We find already that feveral neighbouring nations, and fome of our moft diftant provinces, are vying with us in this branch of trade. Denmark, Hamburgh, Dantzick, and the Baltic, have, for fome years paft, furnifhed very large quantities of corn to the places where it has been wanted, and at much cheaper rates than could be had from us, notwithftanding the bounty; and our own plantations in America not only fupply much to Spain and Portugal, but even come fo near to us as Ireland and the Bay of Bifcay, and underfell us at thefe places; not to mention what a flourifhing trade this is in Sicily, Naples, the Levant, Morea, \&c.-So that all thefe countries, if we refign to them this part of our commerce, will grow more potent by fea and land; and Britifh America may alfo contribute to the ruin of Great-Britain. Wherefore, upon any reduction of the bounty, the corntrade muft decline in England, and a gradual neglect of tillage at home will encourage it more and more abroad;
which intay, in time, fubject us to the mifery of feeking toreion fupplies even for our own ufe; which was a cale that fhould not be forgotten, when a few years fince our crop failed, and we imported large quantities from abroad. Does it not therefore become the wifdoth of the nation to flrive, by cvery prudent meafure, to fectute the corn-trade to the kinerdom? For may not any falfe ftep upon fo tender and delicate an occafion open a wide door to poverty and diftres ?
It is an experienced truth, and therefore become an univerfal maxim, that thofe who can furnith cheapef a commodity of equal goodners, will have the trade; but, from what has been faid, in favour of withdrawing the bounty, the corntrade is reprefented only as fubfervient to all others, and to bear fcarce any proportion to the manufactures, though perhaps the corn-trade, confidered in it's full extent, is as confiderable a branch as moft of them; and, if not the frof, may, we apprehend, be accounted the fecond nof valuable branch belonging to the kingdom. If we reflect a little upon the extent of it, we fhall, perhaps, find the tract of land dependent thereon is the moft confiderabie part of the nation, and the fame alfo of the inhabitants and people therein employed. And, I believe, there is not any one branch of foreign trade, which is fo beneficial to the interelt of navigation, for the bounty is well and wifely confined to the em. ployment of our own hipping; 'tis a bulky cominodity, and therefore etnploys the more veffels. Were we to take a furvey of all the out-ports great and fmall, upon the coafts of this kingdom, we fhould be furprized to fee how the number of thips and veffels are increafed, which have no other dependance than the corn-trade; and, if there is an increafe of fhipping, there muft alfo be an increale of mariners, which all agree to be the beft fecurity of the kingdom. The employment of thefe fhips and mariners neceffarily occafions bufnefs among various forts of mechanics and artificers afhore : in fhort, 'tis certain, that a multitude of families have their fole dependance on the employment of fhipping in the corn-trade, and, when any ftagnation happens, the confequences are foon evidently cxperienced.
Was the bounty on corn withdrawn, it might then be loaded on foreign fhipping as well as our own, and a preference would be given to them, for what fhare of this trade we might have remaining, becaufe they will generally carry it much cheaper than our's, and this would prove a fatal ftroke to our navigation. Is it not, therefore, as material that we fhould ftudy to preferve the corn-bufinefs, as any othec of equal importance to the nation, and not fuffer other countries to underfell us; which, without the bounty, they certainly can and will do?
Befide, we do not conceive that the exportation of corn has any material influence upon the manufactories of the nation, the chief of which are fituated generally in the interior parts of the kingdom, where the exportation can have very little effect upon the price. Thefe are not countries that ge nera!ly produce abundance of corn, and therefore the people more eafily conceive miftaken notions about rending it out of the kingdom.-And, though our manufacturers merit a tender care and regard, yot the intereft of the farmer is not to be neglected. Is all the fea-coaft, whofe chief dependance is on the exportation of corn, to be totally undone for want of other employment?
'Tis an experienced truth, that cheapnefs and plenty do not always encourage induftry in the poor. But a permanent change on the price of provinion muft affect the price of la bour: yet the change that is fometimes wrought in the price of corn by large exportation, is not permanent, but accidental and temporary; and fuch there muft of neceffity always be in the price of provifions, if from no other caufe than the difference of our crops at home; for large demands for corn abroad are not permanent, and therefore it is that the exportation (though a feeming paradox) makes it cheap at home; for, our lands being improved, people fow all they can upon the prefumption of an exportation, which elfe there would not be encouragement to do ; and, as the forcign demand is precarious, fo it often happens, that we have large focks in the kingdom, and little or no vent for it: the price of corn may, indeed, for a feafon advance, through the heat of the circulation for foreign markets; as is the cale, more or lefs, in moft other merchandizes; but experience proves, that corn is only dear for a continuance, when the crop has proved light at home : a deficiency this vay will foon overballance the largeft exportation ever known, and the farmer muft then fell his corn at a dearer rate, or can't pay his rent, as eftates are now in general let. When we have a plentiful crop, wheat is and will be cheap, and large ftocks left cyen after the greateft exportation. What then would be the canfequence, if no bounty was allowed to encourage the exportation, and efpecially as our plenty often happens, when there is no great demand for it abroad? 'Tis certain, therefore, that, by the exportation of corn, there is no permanent advance of the price, but, on the contrary, there are often accidental changes, when it is thereby lowered; and, to make it appear that the price of bread is not, on an average, at any unreafonable price for the labourer, wheat has not, for the laft feven years, met at more than 2.6 s .6 d . per quarter

Exchequer meafure, and that in a place of confiderable exportation ; nor is it conceived, that a fmall advance of bread would be perceptible in the fale of any piece of goods manufactured and fent abroad.
Moreover, if great cheapnefs of corn be moft advantageous to the kingdom, why is it that the legiflature does not freely fuffer it to be imported, when it may, but that fuch liberty would be deftructive to the landed intereft of the kingdom? 'Tis obfervable, that very oppofite and contradictory arguments have been offered againft the bounty on corn. From the foregoing account of bihop Fleetwood, of the market-price of wheat at Windfor, it is faid, that the price has declined ever fince the bounty has been allowed; from whence is inferred a fwelling account of the farmer's lofs, and of the prejudice it has been to his intereft; not confidering, that the annual product of the. land has been much more contiderable. So that what has been faid againft the bounty, has been argued from felf contradictory principles, which ferve to corroborate what has beeri urged in favour of it's continuance; for, at the fame time it has improved our lands by encouraging the exportation of corn, it has alfo made corn the cheaper to the manufacturers, \&cc.
Some have propofed to leffen the bounty on wheat and augment it on four ; but 'tis conceived that this would be of no fervice, though the more can be manufactured at home would be ceitainly beft ; but fome countries abroad impofe a larger duty on flour than on wheat, and Holland even prohibits it ; in others flour is not fo faleable a commodity; in Spain they will fcarce touch it, if they can have wheat; befides, flour is a merchandize more fubject to fpoil in hot countries, and therefore fuch an alteration would not be prudent to make.
The doctrine of allowing bounties, upon various fpecies of goods, has by long experience proved to be of advantage to the nation, and therefore fhould not in any inftance be altered, without the moft mature deliberation: fuch are the bounties on Britifh made fail-cloth, the Britifh manufactures of filk, filh, and fleh, naval fores, Britilh made gun-powder, on Britifh firits drawn from corn, Britifh refined fugar, Britifh and Irifh linnens, \&c.- None of thefe articles feem to be of that confequence to the nation, as the great article of corn; and therefore, if the wifdom of the nation Ahall judge it found policy to continue thefe, our reprefentatives will hardly be induced, we humbly apprehend, to withdraw that upon corn, which fo nearly and fenfibly mult affeet the whole landed intereft of the nation. And wherefore do we allow drawbacks upon the re-exportation, even of foreign commodities, but for the general benefit of our navigation, the freight being all clear gain to the kingdom? Are not there drawbacks a kind of bounties allowed upon foreign merchandizes, and can we therefore, confiftently with ourfelves, withdraw the bounty, which has long. been experienced to be fo nationally beneficial? Has not the wifdom of the legiflature taken care, that this commodity fhall be fhipped on board Britilh fhips, whereof the mafter, and at leaft two thirds of the mariners, are to be Britifh fubjects? Is not this greatly for the encouragement of the Britifh navigation?
When the bourties that were granted upon the raifing of pitch and tar in the Britifh plantations, had pretty well enabled us to fupply ourfelves with thefe commodities, they were withdrawn, and thefe trades foon returned again to the hands of the Swedes and Ruffians; which obliged us to renew the bounties, or to give up the trade.
With regard to any deficiency that may have happened in the funds, which have been appropriated for the payment of thefe bounties on corn, and for which the debentures have been duly and legally made out, we are furprized, that any doubt can be made of the payment thereof, upon proper and becoming application; nor is it lefs extraordinary for people to fuggeft, as fome have done, that, if there is no fuch deficiency, the public money muft have been alienated, and applied to other purpofes than intended by parliament; for no perfon or perfons in this kingdom, I am apt to believe, would dare thus to mifapply the public money, when it may be fo eafily detected.
CORNWALL, is bounded by the Englifh channel on the fouth, St George's channel on the weft, Briftol channel on the north, and is parted from Devonthire on the eaft by the river Tamar, and is in circumference about 150 miles. It's chief rivers are the Tamar and Hamel. The air is clear and healthful, but fharp; and, being almoft encompaffed with the fea, fuljects it to violent flaws of wind. Though mountainous and rocky, it hath all kinds of foil, the vallies affording plenty of pafture; and the land near them well cultivated, being manured with a fea-weed called ore-wood, and a fat fort of fand. Here are the beft flate tiles, which are not only ufed in England, but exported in great quantities; as alfo the moor-ftone for facing windows, doors, and chimnies ; which, when polifhed, looks as well as the Egyptian granate. It abounds with tin and lead-mines, and along with the tin a yellow ore is dug, called mundic, yielding good copper.
In thcir rivers and bays are trout, lobfers, oyfters, foles, \&c. but they profit moft by their pilchards (called the Spanifh ca-

Vol. I.
pon) becaufe ferved up by them, dreffed with oil and lemon, as a dainty : pilchards are faved three ways, viz. by fuming, preffing, or pickling, which employs great numbers of women and children, to the great relief of their neceffity.
Their chief metal and manufacture is tin. When the ore is brought above ground in the ftone, 'tis broke with hammers, then carried to the ftamping-mills, which makes it ready for other mills, that grind it to powder: when wafhed and cleared from earth, \&xc. 'tis melted into pigs of thrce or four hundred weight, marked with the owner's name, and the value fet upon it at the coining-houfe. The famp is the feal of the duchy of Cornwall. The tinners are regulated by laws called Stannary. Since the Norman conqueft, the tinners had from time to time new offices and privileges granted them : one is, that no Englifhman in that duchy thall pay cuftom for exporting Cornifh cloth, granted them in confideration of their paying 4 s . for the coinage of every hundred weight of tin, whereas Devonfhire pays no more than 8 d . They have alfo the freedom to take fand out of the fea, and carry it to any part of the county for manure. The coinage towns are Lefkard, Leflwithiel, Truro, Helfton, and Penfance. And the tinners are reckoned at leaft 100,000 .
This county, though fo remote from the royal refidence, fends no lefs than 44 members to parliament, which is but one lefs than what reprefents all North Britain; and almof double the number returned from the whole principality of Wales, or from any of the counties of England, fome of which are much larger, if not three times more populous and wealthy than it.
Launceston, the chief town, is a populous trading place, and gives title of viccount to the prince of Wales.
Leskard is one of the largeft and beft built towns in the county, and has, perhaps, the greateft market and trade, efpecially in all manufactures of leather.
Lestwithiel is a well built town. It's chief trade is the woollen manufacture.
Truro is a branch of the port of Falmouth, and fands at the conflux of two rivers, that almof encompals the town, and form a large wharf. It's chief trade is fhipping off tin and copper ore, which laft is found in great quantities in the mountains betwixt this and St Michael's, and is much im* proved fince the mills ereded near Briftol, \&c. for the bat-tery-wares. It's mayor, who is chofen out of the aldermen, has large privileges, being alfo mayor of Falmóuth; and the keyage of goods, laden and unladen there, belongs to this corporation.
Bodmin almoft in the center of the county, has a good corn and fefh-market.
Helston is a large, populous, trading town; feveral tin fhips take in their lading here. King John gave it the liberty to build a Guildhall, to pay no toll but in the city of London, to be impleaded no where but in their own borough, and to enjoy the privileges of Launcefton-Caftle.
Saltase is but a league from Plymouth dock. The inhabitants trade much in malt and beer. It has feveral large privileges over the haven belonging to it.
Westiow has a trade in pilchards, \&ic. but not fo confiderable as at Eaftlow.
Penryn is a neat built town, well watered with rivulets, and has an arm of the fea on each fide, with a good cuftomhoule and key. This, and other towns near it, drive fo confiderable a trade in drying and vending pilchards, and in the Newfoundand fifhery, that here are many merchants.
Tregony is on the fame river. It's chief manufacture is ferge.
Sr Ives, though now a poor harbour, being almoft choaked up with fand, has thriven much by trade with pilchards and lates. Not far from it are fome copper-mines.
Fowey is a pupulous and pretty town, and has many fourifhing merchants, who have a great fhare in the pilchard filhery.
Kellington is not inferior to the better half of the Cornifa boroughs for buildings and wealth. It's chief trade is the woollen manufacture.
Falmouth is by much the richeft and beft trading town in the county, and larger than any threè of it's boroughs that fend members. 'Tis well built, and it's trade much increafed fince the eftablifhment of the packets between this place, Portugal, and the Weft-Indies.
The cuftom-houle for moft of the towns in this county is eftablifhed at this town, where the duties are very confiderable.
HELFORD is a harbour where the tin fips often load, and here are many veflels in the pilchard trade.
Pensance, the fartheit town of any note in the weft of Enggland, is well built and populous, having many fhips belonging to it. Veins of lead, tin. and copper, are faid to be feen here, even to low-water mark, and in the very fea.
Padstow lies convenient for trade with Ireland. It's chief trade, befides that in flate-tiles, is the herring fighery. New Hland, here, is noied for good camphire and fea fowl.
COROMANDEL, in the Mogul empire. This con ftretches fowh wett from the bay of Benan: or rather the

## COR

Hinits of Golconda to thofe of Madera. Moft of the country is plain, and they have but few mountains or trees. So fruitful it is in rice, that 'tis faid to have took it's name thence; yet fometimes, for want of the ufual rains, the famine is fuch, that the natives fell themfelves for food. They have multitudes of fheep with no wool, but a little hair.
They have fcarce any thing curious about them but their loons for weaving feveral forts of fine filks, callicoes, and muflins; their chief manufacture, for which the Europeans deal with them, and their cotton cloth, which is reckoned the fineft in the Indies; yet they work in forry dark huts like horfties. Not only European goods are in requeft here, but all forts of fpice and gold, which they undertand very well. The Englifh and Dutch have fo many forts, factories, and other fettlements on this coaft, that they may be faid to poffefs the whole; yet they are fubject to the Great Mogul, who has numbers of his fubjects in all the places they poffefs. The chief places of any trade as they lie from north to fouth, are,

1. Pettipoly, which lies a league up a pretty large river. It is the largef harbour on this coaft, but the bar has fome fhallows farce palfable but by fmall veffels. The printed and dyed fuffis of this place are highly valued. They have alfo good indigo here.
2. Kisnipatan, a little more fouthward, on a good large river, formerly bought good ftore of cotton cloth of the Englifh factories, but greatly decreafed fince: as alfo Armegon.
3. Carrera, on a large river, is noted for a plant ufed in dyeing; as are alfo Caletour and Penna, two fmall places near it.
4. Paliacate, at the mouth of a river of that name, 9 leagues north from fort 5 t George, and I40 miles fouth from Pettipoly, is a chief factory of the Dutch, to which all their others on this conft are fubordinate. The pagans here trade in painted and white callicoes, and other linnen. The Banians and Jews are the chief traders. Here the Dutch refine what faltpetre they bring from Bengal, and make gunpowder for their other factories. Great quantities of cottonftockings are knit here, and exported to all the European factorics in India.
5. Fort St George, or Madraspatan, put in poffeffion of the Englifl Eaft-India company, by one of the pagan princes, above fixfcore years ago, ratified by the king of Golconda, to whofe fovereign the company pays 7000 pagodas (worth about g s. each) per ann. for the royalties and cuftoms; by which 'tis faid they gain four times the fum, the whole amounting to 30,000 piftoles at leait. It is a place of the utmoft importance to the company, for it's ftrength, wealth, and the great annual returns it makes in callicoes and muflins. The governor here prefides alfo over all the fettements on the Coromandel coaft, and the weft coaft of Sumatra; the perfon, who is faid to prefide at Bencoolen, being but a deputygovernor there. He is alfo captain of the firft company of foldiers.
It is divided by fome into three, though they are properly only two towns, viz. the Englinh or White Town, and the Black City, on the north fide of it, called by the Moors, Madrafs, or Chinnepatan.
The number of houfes, in the whole White Town, is not much above 120 ; they are neat, and have Italian porticoes and rows of trees before their doors.
'The Black Town or City is much the largef, and is more than a mile and half in compars.
The river by which it is wafhed, falls at the diffance of half a mile into the fea; but, before the wet feafon, the bar is cut to widen it's paflage, or it would overflow the country. It runs thus with a great ftream two months in the year, after which the bar cloies of itfelf, and forms a peninfula three miles round, which feeds numbers of theep and hors, and fome cows; but the foil is fo poor, notwithftanding the charge the company has been at to improve it, that the cattle would ftarve, had they no other fuftenance.
They trade from hence to all parts eaft of the cape of Good Hope; but the greateff fhips ufe the Mocha, Perfia, and Surat market, with Bengal and China commodities, and touch by the way on the Malabar coaft, for pepper, cacao-nuts, coyre, and fexeral drugs, the produce of that coaft.
The European goods that fell beft here, are lead, wine, beer in calks or bottles, ale, cyder, cheefe, cloth-hats, fine ribbands, gold and filver lace, thread and worfted fockings, and all other forts of haberdafhery.
Returns are made to Europe in all the product of the Indies, particularly cotton cloth and mullins, which are cheaper here than at Surat, but dearer than in Bengal.
6. St Thomas, about two leagues fouth of fort St George. 'Tis inhabied by weavers and dyers, and noted for the beft coloured ftuffs in India: but there is no factory here, and the people poor, the trade being removed to Madras.
7. Cobizon, fix leagues fouth of fort St George.

Sadraspatan, thirty miles fouth of fort St George, is a fmall Dutch factory; the town is populous, but the houfes mean; it ftands in a healthful country and fruitful foil.
Conymere, formerly an Englifh factory, 'till transferred to Conymere, for
fort St David.

Pondicherry, is one of the mof eminent factories belongint to the French.
The chief revenues of the company arife from cuftoms of 5 per cent. on goods imported and exported by fea; choultry, or land cuftom, of two and a half per centi on cloth, provifions, \&c. brought in from the country; which, when exported, pay two and a half per cent: more; anchorage duty, paffes, coinage, \&xc. which all together are very confiderable; for the mint alone brings above 1000 pagodas a month into the company's coffers, at one half per cent. for coinage of gold, and two per cent. for filver. The bullion that cones from Europe, \&c. is coined into roupies, which are ftamped with Perfan characters, declaring the Mogul's name, year of his reign, and fome of his epithets. They alfo coin gold into pagodas of different denominations and value. The Moors have allo mettas, or toll-houles round the city, where they receive about feven per cent. on all goods that pals by them, except what is for the French, who only pay the choultry above-mentioned. Befides the neighbouring villages which the merchants or others farm of the company, at certain rents, amounting in the whole to near 1300 pagodas a year, the fcavenger, fifhing-farm, wine licence, \&c. are equally advantageous to it. Another confiderable branch of the company's profit is the tobacco and betal farm, which is a fmall duty laid on thofe commodities, and leafed out to the black merchants for 8000 pagodas per ann. And another branch is the arrack farm, or the fole licence of making Pariar arrack, for which they are paid 3600 pagodas a year. The common people prefer this to the beft Batavia or Goa arrack, only becaufe it is more heating. 'Tis obferved, that thefe three laft-mentioned commodities, whence fuch vaft profit arifes, are all confumed by the inhabitants, who are no lefs within the company's bounds than 300,000 fouls.
Tegnafatan belongs to the Dutch, as allo Carcal and Tirepolier.
The principality of Gingi, extending 160 miles from eaft to weft, and 80 in breadth, abounds in rice, falt, and fruits; but fo focked with people, that they are forced to have provifions from other countries. It exports, to other parts of the Indies, linnen and woollen ftuffs; importing chiefly ficices, fandal-wood, Chinefe filks, velvets, fattins, \&c. It has but two towns, and both within land, viz.
3. Gingl, or Chengier, it's capital, is faid to be very populous, and three times as big as Rotterdam, well fortified, and lies in a pleafant valley by a fine river.
2. Cidambaran, about 46 miles N. W. from Gingi, of chief note for it's ftately pagods.
The principality of TANJAOR, on the fouth of Gingi, extends 139 miles from eaft to weft, and 73 along the coaft. The Europeans find it very unhealthfal, but trade greatly here in rice, painted callicoe, dye-woods, \&c. for which they give bars of filver in exchange.
r. Fort $\mathrm{S}_{\mathrm{t}}$ David is a ftrong fort and factory belenging to the Englifh. It is of great profit to the company, becaule of the rents they have here, and the great quantities of callicoes and muflins carried hence to Europe. The country is healthful, pleafant, and fruitful, and watered with feveral rivers, which ferve as walls to fortify the fettlement.
2. Porto Novo, a Dutch factory. The country is fertile, pleafant, and healthful, and produces good cotton cloth, which is either fold at home, or experted to Pegu, Tanacerim, Queda, Jehore, and Atcheen, or Sumatra.
3. Tranquebar, a fortrefs and colony of the Danes. It is faid to be one of the largeft towns in the Indies, next to Batavia, but their trade is inconfiderable.
4. Negapatan belongs to the Dutch. The colony affords little befides tobacco and long-cloth.
5. Tanjaor, the capitol, is an inland town; but we have no exact account of it.
Madura, commonly called the Fishing-Coast, or PearlCoast, becaufe of the oyfter-fifhery, which produces great quantities of pearl, but they are fmall, not comparable to the true oriental pearl, in the gulph of Perfia It is faid no lefs than 60,000 people are employed in this filhery, and guarding the veffels.
This country belongs now to the Dutch. It bears no herbs or plants, but thifles or houfeleeks.
It's only inland towns of note are,
r. Madura the capital.
2. Ticherapali, one of the moft famous places in India. The moft remarkable on the coaft are,

1. Tendy, whence many hundreds of cattle are yearly tranfported to the ifland of Ceylon, to which they crofs in four e: five hours.
2. Tursucorin, a Dutch factory. A great quantity of cloth is wove in this town The beft lime in the Eaft-Indies is made here, of oyfter-ntells. The Dutch colony here fuperintends the pearl-fifhery, which is faid to bring their company at leaft 20,000l. a year.
3. Manapaar, another Dutch factory, fanding on a high ground, about a mile from the fea.
4. Peripatan, one of the chief towns on the coaft, and the capital of the Maravas and Paravas, a barbarous fort of robbers, fo called.
Marava, is a large kingdom, tributary to that of Madura. One quarter of this country is emphatically called The Robbers County, where they come out of their forefts 5 or 600 in a night, to plunder where they can. All endeavours ufed by their prince to check them have hitherto proved ineffectual. In the year 1709 only, they laid watte above 500 confiderable fettlements:
The greateff trade here is in fifh, which they carry up the country, to exchange for rice, and other neceflary provifions, of which the fflhing coaft is quite deftitute ; the whole coaft, for about twelve leagues, being covered with a kind of brambles, and a dry burning fand, except a foreft about five or fix leagues in length, infefted by tygers.
CORSICA, is an illand of the Mediterranean, fituate between that of Sardinia and the fouthern coafts of Italy. It's greateft length is cemputed to be about ro Italian miles, and it's breadth about 80. It hath the ftate, city, and fea of Genoa on the north ; Sardinia on the fouth, from which it is parted by a freight about eight fmall miles over; the Tufcan Sea, and Naples toward the eaft ; and the Mediterranean on the weft.
It is at prefent divided into four diffricts, or provinces, each fubdivided into cantons, called by the natives pieves.
The ifland is, in general, fo woody and mountainous, and the ground fo dry and flony, that few things grow in it, but by dint of labour. Some parts of it, indeed, produce good corn, wines, figs, almonds, 8 cc . and fome pafture-grounds breed, alfo, quantities of cattle, and their forefts plenty of deer and other game, as their coafts do fifh, which is very good, particularly the ton, a kind of fturgeon, and a fmall filh, called fardinas. Some good coral is likewife found about them.
The ifland, however, is but thinly peopled, by reafon of it's unwholfome air, and it's more difagreeable government under the Genoefe.
The Corficans are reprefented as uncivilized, brutifh, cruel, and revengeful; infomuch that the name of Corfair, which fignifies a pirate, or rover, is thought to be derived hence; but it muft be confeffed they are bold and valiant, and, for the moft part, very good foldiers, on which account they are ufually among the Pope's guard.
Places of any note in the ifland are thofe which follow :
I. In the northern province, or diftriet, called Di Ano Li Montr.
Bastia, the capital of the infand, fituate on the north-eal part of it. It has a good barbour, defended by a fort, and is alfo the refidence of the Genoefe governor.
San Fiorenzo is a fmall but convenient fea-port, with a good haven, fituate on the north fide of the iffand, on a gulph of the fame name,
Nebio, once a fine city, but now reduced almof to the condition of a village. It ttands about a mile from the north coaft and from the caftle of St Fiorenzo, and about in north-weft from Baftia.
Centuri ftands on the utmoft northern cape, overagaingt the ifland Centuria, to which it gives name. It is now inconfiderable, and thinly inhabited.
Mariana, anciently a famed city and Roman colony, hath now nothing left but it's noble ruins, fill to be feen on the eaftern coaft, about 15 miles fouth of Baftia.
II. In the fouthern part, or Di La Li Monti,

Bonifacio, fituate on the moff fouthern verge of the illand, and is a very ftrong and well-peopled city. It ftands on a high rock, and hath a very convenient harbour. . It fands in latitude 4 I. 20. 9.35. eaft, and about 25 miles fouth-weff from
Porto Vecchio, a noble fpacious fea-port, capable of containing a good number of large veffels, which is fheltered on feveral fides from the wind. It is eafily difcovered at a diftance by a high mountain, craggy, and indented on the top, a little to the fouth of which is the haven. But the entry, efpecially on the north fide, is fomewhat dangerous, by reafon of feveral rocks even with the furface of the water. The town itfelf hath nothing now worth fpeaking of.
Casa Barbarica is a finall fea-port on the fame coaft, only famed now for the coral which is gathered in that fea, in great quantity, and of a good fort.
III. On the eaftern fide, or Lato Di Dentro,

Aleria, a very ancient bifhopric, but the air was fo unhealthy, that it's inhabitants were forced to abandon it, fo that it is now in ruins.
Corte is a ftrong and well-peopled city, built on a rock, and defended by a ftout caftle.
Accio, Venaco, Alesano, \&cc. have nothing worth further notice.
IV. On the weftern fide, or Lato Di Fuori,

Addiazzo, on the weftern coaft, fouth of the gulph of the fame name, projects into the fea in form of a peninfula. It is by fome efteemed the capital of the inand, is well peopled, and much reforted to by the Genoefe merchants. It's territory rich and fertile, efpecially in wines of an exquifite taffe, for which Carceri and Mezana, befides about 30 other vil-
lages are famed, and fome of them, that are near the coaft walled in, by reafon of the Corfairs which infeft it.
Calvi is a ftrong town, fituated on a craggy high hill, and fenced about with good outworks. It's inhabitants are called Calves.
The gulph of Calvi is large and deep, but hath fome dangerous rocks before it, but which mày be eafily avoided, becaufe the town, which ftands yery high, is a fure land-mark for fleering into it:
Balagna, Sacona, Ornano, and a few other places, have nothing worth mentioning in regard to trade.

## Remark.

However fhall the trade of this illand may be, it prefent, by reafon of thofe contentions and heart-burnings between them and the Genoefe, if once it comes under the dominion of another potentate, as is not impofible, perhaps, a little time would put a new face upon their affairs, to the no great advantage, very probably, of any powers who have an intereft in trading to the Mediterranean.
COTTON-TREE, is of three kinds: one creeps on the earth, like a vine; the fecond is like a bufhy dwarf tree; and the third is as tall as an oak: all three, after producing beautiful flowers, are loaded with a fruit as iarge as a walnut, whofe outward coat is entirely black. When fully ripe, it opens and difeovers a down, extremely white, which is the cotton. They feparate the feeds from it by a mill, and then fpin the cotton, and prepare it for all forts of fine works, as ftockings, waiftcoats, quilts, tapeftry; curtains; \&ic. With this they likewife make mullin, and fometimes mix the cotton with wool, fometimes with filk, and gold itfelf.
The fineft cotton comes from Bengal, and the coaft of Coromandel.
The trade herein is very great, and it is difinguighed into cotton-wool and cotton-thread.
The firft is brought moftly from Cyprus, St John d'Acre, and Smyrna. The moft efteemed is white; long, and foft. Thofe who buy it in bales, fhould fee that it has not been wet, moi-- fture being very prejudicial to it:

The crop of cotton in wool is very confiderable about Smyrna, and more than in any other part of the Levant. The grain is fown in July, and reaped in October: the fineft is that of the plain of Darnamas, the price of which is ufually from fix to feven piafters the quintal of 440 oco's.
The charges of a bale of cotton-wool, weighing 230 rottons, at feven piafters the quintal, amount to two piafters 39 afpers, Of cotton-thread, that of Damas, called cotton d'once, and of Jerufalem, called bazas, are the moft efteemed, as alio that of the Antilles Ifles.
It is to be chofen white; fine, very dry, and evenly fpun.
The other cotton-threads are, the half-bazas, the remes, the beledin, and gondezel; the payas and montafiri; the geneguins, the baquiers, the joffelaffars, of which there are two forts.
Thofe of India, known by the names of Tutucorin, Java, Bengal, and Surat, are of four or five forts; diftinguifhed by the letters $\mathrm{A}, \mathrm{B}, \mathrm{C}, 8 \mathrm{cc}$. They are foid in bags, wich a deduction of one pound and a half on each, for thofe of Tutucorin, which are the deareft, and two pounds on each bag of the other forts.
For thofe of Fielebas, Smyma, Aleppo, and Jerufalem, the deduction at Amfterdam is eight in the 100 for the tare, and two in the 100 for weight, and on the value one per cent. for prompt payment.
The onattee, or filk cotton, which grows in Perfia, is the produce of a fhrub, the fruit of whicli is large and long, in the form of green lambruches; when ripe, it opens and difcovers a fine and light filk, which the wind eafily difperfes; if the fruit be not gathered before it is entirely opened. The feed refembles fmall lentils, each having a kind of tail, confifting of gloffy filaments, of which they make mattreffes.

## Cotton of Siam.

A kind of filky cotton in the Antilles fo called, the grain having been brought from Siam: It is of an extraordinary finenefs, even furpaffing filk in foftnefs. They make hofe of it there, preferable to filk ones for their luftre and beauty; they fell there from ten to twelve, and fificen crowns a pair : but there are very few made, the work taking up much time; fo that what are made is more for curiofity, than as a branch of traffic. The mill, ufed in the Antilles Ines for feparating the cotton, is a long fquare frame, confifting of four beams, about four feet high, joined together by eight crofs-pieces, four above, and four below; two long findles, chamelled, which crofs the frame, and turn round contrary ways, by means of fome treddles, on which the workman puts his feet, and of two bandles on the fides. Before the frame is a moveable board, eight inches broad, and as long as the mill, placed overagainft the fpindles. On this board the workman, who fits before it, puts the cotton in a pannier, placed at his left-hand, to fpread it to the right on the fpindles, when be puts them in motion.
The face between the findles being wide enough to give paffage to the cotton, which they draw in turning round, but not to admit the feeds, feparates them, the corton falling into a bag that hangs under the mill, and the feed falling to the
ground,

## C R E

## C R E

ground, between the workman's legs. To direct the cotton into the bag, there is a board under the fpindles like that above them, inclining towards it.
A good workman will cleanfe from 55 to 60 pounds in a day.
The manner of packing cotton, as practifed in the Antilles. The bags are made of coarfe foile de vitrée, of which they take three ells and a balf each : the breadth is one ell three inches. When the bag has been well foaked in water, they hang it up, extending the mouth of it to crofs picces of timber, mailed to pofts fixed in the ground, feven or eight feet high; he who packs it, goe's into the bag, which is fix feet nine inches dcep, or thereabouts, and there preffes down the cotton, which another hands to him, with hands and feet, obferving to tread it equally every-where, and putting in but little at a time. When the bag is full, they few it up. The bag fhould contain from 300 to 320 pounds of cotton.
The beft time to pack colton is in moift and rainy weather, fo it be done under cover. The tare abated in the Antilles is three in the 100.

## REMARKs.

Cotton being a production applicablc to a great variety of manufactures, it cannot be too much cultivated in our own plantations that will admit of it. And whether it may not become a material ingredient in a variety of more articles of trade than what it has yet been applied to in this nation, may well deferve to be confidered.
COURLAND, a duchy. This country, called alfo KURELAND, is by fome reckoned one of the divifions of Lithuania. It has the gulph of Riga, and the river Dwina, on the north ; the Baltic Sea on the welt ; Samogitia on the fouth; and Lithuania on the eaft. It is about $1 g 0$ miles from northweft to fouth-eaft, but the breadth not proportionable, being ' but 80 where broadeft, and not above 20 in the eaftern part. It is a plain fruitful country, abounding with corn and honey, though in fome parts fenny, and full of lakes and rivers. It was formerly tributary to Sweden, but fince to the Poles: for, though it had it's own duke, yet he paid homage to the king of Poland. On the banifhment of count de Biron to Siberia, the ftates chofe for their duke prince Lewis-Erneft of Brunf-wick-Wolfembuttle.
It is a populous country, but liable to be harraffed when there is a war between the Poles and the Mufcovites, or Swedes. They dry their wheat and barley with wood in the ftraw, and then threfh it, which makes the Dutch prefer it to the corn of Poland, becaufe it preferves it better. Their chief commodities are oats, flax, hemp, yarn, honey, wax, linfeed, tar, mafts, timber of all forts, pot-afhes, tallow, goat-ikins, \&c. which are carried to Rrga, Libaw, Windaw, and Memel, to be exported. They have plenty of black cattle and horfes, and have many commodities from Riga. One of their ways of hulbandry is, where there is a valley, to let the water in to lie upon it for three or four years, and to ftock it with fifh, which renders the ground fo foft and fat, that, when it is drained, it requires but one eafy plowing; the firft two years they fow it with barley, and the third with oats.
The air is clear and healthy; and, though the winters are fevere and tedious, and the fummers not very long, yet the excellency of the foil, the cool fummer nights, refrefhing dews, and fucceeding hot days, ripen both their fummer and winter corn.
It's principal rivers are the Dwina, the Aa, and the Windaw. There are feveral lakes here appropriated to the public, called Free Seas, where any noblemen throughout the duchy, though he has no eftate near them, has liberty of fifhing.
Places of moft note are,
r. Wrindaw, at the mouth of the river aforefaid, near the Baltic. Here formerly the ftates of Courland held their affemblies, which made it populous; but it is now much decayed, being only fupported by building fhips for the duke, and by it's trade in pitch, tar, wax, \&cc. It hath ufually a garrifon of Poles, but under command of the duke.
2. Libaw, lies on the coaft, has a good road and harbour, where the duke's fhips are alfo built, and has the greateft trade of any of his towns.
3. Piltyn, on the river Anger, is a palatinate, and the feat of the bifhop of Courland.
4. Mititaw, on the river Muffa, 32 miles fouth of Riga, the capital of the whole duchy, and the feat and burial-place of it's dukes, who have a magnificent caftle, fortified by two baftions, encomp ffed by marihes, and has always a ttrong garrifon. The town is meanly built, but well fortified, and large, containing about 12,000 inhabitants. ' The Aa, on which the caftle ftands, paftes by this city to the Dwina, with a deep channel, which might be navigable, if the people of Riga had not, for their own intercft, choaked up the mouth of il.
5. DAUSKF, is another frong town, on the fame river, with a caftle built on a rock, which has a large garrifon.
CREDIT, and firf of Private Credit, in regard to matters of trade.
The ordinary credit practifed among perfons engaged in commerce of every kind, efpecially in the fimaller way of dealings, is a matter fo well known, that we may pals over any obfer-
vations on this point, and proceed briefly to confider thofe kinds of credit which are ufed among traders of a fuperior clafs. There may be reduced under two heads, the borrowing money on credit and the buying and felling commodities on credit.

## REMARKs on the confequences of long credit in private trade.

Every confiderable trader ought to have fome eftate, ftock, or portion of his own, fufficient to enable him to carry on the traffic he is engaged in.
The moft judicious traders, like bankers, are always careful to keep their dealings within the extent and tether of the capital, fo that no difappointment in their returns may incapacitate them to fupport their credit.
Yet traders of worth, judgment, and œconomy; may fometimes lie under the neceffity of borrowing money, for the carrying on their bufinefs to the beft advantage; as, when the merchant has commodities on his hands, which he is willing to keep for a rifing market, or on account of monies owing him, which he cannot get in in time, wherewith to anfwer the exigencies of his affairs, or for the payment of cuftoms, \&c.-On thefe occafions, the taking up money at intereft is no difreputation, but a great convenience to the carrying on his traffic: but then the borrower ought to be fo juft to his own reputation, and to his creditors, as to be welt affured that he has fufficient effects within his power to pay off his obligations in due time.
But, if the trader thall borrow money to the extent of his credit, and launch out, into trade, fo as to employ it with the fame fieedom as if it were his own proper ftock; fuch a way of management is very precarious, and will be attended with dangerous circumftances; for, as trade is liable to unforefeen accidents, if fuch a trader fhall meet with lofes or difappointments, and bring his credit into doubt, this may and will draw the demands of all his creditors upon him at once, and render him incapable of drawing in fo much of his fcattered effects as will pay his debts, and thereby will ruin his credit, although he might believe that he had more than enough to fatisfy all the world.
As, therefore, a wife man will trade fo cautioufly as not to hazard the lofs of his own proper eftate at once, much more fhould an honeft man be careful not to involve the eftates of other men in his perfonal trading adventures; but he that knows he has loft his own fortune, and endeavours to recover it by trading with the ftocks of other men, can have no pretence to the character of either wife or honeft.
The dealing for goods on credit was, probably, at firft introduced by the trufting of young beginners, whofe chiefeft, or, perhaps, only ftock, might be the opinion of their capacity, induftry, and honefty; and, as this is continued to retailers, and fuch who trade for finall fums, it may be reckoned a commendable and ufeful practice in trade; but whether the practifing this in the way of great wholefale traders, in fo large a manner as is common in England, may be advantageous to trade, is a confideration that will admit of great doubt.
This maxim we may, however, advance with fome confidence, That merchants ought never to purchafe their goods for exportation upon long credit, with intent to difcharge the debt by the returns of the fame goods; for this has an injurious influence upon trade feveral ways, whereof divers in-: fances may be given. It tends to force trade, and glut the foreign markets with greater quantities of merchandize than is ordinarily required, whereby the price of the commodities comes to be abated, to the prejudice not only of the fair trader, but allo of the trade of the nation in general.
When the price of goods is lowered, the manufacturers commonly endeavour to make them worle in quality, that they may be able to fell them at lower prices, and that brings them into difefteem, and, by degrees, ftagnates the fale, and tranffers the trade to other countries, who fupply the fame markets with better commodities, becaufe they do not over-ftock them. And here it may be remarked, that, for the preventing fo great an evil, all our manufactures ought to be ftrictly kept up to a ftaple, or teft, to warrant their reputation.
He that buys goods for time, muft confequently pay the dearer for them, and, as is before oblerved, muft force a fale abroad, that he may have the returns in time, to anfwer his credit; and if, by the falling the markets, the money-dealer gets little or nothing, he, to be fu:c, mult fell for lofs: and, if he makes his returns by merchandize, his neceffities compel him to fell his importation immediately, for the raifing prefent money, which oftentimes turns to lofs alfo: fo that this way of traffic is not only highly injurious to trade in general, but fuch traders moft commonly undo themfelves, and involve others in their ruin.
It fhould feem, therefore, to be an eftablifhed principle among merchants, that, when they have occafion to make uli of their credit, it fhould always be for the borrowing of moncy, but never for the buying of goods, wherein their greateft care ought to be exercifed, that they may be purchafed at the beft hand. Nor is the large credit given to our whole fale traders a prudential or juttifable practice in trade, Previoully to entering upon this point, it may be requifite to obferve, that it is not ufed in any other rading nation to that extent as it is in
England.

Ehgland. If any imagine that the cuftom of the Dutch contradicts this alfertion, becaufe they give three months time upon all contracts, they will find that this credit is only in notion, but nothing lefs in practice ; for the merchant always expects his money, when called for, and allows the buyer 1 per cent. for prompt payment : but, if any dealer hould infift upon the time, and refuef to pay 'till the three months are expired, though he may not be fued 'till that time, he lofes his reputation, and muft expect no more credit.
Nothing is more apparent, than that the original, natural, and genuine way of trade, muft have been to buy and fell for ready money, and that the felling large quantities of goods on trult has beẽ fuperinduced through ill cuftom, which, with us, by long ufage, is become fo habitual, that we fcarcely attend to the danger and inconveniencies, or endeavour to reform ir. To give a clear view of this matter, we may obferve an inftance how it was introduced, and how rectified in a foreizn country.
The ufual way of vending goods in Spain for the expence of the country, was by the traders of the inland cities, who came to the fea-ports, and purchafed with their ready money, from the factors of the feveral nations refiding there; but they never thought of fuch a thing as the alking for credit, 'till the factors, being overfocked with goods, would perfuade them to take more, and pay for them the next journey: thus by degrees, they run into a trufting trade, which continued for fome years; but the inland traders being hereby allo enabled to give credit to their under-dealers, fell to be more and more behind in their pay, and, being preffed by their factors, moft of them, who had lived comfortably while they traded upon their own ftocks, came to be ruined by adventuring upon truft; the factors difobliged their principals by contracling great loffes by bad debts, whereby many of them loft their bufinefs; new factors were fent over, and pofitive orders given by the principals, to fell none of their goods but for ready money: thus the trade was reduced to it's origin ftate, and fo it long continued, and all parties profpered. If we look at home, we fhall find this mifchief radicated in the whole courfe of our trade, to a degree beyond comparifon in any other nation, the greater part of our inland traders, who deal for very great fums, continuing to manage their bufinefs in this way; and, though many of them who act with exträordinary prudence and circumfpection obtain confiderable eftates, yet, if they account the flownefs of their returns, together with the loffes which accrue by the bad debts of fuch whon they truft again, they might, perhaps, have made far greater improvements, if this way of trufting and being trufted had never been introduced.
On the other hand, it is fo natural for young men to aim at the way of living and trading like the wealthy mafters whom they have ferved, that finding credit fo eafy, and their acquaintance large among the country chapmen, they launch out into trade far beyond the power of their own ftock; and, though they may hold it for a time, yet when they meet with difappointments and loffes from their under-dealers, and come to faulter in their own credit, how many have we feen ruined? and how great the loffes they have brought on their creditors? Whence it comes to pafs, that the number of bankrupts in England is greater than in other trading countries. As the injury to our trade by this kind of dealing is very manifeft, nor an eafy tafk to fhew wherein it is at all helpful, it feems to be merely a vice in trade; which, if it could be removed, the trade of the nation would certainly become more flourthing in general, and more beneficial to the individuals therein concerned.
If any fhould imagine, that this great credit contributes any thing to the promoting and enlarging of trade, this notion will appear groundlefs, when it hall be confidered, that it adds nothing to the vent and confumption of commodities; for there will remain no lefs occafion for confumption, if this excefs of credit were leffened; the only effect thereof being, that it enables people to overtock themfelves with goods, and confequently this lies a dead weight on the whole trading ftock of the nation, and cramps the merchant in his trade, by the tedious length of the returns.
If it fhould be further argued, that the leffening of this fort of credit would be a great hindrance to young tradefmen, who begin with fmall focks; let it be obferved, that men ufually place their fons to trades, fuitable to the portions they defign to give them; and, when they thall receive lefs credit from the merchant, they will give lefs credit in their fales with a good grace, and fo will continue to hold a fhare in trade proportionable to their ftock, which is as much as the prudent and honeft man fhould aim at : nor can there be any doubt, but, under fuch a regulation, more tradefmen would thrive, and fewer would mifcarry, than under the prefent mifgoverned excels of credit: and, if the want of competent ftocks fhould difcourage fmall fhopkeepers, and tend to leffen their numbers for the future, the youth of incompetent fortunes might be bred up to employments, not the lefs ufeful to the ftate; let the younger fons of gentlemen with handfome capitals turn fhopkeepers, and others manufacturers and artificers, who are the fundamental ftamina of all our commerce.
VoL. I.

That there is a poffibility of reforming this ill cuftom, in fes fpect of the buyers, is apparent, from the practice of the Eaft-India company, who make the trader pay for the good bought, before he receives them; yet we fee this is no ob= Itruction to the currency of vending their commodities through the nation. As a multitude of fellers, indeed, cannot be brought to an univerfal concert in their bulinefs, like thofe who trade upon a joint ftock; on their part it will be a work of more difficulty and time, but that thould be no difcouragement to the attempt.
However, 'tis probable, that fome natural courfés might be fallen upon, which would by degrees prove effectual fur the remedying this corruption in trade; and therefore, to contribute fomething towards fo good a defign, I'll take leave to revive the fentiment of Mr Higgs, a very eminent merchant of the city of London, upon the like occafion, wha lived in the latter end of king William the Illd's time: 'Suppofe, fays he, that the feller of merchandize who gives credit, fhould require his debtor to give a note under his hand, upon the fame paper with the bill of parcels, promiling to pay the fum therein mentioned at the time agreed, with intereft for any forbearance after due, and that he fhould get the fame to be regiftered and attefted in any court of record, at the feller's direction, upon delivery of which attefted note, the debtot fhall receive the goods bought; and, in cafe of non-payment at the time, or to the creditor's fatisfaction, he might, without the trouble of fuing in the common way (fince the bill of parcels and regiftry make any further proof or trial needlefs) take out execution, and levy the whole, or what part of the debt remained unpaid, upon the goods of the debtor, when he pleafed.
We know, indeed, that the acknowiledging of judgment, in the manner now practifed, is effectually the fame with what is here propofed; but, as that is become a word of terror; and what men in good credit will not \{ubmit to, it may be requifite to inftitute fomething with a milder appellation in the ftead of it, though it may not be the lefs effectual $:$ : and if upon the firt introduction, it can butbe brought into common practice, time will familiarife it, and none who defire credit, would fcruple compliance; in order to which, is would greatly facilitate the general introduction of this laudable practice, if no judgment was to be valid between trader and trader, but what fhould be obtained upon trial in open court, and that fuch regiftered notes hould have preference before all other contracts; but more efpecially, if no proof for debts upon dealing between tradefmen for the value of above 201. were admitted, except what fhould be regiftered: was fome fuch provifion as this made by law, peaple in general would eafily come into it, and few creditors would truft their goods to buyers, who fhould refufe to comply with fuch a fecurity, as could alone fubject them to be under the power of the law. This would moft certainly make people more cautious in over-buying themfelves, bring them to fome punctuality in their payments, and, as few men of good eftates would care to hamper themfelves with fuch fevere obligations, would be likely to bring back the bulky part of dealing, to the old laudable way of buying and felling for ready money.
If the neceffitous fort of people fhould think, thiat this fhortening of credit would prove a grievance, let fuch confider, that 'tis their improvidence which makes and keeps them poor; if they buy at truft, they muft pay for it at one time or other, or be in danger of a gaol; and they know that they pay much more for truft, than if they bought for ready money; fo that the paying, at firf, will fave them what they are obliged to pay at laft : this, under the name of faving, is the fame as getting ; for this difference in price is money merely wafted, becaule they neither eat, nor drink, nor wear the more for it; and, after all, they need not fear the want of credit for their neceffary provifion; fuch credit for a week or two (and they can want no more, when wages is well paid) will always be given to thofe who maintain an honeft reputation.
In the like manner may the rich be argued with: if they run into debt, 'tis their luxury and improvidence that brings and keeps them under fuch difficulties; it cannot be an un. acceptable fervice to fuggeft, how they may get rid of thefe voluntary taxations: let them pay ready money for all they buy, which would fave many a gentleman more than the amount of his involuntary taxes: but, perhaps, fome are already in debt, and think they can't live without continuing fo: lef them retrench their expences for a year or two, 'till they get one half year's rent of their eftates before-hand, and this would enable them, if they can be content to live upon their own eftates, to keep out of debt for ever after: if their incuribrances are too heavy to be fo foon difcharged, 'tis moft prudent to mortgage their eftates (if felling abfolutely fhould not be the more eligible) for fo much as would clear them, and put them in ftock for half a year's expence. This would anfwer the end, and induce general ceonomy: if they are fo wifely determined as to fee the end of their eftates, borrowing money, to buy all their fuperfluities at the beft hand, is ftill the beft hufbandry, becaufe that would hold out the longeft.

Thus, after the difficulties which at firf attend general alzerations of any kind, are over, all degrees of people will find their account in it; money will become more plenty in circulation; rents will be better paid; improvident people will be induced to frugality; which is the firft principle conducive to national as well as private riches.-Tradefmen, who have ftocks of their own great or fmall, would make larger improvements for their families, as well by means of their quicker returns, as by preventing the many loffes, which they have been ufed to fuftain from bad debts, as likewife from leffening their number, becaufe then fuch as have no ftock, muft live no longer upon the public, but will be obliged to apply themfelves to labour, or fuch other employments as are fuitable to their condition; whereby they will become much more ufeful in their generation.'
Credit, or Public Credit. The profperity of the trading as well as the landed intereft of thefe kingdoms always depending upon the flourifhing fate of the public credit, the reader would naturally expect, confiftently with the fcope of this work, that an article of fuch concernment fhould not be omitted.
To fet this matter in a due light, it is neceflary to enquire what is meant by the public credit of the nation.
Firf, Credit may be faid to run high, when the commodities of'a nation find a ready vent, and are fold at a good price; and when dealers may be fafely trufted with them, upon reafonable affurance of being paid.
Secendly, When lands and houfes find ready purchafers; and when money is to be borrowed at low intereft, in order to carry on trade and manufactures, at fuch rates as may enable us to underfel our neighbours.
Thirdiy, When people think it fafe and advantageous to venture large flocks in trade and dealing, and do not lock up their money in chefts, or hide it under-ground. And,
Fourthly, When notes, mortgages, and public and private fecurity will pafs for money, or eafly procure money, by felling for as much filver or gold as they are fecurity for; which can never happen, but upon a prefumption that the fame money may be had for them again.
In all thefe cafes, 'tis abundantly the intereft of a nation, to promote credit and mutual confidence; and the only poffible way effectually to do this, is to maintain public honour and honefty; to provide fpeedy remedies for private injuftice and opprefion; to protect the innocent and helplefs from being deltroyed by fraud and rapine.
But national credit can never be fupported by lending money without fecurity, or drawing in other people to do fo; by raifing focks and commodities by artifice and fraud, to unnatural and imaginary values; and confequently, delivering up helplefs women and orphans, with the ignorant and unwary, but induftrious fubject, to be devoured by pickpockets, ftock-jobbers, and bubble-mongers; a fort of vermin that are bred and nourifhed in the corruption of the flate.
This is a method, which, inftead of preferving public credit, deftroys all property; turns the fock and wealth of a nation out of the important channels of trade and commerce; and, infead of nourifhing the body politic, produces only ulcers, eruptions, and often epidemical plague-fores: it farves the poor, mifguides and impoverifhes the rich, deftroys manufactures, ruins our navigation, and raifes general murmurs and difquietudes, which often terminate in nothing lefs than infurrections, \&c.
An idea of the public credit being, at prefent, in the ordinary acceptation, confined to the fate and condition of the public funds, debts, and money-tranfactions of the nation, we fhall, under this article, reftrain ourfelves to thefe confiderations, and give a hort fketch of the effential parts of their hiftory, from the death of queen Anne to the prefent time, which will be a retrofpect fufficient under this general head.
After two fuch'bloody and expenfive wars, as thofe were of king William and queen Anne, it was full time to think of effectual ways and means to leffen thofe heavy national debts and incumbrances we had incurred, and to cultivate the arts of peace and traffic, which alone could put public affairs in a flourifhing condition.
To which end, no expedient appeared adequate to that great work, 'till the irredeemable debts were brought into a ftate of redemption, in order to reduce the high intereft of the public creditors, and appropriate the favings thereby made, to the eftablifhment of a fubftantial fund to fink the principal debt. This was done, effectually done, by thofe wife and falutary meafures, and the finking fund for that purpofe, in confequence thereof, had it's being and exiftence. And, to fuch a height was this fund raifed in the year 1727, by the reduction of intereft of the principal part of the national debts, from 6 to 5, and afterwards from 5 to 4 per cent. in conjunction with the encreafe of the duties of thofe funds, whofe furpluffages conftituted the finking fund, that it amounted to no lefs than $\mathrm{I}, 200,000 \mathrm{l}$.
Here was prefented the moit defirable profpect that could be wifhed, for difcharging our national debers; the whole of which being reckoned at about 50 millions, at 4 per cent. we will fuppofe; by the inviolable application of this fund to the pay-
ment of fuch debts, would have abfolutely difcharged the fame, in fo fhort a term as 25 years and I month, without reducing the intereft of the public creditors lower than to 4 per cent. So that by this time, from the efficacious operation of this fund, had it been no otherwife applied, it would bave paid 50 millions of debt.
Let it be fuppofed, that the exigences of public affairs res quired, as faft as the old national debt was difcharging annually by the faid finking fund of $\mathrm{r}, 200,000 \mathrm{l}$. when the intereft of the funds was at 4 per cent, to contract annually a frefh debt, even of the fame fum of $1,200,000$ : the queftion I would beg leave to put is, whether, under fuch circumftances, it was more for the intereft of the nation, and the fupport of public credit, that this, $1,200,000$ l. of frefh debt fhould be taken out of the finking fund, and applied to the current fervice, or that the faid $1,200,0001$. fhould have been raifed by freh loans, upon NEW FUNDS, created for the payment of the like annual intereft thereof?
To many this may appear to be the fame thing to the nation; for, fay they, if the nation pays off one year $1,200,0001$. of the public debt, by means of the finking fund, and contracts a frefh debt of the fame fum of $1,200,000$ l. by frefh loans upon new duties, wherein is the difference to the public? This queftion, indeed, is very natural to be afked; but reafon and the power of numbers will fhew a very great difference, in point of intereft to the kingdom. For, if 1,200,0001. was annually raifed for 25 years and I month together, by frefh loans upon new funds, the freih principal debt which the nation fhould hereby contract, would be 25 times $1,200,0001$. which is 30 millions, and for the odd month we will fay the $\pi^{\frac{1}{2}}$ part of the faid $1,200,0001$. which would have made the whole frefh principal debt to have been $30,100,000 \mathrm{l}$. To which, if the intereft of the $1,200,0001$. is paid annually, as we fuppofe the finking fund to be paid annually to difcharge the old debt of 50 millions, at the fanme rate of intereft, being 4 per cent. the annuity to be paid for intereft of the frefh debt of $1,200,0001$. will be 48,0001 . which, in 25 years and I month, will amount to the fum of $\mathrm{I}, 204,000 \mathrm{l}$.- This intereft money being added to the foregoing principal frefh debt of $30,100,0001$. will make' the fum total 3r,304,0001.
But, as a finking fund of $1,200,000$ I. feadily and inviolably applied for 25 years and one month, will difcharge a debt of 50 millions, and the raifing of $1,2,00,000$ l. per ann. a frefh debt upon new funds, will contract a principal debt of no more than $30,100,000$ l. in the fame term of 25 years and one month, together with intereft paid, which makes the whole no more than 31,304,0001. : fo much as the difference is between 50 millions of money, and $31,304,0001$ is what the nation would have faved, by preferring the one method of raifing of the money to the other; and that amounts to no lefs a national faving in 25 years and one month, than the round fum of eighteen Millions, six hundred and ninety six thousand Pounds.
As this may a little furprize people, who are unacquainted with the power of numbers, I thall endeavour to explain this myftery; which will be feen through in an inftant, by any tolerable arithmetician, when I only fay, that, in the cafe of applying the annual finking fund of $1,200,0001$. inviolably to the payment of the old debt of 50 millions, the nation would have reaped the benefit of compound intereft; whereas in the raifing aninually of a frefh principal debt of $\mathrm{r}, 200,000 \mathrm{l}$. upon new funds, the nation pays only fimple interelt for the faid principal debt, as it is contracted.
For the reader is defired to obferve, that the annual income of the finking fund, in this manner applied, to the difcharge of the 50 millions of the principal of the public debts, increafes yearly, in the fame manner and proportion, as a principal fur put out and continued at compound intereft, or intereft upon intereft, at fuch a rate of intereft as the principal furn to be paid off is fuppofed to carry : that the increafe of the finking fund, in every year, is made by the intereft of that principal fum, which was paid off the year next before it; and that the whole of the increafe of the finking fund, in any one year from the beginning, to apply the fame in difcharge of the principal debt of 50 millions, is the fum of the intereft of all the principal fums that have been in the year before paid off by it; and that the whole of the debt propofed to be paid off by a finking fund, in this manner applied, will be completely difcharged the year before the finking fund itfelf is increafed, by the addition of the whole intereft of the debt to be paid off.
If then the preceding computations can ftand the teft, it will appear, that the above finking fund, in this manner increafing, by the addition of the intereft of the principal fums in every year paid off, and confequently by additions in every year greater than thofe made to it in the year before, would have been fufficient, not only to have dificharged the whole even of our prefent debts, but any probable addition that Thould in the mean time be made to them, by freh loans on new invented funds, in a few years after the preient debts would have been difcharged; and that the time required for the difcharge of our debts, increafed by an addition in the manner before reprefented, would by no means have been length-

## C R E

ened out, or the payment of the whole of our debts by the finking fund retarded, in proportion to the addition to, or increafe of the debt itfelf: the total payment of our debts becoming by no means defperate by fuch a permanent finking fund, upon account of any determined additional debt, unlefs fuch additional debts are fuppofed to be continued increafing in every year in the fame, or a greater proportion to one another, than that in which the additions yearly made to the finking fund thall increafe.
See the articles Interest, and Compound Interest, where all the cafes, and varieties arifing upon calculations of this kind, thall be fully fhewn and illuftrated by examples.
It would, however, be true, that if at any time, on the difcharge of any part of the principal debt, the intereft were not added to, and applied to the farther difcharge of the remaining debt, but another equal or greater principal fum

Computations at 4 per Cent.

## CRE

Thould be boirrowed on the fame annuity, the progrefs of a finking fund would, by fuch meafures, be ftopped, if the fame fum were borrowed; and, if a greater fum was borrowed, it would be put backwards: but, as long as thefe meafures fhould not be taken, or fuch a finking fund diverted to any other purpofe than the difcharge of our debts, the effectual payment of them, is, by this expedient, by no means to be delpaired of, from the increafe of them by frefh loans on new duties. To fuch who are not well enough acquainted with numbers to difcern the reafon of what has been faid, with regard to the efficacy of the finking fund, the following tables may be ufeful, they reprefenting how fuch a fund of a million only, would have operated upon a debt of 50 millions, by being reduced from 6 to 4 per cent. from the year 1727 ; and alfo how a finking fund of $1,500,0001$. would have operated upon the like debt, had it then been reduced to 3 per cent.

Computations at 3 per cent:

Thus it appears, if what has been faid be duly attended to, that, if the finking fund of $1,200,000 \mathrm{l}$. interelt at 4 per cent. had been facredly applied to the payment of the old debt of about fifty millions, in the year 1727 , and we had contracted a million of frefh principal debt every year from that time, upon new funds at 4 per cent. intereft, the nation would now, in the year 7 752, have been no more than 24,000,000 1. in debt; which would have difburthened the kingdom of a national debt of above fifty millions: and this, we humbly conceive, would have proved an infinitely better fupport to the public credit, than all the fchemes and projects that have been broached from the time of the eftablifhment of the finking fund to this day.
We know, by lamentable experience, what effects tampering with the funds in the year 1720 had on the public credit ; and we alfo know, that no fervice whatever was done to the public credit by the fcheme of reduction of intereft propofed in the year 1736 . For, although the title of a painphlet now before me, reported to have been written by the honourable gentleman who propofed that fcheme, fays, Reafons for the more fpeedy leflening the national debt, and taking off the moft burthenfome of the taxes : yet, with all humble fubmiffion to the judgment of that great man, the contrary we fee is demonftrable; for no meafures can ever expedite the payment of the national debt fo foon as a permanent finking fund, without the diminution of taxes. For if, according to that fcheme, the nation had faved i per cent. upon fifty millions, and had taken off taxes to the amount of $5^{c 0,0001 \text {. per annum, how }}$ could fuch meafures have put the national debt into a more expeditious way of redemption, than by adding the favirg of $500,000 \mathrm{l}$. per annum to the finking fund, and to have inviolably applied the whole money that ever the finking fund produced to that purpofe?
The primary and fundamental principle of reducing the intereft of the public creditors, was in order to eftablifh and increafe the finking fund from time to time, with intent to acceleiate the payment of the principal debt, and to be a certain fecurity to the national creditors, that their principal debt was in a fair way to be paid; nay, was as certain and fecure of being paid, as their intereft irfelf. This was the grand pillar upon which the public credit was fixed by the eftablifhment of a finking fund; and, 'till the finking fund is effectually redeemed, and facredly and inviolably applied to the payment of our national debts (which, we have feen, might have been greatly advanced by it, and yer the nation have borrowed money by frefh loans upon new funds) the public credit of this kingdom can never be fettled upon it's right bafis, let whatever other projects be hatched, under that fpecious colour. Befide, did it not coft the nation above three millions in the public accounts, in order to put the old national debt into a Itate of redemplion? To attempt, theiefore, to render the debt again inredeemable for 14 years, as was propofed by the fcheme of $17 ; 6$, was not that undoing what had coft the nation fo much money to bring about.
The grand principle upon which the reduction of intereft was firft founded, was, as before obferved, for the eftablifhment of a finking fund, for a fecurity to the public creditors that their principal thould certainly be paid; but, if the public creditors had been told that all the favings by the reduction of their intereft was to be applied to the current fervice, I am perfuaded they would never have acquiefced to have made their irredeemable debts redeemable, and, confequently, their intereft could not bave been reduced at all. And, indeed, if the long and fhort annuities, \&c. had been continued in their original ftate, perhaps, the public credit of the nation would have been in a better condition that it has been fince the finking fund was otherwife applied, than it feems, in the opinion of many, to have been firft intended.
The great argument for the reduction of interef has been the large fums that are paid to foreigners for intereft of that proportion of the national debt which is due to them. But if the finking fund had been applied only to the payment of the old debt before 1727 , and all new debts that we have contracted fince had only been amongft ourfelves, and all foreigners had been excluded from becoming creditors of the nation, this would have effectually prevented any money going out of the kingdom for the payment of intereft to foreigners; and, had the public credit been duly fupported by a permanent finking fund of a million and an half, and we had raifed a new debt of a million a year, among ourfelves, fuch would have been the flourifhing fate of the public credit, I am inclined to believe that we fhould not bave had occafion for one fhilling of the money of foreigners. This, alfo, would have preferved the Dutch courfe of exchange always in our favour, inftead of the contrary, which has been the cafe ever fince we have been millions indebted to foreigners; and I am afraid that this is a greater difadvantage to our commerce with Ruffia, Sweden, Denmark, and many parts of Germany, than moft people are aware of. See the article Britain, or Great-Britain. All tampering with the funds, in order to reduce the intereft lower and lower, we humbly conceive is not the natural way to fupport the public credit in a flourifhing condition, unlefs thefe favings are applied to an inviolable finking fund for the payment of the principal debt. Nor is the occafional high
price of focks a conclufive argument, as fome would hate us believe, of the good plight of the public credit, becaufe this may be eafily brought about by art, to anfwer temporary purpofes, and at length to reduce the intereft of the public funds, even to nothing.
Let us fuppofe, upon the exiftence of a large finking fund, when the intereft of the public creditors was 4 per cent. that a minilter of great abilities has the management of the Treafury, and a great influence on the directors of the Bank of England, who have a thorough confidence in bis veracity, as well as difcernment; that he endeavours to reduce the intereft of the public creditors, with a view to incieare the finking fund, in order to fink part of the national debts. If the affairs of the nation run fmoothly, and without any fears, we conceive fuch a minifter will be able to effect this reduction, without bringing any additional fum of money into the nation; that is, without the nation being the richer to induce it to give real caufe for fuch a reduction of intereft.
If the minifter directs the Bank to ftrike Bank notes for large fums (promifing, or engaging, in the name of the legillatute, to indemnify the Bank in cafe of any fudden call for ready money) for which no reády money has been depofited, directs thefe notes to be offered for fock, and effectually propofes good parcels of fock to be bought gradually, the ftocks will rife in the altercations, and the owners of the ftock who fold it finding the price to continue high, and not being in the channels of commerce to make an intereft otherwife of their money, will want to buy in again, rather than let their bank notes lie idle
They will, perhaps, try to lend out their money upon mortgages; but the notion of a reduction of intereft, and the increafe of the number of lenders, occafioned by the operation, will make thofe who mortgage their eftates demand money at 4 per cent. and all this while there will be no occafion for ready money, but for the intereft of the flocks, and of the mortgages (for here we do not fuppofe new mortgages, but a paying off of old mortgages feems to require ready money, and will increafe the number of borrowers, and raife intereft) for the capitals in both may be paid in bank bills: and fo, while this game is flowly and dextroully managed, the high prices of fieck go gradually diminifhing the intereft of the public creditors; and when the minifter has, by thefe methods, reduced the intereft under 4 per cent. in the public funds, mortgages, and great payments, he will be able to get in the bank notes he ordered to be ftruck, by felling the fook bought, and leaving it, perhaps, in the hands of the firft owners at a higher price.
By offering reimburfement, the minifter may eafily bring the proprietors of redeemable funds to take 2 per cent. inflead of 4 per cent. and be fatisfied with the fame funds at that price. And thus, by increafing the faving fund, he may effectually pay off fome part of the capital, and fo diminifh the debt, and increafe the number of lenders.
The like ends may be attained by an able minifter, if he can, by his own example, and affurances of lowering intereft, engage fuch as have by them large parcels of bank notes, to buy ftocks upon fuch encouragement, and borrow bank bills of others to buy focks, and keep them in their hands 'till thofe who fold them want to buy in again at high prices. All this, I fay, an able minifter may do by means of credit, without any fenfible alteration in the increafe, or circulation, of the fpecies of the nation, which will not be much influenced by thefe operations; only, indeed, here and there fome of the fpecie-lenders of the firft clafs, fecing a general notion of the reduction of intereft by the example of that in the funds, will more readily give way to the altercations. But this will not affect the fifh-women of Billingfgate, who pay a fhilling a week intereft for a guinea; nor will the wool-merchant fell his wool to the hatter for time the cheaper ; and all the loweft undertakers, who are the fources of intereft, will continue in our fpeculation much as they did before; and, by that time the minifter'soperations are at an end, and theowners of ftocks fit down with them at an intereft of 3 per cent. the proportion of fpecie lenders and borrowers being not at all altered, the intereft of hard money will appear to be fill 4 per cent. upon good fecurity, and the focks will confequently return to their proportion, and fall accordingly. For, if intereft can be had for fpecie on good fecurity at 4 per cent. the owner of fock, who at this time has but 3 per cent. will fell out, and draw in the value of his ftock in fecie, to lend it; and the fale of fock will confequently fali the price of it.
From what has been faid it is pretty plain, from the foregoing confiderations, that banks and credit hāve a vaft influence upon the rife and fall of ftocks and public funds, where a project is laid for the raifing of their price, when there is no additional fum of fpecies required : but they have not fo great an influence upon the general circulation, and barter of a nation, which is moftly gathered from minute payments into large fums, and from fuch fums diftributed into minute payments, all which require fpecie,
In the South-Sea time, 1720 , the capital of South-Sea flock was at 1000 , and thofe of the bubbles, at the then high rates, were computed to amount to 800 millions fterling; and the half-yearly intereft of the South-Sea capital, at 1000 , would
have required ten millions fterling, which was, perhaps; more than all the circulating money then in England.
Yet credit and paper-circulation kept this mighty fabric up, fo long as no more fpecie was required in circulation than ufual; but, when the profpedt of fo much imaginary wealth made people increafe their expences greatly, and bring in great quantities of foreign conmodities for their luxury (both which articles were to be anfwered by ready money) the machine tumbled in a few months. This example juftifies what has been fuggefted, that, in particular cafes, as in that of buying and felling of focks, banks and credit may produce furprizing effects, where the management may not require any additional circulation of fpecie.
If a minifter thould, by means of the credit of a bank, try to reduce intereft in a nation forcibly from 4 to 2 , by offering to lend bank notes to all people at 2 per cent. he may probably unhinge his whole project ; and whereas feveral in that cafe, who are diffident of the fuccefs, fell out their ftock, and call in their fecie, they ftop the channel of circulation, and caure fuch a call on the Bank, as will foon blow it up. This was the cafe at Paris in 1719 and 1720 , though the fcheme there was not wholly for reduction of intereft ; but, the other operations at Paris not relating to our prefent purpofe; we thall not now examine the caufes of the mifcarriage there.
If then the lowering of intereft is effected by artificial contrivances, fuch as Mr. Locke calls the fhuffing of properiy from one hand to another, and which, as he oblerves, will put our affairs into diforder: if fo, none of thefe advantages that neceflarily flow from a natural low intereft, can be expected : inftead of it's being the fignificant fymptom of a profperous fituation of our affairs, it will not a little contribute to bring us into a confumptive condition. 'The nation may look - well, faid a great man in the houfe of commons, to all - outward appearance; the national intereft of money may - be lower than ever it was, and may continue fo for fome ' time, and yet that nation may be in a galloping confumption'; and it is to be feared, that, if fome people are not ftopped in their career of tampering with the funds, they will at length give fuch a blow to the public credit, as cannot be eafily, if ever effectually reftored. Nor can any meafures laftingly preferve it, but the fteady redemption of the finking fund ; for certainly it can never be found policy to mortgage that fund, on which alone we depend for our redemption. National wealth and power, and, confequently, the good fate of public credit, confift in numbers of people employed in trade and manufactures, and in magazines of home and foreign commodities, wherewith to fupply other nations, and thereby increafe our navigation. It is only the folid advancement of our commerce, and fo regulating the fame as to preferve the general ballance in our favour, that can prove the effectual and permanent means of upholding the public credit of the kingdom. The fall, therefore, or rife of intereft, as Mr Locke again obferves, caufing neither more or lefs land, money, or commodities, than there was before, cannot contribute to this, that being a natural and necessary consequence arising therefrom; that is to fay, the lownefs of intereft is not the caufe, but the effect, of riches. This that great man confirms in another place, where he fays, That the lownefs of intereft in Holland is not the effect of politic contrivance in the government to promote trade, but as the confequence of the great plenty of money. So that the flourifhing ftate of trade does not depend on the lownefs of intereft, but as it is a means of fupplying the trader with money proportional to the demands of trade: wherefore, it is not forcing down the intereft of money by any unnatural meafures, that will promote commerce, which alone can maintain the public credit upon a fubftantial bafis; and, before fchemes are hatched for the reduction of the intereft of the national creditor ftill further and further, in order to force people into trade, as is pretended by fome, ought they not firit to cut out new branches of trade, wherein the public creditors may beneficially employ their money? When this is the cafe, the intereft of money will reduce itfelf.
Some people, it feems, give out that there is to be no end of the reduction of intereft: if fo, numbers of the public creditors muft break into their principal, or ftarve. The intereft we pay to foreigners is doubtlefs a grievance; and will not what we have humbly fuggefted, lay the ax to theroot of that grievance? Let the finking fund be abfolutely freed from it's incumbrances, and inviolably applied to the payment of our prefent debts; and, if we run more into debt, let it be to ourfelves only, and then it will matter not whether the intereft be further lowered or no; for, in that cafe, the more intereftmoney the public creditors received, the more would be the rpending-money of the nation. But, if the intereft is reduced fo low that the public creditors have little or no money to fpend, muft not trade fuffer in proportion, or muft not thoufands and thoufands of the public creditors be undone, by fubfifting on their principal?
Upon the whole it appears, we humbly conceive, that the diverting the finking fund from the payment of thofe national debts which were contracted before the year 1716, was a very unluickly miftake in the public meafures. That it was not done intentionally I have very good grounds to believe,

VoL. It
but really from not confidering the weight of what is humbly fubmitted to the public attertion; and, although the emer gencies of ftate bave occafioned this fund of redemption to be applied to the current fervice, yet I am willing to flatter myrelf, that one day it will be difburthened from it's incumbrances; and I could wifh, I could rejoice, that the prefent adminiftration, or any other, would in earneft undertake this defireable work, being convinced that they would reap as great glory by redeeming the finking fund, and applying it to the payment of the increafed debt, as their predeceffors had honour in it's firft eftablifhment. And,
If that once comes to pals, what will this nation have to fear either from the haughty infults of the Spaniard, or the undermining machinations of the French? For, as the finking fund would fteadily goon difcharging our prefent debts, $[0$, whenever the emergencies of the government required further loans, within the limits of what fum fhould be annually difcharged fuch loans being made upon new funds, what power could ever prefume to trifle, or maltreat thefe kingdoms? Our fovereign, and his miniitry, would have fuch weight and influence at every court in Europe, that the name of a Briton would be reveted over the whole globe.-And, when our prefent national debts were abfolutely difcharged, and thofe taxes taken off from our trade that have been appropriated for the payment of the intereft and princlpal of our debts, we fhall be enabled to afford our produce and matiufactures fo cheap at foreign markets, that no nation will be able to rival and fupplant us. - We thall then be able to fupport the fovereignty of the feas, and the ballance of power in reality; diffipate all fchemes bath at home and abroad, that fhall be hatched for the deftruction of this the beft of conftitutions, for preferving the liberties and propertles of all who live under it.
But if, on the contrary, no efficacious meafures fliall be taken to procure and preferve to the kingdom a proper fund, to fink the rational incumbrances; if the public credit of thefe king doms is never to have a fteady and invariable fund to fupport it, by convincing the whole world that; though our debts are great, yet that we can certainly and eafily pay them, even though we fhould be forced into a frefh war: when this comes once more to be the fate of thefe kingdoms, men of the highelt honour and integrity will chearfully enter into the fervice of their king and country, and the nation will be able liberally to reward them for their zeal in their country's intereft; which brings to my mind the generous fentiments of Mr Hutcherfon, who fomewhere fays, if I remember right, That, rath $r$ than minifters of fate fhould have any motives to induce them to retard the payment of the national debts, he would propofe every able and honeft minifter who would zealoully promote their difcharge, fhould be allowed by par liament half a million, or more, for himfelf and his family, that he might have no temptation to obftruct a work of fo great emolument to the kingdom, and fo honourable to himfelf.

- But if, fays the fame gentleman, a conduct contrary to this 's be held, will it not give juft reafon to fufpect, that there is ' nothing lefs in view than the difcharge of the public debts? ' and that all that is intended by the defigned lefening of in tereft, is only to provide new funds for fuch debts as the ill management of a miniftry fhall think fit to bring upon the ' nation! And fo a fund of three millions, which, at the rate - of fix per cent. per annum, is fufficient to anifwer the intereft c of a debt of fifty millions, at the rate of five per cent. per 6 annum, will be fufficient to anfiwer the intereft of a debt of fixty millions, and, at the rate of four per cent. per annum, ' to anfwer a debt of feventy-five millions, \&c.
- And in this manner a defigning miniftry may be able to in© creafe the national debt to a moiety more than it at prefen ' is, without raifing any new taxes on the people: but, if the debt fhould once increafe to fo monftrous a bulk, by reduction only of intereft to fo low a rate, and without any 6 new provifion of funds, will there be afterwards a poffibility 6 for the difcharge thereof? And it is very eafy to guefs what - the confequence would be, if the nation once faw that they ' were to groan, not for a few years, but for ever, under fo 6 infupportable a load : therefore it is impofible to hope, - that the proprietors of the funds will concur in the leffening ( their own prefent income, if they have any grounds left - them to fufpect that this will be fo far from fecuring to themi 6 the repayment of their principal, that, inltead thereof, it ' may be a moft effectual method intirely to defeat the fame.' Among the many advantages that accrued to this kingdom by the happy revolution in 1688, the parliamentary lettlement of the revenues and expence of the nation is not the leaft to be valued. Before that period of time; the incomes and iffues of the public revenue were intirely in the difpofition of the crown, and fo blended together, that our liberties were precarious at home, and we could never be fure that the king dom was in fuch a pofture of defence, as to be fafe from foreigh invafions; but now, by annual feffions of parliament, the care of fettling and providing ways and means of making annual fupplies for the navy, guards, and garrifons, lies upon the legillature; and we need not be apprehenfive that $2 n_{y}$ minifter can be able to hurt the conftitution, or endanger the fafety of the nation, by mifapplication of the public money,

## C R E

## CRE

without cenfure: the fate of the navy is laid before the houles of lords and commons every winter, and made out in the moft exact and authentic manner from the proper officers.
King Charles II. fuffered the fleet of England to moulder away to nothing; and king James II. made a fhift to get a ftanding army, without the confent of parliament; which, if it had been falfe to God and their country, might have been a fufficient inftrument to have fubverted the conftitution of the government : but the good providence that watched over the liberty of the nation, permitted that weak prince to attempt a force upon the confcience, before he had fecured the fword or the purfe. Now, fince the revolution, provifion is made by parliamentary grants of money, from year to year, for maintaining a fettled number of land forces, and no more than are abfolutely neceffary for the fupport of the honour and dignity of the crown, and for the fecurity of the kingdom at home, and from any fudden infult from abroad. As thefe forces are kept up by confent of parliament, and are very regularly and well paid, they are not likely to be any way dangerous to our liberties: all hazards in future times of this nature are prevented, by the prefent difpofition of the revenues of the kingdom.
But, that we may pafs a right judgment upon the public revenues, let us look as far back as the year 1721, when they fell into the channel in which they have ever fince fo happily continued. The credit of the nation was at that time upon the brink of ruin; the unfortunate fufferers by the SouthSea fcheme were become formidable even to the government itfelf, being joined by the Jacobites and malecontented pretenders to patriotifm; and thefe men (as we have frequently found by experience) are like Sampfon's foxes, linked clofe together by the tails, thongh their heads ftand different ways. And, indeed, it cannot be otherwife, when the joint work of them both was to inflame : befides, at this critical time, feveral of the robbers and highwaymen of the year 1720 cunningly joined themfelves with the hue and cry, which did very much contribute to the hurry of the purfuit, and increafe the noife, the fury, and clamour: yet, notwithflanding all the difficulties of this too general calamity, which the year 1720 brought upon us, the fcene foon changed, under the prudence and moderation of a fteady direction: a clear head and an honeft heart worked through all thefe difficulties, public credit revived, and money was foon borrowed at very low intereft, to carry on the current fervice of the government; focks have had no other rife or fall than what was occafioned by the management of the gamefters of the alley, in which the credit of the kingdom is no more concerned, than it is in the queftion, who wins or lofes at the Bath or Newmarket.
Care has been taken duly to pay the intereft to the creditors of the public ; and, as we have no reafon to defpair of the eftablifhment of a permanent finking fund, fo the public creditors will then be as fecure in the payment of their principal, as they are at prefent of their intereft.

- It is true, fays Sir J- B-d, in the year 1736 , in de-- fence of his fcheme for the reduction of intereft, fome mo-- dern politicians have run upon a notion, and feveral perfons - are weak enough to believe, that the not paying off the * public debt will engage people the more to preferve the pre-- fent government. This policy, indeed, of theirs would - hold good, if it could be made out that the public creditors - are ftronger, and more in number, than thofe concerned in - the payments to the public. But it rather feems to hold in - fenfe and reafon, That the throne of that prince, in a free - nation, muft be moft firmly eftablifhed, whofe affairs will - permit him to alk, or who defires to collect, the feweft © taxes from his people.' See the articles Duties, Funds, Interest, National Debts.
Here then we find that the fentiments of this honourable gentleman were very clear and exprefs in regard to the neceffity of the difcharge of the national incumbrances; and, from the title of his reafons given in vindication of his fcheme, it feems to be intended rather to accelerate, than retard, that great work : which, to comprehend, I am quite at a lofs, as it propofed, if I underftand the defign right, the taking the fame annuity off in taxes as was intended to be faved by the reduction of intereft: which taking off taxes that were appropriated by parliament for the inviolable payment not only of the intereft of the public creditors, but, in the judgment of many great men, for the redemption of their principal debt allo, could never expedite and haften the difcharge of the debrs; nothing can ever do that, but the taking off taxes, in confequence of fuch payment, in an honourable and parliamentary way. Nor could thefe taxes, we apprehend, without confent of the public creditors, and confiftent with the faith of parliament, have been taken off, 'till the principal debt for which they were mortgaged was juftly and duly difcharged. For, when the public creditors lend their money upon any certain fund which may be propofed, to induce them to fuch loans, do they not always confider, whether fuch funds are likely to prove effectual in anfwering the conditions offered to them? If the fund offered to them is liable to fail of good fecurity for the due and regular payment of their intereft, they are never readily induced to part with
their property upon fuch a precarious foundation, Nor, if fuch fund is fubject to be annihilated, or any way alienated from it's primary intention, will people lend their money upon it?
In regard to all funds, therefore, that have been, or fhall be appropriated by parliament, as a fecurity for the payment of the annuity of the national creditors, it can never be confonant to the faith of parliament either to take them off, or otherwife apply them, without the concurrence of thofe creditors to whom fuch funds have been, or thall be mortgaged, for their fecurity: wherefore it is the fenfe of parliament that thefe funds fhould not be temporary, but perpetual, 'till the redemption of the principal. Nay, we further humbly conceive and it has been the fentiment of fome of the greateft men in the kingdom, that fuch funds are as inviolably bound for the repayment of the principal debt, as the intereft; and, therefore, the funds propofed ought al ways to have afforded a finking fund, that would have difcharged the debt in a reafonable number of years, and not only a fcanty annuity: had this been always the cafe, with refpet to all the debts that we have gradually contracted, as fecure provifion would have been made for the repayment of the principal, as for the intereft.
And 'till a certain and clear, unincumbered, and permanent finking fund, for the payment of the national debts, in a reafonable number of years, does take place, it is my humble opinion that the public credit of this kingdom will never be bottomed on a folid foundation; feeing our public Debfs are almoft trebled fince the reign of queen Anne.
As our funds, indeed, are at prefent circumftanced, ' Pub-- lic fecurities, as the ingenious Mr. Hume obferves, are with - us become a kind of money, and pafs as readily at the cur' rent price as gold and filver. Wherever any profitable un-
- dertaking offers itfelf, however expenfive, there are never ' wanting hands enough to embrace it ; nor need a trader, ' who has fums in the public ftocks, fear to launch out into - the moft extenfive trade; fince he is poffeffed of funds, - which will anfwer the moft fudden demand that can be ' made upon him. No merchant thinks it neceflary to keep - by him any confiderable cafh. Bank ftock, or India bonds, - efpecially the latter, ferve to all the fane purpofes; be' caufe he can difpofe of them, or pledge them to a banker, - in a quarter of an hour; and at the fame time they are not - idle, even when in his fcrutore, but bring him in a conttant - revenue.
- In fhort, our national debts furnifh merchants with a fpe-- cies of money, that is continually multiplying in their hands,
- and produce fure gain, befides the profits of their commerce.
${ }^{6}$ ' This muft enable them to trade upon lefs profit. The
- fmall profit of the merchant, renders the commodity cheaper,
- caufes a greater confumption, quickens the labour of the
- common people, and helps to fpread arts and induftry
- through the whole fociety.
- There are alfo, we may obferve, in England, and in all - ftates, that have both commerce and public debts, a fet of ${ }_{6} 6$ men, who are half merchants, half ftock-holders, and - may be fuppofed willing to trade for fmall profits ; becaufe 6 commerce is not their principal or fole fupport, and their - revenues in the funds are a fure refource for themfelves and - their families. Were there no funds, great merchants, - would have no expedient for realizing or fecuring any part" - of their profir, but by making purchates of land, and land - has many difadvantages in comparifon of funds. Requiring ' more care and infpechion, it divides the time and attention ' ' of the merchant; upon any tempting offer or extraordinary - accident in trade, it is not fo eafly converted into money; ' and as it attracts too much, both by the many natural plea-- fures it affords, and the authority it gives, it foon converts - the citizen into the country gentleman. Moremen, there-
- fore, with large ftocks and incomes, may naturally be fup' pofed to continue in trade, where there are public debts: ' and this, it mult be owned, is of fome advantage to com' merce, by diminifhing it's profits, promoting circulation, - and encouraging induftry ${ }^{*}$.
* © On this head, I fhall obferve, without interrupting the - thread of the argument, that the multiplicity of our public - debts ferves rather to fink the intereft, and that, the more t the government borrows, the cheaper may they expect to - borrow ; contrary to firft appearance, and contrary to - common opinion. The profits of trade have an influence ' on intereft.'
- But, in oppofition to there two favourable circumftances, - perhaps of no very great importance, weigh the many dif-- advantages that attend our public debts, in the whole inte6 rior œconomy of the ftate: you will find no comparifon - betwixt the ill and the good, that refult from them.
- Firf, 'Tis certain, that national debts caufe a mighty con-- fluence of people and riches to the capital, by the great - fums which are levied in the provinces to pay the intereft - of thofe debts; and perhaps too by the advantages in trade ' above-mentioned, which they give the merchants in the - capital above the reft of the kingdom. The queftion is, ' Whether, in our cafe, it be for the public intereft, that fo ${ }^{6}$ many privileges fhould be conferred on London, which has ' already arrived at fuch an enormous fize, and feems fitll
- increafing?
* increafing ? Some men are apprehenfive of the conlec quences. For my part, I cannot forbear thinking, that, - though the head is undoubtedly too big for the body, yet - that great city is fo happily fituated, that it's exceffive bulk 6. caufes lefs inconvenience, than even a fmaller capital to a - greater kingdom. There is more difference betwixt the - prices of all provifions in Paris and Languedoc, than be-- twixt thofe in London and Yorkfhire.
- Secondly, Public ftocks, being a kind of paper credit, have - all the difadvantages attending that fpecies of money. They
- banifh gold and filver from the molt confiderable commerce
- of the State, reduce them to common circulation, and by
- that means render all provifions and labour dearer than
' otherwife they would be.
- Thirdly, The taxes, which are levied to pay the intereft of
- theie debts, are a check upon induftry, heighten the price
- of labour, and are an oppreffion on the poorer fort.
- Fourthly, As foreigners poffefs a fhare of our national funds, they render the public in a manner tributary to them, and
- may in time occafion the tranfport of our people and our
- induftry.

