
XVII. Thefe things being done, the commifioners fhall fix a day for all the creditors to meet, who live in the city, and elfewhere, that they may give in their names, and their demands. XVIII. On the day appointed for the purpofes aforefaid, the commiffioners thall proceed firft to enquire into the debt, and of the preference to be given to each creditor prefent, whom the commifioners fhall endeavour to bring to an agreement upon that head. If that cannor be effected, the creditors who difagree,' fhall be obliged to put into the hands of the commiffoners, within fourteen days, their demand, article by artiele, with the neceflary vouchers, on pain, that if, within the faid time, every one has not given in fuch account, he thall be regarded as havimg defifted from his pretenfions, and fhall have juftice only according to their demand, and according to the particulars delivered in by others. Thofe who within the faid time of fourteen days hall have furnifhed their partitulärs; may demand, in fourteen days afterwards, the fame of every one, who has given them in ; to the end that, within fourteen days following, they may give in writing their objections, without having any longer term granted for that 'purpofe. But, after thefe fourteen days, the affair Thatl be determined by the commiffoners.
XIX. The preference to be giwen to the refpective creditors being finally feitled, thofe who fhall think themfelves injured, may within ten days after, or within ten days after they have heard of fuch determination, appeal to the court of aldermen, who adjudge the matter within ten days of fuch appeal, unlefs.it be dropped.
XX. Afterwards the commimoners fiall proceed to a divi; dend, or diftribution. Thofe who thall have had the preference, fhall receive their debt, upon giving a proper difcharge to the commifioners, according to the amount of the infolvent's effeets; and the money remaining thall be diftributed among the other creditors, at the rate of a fhilling in the pound, upon giving a proper difcharge.
XXI. If a tenant of any houfe; or other kind of dwelling, fails between the months of May and the firf of December, the landiord fhall take fuch houfe or dwelling. place to himfelf, for the remaining term of the leafe, and hall difcharge the infolvent fund thereof; fo thar he fhall only have the right of preference upon the effects which be fhall find upon the prewiffes, for the.rent of the current and preceding years, and

## B A N

for no longer time. And, for what thall appear due before; he thall come in as a creditor with the reft.
XXII. But, if the failure happens between the firf of December and the month of May following, the rent fhall be charged on the infolvent fund for one year, beginning from the month of May, unlefs the landord thinks proper to take the houfe into his own hands for the fame year.
XXIII. And, as the benefit of the creditors conflifts in finibing their affaits as foon as may be, thofe creditors who would prove their debts, thall henceforth proceed in the firlt inflance, againft the-truftees, who, in that cafe, will be defendants, and on the other hand thall be plaintiffs againit thofe who thall be debtors to the infolvent.
XXIV: The creditors who would prove their debts, and all others who lay claim to part of thofe effects, lhall be obliged to enter their action againft the truftees in due time, before the faid preference and agreement among the creditors are fettled, and before the fale and diftribution of the infolvent's effects. And to this end they fhall fummon the truftees three days before-hand, and fend them their refolution with the fummons; as likewife a copy of the particulars, whereon their demands are grounded; and in cafe; upon the day ap-pointed, thofe who made; fuch demand do appear before the commiffoners, the truftees fhall be acquitted, and the expence thereof paid by thofe who cited them, before frefh meafures can be taken againt them.
XXV. But if any one has attached the effects, which he pretends to have claim to, be fhall be obliged to fummon the truftee the third day after fuch attachment, and to bring his action under the penalty of being nonfuited.
XXVI. The truftees being fummoned as above, and not appearing, there will be a default for non-appearance, and the eupon a fecond fummon iffued, and on no appearan e to that, the commiffioners will pàfs judgment upon the matter, according to the vouchers laid before them by the party alone who does appear, and the truftees fhall only be condemned to pay the cofts of the procefs, propter contumaciam
XXVII. When the truftees app ar upon fuch fummon, the caufe fhall be argued and determined directly, without giving or taking any further day to anfwer, unlefs for very good caufe the commiffioners thall think the fame neceflary. XXVIII. Provided the truffees fummon any one, as before reprefented, and they do not appear, the truliees fhall have the fame adyantage as was before given againft them, and the parties fhall be obliged o pay the expence.
XXIX. But, the perfons fummoned not appearing, a fecond fummon is granted for the week following, and not appearing the fecond time, the fummon having been duly executed, they muft give provifional fecurity, and have a third fummon; which terminates in a deffitive condemnation of the fecurity, or juftice is done in fome other manner.
XXX. But, if the parties fummoned appear, the point is either concluded then, or fome day the next week following, unlefs the commiffioners find good caufe to do otherwife.
XXXI. The truftees, having arrefted any perfon or effects, fhall be obliged, at the requifition of the party fo arrefted or interefted, within three days, to carry on the profecution before the commiffioners, in order to make their demand, and bring the matter to a conclufion; upon which the perfon arrefted then anfwers, or takes another day without deviating from the provifional fecurity, provided the cafe is fo circumftanced: but the perfon arrefted, or interefted, making no profecution, the arreft fhall be referred, and profecuted at the next court, according to cuftom.
XXXII. The caufe being pleaded, the commiffioners fhall difpofe of the principal, according to the nature of the cafe; and, if either of the parties fhall appeal, the caufe hall be brought and profecuted before the court of aldermen, who thall finally determine the fame.
XXXIII. The creditors of any infolvent being diffatisfied with the proceedings, and the ill conduct of the truftees, may remonftrate the matter before the commiffioners, who fhall caufe the truftees to come before them, hear them, and fet the affair in a juft light, according as the cafe thall require.
XXXIV. The perfons, whom the faid commiffoners appoint truftees in regard to the effects of the infolvent, fhall be obliged to give good fecurity for their conduct, at the difcertion of the commiffioners, in order to have recourfe to fuch fecurity, in cafe of male-adminiftration, unlefs the truftees were chofen from among the creditors.
XXXV. The truftees or affignees among the creditors having received any money belonging to the infolvent fund, fhall not keep it in their hands, but the fame ihall be immediately delivered to the faid commiffioners.
X×XVI. And thofe truftees who thall be called upon, loall be obliged to appear before the commifioners, not only at the end of their adminiftration, but-at all times before, to render an account of, and juftify their proceedings; and, being fummoned for this purpole, they fhall be obliged at the firft order, under the penalty of a fine of three guilders; and, if they are called upon a fecond time, the like; and rhe third is a fine of fix guilders; and if notwithftanding they fil to ap. pear, and do not render up their accounts, they fall be called

## B A N

tupea a fourth time upon pain of imprifonment; afterwards the commifioners fhall lay the matter before the court of aldermen.
XXXVII. At the end of the adminiftration of the trufiees, when the faid commiffioners thall difcharge them of their truft, they fall grant them, for their trouble, what they judge proper.
XXXVIII. Any one of this city, of under its jurifdiction, defiring to give up his, effects, the faid commifioners fhall take meafures to fecure them, by appointing proper perfons for that purpore, as foon as warrants of fuch ceffion thall be granted to the creditors, and they fhall be informed of the validity thereof, in order to lay the affair before the court of aldermen
XXXIX. In order to prevent all abufes and villainies which are daily practifed by many, in the requiring and profecuting the warrants granted by the burgomafters of this city, $\mathcal{C} c$. with intent to obtain the fecurity of the body, and the continuation thereof, the faid commiffioners fhall give true information of the ftate of the fufpected perfons, in order to do the fape duly before the burgomafters.
XL. Any one being fummoned, he thall be obliged to appear before the commiffioners, in default of which he niall pay a fine of fix fols for the firft time, twelve for the fecond, and twenty-four for the third; afterwards the commifioners fhall communicate the matter to the court of aldermen, and thall fend one of their officers in fearch of the perfon.

## How bankrupts are looked on in China.

When any man becomes a bankrupt in this country, they throw him into prifon in the govenor's palace, and he is immediately put upon the declaration of his effects. After he has been a month in prifon, he is releafed by the governor's order, and proclamation is made, that fuch a one, the fon of fuch a one, has confumed the fubftance of fuch a one; and that if he has any effects in the hands of any perfon, in any flape whatfoever, it muft be made known in the term of a month. In the mean time the bankrupt is bamboo'd ${ }^{*}$ on the backfide, if difcovery is made of any effects of his; and at the fame time is- upbraided with having been a month in prifon eating and drinking, though he had wherewithal to fatisfy his creditors. He is chaftifed in the fame manner, whether he makes any declaration of his effects, or not. They reproach him, that he has made it his ftudy to get by fraud the fubftance of private perfons into his hands, and embezzle it; and that be ought not to defraud thofe he had dealings with, by ftripping them of their property. But after all, if they cannot difcover him to have been guilty of any fraud, and if it is proved to the magiftrate, that the man has nothing in the world, the creditors are called in, and receive a part of their debt out of the emperor's treafury. After this, it is publickly prohibited to buy of, or fell to, this man, upon pain of death, that he may not defraud any of his creditors by concealing their money. If difcovery be made that be bath any fums in the hands of another, and if the perfon he intrufts makes no declaration within the time limited, he is bamboo'd to death, and nothing is faid to the proprietor or bankrupt. The fums that they difcover are divided among the creditors, and the debtor or bankrupt muft never more concern himfelf with trade.
*This punifhment is fuch, as none farce ever furvive; it is fo grievous, that no perfon in all China may, of his own authority, infict it upon another, upon pain of death, and confifcation of his goods.

## REMARK s.

There are three things which all men of judgment and experience in trade allow to be the great prefervatives againft bankruptcy. As,

1. A thorough fkill and difcernment in the whole of the employment wherein a perfon may be engaged. In regard to the mercatorial profeffion, the knowledge and judgment requifite are not fo narrow, mean, and confined, as fome are wont to think. For,
According to what I have reprefented in my New Mercantile Inftitution, without acquaintance in the produce and manufackures of the commercial world, and in the laws of our own and foreign countries relative to general trade ; without abilities to obtain the beft intelligence, in order to Arike the critical tinue when, and where, exportation or importation from nation to nation, drawing, remitting, and negociating foreign bills, invite to the beft advantage: without knowledge of the duties, impofts, fubfidies, drawbacks, bounties, and all other charges and allowances at home and abroad, to which trade is fubjest, it is impoffible that any previous calculation can be made, whether an adventure will turn to account or not. If the merchant be not thoroughly fkilled in foreign monies and exchanges, as alfo in foreign weights and meafures, and the methods of reducing thofe of one nation reciprocally into thofe of others, how fhall he be able to judge of foreign invoices and accounts of fales? and, if he be not perfectly acquainted with the arts of arbirrating the foreign exchanges with accuracy, he camot embrace thofe benefits
which their perpetual fuctuation affords. Nor is a knowledaid of the intrinfic value of foreign fpecie lefs neceflary that of the extrinfic par, or the arbitrational prices of exchange, in order to deal occafionally in the export or import of foreip, coins, and bullion gold and filver, to the beft advantage. In fine, the merchant deftitute of this feries of information, and alents to apply it to the moft beneficial purpofes in every fhape, can never bope to reap any confiderable profit from his profeffion, or fuftain the character be bears with any fort of dignity. He mult owe his fuccefs, if he has any, to fortunate hits, and unexpeCled advantages; things which no prudent man will chufe to depend upon for the whole ptofperity of bis life.
To the ignorant in thefe matters, commerce is but a game at chance, where the odds are againft the player. But, to the accomplihed merchant, it is a fience, where 1 kill can fcarce fail of its reward; and, while the one is wandering about in a patblefs ocean, without a compars, and depends on the winds and tides to carry him into his port, the otber goes fteadily forward, in a beaten track, which leads him directly, if no extraordiuary accident intervenes, to wealth and honour.
Whoever turns his thoughts on the ftupendious circulation of paper property throughout the world, by inland and foreign bills; on the varivus cuftoms and ufages eftablifhed among traders in their money-negociations, for the fupport of univerfal credit; on the numberlefs different tranfactions which diverfify the bufinefs of the mercbant; as buying and felling, exporting and importing, for proper, company, or commifion account ; drawing on, remitting to, and freighting, or hireing out, fhips for various parts of the world at the lame time whoever duly confiders the fkill in figures and accountanthip, requifite to adjuft and methodize this great variety of tranf attions, whereby fuch trader may always have the true repre fentation of his affairs before him; together with the judgment to conduct fuch a complication of occurrences, and addrefs to maintain a general correfpondence in our own, or the more univerfal languages; cannot but fee the extent of a courfe of education proper to form fo diftinguifhed a character. - Notwithfanding this, nothing is more certain than that no gentlemen in the general labour under greater difadvantages in point of erudition ; which, I am afraid, is one principal caufe of the frequent bankruptcies amongft thofe who are, perhaps, the molt ufeful fubjects in the community; they being the great inftruments who give conftant bread and employment to the mafs of the people, and draw treafures into the nation from the remote parts of the world.
Whether, therefore, the eftablifhment of a mercantile college, or a well-regulated feminary, proper for the breeding up our Britifh merchants with every defirable advantage, may not be worthy the confideration of fome public-fpirited perfons, is humbly fubmitted. That an inflitution fomething of this kind is greatly wanted in England, I have endeavoured to fhew at large in the before-mentioned tract; and I heartily wifh, that my poor endeavours in the public fervice may, one day, ftimulate others of far fuperior abilities and advantages to attempt what every body has been pleafed to approve; notwith flanding the mean and bafe artifices which have been ufed to deprive my country, in that fhape, of the benefit of my labours, and myfelf of the advantages of twenty years ftudy and application, with a view principally to the eftablifhment of that mercantile defign. See the article Mercantile College
By the plan of inflitution in the beforementioned treatife will be feen the qualifications neceffary, abfolutely neceffary, to form the accomplifhed Britifh merchant: and, if thofe qualifications therein enumerated were commuricated to young perfons, in the manner propofed, there is no doubt to be made but the art of merchandizing would, by that means, have been greatly advanced, the general commerce of the kingdom proportionably extended, and much fewer bankrupts. 2. However, the beft accomplifhments for trade avail little without oeconomy; for, although a perfon of penetration and addrefs may be occafionally extremely fuccefsful, yet the man of prudence fhould make allowances for fuch loffes as the keeneft forefight and difcernment cannot always prevent: it hould, therefore, be always confidered that the debit, as well as the credit fide of the account of profit and lofs, is liable to fwell.
2. But nothing, perhaps, can be a more effectual prefervative againft failure than a thorough knowledge in figures and accountantihip. It is not neceflary, indeed, that a merchant engaged in large concerns fhould keep his own books, as he may probably employ his time to far greater advantage; but it is indifpenfably neceffary that he fhould be capable of doing fo. How is it poffible, otherwife, that he thould be able to judge when they are kept as they ought to be? Nor can he be capable of fo infpecting them, as to be duly acquainted with the ftate of his own affairs.
It is an unbecoming meannefs, not to fay a confummate folly, in any man, whofe fontune is daily at flake, to depend upon others to give him what they pleafe for the flate of his affairs. It is juftly proverbial among the Dutch, that the man who fails did not underftand to keep his accounts: and it may be truly faid, a merchant without that $\mathfrak{f k i l l}$ is in as bad
fituation
fitiation as the mariner on the wide ocean, without chart, compafs, or obfervation, whereby to direct his courfe. Borb the French and the Dutch always entertain an opinion of a fraudulent bankruptcy, when there are no juft and methodical accounts kept by traders; for, let their loffes be what they will, they ought fairly and uprightly to appear through their books, and from the teftimony of authentic vouchers. So that regular and upright accounts are an effectual juftifcation of the trader's conduct, as demonitrating, whether ikill and ceconomy have been wanting, or whether only fuccefs: if the latter is the cafe, he is, notwithftanding, careffed and fupported; whereby he may become as profperous afterwards, as he was otherwife before. This alfo is the cafe in Britain, and indeed in all nations where commerce is cultivated.
Among all the laws relating to bankrupts in England, I do not remember to have met with any that injoined fuch traders who are within the fatutes to keep juft and regular accounts of their tranfactions, and of their whole income and expence, be the fame in whatfoever fhape it fhall happen; yet this feems to be as neceflary a law as any relating to barikrupts : for, if an omifion hereof was, among other things, made a fufficient caufe of obftruction to the obtaining of their certificates, it might have a happy tendency to prevent that frequency of bankrupts among traders; feeing, while a perfon had the true itate of his affairs always before him, that might prove a fafe and fteady rudder to fteer him clear of thofe rocks and fhoals whereon he might otherwife fplit.
Another fafeguard againft thofe misfortunes in traffic is honour and integrity in dealing, honefty being the beft policy among traders, as well as the reft of mankind. However great the temptation to act otherwife may often be in the way of traffic, yet, in the long-run, the trading trickfter is frequently catched in his own toils: for, as it requires more art to be roguifh than otherwife, fo that art is daily liable to detection, and lofs of reputation; whereas fo extraordinary is the power of juftice and honour in commerce, efpecially when united to prudence and fkill, that it proves the fource of a boundlefs credit to a trader; and, credit in traffic anSwering the end of money, fuch trader may be faid to be rich, in proportion as he is juft and upright; for an extenfive credit, wifely managed, cannot fail to be productive of extenfive riches.
It does not feem to be that refined policy, that fome flatter themfelves with, for a rich, overgrown trader to engage in combinations and ingrofings, and other unfair and illegal practices, in order to opprefs and ruin young beginners. Perfons of this unnatural famp have frequently undone themfelves by attempting the deffruction of others; for the mean art of underfelling, in view to monopolize, is not lefs hazardous than difhonourable; and, when fach a one comes to misfortunes, he is-as little pitied as the cruel ruffian going to the gallows. As people in trade are never too low to rife, fo they are never too high to fall. A man in trade, though flanding himfelf fecure, thould have a benevolent concern for thofe who mifcarry, and, inftead of fcheming at the deftruction of others, hhould fretch out the arm of affiftance to thofe who would follow his wife and induftrious example.
I have known a merchant as much diftinguifhed for his generofity and humanity as for his equity and profperity in his negotiations. Inftead of ftudying the low craft of oppreffion, in order to injure the young beginner, his greateft joy confifted in raifing young people of good behavipur and promifing talents. He touk few apprentices with large fortunes, or large premiums, becaufe he was wont to fay, That thofe who had great fortunes wherewith to begin, needed not that help to throw them into bufinefs like people of fmall ones. It was his maxim, therefore, to breed abundance of fuch young people in his counting-houfe, and, after three or four years accomplifhment under his judicious cye, to tranfplant them to foreign counting houfes, among his correfpondents: and, if their conduct was approved, he fome-how made it for the intereft of thofe houfes to take fuch young people into the partnerfhip. By which means, he not only exercifed, his natural principle of good-will to mankind, but fo attached thofe objects of his benevolence to his intereft, that he found his account in deating with thefe foreign houfes. So that he experienced it to prove the more beneficial policy to raife, rather than deftroy, the fortunes of young people who merited his regard.
Nor was this his practice abread only. In order to be well ferved by his manufacturers, and indeed by all with whom he had dealings, he ever ftudied their intereft in conjunction with his own. Thus any poor man's fon who fell in his way, and had any thing of a promifing turn; or any ikilful, honeft manufacturer, \&c. was fure to have fupport from him: he would offer them money on eafy terms; and, if they proved indultrious and deferving, his purfe was always open to them. By which fingular management, both gratitude and intereft proved motives to his being well ferved in the qualities of the goods he exported, they being as well fold abroad as well bought at home.
His conduct, in regard to imports, was equally peculiar. His buyers wocre tradefmen of his own choice, rather re markable for induftry than fortune : thofe never failed of what
credit and reafonable indulgence they flood in need of. Such behaviour faved many from bankruptcy, but had no tendency to occafion it; yet there are many traders who are as diftinguifhable for their cruelty, as this worthy gentleman was for a difpolition diametrically the reverfe. This honeft policy fo warmly attached all whom he dealt with to his intereft at home, as well as abroad, that it is little to be admired that fo wife, and fo good, a man accumulated what riches and honour he pleaied. This example fhews the true ufe of money and fagacity in the arts of commerce; and, it is to be hoped, will be followed by many, which will certainly make the ich ftill richer, and the poor happy. This is a fpecies of charity which brings its prefent reward with it: but, as the poet fays,

Such who in life opprefs, and then bequeath
Their goods to pious ufes at their death;
Are like thofe drunkards being laid to neep,
Who belch and vomit what they cannot keep.
There is nothing has a greater tendency to failure in trade than a tradefman's being obftinate and felf-fufficient in his own opinion, and quarrelfome and litigious among his neighbours, and thofe with whom he has concerns in trade. That trader muft be in the road to ruin of whom it is faid, that he catches at every advantage from thofe he deals with, wrangles without reafon, quarrels without provocation, difputes trifles, 'and goes to law without juftice.
He that will feek juftice in the law, ought to be firf certain that he can obtain the fame in no amicable way. The law was not defigned to promote broils and confufion among mankind, but to prevent them.
Tradefmen who have thefe fquabbles generally upon their hands, are as difcontented within themfelves as they are con* temptible in the eyes of others. A man that is always paying lawyers bills, reading over bills in Chancery exhibited againft him, is of a difpofition very unfit for commerce, which requires the man to be calm and unirritated; otherwife his bufinefs muft fuffer, and all prudent men will as follicitoully avoid dealing with a litigious trader, as with one who has got the plague:

Law-fuits avoid, with as much ftudious care
As you would dens where hungry lions are;
And rather put up injuries, than be
A plague to him who'd be a plague to thee.
Law-fuits and contentions in trade are fometimes unavoidable: unlefs the defendant will fuffer depredations upon his property, he is under the neceffity of defending himfelf, and feeking protection from the law. For a man to defend himfelf againft the ftrife, contention, and villaing of others, is not to be litigious; that character is due to the aggreffor; for it is the duty of the moft quiet and inoffenfive man to defend himfelf, when offenfively attacked. The querulous lawing trader is the contempt of the rich, and the averfion of his poorer neighbours; the fcandal of his trade, and the terror of his cuftomers. The prudent trader will not reject the following maxims. 1. Not to decline or delay paying a juft debt, if able, but to pay it, without giving any man caufe, or putting him to the charge of fuing for his own.
2. Nor to give any man trouble, though for a juft debt, where there is any probability of obtaining it without, nor till all reafonable, 'quiet, and friendly methods are tried to avoid it.
3. When neceffitated to ufe the violence of a legal profecution, yet to do it with tendernefs, without expofing the debtor more than needs muft; and above all, without putting him to more than neceffary charges. This fhews a juft reluctance to the thing; in which cafe the defendant is juftly anfwerable for all the evil which he brings upon himfelf. The difcreet trader will, as far as in him lies, prevent a decifion at law; if it be poffible, he will bring all differences to a friendly accommodation, by expoftulation, by applications, by arbitration, and evén by abating fometimes much of his demands for peacefake.
For men to make a difpute at law become a formal quarrel; engage their paffons in the difference, and turn their tradebreaches into breaches of charity and breaches of temper, is to put off the Chriftian and the man of fenfe together.
This way of going to law bad a terrible event a few years ago in this nation, and left a bloody precedent, viz. in the late duke Hamilton and the lord Mohun : they had contended many years at law about an eftate; but meeting occafionally, while the fuit was depending, the heat of the legal procefs broke out in an illegal flame; they differ in words, give and return difobliging expreffions; this kindles their paffion; both hot, both brave ; they quarrel, a challenge enfues; they both meet, both fight, and are both killed. This is the cafe, tho' not carried to fo fatal a length, with all who go to law about trifes, and carry on their fuits with animofity : they go to law, like Hamilton and Mohun, and, if they had courage to engage, would put it to the like iffue. Nothing bas a greater tendency to the ruin of traders, and all others, than this un-

31
happy

## B A R

happy difpofition; and nothing is more contemned amonz the wife and honeft part of mankind.-In fine, a litigious trader lives in a kind of warfare among his fraternity; whereas commerce fhould be the general bond of good will, as it is the grand fource of their temporal welfare.
BAPTISM, a ceremony practifed at fea in long voyages, on thore perfons who pafs the tropic for the firft time, as alfo on the merchant-hips that have not paffed it before.
The baptifm of thips is a very plain ceremony, and is performed by wafhing it all over only with fea-water; but that of perfons is more formal and mytterious, as thall be related hereafter ; but neither is performed without giving the fhip's company fomething to driak and caroufe. With regard to the baptizing of the fhip, the feamen think they have a right to cut off the hip's beak-head, unlefs the captain or matter redeems it, by giving them feveral bottles of brandy, and money. This prefent, which the mafter makes them, is not reckoned an average, nor are the freighters accountable for it, but only the proprietors or owners of the fhip.
As for the baptifm of perfons, it is performed after the folowing manner:
The moft ancient of the reamen, who have already croffed the line, or the tropic, being oddly dreffed, with his face blackened, a comical cap on his head, the journal, or fome other fea-book, in his hand, and followed by feveral other failors, each with fome kitchen utenfil inftead of a weapon, comes by beat of drum, apd places himfelf gravely on a feat prepared for that purpofe upon deck, at the foot of the mainmaft.
Before this drole magifrate every perfon, not yet initiated into thofe myfteries, comes and fwears that he will caule the fame ceremony to be obferved, whenever opportunity offers. If fuch a perfon pays down; or promifes, fome gratification, he gets off clear for his prefent, and has only a few drops of water fprinkled over him. But the others, as well as the common failors, are in a manner drowned with pails full of water, kept ready for that purpofe, in cafks or buckets. The mip and cabbin-boys, are put under a bafket, where they are foaked with water at pleafure; and, in memory of fo curious a ceremony, are compelled to whip one another, which they do foundly. The money paid is either fhared among the fhip's company, or kept to buy fome refrefhment at the firt convenient place they come to.
BARATRY, or BARRETRY, according to the common law of England, fignifies the moving and maintaining of fuits in difturbance of the peace, and the taking and detaining of houfes, lands, \&c. by falfe inventions. The word baraterre in French, fignifies mifdemeanor, fraud, deceit. It is derived from the old word barat, which fignified any impofition: whence they alfo faid baratter, to impofe upon one. In marine commerce, baratry fignifios the ftealiig, imbezzling, or any ways altering of merchandizes, by the malter or company of a hhip; and, in general, all the tricks, frauds, or male practices, which they pretty often ufe, in order to defraud the owner of the Chip's cargo, or other perfons concerned in it.
By the 28 th article of the fixth title of the third book of the ordonnance of the marine in France, publifhed in Auguft 168 I , it is ordered, that the infurers thall not be obliged to make good the loffes and damages which fhips or merchandizes thall have fuffered through the fault of the mafter and crew, unlefs by the policy they were made anfwerable for the mafter or captain's baratry,
The penalties of baratry are mentioned in the fame ordonnance, in the firf title of the fecond book, in the following articles.
Article 20. The mafter who, without any neceffity, took money upon the body, victualling or fitting out of his hhip, or who fold merchandizes, engaged the rigging, or fet down in his accounts or memorandums fictitious averages or expences, is obliged to pay them in his own name, declared unworthy of the mafterlhip, and banifhed from the harbour where he ufed to dwell.
Article 32. All mafters of hips are prohibited to fell again the victuals of their fhips, and to imbezzle or conceal them, upon pain of corporal punifhment.
Article 35. If a mafter fails a wrong courfe, commits any theff, or fuffers any to be committed on board his fhip, or fraudulently gives occafion to the alteration or feizing of the merchandizes, or of the thip, he is to fuffer corporal punifbment.
Article 36. A mafter who is convicted of delivering a fhip to the enemy, or to have wilfully caufed it to be fhipwrecked or loft, is to be punifhed with death.
Baratry, in a marine fenfe, is in England, when the mafter of a fhip, or the mariners, cheat the owners or infurers, whether by running away with the fhip, finking her, deferting her, or imbezzling the cargo.
If goods delivered on chipboard are imbezzled, all the mariners ought to contribute to the fatisfaction of the party that loft his goods, by the maritime law, and the caufe is to be tried in the admiralty. I Lill. 368.
A mafter of a ihip, if a minor, undertaking to bring goods from any place abrod to England, if he wattes and confumes

## B A R

them, he may be profecuted in the court of admiralty, thounh he be an infant. Roll's Abr. 53 c .
And, where a hip was infured againft the baratry of the matter, \&e. in antation brought thereupon, the jury found that the hip was loft by the fraud and negligence of the mafter: the court held, that, if the mafter run away with the ihip, or imbezzle the goods, the merchant may have the action againft him; for it is reafonable that merchants, who hazard their focks in the foreign traffic, fhould fecure themfelves in what manner they think proper againit baratry of the mafter, and all other frauds; and this muft be intended fraud in the mafter, not a baro neglect: and they all agreed that fraud is baratry, though not named in the covenant; but negligence might not. Mod. cafe $2,0 \quad 23 \mathrm{r}$.
Baratry of the mariners is a difeafe fo epidemical on fhipboard, that it is very rare for a mafter, be his induftry never fo great, to prevent it; a fpan of villainy on fhipboard foon fpreads out to a cloud, for no other caufe but of that circular encouragement that one knavifh mariner gives another.
However, the law does in fuch cafes impute offences and faults committed by them to be negligence in the mafter; and, were it otherwife, the merchant would be in a very dangerous condition. Molloy.
The reafons why they ought to be refponible are, for that the mariners are of their own chufing, and under his correction and government, and know' no other fuperior on fhipboard but himfelf; and, if they are faulty, he may correat and punifh them, and juftify the fame by law : and likewife, if the fact is apparently proved againft them, may reimburle himfelf out of their wages. Roll's Abridg. 533.
And therefore,' in all cafes, wherefoever the merchant loads aboard any goods or merchandizes, if they be loft, imbezzled, or any other ways damnified, he muft be refponfible for them; for the very lading them aboard makes them liable, and that as well by the common law as the law marine. i Ven. 190, 238. Raym. 220. 1 Mod. 85.
Nay, if his mariners go with the fhip-boat to the key or wharf, to fetch goods on Mipboard, if once they have taken charge of them, the mafter becomes immediately refponfible, if they fteal, lofe, damnify, or imberzle them.
A mafter of a fhip is more than one, who, for his knowledge in navigation, fidelity, and difcretion, hath the government of the fhip committed to his care and management; and, by the common law (by which-properties are to be guided) he hath no property, either general or fpecial, by the conftituting of him a mafter; yet the law lonks upon him as an offcer, who muft render and give an account for the whole charge, when once committed to his care and cuftody; and, upon failure, to render fatisfacion: and, therefore, if miffortunes happen, fiiber through negligence, wilfulnefs, or ignorance of himfelf, of his mariners, he mult be refponfible.

## In Chancery.

A, mafter of a thip, fo appointed by B, owner, treats with the plaintiff to take the fhip to freight for 80 tons, to fail from London to Falmouth, and fo from thence to Barcelona, without altering the voyage; and there to unlade, at a certain rate per ton: and, to perform this, the wafter obliges the fhip, and what was therein, valued at 3001.; and, accordingly, a charter-party was made and fealed, between the mafter and the merchant; but the owners of the thip were no parties thereunto. The mafter deviates, and commits baratry, and the merchant, in effect, lofes his voyage and goods; for the merchandizze being fifh, came not till Lent was patt, and were rotten. The merchant's faetor thereupon fueth the mafter in the court of admiralty at Barcelona, and, upon appeal to a higher court in Spain, bath fenterice againft the mafter and the fhip; which coming to his hands (viz. the merchant's hands) the owner brings an action of trover for the hip: the mafter fues in Chancery to ftop this fuit, and another fuit brought for the owner for freight, claiming deductions out of both, for his damages fuftained by the mafler, for the breach of the articles by the mafter; for, if the owner gives authority to the mafter to contract, he fhall bear the lofe; but, in cafe of bottomry, after a voyage begun, the matter cannot oblige the owner beyond the value of the hip: but this cafe is on contract.
Lord chancellor. The charter-party values the fhip at a certain rate, and you shall not oblige the owners farther, and that only with relation to the freight, not to the value of the thip; the mafter is liable to the deviation and baratry, but not the owners; elfe mafters thouid be owners of all men's fhips and eftates. Mich. 29 Car. II.
But, where the mafter of the fhip took beef, fails, \&c. on credit, and failed, the owners were obliged to pay, and not allowed to defend themelves by infifting that the mafter was liable only, and that they had given him money to pay the plaintiff. He is but their fervant, and, where he buys, they are liable, and continue fo, if he has not paid the creditors, though they gave him money for that purpofe. 2 Vern. 643 If any fault in the mafter or mariners be cominited in any port, haven, river, or creek, or any other place which is infra corpus comitatus the common law thall have jurtole-
tion to anfwer the party damnified, and not the admiralty [fee Admiralty] but, if the fame be committed fuper altum mare, the admiralty fhall have jurifdiction of the fame; yet, if it be on a place where there is divifum imperium, then, according to the flux or reflux, the admiralty may challenge; the other of common right belonging to the common law. 5 Co. 1707. Mod. 89I. 9 16.
The common law is the over-ruling juriddiction in this realm; and they are to intitle themfelves well who would draw a thing out of it. Lord Raym. 272.
And, therefore, as foon as merchandizes and other commodities are put aboard the fhip, whether fhe be riding in port, haven, or any other part of the feas, he that is exercitor navis is chargeable therewith; and if the fame be there loft or purloined, or fuftain any damage, hurt, or lofs, whether in the haven or port before, or upon the feas, after the is in her voyage; whether it be by mariners, or by any other through their permifion ; he that is exercitor navis muft anfwer the damage, for that the very lading of the goods aboard the fhip does fubject the mafter to anfwer the fame. F: Naut. caup. ftab. leg. i. fec. 2, 3, 6, 7. And with this agrees the common law, where it was adjudged, that goods being fent aboard a hhip, and the mafter having figned the bills of lading for - the fame, the goods were ftowed, and, in the night, divers perfons, under the pretence that they were prefs-mafters, entered the fhip, and robbed her of thefe goods; the merchant brought an action at the common Jaw againft the mafter; and the queftion was, whether he fhould aniwer for the fame? It was alledged, on his part, that there was no default or negligence in bim, for he had a fufficient guard; the goods were all locked up under hatches; the thieves came as prefsmafters, and by force robbed the fhip; and that the fame was vis major, and that he could not have prevented the fame: and, laftly, that though he was called malter, or exercitor navis, yet he had no thare in the fhip, and was but in the nature of a fervant, acting for a falary:-But, notwithftanding, it was adjudged for the plaintiff; for at his peril he muft fee that all things be forth-coming that are delivered to him, let what accident foever happen (the act of God, or an enemy, perils and dangers of the fea, only excepted) he being looked upon by the law as a common carrier; and that, though he receives a falary, yet he is a known and public officer, and the plaintiff hath his election to charge either mafter or owner, or both, at his pleafure, but can haye but one fatisfaction. Melloy.

## Thomas Knight, Efq; againf Richard Cambridge.

This cafe fhewing the nature of baratry, I fhall give it at large, as delivered by lord Raymond.
Cambridge brought a writ of error, upon a judgment given againft him in the Common-Pleas, in an action brought by the plaintiff upon a policy of infurance of the thip Riga Merchant, at and from Port Mahone to London. And ferjeant Braithwaite for the plaintiff in error Infifted, that the judgment was erroneous, becaufe the breach was ill affigned: becaufe the policy was, that the defendant Cambridge fhould infure the faid thip, among other things, againft the baratry of the mafter, and all other dangers, damages, and misfortunes, which Chould happen to the prejudice and damage of the faid fhip; and the breach affigned was, that the fhip, in the faid voyage, per fraudem \& negligentiam magiftri navis pradictæ depreffa \& fubmerfa fuit, \& totaliter perdita $\&$ amiffa fuit, \& nullius valoris devenit. This, he infifted, was not within the meaning of the word baratry, but the breach fhould have been exprets, that the hip was loft by the baratry of the mafter. Befides, the owner of the goods has a remedy againft the owners of the fhip, for any prejudice be receives by the fraud or neglect of the mafter; and, therefore, there is the lefs reafon the infurer thould be liable. Befides, if the word baratry fhould import fraud, yet it does not import neglect; and the fact here alledged is, that the fhip was loft by the fraud and neglect of the mafter. But the court was tinanimouly of opinion, that there was no occafion to aver the' fact in the very words of the policy, but, if the fact alledged came within the meaning of the words in the policy, it is fufficient. Now baratry imports fraud, Du Frefne Gloffar. verbo barataria, fraus, dolus: and he that commits a fraud, may properly be faid to be guilty of a neglect, viz. of bis duty. Baratry of a mafter is not to be confined to the mafter's running away with the thip; and the general words of the policy ought to be conftrued to extend to loffes of the like nature as thofe mentioned before: now loffes arifing from the fraud of the mafter, are of the fame nature as if he had run away with the fhip, fuppofing baratry was to be confined to that, which it is not, becaufe it imports any fraud. And judgment was affirmed; April ${ }^{27}$, 1724 . Lord Raym. 1349.
BARB, a Barbary horfe. Barbs are very much efteemed for their ftrength and their fwiftnefs, and more fill, perhaps, on account of their fcarcity. They are commonly of a flim Thape, and have very thin lege. They'are ufed both for the faddle and for coaches; and they make exceeding geod ftallions for ftuds. In order to diftinguifh them, they ufe in France to hang under the horfe's throat, efpecially to coach-
horfes, a kind of beard made of horfe-hair, commonly dyct red.
The French confuls, who refide in the towns of Bartary, da pret:y often hip of barbs, either for the ufe of perfons of quality who defire them, or which they fend into France for their own account: But fkilful judges do not much value the horfes that are this fent over, there being always many bad ones among them; becaufe the confuls, whatever good intentions they may have, are commonly much better fillied in other trades than that of horfe-fech.
When the French king would have barbs for his fuds or ftables, he commits the care of buying them to one of his, grooms, or equerries, who commonly paffes for an envoy to the African princes, notwithftanding which title the is obliged to pay duty for the horfes he buys.
That duty is not the fame in all places, and there are often great extortions practifed, before the horfe be on fhipboard, thofe barbarians having no other view but to impofe upon the Europeans who trade with them. At the Bation of France 13 piafters are paid for duty of exportation for every horfe, namely, io to the governor, two to the captain, and one ta, the interpreter.
BARBARY in general. This vaft tract of ground is bounded on the north by the Mediterranean fea, which divides is from Europe; on the eaft by Egypt, on the fauth, by Sara or the defart, and on the weft by the Adlantic, or weftern ocean. It's utmoft extent from eaft to weft, that is, from cape $\mathrm{Non}_{3}$ on the moft weftern coaft of Morocco, to the confines of Egypt, is almoft 37 degrees, that is, from to degrees weftern to $26 \frac{1}{2}$ degrees eaftern longitude, or about 2200 miles: as for it's breadth from north to fouth, it is very unequal ; in fome parts not above 6 or 7 degrees; ànd where wideft, as from cape Non, above-mentioned, to Tangier, not above 10 . degrees, or 600 miles; but, we mult obferve, that moft geographers have given it a much greater extent both ways; fome of them as far as 4000 miles in length, and 1200 in breadth; which can only be meant, including the creeks and windings, which áre too precarious and unknown to be depended upon.
Barbary is, next to Egypt, the moft fruitful, trading, and populous part of Afric. The foil abounds with plenty and variety of grain and fruits, efpecially citrons, oranges, dates, figs, olives, grapes, pomegranates, alinonds, \& $c$. in all which the inhabitants drive a confiderable traffic, as well as in coral, Morocco leather, Barbary horfes, and other commodities, as we fhall have occafion to mention in the trade of each particular kingdom. The air is temperate, though hot, being refrefhed by conftant breezes from the Mediterranean.
The kingdom of Barca, under the government or bafhawfhip of Tripoli, being for the moft part a barren defert, and having no commerce of any confequence ; it will not be ex: pected to have any place in this work.
The kingdom of Tripoli.
Tripoli Proper, is bounded on the north by the Mediterranean, on the eaft by Barca, on the feuth by the Sara, or Great Defart, and on the weft, partly by Tunis, and partly by Bi'cdulgerid. It is varioufly divided, as firft, into maritime and inland, or into five principal provinces or dittricts, viz. i. Tripoli, properly fo called. 2. Effab. 3. Meffellata. 4. Mzerata, or Mezerata, or the antient Cyrenaca; and 5. Barca, or antient Marmorica, now part of this bafhawfhip. It hath a great number of cities in each of the four former provinces, and fome of them very large, trading, and populous, as well in the inland, as on the coafts; but chiefly in the latter, where, befides their feveral manufactures and commerce, they carry on the piratical bufinefs to great advantage to themfelves, though to the great hazard and lofs of the European nations trading on the Mediterranean. According to this diftinction of mariume and inland, the principal cities in the former are, I. In Tripoli Proper, Copez, Bibana, Znora, Zavia, Cgarbia, tower of Arzaria, Zouaga, or Old Tripoli; the New Tripoli, Lebeda Tagara, and fome few of lefs note.
2. In the province of Mozarat, or Mzerata, the capital Tubia Ziliten, \& \& c.
3. On the gulph or bay of Sidra, Colbene, Smeida, Sbica, Arcadia Serte, Naïm, Tini, Porto de Sabi, Stagno, Zoara, Zamera, Corcaura, Mirelle, alias Millic, Bernich, Bengafi, and Tolometta ; the three laft on the coaft of Derna.
In the inland part of Tripoli Proper, the chief places are mount Riaina, mount Fiffato, mount Gefren, or Guefon; the towns of Tarona, or Taorbona; the other parts in Ibai Valid, Mefda, and mount Guibet or Aclas ; which laft divides it from the kingdom of Faifan, the country of Haicha, the defart of Ezzab, the territory of Benoferta, fo called from it's capital, a fmall town; and the defart of Ouguila, or Auguila; in which are Auquela the capital, Siv-ab, or St , Rio, and the mount Muyes.
Tripolif Proper, which we begin with, not as being the next in courfe to Barca, but on account of its being the molt confiderable province in this fate; it hath Tunis nn the weff, from which it is parted by the river Capr $z$, or Caps, which rifes out of a fandy defart on the fouth, near mouni Vailaiat, and falls into the Medterrapean,

There

There is a very hot foring near the town of Albiamma, which is convered thither by an aqueduct ; but the water is fo ho and fulphureous, that it is hardly drinkable, till after it hath been expofed twenty-four hours to the air. Near the foring s a pool called the Leper's-lake, becaufe it cures that diftemper. This city did once vie with Tunis, and is affirmed to have excelled it. in the quantity of gold, filver, pearls, and precious fones, befides other forts of rich commodities. It ad alfo, we are told, near one hundred and fifty different trades belonging to the filk-manufactures, befides a great number of others belonging to that of the camblets, cotton, and other ftuffs. At prefent, all thefe branches of traffic are much decayed; it now chiefly confilts in the great quantities of afhes brought thither by the Arabians, and montly bought up by the French, for making glais and foap.
Capes, or Caps, Cabez, Capez, fuppofed the antient TaCAPE, is a good large town, well walled and fortified, and fituate on a bay of it's name, defended by a ftout fort, at the mouth of the hot river before-mentioned. It made a very great fgure in the time of the Romans, but underwent fo many frange viciflitudes from the Goths, and other barbarous nations, and is at prefent fo much expofed to the excurfions of the Arabs, that it is only inhabited by a parcel of poor fifhermen and hubandmen ; but the foil about it is very fandy and barren, and produces but a little corn, and fome dates.
The gulph of Sidra. This large bay, antiently called Syrtis Magna, lies on the fame coaft, between the country of Marata on the weft, and the kingdom of Barca on the eaft, and hath the defart of Serte on the fouth.
They farcely carry on any trade, but that of fifhing and piracy. Yet fome few there are, both here and at Mfarata, who trade in European commodities, which they fend into the country of the blacks, and exchange them for negro-flaves, civet, and mufk, which yield them a confiderable profit in Turky.
The country of Faisan, or Fassan.
South of Tripoli, and between it and Sara, or the defart, is the country of Faifan, or Faffan, a difrict under it's. own particular government, and containing twenty-eight cities or towns, one the capital of it's name, and about one hundred villages. The country abounds in dates, and the inhabitants are efteemed rich, efpecially by the trade they drive in negroflaves.
Juft weftward of Faifan, is the fmall territory of Gadamis, or Gudemis, on the confines of Biledulgerid, and Vhergela on the weft. It is a very rich diftriet, under a government of it's own, and drives a confiderable trade in flaves and dates The kingdom of Tunis.

This is the country, which formerly was the once celebrated republic of Carthage; and which, in the utmoft extent of it's conquefts, contained a much larger territory than it hath fince, or doth now, it antiently polfefing the provinces of Conftantina, Bugia, Tripoli, Tunis, and Ezzab, and ftretching along the coafts, above 120 leagues. It hath fince loft them all, except that of it's own name, and is reduced now within a very little compars, being bound on the eaft by Tripoli, on the weft by the river Gualdibarbar, which parts it rom Conftantina, and on the fouth by Biledulgerid. So that t's utmof extent, from eaft to weft, is only from the 7 min . 30 deg. to 11 min .30 deg . of eaft longitude, or at moft bo leagues, and about 135 from north to fouth.
The foil and climate is much the fame with that of Tripoli, except that it is a little more fertile towards the weft, being watered by fome good rivers.
The Moorifh kings, whilf in poffeffion of this country, ufed o coin feveral forts of money; as particularly thofe called fultanins, which were of gold, and weighed about twentyfour carats; the rofaras, which were of filver, and of a quare fogure. They ule likewife the alpers, dubbes, and barbas, which bear the fame price here that they do at Alier. The greateft commerce confifts in oil, olives, dates, foap, kali or afhes', oftrich-feathers, camels, and horfes, Olives they have in fuch plenty, that they can fend vaft uantities of oil abroad, and make their charcoal of the wood; which is almolt the only one they have for that, or any other ufe. Their many vallies, between thofe high mountains, afford plenty of corn, fruit, and pafture; and they breed great quantities of horfes and camels, which fell bere very cheap.
They abound likewife with variety of game, as well as of wild bealts. Their rivers afford them plenty of filh; as for other provifion, fuch as rice, pulfe, \&c. they are forced 10 have them from abroad.
Tunis is faid to owe moft of it's frength and beauty to the Arabs, who came hither from Carthage, where they did not think themfelves fo fafe, and raifed it to that degree of grandeur and ftrength it hath fince appeared in; for the many revolutions it hath undergone from the Vandals, Arabs, Spaniards, Turks, \&c. had reduced it to a very low and mean condition. It is now fo populous, that it is computed to contain ten thoufand families, and three thouland ihops, where hey fell linnen and woollen; and the Venetians and Genoefe are the two European nations that drive the greatef commerce with them. A great part of the inhabitants, bo:h
within the city and fuburbs, are employed in the linnen ma nufacture, which is here the fineit in all Africa; their thread being the moft delicate and beft twilled; and it is of this that they weave that fuperfine cloth, of which they make thofe turbans called tunecis, fo highly efteemed by the Turks and Moors. But their moft advantagcous bufinefs is piracy, in which they excel their neighbours, efpecially in the number of chriftian flaves they make, and of which here is no inconfiderable number.
The province of Sousa, or Susa, is fo called from it's capital, an ancient Roman city; built upon a rock near the feafide, over-againft the inand of Pentileria, and one of the neareft to Sicily, of any African cities. It hath a commodious large haven, where the pirates revel in fafety, and the inhabitants, though moftly feamen, are reckoned a civil and trading people. Some of the meaner fort about the city follow the bufinefs of weaving, others of making earthen ware, and breeding of catcle. The territory is fertile in barley, figs, olives, dates, and pafture grounds.
The city of Soufa is ftrong, well walled, and is defended by a good fout caftle and garrifon. It drives a pretty good trade in oil, honey, wax, and efpecially in the tunny filh, which is here caught and pickled, and in great requeft.
Algier Profer. This province is fo called from it's capital, the prefent metropolis of the kingdom, It is one of the four parts of the antient kingdom of Tremecen, or Tremizan, alias Telenfine. It is bounded on the eaft by Bugia, on the weft by Tenez, by the Atlas on the fouth, and by the Mediterranean, from the mouth of the Chinelaf to the northern confines of Bugia. The territory of Algier is fertile in fruits, and the plain of Moligia produces corn, barley, and oats, two or three times a year, befides other grain. The melons are of exquifite tafte, fome of which ripen in fummer, and others in winter. 'Their vines are very large and thick, and the bunches of grapes commonly a foot and half long. There are feveral forts of manufactures carried on here, efpecially of the filken kind, and moftly by the Andalufian and Granadan Spaniards: the commerce of the city is ftill more confiderable; but that which enriches it moft, is their piracy. The coin ufed here is moltly foreign, as the Turkifh fultanins of gold, worth about a ducat; the moticales of Fez, worth about two hillings; Spanifh royals, French crowns, Hungarian ducats, \&c. That which is coined here is the barbas worth half an afper, a fmall fquare piece of filver, ffteen whereof make a Spanifh royal, and a doblas worth about a crown.-At Tremecen they coin pieces of gold, called rubios, and worth about 35 afpers, medians worth 501 , and zians worth 100 .
The province of BENI-ARAXID, or BENI-RAZid, fo called from it's inhabitants, who are Bereberes; it is one of the dependencies on Algier, fituate on very high ground, and about 17 leagues in length, and 9 in breadth. All the fouth part of it is a plain champaign country, and the north very mountainous, but interlaced with fertile vallies, abounding with corn, honey, and pafture-grounds ; and the whole province producing plenty of jujubes, figs, and other excellent ruit. It's four chief towns are Beni-Arax, the capital, Calaz, El Mohafcar, and Batha.
Beni-Arax, is the molt ancient and confiderable, and hath above two thoufand houfes, and a great number of perfons of quality and wealth.
Calaa, is the next town of note; it hath a good number of merchants and artificers, who live very comfortably.
El Mohascar, is a large open town : it hath a market every Thurfday, to which the Bereberes, Azuagues, and Arabs, repair to fell their cattle, corn, barley, dried figs, and raifins, honey, wax, oil, \&c. and the merchants of Tremecen, their cloths, linnen, camblets, bridles, faddles, and other fuch-like commodities.
The province of Miliana, or Magnana, fo called from it's capital, and fituate on the fouth and eaft of Algier Proper, and joined on the weft to Beni-Araxid, is chiefy inhabited by a ruderfeople, whole principal bufinefs is weaving of linnen clotbs adand making of faddles, after the Morifco fafhion. It was formerly part of the kingdom of Tremecen, but was fubdued to Algier, by the pirate Barbaroffa.
The capital, antiently called Magnana, and Manliana, was built by the Romans on a high and craggy hill, with a deep valley at the bottom, about 57 miles fouth-weft of Algier. The territory about it is fo covered with walnut-trees, that they are obliged to leave one half of the nuts to rot on the ground. Befides the two manufactures above-mentioned, the people here are very curious in turning a fort of wooden ware, chiefly for drinking, which is in great requeft. They have the fineft citrons and oranges in all Barbary, which they fend to Tenez, Algiers, and other places.
The province of SARGEL, is fo called from it's capital, and is one of thofe governments that have been difmembered from that of Tenez Proper, and fituate between that and Algier. It is a maritime country, very fruitful, and well peopled. It yields plenty of corn, fax, hemp, fruits, and efpecially mulberries, with which the inhabitants of Sargel bieed great quantities of filk-worms, which is their chief manufacture. On the coaft, about fix miles from that city, is the famed
mountain of it's 'name, called by the Turks Carapula, and by the Moors Girafumar, which is of fuch prodigious height, that a fhip may be difcovered 12, fome fay 20 , leagues off at fea. Between that mountain and the city, runs a river, on which are a great many corn and other mills. The two chief towns in this diftrict, are Sargal and Brefcar. Sargal is an antient city, fuppofed the Chanuceit of Ptolemy, fituate between Tenez and Algier, and about fifteen leagues from either by fea, though not above ten by land. The town hath above fifty thouland houfes, chiefly employed in the filken trade, and can, upon an emergency, furnifh fome thoufands of dexterous archers; and, indeed, it's chief ftrength confilts in the riches, number, and foutnefs of it's inhabitants.
The province of Humanbar, is the molt weftern maritime province of the Algerine kingdom. The country is partly hilly, and partly champaign, but both are fertile in corn, flax, cotton, fruit, \&c. Here are two high mountains, the one called Tarara, the other Gnathafus; the latter inhabited by a favage, diftreffed, yet induftrious, people, called the tribe of the Bereberes : they fow fome corn, breed quanticies of cattle, and work at the iron mines, which are on this mountain; and which employ numbers to make charcoal for the purpofe of fmelting and refining their iron.
Ptolemy, is fituate on a plane, three miles from the fea. It hath a river that runs by it, whofe banks are covered with variety of fruit-trees, and the adjacent mountains bear a fort of tree called carrabers, the fruit of which is fo fweet, that the prople make a kind of honey of it, which they eat all the year round. The inbabitants fow great quantities of wheat and barley, breed great herds of cattle, weave the fineft cotmon cloths in all Barbary, and drive a great trade with them but they are forced to pay fuch taxes to the dey of Algier for that liberty, that it runs away with the profit.
The province of Anga, or Angued.
Guagida, an antient city built by the natives, in a fertile and delightful plain. Here are fome of the fineft mules in all Africa, which are fent and fold at Tremecen, and thence into all parts of Afia and Europe.
The province of Tremecen, is a fmall province of the Algerine kingdom, reaching only in length from eaft to weft, from the confines of Anga to thofe of Fez , and from north to fouth, from the fea to the defart of Atlas. However the country is well watered, and produces plenty of corn, and variety of fruits and cattle.
The merchants chiefly trade into the country of the blacks, where they exchange their merchandizes for Tibar gold, ambergreafe, muik, civet, African bezoar, elephants teeth, negro-flaves, \&c. and this traffic is fo advantageous to them, that two or three fuch journies are fufficient to enrich a man ; and fo it fhould, confidering the length and difficulty of it, through fuch vaft fandy defarts, and the danger they run from the fands, heat, drought, and efpecially from the plundering Arabs.
The city of Tremecen, has a confiderable number of corn and other mills, on the river Ceffif. Great quantities of oil are made within this circuit, as well as excellent grapes dried and fent abroad. They have likewife variety of manufactures, efpecially thofe of weaving, both filk and cotton, and linnen carpets, \&c. in the neatnefs of which they excel to a great degree; infomuch that lome of their mantles will fcarce weigh ten ounces. They are likewife famed for their fine faddles, ftirrups, bridles, \&c. which are made after the Morifco falhion. Tefzara is a large town; moft of it's inhabitants are employed in the neighbouring iron mines, or in the manufacture of that commodity, which is it's chief commerce, and is hence carried to Tremecen, and elfewhere.
The province of $Z_{\mathrm{EB}}$, or $\mathrm{Zabe}_{\mathrm{A}}$, joins on the north to the mountains of Bugia and Conftantina, on the eaft to Biledul gerid, on the weft to the defert of Mazila, and on the fouth to the defert, through which the caravans go from Tocart to Guargela and Quefkelen-The country is hot and fandy, full of poifonous creatures, but is plentiful in dates and wa ter, which makes it be fo populous. - It's commerce is chiefly with the blacks, by which they enrich themfelves.
The province of Tegorarin, or Tagurini, is bounded on the eaft by Biledulgerid and $Z \mathrm{eb}$, on the weft by Segelmefla, on the north by Algiers, and on the fouth by Zara, or the Great Defert. The inhabitants daily increafe in wealth by their traffic with the blacks; and it is in this territory that the merchants meet to form themfelves into caravans, in order to crofs the vaft deferts of Lybia. The land here is fo dry and barrein, that it requires a great deal of watering and manure before it can be made to bear either corn, barley, or hardly any thing but dates, which do, indeed, grow in great plenty. Flefh is fcarce and dear amongtt them, for want of pafture; a few goats they have, and feed upon their milk; they eat horfe and camel's feih, but do not kill them till they are old and paft labour; and thefe they purchafe of the Arabs, who bring them to their markets.
The province of Segelmessa, or Sugulmessa, is bounded on the weft by Dara, by Zeb and Mazzeb on the eaft, by part of the Great Atlas on the north, and on the fouth ex tends itfelf to the defert of Lybia, and is chiefly inhabited by Vol. I.
the Bereberes. It is a large territory, extending itfelf above 230 miles, Moll fays 500 in length, and 300 in breadth. They have little commerce, and thercfore are uncivilized and favage among themfelves. They fow no great quantity of corn, and feed chietly on dates, figs, rainos, neaches, of triches, flags, and fuch fieth as the Arabs drive thither for fale. The people are chietly employed, either in the culture of lands, or in the tanning trade, but are poor and milerable, as well as brutal, for want of commerce, which renders all nations otherwife, wherein it is duly cultivated.
The province of Tafilet, was formerly the feat of the leings thereof, but now fubject to the king of iforocco. It is a lorg tract of land, runing almott lorth-woll and fouth-eaft, bounded on the north by Fcz and Tremecen, on the caft by Segelmefla; on the fouth by Sara, or the defert; on the wefi by Morocco and Sur. The country is mountainous, yet bears fome corn and other fruits, planty of dates and fome indigo, and hath good pafture grounds, both on the hills and vallies, efpecially along the fides of the river, but for the riof part is fo dry and barren, that only the chiefs and aleaies, who are the nobles, can wiford themelves corn, whit the comamon fort live only ou dates and camel's leh. Water is tow: wife fo fcarce, where they are at a ditance from rivers, that they are obliged to fave, in winter, what rain-wacer falls, to ferve them in fummer.
The principal commerce of this country is a fort of fine leather, and of indigo; which latte, though made of that plant which grows wild, and in great quantities, doth yet give a deeper, more lively, and permanear dye, than that which is cultivated with fo much pains in America, according to Labat. They deal confiderably in ftriped filks and limen, after the Morifco fahion. But their molt coniderable ex port is that of dates, and of a fpecies of leathor they make of a peculiar beaft among them, calied lanto.
Tafict, a town which ftands by the river of it's mame, in the kingdom of Taflet. It contains about 2000 houfes, inhabited moflly by Bereberes, called Filelis, who are ingen:ous, induftrious, and rich. Their chief manufa fides the filks and leather above mentioned, are a kind of fine coffocs, carpets, and other coverings, of a very fipe texture. They make good indigo and Morocco leather; and this town is the great rendezvous for the European and Barbary morchants. There are various other provinces, which may be faid to come within the boundaries of Barbary; but, as they afford us no matier for commercial confideration, we thall pafs them over, and touch only upon the
Niger, or Sanago river, the one being eftcemed, by the moft accurate geographers, a part of the other. The Europeans have been able to trace this but part of the way, beyond which they know nothing of its courle, but what is learnt from the Mandingo negroes, who, among all the blacks, are the moft addicted to travelling and trainc, but are neither expert enough in their obfervations, nor have gone far enough to know any thing of its real fource, fince the; place it no higher, according to Labat, thau the lake Maberia, in the kingdom of Tombut, which is little more than haif way to that of the Nile.
Others, with Labat, have ftretched it's courfe buck eaftward, to the lake Bournow, which lies under the 18 th degree of latitude, and igth of eaft longitude, and fix it's fipring-head there, it being difficult to trace it further, on account of the dangers of fuch an attempt from the fuppofed barrennefs of the country, but rather from the favage difpofition of the inhabitants, who live beyond it; and who can never be rendered humane and civilized, tiil the Europeans take wife and honeft meafures to make them fo.
'Tis certain, however, that the Sanaga is a very large and confiderable river, and of very great extent in it's courfe, even though we fhouid trace it's fpring head no farther than the lake Bournow. But, if we fuppofe it to fring from the fame head with the Nile, it will then crofs almoft the whole country of Afric where it is wideft, and will have a courfe of near 50 degrees from eaft to weft, exclufive of it's windiags. The entrance into it is narrow and fomewhat difficut, by reafon of it's immoveable bar and fandy hooals, as well is the feveral iflands that are at the mouth of it, and the feveral canals and marthes that clog it; of which we fhall give a more diftinct account, when we come to fieak of Negroland, and of the feveral fettlements of the Europeans on thefe iflands. But, after failing up eight or ten leagues, it is found broad and deep, and fit to carry drose velfels; and except about five or fix leagues on each fide above the mouth, which is a fandy and barren grownd, all the rel, as far as the lake Maberia, the banks are covered with frately fruittrees and villages, and the country well watered, and very fertile for a great way; for like the Nile it overfous it for many leagues, and inriches the land to a great degree, and would do fo fill more, if the inhabitants were as expert and induftrious in making all the advantages they can of it; but that is not the cafe, though the people on both fides live as near to it as they can, and feed great herds of cattle, and fow large and fimall millet, the former whereof is what we call the Turky wheat, in great quantities, and with great increafe. As the Senaga receives many confiderable rivers in its courfe,

## B A R

## B A R

which rwell' it high enough to be able at all times to carry veffels of 40 or 50 tons, fo it fplits itfelf into feveral brancher, which, re-uniting again, do form very large and fertile illands, well filled with towns, villages, and inhabitants.
The moft noted towns for largenefs and number, are Bequio, or Bifeche, fifuate between the great Aream, and the branch of its name, otherwife called Corow river, and is about 35 leagues in length, and in fome parts 12 or 15 in breadth, and interfected with a great number of fmaller ftreams and canals, which makes it refemble a group of fmall ifles, covered with palm and other fruit-trees, and other verdure, as well as towns and villages. This ifland reaches almoft to the mouth of the great river.
Above that is another called the ifland Morphil, from the ftream that inclofes it on the other fide, and is no lefs than 80 leagues in length, and 8 or 10 in breadth, where wideft; hath a confiderable number of large villages, well peopled, and who drive a great trade in elephants teeth, which the negroes call Morphil. Adjoining to that, and parted only by a canal, is another called by the inhabitants Bilbas, and is about $3^{\circ}$ leagues long, and 5 or 6 broad. It is populous, and the negroes, who inhabit it, drive a good commerce in ivory, gold-duft, and fome little plates of that metal flatted with the hammer of different thapes and fizes, chiefly ufed by the women, wherewith to adorn their hair.
Thefe iflands of Morphil and Bilbas belong to the kingdom of Firatic, or Fullis, whofe prince and inhabitants are extremely obliging to ftrangers; and, befides their populoufnefs and fertility, abound with great variety of peculiar trees, herbs, and roots. They breed likewife divers forts of cattle, and other animals, fowls in great abundance, and bave plenty of cotton which they manufacture.
About four or five leagues eaft of the ifland Bilbas, is a fmall one called Sadel, belonging now to the French African company, to whofe director-general, Mr. Brue, the king of Siratic gave it, anno Ijor. But, as that prince's kingdom extends itfelf a prodigious way on the other fide of the Senaga, we Chall refer the fuller account thereof to the article of Negroland.
The province of Zanhaga, or Zenega.
This large territory extends itfelf from the river Suz, which parts it from Morocco on the north, to that of Sanago on the fouth; that is, from the 17th to the 28th degree of latitude, and is bounded on the eaft by the territory of Serem, Sunda, and Zuenziga, and on the weft by the Atlantic ocean. It is inhabited by feveral nations, fuch as the Berviches, Ludays, Duleynes, and Zenegui, befides fome tribes of Arabs, 'which latter live for the moft part upon the former, and carry off whole droves of their cattle, which they exchange at Dara. In this province are the two deferts of Azoa and Taguzza, or Tagooff, the laft of which produces a vaft quantity of rockfalt, which is conveyed hence into all parts of the defert, and Negroland.- This country is fo flat and fandy, without either trees, mountains, towns, woods, or rivers, for a traveller to fteer his way by, that it is next to impoffible not to mifs his road in fo long a tract. The traders who travel into thefe parts, guide themfelves by the flars, as they moftly travel in the night, by reafon of the exceffive heat. Here are neither cities nor towns of note. The people fubfift moftly on dates, and the milk of their flocks, except they chance to kill fome wild goats and other game, which are very fcarce. The kingdom of Gualata is fouth of Zanhaga (though geographers difagree about, its fituation and boundaries) whofe inhabitants are called Benais; they are rude and unpolifhed, though courteous enough to thofe with whom they traffic. Zanaha lies on the north, the river of that name on the fouth, the ocean on the weft, and the Zunda and Zuenziga on the eaft. It is poor and barren, corn and flefh of all forts are very dear; they have neither learning nor judges among them, though, in their commerce, they make ufe of the Arabic characters. They are fubject to the kings of Zanhaga, and Tombut; while they had fovereigns of their own, they had a confiderable commerce.
The province or defert of Zuenziga, is ftill more barren and defert than the two laft. It hath thefe two countries on the weft, Sunda and the defert of Cogden on the north, Twarges and Zanfara on the eaft, and the defert of Ghiri, or the river of Sanago, on the fouth.-The limits and fituation of thefe defert provinces are not agreed on by the African geographers : according to fome of the more accurate, it is faid to be the common thoroughfare of the merchants and caravans that go from Tremecen to the kingdoms of Tombut, Agades, Yzza, \&c. though extremely hazardous for want of water. The inhabitants are partly native Africans, and partly Arabs; the latter are exceeding rich in cattle, with which they wander for frefh pafture as far as the kingdom of $Y$ guid.
The province or defert of Targa, or Halr, and Twar. GEs, hath its firft name from the defert, and the fecond from the people that inhabit it, whom fome geographers have filed Twarges, or Terges. Some of them have taken Hair for the chief city in the province, though Leo Africanus rather calls it a defert; but neither Targa nor Hair are mentioned by him as cities, neither doth it appear to have any. The truth is, we know but litcle of thofe deferts. We arc, bowever,
pretty well aflured, that it is neither fo dry and barren as thofe we have gone through, nor fo fuitry and unwholefome. It hath many good wells of water, though generally deep; the lands produce grafs, and feveral forts of herbage. Grear quantities of manna are found here, eppecially towards the frontiers of Agades. The inhabitants gather it in calabafies, and export it for fale. The negroes diffolve it in the water wherein they drefs their meat, and efteem it vey cooling and falubrious, and think it owing to that, that the people are more healthy here than in Tombut, though the air be not fo good. The Arabs and Barbars, which are here very numerous, make a great trade of catching of negroes, and felling them for llaves.
South of Targa is the defert of Agades. And farther fouth the kingdom of Zanfara, or Janfara, which begins to affume the face of a fertile country, producing corn, rice, Turky wheat, and cotion in abundance.
The province or defert of Iguidi, or Yguidi, and Lempta. The former, 'Yguidi, or, as Mr. De L'lle writes it, Iguidi, is the name of the country, and Lempta, or Lemptunes, that of the inhabitants. This country is fill mqre unknown to us, as it draws farther from the fea-coaft, and is more barren and miferable than any we have feen yet in the whole tract of this long defert. It is befides very dangerous for travellers, not only on account of its exceffive heat and drought, but likewife on account of the brutifh fiercenefs of its inhabitants, who are a wild breed of native Africans, that rob all that come in their way, and kill all that refift them. It is the thoroughfare for the merchants and caravans that travel from Conttantina and other towns of Algiers, Tunis, \&c. into Negroland.
Farther eaf of Yguidi and Targa, lies the kingdom of Agades, or, as others write it, Agdes and Egdes, which hath the Sanago on the fouth, and Bordoa and Bournow on the eaft. It hath fo much better a foil, as it produces much grafs for the numerous herds they feed on it, efpecially on the fouth fide, that it is divided into two diftricts, viz, the northern filed defert, and the fouthern, or fertile. Mr. De L'ille mentions three principal towns in this kingdom, viz. Agades the capital, Deghir, and Secmara, and takes notice of great quantities of good fenna that is gathered in this country.
The province of Berdoa, which hath Faifan and Barca on the north, Bournow on the fouth, Nubia on the eaft, and extends itfelf from the 16 th to the 22d degree of eait longitude, and from the 20 th to the 23 d of north latitude, and farther; but is all a frightful defert beyond it. It is faid to be fo called from its capital, which lies direelly under the tropic of Cancer; but De L'Ifle fays, on the contrary, that that is the name of its inhabitants, who live together in tents, and upon the plunder of the merchants and paffengers. On the northern confines, near the mountains which part this country from the kingdom of Tripoli, fands the town of Zala, where are kept fome confiderable fairs. The country in general is very dry and barren. South of Berdoa lies
The province of Borno, or Bournow, fituate between Gaoga on the eaft, the Sanago on the fouth, Cano and Agades on the weft. It is a defpotic kingdom, and extends itfelf from 13 to 22 degrees of longitude eaf, and from 17 to 21 of latitude, but is far from deferving to be ranked among the deferta of Zahara, except towards the northern parts of it ; but all the reft is well watered by fprings and rivers, defcending from the mountains, and produces corn, and feveral forts of fruits. On the north-weft ftands the mountain of Tanton, which hath fome good iron mines, which they know not how to work to advantage; and, on the north-eaft, runs the moft defert part of all. On the South flows the Niger, or Sanago. The eaftern and weftern parts, which are partly flat, and partly mountainous, are inhabited by a people that live in tents, have their women and children in common. The mountains are covered with herds of cattle, and fome of them produce alfo millet and cotton. Bit the people here, though they bear the afpect of the human fpecies, yet feem to be but a fmall remove from the brute creation. - Thofe who refide in towns, indeed, are more tractable and polite, by reafon of their being merchants, manufaclurers, and artificers, of all countries and complexions. The king, who is here abfolute, is faid to be fo rich, according to Baudrand and Dapper, that all his houfhold furniture, even down to his fpurs and ftirrups, \&c. are all of pure gold.
The chief places in this kingdom are, Borno, the capital, Amazen, Sagra, Semegonda, which lie northward of the firft; and, eaftward of it, are thofe of Nebrina and Sama. We know but little of them, except that the capital is fituate upon the northern bank of the Sanago, near the frontiers of Cano, and drives a goad commerce with all the neighbouing countrics.
The province, or kingdom, of Gadga, or Kaugha. This is the moft eaftern, and laft province, of this extenfive defert of Zahara, it being contiguous on the north-eaft to Egypt, and on the eaft to Nubia. On the weft it hath the kingdoms of Bardoa and Bournow; on the north, part of Bardoa, and, on the fouth, according to fome, by the Niger, and, according to others, by the Bar-el-Alrad, which falls into the Nile. The country is mofly mountainous, and the people
very rude and illiterate, and go almoft naked. Leo Africanus tells us that they live in poor flight huts, made of fuch combuftible fuff, that they are frequently fet on fire, and fpread flames through their fcattered hamlets. The breeding of great herds of cattle, both fmall and great, is their chieficare and wealth.

## Remarks.

From a confideration of the trifling trade which there is in this large territory, it is no wonder that the people are favage, even to brutality: for it is certain that commerce with other nations, as well as within themfelves, has a natural tendency to polifh and humanize mankind in general: and, in confequence thereof, government has been eftablifhed: fo that it may be faid with great truth, that mutual intercourfes of home and foreign traffic have given birth to all thofe bleffings which the whole human feecies enjoy, beyond the moft brutal and barbarous nations; there being reafon to believe, from what we experience amidft thofe nations which are defitute of commerce, that the whole race of men would have appeared but a fmall remove above the brute creation, had they contented themfelves to live without the purfuits of commerce. If we contemplate the fate our own nation, when our commerce was in its infaricy, and compare ourfelves then with what we are at prefent, there will appear to be almoft as much difference as there is at prefent between fome of the barbarian countries and our own. This confideration fhould give us juft notions of the invaluable bleffings of traffic, it being that which was the original parent of our arts and fciences, our literature and our government; for the inducement to cultivate letters arofe from the influential motives of profit and honour; and, trade being neceffarily productive thereof, that may be juftly faid to be the parent of all that we enjoy beyond the Hottentot.
And, if we were to trace the origin and progrefs of the commerce and navigation of all countries, from the hiftory of the world, we fhall find that they, as well as ourfelves, are in debted to trade for the like enjoyments.
Since it is a true maxim, that by what means any thing is acquired, by the fame it is preferved, it muft ever be for the intereft and glory of this nation to cherifh and encourage to the utmoft the commercial arts, which have been productive of all our felicity and grandeur. Whence it follows, that thefe ftudies cannot be too warmly and zealoully promoted by thofe who wifh well to mankind, and have any real regard to their country. What would our gentry, our nobility, or our fovereigns, be better than thofe of Barbary, was it not for commerce? Since this is indifputably the cafe, it is extraordinary that, hitherto, we have had no welleftablifhed inftitutions for the regular fludy and cultivation of thofe arts, which are fo dear to our country, and fo ineftimable to our pofterity!
\$We are behind no mation whatever in our charitable inflitutions; and why fhould there not be inftitutions to enable us the better to maintain thofe charities? Why fhonld a trading nation be deftitute of trading colleges? ' $I$ is trade that has given bread to the phyfician, the lawyer, and the divine: and why fhould not equal care be taken to breed up Britifh merchants, as any of the other profeffions? A mercantile college, or a college for merchants, does not found lefs agreeable, than a college for any other order of men whatever. We have one for the fupport of decayed merchants, and why not many to prevent their decay?
The commerce and the money affairs of the nation are the grand points of confideration which come before the legiflature. But what do our young nobility and gentry, who are to reprefent a trading nation in parliament, ever hear of thefe matters at their colleges, either at home or abroad? Why alfo Chould not this kingdom have feminaries properly eftablifhed and endowed, to bring up thofe to a perfect knowlege of trade who are to be the guardians of our trade? Is it, becaufe trade is too well underftood, by thofe who have the care and protection of it, that it needs no fuch eftablifhments? Or , is this branch of knowlege to be obtained without any application, or regular courfe of ftudy? This will not be faid by thofe which are judges of the matter. Is a knowlege of trade, in a trading nation, an accomplifhment unbecoming the gentleman? This will hardly be faid either, frice it is a frequent topic of converfation among fome of the politeft companies, and the ftanding fubject of the capital debates of our parliament itfelf. If any gentleman can be weak enough to imagine that trade has no connection with his private intereft, as a landed man, or as a monied man, he may then as well live among thofe barbatians where there is no trade, as in Great-Britain. When an acre of land is worth no more in England than it is in the deferts of Barbary, then gemtlemen may have reafon to contemn trade as beneath their regard. But, while trade is the chief caufe of their wealth, their fplendor, and dignity, it will ever be their intereft, and that of their pofterity, to fudy it in carnef, and promote and encourage it with zeal and alacrity.
As the knowlege of trade and money is the beft accomplifhment that the reprefentative of a trading people can have, fo it will bardly be thought any difhonour to him who fhall re-
prefent his fovereign at foreign courts. Treaties of commerce with other nations are the moft effential points that cincern our national interetts; and, for an ambaflador to excel in the knowlege of commerce, is certainly no way repugnant to that high charafter.
When any extraordinary regulations with regard to trade are to take place in a trading country, we then more fenfibly difcern the utility and necetifty of this knowlege. This is the cafe, at prefent, in Holland. His late royal highnefs the prince of Orange, it is faid, took unfpeakable pains to inform himfelf in this important fubject; and it is plain enough, from his propofals to the States-General, that he found a knowlege in the practical, as well as the political nature of trade, abfolutely neceflary in thofe weighty confiderations.
Here it may not be amifs to obferve, that the great point under confideration ar prefent, in Holland, is, the regulation of the duties upon merchandizes inwards and outwards, that being the moft effential point to be fetcled in a nation whofe dependence is upon foreign traffic. To which end, we find, in the prince's propofals, that it was neceflary to inquire into the nature of every diftinet fpecies of goods, in order to know it's diftinct and peculiar ufe and application in all their mechanical and manufactural arts; without which it being imponfible to make a true judgment what commodities ought to pay duties, and what not, and how thole duties fhould be wifely rated, effectually to promote, and not to injure, their commerce and navigation. Whence it may be obferved of what ufe the prefent work wherein I am engaged may be of to the ftatefman, with refpect to the forming of a right judgment upon whar principles the cuftom houfe duties ought to be regulated. As this muft degend upon a thorough knowlege in the rature, ufe, and application of every fpecies of merchandizes imported and exported, our Dictionary, I humbly apprehend, muft be of great utility upon fuch important confiderations; it containing a more minute and ample defcription of thefe things than any work ever before publifhed. And this was one great motive for being fo explicit upon thofe articles, but not the only one; for, by this means, our mechanical and manufactural arts may be greatly advanced by the artifts themfelves, when they are well informed of the application of thefe materials to variety of purpofes.
BARBATINA, or SEMEN CONTRA, a feed which is effcacious in extirpating worms from the human body, to which children are chiefly liable.
The plant which produces this feed, is a kind of wormwood, and has fuch fmall leaves, that they can hardly be diftinguilhed from the feed itfelf. It is pretended that fome of it grows in the province of Xaintonge in France; but that which the druggifts fell, comes from Perfia, and from the borders of Mufcovy. The Englifh, French, and Dutch, get it from Aleppo, by the way of Alexandretta, Scanderoon, and Smyrna.
This feed, to be good, ought to be plump, of an agreeable fcent, and very green: efpecial care mult be taken that it be not dyed green, ard that the feed of fouthernwood be not fold inftead of that.
The Englifh and Dutch make fugar-plums of this feed, as is done with aniie-feed.
The barbatina, or femen contra, pays duty of importation in France 5 livres per roo weight, according to the tariff of 1664, and 20 per cent. of it's value befides, by a decree of council of the 1 gth Augutt 1685 , as a merchandize coming from Perfia and the Levant.
BARCALAO, a Spanifh word, which the French pronounce baccala, or baccaliau. By this lait name the Bafques moft commonly call the filh which we tile cod; and thofe people alfo call the ille of Newfoundland, the ille of Baccaliau (Cod Inland) becaufe of the great plenty of cod that is catched there. There is, however, a league to the weft of that large ifland, another fmall one, which is more particularly called Baccaliau. The barcalao is a kind of cod, perfectly like that of Newfoundland, and is to be met with in feveral parts of the SouthSea; but the greateft quantity is catched on the coaft of the ine of Juan Fernandez, 80 leagues to the weft of Valparaifo, on the coaft of Chili.
One d'Apremont, a Frenchman by birth, who had been life. guard-man to Lewis XIV, was the firf who taught the Spaniards of Peru to catch, cure, and dry this cod, about the year 1713.
BARGAIN, a contract, or agreement, in buying and felling. Hence, to buy a good bargain, is to buy cheap. The French have the word barguigncr, which fignifies to debate about the price of any merchandize, to difpute every penny; as alfo, to be uncertain what to choofe, or how much to pay. With the ltalians, that word is ufed to fignify felling for a time, and upon truft.
Bargain is alfo a contract, or agreement, to give a certain merchandize for a certain price; whence the French $e_{d} l l$ it contract de vente, a contract of fale. So that there are three things chiefly requifine to make a bargain complete, or perfect. I. The merchandize fold. 2. The price. 3. The mutual agreement, or content.

REMARXS.
The merchandize fold ought to be certain; which is eafy enough when you fell a determined body; as for inftance, a
horie,

## B A R

## B A R

horfe, or fuch other thing. But, when the queftion is about a quantity of wine, corn, tin, iron, \&ic. which are fold by the meafure, tale, or weight, the fale is not perfect till the merchandize be mieafured, fold, or weighed, becaufe of the uncertainty, unlefs the feller fold all his wine, all his faggots, all histin, \&c. in a lump and together, without felling them by the meafure, tale, or weight.
It is not lawful in fome Roman catholic countries to fell things that are out of trade; fuch as are efteemed facred things: but yet, if the buyer acted fairly, the bargain ought to ftand fo far as to intitle him to damages and intereff from the feller. There are other things, the trade of which is abfolutely prohibited in France, as that of falt, in fome provinces; or with foreigners, as that of gold, filver, jewels, warlike fores, arms, corn, and ocher fuch merchiandizes, the exportation of which is prohibited, and which are reckoned contraband goods. But, thefe being excepted, all other things may be fold, even 2 man's right or claim, and even his hope or expectation of an uncertain event, as the future produce of a vineyard, the felling of timber in a foreft, the fuccefs of a voyage by fa, \&c. becaufe it is not the thing uncertain that, is fold, but only the hope or expectation, which is certain.
According to the nature of trade, the price of the thing fold hoould be paid in current coin, otherwife it would be only an exchange, nor could there be any difference made between the price and the thing fold. However, it is cuffomary in France that when an eftate is exchanged for moveable things, which can be eafily valued and appraifed, fuch as wine, corn, wood for fuel, timber, iron, lead, tin, gold and filver in ore, \&c. it produces the fame effect as a true fale, either with regard to the rights of the lordfhip or manor, or to the power of redemp. tion. Confent being the material condition of a fale, it ought to be equally free from error and violence; that is to fay, with regard to error, if there happens to be one in the very fubftance of the thing bought, it makes the bargain void: but is is otherwife, if the error be only in the qualities of the thing fold; for, in that cafe, it does not diffolve the bargain, provided there be no voluntary fraud on the fide of the feller. Thus, if I defign to buy pewter, and nothing but lead is fold to me, the fale cannot ftand good, becaufe I was impofed upon in the very fubftance of the thing I wanted to buy. But, if I defigned to buy a clock that went true, and it does not prove fo, the bargain ought to fland, becaufe I was deceived in the qualities only of the thing that was fold to me.
A bargain, or fale, may be made purely and fimply, or with condition. If it be made purely and fimply, it is penfect, and ought to take effect, though there be no contract or agreement in writing; becaufe writing, in fuch a cafe, is not effential to the bargain, and ought to ferve only as a proof of it, unlefs the parties were refolved to make a bargain in writ-ing; in which cafe the fale is not perfect till the contract be figned: fo that, from the moment the parties have agreed to have fold and bought, there is no further occafion of any contract between them.
The fale with condition remains fufpended, till the condition happens: but then it becomes complete or perfect, the moment the condition exifts, without any new confent of the parties: the happening of the condition has even a retroactive effect; that is to fay, that, when the condition has happened, the fale is prefumed' to have been as perfect, from the moment the bargain was concluded, as if it had been made purely and fimply, and without a concition.
It mult be obferved, that there is a great difference between a fale, and a promife to fell.
A fale, among the Romans, obliged the feller to deliver the goods fold : in France, it makes over the property of it to the buyer, in cafe the feller was the propristor. But a promife to fell obliges the promifer to pay only damages and intereft, in cafe he does not perform his promife.
Although the feller ffipulated, that, if the price were not paid within a certain time, the fale fhould be void, yet he may, after the time is elapled, bring his action in order to be paid; and that claufe is always underfood thus; viz. that the fale Thall be void, if the feiler thinks fit, becaufe the claufe was put in, in his favour only; otherwife the buyer would be at liberty to make the bargain ftand, or to annul it at his pleafure; which ought not to be at the difcretion of one only of the contracting parties.
When the feller has fixed no time for the payment of the price of the thing fold, the buyer cannot have the property of it, till he has paid the price.
When, in any bargain or contract of fale, there are dark claufes, they mult always be interpreted againft the feller, who ought to bear the blame of not expreffing himfelf more clearly. A fale is a bargain, wherein honefty and plain-dealing are fo neceffary, that if the feller concealed from the buyer the defects of the thing fold, which, in all likelihood, would have prevented him from buying it, the buyer is obliged to pay him damages and intereft.
The feller may bring his action againt the buyer, to oblige him to pay for the thing fold: but there is a diftinction to be made between moveables and immoyeables. For, with regard to moveables, there is no intereft due for them, but from the day the demand was made in a lawful manner; yet, as to
immoveables, the intereft of the price is due from the day of the delivery of the thing fold, or from the day it was offered. With regard to immoveables, the buyer is not reputed to have paid the price of them, unlefs he produces the receipts. Whereas, with refpect to moveables, the payment is prefumed to have been made, at the time when the goods were delivered, unlefs the feller can prove the contrary.
This, however, fuffers an exception with regard to wholofale traders and retailers, to bakers, paftry cooks, and apothecaries, who have a right to demand the payment of the merchandizes by them delivered, fome at the end of ax months, reckoning from the day of the delivery; and the others at the year's end, though there be no account fetted, nor any promife in writing.
The feller of an immoveable has a fpecial privilege or claim on the thing fold; but it is not fo with moveables: for, as the latter cannot be mortgaged, the feller cannot claim the thing fold, but as long as it is actually in the hands or poffeftion of his debtor; but, the moment it is pafled into the hands' of 2 third perfon, he has no longer any right to it, unlefs he fold it without fixing a day or term for the payment of it, in hoper of being paid immediately; in which cafe he may trace and claim it, into what place foever it has been removed, in order to be paid the price he fold it for.
There are fome things that are fo much privileged, as wine, wheat, and other neceffaries of life, that, by the common law in France, the feller may feize the body of the buyer, for the payment of the price, after a bare order from the judge.
When the fale is entirely complete, the feller ought to be difcharged from any danger which the thing fold may ran, though it fill continue in his poffefion; becaufe it feems it is the buyer's fault not fo take the thing away, by paying the price, as foon as the fale is completed. But, if there be fill fomething wanted to complete the fale; if, for inftance, it be made under a condition, that is not yet fulfilled; if a merchandize fold by the meafure or the weight, be not yet meafured or weighed : even with regard to wine, if the veffels be not yet filled and marked; the feller is to bear the danger of any accident, even though it chould not happen through his fault: for if it were through bis fault or neglect, though never fo little, be would be andwerable for it, even affer the fale was complete.
The buyer of moveables has only a perfonal action againft the feller, to oblige him to deliver the thing fold; for a bare bargain does not inveft the buyer with the property of the thing bought, till it be actually deliyered to him. Whence it follows, that if, after I have fold my horfe to fuch an one, without delivering it to him, I fell and deliver the fame harfe to a third perfon, that third perion is the true proprietor, and the firft buyer has only an action of damages and intereft againft me, for not deljvering to him the horfe I fold him. The fame is to be obferved, according to the princippestef be thus circumftanced.
A defect in the thing fold, which does not appear, and cannot be perceived by the buyer, is a lawful caufe to makewoid fome forts of fales; as of horfes, which the feller is to warrant free from being foundered, fhort-winded, and the glanders.
BARK, properly a fmall boat, with one deck only; and in ge; neral any little veffel, which ferves to tranfport merchandizes, either by fea or by rivers.
At Paris, they give the name of bark, or boat-oyters, to fuch as are brought thither in boats that come up theyiver, to diftinguifh them from thofe that are brought on horfes by the ripiers, and to which they give a name that anfwers to horfeoyfters (huitres de claffe) much after the fame manner as we diftinguifh at London the boat-mackarel from the horfe-mackarel. The oyfters that are brought upoa horfes, making more hafte, and being kept but a little while on the road, are always the frefhelt, and confequently the molt eftermed and the beft.
Bark, the outward covering of trees, which ferves them inftead of a lkin.
There are feveral forts of barks that are traded in, fome of which are ufed in phyfic, as the quinquina, or jefuit's bark, and mace: others ferye for dyeing, as thofe of the alder and walnut-trees: others are ufed as fice, as cinnamon and caffia lignea: fome for divers ufes, as the bark of the corktree, the oak, the linden-tree. All thofe feveral forts of bark are defcribed in their proper places.
The barks of tamarind pay duty of importation in France, at the rate of 25 fols per hundred weight. Thofe of caper trees 2 ilivres and 10 fols. Thofe of mandrakes 40 fols, according to the tariff of the year 1664 ; excepting thote drugs that may come from the Levant, which pay a duty of 20 per cent. ad valorem, according to the decree of Auguft the isth, 1685.

BARK of trees, a ftuff manufactured in the Eaft-Indies, with the bark of a tree, which is fpun like hemp. After it has been beat, and fteeped in water, they extract long threads from it, which are fomething between filk and common thread; being neither fo foft nor fo gloffy as filk, nor fo rough and hard as hemp.
They mix filk with it in fome fuffs, and thefe are called nill laes, and cherquemolles, The fotalongees are allo partly of

## B A R

bark, and partly of filk, and do not difier from the former but in their being ftriped.
The pinaffes and biambonnees are all of bark
The ftuffs are between feven and eight (French) ells long, and 3 or $;$ of an ell broad: except the cherquemolles, which meafure but four ells in length by $\frac{3}{4}$ in breadth.
BARLEY, a fort of grain very weil known. The plant that produces it, has a ftalk fmaller and more brittle than that of rye, and it's leaves are broader and rougher than thofe of wheat. It's bloflom is fucceeded by a grain pointed at the two extremities, efpecially at the outermoft, which render it's ear brifling, with a long and Charp beard, proper to defend it from birds.
There are two forts of barley; the one, which the French call fquare barley, or barley of autumn, becaufe they fow it in that feafon; it requires a rich foil, well plowed. The other is called fring-barley, which is the common fort ; they begin to fow it in France towards the middle of April ; it delights in a light dry foil, being apt to change into oats, if fowed in a ftrong moift foil. There is alfo white barley, red barley, and of fome other colours, according to the foil and land where it is fowed.
Mr. Miiler gives us a better account of this grain. It has, fays he (Gardener's Dictionary) a thin fpike; the calix, hufk, awn, and flower, are like thofe of wheat or rye, but the awns are rough; the feed is fwelling in the middle, and, for the moft part, ends in a harp point, to which the hufks are clofely united. The chief kinds are, 1. The common, long eared barley. 2. Winter, or fquare barley, or beer barley, by fome called big. 3. And the fprat barley, or battledore barley. The firft and third fort are commonly cultivated in England; but the fecond fort is feldom to be met with near London, though Mr. Miller thinks it much preferable to the other two, as producing a larger feed, and very full thick fikes.
The meal of barley is very white, and good to make bread, efpecially being mixed with that of fome other corn. There are fome provinces in France where it is the people's common foud; and even in the other provinces of France, when there is a fcarcity of corn, they have recourfe to barley-meal, for want of that of wheat or rye; as it happened in 1709 , when moft of all the people in the country, and many of the inhabitants of the cities, and even thofe of Paris, owed the prefervation of their lives to the meal of barley.
Befides this ufe that is made of barley, the brewers of beer confume valt quantities of it; for, after they have made it prout, ferment, and boil, they make that liquor of it called beer, which has fome of the properties of wine, and is ufed intead of it in thofe places where the foil does not fuffer the vine to be cultivated.
The corn-merchants and the country farmers are thofe who fell by wholefale all the barley that is ufed at Paris, and the corn-chanders retail it.
By an ordonnance of the city of Paris, of the year 1672 , all brewers, mafter corn-chandlers, and retailers, are forbidden to go and meet the merchants and hufbandmen, in order to buy their barley, nor are they to buy any but upon the keys : and the keys muft never be unfurnifbed with barley. The corn-chandlers and retailers are not only forbidden to buy any but on market-days, and on thofe days in the afternoon only, but they are even forbidden to buy above two feptiers, or 24 buhels, at once, and to keep above 8 feptiers or 96 buheis, in their houfes at a time.
Barley is meafured and examined on the keys, and in the markets at Paris, by the fworn corn-meters.
Barley pays duty of importation in France at the rate of 24 fols the muid, Paris meafure, containing two tuns, and each tun fix feptiers, which, however, muft be underftood of that barley which is entered by the province of Anjou. The duty of exportation is of 13 livres per muid, allo Paris meature; namely, 20 fols for the ancient duty, and 12 livres for the new cuftom; the whole agreeably to the tariff of the year 1664.

At Amfterdam barley is fold by the laft; and there is no other deduction made but of 1 per cent. for prompt payment. It's common price is from 50 to 70 golden florins per laft. That florin is of 28 ftivers, about 29 pence half-penny Englifh money.
Peeled Barley, is that barley which has been ftripped of it's firft coat. The beft in France.comes with Vitry le François; they have fome at Charenton, near Paris, which is pretty good. There is fome very white, and others lefs fo. It ought to be chofen frelh, dry, large, plump, not rank, nor multy. Peeled barley is fold at Paris by the druggifts and the corn-chandlers. It is ufed in the compofition of feveral diet-drinks, which are prefcribed to fick perfons, as alfo to perfons in health, to cool them. However, thofe drinks made with peeled barley are reckoned a little too nourithing. Peeled barley pays a duty of importation at Paris at the rate of 10 fols per 100 weight. For the ufe and confumption of barley in England, fee Malt.
BARRA, called alfo fometimes BARRO, a long meafure ufed in Portugal, to meafure woolen or linnen cloth, (erges, \&ic. Vol. I.

## B A R

Six barras make 10 cabidos, or cavidos each cavidos mit iwering to ${ }_{7}^{4}$ of the Paris ell.
Barra is allo a long mealure urad in tome part; of $\mathrm{S}_{\mathrm{p} \text { anh. }}$. It is the fame with the yard of Seville.
There are three forts of barras, that of Valentia, that of Ca tile, and that of Arrazon.
The barra of Valentia is of 2 feet 9 inches and 7,7 of an inch. which make $\frac{1}{1}^{\circ}$, of an ell Paris meafure: fo that 13 barras of Valentia make io ells of Paris, or 12 yards, ands, Enslifit meafure.
The barra of C.file contains 2 feet 7 inches ${ }_{\mathrm{T}}^{2}=$, and fomething more, which anfwer to $\frac{5}{z}$ of the ell of Paris; fot that 7 barras of Cadtile nake 5 ells of Paris, or 6 yards and $\frac{3}{7}$ Englifh meafure.
The barra of Arragon differs but a few lines from thofe of Valentia and Caftule: fo that 3 barras of Arragon make 2 ells of Paris, or 2 yards and $\frac{a}{7}$ Englifh meafure.
The reduction of thefe the one into the other is performed by the common rule of proportion.
BARRACAN, which the French alfo call BOURACAN, a fort of fuff, not diapered, which is a kind of cambler, of a coarfer grain than the common. It is ufd to make cluaks, fur-touts, and fuch other garments, to keep off the rain.
Barracans are wove on a loom with two treddles, with the huttle, like camblets and lininen cloch". The thread of the woof is fingle, twilted, and fpun very fine, and that of the warp is double or triple; that is to fay, it is compofed of two or three threads, well twifted together. The moft common material ufed in the manufacture of thefe ftuffs, is wool; fometimes they mix it with hemp.
There are fome barracans the wool of which is dyed before it is worked upon the loom. Thefte are called barracans dyed in the wool. Others are manufactured white, and afterwards dyed black, red, blue, brown, \&c. Thefe are named barracans dyed in the piece, becaufe they were not dyed till the pieces were taken from the loom.
They do not full barracans; they only boil them two or threa times after they are taken from the loom, to prevent their fraying. Afterwards they put them into the calender, oo make them fmooth : and, finally, they make them up into a kind of flattened roll, fewed at both ends with fmall pack-thread. Thefe rolls they call pieces of barracan.
The good qualities of a barracan are, that it be very fmooth, of a round grain, and fo clofe, that water may run off from it without foaking through it.
The cities where the moft barracans are made in France are, Valenciennes, Lifle, Abbeville, Amiens, and Roan. Thofe of Valenciennes are the molt valued; they are all of wool, both the warp and the woof. Their breadth is commonly $\frac{2}{3}$ of an ell, and the piece meafures 23 ells Paris meafure. Thofe of Lifle are alfo intirely of wool, and of the fame length and breadth with thofe of Valenciennes, but of an inferior quality.
Thofe of Abbeville are pretty much like thofe of Valenciennes, both with regard to the materials they are made of, and with regard to their length and breadth; whence they are called barracans, after the manner of Valenciennes, though they be neither fo fine nor fo good.
Thofe that are manufactured at Amiens are alfo intirely of wool; but there are two forts of them, with regard to their length and breadth. Thofe that are called narrow barracans are but $\frac{1}{2}$ an ell broad, and $2 i$ ells long: they bear fome refemblance to the coarfe camblets, whence they are fometimes called camblets with twifted threads, or camblets with a coarle grain.
The other are called broad barracans, being $\frac{3}{7}$ of an ell in breadth, and the piece meafures 23 ells. Moft of the barracans of Amiens are manufactured with white wool, and afterwards dyed of feveral colours. Thofe of half an ell are commonly cleaned in water with the feet, before they are boiled and dyed.
The barracans of the manufactory of Roan are the work of all. There are two forts of them; fome intirely of wool, and of the other the warp is of hemp, and the woof of wool; the breadth of both is two-thirds of an ell, and their length 23 ells, Paris meafure.
Barracans dyed in the wool, are thofe barracanst the wool of which was dyed before it was put upon the loom.
Barracans dyed in the piece, are thofe that are not dyed till they be taken from the loom.
A roll of Barracan is a piece of barracan intirely finifhed, rolled up, and fewed at both ends of the roll.
BARRAGE, a fort of worked linnen, manufactured at Caen, and in the neighbourhood of that capital city of Lower Normandy. There is the fine barraze, the common barrage, and the fmall barrage.
Barrage is alfo a duty, or toll, paid in France for the repairing of bridges, paffages, and particularly the pavement of roads. That duty is thus called becaufe of the bars, gates, or turnpikes, which fhut up the roads at the entrance of towns, or at other places, where fuch tolls are to be paid. It is feldom paid but by carriers, for their waggons, carts, or pack-hores. There are, however, fome places where all 3 L
cartiages

## B A R

carriages in general, and even foot paffengers, are obliged to pay toll. It is not the fame every-where, the toll being more or lefs according to the places. The coachmen and waggoners who carry perfons, baggage, or merchandizes, do generally undertake to pay thofe tolls, without demanding any thing more for it.
BARRIERS, or BARRIERES. Thus they call, in the chief cities of France, and particularly at Paris, the places where the cuftom-houfes are eftablifhed, and where the officers receive the duties of importations, according to the tariffs fetthed by the king's council. They are called barriers, becaufe the paflages through which the carriages and merchandizes liable to yay duties are to pafs, are fhut up with a wooden bar, which turns upon a hinge, and is opened or thut according to the will of the cuftom-houfe officer.
There are at Paris 60 of thofe barriers, all placed at the entrance of the fuburbs. At 22 of thefe barriers, befides the receivers of the barrage, or toll, there are cultom-houfe officers, who examine the bills, or letters of carriage, receive the chief duties, and take care of the intereft of the king's general farmers (the taxes and duties in France being generally farmed out). The other barriers are only, as it were, for eale and conveniency, that the former may be more free; for otherwife they would always be crouded, if they alone were open for admitting into that capital of the kingdom the almoft infinite number of traders, carriages, and merchandizes, which are inceflantly arriving thither.
At thofe 60 barriers all carriages and perfons who bring provifions, are to fop, to be vifited, and to pay duties, 'according to the tariffs. The cuftom-houfe officers have even the liberty to examine all coaches, berlins, and chaifes, efpecially thofe of private perfons, in order to fee whether they have any contraband goods, or any provifions liable to pay duty. They alfo examine portmanteaus, cloak-bags, and trunks, of which the owners are obliged to deliver them the keys; and they ftop and feize every thing that was not declared; which, according to the ordonnances, is forfeited, together with the carriages on which they bappen to be loaded, and all the other provifions, wearing apparel, and merchandizes, with which they were mixed.
For the better adminiffration of all the barriers where there are cuftom-houfe officers, there is an ambulatory or walking officer, who goes continually from one office to another, and examines and comptrols the regifters of the other officers, of which he afterwards gives an account at the office of the general farm.
As there are feveral goods that might be run, as wine, brandy, printed linnen, and other things, which are either contraband, or liable to pay duty, and which might be hid in carts or waggons, that bring hay or fraw, or in fuch as are loaded with bales of cotton, wool, flax, or other fuch merchandizes that are foft and bulky, the officers keep, at the door of their office, iron inftruments, with a wooden handle, which they cail tucks (fondes) and with which they probe all fuch goods in which they fufpect that fome other merchandizes may be hid, which people have a mind to run.
It is at thofe barriers that are paid the duties of importation, or entry, for wine, cattle, h.y, wood, timber, coals, fruit, meat ready cut up, and almott all provifions defigned for the ufe of the city of Paris.

## Remarks.

As it is of very great importance for all carriers, who arrive at that great motropolis, as alfo for all citizens and merchants who own, or to whom are directed, the merchandizes that are brought thither, to know through what barrier they are to enter, that they may fend their clerks, or fervants, in order to receive, and pay the duties for them. Mr. Savary has inferted in this place a lift of all thofe barriers: but, this being of no manner of ufe to an Englifh reader, we thought proper to omit it.
Of that great number of barriers there are but a few through which the merchants and carriers may enter wine, and other liquors, as alfo cattle. The ordonnance of aids, made in the year 1680 , appoints but 23 barriers, and declares all the others to be falfe, or unlawful paflages, for thofe forts of merchandizess giving leave for all other goods to pafs through fuch offices, gates, and barriers, as the carriers or drivers fhall think proper.
That liberty of palfage for all merchandizes and provifions coming to Paris was continued till the year 1723, when his majefty, being informed that thofe who brought to Paris and the fuburbs fuch merchandizes and provifions as were liable to pay duty and toll, made an ill ufe of that liberty, and went out of the high roads and common ways, in order to pafs, feveral together in company, through thofe barriers where there is no cuftom-houle office, in order to fave the duties; the king, to remedy a diforder fo detrimental to the farmers of his revenue, did, by a decree of his council, authorifed by bis letters patents, dated January 28, 1723, and regiftered in parliament the 12 th of February following, direct through what barriers the merchandizes and provifions, liable to pay duty and toll, were to pafs for the future. By the fame decree all officers of the gates and barriers are forbidden to open
them at unfeafonable hours, and to wink at the faid merchandizes either by day or by night, under the penalty of atifwering for the damages and intereft, of paying a fine of 500 livres, and being declared incapable of holding any office, and even fuffering corporal punifhment, if the cafe required it.
BARTER, fignifies the exchanging of one commodity for another, or the trucking wares for wares, among merchants.-iso it is mentioned in the flatute I Ric. III. cap. g. And thus bartering was the original and natural way of commerce, precedent to buying; there being no buying till money was linvented, though in exchanging both parties are buyers and fellers.

## REMAR Ks.

Let us fuppofe the butchers in their ftalls at market, onvone fide, and the cuftomers, or buyers, on the other; the price of the meat will be determined, and a pound of beef thall be to the price of filver, as all the beef at market to all the filver (if filver be made ufe of as money) that is intended to buy it.
This proportion is come at by bargaining; the feller keeps up his price, according as he conceives there is a demand; the buyer ftands out, according as he judges there is plenty of beef. And this altercation continues till either of them comes to the other's terms, and fo determines the price. Thefe altercations are, at firf, carried on at an uncertainty, but gradually the quantity of the commodities, and of the money there is to buy them, comes pretty nearly to an equilibrium, and the prices of the things are determined.
If feveral maitues d'hôtel at Paris have limited orders to buy green peafe, and 10 meafures of peafe are limited by the faid orders to 60 livres the meafure, 10 to 50 livres, 10 to 40, and 10 to 30 . On this fuppofition, the money correfponds to 40 meafures of green peafe; but, if there be but 20 meafures at market, the fellers, feeing a great demand in proportion to the quantity of peafe, will keep up the price. The altercations will begin by the maitres d'hôtel, limited to 60 livres; and, when they are fupplied, the 10 meafures there limited to 50 livres will be fupplied, and the price of the peafe will fall to 50 livres, and the maitres d' hôtel, who are limited to 40 and 30 , will go without peafe; but, if 20 meafures more are brought to market, thofe laft will be allo fupplied, and the price of peafe will fall to 30 livres the meafure.
But if, inficad of 20 meafures, 200 meafures are brought to market, the price of green peafe will fall conffderably; and this fall of the price will be proportionable to the quantity of peafe, with regard to the quantity of money intended to be laid out; and it may fo happen in the altercations, that the 200 meafures thall fell for no more money than 20 meafures would have fold for. And, when the green peafe fall fo low as to antwer the price of feveral others befides the maitres d' hotel we have mentioned, there will probably be buyers enough.
Let us fuppofe another example:-That in a market-town containing 500 inhabitants, the bakers expofe to fale 1000 pounds weight of bread, for the buying of which the faid inhabitants intend 10 ounces of filver, at 100 d . per ounce. - According to this fuppofition, the 500 inhabitants will have two pounds of bread each, at I d. per pound.
Now, if a detachment of 500 foldiers come to this town at the beginning of the market, and determine to buy bread, the bakers, feeing this increafe of the demand, will raife the price of their bread. The inhabitants, who ufed to buy the bread at I d. per pound, and who know there is corn enough to make more, will buy no more than what is abfolutely necellary, and they will be contented with roots, flour, or any thing they can meet with. But, if the foldiers mult have bread, and the price of it comes out at three half-pence per pound in the altercations, and they buy 750 pounds of it, at 1 d . $\frac{1}{2}$ per pound each, there will remain 250 pounds for the inhabitants; and, if they ftill refule to give more than a penny a pound for it, the bakers will, at the clofe of the market, let them have it at that price, or elfe this 250 pounds of bread will remain unfold; and, perhaps, the next day, when the foldiers are gone, or when a greater quantity of bread is made it will fall to a penny a pound.
It often happens that the fellers, in keeping up the price, mifs the opportunity of felling. And it alfo happens that they may fell higher another day. All that depends on the plenty or fcarcity of money, or of the buyers, and of the plenty or fcarcity of the commodity, and the knowlege which the buyers or fellers have of it. Though moft of the undertakers buy and fell at an uncertainty, yet the altercations readily find out the proportion of equilibrium. And it commonly happens in commodities whereof the confumption is conftant and uniform, as bread, that the magiftrate is able to fix and determine the price for it, when there is no fudden plenty or fcarcity of the faid commodity, or of money.
I have dwelt upon this example, in order to make the reafons of the variations of the prices of the things at market more feeling and fenfible. The plenty or farcity of commodities, or of money, in every place, caule thofe variaions immediately; and the mediate or remote caufes of them

## B A V

are fancy, or fafhion of living of the prince, and the landholders, \&c.

## Further conliderations upon Barter.

If the money which carries on the barier of a city (which, at prefent, we will conlider as if there was no other in the world) be 100,000 ounces of filvet, that is to fay, if all the proportions of the values of all goods and commodities in the faid city, be meafured by the 100,000 ounces; or, what fill comes to the fame thing, if thefe 100,000 ounces pars for pledges, and keep the accounts of the pretenfions of all barters in the faid city. And if, in thefe circumftances, the faid city reccives 100,000 ounces more, fo difributed that every one who has had an ounce of filver, has now two ounces, and that the quantity of money in circulation becomes 200,000 ounces of filver; this city, confidered in itfelf, is not in any refpect richer or happier than before: it will only happen that all goods and commodities will grow twice as dear as they were.-Though this confequence feems mighty plain, yet I hall endeavour to fet it in a clearer light under the article Monfy, when I come to confider particularly the effects of the increafe and decreafe of the real quantity of money in a ftate.
When Auguftus returned to Roine, after the defeat of Mark Anthony and Cleopatra, be brought with him fo great a quantity of money, that all goods and commodities fold immediately for double the value they fold for before, as Dion Caffius tells us. If all the money he brought to Rome had been laid up in the treafury, it would not have had this effect; for it would have entered but flowly into circulation and barter : but be diftributed it among his foldiers, whom he was not able to pay after the battle of Actium, by which means it came quickly into circulation.
It is true that the 200,000 ounces of filver are intrinfically worth double the value of 100,000 ounces: that it will make double the quantity of plate, and that it correfponds to double the quantity of land and labour; but, if 200,000 ounces are applied precifely to circulate and barter, inftead of 100,000 ounces, they will produce no real advantage or difadvantage to the city in queftion, confidered in iffelf: whether one ounce of filver, or two ounces, be given in pledge, or barter for any commodity, a fmall price, or a large one, it is all one.
But, if we compute the circulation of one city with another, or of one nation with another, it will appear hereafter that thofe nations which have mot money in circulation, and, confequently, where commodities are deareft, have a great advantage over thefe which have lefs money, and where commodities are cheapeft, all other circumflances being equal; and that the principal advantage of foreign commerce confifts in bringing home a yearly ballance of trade. See Moner, and its circulation; Silver, and its value; and Ballance of trade.
BARUTH, an Indian meafure, containing 17 gantans, which amount to between 54 and $5^{8}$ pounds of pepper, avoirdupoife Englifh weight. At that rate a gantan ought to weigh about 3 pounds and a half of pepper.
BARUTINE SILKS, are thofe which come from Perfia by the way of Seyde, or Said. They are weighed by the damafquin, which contains about 600 drachms, of very near 4 pounds avoirdupoife.
BASALTES, a kind of black marble; or very hard touchftone, which refifts the file. It is heavy, fmooth, foft to the touch, and takes a very fine polifh, of an iron colour. It is to be found in Ethiopia, and in feveral places of Germany. It is ufed, like other touch-ftones, for trying gold and filver.
BASARUCO, a fmall coin of the Eaft-Indies, very bafe, being made only of very bad tin. There are two forts of this coin; the one called good, the other bad. The latter is one fixth part in value lower than the former. Three bafarucos make two rees of Portugal, and 375 make a pardao-xerafin, which is to be underftood of the good bafarucos; the bad ones mult be increafed by a fixth part proportionably.
BASIL, one of the cantons in Switzerland, is bounded on the fouth by the canton of Solothurn ; on the eaft by the Friichgaw, which belongs to the empire; and by the territory of Rhinfelden, one of the foreft-towns; on the weft it is bounded with Alface; and, on the north, it advances on the territories of Germany, beyond the Rhine, and is bounded by the Brifgaw. It is a rich and fruitful country in all necerfaries for life, and produces even for exportation exce!lent corn and wine, efpecially about the city of Bafil. Their revenues arife chiefly from fecularized abbies, from their bailiwicks, and from impofts on goods carried through their country, to and from France, Italy, and Germany.
The government of the city of Basil is in the hands of the trading companies. Though this city has admitted a great many French refugees, who have fet up manufactures bere, yet feveral parts both of the city and fuburbs are fill empty. This Dr. Burnet imputes to the maxims of this city, one whereof is, the advantages of the burgherfip, which are fo great, that citizens will not admit ftrangers to a fhare of them. Here are 3 I mills, whereof 21 are for grinding corn,
and 6 for making paper; of which the ordinary fort is faid to have been firft made here by Andrew and Michael Galician.
Liechstal, lying in the main road from France and Italy, to Germany, bas always company.
BASON, a rale by the bafon. Thus they call at Amfterdam the public fales made by authority, and over which prefides an officer appointed by the magiftrotes, who is ftiled vendumeefter, that is to fay, mafter of the fale. Such a fale is called a fale by the bafon, becaufe, before the lots are delivered to the higheft bidder, they commonly ftrike on a copper bafon, to give notice that the lot is going to be adjudged.
BASTION of France, a fettiement of the French on the coalt of Barbary, near the place where coral is nithed up. They allo drive there a confiderable trade in leather, wax, and corn. The coral-filhers, or, as Willughby calls them, urinators, come, a little before the feafon begins, to the Baftion of France, without either tackle or tools, without veffels, and without money. The firft thing they do is to feparate into crews. The crew of a coral fifhing-boat may confift of feven, but it is generally compofed of eight. The patron, or mafter of the boat, the man that throws the crofs, and fix feamen that manage the boat, and affift in dragging the machine aboard. Upon applying to the company, they are furnifhed with a proper veffel, which the French file fatteau, that is, a long fhasp boat, with very large fails, fo that they go at a grear rate, and are not eafily taken. They are likewife furnifhed with all kinds of tackle and provifions upon credit. Then they enter into articles for the price of the coral, which is generally fixed at a French crown a pound, or thereabouts. They likewife engage to fell all that they take at that rate, upon pain of corporal punifhment, if they are detected in a clandeftine commerce.
Thus equipped, they proceed to fea; but they are not obliged to deliver their coral till the feafon is over. Then each boat's crew brings their fock on fhore, where it is divided into 13 equal parts; of which the maffer of the veffel has four; he that manages the machine two; and each of the crew one; the thirteenth part belongs to the company, and goes in difcharge of the equipment. In a good feafon a boat will bring 25,100 weight of coral, from whence the reader may judge of the profit which attends this fillery; and, if he defires to be informed of the total value, it is enough to lay, that, in a very flourifhing feafon, there are 200 of thefe veffels employed. The bufinefs of coral-fifing is both laborious and dangerous; it requires great fill and dexterity to heave the crofs, and no fmall Iabour and diligence to get it on boatd again, befides the great rifque they run from florms and accidents in their filhing, and pirates; all which, taken together, keep the coral-fifhers fo poor, that the company never wantfervants.
BATE, or BATZ, a fmall copper coin, mixed with à little filver, which is current in feveral cities in Germany, particularly at Nuremberg. It is worth four creutzers, at the rate of four French deniers, or eight phenings, per creutzer.
BATZ. This is alfo a coin of Switzerland. It is of copper, mixed with fome filver. This coin is current at different rates, according to the greater or fmaller quantity of alloy it has. At Zurich the rixdollar is about 5 livres, or 100 fols, French money, and is worth 28 batz $\frac{T}{2}$, which are higher than the batz of Switzerland (thus thofe of Berne, Lucerne, and Friburgh are called) fo that a batz of Zurich is worth about 3 fols and $\frac{x}{2}$ French money.
The batz of Bafil, Schafhoure, of Conftance, and St. Gall, are the beft of all; and thofe of Berne, Lucerne, and Friburgh, the worft. They give but 9 of the former for 10 of the latter. They give but 27 batz of the firt for the rixdollar or crown, and 30 of the other, which make them be called fhort batz.
The good batz are worth 10 rapes at Bafil; the bad, or fhort batz, are worth one rape lefs than the other.
BAVARIA, one of the circles of the German empire, is bounded on the eaft by Auftria and Bohemia; on the fouth by Ca rinthia and Tirol; on the weft by Swabia and Franconia; and it leffens almoft to a point towards Upper Saxony, on the notth. In this country are many mountains, in which are mines of copper, and fome filver, as alfo quarries of marble. Here are likewife falt-works, and baths.
This circle is divided into the three capital provinces of it, viz. I. The electorate, divided into Upper and Lower Bavaria. 2. The Upper Palatinate, fo called to diftinguifh it from the Lower, or the Palatinate of the Rhine. 3. The archbifhopric of Saltzburg.
Defcribing this circle from north to fouth, we begin with the Palatinate.
The chief riches of the Upper Palatinate proceed from the mines of filver, copper, and iron; and they export great quantities of the latter to the neighbouring countries.
Amberg has great privileges, which were granted to it by the emperor Robert, and lies conveniently for traffic, being almoft in the center, betwixt Raifbon, Ingolfat, and Nuremberg. Its greateft trade is from the iron-mines, and the manufactures thereof, which are fent down the Nabe to Ratifon, and other cities.

## B D E

The chief commodity of the territory of NEWMARK, is iron, and their rivers are covered with iron mills. Allerfberg, on the welt fide of this diltrict, is faid to be a trading town and Hollenftern, on the confines of the bifhopric of Aichitat, is famous for iron mines in its neighbourhood.
The duchy of Bayaria, properly fo called, confilts of the Upper and the Lower. The former lies under the $\mathrm{Alps}^{2}$, and is cold and barren, having but little corn, and no wine; the latter is on the Danube, and is fruitful and pleafant.
The revenues of the elector, faid to amount to $7,000,000$ of forins, arifes chiefly from his monopolizing the three principal commodities of his country, viz. falt, corn, and ftrong, or white beer ; which is fo famed, that it is exported to other countries. The people of Tirol and Saltzburg have almoft all the corn they fpend from Bavaria; and the elector has a penny for every fack that is exported. Their beer alone, faid to be as good as any in the world, has been computed to bring him in between 80 and 100,000 Alorins per ann. Thofe three commodities, befides the tobacco trade, which he alfo engrofles to himfelf, with feveral other things, are only allowed to be fold by his agents and fervants. Thefe, with his own domain, and the tolls on all the veffels that go up and down the Danube, and other navigable rivers, of which there are feveral in this country, bring in a yearly revenue of above half a million fterling. A modern German writer makes it amount to between 8 and 900,000 l. and fays the Jaff clector but one, viz. Maximilian, had fome years above a million. Mean while, the fubject is fo miferably impoverifhed by thefe monopolies of trade, that the peafants chief fubfiftence is from the great herds of fwine fed in their woods by acorns and crabs. The fr-trees of this country are a treafure to it, fince the timber ferves for every purpofe that can be imagined, whether for building or houmold-ftuff; and there is not a province in the empire where provifions are cheaper, though there is a vaft home confumption, the Bavarians being very fond of good eating and drinking.
Ratisbon has a great trade by the Danube, the Nabe, and the Regen, which join near the city.
Straubing, is atown of good trade.
Passaw, is a rich; populous and trading city.
The duchy of Newburg is famous for it's wine; and at the town there is a good trade 'therein, which is fold weekly in the markets; and the duke has a good revenue arifing therefrom.
At Munich, moft of the mechanics are glafiers and filk-weavers. Great quantities of falt, wine, \&c. are fold at their two annual fairs, viz. St. James's-tide, and the week after Twelfthtide
At Obernsberg is a cuftom-houfe, where toll is demanded for all veffels that pafs the river Inn, on which it ftands.
The archbifhopric of Saltzburg is dry, rocky, and barren, except in fome vallies, yet abounds with falt, mines of copper, iron, and fome filver, with excellent quarries, from fome of which is dug a ftone, little inferior to jafper. The revenues of the archbifhop amount to near 80,000 crowns. The very falt which is carried into Bavaria and Swabia brings bim in 30,000 crowns per annum.
Berchtolsgaden furnifhes it's neighbourhood with ftore of falt.
The falt of Hallein is carried in great quantities through Bavaria, and a corner of Tinol, into Switzerland, where it is paid for in French money, which is one reafon that there is fcarce any coin current in Bavaria, but that of France. There is a great high mountain on the weft fide of the town, the earth of which being mixed with a fort of allum, or faltpetre, they throw it into larger trenches, which they fill with frefh water, and let it fand three or four weeks, till the earthy part is funk to the bottom ; then they let out and boil the faline part in iron pans, three feet deep, and ten or twelve in diameter; and, when the water is evaporated from the falt, which it leaves at the bottom, they take it up and put it to dry and harden, in fome deal calks, without any head or bottom.
Lauffen has a good trade between Saltzburg and Titmoning BAY; one of the colours of the hair of horfes, inclining to red and coming pretty near the colour of a chefnut. There are, if we may fay fo, five different hades, or gradations, of the bay colour; viz, the chefnut-bay, the light-bay, the yellow bay, or dun-bay, the bloody-bay, which is alfo called fcarlet bay, and the brown-bay.
BAYS, called in French BAYE'TTE, and fometimes BA GUETTE, a fort of open woolen ftuff, having a long nap, ometimes frized, and fometimes not. This Ituff is without wale, and is wrought on a loom, with two treddJes, like flannel. It is chiefly manufactured at Solchefter and Bocking in Effex, in England, where there is a hall, called the Dutch Bay-Hall, or Raw-Hall. By the ftatute 12 Car. II. cap. 22. no perfon fhall weave at Colchefter any bay, known by the names of four-and-fifties, fixty-eighths, eighties, or hundred bays, but, within two days after weaving any fuch, fhall carry it to the Dutch Bay-Hall, to be viewed and examined, that it may appear whether it be well and fubftantially wrought, before it be carried to be fcoured and thickened. No fcourer or thickener fhalt receive any fuch bay, before it has been
marked or flamped at the faid hall. This manufaclure, which is very confiderable, was frft introduced min England with that of fays, lerges, \&c. by the Flemings; who, being perfecuted by the duke of Alva for the fake or their religion, fled hither, about the fifth year of queen Elizabech's lugr, Scé Essex

## Remark $\mathrm{s}_{\mathrm{s}}$.

The exportation of bays was formerly much more confider able than it is at prefent, the Englifh then furnifhing the French and Italians with thofe ftuffs: but, of late years, the French have attempted to imitate them, and have admirably well fucceeded, particularly at Beauvais, Caftres, Montpelier, and Nifmes. They alfo manufacture vaft quantities of bays in Flanders, and efpeciaily at Tournay, Lille, and NeuffEglifes. The people of that country call them baiques. However, the export of Englifh bays is ftill very confiderable to Spain and Portugal, where they are called baetas, and even Italy. Their chief ufe is for dreffing the monks and nuns, and for linings, efpecially in the army. The looking-glafsmakers alfo ufe them behind their glafles, to preierve the tin, or guickfilver, and the cafe-makers to line their cales.
The breadth of bays is commonly a yard and a half, a yard and three quarters, or two yards, by 42 to 48 in length. Thofe of a yaid and three-quarters are moft proper for the Spanifh trade.
They make at Alby in Languedoc, and in the neighbourhood of that city, a kind of woolen fluffs, which they call bayette, or bays, and which are exceeding cheap. They are but two fpans and a balf broad, of that country's meafure, which anfwer to half an ell, wanting a fixteenth, Paris meafure, about half a yard Englifh. That breadth was thus regulated by a decree of the council, dated July the 15 th, 1673 , notwith. flanding the 30 th article of the general regulations of the manufactures, made in Auguft 1669, which orders that no weavers of cloths or ferges, nor any other perfon, thall make any fuff, of how fmall a price foever they be, lefs than half an ell broad Paris meafure.
Bays pay duties of exportation out of the kingdom of France, and the provinces reputed foreign, at the rate of three livres per roo weight. The Englifh bays pay duties of importation at the rate of 20 livers per piece of 25 French ells, and 60 livers per piece of 50 ell , according to the decree of the 20th of December 1687; nor can they be imported but by the ports of Calais and St Valery.
The bays of Flanders, and others of the fame fort, pay but 4 livers per piece of 20 ells, according to the tariff of 1664. $B A Z A R, B A Z A R I$, or BAZAARD. A place defigned for trade among the eaftern nations, and particularly the Perfans. Some are open or uncovered, like the market-places in Europe, and ferve for the fame purpofes, but only to fell the lefs precious and moft bulky merchandizes. Others are covered with high vaulted cielings, and adorned with domes to give them light. In thefe are the dhops of thofe merchants who fell jewels, rich ftuffs, wrought plate, and fuch other merchandizes.
Sometimes they fell even flaves in thofe covered bazars, though that unhuman trade be alfo carried on in the open bazars.. Furetiere obferves, that it is an Arabic word, which fignifies a fale or exchange of merchandizes; whence it is aid, by extenfion, of the places where the trade is carried on.
That word is in ufe among all the nations of the Eall-Indies, as well as among thofe of the Levant, It fignifies in all thofe countries a common or public place, where the market is kept, both for the fale of provifions, and of other merchandizes. The plaçe is fo called, whether it be a market, or a pretty broad ftreet, whether it be covered or not. Malaca was an ciently the general bazar, or ftaple-town for all the trade of the Indies; that is to fay, before the Portuguefe undertook to fail to thofe countries.
The bazar, or maidan of Ifaphan, is one of the fineft places in all Perfia, and even excels all thofe that are to be feen in Europe; but, notwithftanding it's great magnificence, it mula be confeffed, that the bazar of Tauris is the moft fpacious fquare that we know of. They have feveral times drawn up 3000 men in order of battle, in that fquare: it contains above 15,000 hhops, and is reckoned, without difpute, the moft magnificent in Perfia. At Tauris they call the jewelmarket raiferie, that is to fay, the royal marker.
BAZAT, or BAZA. The baza cotton comes from Seyde, Said, or Sidon, by the way of Marfeilles. They diftinguifh three forts of it ; namely, the baza of the firit fort, the common baza, and the middling baza. The firf fort and the midding are often fold in France for 99 livers and 4 fols, and the middling only 73 livers and 12 fols.
BAZGENDGE, a kind of gall-nut, which the Turks ufe to make the fcarlet colour.
BDELLIUM, BONDELEON, or BEDELIUM, a kind of gum.
That name is very well known among the learned, though they do not agree about it's fignification. It is mentioned in the holy feripture (Gen. ii. 12.) and Jofephus, who piecends
to explain what it is, afferts, that it is the gum of a tree, which refembles the olive-tree, and whofe leaves are like thofe of the oak; and that the manna, with which God fed his people during fo many years in the defert, was very much like that drug. Yet there are a great many learned men who do not admit that explication; and Scaliger, who is followed herein by feveral others, owns, that it is not well known what the bdellium mentioned in the fcripture is.
The bdellium fold by the grocers and druggifts is not much better known than that of the ancients.
Some fay that it runs from a thorny tree, whofe leaves refemble thofe of the oak, and whofe fruit is like that of the wild-fig. ree, but yet of a pretty good tafte. Some pretend, that the rree from which the bdellium comes, is like the myrtle-tree. Others fuppofe that thofe trees grow in Bactriana: others again in Arabia Felix, near a city named Saraca: fome fay it grows in Africa, near the banks of the river Senega; and others place it in the Eaft-Indies.
However that be, this gum comes by the way of Marfeilles, or by the fhips of the French African company. That which comes by the way of Marfeilles, is, according to fkilful judges, nothing but the gum called alouchi, and they pretend that the true bdellium is that of Senega.
It muft be chofen in clear tranfparent bits, of a reddifh grey on the outfide, and within of the fame colour with the Englifh glue, and it ought to become yellow, when you wet it with the tip of your tongue. This gum is ufed in the compofition of mithridate, and fome other compounds. Authors being fo much divided in their opinions about this matter, tis enders and needlefs to quote all their fentiments: thole who would gratify a curiofity, attended only with great uncertainty, may confult Diofcorides, Gaien, Dale, Pomet. By the tariff of 1664, the bdellion pays in France duty of importation 4 livres per 100 weight: but, by the decree of the 15 th of Auguft 1685 , it pays 20 per cent. of it's value when it comes from the Levant, Barbary, and other lands or territories within the dominions of the Grand Seignior, of the king of Perfia, or of Italy.
BEAM, a large piece of timber ufed in building, which, being laid acrofs the walls, ferves to fupport the principal rafters of the roof. The proportions of beams, in the neighbourhood of London, have been fettled by ftatute, as follow: a beam 15 feet long ought to be feven inches in breadth on one fide of it's fquare, and five on the other: one of 16 feet in length muft be on one fide eight inches broad, and fix on the other : one of feventeen feet in length mult be on one fide eight inches broad, and fix on the other : one of feventeen feet muft be ten inches on one fide, and fix on the other: but they make them ftronger in the country.
Be A m s of a hip, are the large main crofs timbers, which prevent the fides of a thip from falling together, and which alfo fupport the decks and orlops: the main beam is next the main-maft, and from it they are reckoned by the firft, fecond, and third beam. The greatef beam of all ịs called the midfhip beam.
BEAN, a pulfe of the large fort, commonly cultivated in the fields. People of fafhion feldom eat them, but green; but, in feveral places, the country people dry them to eat them in the winter; they alfo often feed cattle with them: the meal of beans is ufed in phyfic, being prefribed both to be taken inwardly, and in the compofition of fome cataplafms. And perfumers alfo ufe it to make powder for the hair.
Beans pay duty of importation in France, like other forts of pulfe.
This plant, which is a kind of the xth clafs of Monf. Tournefort, has a papilionaceous flower, which is fucceeded by a long pod flled with large kidney-fhaped feeds; the ftalks are firm and hollow; the leaves grow by pairs, and are faftened to a mid-rib. Monf. Tournefort oblerves, that there are eight forts of thefe beans known, which are diftinguifhed by the difference of their flowers and fruit.
$\mathrm{Mr}_{\mathrm{r}}$. Miller obferves, that there are four forts of beans cultivated in England, which are the fmall Libon, the Spanifh, the Sandwich, and the Windfor. The firft and fecond forts are ufually planted in October and November, under warm walls or hedges, to have them early; which if they abide through the winter, they will produce beans early in the fpring: or they may be planted clofe in beds, in fome piece of ground that is well defended from the north and eaft winds; and, being arched over with hoops or withies, may be covered in very hard frofts with mats and fraw ; and, in the fpring, thefe plants may be tranfplanted into warm borders, by which means your crop will be feeured from the injuries of frof: and, if care be taken in tranfplanting them, not to break their roots, and allo to water them, if the feafon proves dry, until they have taken $f=$ efh root, they will bear as plentiful a crop, as thofe which remained where they were at firft planted, with this difference, that they will be a fortnight later. The Lifbon bean is chiefly preferred to the Spanifh, and the beft way is to procure frelh feeds from abroad, at leaft every other year; for in England they are fubject to degenerate, not in goodnefs, but only in earlinefs.
The Sandwich and Windfor beans are feldom planted before Chriftmas, but efpecially the Windfor, which is moft fubject

Vol. I.
to be hurt by cold, of any of thofe kinds. Thefe beana fhould have an open expofure, and require to be planted at a greater diftance than the two early kinds: for, if they are planted in thady places, or too clofe, they will grow to a great height; but feldom produce many beans. The ulual diftance for thefe (if in an open fituation) is two feet and a half, row by row, and four inches in the rows. But, if the pluce is clofely furrounded by hedges, walls, or tald trees, the diftance muft be greater; the rows fhould then be three feet apart, and the beans fix inches diftant in the rows. The Sandwich beans, being hardier than the Windfor, are ufually planted about Chriftmas, to fucceed the forward corps; and thole, although at prefent in little requef, are yet very ferviceable, being plentitul bearers, and very little inferior either in fize or goodnefs to the Windfor,
In the middle of January, if the weather is open and good, you may plant the firft crop of Windfor beans, which will fucceed the Sandwich, and every three or four weeks make a new plantation, till the middle of May, in order to preferve a fucceffion through the feafon. Indeed, there are fame peaple, who plant beans even in June; but uulefs the foil be very ftrong and moift, or the feafon prove wet or cold, they feldom fucceed well; for in hot and dry weather, which commonly, happens in July, the infects infeft there plants very much, and often deftroy them quite. There are others who advife the cutting down of beans, in order to caufe them to produce frefh hioots from the bottom for a late crop; but this feldom anfwers the trouble, for they are liable to the above-mentioned inconveniencies, much more than a frefh planted crop.
Beans for horfes, are fold at Amfterdam at about 15 livies de gros per laft. The deduction or difcount, for prompt payment, one per cent.
Beans grow admirably well in Egypt, where there are large fields entirely covered with them. Their blofloms are a thoufand times more qdoriferous, than thofe of the beans in Europe: As valt quantities of them are planted in the lands about Cairo, towards the weft, nothing can be more charming, than the perfumed air one bredthes in an evening on the terraffes, when the wefterly wind blows; nor is it without good reafon, that they endeavour to have plenty of beans in that country, fince it is the common food of the mules, affes, and camels, who confume vaft quantities of them.
In order to make them eat them, they beat them and reduce them into a coarfe meal, whereof they make balls which they afterwards give to thofe animals. They do the fame with the kernels of dates. This obfervation is extracted from Monf, Maillet's Defcription of Egypt.
The French have a fort of beans, which they call feves de marais, i. e. beans of the marih, which they eat only, when green and frefh. They alfo dry them, but then they ferve only to feed cattle. However, fome perfons make a kind of provition of them, to eat in Lent. They buy them green, and, peeling the white ikin off, they fplit them in two, and dry them in the open air. They afford a pretty good and pleafant food.
Bean of St Ignatius. It is a fmall folid fruit, which grows upon a tree in fome of the Philippine iflands, and in which the Chinefe trade in thofe places of the Eati-Indies, where they dwell, or which they trequent, as Malacca, the Sunda iffes, and the Moluccos: thole beans are alio very much ufed in phyfic. The figure of this fruit is inregular, and it is of the bignefs of a green almond, when ftill wrapped up in all it's coats, or of the fruit called hermodactyl. It's outward colour is grey, or rather blackith, when it is well ftripped of a little thin fkin, the colour of which is fomerimes of a whitithgrey, and fometimes reddilh.
That fkin, fticking very clofe to the fruit, cannot be taken off but by little bits, like fcales, and, in procefs of time, by rubbing : fo that moft of thole beans are commonly variegated with thofe two colours, when part of their fkin has been rubbed off.
The infide of the fruit refembles a brown or blackih jelly, but it's confiftency is almoft as hard as that of horn, fo that it is a difficult matter to break or cut it. If you grate it, which is much eafier, in order to have it fo as to make ufe of it, it appears whitith in thofe places which the points of the grater have touched, which deceived thofe who faw it of that colour. In order, therefore, to fee it in it's natural colour, you muft cut it in the middle with a knife, which you drive into it with a hammer or mallet. Finally, it is of a bitterifh tafte, and weighs commonly a little above a drachm, more or lefs, according to it's bignels.

## Remarks.

This drug, though of excellent ufe in phyfic, is ftill very fcarce in Europe, for want of being fufficiently known. This feems, therefore, a very proper occafion to expatiate a little upon it's virtues, in order to give the public a more particular and diftinct notion of them, either for ufe or for trade, than Monf. Lemery has done in his Dictionary of drugs.
Firf, it ought not properly to be reckoned a purging medicine, as that learned gentleman afferted, doubtlefs, from fome
erroneous

## B E A

## B E A

erroncous memoirs. It is by no means ufed for purging; and, though you thould ule it for that purpofe, it would be a difficult matter to fucceed, though the dofe were never fo large. One would run the danger of doing a great deal of harm, by caufing convulfions, pains, fweat, \&ze. rather than producing evacuations by ftools. In a word, if a large dofe of it were given, it's effects would be very odd, or dangerous, according to the conflitution of the patient. But, being given in fmall quantites, by degrees, at feveral times, it will always be found a wonderful remedy, without caufing any voiding upwards or downwards.
Secondly, It muft be ufed as a bitter, and a rectifier of the nervous fyftem: becaufe it's property is to alter and rectify the tone of the nerves, either of the ftomach, or of the conduits through which the fluids pafs, or of the glands where the filtrations are performed: by which it much better reftores the functions of the vifcera, which happen to be put out of order by too fedentary a life, or by too much indulging the body.
If we were better acquainted, by good oblervations, with the mechanifm of the body, and with the effects of thofe things which enter into it daily, and are defigned for it's prefervation, one would more accurately chufe thofe which are proper for each conftitution, and for every fage of life, in order the better to prevent difeafes, or to preferve health, fo as to have no occation for a phyfician. Finally, when the body laboured under any indifpofition, we thould be better able to chufe what is moft naturally proper to cure it, and not commit fo many blunders, as are diily committed by perfons, who pretend to meddle with phyfic, often to their own detriment; or who would cure themfelves by fome pretended family fecrets, which feems, indeed, a good faving method, but by which they often make their diftempers worfe than they were before, and render them fometimes incurable. They always commit a great many errors in all their proceedings relating to phyfic. Wherefore I do not propofe this new remedy but to all phyficians who are capable of knowing the nature of it by obfervations, and making a proper ufe of it.
The Indians, who are fo well acquainted with it, are apt neverthelefs to commit many blunders in the practice of it, and in making too univerfal a ufe of it, as they alfo do of the boaati, mentioned hereafter in it's proper place. Here follow therefore the properties which the Indians afcribe to the bean of St Ignatius, a name which the jefuits of the Manilles have given it, becaule of the goodnefs of thofe qualities; the Malays call it tfiavalonga.
I. They reckon it a fpecific remedy againft all forts of poifon, and even ufe it as an amulet. But to this I give no credit.
2. They ufe it particularly to cure the difeafes of the nerves, as the cramp, vapours, fhakings, and convulfions, either taken inwardly, or in the form of an amulet. I have feen good effects of it in this refpect, when taken inwardly.
3. For pains in the flomach and cholics, they give a little of it in cold water, which gives immediate eafe. It's effects are excellent for thofe ills, as I have experienced.
4. In a miferere mei, or twifting of the guts, they give a little of it in cold water, which often procures a voiding upwards and downwards; and by that evacuation delivers the patient from that dangerous ailment. I have not feen any inftance of this. 5. They efteem it excellent againft bad air, and contagicus or peftilential diftempers. In times of the plague, they take a fmall dofe of it every day, to keep themfelves from the infection.
6. They reckon it a true fpecific againft fainting fits, rifings of the ftomach, palpitations of the heart, fwimmings of the head, and fuffocations, in which cafes they give fome of it with wine or arac, which foon cures the patient; and they prevent the return of thofe diftempers, by making him take the fame remedy for feveral days. I have found it very good in thofe cales.
7. They ufe it after the fame manner againft the bite or fting of venomous animals; and at the fame time they put upon the wound fome of that fame drug, in the form of pap, made after their manner, by rubbing one of thofe beans with fome water upon a rough ftone.
8. Being applied in powder, it is a very powerful remedy to ftop very foon all forts of bæmorrhages or bleedings; in a bleeding of the nofe they take it like fnuff, and it flops it immediately.
9. They ufe it very particularly againft worms.
10. They employ it moft fuccefffully in all forts of fevers, making the patient take fome of it twice a day in a little wine. It cures by fweating. I know it to be excellent in intermitting fevers, becaule it cures the ftomach.
15. It produces, according to them, very good effects in a cold upon the lungs, in a cough, the afthma, and a flitch or pain in the fide, if the patient do continually chew a little bit, or a fmall quanticy of it, and fwallow his fpittle; for it cuts thole vifcous humours which fop the bronchia and the windpipe. I have feen fome perfons receive great benefit from it. 12. They likewife judge it very good for giving eafe in nephritic pains, the gravel, the ftrangury, and the droply, if it be taken every day.
13. They give it to women who have a difficult labous, thinking that it procures them an eafy delivery.
14. It alfo cures the loofenefs and tenefmus, being taken twice a day in water.
15. Finally, they make an oil of it by infufion, or even by a little ebullition oyer the fire: that oil impregnates itelf with all the frength and virtue of the fruit. They give a few drops of this oil inwardly, itn a proper liquor, for the fame difeafe, and particularly for the apoplexy.
The fame oil ferves alfo outwardly for all forts of fcabs, tetters, tumours, cramps, pains, gouty humours, fhrunk members, \&c. by anointing the diltempered part. They ufe it for curing wounds and ulcers; and it is certain, that this remedy produces very good effects, being given in fmall dofes, and with prudence.
The quantity they give is meafured by the fight only and by cuftom, without weighing it, and is generally from 5 or 6 grains, to 8,10 , or 12 . Their method of dividing this bean or fruit into very fmall parts, or very minute particles, is by rubbing it upon a flat fone, of a rough fuperficies, fomewhat hollowed in the middle, and mointening it by little and little with water; which, together with what is feparated from the bean, forms a fubftance of the confiftency of pap or pafte, of which they take up the requifite quantity with the point of a knife, and diffolve it in a proper liquor to make a drink of it.
This method of thus preparing all their remedies taken from wood, or other hard fubflances, is very well; but remedies of this kind more minutely divided by alcohol, or alkool, by the chymifts, produce their effect much fooner, than when given in a coarfer manner: yet, perhaps, many remedies, which are taken in a plain manner, and fuch as nature affords them, without the ufe of fire, produce their effects much more efficacioully: this ought to be enquired into very carefully, and by repeated trials.
As I have a certain quantity of thefe beans by me, and can get more by the correfpondence. I have with perfons in the fervice of the Eaft-India company at Batavia, I propofe to furnifh thofe with them, who may have occafion for them, as well as with the remedies that are made of the beans under different terms, and which I hope to acquaint the public with, which will be more convenient for ufe.
The name of bean which has been given to this fruit is very improper, fince it is not leguminous: it grows juit as it is brought from the Indies, without any coat or fhell, each piece by itfelf, upon a pedicle, at the top of the fhoots or branches of the tree that bears it: but it is of no confequence to alter that name, which ufe has pretty well eflablifhed at prefent. Memoirs of Monf. Garcin, of Neufchatel, M. D.
French beans pay duty of importation in France like other pulfe.
BEAR, a wild beaft, too well known to require a particular defcription in this place.
We may diftinguifh two forts of bears; the land-bears and the fea bears, which might more properly be called ice-bears. The former commonly retire into the mountains, and the Jatter come over the ice of the north fea: of thefe there are fome of a monftrous, and almoft incredible, fize, in Nova Zembla.
Bear-fkins are a fort of furs very much efteemed, and there is a very large trade of them, whether they be the ikins of young bears, or of old ones. The latter are commonly ufed to make houlings, or horle-cioths, or in the more northern climes, for bags to keep the feet warm in the fharpeft cold of the winter. The fkins of young bears ferve to make muff, and other fuch things for warmth or ornament.
Befides the great quantity of bear-fkins which the fellmongers fell, the druggifts fell alfo bears fat, or greafe, which they commonly get from Switzerland, Savoy, and Canada.
That greafe is a powerful remedy for the cure of the king's evil and the rheumatifm. It is ufed with fuccefs for curing the gout, and it is alfo employed in feveral Galenic compofitions. Bear's greafe, in order to be of a good quality, muft be chofen newly melted, greyifh, clammy, of a ftrong and pretty bad fmell, and of middling confiftence or thicknefs. That which is too white is adulterated, and mixed with common tallow.
BEARER of a bill, is the*perfon in whore hands the bill is, and in favour of whom the laft order, or endorfement, was made. When a bill is made payable to bearer, it is underftood to be payable to him in whofe hands it is after it becomes due; and though, in the payment of a bill of this kind, there needs no order or transfer, yet it is good to know to whom it is paid.
BEARING, (in geography and navigation) the fituation of one place from another, with regard to the points of the compafs, or the angle which a line drawn through the two places makes with the meridians of each.
Bearing (in the fea language). When a bip fails towards the fore, fhe is faid to bear in with the land. - When a fluip that was to windward comes under another hip's ftern, and fogives her the wind, she is faid to bear under her lee. - If a Ship fails into an hàrbour with the wind large, or before the wind, the is faid to bear in with the harbour, \&ic. In crouding they fay, bear up the heim, that is, let the fip
go more large before the wind.- Bear up round, that is, let the fhip go between her two fheets, directly before the wind. BEAST, is faid in general of all animals, that are not endued with reafon.
Beast of burden, in the commercial file, is faid of all fourfooted antmals which ferve to carry burdens and merchandizes on their backs. Thofe that are moft commonly ufed are elephants, dromedaries camels, horfes, mules, affes, the theep of Mexico and Peru, and the vicnua. There are allo fome places on the coaft of Africa where they ufe oxen: nay, even large dogs are fometimes employed for that purpofe, as may, be feen in Flanders, and in fome other countries.
BEAUCAIRE. A fair famous throughout all Europe, and the moft celebrated of all thofe that are kept in France. It was formerly kept within the city of Beaucaire in Languedoc, from whence it took it's name, and where there are fill to be feen feverai piazzas, or arches; which crofs the ftreets, and under which the traders did probably expofe their wares to fell : but it is a long time fince the reputation of this fair, and the concourfe of people reforting thither increafed to fuch a degree, that they have been obliged to keep it partly in the open country, under tents, which they pitch up in a meadow near the city.

## Remarks

This fair begins the 22d of July, or St Magdalen's feftival, and continues but three days. People refort thither from all parts of the world, and there is no merchandize, how fcarce or curious foever it be, but may be met with there. So that, notwithflanding the fhort time it lafts, there is fuch a prodigious trade, that it amounts to above fix millions of livres. The infpector of the manufactures of Nifmes, affifted fometimes by his brethten of the neighbouring diftricts, together with the judges of the police of manufactures, and the mafters, wardens, and jurats; vifit and mark all foreign fluffs. The directors of the five great farms of fome neighbouring diffricts are alfo ufed to go thither, to take care of the concerns of their refpective farms.
The freedom of the fair of Beaucaire is a privilege granted to the inhabitants of that city, in the year 1217, by Raymond count of 'Touloufe, both on account of their conftant loyalty to him, and becaufe of that city's moft happy fituation for trade. Since the province of Languedoc has been united to the crown of France, that privilege has been often renewed by feveral kings, particularly in the year 1483 , by Charles VIII, and again under the reign of Lewis XII, and under that of Lewis XIII.
The conveniency of the river Rhone, on which the city of Beaucaire ftands, draws to it's fair the merchandizes of Burgundy, Lyonnois, Switzerland, and Germany. The fea, from which it is but feven leagues diftant, brings thither thofe of the Levant, Italy, and Spain, and by the royal canal it receives all that can come from Upper Languedoc, Bourdeaux, Britany, and the ocean.
The merchants who chiefly refort to that fair, are thofe of almoft all France, either by themfelves, or by their factors. Thofe of Spain, Italy, and Germany, come alfo thither in great numbers; and there are few nations in Europe, whofe traders are not concerned in this fair. There are always Armenians, often Perfians, and fometimes merchants from oriental countries fill more remote.
The chief merchandizes fold there, are fice, drugs, hard wares, woolen and filk ftuffs, Spanifh and Barbary wool, befides that of the growth of the country: in a word, all that is either produced or manufactured in France, or imported from abroad; and pretty often even jewels are fold at this fair.
There is likewife a great trade in money by exchange, and remittances to all parts of the world.
As this is the only fair in all Languedoc which is realiy free, it is properly with a defign to enjoy the freedom, that the merchants refort to the other fairs in that province, in order to buy up there thofe merchandizes which they have a mind to carry to the fair of Beaucaire: and, how famous foever the fairs of Pezenaz and Montagnac be, we may truly fay that they are kept only to prepare matters for that of Beaucaire. Before the year 1632, the freedom of this fair was full and intire ; but, fince that time, it has fuffered fome diminution, by the ellablidhment of the duty of re-appraifing, which was laid on all merchandizes in the province of Languedoc, of which duty the merchandizes brought to the fair were not free. That duty, indeed, is not very confiderable, fince, one year with another, it does not bring in to the king above 2500 livres per annum. They pay alfo another fmall duty of 12 fols per bale of merchandizes which are not unpacked, the farmer pretending that they ought all to be unpacked. That duty is called abonnement, and does not produce above 5000 livres. If the intire freedom was reftored, it would, perhaps, encourage merchants to improve their trade there.
BEAUCE, the northern divifion of the principality of Orleanois, in France, is fituated between Orleanois, Blaifois, Perche, and the Ille of France.
At Charties the chief trade is that of com, this country be-
ing fo fruitful that it can furnifh feveral provinces with com; They have alfo fome manufactures, for which the water of the Eure, on which this city is fituate; is reckoned very proper.
Ploviras is a fmall, but trading town, on the rivulet Oeuf, where they keep a markct every Saturday, and drive a confiderable trade in corn, which the neighbouring fields produce. The foil produces alfo wine and faffion.
BEAVER, or CASTOR, an amphibious, four-footed anima!; which lives fometimes upon land, and fometimes in the water. There are fome which do noi at all live in the water, but go to it only to drink, like othir land animals: thefe dig holes in the ground to dwell in, like rabbets and foxes. They afe called lazy beavers, or land beavers.
As the beavers feed only on filh, they keep conmonly on the banks of fuch rivers as abound with fifh, in unfrequented places, where boats cannot pafs. In the fpring, all thofe of the fame diftrit, or quarter, gather together, and, walking two and two, they go in a body to hunt for anmals of their own fpecies; and all thofe they can catch they lcad into their dens, where they make them work like ीlaves. With their teeth they cut down whole trees, and thefe again into fmall pieces, each of a certain length, and carry thofe materials into their habitations, where they build with them apartments for themfelves, and rooms, or lodges, to lay up the provifions which they gather in the fummer. This we learn from the Travels from. Mofcow to China, by Mr Ever. Ifbrantz Ides, ambaflador from Mufcovy in the year 1692; which travels are inferted in the eighth volume of The collection of voyages to the north (Recueil des voyages ou nord).
The Ruffians, and the people of Ouftiodg, add that travellers, who go a hunting for thofe animals, never carry off all thofe they find in the fame den, but always leave there a male anid a female, that they may find others in the fame place the following year.

## Remak ks

Since the French have made fettlements in Canada, the public has been very much undeceived, with regard to the fabulous ftories which the ancients believed and related concerning beavers; and it has been found, by an infinite number of experiments, not only that this animal, like moft others, can be tamed, which is contrary to the opinion of feveral moderns, but alfo that it has not that natural inftinet to bite off a part of it's body, in order to efcape the hunters : which inftinct almoft all the ancient authors afcribe to it ; except, however, Pliny, who afferts the contrary, though Monfieur Furetiere quoted him as being of that opinion.
The largeft beavers are three or four feet long, and 12 or 16 inches broad in the middle of the breaft, and from one hip to the other. They weigh commonly from 40 to 60 pounds. The head of a beaver refembles that of a mountain rat: it's fnout is long; it's jaws are almoft equal, very ftrong, furnifhed each with ro large and fharp teeth, two of which are incifive, and eight molar; they are deeply rooted, and follow the curvature, or bending of the jaws, which gives them a prodigious ftrength, fo that the caltor can cut down large trees with it's teeth. It is to be obferved that they are not directly oppofite to each other, but pafs over one another, being defigned to work like fciffars. The beaver has very fmall eyes. It's ears are fhort, round, hairy on the outfide, but bare within. It's body is fhort and thick, covered with two forts of hair, commonly brown, and fhining, fometimes black, but feldom white. The hair on the back is from an inch and a half to two inches long: it grows fhorter towards the head and the tail ; it is the rougheft, and the moft fhining; it is fine like a man's hair. The hair on the belly is a kind of down, very fine and very clofe, about an inch long: it preferves the animal from cold, and ferves to make hats, and other manufactures : the workmen call it, improperly, Mufcovy wool. It's tail has no refemblance to that of any land animal; it comes much nearer to that of a filh. It is about a foot long, without hair, being covered with a fcaly fkin, under which is found a firm fat, pretty much like the flefh of a porpoife, or fea hog; the fcales are as thick as parchment.
The beaver ufes it's tail not only to fwim, with the help of it's hind legs, but it ferves alfo as a beater, a trowel, and a hod, to prepare and carry the mortar, when the animal wants to build it's manfion, which is fometimes two or three flories high. It's legs are mort, and covered with very thort hair. It's fore-feet refemble thofe of the badger, and the beaver ufes them like bands, to hold it's prey. It's hind feet are like thofe of water-fowls: fo that the beaver can walk on dry land, and fwim in the water.
This animal, both the male and female, has inwardly, at the bottom of the os pubis, four large pouches, or bags ; the two firft, which are higher than thie other two, are of the figure of a pear, and open the one into the other : they are commonly three inches long, by an inch and a balf in breadth at the bottom, and contain a refinous and foetid matter, called caftoreum, of which we fhall give an account in its proper place. The two other pouches, which hang lower, are con-
tained in the inferior cavities; they appear round at the bottom, after one has taken off the common membrane in which they are both wrapped up. Sometimes there are three of thore bags, as it were in parcels, which are filled with an oily, yellowifh, and ill-fcented fubitance: each of thefe pouches is commonly two inches and a half long, by about 19 or 25 lines diameter: a line is the twelfth part of an inch.
The beaver is good to eat, and is reckoned half fefh and half filh. Its upper part, as far as the legs, is real flefh ; but its inferior, or lower part, towards the tail, which is mont in the water, is of the nature and tafte of filh.
The favages hunt the beavers from the beginning of November to the month of April, becaufe at that time thote animals are very well furnifhed with hair. Thefe people run along the little rivers, and, as foon as they perceive a caufey, they may be fure that the beaver's hut is not far off, and approach it as near as they can. Thefe favages are fo ikilful in laying fnares for them, that not one of them efcapes.
This account and defcription of the beaver cannot but be true, being extracted from that which Monlieur Sarazin, the French king's phyfician in Canada, fent to Monfieur 'Tournefort, and is to be met with in the Memoirs of the Royal Academy of Sciences at Paris, for the year 1704. However, we thall add here a few more particulars, which Arthur Dobbs, Efq; acquaints us with, from an unqueftionable authority. The beavers, fays he, are of three colours, the brown-reddifh, the black, and the white. The firt is the cheapeft; the black is the moft valued by the Hudfon Bay company in England, and the white the moft valued in Ca nada, where they fell for 18 s . fterling, whillt the others fell only for five or fix. Thefe 1 kins are extremely white, and have a fine luftre, no fnow being brighter, and they have a long fur, or hair. The beaver's chiefeft food is the poplar, or tremble; but they alfo eat fallows, alders, and moft other trees not having a refinous juice: the middle bark is their food. In May, when the wood is not plenty, they live upon a large root, which grows in the markes, a fathom long, and is as thick as a man's leg; the French call it volet: but the beavers are not fo good then as when they feed upon trees. They are excellent food, but the tongue and the tail are the moft delicious parts of the whole. They are very fat from November till the end of March. They breed once in a year, and have from 10 to 15 at a litter; fo that they multiply very faft.
This, it feems, fhould be a proper place to mention the ingenious works of thefe animals; the wonderful banks, or moles, which they build with no other help but their paws and their tails; their republics, which are fo well governed; and many other particulars, fo furprizing, that, when one reads them in the accounts of voyagers, and particularly in thofe of Baron de la Hontan, we can hardly believe but there muft be in fuch excellent animals fomething more than a bare mechanifm, or even inftinct. But, as thefe curiofities have more connexion with fpeculative philofophy than commerce, we fhall not dwell any longer upon them; and, in the remaining part of this article, we fhall fpeak only of the trade that is carried on in their rich furs, and of the ufes to which they can be applied.
Though there are beavers to be found in feveral parts of Europe, as in France, along the rivers Rhone, Ifere, and Oyfe, yet they are more frequently to be met with in Germany and in Poland, along the Elbe, and other rivers. The French, and other merchants, trade chiefly in beavers of Canada, from whence they get almoft all thofe they ufe; and under that denomination are comprehended thofe that come from Acadia, from Hudfon's-Bay, and from all parts of North-America. The merchants diftinguilh three forts of beavers, though they are all the fkins of the fame animal. The new beaver, the dry beaver, and the fat heaver.
The new beaver, which is alfo called white beaver, or Mufcovy beaver, becaufe it is commonly kepr to be fent into Murcovy, is that which the favages catch in their winter hunting It is the beft, and the moft proper for making fine furs, becaufe it has loft none of its. hair by fhedding.
The dry beaver, which is fometimes called lean beaver, comes from the fummer hunting, which is the time when thefe animals lofe part of their hair.
Though this fort of beaver be much inferior to the former, yet it may alfo be employed in furs; but it is chiefly ufed in the manufacture of hats. The French call it fummer caftor, or beaver.
The fat beaver is that which has contracted a certain grofs and oily humour, from the fweat which exhales from the bodies of the favages, who wear it for fome time. Though this fort be better than the dry beaver, yet it is ufed only in the making of hats.
Befides hats and furs, in which the beaver's hair is commonly ufed, they attempted in France, in the year 1699, to make other manufactures of it: and, accordingly, they made cloths, Gannels, ftockings, \&c. partly of beaver's hair, and partly of Segovia wool. This manufactory, which was fet up at Pa ris, in St. Anthony's fuburb, fucceeded at firlt prettyr well; and, according to the genius of the French, the novelty of the thing brought into fome repute the fluffs, flockings,
gloves, and cloth, made of beaver's hair. But they went out of fafhion on a fudden, becaufe it was found, by experience, that they were of a very bad wear, and, befides, that the colours faded very much: when they had been wet, they became dry and hard, like felt, which occafioned the milcarriage of the manufactory for that time.
When the hair has been cut off from the beaver's fiins, to be ufed in the manufacturing of hats, thofe fkins are ftill employed by feveral workmen; namely, by the trunk-makers, to cover trunks and boxes; by the hoe-makers, to put into nippers; and by turners, to make fieves for fifting grain and feeds.
The French king had granted, to the Eaft-India company of that nation, an exclufive privilege for the fale of beaver, by a decree of his council, dated the 3oth of May 1721 : but judging, almolt immediately afterwards, that it was more proper to fufpend the execution of it for a time, he re-ordered it, by a decree of the 2oth of July following : finally, having, fince that time, caufed the memoirs fent from Canada, to be examined, as well as thofe which were prefented by the directors of the company, with regard to thofe two decrees, his majefty, by a new decree of the 28th of January, 1722, ordered,

1. That the decree of the 3oth of May, 1721, fhould be executed, according to its tenor and purport, and that the company fhould accordingly enjoy the fole privilege of felling tobacco, agreeably to the letters patents of Auguf 1717, and to the decrees of July 11,1718 , and June 4,1719 , on condition that the faid company, according to their offers, fhall pay, for the future, in Canada, 4 livres for the fat beaver, and 40 fols for the dry beaver.
2. That all private perfons, except fuch manufacturers of hats who had beavers fkins remaining of thofe which they imported, in confequence of the liberty granted by the decree of the 16 th of May, 1720 , fhall be obliged to fell them before the ift of May of the then prefent year 1722 , without fending them out of the kingdom, under the penalty of forfeiting the merchandize, and paying a fine of 10,000 livres; after which time they fhall be obliged to deliver to the company what they thall have left, at the price abovementioned, deducting tare, as is ufual at the delivery of this merchandize. 3. Finally, as to the beaver imported from Canada fince Ottober 1721, which lies in the warehoufes of the ftapletowns of Rochelle, Bourdeaux, and other ports, and which has been bought contrary to the decree of the 30 th of May, 1721 , it fhall allo, without delay, be delivered to the fame company, at the prices abovementioned, and a fol per pound befides for freight.
Beaver-fkins, including the robes and bits, which are not in whole fkins, pay duty of importation in France at the rate of 8 livres and 4 fols per pound; which amount to 820 livres per 100 weight, according to the decree of May 17, 1693, and cannot be imported but by Roan, Dieppe, Havre de Grace, and la Rochelle.
By the fame decree, beaver and otter hair cannot be imported but by the fame ports as the beavers fkins, and pay duty of importation at the rate of 15 livres, 7 fols, and 2 deniers per pound, which amounts to 1536 livres per 100 weight,
Beaver, fignifies alfo a hat made entirely of beaver's hair.
A half beaver is a hat in which other hair bas been mixed with beaver's hair. For more on this head, fee Canapa, and Hudson's-Bay Company.
BEDFORDSHIRE, a county in England, bounded on the fouth and fouth-eaft by Hertfordfhire; on the north and northeaft by Huntington and Cambridgefhires; on the north-weft by Northamptonhire; and on the weft by Buckinghamhire. The air is mild and healthy; the foil a deep clay, and fruitful both in tillage and pafture, in the north parts, but fandy in the middle. Its rivers are the Oufe and the Ivell.
The navigation of the former is of great fervice to the corntrade, whereof great quantities are fent down by it to Lynn, a port-town in Norfolk, where it is fhipped for Holland. This river divides the county into two parts; the northern, which is the lefs, is the moft woody; the fouthern has fpacious fields, yielding plentiful crops of plump, white, and ftrong barley, which, made into malt, is frequently fold in London, and other parts, for that of HertfordMire. It has forefts and parks, well ftored with deer, fat pafture for cattle, produces great quantities of butter and cheefe, with fuller's-earth, and woad for dyeing.
Its chief manufactures are bone-lace and ftraw-hats. It is a county well inhabited, and full of gentry.
Bedford, which is the county town, is a clean, well-built, populous place, and ftands north of the Oufe. The neighbouring foil is exceeding fruifful, efpecially of the beft wheat in England, which is carried by waggons from hence and the north part of the county, 20 miles beyond it, to the markets of Hitchin and Hertford, where it is bought again, ground, and carried in the meal to London. As it flands on fuch a navigable river, it dives a great corn trade, efpecially in the expostation of barley to Holland, by way of Lynn.
Leighton-Beauderart, by contraction called Buzzard, is on the borders of Buckinghamihire. Its market is generally well ftored with cattle, and its Whitfuntide fair with coach

## BEE

nid cart-horfes, brought out of NorthamptanMire, Leiceftet Ghire, sic. and bought up here by jockies from London, Surrey, Suffex, and ocher parts.
Woobur n, noted for plenty of fuller's earth near it; and likewife another kind of earth, which petrifies wood into ftone. This town is allo famous for the manufacture of jockey-caps. Dunstable and the Lutons, and the fouth parts of this county, as far as the borders of Buckinghaminire and Hertfordfire ; the people are taken up with the manufacture of bone lace, wherein they are wonderfully increaled and im-proved.-Alfo the manufactures of fraw-work, efpecially traw-hats, fpreads itfelf from Hertfordfhire into this county and is very greatly increafed within thefe twenty years paft.
The woad, for which this county is famous, is faid to be the plant with which the ancient Britons ufed to dye their bodies, that they might appear the more terrible to their enemies; but rather; as fome think, to preforve them from the inclemency of the weather. It is.cultivated here afer this manner: they fow it every year, and the old woad, except what they fave for feed, is plucked up. The begimning of March is the feafon for fowing it, and the middle of May for cropping it. It is beft in a dry year, but far more plentiful in a wet one. It is cropped commonly four or five times a year, as it comes up; but the firft crop is beft, and every one after it gradually worfe. When gathered, it is immediately ground frall in a mill, till it becomes fit to ball ; and, when balled it is laid upon hurdles to dry, and then ground into powder After this it is fpread on a floor, and watered, which is called couching; and then it is turned every day, till it is perfectly dry and mouldy, which is called filvering. After Glvering it is weighed, and put into a bag, containing 200 weight, and then fent to the dyers, to fry it, who fet a price on it, according to its goodnefs; the beft is valued at about 18 l. a tun. See Woad.
BEE, a kind of Ay; or infect, which produces honey, that fweet and ufeful juice, of which there is fo large a trade carried on in Europe, and efpecially in France, The bee alfo produces wàx.
The bees, or honey-flies, are little infects, the nature and conduct of which is no lefs wonderful than their lahour is beneficial to mankind, fince they furnilo us with homey and wax, both which are very conliderable commodities in the way of traffic.

Of the generation of bees.
The production of bees, at firf, is, that they breed from a kind of little white germen, or fperm, that is poifed at the bottom of the fmall holes, or fockets, that make up the honeycomb, which the bees make in their hives. This fperm, afdifted by the natural heat of the bees, increares, and become a knat of white maggots, which, at the beginning of its for mation, has no refemblance of the bee, but, in a month's inie, it comes out of the focket. The bees generate from February to the end of October, if the hive be in good condition : they fwam in May and June; but the May fwarms are more valued, becaufe they are ftronger than thofe that are later.

How the bees prepare for their prefervation.
$\therefore$ Towards the end of the winter, as foon as the weather becomes a litte mild, as in the month of Februaty, the bees venture out of their hives, range the fields, and bring home wax of different colours, as white, yellow, or red, which ficks, like little lentils, on the hinder part of their thighs, and which, when entered into the hives, they induftrioufly quit themfelves of, and form with it their lodgments. It is obfervable, that the fame fockets are the places wherein they depolite their fperm, whence are generated the other bees, and which are filled with honey, as they become empty, by the production of the young bees which they inclofe. They collect their honey-comb, or wax, from all forts of flowers, as the rofe, the orange, the peafe-bloom, and the daify-flowers. They bring. befides the common wax, a purplifh kind, firmer than the yellow, and ferving them to ftop the cracks about their hives. : This wax is of a ftrong fmell, and very different from the common kind.

## How the bees gather their honey:

The beft feafon of the year for the bees to gather their honey, is towards the latter end of April, and in May, at which time they go out by break of day, when the air is gentle and ferene, and gather the dew, which is more plentiful and common at that time than any other of the year. They return as quick as they can into their hives, to difcharge, into the holes affigned them, the honey-dew they have gathered from the fimples of the field, and which they have fucked into their bodies, and throw it up again, as pigeons do their food wherewith they feed their young; and, when they have filled a focket with this honey, they clofe and feal it up with a finall piece of wax, to prevent it from flowing out again. Towards the end of June and July, when the dews are not fo plentiful as during the months of April and May, it hapPens ftill there are fome dewy mornings, in which the bees Vol. I.
are not lefs induftrous than af other times to make heir harveft.
When they fwarm, and the young ones which compofe the fwarm are come out of the bive, they make, as it were, a cloud of flies in the air, that looks black, and is formed; as they march out, into feeming fquadrons and batalions; like an army. They foltow clofe their leader, who is much larget than the reft, and whofe wings are much horters and who is of a reddilh colour: When they lofe their leader, they become vagatonds, and this is a certain lofs to the proprietor: When the fwarm are got out, they ufually affemble together, and lodge upon fome faady branch; and, being there dorely knit, it is then proper to hive them, left they hould defert; for fhould they fand long, tifl the fon fhines upon them, they will then feparate and fy away. When they are hived, it is proper to fet them in the fhade, from the heat of the fun, which might mele their new wax.
It is alfo to be obferved, that the bees wax, for three years together, is very plentifulty productive in breeding of the bees, and, that the age of the honeycomb is very eafy to be known by its colour ; for the firt year it is whitifh, the fecondent is yellow, and the third brown; but, when older, it turns black, is barren, and without production; and then the bees ceafe to make honey, or breed more fwarms.
C I have hives, fays a gentleman who was a curious obletver - of there animals, made of two pieces, in form of a barrel, 6. or fugar-loaf, cut in the middle; fo that I need not deftroy 6 the bees; and I take the honey of the hives from year to ' years by lifting up one year one part, and the following - the other, according as they are found full, and, inftead of - thofe that are full of honey, I put empty ones.' It is remarkable that bees delight much near water, and watery places, ufing a great deal of it in affifting them to make honey ${ }^{*}$.

- Dr, Warder confirms the famé, and directs fmall troughs of water, with thin boards fwimming therein, for the bees to drink at, and to prevent their drowning.

It is further obfervable; that amongt the bees there are drones; which will not go into the felds at all; or if they do, which is but from noon till about four o'dock; they bring nothing home with them, but; on the contrary, eat the honey made by others; and the induftrious bees kill the drones $t$, which are much larger and blacker than the others, and have no ftings; but, when you prefs their tails, there appear two fmall horns, like tranfparent fking, which are yellow at the end, In Poland and Mufcovy the bees make their hives in the trunks of old trees, and afford plenty of honey, on which the peafants almoft fubfift, without any affiftance, which is contrary to the nature of ours,
$\uparrow$ The drones, according to fome, ate judged to be flallions to the queen bee, who peoples this litule commonwealth.

In fome countties, where the bees have not all the year round a competency of agreeable matter whereon to feed, a method has been found to remove the hives, with their inhabitants, elfewhere, and afterwards bring them back again. According to the cutious defcription of Egypt by Monfieur Maillet, this is done in the following manter:
The inundation of the Nile rendering the countries very ferTile, the inhabitants fend their bees annually into diftant countries, in order to get fuftenance, at a time when they could not find any at bome, and afterwards bring them back. The people of Lower Egypt obferved anciently that all the fruit of the earth ripened fooner in Upper Egypt than in their parts which made a difference of above fix weeks between the two countries: 'hence they gave their bees the advantage. The expedient which they made ufe of then is employed at prefent A bout the end of October, all who poffefs hives embark them on the Nile; and convey them up that river, quite to Upper Egypt, they obferving to arrive thither at the time when, the inundation withdrawing, the lands bave been fowed, and the flowers begin to bud.

- The hives being come to this part of Egypt, are there placed * pyramidically, in boats prepared for that purpofe, after be6 ing marked and numbered by the feveral owners who fen 6 them there." In this place the bees feed, in the fields, du-- ring fome days. Afterwards, when it is fuppofed that they chave got in all the honey and wax that could be met with - within two or three leagues round, their conductors convey s them in the fame boats, two or three leagues lower, and 6 there leave the laborious infects folong time as is neceffary c for them to collect all the riches of the fpot in queftion. Thus the nearer they come to the place of their abode, the earth forwards its productions, and the plants flourifh in pro-portion.- In fine, about the beginning of February, after 6 having travelled through the whole leingth of Egypt (gather' ing all the rich produce of their delightful banks of the Nile) c they arrive at the mouth of that river, towards the ocean, - whence they fer our, and return to their refpective habita-- tions: for care is taken to fet down exactly, in a roll, or - regifter, every diftrict whence the hives fet out in the be-- ginning of the feafon; their number, and the names of the 3 N
par
${ }^{5}$ particular perfons who fent them ; as likewife the mark or - number of the boars in which they were placed, according ' to their feveral habitations.
This feems to prove how exceedingly advantageous it is for perfons to live in the neighbourhood of a great river, when their fields are not very abundant in flowers, or fufficient to fupport thefe animals during every feafon. I conceive that bees, by taking a little voyage upon a river, and enjoying the fpring of a dry country, with the autumn of a fat, feady foil, may thus be fupported the year round. But, in order to do this, the owners of hives mult live near a navigable river, otherwife what has been obferved would be defeated; and many places have not fuch an advantage.
Yet this defect may be fupplied by land carriage. Columella informs us, that the Greeks conftantly conveyed every year bees from Achaia-into Attica; and this becaufe that, at the time when the flowers in Achaia are gone, thofe of Attica began to blow. Monfort relates, that the people of the country of Juliers ufed the fame practice; and that, at a certain feafon of the year, they carried bees to the foot of mountains covered with thyme, and that of the wild kind. As thefe inftances, being borrewed from remote times, may not have their due weight, it may not be amifs to obferve that Monfieur Proutaut makes his bees travel like thofe of the Greeks of Achaia. This ingenious artift has fet up a manufacture for whitening wax, at Yeuvre-la-Ville, near Petivres, in the diocefe of Orleans, in France, and there keeps a great number of hives.
This fpot is one of thofe in which flowers become fearce very foon, and where few are feen, after the corn is ripened. He then fends his bees into Beauce, or le Gatimois, in cafe it has rained in thofe parts. This is a journey of about 20 miles. But, if he concludes that the bees could not meet, in either of thefe countries, wherewith to employ themfelves advantageoully, he then has them carried into Sologne, about the beginning of Auguft, as knowing they will there meet with buck-wheat in flower,' which will continue fo till about the end of September.
The land conveyance of thefe infects being far more difficult than that by water, the contrivance of Mr. Proutaut is, firft, to examine thofe hives, fome of whofe boney-combs might be broken or feparated, by the jolting of the vehicle, to prevent which they are made faft one to the other, and againft the partition of the hive, by means of fmall fticks, which may be difpofed differently, as occalion will hew. This being dore, every hive is fet upon a packing-cloth, or fomething like it, the threads of which are very wide: they then turn up the fides of this cloth, and lay them on the outfide of each hive, and tie them together with a piece of fmall packthread, obferving to wind it feveral times round. They afterwards place in a cart, built for that purpofe, as many hives as it will hold. The hives are fet two and two, the whole length of the cart. Over thefe others are placed, which make, as it were, a fecond lay, or bed, of hives. Thefe mult be always put topfy-turvy; it is for the fake of their honey-combs, and to fix them the better, that the hives are difpofed after this manner; for fuch as have no honey-combs, or very fmall ones, are placed in their natural fituation. Care is taken in this ftowage, not to let one hive ftop, up another, it being effentially neceffary for the bees to have air; and it is for this reafon they are wrapped up in a coarfe cloth, the threads of which are wove very wide, in order that the air may have a free paffage, and qualify the violent heat which thefe infects raife in their hives, efpecially when they move about very tumultuoully, as often happens in thefe carts. Thofe ufed for this purpofe in Yévre hold from 30 to 48 hives. As foon as all are thus ftowed, the caravans fet out. If the feafon is fultry, they travel only in the night; but, in cool days, they make a proper advantage of them. You will imagine that they do not ride polt: the horfes muft not be permitted even to trot; they are led flowly, and through the fmootheft roads. If any hives are void of honey-combs, or have not fufficient to fupport the bees during their journey, which is more than of one day, they are made to flay in the place where they happen to be. The fort of bives we are fpeaking of, are taken out of the cart, are fet upon the ground, and, after removing the packing-cloth, an aperture is made at the bottom of every hive, by which the bees iffue forth, in order to procure themfelves provifions abroad. The firft field they come to ferves as an inn to them. In the evening, as foon as they are all returned, the hives are fhut up, and being placed again in the cart they proceed on their journey. When the caravan is arrived at their journey's end, the bafkets are fet up and down in the gardens, or in fields adjacent to the houfes of different peafants, who, for a very fmall reward, undertake to look after them. It is thus that, in fuch fots as are not very abundant in Howers, means are found to fupply the wants of bees during the whole year.

## REMAREs.

Honey and wax, the productions of thefe delicate animals, being commodities of very general ufe and benefic to mankind, and affording divers branches of traffic, of no incon-
fiderable extent, is the reafon of our intimating the mealures which have been fuggefted for the more than ordinary care and nourifbment of thefe active infects. It is certain that the methods beforementioned have been fuccefsfully practiled; and how much farther the profitable care of thefe uleful creatures may be carried, is not eafy to fay. It does not feem at all irrational to conjecture that variety of melliferous herbs and flowers might, in many parts, be planted adjacent to the refidence of bees, without their being made itinerants, which would, perhaps, afford them conftant nourifhment at all feafons of the year: that is to fay, that fuch quantities of fuitable herbs, flowers, and vegetablec, might, by the means of hot-beds, be preferved, fo as to afford them fuftenance at all times. And thefe meafures, together with well-contrived, warm apiaries, I am inclined to think, might render bees lar more profitable than they have yet been.
The making effays of this nature would well become perfons of leifure, and who are rurally well fituated for fuch experiments. The expence would be inconfiderable to people of fortune, and the amufement not a little engaging and delectable to thole who have a true gôut for the ftudies of nature. We are convinced, from inflances innumerable, that art will furprifingly affift nature, and be productive of infinite variety of effects, which were unknown to our forefathers, who had made no progrefs in the experimental philofophy, which is the only kind of philofophy that can be of utility in regard to traffic. We well know the care and tendernefs requifite for the prefervation of that other important animal, the filk-worm without the application of art for their breed and nourifh ment, we fhould not experience that plenty of their eftimable and delightful productions.
Honey, properly managed, we are fenfible yields a mof delicate kind of liquor. This is much ufed in the northern countries, where great cold hinders the growth of the grape, and production of wine ; but kind nature has bountifully provided them with honey, which they make into a fipituous liquor with water, and efteem it as much, yea, fome prefer it before wine.
Mead, metheglin, and hydromel, are all prepared from honey, which is a fweet juice, exuding from the flowers of a great variety of vegetables, bitter as well as fweet, and fucked up from them by the bees, and laid up in their combs. Honey was formerly thought to have different qualities, according to the different plants and flowers it was gathered from ; but later difcoveries have proved this to be falfe. Honey is a natural foap, attenuating, aperitive, loofening, cleanfing, and ftimulating, of very high efteem before the ufe of fugar, and, in feveral cafes, far exceeds it, as for a pectoral, diuretic, \&c. and neither heats, dries, nor conftringes, till after fermentation; for, before that, the fpirit is not fet at liberty.
But we muft confider thefe three liquors as they are after fermentation. All thefe are made with honey and water, and fome aromatics, as cinnamon, ginger, nutmegs, cloves, \&c. and fermented with yeft after boiling ; the laft is only honey and water boiled, and barrelled clofe, without fermentation. Thefe are the chief drinks of Ruffia, Mufcovy, Lithuania, and Tartary; and many in Britain are wife enough not to defpife thofe liquors; for what is produced from the animal nature may afford more kindly and falubrious drinks than any from the vegetable.
Fermented mead, having the effential oil and falts of the flowers from which the honey is gathered, broken, and mixed with the water, and reduced to a fubtile, volatile firit, becomes of the nature of wine, when it is kept to a right age, i. e. till it be clear, fine, and of a pleafant, vinous tafte; which, if rightly made, it muft be, confidering that honey is the moft effential, fubtile, and fine parts of flowers; and for this reafon, mead muft be a very wholefome liquor, becaufe it is a curious and chemical collection of the beft principles of aromatic and cordial flowers.
Mead muft alfo be an excellent nervous wine, increafe the animal firits, and inflate the delicate tubes with it's volatile and exalted parts, and fit them better for vigorous motion and action; and, as it affords plenty of nervous juices that will fupply the nerves of involuntary motion, Atrengthen the heart, promote circulation, and prove a great cordial, far beyond brandy, aqua vite, or French wine; becaufe, their fpirits being ftripped of their mucous phlegm, and left naked, they foon exhale and leave their phlegm to thicken the blood, load the veffels, and weaken the fibres; but the fpirits of mead and metheglin, being ftill more wrapped up in the oily parts, continue longer in the body, invigorate the folids, and keep them longer in play.
Mead is excellent in all languihings and decays of nature; it is a milk for old people, a great ftrengthener of the folids of the phlegmatic, an attenuater of the blood, an invigorater of the loaded abdominal veffels, and a powerful reviver of the fpirits of melancholy perfons.-It is a powerful diuretic, cleanfes the kidnies, urethers, and bladder, of all fandy, mucilaginous, gravelly, and exotic, tardy bodies.-As it affords plenty of animal fpirits, which invigorate the nerves and fibres, they attenuate, mix, and prepare the blood for fecretion and excretion; by this property, and it's multitude of ellential falts, it fcours the glands and lymphatics, cleanfes
âway the vifcidities of the blood; it fortifies the fomach, and promotes digeftion in the bowols, by it's gently fimulating the mufcular fibres, attenuates the vifcidities lodged in the glands, and affords a nervous juice.
But hydromel, that is, honey and water boiled, and kept unfermented, with cimamon, ginger, and nutmegs, is a powerful cleanfer of the lungs, it helps expectoration, and fheaths the fharp prickling falts which tickle the tracharal glands; for that, not having undergone fermentation, abounds with many oily parts and falts, which, not being fo minute and fubtile as in the other, prick not, nor ftimulate the nerves and glands; neither are the oily parts fo grofs as to cloy and load the fmall velfels of the lungs, but foften and fmooth them, fheath the fharp irritating falts, and fmooth the infides of the velfels with a noble ballamic litus, which defends them from pungency and irritation, till they recover ftrength and elaficity; whereby they fhake off and propel any vifcid or faline moifture, which might fuff, load, or tickle them. Thus are honey and mead of unfpeakable fervice to the difeaies of the breaft. And alfo where the bowels are fluggilh and inactive, and do not anfwer; or where they are too dry and ftiff, and want glandular moifture to expedite the paffage of the faces, mead is good, becaufe it's' grofs falts prick and fir up the inteftines to their office, or it's grofs oil lubricates and foftens them, caufes the glands to give way to the impulfe of the circulating blood, and their excretory duats are foftened and widened; hence a large quantity of inteltinal glandular juice, whereby ftool is provoked. But vinous mead has not this effect, becaufe the fermentation has fubtilized it's oil and falts fo much, that they readily get through the firt paffages into the blood, without producing that effect. The cenomali (i. $\tau$. wine and honey mixed) of the antients, will ftill make the wine more pectoral; that is to fay, the oil and vifcid parts of the honey will obtund or theath up the tartar of the wine, fo as it will not prick nor tickle the glands of the throat, to excite a troublefome cough ; the wine, on the other hand, will make the honey more cordial, ftomachic, and of quicker digeffion.
Mead, and all preparations of honey, are moft difagreeable to choleric conftitutions, becaufe it foon degenerates into the nature of bile, caufes terrible gripes, bilious cholics, and not feldom death: it is alfo hurtful in ardent fevers, becaufe it's fpirits will increafe the violent and impetuous motion of the humours, and exafperate the difeafe. It is no lefs unfuitabie for hot fummer weather, becaufe then the folids are lax, digeftion llow, and it, lying on the fomach, meets with the biles, and turns into an acid, which prefently raifes a violent cholic: fo that, as cyder is adapted for the fummer, fo is this for the winter. Mead, drank before it be fine, palls the fomach, goes flowly off, caufes belchings, flatulency, indigettion, naufea and vomiting, from the vifcidity it had not yet depofited, wherein the contained air rarifies, expands, and caufes an explofion; and thefe vifcidities, meeting with the bile, eafily turn into the fame, and fo caufe bilious vomiting, pain in the bowels, and loofenefs; and, becaufe it contains both much fpirit and vifoous parts, it eafily caufes drunkennefs, hard to get off.
From thefe obfervations it is apparent, that all liquids, like all folids, are not fuitable to every conftitution, which alfo Thews the folly of depending on empirics for the prefervation of health, who, having no true philofophy, cannot poffibly make a true judgment of any medicine they confidently prefcribe. And every phyfician may be truly faid to be nothing better than an impudent quack, who is not thoroughly acquainted with the fpecific nature of the drugs, and the minerals he dares to adminifter. Yet there are too many who fupercilioufly ftrut about the town, pick people's pockets by wholefale, who neither know one drug from another, when they fee them together, nor fkilfully to perform one procefs in chymiftry. But, if they have heard a few lectures, and read Boerhaave, upon thofe fubjects, and got the technical terms by rote, they dogmatically prate away before their ignorant patients and others, and pafs for profound fellows: when, if they were catechized in the whole of medicinal philofophy, before thofe who are judges, their patients would be aftonifhed, to think that they bad trufted their lives in the hands of fuch pedants in phyfic; whofe knowlege has only been ftolen from the files of apothecaries, and whofe fuccefs has been owing to a low and deteffible cunning, rather than to any real merit in their profeffion.
Bees-wax. The wax is a provifion not lefs neceffary for the bee, than the honey itfelf: they build their apartments with it, and it clofes the cells of the nymphs, as well as thofe where the honey is treafured. When any accidents happen, any fractures open, or whenever the fpecies grow too numerous, they recur to the wax; and therefore are always careful to provide a compctent quantity in time. They fearch for it upon all forts of trees and plants, but efpecially the rocket, the fingle popp; , and generally all kinds of flowers. They amafs it with their hair, with which their whole body is invefted. It is pleafant to fee them roll in the yeilow duft, which fall from the chives to the bottom of the flowers, and then return covered with the fane grains; but their beft me-
thod of gathering the wax, efpecially when it is not reig plentiful, is to carry away all the little particles of it with their jaws and fore-feet, into a focket or cavity, that operis as their hinder-feet.
This cavity is made to receive the wax, like a fpoon, and the hair, which covers their feet, ferves to keep the burden fixed and feady, till they return home. They are fometimes expofed to inconveniencies in this work, by the motion of the air, atd the delicate texture of the flowers whinh bend under their feet, and binder them from packing up their booty; on which occafions they fix themlelves on fome fteady place, where they prefs the wax into a mafs, and wind it round their legs, making frequent returns to the flowets; and, when they have ftocked themfelves with a fufficient quantity, they immediately repair to their habitation.
Two men in the compafs of a whole day, could not amais fo much as two little balls of wax; and yet they are no more than the common burden of a fingle bee, and the producc of one journey. Thofe who are employed in collecting the wax from flowers, are affifted by their companions, who attend them at the door of the hive, eafe them of their load at their arrival, brulh their feet, and fhake out the two balls of wax; upon which the others return to the fields to gather new treafures, whillt thofe who difburdened them, convey their charge to the magazine. However, there are fome bees; who, when they have brought their load home, have carried it themfelves to a lodge, and there delivered it, laying hold of one end with their hinder feet, and with their middle feet fliding it out of the cavity that contained it.
Thefe parcels of wax continue a few moments in tie lodge, till another fet of bees come, to knead it with their feet, into different fheets laid upon one another.
This is the unwrought wax, which is eafily diftinguilhed to be the produce of different flowers, by the variety of colours which appear in each theet. Whén they afte w irds come to work it, they knead it over again; they purify and whiten it, and then reduce it to a uniform colour. They ufe this wax with a wonderful frugality; for it is ealy to obferve, that the whole family is conducted with prudence, and all their actions regulated by good government.
The matter which conftitutes this wax, is of a certain bal famic nature, and appears in very frall quantitips, upon the furface of the leaves of fome plants, where it is infpiflated by the heat of the fun; as is manifelt in rofemary
There are alfo often found in other plants certain very minute globules, rifing from the open feminal tutts in the main part of the flower; thefe can fcarce be collected by any human means, but I have fometimes found, fays Boerhaave, upon frequently cohobating firit of wine upon rofemary leaves, an unexpected and ungrateful tafte or fmell of wax, fouling the fpirit, which before was good; and, upon viewth thefe leaves with a microfcope, I thought I difcovered little waxy rifings of the furface, and, upon handling them confiderably, I evidently found wax fticking to my fingers.
Bees wax, therefore, appears to be a certain fpecies of turpentine, which the fat juices of plants, when heated by the fun, fweat out upon the furface, or produce within the cavities of the flowery tufts. This the bees collect, as before defcribed. It is generally yellow, and fot ungrateful either in tafte or fmell; it becomes hard and almoft brittle in the cold, but grows foft, and difilves with heat.

## Of the medicinal ufe of Bees-wax.

The water, vinegar, fœetid fpirit, and butter, from wax, diftilled by the retort.

## Process I .

Half fill a glafs retort with fine wax, cut into pieces fmall enough to enter the wide mouth thereof; then pour clean fand upon it, fo as to fill the retort, which is now to be gently warmed till the wax melts, and fufficiently imbibes and mixes among the fand: fet the retort in a fand furnace, apply a receiver, and diftil with a gradual fire: there ufually firft comes over a little tartilh water, of a difagreeable fetid odour, along with a little fpirit; when with a gentle heat of 214 degrees nothing more afcends, change the receiver, and raife the fire; by which means there will gradually arife a thin oil of a whitifh colour, and concrete, like butter, in the receiver. When this ceafes, apply a violent fire of fuppreffion, upon which the whole body of the wax will foon come over into the receiver, and there appear in a folid form, like butter; having loft the hard brittle nature of wax, and melting oily. So much fand fhould be here mixed with the wax, as to prevent it's exptofive fwelling, as would otherwife happen in the boiling.

The Use.
Here it is manifeft, that the whole body of the wax is volatile, with a certain degree of fire; in which refpect therefore, thefe fubftances agree with camphire, though camphire be much more volatile. Hence we fee alfo that wax, which is wholly inflammable, may exit in a hard and almoft brittle form; and when difiolved in hot water, then forced through
a linnen ftrainer, and poured into thallow, metalline moulds, fo as to form little cakes; thefe being expofed to the open air and fun, and frequently fprinkled with pure water, the wax is thus blanched or whitened; and, though it now alfo confunce in flane, yet it is almoft as brittle as glafs: fo as to feem a very different thing from oil. Inflanmable vegetable oils, therefore, may exift under the various forms of oil, balfam, rofin, pitch, dry tears, wax, and butter. From whence we may further obferve, that the fire can make true Jiquid oils from bodies, which appeared not to be oils before. And this converfion of wax into butter is durable; for it does not return to hard wax again in a very long time, but confantly remains a foft butter, even in the greateft cold. I have kept this butter of wax, fays Boerhaave, above twenty years, in a glafs cylindrical veffel, whofe wide mouth was only loofely covered with paper, yet in all this time it did not return to wax; whereas the moft liquid oil of turpentine foon grows thick, like thin turpentine itfelf *; fo that the different effects of fire upon the bare oily parts of plants is furprifing, confequently no certain rules, can hence be laid down for the action of fire upon-oils.

* Quere. Whether the oil of turpentine being imbibed and mixed with fand in the retort, as in this cafe of the wax, would' not fo volatilize it, as effectually to prevent the coagulation of the one as well as the other? Does not the fand abforb that infpiffating congealing quality we find in the one and not in the other, by not ufing fand! Or will not the proper application of certain abforbient earths, to all vegetable, refinous, or waxy bodies, imbibe that internal fiery quality, which is the caufe of coagulation; and thereby fo volailize them, as to render them a durable butter, as in the prefent cafe?

Camphire, which is a pure inflammable oil, becomes camphire again, and not a liquid oil, after being raifed by the fire. The butter of wax, thus prepared, affords an extremely foft anodyne unguent, agreeable to the nerves, highly emollient and relaxing, and, when rubbed upon the parts, proves ferviceable in contractions of the limbs, and fuccefffully preferves the fkin from roughnefs, drynefs, and cracking in the cold, or the winter: it alfo proves excellent in the fharp pains of the hæmorrtoids.

The butter of wax turned into a liquid oil, upon repeated diftillation by the retort.
Process II.
Melt the butter of wax over a gentle fire to a liquid oil, then pour it through a funnel, firf well heated, into a glafs retort alfo well heated before-hand, fo as. to half fill the retort, with care to prevent any of the butter from fticking to the neck thereof, becaufe in that cafe the grofs matter would fall into the receiver, which fhould here be avoided. Set the retort in a fand furnace, lute on a clean receiver, and diftil cautioully, managing the fire fo, that one drop may follow another at the diftance of fix feconds; when nothing more comes over with this degree of heat, raife the fire, and diftil as before, and continue in this manner increafing the fire with the fame caution, fo long as any butter remains in the retort; and by this means all the butter will come over, fcarce leaving any frces behind; and a thickilh oil, not much diminifhed in quantity, be found inftead of "butier in the receiver. ' If this oll of wax be again diftilled in like manner, it always becomes more liquid, foft; ,tranfparent, and thin, fo as at length to refemble a fubtile, limpid oil : and, the oftener the diftillation is repeated, the more mild and gentle, yet the more penetrating, the oil becomes.

The Use.
Hence it appears, that the action of the fire more and more attenuates certain oily bodies of plants, yet without rendering them acrimonious, but on the contrary always, milder, though at the fame time more penetrating; for this lait oil of wax is an incomparable remedy for the difeafes of the nervous papilla in the external 1 kin , and has fcarce it's equal in curing chapt lips in the winter, chapt nipples in the women who give fuck, and in the cracking of the fkin of the hands and fingers, being fometimes gently anointed therewith. It is afo ferviceable in difcuffing cold tumours, arifing on the face or fingers in the winter; and curing contraEled tendons, and the rigidity of the limbs thence arifing; being ufed along with baths, fomentations, and motion; for it has a fingular virtue in thus reftoring flexibility to the parts: being frequently rubbed upon the abdomen, it prevents coftivenefs; and is therefore excellent in effedually curing the difeafes of children.

## A futher ufe of thefe kinds of oils.

After the chymifts had juftly thewn the phyficians the fpirit refiding in effential oils, contained in a fmall volume, all the particular virtues of the plant, phyficians prudently reflected that from thence they had an excellent inftrument in their art, but that the unducus tenacity of the oil fill prevented, in many cales, it's being ufed with falety, becaufe thefe oils
being extremely fharp, and by their tenacity remaining fixed to one part, occafioned inflammations. Wherefore they began to think of a method of rendering thefe oils mifcible with, water, and uniformly conveying their entire virtues to the places intended, and this they found might be effected by the means of fugar.
Grind therefore an ounce of dry loaf-fugar to an impalpable powder, in a glafs mortar, with a glais pefte, and by d $\varepsilon$ grees add thereto a drachm of any effential oil, or half a drachm, if the oil be very tenacious, and continue rubbing them together, till the oil be thoroughly incorporated with the fugar. The oil in this operation ufually diffuting a fragrancy, it fhould be performed quick. Thus fugar, which is a pure foap, or a true effential oily falr, "divides the glutinous tenacity of the oil, interpofes itfelf betwixt the piinciples thereof, unites them clofely together, and makes an extemporaneous foap; which may thus be commodiouly diluted with water for medicinal ufes: for though this mixture is not fo perfect as in an actual foap, or true effential falt, yet it fuffices for ufe: nor is there reafon to apprehend any inconvenience from the fugar in this preparation; for fugar is unjurtly faid to be unwholefome, as there are no proofs extant thereof.
On the contrary, it is a wonderful fait that perfectly mixes with water, and ferments therewith into wine; and yet what is again furprifing, it appears oleaginous, and perfectly inflammable in the fire: whence it is known to confift of oil and falt.
If thefe elæofaccharums be well prepared, dried, and put into clean glaffes, exactly clofed with glafs ftoppels, they may long be preferved perfect; and, in this manner, very effectual medicines might be commodioully carried from place to place, and be directly ufed on journies, by adding a little of the elæofaccharum to a glafs of wine. By this method, therefore, phyficians, if acquainted with practical chymiftry, may prepare an excellent medicine, rich in virtues; for if the elæofaccharum of mint be diffolved in diftilled mint water, then ffrengthened with the addition of the fpirit of mint, and the mixture fweetened with the fyrup of the fame plant, the whole virtue of mine may thus be obtained.-In like manner the before defcribed oil of wax may by the means of fugar be made an elæofaccharum, which, if properly applied, may be taken internally with fuccefs.
Hence appears the faponaceous property of fugar, which fits it for breaking and dividing the bodies of oils, as if they were in a manner fermented with fugar; and at the fame time it does not diminifh, but rather improves, the particular virtues of thefe oils. The antients, therefore, who were unacquainted with fugar, mixed oils with honey for the like purpofe. And hence we learn the virtue of fugar in the body, where, being diluted with the natural juices, it affords a faponaceous lixivium; which, by the force of circulation, diffolves unctuous and vifcous matters; whence it does not generate but diffolve phlegm, nor increafe the bile, nor turn into it, but opens, thins, and divides it; though, by diffolving the oils too much, it may occation leannefs, as by attenuating too much it produces a weaknefs and relaxation of the parts, and is therefore often found hurtful in the rickets, and the fcurvy.
Having fhewn the medical ufe of bees-wax, by way of chymical analyfis, we fhall fhew it's atility in other refpects.

## Of the ufe of bees-wax in the folid body.

There is a very confiderable traffic in the yellow and white wax. The firt fort is made from the preffing of the honeycomb over a fire, with a fufficient quantity of water; and, when all is difolved, they frain it through a cloth; this done, they melt it, and fcum off the drofs and froth, and afterwards caft it into cakes.
In the refining of wax, fome perfons ufe Roman, or fome other vitriol, but the beft method feems to be by well melting. That which we call wax, is, in it's natural ftate, the honeycomb, which contains the honey in the hive. Poland, Barbary, Bretagne, and feveral parts of France, furnifh a great deal of yellow wax; but that of Dantzick, Bretagne, and Champagne, is reckoned the beft; but it is of little confe= quence from what place it comes, provided it be pure and of a good kind
In the choice thereof, that is the beft which is of a high yellow colour, a good fmell, eafy to break, and does not ftick to the teeth; and take care that it be the fame inwardly as outwardly: and, when in large cakes, as that from Dantzick, obferve that there be no water, Atones, or earth in the middle, or that it be not mixed with rofin, white frankincenfe, of pitch, or coloured with turmeric or roucou.
The ufe of yellow wax is confiderable for feveral forts of works; as tapers, candles, flambeaux, images, anatomical and other curious works, fealing-wax, \&c. Befides it's be-fore-mentioned ufe in medicine, it is likewife uled by way of giving a body to unguents and plaifters.
We meet with, befides this, in the hives, a kind of red wax, called virgin wax, or propolis, which is that the bees ufe to flop up the chinks or holes of the hives, to hinder the cold

## BEE

## B E E

air from entering. And therefore, the more cracks or hotes ihere are about a hive, the more propolis will be found there, This was once much ufed, but, at prefent, is hardly known in the hops, though it has been found very good in nervous cafes.
The white wax is made out of the yellow, cut by a certain engine into fmall flakes, and then bleached in the fun, by which it will become very white. See the article WAx: It is then caft into round cakes, fome thicker, fome thinner. That is the beft which fmells well, and chews hard, not mixed with fheep's fuet, and is withal of a clear colour, withput any caft of yellownefs. The laft, and moft proper to turn white, is the yellow wax of Bretagne, which when it is well made, as that ufually is of Chateau Gontier, eight leagues from Angiers, which pafles for the beft fort in France, will be pure, white, clear, tranfparent, in thick cakes, that when broken betwixt the teeth, does not fick, netther has any ill tafte or fcent.
It is with this fine wax the fineft works are made. Aind we reckon, after the Chateau Gontier wax, the fecond fort, that of Angiers; the third fort that of Mons; the fourch that of Holland, which is generally brought in great cakes of four or five hundred weight; and the firft fort is that we call the Dutch wax royal; the fifth is that of Ambuife; the usth of Chaumont, near Troyes; the feyenth, and the worlt, is that of Rouen, becapfe of the great addicion of fuet they put in, and is in betier or worfe, according to the quantity of fuet wherewith it is mixed
At Montpelier in France, they are reckoned to haye one of the beft manufactures for the blanching of wax in Europe ; the manner and procefs of which is as follows.
Firlt, they melr the wax in a large copper cauldron, then they have ready a mold or form of wood, of the figure of a fugar loaf, or the block of a fteeple crowned hat, which having beinneared over with nlime of faails, they dip into the wax thus melted. This takes up a Ikin or film of wax, as candles upun dipping do.
This they fmooth with their hands, and dip in water, and when it is cold take it off the form, from which, by reafon of the anointing the form with the before-mentioned muciJage, it will readily flip in the form of a cone or long crucible. Thefe cones (fo let me call them) are fet in a garden in ranks, fingly one by one, fupported with canes or reeds, croffing one another in this faltion.

Rourd about they fet pots with water, wherewith they frinkle the wax often, to keep it from melting. In furimer time, when the fun lies hot upon it, they fprinkle it fix or feven times a day, otherwife but three or four times. In fourteen or fifteen days, the upper end of thefe cones will grow white, and then they turn them to whiten the other end. In a month's lime, more or lefs, according to the weather, they will become white all over.
Then they melt the wax again ịn earthen pans like metza, or fcuttles, and run if fo melted, through the neb of a tin-got, into water; and, as it runs down into the water, a man either breaks it with his hand into grains, or works it into round figures, like firial wreaths, or corolla, and thefe they expofe again to the weather, in the garden, and order as before, till they become purely white, and then melt into large pieces to fell. The mucilage wherewith they befmear the forms, is made of fails taken alive, hhells and all, and pounded in a mortar, till they become a perfect pap, or vifcous.
The form, once befmeared well over with this pap, will laft dipping many times. Wax whitened is alfo twice as dear as yclow wax. Yellow wax is folutive, and ufed where there is an inflammation, and the fore not ripe; white wax, on the contrary, is very aftingent. They fay, Montpelier is a place proper for whitening of wax ; and that the fame workmen, coming over into Englapd, found the air of a different temperature, and not fo convenient for this trade.

## REMARKs.

To what has been faid under the article Bees, the following further obfervations may not be unacceptable to many. The due care and culture of bees, affording both profit and deligbt, have always been an agreeable athd ufeful employment for the rural life. The ancients indultrioufly cultivated thefe animals for the fake of their honey, which, among, them, was in as high efteem as fugar is at prefent among the Europeans and Americans. Although, lince fugar has been fo univerfally fubftituted in the fead of honey, the latter has been in lefs general eftimation, yet that does no way depreciate from it's natural excellency and cordiality to the human nature. As much as the animal nature may in dignity furpafs the vegetable, to the like degree, perbaps, may the natural productions of the one furpals thofe of the other, more efpecially in a matter which i, allowed to be the very quinteffence of Vol. I.
the vegotable, without participating of it's exerernentitious qualities: and the degree of animal coction given to horcy and wax, feems the mare naturally to prepare tiem for the human fpecies than is in the power of any vegetable to do, for want of that warmth and motion connatural to the animal heyond the vegetable.
But, was not this the cafe with refpeet to the fpecies of vinous and fpirituous liquors which thefe infects afford, yet their wax makes fo general an article of traffic, and, as we have feen, is productive of feveral gond medicaments, that the bees have a claim as much, at prefent, to our regard on that account, as they had to that of the ancients for the fake of their lieney chiefly.
It is not in towns, but in the country, bees are trained up, Two claffes of people concern themfelves in the culcure; the country people for profit, others for agrecable rural amufement.
The former, engaged in providing for their daily fubfitence in other thapes, can beflow but a few folen moments op their hives. an', therefore, can neither benefic themfelves or theif country thereby, to the degree thofe infects will admit of.
The other clafs, whom an eafier fortune, a fuperior education and difcernmesit, would render capable greatly to advance an art, which, at this time, makes no inconfiderable branch of commerce, haye not curiofity enough to fatisfy themfeives to what degree of peifection and profit the fe animals might be brought.
The culture and maltiplication of bees depend chiefly on a knowlege of their wants, which ca not be known, unlefs we are exactly acquainted wih their method of iving, their temperature, their nutriment, the dangers to which they are expofed, the mof favourable fituation they may be placed in, the productions of flowers and $v$-getables fuitable to them; and how to fereen and fhelter them from thofe inclemencies of weather, as well as other animals who are deitructive of their tender natures. \&c.
The ancients have amufed us with fo many delufions and fabulous hifories of their bees, that it is no wonder if the prejudices which arife from thefe falfe reprefentations, have retarded the progrefs which might otherwife thave been made in the training them up.
To reinforce this beneficial art, and to render it capable of the bigheft perfection, it was neceflary that fome body fhould make bees their fuydy, and not content themfelves, as the ancients have done, with poetical, fictitious deferptions only of them. This has been done; and we are indebted for it to Swammerdam, Maraldy, and Reaumur. The two former, "indeed, though very curious in many of their obfervations, bave not, like the latter, the true experimentalif in philofaphy, given us rules for the training them up to the advantage they may be. Nor are the labours of Reaumur level to the capacities of thofe who are the moft likely to improye the art to any confiderable degree.
To compenfate for this, an anonymous writer has obliged the public with a tract, which he calls the The Natural Hiffory of the Bees; wherein the ingenious author has, from the fentiments of the learned Reaumur, and orhers, handled the fubject with no lefs judgment than elegancy, by way of converfible entertainment.
And if our country gentlemen, in their retirement, would divert themfelves with making further improvements upon the indultry of thefe fagacious creatures, they would not only profit the trade of their country ingeneral, in the articles of honey and wax, but might reap confiderable advantage by their very amufements.
The ftudies of nature, and in what mianner art may be applied to aid and affift her, is the great fource of all difcoveries for the benefit of trade. It is, therefore, fubmitted whether apiaries may not be improveable from fomething of the following principles:

1. From the due application of hot-houfes, fo contrived to let in the dews at cerrain times, for the production, at all feafons of the year, of fuch flowers and plants as may afford proper matter for honey and wax, and protect thefe infects from the inclemency of the weather, as well as from other animals which are their deftroyers.
z. Whether, by fuch-like means, bees mighf not be made to produce both boney and wax of fuperior qualities to the ordinary, by extracting their materials from certain fiowers and vegetables, which might, at the fame time, adminifter fome peculiar medicinal virtues, adapted to the cure and prefervation of the human nature?
2. Whether common turf, in well contrived air-furnaces, might not be ufed as fuel, to keep fuch-like hot-houfes competently warm for thefe purpofes ?
3. Whether water may not, at a fmall expence, be artificially applied, like rain, in veficula, upon thofe flowers or vegetables? 5. Whether, upon the whole, heat and moifture may not be fo applied, under cover, in places built like barns, \&e at the leaft expence that may be, fo as to render bees confiderably more profitable to the proprictors and the nation than they have yet ever been?
4. Whether helps of this kind, fuperadded to all the ordinary ones which are practifed, or have been fuggefted by the curious, 30

## B E E

## B E E

may not contribute to the further improvement of the produtions of thofe infects?
BEECH-TREE; a foreft-trec. It is very thick, and full of branches. It grows admirably well in heavy lands, on mountains, and even in a ftony or rocky foil. It has leaves fomewhat refembling thofe of the horfe-bean; the male flowers grow together in a round bunch, and are produced, at remote diftances from the fruit, on the fame tree. The fruit, which is called maft, confifts of two triangular nuts, which are inclofed in a rough hairy rind, divided into four parts.
Befides the common fort, there are two others, the one with yellow friped leaves, and the other with white ftriped leaves; but thefe are only accidental varieties, which produce no real difference of fpecies. Planters, indeed, would diftinguifh two or three forts, one of which they call the mountain-beech, which, they fay, affords a much whiter timber than the other, which they call wild beech. But Mr Miller is of opinion that the difference in the colour of the wood is occafioned by the places where the trees grow, which is often the cafe with moft other forts of timber.
This tree is propagated by faving the maft any time from October to February, obferving only to fecure the feeds from vermin when early fowed, which, if carefully done, the fooner they are fown the better, after they are full ripe. A fmall fpot of ground is fufficient for raifing a great number of thefe trees from feed; but you muft be very careful to keep them clear from weeds; and, if the plants come up very thick, you mult not fail to draw out the ftrongelt of them the autumn following, thas thofe left may have room to grow: fo that, if you hulband a feed-bed carefully, it will afford a three years draught of young plants, which thould be planted in a nurfery ; and, if defigned for timber-trees, at three feet diftance from row to row, and 18 inches afunder in the rows: but, if they are defigned for hedges, to which this tree is very well adapted, the diffance need not be fo great; two feet from row to row, and one foot in the rows, will be fufficient.
In.this nurfery they may remain two or three years, obferving to clear them from weeds, as alfo to dig up the ground between the rocts at leaft once a year, that their tender roots may the better extend themfelves each way; but you muft be careful not to cut or bruife their routs, which is very injurious to all young trees; and never to dig the ground in fummer, when the earth is hot and dry, which, by letting in the rays of the fun to the root, is often the deffruction of the young trees.
This tree will grow to a confiderable height, though the foil be ftony and barren, as alfo upon the declivities of hills and chalky mountains, where it will refift the winds better than other trees; but then the nurferies for the young plants ought to be upon the fame foil; for, if they are raifed in a good foil, and a warm expofure, and afterwards tranflanted into a bleak, barren fituation, they feldom thrive: the nurfery, therefore, Chould be made upon the fame foil where the plantation is intended.
This tree is very proper to form large hedges, to furround plantations, and large wilderners quarters, and may be kepr in a regular figure, if heared twice a year, efpecially when they fhoot ftrong; in which cafe, if they are neglected but a feafon or two, it will be difficult to reduce them again.
The fhade of this tree is very injurious to moft forts of plants which grow near it, but is generally believed to be very falubrious to human budies. The two forts with variegated leaves may be propagated by budding, or grafting them upon the common fort, obferving not to plant them in a good earth, which will caule the buds, or cyons, to fhoot vigoroully, whereby the leaves will become plain, which often happens to variegated plants.
This tree-affords but two articles for trade, namely, it's timber, and it's fruit, or feed. The wood of the beech is whitifh, hard, dry, and crackles in the fire. In France it is commonly fold in the forefts cut into boards, ftakes, and fhingles, to be afterwards ufed in making houfhold furniture, and other joiners works. The boards ought to be from in to 12 inches broad, 13 lines thick, and 6,9 , or 12 feet long.
The beech timber is allo fold in laths, which are fmall thin boards, defigned for the drawer and trunk-makers.
They likewile make of this wood ftaves, faddle-bows, \&c. It is very ufeful for making the keel and infide of thips.
Beech wood is alfo ufed in making hovels, fpoons, wooden fhoes, and other fuch frall wares.
Of the largeft trunks of beech trees are made forms, and kitchen tables, which are 4, 5, 6, and 7 inches thick, and of different breadths and lengths, according as the trunks are more or lefs thick and long.
Beech-wood ailo makes good fuel; for which reafon there is a great deal of it fold in faggots, in cords of wood, in Jogs, 8 cc .
The fruit, or feed of the beech-tree, which is a kind of nut, or acorn, called maft, contains a kind of white and olly marrow, or pulp, of a (weet tafte, and agreeable to eat, of which they make oil, very much efteemed for trying, and for fallads. This oil, which is very common in Picardy, and thore places where there are many beech-trees, is extrafted cold by cxprefion, after the hell of the maft has been taken off, and
the pith broke, or bruifed. There are fome countries where hogs are fattened with beech-mafts, as they are with acorns in other places.
The common people in France ufe that oil inftead of butter but moft of thofe who ufe a great deal of it complain of pains and a heavinefs in the ftomach. Monfieur Danty d'If fard has prefcribed a method to prevent thofe inconveniencies. Onc muft pour the oil of mafts; newly exprefled, into ftone pitchers, very clofely fhut, put them into the ground, and leave them there a year; after which time the oil will have loft all it's bad qualities. Hiftory of the royal Academy of Sciences at Paris, for the year 1726 .
BEER, a common and well-known liquor, made with malt and hops, and ufed in thofe parts of Europe where vines will not grow, and where cyder is fcarce, or little ufed.
To give the reader a particular account of the whole procefs of making beer or ale, we fhall firft explain how the malt is made, and next how the liquor is brewed.
Sir Robert Murray defcribes the method of making malt as follows: take good barley, newly threhhed; put about fix Eng. lifh quarters in a ftone trough, full of water, and let it fteep therein till the water be of a bright reddifh colour, which will be in about three days, more or lefs, according to the moifture or drynefs, fmallnefs or bignefs of the grain, the feafon of the year, and the temperature of the air. In fummer malt never makes well; in winter it requires longer fteeping than in fpring or autumn. It may be known when it is fteeped enough by other marks, befides the colour of the water: as by the exceffive fwelling of the grain, if it be over-fteeped, or by too much foftnefs; being, when it is in a right temper, like the barley prepared to make broth of.
When it is fufficiently fteeped, take it out of the trough, and lay it on heaps, to let the water drain from it; then, after two or three hours, turn it over with a fcoop, and lay it in a new heap, about 20 or 24 inches deep. This is called the coming heap, in the right management whereof lies the principal fill In this heap it may lie 40 hours, more or lefs, according to the abovementioned qualities of the grain, \&\&c. before it comes to the right temper of malt; which, that it may do equally, is the chief article wifhed for.
While it lies in this heap, it mult be carefully looked to after the firft 15 or 16 hours; for, about that time, the grains begin to fhoot roots; which, when they have equally and fully done, the malt muft, within an hour affer, be turned over with a fcoop, otherwife the grains will begin to put forth the blade, or fpire, alfo, which mutt by all means be prevented. If all the malt do not come equally, but that which lies in the middle, being warmeft, comes the fooneft, you muft turn it fo as that the outmoft may be inmoft, and thus manage it till it be all alike.
As foon as the malt is fufficiently come, turn it over and fpread it to a depth not exceeding five or fix inches; and, by that time it is all fpread out, begin and turn it over and over again, three or four times; afterwards turn it over in like manner once in four or five hours, making the heap deeper by degrees; and continue fo to do for the face of 48 hours at leaft. This frequent turning it over cools, dries, and deadens the grain, whereby it becomes mellow, melts eafily in brewing, and feparates intirely from the hulk.
Then throw up the malt into a heap as high as you can, where let it lie till it grows as hot as your hand can endure it, which ufually happens, in about 30 hours time : this perfects the fweetnefs and mellownefs of the malt.
After it is fufficiently heated, throw it about to cool, and turn it over again about fix or cight hours after, and then lay it on a kiln, with hair-cloth or wire fpread under it, where, after one fire, which muft continue 24 hours, you mulf give another fire, more flow, and afterwards a third, if it be neceffiry; for, if the malt be not thoroughly dried, it cannot be well ground, neither will it diffolve well in the brewing, but the ale or beer it makes will be red, bitter, and unfit to keep. The beft fuel is peat and turf, and next charcoal. If there be not enough of one kind, burn the beft firft, for that gives the ftrongeft impreffion. Indeed, the beft and moft natural method of drying it is in the fun, in the months of April or May. This yields the paleft, the moft wholefome, and the fineft liquor. However this be, take care the malt be not fmoaked in the drying. As to the complexion, or colour of malt, white is accounted the beft, becaufe it is moft natural.
Having thus explained how the malt is prepared, we fhall now proceed to give an account how beer and ale are brewed. A quantity of water, being well boiled, is left to cool till the height of the fteam be over, when fo much is poured to a quantity of malt in the mafhing-tub as makes it of a confiftence ftiff enough to be juft well rowed up; after ftanding thus a quarter of an hour, a fecond quantity of water is added, and rowed up as before. Laftly, the full quantity of water is added, and that in proportion as the liquor is intended to be flong or weak. This part of the operation is called malhing. The whole now flands two or three hours, more or lefs, according to the Atrength of the wort, or the difference of the weather, and then it is drawn off into a receiver, and the mathing repeated for a fecond wort, in the fame manner as
the firft, only the water to be cooler than before, and not to fland above half the time.
The two worts are then to be mixed, the intended quantity of hops added, and the liquor, clofe covered up, gently boiled in a copper the face of an hour or two, then let into the receiver, and the hops flrained from it into the coolers. When cool, the barm, or yeaft, is applied, and it is left to work, or ferment, till it be fit to tun up.
For fmall beer there is a third mafhing, with the water near cold, and not left to ftand above three quarters of an hour, to be hopped and boiled at difcretion. For double beer, or ale, the two liquors refulting from the two firft maihings muft be ufed as liquor for a third mafhing of freih malt.
For fine ale the liquor thus brewed is further prepared with moloffes.
Inftead of yeaft fome ufe Caftile foap, others flour and eggs, others an effential oil of barley, others a quinteffence of malt, others of wine, and others of fal paraniftus.
Beer is chiefly diftinguifhed from ale by the quantity of hops, whicis is greater in beer, and thereby renders the liquor bitterer, and fitter to keep.
Here follow fome extracts of the chief flatutes of England, relating to beer.
II. Stat. \& Will. \& Mar. ftat. 1. cap. 22. fect. I. Any perfon may fhip off, within any of the ufual and allowed ports by law, and at the common keys, and within the ufual hours of excife, to be exported into foreign parts, in the prefence of a fworn officer, to be appointed by the farmers, \&c. of excife within the limits where the fame thall be fhipped, any frong ale, ftrong beer, cyder, or mum, to be fpent beyond the feas, paying cuftom for the fame after the rate of one tbilling per ton, and no other duty: fuch officer to certify the quantity fo hipped off to the commiffioners and officers of excife where the entry thereof thall be made, who are required to make- allowances, and repay the excife of beer, ale, cyder, or mum fo exported, to the brewer, or maker thereof, within one month after fuch exportation, deducting three-pence per ton for the charges of their officers.
III. Sect. 2. If any perfon thall caufe or fuffer any liguor, fo fhipped, to be laid on land, or put into any other veffel, within England, Wales, or Berwick, he fhall forfeit the fame, and 501 . more for every cafk fo unduly landed, or put on board any veffel, the one moiety to the king, \&c. the other to the informer. ${ }^{4}$ And their majefties commiffioners and officers of the cuftoms thall charge every matter of any veffel, in his victualling-bill, with fo much beer, ale, cyder, or mum, and no more, as fuch number of men ufed to fpend in fuch voyages, the excife whereof to be recovered according to the laws eftablifhed.
IV. Sect 3. The faid rate of i s. per ton for beer, \&c. fhall be levied and paid under fuch rules and penaltics, and in fuch manner as by the laws of tonnage and poundage are ordained. V. Sect. 4. No mum imported from foreign parts fhail have any part of the cuftom, or excife, repaid upon exportation. VI. Stat. II and 12 Will. III. cap. 15. fect. i. for afcertaining the meafures for retailing ale and beer. All perfons retailing ale or beer fhall fell theirale and beer by a full ale quart, or ale-pint, according to the ftandard remaining with the chamberlain of the Exchequer, in a veffel made of wood, earth, glafs, horn, leather, pewter, or other wholefome metal, marked from the faid ftandard in the Exchequer, or city of London, or fome other place where a ftandard hall be kept; and not in any other veffel not marked, on forfeiture of a fum not exceeding 40 s . nor lefs than ro s.
VII. Sect. 2. If any inn-keeper, alehoufe-keeper, \&c. fhall fell any ale or beer, in a veffel not marked, or deny to give the particular number of quarts, \&c. in any reckoning, fuch inn-keeper, \&cc. Shall not, for non-payment of the reckoning, detain any of the perfon's things not paying the fame, but be left to his action at law.
VIII. Sect. 3. The fub-commiffioners, or collectors of excife, fhall procure a fubitantial ale-quart and ale-pint, of brafs, according to the Exchequer ftandard, to be made, fealed, and certified from the chamberlain's there, without fee, and delivered to the mayor, or chief officer, in each city, corporation, borough, and market-town, within their divifions, where there is not one already; and, the chief officer giving a receipt for it, the fame is to be delivered to the fucceeding officer: the fub commiffioner, or collector, to forfeit for every default therein 51 .
IX. Sect. 5. Every mayor, or chief officer of every city, botough, or market-town, fhall, on requeft, caufe all fuch ale. quarts and pints, made of wood, \&c. as fhall be brought to him, to be meafured and fized with fuch ftandard, and marked with W. R. and a crown; which marks the faid mayor, or chief officer, are to provide, and to take not above a farthing for marking each meafure. The mayor, or chief officer, not doing his duty therein, to forfeit 5 l. and treble charges to the patty grieved.
X. Sect. 6. One moiety of the penalties in this aft fhall go to the poor of the place, the other to the profecutor, to be recovered by the oath of a credible witnefs, before a juftice of peace, and profecution within 30 days after the offence committed, and the juftice of peace to caufe levy the penalty.
XI. Sect. 7. Nothing in this act thall extend to beer or ale fold to be fpent out of the houfe, if it be meafured out by the ftandard.
XII. Sect 8: Actions brought againt juftices of peace, or perfons employed by them, upon the execution of this act, fhall be laid in the proper county only, to which the general iflue may be pleaded, \&c. and upon a verdict, \&c. the defendant to recover treble coft.
XIII. Sect. 9. The juftices of peace, at their quarter-feffions, are to give this aft in chare to the juries.
XIV. Sect. 10. This act fhall not extend to colleges or halls in the univerfities.
XV. Stat. 12 and 13 Will. III. cap. II, fect. Ig. Nothing in the act II Will. MII. cap. 15. fhall extend to deprive the univerfities of their rights of reizing and marking of meafures for ale and beer within their jurifdictions.
XVI. Stat. I 3 Will. III. cap. 5 . fect. 34 . No common bewer, inn-keeper, viaualler, or retailer of beer and ale, fhall ufe any fugar, honey, foreign grains, Guinea pepper, the liquor called effenta bine, made from malt and water bolled up, coculus Indix, or any unwholefome ingredients in the brewing or making of beer or ale; or mix any fugar, scc. with any beer or ale in cafks, after the fame is cleanfed, on pain of forfeiture of 201.
Mr Savary afferts, that beer is not only made in France with barley, but alfo with wheat, oats, rye, and even with tares, but never with the latter alone, and thofe only with a fmall quantity. He adds, that they mix hops with it to give it the tafte of wine, and that it is the flower of that plant which makes the beer heady, and proper to intoxicate. fiut in this laft particular be is cerrainly miftaken ; for the hops give the beer only a bitter tafte, and ferve to preferve it ; and it is the malt alone that gives it ftrength. As for making beer with any other grain but barley, 1 do not know what may be done in other countries, but, in England, none is brewed but from barley-malt. There is, however, a kind of ale made of oats, which, for that realon, is called oat-ale.
He afferts, alfo, that part only of the grain to make beer mult be malt, and that the proportion ought to be one fourth part of malt to three-fourths of frefh grain: and that, when tares are added, it is to give the beer a brikker tafte. He òjerves further, that, after the beer is brewed, fome put fugar, cinnamon, and cloves into it; and others honey and fice, to make it either ftronger or more palatable.
He alfo tells us, that, in France, they make people believe that the Englifh, in order to give the beer they brew in their country that ffrength, which, in that refpect, makes it preferable to any other beer made in Europe, and even to that of Mons and Bremen, they throw into the kettle fome flefh, which they caufe to be confumed in the boiling : but it is very likely that the goodnefs of their beer is only owing to their manner of brewing it, to the degree of boiling it, and to the ingredients they put into it, with which all other brewers are unacquainted.
Beer may be brewed in all feafons, but that which is brewed in March, fays Mr Savary, is the moft excellent, ard is better for keeping. In England we reckon the October beer the beft. See Brewing and Malting.
The trade of beer in France, does not extend much bejond that kingdom; but they have a very confiderable trade of it at Paris, and in fome provinces, particularly in Flemifh and French Flanders, and in Picardy.
The duty of exportation is paid in France at the rate of 26 fols per ton of beer, and of importation at the rate of 12 fols per barrel; and that of England at-To fols the bottle.
Thefe duties are regulated by the tariff of the year 1664.
There are other regulations by the ordonnance of 1680 , which relating only to themfelves, 'tis needlefs to give the long detail of.
BEGUQUELLA, a medicinal plant, the root of which is a fovereign remedy for the bloody flux.
BEHEN, a medicinal root.
BEHEN, a fruit from which an oil is extracted. \}See BeN. BEID, a plant which grows in-Egypt, near the village of Matarea. The Egyptians call it offir, whence is derived the name given to it's fruit, which is beidelfar in Arabic, as the bordes offar, i. e. the egg offar, in Latin apocynum : Mr Miller calls it in Englifh dog's-bane. This plant fhoots a great many roots, from which arife feveral branches and fuckers, each five or fix feet high. It's. leaves, which grow by pairs, are broad, very thick, and end in an oval. Whilft they are fill young and tender, there iffues from them a kind of milk, which curdles, or coagulates by the heat. It's bloffoms are of faffron colour, inclining to red: they grow in bunches at the end of the branches, to which they adhere by long falks, and where they form a fort of crown turned towards the earth. The bees gather wax and excellent honey from thefe flowers. The feed and fruit is covered with a-kind of cotton, fofter than filk, and of which they make matrefies and cufhions: it is called wad. We muft not forget to obferve, that the milk, or milky juice. which diftils from this admirable plant, is proper to curry or drefs leather, and has feveral properties and ufes in medicine; it ferving as a depilatory to make the hair fall off, and to cure the feurf, the

## B E L

itch, and other fmall tumours, which are formed upon the Akin. The leaves boiled in water, or even raw, being applied to fcrophulous fwellings, cure them by tranfpiration. There are feen at Paris, in the gardens of fome curious perfons, feveral plants of beid, but of which they could not preferve the fpecies; the feed growing and blowing there, but without producing any feed afterwards. They have in France fome trade of the cotton of this plant; but what is imported thither from the Levant, is not confderable, and ferves for curiofity rather than for ufe.
Mr Miller gives us the following account of this plant, and its feveral kinds.
The leaves are produced oppofite by pairs, upon the branches; the flower conlits of one leaf, which is cut into feveral fegments; from its flower-cup anifes the pointal, which is fixed like a nail in the back-purt of the flower, and is afterwards changed into a fruit, which is, for the mof part, compofed of two capfules, or pods, which open from the bafe to the top, inclofing many feeds, which have a long pappous down adhering to them; to this may be added, that the whole plant abounds with a milky juice,
There are feveral forts of this plant cultivated in the curious gardens, fome of which are very beautiful. We thall mention the different fecies of this plant, which are cultivated in the Englifh gardens.

1. The upright broad leaved hoary Syrian dog's-bane, with purpligh-coloured flowers.
2. The upright narrow-leaved Canada dog's-banc.
3. The broad-leaved upright Canada dog's-bane.
4. The American dog's-bane, with tutfan leaves and red flowers, like the lily of the valley.
5. The fhrubby upright dog's-bane, with roundifh green leaves. 6. The upright willow-leaved African dog's-bane, with hairy fruit.
6. The African creeping dog's-bane, with leaves like moneywort.
7. The upright dog's-bane, with oblong leaves and fcarlet flowers, catled by fome baftard ipeeacuanha.
8. The narrow-leaved Canada apocynum, with orange-coloured flowers.
1o. The upright Maryland dog's-bane, with roundifh leaves, and deep red flowers.
The firft of thefe dog's.banes is a prodigious creeper at the root, and will in a fhort time overfpread a large compafs of ground, and mult never be planted too near other plants or flowers, which would be over-run by this plant and deffroyed; but it may have a place in fome obfcure part of the garden; for it is extremely hardy, and will thrive in almoft any foil or fituation. It grows to be fix or feven feet high, and produces large umbels of flowers, which have a frong fweet fmell, but are of a poifonous nature; as are all the true apocynum, and therefore thould not be planted in the way of children, who may receive damage by breaking any part of the plant, and letting the milky juice, with which they abound, run upon the tender part of their fein, which will be apt to blifter it. Thefe flowers are fometimes fucceeded by large oblong pods, which contain a great quantity of a foft cottony fubftance, that adheres to the feeds, and are of fervice to tranfport them to a diftance, when ripe. This plant dies to the root in winter, and rifes again the fucceeding foring.
The fecond, third, fourth, and tenth forts, are all of them very hardy, and may be planted in the open ground, but mult have a dry foil. All thefe produce large fine flowers, and are propagated by parting their roots in March, after the cold weather is paft; for they feldom produce any ripe feed with ws.
The fifth, fixth, feventh, and eighth forts, are tender, and muft be preferved in pots, and houfed in winter.
The fifth and fixth forts will grow very fhrubby, and fometimes to the height of eight or nine feet, and do produce bunches of flowers, which in the fixth fort are of a whitifh green, and in the fifth of a worn-out purple colour, but are of no great beauty or fmell. Thefe are increafed by plapting cuttings in any of the fummer months, in pots of light Gandy earth, plunging them into a moderate hot-bed, thading them from the great heat of the fun, and glving them gentle refrelhings of water. Thefe muft have a good greenhoufe in winter, and muft not have too much water in that feafon.
The feventh fort is a climbing plant, and will twift itfelf round a ftake, and grow to the height of feven or eight feet, and in fummer will produce, from the joints, imall umbels of worn-out purple-coloured flowers, which are extremely fweet; this is propagated by laying down the young hoots, which do eafily take root, or by parting the roots of the oid plants. The eighth fort is the moft tender of them all, and requires a moderate fove to preferve it in winter. This produces extremely beautiful orange-coloured flowers, which often are fucceeded by ripe feeds. This plant may be increafed, by planting custings in June, in a moderate hot-bed, but muft have litale water, and be fecured from the violent heat of the fun, and cold in the nighr. But the beft way to propagate them, is by fowing the feeds in a bot-bed in March; and,
when the plants are come up, prick them into fmall pots, and plunge them into another hot-bed, to bring them forwards: and in June you may begin to expofe them to the open air, at which time they will begin to flower; but it will be advifeable to preferve one or two of the frongeft in the hot-bed, in order to procure good feed.
The nimth fort is tolerably hardy, and only requires to be Ikrecned from the extreme cold in winter, and perhaps, if it were planted into the full ground under a warm wall, it wouid do very well. This plant produces beautiful umbele, of orange-coloured flowers, which continue moft part of the month of Auguft, and deferves a place in the moft curious gardens. It is propagattd by parting the roots in March, or fowing the feeds, which in a good leafon do ripen tolerably well with us.
BEIGE SERGE. It is the name which the people of Poitou give to a fort of ferge, which is black, grey, or tawny: others call it theep-coloured ferge, or natural ferge; becaule the wool with which it was manufa ीured, was pever dyed, being employed both for the warp and for the woof, foch as it came from the fheep. Beiges ought to be compuled of 38 or 39 reeds at leaft, each reed being of 20 threads.
BEIRA, a prıncipality of Portugal, is divided on the noth from the province Entre Duero nd winho; it is bounded by the ocean on the weft, and by fome part of Effremadura; on the fouth by another part of that province, and by the Tagus, or Taio; and on the eaft it runs contiguous to the Spaniit Eftremadura, and the kingdom of Leon.
Aveiro is a confiderable maket'town, fituate on a bay, at the mouth of a creek, which is pretty large, and forms a kind of haven: in it are made vaft quantities at falt, which are exported, fome into other parts of the kingdom, and the rett into foreign countries.

## REMARKs.

The country, though not fo rich and fertile as fome in this kingdom, or moft in Spain, is yet capable of producing good corn, wine, and other ufeful commodities, it righly cultivated. But a great part of the people of this province are fo exceffively lazy, that they had rather beg, fteal, or do any thing, than cultivate their land as they ought.- This is owing to the pride and oppreffion of the great ones; to their contempt of the lower people; and to their difcouragement of honeft induftry among them, rather than any natural propenfiny they have to idlenefs. Could people of difinction be induced to encourage, inftead of diftreffing and defiping them, we need not doubt but it would prove more interefting to themfelves; the labour and traffic of the mafs of the prot ple being the only fource of the wealth and grandeur of the nobles and gentry. There are, however, a number of cities. and noted towns, which are in a pretty flourihing condition, and carry on feveral laudable manufactures, though not to fo great an height, and fo good proft, as they have heretofore; which bas impoverifhed the eftates of the gentry, in proportion as the trade and manufuclures baye declined; all which mult be afcribed to the ill policy, and egregious defects of the Portuguefe conftitution and government, which feems calculated to enflave and impoverif the bulk of the people, rather than to incite them to become induftrious and rich: ta which may be added, that the lands are, as it were, abiolutely in the hands of the nobility, gentry, and clergy, and wherever that is the cafe, whether in Portugal, or in any other country, the majority of the people will be as poor and beggarly as thofe of this province.
The country, 'tis certair, is well fitted for inland produce; being lefs mountainous than fome towards the north, and Jikewife better watered than fome others. Its chief rivers are the Lomba, Arda, Paiva, Tevora, Tourones, and Coa; all which fall into the Duero; thofe of Zezer, Ponful, Aravil, and Elia, which empty themfelves into the Taja; and the Mendego and Vouga, which, after taking in confiderable freams, run into the ocean.
BELELAIS. Silk ftuffs after the manner of taffeties, which are manufactured in the kingdom of Bengal. They meafure forty cobres in length by two in breadth, at the rate of 17 inches and $\frac{1}{4}$ per cobre. The Englifh who trade from Madras to the Manilles, carry thither great quantities of thofe ीuffs.
BELEMNITES, or LYNXSTONE, as fome call it, in Latin lapis lyncis, or dactylus idæus, and called by others in Englin, the arrow-head, or finger-ftone. It is a long fone, nearly of the bignefs of one's finger, fonsetimes more, tmetimes lefs, round, pointed, or of a pyramidical figure, reprefenting an arrow. They are of different colours, iome white, fome grey, fame brown: they are generally imported from Candia, but fome alfo come from the Alps, and from many parts of France, Switzerland, and Germany. They are found even in fandy places near Paris. There are two forts of them; the one, being put into the fire, fends forth a bituminous feent, the other emits no fcent at all. The former is probably, fay fone, what the ancients called lyncurius, which they fally imagined to be a fort of fuccinum, formed out of the coagulated urine of the lynx. But,
The belemnites is really a foffil ftone, which refermbles talf by its weight and colpur. lis exterior torm has occa-

## B E L

## B E L

fioned it to be taken by fome for the petrified tooth of an animal, and its inward colour has made others take it for a petrified horn.
The learned naturalif, Dr Woodward, gives us, at the end of his Natural Hiftory of the Earth, the origin and conftitution of the belemnites; wherein he endeavours to proved, that it is a true foffil, and of a mineral kind: he refutes thofe who imagine that it is formed in a fhell, or in an outward mould : for it is always found contiguous to a mafs of flone, without any void fpace between. There are fome belemnites, which are near two feet long, and about two inches diameter in the bigget place. He alfo refutes thofe who imagined it was a horn or a tooth of fome extraordinary fifh. Some of thefe ftones are indeed of the figure of a horn, but that is not generally true; for they are of all forts of figures, quite different the one from the other.
This fone has a particular fmell, when taken out of the earth; but thofe of England have commonly no fmell. A great many of them are found in the chalk, but none of thofe which Dr Woodward faw, had any fcent. Thofe that have any, had it communicated to them by the faline, fulphureous, or bituminous matters, among which they had phureous, or bround.
The belemnites are very common, and to be found almont every-where. They agree in feveral particulars with fome minerals. Some of them are half trainfarent, and yellowifh, and refemble pretty much common amber, which made the ancients give the name of lapis lyncurius, both to amber and to the belemnites
As to the conftitution of the belemnites, their fubitance is not tough and flicky, as that of animals, but friable and brittle, like that of talc and other fuch foffils. At fight it appears mincral, and proves alfo to be fo by the chymical operations, and by all the trials that are made of it. Its fibres cut its axis diametrically, like thofe of feveral minerals. So that Dr Woodward does not think he fhall be charged with rafhnefs, for afferting, that the belemnites are fofils of the nature of talc. They have the fame feecific gravity with talc, and are of the fame contexture and contitution. The curious reader may confult that famous philofopher, upon this rubject, we giving him only an abftradt of his obfervations, which is fufficient for our purpofe.
Here it'is proper to take notice of what Theophraftus fays upon the lapis lyncurius, as allo what his ingenious and learned annotator, Dr Hill, has obferved upon the belemnites. Theophraftus fays, that the lapis lyoceus is excellent in its virtues, and is ufed for engraving feals on, and is of a very folid texture, as flones are; it has alfo an attractive power, like that of amber, and is faid to attract not only flraws and fmall pieces of fticks, but even copper and iron, if they are beaten into thin pieces. This Diocles affirms.
The lapis lyncurius is pellucid, and of a fine colour: and thofe ftones which are produced from the animal in its native wildnefs, are better than thofe from the tame; as alfo thofe from the male, than thofe from the female: as the different nourifiment the creature eats, and the different exercife it ufes, as well as the difference of its whole habit of body, in being either drier or moifter, make great differences in the ftones.
They are found, in digging, by people who are fkilfui; though the creature, when it has voided its urine, hides it, and heaps the earth together about it. The polifing there ftones is alfo a work of great trouble.
Upon this account of Theophraftus, Dr Hill obferves, 'that

- there has been more confufion and error about the lapis lyn-
c curius of the ancients, than about any other fubftance in the
- whole foffil kingdom. What I have to offer, in regard to
(it, is very different from the generally received opinions;
'thefe are, however, firft to be examined; for, if they are right, this has no title to be heard.
-The firlt and moft generally received is, that it was what
- we now call the belemnites: this is the opinion of Wood-
' ward, \&c. \&c. \&c. how true this is, is to be examined
6 from their accounts; and as they are, moft of them, only
- copies, and thofe often erroneous ones, of Theophraftus,
- he is, where his defcriptions are long enough, always firft
- to be confulted, and moft relied on; and from his words
- I venture to pronounce it evident, that the lapis lyncurius
- was not the belemnites. He firft fays it was fit for engraving
- feals on ; which every one who ever faw a belemnites, muft
- pronounce impoffible to have been meant of it; its tex-
ture rendering it the moft improper fubftance imaginable
- for fuch ufes. And next, that it was of a very folid tex-
- ture, like that of the fones or gems ; the firft fight of a
- belemnites muft alfo prove, that this was not meant of it ;
- for it is not of a folid texture, nor of a grain, as we call it, any way refembling that of a flone, but compofed of a number of tranfverfe ftrix, and of the texture, fpecific 'gravity, and hardnefs of talc, which could never give it a ' title to what our author fays of the lyncurius; that it was
- not only hard and folid, but extremely fo. Hence, I pre-
- fume, I may venture to pronounce this, which is the com-
- mon opinion, evidently erroneous, and that the lapis lyn-
curius of the ancients was not the belemnites.
Vol. 1.
- The few who diflent from this opinion, of the number of ' whom are Geoffroy, Gefner *, Sic. hold, that the lapis - lyncurius of the ancients was no other than amber. This c is the fecond and only other opinion worth naming, and ' the favourers of it bring many paffages from the copiers of ' the ancients to corfirm it: all which ferve to prove what I - have before obferved, that many quote the ancients who bave never read them; and fhow how ufful, and, indeed, ‘ abfolutely neceffary, a correct edition of the work of this 6 author is, in refearches of this kind. This opinion is even c more eafily than the other proved crroneous from the ( words of the author, who not only compares the lyncu-- cius, in fome of its properties, to amber, which I have be-- fore obferved in a parallel cafe in the notes on the fap-- phire + , [fee the article Sapphire] is fufficient proof, - that they cannot be the fame; as no body would ever think - of comparing a thing to itfelf: but after baving gone - through a complete defcription of the lyncurius, according - to the received, though erroneous, opinion of thofe times, ' of its being produced from the urine of the lynx, he be-- gins a feparate account of amber under its own proper ' name, and thews he was well acquainted with its nature c and properties, and knew it to be a native foffil. Hence - it is, therefore, alfo evident, that the lapis lyncurius was not ' amber, and that the generally received opinions of it are - both evidently erroneous.
* Ego lyncurium a fuccino differre non video; \& id quoque pro gemma habitum olim, praferim quod aureo cclore pro gemma habitum olim, praferti
pellucet \& fplender, minime dubito.
t See Theophraflus's Hiftory of Stones, with an Englith verfion, and critical and philofophical notes. By John Hill, M. D. pages $59,60,61$.
- That fuch who had not read the ancients themfelves, hould - fall into errors of this kind, from the obfcurity and con-- fufion of thofe who copied from them, we cannot wonder. - But here it may not be amifs to obferve, that it is not the - ancients themfelves, but thefe copiers and quoters of them, - who are generally obfcure. Epiphanius, who was better - acquainted with them, has made a different guefs, and is, ' indeed, the firf author who has had the leaft thought of - what, I fhall attempt to prove, is evidently the truth in - regard to this ftone.
- What it is not, has been fufficiently proved. It remains ' to enquire what it really is: the way to judge of this is, to ' confider what the ancients have left us about it: what The. ' ophraftus fays we have before us; that it was of a ftony - texture is plain from his account, and may be confirmed - from all thofe who wrote more determinately; they have

- Lyncum humor ita redditus, ubi gignuntur, glaciatur arefcit-- que in gemmas carbunculis fimiles, $\&$ igneo colore fulgentes - lyncurium vocatas. Can any one imagine this a defcrip-
' tion of the belemnites? All that we find in the ancients.
' about it, in fhort, is of this kind, and determines the lapis
- lyncurius to have been a tranfparent gem, of no determinate
' flape, and of a yellowifh red or flame colour, fometimes - paler, and fometimes deeper, which difinguifhes it into - male and female, as we thall fee hereafter from Theophraf-- tus; and of a texture fit for engraving on.
- Had the ancients meant to have defcribed our belemnites, - they would not only not have named any one of thefe cha' racters, but would certainly have defcribed its Chape, - which is the moft ftriking, obvious, and remarkable thing - about it. We are therefore to feek for fome fone better - anfwering this defcription; and this we find, even to the ' utmoft exactnefs, in the gem which we now call the hya' cinth, which it is alfo evident they have never defrribed - under any other name but this (for what they called the - hyacinth, was a ftone of a very different kind, and rec-- koned by us either among the garnets or amethyfts) and - which it is not eafy to conceive how they could better or ' more exactly have defcribed, than they have in their ac6 counts of the lyncurius. Hill's Theoph. p. 73, 74, 75.

## Remarks.

Left fome may imagine that it is needlefs to dwell fo long upon articles of this kind, in a work of commerce, it fhould be confidered, that the ftudy of natural hiftory, in every refpect, bath adminiftered the original matter for univerfal traffic. For manufactures of every kind being made of fome fubftances, and the foffil and mineral kingdom affording no lefs matter for thefe purpofes than the vegetable or animal, that fhould not be wholly negiecied in a work of this niture.
The dealers in precious ftones, minerals, and metals, certainly are confiderable enough to deferve our regard. Nor does the foffil kingtom, from the diamond to the pebble, admit only of extenfive cbjects for traffic, when duly managed by our mechanical artif, but they afford extraordinary medicinal virtues, both from pharmaceutical and chymical $p$ e-
parations. And whether they may not be much more intioduced into the art of dyeing, and thereby render that operation far lefs expenfive than it is at prefent, may deferve confideration. Cochineal and orchelia, and many other ingredients ufed in the art of dyeing, come extremely dear in comparifon, perhaps, to what many productions of the foffil kind would do, wa, this branch of the works of natute duly cultivated, and the properties of thofe bodies fkilfully analyzed. For the perfection of the art of dyeing conlifts in difcovering fixed, bright, and permanent colours, not fubject to change for the worfe in the open air; and fuch colours hhould rather be expected from mirieral, foffil, or metallic matters, than from thofe of the vegetable and animal kingdoms; which ufually afford fubjects of too lax and alterable a texture for permanent colours.
Iron and fteel are ufed in the dyeing of all true blacks (called Spanih blacks) though not in Flanders blacks; alfo copperas, fteel filings, and flippe, which is the fuff found in the troughs of grind-ftones, whereon edge-tools have been ground. They ufe pewter for bow-dye, fcarlet; viz. they diffolve bars of pewter in the aqua fortis they ufe; and nitre and all other forts come under the foffil kingdom.-Arfenic is ufed in crimfon, to give it luftre.-Of mineral falts ufed in dyeing, the chief are allum, argol, and falt petre, or nitre. See the article Dyeing.
This part of nature affords variety of matërials for painting. Many mineral fubjects are natural pigments ; as native cinnabar, ochre, black lead, \&c. but particularly the yellow earth called light ochre, found in Shottover-hills, which is ufed native as a light yellow, and by calcination makes a light red. This colour England fupplies Italy with; and Le Gar would frequently fay, he had been no painter without it. Moreover, thofe who have no relifh for the contemplation of nature, either out of curiofity, or with a view generoully to communicate fomething beneficial to mankind; fhould be incited, methinks, from their own private intereft; to obtain fome knowledge of this kind. For the worth of land does not always conffif in what it produces upon its fuperficies: nor are mines and metals the only things, which have often greatly enriched their poffeffors; fine marles, clays, and fands, have frequently made one acre of land worth fifty, which were contiguous to it. Windfor loam, pipe makers clay, fine pottery earths, Woolwich fand for glafs-making, are glaring inftances of the truth hereof. Has not many an eftate been greatly enriched by quarries of ftone, marble, and alabafter, as well as by common lime-ftone, coal, and falts? and all which for centuries have lain concealed, till fome body of ikill and difcernment has made the difcovery. To what good account have turned, in the way of traffic, the Lemnian earth, the earth of Malta, and various boles, chalks, and talcs? Has not many an eftate been greatly improved by allum, vitriol, and metallic foffils of divers kinds? Thofe who look upon the earth and all nature with a philofophical eye, do not only receive unfpeakably more joy and fatisfaction than the ignorant in their contemplation, but have a much greater chance to imp:ove an eflate, by their fuperior knowledge in the works of nature.
Nor is it enouph to know and diftinguifh the natural productions by name; their qualities fhould be difcovered by art, or their worth cannot be afcertained, becaufe their proper application cannot be judged of. To difcover the properties of bodies, fome knowlege in analytical chymiftry is requifite. On which conlideration among others it is, that we fhall, in the courfe of this work, advance fo far into pradical chymiftry, as to enable the country gentleman, at a fimall expence, to examine the internal parts of his eftate, and to make juft and accurate eftays of any of its peculiar productions, in order to be informed of the ufes, to which they may be moft profitably applied.
BELL, a well known inftrument, ranked by Merfenne and other muficians, among thofe of percuffion.
The metal of which it is made, is a componnd of tin and copper, or pewter and copper; the proportion of one to the other is about twenty pounds of pewter, or twenty-three pounds of tin, to one hundred weight of copper.
The conflituent parts of a bell are the body, or barrel, the clapper, and the ear or cannon, by which it hangs to a large beam of wood.
The bell-founders difinguig two forts of proportions, viz. the fimple, and the relative. The fimple are thofe which ought to be between the feveral parts of a bell, and which experience has fbewn to be neceflary to render it agreeably fonorous. The relative proportions are thofe, which fix a due relation tetween two or more, whereby their combined founds may produce the defigned harmony.
The parts of a bell are, $x$. The founding bow, of the fmaller circle which terminates it, growing thinner and thinner: 2. The brim or the belly, or that part whereon the clapper ftrikes, and which, on that account, is thicker than the other parts. 3. The outward ftriking of the middle of the bell, or, rather, the point under which it grows wider and wider to the brim. 4. The waif or furniture, or that part which grows wider and thicker, by a fupply of metal, which
is larger and larger quite to the brim. 5. The upper yafe; or that half of the bell which rifes above the waif. 6. The pallet, or crown, which is the cover of the bell, and fupports the ftaple of the clapper within. 7. The crown which are branches of metal uniting with the cannons, bent, and hollowed through, to receive the iron-keys, by means of which the bell is hung up to the beam, which is at once its fupport and counterpoife, when it is rung out.
The founder begins by taking the thicknefs of the brim of the bell to be calt, or the thicknefs of the brim of the largell bell, when he is to make many agree together with different notes. The brim is the fundamental rule of the whole work. To meafure that thicknefs, he ufes compaffes with bent legs, and carries this meafure upon a rule, divided into feet, in. ches, and lines.
Reafon and experience taught our ancient founders, that making their bells all of a fhape, that is, of equal width and thicknefs every-where, would produce but a very dull found at very great coft. Making the upper part of the vafe fmaller than the reft is enough : they have, by repeated trials, found out the neceffity of diminifhing the thicknefs of it confiderably. Whenever they have been lavifh of the metal, and have made a bell of an exceffive thicknefs, it produced only a confufed humming. The founders obtained a more lively found, by leffening the expence, by the gradual thortening of the diameter of the bell upwards, and the fucceffive diminution to a certain degree in the thicknefs of it: but they were fill croffed by an inconvenience, which led them at laft to the form now in faftion for bells. The bell is fonorous in its whole extent. The found of the brim, which is the thickeft part of it, is of courfe predominant, even fo as to weaken, and fometimes totally drown, the found of the upper vafe. But it often happens', that they are heard both in the finall bells, and more diftinctly than in the larger. A fingle bell may then produce an harmony, and the combination of the two founds will be pleafant or difagreeable, according to the proportion of the upper with the inferior diameter.
If the upper vafe is exactly fubordinate, or half of the inferior, that is, feven brims and an half to fifteen; this will be the ratio of two to one, or of the whole to one half. And as the ftring of a bafe-viol gives the Ut grave, whilit its half gives the Ut tharp, the diameter of the upper vale being in the proportion of one to two, or of the half ta the whole, whilft the brim gives the Ut grave, the upper vafé will found the Chatp octave, which is an agreeable concord; and is heard in almoit all bells without being remarked, becaufe the two notes of a juft octave refemble much the unifon. But, when the upper vafe is fomewhat more or lefs wide, it may make us hear, together with the found of the brim, an interval of a feventh or a ninth, or any other interyal. That feventh makes a difcord; and the ninth, which is not a fine confonance, may be diminifhed, and make a falfe octave with the predominant tone of the fecond bell. But here is a fill greater cacophony.
The fharp octave is not only moft commonly heard in conjunction with the found of the brims, but there are bells in which, befides the foregoing founds, you moreover hear the found of the third's place, or of that part which grows wider and wider below the waift; according to the bent given to this part, it will prove more or lefs funk and thick. Here is that which will refult from the diverfity of the thicknefs which is a neceffary confequence of the variety of the methods followed by founders in their proportions. When you put a few drops of water in a glafs, and, with the tip of your finger dipped in that water, rub the brink of the glafs circularly, the whole vafe begins to refound, and changes its tone, in proportion as you put more or lefs water into it. The liquor being but one body with the glafs as it were, the found of it becomes grave in proportion, as the quantity of matter increafes; and it becomes charper, as you diminith the quantity of the liquor. The third's place of the bell may then add to the predominant found of the brim, and fo its tharp octave, produced by the upper vafe, a third or a fourth, or any other confonance good or bad, according to the nature of the beat, which admits more or lefs metals, as it fwells or flattens thefe parts more or lefs.
This third found is not difficult to be diftinguifhed in the two fine bells of St Germain des Prez. Our mof kilful founders, and moft learned harmonifts, agree unanimoully, that they have heard nothing more perfect in this kind, than the concord of five of thefe mingled founds in the two large bells of the cathedral of Rheims, and of three very diftinct ones in the biggeft of the two, which is twenty-four thoufand pounds weight, according to the infcription. When this laft is rung alone, 'it ftrikes with equal clearnefs the two octaves along with a third tone, which makes a fourth with the grave, and the inverted fifth with the fharp octave. When both bells ring in company the two grave founds, which are very foft and argentine, are always accompanied with two fourths of the utmoft brightnefs and truth. They are not heard lefs diftincly than the two loweft tones. From thefe four founds, always furmounted with the upper octave
of the iharpelt bell, there refults an harmony which affects thofe who have no fkill in point of mufic, although they think they hear but two founds inftead of five.
But the combination of thefe different founds, which is the effect of the ingenious flructure of the bell, and which muft needs pleafe, when jult, may become falfe, and even render an excellent piece of metal very difagreeable, when the founder does not direat the proportions of his bell rightly; or when, having a bell to reftore to a concordant chime, he happens to follow, in the new cafting of it, proportions different from the cafting of the otber. An irregular found, going in company with that of the brims, proves difcordant, and makes a falfe harmony, although you think you hear but one found ; the ear is offended by it without knowing why. If thefe founds, already ill foried in one fingle bell, come to be mixed with thofe of another, the difcordance is greater fill. A founder, who would exactly determine all the effects which muft needs refult from fuch or fuch fimple proportions, ought to have a thsory much fuperior to that of a country beil.founder, who has no other guide but his old method and traditional rules.
A no lefs diforder is reigning in the relative proportions that fix the concordance of feveral bells. The workmen govern themfelves herein upon the campanary fcale, the ufe whereof they make a great myftery; but father Merfenne has long fince made that matter publick. This learned monk has demonftrated it to be defective, repugnant to the rules of' harmony, and liable to miftakes that may ruin them, from their being obliged to re-caft a large fet of bells at their own expence. Whoever defires may fee this matter minutely treated of by father Merfenne himelf, in the feventh book of his Univerfal Harmony, containing the theory and practice of mufic, from page ito page 46 , in folio, printed at Paris 1636 . In regard to their cafting, fee Foundery.
bELLASOR. The Portuguefe and the Dutch pronounce thus, and fpell the name thus in their maps, rather than Balaffor, or Balafore, or Belafora. It is a large village in the kingdom of Orixa, near the borders of Bengal, and ftands on a fine river three leagues from the fea, between the cape, or Punte de los Palmeres, and the mouth of the Ganges. The Englifh, Dutch, and French, have each a factory there. There comes a ftuff called Bellalor, from this place where it is manufactured: it is made of the herba, which is the rind of a certain tree, which, being prepared and drawn out fine, works like filk, and is manufactured either with cotton or with filk. The Englifh import the Bellafors into Europe. The pieces are $14 \frac{1}{2}$ yards long, and $\frac{1}{2}$ a yard broad, Englifh meafure. There are fine handkerchiefs of this ftuff. See Bengal.
BELLOWS, an inftrument which ferves to draw in the air, and expel it again. It is ufed in chambers and kitchens, in forges, furnaces, and founderies, to brifk up the fire. It ferves alfo for organs, and other pneumatic inftruments and machines, to give them a proper degree of air or wind.
This inftrument is compofed of two flat boards, fometimes of an oval, and fometimes of a triangular, figure. Two or more hoops, bent according to the figure of the boards, are placed between them: a piece of leather, broad in the middle, and narrow at both ends, is nailed on the edges of the boards, which it thus unites together, as alfo on the hoops which feparate the boards, that the leather may the eafier open and fold again. A tube of iron or copper, and fometimes of filver for chamber-bellows, is faftened to the undermoft board, in which there are feveral holes; that tube is called the nofe, or nozel ; finally, there is a piece of leather within the machine, which ferves as a valve, or fucker, and covers the holes in the under board, that the air, which comes in through thofe holes, when the upper board is raifed, may be expelled with force through the nozel, when that board is moved down.
The bellows ufed in the forges of filverfmiths, lockimiths, fariers, blackfmiths, founders, \&cc. whether they be fingle or double, are moved up and down by means of an iron chain faftened to them, and pulled by the workman.
The bellows ufed in founderies, and for furnaces where metals are melted down, and thofe of the forges where large iron works are made, as anchors for hhips, \&c. are generally fet a going by the wheels of fome water-mill.
The Heflian bellows are a contrivance for driving air into a mine, for the refpiration of the miners. This M. Papin improved, changing it's cylindrical form into a fpiral one; and with this, working it only with his foot, he could make a wind to raife two pound weight.
Other bellows, as particularly thofe of enamellers, are moved by one or more fleps, which the workman has under his feet.
Finally, the organ bellows are blowed by a man. Thefe bellows, which give air to the feveral pipes, that form the tones of the organs, are of a particular make, different from the others, and are a kind by themfelves; we mention them in another place.
The butchers do alfo ufe bellows of an extraordinary ftructure, to blow and fwell the felh after the beafts are killed, to fkin and cut it the eafier.

There are feveral workmen who make thofe different foris of bellows: but yet, in France, they all belong to the fame company, which is that of the turners
BENGAL, the mof eafterly province of the Mogul's dominions in India, lies upon the mouth of the Ganges, and is bounded by the provinces of Patna and Jefnat on the north; the kingdoms of Arracan and Tipra on the eaft ; the bay of Bengal and the province of Orixa on the fouth; and by the provinces of Narvar and Malva on the weft; extending near 400 miles in length, from eaft to weft, and 300 in breadth, from north to fouth; and, being annually overflowed by the river Ganges, as Egypt is by the Nile, is one of the richeft and moft fruitful provinces in India.
The bay is the largeft and deepeit in the world, except that of Mexico, and much larger than that, if it be carried no further than it is by our modern geographers, viz. from the moft weftern land of Cuba on the north, to the eaftermoft land of Yucatan on the fouth. The extent given to this bay, is, from the molt fouthern point of the Ine of Ceylon, on the welt, to Achem, on the moft northern point of the illand of Sumatra, on the eaft, and thence to the coaft of Malacca; being 20 degrees of longitude, or $\eta 80$ miles; and, as it ffrikes out from the Indian ocean towards the north, between India and the peninfula of Malacca, is ftretches from the latitude of 6 to the entrance of Ganges in 23 , which is 17 degrees, or 1020 miles. In fact, the bay of Bengal, as it is commonly expreffed and underftood by the Englifh, extends from the fouth part of Coromandel to the river Huguely. It receives feveral great rivers; the Ganges and Guenga from the weft fide of it, and the Aracan and Menamkiori, or Avas river, from the eaft fide. But Bengal, as a coaft, is fuppofed to extend only from Cape Palmiras, on the north of the coaft of Golconda, to the entrance into the Ganges. This river being the moft frequented by European hhips, and made the center of their commerce for the whole province of Bengal, it may be proper to obferve, that Strabo fays, the Ganges was the greateft river in the three continents of the world, the Indus being the fecond, the Ifter the third, and the Nile the fourth. Cluverius fays, it was noted for protucing gold and jewels; that it's leaft breadth was two German leagues, and the greateff five; and that, where fhalloweft, it was 100 feet deep. It rifes in the mountains of Nigracut, part of Great Tartary, receives many other rivers, and, after a courfe of 3000 miles, falls into the gulph of Bengal by fo many mouths, that travellers are not agreed in the number of them.
The common paffage for European fhipping is up one of the moft weftern branches, called the river Huguely. As pilots are not always to be had, the Englif, French, and Dutch, who have their refpective factories here, keep them in conftant pay, to be ready at Ballafora, to carry their hipping up thé river, becaufe it is of the moft difficult entrance to a ftranger, has the greateft variety of channels, and is the moft blocked up with innumerable fands and fhoals of any river in this part of the world ; therefore it has been furveyed and founded with great exactnefs, and feveral fafe and good channels marked out, fo that the largeft hips that ufe the India trade may be carried up to the furtheft part of it where the commerce requires, there being generally from five to feven fathom water in thefe channels, within a few miles from Huguely itfelf, which is, from the entrance of the braces and other channeis, at leaft 160 miles, and much more, including the windings and turnings.
That which is fuppofed to be the moft fouthern branch of the Ganges has a town on it called Piply, four or five leagues up the river, which was formerly a place of good trade, having factories both Englifh and Dutch; but, from the lofs of it's trade, is become a beggarly place (as will ever be the cafe) inhabited only by poor fifhermen, fince the removal of the factories to Huguely and Calcutta.
Among the many villages and farms interfperfed in the large planes by the river Huguely, the firt of any note on the river fide is Calculla, a market-town for corn, coarfe cloth, butter, oil, and other products of the country; and above it is the Dutch Bankfhall, where their thips ride, when the currents hinder them from getting up the river. From Calculla and Juanpardoa, two large deep rivers run to the eaft; and, on the weft fide, there is another that runs by the back of Huguely illand to Radnagor, famous for manufacturing cotton cloth and filk romaals, or handkerchiefs. Baflundri and Feffindti, or Gorgat and Cattrong, are on that river, which produce the greateft quantity of fugar in Bengal.
Ponjeliy, is a village a little higher up on the eaf fide of the Huguely river, where there is a weekly corn-market, which exports more rice than any place on this river.
At Govenapore, about a league further up on the other fide of the river, is a little pyramid, built for a land-mark, or boundary, of the Englifh India company's colony of Calcutta, which is about a league higher. The Englifh; it has been faid, abandoned Huguely, becaufe of the unhealthinets of it's fruation; and Captain Hamilton fays, that this place is the moft unhealthy on all that river, by reafon that, three miles to the north-eaft, there is a falt-water lake, which overflows in September and October, when vaft numbers of fifh refort to $1 t$, which are left dry by the going of of the flood, in November

## B E N

and December, and infect the air by their putrefaction, and caufe a yearly mortality.
The governor's houre in the fort is as regular a piece of architecture as is to be feen of this kind in India; and in the fort are many convenient lodgings, both for the factors and writers, and fome ftore-houfes for the company's goods, befides magazines for their ammunition. The company has alfo a pretty good hofpital here, with a garden and fif-ponds, from whence the governor's kitchen is fupplied with carp, mullets, and calkops. Moft people of any figure here have the fame advantages, and all forts of provifions being good and cheap, as well as cloathing, the country is very agreable, with all it's abovementioned inconveniencies.
The garrifon here confift generaily of 2 or 300 foldiers, more for conveying the company's fleet from Patana, with their falt-petre and piece goods, raw filk and opium, than for defence of the fort; tor, as the company hold the colony in fee-tail of the Mogul, they are not afraid of enemies difpoffeffing them. The Rajas, whofe territories lie on the banks of the Ganges, between Patana and Caffembazzar, are fometimes troublefome, by claiming duty for all merchandizes that pafs on the river, by, or through, their dominions, and often raifing forces to compel payment; but fome detachment from the fort generally clear the paffage. Captain Hamiton complained, that, in his time, the colony had very little manufactory of it's own. He eftimated the number of inhabitants at about 10,000 ; and adds, that the company's revenues, which are pretty good, and well paid, arife from ground-rents, and confulage on all goods imported and exported by Britifh fubjects, who, as free merchants, are tolerated by the company to trade; but all other nations are free from taxes.
Oppofite to the factory which the Danes once had, about four miles below the town of Huguely, the late Oftend company [fee the trade of the Austrian Netherlands and Os. tend Company] fetcled a factory at Bankebankfhall; but, anno 1723, they quarrelled with the fouadaar, or governor of Huguely, who forced them to quit the place, and feek protection from the French, who have a factory at Charnagur ; but the latter here being poor, and carrying on little trade, content themfelves with a little church to hear mafs in, which fays Captain Hamilton, is the chief bufinefs of the French at Bengal.
Chinchusa, where the Dutch emporium fands, is about half a league further up. It is a large factory. The place is wholly under the Dutch government, and about a mile each way, and well inhabited by Armenians and the natives. It is contiguous to Huguely, and is a fancluary for many poor natives, when they are in danger of being oppreffed by the Mogul governor, or his harpies.
Huguely, or Ougly, where the Englifh once had, and the Dutch fill have a factory, is an unhealthy, but pretty large, ill-built town, extending two miles, by the weft fide of it's river, from Chinchufa to the Bandel. This town, at which the Mogul has a fuzza, or cuftom-houfe officer, drives a great trade, becaufe all foreign goods are brought to it for import, as thofe of the Bengal product are for exportation. Bernier fays, it is the beft and moft fruitful country in the world, and the air temperate; that it produces very great quantities of rice, fugar, fices, cotton, filks, canes, \&c. The Portugueze drive a great trade here in confections, pomecitrons, a delicate root like farfaparilla, ambas, ananas, mirobalans, lemons, and ginger. The other commodities are falt-petre, with which the Englifh and Dutch load whole thips: they have alfo lacque, opium, wax, civet, long-pepper, and but-ter.-The country is well watered by channels cut from the Ganges, on the banks of which grow their pulfe, muftardfeed, fefamum for oil, and low mulberry-trees, to feed their filk-worms; but their filk is not near fo good as that of Perfia.
The trade of Bengal affords rich cargoes for 50 or 60 hhips yearly, befides what is carried in fmall veffels to neighbouring countries; and there are veffels of about 200 tons, that bring falt-petre hither fromPatana. They come down in OEtober, before the fream of the river, but are obliged to tow them up again, by ftrength of hands, not lefs than 1000 miles. Befides, the trading veffels in India deal in opium, long-pepper, ginger, tobacco, and various forts of piece-goods, not merchantable in Europe. They abound with warehoufes, and fhops full of all forts of Indian-goods, efpecially filks, fine cloths and ftuffs. The Portugueze had a factory here in the beginning of the laft century, which they called Porto-Riquero, and another a little to the fouth-weft, called PortoAngeli, but were expelled by the Moguls, becaufe of their piracy. There is abundance of Mooribh merchants, who carry on a conliderable trade here. The Dütch factory here, which is built in an open place, about a muket-hot from the river, looks more like a caftle, being incompaffed with deep ditches, full of water, high fone walls, and battions faced with ftone, and mounted with cannon. Their fpacious warehoufes are alfo of ftone, and the apartments for the officers and merchants are large and commodious.
This being the chief of all the Dutch factories in the Bengal direction, the accounts are tranfinitted from hence to Batavia. Bernier fays, that there were 8 or 9000 Chriftians
here in his time, and about 25,000 in the reft of the kingdom. The adjacent country is very finely diverffied with arable land, neat houfes, large gardens, ponds, bathing. places, delightful vallies, and roads adorned with trees, refembling walks.
At Bandel there was formerly a Portugueze colony, but governed fince by the Mogul's touzdaar. They, at prefent, deal in no fort of commodittes, fays Captain Hamilton, but what are in requeft at the court of Venus, the owners whereof are to be met with at it's church, and a prieft to conduct the buyer to proper fhops, for view of the goods, and to vouch for their goodnefs.
At Cassembazaar, about ioo miles above Huguely, and 20 leagues weft from Dacca, are factories both Englith and Dutch, of which, by their company's orders, the feconds of the council ought to be the chiefs. It is a large town, much frequented by merchants, and ftands in a very healthy and fruitful illand of the Ganges, whofe inhabitants are employed in many valuable manufactories, efpecially muflins and filks which are naturally yellowifh, 'till the natives whiten them with the afhes which they call there of Adam's figrtree Tavernier fays, that the Dutch export 7000 bales of them from hence annually; and, except what the natives keep for themfelves, the Tartar and Mogul merchants ingrofs the reft, which is about 15,000 bales. Captain Hamilton fays, tha it fole it's prefent trade and grandeur from
Rajahmal, Ragemahaie, or Ragmehal, 12 miles from it, a well-built town, which was once the refidence of the governors of Bengal, and the greateft place of trade and commerce on the Ganges, by the name of Muxadaubaud and where the Mogul has fill a mint; but on the port's being choaked up, the government was removed to Dacca, and the trade to Caflambazaar. The country adjacent affords plenty of rice, and excellent bunting. The Bengal roupies, which are gold, are coined here.
Macdo, is a large populous town, well frequented by merchants, on another channel of the Ganges, 40 or 50 miles eaft of Rajahmal, and 15 leagues north eaft of Tanda. Both the Englifh and Dutch have factories here; as allo at
Dacca, which is alfo called Dekaka, Daac, or Bandar Dacca, in an inland on the broadeft and moft eaftern branch of the Ganges. It is about a league and an half long, on the banks of the river. Mr. Hamilton fays, it is the largeft city in Bengal, and manufactures the beft and cheapeft cotton and filk. The plenty and cheapnefs of provifions here is alio incredible. In fhort, it is a populous wealthy town, and re*forted to by merchants from China, and divers parts of India. Sundrva, an illand, which lies four leagues from the reft, and as far from the main land, and 120 miles fouth of Chatigan, is about 20 leagues in circumference, has three fathom water within a mile of it's dhore, and ferves to fhelter fmall thips from forms, or the fouth-weft monfoons. It is thinly inhabited by a fimple honeft people, who fell their cloth manufacture incredibly cheap, and have fuch plenty of provifions, that Captain Hamilton was informed, by a perfon of credit, that he bought 580 pounds weight of rice for half-a-crown, and that he gave no more for eight geefe, and 60 good tame poultry. Mr. Fytch fays, alfo, that is one of the moft fruitful inlands in the world; that it abounds with wild hogs and fat kine, and that he bought the latter for 6 s .3 d . a piece, and four wild hogs, ready dreffed, for 12 s .6 d . The illand is divided into two parts, by a channel, which, at high water, is navigable.
After defcribing the coaft and bay of Bengal, with the mouths of the Ganges, and the iflands thereof, we fhall next give an account of the continent, and it's trade, which is called the kingdom or province of Bengal.
It lies in the fouth-eaft corner of Indoftan, on both fides of the tropic of Cancer, and the river Ganges; having it's bay, and the province of Orixa, on the fouth; Patna and Jefnat on the north; Malva on the weft; with Aracan and Tipra on the eaft. It is ufually compared to Egypt for it's fertility Bernier fays, it is the beft and moft fruitful councry in the world, it being well watered, not only by the Ganges, but by channels cut out of ir , on whote banks grow their pulf, muf tard-feed, fefamum for oil, and litte mulberry-trees, to feed their filk-worms, whofe products of raw filk, and their wrought filk, are preferred to the Chinefe, 'and reckoned little inferior to that of Ghilan on the Cafpian fea. Befides aloes, falt-petre, lacque, opium, \&c. as before obferved, it produces very great quantities of rice, which is fent every year to the Moluccas, Sumatra, Malabar, ant Coromandel; the Maldiva iflands, Ceylon, Goa, \&c.- 1 hey alfo fend plenty of fugar to Gol conda, Carnetteo, A rabia, Mefopotamia, and Perfia, as alfo fpices, cotton, the fineft mullins and callicoes, filks called Bengals, elaches and herba ftuffs, with Indico and canes, to Europe. 'The Portugueze drive a great trade here, in confestions, pomecitrons, a long, but very delicate, root, like farfaparilla, ambas, ananas, mirabolans, lemons and ginger. They have, from April to September, almoft continual rains, accompanied with tempefts, which occation inundations, and do a great deal of mifchief. During the other part of the year, the weather is fair, and conled by the north eaft wind; but, in December, January, and February, the monnings are mifty
and cold; yet in December, when the days are chorfeft, and have the fun from half an hour after fix in the morning to half an bour after five in the evening. - The days are then ferene and clear, though the nights are cold; and this feafon is their harveft. Here is great plenty of fifh, good fowls for three half pence apiece, and geefe and ducks in proportion. They abound with fheep, kids, and hogs, the chief food of the Europeans, who alfo victual their Chips therewith.
The governors here exercife abfolute power, have all the tributes, impoits, and fines; for which they are obliged to furnifh the emperor with horfes and arms; fo that this province is rated at 40,000 horfe, and 80,000 foot, for it's quota; and it's yearly revenue is calculated at no lefs, according to Schouten, than $5,000,000$ fterling.
Some geographers have reprefented Bengal as the chief city; whereas there is no fuch town, or a very obfcure one.-Martiniere fays, that, of the many travels he had feen to Indoftan, he never met with any fatisfactory evidence, either as to the fituation or exiftence of the city of Bengal. Our merchants ond feamen, who have been there fo often, know no fuch place ; and, according to the accounts of the fituation of what is called by this name, it would feem to be a town that borders upon Aracan, and is the moft eafterly boundary of the Mogul's dominions, viz.
Chatigan, or, as the Portugueze call it, Xatigam and Porto Majore, about 50 leagues below Dacca, near the bottom of Bengal bay. Moll and Herbert place it at the fouth-eaft corner of an inland, formed by the two moft eaftern mouths of the Ganges; and the Sanfons, on the weft fide of the Cofmin, overagaint what they term the city of Bengal. The place is called, by the natives, Chittagoung. The diftance from hence to Sagor, the weftermolt channel of the Ganges, is, according to Hamilton, about noo leagues. Fytch fays, it is the chief harbour of the country; and it appears to have been formerly a place of confiderable traffic. It was the firft fettlement made by the Portugueze; but the dangers their fhips ran, in coming hither in the fouth-weft monfoons, made them remove to Bandel at Huguely, and it is now a poor place, poverty always being the confequence of the lofs of trade.
Satigan, or Satiga. Mr. Frederic, in his travels, fays, that, in his time, above 30 flips were annually laden here with rice, lacque, fugar, long-peper, oil of Zezelin, \&c. and that merchants commonly bought and freighted veffels at this place, to trade up to the Ganges, by which they made confiderable advantages; but the commerce is fince removed to Huguely.
At Patna, Patena, or Patenaw, where both the Englifh and Dutch have factories for raw filk and falt-petre; and fome geographers place it on one fide the Ganges, and others on the contrary. The Sanfons place it on the eaft of the Ganges, where the kingdom of that name lies, 135 miles north-weft of Dacca; but it is placed on the weft lide by the maps, as well as by Thevenot, Tavernier, and other travellers. The former fays, it is a very large town, in a pleafant and fruitful country: the latter, that the Dutch, whofe factory here is chiefly for falt-petre, refine it at a great town called Choupar yo leagues higher up the Ganges. He makes Patna to be fix miles in length, and one of the biggeft cities in the Indies. Hamiton fays, it is the feat of the prince of Bengal, who is always of the royal blood, and that it produces fo much opium, that it ferves all the countries in India with it. It fupplies them alfo with cotton, cotton-cloth, fugar, 8 cc . that gold is dug in the neighbourhood.-They make a fort of potter's ware here very fragrant, and almoft as thin as paper, for the ufe of the Mogul's feraglio, and the princes of Indoftan.
Bannaraf, or Bannaron, is a handfome large city, on the eaft fide of the Ganges, about roo miles above Patna, in the road to Agra. It has a very confiderable trade in callicoes and filks, which the manufacturers dare not fell 'till ftamped with the Mogul's feal, on pain of being fined and baftinadoed. They abound with plenty of pulfe, and all forts of grain, in the neighbourhood; and they bave manufactures of rich ftuffs of gold, filver, and filks, of magnificent turbants, fine girdes, and light veftments, for the ladies of the feraglio, which makes this of one the wealthieft towns in the Indies.
Tanda, on the eaft fide of the Ganges, above where it divides into branches, and about a league from the river, was the capital of a kingdom, 'till fubdued by the Moguls, and is a place of great trade in cotton and callico.
Soumelpore, about 30 leagues from Huguely, is noted for the fine diamonds in it's river Gouel, fuppofed to be wafhed down from the fouth mountains of Golconda; infomuch that, about the end of January, or the beginning of February, when the water is clear, after having been mudded by the great rains that generally fall in December, above 8000 men, women, and children, fearch for diamonds all along from this town to thefe mountains.
Jonpoure, fands on the fame river as Soumelpore, but 25 miles more to the fouth. It is noted for a confiderable commerce in fweet-fcented oils, rich carpets, hangings embroidered with filk, and all forts of fine linnen.
Laccanow, not far from Jonpoure, drives a very great trade, more efpecially in linnens.
Vol,
I.

Ounce, or Oujea, an ancient city, on a river that runs into the Ganges, formerly the feat of the Patan kings, has a mighty trade in hom, being ufed by the Indians for drinkingcups and targets.
Balasore, or Bellesore, is the place where the European fhips, bound for Bengal and the Ganges, take in a pilot; and the Englifh, Dutch, and French, have their rePpective factories here, which were, indeed, the capital factories of the bay of Bengal, before the navigation of the Huguely river was improved, but, at prefent, of no great confideration. The adjacent country is fruitful to admiration, producing rice, wheat, gram, doll, callavances, feveral forts of pulfe, anife, cummin, coriander, and carraway-feeds, tobacco, butter, oil, and bees-wax. Their manufactures are of cotton, in fannis, caflas, dimities, mulmuls, filk and cotton romals, gurrahs, and lungies; and, of the herba (the rind trif a certain tree, which, being prepared and drawn out fine, works like filk, and is worked with either filk or cotton) they make ginghams, pinafcas, and feveral other forts of goods for exportation. There are rich Moors, Banians, and Gentiles here. The town trades pretty much with the Maldiva iflands, which having no rice or other grain of their own product, it fupplies them with what neceffaries they want, and, in return, brings cowries and cayar, for the fervice of thipping. The fea-hore of Balafore being very low, the fhips ride three leagues from it, in four or five fathom water, in a road which is rendered fafe, by Cape Palmiras, from the violence of the fouth-wind. There is a very dangerous bar at the mouth of it's river, which is about 12 leagues to the north of Cunnaca river. Between thefe two rivers there is one continued fandy bay, where valt numbers of fea-tortoifes refort to lay their eggs; and here are fhoals of a very delicious fifh called pamplee, which are fold for two-pence a hundred, and two of them are fufficient for a moderate ftomach.

## Remarks.

When it is faid the Englifh have a factory in this part, and the Dutch in that, it is rather to defcribe which of the European nations has the principal commerce there; for, except in the particular places where they feverally have forts, and maintain garrifons, no factory is fingular to an European nation upon all the coaft; but the feveral nations have particular houfes, or bazars, in the refpective cities and trading ports, and this they call a factory; whereas the main body of the inhabitants are Indians, and the Europeans are there only by the permiffion of thofe Indians, or, of their princes and governors
But the cafe of the Portugueze is diferent at Goa, whore poffeffion is their own in fovereignty, and they acknowledge no prince but the king of Portugal, though they have near 100,000 people under their government; the reafon whereof is, becaufe they firt obtained their fovereignty of the proper prince, who then ruled, the Great Mogul at that time in being having not extended his dominions to fuch a height as his fucceffors have fince done. The Portugueze thus ftrengthening themfelves at Goa, and having taught the Indians and Meftizes to live after the European manner, they have prevented the Dutch from difpoffeffing them, as they have done at Coulang, and other places on that coaft.
The Dutch have fecured themfelves, even more effectually, at Batavia, on the ifland of Java, which, when they came firft thither, was only an Indian village, furrounded with no more than a pallifado of bamboo canes.
This city is the glory of this inland, and of all the European fettlements in the Indies., It is the center of all the ftrength and commerce of the Dutch in this part of the world, where they are fo powerful, and have fo many fubjects, fo many iflands, kingdoms, principalities, and dominions, depending on them, and are fo able to fupport and protect them, that ic is to be wondered any other European nation Chould have the leaft footing in the Indies, and that the Dutch do not extirpate all the other European factories out of the country. They have allo brought the natives, where they have any influence, to cloath in the European manner, which has wonderfully increafed their commerce from Europe thither.
By thefe politic meafures, we find, that the Dutch have rendered their trade to this part of the world fo important, as to ftrengthen themfelves there, in a manner far fuperior to all the reft of the European powers put together ; and, therefore, whenever it is the will and pleafure of their High Mightineffes, they may monopolize, as it were, all this trade from Europe to themfelves. This would increafe their navigation and brood of feamen to fuch a degree, that they would foon become as potent in Europe as they would then be in Afia.
The fame principles of policy, therefore, which diftate to the chief potentates of Europe to maintain the ballance of power among, themfelves, do alfo dictate the holding the ballance of power in Afia among the Europeans fettled in that part of the world; for, although fome have imagined, but never proved, we conceive, that the Eaft-India trade of this nation is, upon the whole, a loling trade; yet, if ever Eng land gives the fame up, it will certainly prove a real, not an
$3_{3} Q$
imaginary

## B E N

lniaginary lols to this kingdom, and a certain gain to that inta whofe fcale of trade it Ghall be thrown: thus, as it will weaken our navigation, and lefferi our brood of feamen; fo it will Arengthen thore who fhall fupplant us.
If this trade was really detrimental to the nation, we may reafonably prefume it would prove the fame to other ftates which have a thare therein as well as we; unlefs it can be fliewn that other nations are more experienced in this commerce, and carry it on to greater advantage than we do. But it is extraordinary that this trade Mould prove beneficial to all other nations, and otherwife to us; and it is fill more extraordinary-that upitart nations in trade fhould be fo fanguine to eftabling a new Eaft-India company *, if they were not morally certain of it's proving nationally beneAcial.

* This alludes to the endeavours of the king of Pruffa, to eftablifh an India company at Embden, and make that a free port, under certain limitations, as has been rumoured.

But thofe who are not for depriving England of this trade, yet imagine that it would be carried on more to the interelt of the nation by being free and open to all his majetty's fubjects, than in the hand of a trading company, with a large joint-ftock, and with privileges and immunities, exclufive of all other the Britigh fubjects. To which, for the prefent, I Chall only obferve, that; while other nations always have, and ftill do experience it to be for their intereft to carry the fame on by fuch-like companies, it feems impolitic for us to do otherwife, and thereby hazard the lofs of a real gain for an imaginary greater. This matter, however, Thall be confidered under the article of EAst-India ComPaNy; wherein we thall alfo endeavour to thew how that company may be greatly advantaged, and that as much to the intereft of the nation as the company itfelf. The reaton for thefe fentiments, under this head, is to apprife our readers, in fome meafure, of what they are to expect in the fequel of this work ; we not contenting ourfelves with a mere narrative of trade as it is, but are ambitious to fuggeft what may occur to us; which may tend to the advancement of that of our own nation.
In the interim, we fhall only obferve what meafures the parliament of England have been pleafed to take, to prevent the fubjects of the crown of Great-Britain from becoming interefted in any foreign Eaft-India company, and for the encouragement of our own.

Abfract of feveral acts of parliament, now in force, which were made for preventing his majefty's fubjects from trading to the Eaft-Indies under foreign commifions, and from being interefted or concertred in any foreign Eaft-India company to be erected.
By the following acts of parliament now in force, and which were made for preventing his majelty's fubjects from trading to the Eaft-Indies under foreign commifions, and from being interefted,' or concerned, in any foreign Eaft-India company to be erected, it is enacted as follows, viz.
5 Geo. I. cap. 21. By an act paffed in the fifth year of his late majefty king George I. all his majefty's fubjects, except thofe licenfed by the Eaft-India company, are prohibited from going to the Eaf-Indies.-And, to the end fuch offenders may be brought to juftice, the Eaft-India company are impowered to arreft and feize fuch offenders in the Eaft-Indies, and to fend them to England, there to anfwer for the faid offence; and every-Britifh fubject who thall procure, folicit for, obtain, of act under, any commiffion, authority, or pafs, from any foreign prince or ftate, to fail or go, or trade in, or to the Eaft-Indies, incurs and forfeits, for every fuch offence, 500 l . 7 Geo. I. cap. 2 I. By another act, paffed in the feventh year of his late majety king George I. every fubject of his majefty who ball go to, or fhall trade, or adventure into, or from the Eatt-Indies (contrary to the laws in being) and fhall be convided thereof, in any of his majefty's conrts of record at Weftminfter, is to pay and fuffer fuch fine and imprifonment as the court fhall think fit.
And all the goods and merchandize that fhall be bartered, or trafficked for in the Eaft-Indies, or purchafed there, by asy fuch offenders, or that thall be found in his cuftody, or in the cuttody of any other perfon by his order or procurement, are declared to be forfeited, with double the value thereof. 9 Geo. I. cap. 26 . By an act paffed in the ninth year of his. late majefty king George I. all his majettys fubjects are prohibited from fubfcribing, contributing to, encouraging, or promoting, the raifing, eftablifhing, or carrying on, any fo. reign company, from, and after, the 24th day of June, 1723 , to be raifed, formed, or erected, for trading to the EaftIndies, and from being interefted in, or intitled to, any thare in the ftock,' or capital, of fuch foreign company, under forfeiture of all his, her, or their intereft, in the capital, principal ftock, or actions, of any fuch foreign company, together with treble the value thereof.
And the attorney-general is impowered to exhibit bills of complaint in the court of Chancery, or court of Exchequer,

## BEN

againt fuch offenders, for the difcovery of fucti offerice; which difcovery fuch offenders are obliged to make, on the attorney general's waving in fuch bill the faid forfeiture of the treble value, and infilting only on the fingle value thereof; and, in fuch cafe, the fingle value is to be decreed to be paid by fuch offender.
And that every fubject of his majefty accepting of any truft, or knowing of any intereft, Thare, pait, proportion, or concern, which any other of his majefty's fubjects thall have, or be intitled to, in any fuch foreign company, and who forll not, within fix monthe next after the accepting fuch truft, or coming to the knowlege of fuch intereft, fhare, proportion, or concern, as aforefaid, truly difcover the fame in writin, to the Eaft-India company, or their court of directors, thall forfeit treble the value of the intereft fo accepted in truft, or fo known and not difcovered, as aforefaid; and any perfon, making fuch difcovery, is intitled to a moiety of the forfeiture And all his majeity's. fubjects (other than fuch as are lawfully authorifed thereunto) going to, or found in the Eaft-Indies, are declared guilty of a high, crime and mifdemeanor, and are made liable to corporal punifhment, imprifonment, or fine, for the fame, at the difcretion of fuch of his majefty's courts of record at Weftminfter where the profecution for fuch of fence fhall be commenced.
And every perfon fo offending may be feized, and brought to England, and committed to gaol there, by any one of his majefty's juftices of the peace, until fafficiont fecurity be given by natural-born fubjects, or denizens, to appear in the court where fuch profecution thall be commenced; to anfwer the fame, and not depart without leave of the court.
3 Geo. II. cap. I4. By an act paffed in the third year of his late majefty, it is enacted, That, if any of his majefty's fubjects (other than the Eaft-India company, and thofe licenfed by them) fhall, directly, or indirectly, go to, trade, or venture into, or from, the Eaft-Indies, every fuch offen der. Thall incur the forfeiture and lofs of all the thips and veflels employed in fuch a voyage, trade, or adventure; and alfo all the goods laden thereupon, or that were fent to, acquired, traded or adventured, within the Eaft-Indies, and all the proceed, and effects of the fame, and double the value thereof:
BENZION, or BENJAMIN, a kind of gum, which fome reckon in the fame class with incenfe and aroma's. The trees from which the benzoin runs grow plentifully in CochinChina; there are alfo many of them in the forefts of the kingdoms of Lao and Siam
This tree refembles pretty much the almond tree; but it's leaves are longer, and roundifh at the top. The benzoin runs from uncifions made in the trunk and large branches of the tree; though fome authors pretend, without any reafon that it is to be found in a kind of pods, and is formed from an oil, thickened by the heat of the fun.
The grocers and druggifts fell two forts of benzoin, the one in drops, and the other in lumps.
The true benzoin in drops, which is feldom to be met with in France, and of which the people of the ambaffador of Si am's retinue brought a pretty large quantity, is of a yellow, or gald colour without, and white within, flriped with fmall clear veins, which are white and red; it is friable, without any tafte, but of a fweet and very aromatic fcent. It is very different from the benzoin in drops which is, fold at Paris, and which is clear, tranfparent, of a reddifh colour, and mixed with white drops, refembling almonds, whence it is called amygdaloid benzoin. This latter muft be chofen with fuch qualities as come as near as poffible to thofe above-mentioned and, above all, let it be without any dirt, which happens but feldom.
The benzoin in lumps is the moft common of all, and is very liable to be adulterated by feveral gums; melted together. In order to be of 'a good quality, it ought to be very clean, of an agreeable fmell, very refinous, and abounding with white drops: that which is too black, and without any fcent, muft be abfolutely rejected,
The beft benzoin grows in the ifland of Sumatra, at a place called Baros, on the weftern coaft of the ifland, a little to the north of the equinoctial line. . It belongs to the Dutch, who fend great quantities of that drug into Indoftan, or the Mogul's country, for the Indians there ufe a great deal of it in their religious ceremonies. This drug has feveral names; it is called affia dulce, ben of Judea, benzoin of beninas, and in Latin, benzoinum.
They get from the benzoin a kind of white flowers, good for afthmatic perfons, and an oil, which is a fort of balm for wounds.
All 'forts of benzoin pay duty of importation in France at the rate of fix livres per 100 weight ; but, when it has been depofited any where, and comes from the Levant, from Barbary, Perlia, or Italy, it is then reckoned as one of thofe merchandizes, on which, according to the decree of the council, dated the 15 th of Auguft, 1685 , a duty of 20 per cent. of their value ought to be raifed; which duty is alfo raifed on the benzoin when it is imported by Roan, though it had not been depofited any where.

BERCHEROIT,

BERCHEROIT, or BERKEOITS, a weight uled at Archangel, and in all the dominions of the czar of Mufcovy, to weigh fuch merchandizes as are very heavy, or very bulky, fuch as pot-afhes, \&c. The bercheroit weighs 400 pounds of Mufcovy, which amount to about 364 pounds Englifh avoirdupoife weight.
BERGAMO, a coarfe tapeftry, which is manufactured with feveral forts of fpun thread, as flocks of filk, wool, cotton, hemp, ox, cow, or goat's-hair. It is properly a weft of all thole forts of thread, the warp of which is commonly of hemp. It is wove on a loom, almof like linnen cloth. Some pretend it was called bergamo, becaufe the people of Bergamo in Italy were the firft inventors of it.
Roan and Elbeuf, cities of the province of Normandy in France, furnifh a confiderable quantity of bergamos of all colours, and mixtures of colours: fome after the manner of the point of Hungary (point d'Hongria); others with broad fripes, worked with the figures of flowers, birds, or other animals: fome with broad and narrow ftripes, even, and without figures; others again, which are called China's and fcales, becaufe they are worked fo as to imitate the point of China and the frales of fifhes. They make at Roan a particular fort of bergamo, which they call twine, or twifted (tortin in French) becaufe they ufe twifted wool in it; they alfo make fome at Touloufe.
The height or length of the bergamos is moft commonly an ell and a half, an ell and $\frac{3}{4}$, two ells, or two ells and a half French meafure. They make, neverthelefs, fome of two ells and three quarters; but thefe are not common, being feldom made but for merchants who will have them fo. There are of thefe tapeftries fome fine, fome middling, and fome coarfe, or common.
Formerly the French ufed to fend fome bergamos into foreign cóuntries, particularly towards the north: but, at prefent, they are farce ufed any where but within the kingdom, and chiefy at Paris, there being few tradefmen, or mean people, in that great city, who would not think it a difgrace, if, when they fet up, they had not a bergamo tapeftry in their rooms. Thefe are likewife called tapeftries of the ftreet St Dennis, or of the gate of Paris, becaufe there are more of them fold in that part of the town than any where elfe in Paris.
They who trade in thofe tapeltries are the mercers, upholiterers, and brokers; but the former only have them from the places where they are manufactured. See Tapestri.
BERKSHIRE, a county in England, bounded by Hampfhire on the fouth; by Wilthire and Gloucefterfhire on the weft ; by the Thames on the north, which divides it from Buckingham and Oxfordmire; and, on the eaft, by Middlefex and Surrey. The air is, in the general, healthy, and the foil fertile, where it is cultivated; and the whole county, which is as pleafant as moft in England, is well ftored with cattle and timber, particularly oak and beech in the weftern parts, and in Windfor foreft. This county allo abounds with wild fowl, and other game, as it's rivers Thames and Kenner, the one on the north the other on the fouth fide of it, do with fifh, efpecially fine large trout and cray fifh.
It has been obferved, that land is dearer here than in other parts the fame diftance from London. ' The chief manufactures of this county are woollen cloth, fail-cloth, and malt; there being great crops of barley in the weft part of the county, particularly the Vale of White Horfe.
Readinc. This town formerly abounded with many and very wealthy clothiers. In the reign of Edward I. Thomas Cole went by the name of the rich clothier of Reading; and Mr Kenrick, a merchant of London, and fon of a clothier of Newberry, left 7500 1. to encourage this trade here; but, of late years, this manufacture is in a great meafure laid afide for that of malt, which, by the convenience of the riwers in this county, turns to great-account; for the river Kennet will bear a barge here of 1 Io tons; and then it is fo near the Thames, that the largeft they ufe may come up to the townbridge, where they have wharfs.
Though they have a great trade in the country, yet their principal traffic is by navigation to London, to which they carry vaft quantities of malt, meal, and timber, and bring back coals, falt, cobacco, grocery wares, oils, \&c. Some of thefe barges will carry 1000 or 1200 quarters of malt at a time. A large manufacture of fail-cloth was fet up here, by the late Sir Owen Buckingham, lord-mayor of London; but he dying, and his fon being unhappily killed in a duel, that manufacture died with him.
Abingdon. The feveral ftreets of this town are well paved, and center in a fpacious area, where the market is held, which is a confiderable one, efpecially for barley; and they make great quantities of malt, which they fend in barges, with other commodities, to London.
Hengerford, flands on the river Kennet, and is famous for the beft trout and cray-fifh. But, though it lies in the great road to Bath, \&ic. which is it's chief fupport, neither it's buildings nor market are confiderable, it's trade being nothing, and fituation moorifh.
Newberry, or Newbery. The manufaCure of cloth throve here once to fuch a degree, that in the reign of Henry VIII. here flourifhed John Winfthomb, commonly called Jack of

Newberry, one of the greateft clothiers that ever was in Erdos land, he keeping 100 looms in his houfe; and, in the expedition to Flodden-Field againft the Scots, marched with 100 of his own men, all armed and cloathed at his own expence; and he built all the weft part of the church. Alfo, Mr Kenrick, the fon of a clothier of this town, and afterwards a merchant of London, left 4000 1. to this town, as well as 7500 l. to Reading, to encourage the cloathtrg trate. Put it has loft, at prefent, moft of this manufacture. and, in proportion, the profperity of the town has deca;ed, fince it removed to the weft. However, they make a great quaitity of fhalloons and druggets, which, with it's other trades. renders it filll a pretty flourifhing town. It ftand very plea'antly, in a fruitful plain, with the river Kentet running through it. It was made a corporation by queen Elizabech, and is governed by a mayor, high-fteward, recorder, aldermen, and capital burgeffes. The fireets are fpacious, particularly the market-place, in which flands the Guildhall. It is noted, alfo, for it's excellent trout, eels, and cray finh, and has all manner of provifions in great plenty.
Maidenhead. Here is a confiderable trade for malt, meal, and timber, which they carry in their barges to London.
Okingham is the chief place in Windfor-Foreft, being a pretty large, well-frequented town, with feveral ftreets, a fair, mar-ket-houfe, and a manufacture of filk fockirgs and cloth, efpecially of the former, of which large quantities are bought in it's market.
BERMUDAS, or SUMMER ISLANDS, lie in latitude $3^{2}$ north, and in longitude weft from London, according to the moft accurate oblervations, 64. 48. They are numerous, and lie pretty contiguous to each other. Voyagers differ about their number, but they are reckoned, upon the whole, near 400 , yet the moft of them fo fmall and barren, as to be uninhabitable.
Their extent, which is from north-eaft to fouth-weft, is computed but about 20 miles, and their greateft breadth about five, and not above one eighth part of them is inhabited. Moft of them are fo inconfiderable, that neither the Spaniards, nor any other Europeans, thought it worth their while to fettle upon them. The firf Englifhman that faw them was one May, who was caft on them by ftrefs of weather, anno 1593; but the account he gave of them did not encourage other adventurers to fearch after them, 'till Sir George Sommers made an attempt, and was fhipwrecked upon them, anno 1609: after which the Virginia company fold their property to thofe iflands, which they held by virtue of a charter from king James I. to 120 perfons, who, about three years after, fent thither one Richard Moore, with about 60 perfons. Thefe landed on the largeft illand, where they built themelves huts, which grew, by degrees, into handfome houfes, and, in time, into an handfome town, to which they gave the name of St George, and from which the whole ifland hath been called ever fince.
This is by far the moft confiderable of all the illands, being about 16 -miles long from north-eaft to fouth-weft, and about three in breadth where broadeft, and is furrounded with high and craggy rocks, which jut a good way into the fea, and ferve inftead of a ftrong rampart to it: But to it's natural flrength the inhabitants have taken care to add feveral good forts, with batteries, and other outworks, efpecially towards the eaft, whete it lies moft uncovered, fo as to command all the channels, and other avenues, on that fide.
The number of Englifh inhabitants are computed to be above 10,000, befides llaves, who carry on a tolerable commerce in tobacco; but it is of fo indifferent a kind, and fo inferior to that of the other Britifh plantations, that it bears but a fmall price in proportion. They have, likewife, fome cochineal, catch pearls on their coafts, and fome fmall quantities of ambergreafe, which is likewife gathered upon their coaits; and in thefe commodities their trade chiefly confifts, for the fecurity of which they have built no lefs than io forts, moft of them well manned and armed, and all kept in good repair. The country is chiefly mountainous, but hath fome fertile plains; the ground is of various colours, but the brown is effeemed the richef; the whitifh, or fandy, is reckoned next, and the reddifh the wortt, and not unlike potter's clay. About two or three feet below the mould, is found a white hard body, which feems to be a kind of hard chalk, or pumiceflone, through which, however, the roots of the trees force a paffage, and a kind of clay is commonly found to lie under it. Upon the whole, the foil, though thin and fony, is notwithftanding rich and fruitful; but their water is generally brackifh and difagreeable, except rain watcr, which they preferve in cifterns.
The climate is temperate, yet warm enough to produce two good crops in a year. They fow in July, and again in Auguft, and reap in December. Their chief growth is the Indian wheat and tobacco, but they have fome fine fruits, efpecially oranges, all which enjoy a conftant verdure, new leaves always prouting out before the old ones fall. The cedars of this illand are faid to excel thofe of other parts of America, particularly in their fragrancy, duration, beauty, and hardnefs of their wood; and they are here in fuch plenty, that it anfwers in all refpects to our oak timber; fo that not
only their beft floops, brigantines, and other vefiels, are built with it, but likewife fome of their houfes, churches, and other public buildings: and, with refpect to flhips, thofe that are built at Bermudas are reckoned the beft, and are the moft valued throughout all the Weft-Indies.
Their palmetto is no lefs ufeful and common; it's fruit, which, in colour, thape, and fize, refembles our damfon, is very delicious, the wood ferviceable for building or fuel, and the leaves, which are commonly between 8 and 10 feet long, ferve to make a light covering for their houfes.
The date, or palm-tree, yields likewife an exquifite fruit; and their forefts abound with variety of odoriferous and medicinal woods, fome of a black, others yellow, and fome of a red colour; and thefe laft bear a berry of the ftyptic quality of the floe, and is ufed by our"Englifh to cure thofe fluxes with which they are commonly afflicted by the too greedy eating of the palm berry, and other lufcious fruits. But the moft remarkable and fingular plant for ufe is the red-wood, fo called from it's fine tincture, efpecially that of it's berry, which produces worms, that afterwards turn into flies, fome of them bigger than the cochineal fly ${ }^{*}$, and with a medicinal virtue far exceeding it.

* It has been afferted by fome, that thefe flies will afford a dye no way inferior to that of the cochineal; which, if true, and they could be plentifully cultivated, might come cheaper to our Englifh dyers than cochineal.

All European and American trees and plants, likewife, grow here in great perfection, efpecially the palm, nulberry, olive, laurels, barberry, pear, and orange-trees, the latter of which is affirmed to bear the beft and moft delicious fruit, and which ufed to be brought over into Europe, but they have been difcontinued of late years.
There are fo great plenty of tortoifes caught here, that the inhabitants make it their common food, their fleh being very white, tender, and of an exquifite tafte.-They have, likewife, great variety of fowl, both wild and tame.
Fifh is here in fuch great plenty and variery, both of the fcaly and Thelly kind, that they have not found names for many forts of them. Some whales, alfo, are caught upon thefe coalts, chiefly in the months of February, March, and April ; but all their attempts for fettling of a whale-fifhery have hitherto proved fruitlefs. The Bermudans, heretofore, drove fome traffic in fperma-ceti, and in the train or whale-cil ; but that branch is gone into decay, with fome others, which has leffened the wealth of the inhabitants, as well as their number, many of the younger fort going to feek their fortunes elfewhere, fince the decay of their traffic.
The country, however, continues itill to be well cultivated; and tho' their whole commerce feems to be confined to the other parts of America, which they furnilh with great variety of their productions, and with floops, and other trading veffels, which, indeed, is the moft confiderable branch of their trade: and notwithflanding they do not receive any extraordinary encouragement from England; we do not find they repine much at ir, but feem to content themfelves with the healthinefs, pleafure, and plenty of their country, which they look upon as a fafe and quiet retreat from the cares and troubles of the other parts of the world. They do not feem to have any ambition to enrich themfelves, which, probably, may be owing, in fome meafure, to the fmall profpect they have of fucceeding in it, if they had; for it is not to be doubted but they would gladly embrace every opportunity of improving their commerce with Great Britain, from which they annually receive fuch a confiderable quantity of goods, being moftly cloathed with our manufactures, and ufing no other utenfils in all their divers kinds of works but fuch as are fent to them from hence: fo that, with refpect to traffic, the whole advantage lies on the fide of England. But, were all due encouragement given to the Bermudans, there is very great probability that feveral eftimable commodities might be raifed among them, which would capacitate them to take much greater quantities of manufactures from their mother-country. There are two, in particular, for which their country is faid to be more naturally circumftanced than any other of the Britifh plantations, viz. filk and cochineal, which are not inconfiderable articles of commerce. And it was with this view that a very worthy merchant of the metropolis of London collected, fome few years ago, an account of all that had been writ, or what was to be met with upon that head, and caufed it to be digefted and printed, and fent to be diftributed, at his own expence, in Carolina and the Bermudas; which is fuch an inftance of public firit as deferves to be mentioned with honour, and is well worthy to be imitated. A few generous attempts of this kind, fupported by proper fubfriptions, and inferior to thofe made for fome diverfions only, might turn to unfpeakable advantage to the public, and prove the means of making multitudes of people happy both here and there. We may add, allo, that the characler of the inhabitants of that ifland for induftry, ingenuity, and efpecially honefty and fair trading, which they are allowed to have always maintained above all our other plantations, jufly intitie them to a peculiar regard; fince it is affirmed, by a gentleman who
had been as well acquainted with this, and our other planeations, as 30 years trading with them would make him, to be the fineft country, and inhabited by the beft people he ever knew.
Bermudas, indeed, is become lefs healthy and pleafant within thefe 20 or 30 years, on account, as is fuppofed, of the dreadful hurricanes and thunders, which are fometimes fo violent as to fplit whole rocks; and, as it always was, and fill is, difficult of accefs, on account of the valt ridges of rocks that furround it, as well as the impetuoufnefs of the currents, which forcibly carry fhips out of their courfe, and the many fipwrecks which happen along thefe coafts, it has lefliened the trade of this ifland. But, notwithftanding thefe incorveniencies, the ifland is ftill fo plealant and healthy, that people live to a great age, and feldom die of any other diltemper bur that.
The government is here much the fame as in Virginia, the crown appointing the governor and council, and the people chufing their reprefentatives to fit in the affembly; and they are obferved to have fewer by-laws than any other of our plantations, which, in all likelihood, is owing to the fmallnefs of their trade.
BERNE, a canton in Switzerland, is baunded on the north with that of Solothurn, and a part of the bilhopric of Bafil; on the eaft with Lucerne and Underwald ; on the fouth with the Valais, or Wallifland, and the lake of Geneva; and, on the weft, with the Franche Compté, and the county of Neufchatel. This is the moft fruifful, richeft, and by much the largeft of all the cantons. The revenues of it arife, 1. From the lands or demefnes of the fovereign. 2. From the tenths of the fruits of all the lands of the canton, except fome few ordfips, which are, by a particular tenure, exempted. 3. From a certain tax upon rural lands, which they call, in French, cenfes foncieres. 4. From duties, or cuftoms, on merchandize. 5. From the produce of the fale of falt.- The firf article produces great quantities of corn and wine, which are laid up in magazines, and fold out to the peopie, when the government thinks fit. The fecond muft needs run very high in fo great a diftrict of country. The third is a tax upon lands which are not pofiefled by gentlemen, like the taille in France, and is fuppofed to amount annually to about a French livre per acre. The fourth produces but little, becaufe of the fmallnefs of their trade, and the eafinefs of the duty. The fifth is very confiderable, becaufe the fovereign alone fells it to the fubject by retail, at what price he thinks fit. There is another tax in ufe, called, in French, le lod, which is a fine, amounting to the fixth part of the full value of any parcel of land, or eftate, payable by the buyer of every eftate to the fovereign. As the fale of corn and wine, in which thefe revenues chiefly confift, is more or lefs, according to the price they bear; and as, in cheap feafons, the fovereign fells none at all; it happens that, for fome "years together, they put little or no money into the treafury, and, at other times, lay up in one year the revenue of many. The peafants of this canton are generally rich, efpecially on the German fide; and, as they pay no duties to the public, and the foil has, as well as requires, great cultivation, it is common for them to have eftates to the value of 10,000 crowns, and fome to the value of 100,000 . They get a great deal of money by breeding horfes. They have fome fountains of falt-water, but the making of the falt confumes fo much wood, that it has not turned to account. Though the fubjects of the ftate are rich, the public itfelf is poor; and, though they could oppofe a fudden invafion, yet their unkindly foil requires fuch a number of hands to cultivate it, that they could not fpare any for a long war.
The trade of the city of Berne is not very great now, and was much lefs before the arrival of the French refugees, whoentered into partnerkip with fome of the city tradefmen, and introduced certain manufactures of ftuffs; but fome doubt whether they have not done more harm than good, by the introduction of the French modes and luxury, in room of the ancient Helvetic fimplicity and frugality.
SAUREN, has feveral fairs in a year.
That part of the Roman, or French country, or Pais de Vaux, which banks upon the lake of Geneva, produces a white wine, that is equally palatable and wholfome, and is called vin de la cote. As foon as the vintage is over, they hip off their wine upon the lake of Geneva, which furnihes all the towns that lie upon the borders. What they defign for other parts of the country they unload at Vevay, and, after about half a day's land-carriage, convey it into the river Aar, which brings it down the ftream to Berne, Solothurn, and, in thort, diftributes it through all the richeft part of Switzerland; and, by means of this navigation, the wine comes very cheap, not withftanding the great diftance of the palces where it is fold from the vineyards.
The markets and fairs of Bex are well frequented. Near the town is virgin fulphur, good for the nerves, and three faltpits; one at Bevieux, half a league above Bex; the fecond at Roche, between Villeneuve and Aigle; and the third at Panex mountain, where are fprings of falt water. They were difcovered near 200 years ago; but, while they were in private hands, turned to no account, 'till the lords of Berne

## B E R

bought them, and they have fo improved them, that they make three times the falt they did 50 or 60 years ago, and have reduced the price of it to three half-pence a pound.
At Vilieneuve, is a very fine trout-fifhery, which bringe a great revenue to the lordhip.
Montreux, is a parifh confifting of a fcore of villages and hamlets, difperfed among thefe mountains, where their vines are planted in rows, and not confufedly, as in other places, and the inhabitants both of this, and of the government of Aigle, have always wine to fell earlier than their neighbours.
Vevay is a pretty large and flourihing town, with a confiderable trade, by the refort of the Savoyards, the Valefians, and mountaineers, who come hither to fell their commodities, and it ftands in a very pleafant, fruitful country, with a good air.
At Lalay is abath, which draws many people to it in the fummer.
The country of La Vaux may be faid to be altogether a vineyard, which produces the ftrongeft wine of all the canton of Berne. The chief of the parifhes is Cully, noted for the beft wines in this country.
Morges is a very handfome, modern-built town, and, by means of its fpacious harbour, fine key, and warehoufes, has a hew of greater trade than any other town on the lake, for the articles of traffic between France and Geneva are landed here.
In the neighbourhood of St Prez there is 'a mineral fpring of great reputation, which draws much company thither.
The country on the coaft of the lake, which is therefore called
La Cote, part of which is included in the bailiwic of Morges, and that called la Vaux, abovementioned, are the two beft vineyards in the 13 cantons. The wine de la Vaux is the moft fparkling, the brifkeft, and the moft palatable; but the wine de la Cote is the wholfomeft, and, though not fo fprightly as the other, will better bear the carriage. It is exported to Holland, Brandenburgh, Italy, \&c. and as much efteemed, for it's delicate flavour, as the beft wines of Champagne and Burgundy. It is a white wine, of which the inhabitants of this canton drink to excefs without the leaft inconvenience.
The bailiwic of Moress is full of lordfhips, all which are, generally fpeaking, full of corn and wine, \&c. That which st produced, in the neighbourhood of the town is tolerably good, but the wine de la Cote excels it by far, particularly that about Rolle and Burfins.
At the town of Rolle are abundance of the beau monde, who are drawn hither, elpecially in the fummer time, not only by the mineral waters at both ends of the town, which are in great vogue, but alfo by it's advantageous fitpation, at the foot of a hill, where is an excellent vincyard.
Nyon is very well fituate for trade, not only by reafon of it's neighbourhood to Geneva, and it's harbour on the fine lake, but by it's communication with Burgundy, from whence there is a refort to it's fairs, and very often to it's weekly markets.
Prangin is noted for it's mineral waters, which are very much in requeft in the fummer feafon.
Yyerdun has a public granary, a flourifhing trade, and a fmall harbour, formed by a canal, which receives the Orbe, together with warehoufes, and a cuftom-houfe. It's lake is very convenient for tranfporting it's commodities. The inhabitants are generally in good circumftances, and had once a manufacture of filk.
At Moulton are four fairs in a year, but they are not near fo much frequented as they were formerly for a long time.
The people of the Pais de Vaux are folazy, that German peafants come hither every day to hurband their lands, and, either by taking farms, or by their good fervice to fuch as keep them in their own hands, they get a good deal of money. The chief product of the bailiwic of MORAT is wine, though it is none of the beft. They have cabbages of an extraordinary fize, of which they fend hundreds of cart-loads to Berne.
BERRY, a territory of Orleanois, near the center of France. This territory is bounded on the north by Orleanois, properly fo called; on the feaft by Nivernois; on the fouth by Bourbonois and Upper Marche; and, on the weft, by Poictou. The air here is very temperate, and the foil produces wheat, rye, and wine, which, in fome places, is not inferior to that of Burgundy; but, in other places, it is not by far fo good, and very weak. The paftures abound with fheep, the wool of which is very fine. This country produces alfo a great deal of hemp and flax. They fay that there are, in the province of Berry, feveral mines of iron and filver, but they are intirely neglected. There are quarries of ftone at half a league's diftance from Bourges, which are of great ufe. In the parifh of St Hilary, near Vierron, there is a mine of oker, which ferves for melting of metals, and for dyings, and which is of great ufe, there being but little of that mineral in the kingdom. They make here a great quantity of thick woolen cloth, calied, from this province, draps de Berry.
Bourges, though of large extent, is very thinly peopled, the reaton of which is, their having no manner of trade here ; Vol. I.

## B E R

which is owing, according to Monfieur La Martiniere, to a privilege granted by Lewis XI. to the inhabitants, by which every perion who has once bore the office of mayor or echer vin, or alderman, is reputed a gentleman; and, after that, are weak enough to defpife trade, which impoverifhes them. The citizens of Bourges have four great privileges, as Du Chefne informs us, 1. That their goods cannot be ronfifated. 2 They are free from garrifons and winter quarters. 3. Theip effates pay nothing to the king. 4. Thofe who poffers lord Thips are excmpted from the ban and arriere-ban, viz, frumz ferving in the kings armies, whether they bold immed atety from the crown, or mediately from fome other lord.
At the barony of Chateau-Neuf, the lord levies the talle, together with the king, upon all the cutizens, pearants, and inhabitants, the richert of whom are obliged to pay five pence each every year to the lord, and the others fomething !efis, according as they are able.
The trade of Mehun confifts in woul, flax, and other mer's chandizes, and they keep here two fairs every year.
The inhabitants of Vierron are the moft induftrous and mof laborious of the whole province. Their chief trade confilts in wood, and in woolen cloth and ferges, manufactured here.
Bols-Belle is an independent and fovercign principality, the lords of which have always enjoyed the rights and perogatives of fovereign princes, having caufed money to be coined in their own name, with their image famped upon it. They have alfo granted letters of grace, pardon, remiffion, and abolition. All thefe privileges have been confirmed by Henry the Great, Lewis XIII. and Lewis XIV. The city, therefore, with it's diftrict, are frec from tailles, gabelles, aids, and all kind of taxes.
Issoubon is divided into two parts by the river Theols, the lower of which is inhabited chiefy by merchants and tradefo men, The trade here confifts in catte, woolen cloths, and druggets, woven and knit hofe, and hats, manufactured in this city, and in the neighbourhood; but their chief trade confifts in timber, with which they fupply the adjacent countries. As the inhabitants have always diftinguifbed themfelves by their zeal and fidelity to the French kings, they are exenipt from the ban and arriere-ban, taille, and quartering of foldiers.
The territory of Chateau-Roux is one of the moft barren fpots of ground in all France, moft of the lands confifing of forefts, ponds, and heaths, which is not worth the while to cultivate. However, the wood of the forefts affords fuel to the forges; the fifh of the ponds is fold in Berry and Tpuraine ; and the heaths afford food for cattIe, of which they have here a great trade. There is, in this city, a manufactory of woollen cloth, which is one of the moft confiderable in the kingdom, and affords employment to above $10,0,00$ perfons, both within the town and in the neighbourhood,
The territory of Blanc, likewife, is very barren, but containg a great many woods and forges, and a valt number of ponds, Though the river Creufe be not navigable here, yet they uf it to fend down floats of timber to the neighbouring towns.
BERWICKSHIRE is bounded on the fouth with Tweed and Teviotdale; on the north by Lothian; on the weft by Tweedale; and, on the eaft, it is walhed by the German ocean. 'Tis the fouth-eaft fhire of all Scotland, being divided from the town of Berwick by the Bound-Rod, and from Northumberland by the river Tweed, which runs between them for about eight miles, and rifes out of the fame tract of hills, as the Clyde and the Anand. It runs fwift between hills through Tweedale foreft and Teviotdale; and, before it paffes into the ocean, has meafured 50 miles. Templeman's Survey, which divides it into Mers and Lauderdale, makes it $3^{\circ}$ miles in length, and 16 in breadth, with an area of 338 fquare miles, The General Atlas makes it 30 eaft and weft, and 22 where broadeft fouth and north, including Lauderdale.' The editor of Camden divides it into three parts viz. Mers, Lammermoor, and Lauderdale. He fays, the Mers is a pleafant low ground, open to the influence of the fun, and guarded from thorms by Lammer-moor: fo that 'tis a fruitful ioil, abounding with corn and pulfe, but efpeciaily hay.
Lammer-moor is a great tract of hills on the north fide of the fire, above 16 miles long and at leaft 6 in breadth, feeding multitudes of fheep and black cattle. In the fum-mer-time, 'tis particularly noted for paflurage'; and for plenty of partidges, moor-fowl, plover, dotterels, and other game; but the product of it's foil does not bear fuch a price as that of others, and therefore is not reckoned io good.
Lauderdale is a tract lying on each fide of the water of Lauder, abounding with pleafant vallies, hills, and woods, and well ftored with corn and paturage.
The fhire of Berwick, in general, is very fruitful in corn and grafs, abounds with theep, black cattle, and borfes, and has many feats of perfons of quality. The moff fruifful and populous parts are thofe that lie on the Tweed, and the leffer pulous parts are thole Whitewater, Blackwater, and the Eye. The fuel of the common people is turf and peat, but the gentry have coals from Northumberland. It is well fuppliẹd with fifh from the fea and it's sivers.