Fifthly, The greateft part of public ftock being always in

- the hands of idle people, who live on their revenue, our
- funds give great encouragement to an ufelefs and inactive - life.
- But, though the injury that arifes to commerce and induftry © from our public funds, will appear, upon ballancing the - whole, very confiderable, it is trivial in comparifon of the
- prejudice that refults to the State, confidered as a body poli-
- tic, which mult fupport itfelf in the fociety of nations, and
- have various tranfactions with other ftates, in wars and ne-
- gociations. The ill there is pure and unmixed, without c any favourable circumftance to atone for it. And 'tis an © ill too, of a nature the higheft and moft important.'
CROATIA was once divided between the Hungarians and Turks; but is fince fubject for the moft part to the emperor of Germany, who has the title of king of Croatia.
The prefent boundaries of this province, are the river Save on the north and north-eaft, which parts it from Sclavonia; Bofnia on the eaft, Carniola on the weft; and Morlachia on the fouth and fouth-weft.
It is above 80 miles in length either way. It pays above twice the fum that Sclavonia does to the emperor's extraordinary fubfidies. The foil is fruitful in wine, oil, $\&<c$. as well as all neceffaries for life, where 'tis cultivated; but being a frontier province, like Sclavonia, labours under the fame inconvenicncies. The people, called Croats, are of a good ftature, valiant, hardy and good foldiers, efpecially the horfemen, who are fo famous, that they are entertained in moft of the courts of Germany as their horfe-guards. Chief places are,

1. Carlst'adt, near the frontiers of Carniola, is a frong fortrefs, and always well furnifhed with a good garrifon and ftores, maintained by the Carniolans, to whom it is a bulwark againt the Turks.
2. Siseg, or Sisaken, ftands on the Save, 33 miles eaft of Carlftadt.
3. Castanowitz, a ftrong caftle, confifing of three towers, and a wall according to the antient manner of fortifications.
CUMBERLAND is bounded on the eaft with Northumberland and Durham, on the fouth-eaft with Weftmoreland, on the fouth with a fmall part of Lancafhire, has the Irifh fea on the weft and fouth-weft, and Scotland on the north and north-weft, and is 168 miles in circumference.
The air is fharp but agreeable, and the foil affords good pafture to great flocks of fheep, whole fleib is particularly fweet and good; it's plains abound with corn, and it's lakes with wild fowl and fifh, which laft they have in plenty alfo from the ocean.
The county abounds with rivers, and thofe bodies of waters, called by the inhabitants meres. Chief rivers are the Derwent, famous for the falmon-fifhing, and the Eden, befides feveral others of leffer note. The fouth part of the county, called Copeland, abounds with rich veins of copper ; and at Newlands, and other places among the mountains of DerwentFells, fome rich veins of copper, not without a mixture of gold and filver, were difcovered in former ages. Here is alfo abundance of black-lead, as alfo mines of coal, lapis calaminaris, and lead ore.
Carlisle, is pleafantly fituate between three fine rivers, abounding with firh. 'Tis a fea-port, but without fhips, merchants, or trade; yet wealthy and populous, and the key of England on the weft fea, as Berwick upon Tweed is on the ealt fea.
Cockermouth is a populous trading town, with a harbour for veffels of good burthen, and a caftle.
Ravenglass, in that part of the fhire called Copeland, is a well built town, and has a good fifhery.
Whitehaven, fo called from the white cliffs near it, which Thelter the baven from tempefts, is a populous rich town, chiefly beholden for it's improvement to the Lowther family, from which Sir John Lowther, Bart. took his title of diftinction; and his fon, the prefent Hon. Sir James Lowther, has now a very great eftate here. He has been at a vaft charge to
make the harbour more commodious, and to beautify the town, the trade of which is chiefly in falt and coal, with which it furnifhes Ireland and part of Scotland; as it did the latter alfo with tobacco and fugars before the union. In time of war or crofs winds, 'tis common to fee 200 fail at once go off for Dublin, laden with coals. And Sir James Lowther, Bart. in particular, is faid to fend as many coals to Ireland, and the Ine of Man, as bring him, at leaft, 20,000 l. a year.
KESWICK, was long ago noted for mines of black-lead, and is inhabited by miners, who have water-works by the Derwent for fmelting the lead, and fawing of boards.
Workington, is a noted place for the fifhing of falmon, which, like thofe of Carlife, are carried from bence, fiefh as they take them, to London; where, by travelling night and day, and changing horfes, they arrive fweet and good.
Penrith, vulgo Perttif, is a large, populous, weil buile town, noted for tanners, and reckoned the fecond in the county for trade and wealth. It has a good weekly cornmarket, and a much greater for cattle, every Tuefday fortnight, from Whitfunday to the firf of Auguft.
CURRENCY, or PAPER-CURRENCY, in regard to the Britifh colonies in America.
On the firft fettiement of thefe colonies, an Englifh crown was 5 s . in denomination, but the trade there was carried on chiefly by exchanging one commodity for another, and with little or no filver or gold : fugar, tobacco, and rice ferved as a medium for trade in fome of the plintations.
In Barbadoes, the merchants kept their books, and the public officers received their fees in fugar, fixed as a ftandard at 12 s .6 d . per 100 weight; fo that the exchange, between that illand and England, varied in proportion to the price of fugar in England, and 1001. in Barbadoes was fometimes worth 105 1. to 1081 . fterling in England.
As the American commerce flourifhed, foreign filver and gold coins were introduced, and became a medium for trade; and bills of credit, commonly called paper-money, or paper-currency, were remitted to fome colanies by their governments, to be difcharged by a tax, or otherwife, at certain times to come, which added to their medium of trade and circulation, and anfwered the intention of thefe colonies, whilft they kept within due bounds.
As the faid filver coins went by tale, and. were not milled, they were clipped to fuch a degree, that the exchange to England varied in proportion, and the paper-currency alfo varied in value, and was depreciated in feveral of the colonies, occafioned by their remitting more than their trade and property could bear, or from fome other miftaken conduct; and, in fome other of the colonies, fuch paper-money, notwithftanding it's under value, went in dicharge of prior contracts, made when fuch money was of a greater value; and inftead of varying in denomination in proportion to it's intrinfic value with filver, the principal ftandard in other countries, they varied the nominal price of filver in proportion to the value of their paper-money : fo that an ounce of filver that formerly went for 6 s . 8 d , has fince gone for 28 s . money of New England per ounce, and for 42 s . money of Carolina per ounce: whereby, in procefs of time, almoft every province, as well as the illands, varied more or lefs in their currency, and confequently in their refpective exchange between Great-Britain, the center of it's plantation commerce, and thefe colonies, which put the whole American trade upon a ftate of uncertainty and into fuch confufion, that no trader could tell how to value his debts after they were once contracted.
Her majefty queen Anne, by her royal proclamation bearing date the 18 th of June 1704, did publifh and declare, 'That,

- from and after the firf day of January next enfuing, no - Séville, Pillar, or Mexico pieces of eight, though of the - full weight of 17 pennyweights and an half, fhould be ac-- counted, received, taken or paid, within any of the colo-- nies or plantations, as well thofe under proprietors and 6 charters, as under her majefty's immediate commiffion and - government, at above the rate of 6 s . per piece current mo-- ney, for the difcharge of any contracts or bargains to be - made after the firf day of January next ; the halves, quar-
- ters, and other leffer pieces of the fame coin, to be ac-
- counted, received, taken, or paid in the fame proportion; ' and that the currency of all pieces of eight, of Peru dol-
- lars, and other foreign fpecies of filver coins, whether of
- the fame or bafer alloy, fhould, after the firft day of Ja-
- nuary next, ftand regulated, according to their weight and
- finenefs, according and in proportion to the rate before
- limited and fet for the piece of eight of Seville, Pillar, and
- Mexico; fo that no foreign coins of any fort be permitted
- to exceed the fame proportion, on any account whatfoever." In the 6th year of the faid queen Anne, an act was paffed for afcertaining the foreign coins of her majeity's colonies and plantations in America, whereby it was enacted, ' That if : any perfon within any of the faid colonies or plantations, 6 as well thofe under proprietors and charters, as under her - majefty's immediate commifion and government, fhould, - after the firt day of May 1709, for the difcharge of any ' contracts or bargains to be hereafter made, account, re-- ceive, take, or pay any of the feveral fpecies of foreign

## CUR

Gilver coins mentioned in the before recited proclamation at any greater or higher rate, than at which the fame is thereby regulated, fettled, and allowed, to be accounted, - received, taken, or paid; every fuch perfon fo receiving, accounting, taking, or paying the fame, contrary to the directions therein contained, thall fuffer fix months im-- prifonment without bail or mainprize, \&c. and Thall like" wife forfeit the fum of 101 . for every fuch offence, \&c. - But with a provifo, that nothing in the proclamation fhould - extend, or be conftrued to compel any perfon to receive 6 any of the faid fpecies of foreign filver coins, at the ref pective rates in the faid proclamation mentioned. By the - above-mentioned regulation, filver at 17 dwts. $1 / 2 \mathrm{grs}$. for 6 b . is equal to 6 s . rod. $\frac{2}{7}$ per ounce.
And there is a further provifo in the faid act of the 6 th of queen Anne, whereby it is declared, 'That nothing in the - faid act contained fhall extend, or be conftrued to reftrain - her majelty from regulating and fettling the feveral rates of - the fpecies of foreign filver coins, within any of the faid - colonies or plantations, in fuch other manner, and accord-- ing to fuch other rates and proportion, as her majefty, by Ger royal proclamation for that purpofe to be iffued, thall, from time to time, judge proper and neceflary, or from giv-- ing her affent to any law hereafter to be made in any of - the faid colonies or plantations; but that fuch farther re-- gulations may be made, and fuch affent given, in as full and ample manner to all intents and purpofes, as the fame might have been done in cafe this act had not been made, and no otherwife, any thing before contained to the con"trary hereof in any wife notwithftanding.'
The changing the value of current money in any country, muft certainly make a confiderable change in any mens properties, unlefs due care is taken to proportion and afcertain the old currency with the new intended currency.
But this not being fully provided for by the faid proclamation or act, although they extended only to contracts made after a certain day to come after the proclamation, yet as the contracts, made before that time, remained under a ftate of uncertainty and difficulty, few of the colonies have, or could, without much lofs and confufion, obferve this intended regulation.
Barbadoes, indeed, ftruggled through it with much difficulty and lofs to many of it's inhabitants, and obferve it to this day. The money-holders lent their money juft before the regulation took effect, for feveral months without intereft; the borrowers paid it their creditors, fome with lofs and fome without; fo it paffed from hand to hand, and exchange, between England and that ifland, fell from 60 to 25 per cent. which proved a great lofs to feveral, and particularly to thofe who contracted debts, while fuch exchange was at 60 per cent. and paid them when it was reduced to 25 per cent. and alfo to thofe who had light clipped money upon their hands. However, fince this regulation, this colony has had an extenfive credit, becaufe every creditor is fure his money will be of equal value when it is repaid : and the exchange, between that ifland and London, became about 30 per cent. which is near the proportion between 5 s . 3 d. the value of an ounce of filver in England, and $6 \mathrm{~s} .10 \mathrm{~d} . \frac{1}{7}$ the value of an ounce of filver in Barbadoes.
The exchange of the Leeward illands plays at about 60 per cent. and that of Jamaica at about 40 per cent. and varies from time to time, according to the nominal value they put upon their gold and filver, and other incidents.
Carolina for the fame reafons, and from a large emiffion of paper-money, raifed their exchange to 700 per cent. advance, and New England to upwards of 400 per cent. advance, which proved a great lofs from time to time, to fuch as had given credit in and to thofe provinces; but, as fuch lofs happened gradually, it was not felt fo feverely as at firft view it may appear, and the price of filver and exchange in New England varied but little for feveral years.
New York, the Jerfeys, and Penfylvania allow 8 s .6 d . to 9 s . for an ounce of filver, and their exchange is from about 65 to 70 per cent. Maryland allows ios. to in s. per ounce, and exchange there is at about 100 per cent, advance. Bermudas is much as Barbadoes, and Virginia is at 6 s .8 d . per, ounce, and exchange there is about 25 per cent.
Now, for the better regulating all money and exchange throughout his majefty's colonies and plantations in America, it may be propofed, that there be an equal and fixed price for filver throughout all thofe colonies and plantations; and that all contracts or bargains, from fome certain day to come, be made for fuch money, and fuch money to be accounted, 'received, taken, paid, fued for and recovered accordingly. And no recovery to be made for any money of different forts or denominations that fhall be contracted for after fuch time, except for fuch money, and at fuch prices as thall be herein after mentioned. This will naturally be called fterling money, proclamation money, or new money, and what is now current, be it what it will, will be called old currency, or old money. In order to prevent any lofs or inconvenience by fuch a regulation, to any creditor, debtor, or money-holder, it may be fuppored, that the ftandard of filver fhould be fixed at 5 s .3 d . per ounce, the price of filver in pieces of eight or
bars ; then 1001 . new money would be equal in value to 1301. old currency in Barbadoes and Bermudas; and 1406). old currency in Jamaica, 160 I. old currency in the Leeward Illands 5001 . old currency in New England, 1651 . old currrency in New York, the Jerfeys, and Penfylvania, 1251. old currency in Virginia, 200 . paper-money in Maryland, 8001. paper-money in Carolina. Or in fuch proportions as the currency of the feveral and refpective colonies thall really bear to either of the undermentioned prices of filver, as may be found moft agreeable; viz.
$6 \mathrm{~s} .10 \mathrm{~d} . \frac{2}{7}$ per ounce, which is equal to 6 s . for 17 dwts .12 grs. the price regulated by queen Anne's proclamation, confirmed by an act of parliament in the 6th year of her reign. 5 s .6 d . per ounce, the price afcertained for payment of the duties on foreigh fugar, tum, and molaffes, imported into the Britifh plantations in America, 6 Geo. II., cap. 13. 5 s . 3 d . per ounce, may be accounted the price of filver in pieces of eight or bars.
5 s. 2 d . per ounce, is the price of Englifh filver coin or terling.
Notwithftanding fuch a regulation, there would ftill be a fmall exchange in the feveral plantations, in proportion to the rifque, charge, and other incidents, attending the tranfporting money from one country to another ; but every one, for the future, may expect an equal value upon the repayment of the money he fhall credit, lend, or trade for in the plantations, without having the value of his property depreciated by any law or cuftom, while it is in other people's hands; which is the principal defign of the propofition.
And gold muft and will always bear a value in proportion to fuch a fandard of filver: [fee the article Bullion] but it is however propofed, that all gold coins, and other commodities, do pafs for the fatisfaction of all contracts made, or to be made, before fuch a period of time, at the feveral and refpective rates or prices, and in like manner as they now pafs in each and every colony refpectively. And fhould there be a neceffity for creating and iffuing out bills of credit, commonly called paper-money, to anfwer a medium of trade, or any extraordinary emergency in any of the plantations, there mightbe provifo's, that fome reafonable fums, to be limited, may be iffued or emitted, provided there be a fund fufficient to anfwer atr intereft on all bills of 20 s . value or more; and likewife gradually to pay off, difcharge, and fink the fame within a limited time. But that nothing in any act, to be made in any of the faid plantations or colonies, extend, or be conftrued to compel any perfon to receive any fuch bills of credit or paper-money in difcharge of any debt, or to allow or account the fame a legal tender, unlefs fuch aets fhall have firft received the royal approbation.
Now fuppofe order ihould be taken, that all bargains and contracts that thall be made after the firft day of January next, in any of his majefty's plantations or colonies in America, be made, received, paid, and recovered, conformably to the act paffed in the 6th year of the reign of queen Anne, intitled, An act for afcertaining the rates of foreign coins in her majefty's plantations in America: and that all bargains and contracts, made or to be made, in the faid plantations or colonies before that time, be paid, received, and recovered, at the current value or rate that the current monies, of any kind or nature foever, actually bore on the firft day of February laft, in the faid plantations or colonies refpectively, in proportion to 6 s . for 17 dwts. and 12 grs. or 6 s . rod. $\frac{2}{7}$ per ounce, the price of filver afcertained by the faid act. And that the rates or value of all fuch current money, as it ftood on the faid firft day of February, be fettled and afcertained by the governor and council of each province or colony refpectively, or by fome other authority.
This regulation would be no ways prejudicial to any debtor, creditor, legatee, annuitant, or any other perfon whatfoever; fince the money of all forts current, or that may hereafter be emitted as above propofed, will pafs at it's refpective value, according to contract, to a fixed ftandard of filver, in like manner as moidores, guineas, and other coins, or as India bonds, and other public fecurities, now pafs in Great-Britain.
On the other hand, fuppofe the faid proclamation and ace fhould be attempted to be put in execution, without any regard to contracts made before fuch an attempt, the greateft confufion muft enfue in fome of the colonies; fince, in New England and Carolina, every debtor, to comply with that act, without fome further provifo, muft pay the value of 4 or 500 guineas for every 100 guineas he contracted to pay, or ftands chargeable with, by means of any legacy, annuity, or otherwife, even if it was but a few months before: or, to fpeak in other words, he muft pay four or five times as much as he ought to pay. See the articles British America, Colonies, and Money.

## REMARKs

The feveral provinces on the continent of North America, and alfo the Leeward Inands, and Jamaica, fubject to the crown of Great-Britain, have ever fince their being fettled or fubject to the faid government, or at leaft within thefe eventy years laft paft, varied greatly in the way of reckon-

## C U R

## C UR

ing their monies or currencies, from what has been by law eftablifhed in England or Great-Britain. The currencies in the colonies have fluctuated and varied fo much, that they have differed greatly both as to time and place, feldom being the fame in two different provinces at a time, and often changing value in the fame place. In fome of the provinces, they have deviated fo much from fterling money, in the way of reckoning their monies, and run on to fuch a degree of depreciation, that two fhillings fterling hath become equal to one pound nominal currency, or one pound fterling equal to ten pounds. At Bofton, in New England, they run on in a continual courfe of depreciation in the face of 47 years, in an irregular progrefive advance, from 133 l. currency for 1001 . fterling to 1100 I . currency for 1001 . fterling.-A ftate of all the degrees of depreciations in the refpective years the variations or changes happened, from the year 1702, to the year 1749 , together with the value of filver, both by the ounce and dollar, that correfpond with the faid depreciation, are fet down in the following table.

| Years | Exchange | Oz. of Silv. Cur. | Dollar Ster. |  |  |
| :--- | ---: | :---: | :---: | :---: | :--- |
|  |  | s. | d. | S. | d. |
| 1702 | 133 | 6 | $10 \frac{1}{2}$ | 4 | 6 |
| 1705 | 135 | 7 | 0 | 4 | $6 \frac{1}{4}$ |

Their money having thus run on to 11001 . currency for 1001. fterling, or 11 for one, a flop was put to the farther depreciation of the money of the province of Maffachufett's Bay, in the year 1750 , by a remittance in money fent over from England, to the amount of 183,000 l. fterling, to reimburfe the expence that province had been at in the reduction of Cape Breton in the French war 1740; the money was moftly compofed of Spanith dollars. Their de'preciated paper money, or province bills, were called in, and paid off, at the rate of 45 hillings currency for each dollar, and the bills burnt and deftroyed; and a law made, by which the par of exchange with that province and England is fixed at $133 \frac{1}{2}$ l. currency for 1001 . fterling, and the dollar at 6 s . the fame currency. This change was a pleafant event, efpecially to them who have correfpondence with that province; but I have been informed, that tho' they are obliged to keep their accounts agreeable to the faid law, yet fince that time they have for fome years negotiated their bills with England in old tenor, or the old currency ; and that fo late, as within thefe fix years laft paft: but it has been fince faid that the practice is now entirely laid afide. The currency of Rhode Inland has run on in a courfe of depreciation, from the year 1744 to the year 1759 , from 450 . to 2300 l. currency for 1001 . fterling -an amazing depreciation indeed, which makes the trade carried on by that province (which is pretty confiderable) perplexing to themfelves and their correfpondents; but I am informed, they are endeavouring to put a ftop to fuch a mad depreciation, and to put their currency under fome regulation, which it is to be hoped by this time is effected.
The currencies of feveral of the provinces have at times gone backwards and forwards in varying their exchanges with England ; fome feem to be fixed, and others in a variable fituation. The parts of exchange with the feveral provinces are at prefent, or lately were,

By late information from Quebec and Montreal, as alfo from Halifax in Nova Scotia, Anapolis, and the bay of Fundy, the rate of their currencies may be fixed at 108, 109, or 1IO; the feveral fpecies of money current in all thefe refpective places, at prefent indicate, that thefe mult be the equitable rates of exchange, the dollar paffing in them all for 5 s . the piftole for 18 s . the Englifh guinea for 22 s .6 d . the johannes or $3^{6 \mathrm{~s}}$. piece for $3^{8} \mathrm{~s} .6 \mathrm{~d}$. and the moidore for 29 s . in their refpective places, at Quebec and Montreal the New York traders, which fupply the places with provifions, deal with the inhabitants in New York currency, in receiving dollars at 7 s .6 d , and gold in proportion. But thefe exchanges and values of money in fpecie in thofe places may be no ttandard for after times, as they may probably foon vary.

A queftion naturally will arife, How hath it come to pafs, or what is the reafon, that the feveral currencies of the Britifh colonies have differed fo much one from another: both in refpect to time and place, and fill do differ, from what is by law eftablifhed in England?
In anfwer to which, I hope the following reafons will, in a great degree, be fatisfactory. The teveral provinces in their intancy had but little trade, and confequently little money, The tools, utenfils, and neceffaries for planting, they were at firt fupplied with from Britain, involved them in debt, before they were able to raife goods for exportation to pay their creditors; and the goods they firf railed were often fo ordinary in quality, or fo little in quantity, that they were able to export to a foreign market, that the net proceeds of the fame often turned out poorly, by which means the planters remained continually in debt to the Britifh merchants, and occafioned the balance of trade to be always againft them; and having neither goods nor cafh fufficient to remit their creditors, the confequence has been, that many bad debts have been made, and great loffes furtained, as the merchants of Great-Britain have but too fatally experienced.
When the northern colonies became more thiriving, and by the produce they raifed, were enabled to fupply the fugar inlands with provifions, as flour, bifcuit, falt, fifh of feveral forts, horfes, live fheep, hogs, geefe, \&c. befides what is called lumber, viz. timber, ftaves, heading, and hoops, $\& c$ they drew money from thence: the only fources they at firft, or even at prefent can be furnifhed with a fupply of money: (the remittances made thither in the laft and prefent wars excepted) the money they imported from the inlands, together with their produce, were not fufficient to fupply their creditors in Britain, which prevented the cafl ftaying with them, and obliged them to fhip it off with their other merchandize towards paying their debts here, which obliged the provinces to create and iflue bills of credit, commonly called paper money, to circulate in trade among themfelves, gold and filver being as much a merchandize as any they dealt in. The trade of the northern colonies continuing for many years in a bad ftate, and the balance with Britain always againft them, occafioned the ready money they had amongft them to be picked up by the merchants and factors refiding in America, acting for their correfpondents or employers in Britain; and calh or bullion being a certain remittance, preferable to bills of exchange or produce, which were very precarious, the bills being often fent back protefted, and the goods coming to a bad market: this made the merchants and factors rival each other in purchafing gold and filver, and from time to time raifed the price; and in proportion as the nominal value of the fame advanced, the price of bills and the rates of their currencies kept pace with it, and proportionally depreciated as the nominal value of the fpecie advanced, compared with the value of money in Britain.
This is evident, by cafting an eye on the table of the courfe of depreciation of the currency of Bofton, inferted in the preceding pages; wherein it appears, that the nominal prices of filver the ounce in that province, for the face of 47 years, was always nearly proportionable to the depreciated rates of exchange in the periods of time the faid currency varied: and it is not to be doubted, but the change of the value of money preceded the alteration of the exchange.
From what has been faid it may naturally be inferred, that in whatfoever province in Britifh America, whofe trade does not import them fo much cafh from one quarter as the demand is upon them from another, or in other terms, which have the balance of trade againft them, their currency will be unftable, and fubject to depreciation. As contrary caufes always produce contrary effects, fo in the affair under confideration it appears, that the inands and provinces that have a flourifhing trade, and an influx of money to anfwer foreign demands upon them, that their currencies have fixed for a long time in one ftate.
In the ifland of Jamaica, in confequence of its great and valuable produtions, and the calh it imports from the neigh bouring fountain heads; the Spanifh illands and continent, has preferved it's currency in one fate for many years: has never had the ufe of paper money, nor even copper, their current money being all gold or filver, neither has the price of bills varied in above 20 years, always being at 140 . And it is much the fame in the other fugar iflands, except the price of their bills are fubject to vary. New York and Penfilvania currencies feem fixed for the fame reafon: and it is to be hoped, more of the provinces will be able to keep their currencies from further depreciating.
It may be of ufe to fome readers to note, that to whatever degree of depreciation the currencies of the colonies have been at, the denomination of pounds, fhillings, pence, and farthings, have been retained, altho' they have none of the money amongit them of thefe denominations.
Since the Definitive Treaty of 1763 has taken place, and fuch extenfive new acquifitions have been thereby ceded to the crown of Great-Britain; it is not to be doubted, but our American affairs, will meet with all due attention from

## C U S

## C U S

the government of their mother country: and thete are, perhaps, few points that may merit confideration more than the prefervation of an uniformity and Sameness of Currency amongit the whole of our colonies. See British America, the latter end of that article.
CUSTOMS. The old fubfidy, or fubfidy inwards, firft granted by the a\&t, 12 Car. II. cap. 4. and continued, as to one half, to Auguft 1, 1708, by the $4^{\text {th }}$ money-act, Anne, parl. 2. feff. 4. and as to the other half, for ever, by the 5 th money-act, Anne, parl. 3. feff. 1. This is a tax of 61 . per ton upon fome wines, and 41 . sos. upon others, and on perry, rape, cyder, and vinegar, imported into the port of London by Britifh fubjects in Britifh fhips, navigated according to law; and, upon all other goods fo imported, it is a tax of 5 l. per cent. ad valorem; as to which I fhall now in general oblerve, that, when goods are to pay any tax according to the value, that value is to be afcertained by the two books of rates, or, if not there rated, by the oath of the importer, or by the price at a public fale; and, when goods are valued by the oath of the importer, the officer may take the goods, paying the importer the price he puts upon them, with 101 . per cent. profit, and the produce at a public fale, after all difburfements for duties, \&xc. is to be paid to the crown, for the ufe of the finking fund.
2. The petty cuftom, or alien's duty, payable by alien or denizen importers, granted and continued by the fame acts, and is a fourth more than the former.
3. The additional duty granted and continued by the fame acts, being an additional duty of 3 l. per ton on fome wines, and 41. upon all others; and a moiety of the neat old fubfidy by way of additional duty upon all wrought filks, except Eaft-Indian; and upon all linnens, except Irifh and calicoes; and Id. per pound on tobacco of the Britifh plantations.
4. The one per cent. inwards, granted by the'act, 14 Car. II. cap. II, and continued by the faid two acts of queen Anne, being a tax of I l. per cent. ad valorem, upon all goods imported from any place in the Mediterranean beyond Malaga, in any Britifh fhip that hath not two decks, and carries lefs than $\ddagger 6$ guns mounted, with two men for each gun, and ammunition proportionable. The defign of this tax is to oblige our merchants to make ufe of defenfible fhips, in order to prevent our feamen's being made flaves by the Barbary pi. rates; but fhips exporting Britifh fifh are excepted.
5. The compofition on petty feizures, which is an indulgence allowed by cuftom to our cuftom-houfe officers; for one moiety of all goods, reized and condemned, belongs to the crown, and muft be paid or fecured, before the officer can have the goods to fell; but when the duty of the goods feized does not exceed 40 s . the officer is allowed to compound with the collector.
II. That, which I before called the fecond branch of the cuftoms, I fhall now divide into two ; the firft of which is called the fubfidy outwards, firf granted by the faid act, 12 Car. II. cap. 4, and continued to March 8, 1742 , by the third money-act, Anne, parl. 4. feff. 1 , being a tax of 5 l. per cent. upon all goods exported, with feveral original exceptions; and now molt goods are exempted, except dying goods, and feveral others neceffary in our manufactures ; and except leather, white woollen cloths, and coals, which pay particular duties after mentioned.
III. 'The one per cent. outwards, being the fame, and firft granted by the fame act, with the one per cent. inwards; and continued by the faid $3^{d}$ money-act, Anne, to the fame time.
IV. The duty on tanned leather exported, being a duty of I s. per hundred firft granted by the act, 20 Car. II. cap. 5, and by the 3 d money-act, Anne, parl. 4. feff. 1, continued for 32 years, from March 8, 1710.
V. The impoit on wine and vinegar, firft granted by the act, I Jac. II. cap. 3, and by the 8th money-act, Anne, parl. 4. feff. 1 , continued for ever; being an additional tax of 81 . per ton on all vinegar and French wines, and 121 . a ton on all other wines:
VI. The impoft on tobacco, firft granted by the act, I Jac. II. cap. 4, and by the laft-mentioned a\&t of queen Anne, continued for ever; being an additional tax of 3 d . per pound on tobacco of the Britifh plantations, and 6 d . upon all foreign tobacco.
VII. The coinage-duty, firlt granted by the act, 18 Car. II. cap. 5 , and by the 5 th money-act, Anne, parl. 3. fefl. 1 , contimued to the end of the firft feffion of parliament, after March 1, 1715-16, being an additional tax of ios. per ton on all wines, vinegar, cyder, beer, brandy, and ftrong waters, imported.
VIII. The coal-duty, firt granted by the act, r Jac. II. cap. 15, and by the 4 th money-act, W. III. parl. I. feff. 2 , continued to September 29, 1716 . It was at firft is. 6 d . per chalder or ton on coals imported, or brought coaft-ways into the port of London; but, by the act which continued it, - was reduced to is. and it was firt appropriated to the building of St Paull's, London; and by the 2d act, to the finifhing that church, and repairing St Peter's, W eftminiter.
IX. The impoft 1690 , firft granted by the $3^{d}$ money-act, W, and M. parl. 2. 1eff. 2, and by the faid 8 th money-ad of
queen Anne contintied for ever. It is an additional tax of fifty-five different kinds, upon as many different foits of goods imported, many of which are neceflary in our manutactures, fuch as pot-afhes, brimftone, candles, cordage, drugs even for dyers ufe, unwrought iron, oil, hempfeed, raw filk, ftarch, fteel, beaver-wool, wood, \&ic. and the tax is generally at leaft 5 per cenit. ad valorem.
X. The impoft $1692-3$, firft granted by the 3 d money act, $W$. and M. parl. II. feff. 4 , and by the faid 8th money-act of queen Anne continued for ever. It is likewife an addifional tax of 72 different kinds, upon as many different forts of goods particularly named; and upon all other forts of goods, not particularly rated in the firft book of rates, except mum, and except goods particularly charged with this or the faid impon I0go; it is a general additional tax of 51 . per cent. ad valorem. By this tax likewife, many forts of goods that are neceffary in our manufactures, are particularly charged; fuch as rough amber, wood-afhes, lamp-black, dyeing-woods, except thofe particularly excepted; elephants-teeth, rough flax, furs, goats-hair, rough hemp, hides, incle, indigo, iron, leather, rofin, falt not ufed in curing filh, tar, tow, \&c. and all French goods in general, except wines (hereby particularly charged with 81. per ton) brandies; vinegar, and falt, are charged with a duty of 25 l. per cent. ad valorem.
XI. The falt-duty, firft granted by the 3 d money-act, $W$. and M. parl. 2. feff: 5, and by the 7 th money-aet, W. III. parl. I. fefl. $I$, continued for ever. It is an additional tax of 3 d. a gallon upon all falt imported, and was put under the management of the commiffioners of excife; but as it is paid upon importation, and collected by the officers of the cuftoms, I ftate it as a branch of our cuftoms.
XII. The new duty on fipice and pictures, firft granted by the 5 th money-act, W. and M. parl. 2. Ceff. 6 , and by the 3 d money-act, Anne, parl. 3. feff. I, continued for ever. It is an additional duty of 51 . per cent. ad valorem, upon pictures, cinnamon, cloves, mace, nutmegs; and upon tea is. coffee 6 d . cocoa 6 d . and chocolate I s. per pound.
XIII. The fecond 25 per cent. on French goods, firft granted by the 5 th money-ad, W. III. parl., i. fefl. - I, from February 28 , '1595-6, to February 28 , 1716-17; being an additional duty of 25 I . per ton on French wines; 301. on fingle, 60 I. on double French brandies; 151 . on French vinegar, and 25 l. per cent. ad valorem on all other French goods; fo that, by this and the faid 9 th branch, all French goods, were fubjected to a duty of 50 l. per cent. over and above all other duties; but I do not know by what odd contrivance Dunkirk was, foon after the beginning of the late king's reign, allowed to be a port, and all forts of French goods, except wines, allowed to be imported thence as Flemilh; though, by the treaty of Utrecht, it was exprefsly ftipulated, that the harbour hould be filled up, and never again reftored.' Surely, our commiffioners of the cuftoms would not have ventured to have done fo, withont orders from fome perfons in a fuperior ftation!
XIV. The new duty on coals, culm, and cinders. This and the next branch were at firt both granted together; but, as they were afterwards divided and appropriated to different purpofes, I muft now fate them feparately. Both thefe branches were firt granted on coals and culm, by the $3^{d}$ money: act, W. III. parl. I. fefl. 3, and extended to cinders by the 2d money-act, W. III. parl. 2. deff. I, being an ad-4 ditional duty of 7 s .6 d . per chalder, and 5 s . per ton on coals imported, and 5 s . per chalder, and 3 s .4 d. per ton on coals carried coaft-ways from one port of England to another; I s. per chalder on culm, and 5 s . per chalder on cinders. This duty having been continued to September 30, 1710 , three fifths of it were from thence, continued to Septemberi30, 1742 , by the 3 d money-act, Anne, parl. 3. fefl. 2.
XV. The additional duty on coals, culm, and cinders, firf granted as before-mentioned ; and, as to the other two fifths, continued to March 8, 1742-3, by the $3^{d}$ money-act, Anne, parl. 4. feff. 1.
XVİ. The new or further fubfidy, firft granted by the $5^{\text {th }}$ money-act, W. III. parl. I. feff. 3 , and by the ad moneyact of the laft parliament of king William, and frit of queen Anne, continued to her for life; being an additional tax upon wines, and all goods imported equal to the old fubfidy, with very few exceptions.
XVII. The new duty on whale-fins, firft granted by the 12 th money-act, W. III. parl. $\therefore$. feff. 3 , and by the 8th moneyact, Anne, parl. 4. feff. I, continued for ever; being an additional tax of 3 d . per pound weight on thofe imported by the Greenland company, and 6 d ; per pound on thofe imported by others.
XVIII. The further duty on falt, firft granted by the inth money-act, W. III. parl. I. feff. 3 , and thereby at once granted for ever, being an additional duty of 7 d. per gallon on all falt imported. This duty was likewife to be under the management of the commifioners of excife, bur I ftate it as a branch of our cuftoms, for the fame reafon I have already given, with refpect to the former duty on falt.
XIX. The 15 per cent. on muflins, firf granted by the $2 d$ money-act, W. III. parl. 2. feff. 2 , and by the $3^{d}$ maneyact, Anne, parl. 3. fefl. I, continued for ever, being an ad-
ditional tax of $\operatorname{I} \mathfrak{j}]$. per cent. ad valorem on muflins, under which general name are comprehended twenty-five different forts of goods imported from the Eaft-Indies. This tax was at firf lald upon almoft all other forts of Indian manufactures; but they were fonn after prohibited to be worn in Great-Britain, and freed from this tax.
XX. The excife on foreign liquors, imported, thall be taken notice of under the article Excise.
XXI. The duties called prifage and butlerage, the former of which is payable by all natives, importers of wine, except the merchants of London, Southampton, Chefter, and the Cinque Ports, being one ton, if ten tons, or more, and under 20 , be imported; and two tons, if 20 tons, or more, be imported by one hip ; and the latter is payable by all foreigners, importers of wine, in lieu of prifage, being 2 s . per ton on the quantity imported ; which duties belong by cuftom hereditarily to the crown.
XXII. A new additional duty upon coals imported into the port of London, firft granted by the 5 th money act, Anne, parl. I: feff. I, from May 15, 1708, to May 15, 1716, being an additional tax of 2 s . per chalder or ton, and appropriated to the fame purpofe, as the 8th branch of the cuftoms beforementioned. This tax, together with the faid 8th branch were continued to the 28 th of September 1724, and, from the refpective times of their expiration, appropriated to the building fifty new churches, by the 9 th money-act, Anne, parl. 4 . efi. I
XXIII. The one third fubfidy, firf granted by the 4 th moneyact, Anne; pari. I. fefl. 2, and by the third money-act, Anne, parl. 2. feff. 4 , continued to March 8, 1806-7, being an additional tax upon all wines and merchandize imported, equal to one third of the old fubfidy.
XXIV. The additional duty on spice and pictures, and new duty on drugs, firft granted by the $4^{\text {th }}$ money-act, Anne, parl. I. feff. 3, and by the 3 d money-act, Anne, parl. 3. feff. I, continued for ever. By this branch an additional duty of 51. per cent. ad valorem is laid upon all fice, añ 201. per cent. on all piCtures (for fale or private ufe). imported; on drugs 101 . per cent. ad valorem on fome, and 41. per cent. on others; on coffee, tea, and chocolate, an additional duty equal to that in the eleventh branch; on China ware 121. per cent. as fold at the public fale; and on white calicoes, not charged as mullins, or Indian dimities, and on all other manufactures of cotton, 151 . per cent. as fold at the public fale. XXV. The two thirds fubfidy, firf granted by the 5 th moneyact, Anne, parl. I. feff. 3, and by the fame act with the former continued for ever; being an additional tax on all wines and merchandize imported, equal to two thirds of the old fubfidy ; but feveral forts of goods are exempted from this duty.
XXVI. The duty on white woollen cloths exported; being a duty 5 s. per piece, granted without limitation of time, by an ad, Anne, parl. 2. eff. 4 ; as mentioned in part.
XXVII. The new duty on pepper and raifins, and a further new duty on fpice, firl granted by the 4 th money-act, Anne, parl. 3. feff. 2. to continue for thirty-two years from LadyDay 17 10, by which an additional duty of is. 6 d . per pound was laid on all pepper impotted (long pepper was afterwards excepted) 5 s , per hundred weight on raifins, 3 s . per pound on fnuif, not of our plantations, and on friceries, viz, nutmegs, cinnamon, cloves, and mace, a new duty equal to all the duties then payable upon them.
XXVIII. The new duty on candles imported, firt granted by the 5 th money-act, Anne, parl. 3 feff 2 , and by the 8 th money-aCt, Anne, parl. 4. feff. 1 , continued for ever; being an additional duty of 4 d . per pound on.wax, and a halfpenny per pound on tallew-eandles imported.
XXIX. The duty on coals exported, granted for 32 years, from March 8, $1710-11$, in lieu of all former duties, by the $3^{d}$ money-act, Anne, parl. 4. fefl. L, being a duty of feven different kinds upon coals exported.
XXX: The additional dury on candles imported, firft granted by the 3 d money-adt, Anne, parl. 4. Sef. 1 , to continue for 32 years from March 25, 1711, being a new additional tax equal to the former
 granted by the 6th money-act, Anne, parl. 4. feff. I, to continue for 32 years from June 24,1711 , being an additional tax of twenty-one feveral particular kinds; upon twentyone particular forts of bides and fkins named in the act, and upan all others not named, or pieces of hides or kins , or manufactures conffiting moftly of leather, 15 l: per cent. ad valorem; and upon parchment 6 d . per dozen, and upon vellum Is. per dozen.
XXXII. The new duty on hops imported, firf granted by the 7 th money ${ }_{7}$ act, Anne, pari. 4. feff. 1, , for four years from June 1, 1711, being an additional tax of 3 d. per pound on all hops imported.
XXXIII. A new duty upon rock-falt exported to Ireland, after June in, ifir, being a duty of 9 s . per ton; but the exporter is allowed the draw-back for the former duty, upon thewing a certificate of it's haying been paid. It was firt impofed for thirty-two years from the above day, by the roth money-act, Anne, parl. 4. fefl. - .
XXXIV. The new duty on foap, paper, \&c. imported, firf
ranted by the 3 d money-act, Anne, parl. 4. feff: 2 , to con'tinue for 32 years on foap, from the roth of June 1712 ; ofi paper, from the 24 th of June 1712 ; and on linnens flriped printed, painted, ffained, or dyed after the manafacture; from July 20, 1712. By this: branch an additional duty of 2d. per pound is laid upon all foap imported; additional duties of fifty feveral kinds are laid upon fo many forts of paper particularly named, and upon all forts of paper not named; 20 l. per cent. ad valorem ; and upon the linnens above deferibed, 15 l. per cent. ad valorem. Buoks, prints, and maps imported, were likewife by this act loaded with an additional duty of 301. per cent, ad valorem; but this tax was afterwards abolifhed.
XXXV. The additional duty on hides, fkins, \&ce. imported; was firf granted by the 4 th money-act, Anne, parl. 4. fefi. 2 ; to continue for thirty-two years from Aug. 1. 1712, on Hides ${ }_{3}$ $\& c$; from July 1, 1712, on wire; and from June 16,1712 , on coffee, tea, and drugs, except drugs for dyeing, and turpentine from the plantations. By this branch new additional duties of twenty-one different kinds were laid upon twentyone forts of hides and ikins particularly named, and on all others not named, on all pieces, and on all manufactures moftly of leather, 55 l. per cent. ad valorem. And the following additional duties were laid upon the following goods imported, viz. on parchment, 2 s ; per dozen; on vellum, $3^{\mathrm{s}}$. per dozen; on farch, 2 d . per pound ; on coffee, Is. per pound; on tea from the Eaft-Indies, 2 s . per pound, and from any other place, 5 s. per pound ; and on drugs 20 l. per cent. ad valorem. How cruel is it to tax fo highly even the ficknefs; and difeafes of the people!
XXXVI. The new duty on coals exported, firftgranted by the
 two years from Auguft 2, 77 I4, being an additional duty of 5 s. per chalder on coals exported on foreign bottoms, and 3 s . on thofe exported in Britifh bottoms. This was fo far a wife regulation $\underset{\text { b }}{ }$ but the duty was not high enough, becaufe the duties upon coals brought to London ftill exceed thofe on coals exported.
XXXVII. The new duty on fail-cloth, imported, firf impofed by an act, Anne, parl. 4. feff. 3, for feven years from July 2I, 1713 , being an additional duty of 1 d. per ell.
XXXVIII. The additional duty on foap, paper, \&c. imported, firt granted by the $3^{d}$ money-act, Anne, parl. 5. feff. 1, to continue for thirty-two years from Auguft 2, 1714, being an additional duty upon foap and paper imported, of half the duty impofed by the $30 t h$ branch, upon the linnens there defcribed, an additional duty of 15 l. per cent. ad valorem, and a new additional duty of 2 d . per pound on ftarch.
To this long lift I thall add two other branches of cuttoms, which I have not before-mentioned, becaufe they are fildom if ever, brought into any account; and the frift will never, 1 hope, produce any thing confiderable; but the laft is now, I believe, confiderable, and will, I hope, be every year more and more fo. The two I mean are,
XXXIX. A duty of 5 s. per ton on all French Chips, impofed by the act, 12 Car. II. cap. 18, to continue as long as the duty of 50 fous per ton, or any part thereof, on Britifh Mips, is continued in France; and for three months after. But, whether Dunkirk fhips have been obliged to pay this duty, I know not.
XL. Is what we ufually call the plantation duties, impofed by the act, 25 Car. II. cap. 7. for ever; being duties of feveral kinds upon feveral forts of goods, fhipped in our-plantations, and not to be brought to England. To thefe, we fhould likewife add,
XLI. The Barbadoes duty, which is a duty of 4 I. io s. per cent. payable in Barbadoes, and the Leeward Inands', on goods exported from thence, every fhilling of which is now broinght home; inftead of being applied towards the fupport of thofe iflands, as it was at firft defigned, when granted by the people there.

REMARKS.
Thefe were our cuftom-duties fublifing at the end of queen Anne's reign; what additions upon additions have been made fince, may be feen in Saxby's Book of Rates. But without enumerating all of them, which are too tedious, we may fee, what a maze our merchants muft be in about them, when they come to their computation. If likewile we confider the many exceptions, and exceptions from exceptions; the many regulations, and regulations of regulations, for collecting thofe cuftoms, we muft conclude it no eafy matter for any merchant in this country to be mafter of this branch of his bufinefs, if he be what we call a general merchant.
In order to lead perfons defirous to be well acquainted with the methods of calculating the duties of cuftoms, as they are reprefented in Saxby, the beft Book of Rates at prefent extant, we refer to the conclufion of every letter throughout this work, where this buinefs is fufficiently treated of to underftand the prefent fate of thofe duties, and indeed any future variations to which they may be liable.
But why we have not included a book of rates ready computed, fee the end of letter A, and it's concluition, called a Short Enquiry, \&c.

Of fome determined cafes in law relating to the bufinefs of the Cuftoms.
Every merchant thall have free liberty to break bulk in any port allowed by law, and to pay cuftom for no more than he fhall enter and land; provided the mafter, or purfer, firft make declaration upon oath, before any two principal officers of the poit, of the true contents of his Chip's lading, and fhall after declare upon oath, before the cuftomer, collector, \&c. or any two of them, the quantity and quality of the goods landed at the other port where bulk was firft broken, and to whom they did belong.
A merchant brought 80 tons of bay-falt to a port in England, and out of that fhip fold 20 tons, and difcharged the fame into another then in the fame port, without being actually put on fhore; for the reft, being 60 tons, the mafter agreed for the cuftoms, and landed them: thofe 20 tons, though always water-borne, were yet adjudged to pay; the difcharging them out of the fhip amounting to as much as laying them on land, the fame being done in port, and the king would otherwife be defrauded. But a fhip carried in by ftorm, and part landed, to preferve the veffel, before the duty paid, is not fubject to a forfeiture. Coke, 12 part. fol. 17, 18. Plowden, 9. Fogaffa's cale.
2. All foreign goods (except wines, currants, and wrought filks) firf imported, hall be again exported by any Englifh merchant within 12 months, and thofe exporting fuch goods, fhall have allowance, and be repaid by the officer that received the fame, one moiety of the fubfidy that was paid at firft, on due proof made by certificate of the due entry, \&c. after all which duly performed, the moiety firt paid inwards fhall, without delay, be repaid, as alfo the whole additional duty of filk, linnen, and tobacco, as before directed. If the officer refufe to pay, whether the merchant-exporter may not bring an action againft him upon the debt created in law, as he that hath a tally may do? Hobart, 270. Lutw. 215, 221. 14 Hen. VII.
3. And if there be any agreement now in force, formerly made with merchants ftrangers, or their factors, or fhall hereafter with any merchant, or factor, for foreign goods, to be brought into the port of London, or any other of this kingdom, or principality of Wales, and to be exported again by way of compofition: all other merchants his majefty's fubjects fhall be admitted into the fame, and not excluded any privilege granted the ftranger by any private agreement, under the fame condition and reftriction as the merchant-ftranger. Rolls Abridg. 599.
4. Every merchant, as well Englifh as ftrangers, fhipping any kind of wines that have formerly paid all duties inwards, fhall be allowed them, except to Englifhmen 20 s . per ton, and the ftranger 25 s . per ton, on due proof of the entry and payment inwards, and of the fhipping to be exported, as above. 5. Any merchant, denizen, or ftranger, exporting Spanifh, or foreign wool, Thall have liberty fo to do, with this further condition, of not exporting them in any other than Englifh fbipping, on pain of corififcation. 12 Car. II. cap. 32. 14 Car. II. cap. I8.
6. Every merchant, Englifh or ftranger, that fhall fhip or export currants formerly entered, fhall be allowed thofe fubfidies paid inwards, except 1 s .6 d , for every hundred weight to the Englifh, and $\mathrm{xs} .8 \mathrm{~d} . \frac{2}{2}$ to the ftranger, on due proof, as in the fecond article.
7. If any merchant, having duly paid all duties inwards for foreign goods, and, by reafon of bad fale, be forced to keep the fame, or any part, after the fpace of a year, he may fhip the fame for exportation, without further duty, on proof the fame was entered, and fubfidy paid inward.
8. Every merchant importing wines, on due entries of the fame, fhall be allowed 12 per cent. for leakage.
9. Every hoghead of wine that thall berun out, and not full feven inches, fhall be accounted for outs, and pay no fubfidy. And by fome it is conceived, no freight thall be paid for the fame; but that fhould feem hard, as the fault may be in the cafks, or ill ftowing (of which, by cufom, the mafter has no charge, efpecially French wines, but it belongs to certain officers beyond feas, from whence they are imported) befides the goods, empty or full, take up tonnage in his fhip. Boyce verf. Cole, fenior and junior. Hill. 27 Car. II. in B. R.
10. If any wines prove corrupt, and fit only to diftil into hot waters, or to make vinegar, the owner thall be abated in the fubfidy according to his damages, by difcretion of the collectors and one of the principal officers.
11. Any tobacco, or other goods imported, receiving damage by falt water, or otherwife, fo as to prejudice the fale, the principal officers of the Cuftom-Houfe, or any two of them, may chufe two indifferent merchants, who fhall certify and declare, on their corporal oaths, the damage they have received, and diminution of value, according to which abatement is to be made. There is a book at the CuftomHoufe in which is a general value fèt on all goods, among which is tobacco.
By an act 12 Ann. cap. 8. §. 8. there is to be no allowance for darnaged tobacco; but, on refufal of the duties, the tobacco is to be burned.
12. All merchants-ftrangers, who do pay double fubfidy for lead, tin, woollen cloth, fhall alfo pay double for native ma-
nufactures of wool; and for all other goods, inwards or outwards, 3 d . in the pound befides the fubfidy. Nor can fuch merchants-ftrangers land their goods before they have agreed for the cuftoms, notwithtanding charta mercatoria.
13. Merchants, trading into the port of London, may lade and unlade their goods at any lawful keys, \&c. between the Tower and London-Bridge, and between fun-rifing and fetting, from the 10 th of September to the 10 th of March; and between fix in the morning and fix in the evening, from the Ioth of March to the Ioth of September, giving notice to the refpective officers to attend, who, on refulal, forfeit for every default 51 .
14. The merchants of York, Kington upon Hull, and Newcaftle upon Tyne, and their members, thall be allowed free of cuftom two of the northern cloths and kerfeys in 10 to be fhipped in thofe ports in the name of double wrappers, as formerly allowed them there.
15. The merchants of Exeter, and other weftern parts, thall be allowed, free of fubfidies, one perpetuana in io for a wrapper, and three Devons dozen in 20 for wrappers, to be flipped out of the ports of Exeter, Plymouth, Dartmouth, Bariftaple, Lyme Regis, or the members thereof.
16. All merchants tranfporting any fort of woollen, whecher new or old drapery, as alfo all bays and cottons, hall be allowed one in ro for a wrapper, free of cuftom.
N. B. All thefe feveral allowances are not by act of parliament, but purely his majefty's gracious benignity towards encouraging the merchants trade.
17. Every merchant fhall be allowed, on all other goods liable to poundage, five in the hundred of all the faid fubfidies of poundage.
18. The officers who fit above in the Cuftom-Houfe of London, thall attend there from nine to twelve in the forenoon, and one officer in the afternoon, during fuch time as the of ficers are to wait at the water-fide, for the better deciding all controverfies that may happen concerning merchants warrants; all other officers fhall attend in the Cuftom Houfe of every refpective port, from nine to twelve, and from two to four.
19. Every merchant, making entry inwards or outwards thall be difpatched in order as he comes; and if any officer put any merchant, or his fervant, duly attending and making his entries, to draw any other gratuity than is limited in the act of tonnage and poundage, $\& \mathrm{c}$. if the mafter-officer, he fhall, upon complaint, be ftriatly admonifhed of his duty; but, if the clerk, he fhall be prefently difcharged of his fervice.
20. The lord mayor, commonalty, and citizens of London, their officers, or deputies, for the offices of package, fcavage, baleage, or portage, of any goods of aliens, or their fons born unfreemen, imported or exported into, or out of the city of London, or ports thereof, unto or from parts beyond the feas, concerning receiving or taking any fee or rates heretofore ufually taken, may receive the fame, any thing in the att of tonnage, \&c. or other act, to the contrary notwithftanding. 21. All antient duties heretofore lawfully taken by any city or town corporate, their farmers, \&c. for maintenance of bridges, keys, \&cc. fhall and may be received as formerly, any thing to the contrary notwithftanding.
22. The under-fearcher, or other officers of Gravefend, may fearch any fhip outward-bound, but not, without reafonable caufe, detain them above three tides, on pain of lofing their office, and rendering damage to the merchant and owner; nor fhall the officers of the out-ports detain any outwardbound fhip above one tide after fhe is laden, and ready to fet fail, on like penalty.
23. All timber in balks eight inches fquare, and upwards, imported from beyond feas, fball be rated according to the meafure of timber, the foot fquare 3 d . for the value, and, according to that rate, fhall pay for fubfidy 12 d . in the pound, according to poundage; and all under eight inches fquare, and above five, fhall pay as mentioned in the book of rates for middle balks; and all under, according to the fate of fmall balks.
24. For avoiding oppreffions, in exacting unreafonable fees, no officer, or clerk of any Cuftom-Houfe, fhall exact, require, or receive, greater fees than are, or thall be eftablifhed by parliament, on default to forfeit his office.
25. All fees to be paid to the cuftomer, comptroller, \&cc. in the port of London, for cockets outwards, fhall be paid in one fum, to him who delivers the cocket; and the merchant, after payment of all duties, is to keep his own cocket till he thall thip out his goods fo entered, when he is to deliver the fame to either fearcher, together with the mark and number of his goods.
26. The Cuftom-Houfe officers fhall allow to all perfons monies due to them for the half fubfidy, and the Algier duty of foreign goods.
27. Any merchant denizen born, having his goods taken at fea, or loft, the duties being paid, or agreed for, may, on due proof, hip from the fame port the like quantity, without paying any thing. 27 Ed. III, cap. I3. 12 Car. II. cap. 4.
If the importer pay ready money, he fhall be allowed io per cent. for what he fhall pay down.
28. Ships of war may be entered and fearched for unaccur-

## C Y D

## C Y D

toned goods the officers to fee none be unladen, or embezzled, on pain of 1001 . fine. 14 Cas. II. cap. II.
Goods conveyed fecretly into Thips, and carried away without duties paid, the owners forfeit double value, except coals, which only forfeit double duty.
29. Allowances are to be given merchants for damaged goods, of 5 per cent. on all imported, and 12 per cent. on all wines allowed debentures; but, if lefs be fhipped than is in the certificate, the goods to be forfeited, and the fublidy to be received; and goods fhipped out are not to be landed again in England, on pain of forfeiture.
All goods coming out, or carried into Scotland by land, fhall pals through Berwick or Carlifle, and pay cuftom, on pain of forfeiture.
And, although by this act are many allowances, they are reftrained to fuch who traffic in fhips.
And, whereas all manner of woollen cloths are prohibited by law to be tranfported, his majefty was pleafed to grant. (by letters patents dated the $24^{\text {th }}$ of February, 27 Car . II.) unto Frances, countefs of Portland, full powers for 31 years to licenfe the tranfporting fuch goods, notwithfanding fuch prohibitory laws; which is now put in execution by agreement, and the compofition with her deputies at the Cuftom-Houfe.
CYDER, is the juice of apples, but not of fuch as are efteemed for common ufe: it is produced from the moft favage claffes of this fruit, and from thofe whofe flavour is leaft agreeable to the palate. Some of them are fweet, others very acid : thefe latter produce very bad cyder; and the beft method will be either to root up the plant, or improve it by grafting. The fweet apples are the only proper fruits for affording an agreeable cyder, which neither offends the palate, nor intoxicates the head: they fhould be gathered from the tree, but may be thaken down with poles. They are afterwards expofed in heaps to the open air, after which they are carried into the confervatory, where each fpecies is ranged according to it's parcicular degree of maturity, and in order to be preffed, at different times, 'till the winter be far advanced. The found fruits are firft bruifed in a large circular trough, under two wooden wheels, placed in an upright pofition, and whofe axle-trees are faftened to a turning beam, drawn round by a horfe. Thofe who are unprovided with an engine of this nature, may bruife the apples with pefties. After which the pulpy fubftance is conveyed to a prefs, whofe flructure correfponds with that of the wine-prefs; and, to prevent it's being fcattered, it is difpofed into a fquare bed, four or five inches thick; this is afterwards covered with a furface of ftraw, which ought to have a finall projection over the fides of the heap. A fecond fquare of the crufhed fruit is raifed upon this fpread of flraw, another lay of which muft cover the new fquare; and this difpofition is alternately formed, as long as is judged convenient. Inftead of ftraw, in France, they make ufe of large hair-cloths, which are more adapted to contain the murc. The great beams of the prefs are then lower'd with the wheel, and the juice flows into a fat that is funk into the earth; whence it is afterwards fhifted into veffels, where it is fuffered to ferment for the fpace of 55 days, or three weeks, and it is then ftopped up.
There is another fmall prefs, which prevents the trouble of ranging the feveral beds of fruit and ftraw ; it is called a boxprefs, from ir's fhape, and is calculated to contain the feveral fiuits that are to be preffied, whether apples, pears, or grapes. One end terminates in a moveable beam, worked by a wheel and a fcrew, and the juice flows through the cavities that open in the fide.
If we would have cyder in it's perfection, and to flower in the glafs, we muft wait'till it has been properly prepaned in the vart, and, when it begins to tafte agrecably, it mult be glued like wine, and may then be drawn off in bottles, which will preferve it much better, and longer, than cafks.
The laft act relating to cyder containing the tenor of that preceding it, we judge it needlefs to give the former.

The laft act of 1763 , relating to Cyder.
Whereas by an act made in the laft feffions of parliament, intituled, 'an act for granting to his majefty feveral addi' tional dutics upon wines imported into this kingdom, and * certain dutics upon all cyder and perry, and for raifing the - fum of three millions five hundred thoufand pounds, by - way of annuities and lotteries to be charged on the faid - duties: a duty of four hillings per hogthead was, from 6 and after the fifth day of July, one thoufand feven hundred and fixty-three, granted upon all cyder and perry - which fhould be made in Great-Britain, to be paid by the maker thereof, over and above all other duties then payable - for cyder or perry; and it was thereby directed, that the ' amount of the faid duty fhould be paid within the fpace - of fix weeks, to be computed from the time of making the - charge, in manner therein mentioned, by the officer or - officers of excile ; and all makers of cyder and perry were ' thereby autholized to compound for the faid duty, after the rate therein mentioned, in relpect of the cyder and - perry to be confumed in their own private families only, - in fuch manner, with fuch exemptions, privileges, and advantages, and under fuch regulations, as are in the faid Vol. I.
' act allowed and provided : and whereas it would be a great ' relief to the perfons fubject to the faid duty, or to the compoftion in lieu thereof, many of whom are indultrious ' perfons with large families, if the time for payments of
the faid duty were enlarged, and the compofition of five - fhillings, authorized to be made by the faid act, were low-
's ered : be it therefore enacted by the king's moft excellent

- majefty, by and with the advice and confent of the Iords - firitual and temporal, and commons, in this prefent par6 liament allembled, and by the authority of the fame, That - from and after the fifth day of July one thoufand feven

6 hundred and fixty-four, in lieu and infead of the time of
' fix weeks, limited by the faid act for the payment of the

- faid duty on cyder and perry, the fpace of fix calender
- months thall be and is hereby allowed for the payment of
- the faid duty, to be computed from the time of making the
- charge thereof; 'and the laid duty inall, from and after the
- expiration of the faid fix months, be recovered and levied
- in fuch manner as the fame could or might have been re-

6 covered and levied by virtue of the faid former act, at or
6 after the expiation of the faid time therein limited for pay-

- ment thereof; and be it further enacted by the authority
- aforefaid, That from and after the fifth day of July, one
- thoufand feven hundred and fixty-four, when any perfon,
- being a maker of cyder or perry within this kingdon, fhall
- be defirous of compounding for the faid duty on cyder and
' perry, to be confumed in the private family of fuch perfon
6 only, it fhall be lawful for the commiffioners of excife for
- the time being in England and Scotland refpectively, as
- the cale may be, or the major part of fuch refpective com-
- miffioners, or fuch perfon or perfons as they, or the major
- part of them, fhall refpectively appoint for that purpofe;

6 and, in default of fuch appointment, then for the collector
6 and fupervifor for the diftrict and divifion within which the

- perfon defiring to make fuch compofition doth or fhall in-
- habit (and the faid commiffioners of excife, and the perfons
- fo to be appointed by them, and in default thereof, fuch - collector and fupervifors as aforefaid, are hereby refpectively ' required) upon receiving from fuch perfon an exact lift, c figned by him or her, of the feveral perfons of the age of c eight years and upwards, whereof his or her family con-- filts (fpecifying their chriftian and furnames therein) to - compound and agree with every perfon fo delivering in - fuch lift, for and in lieu of the duty of four fhillings granted - by the faid-act on cyder and perry to be confumed in his - or her own private family only, at the rate of two fhillings - per annum for each perfon which fhall be mentioned in © fuch lift, in lieu and inftead of the compofition of five < flillings authorized to be made by the faid act; which
- compofition, after the rate of two fhillings as aforefaid,
- fhall laft for one year, and be renewed annually; and the
- money arifing thereby fhall be paid down at the refpective
- times of making the compofition; and in cafe the family of - any perfon making the compofition fhall be increafed at
any time during the year compounded for, then every per-
- Fon whofe family fhall be fo increafed thall deliver in an - additional lift, containing the names of the feveral perfons - of the age of eight years and upwards added to the family, - and fhall then alfo pay down a proportionable compofition - for the perfons fo added, videlicet, two-pence for each ca-
- lender month that fhall be unexpired of the year for which
- his or her compofition was made, for each and every perfon - fo added, and like manner frefh lifts fhall be delivered, and

6 compofitions made accordingly every year : and that the monies arifing by the faid compofitions fhall be applied in

- fuch manner, and for fuch purpofes, as the duties granted
- by the faid act were thereby directed to be applied ; and all
- parts of the faid act (not hereby altered) relating to the

6 compofitions thereby authorized to be made for the faid

- duty, and alfo to the perfons compounding in purfuance of the power thereby given, and for preventing and pu6 nifhing all frauds, with refpect to the faid compofitions, and
- for fecuring the faid duty, fhall take effect, and be in full
- force, applied, and put in execution, with refpect to the - compofition hereby allowed to ba made, and to all perfons 6 compounding under the authority of this act, and for pre-- venting and punifhing all frauds in relation thereto, and - for fecuring the faid duty, as fully and effectually, to all - intents and purpofes, as if fuch parts of the faid act were
- herein fpecially repeated, re-enacted, and applied to this 6 prefent aca.
And be it further enacted, by the authority aforefaid, That from and after the fifth day of July, one thoufand - feven hundred and fixty-four, all and every perfon and - perfons, not being a compounder or compounders, who f fall intend to make any cyder or perry, at or with any - mill prefs, or ather utenfil whatfoever, not being the pro-- perty of fuch perfon or perfons, but of any other perfon or perfons, whether compounding or not compounding for ${ }^{6}$ the faid duty, fhall, ten days at the leaft before he, fhe, ' or they fhall begin to make cyder or perry, make a true 6 and particular entry in writing, at the office of excife next ' to the place where fuch cyder or perry fball be intended ' to be made, of his, her, or their refpective name or names
s and of every mill, prefs, and other utenfil fo intended to - be imployed; and of the name or names of the owner or - owners thereof, and alfo of every florehoufe, warehoufe, 6 cellar, or other place wherein fuch maker or makers intend ' to lay or keep fuch cyder or, perry ; and if any fuch maker - or makers fhall make ufe of any:other mill, prefs, or uten-- fil, ftorehoufe, warehoufe, celliar, or other place whatfo-- ever, either for the making, laying, or keeping, any cyder - or perry, without having made fuch entry as aforefaid, ${ }^{\text {or }}$ * any entry thereof, in purfuance of the faid former act, he, - fhe, or they, fhall refpectively forfeit and lofe the fum of - twenty-five pounds for every fuch offence: and all and - every the officers of excife, fhall, at all times in the day-- time, be permitted, upon their requelts, to enter the mill-- houife, ftorehoufe, warehoufe, cellar, and all other places - whatfoever ufed by any fuch maker or makers as aforefald, - either for the making, laying, or keeping of cyder or - perry, of which notice fhall or ought to have been given, c in purfuance of this act; and to, gauge and take an aco - count of all the cyder or perry which thall be there found, - and hhall thereof make return or report in writing to the 6 refpective commiffioners of excife in Great-Britain, or - fuch other perfon or perfons as they hall refpectively ap-- point to receive the fame, leaving a true copy of fuch re-- port in writing, under his or their hand or hands, with - or for fuch maker or makers of cyder or perry: and fuch - report or return of the faid officer or officers fhall be a - charge upon fuch maker or makers of cyder or perry; ahd - the amount of the duties thereby charged thall be paid by - fuch maker or makers refpectively, wirhin fuch time ass is - by this act appointed.- Provided always, and be it further - enacted by the authority aforefaid, That from and after - the faid fifth day of July, no owner or proprietor what-- foever of any mill, prefs, or other utenfil for the making - of cyder or perry, which thall be let out or lent to any - other perfon for the purpofe of making cyder or perry, thall - be obliged to give any notice of the letting or lending fuch - mill, prefs, or other utenfil, or of the making cyder or < perry therewith, by the perfon to whom the fame fhall be - fo let or lent; any thing in the faid former aft contained - to the contrary thereof in any wife notwithftanding.
- And for the better accommodation of fuch makers of cyder - or perry, who thall compound for the duty on cyder and - perry granted by the faid recited act : be it further enacted, c by the authority aforefaid, That from and after the fifth - day of July, one thoufand feven hundred and fixty-four, - when any fuch maker fhall intend to fell or difpofe of any - cyder or perry immediately from the mill pound's mouth, < or place where the fame fhall be made, the officer of excife - of the divifion or place where fuch makers fhall refide, fhall, 6 and he is hereby required, during the time of making cyder - or perry only, and at no other time, to deliver to, and - leave with fuch maker, if demanded, in writing, a fuffi-- cient quantity of blank certificates, numbered one, two, - thrce, and fo on in an arithmetical progreffion, to be filled - up by fuch maker, and fubfcribed by him or her, who - fhall exprefs in each of the faid certificates that fhall be - filled up, the exact number of gallons of cyder or perry, - intended to be fent therewith, and the number of cafles or - package containing the fame, and the place to which, and - the name and place of abode of the perfons to whom, fuch - cyder or perry is to be fent, and the time when fuch cer-- tificate is filled up; which certificate (provided it accom-- panies the quantity of cyder or perry mentioned therein) - flall be a fufficient protection for the removal of fuch cyder - or perry, immediately from the mill pound mouth, or place - where the fame fhall be made; and that the officer of ex-- cife, at the fame time that he delivers any quantity of blank - certifíates, to any fuch maker as aforefaid, fhall alfo de-- liver to fuch maker a like quantity of blank counterparts - of fuch certificates, bearing the fame numbers with the - certificates : and fuch maker is hereby required, whenever - he fills up the blanks of any certificate for the removal of - cyder or perry, as aforefaid, at the fame time to fill up and - fubfcribe the blanks of the counterpart thereof, in all par-- ticulars agreeable to the certificate; and fuch maker fhall, * at the time of the delivery of the faid blank certificates, - and counterparts, give a receipt to the officer of excire * delivering the fame, acknowledging that he or the hath - received fo many blank certificates, and the counterparts - thereof, numbered as aforefaid; which counterparts fo fill - led up, fhall be returned by fuch maker to the refpective - officer of excife, whenever he fhall require the fame; and - fuch maker fhall then alfo fhew to the officer, all the cer-- tificates and counterparts not ufed or filled up; to the end < the officer may then know what number of certificates - have been filled up; and fuch maker fhall, at refpective - times, when he or the thall deliver up fuch counterparts - fo filled up, from time to time declare upon oath (or af-- firmation, if a quaker) to be adminiftered by the fupervifor - of excife of the divition or diftrict where fuch maker refides, t that the feveral quantities of cyder and perry fpecified in 6 the feveral counterparts fo directed to be delivered up, con-- tain the whole quantity of cyder and perry which he or - The fhall have fold or difpofed of, from his or her mill - pound's mouth, or place where the fame was made; and
the refpective officers of excife within their feveral divifion " are hereby required, from time to time, from the fevera - counterparts of fuch certificates fo filled up, fworn to, and delivered as aforefaid, to make returns or reports in writing - of the feveral quantities of cyder and perry fold or difpofed 6 of as aforefaid, by every fuch maker refpectively, to the refpective commiffioners of excife in Great-Britain, or fuch Gother perfon or pefons as they fhall refpectively appoint to 'receive the fame, leaving true copies of fuch report in writing, under his or their hand or hands, with or for - fuch refpective maker; and fuch returns or reports of the - faid officer or officers, fhall be the charges upon fuch 6 refpective makers of cyder or perry : and the amount of the d duties thereby charged, fhall be paid refpectively by fuch - makers, to the refpective collectors of excife, within whofe - collection fuch makers fhall dwell and inhabit; or to fuch - other perfon or perfons as the faid refpective commifioners of excife fhall refpectively appoint to receive the fame, within the fpace of fix calendar months, to be computed - from the time of making, fuch charge: and if any fuch - maker of cyder or perry, thall neglect or refufe to deliver - to the officer of excife, when required, all the counterparts - of certificates then filled up, or to declare upon oath or - affirmation as aforefaid, or to chew to the officer all the - certificates and counterparts not ufed or filled up, or fhall - fell or difpofe of more cyder or perry from the mill pound's - mouth or place of making, than is mentioned in fuch - counterparts fo delivered up, or fhall fraudulently infert in

6 the blank of either counterpart or certificate, a greater or

- lefs quantity of cyder or perry than is really fent with fuch - certificate: every fuch maker offending in any of the faid - cafes, for every fuch offence fhall réfpectively forfeit and
- lofe the fum of twenty-five pounds : and that no certificate ' to be filled up by any fuch maker, fhall be in force for the - removal of cyder or perry, immediately from the mill - pound's mouth or place of making, but between the firft - day of Septeraber and the thirty-firf day of December, in
- each year; and that every fuch maker thall, every year,
- within ten days next after the thitty-firft day of December

6 in each year, deliver, or caufe to be delivered, to the 6 officer of excife of the divifion or place where he or the - refides, all the blank certificates and counterparts thereof 6 which have not been filled up by fuch maker : and if any - fuch maker of cyder or perry, fhall neglect or refufe by the - fpace of ten days next after the thirty-firft day of December s. in any'year, to deliver or caufe to be delivered, to the: - proper officer of excife, all the blank certificates and coun-- terparts thereof which have not been filled up by fuch maker, - every fuch maker thall for every fuch offence refpectively, - forfeit and lofe the fum of twenty-five pounds.
c And be it further enacted, by the authority aforefaid, Thate © if from and after the faid fifth day of July, any perfon or per-- fons what foever thall affault, oppofe, tholeft, or hinder, any of-

- ficer or officers of excife, in the duée execution of any of the - powers or authorities given and granted by this act: all and © every the party or parties fo offending, hall, for every fuch c offence refpectively, forfeit and lofe the fum of fifty pounds. - And be it further enacted, by the authority aforefaid, That - if any officer of excife fhall refufe, or wiffully neglect, to c Ieave a true copy of his report in writing, with thie maker 6 or makers of cyder and perry, as this or the faid former act directs, or to grant a certificate for the removal of any - cyder or perry, upon reafonable requeft made for that purt-- pofe: or if any maker of cyder and perry, authorized and
© impowered by this prefent act to compound and agree for and
- in lieu of the düty granted by the faid former act, fhall offer
- to make fuch compofitions and agreement, anid if fuch of-
- ficer of excife fhall refufe, or wilfully neglect, to accept fuch
- compofitions and agreement as this prefent act directs; every - fuch officer of excife fo refufing or wilfully neglecting, that - for each refufal or neglect, forfeit and pay the fum of forty - fhillings ; which forfeiture and penalty phall and may be fued - for, levied, recovered, and applied, inlike manneras the other 6 forfeitures and penalties impoled by this, or the faid former - act, may be fued for, levied, recovered, and applied.
- And be it further enacted, by the authority aforefaid, That - the feveral penaltiesimpofed by this act, fhall and may be fued - for, recovered, levied, mitigated and difpofed of, by the fame - ways, means, and methods, and in the fame proportions as - any penalty impofed by the faid recited act may be fued for, - recovered, levied, mitigated, or difpofed of: and be it further - enacted, by the authority aforefaid, That if any perfon or - perfons, fhall at any time or times be fued, molefted, or profecuted, for any thing by him, ber, or them, done or exe6 cuted, in purfuance of or by colour of this act, or of any 6 matter or thing in this act containing, fuch perfon or perfons - Ihall and may plead the generaliflue, and give this act, and - the fpecial matter in evidence, in his, her, or their defence, - or defences; and if afterwards a verdift fhall pafs for the - defendant or defendants, or the plaintiff or plaintiffs thall < become nonfuited, or difcontinue his, her, or their action or profecution, or judgment fhall be given againt him or' them, upon demurrer, or otherwife'; then fuch defendant or defendants, fhall have treble cofts awarded to him, her, - or them, againf fuch plaintiff or plaintiffs.'

## A Continuation of the Bufinefs of the Cultom-Houre from the End of Letter $\vec{E}$.

'TO give the reader a thorough idea of this part of our work, he is defired deliberately to confult what we have faid at the conclufion of the letter $A$, and alfo what is faid at the end of letter B, together with what other matter we fhall offer as we go on alphabetically.
As * the duties on corn imported are to be levied according to the prices thereof at the times and ports of importation, $\dagger$ therefore the juftices of the peace, for the feveral counties of Great-Britain, muft, at the refpective quarter-feffons next after Michaelmas and Eafter-day yearly, by the oaths of two or more honeft and fubftantial perfons, being neither merchants nor factors for the importing of corn, and by fuch other ways and means as to them fhall feem fit, examine and determine the common market-prices of middling Britifh corn and grain, and certify the fame, with two fuch oaths made in writing annexed, unto the chief officer of the cuftoms at the port of importation, in order to be hung up in fome public place in the CuftomHoufe, to afcertain the prices according to which the duties ought to be paid.

- 22 Car. II. cap. 13. §. 1,2 .
+1 Jac. II. cap. 19. §. 3, 4;
And, in arder to prevent omiffions, or neglect in the faid juftices, the collector and comptroller are, in due time, to fend to the clerk of the peace, and defire him to remind them of fettling the prices of corn and grain, and to grant a certificate thereof; copies of which certificates are to be tranfmitted to the commiffioners. *But if, notwithftanding, the juftices do omit or neglect to determine the prices, the collector of the cuftoms mult receive the duties according to the loweft prices of the feveral forts of corn mentioned in the act of tillage, 22 Car. II. cap. 13.

## A Continuation of the Business of the Custom-Housee.

Naval fores imported from the Britifh plantations in Anerica, and trees fit for mafts, yards, or bowfprits; imported from Scotland.

* The aforefaid fores imported directly from any of the Britifh plantations in America, or the trees from that part of GreatBritain called Scotland, being intitled to a reward or premium, therefore, in order to procure the fame, the following requifites miuft be performed at the time of importation.
- 3 and 4 Ann. cap. 10. §. 1, z. 12 Ann. cap. 9. §. 2. 8 Geo. I. cap. 12. §. I. 2 Geo. II. cap. 35. §. 4, 12.

Upon the mafter's arrival, he muft produce to the chief officers of the cuftoms, at the port of importation, the certificate which was granted at the loading port, viz.

If the fhip comes from the Britifh plantations.
A certificate under the hands and feals of the governor, lieu-tenant-governor, collector of the cuitoms, and naval offcer in the faid plantations, or any two of them, teftifying, that, before the departure of the fhip, the perfon loading the faid naval ftores, had made oath before them, that the fame were, truly and bonà fide, of the growth and produce of the faid plantations : and, with refpect to the high bounty or premium on tar, the faid certificate muft likewife exprefs, That it has appeared to them, by the oath of the owner or maker of the tar for which fuch certificate was granted, that the tar therein mentioned was made from green trees prepared for that purpofe, after the following manner ; that is to fay, that, when fuch trees were fit to bark, the bark thereof was ftripped eight feet, or thereabouts, up from the root of each tree, a llip of the bark of about four inches in breadth having been left on one fide of each tree; and that each tree, after having been fo barked, had ftood during one year at the leait, and was not before cut down for the making of tar; and that the faid tar was made without mixture of any other tar therewith. The form of which certificate is ufually as follows :

Port of Bofton, in $\}$ In the Alice of Hull, Daniel Granger New England $\}_{\text {mafter, for Southampton. }}$

William Ford.
Four bundles, containing three tons of hemp, of the produce of one of his majelty's plantations in America, as appears to us by the following oath :

Jurat' William Ford, That the hemp abovementioned, by him thipped on board the abovenamed fhip, the Alice of Hull, whereof Daniel Granger is mafter, bound for Southampton, is truly and bonâ fide, according to the beft of his knowlege, of the growth and produce of his majefty's plantations a-

* Loc. Sig. bovenamed $t$. In teftimony whereof, we have hereunto fet our hands and feals of office, at the Cuftom-
* Loc. Sig. Houfe aforefaid, this eighteenth day of December, in the fourth of his majefty's reign, annoque Domir ni 1730.
A. B. Collector of the Cuftoms, B. C. Naval Officer.
$\dagger$ When the certificate is for tar, made from trees purpofely prepared; in the manner beforementioned, there muft then be added after this reference, - And that the faid tar was made from green trees, prepared for that purpofe, as the law directs.

If the fhip comes from North Britain, or Scotland.
A certificate under the hands and feals of the comptroller and collector of the cuftoms, and the naval officer, or any two of them, refiding at the port of exportation in North Britain, teftifying, that, before the departure of the fhip, the perfons concerned, or employed, in cutting down fuch trees, or any two of them, had made affidavit in writing before them, or any two of them, 'That fuch trees were truly, and bonâ fide, of the growth and produce of North Britain: in which affidavit muft be fpecified the particular number, quantity, and qualities of the trees, together with the time when they were cut down, the name of the proprietor, and the place where the fame did grow; and in the aforefaid certificate muft be inferted a true copy of this affidavit. The form of the certificate may be the fame as that from the Britifh plantations beforementioned, except only in the tenor of the affidavit, which muft be formed according to the foregoing directions, and, therefore, it needs not be exemplified.
And, after the goods mentioned in any of the aforefaid certificates are duly landed, the truth of fuch certificates muft be confirmed by the oath of the mafter, made either upon the back thercof, or upon feparate paper, in the following words, viz.
Daniel Granger, mafter of the flip Alice of Hull, lately arrived from Bofton in New England, maketh oath, That the four bundles of hemp within mentioned, were really and truly laden on board his faid fhip at Bofton, a Britifh plantation in America, [or at -_ in Scatland,] and that the four bundles of hemp, which he hath now delivered out of his faid fhip in this port of Southampton, are the very fame goods which he took on board at Bofton as aforefaid, and that he knows [or verily believes] every part thereof to be of the growth and product [or manufacture] of the faid province, or of fome other of his majefty's
colonies and plantations in America [or of fome part of Scot land].

Jurat' apud Southampton,
$7^{\circ}$ die Martii, 1730, co-
ram me A. B. Collector.
Goods for which fecurity may be taken for payment of fome of the duties.
As, for the greater eafe and encouragement of trade; part of the duties on feveral forts of goods are not obliged to be paid down at entry, but fecurity may be taken for payment of the farthe at certain periods of time, I thall here give the rieceflary directions which are to be obferved in taking fuch fecurities, which are as follow:

1. That * all obligations and fpecialities, made for any caufe concerning the king's moft royal majetty, or to his heirs, or to their ufe, \&c. muft be made to his majefty, and to his heirs (kings) in his or their name or names, by thefe words, Domino regi, and to be paid to his majefty by thefe words, Solvendi's eidem domino regi, haredibus vel executoribus fuis: and that, for all other obligations taken otherwife, the offender is to fuffer fuch imprifonment as thall be judged by the king and his council: and, likewife, that, if the debt of fuch obligations is not fatisfied in the king's life-time; they are to come, and remain, to his heirs or executors.

* 38 Hen. VIII. cap. 39. §. $2,3$.

2. That the collector is to endeavour; with the privity and approbation of the comptroller, to take good and fufficient fecurities, by one, two, or more perfons befides the importer, for the feveral bondable duties; which approbation he may fignify; either by being a witnefs to the bond, or by a proper certificate under his hand, according to the following form :

I do approve of Dennis Dove and Samuel Lloyd, of Southampton, as fufficient fecurities for the fum of one thoufand feveri hundred pounds. Dated the third of February, $173^{\circ}$.
B. C. Comptroller.

Thus having premifed all that was neceffary to be noted in' relation to bonds in general, I fhall next proceed to exemplify the feveral particular bonds that are to be taken for the fecurity of the duties on goods and merchandizes imported.
I. A bond for the additional duty on linnens and wrought filk imported.

* Linnens and wrought filks imported, beirt chargeable with an additional duty of a full moiety of net old fubfidy, and the importer being at liberty either to pay down fuch additional duty, or to give fecurity for the payment of the fame within twelve months from the importation: therefore, when it is the importer's choice to give fuch fecurity, it muft be after the following form:
* Claufes in the book of rates after linnen and filk.

Noverint univerfi per præfentes, nos A. B: \& B. C. fingulos de Southamptonia, in comitatu Southamptoniæ, mercatores, teneri \& firmiter obligari fereniffimo domino noftro Georgio Secundo, Dei gratia, Magne Britannix, Franciæ, \& Hibernix, regi, fidei defenfori, \&c. in centum libris, bonæ \& legalis monetæ Magnæ Britannix, folvendis eidem domino regi, hæredibus vel executoribus fuis: ad quam quidem folutionem bene $8 x$ fideliter faciendam, obligamus nos \& * utrumque [aut $\dagger$ quemlibet] nolfrum, per fe, pro toto $\& x$ in folido, haredes, executores, $\&$ adminiftratores noftros \& * utriufque [aut $\dagger$ cujuflibet] nofrum, firmiter per præfentes. Sigillis noftris figillat'. Dat' nono die Februarii, anno regni regis prædicti quarto, annoque Domini 1730 .

* If but two obligors.
+ If more than two obligors.
The condition of this obligation is fuch, That, if the abovebounden A. B. and B. C. their executors, adminiftrators, or affigns, or any of them, do well and truly pay, or caufe to be paid, unto C. D. collector of his majefty's cuftoms in the faid port of Southampton, or to the collector of his majefty's cuftoms in the faid port for the time being, for his faid majefty's ufe, the fum of forty-nine pounds, nineteen fhillings, and five pence, of lawful money, on or before the ninth day of February, which Thall be in the year of our Lord one thoufand, feven hundred, and thirty-one; being for the additional duty of five hundred twentyfix hundred ells of narrow German linnen, imported from Ham burgh, in the fhip Hope of London, whereof Daniel Grove is mafter, and entered this day at the Cuftom-Houfe in the port of Southampton, in the name of A. B. then this prefent obligation to be void, or elfe to remain and be in full force; effect, and virtue.

Sealed and delivered
in the prefence of
Dennis Dove, * A. B. Collector, B. C. Comptroller.
7. A bond for the new duty on falt.

The bonds being made out and executed, according to the aforegoing directions and examples, they are, befides being inferted in diftinet columns in the entry-book inwards, to be entered by way of charge on the left-hand fide of a feparate account, which is to be erected for every importer, in two particular books, which are to be kept for that purpofe, the one by the collector, and the other by the comptroller: and, after the bonds are fo entered, they are to be immediately locked up in the king's cheft, there to remain under the diftinct locks of the collector and comptroller, 'till duly difcharged.

## A Continuation of the Business of the Custom-House.

The amount of the feveral bonds which have been taken, being charged to the debtor-fide of each merchant's proper account as before exemplified, and the bonds themfelves being repofited in the king's chefts; I fhall next fhew how the faid accounts and bonds are to be difcharged.

Upon the receipt of the whole, or any part of a bond, either by money, debentures, or certificates of damage or over-entry; the fum received, or to be allowed, muft be immediately pofted to the difcharge of the proper bond, on the right-hand or creditfide of the accounts, wherein tbey before had been charged debtor; and, if difcharged by money, the fum received mult be likewife entered by the collector and comptroller in diftinct books, to be kept by each of them for that purpofe, in the method fpecified at the end of the quarter-book, under the title of, An account of money received in difcharge of bonds formerly taken.

And in thofe bonds where the conditions require the payment to be made at feveral times, or where any part of a bond is paid before it becomes due, or wherein any part of the goods therein mentioned, have had an allowance for damage, or have been over-entered, or, being intitled to a drawback, have been exported; when fuch payments are made, or regular debentures or cettificates produced, their amounts muft be likewife immediately endorfed on the backs of their refpective bonds, by way of difcharge for fo much as they do amount to. The form of which endorfement may be as follows:

20th of April, 173 I.
Paid, in part of this bond, fix hundred and $\left.\begin{array}{l}\text { fixty-four pounds, five fhillings, and four- } \\ \text { pence, by debentures relating - - }\end{array}\right\} \begin{array}{lll}66_{4} & 5 & 4\end{array}$

viz. Additional duty - 124 II 0 New fublidy - - 124 II 0 One third fubfidy 41104 Impoft - 37313 o
$664 \quad 5 \quad 4$
And when the bonds are fully difcharged, either by payment in money, or by debentures or certificates relating, they are to be delivered up to the obligors.

But, if the payments of the bonds are not punctually made on the days fpecified in the conditions, the collector is to demand the fame; and, if they are not difcharged within fourteen days after demand, the bonds muft be fent up (more efpecially in vacation-times, that the benefit of the approaching terms may not be loft) to the proper follicitor of the cuftoms, with a fchedule thereof, attefted under the hands of the collector and comptroller, in order to be put in fuit, for the principal and intereff: and, if the obligors are thought to be totally infolvent, a diftinct lift of fuch bonds, with a certificate under the hands of the collector and comptroller, of the conditions of the obligors, and the reafon of their infolvency, are to be likewife fent to the faid
follicitor: and, for the due profecutions of fuch bonds that are thought to be recoverable, not only the collector is to keep a conftant correfpondence with the faid follicitor, who will fend the proceffes; but alfo the country-attorney, employed in folli:citing the fame with the fheriff, muft correfpond with him, and follow his directions.
And, after bonds are thus fent up to the follicitor to be profecuted, the collector is not to look upon himelf as difcharged thereof, and from taking any further care in getting in the money due thereupon; but muft ufe his utmoff endeavour to recover the fame: and as foon as any money, whether principal or intereft, is received upon fuch bonds, the follicitor is to be acquainted therewith; who, if the whole appears to be difcharged, mufe fend down the bond, in order to be delivered up to the obligors.
And with regard to the payment of bonds for cuftoms, or other duties on goods imported, which have elapfed their times, it mult be oblerved, * that the penalties are not to be difcharged without full payment of the principal, together with $\dagger$ intereft, at 61. per cent. per annum, to be reckoned from the day on which the principal became due, until the adtual payment, \&cc. untefs the treafury, upon reprefentation of the commiffioners of the cuftoms, fhall think fit to remit it ; but intereft may not be remitted to any corporation or company trading by charter: and when intereft is due on any bond, and there is any money received thereon, fuch money is firft to be applied to the difcharge of the intereft then due, and the refidue towards the principal: and, when any intereft is received upon bonds, the fame mult be entered by the collector and comptroller, in diftinet books, to be kept by each of them for that purpofe, in the method fpecified at the end of the quarter-book, under the title of, An ac: count of intereft received on bonds formerly taken, \&c. And the money, as well principal as intereft, received upon account of bonds, is to be inferted in the proper abftracts, and to be remitted to the receiver-general, in like manner as the money paid upon the entry of goods.

## * 4 Ann. cap. 6. 8. 26, 27.

+ But, with refpect to tobacco-bonds, it is the opinion of the attorney-geneial, That intereft is not due thereon, when the tobacco is exported within three years (the time allowed by law for the exportation) from the importation; though, in flriftnefs, the bonds are forfeited, and may be put in fuir, if they are not paid, or the tobacco exported in eighteen months. And therefore, when fuch bonds are become due, the commiffioners muft be acquainted whether the tobacco is in being and where, and if really intended for exportation; as allo whether the fureties are at that time of ability to anfwer the penalty of the bond.
Lafly, with refpect to tobacco-bonds, it mult be obferved, that if after they have been given as before directed, for payment of the duties at the end of eighteen months; the importer fhould difcharge the whole, or any part thereof, in ready money, before the expiration of the faid time, he muft be allowed a difcount, after the rate of feven per cent. per annum, in proportion to the time unexpired : for the payment of which difcount, a certificate muft be made out after the following form : but confiftent with the alterations that fhall happen from time to time.

Dennis Dove.

This is to certify, That Mr Dennis Dove did, on the 7 th day of November, 1731, pay the fum of one thoufand thirty-five pounds, fourteen fhillings, and eight-pence, in full difcharge of the above-mentioned bond.
A. B. Collector. B. C. Comptroller.

The difcount after the rate of 7 per cent. per annum, to be allowed for the payment of the one thoufand thirty-five pounds, fourteen fhillings, and eight-pence, above-mentioned, two hundred and fixty-nine days before the expiration of the bond, amounts to fifty-three pounds, eight fhillings, and feven-pence.

1. s. d.

A. B. Collector. B. C. Comptroller.

This certificate being thus made out, the quantity of tobacco for which the duties are repaid, and the time of payment, are to be noted in the margin of the entry-book inwards, oppofite to the refpective entry ; to prevent the allowance of difcount more than once, or to remind the officers that the faid difcount muft be deducted from the drawback, in cafe any part of fuch tobacco thould be afterwards exported: which being performed, the amount of the faid certificate is to be paid to the merchant, taking his receipt for the fame, on the back thereof, after the following manner :

Southampton, roth of November, 1731 ,
Received of the honourable the commiffioners of 1 . s. d.
his majefty's cuftoms, by the hands of A. B.
their collector in this port, the fum of fifty-
$\begin{array}{lll}53 & 8 & 7\end{array}$
three pounds, eight fhillings, and feven-pence,
in full of this certificate -
Signed Dennis Dove.

## A Continuation of the Business of the Custom-House.

$\begin{gathered}\text { But, before thefe certificates are paid to the merchants, they } \\ \text { muft be entered in feparate books, to be kept by the collec- }\end{gathered}$
$\begin{aligned} & \text { tor and comptroller for that purpofe, after the following } \\ & \text { form }\end{aligned}$

| No. of certificates. | Merchants names. | Ships and mafters names. | Date of the bond. | Date of the Ships report. | When paidduties. | Quantity of tobacco paidfor. | Additional Duty. | New Subfidy. | One third Subfidy. | Import. | Tine elapfed. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Dennis Dove | $\left\{\begin{array}{l} \text { Olive-branch } \\ \text { Giles Ellis } \end{array}\right\}$ | $\begin{aligned} & 3 \mathrm{Feb} . \\ & 1730 . \\ & \hline \end{aligned}$ | $\begin{array}{r} 28 \mathrm{Jan} . \\ 1730 . \\ \hline \end{array}$ | $\begin{array}{r} 7 \text { Nov. } \\ 173 \mathrm{I} . \\ \hline \end{array}$ | $\begin{gathered} \mathrm{lb} . \\ 54^{8} 33 \\ \hline \end{gathered}$ | $10 \bigcirc 4$ | 1004 | 369 | 11 | 9 Days. |

And, at the end of each month, thefe feveral duties mult be added up, and their particular totals transferred to the difcharge of the refpective duries, in the proper column in the monthly abftracts; and allo, at the end of each quarter, the totals of the three months mult be added together, and their amount tranfferred to the credit-fide of the quarterly account-current.
Ali that I have further to fay in relation to bonds, is, that, at the clofe of each quarter, a true ftate thereof muft be tranfmitted with the other quarterly accounts; which flate muft confift of two parts, viz. bonds formerly taken, and bonds taken in that quarter: the left-hand fide, or charge of the former part whereof, fuppofes accounts to have been before opened, and a former quarterly fate to have been tranfmitted; and therefore is only a tranfcript (from fuch former ftate) of the total of each merchant's bonds remaining in the collector's hands, at the end of that quarter ; and the right-hand fide, or difcharge, is formed from the books of the account of money received in difcharge of bonds formerly taken; and the books of debenture, certificates of over-entries, damages and difcounts; the total of which dif-
charges being deducted from the charges, the difference muft be inferted in the laft column but one, which fhews the fums due upon every particular bond, and muft be likewife transferred to the laft column, unlefs there be more bonds than one belonging to the fame merchant, and then the total of all that merchant's bonds muft be inferted in one fum in the faid laft column; and, as a proof of the truth, may be confronted with the refpective merchant's accounts in the bond-book.
And, as to the latter part of the faid ftate, the left-hand fide is only a tranfcript from that quarter's cuftom and coal-account ; and the right-hand fide muft be difcharged in like manner as before directed for the former part of this account: and as frequently there will not be any difcharge, therefore, in that cafe, the whole charge muft be transferred to the two laft columns, under the titles of, bonds remaining at the end of the quarter. But, more fully to illuftrate the method of the aforefaid ftate of bonds, I thall here add an example of the form, being as follows:

# A Contintation of the Business of the Custom-House, 

## Bilis of fight.

When goode come configned to any merchant, and he has tot received any invoice, bill of Jading, or other advice, from his correlpondent, or happens by any other means to be ignorant of the real quantities and qualities of the faid goods, fo that he is not capable of making a perfegt entry of the fame, he muft acquaint the collector and comptroller thereof, and defire a bill at fight, or view, in order to have them brought on thore and examined; who, upon the merchant's making oath to the truch of his allegations, and depofiting fich a fum of money in the collector's hands as may be conjectured to be fufficient to anfwer the duties, will grant fuch bill. The form whereoi, and the whole medhod of execution, mult be as follows:

23d of January, 1730.
In the Swift of Lyme, Benjamin Lyon mafter, from Oftend. Andrew Fountain.
Sight,
A.F. $\left\{\begin{array}{l}2 \text { cafes } \\ \text { I bale }\end{array}\right\}$ of metchandize, quantity, and quality A.F. $\left\{\begin{array}{l}\text { I bale } \\ 2 \text { packets }\end{array}\right\}$ unknown.

Andrew Fountain maketh oath, That neither he; nor any other perfon for his ufe, has received any invoice, bill of lading, or other advice, or doth know the contents of any of the gpods abovernentioned, fo as to be capable of making a true and perfect entry thereof, without having them firft examined by the officers of the cuftoms.

Signed-Andrew Fountain:

## Jurat' $23^{\circ}$ die Januarii, $\mathbf{1} 730$ <br> coram me A. B. Collector.

Sufficient money being depolited to fecure the duties, you may permit the goods abovementioned to be landed under your care, and to be brought to his majefty's warehoufe, to be there viewed, examined, \&c. by the furveyor and the proper landwaiters, who are to endorfe the particular quantities and qualities an the back hereof, and return the fame to us immediately, that a perfect entry may be made: but the goods are not to be Helivered till fuch perfect entry be made, and his majefty's full duties be paid.

Depofited fifty pounds:
A. B. Collector, B. C. Cuftomer, C. D. Comptrollet.
D. E. Surveyor,

To $\left\{\begin{array}{l}\text { *E.F. Tide-Surveyor, } \\ \text { F. G. }\end{array}\right.$
$\left\{\begin{array}{l}\text { F. G. } \\ \text { G. H. }\end{array}\right\}$ Land-Waiters:
Thefe bills being thus made out, they are to be entëred on the left-hand fide of a book, to be kept for that purpofe, in the method hereafter mentioned; and, if the fhip lies in the road, or any great diflance from the key, they are to be directed to the * tide-furveyor, as well as the land-furveyor and landwaiters, and put into his hands to fetch them to the lawful key,
where he is to defiver them into the cuitody of the land-furveyor and proper land-waiters, endorfing his part of the execution on the back thereof thus:

## $25^{\text {th }}$ of January, 1730 .

Delivered the goods within mentioned, intd the cuftody of F. G. land-water.
E. F. Tide-furveyor.