Duns, a burgh of barony, a pretty large populous town, of the beft trade in the county, and ftands on a rifing ground in the center of the fhire.
Eymouth, Aymouth, or Haymouth, a good fifhing town, the only port in the fhire for fhipping, at the mouth of the Eye, and has a weekly market.
Caldstream, or Coldstriam, a market-town clofe by the Tweed.
Greenlaw is a burgh of regality, with a weekly market, and B is the chief burgh of the fhire.
Eyton, or Aton, ftands on the fame river as Eyemouth, is a large pleafant village, and has an annual fair. The people here are as perfectly Scots, as if it was 100 miles north of Edinburgh.
Cockburn's-path, or Cobber's-path, ftands near the coaft, where it has fometimes a great herring-filhery. It has allo an annual fair.
BERYL, BERYLL, or BERYLLUS, a precious ftone, tranfparent like cryftal. It is found in the mines of the Indies, and is alfo to be met with on the banks of the Euphrates. There are feveral forts of beryls; they reckon even ten fpecies of it. The moft valuable are the beryl, the chryfoberyl, and the chryfoprafin.
The beryl inclines a little to a fea-green, whence it was called in Latin aqua marina, under which name we have mentioned it. To make it more fparkling and bright, it muft be cut facet-wife; for the polifhing gives it no brightnefs, after what manner foever it be cut.
The chryfoberyl is paler, and inclines fomewhat to a goldcolour.
The chryfopralin partakes more of the green.
Some think that the beryl is the diamond of the ancients; and it is certain, that fome modern jewellers, though very fkilful, have fometimes miftaken the one for the other.
There are fometimes fuch large pieces of beryl found, that they may ferve to make very fine vafes. It is faid there are great quantities of them in Cambaya, Martaban, Pegu, and the illand of Ceylon.
The properties of the beryl were very confiderable, according to the ancient naturalifts and philofophers. It was proper to make men avoid the fnares of their enemies; to raife the courage of the fearful; to cure the difeafes of the eyes, and the pains in the ftomach. At prefent it has none of thofe good qualities, becaufe people are no longer fimple enough to believe it has them.
Dr. Woodward, in his Methodical Difpofition of Foffils, printed at the end of his Natural Hiftory of the Earth, makes the beryl in the clafs of ftones, of the 2d Tpecies, 2d fort, and the n. II. among thofe, which have fine colours, and are tranfparent. That celebrated and learned Englighman obferves, that the beryl of the lapidaries is a fort of fine cornelian, more tranfparent than the common cornelian, and of a deeper red. That of the ancients was quite different; it was of a bluifh green, and is probably the fame with our aqua marina.
BESISTAN, or BERSTEN. Thus at Conftantinople, Adrianople, and in fome other towns within the Grand Signior's dominions, they call thofe places where the merchants have their Chops, and expofe their merchandizes to fale. Each fort of merchants have their particular befiftan, which muft alfo be underftood of the workmen, all thofe of the fame trade working in the fame place. Thefe befiftans are commonly large galleries, vaulted over, whofe gates are fhut every night. Sometimes the wardens and keepers of the befiftans will anfwer for the merchandizes, on paying them a very moderate perquifite for each thop.
There are two befiftans at Conftantinople, the old and the new one.
The old one was built in the year 1461, under the reign of Mahomet II. There are but few fine merchandizes in it. Here they fell all forts of weapons, efpecially fabres, as likewife horfe-harnefs, indifferent enough, though fome of it are inriched with filver, gold, and precious ftones.
The new befilian is defigned for all forts of merchandizes, and yet one hardly fees there any thing but the fineft and richeft works : as plate, furs, vefts, carpets, and ftuffs of gold, filver, filk, and goat's-hair ; nor are precious fones and porcelaine, or China wares, wanting there.
This befiftan, which is alfo called the great befiftan, is a round building, all of free-ftone. It has four gates, which are never opened but in the day-time. In the night a watch is locked up in it, for the fecurity of the fhops. Each branch of trade, or trading company, has a place affigned, out of which no perfon can fell, nor even expofe to fale the fame forts of merchandizes. The Englifh, French, and Dutch merchants, have their thops for drapery goods in this befiftan.
Merchandizes are very fafe in fuch places, the gates of which are always fhut betimes. The Turkifh merchants who have hops there, go and lie at their houles in the city: as for the Chriftians and the Jews, they retire in the evening beyond the water to the fuburb Pera, and return the next morning. See Bazar.
The befiftans of Adrianople are very fine, efpecially that
where the ftuffs are fold, and that in which are the thoemakers thops.
BESOAR. See Bezoar.
BESORCH, a coin of tin, or of fome alloyed metal, current at Ormus at the rate of about $\frac{7}{45}$ parts of a farthing fterling. Ten beforchs are worth one pays, 4 pays one fondis, 10 pay one chay, about 4 pence farthing and halt a farthing Englifh; 20 pays one mamoudi, 8 pence 3 farthings Englifh; 2 mamoudis I abaffi, or 17 pence half penny; 25 pays make latin; 5 larins a reale, or rixdollar; and 100 mamoudis a toman. They reckon at Ormus by tomans, as they do in Holland by pounds de grofs.
BETEL, a plant in great repute all over the eaft, efpecially in the lndies, where there is an incredible confumption and trade of it.
This plant, which is pretty much like the fhrub that bears the pepper, is fo weak, that it wants a prop to fupport it, as it grows up. Its leaves are like thofe of ivy, but more tender, and are foll of a red juice, which the people of the eafl imagine is very good to comfort the heart, to fatten the teeth, and to make the breath fweet and agreeable.
The Indians are continually eating, or rather chewing, the leaves of this plant, with flices of the arech-nut. It is this that renders their lips fo red, and their teeth of fo black a colour, which it is well known they prefer before the whitenefs of the teeth of the Europearis.
Monfieur Garcin afferts, that this is a miftake; the juice of the betel-leaves not being red: and that it is the arech nut alone, which, when chewed, renders the fittle red.
The trade of betel-léaves is very confiderable. A great number of fubftantial merchants are concerned in it, who keep feveral thips to tranfport that drug almoft over all the eaft, where it is fo much in ufe, that both the great men and the common people, the rich and the poor, are never without their box of betel. They offer fome of it to one another, whenever they meet; and it is a ceremony eftablifhed, as well among the men as among the women, to offer it to one another in all their vifits, and they would look upon it as an affront, either not to be regaled with it, or to refufe it, when offered. What renders this trade cafy, is the property which the betel-leaves have of keeping a great while good. See Areck.
BEURT-SCHEEPEN, or BEURT-SCHUYTEN, which may be tranflated into Englifh, turn-fhips, or turn-boats. Thus they call; at Amfterdam, thofe fhips that go to fea, or veffels or boats that fail only on rivers, or frefh water, and have the exclufive privilege to take in goods for feveral cities, both within and without the feven provinces. They are thus called, becaufe every mafter of a veffel is obliged to load and put off in his turn, for the place for which it is bound; which is regulated and fettled by the directors of the company of boatimen, or watermen.
The privileged places for the thips are, for France, Roan, and St. Vallory; for England, London; for Germany, Hamburgh and Bremen. There are alfo fuch veffels for Middleburg in Zealand, for moft of the towns in Brabant and Flanders, and for almoft all the cities in the feven provinces. This is extremely convenient for the merchants of Amfterdam, who have not merchandizes or goods enough to load a whole fhip or veffel, and who by paying freight, as it is regulated by the ordonnances, have, by thofe veffels, an opportunity of fending to all thofe places as many or as few merchandizes as they pleafe.
Every one of thefe veffels, or boats, has its fixed place in one of the canals of the city, or in the harbour; and cannot fet off but in its turn, and when it is fully loaded.
When a merchant has merchandizes enough to load one or more of thefe fhips or veffels, for one of thofe privileged places, he is at liberty to agree for the freight with the mafter of the flip or veffel, without conforming himfelf to the regulations; and he may chufe fuch fhips, and fuch mafters, or boatimen, as he pleafes, though it be not their turn to fet off, but he muft firf know from the fuperiors of the company, whether they will permit it; becaufe, in cafe the mafter or boatiman were not a burgher of Amfterdam, if another who was one, fhould offer himfelf, the latter would be preferred. Leave being given, the merchant who wants to load a veffel, ought firft to make his declaration to the commiflaries in tae following form:

Gentlemen, Commiffaries of the navigators without the country, I defire you to give leave to Mafter N. N. to load (for Roan for inftance) on condition that he fhall take in no merchandizes but for me alone.

At Amfterdam the -, \&c. I. P. R.
This declaration is given to the mafier or boatfman of the veffel which has been freighted, or which is defigned to be freighted; the mafter or boatfman carries it to the commiffaries, who thereupon deliver the permit or leave to him. In cafe of a refufal, which happens but feldom, the only remedy is to look for another mafler or boatfman, for whom the commiflaries may have more kindnefs or indulgence, it not being fafe to load without leave; for thefe gentlemen are very jea-

## B E U

lous of their privileges; befides that, they find fome profit, when the merchandizes pafs through their hands.
That the reader may have a more accurate notion of thofe turn-fhips, and turn-boats, or veffels, we fhall add here an extract of the ordonnance of police, which has been made for the beurt-fcheepen, or turn-fhips, which are privileged for Roan, and for London.
An ordonnance for thofe thips which may fail by turns for Roan and for London.
Firft, No veflel which is. in a condition to fail out of there countries, fhall load for the above-mentioned ports, but in its turn; and fuch vefle's, whofe mafters are defrous to fall by turns, muft be well provided with anchors, cables, fails, \&c. that the merchandizes may be tranfported dry and well conditioned : the whole at the difcretion of the fuperiors of the company of navigators out of the country, or of others who may be appointed to take cognizance of thefe matters. 2. Every other week two weflels Thall be loaded for London, and every twenty days two veffels for Roan.
3. Thofe for London fhall come to the key on the Monday, the one to remain there till the Saturday following, that is to fay, 6 days: and the other to fail 7 days after she departure of the firft, that is to fay, 14 days after it fhail have been put in turn.
4. The firt of thofe for Roan fhall depart from the key on the evening of the loth day after its coming to it; and the other fhall depart ten days after the firlt, that is to fay, twenty days after it came to the key.
5. The faid veffels fhall fet fail the fecond day after their leaving the key, and others thall come in their flead to obferve the fame order, under a penalty of 25 guilders for fuch mafters whofe turn it fhall be to come to the key, and who hall neglect it.
6. In winter, thofe veffels fhall have two days more to load, than in fummer; that is to fay, thofe for London eight days, and thofe for Roan twelve. The fummer fhall be reckoned to begin on the firf of March, and continue to the firft of October: and the winter, from the firft of October to the firft of March.
7. The veffels, after departing from the key, fhall not load any merchandize, under the penalty of a fine of 6 guilders, for every parcel or piece loaded, and being deprived of their turn a whole year for the firft time, and the fame penalty and arbitrary punifhment for the fecond.
8. In cafe the veffels, or one of them, get their full lading before the time limited, "they fhall be obliged to depart immediately from the key, and another to be put to it directly, whofe days of loading thall not begin to be reckoned from the day, on which the time of that which it fucceeds, was to end.
. It fhall be lawful for fuch mafters as fhall have continued at the key during their limited turn, without being able to get their full lading, to buy merchandizes for their own account, in order to compleat their cargo; but this however ought not in the lealt to delay their departure, nor to prejudice the mercbandizes already hipped, under the penalty of paying a fine of 25 guilders. Thofe mafters, who thall thus have bought merchandizes, fhall pay no freight for them to their partners̀, if they have any.
10. 1 wo merchants or factors may freight a veffel in the city for either of the above-mentioned ports, at fuch a price as they thall agree for with the mafter. But the mafter fhall not load any other merchandizes, but thofe of the faid merchants or factors, under the fame penalty as above.
in. The mafters, whofe turn it fhall be to load, fhall be obliged to take in, without difinction, all the merchandizes that thall be brought to their fhips, even though they Thould have already promifed to take in others: the firit that arrive, ought to be the firft loaded.
12. 'The mater's who fail by turns, fhall not undertake any vojage, nor ferve as tender, during eight days before theur turn comes; but fhall be obliged to bring their veffels to the key, four days before their time of loading begins; and place their veliel next to that to which they are to fucceed, that they may help each other, under the penalty of 50 guilders fine, and lofing their turn for a whole year. But in cafe a mafter, without any fault of his, cannot take his turn, the other mafters fhall draw lots, who fhall take his place: and he on whom the lot falls, fhall be obliged to take the other's place, under the penalty of 25 guilders fine, and lofing his turn for a year.
13. The mafters who fhall have had their turn for Roan, thall have it afterwards for London. Which is to be underftond alfo of thofe who fhall have had their turn for London, and who thall load afterwards for Roan.
14. The two mafters who thall come to the key at the fame time to load for London, fhall divide their freight in common, which thofe for Roan fhall alfo do between themfelves. And, for want of a good account in one of them, he who fhall be guilty thall pay a fine of 50 guilders, and lofe his turn for three years.
15. No mafter of a veffel fhall fail by turns, till be has been four years a burgher of Amiterdam.
16. Thofe veffels which fhall be fet to the key together for loading, fhall draw lots which fhail fail frit.
17. The malters of veffels, which fhall fail by turns to Zean land, to Antwerp, or to other places between the lands, fhall have no turn to fail to London or Roan, unlefs they quit and renounce their turns of failing to places between the lands. 18. The mafters of veffels which fail by turns, tha'I be obliged to keep near their veffels from morning till night, except to wards noon, when they fhall have liberty to go to the exchange. And if any matter, whilf his thip is loading, is found to do otherwife, or to drink in a public houfe or elfewhere, he thall pay a fine of 3 guilders for every fuch offence.
I9. The lords of the magiftracy thall appoint a perfon to have the infpection over the keys, where thofe fhips thall be, that are to fail by turns for London and Roan, and to make them depart at the proper timic.
20. One third part of the fines hall go to the lord, one third to the poor, and one third to the informer.
2I. And, in order that the merchants may know what they are to depend upon for the payment of the freight of thofe veffels which fhall lail by turns, the faid lords have ordered by thefe prefents, that fuch freight fhall be paid according to the following tariff or rate, the mafters being at liberty to take lefs, but not more, under the penalty of paying a fine of 25 guilders, and lofing their turn for a year.
22. If any merchandizes be fhipped for Roan or for London, the freight of which is not fet down in the faid tariff, if it be for Roan, and the freight be found in the tariff of London, or on the contrary, if it be for London, and the freight be found in the tariff of Roan, there fhall be paid one third more.
Finally, the mafters thall pay to the infpector, every time before their departure, namely, for veffels of above thres lafts, three guilders; and for thofe under that number two guilders, upon pain of paying double on their return.

Refolved the 19th of February, 161 r .
This fame ordonnance contains alfo an order, according to which the mafters of thofe veffels which fail by turns for London and for Roan, ought to regulate themfelves with regard to the bignefs or capacioufnefs of fuch veffels, in order to divide the freight between them.
A veffel, from 26 to $3^{1}$ lafts, is reckoned for 30 lafts; from $3^{1}$ to 36 , for 35 ; from 36 to 41 , for 40 ; and from 41 to 46 and above, for 45 lafts.
There are a great many fuch other ordonnances for the freight of flips failing to Hamburgh, Zealand, Flanders, and within the United Provinces. The ordonnance relating to Hamburgh, which is dated the 27th of April, 1613 , has this remarkable particular, That in it's tariff there is a differenice made between the freight in fummer, and the freight in winter; as alfo between the freight paid from Amfterdam to Hamburgh, and that from Hamburgh to Amfterdam. The reader may fee that tariff, and thofe for London and Roan, in the Traité du negoce d'Amfterdam (Treatife of the trade of Amfterdam) publifhed in the year 1722 , by Monf. S. P. Ricard. We fhall only add here, with regard to thefe three tariffs, that, in that for Roan, the merchandizes are rated in guilders, ftivers, and pennings; in that for London, in pounds, fillings, and pence ferling; and in that for Hamburgh, in mares, fols and pence lubs, with refpect to thips failing from Amfterdam; and in guilders and ftivers, with refpect to thofe returning thither.
The French have always complained of thefe beurt-fcheepen, for Dunkirk, St. Valery, and Roan; and feem to be pretty well grounded in their complaints. For,
I. If there be a Frenchman who defires to load his thip, they make him wait till three Dutch veffels have failed before bim : whereupon it is to be obferved, that, every fhip having a fortnight's time to take in its lading, the Frenchman's turn is put off for fix weeks.
2. That it is not lawful for the merchant, to whom the Frenchman is directed, to difpatch him himfelf before the limited time, though he fhould give him half his lading; for he cannot do it, unlefs he gives him his full lading ; which can never be the cafe, becaufe from Holland they fend into Picardy and Normandy nothing but fine merchandizes, excepting however pot-afhes, a fort of afhes which come from the Black Sea: which often obliges the French to return empty, or to fail for fome other port.
3. The directors of the beurt, or turns, know fo well how to promote the advantage of their own nation, that within the interval of fourteen days, during which the Frenchman ftays to take in his cargo, there is fearce any thing left for him, the merchandizes which are to be fhipped off being always kept for the Dutchman, whofe turn comes after the Frenchman's.
Notwithftanding there are many general benefits attend thefe regulations, yet they are not without fome inconveniencies: as veffels mult thus be joaded by turns, the freight of merchandizes is always kept up at a pretty high rate. For it is obferved, that a bale of pepper, or of other merchandize, pays, from Amfterdam to Roan, twice or thrice as much as from Amfterdam to Bayonne, and that for no other reafon,
but becaufe thips are loaded by turns for Roan, and not for Bayonne ; which cannot but proportionahly raife the price of merchandizes coming from Holland, and imported into France by Picardy and Normandy.
BEZISTAN. See the article Besistan
BEZOAR, or BEZOARD, a medicinal fone, which is réckoned a fovereign antidote againft poifon, and an excellent cardiac. It is allo prefribed againft a fwimming in the head, the epileply, a palpitation of the heart, the jaundice, the cholis, and fuch a vaft number of other diftempers, that it will doubtlefs be fhorter to fay in general, that it is efteemed by fome empirics a kind of panacea, or univerfal remedy, proper to cure all forts of difeafes. It is, perhaps, as much it's fcarcity, as it's real properties, which has gained it fo high a reputation. However, people begin now to value it lefs, and there are fome able.phyficians, who do not efteem it at all.
There are feveral forts of bezoars, and, among others, the oriental, the occidental, and that of Germany.
The oriental bezoar is reckoned the beft, and there is plenty, enough of it in feveral parts of the Indies, efpecially in the kingdoms of Golconda and Cananor. It is found there, mixed with the dung of an animal called pazan, in whofe belly that fone is formed. The buds of a certain fhrub which it browfes, are, as it were, the feed of the bezoar, which grows round about that food, commonly of the bignefs of an acorn, or of a hafle-nut, and fometimes of the fize of a pidgeon'segg.
This fone has feveral thining fkins or coats, like an onion; they are fometimes of a blood-colour, but pretty often of a pale yellow, brown and clear green, and alfo of the colvur of honey.
The number of bezoars, which each of thefe animals produces, is not certain; fome have none at all, fome have but one, and others two, three, even to fix.
The bigger the bezoar ftone is, the dearer it fells, the price rifing proportionably like that of diamonds. Thofe of an ounce weight are fold in the Indies for 100 French livres; and one of four ounces and a quarter was fold for 2000 livres.
The reader would perhaps be glad to know what fort of animal it is, in whole belly the bezoar is found ; and we fhould indeed have begun this article, with a defcription of it: but the feveral writers, who boaft that they have feen thofe animals, and even that they have had fome' of them in their poffeffion, fpeak fo inconfiftently of them, that it is very difficult to determine a matter of fact between authors, who alledge their own eyes as vouchers for what they affert, and yet difagree among themfelves.
What feems to be moft certain, becaufe all authors agree in it, is, that this animal is a kind of wild goat, but which the Indians know how to tame, in order to make an advantage of their bezoar.
The oriental bezoar muft be cholen fhining, of a fcent fomething like that of ambergreafe, foft to the touch, and in large and fine bits. As for their figure, it is no matter what it is, nor of what colour the bits are, but they are molt commonly of an olive-colour.
It is eafy to adulterate the bezoar, but then it is not lefs eafy to difcover the fraud. Here follow feveral methods to try it. 1. Let it foak three or four hours in water that is but lukewarm : if the water does not change it's colour, and the ftone lofes nothing of it's weight, it is a fign that the bezoar is without mixture.
2. You may found it with a fharp red-hot iron: if it enters the fone, and makes it fry, the ftone is factitious.
3. If, by rubbing it over a paper fmeared with cerufe, or white lead, it leaves a yellow teint upon it, one may be certain that it is good and genuine.
The occidental bezoar, or bezoar of Peru, differs very much from the former. It is to be found in the bellies of feveral animals peculiar to that part of America. In fome the bezoar is of the fize of a hafle-nut, in others it is as big as a walnut: there are even fome bezoars of the bignefs of a hen's egg. There is no lefs difference in their figure than in their fize. Some are oval; fome round, and others almoft flat. As for their colour, it is either dark, or of an afh colour.
This bezoar is fcaly, like the oriental fort, but the fcales are much thicker. When it is broke, one would think it has been fublimated, becaufe of the many fmall thining needles of which it feems to be compored : but, on the outfide, it is very fmooth and even.
The animals in which this ftone is formed are the guanacos, the iachos, the vicunnas, and the taraguas. That of the laft is moft efteemed, and the taragua is pretty much like the animal which produces the oriental bezoar, being like the goat in fize, and of the thape of a fheep.
Mr. Wafer (in the third volume of Dampier's Voyages, p. 383, \&c.) gives us a curious account of an animal which produces bezoar, and is found in the inle of Mocha, which lies overagainit the city of Chiti, about 30 degrees 20 minutes fouth latitude. It is 2 fort of cheep, which the inhabitants call cornerade terra. This creature is about 13 hands and a half high at the back, and is a very ftately beaft. Thefe fheep are
are fo tame, fays our author, that we frequently ufed to bride one of them, upon whole back two of the luftieft men would ride at once round the inand, to drive the reft to the fold. His ordinary pace is either an amble or a good hand-gallop; nor does he care for going any other pace, during the time the rider is upon his back. His mouth is like that of a hare; and the hair-lip above opens as well as the main lips, when he bites the grafs, which he does very near. His, head is much like an antelope's, but they had no horns, when Mr. Wafer was there: yet his people found very large horns, much twifted, in the form of a fnail-hell, which they fuppofe thefe animals had fhed; there lay many of them fcattering upon the fandy bays. The ears of this animal refemble thofe of an afs, His neck is fmall, refembling a camel's: He carries his head bending, and very ftately, like a fwan: is full-chefted, like a horfe, and has his loins much like a well haped greybound. His bu tocks refemble thofe of a full-grown deer, and he has much fuch a tail. He is cloven footed, like a theep, but, on the infide of each foot, has a farge claw, bigger than one's finger, but fharp, and refembling thofe of an eagle. Thefe claws ftand about two inches above the divifion of the hoof, and they ferve him in climbing rocks, holding faft by whatever they bear againft. His flefh ears as like mutton as can be. He bears wool of 12 or 14 inches long upon his belly, but it is fhorter on the back, fheggy, and but inclining to a curl. It is an innocent and very ferviceable beaft, fit for any drudgery. Of thefe Mr . Wafer's men killed 43; out of the maw of one of which they took 13 bezoar-ftones, of which fome were ragged, and of feveral forms; fome long, refembling coral, fome round, and fome oval, but all green, when taken out of the maw : yet, by long keeping they turned of an afh colour. The Spaniards told Mr. Wafer's people that thele creatures are extraordinarily ferviceable to them at the mines of Potofi, which lie a great way up in the country, in bringing the filver from thence to the cities that lie towards the fea, between which cities and the mines are fuch cragged ways and dangerous precipices, that it were almoft impoffible for any man, or any other beaft, to carry it. But, thefe theep being laden, and led to the precipices, their mafter leaves them there to themfelves, for above 16 leagues, and never meets them 'till he himfelf has alfo ferched a compals about 57 leagues round. This their furenefs of foot confifts folely in their aforefaid claws, by which they hold themfelves fo fart upon the leaft footing, that they can go where no other beaft can.
The German bezoar, which fome call cow's-eggs, is found in the ventricle, or ftomach, of fome cows, but more particularly in that of the hamoys, a kind of wild goat. Some of thefe ftones weigh 18 ounces: but this fort of bezoar is not much valued.
Befides thefe three forts of bezoar, which are not very fcarce in France, or elfewhere, and are to be had at all the druggilts and apothecaries fhops, the curious have three other forts in their clofets, whofe fcarcity have raifed them to an exorbitant price. Thefe are the hog, or boar bezoar, the Malacea, or porcupine bezoar, and the monkey bezoar.
The hog, or boar bezoar, called by the Dutch pedro de porco, and by the Portugueze, who firft brought them into Earope, pedro de vaffar, is found in the gall of fome Indian boars. It's bignefs, or fize, feldom exceeds that of a filberd, which it refembles pretty much in figure, though more irregular, As to it's colour, it has no fixed one, though it is moft commonly white, inclining fomewhat to green. Finally, it is on the fide flacked, as it were, and foft to the touch.
When there bezoars arrive at Amfterdam, the number of which feldom exceeds five or fix, in the richeft cargoes that come from the Eaft-Indies, they are bought for 3 or 400 guilders a piece, and even for more, not by merchants to trade with, and get a profit upon them, but by the wealthief citizens, either to make prefents of them to perfons of diftinction, or to keep in their families, as a very great treafure, which they tranfmit to their children by a kind of entail.
It is incredible how many virtues, or properties, the Indians afcribe to this bezoar, which, among them, they call maftica de foho; and thofe of the kingdom of Malacca, where it is moft commonly found, efteem it more than the oriental bezoar; not fo much becaufe they think it the beft antidote in the world againft all forts of poifons, but becaufe it is a fovereign remedy for curing the mordoxé, a kind of diftemper to which they are very much fubject, and which is not leis dangerous in that part of Afia than the plague is in Europe.
The other properties which the Indians afcribe to the hog or boar bezoar, are as follow: they fay it is admirable for curing all malignant fevers, as welt as the fmall-pox, and all diftempers incident to women who are not with child; but it is known, by experience, that it makes thofe pregnant women mifcarry who are indifcreet enough to ufe it.
This bezoar muft be fteeped in a glafs of water, or wine, 'till the liquor has acquired a bitterifh tafte, which is not difagreeable. This liquor muft be taken in the morning fafting; though upon an urgent occafion, it may be drank at any time of the day.
To make that infufion more eafily, as alfo to preferve fo precious a fone, mont of thofe who have any, caule is to be ine:

## BI G

clofed in a round golden box, futl of holes, to which is fixed a fanall chain of the lame metal, by which they keep it fufpended in the liquor, when they want to ufe it.
The bezoars of porcupines and monkies differ from the boar's in nothing but their being found in the galls of thofe two animals, whereas the other is found in the wild boar's gall; unimals, whereas the other is found in the wild boar's gall; un-
lefs we Chould fay, with Monfieur Tavernier, that the two former, which he calls Malacca ftones, are not taken out of the galls, but out of the heads, of the porcupines and monkies, and that thefe are the bezoars on which the Malayans fet fo high a value, that they never fuffer any to be carried out of their country, unlefs it be to make prefents to ambaffadors, or even to fome of the greatelt kings of the Indies.
Some affert, that the bezoar of Siam, which is fo much efteemed on account of it's rare and excellent qualities, is a fone, found in a monkey, and that it is to be met with in that kingdom, as well as in that of Malacca, to which alone travellers had afcribed it, 'till the Chevalier de Chamont was fent ambaffador from France to Siam, in the year 1686.
Upon the whole, the properties, figure, and colour of thofe three bezoars are fo much alike, that there is no great danger, though a perfon thould miftake the one for the other, or even think it is one and the fame fone, under three different names.
We may obferve, in general, with regard to all thofe bezoarfones, that there are few animals in whofe bowels they are not found; and people feidon fail to afcribe to them very extraordinary properties, which, perhaps, they never had ; and it is, very probable, after that manner that all the bezoars, both ancient and modern, mentioned in this article; acquired the reputation they have,
We thall not feak here of the bezoars of fome whimfical chy. mifts; we thall only intimate what they call animal-bezoar, which is a powder of vipers, and bezoardicum Joviale, or bezoar of Jupiter, is nothing but block-tin, feveral times calcined.
Ox Bezoar, otherwife called gall-fone, is a yellowifh tone, found in the ox's gall-bladder. The phyficians ufe it fometimes in medicine, and the painters in miniatute employ it in feveral cafts of yellow.
BIA, Thus the Siamefe call thofe frall white thells which fome from the Maldives, and which are called coris, or cowries, almoft throughout the Eaft-Indies, where they ferve for fonall coin, or money. They are alfo current in feveral parts of the African coift.
BICHET, a quantity or meafure of corn, which differs according to the places where it is ufod. The bicher is not a wooden meafure, as the minot at Paris, or the bufhel at London: it is a conpound of feveral certain meafures,
At Torpus in Burgundy, the bichet is of 16 mealures, or buthels of that province, which amount to fomething above 19 bulhels of Paris.
The bichet of Beaune, as well as that of Tornus, is divided into I 6 meafures, or buhhels, but thefe meafures amount but to 78 bufbels of Paris.
At Verdun the bichet is compofed of 8 meafures, or buihels, of the cotmery, which at Paris make 15 bufhels.
The bichet of Chalons on the Sáome contains 8 meafures, which make 14 buffels at Paris, equal to the quarter of Brefle,
In fome other places of France, and particularly at Lyons, the buthel is called bicher, though very different from the other bichets mentioned above.
BIDON, a liquid meafure, containing about 5 pints of Paris, that is, about 5 quarts Englifh wine meafure. It is feldom ufed but among (hip's crews. The wine defigned for every mefs of failors is put into a bidon, which is a kind of wooden cafks, bound with fat iron hoops.
BIGONTIA in Italian, BIGON in French, a liquid meafure ufed at Venice. It is the fourth part of the amphora, and one half of the botté, Four quarts, or quartons, make a bigot, and four tifchanfera a quart. See VENICE for their meafures reduced to the Englinh flandard.
BIGORRE, the fouth divifion of the principality of Gafcony in France, is fituated almoft intirely in the Pyrenean mounains, which feparate it from Arragon on the fouth; on the eaft it is bounded by Couferans and Comminges; on the north by the mountains of Armagnac ; and, on the weft, by Berne. The mountains here are faid to have mines of capper, but they are not wrought.
Tarbe, or Travia, is fituated in a fruifful plain, on the banks of the river Adour, 12 leagues diftant from Auch to the fouth, and 6 from Pau to the ealt.
Bangeres is a city remarkable for it's feveral baths, within this c:ty and it's neighbourhood, to which people refort twice a year, viz. in the fpring and in autumn.
Barege is a village alfo remarkable for it's baths, and a great refort of company, There aite there four baths, of different degrees of heat. The firt is called the great bath, and confifts of two frings of clear water, the fmell whereof is like that of the mud of the fea, and is very hot.
When you expofe filver and copper over the fteam of this bath, the filver becomes immediately red, and then black, as the copper alfo does. The alteration is quicker ftill, when you plange there metals into the water, whether it be at the fpring, or even when the water is cold, and taken the day before. The
Ypl, I.
water of the fecond bath is of the fame nature, but nof chita fo hot, becaule the pipe through which it is carried into the common refervoir, is longer than that through which the water of the great bath runs, and is made of narble, whereas the other is of iron. The water of the thied is lefs hot ftill $;$ and that of the fourth, called the round bath, is but luke-warm and very much weakened by a mixture of water from fome cold frings. Thefe baths are reckoned very good for the cuse of theumatic pains, and other diftempers.

## REMARKS,

The eftates of many gentlemen affording variety of mineral fprings, which occafion great reforts of people, and prove no inconfiderable advantage to fuch eftates, as well as to the towns and cities wherein they bappen to be difcovered; the practice of bathing, and likewife mineral water felling for drinking, are become a fpecies of traffic, For a gentleman who converts a mineral fpring upon his lands into a commodious bath, may be faid to trade in the virtues of his water and, if be fells them, he becomes a kind of dealer in mineral liquors.
On thefe confiderations, it may not be altogether ufelefs to obferve, that, fince the variety of baths in England, and in many other parts of the world, have turned to fo good an act count to their proprietors, and have tended greatly to enrich particular towns and cities adjacent to them, it concerns the landed gentleman to know and difcover whether his eftate happens to afford any falubrious fpring of this kind, and to, judge whether any adyantage is to be made of it.
To which end, it is requifice (as I have obferved on ather oca cafions) that dand proprietors fhould be fo much of the philofopber as to be able themfelves to make a proper judgment of the various forts of waters, as well as of whatoever elfo their eftates may afford.
Wherefore it may be very acceptable, inftead of difagreeable ${ }_{2}$ to many of the gentlemen of this kingdom, to find, in a Dictionary of Commerce, whatever has a tendency to the improvement of their eftates, for the benefit of their families which are often very large, and require better provifion than they are frequently able to make for them: whereas, could they be prevailed on to caft an eye upon this work, we flatter ourfelves that they would experience it to turn to no lefs good account to them than to traders in general, And as the land, as well as the fea, is the grand fource of trafficable productions, we conceive it perfeety compatible with a work of this nature to promote the intereft of land in this thape, in conjundion with that of trade in athers.
The method of examining mineral waters for drinking, \&c. 1. To half a common wine glafs of pyrmont water, was added a dram of fyrup of violets; whereby a greenifh colour was produced. 2. To a like quantity of the fame water, were add. ed a few grains of frraped gails; and, firft, a purple, then a blackifh colour, prefently enfued. 3. A quantity of the fame water was evaporated, and a mali proportion of an ochry fubftance was left behind: 4. A glafs of the fame water was feg cold in the receiver of the air-pump, and found, upon withdrawing the external air, that the water fparkled violently, and difcharged a numerous quantity of fmall bubbles at it's furface, like what happens in the conflict of an acid and alkaline liquor.
This experiment holds in all the cales of chalybeate waters only, and not of mineral waters in general, By mineral waters in general are meant all thofe wherein any medicinal virtues, befides thofe of common water, are found. Thefe are of various kinds; they may be confidered thence under the general titles, of chalybeate, purgative, and alterative.
The more ufeful and commodious additions for examining thefe three kinds of mineral waters, are galls, fyrup of violets, and oil of tartar per deliquium.
Galls difcover in them any fmall proportion of vitriol, or dife folved iron, as having the property of immediately ftriking a purple, or black colour, in all waters where any fuch fubflance is lodged.
Syrup of violets, in the fame manner difcovers any fmall predominancy of an acid or alkalit therein, by changing the water red, if an acid, and green, if alkali prefides.
Oit of tartar difcovers any finall proportion of earthy-matter, lefs capable of diffolving in water than that $\mathrm{f}_{1}$ lt, by precipitating fuch earthy matter, in form of a white cloud, to the bottom of the containing glafs, where it collects, and appears like a fubtile white powder.
-Thefe particulars may be fhewn, and proved fatisfaetorily, by adding to pure water a little of a known acid, alk ali, diffolved mron, and fubtile earth, or a fine light fediment of an earthy water; applying the fyrup of violers, galls, and oil of tartar refpectively.
Suppofe, therefore, any unexperienced water to be examined; firt, drop into it a little fyrup of violets, and, if this does not alter it's colour, but cantinues it's full natural bluenefs, the water is neither acid nor alkaline. If gall do not turn the water black, it is not irony, or vitriolic ; and, if oil of tattar does not precipitate a white powder, the water bolds no confiderable proportion of earthy matter,

Thefe experiments admit of great enlargements, by mieans of many other additions, capable of caufing a change of colour, or a precipitation, in waters, according as they are impregnated with matters of certain kinds. Thus a folution of filver, by caufing a thicknefs, or light precipitation, difcovers a minute proportion of fea-falt contained in waters; and there is fcarce a falt on earth, or a mineral, hitherto known, but the induftry of the experimental philofopher has found ways of difcovering if it be contained in any common or mineral water; efpecially, if to this we add the ufe of evaporation, or bringing the folid contents of fuch waters to a dry form. So that, if this whole affair was to be properly conducted, we apprehend it might, in a fhort time, terminate in a certain difcovery of the contents of all the mineral waters of the kingdom, to the great advantage of ordinary life, a confiderable improvement in the art of medicine, and many other mechanical arts and trades, depending upon the proper choice and ufe of waters. Thefe things are remarked here, with a view only to apprife the country gentlemen of our intention to omit nothing effential that may have any tendency to the difcovery of whatever may turn to their private advantage. For more matter on this head, fee the article Waters, chalybeate, purgative, and alterative.
BILL fignifies a paper, either written or printed, in very large characters, which is pofted up in fome open and public place, to give notice of the fale of any merchandize or thip, or of the failing of any veffel into foreign parts. The latter ought to mention the places where fuch veffels are bound, and thofe where they are to touch by the way, as alfo of what burden they are, how many guns they carry, and how many men they bave on board. It is alfo by bills pofted up, that the trading companies acquaint the public with the quantity and quality of the ftuffs, linnens, metals, drugs, fpices, and other effects, which their hips have brought home. They generalIy mention in thofe bills the places where fuch hips are arrived, the day of the fale, and often, alfo, the conditions of it. In a word, there are few things in commerce for which traders are not fometimes obliged to have bills pofted up, if it were only to give notice of the new manufactures which they undertake to fet up, or even only to let the public know that they have changed their dwelling-place, in order to preferve their cuflomers.
No man is at liberty to poft up a bill at Paris on any account whatfoever, without firf obtaining leave from the lieutenant of the police, or from fuperior judges, according to the nature of the cafe.
Though fuch bills be alfo ufed in England, yet printed bills are often handed about for the abovementioned purpofes; and the great conveniency of advertifing in the public news-papers makes thofe bills lefs neceflary here than in other countries.
Bill, in trade, both wholefale and retale, as alfo among tradefpeople and workmen, fignifies an account of merchandizes or goods delivered to a perfon, or of work done for one.
In thofe bills muft be fet down the fums of money received on account, which ought to be deducted from the fum total.
In France, agreeably to the feventh and eighth articles of the firft title of the ordonnance of March 1673, the bills of merchants ought to be fettled within a year after the delivery of the merchandizes, and the bills of workmen within fix months after the delivery, or performance, of the work, otherwife exceptions might be made at law by the buyer, who, in fuch cafe, may refufe payment: but, in that cafe, the merchant, or workman, may caufe the debtors to be examined, and oblige them to declare upon oath whether or not they have paid for fuch merchandizes or works, according to the tenth article of the fame title of the abovementioned ordonnance.
Bills fettled, are fuch bills at the botom of which they to whom the merchandizes, or works have been delivered, acknowledge that they have received them, that they are fatiffied with the price, and promife to pay it, whether the time when payment is to be made be exprefled or not.
As foon as the bills are thus fettled, or that there is a promife to pay for the mercbandizes, \&c. the merchants and tradermen are fecure againf all exceptions at law, and may in France claim their debts, even during 30 years.
Bill, in commerce, is alfo a common obligation, or engagement, given by one man to another. It is fomerimes with a penalty, and fometimes without a penalty, though the latter is more commonly ufed. By a bill is ordinarily underitood a fingle bond, without a condition; and it was formerly the fame with an obligation, fave only that it was called a bill, when in Englifh, and an obligation, when in Latin.
A bill has been defined to be a writing, wherein one man is bound to another to pay a fum of money, on a day that is future, or prefently on demand, according to the agreement of the parties at the time it is entered into, and the dealings between them : and it is divided into feveral forts, as a bill that is fingle, a bill that is penal, \&ic. When a bill of rool. is to be paid on demand, it is a debt prefently, and there needs no actual demand; and a fingle obligation, or bill, upon the fealing and delivery, is debitum in prefenti, a prefent debt, though folvendum in futuro, to be paid in the time to come. On a collateral promife to pay money on demand, there muft be a feccial demand; but between the parties it is a debt, and
faid to be fufficiently demanded by the action. It is otherwife where the money is to be paid to a third perfon, or where there is a penalty. If a perfon acknowledge himfelf by bill obligatory to be indebted to another in the fum of 501 . and, by the fame bill, binds himfelf and his heirs in 100 l. and fays not to whom he is bound, it fhould be intended he is bound to the perfon to whom the bill is made. A bill obligatory written in a book, with the party's hand and feal to it, is good; and, if a man makes a bill thus, I do owe, and promife to pay, to A B, 501 . \&\%c. for payment thereof I bind myfelf to $C D$, another perfon; it is good, by the words of the firft part, and the words obligatory to another perifon are void. A perfon fays by his deed, Memorandum, That I A B have received of CD the fum of 201 , which I promife to pay to EF. In witnefs whereof I have hereunto fet my feal, \&c. Or, if the bill be, I fhall pay to CD 201. in witnefs, \&ic. and the fame be fealed: or, if it runs as follows, I owe CD 20 l . to be paid at, \&c. or, 1 had of CD, 20 I . \&c, to be repard him again: or, I A B do bind myfelf to CD , that he thall receive 20 . \&c. all thefe are faid to be obligatory.

## Form of a fingle bill for money.

Know all men by thefe prefents, That I A B, of, \&c, do owe, and am indebted to C D , of, 8 cc . the fum of fifty pounds of lawful money of Great-Eritain, which I promife to pay unto the faid CD, his executors, adminiffrators, or affigns, at or upon, the firft day of October next enfuing the date of thefe prefents. In witnefs whereof I hereunto fet my hand and feal, the roth day of Auguft, Anno Domini 1750.

## A penal bill for payment of money.

Know all men by thefe prefents, That I A B, of, \&c. do owe unto CD, of, \&c. the fum of one hundred pounds of lawful money of Great-Britain, to be paid unto the faid CD, his executors, adminiftrators, or afligns, on, \&c. next enfuing the date hereof. For which payment well and truly to be made I bind myfelf, my heirs, executors, and adminiftrators, to the faid CD, his executors, adminiftrators, and affigns, in two hundred pounds in like lawful money, firmly by thefe prefents. In witnefs, \&c.
Bill of Credit, is a bill which a merchant, or banker, gives to a perfon whom he can truft, impowering him to receive money from the faid merchant, or banker's correfpondents in foreign countries. It is generally in the following form :

- This prefent writing witneffes that IA B, of London, mer-- chant (or banker) do undertake to, or with C D, of, \&c. - merchant, his executors and adminiflrators, that, if the - faid CD do deliver, or caufe to be delivered, unto E F, of - \&c. or to his ufe, any fum or fums of money, amounting - to the fum of, \&c. pounds fterling of lawful Britifh money - (or any fum or fums of money, as the faid EF thall have 6 occafion for) and fhall take a bill under the hand and feal of ' the faid EF, confeffing and fhewing the certainty thereof; ' that then I, my executors and adminiftrators, having the - fame bill delivered to me or them, hall and will imme-- diately, upon the receipt of the fame, pay, or caufe to be 6 paid, unto the faid CD, his executors or affigns, all fuch - fums of money as hall be contained in the faid bill, at, \&c. - For which payment, in manner and form aforefaid, I bind - myfelf, my executors, adminiftrators, and affigns, by thefe 'prefents. In witnefs, \&c.'
Though bills of credit be different from bills of exchange, yet they enjoy the fame privileges, for the money paid in confequence of them is recoverable by law.
A merchant, or banker, ought to be very well acquainted with the characters of thofe to whom he gives letters of credit, efpecially if the fum be not limited. It is advifeable, therefore, as much as it is poffible, to determine the fum, that a perfon may exaclly know what engagement he enters into.
There is another caution to be obferved, which is, to acquaint the correfpondents who are to furnifh the rnonev, with the departure of him who is to receive it, and to defribe his perfon as accurately as can be, or even to agree about fome peculiar word or fentence, by which the correfpondents may know that the perfon who applies to them for moncy is really the identical perfon meant: for he may be killed, and his bill of credit ftolen, whereby another might perfonate him, and receive the money in his flead, which has frequently happened.
Bill of Entry, is an account of the goods and merchandizes entered at the cuftom-houfe, both inwards and outwards, in which is expreffed the merchant exporting or importing, the quantity of merchandize, and the divers ipecies thereot, and whither tranfported, or from whence. See examples bereof at the end of the letter $A$, where the method of computing the duties, and the manner of entering goods at the cultom-houfe, are explained.
Bir l of Exchange, is a piece of paper, commonly long and narrow, on which is wrote a fhort order, given by a banker, a merchant, or trader, for paying to fuch a perfon, or to his order, or alfo, in fome councries, to the bearer in a diftant place, a fum of money equivalent to that which fuch a banker, merchant, or trader has received in his dwelling-place.

## B I L

## B İ L

The exchange of monies is of great antiquity, as well by obiervation of the Hebrew cuftoms as thofe of the Romans.
mans. the firf day of the month Adar; proclamation was
Upon Upon the fint ant Ifrael, that the people fhould provide made throughene which were yearly paid towards the fervice of the temple, according to the commandment of God ; on the 25 th of Adar, they brought tables in the temple (that is, in the outward coutt, where the people food) [Exod. xxx. 3I.] on thefe lay the leffer coins, which were to furnifh thofe who wanted half thekels for their offerings, or that wanted leffer pieces of money in their payment for oxen, fheep, doves, \&c. which food there ready in the fame court to be fold for facrifices; but this fupply and furrifhing the people from thefe tables, was not without an exchange for other money, or other things in lieu of money, and that at an advantage: hence all thofe who fat at the tables were called bankers, or mafters of the exchange.
By the Romans it is fuppofed to be in ufe upwards of 2000 years, money being then made out of gold and filver, to avoid the carriage of merchandizes in barter, from one country to anotier: fo other nations, imitating the Jews and Romans, erected mints, and coined monies, upon which the exchange by bills was devifed, not only to avoid the danger of the adventure of monies, but it's troublefome carriage.
Thus flates having, by their fovereign authority, coined monies, caufed them to appoint a certain exchange, for permutation of the various coins of feveral countries, without tranfporting of the coin, but giving par pro pari, or value for value, with a certain allowance to be made thofe exchangers for accommodating the merchants.
As commerce branched into vatious flapes, fo did exchange, but was generally reducible to four fpecies, viz. common exchange, real exchange, dry exchange, and fictitious exchange. Thole who practifed the common exchange were conftituted by the feveral kings, who, having received monies in England, would remit by exchange the like fum, to be paid in another kingdom. Edward III. to afcertain the exchange, caufed tables to be fet up in moft of the general marts or ports of England, declaring the values of the foreign coins of thofe countries with which his fubjects carried on commerce, and what allowances were to be made for having monies to be remitted to fuch countries.
Real exchange was, when monies were paid to the exchanger, and bills were drawn, without naming the fpecies, but according to the value of the feveral coins; which two offices afterwards were incorporated ; and, indeed, was no more but, upon payment of monies here in England, to be repaid the juft value in money in another country, according to the price agreed on between the officer and deliverer, to allow, or pay, for the exchange of the money, and the lofs of time.
Dry exchange 1s, when a merchant hath occafion for 5001. fuppofe fur a certain time, and would willingly pay intereft for the fame; the banker, being defirous to take more than the legal intereft, and yet to avoid the ftatute, offers the 500 l . by exchange for Cales, or any other place, to which the merchant agrees; but, the merchant having no correfpondent there, the banker defires him to draw his bill, to be paid at double or treble ufance, at Cales, by any feigned perfon, at the price of the exchange then current. Accordingly, the merchant makes the bill, and the banker pays the monies; which bill the banker remits to fome friend of his, to procure a proteft from Cales for non-acceptance, with the exchange of the money from Cales to London; all which, with cofts, the merchant is to repay to the banker; and fometimes they have been fo confientious as not to make above 30 per cent. by thefe artifices. This kind of ufury is faid to be firlt introduced into England by the Jews. Vide Co. 2 Inft. fol. 505.
Fictitious exchange is when a merchant hath occafion for goods to freight out his /hip, but cannot well fpare the money; the owner of the goods intimates, that he muft have ready money; the buyer knowing his drift, it is agreed, that the feller fhall take up the monies by exchange for Venice, or any other parts; but then the merchant muft pay for exchange and reexchange.
Thefe two laft ways of oppreffing the generous merchant were afterwards prohibited 3 and 4 Hen. VII.
The jult and true exchange for monies, by bills, is par pro pari, according to value for value; which is grounded on the weight and finenefs of monies, according to their feveral flandards, proportionable to their valuation; which, being truly and juflly mude, afcertains and reduces the price of exchange to a fum certain, for the exchange of monies to any nation or country whatfoever.
Foreign bills of exchange have long been looked on as the moft obligatory and convenient paper fecurity, that is amongt merchants; not fo much by vistue of the laws of any country, as in conformity to the univerfal cuftoms and ufages eftabhithed among traders themfeives, by a kind of unanimous concurrence, for the facilitating a general commerce throughout the world. In order, therefore, to make a judgment in cafes of this naiure, it is neceffary to be acquainted with thofe
cuftoms and ufages : but, although in the courts of judicature of this nation, great regard is pard to thefe mercantile ufages; yet they hàve been frequently over-ruled by the law. Wherefore we judge it neceffary to give a feries of felect cafes, which have been determined in our courts of law, as alfo thofe flatutes which relate to bills of exchange; thefe being the fundamental principles, upon which the reafonablenefs and equity of mercantile ufages mult be judged of in this kingdom. In the reign of king William III, inland bills in this nation had greatly lof their credit, being not looked upon as bills of exchange, and therefore not punctually and regularly paid 3 which proceeded, in a great meafure, from the defect of the laws, they not having effectually provided for the recovery of fuch debts: whereupon the following aft of parliament took place to remedy this evil.

## Anno 9 \& 10 Gulielmi III. Regis.

## An aft for the better payment of inland bills of exchange.

c Whereas great damages and other inconveniencies do fre' quently happen in the courfe of trade and commerce, by ' reafon of the delays of payment, and other neglechs on - inland bills of exchange in thi, kingdom; be it therefore ' enacted by the king's moft excellent majefty, by and with
'the advice and confent of the lords fpiritual and temporal,
' and the commons in this pretent parliament affembled, and 'by the autbority of the fame, that from and after the $24^{\text {th }}$ © day of June next, which fhall be in the year 1698 , all and ' every bill or bills of exchange drawn in, or dated ar, and ' from any city or town, or any other trading city or town, - or any other place in the kingdom of England, dominion ' of Wales, or town of Berwick upon Tweed, of the furn ' of five pounds ferling or upwards, upon any perfon or per-- fons, of or in London, or any other trading city, town, or ' any other place (in which faid bill or bills of exchange fhall - be acknowledged and expreffed, the faid value to be received) ' and is, and thall be, drawn payable at a certain number of - days, weeks, or months, after date thereof, that from and ' after prefentation and acceptance of the faid bill or bills of 'exchange (which acceptance thall be by the underwriting, "the fame under the party's hand fo accepting) and after ' the expiration of three days, after the faid bill or bills fhall 'become due, the party to whom the faid bill or bills are - made payable, his fervant; agent, or affigns, may, and fhall, ' caufe the faid bill or bills to be protefted by a notary public, ' and, in default of fuch notary public, by any other fub' ftantial perfon of the city, town, or place, in the prefence ' of two or more credible witneffes, refufal or neglecł being - firft made of due payment of the fame, which proteft fhall - be made and written under a fair written copy of the faid ' bill of exchange, in the words or form following ;

Know all men, thatIR.S. on the manded payment of the bill, of which the above is the copy, which the faid
did not pay; wherefore I the faid
do hereby proteft the faid bill, dated at
this
day of

- Which proteft fo made, as aforefaid, fhall, within fourteen - days after making thereof, be fent, or otherwife due no© tice fhall be given thereof to the party, from whom the c faid bill or bills were received, who is, upon producing - fuch proteft, to repay the faid bill or bills, together with ' all interefts and charges, from the day fuch bill or bills were - protefted; for which proteft fhall be paid a fum, not ex-- ceeding the fum of fix-pence; and in default or neglect ' of fuch proteft made and fent, or due notice given within ' the days before limited, the perfon, fo failing or neglecting - thereof, is, and fhall be liable to all cofts, damages, and - interefts, which do, and fhall, accrue thereby.
- Provided neverthelefs, that in cafe any fuch inland bill, or © bills of exchange, fhall happen to be loft, ór mifcarried, - within the time before limited for payment of the fame, 'then the drawer of the faid bill or bills is, and thall, be - obliged to give another bill or bills of the fame tenour with ' the firft given, the perfon or perfons to whom they are, and - fhall be fo delivered, giving fecurity, if demanded, to the - faid drawer, to indemnify him againft all perfons whatfoever, - in cafe the faid bills or bill of exchange, fo alledged to be ' loft or mifcarried, fhall be found again.'
After this, the nation being fenfible of the conveniencies arifing to commerce by that act, and obferving, that there was no provifion made in it for protefling fuch bills for non-acceprance, and the merchants further confidering how beneficial it would be to the public to have the fame remedy upon promiffary notes, as upon bills of exchange, whereby the fame may be transferred from party to party, without any other formality, but that of an endorferment: all there matters having been taken into confideration by parliament, an act for that effect paffed both houftes, and received the royal affient, to the general fatisfaction of the nation, which is as follows.

## B I L

Anno $3 \& 4$ Annze Reginay
An act for giving like remedy upon promiflary notes, as is now ufed upon bills of exchange, and for the better payment of intand bills of exchange.
4 Whereas it hath been held, that notes in writing, figned a by the party who makes the fame, whereby fuch party pro-- mifes to pay any other perfon, or his order, any fum of " money therein mentioned, are not affignable or endorfible G over, within the cuftom of merchants, to any other per-- fon; and that fuch perion to, whom the fum of money - mentioned in fuch note is payable, cannot maintain an caction, by the cuftom of merchants, againt the perfon - who firf made and figned the fame; and that any perfon - to whom fuch note chould be affigned, endorfed; or made pay-- able, could not, within the faid cuftom of merchants, matn-- tain any action upon fuch note againft the perfon, who firf - drew and figned the fame: therefore, to the intent to en-- courage trade and commerce, which will be much advanced, : if fuch notes fhall have the fame effect, as inland bills of ' exchange, and fhall be negociated in like manner; Be it 'enacted by the queen's moft excellent majefty, by and with - the advice and confent of the lords fifititual and temporal, ' and commons in this prefent parliament affembled, and by - the authority of the fame, that all notes in writing, that af-- ter the firit day of May, in the year of our Lord 1705 , fhall 4 be made and figned by any perfon, or perfons, body politic - or corporate, or by the fervant or agent of aty corporation, - banker, goldfmith, merchant, or trader, who is ufually en-- trufted by him, her, or them, whereby fuch perfon or perfons, - body politic and corporate, his, her, or their order, or unto - bearer, any fum of money, mentioned in fuch note, ifall - be taken and conftrued to be, by virtue thereof, due and - payable to any fuch perfon or perfons, body politic or cor-- porate, to whom the fame is made payable; and alfo every - fuch note payable to any perfon or perfons, body politic ' and corporate, his, hex, or their order, Shall be affignable - or endorfible over, in the fame manner as ipland bills of "exchange are, or may be, according to the cuftom of merchants; and that the perfon or perfons, bedy politic and - corporate, to whom fuct fum of money is, or thall be - by fuch note made payable, fhall and may maintain an - action for the fame, in fuch manner, as he, fhe, or they s might do, upon an inland bill of exchange, made or drawn according to the cuftom of merchants; and that the perfon or perfons, body politic and corporate, who, or whofe - fervant or agent, as aforefaid, figned the fame; and that - any perfon or perfons, body politic and corporate, to whom fuch note that is payable to any perion or perions, 'body politic and corporate, his, her, or their order, is endorfed or affigned, or the money, therein mentioned, ordered to be paid by endorfement thereon, fhall and may - maintain his, her, and their action for fuch fum of money - either againft the perfon or perfóns, body politic and cor - porate, who, or whofe fervant or agent, as aforefaid, figned - fuch a note, or againft any of the perfons that endorfed - the fame, in like manner as in cafes of inland bills of exchange: and, in, every fuch action, the plaintiff or plain-- tiffs fhall recover bis, her, or their damages, and cofts of ' fuit ; and if fuch plaintiff or plaintiffs fhall recover his, her, ' or their cofts, againit the defendant or defendants; and - every fuch plaintiff or plaintiffs, defendant or defendants, re-- fpectively recovering, may fue out exccution for fuch damages and cofts, by capias, fieri facias, or eligit.

- And be it further enacted by the authority aforefaid, that ' all anid every fuch actions thall be commenced, fued, and - brougbt within fuch time as is appointed, for commencing - or fuing attions upon the cafe, by the ftatute made in the - 21 it year of the reign of king James the firft, intitled An ' act for limitation of actions, and for avoiding of fuits in - law, provided, that no body politic or corporate, fhall have - power, by virtue of this act, to iflue or give out any notes ' by themfelves or their fervants, other than fuch as they - might have iffued, if this act had never been made,
- And whereas by an act of parliament made in the sninth - year of the reign of his late majefty king William III. in-- titled, An a\&t for better payment of inland bills of exchange ; "it is, among other things, enacied, that from and after pre-- fentation and acceptance of the faid bill or bills of exchange - (which acceptance thall be by the underwriting, the fame - under the party's hand fo accepting) and after the expira-- tion of three days, after the faid bill or bills fhall become - Jue, the party to whon the faid bill or bills are made pay--able, his fervant, agent, or affigns, may and fhall caufe f the fame bill or bills to be protefted, in manner as in the - faid act is enacted : and whereas, by there being no pro* wifion made therein for proteffing fuch bill or bills, in cafe - the party on whom the fame are or thall be drawn, refufe 'to accept the fame, by underwriting the fame under his 4 hand, all merchants and others who refule to underwrite - fuch bill or bills, or make any other than a promiffary ac-- ceptance, by which means the effect and good intent of - the faid act in that behalf is wholly evaded, and no bill - or bills can be protefted before, or for want of fuch ac-

## B I L

septance by underwriting the fame, as aforefaid : for remedy whereof, Be it enacted by the authority aforefaid athat from and after the firft day of May, which fhall bo - in the year of our Lord 1705, in cafe, upon prefenting of fuch bill or bills of exchange, the party or parties, on a whom the fame thall be drawn, fhall refufe to accept the 'fame, by underwriting the fame, as aforefaid, the party 'to whom the faid bill or bills are made payable, his 'fervant, agent, or affign, may, and fhall, caufe the faid - bill or bills to be protefted for non-acceptance, as in cafe of - foreign bills of exchange : any thing in the faid act, or 'any other law, to the contrary notwithtanding; for which ' proteft there thall be paid two Ghilings, and no neore.

- Provided always, that, from and after the faid firt day of - May, no acceptance of any fuch inland bill of exchange - Ahall be fufficient to charge any perfor whatfoever, unlefs "the fame be underwritten, or endorfed in writing therecupon; and if fuch bill be not accepted by fuch under' writing, or endorfement in writing, no drawer of any - fuch inland bill thall be liable to pay any, cofts, damages, - or intcrefts thereupon, unlefs fach proteft be made for non-- acceptance thereof, and, within foutteen days after fuch ' proteft, the fame be fent, or otherwife notice thereof be ' given, to the party, from whom fuch bill was received, or - left in writing at the place of his, her, or their ufual - abode; and if fuch bull be accepted, and not paid before - the expiration of three days after the faid bill fhall become - due and payable, then no drawer of fuch bill thall be - compellable to pay any cofta, damages, or interefts there, - upon, undefs a proteft be made and fent, or notice thereof - be given, in manner and form above-mentioned : never' thelefs, every drawer of fuch bill Thall be liable to make ' payment of cofts, damages, and interefts, upon fuch in ' band bill, if any one proteft be made for non-acceptance, ' and non-payment thereof, and notice thereof be fent, given, - or left as aforefaid.
- Provided, that no fuch proteft fhall be necellary, either - for non-acceptance, or non-payment of any iuland bill of ' exchange, undefs the value be acknowledged and exprefled - in fuch bill to be received, and unlefs fuch bill be drawn - for the payment of 20 1. Aterling, or upwards; and that ' the proteft, hereby required for non-acceptance, fhall be - made by fuch perfons, as are appointed, by the faid recited - acts, to proteft inland tills of exchange for non-payment ' thereof.
' And it be further enacted, that from and after the firft day - of May, if any perfon doth accept any fuch bill of ex-- change, for and in fatisfaction of any former debt, or - fum of money formerly die unto him, the fame thall be accounted and efteemed a full and complete payment of - fuch debt, if fuch perfon, accepting of any fuch bill for his - debt, doth not take his due courfe to obtain payment there-- of, by endeavouring to get the fame accepted and paid, and - make his proteft as aforefaid, either for non-acceptançe, of - non-payment thereof.
- Provided, that nothing herein contained fhall extend to difo - charge any remedy, that any perfon may have againft the ' drawer, accepter, or indorfer of fuch bill.'
After a recital of thefe acts of parliament, in relation to bills of exchange, we conceive it more fatisfactory, to every man of fenfe, rather to give a variety of cafes that have been determined in the courts of judicature of this kingdom, than the collective fenfe of thofe whofe judgment is not of the like authority.
We apprehend, moreover, that thofe cafes, being abftracted with their effential circumflances, will prove of more public utility, than giving them in a grofs fuperficial manner, which in that way, even to lawyers themfelves, who have not the cafes ad unguem, could be of little fervice, and of much lefs to traders in general. . In regard to the acceptance of bills of exchange, fee the article Acceptance, where there are fome cafes, incorporated with the general ufages of merchants.

Some curious Cases relative to Bilis of Exchange, as they have been determinep in Courts of Juw dicaturein England.

Clark verfus Mundal. 3 W. \& M. coram Holt C. I, at Nifi Prius at Guildhall.
A, having a bill of exchange payable to him, and he being indebted to $B$ in a fum of moncy, fends and indorfes this bill to $B$. Afterwards $B$ brought affumpfit againft $A$ for the money, and on non affumpfit A gave in evidence this bill of exchange indorfed, and that it had lain fo long in B's hands after it was payable, and reckoned it-as money paid and in hishands; but it was difallowed; for a bill hall never go in difcharge of a precedent debt, except it be part of the contract that it hould be fo. If A fells goods to B, and B is to give a bill in fatisfaction, $B$ is difcharged, though the bill is never paid, for the bill is payment: but, otherwife, a bill fhould never difcharge a precedent debt or contract; but, if part be received, it thall be only a difcharge of the old debt for fo much. Salk. 134.

Hodges verfus Steward. Parcli. 3 W. \& M. B. R.
In an action on the cafe on an inland bill of exchange, brought by the indorfer againit the drawer, the following points were refolved.
were A difference was taken between a bill payable to J. S. or bearer', and J. S. or order; for a bill payable to J. S. or bearer, is not affignable by the contract, fo as to enable the indorfer to bring an action, if the drawer refure to pay, beaufe there is no fuch authority given to the party by the firf contract, and the effect of it is only to difcharge the drawer, if he pays it to the bearer, though be comes to it by trover, haft, or otherwife. But when the bill is payable to J. 8 . or arder, there an exprefs power is given to the party to affign, and the endorfer may maintain an action.
2. Though an affignment of a bill payable to J. S, or bearer, be no good affignment to charge the drawer with an action on the bill; yet it is a good bill between the indorfer and indorfee, and the indorler is liable to an action for the money; for the indorfement is in nature of a new bill.
3. It being objected, that, in this cafe, there was no averment of the defendant's being a merchant, it was anfwered by the court, that the drawing the bill was a fufficient metchandifing and negociating to this purpofe.
4. The plaintiff declared, on a fpecial cuftom in London, for the bearer to have this action. To which the defendant demurred, without traverfing the cuftom; fo that he confeffed it, whereas, in truth, there was no fuch cuftom; and the court was of opinion, that, for this realon judgment fhould be given for the plaintiff; for though the court is to take notice of the law of merchants, as part of the law of England; yet they cannot take notice of the cuftom of particular places, and the cuftom in the declaration being fufficient to maintain the action, and that being confeffed, he had admitted judgment againt himfelf.
5. 'Twas held, that a general indebitatus aftumpfit will not lie on a bill of exchange for want of a confideration; for it is but an evidence of a promife to pay, which is but a nudum pachum; and therefore be muft either bring a fpecial action on the cuftom of merchants, or a general indebitatus äflump'fit againft the drawer, for money received to his ufe. Judgment pro Quer'. Ibid. $125^{\circ}$

## Pinkney verfus Hall. 'Hill. 8 Will. IIl. B. R.

By the cuftom of England, where there are two joint traders, and one accepts a bill drawn on both for him and partner, it binds both, if it concerns the trade; otherwife, if it nencerns the accepter only in a diftinct intereft and refpect. Ibid. 126.

## Clark verfus Pigot. Pafch. 10 Will. III. B. R.

Clark having a bill of exchange payable to him or order, puts his rame upon it, leaving a vacant foace above, and fends it to J. S. his friend, who got it accepted; but, the money not being paid, Clark brought an indebitatus aflumpfit againft the accepter: and it was objected on evidence, that the property was transferred to J. S. Et per Holt, C. J. J. S. had it in his power to act either as a fervant or affignee: if he had filled p the blank fpace, making the bill payable to him, that would have witneffed his election, to have received it as indorfee; but, that being omitted, his intention is prefumed to aft only as fervant to Clark, whofe name he would ufe only in order to write the aquittance over it. Ibid. 126.

Anonymous, Mich. in Will. III. coram Holt, C. J. at Nifi Prius at Guildhall.

A bark bill payable to $A$, or bearer, being given to $A$, and loft, was found by a flranger, who transferred it to C for a voluable confideration; C got a new biil in his own name. E: per Holt, C. J. A may have trover againft the ftranger who lound the bill, for be had no title, though the payment to him would have indemnified the bank; but A cannot maintain trover againft C , by reafon of the courfe of trade, which creates a property in the affignee, or bearer. Ibid. r26.

Anonymous, Mich. to Will. III. coram Holt, C. J. at Nifi Prius at Guildhall.

A bill of exchange being made payable to $A$, or order, $A$ indorfes it to B ; B camot fue A , unlefs he firf endeavour to fiod out the firlt drawer to demand it of him; for the indorfer is only a warranter for the payment of the drawer, and therefore liable only on his default; and fuch endeavour muft be fet forth in the declaration. Ibid. $\mathbf{I} 26$.

Allen verfus Dockwra. Mich. so Will. III. coram Treby, C. J. at Nifi Prius at Guildhall.

A bill was drawn on Sutor, payable in three days; Sutor broke; the perfoh to whom it was payable kept the bill by him four years, and then brought affumplit againt the drawer: and ver Treby, C. J. when one draws a bill of exchange, he Vol. I.
fubjects himifelf to the payment, if the perfon on whem it was drawn refules either to accept or pay: yet that is whit this fimitation, that, if the bill be not paid in convenient time, the perfon to whom it is payable fhall give the drawer notice thereof; for otherwite the law w?ll imply the bill paid, becaule there is a trult between the parties, and it mady be frejudicial to commerce, it the bill may rife to to charge the drawer at any diftance of time; when in the mean time all reckonings and accounts are adjutted between the drawer and drawee. lbid. 127.

Jackfon verfus pigot, io Will. III. B. R.
The plaintiff declared on a bill of exchange drawn by $f . S$. on the defendant, dated the 15 th of March, rógo, payable a month after fisht, and that afterwards, viz the 27 th of spril, 1697, he thewed it the defendant, and be promifed to pay it according to the tenour of the bill, after verdict for the plain tiff on non affumpfit, was moved in arreft of judgment that this manner of declaring was abfurd, it being impolfible to pay according to the tenour of the bill at time of the pronife. Refolved by the court, that, where the time of payment is paft at the acceprance of the bill, the -ccertance can be only to pay the money; and if he was fó a'turd as to promife to pay the money, according to the tenour of the bill, yet that is no more in law now than a promife to pay the money gencrally: but it is better to declare in fuch a cate on general promife to pay the morey. Per Holt, C. J. Llid. 127.

Lambert verfus Pack, Paf. ti Will. III. coram Hoit, C. I at Nifi Prius, London.
An action on the cafe was brought on a bill of exchange againft the indorfer; and it was ruled by Holr, C. J. upon evidence, Ift, That there is no need to prove the drawer's hand, becaufe, though it be a forged bill, the indorfer is bound to pay it. $2 \mathrm{~d} / \mathrm{y}$, The phaintiff mult prove that he demanded it of the drawer, or him upon whom it was drawn, and that he refufed to pay it, or elfe that he fought him and could not find him; for otherwife be cannot refort to the indorfer. 3 dly, That this was done in convenient time; for if they itand, and are refponfible a convenient time after the affignment, and no demand made, the indorfee thall not charge the indotfer. The time for foreign bills is three days, and no allowance fis to be made for Sundays and holidays. Serjeant Wright cited acate of one Tracey, who tood a week after the indorfement, 'and the indorfee loft bis money; which Holt, chief juftice, thought was too ftrait ${ }_{i}$ but fuch matters muit be left to the jury. 4 thily, It is a queftion whether notice múf be given or no; but it is fair to give notice. 5 thly, That the demand muft be proved fublequent to the indorfe. ment ; for, if it was precedent, he could only a $\mathcal{C}$ as fervant to the indorfer; and fotthe demand was infufficient to charge the indorfer. 6thly, If a man indorfes his name upon the back of a bill blank, be puts it in the power of the indarfee to make what ufe of it he will; and he may ufe it as an aciquittance to difcharge the bill, or as an affignment to charge the indorfer. 7 thly, In cales of bills purchafed at a difcount, this is the difference; if it be a bill payable to A , or bearer, it is an abfolute purchafe; but if tod A , or order, it is indorfed blank, and filled up with an affignment, the indorfer muft warrant it as much as if there had been no difcount. lbid. i28.

## Eaft verfus Effington, Mich. I Ann. B. R.

Indorfee declared on a bill of exchange againft the drawer, and the bill was, Pray pay this my firf bill of exchange, my fecond and third not being paid; and the endorfement was fet out in this manner, that the drawer indolfavit fuper billam illam, content' billa illius folvend' to the plaintiff, without fhewing that it was fubferibed. On non aflumptit and ver-dict pro quer. it was objected in arreft of judgment, that there was no averment that the fecond and third bills were not paid, which is a condition precedent :- fed non allocatur: et per cur. That mult be intended, for the plaintiff could not otherwife have had a verdict: and, for the fame reafon a'fo, the endorfement, which was likewife excepted againt as fet forth in the declaration, was held good, being aided by the verdiet; the court comparing it to an action of debt, by an affignee of a reverfion, without flewing an attornment which, on non debet, is aided by verdict; for, if the endorfement be neceffary to transfer the bill, fo is the attornment to pais the reverfion. Ergo, as the attornment fhall be fupplied by the jury's finding debet, fo thall the endorfement by therr finding aflumpfit. Ibid. 130.

## Lucas verfus Haynes, Pafch. 2 Ann. B. R.

In trover for a bill of exchange, the cafe upon evidence was, that the plaintiff had a bill of exchange drawn upon the defendant, and fent it by I. S. to the defendint, to get it accepted; J. S. left it with the defendant, and afterwards, the bill being loft, the plaintiff brought trover for it, and J. S. was now the plaintiff's witne?s for this matter, ant, becaufe the plaintiff had endorfed the bill, it was object $d$ that $\int$. S. could not be a witnels; and, this point being faved, the court were all of opinion, that the bare endorfement, without other

## B I L

words puiporting an affignment, does not woik an alteration of the property; for it may. fill be filled up, either with a receipt or an affignment, and, confequently, J. S. is a good witnefs. Ibid. 130.

## Buter verfus Crips, Trin. 2 Ann. B. R.

Per Holt, C. J. Pay to me, or my order, fo much, is a bill of exchange, if accepted; and this is the ouly way to make a bill of exchange without the intervention of a third perfon. Ibid. 130 .

## Borough verfus Perkins, Mic. 2 Ann. B. R.

Error of a judgment in C. B. in cafe on an inland bill of exchangé brought againft the drawer, and judgment for the plaintiff by nil dicit. Mr Raymond for the plaintiff in error urged, that it doth not appegar by the declaration that the bill was protefted, and fince the fatute 9 and $1 \circ$ Will. III. no action lies againft the drawer, unlefs there be a proteft made, as that act requires; and this ought to appear in the declaration; for, at common law, the party had no remedy againft the drawer, without notice given him of non payment; and, if the ftatute does not make the proteft neceflary, it does nothing. Mr Parker cont. It does not appear the bill was accepted by underwiting, without which it is not within the flatute, and without it a proteft cannot be made; for a proteft was not neceffary' at common law in cafe of inland bills, as it was in cafe of foreign bills; but, fuppoling it were within the flatute, yet the proteft need not be fet forth in the declaration, but this is to be confidered at the trial; for, if the drawer receive damage for want of a proteft, and the damage amounted to the value, it is a total difcharge; if lefs, yet for fo much. Holt, C. J. In inland as well as foreign bitls of exchange, the perfon to whom it is payable muft give convenient notice of hon-payment to the drawer; for iff, by his delay, the drawer receive prejudice, the plaintiff fhall recover : a proteft on a foreign bill was part of it's conftitution; on inland bills, a proteft is neceflary by this ftatute, but was not at common law; but the flatute does not take away the plaintiff's action for want of a proteft, nor does it make fuch want a bar to the plaintiff's action; but this ftatute feems only, in cafe there be no proteft, to deprive the plaintiff of damages or intereft, and to give the drawer a remedy againtt him for damages, if he make no proteft. Quod Powell conceffit, and that a protef was never fet forth in any declaration fince the ftatute. Ibid:-31.

## Buckly verfus Cambell, Hil. 7 ann. B. R.

The plaintiff declared upon a bill of exchange drawn at Amfterdam, payable at London at two ufances, and did not fhew what the two ufances were; and judgment was given pro def. for the court could not take notice of foreign ufances, which varied, being longer in one place than another. Ibid. 131 .

## Hill \& al' verfus Lewis.

Action upon the cafe for 1701. ros. The plaintiff declared feveral ways, viz. ift, Upon two bills of exchange againft the indorier. 2dly, Upon a mutuatus. 3 dly , An indebitatus affumpfit pleaded. The cafe upon evidence was, Moor, a goldrmith, fublcribed two notes, payable to the defendant. The defendant, on the 19 th of Oclober, indorfes thefe two notes, and gives them and eight others to one Zouch, to whom he was indebted: Zouch, the igth of October, between the hours of II and 12, brought thefe notes to the plaintiffs, being goldfniths, and they accepted them, and gave to Zouch other bills, and fome money: and afterwards, the fame day, the plaintiffs received money upon other bills of the faid Moor, and might have had the money due upon thefe two bills, if they had been demanded; but, in the night following, about midnight, Moor broke and ran away; and whether the plaintiffs or indorfers fhould lofe this 1701 . 10 s, was the queftion. The queftion was, whether the acceptance of thefe bills in fatisfaction for fo much money be a good difcharge of the indorfer? and Holt, C. J. held, that goldfmiths bills were governed by the fame laws and cultoms as other bills of exchange; and every indorfement is a new bill, and fo long as a bill is in agitation, and fuch indorfements are made, all the indorfements and every of them are liable as a new drawer. That by the law, generally, every indorfer is always liable as the firft drawer, and cannot be difcharged without an adual payment, and is not difcharged by the acceptance of the bill by the indorfee; but, by the cuftom, this is reflained, viz. the acceptance is intended to be upon the gigreement, fo. that the indorfee will receive it of the firft drawer, if he can, and, if he cannor, then that the indorfer will anfwer it; as if the frft drawer be infolvent at the time of the indorfement, or upon demand refufes to pay it, or cannot be found. And the indorfer is not difcharged without aktual payment, until there is fome neglect or default in the indorfee, as if he does not endeavaur to receive it in convenient time, and then the firft drawer becomes infolvent.
The fecond point was, what hill be thought convenient time to endeavour to receive fuch bill? Et per Holt, C. J. In cafe of foreign bills, he upon whom it is drawn hath three
days to pay it, and the indorfee of fuch bill need not demand payment until the faid three days be expired; and, if he upon whon the bill is.drawn become infolvent in the faid time, the indorfer is cbargeable, and after the three days the indorfee may proteft it; and it feems the fame time ought to be allowed for inland bills, though it was urged that for foreign bills alone time was required, in refpect the drawee was to receive advice from the drawer.
And the chief.juftice, in his direction to the jury, faid, that what hould be thought convenient time, ought to be according to the ulage among traders in fuch cafes, and upon all the circumftances: that the plaintiffs had ten bills delivered to them together; and that, perhaps, they had other affairs that hindered them from going prefently to receive thefe two bills, and that they received two other bills the fame day. The chief-juftice left it to the jury to confider, whether the time in this cafe were conventent time or not; and, if the plaintiff had convenient time to receive his money, then to find for the defendant, otherwife for the plaintiff; upon which the plaintiff prayed to take the veidict upon the indebitatus affumpfit. Et per chief juftice: you cannot take the verdict upon any part of the declaration but that to which evidence was given, and here it will be good, if found upon the bills of exchange; but, if the evidence be applicable to any other part of the declaration, you may take it upon any fuch part to which the evidénce is' applicabic. And becaufe Zouch had fworn that he had received the bencfi: of, and had been fatisfied with the bill he took of the plaintiff, by which the defendant was difcharged aga nft Zouch, the verdich was taken upon the indebitatus aflumplit for money laid out for the defendant's ufe; and it feems the indorfement by the defendant to the plaintiff was good evidence of a requef to pay the faid money to Zouch. Now exception was taken that one bill was payable to the defendant only, without the words, or his order, and therefore not affignable by the indorfement; and the chief-juftice did agree that the indorfement of this bill did not make him that drew the bill chargeable to the indorfee; for the words, or to his order, give authority to the plaintiff to affign it by indorfement; and it is an agreement by the firf drawer that he would anfwer it to the affignee: but the indorfement of a bill which has not the werds, or to his order, is good, or of the flame effect, between the indorfer and the indorfee, to make the indorfer chargeable to the indorfee. Ibid. 133 .

## Harry verfus Perrit, Trin. 9 Ann. B. R.

Action on a promiffary note againft the fecond indorfer, and the plaintiff declared without an averment, that the money was demanded of the drawer, or the frift indorfer. And this was held good upon motion in arreft of judgment ; for the indorfer charges himfelf in the fame manner as if he had originally drawn the bill. Ibid. 133 .

## Witherley verfus Sarsfeld, Mich. 干 W. \& M.

A writ of error was brought in the exchequer chamber upon a judgment in B. R. where the plaintiff declared in cafe, on the cuftom of merchants, that if any merchant, or other trading perfon, make and direct any bill of exchange to another, payable to a merchant, or any other trading perfon, and the bill be tendered, and, far want of acceptance, protefted, in fuch cafe the drawer by the cuffom is chargeable to pay, \&c.-That the defendant at Paris in France did draw a bill on his father here in London, payable to the plaintiff, and the fame was prefented but refufed, and he, according to cuftom, protefted the bill, whereby the defendanc. be came chargeable, and, in confideration of the premifes, did affume, \&e. To this the defendant pleaded, that he was a gentleman, the fon and heir of Dr Thomas Witherley, and, at the time of drawing the bill, was a traveller, and at Paris, for his better education; and that he was no merchant, not trader, nor did ever deal as fuch, and he was then at Paris as a gentleman and traveller, as aforefaid, abfque hoc, and denies that he is or ever was a merchant, \&c. The plaintiff demurs to the defendant's plea, and fhews for caufe, that it amounts to the general iffue, is double and uncertain, \&ic. Holt, C. J. It is not every plea that amounts to a general iflue that is ill; and the cuftom is the foundation; and the plea is' an anfwer to that, and therefore enough. But this drawing a bill muft furely make him a trader for that purpofe, for we all have bills directed to us, or payable to us, which muft be all voidable, if the negociating a bill will not oblige the drawer of it. The judgment for the defendant was reverfed, and the plaintiff had judgment in B. R. upan a remittitur. Holt's Reports, $x_{3}$.

Darrach verfus Savage, Pafch. 2 W. \& M.
Indebitat, affumpfit for 40 l. received to the plaintiff's ufe, the defendant pleaded non aflumpfit; and upon the trial the evidence was a bill of exchange, or note, under the defendant's hand, dated the 22 id of February, 1587 , directed to a meFchant of London, Pray pay to Mr John Darrach, or his order, the fum of 401. and place it to my account, value received, witnels my band. The money was never demanded of the

## B I L

B I L
merchant 'till the aftion brought: and it was infifted for the ptaintiff, that the defendant was itill chargeable, and fo" continued to be 'till the note was difcharged.
Hole, C. J. In this cafe the bill, or note, fhould be deemed payment ; and that the plaintiff was fatisfied with the merchant as his debtor. if he did not in convenient time refort back to the drawer for his money: for his keeping the bill, fo long, was an evidence that he thought the merchant good at that time, and that he agreed to take him for his debtor. Judgment for the defendant. lbid. ir3.

## Mogadara verfus Holt, Mich. 3 W. \& M.

In cafe on a bill of exchange, the plaintiff fets forth, that there is a cultom, that if any merchant in London draws his bill, or bills, upon any merchant in Rotterdam, payable to any merchant, or order, and if the merchant there accept any fuch bill, and before acceptance, or after, the merchant to whofe order the money is directed to be paid doth'indorfe it to any other merchant, and that other merchant doth indorfe it to fome other, and the merchant, to whom the bill is directed, accepts it after fuch indorfement, and fails in payment to the merchant to whom indorfed at the time limited, whereby the bill becomes protefted, and notice is given thereof to the drawer; that, in fuch cafes, the drawer becomes liable to pay the fame with damage to the indorfee. That the defendant drew a bill of exchange, 1 gth November 1688, on Edward Williams, payable in two months and a half, to the order of one Hartopp, for 3001 . value of himfelf; and Hartopp the fame day indorfed it to Marques, and Marques indorfed it to the plaintiff; that the plaintiff afterwards, viz. 8 Feb. 1689 , gave notice to Williams, and he then accepted the biil; that Williams failed to pay it, and, by rearon thereof, the raid 8 Feb . the bill was protefted, of which proteft the defendant had notice the 28 th of April, and did not pay it The defendant demurred generally to the declaration, the bill not being accepted till after the day payment was expired; and it was infifted, that the proteft fhould have been for nonacceptance within the time, and fallure of payment at the time.
By Holt, C. J. The law of merchants made him liable, who was the drawer of the bill, though the acceptance were after the day; for it need not be tendered within the time. Now by that law the drawer is chargeable by the value received; and though the money were not paid, or the bill preferted within the time mentioned, yet it ought fill to be paid: and if the party do not tender and protelt at the day, and there be a break in the mean time of the perfon on whom the bill is drawn, he lofes his money; otherwife, if there be no particular damage. Judgment was given for the plaintiff. Ibid. 114.

Ward verfus Evans, Mich. 2 Ann.
A cafe made before my lord chief-juftice Holt at Guildhall was this: Ward, the plaintiff, fent his fervant to receive a note of 'sol. of B, who went with him to the defendant Sir Stephen Evans's hop, and he indorfed off 50 I. upon a note of 100 l . which B had upon him, and gave the fervant a note of 501 . upon one Wallis, a goldfmith, to whom the note was carried the next day by Ward's fervant ; but Wallis refuled to pay, and that day broke; and thereupon the note was fent back to Evans, who refufed payment, on which an action was brought; and the queftion was, whether it would lie againft the defendant, or that this were a good payment by Evans to the plaintiff.
Holt, C. J. It is plain the fervant was fent by his mafter to receive the money, and not the bill: and if the fervant upon tender of the bill, had come to the mafter to know his mind, and the mafter had fent him back for the money, if then he had took the bill, that would not have bound the mafier; but here was fome time for the mafter to affent to what the fervant had done; but he held clearly, that this indarfement by Evans on the note of B , was a receipt by him of fo much money to the ufe of the plaintif, for which an indebit. affump. would lie. And they all agreed, that if a mafiet fend his fervant to receive money upon a goidfmith's bill, or any other, and he takes another bill upon another perfon for payment, that fhall not bind the mafter, without fome fubfequent act of confent; as if he would not fend back the bill in reafonable time, $\& \mathrm{cc}$. but acquiefcence, or any fimall matter, will be proof of the mafter's confent, and that will make the aft of the fervant the act of the mafter. A goldfmith's note is received conditionally, if paid, and no otherwife, without an exprefs agreement to be taken as money: and the party having fuch note thall have a reafonable tinc to receive the money, as, in this cafe, the next day, and is not obliged as foon as he receives the note to go ftraight for bis money. Ibid. 120.

Popley verfus Ahley, Pafch. 3 Ann.
The defendant took up feveral goods of the plaintiff, who fent a fervant with a bill to him for the money; the defendant orders the fervant to write him a receipt in full of the bill, which he did, and thereupon he gives him a note upon * third perfon, payable in two months: the maller fent feve-
sal times to the thitd perfon, to prefent him the note, but could not get fight of him within the time; the party breaks; and all this appearing in evidence, and that the defendant went to fea the next day after he gave the note, now this action was brought againt the defendant for the money.
Holt, C. J. If a man give a note upon a third perfon in payment, and the other, takes it abfolutely as payment, yet, if the party giving it knew the third perfon to be breaking, or to be in a failing condition, and the receiver of th: note ufes all reafonable diligence to get payment, but cannot, this is a fraud, and therefore no payment; and here was no laches in the plaintiff, for the party falled before the money was payable. The chief-juftice directed for the plaintiff. Ibid. 122.

## Soper verfas Dible.

Affumplit upon a bill of exchange. The plaintiff declarec, that fecundurn confuetudinem et ufum mercatorum the accepter is bound to pay, \&e. without thewing the cuftron at lar e $e$. And the defendant demurred; and it wis adjulged for the plaintiff; and, per curiam, it is a bett-r way, than to thew the whole at large. Lord Raym. 175 .

## Nicholfon verfus Sedgwick.

The plaintiff declares, quod inter mercatores et alios negotiantes intra hoc regnum there is, and time whereof, \&xc. hath been a cuftom, that if any trider make a bill, or nute, by which he affumes to pay another perfon, or the bearer of the bill, fuch a fum of money, fuch perfon is bound by it to pay fuch fum to fuch perion to whom the note is payable, or to the bearer.-The plaintiff then khews, that the defendant Sedgwick, being a goldfmith, made a note in writing, whereby he promifed to pay to Mafon, or bearer, 1001 . that Mafon delivered the note to the plaintiff for 1001 . in value received; and that for non-payment of this 1001 . the plaintif: brought this action againft the defendant. Non affumpfit pleaded, and verdial for the plaintiff. It was moved in arreft of judgment, that this action could not be brought in the name of the bearer, but it ought to be brought in the name of him to whom it was payable. Quod fuit conceflum per curiam; for the difference is, where the note is payable to the party: or bearer, or to the party or order.-In the latter cafe the indorfee has been allowed to bring the action in his own name, becaufe the indorfement of the party, muft appear upon the back of the note; but, where it is payable to the party or bearer, it may be very incopvenient; for then any one, who finds the note by'accident, may bring the action. Though this laft has been frequently attempted, it has never yet prevailed; and in the cale of Horton and Coggs, the goldfmith (3 Lev. 299.) this difference was taken and agreed; and the judgment of the court (being the fame cafe with this) was arrefted. But the court declared that the bearer might bring the action in the name of him to whom the note was payable. And judgment was arrefted, nifi, \&x. The fame point was refolved in B. R. between Hodges and Steward, before given, Salk. 125. But there it was refolved, that the indorfement to the bearer binds the party who immediately indorfes it to him. The principal point was alfo refolved, Mich. 6 W. \& M. B. R. between Sir Thomas Efcourt and Cudworth. Ibid. 8 r.

## Bellafis and Hefter.

The queftion was, whether a general indeb, affumpfit will lie upon a bare acceptance of a bill of exchange. By juftice John Powell, a general indebitat. affumplit does not lie on a' bill of exchange; but it ought to be a fpecial declaration upon the cuftom of merchants, as in the cafe of Brown and London, I Lev. 298. I Mod. 285. 2 Keb. 695, 731, 758 , 822. I Vent. 152. In which cafe, judgment was arrefted after verdict, as reported by Levinz and Ventris. Lord Raymond, 281.

## Bromwich and Lades.

In this cafe, it was faid by the clrief juftice Treby, that bills of exchange were of fuch general ufe and benefft, that, upon an indebitat. affumpft, a bill of exchange may be given in evidence to maintain the action; and Mr juftice Powell, that upon a general indeiit tt. affumpfit, for monies received to the ufe of the plaintiff, fuch bill may be left to the jury to determine, whether this was for value received or not. In this cafe the declaration was on the cuftom of merchants, and a general indebitat. affumpfit thereon. See the declaration and exceptions to it, in the foregoing cafe of Bellafis and Hefter, 1 Lutwych, 1589 .

## Brown and London.

What aetions lie upon a bill of exchange, and how to be brought, and againft whom. See Hardrefs, 487 , in Scaccario. I Mod. 285.1 Lev. 298. and 2 Keb. 695 . and the cafe of Cramlington againft Evans and Percival, 2 Vent. $307 \cdot$ Lord Raym. 175, 364, 574.
A draws a note upon a goldfmith, and fends his fervant to receive the money, and invert it in Exchequer bills; the fervant gets B to give him money for the note, and then brings

## B I L

the Exchequer bills to his mafter, and two days afterward the goldfmith fails; it was adjudg ${ }^{-d}$ that $A$ mult anfwer the money to $B$ : for the property of the note was not transferred o B , there being no indorfement; and he could not have fued upon it; it was only in the nature of a pledge or fecurity to him. Luc. 109.

## Morris verfus Lee.

Note, The foregoing Stat. 3 and 4 Ann, ch. 9. having given like remedy upon promiffary Hotes, as upon iniland bills of exchange: it was refolved, that an action lies by a fecond indorfee upon a note, whereby the defendant promifed to be accountable to J. S. or order, for 100 l. value received. L. Raym. 1396.

## Burchell verfus Slosock.

A note value received de pramiffis, in Rofemary-lane, was adjudged a good note within the flatute. Idemr 1545 .

## Elliot verfus Cooper.

The indorfee declared, that the defendant made his note in writing, by which he promifed to pay, \&c. without faying the defendant figned it: this was held good, on demurrer. Idem. 1376, 1377. The like of a bill of exchange, in the cafe of Sir John Erefkine verfus Murray. Error C. B. Idem, 1542. So in the cafe of

## Smith verfus Jarves and Baily.

Where the declaration fhewed, that the defendant made it a note for himfelf and partner, and figned it; whereby he promifed for himfelf and partner to pay, \&c. Idem, 1484. And in the foregoing cafe of Ereikine and Murray. A bill need not to be exprefsly averred to be drawn according to the cuftom of merchants. Idem, 1542.

Neale verfus Ovington. Error C. B.
An action on a note, by which the defendant and another promifed jointly or feverally, as ill. Idem, 1544,1545 . A draws a bill upon $B$ to the ufe of C , and, upon non-payment, C protefts the bill; he cannot fue A, unlefs he gives notice that the bill is protefted, for A may have effects of B in his hands, by which he may fatisfy himfelf. Vent. 45

## Jenny and others againft Herle. Error C. B.

Pray pay to H. r945 1. upon demand, out of the money in your hands, belonging to the proprietors of the Devonfhire mines, being part of the confideration money for the manor of Weft-Buckley.-This is no bill of exchange. Idem, 1361, 1362 , and 1563 , in the cafe of Hadock and Lynch. Pay to J. S. or order, iol. as my quarter's half-pay by adance, is a good bill of exchange, as in the cafe of Macleod and Snee, Pargiter and Beckin. Idem, 148I.

## Monk verfus Clayton and Morris.

A, fervant of Sir Robert Clayton and Mr. alderman Morris (but at that time ackually gone from them) took up 200 suineas of Mr. Monk, a gold!mith, without any authority of his mafters; (but Monk did not know that he was gone) the monics not being paid, Monk brought an action againft Sir Robert Clayton and Morris, and at Guildhall it was ruled by Keeling chief-juftice, that they hould aniwer; and there was a verdict for the plaintiff. And, though there were great endeavours to obtain a new trial, yet it was denied, the court at Weftminfter being fully fatisfied that they ought to anfwer: for this fervant had ufed often to receive and pay monies for them; and thereupon they actually paid the monies. Mich. 22. Car. II. in B. R.

Note, That which will oblige the mafter, will be the authority and liberty which he ufually gives the fervant; therefore fuch a power, devolved, ought to be fecured by the prudenteft way that may be: which is generally done by bonds and obligations. And, tho' the fame feems an act of wifdom for merchants and others fo to take, yet it oftentimes proves the deftruction of many a family. The father puts out the fon apprentice, perhaps, with no lefs than 2 to 3001 . or 5001 . and is himfelf become bound for his integrity, 8 c . The fervant is immediately trufted with his cafh, and he too young to be experienced in the world, either neglects keeping a juft account, or, keeping that, fubjects his mafter's calh to be fpent by himfelf, and thofe who make it their bufinels to betray youths fo circumffanced. The mafter, difcovering the fraud, calls his fervant to account, who, confcious of the act, forfakes his fervice, dreads the fight of his relations, and, as a general confequence, falls into company, into whofe wicked courfes he is trepanned, The father is called to anfwer whatever his fon has embezzled, which proves a great afflition, if not the ruin of many families. On the other hand, if fervants were not to be trufted, the myftery of bufinefs, according to the common way of practice, could not be learnt, nor affairs difpatched, and therefore faith muft be given: but then it were juftice, honour, and honefy, as well as humanity, that, as a father puts a child to one in whom he repoles a confidence, that the mafter fhould be as a parent; fo he fhould prevent every occafion that might fub ject a young fellow to temptations, and not be over.halty in
trufting them with their calh. Which is the very bait with which our London gamefters catch fuch gudgeons.

## Pinckard verfus Fowke.

If a bill is drawn on $B$, and $B$ happens to be in the country, and a friend of his defires the party not to protef, and he will pay the fame, it fhall bind fuch party. Styles, fol. 416 . The merchants of London allow three days, after a bill of ex. change becomes due, for the payment; and for non-payment within three days proteft is made, but is not fent away 'till the next pof after the time of payment is expired.
The ufe of the proteft * is this, that it fignifies to the drawer that the party upon whom he drew his bill was unwilling, or not to be found, or infolvent, and to let him have a timely notice of the fame, and to enable the party to recover againft the drawer; for, if one draws a bill from France upon a perfon in England, who accepts and fails, or becomes infolvent, at the time of payment, if there be not a proteft and timely notice (which is looked upon to be the third day) fent to the drawer there, it will be difficult to recovor the money.
*There are two protefts: i. For non-acceptance, which is
called allo intimation. 2. For non payment.
A man not found, or being found, not met withal either at home or the exchange, is caufe fufficient for a protelt; but in that there muft be diligence ufed to find him.
A bill, returned protefted for non-payment, being once fatisfied by the drawer to the deliverer, the drawer is difcharged and fo is the accepter to him to whom the monies were to be paid: but the accepter, by virtue of his acceptance, makes himflf debtor to the drawer, according to the cuftom of merchants.
Monies may be had on exchange by way of letters of credit, the which are in two refpects; the firft general, the other fpecial.
The general letter isopen, direfed, To all merchants and others that fhall furnifh my fervant or factor, or any other, with fuch and fuch monies; for repayment of which, he binds himfelf to anfwer and pay all fuch bills of exchange as hall be drawn on him upon the receipt of the value, by his fervant, factor, or other perfon: if there be really monies advanced on this letter of credit, and paid to the factor, fervant, or other, and bills of exchange are fent to the party that fent fuch letter of credit, and if he refufes to accept, yet according to the cuftem of merchants he is bound to pay: the reafon is, for that there was no refpect had to the ability of the taker up, but to him that gave his letters of credit: and therefore in fuch cafe, if an action at law be brought, the particular cuftom as to that point muft be carefully fet forth. The fpecial letter of credit, where one writes a letter to furnifh another man's factor or agent; there is in this the fame remedy as above. Molloy.
As bills of exchange feldom come without letters of advice, fo ought they to be purfued: if a bill 'hall exprefs, And put it to the account of $A$; and the letter of advice fays $B$, this mult be protefted againft, for it cannot fafely be paid, without running the rifque of an equitable fuit. Idem.
If one pays money on a bill before it be due, and the party breaks, it has been conceived that the party ought to anfwer the drawer: the reafon hath been, becaufe the drawer might have countermanded the fame, or ordered the bill to be made payable to another. Idem.
In Italy, if money is paid to a banker's fervant, and if the mafter fubfribe, Pagate com fi dicé, this binds the matter as effectually, as if he had fubfribed it with his own hand. Jdem.
A bill drawn by a merchant in London, payable by another perfon beyond fea, fuch bills in moft countries, are affignable over from merchant to merchant, and the laft perfon may fue and recover the fame upon an acceptance: but, in Eng:and, only the firft perfon mentioned in the bill, and to whom the money is made payable, may recover. 'Tis true, fuch perfon to whom the money is made payable, may, for a valuable confideration, deliver this bill to another perfon, and he may indorfe an order on the back-fide; and, if the party ofterwards refufes payment of the fame, it may be fued in the party's name to whom the fame was transferred, laying the fame by way of cuftom. Idem. But in the cale of

## Hawkins verfus Cardy.

If the perfon to whom a bill is payabie, indorfes it for payment of part only to $J$. S. the drawer is not liable to the action of J. S. for a man cannot make another liable to two actions, where by the contract he is liable but to one. L. Raym. $3^{60}$.
It is effential to a bill of Exchange to be negotiable, Lucas 294.

It is enacled by 3 and 4 Ann. c. g. That all notes, payable to any perfon, or order, fhall be affignable over in the fame manner as inland bills of exchange are, or may be; and that any perfon to whom fuch note is indorfed, may maintain an action for the money, either againft the perfon who tigned fuch note, or againft any of the perfons who indorfed the fame, in like manner as in cafes of inland bills of exchange.

## B I

By fat. 2 Geo. II. c. 25. fect . I. If amy perfon thall forge, or procure to be forged, or affift in forging any (inter alla) bill of exchange, promiflary note for payment of monèy, indorfement, of affignment of any bill of exchange, or promiffary note for payment of moncy; or any acquittance or receipt for money or goods; or thall utter or publith, as true any luch forged, \&c. knowing the fame to be forged, with an intent to defraud any perfon; every fuch offender thall be guilty of felony, without benefit of clergy. And,
By flat. 7 Geo. 11. c. 22. If any perfon thall fally make, alter, or forge, or procure to be fallyy made, \&c. or affint in falily making, \&c. any acceptance of any bill of exchange, or the number or principal fum of any accountable receipt for any note, bill, \&c. or any wariant or order for payment of money or delivery of goods, or thall utter or publimh any fuch falfe acceptance, bill, \&ic. with intent to defraud any perfon; every fuch offender thall fuffer as a felon; without pernefit of clergy.
In an action on the cafe, grounded upon the cuftom of merchants, that whenever any fuch or other perfon, negotiating for them with any other merchant in England, have bills directed to them, that if he to whom fuch bills are directed, refufe to accept on fight, or to pay fuch bills, then he that drew them ought: ' both being by the cuftom to be merchants, the bearer as well as the drawer. And, the plaintiff not having thewn that the bearer was fuch a merchant or perfon negotiating, it was moved to ftay judgment for that caufe; but judgment was given for the plaintiff, for, by the court, fuch merchant is referred only to him, to whom the bill is directed, and to the procurers of fuch a bill, and not to the drawers, or they to whofe ufe the money is to be paid. 1 Keb. 592, 636.

The governors of the bank of England and Newman.
Affumplit for money lent; and, upon motion for a new trial, the cafe appeared to be this: one Bellamy gives his bill of exchance to Newman, payable to him or bearer, on the ift of April enfuing ; before the ift day of April, Newman difcounts the bill with the governors of the bank, who fent the bill after the day to Bellamy, and he acknowledged it, but it was not paid; on the 8th of June enfuing, before payment of the bill, Bellamy becomes infolvent, for which reafon the bank came upon Newman, and brought this action; and a verdict was found at Guildhall for the plaintiff. But the court granted a new trial for two reafons; firf, for that, the bank having difcounted the bill with allowance, it was a purchafe in them of the bill. Secondly, the bill was not received at the day when the bill was good, and Bellamy folvent, which delay was laches in the bank. Comyns, cale 37.

## Anonymoust In Chancery.

A gave a bill of exchange for valte received, $B$ afligns it to C for an honeft debt; C brings an indebitat. affumpfit on this bill againft A, and had judgment ; on which A brings his bill to be relieved in equity againft this judgment, becaufe there was really no value received at the giving this bill, and C would have no prejudice, who might ftill refort to $B$, upon his original debt: it was anfwered, that A might be relieved againft $B$, or any claiming as fervant or factor of, or to the ufe of, B. But the chancellor held, that C being an honeft creditor, and coming by this bill fairly for the fatisfaction of a juft debt, he would not relieve againft him, becaufe it would tend to deftroy trade, which is carried on every-where by bills of exchange, and he would not leffen an honeft creditor's fecurity. Comyns, cafe 28.

## More verfus Manning.

Affumpfit. Upon a promiflary note giveni by Manning to Statham and order: Statham affigns it to Witherhead; and Witherhead to the plaintiff; and upon a demurrer to the declaration an exception was taken, becaufe the affignment was made to Witherhead, without laying to him and order, and then he cannot affign it over; for by this means Statham, who had affigned it to Witherhead, without fubjecting himfelf to his order, will be made liable to be fued by any fubfequent indorfee. And to this the chief-juftice at firft inclined, but afterwards it was refolved by the whole court, that it was goon.
For if the original bill was affignable (as it will be, if it be payable to une and his order) then, to whomfoever it is afGgned, lic has all the intereft in the bill, and may affign it as he pleafes; for the affignment to Witherhead is an abfolute affignment to him, which comprehends his affigns; and therefore nothing is done when the bill is affigned, but indorfing the name of the indorfer, upon which the indorfee may write what he w.ll, and, at a trial when a bill is given in evidence, the party may fill up the blank as he pleafes. Comyns, cafe igo.

Jofceline and Laffere.
This was an action of the cafe on a bill of exchange brought againft the drawer, and the bill was to pay $28 \frac{1}{6}$ at 7 I. a month, at monthly payments, to begin September following, out of his growing fubfilleñce.
Vol. I.

## B I Li

Branthwait: This is no bill of exchange, fre, if he rem: no pay, then he will not be liable. the court will tike : tice of the cuftom of $m$ rchants, and, if thic be not wi. the cuftom, this court w 11 adjudge them no bills of exc: ang ; and these is no difference when brought againt the a cepier, and when againft the drawer: fuppole a bill hould b: drawn to pay fo much money out of his tents, that would not be a goud bill of exchange.
Whitaker: This is a go dill of exchange, there are three perfons conccrned in it, which are neceffary to make a bill of exchange; out of growing fublifence are words not known in the law, they are infenfible, and therefore to be rejected; it is alfo negotiable, for what makes it fo, is, i 's heng drawn payable to order, and is value received. 2 Vert. 308. Shore 4,5. There was a cale at Nifi Priu., Parfons and Goodwin. At leaft this is a good bill againft the drawer.
Chief.juftice Parker. There is no neceffity, in a bill of exchanje, of faying value received. The queftion is, whether this be intended more than a bare authority? This rather imports, that the drawer had then no fubfiffence; this looks more like an authority than a bill of excbange, and the action is brought for non-payment, and not for non acceptance.
The next point will be, if this bill, as he calls it, or what ever it be, be a good confideration for the exprefs promife; for, though it be frictly no bill of exchange; $j$ et, if it be a good confideration to raife the exprefs promife in the narr', it will be good.
Eyre juftice. To infert value received in a bill is not neceflary; nor is it neceflary to have three perfons to make a good bill of exchange, for a man may draw a bill on hımfelf, but it has always been taken to be for a certain fum, and the party takes on him to pay at all events. This is payable out of a certain fund; fuppofe a promiffary note of 100 l . were payable out of fuch and fuch rents, would that be good? In fuch a cafe there muft be an averment, that fuch rents were received, out of which the bill was to be paid; and there is no difference here between the drawer and accepter; for, fuppofe an action had been brought againft the accepter, would an action lie againft him before he had received the rents? fure it would not. The other point, whether it be a good confideration? If the fubifitence do not come in or is contingent, that may be a reafon for it's not being a good confideration.
In this cafe the judgment was afterwards reverfed, which had in C. B. been given for the Flaintiff, in the original caufe.

## Thomas and Bifhop, Mich. 7 Geo. II.

A note was drawn by Charles Mildmay on the defèndant, at thirty days fight; to pay to John Somervil, or order, 2001. and to place the fame to the account of the. York-buildings company, as per advice, and is accepted by Bifhop. This was a cafe faved to the defendant, on a verdict for the plaintiff at Nifi Prius, before Mr. Juftice Page. After the note being read,
Mr, Kettleby moves for a new trial. The action is brought by an indorfee, whom he apprebends has no action againft the defendant, the direction of the note being to Mr. H. Bifhop, cathier of the York-buildings company, at their houfe, \&c. and that therefore the company ought to have been charged with it, and efpecially as the letter of advice is directed to the governor and court of affiftants of the faid com-pany.-It is a great hardhip upon the defendant, and muft ruin him, if he is charged therewith, there being great numbers of other notes accepted by him in the fame manner. - There was a queftion when he was firft fued as to his putting in bail, and 'twas compared to the cafe of Maddocks of the bank, and urged, that, though the acceptance of a banker's fervant binds the mafter, yet the fervant is not bound by it:
Strange alfo for the defendant. The note would have been fufficient to have charged the company, fo the plaintiff has remedy without the defendant. .For it is a fettled point, that the mafter may be charged by a fervant. At the trial the opinion was; that he was bound for his faying only, Accepted, and not as agent of the company. But it appears, from the face of the bill itfelf, to carry the intereft of the company with it, and is fo addrefled, and fo likewife is the direction. But the letter of advice clears it beyond doubt, and is a key to the whole cafe, as being directed to the governor and court of affiftants of the company by Mildmay, who drew the bill.-He infifts this was proper matter of evidence for the confideration of the jury, and, therefore, as it was not admitted before, hopes the court would grant a new trial: Serjeant Darnell. It is urged that the queftion, whether the defendant accepted for himfelf or the company, ought to have been before the jury; but I muft be of opinion to think otherwife, never knowing that a goldfomith's fervant, accepting for bimelf, would bind his mafter, but not him. A man may accepr, and whoever does that, it binds him; nor thall the addition which is neceffary to defribe the por fon, and make him known, excufe him. The flatute, indeed, direcis the fervant's acceptance foll bind, but that

Thall be as he accepts. Befides, the drawer is difcharged, if there is no acceptance in time. The acceptance is a perfonal contract, and, if left to a jury, would deftroy the credit of all fuch notes. Had the action been againft the company, there had been more reafon to have doubted then, than in the prefent cafe.
Kettleby in reply. Every man's property mult depend on the difcretion of a jury, and thinks it was a proper queftion for their determination, whether this aeceptance of the defendant was on his own account, or for that of the company, as being a matter of great importance, and was never determined.
Strange. As this action depends upon the uncertainty of a meer matter of fact, the jury are the only proper perfons that can determine it. The fame may happen in many other cafes, and as it is admitted that a fervant may act on his own and his mafter's account, and therefore as he may act in a double capacity, it is' a proper queftion to come before a jury, to determine in which capacity he acted in the prefent care.
As to the remedy over upon the drawer, that will be the fame, let this be determined as it will; for here is certainly an acceptance, but the queftion is by whom, which will make this objection vanifh.
York chief-juftice. I am of the fame opinion my brother Page was of at the trial, and think the verdict was a proper verdict. A bill of exchange is a contract of a very peculiar nature, depending, in a great meafure, upon the cuftom of merchiants. It is originally the contract of the drawer, but, when accepted, is a contract of the drawee, and is according to the tenor of the bill: and a farther contract may"arife from the indorfer; though it is certain that a writing may be drawn in the form of a bill of exchange, and yet not be fo; but I know of no cafe, where it has happeried to be fo, and the accepter been difcharged, by any evidence not appearing upon the bill itfelf, and cited the cafes of Jenney and Hern. Paf. 10 Geo. I. in B. R. The latter of thefe cafes was on a bill to pay to J . S. on demand, out of the money in your hands, arifing from, $\& e$. - And, in this cafe, the accepter was held liable to anfwer for no more than what he fhould raife from, \&cc.--But the cafe in queftion comes not up to this. The addition in the bill is merely a defcription, and cannot alter the nature of the contradt ; and the acceptance is general, and muft be taken fecundum formam billz. It is not to account out of any particular fund, but only; when the money is paid, to what account to place it.
As to the letter of advice, that was only between the drawer and drawe; and, as it was a prívate tranfaction only between them, it cannot alter the cafe.
In regard to the evidence of the defendant's being caflier of the company, this ought not to be confidered by the court any extrinfic parole evidence might as well be produced', and that would affect the credit of all thefe contracts, It is plainly , from the face of the bill, a bill between the drawer and drawee, and could not have been accepted by the company, but for the honour of the drawer, and this a flranger might have done. There was a much ftranger cafe in this court, bewween

Cramlington and Evans. 2 Vent. 307.
Where, notwithflanding the money due upon the bill was levied by extent before the day of payment, yet it was held the accepter was bound, and the indorfee had judgment againft him. Nor would it have excufed the defendant, if the acceptance had been for the company; for the company could not have been charged. That would have been a matter of equity between Mr. Bifhop and the company, and he might have been relieved there.
Probyn. Where a bill is drawn upon a banker, and accepted by one who is his fervant, he inclined to think it thall bind the mafter, though the acceptance is general, becaufe no one would truft the fervant; and the bill is taken on the credit of the mafter: but the prefent cafe is not fo: the bill here is drawn upon the fervant, and the addition is only deferiptive of him.-We muft go according to the face of the note, and the rules of law, to make things certain. -The indorfer is a ftranger to the contract between the drawer and drawee, and, if there is any thing in it that does not appear upon the face of the note, it ought not to be admitted in evidence againt him.
Lee. In cafes of this kind, extrinfic evidence ought not to be admitted; the acceptance is general, according to the tenor of the bill; and, as the bill fhews nothing that the company were engaged in it, no evidence thereof ought to be admitted. Bills of exchange are facred things; and, as no man can determine any thing of them but from the face of the bill, that only fhould be taken in evidence, which is underftood to be a general rule in all trials of this kind.
Page. In a cafe where a bill was given for goods fold and delivered, which were not delivered; yet the court would not admit any evidence of it; for they held that the bill was to be confidered from the face of it.
Cur. The rule to ftay the poftea muft be difeharged.
This cale being important, is the reafon I have given the
pleadings thereupon, according to the beft information I have been able to obrain.

## Croffe and Gray. Eafter 8 Geo. II,

One Slaughter, a clerk in the Exchequer, gave a promiflary note to Gekie, Gekie indorfed it over to Webb, who indorfed it to the defendant, who indorfed it to the plaintiff. Thie note was not payable 'till fix months after date, and, about a week after it became due, the plaintiff, by his attorney, demanded the money of Slaughter, who refufed payment, and defired fome time of forbearance, which the plaintiff's attorney refufed to give, but after the plaintiff himelf gave him a month's time. This was in Auguft laft, and, the month expiring before the beginning of Michaetmas term, the plaintiff, the firf day of the term, filed a bill in the Exchequer againft Slaughter (which was as foon as he could be fued, by reafon of his privilege) and on this bill obtained judgment: but, Shughter proving infolvent, the plalntiff brought this action againft Gray, the indorfer. The queftion was, whether, if the indorfee gives time to the drawer of the note, it does not difcharge the indorfers. The chief-juftice faid, the time for the indorfee to demand the money of the drawer, was fertied to be a reafonable time. - A verdiet was given for the plaintiff.

Lewis and Orde, 2d Sittings in Middlefex, before Hardwieke chief-juftice.
This was an action brought upon a note given by the plaintiff to the defendant, in the following form; I promife to pay to Mr. James Lewis eleven pounds, at the payment of the thip Devonfhire; for value received. The plainiff declared as upon the flatute of queen Anne, taking it to be a note within the flatute.
Marfh for the defendant objects, that it is not a note within the ftatute. Ift. Becaufe not payable to order, or bearer; and 2dly, Becaule of the contingency of the time of payment.
Hardwicke. It has been long fetted, that the ftatute does not require a particular certain form, and faid, he remembered a cale in this court, where it was held on demurrer, that a note, to be within the flatute, need not be payable to order: and in that cale it was urged, that it might as well be faid every note within the ftature fhould be payable to order or bearer, for they are the words of the ftatute. As to the contingency of the payment, the fubfequent fact of the payment of the fhip makes it certain; and therefore, though not a lyen ab initio, yet became fufficiently fo, and within the ftatute, by the fact happening after. It is not like the cafe of Jofcelin and Laferre. Raym. 1362, where it was held, that a bill of exchange, payable out of a particular fund for growing fubfiftence, was not within the flatute. I think, therefore, the declaration is proper enough; but you may make your objection in arreft of judgment, for this will appear on the record. The chief.juftice further faid, that in cafe of a foreign attachment, where A receives the money of B , by authority of C , and in difcharge of a debt due from C to $A$, the money can never after be attached in the hands of $A$ for the debt of $B$.

Powell and Moliere, in Chancery, Eafter io Geo. II. The bill was for fatisfaction of a bill of exchange drawn upon the defendant, and accepted by him. Pending the fuit, the original defendant died, and it was revived againit his executors, praying alfo a difcovery of affets, and to be fatisfied thereout. On the proofs fome queftion was made, whether the acceptance was fufficient to charge the defendant, and whether the plaintiff by keeping the note about ten days after it became due, without coming to the drawee for the money, had not difcharged the accepter? But it was infifted for the defendant, as a previous matter, that the plaintiff had a plain remedy at law, that his cafe depended upon facts that ought to be tried by a jury, and not to be determined in this court.
Hardwicke lord chancellor. Regularly the plaintiff ought to purfue his remedy at law, and not in this court: and, if the cafe ftood as it did at firf, I fhould certainly difmifs the bill; but the bill of reviver praying a fatisfaction out of affers and a difcovery of affets, it is made a cafe of which this court takes cognizance, and then the prayer of fatisfaction is an incident that follows with it. I have, therefore, no doubt, but that the plaintiff is proper in praying a remedy in this court. But, with regard to the acceptance, if there were doubt of it, as to the fact, or whether in law what has been done amounts to an acceptance, it might be fill neceffary to fend the parties to a trial at law; but I think there is no doubt of either. The teftator, when the bill was brought to him, received it, entered is in his book according to his courfe of trade, and is proved to have been made under a particular number, and wrote that number under the bill, and returned it. Now it is faid to be the cuftom of merchants, that, if a man underwrites any thing to a bill, it amounts to an acceptance. But, if there were no more than this in the cafe, I frould think it of little avail to charge the defendant; but what determines me is, the tefator's letters; and

Ithink there can be no doubt, but that an acceptance may be by letter, and it has been fo determined. There was a doubt, whether a parole acceptance be good. Lord chiefjuftice Eyre held that it was, lord Raymond held the contrary, and there was a like cafe came once before me at Nifi Prius, (Lumley and Palmer) and I had a cafe made of it for the opinion of the court; and it was feveral times argued, and at laft folemnly determined, that fuch acceptance is good; much more then an acceptance by letter.
As to the plaintiff's being intitled to intereft, I think it a clear cafe that he is, though no proteft has been made; for that is neceflary only to intitle the drawee to damages againft the drawer, and, all the damage that can be had in fuch a cafe, is the intereft.
Decree for the defendant to pay the note with intereft, at the rate of 4 per cent. The plaintiff to pay the cofts to the time of the bill of reviver, and after each party to bear their own cofts.

Thead and Lovell. At the fittings after term for B. R. in London, Mich. 12 Geo. II.

This was an action againft the indorfer of a bill of exchange. The bill was given in evidence, with an indorfement only of the defendant's name; which, as was urged for the defendant, was not an indorfement that would fubject the defendant to an action; to which the plaintiff's counfel agreed, but prayed that they might have the bill back, to write over the indorfement, pay the contents to J. Thead, which was oppofed by the defendant's counfel, urging, that, if the plaintiff had any right fo to do, he ought to have done it before the caufe came on, and that he ought not to be admitted to do it now.
Lee chief-juftice. I believe this hath been often allowed; and I am of opinion, that the plaintiff ought now to be let in to do it.
The bill was then delivered back to the plaintiff, and the words above were wrote over the defendant's name.
It was then objected, that the plaintiff himfelf appeared to be an indorfer of the bill, and therefore the property out of him, fo that he could not maintain this action. Upon which it was prayed for the plaintiff, that they might have the bill back again, to ftrike out the indorfements fublequent to the defendant's; which was oppofed by Strange, folicitor-general, averring, that he remembered a like cafe at Nifi prius, before lord Hardwicke, where, though he allowed the bill to be delivered back, to have the indorfement filled up; yet be refufed to let it be delivered back, to have the fublequent indorfements ftruck out.
To which Marfh for the plaintiff faid, that the fublequent indorfement, being in blank, amounted to nothing; it might be as a witnefs, \&ce. and would not hew a transfer of the property; which appeared from the neceffity of having the purport of the defendant's indorfement wote over it. But Strange faid, that he was ready to fubmit this to the jury, whecher fuch indorfement were an affignment of the property, or not.
Leerty, or nof-juftice, declared his opinion, that he thought the plaintiff ought to have this advantage now; and the bill was therefore again delivered back to the plaintiff, that the indorfements fubfequent to that made by the defendant might be flruck out, which being done, and the bill read, the fol-licitor-general took this further objection, That by the defendant's indorfement, as it is now made, to pay the contents to J. Thead, and the record is to Thead, or order, $\mathrm{f}_{0}$ it is not the fame bill. But, upon looking into the record, it appeared to agree with the indorement.
It was then urged for the defendant, that the plaintiff muft prove a demand upon the drawer, and his neglect to pay; which was fubmitted to by the plaintiff's counfel without argument. Upon which it appeared in evidence, that the plaintiff had by his fervant, from time to time, applied to the drawer for fix weeks together, and was put off; that, at the ead of fix weeks, the drawer became a bankrupt, and the plaintiff not being able to thew that he had given notice to the indorfer of the default in the drawer, and the witnefs confefling that he knew of no notice being given to the indorfer of this neglect of payment in the drawer, it was taken, without argument, to be a difcharge of the indorfer, and the plaintiff was nonfuited.

Reynolds and Dundafs. Rolls Trin. and 14 Geo. II. Upon motion for an injunction the cale appeared to be, that the plaintiff had been drawn in, upon fome falfe or miftaken confideration, to give a promiflary note to J. S. ; and, J. S. having put the note in fuit, the plaintiff brought his bill in this court to be relieved, and to bave an injunction; and before anfwer, or any order made in the caufe, J. S. indorfed oier the note to the prefent defendant Dundafs; whereupon the plaintiff amended his bill, fetting forch the indorfement, and charging notice, both of the fraud and lis pend' concerning it in Dundals, and prayed relief againft the note, and an injunction againft Dundafs, from proceeding at law thereupon.

Dundals, in his anfwer, fwore to the payment of the money fpecified in the note to J. S. upon the note being indorfed over to him; but not clearing himfelf of the charge upon him of notice of the fraud, aǹ injunction was granted by Mr Verney, mafter of the Rolls, who declared, that there was no fort of proceeding more lable to fraud, than the negotiating fuch notes; and faid, that though generally the confideration of fuch note is not inquirable into the hands of an indorfee; [Comyns 43.] yet, that where there appears to have been an original fraud, and any perfon knowing, or who may be fuppofed to have notice of, that fraud, will pay his money, and take an indorfement to himfelf of fuch note, it is but jufice and equity, that the note fould fill be fubject to be avoided by that original fraud, which it cannot but be fuppofed the indorfee had notice of, and that he would not have advanced his money, without having in view a defign to fupport and maintain the fraud.
It was then prayed, that the injunction fhould be granted only on terms, that the plaintiff fhould give judgment at law with releafe of errors, fubjed to the order on hearing; but this was denied by his Honour, he faying, that he faw no reafon for it, and granted the injunclion generally. N. B. Mr Murray for the defendant, and Mr Noel and Mountney for the plaintiff.

Cook and Coland. Mich. 18 Geo. JI. in B. R.
This was a writ of error of a judgment in C. B. for the plaintiff. The action was on a promiflary note, to pay 150 guineas ten days after the death of the defendant's father And, the queftion being whether this is a note within the Itatute of queen Anne, it was held in C. B. that it is, and judgment was given for the plaintiff; and was affirmed upon this diftinction, That where the time upon which the note is payable depends upon a contingency, that muft fome time or other happen, as in this cafe; and where it is upon a time that may poffibly never happen at all; the one makes a vefted intereft, which the other does not.
Of the laws andufages of Scotland in regard to bills of exchange.
The foundation hereof depending upon the 2oth ad 3 parl. king Charles II. it will be neceffary to cite the fame, which is as follows, viz.-‘ Our fovereign Jord, confidering how ne-- ceflary it is for the flouriming of trade, that bills or letters - of exchange be duly paid, and have ready execution, con6 form to the cuftom of other parts, doth therefore, with ad-- vice and confent of his eftates of parliament, ftatute and cordain, That foreign bills of exchange, from or to this ' realm, duly protefted for not-acceptance, or for not-payment, the faid protefl having the bill of exchange prefixed, c is regifterable within fix months after the date of the faid - bill, in cafe of not-acceptance, or after the falling due ' thereof, in cafe of not-payment, in the books of council 6 and feffion, or other competent judicatures, at the inftance - of the perfon to whom the fame is made payable, or his - order, either againt the drawer ir indorfer, in cafe of a 6 proteft for not-acceptance, or agdinft the accepter, ia cafe - of a proteft for not-payment, to the effect it may have the - authority of the judges thereof interponed thereto, that let-- ters of horning upon a fimple chares of dix days, and other - executorials neceffary may pafs ty reupon, for the whole

- fums contained in the bill, as w'ci! exchange as principal, c in form as effeirs: ficklike, and in the fame manner, as ' upon regiftrate bond, or decrees of regiffration, proceed6 ing upon confent of parties. Provided always, That, if 6 the faid protefts be not duly regiffrate within fix months - in manner above provided, then, and in that cafe, the 6 faid bills and protefts are not to have fummary execution, 6 but only to be purfued by way of ordinary action, as acc cords. And farther, The fums, in all bills of exchange, < bear annualrent, in cafe of not-acceptance, from the date - thereof, and in cafe of acceptance, and not-payment, from
' 6 the day of their falling due, ay and while the payment - thereof. And farther, Notwithfanding of the forefaid - fummary execution provided to follow upon bills of ex6 change, for the fums therein contained, in manner above - rpecified: yet it is leefome to the party charger to purfue - for the exchange, if not contained in the faid bills, with - re-exchange, damage, intereft, and all expences, before the - ordinary judge, or, in cale of fufpenfion, to eik the fame 6 to the charge, at the difcuffing of the faid fufpenfion, to 6 the effect that the fame may be liquidate, and decreet given - therefore; either againft the party principal, or againft © him and his cautioners, as accords.'
The execution, that is provided by this act, varying in feveral points from the cuftoms of other countries, thefe culloms generally regulate the practice of traders in Scotland, when their own publick acts are filent and determine nothing.
In cafe of any foreign bill of exchange from or to Scotland, duly protefted for not-acceptance, or fer not payment.
This act mentions only foreign bills, and not fuch as are drawn from one place within Scotland to another, or inland bills; which was fo ordered, left people had been tempted, with the privilege of fummary execution, to conftitute all their debts by bills, and none by bonds.

Inlath bills of exthange had not in England, before 1697, ainly manner of force or credit. But, at length, feeing great damages frofuently happened in the courfe of trade, by reafon of the delays of payment, and other neglects of fuch bills; thefe bearing value received, were ordained to be lummarily negotiated by protefting, accepting, and giving advice therebf, \&c. provided the bills be drawn for 2ol. fterling, or upwards.
The laws of SCOTLAND have not only made careful provifion for the duc payment of foreign bills, but allo of inland draughts; fummary execution, by horning, is ordained to proceed upon bills, or tickets, drawn upon, or granted by, or to, and in favour of the bank, and the managers and adminiftrators thereof, and protefts thereon, as is appointed to pafs upon foreign bills *

* Act of Parliament 17 July , 1695 , which is not inferted in the principal collection of the flatutes of Scotland.
The like execution paffes now upon all inland bills and precepts, as is appointed to pafs upon foreign bills by this act 20 parl. 3. Ch. II. 168 I : which ftatute is extended, in all points, to inland bills and precepts*: yet, whether under that general the priyilege of annualrent be comprehended, feems not fo clear: for as it may be alleged for the affirmative, that feeing generalia debent generaliter intelligi, and the act, 168 r , is extended in all points; the claufe concerning annualrent, being one of them, muft be underftood as carried under the general, efpecially confidering, that this fenfe is acquiefced in by common practice ; no body ever fcrupling at the payment of annualrent for inland bills
* Act 36. feff. 6. parl. K. W.

But the lords have found annualrent due upon inland bills as well as others *. Bills or precepts, for delivery of falt, meal, \&ic. are not privileged as money-bills: though the ordinary folemnities required in other writs may be difpenfed with in them, when granted in re mercatoria $\dagger$.

* 8 June, 170 , Blair contra Oliphapt. 16 Decemb. 1713, Lellie contra Robertion.
+19 February, 1715, Douglas contra colonel Erfinine
Inland bills and precepts muft alfo be negociated as foreign bills, by duly prefenting them, protefting for not-acceptance and not-payajent, and advifing the drawer, or laft indorfer, thereof. So the poffeffor of an inland precept granted by his debtor in a bond, not having protefted the fame for not-pay ment, nor done any diligence againft the accepter of the precept, 'till he broke, was found to have no recourfe for payment againft the drawer, or his cautioner in the bond $\ddagger$.

## $\ddagger 10$ Joly, 1706, Brand contra Yorfon.

Promiffary notes have the fame effect, both in France § and England \|, as bills of exchange, as to indorfements thereof, and maintaining actions thereon for payment of fums, with cofts and damages. There is this difference, indeed, that, whereas a bill muft be protelted, the party, failing to pay a note, muft be fummoned to a court.
§ Edit. de Commerce, 1673, tit. 5. art. 27. tit. 7. art. 1.
II 3 and 4 Ann. cap. 9. junct. 7. Ann. C. cap. 25.
Promiffary notes have no fuch privilege in Scotland. A merchant's note payable to others, or order, at fuch a place, or at any other place, with the current exchange, was found to be only a fimple ticket, and not of the nature of a bill of exchange, in refpect there was not a drawer and accepter, and therefore null, for want of writer and witneffes names and defignations **.

## ** 29 Jan. 1708, Arbuthnot contra Scot.

The like note, whereby one promifed to pay to a perfon, or order, a fum, value received, being indorfed to a third party, was, for the fame reafon, compacted with the indorfer's debr $+\dagger$. Nor doth the Englifh flatute of 3 and 4 Ann. cap. 9 . giving the like remedy upon promiflary notes, as is now ufed upon bills of exchange, for three years, though made perpetual by an act of the Britich parliament fince the union $+t$, extend to promiflary notes in Scotland $\ddagger \ddagger$, becaufe the Britifh ftatute doth only make the former, which was a temporary law of England, to have perperual force there; and, being but an acceflary, can go no further than the flatute of EngLind it was calculated to continue.
†† 12 Feb. 1708, Bundie contra Kennedy.
++7 Ann cap. 25.
$\ddagger \ddagger 6$ Decemb. 171 1, King contra Efdale.
A proteft, having a bill of exchange prefixed, is regiftrable within fla months after the date of the laid bill, in cafe of not-acceptance, or after the falling due thereof, in cafe of not-payment, \&c.
Bills of exchange have every-where paratum executionem ; for retarding whereof, no exceptions are admitted, but fuch as are inflantly verified ${ }^{*}$. But not by this act, after fix months from the date of the bill, in cafe of not-acceptance, or from

It's falling due, in cafe of non-payment, within which time only fummary diligence is competent by regillation + ; and yet a bill payable, at a certain day, which the poffeffor neglected to proteft for not-acceptance within fix months of the date, was found duly protefted for not-payment, and regiftrate againt the drawer, within fix months after the term $\ddagger$. Here, fome would think, the lords proceeded upon the fuppofition that bills, payable on a precife day, require no acceptasce, and that the creditor therein needs never to offer his bill till the term of payment elapie, and then proteft for not-payment; though it be otherwife with bills drawn on fo many days fight, which muft be offered in order to acceptance, for determining the time of their falling duc. But this diftinction between thefe two kind of bills bath neither foundation in the act of parliament nor in the merchant-cuftom. And if bills, payable at a certain time after date, were not to be duly negociated, by prefenting in order to acceptance, and protefting for want of it, as well as bills on fo mariy days fight; it wouk interrupt commerce, and ruin merchants. Thérefore, it feems more probable, that the realon of the aforefaid decifion was, becaufe the drawer could qualify no prejudice he fuftained by the poffeffor's neglecting to proteit for not-acceptance fince the perfon drawn upon had none of his effects.

* G. Dunozeti dec. 268., u. 4, 5. Boer. dec. 295. a1. 7. Scaccia de appelar. lib. 3. cap. 2. quaft. 17.
+ Which is a decrec on tentence in the conftrualion of law.
$\ddagger 25$ July, 1699 , Robert Yule againft James Richarlfon.
At the inflance of the perfon to whom the fame is made payable, or his order. The fimple having of a bill is a fufficient title to protelf for not-acceptance; but none, without an active title in his perfon, can effectually proteft for not-payment, and obtain the protefted bill to be regiftrate, at his inflante; becaufe the accepting of a bill puts nothing in the prefenter's pocket, but is merely an obligement to pay in the term on it, to the perfon that thall have right thereto at the falling due: whereas payment of a bill call only be made to one having right to receive and difcharge, and confequently fuch a perfon only may proteft for not-payment: the defign thereof being to put the debtor in mora folvendi, fo as to infer exchange, re-exchange, and damages; which can never be without an active title in the proteffer.
When a bill is payable to two or more perfons conjunctly and feverally, any one of them may receive payment, and difcharge the debt *; but then, after one has charged for it in his own name, the bill cannot be warrantably paid to any other without his confent $\dagger$.
* Arg. I. 31. §. 1. ff. de novat.
- Arg. 1. 16. ff. de duob, reis conflit.

Either againg the drawer or indorfer, in cafe of a proteft for not-acceptance. By the cuftom in other countries, the creditor of a bill that is fuffered to be protefted for not-acceptance, cannot recur by action and diligence againf the drawer, or indorfer, for payment, before the term ; unlefs he be vergens ad inopiam : but only to oblige to give fufficient fecurity for payment, at the day and place appointed; with charges and re-exchange, in cafe of failzies, to be valued according to the courfe of them: after which fecurity is given, they can be no more troubled than if a bill had been accepted; and the poffeffor muft fuperfede farther diligence 'till it fall due *. Though an indorfer fhould, before the term, give fatisfaction to the creditor, he cannot, 'till then, oblige the drawer, or a former indorfer, to reimburfe him, if they be willing to find furety in manner abovementioned $\dagger$. This is the practice in other countries; but, by the acts of Scotland, when a bill is protefted for not-acceptance, the poffeffor has immediate recourfe, by horning, \&c. againft the drawer or indorfer, even before the term of payment: for, if it were otherwife, the creditor might fometimes (as when his bill is payable nine or ten months after date) be debarred from the common benefit of fummary diligence, which is only competent within fix months.

* Du Puy, chap. 7. n. 6, 7. Scarlet, chap. 13. R. 7, 8,:8.
+ Ibid. R. igr.
Or againft the accepter, in cafe of a proteff for not-payment, \&c. An accepted bill, being protefted for not-payment, is regiftrable in order to horning, and other diligence againt the accepter, when the poffeffor muft firft difculs: and, that being done without recovering payment, he has only an action for making his money effectual, againft the drawer and indorfers; who yet may be purfued conjunctly or feverally, in folidum. Herein the law of Scotland recedes from the cuftom abroad, which makes drawer, indorfer, and accepter liable to the creditor in the bill, without any benefit of difcuffion** And what can be the reafon why it is not fo in Scotland, but that the accepter is confidered as principal debtor, from the firft defign of the parties to have the bill paid by him; the drawer and indorfers being but fo many mandators, much the fame in law as cautioners; who regulariter are only liable fubfidiarie, after difcuffing of the principal $\dagger$. And, if fum mary immediate diligence were allowed againft the drawer or indorfers, they could not propofe the moft ordinary defence

## B I L

and exception againgt the poffeffor; viz. that he fuffered the accepter to break by his omiffion of due diligence, but by way of fulpenfion, which would be expenfive. The creditor in a bill protefted for not-acceptance, has alfo action againit him on whom it was drawn; if he unjufly refufed to accept, having provifions in liis hand $\ddagger$. Thus a perfon who fuffered a bill drawn upon him to be protefted for not-acceptance, was found liable to the poffeffor in quantum hie had of the drawer's effects; at proteting of the bill, and to be in mala fide to pay thereafter to the drawer $\|$. And as the poffeffor of a bill, having firft difcuffed the accepter; has fubfldiary recourfe againt the drawer, and all indorfers: fo thofe who indorfed, after acceptance of the bill, have ground of relief of the drawer, accepter, and other more early indorfers; and every indorfer bf thofe that went before him. Yet a bill payable at a certan day, being protefted for not-payment, after the falling due thereof, without a previous acceptance, or protelt for notacceptance, was found regiftrable againft the drawer $\$$. And horning againft the accepter upon an inftrument of proteft for not-payment, againtt the drawer, and all others concerned without exprefs mention of the accepter, was fuftained to though there be no action competent againf the drawe till the bill is protefted againt the accepter; for a proteft for not payment need not be ufed againft the party perfonally, or at his dwelling-place, but only at the place of payment.

* Marquhardas, lib. 3. cap. 8. n. 5. Neoftad. faprem. cur. Holl. Zealand. \&c. Dec. 12. Du Puy, cap. 16. In. t. Voet in Pand. lib. 22. tit. 2. n. 9. Relp. Jurifc: Holland. part. 3. vol. 2. conf. 33 .

$\pm$ Sair's Infit. lib. I. tit. i1. fect. 7.
i) December 9, 1712, Gordon contra Anderfon.

July 25, 1669, Robert Yule contra Richardfon
1697, John Inglis and James Fowlis againft Mackie of Palgown.
The polfeffor of a bill payable at a certain day, having fignified the draught, by a letter to the perfon drawn upon, defiring to know whether he would accept; and received anfwer, acknowledging he had effects of the drawer's, that he fhould be careful to have them applied towards the payment of his debts, but was refolved to clear off, firf, fuch as he himielf ftood ingaged for ; and hoping the poffeffor would be difcreet, and not proteft the bill, for he expected fufficient effects from the drawer, tt fuch a day. When the bill fell due, it was protefted for not-payment, againft the writer of the letter, as if the letter had been equivalent to an acceptance, and horning raifed thereon. But the lords found the bill fo protefted to be no ground of a fummary charge, and turned the fame into a libel *.
*July 12, 1699, William Maxwell againft captain M‘Kay.
Correi debendi, by the common law, are not bound in folidum, unlefs the obligement exprefs it fo *; becaufe, in dubiis potior eft conditio debitoris. And the cuftom of Scotland finds ordinarily co principal debtors, that are exprefsly bound, conjuncty and feverally, to be liable only pro rata, unlefs the matter of the obligation be an individual fact, or fomething not to be done. And in bills of exchange drawn upon two or more perfons conjunctly, not being in fociety, every one may accept for his own part $\dagger$. But then bills drawn upon two, without expreffing conjunctly and feverally, or any words equivalent, and fimply accepted by one of them, were found to make him liablc for whole fum $\ddagger$. Whence it may be inferred, that, when one or more perfons drawn upon would only oblige himfelf pro rata, he muft not accept fimply, but qualificate, for his own part. Acceptance of a bill by one of two co-partners obliges the other : but a commifion granted jointly by two merchants, for fending home wines upon their account, with a promife to make payment of the bills that fhould be drawn for the price; and the wines accordingly fent and delivered to one of them, to whom the bills, though drawn upon both, were only prefented, and by him accepted: which being thereafter protelted for not-payment, and the other party, granter of the joint commiffion, puriued for them: he was affoilzied upon this ground, that he received no part of the wine, and the bills were never prefented to him, or accepted by him, nor the drawing thereof fo much as intimated to him by advice from the drawer, or his factor : but, on the contrary, the purfuer toak a new fecurity from the accepter, long after they were protefted, without offering to purfue the defender, before the other was broken and gone off $\|$.

Jinuary 2c, 1675, M•Morland contra Maxwell.
|| March 24, 1685 , Stewart contra William Blackwood.
That letters of horning upon a fimple charge of fix days, and other executorials neceffary, may pafs thereupon. All hornings * on regiftrate bands $\dagger$ and decreets $\ddagger$ in Scotland, not bearing days, but in form as effeirs, muft be upon fifteen days, and pafs by way of bill, as the warrant thereof. But feeng it is neceffary for the flourifing of trade that bills of exchange be duly paid, and have ready extcution, conform Vol. I.
to the cuftoms of other countries ; horning on thefe is iffued out on fix days charge.
* Which are warrants; in the king's name, to charge pe-fons to pay debts, or perform deeds, within a prefixed tume up. on pain of being declared outhaw by three blalls of a meftaz. ger's horn, in cafe of difobedience.
$\dagger$ Bohds, or obligations of record:
$\ddagger$ i. e. decrees, or fentences of court
By other executorials neceffary, we underftand the other ordinary diligence required by the laws of Scotland, for compeling a man to pay his debt; fuch as caption; or execution of the body, whereby his perfon is feized, and put under reftraint; arreftment, and poinding *; for effecting his moveables; inhibition $\dagger$, comprifing $\ddagger$, and adjudication $\|$, for alfecting or evicting his heritage.
- i. e. diftraining or diftrefs.
+ i. e. a prohibition by letters in the king's namé, in favbut of a creditor, difcharging his debtor to fell, difpofe of, or any way burden his lands or hereditaments, and all other perfons to bargain with him, to the prejudice of the creditor's claim; 'till the fame be fatisfied.
$\ddagger$ Or appraifing, is a decree; or fentence, of a meflenger at arms, adjudging a perfon's lands and heteditamenis to belong to his creditots in payment of debt; but recoverable, by fatisfying the debt within a certain term of years, called the legal reverfion: upon expiring of which legal reverfion, before all is paid, the fubject apprifed becomes abfolutely the creditor's, who is called the apprifer
Adjudication (which is now intlead of apprifing) is a decree, or fentence, of the lords of feffion, of the fame nature, and having the like effect; as an apprifing.

Merchants enjoy many perfonal privileges in feveral other countries, which they are abridged of in Scotland. As they cannot be arrefted, br made prifoners upon the publick exchange ; nor can their perfons and goods be feized on at folemn fairs, for debts elfewhere contracted. In Sweden, Norway, France, Spain, and Portugal, the merchants of HansTowns; in Denmark and Mufcovy, the meichants of Lubeck; and in Pruflia, all the merchants of Germany have the public faith for their fafety from arreltments upon the road.
By the municipal ftatutes of fome places, as Milan, there is a tacit hypothetic competent for bills of exchange *: that is, law gives, to the creditor in a bill, a real fecurity upon the goods of the debtor, for the payment thereof, without exprefs paction. But even exprefs hypothecations of goods, without delivery, are ineffectual by the cuftoms of Scotland; and by it few tacit hypothetics allowed, whereof none are for bills of exchange: for ordinarily we prefer parties according to the priority of their legal diligence, that commerce may be the more fure, and lefs retarded, by not obliging them to too nice an inquiry about the condition of fuch as they contract with.

* Du Puy, cap. 17. n. 6. Nic. a Genua de fcript. privata de la cam. 1. 2. n. 7.

Though the poffeffor of a bill be not bound to feek for payment at any other place than where the fame is payable *, yet he may, in cafe of not-payment, proceed in diligence againit the accepter, or his goods, wherever be can find them $\dagger$; not only for the principal fum, but alfo for damage andintereft $\ddagger$.

* L. 9. ff. de co quod certo loco. Scaccia, §.2. Gloff. 5. n. 194, 210
$\dagger$ L. I. ff. de eo quod certo loco. L. 19. §. I. ff. de judiciis.
$\ddagger$ L. 2. ff. de eo quod certo loco. Scaccia, ibid. n. 213.
For the whole fums contained in the bill, as well exchange as principal, \&c. The inftrument of proteft, as being juris gentium, bears ordinarily the principal fum, exchange, reexchange, damage, intereft, and expence *. But we can only charge for the principal, and exchange, if contained in the bill; annualrent, from the date thereof, in cafe of not-acceptance, and from thence it falls due in cafe of acceptance and not-payment: re-exchange, damage, and intereft, not being liquid debts. Yet, though the fums charged for be fatisfied, the poffeffor is not bound to difcharge the debt, and give up the diligence, but only the principal bills, with a difcharge thereof, referving the diligence for an inftruction of his claim in an ordinary action for exchange, when not in the bill, re-exchange, damage, and intereft. The reafon why the principal bill muft be returned, upon payment of the fums therein mentioned, with the annualrent, is, becaufe if the bill were kept up, and only a reparate receipt of the money given, what thould hinder the bill to be afterwards indorfed to another, for value received? againit whom the indorfer's receipt apart would not avail the debtor, fince bills of exchange are as fungible as money, and pafs from hand to hand fine onere, and affected with no feparate obligements of the 'author. Therefore, if the poffeffor of a bill fhall refufe to deliver up the fame, upon an offer of the fums charged for ; that would be to the debtor a good ground of fufpenion, and exoneration from expences of plea.

The

## B I L

## B 1 L

The exchange is fometimes given to the drawer, fometimes to the remituer, and then it is contained in the bill Exchange thould be determined conformable to the courre, at the place where the bill is drawn, to the place of payment; but how the courfe is regulated is a more difficult queftion? Some have compared the rifing and falling of exchange to the ebbing and flowing of the fea. [See the article Bat-] LANCE of trade for the general caufes of the rife and fall of excbange.] Befides what is there faid, exchange may be obferved to depend alfo upon the prefent rate of coin, in the place the bitl is directed to, and the plenty or fearcity of money or bills from whence they are drawn. Pienty of money, and fcarcity of bills, raifes the exchange; and plenty of the latrer, and fearcity of the former, lowers the fame. When inips come in plenty to carry off the product of a country, that is a featon when money is eafier to be had than bills, and confequently the exchange rifeth there; and, when that demand ceafeth, bills are more plentiful, and eafier to be had than money, and confequently the exchange falls.
The many different forts of money, curient at Frankfort, occafions a great variety in the prices of exchange there. King Edward III of England, as mentioned at the beginning of this article, for determining the courfe of exchange, in the infancy of foreign trade, caufed tables to be fet up in mot of the general marts and ports of the kingdom, \&cc. But parties now in moft countries are left to agree among themfelves, as they beft can, without any legal check, provided they keep free from dole, and tricks of circumvention. And this is partly the reafon why the value of exchange is fo variable in rifing and falling every week. This latitude in exchange may be thus jutified: 1. Every thing is worth fo much as it may be fold for, to him that knows the quality, thereof. 2. We may lawfully inhance, or lower, the price of any thing (where there is no exprefs law to the contrary) according to the quality of the perfon with whom we have to do: and, therefore, the taking of more in name of exchange from one than from another, is juftifiable, becaufe a great rifque may be run in trufting him who pays the higher exchange, as not being fo fufficient a perfon, nor of fo unqueftionable credit, as the man who is dealt with upon eafier terms.
Provided always, that, if the faid protefts be not duly regiftrate within fix months, the faid bill and protefts are not to have fummary execution, but only to be purfued by way of ordinary action.]
There are inflances not a few in the laws of Scotland, of privileges indulged to fuch as ufe diligence upon recent deeds, or obligations, which are denied to thofe who fuffer things to lie long over unqueffioned: as the oath in litem to the purfuer of a fulzie * within three years; the preferable diligence of the defunct's creditors to the creditors of the apparent heir, completed within the like face; and the benefit of fummary execution competent to the poffeffor of a bill, duly protefted, and regiltrate within fix months; befides many others I could inflance. Which prefcription of fix months doth run againft minors, as well as others, for thofe reafons.

* i. c. an action for fpoliation of goods.

If an accepted bill, be loft, the poffeffor has not the benefit of fummary diligence, but can only purfue by way of an ordinary action; becaule a proteft for not-payment cannot be made but upon the accepted bill *.

- Scarlet, cap. 40. R. 14.

The fums in all bills of exchange bear annualrent, in cafe of not-acceptance, from the date thereof; and in cafe of acceptance and not-payment, from the day of their falling due, and while the payment thereof.]
Though the taking of annualrent be lawful in Scotland, and the quantity thereof eftablifhed by act of parliament; yet, in particular cafes, it is only due ex pacto, when parties oblige themfelves for it; or ex lege, when cuftom or ftatute appoints it, as here in foreign bills of exchange.
By the laws in other countries, annualrent is only due for protefted bills ${ }^{*}$; which is agreeable to the laws of England, where inland bills being protefted, the party from whom they were received is liable to repay the fame, with interef and charges from the date of protefting $\dagger$.

* Edit. de Commerce 1673, tit. 6. art. 7. Du Puy, cap. 15. n. 3. +9 and 10 W. III. c. 17. §. 2.
The creditors of an unexcepted bill can have no recourfe againft the drawer or inderfer, even for the net fum therein, and far lefs for annualrent, till once it be protefled for not-acceptance : confequently, no annualrent thould be claimed for bills, although accepted, if not protefted for not-payment: but yet the accepter of a bill that was never protefed, was found liable for annualrent from the term of payment, in regard the claufe concerning annualrent is couched in the general term of all bills *.
* 20 Feb 1700, William Clapton and George Wation againft Baillie M' Intolh.
However, the lords did afterwards, in another cafe *, find annualrent not due for the fum in an accepted bill for the term of payment, in regard the bill was never protefted for
not payment; which is both more agreable to the merchant law and cult $m$ of other places, and to the analogy of their own decifions: for, if the indorfee of an accepted bill, vot proefted againft the accepter, nor diligence ufed to obtain payment for the face of five years, be duly confidered as a common affignce $t$, whereby he Jofeth the ordin+ry privileges of exemption from compenfation, or arreftment for the in dor'er's debt: it feems no lefs reafonab!-, that the neglect of protefting fhould exclude from the beaffit of annualrent.
* 15 Hily 1713 , Watfon and executors of Wilfon contra Gordon. † 18 Feb . $17 \mathrm{t5}$, Dtuchar contra Grierfons
The French edit. de commerce, $1673^{*}$, ordains annuatrent for the $p$ incipal fum and exchange, trom the day. of the proteft; and for re-exchange, from the commencement of a procefs. But the Scotch aft provides only annualrent for the principai fum, and for exchange, when contained in the bill: which is inferred from thefe words, The fums in all bills of exchange bear annualrent, ic.
* Tit. 6. art. 7.

Yet it is leafome to the party charger to purfue for the exchange, if not contained in the faid bills, with re-exchange, damage, intereft, and all expence, before the ordinary judge, \& \&c.] Exchange is not contained in the bill, when the profic of it is given to the drawer, in confideration of his furnifhing the remitter's occafions with fuch a fum elfewhere, as in all bills drawn in Edinburgh upon London : and ordinarily it is then contained in the bill expretsly, when payable in a coin not current at the place of payment; or when the deliverer gets the exchange, as a premiuin for advancing ready money, to fupply the drawer's exigencies. and accepting his bills payable fome time aiter, and, perhaps, in another place, when and where the drawer may more conveniently command the money, as when bills are drawn at London upon Edinbuygh. The reafon why exchange not contained in the bill, with re-exchange, damage, interelt, and expence, c.n only be purfued via ordinaria, and not fumm rily, is, becaufe they are liquidated debts, and therefore want to be confitute by a decreet, or fentence, of a judge.
It is the natural confequence of an obligement, to wrong and prejudge no body, either by failing in the performance, or by acting centrary to it; and that damage, of whatever nature, mult be repaired by him that occafioned it. By damage and intereft is underflood a real diminifhing a man's fubftance, or obftrueting fome expected profir. The former may be eafily valued, the fatter not. Yet this lofs ob locrum ceffans in infinitum non eft producendum, fed primum tantum peti poteft *, fi mercator probat fi debitam pecuniam perfolviffet dicta die, certe lucratus eflet decem, audiatur; verum fi dicat ex illis pecuniis merces comparaffet, lucratufque eflet, non audiatur $t$. And the poffeffor of a bill cannot-plead upon damage fuftained in the difappoinrment of his defigns, as the lols of fome profitable opportunity through the not payment.

- L. im. C. de f:ntent. qua pro eo quod intereft frof. 1. 21.\$3. ff. de att. empti.
 Scarlet, cap. 21. r. io.

The points to be confidered about damage and intereft are, I. If there be any due, and wherein it confifts? 2. What eftimate ought to be fet upon it? For clearing the firft, the quality and circumflances of the matter of fact inferring damage; what were the immediate and remote confequences, and how far the party charyed therewith dipped, or had a hand in it, mult be examined into. Thefe are the lights a prudent judge fhould walk by, in judging matters of damag and intereft.
Re-exchange is an ordinary article of damages for a proteffed bill, which was firft claimed by the Florentine exdes. Bur many labour under a grofs'miftake abour the nature of it, as if exchange and re-exchange were double exchange. When the poffeffor of a bill not paid, protefts, and takes up fo much money by exchange, at the place where, it hould have been paid; the exchange for this is commonly higher than what was given for the protefted bill, in confideration of the ready money advanced; whereas, in the firft cale, he gave in his money upon receiving the bill. What adds berween the exchange of the draught, and re-draught, is what is properly called re-exchange.
According to the French edict of commerce 1673 , there is no pretence for re-exchange, unlefs when it is made appear, by an inftrument, that the poffeffor of the protefted bill took up money by exchange. at the place where it fhould have been puid: but only for reflitution of exchange, with annualrent, and charges of protefting *. For this money taken up by exchange, to fupply the want of that for which the bill was protefted, the drfappointed party may either reiraw upon the firft drawer $t$, or upon either of the indorfers, if the bill was

* Edit. de commerce 1673 , tit. 6 ant, 4.

## B I L

negociated in feveral places $\ddagger$, or upon the place where be was to be before he returned home, or upon any other part, when there is no certain trade between the place of the fecond draught and thofe where the protefted bill was drawn and indorfed; if fo be, he the re-drawer timeoully adyertife the parties concerned §. And his oath is fufficiently probative, as to his defign with the bill, though taxable, if it appear exorbitant, as other oaths in litem \|.
$\pm$ Ibidem. Du Puy, ibid. n. 9. Stair Inf lib. i. tit. in. §. 7. \$ Du Puy, ibid. n. 5, 10, 6. Scaccia, §. 1. quætt. 7. part. 2. amp. 8. n. 250.

HStair, ibid.
But then the drawer of the firf bill in either of there cafes is no farther obliged for re-exchange, than at the courfe (the time of protefting) for bills at fight, from the defigned place of payment to that where the bill was drawn*: which gave occafion to the foreign cuftom of fubjoining to protefts a certificate from two brokers, concerning the prefent value of exchange between thofe places $\dagger$.

* Edit. de commerce 1673 , tit. 1. art. 5. Da Puy, ibid. n. 20. Scarlet, cap. 20.r. 7, 8.
$\dagger$ Du Pay, ibid. 26.
In like manner, the indorfers are only liable in the courfe of re-exchange, to the place where they indorfed the bill *. The reafon of all this is plain, becaufe there being nothing treated on between the drawer and remitter, but exchange from whence the bill was drawn, to the place of payment, the reexchange muft only be underfood from thence, back again to the place of the draught, without refpect to emergent and unthought-of negociations: nor was there any other thing under confideration, between the indorfers and the perfon to whom they indorfed the bill, but exchange from the refpective places where each of them did negociate the fame.
* Edit. de commerce 1673 . Da Puy, ibid. Scarlet, ibid.

But if, by the drawer's order and exprefs allowance, the bill was indorfed in fome particular places, he will be accountable for re-exchange to thofe parts, or to any place, wherever it was indorfed, if he gave indefinite powers to negociate*. However, though, as before obferved, the drawer, in fome cafes, be fubject to the re-exchange, without a neceffity upon the poffeflor of re-drawing direcily on him; fince, if it were otherwife, re-exchange would only take place when the creditor has occafion to employ his money there, from whence the protefted bill came; which feldom occurs in fo fhort a time. Yet the accepter of bills, having, after they were protefted, and a charge given him, made partial payment of the principal fum, and offered the remainder by way of inftrument, was found liable only for that part of the principal that was unpaid, with the intereft thereof, 'till the time the offer was made, and not for re-exchange : in refpect the poffeflor had not re-drawn for his money upon the firft drawer $\dagger$. But, after all, this act of parliament makes no mention of re-drawing, as a requfitum to infer re-exchange, which it feems to allow after a due proteft.

- Edit. de commerce 1673 art. 6.
$\dagger$ So it was decided in the cafe of William Boick contra Blackwood.
The drawer will be obliged for the fums contained in the bills, with annualrent, exchange, re-exchange; and charges, although he received no value, but followed the remitter's faith for if, who hath not paid him: if the poffeffor paid value to his author *. But, if a bill chance to be unfatisfied, through fome accident, which the drawer could not forefee, nor prevent; this will be to him a ground of indemnity for damages: in like manner the protefting for not-payment of an accepted bill, at the accepter's mortuary houfe, where he died, was fuftained to afford action to the creditor in the bill, for the fingle value, againft both the drawer, and the fucceffors of him on whom it was drawn : but not for exchange or re-exchange given againft the drawer; becaufe it was not thought any fault, or voluntary failure, but an accident of death intervening, that the bill came to be protefted $t$.
- Scarlet, cap. 42.r. 2, 4.
† July 8, 1664, Kennedy contra Hutchefon.
The protefting for not-payment of a bill, by the poffeffor's neareft of kin, or executor nominate (as hath been done) with a deftgn to falve and keep intire the recourfe againft the drawer, is a moft unwarrantable action; for, befides that it cannot infer exchange, re exchange, and damages; feeing the debtor ought never to be confidered as in mora, 'till once an active title is made to the bill: Molley * affirms, that a proteft for not-payment ought not to pafs in fuch a cafe, no perfon having right to make it; and, if any notary fhould proteft, an action might lie againft him, at the inftance of the party receiving prejudice thereby.
* L. «. cap. 10. n. 34.

Or in cafe of fufpenfion to eike the fame to the charge, at the difculfing of the faid fufpention, to the effect that the fame alay be liquidate, and decreet given therefore.]

Sulpenfion * is a topping of execution either for a time; or for ever, upon reafons inftantiy verified by writ, or oath of party, unlefs they confift in facto, and are probable by witnelles, or be founded upon another man's writ, as when fureties fufpend upon difcharges granted to the principal debtor.

Which i fomething in the nature of an injuntion in the law of England.
By an act of parliament dated 17 July, 1695 , no furpenfion can pafs of any charge of fums lent by, or to, the bank, but upon dircharge, or conlignation, of the fums charged for. When reafons are inlilted on befides thole in the bill, they are called, in Scorland, eiked, or added reafons. This eiking of reafons is allowed, becaufe that fufpenders are obliged inttanter to verify. I hough fummary execution be not comperent for exchange not contained in the bill, re-exchange, damage, \&ec. thefe not being liquid or afcertained debts; jet, in the cafe or fufpenfion, they may be warrantably added to the charge; feeing they can then be conveniently liquidited, and confituted in the decreet, finding the letters orderly proceeded. And * fruftra fit per plura, \&c. But, the poffeffor of a bill not having re-drawn !pon the drawer, an addtional charge of reexchange. damage, and intereft, was not fuftained againft the accepter t. When dili ence upon bill of exchanje is fufpended, all preceding expences nsay be eiked to the charge. And if, at difcuffing of he fufpenfion, the fame be found calumnious, the lords will alfo decree the additional charges of plea, according to a particular account thereof given upon oath by the charger $\ddagger$; but not where there is a probabilis caufa litigandi: fo expences are refufed in' a fufpenfion, raifed by the accepter of a bill, on a ground of compenfation tor the indorfer's debts; although the compenfation was over-ruled, and the latter founded orderly proceeded $\|$.
*Which fentence is given, if the fufpenfion appear to the lords at advifing to be groundlets.

libe-atica,
liberation, though he was ignorant of the indorfement: becaufe he declined to give his oath of calumny, that he had ground to fay, the prefent poffeflor knew of the payment made to the indorfer, whenthe bill was indorfed to him §̧.
§ February 5, 1702, Van Muin and Allan againft Wood Neither will a receipt of the money from the creditor, not being upon the bill, but in a paper apart, defend the payer againft a new poffeflor. But partial payments marked upon the foot of an accepted bill of exchange, and a ballance ftated, as due in figures, offered to be proved to be the deceafed creditor's hand-writing, was fuftained in a procefs at the inftance of his heirs, to affoilzie the accepter, except as to the faid ballance; in refpect, he offered to prove by witneffes, that payments were truly made conform to the faid account, and the bill was fill in the cuftody of the purfuer*.
- ${ }^{2}$ Feb. 170g. Watfon of Muirhoufe contra Smith.

To avoid the troublefome circle of making mutual payments, by fuch as are debtor and creditor to one another, compenfation is found necelfary : it being more one's intereft to retain in his own hands, than to pay and feek back again. Compenfation is ordinarily relevant, or a good plea, with us, againft an affignee upon a liquid debt due by his cedent, before intimation of the affignation ${ }^{*}$, conform to that principle in law, none can be in a better condition than the author, from whom his right flows $\dagger$. Yet in bills of exchange, our law fuftains not compenfation againft the poffeffor of a bill, upon a debt of the indorfer's prior to the indorfement, not even in inland bills $\ddagger$. So compenfation againft an inland bill accepted by two co-partners, upon a liquid debt due by the indorfer to one of the joint accepters, prior to the indorfement, proponed by the other accepter and co-partner, was repalled; although the ground of compenfation, founded on, did confift with the poffeffor's knowledge, and was received by him upon the indorfer's order. The reafon is, becaufe indorfations ufe neither to bear dates, nor need intimations like other affignations; and, for the benefit of commerce, carry right to the fums in the bill fine onere, as if fo much money had been delivered in a bag to the indorfee.

- March 16, 1639. Forfyth contra Coupland, January 22, 1663. Wallace contra Edgar.
+ L. 175. 5. I. ff. de Reg. Jur.
$\ddagger 31$ Jan. 16 g. . John Stewart againg Alexander Campbel. When we fay, that compenfation is not to be obtruded to the poffefior, upon the indorfer's debt; it is to be underfood with this common exception, unlefs the debtor prove by the creditor's oath, that the bill, purfued for, is for the indorfer's behoof. And fo it was found relevant for the accepter of a bill of exchange, to prove by the poffeffor's oath, that the indorfement, in their favour, was but a truft: and, by the oath of the indorfer, that he was fatisfied for the fum contained in the bill, by the drawer. But he the indorfer being in France, and we in ftatu belli with that kingdom; the lords refufed to grant commiffion for taking his oath there, but only to be executed within the dominions of any of our fovereign's allies*. Yet they fopped circumduction of the term for not reporting of the commiffion during the war ; without prejudice to the accepter to take the benefit thereof, if in the mean time the indorfer happened to die t.-Again, the indorfer of a bill, purfued by action of recourfe, was allowed to prove payment by oath of the poffeffor's cedent, although the plaintiff was an affigriee for an onerous caufe. Becaufe he knew that the fum contained in the bill was rendered litigious by procefs betwixt the cedent and the defender, before the affignation $\ddagger$. 'Tis true, the accepter proving by the oath of the creditor in the bill, that the fame is for the drawer or indorfer's behoof, may compenfe upon debts due to him by that perfon: but yet a creditor of the drawer of a bilt, having arrefted in the accepter's hands, and proved by the poffeffor's oath, that the bill was only payable to him for the drawer's behoof, was found to have good right to the fum in the bill, without being obliged to ftand to that oath, when made ufe of by the accepter, for proving that the drawer and accepter were upon the matter one perfon; and, confequently, that all his pleas were entire, to him againft the arrefter, as againft the drawer \|.

As no debt of the indorfer of a bill can be a ground of compenfation againft the pofiefor; fo, for the fame reafon, nei-
ther do the indorfers feparate receipts of partial payment militate againft him the poffeffor*. Upon the fame topic, declarations apart were thought not fufficient to foop the cuprency of bills $t$. But indoriement of bills, not for value given at the time, but in fecurity of bygone debr, lefs than the fum in the bill, and what expences hould happen to be difburfed in recovering payment, was excluded by an anteriur feparate general difcharge granted to the accepter $\$$.
- December 12, 1711. Erikine contra Thompfon.
$\dagger$ January 18, 1700. Whitman contra Johniton.
$\ddagger$ Jan. 15, 1708. Crawfurd cositra Piper.
Very commonly bills are fufpended upon a reafon of multiple poinding*, as when the debtor is, or may be, fued by different pretenders; to the end they may difpute their preference, that he may be liable, in once and fingle payment, to the party who thall be found to have beft right. And he, the fufpender, gets ordinarily allowance for his expences; but not till the conclufion of the caufe, and the preference be difcuffed $\S$. But yet there is not fo much ground for competition in the matter of bills, as upon other rights; which, according to the cuftom of Scotland, are more varioully affectable by diligence.
* i. e. manifold diftres.
§ December 12, 1702, George Wood againft the creditors of Wightman.
The competition in bills runs ordinarily, either between affignees by indorfation, or betwixt arrelters, or betwixt affignees and arrefters. In a competition of different perforis, to whom the firf and fecond bill are endorfed; he will be preferred that procured the firf acceptance, whecher upon the firft or fecond bill, although laft indorfed *; as being, mafter of the firft complete right. In a debate betwixt two arrefters, an arreftment, by virtue of letters of horning upon a protefted bill, was preferred to intervening arreftments upon depending actions $\ddagger$.
- Scarlet, cap. 42. r. ${ }^{2} 6$.
$\ddagger \frac{\text { Sarlet, }}{1697}$, John Inglis and James Foulis, againft Mackio of Palgown.
In ordinary competitions betwixt affignees and arrefters, the preference is ruled by the priority of the intimation or arreftment, though it be but the difference of three hours *; but indorfations of bills of exchange are tranimitted, without notice to the debtor, and feldom dated : therefore an indorfement was preferred to a pofterior arreftment laid on for the indorfer's debt, before intimation of the pofferfor's right to the accepter $\ddagger$. For commerce-fake, the poffeflor of a bill indorfed for value freceived, fhould be preierred to prior areftments, at the inftance of the indorfer's creditors. Bills not being arreftable, more than they are compenfable, for the indorfer's debt; therefore the poffeffor of a bill to whom it was indorfed for value, was preferred to the indorfer's creditor, who had arrefted the money in the accepter's hand before indorfation; it not being alledged, that the indorfee knew of the arreftment, when the bill was indorfed to him $\$$. It may feem proper here, once for all, to obferve, that although bills of exchange are, regulariter, neither compenfable nor arreftable for any indorler's debr, and his feparate receipts of payment, not extant upon the bills, cannot militate againft the prefent poffeffors for value; yet bills, as well as other obligations, are affectable by compenfation, or arreftment, for the prefent poffeffor's debt, or by his feparate receipts, and liable to any other legal exception, founded upon his own deed: which doth not in the leaft infringe upon the faith and free fecurity of commerce, but only obligeth dealers in exchange to act juflly towards thofe they have to do with.
* Stair Inftit. lib. 4. tit. 135. \$. 7 .
$\ddagger$ July $\mathrm{F2}$, 1698 , John Ewin Geils ánd Robert Innes.
§ December 5, 1712 , Hume contra Smith.
'Tis true, Sir George Mackenzie, in his obfervations *, doth fuggeft, as a reafon for denying compenfation upon the porfeffor's own debt, that bills, being in effect bags of money in the conftruction of law, are a kind of depoftum, againft which compenfation doth not lie. But this is of no weiglir, feeing bills are not compared to money-bags in the hands of the defigned accepter, or debtor liable in payment, who only could be underftood the depefitary; but refemble ready money in the hands of the poffeffor, in fo far as bills do, alike freely as money, pafs from one poffeffor to another, without any latent embargo upon them, arifing from the delts or deeds of his author, as if they had been originally payable to himfelf. Nay, a bill, payable to a focicty, may, while it fànds in their perfons, be arrefted or compenfed for the private debt of any member of the focitty, in fo far as extends to his proportion and intereft in the flock of the fociety, which is a tacit withdrawing thereof. So a particular fhare of principal and intereft of the capital flock of the African company in Scotland, was found arreftable, at the infance of the proprictor's creditor, in order to oblige the directors of the company to transfer the fame in the ordinary way in favour of the arrefter 1 .

$\ddagger$ March 18, 1707, Alifon contra Disectors of the African company.
4

It may frequently fall out, that a perfon, being abroad, accepts of bills drawn by his creditor, prefented to him perfonally, while in the mean time there is an arreftment, unknown to the accepter, laid on at his houfe by the drawer's creditor. In fuch cafe, the accepter of the bill fhould be liable both to the arrefter in the forth-coming ${ }^{*}$, if the arreftment be ufed before acceptance of the bill, and to the poffeffor of the bill, provided he have it for an onerous caufe. The reafons are, $r^{\prime}$ There is no doubt but an arreftment is fuch a legal imbargo upon the effects arrefted, as they cannot be converted to any other ufe than the arrefter's payment. Nor fhould the accepter's ignorance prejudice another's preferable diligence. 2 dly , The polleffor of the bill may juftly pretend, that the accepter muft implement his acceptance, againft which he can never be heard to alledge, that it was upon fuppofition of his having fuch effects to anfwer, which, without his knowledge, are carried away by an arrefter's diligence. For he might have accepted the bill without effects; neither was the poffeffor bound to know whether he had effects or not. And the poffeftor being hindered, through the bill's being accepted, from immediate recourfe againft the drawer, who may break in rhe interval ; therefore the accepter, in the forefaid cafe feems only to have the drawer, to feek for his relief.

## * i. e. in the fuit for making the fubjett arrefted effectual.

A creditor of the drawer of a bill as per advice, having arrefted in the hands of the polfeflor and accepter, and the poffeflor having deponed in the forth-coming, that the bill was only payable to him for the drawer's account ; the acceptet, who had none of the drawer's effects, was decerned to make the fum in the bill forth-coming*; although the drawer, or his truftee, the poffeffor, could never have compelled the accepter to pay, without inftructing aliunde fome ground of debt: and, though the arrefter made ufe of the poffeffor's oath againft the accepter, he, the accepter, was not allowed the benefit of the fame oath, to prove, that the bill was payable for the drawer's behoof, and that there was no advice in the cafe. Advice for the creditor in a bill to him it was payable to under truff, ordering the application of a part of the money towards the fatisfaction of a debt due to a thind perfon, not being intimated to him; the property of that money, notwithftanding the advice, remains with him who fent it, arreftable by his creditors $\ddagger$. Nor was the protefting of a bill of exchange found fufficient to intitle the pofleflor to effects remitted afterwards by the drawer, to the perfon drawn upon, and arrefted by the drawer's creditors: although the receiver of the money had advice from the drawer, to make payment to him. And it was found, that the property of the money was not tranfmitted from the drawer by the letter of advice, but remained his, and affectable by his creditors, the arrefters who were therefore preferred $\$$. But one would think, that, had there been effects of the drawer's in the hands of him on whom he drew, at the time of the proteft for not-acceptance : no pofterior arreftment could have excluded the poffeffor of the bill his right to there effects. For then he could have purfued the perfon drawn upon for payment, notwithftanding to did not accept. A perfon having got a precept, by way of miffive letter, upon his debtor's debtor, containing an affignation to his bond; and baving both protefted the precept for not-acceptance, and intimated the fame as an aflignation; was preferred to a pofterior arrefter, although the proteft wanted witnefles fubfrribing thereto, the intimation having witnefles; although there had been a former intimation produced by bim without witneffes, and that it was alledged by the arrefter, that lite pendente nihil eft novandum $\|$. For no man, by producing a null title, can be excluded from founding afterwards upon one more valid and formal.

* Cowman againf Douglas.
$\ddagger$ January 15,1706 , Lord Rofs contra Gray of Newtoun.
$\$ 1697$, Inglis and Fowlis againt Mackie of Palgown.
il July 23, 1703 , William Blackwood againf Clurles Miln and Sir Robert Anffruther.

Becaufe, in competitions betwixt arrefters and alfignees, the queftion is frequently tabled, whether bills of exchange bet comprehended in the act of parliament 1696 , about bankrupts? Whereby all voluntary deeds by one under horning, found by decreet of the lords to be infolvent, and alfo to be either imprifoned, or retired to the abbey, and other privileged place, or fled or abfconded, or to defend his perfon by force, made at, or after, or in the fpace of fixty days before his becoming fo, in favour of any of his creditors, either in fatisfaction, or for fecurity, are declared null. Which point is neceffary to be cleared. It may be alledged, that bills of exchange are not accepted in the act, which is general againft all voluntary deeds, made by a bankrupt in favour of any of his creditors, to the prejudice of others; fo that even voluntary payment, by fuch a partial preference, would be ineffectual, and liable to be litigated; and, by parity of reafon, bills of exchange. 2dly, If an exception were allowed, as to bills, then bankrupts would make all their.conveyances by bills, and fo elude the act of parliament. But, on the other hand, it may be pleaded, that bills cannot be brought under that act,
Yor.
and are none of thofe deeds which a bankrupt may not do and are none of bofe deeds which a bankrupt may not do
within fixty days of his breaking. I. Although bulls are not exprelly therein excepted, it is not to be imagined, that ever the parliament defigned they foould be comprehended: fince they pafs from hand to hand in payments, as bags of money; and are neither arreftable nor compenfable.' 2. There is a wide difference betwixt an affignation to a fum, and a bill: for he that takes an affgnation, knows that the perfon whofe debt is affigned, is debror to the cedent; but the receiver of a bill is nor bound to enquire, whether the perion on whom the fame is drawn, be debtor to the drawer, or not, it being fufficient for him to procure acceptance. For what is more ordinary, than the accepting of bills of honour of the drawer or indorfers, to whom the accepter owes nothing? 3 dy; It were in vain to pretend, that the accepting of bulls from the ftatute would make it elufory; for all fraudulent conveyances by bills, or otherwife, are fitll reducible; and bills drawn by country gentlemen, or others who are not in ufe to trade, would be more liable to the fufpicion of a frudulent defign, than fuch as are drawn by merchants in the ordinary courfe of their trade. And, to briag the drawing or indorfing of bills within the compaifs of the act of parliament, were to deftroy the fecurity of merchants, interrupt commerce, and occafion great confufion, For a bankrupt may give a bill to his creditor, for payment of an anterior debt, which comes to be accepted, and thereafter indorfed, perhaps, to two or three more for value received; would it not be a hardfhip to annul this bill, becaufe the drawer within fixty days of the date proves infolvent? This point is now cleared by feveral decifions. A precept or inland bill granted to a creditor, in fatisfaction or fecurity of his debt by the common debtor, when he was under diligence of horning and caption, and infolvent and retired, fled; or abfonded in the terms of the act of parliament, was found reducible at another creditor's inftance *. The act of parliament, 1696 , was found to take place upon a bankrupt's indorfement of an accepted bill 'fiexchange, fill in the perfon of the indorfee, litigated by the accepter, who was the indorfer's creditor, if he the accepter proved, that the bill was indorfed for fatisfaction or fecurity of a prior debt, and not for prefent value received $\oint$ : for it had been unreafonable to oblige the creditor in the bill to prove, that he gave prefent value for it; feeing the paying value for bills (which may be either in goods, money, or bank-notes, or another bill given to the drawer or indorfer, upon fome other place, where he has occafion for money) is a tranfaction that cannot be eafily proved, the prefence of witneffes not being required to the fublcribing of bills. But a bill of exchange drawn or indorfed by a bankrupt, payable to a conjunct perfon, his own brother-in-law, was found to fall under the forefaid act of parliament, unlefs it were made appear, that value was given for it at the time of the drawing or indorfing \|: where deceitful collufion, to the prejudice of the creditor, being prefumed in law, betwixt perfons fo near allied by blood, it was no hardhip to burden the receiver of the bill, with proving immediate delivery of the value. The reafon of that quality in the decifion, unlefs value was immediately given for the bills, is, becaufe a bill drawn by a bankrupt, within the forefaid fpace of fixty days, for value delivered at the time, is good, and ought not be difputed: feeing, over and above that, it is not a preferring one creditor to another, which the act only provides againft; whatever privileges merchants may have, as to their bargains ex incontinenti, in the courfe of their trade, that it may not be retarded; yef, when they come to take fecurity for bygone debts, that muft be done according to the common law.

* February 15, 1698, Charles Gray againt Andrew Melvil and Harry Baird.
§ January 16, 1713 , Campbell of Glandervel, contra Graham of Gorthie.
$\|$ February $2,17 c 0$, Durward contra Struthers and Wilfon.
In the foregoing cafes, bills of exchange, drawn or indorfed by bankrupts, were allowed to be queftioned upon the ant of parliament of 1696 , only in the perfon of the fift poffefior or indorfee: for, had they been de novo for value to third parties, it is to be doubted, whether it would be confiffent with the freesom and fafety of commerce, to reduce upon that head in their perfons, who are not bound to know the condition of the firf drawer or indorfer. But yet an affignee to whom precepts bearing for value received, were granted by a rebel at the born upon his debtors, as a corrobnrative fecurity for bills of exchange, due before the denunciation, was preferred to the donatary of efcheat : although the precepts wanted the folemnity of witneffes, and the writer's name and defignation*; in refpect that the affignee, in concurrence with the reft of the rebel's creditors, fubicribed his confent to the pafing of the donatary's gift, with this exprefs quality, that it fhould not prejudge his right: though it was alledged for the donatary, that the affignee's fubfcribing a qualified confent to the procuring of the gift implies only, that his right fhould not be diminifhed by his fubfcription, without giving him any farther right, than he had before.
- December $2 \cdot, 1698$. Dean of Guild Blair, conira George Wation.

## B I L

It is a ftated controverfy among lawyers, if the exception of not numerate money (to which all written obligations for money received, lay open by the civil law for two years; during which time, the creditor, purfuing, behoved to prove delivery of the money, otherwife than by the debtor's handwriting) be competent againft bills of exchange? But all they Yay, pro or con, is of fmall ufe to the Scots, who allow no fuch exception; and fuftain writs after delivery, as valid and probative from the date, 'till they be improven: admitting always contrary probation by writ, or oath of party; although the chyrographium bear a claufe exprefsly renouncing the exception of not numerate money. Which take place in bills, as well as in other written obligations; fo the exceptions be made to the poffeffor of a bill protefted for not-acceptance by his immediate author, whether he be drawer or indorfer, upon the account of no value received from the poffeffor himfelf. But it would not be relevant for the drawee, or a prior indorfer, to object againft the poffeffion of a bill, for an onerous caufe, that no value was paid for the fame, by his author the laft indorfer; or for the accepter, to found upon no value received by the drawer.
Caufa data, non fécuta, is an ordinary exception againft bonds; and in mutual contracts, both parties mult perform. But a bill of exchange, bearing value received, being granted for the part of the price of a fhip, which was never delivered free with a valid vendition; and the bill indorfed to a third perfon: the exception, ob caułam non fecutam, was not found effectual againft the poffeffor; nor declarations apart, fufficient to ftop the currency of bills *. Becaufe bills of exchange are as fungible as money, affected with no qualities, but fuch as are mentioned in the bill; and value received imports a renunciation of all exceptions. But though the allowing the exception of caufa data, non fecuta, againft a ftranger or third party, to whom a bill is indorfed, might prove a fop to the neceffary courfe of bills: it is relevant for the debtor in a bill, to prove by the creditor's oath, that the bill, he being the firft poffeffor thereof, was granted for the vendition of the part of a fhip; and the being acknowledged, to inftruct, that he, the debtor in a bill, was debarred from poffeffion of the fubject fold, by preferable rights of bottomry, affecting the thip I. And the arrefter of a bill for a part of the price of meal to be delivered by the drawer, for whofe performance the creditor in the bill ftood obliged, as cautioner in the contract, was not obliged to pay the bill, the meal not being delivered, although the bill was payable before the delivery of the meal f.

* January 26, 1700 , Wightman againft Johniton.

If February 13,1706 , Plummer contra Houton.
$\ddagger$ June 7,1707 , Boys contrà Shaw.
Prefeription is another exception againft bills, which is the way to acquire or lofe the property of a thing, or any tight, or action, by the courfe of time. Which definition implies two kinds of prefctiption: the one, whereby the poffeffor acquires the property of that he poflefles, and the proprietor is defpoiled of it, for want of poffeflion: the other, which occafions the acquifition or lofs of all other rights, or claims and actions: whether there was poffeffion in the cale, as in the enjoyment of fervitudes; or no poffeffion; as when one lofes a debt by failing to exact it in due time. Prefeription is founded on this prefumption, that he who enjoys a right, has a juft title, elfe the fame had been fooner called in queftion; and that he who ceafed to exercife it, hath been difpoffefled and denuded for a juft caufe: and that the perfon who hath continued fo long without demanding payment of his debt, hath either got fatisfaction, or acknowledged nothing to be due to him. The rules of prefcription are either fuch as regard the ufe, nature, fubject, and interruption of it; that which legitimates and vitiates prefcription, and the perfons againft whom it runs: or fuch as diftinguifh the times of preicription, which are but arbitrary laws, different in divers places.
From clearing the time from which bills prefcribe, we are to confider a two-fold prefcription, viz. a thort prefcription of fix months, which is the time allowed for regiftration and fummary diligence; and a long prefcription of twenty years, which is common to bills with holograph writs. Although bonds prefrribe only from the term of payment, and not from the date ${ }^{*}$ : yet this prefcription of fix months commenceth from the term of payment, only in cafe of acceptance and not-payment; for, in cafe of a proteft for notacceptance, the computation runs from the date of the bill, even when the day of it's falling due is longer than fix months.

* February ${ }_{17},{ }^{1665}$, Butter contra Gray.

As to the long prefcription, Sir G. Mackenzie, in his obfervations*, informs us, indeed, that he remembers the parlia. ment exprefsly refufed to limit bills of exchange to the twenty years prefcription: as being too narrow for thefe common vehicles of trade between Scotland and foreign countries. And it is faid to have been decided $\|$, that bills of exchange do not prefcribe as holograph writs: but this can hardly be well accounted for, fince the reafon why holograph writs prefcribe quoad modum probandi fooner, than fuch as are

## B I L

more folemn, is, their not being fubfribed before witneffes: and confequently, bills of exchange, as both wanting witneffes, and feddom holograph, fhould much rather have a fhorter courfe, as it is in other parts. Efpecially, feeing the reafon why thefe are probative, without being holograph, and without witnefles, is, for that they are not given as lying fecutities: but payment theredf is ordinarily fought after. And my lotd Stair is of opinion $\ddagger$, that fuch would not be probative, if kept up for any confiderable time. Yet there is this difference betwixt a bill of exchange, and an ordinary holograph writ, that the firft doth prove it's own date, whereas the other does not.

\# Les lox civiles, \&cc. Tom. II. Lib. 3. tit. 2. fet. 5. att. 16, 17.

Of the regulation of Bills of Exchange in France, according - to the ordonnance of 'March 1673, Titte'5.

## AR T. I,

Bills of exchange ought to contain, in a concife manner, the names of thole to, whom the contents are to be paid, the time of payment, the name of him who gave the value, and whether it was received in money, merchandize, or otherwife.

A в т. IV, XI, XII.
The bearers of bills of exchange, which have been accepted, or which become due at a day certain, are obliged to get them paid, or to have them protefted within ten days after that on which they became due. And, after fuch a proteft, they who have accepted them can be profecuted at the fuit of the bearers: the fame bearers can alfo, with the judge's leave, feize the effects of thofe who have drawn or indorfed thefe bills, though they were accepted, and even the effects on thofe to whom they were drawn, in cafe they accepted them.

Art. XIII, XIV, XV.
They who have drawn or indorfed bills of exchange, ought to be profecuted within fifteen days, if they dwell within the diffance of ten leagues; if at a greater diftance, at the rate of one day more for every five leagues, without diftinction of the diftricts of parliaments : but this muft be underftood of fuch perfons only, whofe dwelling place is within the kingdom of France: as for thofe who dwell in other countries, the delays are otherwife regulated. They who dwell in England, Flanders, or Holland, ought to be profecuted, within two months : in Italy, Germany, and Switzerland, within three months; in Spain within four months; in Portugal, Sweden, and Denmark, within fix months: all thble feveral terms mult be reckoned from the day next following that, on which the proteft was made, to that on which the profecution is begun inclufively, without diftinction of Sundays or holidays; after which terms, the bearers of bills of exchange have no longer any action or demand againft the drawers and indorfers.

A r t. XVI, XVII.
The drawers and indorfers of bills of exchange are obliged. to prove, in cafe it be denied, that thofe on whom they have drawn them, were indebted to them, or had money in their hands, at the time the bills were to be protefted, otherwife they are obliged to make them good; and in cafe the drawers' or indorfers had, fince the time limited for the proteft, received the value either in money, merchandize, by account, compenfation, or otherwife, they are alfo obliged to make thofe bills good.

## A r т. XVIII, XIX,

Bills of exchange payable to a particular perfon, and not to the bearer or order, being loft or millaid, payment may be demanded and made, by virtue of a fecond letter, without giving fecurity, provided, neverthelefs, mention be made of it's being a fecond bill, and that the-firtt or preceding fhall remain void and null. But, when a bill, payable to the bearer or order, happens to be loft or miflaid, it ought not to be paid but by an order from the magiftrate, and by giving fecurity to aniwer for the payment.

> AR T. XX.

The fecurities given for the payment of bills of exchange are difcharged of courfe, without any fentence, proceeding, or fummons, if no demand was made during three years, reckoning from the day of the laft profecution.
$A R T$. XXI.
A bill of exchange is reputed to be acquitted or paid, when no demand or proceeding was made during five years, reckoning from the day next following that on which it, was due,
ar protefted, or the laft proceeding made, Neverthelefs, the pretended debtors are obliged, if thereto required, to declare, that they are not indebted; and their widows, heirs, or affigns, muft affirm, that they fincerely belicive there is nothing due.
$\mathrm{A}_{\mathrm{R}}$ т. XXIt.
What has been obferved in the two laft articles, ought to take place alfo with regard to minors and abfent perfons.

> A \& t. XXIII, XXIV, XXV.

A bare fignature on the back of a bill of exchange is looked upon only as an indorfement, and not as an order, unlefs it be dated, and the perfon's name be mentioned; who paid the value, either in money, merchandize, or otherwife. And a bill, thus indorfed, is reckoned the property of him whofe name is mentioned in the order; without any transfer or notification : but, on the contrary, if there be only a blank indorfement, that is to fay, the bare fignature of the proprietor, it fhould be reckoned to belong fill to him, who thas put his name on the back of it, and fuch might be feized by his creditors; and brought into account to his debtors.

## A r т. XXVI.

It is abfolutely forbidden to antedate any order, , upon pain of forgery.

AR $\mathrm{T}: ~ X X V I I$.
They who fubfcribe a bill of exchange (which fubfctiption the French call aval) whereby they bind themielves to pay the contents, in cafe it be not paid when due by the accepter, or drawer, become thereby bound to the drawer, indorier, and accepter, though it be not mentioned in the fubfcription or aval.
Finally; the firft article of the 7 th title of the fame ordonnance orders, That they who have figned bills of exchange, and even they who put their aval to them, may be arrefted; which is to be undertood, in cale the bills be not paid.
As, in the ordonnance ifued in the year 1673 ; it was impolfible to forefee all the different cafes that might arife in the negociation of bills of exchange, though, as we have feen, that ordonnance enters into very minute particulars upon that fubject, there have been given fince feveral declarations of the king, and decrees of the parliament, which have interpreted or explained feveral articles of that ordorinance, and added fome new ones to it,
By the declaration iflued in May 1686, it is ordered, by way of explanation of the ordonnance of 1673 , that the fourth article of it be oblerved according to it's form and contents; and that; accordingly, the ten days granted for protefting bills and notes of exchange Chould not be reckoned but from the day following that, on which the faid bills and notes became due; that the day on which they became due, fhould not be reckoned among the ten, but only that on which the proteft was made, as well as Sundays and holidays, even the moft folemn fellivals, which fhould fall within the fpace of the ten days; notwithftanding all orders and cuftoms to the contrary, even the 6th article of the faid ordonnance of 1673 , which article is abrogated, in that refpect, by this laft-mentioned declatation.
By a fentence of the Chatelet of Paris, given the 31 lf of Auguft 1708 , it was declared, that the limitation of time, eftablifhed by the 15 th article of the 5 th title of the ordonnance of the year 1673, with regard to the bearers of bills of exchange, who negleet to profecute the indorfers, within the term fet down in the $13^{\text {th }}$ article of the fame title, fhould take place,' as well with regard to the indorfers of notes, payable to bearer, as with regard to the indorfers of bills of exchange.
By a decree of the parliament, in the form of a regulation, made the 30 th of Auguft $1 \geqslant 14$, according to the opinion of the king's attorney-general, it is ordered, that the articles 18 , 19, and 33, of the ordonnance of the year 1713, thall be exccuted; and accordingly, that, in cafe a bill of exchange, on which are feveral indorfers, be loft, the owner fhall apply to the laft indorfer, and not to the drawer, in order to have a fecond bill. See Indorsement and Indorser.
The frequent augmentations and diminutions of the coin in France, which happened during the reign of Lewis X'IV, and which the neceffity of the flate caufed to be continued during the firft years of Lewis XV, having occafioned many difputes, with regard to the payment of bills and notes of exchange, they were obviated by two declarations; the one of the 16 th of March 1700, and the other of the 28 th of November 1713 , and by a decree of the council given the 27th of May 1719.
By the firft of thefe declarations, the bearers of bills and notes of exchange, or of bills payable to the bearer, are obliged, ten days after they become due, to caufe payment to be demanded of the debtors, by a fummons containing the names, qualties, and dwelling-places of the faid bearers, offering to receive the payment of fuch bills or notes, in current fpecie: and, if the bearers omit to make fuch a demand within the limited time, they fhall be liable to fuffer from the diminution that miyht happen in the current fpecie. The fecond declatation confirms and explains the former, and orders, that, reciprocally, it thall not be in the power of
the debtots of fuch bills, or notes, to oblige the bearers to feceive the pdyment of them before the tenth day after they became due. And, with regard to promiflary notes for value qeceived in merchandize, which, according to cuftom, are not paid 'till a month after they are due, the debtors of fuch notes fhall not oblige the bearers to receive payment before the fame day. Neverthelefs, his-majefty's will and pleafure is, that they, who thall have given nores for merchandizes, the difcount of which was agreed upon, fhall be at liberty to difcharge them, provided payment be made full thirty days before that appointed for the diminution of the fpecies.
The decree of the council, given the $27^{\text {th }}$ of May 17 19 , contains a regulation for the payment of the bills of exchange, drawn or indorfed in foreign countries, particularly in England and Holland.' His majefty orders, that the bills drawn from Holland, before the augmentation of the ift of May 1718, be paid in crowris of five livres; and that thofe drawn, before the diminution of the 8 th of May 17.19, could be knowh there, be paid in louis d'ors of 36 livres; and with regard to the bills drawn from England before, and due fince, the faid diminution, be alfo paid in louis d'ors of 36 livres; with liberty, however, to the beater, to caufe himfelf ta be reimburfed, by the perfon who pays the bill, twenty-fols per louis d'or, in the cafe the definitive fentence, which was to be given In England, Chould order, that the bills drawn before, and due fince, the known augmentation of the firft of May 1718, were to be paid in crowns of fix livres.
There are four things to be confidered in all bills of exchange, viz. I. The perfons. 2. The time of payment. 3. What is to be paid; and, 4. The value. As for the words or expreffions, and other conditions, they are arbitrary.
I. There are commonly four perfons concerned in a bill of exchange, namely, the drawer; he who receives it, and has given the value, cailed by fome the drawee; he who is to pay it; and be who is to regeive it.

## EXAMPLEI.

Sir, Paris, Auguftir, 1732. For idoo livres, - At fight pay by this my firft of exchange, to Mr Severin, - the fum of a thoufand livres, value received of Mr Lucian, $\sqrt{ }$ and place it to account, as per advice from

| To Mr Hilaire |  |
| :--- | ---: |
| at Lyans. | Your humble Servant |
| Simeon. |  |

Obferve, that it is not cuftomary at prefent to make compliments in bills of exchange, fo that moft merchants omit thofe words, your very humble fervant, and only fign their name. In order that this kind of contratt may be put in execution, the drawer gives notice to the perfon who is to pay the billy with orders to do it, by a letter to this purpofe;

SIf it
Paris, Augut 11, 1732.
-I have this day drawn a thoufand livres upon you, payable ' at fight to Mr Severin, for valué réceived of Mr Lucian. I - Hefire you to honour it, and charge it to my account in con' formity.'

In cale the drawer has not effects in the drawee's hands to the amount at leaft of the fum drawn, he muft give him notice how he will furnifh him with money to pay it: but, if the drawee be his debtor, he fays, place it to his account, or to that effect.
Sometimes, or rather now mof comrionly, they put in the bill of exchange, Pay to Mr Severin; or to his order, or, Pay to the order of Mr Severin.
There are afterwards many times feveral fucceffive orders; but this does not in the leaft alter the nature of the bill of exchange, all thofe orders being only a fubtitution of the one in the place of the former, and putting the laft in the place of him to whom the bill was originally made payable.

## EXAMPLe

Sir; Paris, Auguft 14, 1734. For 2000 livres. - Eight days after fight pleafe to pay this my firf of exchange ' to Mr Felix, or order, the fum of two thoufand livres, for © value exchanged with Mr Martel, and place it to accounr, 6 as per advice of

ToMr Viclor, at Roan.
Your's, sec. Fabtaven
And at the bottom of the bill, or moft commonly on the back of the bill, is put,
For me pay the contents above, or on the other fide, to the order of Mr Vincent, value received of Mr Julian.

Paris, Auguft 14, 1734. Signed Fetix.
And thus feveral other orders are, or may be, put fucceffively. From thefe orders being now commonly writ on the back of the bills of exchange, come the words of indorement and indorfer, from the Lutin in dorfo. Thefe orders are generd!ly

## B I L

B I L
very concife, as for infance, in thefe words only, $P$ ay to the order of $C D$, and figned by the owner of the bill, fometimes with, and often without any date.
Sometimes, or rather very often, the bill of exchange is payable to him who gives the value, which happens chiefly when he is to go to the place where the bill is to be paid, or when he has a mind to negociate it: in which cafe there are but three perfons named in it.

ExAmpleIII.
SIR, Paris, Auguft i, 1736. For 3000 livres. - At the end of this month pleafe to pay this my firft of ex-- change to Mr Romuald, the fum of three thoufand livres, value received of him, and place it to account, as per ad-- vice of

To Mr Paul, at Mareilles. Your's, \&c. Gabin.
If the perfon to whom the bill is payable fhould not go to Marfeilles, fome queftion whether his order alone would be fufficient to get it paid, and fay that he muft make a transfer of it before a notary-public, or fend a letter of attorney: but neither of thefe are of more force than a bare order; they are only more authentic. But, to prevent the neceffity of fuch a transfer, or letter of attorney, it is better to make' the bill payable to fuch a perion, or order.
Sometimes the perfon on whom the bill is drawn, being a correfpondent of the drawer, and of him who pays the value, it is made payable to himfelf, and in that cafe alfo there áppear but three perfons in the bill.

## ExampleIV.

Paris, Auguft 14, 1740 . For $1000 \Delta$, at 101 deniers de gros. SIR,

- At two ufances pay by this my firf of exchange to yourfelf - the fum of a thoufand crowns, at a hundred and one deniers - de gros per crown, value received of Mr Benoit, and place it - to account as per advice of

ToMr Dennis, at Your's, \&c. Aubin. Amfterdam.

There appear, alfo, but three perfons in a bill of exchange, when the drawer puts that it is value of or in himfelf.

ExAMPLEV.
SIR, Paris, Auguft 21, 1741. For 4000 livres. - At the next payments of Auguft, be pleafed to pay to Mr - Jouin the fum of four thoufand livres, for value in myfelf, - and place it to account as per advice of

To Mr Paul, at Lyons.
Your's, \&c. Gabin.
There are alfo bills of exchange in which but two perfons appear, namely, the draver, and the perfon who is to pay it,

## Exa'mplevi.

Paris, Auguft ${ }_{\mathrm{I}}$ 1742. For $1000 \Delta$, at 74 kreiffers per $\Delta$. SIR,

- At the next fair of September pay this my firt of exchange - to yourfelf the fum of a thoufand crowns, at feventy-four - kreiffers per crown, value in myfelf, and place to account - as per advice of

To Mr Hilaire,
at Frankfort.
Your's, \&c. Simeon.

## Example VII.

SIR,
Paris, Auguit I, 1744. For 1000 livres. - At two ufuances you will pay by this my firft of exchange, ' to my order, the fum of one thoufand livres, value in my-- felf, and place to account as per advice of

To Mr Jordan, at Roan.
Your's, \&c.
But, in thofe forts of bills of exchange of the fixth form, or example, there muft always be underfood one perfon, and fometimes two: for either the bill is drawn for the account of a third perfon, who is not mentioned in it, but only in the letter of advice, or it is remitted for the account of a third perfon, not named in it. It even happens fometimes that it is both drawn for the account of one perfon, and remitted for the account of another, though neither be named in it: but, in thofe cafes, the perfon to whom the bill is directed acts the part of feveral perfons, for he pays to, and receives from, himfelf; but the draught, or remittance, muft of neceffity be for the account of a third perfon, for it is impoffible that a man Chould pay to himfelf, without fome foreign caufe: fo that there are at leaft three perfons, and fometimes four, neceflarily concerned in a bill of exchange.
The feventh example, or inftance; happens but feldom : but Monfieur James Savary afferts, that he has feen it, and adds, that fome people queftioned whether it were really a bill of exchange. In order to folve that queftion, we mult know the reaforis which occafion the drawing of fuch bills of exchange; our author mentions two reafons; the frift is, when
a banker has orders to draw upon a place at a certain price, which he judges advantageous, but meets with no opportunity to do it, neither at that price, nor to any other, there being no money to be remitted at that place; he thereupon refolves to take the bill he draws for a friend's account, to his own account, rather than fail to ferve his friend, and, 'till he can meet with an opportunity to negociate it, he draws the bill payable to his own order. The fecond reafon is, when the drawer is a creditor of the perfor upon whom he draws, and, before he dilpofes of the reoney due to him, he would fecure it by the privilege of an accepted bill of exchange. One cannot doubt, but, in either of thefe cafes the bill is a true bill of exchange, for it has the effential conditions of it, which are, on the one hand, the remittance from place to place, and, on the other, the confent of the drawer to the giver of the value $;$ and, over and above that, the confent of the accepter. Of the drawer, in the firft cafe, by the letter of the perfon who gave orders to draw to him who paid the value.; and, though this confent of ewo perfons appear not in the bill of exchange but by one and the fame perfon, yet it is perfect, nevertholefs, reprefenting really two perfons, him who gave the order, and him who received it. If it be objected, that, in the fecond cafe, there is not the confent of two perfons, it may be anfwered, that, by the order, that confent is full and intire, and, confequently, it is a true bill of exchange.
We may add a further example, which happens very feldom; it is as follows:

## Exampie VIH.

Caën, Auguft 20, 1746 . For 3000 livres. - On the 20th day of December next I fhall pay, at the houle ' of Mr P -, in Paris, to the order of Thomas, the fum ' of three thoufand livres, value received of him in merc chandize.'

## N. Clembnt.

There are in that bill but two contracting parties who bind themfelves; he who gives the bill binds himfelf to procura the payment of it, and he who gave the value binds himielf to get the money received. The two other perfons, viz. he who is to pay the money, and he who is to demand the payment, are orily to fee the coniract exxecuted, or performed.
II. The fecond confideration with regard to bills of exchange is that of the time when they are to be paid, which is done five different ways, as follow :

1. At fight, or at will, which is the fame thing, becaule the bill muft be paid the moment it is prefented.
2. So many days after fight, which is an uncertain time, determined only by the prefentation of the bill, becaufe it is reckoned from that day only, that the drawer may, in the mean time, procure the fum drawn upon him.
3. On fuch a day of fuch a month, which is a time determined in the bill.
4. At one or more ufances, or at one, two, or three ufances and a half, which is a time determined by the cuftom of the place where the bill is to be paid. See Usance.
5. At the payments, or at the time of the fair. This method is not general for all places, but only for thofe where there are fettled fairs, as Lyons, Frankfort, Bolzano, Lintz, and fome other places; and that time is limited by the regulations and ftatutes of thofe fairs. See Fairs.
III. With regard to what is to be paid, which is the fum expreffed in the bill, it will be fufficient to obferve, that, when the bill is drawn for fo much money current in the place where the bill is drawn, and that money is not current in the place upon which it is drawn, the price at which it is valued muft be mentioned in the bill, as the reader may fee in the fourth and fixth examples above, to which we fhall ddd one of a bill of exchange drawn from London upon Amflerdam.

SIR,

- At two ufances and a balf pay by this my firft of exchange ' to Mr D , or order, the fum of one hundred and fifty pounds - fterling, at thirty-five fchellings and eleven gros per pound - fterling, value received of Mr E , and place it to account - as per advice of

To Mr M. N. merchant, at Amfterdam.
IV. Finally, with regard to the value, the forementioned edief publifhed by the king of France in March 1673 . tit. 5 . art. I , orders that it fhall be declared in all bills of exchange, whether the value was received in money, merchandize, or other effects: but, as merchants of other nations are not obliged to fubmit to that edict, there are many of their bills of exchange which exprefs only value received, without mentioning the nature of the effects in which the value was received; fome even fay only value of fuch an one, without adding the word received; and in fome it is only. faid value in account. It mult be obferved, that merchants generally draw a fecond, fometimes a third, bill of exchange, for the fame purpofe with the firt, in thefe, or the like, words:

## B I L

## B I L

Loudbn, April 27, 1749. igol at 35 flhellings if gros, $2 \frac{1}{2}$ ut.
SIR,

- At two ufances and a half pay by this my fecond (or third) of - exchange, the firft (or the firft and fecond not being paid) to - Mr. D, or order, the fum of one hundred and fifty pounds
- ferling, at thirty-five fchellings and eleven gros per pound
- fterling, value received of Mr. E, and place it to account
- fterling, value

To Mr. M. N. merchant, at Amiterdam.
F. G.

Thefe fecond and third bills are given for the fecurity of him to whom, or to whofe order, the bill is made payable, in cafe the firtt fhould be loft; as alfo that he may, if he pleafes, fend one to be accepted, and keep the other, or others, by him, or negociate it as he thinks fit ; for it is enough if one of the or negociate it ar accepted, the other, or others, being only in the nature of duplicates.
The orders and regulations of the city of Hamburgh, with relation to bills of exchange.
I.

He that accepts a bill of exchange, becomes a debtor himfelf, as well as he that has taken up, or received, the money.

## II.

When a bill of exchange comes from foreign and diftant countries, if drawn upon any man, in order to be accepted; if the perfon declines accepting, he who prefents the bill muft immediately proteft it. If he waits three days to know the mind of him who fhould, accept it, he fhall incur no prejudice thereby, provided no fervant goes in the mean time to the place where the money is told out.

## III.

If the perfon upon whom the bill is drawn will not accept within the three days, the proprietor, or prefenter of the bill, muft proteft, and fend back the proteft; but, withal, he muft keep the bill itfelf by him, 'till the time is elapfed. If the perfon upon whom the bill is drawn will then pay the money, the bearer muft receive it upon condition, that he likewife pays the charges of the protefl. If he will not pay, then the owner muft proteft for principal, intereft, and damages, and fend back the proteft with the bill, and demand of the drawer his principal, intereft, and damages, purfuant to the courfe of exchange.

## IV.

When a bill is due, the time being expired, the owner muft not fail to demand his money with all poffible expedition; and, if the accepter be remifs and backward in paying, he is obliged to proteft the bill within 12 days, for he may wait no longer without prejudice, provided he is remifs in making his demand, or has not had any new contract or dealings with the accepter: but, if thefe 12 days expire before he enters his proteft, he thereupon forfeits his demand upon the drawer, and can only apply himfelf to the accepter. This cafe holds punctually, but allowances are made for a Sunday or holy day ${ }_{\text {falling in, }}$, upon which no proteft can be entered.
V.

If any one takes a bill upon himfelf, and promifes to accept it, he is obliged to pay is.

## VI.

If a man receives a bill, in order to accept it, and keeps it by him three exchange-days, fo that the former poffeffor cannot come at it, though he makes a demand, the bill fhall pafs as actually accepted; and, when the time is expired, he that kept it fo long, and did not riturn it upon a demand made, ftands obliged to pay it.

## VII.

If a perfon receives money, and the bill drawn thereupon is not accepted at the appointed place, but a proteft returned upon it, he is obliged immediately, without any delay, to give in furety, or pleage, or confign goods to the value, to fecure the creditor for the money, together with his charges and damages.

## VIII.

If a fervant, without full power and commifion given in writing, accepts a bill drawn upon his mafter, the mafter is not obliged to pay it, when it becomes due; but, if the fervant had a full power given in writing, the mafter muft pay ir in the ufual courfe.

## IX.

If any man prefents a bill of exchange, and it is not accepted, a third perfon may accept, out of regard to the perfon that drew it; and, after he bas made payment, and received the bill transferred, he has a good action againft the debtor for the money he paid: or he may proteft, and accept the bill, and then pay and take the bill himfelf, with a proteft, that he may have a clear demand for his own. This third perfon does, by virtue of the acceptation, ftand obliged to pay the faid bill.

## X.

No man muft pay a bill before it is due: for, if it thould happen that the peifon who receives the money before due, breaks in the mean time, the lofs falls upon thofe who paid the bill before the time.

VoL. I.
XI.

Thofe who bave paid the fum fecified in a bill of exchange, may re-call the commiffion therein contained, upon the atecount that the perfon who drew the bill re integrà paid it before the accepter, unlefs it be that he upon whom the bill was drawn was no agent or factor for the drawer, but had a right to the faid fum, and received advice along with the bill to apply the faid fum intirely to his own ufe.
XII.

Bills being drawn payable at Frankfort, Leipfick, Nuremberg, and the like places of yearly fairs, and there accepted, the poffeflors of the bills may, without prejudice to themfelves, be allowed to enter a proteft three days after the people are returned from fuch fairs to their ufual place of abode; and upon other commiffions or orders they may proteft three days after the pay-week; but, if they do not proteft within, or upon, the expiration of thofe three days, they thereby lofe their action upon the drawer, and muft intirely depend upon the accepter.
An edict of the imperial city of Frankfort upon the Meine, relating to Exchange and Commerce.
We, the council of the holy imperial city of Frankfort upon the Meine, do hereby make known to all men, and particularly to all inland and foreign traders that carry on commerce and exchange in the fairs that are ufually kept here, and otherwife; that, upon the complaints brought before us, we have found that, for fome time paft, the bills of exchange negociated in this city, and at thefe fairs, have been managed in a very diforderly and abufive manner. Now confidering that this occafions no fmall inconveniencies, and chargeable and tedious law-fuits; and befides, it is to be feared, that, if this abufe is not looked after, it will terminate in finking the trade and commerce, to the great detriment of the free and privileged fairs that are to be held here. Upon this confideration, we conceived, both from our own concern, and from the earneft requeft of feveral merchants, that we are under an obligation and neceffity of determining, by a certain edict, or order, how merchants are to aft in our fairs, and what mealures they are to obferve in the managing their affairs of merchandizing and exchanges.
Accordingly, we do now ordain and require, in this our public edid, what is drawn up in the following articles.
I.

In the firft place, confidering that it has but too often happened that fome foreign merchants, who do not refort hither perfonally themfelves, but fend their fons, factors, or fervants, to negociate and adjuft all their concerns, have thereby occafioned a difpute upon what was contracted and negucisted by the perfons thus commiffioned: 'we give thofe foreign merchants to underffand, that it behoves them, both at fair-time, and on all other occations, to qualify the perfons they fend with a due commifion, or full powers, either general or fpecial, and confined either to a certain or unlimited time, impowering them to act at liberty both in buying and felling, as alfo to accept, take, pay, difcount, and difcharge bills of exchange, and to do as they think fit in whatever is needful, purfuant to the nature and act of every fort of bufinefs; and thefe commiffions, or full powers, are hereby ordered to be entered in every principal fuperior court.
II.

And, that thofe who deal with fuch agents may have full inftruction and fatisfaction in regard to their commiffion, every perfon thus commiffioned fhall be obliged to convey his commiffion, with a copy of it, to the notary, that is always here appointed, and fet apart for that office; which done, the notary fhall immediately compare it with the original itfelf, and carry the fame to the Protocal. After that, he hall re; turn the original, having firft writ upon it that he brought it out of the Protocal; and the agent again fhall fign upon the copy brought from the Protocal, that he had his original returned to him.
III.

The commiffion, or full power, given without a limitation of time, fhall continue in force 'till the principal granter revoke it in due form, and notifies his revocation thy the notary at the Protocal, appointed for this fervice: fo that, if the revocation itfelf is not regiftered in the Protocal, it thall be invalid.

## IV.

But if it bappen that a principal, having given a commiffion calculated to a certain time, wants to difannul the commiffion before the time is expired, be may do it without prejudice to any man ; only the revocation muft be notified and regiffered as above, in the Protocal: and what was negociated before the revocation continues in full force.

$$
V
$$

Further, confidering that, of late, a cuftom is crept into partnerfhips, companie", and focieties, that the members co not all write their own names, nay, oftentimes none of their own names, but only the name of the founder or treafurer of their company, who is dead long before; fo that traders cannot know who and how many belong to fuch a company, or, in cafe of the death, or the breaking, of' any of the members, who to apply $t 0$, as teing jointly bound for the debt: upon this
con-
confideration it is enacted, That all and every trader, whether inhabitants of this place, or foreigners, that are incorporated into a company, or joint fociety, thall infert all their feveral and purticular namcs in any commiffion, given either to one of their own members, or any other perfon, for negociating their concerns, without omitting any thing relating to their refpective rights: to the end that the notary, fet apart for the ofice, may give into the Protocal not only the commiffion, or full power, put into his hands, but likewife the names of all the company, or partners, and what relates to their joint fettlement; the which he hall be obliged to do.
VI.

If a company has a mind to part, the partners muft give timely notice of it to their correfpondents, and efpecially their creditors, as well as the appointed notary; in default of which, all fubfequent negociations; upon that foot, fhall affect them as much as if the company were fubfifting; and the notary fhall be obliged to mark the feparation, or parting, thus notified, in the margin of the full powers regiftered in the Pro. tocal.

## VII.

In like manner; to prevent the diforderly events that have happened with reference to bills of exchange, all acceptations hereafter fhal be figned either by the name of the principal dealers, or by thofe who are fully commiffioned, with the date annexed, bosh in the time of the fair, and at all other times.

## VIII.

In the time of the fair, the acceptation of bills of exchange fhall commence upon the Monday in the beginning of the fair, and reach to Tuefday at 9 o'clock in the morning, in the fecond or third pay-week; after which time no prefenter is obliged to wait longor for acceptation; but, if it is performed before 90 oclock aforefaid, the bill may be protefted, or at leaft noted. In the mean time, the creditor and prefenter may proteft it before, if he thinks fit; and at the fame time, if any'one, who declined the acceptation in the firft week, is willing to accept it per honor di littera fopra protefto, then the proteft fhall be put into his hands, for his ule, as well as the bill.
IX.

The realon of the refufal to accept muft be taken from the recufant, or fome of his fervants, and inferted into the proteft by the appointed notary; or, if, through multiplicity of bufinefs, he has not time, by any other notary fubftituted by him; and, at the fame time, a particular copy thereof thall be kept by the faid notary. If any one, alarmed by the proteft, offers to pay the bill before the proteft is fent away, he is obliged to pay the charges, as well as he that pays per honor di littera

## X.

Bills regularly accepted in the fair, but not paid at the due time, fhall, purfuant to the ancient cuftom, be marked down, or regiftered, upon the demand of the creditors, or prefenters, by the notary, on Saturday, in the pay-week, prefently after the merchants are gone from the common place of meeting, or to fix to a certain time, at any hour from $20^{\circ}$ clock in the afternoon to fun-fet: and the proteft raifed thereupon muf be fent away by the very firf, or, at fartheft, by the fecond poft.

## XI.

The transferred and indorfed bills, which commonly appear at the fair, Ihall, for certain reafons, be no farther prohibited, but pals current.

## XII.

In fair-time, the ufual proteffations of bills drawn at ufance, that is, payable 14 days after accepting, fhall.continue as heretofore; that is, the perfon may, without prejudice, delay the proteftation four days at difenetion, after the bill is due, but with this difference, that the day upon which the bill is prefented and accepted thall not be reckoned, the following dzy being the firlt of the computation, and that Sundays or holy-days falling in fhall never be reckoned amongft the days of grace.

## XIIT.

But this allowance of time is not given to fuch bills as run upon fight, or at two or three days fight, upon which the accepter has no days of grace, but is obliged, as foon as the bill is accepted and due, to pay the money at fartheft within 24 hours.
XIV.

As to the value and worth of bills coming either in fair-time or otherwife, from fuch places as obferve the fair-ftandard of this city, and reckon in rixdollars, the payment thall be in exchange, or bank-money, of 74 cruizzers, and not go cruitzers, of current money, unlefs is be that it is exprefsly fpecified fo in the bill. Jut, let it be ether exchange or current mony, toth of them. flall be underftood of the good large fpecie.

## XV.

Cor feering that in the courfe of exchange, notwithfanding it is founded upon plain and honourable commerce, the exception non numerata pecurix, or the flifting refuge of not having ready money told down, will begin to creep in, it is hereby declared in fuch dealings, the faid exception hall by
no means be admitted: fo that thofe who abfolutely accept a bill muft never plead any fuch cxception, but fland ubliged to make prompt payment, with a previous regard to their own right.

## XVI.

In like manner, no exceptions of that nature fhall take place in any contracts; and the contracts themielves, uniefs they be concluded with the mutual approbation of the joint contractors, are hereby declared invalid.
XVII.

All affignations muft return upon the affignees, unlefs it be that the affignee does abrolutely accept and take upon himflf the whole matter.
XVIII.

With reference to the failure and bankrupt cafes that happen here, confidering that foreign dèalers who live out of pur country are admitted upon an equal foot with our own inhabitants, and the former receive their ratum, or dividend, as well as the Jatter, though at the fame time our inhabitants are denied the like privilege effewhere: we therefore cmat, jure talionis, that the merchants living in thofe places that ufe our inhabitants after that rate, thall be upon the fate footing here; and that nu foreigner, or out-fiving trader, Thall be.allowed to partake of a bankrupt's eftate or effects, before he produces a credible teftimony from his magiftrates and fuperiors, importing that our dealers are allowed the like privilegg in the like cafes in the place where he trades and lives.

## XIX.

Since the merchant's Alile has brought it to a cultom, that, in cale any one had a demand upon a third perfon boch for his own account, and fomewhat due apart for another, though this third perfon does not make full payment, the demander, whether foreigner, or a home trader, is impowered to hold to his own account whatever is contracted, or paid: we therefore ordain, that, if this account is made before a man breaks, the demander muft acquiefce in it.

## XX.

In like manner, if any one has received commodities of another, to fell them by way of commifion, but upon their ac count is charged with bills of exchange, and other colts, he is impowered to reimburfe himfelf out of the faid geods, and, in cafe of the goods being feized upon the proprietors breaking, he ftands obliged only for the furplus.
To make this our order and edict known unto all men, we have caufed it to be printed and publifhed ; and it fall begin to be of force the next enfuing Eafter in 1657: and all wierchants, or others that deal to this place, are hereby ordered to af accordingly, in order to their own fafery.

Given at the council-board, Sept. 18,-1666.
The edict having been publifhed in the year 1666, it was followed by another fhort confirmatory decree of Feb. 8, 1676 .

A later edict of the imperial fates of Frankfort upon the Meine, relating to exchange and trade, renewing and inforcing their former orders, with additions.

We, the council of the city of Frankfort upon the Meine, do hereby make known to all and every trader, whether foreigner or inhabitant of this place, Chrifian or Jew, that is any way concerned in exchange and merchandi-e: that forafmuch as we are, to our high difpleafure, informed, that our new order, iffued forth in 1666, with regard to commerce and exchange, is not duly obferved, whereby great diforders have crept into all payments on bilis of exchange, and affignations, of which the traders who refide have given us intelligence, and petition for this our regulation. We, therefore, confidering that fuch diforders may be greatly detrimental, did appoint a deputation, commifioned from our own body, together with fome merchants and traders, to infpect narrowly into the circumflances, of this affair, and form fome refolutions thereupon; the fubfance of which is as follows :
I.

It is our will and pleafure that our new edict, or order, relating to traffic and exchange, iffued forth in the abovementioned year of our Lord 1666, hall be, and is, heteby inforced and renewed, as to all the particulars contained in it: and that hereby full warning and admonition fhould be given to all perfons, to correct, after the time to come, the diforders and abufes committed contrary to the tenour of that order.
II.

In a particular manner we hereby confirm and zevive the fourteenth paragraph of the faid edict, or order : and injoin all perfons, in purfuance of that, to make payment of money in good large fpecie: but with this allowance, that, fron the date hereof to the firft day of the month of July next enfuing in this plefent year, all who have occalion to make payments are warranted to fatisfy their creditors in gulders, and other pieces of fimall money; or, if that be reculed, to falder their bills to be fent back protelled. But, as foon as the firft day of June is paft, no man hall be obliged, againt the will, ro receive in the payment of bills guilder pieces, or the fmall half and quarter dollars: if the bill is drawn payable in bank or exchange money, he is not bound to take any other mpney
but the crols-albettus's, or Dutch dollars, and the three whole and half good rixdollars, or whole and half ducatoons, each ducatoon being reckoned as a rixdollar and a quarter; and thofe who fatl in payments after this manner, are declared liable to the immediate execution of the law. Farther, thofe who are debtors upon bills, are allowed to pay in as many quarterdollars, as will make 10 in the 100 , but no more.
III.

Neverthelefs, in the third place, no man fhall be forced to take any affignation, unlefs it be that the affignation falls upon the perfon that is willing to pay in ready cafh.
IV.

All contracts made at the end of the fair-time fhall ftand as good and valid as thofe agreed upon in the middle of the fairtime.

## V.

Lafly, when Jews are to pay bills to Chrifians, they are hereby obliged and bound (as well as the Chriftians) to bring the money to their houfes without admonition.
All this we injoin with a falvo to what alterations, additions, and explications this council may make, as time and occafion fhall require.
Given at the council-board, Tuefday February 8, 1676.
The regulations of exchange of the honourable and prudent the ftates of the city of Aug(burgh.

Forafmuch as the honourable and prudent the fates of the imperial city of Augrburgh are informed, upon good grounds, that, for fome time pait, no fmall diforders are crept into the management of exchange among the merchants that trade here, which give occafion to apprehend, that, if this grievance be not fpeedily redreffed, it will not only grow heavier in procefs of time, but may prove the fource of many tedious and coflly law-fuits, and other inconveniencies: upon this confideration the faid honaurable ftates (who are always careful and vigilant in promoting the intereft of their country, by omitting nothing that may advance commerce and fair trade, upon which depend the livelihood and welfare of their traders) the faid ftates find themfelves bound, purfuant to the example of other trading towns, to eftablifh an order and fanding rule of exchange, and to publifh the fame, that no man may precend ignorance, in hopes that the good citizens and inhabitants will obferve the contents of it with a dutiful compliance, as they mean to avoid the penalties that arife upon their doing otherwife.
In the firit place, as to what relates to the accepting of bills of exchange, if the perfon upon whom a bill is drawn is unwilling to accept, either he, or one freely commiffioned by him, muft fign it, and add the date of the acceptation. Both parties may chule to prefent, or accept, the bill, either the very day upon which it comes to hand, or the next day after (abating for the Venetian bills, upon which there follows a peculiar order in the fourth paragraph of this our edict.) But the perfon upon whon the bill is drawn muft difcover his mind as to the accepting in fuch a convenient time, that, in cafe he declines to accepr, he who has the bill may enter and forward his proteft to the refpective place, by the firft poft.
In the next place, confidering that the pofts and comers to and from this place are fettled upon fuch a foot, that thederters from one place to another, coming in for the moft part (efpecially in harveft and winter) in the afternoon, and towards the evening, muft be difpatched againft the next day, 4 or 50 'clark being the laft hour for the giving in of letters, which confines men to a narrow compafs of time, infomuch that it may eafily happen, efpecially if the wriling or poftday chances to be a holy-day, that they cannot negociate the acceptation in the preceding date: we therefore determine, that all acceptations demanded, or given, on fuch holy-days, fhall be yalid (excepting ftill the Sundays, which there is no neceffry of including) but, at the farme time, all perfons Ball hereby be obliged to the Chriftian demeanour, of not making ufe of this difpenfation withour an abfolute neceffity, it being required of them to procure the accepting on the foregoing working days, if it is poffible. In like manner the public notaries are hereby warranted to enter and mark down the proteftations on fuch holy-days, and, if occafion is, to return them ; all which cannot be done, if the proteft cannot be fent back in lefs than eight days, which may prove detrimental to thofe who remit, and are under a neceffity of making ufe of the inftrument of proteftation.
In the third place, the honourable ftates do all along ftand by their decree, publifhed on July 16 and 24, in the year 1624 , by the tenour of which, the common and fingle ufance is fetthed to 1 ; days, and confequently, the double ufance to 30 , an ufance and a half to 23, and a half ufance to eight days; and, after the expiring of thefe, commencing from the acceptation, the next day is the day of payment, upon which computation all holy-dyys, befides Sundays, are not reckoned for termini in terminis. The fame method fhall hold and continue as to the five days- of grace inclufive, after the ufance is out, which time the merchants may $w$ sit without prejudice or danger, provided ftill that Sundays and all holy-days, in which nocouncil can be held, fhatl not be reckoned in that number.

In the fourth place, in regard it is enacted in the faid cectre with reference to Venetian bills, that no perfon fhat be obliged to accept them but upon Fridays; the coneqquence of which is, that the laft day of ufance clapfes on a Saturday, and, the pay-day happens to be the next Sunday, fo that the money cannot be demanded 'ill the Monday following: and confidering that this, upon the account of the letters from Venice theis coming in moftly all the year round on a Thurfday before noon, may prove dilatory, and no fmall detriment to thoie who re: ceive the Venetian bills: upon thefe confiderationt, the tenor of the faid decree fhall fand firm, which provides that the accepting of Venetian bills fhall be upon Friday; but withal, that the bills from Venice, or elfewhere, to this place, and failing due upon a Sunday, may be demanded on the foregoing Saturday : fo that fuch payments made on a Saturday are watrantable and legal. And the like fhall be obferved as to the days of grace, as much as if they had become due on a Saturday.
The fame rule holds as to all other bills of exchange, purfuant to the ancient ufe and cuftom.
Fifthly, With reference to fuch bills of exchatge as are drawn payable à lettera vifta, or upon fight, which are prefented out of hand and accepted; we impofe no neceffity upon traders to pay them prefently, provided they do it within 24 hours; after which a proteft is warrantable. In like manner, no days of grace fhall be allowed upon fuch bills as are payable in a very fhort time, fuch as two or three days; thefe bills being hereby put upon the fame foot with the foregoing bills upon fight. But all other bills, of what number of days foever, upon half, whole, or more ufance; and likewife in the Frankfort Ritorni ultimo Junii, ultimo Novembris, or whatever bills made payable upon a certain expreffed day, thall, without diftinction, be allowed the five days of grace; to this end only, that the creditor, or poffeffor of the bills, may wait fo long without prejudice to himfelf to fatisfy the debtor, if he can't receive the money upon the firft demand, purfuant to the decree mentioned above. Not that the allowance of thefe days of grace flall encourage men to gratify their humour or occafions, in retarding the payment fo far behind the due time. On the contrary, they are required to make good payment upon the day that the bills become due, according to the cuftom hitherto obferved; fo that no delays fhall be officioully claimed, upon the precence of days of grace.
Sixthly, In cafe bills drawn payable upon a certain day, to not artive here 'till not oniy the prefcribed tume itelf, but likewife fome part of the acceffary days of grace is expired; the faid five days of grace thall be computed, as beginning not from the prefenting and accepting of the bill, tu: from the day of payment fixed in the bill: fo that the debtor can only make ufe of the remainder of that complement. If both the t'me prefcribed, and the full number of the days of grace, are all palt before the prefcribing the bill, the payment fhall accrue within 24 hours after accepting, as well as bills upon fight.
Seventhly, All bills of exchange drawn payable on a certain day, at one, or more 4 [ances, or a fhorter term, mult be paid by the accepter, whenever the ufance and the five days of grace are expired, whether the value be received by the drawer or not; for 'ris a fanding rule, chi accetta pagi. In like manner, let this be an univerfal rule as to the payment of bills, that as payments made upon the day that the bill becomes due, or any day after, are good; fo, on the contrary, payments, made before the accruing day, are faulty; for, if they prove any way prejudicial to one or the other third perfon, they will be held as null-and invalid. Eighthly, As foon as a bill of exchange returns proteffed for non-payment, he who drew the bill, flands obliged immediately to repay his creditor the fum fiecified in the bill, befides his charges, and the exchange Laggio ; or to give bim good fecurity, or fome other reafonable fatisfaction, upon the very day that the advice comes, and both the drawer of the bill and the accepter are bound jointly and feverally, as creditors, to the poffeflor, 'till the bill is fatisfied; the poffeffor having a full power to demand payment of either. Ninthly, To give credit to a protefled bill lies chiefly at the door of thore who are to receive the money; and, if they will not credit it themfelves, they foculd endeavour to try about; and, if they meet with any one that accepts this protefted bill, he, having accepted, ftands obliged to pay it. But if, after this, the perfon upon whom the biil was drawn, defires and offers to accept and pay the bill, then he who gave the bill this credit before, is not obliged to ilaad, unlel's fo inclined.
Tenchly, That if any inhabitant of this place acrepts a bill to pay at fome other place, as Nuremberg, Ulm, St Gall, \&re and in like manner, if any one receives remittances and bills of exchange, upon debtors living elfewhere, the content of which bulls is to be adwanced here; in both thale cales, the acceptation muft be procured by letters and bills of exchange, tranfmitted from one to another, which require fome timc. The time of payment, in fuch cafes, fall accrue after the fame rate, as if the acceptation had been made at the place where the money is wo be faid. But, in cale any intubitant
of this place ftands bound to pay, here at Aughurgh, a bill of exchanse to another perfon that lives elfewhere; and is defired by him to tranfmit him neat money for it; he is not obliged to comply with his defire, without difcounting the provifi, minney. After that, the poffefor of the bill may fifid any body who takes the payment on himfelf, according to the ufual manner, in the market-place of this city; or, if he is willing to difpente with it, he may freely do it.
In the eleventh place, with reference to the manifold indorfements of bills of exchange ; fince they are fo much in ufe here as well as in other places, that it will not eafily bear a limitation, and far lefs a total reftraint; we fuffer them fill to pars, but with this referve, that the indorfement in banco is hereby declured altogether null; and he who gives fuch bills, fhall be obliged to fill up the indorfements, making mention of the fums.
Twelfthly, In regard that by the difpatching of Difpacii, not only in the Boizner fairs (where transferred bills are not allowed) but in other places, to fave the provifion charge, a cuftom is introduced, that the debtor does not give his own bill, but one of a fecond, third, or fourth perfon, with whom the creduor never had any dealings: we fuffer this cuftom to take place towards the facilitating of bufinefs, but with this provifo, that the debtor fhall, upon fending fuch a bill, write to his creditor a feparate acknowledgment, that he flands for ever obliged to fee the bill paid.
Confidering likewife, in the thirteenth place, that, for fome ti:ne paft, great and many inconveniencies have arofe, from the too late difpatching bills per le fieri; and that there is a necefinty of removing fuch inconveniencies: we therefore enact, that the debtor fhall fland obliged, under the penalty of four guilders to the poor, to pay the bill to his creditor, at fartheft, at the noon of that day, upon which the primi fpacii muft be difpatched. Befides, thofe who have received money per le fieri, ftand obliged to give a writ of acknowledgment to their creditors, if they but defire it.
Laftly, It being fufficiently known, what inconveniencies and differences have arifen from the affignation payments, 'tis full time to remedy them; to which end, nothing is more proper, than that all written affignations and transferrings foould be altogether taken away, and refcontro upon the foot placed in their room, after the following manner. He who is to pay the money, is to appear at the exchange, on ex-change-days (for which from eleven to twelve before noon, on Saturday, Monday, and Tuefday, is the precife time allotted) and there endeavour to adjult the refcontro, and to fatisfy his creditors. But, if upon Tuefday exchange, he cannot come to an end with his creditor, who demands prompt payment in calh, he ftands obliged, without further delay, to pay him in ready money.

Some obfervations, neceffary for thofe who have bills to receive at Amfterdam, the capital city of the province of Holland.

1. That all bills of exchange, upon any one refident in that town, are payable in bank [fee the BANK of Amfterdam, defribed under the province of Holland] except it is otherwife ordained in exprefs terms in the bill.
2. All bills of exchange at Amfterdam muft be paid within fix days after they are due at the lateft (that being the number of the days of grace in Holland) except thofe that are payable in bank, when the bank is fhut up at the time they fhould be paid; in which cafe they muft be paid, by writing off the value in bank, within three days after it is open; and, if it be not done in that time, they muft forthwith be proteffed.
3. When a bill becomes due, the bearer thereof generally carries it to the perfon who is to pay it, having firft written the following order upon the back of it:

Write the contents of the other fide upon my account in bank, at. Amflerdam, the

And the bill being left with the debtor, he accordingly writes off the value next day in bank.
4. Or, if the bearer of the bill be not inclinable to deliver it to the debtor, 'till the value be actually writ off in bank, after hhewing him the bill, and telling him that he will find it in the bank, he muft carry it thither, and, paying fix ftivers to the book-keepers, defire them not to deliver it to the debtor, 'till the value be written off in the books; and afterwards, returning when he thinks the value is written off, and finding it done, he mult order them to deliver the bill to the perfon who has wrote off the value, and who ought to go and call for it. But, if the value be not written off in due time, the bearer muft demand the bill, and caufe it to be protefted for non-payment.
5. But, if the bearer of the bill has no account in bank, and is not defirous to have any, he may propofe to the debtor to pay the bill in current money, agreeing for the price of the agio; [Sce Agro] and, having received his money, give a receipt upon the back of the bill, mentioning that be bas received the value in current money, agio at fo much per cent.
6. But, if the bearer of the bill can't agree with the debter for the agio, he may negociate it with a cafh-keeper, or any body elfe: becaufe, if the indorfement was fimply for value received, it would not be valid; no fuch bill being reputed paid, without a fpecial indorfoment, except it be written in bank.
Write for me the contents of the other fide to A. B. in bank, value of him, at Amfterdam, the
of
${ }_{\mathrm{F}}{ }^{\mathrm{I}} \mathrm{F}^{\mathrm{N}} \mathrm{N}$.
Thefe indorfements upon the bills may be made in French, Englifh, or any other language underfood by the accepter of a bill: but orders in bank muft be written in the language of the country. And therefore I have thought it proper to infert a model of thefe orders in their own language.

Fol. $97^{6}$.
De heeren commiffariffen van de banck, geleiven te betalen aen B. G. de fomma van tweè duyfent vier hondert feven en t'achtentig guldens tein ftyvers, actum in Amfterdam den, \&c.

Flo. 2487 : 10.
When a merchant is defirous to negotiate bank-money for current, he may do it before the town houfe, between ro and 11 in the morning: where the calh-keepers generally meet, who will give either bank or current money to fuch as want it. And fometimes fuch negociations are tranfacted upon the exchange by the interpofition of brokers, who get I per 1000 for their trouble, equally payable by both parties. The falaries of the officers of the bank are paid by the city, and all the fines and other monies paid for transferring of fums, and other things of that nature, are laid out in charitable ufes.
When any man's account in bank is filled up, and a new one muft be begun, the party, having notice thereof, muft repair to the bank to compare accounts in the fame manner as when the balance is made.
When any body that has money in the bank takes it out, if the agio be under 5 per cent. the treafurers pay them the difference, they having received it at that rate.
When any difference happens between merchants concerning any fum in tank, 'tis determined by two or three commifioners, chofen among the magiffrates, who decide all fuch matters fummarily.
At the death of any perfon, who has money in the bank, their' heirs and fucceffors mult prove their titles by authentic deeds, before the book-keepers transfer the fums to their accounts.
Molt bills of exchange are negociated at Amfterdam, as at other trading cities in Europe, by agents or brokers (fee the articles Agents and Brokers) who enter in their book a memorandum of fuch negotiations concluded by them, in order to determine any difference between merchants on theté occafions, and allo to adjuft their brokerage.
Thofe brokers for exchange and merchandize, at Amferdam, are in number 375 Chriftians, and 20 Jews. They are admitted into thefe offices by the magiftrates, before whom they take an oath to perform their functions faithfully, according to the regulations appointed for them.
Befides thefe fworn brokers, 'tis believed there is twice that number of other little intermeddlers at Amfterdam ; in January 1613 , and November 1624, they were allowed to take, for negotiating bills of exchange, 3 fivers per joo florins; and, in exchanging bank and current money, I per 1000. And, as to ufance of Amfterdam, it is to be obferved, that it is not, as-in fome other places, either precifely 30 days, or 31 , or 28 , or 29 , according to the number of the days of the month; for there, a bill drawn at ufance, fuppofe the 10th, 20th, 25 th, or any other day, falls due the fame day of the enfuing month, without any regard to the number of days in the month, in which it was drawn.
So that a bill, drawn (for example) the 20th of February, becomes due the 2oth of March, though February has but 28 days, except when it is leap year: and, on the other band, a bill, drawn the 2oth of January, does not become due 'ill the 20th of February, though January has 31 days. See the article Usance.
For more matter relating to the negotiating of bills of exchange in Holland, fee the article Amsterdam, under the province of Holland.

His' Electoral Highnefs of Saxony's moft gracious decree, for regulating the payment of bills of exchange, and the time of their being due : as well as the method of dealing, by way of commiffion or factory, in the city of Leipfic.

Trusty and well beloved: We have heard your humbleinformation and your dutiful petition, fetting forth what the merchants of our city of Leipfic have propofed, for the lecurity and improvement of their commerce; and their earneft defire to have it brought into the next diet, and paffed into an Imperial ediç. It being our inclination propitioufly to promote whatever may tend to the advantage of commérce in this country, and we have withal remarked, that the particulars given in by cur merchants,
will fcarce be allowed of in all the trading towns of the holy Roman empire, or pafs for a general rule in the Imperial decree: upon thefe confiderations, we have refolved, as being princes of this country, and by virtue of the power we are here invefted with, as well as out of regard to a dutiful petition of our city of Leipfic, fince prefented to us, to make a particular act and order, upon the cafe above-mentioned.
In the firft place: As for bills of exchange, and what relates to them, we continue them upon the fame foor, as in our declaration iffued forth, July 21, 1660 , from the exprefs terms of which, 'tis evident, that bills drawn upon fight, are firm and obligatory upon the drawer or accepter, let him be whom he will; and that not only bills upon fight, but even thofe payable after fome time, are of the fame firm obligation: and that the penaltics are fully as fevere upon thofe who drive no trade, whether gentlemen or ordinary perfons, learned or un learned, employed in publick offices of diftinction or unemployed, as they are againft the merchants themfelves.
In the fecond place, in regard the merchants have hitherto complained, that the Nuremberghers obferve no certain time in returning home, and yet this time of this their uncertain return is the period upon which both the payment and protefting the bills does depend :
We therefore ordain and conftitute, that, from this day forward, Thurflay in the pay-week fhall be the term; or if, in the new year's fair, the fair begins on Sunday, the fifth day of the pay-week (reckoning, from the day upon which the fair is prohibited upon the expiration of the firft week) and the proteft of bills thall pafs 'till ten o'clock at night, but none hall be received after that hour.
In the third place, with reference to goods put into the hands of another upon commiffion, the fame cuftom as is obferved in other trading towns thall take place in our town of Leipt fic: fo that whoever has goods upon commiffion to fell for another, and upon thefe is charged with bills, he has a power to refund bis charges out of the goods in his hands. And, if in cafe of bankruptcy or otherwife, fuch goods be attached or arrefted, he is only obliged to account for the furplufage.
This we require you to make publick, in the ufual form, to all traders, and, as much as in you lies, to fee it inviolably obferved : in the doing of which, you will perform what is our will and pleafure.

Given at Drefden,-Sept. 4, 1669.
John George, Elector.
To our trufty and well-beloved the council of' Leipfic.

## The regulations and ordonnances of exchange, eftablifhed at Bologna in Italy.

## I.

The place thall be free to all perfons, both foreigners and natives, and as.well to thofe that do not, as to thofe that do, merchandize; fo that every perfon, of what condition foever, may give or receive money in exchange, provided that the exchange be real : meaning by real exchange, when the money is actually paid in Bologna, that it may be re-paid in another place, according to the contents of the bill of exchange, and that alfo the bill be actually fent to the place and perfon upon whom it is drawn, and there be either paid or refufed.

## II.

It fhall be in every one's power, though no merchant, to put his money in merchants hands, and receive real bills of exchange for it; that thereby he may have credit in other places, as its ufual elfewhere in Italy, and out of it; and alfo it fhall be lawful for any perfon to give money upon bills of exchange, and to return fuch bills to the drawer, if the buyer does not reccive the money he paid upon them.

## III.

If foreigners fend foreign pieces of money for exchange, or otherwie, fuch money fhall remain free and unmolefted for the ufe of thofe who fent it; even though they be excommunicated by the order of the holy church, or be guilty of herefy, or treaton, or though they hould be indebted to the treafury, fuch money fhall be left free and unmolefted, for the ufe of the faid foreigners, and the fame fhall be underfood of money fent from other countries by bills of exchange, to perfons of that character here *.

* This feems to be no mean froke of policy in the ecclefiaftical fate, in order to render it a kind of afylum for delinquents of all nations; and to convince the world, that even the worft of crimes thall be no reltrant to the drawing money and people into there all-fanctified territories.
IV.

All differences and difputes happening in this city, concerning bills of exchange, between any perfons whatfoever, fhall he decided and determined by the confuls and merchants judges, to whom alone it thall belong to take cognizance of fuch fuits and differences; nor thall it be in the power of any other judge, or judicature, or magiftrate whatfoever, to take

Vol. L.
notice of, or juige, or any other way, to hinder their judirment, or to meddle or concern themfelves in it, directly or indirectly, in any manner whatfoever. And 'tis likewife declared, that the deciding of all fuch controverfies fall belong to faid judicature, not only in the frift trial, but alfo in cafe of an appeal, according to the conflitution and form of the faid judicature. And; if any one fhould appeal to the pope himfelf, the right of judgment fhall then detolve upon the judge of appeals, and the merchant judges, and confuls, as it is fpecalify ordained by his holinefs in fuch a cafe; and the appealer hall be obliged to profecute his fuit beiore them within a certain limited time, according to the flatutes of the faid judicature; or otherwife the appeal to be void and of no effect, and the fentence given to be put in execution by the merchant judges and confuls, as iff there had been no appeal.

## $\dot{V}$.

The merchants may meet in the place where the faid judicature fits, or any other place which fhall be thought convenient for them, whither they hall repair, and remain there an hour in the forenoon, and an hour in the afternoon, three days a week, viz. Mondays, Wednefdays, and Fridays, thefe not being holidays; and if they be, that meeting thall be kept the day preceding, and there thall be no bufinefs done among merchants on holidays.
VI.

The exchanges mult be made in gold crowns of good coin, for all places; and all accounts and writings between merchants and dealers, foreigners or inbabitants, fhall be made in that fpecie.
VII.

The ufance for paying bills of exchange thall be as follows, viz:
To Rome and Genoa, ten days fight.
To Milan, Venice, Florence, Pifa, Lucca, and other places of Tufcany, eight days fight.
To Naples, fifteen days fight.
To Palermo, Meffina, Bari, and other places of Sicily, one month.
To Lyons, Befançon, and Spain, according to the yearly markets.
To Paris, Antwerp, and all the Netherlands, two months. To London and the Levant, three months.
VIII.

There fhall be paid, to the brokers who conclude the faid exchange contricts, a golden ftyver for every hundred crowns, by each party; and thefe brokers thall be approved and allowed by the judicature of merchants, and be obliged to make obfervations, and do every other thing, which fhall be required of them, according to the difpofition of the fatutes of the faid judicature; and they fhall keep a book, after the manner of a journal, wherein they fall write from day to day, with their own hands, what exchange contracts they conclude, fetting down both parties, viz. the drawer and the buyer of the bill, as well as the fums drawn, and the prices of the exchange, and for what places: in doing of which, if any fail, in the whole or in part, they fhall be difcharged from their offices, and deprived of all their fees.

## IX.

In cale any bills of exchange drawn at Bologna return protefted, the buyer of any fuch bills to whom it fhall be returned, immediately appearing before the judges and confuls, if they be fitting at that Hour, and otherwife before one of the notaries of the faid judicature; and, thefe demanding execution againt the drawer of the faid bill, the faid judges or confuls, or (they not fitting) the faid notary without any other intimation, or acting of the drawer, fhall prefently grant the faid execution, by virtue whereof, the creditor may with a ferjeant feize the goods of a debtor for the fum contained in the bill, with the intereft, charges, and damages, according as the judge fhall think fit.
And, in cafe any hinderance or delay fhall happen to the faid execution, the faid ferjeant fhall prefently give notice thereof to the faid notary, who fhall then be obliged to give a perfonal order to the creditor againft the debtor, who, in cafe of any execution upon his goods, may appear before the faid judges and confuls, and complain, if he thinks himfelf oppreffed, or has any exception to make againft the bill. But he fhall not in any manner be admitted to an audience, 'till he has fecured the creditors, although the time of payment be not come. And in cafe a bill be returned protefted, and he that drew the bill be dead, the buyer may proceed againft the goods of his heir, in the fame manner as he might do againf his, if he were living, though the time limited by the law for profecuting an heir, or making an inventory of his goods, be not expired, as though the heir be a minor, who bas not yet got tutors, and notwithftanding any other reafon whatfoever. And in cafe the time appointed by the law for the heirs to take full poffeffion of the goods of the deceafed, and for making a lawful inventory, be expired before the creditor appear to demand the faid execution, then the faid creditor may lawfully draw bills of exchange for the faid money, charges, \&c. upon the faid heirs, 'till he be 4 A
\{u! ! y
fully paid. And the goods of all forts of people, of what condition foever, even though they be magiftrates, to whom a proteft, or a non-accepted bill, thall be returned, may and thall, at the requeft of the creditor, be feized for the paying or fecuring of the payment of the creditor's money, before the or fecuring of the payment of the credid judge, conful, or notary, as is faid before, notwithftandfaid judge, confu, or notary, ing all laws, cuftoms, ftatutes, and privileges, to the contrary.
X.

And becaufe it fometimes happens, that fome who lay out money upon exchange, do it with a furety, who fublcribes the fecond or third bill, as it is cuftomary in many places; it is hereby declared, that, if the firft bill be refufed and returned protefted, the creditor may as well demand his money of the fubferibers of the fecond or third bill, as of the principal who hath drawn it, as he fhall think fit; and the forementioned execution to be awarded againft the principal, may alfo be awarded againit the furety, any law or cuftom formerly in ufe, to the contrary, notwithftanding.
XI.

No prefcription thall be of force, nor no other exception be admitted againft true and real bills of exchange; and all trials of that nature fhall be feeedily decided, without any artificial delay, hindrance, or interruption of the procefs.
XII.

Bills of exchange being drawn upon Bologna, and refuled to be accepted; the bearer thereof may caufe a proteft to be made for all charges, damages, and interefts, againft the perfon or perfons refufing to accept them; and in cafe fuch perfon or perfons be abfent, and no opportunity can be found to make a perfonal proteft, it may be made by a notary, at the houfe of the party or parties who mould accept it; and the time of payment being come, and payment made, the proteft may be delivered to the payer.
XIII.

No acceptation of bills drawn upon Bologna hall be valid, except they be accepted by him who is to pay the money, and not by an agent, friend, or book-keeper, except fuch perfons have a fufficient procuration: in which cafe, all traders thall be obliged to give notice to the fuperintendant of the court-merchant, of all perfons that are fo appointed, to fatisfy their bills, and for the time they are to continue in that flacion, which the faid fuperintendant mult enter in a record kept for that purpofe.
XIV.

Bills upon other men being thus accepted, by perfons qualified as above, the faid perfon thall be obliged to pay the money in due time, and the bearers of fuch bills fall be no ways prejudiced by fuch acceptations, fo that they may not act againft all fuch perfons as are in any manner bound in the faid exchange, but thall be allowed to proceed againft any one concerned in the faid bill, as they think fit, and that as well for the principal fum, as for the charges, damages, and intereft.
XV.

If it happen, that after the accepting of any bill the accepter breaks, and by that means the bill remains unpaid, the bearer thereof duly entering his proteft, the drawer fhall be obliged to refund to him the principal, as well as the interef, damages, and charges.

## XVI.

No attorney thall be allowed to appear in the court-merchant, except only in cafes in which it is ordained by the ftatutes of the faid judicature of merchants, in the article concerning bills of exchange, and with the conditions and reftrictions contained in the faid article, concerning the faid attornies, and no otherwife.
XVII.

And in cafe there thould happen any differences concerning the faid bill of exchange, not mentioned in thefe articles, they muft be determined by the judge and confuls of the faid judicature, or by the greateft number of them. But, in all the cafes above-faid, they muft act, proceed, give fentence, and execute, according to the contents of thefe articles, and not according to the inftitutions of the faid judicature concerning excbanges, as far as they are contrary to, or differ from, thefe articles; but otherwife the faid inftitution to remain in theirfull force and virtue, as well concerning bills of exchange, as concerning common writings, and all other things whatfoever, treating of the power or jurifdiction of the judges, confuls, \&c. any former law, ufe, practice, or cuftom so the contrary, notwithfanding.

## REMARKg.

In the firft part of this article of Rills of exchange, I have given a feries of felect authenticated cafes relating thereunto, which have been adjudged in our courts of law in England; and which, being maturely confrdered, will enable a thinking man to mate a good judgment upon any ather occurrences that relate to this important topic. For not only fimilar bur diffimilar cafes are determined by the due application of thofe general maxims of reafon and law, whereupon thefe prior adjudged cafes have been grounded.

Sometimes, indeed, it has fell out, that what has been laib if the opinion of fome judges, is not fo in that of their fucceffors; but this I am inclined to think, has been but in very few cafes; and that in fuch which have been very delicate and complicated, and wherein they have not been exactly paral. lel, and tallied in all circumftances: and, where this happens, there is the fame reafon why our judges fhould differ from one another, and even from themfelves, as that they thould accord, when it happens otherwife.
It is this difference in the circumftances of cafes, which has rendered the reports of law fo voluminous; but this is unavoidable, as neceflarily arifing from that infinite variety of tranfactions among mankind. But it is certainly more to the fecurity of property to have all pre-determined cafes authentically reported, for the guidance of fucceeding courts of judicature, than not; and not to leave them unreftrained, and to act arbitrarily, without any regard to thofe reafons and principles of law of their predeceflors, which have ftood the teft of ages. It is more to the benefit of fociety to bear with voluminous laws, and even thofe which may fometimes clath, than to be governed only by the uncontroulable will of judges, who have not always proved incorruptible.
Moreover, although fome have been wont to think, that our law, being fo voluminous, occafions it to be more expenfive, yet I apprehend this to be a vulgar error; for, where cafes are fo faithfully and equitably reported, as in England, a man of fenfe, though not bred to the law, who attentively and impartially confults thofe reports, may himfelf form a good judgment in moft cafes, whether he is in the wrong or the right in going to law: which fhews, that the more law cafes there are properly reprelented, or, if you pleafe, the more voJuminous the law is in this refpect, the lefs tedious, the lefs expenfive, and what is 隹ll more defirable, it is rendered the lefs precatious, and the lefs dependent on arbitrary will. The ftatute-law of England, it is true, is voluminous, and perhaps ufelefsly fo, and often inconfiftent with the common law: but, as our judges are the proper conftrueters of thefe fatutes, it is obfervable, that where any doubt arifes, with regard to the fenfe of a ftatute, they judge of it by the tenor of the common law: and, in matters of law, it is more for the advantage of the fubject, that Weftminfter-hall fhould, in this refpect, controul St Stephen's chapel, than the latter the former; for, otherwife, the flatutes which do not always quadrate with the fenfe and firit of the law, would fubvert a great part of it, and render all reported cafes ufelefs to pofterity; and every new judge might have it in his power to make new laws, whereby we hould have no laws certain at all. In regard to Scotland, likewife, I have given fome curious cafes relating to bills of exchange, which will ferve as a guide in many other refpects; for, in order to enter into the reafon of thefe adjudications, they are fupported by the authority of thofe, who are allowed to have wrote the beft on the fubject, according to the eftablifhed cuftoms of the principal trading nations in Europe.
The regulations and edicts of France, Holland, the great cities of Hamburgh, Francfort, Leiplic, Augfourgh, and Bologna, mut convey an idea of the care which they have judged neceffary, in order duly to apprize traders of the laws and cuftoms they are obliged to regard, in thefe kind of negotiations, But, befides the laws and ufages which are peculiar to particular nations and great trading cities, in regard to matters of this nature, there are fundamental principles and maxims of reafon, whereupon thofe peculiar laws and cuftoms ought to be grounded; and thefe cannot be too well underftood both by traders and lawyers: and thofe fhort circular letters, or orders, given by bankers and trading people to furnih to others certain fums of money, are of fuch ufe and advantage to trade, that it cannot be carried on without them; feeing in many nations the exporting of money is prohibited under fevere penalties; in others no money is current but their own, and all foreign coin reputed bullion: fo that bills feem to be the only expedient left to merchants for drawing their effects out of foreign countries, from perfons indebted to them, upon the yearly, ballance of trade; and no one would fend their merchandize to a place from whence, when they are fold, he has no means to bring home the value, or cannot do it without an extraordinary rifque.
Many great men, both lawyers and divines, have wrote upon this fubjest; but what the ancients wrote, when the exchange was but in it's infancy, imperfect, and lefs known, does not fuit with the modern conititution of it, as now refined and improved. And later authors, what with their ufelefs niceties and unintelligible different notions about the nature and lawfulnefs of it; and their fanciful divifions and fubdivilions; inftead of clearing up the matter, they have only perplexed and confounded it.
Among the Italians that have wrote upon exchange, Sigifmund Scaccia, and Raphael de Turri, are the chief: whom Jo. Gaitus, J. Marquhardus, Fra. Stypmannus, Car. Ant. de Luca, Jofeph Giballinus, Van Lewen, and others of feveral nations, have but copied after. The works of thefe leading authors abound with learned fubtilty, and whimfical fcholaftic queftions, but are flamefully defective in material things, founded on the plain nature of commerce. Many of the de-
cifions of the Rote of Gerioa are upon points of little import to us. The decifions of Portugal, callected by Anton. di Gasim ; thofe of the fupreme courts of Holland and Flanders, compiled by Neoftadius and Chriftineus; and the Refponfa jurifconfultorum Hollandix; totuch upon bills of exchange but feldom, and with relation only to particular cafes. In the whole Journal du Palais, which is a collection in nine volumes of the decifions of all the parliament and fovereign judicatures in France, for many years, there are not above three or four decifions relating to bills of exchange: the reafon whereof 15 , becaufe, in all the trading towns of France, eftablifhed courtsmerchants take cognizance of differences between perfons of that profeflion, in a fummary manner; except where the intervening of fome nice points of law render merchants incompetent judgrs, which are carried before the parliament. Such courts for determining differences arifing upon matters of commerce are alfo erected in moft other trading nations in Europe, though there is no fuch judicature as yet in Britain. This matter was but of late well underftood by lawyers: for, in dociding controverlies of this nature, the advice of merchants was frequently taken and followed; and even few of thofe have a right notion of it. The French lawyers never much applicd themfelves to treat of it. M. Marefhal, 1625 , publithed Un traité de Change \& Rechange, \& Banqueroutes, crammed with citations of laws and doctors; but he runs over bills fo fuperficially and diforderly, that it is more than likely he was but little acquainted with the fubject. Clerac, 1695, printed another Traité de Change, to as little purpofe. Sieur Jacques Savary, though he excels the other two in his Parfait Negociant, handles the argument fo meanly, that it is plain he never weat to the root of it. L'Art des lettres de Change, par Monfieur Jacques du Puy, illuftrates the nature of an exchange contraft, and contains fome principles for deciding queftions of this kind : but, as that author hath fome good things, fo he is chargeable with many material defects, and is far from anfwering the title of his works. The French edict of commerce, 1073 , regulates and decides only the more ordinary cales. Sam. Ricard's Traite general du commerce, has many ufeful practical things; yet thefe are only touched as a merchant, but does not cale the matter, or dip into the point of law. Marius's Advice concerning Bills of Exchange, and Malines, are as flat and heavy as they are injudicious. Scarlet's Stile of Exchanges is but an undigefted collection of incoherent rules and aphorifms, and blended with inconfiftencies. Wyffel Styl tot Amfterdam, or the courfe of exchange at Amfterdam, which, though it contains feveral things touching the particular cuftoms in Holland, is but a rhapfody of tautologies and fuperfluous matter. Molloy's de Jure Maritimo \& Navali has but one chapter on bills of exchange, wherein there are not many cafes, nor are thofe given fo fully as to be fatisfactorily underftood; and, indeed, cafes without the effential circumftances, and pleadings, are of little avail.
It was neceflary, therefore, we apprehend, for the ufe of the traders of this nation in particular, to collect a number of felect cafes, with all their pleadings, by means of which, as before oblerved, a very good judgment may be made of many others, which may not quadrate in all their circumftances.
The laws of exchange are univerfal, as well as particular. The former are thofe eftablithed by the common confent of all nations, called Tbe cuftoms of merchants, which are everywhere in force. The latter are the peculiar laws of exchange, that obtain in feveral countries, by ftatute or cuftom. But though there are fome fpecial differences of formality, as we have feen, in the management of it in different places, yet the common law of exchange is much the fame every-where, all nations having concurred, as much as poffible, to encourage this advantageous commerce, and to free it of all incumbrances which might interrupt it's progrefs: fo that there does not feem to be great reafon for the diftinction frequently made between the cuftom of merchants and the analogy of our law, as if thefe often clathed and interfered; fince nothing merits the denomination of a merchant-cuftom but what univerfally obtains, \& apud omnes per aque obfervatur, abfracted from the civil and municipal cuftoms of particular places, which are too often unjuflly obtruded for the cuftom of merchants.
The laws of exchange are not fo exactly obferved in Spain as in England, France, and Holland. In England the law pays due regard to the cuftom of mercbants. Inland bills and promiflary notes, we have feen, are privileged by ftatute; concerning which alfo in France, careful provifion, we find, is made by royal edicts and ordinances, particularly that of Lewis XIV. anno 1673. In Scotland, all bills of exchange, whether inland or foreign, have the fame force by pofitive law *, though they have no fuch regard as the French or Englifh to promiflary notes. In feveral places of Italy, as Bologna, the rules of exchanges are eftablibed by law and ordinances, and in others by immemorial practice, or local cuftom. The more confiderable trading cities of Germany, as Hamburgh, Frankfort, Augburgh, Leipfick, as we have fhewn, have alfo their particular orders and regulations, with relation to bills of exchange. See the articles Exchange and Acceptance.

* Aer 20. par. 3. Char. II. Aet 36. fefl. 6. par, K. W.

Briz of Ladirg, is a memorandum, ör acknowledgment, figned; by the mafter of a hlip, and given to a merchant, or any other perfon, containing an account of the goods which the mafter has received on board from that merchant, or other perfon? with a promife to deliver them at the intended place, for a certain falary. The French ufe the wörd connoiffement for Ohips failing in the ocean, and they fay police de chargement (a policy of lading) when they fpeak of flips failing in the Mediterranean.
According to the ordonriance of the marine, or navy; int France, made in Auguift, 168 I , tit 2. of the third book, the bills of lading ought to be figned by the mafter; or the capmerchant, and muft contain an account of the quality and quantity of the merchandizes, the marks and numbers of the bales, chefts, or parcels; the name of the merchant who fhipped them, that of the perfon to whom they are to be delivered, or to whom they are configned; the place from whence the fhip fails, that where the goods are to be landed, the name of the mafter, that of the fhip, and the price agreed upon for freight or carriage.
Each bill of lading muft be made treble, one for the merchant who loads the goods; another to be fent to the perfon to whom the goods are configned, at the place where they are to be landed; and the third to remain in the hands of the mafter of the fhip, or of the cap-merchant.
Four-and-twenty hours after the goods have beeri put on board the thip, the merchants are obliged to prefent the bills of lading to the mafter, for him to fign them, and to furninh him with the acquittal; or difcharge, of their merchandizes, upon pain of paying the intereft of the delay.
The factors, commifioners, and others, who receive the merchandizes mentioned in the bills of lading, are obliged to give receipts for them to the mafters who requite them, upon pain of paying all cofts, damages, and interefts, even thofe incurred by the delay.
When there happens to be any difference in the reveral bills of lading of the fame merchandize, that which is in the mafter's hands is to be credited, if it was filled up with the merchant's own hand, or with that of his factor; and that which is in the merchant's poffefion ought to be followed, if it was filled up by the maifer's own hand.
It muft be obrerved, that a bill of lading is ufed only; when the merchandizes fent on board a chip are but part of the cargo; for, when a merchant loads a whole veffel for his owri perional account, the deed paffed between him and the mafter, or owner of the fhip, is called Charter.Party. See that article.
That the reader may the better underftand what has been obferved above, it was thought proper to infert in this p'ace, the three following models; or forms, of bills of lading; the firf as is ufed by the French, the fecond by the Dutch, and the third by the Englifh.
In order to diftinguif what is printed from what is left blank in the printed forms to be filled up by the parties concerned, we thall fet down in the following forms what is printed, in a Roman letter, and what is written in the blanks in Italics.

## The form of a French Bill of Lading

Jefus Maria Jofeph. At Marfeilles the $7^{t h}$ of March, 1743, were loaded in the name of God, and of good fafety, at the port and harbour of this city, by Mr Cbarles, for the account of Mr Ifabeau, on board the fip called the St Jobn the Baptifi, commanded by Captain fames Rebutty, to carry and bring, with God's help, to Havre de Grace, and deliver to Mr Pinant, merchan', or to his affigns, the merchandizes hereafter mentioned, to wit, 1. I fay, two tuns of wine, containing eigbt mi lecclles, no. \& 1, 2. Further, 2. Ifay, two bales of old Flanders tapeffries, diretted to Mr. Ifabeau; which abovefaid merchandizes have been thipped on board the faid (hip wellconditioned, and marked with the mark as per margin; for which, when delivered by God's affiftance at the faid Havre de Grace, without any thing being wetted or fooiled, thall be paid by the faid Sieur Pinant, or his agent, for freight, three-fore and fifteen livres per tun, containing fourteen millerolles of this city for the wine, and fix livres for the two bales of tapefry, \&c.

Signed Germa, \&c.
The form of a Dutch Bill of Lading.
1 Charles Piquet, mafter under God of the veffel called the St Ann, lying at prefent at anchor before Rotterdam, in order to fail with the firt fair wind (which God fhall fend) to the city of St Fallery, where my true unloading is to be made; confefs to have received on board my faid veffel between decks, of you Mr William Hennequin, the following merchandizes,
PL marked and numbered with the fame mark and No. 1. number as per margin; the whole dry, and well conditioned: namely, one bale, containing fix balf pietes of woillan cloth; whith merchandizes I promife to deDiver to Meffeurs Manfes and Angu:eux or to their commiffioner, factor, or agent, the dangers and accidents of the fea only excepted. And for the per-
formance

## B I L

formance of what is here faid I have bound, by thefe prefents, my perfon, my goods, and my faid fhip, freight and tackle, and flewing to me one of thefe bills of lading, and paying to me for freight of the faid merchandizes the fun of froe guilders, over and above the cuftomary average and duties. In witnefs of the truth of which I have figned, with my own fign manual, three bills of lading, of the fame tenor, of which one being performed, the others thall remain of no value. Done at Ritterdam, the 15 th of September, 1743.

## Signed Charles Piquet.

N. B. That the words between [] are blanks filled up. Shipped by the grace of God, in good order, and wellconditioned, by [F. C. of London, merchant] in and upon the good thip called [Mermaid] whereof is mafter, under God, for this prefent voyage [N. O. mariner, and now riding at anchor [in the port of London] and by God's grace bound for Leghorn in Italy; to fay [one bale of woollen cloth, one cark of tin in blocks, and one cafk of refined fugar, contents, \&cc. as per invoice] being marked and numbered as in Che margin, and are to be delivered in the like good order, and well-conditioned, at the aforefaid port of [Leghorn] (the danger of the fea only excepted) unNo. I, to [Mr P. R. merchant there] or to his affigns, he or 2, 3. they paying freight for the faid good [two dollars and a half per 100 weight for the tin, and one dollar and a half per cloth] with primage and average accuftomed. In witnefs whereof the mafter, or purfer of "the faid fhip, bath affirmed to [three] bills, one of which being accomplifhed the other [two] to ftand void. And fo God fend the good fhip to her defired port in fafety. Amen. Dated in [London the 4th day of January, 1752.] Infides and contents unknown to

## Evans verfus Martett.

If goods by bills of lading are configned to $A, A$ is the owner, and mult bring the action againft the mafter of the flip, if they are loft. But if they be feccial, to be delivered to A, to the ufe of $\mathrm{B}, \mathrm{B}$ ought to bring the action. But if the bill be general to $A$, and the invoice only thews that they are upon the account of $\mathrm{B}, \mathrm{A}$ ought always to bring the action, for the property is in him, and B has only a truft, per totam curiam. And per Holt, chief-juftice, the affignee of a bill of lading has fuch a property as that he may affign it over.. And Shower faid, that it had been adjudged fo in the Exchequer. Lord Raym. 271.
Bill of Parcels, is an account given by the feller to the buyer, containing the particulars of all the forts and prices of the goods bought.
Bill of Sale, is a folemn contrad, under feal, whereby a man paffes the right, or intereft, that he has in goods and chattles; for if a man promifes, or gives any chattles, without valuable confideration, or without delivering poffeffion, this alters no property, becaufe it is nudum pactum, unde non oritur actio; but, if a man fells goolls by deed under feal duly executed, this alters the property between the parties, though there be no confideration, or no delivery of poffeflion, becaufe a man is expofed to deny his own deed, or affirm any thing contrary to the manifeft folemnity of contracting.
But what is chiefly to be confidered under this head, is the ftatute of 13 Eliz. cap. 5 . by which it is enacted,' That all 6 fraudulent conveyances of lands, \&c. goods and chattes, to c avoid the debt or duty of another, fhall (as againft the party c only, whofe debt, or duty, is fo endeavoured to be ayoided) - be utterly void, except grants made bona fide, and on a ' good (which is conftrued a valuable) confideration.' And by the latter claufe of that ftatute it is provided, " That all par* ties to fuch fraudulent conveyance, who, being privy there-- unto, fhall wittingly juftify the fame to'be done bona fide, - and on good confideration; or Thall alien or affign any lands, * leafe, or goods, fo to them conveyed as aforefaid, fhall for-- feit one year's value of the lands, leafe, rent common, or ' other profit out of the fame, and the whole value of the - goods; and, being thereof convicted, fhall fuffer half a ' year's imprifonment without bail, the forfeiture to be di"vided between the queen and the party grieved.'
For the explanation of this ftatute the following cales may ferve.
A being indebted to B in 400 l . and to C in 200 l . C brings debt againft him, and, hanging the writ, A being poffeffed of goods and chattles to the value of 3001 . makes a fecret conveyance of them all, without exception, to B, in 「atisfaction of his debt; but, notwithftanding, continues in poffeffion of them, and fells fome of them, and, others of them being theep, he fets a mark on; and refolved, that it was a fraudulent gift and fale, within the aforefaid ftatute, and Thall not prevent $C$ of his execution for his juft debt; for though fuch fale hath one of the qualifications required by the fatute, being made to a creditor, for his juft debr, and, con-
fequently, ôn a valuable confideration; yet it wants the other, for the owner's continuing in poffeffion is a fixed and undoubted character of a fraudulent conveyance, becaute the pofleffion is the only indicium of the property of a chattel, and, therefore, this fale is not made bona fide. 3 Cu .80 . Mo. 638 . 2 Bulft. 226. 'Twine's cafe.
Upon the fame realons the following cafe turns: A iṣ indgbted to five feveral perfons, to the fum of 201. cafh, and having goods to the value of 201 . makes a gift of them to one of the five, in fatisfaction of his debt, but upon this fecret truft between them, that the grantee, in compaffion to his circumftances, fhould deal favourably with him, in permitting him, or fome other for him, to ufe and poffels the faid goods, paying this creditor, as he was able, and could afford it, the faid debt of 20 l . and refolved to be a fraudulent conveyance and deed of fale. 3 Co. 81 . Mo. 639 .
So in that cafe, if A makes a bill of fale of all his goods, in confideration of blood and natural affection to his fon, or one of his relations, it is a void conveyance in refpect of creditors; for the confiderations of blood, \&c. which are made the motives of this gift, are efleemed in their nature infering to valuable confiderations, which are neceffarily required in fuch fales by 13 Eliz. cap. 5. and this is a conftruction fuitable to the ftrictef rules of equity; for, if confiderations of blood or natural affection were allowed to be of equal dignity with, or to come under the notion of, valuable confiderations required by this ftatute, then it would be in the power of any debtor, by fuch conveyances of his perfonal eftate to his kindred, to build a family, upon a conduct to his creditors, which carries in it all the ftrains of injuftice and collufive dealing: moreover, there is a frong prefumption that fuch fales to relations are conftantly attended with a fecret truft and perional confidence of recovering part of the goods to the vender, for his fubfiftence; fo that they are intirely inconfiftent with the fcheme laid down by the ftatute, and therefore void and illegal. 2 Rot. Abr. 779. 3 Co. 8 I , Palm. 214.
A poffeffed of divers goods to the value of 2501 . by covin to defraud his creditors, made a gift thereof to his daughter, on condition to be void on payment of 20 s . adjudged that it was apparently a fraudulent conveyance, and void. Cro. Eliz. 8 io. Bethel verfus Stanhope.
As the owner's continuing in poffeffion of his goods, after his bill of fale of them, is an undoubted badge of a fraudulent conveyance, becaufe the poffeffion is the only indicium of the property of a chattel, which is a thing unfixed and tranfitory; fo there are other marks and characters of fraud; as a general converance of them all without any exception; for it is hardly to be prefumed that a man will frip himfelf intirely of all his perfonal property, not excepting his bedding and wearing-apparel, unlers there was fome fecret corre'tondence and good underftanding fettled between him and the vendec, for a private occupancy of all, or fome part of the goods, for his fupport; alfo a fecret manner of tranfacting fuch bills of fale and unufual claufes in it; as that it is made heneflly, truly, and bona fide; are marks of fraud and collufion; for fuch an artful and forced drefs and appearance give a fufpicion and jealoufy of fome defect varnifhed over with it. 3 Co. 8 I . Mo. 638 .
If goods continue in the poffeffion of the vender, after a bill of fale of them, though there is a claufe in the bill that the vender fhall account annually with the vendee for them, yet it is a fraud; fince, if fuch colouring were admitted, there would be no difficulty whatever to avoid the provifions and cautions of the aforefaid act. Mo. 638 .
A man takes a wife, and afterwards marries another, his firft wife living, and by deed gave part of his goods to his pretended fecond wife; it feems this is a fraudulent gift, withits 13 Eliz. and by the common law too, in refpeet of creditors, becaufe made without any valuable confideration; for the fecond pretended marriage is fo far from coming under the notion of a confideration, that it is a crime punifhable by law. 2 Leon. 223. Stamford's cafe, per Dyer.
Where there is an abfolute conveyance, or gift, of a leafe for years, and the perfon who makes it continues in poffeffion after fuch fale, the gift is fraudulent, becaule attended with that diftinguifhing character of a fraud; but if the conveyance, or fale, be conditional, as that upon payment of fo much money, the leafe fhall go to the vendee; thetr continuance in poffeffion after the gift does not make it fraudulent, becaufe the vendee is not to have the leafe in poffeffion, 'till he performs the condition.
A has a leafe of certain lands for 60 years, if he fo long lives, and forges a leale for 90 years abfolucely, and by indenture, reciting this forged leafe, bargains and fells it for valuable confiderations, together with his intereft in the land, to B . In this cafe B is not a purchafer within 27 Eliz. cap. 4. for though there were general words in the fale, to pafs the true intereft, yet it is plain that it never was contracted for, or originally included in the bargain; fo that, the bargain being made of an imaginary interef, the bargainee can never come under the character of a real purchafer, to defeat the purchafer of the true leafe of 60 years which $A$ was realy poffefled of. Co. Litt. 3. Sir Richard Cobham's cafe.

## B I L

A, by bill of fale, made over his goods to a truftec, for $B$, who lived with him as his wife, and was fo reputed, and be alfo purchafed the leafe of a houfe wherein he dwelt, in the name of a truftee, and declared the truft thereof to bimfelf for life, then in trutt for B , during the refidue of the term; and his bill of fale was held fraudulent, as to creditors; but, as to the declaration of the truft of the term, the court held is good, and not Jiable to A's debts, the term being never in him, and being fo fettled at the time it was purchafed, and A might have given the money to B , who might have purchated it for herfelf, and in her own name. 2 Vern. 490 . Decreed in equity between Fletcher and lady Ledley.
If $A$ makes a bill of fa'e to $B$, a creditor, and afterwards to C, another creditor, and delivers poffeffion at the time of the fale to neither, after $C$ gets poffeffion of them, and $B$ takes them out of his poffeffion, C cannot maintain trefpafs, becaufe the firft bill of fale is fraudulent againit creditors, and fo is the fecond; yet they both bind A, and B's is the elder titte, and the naked poffeffion of C ought not to preval againg the title of $B$, that is prior, where both are equally creditors, and poffeffion, at the time of the bill of fale, is delivered over to neither. Abr. Eq. 148. Baker verfus Lloyd. Per Holt.
Bill of Store, is a licence granted at the cuftom-houfe to merchants, whereby they have liberty to carry, çuftom-free, all fuch fores and provifions, as they may have occafion for during their voyage.
BILLEDULGERID, a territory in Africa. This country is faid by geographers to derive it's name from the Arabic Biled-el-gerid, which fignifies the land of dates, it abounding with that kind of fruit, more than any otber part of that quarter of the world; infomuch that it can furnifh moft of the neighbouring kingdoms with it, in exchange for wheat, which grows here in very fmall quantities. It is bounded on the eaft by a ridge of high mountains, which parts it from the kingdom of Tripoli, and part of Gadamis ; on the fouth, by the province of Verghela, and on the weft by the countries of Zeb and Mezeb, and part of the kingdom of Coucque, or in more general terms, by the kingdom of Algiers.
This whole country is very mountainous, fandy, and barren, producing little fuftenance, excepting prodigious quantities of dates, as before intimated, fome parts of it being quite covered with large thick woods of palm-trees, from which that fruit is gathered. The climate is hot and unhealthy, and the people lean, and of a fwarthy and flivelled complexion; their eyes are very much hurt by the eaft-wind, which drives the hot fand into them; and are fometimes fo violent, as to bury them under it by whole herds. They are mofly a mixture of ancient Africans and wild Arabs, the former living in fome kind of cities or towns, the latter in tents, and ranging from place to place for food and plunder. The Arabs, who efteem themfelves of the moft noble race of the two, are in fome manner independent, and will hire themelves into the fervice of the neighbouring princes that are at war. The reft either follow the plundering or hunting trade, which laft is one of their nobleft diverfions, efpecially that of oftriches, which are faid to be here as high as a man on horfeback. They eat their flefh, barter their feathers for corn, pulfe, or other things they want, ufe their hearts in their conjuring tricks, their fat or oil as a medicine, make pendants for their ears of their talons, and turn their fkins into fnapfacks. Their common food, befides the dates above-mentioned, is the flefh of thefe oftriches, and of their goats and camels; and their drink either the thin liquor or broth in which that flefh is boiled, or the milk of their camels, for they feldom drink any water, that little they have of it being neither wholefome nor pleafant, but in moft parts they labour much under the want of it. They have fome horfes, which they ufe in their hunting, and thievih exploits; in both which thofe of the better fort are attended by their black flaves, and the reft by their obfequious wives, who look after them and their horfes, and perform all the moft flavifh fervices about them.
Some fchools they have, to which they fend their boys, who, if they prove proficients in that kind of learning they are taught, are commonly raifed to the dignities of judges or priefts, or more properly conjurers or jugglers, for they ufe a great deal of that fuperftitious trafh. Some few among them give themfelves to trades, but the generality defpife it as below them; and where any of them think it worth their while to till the land, which is but rarely done, they commonly leave it to their wives and daves. Some of them wander from one end of their country to the other, with their herds of cattle.
Tousera, or Teuzar, is a town or colony, near the frontiers of Tunis, in latitude 32, 28, and eaft longitude 10,26 . Marmol places it in Numidia, and Monf. De Lifle in Billedulgerid. The town is parted by the river; one fide of it is inhabited by fome of the ancient Africans, and the other by the Arabs. Here are held feveral fairs, to which all the neighbouring countries refort to purchafe what they have, and the people are pretty wealthy both in money and dates.
Capsa, the other colony in Billedulgerid, in the latitude 33, 15 , and eaf longitude 9, 3; which was formerly, according Vor. I.
to Marmol, very populous, and had fome fately mofquer, an: other ftruetures, and handfome ftreets, but was inhabited only by poor people, whom the opprefion of the Tunis governmient will fcarce fuffer to live. In the heart of the crty is an inclofed fountain, whofe water is hot, and ferves equally for bathing and for drinking, when it is cool. The territory about it abounds in palm, citron, olive, and other fruit trees; but the climate and inhabitarts are very unbealthy, which makes them peevifh and churlifh to flrangers: which, together with their want of commerce, gives them a rank little above the pitch of the brute creation.
To BIND an Apprentice, is to engage him with a mafter, or freeman of any company, in order to learn, dúring a certain number of years, which is regulated in France by the ftatutes, and in England is generally of feven years, the profeffion or trade of the mafter with whom he is bound.
We fay, that a mafter cannot bind above one or two apprentices at a time, to fignify that he cannot have above that number, according to the regulation and by-laws of his compan!. See Apprentice.
To Bind onefelf for another, is to be his bail, or furcty ; to engage to pay for him, to make onefelf anfwerable for the loffes and damages that may happen through his fault.
To Bind Books, is to few together the fheets of a book, and put a cover to it. See Book-b.nder.
BINNELANDS-PASS. Thus they call at Amfterdam, and in all the other towns under the dominion of the States General of the United Provinces, a kind of paffort which people are obliged to take, when they would tranfort any merchandize from one town to another, without paying any duty of importation or exportation. That paffport coffs but 24 ftivers ; but it muft be brought back within fix weeks, with a diicharge from the commiffioners of the cuftoms, certifying, that the merchandizes'are arrived at the place they were defigned for; otherwife the owner would be obliged to pay duty for them, as if they had been obipped for expor tation into foreign countries.
Binneland is a Dutch word, which fignifies inland.
BIRCH-TREE, in Latin BETULA, is a tree of a middling height: it's branches are thin, flextble, and bending. The outward rind of the trunk is thick, rough, white, and full of crevices: but the inward rind is thin and fmooth like parchment; the ancients ufed it inflead of paper. The wood of this tree is white; the leaves are pretty broad, peaked and indented on the edges; they are like thote of the black poplar, being green, tender, fmooth, and of a bitter tafte. It's flowers are catkins, of the length of long pepper, with feveral leaves placed like fcales, and faftened to a frall pedicle. Thefe catkins leave no fruit behind them; the frut is produced at a diftance, on different parts of the fame tree: it looks firf like a fmall ear of corn, with feveral fcales, which becomes afterwards a little fqammofe cone, of which the fcales, cut for the moft part like trefoil, cover each of them a winged feed. This tree cafts it s outer rind every year. It grows in a poor foil, or marfhy places.
The timber of this tree, though accounted the worft of all others, yet it is not without it's various ufes. The turners often ufe it to make chairs, \&c. and the hufbandman for making ox-yokes; it is allo planted for hop-poles, hoops, \&c. and is proper likewife to make bafkets of it's branches: but in places within twenty miles of London, it is kept often cut to make brooms, and tarns to very good account. $B I R D$, a two-legged animal, covered with feathers, and having two wings, with which it raifes itfelf up into the air, and which it ufes to fupport itfelf phere, and to fly. There are neverthelefs fome kinds of birds, which run rather than fly. We call finging and pleafure-birds, thofe whofe warbling is agreeable to the ear, or thofe, which, by the brightnefs and variety of their plumage, are pleafing to the cye. They are alfo called aviary-birds, becaufe they are kept in aviaries, or great cages made of iron or brafs-wire, where they are brought up and fed. None but the mafters-bird-catchers trade in thefe birds in France.
There are divers kinds of birds, either tame or wild, "whofe feathers and down are part of the trade of different merchants. Of that number are the oftriches, the fine feathers of whore wings and tails are fold by the feathermen; the fwans and geefe, whofe large feathers or quills are fold by the flationers, and whofe down is ufed by upholfterers in feveral of their works; the grebes, of which very fine muffs are made, and thofe kinds of falcons or hawks, which furnifh the ledredon, a very light and warm downy $\mathbb{1 k i n}$, which has not been above half a century in falhion.
BIRD-CATCHER : this, though a mean trade, we thall take notice of it, by reafon that what follows will thew, that even the loweft is under fome proper regulation in France. Such a one is he who goes a birding, to catch fmall birds, to bring them up, and make a trade of them. In France, the birdcatchers do alfo make the aviaries and cages, either of wood or wire, to lkeep the birds and make them fit; as allo the traps to catch them, and all the feveral nets that are ufed in that innocent and agreeable fowling.
At Paris, the bird-catchers are a pretty numerous corporation or company, which is none of the molt modern. Their
flatutes

## B I R

## B I R

ftatutes and rules were given them, from the remoteft antiquity, by the officers of the forefts at Paris; and the rules and ftatutes by wbich they are at prefent governed, were delivered to them in May 1647 , by the recorder of that jurifdiction, as being extracted from the ancient regifters.
Thefe rules and ftatutes are compofed of fifteen articles, the chief of which afcertain the time during which the jurats ought to continue in office, the number of years for which apprentices are to be bound, and the right, difference, and order of the vifitations.
No jurat can continue in office above two years; apprentices are bound for three years, and the vifitations both of the foreign merchants, and of the mafter bird-catchers of the city and fuburbs of Paris, are performed as follow.
No foreign merchant, who brings to Paris any of thofe birds called Canary-birds, either common, or from the Canaries, can fell them, before he has expofed them to public view from ten of the clock in the forenoon 'till twelve, on the marbleftone of the juftice-ball, on the days when the parliament meets, of which he is obliged to take the certificate from the officers of the forefts. He is likewife to wait 'till the governors of the king's aviaries, having had notice given them by the jurats, have declared, that the faid aviaries are fufficiently ftocked with thofe birds, and 'till the malter bird catchers have alfo refufed to buy any of his birds; after which, fuch a merchant is at liberty to fell them to whom he pleafes, but yet not before he has given to every jurat a bird out of each cage, for their duty or perquifite of vifitation.
In cafe the mafter bird-catchers 'think fit to buy all the birds, they are to diftribute then by lots among fuch freemen of their company who would have any.
No man can trade in finging or pleafure-birds, nor go about to catch any, unlefs he be free of the company; and no one can be made free, unlefs he has been an apprentice, except he be a freeman's fon.
None but freemen are allowed to import and feed ortolans; nor can they fell them alive to retailers, in order to be fattened, and rendered fit for eating, under the penalty of forfeiting the birds, and of a fine to be paid both by the buyer and the feller. The freemen of that corporation have alfo the fole right of making bird-cages, and nets to catch birds; they have allo the liberty to cafl, either of lead or any other metal, drinking-pots for birds.
The birds which the mafter bird-catchers only are allowed to catch, either with bird-lime, bird-calls, nets, or otherwife, are all thofe which are called finging or pleafure-birds; fuch as linnets, goldfinches, chaffinches, canaries, lingets, nightingales, quails, larks, blackbirds, filkins, ortolans, and others of the fame quality.
The time during which it is not lawful to go a bird-catching, is from the middle of May 'till the middle of Auguft, becaufe during that time the birds couple, make their nefts, and hatch their young ones: birds of paffage, however, are excepted from this rule, fuch as quails, nightingales, and ortolans, which may be catched from the 2d of April to the 2d of May, which is the time when they come, and from the Ift of Auguft 'till they go back.
The places where, and days on which, the bird-catchers may expofe to fale the birds they have either caught or brought up, are their own fhops every day of the week, and the Valley of Mifery (a place at Paris) on Sundays and holidays; except on the higheff feftivals, and on days of general proceffions: they being permitted on Sundays, and lefs folemn holidays, to expofe to view and hang their cages before the fhops and walls of the houfes of the faid valley.
Befides the above-mentioned birds, the freemen of that corporation fell alfo turtle-doves, pigeons, parrots, parrokates, fquirrels, and other fmall animals for pleafure.
Finally, according to a very ancient cuftom, and by virtue of two articles in their ftatutes, namely, the feventh and the fifteenth, the jurats are obliged to be prefent at the king's coronation, to bring birds thither, and let them fly in the church where the ceremony is performed. And the freemen are alfo obliged to let Ay, as a token of joy, on Corpus Chrifti day, and when a queen makes her entry, a certain number of birds which are ordered by the officers of the forefts.
BIRD'S-NESTS, a kind of fpice very much efteemed in China, and throughout all the Eaft-Indies; it is to be found in Tonquin and in Cochinchina, but more particularly in the kingdom of Campa, or Champa, which is fituated between both. The birds which make thofe nefts to lay their eggs, and hatch their young ones in, are pretty much like the fwallows: in coupling-time, there iffues from their bills a clamny foam or glutinous matter, which is the only material they build their nefts with; they faften 'them to the rocks, by applying to them that glutinous fubftance, by feveral layers the one over the other, as the former becomes dry. Thefe nefts are of the form of a middle-fized fpoon, but the brims are higher,
There are fo many of there kinds of nefts, that they gather every year feveral hundred weight of them, which arc almont all carried into China, where they are fold for 5 tales per hundred weighty which amount to about a hundred Spanifh
ducats. They are thought to be good for the ftomach and the head, and give a delicious tafte to the meat feaioned with them.

## Remarks.

As it is very difficult nicely to obferve the natural objects, which one fees or hears mentioned in the Indies, this is the reafon why they are but very impenfectly defcribed by travellers. We thould, therefore, be fatisfied to learn to know them from their accounts but by parts, 'till time and repeated obfervations, give us a perfect knowledge of them. The firft relations always prefent us with fomething wonderful; but the wonder decreafes, in proportion as things are more accurately obferved, and become more familiar to us. When it is reported, that in the Indies people eat bird's-nefts, there is no man but mult wonder at it; nsy, many think they are impofed upon, becaufe it appears to them quite repugnant to nature, or at leaft very little acceptable to the palate.
The thing feems more furprifing flill, if we fay, that thofe nefts are eaten not as a fice, as Monfieur Savary afferts, who has been milled by fome erroneous memoirs, but as a true food, very nourihing and falubrious.
The travellers who mention thefe nefts, have not been well informed of the places where they are found, nor of the fubftance they are compoled of, nor of the real ule that is made of them. Of all this we fhall here give an account, with a true defcription of thofe nefts, which no man has yet accurately defcribed.
The bird who makes them is a kind of fwallow, the upper part of whofe body, including the head and tail, is of a bluilh black, and the under part is white: it's head is fmall, it's bill fhort; thick, crooked, bluifh, and very fhining: it's legs are fhort and flim, it's wings very long, extending far beyond it's tail.
This kind of fwallows dwell upon high rocks, which are the true places where they nefle. There are feen vaft numbers of them in all the Sunda inles, in the Molucca's, in the iflands of New Guinea, in the Philippine illands, and on all the coalt of the main land, which lies between the peninfula of Malacea as far as China; that is to fay, in fuch places as are mountainous, and full of rocks: which is quite different from what Tavernier and father Tachard tells us of their nefts, af ferting that they are no where to be met with but in Tonquin and Cochinchina. This kind of fwallows muft needs abound moft plentifully in all thofe places, fince feveral thoulands of pounds are taken for them yearly, and great quantities ufed for the table in the Indies.
Thefe nefts differ fomething from one another in their fize, thicknefs, colour, and weight. Their diameter commonly is full three fingers breadth on the top, and their perpendicular depth, which is greateft in the middle, does not exceed an inch. The fubftance of thefe nefts is white, or reddifh, and fomewhat tranfparent: in fome nefts, and in certain places, it is mixed with a dark purple. Their thicknefs is near that of a filver fpoon. The form of one of thefe nefts is not much unlike a fea-hell; it is, as it were, an irregular femicircle, whofe diameter, or fide, which is about three inches long, is that which is fixed to the rock, where the bird built it. It's weight is about a quarter of an ounce, fometimes a little more, and fometimes a little lefs.
Thefe nefts are very brittle, and their fubftance, being broke in pieces, fhines in the infide like gum. As the matter was applied, by the induftry of the bird, in liquid and clamny threads, the nefts feem wrinkled; or flightly furrowed, on the furface. All that I bave been afferting, in this defcription, muft be underitood of the nefts that are very dry, and have been long kept; for, on thofe inacceffible places where they are faftened, they are more limber, larger in their dimenfions, and heavier.
As to the matter of which they are made, travellers have been puzzled to know what it is ; moft of them have thought it to be a kind of clammy foam, which iflues from the bills of thofe birds in coupling time, as Monfieur Savary afferts here after them.
But here follows an account that mult undeceive the public. Thefe fwallows do, indeed, build their nefts in couplingtime, as all other birds do, and particularly our fwallows; but then, like ours, they go and fetch elfewhere the materials for building their nefts. As every kind of volatiles have their different ways of building their nefts, and even the fame kind in different climates; fo thefe fwallows ufe a particular fubflance, different from that ufed by any other bird. It is an animal fubftance, which they go and fetch on the fea-hore; they fix on a kind of ftar-fifh, whofe fubftance, or flefh, refembles a nimy and vifcous jelly, which the fea ebbing leaves on the fhore; of which they take whole bills full, which each bird carries to the place where it defigns to make it's neft, applying it by threads one over the other at feveral times, fying backwards and forwards all the while, 'till the nell be finifled. Some people pretend that thefe birds get that glutinous matter from a kind of
oyters, or fome other fhell-filh, which abound in thofe feas, and are of the kind called in Latin chama, which is a fort of cockje. It may be that thofe fwallows take the materials of their nefts from both thefe forts of fea infects; their crooked and ftrong bills fhew fufficiently that they are able to tear thofe animals to pieces, and take their fubftance away.
To come now to the ufe of thefe nefts, it mult be obferved that they are by no means fought for on account of their tafte only, as is in fome_relations falfly afferted: for it is certain that they are of an infipid tafte, which muft be heightened with fealoning, mixing them with good meat, to make them good and palatable; fo far are they from ferving inftead of fice to feafon other meat, as was thought formerly.
But they are reckoned good, light, and wholefome food, very proper for fick people; they are fo well dreffed with feveral other good ingredients, that they prove an excellent difh to thofe who do not know what it is; as the materials with which they are made come from fifh, they are not infalubrious.
The Dutch ufe a great many of thefe nefts, and as many in proportion as the Chinefe, both at Batavia, and in the other parts of the Eaft-Indies. Their fhips, efpecially, have always a large provifion of them for the table of their officers, which ferve them inflead of garden-ftuff, either in foups, or drefled in the form of a mefs.
The fubttance of thefe birds-nefts is very clean, and free from all manner of filth. There are feen, fometimes, fmall feathers adhering to the inward furface of the neft, but they are eafily feparated, when the neft is put for come time in water to foak, in order to mellow and prepare them for dreffing. They are white, and pretty much like vermicelli; fo that they are pleafant enough to the fight.
Of late years the Dutch, and even the Englifh, bring fome of thefe nefts into Europe, to make the curious tafte of them, and to adorn cabinets with, rather than for any other ufe. In this laft cafe they are worth keeping; I have made prefents of fome to feveral learned men at Paris, fince I came back from the Indies.
Thele nefts are fold at Batavia from one rixdollar and an half to two rixdollars, Dutch money, per pound: they are fold in parcels, being placed very regularly, the one within the other, neatly tied with frings of reeds, neatly wove, as it were, like a bafket boot-falhion, with holes, through which the nefts are feen. Memoirs of Mr. Garcin.
BIRMINGHAM Hard-ware-men, or dealers in the city of London, Sheffield, and Brimingham wares, are to called, becaufe they principally trade in, and moftly wholefale, all forts of tools, fmailer utenfils, toys, buckles, buttons, in iron, fteel, brafs, \&c. made in London, and the great trading towns of Brimingham in Warwickthire, and Sheffield in Yorkfhire, where many thoufand of artizans in different branches, are conftantly employed, but for the moft part in the fmithery and cutlery ways.
There are but few of thefe in London; yet almon all of them carry on a very cxtenfive trade, and are reputed wealthy. It is not eafy to conceive, much lefs to defcribe, the numerous articles that pals through their hands: therefore a youth, defirous to ferve an apprenticelhip to this bufinefs, fhould be ready and acute, not want a good memory, write a plain hand, know arithmetic, and fomewhat of book-keeping.
This trade will require at leaft 500 l . to fet a man up; and one that intends to purfue bufinefs with fpirit, may difpenfe with 2000 l .
BIS: This is a Latin word, which fignifies twice. It is often ufed among merchants, particularly when through inadvertency or miffake two leaves in the fame book have been marked with the fame number: in which cafe one writes bis next to the number of one of thofe leaves, to thew that it has been ufed twice.
The fame caution is obferved with regard to the numbers marked upon pieces of ftuff, when the fame have been repeated. This method has been found out to prevent the trouble of altering a whole feries of numbers.
BISA, or BIZA, a coin of Pegu, which is current there for half a ducat.
It is alfo a weight ufed in the fame kingdom, to weigh merchandizes. It is equal to two pounds and five ounces of Venice, or to three pounds and nine ounces of the fubtle, or light weigh, of the fame city; and 100 pounds fubtle weight of Venice make about $65 \frac{3}{4}$ pounds of London. Each bifa weighs roo tecalis.
The fmalieft weight after the bifa is the abucco, which weighs but 12 tecalis and a half. The agito weighs two abocchis, and two agiti half a bifa, that is to fay, 50 tecalis.
BISCAY, the molt north-eaft principality of Old Spain, which, although fubject to the kings of Spain, yet they file themfelves lords of Bifcay. As generally taken, it is divided into three provinces, viz. Bifcay, properly fo called, Guipufcoa, and Alaba, or Alava. The whole is bounded on the weft by that Mip of Old Caltile which reaches to the fea, and parts Afturias from Bifcay on the fouth. The ridge of mountains branching from the Pyrenees feparate it from Old Caftile on the fouthcaft, as the fame mountains part it again from Navarre, and the little river Cidaro from France, on the eaft; and on the
north fide it is walhed by the Cantabrian fea, called commonly the bay of Bifcay. The whole lengch, from eaft to wef, is about 120 miles, and, from north to fouth, where broadelt, fomewhat lefs than 60.
The country is mountainous and barren, producing neither wheat, barley, wine, nor oil, but abundance of millet feed and fruit; fo that cyder is here in plenty, and is the common drink of the inhabitants, excepting a fmall fort of wine made there, which they call chacolino. Some flax is likewife produced in their vallies, and abundance of timber for thipping on the bills. But their greateft treafure confifts in their inexhauftible mines of iron, which is efteemed the beft in the whole world, and is, therefore, tranfported thence into all parts.
Here are whole towns of fmiths, that carry on the manufacture of all forts of iron work, efpecially in the military and naval way; and their workmanhip is extremely nest and elegant. There are likewife very confiderable quantities of wool fhipped off from their fea-ports into mof foreign nations, where they have an important woollen manufacture of fine broad cloths, but moft of the wool is brought thither from Old Caftile. Some, however, they have here, but, as it is neither fo fine, nor in any quantity, they manufacturc it wholly for their own ufe.
Ordunna, a port-town in this province, fituate 25 miles fouth-weft of Bilboa, and is the only place in this province that is dignified with the title of city. It is feated in a plentiful vale, furrounded with high mountains, and dikant about 18 miles from the fea. It is more confiderable for it's trade than bignefs.
Bilboa, a large town but no city, though few cities in Spain are larger at. leaft, there are many cities much fmaller ; nor is there any city in all the north part of Spain that equals it for trade. The port is very good; and, though it flands fix miles from the fea, and the river Ibaichaval, or Nervius, on which it ftands, is very fmall and narrow, yet the channel receives fhips of good burden, and fmaller veffels come up to the very town-mole, or key. Two things make this a place of extraordinary trade : firft, it's being the neareft feaport to Madrid, fo that, from hence, the manufactures of other countries, efpecially of England, Holland, and France, are carried by land thither; and this caufes a great importation of thefe goods. It is not a place of any antiquity, being built, as the Spanifh hiftorians fay, in the year 1300; but it came into trade, and grew rich, from the goodnefs of it's port. The fecond article of it's greatnefs is, the export of thofe two capital products of Spain, wool and iron; both which are brought chiefly to this port. Much of the iron, alfo, which is in quantity inexhaufible, and in quality incomparably good, is manufactured here, and in all the country near it: and they make here all thofe neceffary things which we call in England hard-ware, as alfo handy-cratt fores, in which iron is neceflary, fuch as mechanic and arrificers tools, and tools for hufbandry, nails, locks, chains, jacks, crows, pick-axes, wheel-works, \&c. as alfo fteel, and fteel-ware; with all kinds of mititary iron work, fuch as fwords, firearms of all forts, and almoft all neceffary utenfils made of that metal. Befides this, the iron and the feel is largely exported in bars, and France takes off a prodigious quantity of it, as well as England.
Here is alfo a fmall fleet of fhips fitted out annually, for the whale fifhery at Greenland, or spitibergen; and, in proportion to the number of fhip;, they have fucceeded as well as any other nation, and fhewo themfelves as ikilful harponiers as any.
Dusengo, ftands 15 miles diftant to the fouth-eaft of Bilboa, on a fmall river, which defcends from the mountains with which it is furrounded on the land-fide. It is inhabited by about 1500 families, moft of them employed in the iron-manufacture, fuch as fword-blades, hilts, and fuch-like military implements.
St Sebastian, a noted port in the bay of Bifcay, and territory of Guipulcoa, fituate 55 miles eaft of Bilboa, and 25 fouth-weft of Bayonne. In this port have been feen upwards of 100 Englifh merchant-fhips at a time, which have been made prizes by the Spanifh privateers, in times of war with Spain. The mole will receive 200 fail of fhipping. The inhabitants do not amount to above $\mathbf{1} 600$ families, in two parifhes; and they have no great trade but in time of war by privateering.

Remarks.
It being neceflary to the intereft of Britain that the be well acquainted with the policy of it's neighbouring countries, and in particular to attentively watch every mealure they purfue with relation to their commercial interefts; it may not be altogether ufelefs to obferve what a late very ingenious Spanifh writer has faid; with regard to the Bifcayners, efpecially as there has been for fome years a fpirit rifing in Spain, that does not forbode any good to the trade of thefe kingdoms:

- The navigation and commerce, fays this Spanifh writer, of - thefe provinces [meaning Bifcay and Guipufcoa] by fea, - have been much impaired by lofing feveral hips in the ex-
- peditions of the late war: for they have not yet been able - to replace them, and build others, as they have had very
- bad harvefts, and are not yet paid the whole of what was
- due to them for freights, and other things: fo that it will be - very reafonable and expedient to order the ballance of their - accounts to be paid immediately, that they may be enabled - to build and fit out other veffels, and thus revive and im* prove their fifhery and commerce by fea.
- As it is allo certain that money is now very fearce in Gui-- pufcoa, where the principal difburfements were ufualiy made - for building thips, and other neceffary and chargeable preparations for a fifhery that is any ways confiderable, I hould - apprehend it a very good piece of policy to make them a tender, out of the king's revenue, of 25 or 30,000 doublons, - without intereft, for their firf expences, which ufually run - high, upon the condition of their repaying it in fix years. - My intention is, that in the two firft years they be not - obliged to return any part of it; but, in the four following, - to do it in equal payments, 'till the whole be difcharged; - and, for a fecurity that the loan be repaid in the form and - manner that fhall be ftipulated, let the province of Guipur-- coa ftand engaged for it, befides the joint bonds given by - the private perfons who are to receive the money. That the - diffribution of the money, the execution of the bonds, the - fecurities, and other points, may be well conducted, and - with all the precaution that is requifite on fuch an occation, - let there be chofen out of that province, or fent from the - court a minifter of known abilities and public fpirit, charged - with this commiffion, and to difpofe their minds to it, en-- courage affociations, and every thing that hould tend to - enlarge the filhery of bacalao, on the banks of Newfound-- land, as alfo the fifheries for whales, herrings, \&c. in thofe - parts where found to be in plenty.
- Should the Englifh, in oppofition to all the reafons above-- mentioned, fill perfift in difturbing his majefty's fubjects - in this fifhery, and it be not proper to employ force in or-- der to take fatisfaction, and maintain their juft tights, 'till - we have firft tried all the gentler methods which prudence - dictates; in my opinion, they fhould alfo be given to un-
- derftand that his majefty. among other expedients, may
- avail himfelf of the fovereign right he poffeffes to prohibit
- the confumption of bacalao in all his dominions. 'This too - is a meafure very practicable, and may be done without any " great inconvenience to the common people, whenever the - fifhery of his majefty's fubjects, both on our own coafts, - and in other feas, fhall be encouraged and enlarged in the - way I propofe ${ }^{*}$, and alfo fupported by the provifions I - before recommended on the fubject of guarda cofta. For * as the fifhery of bacalao was not begun, or even difcovered, - in Newfoundland, but fince the year 1500 , and Spain, tho' - much more populous, was able to fupport herielf for above - a thoufand years without this commodity, and all the time * obferve the vigils and days of abltinence in the Catholic - religion ; it thould, methinks, be no extraordinary or dif-- ficult thing to maintain ourfelves without it, and fo well, as - to find no want of it. But I ghould not advife this ftep - 'till the other, which I have pointed out as a means likely - enough to relieve, in a great meafure, the misfortunes we - fuftain from the large confumption of falt-fifh from abroad, - prove to be infufficient for the purpofe.'
* This author, after fhewing the advantages which the Engliih, French, and Dutch have derived from their fifheries, takes no little pains to animate the Spanifh nation to purfue the like policy; and that the Bifcayners and Guipufcoans, in particular, hould vie with the Englifh in their fifhery on the Banks of Newfoundland: and, indeed, that they fhould vigoroufly attempt to fupply themfelves with finh of all kinds, imtead of purchafing thofe of England, Scotland, Ire. land, Newfoundland, or New England. And policy of this kind, it is faid, has already taken root in Spain, together with many other maxims, which are likely to prove of no advantage to thefe kingdoms: all which fhall be taken due notice of in their proper places, in order to forewarn the nation of the danger, before it may be too late to prevent it

## Further RemARKs.

Thefe fentiments were introduced in my firt, and fecond editions of this work; and that they were not groundlefs fuggeftions of the auther's, the laft war has fufficiently evinced; for when Spain joined France, they made pretenfions to a Mhare of the Fisheries at Newfoundland: but fuch care has the court of Great-Britain taken of this effential point in the Definitive Treaty of Peace between his Britannic Majesty, the Most Christian King, and the King of Spain, concluded at Paris, the icth day of February, 1763 , as to obtain the following explicit Renunciation, with regard to the Fisheries of Newfoundland, on the part of the King of Spain; which is contained in the XVIIlth article of the faid Definitive Treaty, viz. His Catholic Majesty desists, as well for him. self, as for his successors, fromall pretensions, Which he may have formed, in favour of the Guipuscoans, and other his subjects, to the bight of fishing in the neighbourhood of the
island of Newfoundiand. See the article America for the Dffinitive Treaty of 1763. Sce allo the article Bafiama Islands, with refpect to the faid Definifive Treaty, and British America, French america.

- In chapter 29, the Spanifh author further fays, which treats - of the conduct and practice of the Englith, and the valt - fums of money they drain from us by the fale of bacalao*,
- and other falt-fifh, I introduced a few semarks and obfer\& vations upon this calamity, and the means which might be 6 employed to prevent it in a great meafure, and which I c was led into by the reflections of an Englin writer, well - affected to the crowns of Spain and France, in his treatife, - under the title of The interef of England ill underftood in - the war of queen Anne. And as we hoould never lofe fight - of the principal of thofe obfervations and reflections, which ' are the foundation of the particular provifion in fupport of 'the fifheries, I have thought proper to repeat fome part of v them in this place.
* If the Spaniards fhould attempt to lay any prohibition, or higher duties on our fifh. than what are now lad by fubfit ing treaties, they may be foon convinced that the crown of Great-Britain has it in her power to retaliate upon them, ty proper meafures to be taken in regard to the segulation of our own commerce. Thefe things we fhall hunbly fuggett, in the fequel of this work, under their effential heads.
- This minifter invites the bifhops to allow, throughout the - year, the ufe of certain kinds of food prohibited upon par6 ticular days, and means, no doubt, eggs, cheefe, milk, and - butter, which fome religious foundations are reftrained from " many days in the year. In all probability, he would alfo - infinuate, that the prohibition of flefh might be moderated, ' as it is in the provinces of the crown of Caffile, in refpect
- to Saturdays, and may be extended to the crown of Arragon.
- In all thefe meafures he apprehends the pope will readily - concur, for the reafons he there gives, and others hinted at; 'and, without daring to fpeak out, was, in my opinion, will-- ing to tell us, that, if by fuch means we would reduce the - confumption of bacalao, and other cured finh, which they
- bring us from the North and Newfoundland, we might take ' away this great advantage from the Englinh, and other - powers, who, by the fale of them, drain us of millions of - crowns, increafe their own ftrength, and ruin us. Thefe © great difadvantages fo very much intereft our confcience, as - well as all good policy, that they deferve the particular at' tention of all catholic princes, and efpecially the pope. From ' the pious zeal of this holy father we have reafon to flatter c ourfelves, that, as foon as he fhall be informed of thefe in'conveniencies, he will allow, and even encourage, the ' meafures that tend towards a remedy, even though it be - necelfary to fubftitute, in the place of numerous falt.days, c another fpecies of abftinence and reftraint, that equally ad' miniflers to the mortification of our fouls, and does not - turn out fo much to the advantage of the rivals of the - crowns and the catholic church, as thofe frequent faft-days - do, by opening a way for the importation and confumprion - of their falt-fifh, which is a main branch of their commerce, - and a great foundation of their riches and ftrength.
- Though I have fome reluctance at the thought of giving - my fertiments as to the generality of thefe points, that are - of fo delicate a nature, methinks I may, without any - \{cruple, decide in one particular. It is to folicit the per-- miffion of his holinets to allow of flefh in the kingdoms of
'the crown of Arragon, and in Navarre, upon thole Sa-- turdays that happen not to be particular vigils, under the - reftraints, and as it is pracifed, in the provinces of Caftile.
- This I propofe, both on the frength of the folid and well-
* known motives already given, and becaufe is would be no - more than what has been eftablifhed for many ages, and is ' now practifed in moft parts of the kingdom of Spain, \&c. - As to the meafures infinuated in the reflections of this writer, - which regard the taking off in part the prohibtion of fefh - on fome other days in the year, and permitting religious - houfes certain forts of food, which they are reftrained from, - befides flefh, during the whole, or moft part of the year, I - judge it a point of greater moment, and to require more - deliberation. The utmoft I fhall have courage to offer is, - that there be laid before his bolinefs the reafons already - given, and others that will occur, in particular the increale - of ftrength, and other advantages, which feveral nations, - by means of the great confumption of falt-fifh in Spain, : acquire and employ againft the catholic church itfelf; that, - in his wifdom, he may vouchfafe to determine upon, and - eftablifh, thofe provifions, which he fhall judge mof ef-- fectual, and proper for a remedy; fo far at leaft, as to ' take off part of the inconveniencies that have been doc fcribed.. For never fhall we be able to find a more fure - waysto fucceed in redrefing cither the grievance itfelf, or - it's accidental circumftances, than by referring it intirely to ' the great piety, holy zeal, and infallibility of his holinefs.' Vide The theory and practice of commerce and maritime affairs, written in Spanifh, by the late Don Geronyno de Uztariz, member of his Catholic majefty's privy counci, of the
foyal board of Trade and the Mint, and his majefty's fecretary in the council and chamber of the Indies.
Biscay New, a province of Mexico in America, is bounded by New Mexico on the north; by part of Florida and Panuço on the eaft ; by Zacatecas on the fouth; and by Culiacan on the weft. It is about 100 leagues from eaft to weft, and 120 from north to fouth. It's being well watered makes' it fruitful, and it's fituation a little above the tropic of Cancer renders it temperate. Though there is a mountainous barren part, called Topia, yet trolt of the country is pleafant, abounding with all manner of provifions; and, though it has no communication with the fea, yet the inhabitants are very rich, not only in corn, cattle, \&cc. but alfo in filver mines, and fome of lead. The natives are warlike, and not yet totally reduced. They have four great towns between the mines of Zacatecas and thofe of this country, which lie in moraffes, and are therefore difficult of accefs. St Barbara, St John's, and Ende, are three little towns, built by the Spaniards, for defence of the large filver mines in the neighbourhood, and are therefore well inhabited, particularly the firft, which lies 240 miles north of Zacatecas. The fecond lies about 70 miles north of it, and is equally rich in mines, and the third, which is aifo rich in mines, lies 70 miles weft of the fecond. Thefe are the mines, which Hennipin fays, M. de la Salle aimed at, when he ranged the coaft of Florida, on pretence of feeking the mouth of the river Miffiffippi.
BISKET, or BISCUIT, from bifcoctus, twice baked. It is faid particularly of that bread, which is made for voyages by fea, efpecially for long voyages. This fort of bifket muft be baked four times, whereas the other forts are baked but twice.
Bifket, in order to be good, fhould be made.fix months before it is put on board a flip: it muft be of good wheat flour, thoroughly cleaned from bran, and with a well leavened dough.
Water and biket are the moft neceffary provifions in the fitting out of Rhips, and, if either of thele two be loft or fpoiled, the crew languilh away, and often perifh moft miferably, efpecially if they happen to be bound for a very long voyage.
The reader may find under the article Water, which is the molt proper to be taken on board, the precautions that are to be taken, in order to preferve it, or to prevent it from running; and even the feveral experiments which, from time to time, have been tried, to take away the brackifinnefs of feawater, and render it, if poffible, fit to drink.
With regard to bifket, we fhall prefent the reader here with feveral obfervations, defigned to fhew how to make good bifket: they are extracted from a memorial drawn up by Monf. Savary de Ganche, who had, during ten years, the general direction of the vietualling-office of the marine in France, for the diftrict of Breft.

## The manner of making fea-biket.

## Wheat.

Wheat is the only corn that muft be ufed in the making of fea-biket. It ought to be chofen of a red grain, fnooth, and, above all, well cleaned from grit, tares, or yetches, and all forts of weeds.
New wheat, three or four months old, is the beft ; that of a year old may alfo be ufed, provided it has not been heated, and was kept in very dry and well aired barns, not raifed in too high a pile, that is, of two feet and an half at moft, and has been well ftirred once in a fortnight.
When the corn is taken out of the barn, it mult be expofed to the air, and firred with a hovel two or three times at leaff. When it is heated on the furface only, which may be known by it's not fmelling four, and if the grains do not ftick to each other; when preffed with the hand, it mult be kept a month in the barn, and continually firred, 'till it be well recovered.

## Flour

Flour which comes from abroad, efpecially if it be well cleaned from bran, is not fafe to make biket of, if it be but never fo little heated.' It's multy fcent may be taken away, by often ftirring and fifting it; but you can never take off it's bad tafte, which afterwards infallibly fpoils the bifket. Neverthelefs bread may be made of it, becaufe it is not neceffary to keep it long.
It is better to have flour from abroad with the bran, becaure it is not fo apt to heat in the boats, when it is well packed up, that is to fay, well beaten and preffed in the facks.
Good flour muft have no manner of fmell; when put upon the tongue, it ought to tafte like a nut; and, when fifted, it muft be like velvet to the touch: when it is fandy, that may be found out, by putting a bandful of flour into a bafon of water; the fand, if there be any, will all fettie at the bottom. When the flour comes from the mill, the bran mixed with it ought to be flat and broad; nor fhould it be fifted 'till about a fortnight after it is ground, that the moifture it has confracted at the mill may dry off, and to pafs the better through
the fieve, which is abfolutely neceffary for the making of goood bifket.

## Leaven.

In order ta make the leaven, a piece of dough weigbing abouk 20 pounds, from the leaven of the laft oven-full, fiould be prepared, which is done, we'll fuppofe, between if and i2 at noon. At four of the clock in the afternoon, the baker puts that dough into the kneading-trough, and pours over it about five gallons of very clean water, a little more than lukewarm, but hotter in winter than in fummer; he dilutes afterwards with the guantity of flour neceffary to confume all that water, fo as to make a dough neither too foft nor too hard. This new mafs of dough weighs commonly about fixty pounds, In this condition the baker puts it in a corner of the knead-Whe-trough, furrounding it on all fides with four to fupport it. When it has been rifing five or fix hours, the fame opera: tion is repeated; by adding water and four to the dough, which increafes it by about thisty pounds.
About one or two of the clock the next morning, which is the time when the baker would knead, he adds thirty pounds more to the pafte, which makes a mals of 120 . pounds ; of this he takes half to ferve as leaven for the next baking, and at the fame time kneads the remaining fixty pounds in the kneading-trough for the firft oven-full, and, for the other bakings he is to make during the reft of the day, he increafes the leaven at once with fixity pounds, which he puts into a tub or bucket, in order to continue the fame alternately, except that for the laft oven-full he adds but twenty pounds to the leayen, which is to ferve for beginning the fame operatipn again the next day.
Care muft be taken that the baker, out of lazinefs, does not knead two ovens-full upon the fame leaven for in that cafe the bilket would be apt to corrupt. "Let it be obferved, that in winter there ought to be $\frac{1}{5}$ part of leaven more than in fummer. It muft at all times be covered sith fome woollen ftuff, as cloth, frize, or fateen, but never with linnen, to prevent a cruft being formed upon it.
In fome places, and particularly at Breft, they follow another method, but which is not reckoned fo good. They take, indeed, twenty pounds for the firt leaven, which they in: creafe to fixty pounds, as in the former operation; but then, within fix hours after, they increafe it to two hundred pounds? which they divide into four parts, two of which they put at the ends of the kneading-trough, one into one bucket, and another of twenty pounds into another, The three former parts ferve to knead the three firit bakings, or ovens-full: and the laft parts to compofe three other parcels of leaven for three other bakings, with a quantity of twenty pounds weight of leayen for the next day's baking.

Dough.
The kneader takes water out of the kettle or copper which he ufed for the leavens, and dilutes that wbich he would employ into a whitifh and thick water; and, putting flour to it two or three times, he kneads it quickly and very ftrongly with his fifts, going from the right to the left, and beginning again from one end to the other, and from the left to the right, he reduces it to one fingle mals. After this, he flattens it with the palm of his hands, and divides it into four parts: then he flattens them again, and handles and kneads them with all his might one after another; afterwards he puts them again upon one another, and, having cleaned his kneading-trough, he puts the whole into one mafs, iurning and kneading it ftill. After which he cuts it again into four parts, which having rejoined for the laft time, he takes the dough out of the krieading trough, and puts it upon a table, where another workman turns it often and often, during a quarter of an hour, 'till it be very firm and dry;

## CAKes.

As foon as the dough is in the above mentioned condition, it muft immediately be made into cakes. Each cake muft weigh fourteen ounces of dough, that, when baked, it may weigh eight, or at moft nine, ounces.
The dough is cut into pieces of that weight, which pieces are afterwards turned upon the table with the hands into balls, to make it harder ftill: then it is flattened with a kind of rolling-pin, the middle of which is thicker than the two ends, oblerving, however, to make the cake fomething bollow in the middle; as for the edges, they mult be evep, and be above one third part of an inch thick.
The cake being thus formed, they make the mark, a crofs, or fome other figure, upon it, with an inftrument for that pura pofe; after which they turn it on the other fide, laying it upon the table, as near as polfible to thofe that are already made ; finally, a little before they put it into the oven, they prick it four or five times with an iron inftrument that has three points.
Before they prick the cakes and put them into the oyen, they muft let shem reft half an hour upon the table, or even more, if need be, that they may have time to rife, which the baker ought to know and direct.
At Breft, they put the cakes into the oven, as foon as they are pricked, without letting them reft or rife, becaufe they
${ }_{4}$ C
pretend
pretend they are fufficiently furnifhed with leaven, and in that cale they do not cover them.