But, if the fhip lies near the key, the land-waiter may fend for the goods on fhore, as is ufual in other cafes.
The goods having been carefully examined by the furveyor and land-waiters, they are (as directed in the faid bills) to fignify how they find them, by endorfing the particular quantities and qualities on the backs of the bills, after the following manner:
Landed by virtue, and in full [or in part] of this fight, forty demi cambricks, plain ; one hundred and thirty ells of Flanders linnen, under $\mathrm{I} \frac{\mathrm{f}}{\mathrm{g}}$ ell; eighty ells of Flanders linnen, above If, and under two ells, plain; forty yards of Flanders damafk napkining, under $1 \frac{2}{8}$ ell ; twelve yards of Flanders damak tabling, above two, and under three ells; one hundred and ten yards of thread bone-lace.
Certified the $27^{\text {th }}$ of January, $173^{\circ}$.
D. E: Surveyor,
$\left.\begin{array}{l}\text { F. G. } \\ \text { G. H. }\end{array}\right\}$ Land-waiters.
Thefe bills, being thus fully executed and completed, are to be immediately returned to the collector, cuitomer, and comptroller, that a perfect entry may be formed therefrom in the king's books, and his majefty's full duties be charged to account; which they are to fignify to the furveyor and land-waiters, by inferting the faid duties on the bill, underneath their certificate of the execution, and fubfrribing their names thereto, as is ufual in all other warrants: and, in adjufting thefe bills, after the full duties are deducted from the fum depofted, the remainder (if any) muft be returned to the importer.

The duties being thus adjufted and fully paid for the goods, and the fame fignified on the bills of fight, they are forthwith returned to the furveyor and land-waiters, as a perfect warrant to them, for the delivery of the goods to the importer, which they are to permit accordingly: and, if fuch perfect warrant is not fo returned, they are to demand the fame the next day.
And if, at the clofe of a month, there are any fights fanding out unperfected, and, confequently, the money depofited remaining in the collector's hands, fuch depofits are to be inferted on the back of that month's abftrac.
The aforefaid bills of fight, and their executions, are, before they are delivered to the officers to whom directed, to be entered in proper books to be kept by the collector, cultomer, and comptroiler, after the following manner:

## Foreign goods returned.

When foreign goods, which have been regularly imported, have been afterwards exported, and are, for want of fale, or the great fcarcity of fuch goods here, \&c. defired to be returned, or again imported, into any port of Great-Britain, notwithftanding there is not any law for fuch re-importation, yet, upon payment of the like duties that were due upon the firft importation, (though, perhaps, the goods were exported out of time, and, confequently, were not intitled to any drawback) it is the practice to indulge the merchant in fuch re-importation, although fuch goods may be prohibited to be originally imported foom that place, upon performance of the following requifites : the firf whereof is, to fignify to the fearcher, \&c. the time when, and the fhip in which they were exported; who thereupon will have recourfe to their books, and, in cafe they find that fuch entry outwards was duly made, will grant a certificate, or duplicate thereof, as follows :

In the Hope of Whitehaven, William Hall, for Peterfburgh
Edmund Frof.

Qrie thoufand pounds of Virginia tobacco, the fabfiay in wards whereof was paid, and the other duties fecured, by WilIiam Tims, the ninth of July, $\mathrm{I}_{728}$. Dated the third of May, 1729:
The goods abovementioned were regularly fhipped off, but four hundred eighty-fix pounds of tobacco ["for which a debenture hath paffed] being part of the above entry, are now returned, in the + Neptune of Liverpool, William Wells mafter, from ed, in the + Neptune of the cultom-houfe at Southampion, the $15^{\text {th }}$ of March, 1730 .
A. B. Searcher,
B. C. Land-waiter.

* To be omitted, if exported out of time
+ Or the fame fhip and mater.
If the goods were entered outwards at any other port, this certificate muft be granted by the officers of that port: but, if the cocket whereby they were fhipped be produced, I appreisend that will fully ferve the fame purpofe.
And on the back of the aforefaid certificate proof muft be made, by the oath of the merchant, that the geods then re-

## A Continuation of the Business of the Custom-House.

turned are the fame therein mentioned. The form of which proof muft be as follows:

$$
1_{5} \text { th of March, }{ }^{7} 73^{\circ} \longrightarrow \text { No. } 6 .
$$

In the Neptune of Liverpool, William Wells mafter, from Peteriburgh.

## Returned.

E. F. $\}^{\text {Forty boxes, containing four hundred eighty- }}$

No. Ia 40$\}$ fix pounds of Virginia tobacco.
Edmund Frof maketh oath, That the tobacco abovementioned is now returned as part of the entry outwards within mentioned, which was formerly exported from hence, and not fold, nor the property changed beyond fea; but he verily believes it to be the fame tobacco which was exported as aforefaid, and no other.

Signed-Edmund Froft.
Jurat' $15^{\circ}$ die Martii, 1730,
coram me C. D. Collector.
Whereupon an entry mult be made, as for other goods imported, and the duties paid, or fecured, being inferted underneath the merchant's oath; the collector, cuftomer, and comptroller, are to fubfribe their names thereto, and direct it to the furveyor and proper land-waiter, as a warrant for their delivery of the goods.

## Britifh goods returned.

When goods of the product or manufacture of Great-Britain, which have been exported to foreign parts, are, for want of fale, or any other occafion, defired to be returned into any port of Great-Britain, a bill of fore may be granted for the landing and delivering of the fame: as a foundation for which, the fearcher, \&c. muft be applied to, for a certificate, or duplicate of the entry outwards, in like manner as before directed for foreign goods, which muft be as follows:

In the Diligence of Briftol, Henry Hopkins mafter, for the Streights.

Benjamin Jones.
One hundred and a half of haberdafhery ware.
Ten dozen of felt, and five dozen of caftor-hats.
Four fothers of lead.
Dated the $23^{d}$ of January, 1730.
The goods abovementioned were regularly fhipped off; but four dozen of felt, and three dozen of caftor-hats*, being part of the above entry, are now returned in the Welcome of London, George Crilp mafter, from Leghorn, as the merchant offereth to affirm. Dated at the cuftom-houfe in Southampton, the 23 d of March, 1730.

## A. B. Searcher,

B. C. Land-waiter.

* But, if the goods were intitled to, and received any bounty, upon the exportation, there muft be added a fter this re-ference-for which a debenture has paffed-and the bounty muft be repaid for the quantity returned, as in the entry inw.irds.

On the back of which certificate proof mult be made, by the oath of the merchant, that the goods therein mentioned to be returned, are of Britifh manufacture, \&c. The form of which proof muft be as follows:

$$
\text { 23d of March, } 1730 .- \text { No. } 76 \text {. }
$$

In the Welcome of London, George Crifp mafter, from Leghorn.

## Store.

## B, S.

No. 1, 2. Two boxes, containing four dozen of felt, and three dozen of caftor-hats, of Britifh manufacture, returned, being part of a greater quantity formerly exported from hence, per cocket dated the twenty-third day of January, 1730, as appears by the certificate within mentioned.
Benjamin Jones maketh oath, That the hats abovementioned are all of Britih manufacture, and were formerly exported from
hence as within mentioned, and are now returned as the fame, and no other.

Signed-Benjamin Jones.
Jurat' $23^{\circ}$ die Martii, 1730, coram me C. D. Collector.

Whereupon an entry muft be made in the books inwards, as for foreign goods imported; and the collector, cuftomer, and comptroller, having fubicribed their names underneath the merchant's oath, the fame is to be directed to the furveyor and proper land-waiter, as a warrant for their delivery of the goods.

But, as it may fometimes fo happen, that the entry outwards cannot be fixed upon, by reafon of the diftance of time, the lofs of papers or accounts, or feveral other accidents : therefore, in that cafe, as there cannot be any other proof, the oath of the merchant only muft be deemed fufficient, and may be taken as follows:

In the Welcome of London, George Crifp mafter, from Leghorn.

Benjamin Jones.
B. S.

No. I, 2. Two boxes, containing four dozen of felt, and three dozen of caftor-hats, of Britifh manufacture.

Benjamin Jones maketh oath, That the hats abovementioned are fent to him this deponent, as part of a larger quantity formerly exported from hence, and that, according to the beft of his knowlege and belief, they are all of the manufacture of Great-Britain.

Signed-Benjamin Jones.
Jurat' $23^{\circ}$ die Martii, ${ }^{1730}$,
coram me C. D. Collector.
An entry muft be made in the books inwards, and this oath muft be fubfcribed and directed as a warrant for the delivery of the goods, in like manner as when the particular entry is proved.

Sufferances for landing goods at an unlawful key.
Though foreiga goods and merchandizes have been entered, and his majefty's duties duly paid, and a warrant be thereupon granted for the delivery thereof; yet if the merchant, for his conveniency, is defirous to land them at any other place than the lawful keys appointed by his majefty's commiffion out of the court of Exchequer, a fpecial fufferance mult be granted for that purpofe, after the following manner :

In the Guftavus of Stockholm, Hans Gronberg, from Sweden. ${ }^{-}$

## Roger Dove:

Two thoufand ninety-fix bars, containing forty tons of Swedifh iron; one hundred and twenty barrels, containing ten lafts of tar.
A warrant having been paffed by us for delivery of the abovementioned goods, and the importer having fignified to us the inconveniency that would attend the bringing the fame to the lawful key, we have granted this fpecial fufferance for landing the fame at -
the fame at
You are, therefore, to permit the fame to be unladen into lighters, and afterwards landed at the faid place, in like manner, and with the like care, examination, and infpection, as is ufual at the lawful key: for which this fhall be your voucher.

Dated at the cuftom-houfe, Southampton,
the 2 Ift of January, 1730.
A. B. Collector, B. C. Cuftomer, C. D. Comptroller.

To $\left\{\begin{array}{l}\text { D. E. Surveyor, } \\ \text { E. F. } \\ \text { F. G. }\end{array}\right\}$ Land-waiters:
But, before fuch fufferances are delivered to the officers to whom direAted, they muft be entered in a particular book to be kept for that purpofe; which being only a tranfcript from the faid fufferances, of the names of the ihip, the mafter, the place arrived from, the importer, the particular goods, and the place to be landed at, need not be exemplified.

## D.

## D A L

DAALDER, a name given by the Dutch to pieces of 30 fols, coined by them, and which are worth one florin, or guilder and balf, being equivalent to the fmall French crown of 3 livres toumois, or 60 fols. Heretofore, according to the old rate of money in that kingdom, the daalder went for 37 fols, 6 -deniers.
Daalders are coined alfo at Hamburgh, called daalders lups, or lubs, of 2 marks lubs each. It is worth from 32 to 33 fols of Holland, and from 66 to 70 fols in France. It is ufed as current money in many other cities of Germany, and in keeping their books of accounts. Formerly they went for 40 French fols. The Hollanders call alfo every fort of crown a daalder, which is worth no more than 30 fols; they denominate them differently, viz. ryks-daalder, that is to fay, an imperial crown.
DACZ. A JIE, a filver money current in Perfia, worth 5 mamoudis ; two daczajies make the bafaer denaire.
D ALLE, a nominal money, ufed in keeping books of account in many cities of Germany: it is worth 32 fols lubs, which makes 40 French fols; the fol lubs being fomewhat more than the fol tournois.
DALLER, or, as we commonly fay in Englifh, dollar, a German word, fignifying a crown-piece, a kind of filvermoney. The Germans commonly pronounce it taller, and the Dutch daalder, or more properly ryx-daalder, to diftinguib it from daalder, another fort of filver money worth 30 fols, coined by them. See Daalder.
The dallers, or German crowns, are coined in many ftates of the empire, as weil as in Holland. Thofe which the French properly call crowns, and the Spaniards piaftres, or pieces of eight, have different marks, according to the ftamp of the different fovereignties where they are coined. There are demi-dallers of 30 fols, and quarter dallers of 15 fols.
Dallers are not all of equal weight, and of the fame ftandard. Thofe of Holland are but 8 deniers, 20 grains fine, and weigh only 22 deniers, 12 grains.
The dallers of Bafle, and of St. Gal, are of the fame weight with the Dutch ones, but they are 10 deniers, 3 grains fine.
The dallers of almoft all the other German cities, weigh as thofe of Holland, and are one denier finer than thofe of St. Gal.
The Francfort dallers are of a higher ftandard than any other, being il deniers, II grains fine. On the contrary, fome of thofe at Mantone are of the loweft, being only 5 deniers, $3^{2}$ grains fine. Laftly, there are fome that weigh but 21 deniers, as the dallers of Mantone of 1616 ; others no more than 19, as thofe of Savoy, called fpardins.
It is the Dutch dallers that partly ferve for the great traffic carried on by them in the Levant, where that kind of piaftre is called anlani, from it's ftamp, which is a lion. See Aslant.
If we may believe Sir John Chardin, thefe dallers are not only of a very bafe alloy, but he moreover affures us, that the demi-dallers, and, above all, the quarter dallers, which are current in the Turkiih ports of the Mediterranean, are almoft all counterfeit
The daller goes at Cavio for 33 meidins in exchange, and for 38 , fometimes more in fpecie, at the rate of 18 French deniers the meidin, or 3 Turkifh afpres. They go for much the fame at Conftantinople, and other parts of the Turkifh empire.
Daller is alfo money of account, ufed in fome parts of Germany, as, among otbers, at Augfbourg, and Bolzano.
DALMATIA is feated along the coalt of the Adriatic fea, or gulph of Venice, having Albania on the fouth-eaft, Bofnia on the north eaft, Morlachia on the north-weft, and the gulph of Venice on the fouth-wen. It extends in length near 200 miles; but it's greateft breadth is not above 45. The

Vol. I.

## D A L

foil is in fome parts mountainous, but otherwife very fruitful, producing corn, wine, oll, honey, and wax.
This country is at prefent divided into three parts, viz. Venetian Dalmatia, Turkifh Dalmatia, and the republic of Ragula.
The Venetian territories in Dalmatia confift, at prefent, of thefe following cities: Zara or Jadera, Nona, Scardona, Sebonica, St. Nicholo, Trau, Spalato, Cliffa, Ciclut, and Rifano.
Zara, or Jadera, about 150 miles fouth eaft from Venice, is fituate on, or rather almof furrounded with, the Adriatic fea, and joined to the continent by a bridge, and is the capital of a county of it's name. It is now one of the beft fortified places belonging to the Venetians, and the metropolis of Dalmatia.
Nona is another well-fortified town on the Adriatic, and almoft encompaffed with water. It ftands over againft the long ifland of Pago, from which it is parted by a channel about four miles broad. Neither of thefe are remarkable for any great trade.
SCARDONA, about 30 miles fouth-eaft of Zara, though formerly a confiderable city, is, at prefent, confiderable for little elfe but it's bifhopric, fuffragan to the fee of Spalato, which was trangated hither from the maritime Belgrade, in the year 1120 .
Sebonica is a well-fortified city on the fame gulph, and on the oppofite fide of the river Cherfa, from Scardona. It's port is fo fpacious, that it can contain a large naval fleet. It ftands about 40 miles fouth-eaft from Zara, 30 north-weft from Spalato, and about 190 from Venice.
St. Nicholo is a ftrong fort, and fo advantageouly fituated, that it commands the channel that leads to Sebonica; fo that no fhip can fail into it, without leave of the governor.
Trau is a fmall, but frong town, built upon an ifland, which joins to the continent, by a bridge on one fide, and to the ifland of Bua at another. But neither of thefe places have any commerce to fignify.
Spalato is a pretty large, and well fortified city, with a very capacious and fafe harbour. It is fituate between the two contadas, or territories, of Trau and Cliffa. It is one of the fea-ports, where the Turkifh caravans unload their merchandize for Venice. [See the article Caravan.] It hath a fine lazaretto for thips that perform quarentine. [fee the article Quarentine] and the profpect of the port and city.
Cilssa is remarkable only for a ftrong cafte, ftanding between two hills.
Ciclut has another fortrefs, fituate on an ifland formed by the river Narenta. It flands about 55 miles fouth of Spalato.
Risano was formerly a commodious port, feated at the further end of a gulph of that name; but that place has been fo ruined by the Turks, that the gulph now takes it's name from
Сataro, fituate on the eaf-fide of it, over-againt the fartheft point of Italy. 'This port, together with Caflenovo, and Budoa, are well-fortified places.
The principal illands on this coaft, belonging to the Venetians, are,
Cherso, which bas a ptetty convenient harbour, is fertile, producing good wine, corn, and oil; at prefent it is nhabited by a mixture of nations, which are obliging to ftrangers, and have little or no commerce with the corfairs that infe: thefe parts. It ftands between Iftria and Moracha, abouz 12 miles from Fiume to the fouth, and as many to the ealt from Fianano.
Velia is fituate on the fame gulph with the forra: It produces plenty of wine, wood, and filk, and is fair dor a fmall, but fine and fleet breed of horifs.
$P_{A G O}$ is fo barren, that all the corn that is gathered here, is not fufficient to maintain it's inhubitants 3 months in the year ; and the wine about as much more. It hath fome falt-pits, which yield pretty confiderable quantities of that commodity, but, being obliged to pay three fourths of it to the republic, that contributes to impoverifh the people.
Lesina, or Liesma, is fituate at the tar her end of the golfo di Narenta. This country is chiefly inhabied by hufband-
then, who cultivate the more fertile parts of it, which, tho' mountainous, produces plenty of corn, wine, olives, faffron, honcy, and all forts of fruit; fo that they here abound with all kinds of neceflaries for life. They make a confiderable gain alfo, from the valt quantities of fifh caught round this inland.
Thiere are many other fmaller illands which deferve no notice; fo that we thall refer to the iflands which the Venetians poffets on the Ionian and Egean fea, or Archipelago; the chiefeft whereof are, as follow:
Cephalonia is one of the largeft iflands that the Venetians have in this fea. It is very fertile, efpecially in red wines, excellent Mufcadine raifins and currants, and delicate oit; wherein all the people here carry on a very advantageous traffic. Here is a fpacious port, and well fheltered on all fides, but not good for anchoring of thipping. At the entrance is a large village, where moft of the raifin merchants refide. There are allo two more ports; the one at Percarda, the other at Luxun; the former for fmall, the latter for larger veffels. It is under the 38 th degree of latitude, and 20 of ealt longitude.
Corfu is the next confiderable illand on this coat for bignefs, but much more for it's wealth and populoufnefs. It extends itfelf along the coafts called Della Chimera, from north to fouth about 50 miles. This illand is very falubrious, and well peopled, it being computed to have about fixty thoufand fouls. It furnifhes Venice with vaft quantities of falt, and is, befides, very fertile in corn, wine, and oil, and all forts of fruits, and trees for timber, efpecially cedar.
$Z_{\text {ANT }}$, or the golden ifland, as it is called, is fituate on the fame coalt, on the fouth fide of Cephalonia, from which it is divided by a channel about 12 miles in breadth. The country is very fruifful in corn, wine, oil, and a great variety of the moft delicate fruits, efpecially the Mufcadine grapes; which, as that fort of wine is pretty common in Italy, they here moftly dry up, and fend into England, Holland, \&cc. with many other commodities; on which account it is faid to be a.golden ifland to the Venetians, as all places which afford a good commerce, are much better than mines of gold to the ftates, to which they belong.
The Englih and Dutch have here a factory and conful, and a number of merchants and factors for the flaple commodities of this place, raifins and currants, which are very fine and cheap: but our nation is efteemed the greateft promoter of that trade, as they deftroy more of that commodity, than perhaps, half of Europe befides; which is a great difadvantage to thefe kingdoms, and therefore behoves us to think of ways and means to provide ourfelves with what fruits we ftand in need of, in our own colonies; which we have great reafon to believe, is far from impracticable. See the articles Wines, and Plantations. Zant ftands between Cephalonia, and the cape Tornefe in Morea; about 15 miles fouth of the former, and 12 weft from the latter, under the 38th degree of latitude, and 21 eaf longitude.
$\mathrm{M}_{\text {ilo }}$ is a fmall illand, fituate on the Egean fea, or, as it is commonly called, Archipelago, [fee Archipelago] and is about 60 miles in compafs, and of a round figure, well peopled and cultivated, and has one of the largeft and moft commodious havens in all the Mediterranean. The port of Milo is 6 miles long, 3 broad, and hath a fufficient depth of water for thips of any burthen, but is montly frequented by pirates. The ifland is pleafant and fruitful, though mountainous, except a fine plain of about 6 or 7 miles in length; in which is lituate Milo, the capital of the inland.
The mines of iron here are very advantageous; and one part of the city, called St. Jean di Ferro (St. John of Iron) is moftly employed in manufacturing it, and keeps a perpetual fire for that purpofe. This is, perbaps, the only thing that keeps the city tenantable; fince, befides the unwholefomenefs of the air, it is, in many other refpects, made more fo, efpecially from the filthinefs of the ftreets, and the great number of hogs that are there reared and killed.-Notwithftanding all this, the people live here at a high rate, every thing being in great plenty and cheap, from the commerce they drive.
Cerigo is the fartheft weftern ifland in the Egean fea, or Archipelago, and lies 12 miles to the fouth of cape St. Angelo in Morea. It is mountainous and barren, and produces hardly corn and wine fufficient for it's inhabitants, but hath plenty of other provifions, which are here very cheap. It hath but one good harbour, which ftands on the fouth-fide of it, and can contain above 50 large veffels, and may be fhut with a chain.
Cimolo is a finall ifland, about 18 or 20 miles in compafs, and is barren and mountainous. The inhabitants are moflly Greeks, but sude and ignorant, living chiefly on the debauchery of the pirates and corfairs, who frequent it on account of the women, who are here both handfome and kind enough to keep up a confant and advantageous commerce with them.
Turifish Dalmatia. The Turks have firts of the upland country, towards the limits of Servia and Bofnia; where the moft confiderable cities and towns are as follow:
Narenta is feated on the mouth of a river of the fame
name, which falling there into the gulph of Venice, forms a -fmall bay, called the bay of Narenta. This city is 50 miles diftant from Spalato to the fouth-eaft, and 25 from Ragufa towards the north. It's territory confiftrof one fingle valley, about 30 miles long: the river Narenta overflows it, during certain months of the year; which renders the country extremely fruitful, which produces plenty of corn.
Ragusian Dalmatia lies on the fea-coaft, partly ifland, and penifula, which latter is called Sabioncello, and partly on the main land of Dalmatia, which bounds it on the eaft, and partly on the north; as the bay of Narenta, and the inland of Lefina, do on the notth and well, and the Adriatic fea on the fouth. The country is about 60 miles long, but not proportionably broad. The foil is not over fruifful, but the country is pretty populous.
The chief towns belonging to this republic are,
Ragusa, Ragusi-Vecchio, Stagina, Stagno Piccolo, but they have no extraordinary trade.
To the Ragufians are alfo fubject the following iflands:
Meleda, feated near the peninfula of Sabioncello, from which it is feparated by a narrow ftreight. It is about 30 miles in length from caft to weft; but it's breadth is very unequal, the coaft, efpecially towards the north, being cut by many bays and inlets.
The fea hereabouts abounds with fifh, and the foil of this ifland is very fit for vineyards, producing very heady red wine: it abounds allo with orange and lemon-trees; but it does not produce corn enough for the ufe of it's inhabitants, though they are not much above two thoufand. In this ifland are fix villages, with feveral ports and harbours, the chief of which lie on that coaft which looks towards the main land: the whole ifland is governed by a gentleman who takes the title of Count, and is appointed annually by the grand council of Ragufa.
Cuzzola is feparated from the peninfula of Sabioncello, by a ftreight about fix miles broad, called the gulph of Santa Croce; it's greateft length is of about 40 miles, and it's breadth 10 or I2. Here are five villages very well peopled. The ifland abounds with forelts, which afford great plenty of timber for fhip-building. In thefe forefts there is a kind of animal called Zachalia, pretty much like dogs, whofe fkins ferve to make fome indifferent furs. This inland belonged formerly to the Ragufians, but they have yielded it to the Venetians.

## REMARKS.

The coafts of Dalmatia and Croatia are full of very good hatbours, ftrong towns, good rivers, and people enough, but not much trade upon the whole. The people are a hardy, military race, not inured to commerce or arts, nor inclined to the fea, or much to fhip-building, either for their own trade, or that of others: fo that the Venctians are not to expect any great advantage in point of trade from that part of Dalmatia, which is under their dominions, unlefs it thould appear they had changed the genius of the people, and put manufactures into their hands.
The chief benefit the Venetians have from this country, is, that they receive a great quantity of corn and mutton from hence, and fome black cattle ; but though the coaft is the Venetians, the country is not theirs far within the land; it is partly the Emperor's, efpecially the Croatian fide, and a great part of the Dalmatian fide belongs to the Turks.
The coalt is interfperfed with inlands which, as well as the inland towns on the continent, are generally well fortified: fo that what trade they have is well guarded; and as they are often alarmed, the people are brave, which makes the feamen on this fhore be effeemed the beft the Venetians have, only they are but few in number: fome of them, indeed, are tolerably good failors, and the Venetians frequently bire them and their hips alfo for their merchandizing voyages; they being efteemed good pilots, as well as bold fellows.
The fifhermen here work in larger boats than ufual, becaule as Venice is the only market for their fifh, fo the gulph being at the north part of the Dalmatian coaft, at lealt 60 or 80 miles over, they muft have good boats, the fea fometimes being very tempeftuous.
The feamen here are called Venetians, though they are not fo; and the landmen are called Mortaques, though they are both Dalmatians or Croatians. But they all fpeak Italian, or rather a kind of Lingua Frank, common to all the feafaring people in the Levant.
The Venetians make, however, fome advantage of trade this way, by furnilhing all the people with cloaths and manufactures of all kinds, alfo with ammunition, and fire-arms, and weapons of all forts: nor do they fuffer any body to trade with the Dalmatians, but themfelves and the Ragulians.
The republic of Ragufa is a place of trade, and, as they are a free ftate, fo they have a free trade, as well among the Turks as Chriftians. The number of their people creates them a trade; but they have no extraordinary commerce weft ward, and we rarely fee a fhip or bark of Ragufa on this fide the Archipelago, or on this fide of Italy.
They trade chiefly among the Turks, and under their protection, and principally when the Venetians have a war with

## D A M

the Turks; then the peaceable Ragufians are the carriers of the parld, for they go and come free on both that par
fides.
The time of war, therefore, is the barveft of the Ragufian commerce; for, as they pafs and repais to Confantinople, to Simyma, Salanichi, to Alexandria, and to Venice,--they are hired to all thole places by the Venetians, and fometimes by the Turks.
They are alfo conftant traders at the imperial port of Triefte, and bring thither all the merchandizes of the Levant, and the like to Venice: fo that they are the proper medium of trade when it is interrupted by a war. They are efteemed excellent feamen, but you hardly ever find them failing in any hips but their own; nor will they, on any occation, be hired either as victuallers, tenders, or tranfparts, or for any other bufiners; againft the Turks; which is political, they preferving, by that means, the friendhip of the Turks; and as they live, as it were, under the Turkifh power, they would mintake their interelt. if they provoked them on warike conjunctures.
DAMAS K, a filk fuff, with a raifed pattern, ib as that which hath the right fide of the damafk, is that which hath the flowers raifed and fattined.
Damafks thould be of dreffed filk, both in warp and in woof; and in France $\frac{11}{2}$ of an ell in breadth.
They have a ftuff in France, which they call the caffart damalk, made in imitation of the truk damank, but having the woof of hair, coarfe filk, thread, wool, or cotton. Some have the warp of filk, and the woof of thread; others are all thread, both warp and woof, and others again all of wool. They are made of three fizes, being either $\frac{1}{2}$ lefs than halfell, or full balf-ell, or half-ell $\frac{x}{16}$ wide.
They are made, in France, particularly at Chalons in Champagne, and in fome places in Flanders, as at Tournay, and the neighbouring parts, and which are intirely of wool. Thofe of Tournay are $\frac{3}{8}$ wide, and 20 ells long.
Chinefe, or India, damakks, are feven, eleven; and twelve ells in length, and from $\frac{3}{8}$ to $\frac{7}{7}$ wide. They are called Chinefe, becaule for the molt part coming from thence; and India damaks, becaufe bought of the Indians sy the company's factors. They are of yarious colours.
The word Damask is alfo applied to a very fine fteel, in fome parts of the Levant, chiefly at Damaicus in Syria, whence it is fo called. It is ufed for Yword and cutlaf-blades, and is finely tempered.
Some authors pretend it comes from the kingdom of Golconda in the Eaft-Indies, and that the method of tempering it with allum was invented there, and which the Europeans have not yet been able effectually to imitate.
DAMASKEENING, orDAMASKING, the operation of beautifying iron, fteel, \&c. by making incifions therein, and filling them up with gold or filver wire, chiefly ufed for adorning fword blades, syards and gripes, locks of piftols, \&cc.
The name which this art hath preferved fhews allo whence we had it, pointing out that famous city of the Levant where it was invented, or at leaft, whofe artificers have made the fineft pieces of work of this kind.
But, if we owe the invention of this kind of fculpture to Damarcus, yet M. Felibien, in his Principles of Architecture, feems to give the honour of perfecting this art to France, and pretends that Curfinet, a cutler at Paris, who wrought in the reign of Henry IV. and lived to the time of Lewis XIV. furpaffed all others before him herein. Be that as it will, it is certain there have been fince feveral French cutlers not inferior to Curfinet.
They only damalk, at prefent, the hilts of fwords, and fome part of the blades; fuits of armour, and horfe-trappings, were damalked, when they were in falhion; but, if thefe are at any time made now, they are plain.
Damafking partakes of the mofaique, of engraving, and of carving. As to the mofaique, it hath inlaid work; as to engraving, it cuts the metal, reprefenting divers figures; and as in chafing, gold and filver is wrought in relievo.
There are two ways of damaiking: the one, which is the fineft, is where the metal is cut deep with proper inftruments, and inlaid with thick gold and filver wire; the other is only fuperficial.
In the firf the incifions are made in the dove-tail manner, that the gold and filver wire, which is forcibly drove in, may be firmly fixed. In the other, having heated the fteel 'till it becomes of a blue, or violet colour, they hatch it over and acrofs with the knife, then draw the defign, or ornaments intended, with a fine brafs point, or bodkin; which done, they take fine gold wire, and chafing'it according to the figure before defigned, they carefully fink it into the hatches of the metal, with a tool fuitable to the occafion.
Several artifans are permitted by their flatutes to adorn their works by damarkeening ; among others, the cutlers, gunfaniths, fpurriers, and armourers.
DAMASSE', or PETITEVENISE, a kind of wrought limen made in Flanders, fo called from the fafhion of it's large flowers, fomething like thofe of damalks: it is ufed cheefly for tables. A table-cloth and a dozen napkins of this fort is called a damalk-fervice.

## D A N

There is alfo a filk fuff fo called, which looks like a damafk on one fide, and on the other is plain.
DANCING-MASTER, he who teacheth to dance.
The reader will doubtlefs be furprized to find this article in a Commercial Dictionary; nor fhould we, though Mr. Savary has taken notice of it, was it not to thew the Englifh reader, that every kind of bufinefs in France is under fuitable regulations; which I have done with a view to convince this nation, that the profperity and fplendor of that kingdom has not fprung from chance, but refined policy.
The ftatutes of this company are of the year 1658 , given, approved, and confirmed by Lewis XIV. enrolled in the Chatelet the $13^{\text {th }}$ of January, 1659 , and in parliament the 22d of Auguft following.
The chief, or head of the company, and who governs with the mafters of the fraternity, hath the title and quality of king of all the violins, dancing-mafters, and mufcians, both high and low, in the kingdom. He does not enter on his charge by election, but by letters of commifion from the king, as being one of the officers of his houlhold.
As to the mafters of the fraternity, they are elected yearly by plurality of voices, and hold the fame place in that body for their authority and functions, as the wardens in the other companies.
There are two regiftries, where the indentures of apprenticethip, and copies of freedom are to be enrolled; that of the king of the violins, and that of the mafters of the fraternity. Apprentices are bound for four years, but one year may be given them. The candidates are to perform before the king' of the violins, who may fummon there 24 mafters at his pleafure; but only rofor the fons, and the bubbands of mafters daughters : all of them have their letters from this king. The violins of the king's chamber are received by their difcretionary warrants; however, they pay the fees.
None who is not a mafter may keep a ball-room, or fchool, whether for dancing or inftruments, nor give ferenades, or concerts at weddings, or public affemblies: even mafters themfelves are prohibited from playing in taverns and infamous places, on pain of fine to be levied, as by decree of the Chatelet of the 2d of March, 1644, and of the parliament the IIth of July, 16.48.
Laftly, the king of the violins is permitted to nominate the lieutenants in every city, for caufing the ftatutes to be obferved, receiving and ratifying letters, iffuing out all provifional letters on the faid king's prefentation; which lieutenants are intitled to one moiety of the faid king's fees for the reception of apprentices and mafters.

## Remarks.

'Tis certain, that regulations of this kind, in regard even to the profeffion of dancing-mafters, have not a little contributed to render the French nation famous over all Europe, for excelling in this art, both in theory and practice: indeed, the natural fprightlinefs and vivacity of thefe people in general, may adminifter fomething to the perfection for which they are to remarkable: yet this alone, without being controlled by fuitable regulations, might not have anfwered the end.
Though various concurrent caures may jointly help to make monfieur furpafs others in giving inftructions for this ornamental accomplifhment, yet all thefe would hardly have the apparent effect, without fomething of ftate policy to countenance, and encourage this gay firit.
That the court of France, and all the nobility and gentry of that kingdom, feem to have an ambition to attract the eyes of the whole world, from the fplendior and elegancy of their dancing, as well as their other belles afiemblees, will hardly be doubted by thofe who have feen them.
Whether the cultivating the arts of gaiety to the degree this nation feems fo induftrioully to do, be merely owing to a natural difpofition for the external politeffe, or to flatecraft, or to both, we thall not enquire : certain it is, this gives fuch an attractive power to that kingdom, as to draw thither the moft illuftrious, both young and old, of all nations in Chriftendom; the one for erudition and travel, the other for pleafure and joyous amufement. Does not this occafion the fpending immenfe fums in France? Nay, it is to be queftioned, whether that nation has any fingle fund that brings more treafure into it, than what proceeds from general fources of this kind. With what contempt is a dancing-mafter looked on among us, who is not either a Frenchman, or has not been fome time in France to gain that air, that je ne fectay quoy of thri kingdom? If our itage-dancers are not à la mode de France, our fingers and muficians Italians, who that is remarkable either for tafte or diftinction, would be feen at our public thearres and operas? It matters little to a ftate, by what ways and means riches are brought into it, provided they are fo: if fome nations have the knack of fiddling and finging others out of their money; if fome have the art of painting or dancing wealth into their public trealury, why are not thefe meafures as laudable and politic to aggrandize flates as any other? The money brought into nations by fuch means, being all clear
gain, without any fort of hazard, why are they lefs eligible than others?
'Twas nor, perhaps, the leaft material branch of Lewis the XIVth's fynem of policy, to inftitute feminaries in the ftate for education of every kind, and liberally to reward the profeflors of all forts, in order to ground the principles of education upen plans better calculated for the improvement of youth than any other, probably, in Europe. Nor has this proved only of unlpedkable emolument to the nobles and gentry of that kingdom, by fupplying a fucceffion of men of diftinguifhed abiities to manage it's affairs both at home and abroad, with honour and advantage, but thefe literaiy eftabiifhments have repaid their expence to the crown in a tenfold degree, by the money they have occafioned to be fpent by foreigners upon their account.
The French have no occafion to fend their youth of figure and condtion abroad for education, and therefore it is they travel little therafelves, but receive all traveliers, and grow wife by ftaying at home. On che contrary, whecher we have occafion or no, 'tis become fallionatle to fend the fons of our greateft families to foreign univerfities and colleges. Why are thefe things fo? Will not our own feminaries of litera,ture afford as great benefit, even with regard to polite and ornamental, as well as folid erudition of every kind? If they will not, as they are at prefent conflituted, are they not capable of doing fo? Will not the great and generous endowments of Oxford and Cambridge, admit of giving due encouragement to the ableft profeffurs of every kind? They certainly will.
No nation have exceeded Britons in every art and fcience, in every part of ufeful or polite literature. Though we may not equal our neighbours the French in the vivacity of the heel, they have never in general furpaffed us in the bufinefs of the head; unlefs now and then in fome political ftrokes, which we muft allow to have been mafterly: yet this has been the fault of particular minifters, not that of the Britifh genius in general.
Why may not our Enghifh univerfities be rendered the refort of forcigners of diftinction, as well as thofe of any other country? Might not this occalion as much money to be feent in the nation by forcigners, as is now feent out of it for travel, and the like occafion?
'That our univerfties, indeed, did not admit' of that univerfal knowledge that was defirable, his late majefty foon difcovered, upon his acceffion to the crown of thefe kingdoms: wherefore in his great wifdom, he eftablifhed profeffors for the ftudy of modern hiftory and the modern languages. If thefe inflitutions fhould be rendered mere finecures, and by no means anfwer the wife and gracious intentions of the king, why is not effectual care taken that they mould do fo?
Nor is it to be doubted, but fuch was the difcernment of his majefty, that he hoped and defired, that his royal example would be followed, by inftitutions of the like kind, at every college in Oxford and Cambridge. Had this been the cafe, there would not by this time, have been any living language in Europe, which night not have been fpoken with as much puity and elegance at there Englifh feminaries, as any court in Chriftendom? By which means, might not our Britifh nobility and gentry, have become as familiar with all the European languages, or with the principal of them, as with their own, and thofe of the antients? This would have been, we conceive, the natural way to have drawn foreigners, more or lefs, of the frift rank and fortunes, from all the courts of Europe, to our univerfities; which would have been attended with confequences, that might have greatly promoted the interefts of thefe kingdoms. It would have rendered our language as familiar to thefe foreigners, as theirs would have become to us; and then why fhould not the Englifh tongue have become as univerfal as the French? Which might have been attended with effects not lefs interefting to us, than that policy has really been to ourgreat rivals. This would have naturally brought the greatelt men at'all the principal courts, better acquainted with our books and conftitution than they at prefent are; and what might not have been lefs beneficial to the nation, fuch acquaintance and familiaricy ulight, by this means, have been cemented between our EritiM nobles and gentry, and thofe of other nations, as to have in their confequences, highly promoted the intereft of thefe kingdoms, and not lefs her commercial than any other. For long experience has verified, that no fi iendhips are more invidable and honourable, than thofe contracted between fellow-ftudents and collegians: and, 'tis certainly more for the benefit of this kingdom, fo to form and plan our literary feminaries, that foreigners may rather be inclined to refort hither to fpend their money, and be bred amonglt us, than for our great men to be bred up in orher countries.
DANK, orDANCK, a little piece of filver current in Perfia, and fome parts of Arabia. It weighs the fixteenth part of a drachn.
Dank is alfo a dittle weight, ufed by the Arabians to weigh jewels and drugs, when thefe laft are ufed in the compofition of medicinss. It is the fixth part of an Arabian drachm, which is eight grains French weight.

DATES are a fruit fomewhat of the fhape of an acorn; they are compofed of a thin, light, and gloify membrane, fome. what pellucid, and yellowith; which contains a fine foft and pulpy fruit, which is firm, fweet, and fomewhat vinous to the tafte, efculent and wholefome, and within this is inclofed a folid, tough, and hard kernel, of a pale grey colour on the outfide, and within finely marbled like the nurmeg
For medicinal ufe they are to be choten large, full g. yellow on the furface, foft and tender, nor wrinkled; fuch as have a vinous tafte, and do not rattle when thaken.
They are produced in many parts of Europe, but do not ripen perfectly there: the beft are from Tunis; they are alfo very fine and good in Egypt, and in many parts of the Eaft Tuofe of Spain and France look well, but are never perfectly ripe, and are very fubject to decay.
They are preferved three different ways; fome preffed and dry, others preffed more moderately, and again moiftened with their own juice, and others not preffed at all, but moiftened with the juice of other dates as they are packed up, which is done in bafkets or in kins . Thofe preferved this laft way are much the beft. Dates have always been efteemed moderately ftrengthening and aftringent; they are prefcribed for habitual diarrboeas, weakneffes of the fomach, and for ftrengthening the womb; but at prefent are little ufed in England, being even left out of the pectoral decoctions, in which they ufed to be an ingredient.
DA UPHINE', in France, is feparated from Lyonnois and Languedoc on the weft, by the Rhone, which parts it on the norith alfo from Breffe and Bugey, on the eaft it has Piedmont, and on the fouth Provence, and the country of Avignon.
The foil in fome parts is very fruitful, but two thirds of the province are barren and mountainous.
It's principal rivers are the Rhone, Durance, Ifere, and the - Drome.

Grenoble is the capital city, the wollen fluffs, of which they make a great many, are but coarfe, but their fkins and gloves are very much efteemed.
Vifnne was once a vary large and famous city, but is at prefent not above the fourth part of it's former extent; the inhabitants are very expert in making divers forts of manufactures, particularly plates of iron and fteel, paper, \&c; by means of mills and engines upon the river Jura.
DEBENTURE, a term in traffic, ufed at the cuftom-houfe, when the exporter of any goods or merchandizes, is intitled by act of parliament to any bounty or drawback on their exportation; and this debenture is a peculiar certificate figred by the officers of the cuftoms, which entitles the trader to the receipt of fuch bounty or drawback.

## Remarks.

The bounties and drawbacks allowed in this kingdom for the encouragement of trade, making a very confiderable part of the bufinefs of the çuftoms, and requiring all debentures upon fuch occafions to be made out correctly, and in due form, according to the feveral acts of parliament made in that behalf, we have judged it ferviceable to all merchants, as well at the out-ports, as at the port of London, to be well informed in what fo nearly concerns their intereft, left (as was the cafe the other day with an eminent merchant of the city of London, in regard to a drawback) they fhould be fufferers for want of duly obferving form and time, in the exportation of certificate goods. See the article Drawbacks.
Of the nature of Debentures, and the feveral effential forms thereof relating to the bufinefs of the cultom-houfe, as well at the out-ports as the port of London.

* All merchandizes that are defigned to be taken on board for that voyage, being entered and hipped, and all other requifites performed, as we have, and shall reprefent, at the end of every letter, according to the nature of the goods, and the place to be exported to; before the veffel may depart, the mafter mult deliver to the collector, \&cc. a content (ufually called in the our-ports a report) in writing, under his hand, of the name of every merchant and other perfon, that fhall bave laden any goods on board his fip, together with the marks and numbers of the goods; and muft publickly, in the open cuftom-houfe, upon oath, anfwer to fuch quetions as thall be demanded of him by the collector, 8 c .
* 13 and 14 Car. II. cap. 11. S. 3 .

But, before this content or report be fworn to by the mafter, it mult be compared by the fearcher, furveyor, and landwaiter, with the merchant's endorfements on their cockets ; and, if found to agree, the fame muft be certified thereon: the form of which content or report, and the execution of what is required to be done, muft be as follows;

## Port of South.

ampton.
In the flip Taviftock of London, Britifh built, property all Britif, about two hundred tons, with thirty-nine men, of which thirty-feven are Britifh men, and two aro foreigners, befides Daniel Bright, a Britifh foreigners, befides Daniel Bright,
man, mafter for this prefent voyage to Jaman, matter for
maica in America.

Or , if the mafter be a quaker,
Suprafcriptam declarationem omni modo efle veram, dictus Daniel Bright
Solenniter declaravit $\frac{18}{24}$ die Martii ${ }^{1730}$, coram nobis
A. B. Collector or

Cuftomer,
B. C. Comptroller. ly, fincere, and truly declare and af-
firm $]$ That the entry or content above writen, now tendered and fubreribed by you, is a juft report of the name of your fhip, its burden, built, property, numbers and country of mariners, the prefent mafter and voyage; and that it further contains a juft and true account of all the goods, wares, and merchandizes, laden on board your faid fhip for this prefent voyage, togecher with the particular marks, numbers, quantities, qualities, and properties of the fame, to the beft of your knowledge and belief; and that if you have on board any certificate-goods, or goods that receive a draw-back, bounty, or premium from his majenty on exportation, you wil not fuffer them to be relanded, or unfhipped in order to be relanded, in any part of Great-Britain, without the prefence of an officer of the cuftoms: and that you will not take in any more goods for this prefent voyage, without duly entering the fame, and adding them to this report. So help you God.

Daniel Bright.
The fhip being thus cleared, it is to be noted in the margin of the fhip's entry-book outwards, mentioning the particular day: and, if the mafter thould afterwards take in any more goods, they mult be added to the report, underneath the tormer goods, thus :

Added the 24th of March, 1730
B. R. No. 3. I Cheft Glafs and carthen ware B. Reeves. Examined by the cockets, Signed-Daniel Bright.
D. E. Searcher,
E. F. Surveyor,
F. G. I. and-waiter

And then the report muft be fworn to de novo, inferting the day, under that fworn to before: the like muft be repeated as often as any goods are taken in after clearing.
If a fhip trades in goods for different places, they fhould be particularly diftinguimed in the report: as fuppofe the aforefaid veffel had taken in goods for Ireland, Madeira, and Jamaica.

For Ireland.
$\left.\begin{array}{l}\text { S. G. I }\end{array} \begin{array}{c}\text { For Ireland. } \\ \text { I box lace } \\ \text { For Madeira. }\end{array}\right)$ Samuel Grimes.

The mafter having cleared, all the cockets are to be delivered to the fearcher, furveyor, and land-waiter, who are to examine the fhip, to fee if there be any more goods on board than mentioned in the indorfements of the cockets; and, if there be not, they are to difcharge the tidefmen, and deliver the cockets to the mafter, permitting him to proceed on his voyage.
And, if after a fhip has cleared for foreign parts, at any one port of Great-Britan, he hould proced to any other to take in more goods, fhe muft alfo clear at each of thofe refpective ports; and the goods taken in at the former, muft be fpecified in thefe ports: as fuppofe the fore-mentioned thip was to proceed to Chichefler, in the report muft be mentioned the goods hipped at Southampton, and alfo thofe taken in there, and fo at every port.

Vol. I.

Of the aforefaid reports, two are to be fublcribed by the mafter; one of which is to be taken in a book to be kept at the port for that purpofe; and the other on loofe paper, to be kept on a file, till the end of each quarter, when they are to be tranfinitted to the regifter-general of all thips belonging to Great-Britain, to be examined whether duly fworn to and attefted, and the hips navigated according to the act of navigation.
The fhips being regularly cleared out and difcharged according to the foregoing directions, and aciually failed out of the port on their intended voyages, debentures may be made out from the exporters-entries, in order to obtain the drawbacks, allowances, bounties, or premiums, that are due on exportation of any goods on board: * the which debentures for foreign goods, are to be paid within one month after demand. + Am, in making out thefe debentures, it muft be oblerved, 'That every piece of vellum, parchment, or paper, containing any debenture for drawing back cuftoms or duties, muft, before writing, be flamped, and pay a duty of eight pence.

* ad Rule of book of rates.
$\dagger 9$ Ann. cap. 23. §. 22, 24
The forms of the feveral kinds of debentures are as fullow: 1. À debenture for all corn, except malt.

 <br> <br> K. L.}
## A debenture for malt.

As to the form of a debenture for malt exported, it will appear, by the following example, to be not much different from that for all other corn; but it is to be noted, that the bounty for malt is not to be computed on the real quantity Chipped, as for all other corn, but * after the rate of thirty quareers, and no more for every twenty quarters of barley, or other corn or grain entered and made into malt, as thall appear by a certificate from the officers, with whom the corr to be made into malt for export, was entered; though the barley or other grain, in making, fhould have exceeded or fallen fhort of a quantity in proportion to thirty quarters malt, for every twenty quarters corn.

* $12 \& 13$ W. III. cap. 10. §. 9: \& \& .

The form of the debenture.
Port of Southampton.
Jurat. A. B. That the malt herein men tioned is not reland ed, or intended to be relanded in Great Britain, or the iflands of Guernfey or Jerfey.
14 die Januarii $173^{\circ}$, coram nobis
B. C. Colle Ator, D. E. Comptroller.

Thefe are to certify, That I A.B. of Southampton, did, on the Ioth day of January, 1730 , enter for Rotterdam, on the fhip Goodfellow of Hull, a Britifh Mip, whereof William Miller the mafter, and two thirds of the matiners, are his majefty's fubjects, one hundred and feventeen quarters, and two bufhels of malt, Winchefter mealure ; and that the price of malt, Winchefter meafure, in the port of Southampton, the laft market-day, did not exceed twenty-four thillings per quarter.

Witnefs my hand, the roth day of January, 1730 .
A. B.

## D E B

Jutavit A. B. That the contents of the cerificate abovementioned are true, coram nobis
B. C. Collector, D. E. Comptroller.

Bond is taken on the penalty of 50 pounds, that the malt abovementioned (the danger of the feas excepted) Alall be exported into parts beyoud the feas, and not be again landed in the kingdom of Great-Britain, or the illands of Guerney or Jerfey.
B. C. Collector,
D. E. Comptroller.

By a certificate produced to us $f$ the proper officers of excife (which is hereunto annexed) it appears, that the aforefaid one hundicd and feventeen quarters and two bufhels of malt were made from one hundred and five quarters and one buthel of bailey [or other grain]: and by an act of 3 Geo. II. the fard A. B. is entitled to a bounty or premium of two thillings and fixpence per quarter upon one hundred fiffy-feven quarters four bufhels of malt, being according to the tate of thirty quarters of mals, for every twenty quarters of ba:ley, or other gram malted for exportaticn.

> B. C. Collector, C. D. Cuitomer, D. E. Conptroller.

On the back of the two laft debentures muft be endorfed the drawback to be repaid, as follows:
The duty to be repaid for the printed linens and $\gamma^{1}$. s. d. printed filk handkerchiefs, within-mentioned, $\}$ II 120 amounts to eleven pounds twelve Ghillings -$\}$

> A. B. Collector, B. C. Comptroller, $\}$ of the cuftoms.

* The debentures are to bedslivered to the exporter, to produce to the collector of thofe duties, by whom, or the commiffioners, the drawback is to be paid, or the fecutity given difcharged, if they were only fecured.
* 10 Atin. cap. 19. §. 93.12 Ann. cap. 9.

14. A debenture for Britifh flarch.

Port of Southampton.
Roger Crompton did enter with us, the $13^{\text {th }}$ day of February, ${ }^{1} 733^{\circ}$, In the Diligence of Briftol; Henry Hopkins mafter, for the Streights, fixty-three hundred weight, three quarters, and twenty-one pounds of Britifh-made ftarch, making feven thoufand, one hundred, fixty-one pounds net; the duties whereof have been paid for his majefly's ufe, to the proper officers appointed to receive the fame, after the rate of two-pence per pound weight, being made funce the fecond .8 C

## D E B

of Auguf, 1714, as appears by the oath [or affirmation] of Charles Owen.
A. B. Collector, B. C. Cuttomer, C. D. Comptrolier.

Bond is taken in the penalty of 1201. that the above-mentioned ftarch fhall be fhipped and exported, and that the fame, or any part, fhall not be relanded in any part of Great-Britain.
A. B. Collector,
C. D. Comptroller.
15. Debentures for Britifh foap, paper, and candles.

The form of thefe is exactly the fame as of that for flarch; but the particular goods, the duties paid, and the proof of it, muft be inferted according to the following examples, viz.

## SoAp

Twenty-four firkins, and forty-eight half-firkins, containing three thoufand feventy-two pounds avoirdupoife weight, of Britifh foft foap, the duties whereof have been paid for his majefty's ufe, after the rate of one penny half-penny per pound, as appears by certificate under the hand of G. H. the collector, dated the 26 th of January, 1730.

## Pafer.

Four hundred and eight yards fquare of Britifh ftained paper, the duties whereof have been paid for his majefty's ufe, after the rate of one penny half-penny per yard fquare, as appears by certificate under the hand of G. H. the collector, dated the 12 th of January, 1730 .

## Candees.

Five hundred pounds of Britifh tallow candles, and three hundred and forty pounds of Britifh wax candles, avoirdupoife weight, the duties whereof have been paid for his majefty's ufe, after the rate of one penny per pound for the tallow candles, and eight pence per pound for the wax candles, as appears by certificate under the hand of G.H. the collector, dated the 14 th of February, 173 .
On the back muft be endorfed the drawbacks to be repaid, as follow:
The duty to be repaid for the farch within-men- l $^{\text {1. s. d. }}$ tioned, amounts to fifty-nine pounds, thirteen $\} 59$ I3 6 fhillings, and fix-pence
$\left.\begin{array}{l}\text { A. B. Collector, } \\ \text { B. C. Comptroller, }\end{array}\right\}$ of the cuftoms.
Being thus executed, they are to be delivered to the exporter, in order to procure the drawback.
16. A debenture for fifh.

Portof Southampton. Thefe are to certify, That Thomas Fielding did enter with us, the 27th day of February, 1730, in the Dili-

Jurat Thomas Fielding, That all the fifh herein - mentioned, are Britifh taken, and really exported to, or for, parts beyond the feas, and not relanded, or intended to be relanded, in GreatBriain.

Thomas Fielding, agent.]

Jurat $22^{\circ}$ die Martii, 1730, coram nobis A. B. Collector, C. D. Comptroller. gence of Brittol, Henry Hopkins malter, for the Streights, fixty-eight barrels of falmon, of Britifh taking and curing. Witnefs our hands, the gth day of March, 1730 .
A. B. Collector,, B.C. Cuftomer, C.D. Comptroller.

Thefe are to certify, That we have examined the ( ${ }^{*}$ ) fixty-eight barrels of falmon above-mentioned, each barrel containing forty-two gallons winemeafure, and marked, or branded, with the letters E. A. and find them all to be well cured, and merchantable, and that they were fhipped the ift day of March prefent.

Certified the 20th of March, 1730 .
D. E. Searcher,

E: F. Affifant-Searcher.
In filling up the fearcher's certificate of the fhipping and condition of the fifh, it muft be oblerved, that the number, fize, and fpecies of the finh, muft be diftinetly expreffed, and that, after this mark ( ${ }^{*}$ ), there muft be added as follows, according to the feveral refpective forts, viz.
-Cafks of pilchards, or fhads, each cafk containing 50 gal . lons wine meafure.

## D E B

-Hundreds of cod-fifh, ling, or hake, each fifh containing 14 inches, or upwards, in length, from the bone in the fins to the third joint in the tail, and punched in the tail, according to act of parliament.

- Barrels of wet cod-fifh, ling, or hake, each barrel containing $3^{2}$ gallons, wine meafure.
- Hundreds weight of dried cod-filh, ling, or hake, called haberdines.
-Barrels of white herrings, or full, or clean, thotten red herrings, containing 32 gallons, wine meafure.
And for falmon, pilchards, fhads, herrings, and dried red fprats, mult be added, That each barrel, or cank, is maiked, or branded, with the letters E. A.

And on the back of the aforefaid debenture mult be endorfed the bounty that is to be paid on the exportation, thus:
The premium to be paid for the filh exported, as 7 l. s. d. $\left.\begin{array}{l}\text { within-mentioned, amounts to fifteen pounds, } \\ \text { fix fhillings }\end{array}\right\} .1560$ ning
A. B. Collector, B. C. Cuftomer, C. D. Comptroller.

And, if the collector has proper money in his hands to pay the fame, the exporter's receipt muft be taken for fuch bounty, as follows:

Southampton, the 23 d day of March, 1730 .
Received of the honourable the commiffioners of 7 l. s. d $\left.\begin{array}{l}\text { his majefty's cuftoms, by the hands of A. B. their } \\ \text { collector in this port, the fum of fifteen pounds, }\end{array}\right\} 1560$ collector in this port, the fum of fifteen pounds,
fix fhillings, in full of this debenture
Witnefs C. D. Comptroller.
But, if the collector has not fufficient money in his hands on the new duty on falt imported, or on the branches chargeable with the payment of corn debentures, the fame mult be certified to the commiffioners, as follows:
Thefe are to certify the honourable the commiffioners of his majefty's cuftoms, That the collector of Southampton has not money in his hands arifing by the duty of three pence per gallon on foreign falt, or by cuftoms, out of which the bounties for corn are payable, fufficient to pay this debenture. Witnefs our hands this $23^{\text {d day of March, } 1730 .}$
A. B. Collector,
B. C. Cuftomer,
C. D. Comptroller.

And when this debenture, with the aforegoing certificate thereon, is produced to the commiffioners, their fecretary is to examine it, and fignify the fame, as follows:
I have examined this debenture, and do find the requifites of law duly performed; and by the aforegoing certificate it appears, that there is not fufficient money in that port to pay the fame.
F. G. Secretary.

Whereupon the commiffioners will order the payment, as follows:

Cuftom-houfe, London, the 27 th day of March, 1730 . You are, in three months from the date hereof, to pay in full of this debenture, out of fuch money as fhall then be in your hands, arifing by the duty of three pence per gallon on foreign falt imported, or, if the fame be deficient, out of the cuftoms or duties chargeable with the payment of the bounty for the exportation of corn or grain, the fum of ffteen pounds fix hillings.
To L. M. Efq; receivergeneral, and cafhier of

## G. H. <br> H. I. $\}$ Commiffioners.

And when, for want of money, the debentures are not paid at the port, but certified to the commiffioners, duplicates thereof muft be drawn out in proper columns, in like manner as before defcribed for com-debentures, in order to be fent therewith.

## 17. A debenture for beef or pork.

Port of Southampt. Thefe are to certify, That John Fowler didenter with us, the 2oth day of March, Jurat John Fowler, 1730, in the Dilgence of Buftul, HenThat all the beef, ry Hopkins maffer, for the Streights, herein - mentioned, one hundred cafks, quantity one bunwas falted with fo- dred ninety-five barrels and an half" of reign falt only (with - falt beef, for fale, each barrel conout any mixture of Britifh or Irifh falt) for which the duties have been paid, and not drawn back, and
taining thirty-two gallons, wine mea fure, all good and merchantable, and falted with foreign falt only (without any mixture of Britifh or Itifh fatt) for which the duties have been paid, and

## D E B

hat the fame is really exported to parts beyond the feas, for fale, and that no part thereof was fpent, or intended to be fpent, for the thip's ufe, and was not relanded, or intended to be relanded, in GreatBritain.
John Fowler, ex-
porter [or his agent].

## D E B

Southampton, the $24^{\text {th }}$ of March, $173^{\text {n }}$.
Received of the honourable the commiffioners of 7 l. .. d. his majefly's cuftoms, by the hands of A. B. their collector in this port, the fum of ten pounds, 1049 four hillings, and nine pence, in full of this debenture
Witnefs
John How.
C. D. Comptroller.
19. A debenture for foreign goods.

* As foreign goods imported, and afterwards exported to foreign parts within three years (accounting from the mafter's report of the fhip) are intitled to the drawback of furh duties as are by law to be repaid: therefore, when regularly flipped for exportation, debentures mult be formed from the certificate of the payment, or fecurity inwards.
In making out the debentures it muft be obferved, that, if the goods mentioned in the certificate were imported at any other port, feparate debentures muft be made; and, when Thipped, and the exportation duly fworn to, they mult be fent to the port, or ports, of importation, to have the duties computed and repaid; and the original certificate muft be fent therewith; and, if the duties were paid at London, a duplicate in the following form :
* Second, fourth, fixth, and twenty-fixth rules of the book of rates. 9 and 10 W. III. cap. 23. §. 18. 7 Geo. I. cap. 21. §. 10.

Port of Southampton.
In the Taviftock of London, Daniel Bright mafter, for Jamaica.

Robert Anhby.
The fublidy, new fubfidy, one third fubfidy, two thirds fuofidy, additional dury, and impoft inwards, for feventy-two callicoes, were paid at London by the united company, the 3oth of May laft, being for the 15 per cent. on callicoes; twenty long cloths at fixty-five fiillings per piece, lot F V A, folio 104, fold Lane by the Grantham; as by certificate from London, in the name of Salter and company, dated the $3^{\text {d }}$ of January liaf. Dated at the cuftom-houfe, the 2oth of March, 1730.
A. B. Collector, B. C. Cuftomer, C. D. Comptroller.

## To D. E. colleetor outwards,

in the port of London.
Of the aforefaid debentures there are but two forts, viz. one for tobacco, and another for all other foreign goods.

## I. Debentures for tobacco.

In the execution whereof, it muft be particularly obferved, 1. * That debentures for the fame quantity may be made in one or more parchments; and therefore it is the practice of London, Brifol, \&c. when the bondable duties were fecured at importation, to make out a diftinct debenture for them, and another for the old fubfidy; in moft other ports they are ufually made on the fame parchment, by inferting the money and bonds in different-columns.

* 7 and 8 W. III. cap. 10. §. 5 .

2.     * That the exporter's oath muft be printed, fpecifying whether he acts for himfelf, or by commiffion.

> * 7 and 8 W. III. cap. 10. §. 5. 12 Geo. I. cap. 28. 5. 24.
3. * If exported to any other foreign parts than Iteland, the word Ireland mult be added to the oath, after Great-Britain.

$$
\text { * } 6 \text { Geo. I. cap. 21. §. } 50 .
$$

4.     * That as ne tobacco may be confumed on board hips of war in Europe, but what has paid full duties, and been manufactured in Great-Britain; no drawback is to be allowed for tobacco exported in any man of war.

* 6 Ann. cap. 22. §. 13.

5. *That the eight pounds per hoghead of 350 pounds, or more, allowed for draught at importation, muft not be deducted on exportation.

* 9 Geo. I. cap. 21. §. 15.

6.     * That debentures for tobacco exported to Ireland muft 6. * That debentures for tobacco exported to Ireland mult
not be paid, till a certificate be produced, teftıfying the landing thereof as follows:

* 8 Ann. cap. 13 . §. 18.

## D E B

Port of Dublin.
Thefe are to certify all whom it may concern, That George Hill of this city, merchant, hath landed here, out of the Hope of Dublin, James Butler mafter, from Southampton, forty four thouland, feven hundred, fifty-three pounds of Britifh plantation tobacco, which came per cocket from thence in the name of Nicholas Stone, dated the 8th of March laft, for * forty-five thoufand, feven hundred, twentyeight pounds of the faid tobacco: his majefly's full duties whereof were here paid by the faid merchant, the 28 ch of March laft.

Witnefs our hands and feals of office, this fourth day of April, 173 I.
A. B. Collector, B. C. Comptroller, or Surveyor.

* To be omitted where there is no variation between the quantities Ihipped in Great-Britain, and landed in Ireland.

Each cocket mult have one of thefe, and muft be annexed to the refpective debentures, to be tranfmitted as vouchers; without which the collector will not have credit for the fame: but where the fubfidy is repaid in money, and the debenture for the bonded duties remains in the merchant's cuftody, the original certificate muft be annexed to the fublidy debenture, and $a$ duplicate of it attefted by the collector and comptroller, annexed to the debenture for the bonded duties.
7. * That if, on producing the aforefaid certificate, there appears to be any difference in weight, fo as the quantity landed is lefs than that fhipped; the exporter muft have an allowance not exceeding two per cent.

* 6 Geo. I. cap. 21. §. 48 :

8. That no perfons may fwear to the exportation, but fuch as are permitted to fwear to debentures for other goods.

A debenture for the old fublidy of tobacco, when the other duties are fecured.

Port of Southampton.

* The 61 lb . of tobacco being the difference berween the quantity to be allowed for, and that fhipped, is deducted from this article.

With refpect to the bondable duties on tobacco, it muft be obferved, that if it fhould happen that they have been fecured at importation, and the bond be paid off before the debenture be paffed, thofe duties muft be paid in money: and if the bond was paid off before due, to that difcount was allowed for the time unexpired, it mult be fpecified on the debenture, and the difcount deducted.

## II. Debentures for all other foreign goods.

In which is to be obferved,
I. * That no perfon may be admitted to fwear to the exportation, but the true exporter, either as proprietor, or who, being employed by commifion, is concerned in the direction of the voyage.

* 4 and 5 W. and M. cap. 15. S. 13. 6 and 7 W. III. cap. 7. \$.5. 12 Geo. I. cap. 28. §. 24.

2.     * That debenture for any certificate goods exported to Ireland muft not be allowed, 'till certificate be produced, teftifying the landing thereof: one of which certificates is to be required for each cocket, and annexed to the debentures, before the fame are paffed; and tranfmitted as vouchers, or the collector will not have credit for the fame: but where the fubfidy is repaid in money, and the debenture for the bonded duties remains in the merchant's cuftody, the original certificate muft be annexed to the fubfidy debenture, and a duplicate of it attefted by the collector and comptroller, annexed to the debenture for the bunded duties: and there certificates and duplicates are to be numbered to diftinguifh whether it be Iff, 2d, $3 \mathrm{~d}, 8 \mathrm{c}$. duplicate.

* ${ }^{1}$ Ann. cap. 21. §. 11. 8 Ann. cap. 13. §. 18. 5 Geo. I. cap. 11. §. 5. 9 Geo. I. cap. 8. §. 8. 2 Geo. II. cap. 28. §. 3. 3 Geo. II. cap. 20. §. 2.

And according to the quantity landed (if lefs than fhipped in Great-Britain) the drawback muft be allowed, and for no more.
3. * That a debenture mult not be made out for any falt landed in Ireland, unlefs entered outwards at exportation for fome port in Ireland.

- 5 Ann. cap. 29. §. 13.

4. That the collector and comptroller are to give the importers of falt, credit, in their account, for what falt fhall be exported to any foreign parts, by debentures,
Vol. I.

## A debenture for any other foreign goods than tobaceo.

## Port of Southampton.

Robert Alhby did enter with us, the i6th day of March, 1730, in the Taviftock of London, Daniel Bright mafer, for Jamaica.
The fubfidy, new fubfidy, and one third fubfidy inwards, were paid for feven hundred, an half, and ten ells plain, narrow, Germany linen; by James Owen, the 18 th of June, 1729; one hundred forty-feven ells plain Holland's linen, under $1 \frac{x}{8}$ ell wide, by Roger Smith, the 7 th of December, and 15 th of January laft; three hundred weight and an half of currants, and ten pounds of nutmegs, by William Barber, the 4 th inftant; twenty reams of ordinary paper, being for the new duties, fine fool's-cap, by John Short, the 3 d of May, 1729; eight pounds of rhubarb, fourteen pounds of gentian, and feven pounds of feammony, from the place of their growth, by Samuel Hurf, the 8th of April, and 16th of November laft; two hundred weight, three quarters, and fourteen pounds of battery; five hundred weight, one quarter, and feven pounds of metal prepared, by Ralph Snow, the 3 d of Auguft, and rgth of November laft. The two thirds fubfidy was likewife paid for, all but linen and currants; the additional duty was paid for linen; the impoft 1690 was paid for, all but Holland's linen, nutmegs, battery and metal prepared; the impoft 1692-3 was paid for battery, and metal prepared; the new duty was paid for nutmegs, paper, and drugs; the additional new duty was paid for nutmegs, as dorh appear by the certificate of the collector inwards: and, for further manifeftation of his juft dealing herein, he hath alfo taken oath [or affirmation] before us for the fame.

Cuftom-houfe, Southampton, the day and year abovefaid.

## D E B

tered raifins folis and callicoes, though not inferted in the debenture, becaule the duties of the former were paid at Pool, and of the latter at London: in fuch cafes feparate debentures muft be made out, and fent to the refpective ports, to have the duties there computed and repaid; and the exportation fworn to, if exported by his order, who fent them from the port of importation ; remembering to have a diftinct parchment for the duty of 15 per cent. on mullins or callicoes.
All the feveral kinds of debentures, the forms of which are here given, muft, before delivered or paid to the exporters be entered into a feparate book, to be kept for that purpofe by the collector and comptroller, in the forms preceding.
See the Table thereof.
DEBIT, among book-keepers, is ufed to exprefs the lefthand page of the ledger, to which are carried all articles fupplied, or paid, on the fubject of an account, or that is charged to that account.
DEBTOR and CREDITOR, an art fo called, which is made ufe of by the moft fkiliful and eminent traders, in order to keep an exact account of all their commercial traniactions.

## Remarks.

Under the articles of Accountantship, Book-Keeper, and Books of Merchants, we bave gradually introduced the reader into a knowledge of this uffeful and important method of account-keeping ; to all which we refer: and under the head of Bainking I have, upon a fingle theet, exhibited to one view, in a plain practical light, how eafily this art is applicable to that branch of bufinefs. This I have done in the ledger-form only, judging that the mot intelligible, as it is the moft effential book of all, and all others only preparatory thereunto. And having given a full account of the nature and ufe of all books auxiliary to this, under the article Books of Merchants, I fhall not repeat what I have there faid, but proceed to delineate the whole art of Debtor and Creditor, according to it's true and fundamental principles, at one view, and that allo upon one fingle fheet for that purpore; which, being comprehended, will enable any perfon to apply this art to any kind of negoce whatfoever, and that either of a public or private nature. I am the more readily induced to chufe this ledger-form rather than any other given in the ordinary way by voluminous writers upon this fubject, the fpecimen before given therecf, in regard to the bufinefs of banking, having met with fo good a reception.
Previous to which, I fhall only defire the reader to obferve the few following general rules, for his government in the ftating of accounts, according to the method of debtor and creditor, or the genuine Italian method, by double entry. As I. The account unto which any thing comes, or upon account of which any thing goes out, is to be charged debtor for the fame, and it's total amount.
2. That account from whence the fame comes, is to be difcharged thereof, or made creditor for it.
And although this art is of fo very extenfive a nature as to be applicable to every kind of bufinefs whatfoever, where accounts are requifite, that the ftate of fuch accoupts fhould jufly and truly appear upon the ledget; yet all kinds of accounts that can happen upon this principal book, are reducible to fo few a number, as four; and; if I may be allowed an expreffion borrowed from the mariner, the boxing about of thefe four diftinct fpecies of accounts, fuitably to the nature of the tranfaction, either by way of charge or difcharge, or according as thefe certain accounts thall require to be ftated, either as debtors or creditors, comprehends this whole fcience, notwithftanding the prolixity of authors who have profeffedly wrote thereupon.

## Explanation by Examples.

1. If you buy goods for ready money, you debit Merchandize General, or Particular, and credit Cash.
2. If you tell goods for ready money, you debit Cash, and credic Merchandize General, or Particular.
3. If you buy goods part for ready money, and part on credit, you delit Merchandize General, or Particular, and credit Cash for the fum paid, and the Personal Account for the fum due.
4. If you fell goods on credit, you debit the Personal Account, and credit Merchandize General or Particular.
5. If you fell goods for a part credit, and a part ready money, you debit Cash for what you receive, and Personal Account for what remains due, and credit Merchandize General or Particular by both,
6. If you order foreign merchandizes to be fent for your own account, you debit Designs, or Voyage, from, \&c. to, \&cc. and credit Personal Account for the whole coft and charge, as per invoice and infurance, \&c. in the forcign money of the country *.

* As your foreign correfpondent, in this refpect, acts as a factor for you, and you are indebted to him only, according to the invoice, in the money of his country, you mutt enter this tranfaction under the head of fuch perfonal account thus: A. B. of Libon. My foreign account, and credit him in millreas, the money of account in Lifbon, and value fuch money at the price of exchange; and, when you pay him, either by remitting him, or by his drawing on you, you debit A. B. in the fame foreign account, and credit the account of draughts or remittances, 'till you have paid the money, and then debit either of them, and credit cath. And, as you credit his perfonal account, according as the courfe of exchange then is, fo you debit him according to what yon really pay for fuch foreign meney, whereby the difference between the flerling columns of fach foreign account will fhew whether you gain or lofe by the exchange, from the firft valuation.

7. If you fend a foreign correfpondent goods for his account, you debit his Personal fteriing account, and credit Mer-chandize.-Or, if you buy the goods on credit, you may credit the feller for what is due, and Cash, or Charge of Merchandize *, for what you expend, and credit Commission Account for your commifion.
*Thisaccount of Charges of Mirchandize frequently anwers the end of an intermediate account to Profit and Loss, and may be made an excellent blind upon many occafions ; for it is debtor to calh only for what is really paid on that account, but it may be creditor for more, and for commifion, \&cc.-And the difference in the ballance paffed to profit and lofs, or to capital fock, \&cc.-By this account he profits or loffes of traders may be fo artfally concealed to anfwer temporary purpofes, \&c. as few can difcover but he thorough-paced accountant.
8. If you import goods from a foreign correfpondent to fell by commiffion, you debit Merchandize for Account, of such Person, and credit Charges of Merchandize, for the duties and all incident expences.-And when you make out the account of fales * of thofe goods; and fend the fame to your correfpondent, you include your commiffion therein.-And, in your own books, you debet merchandize account of fuch perfon to Commission, and to the STerling Account of fuch correfpondent, and credit, Commission account, and fuch correfpondent's Sterling Account.

* See the article Account of Sales, under the article Account, where are contained fome particular remarks upon the making out fuch accounts.

9. If you fend goods to a foreign correfpondent to fell for your account by commiffion, you debet Voyage to fuch a place, configned to fuch perfon, and credit Merchandize for the coit, and Charges of Merchandize for all incident expences.-And fend an invoice * therewith.

* An invoice is an account of the coft and charges of the goods fent, for the government of your factor in the fales of fuch goods. But it being cuflomary among merchants to add 5 or 10 per cent. or more, upon the invoice, in order to induce a factor to fell more to the advantage of his principal, it is feldom much regarded. See the article NYouće.
ro. When your factor renders you an account of fales of fuch goods, you debet his foreign account, and credit the accoun of Voyage to him configned; which you value in the outer columin in fterling money, according to exchange, which is rectined afterwards on the ballance of the account, as before oblerved. So that the profit or lofs upon fuch goods, will appear upon the account of voyage, \&cc. And when your factor remits you, or you draw upon him for the net produce of your goods, you debet the account of $\mathrm{De}_{\mathrm{E}}$ signs (i. e. Draughts or Remittances) and credit your factor's Foreign Account.-And, when you receive the monsy, you debet the account of CASH, and credit the

## D E B

account of Draugets or Remittances; which concluds the whole adventure.

## RemARKs.

If thefe few inftances only are thoroughly comprehended, and the reafon of them, the attentive reader will eafily obferve, that the boxing of thefe four different kinds of accounts, by way of charge and difcharge, to keep the books in a ballance, includes the whole art : and any peifon who reprefents thefe four articles before him, they will prove a conftant guide in the fating of all manner of accounts, though ever fo complicated.
And, when he has made himfelf a mafter of the true debtors and creditors, the regiftering tranfactions minutely and circumftantially in the wafte-book and journal, in order to be pofted from thence into the ledger, will be extremely eafy.
But, left what has been faid thould not prove fo intelligible as 1 could wifh, I thall make ufe of another method of explication.
As all tranfactions in trade are mutual between perfon and perfon, fo the confideration how thofe we deal with are to Itate their accounts, in order to be in conformity with our own, will ferve to help the young accountant to the true method of ftating of his debits and credic. Example:
If you in England agree with a foreign correfyondent to be equally concerned with him in a cargo of merchandize, and confign the fame to him for difpofal, the firft coft, charge and infurance, $\& c$. being 2000 l .-Confider, you muft either have fuch merchandize by you, or you mult purchafe them-If you have them by you, they mult ftand debtor in your books for their prime coft and charge, as before thewn.-Or, if you pur. chafe them, they will ftand debtor to the feller, if you had credit, or to cafh, if bought for ready money, and perfons or cafh muft have credit for the fame. When fuch merchandizes go out of your poffeffion, reafon fays that they muft no longer remain debtor, as if they fill remained in your polfeflion-If fo, when you part with thefe goods, you are certain that they muft have credit. What then is the proper creditor is the next queftion? For every debtor muft have it's counterpart creditor, to conflitute the double entry, and every creditor it's counterpart debtor.
If you part with thefe merchandizes to be fent by fea to a foreign correfpondent for your joint account, reafon dictates that fuch a correipondent cannot be a debtor for the whole, fince he is but a half part interefted therein. But reafon fays, as foon as the goods are thipped, that he is anfwerable for his patt, wherefore here is one debtor. Quere, What fays plain reafon ought to be the other, that both may make up the whole? -The anfwer is fo eafy, that it can frarce be miftaken.
Designs muft be the other, under the title of voyage to fuch place, configned to fuch a one.-So that, by this method of entry, there will be two debtors to make up the counterpart creditor.-Whence it appears, that when' your foreign correfpondent, and partner in this adventure, renders you an account of fales for your part, you debet him and credit the voyage aforefaid; whereby the proft or lofs arifing will appear upon this voyage-account on the ledger.
There is another manner of ftating this tranfaction. Let voyage, \&c. in company, \&c. be debtor to merchandize for the whole coft and chirge of the adiventure, and debit your foreign correfpondent toithe voyage; which method of entry rendering the voyage in company, $\$$. $c$. debtor for the whole, and creditor for one half, leaves that account virtually a debtor only for one half: and, being made creditor for one half, the net proceeds will confequently thew the profit or lofs upon this occurrence.
Confider on the other hand, how your foreign correfpondent ftates this affair in his books. Upon writing him that you have fhipped fuch goods for your joint account, he fates the affair in his book thus: Voyage from London, in company, \&c. debtor to your fterling account, for his half part of the coft, charge, and infurance, \&c. and gives your fterling account credit in conformity; which fhews the true ftate of his affairs with you, if he dies before the goods arrive.-On their arrival, he pays duties and other charges.-For which he may either debit the voyage, \&c. for his half part, and you for your's in your foreign account, to his account of cafh, and credit that account for what money he expends; or he may dicharge the voyage account by debiting merchandize in company thereto for his own part, and to the account of cafh for the whole he expends, and then debit you to merchandize in company, \&cc. for your part of the cuftoms and charges 'till fold. - And, when fold, may give you credit by merchandize in company for your half the net produce, exclufive of thofe duties and firft charges.- Or he may place the whole charges to the company account, and credit you at the conclufion for your half the clear net proceeds, \&c.
If you order a correfpondent at one foreign port to lade goods for another foreign port, and confign them to fuch a one for your account and rifk, how muft this account be ftated in your books?
'Tis certain that he who fends the goods, according to your order and direction, is your creditor for their coft and charge. -But the perfon to whom you ordered them to be conligned,

## D E B

## D E B

athinot be your debtor before he has receired thole goods Here therefore interpofes the intermediate account of Defigns, under the denomination of voyage from fuch a place configned to fuch a one debtor, and the perfon who fends the goods is the creditor in his foreign account of money of his own country, as before intimated.
When your correipondent, to whom you have configned fuch oods, writes you of the fale, and net produce thereof, you debit him in his foreign account, in the money of his country, and credit the account of voyage, \&cc. conligned to him. Whereby the proft or lofs ariing from this adventure will appear upon the voyage account, when the values of the foreign money come to be afcertained in fterling. And as the firt correfpondent who fent and configned thefe goods to the latter by your order, is your creditor, and the other is your debtor; it is natural in the courfe of bufinefs, efpecially if the exchanges fhould at fuch time prove favourable, to order your creditor to draw upon your deltor for his reimburfement, or your debtor to remit to your creditor.-Let which will of thete two be the cale, you mutt debit the creditor; or credit the debtor; which keeps both their accounts in a juft light in your own books.-Or, if it is more convenient or advantageous for you to remit your foreign creditor, or order him to draw on you, you debit him in his foreign account, wherein he had credit, to draughts or remittances in conformity, and credit either the one or the other, according as the tranfaction has fell out.-And, when you actually pay the money for fuch draught, or remittance, you debit one of thele accounts to cafh, and credit cafh, which keeps all the ccounts right and in a ballance.
Let it be confidered alfo, in what manner both thefe foreign correfpondents enter thefe mercantile negotiations in thei books.-As that correfpondent to whom you gave the firft order, is your creditor in your own books; fo you are of courfe his debtor in his books, in your account current in the money of his country, for the coit, charge, commiffion, and infurance, if not made by yourfelf, for the amount of the whole invoice of fuch goods fent for your account.-If then you ere a debtor in fuch correfpondent's books, what is it realonable to make the counterpart creditor? -T The anfwer is mishty natural, from the principles before laid down. Merchandizes going out of his poffefion, 'tis certain, that account is one creditor to make up a part of the whole; and, as there neceffarily accrue charges of merchandize, and commiffion, \&cc. thele diftingt intermediate accounts of Defigns will make up the other part.-And when be draws upon you, or you remit him for the whole, he then credits or difcharges ou, and debits his account of draughts or remittances. And, when he receives his money for the bill of exchange, he debits his account of calh, and credits draughts or remittances, according as the affair has turned out.
The other correfpondent, who has the difpofal of your goods, does, upon the receipt thereof, pay the duties, freight, and other incident charges.-For which he debits merchandize for your account, and credits his cafh for what he expends upon this occafion. -When he difpofes of your grods, as it mult be either for ready money, on credit, or for both:-He credits'your merchandize account by thefe refpeclive accounts, and debits them as counterparts conformably thereunto. -So that, in order to conclude this account upon his books, he debits the fame for all after-charges, and bis commiflion, and credits the account of charges of merehandize, and commiffion; and, by fubtracting the fum total on the debit fide from that on the credit, fhews him what is due to you for the net proceed of fuch merchandize.-Which he paffes from the debit of your merchandize account to the credit of $y$ wur account current, upon his rendering you an account of fales for the fame.-Or upon his remitting you for the fame, or your drawing on him for it, or any foreign correfpondent, by your order, he then debits your account current, and credits draughts or remittances, 'till the bill or bills of exchange fhall be paid. - And, when actually paid, he debits either, or both of thele accounts, if the tranfaction requires it, and credits the account of carh, which ends this tranfaction in his books.
By thus confidering, how all, and every the different parties with whom you tranfact bufinefs, ftate their tranfactions with you in their books, you will, as it were, be naturally led to the flating of any thing that occurs in your own books, even in the moft fingular and perplexed cafes; and thar, with the affiftance only of thofe four diftinct fpecies of accounts, fuppofed to exift upon the ledger; nothing happening, which falls not under fome peculiar fubdivifion of the one or of the other.
That nothing, however, may be wanting to render this admirable method of accountanthip perféally intelligible, we Thall add to what has been already reprefented, undcr the various heads before referred to, a variety of very curious and real mercantile tranfactions; which will not only very amply exemplify the fcience, but at the fame time exhibit in what manner the practical art of merchandizing is carried on by thofe, who have been efteemed to be the moft fkilful therein. This we hall do, under the article Mercantile Accountantship, and Ledger; wherelikewife fhall be fhewn,

Vod. I.
how thismethod of accounts by debtor and creditor is applicable to the accounts of the nation; and may ferve to afcertain indifputably the true and genuine fenfe of all acts of parliament, that may be hereafter made, in regard to the Funds, and Public Revenue of this kingdom; the public and the public creditors always righted, in any future variations, with regard to their property, and many rancorous difputes and altercations, both within doors and without, thereby happily prevented.

Some of the principal laws of England, relating to debt and debrors.
3 Edw. III. c. 23. None to diftrain a forcigner in any city, town, \&c. for any debt not juftly his, on pain of grievous punifhment.
2 Rich. II. c. 3. Judgment thall be given againft a debtor, who, having made a fraudulent conveyance to defraud creditors, retires into a privileged place, and refufes to appear on proclamation by the fheriff
3 Jac. I. c. 15 . 14 Geo. II. c. 10. Citizens and freemen of London, and others, having debts owing under 40 s . to caufe the debtor to be fummoned to the court of Requefts at Guildhall; refufing to appear, to be imprifoned in one of the compters, \&cc. But this act not to extend to debts for rent, or on real contracts, \&c
4 and 5 Ann. c. 16. In debt on fingle bill, \&c. the defendant may plead payment in bar. And pending an action on bond, \&c. the defendant may bring in principal, intereft, and cofts; and the court thall give judgment to difcharge the defendant
1 Stat. 2 Geo. II. cap. 22. fect. I I. Mutual debts between plaintiff and defendant, or if either party fue or be fued, as executor or adminiftrator, between the teffator or inteftate, and either party, one debt may be fet againft the other, and matter given in evidence on the general iffue, or pleaded in bar, as the cate thall require, if notice be then given of the fum to be infifted on, and on what account due. Made perpetual, 8 Geo. II. cap. 24 .
2 Stat. 8 Geo. II. cap. 24. fect. 5. Mutual debts may be fet againft each other, by being pleaded or in the general iffue, though deemed of a different nature, unlefs either accrue by penalty contained in a bond or fpecialty. In fuch cafes it thall be pleaded in bar, fetting forth what is juftly due on either fide.

## Debt to the king.

I Mag. chart. 9 Hen. III. cap. 8. and 18. The king's debt not to be levied on lands, when there are goods and chattel to fatisfy; nor Chall pledges be diftrained when the principal is fufficient, and if they anfwer the debt, to have the debtor's lands, \&c.
9 Hen. III. c. 18. King's debtors dying, he fhall be ferved before the executor.
x Edw. I. c. rg. The fheriff, having received the king's debt, upon his next account fhall difcharge the debtor, on pain to forfeit treble value; and the fheriff to give a tally to the king's debtor on payment.
28 Edw. I. c. 12. Beafts of the plough not to be diftrained for the king's debt, if others may be found.
25 Edw. III. ftat. 5. c. 19. Notwithftanding the king's protection, creditors may proceed to judgment againft his debtor with a ceffet executio, 'till the king's debt be paid.
13 Eliz. c. 3. All lands, tenements, and hereditaments of the queen's accountant, and lands purchafed in others names in truft for fuch, liable to execution, as if found by writing obligatory, \&c. and the queen may fell in fix months to fatisfy the debt, \&c.
27 Eliz. c. 3. The queen, \&c. may make fale of the accountant's lands, \&c. as well after his death, as in his lifetime. But the beir's lands not to be fold during his minority; and, if the accountant or debtor had a quetus in his life-time, that fhall difcharge the heir of the debt.
7 Jac . I. c. 15. No debt fhall be affigned to the king, \&c. by any debtor or accountant, other than fuch as did originally grow due to the king's debtor, \&c
DEBTS of the NATION, or the NATIONAL DEBTS Under the head of Public Credit, I have obferved the connection between the landed, trading, and monied interefts of thefe kingdoms, and how they reciprocally uphold and maintain each other: I have allo there endeavoured, and elle where, to thew upon what foundation the public credit of the ration really ftands; and upon what principles, in my humble judgnent, the fame may be built upon fuch a rock that no temporary blaft, coming from domeftic or foreign foes, can ever greatly endanger it: which fentiments are grounded upon a fure and certain method of gradually dif charging our old debts, in a moderate number of years, by a conftant and permanent finking fund, to be applied, inviolably applied, for that purpofe: where allo I have fuggetted, that on all future exigencies of the ftate, when money is wanted beyond what can be conveniently raifed within the year, it fhould be borrowed within ourfelves, and nothing of FOREIGNERS, that the nation may not be drained of it's current cafh for the payment of their interefts.

## D E B

It being my defire to communicate as much ufeful matter in as narrow a nompals as 1 am able, I have not exceceded the quantity of a fheet and a quarter, upon a fubject of fuch high concernment: within which face the judicious reader will grant, that a fubject of this nature could not be exhaufted. It is, therefore, we have referred to various other heads, that naturally correfpond with the fubject, which is not to be avoided in a work digefted into this form.-Among the reft, having relerred, from the article of Public Credit, to that of National Debts, I thall purfue the fubject in fomething of a different light, in order further to elucidate the matter, fince our National Debts are near trebled fince the reign of Queen Anne.
It is allowed on all hands, that nothing is fo great a clog, burden, and incumbrance on our trade, as the taxes with which it is loaded; more efpecially thofe which are laid upon our own produce and manufactures: wherefore it is alfo allowed, that nothing can be more for the general benefit of our whole commerce, than the taking off thofe taxes which are the moft detrimental thereto. But the grand queftion is, how they can be taken off, confiftent with the parliamentary faith, and without injury to the national creditors?
As the bulk of thofe taxes are fettled by parliament as a fecurity to the public creditors, for the due and regular payment of their intereft, and, as obferved under the article of Pubitic Credit, in the opinion of many of the wifeft men in the kingdom, fettled alfo 'till the redemption of the prin cipaldebt, how can they be taken off, 'till fuch debt is juftly and honourably paid?
If then thofe taxes, which are facredly appropriated for thofe purpofes, and which lie fo heavy upon our trade, cannot, without the sonfent of the public creditors, be annibilated, or alienated, does not the reduction of taxes abfolutely depend on the redemption of the principal debts, for which they have been mortgaged? This being the cafe, are not all fchemes and projects to poftpone and retard the Payment of such Debts, by rendering them again and again irredeemABLE, calculated to perpetuate thofe taxes to the end of time, and, confequently, to the effectual ruin and deftruction of all our trade and navigation? There can be no greater enemies, therefore, to the general commerce and the public credit of thefe kingdoms, than fuch who are brooding low fchemes to prevent the gradual payment of the debts of the nation, from that weak and fhameful maxim, that it is better for the public creditors to continue ferpetual annuitants only, and never to receive their principal money at all; that is, in orher words, it is better for the public creditor, as well as the trade of the whole nation, to labour under the preffure of our prerent taxes, than that our debts thould ever be difcharged. Let fuch who will prefume to maintain thefe principles, weigh what the learned Mr. Hume fays upon this fubject, and they may poffibly be brought a little to their fenfes.

- I mult confers, fays this ingenidus gentleman, that there is - a Atrange fupinenefs, from long cuftom, crept into all ranks - of men, with regard to public debts; not unlike what di-- vines complain of with regard to their religious doctrines. We * all own, that the moff fanguine imagination cannot hope ei-
- ther that this, or any future ministry, will be por-
${ }^{t}$ feffed of fuch rigid and fteady frugality, as to make any con-- fiderable progrefs in the payment of our debts; or that the - fituation of foreign affairs will, for ańy long time, allow 6 them leifure and tranquillity fufficient for fuch an underc taking*. What then is to become of us? Were we ever - fo good Chrittians, and ever fo refigned to providence, - this methinks were a curious queftion, even confidered as - a fpeculative one, and what it might not be altogether im-- poffible to form fome conjectural folution of. The events * here will depend little upon the contingencies of battles, * negociations, intrigues; and factions. There feems to be - a natural progrefs of things, which may guide our reafon-- ing. As it would have required but a moderate fhare of - prudence, when we firf began this practice of mortgaging, * to have foretold, from the nature of men and of minifters, - that things would neceffarily be carried the length we - fee; fo, now that we have at laft happily reached it, it ' may not be difficult to guefs at the confequence. It muft, - indeed, be one of thefe two events, either the nation muft - deftroy Public Credit, or public credit will destroy - the Nation. It is impoffible they can both fubfif, after 6 the manner they have been hitherto managed, in this as well as in fome other nations.
- In times of peace and fecurity, when alone is is poffible - to pay debts, the monied intereft are aveffe to receive par-
- tial payments, which they know not how to difpofe of to
advantage ; and the landed intereft are averfe to continue
the taxes requifite for that purpofe: why; therefore, fhould a minifter perfevere in a meafure fo difagreeable to all parties? For the fake, I fuppofe, of a potterity, which he will never fee, or of a few reafonable, reflecting people, whole uniced intereft, perhaps, will not be able to - fecure him the fmalleft borough in England. It is not tikely we thall ever find any minifter fo bad a politician: with regard to thefe narrow, destructive Mazims
of Politics, all Ministersareexpertenough

## D E B

-There was, indeed, a fcheme for the payment of our debs, which was propofed by an excellent citizen, Mr Hutchin

- fon, above 30 years ago, and which was much approved of by fome men of fenfe, but was never likely to take ef - fect. He afferted that there was a fallacy in magining that * the public owed this debr, for that really every individual owed a proportional fhare of it, and paid, in his taxes ' proportional thatre of the intereft, befide the expences of levying there taxes. Had we not better then, fays he make a proportionial diftribution amongft us; and each of - us contribute a rum fuitable to his property, and by that ' means difcharge at once all our funds and public mort' gages? He feems not to have cotilidered, that the labo' rious poor pay a confiderable part of the taxes by their an' nual confumptions, though they could not advance, a once, a proportional part of the fum required. Not to ' mention, that property in money, and fock in trade, - might eafily be concealed and difguifed, and that vifible ' property in lands and houfes would really at laft anfwer - for the whole: an inequality and oppreffion, which never would be fubmitted to. But, though this project is never ' likely to take place, it is not altogether improbable, that, ' when the nation becomes heartily sick of their Debrs, - and are cruelly oppreffed by them, fome daring projector may - arife, with vifionary fchemes for their difcharge. And as - public credit will begin, by that time, to be a little frail - the leaft touch will deftroy it, as happened in France; and ' in this manner it will die of the doctor*
* ' Some neigbbouring flates pracife an eafy expedient, by - which they lighten their public debts. The French have - a cuftom (as the Romans formerly had) of auginenting - their money; and this the nation has been fo much fa. - miliarized to, that it hurts not public credit, though is - be really cutting off at once, by an edict, fo much of their - debts. The Datch diminifh the intereft without the con-- fent of their creditors; or, which is the lame thing they - arbitrarily tax the funds, as well as other property, Could - we practife either of thefe methods, we need never be - opprefled by the national debr; and it is not impofible - but one of thefe, or fome other method, may at allad - ventures be tried, on the augmentation of our incum - brances and difficulties. But people in this country are - fo good reafoners upon whatever regards their intereh - that fuch a practice will deceive no body, and public - credit will probably tumble at once, by fo dangerous a - trial. So great dupes are the generality of mankind, - that, notwithtanding fuch a violent hrock to public cre - dit as a voluntary bankruptcy in England would occation, - it would not probably be long ere credit would againf - vive in as flourifhing a condition as before. The prefent - king of France, durng his grandfasher did, and as low iment, comparing the natural rate of - intereft in both kingdoms. And igh are com-- monly more governed by what they have feen, than by - what they forelee, with whatever certainty, yet promies, - proteftations, fair appearances, with the allarements of - able to refin. Mankind are, in all ages, caught by the - fame baits; the fame tricks, played over and over again, - Aill trepan them. The heights of popularity and patriot' ifm are fill the beaten road to power and tyranny; flat - tery to treachery; fanding armies to arbitrary govera-- ment; and the glory of God to the temporal incereft of - the clergy. The fear of an everlafing deitruction of cre-- dit, allowing it to be an evil, is a needlefs bugbear. A - prudent man in reality, would rather lend to the public - immediately after they had taken a punge to theirdebts - than at prefent, as much as an opulent knave, even tho - one could not force him to pay, is a preferable debtor to - an honeft bankrupt: for the former, in order to carry on - bufineff, may find it his intereft to difcharge his debts, ' where they are not exorbitant: the latter has it not in - his power. The public is a debtor, whom no man can - oblige to pay. The only check which the creditors have * on it, is the intereft of preferving credit; an interelt - which may be eafily overballanced by a very great deb, - and by a diffcult and extraordinary emergence, even fupporing that credit irrecoverable. Not to mention, tha a prefent necefily often forces flates into mealures whic - are, ftrietly fpeaking, againft their interef.
- But it is more probable, that the breach of national faith - will be the neceffary effect of wars, defeats, misfortunes; ' and public calamities, or even, perhaps, of Victuries and - Conquests. I mult confefs, when Ifee princes and ftates - fighting and quarrelling amidf their debts, funds, and pub' lic mortgages, it always brings to my mind a match of - cudgel-playing fought in a china-fhop. How can it be - expected that fovereigns will fpare a fpecies of property - which is pernicious to themfelves and to the public, when 6 they have fo little compaffion on lives and properties, which - are fo uffeful to both? Let the time come (and furely it 6 will come) when the new funds, created for the exigencies. - of the year, are not fubfcribed to, and raife not the money - projected. Suppofe either that the cafh of the nation isex-- haufted, or that our faith, which has been hitherto fo ample,

## D E B

D E B
berins to fall us: fuppofe that, in this difffefs, the nation 4 is threatened with an invafion, a rebellion is fufpected, or 6 broke out at home, a iquadron cannot be equipped for c want of pay, victuals, or repairs, or even a foreign fubfidy - cannot be advanced : what muft a prince or minilter do in - fuch emergence? 'The right of felf-prefervation is unalien6 able in every individual, much more in every community; 6 and the folly of our ftatefmen muft then be greater than the - folly of thofe who firft contracted debts, or, what is more,

- than that of thofe who trufted, or continue to truft, this
- fecurity, if thefe fatefmen have the means of fafety in their
' hands, and do not employ it. The funds, created and mort-
s gaced, will, by that time, bring in a large yearly revenue - fufficient for the defence and fecurity of the nation; money - perhaps is lying in the Exchequer, ready for the difcharge of the quarterly intereft: neceffity calls, fear urges, reafon
- exborts, compaffion alone exclaims : the money will imme-
- diately be feized for the current Service, under the moft
folemn proteltations, perhaps, of being immediatelyreplaced.
But no more is requifite. The whole fabric, already totter-
c ing, falls to the ground, and buries thoufands in its ruins
And this, I think, may be called the natural death of Pub-
sic Credit : for to this period it tends as naturally as an
6 animal body to its diffolution and deftruction.
chefe two events, fuppofed above are calamitous: thou-
fands are thereby facrificed, to the fafety of millions. But
* we are not witbout danger, that the contrary event may
- take place, and that millions may be facrificed for ever, to
the temporary fafety of thoufands*. Our popular govern
6 ment, perhaps, will render it difficult or dangerous for a
minitter to venture on fo defperate an expeditnt, as that of
a voluntary bankruptcy. And, though the houfe of lords
c be altoyether compoled of the proprietors of lands, and the
- houle of commons chiefly, and confequently, neither of
* them can be fuppofed to have great property in the funds;
yet the connections of the members may be fo great with the
- proprietors, as to render them more tenacious of public

6 faith, than prudence, policy, or even juftice, ftrictly fpeak-

- ing, requires : and, perhaps too, our foreign enemies, or
- rather enemy (for we have but one to dread) may be fo - politic as to difcover, that our fafety lies in defpair, and may not, therefore, thew the danger open and barefaced,
'till it be inevitable. The ballance of power in Europe, our
- grandfathers, our fathers, and we, have all juftly efteemed
- too unequal to be preferved without our attention and af-
- fiftance. But our children, weary with the fruggle and
< fettered with incumbrances, may fit down fecure, and fe
- their neighbours oppreffed and conquered, 'till at laft they
- themfelves, and their creditors, lie both at the mercy of
the conqueror. And this may properly enough be denomi-
s nated the violent death of our public credit.
* I have heard it has been computed, that thewhole credi-- tors of the public, natives and foreigners, amount only to -17,000. Thefe make a figure at prefent on their income;
but in cafe of a public bankruptcy, would in an inflant - become the lowelt, as well as the moll wretched, of the - people. The dignity and authority of the landed gentry and nobility is much better rooted, and would render the
- contention very unequal, if ever we come to that extremity. One would incline to aflign to this event a very near period, fuch as half a century, had not our fathers prophecies of this kind been already found fallacious, by the duration of our public credit fo much beyond all reafonable expectation. When the aftrologers in France were every year fortelling the death of Henry IV. Thefe fellows, fays he, mult be right at laft; we fhall, there-- fore, be more cautious than to affign any precife date, and thall content ourfelves with pointing out the event in general.
- Thefe feem to be theevents which are not very remote, and c which reafon forefees as clearly almolt as fhe can do any ' thing that lies in the womb of time. And tho' the ancients c maintained, that, in order to reach the gift of prophecy, a - certain divine fury or madnefs, was requifite, one may - fafely affirm, that, in order to deliver fuch prophecies as c thefe, no more is neceflary, than merely to be in one's - fenfes, free from the influence of popular madnefis and de-- lufion.'

REMARKs before the lalt war.
According to the judgment of this gentleman, we find he entertains but a very melancholy idea of the fate of the monied intereft, and the inftability of the public credit of this kingdom. However, we cannot help thinking but this learned writer hath
cartied his imagination rather too far, it having been fhewn, under the article of Public Credir, that fuch is the efticacious operation of a Permanent Sinking Fund, that we need not be under fuch terrible apprehenfions. Nor have we reafon to defpair of ftill having fuch a clear fund, as will be inviolably applied to the difcharge of our debts; and which will, in lefs than half the ordinary age of man, effectually reduce all public debts contracted before 1716 , by the wars of king William and queen Anne: nay, if our dehts had been even an hundred millions in the year 1727 , it will clearly appear, from a further continuation of thofe computations given under Public Credit, that they would have been abfolutely difcharged by a finking fund of one million, only at four per cent. before the year 1770, and, by a finking fund of one million at three per cent. before the year 1766 ; whence it will eafily be inferred, that if the prefent debts of the nation were even an hundred, inftead of fourfcore millions, a finking fund of a million ortly, reckoned even at four percent. would abfolutely difcharge them in 43 years; and, reckoned at three per cent. in 39 years: and the greater a finking fund fhall be rendered, a debt of fo great a magnitude would be difcharged in a leffer number of years: fo that the monied intereft have no reafon to confider themfelves in a fate of defperation, as the learned author before quoted feems to do.
The longer our debts continue, and the longer thofe taxes continue upon our general trade for the payment of their intereft, and redemption of the principal, the longer muft our commercial intereft languifh, and the greater opportunities will other nations have to fupplant us therein; whereby the revenue muft be proportionably diminifhed, and then, perhaps, we can have no great foundation for hope that our debts will ever be paid.
I have dwelt the longer upon the nature and powerful efficacy of a DEBT-PAYING FUND, if I may be allowed the expreffion, becaufe it appears to be the moft natural, as well as the moft effectual way, that ever was propofed for the payment of our national debts. - It is moreover the moft gradual, and a method the leaft detrimental to the public creditors, of difcharging, their debts, and, perhaps, the only way we can fall upon to get out of debt to FOREIGNERS, and contract frefh debts only among ourfelves, by new loans upon new funds, whenever the emergencies of the fate require it. See the article Public Credit.

## Remarks fince the laft war, and the Definitive Treaty

 of 1763 .Since the preceding fentiments, our PUBLIC DEBTS and TAXES have fwelled to fuch an enormous height, and in fo few years, that now the moft fanguine for the poffibility of their total difcharge, are flaggered; and many wife men think it impofible that they ever Mould be fo; and confequently the public creditors muft become PERPETUAL annuitants.
Should this prove the cafe, the whole weight of our Taxincumbrances muft perpetually remain for the payment of the annuitants. But this the nation will find difficult to bear, without a change in the whole constitution of the National Revenue; and even was that done, as is not judged impracticable, it would not preferve us from future wars; and if we fill go on borrowing and funding, we certainly muft come to our ne plus ultra at laft, and that mult be, when we can find no new Tax Funds, whereby to increafe the national incumbrances. How much longer it can be reafonably prefumed, that the nation will be able to bear fuch a fyftem to prevail, requires no great forefight to predict. It can prevail no longer, than that fuch muft inevitably be the weight of our Taxes upon our wholf Trade and Navigation (for there they ultimately terminate) as to render our commodities in general fo excessively dear, that no foreign nation will be in a capacity to purchafe them; and when we are difabled from the Sale of our own Wares, how long can we be fuppofed able to buy and import thofe of other nations? Every man fees that cannot be long.
When this comes to be the cale, the firf great branch of the Public Revenue that will feel it, will be the Customs. When the foreign fales of our manufactures are ftopt, what likewife will be the ftate of our Excises? Muft not they as well as the Customs feel the effects? They moft affuredly muft. How then can the annuitants be paid their revenues, when we have loft thofe funds that are mortgaged for that purpofe? We fhall not be in a condition to pay them, and we then muft unavoidably become a bankrept Nation.

## Continued from the article of PUBLIC CREDIT.

Computations at 4 per cent.

REMARKs:
Some people feem to be quite infenfible of the weight of our national debts, and therefore judge lightly of the taxes which they have occafioned, and think to ballance all thefe evils, by highly magnifying the riches of the kingdom in general. This is certainly the way to entail them fol long upon the nation, 'till we muft inevitably fink under them, and be fwallowed up by a neighbouring potentate, who, at this time is confulting effectual ways and means to difcharge their debts. And that forne efficacious fcheme for the fame purpofe is expedient for this nation, or rather abfolutely neceffary, I am more convinced than I care to exprefs; for I would not willingly, as a certain great man faid upon a finilar occafion, give a bandle to our enemies to entertain a mean opinion of us. I know we are a rich and wealthy hation, and have great refources; but let us confider what the facred hiftory reports of the riches of Solomon: his treafure was immenfe, fuch as enabled him to build a temple at Jerufalem (according to the computation of learned men) of almoft incredible value. Yet his riches have long fince vanilhed, the place where the temple flood, and even Jerufalem itfelf, that contained it, is fcarcely now, to be found. God forbid that this thould ever chance to be our cafe, by going beyond our ftrength, and not thinking, withour delay, of effectual ways and means, for the payment of our national debts. For more matter on this fubject, fee the articles Credit, Public Credit, Funds, Duties, Exchequer, Labour, Taxes, Stock-Jobbing; where I fhall more particularly confider the effects to the public creditors of paying the debts, and how the leaft prejudice may be done them, whenever that comes to be the cafe
DECLARATION, a term of the cuftom-houfe, and of commerce, in France. It contains a particular account, or invoice, of what is contained in the bales, or cafes, brought to the offices for entrance inward or outward. By the ordinance of the five great farms of 1687 , tradefmen and carriers, on entering goods in France for import or export, are to make delaration of them, which is to contain the quality, weight, number, and meafure of the goods; the merchant or factor's name that fends them, and to whom configned; the place of lading and delivery, with the marks and number of the bales.
They are to be figned by the merchant or owner of the goods, or his factor, or by the carrier only, and regiftered by the clerks of the office where made.
In a word, 'tis properly a duplicate of the invoices, that remain in the hands of the vifitors, receivers, or comptrollers of the cuftoms, for fecurity and juftification that they have paid the cuftoms.
On thefe declarations, the clerks give what's called an acquittance of payment.
Carriers and conveyers of goods, whether by land or water,

Computations at 3 per cent.

who have not their declarations in hand; are, at their arrival, to declare in the offices, on the regiter, the number of the bales, sxc. their marks and numbers; with charge to make within fifteen days if by land, and fix weeks if by fea, a declaration of their goods in full ; during which, the bales, \&cc. are to remain as a depofit in the office.
When a declaration hath been once given, it may not be augmented or diminifhed, on pretence of omifion or otherwife, When the declarations are made, the goods are to be viewed, weighed, meafured, and numbered by the clerks; and the cuftoms due to the king, paid according to the tariffs and orders of council. If a declaration be found falfe in the quality of the merchandizes, they are confifcated, and all of the fame invoice, belonging to him who made it, and even whatever elfe is therewith, if belonging to him; but neither the goods nor what elfe is therewith belonging to others, unlefs they are confederates in the fraud. If the declaration be falfe in the quantity, the forfeiture is only of what's not mentioned.
All that's here mentioned concerning regulations in France, is conformable to the ordonnance of the five great farms, of February 1687 , title 2. articles $1,2,3,4,5,6,7,8$, and 13. which enact penalties on thofe who trefpafs.

Rule for the form and manner in which the declarations of dealers and merchants are to be made for goods imported
into, or exported out of the kingdom, or provinces reputed foreign.
The fecond title of the ordonnance of farms, in February 1687, feems by the cautions to provide againft the conteffs that might arife between merchants and cuftom-houfe officers, on the fubject of declarations; which, after forty years experience and difficulties daily occurring herein, being found to need explication; the king in council, having caufed the memorials of the merchants and farmers to be examined, made a new regulation the gth of Auguft 1723 , to ferve for the future, as a certain rule, and to be obferved in all ports and offices, both within the limits of the five great farms, and in the provinces reputed foreign.
The letters patents enforcing obfervance thereof, are of the 3oth of September in the fame year, and their inrollment in the court of aids the 13 th of October following.
The matter of declarations, whether inward or outward, be ing one of the moft important of commerce, we thall here infert the nine artices of which thiṣ regulation conffifs.
I. They fhall contain the quantity, weight, number, and meafure of the goods; the merchant or factor's name ; the place of lading and delivery, with the marks and numbers of the bales in the margin.
II. They thall be relative to the tariff; that is to fay, that the mafter of the veffel, merchant and carrier, fhall declare, by weight, goods whofe cuftoms are to be paid by weight;

## D E N

D E N
by meafure, thofe which are fo payable; and by number, thole that pay by number.
III. Thofe declarations fhall be efteemed entire with refpect to goods, the cuftoms of which are paid by the weight, when the weight of thefe goods exceed not that declared above one tenth, which excefs being paid, they thall not be feized or torfeited; but, if it exceed one tenth, that overplus thall be forfeited to the farmer of the revenue with a fine of 300 livres for every offence.
IV. The preceding article fhall not extend to iron, copper, lead, and tir, which may not exceed one twentieth of the weight declared, and, on paying the dues for that excefs, are not to be feized or forteited, otherwife to be liable, as by the laft article.
V. The declarations of all goods, whofe cuftoms are payable by number, thall atio be reckoned compleat, if not exceeding one tenth of the number declared, on paying for the excei:; and the goods not feized or forfeited, otherwife they are liable to the penalties of the third article.
VI. With reipect to coarie fugars, fyrups, oils, and butters, which are goods fubject to wafte and leakage, the cultoms to be on the abrolute weight, without obliging the merchants to a declaration ; but only to report the declarations of weight made at the place of lading, and to reprefent the fame number of pipes, barrels, \&ic. in good condition.
VII. Carriers and conveyers of goods by land or water, not having their invoices or declarations at their arrival, fhall make them on the regiter of the number of their bales, \&c. with charge to make particular declaration within 15 days, if by land, and fix weeks if by fea; leaving their bales the mean while in the office: on failure, the goods to be forfeited, and the carriers fined 300 liveres.
VIII. If goods have taken wet in the voyage, and the weight be increaled above five in the hundred, deduction fhall be made of the excefs over and above the natural weight, to verify which, and make the faid deduction, the merchant thall produce the invoice; and, if the increafe exceed nat five in the hundred, the farmer thall not be obliged to make deduction.
IX. The other articles of the fecond title of the ordinance in 1687 to be put in execution, according to their form and tenor, in what does not deviare from the prefent regulation.
DEMURRAGE, in commerce, an allowance made to the mafter of a fhip by the merchants, for ftaying in a port longer than the time firt appointed for his departure.
DENBIGHSHIRE is bounded on the fouth with Montgomeryfhire ; on the weft with thofe of Merioneth and Caernarvon; on the eaft with Shropthire and Cbefhire; and on the north with the Irifh fea and Flinthire. It is in circumference near in 8 miles, the air wholefome, but fharp, the hills furrounding it retaining the fnow for a long time. The foil is various; the moft pleafant, fruitful, and healthy part is the Vale of Clwyd. J's rivers of moft note are the Clwyd, Elwy, Dee, and Conway.
The chief commodity here, befides goats, fheep, and black cattle, is rye, commonly called amel-corn, though here are feveral mines that yield great parcels of lead ore, particularly that called the marquis of Powis's.
Dembigh, the county-town, has a good trade, and is inhabited by many glovers and tanners.
Wrexham has a good market for flannel, which the faetors buy up, and fend to London, it being a confiderable manufacture, and the chief employ of the poor through all this part of the country.
DENIER TOURNOIS. A fmall piece of copper-money, formerly current in France, and fo fill in fome provinces beyond the Loire.
The officers of the mint of France call it deneral, or demier of price, to diftinguih it from what they call denier of weight.
Thefe have been feldom coined in France, fince the year 1049, which, with thofe coined towards the end of Lewis XIllth's reign, were the work of the famous Varin, and are mafter pieces, as to money: wherefore the curious keep them among the moft rare medals,
'They have been fometimes taken for the maille; though this denier, which has alfo been a current ípecies, was only a part and fubdivifion thereof, and worth bur half the denier.
There are at prefent in France feveral little copper-pieces, which, having no proper name, are diftinguithed only by their value in deniers: fach are the pieces of $36,30,24,18,12$, $\ell, 4$, and 2 deniers. The pieces of 4 , and of 2 deniers, were coined at Strafbourg, for currency in the province of Alface, purfuant to the declaration of the 6th of Sept. 1695. Thofe of 6 deniers were coined in the mints of Aix, Montpelier, Rochelle, Bourdeaux, and Nantes, by the edict of Ottober 1709 , and are little current.
DENMARK, one of the molt antient kingdoms of Europe, is divided into two parts by the Baltic dea; namely, the Peninfula annexed to the continent of Germany, and the illands. The former, which contains the duchy of Holftein, South Jutland, or Slefwick, and North-Jutland, is bounded on the weft and north by the German ocean;

Vul. I.
on the eaft by that part of the fea called Categate, and the Middle fort Sound; and on the fouth by the river Elbe. It's greateit length from fouth to north is about 224 miles; but it's breadth (not including the iflands) is not above 74 miles; and in fome places much narrower. The iflands, which make up the other part of this kingdom, are Zealand, Funen, Langeland, Laland, Fallter, Bornholm, and many others of lefs note.
The air, though very cold in Denmark, is not fo fharp as in fome places of Germany, though fituated much more to the fouth; the vapours of the fea, furrounding it, melting and diffolving the nitrous particles, carried by the wind from northern countries, before they arrive here.
The foil, though in moft places barren and mountainous, has good paftures, which feed vaft herds of kine, and an excellent race of horfes; but the country in general produces but little corn.
It has no rivers navigable for veffels of any confiderable burden. There are lakes which afford a good quantity of fifh; and the forefts are abundantly ftocked with venifon of all forts, and wild fowl in great plenty.
It's commodities for exportation are very few; cattle is the chief, which they fell to the Netherlands: but, as for manufactures, they have fo few as not to deferve notice.
South Jutland, or the duchy of Sleswick.
Chief towns of this duchy are as follow:
I. Sxfswick, the capital, feated on a fmall arm of the fea, called the Sley, was formerly a place of very great trade, but it is now almoft dwindled to nothing.
2. Gottorp, about fix miles from Slefwick to the fouth-weft, of note only for it's fortrefs, and noble palace. Here is a toll-booth or cuftom-houfe, where toll is paid for great numbers, of black cattle, that pafs from Jutland into Germany, and produces a confiderable fum to the king, the toll being fome years for above 50,000 head of cattle.
3. Tonningen has a pretty good trade, which increafes daily, by means of 't's commodious harbour, formed by the Eyder, on which it is fituated; it is much frequented by the Dutch for black cattle.
4. Husum has a harbour capable of fmall veffels, and every week a market for cattle, the neighbouring country abounding with paftures; in time of war, above 4000 horfes have been fold here in a year. In the gulph, on the weft of the town, they fifh valt quantities of excellent oyfters.
5. Flensburg, fo called from the bay or gulph on which it ftands, and which is formed by the Baltic. The bay makes a fine haven, where fhips of great burden may ride fafe, and come up to the very warehoutes.
6. Apenrade ftands on another gulph of the Baltic, fixteen miles north-weft of Flenßurg. It has a port at the bottom of the bay, much frequented by the Danifh fifhermen, and has a pretty good trade with the adjacent illands.
7. Hadersfebese is a good fea-port town, near 20 miles north of Apenrade. The country about it abounds with fruitful corn fields, and excellent pattures, which, with the fifh taken out of the lake and gulph near it, render this a pretty flourifhing place.
8. Tunder lies in a fruitful foil, and had formerly a confiderable trade, now loft, the harbour being choaked up with fand.
North Jutland.
The moft confiderable towns herein are :

1. Repin, a place of confiderable trade. Hither are brought almoft all the black cattle from many parts of Jutiand, which are thipped off, efpecially for Holland : and they export corn to neighbouring countries, all which afford them great profit.
2. Colding, though it lies commodious for trade, has hardly any but in cattle.
3. Rincoping lies on a bay of the German ocean, made by a neck of land 25 miles in length from north to fouth, fo that fhips ride in the port fafe from all winds.
4. Aarhus, at the mouth of the river Gude, which runs through it, and a little lower falls into the Categate, is a neat pleafant town, well fupplied with all neceffaries, and has a good harbour.
5. Randers, on the river Gude alfo, is a place of good trade, and famous for the beft falmon in Jutland.
6. Scheve has the reputation of breeding the beft horfes in the north.
7. Schagen is more frequented by merchants from all parts of Europe, than any other town in Jutland, becaufe they touch here in'their way to the Sound. It's trade would be far greater, but for the dangerous coaft it lies on.
The lslands of Denmark.
ZEALAND, the largeft and moft fruifful in the Baltic fea, is, in length, about 68 miles, and in breadth about 60 . In is are the following confiderable cities or towns:"
i. Copenhagen, the capital of the kingdom, is thus called from it's fafe and commodious harbour ; it's name fignifying the merchant's port. And it may be juftly reckoned, in all refpects, one of the beft in the whole world.
8. Helsenevr is about 20 miles diftant from Copenhagen to the north, and is defended by the neighbouring impregnable 8 F
caftle

## D E N

calle of Croonenburg, which commands this fide of the Sound, as Helfinburg does the orther. Every fhip that paffes this ftreight muft ftrike fail at Croonenburg, and come to the town to compound for the cuftom, under penalty of forfeiting vefiel and cargo.
3. Fredericksiurg, a fmall town 20 miles north-weft of Copenhagen, is of note only for the ftately caftle and royal palace that ftand near it.
4. Holbeck, a pretty confiderable town, fands at the bottom of a narrow bay, that affords it fome trade.
5. Kallunburg has a fafe harbour, and pretty good trade.
6. Koge is a fall but very populous town, feated on a bay of the Sound. It is enriched by trade, which confifts chiefly in corn and fill.
Funen is about 36 miles from eaft to weft, and 30 from north to fouth. It is better peopled than Zealand. The moft confiderable towns for trade are :

1. Odensee, a large handfome town. They brew here excellent beer, reckoned the beft in all Denmark.
2. Nyburg, about 13 miles eaft of Odenfee, has an excellent port, which occafions tome trade. Here people embark to pars into Zealand.
3. Schwinborg is a pleafant town, and has a large and commodious harbour.
Arroe, Langeland, Laland, and the reft of the fmaller inlands of Denmark. Thefe have no towns of any conliderable trade.
The port of Copenhagen is not only the fineft in the Baltic fea, but alfo one of the moft commodious in all Europe. So that the chief trade of Denmark is carried on here, though there is fome at Elfineur. But the trade of either of thefe cities is frall, in comparifon of that on the reft of the Baltic. Goods, which fell beft in Denmark, are falt, chiefly that of Spain and Portugal, rather than of France; but the wines and brandies of France are the moft efteemed. Great quantities of paper are alfo imported; gold and filver fuff; filk and woollen ftuffs, chielly thofe of Holland; fpiceries and drugs.
Tallow, hemp, cod, ftock-ffif, and wheat and rye from Zealand, are the chief commodities they export, timber being prohibited.
The Duten tranfport alfo from Jutland great numbers of lean cattle, which they faten in their paftures, with confiderable advantage.
The French have an advantage over other nations in paffing the Sound, that their goods are not infpected; nor need they, if they will not pay the cultoms 'till three months after, on the mafter's declaration and bill of lading.
The cities next to Copenhagen for trade, are Ulfted, Chriftianftadt, Carelfcroon, Salthourg, Carelhaven, and chiefly Elfeneur. From all which are exported fmall mats, firplanks, pitch and tar, tallow, ox and cow-hides, and deerikins.
Thefe cities, except the capital, are chiefly traded with by exchange of the merchandize, or with rixdollars carried thither in fipecie.
Accounts are kept there in rixdollars, marcs, and fhillings Dantz. The rixdollar at the rate of 6 marcs, or 4 oorts; the marce 16 fchellings, and the fchelling 3 penins. The oort is 24 fchellings, or one mark and half.
Two Danifh marcs of 116 fols Danois, make one marc lubs of 8 fols.
Copenhagen exchanges with Amfterdam, and gives a 107 sixdollars, more or lefs, for 100 rixdollars banco of Amfterdam. Bills of exchange have ten days of grace.
Frederic IV. in December 1699, enacted, that for the future the new-ftile fhould be obferved in all his dominions.

## Weights and meafures of Denmark.

The weight at Copenhagen for heavy goods, is the fchippond of 320 pounds. It is divided into 20 liefponds, and each liefpond into i61.
The pound is lefs than that of France and Amfterdam by about $\mathrm{I}_{\frac{\mathrm{r}}{7}}$ per cent. The ell is one third lefs than that of Holiand, and equal to the Englifh yard.
The 100 feet of Copenhagen make $103 \frac{1}{3}$ at Amfterdam.

## Real money current at Copenhagen.

The par of the following money is calculated on the rate of the rixdaelder of 6 marcs Danois, amounting to 5 livres of France (in 1751.)
A rofe noble is 4 rixdaelders, or 24 marcs Danois, or 20 livres of France.
The ducat, 2 rixdaelders, or 12 mares Danois, or ro livres French.
A rixdaelder or daller is 6 marcs Danois, or 5 livres French. It is alfo 3 marcs lubs, or 48 fchellings lubs, or 96 fchellings Danois.
The halft, or $\frac{1}{2}$ rixdaelder, and the $\frac{1}{4}$ in proportion.
A flicht daller, 4 marcs Danois, or 32 fchellings lubs, or 3 livres 6 fols French.

The halft or demi flicht daller, and the quarter in proportion. A rix marc Danois, 16 fchellings lubs or ftivers a Danois, in French money 1 livre 13 fols.
The lubs fchelin, or fchelling of Lubec, is one fchelling Danois, 3 fenins or doubles, in French money 1 fol.
In 1710, the king of Denmark caufed pieces to be ftruck of 12 fols Danois, or 6 fols of Lubec; not to mention other leffer pieces, and of an inferior intrinfic value by 13 per cent. which occafioned confufion in the agio, and daily bufinefs at Hamburgh, that money advancing the agio to 25 per cent to the year 1717, and in 1724 to 33 .
In 1726 thefe pieces were reduced on the part of Denmark from 6 to 5 fols, and the other froall pieces in proportion; and thofe of 16 to 15 . This reduced the intrinfic value as near as poffible to that of the good money of Hamburgh, which by that means became 2 per cent. better than that of the new current money there.
The crowns of Denmark are 32 fols of banque in fine filver, at Hamburgh.

## Remarks.

The paffage or freight, called the Sound, is between the ine of Zealand and the continent of "Scanie. On the Swedifh fide is the city of Helfingbourg, with a ruined caftle, between which and Elfeneur, all hips trading to the Baltic pafs and repafs; fo that, next to the ftreight of Gibraltar, it is the moft important and frequented.
The lofs of Schonen, though it was confiderable to the Danes, in regard to the largenefs and fruitfulneis of the province, yet it was more fo, with refpect to the dominion of this great paffage. For though the Danes, by the treaty of peace, have exprefsly retained their title to it, and receive toll from all fhips that pafs, except thofe of the Swedes, yet they do not efteem the fecurity of that title fo firm as they could wifh; for, not being mafters of the land on both fides, they may have the right, but not the 'power, to affert it upon occafion; and feem only to enjoy it according to their good behaviour ; their ftronger neighbours, the Swedes, being able to make ufe of the firft opportunity given them to their prejudice.
This toll being very confiderable, and having occafoned many difputes, it may not be amifs to infert here an account of the original and nature of it.
It is faid to have been at firft laid by the confent of the traders into the Baltic, who were willing to allow a fmall matter for each thip that paffed, towards maintaining of lights on certain places of that coaft, for the better direction of failors in dark nights ; hereupon this paffage of the Sound became the moft ufed; that other of the Great Belt being in a little time quite neglected, as well becaufe of the great conveniency of thofe lights to fhips paffing in and out of the Ealt-Sea, as becaufe of an agreement made, that no fhip fhould pais the other way, that all might pay their fhares; it being unreafonable that fuch fhips thould have the advantage of thofe lights in dark or ftormy winter nights, who avoided paying towards maintaining thofe fires, by paffing another way in good weather.
Befides, if this manner of avoiding the payment had been allowed, the revenue would have been fo infignificant, confidering the fmall fum each fhip was to pay, that the lights could not have been maintained by it; and the Danes were not willing to be at the charge, folely for the ufe of their own trading fhips, becaufe they were mafters of fo few, as made it not worth their while; the Lubeckers, Dantzickers, and merchants of other hanfe-towns, being the greateft traders at that time in the northern parts of Europe, by which they arrived to a great height of power and riches. But there being no fixed rule, or treaty, to be governied by, with regard to the different bulk of the fhips belonging to fo many different nations, the Danes began, in procefs of time, to grow arbitrary, and exacted fmaller or greater fums, according to the ftrength or weaknefs of thofe they had to deal with, or according to their friendihip or difcontent with thore princes or flates, to whom the feveral fhips belonged: therefore the emperor Charles $V$. to afcertain this toll, concluded a treaty with the king of Denmark, -which was figned at Spire on the Rhine, and was in behalf of his fubjects of the Netherlands, who had a great traffic in the Baltic, and agreed, that, as a toll-cuftom in the Sound, every thip of 200 tons, and under, fhould pay two rofe-nobles at it's entrance into, or return from the Baltic; and every fhip above 200 tons, three rofe-nobles. A rofe-noble is worth about eighteen hillings fterling.
This agreement remained in force, 'till fuch time as the United Provinces fhook off the Spanifh yoke; and then the Danes, taking an advantage of thofe wars, raifed their toll to an extravagant rate, the troublefome times not affording the Dutch Jeifure to mind the redreffing fuch a mifchief. However, about the year 1600, they joined themfelves with the city of Lubeck, in oppofition to fuch an extravagant toll as was taken from both of them; that from thenceforth the Dutch paid more, or Jefs, as fortune was favourable, or adverie to them, but generally little. In 1647 , the firft treaty was

## D E N

## D E N

made between Denmark and the United Provinces, as fovereigns, for this toll; and they were obliged to pay a certain fum for each thip. This was to continue forty years; after which, if in the mean time no new treaty were made, that of Spire was to be in force.
This treaty of 1647 expired in 1687, and the Danes agreed to make an interim-treaty, till fuch time as the many differences between them and the Hollanders, in this and other matters, could be adjufted at leifure, and concluded by a more lafting and folemn one
'I his interim-treaty, which was but for four years, expired in 1091; fo that, no new treaty being made and compleated during that time, the antient treaty of Spire remains in force, and no other.
The treaties of the Englifh with Denmark are grounded on thofe between the Dutch and that kingdom, and have reference to them, with a covenant, that we fhall be treated as a nation in the ftricteft friendhip with the Danes.
From this fhort hiftory of the original of this impofition, it appears how flightly grounded the king of Denmark's title is to this right; which from an eafy contribution the merchants chofe to pay for their own conveniency, and whereof the king of Derimark was only treafurer or truftee, to fee it fairly laid out for the common ufe, is grown to be a heavy impofition upon trade, as well as a kind of a fervile acknowledgment of his fovereignty of thofe feas; and is purely owing to his aking an advantare of the difficulties of the Hollanders during their wars with Spain, and the connivance of kingJames I. in prejudice of the Englifh; he favouring the Danes, upon account of his marriage to a daughter of that crown; and, upon thefe two examples, all the leffer ftates were forced to fubmit.
Nor is it conceiveable how it could be otherwife brought about ; fince it is very well known, that the paffage of the Sound is not the only one into the Baltic, there being two others, called the Greater and the Leffer Belt; the former is fo commodious and large, that, during the wars between the Danes and the Swedes, the whole Dutch fleet chofe to pafs through it, and continued in it for four or five months together : and the Danifh ftrength at fea never appeared yet to formidable, as to oblige the Englifh and Dutch to chufe which paflage it pleafed. Befides, the breadth of the Sound, in the narroweft part, is four Englifh miles over, and every where of a fufficient depth; fo that the king of Denmark's caftles could not command the channel, when he was mafter of both fides; much lefs, now he has but one. It is plain, therefore, this pretended fovereignty is very precarious, being partly founded on a breach of truft, as well as on the careleffnefs of fome princes concerned in it, to the great injury of trade.
This toll affords the king yearly a confiderable proft, though much lefs than formerly. About the year 1640 , it produced 240,000 rix dollars per annum ; but, fince 1645, it has not yielded above 190,000 ; fome years not above 80,000 ; and, in 169 I , it did not extend to full 70,000 .

## Further REMARK s.

This country has infinite advantage of a fea-coait for the encouragement of navigation; and their king, by that means, has a tolerable good fleet. Yet, as obferved, they have only the port of Copenhagen that is confiderable. But their whole country does not fupply any great matter for merchandizing; they have few of the effential funds of trade; they have neither an extraordinary produce of the earth, nor manufactures among the people: and fome have afferted, that they fcarce ever loaded one hip with their own productions and manufactures, to any part of the world, except corn, and that not very frequently.
At prefent, indeed, in imitation of many other powers of Europe, they feem to give more than ordinary attention to the affairs of commerce and navigation, as well in the EaftIndies as in Europe; and their merchants begin to increafe not only at Copenhagen, but at Altena near Hamburgh, who indeed are not, properly fpeaking, to be called merchants of Denmark, though many of them are Danes, and they are admirably fituated for the firmeries great and fmall; that is, for the herring-fifhery, and for the north-fea codfifining, which is on their own coaft, and for the whole filhery in Greenland; but they do not feem to exert themfelves in any but the whale-fifhing, and that to no great degree; but, on the contraty, they buy their herrings, and their train oil, and their whalebone of the Dutch: fo indolent have they been 'till lately, and fo averfe to trade, that though the beft harponiers, and the beft fleerfmen, and moft filled in the whale-fifhing, are found among the fubjects of the king of Denmark, particularly in Jutland, Slefwick, Ditmerfan, and thofe parts; yet they generally go to Greenland, in the fervice of the Dutch, the Bremers, or the Hamburghers.
Some years fince they made a new fettlement upon the point of that country we call Greenland, at the entrance of Davis's Streights, and planted fome people there. But the trade with the inhabitants feems fo inconfiderable, and the climate fo feverely cold, that we can hardly fuppofe it will ever en-
courage the people to bear the extremities of the feafon, for the fake of the profits of it. Their returns from thence are nothing but ikins of beafts, bear, fox, feal, deer, fome beaver, and a little train oil: the goods they vend are chiefly coarfe woollen cloth and flamel, with fome linen, all for clothing; the reft is in wrought iron, tools, fire-arms, fifh-ing-tackle, and the like.
The Danes, as they have neither mines or manufactures, are principally employed, either as feamen by the Hamburgbets, Lubeckers, and Hollanders, or as countrymen in breeding and feeding of cattle. The country of Jutland is exceeding fruitful in grafs, breeds very large black cattle, and good horfes. This affords them a quantity of butter, hides, and tallow; and thefe are the chief of their exportation on that fide. The overplus of their cattle are driven lean into Holland, to be fatted there, as the Scots and Welch drive theirs into England for fale.
The fat cattle are fent to Hamburgh, Lubeck, and over the Elbe, into that part of Germany called the circles of Weftphalia and Lower Saxony, where, it is faid, the Danes, fome years fince, did not fell lees than 50,000 head of fat bullocks, befides a great number of horfes; but it was a great Jofs to them when the Dutch prohibited the Jutland bullocks, upon which the king of Denmark forbad their buying horfes in his country.
To the dominions of Denmark, as we have before more particularly obferyed, muft be'added that of Norway, which, though a feparate kingdom, and formerly a very powerful one, governed by a king. of it's own, is now fubject to the crown of Denmark, and in a great meafure compenfates, by it's trade and fhipping, the deficienicy of Denmaik itfelf. Though the foil of this country is the moft barren of any of the northern parts of the world, yet, by reafon of the numberlefs large woods of fir, which every where cover the ground and by the prodigious length of it's coaft, which extends from latitude $58 . \frac{3}{2}$ to the north kyn , or cape, in latitude 7 I , it is made opulent by exporting their fir timber, deals, mafts, yards, fpars, baulks, \&c. as alfo pich and tar, more or lefs, to almoft all the neighbouring nations, efpecially to thofe which have any thing of maritime commerce. This trade alfo becomes a nurfery of feamen to the king of Denmark, whenever he has occafion to man his fleet.
They take no inconfiderable quantity of white fifh on their coaft, which we call ftock-filh, and which the Dutch and Hamburghers conftantly buy to victual their hips. They catch, alifo, abundance of lobfters on their coafts; but this is more generally done by the Englifh and Dutch.
They fupply Great-Britain and Holland, France and Spain, with fo great a quantity of fir-timber, deals, \&c. that they do not thereby load fo few as 2000 fhips a year, and return feven-eighths, at leaft, of the value in ready money; and fome have complained in England, that they carry away the greatelt quantity of our current coin of any trade whatever, they coveting chiefly our crowns and half-crown pieces, which go current in Norway to good advantage, and are frequently feen as plentiful there almolt as in England itfelf, in proportion to the place.
As this branch of the timber trade is generally allowed to be fo detrimental to Great-Britain, fhould we not, by every meafure in our power, encourage our own navigation, by building large bulky fhips, fuch as are ufed by the Danes and Swedes, in order to import part, at leaft, of our timber from our prefent extenfive new acquifitions in North America. See America, British America, Colonies, Plantations.

## Remarks fince the Treaty of 1763 .

The Definitive Treaty of 1763 ; having annexed Canada and it's Dependencies, and therely including all the French Louisiana, contained on the eaftern fide of the Mississippi; and fince that treaty has likewife fecured to us the freedom of navigation on the Mississippr, through the Gulph of Mexico, and obtained for us all Spanish Florida, and in confequence thereof the ports and harbours of Mobille and Pensacola in the fame gulph; fince now we are poffeffed of the Port of St. Augustine, alfo in the Gulph of Florida, and that there is ceded to us in America, all the Gulph and River of St. Lawrence, and Cape Breton, and we have gained, without reftriction, all Acadia and its dependencies, and that there is a final end to all our former difputes and controverfies, in North America, in general, what hinders that we thall not be able to fupply ourfelves with all the timber we can fand in need of, from thefe vaft continental pofieflions? That there is timber enough, and of the various kinds wherein we ftand in need, in North America, may be feen under our feveral colonies, as we have defribed them.-And fince we are poffeffed of the navigation of the river Miffiffppi, and all it's divers branches to the eaftward, and of the tivers Mobille and Penfacola, the Ohio, and of many of the great lakes, we can hardly ftand in need of water carriage to convey the timber from the feveral internal parts, where it abounds. If we want people to fell it, fhould not all meafures be taken to people our new acquifitions, for this and

## D E R

## D E S

other important purpofes, which thefe territories will admit of? Are there not proteftants enough to be drawn, by feaSonable encouragement, from all parts of Europe? Therecertainly is; and therefore it will be inexcufable, if we do not fupply ourfelves with all the timber we have occafion for from Norway; and will not this fave the nation feveral hundred thoufand pounds per ann. and proportionally improve our American navigation.
DERBYSHIRE is bounded on the eaft with Nottinghamfhire, and a part of Leicefterfhire, which alfo bounds it on the fouth; on the weft by Staffordhire, and part of Chefhire and, on the north, by Yorkhire : in circumference about 130 miles. It's chief rivers are the Dove and Derwent. The air on the eaft fide is wholefome and agreeable; but, in the Peak, fharper, and more variable as to rain and wind. The foil is in fome parts well cultivated and fruitful, in others barren and mountainous, hence called the Peak, from a Saxon word, fignifying an eminence; but its fubterraneous riches in mines and quarries make this tract almon as profitable as the other part, it yielding great quantities of the beft lead, antimony, mill-ftones, fcythe-ftones, and grind-ftones, marble, alabafter, green and white vitriol, allum, pit-coal, and iron, for the forming of which, here are forges, which, with the fead and other confiderable works, confume fuch quantities of wood, that the country has little left:
Buxton Wells, in this county, are much reforted to for their waters, which crpate a good appetite, and open obftructions. This bath is of a temperate heat, and recommended by phyficians, both for drinking and bathing, particularly in fcorbutic or rheumatic complaints.
At Matlock, a village on the banks of the Derwent, are the fmelting-mills, at which they melt the lead ore, and run it into a mould, where it is formed into pigs, and afterwards refined for it's filver: the bellows are kept in motion by water. See the article Lead.
Derby, the county-town, fituate on the weft bank of the Derwent, over which it has a very fine ftone bridge, wellbuilt, but, ancient. The river has lately been made navigable into the Trent. It is a fine, beautiful, and pleafant town, and has more families of gentlemen in it than is ufual in towns fo remote; perhaps the more, becaule the Peak, which takes up the larger part of the county, is fo inholpitable, rugged, and wild a place, that the gentry chufe to refide at Derby, rather than upon their eftates, as they do eifewhere.

## REMARKs.

Here is a curiofity of a very extraordinary nature, and the only one of the kind in thefe kingdoms: I mean thofe mills on the river Derwent, which work the three capital Italian engines for the making organzine, or thrown filk; which, before thefe mills were erected, was purchafed by the Englifh merchants, with ready money, in Italy; by which invention one hand will twift as much filk as before could be done by fifty, and that in a much truer and better manner. This engine contains 26,586 wheels; and 97.746 movements, which work 73,726 yards of filk-thread, every time the water-wheel goes round, which is three times in one minute, and $318,504,960$ yards in one day and night. One water-wheel gives motion to all the reft of the wheels and movements, of which any one may be flopped feparately. One fire-engine, likewife, conveys warm air into every individual part of the machine, and the whole work is governed by one regulatort. The houfe which contains this engine is not only five or fix ftories high, but not lefs than half a quarter of a mile in length.
The model of this engine is faid to have been taken by the brother of the late Sir Thomas Lombe, merchant of the city of London, from the original in the king of Sardinia's dominions, who, under the difguife of a common workman, or by fome other artifice, fecretly drew the plan thereof upon paper, and then made his efcape to England, and communicated the fame to his brother Sir Thomas, who acting in concert with him, employed an excellent practical mechanic, one Soracle, a perfon admirably well .killed in mill-work and with the aid of the draughtiman, Mr Lombe, they jointly completed the whole piece of machinery; which has proved of no little advantage to the filk trade of thefe kingdoms in general.
In the fifth year of the reign of George I. a paterit paffed to fecure to Sir Thomas Lombe the fole property of this machine for 14 years, it being looked upon, in this kingdom, as a new invention for the intereft of trade; but the requifite buildings and engines, and the inftrueting of proper perfons to work them, took up fomuch time, that the term of 14 years was near elapled before Sir Thomas could make any advantage thereof: whereupon he applied to parliament for a confideration from the public; and the parliament accordingly, to preferve fo ufeful an undertaking for the benefft of the kingdom in general, allotted 14,0001 . to be paid to Sir Thomas, on condition that he fhould allow a perfect model to be taken of his new-difcovered engines, in order to fecureand perpetuate the art of making the fame:
The preambleto this act fets forth, That Sir Thomas Lombe
did, with the utmof difficulty and hazard, and at a very great expence, difcover the art of making and working the three capital engines made ufe of by the Italians to make their organzine filk, and did introduce thefe arts and inventions into this kingdom, \&c.
Daily experience convincing us that foreigners are prying into every myftery of trade belonging to thefe kingdoms, and ftealing away our very artilts themfelves, it is certainly for our intereft to retaliate uponi them, and endeavour to introduce whatever peculiar arts and branches ofcommerce, wherein they alfo excel, into our own kingdoms: and if, by the payment of our national debts, and, in confequence thereof the reduction of our taxes on trade, we can be capable of felling our commodities equally cheap, how can they eafily fupplant us at foreign markets?
While other trading nations thall be conflantly making advances in their traffic, by fhorter ways of labour, and every other art that the human mind can pofibly inveftigate, we cannot expect to maintain our ground in the commercial fytem that now prevails over the world, unlefs we encourage the like arts. If other nations fhall make ufe of faw-mills for their timber, whereby one man will perform the bufinefs of ten, or more, in the manual laborious way; if another nation fhall make ufe of filk or woollen looms for the manufactures of their cloth," \&e. whereby the dexterity of one arift can do more than 20 hands can by the means of knitting-needles : will not that nation who joins the art of mechanifm to that of labour, be able to make their manufactures furprizingly cheaper than thofe who prefer the mere corporal drudgery to the gift of fcience? The great things to be executed by the means of mechanical powers, founded on geometrical principles, are wonderful to the Indian, who is totally ignorant thereof: the application of the mere lever and the pulley would aftonifh him, and infinitely more the faying of Atchemides, Da mihi punctum, \& terram movebo. It is true, that, when the machine for flocking-weaving was firft invented, it deprived many thoufands of their bread protempore, who got their living by knitting of that article of apparel : fo, likewife, when printing was invented, thofe who were fupported by mere writing were gradually laid alide.But no one will prefume to maintain, that, if other nations fall into thefe, and fuch like arts, whereby they greatly leffen the expence of their manufactures, we ought to derpie what they embrace.
Nothing certainly is mor univerfally beneficial to commerce in general, than the mechanic arts, which are founded on geometrical principles, and applicable to an infinite variery of éngines. - The fupreme wifdom, by creating man fo little and fo weak, had, in all appearance, no other intention than to render him active, ingenious, and induftrious. Senfible, therefore, of his indigence, he turns himfelf every way; he calls to his fuccour force againft force, velocity againf gravity, and gravity againf velocity, one thock, min fhort, againft another. Thus, by the aid of mechatitef, this little being, not above five or fix feet high, with two arms only, will difpatch as much work as a giant, whom one would imagine to have a thoufand. The large and mafly bodies with which nature abounds would feem almoft to drive him to defpair. What would become of him, when any violent tempeft arifes? How will he crofs rapid and deep waters, that obftruct his paffage? By the power of mechanics, he keeps nature in fubjection; the winds are fubfervient to his direction, and convey him at pleafure beyond the feas; he erects fuch edifices as will ferve from one age to another; he throws fuch bridges over rivers, that become of unfpeakable benefit to trade, and that pofterity will look on with admiration.
The moft common machines made ufe of to fupply his want of ftrength, are the lever; the beam, or ballance, with equal or unequal arms; the pulley, fimple or compounded; the fixed or moveable pullies; the axle-tree and all captanes; the crane and calender; the dented wheel, the forew, the wedge, and mills of all kinds. - The due application of thefe to the ufes of trade is fo great, that ftudies of this kind cannot be too clofely' purfued in a trading nation. See the article Mechanical arts.
DESIGN, or DESIGNING, in the manufactories, expreffes the figures wherewith the workman enriches his fluff, or fllk, and which he copies after fome painiter, or eminent draüghtfman; as in diaper, damafk, and other flowered filk and tapeftry, and the like, \&cc.
In undertaking of fuch kinds of figured fuffs, it is neceffary, fays Monf. Savary, that, before the firf flroke of the fhuttle, the whole defign be reprefented on the threads of the warp; we do not mean in colours, but with an infinite number of little packthreads, which being difpofed fo as to raife the threads of the warp, let the workmen fee, from time to time, what kind of filk is to be put in the ege of the fhuttle for woof. This method of preparing the work is called reading the defign, and reading the figure, which is performed after the following manner:
A paper is provided, confiderably broader than the fuff, and of a length proportionate to what is intended to be reprefented thereon. This they divide lengthwife, by as as many black

## D E S

lines as there are intended to be threads in the warp; and crofs thefe lines by others drawn breadthwife, which, with the former, make little equal fquares.
Onthe paperthus fquared the draughtfman defigns his figures, and heightens them with colours, as he fees fit. When the defign is finifhed, a workman reads it, while another lays it on the fimblot.
To read the defign, is to tell the perfon who manages the Toom the number of fquares, or threads, comprifed in the fpace he is reading, intimating, at the fame time, whether it is ground or figure.
To put what is ready on the fimblot, is to faften little frings to the feveral packthreads, which are to raife the threads named: this they continue to do, 'till the whole is read,
Every piece being compofed of feveral repctitions of the fame defign, when the whole defign is drawn, the drawer to rehegin the defign afrefh, has nothing to do but raife the little itrings with llip. knots to the top of the fimblot, which he had let down to the bottom. This he is to repeat as is neceffary, 'till the whole be manufactured.
The ribbon-weavers have likewife a defign, but far more fimple than that we have defcribed. It is drawn on paper, with lines and fquares, repreienting the threads of the warp and woof. But inftead of lines, of which the figures of the former confift, thefe are conftituted of points only, or dots, placed in certain of the little fquares, formed by the interfection of the lines. Thefe points mark the threads of the warp that are to be waifed, and the fpaces left blank denote the threads that are to keep their fituation. The reft is managed as in the former.
Design is alfo ufed, in painting, for the firft idea of a large work, drawn roughly, and in little, with intention to be executed and finified in large. The art of painting has been, by fome of the greateft mafters, divided into the delign, or draught, the proportion, the expreffion, the clair-oblcure, the ordonnance, the colouring, and the perfpective. See the article Painting.
Defign in painting is the fimple contour, or outlines of the figures intended to be reprefented, or the lines that terminate and circumfribe them. Such defign is fometimes drawn in crayons, or ink, without any fhadows at all; fometimes it is hatched, that is, the fhadows are expreffed by fenfible lines, ufually drawn acrofs each other with the pen, crayon, or graver. Sometimes, again, the fhadows are done with the crayon rubbed, fo as there do not appear any lines: at other times, the grains or ftrokes of the crayon appear, as not being rubbed: fometimes the defign is wafhed, that is, the fhadows are done with a pencil, in Indian -ink, or fome other liquor; and fometimes the defign is coloured, that is, colours are laid on much like thofe intended for the grand work. The effential requifites of a defign are correctnefs, good tafte, elegance, character, diverfity, expreffion, and peripective. Correctnefs depends on the proportions, and a knowledge of anatomy. Tafte is a certain manner of defigning, peculiar to one's fclf, derived either from nature, mafters, or ftudies, or all of them unitedly. Elegance gives a delicacy that not only ftrikes perfons of judgment, but communicates an agreeablenefs that pleafes univerfally. The character is what is peculiar to each thing; wherein there muft be diverfity, inafmuch as evcry thing has it's particular character to diftinguifh it. The expreflion is the reprefentation of the parts of a painting, or figure, according to the fituation they are in with refpect to the point of fight.
The defign, or draught, is a part of the greateft import and extent in painting. It is acquired chiefly by genius and application, rules being of lefs avail here than in any of the other branches of the art, as colouring, clair-oblcure, expreffion, \&c.
The principal rules given by the beft mafters that regard defign are, that novices accultom themfelves to copy good originals at firft fight: not to ufe fquares in drawing, for fear of ftinting and confining their judgment: to defign well after the life, before they begin the practice of perfpective rules. in defigning after the life, to learn to adjuft the magnitude of their figures to the vifual angles, and the diftance of the cye from the model, or object: to mark out all the parts of their defign before they begin to fhadow: to make their contours in great pieces, without taking notice of the little mufcles, and other breaks : to make themfelves mafters of the rules of perfective: to obterve every froke as to it's perpendicular parallel and dittance; and particularly fo to compare, and oppofe the parts that meet upon, and traverfe the perpendicular, as to form a kind of equare in the mind, which is the great, and almof the only rule of defigning juftly: to have a regard not only to the model, but alto to the part already defigned; there being no fuch thing as defigning with ftrict juftnefs, but by comparing and proportioning every part to the firft.
The reft relates to perfpective; as that thofe objects be feen, at one view, where rays meet in a point: that the eye and object be always conceived as immoveable: that the fpace, or medium between them be conceived tranfparent: and that the eyc, object, and picture, be at a juft diftance, which is ufually double the bignefs of the lubject, or picture.
Vol. l.

## D E S

## REMARK.

The great utility of the art of defign, or drawing in general, being reprefented in a very juft light by the ingenious Mr. Gwyn, in his eflay on that fubject, including propofals for erecting a public academy, for educating the Britifh youth in drawing, and leveral arts depending thereon, it may not be unacceptable to many of our readers to quote bim upon this occafion.

- In regard, fays that gentleman, to the mechanic arts, I would - defre every polite reader to affilt me with his imagination, 6 and every artift to make the particular application of my ge-- neral remarks to himfelf, and his own bufinefs : for fhould I
- enumerate all I could now think of, to whom drawing is
- either abfolutely neceffary, or would be greatly uffful, I
- thould incur the charge of a needlefs prolixity, if not of
" defcending lower than the pieture hitherto given of my - fubject may feem to require. The bailiff, farmer, and all 6 whofe bufinefs is relative to lands, may include themfelves
- in what we have faid of the furveyor; the carpenter, ma' fon, bricklayer, glazier, with fome others whofe trades have refpect to building, might be difpleafed, if put in any ' other clafs than that of architects; and real architects, ' while they find the affiftance of thefe artifts neceflary to exe6 cute their defigns; mult not be alhamed to fhelter their auxiliaries. All whofe employment is in the fahioning of - earth, wood, metal or ftone, or in ornamenting the vac :ious utenfils of life fafhioned from thefe, muft acknowledge
" that drawing turns greatly to their account, and that, if
' they can form no defigus of their own, they are conftantly - obliged to copy thofe of the better artifts.

6 Weavers, embroiderers, and others employed in manufac"turing of filks or cottons, are obliged, if unkilled them-- felves, to have recourfe to thofe who profefs pattern-draw6 ing *. How much fuperior to thefe dependent artifts hall - we efteem thofe engravers, who, with great neatnefs of the ' burin, have few or no ideas of their own to follow, and are 6 obliged to work after the defigns of others in all they per' form? Muft it not occur to all fuch, that their great - defect is the want of fill in the art of drawing? Can any - labour feem too arduous, if by it they may attain this origi-- nal idea, this animating foul of all their other fiill? Ileave 6 this thought to the reflection of every one who is fenfible ' of his own deficiency.

* Hence the complaints of perfons engaged in thofe parts - of the weaving trade, where defign, invention, or, as - they term it, fancy, are concerned. Thefe men have - long been convinced of the necelfity of drawing in thofe branches, and with great concern lament, that, notwith - flanding the perfection to which the filk manufacture is - brought in London, particularly in Spiral-Fields, our - greateft artifts, for want of diill to delineate, and thereby - improve their own conceptions, are, in the article of bro'caded filks in particular, reduced to the neceffity either - of calling in the affiflance of the better-inffrutted, though ' not more ingenious, French, who refide among them, or - of fervilely imitating their lefs elaborate performances.
- In a word, the aftronomers cannot in fancy parcel out the - heavens, nor the geographer defcribe the divifions of the 6 earth that really exift, without fome proficiency in the art ' of drawing. Ueder the direction of thefe we place all the ' artifts who work on inftruments for the meafure of time or - fpace, by whatfoever denomination they are known. Not ; one of thefe mechanics but is ftrictly bound to the rules of - exact proportion.
- To navigators, continues this gentleman in another place, ' who traverfe the valt ocean, and whofe fafety depends upon ' their knowledge of their fituation every moment, the art c of drawing is fo abfolutely neceflary, that the neglect of it - hitherto has been equally fatal and unaccountable. In the ' art of war how requifite it is, and how fhamefully it has ' on our part been pretermitted, the recent experience of the ' four or five years laft elapfed, does but too fully demon"frate. We can only hope that the infticutions at Wool' wich and Portfmouth, by training up a fufficient number ' of young men in the uleful parts of knowledge, of which ' this of drawing is one of the moft effential, may vindicate ' to our nation, in future wars, as much applaufe for our - military fkill, as is now given without referve to our ' courage. If we do not imirate our neighbours in an art, ' which is now hecome fo effectual, as almult to take the ' place of numbers, weight, and perfonal prowefs, how thal - we ever hope again to conquer them in the field, or to - maintain our fuperiority over them on the ocean?

6 In the Ordonnance Marine, Lewis XIV. orders, " That - there be profeffors to teach navigation publicly in all the - fea-port towns, who muft know defigning, and teach it ' their fcholars, in order to lay down the appearances of ' coafts, and the like. They are to keep their fchools open, - and read four times a weck to the feamen, where they mult - have charts, globes, fpheres, compaffes, quadrants, aftro-- labes, and all books and inftruments neceflary to teach their ' art. The directors of hofpitals are obliged in fend thicher, ' ycarly, two or thee of their boys to bc tugght, and to fur-

## D E S

## D E V

nifh them with books and inftruments. Thofe profeffors are obliged to examine the journals depofited in the office of - admiralty, in the places of their eftablifhment, to correct ' the errors in prefence of the feamen, and to reftore them within a month.'
King Charles II. who well underftood the importance of - eflablifhments of this nature, founded fuch a fchool in

- Chrift's Hofpital, whích has produced many eminent pro-

6 ficients. King William eftablifhed a mathematical lecture, to breed up engineers and officers; which was difcontinued,

- however, after the peace of Ryfwic. The fault of the
© Englifh has ufually been, to neglect the means of teaching military qualifications when the ufe of them has not been 6 immediately neceffary. But the above-mentioned fchools, now eftablifhed at Woolwich and Portfmouth, to teach sthe arts relating to war, feem to promife a more lafting duration.
It appears from the account, lately publifhed, of the moft © remarkable voyage of the prefent age, that the honourable
- gentleman, fince called up to the rank of nobility, who commanded in it, had a true fenfe of the whole duty of his
© employment, and looked upon the application of a fkill in drawing as no inconfiderable part of it. We muft take the fentiments, in the introduction of that work, for the commander's own, though publifhed under another name. 6 They are fo full to the point I am upon, and their authority is fo much better than my own, that a quotation from them will fupply the place of much that I muft elfe have faid upon the fubject of drawing, with refpect to the - public

I cannot, fays Mr. Walter, in the right honourable lord

- Anfon's Voyage round the world, finifh this introduction,

6 without adding a few reflections on a matter very nearly connected with the prefent fubject, and, as I conceive, c neither deflitute of utility, nor unworthy of the attention 6 of the public; I mean, the animating my countrymen, 6 both in their public and private ftations, to the encouragement and purfuit of all kinds of geographical and nautical - obfervations, and of every fpecies of mechanical and commercial information. It is by a fettled attachment to thefe feemingly minute particulars, that our ambitious neighbours have eftablifhed fome part of that power with which * we are now ftruggling: and, as we have the means in our - hands of purfuing thofe fubjects more effectually than they - can, it would be a difhonour to us longer to neglect fo - eafy and beneficial a practice: for, as we have a navy * much more numerous than theirs, great part of which is s conftantly employed in very diftant ftations, either in - the protection of our colonies and commerce, or in affift-- ing our allies againft the common enemy, this gives us - frequent opportunities of furnifhing ourfelves with fuch - kind of materials as are here recommended, and fuch as - might turn greatly to our advantage, either in war or c peace.

- For, not to mention what might be expected from the - officers of the navy, if their application to thefe fubjects - were properly encouraged, it would create no new ex-- pence to the government to eftablifh a particular regulation - for this purpofe; fince all that would be requifite would be c conftantly to embark on board fome of our men of war, 6 which are fent on thefe diffant cruizes, a perfon, who, - with the character of an engineer, and the fkill and talents - neceffary to that profeffion, hould be employed in draw-- ing fuch coafts, and planning fuch harbours, as the fhip - hould touch at, and in making fuch other obiervations of - all kinds, as might either prove of advantage to future na* vigators, or might any ways tend to promote the public 6 fervice.
- Befides, perfons habituated to this employment(which could - not fail, at the fame time, of improving them in their pro* per bufinefs) would be extremely ufeful in many other lights, - and might ferve to fecure our feets from thofe difgraces, * with which their attempts againft places on fhore have been c often attended: and, in a nation like ours, where all fci-- ences are more eagerly and univerfally purfued, and better < underftood than in any other part of the world, proper fub-- jects for fuch employments could not be long wanting, if - due encouragement were given to them.
- This method here recommended is known to have been fre' quently practifed by the French, particularly in the inftance - of Monf. Frezier, who has publifhed a celebrated voyage - to the South-Seas: for this perfon, in the year 1711, was "purpofely fent by the French king into that country, on - board a merchantman, that he might examinie and defcribe 6 the coaft, and take plans of all the fortified places, the - better to enable the French to profecute their illicit trade, ' or, in cafe of a rupture with the court of Spain, to form - their enterprizes in thofe feas with more readinefs and - certainty.
- Should we purfue this method, we might hope, that the - emulation among thofe who were thus employed, and the c experience, which, even in time of peace, they would - thereby acquire, might at length promife us a number of ' able engineers, and might efface the national fcandal,

6 which our deficiency in that fpecies of men has fometine 6 expofed us to: and, furely, every flep to encourage and - improve this profeffion, is of great moment to the public as no perfons, when they are properly infructed, make

- better returns in war, for the encouragement, and emolu - ments beftowed on thein in time of peace. Of which the - advantages the French have reaped from' their dexterity (too numerous and recent to be foon forgot) are an ample confirmation.
- And having mentioned engineers, or fuch as are fikilled in
" drawing; and the other ufeful praftices of that profeffion, 6 as the propereft perions to be employed in thete forengr enquiries, I cannot (as it offers itielf fó naturally to the - fubject in hand) but lament, how very imperfect many of - our accounts of diftant countries are rendered, by the rela' tors being unfkulful in drawing, and in the general princi-- ples of furveying, even where other abilities have not been - wanting. Had more of our travellers been initiated in - thefe acquirements, and had theie been added thereto
- fome little fkill in the common aftronomical obfervations ( all which a perfon of ordinary talents might attain with a 6 very moderate fhare of application) we fhould, by this ' time, have feen the geography of the globe much correcter ' than we now find it; the dangers of navigation would have - been confiderably leffened, and the manners, arts, and pro; - duce of foreign countries, would have been much better
- known to us than they are. Indeed, whien I confider the - frong incitements that all travellers have to acquire fome part, at leaft, of thefe qualifications, efpecially drawing; 6 when I confider how much it would facilitate their obfer-- vations, affift and ftrengthen their memories, and of how - tedious, and often unintelligible, a load of defription it ' would rid them, I cannot but wonder that any perfon; ' that intends to vifit diftant countries, with a view of in-- forming either himfelf or others, fhould be unfurnifhed with f fo ufeful a piece of fkill.
- And, to inforce this argument fill farther, I muft add; ' that, befides the ufes of drawing which are already men' tioned, there is one, which, though not fo obvious, is yet,
' perhaps, of more confequence than all that has been hi-
- therto urged; and that is, that thofe who are accuftomed - to draw objects, obferve them with more diftinetnefs than - others who are not habituated to this practice: for we may - eafily find, by a little experience, that, in viewing any ob-- ject, however fimple, our attention or memory is fcarcely 6 at any time fo frong, as to enable -us, when we have turn6 ed our eyes away from it, to recollect exactly every part it ' confifted of, and to recall all the circumitances of it's ap-- pearance; fince, on examination, it will be difcovered, - that in fome we were miftaken, and others we had over - looked: but he that is employed in drawing what he fees, - is at the fame time employed in rectifying this inatten6 tion; for, by confronting his ideas copied on the paper, with the object he intends to reprefent, he finds in what * manner he has been deceived in it's appearance, and hence - in time acquires the habit of obferving much more at one - view, and retains what he fees with more corrednefs, than
- he could ever have done without his practice and proficiency in drawing.
- If what has been faid merits the attention of traveliers of ' all forts, it is, I think, more particularly applicable to the 6 gentlemen of the navy; fince, without drawing and planc ning, neither charts nor views of land can be taken; and, ' without thofe, it is fufficiently evident, that navigation c is at a full ftand. It is doubtlefs from a perfuafion of thefe ' qualifications, that his majefty has eftablifhed a drawing' mafter at Portfmouth, for the inftruction of thofe who are s prefumed to be afterwards intrufted with the command of - the royal navy: and though fome have been fo far milled, - as to fuppofe, that the perfection of fea-officers confifted in - a turn of mind and temper refembling the boiferous ele' ment they had to deal with, and have condemned all li-- terature and fcience as effeminate, and derogatory to that 6 ferocity, which, they would perfuade us, was the moft ' unerring characteriftic of courage: yet it is to be ioped, - that fuch abfurdities as thefe have at no time beenauthorized - by the public opinion, and that the belief of them daily di' minithes.'
Since the firft publication of this work, the Society of Arts, Manufactures and Commerce, has been eftablifhed; and, from the encouragement they have given, the art of Designing has been far more cultivated in this kingdom than heretofore: notwithftanding, this fociety does not as yet feem to be planned upon the moft ufful foundation that it might be, fee the article Royal Society, the conclufive Remarks thereon.
DEVONSHIRE, has the Englifh channel on the fouth, Brifol channel on the north, is divided on the welt from Cornwall, by the river Tamar, and is bounded on the eaft with Somerfethire.
'Tis about 69 miles in length, 66 in treadth, and 200 in circumference, being the largeft and moft populous county in England,' Yorkfhire excepted.
'The air is mild, except on the hills and dry heaths, where, if

## D E V

Charp, 'tis healthful. The foil various, in fome patts moorifh and barren, in others as fruifful, efpecially the fouthern parts, called the Garden of Devonthire.
That patt, called the Sauth Hams, is famous for it's rough cyder: and it's tin mines, were formerly in great abundance, but there is very little tin dug in this county now. It's commodities are corn, cattle, wool, \& \&c. and it's manufactures, kerlies, ferges, druggets, perpetuana's, long ells, batloons, narrow cloths, \&xc. as alfo bone lace.
Chief rivers, are Tamar, Tave Lad, Ock, Tame, Touridge, Ex, and Dart.
EXETER, the chief city, and one of the principal in the kingdom for it's building, wealth, extent, and number of inhabitants. The fea flowed up formerly to the very walls of the city, and fhips could load and unload at that called the Witer-Gate: an advantage they were afterwards deprived of, but have fince recovered by the contrivances of fluices and gares, that veffels of 150 tons can now come up to their key. Of all it's fairs, which are feven, Lammas-fair is the greateft, being much frequented by mercers, linen-drapers, haberdafhers, 8cc. from London; and it lafts three whole, and 0,0 half days.
As great a trade as is now carried on here, for fenges, and other woollen goods, in which 'tis computed that 600,0001 . at lealt is yearly traded for; yet were the markets for wool, yarn, and kerfeys, not erected till the 30th of Henry the VIIIth, before which the merchants drove a confiderable trade to Spain and France. There were weavers here before Henry VIII. but Crediton kept the wool-market and clothtrade. The ferge-market, kept weekly, is faid to be the greateff in England, next to the brig-market at Leeds; and that lometimes as many ferges have been fold in a week, as amount to 60 or $80,000 \mathrm{l}$. for, befides the valt quantities of woollen goods ufually fhipped for Spain, Portugal, and Italy, the Dutch give large commiffions for buying up ferges, perpetuana's, \&c. for Holland and Germany. That to France is not very confiderable, and too much of what there is, is in the hands of fmugglers, that mifchievous practice being moft fucceffful on the fouth coaft of England. 'Tis particularly remarked of this city, that it is almoft as full of gentry as of tradefmen, and that there have been more mayors and bailiffs of it, who have defcended from, or given rife to, good families, than of any other of it's bignefs in England; it's great trade and flourifhing fate tempting gentlemen to fettle their fons here, contrary to the practice in the midland and northern counties; where, according to the vain and ruinous notion of the Normans, trade was left to the vulgar, and gentlemen were not to foul their fingers with it. See the article Commerce
From the mouth of the river Ex to Torbay, the fhore is full of villages, but nothing remarkable for traffic.
Torbay is famous for the landing of the prince of Orange, afterwards king of Great Britain, with his army, in 1688.
Dartmouth town and harbour, are five miles weft from Berry-Point, which is the weft part of land that makes the bay: being on the mouth of the river Dart, a river of a long courfe and decp channel, and which makes an excellent harbour at this place, able to receive a royal navy. The entrance, indeed, is narrow, but the channel is good; and 'tis commanded by a caftle, fo placed at the mouth of the river, that nothing can pals but under the very muzzle of i's guns.
The town has a large key, is very populous, and the merchants have here great bufinefs, being feated as it were in the center of the pilchard fifhing, which they manage very much to advantage. They alfo trade confiderably with France, Portugal, and to the Mediterranean, and feveral very good fhips belong to the town. They have likewife very confiderable trade to Newfoundland.
It is to be obferved here, and I fpeak it now for the whole coaft, that in all the towns that lie thereon, beginning at Southampton and reaching the land's end, and even afier that into the Severn fea, and fo to both fides of that fea, the Wellh as well as Englin, there are abundance of confiderable merchants, who trade independent of London, having two particular branches, which they manage with great fuccefs, exclufive of their ordinary correfpondence; namely, the pilchard and herring-fifheries, and the Newfoundland finhing. They deal very largely alfo in other things, as in the ferges and manufactures of Exeter, and of other parts of Devonfhire, and efpecially in copper and block-tin, plentifully found in the mines of Cornwall and fome in Devonfhire, and hardly any where elfe in England.
Pymouth, anciently no more than a fifhing towns is now the largeft in the fhire, containing near as many fouls as Excter, and is one of the chief magazines in the kingdom, owing to it's port, one of the biggeft and fafeft in England, having two harbours, capable of containing 1000 fail.
It has a good pilchard-fifhing on the coalt, and drives a conliderable trade to the Streights and Wefl Indies.
Barnstaple has a good trade to America and to Ireland. from whence 'tis an eftablifhed port for landing wool; and imports more wine and other neerchandize than Biddeford, and is cvery whit as confiderable; for, though in's rival cures
D. I A
more fin, yet Barnftaple drives a greater trade with the ferge-makers of Tiverton, Taunton, and Exeter, who come hither to buy fhad fifh, wool, yarn, \&c.
Howiton is an ancient borough; the firf ferge manufacture in Devonfhire was here; but 'tis now much employed in that of lace, and the broadelt fort made in England, of which great quantities are fent to London.
Ashburton, fituated among bills, noted for mines of tin and copper, and has a manufzaure of ferge.
Clifton Dartmouth Hardness, has a harbour where 500 fail of thips may ride fafe; here live fome confiderable merchants, who trade to Portugal', Italy, and the plantations, but efpecially to Newfoundland, and from thence to Italy, \&c. with fifh. Befides this, a pilchard-finhery is carried on hereabouts, with the greateft number of veffels of any port in the weft, except Falmouth.
Tiverton is an ancient town, noted for the greatef woollen manufacture in the county next to Exeter.
Biddeford is inhabited by wealthy merchants, who fend fleets yearly to the Weft-Indies, particularly Virginia and Newfoundland, and to Ireland, from whence 'tis an eftablifhed port as well as Barnftaple, for landing wool: forty or fifty fail, belonging to this port, have been employed to fetch cod from Newfoundland: and others are fent to Liverpool and Warrington for rock-falk, which is here diffolved by the fea-water into brine, and then boiled up into a new falt, juftly called falt upon falt, with which they cure their herrings. DIAMOND. Stones of this denomination admitting of a branch of trade of no little extent, we may reafonably enough expect, that the reader would judge it a material emifion, if we were to take no notice of them.
The genuine diamond is a pure, hard, folid, tranfparent, fparkling, precious fubftance; the moft perfect of all the gems of the cryftal kind; excelling all other bodies in the Iuftre of it's reflecting light, and enduring the fierceft fire for a very long time, without melting.
As the fize, fo is the fhape of diamonds irregular. Yet it feems to have one determinate form, into which it naturally concretes, when unimpeded by foreign accidental matter; and fo have the various falts; and art can eafily obftruct thofe falts from cryftallizing in their natural determinate figure, and give them very different and irregular forms.-W Wat art is capable of doing above ground, we may prefume nature may do by accident under it : common crytal and fpar, which have their natural fpecificated figures, and angular forms, generate into irregular and thapelefs maffes.
The diamond is often blemifhed, with white, yellow, or black fpots, which greatly diminith it's fplendor, and therefore it's value, whence divers practices have been ufed to get them out. They are of different colours, white, yellowih, bluifh, reddiif, \&cc.
They confift of cryfal laminx, fomewhat in the nature of Iceland cryftal, fo that ikilful lapidaries can frequently feparate them with the edge of a knife. They are not calcinable by common fire, nor in the focus of a burning-glafs, if only the plain flat furfaces be thus expofed to the fun's rays; but, if the edges of the plates are turned to the rays, they filit, feparate, and rum into a kind of glafs; which has not the luftre of a diamond.
The dlamond, the mof readily of all fubftances, emits fire with fteel.
It makes no effervefcence, nor fuffers any the leaft change in the moft powerful acid menftruums.
The common colour of diamonds being generally known by fight, 'tis not neceffary, nor would it be eafy, to defcribe it by words; the moft uftual colour of thefe gems is not theonIy one. That celebrated French jeweller, Monfieur Tavernier, gives an account of a fair diamond that he bad, of a very red colour. There are others of a golden yellow, which might be taken for an excellent topaz.
That the real virtues of gems may be probably derived from the metalline, or mineral tinctures, or rather corpufcles that were imbodied with the matter of the gem, whilft it was yet fluid, or foft, and afterwards coagulated therewith, appears probable; becaufe fome have been really difcovered to be impregnated with metaline, and more particularly with ferrugineous particles, if we may credit the great Mr. Boyle's affertion, in regard to an experiment made with his own hands; for he, having taken a moderately vigorous loadftone, and applied it to a diamond of a dull colour, found that it had in it particles enough of a ferrugineous nature, to make it magnetic; and obferved, that it would not only fuffer itfelf to be taken up by the frongeft pole of the loadftone, but, when that pole was offered within a convenient diftance, it would readily leap through the air to faften itfelf so it. Jewellers and lapidaries, and, indeed, the general opinion of mankind, allow, that the goodnefs of diamonds cenfifts in their water or colour, luftre and weight: the white is eftemed the moft perfect colour: their blemilhes and imperfections comfift in veins, flaws, fecks of red or black fand, and a bluifh or yellowih caft.
European artifts examine the goodnefs of their rough diamopods, by day light; the Indians do it by night; in order to which, fay: M. Savary, they make a hole in a wall a foot

Yquare, and place a lamp therein, with a thlek wick, by the light of which they form a judgment of the quality of the ftone.
Dr Wafl, in the Philofophical Tranfacions, feems to have fell upon a good method of judging of thefe gems: a diamond, with an caly flight friction in the dark, with any foft animal fubftance, as woollen, filk, or the like, appears luminous in it's whole body: if you continue rubbing it for fome time, and then expofe it to the eye, it will remain luminous for fome time. If the fun be eighteen degrees below the horizon, holding up a piece of bays, or flannel ftretched tight between both hands at fome diftance from the cyc, and another rubbing the other fide of the bays, or flannel, pretty brifkly with a diamond, the light is much more jplendid and delightful than any other way. But what the doctor judges the moft extraordinary is, that a diamond, being expofed to the open air, in view of the 1 ky , gives almort the fame light of itfelf, without rubbing, as if rubbed in a dark room: but, if in the open air, you put the hand, or any thing elfe a little over it, to prevent it's open and immediate connmunication with the fky , it gives no light, which is a diftinguilhing criterion of a diamond.
Rough Diamond is the fone as nature produces it in the mines.
Brilliant Diamond is that quite flat underneath, but it's upper part cut in divers little faces, ufually triangles, the uppermof whereof terminate in a point.
Table Diamond is that which has a large fquare face atop, encompaffed with four leffer.
Diamond-Cutrer is an artificer who cuts diamonds, is fkilled and deals in them. See the more general article L.Apidary.

Of the Díamond Mines, and trafficking thereat.
The places whence we have diamonds, are the Eaft-Indies and the Brafls; they are found in the former, in the ifland of Bornco, and in the kingdoms of Viffapour, Golconda, and Bengal. In all thefe places, they are generally found clear and colourlefs, yet are fometimes met with, tinged with the colours of the other gems, by the mixture of fome metalline particles, as before obferved, according to Mr. Boyle.
They are found partly in mines, partly in rivers.
At Raolconda, a town in the Eaft-Indies, five leagues diftant from Golconda, and eight or nine from Viffapour, in the province of Conutica, is a diamond mine, difcovered not above 200 years ago: therein are found the pureft ftones, with the moft fplendid water; but being forced to get them out of the rocks, with a great iron-lever, and many blows, they frequently flaw the diamonds by fhivering them, and make them look no better than cryftal: which is the reafon why there are fo many foft fones found in this mine, though they make a great fhew.
If a fone be free from flaws, they give it only a turn or two upon the wheel, that it may lofe as little as poffible of it's weight; but, if it has any flaws, points, or black fpecks, they cut it into facets, and work the flaw into a ridge to hide it.
The diamond trade at the mines is free and juft, and tranfacted without any talking on either fide, the buyer and feller expreffing themelves, by taking each other by the hands; and fo, in the fame place where they are many people, a parcel of goods thall be fold feven or eight times, and no man know it.
At Gani, or Colour, feven days journey from Golconda eaftwards, is another diamond mine; it lies between the town and a mountain; and the nearer they dig to the mountain, the larger ftones they find; but there is none on the top.
This mine was found not above an hundred years ago, by a countryman, who, digging his ground to fow millet, found a large diamond 25 carats weight: upon which the rich men in the town fell to digging, and found, as they do to this day, bigger flonts than in any other mines, viz. fome above 40 carats, and one of 900 , which Margimola prefented to Aureng-Zeb.
But the mifchief of thefe ftones is, that they partake of the quality of the foil, and are few of them quite pure and clean, and free from all blemif; fome being black, others red, and others yellow and green. Near Soumelpour, in the kingdom of Bengal, is a river called Gouel, where there are diamonds found mixed with the fand.
In the ifland of Borneo, which is the largeft illand in the world, is another river, called Succadan, in the fand whereof they find diamonds, as hard as any in the other mines; but the queen of the mine will permit none to be carried out of it; fo that all that come from thence are conveyed out by flealth.
At Rocolconda mine they weigh by mangolins, which are each a carat and $\frac{3}{4}$, and pay in new pagodas, as they do alfo at Colour.
At Soumelpour mine, they weigh by rahs, which are each $\frac{7}{8}$ of a carat, and pay in roupees.

Of the value of diamonds at thofe places.
The piice of diamonds here is thus to be known: if it be
a thick fone, well fquared, and have all it's corners, and the water be white and lively, without fpecks or flaws, fuch a ftone is worth ten pounds Gfteen fhillings ferling; or of the fame value, if it is cut in facets, which they call a rofe diamond, if it be a fair breadth, and of the fame perfection; and, if a ftone weighs more carats, it is raifed in price. Imperfect diamonds are not above one half of the value of the perfect.
Murfilli, a kingdom northward about 500 miles from Malabar. They have here diamonds in their hills, which they fearch for after great rains.
Here the diamonds are fo fcattered in the earth, and lie fo thin, that, in the moft plentiful mines, 'is rare to find one in digging, or 'till they have prepared the fluff, and fearched purpoiely for them.
Of the method in general for fearching for diamonds in the mines.
The diamonds being frequently inclofed' in hard clods of earth, and the new mines in the kingdom of Golconda, in particular, having the earch fo fixed about them, they cannot move it fufficiently to difcover their tranfparency, 'till they have prepared the ftuff, and fearched very viglantly for them; and was it not for the pecularity of their torin, they would not know them from other ftones.
At the firft opening of the mine, the unikilful labourers fometimes, to try what they have found, lay the fubftance on a great ftone, and ftriking thereon with another, to their coftly experience, difcover they have broken a diamond. Near the place where they dig they raife a wall, with fuch rugged ftones as they find at hand, whereof all the mines afford plenty, of about two feet high, and fix feet over, flooring it well with the fame; for the laying of which, they have no other mortar than the earth tempered with water. To ftrengthen and cement the fame, they throw up a bank againf the fide of it, in one part whereof they leave a frall vent about two inches from the bottom, by which it empties itfelf into a little pit made in the earth to receive fmall tones, if by chance any fhould run through.
The vent being flopped, they fill the ciftern they have made with water, foaking thercin as much of the earth they dig out of the mine, as it can conveniently receive at a tire, breaking the clods, picking out the great fones, and ftiring the whole with Chovels 'till the water is all muddy, the gravelly earth falling to the bottom; after which they open the vent, letting out the foul water, and fupply it with clean, 'till all the earthy fubftance be wafhed away, and none but a gravelly one remains at the bottom.
Thus they continue wafhing for feveral bours 'till ten o'clock in the morning, and then ipread the gravelly ftuff they have fo wafhed, on a place made plain and fmooth for that purpofe near the ciftern, which being fo dried by the heat of the fun at that time of the day, they fo vigilantly look, that the fmalleft bit of a ftone can hardly efcape them. They never examine the fluff they bave wafhed, but between the hours of ten and three, left any cloud, by interpofing, intercept the brifk beams of the fun, which they hold very requilite to affift them in their fearch, thote diamonds conftantly reffecting them when they fhine on them, rendering themielves thereby the more confpicuous.
Some of the moft expert labourers are employed in fearching, he that fets them to work ufually overlooking; but 'tis fcarce poffible, efpecially where many are employed, to watch them fo narrowly, but that they may fteal part of what they them 10 narrowly, but that they may teal part of what if they find
find, and fell it privately for their own ufe. If a large ftone, they do not prefently carry it to their employer, but keep on fearching, having an eye on him, 'till they obferve he takes notice of it, when, with the turn of their hand, they give him a glimpfe of it, but deliver it not 'till they have done work, and then very privately; it being the general endeavour to conceal what they find, left it thould come to the knowledge of the governor of the place, and he requires a fhare; which, in the kingdom of Golconda, is ufually practifed, without any refpect to the agreement made with them. The miners, thofe that employ them, and the merchants that buy the fones of them, are ufually pagans, few or no muffulmen following the employment. The labourers and their employers, are Tellingas, commonly natives of, or near the place.- The merchants here are the Banians of Guzzarat, who for fome generations have forfaken their own country to take up this trade; in which they have had fuch fuccefs, that 'tis now folely engroffed by them, who, correfponding with their countrymen in Surat, Goa, Golconda, Viffapour, Agra, and Dilu, and other places in India, furnih them with diamonds.
The governors of the mincs are alfo idolaters. In the king of Golconda's dominions, a Tellinga brammee rents moft of them, whore agreement with the adventurer is, that all the fones found, under a pagoda weight, are to be his own, all that weight, and above, is to be his for the $\mathrm{king}^{\prime}$ suf. But, although this agreement be figned and fealed, he don't mind the performance, but endeavours to engrois all the profit to himfelf, by tyrannically fqueezing both merchants and miners; whom he not only taxes vesy high, but maintains
fies among them of their own people. On the leaft fufpicion that they have been any ways fortunate, he immediately makes a demand on them, and raifes their tax, elle on a falfe pretence, that they have found a great fone, punithes them corporally, 'tll they furrender what they have, to redcem their bodies from torture.
Beidcs, the excife is fo high on all forts of provifions, bectle and tobacco, which with them are effeemed neceflaries, that the price of all things is doubled; by which rigad impofition, there is hardly a man to be found worth five hundred pounds amongft them, moft of them dealing by monies taken up at intereft of ulurers, who refide there purpofely to furnifh them, who, with the governor, eat up their gains; fo that all whocan, defert their country, and refide in places where they meet with better treatment,--Both merchants and miners here go generally naked, having only a mean cloth about their middle, and a fafh on thei: heads; they dare not weai a coat, left the governor fhould imagine that they have greatly profpered, and are become rich, and make that a pretence to increafe his oppreffive impofitions.
The wifeft, when they find a great ftone, conceal it 'till they have an opportunity, and then with their wife and children run all away into the Viffapour country, where they are fecure againt the like tyrannical impofitions. The government in the Viffapour country is better ; their contracts obferved, taxes eafier, and no fuch impofitions on provifions; the merchant appears genteel, among whom are feveral of confiderable eftates, which they are permitted to erjoy peaceably; by reafon whereof their mines are much more populous, and more beneficially wrought than thofe of Golconda. Among the Portugueze fettlements in the Eaft-Indies, many of the jefuits at Goa not only engaged in trade, contrary to the rules of their order, and their duty as miffionaries, but even defcended fo low, as to difguife themfelves in the habits of faquirs, or Mahometan monks, that they might bave an opportunity of vifting the diamond mines, and purchafing ftones tiere of extraordinary value.
We owe this circumftance to the Hiftory of Holland by M . de la Neuville, who tells us, that the Dutch, being extremely piqued at the trouble the jefuits gave them in China, difcovered this practice to the governor of the diamond mines at Viffapour, who caught two of thefe poor reverend fathers, difguifed like faquirs, with ftones about them to the value of 25,000I. which he took from them, and, after whipping the publickly for profaning the habit of thefe boly men, took fuch meafures, as prevented their carrying on this lucrative commerce in this fhape ever after.

## Of the Brazil Diamond Mines belonging to the king of Portugal.

It is about 40 years ago, that fome precious fones were brought to the city of St: Sebaftian, the capital of the Brazils, taken out of a fmall river lying weftward of that city, which were, at frif, judged to be very fine pebbles, but it was not fo foon they were brought over to Europe.
About the clofe of the laft general war, thefe fine pebbles were found in greater quantities; and 'tis faid, that fome rich planters began to employ their flaves in digging the black heavy earth, on the fides of the mountains, from whence this river defcended, and then thefe ftones were found in greater plenty; fome of them were very large, but moft of them of a black or yellowifh caft, which highly prejudiced their fplendor, and greatly depreciated their value: yet many of the yellow ftones were brought to Lifbon, and fold for topazes.
The king of Portugal afterwards interpoled, and the working of thefe mines was prohibited: which, notwithftanding, did not obftruct their being brought in confiderable quantities; for fometimes 'iwas reported they were found in this or that river, and not dug from any mine; at other times they were chriftened with new names, and nrany fent to St. Salvador, and from thence exported to Europe, under a notion of their coming by the Goa fleet from the Eaft-Indies. This involuntary fraud raifed the value, and at length the crown of Portugal became convinced, that fuch as pretended to great fkill in fones had deceived them, and that fome of thele Brazil diamonds were fearce to be diftinguifhed from the orientals.
Upon this the court altered their meafures, and it was permitted by the royal authority to fend over rough diamonds in the Rio Janciro fleet, under certain reftrictions; which permiffion rendering the value of thefe jewels ftill more and more apparent, the king of Portugal refolved to put this trade under a new regulation; which commenced in the year 1740, when his Portugueze majefty let thefe mines to a company at Rio Janeiro, for a certain ftipulated annual rent, which is faid to be 138,000 crufades, upon condition, that the faid company employ no more than 600 flaves at thefe mines.
The coming of thefe ftones into Europe, efpecially at firft, funk the price of diamonds confiderably, and has ever fince, doubtiefs, had fome influence upon the price.
Voi. I.

## Of the moft eftimable diamonds in the worts.

The fineft diamonds in the world that we know of, are, that known in France by the name of the Great Sancy, one of the fones of the crown, and weighs 106 carats; from which it has ic's name, which is a corruption of the'words cent fix : another is that of the grand duke of Tufany's, which weighs $139{ }_{2}^{x}$ carats; and one belonging to the Great Mogul, woighing $2797^{\circ} \frac{8}{8}$ carats.
The celebrated jeweller and traveller Monf. Tavernier, according to a rule which he had formed or effimating diamonds, valued that of the Great Mogul at above half a million fterling; others have valued it at above $; 00, c 00$. Alerling. But, there being no fixed and determinare method among the Europeans for eftimating diamonds, 'tis no wender that artifts greatly differ; but the Eaft-Indians feem to have one certain and invariable way of valuation, and which does not appear to depend upon any temporary fearcity or plenty of thofe gems. The judicious Mr. Jefferies, indeed in his late treatife on diamonds and pearls, has endeavoured to introduce the like certain and determined method of valuing this fpecies of jewels, the Europeans having no fure guide to go by, neither the merchants nor the jeweliers.
Monf. Tavernier informs us, that the king of Golconda is Caid to wear upon the crown of his head a jewel almoft a foot long, which is faid to be of ineftimable value. It is a rofe of great diamonds, three or four inches diameter, on the top of which there is a little crown, and out of it iflues a branch fafhioned like that of a palm-tree; but it is round, and the palm-branch, which is crooked at the top, is a good inch in diameter, and about half a foor long. It is made up of fprigs, which are, as it were, the leaves of it, and each of them have at the end a lovely long pearl, fhaped like a pear. At the foot of this pofey there are two bands of gold in the fathion of table bracelets, in which are inchafed large diamonds, fetround with rubies, which, with great pearls that hang dangling on all fides, make an exceeding fair thew; and thefe bands have clafps of diamonds to faften the jewels to the head. Befides this jewel, he hath other confiderable pieces, and fuch numbers of precious ftones, that, if there were merchants who could give him the worth of them, he would be the richeft king in the Indies.