## Oven。

For the firf oven-full, they mult begin to heat the oven, as foon as they begin to work the dough with the rolling-pin; and they know that theoven is hot, when the roof of it is of a whitilh ath-colour. But for the other oven-full they do not warm the oven, but after they have rolled the dough, or a little fooner or later, according as the baker thinks fit, or as the dough requires it, and the oven is not to be quite fo white. It muft be obferved, that for the firf oven-full they may heat the oven with green wood, becaufe it has time to dry and burn: but, for the others, the drieft wood is the beft, becaufe the dough requires to be foon put into the oven, left it fhould dry too much.

The building of an oven.
It muft not be above two feet and an half high, taking a perpendicular line from the key-ftone of the roof to the center of the floor: the floor muft have bricks well burnt, two inches thick, and eight inches fquare. In fuch places where they have broad flat ftones, which can bear the fire, they ufe them rather than bricks; the mouth of the oven ought to be two feet wide, by two in the bafe: the bottom or floor muft have five feet and a half in depth, by nine in breadth. The fire fhould be put at two feet diftance from the mouth of the oven, to come directly to the mantle-piece of the chimney: that mantle-piece muft be raifed about eight inchas higher than the mouth of the oven; the oven muft be covered.

## The baking of the cakes.

After the fire is taken out of the oven, and it has been well fwept, the baker thrufts the cakes into the oven the one after the other, on an iron or wooden fhovel, obferving to place them regularly, fo that therre may be no void fpace between them.
He afterwards fhuts the oven very clofe, and puts a few fho-vels-full of live coals againft the door: a quarter of an hour after he opens the oven, to fee whether the bifkets begin to colour: if he finds it fufficiently coloured, he leaves the oven open for half a quarter of an hour, during which he takes away the coals from before the door, which he fhuts again. When the cakes have remained in the oven a full quarter of an hour longer, he takes out fome of the cakes which were firft put in, and breaks them to fee whether they be baked. When they are fo, the edges are reddifi' within; and the little crumb which remains in the middle, is fpongy but dry. They put their hand upon that crumb, and, if they obferve any moifture in it, it is a fign that the cakes are not baked enough; and they muft leave them in the oven, as long as they judge it neceffary to dry ip all the moilture.

## Store-Rooms

As foon as the bifkets are taken out of the oven, they carry them out into the flore-room, which has been well cleaned, and warmed during four days. The ftore-rooms, to be good, fhould be built over the ovens, wainfooted at top and bottom, and on all fides, and the joints of the boards well caulked. When the ftore-room is full, it is never to be opened but to take out the bifket. It requires a month to cool it, and another month to make it ftale enough to be fent on board. Oblerve, that it is cuftomary in Provence to put the tifket into a large airy loft, where they reckon it cools better and more naturally that in the fore-rooms, where it is fhut up with all it's heat; and they take care to chut the windows of thofe lofts, in damp or rainy weather.

## BAKERS.

Three bakers, or journeymen, are fufficient for each oven; namely, a head-man, who puts the cakes into the oven, as foon as, they are pricked, and two kneaders, each of whom is to knead three ovens-full alternately, and help in doing the feft of the work. In Provence they have but five journeymen for two ovens, namely, one head-man and four kneaders. At Breft, the cuftom is, that the fame kneader kneads the fix ovens-full for the day, and the other the fix for the next day; which is the reafon why the dough for the laft baking is not fo well worked, becaule the kneader grows tired.

## Remarks upon the fhipping of biket.

It ought to be fhipped in fine dry weather, in flat-bottom boats, very tight, in which it fhould not continue long. The ftore-rooms in the fhips ought to be well wainfcoted and caulked, and warmed during fix days and fix nights with live coals, after which they muft be left to dry three or four days, that the moifure drawn in by the fire may evaporate.
The ftore-rooms muft afterwards be lined with good mats from top to bottom, and on all fides: it has been abferved in France, that the mats made in Provence are better for that purpofe, than thofe of the weft.
After the bifket is put into the flore-rooms, and they have been clofely fhut, they muft nor be opened but one after another, as occafion requires, and the bifket muft be taken out. only at the opening of the fcutdes.
All wheas, rye, barley, malr, beans, peafe, and all other
forts of comn and grain, ground or unground, and bread, bifket, or meal, may be exported free of all duties, 12 Car. II. II and 12 Will. III. $1,5,6$, and 7 of Anne.

BISAUTH. Authors give ffuch different accounts of bifmuth, that it is a difficult matter to know exactly what it is. Some make a metal of it, and pretend, that, towards the latter end of the feventeenth century, there was a mine of it found in Bohemia. Others make only a feni-metal of it; fome place it in the rank of a bare mineral; finally, fome would have it to be nothing elfe but a mixture of tin, tarar, and falt-petre, a work of art rather than nature.
Among fo many contradictions, there are fome people, who, doubtlefs, by a kind of accommodation or compromife, chufe rather to follow a mean opinion between all, and imagine that there is a natural and an artificial bifmuth. This is che opinion we thall follow in this article, 'till the fubject be better cleared: up.
The natural bifmuth is a mineral body, but half metallic, which wants perbaps but a little more coction and maturity, to be perfect tin: and, indeed, it is thought to be the marcafite of that metal.
Bifmuth hath fometimes it's own proper mine, if it be true that fuch a mine was found in Bohemia, as has been obferved above, and as we read in Monfieur Furetiere's Dictionary, who quotes the authority of one Alonfo Barba. But it is chiefy found in tin-mines: it's fubftance is bard, ponderous, and brittle, of a large glofly white, and fhining grain.
Dr Woodward, the Englifi philofopher, places the bifmuth in the fifth clafs of foffils, and among the minerals, n. 9 .
It is likewife called by fome tin-glafs, becaufe, being broke, it Thews many fmall bright particles, polifhed like glafs; but this is an abfurd appellation, being metallic, though it is capable of vitrification, and that polfibly may have given rife to that nameThe pewterers fometimes ufe it infead of regulus of antimony, as do the letter-founders, in cafting their types. By chymical preparations they extract from it flowers and a magittery, which they call white of pearl; it is ufed to beautify the complexion, and preferve the 1 kin . But as it is certain, that it has an arfenical quality therein, it cannot be fafe to ufe as a medicine in any chape: by no means, 'till it is fritfully prepared by an able chemift.
The artificial bifmuth is, very much like the natural, with regard both to it's form, and to it's property and ufe. It is made, by reducing tin into fmall bits, or yery thin laminx, or plates, and cementing it with a mixture of tartar, faltpetre, and arfenic, placed alternately in feveral ftrata, or layers, in a crucible, over a naked fire. There is a great deal of this bifmuth imparted into France from England, bur it has a reddilh caft, becaufe of the copper, which the Englinh are faid to mix with it's compolition. That which is made at Paris, is clearer and whiter.
It muft be chofen in fine, broad, white, and yery brittle fcales.
BISTI, a fmall coin of Perfia. Some accounts, which come from pretty good hands, place the bift among the current filver coin which is ftruck in Perfia, and make it worth one fol and four or fix deniers French money ; (that is to fay, a little above three farthings of our money.) Others, who deferve, perhaps, more credit, and, among them, Sir John Chardin, feak of the bifti only as a money of account. They call it indeed dinar-bifti, and make it be worth ten fimple dinars: fo that the toman, which is alfo a money of accoupt, being worth 10,000 fimple dinars, it will be worth but rooo of thofe which are furnamed bifti,
BITCHEMARE, a kind of fih which is falted and dried like cod. It is catched in fome places on the coaft of Cochinchina, and is part of the trade which the Cochincbinefe dțive with China. It pays duty of importation at Canton, at the rate of four mas per. pic, and reven per cent. for freight. The Dutch import a great deal of it into China. It is bought for two pattacks per pic at Batavia, and fold again for about four taells at Canton.
BITTACLE, a fea-term, fignifying a frame with two fories, placed in the fteerage, before the place where the fteerfman ftands, by the miffen-maft. It.is all made of boards fattened together with wooden pegs, without any iron, to prevent the direction of the needle of the compafs, which is inclofed in it, from being altered by the proximity of that metal. They alfo put a clock or watch in it, with a candle or lamp to lighe the fteerfman.
In large fhips, befides this bittacle, they have another for the pilot or mate.
BITTS, are two perpendicular pieces of timber in the fore-part of the fhip, bolted to the gun-deck and orlope-beams, their lower ends ftepping in the foot-walling, the heads of which are braced with a crofs-piece, and, when feveral turns of the cable taken over them, is for, fecuring the thip at an anchor; there are generally two pair of them; befides, there are others upon the upper deck, which are fixed by the main and foremaft, and called the topfail fheet, and jeer-bitts.
BITUMEN, an inflammable fubftance, fat and unctuous. They extract an oil from it, and it diffolves in water: yet only matters and alkali falts are the natural diffolvents of bitumen.
The druggifts diftinguifh three forts of bitumen, which they fubdivide again into feveral others; namely, hard, foft, and
flquild, or oily biturmen. Among the hard bitimenein, they reckon the yellow amber, (perhaps we might more julty place ambergreafe in that clafs) jet, arphatios, or bitumen of Judæa, greafe in that clask pithatos, pitcoal; the black-ftone, and fulphiurs. The foft are Maltha, bitumen of Calao, of Surinam, and of Copal. Lafty, the naphtha of $I_{\text {taly, }}$ and the petroleum, are reckoned among the liquid bitumens.
Of thefe bitumens forne are foffils; others fwim on the furface of the waters of fome lakes 'and ponds, and others iffue out of the earth, almoft after the manner of frings.
There are fome bitumens fo hard, that they are uffed in forges fike coals. There are fome fo binding, that they may ferve infead of mortar in building: with the latter were built the famous walls of Babylon. Some again are fo liquid, that they are burnt in lamps inftead of oil.
The bitumen of Auvergne is a kind of pitch of a pretty bad fmell; it is to be found between Clermont, Montferrant, and Riom. There is fuch a great quantity of it, and iffues out of the ground fo plentifully, as to reader the roads fometimes of the grable.
It is this drug dried and hardened, which fome hawkers fell for the true afphaltos, or bitumen of Judxa, to fuch apothecaries and druggifts; as are not well acquainted with drugs : but it's intolerable ftench is fufficient to prevent any body's being impofed upon by thofe cheats.

Remarks.
Dr Woodward," the Englifh philofopher, in his Methodical Diftribution of Foffils, clafs the 4 th, divides the bitumens thus: There are, fays he, two forts of them. Some are liquid, as the naphtha, the petroleum, and the oil of Barbadoes. Others are what we properly call bitumens, and are of different confiftences : the fpecies of them are as follow: 1 . The bitumen properly fo called, or the afphaltos: 2. The piffaphaltos, which, according to Diofcorides, was found in the Ceraunian mountains: 3. Amber: 4 . Jet : 5. The Ampelitis: 6. Pit-coal.
It appears from thence, and from what has been obferved above, what difference there is between the divilion of bituméns made by traders, and that made by natural philofophers, But thore druggifts, as well as apothecaries and chemifts, who deal in drugs, thould by no means be ignorant of their quality, left they poifon as many by the bad medicines, as empirics do by the unskilful application OF GOOD.
It is very well known, that there is in iron a great deal of an oily fubftance of bitumen, which even is but little connected or incorporated with the other principles: or rather, which abounds too much to be every where clofely connected with them. It is that kind of bitumen which ought to be the bafe or chief ingtedient of the Pruflian blue, which we fhall fpeak of under it's proper article. But it is too compact, and it's blue colour too much involved. It muft be extended and very minutely divided, which cannot be done but by a diffolution. The bitumen of iron is conjoined with a yellow metallic darth; it is not looked for in the fubfance of iron, but in vitriol, where the iron is already very much attenuated, and very finely diffolved, and confequently it's bituminous qualities already much opened and extended.
Sulphurs formed in the earth of fire, acid falts, water, and a very fine earth, are termed bitumens. Bitumens, diffolved in a large quantity of water, form the oils or petrolea. But, if they are mixed with earth and falt, the folid bitumens are produced, differing from one another in degrees of purity, according to thie quantity or groffnefs of the earth, or different degrees of mixture. Thus foffil coals, jet, amber, and the ordinary bitumens; and bituminous earths are produced. If there be but a fmall quantity of earth and much acid falt, the common mineral fulphur, or brimfone, is formed. If the mineral original bitumen is joined to a fuffible earth, capabite of vitrification, it communicates to it a metallic form ; that is, the found, brightnefs, foftnefs, ductility, malleability, and all other fenfible qualities of metals.
This origin of mineral bitumens may be confirmed by many experiments. If a mixture of equal parts of oil of vitriol and oil of turpentine be digefted together for a confiderable time in a very gentle heat, and afterwards diffilled in a retort, there will come over frift a yellowide liquor refembling petroleum, both in fmell and confiftency. What remains in the retort, is at firft a foft bitumen, and afterwards turns into a hard blacknefs, eafily inflammable, and, when burnt, fmelling exactly like foffil coal. But, if the diftillation be continued, a white acid liquor will next be obtained, which, by ftanding, lets fall a grey powder, which is true common brimftone, a yellow fubftance of the like nature adhering likewife to the neck of the retort; what is left behind being a black, fhining, light fubftance, difperfed in thin difgregated ftrata, like talc, in which, by the help of the load-ftone, iron may be difcovered. Thus therefore all thefe bitumens may be artificially produced; and the analyfis of the natural ones further confirmed the manner of their formation. Thus true chymical philofophy fhews, that metals are nothing but bituminous fubflances, which have undergone a long digeftion; for by depriving them of their fulphur they are reduced to ahes, and thento glars. This is cafily feen in the imperfect metals.

For if any of them be expofed to a long heat, and efoecianty to the rays of the fun, collected by a large buroing glafs, the fulphureous principles fly off, and only a calx, or afhes, will be left behind; which, in a more vehement degree of fire, are prefently vitrified; and, by reftoring the fulptur, this glaf's may again be reduced to metal:
Thefe confiderations merit the attention of all; who would underfand the true nature of bodies, and their true philofophical method of analyfis. But the folution of metallic bodies may be carried infinitely farther than this: and, if what we hall communicate upon there points, meet with the fame general approbation, as the reft of our labours have had the honour to do, 'tis poffible, that fome future work may afford more light into the true experimental philofophy, than any that has gone before it. Our philofophy in this Thall be applicable to trade principally.
BLACK, an opake and porous body, which abforbs the rays of light, and reflects none, or very few of them : of all colours, black (if it can be called a colour) is the darkeft, and the moft oppofite to white.
There are feveral forts of blacks ufed in trade, which thall be explained hereafter, namely, dyers-black, German-black, ivory or velvet-black, bone-black, hatt's-black, Spanifh-black, lamp-black, earth-black, and curier's-black.
Dyers-Black, otherwife good black, is one of the five fimple and mother colours ufed in dying.
It is made differently, according to the feveral qualities of the ftaffs that are to be dyed. For fluffs of a high price, as woollen cloth an ell and a half, or an ell and a quarter wide, after the Spanifh or Dutch make, cloth of Languedoc, Sedan, Abbeville, Elbeuf, Roan ; ferges of St Lo and Beauvais; broad and narrow rateens, fine woollen druggets, and fome others; they muft ufe a black made of the beft woad and indigo, inclining to a bluifh-brown.
The goodnefs of the compofition confifts in there being not above fix pounds of indigo ready prepared to each ball of woad, when the later being in the tub begins to caft it's blue flower, and in not being heated for ufe above twice: after which it muft be boiled with allum, tartar, or afhes of lees of wine; then maddered with common madder, or the crult of fine madder; and, lafly, the black mult be given with gall-nuts of Aleppo, or Alexandria, copperas, and fhumac.
To bind the black, and prevent the fluffs from frearing, and ftaining one's hands or linnen, when ufed, they mult be well fcoured and cleaned in the fulling-mill, when white, before they are put into the dye; and afterwards they muft be fell beaten in water with the feet, then maddered, and, when dyed black, they muft be well walhed, 'till they yield no more powder.
As for more indifferent ftuffs, fuch as fmall rateens, bays, flannels, ferges of Aumale and Mony, fhalloons, ftamines, and even blankets, it is fufficient that they be well blued with woad, and afterwards blacked with galls and copperas, becaufe fuch fuffs cannot pay for the expence of maddering, and of the other operations which fluffs of a higher value undergo. No ftuff ought to be dyed immediately from white into black, but muft abfolutely be firft dyed blue.
All that we have been obferving concerning dyers-black, agrees with the 9 th, toth, IIth, and inth articles of the general regulations for dyers in France, made in Augult 1669. There are fome other forts of black, which though prohibited by the ordonnances, have, neverthelefs, wrongfully crept amongit dyers, as, for inftance, that which is made with alder-bark, the ftuff that fettles at the bottom of the grinder's trough, which they mix with the filings of iron, or brafs. There is likewife the Jefuit's black, which is made with the fame ingredients as the good black, but without having firt dyed the ftuff blue. In order to make this fort of black, they make the ingredients diffolve in water, which has been firf prepared by making it boil during four hours; after which, they let it cool 'till the hand can bear it ; then they put the-fluff into it, taking it out, and putting it in again, fix times, or more. Some pretend that this method of dying black is better than any other: but it is hardly to be believed; fince, when ftuffs have been thus dyed immediately from white to black, without paffing through the intermediate blue, they can take but a bad and unfettled black. For which reafon the 12 th article of the abovemientioned regulations forbids, under very fevere penalties, the dyeing of any ftuff from white into black.
It is faid, that the Jefuit's black had that name given it, becaufe the Jefuits were the firf inventors of it, and do fitl dye their fuffs after that manne: in their convents, where they keep dyers, to whom they pay wages.
Grey is a fhade of black, from the lighteft colour, which is the white-grey, to the deepeft, which is the black-grey: fuch are pearl-grey, lead-grey, lavender-grey, beaver-grey, pigeongrey, flate-colour, chefnut-grey, brown grey, \&c.
By ftat. 23 Eliz. cap. 9. feec. 3. No cloths, kerfeys, bays, frifadoes, hofen, or any other things in nature of cloth, fhall be maddered for a black, except the fame be firf grounded with woad only, or with woad and ancle, alias biue Inde, unlefs madder be put in with fhumac, or galls, upon pain that the dyer daall forfeit the value of the thing dyed, the one

## B L A

moiety to the queen, and the other moicty to him that will fue for the fame
Sect. 4. It fhall be lawful to dye gall-black, fhumac-black, alias plain black, wherein no madder fhall be ufed.
Stat. $\mathrm{r}_{3}$ Geo.1. cap. 24. fect. 1. If any perfon fhall, within England, Wales, or Berwick, dye black any bays, or other woollen goods, as madder-blacks, the fame not being dyed throughout with woad, indigo, and madder only; or fhall dye black any cloths, long-ells, bays, or other woollen goods, for woaded blacks, the fame not being woaded throu hout the fhall forfeit for fuch falfe maddered-blacks as follows: viz. For every long bays, containing 70 yards, 44 s .
For every Colchefter bays, or thort bays, containing 35 yards, 0 s . and fo in proportion for bays, or other woollen goods. For every cloth dyed black, without being woaded throughout, containing 44 yards, 40 s .
For every piece of bays fally dyed, as aforefaid, containing 70 yards, 30 s .
For every Colchefter fhort bays, containing 35 yards; 12 s . For every perpetuana, or ftuff fally dyed, 4 s , and fo in proportion for any other woollen goods deceitfully dyed for wead-ed-blacks.
Sect. 2. All woollen goods, which fhall be truly maddered black, Shall be marked with a red rofe and a blue rofe; and all woollen goods which thall be truely woaded black throughout, thall be marked with a blue rofe: and, if any fhall counterfeit the faid marks, or thall affix any fuch mark to any of the goods fallly dyed for maddered or woaded-blacks, fuch offender fhall forfeit 4 l. for every piece of goods to which the faid mark fhall be affixed
Sect. 3. If any perfon thall ufe logwood in dying of blue, he fhall torfeit 40 s . for every piece of cloth fo dyed, containing 44 yards; and 22 s. for every long piece of Bocking bays; and 22 s. for every Colchefter, or hhort bays, containing 35 yards ; and 4 s . for every perpetuana, or ftuff, containing 24 yards; and fo in proportion for all other woollen goods.

## REMARXS

The art of dyeing all kinds of woollen, filken, and cotton manufactures is none of the leaft curious, and the leaft important; nor is it yet brought to the laft perfection, perbaps, in this nation, nor with materials fo cheap as could be wifhed and defired for the general benefit of our manufactures and the kingdom. Wherefore, under the article of Dyeing, we hall not only give' an ample account of the art, as it at prefent ftands, but fuggeft fuch hints and oblervations as may have a tendency to it's improvement.
In the interim, I fhall only intimate, that, as a thorough fill in this art depends upon a well-grounded knowledge in the chymical philofophy, we thall here defcribe the nature and caufe of blacknefs, upon thefe principles.
If fire, determined by the fun, be received on the blackeft known bodies, it's heat will be long retained therein; and hence fuch bodies are the fooner and the ftrongeft heated by the fame fire, as alfo the quickent dried after having been moiftened with water ; and it may be added, that they allo burn by much the readieft: all which points are confirmed by daily obfervation. Sir Ifaac. Newton accounts for this extraordinary fufceptibility of heat in black bodies from hence, that the rays of light, falling on them, are neither reflected from them, not tranimitted through them; but, entering the bodies, undergo a great number of reflections and refraction within, 'till the motion be fpent, and, confequently, their heat, \&x. loft; i. e. according to him, 'till they ceafe to be fire: but what motion and heat they themfelves lofe, the body receives and retains.
'To confirm which, let a piece of cloth be hung in the' air, open.to the fun, one part of it dyed black, another part of a white colour, others of fcarlet, and divers other colours; the black, part will always be found to heat the moft, and the quickeft of all, and the others will each heat the more flowly, by how much they reflect the rays more itrongly to the eye; thus the white will warm the floweft of them all, and next to that the red, and fo of the reft in proportion, as their colour is brighter or weaker. This is wely known to the nations who inhabit the hotter climates, where the outer garments, if of a white colour, are found beft to preferve the body from the fcorching fun, and black ones, on the contrary, to increafe the heat.
And it has often been obferved, by the makers of woollen cloth, that if, at the fame rime and place, they hang out two whole pieces, the one black, the other white, the former will moak, and dry quickly, but the latter retains it's water long; and cloths of other colours will dry fo much the flower, by how much their colours ase the brighter,
It has alfo been long obferved, that all black bodies are fooner kindled and fet on a flame by the fame fire, than thofe of any other colour. The duft of whitetouchwood will hardly catch, and futain a fpark of fire ftruck.on it ; whereas, if the fame be fruck on a black coal, the duft thereof will readily receive, and keep it up, fo that, in a foort time, the whole duft will be on fire. The pureft and whiteft linnen will hardly maintain a $S_{\text {park }}$ thrown on it; but if the like fark
be calt on tinder, which is only the coal of linnen kindiedt and again extinguifhed, it will immediately catch through the whole body of it. Nor would gunpowder, were it not lor ir's black colour, be fo ealy to kindle; as appeass by the powder made of white nitre, ground with fulphur *. "T he gardeners have long complained, that their whice foils would not warm with the fun, except in the very utmoll furface; whereas the black grows fo hot as even fometimes to burn the roots of plaints.

* The compofition of guppewder is fix parts of well-purified Salt-petre, one of fulphar, and one at leaft of charcoalis See Gunponder:
Laftly, the philofophers have confirmed the matter by experiments. . If a piece of white paper be laid on the focus of a burning-glars, it will be long before it heat; and very long before it take fire ; and, as foon as kindled, quits it's whitenefs, turns brown, and. then black, immediately atter which it catches flame: whereas, if a black paper be laid on the fame focus, it immediately takes fire. We have fome dxtraordinary things on this head in the experiments of the atcodemy del Cimento*. ${ }^{*}$
* Sagg. Efperienz, 266, 267.

German-Black, called by fome Frankfort-Black, is made with the lees of wine burnt, wathed afterwards in water, then ground in mills made for that purpofe, with ivory, bones, or peach-ftones, alfo burnt: "This is the black ufed by the rell-ing-prefs printers. It commonly comes from Frankfort, Mentz, and Straiburg, either in lumps or in powder. However, they make fome in France, which is not interior to that of Germany but with regard to the difference there' is between the lees of wine it is made of. That of Paris is even more valued than that of Germany, and the rolling-prefs printers find it fofter. The black made in the kingdan of France is diftinguifhed by the name of the cities where it is made; as black of Paris, black of Troyes, black of Orleans. There are at Paris but three workmen who make that kind of black.
The German black muft be chofen moift, but yet it muft not have been wetted; it flould allo be of a fine Mining black, foft, friable, or eafily reduced into powder, light, aṇd with as few fhining grains as polible; it thould allo have been made with ivory, which is better to make a fine black than either bones or peach-ftones.
Ivory-Black, otherwife Velvet-Black, is ivory burnt, cammonly between two crucibles well luted together ; whichivory being become quite black, and reduced to thin plates; or fcales, is ground in water, and made into troches, or little cakes, to be ufed by painters in their works, and by jewellers who fet precious ftones, to blacken the bottom, or ground of the collets, wherein they fet diamonds to give them what they call the teint, or foil.
Ivory-black, in order to be good, ought to be tender, friablea and to have been thoroughly ground.
The apothecaries, and thofe who burn ivory, ought not to throw away the burnt ivory that falls to the botton of the retort, it being as proper to make ivory. black, as even new ivory, provided it be prepared as has been above directed.
Bone-Black, is made with the bones of oxen, cows, \&x. burnt, and well ground. In order to be good, it mult be tender, eäfly reduced to powder, Shining, and to have heen ground very fine. It is very much ufed in painting, but is not fo much valued as iyory-black.
Hart's-Brack, is that which remains in the retort after the fpirits, volatile falt, and oil, have been extracted from hart'shorn: : Thefe remains are ground with water, and make a kind of black, almoft as fine and as good as ivory-black, and which painters may very well ufe.
Spanifh-Black, thus called, becaufe the Spaniards firft invented it, and it moftly comes from Spain. It is nothing but burnt cork: it is ufed in feveral works. In order to be good, it.mult be very black, light, and have as little fand or gravel mixed with it as polfible.
Lamp-Black, or Lam-Black is the footy fmoke of rofin. There is fome in powder, and fome in lumps. That in powder is fold by the bufhel, or in fmall oblong barrels; that in lumps is fold by the pound.: It is made of fimall bits of roin, melted and purified in iron veflels; then they fet fire to it under a chimney, or in any other place made for that purpole, which has been lined on top with heep-fkins, or pieces of coarfe linnen cloth, to receive the vapour or fmoke, which is the black. They gather it afterwards by fhaking the fkins, or cloths, and put it into barrels, or other veffels, to krep it. With us it is commonly made from the relinous and fatty parts of wood, burnt under a kind of tent, which receives it: but the greatelt part is brought from Sweden and Norway. It is ufed on various occafions, particularly in making printer's ink: for which purpole it is mixed with oil of walnuts, or linfeed, and turpentine, all boiled together.
The grocers, and others who trade in lamp-black, mult take notice that it takes fire very eafily, efpecially that which is in powder ; and when once it is on fire, it cannot be extingwifed without very great difficulty; therefore they cannot be too cautious upon that account. The beit merhod to extinguifh the fire in the lamp-black in powder, is to fmother it with
wet linnen, hay, or ftraw; for water alone hardly produces any effect in this cafe.
Earth-Black, is a fort of coals found in the ground, which the painters or limners, ufe to paint in frefco, after it has been well ground.
There is a fort of black made with gall-nuts, copperas, or vitriol, fuch as common, of writing-ink.
They alfo make a black with filver and lead, which ferves to fill up the holes or cavities of ingraved things.
Curriers-Black, The workmen who curry the Jeather after it is tanned, give the name of firft black to the firf blackening they apply to the cow's, calf's, or fheep's leather. That black is made with gall-nuts, four beer, and old iron. The fecond black is compofed of gall-nuts, copperas, and gum Arabic. It is upon this laft black the glofs. is fet.
BLACKS, the inhabitants of Nigritia, or Negroland. See Negroland.
PLACK SEA, or EUXINE SEA, lies between Europe and Aflia, being bounded by Tartary on the north ; by Circaffia, Mingrelia, and Georgia, towards the eaft; by Natolia, or the Leffer-Afia, on the fouth; and by Romania, Bulgaria, and Beffarabia, towards the weft; extending from the 2gih degree of eaft longitude to the 44 th, and from the 42 d to the 46 th degree of north latitude, intirely furrounded by the Grand Signior's dominions, who'enjoys the fole navigation of it, but difturbed fometimes by the excurfions of the Corfacks, who iflue out of the mouth of the Borifthenes, and commit great ravages on the coafts of Turky. The Ruffians did attempt to eftablifh a navigation on this fea, but have been obliged, by late treaties, to deliver up all the fortreffes they had erected on the coafts of the Euxine, and abandon this navigation. It is reckoned a tempefluous fea by the Turks, from whence it is faid to have obtained the name of the Black Sea, and there are not many good harbours in it.

## Remarks.

The principal trade of this Sea has been, for fome ages, only among the Turks, for fupplying the city of Conftantinople with corn, cattle, and other provifions. All the tribute of the kingdom of Hungary, when they had it, and the provinces of Moldavia and Wallachia, which they have ftill, except what was paid in cattle driven by land, was brought down the Danube into the Black Sea, in great quantities. But great part of that revenue being cut off from the Turks by the conqueft of Hungary, and efpecially of Belgrade, that commerce is vesy much interrupted.
However, there is a trade eftablifhed from Vienna and Hungary to the Black Sea, and feveral merchants are pretty largely engaged therein. Another trade bad like to have been opened, as before obferved, in this fea for the Mufcovites, by the taking of Afoph : but the late czar's lofing that town by the treaty on the banks of the Pouth, put a flop to it. But this town, ftanding on the frontiers of Ruffia againft Turky, has been feveral times taken and retaken of late years; but in the laft peace, concluded in the year 1739, between thofe two powers, it was agreed that the fortifications thould be demolifhed, and the town remain fubject to Ruffia. So that by the river Borifthenes, which runs into this fea, the commerce with Turky is in fome meafure maintained; whereby the Ruffians fupply the Turkifh court, and the great baffa's, with the rich furs of Siberia, fuch as ermins, fables, and the black fox in particular, which is fo great a rarity, that none but the Grand Signior, the grand vizier, the boftangi baffa, and the mufti, are admitted to wear them. Thefe the Turks pay all forin ready money, they having no goods to barter with the Mufcovites. They alfo buy honey in large quantities of the Murcovites; and this trade is chiefly carried on by the baffa of Bender, whofe fituation is very convenient on the river Bog, between the Danube and the Nieper.
By the paffage of this fea, alfo Conftantinople receives all the fine choice goods of Perfia and Armenia; the center of which commerce feems to be Erzerum, to which the Perfians come freely, and fome of the Mogul's fubjects, likewife, from India itfelf.
It thould be remarked here, that this trade from the Black Sea to Confantinople would be very advantageous to that city, provided the Borith henes were navigable up the country any confiderable way, as rivers of that magnitude generally are: but the navigation is entirely interrupted by huge immoveable rocks, caufing valt cataracts, or water-falls, which it is not poffible any boats fhould pafs: fo that, although it be a river of an exceeding long courfe, and would opeń an extenfive commerce to Mufcovy, Tartary, Poland, and Lithuania, if it was a clear flream, it is in a manker ufelefs for abour 60 miles from it's entrance into the fea.
The Turks have, it feems, fome correfpondence this way with the Tartars, who bring honey and wax in great quantities, and fome corn: but the chief of their trade is to fell their flaves; that is, the poor Chrifians who fall into their barbarous hands upon their excurfions and inroads into Poland, or among the Coflacks or Mufcovites; in which cafes they tell us they have carried away 30,000 people at a time.
Vol. I.

This commerce is from the Crim Tartary alfo, and by the Streights of Caffa.
BLADEE, a thin piece of metal, extended either in length or breadth, beaten with a hummer, or caft into a mould. It is faid particularly of that part of a fword, dagger, bayonet, or other offendive weapon, that pricks or çuts. We alfo fay the blade of a knife, the blade of a razor, to fignify that pare of thofe inftruments which cuts or fhaves. All thofe forts of blades are of very fine tempered fteel, or at leat of ron very well fharpened. In France the, blaces of weapons are made by the furbifhers, or fword-cutlers, and the blades of knives by the orher cutlers.
The good qualities of a fword-blade are, that it be eafy to bend, and well grooved. Among the foreign blades imported into France, thofe of Damaicus and England are noft valued; and, of thofe that are made in the kingdom, the blades of $V_{1}$. enne in Dauphiné.
Sward-blades, and other weapons, pay duty of importation in France like hard-ware that is to $\mathrm{C}_{\mathrm{a}} \mathrm{y}$, 10 lives per $\mathbf{y} 00$ weight, acording to the decree of the 3 d of July, $\$ 692$; and 3 livres duty of exportation, or even but 2 livres, when they have been declared to be for foreign parts, and a licence has been obtained to export them; for they are a contraband merchandize, as to exportation, according to the ordonnance of 1687 . In England they may not be imported to be fald, bartered, or exchanged, upon forfeiture, or their value.
BLAFART, a fmall coin, current at Cologne, it is worth 4 albus's; and the albus 9 deniers and Tr 3 French money; that is to fay, fomething more than a farthing of our money. BLAISCIS, a territory of Orleanos in France, is bounded on the notth by Beauce; on the eaft by Orleanois, properly fo called; on the fouth by Berry; and on the weft by Touraine.
At BLOIS, the chief trade confifts in wine and brandy, which they fend to Orleans, Paris, Tours, Angiers, Laval, and even into Holland. There were formerly bere a great many tanners; but the high duties laid upon learher have made that mapufactory fink to nothing. They made bere fome ferges, and other woollen ftuffs; but that branch of tieir trade is not confiderable, This city is alfo noted for the beft watches in the kingdom.
St. Die', is noted for the excellenteft wine produced in it's territory.
BLANC, a fmall copper coin, which was fermerly current in France for 5 deniers tournois.
The pieces of three blanks were formerly of copper, allayed with a little filver, and were worth 15 deniers. The old ones had 6 deniers and three grains fine, and, the new ones but 3 deniers and 18 grains.
The pieces of 6 blances, worth 30 deniers, have alfo been ffruck with fometimes more, fometimes lefs filver. There was an edict of Lewis XIV, made in Auguft 1657, ordering the friking of thofe pieces; but it was repealed by letters pa tent of November the fame year.
In $¥ 67$ o, under the fame reign, they ftruck pieces of three blancs, of the fame ftandard with the old ones; they were called pieces of three blancs with edgings. All the reft had but 3 deniers and 17 or 18 grains fine.
But afterwards thofe pieces have no longer been a current coin, but only a money of account; and they fill fay three blancs, to fignify 15 deniers, and fix blancs for 30 deniers, for two fols and fix deniers; but the latter is much more in ufe than the former.
BLANCHING, the art or manner of making any thing white. See Bleaching.
The blanching of iron plates is performed with aqua fortis and tia.
The blanching of woollen ftuffs is done with foap, or with chalk, or with fulphur, or brimftone. The beft blanching of woolen fuffs in France is done at Paris.
The blanching of fla is performed with foap and brimftone, See Bleaching.
The blanching of wax is by expofing it to the fun and dew. That of Chateau-Goutier is the fineft and moft valued in France.
Blanching of copper is done various ways, fo as to make it refemble filver. The common fophifticating method of blanching it, is principally founded upon the admixture of arfenic, firft fixed with nitre. For inflance, fuppofe they melt four ounces of copper, into this they throw half an ounce of arfenic, fixed by being previoully melted with nitre, and being brought into a ball or two with fome fufible mud and lime-water. Thefe they let flow together, with care to prevent any coals from falling into the veffel, for a quarter of an hour ; then, pouring out the matter, they try it upon the touch-ftone, as alfo upen the anvil, to fee if it be white and malleable. If they find it fufficiently foft, they referve it for ufe; but, if brittle, they again melt it for a while, along with a little nitre, or Venice glafs. And if the copper thus blanched be mixed with half, or a third part of pure filver, it preferves a very good colour in wearing.
Thofe methods of blanching copper are of a more curious nature; which may be attempted, according to the direation

## B L A

B L A
of Becher *, with the earth of falt of tartar, thus: frratify any quantity of copper plates, with balf their weight of the earth of red tartar, which has been firft extracted with vinegar, and freed from the falt, though this not totally, but only by a fingle affufion. Let them be-kept ignited together, in a clofe veffel, for the face of five days and nights; then take out the matter, and commit it to the cupel.

- Sçe Bechier Concord. Chym. pag. $576,57^{8 .}$ no. 33. and 40 .

To this purpofe it ought to be recollected what Becher obferves $\mid$ as to this earth of tartar, viz. that, being melted along with gold, it gives a whitenefs thereto, that is not eafily got off again. And in another place he exprefsly declares what is the real fubftance and ufe of this earth + .
if Phyfic. Subterrän. §. 5. cap. 3. §. 72.
t See Fhyfic Subterran. 8. 5. cap. 2, \$. 50.
Becher has another curious method of blanching copper, which he delivers with an affurance of it's ufefulnefs $\ddagger$.

## $\ddagger$ Supplem. ii. in Phyfrc. Subter. §. 55

The method is this: mix luna cornua with an equal, or double weight of tin; put the mixture into a concave globe of copper, confifting of two hemifpheres, the lower whereof may be thus filled with the matter. Then lute the junctiure, and, with a moderate fire, keep the globe of a dull red heat for fome hours. After it is cold, open it, and what you find at the bottom melt with a reduring flux, and you will again find, fays he, the weight of the filver employed; ' whilft the upper hemifphere remains fa blanched and penetrated with the fipit, or fume, of the volatile mixture, as to afford a large part of good filver proof.
This experiment might be otherwifemade, in the way of cementation, by forming fome copper-plates into a hollow figure, placing them at the bottom of a crucible, and laying the mixture of luna cornua, and tin, or iron-filings, upon them; over which again fome pure plates of copper may be laid, and the whole clofed with a cover of copper, or earth; then, luting the juncture, the operation, may be performed in the manner directed.
Ludovicus de Comitibus affords another method of whiteniag copper, where he tells us there is a certain wonderful folutive liquor, which çan totally extract the greennefs of copper, and leave the bottom of it white, fo as never to turn green again : but prove a new metal, differentfrom any of the feven:
But, as we have no particular knowledge of this liquor, we can fay nothing fatisfachory about it, unlefs perhaps, it be of the fame nature with that compound fpirit mentioned by Mr Boyle *, as procured from nitre and falts, in the preparation of the bezoar mineral, of which we thall thew the effect in treating of the tinctures of gold. We have therefore, only to add, that, as it manifeflly appears, from the context of the author, that the copper is only hereby changed in it's colour, but not at all in its corruptibility, upon calcination, and tefting with lead, it has not the genuine properties of filver, and therefore can only pafs for a concealment, or fophiftication, though an ufeful one indeed, for the making of veffels, \&c. of fuch a white metal. See the articles Copper, Metaf, hurGist, Metallurgy.

* See Boyle's Sbridgm. vol. i. pages 260 , 26 r

## Remarks.

Ought not thofe dabblers in the fophiftication of the inferior metals, in order to make them imitate the fuperior, to put people upon their guard in their dealings for wrought plate? For by thefe deceitful artifices may not perfons pay fix, feven, and eight fhillings an ounce for wrought plate, that may not be worth half the money, the hall-mark being daily counterfeited by thofe impoftors? See the articles Alloy, Assay, Goldsmiths-Hall, Mint, Plate, Refiners.
Blanching, in Coinage, is the operation performed on the planchets, or pieces of filver, to give them that luftre and brightnefs the pieces of money have when they come from the Mint. They alfo fometimes blanch pieces of plate, when they would have them continue white, or have only fome parts of them burnifhed.
The blauching, as it is now practifed, is performed by nealing, or heating, the planchets, or pieces of plate, in a kind of fquare pars, without a handle, with a wood fire, in the manner of a reverberatory, that is to fay, fo as that the flame may pafs over the pan. The pieces being fufficiently heated, and afterwards cooled again, are put fucceffively to boil in two other pans, which are of copper, and called boilers: in thefe they put water, common falt, and tartar of Montpelier. When they have been well drained of this firt water in a copper fieve, they throw fand and frefh water over them, and, when dry, they are well rubbed with towels. Another method of blanching planchets and pieces of plate, is to put them, after they have been heated, into a large velfel full of common water, mixed with fome ounces of aqua
fortis, but in different proportions for gold and filver. For gold there muft be eight ounces of aqua fortis, and for filver but fix, to each pail-full of water. This method is but foldom ufed at prefent, becaufe it is too expenfive, and alfo becaufe the aqua fortis diminifhes fomething of the weight fof the filver. See Coining.
BLANK. Thus merchants and traders call void or unwritten places, which are fometimes left in their day-books, or journals, which is a very dangerous practice, ton accoutit of the ill ufe that may be made of it. Merchants books are confidered as good vouchers in courts of juftice, becaufe they are fuppofed to have been written fucceffively from day to day: but, as foon as there is any blank or void face, found in them, were it but of two lines, as it fometimes happens rat the bottom of a page, the book deferves no longer any credit. Arbiters, appointed to examine merchants books, ought carefully to obferve whether the difputed articles be not fet down at the bottom of the pages, which is very fufpicious; and, in the report they make of the condition in which they found the books delivered to them, they are to declare, whethe they found any blanks in them or not, and whether there is any probability that there were blanks left, which may have been filled up afterwards.
Bliank is alfo a piece of paper, at the bottom of which a perfon has figned his name, the reft being void. Blanks are commonly intrufted in the hands of artiters, or friendsy to be filled up as they fhall think proper to terminate any difpute, or law-fuit. A man muft be thoroughly certain of the honefly of thofe whom he trufts with fuch a blank.
A blank letter of attornoy is one in which a void fpace is left to be filled up with the name of the perfon who is to act: With regard to bills of exchange, we fay a blank indorfement, whena man only writes his name on the back of it, leaving an empty fpace fufficient to write either an order or a receipt. See Indorsement.
Among merchants and traders in France, they call a bill or note in blank, one in which a void fpace is left, to be filled, when thought proper, with the name of the perfon to whom the note or bill is to be made payable.
Blank Lottery, called in French Blaneue, a kind of game of chance, to which fome give the name of conmerce. The game of blank-lottery was introduced into France by the Italians who attended queen Catharime of Medicis thither.
That game, as it was then played, and of which Pafquin has givenus a defcription in the 4 gth chapter of the 8 th book of his Recherches de la France, is nothing but what is now called a lottery, which fince above balfia century is become fo common in France andelfewhere: . See Lottery.
At prefent the blank:lettery is nothing like the common lottery, exsept that it is chance whictr diftributes the ligets in both.
In the blank-lottery, every perfon concerted is at libertyt to try: his good or bad luck, without waiting for the refb of the company; and he may, if he pleares, peiterate the trialtimmediately, after every chance drawns, being only obliged to pay', for every chance be draws, the fum to which the mafter of this lettery has taxed it.
The fund of the blarik-lottery confitts commonly of fmall jewels or toys of feveral forts, pictures, wearing appatel, merchandizes, and trinkets, the whole of little value, which are expofed to view in fome fhop, to. tempt thafe who pais by it.
As- thefe blank-lotteries are commonly kept at the fairs in villages, fo there are hardly any but the vulgar and coumtry people who concern themfelves in that fort of game, and take a diverfion in it; without confidering that moft of thefe letteries are only bubbles and impofitions, though they cannot be fet up but with leave from the officers of the:lords to whom the places belong where the fairs are kept.
'The blank-lottery is drawn two ways; the one by a book or regifter, the other by a machine or engine, which is fomething like thofe portico's, where people ufed to game very high at court, under the reign of Lewis XIV.
To draw the blank-lottery after this laft manner, they:throw an ivory or leaden ball into a funnel, which is fufpended over a table, divided into a great many rounds or rings, made fomewhat hollow; and the round in which the ball ftops, determines the player's fate; that is to fay, that he gets nothing, if the ball falls into a blank round; and, if the ball falls into a black round, that is, into one, marked with a number, he wins the lot to which that number refers, all the numbered rounds being black, and the reft white.
There are few or none of thefe lotreries that are fair; for they wha keep them know fo well how to give a declivity to the white or blank, rounds, that it almoft conflantly draws the ball into them; fo that he always keeps his toys, to the great amazement of the fimpleton, who puts his monsy in fuch a lettery.
As to the blank lotteries drawn by a book, there are fome indeed, that are fair, and in which chance is not determined by artifice; but the fafeft is to miffruft them as well as the others, becaufe of the tricks that can be played into them.

## B L E

If a man would keep one of thofe blank-lotteries, he numbars all the lors that are to compofe it. Thofe numbers are afterwards maked upon the leaves of a large book of white paper, one number upon a leaf, taking care, however, that the fmall lots be well intermixed with the great ones, that there may be more room for chance. In this book there are fometimes above a hundred blank leaves, againtt a black or numbered one. The book being thus numbered, he who keeps the lottery, after receiving his money or perquifite, prefents a long brals needle to the drawer or gamefter, who pricks it into fuch place of the book which he pleafes, the book being held by the keeper of the lottery. If the leaf where the gamefter has flruck the needle proves blank, he gets nothing; but, if it has got a number, he has the lot thus numbered delivered to him.
One would think, from what we have juft now faid, that the blank-lottery, drawn by a book, fhould be free from all fraud and impofition, and yet it is no difficult matter to cheat in it. The manner of prefenting the book to the drawer, and of opening it after he has pricked the needle into it, is none of the leaft cunning tricks, which they who keep blank-lotteries, and who are all downright knaves, learn from the jugglers, to order it fo, that the leaves pricked may always prove blank, or have fometimes but very fmall lots, that the lookers-on may thereby be encouraged to try their fortune.
BLANKET, a coverlid for a bed. A ftuff made commonly of white wool, to cover beds with, in order to keep the cold out. They are made in a loom like cloth, with this difference, that they are croffed like ferges.
In order to adorn them, they work ftripes of blue or red wool at each end, and a crown at each corner; with this difference, however, that the ftripes are worked in the $\mathrm{lom}_{2}$ and the crowns are worked with the needle, after the blankets are finifhed, and before they are fent to the fuller.
They alfo fometimes work the name of the weaver upon them with yarn, and often alfo the name of the place where they have been wove.
When they come from the loom they are fent to the fuller, and, after they have been fulled and well cleaned, they are napped with a fuller's thifle.
There is a great quantity of blankets manufactured at Paris and in fome provinces of France, particularly in Normandy, Auvergne, and Languedoc. Moft of thofe that are manufactured at Paris, are made in the fuburb of St Marceau. There are alfo fome manufactories of them in the fuburb of St Martin.
Of the blankets made in Normandy, thofe of Dartenal near Roan are the beft and the fineft, the manufacturers mixing Englifh and Spanifh wool with that of France.
Thofe made at Vernon, another town of Normandy, where they alfo make a great quantity of them, are lefs efteemed, becaule they mix no foreign wool with them.
The blankets of Dattenal are fold at Roan and at Paris, and in time of peace are exported into foreign countries; thofe of Vernon are fold at Beauvais, and in the fmall villages in the neighbourhood.
Befides the blankets made in France, they alfo import thither a great many from foreign countries; and particularly from Catalonia, Spain, Flanders, and England.
Thofe of Catalonia, which are very beautiful and fine, have kept the name of the province where they are manufactured. Some, however, pretend, that the name of Caftalogne, or Caftelogne, as others write it, comes from Caftelana, which in Latin fignifies lambkin's wool, of which thefe blankets are fuppoled to be made.
There are alfo blankets made with the hair of feveral animals, as of goats, dogs, and others.
BLANQUILL, a fmall filver coin, current in the kingdom of Morocco, and on all that part of the coaft of Barbary: it is worth about three halfpence of our money.
BLASTING, in minerology, is when the vein of a mine cannot be broke up. with the fpade, the gad, the ax, or foftened by fire, then blafting is ufed; which is performed with gun-powder, as the moit expeditious method of blowing up the mineral fone; by means whereof, much of the hatdett rock may be fhivered and fplit in a very little time; ${ }^{4}$ parcel of gunpowder being laid in a long hollow cut for the purpofe, after the nature of a gun-barrel, and fired, as it were at a touch-hole; a fmall vent, where the quick-match is applied, being left for the purpofe, and the whole orifice being otherwife hard fopped up with clay. See Minerologr.
BLEACHING, the art of whitening that which was not perfedly white, or not at all fo: thus we fay, to bleach linnen cloth, wax, iron in leaves, filks, woollen ftuffs, \&c. The different methods of bleaching or blanching wax, and iron in leaves, are explained under the articles of WAx and Iron. As to the methods of tleaching filks, limen cloths, and woolen fuffs, we fhall explain them in this article, there being no phace in this dittionary, where it could be more properly done.

The method of bleaching filk.
The filk, being ftill raw, is put into a bar of thin limnen, and thrown into a veffel of boiling river-water, in which has been diffolved good Genoa or Toulon foap.
After the filk has boiled two or three hours in that water, and the bag has been often turned, it is taken out to beat, and then is wafhed in cold water. When it has been thus thoroughly wafhed and beaten, they wring it flightly, and put it for the fecond time into the boiling veffel filled with cold water, mixed with foap and a little indigo; which gives it that bluifh caft, that is commonly obferved in white filk.
When the filk is taken out of this fecond water, they wring it hard with a wooden peg, to exprefs all the water and foap from it ; after which they fhake it to untwift it, and feparate the threads. Then they fufpend it in the air in a kind of ftove made for that purpofe, where they burn fulphur: the vapour of which mineral, properly applied, gives the laft degree of whitenefs to the filk.

## The method of bleaching woollen fluffs.

There are three ways of doing this. The firft is with water and foap; the fecond with the vapour of fulphur; and the third with chalk, indigo, and the vapour of fulphur.

## Bleaching with foap and water.

After the ffuffs are taken out of the fuller's mill, they are put into foap-water a little warm, in which thcy are again worked by the frength of the arms, over a wooden bench; this finimes; giving them the whitening which the fuller's mill had only began. When they have been fufficiently worked with the hands, they are wafhed in clear water, and put to dry.
This method of bleaching woollen ftuffs is called the natural method.

Bleaching with fulphur.
They begin with wafhing and cleaning the ftuffs thoroughly in river-water, then they put them to dry upon poles or perches. When they are half-dry, they ftretch them out in a kind of flove very clofe, in which they burn fulphur, the vapour whereof, fpreading itfelf, ficks by degrees to the whole fluff, and gives it a fine whitening; this is commonly called bleaching by the flower, or bleaching of Paris, becaufe in that ciny they ufe this method more than any where clfe.

Bleaching with chalk, indigo, and fulphur.
When the ftuffs have been well wafhed in clear water, they throw them into a bucket of cold water impregnated with chalk and a little indigo, wherein the fluffs are well firred and agitated: then they take them out, and wafh them again in clear water, after which they hang them on poles: when they are half-dry, they put them into a fove, to make them receive the vapour of fulphur, which finiflaes their perfect whitening.
This bleaching, which is not the beft, though very agreeable to the eye, is called bleaching of Beauvais; becaufe the inhabitants of that city are the firft who found out this method of bleaching woollen ftuffs.

It muff be obferved, that, when woollen ftuffs have once imbibed the vapour of fulphur, it is a difficult matter to make it take a good colour in dyeing, unlefs it be a black or blue. The woolen dyers, in France, have the liberty to bleach all forts of linnen cloths, cottons, hemp, thread, camblets, ferges, ratteens, new and old ftamines, and even worfted fockings: Regulations of the month of Auguft 1669, art. 55 .

The manner of bleaching fine linnen cloths, with the method of preparing them, as practifed in Picardy, and particularly toward St Quintin.

After the linnens are taken from the loom, they are put to foak in clear water for a wbole day; when they have been well wafhed and cleaned of all the filth, they are taken out, and thrown into a bucking tub filled with cold lye, made of wood-afhes and water, which has ferved already.
When they are taken out of that lyc, they are wafhed again in clear water, and fpread in a meadow, where they are now and then watered with clear water out of fmall canals, which are along the meadows. They water them with fcoops, or hollow and narrow wooden peels, with a long handle: there fcoops are called gieters by the Dutch, who pretend to be the inventors of them.
After lying a certain time on the ground, they pafs them through a frefh lye poured on hot: this lye is differently made, according to the condition in which the linnens are.
Being taken out of this fecond lye, they are wafhed in clear water, and laid again on the meadow, all which feveral operations are repeated, till the limen is perceived to have acquired the defired degree of whitenefs.

## B L E

They are ofterwards put into a foft gentle lye, to make them recover the foftnefs, which the former more Gharp and frong lyese caufed them to lofe; and dierwards they wath them in clear water.
They next rub them with black foap, which begins to clean them from the greafe they have contracted, and finifhes whitening the felvages, which would never become perfectly white, without the help of foap.
Then they wafn them well to take off all the foap, and put them to foak in cow's-milk, the cream being firt taken off. This perfects their bleacbing, gives them all their foftnefs, and makes them caft a little nap. Being taken out of the milk, they are wathed again in clear water for the laft time. When they have undergone all thefe operations, they give them the firft blue; that is to lay, they dip them into water, in which a little ftarch has been feeped with fmalt, or Dutch lapis, of which the fatteft and palelt is the beft, for the linnens muft not have'too blue a caft.
The linnens being thus bleached after the manner we have related, the bleachers or whiteners deliver them into the hands of the merchants to whom they belong, who caufe them to be properly prepared.
Thefe preparations differ, according to the qualities of the limens: for there are fome which ought to preferve all their ftrength, and others whofe ftrength muft be leffened to make them clearer.
Lawns, or cambrics, are prepared with ftarch and pale fralt, diluted in clear water. They add fome other drugs, the quantity and quality of which is left to the workmen's knowlege and capacity.
Being thus prepared, they are faftened with ropes to poles fixed in the ground at fome diflance from each other. When they are three quarters and a half dry, they take them from the poles, and beat them on marble blocks with very fmooth wooden mallets; which is done to beat down the grain, and give them a more beautiful appearance.
After this they fold them into fmall fquares, and prefs them. When they come out of the prefs, the merchants put their numbers upon them, which are wrote or Atamped upon fmall bits of parchment, and tied to the felvage of the piece with filk of different colours, according to the merchant's fancy, who calls that filk his livery; each merchant having his particular colour, which he never changes.
After this they wrap up the pieces very neatly in brown paper of Roan well beat, tied with fmall packthread, which they commonly get from Holland. Then the linnens are in a proper condition to be fold, packed up, and fent to the places, where they are difpofed of
All the clear linnens of Picardy, fuch as plain; ftriped, or fpotted lawns, are prepared after the fame manner as thofe before-mentioned: except that thefe are beat, and not thofe of Picardy.
It muft be obferved, that, the fairer the weather is, the eafier are the linnens bleached. In fair weather they may be bleached in a month's time, but, in foul weather, fix weeks or more are hardly fufficient to compleat the operation.
Let it alfo be obferved, that all the linnens, of what kind foever they be, which are bleached in Holland, Flanders, and Picardy, are all dipped into cow's milk, after the cream is taken off; it being certain, that it is this white liquor which gives them that delicate whitenefs, fo much admired in the innens which come from thofe different countries.
It is cuftomary with the merchants who fend their linnens to the bleaching grounds of Flanders and Picardy, to mark them at each end with one or more letters of their names; which marks are made with thread of Epinay, worked with the needle; and, to faften at the places where thefe marks are put, fome fmall twifts made alfo of the fame thread of Epinay; which twits have a certain number of knots, at fome diftance from each other; each knot having it's particular value, according as every merchant thinks proper. The marks are put, in order to know to whom each piece belongs, and the twifts to remember the prices.

The method of bleaching common linnens, as it is practifed in Anjou.

Immediately after the pieces are taken from the loom, they. are carried to the whiffer, who puts them directly into a kind of wooden troughs, full of cold clear water, where, with wooden mallets, which are moved by a water-mill, they are fo well agitated and beat, that they are infenfibly cleared from all their filth and naftinefs.
Being taken out of the mill, they are fpread on a meadow, where the dew which they receive, during a week begins to bleach them.
Then they are put into a kind of wooden tabs, where they throw over them a common lee quite bot.
The linnens having thus gone through the lee, they take them out of the tub, to clean them again in the mill; then they fpread them a fecond time in the meadow, where they leave them a week, after which they give them a fecond lee: all thefe feveral operations are repeated, still the linnens have acquired a perfect degree of whiteriefs, Then they fold them

## B L E

up after a manner proper to each fort, and to the places for which they are deligned.

## REMARKs.

The linnen manufactures of thefe kingdoms, particularly of Scotland and Ireland, where it is their chief ftaple, cannot be too much cultivated and improved; it being the qua ity, as well as the reafonablenefs of the price, that will render it acceptable at home as well as abroad.
And, although every part of the procefs of this manufacture thould be executed to a pitch of excellency, fuperior to that of any other nation; yet, if the captivating beauty of whitenefs alone was wanting, that would prove impediment fuf ficient to the fuccefs of this general manufacture. Yet, to give this colour to it's perfection, every other previous branch of the operation mult be duly performed, or the admired whitenefs cannot be obtained. Thus the imperfection, in this particular, both of the Scotch and Irifh linnens, for a long time, confifed in the badnefs of the flax; which was by many afcribed to the want of a proper water, and extraordinary fecret materials, which the Hollanders and other nations had, and we could not come at. But, fince thefe countrics have fell into the Flemith method of raifing and managing flax, they have the more eafly come into their excellency of bleaching.
It is certain, indeed, that the goodnefs of the flax alone will not abfolutely fupply the defect of unfkilful bleaching, or of bad or improper materiais for that purpofe, though it may contribute to fet it off to greater advantage. In fhort, in any manufactural operation, which confifts of a variety of different parts, the ikilful performance of particulars affords reciprocal benefit to each other, and a general luftre to the whole.
The Scots, by the aid of public encouragement, introduced and brought to perfection the art of bleaching fine linnen, as practifed in Holland. At every public field, quantities' of fine cloth have been brought to as good a colour, as any whitened in Holland. But they mifcarried now and then in everal pieces; but it is now well known, that this is not owing to the want of fkill or induftry in the bleacher, but to the badnefs of the flax whereof the cloct is made.
Nor did they, 'till within thefe few years, bleach fo cheap as the Hollanders, but, at prefent, if I am rightly informed they do within a trifle, though, in that refpect, they have not had fuch public encouragement as the importance of the matter required, and a long while have laboured under many difadvantages, which the Hollanders did not. But from the wifdom and integrity of the truftees, appointed for the care of their manufactures, and the extraordinary zeal and indultry in their manufacturers, they have now arrived to a very great perfection in their method of bleaching for fine goods; for cloth under three fhillings per yard cannot bear the expence of it, nor does fuch cloth, indeed require fo high a colour. Although they have many public bleach-fields in Scotland, which are under very good regulations, and therefore excel in the art, yet there are alfo many private bleachers; and their cloth frequently differ fo much one piece from another, that fcarce one pack of goods of the fame finenefs, is to be had of the fame colour; but, was all the linnen of Scotland whitened in public fields, under proper laws, regulations, and penalties, all the fame ftaple would be alfo of the fame colour, and that country happily freed from the leaft apprehenfion of the ufe of any prejudicial material, which will very much advance the value of the Scotch linnens of every kind.
The Irifh linnen likewife, as well in the article of bleaching, as in atl others, is arrived to a very great degree of perfection, and they are daily making advances therein as well as the Scots.
The truftees of the limnen manufacture of this country have very happily experienced the effects of premiums, which they have wifely given for the improvement of this manufacture in every branch thereof; and it is certainly the intereft of England chearfully to promote the fame, according to it's merit. From the narrative before given of, the art of bleaching, we find it depends upon water, chalk, fulphur, lixiviums, foap, indigo; and I am inclined to believe, from what I have feen, on fome other materials, foreign materials, which are not fo commonly known, and which come confiderably dearer than any of the reft. But, if the particulars above enumerated be well chofen, and properly applied, it is more than likely that bleaching in thefe kingdoms might be carried on at lefs expence than it at prefert is. Wherefore to that end, $t$ would humbly fubmit the following fhort obfervations to confideration.
Qu. r. Whether all waters, made ufe of in this operation, fhould not be firft duly examined by the hydroftatical balance, or by water-poifes, in order to judge of the fpecific gravity of the water propofed, and thereby to determine it's goodnefs by it's lightnefs?
2. That as the fofteft waters, and thofe the leaf impregnated with grofs terreftrial matter, are experientially found to be the beft adapted for this ufe: Quere, Whether only ufing fmall quantities of chalk, for the purpofe before intimated, can anfwer fo good ends, as if very large quantities of it
were thrown into, and to ftand fome confiderable time in, thefe troughs, dikes, or canals, where water is ufed in bleaching grounds? And whether lixiviums made with this chalk and water would not be found more efficacious for bleaching, than the water ufed crude, as it commonly is ?
The reaton of this quere is grounded on the well known principle, that chalk will not only greatly foften the hardeft water, but that it is alfo a precipitator of a great deal of grofs terreftreity out of the water.
3. Whether lixiviums of a more kindly and efficacious nature, that what are commonly ufed, may not be made from fern-afhes, or other vegetable natures? And whether thefe falts of athes, of what kind foever may be ufed, would not operate fooner and more effectually if they were more cleanfed and purified than they generally are, and lixiviums made thereof after'fuch greater purification of the fixed falts?
4. Whether, according to the difference of the wood or combuftible matter employed for the making of pot-afh, not only better lixiviums, but better foaps for the ufe of bleaching, may not be prepared than what ufually are?
5. There are certain faline plants, that yield pot-afh in abundance, as particularly the plant kali; there are others that afford is in lefs plenty, and of an inferior quality, as beanftalks, \&c. But, in general all vegetable fubjects afford it of one kind or other, and may moft of them be made to yield it tolerably perfect, by burning a quantity of the matter; even the loopings, roots, and refule parts of ordinary trees, vine choppings, \&c.
6. But, befides the difference found in different vegetables for producing the falt required, as fome may naturally produce more or lefs of the faline, oily, or earthy principles, than others; another difference will arife, from the manner of burning the fubject, according as this is done with a greater or lefs degree of fire, or acceffion of the air. If a vegetable fubject be burned in a clofe ftifling manner, to a grey, or fomewhat blackifh or brown alhes, thele alhes, thus containing more of the oil of the fubject, will afford a more unctuous falt, that makes better foap, as well as better lixiviums for the ufe of bleaching. But, if the fubject be burned in the open air, which has every way free accefs thereto, the alhes will be white, or contain no part of the oil of the fubject ; and thus fuch falt will prove fitter for the making of glafs (where no oil is required) than of good lixiviums, or good foap for bleaching.
7. 1 he fixed falts of all vegetables, when reduced to abfolute purity, or entirely feparated from the other principles, appear to be one and the fame thing, at leaft not manifeftly to differ. Whence it thould feem, that, by a fuitable management, good pot-alh might be made in all places where vegetable matters abound, without our bleachers being under the neceffity of purchafing foreign pot-ah at a great expence. For if by examining Ruflia pot-afh, for example, we find, that it's fuperior excellence depends upon it's being clear of earth, or upon it's containing a large proportion of oil, or fixed falt, thefe adyantages may, by properly regulating the operation, be given to Englinh, Scots, or Irifh pot-afin; fo as, perhaps, to render the latter as good as the former. But, where the pot-afh of any remarkably faline vegetable is to be imitated, as that of kali fyppore, we would recommend a prudent fprinkling of the fubject with falt or feawater in the burning. And, by theie means properly diverfified, any principle that is naturally wanting in the fubject might be artificially introduced, fo as to perfect the art of pot-afh; whereon the art of bleaching fo greatly depends, as alfo that of foap-making: for, without foap, we find that bleaching cannot be performed. So that it becomes the intereft of the bleacher to be well knowing in the art of foapmaking, or, at leaft, he ought to be fo fkilled in the qualities of foap, as to be capable of judging, which kind is the fitteft for the purpofe of his operation, will come to him the cheapeft, and will, in concert with the other meafures requifite to be taken, blanch his linnen to the utmoft perfection.
To which intent fee the article Soap-making, where I fhall not only fhew the ordinary proceffes, but fuggef fome new methods, founded on experimental knowlege, to make foap better in quality, and cheaper than it generally is; as alfo to point out what kind of foap is the moft naturally fuited to the art of bleaching, and how bleachers may, at a fmall expence, take fuch meafures with the ordinary foap they ufe, as to render it the more efficacious for the intention required. See the articles Linnen, Fiax, Spinning, Lint-mills, Lapperg, Callenders, Rubbing-mille, and Wax, for it's method of bleaching.
Bleaching of hair, is performed by wafhing it, as linnen is done, in a fuitable lixivious water, and afterwards fpreading it upon the grafs. This lixivium, with the heat of the fun and the power of the air, brings the hair to fo extraordinary a whitenefs, that the moft experienced perfon may fometimes be deceived therein; though the artifice is pretty eafily detected, by boiling and drying it; which leaves the hair of the colour of a dead walnut-tree leaf.
There is likewife a method of dyeing hair with Brsmuth [fee that article] which makes white hair, bordering too much upon the yellow, of a bright lilver colour. This alfo VoL. I.
may be tried by boiling, the bifmuth not being fo fixed as to withfand it.
BLIND, a kind of falfe light, which traders commonly have in their ware-houfes and lhops, to prevent too great a light from diminifhing the beauty and luftre of their linnens and ftuffs, sce.
BLOMARY, or BLOOMARY, the firf forge in an ironwork, through which the metal paffes, after it is melted out of the mine.
BLOOD-STONE, or the LAPIS H\&MATITIS, is a mineral of a reddifh colour, hard, ponderous, with long pointed needles. This fone is brought from variety of places, there not being any iron mines wherein it is not found.
Chufe thefe ftones that are of the higheft colour, with fine ftrix, or needies, and as much like cinnabar as may be.
This mineral has fome ufe in medicine, as it is aftringent, deficcative, and good to ftop bleeding, ufed externally, or given inwardly in fine powder; the dole is from four grains to a drachm.
Mr Chares oblerves, in his Pharmacopoeia Chymica, page 82.3, That if you drive it over the helm, in a retort with fal armoniac, you may draw flowers of the colour and fmell of faffion, which are what they call the flores aromatici philofophorum: and moreover, you may make with it a chalybeate acid firit ; and, with fpirit of wine, a tincture and flowers; both which have great virtues, according to the before-mentioned author, to whom we refer.
It is faid this ftone has a fovereign virtue to ftop blood, from whence it derives it's name of lapis hamatitis, or the bloodftone.
This ftone being powdered, as the loadfone, enters the compofition of fome Galenic medicines.
Goldfmiths and gilders ufe it to polifh their works, whether it be upon filver, copper, iron, \&c.
There is alfo another kind of blood-ftone, called the red crayon, ufed by fuch as defign and draw fketches: it is like that of Spain, with this difference, that it does not appear fo fparkling with needles, but dull and unpolifhed, like earth.
This kind is in England, and there are two different forts of it; the one good, which is pretty tender, foft and eafy to faw or cut into crayons; but the other, not worth any thing, as being hard and gravelly, and will not admit of cutting.
In Bohemia, they extract an excellent iron from it; it is dug up in Germany, Italy, and Spain, but the laft is efteemed the beft. Pliny difinguifnes five kinds of it, according to the countries it comes from, and it's different colour and hardnefs: and others divide them from their outward appearance; fome are uneven and angular, as thofe of Spain; fome cluftered on the furface like bunches of grapes, and therefore called botryoides, as thofe brought from Harts-foreft in Germany; and others are formed in various convolutions, like the inteftines, or the outer furface of the brain.
BUOWING of Glafs, is performed by dipping the end of an iron blowing-pipe into the melted glafs, and, by blowing with the mouth, forming the feveral' works which are madè in the glafs-houfes, and manufactories of looking-glaffes. See the article Glass.
BLUE, that which is of a blue or azure colour.
Blue is one of the five fimple and mother colours, which dyers ufe to compofe the others.
Dyer's blue is made with woad that grows in Languedoc, and elfewhere: and fmall woad, called vouede by the French, which comes from Normandy, and indigo brought from the Indies.
Of thefe three drugs, the common woad is the beft, and the moft neceffary for dyeing. The vouede, though inferior in quality, frength, and fubftance, gives alfo a pretty good colour, bat the indigo gives but a falle colour; it may, however, be ufed, if not above fix pounds of it be mixed with each large bale of woad; and if it be not employed, 'till it has been well prepared in a great tub, and in the two firf chafing-dilhes. It is prohibited to ufe it otherwife than with woad, and without being prepared with proper lees.
The vouede can never be employed by ittelf, as having too little fubftance; nor can it ferve to correct the defect of indigo, unlefs it be mixed with woad: but, in cafe it be ufed with indigo only, it requires no lefs than one pound of indigo to 100 weight of vouede.
Some dyers, in order to heighten the colour of blue, ufe Indian and Braft wood, and orchel; but, by the ordonnance in France of the year 1669 , art. 5 , they are prohibited to ufe any of thefe drugs, and even to have any by them.
The blue is rendered more lively and bright, if the ftuff, after being dyed and well wafhed, be dipped into lukewarm water : but it is much better done by fulling the dyed ftuff with melted foap, and walbing it afterwards very clean.
Very deep blues are brightened by boiling the fuffs once in clear water, and then putting them into a decoction of cocheneal: but the azure, and lighter blues, would lofe their colour, and become grey, if they were put into fuch a decoction.
Stuffs, dyed blue, pafs immediately from white to that colou-,

## B L U

B L U
without any other preparation but what they have undergone at the fuller's mill.
In order to know whether the ground blue has been given to the ftuffs, the dyers are obliged to leave at the end of each piece a bluê rofe of the bignefs of a filver crown. Regulations of the year 166 g , art. 34 .
The mafter-piece of a dyer of the fineft fuaff confifts in extracting from woad a blue dye, from the deepeft fhade to the tracting from, and applying it to woollen fluffs. Regulations of the year 1669 , art. 5 .
The blue never fails, if the colour of it be good.

## Remarks

The art of dyeing in general in France, it is well known, is brought to a very great degree of perfection; and it is not at all to be admired that it fhould be fo, when dyers, in regard to every capital colour, are under fuch wife and politic regulations, in order to enable them to furpafs all other nations therein: and nothing is more certain than that no meafures can prove more effectually conducive to the reputation of their woollen and filken manufactures of every kind, than the fuperior delicacy, beauty, and luftre of their colours. By this means have they not only been enabled to beat England in their blacks and their blues, but in their fcarlets, and every other colour ; which, together with falling in with the tafte of the Turks in making cheaper fcarlet cloths than we, have enabled them to fupplant us fo greatly in the Turkey trade? Does not this confirm the neceffity that our artifts and manufacturers of every kind hould have the utmoft affiftance from the learned; I mean the philofophical learned, as well as due public encouragement from the ftate, to enable them to keep pace with, if not emulate and outvie, our induftrious rivals in the dyeing, as well as every other quality of their manufactures; they being the great fource of that treafure, and confequently of that power, which this nation at prefent does, or may hereafter ever expect to enjoy? See the articles Artificers, Manufacturers, Mechanics, and the Royal Society of London.
Painters-Blue, is differently made, according to the different kinds of painting it is defigned for. The ultramarine, blue afhes, and fmalt, are equally employed in oil, in frefco, in water-colours, and in miniature. Thefe three forts of blue are natural, except the fmalt, which has almoft as much of art as of nature in it. There is alfo an ultramarine which is all factitious, the making of which is explained under it's article. Indigo prepared is alfo a blue colour, ufed both in oil and in miniature. See Indigo.
All thefe forts of colours, either in powder, or diluted with oil, are fold in France by the druggifts.
The blue ufed by painters in enamel, and on glafs, is prepared by themfelves, each having his particular method of doing it.
They give the name of Dutch azure to that which is prepared at Amfterdam, and in fome other places of the United Provinces: it is more proper for linnens than for painting.
Flanders-Blue, is a greenifh-blue, feldom ufed but in landikips. It is otherwife called green afhes.
Blue. To give the blue to linnen fignifies, with the whitfters, or bleachers, to dip it into water wherein they have diffolved a little ftarch with fmalt, or Dutch azure. They commonly give two blues to cambrics: the firft is the bleaching-blue, given by the whitfers; and the other the fliffening blue, given by the merchants. See Bleaching, where the method of bleaching fine linnens is mentioned.
Blue is alfo ufed in the bleaching of filks, to give them that bluifh calt, which heightens their whitenefs and lufture. Silks are blued by dipping them in a tub of cold water, in which a little foap and indigo has been diluted.
Blue of Pruffia, or Pruffian Blue, is by fome reckoned as good as the ultramarine for painting both in oil and in water colours.

## RemARKs

The compofition of this blue was a fecret 'till the celebrated Dr. John Woodward, late profeffor of Phyfic in Gretham College, London, publifhed it in the Philofophical Tranfactions of the Royal Society of London; and which was communicated to him from Germany in Latin, the fenfe of which is as follows: Take of tartar and nitre crude, each four ounces; pulverize and mix them well together, and, by decrepitation, bring them into a fixed falt ; which being powdered very finely bot, add to it four ounces of throughly dried ox-blood, reduced to fine powder. Calcine the mixture in a clofe crucible, of which it may fill two third parts: then lightly pound the matter in a mortar, and throw it hot into two quarts of boiling water. Boil them together for half an hour; afterwards ftrain off the liquor, wafh the black remaining fubftance with frefh water, and ftrain as before; continuing to do thus 'till the water poured off becomes quite infipid. Join the feveral jiquors together, and evaporate them to two quarts. Diffolve an ounce of Englifh vitriol, firf calcined to whitenefs, in fix ounces of rain water, and filtre the folution. Diffolve likewife half a pound of crude allum, in two quarts
of boiling water; and add to this the folution of vitriol, taken hot from the fire; pouring to them alfo the firf lixivium whilft thoroughly hot, in a large veffel: a great ebullition and a green colour, will immediately appear. Whilft this ebullition continues, pour the mixture out of one veffel into another, and afterwards let it reft; then ftrain the liquor through a linnen cloth, and let the matter, or pigment, remain in the ftrainer; from whence put it, with a wooden fpatula, into a fmall new pot; pour upon it two or three ounces of the firit of falt; and a beautiful blue colour will inftantly appear. Let the matter be now well ftirred; then fuffered to reft for a night; afterwards thoroughly edulcorate it by repeated affufions of rain-water, allowing a proper time for the precipitate to fublide, and thus, at length it will become exquifitely blue. Laftly, let it drain upon a limen ftrainer, and dry it gently. This makes the paint called the Prufian blue.
N. B. This operation greatly depends on the calcination. The crucible muft firft be furrounded with coals, at fome diftance; that it may grow gradually hot, and the matter leifurely flame and glow. Let this degree of heat be continued 'till the flame and glowing decreafe; then raife the fire again, that the matter they glow with an exceeding white heat, and but little flame appear above the crucible. Lixiviums fhould be very hot, and mixed together with the utmoft expedition.

## Obfervations and experiments upon the foregoing preparation,

 by Mr. John Brown, chemift, F. R. S.In going through the foregoing procefs exactly, according to the proportions prefcribed, I obferved that, by a calcination of $\overline{3}$ iiij of blood dried, with $\bar{z}$ iiij of fal tartari, in two hours time that part of the operation was over, and a black fongy fubftance remained in the crucible weighing, $\overline{3}$ iiij; a diffolution of which being made in boiling water, and afterwards filtered, the remainder, when dried, weighing 3 ix avoirdupoife, the former having been weighed by the fame kind of weight. The lofs and filtration of the vitriol and allum is not worth taking notice of, they having both been yery clean before they were diffolved, the mixtures being made as prefcribed, with the addition of the fpiritus falis, the product was a very fine blue, which, when well edulcorated by frequent wafhings, and afterwards throughly dried, weighed $\bar{\xi} \mathrm{i}$, or a little more, and intirely anfwered the character the author gave of it.
Among the feveral experiments that were made with thefe liquors, I mean the lixivium with blood, the folution of vitriol, the folution of allum, and the fpirit of falt, though they always produced a blue; yet that blue differed in degrees of colour, according to the varied proportions of the vitriol and allum; and the colours produced from thefe feveral proportions were each of them improved by the addition of the fpiritus falis. I thall mention only two of the feveral I tried; in one of which the allum was intirely left out, and a pale blue produced; in the other, the proportions of vitrivl and allum were equal, and a very deep blue was produced. Thefe differences in colour, arifing from the feveral proportions of the vitriol and allum, are only mentioned to confirm the truth of the author's prefcript, as being the moft exact and beft proportioned to produce the fineft colour of any I have tried. The only misfortune he takes notice of as attending his prefcript, is what may happen in the calcination.
It would be curious to know what gave the firl hint for the production of fo fine a colour, from a combination of fuch materials; efpecially when we come to confider, that the blood has the greateft and principal thare in this furprizing change. I doubt not but blood, or fleth of any kind, would produce the fame effects, but have reafon to believe the latter would not produce fo beautiful a colour as the former. I purpofely dried fome beef, freed from it's fkin and falt, and purfued the fame courfe as with the blood; but there was a fenfible difference to be obferved during the calcination, and a very manifelt one in the beauty of the two colours, when finifhed.
To prove the fhare the blood has in this change, the following experiments (fome of which were fhewed before the Royal Society of London) may be convincive. The folution of allum, mixt with that of the vitriol, produces no alteration of colour: if to thefe you add the firitus falis; the appearance is the fame; but, if to the whole you put the lixivium with blood, there precipitates a blue. If you fubititute, intead of the lixivium with blood, a lixivium made with the fame falt of tartar only, which then becomes an ol. tartari, and, after the folution of the allum with that of the vitriol, you pour on this ol. tartari, there follows, indeed, a precipitation, but of no colour ; and, if you add the fpirit of falt, it fo ftrongly attracts what is precipitated, as to render the muddy mixture perfectly clear. The very fame effect will follow if any volatile alcalious fpirit is made ufe of as a precipitant, or any volatile falts diffolved in water; nor can the blood itfelf be fuppofed to communicate fuch change from any fuch properties, the heat of fire it undergoes in the calcination being fufficient to throw them off.
In the calcination of the dried blood and falt of tartar it was obferved, that these was a lofs of juft half. In is diffoult to
determine exactly what quantity of either was loft by this calcination, but it will eafily be granted, that there was loft a far larger quantity of the blood than of the falt of tartar; and that is obvious from an experiment, by which, when the falt of tartar was calcined by iffelf, with the fame degree of heat, it loft lefs than $\frac{1}{7}$ part; whereas, when the dried blood was calcined by itfelf, it loft more than $\frac{1}{8}$. The blood, in calcination with the falt of tartar, communicates it's tinging quality to the falt, or that quality is extracted from it by the alt, and pafles with it in it's diffolution in the boiling water To prove this fome dried blood was calcined by itfelf, and a ftrong decoction was made of it in water, and afterwards filtred : this, when mixed with the former folutions, produced little or no alteration; but, on the addition of the firitus falis, changed to an amber colour, without any precipitation When this liquor was mixed with the ol. tartari, and poured to the former folutions, it cauled a precipitation, but no colour ; and the $f_{i}$ iritus falis, as in the other experiment, made the liquor clear again, but left this alfo of an amber colour The change of colour is not effected in any of the materials, except in that of the folution of vitriol; fo that the allum feems only to be of ufe in fixing the colour, as it is often ufed by the dyers for that purpofe, and the fipitus falis gives it a deeper dye: for, if the lixivium with blood be poured to the folution of allum alone, there will fall a fediment a little on the purple, to which, if you add the firitus falis, it change the colour, and the fediment is a brown
So much the fame changes will be produced if you pour the fpiritus falis to the lixivium, but not the leaft appearance of a blue; whereas, when the lixivium is poured to the folution of vitriol, there immediately follows the blue, which is ftil heightened by the addition of the firitus falis. It will not be improper to take notice, that, as the author orders all the liquors, except the firitus falis, to be boiling hot, when mixed, fo it is certain the colour is thereby more immediately produced, and looks more beautiful; but moft of the experiments here mentioned were made with the liquors cold, and the colours came to their beauty with a little walhing. In one of the experiments with the liquors cold, after the lixivium with blood had precipitated the blue in the mixture of allum and vitriol, by pouring in a little more of the lixivium, the blue all difappeared, and an ugly muddy colour was left; but the addition of the firitus falis foon dicharged that, and the blue returned. In calcining the beef and falt of tartar, I found the matter left in the crucible to weigh juft half of the whole mixture, as in that with the blood; but after the boiling it in water, the refiduum in the filtre, when dried, was very near $\frac{1}{3}$ lefs in proportion than the other: from whence may be reafonably inferred, that the falt of tartar holds a larger hare of the beef in the one operation, than of the blood in the other.
Having, in the former part of this account of the Pruffian blue proved, by the experiments there mentioned, that the folution of vitriol was the only fubject among thofe ingredients, that the lixivium of blood produced this change of colour in it; and having fince confidered that the vitriol, made ufe of in this preparation, is no more than iron diffolved by a liquor running from the pyrites, when expofed to the weather, which is afterwards boiled up and thot into cryftals; it feemed to follow, as a natural confequence, that this metal is the fubjef on which the lixivium of blood produces the change ; and this thought gave occafion to the following experiments on metallic bodies, in order to obferve if the fame change of colour could be produced in any of them.
To a folution of filver in aqua fortis was poured the lixivium vf blood, which occafioned a coagulum of a pure flefh colour. The lixivium made with flefh produced a whitilh coagulum, and the ol. tartari (which was continued to be ufed by way of comparifon with the other lixivia) a much whiter. By the addition of the firitus falis to each of thefe, the bloom of the fleh colour was taken off in the firft, but fuffered no other change. In the fecond the coagulum was a little tinged with blue; and in the third, the white was manifeftly improved. The bluin tinge in the fecond of thefe experiments cannot intirely be affigned as the effect of the lixivium with fiver; when thus diffolved, whether precipitated with falt water or ol. tartari, it will, after it has flood fome time, contract a bluifh tinge, and this from an alloy of copper, from which it may not be intirely freed.
The fame liquors were made ufe of to precipitate the mercury in the mercurius fublimatus corr. diffolved in water; the confequence of which was, that the lixivium with blood produced a pure yellow ; the lixivium with flefh an orange colour ; and the ol. tartari a dingy red. The addition of the fpiritus falis to thefe made fome very odd alterations; for the firt changed it's yellow colour for an orange; the fecond, it's orange for blue; and the third became quite clear again without any colour. The blue colour in the mixture of the lixivium with flefh, and folution of fublimate, may be accounted for from the vitriol in the compofition of the fublimate; but it will not be fo eafy to give a reafon why the fame colour fhould not have been produced from the lixivium with blood, and the fame folution.

Copper, when diffolved in aqua fortis, tinges the water of a green colour ; and if to this you pour the two lixivia of blood and flefh, when you add the fpiritus falis, they both change; and become of a colour not unlike the copper itfelf before it is diffolved in the aqua fortis. If the ol. tartari be -poured to a folution of the copper, the coagulum is a pale green, which coagulum the fpiritus falis diffolves, and leaves the liquor clear, but green, as before precipitation.
Tin-glafs (an imperfect meral) diffolved in aqua fortis, and mixed with the lixivium of blood, made a milky coagulum; and, by the addition of fpiritus falis, after fome time ftanding; it's upper furface changed to a light blue. The lixivium of flefh and the ol. tartari produced both white coagula, which the foiritus falis fcarcely alters.
Lead diffolved in fpirit of vinegar produceth much the fame white coagulum, when mixed either with the lixivium of blood, fefh, or the ol. tartari, nor doth the fpiritus falis make auy alteration.
By all thefe experiments it is pretty evident, that not any of thofe metallic bodies were affected by the lixivium of blood, fo as to produce this fine blue. The two metals untried are gold and tin, the latter of which, when diffolved in the fpirit of vinegar, has fo near a refemblance to lead diffolved in the fame menftruum, that, in all probability, the experiments would anfwer much alike in both. What may be expected from gold I am not yet fo well affured of, as I am from iron, which, when diffolved in fpiritus vitriol, will anfwer all the experiments that have been tried with the folutions of vitriol, and produce as fine a colour; nor can this be owing to any property in the diffolvent itfelf, which, though drawn from the fame kind of vitriol all along made ufe of in thefe experiments, yet is fo altered by the violent fire in the production of it, as not to anfwer many trials to the vitriol itfelf. May we not, therefore, conclude, that iron is the metal that is the fubject of this beautiful colour produced by means of the lixivium of blood?
Monfieur Geoffroy the elder has, by the Hiftory of the Royal Academy of Sciences at Paris, for the year 1725, difcovered a method of making this blue, with good fuccefs, by the means of charcoal alone, to be fubflituted in the place of ox-blood, and with this profitable circumftance, that it will yield almoft twice the quantity of blue, and of a deeper colour. He alfo makes fome variation in the foregoing procefs, not fuffering the calcined mixture of alcalif falt and blood, or coals, to cool: he only expofes the fecula to the air, ftirring it now and then : nor has he any occafion for the firits of falt: according to his method, it is enough that the degree of calcination of the alcali falt and coals be very exact.

## Further Remarks.

The method of making the Pruffian blue in perfection has been held and purchafed as a very valuable fecret, both in England, Germany, and cliewhere; but it is now got into feveral hands. It's procefs is very extraordinary, and could fcarce, perhaps, be derived à priori from any reafoning upon the nature of colours. It is allowed an excellent blue pigment, and by fome preferred to ultramarine; though it's permanency might have been fufpected, from the vegetable and animal matters ufed in it's preparation, if the colour did not feem wonderfully fixed by the operation, whish may reafonably be alcribed to the allum.
A great variety of colours are prepared by the means of animal matters, and more particularly by the means of urine, which, when it has ftood to ferment, or putrify, ferves to extract, change, or fix the natural colours of fome bodies, and to heighten the colours of others. Thus it is uled in the preparation of the ordinary blue called orchel: it is alfo ufed in the changing or fixing of turnfole, fo as to make a moft elegant red from the fun flower : it is likewife a principal ingredient, along with indigo, in making that noble, fixed and durable blue, for the flaining of callico; a colour that firft appears green, but by wafhing with foap, changes, and fixes into a lively blue.
Certain chemical preparations from animal fubjeets are alfo employed for extracting, ebanging, or heightening the colours of various bodies. Thus the alkaline, or volatile, firit of utine, blood, bones, \&c. extracts a fine blue from copper, changes a green folution of copper to a purple, and heightens the red of cocheneal. And doubtlefs the prefent ftock of colours might be confiderably enlarged, or improved by a prudent choice of animal menflruums.
By animal menfruums we mean both the natural and artificial kind. The natural are fuch as blood, ferum, galls, urine, faliva, rennet, whey, butter-milk, \& \&c, moft of which, being properly employed, will either difcharge, or produce, colours. Thus recent urine difcharges the common ink out of linnen; the faliva difcharges red ink; butter milk takes ftains and mildews out of linnen, sce. blood, we fee by our prefent experiments, affords a rich and beautiful blue ; and gall is a natural yellow, which may deferve to be treated as blood in making the Pruffian blue.
Thefe natural animal menfruums, or other animal fubfances, being chemically treated, may afford a great variety both of
fimple and compound tiquors, or new artificial menfruums, for farther improving the bufnefs of colours, dyes, and fains. Thus, as putrified urine affords an alkaline fpirit, by diftillation, that ferves to produce, alter or deftroy, a great number of colours; fo, likewife, might the liquors obtained by difillation, from recent, or fermented whey, butter-milk, stc. And, by varioully compounding thefe feveral fubftances, or liquors, even by random trials, or chance experiments, difcoveries in colours might be made, as in the prefent experiment of Pruflian blue: though we have a much greater dependance upon conducting fuch experiments in a rational manner, or in the way of an art, formed upon a competent knowledge of chemical operations, with their productions and effects; which will enable the enquirer to reafon, by analogy, from one experiment to another, and thus lead, in a fure and guarded manner, to new profitable inventions and difcoveries. Thus, for inftance, the chemical operator found that common bones, burnt only to blacknefs, affords the bone-black, it is very eafy to transfer the experiment to ivory, whereby a better black is produced. And thus, upon finding that dried ox-blood has fo great an effect in making the Pruffian blue, we are naturally led to try the fame experiment with the blood of different animals, or other concreted animal juices, as gall, feathers, flefh, leather, 8 xc . or the intire bodies of certain infects, fifh, birds, \&c. And this thould be done with proper diverfifications of the ingredients, and their proportions; all along carefully noting the feveral phrenomena and wents, which will conftantly afford light and inftruction to the mind, for the better regulating and conducting of the enquiry, 'till it ends in a fatisfactory difcovery of the point aimed at.
BOA-ATI. This is a Malayan word, which fignifies a fruit Thaped like a hart. It is a dry fruit, which is produced on a tree that is to be found no where but in fome of the Mollucca iflands, and particularly in that of Ternate. It is naturally of a middling fize. The natives of thofe illands call that tree foulamou (or rather, according to the Englifh pronunciation, foolamoo) the Dutch fpell it foelamoe, which, according to their pronunciation, has the fame found; for the dipthong $\propto$, in their language, founds like ou in French, and like oo in Englifh. We make this obfervation, becaufe the French, and other travellers, do often commit blunders in foreign words, or names, becaule they do not pronounce them like the natives. It is fo much the more proper to know this, as it will teach the reader to pronounce the names which he will meet with in feveral places of this work, and which the Dutch have given to divers merchandizes, that are yearly imported from the Eaft-Indies in their company's fleet, of which they diftribute printed catalogues through all Europe.
The fruit of the tree called foolamoo is very much efteemed as a medicine through all the eaftern parts of the Eaft-Indies; that is to fay, the peninfula beyond the Ganges, as far as China, and in all the Sunda and Molucca iflands, where they drive a great trade therein, on account of it's excellent qualities againt fevers, pains in the flomach, cholics, \&c. Many people in thofe countries look upon that fruit as a remedy for the cure of feveral other difeafes. It is furprifing that the Dutch, who ufe it often in thofe iflands, have not yet introduced it into Europe. It's virtues, as is pretended, do by far excel thofe of the Bean of St Ignatius, which grows in the fame places, and with which the Spaniards of the Manilles have made us acquainted. See Bean of St Ignatius.
The boa-ati is a fruit almoft round, flattened on both fides, and fomewhat thickifh in the middle, of the fize of a thumb's nail, or fomething larger, floped on one fide; and a little peaked on the other, which makes it refemble a heart, whence it obtained it's Malayan name ; for in that language boa fignifies a fruit, and ati a heart. It is of a feuille-mort, or fillemot colour; and, when carefully obferved, though dry, we difcern that it is properly a capfule, with two cavities, each of which contains a very fmall feed. Finally, it's talte is very bitter, though not at all uripleafant. The dofe commonly given is a whole capfule, but in difficult cafes they give even three or four. Mr Rumphius, whofe hiltory of the Plants of the Molucca Iflands was in the prefs at Amfterdam in the year 1740, calls this fruit, rex amarorum, king of the bitters. The Indians of the Molucca and Sunda ines make a very great ufe of bitters in phyfic: and this begins, of late, to be pretty common alfo in Europe; but there are fome bitters more effectual than others, as appears from the quinquina, or Jefuit's bark. If the boa-ati came once to be known in Europe, the Dutch Eaft-India company would, no doabt, reap a very great benefit from that drug in their trade, fince they atone are in pofleffion of the countries where it grows, as well as of thofe where moft fpices are to be found. It was not improper to give an account of that drug in this place, that an opportunity may from thence be taken to import it into Europe. There are, in the hot countries, a thoufand remedies, naturally produced, which are always too late difcovered ; but often, for want of knowing how to ufe them, they never come to have the reputation they deferved.
BOARD, a long piece of timber, fawed thin, for building, and feveral other purpofes. See Timber.

The tress, of which boards are chiefly made are the walnut, beech, oak, fir, pear-tree, and poplar. See each of thefe articles, where you will meet with an account of the length, breadth, and thicknels of the boards fawed from thofe tiees, as allo of the ule for which they may be proper.

The trade of boards at Amfterdam.
The trade of boards, as well as of other timber for joiners, carpenters, and coopers, is one of the moft confiderable that are carried on at Amfterdam. We mention it in feveral places of this Dictionary: we fhall fpeak heie only of the trade of boards which they drive in that city.
All the boards are fold by the hundred, but in meft of them there are more or lefs boards in a hundred.
The boards of Chrittiaan are fold for about 56 guilders per 100, 126 being reckoned to the hundred.
The boards of Cooperwyk (perhaps it thould be Oofterwyk) about 65 guilders per 100,132 being reckoned to the 100 . The boards from the north for about 48 guilders per 100 , and alfo 132 to the 100.
Laftly, the boards of Wefterwyk are fold for about 60 guilders per 100, 124 to the 1 co.
N. B. All mafts, timber, boards, of the growth, production, or manufacture of Mufcovy, or Ruffia, or of any of that imperial dominion, mult be imported only in thips belonging to Great-Britain or Ireland ; except fuch hips as are of the built of the country whereof the faid goods are the growth, production, or manufacture; or of fuch port where the faid goods can only be, or moft ufually are, fhipped for tranlpor, tation; on forfeiture of fh ip and goods. 12 Car. II. cap. 18. §. 8. See Norway Trade.
BOAT, a veffel worked upon rivers and lakes. (In our language that word fignifies chiefly a fmall open veffel; but we are obliged to take it here, in a more extenfive fenfe, to fignify even covered veflels; and we are authorized fo to do by cuftom, fince even the fhips which fail with the mail to Holland, Portugal, \& c . are called boats, namely packet-boats.)
In this, large fenfe, therefore, a boat is a veffel, either failing, or worked by men, drawn by horfes, on rivers or lakes, and carrying merchandizes, or provifions, from one place to another. The fructure, and even the names of boats, are different, either according to the ufes they are defigned for, or according to the provinces in which they were built.
The boats which navigate on the river Peine are large, long, and ftrong veffels, with pretty high fides; they come from Roan, and from the river Oife, and are commonly ufed to carry great loads of wood for fuel, and other goods. They call them foncets.
The boats which come from the river Loire are called chalands; they are narrow, and neither very long, nor very high, becaufe of the canals and Iluices, or locks, through which they muff pafs. They ferve to carry wines, and other productions and merchandizes of the provinces which lie near the Loire and the Allier.
The boats of the river Marne keep the name of that river, and are talled Marnois : they are flat and middle-fized. They are commonly laden with wine, corn, and timber, from the province of Champaigne.
The fage-boats, called in French bateaux-coches, and more commonly coches-d'eau, water-coaches, are large covered veffels, whichlferve, particularly on the river Seine, for the conveniency of travellers, and for carrying all forts of merchandizes. The names of them are, the pallage-boat, or watercoach, of Sens, of Auxerre, of Montereau, and of Fontainbleau, or Valvin.
The boats of the mafter ferrymen at Paris are called flotes. The ordonnance of that city, made in the year $\mathrm{r}^{6} 72$, injoins them to keep their boats always provided with flaves and oars, and to have a fufficient number of boats ready at the places and ferries appointed by the provolt of the merchants and echevins. ${ }^{\text {a }}$
The firhing-boats on rivers are bardly known under any other name but that of bachot. They are provided wth a pair of oars, a fraff, a pole to faften the boat in the river when they are filhing, a maft and fifhing-lines.
The ordonnance of Lewis XIV, made in December 1672, and quoted above, contains a great many articles concerning the places where the boats laden with merchandizes, which arrive at Paris, are obliged to fop, when there is no room for them at the ufual keys. There are other articles relating to the clearing of the keys, after the boats are undulen; and fome alfo about boats overfet or funk at thofe keys, as well as for the carrying off, marking and felling of the wrecks.
Some articles in the fame ordonnance, regulate the rank of the boats in the river, either going up. or coming down: others, what is to be obferved in paffing chrough bridges or harrow paffes, and which boats are to give way.
Other articles relate to the time when the boats are to come to the keys, to the declaration of their arrival; to the unlading of their merchandizes, to the demands which merchants may have on the boats, for mifreckoning, lofs, of other accidents which befel the faid merchandizes through the fault of the boatfiten, carriers, or mafters of the boats;

## B O D

in fame the ordonnance is declared, in what cafes the boats are not anfwerable for the loffes.
Laftly, there are fome articles which determine what time the boats ought to continue at the keys, according to the goods they are laden with.
With regard to thefe matters of trade by water, the reader may confult the firft, fecond, third, fourth, and fixteenth chapters of the faid ordonnance, or the articles of this Dictionary, where we mention the carriages and carriers by water, the narrow paffes of rivers, the clearing of keys; the bridge-matters, the mooring-places, the bridge-officers, floats of wood, and the like, which will be found in their alphabetical order.
Poft-Boats, are boats eftablifhed on the river Loire, for the conveniency of the public. They are long and narrow, and go very faft. There are fome allo on the Rhône, which go from Lyons to Avignon in twenty-four hours. See the article Post
Boats of Holland. In almof all the feven United Provinces, there are boats which ferve for public carriages, which fet out from every city at all hours of the day, and carry people very conveniently.from one place to another, at a very imall expence. They are long, narrow, and covered, and can contain niear fixty perfons; each boat is drawn by one horfe, and has but two men to manage it; the one fits at the helm, and the other takes care of the rope; the horfe is generally rode by a boy. There are fome alfo which fet out at a certain hour in the night. There is in thefe boats, on the fide of the poop or ftern, a room, which can eafily contain fix perfons, and is feparated with boards from the reft of the boat; it has glafs-windows, whereas the other openings are only flut with oil-cloth in bad weather. There feparate roomis are called roefs in Dutch, which they pronounce roof: to that a perfon who would go, for inftance from Amfterdam to the Hague, takes a place in that room, or even the whole room, if he pleafes; gets into it at eight of the clock at night; where he finds cufhions to lie upon; and is fure to arrive the next morning at the Hague. . But this muft be undertood of the boats which carry metchandizies; for in thofe defigned for paffengers only, in each of which there is alfo a privite room, a man is obliged to change boats feveral times. From Amfterdam to Hacrlem, he muft change boats half way; becaufe the canal there is cut by a dyke. At Haerlem, he muft crofs the town to get to the boat that is to carry him to Leyden. At Leyden, he muft again crofs the town, to meet the boat in which he is to go to the Hague. All this can be performed in ten hours and a half; for, at eight o'clock precifely, a boat fets out from Amfterdam for Haerlem, where it arrives about half an hour after ten: at eleven a boat fets out from Haerlem for Leyden, and arrives there at three in the morning: half an hour after three a boat fets out from Leyden, and arrives at the Hague half an hour fter fix.
There is fo good an order kept, that at the ringing of a bell the boat muft fet out immediately, without waiting for any paffenger. There are few countries were people can travel fo conveniently as in Holland.

## REMARKS.

Thefe regulations feem calculated to anfwer two ends of no little confideration: (土.) That of the conveniency of trade, even in the minuteft cafes of water-carnage, which makes merchandizes come cheaper to the hands of the confumer. And (2.) For the fpeedy, convenient, and certain accommodation of travellers, to induce them either to fee the country and fpend their money among them, or to facilitate the means of a commercial correfpondence for the benefit of thefe ftates.
BOCAL, or BOCCALE, liquid meafure ured at Rome. It is properly what they call in France a bottle, which with us is about half a gallon wine meafure. It holds a little above a Paris pint, or half a gallon; feven bocals and a half make a rubbe, or rubbia; and thirteen rubbes and a half make the brente, which therefore holds ioi $\frac{1}{2}$ bocals. (Monfieur
 tiplied by $7 \frac{1}{2}$ makes 101 $\frac{1}{4}$.)
BOCKING, or BOKKING. Thus they call, in Holland, what we call red herring in Englifh, and the French hareng fumé, or foret, fmoaked herring. The new lift, or tariff of Holland, diftinguifhes three forts of bocking, namely, the bockings in general, thofe that are catched thirteen days after Candlemas-Cay, and thofe of May, which are alfo called Mey bocking. (Mey in Dutch is the name of the month of May.) Thefe three forts of herrings are free in Holland from any duty of importation: as for exportation, the duty differs: the firft fort pay at the rate of one guilder and ten divers per laft, of 10.000 herrings; the fecond 15 ftivers for the fame laft, and the third only three fivers.
They import into Holland great quantities of our Englifh red herrings, which they efteem much more than their own. EODY, is faid in general of feveral perfons who compofe a jurifdiction, or a company or corporation: [in this fenfe we fay in Englifh a body corporate.] Thus in France they fay,
Vor. I.

## BOH

the body of the city [le corpes de ville], the body of; the merv chants, the body or community of arts and tradec, to fignfy the concourfe and affembly of all thofe perfons, who, by employment, privileges, or freedom, have a right to enter, or to be called into thofe companies.
The body of the city of Paris is compofed of a governor, the king's lieutenant, a provoft of the merchants, four echevins, or fheriffs; the king's attorney, twenty-fix counfellors; the recorder, fixteen aldermen, or quarteniers, as they call them in French; an uher of the audience, and fix commif-fary-ulhers.
The provoft of the merchants, affifed by echevins, and the king's attorney, take cognizance of all the difputes which arife amongt the merchants, with regard to the merchandizes which arrive by water on the keys.
There are at Paris fix bodies or companies of merchants, who are looked upon as the chief channels, through which the whole trade of that great city is carried on.
The firft is that of drapers.
The fecond that of grocers, or druggifts,
The third that of mercers.
The fourth that of the furriers.
The fifth that of the hofiers.
And the fixth that of the gold and filverfmiths.
On the 24th of December, 1694, there was made by the king's council a remarkable decree, by which all judges are forbidden to pronqunce, any fentence for apprehending the perfons of the mafters and wardens of any of the fix bodies of the merchants of Paris, in order to compel them to produce the merchandizes by them feized in their vifitations; and all uifhers or tipftaffs, and all other officers, are alfo forbidden to forice them to it ; with liberty, however, for them to fee fuch fentences executed upon the keepers of their offices, with whom the merchandizes feized are depofited.
The general affemblies of thefé fix bodies of merchants are commonly hed in the draper's office or hall, who have the fole right to call them, becaule they bold the firft rank.
When there is occafion to call an affembly, or bufinefs which concerns the fix bodies in general, the mafters and wardens of the drapers company fummon the five other companies to come to their office; thefe companies generally fend thi; ther two deputies, chofen out of the wardens of each body; and when any of thefe five bodies has fome bufinefs of confequence, which concerns that in particular, and requires the concurrence of the other bodies, the mafters and wardens of that company addrefs themfelves to the firft grand warden of the drapers, to demand a general allembly of the fix bodies.
The firft grand warden of the drapers company always pre: fides, or is chairman, in the affemblies of the fix bodies.
The mafters and wardens of the fix bodies of merchants have the honour to carry the canopy over the heads of kings, queens, and other princes, princefles, and lords, who make hèir públic entry at Paris.
The maffers and wardens of the drapers company, as reprefenting the firft body, begin with taking up the canopy before the throne, which is commonly erected without the bars of St Anthony's-gate; and the other five bodies take it up by turn's, the one after the other, according to their rank; fo that the body of the gold and filverfmiths are the laft who hold it, and carry it into the Louvre.
The fix bodies of the merchants of Paris have, for their coat of arms, a man fitting, and holding in his hands a bundle of ficks tied together, which he endeavours to break, with this motto, Vincit concordia fratrum ; that is to fay, The concord or union of brethren overcomes; hinting thereby, that, as long as the fix bodies of merchants fhall continue united, their trade will flourifh, and their privileges will be preferved to them.
It muilt be obferved, that the corporation of wine-merchants at Paris has made, from time to time, feveral attempts to be erected into a feventh and laft body of the merchants of Paris; but the fix bodies have always oppofed it, fo that the wine-merchants can be looked upon only as a corporation of merchants diftinguifhed from the others, by having matters and wardens, who have the liberty to wear gowns of black cloth, faced with velvet, like thofe of the fix bodies.
Sody is alfo faid, in France, of the commonalties of arts and trades, that is to fay, of all forts of tradefmen and workmen, who have been united into feveral bodies. They are more commonly called commonalties in French, and companies in Englifh. See the article Company.
BOHEA, one of the beft kinds of tea that come from China. There are three forts of it. The firft is bought at Quatung or Canton, for 80 taels per pic ; the fecond for 45 , and the third for 25 . The Dutch fell it again, the firft for 180 patachs, the next for 120 , and the lalt for 75 . See TEA.
There is a great variety of teas, as they differ in colour, favour, and in the fize of the leaf. Thefe are, however, all the leaves of the fame tree, only differing according to the feafons at which they are gathered, and the manner of the drying. 'Twere endef's to enumerate thefe feverd fubdiftinctions; the general divifion is into three kinds : the ordinary green tea, the finer green tea, and the bolea; to the
one or the other of thefe may be referred all the other kinds. The common green tea is gathered in April; the bohea in March, while in the bud, according to F. le Compte, and hence proceeds the fmallnefs of the leaves, as well as the depth of the tincture it gives water. It is of a darker colour than the others, often blackilh, and is of the freil and tafte of the others, but with a mixed fixeetnefs and aftringency, in come degree refembling the tafte of the terra Japonica, which the green tea wants. The green teas have all fomewhat of the violet flavour; the bohea has naturally fomewhat of the rofe fmell.
Kompfer fays, the tea-tree is a fhrub that grows but flowly; it rifes to fix feet and higher, has a black, woody, irregular branching root. It's bark is dry, thin, weak, chefnut-co-loured, greyifh on the ftem, and fomewhat inclined to green on the extremities of the twigs; it is firm, and adheres clofely to the wood, and is covered with a thin ikin, which fometimes loofens of itfelf, as the bark grows dry. This being removed, the bark appears of a greenih colour, and fmells fomewhat like the hazle-tree leaves, but more difagreeable and offenfive, and of a bitter, naufeous, and aftringent taffe.
The wood is hard and fibrous, of a greenif colour, inclining to white, of a very offenfive fmell, when green; the pith, which is very fmall, fticks clofe to the wood.
The branches and twigs are numerous, growing diforderly, flender, of different fizes, though, in the general, fhort, wanting thofe rings which in trees and flrubs denote their yearly'growth; thick befet with leaves, on thort, fat, green, oot-ftalks, roundifh, and Ymooth on the back, but hollow, and fomewhat compreffed. On the oppofite fide fand the leaves: thefe are of a foft fubftance, between membraneous and flelby; in fubftance, Chape, colour, and fize, when full grown, like the Morella cherry-tree; but, when young and tender, they refemble (except in colour) the fpindie-tree, with red berries, called enonyrnus.
The larger leaves are two inches long, and one broad, or near it; from a fmall beginning they become roundifh and broader, and then taper in a fharp point. Some are of an oval fhape, fomewhat bent, and irregularly undulated lengthways, depreffed in the middle, with the extremities rolled backwards; they are fmooth on both fides, of a dirty green colour, fomewhat lighter on the back; where the nerves being raifed pretty much, leaves fo many hollows and furrows on the oppofite fide; they are ferrated or indented, the teeth being a little bent, hard, obtufe, and fet clofe together, but of different fizes; thoy have one conipicuous nerve in the middle, to which a deep furrow anfwets on the other fide. It is branched on each fide into five, fix; or feven thin tranfverfe ribs, of different lengths, and bent backwards near the edges of the leaves; fome fmaller veins run between the tranfverfe ribs.
The leaves, when frefh, are deftitute of fmell, and are not, as the bark, ungrateful to the tafte, being aftringent and bitterifh, but not naufeous. They differ in fubftance, fize, and flape, according to the different age, fituation, and nature of the foil wherein they grow. Were they infufed and drank, when they are frefh and green, they would much affect the body, efpecially the hands; for, being narcotic, they would occafion a trembling and convulfive motion in the herves; but they lofe this bad quality in the drying and rolling, whith expreffes that clammy, yellowifh, acid. juice, which caufes thefe tremors; fo corrofive fometimes is this juice, that it excoriates the hands of the roaters and roliers.
The branches are thick befet with flowers, much like our wild rofes, about an inch in diameter, having little fmell, compofed of fix round hollow petals, or leaves, ftanding on a foot-ftalk of an inch long, which, from a flender begiming, infenfibly grow larger, and end in an uncertain number of fmall, round fquame, or leaves, which ferve inftead of the calyx. Thefe flowers continue growing till late in the winter; one or two whereof are generally fick, fhrunk, and fall fhort of the largenefs and beauty of the reft; they have a very difagreeable, bitterifh tafte, which chiefly affects the bafis of the tongue.
Within the flower are many white flamina, exceeding fmall, as in rofes, with yellow heads thaped like a heart; in one flower, there are fometimes an hundred and thirty of thefe ftamina. The flowers are fucceeded by great plenty of fruit, which is unicapfular, bicapfular, but more commonly tricap fular, like the feed-veffels of the ricinus, or palma Chrifti, compofed of three round capfules, of the bignefs of wild plums, grown together to one common foot-ftalk; as to a center, but diftinguifhed by three pretty deep partitions; each capfule contains a hufk, nut, and feeds. The nut is almoft round on one fide only, where the three capfules grow together, fomewhat compreffed, covered with a thin, hardifh, fhining, chefnut-coloured fhell, which, being cracked, difcovers a reddifh kernel, of a firm fubftance like filberds, at firft of a fweetifh, but not very agreeable tafte, which foon grows rougher and bitter, like that of the cherry-kernels, making people fpit plentifully, and very naufeous, when they fall down into the throat; but this ill talte quickly goes off. Thefe kernels contain a great guantity of oil, and often turn
rancid, which is the reafon why fcarce two of a dozen will germinate when fown; this probably may have fruftrated our attempts in Europe to raife this fhrub.
Of the culture, growth, gatheting, and forting of TEA.
The natives of Japan do not allow the tea- fhrub any particular gardens, bat plant it round the hedes of their fields, with regard to the foil; nor do they lay the feeds into rows, which would make it grow into hedges, but at fome difance from each other, that, when the Grub comes to fpread, the growing too clofe might not hinder the plucking off the leaves. They put at leaft fix, but monly 12 feeds, as they are contained in their feed-velfels, into one hole, made five inches deep, becaule few are found to germinate out of that number; fometimes two or three thrybs come up together fo clofoly joined, that the ignorant would readily take them for one ftem.
As the tea-bufhes rife, the more induftrious people fatten the foil where they grow, once a year, with proper mature, mixed withearth. The fhrub mult be at lealt three years old before the leaves are 'plucked, and then it bears plenty ,of very good ones; in about feven years, the fhrub rifes to a man's height; but then it grows but flowly, and bears few leaves; but, if cut down to the flem, new fets of branches and twigs fhoot out thicker, and much more numerous than before, and all nourifhed by the fame root. The young fhoots, as they come up the firff year from the ftem, are al. ways fewer in number, but fatter and larger than thofe which fucceed them; in procefs of time they become branched.
The leaves are gathered at three different times; the firf is gathered at the middle of the firt moon preceding the vernal equinox, which is the firft month of the Japonefe year. The leaves then are few, but very young and tender, being only of two or three days growth, and fcarce fully opened.
Thele are accounted beff, and fold dearelt of all, viz. from 56 to 240 crowns per pound. This grows chiefly about Udfi, a fmall town fituated between the fiea and Miaco, the capital city, and imperial feat of the ecclefiaflical hereditary emperor of Japan, where they are fent to court under a good guard of 100 or 200 men , prepared and put up in papter bags, and thefe into large porcelane pots, called matifubos. Thefe leaves are not gathered by handfuls, but one by onk, that they be not torn, being tender, and not above two or three days old. Yet one perfon, that is accuftomed, to it, will gather 10 or 12 pounds a day; but others not above two or thiee pounds. This is called fieki tsjá, or ground tea, becaufe it is ground to powder, and fipped in hot water; a difh of it is fometimes valued at 12 fhillings.
This fort is alfo called Udfi tsjaá, and tacke facki tejaá, from Udfi, the place where it grows, whofe foil is very good, and becaufe it is gathered off fhrubs of three years old, which are then at their greateft perfection. This is drank by the imperial family. It's farubs are planted on pleafant walks on a mountain, inclofed with hedges for their fecurity, and frequently cleanfed, that no dirt may be found on their leave. Two or three weeks before the labourers begin to gather them, they mult abftain from eativg flefh, or any unclean food, left the impurity of their breath ftain the leaves; or injure their goodnefs; and, when they are gathering, they mult bathe themfelves twice or thrice a day, either in a hot bath or river. They mult not touch the leaves with their naked hands, but gather them with gloves. This is alfo called voni bui, or bohea tea of the Chinefe.
The fecond gathering is called tootsjáa, or Chinefe tea, being prepared after the Chinefe manner. This is often fold for the firft; therefore the fmaller are carefully picked and feparated from the larger or coarfer fort of leaves. The tea-merchants, and fhop-keepers of Japan, divide this into four others, which differ in goodnefs and price. The fiff fort of it is gathered, when the leaves juft appear, and are unopened; then every young branch bears not above two or three. This is fold fiom
to 30 Dutch flivers per Dutch pound and quarter.
The leaves of the fecond fort of this are older and more grown, and, though gathered but a little after the firft, the Game quantity of this is fold at 40 or 45 ftivers. The leaves of the third fort are fill older and larger, and worth about from 23 to 35 ftivers. The greateft quantity of the tea imported into Europe is of this, fort, and fold by the Dutch at fix or feven guilders per pound. Thofe who cry it about the ftreets in-Japan fell it for about 24 ftivers per pound and quarter. The vulgar there drink this.
The third and laft is gathered in our June ; this is mof plentiful, the leaves being come to their full growth, both as to their number and largenefs. Many omit the two former, and depend wholly on this gathering; the leaves whereof are all forted into their different clafles of fize and goodnefs, called the firft, fecond, and third fort; the laft whereof is coarfeft of all, being between two and three months grown, and falls to the fhare of the loweft rank. It is of this fort the labourers gather 10 or 12 pounds a day. This gathering is called ban tsjaá, and is often too coarfe to be dried in pans over the fire, after the Chinefe manner; but, being for the vulgar, they prepare it any how. The longer this is keir,
he better it is; it's virtues, being fixed in the grols leaves, are not fo eafly loft, infufed, or boiled; but the other forts fuffer greatly by any of the three,

## Of the preparation of the gathered Tea-Leaf.

When the leaves are gathered, they are brought to the workhoute to be roafted, the fame day, over a fire in an iron pan; for, if they lie long, or be laid on large heaps, or be kept overight, they would heat, turn black, and lofe much of their virtue; and, if they do heat at any time, they prefently fan hem, and fpread them thin on the ground to cool them. The roafters put feyeral pounds of the leaves into the pan at once, which is heated, that the leaves, though turgid and juicy, when put in, yet foon crack at the edges of the pan : and, that they may be thoroughly and equally dried, the roater conftantly ftirs them with his hands; 'till they are as hot as he can poffibly bear them ; then he takes them out with a hovel, like a fan, and pours them on a mat; then the rollers toll them with the palms of their hands, in fmall parcels, 'till they are equally curled; and fuch a fharp, yellow, and greenifh juice fweats out of the leaves upon this rolling, as burns their hands almoft to an intolerable degree: but ftill they mult continate their work ; for, if the leaves are quite cold before they are rolled, the fooner they cool the better, for they keep their curl the longer; therefore they have one to fan, while another is rolling them. When they are cold, the roafter (who is the chief mafter of the workhoufe) puts them a fecond time into the pan, and roafts them again, 'till they have loft all their juice. He firs them more flowly now than before, left he put them out of their curls; though fome leaves will foread, in fite of all his care. After this roafting, they are carefully rolled again the fame way. If they are fully dry after his, they have done; if not, they are delivered a third time to the roifter. And,
Now the utmoft care and fkill is neceflary, left he burn or blarken them. Some curious perfons roatt and roll them fix or feven times, but ufe a flower fire, that the leaves may preferve their greennefs; becaufe of that fharp juice which fweats out of them, the pan is clean wafhed after every roafting. The ( hinefe, before they roalt their leaves of the firft gathering, put them into hot water about balf a minute, that they may fooner, and more fully, fweat out that noxious juice. When they have done roafting and rolling them, they pour them out on a mat, and fort them a fecond time into different forts, according to their goodnefs, and feparate thofe which are lels curled, or too much burnt, from the reft. Country people roaft their leagues in earthen veffels; and, as they are at lefs expence this way, fo they can afford them cheaper, though very little, if any, the worfe.
The tea muft be all roafted in the night, being gathered in the day; which makes the preparers of it complain heartily of their bad fate. When the leaves have been kept fome months after thefe roaftings, they turn them all out, and roaft them again, to take out any remaining moilture, or what they may fince have imbibed.
As foon as the tea is cooled, after this laft roafting and curling, the Chinefe put it up in boxes of coarle tin, which are inclofed in wooden cheits, or cafes, of fir, all the chinks whereof are carefully ftopped with paper, that the air of thofe climates may not diffipate it's extreme fubtile and volatile parts: and in this manner it is imported to us. Thefe tubs, or chefts, one with another, contain about 112 pounds of tea each. The common people of Japan keep their own tea in large earthen pots, with narrow mouths: but the emperor has his kept in matfubos, which is a fine kind of porcelane pots, or veffels, wrecked up from the fea-rocks, near the illand Formofa, where once the rich and flourifhing illand Mauri food, which was long ago fwallowed up by an earthquake; here were the beft earth, and the moft ingenious people in the world, for making the fineft and richeft porcelane. Thefe veffels, thus filhed up, are the emperor's property, and fold at moft extravagant rates, viz. three, four, or five thoufand thails, each thail being near equal to five fhillings and ten-pence.
The dry leaf, as imported here, contains, r. Phlegm; for, by drying a dram of green, and a dram of bohea tea, on different raucers, before a clear fire, the firf loft $\frac{3 \bar{\circ}}{}$ part, the laft $\frac{1}{10}$ part, in a quarter of an hour, or twenty minutes; fo that all kinds of bohea have naturally more of this than the green, becaufe it is gathered while this principle exceeds it's due proportion, viz. before the falt, oil, and earth have been fufficiently diffolved and rarified by the fubterranean and aëreal heat, and fitted to raife up into a plant, in due quantity with the phlegm.'
As the leaf grows, this watery principle leffens, and the others increafe. 2. An oil, which has fundry attachments to the leaf, which-lofes one part by being expofed to the open air, or put up in paper, or any fpongy body; therefore it is fent to us in tin cannifters.
Another part is drawn off by infufion in cold water; for two drams of green tea, as much imperial, and the like quantity of bohea, each infufed in a pint of cold water lowly before a fmall fire, the firft and lat had loft above + part, and the middlemof an exact fourth.
Another part of this oil is extracted by boiling water; for the
two drams of imperial tea that had been infufed in cold water and dried, infufed again in three fundry boiling waters, and then dried, it had loft three grains more, i. e. 34 in all, out of 120 grains. The green tea, that had been infufed in boiling water, and dried, being now infufed in boiling water an hour, and dried again, had loft 16 grains more, i. c. 48 grains in all, out of 120 grains. But frelh green tea, that had not been ufed before, infufed in feveral boiling waters, loft 46 grains ; two drams of bohea tea, treated in the fame manner, and dried again; had loft 46 grains; 112 grains of hyfon tea, thus infuled and dried, loft 42 grains; 112 grains of all thofe teas that had been thus infufed and dried had a pint of boiling water poured on them, and let ftand 24 hours; then poured off, and frefh put on, and fhifted again, 'till green copperas would no longer change the colour of the waters; then the leaves taken out, and dried flowly, had loft only 9 grains, i. c. near $\frac{1}{\mathrm{~T}} 2 \mathrm{part}$, and 103 grains were left.
Another part is drawn out by boiling in water over an open fire. Thus the laft 103 grains boiled in a pint and a half of water to half a pint, and the operation was repeated fix or feven times; then the leaf was taken out and dried, and it had loft fome grains.
There is ftill another fort that cannot be extracted by watery vehicles, but muft have rectified fpirits. Thus 22 grains of dried Pekoa tea, that had been infufed and boiled in fundry waters, infufed in rectified fpirits, and then dried, had loft two grains; II 2 grains of bohea tea, that had been ufed before, loft feven grains in firits.
There is another part, alfo, which is feparable only by an open fire; for two drams of the above teas (that had been infufed in cold water, bóling water, boiled and infufed in fpirits) being put in a cruçible, fet in a clear fire, and flightly covered with an iron plate; the tea firf fent out a very thick blue fmoke, and then a clear flame; a deal of black :ough oil hung on the underfide of the plate; it tafted exceeding rough and bitter; fo that the oil of tea confifts of light feparable earth and oil, which contitute a gum.
Eighty grains of hyfon tea, as much green, and as much Pekoe, put into different phial-glaffes, and two ounces of fpirit of wine poured on each, and all fet fome hours before the fire, then removed into a cold place, and let ftand feven days more. The like weight of thefe teas, put into three phials, and the fame quantity of firits poured on each of them; then removed quickly into a cold place, and let fand as many days as the firft had done, both in the heat and cold; then the firits poured out of all the fix glaftes, and the leaves taken out and dried. The hyfon, in the firf, had loft 26 grains, the Pekoe 24 grains, the green tea 27 grains. The fpirits, left to exlaale flowly in a fmall heat, loft very near the fame weight. Of thefe, in the cold infufion, the green left 14 grains, the hyfon 14 grains, of a very bitter, attringent, delicate tafted green gum; the Pekoe 12 grains. The fuirits exhaled loft the fame weight again: fo that warm infufion draws out near double of the cold; but both tincture and gum of the laft are infinitely pleafanter and beautifuller than the firft ; and the dried leaves were clear, and fparkled, as though covered with fome vernice.
Thefe infufed in feveral boiling-waters, 'till copperas would tincture the liquor no longer, then dried and weighed, hyfon weighed 38 grains, the Pekoe 37 grains, the green 38 . This gum is partly diffolvable in water, and partly inflammable by the fire; for a little of that extracted by fpirits, put into cold water, and let before the fire, a great part of it diffolved quickly, and tinctured the water green, turning it exceeding bitter and aftringent. Six grains of it, laid on a hot fire-fhovel, it quickly flowed, burnt in a flame, and left a little white afh.
Tea contains a falt, but it is chiefly fixed, when it comes to us; for two drams of tea, that had been fully infufed and boiled, was burnt, and the white afhes put into it's infufions and decoctions, and all evaporated flowly to drynefs. Water poured on the refiduum, and filtered twice, then the earth well dried weighed 36 grains. The filtered liquor, being llowly exhaled, left 8 grains of an exceeding brackifh falt, which would not ferment with acids.
So that we fee the parts of tea are feparable into, I. A peculiar yellow noxious juice, which evaporates in roafting. 2. A thin oil, which is diffipated, either by lying long in the open air, or by infufion in cold warer. 3. A femibalfamic liquor, fomewhat groffer than the laft. 4. A thick and black refinous oil. 5. A little refin, friable in the cold, and inflammable by fire, but not diffolvable in water. 6. A gum, confifing of more mucus than oil, therefore diffolvable in water, or combuftible in the fire. Thefe are the different fortments of the oil of the leaf; for the flowers and feeds, we have had no opportunity to examine them, nor are they in ufe. 7. A fixed falt. 8. Earth.-The different proportions of thefe parts, as near as they could be well computed, are, bohea tea contains $\frac{\mathrm{T}}{\mathrm{T}}$ phlegm, or other volatile parts; green tea $\frac{1}{30}$ part. Fixed earth is about $\frac{4}{3}$ of both, only green tea has a little more than bohea. Green tea has $\frac{T}{T}$ part
 decoction and evaporation of the filtered liquor, are $\frac{8}{13}$ of the

## BO L

whole. But, in making of tea, the parts obtained from the leaf are different in different waters; for two drams of green tea, infufed two hours in boiling river water, then the water poured off, and more put on, and repeated a third time; then the leaves, carefully and flowly dried, had loft $\frac{2}{5}$. Rain water left it lighter, \&ic.
OOHEMIA. Under the name of Bohemia in general are included the kingdom of Bohemia proper, the duchy of Silefia, and the marquifate of Moravia; which lie altogether in the form of a lozenge, between Auftria on the fouth; Brandenburg and Lufatia on the north; the palatinate of Bavaria, with part of Saxony, on the weft ; and Poland on the eaft. The revenues of this country are computed at 12 or 1400,0001 . one year with another; a fum which might be greatly aug. mented, were the mines, efpecially thofe in Bohemia proper, better looked to; they being efteemed the richeft in Europe, both for gold and precious ftones. As to the proportion the three grand divifions bear to one another, it will be beft known by the extraordinary fubfidies the emperor demanded of them for 1733, when Bohemia proper paid 260,000, Silefia 190,000, Moravia 140,000.
The kingdom of Bohemia, properly fo called, is bounded on the eaft by Moravia and Silefia; on the weft by Mifnia and Bavaria; on the north by Lufatia; and, on the fouth, by Auftria. It is almoft intirely encompaffed with mountains, in which there are mines of gold, filver, copper, tin, iron, lead, fulphur, and nitre. Carbuncles, emeralds, amethyfts, yafper, fapphire, and other precious ftones, abound more here than in any other part of the empite. Thele the Jews fend into foreign parts. Gold-fand is likewife difcovered in fome of it's rivers. There are falt-pits, but, the product not anfwering the expence, they are fupplied with it from Mifnia, and other places. They make great quantities of falt and allum. The foil produces ftore of faffron. The gardens and orchards yield fruit enough fufficient for confumption and export. They don't much cultivate vineyards, becaufe their wine does not keep long. They have beer both brown and white, which is much valued and exported; and their hop re better, and more plentiful, than thore of their neighbours. They have meadows and paftures in abundance, with large cattle, and horfes fit for war, befide fheep, and geefe, whofe feathers are carried abroad, there being no beds fcarce at any of the inns but at Prague. The inhabitants of the towns here are not fond of either arms, arts, or trade, but prefer a fupine indolent life. The revenue of Bohemia to the houfe of Auftria is near a million a year fterling.
The whole trade of the city of Prague is in the hands of the Jews, who deal in all forts of commodities, efpecially in the precious ftones found in the Bohemian mines, and, receiving all old-fathioned things in payment, quite ruin the Chriftian handicraftfmen. There are cryftals here called Bohemian cryftals, which have a very good luftre, when polifhed by the Jews, and are fet in ear-pendants, rings, and firt-buttons; but are chiefly for luftres and drinking-glaffes, that are vended all over Europe.
Kuttenburg, has no lefs than thirty mines in its neighbourhood, the chief of which, of the fame name, is the rich eft in the kingdom, being nineteen fathom deep, containing filver and copper. An hundred weight of fome of it's ore yields an ounce of filver, and from eight to ten of copper; and the like weight of the other ore yields eight or nine ounces of filver. When they meet with a vein of blue earth they think it a fign of good ore.
Kadan is a town noted for excellent beer.
Carelsbadt is noted for it's baths and medicinal waters, and is frequented by abundance of foreigners, particularly the nobility and gentry of Auftria, as well as thofe of Bohemia, and merchants from all parts. The town is inhabited chiefly by armourers, and other artificers in iron, who work very neat, and vaftly cheap.
Near Egra are mines of filver and copper. The river Eger here is broad and deep, and bears large vefiels. It was formerly noted for making the beft mead in Germany. With out the city are large fuburbs, with handfome houfes, and a great number of tanners, who fend their fkins all over Hungary and Auftria.
The town of Glatz has the privilege of coining money in the name of the magiffrates, but they feldom coin any above the value of a farthing or a halfpenny. The trade of it is in filver ore, iron, timber, coals, venifon, cattle, butter, and cheefe.
BOLE, is faid in general of feveral kinds of earths, which enter into Galenical preparations, or which are ufed by painters, and fome other artifts.
Boles are native foffl earths, ufually fomewhat unctuous, fo that, when mixed up with water, they may be wrought into a pafte, but not foluble either by water or fire. Such are Argill, or white clay; Axungia terre, or Axungia lunx Cimolia, fuller's earth, boles white and Armenian; the Chian, Eretrian, Lemnian, and Maltefe earths; ruddle; Samian, Selinufian, Tocavian, and all the fealed earths. But there are others of a drier and leaner kind, as chalk, ochre, and manle.

## B O L

## Remarks.

Earth is an infipid, opake, foffil body, indiffoluble by fire', water, or ait, more fuffible than ftone, ftill friable, and ulually fomewhat unetuous.
Earths are divided into fimple, or immutable, and compound: though, perhaps, there is no fuch thing às a ftrictly fimple earth; Mr Boyle having obferved, that neither nature nor art appears to afford any elementary carth; at leaft fome which feem of the fimpleff forts, are found upon examiniration to have qualities not afcribed to pure earth *.

- See Phil. Tranfacl. No. 164.

To the firf kind are reducible chalk, which is the fimpleft and drieft of all earths, as having no difcernible fatnefs at all, and appears to be denfe and brittle, readily ftains the fingers, and fticks to the tongue without any aftringency. Different kinds of earth come under the denomination of chalk; among which, thofe ufed in plyfick are the white chalk and red ochre. The beft white chalk, called terra Cretica, was formerly brought from the inland of Crete, but is now found in feveral other countries. It drinks up and ferments with acids, and is therefore fuccefffully ufed in acidities of the firft paffages, and particularly in the heart-burn; it foftens the acrimony of the fluids, and checks the violent motion of the bile, and confequently proves of fervice in fome kinds of fluxes.-Under this fpecies of earth, pumice, rotten-ftone, \&ic. may be comprehended.
The fecond, or the compound kind of earths, take in the different boles, as the red, white, and brown; moft clays, efpecially all the fat ones, which are wrought up and dried into potter's ware; fuller's earth; the feveral kind of medicinal earths, and fome marle.
Bole is defined by fome, to be a ponderous different-coloured earth and fome marle, but lefs fat than clay, fomewhat foluble in the mouth, of a rough tatte, and itains the finger. Only the Armenian and common boles are chiefy employed for medicinal purpofes; being accounted aftringents and fofteners of acrimony, when internally given; and drying and aftringent, in outward application.
Clay is a ponderous, denfe, fat, vifcid, and nippery earth; and, being held for fome time in the mouth, leaves an impreffion on the tongue, fomething between that of foap and fat. When frefh dug, it may be moulded into any figure, like foft wax, and by fire be changed into a ftony hardnefs. The fpecies of clay are almoft numberlefs, feveral of which thould feem to deferve the title of fimple earths, though on a ftriet examen they appear very compound. Thus Mr Boyle thinks tobacco-pipe clay, by reafon of it's fixity, whitenefs, and infipidity, may, with almoft as much probability, be accounted elementary, as any other native earth; and yet to-bacco-pipes, well-baked, may fometimes be made to ftrike fire; and it has been frequently found, that two pieces of new tobacco-pipe, being brifkly rubbed together, would in a minute or two grow warm, and being immediately fmelt to, manifeftly afford a rank feent, between fulphureous and bituminous; almoft like that which proceeds from pebbles and flints, rubbed hard againf each other ; as if tobacco-pipe clay were not a true earth, but a fine white fand, confifing of grain too fmall to be diftinctly feen.
The fame author obferves, that porcelain, or the matter whereof China-ware is made, is a pure fort of clay, 'which yet is fometimes fomewhat fufible in a violent fire'; and will ftrike fire with fteel, almoft like a flint, to which it approaches in fpecifick gravity. And the like has been found to obtain, in an imitation of porcelain with a fort of Englifh clay**

* See Boyle's Abr. Vol. III. p. 422, 423.

Dr. Lifter makes clay a genus almoft as extenfive as earth itfelf; dividing clays into two grand claffes, under the title of pure and mixed. The former are foft and foluble in the mouth, and have little or no grittinefs; and thefe are fubdivided into greafy, which include the medicinal earths, or terra figillate, and fuller's earth, yellow, brown, and white; boles, cow-fhot clay, and a dark blue clay: harfh and dufty, when dry, as Cretes, properly fo called, or the milk-white clay of the ifle of Wight ; potter's clay, yellow, blue, and red: and flony, when dry, as the feveral forts of ftone, clays, and clunch.
Mixed clays he fubdivides into thofe with round fand and pebble; as the yellow loam of Kipworth-moor; the red fandy clay near Rippon, \&cc. and thofe with flat or thin fand, glittering with mica; as crouch-white clay, grey or bluifh to-bacco-pipe clay, and a red clay in the red fand rock at Rotheram *.

* See Phil. Tranfact. No. 164.

The medicinal earths are very numerous, and by fome comprehended under the fpecies of clays, their virtues being nearly the fame: a hiftory of them has been long expected with impatience.

4
Marles,

Marles, likewife, are of different kinds and various colours: the earth, generally known by the name of marle, is a light friable fubftance, of a middle nature between clay and chalk, but neither fo fat as clay, nor fo denfe as chalk, and fticks to the tongue.
There are many other feecies of compound earths. For Vannochio, an eminent Italian mineralift, informs us, that a fort of reddifh earth often contains the richeft metals; Mr Boyle has found finely figured cryftals to grow in a red earth; and he had a whitilh earth fent him from the north of England, which contained a large quantity of lead. An experienced writer on the gold and filver mines of America obferves, that gold itfelf is frequently difguifed under the appearance of a reddifh earth. And our Englifh ocbres are richer, in iron, even than fome ores of that metal.
Bole earths feem divifible into two fpecies, according as they are more or lefs tenacious; in which view loam and clay may reprefent them all. And even thefe two feem only to differ in refpect of the finenefs or coarfenefs of their component parts; which renders them more or lefs tenacious, clinging, or adhefive. To make a true judgment of the quality of this kind of earth, the following experiment may give an infight.
(i.) Common loam was mixed into a mafs with water, then dried, to fhew that, compared with clay, it would eafily break, crumble, and fall to powder. Bur (2.) Beating fome loam fine in a mortar, and mixing it well with water, it clung like clay; and, when dried, adhered much more tenacioully than before.
This fhews, that not only loam and clay, or all the bolar earths, are nearly the fame thing, when their component parts, or gravelly and fandy matters, are reduced to the fame degree of finenefs; but alfo fupplies us with a plain and fimple rule for the improvement of the art of pottery, and the imitation of China-ware.
And, perhaps, certain curious boles may afford very delicate matters for pottery wares, and that of variety of colours not lefs cuious than the white; nor do I fee why that colour, alone, thould be made the chief bafis of this art. The rule is to grind, or beat, the earths employed, to an extreme degree of finenefs; and, accordingly, porcelain has been imitated in Europe by tobacco-pipe clay, and other earths exceedingly fine ground, mixed into a palt with water, and properly baked and burnt.
Marles, or boles, allo afford a fit matter for the making of crucibles, retorts, \&c. They likewife ferve to procure the difcontinuation and divifion of certain falts and other materials, that would otherwife rife and boil over in the operation.
They contribute too more materially, more intimately, and eflentially, as to quantity, in the fixation of certain bodies in the art of chemiftry; as of oils, for example, of common fulphur, and even of mercury. For which, fee Becher's firit fupplement to his Phyfica Subterranea.
There are chiefly two forts of bole ufed in the medical way, the Armenian and common. The firf, called
Bole Armoniac, or Armeniac, or Bolus Armenia vera officinarum, which is a ponderous, fat, brittle earth, of an aftringent tafte, of a colour between red and yellow. It is found in Armenia. It is not certain, whether that, mentioned by Galen, be the fame with that of the Arabian, and later Greek writers; for the firt was pale, and the other is of a faffron colour. It is poffible, however, that the fame vein may afford boles of different colours, as we fee in the common fort, which is found in the fame fpot of earth, fometimes white, fometimes yellow, and fometimes red. The beft Armenian bole' is that which is moft eafily reduced to a fine powder in a mortar, or diffolved in any 1 i quer; which is without grit; and, when held in the mouth, feems to melt like butter, leaving an aftringent tafte on the tongue. It is commended by Galen in dyfenteries, and other fluxes; in fipiting of blood and catarrhs, efpecially thofe in which a thin matter falls into the thorax; and in ulcers of the lungs. The fame author affirms, that, in a great plague, all who ufed this medicine were cured. Outwardly applied, it is drying and aftringent, and is therefore proper to flop a flux of blood from frefh wounds.
The common bole is a ponderous brittle earth, of a colour between yellow and red, of an aftringent tafte, and is found in many parts of France. It has the fame virtues with the former, and is to be met with in the fhops. As both thefe boles are frequently mixed with fand and grit, the apothecaries prepare them in the following manner:
They diffolve them in water, and, after the fand has fubfided, they pour the turbid folution into another veffel, where it remains 'till the water is clear; being poured off, the fediment is dried in little cakes, and kept for ufe.
They may be prefcribed to be taken inwardly, either alone, or mixed with fealed earth, in this manner:
Take prepared or wafhed Armenian bole, fealed earth, and Venice treacle, of each half a drachm; of fyrup of dried rofes, an ounce; of plantane water, fix ounces; mix and make them into a julep: to be taken by fpoonfuls, in loofeneffes, \&c.

Take prepared Armenian bole, dragon's blood and maftich, of each a feruple; of roch allum, fifteen grains; of fyrup of comfrey, a fufficient quantity to make them into a bolus. This bolus is to be repeated every four hours, 'ill the flux is ftopped, together with a draught of the decoction of the gratater comfrey robts.
In wounds and contufions, thefe boles and the fealed earth may be ufed thus:
Take, of wafbed Armenian bole, a fufficient quantity; beat it up with the white of an egg and rofe-water, into the confiftence of a cataplafm, to be fpread upon linnen cloth, and applied to the part affected, and keep it on by bandage dipped in oxycrate.
Take of Armenian bole, fealed earth, and dragon's blood, of each two drachms; aloes, mytrh, and colcother, of each one drachm: mix them into a powder, to be applied to the part from which the blood flows.
Thefe boles are ufed in feveral officinal compofitions, in the confection of hyacinth, Fracaftorius's confection, Gordonius's troches, the bezoardic powder of Renodæus, the feratum fantalinum, and plaifter of fractures, in the Pharmacopoeia Regia of Charas. See Geoffroy.
Bole, or Bolus, in phyfic, is a remedy prepared of fuch a thicknefs or confiftency, that it may be fwallowed in one or two bits, or from the point of a knife; it is contrived for the conveniency of perfons, who have an averfion for potable medicines.
medicines.
BOLOGNESE, or the duchy of Bologna in Italy, is bounded on the north by the Ferrarefe, on the eaft by Romagna, on the fouth by Tufcany, and on the welt by the duchy of Modena.
Bologna, the capital city, is fituate at the foot of the Appenine mountains, on the little Rhine, or river Reno, and bath a noble plain on the other three fides, which furnith it with all the neceffaries of corn, wine, oil, fruits, \&c. Here is a large channel cut between the Reno and the Po, which wonderfully facilitates the tranfportation of all commodities to and from the city: thofe which are tranfported are commonJy wax, filk, hemp, flax, hams, tobacio, waft-balls, perfumes, fweet-meats, and a curious fmall breed of lap-dogs, fo little, that the ladies carry them about in their muffis and apron-pockets. Befides thefe, they export great quantities of wrought filk of all forts, fich velvets, leather-bottles, and other manufactures of this city, befides olives and other fruits, which are produced in great plenty in the neighbourhood of it. It is well peopled; the citizens are wealthy and induftrious, and the noblemen are here in great numbers, who fpend their money, and are above concerning themfelves with any kind of commerce. It is reckoned to contain about 80,000 inhabitants. The greateft manufacture carried on here is that of filk, of which there are feveral wheels for winding.
BOMB, is a large fhell of calt iron, having a great vent to receive the furee, which is made of wood. The fhell being filled with gunpowder, the fufee is driven into the vent or aperture, and faftened with a cement made of quick lime, afhes, brick-duft, and fteel-filings, worked together in a glutinous water; or of four parts of pitch, two of colophony, one of turpentine, and one of wax. This tube is filled with a combuftible matter, made of two ounces of nitre, one of fulphur, and three of gunpowder-duft, well rammed. To preferve the fufee they pitch it over, but uncafe it, when they put the bomb into the mortar, and cover it with gun-powder-duft, which, having taken fire by the flafh of the powder in the chamber of the mortar, burns all the time the bomb is in the air, and, the compofition in the fufee being fent, it fires the powder in the bomb, which burfts with great force, blowing up whatever is about it: the great height the bomb goes in the air, and the force with which it falls, makes it go deep into the earth.
BOND, a deed, by which a perfon obliges himfelf to porform certain acts; fuch as to pay a certain fum, or to anfwer for another, or to ferve an apprenticefhip with a mafter. The latter is with us called an indenture. See Apprentice: In England, bond is a deed or obligatory inftrument in writing, whereby a perfon binds himfelf to another, to pay a fum of money, or do fome other act, as to make a releafe, furrender an eftate, for quiet enjoyment; to ftand to $2 n$ award, fave harmlefs, perform a will, \&c. It contains an obligation with a penalty annexed, and a condition which exprefsly mentions what money is to be paid, or what other things are to be performed, and the limited time for the performance thereof, for which the obligation is peremptorily binding.
It may be made upon parehment or paper, though it is ufually on paper, and be either in the firft or third perfon: and the condition may be either in the fame deed, or in another; and fometimes it is included within, and fometimes indorfed upon, the obligation; but it is commonly at the foor of the obligation.
A memorandum on the back of a bond may reftrain the fame, by way of exception. The condition of a bond muf be to do a thing lawful ; and
bonds
bonds not to ufe trades, till or fow the ground, \&c. are unlawful, they being againft the good of the public, and therefore void : and a condition of a bond to do a thing wicked in itfelf, as to kill a perfon, se. is void; fo are likewife bonds made by differs, by infants, by feme coverts, \&c. And, if a woman, through threats or flattery, be prevailed upon to enter into a bond, fhe may be relieved in chancery. If an infant feal a bond, and be fued thereon, be is not to plead non eft factum (it is not done) but mult avoid the bond by fpecial pleading; for this bond is only voidable, and not in itfelf void. 5 Rep. 119. But, if a bond be made by a feme covert, fhe may plead her coverture, and plead non eft factum, her bond being void. io Rep. itg.
If a bond depends upon fome other deed, and the deed becomes void, the bond is allo void.
A bond, made with condition not to give evidence againft a felon, \&re. is void; but the defendant mult plead the fpecial matter. I Leon. The condition of a bond to indemnify a perfon from any legal profecution, is alfo void. I Lutw. 667. And, if a cheriff takes a bond as a reward for doing of a thing, it is void. 3 Salk: 75 .
Conditions of bonds are to be not only lawful; but poffible; and when the matter or thing to be done, or not to be done, by a condition, is unlawful or impofible, or the condition itfelf repugnant, infenfible, or uncertain, the condition is void, and in fome cafes the obligation alfo. io Rep. $\mathbf{2} 20$.
But fometimes an obligation may be fingle to pay the money, where the condition is impoffible, repugnant, \&c: 2 Mod. 285.

If a thing be poffible at the time of entering into the bond, and afterwards' becomes impoffible by the act of God, the act of the law, or of the obligee, it becomes void; and if a man be bound to appear next term, and dies before, the obligation is faved. A condition of a bond was, that J. S. fhould pay fuch a fum upon the 25 th of December, or appear in Hilary term after in the King's-Bench; be dies after the $25^{\text {th }}$ of December, and before Hilary term, and had paid nothing: in this cafe, the condition was not broken for nonpayment, and the other part is become impoffible by the act of God. , Mod. Rep. 265. And, when a condition is doubtful, it is always taken moft favourably for the obligor, and againft the obligee; but fo that a reafonable confruction be made as near as can be; according to the intention of the parties. Dyer, 5 r.
If no time be limited in a bond for payment of the money, it is payable on demand. i Brown, 53. But the judges have fometimes appointed a convenient time for payment, having regard to the diftance of place, and the time wherein the thing may be performed. And, if a condition be made impoffible in refpect to time, as to make payment of money on the $3^{\text {oth }}$ of February, \&c. it fhall be paid prefently, and here the obligation ftands fingle. Jones, 140 . Though if the act be to be done at a certain place, where the obligor is to go to Rome, \&c. and he is to perform the fole act without limitation of time, he bath time during life to perform the fame: if the concurrence of the obligor and obligee is requifite, it may be haftened by the requeft of the obligee. 6 Rep. 30. I Roll. Abr. 437.
When no place is mentioned for performance of a condition, the obligor is obliged to find out the perfon of the obligee, if he be in England, and tender the money, otherwife the bond will be forfeited: but, when the place is appointed, he need feek no further. And, if where no place is limited for payment of money due on a bond, the obligor at, or after the day of payment, meets with the obligee and tenders him the money, but be goes away to prevent it, the obligor fhall be excufed. 8 Ed. IV. The obligor, or his fervant, \&c. may tender the money to fave the forfeiture of the bond, and it fhall be a good performance of the condition, if made to the obligee, though refufed by him; yet, if the obligor be afterwards fued, he muft plead that he is fill ready to pay it, and tender the money in court. Co. Litt. 208.
The condition of a bond being for paying of money, it may be performed, by giving any other thing in fatisfaction; becaufe the value of money is certain, and therefore may be fatisfied by a collateral thing, if the obligee accept it: but, if the condition be to do a collateral thing, there it is otherwife, and paying money is no good fatisfaction. 3 Bulft. 148.

The acceptance of a new bond will not difcharge the old one as a judgment may. One bond cannot be given in fatisfaction of another ; but this is where given by the obligor himfelf, for it may by others. I Mod. 22I.
If a bond be to pay money on fuch a time, \&c. it is no plea for the obligor to fay that he did pay it; he muft fhew at what time, or elfe it may be taken, that the performance was after the time limited. Noy's Max. I5.
If a bond be of twenty years ftanding, and no demand be proved thereon, nor good caufe of fo long forbearance thewn to the court, upon pleading folvit ad diem (he paid it on the day) it (hall be intended paid. Mod. Ca. 22.
Payment of money, without acquittance, is an ill plea to action of debt upon a fingle bill; but it is otherwife upon a bond with condition. Dyer, 25 .

If feveral days are mentioned for payment of money ona bond, the obligation is not forfeited, nor can be ficed momi all the days are paft: but, in fome cafcs, the obligee may profecute for the money due by the bond prefendy, though it be not forfeited; and, by fpecial wording the condition, the obligee may be able to fue the penalty on the firft default. I Inft. 292.
In a bond, where divers perfons are bound feverally, the obligee is at his election to fue all the obligors together, or all of thern apart, and have feveral judgments and executions; but he hall have fatisfaction but once, for, if it be of one only, that fhall difcharge the reft. If an obligation is joint and not feveral, alf the obligors muft be fued that are bound; and, if one be profecuted, he is not obliged to anfwer, unlefs the reft are fued likewife. Dyer, 19,340 .
Where two or more are bound in a joint bond, and only one is fued, he muft plead in abatement, that two more fealed the bond, \&c. and aver that they are living, and fo pray judgment de billa, \&ic. and not demur to the declaration. Sid 420. If a bond is made to three, to pay money to one of them, they muft all join in the action, becaufe they are but as one obligee. Yelv. $17 \%$.
An heir is not bound; unlefs be be bamed exprefsly in the bond, though the executors and adminiftrators are:- And; if an obligation be made to a man, his heirs or fuccedors, the executors and adminiftrators thall have the advantage of it, and not the heir or fucceffor; becaufe it is a chattel. Dyer,
14, 27 x .
A declaration need not beaccording to the letter of the bond, where there is any omiffion, \&c. but according to the operation of law upon it. Mod. cafe 228.
In bonds to fave harmicfs, the defendant being profecuted; is to plead non damnificatus, \&c. (no damage fuffered, \&c.) A bond may be from one to one, one to two, three of more perfons; or from two or more perfons, to one, two, three; \&c. and the name of the obligor fubfribed is faid to be fufficient, though there is a blank for his Chriftian name, 2. Cro. 26r. But, where another Chriftian name is in the bond, and the bond figned by the right name, though the jury find it to be his deed, the obligee cannot bave judgment, for the name fubfrribed is no part of the obligation. 2 Cro 558. r Mod. 107. In thefe cafes, though there be a verdid, there thall not be judgment.
If a bond has no date, or a falfe date, if it be fealed and delivered, it is good. A plaintiff may fuggeft a date in a bond, where there is none, or it is impoffible, \&c. where the parties and fums are fufficiently exprefled. 5 Mod. 282. A bond, dated the fame day on which a releafe is made of all things, ufque ad diem datus, \&c. (to that day) is not thereby difcharged. $2^{2}$ Roll. Rep. 255 .
A perfon fhall not be charged by a bond without delivery, on words, or other things, amounting to a delivery. I Leon. 140.

A bond may be good, though it contains falfe Latin or falfe Englin, if the intent appears, for they do not make the bond void. 2 Roll. Abr. 146. The condition of a bond, the intent of what fum was in the obligation, may be more eafily known and explained; and the condition of the bond may be recorded, and the plaintiff demur, \&c.
Likewife the condition of bonds may expound to whom an obligor is obliged to pay money: as if A binds himfelf to B ; in a fum to be paid to $A$, whereas it fhould be to $B$, the obligation is good, and the folvendum void. Inft. 108, 209: Interlineation in a bond, in a place not material, will not make the bond void: but, if it be altered in a point material, it fhall be void. I Nell. Abr. 39r. And a bond may be void by rafure, \&c. as where the date, \&c. is rafed after delivery, which goes through the whole. 5 Rep. 23. Such words, whereby the intention of the parties may appear, are fufficient to make the condition of a bond good, though they are not proper, and thall not be conftrued againft the exprefs words. If the words in a bond at the end of the condition, 'then this obligation to be void,' are omitted, the condition will be void, but not the obligation: but if the words, ' or elfe ftand in force,' be left out, it has no effect to hurt either the condition or the obligation.
The ftealing of any bond, or bill for money, being the property of any one, is made felony, as if the offenders had takend other goods of like value. Stat. 2 Geo. II. c. 25 .

## Form of a Bond for Payment of Money:

KNOW all men by thefe prefents, that I A. B. of the parifh; \&c. in the county, \&c. gentleman, am held and firmly bound to C: D. of, \&c. in the county aforefaid, Efq; in one hundred pounds of good and lawful money of Great-Britain, to be paid to the faid C. D: or his certain attorney, his executors, adminiftrators, or afigns: to which payment, well and truly to be made, I bind myfelf, my heirs, executors, and adminiftrators; firmly by theff prefents, fealed with my feal: Dated the fixih day of May, in the thirteenth year of the reign of our fovereign lord George the fecond, by the grace of God, of Great-Britain, France, and Ireland, king, defender of the faith, \&c. and in the year of our Lord one thoufand fevent hundred and foity.

The Condrtion of this obligation is fuch, that if the abovebound A. B. his heirs,-executors, or adminittrators, do and hall well and truly pay, or caule to be paid, unto the above-named C. D. his executors, adminiftrators, or afigns, the full fum of fifty-two pounds and ten thillings of lawful money of Great Britain, on or before the fixth day of November next enfuing the date hereof, then this obligation to be void, of otherwife to be or remain in full force and virtue. (Or it may be thus:)
That if the faid A, B. \&c. do pay to the faid C.D. S.c. the foll fum of fifty pounds, with intereft for the fame, after the rate of five pounds per cent. per ann. (or with lawfulintereft) on the day, \&c. Then, \&c.

Bond conditioned to pay an annuity for life, and to charge it upon lands in England within a year.
KNOW all men by thefe prefents, that I Antiony Acton, rf, \&sc. Efq; am bound and firmly obliged, unto Barnaby Burch, of, \&c. in 800 l. of lawful money of Great-Britain, to be paid unto him the faid Barnaby Burch, or to bis certain attorney, his executors, adminiftrators, or affigns. To the well and true making of which payment, I bind myfelf, my heirs, executors, and adminiftrators, firmly by thefe prefents, fealed with my feal, this thirfieth day of September, in the fixth year of our fovereign lord Gearge the fecond, by the grace of God, king of Great-Britain, France, and Ireland, defender of the faith, \&c. and in the year of out Lord 1733.

Whereas the above-named Barnaby Burch has contrated and agreed with the above-bounden Anthony Acton, for the purchate of one annuity, or clear yearly fum of 301 . of lawful money of Great-Britain, free from taxes and other deductions, during the life of him the faid Barnaby Burch, for the fum or price of 360 ). of like lawful money; which faid fum of 360 l . he, the faid Barnaby Burch, hath paid unto the faid Anthony Acton, at or before the fealing and delivery of the obligation above-written,' the receipt and payment whereof, accordingly, the faid Anthony Acton doth hereby acknowlege. Now, therefore, the condition of this obligation is fuch, That, if the faid Anthony Acton, his heirs, executors, or adminiffrators, thall and do well and truly pay, or caufe to be paid, unto the faid Barnaby Burch, and his affigns, during the term of his natural life, one annuity, or clear yearly fum of 301. of lawful money of Great-Britain, free from taxes, and all other deductions whatfoever, at the four moft ufual feafts, or days of payment, in every year, viz. \&c. by even and equal portions; the firft payment thereof to begin and to be made on the feaft-day of the nativity of our Lord Chrif, next enfuing the date of the obligation above-written; and alfo, if he the faid Anthony Acton, his heirs, executors, or adminiftrators, fhall and do, within one year next enfuing the date of the obligation above-written, at the requeft of the faid Barnaby Burch, legally and effectually fecure the payment of the faid annuity in manner aforefaid, by and out of freehold meffuages, lands, and tenemen's, or hereditaments, of him the faid Anthony Acton, in fome convenient place, in that part of Great-Britain called England, of fufficient value for that purpofe, with proper power of entry and diffrefs, for recovering the fame annuity, in cafe of non-payment as aforeraid, then this prefent obligation to be void and of none effect, or elfe to be and remain in full force and virtue. See Horfeman's Precedents in Conveyancing, Vol. I. p. 263. wherein may be found a great variety of bonds, very accurately and legally drawn, for many other important occafions.
BONDING, or giving bond for duties to be paid at the cuftomhoufe. All obligations and feccialities of this kind, made for any caufe concerining the king's majefty, \&c. muit be made by thefe words, domino regi, and to be paid by thefe words, folvend' eidern domino regi, haredibus, vel executotibus fuis. 13 Hen. VIII. cap. $39 . \$$. $2,3$.
Bonds taken otherwife, the offender to fuffer fuch imprifonment, as fhall be adjudged by the king or his council.- The debt of fuch obligations not fatisfied in the king's life-time, to come to his heirs. 6 Ann. cap. 26. §. 7.
Bonds written, to be famped with three fixpenty famps. 5 and 6 W . and M. cap. 21. 8 and 9 W. III. cap. 20.9 and 10 W. III. cap. 25.
Bonds written on paper, \&c. before 'duly ftamped, void 'tili ftamped, and payment of the duties, and 151 . befides, and the officer to forfeit his employment. I Ann. cap. I3. 5 Ann. cap. 8. and 5 ditto, cap. 19. and 12 and $\ddagger 3$ Ann. cap. 9. §. 2 I and 25 .
Bonds to be given for duties on importation, fee the feveral articles of merchandize, where an account of their refpective dutcs is given.-See alfo Certificate of difcharge.