Of the cutting of diamonds, and the choice of them roughs
A diamond cannot be cut but by itfelf, and it's own fubfance. In order to polifh them, they firf rub two againft each other, fixed at the end of a flock held in the hand. The duft that comes off by this friction, is ufed to polifh them with; which is done by means of wheels of hardened fteel, turned by a mill, and moiltened with the diamond duft mixed with olive oil. They ufe the fame duft mixed with water and vinegar, wherewith to cut diamonds; which is done with an iron wire, as fine as a bair.
Inftead of fawing, they fometimes in the Indies cleave thern, a rifk the Europeans do not care to run, left they fhould break them; but the Indians do it boldly, and therefore, perhaps, very fuccefsfully. Rough diamonds fhould be chofen compact, of a good form, not glafly, or full of threads and veins, which renders them unfit for cutting: fuch as thefe are pounded in a fteel mortar made on purpofe, and the duft ufed as above-mentioned.
The glaffinefs of them is caufed by the miners; who, to get them more eafly out of the vein, which winds between two rocks, break the rocks with a ftrong iron crow; which concuffion flivers the ftones, and makes them appear glanty.
The perfection of a diamond confifts in it's water, luftre, and weight; it's defects are glaffinefs, reddih or black foots of fand. In Europe, the merchants and jewellers examine them by day-light;, but in the Indies they chure the night-time, making a hole a foot fquare in a wall, in which they fet a lamp with a large wick, at which they view them, held in their fingers. The water they call celeftial is the worft of all, and difficultly difcerned in a rough diamond: the infallible fecret, it feems, practiled by the Indians for the difovery, is to examine them in the fhade of fome bulay tree.
Of artificial diamonds, and various pretended methods of making them, which thofe may try, if they pleafe, whole intereft it concerns.

Art, which imitates nature in fo many things, hath attempted it alfo in this admirable production, but very imperfectly, the beft of them being far fhort of the natural ; for which reafon they bear no price, in comparifon to the ether. There is, however, a pretty great trade in them for nafquerades and play-houfe habits.
There is a particular fort of falfe diamonds, called Alençon diamonds, made of ftones, or cryitals, found near Alençon, a city of Normandy. The village where they are produced, and which is about two leagues from the city, is called Hertré ; the foil is full of glittering fand, and of a hard and grey rock. There are of thefe diamonds fo clean and brilliant, that fome are deceived herein.

8 H
On

## D I A

On the coaft of Medoc alfo are found certain hard and trantparent flints, which, being properly cut, are not to be diftinguifhed, among falle diamonds.

## The way of making the diamonds of Alençon.

Take an earthen glazed pot, fet it on a little furnace, put in it filings of itcel, with fome vine athes at difcretion, wherein place by one another cryftals cut and polifhed; then pour common water gently on them, which boil during the fpace of twelve hours, taking care to add boiling water frefh into the veffel, as the water confumes in it by boiling, and take care it boil continually. Then fee if your cryltals have acquired the colour and hardnefs you expected: if not, continue the fire fome hours longer, and they will be like the true diamonds of Alençon; taking care to repolifh them again at the wheel, to give them colour and brightrefs.

The pretended way to give the true colour and hardnefs of a diamond, to cryftals and diamonds of Alençon.
There are cryflals and precious ftones, which bave neither the colour nor natural hardnefs of diamonds, and which, fome have afferted, may be imitated by art, according to the following procefs :
Take good Dutch tripoly, and make a pafte of it with water out of a fmith's forge, wherein you muft wrap up the quantity you defign of cryftal, or diamonds of Alençon cut and polifhed; then fet it in a crucible covered and luted on a gradual fire, where let it ftand 'till the crucible becomes redhot. A little time after take it out, and take out the fones; then polifh them again at the wheel, to give them their colour.
To fet them in work, take Indian paper, with leaves of tin, like thofe you put behind looking-glaffes; then let them be fet by a, filiful jeweller, and they will not be diftinguifhable from fome natural diamonds, but by nice difcerners.

Another pretended way to harden cryftals and diamonds of Alençon.
Crytals alfo acquire hardnefs in the pafte we are now going to defcribe, becaufe their humidity exhales, and they become more fixed:
Take barley-meal well fifted, with petroleum, or rock-oil; then cut that pafte in the middle, and put all your ftones in order, fo that they may not touch one another. Then cover your fones with the other half of the pafte, and put them in a crucible covered with another, and luted well together, and let it dry. After which, fet this crucible in a gradual wheelfire, from five to fix hours, a fmall fire the two firt hours, whith increafe every two hours, 'till the end of the fix: let the whole cool of itfelf. Then break your crucibles, and you will find your fones mended beyond expectation; which repolifh at the wheel, and let them be fet by an experienced jeweller.
Another procefs faid to anfwer the fame end as the preceding, and to give a fuperior luftre.
Although this is faid to be an important fecret, and may be abufed, yet we fhall communicate it; becaufe, if true, it will put people upon their guard, and convince them of the neceffity of dealing only with people of honour and credit in the diamond way.
Take one pound of loadftone, a pound of quick lime, and half a pound of common fulphur, the whole reduced to powder, and well mixed. With this powder cement your cryftals and diamonds of Alençon well cut, in a crucible covered and weil luted: being dry, fet it in a glafs-houfe furnace, if you have not one ready for the purpore, three days, in a place where the matters may be continually red-hot without fufion; and take care not to take out the crucible all at once, but let it cool gently, otherwife the ftones might break. Having broken the crucible, you will find your ftones to have acquired an additional brilliancy as well as hardnefs, and will refemble the diamonds of the old rock, which repolifh at the wheel to give the colour, and let them be well fet.

## A pretended method to make artificial diamonds.

Take of the fineft natural cryftal, calcined and reduced to fubtile powder what quantity you pleafe; fill a pot with it, and fet it in a glafs-houfe furnace twelve hours, to be melted and purified: then drop the melted matter into cold water, dry it, and reduce it again to powder; add to that powder it's weight of fine falt of tartar, made according to the procefs below*. Mix thefe two powders well, and make little pills of them with common water. Then wipe thefe pills, and put them into an earthen pot on a ftrong fire, there to grow red-hot for twelve hours fpace, without melting. Afterwards put them into a pot in a glafs-houle furnace, where leave them two days, to be well melted and purified.-Then put the matter twelve hours in the annealing furnace, to cool very gradually. Break the crucible, and you will have a fine

## D I A

material for the imitation of diamonds, which cut and polifh at the wheel.
*The way of making falt of tartar proper for this occafion. Thofe who, in their operations of artificial gems, have made no ule of falt of tartar, have, without doubt, been ignoran of the following fine preparation ; for if, to that end, you ufe the ordinary falt of tartar, there is a fulphur and foul. nefs in it, which renders cryftal obfcure, and coniequently would be hurtful in thofe operations
To make this falt, you muft firlt calcine your tartar, 'till is becomes grey, and not to perfect whitenefs; then difloive it in the fineft clear water to embrace the falt; fiter that water, and then evaporate it over the fire, and you will have remaining, at the bottom of the veliel, a white fall. To take away all foulnefs from this part, oilfolve it agan in warm water, and evaporate it again over a gentle clear fire: take it from the fire, and caft it into cold water, and you will find it will leave on the furface of the water a thick froth, which you mult anm off with a fkimmer, that has little holes no bigger than mall pins heads: put the veffel again on the fire, and evaporate the water as before -Take it off the fire, and caft upon it frefh cold wat.r and Ikjm it well as before. Reiterate this procefs, 'tll you find no more froth; then evaporate the whole over a genle fire 'till it be dry, and you will have a falt of tartar well purified, which is not fo forcible as the other, becaufe it is free from all that unctuofity which caufes the fufion. Keep this falt of tartar in a veffel well ftopped, and make ufe of it in cryftal as directed.

The following is a rate, or manner of eftimating the value of diamonds, faid to be drawn up by a perion well verfed in fuch matters; but, as Mr Jefferies's rule feems to be more generally regarded, we thall give that alio.

Table Diamonds.
Dutch cut.
lib. Ih.
lib. Th. Aten.

Antwerp cut.
lib. fh. Jib. ©h. Ater!.

Mr Jefferies's method of valuing wrought Diamond
in conjunction with rough Diamonds, out of which
they are fuppofed to be brought.
An example is here given to thew in what manner the value of a wrought diamond, of one carat, is to be found, upon the principle advanced, fuppofing rough diamonds to be valued at two pounds the carat.
The weight of fuch a ftone muft be doubled (on account of half being fuppofed to be loft in working it) which confidered as it's original weight, making two carats; then multiply the weight into itfelf, which fqueres $i$, and makc multiply the weight into itfelt, which fqueres
4 ; lafly, multiply the 4 by 2 , that produces eight pounds,
which

## D I A

which is the value of a fone of one carat wrought or polifhed, and is equal to the value of the rough diamond of 2 carats, out of which it is fuppofed to be made. This fingle inftance is bere given, to fhew the value of rough diamonds in the price of wrought ones; and as a farther explanation of the rule of valuing them, and previous to the offering any ather, it is to be obferved, that, although two pounds is laid down as the general price of rough diamonds, it is neverthelefs to be underltood, that rough diamonds differ in their value, arcording to their different degrees of perfection or imperfection, and according to the lofs of weight they may be fuppored to futtain in being truly wrought; as it is well known, that fome will lofe abundantly more than others, arifing from their i!l forms, and other defects that may attend them, which are fo numerous and difficult to be expreffed, that what may be faid of them would probably not be underfood, but by the moft experienced traders and ma. notacturers of them.
This confideration, and that of it's being but of little concern to the public, prevents my faying any thing more relating thereto.
In farther explaining the principle of valuing wrought diamonds, three other inftances, befides that already given, will be offered, to thew the operation of the principle in coming at the value of rough diamonds, which it is judged will be fufficient in other cafes in this way of proceeding. After that will be offered three more of the fame weight, in a different manner of proceeding, but to the fame end. Here it may be proper to hint, that all the infances that will be given, are founded upo.4 the price of rough diamonds in general, being put at two pounds the carat; viz. good and bad blended together; fo that two pounds is the price of the middle fort only: and it is alfo to be remembered, that, in manufacturing, half the weight is fuppofed to be wafted. And as miftakes may be made in calculating the value of particular diamonds, in the ways hereafter preferibed, it is here noted, that the prices of diamonds, from one of one carat, to one of an bundred carats, of this degree of goodnefs, are contained in the $11,12,13,14,15$, and 16 th plates of Mr. Jefferies's Effay; which will prove the truth or falfity of any calculation : and it is allo to be obferved, that the ex pence of manufacture is excluded in all the inftances that he has given on this occafion, the reafons of which appear in his tract.
Now follow the three inftances propofed, to explain this firft method of finding the value of any wrought diamonds.

The firf Instance.
To find the value of one of 5 carats weight, the weight muft be doubled, on account of half being fuppofed loft in working it ; that replaces it's original weight, which makes io carats; then multiply 10 by 10, that fquares the weight, and makes 100 carats; and, laftly, the 100 muft be multiplied by 2 pounds, the price of one carat; that produces 200 pounds, and is the value of a wrought ftone of 5 carats, and the price of the diamond, when rough.

Example.
Multiplied by - $\quad 10$ pounds
10 carats
$\begin{array}{ll}\text { Makes - - } & -100 \\ \text { Multiplied by - } & 2 \text { pounds }\end{array}$
Makes - - - 200 pounds.
Second Instance.
To find the value of one of 5 carats $\frac{x}{8}$, the weight mult be doubled, that makes $10 \frac{1}{4}$; next multiply that weight by 4 , to bring it into 4 ths, or grains, which makes 4 I ; then multiply 41 by 41 , that makes 1681 , the fquare of the weight in fixteenths; therefore divide the 168 r by 16 , that brings it again into carats, and makes 105 carats $\mathbb{T}^{\frac{1}{6}}$; which, multiplied by 2 pounds, produces 2101. 2s. 6d. and is the value of the flone, rough or wrought.

6) $1681\left(105 \frac{1}{16}\right.$
J. $210 \quad 26$

## D I A

Third Instance.
To find the value of one of 5 carats $\frac{1}{4}$, the weight doubled is 10 carats $\frac{1}{2}$; reduce that weight into grains, by multiplying it by 4 , that makes 42 ; then multiplying 42 by 42 , that makes 1764 , the fquare of the weight in fixteenths; which divide by 16 , that brings them again into carats, and makes 110 carats and $\frac{4}{40}$; which multiply by 21 . that produces 2201 . 10s. and is the value of the fone, rough or wrought.

$\mathbf{E x A m P L E}$.<br>Carats<br>$\mathrm{HO}_{2}$<br><br>-<br>84 68<br>16) $1764 \quad$ (110 $\frac{4}{16}$

1.220 10

The second Method of valuing wrought Diamonds in conjunction with the rough Diamonds, out of which they are fuppofed to be wrought.

## Firftinstance.

To find the value of a diamond of 5 carats weight, as in the foregoing cafes, fo in this the weight muft be doubled; that makes 10 carats. As a rough diamond of one carat is valued at 2 pounds, every carat in this ftone accumulates 10 times hat value; and fo every carat in this ftone is to be valued at 20 pounds; therefore multiply ro carats by 20 pounds, that will produce 200 pounds, and is the value of the ftone, rough or wrought.
Example.

Multiplied by

## Makes the total 200

Second Instance.
To find the value of one of 5 carats; the weight doubled makes 10 carats $\frac{1}{4}$; next reckon that weight in the foregoing manner, that makes every carat in this flone worth 20 pounds 10 hhillings: fo firft multiply 10 carats by 20 pounds, that makes 200 pounds; then multiply 10 carats by 10 fhillings, that makes 100 fhillings, or 5 pounds; next add the value of the 4 th of a carat at the rate of 201.10 s . that makes 51 . 2s. 6 d . laftly, caft up thefe three fums, the total will be 210 l. 2 s .6 d . and is the value of the flone, rough or wrought.

Example.
10 carats
Multiplied by - - 20 pounds
Makes - - 200 pounds
ro carats mult. by ios, makes 5
The value of $\frac{-7}{4}$ of a carat at $\}-526$
2ol. 10s. is $-\quad-\quad\}$
Makes the total $\quad 210 \quad 26$
Third Instance.
To find the value of one of 5 carats $\frac{I}{4}$; the weight doubled makes 10 carats $\frac{1}{2}$; reckon that weight as in the two other cafes, that makes every carat in this ftone worth 21 pounds: fo multiply 10 carats by 21 pounds, that makes 2101 . then add the value of the half carat at 21 the carat, that makes rol. 10s. laftly, add the two fums together, the total will be 2201.10 s . and is the value of the ftone, rough or wrought.

Example.
Io carats
Multiplied by

- 21. 

Makes

The inftances that have been given of two methods, for finding the value of wrought diamonds, as they ftand connected with the rough (out of which they are fuppofed to be made) it is apprehended, are a fufficient explanation of the principle for valuing rough and wrought diamonds, and prove it's being founded on reafon.

## D I A

Of the method of valuing wrought Dramonds, exclufive of any regard to rough Diamonds.

As inftances have been given of two different methods of attaining the value of wrought diamonds, in which cafes the value of rough diamonds, of double their weights, have been jointly confidered, they, being fuppofed to be made from fuch rough diamonds; three inftances of manufactured diamonds, of the fame weights, will be now offered; to thew in what manner their value may be found, exclufive of any regard to rough diamonds: and as the laft method appears the forteft, and moft eafy to be underftood, that method will be made ure of on this occafion.
This is to be known, by applying the price they bear manufactured, which has been hewn, viz. that, as rough diamonds are valued at two pounds the carat, a wrought diamond of one carat is worth eight pounds; fo to find the value of a ftone of that degree of goodnefs, whatever number of carats are contained in fuch a diamond, each is to be valued at 8 pounds; and whatever fum they make, muft be multiplied by the weight of the diamond. The inftances are as follow:

## Firf Instance.

To find the value of fuch a diamond of 5 carats weight, reckon every carat at eight pounds; then multiply 5 carats by 8 pounds, that makes 40 pounds; fo every carat is to be valued at 40 pounds; then multiply 5 by 40 , that produces 2001 . and is the value of fuch a diamond.

## Example.

Multiplied by
5 carats
Makes the total - 200
Second Instance.
To find the value of one of 5 carats $\frac{7}{8}$, at the rate of 8 pounds the carat, multiply 5 by 8 , that makes 40 ; then add to that the value of $\frac{7}{8}$ of 8 pounds, that is one pound; fo the value of every carat in this ftone is 41 pounds; then multiply 5 by 41, that makes 205 pounds; next add the value of $\frac{y}{8}$ of 41 pounds, that makes 5 l .2 s . 6 d . Thefe two fums cait up reduce 210 l .2 s .6 d , and is the value of the diamond.

## Examplit. <br> Multiply by . 5 carats <br> Makes <br> To which is added the value? of $\frac{1}{8}$ of 4 I 1 . which is <br> Makes the total <br> 205 <br> 526

Third Instance.
One of five carats $\frac{i}{4}$, the value of each carat is 42 pounds; multiply 5 , by 42 , that makes - - 210 pounds Then add the value of $\frac{x}{4}$ of 421 . which is 10 ro

Makes the total

- 22010

## Remarks.

There being divers curious tables in the ingenious Mr . Jefferies's treatife of diamonds, relating to this new method of computation, I would recommend the perufal thereof to all perfons of diftinction, who are purchafers of thefe jewels, as well as dealers therein: and as there have certainly been counterfeit diamonds impofed upon the world, and that gentleman has offered his fervice to the public, as an agent or broker therein, in order to prevent gentlemen being defrauded; I fhould think it the intereff of people of figure to employ fo fkilful a perfon, in a matter wherein they are Jiable to be greatly deceived. Nay, it bas been faid, that even a royal perfonage of this kingdom was fhamefully impofed upon in jewels, which gave occafion to the following lines:

But Annius, crafty feer, with ebon wand,
And well diffembled em'rald in his hand,
Falle as his gems, and capker'd as his coins, scc.
PopE's Dunciad.
The ingenious Mr. Ellicot, an eminent watchmaker in the city of London, hath given a memorial in the Philofophical Tranfactions for 1745 , on the fpecific gravity of diamonds, whore climate, fize, and tranfparency differ. Thefe differences produce not on the gravity $\mathrm{T}_{\mathrm{T}}^{\mathrm{T}} \mathrm{F}$. The fpecific gravity of the diamonds of Brazil is to that of the oriental ones, as 3513 is to 3517 .
Some fine fones found in the mountains in the neighbourhood of Baffa, a large town of the ifle of Cyprus, are called

Baffa diamonds; they are much efteemed, and may be eafily taken for true ones, though the connoiffeurs find fome difference.

A letter from Mr. John Ellicot, F. R.S. to the prefident, concerning the fpecific gravity of diamonds, read Juiy 4, 1745.
As from fome experiments I have lately had the opportunity of making, it appears highly probable, that what has formerly been publifhed concerning the fecific gravity of diamonds, is not to be depended upon; I hope a fhort account of thefe experiments will not be unacceptable, efpecially as I do not find the leaft notice taken of the fpecific gravity of diamonds, in any of the tables publifhed in the Philofophical Tranfactions.
In the account the honourable Mr. Boyle has given of dia. monds (as publifhed by Dr. Shaw, in his abridgment of that gentleman's philofophical works *) he relates it ' as the opi-- nion of a famous and experienced cutter of diamonds, that

- fome rough diamonds were confiderably heavier than others,
- of the fame bignefs, efpecially, if they were cloudy or foul;
' and Mr. Boyle mentions one that weighed 8 grains and $\frac{8}{6}$;
' which, being carefully weighed in water, according to the 6 rules of hydroflatics, proved to an equal bulk of that li-- quor, as $2 \frac{22}{23}$ to I ; fo that, as far as could be judged by - that experiment, a diamond weighs not thrice lo much as ' water.' And yet, in this table of feccific gravities, that of a diamond is faid to be to water as 3400 to 1000 , or a3 3,4 to 1 ; and therefore, according to thefe two accounts, there fhould be fome diamonds, whofe fpecific gravity fhall differ nearly the $\frac{\Gamma}{8}$ from others; which, I am perfuaded, is a much greater difference than could be expected in any bodies of the fame kind, or that which, on a more nice examination, will be found to be in diamonds.
* Page 83.vol. v. new edition of Mr. Boyle's. works in folio.

The firft diamonds I had the opportunity of feeing weighed, were two very large ones from the Brazils, which were furnifhed by Mr. Chace, a merchant in Auftin friafs : the fpecific gravities of thefe were found to be much greater than the heavieft of Mr. Boyle's, the one being as 3518 , and the other as 352 I to 1000 , and the difierence between them lefs than the one thoufandth part. There were two fmaller Brazil diamonds weighed at the fame time, which indeed were not quite fo heavy as the former, the lighteft being but as 350 r , the other as 3511 ; but as thefe were of the fame kind, and comparatively fmall, I judged this difference could not be much depended on. Having bad therefore an opportunity, fome time ince, of a large parcel of Eaft-India diamonds, I chofe out 10, which, both in fhape and colour, and every other refpect, were as different from each other as poffible. Thefe being weighed in the fame feales and water as the former, the lighteft proved to be as 3512 , and the heavieft as 3525 ; the very near agreement of thefe laft with each other, and with the former, though weighed at about eight months diftance, makes it highly probable, that fo great a difference as appears from the place above-cited, and Mr. Boyle's table, is not to be found in any diamonds whatfoever, much lefs fo great a difference as appears between the lighteft of his, and the hean vieft of mine, being above $\frac{1}{7}$ of the whole.
I had never made any experiments myfelf, by which $[$ could form a judgment, how much of the difference between thefe and former trials might arife from the different tempers and qualities of the waters ufed; warm water being lighter than cold, and pump-water gemeratly heavier than river-water: but, taking it for granted, that all perfons who make fuch experiments ufe common and not mineral waters, and waters of the natural temper, and not heated defignedly, I am affured by a friend, who has made many careful trials for this particular purpofe (an account of which he has promifed me he fhall lay before the royal fociety) that the fpecific gravity of any body will not differ above $\frac{\partial}{2}$ ? at the mont, on account of the quality of the water and temper taken together; whereas the heavieft of Mr. Boyle's diamonds, as in his tables, differs from the lighteit of mine, by above one thirty-fifth part, which is about fix times as much as $\frac{x}{2} 50$ : and yet I can think of no other way of accounting for the reft of this difference, unlefs it thould arife from the fmallnefs of the diamonds, or any defect in the inftruments with which his experiments were made.
The fcales in which thefe diamonds were weighed, turned very fenfibly with the two hundredth part of a grain; and, as one of the diamonds weighed above. 92 grains, it was capable of being weighed to lefs than the 18,000 h part: feveral of them were weighed twice over, both in water and air, and the weights found to agree to the greateft exactnefs ; and if to this is added the very near agreement of the weights of the feveral diamonds, though weighed at different times, and at a confiderable diftance from each other, I think it highly improbable, that there could be any confiderable miftake in thefe trials; and therefore their fpecific gravities, as in the following table, may fully bedepended on.

## D I R

1 have fet down the weights of the feveral diamonds both in air and water; that, if any miftake fhould have happened, it may be the more eafily rectified.

I am, $S_{I R}$, with the greateft refpect,
Your obedient humble fervant,
John Eilicot.

The mean fpecific gravity of the Brazil diamonds appears to be
The mean of the Eaft-India diamonds
3519
The mean of both to be
DIRECTION-CHAMBER, is a court inflituted in Old Spain, for the regulation of divers affairs, relating to their commerce to the Spanifh Weft-Indies.
In order to difpatch the bufinefs of this court, the prefident and commiffioners, or judges by office, meet; and if any notable affair occurs, which the prefident thinks fit to confult the oydores, or lawyers, about, he fends for them, who take their places according to feniority.
So great variety of people repairing to this chamber on bufinefs, it was impoffible to affign every degree it's place; but the general rule is, that the feinte $y$ quatros, or aldermen of Seville; jurados, another fort of magiftrates, \&c. fit on the fide benches, all others Itanding below. Any nobleman of Caftile, counfellor of the king, or archbifhop, have a chair under the canopy, on the prefident's left-hand; but all others, though admirals, fit on the fide benches.
The whole jurifdiction was in this chamber alone, 'till the ereding the chamber of juftice in 1563 . From their firf inflitution 'till that time, they had full power in all cafes relating to affairs of the Weft-Indies. Suits arifing on matters not concerning the king's revenue, may be tried at the parties pleafure, before this or any other court; and fo in cale of controverfies arifing after the fleet is cleared, and goods delivered, unlefs the parties be owners, or mafters of hips, pilots, or failors.
This court has the right of trying thofe that lofe fhips, or are the caufe of it; and of thofe that intercept or break open letters fent to the Weft-Indies. In trials between feveral owners of one fhip, about the fale or freight of her, no appeal is allowed from this tribunal to the council. Factors, not anfwering their merchants returns, may, by their order, be brought from the Weft-Indies; and-even have been taken out of churches, giving fecurity not to inflict corporal punifhment. This chamber takes all fureties, as welf for their own officers as for admirals, vice-admirals, and mafters of fhips trading to the Weft-Indies, of all which copies are delivered to the follicitor.
If any bufinefs occur when the court is not fitting, the commiffioners are called together. The prefident, or in his abfence, the eldeft commiffioner, delivers what has been determined. When any thing is put to the vote, the court is cleared, and the youngeft fpeaks firf, but the eldeft figns firft. If they cannot agree in opinion, and the delay will not be prejudicial, 'tis referred to the king, fending the feveral opinions to the council. But, if the bufinefs requires difpatch, or is not of great moment, moft votes carry it; he that diffents nay enter his diffent, but muft fign the decree, to give it the greater authority.
This court allo makes choice of fhips, both in the armadas and flotas; pays the hire of fips occafionally preffed to make up the armadas; admiss thofe thought fit to make up the flotas; appoints mafters, licences, paffengers, examines all rates and contracts for pruvifions, \&c. paffes all orders for payments out of the revenue, \&c. as alio for freight due to mafters of veffels, and for defraying religious perfons, that go to the Weft-Indies on the king's account. He has alfo in charge making the moft of uncoined filver and gold, pearls,

Voi. I.

## D I R

emeralds, and other commodities of the revenue, fines, falaries of the council, \&c. puts up, and difpofes all packets of letters from the king, or private perfons, and forwards all that come over for the king and council.
The prefident and commiffioners are to look to the receipt of the quickfilver brought from the mine at Almaden, or any other place the king fhall direct ; to feeit well put up, according to order, and to oblerve that all officers under them obey their refpective ordonnances, and the inftrutions given them The commiffioners are to draw up the informations againt mafters of hips, failors, and paffengers, upon their vifiting fhips, and to examine witneffes, and then refer the whole to the chamber of juftice. All warrants for apprehending any perfons, iffued by either chamber, muft be directed to the alguaziles of the fame court. No fuits are to be fent up to the council before judgment given ; no perfons apprehended by this court, who appeal to the council to be difcharged, 'till their caufes are determined; and the alguaziles may be fent to all parts of the kingdom, not excepting the king's court; where, before they execute their warrants, they are to acquaint the king's attorney-general with them.
Any perfon upon trial, excepting againft a judge of either chamber, is to give in the caufe of fuch exception upon oath, in writing; and, if he proves not his allegations, fhall be fined the tenth part of the value of the bufineís depending, if the principal exceed not 300,000 maravedies. The prefident, and other judges, are to declare the fufficiency of the exceptions, as practifed in this and all other courts. This is to be done with due modefty, the party begging leave of the prefident, or of the judge be excepts againtt; and the petition is not to be delivered to the efcrivano or clerk, but to the prefident; for if the caufes of exception alledged be no found fufficient to allow it, though they be proved, the petition is to be torn, and the petitioner fined 3000 maravedies.
DIRECTION, the government or conduct of a thing: it fignifies alfo the employ of a director; as likewife the extent of a director's jurifdiction.
Direction, in the matter of gabels in France, is a certain number of falt granaries depofits, and controlls, united under one and the fame management, and depending on the fame chamber of direction
They are feventeen in number, which are, Paris, Soiffons, Abbeville, St. Quintin, Chalons, Troyes, Orleans, Tours, Anjou, Laval, Le Mans, Berry, Moulins, Rouen, Caen, Alençon, and Dijon.
Direction, in France, is faid alfo of a meeting of many creditors, to compromife a debtor's affairs, as well among themfelves as with him. 'Tis fo called, becaufe, to avoid confufion and for the fake of good order, they nominate and chufe, by plurality of voices, a few perfons to direct them.
DIRECTOR, he who prefides in an affembly, or directs and conducts an affair.
We fhall fpeak here only of the directors whofe offices relate to trade and mercantile concerns. The chief of thefe are, the directors of companies, and of the chambers of commerce, [fee the article Chamber of Commerce; ] the directors of the five great farms of France, thofe of the aids and gabels, and the directurs of creditors' in the failures and bankruptcy of merchants.

The directors of trading companies in France,
Are ufually confiderable perfons, chofe by plurality of voices from among the proprietors or ftock-holders, who have a certain'quantity of actions in the company's ftock, and who are prefumed to have moft probity, reputation, and experience, in the trade the company carries on.
Tis not always neceflary for them to profefs trade, and they are often chofen from among the magiftrates and officers of the finances; but it mult be confeffed, that, howfoever knowing and ingenious directors of this ftamp may be, they are far from being fo well qualified for the office as fkilful, wealthy, and experienced merchants; and 'tis perhaps, in the opinions of good judges, owing hereunto, that many companies eftablifhed in France, where this election of directors not merchants, is more common than elfewhere, have mifcarried.
Their number is often regulated by letters patents, or royal charters, in the ftates wherein the fettlement is made. Sometimes the interefted parties or ftock-holders, are left to their liberty of chufing as many as they think neceffary. It feldom happens that the prince names all of them, but he often appoints fome, eipecially at the firft eftablifhment of a trading company.
The Dutch Eaft-India company, which has been a model for moft others, hath fixty directors, divided into fix chambers; twenty in that of Amfterdam, twelve in Zealand, and feven in each of the chambers of Delft, Rotterdam, Horn, and Enchuyfen.
The French India company, eftablifhed in 1664 , had twentyone, twelve of the city of Paris, and nine of the other mont important and trading cities of the kingdom.
Thefe directors, meeting in a certain number on a day appointed by letters patents, debate on the company's affairs, draw up regulations, futfribe letters, receive the accounts,

8 I
mán
make the fub-divifions, fign ordonnances of payment for the cafhier's difcharge; and lally, determine concerning the police to be obferved, whether among them in Europe, or in the cbunting-houfe, lodges, forts, and colonies, where they have deputies refiding to carry on their trade, and to regulate their forces for it's fecurity.
It belongs alfo to the directors or deputies chofen from among them, to appoint the number of veffels, the purchafe of them, their fitting out and cargo, the times of their goind out, the places they are to touch at in therr voyare; and, afty, the number of officers and failors, and of the merchants, fub-merchants, writers, and deputies, who are to have care of the merchandizes.
They alfo, on the return of the fhips, receive and examine the journals of the captains and pilots, the bills of lading, purfers accounts; hear the complaints of the crews, and pay them their wages: and, laftly, caufe the goods to be laid in the company's warchoufes, advertife the public by their bills of the days and hours of their fale, in which the goods are difpofed of to the laft and bigheft bidders.
Here might be added more of their functions, but, befides that fuch an enumeration would be tirefome, thefe which are the principal, may feem to give a fufficient idea.
Mof companies in France allow their directors certain fees of prefence, as they are termed, to render them more affiduous in the meetings, and to prevent their affairs fuffering, by their not meeting to the number fettled by the regulations. In France 'tis cuttomary, befide thefe dues of prefence, to difribute filver medals with the company's arms and device to the directors prefent, with increafe on the part of thofe abfent. Befide thefe directors who refide in Europe, and there fuperintend the general œconomy of the trading companies', they are alfo in the principal places of Afia, Africa, and America, where they trade, and are diftinguifhed by the title of direc-tors-general, and, by an honourable abbreviation, generals; fuch is the general of the French company at Pondicherry, the Dutch general at Batavia, and the Danifh at Tranquebar.
The Englifh give them the quality of prefidents; they have two of them in the Eaft-Indies, one at Surat, and the other at Bantam. But this laft has not refided there for fome time. Thefe direetors-general abfolutely difpofe of all the company's effects, regulate their trade, eftablifh new countinghoules, command all the merchants, fub-merchants, commiffioners, and even captains of fhips, make prefents to princes and their minifters, fend ambafladors to them, make treaties of commerce with them, declare war, \&ic. in all which they are, indeed, fubordinate to the European directors: but, as thofe orders are long in coming, that it would be frequently dangerous to wait for them, they are a kind of fovereigns, that may do every thing in their mafters names, only on 'advifing them thereof when done, either to receive confirmation, or an order to give account of it, according as they are fatisfied or otherwife with their conduct.
'Tis true, thefe generals bave ufually a council; but which they either do not confult, or feldom follow it's advice: fo that it may be faid, that although the fuccefs of a trading company feems to depend on the affembly of the directors in Europe, who give the orders, it depends fill more on the director-general, who is to execute them abroad.
We fpeak not here of particular directors, who act, whether in Europe or out of it, by order of the directors-general, becaufe they are but deputies, and little different, as to their office, from the directors of the cuftoms, farms, aids, and gabels, of whom we fhall fpeak in another place.
Directors of the chambers of commerce in France. See the article Chambers of Commerce.
The decrees of the council of ftate of Lewis the XIVth, for eredting thofe chambers in fome cities of France, gave the quality of diredors, to merchants compofing fome of thofe chambers.
In fome chambers they are called fyndics, and in others deputies.
They are merchants chofen yearly, by plurality of voices, in the different bodies of merchants of the cities, where fuch chambers are eftablifhed; they meet once or twice a week in the hall of the city, or other place, appointed by the decrees for erection, there to debate on affairs of trade, and to anfwer memorials and confultations fent them by the deputy, which each Chamber keeps at Paris, near the Royal Council of Commerce. They alfo ratify and confirm, or invalidate all contracts in trade, made on the places of exchange in thofe cities; none of which may be received among the merchants and bankers, unlefs approved and authenticated by the chamber.
Every meeting-day, filver medals are diftributed to them, and a gold medal to each at going out of their office. The number of medals, and the weight and value thereof, are different, according to the different decrees of their eftablifhment.

Remarks.
Under the article Companies, we have confidered the na-
ture of them in general, and referred to other heads, in onder more particularly to elucidate fome effential citcumfance relating thereto, which, I humbly conceive, may deferve the public attention.
Being at prefent upon the directors of trading companies, it may not be altogether ufelefs to dwell a litule upon this matter. Previous to which I hall take leave to recommend the reader to the articles Action, Bubble, and Asibenio, which will render what I have further to obferve the more intelligible.
Although certain exclufive trading companies may not have proved fo much to the interefts of the national commerce, as if thofe bránches of trade had been, or at leaft were at prefent, free and open to all his majefty's fubjects; yet fone companies, pecularly circumftanced, may poffibly prove beneficial, under certain temporary reftrictions and regulations; in order to cut out, by dint of a joint ftock capital, fuch ${ }_{a}$ commerce as could otherwife never have taken place at all, private adventurers neither being able or willing to iun the rifque neceflary upon furh commencements.
But, when thefe new branches of trade have been well eftablifhed, and the primary adventurers have reaped a reafonable compenfation for their hazard, it may not be, at certain points of time, Jefs national to lay them afide, than it was politic firlt to eftablifh them. And one great reaton for this may be, not only the nature and conftitution of the company, but the executive management of their affairs, by thofe who are appointed their governors and directors. Fu, although the conftitution of a company be ever fo wifely and nationally devifed, yet, if corruption once creeps into the public management, there is feldom any end of it, 'till it draws on, and terminates in a cataftrophe generally calami-tous.-Some of thefe may, perhaps, $\mathcal{f}$ in out their fate of corruption, by a regular fucceffion of villains to a long day; and therefore the evil appears the lefs flagrant and nefarious, by being fo artfully concealed, as only to tteal gradually, and, as it were, infenfibly, upon the public; whereby the property of fuch companies changing hands fo often, and every new proprietor lofing only a little, the malignancy of the corruption has been fiffed; and though it has not, from the length of time, appeared with fo flagitious an afpect, yet it has not in reality been the lefs enormous.
What renders evils of this kind the more univerfally injurious, is, that by far the greater majority of the proprietors are widows and orphans, and other perfons, who are not fufficiently knowing in the affairs of public companies, to effectually detect any fcenes of iniquity that may be carrying on.-Nay, experience hath evinced, that many of the directors themfelves have been excluded from the grand fecret, which was hatching by the fuperlative harpies, to enrich and aggrandize themfelves on the ruin of thoufands: and, if thole within doors, who have fet at the board of direction, have fometimes been egregioufly deceived by their brethren, 'tis no wonder, that all without doors have too often been their dupes and bubbles.
Wherefore, it is not only the right and national conflitution of a public trading company that is neceffary, the upright conduct and management of their affairs is vigilantly to be infpected. For, if the directors of fuch companies are either weak or wicked, they, may be inftrumental to the greateft public calamity, as hath proved the cafe. Is it not the intereft, therefore, of the moft fagacious proprictors, to make themfelves mafters, not only of the nature and conflitution of fuch corporations, but of the conduct of their fucceffive directors ? If thole who are the moft fkilful and experienced, will not take this trouble upon them; if they will not duly attend the general courts, and fudioully inform themelves of whatever paffes, can they expect that the widow and the orphan, and thofe that are unborn, thould take care of their intereft for them? to
Nor are the qualifications of integrity and ability the only ones requifite in fuch a director; due attention and application to the public bufinefs is equally neceflary; for acts of neglect and omiffion may be as detrimental to the proprietors, as thofe of commifion; and although fome fhould think, that they may not deferve that degree of punifhment, yet they merit fuch as is adequate to their criminal conduct: nay, it may be a moot point with the cafuift to determine, whether acts of omiffion, efpecially in cafes where the welfare of thoufands is concerned, are not equally culpable with thofe of commiffion; for the weight of intereft, honour, and reputation of fuch, nay prove wire-draws to numbers to embark in thefe corporations, who would never have done fo, if the high character, credit, and difintereftednefs of fome of the managers,' were not the inducement: and,' if there neglect their duty, why are they not as criminal as thofe who commit acts of fupererogation, to enrich themfelves by the public plander?
Directors of Creditors, are perfons of ability and probity, chofen in France by votes of the creditors, to infpect and examine the debtor's affairs, and to procure as far as poifible, by common methods of juftice, the payment of what's due to each in particular.

Thefe kind of directions are chictly ufed in the failure or Dankruptcy of fome trader or merchant, whofe affairs are in a bad fituation; but who, though unfortunate, is of integrity, and puts himelf in the hands of his crechtors, without concealing any of his effects.
If the failure is confiderabie, the directors chofen are, for their own fecurity, to caufe the act of their nomination to be confirmed, in the confular jurifdiction, if there be one at the place; if not, in fuch other jurifdictions as are white the fallure happens; and to have chofe, by the fame affembly that names them, a notary to receive the acts of the deliberations, which fhall be made by the general affermblies of the creditors, of which they are likewife to note the place, days, and hour of fitting, that none may have caufe of complaint, or plead ignorance.
The powers ufually given them by the creditors, are:
To proceed to make a fchedule of all the effects, both active and palfive; and of regifters, bundles of letters, and other papers of their debtor.
To fee and examine the eftate they fhall have produced, his books and records, and to fee if they are within the terms of the ordonnance made for that purpofe. See Bankrupt.
To caufe his wares and moveables to be fold, and to depofit the money in the hands, either of the notary of the direction, or of fome other refponfible perfon.
To fue for, and recover all the active debts.
Laftly, to examine the contracts of conftitutions, tranfactions, obligations, letters, bills of exchange, and other vouchers, of thofe who pretend to be creditors, in order to report all thefe things to the general affemblies.
The principal obligations of the directors are, not to make advantage of their power, and the confidence repoled in them, but to ufe it for the good and advantage of all the creditors in general.
To admit no one to the meetings who is not a creditor, or at leaft charged with a letter of attorney, by fome one whofe credit is indifputable.
To bring the oppofing parties to a confent at the opening of the feals, and to appoint the fenior to act in behalf of all.
To examine, in proceeding to the inventory of the goode, the pieces that are claimed, to be reftored to their owners, in cafe they are acknowledged to be fuch as they ought, according to the obferved cuftom in fuch cafes.
The fchedule of goods, moveables, and papers being made, to examine the book and memoirs, to fee if they are conformable to the eftate of his effects given in.
To caufe the bankrupt to give an account of his actions, that is to fay of his loffes, and whether they proceed from fhipwrecks, bankruptcies of his debtors, and other fuch-like events, merely unfortunate.
To examine exactly the credit of fuch creditor, their hypotheque and right to the goods of the bankrupt, even of the wife's right, to avoid all furprize, too common on thefe occafions.
To view attentively the dates of the fales of immoveables, ceffions of active debts, bills of exchange drawn, or orders paffed by the bankrupt; to fee if they be not made to fufpected perfons, and within too fhort a time of bis failure.
To draw out a true ftate, in debit and credit, of all his effects, active and paffive.
Laftly, to give an account, and make an exact and faithful report, by one of the directors at the general meeting of the creditors, of all their obfervations and difcoveries, not leverely exaggerating any thing againft the debtor, or favouring him through falle pity; not making any overture either for or againft him, but leaving to himielf the liberty of making his propofals, and to the creditors of accepting them, by a remittance, or time, or of treating him with rigour by fale of his effects, and dividing to themfelves the produce.
Directors General of the five great farms of the gabels, and aids, \&c. in France, are chief commiffioners, who bave the direction of thefe farms, each in the diftricts appointed them by the general farmers. They have not the inipection of each other; but each hath the general direction of his diftrict; whence the quality of directors general hath been given equally to all, being not accountable to any but the general farmors.
They are to make a circuit at leaft once a year, in all the courts under their directions; they examine and take the receivers accounts, legifters of comptrollers, and inform themfelves of the conduet of others employed, whom they may, in fome cafes, even deprive of their authority, 'till it fhall be otherwife ordered by the fuperiors.
There is alfo, in the cuftom-houfe of Paris, a general director of accounts, to whom are fent all the accounts of the general directors, to be examined, and put in condition to be fettled by thofe who are charged with that office by the farmers general.
DIS COUNT, a term ufed among traders; merchants, and bankers. When by the two former, it is ufed fometimes on occafion of their buying commodities on the ufual time of credit, with a condition that the feller fhall allow the buyer a certain difcount, at the rate of fo much per cent. per annum, for the time for which the credit is generally given,
upon condition that the buyer pays ready money for foch commodities, intead of taking the time of ciedir. Alto traders and merchants, frequently taking promiflory notes for monies due payable to them, or order, at a cerrain time, and fometimes having occafion for money beiore the time is elapfed, procure thofe notes to be difcounted by b.inkers, or other monied men, before the time of payment; which difcount is more or lefs, according to the credit and repuration of the perfon who drew the note, and the indorfer, or indor fers, \&cc. Bills of exchange alfo are difcounted by bankers, and the bank of England; wherein confifts one article of the profts of banking. See Banking.
The Sieur de la Porte informs us, that they make' a diffinction in France-with regard to money due for the purchale and fale of commodities, and on account of raifing money by difcounting bills of exchange; the latter being computed upon the principles of common intereft, by fo much on the rool. and that occafioned by commodities, on the hendred pound and the difcount added together: but, bills of exchange being far more frequently negociable on the account of the fale and purchafe of merchandize, than ty the way of mere banking, either of a foreign or domeftic nature, there feems to be no reafon for this diftinction.

## REMARKS

This affair of difcount being too generally miftaken, it may be neceflary to fay fomething upon the fubisct.
Dr Harris, in his Lexicon, tells us, that the difcount for one day is afferted to be the 365 th part of a year: however this miftake came, I know not ; but his two folio pages of tables of difcount, being conftructed upon the fame principle, are likewife erroneous, as are all thore which have been fince built thereupon.
The moft accurate tables of difount extant in our language, that I have met with, are thole of Mr. Smart, which are found ed upon the following true principles of decimal arnthmetic. See Arithmetic.
To find the ahnual difcount of one pound, at 2 per cent. divide . 02 by 1.02 ; and $2 \frac{1}{2}$ per cent. divide .025 by 1.025 ; at 3 per cent. by 1.03 ; at $3 \frac{1}{2}$ per cent. .035 by 1.035 , \&c. and the feveral quotients will be the difcounts recuired.
And thus the difcount of one pound for one year is found, at the feveral rates following, viz.

At 2 per cent. the difcount is found to be .0196,0784,5237

The difcount of one pound, for one year, being multiplied by any principal fum, the product will be the annual difcount of that principal.

Examples.
What is the difcount of rool. for one year, at 5 per cent? The difcount of one pound for one year, at 5 per cent. $\stackrel{\text { Wh }}{ }$ Which multiplied by the principal fum
The product will be
4,7619, \&c.
Anfwer, 1. 4: $15: 2 \frac{3}{4}$.
So that he who allows 5 l. for the difcount of 1001 . for one year, at 5 per cent. (than which nothing is more common) wrongs himfelf; for he ought to receive fo much money as, at 5 per cent. intereft, will amount to 100 l . in one year, which lefs than $1.95: 4: 9 \frac{1}{4}$ will not do.
What is the difcount of 9342 l . at $4 \frac{1}{2}$ per cent. for one year?
The difcount of one pound for one year, as above, at $4 \stackrel{\text { P }}{2}$
per cent. is
$.0430,62, \& c$.
Which multiplied by the principal fum

- $\quad 9342$

402,2852, \&ic.

## Anfwer, 1. $402: 5: 8 \frac{1}{2}$.

Thus the annual difcount of any fum is found, by one multiplication.
The difcount of one pound for any number of days is found thus, viz. firft, find in the table of fimple intereft [fee Interest Tables] what is the intereft of one pound, for any given number of days, at any given rate: then fay, by

## D I S

the common rule of three, As I I. and the intereft fo found, is to 11 . fo is 11 . to a fourth number, the arithmetical complement of which faid fourth number, will be the dicount of 11. for the fame number of days, at the fame rate.

Or, to exprefs it otherwife, divide unity by 11 . and the intereft thereof, and the arithmetical complement of the quotient, will be the difcount required.

ExAmple at 5 per cent.
If find il. and the intereft thereof, for in day, to be $1.0001,3699$

Then divide unity by
1.0001,3699)
1.0002,7397
1.0004,1096 . 0005,4795 .0006,8493 .0008,2192 $1.0009,5890$ .0009,5890 .0010,9589 1.0012,3288 1.0013,6986 $1.0136,9863$
1.0273,9726)
may not be procured from the rob of malt, prudently pre pared and fermented.
EXPERIMENT. M.

The art of a rectifer; by which the proof-goods are made into a cleaner fpirit, for the finer ufes of the compounder and apothecary.
If three ounces of a mixture of tartar and nitre, calcined to a blacknefs, be added to two gallons of the common proof firit of the laft experiment, and all that will run in an un interrupted ftream be drawn over with a bath-heat. This fpirit, made proof with fair water, is the common faleable proof-goods of the rectifying diftiller, when he works to truth. If it be defired fill cheaper, one of the beft method is, to dilute the ftrongeft part, that comes over firft, with a large proportion of water, and draw off the fpirit gently again in balneo, making it up proof with fine foft water. But this gives the fpirit a naufeous and difagreeable flavour; nor do the rectifiers know any good method for the purpofe, being little apprehenfive that it is the oil of the malt refiding in the fipitit which caufes all their trouble; or that it is the effential oil of the fubject which gives to malt-fpirits, brandies, rums, and arracks, their particular flavour: for if, by feparating it, the fpirit could be rendered flavourlefs and taftelefs, it would be fufceptible of any by the addition of other effential oils, fo as to refemble either French brandy, rum, or arrack.
The chemifts have helped them to a tolerable expedient for covering the imperfections which they cannot cleanfe, viz. by adding dulcified fpirit of nitre; a fmall proportion where. of gives an agreeable vinofity to a hogghead of firit: but this has it's inconvenience; for the flavour is apt to be loft, when the fpirit is kept in a cafk, though fucceffful, if well ftopped down in a glafs.
The art of the rectifier might be fet afide as ufelefs, if the original malt-difiller could make his firits perfect at a fecond operation, as we judge it might, and would recommend as an improvement, firft, the brewing in perfection; fecondly, the keeping their wafh, after the manner of ftale beer, 'till it has entirely loft it's malt flavour, and acquired a pungent acid vinocity; and, thirdly, leaving out the lees, to diffil with a well-regulated fire. It is fcarce to be conceived how agreeable a firit may be thus procured from malt, at the very firt diftillation.

## EXPERIMENTIV.

The method of examining proof in fipits, and detecting the invalidity of the common way of judging of the purity, genuinenefs, and goodnefs of brandies, rums, and asracks.
The common method, by friking a phial of common prooffpirit againft the palm of the hand, is a mere fallacy and deception.
To prevent being impofed upon in this way, we might have recourfe to the hydroftatical ballance: a gallon of alcohol is computed to weigh feven pounds and a half, and a gallon of water eight pounds; whence the compound gravity of an equal mixture of both may be affigned. See the article Brandy.
One of the beft methods to prevent being impofed on, is to acquire a habit of judging by the tafte and fmell.

The beft method of making cordial or compound waters.
Infufe a pound of frefh citron-peel in two gallons of good melaffes fpirit; draw off the fpirit gently by the fill, with care to avoid the faints; then making up, as they call it, with foft water, fo as to leave the liquor proof, add half a pound of fine fugar: and thus is procured a genuine citronwater.
This is general, and thews the ufual methods of making all the compound or cordial waters, by thofe called compounders, and alfo by the apothecaries.
The perfection of this branch of diftillation depends upon the obfervance of a few rules, eafy to be complied with; which we thall here lay down, as judging them of confequence to the improvement not only of the art of the compounder, but alfo of a branch of pharmacy and medicine.
(I.) To ufe a well-cleanfed fpirit, freed from it's own effential oil. For, as the fpirit is to be impregnated with the effential oil of other ingredients, it ought firft to have depofited it's own.
2.) To fuit the time of previous digeftion to the tenacity of the ingredients, or the ponderofity of their oil. Thus rho dium-wood and cinnamon require longer digeftion than calamus aromaticus, or lemon-peel : fometimes, allo, cohobation proves neceffary, as particularly in making the ftrong cinna-mon-water.
3.) To fuit the fire, or ftrength of the diftillation, to the ponderofity of the oil intended to be raifed with the firit. Thus cinnamon water fhould be diftilled off brifker than the firit of mint or baum.
4.) That a due proportion of only the fine effential oil of the ingredients be thoroughly united with the firit, fo as to keep out the groffer and lefs fragrant oil.

This may be chiefly effected by leaving out the faints, and making up to flrong proof with fine foft water, in their ftead. And on the obfervance of thefe four ealy rules, the perfection of the arr of compound diftillation feems to depend.
The addition of fine fugar, being of little moment, may be ufed or omitted occafionally. And, if thefe directions be oblerved, there will be no need of fining down cordial waters with allum, whites of eggs, or the like, as they will be prefently bright, fweet, and pleafant-tafted, without farther trouble.

## Remarks.

1. We learn from our prefent enquiry, that inflammable fpirits are produced by vinous fermentation.
2. That the action of fermentation produces fuch a change in the walh, as renders it feparable by fire into feveral portions of matters, befides the inflammable firit, fpecifically diferent from what the liquor would have afforded without fermentation.
3. That, at different times of diftillation, there comes over a liquor of different properties, viz. firft, an extremely acrid, aromatic, and biting one, which goes off by degrees, and ends in acidity.
4. That the art of malt-ditilling may be confiderably improved, (I.) By reducing the brewing and fermenting parts to one operation; (2.) by diffilling flow; and, (3.) by keeping out the grofs oil of the fubject.
5. That this art may be further improved, by fermenting a clear, well brewed wort, and keeping it to be ftale.
6. That the perfection of the art of malt-difilling requires the affiftance of a new one, to produce a kind of treacle from malt.
7. That the effential oil of the vegetable fubject is what gives to all fpirits their particular odours and flavours.
8. That the fineft and moft efficacious part of this oil, always rifes firt in diftillation.
9. That the purity of the fpirit, merely fuch, greatly depends on their being cleanfed firft of their effential oil, next of the phlegm.
10. That brandies are a mixture of one half water, and the other alcohol; and, therefore, their water may be commodioully left behind, upon exportation or carriage.
11. That the perfection of rectification depends upon finding out a fimple method of feparating all the oil and water from a fpirit.
12. That a fure method of determining the ftrength of brandies, is by deflagration, "or burning away their alcohol; then examining the remaining phlegm by weight or meafure.
DISTILLER, he who difitleth, or worketh in that part of chemiftry, which, by means of fire, raifed to certain degrees, feparates, and draws, from mixtures, waters, fpirits, effences, and extracts.
Phyficians and apothecaries cannot difpenfe without moft of the chemical operations performed by diftillation ; and many artizans require for their work oils, ftrong waters, and divers other drugs, that are diffilled by the alembic.
Diftillation, fo ufeful both for health and trade, may neverthelefs be very contrary to both, by the ill ufe that is eafily made of it; for, as it fupplies excellent remedies for the confervation of life, and drugs for feveral manufactures, fo likewife the deadlieft poifons are prepared by it, and waters that change and diffolve metals for purification.
To prevent the ill effects of an operation otherwife fo necerfary, feveral ordinances, decrees, and regulations, have been made, efpecially for the city of Paris, where no one is permitted to have furnaces, alembics, retorts, recipients, and other veffels and utenfils proper for that part of chemiftry, without letters obtained from the king, or permiffions from the magittrates, or, laftly, unlefs he be received mafter in the company of diftillers there eftablifhed.
The royal ordinances, and regulations of the police, permitting thofe only to diftil who have obtained letters, are ancient, and have been often renewed; but, with refpect to the company of difillers, it is new, having not fubfifted a century.

## Of the company of diftillers at Paris.

The decree of the court of coins, which erected that company into a fworn body, and gave the flatutes, is dated the 5 th of April, 1639 : the mafters are there filed mafters of the art and craft of diftillers of ftrong waters, brandy, and other waters, fpirits and effences, circumftances and dependences, in the city and fuburbs of Paris
They confift of 25 articles. Two jurats, called alfo wardens of the craft, of whom one is elected every year, are to fee to the performance of them, in conjunction with the two eldeft bachelors.
Thefe jurats have a right to vifit not only mafters, but all who practife chemical diftillations, and others who keep furnaces and laboratories for difitiling, maffers and refiners of the Mint excepted. Befides thefe vifits of the jurats, they are made, from time to time, by two officers of the court of coins, exprefsly deputed for thofe exsaordinary vifits.

Voz. I.

No one may exercife the trade of a diftiller, unlefs he is marter, nor be received mafter, unlefs he has ferved his apprentice ${ }^{\text {hip. }}$.
Apprentices may not be bound for lefs than four years, and meft afterwards ferve two years as journeymen, before they take their freedom.
Each mafter can take but one apprentice at a time.
Every apprentice, not a mafter's fon, mult perform a mafterpiece of work before he can receive his freedom; a mafter's fon, however, is to produce vouchers of his four years fervice, either with his father or fome other.
The mafter-piece is made in prefence of the jurats, and a counfellor of the court of coins.
Befide what relates to diftillation, the candidate is to be examined, whether be can read and write, and to fhew by certificate that he is 24 years of age. Mafters fons are not exempt from thefe two articles, no more than from the new examen; that all are to undergo, when they appear at the court to take the oath.
Widows, continuing fuch, may have furnaces, and keep journeymen, but not bind apprentices.
Mafter diftillers are permitted to diftil all forts of ftrong waters, oils, firits, and effences, except aqua regia, which all perfons, of what quality foever, are prohibited to make or fell, left it, hould be ufed to diminifh the coin, without altering the imprefs.
The mafters are obliged to keep a regifter of the quantity of ftrong waters they vend, and of the quality, names, and abode of the perfons to whom fold, and not to fell more than two pounds at a time, without permiffion of the court, unlefs to the mafters of the Mint, and to the refiners.
They may not lend their furnaces, nor fuffer foreigners to work at them at home, without permiffion likewife obtained, and are even obliged to give notice to the court of coins, of perfons whom they know to have a laboratory and furnaces, without having had letters or permiffion.
Foreign merchandizes are to be brought by the merchants to the company's court, to be viewed; no diftiller of Paris may buy them, nor foreign dealer fell, before fuch infpection.
Lafly, all contefts relating to the faid trade, the vifitations of jurats, mafters, apprentices, and journeymen, are to be referred to the court of monies, to which alone the cognizance is referved, on pain of 500 livres fine.
Diftillers in, brandies, and fpirit of wine, is one of the qualifications that the mafter vinegar-makers of Paris take in their flatutes.
A fhort hiftory of the laws of England in regard to Difillers. Stat. Io and II W. III. cap. 4. A diftiller fhall not keep any private pipe, ftop-cock, \&c. by which liquors fit for diftillation may be conveyed from one back, or veffel, to another, under the penalty of 1001 . and officers of the excife, with a conftable, 82 . may dig and break up the ground, or other place, to fearch for fuch pipes, \&c. which fhall be feized as forfeited, \&c.
6 Geo. I. cap. 20. Diftillers to make an entry of all warehoufes for kepping brandy, on pain of 20). and forfeiture of the liquor; and no brandy thall be fold but in places entered, under penalty of 40 s . a gallon.
2 Geo. II. c. 17. An excife duty of 5 s . per gallon to be paid by diftillers for all mixed or compound waters calied gin, geneva, \&c. and entries made of fills and fill-houfes, on pain of forfeiting 201. Retailers of thefe liquors, felling lefs than a gallon, to take out a licence at the chief excife-office, and pay 201. yearly, or thall forfeit 501 . But waters ufed by apothecaries, and arrack, rum, citron-water, Irifh ufquebaugh, \&c. are excepted.
3 Geo. II. cap. 7. Cyder', \&c. ufed in diftilling ftrong waters, hall be exempted from the dury of excife; but diftillers, ufing it in any other way but difillation, are liable to 51. penalty:

6 Geo. II. cap. 17. Duty on compound waters or fpirits, and French brandy; \&ic. taken off, and other duties granted, of 1 s . and 2 s . a gallon, to be raifed in the fame manner as excife upon beer, \&c. and diftillers or others may expors fpirits drawn from corn of Great-Britain, without other mixture, and, on oath that duties are paid, fhall be allowed a drawback of 41.18 s . per ton, $\& \mathrm{c}$.
9 Geo. II. cap. 23. No perfon to retail brandy, rum, or geneva, by any name, in lefs quantity than two gallons, without firft taking out licences, and paying 501 . to the next office of excife, \&c. on penalty of 1001 . and perfons retailing thefe fpirituous liquors to pay a duty of 20 s . per gallon: fuch retailers are to make a true entry of all their warehoufes, fhops, cellars, \&cc. under the penalty of 201 and 40 s . for every gallon of liquor concealed; and officers for the faid duties have power to enter warehoufes, and take an account thereof.
If any perfon who fells goods, wares, or provifions by retail, do give away any fpirituous liquors to fervants, \&ec. it fhall be deemed a retailing them: and no perfon thall hawk, or fell brandy, \&ce. about the ftreets, highways, or fields, in any wheelbarrow or bafket, or on a buik, ftall, or fhed, \&c. on pain of 101 . being convicted before a juftice; and, not pay

## D O V

ing it, to be committed to the houle of correction for two months.
This act fhall not extend to phyficians or apothecaries, \&c. as to any fpirituous liquers uled in medicines, nor to charge with duties acoa vita retailed in Scotland: and perfons who have been diftillers feven years, may exercife any other trade, $\$ 2$.
io Geo. II. c. 17. Forfeitures impofed on unlawful retailers of firituous liquors, \&c. to be. recovered and mitigated as by laws of excife, except otherwife ordained by 9 Geo. H. cap. 23.
And, where offenders canniot pay fines, the commiffioners to advance rewards, for information, and fuch offenders to be whipped.
II Geo. II. cap. 26. The occupiers of any houfe, or place, where fipituous liquors are fold, if privy thereto, to be judged retailers, and forfeit 1001 . and perfons to the number of five that, in a riotous manner, affemble to beat or wound informers, or refcue offenders, fhall be gui'ty of felony, and tranfported: and, if any officer of the peace refules to be aiding in execution of thefe acts, he thall forfeit 201 to be levied by diftrefs and fale.
16 Geo. II. cap. 8. The duties !aid by fat. 9 Geo. II. cap. 23. are repealed. No perfon thall retail any diftilled fpirituous liquors, without firft taking out a licence from the commiffioners of excife, 8 cc . and paying 20 s . yearly, under the penalty of 10 l. or to be committed to the houfe of correction, and kept to hard labour for two months. Thefe licences afe to be granted only to perfons who keep taverns, victuailinghoufes, inns, coffee-houfes, or alehoufes.
17 Geo. II. cap. 17. But if fuch tavern-men, \&c. fhall afterwards; during his licence, exercife the trade of a diftiller, grocer, or chandler, or keep a brandy-fhop for fale of fpirituou's liquors, his licence fhall be void, and he forfeit 101. for every offence.
Ig Geo. II. cap. 12. Additional duties to be paid on fpirituous liquors over and above what is already payable.
For every gallon of low wines, or firits of the firf extraction, drawn from foreign materials, 3 d. drawn from wafh trade of malt, id. d awn from brewers wafh, a half-penny; drawn from any other Englifh materials, three-farthings; for every gallon of firits made of wine or cyder imported, 3 d . made of any other materials, three half-pence. Low wines drawh from molaffes only, and fipits drawn from fuch low wines, not fubject to this additional duty.
20 Geo. II. cap. 39. Diftillers within the bills of mortality, may have licences for retailing fpirituous liquors, on payment of 5 . yearly. Diftillers in partnerfhip to have but one licence. Diffiller not to have a licence, unilefs inhabiting within the city of London, paying church and poor's rates for the value of 201. per ann, and, inhabiting in any parts of the bills of mortality; he pay thofe rates for the value of 101. per ann. Diftiller retailing but in his own fhop, and in more than one hop, or permitting tippling in his hop, houle, or any place thereunto belonging, forfeits 101. and every perfon found tippling there fhall forfeit 20 s .
DORSETSHIRE, has Somerfethire and Wilthire on the north; Devonfhire, and fome part of Somerfethhire, on the weft; Hampfhire on the eaft ; and the Englifh Channel on the fouth; and is about 150 miles in circumference.
It is efteemed one of the pleafanteft counties in the kingdom. The air is fomewhat tha1p on the bills, mild and pleafant on the coaft, and healthy almoft throughout. The foil in the vallies is rich, both in paffure and arable, and the downs and hills feed an incredible number of theep, fome of the largeft and fineft brought to Smithfield market, both for Helh and wool: It produces hemp and flax, and great quanities of cloth are made here, both woollen and linen; and is famous for it's plenty of excellent fone, in the quarries at Portland and Purbeck; in the laft of which marble bas been found fometimes. Many kinds of ufeful earth are difperfed up and down the country, particularly the beft tobacco-pipe clay, about Pool and Wareham, and exported to London, Chefter, \&c.
It's principal rivers are the Stower, Frome, Piddle, Lyddon, Dullifh, and Allen, whence they are fupplied with all forts of river-filh, as from their ports with fea-filh; and the rocks on the coaft abound with famphire and eringo.
Dorchester, the fhire-town, has almoft loft the broad-cloth manufacture, for which it was once fo famous, and it's fergetrade is not very confiderable; but the townimen make great profit by their fheep, of which no lefs than 600,000 are faid to be fed within fix miles round the town. It is obfervable, that their downs abound with thyme, and other aromatic herbage, fo nourifhing that their ewes generally bring two lambs; for which reafon they are bought up by the farmers of the eaft part of England, and even Banftead Downs, fo famed for good mutton, are fupplied hence.
Lyme-Regis is a frue harbour in the Channel, with a key inferior to none in England. It had formerly a very flourifhing trade to France, Spain, \&c, and the cuftoms amounted fome years to 16,000 . but it ftands on fuch a high fleep rock, that the merchants are forced to lade and unlade their goods at a place called the Cobb, a quarter of a mile from it,
which cofts a great deal to maintain; and that part of the town which lies at the foot of the rock is fol L.W, that at fpring-tides, the cellars, \&c. are overflowed 10 or 12 feet, to the great damage of the inhabitants.
Weymouth is a place of fome tiade fill, though not fo confiderable as formerly, the high duties on Fiench goods having fpoiled it in thes, and al the ports on the fouth of England where a clandeftine one too much prevails. The Newfoundland trade thrives here; and it's wine trade is alfo confiderable.
Pool is a populous and rich town, being one of the moft confiderable pouts in the weft of England. Here is plenty of good fifh, particularly large oyfters, which, it is obferved, have more and bigger pearls, than any others in England; great numbers of them pickled are fent not only to Loudon, but to the Weft-Indies, Spain, lealy, \&c.

## DOVER-PIER and RYE-HARBOUR.

Duties for the repair of Dover-Pier and Rye-Harbour.
By II and 12 W. III. cap. 5. granted from 1 May 1700 , to 1 May 1709.
By 2 and 3 Ann. cap. 7. continued from 30 April $\mathrm{I}_{709}$, to I May 1718.
By 4 Geo. I. cap. I 3, thence continued to 1 May 1727. By 9 Geo . 1. cap. 30. continued from 1 May 1723 , to i May I 744 , unlefs the harbours be repaired and lecured fooner. This duty was firft granted for raifing 30,1001 . towards the repair of Dover-Harbour only: but by 9 Geo. I. cap. 30 . and 10 Geo. I. cap. 7. is, from the Ift of May 1723 , to be collected for, and appropriated to, the repair of Dover and Rye-Harbours in the following manner, viz.

The duties.
Dover. Rye.
Sea-coals, for every chalder, and grind-
ftones, for every ton - $000_{x}^{\frac{x}{2}}-001$
The tons or chalder to be accounted accord-
ing to the entry of goods at the cuflom-
houfe.
All other goods, for every ton of the bur-
den of the fhip
$001-002$
Which duties are payable by the mafter or owner of every fhip or veffel, of the burden of twenty tons or upwards, and not exceeding three hundred tons, for every loading and difcharging within this realm, for, from, to, or by Dover, or coming into the harbour there (even if fuch thips are but tranfient fhips, which put into port, and lie for winds or orders, without making any report, yet take in ftores and provifions) not having a cocket (or certificate) teftifying the payment before that voyage; except fuch veffels as are laden with Purbeck or Portland ftones, or hips belonging to the ports of Weymouth, Melcomb-Regis, and Lyme-Regis, producing certificates made upon oath before the refpective mayors, under the corporation's common feal, That their owners areinhabitants of thofe corporations, or hips, Englifh built, and manned according to the act of navigation, belonging to Great Yarmouth, producing certificates made upon oath before the baliffs, under the feal of the office, That the owners, or the major part of them, are inhabitants of the faid corporation; or fhips belonging to Ramfgate, producing certificates, made upon oath before the mayor of the corporation, of which the faid port is a member, That the major part of the owners are inhabitants thereof. But coafters or fifhermen are not to pay thefe dutics oftener than once in any one year, unlefs they fhall at any time difcharge or load any goods, from, or to, foreign parts; in which cafe, they mult pay only for fuch foreign voyages.
The Dover duty is to be paid to the cuftomer or collector of the cuftoms, or their deputies, and the Rye duty, to fuch perfons as, the mayor and jurats of Rye fhall appoint (which is generally the collector of the cuftoms) in the port where the thip Gaall fet forth or arrive, before the loading or unloading of the goods: therefore, at the time of entry of any fhip, inwards, outwards, or coaftwife, and before the entry of the goods, the faid collector or receiver muft demand and receive the lame: unlefs the veffel be a coafter, and the mat. ter or owner does produce a certificare, whereby it thall appear, that the duties have been paid within twelve months. And, in order to difcover the true burden of every fhip, according to which thefe duties ought to be paid, upon herarrival at, or departure from, any port, the collector mult require the fame to be confirmed upon the oath of the mafter or owner in the following manner:

James Bell maketh oath, That the burden of the thip the Providence of London, whereof he is mafter [or owner] now bound for [or lately arrived from] Rotterdam, doth not exceed eighty tons.

Signed-James Bell.
Jurat apud Southampton, 9 die
Jan. 1730, coram me
A. B. Collector.

According

## D O V

According to which burden, the collector is to demand and receive the du'y of the matter or owner; and, upon receipt thereof, muft teftify the fame by a certificate under his hand, in the following form:
Port o، Southampton.
Thefe are to certify', That James Bell hath this day paid the Dover-Pier duty of one penny per ton, and the Rye-Harbour duty of tw' pence per ton, for the thip Providence of London ${ }^{*}$, burden elghty tons, whereof he [or B. C.] is mafter for [or fiom] Rotterdam. Dated the ninth of Ja. nuary 1730 .
A. B. Collector.

* If the veffel be a coafter or a fifhing veffel, there muit be here added-being a coafting or fifhing veffel.
So that if fuch veffel thail put into any other port, during that voyage, to load or difcharge any goods, it may appear to the collector there, that thefe duties have been already paid: and, unlets fuch certificates can be produced, the duties muft at all times be demanded and received.
Upon the receipt of any money for thefe duties, a fair and true entry thereof muft be forthwith mad;, in a proper book to be kept for that purpofe; from which, at the end of every quarter, muft be tranicribed an account, in order to be forihwith traifnitted to $\mathrm{Mr}_{\mathrm{r}}$ _ who, by the warden and affitt. ants of Dover-Harbour, and by the commiffioners and truftees of Rye-Harbour, is defired, authorized, and appointed to

## D O W

infpect into the management and colleCting of there duties, in the feveral porss of this kingdom, and to act and do all things necefliry tor the better collecting and receiving the full of the aforefaid duties; and with whom the cullectors are, in all cafes, for the fervice of the faid ducies, $t$; advife and correlpond: but, if it fhould fo happen, that there lias not been any money at all collected, a nill-account mutt be fent up in the ulual form.
And, as to the money fo received, it muft from time to time, as falt as it comes to the collctor's hands, or at the end of every month at fartheft, be remitted to the receiver-general and cafhier of his majefty's cuftoms, in the port of London, in order to be by him paid to the retpective treafurers of Dover and Rye Harbours.

* And, in confideration of the trouble which the collectors or recesvers are at, in receiving and accounting for thefe duties, they are to have an allowance of one fhilling and fixpence in the pound, out of the money by them collected; befides a reimburfement of any reafonable expences tha. thail be thought neceffary in the employment of boats, $\& \mathrm{c}$. in collecting thefe duties from tranfient dhips.
- 9 Geo. I. cap. 30. §. 12 . and orders of the wardens, commifioners, \&c. dated 1 and 3 July 1729 .
The form of the aforefaid account of thefe duties, muft be as follows, remembering to diftinguifh what is received for tranfient thips.

Port of South- $\}$ An account of all fhips and veffels whirh have laden or difcharged any goods in this port, to, for, from, or ampton. $\}$ by Dover; and the duties towards the repair of Dover and Rye Harbours; collected in the quarter ending at Lady-day 1731, for fuch of the faid veffe's as a e liable thereto.

And, at the botom of the aforefaid account, in the book, muft be formed an account current of that quarter's collection, in the following form, viz.

The commiffioners of the Dover and Rye-Harbour duties.
30 Jan. To remittance to Hen. Selwyn, Eq; Dr. $\left.\begin{array}{l}\text { receiver-general of his majefty's cul } \\ \text { toms, per bill of A. B. on B. C. at }\end{array}\right\} \begin{array}{ll}5 & 0\end{array}$ toms, per bill of A. B. on B. C. ten days atter fight

## REMARKs.

Concerning foreign thips uilading wines, $\& \mathrm{c}$. in the Downs. By an aet 12 Car. II. for the increafing llupping and navigation, it is enacted. \&ic. That no wiacs fiall be imported it t. England, in any flip whatioverer, but in fuch as do truly and without fraud belong to the peops therest; except fuch fortin inps as are the bult o' that country of whicn the fa.d wines are the growth, under the penality of lofs of fhip and ginds, provided that, f i prevericon of frauds in concealing alien's guods, all wines impoited in any other thip or veffet, than which doth truly and without fraud belons to England, thall be deemed alien's goods, payable franger's cuftoms.

## D O W

By the faid act it is further provided, That no fareign built Thip thall be deemed to pais as a fhip to England belonging, or enjoy the privilege of fuch a fhip or veffel, until fuch time that he or they, claiming the faid thip to be theirs, fhall make it appear to the chief officers of the cuftoms, that he or they are not aliens; and thal! bave taken an oath before fuch officers, that fach thip or veffel was, bona fide, without fraud, bought for a valuable confideration, and that no foreigner hath any fhare therein; that upon fuch oath he or they fhall receive, under the hand and feal of the faid officers, a certificate, whereby fuch thip or veffel may for the future pafs, and be deemed as a fhip belonging to the faid port, and enjoy the privilege of fuch a thip or veffel.
By the act of frauds, 14 Car. II. for the better increafe of thipping and navigation, it is enacted, That the officers of the cuftoms, in all the ports of England, Thall give an account to the collector and furveyor, \&c.
By the ad of tonnage and poundage, it is enacted, If any wines, goods, or other merchandize, whereof the fubfidies aforefaid, are, or thall be, due, thall at any time after be fhipped, or put into any boat or veffel, to the intent to be carried into parts beyond the feas, or elfe to be brought from parts beyond feas, into any port, place, or creek of this realm, and unthipped to be landed, and the cuftoms not paid, or lawfully tendered, they fhall be forfeited. 12 Car. II. By the act of frauds it is enacted, That if any goods or merchandize fhall be laden, or taken in from the fhore, into any baik, \&c. to be carried aboard any fhip or veffel outward bound, for foreign parts, or laden or taken in from or out of any thip or veffel arriving from foreign parts without the warrant, and the prefence of one or more officers of the cuftoms, fuch bark, hoy, \&cc. Thall be forfeited and loft, and the mafter, \&c. knowing and confenting, thall forfeit the value of the goods fo mipped. 12 Car . II.
A merchant having imported French wines into the Downs in a foreign built fhip, the proprietors thereof having not performed the requifites injoined by the faid act of navigation, in order to the making the faid thip free, and to enjoy the privilege of a thip belonging to England, and hath taken the wines out of the faid lhip, and embarked the fame into Englifh built barks or hoys, which have brought the fame into the port of London, or otherwife, intending to relade the faid wines upon fome other fhips riding in the Downs, bound for fome other foreign parts.
Quare I. Whether thefe wines being fo imported, doth not render fhip and goods liable to forfeiture?
Admitting the Downs are not within any port, as I fuppofe they are not, then I conceive the bare carrying of the thip and goods thither, makes no forfeiture; for the words of the law are, that no wines thall be imported into England, 8tt. into any fhip whatfoever, but what belongs to the people of England, are the built of the country, \&ce. Now, admitting the fhip was not a privileged ©hip to import wines, yet I conceive the fhip not coming into any port, nor into England (which I do not take the Downs to be as to the purpose) is not forfeited within the words of the law; and it being a penal law, I think will not be extended by equity to create a forfeiture, though the fact feems to bear evalion of the true event of the law. The opinion of Edward Ward, Efq;
Quære II. Whether the unlading of the faid goods in the Downs, upon either of the faid cafes, be an unhipping within the act of tonnage and poundage?
I conceive the Downs are neither port, place, or creek of this realm, within the act of tonnage and poundage; and the unfhipping there without paying or compounding, is no forfeiture for the reafons aforefaid. The fame learned gentleman's opinion.
Third quere, If not forfeited on either claufes, then, whether the faid wines are not liable to pay aliens duty, according to the other claufe aforefaid?
The claufe in the act of navigation that impofes aliens duties on wines brought in foreign thips, extends only to wines imported in to any ports or places of England; and is feems the meaning of the act was, that wines for which aliens duties are to be paid, are fuch as are imported in foreign fhips, into forie town bit port, in regard it gives aliens duties, alfo, in this cafe, to the town or port of importation; and I conceive the Downs, in that cafe, is not any port or place of England; and, when the wines are imported into the port in an Enolifh veffel, the demand of aliens duties is not warranten by the words of the law; for, though the greateft partuof the voyage is in a foreign-built thip, yet the aliens duties are not due by the words of the act, but upon importation into the port by a foreign veffel, which might have been otherwife, had the duty been impofed on wines brought from France, $8 x$. in foreign-built thips: then it would have been reafonable, that the greater part of the voyage in a foreign fhip thould have made the wines liable to alfens duties; but here the duty arifes, and takes it's commencement, upon the importation into England in foreign hips, which is not in the cafe; and, therefore, I much doubt whether aliens duties be due or no, as this cafe is, though it is an evation of the law. The fame learned lawyer's opinion.
Fourth quare, Whether the faid hoy, or bark, taking out

D R A
the faid good's without the prefence of an officer, the fame be forfeited by the faid claufe in the act of frauds?
I conceive the claufe in the act of frauds refers to thip any goods within a port, which this thip was not ; and fo any words, coming in and arriving from foreign parts, feem to import: for, when a thip is in port, the cannot unlade any goods without a warrant, or officer; but that; I conceive, doth not hold when the fhip is at fea, and not in port; for then no officer has any thing to do to go on board her; and where a warrant, or prefence of an officer, is not neceffary, there is no forfeiture of the bark, 8 cc . So that within the caft, I conceive, the bark is not forfeited within the claufe.
But, upon the whole matter, I conceive it very fit, as this cafe is, to have a judicial determination of the matter. For as, on one hand, the words of the laws are not tranfgreffed, fo, on the other, the true intent and meanng of the law is evaded: and I am of opinion, if the fact of the cafe was done with a fraudulent intent to evade the laws, that aliens duties in the cale put ought to be paid; but, if the wines were not originally intended to be brought into England, but to be carried to fome other place, and by ftrefs of weather, in any other accident or juftifiable caufe, were brought into Eng land; that, in fuch cafe, neither forfeitures nor aliens duties ought to be anfwered.

March 30, 1675.
Edward Ward.
When Sir Richard Temple, Sir Edward Deering, Sir George Downing, Sir William Lowther, Cbarles Cheyney, Eff; Francis Millington, Efq; and John Upton, Efq; were commiflioners of the cuftoms, feveral projects were thought of to enlarge the ports of this kindom, and give the cuftom-boufe officers a power to collect the king's duties, even in fome places out at fea; and a draught of his majefty's commerfioners for approving and confirming ports and keys, \&cc. was drawn, wherein certain perfons were impowered ' to repair - (to ufe the words of the draught) unto our faid port of Sand-- wich, to. Dover and Rochefter, Feverfham and Deal, mern-- bers of the faid port, and to fearch, find out, and furvey the open places thereabouts, and to affign and appoint all luch, - and fo many place or places, to be keys, or wharfs, for - the landing or difcharging, lading or fhipping any goods, ' wares, or merchandize, within our faid ports or the faid - feveral members thereof, \&cc. and to fet down, appoint, and - fettle the extent, bounds, and limits of the faid port, and ' the members thereof, $\& c$.'
This commiffion was fhewn to the moft noted lawyers then living; and, there being fomething in their opinions that re lates to the maritime fovereignty of the kings and queens of England, it is thought fit to let the reader fee what was the judgment of fuch emminent council in fo weighty a cafe, which had fome reference alfo to an act of parliament.

Sir Robert Sawyer's opinion.
Becaufe fome doubt may arife whether fuch part of the main fea as is limited to be within the precincts of the ports may be taken in by virtue of the act of parliament, I have added a claule of declaration by the king's prerogative, not relative to the act, which will not be fo effectual, unlefs thefe were to pals under the great feal; but, in cafe that way thould be thought too chargeable, it may be of advantage to let, the claufe be inferted, and the Exchequer feal, few perions being able to difcern the different operations of the two feals.

Robert Sawyer.
Sir William Jones, attorney-general, his opinion: I am of opinion, that it will be no advantage to have this claufe of the prerogative royal, nor that it will make it better to have it under the great feal: for I think nodeclaration under the great feal can make, that the open fea, which is out of England, Shall be part of a port; but I thank, if this commiffion under the Exchequer feal, purfuant to the act, will not do it, it cannot be done at all.

William Jones.
Edward Ward, Eq; his opinion.
I conceive this may be a proper form for fuch a commiffion; but as to the validity of it in extending the port into any part of the main fea, and fubjecting thereby all perfons to the duties and penalties of a port, that thall come within that pert of the fea which is made part of the port, I take it to be a doubtulu cafe.

Edward Ward.
DRAWBACKS, are certain duties, either of the cufloms or of the excife, that are allowed upon the exportation of fome of our own manufactures, or upon certain foreign merchandize that have paid a duty at importation.

Sorie of the principal laws relating thereunto.
In regard to foreign goods re-exportedThe time for the allowance thereof extended to three years, from the date of the report of the mafter at the time of impor tation, after the $24^{\text {th }}$ of June, 172 I. 7 Geo. I. cap. 21. §. 10 For

Allowances and abatements upon, or out of any duties now in force, to continue 'till thofe duties ceate. 3 Geo. I. cap 7 . §. 40 .
The oaths of the merchants importing and exporting, required to obtain the drawback of foreign goods; affirming the truth of the officer's certificate of the entry, and due payment of the duties, may be made by the agent, or hulband, of any corparation or company, or by the known fervant of any merchant, ufually employed in making his entries, and paying his cuftoms. 2 and 3 Ann. cap. 9. §. 14.
Not to be allowed for any foreign goods exported to the Ife of Man. 12 Geo. I. cap. 28. §. 21 .
Foreign goods entered outwards.-If lefs in quantity or value be fraudulently flipped out than is expreffed in the exporter's certificate, the goods therein mentioned, or their value, are forfeited, and no drawback to be allowed for the fame. 13 and 14 Car. II. cap. II. §. 12 .
Foreign goods exported by certificate, in order to obtain the drawback, not fhipped or exported, or relanded in GreatBritain (unlefs, in cafe of diftrefs, to fave them from perifhing, which muft be forthwith fignified to the officers of the cuftoms) are to lofe the benefit of the drawback, and are forfeited, or their value, with the veffel and boats, horfes, carriages, \&c. employed in the relanding thereof: and the perions concerned in the unhipping or relanding, or to whofe hands the goods hall knowingly come, or by whofe privity, knowledge, or direction, they are relanded, are to forfeit double the amount of the drawback.' 13 and 14 Car. II. cap. 1 I. §. 12. 8 Ann. cap. 13. §. 16. To be fued for within five years after commiffion of the offence.
The feizure of the hories, or other carriages, and the veffels or boats, if of the burden of 55 tons, or under, may be adjufted by two or more juftices of the peace, by 6 Geo. I. cap. 2 I. 8 Geo. I. cap. 18. § 16,17 , and in Geo. I. cap. 29. §. 4.

Officers of the cuftoms conniving at, or affifting in any fraud relating to certificate goods; befide other penalties, are to forfeit their office, be rendered incapable, and to fuffer fix months imprifonment, without bail or mainprize. 8 Ann. cap. 13. §. 17.
Mafters, or other perfons belonging to any thip a ffifting in, or conniving at, the fraudulent relanding of fuch goods, befides other penalties, are to fuffer fix months imprifonment, without bail or mainprize. 8 Ann. cap. 33. §. 17.

Bonds given for the exportation of certificate goods to Ireland, muft not be delivered up, nor drawback allowed for any goods, 'till a certificate under the hands and feals of the collector, comptroller, and furveyor of the cuftoms, or any two of them, of fome port in Ireland, be produced, teflifying the landing : the condition of the bond being to produce fuch certificate in fix months from the date thereof. 8 Ann. cap. 13. §. 18. 5 Geo. I. cap. 11. §. 15.9 Geo. I. cap. 8. §. 8. 2 Geo. II. cap. 28. §. 3.
Such certificate, not produced in time, the commiffioners of the cuftoms may put the bonds in fuit. Ditto.
Frauds committed in the exportation of tobacco, or any other goods, difcovered to any offcer of the cuftoms, by any perfon (except the exporter) fuch perfon to have one half of the officer's or profecutor's fhare of what thall be recovered, the charge of profecution being firft deducted, the commiffioners of the cuftoms to caufe fuch charges to be equally paid by the crown and profecutor. Perfons aiding the exporter in fuch frauds, difcovering their offence, thall be acquitted. 9 Geo. I. cap. 21. §. 7. See the article Debentures, where the eflential cuftom-houfe forms upon thefe occafions are very amply reprefented, for the benefit of traders, as well as the officers of the crown.
Whoever would fee the variety of laws and circumftances, wherein Drawbacks on the re-exportation of merchandize are allowed, fhould confult the Index to Saxby's Book of Rates; from whence he muft have recourfe to the feveral acts of parliament, which may be occafionally needful to the merchant.

## REMARKS.

The intention of our laws in allowing of drawbacks feems to be twofold, (I.) To encourage the exportation of fach of our manufaclures as are liable to duties, to the end that they be fold cheaper to foreigners; and, (2.) That fuch foreign merchandizes that may have been imported, and have continued here for three years from the date of the mafter's report of their importation, may be fold in other foreign countries fo cheap as to induce foreigners to purchafe them; whereby the nation gains the advantage of their freight, which is fo much clear profit to the kingdom; and the merchant alfo gains, otherwife he would not be at the trouble to traffic in fuch certificate goods.
The wifdom of the legiflature, in regard to drawbacks and bounties, is very confpicuous; fuch policy having a tendency towards rendering this kingdom the marine carriers of Europe, and thereby approximating fomething towards the nature of a free port. And long experience having evinced, that thefe reVol. I.

Arictive encouragements have proved greatiy inftrumenta: to the employment of our fhipping, and increale of our feamen; there may not be manifefted fo great policy in withdrawing, as there was at firit of eftablifhing them for the benefit of commerce. If this principle of encouragement was carried greater lengths, inftead of being concracted, as has for fome time been rumoured that it will be, it might prove of no litule further benefit to our navigation. Sce the articles Cradit [Public Credit], Debentures, Duties, Funds, Debts [National Debts], Navication, Shipping.
DROGMAN, or DRAGOMAN, or DRUGERMAN, a name given in the Levant to the interpreters kept by the ambaffadors of Chriftian nations refiding at the Porte, to affilt them in treating of their mafters affairs. The confuls have them alfo, as well for their own ufe, as for that of the merchants of their nation trading there.
They being abfolutely neceffary in the Levant trade, and the good fucceis of it depending in part on their fidelity and fkil, Lewis XIV, in 1669 , enacted, by an order of council, that, for the future, the interpreters in the Levant, refiding at Conftantinople, Smyrna, and other places, foould be Frenchmen, and appointed by an affembly of merchants, in prefence of the confuls, before whom they hould take the oath, drawn up in writing in the chancery of the ports.
The fame order enacted, that every three years fix boys, from eight to ten years of age, inclinable to go, fhould be fent thither, and committed to the care of the Capuchin friars of the convents there, to be inftructed and qualified for the office of drogmans, or interpreters.
A year after another order was made, enforcing, and, where neceflary, explaining the firft, and enacting, that, in each of the three firltyears, fix boys mould be lent, that there might, in lefs time, be a fufficient number for the fervice of the nation, without being obliged to have recourfe to foreigners.
The penfions of each of thefe boys were fettled at 300 livres, to be paid by the chamber of commerce at Marfeilles, on the duty of half per cent. called cottimo. This laft order was of the 31 ft of October, 1670 .

## Remark.

Whoever confiders the difficulties and impofitions to which foreigners are liable in their way of perfonal traffic, in nations whofe language they are unacquainted with, will readily difcern the neceffity and wifdom of the above regulation, in regard to preferving a fucceffion of interpreters, upon whofe fidelity and fkill the French traders may rely, in the whole courfe of the Levant trade. See the article Consuls.
DRUGGETS, a fuff fometimes all wool, and fometimes half wool, half thread, fometimes corded, but ufually plain.
They are often called, in France, pinchina's, though they have very little affinity with the true pinchina's that come from Toulon or from Chalons in Champagne.
The places in France where moft druggets are made, are, Le Lude, Amboife, Partenay, Niort, Rheims, Rouen, Darnetal, Verneuil au Perche, Troyes, Chaumont en Baffigny, Langres, and Chalons in Champagne.
Very fine druggets, but of a particular fathion, are made alfo at Bedarieux in Languedoc, and in many neighbouring villages. Thefe druggets are fold in Germany. The druggets of Lude are entirely of wool, without cording; they are halfell wide, and the length of the pieces from 40 to 50 ells, Paris meafure, which is to be underftood alfo of all the other lengths and breadths of druggets hereafter mentioned.
At Amboife are made two forts of druggets, entirely wool, the one corded, the other plain. The corded, called in the country petits draps, are two-thirds wide, and from 30 to $40^{\prime}$ ells long; the plain ones are half-ell wide, and from 50 to 60 ells long.
The druggets of Partenay are not corded : their width is halfell, and length from 40 to 55 ells: forme are all wool, and others have the warp thread.
The druggets of Niort are all of wool, fome corded, fome plain, half-ell wide, and from 40 to 50 in length. The corded are moft efteemed, being generally very clofe and ftrong.
The druggets of Rheims are notcorded : they are half-ell wide, and the length from 35 to 40 ells. They are commonly all of prime Segovian wool, finely fpun, which makes them fuperior in quality to all other forts of druggets made in France, which are, for the moft part, made of the wool of the country, coarfely fuun.
At Rouen they make three forts of plain druggets : the one all of wool, half-ell wide, from 25 to 67 ells long; another, which is often called berluche, or breluche, has the woof of wool, and the warp of thread, of the fame length and breadth with the other: this fort comes neareft in quality and price to thofe of Verneuil au Perche. The third fort, commonly called efpagnolettes, are entirely of wool, with a nap on one fide, and fometimes on both, which makes them very warm: they are $\frac{5}{3}$ of an ell wide, and from 60 to 80 ells long. They are

## D R U

## D R U

of different qualities; fome very fine, all of Spanifh wool; others coarfer, only mixed with Spanifh wool; and others all of country wool, which are the coarfeft and leaft efteemed. They are all wove white, and afterwards dyed of different colours.
The druggets of Darnetal are in every refpect like thofe of Rouen.
At Verneuil au Perche, the druggets are half ell wide, from 42 to 65 ells long, the warp of thread, and the woof of coarfe wool of the country. They are of very low price, and chiefly confumed in Beaulle, Orleanois, and the parts about Paris, being worn by the peafants.
The druggets of Troyes are corded on one fide, the woof of wool, the warp of thread; they are half-ell wide, and their length from 35 ells to 46 ; they are not much more efteemed than thofe of Verneuil, already fpoken of.
At Chaumont in Baffigny they are altogether like thofe of Troyes, excepting that the pieces contain from 35 ells to 60 . The druggets of Langres are in every thing like thofe of Chaumont.
Chalons in Champagne fupplies druggets corded, all woollen; fome five-eighths, others two-thirds, of an ell wide, from 16 to 35 ells long. Thefe are alfo called efpagnolettes, and of very good quality.
Scarce any but the efpagnolettes of Rouen and of Darnetal, and fome threaded druggets, are dyed in the piece; the others are dyed in the wool; that is to fay, the wool they are compofed of is dyed of different colours, and mixed, before it is carded, fpun, or wrought in the loom.
Thofe are called threaded druggets that have the woof of wool and the warp of thread.
The corded druggets are wrought with the fhuttle on a loom of four marches, as the ferges of Moui, Beauvois, and other like ftuffs corded.
As to the plain druggets, they are wrought on a loom' of two marches, with the fhuttle, in the farme manner as cloth, camlets, and other like ftuffs not corded.
According to the 20th and 22d articles of the general regulation of the manufactures, in Auguft 1669 , druggets are to be of two lengths and breadths, viz. half-ell wide, and 21 ells long, and feven twelths wide, and from 35 to 40 ells long; but, by the regulation of the 19th of February 1671, all druggets for the future are permitted to be made only half-ell wide. The order of the council of flate in 1698 , for regulating the manufactures of the province of Poictou, amongft other articles, hath fix relating to the lengths and breadths of druggets made in that province.
And that of Auguft $\mathrm{I}_{7} 18$, regulating the woollen manufactures of the generality of Bourgogne, hath five articles to the fame purpofe, for druggets of that province.
DRUGS, a general term for goods in the druggits and grocery way, efpecially for thofe ufed in medicine and dyeing.

Drugs for Dyers.
Of thefe there are two principal forts; drugs that do not give any colour of themfelves, but prepare the ftuff to make the dye, or make the colours more lively and ftrong, and drugs that colour.
Of the firf fort are allum, tartar, arfenic, realgal, falt-petre, nitre, fal gem, fal ammoniac, common falt, mineral falt, falt of cryftal, of tartar, agaric, fpirit of wine, urine, pewter, bran, ftarch, lime, and common afhes, \&c.
Some of the colouring drugs are woad, indigo, fcarlet-wood, logwood, iron-wood, \&c. fcarlet-grain, cocheneal, madder, goat's-hair, greening-weed, favoury, chimney-foot, \&c.
All thefe drugs, both the colouring and the non-colouring, are ufed only by the dyers of the great dye, as they are diftinguifhed in France, except the greening-weed, which the other dyers may make ufe of in their blacks and greys.
There are other drugs ufed in common by both, which colour either faintly, or very much ; as the root, bark, and leaf of the walnut-tree, the rind of the nut, gall-nuts, fumach, and copperas, \&c.
Dyers of the fmall dye may alfo ufe India-wood and verdigreafe, which the others are prohibited.
Drugs prohibited all dyers in France are, Brazil-wood, rocou, baftard faffron, turnfole, orcanette, filings of iron and copper, ironmongers, cutlers, and grinders duft, old rodoul and old fumach.
As to fuftic-wood, yellow wood, trantanel, matherbe, and alder-bark, they are permitted only in the provinces that have not the convenience of getting better drugs.

## The principal drugs in medicine.

Thefe make the greateft part of the wholefale trade in the druggifts and fpicery way; fome are produced in France, but the moft part is brought from the Levant and the Eaft-Indies. The chief drugs imported into this kingdom are from the EaftIndies, and are as follows: allum, china-root, camphire, thubarb, murk, vermillion, foy of Japan ; ketchup, fick-lack, rofam aloes, thell-lack, borax, lapis lazuli, galangal, benjamin, aquila-wood, cambogia, putchuck, or coftus dulcis; dragon's blood, cubebs, cardamums, olibanum, chengue, falt-petre, aloes hepatica, bezoar-ftone, lignum aloes, caffia,

Goa ftone, opium, unicorn's-horn, civet, frankincenfe, tamarinds, turmeric, rock-falt, faffron, myrrh, manna, renes, tacamac, ambergreafe, dammer, cóyr, cowries, chank, nux vomica, fnake-ftone, caffia lignum, affa fcetida, dry ginger, long pepper, tyncal, fago, lapis tutia, worm-feed, gaibanum, gum elemi, ammoniacum, tragant.
Pomet's General Hiftory of drugs, Lemery's treatife thereon, and Geoffroy's Medical Effay, ought not to be overlooked by the curious, no more than by merchants concerned in the trade of drugs.
Drug is ufed alfo to fignify things of little value, expofed to fale. Drug; what is fo called by the fan-makers is a compoftrion of gum Arabic, and fome other ingredients, ufed by them to lay leaves of gold or filver on their fans, or to cover them with either of thofe metals in powder.
They ufe it, allo, to pafte together the papers, gawzes, taffeta's, and other like matters ufed by them for their fans.
The mafters make a great myiftery of this compofition, though it feems to be nothing elfe but the gum, and a little honey diffolved in water. They apply it with a very fine fpunge.
Drug fignifies alfo a falt, or cinder of glats, ufed by fome in bleaching cloth.
One Alexander Le Grand having introduced the ufe of it in France, and his drug, which he had brougbt out of Lorrain, being feized by the mafter and wardens of the, grocers company there; the affair being carried before the lieutenantgeneral of the police, and many trials made of the good and bad effects of that falt, the faid Le Grand, and all others, were prohibited to fell it for bleachings and lyes, and all laundreffes to buy or ufe it, on pain of 300 livres fine, the faid drug being found corrofive, deftructive of the linen, and capable of hurting the health of thofe who ufe it. This fentence paffed the 15th of March, 1710 , was confirmed by order of the council, the 23 d of September following, prohibit ing all perfons to import from Lorrain, or elfewhere, into France, the drug called falt, or cinders, of glafs, on pain of forfeiture both of merchandize, and of horfes and carriages ufed in the conveyance, and a fine of 3000 livres.

## Remarks.

Nothing giving a greater luftre, and, therefore, reputation, to woollen manufachures of every kind, than the excellency of the dyes, which give the colours; we find that the French have been more ftrict and curious in their public regulations relating to the qualities thereof, than any nation whatfoever. See the article Dyeing.

## Laws of England relating to drugs in general.

I. Stat. 8 and 9 Will. III. cap. 34. §. 2. For recompenfe to fuch who may have any loan upon the duty on tin reduced, the old fubfidy to be received for drugs imported from the place of their growth in Englifh fhipping, thall be according to the full value of the fpecies in the book of rates, and hot according to the abatement to one third; and for all drugs otherwife imported, treble fuch value.
II. Sect. 3. This fhall not lay a further duty on drugs ufed in dyeing.
Made perpetual by 7 Ann. cap. 7. §. 26.
III. Stat. 3 Ann. cap. 4. §.8. There fhall be paid to her majety upon callicoes, China ware, and drugs (except drugs for dyeing) imported, over and above all other duties, the rates upon callicoes, \&cc. mentioned in the act; and upon all drugs (dyeing drugs excepted) rated in the book of rates, 10 per cent. according to the values charged; and for unrated drugs (dyeing drugs excepted) four per cent. of the true value: and by unrated drugs are meant clove-bark, Jefuitsbark, callabatha, caffenna, fechia, brugiata, grana Germanica, gum mountjack, jeffamine ointment, lapis hyacinthi, oil of annifeeds, oil of caraway-feeds, oil of cinnamon, oil of cloves, oil or balfam of copavia, oil of juniper, oil of lignum Rhodium, oil of peony, oil of faffafras; pomatum, fal tamarifcx, and all chemical falts; fnake-root, terra dulcis, turpentine of Germany; all chemical preparations, phyfical oils, and medicinal drugs (except drugs ufed for dyeing, and coffee, tea, chocolate, cocoa-pafte, and co-coa-nuts). And dyeing drugs, by this, or other acts, exempted from duties, are aqua fortis, argol, annotto, allum, orchelia, cochencal, cream of tartar, copperas, gum Arabic, gum Senega, ftick-lack, cake-lack, madder roots, or rubca tinctorum; faunders red, fal ammoniac, fal gem, turnfole, verdigreafe, ifinglafs, plantain, litharge, bay-berries, antimony, pomegranate-peels, arfenic, agaric, fena, galls, indico, litmus, madder, orchal, faffore, fhumac, caffumba; log wood, Brazil-wood, Braziletto-wood, Nicaragua-wood, fuftic, red-wood, Japan-wood; woad, weld, valonia-grain, or fcarlet powder ; grain of Seville in berries, and grains of Portugal, or rota; Englifh berries from the plantations, French berries, and falt-petre.
IV. Sect. 9. The duties upon the faid unrated drugs imported from India, and other places within the limits of the Eaft-India company, fhall be afcertained according to the prices, upon fale at the cande, as by ftat. 2 Ann. cap. 9. and the value

## D U M

## D U T

of fuch unrated drugs imported from other parts thall be affirmed by the oaths of the importers.
V. Sect. 10 . The faid duties upon unrated drugs imported from parts not within the limits of the Eaft-India company, Shall be paid by the importers upon importation
VI. Stat. 7 Ann. cap. 8. §. 12. Jefuits-bark, farfaparilla, balfam of Pera and Tolu, and all other drugs of the produce of America, may be imported from her majefty's plantations in America, in Chips regularly manned and navigated, paying the fame duty as if they were imported from the place of their growth.
VII. Stat. I Geo. I. cap. 43. §. 3. Sena imported fhall be liable to the duties charged by the act of tonnage and poundage, and the acts for increafing the fame, and the duties laid by other acts, as if the exemption for drugs ufed in dyeing had not been.
VIII. Stat. 8 Geo. I. cap. 15. §. ro. It thall be lawful to import all drugs herein after enumerated, which are ufed for dyeing, viz. agaric, annotto, antimonium crudum, aqua fortis, argol, arfenic ; bay-berries, Brazil-wood, Braziletto-wood, cocheneal, cream of tartar; fuftic; galls, gum Arabic or Senega ; indico, ifinglafs; litmus, logwood ; madder, madderroots; Nicaragua-wood; orchal, orchelia ; pomegranate-peels; red-wood; faffore, fal ammoniac, fal gem, Sappan-wood, red faunders, fhumac, fticklack; turnfole; valonia and verdegreafe, without paying any cuftom (falt-petre excepted), fo as entry be firft made thereof in the cuitom-houfe, and fo as the fame be landed in prefence of the proper officer, and that fuch importation be according to the rules in 12 Car. II. cap. 18. for encouraging navigation; and, on failure of the faid conditions, the faid goods thall be liable to the duties.
IX. Sect. II. On all foreign goods ufed for dyeing, which fhall be imported duty free by this act, and fhall be again exported, there fhall be paid a fubfidy of poundage upon the value of 20 s . according to the rates hereafter mentioned, the fum of 6 d . viz.

Which fubfidy of 6 d . on exportation, thall be raifed, \&c. as the fubfidy of poundage on goods exported by any law of the cuftoms.
X. Sect. 12. The produce of the fubfidy hereby granted (charges of management excepted), fhall be appropriated to the fame ufes as the poundage on other goods exported.
See Saxby's Book of Rates for Duties on Drugs imported.
DUMBARTONSHIRE, or LENNOX, in Scotland, is bounded on the fouth with the rivers Clyde and it's Firth, with Argylefhire on the north-weft; on the weft it has Loch-Lung, on the north are the Grampian hills, and on the eaft Menteith and Sterlingthire. The lower part, which lies to the eaft, is very fruitful in corn, and the billy breeds numerous flocks of freep. It bas a noble herring-fifhery, in two bays that break into it, from the mouth of the Clyde. The LochLomond, that fpreads itfelf under the mountains, 24 miles in length and 8 in breadth, abounds with fifh, particularly one delicious fort, qalled pollac, of the eel kind, peculiar to it, and the banks are lined with fifhermen's cottages.

DUMFRIESSHIRE, in Scotland, has on the wef Galloway and Kyle ; on the eait Solway Firth, and the marthes of Scorland and England; on the north pare of Clydidale, Tweedale, and Tiviotdale; and on the fouth the Irifh lea.
The foil in general is fiter for pafturage than corn, yet the mountains with which it is encompaffed, are fruitful in corn.
DUMFRies, the chief town, is a pleafant and thriving place, called by fome the Liverpnol of Scotland; it's market and fairs for cattle, which are held on Candlemas, Holyrood, and Martinmas-days, each a week, are the beft in all the fouth of Scorland.
DUNOIS. This little province in France, bounded on the eaft by Orleanois, on the fouth by Blaifois, on the weft by Vendomois, and on the north by the Leffer Perche, is about 10 leagues in length, and 7 or 8 in breadih: and is watered by four rivers, viz. the Loire, Convoye, Egre, and Hierre.
Chateau-Dun, on the Loire, is the capital of the country. They make cyder here, and in fome parifhes of the diftrict are manufactories of woollen ftuffs, which they fell at Tours, Orleans, and Paris.
DURHAM, or the county palatine or bifhopric thereof, has Yorkfhire on the fouth, Northumberland on the North-weft, Cumberland and Weftrmoreland on the weft, and is wafhed on the eaft by the German ocean, being about 107 miles in circumference.
'The air is fharp, and the foil various, but upon the whole not to be reckoned the moft fruitful; yet 'tis thick fet with cowns, and very rich in mines of coal and lead.
It's chief rivers are the Tees and Were, the latter of which runs into the lea at Sunderland, a port much frequented by colliers.
Darlington is one of the moft noted places in the north of England, for the linen manufacture; particularly that fort called huckabacks, great quantities of which, fome ten quarters wide, are fent yearly to London, \&c. they being made no where elfe in England. Some fine Jinen cloth is alfo made; the water of the Skern, on which it ftands, being fo famous for bleaching of linen, that quantities have been fent hither from Scotland for that purpofe.
Stockton is a well built town, of great refort and bufinefs, two leagues up the Tees from it's mouth.
South Shields in this county, fo called, to diftinguifh it from North Shields inNorthumberland, is of great note for 'it's falt-works, here being above 200 pans for that purpofe, which are laid to confume near 100,000 chaldron of coals yearly.
Bernards-Castle, on the north fide of the river Tees, is an ancient and well built town. The manufactures here are ftockings, bridles, reins, and belts.
Marwood is a little town lower on the fame river, noted alfo for the ftocking manufacture.
Sunderland ftands on the fouth bank of the river Were, and is a populous well built borough and fea-port: but, the harbour having a hallow and difficult entrance, the fhips moftly take in their loadings of coals, which is the principal commodity fhipped here, in the open road.
DU'TCH AMERICA. The only colonies which the Dutch have at prefent in America, are, Surinam, Aprowack, Berbice, and Boron, all fituated on the continent of South America, Aruba, and Curaccao, three illands, which are amongit thofe called Sottovento, or under the wind; and, laftly, Saba, St Euftacia, and half of St Martin's, three of the lefler Antilles.

A memorial drawn up in 1721 , concerning the trade which
the Dutch carry on with the Spaniards in America.
The Dutch had formerly a much greater number of colonies in America than they have at prefent. They had in Guiana Viapoco, Aprowack, Surinam, Berbice, and Steperche.
The firft of thefe colonies were entirely deftroyed in 1677 , by a fquadron of Erench men of war, commanded by count d'Etrées, afterwards marhal of France. Aprowack and Steperche were neglected, and the inhabitants removed to Surinam; fo that the Dutch have now only Surinam and Berbice in that part of the world.
Among the Antilles, they have Aruba, St Euftacia, Curaccao, and fome other fmall inlands.
The whole trade that is carried on in their colonies amongt the Antilles, both to America and to Africa, is in the hands of a company eftablifhed by letters patent, by which an exclufive privilege was granted to it, together with an exemption from all duties of importation : it is called the Company of the Weft.
This company has but one third part of the trade; of the two remaining thirds, one belongs to the city of Amfterdam, and the other to the heirs of Mynheer, Van Somerfdyk; but the whole trade is managed by the company.
Private perfons may obtain licences from the company to trade in America, on paying two per cent. on the commodities they carry thither, and five per cent. on thofe they bring back in return.
The declaration of the merchandizes, both in going and coming, is to be made at the company's office, after which they are free from all duties, as if they belonged to the company.

## D U T

This trade is of two forts, viz. that which is carried on from Holland with the inhabitants of the colonies, and that which is carried on with the Spaniards. The latter is properly the fubject of this memorial.
The company employs feveral fhips, fending fome from Holland with commodities proper, both for the maintenance of the colonies, and for the trade with the Spaniards; and others from the caltle of St. Georgè del Mina, one of their chief fertlements on the coalt of Africa, laden with negroes for their own colonies, and for thofe of the Spaniards.
It is to be obferved, that none but the company's fhips have a fhare in this laft branch of trade, no licence being ever granted to private perfons for carrying on the negro trade.When thefe laft fips, of which there are feldom above two or three every year, are arrived at Curaccao, the Spaniards of the main land of America, and thofe of Porto Rico and Hifpaniola, go thither in pirogues, which are a kind of long barks, to buy the number of negroes they have occation for, chufing always the healthieft and ftrongeft. Thofe which they refufe, and which are ftiled Macron negroes, are kept partly for the fervice of the Dutch colony at Curaccao, and partly for that of Surinam, whither the company fends them. When the Spaniards neglect to fetch the negroes, the company carries them to the Spanilh plantations, but with the precautions hereafter mentioned, that they may not be furprized in carrying on a contraband trade, prohibited under very fevere penalties by the ordonnances of the king of Spain; and yet fo conftantly and fo fafely continued by the collufion of the king's officers.
As to thofecommodities which are brought in the company's thips failing from Holland, as foon as they arrive, they are depofited in the warehoufes which belong to the company in the ifland, 'till there be a favourable opportunity to difpofe of them; that is to fay, 'till they have entered into fome correfpondence, either with the governors of fome fea-port towns, or, in cafe they be too ftiff, or infift upon too high a perquifite for their connivance, with fome private perfons, who agree about' a harbour or road, to carry on their trade, whither they fend their barks, with fuch commodities as they have a mind to give in exchange; particularly a great many piafters, or a good deal of gold or filver, either in ingots or in bars. Yet, after what manner foever this is carried on, it feldom happens but the king of Spain's officers have fome fhare in the profits of this contraband trade; even they who affect outwardly the greateft feverity to prevent it, do fecretly employ their confidents to trade for their account: fo that private perfons are very often only the factors or commiffioners of thofe officers.
The merchandizes proper for this trade, are fine linens, cambrics, printed cottons of feveral colours, common lace made at Antwerp after the fafhion of Spain, hard ware, fine and coarfe, made at Nuremberg and Liege, a great quantity of fpices, particularly of cinnamon, all forts of woollen manufactures made at Line, Valenciennes, Abbeville, Leyden, and Haerlem; cloth and thread for fails, cordage for Chipping, white and yellow wax, hats, all forts of ftuff, gold, filver, and filk ribbons, French brandy in cafks, or in thick glafs bottles, and fome other merchandizes.
It muft be obferved, with regard to ftuffs and ribbons, that it is no matter whether they be new or old fathioned, they being always new for the Spaniards when they arrive from Europe: fo that the company never buy of the manufacturers but fuch gold and filver ftuffs as are out of fafhion, even fuch as will no longer ferve even for the trade of Germany.
All that we have hitherto faid of trade, relates only to that which the company herfelf carries on. As for the licenfed fhips, which commonly take in their lading at Amfterdam, Rotterdam, or in Zealand, befides their cargo, which confifts in the above-mentioned merchandizes, they are armed with feveral guns, and carry a greater number of feamen than the company's fhips, that they may be able to defend themfelves in cafe they be furprized in any foreign port or road ; for they only touch at Curaccao to get intelligence, and to get on board fome perfon acquainted with the places where they are to caft anchor, in order to difpofe of their commodities with the greateft difpatch and fecurity.
But, when they have finifhed their trade, they are ufed to go back to Curaccao, in order to complete their cargo with the produce of that ifland, as fugar, indico, cotton in the wool, wood for dyers, hides, and falt, which laft is made in the falt-pits of Curaccao.
Befides gold and, filver in ingots, bars, or coin, which this trade with the Spaniards affords, the Dutch alfo get from them a great deal of cocheneal, hides, cacao; vanilla, tobacco of Verina, quina-quina, or jefuit's bark, and farfaparilla, \&c.
This is the ffate of the trade which the Dutch Weft-India company, and the private perfons who are licenfed, carry on with the Spaniards in America; and this trade, the profit of which the Englifh of Jamaica, the French of St. Domingo, and the Danes of St . Thomas, fhare with the Dutch, has not a little contributed to the prejudice of the commerce both of Cadiz and the other cities in Old Spain, which drive a trade with America; and of the European merchants, who are

## D U'T

concerned in that trade with the Spaniards. For it is an calv matter to perccive, that fince the four above mentioned sations have ufed themfelves to carry on that trade, and fur nifh yearly the inhabitants of Spanifh America with fo prodigious a quantity of European merchandizes, which the: formerly received only by way of Old Spain, the gallcons and flota's cannot come back fo richly laden as they uled to do.

Remarks.
As the author of this memorial explains but very fuperficially after what manner that contraband trade is carried on, we judge it will prove fome fatisfaction to the reader to find, in this place, what a French writer (father Labat) fays of it, in his curious and entertaining account of the French iflands in America, of which a new edition was publifhed in the year 1742. Nouveaux voyages aux ifles de l'Amerique, Tom. VII. chap. 9.
The trade of the European nations with the Spaniards in America.
All European nations are forbidden to go and trade with the Spaniards, under any pretence whatfoever. The Spaniards feize without mercy all the veffels they can meet with, whether they find them at anchor on their coafts, or meet with them at fome diftance, becaufe they fuppole that they are there with no other view but to trade; and the finding on board either merchandizes manufactured in their dominions, or any Spanifh money, is to them a full and fufficient proof of fuch illicit trade.
But yet, thefe are laws which people know how to evade many ways. Here follow fome inftances of thefe evalions. When the mafter of a veffel would enter into fome of their harbours to trade there, he pretends to be in want of water, wood, or provifions. He fends a petition to the governor by an officer, who fets forth the thip's occafions: at other times it is a maft that is fprung, or a leak in the veffel, that can neither be found nor ftopped, without unlading the fhip, and fetting her on one Gide. They prevail upon the governorto believe what they would have him, by the obliging application of a confiderable prefent: after the fame manner they blind the other officers, whole afiftance they may have occafion for; and then they get leave to enter the port and unlade the fhip, in order to find out the leak, and to put the hhip in a condition to continue her voyage.
They obferve many formalities. The merchandizes are carefully locked up in a warehoufe, and the door by which they are put in is fealed: but they take care that there be another door, through which the merchandizes are taken eut in the night time, and their place filled up with chefts of indico, cocheneal, vanilla, with filver in bars or coined, with tobacco, and other American commodities. And, as foon as this trade is finifhed, the leak is found to be ftopped, the maft repaired, and the fhip in a condition to fail.
But all this alone is not fufficient; an expedient muft be found, that they who have bought the European merchandize, may fell them again. For that purpofe, the mafter of the Chip reprefents to the governor and to his officers, that he wants money to buy the provifions he has occafion for, and to pay for what he was furnihed with, in order to repair his veflel, and humbly begs leave to fell fome merchandizes to the amount of what he is to buy, or pay for.
The governor and his council agree to it, with fuch grimaces or hhew, as they think proper to make, and the mafter fells a few chefts or bales of merchandize, to the end that the reft of the cargo, which thefe gentlemen or their agents have bought, may be fold publickly, without giving occafion to complaints; becaufe it is always fuppofed that it is no more, but what the Spaniards got leave to buy from thofe foreigners. Thus the largeft cargoes are commonly fold.
As for thofe that are lefs, and with which the Englifh, French, Dutch, and Danifh barks are cornmonly laden, they carry them to fmall harbours, far diftant from any town, or to the mouth of fome river. They give notice to the inhabitants by jetting off a gun, and they who have a mind to trade come in their canoes, to buy fuch merchandizes as they have occafion for. This trade is chiefly carried on in the night-time; but the Europeans muft be conftantly upon their guard, always armed, and never fuffer more people to come on board, than they arc able to drive back again, if they attempted to infult them. There is never any credit given in this part of commerce, they deal only for ready money, or for merchandizes delivered on the fpot. They commonly make an intrenchment before the cabin, or under the forecaftle of the bark or veffel, with a table, on which they expofe their merchandize to view. The capmerchant or factor, with other people armed, are within the intrenchment with fmall arms; they put alfo fome others above the cabin, or in the forecaftle; the reft of the crew, well armed, remain upon deck with the captain, or fome other officer to receive and entertain the perfons who come on board, to make them drink, and conduct them back with civility; and, if they be people of fome diftinction, or who buy a great deal, to falute them with fome guns at their departure. They are very fond of that honour, and one may be fure to lofe nothing by it.

Buf, notwittiftanding all this, the European traders muft be upon their guard, and take care that they be always flronger than the Spaniards; for, if they meet with an opportunity to feize upon the veffel, they feldom mifs it; they plunder the fhip, and fink it afterwards with the whole crew, that there my be no perion left to reproach them with their perfidy. To conclude, one muft keep a watchful eye upon the Spaniards hands, for they are very nimble-fingered.

## Further REMARKs.

The Dutch, however they have extended themfelves in other parts of the world, and carry on a moft beneficial commerce with Africa and Afra, have, upon the whole, had but indifferent fuccefs, in point of poffeffion, in America; which may not, upon the whole, be detrimental, fince they have fo large territories in Afia. They had once, indeed, a confiderable footing there; upon which a Weft-India company was formed, about the year 1636 to 1652; and, by an extraordinary ftep in politics, got one of the beft colonies in the world for crade into their hands; they had even the greateft part of the Brazils, if not all of it, in actual poffeffion, and maintained it for feveral years; which, had they held 'till now, with all the great improvernents fince made, and poffeffed the prodigious mines of gold difcovered there, they had been fuperior in trade to every nation in the world.
But the Portugueze in Europe having revolted from the Spaniards in 1640, to whom they had been fubject for above half a century, they alfo meditated a revolt from the Dutch in the Brazils, which they effected in 1645 , and drove them out of the whole country.
This ftruck fo great a blow to the Dutch trading interefts in America, as to break their Weft-India company. They have fill the name of a company, and good encouragement from the States-General; are concerned in divers branches of trade, particularly that of Africa; yet they ftand but on a very flight foundation, when compared with the original company.
This misfortune to the Dutch in America, was followed by another, which was the lofs of the colony of New Amfterdam, now called New York; and which was taken from them by the Englifh in 1665, and afterwards conceded to England by the treaty of Nimeguen.
We have feen from what remains to the Dutch in America, that they have no great Chase of power there; nor is the courfe of their trade with other of the colonies belonging to any potentates in that part of the world, little better than a contraband trade, if what Monf. Labat and other travellers tell us be fact; yet they feem to carry on what trade they have here very quietly and unmoleftedly: nor do they feem any way difpofed to fubmit the fovereignty of the American feas to the Spaniards, or any other power; and therefore will not fuffer their fhipping to be fearched any where upon the high feas, under pretence of illicit trade. But if their fhips are catched in the ports of New Spain, carrying on any contraband trade, they do not feruple to fubmit to the Spanifh laws upon fuch occafions. That traders of this and of all nations endeavour, by every fubterfuge, to evade being taken in port, is little to be doubted; nor does it feem any way improbable, but fuch like artifices as have been intimated by father Labar, are really practifed. And, if the Spanilh viceroys, governors, or other inferior officers, appointed by the crown of Spain to refide in America, will connive at, promote, and encourage this commerce, fo lucrative to themfelves, as well as to the others concerned; ir feems fcarce poffible for thofe princes, whofe fubjects are thus decoyed to trade with the Spaniards, ever to prevent it. But there does not appear any fuch difficulty on the fide of the court of Spain; for, if they make their laws in Old Spain fo fevere and rigorous as to deter their own fubjects, as well thofe in power as otherwife ; this fmuggling trade would, in New Spain, meet with as great a check, as it has lately done in England, from the wildom and juftice, as well as from the good execution of our laws relating thereunto.
Wherefore, in regard to this matter, which hath for fo many years created heart-burnings between the courts of London and Madrid, in particular, it appears that the court of Spain itfelf is to blame, for not taking effectual meafures to prevent frnuggling in their own colonies, and not the court of London, out of whofe power it abfolutely is to prevent their fubjects carrying on fuch a trade, if the Spaniards themfelves will decoy the Britilh fubjects into it.
No reafonable Spaniard, not even the moft zealous Spanifh patriot, would prefume to affert before the face of the impartial world, that it is more in the power of the Britith nation to prevent their fubjects from carrying on this commerce by fea, than it is in the power of the Spanifh nation to prevent the fame by land in Spanilh America. And, if this is really the true and candid flate of this important cafe between the two nations; if it is eafy, very eafy, by proper laws duly executed on the fide of the court of Spain, to prevent this contraband trade in America: and if, as it certainly is, it be next kin to an impoffibility, on the fide of the court of England, to prevent their fubjects from being allured into this gainful trade, may we not, without the leaff

Vol. I.
partiality towards our own nation, fay, that the blame really lies on the fide of the Spanifh, and not on that of the Britifh court?
That the court of England have done all on their fide to cultivate a friendhip with the Spanifh nation, the whole world is withels of; nay, that they have condefcended to do more to oblige that court fince the creaty of Seville than all Europe befide, is not to be difputed: as an Englifhman, therefore, as a lover of the Spanifh nation, may I not be allowed to afk on this important occafion, upon what principles of reafon and juftice, the court of Spain can put the labouring owar upon the court of London?
To prevent this evil, this fmuggling trade on the fide of the Britifh fubjects, where is the reafon, that this nation fhould fubmit to the fearch of their thipping on the high feas of America? When-the fhips of the French and the Dutch, $8 t$ c. are catched in this illicit trade, and their cargoes and veffiels feized and confifated, in the ports of New Spain, by the faithful officers of that crown, we never hear of any complaints or remonftrances to the court of Spain about it on the fide of thefe ffates, nor clamours made by the mercantile people upon fuch occafions: the reafon whereof is, that it is allowed to be the univerfal law of nations; for all trading flates to acquiefce in thofe laws which are made to prevent frouggling, and thereby to fecure the legal revenues. But it is neither confiftent with the laws of nations, nature, nor common juftice, for any one maritime nation, in times of peace, to be required to fubmit to the fearch of their hhipping upon the high feas, under pretence of their having been concerned in an illicit trade; for this is ufurping abfolute dominion over the high feas, without any colour of reafon: it is more particularly fo in regard to the Britifh fhipping, when they are obliged to fubmit to fuch a fearch in their going to, or returning from, our own colony of Jamaica; it being abfolutely neceflary for the fecurity of their navigation only, by realon of the winds and currents, and upon no other pretence whatfoever, to keep as clofe to the Spanifh coalt as poffible, both in the Windward Paffage, and in the Gulph of Florida For proof of which, fee the article Antilles Islands and Spanish America.
If the court of Spain, therefore, Thould fill prove inflexible enough, to infif upon this point, and even under any kind of reftriction or limitation whatfoever, it hardly feems poffble, that any lafting friendfip fhould fubfift between the two nations. No Spaniard of judgment or candcur will prefume to fay, that the court of England is to blame, they having already manifefted a greater condefcenfion and cordiality towards that kingdom, to induce them to give up this unreafonable claim, than they could ever expect. And, if they fhould continue fo refractory, as fill to infift upon a matter, which is fo apparently unreafonable, it can proceed from no other motives, but to extort ftill greater conceffions from the court of England than what they have, for peace fake, hi therto granted. But this, perhaps, will fcarce ever be complied with; the Britifh nation will be under the dilagreeable neceffity of ever breaking friendfhip with a power, whofe ufurpations they can fee no end of, even after conceffion upon conceffion.
It mult certainly be bad policy in the court of Spain to be eternally wrangling with a nation, to whom they are more beholden than to any other in the world befide, for the great confumption of their produce ; and efpecially fo, as our exports to the Spanifh nation are declining, by reafon of their having fet up woollen and other manufactures of their own. But we hope that the Spaniards will be wife enough to acquiefce in the moderate and reafonable demands of the Britifh court, and not again compel them to fuch meafures, as may one day prove fatal to Spain, notwithttanding hitherto they have come too well off. For more matter upon this head, fee the articles Locwood and Spanish America.
The DUTCH WEST-INDIA COMPANY. This company eftablifhed itfelf in 1621, and it's charter was dated the ioth of June the fame year, with an exclufive privilege to carry on, for the term of 24 years, all the trade of the African coafts, from the tropic of Cancer to the Cape of Good Hope : and in America, from the fouth point of Newfoundland, through the Streights of Magellan, of Le Maire, and others, as far as that of Anian, as well in the north as fouth feas.
The direchors were divided into five chambers; twenty for that of Amfterdam, twelve for Zealand, fourteen for every chamber of the Meufe, and of the north quarter, and fourteen likewife for that of Friefland
The government, or general direaion, was intrufted with nineteen directors, taken out of every chamber, in proportion to it's contribuiton to the joint flock ; eight for Amfter dam, which advanced $\frac{5}{4}$ ths; four for Zealand, who were there for $\frac{3}{3}$ ths; and two for each of the three ochers, who contributed only $\frac{1}{9}$ th a piece: the nineteenth director was chofen by the States General, who had even a righr to name feveral, as they thought fit.
The 4th of June 1647, the company renewed their charter for 25 years; but were fcarce able to hold out the time of

## D U T

this laft grant, by the immenfe loffes and expences occafioned by undertakings fucceffful at firft, but ruinous in the event
Such was, amongt others, the taking the bay of Todos los Santos, Fernambouc, and the beft part of Brazil from the Portugueze; an extraordinary fuccefs, and of immenfe pro fit to the company, if it could have fupported it; but, as it engaged the in afterwards in expences beyond their ftrength, it reduced them to a weaknefs, from which they could not re cover: alchough, in 1629, their admiral, Peter Hain, had brought into Holland the spanifh plate feet, which was immenfely ich; and their hopes of poffeffing the reft of Brazil appeared fo well grounded, that Maurice, count of Naffau, difdained not to be their general in that new conquett.
This company's weaknefs, which it was in vain attempted more than once to unire to that of the Eaf-Indies, caufed it's diffolution at the expiration of it's charter ; and, the 20th of September, 1674, a new company, compofed of antient partners and their creditors, obtained letters patents from the States, and entered into the fame rights and eftablifhments with the former, which it hath enjoyed fuccefsfully enough, conducting itfelf always with honour.
It's tirft fock was about fix millions of florins; and it's principal fettlements were, one at Cape Verd, and the other on the gold coaft of Guinea, for the African coatts; and thore for America, at Tobago, Curaccoa, and in the New Low Countries, fituate, between Virginia and New England.

## Dutch company of Surinam.

The Zealanders having poffeffed themrelves of the colony of Surinam from the Englifh, during the wars between Eng. land and Holland, the ftates of Zealand, in 1682, yielded their part of that conqueft, to the Dutch Wefl-India company, who, on the 23 d of December the fame year, obtained letters patents of the States for that acquifition. Since that time, the colony is divided into three parts, one of which belongs to the city of Amfterdam, another to the Weft-India company, and the third to the illuftrious family of Somerifyck in Holland. Of thefe three proprietors the company of Surinam confifts, the conduct of which is committed to ten directors; five' on the part of Amfterdam, four for the American company, and one for the houfe of Somerfdyck.
This company, as already obferved, makes part of the WeetIndia company.
By their charter, which confifts of thirty-two articles, are regulated the rights due to the company, the franchifes'and privileges of the colonies and planters; the number of military officers and municipal magiffrates, the fovereign council, the criminal and civil jurifdictions, and, in fhort, the whole police concerning both old and new inhabitants.
The rights referved to the Weft-India company, are thofe of laftage for fhips going in and out of Surinam, at the rate of 3 livres the laft; the right of weight on merchandize at the rate of $2 \frac{1}{2}$ per cent. both out and in, and the capitation payable in fugar, both on white and black, at the rate of 50 pounds of fugar the year : befide thefe three rights, the company enjoys the exclufive privilege of trading in negroes, with obligation to furnifh the colony yearly with fuch a number of haves as it fhall require, which fhall be fold publickly, and prefented. two and two to the buyers, without diftinction of rich or poor: the payment to be at three times, from fix months to fix months, according to the claufes and conditions agreed on between the company's factor and the inhabitants. The franchifes of the colonies and planters confift, firft, in a'free fettlement in the colony with cheir family, cattle, and goods, provided they are fubjects of the States-Generat, and with li. berty of leaving it when they fhall think fit, to return to Holland or fettle elfewhere.
2 dly , In being fubject to the impofition of no right but thofe before fpecified, except cafes of extreme neceffity, whether for the good of the fate in general, or that of the colony in particular.
3dly, In paying no more for their freight and paffage from Europe to America, than 30 florins for every perfon above 12 years, including their maintenance, and only $x 5$ florins for all under that age.
4 thly, In liberty of fhipping their effects on board fuch veffels as they hall think fit.
$5^{\text {thly }}$, That the mips employed by the company in the negroetrade, may not fhip goods homewards to the prejudice of other thips, but only fuch effects as belong to them, and proceet from the fale of negroes, or the company's rights and impofts.
6thly, Merchants, being arrived there with their fhips and merchandize, may fettle in places they fhall find convenient for their trade, provided, however, it caufe no inconvenience to the inhabitants, nor prejudice to the company's rights.
7 thly, The governor and council to be fworn to maintain all the colonies and merchants in the abovefaid privilrges. With regard to the government, it fhall be in thi hands of the council of ftate, compofed of the governor and ten coun-
felors; which laft may be augmented as the colony fortific itfelf, to the number of forty, the governor at the choice of the company, but always with the approbation of L. H. P. and the counfellors at firft by plurality of voices of the inhabitants, and afterwards at the nomination of the counfellors themfelves, when they are thirty in number.
Though the governor is to have the chief authority both in civil and military affairs, they may not, however, be determined but in the council, and by plurality of voices, and then only in conformity with the company's orders.
I ftice, in crimmal cales, fhall likewife be within the cognizance of the governor and council of Atate. Civil jultice thall be adminiftered by the governor, affifted with fix counfellors, chofen out of the inhabitants, three of whom fhall quit the office in two vears: all which counfellors, av well thofe of the council of flate as others, fhall exercie thei office without fee or reward.
Neither the govetnor; nor his council, may charge the colony with other impofts or rights than thofe above-mentioned, without the company's approbation. With which, neverthe lefs, they may exact fome fmall fums for maintenance of minifters for the fervicc of the chuich, fchoolmafters, and the like, as they thall judge neceflary and ufeful.
Laftlv, As the colony may poffibly become a charge to the Weft-India company, the directors of the faid company hall at all times be permitted to withdraw, in which cafe the flate is to take charge of, and give order in the affair.

## Merchandize imported from Surinam.

It's greateft trade confilts in fugars, worth commonly from 7 or 8 dutes, to $i 2$ or 15 the pound; alfo fmall candied citrons and oranges, fome rocou, vanilloes, which are large and plump, but not fo good as thofe from the Spanith WeflIndies. In 7718 , they began to plant coffee here, which fucceeded to a wonder, and is in no lefs efteem than that of the Levant.
The DUTCH COMPANY of the NORTH. This company has not an exclufive privilege; private perfons have equal right, alfo, to trade in the parts of it's conceffon; and the advantage received by it's letters patents, confifts only in fome privileges, of no great confequence.
There are alfo in Holland companies for the Batic Sea, for the fifhery of Nova Zembla, Davis's Streights, and Groenland; but thefe fifheries are not thereby interdicted to thofe who will undertake them: all the difference berween the company's fifheries and thofe of private adventurers is, that thefe laft may not go alhore to cut up their fifh, and melt their fat, being obliged to cut their whales up, and bring them to Holland in piéces to be melted.
The DUTCH LEVANTCUMPANY. There is not, properly ffeaking, a Levant company in Holland: but the commerce carried on by private prefons is fo confiderable, and of fuch great confequence to the commonwealth iteelf, that the States-General have not difdained to take charge of it, and to eftablifh there an order and regulations, which all Dutch merchants in that trade are obliged to obferve.
And for this purpofe the States have appointed at Amfterdam a chamber of direction, compofed of fix deputies anda regiter, all merchants, who, under auchority of the burgo mafters have charge of all things relating to the navigation and commerce of the Mediterrancan Sea; particularly that which they maintain with equal profit and reputation at Smyma and Conftantinople.
It is this company that nominates the confuls of the Levantine ports, which it is, neverthelers, obliged to prefent, and fubmit to the approbation of the States General. It decides, alfo, the number and force of the convoys neceffary to fecure the navigation of the merchant-men ; and cletermincs the differences that may arife between merchants on the fubject of trade; and hath even a right, when needful, to add new regulations to the old ones, but they are of no validity 'till confirmed by the States-General.

## DUTCH EAGT-INDIA COMPANY.

## A Chort hiftory of the Dutch Eaft-India company.

This company was furf undertaken by nine merchants only of Amiterdam. who fubferibed no more than 70,000 guilders. for a capital ftock. They were called the nes company. In th: year iss. they fitted out four inips, having in all 62 guns and 238 atle feamen Being well victualled for foleng a voyage, and well furnifhed with ammunition, they failed from the Texal the 2d of April, 1595.
They wer. particularly infructed to avoid trading in any place whe e the Portugueze had their fettlements and factories; more efpecially where they had any forts, that they might avoid falling in to the hunds of the Spuniards, and Fi ewife to avoid, as much as poffible, being embroiled with the Partugueze.
Thev arrived at the Cape of Good. Hope the 2d of Ausult, from whence they weat to Madagatcar and the in and St Mary, and, Aretching away to the fonth ciaf, they touched no where more 'till they came to the illand of Sumatra, leaving the coaft
of Malabar, the illand of Ceylon, the coaft of Coromandel, and the bay of Bengal (in all which they are now fo powerfui) on the left-hand, for fear of the Portugueze.
On their arrival on the coaft of Sumarra, on the inth of June, 1595, they commenced traffic with the Arabian and Chinefe merchants, and began a trade with the natives, parcicularly in pepper and other fipiees, which they found were brought to the port of Bantam, as to a kind of mart.
The ratives behaved to them with great courteoufnefs and civility at firt: but the Portugueze there being furprized to fee the Hollanders in thefe feas, where they had never heard of them before, they were not a little irritated, nor neglected any infidious mealures to incenfe the king of the country againft them, which foon occafioned a prohibition of traffic between them; and, indeed, were in danger of being furprized by the perfidy of the natives, who, under pretence of friendifip, invited thern among them, and murdered thirteen of their men, among whom was their principal commander, captain Molenaer, and two of their fupercargoes. They, however, difcovered the treachery time enough to fave the reft and their fhips; the Indians baving laid their plot, in concert with the Portugueze, fo as to have furprized the fhips alfo.
By the lofs of men from their firf fetting out, they were fo weakened, as to be under the neceffity of reducing their four fhips to three, and accordingly burnt one, the better to man the reft. With this force they left Bantam, and touched again on the inand of Borneo, difcovering the ccafts as they. palfed; and, having traded in feveral place's to advantage, they came to the inle of Baly, to the eaft of the inland of Java. Here they were fo well received, that two of their men, by the confent of the others, and at the requeft of the king of the country, ftaid behind, with intent to cultivate the friendlhip begun; being affured by their countrymen, that they fhould return the next time they came. Here they took in feveral merchandizes, fuch as the country produced, and fuch as other Indian veffels frequently brought thither, as China goods, filk, fices, and pepper: here efpecially, they found great plenty of rice, which was no little comfort to them, their bread being all feent. They ftored all their fhips with this rice, and took in a large quanfity more than they could confume, which they carried home as merchandze. Being thus pretry well freighted, they fet fail to recurn to their own country, whither they arrived the $4^{\text {th }}$ of Auguft the fame year; having, in lefs than five months, made their yuyage from the farthelt part of the ine of Java. A paffage fo extraordinary, as has hardly been ever done fince. And, although they made no extraordinaty profit, yet they were far from being lofers by the voyage; fo that the next year the company refolved to profecute the trade again. While they were preparing for the fecond expedition, there flarted up another fett of merchants, feven in number, and they began to fit out three Mips for the fame purpofe: but the States, to prevent confufion in the beginning of the trade, obliged them all to join in one company, and forbidany other to interfere for that year. From this union of nine merchants only, fprung the firft Eaft India company of Holland. The thips for the fecond voyage were fix in number. - The admira of this fleet, which was the richeft and frongeft that ever had put to fea from their coafts on any fingle expedition, was Jacques de Neck, the vice-admiral Wybrant Warwijeck : thefe were appointed for their diftinguithed probity, courage, and experience, in marine and merchandizing affairs: befides whom, they had feven fupercargoes, who, with the two admirals and the captains, were conflituted the council. One of there captains was the famous Heemfkirk, who, endeavouring to find out the north-eaft paffage to China in the year 1596 , wintered with all his company on the northermoft part of Nova Zembla: and the pilot of the whole fleet was our countryman, the famous John David, an Englifhman, who: firft propofed the defign.
This fleet was admirably provided, as, indeed, was the firf, with the ftouteft and ableft feamen that could be had; and, as much as poffible, they chofe all unmarried men, that no home affections might make them backward in any hazard, or hafy to return before their commanders thould require it. Knowing alfo, that the Portugueze were determined to at-tack them wherever they found them, they chofe fuch fhips, as were not only ftrong and able to bear the fea, but good failors, and which would work well in an engagement, if put to the neceffity of fighting: in fhort, they were fitted out as fhips of war, with plenty of proper arms and ammunition, \&c.
They likewife carried fuch cargoes of merchandize as might prove gainful in trafic; belides which, they carried alfo $2,300,000$ pieces of eight in fpecie, moft of which had been taken from the Spaniards in an attack upon their galleons, in their return from New Spain: fo that, in this voyage, they bought the Spaniards out of the trade with their own money.
This fleet faited the frit of May 1593, and paffed the Cape of Good Hope July 10 ; from whence, wihout delay, they went for Madagalcar, where they took in freh water. and provifion in fite of the Portugueze, who had a fmall fort in

St Auguftine's bay, but durft not fir out of it. Hence they made for the coaft of Malabar, and refolved to fhew themfelves to the Portugueze wherever they fhould have occafion: accordingly they arrived on the coalt fome leagues to the fouthward of Goa, traded with the natives, purfued, making difcoveries of the foundings, harbours, and roads, and coafted the whole country of India, the ifland Ceylon, the bay of Bengal, and came at laft to the Streights of Baly, on the fouth-eaft of Java, where they had left their twomen. Thus they became a terror to the Portugueze, braved them wherever they came, though they did not offer to attack them; and, in about two years and one month, they returned into their own country very richly laden, with about fix millions and one half of guilders in merchandizes, having fettled two factories, one on the inland of Java, the other in Sumatra. From this time they continued to fend fhips every year, and at length feized upon that fpot of ground and port, where they have now built the famous city of Batavia, the glory of the Indies, and the frength of the Dutch intereft in that part of the world. The fame company fent out four thips more after them the next year, before they had any account of the fuccefs of their main fleet; which teftified the fatisfaction they had in the practicability of the undertaking, and the aflurance of the profit, in cafe of their fafe return.
In the year 1600 , the Zealanders fet out on the like adventure, but loft the firft fhip they fitted out on the coaft of England, being overfec, about five days after putting to fea, and all her men drowned. This, however, did not difcourage the Zealanders; they purfued their defign upon their own foot, 'till the year 1604 ; , when they alfo were taken ino the general company: and chus this company have gone on fuccelifully to this day.
As by means of this company they grew tich at Amfterdam, from the conflux of merchants from Flanders, fo in proportion they increafed their trade: and, as the Eaft India trade occafioned a great increafe of their othercommerce, fo, when the Indian merchandizes were brought home, they exported them again to all parts of the world where they had any trade, particularly to the Baltici; to Mufcovy, and other places in the North, and efpecially up the Rhine, the Maefe, the Ems, the Wefer, and the Elbe, into all patts of Germany and France.
As to their Eaft-India trade in general, and it's increafe to the prefent time, it is no eafy matter to make a computation how extraordinary it hath, from time to time, contributed to inrich the Hollanders in general: that they bring home great treafure every year is not to be difputed.
In regard to the extent of their commerce in the Indjes, and the number of their factories and fettlements there, they have the fort and watering-place at the Cape of Good Hope, in latitude $36 \frac{1}{2}$ fouth of the.Line; a fettlement maintained not for trade, but for relief and fupply of their fhips in their paf fage out and home, as St Helena is to the Englifh in our Eaft-India trade.
They have alfo the ifland Mauritius, fo chritened in honour of Grave Maurice, who was, at the time of it's difcovery, their great champion againt the Spaniards. This lies between the ifland of Madagafcar and the coaft of Malabar, or the Perfian gulph; and is, as the Cape, not ufed for traffic, but chiefly for watering, taking in frefh provifions, and other relief to their flips on the voyage. It is in the lacitude of 16 degrees 35 minutes fouth.
With refpect to their commerce, they have a factory at Mocha, in the ftreight of Babelmandel, juit within the entrance of the Red Sea, called, on that occafion, the gulph of, Mocha. And here they trade, as we do, for coffee and fome few drugs only: but in coffee here and at Batavia, where they had planted it, they trade far more largely than any other nation.
Their other fettlements in the Perfian gulph, and on the coaft of Malabar, from Surat, on the fouth of the river Indus, to Cape Comeron, in which fpace they have the following feveral factories, viz.
Gombroon in Perfia, latitude $27 \frac{1}{2}$
Ormus, in the gulph

Thefe are on the fhore properly called India.

Befide thefe factories, they have the whole trade of the great inland Ceylon, the chief product whereof is cinnamon: and their chief factories in relation thereto are at Colombo and

Manceil,

## D U T

D U T
Manteil, on the weff fide of the illand; at Calapetene, in an infand on the fame fore; at Jetrapatan, on the north point of the ifland; and Point Pedro on the fame, being the extreme land north.
From Ceylon they enter the bay of Bengal, and trade on the coaft of Coromandel and Golconda, up to the river Ganges, where they have feveral factories in common with the Englifh, and fome that are wholly their own. Hence they go on to the coaft of Siam, the great inland of Sumatra, and the peninfula of Malacca, called the Indian Cherfonefus, or the Streights of Sincapore. This, and the Streights of Sunda, are the entrance into the Indian Ocean, or the feas of China and Borneo, and lie between the fouth end of the ifland Sumatra and the weft end of Java, called Java-head, on one hand; and between the fouth part of Malacca, or the faid Indian Cherfonefus, and the north-weft part of Borneo.
Their factories and fettlements on the coafts of Coromandel and Golconda, and the kingdom of Bengal, which are feparately their own, are as follow:
On the coaft of Coromandel, from latitude $10 \frac{1}{2}$, to latitude $22 \frac{1}{2}$.

From hence they have the trade of the great inands of Java and Borneo; and beyond them ealtwards, of the Molucca's, or Splee Illands; "which trade'is wholly theirs, without any competitors: they had alfo a fhare of the trade northward to China, the illand of Formofa, and Japan; but they loft it afterwards.
On the north-eaft-fide of the ifle of Java, in the latitude of about 7 dégrees fouth, fands the fpacious and royal city of Batavia, wholly built by the Dutch, where their governor and council of the Indies refide, and where, they tell us, they are more flrong, though not more populous, than in Europe; which, compared with the enemies who are in condition to offend them, may be true, but not otherwife.
Their fettlements in thefe parts, that is, beyond the Streights of Sunda eaft, and north, are not (as in the fore-mentioned places) under other kings and governments, but were got by forcible entry and conquelt : we mean the iflands of Java, Borneo, Madure, and Celebes, and the Spice Iflands.
From thefe feveral countries they import the following merchandizes: from Mocha, coffee, and fome few drugs; from the coaft of India, Malabar, Coromandel, and Golconda, all kinds of Indian manufactures, fuch as wrought filks, callicoes, mulins, with other great variety of manufactures of cotton and flax; alfo Mell-lack, ftick-lack, red-wood, faltpetre, a great variety of drugs [fee the article $D_{\text {rugs }}$ ], dyeftuffs, \&c. From Borneo, and the coaft of Malacca, pepper, and fome gold and diamonds [fee the article DIAmond]. From Bengal, and the river Ganges, raw filks and wrought filks, of divers kinds, with diamonds, indico, Iahore, cowries, \&c. From Sumatra, Java, and Batavia, pepper, coffee, the lait planted in Java, by the Dutch themfelves. From Ceylon, cinnamon, and fome few drugs, faltpetre, and pearl. From Banda, Gilolla, Ternate, Amboyna, \&c. fpices, viz. nutmegs, cloves, mace, \&c. From China, raw filks, wrought filks, Japan and China ware, tea and arrack.
The Dutch carry out confiderably more European goods to India than the Englifh, becaule the number of their people there, efpecially in their great fettlements at Batavia, Borneo, and the Summer Inands, are prodigioufly increafed, and require greater quantities for confumption.

REMARKs.
From this fuccinct fate of the Dutch Eaft-India company, we may form fome judgment of the weight and influence of this republic in Afia; which, when compared with any other fingle European power that have trade and fettlements there, they are far fuperior: fome have not fcrupled to affert, that their commerce and power there is little inferior to all the other Europeans conjunctively; but this, we are inclined to think, is carrying the point much too far.
The ifland of BORNEO, which the Dutch poffefs in this part of the world, is not only the largeft in Afia, but in the world
itfelf, a very few excepted, being near 12 degrees, that is, 700 miles in length, from north to fouth; and 10 degrees, or 600 miles in breadth; the form almoft circular, or rather elliptical. The Portugueze Jefuit, Vintimeglia, who defcribes it, fays it meafures 1650 Italian miles in circumference: fo that it is certainly the largeft ifland in Afia, not excepling even that of Japan itfelf.
This ifland lying in the very centre of heat, the equator paffing juft overit, we might expect it, like Africa, to be forched up, and given over to uninhabited drought and barrennefs; but, on the contrary, we are furprized to find it infinitely populous, being not only filled with native inhabitants, but thronged with ftrangers of all the trading nations round it, fuch as Chinefes, Japonefes, Siamites, Malayans, Maccaffars, and Javanes, or Batavians, befides Europeans, as Dutch, Portugueze, and fome few Englifh. In a word, Borneo invites her neighbours by the moft powerful arguments of commerce; a product inimitably rich [the fpices,] and, in fome refpects, not to be equalled in quantity in the whole world.
Here, alfo, are the moft exquifite diamonds. The diamondmines of Golconda are, indeed, wonderful in themfelves, and the diamonds are not found here either in that manner, or that quantity: but then, on the other hand, the diamonds at Borneo are of the fineft and moft perfect water, truly brilliant: in fhort, here are the moft admirable diamonds in the whole globe, nor is the quantity fmall that they find here.
As this is a product of the concealed part of nature, the furface might be a cruft for all this, as it is in Africa, where the mountains are fruitful in gold, and the rivers fpangle with the duft of it; and yet the foil fcarce yielding food for man or beaft. But in Borneo, though with the fun in the zenith, you have the vallies watered with beautiful rivers, the hills covered with fourifhing woods, the meadows and fields enriched with fragrant and medicinal vegetables; the trees yielding the moft odorifcrous and falubrious gumis and drugs: they have here the fincft and belt camphire in the world; the beft caffia, of divers forts; 'excellent pepper, and the beft rice in all the eaftern parts of Afia. They have very good cmnamon, though not fo exquifite as that of Ceylon, and feveral other valuable fpices, particularly cloves. They have, befides thefe, numberlefs variety of fruits, neceffary for the fuftenance of human nature: and, for manufacturing, here is no end of the production of cotton : they have, lixcwife, more honey and wax than there is in any other place in India. Here the Dutch in particular, and the Malayans and Chinefes, have their feveral factories and colonies, all different; the furt being Chriftians, the fecond Mahometans, the laft Pa-gans.- The Hollarders are mafters of the very beff parts on the coaft: they call the largeft and moft populous city Borneo, after the name of the ifland : it is a large, populous, and well-fituated town, the ftreets fpacious, and well watered.This place is the feat of commerce; the harbour fafe, deep, fecure from winds, without rocks or fhoals that have any danger attending them, and is able to receive the largett fhips.
Ealt of Borneo lie the Spice Ifands, which, together with that of Batavia and Ceylon, may juitly be called the Dutch empire in the iflands of the Indies. It is true, in Batavia and Ceylon they are not fole lords; but it is not becaufe they have not power to poflers the reft, but becaufe they have the dominion of trade, which is fufficient to them, and more they have no occainon for: however, in thole we are about to fpeak of, they may be faid to be abfolute lords of the place, without any to interfere with them. As
The inland of Celebes, on the eaft of Borneo. This is not, indeed, called one of the Spice Inlands, but it produces a great quantity of fices; and the Dutch, for that reafon, think it worth while to keep the poffefion of it. They have a very confiderable trade with the people of Borneo and China: but the Dutch are abfolute mafters of the place and trade too. The town is very ftrong, having divers good forts to guard the entrance into the harbour ; and the Dutch maintain a good garrifon here againft all events.
The Nutmeg Inands are Banda, Pulo-way, Pulo-rin, Nera, Gumenape, Guligien.-The Clove Mands are Ternate, Fidore, Motir, Machiam, Bachia, all fubject entirely to the Dutch, and ffrengthened with forts and caftles.
Amboyna allo produces cloves, and is fubject to the Dutch; yet neither does this, or feveral others where cloves are produced, commonly pafs for any of the Spice Iflands. The Englifh had formerly a factory in this ifland, and, by that means a fhare with the Dutch in the fpice trade; and, perhaps, in time might have obtained a firmer footing there; nor is it unlikely that the profpect of increafing their intereft, in that valuable branch of commerce was one of the reafons which moved the Dutch to the horrid maffacre of the Englifh: which fcene I chufe to pafs over in filence.-I fhall only oblerve that the Englith, by this act of cruelty, were outed of their factory, and, in confequence, of the fpice trade, which is now as it were wholly engroffed by the Dutch. The Dutch are abfolute lords of thefe Spice Ifiands; nor can any other nation have any bufinefs here, there being no in-
habitants but mere natives to buy any thing, who are pobr and few; and thele have nothing to fell but fices, which no body can publickly difpofe of but the Dutch governor.
The ifland of Java, alfo merits our particular attention, as as well for it's important fituation, and being the greateft colony the Hollanders have in thefe parts, as for the city of Batavia, built by them, and which is now the metropolis and center of all their commerce, and of all their ftrength in the Indies.
$J$ Java is fituate in the latitude of 6 to 9 degrees fouth. It lies oppofite to the fouth-eaft end of Sumatra; and the paflage of the fea, which runs between, is called the Streights of Sunda, the breadth between being about five or fix leagues.
On the north fide are a great variety of good harbours, creeks, and rivers, and two very noted towns, or cities, viz. Bantam and Batavia. The former is properly an Indian city; it was the capital city of the chief kingdom of the Javans, and which was once the moft famous in the ifland. The Englifh, for many years, had here a flourifhing factory, efpecially for pepper, but quitted it for that of Bencouli, which has been much more advantageous to our Englifh Eaft-India company.
The harbour is good, and much frequented: it is ordinary to fee in this port at a time 3 or 400 fail of Chinefe junks, and barks of Siam and Pegu, as alfo of Bengal, fome to buy, others to fell ; for the produce of the place is very well fuited to the commerce of thefe countries, here being conftantly a loading of pepper of rice, for any thips that come, as alfo a great plenty of all forts of fruits common to the Indies.They have allo abundance of cattle, and their beef is good, and will take falt well, notwithftanding the heat of the climate. - The Dutch here too have obtained the fovereignty of the whole place
But the glory of this ifland, and of all the European fettlements in the Indies, is the city of Batavia, the center, as faid, of all the ftrength of the traffic of the Dutch in this part of the world; where they are fo powerful, and have fo many fubjects, fo many illands, kingdoms, principalities, and dominions depending on them, and are fo able to fupport, protect, and employ them, that it is to be admired that any other European nation fhould have fo much as a footing in the Indies, and that the Dutch do not fupplant and drive all the European factories out of this quarter of the world. The number of fhips they are able to fit out here, the number of feamen they are able to raife, and the number of natives they have trained up to the fea, are fo great, that no nation in Europe can produce a ffrength at that diftance able to cope with them. This appeared on feveral occafions in their wars with the Portugueze, wherein, by plain force, they drove them out of all the beft factories in the Indies, except Goa where they are, indeed, fo well fortified, that no power fouth of the Line can ever fupplant them.
At the city of Batavia is feated their government civil and military: here are their magazines, as well naval and marine, as for armies and land expeditions: and from hence, upon any emergency, they fit out fhips of war as they find needful, without the expence and hazard of fending them from Europe.-Nay, here they are able to build fh ips, as well as to repair their old men of war, at a cheap rate, of what bulk and force they pleafe. And for thefe purpores they have rope-walks to make cordage, forges to make anchors, founderies to caft their cannon, mills to make gunpowder: fo that they can never be fuppreffed for want of ammunition, or be obliged to wait for fupplies from Europe, as all other European powers and factories muft do in fuch cafes.- Batavia is the general magazine of the Indies, as Amfterdam is of the United Provinces.
This city of Batavia, when the Dutch came thither, was no more thann an Indian village, encompaffed with a kind of pallifade of bamboo-canes. The Dutch pitched on it for the advantage of it's fituation, all other confiderations afide, not regarding the low, watery, and fenny lands about it, or it's being fubject to inundations by the river, which runs into the fea here, paffing through the middle of the city. Thele things the Dutch being ufed to, and by experience accuftomed to provide againft, they prefently made fubforvient to the city, by cutting channels, drains, and canals, to carry off the water upon any land-floods, fo they turned the currents as they pleared. And, in regard to ftorms from the fea, there lie in the offing 17 or 18 illands, which keep off the winds, and break the waves, when the fea would otherwife come rolling in: fo that the fea between thefe illands and the port is always fecure, and makes the road a good harbour, and as fafe riding, as if the fhips were in a mole : and this harbour is able to receive 1000 fail of fhips at a time, befide floops and barks, and other fmall craft, which go into the river, and lie with their heads clofe under the fhore, faftened to piles.
Befides the ftrength of the city, which is very confiderable, and more than fufficient to refift any force which, in that part of the world, could be raifed againft it; they have five very ftrong forts at a diftance, whereby all the flat country, for feveral leagues about the city, is protected againft the inroads of the natives. This is neceflary, they having abun-
dance of fluices within thefe forts, fome for flopping and turning of waters when floods happen, fo; as to prevent injury to the city; and others for ufeful manufactures, as pow-der-mills, fugar-mills, corn-mills, paper-mills, faw-mills, \& c .
In the beginning of the Dutch fettlement here, the $J_{\text {svan }}$ kings often attacked them, and particularly the king of Bantam once befieged them in a formal manner, with a. yery great army, being joined by the Englifh with feven or eight thout fhips; by which the city, then being in it's infancy, was reduced to great extremity. But, in the height of their diftrefs, their fleet from the Molucca's, confifting of 17 men of war, and 1200 foldiers on board, came to their relief; upon which the Englifh fhips retired to Bantam, and, the Dutch fuccours being landed, they fallied upon the Javans, routed their whole army, and drove them from the fiege with a horrible flaughter : fince which they have made themfelves too frong to be attacked; nor would a regular army of 40,000 men (Europeans) be able to fubdue this fingle city, it being generally well ftored with provifions, and having a good garrifon; and being furrounded with water, no approaches could be made, or attacks formed againt it, in the ordinary way of military conduct.
Ceylon is a large ifland, lying off the fouth coaft of the Mogul's country. It is known to Europe for little but the production of cinnamon, though it yields alfo pepper and ginger, but not in the like quantities. As the coaft is chiefly our bufinefs, we fhall only obferve, that the Dutch are fully mafters of the fea-coaft, and thereby of all the trade and product of the ifland: nor is the poffeffion maintained with any difficult; for the Dutch, who leave the natives wholly to theminises, are concerned only to fecure the cinnamon, and keep other Europeans from them.
The Portugueze were here, as they bad been of moft of the fea-coafts of the Indies, lords of this whole country; nor were they fo'eafily difpoffeffed here as in other places, but defended themfelves bravely many years, 'till, about 1664 , they were effectually fupplanted by the fuperior power of the Dutch, and forced to furrender their poffefiion, which they had held above 150 years.
On the extreme point of this illand due north is a large piece of land, about eight leagues long, and four or five broad; 'tis a peninfula, furrounded by the fea on all parts, except on the fouth eaft corner, where it is joined to the reft of the ifland by a narrow flip, not half a league over. In the reft of the illand, the Dutch have only their fortified pofts, and fome fmall dependent places adjacent, leaving the government of the country wholly to the natives: but here the whole place is their own, and they have not only a ftrong fortification at the north end of it, called Point Pedro, fronting that part of the fea which looks towards the coaft of Coromandel, but they have feveral other forts alfo. ' They have another frong fortrefs on the fouth-weft part of the peninfula, called Jaffnapatam; it is built fquare with four regular baftions, and a large ditch with a counterfcarp: the Dutch take great care to preferve it, maintaining a flrong garrifon always in it.
Befides this peninfula, the Dutch have the city of Punta GalIa on the fouth part of the inand. This was the capital city under the Portugueze government, and is fo ftill under the Dutch; being large, well built, populous, and frong. 'Tis the feat of the Dutch governor, and, as the fortifications are all good, here is a ftrong garifon kept too. The fituation of this town is alfo fuch, that it is ftrong by nature near the fea, and almoft furrounded with it: the harbour is good, and the fhips moor almoft on fhore. The Dutch bave befides four ftrong forts, viz. Negumbo, Columbo, Balecalo, and Trinquemale : the two firft on the weft fide of the ifland, the next on the eaft-fide, and the laft to the north-eaft, all fufficiently ftrong, to defend themfelves againft the natives, and fecure their commerce.

## Further Remarks on the Dutch Ealt-India company.

It may deferve confideration, from what a fmall beginning this mighty power and commerce of the Dutch in the Indies originally frung: it was fet on foot by nine merchants only, and but with a few thoufand pounds fterling: but, indeed, the rife of the Dutch in Europe is not lefs extraordinary, they having arofe only from a few fifhermen. As this manifefts what wondera are to be wrought by induftry, parfimony, and commerce fteadily and wifely purfued and conducted; fo it muft prove a powerful argument to fet a foot any new commercial undertakings, although in their infancy they may meet with great difficulties and difcouragements, which is the cafe of moft notable enterprizes at their commencement.
By thefe obfervations, I have, at prefent, more particularly in view the eftabilfhment of the Britifh fifheries, which, at length bave happily taken place in thefe kingdoms: and, as we have conviciion before our eyes, that one of the greateft trading fates in Europe took it's origin from the fifteries alone, have we not the utmoft reafon to hope for and expect vory profperous cunfequences, from this puble and pub-

## D U T

lic-firited undertaking? No nation being more happily circumftanced to carry on this branch of commerce, we can have no reafon to doubt, but we thall have our thare in this article of traffic over the whole world: and, if this great and national defign is conducted by a fueceffion of gentlemen of woith, honour, integrity, and abilues, no way inferior to thofe worthy patriots who have been fo diftinguifhedly zealous in promoting our fifheries, we need be under no apprehemfion of malveriation in the management of their affairs. To leave this Chort digreffion, and return again to the Dutch Eaft-India company.
'This company is governed by fixty-five directors, divided into different chambers; twenty for that of Amfterdam, which alone poffels one moiety of the flock; twelve in that of Zealand, which held one fourth; fourteen in thofe of Delft and Rotterdam, which together furnilhed one eighth; and a like number for thofe of Enchuylen and Hoorn, which likewife together made the other eighth.
Seventen directors were yer taken out of fixty-five for the common attaits of the fix chambers, and that in the fame proportion; eight for the chamber of Amfterdam, four for that of Zealand, two for thofe of Delft and Rotterdam, and two for Enchuyfen and Hoorn: for the feventeenth, he was taken alternately from Zealand, the Meufe, or North Holland. 'Tis by this fecond direction, that the number, equipment, and departure of the hips are regulated.
The company hath a right to contract alliances with princes, whofe dominions lie eaft of the Cape of Good Hope, and in Magellan's Streights, all along and beyond them; to build forts and place governors and garrifons there, and to appoint officers of juftice and police, but the treaties are made in the name of the States; in whofe name alfo, the officers, both inilicary and juftciary, are fworn.
At the expiration of every charter, the company is obliged to renew it, which it hath already done five times fince the firf grant. Thefe coft the company confiderable fums.
The grant of 1698 was confirmed fince about the end of 1717 , by proclamation of the States-General, prohibiting all their fubjects to fend their fhips, or to fail within the limits granted the company, or to trade directly or indirectly, or to affociate themfelves with foreigners for trade, or to make ufe of their fhips.
Nothing could have been concerted with more wifdom or prudence, than the police and difipline, by which ewery thing in that company is regulated, whether with regard to the election of the directors of the fix chambers, or the government of envoys, and the returns of fhips, or the choice of the fixteen particular directors, the fale of merchandize, and the repartitions of profts; or, laflly, the politique of thefe fovereigns of one part of the great Indies, whom neverthelefs we reproach in this laft refpect, for their jealoufy againft other nations, fometimes a little bloody, and a religion weak enough to yield, as occafion requires, to the intrefts of their commerce : it muft however be confeffed, that terefts of their commerce : it mult however be confefted,
the' are not without apologifts for both thefe complaints.
'T would be difficult to remark all the compting-houfes, factories, refidences, or commercial fettlements, in which they maintain merchants and factors; there being no place, any thing confiderable for trade, from the bottom of the Perfian gulph to the coaft of Cbina, on which they have not fettlements.
While the Dutch navigators meditated a paffage by the north to the kingdom of Calay, and from thence to China, CorneJius Houtman, a Hollander, who had been a long time in the Portugueze fervice, a man as curious as laborious, was taken by the Turks; and, having a long time in vain folicited thofe of his nation for redemption from flavery, he addreffed himielf to fome merchants of Amfterdam, propofing, that if they would pay the fums sequired for his sanfom, he would acquaint them with all he had learnt concerning the commerce of the Indies, and with the courfe they muft kexp in the voyage.
Thefe inerchants, ftruck with the propofition, made not the leaft hefitation to grant Houtman's requeft, enjoining him fecrecy as to the fum required for his ranfom; he was fet at liberty, atrived in Holland, made his report to his benefactors, and encouraged them to form a company, who refolved, in 1595 , to fend four veffels to the Indies, keeping the rout called the Portugueze.
If we read with attention the different relations of the wife, prudent, and courageous manner, in which thofe illuftrious merchants have acted, to form the fineft eftablifhment in the world, we cannor but be ftruck with the abilities of thofe firft founders, who could furmount the numberlefs obftacles that lay in the way of ther enterprize. What muft their labour and refolution not have been, to fettle themfelves in fo remote a country, where they had not a foot of land; a country inhabited by their moft powerful enemies, who had been in poffefion of it a century and a half? What muft not our admiration be, that a few private merchants fhould have laid the foundation of a company at prefent fo formidable? The princes and kings of the world will here find leffons of confummate policy; they will here learn, moreover, if they doubt it, that there is nothing more advantageous or glorious

## D U T

to a ftate, than a commerce well underfood and direeted; and that the way the Dutch made ule of to conquer their enemies was rather to attach them to the company by the proffercd advantages of traffic, than by force of arms, which they never ufed, but to preferve the dominion they had acquired by commerce.
'Twas on the 20th of March 1602, that the States-General fummoned to the Hague the principal merchants of Amftordam and Zealand, who had been interefted in that firft enterprize; and, after hearing their report, the States refolved to abolifh all the petty focieties formed 'till then, that there might be but one only body, and that, from that time, no private perfon hould trade between the Cape of Good Hore and the Eaft-Indies, to the prejudice of the company; with $\mathrm{li}_{-}$ berty, however, to all thofe who would intereft themte:ves in the company, to whom for that effect they granted lecters patents dated that fame day; and, in the treaty of peace, made at Munfter in 1648 , it was feecially refuived,
That the king of Spain might not extend his limits in the Eaft-Indies, but that he fhould be bounded by what he then poffefled; that the conquefts which might be made by the United Provinces, fhould remain to them, whether over the natives of the country, or over the Portugueze, whatever the event might be of the war then fubfifting between Spain and Portugal.
The protection, granted by the States-General to the company, was no fooner known, than every one was for interefting himfelf in that commerce; fo that, in a very fhort time, they formed a capital ftock, which, with that of the preceding petty focieties, amounted to $6,459,840$ florins, bank money.

## $2602 \frac{2}{3}$ per cent.

By the calculation here made, we fee, that, during 63 years, the company hath divided $1749 \frac{x}{3}$ per cent. which amounts to about $22 \frac{5}{5}$ per cent. of the capital flock one year with another. The profperity this famous company enjoys, is owing to the wife adminiftration of the 65 directors:
18 for the city of Amfterdam,
12 for Zealand,
7 for the city of Delft,
7 for Rotterdam,
7 for Hoorn,
7 for Enchuyfen,
I for Haerlem,
I for Leyden,
1 for Dort,
If for Tergow,
I for the province of Guelderland,
I for the province of Friefeland,
1 for that of Utrecht.

## $\overline{6}$

Each of thefe directors is charged with certain affairs in the cities, or factories, of their divifion, called chambers; as for example, the chamber of Amfterdam, the chamber of Rotterdam, \&c. None may hold the office of director, unlefs he hath at leaft 6000 florins in the company, reckoning from the primitive ftock, which makes nearly the 1076 th part of the faid capital. Thefe 6000 florins are worth about 50 or 55,000 florins. Befides thefe directors, the nobility have a depury-director in South Holland, and in the other provinces.
Independent of thefe directors and depuies, there are, befides, eight principal participating deputies, viz.

4 for the city of Amfterdiam,
2 for Zealand,
I for South Holland
I for North Holland.
They have a deliberative, but not a conclufive voice, in certain affermblies to which they have a right of admitrance.
There are moreover in the body two advocates, who affift at the general affemblics, and at thofe at Amfterdam. Their office in the company is nearly the fame with that of the grand penfioner in the ftates of Holland.
All thefe different directors have each their deliberative voice in the chamber of their city: lut it is the general affembly that regulates all the important affuirs of the company; it is held ufually three times a year.
The fi:ft of thefe affemblies regulates the fale of fpiceries, and the dividends to be mase by the company.

The fecond is to deliberate on the anfwers to be made by the company to letters received from the Indies.
The third regulates the fales made in Oetober and November, and the number of fhips to be fitted out, and fent to the Indies the current year.
All thefe forts of affemblies are called the affemblies of $I_{i}$, and they are compofed of

| 8 directors for the city of Amfterdam, |  |
| :--- | :--- |
| 4 | for Zealand, |
| I | for Delft, |
| I | for Rotterdam, |
| I | for Hoorn, |
| r | for Enchuyren, |

16; and the feventeenth is deputy in turn of one of the four fmall chambers.
Befide that affembly of 17 , there is alfo a general affembly held every year at the Hague : it is compored of

| 4 directors of Amfterdam, |  |
| :--- | :--- |
| 2 | of Zealand, |
| 1 | of Delft, |
| 1 | of Rotterdam, |
| 1 | of Hoorn, |
| 1 | of Enchuyfen. |
| IO |  |

This affembly of 10 , generally examines the letters and papers received from the Indies, and forms a rough draught of an anfwer, which is afterwards fent to the aflembly of 17 , to refolve upon what they thall judge convenient.
Every director hath fome particular charge; four of the city of Amfterdam are appointed to have care of the flore houfes, as alfo to buy the merchandize which the company is for fending to the Indies, and to take care of the merchandize unfold : three or four others fet over the finances, and to receive and deliver the company's revenuts: feven others perform what is neceffary for fitting out the fhips; and a very fmall number of them are authorized to tranfact the fecret affairs of the company.
We fhall not finih this article without obferving, that the company maintains and employs ufually in it's ftore-houfes more than 1200 workmen, as well for the building as fitting out lhips.; 50 workmen are yearly employed in picking and cleanfing the fpiceries.
What is hore related gives us a fufficient idea of the riches of that company in thofe parts where it took it's rife; which, however, are fmall in comparifon of thofe they have acquired in the Indies, and of their power at Batavia, a city which furpaffes thofe of Europe in beauty, and the grandeur and power of their general there, who, we are alfured, commands upwards of $50,000 \mathrm{men}$, exclufive of the fleets at his difpofal.
We are yet to explain the manner in which the capital ftock was divided. We have remarked, that it was originally 6,459,840 florins, bank money, whioh was divided into hares of 500 livres gros, at fix florins each; fo that each Thare amounted to 3000 florins; thefe were called capital actions, or, fimply, actions of the India company. They are bought and fold as ftocks are in England, at a higher or lower price, according to the dividends the company think fit to make, who, we are affured, always make a referve of immenfe fums, as a provifion againf thofe loffes which have often happened to it, without being obferved by the pubJic ; a wife and prudent precaution, which has, and will fupport, the credit of that illuftrious company, and deferves to be an example, in this refpect in particular, to all other trading companies in Eurcpe.
Upon the whole, one of the reafons why the Dutch EaftIndia company fourihes, and is become the richeft and moft powerful of all others we know of, is it's being abfolute, and invefted with a kind of fovereignty and dominion, more efpecially over the many ports, provinces, and colonies it pofleffes in thofe parts: for it appoints magiftrates, admirals, generals, and governors; fends and receives embaffies from kings and fovereign princes, makes peace and war at pleafure, and by it's own authority; adminifters juftice to all, appoints tribunals to judge in their name, with plenary power, and no appeal ; punithes and remits offences; beftows rewards becoming the dignity of kings; fettes colonies, builds fortifications, levies troops, maintains numerous armies and garrifons, fits out feets, and coins money.
And, though there is acknowledged a dependance upon the States-General, it may be faid they feldom exert their power; and, while the Republic preferves the right of fovereignty, it tacitly leaves the exercife and poffeffion of it to the merchants of this company. Thefe vaft powers were, and fill are, sequifite to cherifh and preferve this flourifhing branch of trade; and the proprietors jufly merited them: tor, by their own vigilance, fatigue, and expence, they have conquered and preferved all the countries they poffefs in thofe parts of Afia, and their fortrefles on the coall of Aftica, for refrefhment, refiting, and protection of their aips.

## D U T

This company, we have feen, was raifed and profeЯted upon the fpoils of the Portugueze, and afterwards at the expence of the Engl:h. And to what a degree this corporation might raife ir's power and infuence in Afid, and, confequently, in Europe, were there not other potent and opulent European trading companies, to maintain a kind of ballance of commerce and influence againft them, is not eafy to fay. Expertence has hewn, that there is no little danger in trufting then with the upper hand, either in the Indies or Africa; the affair of Amboyna will never be forgotten, no more than their cyranny and cruelty to the Englifh Aftican company formenly, which was the firft, and, perbaps, the principal caufe of their ruin. Quere, therefore,
Whether thofe judge the bett in regard to the trading intereft of thefe kingdoms, who are tor fupporting the united Eaf-India company of England in therr prefent privileges and immunities, and even for enlarging them; or thofe who are for annihilating that company, and laying the trade abfolutely open!
In order to form a juft, candid, and difpaffionate judgment of this matter, we have given the fhort hiftory and ftate of the Dutch Eaft-India company:: in it's place, we thall give a fuccinct hiftory and ftate of the French Eaft-India company, and of thole of the other potentates who carry on a commerce to that part of the world. For, without the intelligent reader hath thofe points fairly laid before him, we humbly conceive that it is not poffible for him to make a true judgment of the queftion. Our bufinefs, therefore, is fo to lay all requilite facts only before the reader, that he may not be mifled in a matter of this bigh importance and concernment to the trade and maritime power of the kingdom in general. See the articlas East-India Company, France, Portugueze East-India Trade, Swedish East-India Company.
DUTIES, in regard to trade, are thofe impofts, or taxes, which are laid on merchandizes at importation or exportation, which are commonly called the duties of cuftoms; the taxes of excife, allo, are frequently diffinguifhed by the duties of excife.

## REMARKs.

We thall here confider duties in another light than what we have hitherto done, under fynonymous heads.
The principles on which all duties and cuftoms fhould be laid on foreign merchandizes which are imported into thefe kingdoms, are fuch as tend to cement a mutual friendhip and traffic between one nation and another; and, therefore, due care fhould be taken in the laying of them, that they may anfwer fo good an end, and be reciprocal in both countries: they fhould be fo laid as to make the exports of this nation, at leaft, equal to our imports from thore nations wherewith we trade; fo that a ballance in money thould not be iffued out of Great-Britain to pay for the goods and merchandizes of other countries; to the end that no greater numbers of our andholders and manufacturers fhould be deprived of their revenues arifing from the product of the lands, and the labour of the people; by foreign importations, than by exportations to fuch countries.
Thefe are the national principles, upon which all our treaties of commerce with other countries are to be grounded: and, as all fates and empires are daily making their utmoft efforts for the advancement of commerce, and to prevent the importation of our manufactures into their kingdoms: as fuchlike meafures are the moft effectual reftraints and prohibitions upon our commerce, theie feems no other way to redrefs the grievance, than by retaliating upon them, and fupplying ourfives, at leaft, with their commodities in a degree of proportion diminifhed equal to what they have leffened in ours. For, if this policy is neglected, and traders are left to act at random, according to their own will, nothing is more certain than that they are taking fteps gradually to ruin the nation, notwithfanding the duties of cuftoms fhould be daily encreafed, by thefe augmented impoffs. So that the additional encreafe of the cuftom-houfe revenue is not an infallible criterion of an encreafe of national commerce and treafure.
But one fundamental branch of the fupport of the royal reBut one depending on the good plight and augmentation of the duties arifing on cuftoms, it is no wonder that, ever fince thofe duties have exifted, every meafure has been taken to improve and encreafe them. But let every judicious man confider upon what principles of policy can this part of the public revenue poffibly be encreafed? Does not this encreafe of revenue arife from the encieafe of foreign imports? And, as the importation and confumption of theie imports diminim, will not the cultom-houfe revenue decline?
Now, fince the encreafe of the contumption of foreign productions and manulactures, among us, has an inevitable tendency to impoverifh our uwn nation, and earich others, the neater care that is taken to encreafe and improve the cuftom-h-ufe branch of the revenue, uniess by the prevention of smugcling, can it have any other effect than to haften the ruin, rather than plomnte the opulence of the kingdom? unlefs our experts in value keep pace with our imports. As

## D U T

our exports, however, do not, according to the conflitution of the public revenue, afford an encreafe of the duties of cuiftoms any way proportionate to our imports, men in power have not thofe inducements to roufe and ftimulate them fo much in regard to the one, as they have in regard to the other.
In regard, Jikewife, to our duties of excife, let it be candidly confidered, how far they may affect the general commeice and wealth, and power of the nation. Are they not laid even upon thore neceffaries of life which affect the labour of the hurbandman and the farmer, and, confequently, the country gentleman, as well as the artifan, mechanics and manufacturers of every clafs, throughout the whole kingdom? The public, as well as the perfonai royal revenue of our fovereign himfelf, doth alfo greatly depend on the keeping up, if not enicreafing, the product of the excife funds; and the very being and exiftence of thefe funds depend upon clogging and encumbering our native productions and manufactures: as this is the cafe, no one will prefurme to fay that the conftitution of this, any more than the cuftom-houfe branch of the revenue, is fo laid as neceffarily to advance that commerce and navigation, which alone can fupport and uphold the ftate. It is true there are drawbacks allowed of the excife-duties upon the exportation of fome commodities to foreign countries; fuch as on beer, ale, \&c. yet the duties on foap and candles, and other the neceffaries of life, that are confumed in our mechanic and manufactural arts, are not drawn back, but render the workmanhip of thofe artifts dearer, in proportion to the weight of thefe taxes; which muft unavoidably prove detrimental to our traffic, as it occafions other nations to underfell us. See the article Bonding of Custom house Duties.
As our intent is only to fet things in that fingle point of view which relates to trade, I fhall confider excifes in no other light at prefent than as taxes on commodities, but attempt to fhew the augmentative faculty of all fuch taxes, and the great prejudice they do to trade; for, whatever raifes the neceflaries of life, raifes labour, and, of courfe, the price of every thing that is produced by labour. How our excifes do really encumber our traffic will appear prefently, they trebling thenfelves almoft to the people for what they raife to the government; and it is to be greatly feared it would appear much more, if we could go to the bottom of the incumbrance; for it is to be confidered that tradefmen in a country, by their mutual dependance on each other, are like wheels in a machine, in which, if one is touched, the others are affected. Amidft fo many trading movers, to what degree the oppreffion is encreafed, is not eafy to fay; nor can we be ftartled at the largenefs of fuch computations; for, being carculaed chiefly among ourfelves, and going out by dribblets, we hardly perceive them, but yet are furprized to find wages and necerfaries grow dearer and dearer, becaufe few ufe themfelves to confider the immenfity of fuch collected advances in fuch fums: if, however, we compare the difference of the prices of neceffaries between England and France, we hall find that difference obvioully accounting for the prodigious amount of the confequences of our taxes; nor'can it be a trifie that makes fuch a fruitul country, as England is, fo dear, and it's trade declining: for our working people, being forced to purchale the neceflaries of life dear, muft work dear to live, until their willing working hands are (ied up by foreigners, who live defs taxed, and, of courfe, work cheaper; fo that they mult, and do, underfell us at all markets for manufactured goods, where they come in competition with us, and, in time, mult and will ftop all fuch exports.
And we may appeal to the judgment of every honeft man converfant in trade, whether he does not experience our trade to decline year after year, more efpecially our woollen trade, which has been effimated to be as neceflary to us as bread is to the life of man; for our dearer goods mult lie unfold, of be fold with lofs, which muft ftop, or break our merchants; they, our clothiers and weavers, \&c. they, their journeymen, who muft either ftarve, turn beggari, thieves, or fly to our enemies, and belp them to ruin us the fafter; which has cer tainly happened ton much of late years. See the articles Artificer and Manufacturers.
Opprefs trade, and the generality of the common people become miferable, and burdenfome to the rich; every accdental flackening of trade encreafes that wretched number.A poor man, by the feverity of weather, the dead time of year in his particular trade (for all trades have fuch tiness) ficknefs, or various orher accidents, cannot work, but, having aved ten good fhillinge, is determined to allow himfelf only bare neceflaries, which, if untaxed, might coft about 4 d - pet day; his money then will hold 30 days.
But if neceffaries are advanced, by the confequences of our taxes, 2 d . per day on his confumption, in that cafe 6 d. per day is only equal to the above 4 d . For his maintenance, and he can then hold out but 20 days, and is forced the earlier by to days (in which poffibly he might get employment) to ftarve, beg, or fteal.
Abfolute ftarving, we muft hope, feldom or never happens among fo humane a people as the Englifh; but want of necerfaries may fo impair a poor man's healch, that he may never recover it, and then an ufeful fubject, part of the iiches of the nation, is loft.

## D U T

## DUT

Begging but ro days learns the poor man an idte way of life, that few ever get rid of, and then, intead of an uleful, he becomes a burthenfome, and, oftentimes, a villainous fubject.
From fealing, whereby he becomes the bane of fociety, and, not contented with injuring his neighbour in his property, he - is prompted tometimes to cake away life; and in both calfes

- he expofes himfelf to be cut off by the hand of juftice : every way a lofs to the nation.-In ail thefe cales, the poor man may have a large family of children, adding mifery to mifery. Encourage but trade, by enabling the poor to work as cheap as our neighbours, and their children will be trained to labour, become induftrious and ufeful fubjects, live comfortably as journeymen, or perhaps, as mafters, and contribute their affiltance to add more power to the nation, and help to eare the rich of their taxes; for, the greater number of individuals there are in a country capable of paying, the lefs the tax will be on them, if equally laid. It is the intereft of the rich to permit the poor to get money for their fupport; for, by preventing them, they bring the greater weight on their own fhoulders, becaufe thefe oppreffions do not ftop with the poor, but extend, like a plague, to the rich and the noble, whofe fortunes inevitably moulder away by them. - Thefe are the chief caufes of the declining condition of their tenants, that great encreafe of the poor's tax under which the nation now Jabours, and which, in fome places, hath not been lefs than 8 s . in the pound, and muft, by degrees, inevitably fink the value of landed eftates, until one ruin involves all. Sec Poor. How to difencumber our trade from pernicious taxes, fee the articies Credit [Public Credit], Dedts, i. e. National Debts, Excise, Funds, Taxes, Trade.
- To fhew, fays the late Sir Matthew Decker, Bart, how - excifes, cuftoms, and falt-duties, encreafe the expences of
- the people, and, confequently, ruin our trade, the follow-- ing account may not be improper.
- Firft, the duties themfelves.
- The net produce of the taxes following was, before the c war, computed to be, one year with another, as under:
- Excife, about - 1. 2,800,000
- Cuftoms, about

1,700,000.

- Salt, about

4,650,000
4 The charges of raifing thefe du-

- ties are about 10 per cent.

465,000

- Secondly, the advanced price of thofe goods
- the above duties are laid on.
- Woeful experience teaches us, that a very fmall
- duty laid on commodities raifes the prices of
- themiconfiderably to the confumer, beyond the
- grofs duty.
c By the fees given to officers, the tyrants of 6 traders.
: By tradefmen's lofs of time in attending upon - excifemen, or at cuftom-houfes: a trader's
$\checkmark$ time is his bread.
- By taking away a quarter part of our trader's - focks for duties, and forcing them to take as

6 great profits on $\frac{3}{4}$ of their focks laid out in - goods, in order to live, as they would on the - whole, if duty-free.
"By tradefmen's profits on the duty and advances

- in all the hands that all taxed goods come thro'
- to the confumer; aंs for example:
- Suppofe there fhould be no other tax but that
- on leather, let us fee how many advances that
* would make on the price of Moes.
- The grazier lays (I), on the beaft he fats, his
- advanced price of fhoes; he fells to the butcher,
- who takes (2) his profit on the grazier's ad-
- vanced price of the beaft; and raifes (3) on the
- hidehis advanced price of fhoes; he fells to the
- tanner, whofe journeymen raife(4)their wages,

6 on account of the advanced price of hoes. The

- tanner pays (5) the tax of 2 d . per pound on
- leather, takes ( 6 ) his profit on the before-menr tioned five advances, and raifes (7), on the tanned bide, his advanced price of thoes. He fells ' to the leather cutter, who takes (8) his profit ' on the before-mentioned feven advances, and raifes (9), on the hide he cuts, his advanced ' price of hoes. He fells to the fhoemaker, whofe journeymen raife (10), their wages, on account 6 of their advanced price of thoes. The fhoe* maker takes (II) his profit on the before-men' tioned ten advances, and raifes (12), on the ' fhoes he makes, the advanced price of the fhoes - he wears; he fells to the confumer, with all thefe 'twelve advances, highly magnified beyond the - bare duty.
- So much for the tax on leather only: but the - grazier, butcher, tanner, leather-cutter, and Vol. I.
' floomakef, ufe foap ; that foap, like leather ' is taxed, and, like that leather-tax, mult be - raifed: but that caufed twelve advances on our - Mhdes; true; place, therefore, twelve advances - more on thoes for the foap-tax. Thefe tradef - men ule candles; twelve advances more for the - tax on them ; and the fame for every other tax ' on necellaries.
- All which, duly confidered, might be com' puted at above cent. per cent. on the grofs pro-- duce of the duties; but, though the large duties - caufe fome farther advance on all the goods
' they are laid on, charged with profit upon profic
' through every hand they pars, yet, as they keep ' not pace with the finall duties, and all calcula-- tions appear fairelt; when moderate, I clufe to 6 abate in the advances, and to fet them only at ' 50 per cent.
- The amount of the advanced price of the goods - the above duties are laid on

2,557,500
( Let us fee how this $7,672,500 \mathrm{l}$. circulates ' through the people, advances the prices of our ' goods, confequently ruins trade.

- Firft, This dearnefs of all neceflaries, which - raifes the firt coft of goods, muft, advance the - price of all labour.
- The Spectator, Ne. 200, computes that the - people without property, who work for their ${ }^{6}$ daily bread, do confume $\frac{2}{3}$ of our cuftoms and - excifes; therefore they pay $\frac{2}{3}$ of them and their - confequences. As thefe prople live but from ' hand to mouth, whatever is laid on them they ' muft, therefore, hift off, or they cannot live; ' and, fince thefe various taxes have been pro-- jected, they muft earn enough, when they do - work, to pay the taxes, the advanced price of - taxed goods, and the advanced prices of all - other neceffaries, viz. meat, bread, cloathing, - or whatever they can ule, not only for the con-
' fumption of the'days they are employed, but for ' thofe alfo that they are not ; therefore, they - are the caufe of raifing the wages of the work-- ing people $\frac{2}{3}$ of $7,672,500 \mathrm{l}$. the amount of the ' advanced price of the goods the above duties' - are laid on, which makes
- Secondly, This dearnefs of all neceffaries forces © the mafter-tradefmen to raife on their cuftom-- ers the taxes and advances on their confump© tion.
- The above Spectator allows $\frac{1}{3}$ confumption of - our cuftoms and excifes to people with property; - but, as thefe may be divided into two claffes, ' viz. thofe in trade, and thofe out of trade, and " the proportion confumed by each not being af-- certained by any author, I hall compute them 6 at half and half: therefore the mafter tradefmen, ' or people with property in trade, viz. mer' chants, manufacturers, mechanics, farmers, ' wholefale dealers, and retailing thop-keepers, ' muft each lay on the goods they confume, - whether food, cloathing, or utenfils, their $\frac{x}{6}$ c confumption of $7,672,500$ l. the amount of ' t the advanced price of the goads the above du' ties are laid on, makes
6 Thirdly, Tradefmen's paying advanced prices 6 on their goods muft have advanced profits: for, 6,393,750 ' whether they lay out their flocks of money in ' goods that bear their natural value only, or - goods that bear double value by taxes, fill a c living profit muft be obtained on the flocks they - employ.
'For the wages of the manufacturer, the me-- chanic, the labourer, and the expences of the ' mafter-tradefman, being of neceffity raifed, the - firft coft of goods muft be fo too; and, con-- fidering the various tradefmen's bands that ' goods pafs through from the workman, or la-- bourer, to the confumer, charged with profit - upon profit by each of thern (which, in the little ' trades, mult be very great, otherwife, their re' turns being fmall, they could not live) the ad' vance thereby occafioned may, at a moderate - rate, be computed at 50 per cent. to the con© fumer, on the above two articles, which raile - the firt coft of goods, and makes
' People with property, out of trade, their $\frac{1}{6}$ of - $7,672,5001$. the amount of the advanced price - of the goods the above duties are laid on, makes
- This is part of the amount of the confequences
© of raifing 4,650,0001. for the government, by
* our prefent manner of taxing goods.