## REMARKS.

This giving bond for duties to the crown, arifing from the great beight of our cuftom-houfe impofts, is an evil which has been, and fill continues to be, attended with confequences, not only greatly detrimental to traders and their fureties,

Who have bice jointly bound with them, but to the general traffic of the whole kingdon.
In regard to the former, that hath been too notorious to need animadverfion. With refpect to the latter, the hcight of the cuftoms, that may deferve fome notice in this place; it being a matter which has been greatly lumented by thofe who have underflood the true intereft of the trade of this kingdom.
All authors agree, that low cuftoms are one of the caufes of the great trade of Holland. And, if low cuftoms advance trace, it follows, that high cuftoms muft prjudice it, which is comparatively our cafe at prefent.
If the lower the cuftoms, the greater the trade, no cuftroms, or Free Ports, muft carry trade to it's utmoft height, which cafe might be ours.
If low cufloms have bad fuch good effeels in Holland, which hath the mof natural difadvantages of any country; a free port mult have the greateft and beff effect in Britain, whofe natural advantages are beyond thofe of any country in Europe, as will be proved under the article Bripain.
That the above obfervations are founded in truth will appear, by thewing how cuftoms, erpecially high ones, obftruct the trade of thefe nations.
Firft, They prevent our country's being an univerfal ftorehoufe. Becaufe, our duties being fo great an additional difburfement to the firf coft of the goods, no merchant will let fo much of his capital lie dead for duties here, when he can have it all circulating in commodities in other countries; nor can fuch goods be re-exported, becaufe the officers fees in and out, which always remain, and the intereft of the money lying dead for duties paid (though they be moflly drawn back) are fo great a charge, the natural intereft of money being higher with us than in Holland, that the goods cannot come near fo cheap from us to any foreign market, as from a free port where nothing is paid in or out ; therefore they prevent our country's having the beft choice of merchandize at the cheapeft prices, to tempt foreigners to become our cuftomers: the great duties on India goods difcourage foreigners from buying at our fales, who pay an extraordinary charge of commiffion on that advanced price, and are forced to lie fome months out of the money for their drawback.
Befides, the ftrict rule of declaring goods, at the cuftomhoufe's makes public to every one each tranfaction of trade; and thereby prevents fhipping, for foreign parts, fuch goods as are there prohibited; which deprives us of feveral beneficial branches of trade that are carried on from Holland, or free ports, to the great advantage of foreign nations.
Secondly, High cuftoms prevent the increafe of our navigation, by enhancing the expences of building and navigating our flips.
Boards, hemp, fail-cloth, and iron, paying duties, thbfe materials muft be dear, and feveral neceflaries of life paying fome cuftoms, and fome excife, the hip-builder's labour muft be dear, alfo the provifions and ftores put on board the fhips.
The Englifh failor paying, on his owh and family's feceffaries, cuftoms, and excifes, muft have, and bath, higher wages, than moft other countries give.
So that a Britifh veffel, built and rigged with dear materials; by dear labour, fupplied with dear ftores, and navigated by failors at dear wages, muft have dear freights, bring in all foreign neceffaries and materials for manufactures dear, and carry out all our own products and manufactures dear to foreign markets, much to the difadvantage of their fale.
This fhews the reafon, why we have not yet been effectually enabled to rival the Dutch, Hamburghers, \&c. in the Greenland trade, the navigation of the Baltic, or the herring fifhery, which being trades carried on for fmall profits, the dearne's of our navigation has hitherto excluded us from making any advance in thefe branches: though it is to be hoped, from the encouragement given by parliament, and from the diffinguifhed wifdom, ikill and integrity, of thofe zedous friends to the trading intereft of this kingdom, who have, at prefent, the conduet of our herring-fifheries, that we lhall happily furmount every obflacle, and raife that nurfery for feamen to that glorious pitch, to which it's warmeft friends can defire : to which end, it merits every kind of public encouragement, to prevent a pofibility of mifcarriage.
By not having an univerfal fore-houfe, our hips, like empty houfes, lie by idle in pur harbours, waiting months for fieights, the intereft of the money they coft eating out their profits; or elfe are obliged to lofe their time, and be at great expences in going from one port to another to endeavour to obtain a cargo.
Thirdly, High duties prevent the increafe of our failors, the true ftrength of this nation.
This is a confequence of the two laft remarks; for no tradc breeds fo many or fo good failors as a free port, and maritime carriage, the employment being the greateft, and the experience the largeft as the voyages are the moft various and extenfive, it being no lefs than the trade of the whole world.
As high cuftoms are inconfiftent with fuch a trade, of courfe they debar us of that increafe of failors, which mult be neceflary to carry the fame on, and who would protect us from,

## BON

## B O N

and carry vengeance to, thofe enemies who fhall dare to infult us.
All this is not only deftructive to our riches, but allo to our fecurity, it being difficult in time of war to man our navy, not improperly called our foating caftes; and occations that hard and difagreeable cuftom of preffing, which puts a freeborn Britifh failor on the footing of a Turkifh llave: the Grand Signior cannot do a more abfolute act, than to order a man to be dragged away from his family, and againft his will run his head before the mouth of a cannon; and, if fuch acts fhould be frequent in Turky, upon any one fet of uffeful men, would it not drive them away to other countries, and thin their number yearly? and would not the remaining few double or treble their wages? Such is the cale of our failors in time of war, to the great detriment of our trade and manufactures.
Fourthly, High duties leffen the capitals of our merchants. By keeping a great part of their ftocks by them ide, to pay duties of the goods they import, which is, in effect, making them not only advance their money, or frain their credit by bonding, or otherwife, for the fervice of the ftate, but likewife run the rifque in the credit they give of ever being reimburfed, and is diverting a fream of riches that fhould water trade; for it iften happens that when our merchants are fhort of cafh, and they have both cuftoms and manufacturers to pay, fo much money goes for the firf, that nothing is left for the latter, which caufes a circulation of difappointments, feldom known in Holland on that account; and the Dutch merchants can carry on the fame trade with much lefs flock than ours, fell cheaper, extend their commerce farther, and of courfe give better encouragement to their working people, whereby they caufe them to be more induftrious than ours.
The following cafe will fhew the difficulties and difcouragements our merchants labour under more than the Dutch, one of our great rivals in trade.
Suppofe a merchant in Rotterdam to fhip corn for Bourdeaux in France, and the neat produce to amount to the value of 2000 l. fterling; if he orders it to be invefted in wines, and fhipped for Holland, he will not pay for duties above 401. Suppofe a merchant in London to fhip corn for Oporto, and the net produce to amount to the value of 2000 l. fterling; if he orders it to be invefted in wines, and ihipped for England, be will pay for duties above 2000 l.
Therefore the dutch merchant's prime coft and duties
of his cargo will be
2040 The Englifh ditto 4000 19601. of the Englifh merchant's difburfe more than the Dutch merchant's in the amount of the duties, is imprifoned until the people he truits pays him, which may be a year, or a year and a half; whereas, if the Dutch merchant's capital be equal, he has had 19601. to employ in buying up goods to freight another adventure, perhaps of woollens, giving quick employment to the navigation and manufactures of his country.
Suppofe the retailers they truf break about the year's end, and make a compofition, amounting to 25 per cent, on the prime coft and duties of the wines.
The Dutch merchant's lofs will be

1. 1530

The Englifh ditto
3000
This alfo makes our merchants rifque in trade greater, and their loffes heavier, than in Holland.
Fifthly, High duties encourage and force the confumption of foreign fuperfluities.
The dearer outlandifh luxuries are, the more are they efteemed by our people of tafte; it is the expence that makes the elegancy; therefore duties on them only further their fale, as Mr Locke clearly proves in his Confiderations, \&c. 'For, - it being vanity, not ufe, that makes the expenfive faftions of - your people, the emulation is, who fhall have the fineft, - that is, the deareft things, not the moft convenient or ufe-- ful. How many things do we value and buy, becaufe they - come at dear rates from Japan and China, which, if they - were our own manufacture or product, to be had common, - and for a little money, would be contemned and neglected? 6 Have not feveral of our own commodities, offered to fale at - reafonable rates, been defpifed, and the very fame eagerly - bought and bragged of, when fold for French, at a double - price ? You muft not, therefore, think that the raifing their - price will leffen the vent of fafhionable foreign commodities c amonglt you, fo long as men have any way to purchafe them, < but increafe it.' Page 93.
But, befides encouraging, our cuftoms force the confumption of moft foreign fuperfluities that are imported; for, though the duties be moftly drawn-back on fome articles, yet the intereft of the money, lying dead for duties and fees in and out, binders, in fome degree, their re-exportation, and, in many articles, the duties are only in part drawn-back; fo that what remains is fuch an additional load as prevents fuch goods being faleable at any other market, and, confequenty, forces us to confume all fuch fuperfluities.
This makes a people luxurious, who can do nothing with foreign fuperfluities but riot and indulge; whereas the Dutch, having the object of gain always before their eycs, by the ad-
vance of foreign'markets for their fuperfuities they have in their ftorchoules, are checked from indulging in what appeara to them common, and of no great value for the prefent, but may be attended with great profit hereafter; which accounts for the Dutch frugality, fo juftiy celebrated by all authors. It is the exceffive confumption among $u s$, not the trade in fo reign fuperfluities, that hould be difcouraged; and which is certainly beft done by taxing the confumers, letting the goods, as objects of traffic, go guite free; whereas our high duties on the goods do juft the reverfe, for they encourage the confumption, and deftroy the trade, to the immenfe lofs of the nation.
Sixthly, High duties encourage frnuggling.
Where the avoiding high cuftoms makes the profit great, no rifque, no danger, can prevent men's attermpting it; it is throwing out a bait to a greedy finh, he will fnap at it, though deftruction enfues; this prejudices and difcourages the fair trader, either tempts or forces him to turn fmuggler, and af fociate himfelf with thofe many examples of depravity we have at this time among our people, living in a ftate of war-with the government, in defiance of laws; whereby an univerfal corruption of manners, and contempt of authority, muft enfue, if not more effectually prevented than feems in the power of hanging to do.
Befides, it being chiefly the articles of luxury that are fmuggled, as brandy, tea, French wines, laces, filks, \& 8 c. it fpreads their confumption among the lower clafs of people, who are tempted to imitate, at a lefs expence, the luxuries of their fuperiors; and the fame fmugglers that bring us thefe fuperfluities, carry off vaft quantities of raw wool, to the great prejudice of our manufactures, and the kingdom in general. Seventhly, High duties ruin manufactures, efpecially the woollen
Cuftoms prevent the bartering away our manufactures for foreign goods, not only for our own confumption, but alfo for exportation, which might enlarge the vent of our goods ten times more than at prefent: for if a merchant now exports woollen goods, and would barter them for wines, the duties on them would amount to more than the coft of his woollen goods; fo that he mult have a double capital for fuch an adventure, or let it quite alone, whereby the fale of great quantities of woollen goods are loft to the nation.
As cuftomsenhance the expence of our navigation, the freights muft be raifed accordingly, whereby the prices of foap, oil, and dying ftuffs, ufed in manufacturing our wool, are advanced to the maker, and the freights on the cloths or fuffs exported, being alfo raifed, are additional clogs upon the fales of our woollen goods.
Cuftoms prevent the carrying and filhing trades, the great nurferies of feamen, whereby our failors being few, and their expences raifed by taxes on the neceffaries of life, they have the higheft wages of moft people in Europe ; which, as it is an additional advance of our own freight, fo it proves injurious to our woollen trade in proportion.
Cuftoms taking away fo great a part of our merchants ftock, they are thereby deprived of driving that great trade of maritime carriage, and vending thofe quantities of woollen goods, they would otherwife do: befides, our merchants rifgue in trade being greater than in Holland, and their loffes heawier, as we have fhewn, their bankruptcies muft be more frequent; this fenfibly affects our manufacturers, who are generally confiderable creditors : for broken merchants may be well compared to nine-pins, one of which feldom falls without beating down many others.
Cuftoms recommend foreign manufactures of fine goods, by making them expenfive, which vanity, on that account, foon renders fabionable; whilft our own are defifed, though fuperior in goodnefs, and are a great difcouragement to our manufactures.
Cuftoms are the caufe of the finuggling of wool, becaufe the gain being great by running tea, brandy, and French goods, on account of the high duties, hath railed the contraband trade to a great height; and the fmugglers cannot make their returns in any commodities of fo quick and certain a vent, or that gives fo good a profit, as our wool; for the French, being lefs taxed in proportion to their number of people than we, can work cheaper, and their own wool being coarfe, in comparifon to ours, Englifh and Irifh wools are fo much in demand, that they will give great prices for them; for which reafon they receive vaft quantities, to the ruin of the vent of our own manufactures in foreign countries.
Cuftoms on the neceffaries of life, and the materials of divers manufactures, muft neceffarily make all our commodities dear, not only to our own people, but to foreigners likewife (though our workmen fhould have no excifes to pay) and fuch difcouragements give opportunity to foreigners to fend their manufactures cheaper to foreign markets, and fmuggle them, in defiance of all laws, into our own country, to the daily ruin of our manufacturers; for all thofe cuftoms which affect the neceffaries of life, and the materials of various manufactures, are as much taxes on our woollen manufaclures as if they were laid on the wool itielf, or more: for the workman muft raife the money on the woollen goods he

## B O O

## В 0 O

trakes, to pay the duties of what he ufes of the above articles, with the advances in all the hands they pafs through, before they come to him.
It is by thefe means that we ourfelves drive away our own manufacturers, and prevent bur evet getting more; and foreigners could not rival the people of fo friifful a country as Britain, if we did not furnith them with the means of our high taxes and reftraints, that are always prejudicial to trade, though defigned to advance it, and never effect the thing intended, though fortified with the moft rigorous penal laws; of which Mr Locke gives an inflance in his Confiderations, \&c. P. 116. "T is death in Spain to export money; and - yet they, who furnith all the world with gold and filver, - have leaft of it among themfelves; trade fetches it away * from that lazy and indigent people *, notwithftanding all 6 their artificial and forced contrivances to keep it, and it fol-- lows trade againft the rigour of their laws; and their want - of forcign commodities makes it openly to be carried out - at noon-day.'

* The Spaniards have borne this reproach fo long from other nations, that they now feem, according to the fyftem of policy which they have adopted, to deferve quite a different character. See the articles Biscay and Spain.

This feems to be a parallel of the fate we are coming to; and which fome foreigners may foon poffibly make.
It is felony in England to export wool, and yet they who furnih all the world with wool have leaft of the manufacturing of it among themfelves; the fmuggling trade fetches ic away from that excifed and cuftom-loaded people, notwithttanding all their artificial and forced contrivances to keep it there : it follows the fmuggling trade againft the rigour of their laws, and their want of taking of the taxes on their manufacturers makes it openly be carried out at noon-day.
By this we fee that neither death nor banifhment can force trade to an unnatural channel; and it may be compared, in one refpect, to water, which cannot be compreffed within it's natural dimenfions; the more force is exerted, the fooner is the veffel broke that contained it, and the water let loofe, never to return.
The great De Wit, in his Memoirs, Ratifbon edit. p. 77, afferts, 'That the navigation, the fifhery, the trade and ma-- nufactures, which are the four pillars of the ftate, fhould - not be weakened or encumbered by any taxes; for it is they - that give fubfiftence to the moft part of the inhabitants, and * which draw in all forts of ftrangers, unlefs the neceflity was

- fo great that the country was threatened with an intire dec flruction; and thefe fundamentals fhould be attacked, up-- on the hopes that thefe taxes would not laft long; at leaft, - hafte fhould be made, as foon as the ftorm was over, to take - them off. Again, this diftinction thould be made, that ma-- nufactures fhould not, nor cannot, be taxed at all, becaufe - they are not fixed to the country, and we muft fetch from - foreign countries the ftuffs and materials to work them up.' Eighthly, High duties fend away our fipecie.
Britain, having no mines of gold or filver, has no means 'of getting or preferving it's treafure but by foreign trade. As cuftoms confine our trade to mere importation for our own neceffaries or vanities, and, at the fame time, ruin our manufactures, what we want in exports to ballance the imports, muft be paid in fpecie, making the ballance of trade every year more and more againft us; for as we raife the prices of our goods fo high by taxes that foreigners will not take them, and yet continue to import their fuperfluities, which we now chiefly, and in time mult intirely, pay for with our gold and filver, as appears by the bills of entry, in every week, we are beginning to do; and our high duties encouraging fmugglers, who have feldom a fettled habitation, or any ftock of our manufactures by them, they carry out no inconfiderable quantities of fpecie to purchafe their cargoes. Such large draughts make our mint lie almoft idle: we find our money difappear, and grow fearcer and fcarcer every year, our trade declining, and our people ftarve.
The bonding of duties being the apparent confequence of high cuftoms, we have judged it no way improper, under this article, gradually to lay open fuch fentiments, as, we humbly apprehend, may have a tendency to prevent the neceflity of a practice, which, we experimentally know, has proved ruinous to numbers of our eminant traders, and their fureties. And practices which have fuch fatal effects, with refpect to individuals, cannot be compatible with the general intereft of trade ; which, we conceive, will appear from what we have faid on this occafion, and what hereafter we fhall fubmit to confideration, in fuch parts of this work as have a connection with the like point.
BOOK, a work of genius, wit, or learning, compofed for the advantage of the public, or fometines only for pleafure or curiofity.
Books are printed by the printers, bound by the bookbinders, and fold by the bookfellers, either wholefale or retail, bound or in fheets. We fyeak ellewhere of thefe three profeffions, and of their art and trade.
VoL. I.

Befides printed books, there are others in manufript. Amotig the Roman Catholics in France, they give the name of ufages, or chürch-books, to books of devotion; or to thofe that ate afed for the divine fervice in churches.
Printed books are diftinguifhed by their fizes, or forms; which are of feveral forts; as books in folio, in quarto, in octavo in duodecimo, or twelves, \&c. which is to be underftood of the manner of folding the fheets, and the number of leaves, or of pages, which each fheet contains.
Book in Sheers, is a book which is neither bound; nour flitched, nor folded. The authors, printers, and bookfellers in France, Who obtain privileges or licences for the printing and vending of books, are, according to the public edicts and declarations for that purpofe, obliged to deliver eight books, or copies, to the fyndical chamber; but it is fufficient that the books be in fheets: they are not obliged to deliver them bound.
A Book Bound, is a book which, after it has been beat, fewed, and cut, is covered with palte-boards, and thefe again with fome fort of leather, or other ftuff. See Binding.
Books Prohibited, are fuch, the printing and felling of which are forbid by the laws and ordonnances of France. Under this head are comprehended in that kingdom all books againit rcligion, morality, and the ftate ; and even books printed without privilege or licence, without the name pr mark of the printer and bookfeller, and in which the name of the place where they were printed is not mentioned.
There is hardly any trade in France whith is more free than that of bookfelling. This liberty of the book-trade confifts chiefly in a double exemption; the one from all duties of importation and exportation out of the kingdom, or any other tax or importation within the kingdom; the other from all vilitation, or fearch, except thofe of the fyndic and affiftants of the bookfeller's company ; which fearch is, neverthclefs, not made at the cuftom-houfe, or offices belonging to it, but in the company's fyndical chamber, or hall.
This double exemption is very ancient, and was granted and confirmed by the kings of France, in behalf of a crade which is fo ufeful to religion, the ftate, and literature.
The declaration of Lewis XII, given at Blois the gth of April, 1513, which has ferved as a ground work; or model, to that great number of declarations, edicts, decrees of the council, and of the parliament, which have been publifhed under the following reigns, 'till this time, orders, That all books, either in Latin or in French, bound or not bound, fhall be free from all tolls and inland duties, whitherfoever they be carried by land or by water, within the kingdom, or out of it, without paying any tax, impofition, or any other fubfidy whatfoever.
The declaration of Henry II, dated the 27 th of June; 1551 , forbids the opening of the bales of books, except in the prefence of the fyndics and affiftants.
Thefe two declarations concerning the exempting books from all taxes, and from all vifitations except thofe of the fyndical chamber, have been fince confirmed by all the fucceffors of Lewis XII. and Henry II; the former in 1543, by Francis I. and, in 1547, by Henry II, and afterwards both together, by Charles IX, in 1560 ; by Henry III, in 1587 ; by Henry IV, in 1595 ; by Lewis XIII, in 1630 ; and finally by Lewis XIV, by feveral decrees and declarations of the courcil; the moft confiderable of which are the decrees of December 1651, and of the 18th of Augult r699, and the declaration of the 11 th of September 1703.
The vifitors, or fearchers, of the cuftom-houfe of Paris do indeed open the bales and chefts in which the books are packed up, in order to fee if there be not any other merchandizes concealed among them, but they do not examine the books; which are fent to the fyndical chamber.
The licentioufnefs of authors, and of printers and bookfellers, the former of whom may make an ill ufe of their genius by compofing, and the latter of their profeffion, by printing and difperfing among the public fuch books as may be dangerous to religion, good morals, or the flate, have been the occafion that at all times fome precautions have been taken, in order to prevent, or put a ftop to, fuch an abufe.
Before the invention of printing, the univerfity of Paris was alone charged with that care, with regard to thofe books which were expofed to fale in that city by the bookiellers, who were then abfolutely fubject to that body, and could not publifh any book for fale before they had communicated it to the cenfors of books appointed by the univerfity, to be by them either approved or corrected.
Part of this right of infpection over books; as far, at leaft, as it relates to thofe of divinity, or which treat of any religious fubject, is fill enjoyed by the univerfity, and no fuch books can be printed without the approbation of fome of the doctors.
But, the better to prevent the printing and vending of fuch books of all forts as are any way obnoxious, the government has impofed the neceffity of obtaining a privilege under the great feal, or a licence from the officers of the police, according to the quality of the impreflions; befides which, they are allo obliged to annex to the books the names of the authors, bookfllers, and pinters, with theit marks, as allo the name

## B O O

of the place where the books are printed; without all which particulars, a book is reckoned contraband, and liable to'be feized, and the bookrellers and printers to be fined or even more feverely punifhed, if the cafe requires it.
We fhall not, in this place, fpeak of the feveral edicts, declarations, and decrees, either of the council or of the parliament, by which that fort of policy was fetted for the regulation of the book-trade in France, becaufe we give a particular account thereof in two other articles of this Dictionary. See the article Bookseller.
As all thefe regulations could relate only to books printed within the kingdom, and that books imported from abroad, and efpecially from a neighbouring fate (Holland) equally famous both for the ability and licentioufnefs of it's printers, might contain a venom more dangerous fill, they bave taken in France feveral precautions againft it; either to prevent the importation of books which are there efteemed injurious to the ftate, or of counterfeited books, that is to fay, of books printed in France, and reprinted abroad, or to difcover and find them out when they have been imported by ftealth, deceiving the vigilance of the infpectors.
To prevent the importation of dangerous or counterfeited books, -Lewis XIV. has, by a decree of the council, given the 1 ith of June, 1710 , regulated and feecified the towns by which alone at books and pamphlets imported from fore countries may be entered into the kingdom.
There are ten of thefe towns, namely, Paris, Roan, Nantz, Bourdeaux, Marfeilles, Lyons, Straburgh, Metz, Rheims, and Amiens; to which Life has fince been added, by a decree of the council, given the 18th of December, 1717, for books and pamphlets coming from foreign countries; through Frènch-Flanders.
In each of thefe eleven cities there is a chamber eftablified, where the books are firft to be depofited, to be afterwards vifited by the fyndics of the company of bookfellers, or by two bookfellers appointed for that purpofe, in thofe towns where there are no fyndics. Laftly, the fyndics, or appointed bookfellers, are obliged to draw up an exact catalogue of all the books that are brought into, and vifited in, their chamber, and to fend every week an attefted copy thereof to the chancellor, that be may, according to the orders he fhall receive from the king, regulate all that concerns the fuppreffing, feizing, permitting, felling, and vending of all the faid books.
This decree, relating to the importation of books into the kingdom of France, was the next year followed by a declaration of the fame king, given at Fontainebleau the 5 th of September, 17 Lr , containing a regulation of what is to be obferved in the fale of books within the city of Paris.
By this declaration, which was explained by a fubfequent one, given in November the fame year, it is ordered, in nine articles,

1. That, according to the regulations made in the year 1686 , relating to the trade of books, none but bookfellers and printers thall have liberty to carry on that trade ; with leave, however, to all private perfons to difpofe of their books, libraries, and cabinets, but not before having been examined by the fyndics and affiftants of the bookfeller's company, and having firft obtained leave of the lieutenant-civil, and of the lieu-tenant-general of the police.
2. That the bookfellers and printers who thall have bought a library, or cabinet of books, in company, thall caufe the books to be carried into the fyndical chamber, the books being firf examined, in order to proceed there, in the prefence of the fyndic and affifants, to the dividing among them fuch books, the fale of which is, not prohibited'; for the performance of which they have but eight days time allowed them ; during which they are not allowed to fell one fingle book, under any pretence whatfoever.
3. The books thus bought in company fhall not, before they are fhared, be carried any where but to the fyndical chamber; nor, after they are fhared, any where but into the hopss of the bookfellers and printers who bought them, and to whofe Thare they fell, under the penalty of forfeiting the books, and a fine of 1500 livres.
4. If libraries, or cabinets of books, be bought by one printer or bookfeller only, he fhall have liberty to carry them to his houfe to fell them in his fhop, but not any where elfe, after they fhall have been vifited, without difplacing them, at the place of fale.
5. That no perfon fhall have liberty to let out any place to put books into, but after obtaining permiffion from the lieu-tenant-general of the police, under the penalty of a fine of 500 livres.
o. That no bookfeller nor printer fhall have a warehoufe out of his dwelling-houre, unlefs he makes a declaration of it to the fyndics and affiftants, which fhall be entered into a particular regifter kept for that purpofe, under the penalty of forfeiting all the books that fhall be found in fuch a warehoule, and a fine of 5500 livies: and no private perfon fhall let out to hire fuch places, but by a leafe made before a notary, and after the abovementioned declaration thall have been regiftered, under the fame penalty of a fine of 1500 livies.

## B O 0

7. That, at the time of taking off the feals, the books either prohibited or printed without licence, thall be fet apart by the commiffary who put on the feals, to be carried, alter a catalogue of them thall have been made, into the fyndical chandber, and delivered to the fyndic and gffitants, upon their receipt written at the bottom of the catalogue.
8. That, in cafe there be a Cale of buoks, to which the feal was not fet, the fyndic and affiftants fhall be calied to vifit them, and the books prohibited, or printed withour licence, fhall be feparated from the reft, and fent to the fyndical chamber, as above.
9. Finally, it is ordered, that no printer or bookfeller thall appraife any books, unlefs a certificate be firft produced of their having been duly vifited, under the penalty of a fine of 500 livres, and being interdicted for fix months.
With regard to the fecond declaration, defigned to explain the former, it is thereby ordered, that the formalities com.manded by the firft, concerning the vifiting and felling of libraries, or cabinets of books, fhall take place only in cales of voluntary or forced fales, but not in cafes of legacies, gifts, or prefents of fuch libraries or cabinets of books.

## REMARKs.

To urge a word in favour of letters and uffful fciences, is as needlefs, at this time of day, as to declaim on the benefits of rain and fun-thine, when nature requires them for the cultivation of the earth: and, from the hiftory of mankind, fuch feems to have been the firft rudenefs and barbarifm of the guman feecies, that the mind of man would have continued as wild and barren as the earth, without culture by ant and in genuity.
Books being the only means whereby knowlege of every kiad cap be generally and eafily convesed, they become eftimable in proportion to the ufeful matter they propagate: and, although fome may abufe this power, yet fo tenacious' of this privilege of book-printing have been the warmeft friends to the liberties of there kingdoms, that they bave looked on it as the great palladium of our civil and religious rights, and have therefore zealouify contended for it's prefervation.
If then a privilege of this nature be eflegmed fo dear to this nation, fhould not all due encouragement be given by the kegillature to fupport and maintajnitit? Can any means prove more effectual to that end, than fecuring to every one, who thus generoully communicates the refult of his, fudies for the benefit of the public, a right and property to the productions of his own labours? However reafonable this is, yet it leems extraordinary, methinks; that authors Gopuld be the only people in the kingdom whofe property is not jufty and fafely eftablinhed.

## REMARKs.

As this point is put in a judicious, and, in my humble judge ment, an unanfwerable light, by a very learned gentleman, who has oblized the world with fome of the moft admirable performances which this age has produced, I am highly fenfible that giving the reader his fentiments will be far more ac. ceptable than any thing that can; come from me; and therefore I fhall crave that learned author's permifion to reptint his Letter to a member of parthament, concerning literary property, at large, left it's freneth and elegancy fhould te loft, by being in the leaf curtailed.
Str,

- It feemeth, to me, an odd circumitance, that, amidat the jufteft and fafeft eftablifhment of property, which the beft form of government is capable of procuring, there fhould yet be one fpecies of it belonging to an order of men, who have been generally efteemed the greateft ornament, and, certainly, are not the leait fupport of civil policy, to which little or no regard hath been hitherto paid, I mean, the right of property in authors to their works. And furely, if theresbe degrees of right, that of authors feemeth to have: the advantage over moft others; their property being, in the truelt fenfe, their own, as acquired by a long and painful exercife of that very faculty which denominateth us men; and, if there be degrees of fecurity for it's enjoyment, here again they appear to have the fairef claim, as, foriune hath been long in confederacy with ignorance, to fop up their way to every other kind of acquifition.
Hiftory, indeed, informeth us, that there was a time when men in public ftations thought it the duty of their office to encourage letters: and when thofe rewards, which the wifdom of the leginature had eftablifhed for the Jearned in that profeffion deemed more immediately ufeful to fociety, were carefully diftributed amongh the moll def riving. While this fyftem lafted, authors had the lefs occafion to be anxious about literary property: which was, perhaps, the reafon why the fettlement of it was fo long neglected, that at length it became a queftion, whether they had any property at all.
But this fond regard to learning being only an indulgence to it's infant age : a favour, which, in thefe bappy times of it's maturity, many reafons of flate bave induced the public wifr dom to withdraw ; letters are now left, like virtue, to be their own reward. We may furely then be permitted to expect

## B O O

## B O O

that fo fender a pittance fhould, at leaft, be well fecured from rapine and depredation.
Yet fo great is the yulgar prejudice againft an author's property, that when, at ary timé, attempts bave been made to fupport it, againt the moft flagrant acts of robbery and injuftice, it was never thought prudent to demand the public protection as a right, but to fupplicate it as a grace: and, this too, in order to engage a favourable attention, conveyed under every infinuating circumftance of addrefs; fuch as promoting the paper manufactory at home, or augmenting the revenue by that which is imported from abroad.
The grounds of this prejudice are ${ }^{*}$ various. It hath been partly owing to the complaints of unfucceffful writers againft bookfellers, for not bringing their works to a fecond edition ; and partly to the complaints of little readers againit fuecersful ones, for a contrary caufe; when, to the great damage of the purchafers of the firf edition, they have fraudulently improved a fecond. For the proprietor profeffing to fell only his paper and print, and not the doctrine conveyed by it, the purchafer, who bas nothing elfe for his money, never teckons (and often with good reafon) his improvement for any thing So that, when a fecond edition leffeneth the price of the firft, he very naturally thinks bimfelf tricked of his money.
Another ground of prejudice, is, the unfait advantage made of the author's property by bookfellers: which, if true, would be juft as good a reafon for refufing him the public protection, as it would be to turn all thofe eftates upon the common which one of your Peter Walters has out at nurfe. For why flould it be expected of an author, and of no one elfe, to become fage before he be intrufted with his own? Let him but fhare in the common fecurity, and he will foon learn the value of property, and how to ufe it like his reighbours. As it is, we need not wonder he fhould be difpofed to part with that for little, which he is unable to preferve but at great hazard and expence.
A third ground of prejudice is the odious found of the word monopoly. But this is taking the thing in queftion for grant. ed, viz, that an author hath no right of propery: for a monopoly is an exclufive privilege by grant of doing that which all men have a claim to do; not an exclufive right by nature of enjoying what no one elfe has a claim to. Sa that to make this a monopoly, is making a proprietor and a monopolift the fame.
A fourth ground of prejudice is the favourite found of liberty, in thefe times commonly ufed for litentioufnefs; and appasently fo on this occafion. For liberty fignifies the power of doing what one will with one's own; which is the right we here contend for: and licentioufnefs .the doing what we will with another man's; which is the wrong we feef to redrefs. So that, as fure as licentioufnefs deftroys liberty, fo certain is It that the production of the right in queftion adds ftrength and vigour to it.
But it is not my defign to defend the ufe men make of property, but to vindicate the right they have in it. I fhall therefore go to the bottom of them; and, as they all fupport themfelves on the falle logic here detected, the taking the thing in queftion for granted, I fhall thew, that an author has an undoubted right of property in his works.
Things fufceptible of property muft have thefe two effential conditions, that they be ufeful to mankind, and that they be capable of having their poffeffion afcertained. Without the firt, fociety will not be ofliged to take the right under it's protection; and, without the fecond, it will never venture upon the trouble.
Of thefe, fome are moveable, as goods; fome immoveable, as lands: and they become property either by firf occupancy, or by improvement.
Of moveables, fome are things natural; others, things artificial. Property in the firft is gained by occupancy; in the latter, by improvement.
Moveable property, arifing from improvement, is of two forts; the product of the hand, and of the mind; as an utenfil made; a book compored. For that the product of the mind is as well capable of becoming property as that of the hand, is evident from hence, that it hath in it thofe two effential conditions, which, by the allowance of all writers of laws, make things fufceptible of property; namely, common utility, and a capacity of having it's poffeffion afcertained.
Both thefe forts of things, therefore, being capable of property, we are next to confider, as they are fo different in their natures, whether there be not as great a difference in the extenfion of their rights.
In the firft cafe, then, it is agreed, that property in the product of the hand, as in an utenfil, is confined to the iadividual thing made; which, if the proprietor thinks not fit to hide, others may make the like in imitation of it; and thereby acquire the fame property in theit manual work, which he hath done in his
But, in the other cafe of property in, the product of the mind, as in a book compofed, it is not confined to the original MS. but extends to the doctrine contained in it : which is, indeed, the true and peculiar property in a book. The neceflary confequence of which is, that the owner hath an exclufive right of tranferibing or printing it for gain or profit.

This difference, in thefe two forts' of property, arifes from an equal difference in the things: as will appear, by confidering the different nature of the works, and the different views of the operators.
With regard to the nature of the work: an utenfl ; and a book only coufidered as a compofition of paper, and ink drawn out in artificial characters, are both works of the hand; and, as fuch, the property is confined to the individual thing:, But a book, confidered merely in this light, is conlidered inadequately and unjufly; the complete idea of a book being fuch a compofition as is here fpoken of, together with a doctrine contained. But under thi idea it flumes another nature, and becomes a work of the mind. We inve proved a work of the mind to be fufceptible of proper. $y$. like that of the hand. Now if the property, in a b ok, be confined to the indwidual volume, here is a work of the mind executed without any property annexed : the property in the individual volume ariling from it's being merely the wolk of the hand. A doctrine abfurd in fpeculation, as it is making manual and mental operation one and the lame, which are two diftice and different things: and uijuit in practice, as it depriveth the owner of a right annexed by pature to his labourt Again, in the utenfil made, the pripcipal expence is in the materials employed; which, whoever furnifheth, reafonably acquires a property in the thing made, though made by imitation. On the con rary, in a book compofed, the pripcipal expence is in the form given : which as the original maker only can fupply, it is but reafonable, how great foever the copies of his works may be multiplied, that they be multiplied to his own exclufive profit.
Let us next conlider is, with regard to the different views of the operators. He who makes an utenfil, in imitation of another he fees made, mult neceffarily work with the fame ideas the original operator had, and fo fit'y acquires a property in the work of his own hands. But the moft learned book in the world may be copied by one who hath no ideas at all. What pretence, then, bath fuch a one to property, in a work of the mind, who hath employed, in copying it, only the labour of the band? And which rends but to make his theft the more impudent, as he fteals what he doth not underftand. Again, in an utenfil made, the framer of it hath plainly no regard to any one's benefit bat his own: and he muft finifh it before it can be fitted for bis ufe. His end, then, being obtained in that individual piece of work, it is but reafonable his property thould there terminate. In a mental work, the thing turns the other way. Here the contriver may himfelf enjoy all the fruits of his difcoveries with out drawing them out, fcholaftically, in form. When he doth this, it is but candid to fuppofe that it is done for the benefit of others. Can any thing, therefore, be more juft, han that he fhould be owned and protected in a property, which he hath not merely acquired to himfelf, but which is generouly objective to the benefite of others?
In a word, to infift once again upon what hath been faid. If an author have only a property in his individual manufcript, he hath, truly fpeaking, no property in his book at all; that is, as his book is a work of the mind; which, in this cafe, ftill lies in common. The confequence is, (as appears from the explanation of property given above) that no property arifeth from a thing fufceptible of property: nay, which is fill more abfurd, from a thing aclually become property; as being attended with all thofe effential conditions from whence property anifeth. To deny an author, therefore, or his affigns, an exclufive privilege to print and vend his own work, feemeth to be a violation of one of the molt fundamental rights of civil fociety.
Bot here let it be obferved, that, in our divifion of artificial moveables, into the two forts, of manual and mental, we purpofely omitted a third, of a complicated nature, which holds of both the other in common; as referving it for this place, to fupport and illuftrate what hath been faid above of the two more fimple kinds: and that is, of mechanic engines. Now, thefe partaking fo effentially of the nature of manual works, the maker hath no perfect right of property in the invention. For like a common utenfil, it muft be finifhed before it can be of ufe to himfelf; like that, it's materials are it's principal expence; and, like that, a fucceffful imitator mult work with the ideas of the firf inventor: which are all reafons why the property flould terminate in the individual machine. Yet becaufe the operation of the mind is fo intimately concerned in the compruction of thefe works, their powers being effected and regulated by the right application of geometric fcience, all fla es have concurred in giving the inventors of them a licence of monopoly, for a term of years, as on a claim of right. Now the reafon of this, we fay, can be explained only on the principles here advanced, that the conftrutor of a piece of mechanifm hath his property confined to the individual thing made; and the compofer of a fcholaftic work hath-his extended to the ideal difcourfe itfelf. And a mathematical machine holding of the nature of both, but more effentially of the former, there was no way of adjufting and fatisfying an imperfect right but by fuch a grant as is here mentioned.
But it is no unfrequent practice for the claimants of a per-
fect right to apply to the magiftrate, or legilature, for the better fecurity of an acquired property, in the fame mannter that claimants of an imperfect right do, to acquire property: fometimes, to the one for a licence; and fometimes, to the other for an act of parliament. Yet from thence to conclude, that the claimants of a perfect right have, by fuch application, waved, or given up, their claim; or that the magiffrate or leginature have, by their licences or acts of exclufive privilege for a certain time, either abridged or fuperfeded that claim, appears to me the higheft abfurdity; as it will, 1 am perfuaded, to others, on reflecting upon the plain and obvious reafons why the petitioners feek this additional fecurity, for the enjoyment of a hatural right; and why the magiffrate and legiflature grant it only for a certaln term of years.
In the common adminiftration of juftice, the way in $u$ le, to reftrain the invafion of property, is to oblige the offender to repair the damages fuffained. Now fuch is the nature of the property in queftion, that it may be long invaded before the fufferer can difcover the offender: fo that fuch a one having a fair chance not to be detected; and, if detected, a certainty of refunding only what he hath unjuftly gained; bad men will have but too great encouragement to invade their neighbour's property. Therefore, to counteract this undue temptation, it was natural for fuch proprietors, in their own defence, to apply to the flate for additional and accumulative penalties againft the invaders of their right. In which, they act but as the fate itfelf doth for the fecurity of government in general; when, for the fupport of that natural allegiance, which all men owe to the fociety under which they chufe to live, and whereby they are protected, it addeth, by pofitive laws, the additional fanction of oaths, and other folemn engagements. Now if the ftate, in this cafe, can never be fuppofed to have waved or 'fuperfeded it's natural clain to allegiance, and to reft it folely on the oaths taken, or the engagements made; what reafon have we to think that the fubject in his turn, when he applies to the fate for protection, in the inftance in queftion, fhould give up or impeach his natural right, while his only purpofe is to feek additional fecurity for the enjoyment of it?
This leadeth us to our fecond queftion, Why the magiftrate and legillature reftrain this additional fanction to a certain term of years? And the reafon is evident. The petitioners neither require more, nor doth the ftate find, that more is needed. The great temptation to invade this property being while the demand for it is great and frequent; which is, generally, on the firf publication of a book, and fome few years afterwards. While this demand continueth, the proprietor hath need of all additional fanctions, to oppofe to the force of the temptation : but when, in courfe of years, the demand abateth, and with it the temptation, the common legal fecurity of natural rights is then fufficient to keep offenders in order.
However, as clear and undoubted a property as this is by nature, and the common principles of fociety, it cannot be denied, but that the legiflature may abridge, fufpend, or abrogate it within it's own jurifdiction, as it is accuftomed to do with feveral other the like rights, for the fake of the whole. But then it muft be done by exprefs declaration and decree: implication, inference, or any mere law-confequence, or even a miftake of judgment, in the legilature, going on a fuppofition that there was no natural right where indeed there was, would be, fimply, infufficient to abrogate it. And the reafon is plain, becaufe the believing a thing to be no natural right doth not infer a judgment, that the enjoyment of it, as fuch, would be hurfful to the fociety; which judgment is the only caufe of the legiflature's abridging or abrogating a natural right.
This was neceffary to premife, in order to fet a cafe in it's true light, which hath, above all others, encouraged the invafion of property; though the act, from whence it arifes, was folely contrived to prevent that invafion. I mean the act of the eighth of queen Anne; which ignorance and knavery have concurred to reprefent as a reftrictive, and not accumulative, law; and, confequently, to fuppofe it the fole foundation, inftead of an additional fupport, of literary property. It is intitled, An act for the encouragement of learning ; in which an exclufive right of property, under certain conditions, is fecured, by particular penalties, to authors, and bookfellers claiming under them, for the term of one and twenty years.
Now in this act, we are fo far from finding any declaration to abriuge, fufpend, or abrogate this natural right; (which, as we fay, would be indeed fufficient to diffolve it) or any expreffion intimating the opinion of the legillature againft it's exiftence ; (which, as we fay, would not be fufficient) that, on the contrary, there is, in the preamble of it, an ex. preffion plainly declarative of their opinion, that authors had a right, prior to this act; and, towards the conclufion, a provifo, which leaves the queftion of the right, free from, and undetermined by, what is, in this ftatute, enacted concerning property.
The exprefion is this- Whereas printers, bookfellers, and * other perfons, have of late frequently taken the liberty of
${ }^{6}$ printing, reprinting; and publifhing, or caufing to be print* © ed, reprinted, and publifhed; books, and other withigs; ' without the confent of the authors or proprietors of fuch
6 books or writings, to their very great detriment, and too ' often to the ruin of them and therr famlies, \&rc.'-Now, could the injured parties, here mentioned, be proprictors of that in which they had no property ? Or did the leginature, in a law for the regulation of to momentous a branch of what was deemed and claimed as property, ufe the terms of the fubject in queftion inaccurately or unfitly? If it were poffible to think fo of a Britifh legiflature, the fuppofition would be excluded here; becaufe, not only the exprefion, but the fentiment neceffarily fuppofes that they uied the word propretors in it's ftrict and exact fignification; it being a reprefentation of the bad effects from the liberty taken of printing and reprinting books, without the conlent of the authors; or their affigns.
The provifo, ith the conclufion, is in thefe words, -' Pro6 vided that nothing in this act contained fhall extend, or - be conftrued to extend, either to prejudice or confirm any - right that the faid univerfities, or any of them, or any per-- fon or perfons have, or claim to have, to the printing or re6 printing any book or cony already printed, or hereafter' to - be printed.'-Now, though it may be eafily granted, that one purpofe of this provifo was to leave undecided all claims, or pretences of claim, to exclufive printing, from patents, licences, \&c. yet the large wording of it appears to have a particular aim at obviating fuch mifconftruction of the ftatute, as if the additional temporary fecurity, thereby given, etther implied that there was no right of property before, or elfe abrogated what it found. And the having thefe two things in it's intention, viz. the natural right, and that which is founded on patents, feems to be the reafon of it's faying that it neither prejudiced nor confirmed : it being unjuft to prejudice a plain natural right; and inexpedient to confirm an unexamined claim by patent. For what the legilature's fenfe was of this natural right, appears from what hath been oblerved of their ufe of the word proprietors, in the preamble.
But laftly, in cafes where the fenfe of the legiflature is uncertain or obfcure, there the interpretation of the fupreme magiftrates of juftice bath been always deemed to have the force of a legal decifion. And this decifion hath been made in favour of property, on the act in queftion. For, in the high court of Chancery, actions for damages have been furtained, where the action for forfeiture and penalties, on this fatute, was not competent in any other court: which fhews, that that great magiftrate did not confider this act as a reftrictive, but as an accumulative law. It being a rule, that pofitive correctory laws are to be fltictly interpreted. For, in every civil fociety, experience fhews, that the fubject, in many cafes, muff be put under reftraint with regard to things in themfelves lawful, merely becaufe of the bad confequences, to the public, by the abufe of liberty. But, in all fuch reftritive laws, right reafon, at the fame time, forbids thefe laws to be extended, in the fmalleft particular, beyond the letter of the act. To do otherwife would be abridging liberty, without authority of law, which is the fame thing with private violence. This plainly thews the judgment of the high court of Chancery, to be that there was a right of property previous to the flatute; which the flatute had ne ther abrogared nor abridged; and, on that right, the action was fuftained, where the action for forfeiture and penalties was not competent. For an additional fecurity of property, made for the benefit, and at the requeft, of the proprietors, can never be deemed to exclude them from having recourfe, at pleafure, to that legal remedy, which on the cemmon principles of a court of equity, they had a claim to, prior to the grant of fuch additional fecurity.
All this laid together, it feems abundantly evident, that no right is taken away by this act, which authors, or their affigns, had before the making of it. And confequently that it is no reftrictive, but an accumulative law, brought in aid of a natural right, whofe reality I have here endeavoured to fupport.' See the articles Bookseller and Copies of Authors.

REMARKS.
Though what this learned gentleman has urged, is more than fufficient to thew the juftice of a law for the fecurity of literary property, yet we fhall prefume to add a word more, by obferving what effect this would bave on particulars, and on the public. With regard to the former, it is certain, that, while an author or his affigns are protected in their property from the invafion and piracy of ochers, they can afford to fell cheaper ; it being well known, that the profits of bookfelling depend on the numbers fold, and not on a few; and, the fewer are fold, the dearer the books muft be; and, the more, the cheaper they can be afforded. And, as to the public, it is apparent, that the interefts of fociety will te better fecured both in a civil and a religious view; for then the licentiournefs of libelling the government, and infulting the church and gorpel itfelf by impious books, will be eatier remedied than when property is infecure.

Should it be faid, that, if literary property be fo neceflary to be fecured, how happens it not to be done in any country abroad, in the manner it has been demanded? And how happens it to he now wanted at home, when we have done fo long without it? To the firf queftion it may he obferved, ol hat there are arbitrary powers in the adminiftration of governments abroad, even in their republics (which powers our fiee government has not thought fit to intruft to the executive power) whereby the magiftrate is well enabled by the ftanding police, from time to time, to punifh the invaders of there temporary licences which he granted. And yet the want of eftabluthing literary property on a right foundation, even there, is attended with many milchiefs to proprietors, which they lament, and want that remedy to rectify, which is great Jy defired, by all friends to literature, in this kingdom. As to the other queftion, how we come to want a new fecurity for property not wanted before? The general anfwer is, that thefe mifchiefs have been continually growing fince the revolution, and are now arifen to fuch a height, as to become intolerable. Before that happy period of the eftablifhment of public liberty, there were two very powerful reftraints to the invalion of literary property: the one was power granted by the council-board (which had then a very formidable jurifdiction) to the company of ftationers. 2 d ly, The power of licenfing by perfons feverally deputed by the crown, and the archbithop of Canterbury. Now, confider the efficacy of thofe two juridictions to reffram piracy, as it is called, who are the invaders of property! Neceffitous bookfellers, and fcribbling authors ftill more neceffrous, and who very e fily pirate large volumes, that contain bodies of fciences, fuch as dictionaries, fyftems, \&ec. only by making trivial alterations, or cafting them into different forms.
Before the revolution, the company of itationers effectually reftrained the piracy of bookfellers : and the licenfers, by application of the proprietors, the piracies of frribblers. But, happy for the general literty, the powers of the councilboard, as exercifed a century ago, and of litenfers, are at an end. But it was not prefently conlidered, that, as abufively as the powers were exercifed, yet, the powers had their ufe, to reftrain injuftice: and that, when they were abolifhed, there would want fomething to fupply their place._-In a word, if unlicenfed printing, as undoubtedly it is, be one of the fecurities of public liberty, an act declarative, of an author's right in his copy, is as neceffary for the fecurity of private property.

- Permit me, fays an elegant writer, to fpeak a word in the caufe of learning, and lament that a liberal education thould be the only one, which a polite nation makes unprofitable. All mechanic artizans are allowed to reap the fruit of their invention and ingenuity without invalion; but he that has feparated himfelf from the reft of mankind, and ftudied the wonders of the creation, the government of the paffions, and the revolutions of the world, $\& \mathrm{cc}$. and has an ambition to communicate the effeet of half his life fpent in fuch noble enquiries, has no property in what he is willing to produce, but is expofed to robbery and want, with this melancholy and juff reflection, that he is the only man who is not. protected by his country, at the fame time that be beft deferves it. According to the ordinary rules of computation, the greater the adventure is, the greater ought to be the profit of thofe who fucceed in it; and, by this meafure, none have a pretence of turning their labours to greater advantage than perfons brought up to letters. A learned education is very expenfive, and confumes a moderate fortune before it is gone through in it's proper forms. The purchale of an handfome commiffion, or employment, which would give a man a good figure in another kind of life, is to be made at a much cheaper rate. Now, if we confider this expenfive voyage, whith is undertaken in the fearch of knowledge, and how few there are who take in any confiderable merchandize, how lefs frequent it is to be able to turn what men have gained into profit; how hard is it that the very fmall number who are diftinguifhed with abilities to know how to vend their wares, and have the good fortune to bring them into port, fhould fuffer being plundered by privateers, under the very cennon that fhould protect them?
The moft eminent and ufeful author of the age we live in, after having laid out a princely revenue in works of charity and beneficence, as became the greatnefs of his mind, and the fanctity of his character, would have left the perfor in the world, who was the deareft to him, in a narrow condition, had not the fale of his immortal writings brought her in a very confiderable dowry, though it was impoffible to be equal to their value. Every one will know that I mean here the works of the late archbifhop of Canterbury, the copy of which was fold for 25001.
I do not feak with relation to any party; but it has happened, and may often fo happen, that men of great learning and virtue cannot qualify themfelves for being employed in bufinefs, or receiving preferments. In this cafe, you cut them off from all fupport, if you take from them the benefit that may arife from their writings. For my own part, I have brought myfelf to confider things in fo unprejudiced
manner, that I efieem more a man who can live by the products of his underftanding, than one who does it by the favour of great men.
The zeal of an author has tranfported me thus far, though I think myielf as much concerned in the capacity of a reader. If this pradice goes on, we mult never expect to fee again a beautiful edition of a book in Great-Eritain,'
Books, in the plural number. This, in the trading and mercantile ftile, is underftood of all the regifters in which merchants, bankers, and traders, do methodically write, either in the grofs, or minutely, all the affairs relating to their traffic, or even fuch of their domeffic concerns which are any ways connected therewith. Thus we fay, the books of fuct a merchant, or trader, are in vety good condition; that banker keeps his books in very good order; there is no order, no accuracy, in this trader's books of account.
Merchants cannot abfolutely carry on their trade, without keeping proper books of account; they are even obliged by the ordonnances in France fo to do. See Remarks upon the article Bankrupts. But they have occafion for more or lefs books, according to the nature of their trade, and the quantity of bufinefs they have, or according to the manner in which they keep their books.
Book-keeping. Books are kept either by fingle, or according to the method of double entry. They who keep them in the former method (which is proper only for retall dealers, or at leaf for traders who have but very litule bufinefs) bave occalion for few books only, fuch as a journal, or day-book, and a ledger, or poft book; the former, to write all the articles following, as they occur in the courfe of their bufinefs; and the latter, to draw out the accounts of all the debtors and creditors on the journal. But, as for wholefale dealers, and great merchants, who keep their books according to the double entry, or Italian method, as is now moft conmonly done, their bufinefs requires feveral other books, the ufefulnefs of which will be feen from what followeth.
Moft authors agree, that the Italians, and particularly thofe of Venice, Genoa, and Fiorence, were the firft who introduced the method of keeping books by double entry, or by way of charge and difcharge ; whence amongt us it is ftill called the Italian method.

## Books kept according to the method of double entry.

The moft confiderable books, according to this method, are the walte-book, the journal, and the ledger. Befides thefe three, which are abfolutely neceffary, there are feveral others, to the number of thirteen, or even more, called fubfervient, or auxiliary books; which are ufed in proportion to the bufinefs a man has, or to the nature of the trade he carries on. Thefe thirteen books are,
The cafh-book.
The debt-book.
The book of numero's.
The book of invoices.
The book of accounts current.
The book of commiffions, order, or advices.
The book of acceptances of bills of exchange.
The book of remittances.
The book of expences.
The copy-book of letters.
The book of poftage.
The fhip-books.
The book of workmen.
To theie thirteen may be added others, which depend on the greater or leffer accuracy and order of the merchants and bankers, and on the feveral kinds of trade carried on by particular dealers; but for the generality, thefe thirteen are fufficient.
The Wafte-Book, is the firft and moft effential, in which all kind of matters are, as it were, entered, according to the order of time in which they occurred, in a promifcuous manner, in order to be afterwards feparated and tranferibed into the other books. This book cannot be kept with too much accuracy and regularity, becaufe recourfe muft be had to it in all difputes which may arife relating to trade.
It may be kept two ways; the firft is by only entering things into it fucceflively, juft as they fall out; as, for inftance, bought of fuch an one, fold to fuch an one, paid to fuch an one, lent fuch a fum, and fo forth.
The fecond way is, by entering at once each article, according to its proper debtor and creditor: this method is reckoned the beft, becaufe, by forming immediately a kind of journal, it faves the trouble of making another.
Some, for greater accuracy, divide the wafte-book into four others; namely, the book of emption, or of things bought; the book of fale, the book of cafh, the book of bills. Among the merchants who follow that method, fome do immediately enter the articles from thefe three books into the ledger, without making a journal; others, writing thofe four books fair out, make a journal of them, out of which they afterwards poft the feveral articles into the ledger.

## B O O

The wafte-book is an univer $r_{A 1}$ and compleat memorial of all the tranfaclions and events of bufinefs, taken in the natural order of time; whereby all things of one date are placed together, ferving as a preparation for the ledger, into which they are all to be transferred upon diftinet accounts, according to the order of the fubjects.
The wafte-book begins with an inventory of a merchant's effects and debts, and contains a compleat record of every tranfaction of his affairs, with-all the circumftances, in a plain narration of matter of fact; every tranfaction following another, according to the order of the dates. This book is in reality a journal, or day-book; but, that name being applied to another, the name of wafte book is given to this by way of diftinction; though what relation the word watte bears to the nature of this book, is not very obvious. Some authors, with more propriety, call it the memorial, or memo-randum-book, becaufe it's principal ufe is for taking memorandums.
Here follows an inftance of the method and ufe of the waftebook. If, on the firft day of July, you buy a pipe of portwine for 27 1. ready money, and on the 4 th fell to Edward Ellis 12 pipes of fherry at 30 . per pipe, of which he pays you 701 . down, and for the reft you give him a month's credit; all the form of expreffing thefe cales in the waftebook, is as follows, viz.

| July r.Bought a pipe of port wine, for which I paid -4th,Sold to Edw. Ellis twelve pipes of fherry, at 30 l .per pipe.Received in ready money <br> Reft due at one month |  |
| :---: | :---: |

And fo of any other matter.
The Journal, or Day-Book. The name of this book fufficiently fhews its ufe. Each article, entered into this book, ought to confift of feven parts, which are, the date, the debtor, the creditor, the fum, the quantity and the quality, how payable, and the price.
This book is commonly a regifter in folio, of five or fix quires of paper, numbered, and ruled with one line on the fide of the margin, and with three on the other end, to write the fums.
It is the joumal which is meant in the ordonnance of France, of March 1673, where it is ordered, tir. III, art. 1, 3, and 5. That all merchants and traders, whether wholefale or retale, fhall keep a book, containing an account of all their commercial tranfactions, bills of exchange, debts active and paffive, \&c. And, for want of keeping fuch a book, and furrendering it up, in cafe of failure, they are reputed fraudulent bankrupts, and profecuted accordingly in an extraordinary manner, and condemned to fuffer the punifhment directed in the fame ordonnance, tit. II. art. $11,12$.

## Model of an article in the journal.

The journal, fo far as it differs from the wafte-book, is only a book of aid to the ledger. There are two different methods of keeping it: in the firt,, which is that hitherto chiefly ufed, the journal is a complete tranfcript of the waftebook, in the fame order of time, but in a different ftile: for the wafte-book expreffes every tranfaction in a fimple narration of what is done; whereas the journal diftinguilhes the proper debtors and creditors, as a preparation for the ledger: thus, when any tranfaction is to be transferred from the wafte-book into the journal, they examine it by the rules of the ledger, as if it were to be entered immediately there; and, finding the debtors and creditors to which it belongs, thefe are diftinctly marked by their denominations of debtor and creditor, in the ftile of the journal ; at leaft, the accounts that are debtors, are exprefsly fo named; and, by their being direcely connected debtor to fome other accounts, thefe are fufficiently determined to be the creditors, though the word creditor be not written.
The other form of a journal, which in certain refpects is preferable to the former, makes this book a complete tranfeript of the wafte-book, without any alteration, leaving on the left fide of every page a large margin, about the third part of the page, on which, againft every tranfaction, are written the names of the debtors and creditors of the tranfaction, with their tities of debtor and creditor, and fums of money; oblerving, that, where there are fundry debtors or creditors to one creditor or debtor, they write their names next each other, and the name of the one correfponding debtor or creditcr againf the total of the other fums; by which means, the connection appears at fight. Then, when the tranfac-

## B O O

tion is trai:sfered to the ledger, they write in this margin the numbers of the folio's where the accounts fland in the ledger, for the purpofes already mentioned, in freaking of the former method. This book may be called either the wafte book or journal, being in reality both; not only as every wafte-book is a journal, but as there is here alfo that which diftinguifhes both a wafte-book and a journal.
Ledger, or Ledger-Book, fometimes alfo called the great book, becaufe it is the greateft of all the books ufed by the merchants; and the poit book, becaufe all the articles extracted from the journal are diftinclly pofted into this; is a large volume in folio, compofed of feveral quires of large and thick paper. Every page of it is ruled with fix lines from top to bottom, two on the fide of the margin, and four on the firde of the fums.
In this book are written all the accounts by way of debtor and creditor as they are extracted from the journal; fo that it is properly the wafte-book ftill further digefted, and contains all the tranfactions of a man's affairs in fuch order, as that thofe belonging to every different fubject lie together in one place, making fo many diftinct or feveral accounts.
To form every account, two pages are ufed oppofite to each other: that on the left ferves for debtor, and that on the right for creditor. After the name of each debtor on the left page, they write Debtor, or by abbreviation Dr. and on the right Per Contra, Creditor, by abbreviation Cr.
Each article in this book muft be compofed of five parts or members, which are, 1. The date. 2. The perfon whom we credit, or are credited by. 3 . The fubject, that is to fay, the thing credited or indebted for. 4. The folio, or page correfponding to it, 5 . Laftly, the fum or amount of the article. Two inftances, the one of an article of debtor, the other of an article of creditor, will more diftinctly thew the form and ule of this book.

Model of an article in the ledger. See Banking.

## Model of an article in Creditor.

As the management of the ledger is of the laft importance in accounts, the following rules relating thereto fhould be duly attended to.

1. That, for every diftinct fubject with which you have an account (i. e. for every perfon with whom you deal on mutual truft and credit, or who by any means becomes your debtor, or you his) as well as for every thing you deal in, there muft be a certain feparate fpace, or portion allowed, wherein-are to be written all and only the tranfactions relat ing to that fubject, whofe name is to be infcribed or written on the head thereof, making thereby difting and particular accounts.
2. Every account is to be diffinguifhed into two parts, taking for each an equal portion (lefs or more as you think fit) of right and left pages, of one folio, or opening; the name of the fubject being written on the head of the account on both fides, which are diftinguifhed by the word Debtor on the left fide, and creditor on the right, for the purpofes following, to which the columns explained below are fubfervient.
3. Every perfonal account to contain, on the debtor fide, all the articles which that perfon owes you, and the payments you make of your debts to him: and, on the creditor fide, all that you owe to him, and the payments he makes of his debts to you. Or, becaule this rule confiders payments under the notion of mutual oppofite debrs upon the receiver, if this be once fuppofed, the rule may be briefly exprefled thus: every perfon is debtor for what he owes me, and creditor for what I owe him.
4. Every real account to contain on the debtor fide the quantity and value of what was upon hand at the begioning of the account, and what was afterwards received, with all coft and charges; and on the creditor fide, the quantity and value of what is difpofed of, or in any manner taken away, or gone out of poffefion, with all the returns that fubject makes me. Or, more briefly, thus: it is debtor for all received, firlt coft, and charges; and creditor for all gone out of it, with the returns.
5. Every tranfaction muft be entered in the ledger-book, with a balance of debt and credit, i. e. fo as that every ar ticle be placed on the debtor fide of one account, and the creditor fide of fome other, making thereby equal debt and credit in the ledger: and where the perfonal and real accounts concerned in the tranfaction, do not, in the articles belonging to them, make this ballance (as they will in moft cafes) then fome imaginary account muft be ufed to fupply the defect.
6. Thofe

## BOO

6. Thofe accounts, whofe articles of debt and credit in any tranfaction ballance one another, are, in the ledger, to be conneded together in the ftile of every article, as mutual and correfpondent debtors and creditors, by writing in each of the correfponding accounts the name of the other, after the particle To in the debtor's account, and By in the creditor's, which connects the two; the name of the accounts in which articles are written, with its quality of debtor and creditor, being underftood as joined to, and fo is read before, the word To or By, in every article, (though it be written only once for all upon the head of the account.) Then, after the name of the correfponding creditor or debtor, follows a brief narrative of the fact ; the date, and other numbers, being placed in their proper columns.-Hence we find the ufe of the column which fands before and next to the money columns, which is this, to write in it the number of the folio where ftands the correfponding accourt, with which the account in which you write is connected in every article.
Fo facilitate the ufe of the ledger, there is an alphabet, or index, made to ferve as a repertory; it confifts of as many leaves as there are letters in the alphabet, that is to lay, 24: each leaf is cut on the edge, and marked with one of the 24 letters, in their natural order; and on each leaf is fet down the initial letter, or letters, of the names of every account, either perfonal or real, with the number of the folio of the letter where the account is ftated; by which means a perfon may find in the ledger, with the greateft eafe, any account which he has occafion to confult.
Cahh Book. This is the firlt and moft important of the 13 auxiliary books. It is fo called, becaufe it contains, in debtor and creditor, all the cafh that comes in, or goes out, of a merchant's ftock. The French call it allo the book of cafh, and of notes (livre de caiffe \& le bordereau) becaufe, befides an account of the calh received and paid, it contains alfo notes of the feveral fpecies of the money, or coin, that comes in, or goes out.
When a merchant does not keep that book himfelf, he has it kept by a clerk, or book-keeper, whom they ftile calhier.
In this book they write all the fums which are daily received and paid. The receipts on the debtor's fide, the perfons of whom it was received, on what, and on whofe account, and in what fpecie; and the payments on the creditor's fide, mentioning alfo the feccie, the reafons of the payments, to whom, and for whofe account, they are made.
The title of this book is fet down as follows: all the other books have alfo their proper titles written on the back, or cover.

CASH-BOOK.
No. A. ${ }^{1751}$.
The articles in debit and credit are formed after the following manner :

Model of an article in debit, which muft be on the left fide. Cash Dr.

Model of an article on the credit fide, which muft be on the right fide, overagaint the former.

Credit.

The better to conceive the nature of the book, it is to be obferved, that in bufnefs, where cafh happens to be an account which has numerous articles, it is convenient to keep a particular account thereof in a book diftinet from the ledger, and for this reafon called the calh-book. This is formed in all refpects like the cafh-accounts in the ledger, with a debtor and creditor fide, in which all the cafh received and given out is entered, either in a fimple ftile, or in that of the ledger : but, which way foever the narra-

## B O O

tive is made, every article muft be duly entered on the ope pofite fide of the correfponding account in the ledger, with a reference to the ledger account of cah : for fuch an account there mult alfo be, into which the fums of the debtor and creditor fides of the particular account muft be tranfferred once a week, or month, as is found moft convenient. Thus in the calh-book, the fums being written down againt them, fay, transferred to the ledger, and mark the folio; and in the ledger account enter the fum, with the date of the transfer, debtor to, and creditor by fundry accounts, as per cafh-book. The cafh-account in the ledger is neceflary for the ballance of the whole; and the conveniency of the feparate account of all the particulars is, that we have them all together in one continued account: whereas the rule of the ledger being not to allow more than one folio for one account, 'till that be filled up, the account might hereby lie in feveral folio's.
Book of Debts, or Payments, is a book in which is written down the day on which all fums become due, either to be received or paid, by bills of exchange, notes of hand, merchandizes bought or fold, or otherwife, that by comparing receipts and payments, one may in time provide the neceffary funds for payments, by getting the bills, notes, \&cc. due, to be paid, or by taking other precautions.
Two models will be fufficient for explaining the whole ufe and form of this book; let it only be obferved,' that, like the ledger, it ought to have two pages, oppofite to each otier, on the left of which is fet down what is to be received, and on the right what is to be paid.

Model of the left page for the receipts.

Model of the right page, for the payments.

Book of Numero's, or Wares. This book is kept, in order to know eafily all the merchandizes that are lodged in the warehoufe, thofe that are taken out of it, and thofe that remain therein. It's form is commonly long and narrow, as of a half-fheet of paper folded length-ways. Every page is ruled with tranfverfal and parallel lines, about an inch diftant from each other, with two other lines from top to bottom, the one next the margin, and the other next the fums.
Within the oblong fquares formed by thofe lines, they write on the left page the volume of the merchandizes, that is to fay, whether it be a bale, a cheft, a tun, \&cc. their quality, as pepper, cloves, honey, foap, \&c. and their quantity, or weight; and overagaintt it, on the fide of the margin, the numbers which the bales, cheits, tuns, \&c. are marked with as received into the warehoufe.
On the right-hand they follow the fame method for the difcharge of the merchandizes which are fent out of the warehoufe, futting overagainft each article on the left, firft in the margin the date when the merchandizes were carried out of the warehoufe; next in the oblong fquares the names of thofe to whom they were fold or fent; and, finally, what quantity of each was fent out, in cafe the whole were not. Here follow the two models, the one of the left, the other of the right-hand page.

Left hand page.

Book of Invoices. This book is kept to preferve the journal from erafures, which are unavoidable in drawing up the accounts of invoices of the feveral merchandizes, received, fent out, or fold, wherein one is obliged to enter very minute particulars; it is allo defigned to render thofe invoices eafer to find than they can be in the watte-book, or journal. The invoicts which muft be entered here are thofe of the merchandizes bought, or fent away, for the account of another.
Thofe of merchandizes which one fells by commiffion.
Thofe of fuch merchandizes as are in partnerfhip, of which others have the management.
Lafly, all the accounts which are not immediately clofed, and which one would not open on the ledger.
This book contains an account, or invoices, of ail the goods which a perfon chips off, either for his own account, or for others in commifion, according to the bills of lading, with the whole charges 'till on board, every invoice following after another, in order as they happen.
The invoice-book is only a copy of what is written in the wafte-book in thofe cafes.-After the date, the narration is to begin thus :-Shipped on board the dhip N, A B mafter, bound for C , the following goods, \&c. configned to EF, for my account, or by order, and for the account, of G H.Or it may be begun thus:-Invoice of goods fhipped aboard, \&c.
Book of Accounts current. This book is kept in the form of debtor and creditor, like the ledger; it ferves to draw up the accounts which are to be fent to correfpondents, in order to fettle them in concert, before they are ballanced in the ledger : it is properly a duplicate of the accounts current, which is kept to have recourfe to occafionally.
Book of Commiffions, Orders, or Advices. In this book are entered all the commiffions, orders, and advices, a perfon receives from tis correfpondents.
The margins of this book ought to be very broad, that there be room to write overagainft each article the neceflary notes, or remarks concerning their execution. Some do only crofs each article, after it has been executed.
Book of Acceptances, or of Draughts. This book' is defignéd as a regifter of all the bills of exchange,' which our correfpondents advife us by their letters they have drawn upon us.
They are thus regiffered, to the end that, when the bills are prefented, a merchant may know whether he has orders to accept them, or not.
When a perfon will not accept a bill of exchange, he writes in the book of acceptances, againft the article of that bill, a $P$, which fignifies proteft, that, when it comes to be prefented to him, the bearer be told that he may proteft it. If, on the contrary, he would accept the bill, he puts an A againit the article, which fignifies accepted, adding the date, or day of acceptance, in cafe the bill be at fome days fight; and, after the articles have been transferred on the book in which are fet down the days on which payments become due, it-is cancelled.
Booz of Remittances. In this book are regiftered all the bills of exchange, as they are remitted by the correfpondents, to reguire the payment thereof, when due.
If they be protefted for non-acceptance, and fent back to thofe who made the remittances, it muft be mentioned againft each article, by putting a $P$ in the margin, with the date of the day on which they were fent back, and then they muft be croffed: but, if the bills be accepted, they put an A againft the articles; and the day on which they were accepted, if they be af fome days fight; and, after they have been tranfferred on the book of the days of payment, they áre croffed. There is fo near a relation between the book of acceptances and that of remittances, that feveral merchants, bankers, and traders, make but one of thofe two, which they keep in the form of debtor and creditor, putting the acceptances, or draughts, on the debtor's fide, and the remittances on the creditor's.
As the draughts are of two forts, that is to fay, that a merchant may draw bills of exchange onthis correfpondents, and his correfpondents may reciprocally draw bills upon him ; many merchants and bankers, befides the books of acceptances and remittances, juft now mentioned, keep a third book, only for regiftering the bills which they draw upon others;
but moft traders kep but one book for thofe two lorts of bills, that they may not too much multiply the number of auxiliary books.
Book of Expences, is a book in which is fet down a particular account of all the expences, either in their houlhold or for commercial affairs, which, at the end of every month, they caft up, and fet down the fum total either in the wafte-book or in the journal, or rather in the cath book.
This book, being a feparate account of all the expences of living, ferves to keep both the profit and lofs account, and alfo the cath book, more diftinet ; the greater and more confiderable articles are to be placed here particularly; but the feveral frall articles of daily difburfements only in totals'; though what denominations, and how general or particular the articles of this book ought to be made, mult be left to, every one's choice: all that is neceflary to obferve here is, that the calh paid out on fuch accounts muft be carefully entered bere and then once a week, or month, be transferred to the calh-book, and to the profit and lofs-account in the ledger, which is debtor to calh for it.
Book of Copies of Letters, This book ferves to keep copies of all the letters relating to bufinefs, which a merchant writeds to his correfpondents, that he may have recourfe to them up. on occafion, and know exactly what he wrote, and what orders he gave to them. -
Book of paffage, is a friall regiter, long and narrow, in which a merchant opens a particular account to each of his corre-〔pondents, of the poffage paid for them; which is afterwards caft up, when he thinks proper, and they are entered in the journal and ledger accordingly.
Book of Veffels, or the Ship's-Book. This book is kept by the way of debtor and creditor, an account being opened for every fhip. On the debtor's fide are. fet down all the expences for victuslling, fitting out, wages, \&c. and, on the creditor's fide, all that the thip has produced, either for freight or orherwife: the total of each is afterwards entered in the journal, making the vefle! debter and creditor.
Book of Workmeñ. This book is particularly ufed by thote traders who have manufactures, and is kept in debtor and creditor, there being an account for every workman that is employed. On the debtor's fide are fet dowir the materials which are given to them for manufacturing, and on the creditor's fide, the work which they bring home; after it is manufactured.
Bank-Book. Befides all the above mentioned books, in thofe cities where there is a public bank, as London,' Venice, Hamburgh, Amfterdam, the merchants who keep' cafh therein are obliged to keep a bank book, which is likewile kept by way of debtor and creditor. Herein they fet down all the fums which they pay to, or receive from, the bank; by which means they can eafily know, in: a very little time, how they ftand with the bank, that is to fay, how much cafh they have there.
The fame may be obferved with regard to thofe merchants or other perfons, who keep their calh at a banker's, which is very much practifed in Lóndon.
Month-Book. This alfo is one of the auxiliary books kept by fome merchants. It is numbered in folio's, like the ledger, and divided into fpaces, on the top of each of which are the names of the 12 months in the year January, February, \&c. aliowing a whole folio, or what you pleate, to each month; and a different fet of twelve fpaces, for every different year. On the left-hand page enter the payments to be made to you in that month, and on the right-hand page the payments you are to make. Make a column likewife on the left-hand of every page, in which write the day of payment, and after this the name of the debter or creditor, and draw the fum into the money columns, This does not differ much from the debr-book above mentioned.
All thefe books or writings, which merchants and traders have more or lefs occafion for, according as their trade is more or lefs extenfive, are in the main, kept after the fame manner in the chief trading towns in Europe; but not with regard to the coin, or money, every merchant regulating himfelf, in that-refpect, to the money which is current in the country where he is fettled.
In France, the merchants and bankers keep their books in livres, fols, and denier, Tournois; the live is worth 20 fols, and the fol 12 deniers.
In Holland, Flanders, Zealand, and Brabant they are kept in pounds (ponden) fhillings (fchelltngen and grofs, gropt, Flemifh (vlaamich) which äre fummed up by 20 and 12 ; ber caufe the pound is worthizo fchell ngen, and the fchelling 12 groot.
They alfo keep their books, in thofe countries, in guilders, ftivers, and penningen, which are fummed up by 20 and 16 , becaufe the guilder (gulde) is worth 20 flivers (ftuyvers) and the ftiver 16 penningen,
It muft be obferved, that the pound grofs, or Fleminh, is worth fix guilders, and the fchelling (which the French' call fol de grofs) fix flivers: fo that the guilder is worth $4^{\circ}$ groot, and the fiver two groot.

## B O O

## I T A L Y.

At Bergamo, they keep their books in lira's (livres) foldi (fols) and danari (deniers) which ate fummed up by 20 and by 12 , becaufe the lira, or livre, is worth 20 foldi, and the foldi 12 danari; the fums are afterwards reduced into ducats, of 7 livres of Bergamo.
At Bologna, the books are likewife kept in livres, fols, and deniers, which are alfo fummed up by 20 and by 12, for the above-mentioned reafon : but the fums are afterwards reduced into crowns, each of which is worth 85 fols of Bologna. At Genoa, they are kept after the fame manner, but the fums are at laft reduced into piafters of 96 fols each.
At Florence, in golden crowns, fols, and deniers; the crown is worth 7 livres and ten fols, and the fol 12 deniers.
At Leghorn, they keep their books in livres, fols and deniers, fummed up by 20 and 12, for the like reafons; the fums are afterwards reduced into piafters of 6 livres.
At Meffina, Palermo, and in all Sicily, they are kept in ounces, tarins, grains, and picoli, which are fummed up by 30 , by 20 , and by 6 , becaufe 30 tarins make an ounce, 20 grains a tarin, and 6 picoli a grain.
At Milan; in livres, fols, and deniers, fummed up by 20 and 12 , for the reafon fo often mentioned.
At Rome, in livres, fols, and deniers of gold di fampa, which are likewife fummed up by 20 and 12 .
At Venice, in ducats and grofio's (grofs) bank money; 24 groflo's make a ducat; but this is particularly ufed for the bank.
They likewife keep their books there in livres, fols and deniers, de grofs, which are fummed by 20 and 12 , becaufe the livre is worth 20 fols, and the fol 12 deniers; but it muft be obferved, that, according to this fecond method, the livre is worth 10 ducats.
They are alfo kept at Venice in current ducats, which differ 20 per cent. from the bank ducats.
At Ancona, in crowns, fols, and deniers; the crown being worth 20 fols, and the fol 12 deniers.
At Lucca, in livers, fols, and deniers; as alfo in crowns with 7 livres and 10 fols each.
At Novi, in crowns, fols, and deniers of gold of mark; the crown of gold of mark being worth 20 fols.
Ar Malta, in tarins, carlins, and grains; as alfo in fequins, and, as they call them there, in dieci tarini, or ten tarins.

## $\mathrm{P} O \mathrm{~L} \mathrm{~A} N \mathrm{D}, \& \mathrm{c}$.

At Dantzick, and in all Poland, the books are kept in rixdollars, grofs and deniers; which are fummed up by 90 and by 12, becaufe the rixdollar is worth 90 grofs, and the grofs 12 deniers.
They are likewife kept in that country in florins, grofs, and deniers, which are fummed up by 60 and by 12, becaufe the florin is worth 60 grofs, and the grofs i2 deniers.
They keep them moreover in livres, grofs and deniers, which they fum up by 30 and 12 ; the livre being worth 30 grofs, and the grofs 12 deniers.

## GER M ANY, \&c.

At Frankfort, Nuremburgh, and almoft throughout all the empire, accounts are kept in florins, creutzers, and pennings or phenings, current, which are fummed up by 60 and by 8 , becaufe the florin is worth 60 creutzers, and the creutzer 8 pennings.
They keep them likewife at Frankfort in florins, creutzers, and pennings of exchange, which are fummed up by 65 and by 8 , becaufe the florin is worth 65 creutzers, and the creutzer 8 pennings.
At Hamburgh, they are kept in marks, fols, and deniers lubs, which are fummed up by 16 and by 12 ; the mark being worth 16 fols, and the fol 12 deniers lubs.
They keep them alfo at Hamburgh after the fame manner as in Holland.
At Aughburgh, in talers and creutzers; the taler is worth 90 creutzers, and the creutzer 8 pennings.
At Bolzano, or Botzen, as at Augfburgh: and allo in florins and creutzers, the florin being worth 60 creutzers.
At Naumburgh, in rixdollars, grofs, and fenins, the rixdollar being worth 24 grofs, and the grofs 12 fenins.
In Hungary, in golden hungars and femi-hungars.
At Strafburgh, in florins, creutzers, and pennings, a money of Alface.
At Berlin, and in part of the king of Pruffia's dominions, in rixdollars, and in grochs, as alfo in florins.
In Sweden, in filver dollars, and in copper dollars.
In Denmark, in rixdollars, in hors, and in fchellings.
In Mufcovy, in rubles, in altins, and in grifs, or grives. Ar Geneva, in lives, fols and deniers, as alfo in florins. In Savoy, as at Geneva, but the florin differs.
At Raconi, in florins and in grofs.
In Switzerland, in florins, creutzers, and pennings:
SPAIN and PORTUGAL.
At Madrid, Cadiz, Seville, and in all Spain, the books are kept in maravedis, 375 of which make a ducat.

Vox. I.

## B O O

They are alfo kept in Spain, in ryals of plate or filver, and in pieces of eight; 34 maravedis make fuch a rayal, and eight rayals are worth a piece of 8 piafters, or a rayal of 272 maravedis.
At Lifbon, the books are kept in rees, which are diftinguifhed by hundreds, with comma's from the right to the left, and are reduced into mil-rees, or a thouland rees, each of which thoufands make a Spanifh piftole.
In England, Scotland, and Ireland, the books are kept in pounds, fhillings, and pence ferling, which are allo fummed up by 20 and 12 .
In the ports of the Levant, and in all the dominions of the Grand Seignior, the books are kept in piafters, abouquels, and in afpers.
Book of Cargo, or Loading, is a book kept by the cap-merchant, or purfer, on board a trading veffel, in which he enters all the merchandizes which compofe the cargo of it's thip, either for freight only, or for fale, or exchange, according as they are fold in the places for which they are Chipped, or delivered to thore to whom they are directed, the whole as it is feecified in the captain or mafter's bill of lading.
The method of keeping this book, is to write down apart, or by themfelves, all the merchandizes that are to be fold, every one according to the place where it is to be difpofed of; and alfo apart all thofe that are only taken in for freight, and thofe likewife according to the places and perfons to whom they are directed.
There are commonly, on every page of this book, two columns on the left fide, and three on the right; in the firft on the left, they fet down the mark of the bale or cheft, and in the fecond it's numero. Over-againft it, they write down the place where the merchandizes are to be fold, with an account of what merchandizes are contained in the bale or cheft; they do the fame with regard to fuch merchandizes as are only for freight : then they fet down, in the three columns on the left, the fums which have been received either for fale or for freight.
They commonly fet down the merchandizes for fale firft, and next to them thofe for freight: an inftance of an article in a book of cargo will be fufficient to make the reader underftand how it is kept.

## Model of a book of cargoes.

Book of cargo of the merchandizes fhipped at Rochelle, the 6th of March, 1751, on board the Swallow frigate, Cofal mîhincr, to be, with God's affiftance, carried and delivered to the places and perfons for whom they are defigned.

Books of cargo are looked upon as private writings only, and cannot have the fame authority as bills of lading, charterparties, invoices, and fuch other writings, to ferve as vouchers for a chip's cargo.
This difference, in France, has been adjudged by a decree of the king's council, given the 2 Ift of January, 1693 , by which his majefty declares as a lawful prize feveral bales of merchandizes, which had been fhipped on board the Redeemer, taken by a French privateer, which merchandizes were only regiftered in a book of cargo, which was the only book on board : his majefty declaring, that it could not fupply the want of an invoice, of a charter-party, and of a bill of lading, none of which were to be found on board. So that, notwithftanding the claim of a French merchant, the merchandizes were fold for the profit of the privateer, except the tenth part, which was remitted to the high admiral, to which it belonged.
Thefe books, together with the bills of lading, charter-parties, and other papers and vouchers, are what they call the writings of a merchant-fhip.
By the gth article of the firft title of the ordonnance of Lewis XIV, concerning the four great farms, made in February 1687, all captains and mafters of fhips are obliged to declare at the office, the nearefl to the place into which they put, for what port their merchandizes are defigned, and, for that purpofe, to produce and thew to the commiffioner their baoks of cargo, bills of lading, charter-party, \&c. Sie Bill of Lading, Charter-Party.

## REMARKs.

From this defcription of the ufe of thofe diftinct books, an idea may be formed, that the intention and refult of the whole is to exhibit to a trader, at all times, the true ftate of his affairs; than which, nothing can be a greater prefervative againft misfortunes in trade.
The book wherein this reprefentation of a trader's concerns is to be feen, is called the ledger; by reafon that herein are digefted, in a collective light, all the principal heads of his accounts, by way of charge and difcharge, according to the nature of the tranfaction: and, if every account in this fummary book is duly debited and credited, as reafon requires, for what it ought to be, there is no great difficulty to comprehend, that the ballance of every diffinct account will juftly and truly fhew the ftate of fuch account, and, if alfo the ballance of every particular account is juft and true, the general ballance of the whole cannot be falfe.
To perfons, who are unacquainted with the Italian method of accountanthip, or the method by double entry, or by way of charge and difcharge, fuitably to the nature of the occurrences, this multiplicity of books may fo perplex and bewilder them, as to render this art a very myftical matter; whereas it depends upon the plaineft principles of reaion, and therefore can be no way difficult, if thofe principles are attended to.
That the art is extremely eafy, I have endeavoured to fhew under the article of Banking; where I have, upon a fingle fheet, exemplified the fundamental principles of the whole myttery: and, if the familiar explanation thereof which I have given, be well underftood, the application of thofe principles to any other purpofes may be made without difficulty. For, as it has been fhewn, that all the other books are only auxiliary, or preparatory to this grand and principal book, wherein all tranfactions are entered in miniature; fo, if the reafon of the entries in this be thoroughly underfood, the ufe and nature of the fubfervient and inferior books will be fo of courfe. For it is this book alone, which can teach the art, it being the effential. The others may vary in their number, and in their method of keeping, according to the bulinefs wherein a trader may be concerned ; but this book mult never vary from the laws and principles of true reafon, whereupon the fcience is bottomed.
And, although I have given a defcription of the ufe of the divers books generally to be met with in a merchant's count-ing-houfe of any degree of eminence; yet, I have only done this, in compliance to the ordinary way of giving inftructions in this art ; for 'tis my opinion, that the nature and foundation of the ledger fhould be firt taught, and the ufe of all books preparatory thereunto (be they ever fo numerous, according to the peculiar circumftances of a trader's bufinefs) will, with all defirable eafe, be throughly comprehended.
The accountant, who keeps the principal books in mercantile bufinefs of confequence, always confiders the effects of his journal entries in the ledger, before he fates them; that naturally leading him to fall upon the true debtors and creditors in ftating of his journal, previounly to the pofting from thence into the ledger: for, if the neceflary confequence of every entry into the ledger is not weighed and underfood by the book-keeper, this journal can never be rightly ftated; and therefore, the ledger can never give a juft reprefentation of a trader's negotiations.
Wherefore, whoever would be fundamentally grounded in that excellent art of book-keeping by double entry, fhould firft ftudy the nature of the ledger, and not be perplexed with any other book till he becomes thoroughly acquainted with that: for the peculiar forms of ever fo great a multitude of other books will be as foon underfood as feen, and may be kept by any backney writer, as well as by the ableft bookkeeper, or accountant; and a thorough paced accountant (efpecially in the mercantile way, which admits of a furprifing variety of tranfactions in large and extenfive bufinefs) is no low or contemptible character, notwithftanding there are fo many who unmeritedly call themfelves fo.
Having given a fhort fate of a banker's ledger only, under the article of Banking, according to the currency of the ordinary tranfactions of that branch of bufinefs, it may be ufeful to the reader, in order the more inteliigibly to explain my meaning, to illuftrate the very fame tranfactions, by giving him an idea of ranging them in the various auxiliary books, previoully neceflary to their being transferred into the ledger; and then be will experience, $l$ am perfuaded, that the eafieft and fhorteft method to become fkilled in this aft, is to be mafter of the ledger, before he is put to underftand the forms of other booki. For, as the ledger is the accountanth'p refult of all the other books, fo the imagined re-converfion of that book into all the reft will thew the difference of the method propofed, and the vulgar one that is practifed.
Let it be fuppofed, then, that thefe tranfactions of banking were entered, as they occurred, in the feveral books appropriated for the divers occufions: as,
I. That they are entered in the wafte-book, in the natural and promifcuous order as they happened daily to arife, as is done in the mercantile way.
2. That they thould be from thence journalized, or ftated in the due form of debtor and creditor, according to the reafon of fuch occurrences.
3. That what relates to the cafh-account, fhould again be feparated into a daily or weekly cafh-book.
4. That a diftinet book was kept for bills of exchange, and another for promiffary notes.
5. That another was kept for the dealings in ftocks, and another for bottomries; and in the like manner particular book for other parts of the bufinefs.-This being fuppoled to be the cafe, there can be no difficulty to conceive, that the fole detign of all thefe books is to terminate in an accurate ledger, in order always to exhibit the true ftate of the banker's affairs, in relation to every branch thereof.
Now the art of the accountant confifts in judging of the refult and confequence of every thing, as it thall appear in the ledgerform; otherwife, it is not poffible that he fhould be able to keep the accounts accurately. For, although he fhould keep no grand ledger at all, yet, if he does not keep his cafh-account in that form, by way of charge and difcharge; and the feveral other diftinet accounts alfo; fuch books will always be in confufion, and can never be duly ballanced, "till they are reduced into that form from the wafte-book or journal, and what other books may contain the whole of a trader's negociations.
From what has been obferved, it cannot but be obvious enough, I apprehend, that as the great end, and defign in the bufinefs of book-keeping, is the ftating of a ledger in an exact and accurate manner; fo the perfect knowledge hereof fhould be the firft, and not the laft thing, which the accountant is made acquainted with. For, if he knows how to form a general ledger under the moft accurate and concife heads, a knowledge of the form of all other books, preliminary or auxiliary there'unto, will, as obferved, fo foon be underftood as viewed. Nay, when a perfon is capable of fating the ledger with judgment, in regard to any kind of tranfactions, he will, with no lefs judgment, adapt the number, as well as the form, of all the preparatory books thereunto.
'Tis neceffary, abfolutely neceffary, we allow, that all the forms of accountanthip fhould be duly adhered to; but, as we would convey the effence, and not the form of the art only, we have thought proper to point that out to our readers. The great difficulty in accountanthip, according to the method of double entry, confifting in the properly ftating of the ledger, it will be expected that we fhould lay down the principles of reafon, upon which the fame is founded. This we fhall do, but not 'till we come to the article of Mercantile Accountantship; where we fhall have occafion to illuftrate the principles by fo great a variety of practical occurrences, that any one may become a complete mafter of this ufeful fcience, and apply the fame to whatever public or private occafions he may require.
We defire, therefore, that what we have faid here, in regard to this matter, as alfo under the articles of AccountAntship, and our Remarks on Bankrupts, and the examples we bave given with refpect to the bufinefs of Banking, may be all looked upon as introductory to the article of Mercantile Accountantship; and what we fhall fay under that head, as preparatory to the underftanding of the National Accounts; where we fhall endeavour to demonftrate, how eafily this admirable art is alfo applicable to the accounts of nations, as well as to thofe of private perfons; and what confufed and bewildered notions perfons of the firtt diftinction have had of thefe things, for want of being able to flate the accounts of this nation in particular, in fo familiar and fo accurate a manner as this method will admit of.
And, as the knowledge of the money-affairs of this kingdom is of fo high concernment to the intereft of land and trade, we humbly hope, that what we fhall fuggeft upon that topic, will be as cordially received by our nobility and gentry, as it is zealoully intended for the general benefit and advantage.
Book of Rates. This is a book eftablithed by parliament, fhewing at what value goods that pay poundage, fhall be reckoned at the cuftom-houfe. See Customs, Duty, Tunnage, poundage.
The book of rates annexed to the act of tunnage and pound-
age, made in the 12 th year of King Charles II is age, made in the 1 th year of King Charles II. is the foundation of all fubfequent cuftom houfe duties which have been laid fince, and is fubfrribed with the hand of Sir Harbottle Grimitone, then fpeaker of the houfe of commons. An additional book of rates of goods and merchandizes ufually imported, and not particularly rated in the former, with rules, orders, \& \& . is figned by Spencer Compton, Efq; fpeaker of the houfe of commons, 11 Geo. I. c. 7. See at the end of every Letter in this Dictionary, concerning the susiness of the Custom-House.
BOOKBINDER, he who binds books. The company of binders and gilders of books, in the city and fuburbs of Paris,

Is very modern, though their profeffion is very ancient. 'Till the month of Auguft 1686, thefe workmen were of the body of bookfelicrs, and carried on the book trade together with them; fome had even printing-houfes. This union, which had continued many centuries, was broke by two edicts of Lewis XIV ; one of which contains regulations for the printers and bookfellers, and the other etects the bookbinders and gilders into a diftinct company or corporation.
When the body of bookfellers was firf eftablifhed, there were but two bookbinders and two book-gilders, who were filed colourers (enlumineurs.) The invention of the art of prining, by which the number of bookfellers was confiderably increafed, did, in confequence thereof, increafe that of the bookbinders and gilders; and thefe two profeffions, which made but one company, were foon confounded, the bookbinder becoming a bookfeller, and the bookfeller exercifing the ant af bookbinding.
By the edicts of the year 1686, which were defigned to reform that abufe, and prevent it for the future, the bookfellers, printers, and letter-founders, were continued one company, and the bookbinders and gilders were erected into a new company, having their own wardens, and particular natutes.:-
We fhall give hereafter an account of the ftatutes of the bookfellers and printers company. See Bookseller. And we fhall, in this place, prefent the reader with an extract of the moft important regulations, which relate to the bookbinders and gilders.
By the above-mentioned edict, given at Verfailles in Auguft, 1686, and regiftered in the parliament of Paris the 7 th of September following, the king orders:

1. That the company of the matter-bookbinders and gilders fhall, for the fuiure, be entirely feparated from the company of bookfellers and printers, fo as that thefe two companies may never be again united and incorporated together.
2. That the profeffion of bookbinders and gilders fhall continue erected into a mafterflip, and the malters united into one body corporate, to be governed according to the regulations and ftatutes preferibed to them by this fame edict.
3. That they who follow together the two profeffions of bookfelling and bookbinding, fhall be obliged to chufe either, and to continue afterwards in that company which they fhall have chofen, according to the cafes and circumftances which are fet forth and explained in that ediet.
4. Laftly, That the mafter bookbinders and gilders fhall fill be reputed and reckoned as members of the univerfity of Paris, and as fuch enjoy all the privileges, which they lawfully and jufly enjoyed before. That they fhall make but one brotherhood with the mafter bookfellers and printers, but neverthelefs they fhall not be fummoned to the affemblies, nor be prefent at the election and nomination of the fyndic and affiftants of the bookfellers company; but, on the day next following that election, they fhall meet and chufe, by a majority of voices, the wardens of their own company.
The mafter-bookbinders pretended that the meschant-mercers, and other fivemen of corporations who trade in paper, had not the right to keep by them feveral of thofe tools, or inftruments, particularly thofe which ferve for the beating, cutting and binding of books; but, by a decree of the parliament of Paris, made towards the latter end of the feventeenth century, the flationers have been kept in poffeffion of the beating-ftone and hammer, of the cutcing-prefs, and of the fewing-prefs, on condition, neverthelefs, that they fhall not bind any regifter but with fquare backs; thofe with round backs, as belonging to the bookfellers trade, muft be bound by the bookbinders only.
BOOKSELLER, one who trades in books, whether he prints them bimfelf, or gives them to be printed by others. See Book-Trade.
Bookseller Foreign, or Alien, one who comes into a town, or city, which is not his ufual dwelling-place, to fell, difpofe of or exchange books, which be caufed to ,be printed elfewhere, or caufed to be brought from foreign countries.
At Paris no alien-bookfeller is allowed to keep a fhop, warehoufe, or printing-houfe, nor to caufe bills of his books to be pofted up, either by himfelf or by factors, or any other perrons, nor even to expofe and fell them at the fairs of St Germain and St Laurence.
They have liberty, however, to fell or exchange them, provided it be done in the fyndical chamber, or hall, of the bookfellers and printers company, after their books have been there vifited, and on condition that they fhall not continue there above three weeks, reckoning from the day' of the opening and vifiting their books for the difpofal of them.
The new regulation concerning bookfelling and printing, of the 28 th of February, 1723 , made but very little alterations in the three articles which compofe the title of foreign bookfellers, in the regulation of 1686 . The only ftatute of poltcy, added to it, is to be met with in the fecond article. By that ftatute, the foreign bookfellers are ordered to keep
their books for fale within the univerfity, as is cxpreffed in the 12 th article, and no where elfe, and to declate to the fyndic and affiftants of the bookfellers company the nu: where they fhall keep them. See the next Article.
BOOK-TRADE, the trade of thore who deal in books.
The bookfellers and printers at Paris make but one corporation, or company, under the name of the Body of bookfellers; to which are continued united, in France, the maffer-jetterfounders, by the edict of Lewis XIV, given in Auguft, 1686 ; and from which body were feparated the bcokbinders and gilders, by an edikt of the fame king, given the fame month and year, whereby they were erected into a diffinct company. We mention hereafter the letter-founders, and we have given above an account of the bookbinders. See Letter-Founder and Bookbinder,
There are, among others, the regulations made in France in $1650,1663,1670,1671,1686,1703,1704$, and 1713 , befides a vaft number of decrees of the council, ferving either to explain the ancient ftatutes, or to eftablifh fome new ones.
The four laft regulations, and particularly the edift given in Auguft, 1686, and regiftered in the parliament of Paris the 2 Ift of the fame month, and the declaration of the $23^{\mathrm{d}}$ of October, 1713 , and regiffered the 26 th, given as an explanation of that edict, ought to be conlidered as true fatutes of the company of bookfellers, 'till thofe which have been offered to the king's council by the bookfellers and printers, and partly agreed upon amongt them in feveral conferences, received the royal authority by a new ediet, or declaration:
We fhall give here an extract of that edict of 1686 , corrected where it may be neceffary, by the articles of the declaration which explains it, or by the other declarations and decrees of the council given fince.
This edict, in the form of a regulation, contains 69 articles, brought under 15 titles; thefe titles are as follow :
Of the franchifes, exemptions, and immunities, of the bookfellers and printers of Paris.
Of the bookfellers and printers in general.
Of apprentices.
Of journeymen.
Of the admiffion of mafters, or freemen.
Of the widows.
Of the correctors.
Of hawkers of books.
Of foreign bookfellers
Of fyndics, affiftants, and mafters of the brotherhoodd
Of the vifitation, and the fyndical chamber.
Of libels, and prohibited books.
Of the privileges, or licences, for printing books.
Finally, of the inventories, appraifing, and fales, of the flock of bookfellers and printers.
The bookfellers, printers, and the letter-founders, who with them compofe the body of the traders in books, are reckoned to belong to the body, and to be members of the univerfity, being entirely diftinct and feparated from the mechanic arts; and in that quality they enjoy all the rights, franchifes, and prerogatives, which the rector, mafter, and fcholars of the faid univerfity are ufed to enjoy.
There are at the head of this company a fyndic and four affiftants; the company, being affembled, chufe them by election, and by a majority of votes. The election of a fyndic is made but every other year, and that of the affiftants every year, but of two only at once, in the room of two ancient ones who go out of the office. The day of the election is fixed on the 8th of May, and the number of the electors to 16 perfons, who are fummoned from among the bookfellers and printers, befides the fyndic and the affiftants. The election is made in the prefence of the lieutenant-general of the police, and of the king's attorney-general, at the Chatelet.
There was an equality kept between the bookfellers and the printers, by the edict of 1686 , in regard to the right of election, and to the number of perfons fummoned; but the vaft difproportion between the number of the former and that of the latter, (there being but $3^{6}$ printers, and much above 200 bookfellers) occafioned an explication to be made of the declaration of the year 1713 , in the feventh article of which it is ordered, that there fhall be chofen for the future but one affiftant from among the printers every other year; and that but four printers and 12 bookfellers fhall be fummoned for the elections.
The fyndic is entrufted with the adminiffration of the money and effects belonging to the company, and the two laft affiftants are the adminiffrators of the brotherhood.
The vifirations both general and particular are made by the fyndics and affiftants; the general ones every three months, and the others as often as they think it neceflary.
The vifitation of the books imported from abroad (which are all carried to the fyndical chamber, by virtue of the 58 th article of the edict, the execution whereof has alfo been ordered by a fentence of the lieutenant-general of the police, given
the 6th of June, 1698 ) ought to be done, at Jeaft, by three perfons from among the fyndic and the affiftants: the days appointed to make it are Tuefdays and Fridays, at 2 in the afternoon.
In thofe vifitations, all libels againft the honour of God, and the welfare and quiet of the ftate, and all books printed eittier within or without the kingdom, in breach of the regulations, or privileges, ought to be fopped, even with the merchandizes that might happen to be in the bales with luch libels, or other prohibited books.
Not only the vifitation of the books which are carried to Pa ris by foreign printers, or bookfellers, or from the provinces, to be fold or exchanged there, ought to be performed in the fyndical chamber; but even the fale, or exchange, of thofe books ought to be done there in the prefence of the faid fyndic and affitants.
Lafly the officers of this company, befides the vifitations made at their brethren's houfes and hhops, bave alfo the right to vifit, or feize, thofe of the fellers of marbled paper, printfellers, and dealers in printed paper for hangings, who, by the 6 Ift article, are forbidden to keep at home any letters proper for printing books.
Apprentices, who mult not be married people, are obliged to ferve at leaft four years following, and afterwards three other years as journeymen, with any freeman of the company. None can be admitted an apprentice, unlefs he be verfed in the Latin tongue, of which he is to produce a certificate from the rector of the univerfity.
A printer who bas but two preffes can take but one apprentice: the others may have two. As for the bookfellers, they can bind but one apprentice at a time : but the fixth article of the declaration of 1713 , which orders that every printer foall have at leaft four preffes, feems to have made void that difference of one or two apprentices for printers.
The fons of freemen are not obliged to undergo any apprenticelhip; and, if they have the requifite qualifications, they ought to be admitted upon their firlt application: this, however, is liable to fome exceptions, as hall be obferved hereafter.
The qualifications requifite to be made free, befides the apprenticefhip and fervice for thofe who are obliged to it, is, that they be full 20 years old, natural-born. Frenchmen, kikilled in the Latin tongye, and able to read Greek.
He who fues for his freedom, ought to have a certificate from two other freemen of the company, declaring that he is capable to follow the profeffion of a printer or bookfeller, which is to be underftood, according to the interpretation given in the 4 th article of the declaration of 1713 , that the fon, or apprentice, of a bookfeller, who would be admitted a free-man-bookfeller, muft have a certificate ligned by two bookfellers only; and the fon, or apprentice, of a printer, in the fame cafe, thall bave a certificate from two freemen-printers only; and, if any would be printers and bookfellers at the fame time, they muf have certificates from two bookfellers and two printers.
According to the $3^{\text {d }}$ article of the declaration of 1713 , the fons of freemen-printers, who follow only the bufinefs. of printers, ought to ferve a whole year with a bookfeller at Pa ris, or two years with a country bookfeller, before they can be admitted bookfellers. In the like cafe, apprentices are to ferve two years at Paris, or three years in the provinces: which muft allo be obferved, in fimilar circumflances, by the fors, or apprentices, of bookfellers, who would be made free printers.
Journeymen who marry the widow, or daughter, of a freeman, are admitted as freemen's fons.
man, are admitted as reeme, enjoy all the privileges of their
Widows, who continue fuch, late hulband's freedom, except that they cannot bind new ap. prentices, but only keep thofe they have 'till their time be out. The number of printers is fixed at 36 , whole places, in cafe of a vacancy, cannot be filled up but by printers fons, or by fuch as have a right from their regular apprenticelhip.
The number of bookfellers is not determined; but they are not allowed to admit above one freeman a year, befides freemen's fons and fons-in-law. In fuch an admiffion they prefer him whofe name has been firft fet down in the regifter by the fyndic and affiftants.
Every one of the $3^{6}$ printers, who, by the 2d article of the regulation of the year 1686, might have two prefles only, belonging to him, is now obliged, by the 6th article of the declaration of 1713 , to have at leaft four prefles, and eight different fets of Roman letters, with their Italics, from the great canon to the pearl; nor can feveral printers enter into partnerfhip for the fame printing-houfe.
The bookfeller-printers, who keep a printing-houfe, or book-feller's-fiop, ought to keep them within the quarter only, in the fame place, and not feparately. 'The bookfellers, who are not printers, may keep their thops within the palace, or the court of Juftice-Hall, unlefs they confine themfelves to the felling of primers only, and other fmall prayer-books, in which cafe they may live in the neighbourhood of the palace, and in the freet of Nôtre-Dame.
The IIth article of the edict of 1686 , which contains thofe
regulationgs concerning the dwelling places of the printers and bookfellers, does alfo determine the limits, or bounds, of what is called the quarter of the univerfity.
All the printers and bookiflers who print, or caufe to be printed, any books, are obliged to put their names and marks to them, to take out privileges, or licences, under the great feal, to print thefe privileges entirely, at the beginning or end of each copy, and to have it allo regiffred at length, as likewife the ceffion they make of them; in the regifter of the fyndical chamber.
However, it is not neceffary, it is even forbidden, to obtain fuch lieences for petitions, cafes, \&c. We give in another place a full account of all that relates to this fubject. See Licence.
After feveral alterations which happened in the book-trade with regard to the number of copies which bookfellers and printers are obliged to deliver to fome libraries, or to the fyndical chamber, at every impreffion they make of books, the declaration of Lewis XIV. of the 6th of October, 1703, fixed them to eight, to be diftributed as the reader will fee in the article Copies of authors for Printing.
The declaration of 1713 does likewife oblige to it all engra, vers and printfellers, with regard to fuch books as contain figures, cuts, maps, \&c. See Copies.

It belongs to the bookfellers and printers only to make an inventory of, or to appraife, printing houfes and books, which are to be expofed to fale. And the preffes and letters belonging to a printing-houfe cannot be fold, nor carried off, without leave from the lieutenant-general of the police, and only in the prefence of the fyndic and affiftants, who oughs to keep a regifter of them, upon which they, to whom they have been fold or adjudged, are obliged to write that they take them for their account, upon pain of forfeiture and a fine.
The bookfellers and printers, as members of the univerity, and on account of the excellency of their art, having been always. feparated and diftinct from the mechanic arts, their company was comprized in the lift drawn up in council for the execution of the edict of Lewis XIV, by which were created, or erected, officers of mafters and wardens, fyndics and jurats, for the bodies of the merchants, and for the companies of arts and trades: but, a new creation of auditors in thofe bodies and companies being made in 1694, the company of bookfellers, who, through inadvertency, were tinferted in the new lift, againft their privileges, was, as it were, forced to pay a confiderable fum, which they were obliged to borrow, to get rid of the vexations they fuffered from the king's farmer.
Finally, in 1703, the bookfellers and printers, being again profecuted for feveral taxes laid on the other companies by the ediEts of $170^{\circ}$ and 1702, they obtained a full and abfolute difcharge by a declaration made in October, 1703 ; and the fums paid by them, 'till that time, into the king's coffers, were declared to be inftead of the augmentation of what they were to pay for the confirmation of their rights and privileges, By the fame declaration, the number of copies to be delivered to the fyndical chamber was increafed to eight, and the fees for vifitations and admittance of freemen were alfo confiderably increafed, in order to indemnify the company of bookfellers for the large fums they had borrowed, to pay the arrears, and to reimburfe them by degrees.
We do not mention here the correctors of the prefs, hawkers of books, foreign bookfellers, the fyndical chamber, nor feveral other things relating to this, of which mention is made in feveral articles of the regulation of 1686 , becaufe we give an account of them under their proper heads, to which the reader may have recourfe.

Regulations concerning the book-trade and printing, at Paris, refolved in the king's council of flate, the 28 th of February, 1723.
The new regulations, that were to determine the difputes which arofe continually between the bookfellers and printers, being at laft put into a proper form, his majefty, in order to fecure the execution of them, iffued a declaration, dated the 1oth of December, 1720. But, though thefe regulations had been drawn up and examined with a great deal of care, yet, when they were brought to the parliament, with the cuftomary fealed letters, to be there regiftered, there were found reafons to make feveral obfervations, by which it appeared that a great many articles wanted fome alrerations; befides which, feveral abufes that had been introduced among thofe who carry on the bufinefs of bookfelling and printing, required to be redreffed by fome new regulations. Thefe confiderations determined his majefty to call in his declaration, that thefe regulations might be amended, and again prefented to his council, to be approved there. It was at laft refolved, on the 28th of February, 1723, and publifhed with the title of Regulations for the bookfellers and printers of Paris.
'Thefe regulations, by virtue of a decree of the king's council of ftate, made that igth of June the fame year, and agreeably to an ordonnance of the lieutenant-general of the police, whom the king charged to fee them executed, were
read and regiftered in the fyndical chambers of the bookfellers and printers of Paris, the $13^{\text {th }}$ of October following. Thefe new regulations contain 120 articles, whereas thofe of the year 1686 had only 69 . As to the titles, there is but one added, which is that of fubfcriptions, which they have put the third, in the room of that of ketter-founders, which is now the eleventh. We fhall give no account here of that new title, referring it to the article of Subscriptions. As for the articles either added or amended, we fhall juft run them over, and, to avoid tirefome repetitions, we thall fay nothing of thofe that do not differ from the articles of the regulations of the year 1686 :
The firf article confirms the exemption granted to the company in 1703, of being free from loans, taxes, levies, fubfidies, \&c. already laid, or to be laid hereafter, on arts and trades, of which his majefty excepts, diltinguilhes, and intirely feparates this company.
By the fecond, all books, either manufcript, printed, or engraved, bound or unbound, old or new, books of prints and geographical maps, whether they come from foreign countries, or from the cities and provinces of the kingdom, or be exported out of the kingdom, as alfo caff letters and characters for printing either old or new, and the ink ferving to print, coming from foreign countries; or from the cities and provinces of the kingdom, are free from all duties of the cuf-tom-houfe, tolls, bridge-duties, \& cc . according to the edicts and declarations of his majefty's predeceffors: and, to the end that the above-mentioned merchandizes may enjoy the faid exemption.
It is ordered, by the third article, that on each parcel, bale, tun, \&c. there be a declaration in thefe words; books, caft letters, printing ink, \&x.
By the fourth article, all perfons, of what quality or condition foever they be, except bookfellers and printers, are forbidden to carry on the trade of books, or to have any printing preffes at their houfes. This article is the fame with the fixth of the regulations of 1686 , but very much enlarged. The fifth, fixth, feventh, and eight articles are only the fequel of the fourth, and relate to the buying and felling of old papers, old parchments, and old books, by the wives and widows of bookbinders, bookfellers, and printers. They alfo regulate in what books the merchant-mercers may trade, which was the fubject of the 11 th, 12 th, 13 th, 14 th, and 16 th articles of the preceding regulations of 1686 .
By the rith article all bookfellers, who, at the fame time, carry on the bufinefs of printers, are obliged to put up a bill, or fign, declaring that they keep a printing-houfe; nor are they to fet it up at any place but. where their printing-houfe actually is.
The $23^{\text {d }}$ article declares that no bookseller, or printer, flall take above one apprentice at a time: they may, however, take a fecond, when the laft year of the firft is begun. The $44^{\text {th }}$ article, which relates to the admiffion of freemen, is the moft important of all in thefe new regulations, and deferves to be given here at length.

The 44th article of the regulations of 1723 , concerning the admiffion of freemen.
As it is of very great importance that they who follow the profeffion of printing and bookfelling be endowed with a fufficient capacity and experience, his majefty orders that the fons and fons-in-law of freemen, as well as the apprentices who fhall have finifhed their time, and ferved the mafters as journeymen, before they obtain their freedom as bookfellers or printers, befides the certificate of the rector of the univerfity, be moreover obliged to undergo an examination, to wit, they who would become bookfellers, an examination on the trade of books; and they who would be admitted printers, after being examined on the book-trade, thall undergo a trial of their capacity with regard to printing, and the things relating thereunto: which examinations they thall be obliged to undergo in the prefence of the fyndics and affittants in office, attended by four ancient officers of their company, two of whom muft be printers and two bookfellers; and by two other bookfellers and two other printers, who have not yet bore any office in the company, but have been at leaft Io years free of it. Thefe eight examiners fhall be drawn by lot by the candidate, both out of the number of the ancient officers, and from among fuch bookfellers and printers who have at leaft io years freedom. Thefe faid examiners, thus chofen, his majefty orders to meet with the fyndics and affifants, at the fyndical chamber, to proceed all together, by way of fcrutiny to the faid examination and trial, which examination is to continue two hours at leaft; nor the candidate be admitted to his freeedom, unlefs he have two thirds of the votes in his favour. The fyndic and affiftants fhall take immediately a verbal procefs of the whole proceedings: and, for the fees of their attendance, the fyndic, and each of the afliftants, as well as every one of the examiners, fhall have fix medals, worth fix livres tournois, which fhall be diftributed to them by the candidate.
It is ordered by the 45 th article, which is but a fequel of the foregoing, that every candidate for the bookfellers trade; who fhall be found to have the requifite qualifications, fhall Vol. I.
be admitted by the fyndic and affiftants, upon paying the fum of 1000 livres, to be employed for the company's occafions and every candidate for the printer's bufinefs hhall pay 1500 livres, with this difference, that the latter fhal not be admitted but by virtue of a decree of the council; given by the advice of the lieutenant-general of the police, fent to the keeper of the feals.
It is alfo ordered, that, if a perfon who thall hąve been admitted a bookfeller, comesiafter to be admitted to the freedom of a printer, he fhall be obliged, befides the 1000 livres abovementioned, to pay the fum of 500 livres. The fees for attendance, to be paid by the candidates, are the fame for bookfellers and printers; namely, 12 filver medals to the fyndic, fix to each of the affiftants, and two to each of the ancients.
By the 46 th article, the fees for the admifion of freemen's fons are fetthd, namely, at 600 livres for bookfellers, and 900 livres for printers, which fees are alfo to be paid by fuch journeymen who, after having finibed their apprenticefhip, fadl marry a freeman's daughter or widow; with this condition, neverthelefs, that fuch freemen's fons, or fons-in-law, or they who marry freemen's widows, thall undergo the examination, and obferve all the formalities abovementioned.
The 48 th article grants to the freemen of Paris the right of going to dwell, and carry on the bookfellers trade, in all the cities and other places of the kingdom, by only producing their letters of freedom, and caufing them to be regiftered at the ordinary court of juftice kept in thofe places.
The fix following articles treat only of the printers, and order, r. The execution of all the articles of the ancient regulations made with regaid to printing, particularly thofe of 1686. in all the articles which are not abrogated by thefe prefent regulations. 2. That the preference formerly granted to the fons and fons-in-law of printers, of being admitted in their ftead, hall no longer fubfilt, and that they fhall not be preferred, unlefs they be at leaft of an equal merit with their competitors: 3. That every candidate to the freedom, who, upon examination, fhall be found to have the requifite qualifications, thall be obliged to bave a printing-houfe, with four printing-preffes at leaft, and nine forts, or fizes, of $\mathrm{R}_{\mathrm{Q}}$ man letters, with their Italics, as it is explained in the 51 ft article, of which preffes and letters an inventory fhall be made by the fyndic and affiftants. 4. That no printer fhall lend to any candidate any preffes, cafes, or letter, upon pain of forfeiting the fame, and lofing his freedom; nor fhall any candidate borrow them, 5. That the printers already admitted, whofe printing-houfes are not completely furnifhed, according to what is ordered above, fhall furnith them thoroughly within three months: in default of which they fhall be obliged to fell them within the courfe of two years. 6. Laftly, the printing-houfes which thall have been found completely furnifhed at the general vifitation ordered by the regulations, thall afterwards be conftantly kept fo.
The title of the letter-founders contain 13 articles, namely, from the 57th to the 69th, inclufively; but, as we give a full account of them in another place, we thatl only refer to it here. See Founder of letters.
The title of the hawkers of books contains fix articles, which are the 69 th to the 74 th, inclufively.
There are but three articles relating to foreign bookfellers, viz. the $75^{\text {th, }} 76$ th, and $77^{\text {th. See Bookselier Foreign. }}$ The declaration of the year 1753, which altered the regulations made in 1686, with regard to the election of a fyndic and affiftants, have been again amended by the regulations of the year 1723 .
By the firft article of that title, which is the 78th of thefe regulations, it is ordered, that the company fhall proceed, according to cultom, every year, on the 8 th of May, to the election of two affiftants, in the room of thofe who, after two years fervice and functions in the faid office, ought to go out of it; that every other year, on the fame day, a fyndic Shall be chofen, who thall be taken out of the number of ancient affiftants, on condition, neverthelefs, that a fyndic fhall be chofen alternately from among the faid ancient affiftantbookfellers, or affiftant printers; or; at leaft, that the fyndic's place fhall not be filled up above twice following by a perfon chofen out of the number of the ancient bookfellers, or ancient printers: and that; when the fyndic thall be a printer, there thall be but one affiftant following the profeffion of a printer, fo as that, of the five officers that compofe the board, there be always two freemen following the printer's bufinefs.
It is alfo ordered, by the 79 th article, that; of the 16 pe:fons fummoned for the election, there be eight printers.
The article's 90 , 91 , and 92 , contain wife precautions to prevent the importation of books, either prohibited, or printed againft the ftatutes, as alfo the importation of caft letters for printing, which might be introduced fraudulenty, and ferve not only for printing fpurious, pirated, or counterfeit editions, but likewife for printing libels, or works againtt religion, or the public tranquillity.
By the firft of thefe three articles, all drivers, and mafters, and leaders of coaches, carts, waggons, \&ic. and all other carriages by land or by water, in which are carried to Paris

## B O O

bales of books, prints, or caft letters, are forbidden to deliver them as directed, or to unload them in the neighbourhood of that city, and all private perfons are forbidden to receive any. His majefty orders that fuch bales fhall be carried to the cuf-tum-houfe, or delivered, upon a note figned by the fyndic, or by two of his affiftants, to be carried to the fyndical chamber, under the penalty of a fine of 1000 liveres, and even of corporal punifhment, if they fhould commit the fame fault again: and, if there be found in any fuch carriages, books, prints, or caft letters, which were not declared by the leaders of the carriages, or if any fuch be carried clandeftinely tírough by-places, they thall be ftopped, and notice of it fhall be immediately given to the fyndic and affiftants, who fhall take care of them, upon the verbal procefs of the officers and clerks of the cultom-houle
The fecond of thefe three articles does likewife forbid all infpectors and overfeers of the cuftom-houfe at Paris, as alfo the waiters, or clerks, employed at the gates and bars, and all 'mafters of coaches, carriers, meffengers, and others, to deliver any bale, parcel, or cheft of books and prints, to any perfon of what quality foever he be; and this is to be obferved, notwithftanding all decrees, orders, permiffions, and even the 6th article of the decree of the council of the $t$ th of September, 1720, concaining regulations for the king's library; upon pain for the offenders to anfwer for it in their own proper name, to pay a fine of 500 livres, and to lofe their places.
Finally, by the third of thofe three articles, his majefty appoints the cities at which it fhall henceforth be lawful to import books and pamphlets. There cities are Paris, Roan, Nantz, Bourdeaux, Marfeilles, Lyons, Strafburgh, Metz, Amiens and Lifle.
The fame article, providing for the fecurity of the books, as they are carried through the feveral offices of the kingdom, forbids all directors, clerks, wardens, and others employed in the faid offices, to open, vifit, or ftop any bales, packs, parcels, \&c. of books, prints, or caft letters, coming from foreign countries, or from the provinces of the kingdom, to the city of Paris, and orders that they fhall fuffer them to pafs to the place they are defigned for, upon fecurity being given by the perfon who fent the bales, \&c. of which the carriers, \&c. are to take a receipt; namely for bales coming from foreign countries, at the firft cultom-houfe as they enter the kingdom; and, for the others, at the cuftom-houfe of the place whence the bales, \&c. are fent, or, if there be none, at the next cuftom-houfe, where the bales and parcels fhall be marked with lead, and the receipt given to the carriers regiftered.
The 97 th article relates to the dealers in marbled paper. . See the article Marbled Papir.
The 98th article orders that all merchandizes relating to the book-trade, which fhall be feized for any offence againft thefe regulations, fhall be depofited in the fyndical chamber of the company of bookfellers and printers; the fyndic and affiftants thall take upon themfelves the care of them; by virtue of the verbal procefs concerning the feizures, to keep them without any fee or expence, 'till a fentence be pronounced upon the faid feizures: nor thall thofe merchandizes be tranfported to any other place, nor committed to the care of any other keeper or officer.
The title or the privileges, or licences, for the printing of books, contains it articles, the firft of which is the rout, and the lalt the II2th. They are partly new, and partly extraCled from the regulation of the year 1686 .
A decree of the king's council of ftate of the roth of April, 1725, containing regulations concerning the printing and fale of books.

It feemed that the foregoing regulations, in which the king's council entered into fuch minute particulars, fhould have fufficiently provided againft all that might difturb the good prder of a company fo neceflary to the flate, and to the ficiences. But his majefty being informed that the negligence of feveral bookfellers and printers, and the covetoufnefs of fome, had given rife to feveral new abufes, which raifed the complaints of the public, and did a very great prejudice to the trade of books printed in France; that even forrie of the faid bookfellers, having got leave to receive fubfrriptions for the printing of fome works, had not fulfilled the engagements they were entered into with the public; that others, having obtained a renewal of the licence for books already printed, made no other ufe of it but to prevent other bookfellers from getting leave to print the faid book: his majefty being willing to provide againft all this, caufed four new articles to be drawn up, to ferve as a fupplement to the regulations of the 28th of February, 1723: to wit
I. That, for the future, nor licence, nor permifion, for printing new books, or for making new editions of books already printed, fhall be delivered, unlefs there be prefented, at the fame time, two printed fheets, as a fpecimen of the paper and letter the printer defigns to make ufe of, which printed fheets muit be approved by the keeper of the feals ; the one to be annexed to the counter-feal of the licence, and the other to be depofited in the fyodical chamber, where the faid li-
cence fhall be regiffered; thefe fheets to ferve as a fpecimem, by which the whole edition thall be examined by the fyndic and affitants of the bookfellers company, in the prefence of a perfon appointed for that purpofe by the keeper of the feals, before the books be expofed to fale, upon pain of forfeiting all the copies that thall be found not anfwerable to the fecimen, and paying a fine of a thoufand livres, \&c.
II. That all bookfellers and printers thall be obliged to take a particular care, that all the editions of books be abfolutely correct, as much as is poffible, upon pain of forfeiting thofe whofe correction thall have been vitibly neglected, and lofing the licences and permiffions, \&c.
III. That no fubfription thall be propofed to the public, but for the printing of confiderable works, which could not be printed without fuch affiftance; and only after leave firft obtained from the keeper of the feals, who thall not grant it 'till the books be approved by the cenfors; which leave or permiffion fhall be witten and ligned upon the printed fheet, called profpectus (propofals), which is to contain the conditions to which the bookfeller binds himfelf to the fubferibers, both with regard to the paper and letter, and to the price of the books, and the time when they are to be delivered: which printed theet of propofals thall be depofited, with the original permiffion; in the fyndical chamber, and regiftered in the company's books, in which the bookreller thall alfo fign his obligation or bond to perform the propofed conditions: and fuch bookfellers as thall fail to fulfil any of the faid conditions, fhall be condemned to return to the fubfrribers double the furs they receive from them, and to pay an arbitrary fine, according to the nature of the offence.
IV. That all the fyndics and the affiftants of the bookfellers company fhall be obliged to deliver, within a month to the keeper of the feals, an account of all the privileges or ticences that were renewed fince the Ift of January, 1718, for books already printed; with an account of fuch books as Shall have been reprinted, in confequence of the renewing of the licences; to the end that, upon examination, all the new privileges or licences which have not been ufed, may be annulled, and new ones, or only fimple permiffions, granted, to fuch as fhall petition for them, and promife to caufe thofe books to be very foon reprinted, according to thefe prefent regulations.

Remarks.
From the multitude of regulations made in France; with regard to the bufinefs of bookfelling, we may judge of what importance they efteem this employment to the ftate, as being capable of doing great good or great mifchief to it. To prevent what is looked upon, by that government, in the light of the latter, we find fuch reftraints are laid upon the liberty of the prefs, that the people thall have no knowlege communicated to them, fans privilege du roy, without the king's leave: that is to fay, in plain Englifh, that the whole kingdom fhall be kept in fuch ignorance, as beft fuits with the will of their fovereign; to the end, that he may be as uncontroulably abfolute and tyrannical over the people as he pleafes.
As this kind of policy hath proved, and is likely to prove, an invincible barrier againft the liberties of that brave and polite nation; fo the contrary hath proved the grand prefervative of the liberties of Great-Britain. For, whenever we fhall be deprived of this privilege, can we expect other than to be governed by the abfolute will of a prince and his minifters? Would not our parliaments become cyphers, or, perhaps, be totally annihilated? And what kind of government could we expect, but a joint confederacy, civil, ecclefiaftical, and military, againt the properties of the people? What inducement could there then be for induftry and commerce when our acquifitions were infecure?
Arbitrary princes, 'tis true, do give encouragement to arts and trade, but with what view? Is it more, than to render their fubjects temporarily rich, that, when they have occafion for plunder, they may not have all beggars in their ftate! On the contrary, when the powers of princes are governed by laws made by the people, the people will take care to make fuch laws, as will fecure their liberties and properties againft the oppreffions of princes. If fuch a conftituted legiflature fhould fometimes happen to be milled or corrupted, in the making of laws; yet while we enjoy the liberty of writing, we may be fure to have thofe laws repealed; for what corruption can withftand the power of a free enquiry? The upholders of this invaluable privilege, are the writers, the bookfellers, and the printers. Being, at prefent, confined to the bookfeller, I fhall refer to the other refpective heads, and confider him in relation to other traders, who bave connection with his branch.
The quantity of paper, confumed in the manufacture of books, is very confiderable: and whereas, not many years fince, we were under the neceffity of importing feven eighths of that commodity for this purpofe, we have now the fatiffaction to fay, that we do not take above one eighth from foreign countries, the remainder being of our own manufacture. This has been owing to the great encouragement
given by our bookfellers, to this branch of trade; wherein, if we continue to advance, we fhall hot only be capable of fuppying ourfelves, but may, in a few years, make that commodity fo exquifite and fo cheap, as to be able to export it to foreign countries. See the article Paper-making.
The ftationer, bookbinder, and engraver, are great dependents on this clafs of traders; and the printer hath his chief dependence upon them, and the letter founder on them both. 'Tis the bufinefs of the bookfeller to encourage all artifts who bave any connection with his branch, to the end that his books may be fo delicately printed and embellifhed, that we may not only equal, but purpafs foreign nations in the art of book-printing. Nor is this a traffic of inconfiderable extent at prefent; and, by proper encouragement, may be made far more importantly fo. For, from the freedom of the Englifh prefs, or the unreftrained liberty we enjoy of 'writing upon every kind of fubject, foreigners entertain an opinion of our books, and perfons of diftinction, in moft parts of Europe, are not a little fond of them. As our language alfo begins to be more generally fudied in Europe than ever, fo it is not to be doubted, but the Britifh trade of bookfelling will increafe in the like proportion; efpecially if literary property be duly fecured by laxit
We are inferior to no nation, at prefent, in the art of letierfoundery, as well as that of princing; and therefore; if due care be taken by our bookfellers to have their books printed as well, and as cheap, as they are in other nations; if our home manufacture of paper be equally good, and every decoration belonging to a book be as well executed, what hinders but we may largely extend our commerce of bookfelling? That no nation can beat us in this trade, I could produce manifold inftances. For brevity's fake, I thall mention a few only, viz.
The Anatomical Tables of Albinus, which are publifhed on $4^{8}$ large copper-plates, 15 inches by 22 , beautifully engraved, and printed on large imperial paper; accurately reprefenting figures of the human fkeleton, and of the feveral orders of the human muifles; alfo diftinct views of the particular parts, wherein all that belongs to the ftructure or babit of each mufcle, is thewin at large from the body. Together with a minute and ample explanation of the whole.
The plates in this work aree efteemed to be as correctly and mafterly engraved, as thofe of any work of this kind ever were in any part of Europe; and the paper and letter are fuperior to that printed in Holland, and fell near two thirds theaper.' Nor fhould it be forgot, that the whole is printed on paper of our own manufacture. Alfo,
A ñeat, correct, and beautiful edition of $Q$. Horatii Flacçi opera, in two volumes 8vo, p̈rinted on royal paper, illuftrated with 35 copper-plates, taken frớm antique ftatues, gems, medals, \&c. and reprefehting feveral kurious pieces of antiquity. To which is prefixed, a defcriptivê account of every plate, and the paflages in the poeit which it explains and illuftrates.
A neat, correct, and beautiful edition, of Virgilii opera, in two volumes 8 vo , printed on todyal paper, embellifhed with above fixty copper plates, containing i 66 pieces of antiquity, taken from ftatues, marbles, paintings, gems, medals, \&c. To which is prefixed, a full and defcriptive account of every plate, and a feference to the paflages in the poet, which each explains and illuftrates.
A neat, correct, and beautiful edition, of Terentia opera, in two volumes 8 vo , on ioyal paper, with copper-plates, in the fame manner.
This edition of thofe daffical authors was corrected from the moft accurate manufcripts in the univerify of Oxford; and for beauty and elegaince of printing, as well as cheapnefs, we may prefume to fay, was never equalled in this, or any other ination.
Another inftance we have in the Heads of the Illuftrious Perfons of Great-Britain: containing 120 , finely engraved by Mr Houbraken, and printed on large imperial paper, together with their Lives and Characters, by the Rev. Dr Birch, Secretary to the Royal Society.
Frotn thefe facts it appears, that the bookfellers of this king. dom are capable of printing books as well, and as cheap, as thofe of any other nation: and therefore, for the general benefit of the kingdom, fhould be fo encouraged, as to be capable of extending this traffic as greatly throughout the world, as it will admit of. But there feem to be various obftacles in their way to prevent it, which are continued, I am perfuaded, for want of the confequences thereof being duly weighed and confidered.
The principal obftacle hereto is the infecurity of literary property, according to the laws at prefent fubfiffing. Though this matter has alteady been fpoken to, in the Remarks on the article of Books, to which we refer the reader; yet it may not be altogether ufelefs, under this head, to add a word more on a fubject fo interefling to the nation; and wherein, at prefent, indeed, I am a party concerned. For what encouragement hall I have to go through with the laborious work, $I$ am at prefent engaged in, provided the property is not fo fecured, as that I may make that reafonable advantage of it to which I am intitled?' Tis above twenty years fevere ftudy añ application, that has epiabled mé to
undertake this performance; and although the large fund of materials, which ! have'fo long been collecting, were not; indeed, originally defigned for this identical work; yet they were defigned for one no way difimilar, nor lefs laborious, and very probably might have terminated in one of the fame kind.
Whatever is a difcouragement to perfons turned for ftudy; in order to render themfelves ufeful to the community, fops up the channels, from whence all improvements of fcience How. For what mechanical or manufactural art, what branch of knowledge whereon our commerce and navigation depend, bath not been, at firlt, difcovered by fludious mien, and communicated for the general benefit of others? Were not they, alifo, the original founders of civil government itfelf; and therefore may it not be faid with truth, that all fovereignty owes it's origin to them? At firt, in every country, there prevailed nothing but barbarifm, and rudenefs: all places were terrified with giants, and enchantments, and infolent ufurpers to deceive mankind: againft thefe there firt arofe fome mighty heroes, as Hercules, Thefeus, and Ja= fon: thefe fcowered the world, redrefled injuries, and defroyed thofe human monfters; for which they were made demi-gods. After them fucceeded Solon and Lycurgus, \&zc. who accomplifhed the work, faunded commonwealths, gave laws, and put juftice in it's courfe.
'Tis true, there have been princes, as well as other diftinguilhed perfonages of the firft rank, who have thought it their duty, as well as an honour, to become authors for the benefit of communities: and, why is there not as much glory in writing for religion and virtue, for the liberties of mankind, and for the' benefit of ufeful arts and univerfal commetce, whereby the whole human fpecies fubfit, and are knit and united together, as in fighting for them, ini pleading for them in fenates, or in fettling of property between perfon and perfon? But the bulk of thofe authors, who have been, by far the more numerous, and perhaps, not the leaft ufefut, have not been men of the fupreme clafs; they have rather been neceffitous than opulent; for many fudious meñ delight rather in a retired, than an over-active life, that they may fan the actions of men in private more hicely, and contemplate the works, of nature more narrowly, in order to draw knowlege for the benefic of the folely active part.
But, if fuch whofe fortunes do not abound, and to whom the divine providence feems to have given a conftitutional turn and biafs to benefit fociety by their fludies, cannot fubfift by them with decency, will not ufeful learning and fcience beconie contemptible, and will not the human fpecies again degenerate into their primitive ftate of barbarifm and brutality? But it is not to be doubted, when this matter comes to be Jaid before the legillature, but literary property will be fo effectually fecured, that mei of letters may be encouraged to advance ufeful fcience of every kind in this kingdom. Few authors caring to have the fatigué of retailing their own books, they generally chufe to employ bookfellers for that purpofe, or to aftign over their property to them for a valuable confideration.' Nor are there many authors, who have unz dertaken the printing and publifhing of any confiderable work that is likely to be tranfmitted to pofterity, àt their own expence, and without being concened with fome bookfeller, or feveral of them, eminent in their profeffion.
And, in order to bave books well printed and prudently propagated, bookfellers feèm, in many cales, to be agents indifenfably neceflary to áuthors, more elpecially it large un dertakings: and, indeed, they have been inftrumental in fetting forward many of the greateft and moft ufeful works, which have been publifhed. But, was the property of authors better fecured, the more could a bookfeller afford to give authors for their copies, and the more would literature be encouraged. Siee the article Books ant Copies of authiots:
BOOK-KEEPING. See Books of Merchants, and Mercantile Accbuntantship:
BOOK-KEEPER, is or ought to be, a perfon properly qualified to keeps fuch accounts as he is required to do, in a methodical and correct manner. The title is principally given to the chief clerks of merchants, and other eminent traders, and they generally keep the journal and ledger, all the other auxiliary books being kept by the younger gentlemen clerks, or by others under the book keeper.
Thofe who keep the accounts of noblemen or gentlemen, of are employed in any under branch in the public offices of thia kingdom, where the flate of the national revenue is kept, are conimonly called clerks, not book-keepers. And fucf who have the chief conduct of the accounts of thefe public offices, or of any of the great trading or monied corporations, are diftinguifhed by the title of Accountants [fee that article] or bccountants-general, and not book-keepers.

REMARKs:
However mean in the eye of fome a book-keeper may appear, from the found of the word; yet the character of an able mercantile one, is very far from being contemptible in the opinion of thofe who are acquainted with his accom-
plifhments.
plifhments. There are, indeed, amidft this clafs of people, many ignorant and unkilful perfons, who have brought no credit to the profefion, which is the cafe of all others. The book-keeper, who is at the head of this employment, is he who is commonly called a merchant's book-keeper; and the qualifications, requifite for fuch a one, fhould be no way inferior to thofe of a merchant himfelf; becaule, if his conduct and his qualifications render him acceptable, he ftands a fair chance to become a merchant for himfelf; which has been the cafe of great numbers, who have been no difcredit to that honourable employment.
For merchants, who are generally gentlemen of generous and noble fpirits, when they have had experience of a juft and fkilful book-keeper, they think it no dihonour to take him into their partnerfhip, either in their houfes abroad or at home. As a book-keeper to a merchant, therefore, is in the road to advancement, it is his intereft not to be deficient in point of accomplifhment. And, if he does not fucceed in that fhape, he may gradually ftrike into trade for himfelf; for, if his own fortunes will not admit of that, yet, where a perfon in that capacity has behaved with integrity and honour, and is a man of judgment and conduct in his bufinefs, the people who have had dealings with the merchant he lived with, will not fcruple to put confidence in him; and, if he is wife enough not to ftretch his credit beyond it's bounds, he has an happy opportunity to profper.-Nay, fome merchants, after a feries of faithful fervices from their book-keepers, have thrown a branch of their bufinefs into their hands, lent them money to carry the fame on, and recommended them to their foreign correfpondents. Others again, by having the conduct of the bufinefs at the death of their mafter, have naturally fell into a confiderable part of his bufinefs, and become very eminent traders. Some likewife have been fortunate enough to contract fuch friendfhips with the young gentlemen, clerks of confiderable worth, who, from experiencing the integrity and judgment with which they behaved, have taken them into partnerfhip, and had no reafon to repent their choice. We do not fay, that thefe things are very common; but 'tis well enough known they have very frequently happened: and my reafon for hinting thefe things is with no other view, than to remind this fett of people, that their abilities, their honour, and their fecrecy in their mafter's affairs, and having his intereft really at heart, are fo ftrong a recommendation, that they have rarely reafon to repent their having been fervants in this capacity.
The accomplifhments of a complete book-keeper fhould be no way inferior to thofe of a merchant himfelf, fince, as obferved, he is not out of the road of becoming one; and I am inclined to think, that if fome young gentlemen themfelves, even of tolerable fortunes, who have ferved their clerkfhip with a merchant, would condefcend for two or three years afterwards to become book-keepers to their mafter, or to any other merchant, it would prove more to their advantage, than being eager inftantly, after the expiration of their clerkfhip, to ftrike into trade for their own account. For, although the law gives age at one and twenty, that term of years does not always give fuch judgment and experience, as may be requifite to embark a fortune in trade.
I am too well acquainted with the way of thinking of there young people, as not to be fenfible, that even fuch who have only four or five thoufand pounds to begin trade with, would think it too great a difparagement to be thought a bookkeeper, however beneficial it might hereafter prove to them. But, if a regard to this admonition would prove more interelting, than gratifying a youthly fafhionable delicacy, it may not be undeferving their attention. Let thefe young gentlemen take it, as they pleafe, the advice is fincerely intended for their adrantage, not their difgrace. But, if they fhould be fo nice as to think themfelves above receiving a falary in that capacity, there is no nobody will be angry with them on that account, if they are not with themfelves.
If this fhould by no means prove agrecable, I think they fhould be articled, from fixteen years of age, rather for feven than five years; the age of three and twenty being early enough to hazard a handfome fortune in trade; and this may anfwer the end of obtaining more experience before they commence for themfelves, as well as being a book-keeper, provided the two laft years they keep the principal books, efpecially the ledger.
An able book-keeper of a merchant of kill and difcernment, has great opportunity of improving his judgment in the art of conducting trade; for, as he is the recorder, fo he may be the critical infpector of his mafter's actions, and gain experience from his fagacity, or faux pas: 'tis not unmeaningly proverbial, that the by-ftander fees more than the gamefter. Though it is not neceflary for a book-keeper to be a man of learning, yet he flould not be illiterate; though he is not required to be a great critic, yet he fhould be a grammarian, be well acquainted with the language of his country, and knowing in the French tongue, as being the univeral correfponding mercantile language. But he cannot be too familiar with other of the principal modern languages, nor too
ready a writer, or too expert an arithmetician and accoun. tant. And, as he may be occafionally put upon holding a part of the foreign correfpondence, he fhould not be wanting in point of the epiftolary file; which in the mercantile way, cannot be too eafy, unaffected, and plain, fo as to leave nothing ambiguous and unintelligible. There are divers other amiable qualities required by a perfon acting in this capacity; for, although he may be entrufted with the ftate of a merchant's affairs, yet this chould not leffen his refpectful duty, nor inviolable fecrecy: but there are methods of concealing what may be requifite, without much trouble to a merchant.
BORAX, a mineral falt, ufed in foldering and fufing gold, and other metals. The ancients have known it under the name of chryfocolla. Pliny, lib. 33. cap. 5. of his Natural Hiftory, fpeaks largely of it; but his account does not, in-every refpect, agree with what has afterwards been difcovered by experience.
That author diffinguifhed this drug into natural and artificial, or factitious borax. The natural borax, according to him, is nothing but a flimy humour, which runs in the mines of gold, filver, copper, and even lead; and, being congealed and hardened by the cold in winter, takes the confiltency of pumice-ftone.
As to the artificial borax, he pretends that is made by letting water run into the veins of the mine during the whole winter, 'till the month of June, and letting the mine to dry for two months; fo that, according to him, the artificial bortax is nothing but the mineral putrified and corrupted.
The fame author diftinguifhes black, green, white, and yellow borax, which take their feveral colours, as well as their price, from the mines whence they are extracted. He pretends that the natural borax is much harder then the arificial. The moderns do alfo diftinguifh two forts of borax, the natural, which is called crude borax; and the artificial, which is the fame purified and refined.
The natural borax is a mineral falt, of the figure of the common gem-falt. It is taken out of the bowels of the earth in feveral parts of Perfia; it is alfo found at the bottom of a torrent which runs in the mountains of Purbeth, in the territeries of Radziaribron, and extend to the borders of White Tartary.
When this mineral is taken out of the earth, they expofe it to the open air, where it acquires a kind of reddifh greafe, or fatnefs, which ferves to feed it, and prevents it's calcining. When the borax is in it's perfection, the merchants of Perfia fend it commonly to Amadavat, a city in the Grand Mogul's empire, whence the Englifh, the French, the Dutch, and other nations, get it, and bring it into Europe.
There is another fort of natural borax, which is harder, of a grey colour, and pretty much like the Englifh copperas, after it has been long expofed to the air: but, upon the whole, it's only difference from the former is, that, having continued a long time in the air, it is dried 4 p , and loft the reddith fatnefs it had before. They who deal in' thefe forts of crude borax ought to take care that it be not adulterated, nor mixed with ftones, and other foreign ingredients.
The Venetians were the firf who made any artificial borax, or, rather, who found out the art of purifying and refining the natural. They purify it by diffolving it in water, filtrating it, and cryftallizing it afterwards; to reduce it into cryftals they ufe cotton matches, about which the borax cryitallizes, as fugar-candy and verdegreafe do upon wood. Others, after refining the borax, reduce it into fmall fones, of the figure of tagged points; but as it had too greenifh a caft, the Dutch, who have alfo laboured to refine it, have reduced it to large bits, which give it a whiter caft, and make it more faleable. This laft fort of borax is that which is now fold by the druggifts and grocers of Paris.
The refined borax, either from Venice or from Holland, in order to be good, ought to be clear and tranfparent, almoft infipid to the tafte; and, above all, it muft not have the leaft mixture of Englifh allum, which is not eafily difcovered by the fight only, though adulterated borax is never fo white nor fo light, as that which is pure; but ule does but too foon. difcover the cheat, allum not being proper to fufe merals; and, when it is put on live coals, it does not fwell fo much as borax does.
Borax is fometimes ufed in medicine: it enters into the compofition of the unguentum citrinum, and ferves alfo to make fome kind of paint for the ladies.
Agricola obferves that there is a folfile nitre, which is as hard as a fone, of which the Venetians make borax. He is in the right therein, and it is nothing but the Perfian borax, we have been fpeaking of. But what he addys, according to Furetiere's quotation, that the Venetian borax is made with the urine of young lads who drink wine, which urine is beaten with a peffle in a brazen mortar, 'cill it be of the confiftency of an unguent, and then mixed with verdegreafe, and fometimes with nitre, not only is falfe, but is a mifreprefentation of the palfage from the chapter of Pliny quoted above, where there is not the leaft mention of wine drank by young lads, whofe urine Agricola pretends is made ufe of.

## B O T

## Remarks.

Of all the mineral falts the borax is that whofe natural compofition is the leaft known. It may be placed in the clafs of alkali falts, and among the abforbents.
By the analyfis, or refolution of this falt, when put in a retort over a gradual fire, the matter fwells, and yields but a clear infipid water, without any fmell, which is no part of the falt, and is fo foreign to it, that the borax, notwithflanding that lofs, and notwithitanding the increafe of a very violent fire, continues ftill in it's cuftomary faline form; the only alteration it receives from the action of the fire is, that it reduces itfelf, at the bottom of the retort, into a tranfparent mafs, and, as it were, vitrifed; which, though by it's tranfparency it refembles glafs, yet it differs from it in being ffill diffoluble in water; in all other refpects it is a kind of glafs, as fine, and almoft as hard, as cryital; which is not furprifing, fince this falt eafily acquires the tranfparency of glafs, and even forwards the vitrification of certain matters, when mixed with them. Spirit of wine, being poured upon this vitrified borax, excites a heat in it, which common borax does not acquire: yet, notwithfanding this alteration, vitrified borax, being diffolved in warm water, and afterwards cryftallized, refumes it's ancient form, and becomes a beautiful refined borax, which fhews that the action of the fire in that procefs does not change the fubftance of that falt.
This is a fummary account of Monfieur Lemery's experiments on the nature of this falt, extracted from his Memoirs, printed in the Hiftory of the Royal Accademy of Sciences for the year 1728, which he has continued in thofe for the years 1729 and 1732 , to make thefe experiments ferve, by rational inference, to underftand not only the medicinal properties of the borax, but alfo the manner of it's operating in the fufion of metals, wherein it is ufed.
We fhall only add here the obfervation of a perfon of very great experience, concerning the manner of ufing borax.
It muft be calcined at feveral times before it is ufed for foldering, that all the moift parts may be feparated from it, and thereby prevent it from ebullition, which often makes the work mifarry, this being of a dangerous confequence in valuable pieces of work: it muft be calcined with a flow fire, and, when it does not fwell any more, it mult be neatiy pounded; after which they calcine it a fecond time, and then pound it again, to ufe it upon occafion.
The ufe of borax in medicine is chiefly as a ftimulant, emmenagogue, and diuretic; it is one of the moft efficacious medicines known in fuppreffions of the menfes, and is given with fuccefs to promote delivery, and to bring away the fecundines. It is ufually given with powder of myrrh, and a few grains of faffron. It's dofe is from five to 15 grains; fome writers fpeak of much larger quantities, but they are neither fafe nor neceflary. It is alfo ufed by the women as a cofmetic. The great confumption of it, however, is for foldering, and the fluxing metals clean and free from all their feculent and heterogeneous matter; and the dyers, if it were not too dear, would confume a great quantity of it, to give a glofs to their colours: but allum, fufed in a crucible with common nitre, may anfwer that end at a much cheaper rate, borax being frequently from 5 to to fhillings a pound.
Borax, is alfo a fort of toad-bezoar, that is to fay, a fort of ftone found in the heads of toads, to which great properties are afcribed. Some natural philofophers pretend that it is really a petrified bone of that animal's head, and deny there being any fuch flones. There are fome, however, to be met with in the cabinets of the curious; but the moft fincere of them would not anfwer for their being genuine, nor for their pretended properties againft poifon and a bad air. There are alfo fome authors who affert that this ftone, which they call craupadine (from the French word crapaud, a toad) is found in the head of the fea-toad, and not of the land-toad, and they place it among the precious ftones, called by fome toad-ftone.
BORROWING, the taking up of money of a friend, or other perfon, on condition of returning it after a certain time, and paying intereft for the fame. It is almoft impoffible to undertake and carry on an extenfive trade, without fometimes borrowing money, or taking merchandizes upon truft, which amounts almoft to the fame : but both thefe ways are capable of deffroying a man's credit, and ruining him, if he is not punctual in paying the money, when due, efpecially if it be money borrowed; becaufe the intereft, if continued for fome time, generally abforbs the whole profit which is made in trade. BOSNIA, a frontier province of Chriftendom, divided between the houfe of Auftria and the Turks; that part which lies on the eaft of the river Unna belonging to the Turks, and that part on the weft of that river to the Auftrians. It is bounded on the north by the river Save, which parts it from Sclavonia; on the weft by Croatia, and partly by Dalmatia, which bounds it alfo on the fouth; it has Servia on the eaff, from which the river Drin feparates it.
The air here is harp, but the foil produces fome corn; and there are alfo fome mines of gold and filver, which are rarely wrought, and, when they are, they do not turn to any extraordinary account.
Vol. I.

BOTARGO, a kind of faulage, made with the ezss and blood of the fea-mullet, a large filh, pretty common in tha Mediterranean. It is long and narrow, about the thicknefs of a pike. They open the fifh, and take out the eggs, of which they make the botargo, which is afterwards traniported to all places. We meet chiefly with this filh in a fmall arm of the fea near Alexandria, as you come from Rofetta The beft batargo comes from Tunis in Barbary. They alfo make fome in France, at a place called Martegue, 8 leagues diftant from Marfeilles: the people of Provence eat a great deal of it. There is no great trade of it at Paris; however, the great grocers have commonly fome of it to fell, efpecially towards Lent, it being very proper food to ufe in that holy feafon. They eat the botargo with olive-oil and lemon-juice: it muft be chofen dry and redidih. They cut it in flices, Jike the caviary, and it is reckoned a nice difh, as it really is. When they would keep it, they put every bit by itfelf, and wrap it up in a kind of wax leaves, otherwife it will generate maggots: a perfon may carry it thus every-where about him. They falt and dry it in the fun, like Caviary. See that article.
They alfo make valt quantities of botargo in feveral parts of Egypt, particularly towards Alexandria. They open the mullet, as foon as it is catched, and they drefs the eggs almoft as they do thofe of the flurgeon for making the caviary. There is a great confumption of botargo's of Alexandria throughout all the Levant.
BOTTAGE, a duty which the abbey of $S t$ Dennis in France raifes on all the boats and merchandizes which pafs on the river Seine, from St Dennis's-day, the gth of October, to St Andrew's-day, the oth of November.
This duty is confiderable enough to oblige the merchants to take their meafures betimes, that they may avoid paying it, either by fending their merchandizes before the day on which this duty begins to be paid, or by delaying to fend them 'till the day is paft, efpecially if the merchandizes be of any bulk.
BOTTOMRY, is a marine contract in commerce, for the borrowing of money upon the keel or bottom of a thip; that is to fay, when the mafter of a thip binds the fhip itfelf, that, if the money be not paid by the day appointed, the creditor thall have the faid ohip: and this taking up money on bottomry is commonly in nature of mortgaging a hip: and in the inftrument executed between the lender and the borrower, there is a claufe which expreffes, that the thip is engaged for the performance of the fame.
Bottomry is alfo where a perfon lends money to a merchant, who wants it in traffic, and the lender is to be paid a larger fum at the return of the fhip, ftanding to the hazard of the voyage; in regard to which, though the intereft be greater than that allowed by law, it is not efteemed ufury: for money, lent at fea, is allowed a larger intereft than money advanced on land, by reafon 'tis furnithed at the greater hazard of the lender; and, if the fhip perifhes, he fhares in the lofs; fo that there is not that degree of fecurity, as in cafes on land, on mortgages, \&c. And, the greater the danger is, the greater may be the profit reafonably required for the money fo lent: and this hath been the opinion of civilians, and all, or moft part of the trading countries of Chriftendom allow it. The contract of bottomry, as generally made, is juft and honourable, according to the laudable cuftom of maritime perfons; and, though the advantage feems to zun high, as twenty, thirty, or fometimes forty per cent. and upwards, without confideration of time; yet, if by the common law, an action be brought on fuch an inftrument, the defendant cannot plead the ftatute of ufury. So it was held, where a perfon brought an action of debt on a bond for money taken up on bottomry; the defendant pleaded the flatute againit ufury, and fhewed, that a certain thip made a voyage to fifh in Newfoundland (which might be performed in eight months) and the plaintiff delivered 501 . to the defendant, to pay 601. upon the return of the fhip to fuch a port; and, if the faid ikip by leakage or tempelt hould not return from Newfoundland to the faid port, then the defendant fhould pay the principal money, viz. 501 . only : and, if the hip never returned, then nothing thould be paid: it was adjudged in this cate, that the fame was not ufury; for, if the thip had ftaid at Newfoundland two or three years, yer at her return but 601. was to be paid; and, if ibe never returned, then nothing. Trin, 6 Jac. B. R. 2 Cro. Rep. 208. 209.
There is likewife another way of advancing money, called ufura marina, though with little propriety, joining the advanced monies and the danger of the fea together; and this is obliging fometimes upon the borrower's fhip, goods, and perlon: the product of which, by agreement, will advance fometimes 20,30 , and fometimes 40 per cent. For inflance, a private gentleman has ro00 . ready money lying by him, and he, being informed of an ingenious merchant that has good credit beyond feas, applies himfelf to him, offers him 10001 . to be laid out in fuch commodities, as the merchant fhall think fuitable for that port or country the borrower defigns for, and that he will bear the adventure of that money during all that voyage (which he knows may be accomplifhed within a year) hereupon the contract is agreed
upon, 6 per cent. is accounted for the intereft, and 12 per cent: for the adventure outwards, and in per cent. for the goods homewards; fo that, upon the return, the lender receives 30 per cent. which amounts to 13001 . This is not efteemed ufury by the laws of this realm, by reafon of the tifque and danger that the lender runs.
When a mafter or owner of a thip takes up money on bottomry, and buys in lading, but endeavours to defraud the prince or flate of their cuftoms, or puts fuch goods on board which incur a forfeiture of the fhip; in fuch cafe, the borrower only runs the hazard, and not the lender. And where bonds or bills of bottomry are fealed, and the money is paid, if the fhip receives injury by form, fire, enemy, or any other accident, before the commencement of the voyage, then the perion borrowing fhall only run the hazard; unlefs it be otherwife provided, by particular words, that the contract is to have it's beginning from the time of the fealing. But if the condition be, that if fuch a thip fhall fail from London to a port abroad, and Chall not arrive there, \&c. then, \&c. here the contingenoy begins not'till the departure. Leg. Naval. Rhod. Moll.
A mafter of a fhip hath no power to take up money on bottomry, in places where his owners dwell, unlefs he is a partowner (as mafters often are at this time, and is the greateft fecurity for their faithful fervice) and in that cafe he may take up fo much only as his part will anfwer in the faid fhip: for, if he exceeds that, his own eftate fhall ftand liable to make fatisfaction. But when a matter is in a ftrange place or country, where he hath no owners, nor any goods of theirs, nor of his own; and for want of money, which he cannot procure by exchange or otherwife, his voyage might be retarded, there money may be taken upon bottomry, and all the owners are liable for it; that is, they are anfwerable by their veffel, but not in their perfons, by the act of the mafter; and the owners may have their remedy againft fuch mafter, whom they put in truft. Leg. Oleron. c. 4 . If money be lent on fhip-board by a merchant or paffenger, and before the day of payment the fhip bappens to be calt away, if there be fuch a faver as will admit of a contribution, the party lending is not to have his whole money, but is fhall come into the average; becaufe, if that money had been fo lent, it would have been in common danger with the reft: but, if the time appointed were paft before the misfortune happened, then the borrower mult repay the lender his whole money, free from contribution. And, therefore, by the maritime laws, in cafe the borrower detains any money thus lent, beyond the appointed time for the repayment; he fhall, at his return from the voyage, not only pay the profit agreed on before, but be obliged alfo to augment the fame, according to the longer time, accrued fince the day of payment. Leg. Naval. Artic. I7, 18.

Some Cases determined in the Courts of Judieature in England, relating to Bottomry.

## Deguilder verfus Depeifter.

The care was upon a bottomry bond, whereby the plaintiff was bound in confideration of 4001 , as well to perform the voyage within fix months, as at the fix months end to pay the 4001 . and 401 . premium, in cafe the veffel arrived fafe, and was not loft in the voyage.
It fell out, that the plaintiff never went the voyage, whereby his bond became forfeited; and he now preferred his bill to be relieved; and upon a former hearing, in regard the fhip lay all along in the port of London, and fo the defendant run no hazard of lofing his principal; the lord keeper thought fit to decree, that the defendant thould lofe the premium of 40 l . and be contented with his principal and ordinary intereft : and now, upon a re-hearing, confirmed his former decree. Vern. 257.