## D U T

- Ourother taxes are, the land-tax, the grofs pro-
- duce, at about 4 s . in the pound, is about -
- computed grofs produce about
r,960,000
500,000
c The poor's tax is computed; on a middling
© rate to equal the land-tax, but muft be much
- more when trade is reduced, and the price of
< provifions high: however, to reckon it at no more than the land-tax, or
- General amount of all our taxes, and part of
- their confequences before the late war

1,960,000 15,289,375

- Let us now fee the amount of our taxes with 5 regard to our expences. The Britioh Merchant
© vol. i. p. 165 , computes our people at feven 6 millions, and their expences at 71 per head;
© but, as neceflaries are grown dearer fince the
© year 1713, when he wrote, and the number - of people encreafed, I fhall compute the people
© at eight millions and their expences at 81 . per
© head, which rimakes our total expences annually
- Of which $64,000,000$, the people pay for the
- taxes, and their confequences, as above -'
- taxed, would be only

15,289,375
48,710,625
6 15,289,375 1. charged on $48,710,6251$. is a tax of above 6 3 I per cent. on the expences of the people, which muft add G a prodigious artificial value to our goods, confequently ren-- der them lefs faleable, and ruin our trade.

- If it be afked, Whether foreigners, for what goods they take
© of us, do not pay on that confumption a great portion of cour taxes?
- The anfiwer is, that it muft be admitted they do; but, if 6 that was originally intended and expected to continue the - fame as at the firft laying on our taxes, it will be the ftrong-- eft argument againft them; for, as our taxes on neceflaries * are proved to be fo burdenfome and extenfive, by raifing
- the prices of our goods, foreigners take lefs of them yearly:
- and, when the demand is reduced, the people, having lefs - work, find, lefs money to pay, and yet have their taxes - proportionably encreafed on them as they lofe their trade: - for, as the government abates neither expences or taxes, a and, if one method of taxing fails, another is tried, what eforeigners ceafe to pay we muft: or, in other words, the
- lefs trade and money, the more taxes; and, the more our
- taxes are, the lefs and lefs trade and money we know we
- muft expect. Is not this like adding to a horfe's burden,
s and diminifhing his meat? And mult we wonder if he finks
- under his load? Perhaps figures may explain this ftill
- clearer, by ftating a fimilar account through 30 years.
- Suppofe that in the year 1710 all our taxes, and part of their
- confequences, were as they are now, viz. 15,289,3751.
* that foreigners paid then $\frac{3}{7}$ of them, and our own people $\frac{6}{7}$;
- that foreigners going to cheaper markets fince, have ceafed
- taking goads from us yearly in proportion to 1 per cent.
- only on their former $\frac{1}{2}$ part of our taxes, and their confe-
- quences, the account every five years will ftand thus:

Foreigners paid of
our taxes, $\beta \mathrm{ic}$.
Our own peo-
ple paịd

- Antio $17 \mathrm{I}^{\circ}$

1. $2,184,196$

1715
2;074;987
$1,965,778$
$1,856,569$
13,105,179
13,2,14,388
$13,323,597$
1 $3,432,806$
I 3,542,015
$13,651,224$
13,760,433

- By this it plainly appears in what manner our prefent taxes - drive away our trade, and burden our people, who had, by i this accouirt, 655,2541 , more to pay in 1740 , than they had in 1710, with $\frac{3}{30}$ lefs trade to pay it with.
-To conclude this head. Two of our greateft authors clear-
- ly forefaw, at the laying on our numerous excifes, cuftoms,
- \&c. that thefe unhappy confequences muft neceltarily fol-
( low ; and their arguments are a full proof of what has been < already advanced.
- Mr. Liocke, in his Confiderations, \&c. p. 90, fays, That, - for raifing three millions on commodities, and bringing. fo - much into the Exchequer, there muft go a great deal more - than three millions out of the fubjects pockets; for a tax of 6 that nature caninot be levied by officers to watch every little - rivulet of trade, without a great charge, efpecially at firit ' trial; but, fuppofing no more charge in raifing it than of - land-tax, and that there are only three millions to be paid, - it is evident, that, to do this out of commodities, they muft - to the confumer be faifed $\frac{x}{4}$ in their price, fo that every thing - to him that ufes it muft be a quarter dearer. Let us fee - now who, at the long-run, muft pay this quarter, and where 6 it will light: it is plain the merchant and broker neither will - nor can, for, if he pays a quarter more for commodities than
- he did, he will fell them at a price proportionably raifed;
ct the poor Jabourer and handicraffiman cannot, for he juft
- lives from hand to mouth already, and all his food, cloath
- ing, and utenfils, cofting a quarter more than they did be-- fore, either his wages mult rife with the price of things, to ' make him live, or clfe, not being able to maintain himfelf c and family by his Jabour, he comes to the parih.
- And afterwards he proves, that, in the hoene-confumption, - And afterwards he proves, that, in the
- Dr. D'avenant, in his Effay on Trade, vol. iii. p. 30,
ferts, That, as to manufactures, high excifes in time of
- peace are utterly deftructive to that principal part of Eng-
- land's wealth; for if malt, coals, falt, leather, and other
- things bear a great price, the wages of fervants, workmen, - things bear a great price, the wages of lervants, workmen,
' bear fome proportion to the expence; and, if fuch as fet
- the poor to work find wages for labour, or manufactures ad-
- vance upon them, they muft rife in the price of their con' modity, or they cannot live; all which would fignify little,
- if nothing but our own dealings among one another, were ' thereby affected: but it has a confequence far more per-- nicious in relation to our foreign trade, for it is the expor-
- tation of our own product that muft make England rich.
- And in page 3I, But the confequence of fuch dutics, in c times of peace, will fall moft heavily upon our woollen ma' nufactures, of which moft have more value from the work-- manfhip than the materials; and, if the price of this work-
- manihip be enhanced; it will, in a fhort courfe of time, put
- a neceffity upon thofe we deal with, of fetting up manufac-
- tures of their own, fuch as they can, or buying goods of
- the like kind and ufe from nations that can afford them ' cheaper.' That this is matter of fact, fee articles Srain, France, Holland, Prussia, Sweden, Denmark, \&c.'

## Further Remarks.

The preceding obfervations having been made before the laf war, when the Public Debrs of the kingdom did not exceed 80 millions, and our Duties and Thaxes in general were proportionate to fuch principal Public Debts; the evils hereby lamented have encreafed, as our Public Debts have fince done; and to what an enormous height they are now brought, and to what a degree the nation is incumbered, in confequence thereof, our trade and navigation muft inevitably feel, fenfibly feel, for fome time, till we experience the profperous effects of the late Definitive Treaty of 1763 , and the moft efficacious operations of the Sinking FuNd, for our gradual redemption frons fuch an immenfe load of national taxes and new duties of excife and cuftoms. See Debts, National Debts, Revenue, Taxes.
D W INA, a principality in the empire of Ruffia, having the White-Sea on the north, and the principality of Ruberanilli on the fouth.
The river Dwina, or, as it is in fome places called, the Suchana, rifes in the province of Jeraflow, paffong within 30 miles of the lake Bielejezero, in the province of Bielejezero, and in the latitude of 57 degrees 40 minutes north. It runs weft for about 40 miles, and then turns north for at leaft 40 more; during which courfe it pafles within 30 miles of the faid lake ; which lake emptying itfelf into the great river Wolga : here it was that a navigation was faid to bedefigned by the late Czar Peter the Great, to begin from the Dwina, and to be carried into that lake, and fo into the Wolga, by a canal of only 30 miles in length.
From this part the river turns away eaft, and, being encreased with feveral fmall rivers; forms a fufficient ftream fo as to bear boats tolerably large, but efpecially floats of timber, with which they fupply the carrigge to Wologda, the firft city of note upon the river Dwina, and which has been thereabout 60 miles navigable.
From this city of Wologda to Jeraflow, on the Wolga, is about 70 miles by land. Herethe goods which formerly came from England to Archangel, and were to go to Aftrecan on the Cafpian Sea, and fo to Perfia, ufed to be landed: and, being carried upon camels to Jeraflow, were then embarked on board their great ballatoons upon the. Wolga, aud went down that river above 2080 miles to Afracan.
Wologda is a large, ill-built, but populous city, upon the Dwina, about 120 miles from it's head; it was always a town of great trade before the building of Peterfburgh, hecaule of the navigation to and from Archangel, which conveyed merchants goods by two fuch great rivers.
FromWologda the Dwina goes on to Tofopiloez and Cheleseb 60 miles; thence to Strelitza, where the Strelitz guards were firft railed; thence paffing through fexeral populous towns, it runs on to Ofterough, in latitude 60; then, turning it's mighty channel to the nipoth-wef, it runs,' by innumerable, mighty channel to the north-welt, it runs, by innum
populous, and fome fortified places, to Archangel.
populous, and fome fortified places, to Archangel.
Though it mult be a long way about, yet it is to be oberved that the Ruffian and Muicovite merchants and travellers, who undertake the paffage from Mofrow to China by land, come all this way, viz. to Jerallow by the Wolga, in boats; and then, hiring horfes to carry their baggage to Wologda, they their take boat again, and go near 400 miles north caft down the river Dwina; then they land, and buy horfes and camels, and fo go away eaft about 600 miles more, to Toboliky, upon the river Tobol. See the article Russia.

## D Y E

DYEING. Somewhat a-kin to painting is the art of dyeing, which gives the molt beautiful colours to filk, cotton, linen, and woollen, for apparel in general; and alfo affords us hangings, flags for fhipping, and innumerable other particulars, for bome, as well as foreign confumption. This art depends chiefly on three things, viz. 1. Difpofing the furface of the fluffis to receive and retain the colours, which is performed by wathing them in different lyes, digefting, beating hem, \&c. in which buman urine putrified, a fharp falt of athes, divers foaps, and galls of animals, are of principal ufe; by means whereof, the vifcous gluten of the filk-worms, naturally adhering to their threads, is wafhed and cleanfed from them, and thus they become fitted gradually to imbibe the colours.
By thefe allo, the grealy foulnefs, adhering to wool and flax, is fcoured off. In every article of which, the ufe of chemiftry is fufficiently confpicuous. The 2d is, So to grind tne culours, as that they may enter the body duly prepared, and preferve their brightnefs undiminifhed; in which chemiftry alfo is known to be of fingular importance, as appears from the manner of dyeing fcarlet, difcovered by Cornelius Drebble, citizen of Alemaar; a man extremely well fkilled in chemiftry (which recommended him to the king of Eng. land)' and enumerated among the fuperlative philofophers of thofe times.
Among other of his experiments, he left an account of one concerning the method of dyeing wool with a bright flame colour; which method his fon-in-law, Kuflaar, afterwards putting in practice, raifed an immenfe fortune by it. Spirit of nitre is found to heighten and improve the rich colour of cocheneal, into the brightnefs of burning fire; but then it's acrimony corrodes and damages the wool, which is prevent ed by dulcifying it with tin: after which it neither hurts wool nor filk, yet retains all it's luftre and vivacity. The third confifts in having beautiful colours, wherein the ufe of chemiitry likewife is obvious. I once fhewed fome colours, fays the learned Boerhaave, which I had prepared from folutions of copper, to fome fkilful mafter-dyers, who were furprized with the beauty of them, and would have given any money to have been able to give colours of fuch brightnefs to their Itufts, \&c. and no wonder, fince the blue, violet, and green of copper, which may be raifed or weakened at pleafure, afford fo agreeable a variety, that a perfon who could dye woollen, filken, linen, or cotton cloths therewith, would gain an immenle eftate.

A thort account of what is done in particular trades, by the art of dyeing or colouration, according to Sir W. Petty. 1. There is a whitening of wax, and feveral forts of linen and cotton cloths, by the fun, air, and reciprocal effufions of water. z. Colouring of wood and leather by lime, falt, and liquors, as in ftaves, canes, and marble leathers.
3. Colouring of paper, viz. marbled paper, by diftempering the colours with ox-gall, and applying them upon a ftiff gurmed liquor.
4. Colouring, or rather difcolouring the colours of filks, tiffanies, \&cc. by brimftone.
5. Colouring of feveral iron and copper works into black, with oil.
6. Colouring of leather into gold colour, or rather filver leaves into gold by varnifhes, and in other cafes by urine and fulphur.
7 . Dyeing of marble and alabafter with heat and coloured oils.
8. Colouring filver into the brafs colour with brimftone or urine.
9. Colouring the barrels and locks of guns into blue and purple, with the temper of fmall-coal heat.
10. Colouring of glafs (made of fands, flints, \&cc.) as alfo of crytals and earthen ware, with the rufts and folutions of meteds.
11. The colouring of live hair, as in Poland, horfe and man's hair, as alfo the colouring of furrs.
12. Enameling and annealing.
13. Applying colours, as in the printing of books and pictures, and as in making of playing cards, being each of them performed in a feveral way.
14. Gilding and tinning with mercury, block-tin, fal armoniac.
15. Colouring metals, as copper with calamy into brafs, and with zink or fpelter into a golden colour, or into a filver one with arlenic: and of iron into a refemblance of copper, with Hungarian vitriol.
16. Making painters colours, by preparing of earth, chalk, aud Aates; as in umber, ochre, Cullen earth, \&c. as alfo out of calces of lead, as cerufe and minium; by fublimates of mercury and brimitone, as in vermilion; by tinging white earths variouly, as in verdeter, and fome of the lakes; by concrete juices or freculx, as in gambugium, indico, pinks, fap-xteen, and lakes: as alfo by rufts, as in verdegreafe, \&c. 37. The applying of thefe colours by the adhefion of oxgill, as in the marble paper, aforefaid; or by gum-water, as in limning; or by clammy drying oils (fuch as are the oils of !imecte, nuts, [pike, curpentine, \&uc.)

## D Y E

18. The watering of tabbies.
19. The laft we fhall name is the colouring of wool, linen, cotton, filk, hair, feathers, horn, leather, and the threads and webs of them with woods, roots, herbs, feeds, leaves, falts, limes, lixiviums, waters, heats, fermentations, nacerations, and other great variety of management: an account of all which is a fhort hiltory of dyeing.

The materials ufed in this art of colouration are, Iron and fteel, or what is produced from them, in all true blacks (called Spanifh blacks) though not in Flanders blacks, viz. they ufe copperas, fteel-filings and nippe, which is the fluff found in the troughs of grind-ftones, whereon edgetools have been ground.
They alfo ufe pewter for Bow dye fcarlet; viz. they diffolve bars of pewter in the aqua fortis they ufe, and make alfo their dyeing kettles or furnace of this metal.
Litharge is ufed by fome, though acknowledged by few, perhaps, to add weight to dyed filk; litharge being a calx of lead, one of the heavieft and moft colouring metals.
Antimony is much ufed to the fame purpofe, though we know there be a very tingent fulphur in this mineral, which affordeth variety of colour, by the precipitations and other operations upon it.
Arfenic is ufed in crimfon upon pretence of giving luftre, although thofe who pretend not to be wanting in giving luftre to their filks, do utterly difown it's ufe.
Verdegreafe is ufed by linen dyers in their yellow and greenith colours, although of itfelf it frike no deeper colour than of pale ftraws.
Of mineral falts ufed in dyeing, the chief is allum; the true ufe thereof feems to be in regard to the fixation of colours.
I. It may be alfo ufed to make common water a fit menftruum for extracting the tingent particles of feveral hard materials; for allum is, ufed with fuch materials which fpend eaty enough, as Brazil-wood, logwood; \&c. And withal, that the ftuffs to be dyed are firtt boiled in allum liquors, and the allum afterwards cleared from the faid ftuff again, before any colour at all be applied.
2. Whether it be ufed to fcour the fordes, which may interpofe between the coloranda and the dyeing ftuff, and fo hinder the due adhefion of the one into the other, the boiling of feveral things firt in allum feeming to tend this way. But I find this work to be done in cloth and rugs, by a due fcouring of the fame in the fulling-mills with earth, and in filk with foaps, by which they boil out the gums and other fordes, hindering or vitiating the intended colours.
3. Whether allum doth intenerate the hairs of wool, and hair ftuff, as grograms, \&c. whereby they may the better receive and imbibe their colours? Unto which opinion I was led, fays Sir William, by the dyers; faying, that, after their ftuffs were well boiled in allum, they then cleared them of the allum again: but we find the mof open-bodied cottons and filks to have allum ufed upon them, as well as the harder hairs. Nor is allum ufed in many colours, viz. in no woad or indico blues; and yet the ftuffs, dyed blue, are without any previous inteneration quickly tinged, and that with a flight and fhort immerfion thereof into the blue fat.
4. Whether it contribute to the colour itfelf, as copperas doth to galls, in order to make a black; or as juice of lemons doth to cocheneal in the incarnatives, or as aqua fortis, impregnated with pewter, doth in the Bow fcarlet, changing it from a red rofe crimfon to a flarne colour. This ufe is certainly not to be denied to allum in fome cafes; but we fee in others, that the fame colours may be dyed without allum as well as with it, though neither fo bright, lively, or latting.
5. Wherefore, fifthly, I conslude (as the moft probable opinion) that the ufe of allum is to unite the cloth and the colour, as clammy oils and gum-waters do in painting and limning; allum being fuch a thing, whofe particles diffolved with hot liquors will fick to the ftuffs, and pitch themfelves into their pores; and on which the particles of the dyeing drugs will alfo catch hold, as we fee the particles of copperas, and other cryftallizing materials, do of boughs and twigs in the veffel, for cryftallization.
A fecond ufe I imagine of allum, is the extracting or drying up of fome fuch particles, as could not confift with the colour to be fruck; for we fee allum is ufed in dreffing of alutas, or white leather, which it drieth, as the falt of hendung doth in ox-hides, and common falt in preferving flefh meat; for a Cheep-fkin newly flayed could not be coloured as brafils are, unlefs it were firft drefled into leather with allum, \&c. which is neceffary to the colour, even although the allum be, as it is, cleared out of the leather again, before the colouring, with bran, yolks of egss, \&c. Wherefore, as accidentally it makes a wet raw lkin take a bright colour, by extracting fome impeding particles; fo doth it alfo out of other materials, though, perhaps, lefs difcernably. Another ufe of it is, I fuppofe, to brighten a colour: for, as we fee the fineft and moft glafly materials make the moft orient colours, as feathers, fowers, \&c. fo certainly if boiling cloth in allum incruftate it with a kind of glafty particles, the tinging them yields more brightnefs, than tinging a fra-
brous matter. Anologous bereunto, I take the ufe of bran and bran-liquors to be; for it yielding a molt fine flour (as we fee in making farch) this 1 conceive, entering the pores of the fuff, levigates the fuperfices, thus making the colour more beautiful, as we fee all woods to be gilded are firt fmoothed over with white colours.
And, indeed, all other woods are thus prepared by priming before the ultimate colours be laid on.
The next mineral falt is falt-petre, not ufed by antient dyers, and but by few of the modern : and that not 'till the wonderful ufe of aqua fortis (whereof falt-petre is an ingredient) was oblerved in the Bow fcarlet: nor is it ufed now, but to brigh colours, by back-boiling them, for which argol is more conmonly uled, Lime is much ufed in working blue fats.
Of the animal family are ufed cocheneal, urine of labouring men, kcpt 'till it be ftale and ftinking; honey, yolks of eggs, and ox-gall. The three latter fo rarely, that I hall fay little mote of them here, only obferving of urine that it is ufed to foour, and help the fermenting and heating of wood; and alfo in the blue fats inftead of lime: it difchargeth the yellow, and is therefore ufed to (pend weld withal.
Dyers ufe two forts of wacer, viz. river and well water. The laft, which is harfh, they ufe in reds and other colours wanting reftringency, and in dyeing materials of the flacker contextures, as in callicoe, fuftian, and the feveral fpecies of cotton works. But 'tis naught for blues, and makes yellows and greens look rulty.
River water is more fat and oily, and therefore ufed in moft cafes, and muft be had in great quantities for wafhing and rinfing their cloths after dyeing.
Water is called by dyers white liquor, but a mixture of one part bran and five of river water, boiled an hour, and put into leaden cifterns to fettle, is what they call liquor abfolutely. This, when it turns four, is not good, which will be in three or four days in fummer: this liquor, befides the afore-named ufes, contributes fomething, I conceive, to the holding of the colour; for it is ufed to mealy dyeing ftuffs, fuch as mather is, being the powder of a root; with which the flour of the bran being joined and made glutinous by boiling, I doubt not, but both fticking upon the villi of the ftuff, the mather fticks the better for the ftarchy paftinefs of the bran flour.
Gums have been ufed by dyers about filk, viz. gum arabic, dragant, maftic, dragon's blood. Thefe tend little to the tincture, no more than gum in writing-ink, which only gives it's confiftence; fo gum may give the filk a gloffinefs: and, laftly, to encreafe weight; for if an ounce of gum, worth a penny, can be incorporated into a pound of filk, it produces three fhillings, the price of an ounce of filk.
Having fpoken thus far of fome of the dyeing ftuffs, I fhall infert a catalogue of moft dyeing materials.
The three peculiar ingredients for black, are copperas, filings of fteel, and flippe.
The reftringent binding materials, are alder-bark, pome-granate-peels, walnut rinds'and roots, oaken fapling-bark, and faw-duft of the fame, crab-tree bark, galls, and fumach. The falts are allum, falt-petre, fal armoniac, pot-alhes, and ftone-lime, unto which urine may be enumerated as a liquid falt.
The liquors are well and river water, wine, aqua vitæ, vinegar, lemon-juice, and aqua fortis, honey and molaffes. Ingredients of another clafs, are bran, wheaten flour, yolks of egos, leaven, cummin-feed, fenugrec-feed, agaric, and fenna.
Gums are, gum arabic, dragant, maftic, and dragon's blood.
Gums are, gum arabic, dragant, maftic, and dragon's blood.
The fmecticks, or abterives, are fuller's-earth, foap, lin feed-oil, and ox-gall.
The metals and minerals are pewter, verdegreale, antimony, litharge, and arfenic.
The colourings are of three forts, viz. blue, yellow, and red, of which logwood, old fuflic, and mather, are chief.
The blues are woad, indico, and logwood: the yellows, weld, wood-wax, and old fuftic: the reds, are red-wood, brafil, mather, cocheneal, fafflowers, kermes-berries and fanders; the arnotto and young fuftic for orange-colours. In cloth-dyeing, wood foot is of good ufe.
Red-wood muft be chopt into fmall pieces, then ground in a mill as corn is. 'Tis ufed in dyeing cloth and rugs of the coarler fort: the colour is extracted by long boiling 'with galls. It makes a kind of brick colour red, and holdeth much better than brafil. The cloth is to be boiled with it, fo that it is only for fuch as are not prejudiced by much boiling.
Brafl is chopt and ground like red-wood: it dyeth a pinkcolour or carnation, for which 'tis ufed with allum; and, with addition of pot-alhes, for purples.
Brafil fteept in water giveth a claret colour, which a drop or two of lemon-juice, or vinegar, turneth to the colour of Canary fack, agreeing herein with cocheneal. This colour foon ftaineth, as may appear by the change fo fmall a quantity of an acid liquor makes uponit.
Mather, ufed to the beft advantage, dyeth on cloth a colour neareft to our Bow dye, or new fcarlet, as fafflower doth in filk, fo that the baftard fcarlets are dyed with-it. This
colour endures much boiling, and is ufed both with allum and argol : it holdeth well
Mather is ufed with bran liquor inftead of white liguor.
Cocheneal is alfo ufed with bran liquer in pewter-turnaces, and with aqua fortis for the fcarlet dye, called in grain. Rags dyed in the dregs are called turnfole, and ufed to colour wine cocheneal being efteemed rather cordial than unwholefome, Any acid liquor takes off the intenfe rednefs of this culour, inclining it to an orange, flame, or fcarlet colour: wi.h this colour alfo the Spanifh leather and focks are dird whith this dies ufe. The extract of it makes the fineft lake.
Arnotto dyeth of ittelf an orange colour, is uled with poralhes upon filk, linen, and cottons, but not cloth, as not penetrating into a thick fubftance.
Weld dyeth a deep lemon colour. Painters pink is made of it.
Wood-wax dies the fame as weld, being ufed in greater quantities. Tis ufed for coarfe cloths, and is fet with poralhes or urine.
Fuftic is chopt and ground as the other woods.
The young fuffic dyeth a kind of reddifh orange colour ; the old, a hair colour, with feveral degrees of yellownefs between: 'tis ufed with flaked lime. The colours dyed with old fuftic hold extremely, and are not to be difcharged, will fpend with falts or without, and will not work hot or cold. Soot of wood. This containeth in itfelf both a colour and falt, wherefore nothing is added to extract it's colour, which of itfelf is the colour of honey; but the foundation of many others upon wool and cloth, for to other things 'tis not ulid. Woad bcing chopt and ground is made into balls, and dried in the fun.
Englifh woad is accounted the frongeft, 'tis tried by faining white paper or a limed wall with it; if the colour be a French green, it is good.
${ }^{\prime}$ Tis ufed with pot-alhes called ware.
Lime, or calke, which is a ftrong lime, is ufed to accelerate the fermentation of the woad.
The making and ufing woad is one of the moft myteriaus, nice, and hazardous operations in dyeing; it is one of the moft lafting colours, and the foundation of fo many, that the dyers have a certain fcale to compute the degrees of it by.
Logwood maketh a purplifh blue, and may be ufed without allum: being now ufed with galls, 'tis lefs fading than formerly.

## General obfervations upon Dreing.

1. All materials (which of themfelves do give colour) areeither red, yellow, or blue; fo that out of them, and the primitive fundamental colour white, all that great variety whichwe fee in dyed ftuffs doth arife.
z. That few of the colouring materials (as cocheneal, foot, wood-wax, woad) are in their outward and firlt appearance of the fame colour, which by the fighteft diftempers and folutions in the weakeft menftrua, the dye upon cloth, filk, \&c.
2. That many of them will not yield their colours without much grinding, fteeping, boiling, fermenting, or corrofion by powerful menflrua, as red-wood, weld, woad, arnotto, 8 c .
3. That many of them will of themfelves give no colouring at all, as copperas or galls, or with much difadvantage, unlefs the cloth, or other ftuff to be dyed, be as it were, firt covered or incruftated with fome other matter, though colourlefs aforehand, as mather, weld, brafil with allum.
4. That fome of them, by the help of other colourless ingredients, do ftrike different colours from what they would alone, and of themfelves, as cocheneal, brafil, \&c.
6 . That fome colours, as mather, indico, and woad, by reiterated tinctures, will at laft. become black.
5. That, although green be the molt frequent and common of natural colours, yet there is no fimple ingredient, now ufed alone, to dye green with upon any material; fap-green being the neareft, which is ufed by country people.
6. There is no black thing in ufe which dyes black, tho' both the coal and foot of moft things burnt or fcorched be of that colour; and the blacker, by how much the matter before it was burnt was whiter, as in ivory black.
7. The tincture of fome dyeing fluffs will fade even with lying, or with the air, or will ftain even with water, but very much with wine, vinegar, urine, \&c.
8. Some of the dyers materials are ufed to bind and frengthen a colour, fome to brighten it, fome to give luftre to the ftuff, fome to difcharge and take off the colour, either in whole or in part, and fome out of fraud, to make the material dyed (if coftly) heavier.
9. That fome dyeing ingredients or drugs, by the coarfenefs of their bodies, make the thread of the dyed ftuff feem coarfer ; and fome by fhrinking them fmaller, and fome by froothing them finer.
10. Many of the fame colours are dyed upon feveral ftuffs, with feveral materials; as red-wood is ufed in cloth, sot in filks; arnotto in filks, not in clo.h, and may be dyed at feveral prices.

6
13. That
13. That fouing and wafhing of ftuft, $s$ be dyed, is to be done with fpecial materials; as linn ; with ox-galls, fometimes fuller's-earth, fometimes toap his latter being in fome cafes pernicious, where put-afhes wili ftain or alter the colour.
14. Where great quantities of fuff are to be dyed together, 14. Where they are to be done with freat fpeed, and where the pieces are very lons, brood, thick, or otherwife, they are to be differently handed, both in relpect to the veffels and ingredients.
15. In fome colours and fuffs the tingent liguor muft be boiling, in other cales blood-warm, in fome it may be cold.
16 Some tingent liquors are fitted fur ufe by long keeping, and in fume the virtue wears away by the fame.
17. Some colvurs or fluffs are beit dyed by reiterated dippings into the fime liquor, forme by continuing longer, and others a lefer time therein.
18. In fome cafes, the matter of the veffel wherein the liquors are heated, and the tindures prepared, mult be regarded, as the kettles mult be pewter for Bow dye.
19. There is little reckoning made how much liquor is ufed in proportion to the dyeing drugs, it being racher adjufted to the bulk of the ltuffs, as the veflels are to their breadth : the quantity of dyeing drugs being proportioned to the colour higher or lower, and to the ftuffs both; as likewife the falts are to dyeing drugs.
Concerning the weight which colours give to filk (in which 'tis molt taken notice of, being fold by weight, and a commodity of great price) : 'tis obferved, that one pound of raw filk lofeth four ounces, by wafhing out the gums and natural fordes.
That the fame fcoured filk may be raifed to above thirty ounces from the remaining twelve, if it be dyed black with fome materials.
The reafon of this is, becaufe all gravitating drugs may be dyed black, being all of colours lighter than that: whereas, perhaps, there are few or no materials, wherewith to increafe the weight of filk, which will confift with fair light colours.
Of a thing truly ufeful in dyeing, efpecially of black, nothing encreafes weight fo much as galls, by which black filks are reftored to as much weight as they loft by walbing out their gum : nor is it counted extraordinary that blacks fhould gain about four or fix ounces in the dyeing, upon each pound. Next to galls, old fuftic increafes the weight about $1 \frac{5}{2}$ in 12 . Mather about one ounce.
Weld half an ounce.
The blue fats, in deep blues of the fifth ftall, gives no confiderable weight.
Neither doth logwood, cocheneal nor arnotto: nor even coppcras, where galls are not.
Slippe adds much to the weight, and giveth a deeper black than copperas itfelf, which is a good excufe for the dyers that ufe it.

## Dyers in France, of the great and good dye.

Thefe have been ever diftinguifhed from thofe of the leffer dye, as may be feen by a regulation made by the provort of Paris in November 1383, but, for a long time befure that of 1660, there was no difference as to the mafters of the two companies; for, if the latter engaged in dyes of a price and quality that did not belong to them, thofe of the great dye thought it not beneath them to work in the leffer dye.
In the regulation of 1669 , are feveral articles common to both companies, though formed chiefly as flatutes for the great dyers, the uther company not being confirmed 'ill ten years after, by letters patents in 1679.
Thofe new ftatutes of 1669 contain 62 articles, which may be reduced to four claffes or titles.
The firf, in tentarticles, treats of the feparation and eftablifhment of the two companies, their difference, wardens, drugs permitted and prohibited, \&c.
The fecond preferibes manner and fafhions, according to the colours and qualities of the ftuffs.
The third regulates the work of the leffer dycrs.
And the fourth and lalt clafs treats of the police of the matterdyers, their widows and apprentices.
We fhall here extract only what is moft important in the firf and two laft of thefe claffes.
At the time of the regulation in 1669 , there were in Paris but three dyers of the great dye in woolien ftuffs: to form a body fomewhat more confiderable, it enacted, That three dyers of the leffer dye fhould be nominated by the lieute-nant-general of the police, to work for the future at the great dye, performing, however, their mafter-piece of workmanhip by thofe who fhould be chofen.
They were afterwards feparated from each other, not being permitted the fame wardens to govern them, nor to intermeddle in each other's craft.
A warden is to be elected yearly, to fee to the performance of the new fatutes granted to the mafters of the great dye; who, 15 days after his election, at the company's expence, is to tender, in prefence of the officers of police, and mafters and wardens of the drapery, 12 pieces of cloth of Valogne
Vol. 1.
or Berry, and four pieces of filk, of colours requifite for patterns of unmixed ones.
It treats next of drugs and ingredients allowed or prohibited to both, vee Drugs.
The eighth article is of ftuffs which may be dyed in the great dye only.
The ninth and tenth, which are the laft of the firft clafs, treat of the fcouring of cloths dyed black, and of the erecting fulling mills: it treats alfo of fome preparations of blacks. The third clafs begins with fuffs appertaining to the leffer dye, and prohibits matter clothworkers and others to ufe any fat but hogs-lard. It afterwards dilinguifhes the cloths of each dye; enacting, that all woollen defigned for tapeftry, Shall be of the good dye as prefcribed for cloths. 'Tis alio prohibited to ufe, in the dyeing woollens by the leffer dye, alder-bark, filings of iron or copper, or Indian wood.
In regard to infpections and marks, one of the moft effential points of the regulation enacts four forts; thofe of the drapers with the dyers; of the jurat dyer with the mafters of the company; thofe of the malters and warduns for foreign merchandizes unladen at the halls; and, laftly, of the lame perfons for goods carried to fairs.
The drapers infpection of the dyers, is to be by a draper who hath gone through the office, commiffioned hereunto by the drapers company; to which, not only the mafters of the great dye are fubject, but even their warden; during the fifteen days his commifion lafts, he examines not only the drugs and ingredients, but alfo the ftuffs dyed, marking them with the name of the cities where dyed, and with the dyer's name and quality of the ftuff.
The wardens infpection differs not from that in other companies.
The third infpection is that of the mafters and wardens of the drapers in the halls, and was defigned, as well to fee if the woollen ftuffis of French manufacture have the proper marks, as to examine if foreign woollen fluffs were of the good dye, and to make them accordingly. To facilitate this mportant infpection, all goods not defigned for fairs, are to be brought directly to the halls, and there remain three days; prohibiting all drapers, mercers, \&c. on pain of forfeiture, and rooo livres fine, to receive any into their houfes, fhops, or warehoufes, 'till infpected and marked.
Laftly, the infpection and mark made at fairs are the fame. The police of the company of matter dyess, which makes the fourth clafs, confifts:
Ift, In that none may receive his freedom, 'till after four years apprenticefhip, and ferving three years as a journeyman. 2dly, No mafter may take more than one apprentice at a time, whom the mafler, eight days after his apprenticefhip, is to oblige to perform a rrial or mafter-piece of dyeing, in prefence of the warden in office, to be afterwards enrolled in the journeymen's roll.
3dly, Apprentices may not, during their apprenticefhip, abfient themfelves without due caufe, fo deemed by the officers of police, on pain of erazement out of the company's books, without they will fubmit to ferve a new apprenticeflip.
4thly, Journeymen, after four years apprenticefhip and three years fervice, may not be received maffers without fpecial privilege, or a mafter-piece of workmanfhip performed in prefence of the warden and two ancient matters; which is to be compofed by the candidate of three balls of Languedoc woad, from which, properly prepared, he is to draw a blue dye, and ufe it in cloths, and this during fix days, and no longer; but mafters fons are not obliged to this, but only to tiial of a good dye during two days.
5 thly, Mafters widows may continue the buffnefs, but not take new apprentices; the faid widows, as alfo mafters daughters, make journeymen free by marriage.
Befides there five particulars, there are two others regulating the days of meeting, viz. thofe of the chanber for the affairs of the company, and the general yearly meeting; in which laft reports are made of trefpaifes committed that year, to prevent and punif which proper remedies are confulted. By the 56 th article of thefe ftatutes, mafter-dyers are permitted to bave in their houfes tenters, on which to extend and dry their ftuffs when dyed, provided, however, they reach not beyond one half of the ftreet, and that the ftuffs on them come not within three fathoms of the ground.

A new regulation in France for dyers marks.
By the 58 th article of the regulation already mentioned, all mafter-dyers of woollen fluffs are to have a fimall anvil, with their name engraved on it, that the infpector applying his lead to the ends of the fuffs, may imprefs the dyer's name on it.
They are, moreover, not to put on their leads the words manufactures royale, unlefs intited to it by letters patents. Some dyers, however, efpecially thofe of the borough of Darnetal, not content with the fimplicity of the ufual mark, by a manifeft trefpafs, ufing gilded lead with pompous impreffions, without permiffion ottained, the kirg, to flop this, ordained the execution of the fatutes a-new, with very exprefs prohibitions, on pain of forfeiture, and 500 livres fine. There are three orders of council of the year 1725, con-
cerning

## D Y E

D Y E
cerning the dyers. The firft of which permits them to dye black with the walnut-tree root, light ftuffs not fulled, under certain conditions.
The fecond permits, in like manner, the dyers of Languedoc, Auvergne, \&c. to dye cadis and cordelats, of half ell and under, with the leffer dye.
The third prohibits all dyers and others to rend, or encourage the fending, out of the kingdom; dyed fulks fit to make ftuffs of.

## In regard to dyers of the leffer dye in France.

Their ftatutes are ancient.
All the fworn companies being obliged by the ordonnance of Orleans to reform their ftatutes, and take new letters patents of confirmation; thefe dyers obtained letters of Charles IX, in 1575 , fince confirmed by Henry IV, in 1604, and by Lewis XIII, in 1618 , and laftly by Lewis XIV, in 1679, the letters paterits being inrolled in parliament in 1680 . Amongit other things common to all other patents, it in particular enacts, That they are, in their art and craft of the leffer dye, to ufe gall, copperas, alder-bark, Indian wood, orchel, brafil, and dyer's weed, to foften the blacks, as alfo to dye in black; mufc, triftamic, $\& c$. which properly diftinguifh that company from others, to whom thofe forts of drugs are prohibited.
The ftatutes confirmed in 1679, confifing chiefly of the articles already given, in fpeaking of the great dyers, we thall infert here only the molt effential, and peculiar to thofe of the leffer dye.
The apprenticefhip is to be four years indifferently with mafters of either dye, and the fervice afterwards three years with thofe of the lefter dye.
The mafter-piece of workmanfhip confifts in four pieces of dye, two of cloth, and two of light ftuffs: the cloths to be black. Of the fmall ftuffs, one is to be dyed in caftor, and the other in brown bread, or bran, but without partaking of the greater dye.
Mafler's fons to ferve only two years apprenticefhip, and the fame time as journeymen, either with their father or a fran ger; and, at reception to their freedom, are held only to a fincle trial, which is to a piece of cloth black, and a piece of light ftuff at their option. Journeymen marrying maf ters daughters or widows, have the fame exemption from a mafter-piece of work manfhip.
No journeymen or apprentices may dye on their own account, on pain of exemplary punifhment.
Lafty, befides the infpections of their own wardens, they are fubjected to thofe of the wardens of the company of the great dyers.
Before the year 1679, dyers in filk, woollen, and thread, elaimed allo a right to vifit thofe of the leffer dye, in conjundion with the mafters of the great dye.

## Dyers in filk, wool, and thread.

Though thefe be confidered as one company only, yet in fome refpects they may be accounted as three different ones, only re-umited in one body.
In effect, the matters are not indifferently permitted to dye filk, wool, and thread, nor even to dwell and work together. The dyeing each of thefe materials forms different profeffions, which have their matters, apprentices, matter-pieces of fkill, drugs, , \&cc. and, if one of thefe three freedoms is chofe, may not have liberty to pafs in the two others.
Thefe three trades, thus united, are in fome fort confidered as dyers of the great dyes, as they are to ufe the beft drugs in many of their dyes.
Their firf flatutes are very antient, but mofly repealed by the regulation of 1669.
The new regulation has 98 articles, fome of the moft effential are as follow:
The ft , after re-uniting them in one company, reftrains the filk-dyers to dye and fell filk only, and fo of the other two; and every mafter to be received, for the future, is to perform his mafter-piece of workmanihip only in one of the hree dyes wherein he fhall chufe to work.
The 2d treats of the election of wardens, half of whom are always to be mafter filk-dyers, and the other half woollen and thread-dyers: fo that, of four wardens, two of them are to be for the filk-dyers, one for the woollen, and the other for the thread dye.
By the $3^{d}$, the general vifitations of the wardens are fixed at By the $3^{\text {d, the general vifitations of the wardens are fixed at }}$
four in the year, to which the filk-throwfers are alfo fubject. Befide trefpaffes and faults in dyeing which the wardens are to obferve in their circuits, and report as the cafe requires, they are alfo to take the names of the dyers, their fons, apprentices, and journeymen, to know if they have been regiftered in the company's books.
The 83 d enacts, that none may ufe the trade, that has not been apprentice and journeyman the due time, performed a mafter-piece, and been received mafter.
By the 84 th article, every mafter is to have a punch graved on one fide, with the name and arms of the city whert he
lives; without which marks, they may not fell or deliver any dyed fuffs, nor any perfons receive them, on pain of roo lives fine for every treipafs; and forfeiture of the goods not marked.
The 85 th requires every dyer to keep a regifter of the filks, woollens, and threads, \&cc. delivered them to dye.
The goods which the filk -dyers may fell by wholefale or retail, are all forts of filks raw and dyed, \&c. Thofe of the woollen dyers, are woollens dyed, and canvaffes proper for tapeftries; the thread-dyers, all kinds of linen thread, mohair and cotton, marking thread, \&ic.
The 87 th is concerning tenters in the ftreet, and is the fame as the 56 th of the great dye.
By the 88 th, their weights and meafures are to be thofe ufed in the place of their abode.
By the 89th, they have the privilege of preference on goods dyed by them, that may have been feized and fold, but only for the two laft years.
The four following, articles relate to-apprenticefhips, journeymen, mafter-pieces, freedons, and widows privileges. The apprenticefhip is four fucceffive years with one mafter, who may take but two apprentices at a time, the fecond to be bound two years after the firft. The fervice as journeyman is two years, foreigners excepted, who mult ferve fous years before they can be free.
Widows may continue their profeffion, and continue apprentices taken by their hubbands, but not bind any anew.
The $94^{\text {th }}$ article prohibits mafters to ufe more than one fhop or workhoufe, as alfo to lend their name to others to hold them in their ftead.
The four laft articles relate to the particular meetings of the company, the cuftody of records and papers, fines, and the general meeting.
The particular meetings are fixed too nce a momeh, with liberty, however, to the wardens, to convoke extraordinary ones, if neceffary.
The papers, records, \&c. are to be put, an inventory of them being firt made, into a cheft, with two keys, depofited in the company's chamber; one of the keys to be kept by one of the wardens of the filk-dyers, the other alternatively by thofe of the woollen and thread-dyers.
The fines and confifcations beiong one moiety to the king, one quarter to the wardens that leize, and the other to the poor.
The general meeting is exactly the fame in all refpefts, as that of the great dyers, with this only difference, that, in the roon of the wardens of the drapery, a mercer and filkworker are called to it.
Thefe fatutes of 1669 were obferved without alteration 'till 1691 , when, exigencies of ftate having obliged Lewis XIV to feek for fupphes by the creation of many new offices, wardens were created for all the companies in Paris: which offices having been fince re-united and incorporated, that of the filk, woollen, and thread-dyers, among others requefted an incorporation, and propofed to raife money for the finances: on accoint of which, they increafed the fees of binding apprentices and taking freedoms, annual vifitations, and enrollment of journeymen in the company's regifter.
The fame thing happening in 1694 and 1701 , for the incorporation and re-union of the offices of auditors of company's accounts and fuch-like, a new augmentation was made of the fame fees.
Lafly, two edicts in 1704 having created the offices of corpp-troller-vifitors of weights and meafures, and of regifters to enroll all acts concerning the police of the companies of arts and trades, the dyers obtained a re-union by letters patents of 1707 , confifting of ten articles; four of which augment their fees, the others relate to difcipline, permitting the wardens to receive fix mafters without quality. Ghildren born before their fathers freedoms, are obliged to one fungle trial only. All mafters of the company of Paris are intitled to freedom in all cities of the kingdotn, namely Lyons, Rouen, Bourdeaux, Touloufe, Caen, Orleans, Tours, and Amiens. The wardens may vift privileged, or retired into privileged places. Though mafters may have but one (hop, they may, however, effablifh a calender in another houfe, with reftraint to work only in their dyeing trade. Finally, all mafers are prohibited from bringing to their houfes, or fhops, anywoollens not unladen at the chambers to be vifited by one of the wardens, and the fee paid at the accuffomed rate of two fols fix deniers the bale.
The 6 th article of the new regulation enaets, that conformable to the import of all other patents of re-union of offices and augmentation of fees, when the company fhall be retmburfed a fum they have advanced to the ffate, no other than the old and accuftomed fees thatl be exacted.
DYer in leather, an artificer who colours finins, either on the one fide or the other, in the cold or hot dye.
Hat-DYER, is faid of mater-hatters, who give themfelves particularly to the dyeing of hats. Though there be in effect but one freedom in this company, the mafters feem to be divided into three diftinct profeffions, the one making the hats, the others dyeing them, and the third fitting up and felling them. See Hats.

## D Y E

## D Y E

Of the encouragements propofed to be given in Spain with regard to the art of Dy Eing.

Though the company, or trade, of good dyers in fil $k$ and wool, fays a patriof Sphiary, are buf few every wheng, it is to be conflidered, that, upon this art or myftery, we depend for one of the moft ellential secommendations of oup avoven goods, and what procures them the readieft vent both at home and abroad ; for it will turn to fmall account that the materials are good, and well wrought up, unlefs the mixture and colours be kafiwerable, and grateful to the eye of the purchater. It may be faid, what a piece of cluth, or any other fort of goods, ill dyad; is much the fame as if it was very much fained.
The importance of a good dye is alfo confirmed by experience. The great efteem and univerfill market the filks of tyons have obtained in all parts of the mardd praceed more from the livelinefs of the colours, and a happy fancy in difiofing of them, than all other things put together. As then we can give-due thncouragement to ayers for a trifing reward, being few in namber, and by this means fecure one of the principal perfedtions thefe goods wart to recommend themfetves, and come to a good market every where, I efteem it our iatereft to fet nothing be charged upon mafter-dyers in the provinces of the crown of Caltille, for any thing relative to this craft, to the alcavalas, cientos, millones, or any other: taxes, even to -make up the compofition of the placethey live in, or unon any other zecount, and that they pay only the impofts upon provifions
and commodities, which they fatl purchafe and cenfume, as atl other families do
It will alfo beproper encouragement to let them lbuy, free of adf duties, a certain portion of dyeing ingredients, and alfo their coppers, and other veffels and utenfils neceffary to the craft ; and that the mafter be exempt from quartering, \&xc. coldiers, and troublofome offices : and in large cities, where there are various manufacteries, I woutd fave them allowed - houfe capabile both of receiving theirffamily; andyekereifing their trade, at the charge of the arbitrios and proprios of the faid towns; a trifing expence and would yield:yaft benefits to the treafury, and the cities themfelves. For we may depend upon this, that, let there be ever fo many good manufactures, they cannot be preferved, and all the pains and charge we have been at in raifing many of them winl be miferably defeated, if we fhall fill be in want of geod dyers; for thofe we have at prefent are few, and moff of them not mafters, of their hufinefs. But it is to be underftood, that a title to Yabefe privileges and advanrages is, giving fatisfactory proofs of their ability inthetrade, and in an examination before the wifitors of the faid fabrics, by order of the intendant, or corregidor, whom it thall concern; and with their diftance, or their deputies, In order that their claim may be faitly made out.
In regulating and carrying into execution the immunities and indulgencies already propofed, it may happen that time and experience oblige us, in prudence, to make fome alterations; for it is often, the cafe, even indifpofitions that have been reIfolved apon after a confultation of the ableft tribunals, and tetermined by princes and republics of the greatef wifdom, as appears from the manyllaws, fatutes, ordinances, and iother national regulations, colledted, together in the boidy of flatutes, where we frequently, and from time to time, find deveral variations; amiending; fome, explaining others, repealing many, and making all fuch new laws as fhall be judged proper, juft as the times make neceffary, and events arife in the courfe of things. It will, therefore, be no furprize, if the regulations; or propofals, which a zeal for the fervice of his majefty, and the intereft of the public, have put me upon, may, in.many inftances, be reformed for the better. But, that thefe indulgences difpenfed by his majefty may not bereceived as inviolable privileges, and it may appear not quite fo hath, and with an air of novelty, when on this very account fome alterations fhould be miade, it will be very proper that, in the very patents which his majelty thall grant, both forthe immunities and other encouragements above-mentioned, there be inferted this provifionary claufe, For the prefent, and during my pleafure.

## The laws of England relating to Dyers.

3tat: 23 Eliz. c. 9. 6. 3. No choths, kerfeys, bays, frifadoes, hofen, or other things in nature of cloth, fhall be maddered for black, unlefs firft grounded with woad only, or with woad and ancle, alias blue indico, unlefs the madder be put in with
fumach or galls. And no perfon fhall dye cloth, \&c. upon pain of forfeiting the value of the thing dyed, one moiety to the queen, and the other to him that will fue for the fame. \$4. It thall be lawfut to dye'gall-black, furaach, or plain black, wherein no madder is ufed.
§. 5. Every dyer dyeing cloths, \&c. maddered, and not woaded, thall, before defivery, fix a feal of lead to them, with the letter $M$, on pain of forfeiture, for every yard, \&ic. 3s. 4d. And any perfon felling cloths, \&ce maddered and not woaded, with out notice firft given to the buyer, fhall forfeit double the value of all fuch cloth, \&c. to the party who Chade fae for the fame.
13 and 14 Car. II. cap. II. §.26. Any perfon may import logumod, alisas block wood, to ufe in dyeing.
§ 27. Provided fuch importation be afcording to the act of navigation, 12 Car. IL. cap. 18. and paying a fubfidy to his majefty, as provided in the act of tonnage, \&ce.
I3 Geo. I. c. 24. §. I. Any perfon within England, Wales, or Berwick, dyeing ,black any bays, or other woollem goods, as madder-blacks, nat being dyed throughout, with woad, in. dige, and madder only, or dyeing any cloths, long-ells, \& \& c, for woaded blacks, not being woaded througheut, hhall forfeit for the fame as follows, viz.
For every long Bocking bays, containing 70 yards, 44 s .
For every Colchefter bays, or fhort bays, containing 35 yards, 22 s . and fo in proportion for bays, or other woollen goods. For every dof dyed black, not being woaded throughout, comtaining 44 yards, 40 s .
For every piece of bays fally dyed as aforefait, containing 70 yarts, 30 s .
For every Colcheter, or Ahortbays, containifg 35 yards, T2s: For every perpetuana, or ftuff, fally dyed, 4 s . and fo in proportion for any other woollen goods deceitfully dyed for woaded blacks.
§. 2 All wootlengoods, truly maddered, blacks fhall be marked with a rediand a blue rofe ; and all woollen goods truly woaded black, with a blue rofe: and any perion counterfeiting the faid marks, or fixing fuch to any goods fallly dyed for maddered or woaded blacks, forfeits 41 . for every piece of goods fo marked.
§. 3. Any perfon, ufing logwood in dyeing blue, thall forfeit 40 s . for every piece fo dyed, contaning 44 yards, and 22 s . for every long piece of Booking bays, containing 70 yards; and 12 s . for every Colchefter, or fhort bays, containing 35 yards; and 4 s , for every perpetuana, or fluf, containing 24 yards; and fo in proportion for all other woollen goods.
$\$ .4$. All perfons occupying the trade of dyeing woollen manufactures within the city of London, or ten miles compafs, hhall be fubject to the infpection of the company of dyers of London; and the mafter, wardens, and court of affiftants of the faid company, may appoint (earchers within the faid limits ; and, out of the faid limits, juftices, at their quarterfeffons, may appoint fuch fearchers; who, taking to their affiftance a conftable; or other peace-officer (who are required to be affifting) may, at all feafonable times in the day-time, enter the fhop, or workhoufe, of any perfons ufing the trade of dyeing, to fearchall cloths, and other woollen goods; to be dyed black or blue; and any perfon oppofing forfeits 10.1 . §.5. All effenees againt this act, where the forfeitures exceed 5.1. may be recovered by action of debt, \&ec. in any court of record at Weftminter; and, where the penalties Ghall: not exceed 5 , the matter thall be heard and determined by two or more juftices for the county, city, \&c. where the offence Ihall be committed (fych juftices nor being concerned in the matter.of the complaint) which examination ghall be upon oath of one witnefs : and all forfeitures by this act within the city of London, and ten miles diftance, thall go one moiety to the informer, and the other to the company of dyers; and, beyond fuch compafs, the whole fhall go to the informers; and any offenders refuting to pay, if not exceeding 51. in 20 days after conviction, the juftices before whom they were conviहted may iffue warrants for lewying the fame by diftrefs and fale of goods, or commit the offenders to hard labour for three months.
\$. 6. All profecutions for iffences againtt this adt fhall be commenced within 40 days, and profecuted without wilful delay; and perfonsagegrieved may appeal to the next quarterfeffions, and the determination hall be final, and cofts allowed.
§. 7. If any fuit be commenced for any thing done in execution of this act, the defendant may plead the general iffue; and, if the plaintiff be nonfuited, 8 cc . the defendant thall recover treble cofts. And this act hall be a public act.

# The PRACTICALBUSINESS of the CUSTOM-HOUSE, continued from the end of letter C . 

A fufferance for the landing and examining of paffengers baggage and wearing apparel.
I N the Providence of London, James Bell mafter, from Rotterdam.

Mofes Wharton.
$\left.\begin{array}{l}\text { Four portmanteaus } \\ \text { Three boxes }\end{array}\right\} \begin{aligned} & \text { Containing baggage and wearing ap- } \\ & \text { parel, linen and woollen. }\end{aligned}$
Three trunk parel, linen and woollen.

You may permit the goods above-mentioned to be landed, and examined upon the lawful keys, unlefs the proprietor, or his agent, defire them to be fent back to the warchoufe: and, after examination, you are to certify on the back of this fufferance how you find the faid goods, enumerating the particulars; and,
if any cultomable goods be found among them, not concealed you are to take care the duty thereof be paid; but, if prohibited, or concealed, they will be liable to feizure. Dated at the Cuf-tom-houfe, Southampton, the 17 th day of January, 1730.

A B. Collector, B. C. Cuftomer, C.D. Comptroller. D. E. Surveyor,

To
E. F. $\}$ Land-waiters.

Secondly, before thefe fufferances are delivered to be executed, they muft be entered on the left-hand fide of a particular book, to be kept by the collector for that purpofe, in the following form:

Sufferances for paffengers baggage and wearing apparel.

The fufferances granted.

| Date of the fufferances. | Pafiengers. names. | Ships names. and places. | Mafters names. | From whence. | Outward package. | $\left\lvert\, \begin{aligned} & \overline{\text { When }} \\ & \text { exa- } \\ & \text { mined. } \end{aligned}\right.$ | The feveral fpecies of the goods. | By whom examined. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1730. $17 \mathrm{Jan}:$ | Mor. Wharton. | $\left\{\begin{array}{l} \text { Providence } \\ \text { of London } \end{array}\right\}$ | JamesBell | Rotterdam | $\left\{\begin{array}{ll} 4 & \text { Port- } \\ \text { manteaus } \\ 3 & \text { Boxese } \\ 3 & \text { Trunks } \end{array}\right\}$ | 18 Jan . |  | D. E. Surveyor. <br> E. F. $L_{\text {Land- }}$ <br> F. G. $\}$ waiters, |

Thirdly, The fufferances being thus entered, they are to be delivered to the officers to whom they are directed, who are carefully to examine the goods, and then report the particulars of each paffenger's baggage on the back, thus:

18 Jan. 1730. Examined four portmanteaus, three boxes, and three trunks, and found them to contain thirty ells plain hollands linen, under $\mathrm{I} \frac{\mathrm{I}}{8} \mathrm{ell}$; one pound and a half of Dutch wrought filk ; certain papers and books of account; three pounds of tea; one Indian damark gown and petticoat; certain old wearing apparel.

## D. E. Surveyor.

E. F. $\}$ Land-waiters.

And they are to be returned to the collector, \& c . for their further directions; who, under the officer's endorfement, are to direct all fuch apparel and baggage as appear to be worn, and to belong to the paflengers, to be delivered without any entry, if not of prohibited goods : but fuch cloaths, or fmall parcels, as have not been worn, and are cuftomable, muft be entered, and the prohibited profecuted. The direction mult be as follows:
The linen and filk to be entered; the tea, gown, and petticoat to be profecuted; and the reft delivered.
A.B. Colle Ctor , B. C. Cuftomer, C. D. Comptroller.

Laftly, The examination, or execution, is to be entered on the right-hand fide of the book, where the fufferances were entered when granted; and then to be returned (with perfect warrants for the goods liable to duties) to theofficers they were directed to, who may, by virtue thereof, deliver the goods to the owner; and, with their executions, to be entered in the landwaiter's books, and preferved, in order to be jerqued with the feveral perfect warrants granted for that particular fhip.

The aforegoing are directions for the entering of all forts of goods and merchandize imported from foreign parts, under all circumftances; the method to be obferved in the examination and delivery of them is as follows:

When entered, and the warrants, \&c. granted for the landing and delivery, produced to the land-waiters (to be appointed by the collector, by noting their names in the report-book, or a particular one for that purpofe) they are to accept it as an authority to permit the landing and delivery, but may not examine the goods on board, but order them on fhore at the merchant's charge: certifying the entry to the tidefmen on board the fhip, before they permit them to be unladen. The certificate to be as follows:
In the Providence of London, James Bell mafter, from Rotterdam.

A. B $\}$ © Land-waiters: :

To the officers on board the faid fhip.
And, if there is fufferance to permit landing them at any other place than the lawful keys, it muft be mentioned in the order thus:

Sufferance for
By virtue of the order the tidefmen on board are to let the goods be brought on thore, and to deliver them to proper landwaiters, who are to attend at landing them, to examine, tafte, weigh, meafure, gauge, number, \&sc. according to the nature thereof; and to take an account of the quantities and qualities, in order to adjuft the duties to be paid: but, that land-waiters may be prepared to take an account of the examination and delivery, when the fhip is reported, a blank book is to be delivered to each whom the collector fhall appoint to fee fuch fhip difcharged; the title to be as follows:

> Cuftomi-boufe, Southampton,
> -8th day of January, $773^{\circ}$.

This book, containing twelve leaves, delivered to Mr. A. B. land-waiter, to take an account of the delivery of the lading of the Providence of London, James Bell matter, from Holland, reported the 8th day of January, $173^{\circ}$.
B. C. Collector.

And as to fhips that do not report, \&c. every land-waiter muft have a general pocket-book dilivered to him, to enter all warrants directed to him for delivery of goods. The title as follows:
This book, containing one hundred leaves, delivered to Mr. A. B. land-waiter, to take an account of the delivery of all goods landed out of fuch thips as do not report.
B. C. Collector.

In the landing, examining, and delivery of all goods and merchandizes, it muft be carefully obferved,
I. That none be landed or delivered without a proper warrant; otherwife they are liable to feizure.
2. That no more bedelivered than what the land-waiters have perfect warrants for; and if, upon examination of fuch dry goods as pay duty by tale or meafure, the importer appears to have endorfed fhort, they muft be feized: but, in cafe of fhart entries upon goods paying duties by weight or gayre, the land-

## The PRACTICAL BUSINESS of the CUSTOM-HOUSE.

waiters muft give the merchant an account in writing, that he may make a poitoradditional entry of it, before the goods be taken off the keys: unlefs the quantity fhort entered be very fmall, which may be entered in a book kept for that purpofe in the cuftom-houfe, that the collector may know the quantity and quality, to demand the duties of the merchant; which the landwaiters are to fee pofted the next day at fartheft, though, in Itritnefs, they are not to give any credit; and to prevent it,
the furveyor muft, 14 days after the expiration of every month, deliver to the collector, and comptroller a lift of all hips cleared the preceding month, with the poft entries that were flanding out fix days after the fhips were cleared; who are to enquire into the reafons, and charge the officers concerned in giving fuch credit, and fend their anfwers to the commiffioners, with their obfervations.
The form of the poft-entry book may be as follows:

Which may be imported free of all duties, provided entry and other requifites of law be performed as before, are agaric, annotto, antimonium crudum, aqua fortis, argol, arfenic, bayberries, brafil-wood, braziletto wood, cocheneal, cream of tartar, fuftic, galls, gum arabic or gum feneca, indico of all forts, ifinglafs, litmus, logwood, madder of all forts, madder-roots, Nicaragua-wood, orchal or orchelia, or archelica (or Spanifh weed) pomegranate peeds, red wood, faffore, fal armoniac, fal gem, fapan wood, red faunders, fhumack, fticklack, turnfole, valonia, verdigreafe; but on failure of the aforefaid requifites, are to pay as formerly. 3 and 4 Ann. cap. 4. §. 8. 8 Geo. I. cap. F5, §. 10.

Foreign dyeing-goods, liab't to duty outwards. See Book of Rates.

## E.

## E A R

EA R TH, a due knowledge of the nature hereof, adminiftering matter for the benefit of divers kinds of traffic, it may be ufeful to give the man of bufinefs fuch an idea thereof, that he may poffibly reap fome advantage by it. See Agriculture, Húsbandry, Farming.
Our knowlege of the earth reaches but little below it's furface. So far as men have ever dug, it appears a compages of numerous folid fubftances, ranged in a diforderly manner, feemingly to us; which may be phyfically neceffary, to afford different partitions or beds, of foil, gravel, clay, ftone, coal, marcafites, ores, gems, \&xc. each ferving as a matrix to the other, and all affording no inconfiderable articles for commerce.
By the ordinary ufe of the word earth, is meant the foil, mould, or coat, wherein vegetables grow. This coat, which reaches but a fmall depth, is the feat of vegetation; and an analyfis of this earth, or garden mould, may not a little contribute to fome beneficial improvements in agriculture.

## EXPERIMENTI

Take two pounds of frefh, black, and rich garden mould, and ftir it well in two quarts of fair water, gently warmed; then let the grofler part fettle to the bottom, and filtre the liquor through cap-paper, and you will find that it will pafs confiderably muddy, or impregnated with the finer parts of the earth, which it would not eafily depofit upon many days ftanding in a quiet place.

> Remarks.

The defign of the experiment is to obtain a proper liquor for difcovering the matter which the earth affords to plants in vegetation, or the natural juices and natural falts of garden mould; becaufe nothing feems capable of rifing in vegetation, but what is foluble in moderately warm water, and will pafs the pores of paper, fomewhat in the fame manner as it does the natural abforbing veffels, or ftrainers of a plant. Whence the filtred liquor, in the preceding experiment, may be examined chemically; as by evaporation, or the way of trying mineral waters, \&c.
In regard to the methods of aftaying Clays, Coal, MarCasite, Ores, Gems, \&c. fee thefe refpective articles.

> EXPERIMENTII.

A general analyfis of common water.
There being few fpecies of earth from which fome degree of an aqueous quality is not diftillable; and water being an auxiliary inftrument to vegetation in conjunction with garden mould, it may be ufeful to thofe, who would aim at improvements in agriculture of any kind, to give the analyfis of this active fluid body, as united with earth, rather than as Teparately confidered.
Common water, being put into the exhaufted receiver of the air-pump, throws up numerous bubbles and explodes; and, therefore, contains what may, by way of diftinction, be called æther, or fpirit.
It contains alfo a merely aqueous part, diftinct from æther, and the earthy fediment, as appears from diftilled common water.
It contains a dry folid matter, which is either earthy or fa. line, as appears upon a full evaporation; and from the infides of tea-kettles, which, after long ufe, are lined with a ftony matter, that beats off in flakes, or crufty pieces.
That water is accounted beft and wholfomeft, which is lighteft, moft fpirituous, and freeft from earthy fediments; and thefe properties are ufually found in pure rain water: this being naturally diftilled from the ocean and rivers, or by the fun's heat raifed up into the atmofphere, from whence it is returned, much after the manner of diftillation.
Neither can the qualities of earth be duly confidered, abflractedly from it's conftant attendant, the atmofphere. This is a kind of dry fuid, no lefs effential to the earth than the moif one. It feems as heterogeneous as the earth or water, though more rarified. It is daffimilar in it's parts, like the Vol. I.

## EAR

body of the earth; and has fomething analogous to beds, of particular portions, abounding with different kinds of effluvia, according to the difference of the countries and places; over which it extends. Thus over mount Ætna; or other vulcano's, it muft neceffarily be impregnated, after the manner of certain mineral waters, with the fumes of burning minerals; over the inland Ceylon, with aromatic effuvia; over London with the fmoak of fea-coal, \&cc.

## EXPERIMENTIIL.

A general analyfis of the air, as having a tlofe connection with the earth.

That the air is an elaftic fluid, appears by it's diftending bladders, and breaking glaffes in the exhaufted receiver of the air-pump. i. That it is effential to life, appears by animals dying without it. 3. That it may receive invifible influence or alteration, as well as vifible effluvia, appears from it's becoming poifonous by paffing through fire, and by containing grofs fmoak, and the fine particles of fermenting or putrefying bodies: and 4 . That it is naturally a compound, appears by the water it depofits in dry falt of tartar, and by changing the colours of various bodies.-The earth and air continuing infeparably conjoined, the one muft neceffarily participate of the qualities of the other.

Of the earth in regard to vegetation,
The earth's furface is generally found coveted with verdure, or a vegetable coat, and in fome places with fand, duft, and mud.
Under this fuperficial coat, there ufually lies a bed of mould, or under-turf earth, of different depths, from one foot to two, three, or more, in different places. This mould, or under-turf earth, is the proper matrix of vegetables.

## Experimenti.

Take four pounds of frefh, black, and crumbly garden mould, efteemed the beft fort, and what has lain fome time expofed to the atmofphere, and not been exhaufted in vegetation. Elixate the fame in fair boiling water, 'till all that is capable of diffolution, and imbibition by the water, may be fo. Having thus obtained a lixivium, or folution, filtre the fame through thick double paper, in order to obtain it tranfparent, at leaft free from any grofs terreftrial parts, that might otherwife lodge therein.-This folution contains all the parts of the fubject that are foluble in boiling water.
To bring thefe parts to a clofer juxtapofition, that they may manifeft themfelves to the fenfes, and particularly to the tafte, exhale away the more aqueous fluid in the form of a vapour, and compare the concentrated folution, with a portion of the former that remained unevaporated, and you'll find it tafte more faline.
To gain a fuller information, evaporate a portion ftill bigher, and fet it to cryftallize, to fee if any falt would hoot, which will adminifter great infight into the qualities of the earth you would affay. See the article Assay, in regard to mineral earths.
To a part of your filtred folution, you may add the fyrup of violets, to diffover whether the folution be acid, alkaline, or neutral.
Wafh the remaining terteftrial matter in feveral waters, every time decatting the upper muddy liquor, after a little ftanding, in order to procure the pure fand contained in the mould, which will ftill more and more enlighten your judgment in it's nature and quality.

## Remarks.

Experiments of this kind difcover a method of refolving the matrix earth of vegetables into it's conftituent parts, without altering their natural form and properties. Whence it fhould feem, that a true judgment might be formed of mould, both in general and particular, and a rule be obtained for their artificial mixture or compofition. For example, if you bad any mould from the Spice Ilands, where 9 A
either

## E A R

either the clove ar the cinnamon grows; or from any part of Afia, where the tea grows, or America, where the cacao is produced; we might be directed, by this analylis, to mix up a mould that fhould refemble it, for producing thefe vegetables in England. Burt, to render thefe experiments fuccersful, no lefs regard muft be had to the ftate and ingredients of the atmofphere, than to the ftate and ingredients of the foil.
To render thefe fimple experiments fill the more infructive, for difcovering the principles of vegetation, and the nature of earths and plants, it were proper to compare them withe fimilar analyfis of certain vegetable fubjects.
Thus by bruting a tender plant, elixating all it's foluble parts with warm water, exhaling the humidity, and fetting the remainder to cryftallize, you'll obtain the native faline parts of the plant, in the form of a folid falt, which appears cither of the "artareous or nitrous hind, according to the nature of the plant.
And, though any alkaline plant, as creffes, were watered in it's -growth with a folution of nitre, which upon diftillation affords much acid fpirit, the plant would ftill prove alkaline and the fame holds of every plant and falt hitherto tried. Whence there appears to be a power in plants of changing any other falt into their own; which is alfo the cafe of animals. And kence we likewife find, upon experience, that compofts, abounding in fea-falt, nitre, or urinous falts, all agree to promote vegetation.
But, as there may be certain more fixed parts naturally contained in mould, than will diffolve in boiling water; and as thefe parts may poffibly be loofened, digefted, and rendered capable of afcending into vegetables, by the long continued action of the fun and atmofphere; it may be ufeful to try fome other analycis of the fame fubjeet.

> EXPERIMENTII.

## The analyfis of garden mould by fre.

Weigh two paunds of garden mould of the kind before defcribed, and put it into an earthen retort; commit it to a naked fire, warking by flow degrees of heat into a glafs yeceiver; at latt kesping the retort ignited, far fome time. There will cone over (1.) a water; (2.) an oil; and (3.) a volatile fpirit almoft like that of harthorn; and (4.) there will remain behind a diy caput mortuum, or apparently fixed earth.
Elixate part of the caput mortuum, and dry it, and by triture reduce the fame into a fimilar powder, with defign to put each parcel into a feparate pot, and expofe them to the open air for a twelvemonth, to try whether they would then prove fertile.
By comparing this procefs with the fame performed upon a vegetable, an animal, and a mineral fubftance, it appears, that one fimple fixed earth is the bafis of all animal, vegetable, mineral, and earthy matters; or the true ftamen, fupport, and fkeleton of flefh, bone, wood, metals, and earths, \&c. being of itfelf of a fixed and unalterable nature.

## Of bolar earths.-See Bole.

Thefe earths are divifible into two fpecies, according as they are' more or leff tenacious; in which light loam and clay may reprefent them all. And even thefe two feem only to differ in refpect of finenefs or coarfenefs of their component parts, which renders them more or lefs tenacious and adhefive.

## Exprermentili.

(1.) Mix common loam into a mafs with water, then dry it, which will hhew that, compared with clay, it would eafil crumble and fall into powder. But (2.) beating fome loam fine in a mortar, and mixing it well with water, it will cling like clay, and when dried adhere much more tenacioully than before.

## REMARKs.

This experiment fhews, that loam and clay, or all the bolar earths, are nearly the fame thing, when their component parts, or gravelly and fandy matters, are reduced to the fame degree of finenefs: it fupplies us alfo with a rule for the improvement of the art of pottery, and the imitation of China ware. [See Porcelain, and Pottery.] This rule is to grind or beat the earths employed, to an extreme degree of finenefs; accordingly porcelain has been imitated in Europe, by tobacco-pipe clay, and "other earths exceedingly fine ground, mixed into a pafte with water, and properly dried and baked.
Under bolar earths, may be ranged all the hungry garden earths, all the fandy field earths, all the clay or marly eaths, and all the mixtures hereof.

## Of faline earths.

By which are meant all thofe wherein any quantity of acid, alkaline, or neutral falt is contained.

## E A R

Upon ftrict examination, no earth, perhaps, would te found without fome proportion of falt ; which is generally thought to be the principle that cements all carths together. And the following experiments feem to fhew fome reafon for the opinion.

## Expertmentiv.

That a faline matter may give tenacity and firmnefs to earth.
(r.) Slack quick lime with a fufficient quantity of water, to bring it into a kind of pafte. (2.) Suffer the moifture to exhale gradually, and the lime will acquire a ftony hardnefs. (3.) Pour a larger quantity of water upon another parcel of quick lime than fuffices to make it into a pafte, decant the wall, and you'll find it faline, (4.) Elixate the remaining matter with feveral quaptities, of frefm water, to extract all the falt of the lime. (5.) Dry the calx thus deprived of it's falt, and you'll find it has loft it"s tenacity, and will heone crumbly or dufty.

## REMARKs.

This experiment thews the nature and compofition of lime, which, mixed with fand, makes the common mortar for building. We fee it is the alkaline falt contained in the lime, and either extricated, or produced, in calcining the lime-ftone, that occafions the mortar to concrete and harden; and, where the falt is in it's full proportion, the lime is ftrongeft, and the mortar hardeft and moft durable. This faline principle in lime gives it an advantage over chalk, as a compoft for lands exhaufted of their natural falts in vegetation: for the alkaline falt of the lime, by ftrongly attracting the humidity of the air, as, all falts do when they begin to run per deliquium, whereby they fwell, dilate, crumble, and open the earth wherein it is mixed, in order more kindly to adminifter the virtues contained both in the earth and the air to the roots of vegetables in general; whence it is obfervable, that the atmofphere has the freer action thereon, while the alkaline falt of the lime becomes of a nitrous fertilizing quality.-
Under the general head of faline eafths may be reckoned all thofe that are calcined, or burned in the fire; as all the kinds of lime, pottafh, falt of tartar, foot, \&c: thefe being but mixtures of falt and earth.

## Of fulphureous earths:

Such as coal, bitumen, brimftone, crude ores, marcafites brafs lumps, mundics, or the like: for, though thefe may be diftinguifhed in refpect of leffer differences, yet, in general, they are all a compofition of fulphur, uninflammable earth, and a fmall proportion of metal.
The analyfis of fulphureous earths by an example in mundics.
Experiment V .
Take half a pound of Cornifl mundic, reduced to fine powder, and put it into an earthen retert; which, placed in a naked fire, fit on a capacious receiver, and lute the junglures well with a mixture of loam and borfe-dung. - Give degrees of fire, up to the ftrongeft.-Let all cool, and take off.-You will find a fmall proportion of an acid liquor, exactly like the fpirit of fulphur by the bell, at the bottom of the receiver, and a confiderable quantity of flowers of fulphur fublimed to the top.
The caput mortuum being taken out, and fluxed with half it's weight of clean iron filings, will afford a metalic reguline fubftance. Whence we fee that marcafites chiefly refolve into fulphur, and a more fixed earthy part; which, being treated in the affay as lead only, yields a proportion of matal. And hence, perhaps, all the pyrites, brafs lumps, marcafites, and mundics, are but cruder kinds of ore; and, if they cquld be brought to full maturity, they would prove real ones.
Thefe marcafites, upon long lying in the open air, attract the moifture thereof, and hence grow hot, in fome meafure diffolve, from an efflorefcence on the furface; and, by degrees, turn into a vitriol, of the fame kind with the metal they contain.
Thus, if that metal were iron, the vitriol becomes green, or martial; if copper, blue, or cupereous: and on this is founded the artificial method of making vitriol, now practifed in feveral parts of England. Moreover,
From the heating, fuming, and firing of there fulpbureous earths, by the moifture of the air, we may lean, perbaps, the origin of hot baths, mineral waters, damps and fres in mines : for it is found that a pile of thefe fulphureous earths, being barely moiftened, will at firft fmoke, and at length take fire, and burn like glowing coals.
This experiment likewife fhews the method of examining thefe marcafites (which have been frequently taken for rich orts both in England and el(ewhere) and of extracting the nactal they may contain, after having firft feparated their fulphur. Many ikilful metallifts have been impofed on by the feecious fhew of thefe marcafites, they baving ufually a grcat fpecific

## EAR

## E A R

qupity, and fome of them a greater than real ones: fo that they may poffibly contain the matter of metals, though in a erude, imperfect, and unfixed fate. But, to bring this matter to the tef, requires more than ordinary knowlege in metallurgy. See the articles Metallurgy, Assay, Marcasite.

## Of fony earths.

That ignition may deffroy the tenacity, or cohefion, of fony earths, Thewn in' alabafter.
Reduce about a couple of pounds of foft alabafter to to fine powder; put it into a flat iron pan, and apply a foft heat, that the matter may not glow, yet remain too hot to be toucted ; by which means the powder will be brought to flow, or run, fomething like quickfiver; and, being gently Airred, will boil and bubble. If you let it continue thus, with a foft heat, it will run off the fpatula, held almoft ho-rizontally.-Remove it from the fire to grow cold, put it into a glafs, keipt clofe ftopped, in a dry place, as gypfum, or calcined alabafter:
A-quanity of the gypfun thus prepared, being brought into a pappy confiftence with water, the humid mafs will foon become fo haxd and rigid, as to ring, or afford a clear found, when fruck with the fiager, or any more folid inftrument. But a parcel of the fame powder, kept in a ftate of ignition for fome time, before it is taken out of the calcining pan, and being mixed with water, it will acquire a loofe, friable confiftence, or a much lefs degree of tenacity than the other. The unignited fort, alfo, by being kept in the open air, lofes of it's coagulating virtue; and, when once confolidated with water, will become unfit for the like purpofe again.
Thus all the fony earths that do not vitrify in the fire are, by ' ignition, reduced to fine powder: fo may flints themfelves, by being often ignited and quenched in water. Thus white marble, or cryftal, is reduced to a powder, fit for the making of pure white glafs.
This experiment alfo chews us an earthy matter, apparently fluid over the fire, that will harden in water; and will ferve to direet a further enquiry after cheap bodies, that will grow fltll barder under water, which might prove of great fervice in bridge-works, water-works, and the like,
The prefent ufe of this preparation is for taking off faces, impreffions, and figures, and the flopping of leaky pipes or veffels, that tranfmit or contain water.
The feveral earrths hitherto mentioned confitute an opake aggregate of diftinc qualities ; fuch an one whofe parts are not commoveable by the fubtle motion of light; but there is angther feecies of earths, that come into a tenacioully cohering aggregate, and admit of an intenfe and inherent motion of their fmalleft confituent parts.
Such are gems; fome whereof are homogeneous, and perfectly tranfparent, as the diamond, ruby, fappbire, jacinth, emerald, \&c. to which may be added various kinds of fands and glaftes, thofe commonly called mettalline fluors, and the white clafs of cryftals.
There are other gems, that are coloured, whofe tranfparency is partly obfcured by the interpofition of a friall quantity of exceedingly fine opake matter; which, fometimes proving larger in quantity, totally obfcures the fones, renders them opake, and poffefied of firmnefs, and of exceedingly bright polifh. See the article Gems.
There are fome again, as it were, unequally mixed of thefe two. Of this kind are all the coloured gems in general; of the fecond, the turquife, the opal, the onyx, the carneol, the fed jafper, 8 cc .- And of the laft, the variegated jafper anid agate.
Thefe tranifparent earths, whilf under a tremulous motion in their aggregate generation, are fruck upon by the rays of light, which they again throw off in the fame angle ; whence proceeds the Pplendor of tranfpafent gems, viz. from the light thus reflected on their furface.
Thefe diaphanous earths have this tremulous property in common with fonorous earths, as approximating thereto, either in the individual tenuity of their whole fubftance, or fome principle thereof: for, as the corpucless that are capable of being impelled by the light of the fun, moving the rays of the air, muft needs be greatly attenuated; fo thefe corpurcles, which, in the aggregate, are movable by fo fubtle a tremulous, or undulatory motion, as to vibrate the phyfical lines of the air, muft alfo neceffarily be exceedingly minute. But fuch bodies as are either tranfparent, or, if opake, the moft attenuated metals, which, being concreted inte an aggregate, are fo intimately combined, that a ray of light can fearce defeend below their furface, but it is immediately repelled, as may bedemonfrated to the fenfes from optics.
A due knowlege of thofe gems depends upon two principal things, viz, their hardnefs and their colour. Their hardnefs is commonly allowed to fland in this order : the diamond firft, as moft compact of all; after which follow the ruby, the fapphire, the jacinth, the emerald, the amethyft, the garnet, the carneol, cialcedon, the onyx, the jafper; after thele fucceed the agate, porphyry, and marble. This difference, however, is not regular and confant, but frequendly varies.

Good cryittals may be allowed to fucceed the onyx, but this whole clafs of metalline glaffy fluors feems to be ftill fofter. In point of colour, the diamond is valued for it's tranfparency , the ruby for its purple, the fapphire for it's blue, the emerald for it's green, the jacinth for it's orange, the amethytt for it's violet, the turquoife for it's azure, the caineol for it's carnation, the onyx for its tawny, the jafper, agate, and porphyry for their vermilion, green, and variegated colour, and the garnet for it's tranfparent blood-red.
All thefe gems, as they are fometimes found coloured; of fpotted, along with their tranfparency, fo are they fometimes perfectly limpid and colourlefs ; in which cafe the diamondcutter knows how to diftinguifh their feveral fpecies, frami their different degrees of hardnefis upon the mill. See the articile Diamond.
For the cutting or polifing of gems, the fine powder of the fragments of thofe that are next in degree of hardnefs is always requifite to grind and wear away the fofier; but, as none of them are harder than the diamond, this can only be polifhed with its own powder.
Mr Boyle has many curious obfervations upon this fubjee of gems, in fpeaking of diamonds that fhone in the dark; where he finds that fuch diamonds as are left with fmall afperities, or inequalities, upon their furface, through an imperfection in the polifhing, have all of them this faculty, viz, of flining luminous in the darkef places.
As to the thing that gives the colour to gems, there are many different opinions, or rather conjectures. Whatever it be, it is certainly a real fubftance, that variounfy reflects the light in it's motion. But that this body hould be copper, for inftance, which gives the fine blue to fapphire, or to lapis lazali , becaufe it gives the like colour to fipirit of fall ammoniac, feems the lefs probable, as this colour does not abrolutely depend upon the copper, but upon the property of the firit therewith united: for the fame copper turns an acid firitit of a green colour; and, with glafs, Cometimes makes a green, fometimies a red, fometimes a blue, and fometimes a black.
Upon no better foundation alfo, perhaps, flands that opinion of the garnet, as receiving it's colour from iron, becaufe that metal exhibits fuch a colour in it's glafs: for iron does not produce fuch effects quatenus iron per fe, but as iron differendy prepared; and fuch preparations thereof are no where to be found natural: for inftance, the crocus martis with vinegar, 8 cc .
It may be further obferved of the bolar earths, that they are a kind of aggregate, coniffting, of numerous other leffer aggregates, or fenible molecula; or, indeed, that they commonly are no more than a rude heap, or heterogeneous mafs, containing many of the earths abovementioned, both opake, tranfparent, and metalline.
Whence it is no wonder that iron, for inftance, by modern experiments, has been eafily made out of common loqm: for, as iron is an beterogeneous body, tempered up with much opake and much vitrefcible earth, alone with' fome metalline parts; it is not at all improbable either that the two firt earths, which are found to exiff plentifully in loam, fhould be readily combined by the addition of the third; or that all of them, being prefent together, fhould be joined by a fuitable operation, and feparated from the otber parts that do nos unite therewith.
Upon the fame foundation depend thofe extractions from emery, blaod-flone, and the crocus of iron itelf, whereby gold receives an augmentation; what is thus extracted, now putting on a metalline form along with the gold; and preferving it upon moff trials, 'till at length, by the acceffion of the metalline complement, they every one become permanent and perfect gold *.

* See Becher, Miner. Arenar. page 909-927.

To feparate thofe feveral earths that are fo blended, is a work of no little art, particularly to get the opake, calcarious, or homogeneous bolar earth, clear of that which is tranfparent and vitrefcibile. But it is much lefs labour to feparate the metalline parts from them both.
The beft way, poffibly, of feparating the finer earthy particles from the larger fands, is by wafhing, which alfo eafily gets the fmalleft metaliine parts away from thofe of the fame fize, and that in a ftricter fenfe are called earthy.
Under this head of earths nuay be ranged thofe artificial tenacious clays called lutes, which are commonly oppofed to the violence of the fire, to hinder the efcape of fubtile fubftances, and are very neceffary in chemical operations.
Earths of this kind are either defigned for the making of earthen veffels, fuch as retorts, crucibles, \&c. or for coating over veffels of glafs, fo as to defend them in a naked fire, or for the flopping of junctures, orifces, or cracks, of receiving, preferving, and diftilling veffels, in thofe parts that are fartheft from the fire.
There are fome natural clays found fit, whereof to form veffels for diftillation, fublimation, calcination, and reverberation, as being well contempered with a fufficient quantity of a tenacious fubftance, fo as to require no previous preparation for the hand of the potter, who is to give them their figure.

## EAR

## E A R

There are other clays that require to be artificially tempered, to fit them for this purpoie. Thus thofe that when dry cohere but loofely, may be mixed with a fuitable proportion of iron fcales, or filings; and thofe that remain foft in the fire, with powdered flints or glafs. Sometimes, likewife, a little litharge is found proper, as giving the veffels a greater degree of tenacity.
For crucibles, and other pots for the melting of metals, the native Haffian earth is to be generally preferred, or that of Auftria; but the Haffian being fandy, and the Auftrian martial, this is fooneft preyed upon, and deftroyed by falts and antimony, and that by lead.
But as lead, and the glafs of lead, immediately break, or run through all forts of the common crucibles, thofe who have occafion for violent fires fhould ftudy the nature and quality of fuch earths as will the beft fand the fire, and will not vitrify by the fulphur of ores, or the penetration of fluxes. In regard to which, nature alone, perhaps, affords no diftinct fpecies of earth that will effectually anfwer fuch purpofes: whence we muft call in art and philofophy to our aid; and thofe who are the beft acquainted with chemical analylis will have the advantage over thofe who are ignorant therein.

## Of metalline earths :

For there are reafons to judge, that even metals themfelves are but a fpecies of earths ${ }^{*}$, as they both burn into afhes, and melt into glafs; whilf their metalline ductile form appears owing to nothing more than a certain proportion of fulphur, or oil, they contain; which, when burned out, leaves them terreffrical calces, or certain metalline earths, of a nature peculiar to each metal. Thus we may divide earths into two general tribes, viz. the friable and the malleable. We have gone through the former fpecies, the other we fhall fpeak of under the article Minerology.

* See Becher's Phyfica Subterrarea.

## REMARKs.

It would be very tedious, and of no great fignificancy, to enumerate all the particular differences of thefe earths, either friable or otherwife, or thofe that are ufed medicinally, or in any other application. Thofe that are the moft effential we have noticed, and fhall do fo, fo far as we judge confiftent with the nature of our work.
From the foregoing enquiries we learn, that the atmofohere, with it's conftituent parts, is a chief inftrument in promoting the fertilization of the earth, whereby all vegetables, and thence all animals are fed, fupported, and maintained; that the mould for vegetation may, in fome meafure, be fupplied with the air at different times, and afterwards, by lying immediately under the turf, receives whatever richnefs, or fine matter, defcends from above, in the form of dews, rains, fnow, hail, or other more fubtle and invincible conveyance : and that ithis invigorating fubftance, foaking through the upper turf, may be thereby defended from the winds and heating fun, as by a $\mathbb{I k r e e n}$, for being exhaled too foon again Thus the atmofphere appears to exercife a kind of renovating power, fo as to fupply even exhaufted and barren foils with frefh vigour and animation, and fit them for the production of new crops. Which confiderations point out a good rule' for recruiting withered and exhaufted vegetables, by expofing them to a kindly atmofphere, rather than by bare watering of them, which might only ferve to injure and corrupt them the fooner.
Hence fome capital directions may be formed for the improvement of hufbandry, horticulture, and the raifing and improving of fruit and foreft trees, by finding the nature, compofition, and ingredients of the foil, wherein each kind of grain, plant, and tree, is moft nourifhed and delighted :
That it is poffible, by rational experiments, to difcover the beft kind of fteepings for grain and feed, and the beft kinds of compofts and manure for land; according to the nature, or prefent exigence of the foil, or the fruit intended to be produced ; or any one particular falt, oil, or property to be introduced, either into the ground or the feed :
That water, as well as fire, may prove a ufeful chemical analyzer in fome cafes :
That compofts, before they can produce their effects, muft, in fome degree, approach to the nature of the foil they are defigned to improve:
That by earths are underftood fuch grofs fubftances as are of themfelves infoluble in water, and indeftructible in the fire, yet with fixed alkali melt into glafs, or with any unctuous matter affume the form of a metal, according to their refpective natures; and, confequently, that even earths, though apparently exhaufted fimple bodies, have yet their refpective or peculiar properties and effects:
That the mont fixed part of earth has many inftrumental efficacies, not only as floating in the air, and as forming the bed, or matrix, of vegetables, but alfo in conftituting the folid parts, or ftamina, of all vegetables, animal and mineral fubftances, and affording us all our veffels of glafs, ftone, wood, and metal; our furnaces, crucibles, and retorts; and being,
perhaps, in itfelf, the moft fixed and unchangeable body in nature
That a high degree of trituration, or reducing the particles of certain bolar earths, clays, and fony earths, to an extreme finenefs, may contribute to the improvement of pottery. For which purpofe, trituration, fifting, fubfidence in water, and decantation, might be ufed to great advantage. See the article Potтery.
That the making of lime may be improved, for the purpofes of buildings, manure, and water-works, by a due choice of the materials, and a fuitable calcination.
That fome confiderable ufe and improvement might, with proper fkill and application, be made in the bufinefs of brafs lumps, marcafites, mundics, and infinite other fpecies of mineral bodies. See Minerology and Metallurgy. That marcafites, or other minerals, by attraaing the moifture of the air, may be the efficient caufe of fubterraneous fires, hot fprings, damps in mines, mineral waters, \&c.
That the matter of metals may poffibly be loofe, immature, or unconcocted, in certain mineral matters; fo as in the fire to evaporate with the volatile fulphur, or other unctuous unfixed parts of the mineral, unlefs detained, and brought to greater perfection, either by nature or art.
That fire may have the fame effect as air or time, on certain ftony matters, and make them loofe, crumbly, and incoherent.

## Further Remarks.

On the ufefulnefs of the knowlege of all kinds of earths to the country gentlemen in general.
Under the articles Assay, Bole, and Clays, we have already thewn how highly profitable the knowlege of all earths may oftentimes prove to gentlemen of landed eftates in general; that they may oftentimes have a much larger Share of property within the compals of a few acres, than in fome thoufands, and yet be totally ignorant of the matter, for want of a little turn and application to ftudies of this nature. And from the fimple and familiar experiments we have exhibited, will appear, that there is neither any great trouble or expence attending refearches of this nature. Whence one fhould prefume that gentlemen, for their own fakes, for the intereft of their pofterity, would attend more to the contemplation of nature, and practical lucrative philofophy, than they are generally wont to do.
As I have no little defire to be of all ufe, according to the beft of my fmall abilities, to this great clafs of the community, I fhall not be wanting in any pains to lay before them, in fuch a manner as to give them the leaft trouble and moft fatisfaction, yet a good relifh for thofe advances and improvements that have been made by philofophic experimentalifts, which have been made not lefs for the interefts of land than traffic. For, however much perfons of great landed eftates may depend upon mere practical, laborious men, for their care and improvement of them; yet fpeculation is not the lefs requifite; I mean, fpeculation grounded on a repeated feries of rational and infallible experiments; for, without this, fpeculation tends to as little ufe in regard to the improvement of lands and trade, as enthufrafm, vifionary fchemes, and metaphyfic controverfy, have done to the advancement of religion and found politics.
In regard to the choice of land ftewards, it may deferve the confideration of people of diftinction, whether fuch fervant, having fomething of a knowlege in what we have reprefented under this article, and a general tafte for ftudies of this kind, might not frequently prove highly benefical to a gentleman's eflate? And, if a gentleman himfelf bad a turn for ftudies of this nature, he would eafily direct fuch a courfe of experiments to be made, though he fhould not chule to trouble himfelf about them. If what has been urged on my part upon this matter, for the benefit of the landed gentlemen of there kingdoms, fhould fail of the defired weight and influence, permit me, candid and generous reader, to recommend and inforce what hath been humbly fubmitted, in the words of the great and learned bihop Spratt, in his Hiftory of the Royal Society.