## Goddard verfus Garret.

The defendant had lent money on a bottomry bond, but had no intereft in the fhip or cargo; the money lent was 3001 . and he infured 450 I . on the fhip; the plaintiff's bill was to have the policy delivered up, by reaion the defendant was not concerned in point of intereft, as to the fhip or cargo.
Cur. Take it that the law is fettled, that if a man has no intereft, and infures, the infurance is void, although it be expreffed in the policy, interefted or not interefted; and the reafon the law goes upon is, that thefe infurances are made for the encouragement of trade, and not that perfons unconcerned in trade, nor interefted in the thip, fhould profit by it; and, where one would have benefit of the infurance, he muft renounce all intereft in the fhip. And the reafon why the law allows that a man, having fome intereft in the fhip or cargo, may infure more, or five times as much, is, that a merchant cannot tell how much, or how little, his factor may have in readinefs to lade on board his fhip. And it was faid, that the ufual intereft allowed on bottomry was 3 per cent per ann, and you may infure at 6 or 7 per cent. for
the voyage: fo , if this practice may be allowed, a man migit be fure to gain 30 l. or more per cent. Per cur. Decree the policy of infurance to be delivered up to be cancelled. See Assurance.
Note. That, in this cafe, notice was taken in the policy, that it was to infure money, on bottomry.
Note alfo, That, in this cafe, the fhip furvived the time limited in the bottomry bond, and was loft within the time limited in the policy. So, if infurance good, the defendant might be intitled to the money on the bond, and alfo on the policy. Vern. 254.

## Harman verfus Vanhatton.

Defendant lent the plaintiff 250]. on a bottomry bond, and afterwards infured on the fame hip; but the infurance was larger as to the voyage, there being liberty to go to other ports and places than what were contained in the condition of the bottomry bond. The fhip being loft, the defendant recovered the money on the policy of infurance, and alfo put the bottomry bond in fuit : the Mip, though loft, had deviated from the voyage mentioned in the bond, in going to Virgin Gardo to buy falt.
The plaintiff brought his bill, pretending the defendant ought not to have a double fatisfaction to recover both on the me furance, and alfo on the bond, he having infured only in refpect of the money he had lent on bottomry, and had no other intereft in the fhip or cargo; and therefore the plaintiff would have had the benefit of the infurance, paying the premium. Sed non allocatur.
The defendant, having paid the premium, was intitled to the benefit of the policy, and run the rifque, whether the fhip was loft or not; and the infurers might as well pretend to have aid of the bottomry bond, and to difcount the money recovered thereon, as the plaintiff to have the money recovered on the policy, to eafe the bottomry bond.
The plaintiff alfo charged, that the defendant had promifed and agreed to deliver up the bond, on the plaintiff's making up the money recovered on the policy, as much as he lent on the bond, with interefts and coffs, and proved fuch offer and promife. Sed non allocatur. It was but nudum pactum, a voluntary offer, and on condition that the money was then paid, and it was not complied with. Vern. 636 .

## Williams and Steadman.

Debt upon a bond upon bottomry; the defendant pleads, that the fhip went from London to Barbados fine deviatione, and afterwards fhe returned from Barbados towards London, and in her return the was loft in voyagio prodict'; the plaintiff replies, that the fhip, in her return, went from Barbados to Jamaica, and that, after a ftay there, fhe returned from Jamaica towards London, and was loft, and fo fhews a deviation. The defendant rejoins, that the was preffed into the king's fervice, and fo compelled to go to Jamaica, which is the deviation pleaded by the plaintiff: abfque hoc, that the deviated after her being preffed, \&c.
The plaintiff demurred; and -per curiam adjudged for the plaintiff. Firft, the bar of the defendant is not good; for he pleads, that the fhip went from London to Barbados without deviation, and that, in the return from Barbados to London, the was loft in the voyage aforefaid, but does not fhew without deviation; for the condition is fo in exprefs words; and he ought to fhew exprefsly, that he had performed the words of the condition; and though it be faid in voyagio predict', and it cannot be in voyagio predict' if the had deviated, and fo it is implied.
Yet Holt chief juftice faid, that to plead fuch a matter, which would be a performance of a condition by implication, is not fufficient. 3 Cro. 234. Tedcaftle's cafe. Holt's Report's, 126.

Many mafters of mips having infured, or taken up money upon bottomry, to a greater value than their adventure, have fometimes willfully caft away, burnt, or otherwife deftroyed the fhips under their care; therefore, by ftatute 10 Car. II. 1, 6 , the crime was made felony, and the perfon or perfons offending were to fuffer death : and this law was continued, by a fatute made in the firft year of the reign of queen Anne. Vide ftatutes 4 Geo. I. c. 12. and II Geo. I. c. 2 g under the head Navigation and Shipping.
By the 19th Geo. II. cap. 37. it is enacted, That, after the Ift day of Auguit, i 1746 , every fum of money lent on bottomry, or at refpondentia, upon the fhips of any fubjects, to, or from, the Eaft-Indies, fhall be lerit only on the fhip, or the merchandizes laden on board her, and fo expreffed in the condition of the bond; and the benefit of falvage fall be granted to the lender, his agents, \&c. who only thall have a right to make aflurance on the money lent; and no borrower of money on bottomry, or at refpondentia, thall recover more on any affurance than the value of his intereft on the fhip or effects, exclufive of the money borrowed. And, if the value of his intereft doth not amount to the money borrowed, he thall be refponfible' to the lender for the furplus, with lawful intereft for the fame, together with the affurance and all charges whatfoever, \&cc. notwithfanding the hip and merchandize fhall be totally loft.

## BOT

By the 2 , Geo. II. All his majefty's fubjects were prohibited, during the continuation of the late war, to lend money on bottomry, or refpondentia, on any fhips or goods belonging to France, or to any of the French dominions or plantations, or the fubjects thereof; and, in cafe they did, the contracts and agreements to be void, and they or their agent, or broker, therein interfering, were to forfeit 500 l . \&c. See Assurance.
There is a fictitious way of taking up money in the nature of bottomry, upon fuppofition of a hip and mafter, being the common practice among the Italians, and has been ufed by fome perfons on this fide the water; where a man borrows money, the condition reciting, whereas there is fuch a hip, naming her, bound to Amtterdam, whereof fuch a man is mafter (when, indeed, there is no fuch fhip or mafter in nature) that, if that (hip fhall not arrive at fuch a place with in twelve months, the money agreed on to be paid, fhall be paid; but, if the fhip fhall arrive, then nothing: this method of raifing money is highly unjuftifiable, and bas, 'tis to be feared, been too frequently practifed; but what is very extraordinary is, that fuch a contract fhould ever have been adjudged good according to the common law of this realm; yet it has been fo, and on a fpecial verdift too. See Hill 22 and $2_{3}$ Car. II.
But, although it has bad this authority, yet fince the prohibition of affurances, intereft or no intereft (as by the beforecited act ) it will render the like practices the lefs frequent, if not totally put an end to them. See the article Assurances.

## A Bill of Bot tomry is made as follows

To all people to whom thefe prefents fhall come, I A. B. \&c. owner and mafter of the fhip, called, \&c. of the burthen of 200 tons, now riding, \&c. and bound for, \&c. in the WeftIndies, fend greeting. Whereas I the faid A. B. am at this time neceffitated to take up, upon the adventure of the faid ibip, called, \&c. the fum of one hundred pounds, for feting forth the faid thip for fea, and for furnifhing her with provifions, \&cc. for the faid voyage, which C. D. of, \&c. merchant, bath on requeft, lent unto me, and fupplied me with at the rate of 201 . for the faid rool. during the faid voyage. Now know ye, that I the faid A. B. do, by thefe prefents, for me, my executors and adminiftrators, covenant, grant, and agree, to and with the faid C. D. his executors and adminiftrators, that the faid thip thall, with the firft fair wind, after the day, \&c. of this inflant, \&c. depart from the faid river of Thames; and fhall, as wind and weather hall ferve, proceed in her voyage to, $\& x$. aforefaid, in the Weft-Indites, and having there tarried until, \&c. and having the opportunity of a convoy, as being fooner difpatched (which thall firt happen) thall return from thence, and, as wind and weather fhall ferve, directly fail back to the river of Thames, to finifh and end her faid voyage. And I the faid A. B. in confideration of the faid fum of 1001 . to me in hand, paid by the faid C. D. at and before the fealing and delivery of thefe prefents, do hereby bind myfelf, my heirs, executors, and adminiffrators, my goods and chattels, and particularly the faid thip, with the freight, tackle, and apparel of the fame, to pay unto the faid C. D. his executors, adminiftrators, or affigns, the fum of 120 l. of lawful Britifh money, within one and twenty days next after the return and fafe arrival of the faid thip, in the faid river of Thames, from the faid intended voyage. And I the faid A. B. do alfo for me, my executors and adminiffrators, covenant and grant, to and with the faid C. D. his executors and adminiftrators, by thefe prefents, that I the faid A.B. at the time of the fealing and delivery of thefe prefents, am true and lawful owner and mafter of the faid thip, and have power and authority to charge and engage the faid thip as aforefaid; and that the faid fhip hall, at all times after the faid voyage, be liable and chargeable for the payment of the faid $\mathbf{1 2 0 1}$. according to the true intent and meaning of thefe prefents. And, laftly, it is hereby declared and agreed, by and between the faid parties to thefe prefents, that in cafe the faid fhip hall be loft, mifcarry, or be caft away, before her next arrival in the faid river of Thames, from the faid intended voyage, that then the faid payment of the faid 120 . fhall not be demanded, or be recoverable by the faid C. D. his executors, adminiftrators, or affigns, but thall ceafe and determine, and the lofs thereof be wholly borne and fuftained by the faid C. D. his executors and adminiftrators; and that then, and from thenceforth, every act, matter, and thing herein before contained, on the part and behalf of the faid A. B. to be done and performed, fhall be utterly void; any thing herein contained to the contrary thereof, in any wife notwithfanding. In witnefs, \& c.
Sometimes there is added to this bill of bottomry, as a further fecurity, a fhort bargain and fale of the fhip, \& c . with a provifo to be void, on payment of the money, and performance of the covenants.
A Bill of Bot tomry, where the fhip is to go to feveral ports.
To all people, \&c. I A. B. of, \&cc. mariner, mafter, and part owner of the good thip or veffel, called, \&cc. of London, of the burtben of two hundred tons, or thereabouts, now rid-
ing at anchor in the river Thames, within the port of London, do fend greeting: Whereas the faid fhip is now bound out upon a voyage from the faid port, unto the ifland of Bar bados, and from thence, if occafion fhall be, to the ifland of May, and fo to return back again to the faid ifiand of Barbados, and thence to London, to end her voyage: Now know ye, that I the faid A. B. for me, my executors and adminiftrators, do covenant and grant, to and with C. D of, \&c. (who, before the fealing and delivery hereof, hath paid and advanced unto me the fum of iool. of lawful money of Great-Britain, and is contented and agreed to fand to, and bear the adventure of, the faid fum upon the body of the faid hip, during the faid voyage) and to and with the exccutors, adminiftrators, and affigns, by thefe pre fents: That the faid lhip, with the firlt, good wind and weather, after the day of, \&e. next enfuing the date here of, thall depart from the faid river of Thames; on the faid intended voyage, and falll, by God's grace (the perils and dangers of the fea, and reftraint of princes and rulers excepted) return into the river of Thames from her faid voyage, before the expiration of fourteen months, to be ac counted from the date of thefe prefents; and that the faid fhip, in her faid intended voyage, fhall not fail or apply unto any other ports or places, than thofe before-mentioned herein, unlefs the thall be neceffitated thereto, by extremity of weather, or other unavoidable accident. And that I the faid A. B. my executors, adminiftrators, or affigns, fhall and will well and truly pay, or caufe to be paid, unto the faid C. D. his executors, adminiftrators, or affigns, at, \&c. the fum of 130 . . of lawful money of Great-Brirain, in refpect of the adventure aforefaid, if the faid thip fhall go only to the inland of Barbados, and from thence return to London to finifh her faid intended voyage; and the fum of 140 1. of like money, if the faid fhip thall go from thence to the ifland of May, and fo return again to the faid iffand of Barbados, and thence to London, to end her faid voyage ; and that within one month, after the return of the hull or body of the faid fhip, unto the fiver of Thames, from her faid voyage. Provided always, and it is neverthelefs the true intent and meaning of thefe prefents, That if the faid hip, in her intended voyage, fhall happen to be loft, mifcarry, or be taken by men of war, or pirates, that then this prefent writing or deed, and every covenant, payment, matter, and thing therein contained, on the part and behalf of me the faid A. B. to be done, paid, and performed, thall be void, and of none effect : and that then I the faid A. B, my executors or adminiftrators, fhall not be any ways chargeable, or liable to pay the faid feveral fums before-mentioned, or either of them, or any part thereof, to the faid C. D. his executors, adminiftrators, or affigns, but that he and they are to lofe the fame, and every part thereof; any thing herein before contained, to the contrary thereof, in any wife notwithftanding.
And it is agreed, by and between the faid parties to there prefents, that in cafe the faid thip fhall not be returned unto the river of Thames, from the faid intended voyage, at the end of fourteen months, to be accounted from the date of thefe prefents; and that, at the expiration of the faid fourteen months, there fhall not be juft proof made of the lofs; happening within the time aforefaid: that then I the faid A. B. my executors, adminiftrators, or affigns, fhall and will within twenty days, next after the end and expiration of the faid fourteen months, well and truly pay, or caufe to be paid, unto the faid C. D. his executors, adminiftrators, or affigns, at the place of payment aforefaid, the faid fum of 1301. in cafe the faid fhip thall go unto the ifland of Barbados as aforefaid, and the faid fum of 1401. in cafe the faid fhip thall go unto the illand of May as aforefaid; and that the faid C. D. fhall not run the hazard and adventure of the faid fum by him adventured as aforefaid, upon the body of the faid fhip, any longer than fourteen months, to be reckoned and accounted as aforefaid. In witnefs, \&c.

## A Bottomry Bond is of the following form.

Know all men by thefe prefents, That I A. B. of the pirifit of, \&c. in the county of Middlefex, mariner, am held and firmly bound to C. D. of, \&c. in the county aforefaid, merchant, in 2801 . of good and lawful money of Great-Britain; to be paid to the faid C. D. or to his certain attorney, his executors, adminiftrators, or affigns; for which payment well and traly to be made, I bind myfelf, my heirs, executors, and adminiftrators, firmly by thefe prefents, fealed with my feal : Dated this day of, \&c. in the -_ year of our fovereign lord George the third, by the grace of God, of Great-Britain, France, and Ireland, king, defender of the faith, \&c. and in the year of our Lord one thoufand feven hundred and
The condition of this obligation is fuch; that if the above bound A. B. his heirs, executors, and adminifitrators, do and thall well and truly pay, or caufe to be paid unto the above-named C. D. his executors, adminiftratots, or ar figns, the full fum of 1301 . of lawful Britih money, at dr before the end of one month next after the return of the fhip, \&cc. (burthen, \&cc. whereof the faid A. B. is mafter)
from her prefent intended voyage, which the is to make to the illand of Barbados, and fafe arrival in the river of Thames; and pay the full fum of 1401 . of, 8 cc . if the faid fhip, chatl go to, \&ic. And alfo thall and do well and truly oblerve, perform, fulfil, and keep, all and every the covenants, grants, articles, agreements, which, on his or their parts and bebalfs, are, or ought to be, obferved, performed, fulfilled, and kept, mentioned and contained in a certain writ-
ing, or bill of bottomry, of the date above-written, made by and from the faid A. B. part-owner of the faid thip, unto the faid C. D. in all things, according to the true intent and meaning of the faid bill of bottomry, or adventure ; that then this obligation to be void, or elfe it fhall remain in full force and virtue.
BOULINIS, or BOULIGNIS, a copper coin, fruck at Boulogna, or Bononia, in Italy; it ferves there inftead of pence, and, in buying and felling, they bargain by boulinis, as they do in France by fols, and in England by pence.
The boulinis is worth four quadrins, that is to fay, the Roman bayoca, which is current in the trade which thofe two cities have with each other, becaufe Boulona lies in the territories of the Pope. The name of the coin, as one may eafily guefs, comes from that of the city where it is ftruck.
BOUNTIES. The Bounties and Allowances, payable out of the Duties of Customs, the Bounties and DrawBACKs on Britis excifeable goods exported, and the premiums on naval ftores imported; together with inftructions in regard to the performance of the refpective regulations required by law, are fo very numerous, that we refer to Saxby's Book of Rates, in relation to thefe points, from page $359,8 \mathrm{c}$, and his Index.
BOURBONNOIS, 2 territory of the government of Lyonois in France, is bounded on the north by Nivernois and Berry; on the weft by Upper Marche; on the fouth by Auvergne; and, on the eaft, by Burgundy and Forez. This country produces very good wine, but it foils, if it be tranfported abroad. Here are a valt number of mineral frings, which are very famous, and much reforted to.
At Moulins is made a great deal of iron and fteel works, which are very much efteemed in France.
Near the city of Bourbon l'Archambaud are fome rocks which have veins, the fmall ftones of which are like diamonds and cut glafs; when they are well polifhed and fet; the beft connoiffeurs will take them for:true diamonds.
At Gannat is a granary of falt.
BOX, a tree too well known to need a particular defcription. There are feveral fpecies of this tree; the two moft confiderable of which are, the buxus vulgaris, or buxus arborefcens, which grows to the height of a fmall tree; and the buxus humilis, or humble box, which does not grow above two or three feet high, but fpreads very much.
We thall fpeak here of the box-wood, only as far as relates to it's nature, ufe, and the trade that is made of it.
The box-wood is yellowifh, hard, folid, even, very heavy, and takes a good polifh.
When this wood is in pieces, of a reafonable thicknefs and length, it is very faleable, being ufed in works of fculpture, and in wind-inftruments of mufick, fuch as violins, baffviols, haut-boys, flutes, flagelets, sc.
Box of an inferior quality ferves to make fmaller works, as combs, balls, tops, fpoons; forks, handles of knives; nutcrackers, tooth-pick-cafes, fnuff-boxes; and other boxes, pullies, \&ic.
The fineft box-duft is ufed to throw over paper, to dry the frefh writing; the ftationers and comb-makers have a confiderable trade of it.
The provincés of Champagne and Franche Comté, in France, produce a great deal of box, which is reckoned very good; but the beft comes from Spain and Smyrna: the latter is car ried to Roan by the Dutch, on the return of their fhips from the Levant.
It is of this laft fort of box that almoft all the combs are made at Paris. It is fold by the hundred weight, and is in thick and thin billets, commonly four feet long. It is fold by the comb-makers themfelves, who cut it into fquare pieces, of different lengths and thicknefs, according to the combs they would make.
The great quantity of box which is brought to Roan is the reafon why they make a great many combs in that city, which they fend to Paris, and into the provinces of the kingdom, and even into foreign countries.
One may extract from box, by the help of a retort; a fpinit and an oil, which may be rectified, like that of guaiacum. The druggifts of Paris, and thofe of fome other great cities in the kingdom, drive a pretty good trade of that oil, which is reckoned a rovereign remedy for feveral diftempers, buit it is very eary to adulterate it.
BRABANT, is bounded on the north by Holland and Guelderland, on the weft by Zealand and Flanders, on the fouth by the counties of Hainault and Namur, and on the eaft by the principality and bifhopric of Liege, and by part of Pruffian Guelderland.

The trade of Brussels; the capital city of Brabant and of all the Netherlands, confifts of camblets, laces, and fine of peftries made here, and which they fend all over Europe. Round three partsi of the large market-place here, are the halls of the different trades, where the deacons and tradefmen meet on the affairs of their companies: they have each a great room for themfelves. Here is a mint for the coining of money.
Vilvorde receives fome advantage's to its trade, from the canals running by it, which lead from Bruffels to Antwerp.
At Nivelle, is made a great quantity of fine linnen, equal to that of Cambray.
Louvain was formerly the richeft city in the country, and drove a very extenfive trade, confiffing chiefly in woollen cloths manufactured here: that trade was fo flourifhing in the beginning of the fourteenth century, under John III, duke of Brabant, that there were here above four thoufand woollen drapers, and above an hundred and fifty thoufand weavers. But in 1380, thefe journeymen weavers revolting againlt Wincellaus, duke of Brabant, he laid all the country wafte; but being befieged at laft, they were obliged to beg that prince's mercy, and were moft of them banihed. Upon this they retired into England, where they were very kindly received. This entirely ruined the trade of Louvain, which is not confiderable at prefent ; and confifts chiefly in the excellent beer which they brew here; and of which they fend a great quantity into the neighbouring cities, and particularly to Bruffels.
Diest is not large, but noted by the woollen cloths, hofe, and other manufactures; as alfo by the excellent beer brewed here, which is fold in all the neighbouring towns. They keep here, every Afh-wednelday, a famous fair for horfes.
At Borsleduc; the linnen and woollep manufaQures flourifh, and the place is likewife famous for cutlery wares and needles. Oasterwick was formerly very confiderable, having 500 weavers looms, and 38 brewhovifes. There is a large mar-ket-place, where they keep a market every Wednefday, and three fairs every year. See Austrian Netherlands.
BRACELET, an ornament put round the wrift. There are fome made of ribbands, of wove hair, of horfe-hair, of pearls and of precious flones. The fmall pietures in miniature, which are put on the arm, are alfo faftened to the bracelet.
Bracelets are in ufe as well among the moft polite as the mof barbarous, nations. The inhabitants of Madagafcar make them of metal, in the form of a ring, or of a chain. The favages of America have them of glafs-beads. The blacks on the coalt of Guinea make them of thofe Thells, which are called coutris, or coris, in Afia, and Bouges, in Africa: and it is in order to get thofe vain ornaments, that they all give their-richeft merchandizes, and even fometimes barter for thofe trifles the liberty of their fathers, wives and children. See the next article.
Bracelet, called by the French menille, or rather manille, from main (manus) the hand, is one of the metcliandizes, which the Europeans, and amonglt others the Dutch, carry to the coalt of Africa, to trade with the negrees. The French alfo uféd it very much in their trade with the inhabitants of the intand of Madagafcar; whillt they Had a fettlement there.
Thefe bracelets are a kind of large ring of copper, which thefe African nations ufe to adorn themfeives with, and for : which they barter flaves and other mercbandizes, for which the Europeans trade with them. This odd kind of ornament they put on the bottom of their legs, juft above the ancle, and on the thick part of their arms above the elbow.
There are two forts of thefe bracelets or rings; fome are plain, flat, and without any engraving; the others ate round, thicker, and adorned with chiflel works, and foliages in relievo. The latter are of good copper, and of a pretty good workmanfhip; the others are hardly any thing but the foum of that metal; they are both exchanged either by tale or by weight.
The inhabitants of Madagafcär are alfo very fond of adorning themfelves with thofe bracelets; the richeft amongt chem, and the chiefs of the white have gold ones: but thefe they make themfelves, melting down and changing into bracelets all the gold coin they fometimes receive from the Europeans, in exchange for their merchandizes. Moft of their yellow brafs bracelets they get from the French, who drove a pretty good trade in thofe wares, whilft they fetted in the bays of Atougil and St Auguftin.
BRANDENBURG. This marquifate and electorate has Mecklemburg and Pomerania on the north, part of Lunenburg on the weft, part of Magdeburgh, of the dutchy of Saxony, Lufatia; and Silefia on the fouth, and Poland on the eaft. In the New Mark they feed great flocks of fheep, and fome black cattle; and La Foreft fays, that, if they were as much given to trade as to drinking and feafing, they might make confiderable profit of their fheep, and breed more black cattle. But, fince his time, the trade of this country is very much improved, the elector Frederic William having entertained near a hundred thoufand pro-

3
teflants,
telfants, who fled bither from perlecution in France, \&c. in 1685 , and the following years, to whom he allowed great privileges, and an act of naturalization, which fettled many ufeful manufactures in this country, and doubled feveral branches of the revenue: and the late elector prolonged, and even augmented, the franchife of thofe French proteftants; caufed churches to be built for them, of which he maintained the minifters; gave them a very fine college for the education of their children, and chofe a company of mufqueteers out of them, in which none but French were admitted. Their commodities are cliefly exported by the Elbe and Oder, betwixt which there is a communication by a canal, which faves their paying toll in the Sound. The revenues of the elector of Brandenturg were computed, in 1680 , to amount only to between 6 and 700,000 l. a year. In 1690 , they were thought to exceed one million: and his late majefty, by almoft every year inviting, and handfomely fettling, new coJonies of French proteftants in his dominions, advanced his revenue to above a million and a half of our money. There are fome, who, confidering the many and great taxes that irave been lately laid on all commodities, wearing apparel and victuals not excepted, have made his annual revenue to amount to near two millions ferling: As he has few filver mines, but fome of brafs, iron, and copper, the money in his dominions is generally worfe than in Saxony and the electorate of Hanover.
Landsperg is very conveniently fituate for trade, which confifts much in cafting of iron ordnance.
Frankfort wos once a free and imperial city, but now exempt, and not to confiderable as formeriy. Neverthelefs it has a confiderable trade, chiefly in linnen cloth and fells, by the Oder, and the canal between that river and the Eibe, and has three great fairs a year.
The canals from Berlin to the Havel, the Oder, and the Elbe, not only fock it with fifh better than any city in Germany, but make it one of the beft trading towns in the empire; for they open a communication by frmall veffels from Silefia to the mouth of the Elbe. At the fame time it muft be owned, that the French refugees have contributed, in an extraordinary degree, to the aggrandizement and embelliihment of this city, by the introducing and eftablifhing the arts in it, and all kinds of manufactures. In the ffreet called La Rue de Cloitre, Frederic the Firft eftablifhed an academy for nobility and gentry; but the late elector, upon its decay, changed it into a workhoufe, with lodgings for feveral woollen manufacturers; fo that 'tis called the Royal Manufactory. There are public workhoufes adjoining to it, which were eftablifhed and built by the prefent elector's grandfather ; and, being deftroyed by fire, the late elector caufed them to be rebuilt. Near the fquare called the Moloke Mark, is a manufactory of gold and filver lace. The houfe of the general of the ordonance contains the foundery, where men are continually at work. The manufactures that are moft flourifhing in this city, are curious works in gold and filver, in polifhed fieel and in glafs, as alfo light ftuffs, coarfe cloths, flockings, \&c. And Mr Toland afcribes the improvement of this city, and of the Brandenburg dominions in general, not only to the encouragement given to the French refugees, but to the great number of houles, which the elector (grandfather to the prefent) built in feveral places, whereby his fubjects reaped confiderable profit, both from their labour and materials; for it's faid, that he actually fet apart 150,000 crowns a year for his buildings.
At Potzdam are made all the forts of arms for the forces and arfenals, which were formerly made at Liege.
The city of Brandenburg has a confiderable trade; the Havel bringing great boats hither from the Elbe, with all forts of merchandize, from the towns on that river
The inhabitants of Stendal bave a pretty good trade in corn and linnen cloth, and make a good profit by travellers, it being in the road from Magdeburgh and Erfurt, to Hamburg and Lubeck.
The chief trade at Soltwedel is in beer, which they export.
The chief trade of Gardeleben, is in beer and hops, reckoned as good as any in Germany, which are bought up by the Danifh merchants.
Tangermund is a place of pretty good trade in corn, and other commodities conveyed to Hamburgh, and other places by the Elbe.
BRANDY, a fpirituous and inflammable liquor, extracted from wine, or other liquors, by diftillation, which is moft commonly performed by the balneum Mariz, but fometimes alfo by a fmall flaming fire.
The veffels ufed in this operation are commonly of copper: fome diftillers, in order to cool the brandy fooner, make the neck of the matrafs, which they have very long, and of a ferpentine, or winding figure, pafs through a tun of cold water.
In order to diftil this brandy, they fill the cucurbit half full with the liquor they would extract it from, which they put over a moderate fire 'till about the fixth part of it be diftilled, or 'till they perceive that what falls into the recipient is no donger inflammable.
Brandy difilled a fecond time is called fpirit of wine; and Vul. I.
this firit purified again, by one, or by feveral difillations, is what they call firit of wine rectified.
The fecond diftillation is made in the balneum Mariz, and in a glafs cucurbit, 'till the brandy that was put into it be reduced to one half; and this half is again rectified, as often as the operator thinks proper.
To abridge thefe feveral difillations, which are tedious and troublefome, they have invented a chymical inftrument, by which the redification of firit of wine is made by one fingle diftillation. One may fee the defcription and figure of that inftrument in Glafer's Treatife of Chymiftry, the Lyons edition, $16 ; 6$.
To try the goodnefs of the rectified firit of wine, you mult examine whether, when lighted into a blaze, it confumes intirely, without leaving any impurity behind; or rather, which is furer ftill, whether, having put fome gunpowder at the bottom of the firit you would try, the powder takes fire; when the fpirit is confumed : in which cafe the firit is good.
With regard to brandy (we fpeak only of that which is diftilled from wine) they who trade in it chufe it whise, clear, and of a good tafte, and fuch as will bear the teft of proof, that is to fay, that, when poured into a glafs, it forms on the top of it a little white lather, which, as it diminifhes, makes a circle, which the French brandy-merchants call the chapelet, and the Englifh the bead, or bubble, there being no brandy but that which is well defegmated, and does not retain too much humidity, wherein the bead will be intirely formed.
The chief ufe of brandy is as a drink, particularly in the northern countries, among the negroes of Guinea, who will fell one another for fome bottles of brandy; and among the favages of Canada, who are extremely fond of it, but to whom the French are forbidden to give any, under very fevere penalties.
Brandy is allo ufed in medicine, to flrengthen the nerves; and in dyeing, when rectified into fpirit of wine, being then reckoned by the dyers among the non-colouring drugs.
Befides the brandy made of wine, there is fome alfo made of beer, cyder, fyrups, fugar, molaffes, fruit, grain, \&c. (But thefe are not properly called brandy with us, but go under the general denomination of Spirits. See Rum and Arrac.) Wine-brandy made in France is efteemed the beft in Europe. By a decree of the parliament of Paris, of the I $3^{\text {th }}$ of March i 69.9 , none but French brandy is allowed to be brought to Paris, and the fale of all other brandies, as thofe of cyder, fyrup, molaffes, \&c. is prohibited under the penalty of forfeiting the fame, and paying a fine of icoolivres. Cyderbrandy is made in Normandy, and that of fyrup, fugar, and molaffes, at Orleans, and other places in France, where there are fugar-bakers.
They make brandy in France wherever they make wine, and for that purpofe, they make ufe both of wine that is pricked, and of good wine.
The brandies for foreign trade, and which the Dutch efpecially buy up in great quantities, are thofe of Bourdeaux, kochelle, Cognac, Charente, the Ine of Rhé, Orleans, the country of Blaifos, Poictou, Touraine, Anjou, Nantes, Burgundy, and Champagne.
Of all the French brandies, thofe of Nantes and PQitiou, which are of the fame quality, are the moft efteemed, beceufe they have a better tafte, are finer and ftronger, and will the longeft bear the proof of the bead. Thefe are what foreigners chiefly buy.
The brandies of Anjou, Touraine, Orleans, \&c. but chiefly thofe of Anjou, are moft commonly fent to Paris, and into Flanders, by the river Loire. They are not of fo good a quality as thofe of Poictou and Nantes, though they are alfo yery good.
The merchant druggifts and grocers are thofe who, at Paris, have the greateff trade in brandy, either by wholefale or retail. Some merchant-mercers, as well as the lemonade-fellers, the vinegar-fellers, the diftillers of brandies and ftrong waters, do likewife carry on fome trade in brandy: and thofe of the Jaft companies have a right to diftil it, and to keep by them all the utenfils, as coppers, ftills, and other veffels, either of copper, earth, or glafs, neceffary for that ditillation. Whereas, on the contrary, all vintners, tavern-keepers, and other retailers of wine, are forbidden to diftil any, and even to keep any diftilling veffels in their houfes.
Befides the two bodies of mercers and grocers, and thofe three companies of arts and trades, who, by their fatutes, have a right to trade in brandy at Paris, there are alfo a great number of poor people, of both lexes, who get a livelihood there by reailing brandy in very fmall quantities. They are a kind of huckiters, who fet up their litte fhops, or ftalls, at the corner of freets every morning betimes, when the workmen and labourers are going to their day's work. They alfo walk about the ftreets, car: ying their whole fhop, bottles; glaffes, and meafures, in a fmall balket, which they hang about their necks. The women generally fit in their hops, or ftalls; and the men walk about, crying brandy to fell.
The French name for brandy is eau de vie; in Latin aqua vité, water of life: but the French call it fometimes brandevin,

$$
4 N
$$

from

## B R A

from the Dutch brandewyn, as it were, burnt wine, from branden, to burn, and wyn, wine: bur the word brandevin is feldom ufed unlefs among thp vulgar and the foldiery.. At Paris, where brandy is fold by the huckfters in fmall quanrities, or meafures, from four deniers to a fol; and in the armies, where the futlers retail it, they call it brapdevin, rather than eau de vie; but every-where elfe they ufe the laft word, unlefs it be in joking.
The veffels and cafks, into which the French brandies are put, and tranfported abroad, have different names; according to the feveral provinces where they are made or bought. The moft common are the barriques, pipes, tuns, tonneaux, and poinçons.
There are alfo barils and baricants; but the latter are very fmall, and are ufed only for the retail of brandy within the kingdom, and particularly for prefents, and for the provifion of private families.
The brandies which come from the country, or province, of Blaifos, are in poincons, or puncheons; thofe of Anjou, Poictou, and Nantes, in pipes and tonneaux ; and thofe of Bourdeaux, Cognac, Rochelle, the ifle of Phe, and other neighbouring places, in bariques.
We are obliged to make ufe of thefe French names, becaufe We have none in Englinh which anfwer exactly to them.
Though the barique (or hoghead), be in feveral places a veffel containing a determined quantity of liquor, afcertained by gauging; yet, in the brandy-trade, it may bee confidered as a meafure of evaluation, which ferves to determine the purchafes made by foreigners.
This barique of evaluation is not equal every-where, and contains more or lefs veltes, or verges, accotding to the places.
At Nantes they reckon 29 veltes to the barique; at Rochelle, Cognac, and in the Ine of Rhé, 27; at Bourdeaux, 32; which muft be underfood with this provifo, that, in cafe the calk holds lefs than the number of veltes for which the buyer made his bargain, the feller accounts to him for what is wanting, at the rate the purchafe was made at : if, on the contrary, If contains more, which is almof always the cafe (there being pipes, poinçons, tonneaux, and bariques, from 50 to 60 veltes) the buyer is to account for the furplus to the feller: fo that, if the pipe fold at Bourdeaux, where the barique of evaluation is rated at 32 veltes, thould contain 48 veltes, the buyer pays for it as for a barique and a half; and thus in proportion in all other places.
The velte, by which the barique is rated, contains three pots, the pot two pints, and the pint weighs fomething lefs that two pounds and a half (obferve that a French pint anfwers very near to our Engliih quart, wine meafure; fo that the velte contains about a gallon and a half, or fix quarts, or bottles.) Some reckon the velte to contain four pois; but they are probably miftaken, or the pot, by which they meafure the velte, contains lefs than two pints.
It muft be obferved, that the brandy-calks, being not limited, as we have faid, to a fixed number of veltes, and the pipes, poinçons, and tonneaux, containing from 50 to 90 veltes, all that is above the 50 veltes is called excefs, or overplus, for which the commiffioners of the cuftom-houfes fettled in the ports where the wine or brandy is Chipped off, caufe a duty to be paid at the rate of fo much per velte, over and above the duty of exportation for the 50 veltes, at which every barique is rated in the tarif, or book of rates.
At Amfterdam, and in the other cities of Holland, the barique, or hogthead, is rated very near as it is in France, and almoft upon the fame footing as the barique of Nantes; that is to fay, it contains 36 viertellen, each viertel 6 mingles, and the mingle weighs 2 pounds and a quarter.
The French brandies are fold at Amfterdam by pounds de gros, or pounds Flemifh, more or lefs, according to their quality; with a deducion, or difcount, of i per cent. for ready money. Thofe that are of $\frac{3}{5}$, which the Dutch call verloop, are fold for $\frac{2}{3}$ more than the common ones.
The merchants of Rochelle, Nantes, Roan, \&c. do themfelves export a pretty large quantity of their brandies into foreign countries. There is no thip laden there, particularly for the French iflands in America, the coaft of Africa, and the northern countries, but French brandy is part of the catgo. Yet that trade is nothing in comparifon to what is carried on with foreigners, who come and buy up thofe brandies in the abovementioned ports, and particularly at Bourdeaux.
The number of 'foreign veffels which, in time of peace, arrive at thofe ports, and take part of their cargo in brandy, is incredible; there are fome from all parts of Europe. Nantes alone furnilhes them with about 7 or 8000 hogtheads, Bourdcaux above double that number, and the other places in proportion.
The foreigners who buy moft of the brandies, are the Englifh, Scoss, Irifh, Dutch, Flemifh, and Hamburghers; but it is certain that the Dutch alone take up near as much as all the uthers together, not only for their own confumption, which is very confiderable, but alfo to export again into all the countries in Europe, and to America.
Li time of war between England, Holland, and France, the

Danes, if they be neutral, and fometimes alfo the Swedes, join with the Hamburghers, and carry on with them the trade of brandy; which thofe nations can hardly forbear drinking. Hamburgh alone confumes above 4000 hogheads of brandy; Lubeck about 400 ; Koningfberg only $x 00$; Riga, Revel, and Narva, as many; Denmark more than Lubeck; Archangel, according as they have liberty to import any, there being fometimed a general and fevere probibition to buy or fell any; Dantzick imports but little brandy, and even that litcle, is proper for Pruffia only.
We do not reckon Poland and Sweden among the northern countries where they confume anyiFrench brandy; not that thefe nations are more referved than any other with regard to this burning drink; bur, as they prefer corn-brandy to French brandy, they have at pome wherewithal to make fuch brandy as fuits their tafte beft, and colts them much lefs than the French brandy would do: fo that about 100 hogheads annually are fufficient for the provifion of Stockholm.

## REMAREs.

Brandy is diftilled over a common fire, but flow, and not in balneum Maria. For this operation they ufe ftoves built with bricks, or fone, which are made either round or fquare: when they ufe bricks, they bind them with a frong fine clay, mixed with horfe-dung, or cows-hair.
Thefe ftoves muft always have two bottoms; the lowermoft is to receive the afhes of the wood, or coals, and the uppermoft to put the fuel in. They alfo have the precaution of contriving three or four vents round the copper, which they open or fhut, as they would either forward or retard the diftillation. For want of a ftove, they fometimes ufe an iron trevet to fet the copper upon, and they only put wood under it:- but this method is very defective; nor can ever good diftillation be made, if the operator is not mafter of the fire, to manage it with judgment and dexterity, which cannot be done in this laft method in the open air.
In order to make good brandy, there muft be ufed a large copper cucurbit, to which the head muft be properly adapted; and, having filled it half full with wine, which murt be neither four, nor vented, nor corrupted, the cucurbit mult be covered with it's bead, which muft be exactly luted to it, with paper and pafte, or rather with a wet bladder, folded feveral times. Then the cucurbit muft be put into the ftoye; and the branch, or neck, through which the brandy is:to diftil, muft be made to pafs through a tun with one botem only, filled with frefh watet; for which purpofe the neck muft be three or four feet long, compofed of a long tube, which muft pafs obliquely through the tun, and; winding again, muft meet a tube which iffues out of the head of the cucurbit; thefe two tubes entef into one another, and muft be alfo luted together with paper and pafte, or a wet bladdere as above, to prevent the evaporation of the finits during the diftillation. Care alfo mult be taken to keep upon the head of the cucurbit a wet cloath, to make the firits condenfe. As foon as you obferve that fome drops begin to fall at the end of the long tube, you muft fuffer-about 50 to fall down, after which you muft adapt to that end of the tube a recipient, or veffel, capable to receive the brandy which is going to diftil. If you would make good and delicate brandy, you muft take care not to hafteri the diftillation by too fierce a fire: in order to act with more fecurity $;$ you muft obferve that a drop which falls does not wait for the next, and regulate your fire, increafe or decreafe it, by giving more or defs air to the fove, either by opening or fhutting fome of it's, doors, or by opening or fhutting fome of its vents: to do which with the more exactnefs, a regifter is requifite:
If what we have been obferving be exactly followed, and but one fourth part of the liguor contained in the cucurbit be extracted, you fhall have excellent brandy, provided you chufe proper wine That which gnows about Orleans and Paris is very proper to make excellent brandy, though it be none of the ftrongeft; it will even afford more brandy than that which is much ftronger; the reafon of it is this: thofe wines which feem to abound moft with firits, do alfo much more with tartar, which fixes thofe firits; whereas weaker wines; having a lefs quantity of tartar, fuffer the firits to rife much eafier.
There are alfo feveral other forts of brandies, made of fruit, grain, and other ingredients. But; before we finifh this article, we fhall give an account of the manner of extracting brandy from the hufks, or fkins, of grapes, after the prefling; becaufe the benefits that can arife from this difillation deferve fome attention.
After the grapes have been prefled, whatremains in the prefs is coarfely feparated into fmall particles with the hand, and afterwards thrown into large tubs, where they prefs it very hard, mix a hittle water with it, and cover it very clofe with clay: in that condition they leave it to ferment during four or five weeks, obferving, however, to fhut the crevices which might happen to come in the clay, to prevent the evaporation.
After that time, they fill a very large copper half full with that mixture, cover it with it's head, and lute it to it, and diftil the whole after the fame manner as they do brandy.

## B R A

## B R A

By this work they may make a very great advantage of a - matier, which they were ufedto caft upon a dunghill.

If this brandy be not fo palatable as that which is made of wine, yet it is excellent for making fifits of wine. Both there liquors are a confiderable branch of trade, and we thought that it would be acceptable to the public to enter into a minute account of this operation.
The ordonnance of aids in France, made in 1680, art. y. and 2. of the title of duties upon brandies, fettles thofe that are to be raifed, as they enter the city and fuburbs of Paris, at 45 livres per muid, or hoghthead, Paris meafure, whether they enter by land or by water; wherein are comprifed the 15 livres for the wholefale trade, and for the eighth penny, laid upon that liquor; which duty of 45 livers is alfo to be paid for all brandies coming by water, and unloaded within three leagues of Paris; even thofe which are carried through that city, either by land or by water, without ftopping there, excepting, however, that upon thefe there is a deduction of the is livies for the wholefale trade, and for the eighth penny". As for thofe brandies which pals through the city of Paris, without ftopping there, to be tranfported into foreign countries, they are free from all duties of entry into that capital, by proving their letters of carriage, and giving fecurity to the general cuftom-houle of entries, that they will bring back a certificate from the judges and officers where the brandies were embarked, that they were really flipped, and produce a receipt of the payment of the duty of exportation.
The duty on brandy fold by wholefale is a twentieth part of their price, or value; and on thofe fold by the quart, or retain, 15 lipres per muid, or hogfhead, Paris meafure. But the btandies föld within the city and fuburbs of Patis, are free from that duty. Thofe allo are free from all dúties which are bought by the pot, or by the pint, and refold again by the huckfters about the ftreets in fmall meafures of 4 or 6 deniers, or of a fol at moft.
There areftill fome other duties on brandy, which are paid In France, but not generally every-where, as the fourth; the duty of aids, that of augmentation, and fome others, for which the reader may confult the fane title of the aboveoneritioned ordoniance of the year 1680 .
Befides the decrees, declarations, or ediets of the king's council, for regulating the traniportation and fale of brandies, hitherto mentioned, there is a laft declaration of the 8th of May, 17.18, regiffered in the parliament the i6th of the fame month, whlich orders, that, for the execution of thofe of December, 1687 , and January, no brandies fhatl be carriéd off before the buyet thall have given good and fufficient bail to the cuftom-houfe of the place from whence they are to be carried away, promifing to bring back certificates and receipts for the payment of the duties of entry at fuch places where they are due; unlefs the fellers of thofe brandies, or the factors refiding in the places where they are fold, chufe to give fuch fecurity, of which mention fhall be made in the permits for carrying them away, upon pain of forfeiting the brandies, carriages, and all things belonging to them : the cui-ftom-houle officers of the place whence the brandies are to be carried a way, being forbididen to receive any declaration, or to deliver any permit, before the fecarity be given, upon paln of lofing theit place.

## Duties of exportation paid on bramdies at Bayonne.

The pipe, containing about 80 veltés (about $\mathbf{1} 20$ gallons) pays 4 livres ancient duty, and for the $\frac{x}{5}$, or the augmentation of 4 fols per livre, 16 fols; in all 4 livtes and 16 fols.

## Dúties of exportation at Bourdeaux.

At the cuftom-boufe, per piece of 50 veltes liv. fols. But the feller accounts to the buyer - $\quad-\quad \begin{gathered}28 \\ 8 \\ \text { I }\end{gathered}$
for the duty of importation into the city; fo that
there remains to be paid by the buyer, who fends
the brandy abroad - - I9 18
For tare on the pipe of brandy - - - $\quad 1918$
For brokerage
For carrying on board and fowing
5
For porterage from the feller's key to the buyer's
houle, from 6 fols to 8
Pieces containing above 50 veltes pay in fols for the laft-mentioned porterage; but, on exportation, the feller reimburfes it to the buyer.

## The trade of brandy at Amfterdam.

We have as yet faid but little of the trade of brandy which is Carried on at Amflerdan: yet we prefume it will be acceptable to the reader to find in this place the account given us in Mr John Peter Ricard's work, printed in the year $\mathrm{r}_{7} 22$, wherein he treats very accurately of the trade of that famous city. Mont of the wine-brandies fold at Amfterdam are imported from France, particularly from Cognac, Nantes, Bäyonne, Rochelle, Bourdeaux, Languedoc; and Provence: : they have alfo fome from Barcelona in Spain. All thofe brandies are fold
by the verge (which is the fame as the velte) and are paid in pounds grofs, or Flemifh, which the French call livres de gros The $3^{\circ}$ verges of Cognac brandy are
bought, one year with another, re-
gulated by the year 1682 , for
Thofe of Nantes . - -
Thofe of Rochelle
Thore of Bourde
Thofe of Lauguedoc
Thofe of Provence from - $\quad 7 \frac{8}{2}$
Thofe of Barcelona alfo from - $7 \frac{1}{4}$ to $7 \frac{2}{2}$
As for the grain-bratidy, or foirit, the greateff part of which is made at Amfterdam, it is fold by the aam, which contains 128 mingles.
The aam of grain-brandy, or fpirit, is commonly fold for 23 guilders and a half, a little more or a little lérs, according to the variety and plenty of grain. On all thofe brandies either of wine or grain there is a deduction, or difount, of one per cent. for prompt payment, or réady money.
It is always the feller who gets the brandies gauged at his ex pence, which cofts him, according to the placart, or ordonnance, of the year 1704 , for a piece of 50 verges, and under, 3 ftivers; from one of 5 Ito 79 verges, 6 ftivers; and, for one of 80 and aboye, í2.fivers.
If the buyer finds the piece erroneoully gauged, after he has emptied it, he may have it meafured again, by a fworn gauger, who meafures it with wäter; and, if there be any error found the feller is obliged to indemnify the buyer.
Brandies feveral ways prepared, which ferve for drinking.
They make with brandy, either fimple or rectified, feveral forts-of ftrong liquors, into which they put fugar and fpices, with flowers or fruit, and other ingredients, which they clarify afterwards, by paffing through a woollèn cloth, or fil trating through brown paper.
The grocers, lemonade-fellers, vinegar-miercliants, фiftillers, and all thofe who have the right to make brandy, have alro that of compounding and felling thofe liquors : but, common$y$, the greatelt quantity of them come from Montpelier, where it hath been faid they make them better than in any other part of the world ; and it is from that city that the cof-fee-houfes at Paris, where there is the greatelt demand for hofe liquors, have them, whether they get them direcliy from Lauguedoc, for their own account, or buy them in the itreet called ia Huchette, where there is a warehoufe of them, of many years ftanding. The chief of theie waters are,

Cette-water;
Anife-water,
Water of franchipanne,
Angelic-water,
Clairet-water,
Celeri-water,
Fennel-water
Divine-water,

## Laftly, Barbadoes water.

The laft of thefe, to be excellent, mult be imported from England, and come really from Barbadoes; for the apothecaries and difillers of Montpelier have not yet been able to imitate it perfectly.
Befides thofe liquors made with brandy, and which have kept the name of water (from the French eau de vie) there are fome others, which, either from the fruit mixed with them, or from the fancy of the artift, have got names which are become, as it were, their proper names: fuch are, the roffolis, perfico, ratafee, valtee, mufcadine fack; and fome others.

Further Remarisg relating to the laws of England concerning brandy.
The improvements which have been made within there few years in the Britifif diftilery, afford very good Englifh bfandy; and how near brandy made in England, from fubjects of our own production, may be brought to approach the quality of French, fee the article Distillation. The fatutes of England relating to brandy are:
By flat. 22 Car. II. cap. 4 fect. 2. It is declared that brandy is a ftrong water perfeetly made, and, being imported, is chargeable, by the act 12 Car. II. cap. 23, 24. with the duty of 8 d . per gallon fet upon Atrong water perfectly made and imported, and not with the duty of 4 d . per gallon upon fipirits made of wine, or'cyder, imported.
2 Will, and Mar. ftat. 2. cap. 9. fect. 12. All ftrong waters, brandy, or fpirits, brought from Guernfey, Jerfey, Sark, or Alderney, hall be charged with 8 s . per gailon, to be paid to the collector of excile before landing; and all other excileable liquors brought from the faid inlands (except beer, ale, and mum) fhall be charged with the like duties as are charged on the like liquors made in this kingdom, to be entered and paid as abovefaid; and, before the landing fuch liquors, oath Ghall be made by the importer, or owner, before the collector, or principal officer of the cuftoms, that the fame are of the growith and manufacture of the faid inlands, and are not mixed with foreign materials. And, in cafe fuch liquors thall be landed before fuch entry and oath be made, and the duties paid, the fame thall be taken to be of the growth and manufacture of the territories of the French king, and the liquors
$\dot{\text { fhall }}$ be deftroyed, and all perfons concerned in the importation or fale thereof thall fuffer the penalties mentioned in ftat. I Will. \& Mar. ftat. I. cap. 34. viz. They hall forfeit the value for the firft offence; and for the fecond offence, double the value, and fhall be difabled to bear office: the values to be ftated as follows, viz. a tun of wine 301 . a tun of brandy 40l. and commodities rated according to the book of rates, and other commodities, by a jury.
Revived by 12 Will: III. cap. 11. fect. 8. and continued by 3 Ann: cap. 4. 5 Ann. cap. 19, and made perpetual by ${ }^{1}$ Geo. I. flat. 2. cap. 12.
Stat. 12 Will. LII. cap. I i. fect. 18. No perfon thall fell brandy, or other diftilled liquors, to be drunk in his houfe, but fuch only as thall be licenfed in the fame manner as ale-houfe-keepers, and fubject to the fame penalties: and the juftices of peace, sic. are authorifed to exercife the fame jurifdiction over retailers of brandy, \&ic. as over common ale-houfe-keepers:
Sect. 20. If foreign brandy, or fpirits, fhall be imported in any fhip under 15 tons (except for the ufe of the feamen, not exceeding one galion'each) fuch brandy, \&c. Thall be forfeited, one moiety to his majefty, and the other to fuch perfon as fhall feize, or fue, for the fame.
Stat. i Ann. cap. 14. fect. i. Concerning ditillers who keep places for diftilling Englifh brandy and frong waters, from malted corn, and all Chop-keepers, who principally deal more in other goods than in brandy and ftrong waters, and who do not permit tippling in their houfes, the claufe in ftat. 1,2 , and 3 Will. III. cap. ir. rect. 18. Thall be repealed.
Sect. 2. If any perfon thall import French brandy before the duty be paid or fecured, or by licence from the proper officer, every perfon that hall fo do, or be affifting therein, or conceal the fame, when landed, fhall forfeit not only the goods imported, but alfo double the value, one moiety (after charges of fuit deducted) to her majefty, and the other to the informer : and, if any officer of the revenue fhall connive at fuch clandeftine importation, or conceal the fame, or compound, without licence, with any perfon concerned in clandeftine importation of French brandy, fuch perfon thall be incapable of office in the revenue, and fhall forfeit 500 l . to be divided as aforefaid.
6 Geo. I. cap. 21. fect. 12. All perfons who thall become difillers, or fellers of, or dealers in, brandy, arrack, rum, fpirits, or ftrong waters, fhall, before they take any fuch brandy, \&c. into their cuftody, make entry, at the office of excife, of the feveral warehoufes, \&c. intended by them to be made ufe of for the keeping of brandy, \&cc. on forfeiture of 201 . for every fuch warehoufe, \&c. made ufe of by fuch diftiller, \&c. without making fuch entry, together with the brandy, \&c. found therein, and all the cafks, \&c. containing the fame.
Sect. 13. No brandy thall be brought into fuch warehoufe, \&c, without firft giving notice to the officer of excife of the divifion, and producing, and leaving with him, an authentic certificate, that the duties chargeable on all the faid brandy, \&c. have been paid, or that the fame has been condemned as forfeited, or was part of the flock of fome importer, diftiller, \&cc. of which an account had been taken purfuant to this act, and expreffing the quantity and quality thereof, and at what port the duties were paid, or the brandy, \&c. condemned, or of whofe ftock the fame was part, on forfeiture of the brandy, \&c. together with the cafks and veffels containing the fame.
Sect. 14. The officers of excife may at all times, by day and by night (and, if by night, in the prefence of a conftable, or other peace-officer) enter into the faid warehoufes, \&c. made ufe of by any dititler, \&c. and by tafting, gauging, or otherwife, take account of the quantity and quality of all fuch of the faid liquors as thall be in their cuftody; and if any diftiller, \&c. Thall hinder, or refufe, the faid officers to enter his warehoufe, \&c. or obftruct them in the execution of the powers by this act given them, he fhall forfeit 501 .
Sect. 15. No brandy, \&c. Thall be fold, or expofed to fale either by wholefale or retail, but when the fame fhall be in fome of the warehoufes, \&c. fo entered, on pain of forfeiting 50 s . for every gallon of brandy, \&c. fold, or expofed to rale, in any other place, and fo proportionably.
Sect. 16. Where any brandy, \&c. Thall be fold in the faid entered places, in great or fmall quantities, the officers of excife of the divifion thall be obliged, upon the requeft of the feller, without fee, to give the buyers thereof certificates in writing, figned by the faid officers, expreffing the quantities fo fold, the names of the buyers and fellers thereof, and that the duty has been paid, or that the fame has been condemned as forfeited, or was part of fuch ftock, as aforefaid.
Sect. 17. No brandy, \&c. exceeding the quantity of one gallon, fhall be removed, or carried from one part of this kingdom to another, by land or by water, without a permit, or certificate, from one of the officers of the cuftoms, or excife, certifying the quantity and quality thereof, and that the duties have been fatisfied, or that the fame had been condemned, or was part of fuch ftock as aforefaid, on pain of forfeiting the brandy, \&c. and the calks, \&c.

Sect. 18. Every perfon who thall have in his cuftody any brandy, \&c. exceeding the quantity of 63 galions, fhall be deemed a dealer in brandy, \&c. and fubject to the furvey of the officers of excife.
Sect. 19. The penalties and forfeitures by this act given on account of brandy, \&c. thall be fued for, \&c. by the laws of excife, and one moiety thereof (the charges of fuing for, $\& \mathrm{c}$. being firlt deducted) fhall be to the king, and the other to him who thall feize, or fue for the fame.
Seet. 20. Where any brandy, \&c. fhall be feized, as forfeited, by any officer of either the faid revenues, all fuch feizures (except where the feizure fhall be made for unlawful importation, and the whole quantity of brandy, \&c. at any one time for that caufe feized does not exceed 63 gallons) fhall, in a fummary way, be heard and determined, viz. in cafe fuch feizure be made within the immediate limits of the chief excife-office in London, the fame fhall be determined, in a fummary way, by the commiffioners of excife, or the major part of them : and, if fuch feizure fhall be made without the limits of the faid excife-office in London, then the fame fhall be heard, \&c. before two juttices of peace refiding near the place where fuch feizure fhall be made; which commifioners and juftices fhall caufe the perfon in whofe cuftody fuch brandy, \&c. was found, to be fummoned to appear before them, and, upon their appearance or default, to examine into the caufe of the feizure, and give judgment, and to iffue out their warrants for fale; and fuch judgments hall be final, not liable to appeal, or to be removed by certiorari.
Sect. 21. Where any fuch brandy, \&c. (except as before) fhall be feized as forfeited, and no perfon within 20 days after appears to the officer who made fuch feizure, to claim the fame, then, if fuch feizure fhall be made within the limits of the chief office of excife in London, the officer who made the feizure may, after the expiration of 20 days, caufe notice in writing to be figned by the follicitor of the excife, to be affixed at the Royal Exchange, fignifying the day, and time of the day, that the commiffioners of excife will proceed to hear the matter of fuch feizure, and to condemnation of the brandy, \&cc. And, if fuch feizure be made out of the limits of the chief excife-office, the officers who fhall make fuch feizure may, after the expiration of 20 days, caufe public notice to be given, by proclamation, at the next market-town to the place of feizure, on the next market-day after the expiration of the faid 20 days, of the day and place when and where the juftices will proceed to hear the matter of fuch feizure, and to the condemnation of fuch brandy, \&c. in which cafes the faid commiffioners and juftices refpectfully are to proceed to examine into the caufe of fuch feizures, and to give judgment for the condemnation of fuch brandy, 8 cc . as on examination Shall appear to be forfeited, and of the cafks, \&c. which judgments thall be final, as if the owners of the faid brandy, \&c. or the perion in whote cultody the lame was, had been fummoned to attend the faid commiffioners and juftices, and thall not be liable to appeal, or to be removed by certiorari.
Stat. 8 Geo. I. cap. 18. fect. I I. All dealers in foreign brandy, fpirits, or ftrong waters, who fhall receive into their cuf tody any Britih fpirits, fhall keep the fame apart, and in feparate places, from their foreign brandy, \&c. on pain of forfeiting 10 s . for every gallon which fhall be found in any vault, \&c. where they fhall keep any foreign brandy, \&c. together with the cafks, \&c. wherein the fame Britilh fpirita hall be found.
Sect. 12. In cafe any officer of the excife fhall find any increafe of foreign brandy, \&cc. in the hands of any fuch dealer, over and above the quantity he found at the time of his laft furvey, fuch increafe thall be deemed to be made by foreign brandy, \&c. for which no duties were paid, and which had been privately brought by fuch dealer into the place where fuch increafe hall be found, without permit, or payment of the duty, or any previous entry to any officer of the excife of bringing the fame; and fo much of the faid foreign brandy, \&c. as thall be found fo increafed, fhall be forfeited, and may be feized by fuch officer, unlefs the owner fhall make it appear, that fuch increafe was made either by mixing fome of his flock of Britifh fpirits, whereof the officer had taken an account, with his foreign brandy, \&c. in the prefence of the officer of excife of the divifion, or by foreign brandy, sxc: brought into the place, with certificate of the payment of the duties, or that the fame had been condemned, and that: due notice was given to the officer of bringing in the fame beforé it was brought in.
Sect. I 3. No foreign brandy, \&c. although the fame be under the quantity of one gallon, thall be received into the cuftody of a retailer, \&c. or any perion for his ufe, without a permit, or certificate, figned by fome officer of the cultoms, or excife; fignifying that the duties were paid, or fecured, or that the fame had been condemned as forfeited, on forfeiture of the brandy, together with the cafks, \&c.
Sect. 24. All brandy, arrack, rum, fpirits, and frong waters, as well foreigo as Britif, and foreign excifeable liquor, which fhall be forfeited, together with the calks, botties, velfels, and other package, containing the fame, may be feized by any officer of the cuftoms, or excife, or by perions deputed by

## B R A

warrant from the lord-treafurer, or under-treafurer, or by fpecial commifion under the great-feal, or privy-feal, but by none others.
Sect. 25. If any perfon thall affault, or hinder, any officer of he cuftoms, or excife, in feizing or fecuring any brandy, \&c. or foreign excifeable liquors, which thall or may be feized, or virtue of this or any other act, or fhall by force refcue any brandy, \&c. after the fame fhall have been feized, or fhall endeavour fo to do, or thall, after feizure, ftave or damage any cafk, \&c. containing fuch brandy, \&c. the party offending thall forfeit 40 l.
Stat. 1 I Geo. I. cap. 3o. fect. 3. No brandy, arrack, rum, pirits, or ftrong waters, whether Britifh or foreign, fhall be fold, or expofed to fale, either by wholefale or retale, but when the fame flall be in fome of the warehoufes, or other places, entered in purfuance of the aet 6 Geo . I. cap. 21. on pain of forfeiting all fuch brandy, \&c. together with the cafks, \&c. over and above the penalty of 40 s . per gallon, impofed by the faid act.
Stat. 2 Geó. II. cap. 28. fect, 10 . No perfon fhall fell brandy, or other diftilled liquors, by retail, but fuch as fhall be licenfed in the fame manner as common alehoufe-keepers, and fubject to the fame rules and penalties; and the juftices of peace thall have the fame jurifdiction over retailers of brandy, 8 c , as over alehoufe-keepers.
Stat. 6 Geo. 1I. cap. 17. fect. 2. The duty (by ftat. 7 and 8 Will, III. cap. 20.) of 301 . per tun on French brandy of fingle proof, and 6o l. per tun on French brandy of double proof, thall ceate.
Sect. 3. In lieu of the faid duties, there thall be paid to his majetty the excife herein expreffed ; viz. for every gallon of fingle brandy imported, to be paid by the importer, before landing, over and above the duties payable for the fame, is, For every gallon of double brandy imported, 2 s .
Sect. 4. The faid duties thall be collected in the fame manner, \&c. as the duties of excife.
As for the famous gin act, as it is vulgarily called, that is to fay, the att againft retailing fipirituous liquors, which affected all forts of brandies, as other firits, it being now repealed, we think it needlefs to give an extract of it in this place. See Distillation and Malt.

## Further Remarks on Brandy

Although neither Englifh malt nor molaffes firits come up to the goodnefs of brandy, yet the fault is not in the grain, or fruit, from which they are extracted, but from the cifferent manner of their preparation; for both grapes and grain confift of the like principles, of oil, falt, phlegm, and earth, by a chemical analyzation; they differ only in the quantity and connedtion of their principles, for the grain has them more firmly and clofely conjoined. - Hence appears the neceffity of double fermentation to fweil the compact earthy parts, and o' difengage and fubtilize the oily and faline parts, that they may be feparated from the more grofs and earthy:
Thefe firits differ alfo in refpect of their feparability and volatility. Thus fome wines, that are ftronger bodied, abound more with fulphur and falt, afford less pirit than others that are thinner, and appear weaker; for the firituous particles of the laft are much fmaller, lighter and finer, and are lefs intangled in a vifcus; their fpirits are more difpofed to motion, and run more readily, and in larger quantity, from their earth and phlegm.
Spirits of the grape, or grain, are the oil, or falt of thofe vegetables, reduced into volatile particles, lighter than the phlegm wherewith they are entangled. Thefe fpirits are neither acid nor alcaline, but of a neutral nature as to both, which Boerhaave has fufficiently proved by divers experiments.
That there is no effential difference between brandy, molaffes, and malt firits, if they are thoroughly rectifyed, appears from hence; for, all fpirits being obtained by diftillation, it does not feem poffible that the fire fhould make fo great a difference as is generally believed. Wine diftilled yields much fpirit, which is only it's oil and falt fubtilized. After this fipirit comes much phlegm; after that come over acid firits, mixed with a tharp white naufeous aftringent pblegm; continue the diftillation, and there arifes a black, thick, burnt, flinking oil, which may be feparated from the acid fpirits by brown paper: after all, in the bottom of the fill remains a mals of falt and earth, which may be feparated with water.
This falt is a fixed, alcaline falt. Molaftes, fermented with water, and caft into a ftill, yield the fame. Grapes contain much oil, falt, and phlegm. Barley has much oil, and but a little effential falt. Sugar has in it much effential falt, and not a little oil. As all thefe fpirits are in daily ufe with us, ir may not be unacceptable to confider them a little further: for, as the better fort ufe what is called brandy, fo the poorer muft be content with malt fpirits, which are cheaper, and whofe ordinary imperfections are, I. Want of age, which gives them an empty, rheumatic, and fiery tafte, though tome pretend to take it off by the proper application of the dulcified fpirit of nitre. 2. It is of a lower ftandard than true French brandy, this having about feven parts of phlegm Vol. I.

## B R A

to nine of firits; the other nine parts phlegm to lefs than five of fpirits, and often not fo much; for if you caufe zio quarts of it to be put into a ftill, you will not get above two quarts of firit, which would all burn away; i. e. nine parts phlegm to one of firit. 3. It wants, likewife, the vinous flavour of true brandy; this fome attempt to give by incorporating the dulcified fpirit of nitre alfo, or young buds of black currant-berries, into it: but the remarkable tafte of the firf, and the cerefied flavour of the other, in the ofdinary procefs, difcover the impofition.

## Of judging of proof in fpirits.

This being a commodity of general ufe, and, therefore, a large article of traffic, it may not be improper to thew the moft exact methods of examining proof in fpirits, and detecting the invalidity of the common methods of judging of the purity, genuinenefs, and goodnefs of brandies, \&c. To which end, Take a long phial, half filled with the common proof fpitit of the malt-diftillers, and give it a fmart ftroke with it's bottom againft the palm of the hand, and there will appear, on the furface of the liquor, a chaplet, or crown of bubbles, which will difappear in a clear ftrong manner ; that is, it will firft remain a while, and then go off by degrees, without breaking the bubbles, or rifing into larger: and, when the bubbles go off in this manner, the firit is vulgarly faid to be proof, or merchantable: for, if the bubbles are too large, and vanifh too foon, the fpirit is deemed above proof; if too fmall, and they go off too foon, it is faid to be below proof. But this is a fallacious method of judging; becaufe there are cer tain known ways of making a fpirit bear this trial, when it is in reality either above or below proof: for the proper meaning of the word is, that a proof-fpirit fhould contain about one half water, and the other half alcohol.
By the beforementioned kind of proof, however, all diftilers, brandy merchants, brokers, and the officers of the cultoms and excife, judge of the ftrength and quality of brandies and firits, in all the brandy countries and fea port towns of Europe. It may, therefore, appear fingular here to oppofe the genéral opinion and practice, in a particular where the intereft of fo many trading people, watchful againft all impofition, is concerned: and yet we undertake to thew that this kind of proof is a mere fallacy and deception; for if but a little vinous or faccharine matter, as treacle, fyrup, muft, the rob of fruits \&c. be added to a quantity of highly-rectified firit of wine this flight addition will give a brandy-proof to that fpirit which, therefore, by this trial, may be made to pafs for brandy; that is, a compofition of half water and half alcohol, whereas, in reality, it is almof totally alcohol.
The fraud is eafily detected; not in the common way practifed upon the keys, but by burning a little of the fpirit in a fpoon, for thus it will leave the faccharine matter in a dry form, behind.
Whether there be any method commonly known of making any fpirituous liquor of Europe that contains much lefs than a half of alcohol, to pafs current for proof-fpirit, is not fo certain : but doubtiefs this might be eafily effected; for we fee that arrack is proof, or affords a ftrong crown of bubbles, upon fhaking, as well as brandy, though arrack ufually contains not above half the quantity of alcohol that brandy does; and if but a drop or two of it's own, or any other effential oil, be added to a pint of proof-brandy, this is fufficient to deftroy it's proof, and make it appear much weaker than it is,
To prevent being impofed upon in this way, we might have recourfe to the effay inftrument, or hydroftatical ballance: a gallon of alcohol is computed to weigh feven pounds and a half, and a gallon of water eight pounds; whence the compound gravity of an equal mixture of the two may be affigned. But it is a more fure and ready method for men of bufinefs to burn a little meafured quạntity of the brandy to be tried, in a cylindrical metalline veffel, plunged in cold water to an equal height with the brandy, and when it ceafes to burn, exactly meafuring the remainder, which is the water: but, if the fpirit has loft one half of it's meafure by burning, the brandy may be allowed proof; if more or lefs, it muft be judged of accordingly*.

* See a paper of Mr Geoffroy to this purpore, in the Erench Memoirs.
But, befides the falfe method of judging the ftrength of brano dies by what is called proof, there is another no lefs fallacious one of judging of their goodnefs, though kept a great fecret in few hands, as a thing fome dealers imagine a certain criterion for determining whether foreign brandies are mixed with corn firits. Thefe dealers are provided with a certain yellow liquor, a few drops whereof, being poured into a glafs of right French brandy, gives it a beautifyl blue colour, by the ftrength and brightaefs of which colour they judge of the genuinenefs or unmixed ftate of the commodity, and buy upon this kind of proof; whence they may come to be much deceived; for, if an ordinary malt-fpirit was to be coloured with oak, this fpirit would fuftain the prefent method of proof, and might therefore be purchafed by thofe dealers for French hrandy. This proof tincture, or effay liquor, may be expeditiounly pre-
pared, by diffolving a little green vitriol (firft caicined to redinefs) in a weak firit of fea falt, which thus becomes a yellow liquor; a fingle drop or two of which being added to a glafs of any inflammable foirit, coloured yellow or brown with oak, will inftantly turn it of a beautiful bright blue: whence it is evident that this kind of trial is no more than a deception, and only fhews when brandies are tinged with oak, as they conftantly are by lying long in the calk; and that it is the oak which thus caufes French brandies to turn blue' with the eflay liquor, appears again from hence, that, if the beft and oldeft French brandy be re-diffilled, and thus made colourlefs, it will not turn blue with the eflay liquor, becaufe all the tincture of the oak, or tinging matter of the cafk, is left behind in the ftill.
One of the beft methods to prevent being impofed on by the mixing of malt-fpirits with a finer, is to acquire the habit of judging by the tafte and fmell; for malt-fipirit is ufually rectified fo ill, by the addition of fixed alkaline falts, or certain flavouring ingredients, that it may commonly be perceived by the nofe or palate, efpecially if the brandy propofed for examination be largely diluted with water, to prevent it's overheating the mouth; or elfe be burnt in a fpoon, fo as to leave the phlegm to be tafted and fmelt by itfelf; for this phlegm, if the brandy be debafed by a corn fpirit, will tafte and fmell confiderably naufeous, very different from the phlegm of pure French brandy.
Burying cafks of brandy in the earth, or lying fome months on the iea, takes off it's hot, empty, rheumatic tafte, makes it mild in the mouth, and warm upon the fomach; it is by the laft of thefe methods that the Dutch impore upon us with molaffes fpirits, inftead of right French brandy.

Of the ufe of brandy in regard to the health.
Brandy fhould be drank very moderately, rather from neceffity than pleafure; fo will it be of fervice, and contribute to healch. When the ftomach is raw, weak, and lax, a moderate dram 'raifes a pleafant warmth, a gentle tenfion,' and better digeftion, by rarifying the vifcid phlegm which loaded it, invigorating it's fibres, and making it's coats play with more agility and vigour. When flatulency, or wind, abounds in the inteftines, a dram rarifies the retained, grofs, peripirable matter, and prepares it from an; explofion upwards or downwards, or fends it off by perfiration; it revives the languid nervous filaments, affords them new firit and ftrength for action, whereby their periffaltic motion is promoted. When the body is faint and languid, from a wafte, or diffipation of the animal fpirits, from excefs of exercife, too long walking, fafting, or too low and abftemious a diet, whereby the nervous juice is exhaufted, and the folids cannot act with their former vigour, a dram is fo fubtile before it is drunk, that, in it's very fwallowing, and as foon as it enters the ftomach it penetrates the nerves, adds to the elafticity of the fibres, invigorates the vibrations, and takes off all fenfe of languor and faintnefs. For the fame reafons, when the circulation of the blood is languid, from the decreafed tone of the veffels, a dram excites their vigour, and caufes a brifker circulation.
A dram taken in the decoction of mallows, and althea-root, with a little honey, cleanfes the kidnies, ureters, and bladder, powerfully; forces away fand, fmall ftones, gravelly and flimy matter with the urine. A moderate dram ufed in dropfical and cachectic cafes, where the body is difpofed to be overbulky, and in danger of leucophlegmatia, or any other general, or particular tumours, from a laxnefs, or languor of the nervous fyftem, as a thicknefs or tougbnefs of the blood, efpecially of the lymphatic juices. In thefe cafes a dram invigorates the fibres, rarifies the fluids (though a too frequent, or exceffive ufe, of fpirits, has the quite contrary effect) ftimulates the veffels and fecretory contractions, caufes the blood to flow in the reins in larger quantity, and with greater velocity; hence the fecretion of urine is increafed, and, at the fame time, perfifiration encouraged.
When the ftomach is weakened by a furfeit of tenacious food the preceding day, which has left much phlegm in the excretory ducts of it's glands, or exhaufted it's fpirits, a dram is good before dinner. Drams are chiefly ufeful to phlegmatic conflitutions, bulky bodies, or old age, and fuch as have weak and lax ftamina, expofing them to difeafes of the head, and nervous diforders or dropfies, \&c.
But all thefe good effects will not counterballance the mifchiefs done by the indifcreet and immoderate ufe of firits. All melancholy tempers are injured by them; for, though a fmall dram rarifies the blood at firft, yet the more thin and fpirituous parts exhale fooner, and carry off fome of the fineft ferum with them, whereby the blood becomes thicker, and the folids more dry and fitif.
Choleric difpofitions have their fibres too much flimulated by in'sufe; the acrimony of the blood and it's motion, and agitation, are increafed by it. The repeated ufe of unneceflary drams, in fanguine conttitutions, rarifies the blood at firft, makes it diftend the veffel, and fome unprepared parts rufh into the canals of conic tubes, where they cannot readily pais; hence fevers and other diforders. A too free ufe of inen, in any conftitution, puts the humours into a violent
agitation; whereby their nutritious parts are unfit to anfwer their defign, for this great rarefaction is often fucceeded by a thinnefs and waterinefs of the blood; hence an ill habit of body, a pale look, and a decay of the natural actions.
All fpirits caufe drunkennefs, by an overfufion of the fluids, and diftention of their containing veffels; hence head-achs and pains from faline ficicula darting into and prickling the relaxed veffels, and the nimy matter depofited on their infides, which weakens them and foaks them with phlegm, 'till the perfon become paralytic, lethargic, apoplectic, and convulfed, and often fpirits kill the drinker upon the foot; from all which we cannot help thinking, that the world had been happier, had men never been accuftomed to brandy or fpirits; for fuch as content themfelves with water, or good table beer, are by far more vigorous, healthy; and longlived than drammers, who moftly make themfelves difeafed, and at length become more like beafts than men.
BRASS, a factitious metal, compofed of feveral metals mixed together, among which the chief is copper. That which the French call leton, or yellow copper, is red or natural. copper, prepared with the lapis calaminaris. See Calamine. Before the lapis calaminaris is put into the foundery, it muft be thoroughly calcined, then ground into powder, afterwards mixed with coal-duft, and watered, fo that it be no longer like dult.
The calamine-ftone being thus prepared, they divide it, as well as the rofe-copper, into eight equal parts, and put it into eight crucibles, one part of each into every one, and place them all into the fame furnace, where being melted, it is tranfformed into brafs: fo that, inftead of any wafte or diminution, there is an augmentation or increafe of 48 or 50 pounds per hundred, if copper of Hungary or Sweden be ufed; that of Norway yielding but 38, and that of Italy but 20.
Brafs muft be hammered or forged rather hot than otherwife, for it breaks; if hammered quite cold; and, after it has been twice melted, it is no longer malleable; the workmen not being able to ufe it then, unlefs they add a due proportion of lead to it, which renders it foft and eary to work.
It is certain, that brafs often melted lofes that degree of ductility it has, when firft made; which inconveniency is remedied, by adding to it, when melting, eight or or ten pounds of old copper to an hundred weight, but no lead.
Brafs is ufed to make great guns: fome reckon the beft method is to put into the quantity of eleven or twelve thoufand weight of metal, ten thouland of rofe-copper, nine hundred pounds of tin, and fix hundred of brafs.
But Mr Chandler obferves, that the beft brafs-guns are not made with pure copper and calaminaris, but that coarfer metals muft be mixed therewith, as lead and pot-metal, to make it run clofe and founder. See the article Foundery.
What they call brafs-wire, or brals in hoops, is brafs drawn through the wire-drawing-iron.
For making the fineft ftatues of brafs, the proportion is one half of copper, and one half of brals. The Egyptians, whom fome think the inventors of this art, ufed to put two thirds of brafs to one third of copper : rofe-copper is not fo proper for cafting ftatues as that which is hammered. In common brafs the allay is made with tin, and even with lead, when people would be faving. But the latter ought not to be ufed in brafs defigned for ftatues. For brafs-guns, they put ten or twelve pounds of tin to a hundred of brafs. For bells, they put twenty or twenty-four pounds of tin to the fame weight of copper, to which they add two pounds of antimony, to render the found more foft; and they put but three or four pounds for kitchen-furniture.
Corinthian brafs has been famous in all antiquity. L. Mummius having facked and burnt the city of Corinth, in the 158 th olympiad, or $14^{6}$ years before Chrift, it is pretended, that this precious metal was formed from the immenfe quantity of gold, filver, and copper with which that city abounded; which being all melted and mixed together by the fiercenefs of the fire, compoled, as it were, a new metal. The ftatues and veffels which were afterwards made of it by excellent artifts, were efteemed of great value: and, though it is commonly the fculptor's hand, which enhances the price of thofe pieces of workmanfhip, yet, on this occafion, the matter feemed to vie with, or even to excel above the ordinary perfection of art.
They who have given an accurate account of this metal, diftinguifh three forts of it; in one gold was predominant, in the next fiver, and in the laft gold, filver, and copper were in equal parts. It is very probable, that what was formerly owing to chance, might at prefent beimitated by att: bul, as moft things are chiefly valued on account of their fcarcity, it is but too true, that the eafe with which an artiff might now make fuch brafs, would render it lefs valuable, how like foever it might be to that of Corinth.
Brass is alfo a colour prepared by the braziers and colourmen to imitate brals. There are two forts of it; the red brals, or bronze, as the French call it, and the yellow or gilt brafs. The latter is made only of copper filings, the fmalleft and brighteft that can be found; with the former, they mix forne red ochre finely pulverized, They are both ufed with varnifa, In order to make a fine brafs, that wil! not take any

## B R A

## B R A

ruft of verdegreafe, it mult be dried with a chafing-difh of coals, as foon as it is applicd.
The fineft brals colour is made with powder-brafs, imported from Germany, diluted into a varnifh, made and ufed after the following manner. The varnifh is compofed of one pound and four ounces of fipitit of wine, two ounces of gumJack, two ounces of fandarac: thefe two laft drugs are pul. verized feparately, and afterwards put to diffolve in fpirits of wine, taking care to fill the bottle but half full, otherwife it would burf: in all procefles, in which fpirit of wine is made to act by means of fire, the velfels muft be exactly fopped with a hog's bladder, and buc half full. The varnilh being mdde, you mix fuch quantity as you pleafe of it with the pulverized brals, and apply it with a fmall bruilh to what you would brafs over. But you muft not mix too much at once, becaufe, the varnifh being very apt to dry, you would not have time to employ it all foon enough; it is therefore better to make the mixture at feveral times. After this manner they brafs over figures of plafter, which look as well as if they vere of caft brafs.
BRAZIER, a maker or feller of brafs-ware.
The company of freemen braziers of the city of Paris is very ancient, and had fatutes of their own, a great while before the reign of Charles VI.
The regulations, at prefent, relating to them, regard chiefly the jurats, apprentices, brokers, and foreigners, or thofe who are not free of that corporation.
Of the four jurats, who take care of the company's affairs, and whofe bufinefs it is to make a proper fearch or vifitation at the mafters or freemens houfes, there are two chofen every year.
The freemen can have two apprentices at a time, whom they cannot bind for lefs than fix years: and apprentices cannot obtain their freedom, unlefs they perform a mafter-piece of workmanfhip
The two brokers of the company are chofen by a majority of votes, and are obliged to give the freemen notice of the arrival of foreign traders : they cannot be brokers and taders at the fame time; that is to fay, that they are not allowed to buy any brazier's ware for their own account, and their brokerage is limited.
Finally, all foreign traders, and fuch as are not free of the company, are forbidden to fell, diftribute, and vend, within the city and fuburbs of Paris, any brazier's ware, except by wholefale, and for a fum exceeding 40 livres.

## Remerks.

This trade, as exercifed in England, may be reckoned a branch of the fmithery, though they feldom keep forges; except for brazing or foldering, and tinning the infides of their veffels, which they work up chiefly out of copper and brals, prepared rough to their hands. They confift of a working part, and a foop-keeping part, which latter many carry on to a great extent, dealing as well in all forts of iron and fteel, as copper and brafs goods for houfhold furniture; and lately have fall much into felling what is called French plate, made of a fort of whice metal, filvered and polifhed to fuch a nicety, as he eye cannot foon difcover it from real filver
The fatutes in England, relating to this bufinefs, are in fubftance as follows, viz.
By ftat. 19 Hen. VII. c. 6. fect. i. Brafs to be fold in open fairs and markets, on pain of 101. And to be worked according to the goodnefs of metal worked in London, or be liable to forfeiture; and ufing falle weights to forfeit 20 s . Searchers of brafs and pewter likewife to be appointed in every city, \&c.
By 4 Hen. VIII. c. 7. Brafs ware defective to be forfeited. By 25 Hen. VIII. c. g. Tin or peviter wares not to be fent out of the realm, on pain of forfeiture; and officers to fearch and make feizures, \&c. Pewterers not to teach their trades to foreigners.
33 Hen. VIII. c. 4 . This ftatute makes the adt 25 Hen. VIII. perpeual, and inflicts a penalty of 5 l . for refifting the fearch of brafs, tin, \& c .
33 Hen. VIII. c. 7 . Conveying out of the realm, brals, copper, bell-metal, \&c. (except tin and lead) to forfeit double value.
$\because$ and 3 Edw. VI. c. 37. This afl adds the penalty of rol for every thoufand weight, befides the double value of tranfporting brafs, 8 ic . But metal made of Englioh ore may be exported, by the flatute 5 and 6 W . and M. c. 17
4 and 5 W. and M. c. 5. For brafs wrought and imported there is a duty of 51 . per cent.
9 and io W. III. .. 39 . Brafs and copper, \&c. to be fpun upon thread, and not filk, on pain of 5 s . per ounce. And no thread made of copper, brafs, 88 c . or wire wrought, to be imported on pain of forfeiture.
7 Ann. c. 8. Exportation of Britilh copper and brafs wire to pay no duty.
By 8 Geo. I. c. 15. Brafs manufactures of all forts, exported free.
BRAZIL, a territory in South America, belonging to the Purtugueze, is bounded on the eaft by the Atlantic ocean,
on the weft by the land of Amazons, on the north by Terid Firma, and fome part by the fame ocean, and on the fouth by Paraguay and another part of the fame ocean. It extends ittelf chiefly from north to fouth, except at the two extreme ends, where the coafts wind toward the welt; fo that it's utmolt ftretch, which is from cape Aquara, which lies about 30 minutes fouth of the equinoctial line, in weft longitude $51: 40$. to that of St Vincent about 30 minutes fouth of the ropic of Capricorn, and in longitude 45. 1o. weft. is full 23 degrees and a half, or 470 leagues, or 1410 miles; where it muft be obferved, that fome geographers give it a larger extent fouthward; even as far as the 25 th degree; fo that according to that dimenfion, and the winding of the coaft, it's length may be reckoned to extend above 2000 miles. As for it's breadth from eaft to weft, if we take it from cape St Auguftin, which is the fartheft ealtward under the 35 th degree of weft longitude to the 5 rft , where it's weftern boundaries are commonly fixed, it may be computed fomewhat above 300 leagues; or 900 miles; but it's territories reach but a little way into the inland, and confequently it's breadth bears no proportion to it's length. As for the coafts of Brazil, they begin at the mouth of the great river of the Amazons, whence they run almott eaftward as far as cape St Roque; that is, from 35-40. to 49 degrees of longiude, or about 450 leagues, from which they take a winding fouthwards, quite to the Spanifh province of Guayra, from which it is parted by the river Capibari, two or three leagues from the town of St Vincent. So that almoft the whole county lies under the torrid zone, there being but very few place in it which reach beyond the fouthern tropic.
Mr Nieuhoff, who refided fome years in it, and cone of the latef that hath wrote of it, informs us, that Brazil is ex cellently well qualified for the producing of all things that are generally found to grow in the Weft-Indies about the fame climate, but, in bis time, had neither mines of gold or filver worth taking notice of, at leaft none fuch had then been difcovered there. However, with regard to the gold mines, we have been fince informed, that they have found fome confiderable ones, from which they get plenty of that metal, and with much more eafe than they do in thofe of Peru, \&c. (Rogers.) But the riches of this country, and, indeed, of all America, are thofe of diamonds, fo large and beautiful, that the king of Portugal hath forbid them to be digged, to prevent the exceffive fall of the price of that fo much valued commodity. Nieuhoff likewife extols the conveniency of it's fituation for trade, and it's many noble rivers and commodious harbours for thipping: to which he adds, that tiough it be under a very hot climate, viz. between the line and the tropic, yet it's exceffive heat is greatly allayed by the eaft winds from the ocean; which, being interrupted by neither illands nor mountains, blow fo full and pleafant upon it, that it is altogether healthy and delightful, and free from thofe diftempers which commonly rage in countries of the fame latitude, as in Guinea, Angola, \&c. where thofe fea-breezes have not the fame free paffage. The plague is a thing unknown in Brazil, though the inhabitants are not free from fome putrid fevers, occalioned by the heat and moiftnefs of the air, as well as by the exceffive ufe of fruit. Sugat and tobacco are their principal commodities; and thefe they have in great plenty, and are inferior to none in quality, more efpecially their tobacco, if kept 'till it be old; for, when too new, it is flrong and intoxicating: and this is, perhaps, the reafon why the commerce of it is here fo inconfiderable, except in finuff, to what it is in other parts of America. Other commodities of this country are, ambergreafe in fmall quantities rofin, train-oil, fweetmeats in great abundance, hides, ginger, indigo, and efpecially the moft excellent balfari, called capayva, befides the vaft quantities of Brazil-wood, which is every where known by that name.
The chief commerce of the Portugueze confifts in that from Europe to their Brazil colonies; which, fince the Dutch quit ted them in 1654 , their trade thither is fo furprifingly increafed and improved, and they are become fo ftrong and populous there, efpecially fince their difcovery of the goid mines that they have advanced their commerce to more than twenty times the value of what it was in thofe days.
This increafe of their trade adds a very great increafe to the wealth, and confequently to the frength of their government, as well as to that of their private merchants; for it has been eftimated from a reafonable computation, that the revenue of the king is fo advanced by this trade, that it does not amount to lefs than two millions fterling annually in gold, befides the cultoms of the merchandizes imported from thence. As the return is thus enlarged from the Brazils, efpecially in gold; fo the export of all forts of manufactures from Europe is encreafed to fuch a degree, as is not eafy to fay, and which is chielly occafioned by the exceffive confluence of people to thofe colonies, as well from other countries as from Portugal.
The principal exportation of Eutopean gooc's to the Brazils, are as follow, viz
Woollen nanufactures of Great-Britain, fuch as Fine broad medley cloths.
Spanifh cloths, dyed farlet, crimfon and black.

## riety.

Thefe exportations exceedingly add to the trade of Portugal for the Brazils, and increafe that trade fo much, that whereas twelve fhips a year from thence were ufually the buik of their commerce, they now receive three fleets; that is to fay, from three particular ports, and thefe fometimes twice a year: fo that their commerce thither, at prefent, generally employs above too fail of hips a year.
This will be allowed, we may fuppofe, a confiderable fign of the increafe of the commerce of the country.
But to this may be added, the increafe of the returns ffom the Brazils: which, though they are ftill confined to the fame chief articles as formerly, namely, fugar, hides, tobacco, and Brazil wood, are yet fo increafed in quantity, that they have near four times as much of thofe goods brought from thence every year as they ufually had.
This advance of the Portugal trade, by means of their Brazil colonies, has improved their fhipping, increafed the numbers of their feamen, and not a little the credit of their whole country.
The thips for the Brazils, being under the orders of the government, have their feafons of going out appointed them, and are obliged to go in fleets; nor can any fhip go fingle, or at any other time than with the fleets, but by a fpecial licence from the king, and that is very rarely granted. The feafons for their going are thus,
The fleer for Rio de Janeiro goes out in January.
For Bahia, or the bay of All Saints, in February.
For Femembuque in March.
The Portugueze having various confiderable fettlements in Africa, they carry from thence every year a very great number of flaves to the Brazils; and, as their colony there is exceeding great and populous, as well as rich, were it not that they have fuch extended fettlements on that coaft for the fupply of negroes, it is thought by fome that they would not be able to carry on their fugar works, their mines, and other planting bufinefs in the Brazils, where the flaves are not long-lived. See America and Portugal.
BRAZIL WOOD, thus called, becaufe it came at firt from Brazil, a province in South America.
It is differently furnamed, according to the feveral places from which it is imported: thus there is the Brazil wood of Fernambuco, or Pernambuco, the Brazil wood of Japan, that of Lamon, that of Santa Martha, and laftly the Brafillet, which is efleemed the worft. This laft comes from the Antilles iflands.
The Brazil wood of Japan is otherwife called Sapan: there is the large one and the fmall one: the large is fimply called Sapan, and the fmall Sapan bimaës.
The tree of the Brazil wood grows commonly in dry barren places, among rocks. It becomes very thick and tall, and puthes out long branches, whofe twigs are furnilhed with a vaft quantity of fmall leaves, half round, of a fine bright green, pretty much like thofe of box, but longer, hard, dry, and brittle. It's trunk is feldom ftraight, but crooked and knotty, almoft like the hawthorn. There comes twice a year, at the extremity of the branches, and between the leaves, fmall bunches of flowers, which are fomewhat long, pretty, much like thofe of the lily of the valley, of a bright red, and an agreeable aromatic fmell, very comfortable to the brain, which it ftrengthens: thefe are fucceeded by a flat red fruit, which contains two fmall flat feeds, of a moft lively red; thefe feeds are a kind of almonds, of the form of a pumpkin feed.
Though the trunk of this tree be very thick, yet it is covered with to grofs a bark, that, when the favages have taken it off from the wood, a trunk, which before was as thick as a man's body, remains, as it were, a log not bigger than his leg:
The Brazil wood is very heavy, very dry, and very hard; it crackles very much in the fire, and emits hardly any fmoke, becaule of its exceffive drynefs.
None of thofe different forts of Brazil woods have any pith, except that of Japan: that of Fernambuco is reckoned the beft. It muft be chofen in thick pieces or logs, heavy, compact, very found, without any part of inner bark upon it, and without the leaft rottennefs, and fuch, as after fplitting

## B R E

it, from pale becomes reddifh; and that, being chewed, it has a fweetifh tafte, like fugar.
This wood is proper for turners work, and takes a good polifh: but it's chief ufe is for dyeing, where it ferves for a red colour. However, by the regulations made in France, the dyers of rich and valuable ftuffs are forbidden to ufe it, becaufe it yields but a fpurious colour, which fades very foon. Yet the dyers of inferior ittuffs are fuffered to ufe it, though it be fubject to very great inconveniencies.
From the Brazil wood of Fernambuco, they extrat, by means of acids, a kind of carmine: they alfo make of it a liquid lacca for painting in miniature. And, with a tincture of this wood often repeated, they make that reddifh chalk, which is called rofetta; but it is nothing but the white of Roan, to which the Brazil wood gives the colour of an amaranthus.
Some pretend that a decoction of this wood, that is to fay, of the heart is good for pains in the ftomach, that it ftrengthens it, and that it is even uled with good fuccefs in fome agues. See Voyages du Chevalier des Marchais, Tom, I. p. 91.
BREAD, a baked mafs of dough, which is a conftant part of man's food.
Though the mafter-bakers of Paris, knead, bake, and fell bread to the inhabitants of that great city, yet the bakers of the fmall towns and villages have liberty to carry their bread thither, and expofe it to fale on the fixed market-days, which are Wednefdays and Saturdays in every week. The bakers in the city and thofe of the fuburbs, who were formerly two diftinct companies, have been united into one under the reign of Lewis XIV, by an edict given in Auguft, 1711, See Bakers.
The corn which is moft commonly ufed in Europe, to make the flour of which bread is made, is wheat, rye, and mefling, mefcelin, or maflin, which is a mixture of both. In a great fcarcity of wheat, poor people make bread with oats or barley. Buck-wheat is alfo pretty much ufed in fome provinces in France.
In feveral parts of Afia, Africa, and America, they make bread of maize flour; befide which, they have in America the caffave, the root of which is a rank poifon; but it's fubftance, being dried and fcraped, makes a pretty delicate and nourifhing bread.
The feveral forts of meal with which the bakers of Paris make their bread, are the pure flour of meal for foft bread; the white meal, next after the flour for white bread; the remains of the firf bolting, mixed with what we have called the white meal, for white houfhold bread; the laft bolting of the bran, mixed with the two laft mentioned forts, for brown bread: and, when corn and flour are very fcarce, they make houlhold bread with the meal of bran fent a third time to the mill. Some get bran to be ground in the mill to make rolls, becaufe it rifes better than flour, but it does not make fuch good rolls by far.
The bakers of Paris, as well as the country bakers, who carry their bread thither to market on Wednefdays and Saturdays, are obliged to mark the loaves on the upper part, that the citizens who buy them may know how much they weigh. In order to make the weight exact, a certain proportion mult be obferved between the dough before it is fet to the oven, and the bread when it is baked, becaufe of the diminution occalioned by the baking, which is always proportionably greater in fmall loaves than in large ones,
The large loaves, expofed to fale in the market at Paris, io commonly weigh 12 pounds, and the fmall ones two pounds. The proportion between the raw dough and the baked loaves, as they come out of the oven, from the loaves of twelve pounds to thofe of two, is-as follows: one pound for loave of twelve; three quarters of a pound for thofe of ten and eight pounds; half a pound for thofe of fix and of five pounds; and a quarter of a pound for thofe of three and of two pounds. They alfo make loaves of nine, feven, and four pounds, the diminution of which is regulated at the rate of thofe to which they come neareft.
The defects or faults of bread, according to the regulations, are, to be flack, or over baked, dry, or hard.
The ftatutes in England relating to bread are,
8 Ann. c. 18. The lord mayor of London, mayor, 8 cc . of any city, \&ce. or two juftices, where there fhall be no fuch magiftrates, fhall fet the affize and weight of bread. Every baker to fet a mark on his bread. Biead, wanting in weighs or goodnefs, to be diftributed to the poor.
I Geo. I. c. 26. And forfeiture of 5 s. per ounce for every ounce wanting weight, and 2 s .6 d . for lefs than an ounce, on complaint within twenty-four after baked or expofed to fale within the bills of mortality, and within three days in other places.
The affize of bread for the city of London and bills of mortality (except Weflminfter, Southwark, and the bills of morr tality in Surry) to be fet by the lord mayor and aldermen.

The

BRE
The Assize of Bread, in pounds, outices, and drams, avoirdupois. In the firt colution is that price of the bufhel of wheat, from 2 s . to 15 s . the allowance for baking included; and in the othe corumns the weight of the loaves. Note, The white loaves are one half, and the whearen three quarters of the weight of houfhold loaves.

Bread-room, a fea term. It is a place contrived in a thip's hold, generally towards the ftern, boarded about, and plai-; ftered over to keep the bread or bilket. The boards muft be well joined and caulked, and even lined with tin-plates, or mats. Before the bread or bikket is put into them, they muft be well warmed with charcoal during fix days and fix nights, that the bread and bilket may be kept very dry, nothing being more injurious to them than noifture is, wherefore care muft alfo be taken not to put them on board, but in clear dry weather. There are alfo fuch rooms for powder, and fometimes for cheefe, efpecially in Dutch chips.
The bakers of fea-biket do alfo, efpecially among the French, give the name of bread-room (foutte) to a kind of fore-room, built with bricks or ftone, and lined with boards, where they put the bifket to dry, after it is taken out of the oven. They build them generally over the ovens. See BiskexBaking,
BREAKING, in a mercartile file, fignifies the not paying one's bills of exchange accepted, or other promiliory notes, when due; and abiconding to avoid the feverity of one's creditors. See Bankruptcy. We alfo ufe the word Failing in the fame fenfe.
Breaking Bulk, a featerm, which fignifies beginning to unlade a mip's cargo.
BREADTH, the extent which linnen or woollen cloth, or any other fluff, ought to have between the two felvages or lifts. Vot. I,

The breadch which the gold, filver, and filk ftuffis ought to have, according to three regulations made in France in the year 1667, for the cities of Paris, Lyons, and Tours.

Velvets of all forts, either plain, wrougbt, fhorn, cut, drawn, figured, twifted, middling, or fmall, as well as the feveral kinds of plufh, ought to have $\frac{1 x}{24}$ in breadth; that is to fay, half an ell broad, wanting one twenty-fourth part of an ell. Fine gold and filver cloths, brocadoes, fattins, damafks, flowered tabbies, filver tiffues, both plain and figured, ought alfo to be half an ell broad, wanting one twenty-fourth, as well as all wrought filks without gold or filver, as plain damafks, Lucca's, Venetians, and all plain fattins, what names foever they may go under.
Plain taffeties and tabbies, both Atrong and weak, and of all colours, and black luftrings, may be either half an ell broad, wanting one twenty-tourth, or full half-ell, or half an ell and half a quarter; they may even extend to above five eighths: which ought alfo to be underfood of $t$ ffeties figured in the warp, or Atriped lengthways or crofs-ways, fpotted, differently coloured, and of figured tabbies.
The filatrices and poplines, whofe woof is of ferret, both plain and wrought, ought to be halfe ell, or half-ell and half a quarter.
All the ftuffs mixed with goat's-hair, wool, thread, and cots ton, sec. ought at leaft to be half an ell broad, wanting one 4 P

## B R E

B R $\cdot \mathrm{E}$
fixteenth, or fuil half-ell, or balf ell and one fixteenth: fuch are Egyptians, China fattins, camblettines, Modena's, fartins of Bruges, legatines, ferges, dauphines, ftamines of Lude, brncatella's, linnens for waiftcoats, filk fcarfs; oftades, halfof ades, dimitty, fuftians, \&c.
Plain mohairs, burales, ferandines, \&c. both plain and wrought, whofe woof is of wool, hair, thread, \&c. are of four different breadths, viz. a quarter and a half, half ell wanting one fixteenth, full half-ell, and half-ell and one fixteenth.
Thin flight filks, gauzes, ftamines, crapaudailles, prifonnieres, and fuch like ftuffs, as likewife fine crapes, either frizzled or fmooth, and coarfe crapes, are made according to their ufual breadth, which are not fet down in the regulations, but may be feen under the feveral articles of all thofe fuffs, in their alphabetical order.
The breadths of all fuffs is determined by the breadth of the flay of the loom on which they are wove, and by the number of threads in the warp. All thefe things are explained in the articles where each particular ftuff is mentioned.
Breadth of Limen Cloths. The linnen cloths made at Laval are of four different breadth, called by the French the great breadth, the high, or middling breadth, the common breadth, and the fmall breadth. The reader will fee, in the following regulations, how much every breadth ought to meafure.

Regulations concerning the breadth of the linnen cloths manufactured in the city and vifcounty of Laval, made in 1683 , article 13.

Linnens of Laval, defigned for trade, ought to have one of the following breadchs, meafured by the ell of that city.

1. The linnens called of the great breadth ought to be sof an ell, one inch and an balf broad, coming from the loom, that, when bleached, they may be exactly $\frac{3}{4}$ of an ell, amounting to $\frac{3}{4}, \frac{1}{2}$ an inch, and $6 \frac{1}{2}$ lines, Paris meafure.
2. Thofe called of the high, or middling breadth, $\frac{2}{7}$ of an ell, and 4 lines coming from the loom, that, when bleached, they may be $\frac{2}{3}$ of an ell and one inch broad, amounting to $\frac{3}{4}$ of an ell, 3 inches, 2 lines, and $\frac{2}{3}$ of a line, Paris meafure.
3. Thofe of the common breadth, $\frac{2}{3}$ of an ell wanting an inch, coming from the loom, that, when bleached, they may be $\frac{\frac{1}{2}}{2}$ and half a quarter in breadth, amounting exactly to $\frac{3}{4}$ of an ell, Paris meafure.
4. Thofe of the fmalleft breadth muft be half an ell broad, coming from the loom, that, when bleached, they may have half an ell, wanting 9 lines, amounting to half an ell and one tweifth, Paris mealure.
Note, The Paris ell contains 3 feet, 7 inches, and 8 lines, of their meafure; the foot they divide, as we do, into 12 inches; but the inch they fubdivide into 12 parts, which they cail lines (lignes).
The breadth of ftuffs, and of all that is wove on the loom, and is meafured by the ell, the yard, $8 x$. is taken between the lifts, or the felvages; and that which is contained between them is called the breadth.
The price of fuffs is in proportion to their nature and quality, and increafes or decreafes according to their breadth. There are in France a great many regulations, which determine the breadth of all forts of ftuffs, either of gold, filver, filk, wool, thread, \&c. the chief of which regulations are thofe of the year 1669: we mention in another place both that, and all thofe that have been made fince.
We ufe the word breadth to fignify, in fome fenfe, the quantity requifite of any ftuff to make the width of a garment: thus we fay, there mult be five breadths of callimanco to make that petticoar.
BRECKNOCKSHIRE, in Wales, is bounded with Radnorfhire on the north, from which it is divided by the river $W$ ye; Herefordflire on the eaft ; Monmouthfhire on the fouth-eaft; Glamorganhire on the fouth and fouth-welt; CaermarthenAhire, and part of Cardiganfhire, on the weft. Hence are fent great herds of cattle every year to England, from the mountains.
Brecknock, a borough town, fituate on the river Ufk, has fome fhare in the woollen manufacture.
Beal.t has a confiderable manufacture of fockings:
RREMEN. The dutchy of Bremen has the Wefer on the weft; the Elbe, and part of Lunenburg, on the eaft; the German fea on the north; and part of Verden and Oldenburg on the fouth. The fituation of this country between the two navigable rivers, the Elbe and Wefer, has turned the thoughts of the people in general to trade. This country, with Verden, which was conquered by the king of Denmark in 1y 12, and then taken from the Swedes, was mortgaged to the Elector of Hanover, our late king, who, in 1715 , had 250,000 . granted him by his parliament, to enable him to make a purchafe of it. There was a great oppoftion made to this $i_{i s}$ both houfes, and a clamour raifed without doors. The legiflature wifely judged it might be of dangerous confequence to the crown of Great-Britain, that any fofigiz prince, efpecially a maxitime power, thould hald the
key, which the king of Denmark then had, of the Flbe and the Wefer. Any one who takes the pains to perufe the maps of this part of the empire, will perceive that, whilft that king was in the polieffion of Bremen and Verden, he was mafter of the fea-coaft from Denmark almoft to the Seven Provinces. The maps fhew that the Elbe runs for above 500 miles, through Bohemia, Saxony, Brandenburg, and the reft of Germany; and that the Wefer palles, for about $2 ; 0$ miles, through Hefia, Weftphalia, Oldenburg, and fome other countries of the empire: and the valt importance of thofe rivers to our trade will be confefled by every one who confiders that all our woollen, and other Englinh manufactures, and almolt all our commodities, buth domefic and forengn, to the value of many bundred thoufand pounds a year, are, by thofo ftreams, conveyed to innumerable markets; and that, by the fame navigation, a great part of our riches flows contioually home to us; a trade too precious to have lain at the mercy of any foreigner, either to lock it up from es, or to lay what impofitions he pleafed on it, as might have been the cafe, it his late majefty had not got Bremen and Verden out of the hands of the king of Denmark.
Boxtehude, fituate in a pleafant country, is fo fruitful as to bereckoned one of the granaries of Hamburgh.
Stade has a good trade; and, befides in's having been a freé imperial city, and one of the Hans-Towns, was formerly endowed with great privileges, particularly with a right of to for thips pathing up the Elbe; but became fo poor by Hamburgh's outltripping it, that it was forced to fell ir's flock to that city. After it's abovementioned decay, our Englifh merchants, upon fome difguft taken at Hamburgh, removed hither, which revived it's trade, fo that it again became rich and populous, and is in good condition at prefent, though the Englifh returned to Hamburgh. Here is a large and commodious haven, that will admit larger fhips than Hamburgh; and, as it flands fairer for trade than Bremen, and 30 miles nearer the fea, it is thought ftrange that it has not more engaged the attention of the miniffers of the electorate.
At the mouth of the Schwing is Brunshusen, a fort where our king has a confiderable toll, all the thips, except the Hamburghers, that come up the Elbe out of fea, being obliged to ftop here, and give an account of their lading; for which, when they come to Hamburgh, they muft pay a certain duty to a comptroller, placed there by the government of Hanover : and an Englifh man of war, of 24 guns, rides at anchor on the Elbe, at the entrance into the Schwing, in order to oblige them to bring to; which veffel is of great fervice alfo to the Englifh trade and navigation in thore parts, for preventing clandeftine practices, and preferving the rights and freedom of our commerce.
The chief trade of Bremerfurd is by paffengers between Stade and Bremen.
Ritzbuttle is a bailiwick belonging to the Hamburghers. Here they have a pretty good harbour, called Cuxhaven, which is of great benefit to fhips coming on the Elbe in the winter, when the river is full of ice. Here, likewife, their fhips often ftop, at their arrival from long voyages, for orders and news, and to know whether all is well with the city, before they venture up. Here are their privileged pilots, who, by their ftatutes, are obliged to have a yacht always at fea, near the outermof buoy, ready to put a pilot or two, as occafion fhall require, on board of every thip coming into the Elbe. But, notwithftanding this is one of the moft dangerous rivers in. Europe to come into, as all the fhips coming to Hamburgh are obliged to pay half-pilotage, whether they have pilots on board or not, they are feldom at fea but in good weather, when they areleaft wanted, which has occafioned the lofs of many a rich thip within the river.
Bremen is a great, populous, and flourifhing town, a frea imperial city, and the third in rank among the Hans. It had feveral privileges granted it by the emperor Wencellaus, one of which was, that no goods were allowed to go down this river and pafs this city, without being firft landed here, The inhabitants have the privilege, alfo, of fifhing from the bridge of Hoy, four German niles above Bremen, dowin to the fea; as likewife in the rivers Hunte, Ochtum, Wemme, and Seefum, which flow into the Wefer. The city is well fupplied with filh, both from it's rivers and the fea, and they have every month feveral forts in feafon. Among others they catch great quantities of falmon and lampreys, the former of which, being dried and fmoked, and the latter pickled, are in great efteem throughout all Germany. Charles V. gave them the right of coinage. The river Wefer, which is navigable about 30 miles from the fea, runs through it; but the river is not navigable for hhips of burden farther than Fe gefack, fix miles below the town, where is a cuftom houre, and where all fhips which come out of the fea, or are outward bound, load and unload: nor does this river ebb or fow farther; fo that all goods are brought up from thence in flas* bottomed veffels. It has a confiderable trade to England, efpecially with all forts of Weftphalian linnens, and fends feveral thips, patticularly to London, every year; here being a great confumption of the Englifh woollen manufacture, which

## B R E

they receive not only directly from England, but chiefly by way of Hamburgh and Holland, and diiperfe agaia through the whole circle of Weftphalia, It fends flaps likewife to France, Spain, Portugal, and Italy, and a good number to Davis's Streights. It has alfo a confiderable inland trade, particularly to the great fairs and marts in Germany, to which, among other goods, it fends large quaptities of callicoes and fugar, printed and refined here, though not to that periection as at Hamburgh. lt's beer is very much efteemed in Germany, and therefore exported in large quantities. It's other conmodities are, minerals, timber, corn, cattle, and leather, in dreffing of which, and cloth, they are very expert; fo that both ars fent hither for that purpofe from other countries.

## Remarks

Its duties upon importation and exportation are very low, which is a great encouragement to it's trade, and gives Bremien an advantage over the Dutch in the countries between this c'ty and their republic. It is reckoned, in fhort, the next port to Hamburgh in the whole empire for commerce; and, in time of war, it alio fits out fhips of force, to convoy their merchantmen. It generally fends 25 or 30 hips a year to the whale-fifhery in Greeniand; and their harponicrs, being efteemed, the moft expert in all the country, are frequently hired, both by the Dutch and Englifh. In fine, it cannot but be a very flourifhing city, after having enjoyed a perfect neutrality during feveral wars, between the northerin, and other, powers of Europe. Here is a council of trade. See the article Germany.
BRENTA, a liquid meafure ufed at Rome; it contains 96 boccale's, or 13 rubbia's and a half.
BREWER, he who makes beer, and fells it by wholefale.
The company of the mafter-brewers of the city and fuburbs of Paris is very ancient, being one of the firt that were erected into a corporation, and to whom the provoft of Paris gave flatutes.
The ftatutes of 1268 , drawn up, or approved, by Stephen Boileau, who was then invefted with that office, have been the model, or ground-work, of all thofe that have been made fince; and, though there be fome difference with regard to the number of jurats, and to the years of apprenticefhip, they are, neverthelefs, the fame in fubffance, there being hardly any alteration but what the difference of the times, the language, and the cuftoms, are ufed to occafion in regulations of that nature.
Thele firf ftatutes, wherein the freemen of the company are called cervoifier, from the word cervoife (cerevilia) as the French then called beer, confift but of eight articles; we fhall mention but the fecond only, that we may avoid repetitions when we come to give an account of the fatutes eftablifhed by Lewis XIII, which the company is fill governed by.
No brewer thall make beer except with hops and grain ; that is to fay, barley, or a mixture of barley, rye, and oats: and, if he ufes any other ingredients, fuch as laurel-berries, longpepper, or refin, he fhall be fined to the king in 20 fols Parifis; all the liquor brewed with fuch ingredients fhall be given to the poor.
James Deftoiville, allo provolt of Paris, did, on the 6th of October, 1489 , draw up a new fet of fatutes for the company of brewers. They confift of 15 articles; the abufes which began to creep into the brewer's bufinefs requiring greater precautions than were formerly needful.
By thefe flatutes the time of the apprenticefhip, and the maf-ter-piece of the trade, were fetted, which were not mentioned in the former thatutes.
A third fet of flatutes, but approved and confirmed by letterspatent, was given in May 1514, by Lewis XII. They contain 17 articles, which differ but little from thofe of 1489. The mafter-brewers obrained the confirmation of them under the following reigns, in $1556,1567,1580$, and 1606. Laftly, under the reign of Leewis XIII, were drawn up the fatutes whereby the company is governed at prefent, which, having heen referred to the officers of the Chatelet, were, agreeably to their opinion, approved, ratified, and confirmed, by letters-patents granted in February, 1630.
Four years before this, the fame king had iffued out an edict, in the form of a regulation, for the brewing and felling of beer throughaut all the cities and boroughs of the kingdom: but the 10 articles of this regulation related rather to the new creation of vifitor-comptrollers of beer erected in the year 1625 , than to the difcipline or government of the company of brewers: for which reafon they were neither rehearfed, nor referred to in the letters-patents granted for the confirmasion of the ftatutes of 1630 .
By thefe laft fatutes, which are reduced to 18 articles, three jurats, or wardens, are eftablified, two of whom mult be changed every other year, and two others chofen in their ftead, by a majority of votes, the next day after the feflival of St Leonard, who is the company's patron. Thefe jurats are to make fearch at the mafters and retailers, both of the \#ops and of the yeaft, brought by forejgn merchants; to

## BRE

watch for the prefervation of the company's privileges, and take care that their fatutes be put in execution; to admit apprentices, and prefcribe the mafter-piece to thole who would become freemen; and manage the company's flock, and all their concerns.
The time of the apprenticefhip is fixed at five full years, without any interruption, and the fervice at the mafter's, after their time is out, to three years, as journeymen, after which they can be made free, making their mafter-piece. No freeman can have above one apprentice at a time, during the five years: neverthelef, when the haft year of his firft apprentice is begun, be may take another.
No man can turn over his apprentice to another, unlefs it be for a reafonable caufe, and baving firft given notice of it to the jurats, and obtained their leave.
None can be made free withour undergoing an apprenticelhip, except a freeman's fon; but yet a freeman's fon muft perform the mafter-piece, and pay the company's fees, as well as any other apprentice.
The mafter-piece, which muft be performed in the prefence of the jurats, and of fix ancient officers of the company, fummoned for that purpole, confifts in making at leaft 72 buihels (the French fay fix feptiers) of grain into malt, or even more, if the candidate pleafes, and brewing it into beer.
All mafters are furbidden to fpirit away the apprentices, or fervants of others; nor to employ the journeymen who leave their mafters'before their times be out, except with the mafter's confent.
Nor is any brewer allowed to take a partner, unlefs he be a freeman.
Every mafter is obliged to have his own particular mark, and to fet it on every cafk, barrel, or other veffel, in which he puts his beer, and to leave a print of it on the leaden table which is in the chamber of the king's attorney of the Chatelet, that, in cafe there be any trefpafs againit the ftatutes of the company, or any beer ill brewed, one may know from what brewhoufe it came.
It is ordered that no beer fhall be made but with good malt, well cured and ground, without mixing any tare, or buckwheat, with it, nor any bad ingredient.
No mafter-brewer is allowed to brew above one copperful in a day, and only of 180 bufhels of malt at moft; being for bidden to keep brewhoufes, and to have coppers larger than is necefo fary for the faid quantity of malt; both becaufe beer is not fo good when kept (as the French think) and to the end that every brewer may have work, and get his livelihood by his tr ade. Freemen's widows, as long as they continue fuch, may keep a brewhoufe, and have journeymen, but may not take apprentices; however, they may continue to keep thofe who were bound to their hufbands, and whofe time is not yet out.
Cleanlinels being very requifite to make good beer, all brewers are forbidden to keep in their brewhoufes, or yards, any oxen, cows, hogs, ducks, geefe, and other fuch animals, which commonly occafion a ftench and infeciion.
All hawking of beer and of yeaft is prohibited, both to thofe who are not free, and to the freemen themfelves; the latter not being allowed to fell beer but at their brewhoufes, on dwelling-houfes, nor can they fell yeaft to any perfons but to bakers and paftry cooks, who ufe is in their trades.
Finally, hard or folid yeaft, or barm, brought by foreign trad. ers, fhall not be by them expoled to fale any where but in the brewers hall, nor fold to any perfons except paftry-cooks and bakers, and only after it has, been feen and examined by the jurats.
Thefe flatutes were confirmed under the reign of Lewis XIV, in the month of September, 1686 , by his letters-patents, regiftered in the Parliament of Paris the 3 d of May, 1687.
Several offices newly erected, and, among others, thofe of jurats, regifters, auditors of accounts, comptrollers to mark the books of merchants and of companies, wardens, and keepers of records, and fuch like, having been, fince 1691 to 1714 , united with the company of brewers, upon their paying feveral fines into the king's Exchequer, the company obrained a new confirmation of their ftatutes, with 10 new articles for the better governing their body, which were added to the old ones, by letters-patents dated the 29th of My, 1714, and regiftered in the parliament the 18 th of June following.
By the firlt of thefe articles, in order to prevent the frauds which might be committed by foreign hop-merchants, who come to Paris, the faid foreigners fhall not, ior the future, bring any hops thither without making an exaf declaration of it to the jurats of the brewers company, upon pain of forfeiting the hops not declared, or not mentioned in their declaration. By the fecond article all mafter-brewers, and brewers widows, are forbidden to enter into partnerfhip with any perfons but freemen of the company, and to lend their names, either directy or indirectly, upon pain of paying a fine of 500 livres, and, for the mafters, and mafters widows, of lofing their freedom; and for flrangers, or perfons not being free, of forfeiting all the utenfils, hops, and other materials ufed in brewing. By the third, the jurats are permitted to make, befides the four cuftomary vifitations, fuch other vifitations, or fearch, as they fhall think proper, both at the houfes of the mafterbrewers, and at thofe of the licenfed fellers and retailers of
beef, in order to prevent the frauds, and particularly the ufe of molaffes, in the making of that drink; ordering the fum of io fols to be paid for each of the four vifitations, to be made at the houfes of fuch fellers of beer who do not belong to the company.
The fourth fettles the fees to be be paid by thofe who would take up their freedom, having the neceflary qualifications required by the fatutes, to 1000 liveres; and of thofe who want thofe qualifications, or have not ferved out their whole rime, to 2000 livres; and thofe of freemens fons, who were born before their fathers were free, to 400 livers. Ordering further, that there be paid to the company a fee of 150 livres for every apprentice's indenture, and 40 livres by every perfon who opens fhop, or fets up the bufinefs of a brewer: one half of which fees fhall belong to the company, and the other half to the jurats: nor fhall any perfon fet up for himfelf before he has declared it to the jurats. His majetty declares, neverthelefs, that this augmentation of the tees thall continue no longer but 'till the full payment of the fums and arrears borrowed, and due by vistue both of the faid edicts and of the foregoing, after which the faid fees fhall bereduced, as they were before the edist of March i69I.
The fifth article forbids all licenfed fellers of oeer to have any apprentice, or journeyman, agreeably to the decree of the parliament of Paris; made the 23 d of Auguft, 164I, and to the declaration of the' 30 th of June, 1705 , given in behalf of the weavers, upon pain of paying a fine of 300 livres. The fixth does likewife forbid all retailers of beer to fell to the coopers, or to any other perfons, the calks which the brewers have lent them: and commands them to return them, as foon as they are empty, under the penalty of a fine of 200 livres, to be paid both by the buyer and by the feller.
The feventh grants, to the mafter-brewers of the city and fuburbs of Paris, the liberty to fettle in any other city or place of the kingdom, without paying any fee for being admitted into a company of the fame trade, by fhewing only their letters of freedom.
Finally, it is ordered by the luft article, that fuch jurats, ancient officers, and freemen, who, without any lawful caufe, Ihall be abfent from the meetings fummoned after the ufual form, Ihall be obliged to pay 12 livres, for the profit of thofe prefent; and that all that hall have been refolved by thofe who Chall be prefent at fuch meetings, provided their number be not lefs than IO, fhall ftand good, as if all the freemen had figned it.
There had been alfo erected, in February 1698, 40 offices of beer-tafters for the city of Paris, but they were again fuppreffed in March following, none of thefe offices having been fold by the perfon who had farmed the produce of them.
Befides all the articles contained in the old and new ftatutes of the brewers company, there are fome others to be met with in the ordonnance of aids of the year 1680, which they are obliged to oblerve, under the penalty of a fine to be paid by the offenders.
Thofe articles are the $2 \mathrm{~d}, 3^{\mathrm{d}}, 4^{\text {th }}$, and 5 th, of the title of duties on beer.
By the firft of thefe four articles the brewers are not allowed to ufe any tubs, coppers, or troughs, before they have been gauged by the farmer of the duties on beer, or by his clerk, and before the faid farmer has put his mark on all thofe veffels, under the penalty of forfeiting all the veffels not gauged, or not marked, and the beer contained in them, and paying a fine of 100 livies.
By the fecond, they are obliged, at each brewing, to give notice in writing to the clerks, of the day and hour when they kindle the fire under the coppers, and not to put their beer into barrels but in the day-time: namely, from the ift of April to ift of October, between 5 of the clock in the morning and 8 at night; and, from the Int of October to the 1 ft of April, between 7 in the morning and 7 at night, under the fame penaly.
The third article orders, that the barrels fhall be marked immediately after they are filled, and that a regifter Mall be kept by the clerks of their number, and of what quantity of liquor each of them holds: nor fhall the brewers fuffer any cafk to be carried, or fent away, before the marks be taken off by the clerks, under the penalty of forfeiting the fame, and paying a fine of 500 livres.
Laftly, by the fourth article it is left to the farmer's choice to caufe the duty to be paid, either upon the number and capacity of the calks into which the beer was put, without any deduction, or at the rate of the gauging of the coppers, deducting one fourth part, both of thofe that have wooden brims, and thofe that have none; nor fhall thofe brims be above four inches high.
BREWING, the procefs, or method, of making thofe liquors which we diftinguifh by the name of ales, or beers; the belt fubject for the operation whereof is efteemed malt, whereon, as well as the fkilful management of the operation of brewing, the good quality of the liguor produced, depends.
Wherefore, previouly to the procefs of brewing, it may be freper to give a thort account of the nature of mating (which,
however, we thall do more fully under the article Malt) In order to have a full view of the whole together.
In order for brewing, the barley, if firft to be made iuto malt; whi $h$ is done by putting is into a ciftern full of water; wherein it may fteep for a fónger or lefs time, as the weather is more or lefs cold; two days and nights fufficing in hot weather, and five or fix in extremely cold: when fufficiently fteeped, the water is drained off, for 12 or 20 hours: being taken out, it is couched, or heaped up, into one or two heaps, and turned every five or fix hours, the outermoft part inwards, and the bottom upwards. As it comes, or iprouts, it is ipread thinner, to cool, and to prevent it's fprouting too faft: when come, it is fpread very thin, and turned 10 or 12 times a day, 'till the fprout is dead; after which it is again thickened on the floor, and turned as before directed, great care being taken that it neither mould nor become acro-fpired, that is, that the blade don't grow out at the end oppofite the root, or the malt come and fprout at both ends. The preparation is finifhed with drying it on a kiln, by fpreading it on a hair-cloth, or a tin bottom, full of holes, over a brifk turf or charcoal fire, ftirring and turning it from time to time. For further matter, fee the article Malt, To proceed to the operation of brewing iticif : they boil a quantity of water, which is left to cool, 'tlll the neight of the fleam be over, and pouring enough of it upon the malt, in a malhing tub, to wet the malt as fiff as it well can be rowed about; after flanding a quarter of an hour, antether portion of water is added, and the rowing repeated: lafly, the full quantity of water is added, according to the intended ftrength of the beer, or ale. The whole, having ftood two or three hours, is drawn off into a receiver, and freh water thrown on for a fecond wort; which is to be cooler, and to ifand lefs time than the former. The two worts being mixed, and the hops added, the whole is put into a copper, well covered and clofed, there to boil an hour or two. Which done, the liquor is let into a receiver, and the hops ftrained therefrom: when cold, the yeaft is added, and, after fermenting, of working, it remains to be tunned up.
For fmall beer, there is commonly a third mafhing, with the water near cold, and left to ftand near an hour, to be hopped and boiled at difcretion. For double beer or ale, the two liquors, refulting from the two firft mathings, muft be ufed as liquor for a third mathing of frefh malt. For fine ale, the liquor, thus brewed, is further prepared with molaffes,

Bemarks.
Thefe operations, we find, depend on the duly preparing, curing, and fitting the vegetable fabjects for the purpofe intended. The management of vegetable productions is founded on the art of chymiftry.
On regulating the growth, and curing of vegetables, depends the perfection of corn, malt, wines, bread, fugar, tobacco, fpice, drugs, fimples, dyeing ftuffs, and the like. And new difcoveries, either in vegetation or curation, might eafily intraduce new trades; as has been the cafe in fugar, tobacko, wines, fpirits, \&c.
By proper experiments in vegetation is fhewn the method of regulating, or conducting this natural power for the fervice of arts, by directing is to anfwer particular ends. Thus, by ftopping fhort towards the beginning of vegetation in barley, we procuie malt; and by permitting the grapes to hang 'till they grow not only ripe, but almof dry, upon the vines, rich fweet wines are produced. Thus vegetation may be flopped at any period, or continued longer than ordinary, according as the occafions of diffefent arts require.
By experiments of this kind, we would thew the method of collecting, preparing, and fecuring vegetable commodities, fo as that they may long remain found, perfect, and fit for fervice.
The frif experiment following, therefore, is calculated to thew the method of ftopping the natural procefis of vegetation in the feed, fo as to prepare grain, pulfe, nuts, malte, and roots, for the making of beer.
The fecond tends to hew the method of curing vegetable juices by decoction, or infpiffation, for the fervice of brewing and diftilling. And the third and laf experiment will thew the method of curing yeaft, the flowers of wine, and wine-lees, for the fervice not only of the art of brewing, but of feveral others, as we fhall thew in their proper places. Thefe experiments follow in order:
I. The method of ftopping the natural procefs of vegetation, with a view to malting; or the preparation of grain, feeds, pulfe, nuts, mafte, and roots, for the making of beers, yinegar, and fpirits.
Garden beans, being fuffered to lie in the ground about fix weeks in the winter feafon, were then plucked up and each bean was found to begin to be fplit, or feparate into it's two Jobes, whila the radicle was thot out fome inches downwards, and had begun to take root in the ground; the plume, alfo, which becomes the ftalk of the bean, was rifen to the height of two inches.
In this thate, a few of thefe beans were dried over a clear fire, and thus were found to be turned to a kind of bean-malt,

## B R E

that tafted fweetifh, but mealy between the teeth, and diffolved freely in warm water, fo as to afford a wort, fit for fermenting, with yeaft, into a kind of beer, or ale. This experiment inftrucis us in the ordinary procefs of malting; which, in the cafe of barley, we have feen, is conformable hereto, and in the cafe of malting Indian corn, as we fall fee prefently in the procefs itfelf *.

- See alfo fome experiments to this purpofe in the Philofophical 'Tranfactions.

In the general procefs of malting, with refpect to the barley, every malefter pretends to have his fecret, or particular way, of management. But, to render the operation perfect, the following cautions muft be obferved. (t.) That the barley be newly threfled, or at leaft newly winnowed. (2.) That it be not mixed, or made up of, different forts. (3.) That it be not over-ffeeped in the ciftern, or fo long as to make it foft. (4.) That it be well drained. (5.) That it be carefully looked after, when couched, fo as to Rop the firft tendency of the blade to flooting. (6.) Another caution is to turn the wet couch infide outermoft, if the barley comes, that is, fhoots more in the middle than on the fides. (7.) To keep it duly turning after it is out of the wet-couch. (8.) To give it the proper heating in the dry heap. (9.) To dry and crip it thoroughly upon the kiln, but without a fierce fire ; fo as to be feveral days in drying a kiln of pale malt. And, if thefe directions be carefully obferved, the malt will always be good.
The method of malting Indian corn, or Virginia wheat, is much lefs laborious: for, if this corn be buried two or three inches deep in the earth, and covered with the loofe mould dug up to make room for it, in 10 or 12 days time the corn will fprout, and appear like a green field; at which time being taken up, and wafhed, or fanned, from it's dirt, it is immediately committed to the kiln; and by this means, it becomes good malt, exactly as beans fo treated would do.
It is obfervable of this corn, that both it's root and blade mult thoot to a confiderable length, before it will make malt: and, perhaps, this is the cale in all large-bodied grain, and nuts *.

* It may be worth trying, whether the fame procefs is not, with due care, applicable to the malting of turnips, potatoes, carrots, parflips, sic.

It might be of fervive to transfer this ealy experiment to the making of malt from barley, rice, and the other fmall grains and feeds; but the attempt may be attended with difficulties, becaufe in the making of malt, the barley muft only be fuffered to grow in it's root, and not in the blade; when it would be difficult, at firft, to hit the exact time for taking it out of the ground; and, as the grain is fo fmall, it might prove troublefome to leparate it from the earth, or mould. However, the matter may deferve to be tried *.

- And poffibly fome contrivance might be found, by the means of large hair.cloths, or otherwife, to inclofe the grain, fo that the loofe earth fhould not mix among it; and, at the fame time, an opportunity be afforded of commodioully examining how far the barley is come after lying.
It is a confideration of a higher nature to determine the phyfical effect procured by malting; and whether the end may not be obtained by cheaper, and lefs laborious means. The phyfical difference between malted and unmalted corn appears to be the production, or extrication, of a fweet faccharine fubftance in the malt, which is wanting under that form in the corn. And it is this fweet fubftance alone which we require in malt, for the making of beer, ale, vinegar, and inflammable firits, as I fball thew elfewhere. But even unmalted corn, duly treated, may be made to afford beer, ale, vinegar, and firits: this, therefore, may intimate to us a way of making fuch liquors, without the formal extrication of any remarkably faccharine fubftance. And, according to fome trials made, unmalted corn affords half the quantity of inflammable fpirit, by fermentation and diftillation, as the fame corn would do, when malted. And fuppore that unmalted corn were to be made into a kind of dough, or pafte, fermented with yeaft, as is ufual for bread, and then baked; would not this be a cheaper fubflitute for malting *? It deferves, at leaft, to be tried how much beer, ale, vinegar, and fpirit, might be procured this way, compared with that other of malting.
* They are faid to brew afier this manner in fome countries.

On the other hand, if only a fweet faccharine fubftance be required in malt, are there not cheaper and eafier ways of procuring it than by malting? Do not many trees afford fuch a faccharine juice, by tapping in the fpring without prejudicing the trees? Is not young green corn itfelf remarkably fweet; and does not this fweet juice enter the compofition of the ear, and there remain fixed, or almoft loft in a faccharine form, 'till recovered by malting? Here is a door Vol. I.

## B R E

opened for explaining the nature of fweetnefs, and deducing the particular hiftory of fugar; which is a work that, for it's ufefulnefs in trades, and ordinary life, we wifh were extant: and, 'till fóme confiderable progrefs is made in a work of this kind, the art of malting, and all that depends upon it, will not arrive at perfection.
Thofe who are difpofed to enter upon the enquiry, may pleale to compare the art of ftarch making with that of malting, and particularly try whether fome confiderable ufes might not be made of the refule liquors produced in both arts. The high-coloured liquor drained away from the barley in the fteeping ciftern is a vegetable tincture, that might, if not by itfelf, yet by being ufed, inftead of water, to ground malt, be worth fermenting and diftilling for fpirit; and the fa chmakers refufe liquors have been obferved to contain a quantity of inflammable fpirit.
The prefent experiment may, in this refpect, be made general, it fhewing that there are different times of ftrpping, or preventing, the farther growth of vegetables, for the fervice of arts. And this doctrine may be extended to the forming a fet of general rules, for gathering the different parts of plants, at different feafons of the year, for different ufes.
Thus roots, for inftance, to be had perfect, fhould be gathered and dryed in the fpring, before the leaves are formed; leaves chould be gathered, when they are fully opened, but before the flower appears; flowers, when they are not fully opened; and fome, as red rofes, in the bud.
Seeds are to be gathered, when full ripe, and beginning ta dry, before they fall fontaneoully; and trees are generally beft felled and fleaed for their bark in the beginning of the fpring. But all this is to be underfood of the common ufes of the fubjects; for there are many particular occalions which require them immature. Thus buckthorn-berries hould be ripe gathered for making the fyrup, but unripe for making the painters colour called fap-green.
1I. The method of curing vegetable juices, by decoction, or infpiffation.
Make an infufion of malt, in the common manner of wort, for beer and ale, let it ftand to clarify, and decant the clear, and boil it over a foft fire, to the confiftence of treacle : in this flate it will long keep found, or fit for the making of beer, vinegar, or inflammable fpirits.
This experiment thews us a general way of reducing fermentable fubjects to a fmall compafa, and for fecuring them againft external injuries. Thus a kind of treacle from malt might be produced in cheap years, for the fervice not only of the brewer, but the diftiller and vinegar-maker. The method is likewife applicable to any other fweet or faccharine juice, as that of grapes, the tappings of trees, and the fermentable juices of fummer fruits, and certain fweet roots, as even parfnips, $8 c$.
Thefe infpiffated juices, if not boiled too high, or fcorched in the operation, are eafily brought back to a true degree of thinnefs with water, and fermented in the fame manner, and for the fame purpofes, as they might have been before they were boiled. So that not only beer, bet vinegar, or firits, as fhall be fhewed under proper heads, may be thus commodiouly procured, even in hot countries. Whence it fhould feem that brewers and diffillers might reap no inconfiderable benefit by a prudent ufe of this expedient.
The wine-merchants might thus order the juice of grapes, or fum, to be boiled down in wine councries, and fo left fit to be reduced, by water, and fermented into wine in others. And, for this purpofe, the poorer vintages might ferve as well as the rich, excepting only that the rob, when reduced by water, would not afford fo much wine as the thicker or richer juices. But this operation muft be performed with confiderable exactnefs, to make it fucceed, fo as to produce artificial wines, perfectly like the natural.
This procefs alfo feems applicable to hops, which may be thus, in cheap years, made into a kind of extrah, without any lofs of their valuable parts; whereby the numerous contingencies attending that commodity might, in good meafure, be prevented. But there would here be danger of fraud, becaufe the extract of gentian, centaury, or other bitter, ftomachic vegetables, might be mixed with the extract of hops, fo as not to be eafily difcovered : though perbaps, this inconvenience is not greater than that generally fuffered already, for many are well affured, by experience, that the extract of gentian is a wholefome bitter, which will very well fupply the place of hops in brewing.
It is alfo a procefs fomewhat of this kind that they frequently practife in wine countries, viz. either by fuffering the grapes to grow almoft dry upon the vine, or elfe to boil down their juice, 'till it become fufficiently thick to afford fuch rich wines as Canary, or Frontignac; whofe ftrength may be readily imitated by adding a lefs proportion of water to the rob, or boiled down juice of grapes, in the manner above explained.
III. A method of curing yeaft.

Take a quantity of common ale-yeaft, and put it into a clofe canvas bag, gently fqueezing out the moifture in a fcrewprefs, 'till the remaining matter be left as hard as clay. In

## B R E

B R I
this ftate let it be clofe packed up in a tight cafk, and weil fecured from the air; it will keep found and frefh for feveral months, as has been often experienced.
This is an experiment of conliderable ufe to diftillers, as well as brewers and bakers, who in England, though they employ very large quantities of yeaft, feem to have no method of preferving it, or railing nurferies thereof, whereby they frequently fuftain confiderable lofs: whereas the brewers in Flanders make a great profit by fupplying the malt diftillers of Holland with yeaft, which is rendered lafling, and fit for carriage, after the manner of our prefent experiment.
The fame method is practicable to much greater advantage in the yeaft of wine and wine-lees, which we fhall hew in it's proper place.
We learn from what has been faid, that we have power to ftop the courfe of nature in vegetation, fo as to make this principle anfwer our own particular ends and defigns; whence branches of trade may receive confiderable improvements:
2. That yeaft of malting is farther improveable by a general acquaintance with the nature of vegetation, vegetable juices, the art of fermentation, and of fugars, and other faccharine fubitances:
3. That the labour and expence, attending the bufinefs of malting, may, in fome meafure, be faved by procuring and feparating the fweet juices of vegetables, as nature affords them; or by boiling them down to a treacly or faccharine fubtance:
4. That there are different feafons of the year, peculiarly fitted to the collecting or procuring of thefe juices, and all other vegetable matters, according as they are required ripe or immature:
5. That all fweet vegetable juices may be preferved found and ferviceable by infififation over a foft fire, fo as to throw off their fuperfluous aqueous parts, and leave the fweet or faccharine lubftance behind, in a ftate fit for fermentation, upon the addition of frefh water:
6. That feveral bitter vegetable juices, capable of anfwering the end of hops in brewing, may be infpiffated by the fire, and preferved for that purpofe:
7. That the extremely corruptible fubftance, yeaft, may be preferved found, barely by freeing it from it's fuperfluous moifture, and fecuring it from the external air and too great heat. See the articles Malt, Distillation, Wine, Sugar, and Yeast: all which will adminifter important matter for the improvement and advantage of a great number of trades.
The brewery is a very extenfive trade, and hardly ever more flourifhing in England than at prefent, the practice of winedrinking being now very much turned into that of common beer, or porter, as it is often called; but, whether through choice or neceflity, I leave to the judgment of the public.
It is dwided into three parts, viz. for fmall beer, or, as ufually termed, table-beer, in brewing only which many carry on large brewhoufes,
For pale ale, commonly called two peniny, amber, or homebrewed, the fmaller brewers of which are generally victuallers, who brew only for their own drauglit.
For brown, or butt-beer, and common ale, or, as the excife office diftinguiftes them, common brewers, which is by far the larger branch.
Brewing, we have feen, is an art of no little ingenuity, and capable of great improvement. It not only requires good experience in the manner of working, in the large way in and about London, but a thorough knowledge in the goods, malt and hops, and conftant attendance, by thofe who have the direction, from the mafh-tun to the ftore-cellar, and even then too it muft be looked after; but of labour but little, they having ferving men to do the drudgery.
A youth for the larger concerns in the brewery (and thofe in a fmall way take none) ought to write a good hand, underftand accounts and gauging; whofe friends mult give with him apprentice from 100 to 200 or 300 guineas.
When he is out of his time, if he has bebaved well, he may become a workman-brewer, home-clerk, or abroad clerk, the leaft of which have feldom lefs than 50l. a year; and come of them 200 I . \&c. Sometimes they are taken in partners, in proportion to what cafh they can advance, which is the pooft common way of their coming firft into rade, for, to erect a common brewhoufe, and lay in ftock antwerable, will fink many thoufands before they fee any returns.
They were incorporated into a company in the year 1438 , in the reign of king Henry VI, and confirmed by king Edward $I V$, in 1480 , with the privilege of making by-laws. The fubftance of the flatutes in England relating to brewers is as follows, viz.
23 Hen. VIII. c. 4. Brewers putting their drink in a veffel not marked by a cooper, to forfeit 3 s. 4 d. a barrel; and not felling it at reafonable rates, appointed by juftices, for every barrel 6 s . kilderkin 3 s .4 d . firkin 2 s . and 10 s . for a larger vefiel.
12 Car. II. c. 23. The duty, by this aet, for every barrel
of beer above 6 s . value, is is. 3 d . and under 3 d . By i $W$. $\&$ M. 9 d . for every barrel of beer, \&c. above the value of 6 s. 8 d . was added. 'Thefe duties were granted to king Wiliam and queen Mary for their lives; and the additional duty of the 9 d . per barrel for 99 years, \&c. Brewers to make an entry at the excife-office once a week of liquors brewed, under the penalty of $\mathbf{1 0 1}$. Brewers to be allowed three barrels in 23 for leakage.
Brewers altering coolers, vats, \&c. without notice, incur 50 l. forfeiture, increaled to 2001. by 8 and 9 William. Obftructing fearch 201 . Keeping a private ftorehoufe, \&ic. 501 . penalty; and oppoling a gauger 501 . by fatute 8 and 9 William.
Keeping a private pipe under ground, by 7 and 8 Will. III. c. 30 . to forfeit 1001 . Refufing an officer entrance into the brewhoufe 201. Not permitting him to tafte the drink on the dray, 51. Not telling the gauger how much ale is intended to be brewed, 20 s . per barrel ; increafing it afterwards, 51. per barrel. Mixing fmall with ftrong the fame penalty. Carrying wort out of the brewhoule before the whole is brewed, 40 s .
Obftructing fearch for private pipes, periadty 1001 . Bribing a gauger, rol.
BRICK, an oblong fquare of fat and reddifh earth, firlt dried by the air, and afterwards burnt in a kiln or a clamp; being firft well kneaded and worked, with the feet or hands. Thiey are formed in wooden moulds of feveral fizes, according as the bricks are to be mádé lârger or fmaller, confidering the works they are intended for.

## R EMARKS.

Bricks among us in England have feveral names, according to their forms, dimenfions, ufes, method of making, place, \&c. The chief of them are, compafs bricks, which are of a circular form, and ufed to fteen walls. Concave or hollow bricks; on one fide flat, like a common brick, and hollowed on the other, ufed for conveying water under-ground. Cogging bricks, ufed for making the indented work, under the copings of walls, built with great bricks. Coping bricks, formed on purpofe for coping of walls. Dutch, or Flemith bricks, ufed to pave gards and ftables, and for foap-boilers vats and cifterns. Clinkers, are bricks that are glazed by the heat of the fire in burning, Fedther-edged bricks, are like the common flatute bricks; only thinner on one edge than the other, and ufed to pen up the brick pannels in timber building. Samel, or fandal bricks, are fuch as lie outmoft in a kiln or clamp, and confequently are foft and ufelefs, as not being thoroughly burnt. Great bricks, are thofe which are twelve inches long, fix broad, and three thick; the weight of one being about 15 pounds, fo that 100 weigh 1500 , and 1000 of them 15,000 pounds; their ufe is to build fence walls, together with pilafters, or buttrefs bricks, which are of the fame dimenions with the great bricks, only they have a notch at one end, half the breadth of the brick; their ufe is to bind the work at the pilafters of fencewalls, which are built with great bricks. Paving bricks, or tiles, are of feveral fizes, in feveral countries and placesa Statute bricks, or fmall common bricks, when burnt, ought to be nine inches long, four and a quarter broad, and two and a half thick. (By ftat. 3 Geo. Il. cap. 22. within 5 miles of London, thefe bricks ought to be $8 \frac{3}{4}$ inches long, $4 \frac{1}{8}$ broad, and $2 \frac{1}{2}$ thick) 100 of thele do commonly weigh 550 pounds, and 1000,5500 ; about 407 in number make a ton weight. Thefe are commonly ufed in paving cellars hearths, finks, \&c. Thirty or thirty-two, if true meafure, will pave a yard fquare, and 330 , laid flat, will pave a fquare of 100 fect; but, if laid edgeways, there mult be near double the number.
Stock bricks are to be of the fame dimenfions, only ${ }_{8}^{\prime}$ of an inch thicker.
Bricks are commonly red, though there are alfo fome of a whitifh colour; Walpit, in Suffolk, is famous for this fort.
The earth whereof bricks are made mult not be fandy, which would render them both heavy and brittle; nor ought it to be too fat, which would make them crack in drying. They ibould be made either in the fpring or autumn; and, when made, muft be fheltered from the fun, if it be too hot, and yet be expofed to the air to dry. If they be made in frofty weather, they muft be covered with fand; if in hot weather, with wet ftraw. When they are well dried, they muft be burnt.
The burning of bricks is performed either in a kiln or in a clamp. In the former, the bricks being fet in, and the kiln covered with pieces of bricks, they put in wood to dry them with a gente fire; and this is continued 'till they are pretty dry, which is known by the fmoke turning from a whitifh dark to a thin black finoke. They then ceafe to put in wood, and proceed to burn with brufh, furze, ftraw, heath, brake or fern faggots; having firft dammed up the mouth of the kiln witl a fhimlog, that is to fay, with pieces of brick piled upon one amother, and clofed with wet brick earth, infead of mortar. Then they continue to put in more fag-
gots, 'till the kiln and it's arches look white, and the fire appear on the top of the kiln; upon which they flacken the fire for an hour, and let all cool by degrees. This they continue to do, alternately heating and flacking, 'till the ware be thoroughly burnt, which is ufually effected in 48 hours. About London they chiefly burn in clamps, built with the bricks themfelves, after the manner of arches in kilns, with a vacancy between each brick's breadth, for the fire to play through; but with this difference, that, inttead of arching, they trufs or fpan it over, by making the bricks project one over another on both fides the place, for the wood and coals to Jie in, 'till they meet and are bounded with the bricks at the top, which clofe up all. The place for the fuel is carried up ftraight on both fides, 'till about three feet high ; then they fill it almoft with wood, and over that lay a covering of fea-coal, and then overfpan the arch; but they frew leacoal alfo over the clamp, between all the rows of bricks; laftly, they kindle the wood, which gives fire to the coal, and, when all is burnt out, they conclude that the bricks are fufficiently burnt.
For the making of fuch bricks as will ftand the fierceft fires, our Stourbridge clay, or Windfor loam, are efteemed the beft, though I have feen thefe melted down like glafs. There are fome artificial compofts, which will ftand fire much better, perhaps, than any natural earths.
By ftat. 12 Geo. I. cap. 35. Earth or clay, deligned for making bricks for fale, fhall be dug and turned at leaft once between the ift of November and the Ift of February, and not be made into bricks 'till after the if of March; and no bricks be made for fale, but between the ift of March and the 29th of September : and no Spanilh to be mixed with the earth, or breeze, in the burning of bricks. And all bricks are to be burnt either in kilns, or diftinct clamps, each fort by itfelf.
By ftat, 3 Geo. II. cap. 22. There may be mixed with brickearth any quantity of fea-coal afthes, fifted or fcreened through a fieve or fereen half an inch wide, and not exceeding twenty loads to the making one hundred thoufand bricks, each load not exceeding thirty-fix bufhels. And breeze may be mixed with coal in the burning of bricks in clamps for fale, \&c. Stock bricks and place bricks may be burnt in one and the fame clamp, fo as that the flock bricks be fet in one diftinet parcel, and not mixed nor furrounded with place bricks.
For the more effectual fecuring the obfervation of thefe laws, it was enacted by 12 Geo. I. cap. 35. for the better difcovering of offenders, that the mafter and wardens of the company of tilers and brick-layers thould have power to fearch brick-kilns, \&c. but they baving permitted, and even encouraged, divers perfons to make bricks, contrary to the directions in the faid act ; by 2 Geo. II. cap. 15. they are divefted of that power; and any two, three, or more perfons, appointed by the juftices of the peace, are impowered, within fifteen miles of London, to go in the day-time, in any grounds, fheds, or places, where any clay or earth thall be digged, or digging, for bricks or pantiles; or any bricks or pantiles thall be making, or made for fale, and there to view, fearch, and infpect the fame, \&c. Offenders to forfeit twenty fhillings for every thoufand of fuch tiles or bricks; one moiety to the ufe of the profecutor, the other to the poor of the parilh where the offence fhall be committed.
BRICKLAYER, one who lays bricks, in the building of edifices of any kind. Tilers and bricklayers were incorporated io Eliz. under the name of mafter and wardens of the fociety of freemen of the myftery and ant of tilers and bricklayers.
The univerfal call for this trade is fo well known to every one, that little need be faid of it.
This, however, is to be obferved, that it is moftly an outdoor bufinels, much expofed to the weather, by which they are often hindered from working.
As to the work itfelf, it is not very difficult to be learned, nor laborious (for they have labourers to do their heavy work) but handy and ingenious in contriving. With refpect to the mafters, moft of them live handfomely: and fome, who employ many hands, and undertake large work, commonly called mafter-builders, obtain good eftates; but then they are fuch, who not only have money at command, but take great pains to qualify themfelves for projecting, drawing plans, furveying and eftimating buildings.
BRICKMAKER, is he who undertakes the making of bricks. See Bricks. This is moftly performed at fome fmall difance from cities and towns; and, though fome, through ignorance, look on it as a very mean employ, becaufe laborious, yet the mafters about London, and other capital cities, are generally men of worth.
BRISTLE, the ftrong hair ftanding on the back of a hog, or a wild boar.
Hog-briftles are put to feveral ufes, particularly in making feveral forts of brulhes: they are commonly fent in barrels or hogheads, in parcels of feveral fizes, which are fold by the weight.
Wild boars briftes are much ftronger than hogs, and are much more valued, but then they are alfo much dearer.

Shoemakers, harnefs-makers, fadlers, and others, wfe them: putting one of them as a ncedle or awl at the end of their thread, to few their work
There is a great deal of this commodity imported from Mufcovy and Livonia, by the way of Hamburgh and Holland; whence it is fent away in friall parcels tied in the middle, and put in little deal boxes about a foot long, and two or three inches broad: it is commonly fold by the weight.
Brifle, both of hogs and wild boars, is part of the ironmonger's trade in France, who buy it by wholefale, and fell it by retail, to fuch workmen as make it into brufhes, $\& \mathrm{kc}$, or have occafion for it in their own way of bufinefs.
BRITAIN, or GREAT-BRITAIN, or the BRITISH EMPIRE, is conftituted of the thtee kingdoms of England, Scotland, Ireland, and the feveral plantations of America thereunto belonging.
The iffand of Great-Britain lies in longitude (Teneriff being the meridian) between $9 \stackrel{3}{4}$ and $17 \frac{1}{4}$, and between 90 and 59 degrees of north latitude.
The fouthern divifion of this Ifland, viz, that part of it called England, is bounded by Scotland on the north; the German fea, which feparates it from Germany and the Netherlands on the eaft; by the Englifh channel, which divides it from Frince on the fouth; and by St George's channel, which feparates it from Ireland on the weft. It is 360 miles from norib to fouth, and 300 in breadth from eaft to weft, in the wideft part.
The northern divifion, called Scotland, is bounded on the fouth by the Irifh fea and England; on the eaft by the German ocean; on the north by the Deucaledonian fea; and on the weft by the Atlantic ocean. It is about 215 Scots miles in length, and in breadth in the widelt part about 140.
Ireland, fituate between longitude $5: 40$. and 10. 37 . weft from London, and between 51. 16. and 55. 20. of north latitude, is an iflind feparated from England and Scotland by St George's channel on the eaft ; has the Scots weftern iflands on the north and north eaft ; the mouth of St George's channel on the fouth; and the Atlantic ocean on the weft. It is reckoned about half as large as England.
The American Britifh colonies on the continent, are Newfoundland, New England, New Scotland, New York, New Jerfey, Penfylvania, Maryland, Virginia, Carolina, Georgia, Hudfon's-Bay. The inland colonies are, Barbadoes, St Lucia, St Vincent, Dominico, Antigua, Monterrat, Nevis, St Chriftopher's, Barbuda, Anguilla, Jamaica, Bahama, and Bermudas. We have fettlements alfo in Africa. See Guinea. For a particular and minute account of the productions, manufactures, and trade of England, Scotland, and Ireland, we refer to the feveral counties and fhires thereunto belonging 3 and, with regard to a diftinct account of the trade of the colonies belonging to Great-Britain, we refer to the article of Britise America.
Our intention, under this general head of Britain, is to anfwer thefe purpofes. 1. To take a general view of our inland circulating commerce within ourfelves, as nearly as we can, independent of foreign trade; and allo to hhew how the three kingdoms have a connection and dependency on each other, and on our plantations in America.
2. To point out the natural advantages of Great-Britain for univerfal commerce; and to confider in what fate our trade at prefent is, with regard to the principal nations of Europe. The chief land productions, commodities; and manufactures of England, are the following:

fuch as
Cafks of all kinds

## B R I

The land produce and manufagures of Scotland and Ireland, are in moft refpects the fame as thore of England, except that fir-timber, a manufacture of ftuff called plaiding, and of ftriped muflins, is peculiar to the former
The productions of the Brition colonies are as follow :

Having given a fuccinct :account of the productions of the feveral parts of the Britilh empire, we come now to foeak of it's trade. And, firft, we fhall, with all brevity, condider the home trade of England.
It 'is an obfervation grounded on experience, that every county in England is more or lefs employed in carrying goods of fome fort or other for the fupply of the city of London, as well the produce of the farmer, as of the manufacturer. This cccafions a prodigious number of carriages, as waggons, carts, and pack-horfes, from the inland counties; and likewife of boats and bargemen, where they have the convenience of navigable ftreams; and caufes very confiderable employment for our fhipping and feamen for the navigation of the coafting trade.
The feveral forts of productions fent from all the inland counties, which come under the name of provifions, make a prodigious article of commerce, and are the fole fupport of the places from whence they are fent; for, unlefs there was a confumption of the overplus of their commodities this way, they muft perifh on their hands, and the value of their lands confequently be diminithed: but, by having vent for them in the metropolis, and receiving money or merchandizes in return, the rent of the lands is kept up, the remoteft are thereby cariched, and their poor conitantly employed.
The various particulars of the produce of the counties of England, which are fent to London, are the following:
IIfalt and meal in very great quantities, from Berkmire, Oxfordfhire, Buckinghamfhire, Hertfordthire, Cambridgefhire, and burry. Pars of this, efpecially the meal, is brought by land carriage from Hertfordifire, Bedfordhire, and the north
of Buckingamfhire; nor do there come lefs than 4000 waggon loads a week of this commodity to London from thefe parts, befides what is carried by the river Lea from Hertford and Ware, and from that part of Buckinghammire which lies near the banks of the Thames.
Suffolk and Cambridgefhire fend up great quantities of falted butter; and of late they have no inconfiderable quantity, though not fo good in quality, from Yorkihire.
From Chefhire, Warwickihire, and Gloucefterlhire, come valt fupplies of cheefe; and fome from Suffolk, though of a meaner fort.
The Chefhire and Suffolk cheefe comes by fea; the other chiefly in waggons.
The north-welt part of Wilthire furnifhes a nice kind of thin cheefe in the fpring, called cream, or new cheefe.
From Hamphire come the beft bacon and honey, and a confiderable quantity of the former alfo from Shrophire and Gloucefterfhire, as well as a kind of well prepared hams from Yorkhire.
From Suffolk and Norfolk we have turkies and geefe in fuch quantities, that no eftimate can be made of their number. And all forts of wild fowl, fuch as ducks, teal, widgeon, \&c. the city is fupplied with from Lincolnhire and the ille of Ely. Leicefterihire and Northamptonthire afford the beft and largeft coach-horfes and draught-horfes; and Staffordihire, YorkChire, and Durbam, the beft for the faddle. Suffolk, Lincolnghire, Somerfetfhire, Lancalbire, Yorkfhire, Kent, and Suffex, furnifh the largeft and fattelt oxen.
The Severn from Gloucefter, the Trent from Nottingham, the Eden from Carlifle, and the Tyne from Newcaftle, fupply frefh and pickled falmon; the firft brought by land carriage, the other by fea.
Effex fends the fineft veal, and Huntingdonflire the beft pigeons.
Thus almoft every part of England is employed in furnifhing London with provifions of one fort or other, and thefe in furprizing quantities: befides which, the water carriage of the Thames (whereby fo much of all kinds, efpecially malt and meal, is conveyed thither) brings immenfe ftores of timber and fire-wood from Berks, Oxfordhire, Bucks, and Surry, in barges of 80,90 , and 100 tons.
We fhall next confider the coal trade ; that is, the carrying coals from Newcafte, Sunderland, \&c. to London, which is in itfelf a prodigious article, and employs abundance of men and flipping: infomuch that, in a time of urgent occafion, this branch alone has been able to fupply the government with a body of feamen, able to man a confiderable fleet at a very Ihort warning, and that without any difficulty.
There have been known to be in the port of London' be: tween 5 and 600 fail' of thefe colliers at a time, and they never want a market for their goods. The greater part of them are confumed in the cities of London and Weftminfter, and parts adjacent thereto; and the reft are re-laden in fmaller veffels, to be fpread by the Thames over the counties of Middlefex, Effex, Hertfordihire, Bucks' Oxford, part of Gloucefter, Berks, Hampfhire, and Surry.
But befides their fupplying London, and many of the inland counties through the means of London, they ferve moft of the port towns, all the way between Newcaftle and London, and up the channel, as high as Portfmouth weft; and, by means of thofe ports and navigable rivers, many of the bordeying counties within land: as from Lyon into the ifle of Ely, and the feveral counties of Lincoln, Northampton, Leiceiter, part of Bucks, Bedford, Cambridge, Suffolk, Norfolk; from Colchefter, Harwich, \&c. into the counties of Effex and Suffolk; from the rivers Medway, Stour, the Cray, the Aran, and almoft over the whole counties of Kent and Suffex.
The other great branches of the coal trade in England, are from the port of Swanzey in Wales, to the coaft of Devonfire, and other parts thereabouts; 'and the Cumberland colliery of Whitehaven, belonging to Sir James Lowther, Bart. which, though it chiefly fupplies Ireland, we have thought proper to mention in this place, becaufe it has been computed, that thefe three coal trades, together, employ no lefs than 1500 fail of fhips, and men in proportion: to which, if we add the porters, carmen, keelmen, watermen, lightermen, and bargemen, employed alfo in this trade afterwards, we fhall find it one of the moft valuable branches of our home commerce, as it gives bread to an infinite number of people, independent of any foreign correfpondence; and is the principal domeftic nurfery for our feamen, upon whom the power, the happinefs, and glory of the whole Britifh empire depend.
Another confiderable article of the coafting trade, is that of fhips from the farther parts of Cornwall with tin, from Lancafhire with rock-falt, and from Chefter with cheefe and lead; the latter the product and manufacture of Flinthire, which are all brought to London. The rock-falt is likewife carried to molt of the ports in the Severn fea, as well as in the channel, where it is reduced to brine mixed with otber fea brine, and boiled again into a ftronger falt, called falt upon falt: this is done at Biddeford, Horcombe, Barnftaple, and other towns on the coaft of Devon, where they cure herrings with it, in a manner no way inferior to the Dutch,
ws alfo at Dartmouth, Weymouth, and Colchefter, and various other places in the Channel.
For the managing this bufinefs in particular, as alfo for making malt, ind for other common ufes, there is a large coafting trade to there parts, from Swanzey in Wales for culm; in the carriage whereof, there are not lefs than 300 fail of Thipping confantly employed.
A confiderable number of coafting thips are likewife always employed in paffing to and from London, from Dartmouth, Pool, Weymouth, Lyme, Topfham, Exeter, Plymouth, Falmouth, \&rc. Thofe from Topfham bring a great deal of bale goods, fuch as ferges, perpets, \&c. made at Exeter; and, in plentiful years, there have been imported into Liondon not lefs than 20,000 hogheads of cyder, the growth of the Southhams, from Topfham, Lyme, Plymouth, Dartmouth, and other places in Devonfhire.
All thefe, veffels make their returns from London in heavy goods, fuch as giocery ware, oil for manufactures, lead, Fon, flax, hemp, wine, pot-afhes, and all other forts of goods which the warehoufes and Chops of this great city afford.
Many fhips are fent alfo from Briftol to London, with glafsbottles, flint-glafs, window-glafs, and fometimes with WeftIndia goods, as fugars, cottons, \&c.
Laftly, there is a continued throng of veffels with corn from the eaftern and fouthern coafts of England, fo that all the out-ports have fome communication with London; and moft of them may be faid to derive their greateft advantages from thence; and, iadeed, it is fcarce credible what a number of people are, upon the whole, employed in this coafting trade. They have been computed, and I believe without exaggeration, at no lefa than 100,000 , including the coal trade, falt trade, and corn trade, with the conftant carriage of thop keepers goods from port to port, and allo the fifheries.
Nor is the inland trade of Englañd lefs confiderable, through the great variety of manufactures, of which fome forts or other are eftablifhed in almoft every county, as well as through the rich mines in feveral parts of the kingdom.
Of the latter, thofe of Cornwal abound chielly with tin; thofe of Lancafhire, Staffordilhire, and Shropfhire, with lead, iron, and copper; thofe of Somerfetfhire with lead and copper; Glamorganhire, Cardiganihire, and Flintifire (the three laft in Wales) with lead alfo'; and thofe of Durham, Cumberland, Suffex, and Surry, likewife with iron.
The principal falt-works are at South Shields in the bifhoprick of Durham, and at Lymington in Hampthire; for that fpecies which is drawn from fea-water, and that from the ralt-fprings, is made chiefly in Worcefterhire and Cheihire; befides the Lancafhire rock- falt; which has been mentioned above.
The manufactures of hard-ware are carried on principally at Birmingham, in Warwickfhire, and at Shtffield in Yorkfhire; at which latter place more than 40,000 people are employed in this branch of trade alone.
Each of thefe articles, indeed, affords fubfiflence to a prodigious number of people, who are concerned only in the working and manufacturing them; whilft their vaft circuJation by the injand as well as coating trade before-mentioned, not only to the city of London, but to all other parts of England, furnithing daily occupation for multitudes befides. The brewery, likewife, is an article to be reckoned amongft the more confiderable inland trades of this illand. The quantity of malt liquors brewed in England for home confumption, at the public houfes chiefly, is fo very great, that the excife of them only amounts yearly to what would maintain a kingdom, befides the tax upon malt, which is little lefs than a million more.
But the chief ftaple commodity of England is the woollen manufacture, which is carried on more or lefs in almoft every part of the kingdon; fome making one fpecies of goods, fome another. As, from the multitude of people, there is a great home confumption of all forts for their own ufe in all places; fo no part of the nation making every kind, or having near at hand the materials neceffary for the particular kind they do manufacture, they are obliged to fend for fuch articles as they want to the counties where they are made, or to London, which is the center of their commerce.
This occafions fo general an intercourfe of trade and correfpondence among ourfelves, for the native commodities of our own country, that the inland trade of no other nation in Europe, perhaps, is equal to it.
Thus the manufactures called Manchefter wares, fuch as fuftians, cottons, tapes, incle, \&cc. are fent on pack-horles to London, Briftol, Liverpool, \&cc. for exportation, and alfo to the wholefale haberdafhers' for home confumption; whence the-other towns of England are likewife ferved, or by the Manchefter men themielves, who travel from town to town throughout the kingdom. Of thefe goods they make, at Manchefter, Bolton, and the neighbouring places, above 600,000 1. worth annually. The returns thefe manufachuers have from the three fea-ports before-mentioned, confift in cotton, incle, linnen, yarn, \&c. which they work up into all forts of Manchefter wares.
VoL. I.

Another manufacture of furprizing extent, is the Yorkflice coarfe cloths, called double dozens, and kerficy; the former made at Leeds, Wakefield, Bradford, and Fatherf Id ; the latter at Hallifax, it which parilh only there are above 100,000 people employed in that fingle branch; befides what is made in that part of Lancalhire, bordering on the weft-riding of Yorkthire.
This manufacture is carried to the fame places, and in the fame manner, as the Manchefter wares are, befides immenife quantities that are fent directly to Hull for exportation : and as it is ufed for cloathing the poorcr fort of people in other counties, even where finer cloths are made; fo the flop. keepers, in thefe very counties of Yorkfíre, are obiged to buy the fine Medley cloths of Wilinhire and Gloucefterflire the ftuffs and ferges of Norwich and Exeter, the duroys and filk druggets of London and Taunton, for the wear of the people of better condition.
In like manner the traders of Devonhire and Somerfethire buy the fine woollen cloths of Wilts and Glourcefter, and their camblets, crapes, and women's fuffs, from Norwich; their flockings from Leicefterfhire, Nottinghamfhire, Worcefter hire, Yorkflire, or Eondon; and the like is done with re gard to other forts of goods.
The Norwich traders enter into the fame circulation of ma nufactures; buy their ferges from Exeter, duroys and drug gets from Somerfethire, and fine broad cloths from Wilts, Gloucefterfire, Somerferfhire, and their coarfe cloths and kerfeys from Yorkfhite, and fupply all thofe counties with their own manufacture of Norwich fuffs.
London, indeed, is the center of this home circulation, the feveral counties fending their own goods thither, and receiving thofe of other counties in return. And the fame may be faid with-refpect to all other manufactures, as well as thofe of the woollen kind. But of thefe, befides what are diftributed on pack horfes, from one town and county to another, there are alfo immenfe quantities fold, with all other $f_{p}$ ecies of commodities, at the great fairs of Stourbridge, Briftol, Weft Chefter, Exeter, and Woodborough hill.
The materials for the cloathing trade, fuch as the wool and yarn, are circulated from place to place, in tie fame manner as the cloths; after they are manufactured - The finc fleece wool of Lincoln, Leicefter, and Northamptonfhire, is carried on pack-horfes fouth to Cirencefter and Tedbary in Gloucefterfhire, where it is bought up and afterwadds made into yarn for the clothiers" of Wilts, Gloucefter, and Someriethice, to mix with the Spanifh wool in making their broad cloths: eaftward the fame is carried to Norwich and Buty for the manufactory of thofe'parts; and northward to the farther parts of Yorkfhire, and even into Weftmoreland and Cumberland, where it is made into fine yarn, which is brought up: to London to the amount at leaft of 100 horfe-packs a week, for the making of fire druggets and camblets, \&c, in Spittal-fields.
The furprifing quantities of wool produced on the facious plains of Wilthlre, Dorfethire, and Hamphhire, are carried into the counties of Somerfet and Devon. In fome parts of Somerfethire, it is mixed with the above long ftaple wool of Lincolnhhire; in other parts of that county, and in Devon with the Irith wool, imported at Biddeford and Minehead, for the perfecting their fine ferges, ftuffs and druggets.
There is likewife a very great quantity of fell-wool, that is, wool taken from the fkins of the fheep after they are killed, fent from London to Colchefter, Bocking, Braintree, and all oher parts of Effex, where the bays trade is carried on : and this fort is likewife ufed by the manufacturers of Wilts, Gloucefter, and Somerfetfhire.
There laft mentioned manufactures confift in fine mixed or medley cloths, or fine whites to dye black, fcarlet, \&c. which are called with us Spanifh cloths. The confumption whereof is fo great at home, that the value does not amount to fo little as a million ferling per ann. and this branch is faid to employ not lefs than a million of our people.
We hall now take notice of the filheries on the coaft of England, which are not the leaft important articles of our commerce. Thefe are the herring, the pilchard, the mackarel, the oyfter, and the lobfter filheries : the herring fifhery employs great numbers of thipping and men. The feafon for fifhing on thefe coafts comes in about June, and ends about September: they are taken in prodigious quantities round the whole Englifh coaft, but particularly off Yarmouth, and in the Severn Sea, the back of Devonfhire and Cornwall, where they have an excellent method of packing and curing them.
The feafon for pilchards comes in much about the fame time, and continues as long as the herring fifhery. Thefe are almoft peculiar to the coafts of Devonflire and Cornwall, where they are fo plentiful, that 'tis common to take 3 or 400 tons out of the fame fhoal of fifh. They prefs and pack them after the fame manner as the herrings, and they are a very profitable commodity to the merchants of thefe ports.
The next confiderable is the mackarel fifhery, which is carried on between the Thames and Yarmouth eaft (beyond which place they are feldom found) and as far as the land's end
in Comwall weft. The feafon for this fif comes in about Aprit or May, and ends about July. Immenfe quantities of them are confumed in England, efpecially in London, whither they are brought from the coaits of Kent and Suffex. They are likewife taken in abundance on the Doriethire coaft, and fent far inland on borfes backs: but the plenty is fometimes fo great, that they are obliged to throw away whole boat-loads of them, and even to dung the land with then. Ticere are but few of thefe fifh cured, and that only by the merchants of Yarmouth and Leoftoff.
The fmaller fifheries on the coaft are for oyfters and lobifters. The oyfter filhing is at Colchefter, Fevertham, the ine of Wight, and in the fwales of the Medway, and alfo in the creeks and rivers between Southamptor and Chichefter. This, though it may feem an inconfiderable branch of trade, employs a great number of veffel's and men, which are continually pouring them into London, from Seprember to April. Lobfters too come in large quantities from the channe!, and from the coalts of Northumberland.
To all tbefe may be added the falmon fifhery in the Severn, and on the north-eaft hore about Newcaftle, \&c. which are always a marketable commodity at London, and fometimes bears a very high price.
It is to be obferved, that, as one fort of filh goes out, another comes in; fo that fome are always in, feafon, and the fifhermen confantly employed.
The cod, or white filhery, we thall not mention here, as it belongs chiefly to Scotland, of the home trade whereof, and as it relates to England, we fhall next fpeak to.
As Scotland is a branch of the fame continent with England and Wales, fo it is united under the fame government. Let it fuffice to obferve, that the two crowns were united under one head, in the perfon of king James I. of England, and Vith of Scotland, by which the Engl. Ch and Scots have been freed from thofe incurfions and wars, which ufed to harrafs and torment them both. And, from the union of the two nations, the legillation, which beretofore was vefted in the king and parliament of Scotiand, independent of the parliament of England, is placed in one general parliament of Great-Britain, according to the articles of union enacted by both parliaments, in the fifth year of queen Anne.
All that part of the continent which lies between the counties of Cumberland and Northumberland, belongs' to Scotland, with great numbers of iflands on the other fides, which are bounded by the ocean. On the weft it hath the Irifh fea; on the north the Deucaledonian; and on the eaft the German ocean. 'Tis in length about 250 miles, and in breadth 150 ; in the moft foutherly part 'tis 54 degrees 54 minutes in latitude, and in longitude 15 degrees 40 minutes; but, in the moft northerly, 'tis 58 degrees 32 minutes in latitude, and 17 degrees 50 minutes in longitude.
The foil, take it in general, comes far fhort of England in fruitfulnefs, being much more fit for pafture than corn: not but, in fome of the inland counties, they have good ftore of grain, wherewith they trade to Spain, Holland, or Norway. The firts of the country abound with timber, which is of a valt bigneis, efpecially fir-trees.
Scotland produces a very great number of black cattle, and alfo of heep, more than can be confumed within themfelves, and therefore they fend herds into England, to the yearly amount of near 80,000 head of black cattle, and about 150,000 fheep.
7 he Scots likewife fend their wool into England, which is ufed in making of the coarle cloths of Yorkfire and Lancathire, and receive no inconfiderable quantity thereof again, when manufatured into cloth; as well for their own confumption, as for exportation to the Britifh plantations in America.
On the northeaft parts of Scotland, efpecially about Aberdeen and Elgin, the wool is finer, and of a longer ftaple than that in the fouthern; and the manufactures of worled flockings made at Aberdeen, and the parts adjacent, are very fine, and employ a great number of hands.
Their other chief woollen manufactures are of ferges at StirTing, fluffs at Mufle burgh, blankets and fhalloons at Edinburgh. There is a manufacture of mullins allo about Glafgow, and the parts contiguous, which employs abundance of poor people in the finning; bleaching, and drefing it, and great quantities thereof are brought to England. And we may add here the manufacture of plaiding at Glafgow and Aberdeen.
The mines of lead in this kingdom are of very great advantage to the inhabitants, as likewife i, the abundance of fine coal produced on the banks of the Frith of Edinburgh in Clackmannanfire; where the townfmen are employed in loading them away, as well for Edinburgh as England,. and for the coift towns on the eaft fide of Scotland, fuch as Montrofe, Aberdeen, \&c.
Near thefe coal works are falt-pans, for the making and boiling of falt, which is made in fach quantities, as occafion a very great trade.
And, although they abound with great quantities of fir timber, aid whict is very fir for Ahip-building; yet, as mott
of it lies ton remote from water-carriage, fo much advantage is not made of it as could be wifhed.
But the great fupports of the people of Scotland are their limnen manufactures and their fifheries; the firlt of which, fince the union, has been greatly encouraged; for the cutics on Scots limmen being taken off, and the wearing the printed foreign callicoes fince prohibited in England (infead of vhich the scots linnen is ufed, as it is very proper for taking the impreffion of colours and figures) greit quantities of i: are confumed in England, as well as in the Britifh plantations in America; and by the great increafe of this manufacture, the poor of Scotland are greally employed, and, in general, fubfift much more comfortably than before.
The finmeries of herring, falmon, and cod, or white filh, which lie at their very doors, and might employ an infinive number of hands, they have not fo indufrioully attended to, 'till lately, as might have been expected; yet the falmon and herring fitheries have certainly turned to good account; and it is not to be doubted, but their filheries in general will now be profecuted with all needful vizour and zeal, fince the parliament has paffed an act, giving power to conftitue a joine fock company, for the carrying them on; which, 'tis to be hoped, will tend to enrich theie people, and prove an addition nurfery for feamen, of no little importance to the intereff of the united kingdoms.
The Scots export great quantities of their manufactures to the Britifh colonies in America, where, by virtue of the Union they are allowed a freedom of commerce; and in this tiade they are very much improved.
In fine, Scotland is increafed many ways in their trade, within a few years paft, as well in manufachuring at home, as in merchandizing abroad. And, if they are effectually fupported in carrying on their ftaple manufacture of lineen and their fifheries, they might, in a few years, grow rich in proportion. Their only lofs feems to be, that their fictation is too far from the court and the metropolis; the one too much taking away their nobility and gentry, and caufing their money to be fpent from home; and the other, being too diftant, cannot fo effectually take off the product of their country, which makes the corn and cattle of Scotland, though much of it goes to England, yet not fell at fo good a price to the hulbandman as if it were nearer to London.
The falt of Scotland ought to be mentioned alfo as a produce, rather than a manufacture, as it is in England: and we fpeak of it again, becaufe, as it is efteemed ftronger and better than that of Newcafle, fo it cures their fifh better, and is more defired abroad; and great quantities of it are exported every year to' Germany, 'Norway, and to the Baltic. Thus the remoteft parts of Britain are furnihed for commerce, and every part of it has it's peculiar advantages, fomething to employ their poor at hone, and fomething to fupply for merchandize abroad. And Scotland has this particular happinefs in its commerce, which England cannot boaft of, nor hardly any other nation in Europe, viz. that, in every fingle branch of it's trade with other nations, the ballance is to her advantage, that is, fhe fends out more in va-lue than the receives back, and, confequenty, mult have the difference made good in money : fo that Scotland may be truly faid to be daily increafing in riches, by their trade. The ballance of mere trade between Scotland and England is alfo manifefly to the advantage of the former, the goods they receive from the latter bearing no proportion to thofe they fend from the former; thefe confifing chiefly in woollen manufachures, of the finer forts only, and fome filk; in the room of which England takes off their wool, their cattle, their linnen, their mullin, their corn, and very great quantities of almott every fpecies of their produce, except filh and fatt. It is to be obferved, alfo, that, by this increafe of commerce in Scotland, they are very much increafed in fhipping, and that they build, as well as buy, fhips continually, efpecially for the Weft-Indies, and the fouthern commerce; an article which is neceffarily followed by an increafe of feamen, and an increafe of employment and bulinefs on thore; for the building and fitting out thofe ff: ips is many ways beneficial to Scotland. Their chief want is of good large timber ; but their eaft-country thacie begins to fupply that to their advantage, by making an eafy and larger return, as back-freight for their flips which carry out their fifh.
By this means Scotland muft neceffarily increafe in wealth, and pofterity will difcern it. Nations do not grow rich at once: time, and a long feries of concurring circumftances, bring it to pafs. And, as Scotland receives the overplus of it's commerce from all the nations wherewith they have any, the effect muft neceffarily difcover itfelf in the people, by living better and eafier than formerly, and, in time, becoming as wealthy in proportion as England iffelf. For a more particular account of this trade, fee the feveral countics and fhires in Scotland, and the general article of Scotiand.
The next point that falls under our view is the crade of Ireland, as belonging to the crown of Great-Britain; which we fhall, alfo, in this place, confider in a genera! light, and how it is conneded, or otherwife, with the intereft of England:

## BRI

Imeland is an iland, and lies between longitude 5. 40. and 10. 37. Weil from Loindort ; and between north latitude. 5 : 10. 37. wear 20. It is feparated from pait of England and cotland by St George's, or the Itith Channel, on the eaif as the Scots weftern illands on-the north and north-eatt the mouth of St. George's Chanbel on the fouth; and the Atlantic Ocean on the weft.
The foil, in general, is fitter for grals and pafturage than tillage, the grafs in fume places being fo long, and fyweet with al, according to Dr Beale, as woyld furfeit their cattle, if they were not reftrained; and in other places their foil is fo very fat; as not to admit of being danged. Though a great deal of wood has been cut down to make charcoal for the iron-works, and many hundred acres of bogs drianed, of ate years, which are now exoellent meadows and corn-fields, yet feveral great woods are flill remaining in Ulfter, \&x. and ther parts àre ftill incumbered with bogs of different forts the deepeft: of which are impaflable in fummer, except fuch as have fome paths of firm ground, which are known only the ratives apd hake, as they tread on them, for which reafon they are called thaking bogs, Scc.
Here are a great many iron-mines, but they have been chiefly difcovered and made ufeful by the Englifh, who have been confiderable gainers by them, fince the reign of queen Elizabeth. Of thele there are three lorts, the rock mine, the og-mine, and the mountain-mine. The firt, as it lies near the furface, is. dug out with very litule charge; the ore is full of good tough metal, if the operation of fmelting and refining it be fkilfully performed ; but, in the fmelting thereof, it muft be mixed with other forts of-ore, becaule it is too ftub born to melt properly by itfelf, and choaks up the furnace, unlefs ores more mellow and more kindly for fufion are intermixed therewith. The fecond fort is hewn with little trouble from the rocks; it is not fo rich as the former; and the iron is fo brittle that is farce fit for any thing but plow-fhares, unlefs it be mixed with fome other more malleable forts, which, it mult be obferved, is to be done by melting of the ores together. The mountain ore is tough, of a middle fubfance between the other two, and, in many parts, affords iron no ways inferior to the Spanifh. Dr Beale fays, that they had confiderable mines of lead too, which were very promifng, before the Irih rebellion, but that they were deffroyed by the rebels, and never duly improved fince.
Here are feveral ridges of hills, from io to 50 miles long ; many of which abound with good pafture and arabloland; and the tops and fidos of feveral of' them look às if they had been plowed. : Some of them are very high, particularly between Dundalk and Carlingford. It may be faid of the country in general, that it has as good pafture as any in Europe, had abundance of good corn. Their own cattle are generally fratl, but thofe brought from England thrive exceedingly well. Here are many quarries of free-ftone, marble, flate, flint, and fea coal ; but their principal fuel is turf, only in towns near the coaft they are fupplied with coal from Enge land and Scotland. Here are alfo fome glafs-works, but they have their fand for making it chiefly from England.
Their chief commodities for exports are cattle; hides, furs, tallow, butter; cheefe, honey, wax, falt, hemp, linnen cloth, umber, pipe-ftaves, wool, and woollen-cloth, coarle rags, and thag-mantles, freezes, ratteens, camblets, fowl, variety of fith, as falmon, herring, \&xc. fome lead, tili, and iron. The chief riches of the antient Irifh confift in their numerous flocks of fheep, which they fhear twice a year ; great herds of black cattle; and abundance of fmall horfes, noted for their foft and round amble. Here is variety of game of all forts, but the Irifh gentry are not fo fond of hunting as the Englifh. Though they have-rain generally all the year, except about five or fix wecks fair weather in the fpring, yet the inhabitants are as healthful, and as long-lived, as their neighbours; and though, in fummer, it frequently rains fome days together, to the great hindrance of the maturity of their corn, \&c. as well as of their gathering of it in, yet there is as feldom a dearth here as in any country whatfoever, and moft years they bave not only enough for their own confumption, but for exportation.
It has been obferved by fome, that Ireland is treated by the Englif as a conquered country in nothing more than in matters of trade; and that they are, as it were, compelled to carry a high hand over them in this article, from the principle of felf-prefervation; by furprefing and prohibiting the export of the Irifh minufactures, to prevent the ruin of their own. It is certain that the Irifh have not only wool, fuller's earth, \&ic. to as great perfection as the Englifh, but have abundanty the advantage of them in the manufacturing it, by reafon of the cheapnefs both of the materials, and the labour of the people, owing to the greatcr cheapnefs of the common neceffaries of life. Thofe who attempt to juftify the Englifh for preventing the Irih from running into the Britifh manufactures, urge, 1. That the peopling of Ireland (the native wild Irifh excepted) was from England, and under the pro tection of the Englifh power. They ought, therefore, fay they, to enjoy the country upon the Englifh terms, and not ufe the advantages given them there to the injury of the people that firt fetted and fupported them, as would be the cafe, if
they: fell into the Englifh manufactures. i, They fiy that the fheep, which now yield them fuch a, prodigious fleece, were fitt carried from England; and, as this was at a time too when their exportation was prohbted to all the reft of the world, they ought not; in juftice to England, to emp'oy the produt of thole ficep to the difadvantage of ther bencfactors, or to run into a trade which is fo far the popesty of England (as to them) that they cou'd have ne right to it, but: what they muft derive from the Englifh. On thele foundations, it is faid, that the Englifh have, by agi of pallament, reftrained the fnhabiants of Ireland from exporting any-of their woollen manufactures to any part of the world, except to Fingland. How juit and conclufue the foregoing reafoning is, we leave to the reader's own determuation. Whence it is that the woollen manufactures of the Irifh are not to be reckoned any part of their foreign trade, except to England only. In return for this, and to make them fome compen:fation, they are adaitted not only: co bring their wool to England, but alfo to manufacture it in part; that is, to fpin it ; and very great quantities of their yarn are imported into GreatBritain in a year: and the very laft foffion of the parliament of Ergland an act wa paffed to open the port of Great Yarmouth, for the importation of wool and woollen yarn from Ireland ; the motive to which fignified, in the preamble, to be of great utility and advantage to the woollen manufacturers in that part of England, by rendering the conveyance of theice materials to the feveral towns and places where the faid manufactures are carried on, more eafy, cheap, and expeditious. The Irifh, who think the before-mentioned reftrictions in regard to the woollen manufacture a bardhip upon them, have long clandeftinely exported their unwrought wool to France ; which, perhaps, has proved more prejudicial to England than if they'had been permitted to manufallure the fame in Ireland. But confidering thofe seftraints, it is no wonder that the trade of Ireland is very much contracied, compared to what it would h.ve been, was the cafe otherwife. The common trade.of Ireland, except the article of linnens; therefore, is to be confidered as almolt contined to the provifions that are the mere puoduce of their lands; of which, as they have extraordinary plenty, fo they have a very great, and very profitable, trade with ithen. They trade conide. rably to Flanders and the Low Countries, efpecially for butter, tallow, and leather; but chiffly for butter, of which the Flemings buy large quantities; fo that the lrifh fend many thips at-a time to Otend, laten wholly with that commodity. They drive a confiderable trade to France, alfo, with their barrelled beef (with whish the French vilual their men of war, and fuch of their merchant hips too, that are bound for long voyages) befides the returns which they make from thence for their wool.
As for their herrings, of which they catch great quantities on the north fide of the kingdom, vize on the coaft from Belfalt to Londonderry, they chiefly fend them to Spain and Portugal. With regard to their linnen manufacture, which is fo exceedingly increafed of late years, for which they not only fipin the yarn themfelves, to a far greater perfection than could have been expected in fo few years, but they raife a great part of the flax themfelves; and, it is to be hoped, will be able to raife the whole. Of their linnens, they, as well as the Scots, fend great quantities to the Britifh colonies, and import it into England duty free.
The Irifh alfo buile very good thips, and have exceeding good harbours, in which many Englifh merchants cluufe to build, their oak being very good, and plenty.
From the mouth of St. George's Channel northward, they finh fometimes with 100 fail of large fifhing boats togetber. Befides herrings, they catch fome white fin. They bave all their coals, except a.few in Kilkenny, which is far within land, from England; as alfo all their copper, block-tin, and lead, from Lancafhire, Flinthire, Cornwall, Devonhire, and Yorkfhire. They import their hops, and great part of their Weft-India commodities, with all the bulk of their mercery, grocery, and baberdafhery wares, \&c. from England.
Having, with what brevity I could, run through the chief branches of home trade of England, Scotland, and Ireland, as they are chiefly carried on within themfelves, and as they have relation and dependency on each other, there remain two other points to be confidered, in order to complete our general furveg of the commerce of Great Britain within herfelf: the one of which is that of the Britifh colonies and piantations in America, and the trade botween them and England, Scotland, and Ireland; the other is to take a view of the foreign trade of theie kingdoms in general; and to conclude with our remarks upon the whole.
The exportations from England to her American colonies, confint of almoft all the necellaries and conveniencies of life, provifions chiefly excepted; yet large quantities even of thefe, fuch as beer, brandy, flour, meal, cheefe, are fent to the ifland colonies in particular, though no receffary provifions are fent to thofe on the continent, they having plenty within themfeives.
But our continent, as well as ifland, colonies, are furnithed from England with materials for wearing apparel, houthold

## B R I

## B R I

forniture, filk, woollen, and limen manufactures, iron, cor-dage, and fails, great guns, fmall arms, ammunition, lead, brafs, iron, and teel, whether urought or unwrought; in a word, England furnifhes them almoft with every thing needful for the luxuries, as well as conveniencies, of life, except provifions, as before obferved.
The exports to our plantations from Scotland and Ireland confill principally in linnens of their own manufacture; and from Ireland they fend alfo a confiderable quantity of beef, butter, and pork, to the ifland colonies.
The imports from the colonies, in return, are of various kinds, according to the feveral places from whence they come.
From Hudfon's. Bay are brought chicfly furs and fkins, of divers forts, fucb as beaver, bear, deer, \&c. which are the materials for the carrying on feveral capital and profitable branches of our manufactures. See the articles Hudson'sBay Company.
From Newfoundland, cod-fifh and train oil, which fupports a great part of our fifheries, breeds feamen, and greatly improves our navigation. See the articles Newfoundland, and Fisherie:.
From New England, furs, whale fins, and oil for our woollen manufacturers, drawn from the whale, and fome from the white-fifh; tar in large quantities, turpentine, cod-fifh, plank, pipe-flaves, hogfhead-ftaves, cedar, \&c. Sea British America.
From. New York, and both the Jerfeys, the fame as from New-England, except cod-filh.
From Virginia and Maryland, tobacco, faffafras, farfaparilla, fnake-root; and various other medicinal drugs.
From Caroina, furs and $\mathfrak{k k i n}$, efpecially of deer and bears; tar, pitch, and rice; the latter the principal product of this colony
From the ifland colonies in general, viz. Jamaica, Barbadoes, St Chriffopher's, Nevis, Montferrat, \&c. fugars, Molaffes, rum, indigo, cottrn-wool, ginger, pimento, cocon, preferves, citron-water, and great variety of drugs. See the articles Antilees Íslands.
From Bermudas, cedar-boards, and floops built there. Sce Bermudas Islands.
Frem the bays of Campeachy and Honduras, by way of New England and New York, logwood, fultic, and Nicaragua woods. See Logwood.
The trade of thefe plantations with each other is not inconfiderable; for, as thofe on the continent abound with provifions of all forts, fuch as wheat, flour, peafe, beanis, beer, malt, oats, barley, beef, pork, bacon, falt-fifh, rice, and alfo with horfes, and lumber, viz. timber, deal-boards, pipeftaves, "\&c. and, as there is a great fcarcity of all thefe in the ifland colonies, fo thofe on the continent are continually fupplying the iflands with thofe particulars, and make their returns in rum, fugar, molaffes, \&c.
The act of navigation, as it is commonly called, reftrains the Britifh colonies with regard both to exports and imports, from trading to any part of the world except to their mothercountry, but under certain reftrictions and limitations.

## REMARKS.

Before I conclude this 隹帾h of our plantation trade, we fhould not, methinks, omit the branch of the African trade; for, although we cannot be faid to have any colonies in that part of the world, yet our fettlements, forts; and cafles, give us a right to attempt them, if ever it fhould be judged cligible. Our African fettlements, however, being the means of fupplying our colonies with negro labourers, for the cultivation of fugars, rice, rum, molafles, tobacco, cocoa, coffee, \&c. our American poffeflions may be faid, in a great meafure; to depend upon our trade to Africa; which employs no inconfiderable quantity of fhipping. Nor is the trade to Africa, confidered abitractedly from the flave-trade, of fraill advantage to this kingdom, and might, perhaps, be rendered highly more fo, when the nature of that trade comes to be confidered in a different light from what it hitherto has been. See the articles Africa, African Islands, Azores Islands, and fuch heads as are from thence referred to. Under the article America, we have given the Definitive Treaty, concluded betgeen Great-Britain, France, Spain, and Portugal, in the year 1763; by which it will appear what great alterations that treaty has made in our American affairs, fince the fecond edition of this work was publifhed; it having annexed all Canada and it's dependencies to the Britifh crown, and likewife Florida, and therewith the ports of St Augustine, Pensacola, and Mobile, and the right of navigating the Mregissippy in the gulf of Mexico, which acquifitions will certainly, in a little time, give quite a new face to our commercial concerns in all North America, and doubtiefs very much to the benefit and advantage of the whole British Empire. See the articles America, Bahama Is. zands, Bretish America, French America.
The fame Definitive Treaty of ${ }_{7}{ }^{6} 63$ has alfo annexed to the British Crown, all the Neutral Cariebee filands, except St Lucia, viz. St Vincent, Dominico
ard Torago; and in the lieu of that, we have obt ined the Fiench ifland of Grenada and the Grenadines. The national utility and emolument of thefe ncw acquifitions are likely to prove no way inconfiderable to Great-Britain hereafter. See the articles America, British Americia, Colonies, Plantations, French America.
That fareign trade may impoverifh, as well as imrich, a nation, has been fhewn under the article Ballance of Trade yet without foreign trade, thercfore, be purfued upon principles which will render the fame beneficial to the tate, muft we not be daily declining, in treafure and maritime ftrongth; and confequently, in time, give our enemies and rivals, an opportunity to bring us under their yoke? Wherefore the fludy of trade is a matter of the lail confequence to thefe kingdoms. And, to anfwer the great end of defence and prefervation, it fhould be ftudied both in a practical and a political light; the former to accomplifh our traders in general to extend commerce for their private intereft, the latter to enable us fo to regulate the fame by wife and falutary laws, that the nation may be gainers, not lofers, by it. On what maxims of policy this depends, fee the articles Artificer, Asphaltum, Manufacturers, Royal Society, Trade, and fuch other heads as we from thence refer to.
How to judge, alfo, when a nation gains or lofes by it's trade with particular nations, and how it flands upon the general ballane, fee the general articles Ballance' of Trade and Exchange.
As the nature of trades with particular countries varies, nor are all alike beneficial; therefore, to judge of the good or ill confequences thereof, it is neceflary to indicate the certain figms and characteriftics of advantageous trades.
That trade which exports manufactures made of the product of our own country, is certainly profitable, feeing it employs our poor by taking off our fuperfluities.
The trade which imports foreign materials to be manufactured here, efpecially when they are procured in barter for our own commodities; and when the goods, after they are manufactured, are moftly fent abroad; is doubtiefs bencficial. That trade may be called advantageous which exchanges manufactures for manufactures, and commodities for commodities; and an importation of commodities bought partly for money, and partly for goods, may be of national benefit, if the greatent part of the commodities thus imported are again exported.
All imports of goods which are re-exported, may be generally reckoned beneficial to a ftate; and the carrying goods from one country to another cannot be otherwife, as it increafes our feamen and fhipping, and gains us the freight.
Thefe being fome of the figns, which are generally agreed on, of a beneficial trade, it may be neceffary to oblerve a few general maxims, whereby to try the value of every particuJar trade. And,

1. As we have no gold and filver of our own produce, fo all we have muft be imported from other countries, in exchange for the product and manufactures of our own: and, as we gain gold and filver from thofe countries which do not fell us fo great a value of their commodities as they take from us, but pay the ballance in money; fo we mult pay a ballance in money to fuch countries as fell us more commot dities in value than they take from us, and the capital ftock of bullion is diminifhed by fuch a commerce, unlefs the goods we import from an over-ballancing country be reexported:
That we are mof inriched by thofe countries which pay us the greateft fums upon the ballance, and moft impoverihed by thofe which carry off the greateft ballance from us:
That the trade of a country which contributes moft to the employment and fubfiftence of our people, and to the improvement of dur lands, is moft valuable:
That the trade which leffens moft the fubfiftence of our people, and the value of our lands, is moft detrimental to the nation:
That, the country which does not fell us fo great value of it's commodities as it buys of our's, contributes the whole of the ballance to the employment and fubfiftence of our people, and to the product of our lands:
That the country which fells us more in value than it purchafes of us, takes the whole value of the ballance from the fubfiftence of the people and the landed intereft :
That, therefore, the ballance which is either paid or received by means of our trade with any particular country, is one certain medium to judge of the value of that trade; for every particular trade with other nations contributes fo much to the fubfiffence of our people, and the improvement of our lands, as the ballance it pays to us, for the greater value of commodities we fell than buy: and it deducts fo much from both, for the greater value of commodities we buy than fell, as the ballance we are to pay amounts to:
And, lanly, that every country which takes of our finilied manufactures, and returns us unwrought material;, to be manufactured here, contributes to far to the employment and fubiffence of our people as the whole coft of manufacturing thofe materials, See Trade.

By thefe obvious maxims, which have been granted by all who have had ary knowledge of commerce, we fhall comwho have our chief branches of foreign trade; whereby their bepare our chief branches, or otherwife, to the nation, may be judged of.
And, 1. Our trade to Portugal. The goods we fend thither are broad cloths, druggets, baiz, fays, long-ells, perpets, callimancoes, and various forts of wortted ftuffs, filk, worfted hofe, hats, tin, lead, leather, fifh, corn, and divers other Englifh commodities. Our returns from thence are great quantities of wine, oil, falt, and fruit; by which means their fpare lands, fince they have had the fupplying us fo largely with wine, are greatly improved.
Since the war in queen Anne's reign, it is certain that we have very confiderably increafed our importation of their wines; which is more our intereft to do than to have them from France, whence our imports have been always more than our exports would pay for; and to Portugal our exports are rather greater than their returns, efpecially fince we have defifted from importing their fugars and tobacco, commodiiice wherewith we are far more advantageoully fupplied from our plantations in America; and we are now able to furnifh foreign markets cheaper than the Portuguefe can, or as cheap as the French, if our plantations were upon a footing equally beneficia! with theirs. See the articles British America, and Plantations.
The Portugueze were formerly the great navigators of the world, as appears by their many difcoveries, both in the Eaft and Weft-Indies, befides the feveral illands of the Azores, Cape de Verd, and Maderas, where they have fettled colo. nies. To thefe they admit us a free trade, but referve their remoter fettlements on the continent of Brazil more ftrictly to, themfelves, whither they export many of the commodities which we fend them.
Their inands we fupply directly with our manufuctures, and from the Azores load corn, woad, and fome wines, which we receive in barter for them; the firft we carry to the Ma deras, where it is again bartered for the wines of the growth of that illand, which are fhipped from thence to our plantations in America.
As the Portugueze are not now the navigators which they formerly were, to neither are they great manufacturers; fome forts of coarfe cloth they do make, which is often fhipped to the iflands of Maderas and the Azores, where it is preferred before any other of the like goodnefs, becaufe of their own manufacture; and they have atiempted the making of baiz, for which they drew over fome of our workmen; but it foon came to an end, our workinen returning home by due encouragement. being given them here: fo prudent is it to ftop an evil in the begraning.
Upon the who'e, fo large is the quantity of Portugal wine imported into England, Ireland, and our plantations, from the Maderas, and alfo the quantities of oil, falt, and fruit, that, notwithftanding the appearance of a little Portugal gold among us, the ballance is certainly far lefs in our favour than is generally imagined; for the French and the Dutch have of late years greatly interfered with us in that trade; which is well enough known to the Britih factory at Libon; notwithitanding, it is faid, the court of Portugal have lately, treated our- Britifh merchants in that kingdom with a behaviour contrary to the laws of nations, and fubfifting treaties, and which the Englifh nation does by no means merit from that. But we do not doubt but every caufe of mifunderftanding will be foon happily prevented, fince the Portugueze have fo lately experienced the powerful friendfhip of Britain in time of need. See the atticle Portugal.
z. Our trade to Spain. The goods we export thither are broad cloths, druggets, callinancoes, baiz, fays, perpets, fuffs of divers kinds, cotton, worfted, and filk hofe, fifh, leather, tin, lead, corn, \&ic.- The commodities England takes from them are wine, oil, fruit of various forts, wool, indigo, cochineal, and dyeing ftuffs of feveral kinds, drugs, iron, cocoa. The bulk of the commodities we take from them are the produce of their own country, viz. wine, oil, and fruit, \&c. fo that the Spaniards pay for our woollen, and all other products, at a very eafy rate; and, if it were not for the great confumption of Spanifh wines, fruis, and oils, \&c. in England, their fales of thefe commodities would amount but to a trifle, they having no nation for their cuftomers but us, Holland, ànd a very fmail matter to Flanders, Hamburgh, and the Baltic.
It is computed that we take off above two thirds of the whole ; to that, although we are obliged to the Spaniards for their cuftom in our manufaclures, they are no lefs obliged to us for taking off their produce.
Formerly was received a great ballance from them in bullion; but fince the houfe of Bourbon has filled the Spanifh throne, and introduced French fuffs and fafbions, we have very great reafon to believe the ballance is but very fmall in our favour: and, according to the fyftem latei'y adopted by that court, it is likely to be lefs, if not to be turned againtt us, unlefs we turn the tables upon them, and take lefs of their wines, oils, and $f$ frits, \&c. as they givelefs encouragement to our manufactures. Their attempring the feheme of the late duke de Ripperda, by fealing away our woollen manufactures, $I$ am afraid forebodes bio rood to this nation. See Biscay, and Spain.

VrL. I.
3. Our trade to Italy. The goods we fend to that country are, viz. ferges, baiz, druggets, perpets, fays, kerfies, Spanifh cloth, long cloth, fuffs, flannels, lead, tin, and finh; pepper, and other Eaft-India goods. The commodities which England takes from them are oil, wine, raw, thrown, and wrought filks, foap, olives, anchovies, cutrants, paper, drugs, and dyeing wares.
Within thefe 20 years we received a confiderable ballance by the Italian trade in gencral; but the French having ftept in here, too with great quantities of their woollen manufactures, and alfo having got a part of the fifh trade; and as we import great quantities of thrown and raw filk from thence to carry on out manufactures; the ballance is certainly now againt us.
The Italians have an excellent method of throwing their filk, by a water-engine, which, with a few hands to attend it, will do more work than a hundred perfons can do at throwing, according to our common method. Indeed, fine Italian raw filk cannot be thrown with that exafinefs and delicacy required, by hand, as it can be by an engine. We have however, been fo unfortunate as never to have had any fuch engine, 'till of late years, and there is but one complete in the kingdom ; though fhorter ways of labour will render our manufactures cheaper: which, therefore, is one great point not to be neglected in this kingdom.
Both Venice and Genoa have made fome attempts on a woollen manufactute, being furnifhed with wool from Alicant, and thofe eaftern parts of Spain.
4. Our trade to Turkey. The commodities this trade takes from us are chiefly broad cloth, dyed in collurs. férges, long ells, tin, lead, and fome iron; and the Englifh merchants frequently buy up French and Lifoon fugars, and tranfport thither, as well as bullion from Cadiz. Our returns are chiefly raw filk, grogram-yarn, cotton-wool, and cottonyarn, goat's-hair, coffee, dyeing goods, and drugs of fundry forts, fcap, leather, fome fruit and oil.
The Turkey filk is only fit for the dhute of our fine damafks; and other coloured filks, and for making filk flockings, galloons, and filver and gold lace; but it is not proper for the warp of any filk, not being fine enough; nor even enough for organzine, or double-twifted filk, that being all Italian, nor indeed even enough for the fhute; or woof, of black lufrings, alamodes, or paduafoys, the thute of that being alfo Italian.
Our returns, however, from Turkey, have been the foundation of feveral manufactures, different from our own, by the variety whereof we betier fuit cargoes to export agaiñ. See Turkey Company and Trade.
5. Our trade to Hamburgh, and other parts of Germany. The goods we fend to thore countries are broad cloths, druggets, long ells, fingle dozens, perpets, taiz, ferges, flaniels, worited hofe, and feveral forts of ftuff, tubacco, fugar, ginger, Eaft-India goods, tin, lead, and feveral other commodities, the great confumption of which is in Lower Germany. We take from them, even yet, great quantities of limien, linnen-yarn, kid-fkins, tin plates, and many other commodities.
Formerly we were fupplied by France with linnens; but; fince the high duty upon French linnens, the emperor, and other princes of Germany, have gained that manufacture, which has greatly inriched them. Notwithftanding the advantage they have by importing their linnens upon us, fome of them have prohibited feveral forts of our woollen manufaclures, and others have prohibited all; which at prefent gives them a ballance upon us.
6. Our trade to Holland. The goods we fend to this country are very confiderable, as broad cloths, druggets, long ells, ftuffs of various forts, leather, corn, coals, and fomething of almoft every kind which this kingdom affords, befides all kinds of India and Turkey re-exported geods, fugars, tobacco, rice, ginger, pitch, and tar and fundry other commodities of the produce of our American plantations.
We take from Holland large quantities of fine Hollands linnens, threads, tapes, and incles, whale-fins, brafs battery, madder, argol, clapboard, wainifcot, and a great number of other commodities and toys, pepper, and all forts of India fpices, fine lace, cambricks, Dutch paduafoys, velvets, and other wrought filks; yet, fo great is the quantity of our exports thither, that the ballance by way of trade only is confiderably in our favour. See Holland.
7. France takes from England large quantities of tobacco, horn plates, tin, fome lead, fome flannels, and corn in time of farcity. We take from them wine, brandy, linnen, fine lace, fine cambricks, and cambrick lawns, to a very confiderable value, as alfo brocades, velvets, and many other rich lilk manufactures, which are either run in upon us, or come by way of Holland; the humour of fome of our nobility and gentry being furh, that, although we have theie manufaclures made as good, if not better, than the French, yes they are frequently obliged to be callid by the name of French, to make them fell. Their linnens are run in upon us in very great quantities, as are their wine and brandy, from the Land's-End even to the Downs. Their brandics bave been fold from ${ }^{3}$ s. to $3 \leq 6 \mathrm{~d}$. per gallon, and their clarct from

[^3]3 s. to 4 s . the beft, though the bare duty of the brandy is 6 s .8 d . per gallon, and that on whe 52 l . per tun, or 13 d . per quart. This muft drain us of our gold and filver; for the fmugglers carry nothing oot but gold, filver, and wool, wherewith to parchafe thofe commodities. It is a misforiune upon us, that our intereft is not better confidered ; we might be fupplied with fine rum from our plantations, that would be more acceptable to our common people than French bran$d y$, provided the importation was fufficiently encouraged; then the nation would be fupplied with that firit from abroad at little charge, for it would not coll above 12 d . fterling per gallon abroad; and, in redity, it could not fland the nation in more than one fifth part of that; for it is thewn, under the article Plantations, that four fifths of all that is gained by them comes home to us. France, above all other nations, is the moft difadvantageous for England to trade with : it produces moft things neceffary for life, and ftands in need of very. little for luxury or convenience, fome few materials excepted, to help in carrying on the ir manufactures, the chief whereof are wool, and fome dyeing ftuffs.
8. Flanders takes from us ferges, a few flannels, a very few ftuffs, fugar, tobacco, tin, and lead. We take from them fine lace, Flanders whited linnen's, thread, tapes, incles, and divers other commodities to a very great value. But the Dutch, having the command of the mouth of the Schelde, do thereby fecure to themfelves, in a great meafure, the paffage of goods to and from Flanders through Holland; fo that it is difficult to judge what the ballance we pay to them amounts to. By the direct trade which is carried on by the way of Antwerp, the exchange indicates that it is in our favour.
9. Norway and Denmark take from us Guinea's, crownpieces, and bullion, a little tobacco, and a few coarfe woollens, of fmall value. We take from them vaft quantities of deal boards, timber, fpars, and iron. We pay them a large ballance; and their re-building great hips of burden (deftroyed in the war between them and Sweden) hats pretty well effablifhed them in the navagation and freight of their timber, which has increafed the ballance upon us. See Norway and Denmark.
10. Sweden takes from us gold, filver, and but a fmall quantity of our manufactures, or productions. We take from Sweden near two thirds of the iron wrought up and confumed in the kingdom; alfo copper, boards, planks, \&c. fo that the ballance now is conliderably to their advantage with England. Before they encouraged a woolen manufacture of their own, they took large quantities of our cloths; but, having loaded them with high duties, that trade is fince much more to our difadvantage. Sẹe Sweden.
II. Ruflia takẹs from us fome coarfe cloths and palaches, long ells, worfted ftuffs, tin, lead, and a few other commodities. England takes from Ruffia hemp, flax, linnen cloth, linnenyarn, Ruffa leather, tallow, furs, iron, pot-afh, rhubarb to a prodigious value; which turns the ballance confiderably againf us: and, having no other market to go to for hemp, where any great quantities may be had, they are paid their own price for what we take of them.
12. The Eaft-India trade takes from us great quantities of bullion, and confiderable quantities of our woollen manufactures, and various other commodities, which purchafe there, at very low prices, the products and manufactures of India and China, which are brought home in our own navigation; out of which we fupply ourfelves with mufins, callicoes, and other cotton cloths, as alfo coffee, tea, and raw filk; and fell to foreigners, it is thought, as many of the faid commodities as repay for all the bullion fhipped, and leave with us befides a very confiderable ballance upon that trade. See EastIndia Trade, and East India Company.
Bengal raw filk is bought at very low prices there, and is very ufeful in carrying on the manufactures of this kingdom. China filk is of an excellent ftaple, and comes at little above one third of the price of Italian Piedmontefe filk. The duty of Bengal raw filk being one third more, and China near three times as much, as that of Italian, hinders our being fupplied fo fully as we might, and is no little detriment to the kingdom; for we pay the duke of Savoy all ready money for what we have from him, which as effectually drains us of our bullion as the India or China trade does, with this aggravation, that almoft three pounds of China filk may be purchafed for the money that one pound of Piedmont filk cofts us.
Although fiver is not fent out diresly to Piedmont, as it is to India, yet in fact it is the fame thing; for the ballance of fome other trade is carried thither, which otherwife would be remitted to us.
The filk of China will anfwer, in moft refpects, the ufe of Italian filk, provided we could be fupplied with the fine raw filk whereof they make their damafks, fattins, and other fine manufactures, which, by the curiofity of thefe filks, muft come up to the goodnefs of Italian filk.
The China filk that we commonly receive is purchafed at Canton, the neareft pore we trade to in China; but their fine filk is made in the provinces of Nankin and Chekiam, where their fine manufactures are carried on, and where prodigious quantities of raw filk are made, and the beft in all China.

We have never imported any quantities of the fuperfine here, but two or three Chips have brought extraordinary good, the beft of which, we are informed, was brought from Amoy; and, doubtlefs, if encouragement was given for the importation of that fine filk, it might be thrown here, and our manufactures carried on ar a fmall expence to the nation. The countries of Chekiam and Nankin, that produce it, are much to the northward of the places that we now trade to, and near Chulan, about 5 or 600 miles to the northward of Canton, an illand in which we formetly had a factory, and were admitted to trade.
That country is very cold in winter, and fome of our woollen goods have fold very well there, efpecially our callimancoes and long ells.
Befides, the countries of Chekiam and Nankin are near the beart of the empire, where the greatelt trade is carrued on; and Nankin' being the metropolis of trade in that country, as London is in England, fhe fends out her manufactures and merchandize to Canton, as we do to Briftol, Liverpool, and other out-ports. But, as Canton is the neareft port, fome captains and fupercargoes have raifed objections againft going further down the coalt, alleging that it is a difficuit pilotage, and they are in danger of lofing their paffage back that year; that the mandarins, and other officers, impofe upon them, which makes it difficult to trade with them. But, when private traders had liberty to go to China, they were of another fentiment; they went to thofe places where they could get mof money; and the people of Chufan (where the merchants of Nankin, as well as of Hamcheu and Nimpo, two other great trading cities, lodge great quantities of merchandize) would be as inclinable to cultivate a commerce with our captains and fupercargoes as the people of Canton are; and it is little to be doubted but we might find as much encourdgeatent to trade to thofe parts, as we do now to Canton, their interelt being the farme among them all.
We have been affured, that feveral of our other commodities, as well as our woollen, would be very acceptable towards the heatt of China. If this trade could be duly eftablified, and any confiderable quantities of our produce and mahufactures vended in that populous and extended country; and could we alfo import that fine filk before intimated; it would exceedingly add to the profits we already receive by the India traffic, and would effectually enable us to vie, in the filk manufacture, with any nation in Earope; for, as cheapnefs and goodnefs always obtain preference, filk, fo imported from China, would anfwer in both thofe effential refpects.
The licences given by the prefent company to private merchants, to carry on a coafting trade in India, has proved of no little advantage to the kingdom in general; and may prove of far more, by finding out more markets in thefe parts for our European commodities. See East India Trade, and Companies.

## Remarks.

I. From this fhort narrative of the trade of Great Britain and Ireland, and of our American plantations, and Africa, among themfelves, fome judgment may be made, how far thefe kingdoms can be faid to be independent, in point of trade, from all the rell of the world: and, indeed, when it is duly confidered, what quantity of fhipping and watercraft of every kind, which are employed in our home coafting trade round our inlands, and likewife the fhipping employed to and from Great-Britain and Ireland to our colonies in America and fettements in Africa, and what quantity our colonies employ amongtt themfelves : when thefe points are well weighed, our feamen and tunnage of fhipping, would perhaps intitle us to the character of a maritime power, although we had no commerce with other nations. But,
If we had no commerce with other nations, and our neigh. bouring potentates had, and a commerce fo wifely regulated, that they were conftant gainers by it, and we only carried on a domeftic trade within our own territories, fhould we not be at a kind of fland with regard to wealth and power, while other nations were daily increafing both? Was this the ftate of things, would it be poffible to maintain ourfelves an independent people? Muft we not always be at the mercy of the moft potent neighbours, and become vaffals to their will?
Let any man, converfant with the world, pafs but a tranfient reflection on the ftate of mankind throughout the globe, and he will find, that fearce any thing prevails, but a confederacy of civil, ecclefiaftical, and military power, againt the liberties and properties of the whole human fpecies, except in the little fots called Great-Britain and Ireland, and their dependent dominions. And was it not the advancement of the commerce of this nation, in the days of that great princefs Elizaberh, that firt enabled us to oppofe thufe chains of havery, which were fo refolutely forged for us in Spain? And has not our trade and navigation, ever fince, been the only means whereby, we could keep pace with our enemies in riches and power, in order to defend ourfelves againt that tyranny and oppreffion, to which almof the

## B R I

## B R I

whole world is liable? Can any man confler the fe indifputable facts, and hefitate a moment, whether cur trade is not fill the only means left us, whereby we can protect ourfelves from that bondage, wherein other fates are involved? Since trade, the converfe with the world, is the honelt way to ftrengthen and enrich a nation, and the great difcourager of idenefs and debauchery, \&c. we being fituated by nature, and having genii proper for it's cultivations, ought to make it our ftudy to manage it to it's higheft capacity of advancement; which, if we would in earneft purfue, war itfelf would be fuch advantage and fecurity to us, that we Thould not only be out of danger from our enemies, but command the trade of the world; and, on the contrary, if that be neglected, all the miferies, attendants on llavery and po vert), that fhall happen to the nation, may be afcribed to our own improvidence and inachivity.
We contradict the received maxim, That men will attempt any thing for advantage, whilit we neglect proper methods for improving and encouraging trade; for no greater advantage can how from any fountain, or proceed from any faculty upon earth, than from that; for, where trade is, there will be employment; where employment is, thither will people refort; there will be a confumption of commodities, and thereby, as things'are at prefent circumftanced, the public revenue will be increafed: fo that, if we fupport ourfelves by a fiouribing commerce, we need not doubt but people from all parts of the univerfe would refort hither to enjoy themfelves and improve their focks.
We fee every day, that the convenient fituation of any eftate gives an eftimate, and raifes it's purchafe; and without convenience, life itfelf would be but a mere fpiration, fcarce worth the valuing: England then moft certainly deferves to be valued and preferred to all nations on the earth, having both to fo great advantage.
'Tis an inland placed as a center to the circular globe, towards which, trade may draw a line from the whole circum ference; 'tis bleft with a moderation of every element; no fcorching fun negroes, nor frigid zone benumbs, it's natives, but a medium influence ftrengthens and beautifies it's inhabitants, who are of regular thapes; neither an unwieldy nor pigmy breed, but fit to endure the toils of war, or peaceful Jabours on the land: our climate is fo moderate, that the fun neither exhales, nor the cold phlegmatics, the-fpirituous parts, but allows. a temperature between both; fo that our native imaginations are neither too airy for confideration, nor too dull for invention; it's foil is mixture and productive, and, where barrennefs appears on the furface, the bowels are enriched with valuable manes, $2 c$.
No Alpine mountains, nor Holland bags, but a delightful variety of hills and dales, compafs the land; fo that, when the parching fun burns up and chaps the higher lands, the humble meadows thrive with verdure ; and, when mighty fhowers drown the vales, the hills grow fruitful by watering; our lands, when tilled, produce a grateful plenty in return to la bour; our trees in general are lofty and well topped, afford us all the conveniences that we can expect ; our kingly oaks fo firmly rib our fhips, that our royal navy, if duly fupported by the effects of a proiperous national commerce, will ever prove an invincible bulwark to any daring foe; our fruits are pleafant and ufeful for fupport; our cattle large, healthy, ftrong, and numerous, which are as good as the world produces, for labour or for food; their fkins are firm, and of fo contracted pores, that better leather is no where to be met with. Our wool is very good, and, if duly regarded, would equal the boafted Segovia; 'tis the parent of our chief manufactures, and gives us a plaudit in our cloth, baiz, fays, ferges, \&c. throughout the univerfe. We have fowl in plenty, and that plenty good. In the bofom of our native earth are hid riches, which are eafily obtained by the artift and laborious, as tin, lead, copper, iron, coals, \&c. Our land is plentifully veined with rivers, refrefhing the earth, affording varicty and plenty of fifh. Nature has made fuch a paradife of the land, that we hew ourfelves ungrateful to the divine bounty, when we are negligent of the bleflings it hath liberally beftowed. In fhort, the nation is a verdure-field indented with harbours around it, where our hips, from their natural fituation, may ride out the tempeftuous fform.
The fea, by providence, is a wall which furrounds us, to defend us from the Pharaoh that would enflave us; 'tis champion and fervant too, for by our fhips furrowing it's waves, we fend our plenty out, and bring the riches of the molt diftant parts of the world into our poffeffions.
Ought we not to be grateful, when we confider the bleffings we enjoy, and the opportunities that are given us to improve them larther to our advantage? 'Tis wonderful to think, how feveral forts of fifh, in numbers innumerable, at certain feafons, vifit our coafts by divine appointment and natural in finct, for our fuftenánce; and day by day are ready, not only to furnifh us with food, but alfo to be made merchandize of to the enriching of the nation.
-Tis very obfervable how heaven bleffes us by the courfe of the wind, that commonly blows wefterty for above hulf of the year, which makes all our cape lands and bays, ioppofite to the French and Dutch coafts, good roads for our hips to
ride with fecurity ; for we are on the weather, and the French on the lee fiore; befides, our anchor hold is much better than either the French or Dutch; for we have generally a fiff clay, chalk, or hard gravel, whill the French bave only hard rocks, or loofe fands; the Flemifh and Hollanders more number of fands on their coatts; their water of lefs dipth, and confequently their ports choaked up with quick fands; when our filips ride fafe, even between our fands, by our country's being a weather thore.
Thus, in epitome, we fee what a rich heirefs with an immenfe fortune we enjoy, by the gift of the great Father of the uriverfe; but we hhould confider, when this portion was given, gratitude and duty were expected, that it might defcend as a jointure to our pofterity: but, inflead of fuch returns, ungrateful we, by indolent and vicious lives, forget the obigation from the donor; and, regardiefs of our prefent profperity, neglect the means to improve the talen intrufted to our management; and, the greater the truft is, the greater will be expected our improvement; wherefure let us no longer dally, but ferioully amend, and, to our power, ufe the means put into our hands, to make us a profperous, a powerful, and a happy people; which can be done by no honefter way, than by trate and indulfry.
And trade is fo noble a mafter, that it is willing to entertain all mankind in it's fervice; and has fuch variety of employments adapted for every capacity, that all, but the lazy and fupine, may fupport, at leaft, if not enrich themfelves; it's agents are every-where laborious and induffrious; but in our Britifh empire may be enriched, by manufacturing and improving our own and foreign products, and be defended by the increafe of our fe men and finipping; which, if duly employed, can never be too many, being always the conveyors of our riches, as well as ftrength of this nation: as all the felicity and glory of Britain depend upon the encouragement and good management of trade and navigation, fo it's ruin and confufion muft be the confequence of their neglect.
It is not a wonder, that fchools, univerlites, inns of court, and colleges, hould be fo careful to have regulators and infpectors for the better government and direction in therr feveral faculties, that are not in comparifon with the fruits of a duly regulated trade, by which they are all maintained ; yee trade, that gives warmth and motion to the blood, a d frefh fpirits to every part of the nation, from the meaneft cottare to the royal throne, that provides, under God, our dily bread, is in a manner unregarded, and withous a due inpection, regulation, and encouragement! Nowwithfanding this great lady (affecting freedom and fecurity, hath no inclination to continue under the arbitrary power of France, nor the uncertain fate of Holland, with whom the hath refided only as a fojourner, though fhe hath been very highly careffed and embraced by them) is ready to efpoufe both our intereft and nation, and with herfelf bring in dowry the treafures of the world; if we would voucifafe to give her an encouraging entertainment, being very fenfible of the great advantage we might in return give her, by fo abfolutely fecuring our free enjoyment of liberty, that there might appear a certainty of it's continuance to poflerity, and by having our civil rights and properties maintained; fo that the nation may not be depopulated, both by difcouraging ingenious artifans and maqnufacturers from repairing bither, and by forcing our own out of the country to feek bread and protection elfewhere, and by cramping the induftry of others that fhall remain; which has certainly been the cafe, and the French and other ftates have had the wit to take the advantage of our negligence, by encouraging induftry and commerce to an amazing degree in every branch of it, by which means they became fo potent and dangerous to all Europe, before the Definifive Treaty of 1763 has fomething curbed them. How abfolutely neceffary is it then, that all poffible endeavours be made, to ftudy the ableft means and methods for the improvement of trade; which alone can give employment to our poor, and prevent robberies and murder, which are an ignominy to the nation, more effectally than any penal or fevere laws whatfoever?
With all thefe fuperior natural advantages, we cannot be hurt but by ourfelves; 'tis our folly only that can undo us. Had the trade of this kingoom been effectually encouraged, foreigners could not have diverted it's courfe as they have done, unlefs thefe natural advantages were annihilated; and they may as well attempt to link our iflands in the ocean, as, while they remain, to deprive us of the benefits refulting from their fituation and produce, if we take only a refolution to open our eyes; for, although our w unds were, before the late peace really deep, with the weighty incumberance of our debts and taxes, yet we are far from apprehending they are in urable, though our public debts are fo greatly augmented by the laft war.
That many branches of our foreign trade are now carried on to the difudvantage of the nation, which a few years lince were greatly for it's benefit, is certain from the courfes of exchange; for by Llyod's lift now before me, of the 2 Ift of April, 1752, I find that
London gave to Venice for the ducat banco $5 \mathrm{I} . \mathrm{d} . \frac{3}{4}$
tondon gave to Leghorn for the dollar Genoa for the dollar - 4

## By Sir Iface Newton's Tables.

$V$ enice the par is 49 d .492 dec .
Lofs to England about $4 \frac{1}{2}$ per cent.
Leghorn, the par is 51 d .69 dec.
Gain to England, about $x \frac{2}{3}$ per cent.
Genoa. Although the exchange is at prefent in our favour, yet as this is owing to the unhappy fituation of their affairs at prefent, which is likely to be onfy temporary, no judgment can be made from thence at this jundture.

April 21, 1752.
London gave to Lifbon for the milree, 5 s. 5 d. $\frac{7}{8}$
The par of exchange is 67 d .166 dec. Gain to England not 2 per cent.

## London gave the pound fterling to Antwerp, for 36.5

The par is 35.17 dec . Gain to England about $3 \frac{7}{8}$ per cent. Lóndon gave the pound ferling to Amfterdam, for 35.4 .2. The par is 36 s . 59 dec . Lofs to England about $3 \frac{1}{2}$ per cent. The occafion of which lofs upon the ballance with Holland, it muft be obferved, is not only the intereft money, which we pay them for the millions they have in our public funds, but the remittances made through Dutch hands to pay the ballances of feveral branches of trade that are againft us; all which affects our whole trade to Holland at a difadvantage to England of $3 \frac{5}{2}$ per cent. and confequently the fame to their benefit; which, added to the interef money England pays them as national creditors, drains us very confiderably. And, as the continuance of thefe caufes will always keep the exchange in our disfavour; fo likewife their difadvantageous exchange proportionably affects our whole commerce to thefe countries, with which we negotiate our money affairs by exchange, through the medium of the Dutch exchange, which adds fill more to the difadvantage of this nation.
London gave the pound fterling to Hamburgh, for 33.5 .
The par is 35 s .17 dec . Lofs to England about 5 per cent. London exchanges with Norway, Sweden, Ruffia, and moft parts of Germany, by the way of Hamburgh and Amfterdam; and the exchange between England and that place, which is the mof to our detriment, is allo moft fo in all the bills of exchange we negotiate with the abovementioned places, through fuch medium.
London gives to Madrid for a piece of $\frac{8}{8} 40 \mathrm{~d} . \frac{7}{8}$.
The par is 43.2 dec. Gain above $6 \frac{1}{2}$ per cent.
London gives to Paris 31 d . $\frac{7}{18}$ for the French crown of three livres.
The par is 29.149 dec. Lofs to England above $7 \frac{1}{8}$ per cent. Thus we have the exacteft view, we can, of the ftate of the trade between England and the principal hations in Europe; and we find, that we lofe more by the trade with France, than we gain by that with Spain; and ought this not to rouze us to think of taking effectual meafures fo to regulate our trade with that kingdom, that we may not be fuch daily fufferers thereby; nor be over-reached in our commercial interefts, by the chicanery and machinations of that court?

The London courfe of exchange this 22d day of May, 1764, ftands as follows, viz.

## Exchange on

Amfterdam, $36,6,2,1$-half, a 2 uf.
Ditto, a fight, $3^{6,4}$.
Rotterdam, 36, 7 .
Antwerp, no price.
Hamburgh, 34, 10, 2, 1-half
uf.
Paris, 1 day's date, 30 , 1 -half
Ditto, 2 ul. 30, 1-4th
Cadiz, $37,7.8 \mathrm{th}$
Madrid, 38, 1.8th
Bilboa, 37, 7-8th
Leghorn, $4^{8,} 3^{-8 t h}$, a 1 -half
Genoa, $47,3-4^{\text {th }}$
Venice, 50.
Lifbon, 5 s. 6 d .
Porto, 5 s. 5 d.
Dublin, 9, 1-4th
Pitto, 2 uf, $30,1-4 \mathrm{th}$
Bourdeaux, ditto, 30, I-8th
How the Ballances of Trade with particular fates fand at prefent, the above courfes will fpeak for themfelves, we leaving the application thereof to the reader, to make his own judgment.

## Remarks.

'Tis not many years fince the Turky trade was very profitable to thefe kingdoms, it affording us markets for great quantities of our woollen manufactures, together with lead, and other our products hhipped fiom hence to Conftantinople, Scanderoon, and Smyrna; and from thence difperfed all over the Turkifh empire, and alfo into Perfia. But the fcene is changed here, as we have feen it is in many parts of Europe, France having fupplanted us in this once important branch of the Britifh trafic.
That we may judge by what meafures that crafty nation have effectuated this matrer, I fatter mylelf, that it may not be unacceptable to my readers to lay before them the feps, they took to bring this about; ' which, amidt numberlefs other politic arts, hould by no means pals unoticed and unrecorded in this work.
This point was accomplified by the indefatigable endea-
vours of that able minifter of France, Motif. Colbert, whofe memory will be defervedly immortal in that kingdom. From the great increafe of the naval power of France, at the action off Beachy-bead, when the united navies of England and Holland declued a thorough battle, and plied away to avoid engaging, fprung the increafe of their navigation in matters of trade. For, under the bappieft ceconomy of their affairs, the French then entered upon two things, which gave a new turn to the ftate of their whole commerce. The firt was their plauting mulberry-trees, and nourihing the filk worm; by which means they annual!y produced a very large quantity of filk of their own growth, to the great increafe of the wealth of the kingdom. The fecond was the erecting manufactures of wool in all parts of the kingeom, and prohibiting all the Englifh woollen manufactures to be imported among them. So that, in a few years, Monf. Colbert let the poor to work all over France, in combing, fpinning, weaving, and dyeing of woollen goods, although they had a very inconfiderable quantity of wool of their own.
The firft confequence of this was, that the king of France faw all his fubjects clothed, however indifferently, with the manufactures of their own country, who but a few years before bought all their cloths from England, and which was more difadvantageous to them at fecond-hand from Flanders and the Dutch.
This was managed with fuch exquifite policy, and carried on with fuch a prodigy of fuccefs, that it would take up too much room to relate under one head, but it will more fully appear throughout this work. This profound ftatefman, this hearty friend to the trade of his country, fpared no expence, nor left unpractifed any wife meafure, to gain over Englifh artifts, and to plant them in every proper part of France; where they taught the people, fo well, all the feveral parts of the manufacture, and the people were fo eager to learn, and fo dextrous at teaching each other, that, in a few years, they fent their teachers home again, being as able to make and manage every branch of the woollen manufacture, as their inftructors.
The principal care Monf. Colbert took, next to that of planting the manufacture, and of procuring head workmen to inftruct the people, was the furnifhing France with Englifh and Irih wool, and this he did effectually; and to him we owe the injurious traffic of owling as it is called, which is carried on to this day, on the coafts of Kent and Suffex in England, and from divers parts of Ireland; and which all the laws, the military power, nor all the arts of the cuftomhoufe officers, and our guarda cofta's, have not hitherio been able to fupprefs.
By, this means, the French being able to furnifh their own people, to clothe the nobility and gentry, nay, even the king himfelf (for he determined to wear nothing that was not of the manufacture of his own fubjects) they not only in a few years totally excluded the Englifh woollen manufactures from that kingdom, but begun to turn their eyes abroad, and prepare to rival them at all the foreign markets of Europe, as in Spain, Portugal, and Italy; alfo in Afia and Africa, but efpecially in Turky and Barbary.
The unwearied application of Monf. Colbert did all this; he informed himfelf of the various forts of Britifh manufactures, which were fold in every foreign market, and of which he had large patterns brought him : after this he erected particular works in France for the making of thole very goods, encouraged the merchants to export them, by caufing credit to be given them out of the public stock; that is, by the king, even till the returns for thofe goods came home: this was particularly done with the Turky merchants at Marfeilles, who had credit given them, 'till their ships returned fromsmyrna and Scanderoon.
The fame encouraging meafures were given at the famous manufactory near Nifmes in Languedoc, where, 'tis faid, that cloths are made fo admirably well, that fome have even thought they have outdone the Englifh : this we cannot credit; certain, however, it is, that they make very good cloths, and dye and drefs them to great perfection; certain it is, that alfo they have hir the tafte of foreign purchafers, and fupplanted the Englifh.
Effectually to encourage the exporting of thefe cloths, the Turky merchants of Marfeilles had nothing to do but to take a cargo to the fum agreed on, and fhip them off; and, having time given them for payment, the voyage came round before the money was demanded, and they paid for the cloths with the very goods which they received from Turky.
Nor did the manufacturers ftand in necd of any encouragement but what they inflantly had, without years of expenfive attendance, follicitation, and cringing, as if they were craving alms, when they were attempting to ferve their country more than themfelves. See the article Manufacturers. After fuch encouragements, is it to be at atladmired, that the French fould fupplant the Englifh in the Turky trade, as they have done? Is it impoffible for the fkill, the credit, and worth of our Britifh Turky merchants, aided by the wifdom of Britih counfels, and fupported with all fuch encouragements as we have in our power, to retrieve this branch of our commerce? The name, nor the eftablifined reputation
and honour of our merchants, are yet forgot in the Turkifh empire.
Portugal is a conftant market for corn, either from Britain or her American colonies; the Jatter, together with Jreland, fupply it with great quantities of provifions, great part of the payment of which centers in London, by the returns of wines; fo that the Lifbon exchange is fo far from falling to 5 s . or 5 s .2 d . per millree, that it bas not for many years been under $5 \mathrm{s}$.3 d . and, at prefent, we find it no lefs than 5 s. 5 d. $\frac{7}{8}$; which, as before oblerved, does not make the ballance two per cent. in our favour, notwithftanding the imaginations of fome that we are mighty gainers by that trade. What can this be afcribed to, but the decline of the Portugal market for our manufactures, particularly the woollen? Our foreign rivals in trade, working cheaper, fteal it away by degrees: cloths between 8 and in s. per yard the Dutch fupply them with, and have beat out ours about that price almolt entirely. France has, for fome time, begun to fupply them with quantities of it and other manufactures; fo that it aprears by the exchange now, that not much of the extraordinary gain remains from Portugal, with which too many flatter themfelves; for a great part of the Portugal gold, brought here, is for Dutch account, and that of various other foreign ftates; and, the moidores having been circulated for more than they are worth, the nation has been cheated upon that account.
The trade of Spain as yet, we fee, continues tolerably in our favour, but the foundation feems to be effectually laid for it's inevitable deftruction. That court, it feems, have, in earneft, adopted the fyftem of the late duke de Ripperda, who laboured hard, during bis adminiftration in Spain, to eftablifh the woollen manufacture in that kingdom, in order to enable the Spaniards to fupply themfelves, inftead of taking woollen goods from England. And, for this purpofe, have they not itole away our manufactures, to inftruct their people, as the French, we have feen, did in the days of Colbert? Whether Ripperda took his meafures at that time from Don Geronymo de Uztariz of Spain, whole fyftem now takes place, or the latter borrowed it from the former, is not very material; but it is obfervable, that Uztariz firft publifhed his thoughts of commerce and maritime affairs in 1724 , which was at the time when Ripperda was at the head of the finances in Spain. The eftablifhment of woollen manufactures in Spain at that time of day, together with their clofe union with the court of Vienna, did not a little alarm this nation. In a word, the Spaniards have long been reproached by other nations for their indolence and inactivity in matters of trade; but; at prefent, they may feem refolute to wipe off that ftain of ignominy, and to purfue an active, and no longer fubmit to the difadvantages of a paffive, commerce. See the article Biscay, and Spain.
Their reludance alfo to fettle thofe difputes, which had fubfilted between them and the Englifh for near forty years, in regard to America, before the late Definitive treaty took effect, did not look with that face of cordiality and friendfhip towards this nation; the propoled regulation of the taxes upon their own commodities, and of the cuftom-houfe duties, together with their vigorous attempts to fettle the woollen manufacture; (all which, it feems, were intended to humble the power and pride of herefy*) did not prognofticate any good to the trade of thefe kingdoms before the laft peace.

- See Uztariz. Father Villareal the jefuit's approbation of his fyftem on commerce and maritime affairs, which approbation of this learned prieft, we may fuppofe, was obtained; with a view to make the Spaniards the more readily relifh the new fyttem, to the injury of the maritime, or heretical, powers.

However, the Spaniards would do well to confider, that it would be no extraordinary punifhment to Great-Britain to be deprived of their wines and their fruit, if they fhould attempt to ferve us as the French have already done, with regard to the woollen manufacture. For we fhall now very probably be able to fupply our came from Spain, or Portugal, or. France, by means of our new acquired colonies; and there is no other way to preferve the trade of the nation, than by buying lefs of thofe nations, which diminifh their purchafes of ours.
Our trade to Hamburgh and Germany being apparently fo much to our detriment, and woollen and other manufactures being daily eftablifhing in various parts of that empire; and, as his Pruffian majefty, in particular, feems determined to have a new Eaft-India company, and is taking all meafures to improve every corner * of his dominions by trade; is it not time for England to think of turning the ballance in her favour with the Empire? As the great confumption of German linnens, in England and her Plantations, is one principal caufe of this commerce being fo difadvantageous, ought we not to give fuch effectual encouragement to the Scotch and lrith limens, that we may ceafe to lofe, if we can gain nothing, by the trade of Germany? What difficulties have not the scots and the lrifh fruggled with, to bring their linnens to the pertection they have done? And what hinders, wish all Vol. 1.
reafonable encouragements, from the Britifh legiflature, but they may arrive to as great perfection as any foreign nation; which fure will induce all the fubjects of the crown of GreatBritain to wear them, if we fhould never be able to export them any where, except to our own plantations?

* They write from Berlin, that his Pruffian majefty being wil ling to favour the pors of Schwiemund (which has hitherro been an obfcuse place and but little frequented) has made it a corporation, giving it the title of city, and ordered divers forts of manufactures to be fet up there ; in confequence of which encouragement, together with confiderable privileges granted to all that are expert in marine matters, they have begun to build fome new ftreets; and, as the place is pleafa:tly fituated, and very commodious, many inhabitants of Stetin and Greyffenhague have refolved to go and fettle chere. Utrecht Gazette, $175^{2}$.

Linnens are the ftaple manufaclures of Scotland and Ireland; and, if England preferves the woollen for their flaple, the other nations fhould have every help in our power, to carry their linnens to as great perfection as the Englifh have brought their woollens. If they have not, how can the Englifh expect but both will do their utmoft to interfere in their woollen manufactory? While Germany took off large quantities of our woollen goods, it was our intereft to take fome proportionate quantity of their linnens in return; yet, as they have leffened in their Britifh imports in general, flall we continue to drain the nation of it's treafure, by buying of the Germans confiderably more than we fell to them?
It is for the intereft of England to give all fuch encouragement to the trade of Scotland and Ireland, as hath no tendency to prejudice her own. But how can encouraging of the linnens and fifheries of the former, and the linnen of the latter, be any way injurious to England? It is highly to the difadvantage of England to fupport either the French, the German, or the Dutch linnens, becaufe the ballance is with the two former, and fo likewife with Holland, for the reafons before given, though far lefs than they were a few years fince. Why does Ireland carry on the clandeftine trade of wool with France, but becaufe they have more than they can manufacture for themfelves, or fend in wool and woollen yatn, to England? But, if they had all defirable encouragement for their linnens, they would certainly contract their Meep-walks, and employ them in the more ufeful branches of tillage and flax; which would not fo interfere with the intereft of England, as the French have done, and fill do, by means of the Irifh wool. Long experience muft convince us, that the Irifh will fell their wool to any nation, rather than let it rot upon their hands, or leave their theep-walks ufelefs, and their lands of no value to them.
'Tis true, England encourages the importation of Irifh wool and woolen yarn; and, was the manufacture of England fo increafed, as to enable her to take every ounce of their wool, except what they ufed in their own manufacture, would it not be unfpeakably more to her benefit, than to let-the French have it?
It is computed, that England imports annually from. Ireland, of wool, woollen and worlted yarn, about 227,049 ftone, at 16 pounds to the ftone. Now, the computed price at a medium of wool and yarn is at ros. 4 d . per ftone; and the leaft profit arifing upon that, when manufactured, is computed at 2 l . 19 s .8 d . for a ftone of wool manufactured, without dyeing, is at leaft worth 31 . Io s. efpecially that which Ireland fends to England, it being the choicelt and beit they have: if fo, then the Englifh muft gain yeatly, bi the manufacture of Irith wool, 678,573 1. 15 s .6 d . at the loweft calculation. But, as calculated by others, it rifes confiderably higher ; as thus: A pound of wool in England is valued at 12 d . and Irih wool and yarn of the beff fort at 14 d: at leaft: Mr. King's computation is, that the wool is the fourth of the value of it, when manufactured : if fo, a ftone of wool manufactured, is worth 3 l. 14 s. 8 d . and the profit, by Irifh wool fent to England, would then amount to $730,340^{\circ} 1$. 19 s . Another ingenious gentleman, who wrote upon the trade of Ireland in 1687 , fays, that 31 . worth of wool and oil, when manufactured into white cloths, are worth 131 ; at this rate, the gain to Britain upon the importation of Irifh wool, computing fuch as is worth 14 d . Irifh there, would be 916,7 to l. 6 s. 9 d . Which computation being made on white cloths, are fold in England, before they are dyed and exported; the profits upon exportation after dying are to be added, which may at leaft be fuppofed to amount to one third; if not one half more: fo that the calculation given does not feem to be exaggerated. See Wool.
The importation of Irifh wool and woollen yarn into England, proving fo beneficial to the latter, muft convey an idea, how higbly injurious the clandeftine exportation of wool to France muft prove to there kingdoms, as Ftance not only fupply themfelves with woollen manufaclures, but have interfered thetein with us in foreign nations; and, as the bef branches of their woolien goods are compofed principally of Irifh wool, the quantity thereof, imported into France, can-
not be inconfiderable; none would imagine, we apprehend, that to fuppofe the French import, at leaft, double the goantity of Irifh wool the Englifh do, in any Mape, is beyond the bounds of truth and probability: 'tis rather to be feared, that this will be thought a fuppofition far below the mark; yet, if France gains as much by it as England, from what has been faid, we find it will not be lefs than two millions per ann. Should it befaid, that France, obtaining the Irifh wool clandeftinely, makes it come dearer to them than it does to the Englifh legally; and that therefore the gain of France, by the manufactare of Irifh wool, cannot'be fo great as it is to the Englifh : to this it may be anfwered, that the greater quantity the French import, together with the benefits of exportation after dyeing, may be prefumed to compenfate more than the occafional difadvantage in point of price, by reafon that fome wool is feized now and then in the exportation. If then France may be realonably believed to gain at the rate of two millions fterling per ann. by means of the wool of Ireland; and, if by the means thereof, the French have interfered with us more or lefs in all the countrics of Europe; does it not moft importantly concern England to divert Ireland from the raifing of more wool than what they themfelves ufe, and what England can take from them ? To do which effectually, can any thing be more natural, than fo to encourage Ireland in their linnen and other manufactures, which do not interfere with the trade of England, as to induce them gradually to contract their fheep-walks, and apply themfelves to the branches of tillage and flax?
I am not unaware of what has been urged in behalf of the importation of foreign linnens, and what has been formerly faid againft taking off the drawback on the re-exportation of foreign limnens : bur, as the ballance of trade with Germany is now againft us, and the Scots and Jrith have made fo extraordinary improvements in molt branches of the linnen manufactures: thefe confiderations added to that fill more weighty one of the great benefit France receives, and the great injury England fuftains, by the French manufactures of Irih wool, does it not appear to be for the intereft of England to encourage, to the utmoft, the general wear of Scots and Irifh linnens in Great-Britain and Ireland, and alfo in all the Britifh plantations? The Scots and Irifh linnens, in many refpects fall little fhort, in point of quality and cheapnefs, to the foreign linnens; and, if they receive all the public encouragement that the nafional concernment of fo ftaple a manufacture requires, is there any reafon to doubt, but our Britifh and Irifh linnens will foon equal thofe of any part of the world, both as to excellency and price? And, if we are once capable of fupplying ourfelves and our plantations as cheaply with Britifh linnen, as we do with foreign, is it not reafonable to believe, that our colonies' will receive them as chearfully as they now do foreign linnens? And, if likewife thofe manufactures are once brought to the perfection of foreign, fhall we not be able to make as acceptable affortments of goods for the Spanifh Weet-Indies, as with foreign linnens? Though our own people fhould not for fome years arrive at the abfolute perfection of foreign linnens, yet is it good policy not to encourage them at home and our plantations, 'till they are able to arrive at the defired perfection? Did not France firf fupply themfelves with the woollen manufactures, before they turned their thoughts to fupplant England at foreign markets? But, had not due encouragement been given firft to have fupplied themfelves, could they ever have had any chance to have interfered with us in any other nation?
Within lefs than twenty years, the poffibility of Irifh linnens arriving at the perfection they at prefent are, was looked on as chimerical, and was treated as fuch, in the capital conteft about taking off the draw-back, upon the re-exportation of foreign linnens: but fact and experience have demonftrated, that fome worthy gentlemen were mittaken in their forefight. Nor are the linnen manufactures the only point, wherein thore people, as well as the Scots, have wonderfully improved within thefe twenty years, but the Irifh have really made confidesable improvements in divers other effential particulars. As the county of Wexford is greatly advanced in the raifing of hops; the counties of Kildare, Meath, and Kilkenny, in raifing of corn; the county of Lowth, in marling and liming land; the county of Tipperary in raifing of Turnips; the counties of Tipperary, alfo, and Langford, in the draining of bogs; the counties of Kildare and Meath, in gravelling land; the counties of Cork, Limerick, and Waterford, in making of butter; the Queen's County, King's County, and Cork, in making of cheefe, and, fpinning bays yarn; the county of Wicklow, in rearing of calves and working of mines; the counties of Down, Antrim, Armagh, and Derry, in the manufacture of linnens; the Northern Counties, Rof common, Mayo, Langford, and Weftmeath, in the fpinning os limnen yarn. Wherefore, from the extraordinary firit of induftry and zeal for the advancement of commerce in that country, we may hope to fee their linnens equal thofe of any foreign country whatfoever.- The wondefful improvements alfo that have been made in Scotland, are no way inferior, which we flall hew in it's place; obferving here only, that according to the information I have received from a gentleman of credit and honour,

The linnens ftamped in Scotland, from the if
Yards. of November, 1746, to the firft of November,

But to what a degree the linnens of Scolland have encreafed, fee the article Scotland.
And we have great reafon to expect, as well as to hope, that the filheries alfo will increafe, to the intire fatisfaction of the united kingdoms.
The Flanderkins were once famous for carrying on the woollen manufacture, which they did by mans of the wool they fetched from England. But king Fdward III, by- wifty keeping our wool at home, put a fop to their manufacture, and eftablifhed it in England. If, therefore, the prohibiting our wool to be carried outhad, at that time, fo happy an effect to this nation, why fhould not our care to prevent it's too great growth in Ireland have the fame confequence with regard to the French, fince all our endeavours to prevent it's clandeftine exportation have fo many years proved ineffectual? As thus making it for the intereft of Ireland fo to contraet their fheep-walks, as to afford no more wool than what they themfelves and England can manufacture, and inducing them to employ thofe lands in the branches of tillage and flax : as the due encouragement, given by the crown of Great-Britain to the Irifh limen manufactures, feems to be the moft natural and effectual way to deprive France of their wool, and thereby lop off from their trade and m nufactures two millions a year, and gradually reinflate this kingdom again in the woollen manufadure, at all the markets where the French have prejudiced us: as thefe appear to be the neceflary confequences which muft arife from a difcouragement of foreign linnens, and encouragement of our own, I do not fee how any thing can be urged in favour of foreign linnens, that is likely to have any fuch happy effects in thefe kingdoms.
The French are the greateft rivals in our manufactures; but let care be taken to prevent their being fupplied with wool from England and Ireland, and we fhall foon fee an alteration therein. 'Tis true, they have wool of their own, but they cannot work it fo as to injure us at foreign markets, without ours or Irifh. As this will be laying the ax to the root of a capital branch of the French commerce, and thereby preventing the fuccefs of their machinations for univerfal dominion, does it not become the wifdom of the nation to think ferioufy of what fo nearly and importantly concerns us? Experience has fufficiently convinced us that war, 'till the laft peace of $1_{7} 63$, has not proved the way to put it out of the power of France to hurt us. Were we to exert the Britifh bravery at the expence of a hundred of millions more than we have done, it is certain that, under fuch incumbrances, we fhould grievoully wafte ourfelves, but'tis much to be doubted whether we fhould gain any permanent advantage over France. For the art of war is now become a fcience, and, indeed, a trading one, and France is often obliged to give their military people diverfion abroad, left they fhould be troublefome at home. War, therefore, every 10 or 20 years feems to be neceffary to that nation; but it is no way fo to us, but defenfively. - When the fword is drawn; befides thofe who immediately engage, do we not fee other potentates, from various views and inftigations, are drawn in on either fide; and what was at firf a conteft only between two, comes at laft to involve twenty? Wherefore let us, fo deal with-France, and indeed, with all other nations, by the peaceable arm of commerce; let us beat them by our fuperior induftry in the acquifition of fuch ufeful atts as will not only employ our own people, but invite all hither who are oppreffed in other countries; for plenty of people, and of uffeful arts, give them beneficial employment; and this will give us fuch power, that no nation, or any confederacy, will dare to infult us; and it will never be ourintereft to infult others, but it will be our happinefs to become the univerfal afylum for art, induftry, and commerce, to all that are perfecuted elfewhere.
As the beating of our greateft rivals in trade is the grand fyftem which we have to purfue for the prefervation of our being, as a free and an independent nation; fo the next good policy that offers itfelf to confideration is the cultivation of frict amity with fuch allies, whofe intereft it will ever be to fupport us againft the confederacy of enemies, as it will be ours to fupport them againft the like evils. Every one will at once fee that I mean the Dutch, who muft be fomething attached to our intereft, while they have above thirty millions of money in our funds; and who, next to Great-Britain, are the grear bulwark of Proteftantifm and Iiberty.
Although, from the Exchange between England and Holland, it appears that the ballance is not againtt us, as it was fome years ago, yet, when it is fomething againft us, I defire again that it may be obferved, I do'not mean that the bailance of trade is againft us, but that the ballance of money negotiations with them, is:

1. Becaufe they are fo great national creditors, and receive intereft of us.
2. Becaufe the money remitted to Ruffia, Sweden, Denmark, and various parts of Germany, where the ballance of trade is againft us, is remitted through their hands.
While thefe caules fubfift, the effect muft be that the exchange will be againft us, with regard to money-tranfactions in general, though not with regard to thofe of merchandize only; for, although we fell them more real merchandize in value than we buy of them, yet the ballance will not appear in our favour by the courfe of exchange; for the reafons before: fuggefted.
As thefe caufes argue no difadvantage in point of real commerce with the Hollanders, fo they ought not, by any means, to difunite us in our reciprocal interefts, in regard to thofe who are our common rivals in trade, as well as our natural enemies. - And our union in regard to our trading intereft, in particular, will naturally cement a union in our national interefts in general.
The goods we fend to Holland are of confiderable value, whether we confider our woollen manufactures, the product of our own country, or our plantation and Eaft-India goods; and our returns for them in fpices, linnen, thread, Rhenifh wines, batfery, madder, whale-fines, clap-boards, \&cc.' fome of which are ffefult to us in our manifactures. Dr. D'Avenant, late infpector-general of the imports and exports, in his fecond report to the commifioners of the public accounts, December 11, 1711, by a medium of feven years, has valued our trade to Holland, though it is not quite fo confiderable at prefent.

Our annual imports at $\quad 579,832:$ 1: $2 \frac{3}{4}$

## Ballance 1,388,102:6: 8 $\frac{2}{2}$

The chief handle which the emiffaries of France have made ufe of to divide us and the Dutch, has been the point of trade, in which they have always endeavoured to reprefent them as dangerous rivals. It is certam, the wealth and ffrength of each nation doth depend intirely upon trade, and that, therefore, neither we nor they can be too careful and tender int that matter. But the world is wide enough for us both : and, if the pairs and expence that have formerly been employed in the quarrels we have had with one another upon the pretence of trade, had been applied in keeping, a watchful eye over our common enemies, and preventing the encroachments they have made upon us in that valuable articie, the trade of both nations would have been much more extenfive and flourilhing than it is at this time; and I am far from allowing, that the trade of the two nations engages them in fuch a rivalihip and competition with one another as is generally pretended. For all that have any infight into the affairs of Holland muft acknowledge, that their trade is chiefly founded upon their carrying goods cheaper than any nation of the world. The hard and penurious way of living they are inured to, enables them to perform the longeft voyages with much lefs confump* tion and expence than other nations: by this means they are become the common carriers of the product of ether countries', having little of their own, except what arifes from their fettlements in the Isdies. Our trade, on the contrary, confifts almoft intirely in vending and difperfing the product and manufactures of our own country and the plantations, while our freight is dearer than that of any other nation. The main branch, therefore of the Dutch commerce, no way affects, nor interferes with ours; neither, if they were to lay it down to-morrow, would any fhare of it devolve to GreatBritain, but to the French, the Danes, the Swedes, the Hamburghers, and the other Hans-Towns, who all both can, and actually do, fail much cheaper than we.
France, therefore, is our moft formidable rival, and the proper object of jealoufy to both nations; who, by fomenting animofities and quarrels between us, has had the addrefs to weaken us at our own expence, and to make herfelf powerful under favour of our folly and connivance. The divifions between England and Holland firt gave her the courage and opportunity to increafe her naval frength, to extend her dominions in the Indies, to drive the Englifh out of the trade of Hudfon's-Bay, and of great part of Newfoundland ; to lay fuch high duties on our refpestive commodities as amount to a prohibition, and thereby to encourage, and even compel, her own fubjects to eftablifh our manufacture in France, and by that means to run away with a great part of ours, as well as the Dutch trade, to Spain, Portugal, the Levant, anid other countries.
Thefe are part of the fruit of our former quarrels with the Dutch; which, one would hope, might at lealt have that effect, as to make us wifer for the future, by teaching us that the only way to retrieve our paft follies is by uniting, in order to recover thofe valuable branches of our refpective trades which France has taken from us; to preferve a ballance of power in Europe, that peace and trade may flouribh; to provide for the fecurity of the feas, and fafety of commerce; and to oppofe any growing naval force that may endanger it.

Thefe meafures, and a general difcouragement amongft us of French produce and mianufactures, being'purfued, would not only turn the ballance of trade with that kingrom in ove favour, which, at prefent, we have feen is fo ruinous to us, but defeat French machinations to diftract Hollind, and weaken us both at once, by fowing the feeds of diffentions between us.
And here I cannot but take notice of that admirable example which, it feems, is fet by a great body of people in and about this great city of London, in order to difcountenance effectually the confumption of all french produce and manufacture, and to encourage our own artifts and manufactures by rewards: I mean that laudable fociety who difinguifh themfelves by the title of Antigalicans, who not only bind themfilves by their honour neither to eat, drink, or wear any thing that is French, but actually do not. And, if this firit fould fpread itfelf throughout the kingdom, and once become fathionable amongh us, it will not a little advantage our own trade, and prejudice that of our rivals. Does if not concern us nearly to keep alive and foread this Antigallican firit as much as may be?
Nor is every branch of trade to thöfe nations, to which we pay a ballance in gold and filver, chargeable with exhaufting our treafure; for, if the goods we buy from any country are fuch as we export again in the whole, or in part, for the fame, or a greater fum of money, our treafure is not exhaufted by fuch a trade; the goods we buy, by fuch re-exportation, makes us full reftitution for all the fums we are out for them.
It is certain, that, befides goods and merchandizes, we export yearly to the Eaft. Indies, in bullion, 4 or 500,000 ounces; and yet I cannot believe that cur treature has been exhiaufted by means of that trade, See East-India Trade. Saltpetre, pepper, and fome few drugs of that country, we cannot well 'be without ; and yet I am inclined to think that our merctiants would fit few or no fhips for fo long a voyage, if they were not alfo to have the liberty of importing manufactures. A very great quantity of Eaft-India goods being re-exported, ${ }^{\text {a }}$ and at a much greater price that the whole annual fums which are fent from hence to the Eaft-Indies, the confequence is, that our treafure is not exhaufted by that trade, fince we have thofe goods in exchange for our money, as procure us much greater fums from other countries, and our whole lofs is more than repaired by re-exporting part only of thefe goods, at a much higher price than we paid for the whole.
From what has been faid, I would not be thought, nor do I think it juft in thofe that do, to condemn every trade, that carries out our bullion, of exhaufting, our treafure, but that only which carries out our bullion for manufactures to be confumed here, which returns no fort of goods to be fent abroad again; and, laftly, which no ways enables $\mu s$ to repair ourfelves of that lofs; and this is the cafe of our trade with France.
I had not dwelt at all on this point, did $I$ not judge it necerfary to the commercial interefts of this kingdom to maintain the ftricteff friendfio with Holland, and theirs to do the fame with us. For, although we are obliged to the Dutch for taking off fuch very large quantities of the Brition produce and manufacture, yet they are no lefs obliged to us for being able to furnifh them therewith, to fupply their foreign cuftomers; and for the commifion we pay them for tranfacting bufinefs for us as factors for Ruflia, Sweden, Denmark, and fome parts of Germany.
It is advanced by Dr D'Avenant, in the before mentioned Report to the commiffioners for public accounts, p. 4I, 'That - they are wrong in their notions who pronounce, becaufe - we carry to a country more of our growth and manufac-- tures than we bring from thence of theirs, that we muft - always be gainers in the ballance of trade with fuch country. - This would indeed hold, if the people with whom we had

- dealings of this nature confumed among themfelves all the - merchandize exported to them: but, as in the cafe of

6 Holland, where our product and manufactures, our planta-- tion and Eaft-India goods, are the chief materials where-- with they drive their trade with other nations; there, the - more of thefe commodities they take from us, the more 6 they enlarge their univerfal traffic, and, confequently, in' creafe their riches.'-And, page 42, 'That large quantities ' of our woollen manufactures, corn, tin, tobacco, with di-- vers other commodities have been fent to Holland, which - goods, in the former courfe of trade, we exported directly - ourfelves to France, \&c. but, as our exports thither have - been increafed all along, fo our exports to other parts muft - in proportion, have diminifhed, and what we feem to have - gained, by our dealings there, we have loft in the general - gained, by our dance of our trade with other countries.'

For what purpofe the commiffioners ordered this report to be drawn up, the public need not be informed, fince we are told, page 56, 'That in fome ports the Dutch fupplant us, and - every where out-wit us; that when we find them enterpriz-- ing, vigilant, and jealous, in whatever has relation to their - trade; and when we obferve them fill endeavouring to ge:

- ground, and never yielding any point to us, but forming - long fchemes, calculated to take effect many years to come, ' in order to enlarge themfelves at our expence; it will bec come good patriots to look about them, and to take care c Jeft, in time, England fhould be, in a manner, excluded ' from the commercial world.'
Page 67. 'To be in a lafting condition to cope with the
- Dutch in trade, we muft, as well in time of peace as war, c have a feet in readinefs, ftrong enough upon all occafions - vigoroully to affert our dominion of the fea; and, in all fu-- ture treaties of commerce we fhall make with other countries, - we are to fence particularly againft the arts and encroachc ments of the Dutch, who, beyond all difpute, are our mof - dangerous rivals in trade, \&c.-

When the treaty of commerce between Great-Britain and France was under public confideration, the flrain of talking ufed by the advocates for it was, " That, by prohibiting the - French trade, we only hurted ourfelves, and gave the Dutch ' an opportunity of inriching themfelves, \&c.'
As it is the conflant bufinefs of the emiffaries of France, and other weak people, to amufe the nation in this manner, and irritate them againtt the people in the world we ought to be the moft careful of having any mifunderftanding with, it may not be altogether ufelefs to attempt further to remove thefe groundlefs notions which fome entertain againft the Dutch. It is fomewhat furprizing, methinks, that he, who could thus affert the danger our commerce was in from the Dutch, could not likewife take notice, that it was far from the intereft and fafety of Great-Britain to put France into poffeffion of the trade of the whole world; that he fhould recommend excluding the Dutch from all trade, and, at the fame time, take no notice that our Newfoundland fihery was given away to France at the treaty of Utrecht; that he fhould recommend our fencing againft the arts and encroachments of the Dutch, at the fame time that treaties of commerce were concluding, ruinous to the trade of Great-Britain, and all it's manufactures; that he fhould propofe our having a fleet always in readinefs, ftrong enough to cope with the Dutch, at the fame time that we were facrificing our filheries, colonies, and plantations in America, to France, which were our nurfery for feamen, the increafe and encouragement of the navigation of Great-Britain.
If our minifters and fenate, for the three laft years of the queen, had not fuffered the French in fome parts to have fupplanted us, and every-where outwitted us; if they had taken care that England had not been, in a manner, excluded the commercial world, by it's treaties of peace and commerce with France and Spain, which were concluded at Utrecht ; if they had not yielded any point to France, whofe monarch we had found enterprizing, vigilant, and jealous, in relation to trade, and to have formed long fchemes, calculated to take effect many years to come, in order to extend it, as they have done, at our expence; happy had it been for thefe nations.
But, indeed, talking in the manner the doctor has done, could be only to amufe the ignorant; for, as he allows that the ballance of trade was then fo highly in our favour with Holland, and is confeffedly fo now, what does it avail to us whether the goods exported to Holland be confumed in the country or not?
Can any thing be more extraordinary, than putting our being gainers or not gainers by our trade to any country, upon that country's confuming, or not confuming, what we export to it? Do we any more confume all that is imported into this kingdom, than the Dutch do what is imported into Hol Jand? If we cannot be faid to be gainers by our trade to any country unlefs the commodities we export to it are confumed in it, what trades can we be gainers by, for what country do we trade with more than Holland, that confumes within itfelf all we fend to it of our product and manufactures, our plantation and Eaft-India goods? But, as moft countries export in great part the goods we import into them, fo do we likewife export great part of the goods and merchandize which we import from Holland, Hamburgh, \&̊c. either in kind, or manufactured.
In the report before quoted, there is not only great venom againft the Dutch, but alfo, that, in a medium of feven years, our annual exports to Holland exceeded the value of our imports 1 . $1,388,102: 6: 8 \frac{1}{2}$, there is this remarkable paragraph, page 2I. ' If the Dutch had not found their account in the prodigious quantity of effects annually exported to Holland from hence; and, if fo wif a ftate had perceived - itfelf to carry on a lofing trade, they would have put a flop ' to this mifchief, either by prohibition of, or high duties upon, our product and manufactures; for which they had - fufficient pretence, from the additional impofitions we have ' laid upon their limens, and ocher goods.'
Who difagrees with the doctor, that not only the Dutch, but other countries, have a fufficient pretence to lay duties on the commodities we import into their dominions? And muft we not conclude the Dutch would certainly have put a ftop to fuch an excefs of traffic, which muft foon have made them poor, had they not been made good the ballance they paid us annually, by the trade they had with other countries, which
they were enabled to carry on more extenfively and advan. tageoufly, by means of the commodities imported from England?
The Dutch, by their large flocks in trade, by the intereft of money being lower than ours, and by having litte or no duties upon the goods imported into Holland, are enabled to make their country a magazine for all goods and merchandize, and to carry on an univerfal commerce; and, if they did not buy fuch great quantities of our product and manu factures, our plantation and Eaft-India goods, and carry them to foreign markets cheaper than we can, what people could we depend upon doing it, or by whom would our conmodities be equally introduced into fo many parts of the world ?
If the Dutch can carry, to any part of the world, not wholly dependent upon them (as many fettlements in the Eaft and Weft-Indies are) our growth and manufactures, our plantation and Eaft-India goods, cheaper, and afford them at lefs price, it is either our fault, or misfortune : but, if this fhould be the care, and they can deal on better terms with othe countries, even with our own commodities, it would much better become us to cortect our errors, which give them fuch advantages over us, than to be angry with them, and prefently denounce their final deftruction.
That the Dutch may enlarge their traffic by the commodities they have from us, is not more certain than that the great exportation we have had for fo many years to Holland, has partly occafioned the landlord to receive his rent duly; the farmer's felling the product of his land at fo high a rate; and that wool, tin, lead, leather, \&c. have borne the greater price; and not only this, but encouraged the manufactures of this kingdom going on more chearfully, and ftood in the room of money, which otherwife muft have been exported to have paid our armies abroad, and left the nation deftitute of cafh to circulate it's commerce.
It is the reciprocal intereft of Great-Britain and Holland, on a civil, as well as a religious account, to be united, and promote each other's happinefs and profperity; and it is far from fhewing any regard for our own prefervation, and the liberties we enjoy, when we denounce deftruction to that people who are, next to ourfelves, the beft and greateft fupport of the proteftant religion in all Europe. Can any man reflect upon this, and what they have undergone, with ourfelves, in the defence and maintenance of our religious and civil liberties, and regret that they enlarge their traffic, and increafe heir riches, or think it reafonable for us to differ with them, becaule they take off fo much of our produce and manufac tures, and fupply other countries with it cheaper than we can do ourfelves?
But if thefe rivals; as they are called, of ours in trade, were crufhed, it would not follow that the trade of the world would, as imagined, fall wholly to our fhare: ' For, fays Sir William Temple, if the trade of Holland fhould be ruined, it would certainly break into feveral pieces, and fhift to us, to Flanders, to the Hans-Towns, or any other parts, according as the moft of thofe circumftances fhould ' any-where concur to invite, and the likeft to fuch as appear s to have drawn it to Holland, by fo mighty a confuence of 'people, and fo great a vein of induftry and parfimony a' mong them.'
If this great man had been to write at this time, he wrould have included the French by name, who have of late years become our greatert and moft dangerous rivals in trade, and had almoft engroffed the riches of America to themfelves; and if they had not been checked, as they have happily been, by the Definitive Treaty of 1763 , were in the moft certain road to have cut us out of the greateft part of the trade of Europe, Asia, Africa, as well as America.
When the French commerce bill was in debate, we were told, and it is not uncommon to hear fome talk in the fame ftrain now, that our goods were firft fent into Holland, Flanders, Italy, \&c. and afterwards into France, under the preffure of the high duties; that is, when we could not get them into France by means of paying the French fuch duties, they were able to bear the high duties of France, and other countries together. Thefe are fuch abfurdities as can never be believed by any reafonable man, yet greedily fwallowed by too many among us.
Dr D'A venant, by faying, in his 42 d page, ' That our exports \& to other parts muft decreafe in proportion (which, by the - way, is a manner of begging the queftion, rather than * proving it) and what we feem to have gained in our dealings - there (i. e. Holland), we have loft in the general ballance ' of trade with other countries:'
Whatever intention this gentleman may have had to excite our indignation againft that people (as he plainly has by the tenour of that part of his report) he has unhappily brought an argument that cannot ferve his purpofe; for fuppofing, though not granting it to be true, that the channel of trade has been changed, as he would inlinuate it to be, and allowing his argument the full force it is capable of, viz. that, if we increafe in our traffic to Holland only fo much as we decreale in our commerce to other parts, we are not then gainers in the ballance of our general trade by fuch an addition of our trade to Holland; and allo laying afide, for argument fake,

## B R I

BRI
the confideration mentioned above, whether if the trade were fill driven, as he fuppofes it to have been, in as great a degree to other parts, we had not been obliged to take confumable and detrimental commodities from fuch other nations, in exhane for our pown: which is by no means the cafe of our trade with the Dutch; that trade being no prejudice to our general trade; and if it be, at the utmoft, only no advantage, and is not a prejucice to us, there is the lefs provocation given for his angry paragraph, page 67. It would have been more roper for the doctor to have faid, that to fuch other nation (if he could have inftanced in any) whofe commerce he apprehends has been prejudiced by fuch an alteration in the channel of our trade; for it can have no weight with us, becaufe if we neither get nor lofe, but that the fame trade is fill driven, how are we concerned, or why hould we be angry with the Dutch? Let them that are prejudiced complain, we are unconcerned in the matter, fo far as his argument relates to the increafe of our trade, without confidering other confequences, whether it is to the one or the other nation, that our commodities and manufactures are exported.
The Dutch are an induftrious trading people, and it is almoft impoffible for them to fubfift without driving that commerce they do; but have we any reafon to be angry with them who are our natural allies, for pufhing their traffic as far as they are able?
I would not willingly be thought uncharitable, and I hope I fhall not be deemed fo in declaring, that thofe who are ever grumbling, railing at, and damning the Dutch, are as well gnorant of the happinefs of enjoying liberty and the Proteflant religion, as of the true intereft of their country; and that it has been the endeavour of the beft and greateft men in this nation, ever fince the Reformation, or the Dutch throwing off the Sp niards, to maintain a fincere and folid friendfhip with Holland.
The world is large enough to employ the induftry and wealth of Great-Eritain and Holland; and it would be abfurd if one neighbour fhould differ from another for being more frugal, vigilant, active, and, confequently, to thrive better than himfelf; on the contrary, he is to emulate this man, and, as near as poffible, to fquare his own actions by thofe rules which he finds has made the other profperous: this holds, likewife, between countries that are rivals in the fame myfteries; and, if we will ever pretend to outdo the Dutch in trade, we muft practife feveral of their virtues, and lay afide many of our own vices.
It is to be wifhed that we could be brought to reflect ferioufly upon what is faid by Sir Richard Steele, in his importance of Dunkirk confidered, s That all reafonable men know - that the Dutch can reap no advantage but muft flow from their induftry and our negligence; but the power of France cannot only rival us in trade, but alfo, when the king 'pleafes, invade us again by the pretender.' Has not our Definitive Treaty put it out of their power to do this, if Holland and we do but fincerely unite our powers againit France, when needful? Dr D'Avenant, in his Difcourfe on trade, \&c. alfo fays,' Though the Dutch may - never turn their ftrength to hurt the traffick or peace of - England, yet 'is no very remote fear to apprehend that, notwithftanding all their riches, they may at laft become a prey to France.

- And if the French, with the Dutch fhipping in their right, and as their lords, thould once become mafters of the Eaft - India trade, fuch an acceffion to that wife, well-peopled, ' and large empire, mult prove our ruin.' If the new acquifitions we have fecured to ourfelves are duly.preferved and encouraged, will it not be out of the power of France to injure us without being ftill greater fufferers? See America, Bahama Islands, Biscay, \&ic. British America, French America.
Thus have we endeavoured to remove thofe caufelefs prejudices too many have conceived againft the Dutch, and hope this matter is fet in fo clear a.light, and according to the fentiments of thofe who have underflood our trading intereft beft, as to difabufe fuch who bave been impofed upon; which will convince them, that we have been more obliged to them than to any one country wherewith we have exerciled commerce, for keeping our poor from ftarving, and our products and masufactures from finking; in upholding and augmenting the price of lands, and enabling the tenants to pay their rents; in eafing the landed men in the taxes, on land in particular, and enabling every fubjeet to contribute to the taxes in general, in being afffifant to us in preferving our holy religion and maintaining our own, and the liberties of all Europe. What has been faid I conceive fufficient alfo for making a judgment of our commerce with thofe feveral countries, and the advantage, or otherwife, in a great meafure accruing to this kingdom by all, or any of them ; wherein I have omitted to give the particular amount of the trade and ballance by each country from the Cuftom-houfe accounts, becaufe that is a touch.ftone which can give no fatisfactory account of the matter; and, therefore, has been rejected by fome of the moft judicious writers upon this fubject: inftead of which, they have made the courfes of exchange between us and thofe
- Vol. I.
countiles not only the more certain criterion, but by far the eafieft way to determine this matter. Whercfore 1 have made ufe of the fame; for which I have given my reafors under the articles Arbitration of Exchanges, and Ballance of Trade, and fhall endeavour to confirm the truth thereof throughout this whole work, from fuch variety of lights as will corroborate each other.
To what I have already faid in regard to this point, under the beforementioned heads, I would only add for the frefent: Firf, That exchange fhews us daily which of two nations is owing the other, and, confequently, that it is the uue BARometer of Commerce.
Secondly, That the nation which is indebted has the difadvantage in commerce, and that the one to which a ballance is owing has the advantage.
And, thirdly, That advantageous conmerce neceffarily draws fpecie, or bullion, into the fate which has the advantage, or to which the ballance is owing; and that they are exported out of that flate which has the difadvantage, or which is indebted.
There are, however, cafes which may occafion fome exception to this rule. There happen, at fome particular times, extraordinary movements in the courfe of exchange. Thofe which are owing to fome particular turn of trade, are feldom of any continuance; nor confiderably felt by traders: things fpeedily return into their natural fituation, and the ballanca, leans fometimes to one fide, fometimes to another; but it is quite otherwife when thefe movements are occafioned by caufes that are fuperior to, and independent on, commerce. For example, a recoinage of money in France, which brings too much advantage to the king, and, confequently too much lofs to his fubjects, or a chamber of juftice, a vifa, \&c. in that country, induce people to fend their money abroad, in order to fave a part of their lofs. In fuch cafes, thougla the French are not then debtors, yet the exchange falls at once. It is the fame cafe when a ftate, for fome poltical confideration, is obliged to pay great fums in foreign countries, wither out having received a compenfation: then that export is the fall of exchange; it is much more fenfible, and of much longer continuance. In fuch a cafe, before pradically engaging in exchange, it ought to be nicely ftudied, and narrowly examined; and, if it be found not capable to bear confiderable returns, it is much better to tranfport money in kind than to ruin trade.
Let that be as it will, it is however certain, that they who attentively confider the daily courfe of exchange, by feeing which of two nations is indebted to the other, or which has the advantage or difadvantage in trade, will alfo fee what is to be done for fupporting that exchange, or for benefiting trade. This method of knowing the ballance of trade is infinitely more fure and expeditious, than that of examining the imports and exports of merchandize; for it enables the legiflature daily to take fuch meafures as may eisher maintain and preferve the advantage, if we have it, or recover it, if we have it not; whereas, that which refults from the examination of commodities which are imported and exported, can only be known a long time after; and then it is out of time to carry proper meafures into execution.
If what has been faid at prefent, and what is alfo faid under the other articles referred to, with refpect to the exchange being the moft certain touch ftone, whereby to judge of the ftate of trade between one nation and another, fhould noe be fatisfactory; I might confirm the truth thereof by the authority of many able writers, though reafon and demonftration, we conceive, are intitled to greater regard than any mere authority. Yet, fince what I have wrote on this topic in the former part of the work, there has appeared a very ingenious Italian writer, who has juftified what has been urged, it may not be improper to quote him upon this occafion. The author 1 mean is the celebrated Signior Marcheze Gerolamo Relloni, merchant and banker at Rome, in his treatife De Commercio, where, in his third chapter De monetaria pertnutatione, he fays *, ' Though, to the genera' Iity of mankind, the word exchange may feem to be a mere - metaphyfical term, and does not fignify any thing that hath
* Quanquam hujufmodi cambii vocabulum plerifque metaphyficum effe videtur, nhilque in fe habure. guo res certa, $\&$ vere exitens demonitretur; nihilominus fi ca, qua à mobis antehac dicta furt, accuratius recolantur, deprehendetur profecto, rem hanc fumm efle non imaginarium, fed verun habere à Commercio. Quod ut planum fiat, illud prirum hatere a Commercio. Quod ut planum hat, tium peconix exterorum regnotum intelligi folere, quad quiden pretium quam non aliunde motum fuom, nifi ab ipfo commercio acquirat; ejus natora eft, ut regni alicujus, aliorum regnorum refpectu, quoad negationem, fatum afpofite maniféfet. Etenim fi moneta, ut fape disimus nihil aliud eft, quam menfura quadam, quer rebus ipfis que fub ratione commercii intra regnum aliguod continentur, apta proportione refpondet; ipfum moceta exterorum pretium feu cambium illad efl, rec alia fane res, qua intionfecus detegit, five quum commercium cum exteris fit in :equilibrio; five quum vefa lance impar featu; ant de. nıque quan ratine ponderis preanolleat.
a real being and exiftence in nature; yet, if we attentively - confider what has been faid, every one muft be convinced - that trade is that which gives exchange a real and practical, - not an imaginary, exiftence. To explain which further, - it muft be oblerved, that, by exchange, nothing is meant - but plainly the price of foreign money, which derives it's
- fluctuation'from traffick only, as before intimated. Whence
c it is in it's nature adapred to indicate the true fate of one - nation, when compared to another, with regard to their - commerce. For if money, as before fhewn, is only a cer
- tain meafure whereby to determine the proportions of thofe
- things within a kingdom which are comprehended under
- the nature of commerce, exchange is that which difcovers - intrinfically whether the trade of fuch kingdom is upon an - equality with foreigners, or whether the ballance of trade ' is either in it's favour, or otherwife.'-And, in another part of the fame chapter he fays $t$, 'When trade ftands in æqui-
- librio, or upon equal terms between nation and nation, the * price of exchange will be at par, or will be equal to the real - intrinfic value of the money; but, if the ballance of trade
is againft fuch a kingdom, the courfe of exchange will be above the par, or above the intrintic value of the money;
- and, on the other hand, if the ballance of trade be on the advantageous fide, the courfe of exchange will be below par, or beneath the intrinfic value of the money.
Though I have endeavoured to fhew, that the exchange is the characteritic chiefly to be relied on, in our difquifitions about the ftate of trade with particular nations; yet I would not be underftood wholly, to reject all knowledge than can be derived from the cuftom-houfe accounts : on the contrary, I fhall endeavour, occafionally, to make the beft ufe and application of thole accounts, according to the degree of light and certainty they will afford, in relation to the fubject I am engaged on.
'Twas for this reafon, that I chofe to make ufe of the cuf-tom-houfe accounts, as given us by Dr D'Avenant, in regard to the trade between us and the Dutch; becaufe the exchange, in this inftance, does not indicate the true flate of the mere trade between us and that country, though, as thewn, it does the flate of money-tranfactions in general. Another reaion for introducing that account given us by the doctor, was, with defign to take an occafion from thence to urge, what I have done, with refpect to a matter wherein the two nations appear to be highly interefted.
But, if the reader fhould not have all defireable fatisfaction upon this head, from the whole of what has been faid, in various parts of this work, taken in it's united weight and energy, he may be affured to meet with much more hereafter. For, in a work fo difpofed as this is obliged to be, 'tis defired the reader will conftantly obferve, that it cannot be expected, I hould fully difcufs every point in one article; and, therefore, I am under the neceffity of referring to fuch other heads, as have a natural connection and affinity with each other. See Flanders, Netherlands, Holland.
BRITANY, the moft north-weft principality of France, is a peninfula, bounded on all fides by the ocean, except towards the eafl, where it borders on Apjou and Maine; on the north eaft, where it borders on Normandy; and on the fouth weft, where it borders on Poictou; it is one of the largeft provinces of France. The foil here yields pafture, hemp, wood, minerals, corn, and but very little wine. The meadows feed abundance of cattle, efpecially horfes, of which a very good race is bred here. Hemp and flax grow in great plenty, fo that aburdance of canvas and limen is made in this province. There are allo here fome mines of iron, lead, copper, and tin. This province is happy in bavens, having more good fea-ports than any other parts of France. The inhabitants are good fifhermen, being encouraged by the great variety of delicate firh taken on their coaft, particularly falmons, herrings, fardines, and a certain fifh of a moft delicious tafte, called imperator, or empereur at Marfeilles, and gracieux feigneur, or gracious lord, in Britany; befides tunnies, porpuffes, dolphins, fturgeons, and fome others, appropriated to the royal fifhery.
Rennes, the capital city of Britany, ftands on the conflux of the Ifle and the Vilaine, which divides the city into two parts, and makes the trade of it flourih, by means of the large boats which come here from the fea, above fourteen leagues diffant from ir.
$V_{\text {itre }}$ is pretty large, and well peopled. They make in the parifhes round it coarfe cloth, which they export to various parts of Europe and the Weft-Indies. This cloth is proper to make fmall fails. The women and maidens of all condi tions at Vitré knit thread fockings and gloves, which are fent into Spain, and even the Indies. They fell about twenty thoufand livres worth of them every year.
$\dagger$ Quando commercium obtinet aquilibrium ; illad efficit, ut nempe cambum fes pecuniz exterorum pretium incrafeco moneta valori xquale fit; fi vero illius commercium pra altero minoris fuert, tunc cambiam feu pretium monetre exterorum intrinfecum ipfius valorem excedit; quod fi demum lancis pondus in regni favorem inclinat, tune monetz
rumdem pretium interiori moneta valore inferius evadit.

At Fougeres, the trade of Jeather which the inhabitants carry on, makes their city flourifh.
The city of Nantes is the capital of a country of the fame name, the fecond city of Britany, and a great mart for trade, vaft quantities of all forts of merchandizes being brought in by the river Loire, which fows up to it's walls, and bring up very large boats, and mips of fmall burthen; and from hence, by the fame river, foreign goods are fent to Anjou, Blois, Orleans, \&c. and native commodities brought down. An excellent fort of brandy is exported hence into foreign countries. - By reafon of this convenience for trade, the city has been from time to time confiderably increafed; and there are now four fuburbs round it, which are much larger than the city itfelf, and very well filled with inhabitants. One of the fuburbs, called la Foffe, is near the harbour, and inhabited by rich merchants. There is here a large key, along which are fine houfes, and very large warehoufes. There is a very particular kind of .fociety or partnerhip eftablifhed above a century ago, between the merchants of Nantes and thofe of Bilboa in Spain. The fociety is called the Contraction, and has in each of thefe cities a reciprocal tribunal, after the manner of a confular juridiction; a merchant of Nantes who happens to be at Dilboa, has a right to fit in this tribunal, and has a deliberative voice; and the merchants of Bilboa are ufed after the fame manner, when they are at Nantes. It is becaufe of this fociety, that the Spanifh wool pays but a very frmall duty at Nantes, and that, in return, the linnens of Britany are upon the fame footing at Bilboa. Thefe two, cities had even formerly fhips in common, which traded for the profit of the partnerhip; but this is now no longer practifed. They have eftablifhed of late at Nantes a manufactory of cotton linnens, which fucceeds as well as that which has been long fince fet up at Rouen, and may even exceed it in time, becaufe cotton and indigo are here much cheaper than at Rouen.
The inhabitants of Guerande are rich, and drive a good trade in white falt, made in the neighbouring falt-marihes, and which the Englifh and Dutch load at the port of Croifil. There is alfo here a fair kept every year, during which they fell a great many horfes.
$\mathrm{C}_{\text {roisil }}$, fituate between the mouths of the Vilaine and the Loire, on the fea-coaft, has a large and very fafe harbour.
The city of St Mato is fecured to the feaby a fhoal of fand that encompaffes it, and by feveral rocks and fmall inlands; that make the harbour of a difficult accefs, fo that it is reputed one of the beft keys of France. At low ebb, the port is left almoft dry, by which means it is very eary to build or to refit veffels here. This city is very conliderable for it's trade and Atrength, and the fill of it's inhabitants in maritime affairs; by which great numbers of privateers are, in time of war, fitted out from hence, which greatly difturb the trade of thofe feas. Befides their trade to England, Holland, and Spain, they fit out a great number of fhips from one to three hundred tons, for the cod'fifhery in North America.
At Dinan, in the fuburb called Jargia, along the fide of the river Rance, is a fine key.
The land in the neighbourhoed of DoL, produces a great deal of hemp, of which they make a coarfe clath.
In the diocefe of St Brieux, are feveral manufactures of linnens, and the land produces a vaft deal of corn and abundance of fruit, of which they make cyder.
Lambale is particularly famous on account of the adjacent paftures, wherein are fed many herds of cattle, and for it's confiderable trade in parchment.
The trade at Treguier confifts chiefly in horfes, corn, hemp, and flax. They alfo make here a great deal of paper, of which they fend a confiderable quantity to divers parts of Europe. Here is a fmall harbour, which is pretty fafe.
The river of Morlaix is deep, and receives veffels of a hun. dred tons, which by means of the tide come up into the town; by the convenience whereof it is a place of good trade, which confilts in flax, canvas, paper (made here in great quantify) linnen cloth, thread, and other commodities, that are exported hence into Holland, and other parts. This has fo increafed the number of the inhabitants, that two fuburbs have been added to the town, called Venice and St Matthew. Here is a market kept twice a week.
At Lanion was formerly a confiderable trade in butter, but it is now very much decayed, fince the people of Paris fetch their butter from Ifigni in Lower Normandy. Their chief trade now confifts in wine from Buurdeaux and la Rochelle, which the merchants of St Malo come and buy here.
Brest is one of the grand magazines of the admiralty of France. The harbour is encompaffed with very fine keys, on which are built feveral warehoufes, filled with all forts of naval ftores. .Here the greateft number of the French navy winter, and are fitted out; and Thips of 80 or go guns are built here, which make it a populous and rich place.
Quimpor is fituate on the Oder, into which a fmall river called Benandet falls, furrounding the town, and making it a kimd of illand. The Oder is here fo deep, that barks of a large fize are conveyed at high tide to the port at the confuence of the two rivers, where flands the fuburb termed the Duke's Land, and inhabited by many rich merchants.

## B R I

## B R I

The fea which furrounds Coucarneau, forms it's port by a fmall intrenchment, which leaves but a very narrow entry for the veffels to come in. They are theltered here from all ftorms by the mountains, which fand along this intrenchment.
Audierne is a fmall fea-port, agreeably fituate in a'little bay, on the mouth of a rivuler which comes from Pont le Croix. Doarnemes has a good port, and lies at the upper end of a bay, to which it gives it's name.
VanNes is watered by two little rivers, which join here, and make the port capable to receive feveral veffels of 200 tons burthen. The key is built with large free-ftones, as well as the mole or pier, which lies acrofs a little marfh, near which are feveral magazines and fine houfes; inhabited by rich merchants. The inhabitants of the diocefe of Vannes have a very good trade by means of feveral rivers, and their neighbourhood to the fea.
The harbour of Port-Louis is very good and fafe. The largeft liips enter in very eafily, and go up to the end of the bay at a place called l'Orient. Here are the warchoufes, and chief eftablifhments of the French Eaft-India company. Lewis the XIVth made a very good ufe of this port during the war, having caufed feveral. men of war of the firf rate to be built and rigged here. Notwithftanding the conveniency and fafety of this harbour, yet very few merchants have fettled here; the reafon of which is, that they would be obliged to fetch their merchandizes from Nantes, fo that they could not fell them fo cheap as the merchants of that city. The only; trade therefore of Port-Louis, confifts in fardines and congers.
At Hennebon are feveral rich merchants. It is fituate on the river Blavet.
BRITISH AMERICA, or the flate of the trade of the coIonies and plantations in America, that belong to the crown of Great-Britain. Under the article of America, the reader is defired to obferve, that we have given a general account of the commerce of that part of the world, with refpect to Europe, Africa, and Afia, which fhews the general dependency, in regard to trade, of one quarter of the world upon the other. This we judged a neceflary introduction to a particular account of the trade of the new world, with relation to the feveral European potentates, among whom the American territories are principally divided. To do which in the moft acceptable manner, and according to the alphabetical order to which I am confined, I have referred from America as the root to British America, as a branch for what concerns Great-Britain; to French America, for what concerns France, \&c.
The colonies and plantations in America, belonging to the crown of Great-Britain, confift of thofe upon the continent, and of thofe which are iflands. Thofe upon the continent, fince the Definitive Treaty of if63, are as follow. [See the article America.] Viz. Florida, Georgia, the Carolinas, Virginia, Maryland, Penfylvania, the Jerfeys, New York, New England, New Scotland, or Acadia, Newfoundland, Hudfon's Bay, and Canada and all it's Dependencies. The illands are thofe of Jamaica, Bahama, Bermudas, Anguilla, St Martin's, which belongs to the Dutch as well as the Englifh, Barbuda, St: Chriftopher's, Nevis, Antigua, Montferrat, Dominica, St Vincent, Tobago, Grenada, and the Granadines, Barbadoes.
Florida we have had annexed to the crown of Great-Britain by the Definitive Treaty of 1763 . This new Britifh colony on the continent, is rendered advantageous to this kingdom, from its ports of Pensacola, and Morille, and the Britifh right of navigation in the Mississippi, through the Gulph cf Mexice, and likewife by the Ports of St Augustine and St Mottheo, lying in the Gulph of Florida; and being fo contiguous to the Bahama iflands, and Georgia and Carolina, conflitute together a very good maritime barrier to our fouthern colonies on the continent of America. See Bahama Islands, Flórida, America, British America, French America.
Florida lies on the eaft of the Miffiffippi river, and extends to the weft frontiers of Carolina and Georgia, is Ceparated from Canada on the north by the Apalachian mountains, and has the Gulph of Mexico at the fouth. What is called the Peninfula of Florida, has Georgia on the north, the Gulph of Mexico on the fouth-weft, that of Florida on the fouth, with the channel of the Bahamas; and the Atlantic Ocean on the eaft.
Georgia, a Britifh colony on the continent of North America, lying within the province of Carolina, as defcribed in the chatter to it's late proprictors, is by fome reckoned the third grand divifion of it. 'Tis feparated from South Carolina by the river Savannah on the north, has the Atlantic ocean on the eaff, Indian Florida on the weft, and is feparated from Spanifh Floridd oin the fouth, by the river Alatamaha. 'Tis above 170 miles from north to fouth, and above 300 from the midt of the coaft to the Apalachian mountains, and extends on the north-weft even as far as the river Miffifippi. By feveral treaties made and renewed with the Cherokees, Chikafas, the Nautches, and the three Creek Indian nations,
the fubjects of his Britannic majefty have a, right of poffeffon from Lake Erie to the Chikafas, at the river Mifliffippi; whereas, in many of thofe parts, the French have no other title but that of intrufion and force. When general Oglethorpe, one of the firft promoters and truftees of this colohy, went generoully with the firf colony of the Englin, at his own expence, he and their allies made treaties and cemented our friendhip with the Indian nations, who extend themfelves to the river Mififfippi.
Before the general's arrival here, this country had the name of Yammacraw, an Indian nation; whofe chief Tomochichi, hat had been banifhed, with others, from his own country, readily entered into a clofe friendihip with him; which was the more agreeable to both parties, as there was no other Indian nation within fifty miles. About this timè alfo, the chief men of the lower Creek Indian nations, confifting of eight rribes, who are allied together, and feeak the fame language, came to the number of fifty perfons, with their atiendants (fome of them after a journey of five days) to treat of an alliance with this colony. Thefe Indians laid claim to all the land from the Savannah river, as far as St Auguftin, and up Fint river, which falls into the bay of Mexico. Thofe Indians promifed by folemn treaty, and with the higheft affection to their Englifh brethren, to encourage no other white people to fettle in their country, to which they all fet the marks of their relpective families.
The year following, an alliance alfo was made with another Indian nation in this country, called the Nautches, Natches, or Natchitoches, tending very much to the fecurity of chis new colony. But we have fuffered thefe our faithful allies to be almoft absolutely deftroyed by the French, from their fettlements on the Miffifippi; which, any one will eafily believe, has had no tendency to frengthen our friendhip, and render the Britifh name refpedful among Indian nations; who, in general, are alone capable of fupporting all our colonies in North America; and, thefe in particular, migh:, with proper management, not only have been rendered an invincible barrier to Carolina and Georgia, but have proved of extraordinary advantage to the commerce of thele colonies. For,
Theff Indians; , when their kings and chief wete prevailed on by the addrefs of general Oglethorpe, to come to England, gave teftimony; that they were men of good fenfe, and hearty well-wilhers to a lafting commercial correfpondence betwixt this nation and theirs; and therefore defired of the trultees, that the weights, meafures, prices, and qualities of goods, to be purchafed by them with their deer-fkins, might be fetiled; and that nobody might be fuffered to trade with the Indians in Georgia, without a licence'from the truftees, that the Indians, in cafe of injury and fraud, might "know where to complain. They further defired, that there might be but one ftorehoufe in each Indian town, from whence the traders fhould fupply them with goods at the fixed prices; becaufe they faid the traders had often, in an arbitrary manner, not only raifed the prices of their goods, but given them, at the fame time, fhort weights and meafures; and; by their impofition, had created frequent animofities between the Englifh and the Indians, which had ofien ended in wars prejudicial to both their interefts.
Upon thefe remonitrances, the truftees prepared the following acts, which being laid before the king and council in January, 1735, were, after a report from the board of trade, ratified by his majetty, viz. I. An act for maintaining the peace with the Indians in the province of Georgia. 2. An act to prevent the importation and ufe of rum and brandy in that province, or any kind of firits or ftrong waters. 3. An act for rendering the colony more defenfible, by prohibiting the importation of negroes.
On the 30th of October, 1734, Tomochichit the Indian king, \&ic. being conducted from the Georgia office in the king's coaches to Gravefend, embarked for their own councry, after four months ftay in England; during which, they were allowed by his majefty 20 l , a week for their fubfiftence, and were entertained in a moft magnificent manner, not only by the Court, but by feveral perfons of diftinction, who had the profperity of that colony at heart. Nothing was wanting to give them an idea of the politenefs and grandeur of the Englinh, and of our nation's regard for the Indians. They carried away handfome prefents; and, 'tis faid, the Duke of Cumberland (then but thirteen years of age) prefenting the young prince with a gold watch, exhorted him to call upon Jefus Chrift every morning when he looked upon it, which he promifed. In returs for thefe teltimonies of regard, they promifed eternal fidelity and attachment to the Britifh nation. Upon the return of general Oglethorpe in 1739, to Georgia, Tomochichi, together with four other Indian kings of the Creek nation, with thirty of their warriors, watted on him at Savannah, and acquainted him, that though the Spaniards had decoyed him to St Auguftine, on pretence that he was there; and offered them great preients to fall out with the Englifh; they adhered in their fidelity to his Britannic majefty, and that the Creek nation would march 1000 warriors wherever be fhould command them.

And becaufe the Britif traders, who came amongt them from Carolina, bad ufed bad weights, they defired the general would order them brafs weights and fealed meafures, to be lodged with each of their kings; and they invited him to come up in the enfuing fummer to fee their towns; which he promifed, and accordingly performed the year following, travelling through a country very little known but to the Indians, and very difficult for Europeans, to the town of Coweta, though not lefs than 500 miles from Frederica. Here he conferred, not only with the chiefs of all the tribes of this nation, but alfo with the deputies of the Chowetaws and Chickefaws, who lie between the Englifh and French fettlements; and, on the 2 ift of Auguft, he made a new treaty with the nations of the Lower Creeks; and of which we the rather take notice, becaufe it fhews the fituation and limits of the Creek nation, and of the lands we have obtained of them, as reprefented by themfelves.

- The deputies having drunk black drink together, according 6 to a fuperftitious cuftom of their anceftors, the whole eftates - declared nem. con. that they adhered in their ancient love to - the king of Great-Britain, and to the agreements made, in - the year 1733, with the truflees eftablifhed for the co-- Iony of Georgia; and they farther declared, that all the ' dominions, territories, and lands, from the Savannah ric ver to St John's river, and all the iflands between them; - and from St John's river to the bay of Apalache, and from - thence to the mountains; do by ancient right belong to - the Creek nation, who have maintained poffeffion of it - againt all oppofers by war, and can hew heaps of the - bones of their enemies, by them flain in defence of their - lands. And the faid eftates further declared, that the - faid nation hath, for ages, enjoyed the protection of the
- kings and queens of England; and that the Spaniards, nor - no other nation, have any right to any of the faid lands; ' and that they will not fuffer them, or any other perfon, - except the truftees of the colony of Georgia, to fettle on - the faid lands. And they acknowledge the grant they have - already made, to the faid truftees, of all the lands upon the - Savannah river, as far as the river Ogeeche, and all the - lands along the fea-coafts as far as St John's river, and as c bigh as the tide flows, and all the inlands as far as the faid - river, particularly the iflands of Frederica, Cumberland, - and Amelia, to which they have given the names of his - Britannic majefty's family, out of gratitude to him. But - they declare they did, and do referve to the Creek nation, * all the land from Pipemakers Bluff to Savannah, and the - inlands of St Catharine, Offebaw, and Sappalo: And they
- farther declare, that the faid lands are held by the Creek ' nation, as tenants in common. And Mr Oglethorpe, the - commiffioner for king George the fecond, doth declare, 6 That the Englifh fhall not enlarge or take up any lands, " except thofe granted as above to the truftees, by the Creek ' nation ; and doth covenant, that he will punifh any per-- fon that fhall intrude upon the lands fo referved by that na-- tion.'

This province produces Indian corn, as alfo fome wheat, oats, and barley, of which the two laft grow beft; very good wheat is alfo reaped in May, and they mow grafs in June. Here are potatoes, pumpkins, water and mufk meJons, cucumbers, all forts of Englifh green peafe, and garden beans, except the Windfor, which will not flourifh here, Indian peafe, all forts'of fallading all the year round, and fweet herbs and pot-herbs. Rice too might be cultivated here with as much fuccefs as in Carolina. Here are nectarines, plums, and peaches, which tree, efpecially peaches, are almoft as common as apple-trees in Herefordhire. The plums are ripe at the beginning of May, peaches and nectarines the latter end of June. Here are no bazle-nuts, but chincapins very fweet and good; wild grapes in abundance, which are ripe in June, as alfo four or five forts of good wine berries, prefimmins much like our medlars, wild cherries that grow in fprays like currants, and are not much larger. Here are a few Englifh cherries in the gardens and orchards, alfo apples, pears, and a few apricot-trees. Many of the apple-trees, bear twice a year, but the latter crop is fmall. Here are great quantities of white and black mul-berry-trees, the fruit of which are not to compare with thofe of England, though the leaves are the beft food for the filkworms. Olives flourifh here in good perfection, and fo do oranges, efpeciallv in the fouth part of the province. The chief trees for timber, \&c. are pine in abundance, fix or feven forts of oaks, biccory, black walnut, cedar, cyprefs white and black, laurel white and red, bays, myrtle, of whofe berries they make candles; faffafras, the infufion of which mokes good driuk; beech trees, and many others that have no name. In fome places here is as good land as any in England, were there but hands enough to cultivate it.
There is a great deal of game in this country, particularly in the winter ieafon, viz. from the beginning of November to the month of March, fuch as wild geefe, ducks, teal, and widgeon; wild turkeys, from 20 to 30 pounds weight; turtledoves in great plenty, curlews, fand-birds, woodcocks and partridges, but much fmaller than in England; fmall deer; and, when it is very coid in the northern parts of America,
here ate valt flights of wild pidgeone, which are very eafy ts thoot. The chief game bere in the fummer feafon is deer and ducks; and the poorer fort of people kill great number of poliems and racoons; the former eat like fueking pig, the other like lamb. Here are many tygers, but fimall; and bears, whofe cubs Hefh eats like that of young pigs.
Here is plenty of filh, which, in the fummer time efrecially, are very cheap, fuch as trout, mullet, whiting, black-fifh, rock fith, fhecp's-bead, down fih, bals, fturgeon, which are hard to eatch, and fundry others, very good. As to fhelififh, here are oyfters innumerable, but not crabs fo good as the Englifh; clams, mufcles, conchs, and prawis to large, that half a fcore of them are fufficient for a moderate ito: mach.
This colony bids very fair for four flaple producions, viz. fkins, rice, filk, and wines. Indeed in regard to the latter, the coat of the natural arape is not frong enough to contain the juice, fo that, when it is ripe, it burlts. The froft about the vernal equinox often kills the vines, alfo, when they are fhooting; and, as for the European grapes, many are deftroyed by the infects of the country: yet experience has thewn, that, by grafting the European on the wild vine, all thefe inconveniencies may be prevented; for then it fhoots later, and fo efcapes the frof better, the fkins of the grape becoming thicker and ftronger, and the infects having lefs power to do prejudice. Some vines brought hither from Portugal and Madeira have throve very well, even in the moft barren parts of the province.
In fine there feems nothing wanting by nature in this country to render it as fruitful as it is pleafant, and as profitable to Great-Britain as any other of the northern colonies.
Savanaah is the chief town, and lies on the fouth of the river of the fame name; on which it has a very fine fruation for trade, it's navigation being very fafe, and fhips of ' 300 tons can lie within a few yards of the town and bank, about'a mile along the river fide; and fhips of fuch burden may allo go a great many miles abave the town.
The river here forms a half-moon, with banks on the fouth fide 40 feet high; and on the top there is a flat, which they call a bluff, at leaft 60 feet high from the river, which is a plain high ground, extending five or fix miles into the country. In the center of this half-moon ftands the town, and overagainft it an ifland of very rich land, fit for pafture. The river abounds with fifh, is pretty wide, the water frefh, and, though there are high woods on both fides of it, yet, from the key of the town, there is a profpect of it's whole courfe to the fea, and to Tyby-Illand', which lies before the mouth of it to the fouthward of the bar; and, the other way, there is a view of the river for fix miles up into the country. Tyby is a very pleafant ifland, with a beautiful creek to the weft of it, where' a hip of any burden may lie fafe at anchor. It has great plenty of deer on it, and a light houfe 80 feet high. About four miles from Savannah, within land, are two villages, about a mile afunder, which they call Highgate and Hampftead, where the inhabitants chiefly apply to gardening, and fupply the town with herbage of all torts. There are 20 plantations within 20 miles round the town, which have each of them from five to 30 acres of land fhared. ' There are two forts built on the, Savannah River, one called Patochocoloas Fort, the other Savannah.
Abercorn is a village about 13 miles, north-weft from Savannah; and, about 5 miles farther up the river, is the town of Ebenezer, a very healthy place, where the Saltzburghers are fettled, who are a fober induftrious people, that raife not only corn, and other produce, enough for their own fubliftence, but fell great quantities to the inhabitants of Savannah, They have good herds of cattle for the ufe of the public, and for breeding.
Augufta is a fort on the river Savannah, which is a pretty thriving place, whither the traders with the Indians from South Carolina and Gcorgia refort, and where are warehoufes, furnifhed with fuch goods as the Indians want, the deer-fkins taken in exchange being fent $23^{\circ}$ miles down the river, to the town of Savannah in boats, which carry each about four tons and a balf. This place is a great protection to both the provinces of Carolina and Geolgia, againft any invaders. Horfe-roads are made from it to the town of Savannah, and to the habitations of the Cherokee Indians.
The illands and forts upon the coaft, as they lie from north to fouth, are thefe, viz.
I Amelia !fland, about 7 leagues north of St Augutine, be longing to the Spaniards, is 2 miles broad, and about 13 long, and extends to the fouthern mouth of the river Alatamaha, the prefent fouth boundary of Georgia, and within a league of St John's, or Juan's River, which is about five lcagues from St Auguftin.
2. Cumberland In nd, is about 20 miles fouth of Frederics. Here are two forts, called William and St Andrew's. The former, which is at the fouth end of it, commands the inlet of Amelia Sound, is ftrongly palifadoed, and defended by eight pieces of cannon. Barracks alfo are built upon it fur 220 men, befides ftorehoufes; within the palifidroes are fine fprings of water, and a houfe, with large magazines under it for ammunition and provifions.

## B R I

3. St Simon's Ifland, near the north mouth of the Alatamahs River, is about 45 miles long, and from 2 to 4 in breadth. The fouth end of it, where was a fort, and a camp, or barracks, with fome huts, in 1742, when the Spaniards lait invaded it, is 25 leagues north of St Auguftine. A ftrong bittery was alfo erected on it, for protection of Jekyl Sound, in which 10 or 12 forty-gun hips may fafely ride. This'illand has a rich fruitful foil, full of fine oak and hickery-trees, intermixed with meadows and old Indian fields. In the middle of it is the town of Frederica, round which are good fortifications, a regular fortrefs, ftrengthened by four battions, and fpur-work, towards the river, mounted with feveral pieces of cannon.
New Invernefs, in the fouth part of the province, 20 miles from Frederica, is a place on the rivet Alatamaha, where the Highlanders are fettled.
Upon the purchafe of the propriety of Carolina, by his late majefty, orders were iffued for building II towns here and in Carolina, each of which was to have a diftrict of 20,000 acres of land fquare, and to be divided into fhares of 50 acres for each man, woman, or child, of one family, which was to be augmented as the planters fhould be in a condition to cultivate a larger quantity. Each town was alfo to be formed into a parifh, the extent whereof was to be about fix miles round; and as foon as the parifh contained 100 mafters of families, it was qualified to fend two members to the affembly of the province, and to enjoy the fame privileges as any of the other parilhes. The ground of each town, being marked out, was to belong in common to all the inhabitants, 'till fhared out to each of them. There were to be 300 acres of land near each town, to be cotmmon for ever, without being charged with rent; and no perfon, by virtue of any former grant, was to take poffeffion of any land within fix miles of each town. The rent payable for every 100 acres, after io years, was to pay 4 s . a year. And to every European fervant, whether male or female, 50 acres of land were alfo be diftributed free from all rent for 10 years.
Carolina is alfo part of that great region of North America which was formerly comprehended under the name of Florida. King Charles II made a grant thereof, in 1663 , to Edward eanl of Clarendon, then lord high chancelior of England, and others, from the north end of the land, called Luck Ifland, which lies in the fouthern Virginian Sea, and within 36 degrees of north latitude, to the weft, as far as the South sea; and, foutherly, as far as the river St Mattheo, which borders on the coalt of Florida, and is within 3I degrees of north latitude; and fo weft, in a direct line, as far alfo as the South Seas, with all royal fifheries, mines, and every thing neceffary in an abfolute propriety, paying a quit-rent of 20 merks yearly.
The plan of government for this colony was defigned by that great ftatefman, Anthony earl of Shaftelbury, and digefted into form by the great Mr John Locke; whence great expeeiations were raifed. But, how fpecious foever that plan might appear in theory, experience fhewed it's impracticability. The only remedy that could at length be found, was to get rid of this fine-fpun conftitution, wherein it was pretended that all the errors of our own were cured, and to put the province into the hands, and under the protection, of his late majefty George II; and this remedy has anfwered all that could be expected from it in fo few years.
After this fale and furrender to the crown, in confideration of 22,500 l. had been confirmed by an act of parliament in the year 1728 , intitled, An att for eftablifhing an agreement with feven of the lords proprietors of Carolina, for furrender of their title and intereft in that province to his majefty the remaining one eighth of the propriety and arrear of quit-rents were referved, by the faid act, to the right honourable John lord Carteret, now earl of Granville.
In confequence of the powers granted by this act to his majefty, he has ever fince appointed governors of North and South Carolina. Befides the governor, there is an affembly, compored of deputies, chofen by the freeholders of every county, who, with the governor's confent, have the power to make laws for the adminiftration of the affairs of the colony.
This country is fituated between the extremities of cold and heat ; the air, for the moft part, is ferene and clear, both winter and fummer; yet they have their winter rains, and fometimes heavy fhowers about Midfummer, efpecially if the wind changes fuddenly from fouth-eaft to north-weft, it then blowing exceeding cold, and bringing diftempers on thofe who do not prudently guard againft it. The country is generally healthful, where people live regularly, and ufe precaution. This province is watered by feveral rivers, the moft confiderable of which are, 1. The Savannah, which rifes in the Apalachian mountains, runs to the fouth-eaft, and falls into the fea, about 32 miles to the fouthward of Port Royal, after a courfe of above 200 miles. 2. Congaree, or Saulee, comes from the Cherokee mountains, and difembogues itfelf into the fea near Cape Carteret, to the north of Charles-Town. 3. Cape Fear River, hath it's head in Virginia, from whence it runs almoit fouthwards, and forms, at it's mouth, a narrow flip of land, the uttermoft point of which is called Cape Fear, in north latitude 33.34. 4. Roanoke, fprings alfo in Vir-
Vol. I.

## B R I

ginia, and falls into the fea in latitude 36 , where it forino kind of long and narrow bay, called Albemarle Sound. So kindly is the foil of this county, that almolt every fort of trees and plants will grow there to great perfection, particularly vines, whear, barley, oats; peafe, beans, hemp, flax cotion; tobacco, indigo, olives, orange and citron trees, as a!lo white mulberry-trees, for the feeding of filk-worns nor are the lands difficult to clear there, becaufe they do not abound with ftones or brambles, but chiefly with large trees that do not grow very thick: fo that great quantities of land are cleared in a litile time.
It is true, the foil in general is fandy, but, being richly impregnated with a nitrous falt, it is extremely fertice, and that to fuch a degree; that it is remarkable that numbers of plantations, which have been conftantly culivated for near, 70 years, yet produced great plenty without dung manare; the planter havipg nothing more to do than to tum up the fuperncies of the earth, and all that he plants thrives to admiration which is fomething peculiar.
The feafon of fowing Indian corn here is from the if of March to the ioth of June. An acre produces from 18 to 30 buftels. The fred time of rice is from the rft of April to the 20th of May: It is fowed in furrows about 18 inches diftant; a peck ufually fows an acre, which yields feldom lefs than 30 bufhels, or more than 60; but between thefe two, as the land is either better or worfe. It is reaped in September, to the 8th of October; and the produce is now become fo confiderable, that It returns to Great-Britain at leaft 80,0001 . a year, including freight and commiffion, which are the molt profitable articles in the Britifh commerce. In a good year this colony can export 80,000 barrels, of 400 weight each, and upon a medium of feven years, may mike 50,000 barrels, difpofed of as follows, from a computation made a few years fince :

To the fouth of Cape Finifletre 10,000 barrels
To the north of Cape Finifterre 38,000
To Great Britain
2,000
50,0co barrels.
This quantity of rice will employ above 10,000 ton of fhip ping, and may return, as obferved, to Great-Britain 80, boo 1 . This product is fo confiderable, fo good in quality, and continues fo increafing, that there is great likelihood that, in few years, all the markets in Europe may be fupplied therewith from this province.
Silk-worms in Carolina are hatched from the egg about the beginning of March, at the fame time that the mulberryleaves, which are their food, begin to open: being attended and fed fix weeks, they eat no more, but have fmall buhes fet up for them to fin themfelves into balls, which, thrown into water, are wound off into raw filk.
Rofin, tar, and pitch are alfo produced from the pine-tree : rofin, by cutting chanuels in the flanding green trees, which meet at a point at the foot of the tree, where is placed a receiver; the channels are cut as high as one can reach with an ax, and the bark is peeled off from all thofe parts of the tree that are expofed to the fun, that the heat of it may the more eafily force out the turpentine, which, being taken from the receiver, and melted in kettles, becomes rofin. Tar is made by preparing a circular floor of clay, declining a little towards the center, from which is laid a wooden pipe, the upper part whereof is even with the floor, and reaches about io feet without the circumference; under the end the earth is dug away; and barrels are placed to receive the tar as it runs; upon the floor is built up a large pile of dry pine-wood, fplit in pieces, and furrounded with a wall of earth, which covers it all over except a little at the top, where the fire is fire kindled. After the fire begins to burn, they cover it with earth, to the end that there may be no flame, but only heat fufficient to force the tar downwards into the floor; they temper the heat as they pleafe, by thrufting a fick through the earth, and letting the air in at as many places as they fee convenient Pitch is made by boiling tar in large iron kettles, fet in furnaces, or by burning it in round clay holes made in the earth.
Black cattle have mightily increafed fince the firf fettling of this colony : about 40 years ago it was reckoned a great deal to have three or four cows, now fome people have 500 and 1000 head; and for one man to have 200 is very common. Here are hogs in abundance. The beef and pork that are raifed here find a good market in the fugar-iflands.
The trade of Carolina is now fo confiderable, that, of late years, there have failed from thence annually above 200 Chips laden with merchandize of the growth of the country, and they have commonly three fhips of war for the fecurity of their commerce. It appears from the Cuftom-houfe entries, from March 1730, to March 1731, that there failed, within that time, from Charles-Town, 207 thips, moft of them for England, which carried among other goods, 41,757 barrels of rice, about 500 pounds weight per barrel; 10,750 barrels of pitch; 2063 of tar, and 759 of turpentine; of deerfkins 300 cafks, containing 8 and 900 fkins each; befides a vaft quantity of Indian corn, peale, beans, \&ic. beef, pork,
and other falted fent beams, planks, and timber for building, moft part of cedar, cyprefs, faffafras, oak, walnut, and pine.
For the deer, and other Kkins, they carry on a confiderable trade with the Indians; in exchange for which they give them only lead, powder, coarfe cloth, vermillion, iron, ftrong waters, and fome other goods, by which they have large profit. The great number of flaves make another part of the riches of this province, there being above 40,000 negroes, which are worth, one with another, 25 l. each. Artificers are frequently fo very fearce, that all forts of work are very dear. Taylors, thoemakers, fmiths, \&c. are particularly acceptable there; a ikilful carpenter is not athamed to demand from 20 to 30 fhillings a day, Carolina money, befides his diet; and the common wages of a workman is from 12 to 15 fhillings a day, and more, provided he fpeaks Englifh, without which he cannot be underftood, and, therefore, is not fo ufeful as others.
Silk is come to great improvement here, fome families making 40 or 50 lb . a year, and their plantation-work not neglected, their little negroe-children being ferviceable in feeding of the filk-worms. Sir Nathaniel Johnfon was the principal promoter of this improvement, as alfo of vineyards. They manufacture their filk with wool, and make druggets. The French proteftants have fet up a linnen manufacture. Befides their bills of credit, the currency of this province is French piftoles and Spanifh gold, which, before the act for regulating coin in the colonies, paffed at 6 s .3 d . I dwt. and 3 d. the odd grains; Dutch dollars, and Peruvian pieces of eight, at 5 s . There is little Englifh money but what here paftes at 50 per cent. advance: a crown at $7 \mathrm{s}$.6 d , a guinea $2 t 32 \mathrm{~s} .3 \mathrm{~d}$.
This country is bounded on the fouth and fouth-weft by the river Savannah, which parts it from Georgia; on the eaft by the Atlantic Ocean; on the north by Virginia; and, on the weft by feveral Indian nations, which lie between this fettlement and the French colonies. The two principal of thefe nations are the Creeks and the Cherokees, who were a long time at war with the Englifh in Carolina; but now the latter are in amity and alliance with the fubjects of the king of Great-Britain, and ferve as a powerful barrier to Carolina and Georgia, againft both the French and Spaniards. The emperor of the Cherokees, and the king of Catawaga, renew ed their league of friendfhip with governor Glen, at CharlesTown in South Carolina, in May 1745. Some extend Caro lina weftward as far as the Apalachian mountains; but, whatever may be the claim of the Englifh in that refpect, it is certain that the abovementioned Indians, and, perhaps, fome other unconquered nations, inhabit between thefe mountains and our fettements in Carolina, which extends from the mouth of the river Savannah, in north latitude 3 r. 55 . to 3 6. 3 I. of the fame latitude, along the coaft, which, running chiefy from fouth-weft to north-eaft, makes the length of the country that way about 350 miles; it's greateft breadth, from the fea-coaft weftward, is about 260 miles; but, towards the north, it is much pent up by the Cherokee mountains, fo that there is not much above 200 miles abroad.
The country is divided into South and North Carolina : the former contains four counties, viz. Granvilie, or Carteret, Colleton, Berkley, and Craven; and the latter two, viz. Clarendon and Albemarle.
In the county of Granyille is the river May, which, joining with the river Cambog, forms, together with the fea, the illand of Edelano. The country upon the river May was formerly inhabited by an Indian nation, called the Veftoes, There is in it a pleafant lake and valley. Port-Royal River lies about 15 miles to the northwands of the river May. It has a bold entrance, 17 feet deep on the bar at low-water, The barbour is large, commodious, and fafe for thipping, and runs into a fine fruitful country, preferable to the other parts of Carolina. It fpends itfelf by various branches into other large rivers. This port is not above $18 \%$ miles from St Auguftine, and, may now, fince St Auguftine is annexed by the Definitive Treaty of 1763 , to the crown of England, in conjunction therewith, prove highly beneficial to thefe kingdoms. The firf Englifh who came to Carolina thought of fettling hereabouts, but the Indians advifed to the contrary, becaufe the harbour, being the fineft in this counary, would have tempted the Spaniards to diffurb them.