- For the improvement of thefe arts of peaceable fame, the gen-- tlemen of England have, indeed, another privilege, whichcan - fcarce be equalled by any kingdom in Europe; and that is the - convenience and benefit of being fcattered in the country.
- And in truth, the ufual courfe of life of the Englifig gentlemen ' is fo well placed between the troublefome noife of pompous ' magnificence, and the bafenefs of avaricious fordidnets, - that the true happinefs of living according to the rules and - pleafures of uncorrupt nature, is more in their power than - any others. To them, in this way of life, there can no-
- thing offer itfelf which may not be turned to a philofophical 6 ufe. Their country-feats, being removed from the tumults c of citics, give them the beft opportunity, and freedom of c obfervations. Their hofpitality, and familiar way of con-- verfing with their neighbourhood, will always fupply them - with intelligence. The leifure which their retirement

## E A R

c afford them is fo great, that either they muft fpend their - thoughts about fuch attempts, or in more chargeable and - lefs innocent divertifements. If they will confider the hea-- vens, and the motions of the ftars, they have there a quieter * hemifphere, and a clearer air, for that purpofe. If they - will obferve the generations, breedings, difeafes, and cures - of living creatures; their ftables, their ftalls, their kennels,

* their parks, their ponds, will give them eternal matter of
* enquiry. If they would fatisfy their minds with the ad-
- vancing of fruits, the beautifying, the ripening, the better-
- ing of plants; their paftures, their orchards, their groves,
a their gardens, their nurferies, will furnifh them with per-
- petual contemplations. They may not only make their
- bufinefs, but their very foorts, moft ferviceable to experi-
- mental knowledge. For that, if it be rightly educated,
- will fand in need of fuch recreations as much as the gen-
- tlemen themfelves, from their hunting, hawking, fifhing,
* and fowling, that is able to receive as much folid profit as
- they delight.
- On both thefe accounts the Englifh gentry has the advantage
c of thofe of France, Spain, Iraly, or Germany; who are
- generally either fhut up in towns, and dream away their
- Jives in the diverfions of cities; or elfe are engaged to fol-
- low their princes wills to foreign wars.
- Nor do they only excel other nations in fuch opportunities,
- but our own nobility of all former times. Firft, they are
- now far more numerous, and fo more may be fpared from
- the civil bufinefs of their country. Befides this, thy are
c now bred up and live in a quite different fafhion. The
- courfe of their anceftors lives was grave and referved; they
' converfed with few but their own fervants, and feldom
- travelled farther than their own lands: this way ferved
- well enough to keep up their fate and their port, but not
to help their underftandings. For the formalities of life do often counterfeit wifdom, but never beget it. Whereas ' now they are engaged in freer roads of education; now the
6 vaft diftance between them and other orders of men is no 6 more obferved; now their converfation is large and genecral; now the world is become more active and induftri* ous; now more of them have feen the ufe and manners of - men, and more apply themfelves to traffick and bufinefs than - ever.
- This alteration has been caufed in our memory, either by
- fo many families being advanced to the higheft degrees of - nobility for their excelling in the arts of the gown; or by - their frequent intermarriages with citizens; or by the travels of the king and the royal family; or elfe by the civil - war itfelf, which is always wont to be the cruelleft tyrant, - or the beft reformer; cither utterly to lay wafte, or to ci-- vilize and beautify, and ripen the arts of all countries. And - ftill we have reafon to expect, that this change will proceed - farther for the better, if our gentlemen thall more conde-- fcend to engage in commerce, and to regard the philofophy 6 of nature.
- Nor ought our gentry to be averfe from the promoting of - trade out of any little jealoufy, that thereby they fhall de-- bafe themfelves, and corrupt their blood: for they are to - know, that traffick and commerce have given mankind a E higher degree than any title of nobility, even that of civi-- lity and humanity itfelf. And, at this time efpecially above E all others, they have no reaton to defpife trade as below - them, when it has fo great an influence on the very govern-- ment of the world. In former ages, indeed, this was not - fo remarkable. . The feats of empire and trade were fel-- dom or never the fame. Tyre and Sidon, and Cades and - Marfeilles, had miore traffick, but lefs command than Rome - or Athens, or Sparta or Macedon. But now it is quite - otherwife. It is now moft certain, that, in thofe coafts * whither the greateft trade fhall conftandy flow, the great-- eft riches and power will be eftablifhed. The caufe of this
- difference between the ancient times and our own, is hard - to be difcovered : perhaps it is this, that formerly the great* eft part of the world lived rudely, on their own natural - productions: but now fo many nations being civilized, and - living fplendidly, there is a far greater confumption of all ' foreign commodities; and fo the gain of trade is become great enough to over-balance all other ftrength: whether - this be the reafon or no, it matters not, but the obferva: tion is true. And this we fee is fufficiently known to all - our neighbours, who are earneftly bent upon the advancing - of commerce, as the beft means not only to enrich particu-- lar merchants, but to enlarge the empire.
- The next thing to be recommended to the gentlemen of - England, has a near kindred with the other, and that is - the philofophy of nature and arts. For the want of fuch an - eafy courfe of ftudies, fo many of them have mifcarried in - their frit years, and have ever after abhorred all manner of - fober works. What elfe do fignify the univerfal complaints - Wh thofe, who direct the education of great mens children ? - Why do they find them fo bard to be fixed to any manner " of knowledge? Their teachers, indeed, are wont to im-- pute it the delicacy of their breeding, and to their mo-- ther's fondnefs. But the chief caufe of the mifchief lies deeper. They fill their heads with difficult and unintelVol. I.

6 ligible notions, which neither afford them pleafure in learn: ' ing, nor profit in remembering them; they chiefly inftruct - them in fuch arts, which are made for the beaten tracks of 6 prefeffions, and not for gentlemen. Whereas their minds - Ihould be charmed by the allurements of fweeter and more - plaufible ftudies, and for this purpofe experiments are the - fittef. Their objects they may feel and behold, their pro-- ductions are moft popular; their method is intelligible, and ' equal to their capacities; fo that in them they may foon - become their own teachers.

- Nor are they to contemn them for their plainnels, and the - homely matters about which they are often employed. If - they fhall think forn to foul their fingers about them on c this account, let them caft their eyes back on the original ' nobility of all countries. And if that be true, that every
6 thing is preferved and reftored by the fame means which did ' beget it at firit, they then may be taught, that their pre-- fent honour cannot be maintained by intemperate pleafures, - or the gawdy fhews of pomp, but by true labours and in-- duftrious virtue: let them refiect upon thofe great men, ' who firft made the name of nobility venerable. And they - fhall find, that amidft the government of nations, the dif' patch of armies, and noife of victories, fome of them dif' dained not to work with a fpade, to dig the earth, and to - cultivate with triumphing hands the vine and the olive. - Thefe, indeed, were times, of which it were well if we c had more footfeps, than in ancient authors. Then the - minds of men we're innocent and ftrong, and bountiful as - the earth in which they laboured. Then the vices of hu-- man nature were not their pride, but their feorn. Then - virtue itfelf was neither adulterated by the falfe idols of - goodnefs, nor puffed up by the empty forms of greatnefs, as - fince it has been in fome countries of Europe, which are - arrived at that corruption of manners, that perhaps fome - fevere moralifts will think it had been more needful for me - to perfuade the men of this age to continue men, than to - turn philofophers.
- But in this hiffory I will forbear all farther complaints; - which were acceptable to the humour of this time, even in - our divine and moral works, in which they are neceffary.
- I therefore return to that which I undertook, to the agree-- ablenefs of this defign, to all conditions and degrees of 6 our nobility. If they require fuch ftudies as are propor-- tionable to the greatnefs of their titles, they bave here - thofe things to confider, from whence even they them-- felves fetch the diftinctions of their gentility. The mine-- rals, the plants, the ftones, the planets, the animals, they - bear in therr arms, are the chief inftruments of heraldrys, - by which thofe houfes are exalted above thofe of the vulgar. 6 And it is a fhame for them to boaft of the bearing of thofe - creatures they do not underitand. If they value the an-- tiquity of families and long race of pedigrees, what can be - more worthy their confideration, than all the divers line\& ages of nature? Thefe have more proof of their ancient - defcent than any of them can hhew. For they have all - continued down in a right line, from caufe to effeet, from - the creation to this day. If they hall confine themfelves - to the country, they have this for their cheap diverfion. If they return to the city, this will afford them in every 6 fhop occafions to inform their judgments, and 6 not to devour their estates. If they go forth - to public fervice, to the leading of armies or navies, they - have this for their perpetual counfellor, and very often for - their preferver. There are fo many natural and mechani' cal things, to be accurately obferved by the greateft cap' tains, as the advantages of different arms and ammunitions, - the paffages of rivers, the ftreights of mountains, the courfe - of tides, the figns of weather, the air, the fun, the wind, - and the like; that, though I will not determine the know-- lege of nature to be abfolutely neceffary to the great office - of a general, yet I may venture to affirm, that it will often ' prove a wonderful affiftance and ornament to the courfe of ' glory which he purfues.'

## EAST-INDIA COMPANY. See Companies.

## The laws of England in regard thereto.

No perfon may trade tbither, 'till fufficient fecurity be given to the commiffioners of the cuftoms; that all the goods caufed by them to be there laden, thall be brought, without breaking bulk, to fome port of England: which fecurity the Englifh Eaft-India company are to give under their common feal, after the rate of 25001 . for every 100 tons they are let at, for every thip by them fent out, according to the form prefcribed. 9 and 10 Will. III. cap: 44. fect. 68. - 6 Ann. cap. 3. fect. i. But the South-Sea company may, by confent of the Eaft-India company, under their common feal, fend yearly to Madagafcar four fhips to take in negroes to be tranfported to Buenos Ayres, having firft given fecurity to the Eaft-India company, not to trade for any other groods. ${ }_{1} 3$ Geo. I. cap. 8. fect. I, 2, 3, 6, 7. 3 Geo. II. cap. 14. fect. 15.
The goods imported from thence, muit be brought to foma port of Great-Britain, and be there unladen, and be openly and publickly fold by inch of candle, upon forfeiture of theis
value. 9 and 10 Will. III. cap. 44. fect. 68,-6 Ann. cap 3. fect. 2.

## The united company and corporation impowered by there

 acts, are to have the whole, fole, and exclutive trade to and from thence, and to and from all places between the Cape of Good Hope and ftreights of Magellan for ever: but fubject to redemption of parliament by three years notice, after the 25 th of March 1780; upon the expiration whereof, and repayment to the faid company of the capital ftock or debt of $4,200,0001$. and all arrears of annuities payable in refpect thereof, their right and title to fuch trade are to ceafe and determine. 9 and ro Will. III. cap. 44. fect. 80.-3 Geo. II cap. 14. (ed. $9,10,11$, 12. 17 Geo. II. cap. 17. fect. 2, 3, 14.The trade and corporation of the united company continued, although their fund fhould be redeemed. 10 Ann. cap. 28. fect. I.-I 7 Geo. II. cap. 17. fedt. 12, 15 .

Goods, of the product of the Eaft-Indies, may not be imported into any place belonging to the Britifh crown, unlers fhipped from Great-Britain, on forfeiture of hip and goods, or their value : officers of the cuftoms conniving thereat, or delaping profecution, forfeit 5001 . and rendered incapable. 7 Geo. I. cap. 21 . fect. 9.
None of his majefty's fubjects may contribute to, or promote the eftablifhing, or carrying on any foreign company trading to the Eaft-Indies, from any part of the Aultrian Netherlands, or any other place, upon forfeiture of their thare in fuch company, with treble the value: one third part thereof to the ufe of his majefty, and two thirds to the ufe of the company, if they inform or fue, otherwife one third part of fuch two thirds to the ufe of the informer or fuer. 9 Geo. I. cap. 26. fect. 2.
Bills of complaint may be exhibited for the difcovery of offences, and recovery of the fingle value only, one third part for the ufe of his majelty, and the other two thirds for the ufe of the company, 9 Geo. I. cap. 26. fect. 2.
But, if a commom informer declares his intention of profecution at law, and inftead thereof, the directors Shall chufe to have it commenced by bills of complaint, they are to allow him one third of the aforefaid two thind parts. 9 Geo. I. cap. 26. fect. 3.
Any of his majefty's fubjects accepting of any fhare in truit, or knowing any other fubject to have any intereft or fhare in any foreign company, not difcovering the fame to the united company, within fix months, fhall forfeit treble the value of fuch thares, or one year's imprifonment. 9 Geo. I. cap. 26. fect. 4.
But making a voluntary difcovery to the directors in writing, within the time afore limited, to have a moiety of the forfeiture. 9 Geo. I. cap. 26. fect. 5.
The forfeitures and penalties inflicted by the acts of 9 and 10.Will. III. 6 Ann. 5 Geo. I. and thefe acts may he pro-
fecuted by the attorney-general; the united company, or any officer of the cuftoms: one third part to be for the ufe of his majefty, one third to the ufe of the company, and the other to the ufe of the officers. 7 Geo. I. cap. 21. fect. 6.3 Geo. II. cap. I4. fect. 9.
The united company may export ftores, provifions, utenfils of war, and neceffaries for their garrifons and fertlements free of duty, provided the duty would not have exceeded 3001 . in any one year. 7 Geo. I. cap. 21. fect. 13 .
A capias in the-firft procefs, may be iffued for offences againft any att for the encouraging and fecuring the lawful trade thither. 9 Geo. I. cap. 26. fect. 8.
The duty of 5 l . per cent, for the mąintenance of ambaffadors, \&c. is, after 29 September 1714, repealed for goods imported from thence by the Engliih company. 9 and ro Will. III. cap. 44. fect. 75, 76, 77.-6 Ann, cap. 17. fect. 8.
Wrought filks, Bengals and ftuffs, mixed with filk or herba, of the manufacture of Eaft-India, China, or Perfia, and cal licoes printed, painted, ftained, or dyed there, prohibited to be worn in Great-Britain; and are, upon importation, to pay only the half fubfidy. II and 12 Will. III. cap. Ic. fect. 1, Io.
Such goods to be imported into the port of London only; and there regularly entered, upon forfeiture, and 500 J. II and 12 Will. III, cap. Io. fect. 3 .
After entry, to be fecured in proper warehoures, approved by the commifioners of the cuftoms; and not to be taken thence but in order for exportation, and until fufficient fecurity be given accordingly.
Such fecurity may be difcharged, upon certificate under the common feal of the chief magiffrate, or under the hands and feals of two known Britifh merchants, at the place where landed, teftifying the fame, or upon proof that the goods were taken by enemies or perihed at fea. II and in Will. III. cap. 1o. fect. 2.

Such bonds not profecuted within three years, nor judgment obtained within two years after profecution, void. 8 Ann. cap. 13. fect. $24,25$.
Officers refufing to deliver them up accordingly, are to pay damage and treble damages. 8 Ann. cap. 13. fect. 24, 25. Proprietors may affix one lock to every warehoufe, and may view, fort, or deliver fuch goods for exportation, in the prefence of the warehoufe-keeper, who is to attend at all feafonable times. 11 and 12 Will. III- cap. ro. fect. 8.
Found in any place other than in the aforefaid warehoules, are fo feited, and upon feizure mult be carried to the next cuftom-houfe, and, after condemnation, are to be publickly fold by the candle for exportation, the buyers giving fecurity accordingly: one third part of the produce of fuch fale to be paid to the king, and the other two thirds to the feizer or profecutor. 11 and 12 Will. III. cap. Io. fect. 2.
The perfons knowingly harbouring or felling fuch goods, are likewife to forfeit 200 I . one third to the king, two thirds to the profecutor. 11 and 12 Will. III. cap. 10. § 2.
The place of the manufacture difputed, the proof to lie upon the owner. II and I2 Will. III. cap. Ip. §4.
Warchoufe-keepers are to enter in a book eyery cheft, bale, and number of pieces therein contained, brought into, and carried out of the aforefaid warehoufes; and every fix months tranfmit to the commifioners of the cuftoms, upon oath, an exact account thereof, and of what are then remaining, in order to be by them laid before the parliament in the firft week of every feffion. 11 and 12 Will. III. cap. 10. § 6.
Within one month after the aforefaid account has been tranfmitted, the commiffioners are to caufe the books and warehoules to be infpected, and the account examined; and, if it appears that any goods have been illegally delivered, the warehoufe-keeper is to forfeit the value thereof, and 500 I . and be difabled from any public employment. II and 12 Will. III. cap. ıo. § 6 .
Eaft-India unrated goads, callicoes, China ware, and drugs of the product of Eaft-India, or China, landed or taken out of any thip before entry, and fecurity of the duties, or without a warrant from the officers, are forfeited, or their value, two thirds to the ufe of his majefty, who is to bear the charges of profecution, and one third to the feizer, or fuer. 2 and 3 Ann. cap. 9. §8. 3 and 4 Ann. cap. 4 . § I $I$. Wrought filks, Bengals, and ftuffs mixed with filk, or herba, of the manufacture of Perfia, China, or Eaft-India, or callicoes painted, dyed, printed, ftained there, imported into this kingdom, and fecured in warehoufes (purfuant to 11 and 12 Will. III. cap. ro.) and appearing, upon examination by the proper officer, to be ftained or damaged, or unfit for foreign markets, unlefs cleaned and refrefhed, dyed, glazed, or calendered, may, by leave of the commiffioners of the cultoms, be taken out to be fo manufactured, under the care and in the cuftody of an officer, appointed by them, bond being firft given in double the value, to return then again within the time the commiffioners fhall think reafonable to limit.
The officer to be paid for his trouble by the perfon at whofe requeft the goods are taken out ; and anv difpute arifing about his allowance, is to be determined by the comaiffoners. 15 and 16 Geo. I. cap. 3 1. § 9.

## EAS

## EAS

The warehonfe-keeper, in the account of the goods received into, and delivered out of the warehoufe (which he is directed to keep, and tranfmit to the commiffioners upon oath every fix months, by 11 and 12 Will. III. cap. 10.) is to infert an account of all goods delivered out to be cleared, $\& c$. in purfuance of this act, and of what is returned to the warehoufe, with the days and times when, and of what is remaining in the care and cuftody of the officer of the warehoufe. 15 and 16 Geo. II. Eap. $2 \mathrm{I} . § 10$.
Any officer entrufted with the care and cuftody of the goods delivered out, and not returning them again to the warehoufe, is to forfeit the value of the goods, and 5001 . and be for ever difabled from any public employment for the future. 15 and 16 Geo. II. cap. 3I. § It.

## Eaft-India goods prohibited.

* Wrought filks, Bengal, and ftuffs mixed with filk or herba, of the manufacture of Perfia, China, or Eaft-India, and callicoes painted, dyed, printed, or fained there, which bave been feized as forfeited, being, after condemnation, to be fold for exportation only; therefore the exporter, befides paffing an entry as for other goods, muft, before hipping, give fecurity for the due exportation.
* 11 and 12 Will. III. cap. $10 . \$ 2$.

## Thomas Brcoks.

Three pieces of Indian taffeties Four Indiandamalk night-gowbs Condemned in Michaelmas One piece of chertiderry Nine remnants of chints Seven pieces of pelongs

A bond for the exportation of prohibited Eaf-Indid, \$c. goods.
Noverint univerfi, \&c.
Whereas by an act of parliament made in the IIth and 12 th years of the reign of king William III. intitled, An ACt for the more effectual employing the poor, by encouraging the manufactures of this kingdom, it is, amangtt other things, enacted, That all wrought filles, Bengais, and ftuffs mixed with filk or herba, of the manufacture of Perfia, Cbina, or Eaf-India, and a!l callicoes painted, dyed, printed, or ftained there, which thall be feized as forfeited by virtue of that agt, fhall be carried to the next cuftom-houfe, and, after condemnation, fhall be fold for exportation : and whereas the above-bounden Thomas Brooks did, on the 28th day of January laft, buy, at a public fale at the cuftom houfe of the port of Southampton, three pieces of Indian taffety, four Indian damafk night gowns, one piece of cherriderry, nine remnants of chints, feven pieces of pelongs, feized by A. B. and condemned in his majefty's court of Exchequer in Michaelmas term 1730, (being of the fpecies and manufacture in the faid act mentioned) and this day entered outwards in his name, on board the Goodfellow of Hull, William Miller mafter, for Rotterdam.

* Now the condition of this obligation is fuch, That if, in purfuance of the faid act, the faid goods, and every part thereof, hall be really and truly exported into parts beyond the feas, and no part thereof be relanded, or unfhipped, with intent to be relanded in any part of Great-Britain: and, if the above-bounden Thomas Brooks and William Miller thall likewife bring a * certificate under the common feal of the chief magiftrate, in any place or places beyond the feas, or under the hands and feals of two known Englifh merchants upon the place where the faid goods fhatl be landed, teltifying, that fuch goods, and every part thereof, were there landed; or, in cafe fuch goods thall be taken by enemies, or perith in the feas, thall make due proof thereof by credible perfons, before the commiffioners of his majefty's cuftoms: then this obligation to be void, or elfe to remain in full force and virtue.

11 and 12 Will. III. cap. $10 . \$ 2$.
But, if the goods are to be exported to Ireland, then that part of the bond which is inferted after this mark *, muft be made as follows :
And whereas by a claule in an act made in the fifth year of the reign of his late majefty, intitled, * An act againft the clandeftine running of uncuftomed goods, and, for the more effectual preventing of frauds relating to the cuftoms, it is enaeted, That no bond given for the exportation of coffee, tea, or other certificate goods exported to Ireland, fhall be delivered up until a certificate fhall be produced under the hands and feals of the collector, comptroller, and furveyor of the cuftoms, of fome port in Ireland, or any two of them.

* 5 Geo. I. cap. If. §5. 9 Geo. I. cap. 8. §8.

Now the condition of this obligation is fuch, That if, in purfuance of the faid acts, the faid goods, and every part thereof, Thall be really and truly exported into fome port in Ireland,
and no part relanded or unfhipped with intent to be relanded in any part of Great-Britain: and, if the above-bounden Thomas Brooks and William Miller fhall likewife, in firs months after the date hereof, produce a certificate under the hands and feals of the collector, comptroller, and furveyor of the cuftoms, of fome port in Ireland, or any two of them, where the faid Goods thall be landed, teflifying that the faid goods, and every part thereof, were there landed; or thall make proof by credible perfons, before the commifioners of his majefty's cuftoms, that fuch goods were taken by enemies, or perifhed in the feas: then this obligation to be void, or elle to remain in full force and virtue.

Thomas Brooks, ${ }^{*}$ William Miller. *
Sealed and delivered in prefence of
A. B. Collector.

## B. C. Comptroller.

## A thort hiftory of the Eaft-India company.

This company is the moft flourifing trading company in the kingdom, as likewife one of the greateft in Europe for wealth, power, and immunities; which appears by the fhips of burden they conitantly employ, the beneficial fettlements they have abroad, their large magazines and forehoufes for merchandizes, and fales of goods at home, with the particular, laws and flatutes made in their favour.
This corporation was originally formed towards the latter end of the reign of queen Elizabeth, their charter bearing date in 1599. Their charter was renewed by king James I. and alfo by Charles II. in 1662, who added latgely to therr privi-leges.-This is the foundation of the company, and was confirmed by king James II.
The fubfriptions, or fhares, in this company, were only of 50 l. originally; the directors having a confiderable dividend, to make in 1076, it was judged eligible to add the profits of the fock, inftead of withdrawing them; whereby the fhares were doubled, and became advanced from 501 . to 1001.
The firft capital of this company was no more than $369,89 \mathrm{Il} .5 \mathrm{~s}$. which, being doubled by this expedient, amounted to 739,782 l. Io s. which, if 963,639 l. the profits of the company to the year 1685, be added, the whole ftock will be $1,703,4221$.
The company fuftaining loffes by the Dutch in India, and by the Great Mogul, began to decline at the Revolution.--The war with France put it into fo defperate a condition, that, appearing fcarc epoffible to be fupported, a new one was erected.
The rife of this new company was occafioned by the great cafe of the old one being taken into confideration by the parliament, which cafe had been depending fome years.-- Be caufe of it's intricacy, it had been firft referred by the parliament to the king, and by hom back to the parliament again in the year 1698; when the old company offering to advance 700,0001 . at 4 per cent. for the fe, vice of the government, in cafe the trade to India might be fettled on them, exclufive of all others, the parliament feemed inclined to embrace their propofals.
In the interim, however, another body of merchants, of whom Mr Sheperd was the chief, and who were fupported by Mr Montague, chancellor of the Exchequer, propoied to the houfe of commons to raife two millions, at 8 per cent. upon condition that the trade to India'might be fertled on the fubfribers, exclufive of all others: they propofed alfo, that thefe fublcribers fhould not be obliged to trade in a joint ftock; but, if any members of them hould afterwards defire to be incorporated, a charter fhould be granted to them for that purpofe.
The parliament judged this new overture not only to be more advantageous to the government, but alfo very likely to fettle this controverted trade on a better foundation than it was on before: wherefore a bill was brought in for fettling the trade to the Eaft-lindies, according to thofe limitations, and fome further refolutions...-In confequence of which, the old EaftIndia company prefented a petition agatnft this bill; which, notwithfanding, was paffed in favour of the new conpany, who obtained a charter of incorporation, dated Sepiember 5, 1698, by the name of 'The General Society intitied to the s advantages given by an act of parliament for advancing a fum - not exceeding two millions, for the fervice of the crown of - England.' Whereby the fum total of all the fubforiptions was made the principal fock of the corporation; and the new company became invefted with the fame privileges as were granted to the old company by the clarter of king Charles II. However, the old company was by the act indulged with leave to trade to the Indies until Michaelmas 170 I.
The fund of this new company became fo confiderable, and fubfriptions were carried on with fuch facility, that, in lefs than two years, the company put to fea 40 Chips equipped for it's commerce; which was double the number employed by the old company in the moft flourifhing times of it's traffick; and they fent annually, at leaft, a million fterling in fpecie to the Indies, whereas the old company had never fent above $500,000 \mathrm{l}$.

## E A S

The two companies fubfifted a few years in a feparate ftate, when, having a due regard to their common interefts, and for the prevention of feveral inconveniencies that might otherwife have happened, both to themfelves and the nation in eneral, they agreed upon feveral articles for their union.
Accordingly, in the year 1702, a new charter of union was granted the two companies by queen Anne, under the name of The United company of Merchants trading to theEaft-Indies, which was effentially the fame with thofe of king Charles and king William; becaufe, by the union they adopted all the regulations made for the government of the old company: fo that the united company fhould rather be deemed the old company continued, than a corporation erected upon a different eftablifhment. Which charter being fince expired, another, with new powers, was granted them, 'till 1730; and, in the 17 th year of king George II. was continued until the 25th of March, 1780; when, on three years notice, and repayment of the capital ftock borrowed by the government, and the annuities, the company's fight to the fole and exclufive trade to the Eaft-Indies is to ceafe and determine.
To the 2,000,000l. advanced by the new company to William III. the united company, in'the 6th year of queen Anne, lent the government $1,200,000$. mote, which made their whole loan amount to $3,200,000$. being, what may properly be called, the capital fock of the company: the firf loan of $2,000,0001$. wars fecured by the government, out of the duties upon falt, and the additional ftamp duties, granted in the gth and roth years of William III. cbargeable with the payment of 160,000 . as a yearly fund for paying the Intereft at 8 per cent. but by the act of the $3^{\text {d }}$ of George II. this annuity of 160,0001 . was reduced to 128,0001 . and tranfferred as a charge upon the aggregate fund ; and, in 1749 , it was reduced to $3 \frac{1}{2}$ per cent. until Chriftmas 1757, and after that to 3 per cent. But, befides this $3,200,000$, there is a million more due by the public to this company, being lent by them at 3 per cent. in the faid 17 th year of king George II.
In regard to the ceconomy and policy of this company, all perfons, without exception, are admitted members thereof, as well foreigners as natives, men and women; with this circumftance, that 5001 . in the flock of the company, gives the owner a vote in the general courts, and 2000l. qualifies him to be chofen a director. The directors are 24 in number, including the chairman and deputy chairman, who may be reelected for four years fucceffively. They have falaries of 1501 . a year, and the chairman of 200 l . The meetings, or courts of directors, are to be held, at leaft, once a week; but are commonly oftener, being fummoned as occafion requires,
Out of the body of direchors are chofen divers committees, who have the peculiar infpection of certain branches of the company's bufinefs; as the committee of correfpondence, committee of buying; committee of the treafury, committee of warehoufes, committee of thipping, committee of accounts, committee of private trade, committee of the houfe, and committee to pravent the growth of private trade.
This company is not only granted an exclufive privilege of trade to the Indies, and other extraordinary conceffions from the government, by their charter, but there are feveral acts of parliament made in it's behalf, whereby all the Britifh fubjects are reftrained from going to the Eaft-Indies, but in virtue of a licence granted by the company, to fuch who are called free merchants, and trade in the Indies from port to port.-The Britifh fubjects, likewife, are prohibited from procuring, or acting under any foreign commiffion, for failing to, or trading there; or from fubfcribing to, or promoting any foreign company, for trading there, under fevere penalties.

## REMARKs.

Under the article Dutch East-India Company, the reader will pleafe to obferve, that we have hewn what extraordinary power and dominion that republic hath obtained in Afia, in confequence of that noble and glorious eftablifhment; and which hath not a little contributed to augment the empire of that fate in Europe alfo. From confidering what has been faid, under the articles France, Portuguese East-India Company, and that of the East-India Trade in general, we thall be able to make a tolerable judgment, whether it is, or is not, interefting for England to continue to uphold and maintain their hare in this commerce, by means of a well conftituted company, with the like, or more extenfive privileges and immunities, than what the prefent Eaft-India company of his kingdom enjoys. And, without having a pretty minute and circumftantial account of the flate of the trade of the other European potentates in Afra, and all the emolument and empire they derive therefrom, we cannot, it is prefumed, be capable of judging, as we ought, of this important matter. Some have not fcrupled to fuggeft, that the trade of the Eaft Indies is a lofing trade to Europe in general; and even, that no nation ever gains by it. If this be the cafe, it is fomething extraordinary, that all the principal European potentates hould be fo infenfible to their intereft, as zealoully to cultivate and promote a traffic that is detrimental to them.
it is ftill more to be admired, if this is fuch a lofing and injurious trade, that, neverthelefs, new fates are ardently ftruggling to obtain a footing in it : they all carry the fame on too, by the fame means; that is to fay, by joint-ftock exclufive companies, with fuch privileges and immunities as fhall give them a degree of weight and influence, in that part of the world, in fome meafure proportionate to thofe which other European powers poffers; in order to maintain fuch a balance of trade and intereft among the natives, as may prevent any one potentate engroffing the whole to themfelves. For, was the whole of this commerce in the hands of any one European ftate, however ruinous fome may imagine this trade to be, it feems more likely to enable fuch fate to gain the univerfal empire, and maftery over all Europe, and thereby give law to the whole world.
Wherefore, it feems to be for the intereft of all the chief powers of Europe, not to permit any one of them to obtain too great an afcendant in this traffic, but to endeavour to take fome fhare therein. The queftion then lies, which are the moft eligible meafures for a fate to purfue to that end? While all other nations make ufe of powerful joint-ftock corporations, and thofe endowed with weighty immunities and encouragements from their refpective fates; it does not feem politic, in any of the reft, to reject the like meafures; it does not appear very likely, that a regulated company, without a joint-ftock, fhould fo effectually ballance the weight of many others in the Indies with large joint capitals and exclufive privileges; much lefs, perhaps, would they be capable of making any head againft them, or participating of any tolerable fhare of that commerce, provided the trade was abfolutely free and open to all the fubjects of any one trading ftate, with a regulated company, without a joint tradingfund, and without a degree of ftrength and dominion, by forts, caftles, \&c. fomething proportionate to thofe of other powers: no trading nation, without thofe advantages in India, could be upon an equality with thofe who pofleffed them; and confequently could not be fuppofed to carry on fo lucrative a commerce. The better to illuftrate my meaning, permit me to make ufe of a familiar comparifon, derived from the prefent militaify fyftem, that is about to take place all over Europe: the king of Pruffia, if I remember right, was the firft prince who introduced a new military difcipline in his armies, with a view, on occafion, to give them fuperior advantages thereby over an enemy, in the time of action.-When other powers, who are upon the qui vive, were fenfible of the inequality they might have in combat with armies, difciplined in a manner fo highly fuperior it feems, do we not find that the other powers of Europe are ftriking into the fame military exercife, in order to be upon an equality, in regard to difcipline? And, if the fame principle is not purfued, with refpect to the commercial intereft of ftates; if thofe who are inferior, in point of policy in conducting any branch of trade, to others, can never expect to be equal to them in profperity therein: on the contrary, they muft, and will ever be behind-hand with thofe in fuccefs, who are beforeband with them in power, wifdom, and good conduct.
The principle objection againft our Eaft-India company is, that it exports our filver; but, as it has been thewn under the article Bullion, and it's references, and will be further thewn, under the head of Money, that it is for the Intereft of the kingdom to allow a free exportation both of gold and filver, the force of this objection, we apprehend, is pretty well obviated.
Money, as a proper medium, is certainly abfolutely neceflary to the carrying on trade, for, where that fails, men cannot buy, and trade immediately ftagnates; credit, which is to fupply that defect, is only the expectation and affurance of money, when it is demanded: neverthelefs, it is a great miftake, perhaps, though a very common one, to think, that money is the caufe of a good or bad trade; fince it is not money that fo much influences trade, as it is trade that difcovers the money, which is the medium whereby trade is the more conveniently managed, but not the fole fource from whence it arifes: thus, when trade is quick and brifk, then money, the medium, is more in view than when it is otherwife; and then, by changing hands oftener, an hundred pounds makes as great an appearance in commerce as a much greater fum.
No private trader, or company, fends money or bullion to other countries, but with a view to gain the more by it. It was a maxim of the wife prince Ferdinand the Firft, great duke of Tufcany, who raifed the trade of his fubjects to an incredible height from nothing, to lend them money, and permit them to fend the fame out of his dominions, in the way of commerce. Mr. Mun, a very Ikilful and eminent Englifh merchant, tells us, that he himfelf experienced the duke's iberality, upon the like occafion, who lent him no lefs than 40,000 crowns gratis, although he knew that he fhould fend the whole away, and that in fpecie too, to Turkey, to purchafe merchandize; the duke being well affired, fays he, that in the courfe of that trade, the fame would return again, ace cording to the Italian proverb, with a duck in the mouth. This judicious old gentleman further informs us, that, by this policy, the duke encouraged trade to fuch a degree, that,
of his own knowlege, Leghorn, which was only a poor little town, became a fair and ftrong city; being, in his time, become the moft famous place of commerce in all Chriftendom. Well, but if this commerce, by the re-exportation of the merchandizes we import from thence, is not only beneficial to the company, but to the general trade and navigation of the kingdom by our re-exportation of Eaft-India merchandize; yet it will be afked, whether it would not prove highly more fo, if it was laid abfolutely free and open to all his majefty's fubjects; experience manifefting, that freedom of trade, and the annihilation of all monopolies, will ever produce greater increafe and profperity: This maxim, in the general, is allowed to be found policy; but in the cafe before us, it feems to be a matter of no little doubt, in relation to the trade of the Eaft-Indies. For,
Although the government thould be at the expence of fupporting and maintaining forts and cafles there, or laid a duty upon the trade on all imports or exports, ad valorem; yet, it is greatly to be feared, that fuch meafures would not enable the Britilh nation to maintain that weight of influence, dignity, and commerce, that either the Dutch, the French, or the Portuguefe, at prefent do: nay, fuch is the peculiar nature of this traffic, that a mere military force, capable only of fupporting forts and gariifons, might, from the peculiarity of their conduct, be more liable to deftroy, than cultivate and cement commercial friendihips, upon a footing equal to thofe who wifely conltitute a proper trading intereft, at the head of their military, which is abfolutely requifite upon thefe occafions. A regulated company, duly fupported by a Britifh government, might certainly be very well devifed for the temporary fupport of a general freedom of trade; but, that the nation could permanently preferve fuch a diftant commerce, any thing like what the meaneft of our rivals therein do, I have never yet feen fatisfactorily proved to the kingdom; and, until it is, I muft, for my own part, always be an advocate for the continuance of the Eaft-India company, rather with additional power, privileges, and immunities, than any diminution of thofe which they at prefent poffers. Nay, with all deference to the judgment of our fuperiors, in matters of this nature, I mult conferf, that I am at a lofs to difcern the difadvantage that could arife to thefe kingdoms, if our Eaft-India company were equally powerful in Afia, even with that of the Dutch; which I have lately fhewn to have been, and ftill continues to be, attended with unfpeakable commercial emolument to theHollanders. See Dutch East-lndiaCompany, It is frequently faid, that our Eaft-India company does not trade and exert themfelves to the full extent of their charter; but that, if private traders had the un-reftrained liberty to drive this trade to the full latitude it would admit of, they would leave no part of the Indies untraded to; efpecially all that are within the limits and jurifdiction of the Britif rights.
In regard to the company's not profecuting this commerce to its extent, as is pretended that the fame will admit of, it canno proceed from a deficiency of capital or credit; and what reafon have we to believe, that they fhould be backwards in augmenting their gains to the utmoft degree in their power? A company, it is faid, cannot trade at fo fmall an expence, and therefore cannot afford to trade for fo fmall profit, as private traders can. This is allowed to be true, in the general; but, before this matter comes to be confidered, the previou queftion is, whether we fhould enjoy any thare at all in this trade, if not by virtue of the company's forts and fettlements? The extenfive correfpondence, and high credit of this company in the Indies, will certainly capacitate them to traffic in every corner of that part of the world, within their rights and privileges, where they can be gainers; and to do fo where they muft be lofers, would fhew little regard to the intereft of the proprietors: but the point, if I am rightly informed, Jies here; fuch branches of trade, by which the company either cannot gain at all by, or are not fo gainful as others they prefer to engage in, are actually carried on by private Britinh merchants, under the company'slicence and authority; nor is the company very fcrupulous, to my certain knowlege, in granting fuch licences to perfons of reputation; they have readily granted one to a gentleman I had the honour, a few years fince, to recommend to fome of the directors of that company.
We are aware of the difference between a general freedom to carry on a trade from Europe to the Eaft-Indies by Britifh fubjects, and a licence to carry on a coafting trade only in the Indies; but thofe free merchants who do obtain fuch licences, and only traffic in fuch of our own commodities as the company fhall export, very amply fupply moft, if not all places therewith, which are actually within the jurifdiction of the company, and fometimes, perhaps, without it. It is true there are fome duties paid to the company, in aid of fupporting their forts and fettlements; but confiderably more, we may prefume, would be laid, for that purpofe, upon all free Britifh traders from Europe, fhould that commerce be ever made free and open to all his majefty's fubjects.
From what we have urged, we would not be underftood to fo much as infinuate, that the toleration granted to thofe licenfed
Voli.
merchants, can be attended with fuch advantages to our private traders, as they might poffibly reap, under the circumftances of an unreftrained free and open traffic to Afia from Europe, and all other parts of the world: the difference, we believe, would be very great, as well in point of intereft to the kingdom in general, as to the feparate traders in particular. But what is to be dreaded is, that if we fhould be induced to lay fo diftant a trade open, while our formidable rivals therein carry the fame on by joint-ftock companies, with great public encourage ments, privileges, and immunities, we fhould lofe all thar therein whatfoever. However, when other European nation ${ }^{\text {e }}$ lay their Eaft-India trades entirely open to their refpective fubjects, we may venture, I prefume, to follow their example without hazard; and 'till then, it feems, in my humble judgement, to be as weak and abfurd, as it would be to fend a body of unarmed and unammunitioned men into the field; againft the like number, well fupplied with artillery, arms, and ammunition
To purfue this point a degree further, in regard to the continuance of this company.
The trade to the Eaft-Indies is of fuch a nature, that it is of the laft confequence to the nation to have, from time to time, diftinet accounts of its ftate and condition: which could not be fo well, or at leaft not fo eafily received, if it was not managed by a joint-ftock company; as on the other hand, the neceffary inftructions and regulations could not, with fuch facility, be any other way conveyed. The conduct of all other nations, who, whenever they have adventured to interfere in this trade, have conftantly put it under the management of fuch a company. And whoever, thall confider how things are to be diftributed and conducted in the Indies, and what a connection and dependency there is between the commerce of the feveral countries included within the extent of the Eaft-India company's charter, will eafily difcern, that if the whole trade were in the hands of a disjointed number of feparate traders; and not under the management and direction of a body of men, converfant and thoroughly experienced therein; and not only capable of giving judicious directions, but duly impowered to fee thofe directions carried into execution; it does not feem very probable that this commerce fhould continue profperous; or even that it fhould at all fubfift.
It may alfo be conceived, that, if the poffefion of the forts and fettlements were in the crown, and the management of the trade only in the hands of the company, it could not but be attended with numberlefs inconveniences, as, indeed, experience fhewed, in the reign of king Charles II. when Bombay came to the crown by his marriage with the Infanta of Portugal ; and, therefore, both that illand, and the ifland of St Helena, have been granted to the Eaft-India company, for the fake of public conveniency.
We may likewife difcover, from the diforder of the company's affairs in that reign, and in the reign of king James, that it is highly detrimental to this commerce, and to the benefits refulting from thence to the nation, that the company fhould be immediately under the power of the crown, fo as to ftand indebted for all encouragement, and to bave no other refource in cafe of grievances, than what they can draw from royal power; for this on the one hand renders trade precarious, and, on the other, interefts a great body of people in the fupport of the prerogative, which might be attended with confequences injurious to the conftitution.
Experience has effectually fhewn the mifchiefs which flowed from the fubfiftence of two Eaft-India companies at the fame time; fo great they were, that both companies foon became fenfible, that nothing, but the union of their interefts, could poffibly afford a proper remedy. Yet we conceive, that the laying this trade open, which is what hath been often contended for, would be a fcheme big with ftill greater evils and inconveniencies, becaufe it would be at the bottom a multiplication of companies, all acting upon feparate interefts, which would certainly be perpetually clafhing and interfering with each other, and give the powerful and united trading intereft of other nations opportunities to deftroy them all, and for ever extirpate Britons from the whole Afiatic traffic. So that as all other countries carry on this trade by joint-ftock opulent companies, endowed with weighty privileges by their refpective ftates, there does not feem any other way for us to preferve the trade; we muft either fupport the Eaft-India company, or refolve to give up our commerce to the EaftIndies, there being no middle courfe for us to fteer; and, from a juft fenfe of this, we may prefume it was, that fo much has been done by parliament in favour of this company, and fo many new powers granted them.
But, notwithftanding this, it is for the intereft of the public as well as of the proprietors of the company, that a watchful eye thould be had over this company, left thofe privileges and immunities fhould be abufed; left the commerce fhould not be conducted as well for the interefts of the nation, as that of the conftituents of the corporation. And, if any reafonable meafures can be fuggefted for the advancement of thefe reciprocal interefts, they fhould be laid before the legiflature: if the company do not extend their traffic to that pitch their charter will admit, whereby the nation and proprietors may
receive

## EAS

receive the full benefit intended by fuch a conflituted company: if this is owing to want of greater powers and immunities than what they at prefent pollefs, it is for the intereft of the public that thefe powers fhould be enlarged: or, if it can be made appear, that many beneficial branches of trade may be carried on within the limits of their charter, even by feparate traders, which the company do not think worth their while to intermeddle with: if this, I fay, can be fully made appear, there is no reafon why the nation fhould lofe the benefit thereof, if they can be proved to be nationally, as well as privately beneficial. But, if on the other band, fuch branches of the Eaft-India trade, as the company do not engage in, would prove detrimental rather than otherwife to the kingdom, the public is ftill the more indebted to the company for neglecting fuch trade.
Upon the fuppofition that private traders could make it appear, that they could vend in the Eaft-Indies much larger quantities of our native Britilh commodities than the campany do, and that without importing much larger quantities of India produce and manufactures, in confequence thereof, for home confumption, and with more and more far gainful reexportation: if that proportion of Eaft-India commerce, faid to be neglected by the company, can be propofed to be carried on by private traders to the intereft of the nation, and noway detrimental to the company, why do not private traders apply to parliament with fuch propofition? If fuch propofition was no way injurious to the interefts of the company, and fuch traders would chufe to trade to certain places, and to a certain degree fromEurope, under the licence and protection of the company, there is no reafon to believe, but a Britifh parliament would be induced to pay all due attention to fuch propofition; provided fuch feparate traders would make fome reafonable allowance to the company for fuch their licence and protection. But, if there branches of trade, propofed to be carried on by private traders, fhould prove no additional advantage to the nation, but only take fo much profit out of the fcale of the company, as they at prefent bring into the kingdom, where would be the greater national emolument by fuch propofition? As many of the gentlemen who are in the direction of that honourable company, have, by their long experience and refidence abroad, obtained a perfect knowledge of the Eaft-India commerce; fo, if any greater advantages can be propofed to be made by the company, in conjunction with thofe of the public, we may prefume, from the known honour, integrity, and judgment of thefe gentlemen, they would not negleat them. But, if there fhould be any beneficial branches of commerce capable of being carried on by the company, and which may have efcaped the cagnizance of thefe honourable gentlemen, I am perfuaded that they would not be unmindful, if any thing fhould be candidly laid before them for the intereft of the trade of the company, in conjunction with that of the nation, and private traders alfo.
If, upon due examination, it fhould be found practicable for the company to open a direct and immediate correfpondence, in order to take off a greater quantity of our commodities, as hath been fuggefted, either by the Cape of Good Hope or by the Streights of Magellan, or by any other reafonable meafures, with the fouthern continent; it is reafonable, that any thing of this kind fhould be properly recommended to the company; and, if found unexceptionable, in the opinion of competent judges, they thould be obliged to make fuch attempts; or, if they refufed, that any private perfons might be allowed to undertake them, and have fuitable encouragements given them by the public. For it mult be allowed, that this, and all other companies, are but fo many corporations endowed with powers in trutt for the public, for which they are, and muft be accountable to the public; and alfo be liable to fuch alterations, extenfions, and reftrictions, as may render them more ferviceable to the public.
The popular objections againft this company, are as follow: The firft is grounded on the exportation of bullion, which is ftated thus: the common meafure of all things in a commercial way, is filver, and confequently the great criterion of the wealth of the nation, is her drawing this common meafure from other nations; but the Ealt-India trade is carried on by exporting this real, this intrinfic wealth, as it is called by fome, which never returns, but is employed to bring back things that are not neceffary, but mere inftruments of luxury.
Before we proceed to anfwer this objection, which has been done in fome meafure en paflant, it may be requifite previoully to oblerve, that the neceffaries of life are in every country, at leaft in every babitable country : and it is to what fome call luxury, that all trade whatever is owing: fo that, if we admit this principle, we fhould not only drink fage inftead of green tea, but make ufe of honey inftead of fugar. We fhould, in thort, endeavour to cultivate and improve the produce of our own country, live upon it, and leave all the reft of the world to hift for itfelf.
How juft a maxim this would be, for people who inhabit an ifland, and how reafonable it is for thofe who derived moft of the bleflings they enjoy from trade and maritime power to talk thus, we leave the reader to judge. But, if once we fet this objection fo far afide, as to allow that trade is a commendable thing; that it gives bread to myriads of the human

## E A S

fpecies, and makes the country wherein it flourifhes rich and happy; the particular trade to the Eaft-Indes becomes as defenceable as any other: for, if exporting of bullion does not impoverifh the nation, then there is no weight at all in the objection: that it does not under the circumftances of the prefent Eaft-India trade, may be thus further urged, in corroboration of what we have faid under thefe heads to which we have referred at the beginning of this article.
When the firft charter was granted to the Eaft-India company, this evil was forefeen, and properly guarded againit by a provifo, that the company fhould be obliged to bring in as large a quantity of bullion as they carried out, in the interval between the voyages made, at the rifque of the com. pany. In reality, therefore, there never was any foundation for this complaint, that the quantity of filver in this king. dom fhould be diminifhed by the Eaft-India trade. Bat, by degrees, and as this commerce increafed, inftead of impoverifhing, it has greatly increafed the wealth of this nation, by bringing in on one hand large quantities of filver for the Indian merchandizes re-exported, and detaining here on the other as great fums of money, that muft otherwife have been exported for foreign produce and manufaetures; which would have been worn here, if we had not been better and cheaper fupplied from India.
It has been formerly objected, that the wearing of India piece-goods prejudiced our own woollen and filk manufactures; but this in a great meafure has been cured by the laws paffed for that purpofe. It may not be amifs, however, to obferve, that thefe manufactures are chiefly to be encouraged, which contribute to exportation; fince it is certain, that the cheaper people can be cloathed here, let that cloathing come from where it will, the cheaper they can afford to work: and, it is the cheapnees of labour, that is the great point to be ftudied in a trading nation; for, if we can under-work other nations, we fhall infallibly undermine their trade, and extend our own.
Another objection is, that even the exportation of Indian goods is difadvantageous to the nation, becaufe it is conjectured to leffen the confumption of our own manufactures in thofe countries to which the produce of India is exported: a very ftrong objection this, at firf view, and yet fallacious at the bottom. For this objection fuppofes what is manifeltiy falfe; it fuppofes that it depends upon our exportation, whether the inhabitants of thofe countries to which we fend them, flall wear the manufactures of the Indies or not: but it is notorious, that, if we did not, the Dutch or the French would fupply them therewith; and would not this have the fame effect as to the exclufion of our manufactures? Wherefore the true ftate of the queftion turns here, whether we fhall take their money, or their goods, for Indian commodities, or whether we fhall fubmit to let them lay out that, or part with thofe for Indian commodities, which we might fupply to other people? Is not the truth of this fill further confirmed, from the ardent endeavours of all thofe powers, who are ftruggling to have a direct correfpondence with India, in order to obtain greater quantities of the goods of that country; and does not this manifeftly prove, that the appetites of thofe people for thefe things were fo ftrong, that it was no way in our power to check or correct them?
The fole objection then againft this commerce, that has any real weight, feems to lie here, that it is againit the intereft of the weftern to correfpond with the eaftern part of the world. The reafons brought to prove this are only plaufible, far from conclufive. - It is faid, that the ballance of trade is againft us; that we import the commodities and manufactures of India, and export filver to pay for them. - That this drains Europe to fuch a degree, as that, fince the difcovery of the paffage by the Cape of Good Hope, the Indians have gained from the Europeans upwards of two hundred millions in filver; which immenfe fum they poffefs, while all that we have received from it, is long fince loft and confumed.-This fay fome zealous and fanguine writers, who gencrally overfhoot the mark of truth, fufficiently proves, that it would be for the benefit of the weftern part of the world, if they had no commerce at all with the eaftern; and that it would be an advantage to Europe in general, if the commerce to the Indies were totally abolifhed.
Admitting this to be true, how does it concern and affect us? are we the legiflators of Europe! bave we the fic volo fic jubeo in our power, to compel the Dutch to diffolve their company, and recall their fubjects from the Indies? Can we forbid the French to trade to the Eaft-Indies, or even the powers of Portugal, Sweden, and Denmark, \&c.? Would they not all, and very juftly too, laugh at us all for our prefumption? Muft we not then be content to take the world as it lies before us, fince the humour of trading to India cannot be extinguifhed? We, as a trading nation, muft endeavour fo to manage that humour, and fo to conduct that commerce, as that both may turn to our advantage. It certainly is for our intereft not only effequally to maintain and fupport the acquilitions made by our company in that part of the world, but to enable the company to enlarge and extend their power and commerce; while the reft of the world have a tafte for thefe commodities, we muft engage the company to take offas

## E A S

large a quantity of our own produce and manufactures as is poffible : let us alfo duly encourage the exportation of fuch goods and manufactures as the company brings home, as being of great confequence to the trade of the nation: let us at allevents, and by whatever means it can be done, prevent the fmuggling of Indian commodities into thefe kingdoms; for fuch as promote that practice, are the greateft enemies to our commerce, and cannot gain a fingle fhilling without robbing the nation of five.
Upon the whole, it feems evident that our commerce to the Eaft-Indies is one great wheel that moves many other; nor does there appear to be any reafon for diffatisfaction at feeing it managed by an exclufive company, which is now conftituted on a very good bafis for the national interefts; and, though our commerce thither is carried on in this hape, yet it is certainly beneficial to the kingdom in general.Nor do the objections againft the company appear to be of that weight, as fome warm people, who feem, I am afraid, to be too much mifled by the word monopoly, imagine; for 'tis certainly more eligible, that a body of our own fubjects fhould engrofs the advantages arifing from this trade, than that other nations fhould monopolize the whole to themfelves, and leave us no fhare therein: and there is infinitely more realon to believe that this would be the cafe, if this trade was laid open, than while it continues in the hands of 2 powerful and opulent company, whofe affairs are wifely, equitably, and honourably conducted.
It imports us, at this juncture more than ever, to be well informed, and clearly convinced as to thefe things; becaufe moft certain it is, that there never was a conjuncture when the thorough underfanding of them was of fog great confequence to the publicinterefts.
In our confiderations upon the nature of this trade, it fhould never be forgot, that, fince the Europeans have carried it on, their hipping and commerce in general have been much extended; from the time the Portuguefe difcovered the paffage by the Cape of Good Hope, the face of Europe has been entirely changed, and this nation in particular, has grown infinitely more confiderable in compariton of other parts of the world, than it was before we engaged in this commerce. And,
If the trade of the Eaft-Indies has carried out fome millions of our filver wealth, may we not reafonably enough afk, how we came by thofe millions? Has it not been from America and the Weftern Indies! And, how came thefe to be difcovered? Was it not by fearching out a new paffage to the Eaft-Indies? If, therefore, by carrying on the commerce of the Eait-Indies, we have fallen upion another commerce, which has not only fupplied filver fufficient for the Eaft-India trade, but likewife brings in annually an immenfe treafure befides, there can be no pretence for imagining that Europe in general has been, or ever can be, a lofer by carrying on this traffic. Providence feems to exclude thefe narrow notions, and, by dividing the treafures of the world in fuch a manner as to make commerce the intereft of all nations, has provided effectually againft this imaginary evil of trading, 'till we have nothing wherewith to trade.
Befides, the Europeans owe many other great advantages to this commerce in the Eaft; it being the great fupport of the maritime power of Europe, and making us mafters of all the other parts of the globe; who, if it had not been for this maritime power, might long fince have been mafters of us. Let any man confider the wide difference, in point of dominion, number of fubjects, and whatever elfe contributes to magnificence and power, between the little republic of Holland, and the great empires of Turkey, Perfia, and India; and remember, that this commerce bas rendered a company, in that little republic, formidable even to all thofe great and mighty empires, and capable of maintaining herfelf, and protecting her concerns againft them all: thefe facts being duly attended to, do they not irrefragably demonftrate the high importance of this commerce, and that it was a very wife and right meafure to promote and encourage it? Can there be a clearer and ftronger demonftration than this, which is founded on experience as well as reafon? Might not the point be fafely refted here, without further confideration? See the Article Dutch East-India Company, the article France, and East-India Trade in general.
Before we leave this point, we'll take leave only to obferve, that, if the intereft, weight and power of our Eaft-India company can be further promoted in Afia than it is, it certainly muft prove proportionably to the benefit and advantage of the public in general, as well as of the corporation in particular. Nay, if ever the time fhould come, from a change in the circumftances of the European commerce, that it may be judged expedient, by a Britifh legiflature, to lay this trade abfolutely open, the more the Britifh intereft is advanced by the company before fuch a cbange thould take place, would it not tend the more to the intereft of private traders in general, when they fhould take poffeffion of that traffic? That it certainly would, no man who confiders the matter with candor and difpaffion, will gainfay.

The Dutch have done every thing to increafe their dominion in Afia; and, having prodigious numbers of the native inhabitants under their power, have introduced the European cuftoms, modes, and habits among great numbers of them. By which means they have obtained not only a greater vent for European manufactures in general amongft the native Afiatics than any other ftate that trades there, but as great a quantity, perhaps, as they all do together.-Could our EaftIndia company be effectually enabled to bring the natives, in like manner, under their controul and authority, what immenfe quantities of our Britifh commodities and manufactures might we not alfo vend in this Eastera Commerce? Could this be done before the trade fhould be laid open, what unfpeakable emolument would arife to private traders, and to the kingdom in general, in confidcration of fuchadditional profperity to the company?

Further Remarks, how far the Eaft-India company may be inftrumental to increafe the trade of the nation
The mere eftablifhment of forts, fettlements, and factories upon the fea-coalts, do not feem to be fo well calculated for an extenfive commerce, as having populous colonies under dominion; which are governed by principles and maxims fubfervient to the intereft of the mother-country. But, however impracticable it may appear to fome, to increafe the power of our Eaft-India company in Afia, and thereby render them capable of exporting far greater quantities of our native produce and manufactures than they at prefent can; yet there is one very great advantage that this company, I apprehend, may be inftrumental to procure to thefe kingdoms, before ever it's annihilation fhall be thought of; and which, perhaps, never can be accomplifhed, not effectually accomplifhed, but by the means of fo . powerful and opulent a company.
The matter I would humbly prefume only to fuggeft at prefent, is fimply this, viz.
That whereas it is allowed on all hands, that the Inland Trade to Africa hath hitherto been but very triflingly cultivated by any, or all the European powers, who are therein interefted, in comparifon to the extent the fame will admit of: and whereas the principal obftruction hereunto, feems to be the great attention that thefe powers have chofe to give to that unnatural, unjuft, cruel, and barbarous commerce, commonly called the Slave Trade, and the little regard that has been given to a natural, juft, humane, and civilized commerce, with thofe people; and whereas the trade to Africa, with refpect to thefe kingdoms, feems even yet to remain unfettled, as being again, according to report, to be brought under the confideration of parliament: it is humbly propofed:
(1.) That every branch of the trade to Africa, excepting that which is commonly called the flave-trade, fhall be given to the Eaft-India company by act of parliament, with an exclufive privilege for - - years; with fuch other encouragements and immunities as to the wifdom of the leginature fhall feem meet.
(2.) That the forts and cafles in Africa, and every thing thereto appertaining, which belongs to the public, be vefted in the Eaft-India company, and the annual fupport which is now allowed by parliament to the prefent African company, flall be granted to the faid Eaft-India company, in order the better to enable them to fupport and maintain thefe forts and caftles already erected in Africa.
(3.) That any one or more of thofe forts upon the coaft of Africa, except Cape Coaft-Caftle upon the Gold-Coaft, or James Fort in the River Gambia, be vefted in the private and feparate Britifh traders, in order the better to accommodate them, in their carrying on the flave-trade; which forts hall be duly maintained and fupported by the Eaft-India company, at the fated fum of 10,0001 . per annum.
(4.) That the whole flave-trade be left in the hands of the Ceparate Britifh traders; and that the Eaft-India company hall have no toleration whatfoever to interfere therein, with the intereft of the feparate Britifh traders.
(5.) That every other branch of the African Trade fhall be foleiy under the controul, direction, and management of the faid Eaft-India company.
(6.) That the Eaft-India company, when poffeffed of thefe additional powers and privileges, fhall be diftinguifhed by the name of The Royal Eaft-India and African Company, or by whatever other appellation the wifdom of parliament may judge the more eligible.
(7.) The one half of the commodities ad valorem, to be vended in Africa by the faid Royal Eaft-India company, fhall be of Britifh produce and manufacture, and the ocher half of the produce and manufactures of the Ealt-Indies.
(8.) That the faid Royal Eaft-India and African company fhall be obliged to erect - - inland forts and factories at their own expence, in order to facilitate trade between the moft interior parts of Africa and the fea-coalt.

Remarks.
If the whole African trade, except that part commonly called the flave trade, was abfolutely vefted in the Eaft-India com-

## E A S

pany, upon fome reafonable terms and condition, there is no doubt to be made, but that trade would, by means of fa powerful and wealthy a company, be carried on to the very center of that great extended and populous country: and what immenfe quantities of our own, as well as of the EaftIndia commodices, might be vended among thefe people, is not eafy to fay; efpecially if thefe negro people couid be gradually civilized, and brought generally to wear, and otherwife confume the European and Indian commodities. But it can never be expected, without the erection of interior forts and factories; and thofe duly maintained and upheld by a powerful company, with a large joint trading fock, that this trade will ever be encreafed to the degree it is capable of. And, as it would be the intereft of this company to cultivate the inland commerce to the utmoft extent, as having no manner of concern with the flave trade, there is all reafon to believe, that where we now export twenty fillings worth of commodities to Africa, we might then perhaps export one hundred pounds worth. There are confiderable quantities of the Eaft-India goods at prefent fent to Africa; but, if that company were fo fettled there as to increafe the commerce in that part of the world, to the degree it is certainly capable of, the confumption of thofe would certainly, as well as that of Britilh commodities in general, increafe beyond imagination. And we very well know, that thofe people have the valuable commodities of ivory, gums, dyeing woods, gold, \&c. \&c. and doubtlefs, when the trade came to be extended to the degree it will admit of, there would be difcovered an infinite variety of trafficable particulars, with which the Europeans at prefent are totally unacquainted.
So well conltituted a company, fupported for half a century only, with fuch powers and privileges as before intimated, or with fuch others as hall make it for the intereft of the company to drive the inland trade to it's utmoft height, would be inftrumental, we may reafonably believe, to make Britons, as well acquainted with the interior territories of that extended country, as they at prefent are with the coaft only. So that if the wifdom of the nation fhould, at any time hereafter, judge it for the public interefts to deprive this company of it's exclufive Afiatic privilege of trade, and lay the trade quite open; would not the feparate traders and the public in general, reap unfpeakably greater advantage by the commerce of Africa, than they ever poffibly can do, if fome powerful company does not undertake the eftablifhment of this very extenfive and gainful branch of commerce?
Nor do we apprehend that feparate traders can have the leaft reafon to complain, or object againft the eftablifhment of fuch an extended commerce into the heart of Africa, as may eafily be effectuated by virtue of fo well conftituted a company, and perbaps, by no other meafures whatfoever. Having endeavoured, to the beft of my power and ability, to inform myfelf, in regard to what has been urged againft every kind of trading company that has exifted in this nation; I am not unapprized of what may be objected againft my own propofition, and particularly what may be offered from the conpideration of the mifcarriage of the late Royal African company: from which fome probably may pleafe to argue, that it is impoffible for any kind of African company long to fubfift, without annihilation of their trading capital.
But, with all deference to the judgment of thofe who are pleafed to think fo, I would beg leave to fubmit a thort paragraph or two to their impartial reflection.--- With refpect to this late company, it mult be obferved, that they were never bettomed upon a parliamentary conftitution ; that they were ever in the precarious fituation of depending only upon the royal prerogative, without any parliamentary fanction. 'T is no wonder, therefore, that they could never raile above the capital ftock of a hundred thoufand pounds; the bulk of which was foon funk in the purchafe, repairs, and erection of forts and caftes; in confequence of which, they had fo trifing a fock left wherewith to trade, that it was not porfible, under all thefe difadvantages and difcouragements, they fhould ever make a tolerable progrefs in this commerce, any way proportionate to the apparent extent it is capable of. Where is the admiration, therefore, that a company, erected upon fo fandy a foundation, thould never be able to fupport $\mathrm{it}^{\prime}$ 's head, and at length fink?
As this trade bas yet never had a fair trial, by means of a company founded upon parliamentary authority, no man can prefume to fay, that what has never been tried will mifcarry. See the articles Dutcheast-India Company, Dutch West-India Company, Frange, and Bullion.

## REMARKS.

The following cafe, containing fome argument that tends to explain and illuftrate the nature and computation of the cultom-houfe duties, in regard to Eaft-India commodities, I judge it may be uffeful to record the fame in this work.

De Term. Sanct. Hill. io Anux.

## In the Exchequer.

Sir Edward Northey, Knt. her majefty's attorney-general, on behalf of her majelty, plaintiff; and the united com-
pany of merchants of England, trading to the Eaft-Indies, defendants.
The information fets forth, That, by the laws and flatutes of this realm, there are feveral cuftoms, impofitions, and other duties payable to her majefty, her heirs and fucceffors, at the cuftom-houfe, upon goods, wares, and meichandizes, imported from Perfia, China, or the Eaft-Indies: in all thore duties, there is a diftinetion between the grofs duties and net duties. The grofs duty is the fum per cent. given or granted by the reveral acts of parliament, which dired fmall allowances to be made thereout to the merchants for prompt payment ; and, thofe allowances being deducted, the remainder is the net duty payable to the crown: all which duties are to be collected and levied in fuch method, and with fuch abatements and allowances as are thereby prefcribed, viz. where any of fuch commodities are particularly rated in the book of rates, there the faid duties are to be collected and levied according to fuch rates. But where any of the faid commodities are not mentioned or fet down in the faid book of rates, nor any value put upon them, there the value of fuch goods according to which the duties are to be paid (except coffee) are to be reckoned according to the grofs price at which fuch goods fhall be fold openly and fairly, by way of auction, or by inch of candle; making fuch allowances only out of the fame, as are provided by an act made 2 Annæ reginæ, intitled, An act for granting to her majefty an additional fubfidy of tonnage and poundage for three years, and for laying a duty on French wines, and for afcertaining the value of unrated goods, imported from the Eaft-Indies (which act, by another act 4 Annæ, is continued for ninety-eight years). By which act it is enacted, That, out of the value of the faid goods fo to be afcertained by the price at the candle, there fhoutd be a deduetion and allowance made of fo much as the net duties, payable to her majefty for the fame goods refpectively, do a mount unto (except the duty of 5 l. per cent. payable to the queen for the ufe of the company) and of fo much as the company, bona fide, fhall allow for prompt payment to the perfons, who, at fuch fales, fhall buy the faid goods at times (which is ufually reckoned at 61. ios. per cent. upon the grofs price) and alfo upon the whole values of the faid goods fo to be afcertained, by the price at the candle, there fhall be deducted and allowed 61. for every 1001 . for the company's charges in keeping fuch goods, from the time of importation 'till the fale by the candle; and in that proportion for a greater or leffer value. By which faid claufe, the values of fuch unrated goods, according to which the duties are to be collected, mult be fuch values as remain after the three deductions and allowances before-mentioned, are made out of the grofs price or value at which the goods are fold by the candle; and, when thofe allowances are deducted out of the grofs price, the duties are to be collected and paid for the remaining fum.
The allowance of the net duties is appointed to be only of fuch net duties as are payable to the crown, that is, what the crown actually receives for the fame goods refpectively; which, for an example, in the cafe of China ware, are computed at 291. 19 s. 7 d. $\frac{1}{2}$, in every 1001 . grofs value. Therefore, deducting the 29 I . $19 \mathrm{~s} .7 \mathrm{~d} . \frac{1}{2}$, together with 61 . Ios. for prompt payment to the buyer at the time, and 61 . for charges in keeping the goods 'till fale, making in all 42 1. 9 s. $7 \mathrm{~d} . \frac{1}{2}$ out of each 100 l . grofs value of China wares fold, the remaining fum, according to which the duties are to be reckoned and collected, will be 57 l . $10 \mathrm{~s} .4 \mathrm{~d} . \frac{1}{2}$, and no lefs; and, according to that proportion, the crown is intitled to receive for duties, in every rool. grofs value of China wares fo fold, the faid fum of $291.19 \mathrm{s} .7 \mathrm{~d} . \frac{1}{2}$; and fo pro rata for a greater or lefler value, as appears by the fpecimen No. 2. following, as was annexed to the information.
By other acts of parliament, there is a duty of 15 l. per cent. laid upon mullins and callicoes, over and above all other duties; which duty is to be reckoned according to the grofs price at which fuch goods are fold: and if the fame be paid to the crown within twenty days after the fale (fuch fale being made within twelve months after the importation thereof) there is a difcount of 5 l. per cent. allowed, which reduces the faid 151 . to 14 l. 5 s . per cent. and therefore, to afcertain the other duties chargeable upon that commodity, there muft be a reduction of the faid 151 . to 141 . 5 s. per cent. out of every rool. grofs price, as well as of the faid other three allowances of 61.10 s . and 6 d . and of the other net duties, actually paid to the crown, computed at igl. os. IId. which faid four allowances, making together 451 1. 15 s . IId. being deducted out of each 1001 . grofs price, the remaining fum, according to which the faid other duties are to be collected for callicoes and mullins, will be 541.4 s . Id. and no lefs. And the information further fets forth, that, between the 8th of March, 1703, the tume the faid act of parliament commenced, and the 12 th of February, 1711 , the defernants had imported into this kingdom great quantities of unrated goods from the Eaft-Indies, and other parts, liable to pay the leveral duties charged upon the fame, which they had long fince fold, and refufed to pay the crown the duties for the fame, according to the computations in the following fpecimens, No. 2 and 4, which the attorney-general annexed to the in-,
formation,
formation, and prayed that they might be taken as part thedreof; and that the defendants took advantage of the practice formerly ufed by the officers of the cuftoms, who, in computing the faid duties, had deducted more out of the grofs price for the net duties than what ought to be deducted; by means whereof, the crown received lefs for the faid duties than what ought to have been paid; and that the defendants infifted, that no more ought to be paid to the crown for fuch unrated goods than what arifes from the grofs price thereof, upon fale by the candle, after a deduction made not only of the net duties payable to the crown for the fame goods, but of the duties for the grofs price at the candle, amounting to 52 1. 2 s .6 d . which was deducting duties upon fuch duties, and alfo upon the faid allowances of 61 . ros. and 61. making in all 64 l. 12 s .6 d , which being deducted out of 1001 . the grofs price of China ware, reduces the fame to 351.7 s .6 d . and the duties then arifing from fuch reduced value, amounted to no more than $181.8 \mathrm{~s} .9 \mathrm{~d} . \frac{1}{2}$; by which method of computation, the duties for every 100 l . grofs value of China ware, would be lefs by in l. $10 \mathrm{s}$. . 10 d . than what ought really to be paid, according to the true method of computation, as appeared by the following fpecimen, No. 2. compared with the defendants feecimen following, No. 3. which was allo annexed to the faid information.
And the attorney-general further fet forth, That, in the infances of callicoes and mullins, the defendants infifted on the like deduction of duties upon duties, and alfo of duties upon the faid allowances of 61 . ios. and 61 . thereby reducing the 1001 . grofs price at the candle to 38 l .2 s .3 d . and that the duties arifing from that reduced value amounted to no more than 131.7 s . Io d. by which means the duties, payable to the crown for every 100 l . grofs value of callicoes and múlins, would be lefs by 5 I .13 s . I d. than what ought to be paid, as appeared by the fpecimen following, No. 4 . compared with the defendants fpecimen, No. 5. following, which was alfo annexed to the information; and that, likewife, in all other cafes of unrated goods imported from the Eaft-Indies, the defendants infifted upon the like manner of deducting the duties, and reducing the grofs price, fo as the crown loft a confiderable proportion of the duties which ought to be received.
And farther fetting forth, that the commiffioners and officers of the cuftoms had required the defendants to pay to the crown the duties of fuch unrated goods imported by the defendants within time aforefaid, as the fame had been computed in the method before fet forth, viz. reckoning the duties of 291. $19 \mathrm{s} .7 \mathrm{~d} . \frac{1}{2}$, to be due for every 100 l . grofs value of China ware, and igl. os. ild. to be due for every 1001 . grofs value of callicoes and mullins, beyond the 15 . or 141.5 s . per cent. as it Chould happen, and fo pro rata for a greater or leffer value, and alfo reckoning the duties of the other unrated goods according to their refpective proportions; but that the now defendants had refufed to account with the crown for the duties of China ware, callicoes and mullins, or any other unrated goods, upon the foot of the faid computation, or to pay the monies due or payable to the fame; by reafon whereof feveral great fums of money, exceeding in the whole 20,000 l. were fill due and unfatisfied to the crown from the defendants, for the du ties of fuch unrated goods.
Wherefore it was prayed by the information, that the defendants might account with her majefty for the duties of the faid unrated goods, according to the fpecimens No. 2 and 4, following, and that the method thereby propofed, of collecting the duties upon unrated goods, by making a deduction out of the grofs price of fuch fum only, for net duties as the crown actually received for the fame goods refpectively, might be eftablithed by the decree of the court.
To which information the defendants put in their anfwer, and thereby infifted, That the duties of the unrated goods had been always paid by them according to the fpecimens, No. 3 and 5, following, which they apprehend to be according to the obvious meaning of the faid act, 2 Annæ reginæ, and to the ancient and known practice of the cuftom-houfe in collecting the duties; and, according to which, all merchants in England had paid cuftoms upon unrated goods, and that the method of computation infifted on by the at-torney-general would be attended with great difficulties and delays.
And farther, that feveral goods had been fold by them at the public fales by the candle, part whereof did not belong to the defendants, but were for the account of private perfons, who had liberty to trade to the Eaft-Indies, and of whom they received no more for their cuftoms than what the fame amounted to by the old method of computation, which was publickly known and allowed, by the officers of the cuftoms; and that the fum which was univerfatly taken and underftood, at the time of fale, to be the duties for thofe goods, was the rule for the drawback upon the exportation thereof; and that, if the duties had been then known to be higher, the drawback muft have been fo likewife, and that would, in fome meafure, have raifed the price (though not equal to the advance of the duties) as well of the goods for domeftic confumption, as of thofe for exportation; fo that it would be a manifeft lofs to the defendants, if, by a new conftruction,
Vol. I.
they fhould be made liable to a higher duty, and boped they fhould not be obliged to the intricate way of computation propofed in the information, but that they might account for the duties according to the ancient method.
And the faid defendants farther infifted, that, where callicoes and mullins had been expofed to fale openly, by auttion; of by inch of candle, within twelve months after the importation thereof, and the faid goods, for want of a market, could not be fold within that time, and had been fold afterwards, that, in fuch care, upon payment of the duty of 151 , pe cent. on fuch goods, within twenty days after the time of fale, the defendants were intitled to the allowance of 51 , per cent. in the act mentioned, although fuch fale bappened to be after the expiration of the faid twelve months.
The attorney-general having replied, and the caufe being at iffue, divers witneffes were examined, as well for the queen as for the defendants; and the caufe came on to be heard February 10, 1714, when the court took time to give their opinions therein: and, the caufe coming again to be heard on the 25 th of the fame February, the court unanimoully declared, that the deduction, or allowance, which was to be made to the defendants, for duties payable to her majefty out of the grofs price, at the candle, of unrated Eaft-India goods, fhould be the very fame, and no other, than that which the defendants fhould pay to her majefty for the fame goods refpectively; and that the methods infifted upon by the defendants, for afcertaining the values, and computing the duties, of the faid unrated Eaft-India goods, and, as the defendants in their anfwer had fet forth, had been to that time ufed by the officers of the cuftoms, were not according to the direction of the faid act of parliament of the fecond year of her late majefty's reign, but erroneous, and liable to great abfurdities; and that the methods infifted upon by the atter ney-general, in his information, for afcertaining the values and computing the duties, of the faid unrated goods, and contained in the fecimens No. 2 and 4 , following, were the right and true methods for afcertaining the values, and computing the duties, of the faid unrated goods, purfuant to the direction, intent, and meaning of the faid act of parliament ; which faid two fecimens the court did ratify and confirm, and decree to be obfetved and practifed by the officers of the cuftoms; as the true and tight methods for afcertaining the values, and computing the duties of unrated Eaft India goods, agreeable to the directions of the faid act of parliament.
And the court farther declared, that the allowanee of 5 I. per cent. made to the defendants, ought not to be made out of the faid duty of 15 1. per cent. charged upon mullins and callicoes, but where the fale thereof fhould be made within twelve months after the importation of thofe goods; and the faid duty of 151 . per cent. paid within twenty days after the time of fuch fale, according to the directions of the faid act of parliament, in fuch cafe provided, and not otherwife. And the court thereupon did order and decree, that the defendant fhould account with her majefty for the duties due to the crown for the feveral unrated goods, which had been by them imported fince the 8th of March 1703, according to the fpecimens No. 2 and 4 following, confirmed by the court, for fuch fums of money as fhould appeat to be due according to thofe fpecimens, over and above what had been already paid by them; and it was referred to the deputy remembrancer of the faid court, to take the faid account, ac cording to the directions and declarations aforefaid, and to report what was thereupon due from the defendants to her majefty; but the defendants were therein to account for the duties of their own goods only, and not for the dutics of fuch goods as fhould appear to belong to private perfons, who had liberty, or were licenfed or permitted by the defendants, to trade to the Eaft-Indies.
In the taking of which account, the deputy was to make the defendants all juft allowances, and to be armed with a commiffion for examination of witneffes, for proving fuch account.
Purfuant to this decree, a charge was exhibited before the deputy remembrancer on behalf of the crown, containing an account of the difference of the duties payable for goods which had been imported by the defendants, according to the former method of computation, and of the duties payable by the method eftablifhed by the decree, amounting to the fum of 26,2221 . I s. $8 \mathrm{~d} . \frac{1}{2}$; in which account the defendants were charged only with the duties of goods imported between the 28 th of November 1705, the time of the arrival of the firft thip after they were conftituted a company and 7 th of September 1713. And a further charge was afterwards exhibited before the deputy on the crown's behalf, for the duties of tea for home confumption, which had been omitted in the firtt charge, amounting to the fum of 4029 I . 10 s .2 d . fo that the whole charge upon the defendants amounted to the fum of 30,251 I. 11 s. 10 d . $\frac{1}{2}$. The defendants, after great delays, gave in their difcharge, containing an account of the duties of goods imported by them which were fot their own goods, but belonging to private perfons, who had liberty, or were licenfed or permitted by the defendants to trade to the Eaft-Indies, amounting to the fum

## EAS

of 6846 l .4 s .4 d . which, by the decree, they were not to account for, and which they craved an allowance of, out of the duties charged upon them in the charge given in on the crown's behalf.
Upon thefe charges and difeharges divers witneffes were examined before the deputy on both fides, and fo great a progrefs was made in the account, that the deputy was ready to prepare a draught of his report; but, the defendants after all thefe proceedings and length of time, thought fit to appeal from the fand decree to the houfe of Lords.
I cannot but obferve, that this caufe, fays the reporter, was defended in the face of the molt certain of all fciences, the mathematics. It is alfo againft the exprefs words of the act, deducting the queen's net duties, and they deduct the grofs duties. And it is alfo againtt the meaning of the act, that the fubject fhould pay duty for the queen's duty. And the refult of their computation is, that all the parts are not equal to the whole: and that, the more duty is laid on, the lefo the queen receives, becaufe you deduct more than you pay; for, the higher you lay the duties, the deductions are the greater. 'The defendants infifted the queen's method was intricate, and framed on fictitious numbers by the operations of algebra, above common capacities. The very title of the aet gives an additional duty, and this computation takes it away: they do not lay the queen's method is wrong, por that theirs is right : fo that indeed the calculation of the Eaft-India company was an impofition in all it's fignificacions, viz, upon the fubject as a tax, and on the queen by way of fraud. The defendants did acquiefce for * teventeen years before they did appeal, and were fo well fatisfied with the juftice and equity thereof, that they have complied with the calculation thereby eitablifhed, in the payment of thefe duties, ever fince the decree pronounced in the Exchequer.

* The company had no longer time ; for that, by a flanding order of the houfe of lords made 24th of March 1725 , appeals are to be brought within five years after the decree or order, in the court below, is figned and inrolled, \&c.

This caufe was heard in the houfe of lords, on Monday the Igth day of March 1732, and was, called, in the houfe of lords, The Algebraic Caufe; becaufe that was the cleareft and beft method of proof: tho' it may be done by yulgar arithmetic.
The fum which the act charges with the payment of this net duty is called the net value : and this net value has ever the fame propertion to the net duty, that the grofs value has to the grofs duty. Now the act requires, that the net value, charged with the payment of the net duty, Chould be the grofs value, diminimed by two feveral fums; the one is the fum I2l. Io s. part of the allowance to the company, for warehoufe room 61, per cent, and that for prompt payment $6 \mathrm{l} . \frac{1}{2}$ per cent. already determined and known; the other is, the net duty payable, which is quite unknown, and the only thing wanting. For it is exprefsly faid in the act, that the net duty payable on the 100 l . grofs value of Eaft-India goods, is not to be reckoned into the net value : and confequently, the net duty payable (whatever it is) together with the company's allowance, muit be dedueted from the grofs value, and the remainder is to be the net value charged to pay the net duty payable: fo that the meaning of the act is no more', than that the fum or net value, paying net duty, thould be the grofs value, leffened by that very duty, and allo by the company's allowance.
Now, in the manner of computing by the direction of this act, there are two very different methods, viz, a right method and a wrong one: And a very ignorant accountant cannot readily fee how the net duty payable (which is as yet unknown) can be fubducled from the grofs value, in order to find the net value, paying the net duty: and therefore, without any farther confideration, he fubducts the grofs duty (inftead of the net duty payable) together with the company's allowance, out of the grofs value, and takes the remainder for the net value paying duty; and concludes; that this net value has the fame proportion to the net duty, that the grofs value has to it's grofs duty.
While the company's allowances continue to be r2l. 10 s . as they now are, it is not in the power of parliament to lay a grofs duty on the 100 l . grofs value, that can poffibly yield to the crown a net duty of above 19l. $2 \mathrm{~s} .9 \mathrm{~d} . \frac{3}{4}$; and, in order to raife fo much duty, the 100 l . grofs value mult be charged with only 43 l .15 s . grofs duty : if the 100 l . grofs value is charged with more, as it is at prefent with 52 l . 2 s .6 d . grofs duty (on China ware) it muft by this method of computation, produce a lefs net duty, as now it does only 18 l .8 s .9 d. $\frac{3}{4}$; whereas, in computing by the method directed in the act, it would produce 29 l. ig s. $7 \mathrm{~d} . \frac{1}{2}$, net duty; and, if the 1001 , grofs value was ftill charged with a greater grofs duty, it would confequently, by the common method of computation, ftill produce a lefs net duty. This

## E A S

their method of computing, as it is grounded upon a ridiculous fuppofition, fo the practice thereof feems to be involved in one continued blunder; as if the intention of the aft dhould be, that, the more impofition is laid, the lefs will be the duty payable to the crown; or that the real defign of the act, was to leffen the duty by laying on a greater. In the next place, if the 100 l. grols value, was charged with 87 I. 10 s. grofs duty, and the company's allowance 121 . Ios. the net duty produced would be nothing; for, by this method of computing, the net duty of 100 I . grofs value, becomes nothing whenever the grofs daty charged on nool. grofs value, is equal to the excefs of noo 1 , above the company's allowance. So that while the compang's allowance is 20 l. per cent. no duty can be laid on the 100 l, grofs value, that will yield the crown a net duty of above 161 .
It is indeed ftrange, that any body chould be able to find a difficulty in fuch an eafy affair as this is; an accountant but indifferently fkilled, would by the rule of common fonfe only, and common arithmetic, as ufual in the like cafes, inveftigate a general method, whereby the computation will be ftrictly performed.
By this true method of computation, the fum of the net value, it's net duty, and the company's allowances, is equal to, or makes up the grofs value rool. as being the feveral parts whereof it confilts : but, by the method hitherto ufed, what they call the net value, it's net duty, and the compan's allowances, will not make up the whole grofs value, though efteemed to be all the parts thereof; and this computation may be made by the common rule of three in vulgar arithmetic, as well as by algebra.
After the matter had been fully argued, the houfe of lords were unanimoully of opinion, that the judgment in the Exchequer, in this caufe, fhould be affirmed; with this variation, that the account which the appellants were to make to the crown, Gould be taken from the time the information was exhibited only, and not from the 8th of March 1703.

The following fpecimens were printed on the appeal in 1732.
Specimen, No. 2.
Containing the method infifted upon by the attorney-general for afcertaining the values, according to which the duties are to be paid to his majefty, upon unrated China wares, referred to by the information in the court of Exchequer, and confirmed by the decres of that court.

## Rementos.

This cafe, brought firft into the court of Exchequer, and afterwards before the houfe of lords, relating to the duties laid upon Eaft-India goods, confirms what we have occationally done ourfelves the honour to recommend, in regard to the neceffity that people of the firf diftinction lie under, even thofe in whom the dernier refort of juftice is vefted, to be duly acquainted with the nature of the crown revenue, and of the accurate computations which are requifite to be made with refpect thereunto.
So fenfible of this was a late right honourable gentleman, Mr Winnington, who, in the opinion of every body, would have been at the head of the finances of this kingdom, if he liad lived, that he did not fcruple to condefcend, for the fake of expedition, to be inftucted, even when he was one of the firf royal counfellors of ftate, in the moft concife practical methods of calculating the duties of cuftoms, with all imaginable accuracy; frequently faying, that, as nothing was of greater concern to a flate, than for it's minifters to be thoroughly knowing in it's revenues; fo nothing could more familiarly contribute to fuch thorough knowlege, than fkill in the' practical computation ; for that this would more effectually imprefs upon the mind all the variety of cafes relating to the revenue, than the mere thumbing over of acts of parliament, without minutely defcending to the very computations themfelves.- That, for want of this, he had frequently experienced himfelf, as well as other minifters of fate, to be at no little lofs in their deliberations upon matters of that important nature. Nor can it be in the power of thofe in authority, without this 1kill, to judge and determine juftly, whether the officers of the revenue did juftice to the crown, or to the trader.
And as it may be prudential, at certain conjonctures, that the royal revenue may, from a change and alteration in circumftances of our trade, with regard to other nations, undergo variations; fo it is fcarce poffible for any man to judge rightly of there matters, without a competent and minute fkill in thefe concerns; for thofe who content themfelves with general notions of thefe things, can only have general, and, confequently, fuperficial ones thereof, and can never make experienced and judicious financiers.-And how indifpenfably neceffary this knowlege is, both to the practical trader, as well as to the lawyer, who would go to the root of thefe matters, is to apparent to need animadverfion.
The foregoing cafe including fomething of the nature of difcounts and allowances which are made to traders, in confideration of the prompt payment of the duties of cuftoms, it brings to my mind a doubt that has occurred to me, in regard to the additional fubfidy of 5 per cent. that was granted in the year 1747, by the act of parliament intituled,
An act fpr granting to his majefty a fubfidy of poundage upon all goods and merchandizes to be imported into this kingdom ; and for raifing a certain fum of money by annuities and a lottery, to be charged on the faid fubfidy, \&c.
The claufe in the faid act that grants this additional fubfidy of 12 d . in the pound, or 5 per cent. runs thus: ' And be - it enacted, \&c. that, over and above all fubfidies of ton-- nage and poundage, and over and above all additional du-- ties, impofitions, and other duties whatfoever, by any - other act or acts of parliament, or otherwife howfoever - already due and payable, or which ought to be paid to his - majefty, his heirs or fucceffors, for or upon any goods or * merchandizes, which; from and after the Ift day of March - which thall be in the year of our lord 1747 , fhall be im-- ported or brought into the kingdom of Great Britain, one - further fubfidy of poundage, of twelve pence in the pound, - fhall be paid to his majerty, his heirs, or fucceffors, upon 4 all manner of goods or merchandizes to be imported, or 6 brought into this realm, or any his majefty's dominions to © the fame belonging, at any time or times after the faid ift 6 day of March, 1747, by the importer of fuch goods or - merchandizes, before the landing thereof, according to the ' feveral particular rates and values of the fame goods and 6 merchandizes, as the fame are now particularly and re-- fpectively rated and valued, in the refpeative books of rates

- referred to by the acts of the 12 th year of the reign of king - Charles II. and the inth year of his late majefty, or by - any other act or acts of parliament, and fo after that rate ' or value, or which do now pay any duty ad valorem.' Then follows the claufe in the faid act, fignifying how the aforefaid duty is to be levied, viz.
- And be it further enacted by the authority aforefaid, that - the fubfidy of poundage, hereby granted, fhall be raifed,
' levied, and collected, by the refpective officers of his ma-- jefty's cuftoms in this kingdom, under the management - and direction of the refpective commiffioners of the cu-- ftoms for the time being; and fhall be brought and paid; or - anfwered into the receipt of his majefty's Exchequer, for the 6 purpofes in this act mentioned (fuch additional charge as © Thall be neceffary for the management of this revenue only - excepted) and that all and every the claufes, powers, direc6 tions, penalties, forfeitures, matters and things whatfoever,
- contained in the faid act of the twelfth year of the reign of
' king Charles II. or in any other laws or ftatutes whatfoever
' now in force, for raifing, levying, collecting, anfwering, ${ }^{\text {c }}$ a and paying, the fublidy of tonnage and poundage thereby - granted, fhall be applied, practifed, and put into execution, - for the raifing, levying, fecuring, collecting, anfwering, - and paying the fubfidy of poundage by this act granted, as
- fully and effectually, to all intents and purpoles, as if all - and every the faid claufes, powers, directions, penalties, - and forfeitutes, were particularly repeated, and again en-- acted in the body of this prefent act.'

Quere, Does not the foregoing claufe in this act of parliament intitle the merchants to every advantage in point of payment of this duty, as thefe other acts intitle him to, upon which this act of 1747 is grounded?
If fo, Have not our merchants a right, according to this aft, to a difcount of 5 per cent. for prompt payment of this additional duty of twelve pence in the pound upon their imports? 'Tis true, the practice that was immediately fell into at the cuftom-houfe, in confequence of this aft, hath not given the merchants this advantage; but, if their acquiefcence under this difadvantage hath proceeded from inadvertency, both on the fide of the merchant, as well as of the officers of the cuftoms, ought not the fame to be rectified ?
This is fuggefted with no view to injure the revenue in it's juft and legal rights, nor to give the merchants more than they are juftly and legally intitled to.-And, if my doubt upon this occafion happens to be groundlefs, I am willing to think it is no way criminal ; and, therefore, it is moft humbly fubmitted to the merchants of this kingdom, whether this matter may deferve their confideration. See the Business of the Custom-house, at the end of Letter A, particularly the Conclusion.
And, if in the courfe of this work, I fhould on the other hand difcover any detriment done to the revenue by traders, I fhall not be wanting to detect the fame, in order to right the crown in it's revenue, as well as the merchants in their legal rights and immunities.
EAST-INDIA TRADE in general. Under the article Asia, we have drawn the outlines of the commerce of that part of the world, as it hath a general relation to the other quarters thereof. In order to defcend the more minutely into the nature of this traffic, we have confidered the fame under the heads of the refpective great companies engaged in this commerce; fuch as the East-India Company of England, the Dutch East-India Company, the French East-India Company, \&c. the trades whereof are all carried on with peculiar privileges and immunities, exclufive of all the other fubjects of thofe refpective flates. From a confideration, therefore, of the diftinet degree of commerce carried by thofe refpective companies for the benefit and advantage of their peculiar ftates and empires, we may form a pretty right judgment of the meafures, which may, from time to time, be requifite to be taken by Great-Britain for the fupport and maintenance of fuch a fhare in this traffic, as may enable them to vie with their rivals therein; and to prevent any one or more of them, from monopolizing the whole to themfelves, and excluding Great-Britain from poffeffing any fhare or proportion therein.
For a more particular account and ftate of this commerce, fee alfo the articles Bengal, Coromandel, China, Japan, Acapulco or Manilla Ships, and fuch other heads as we have occafionally referred to in relation hereunto. We fhall, at prefent, confider this trade in another light than what we have hitherto done, with intent to view the fame in every point, that may contribute to enable us to judge of the fame the more comprehenfively.
Wherefore, we flall confider it, (1.) As a general traffic carried on between Europe, as one country, and the body of the Indies as another. (2.) As a particular trade carried on from one Indian nation to another, more particularly with regard to their coatting trade, managed partly by the Indians among themfelves, and partly by the European companies, which have forts and factories there: and this is a very confiderable trade in itfelf, fuch as
I. The

1. The trade of the Turks from Aden to the Gulph of Mocca, to Mocha, and along the Red Sea to Sues, whence their coffee and other goods are carried to Egypt, to Alexandria, and thence by fea or land to Conftantinople, Aleppo, Smyrna, and other places.
2. The trade of the Arabians and Perfians up the gulph of Ormus, or Perlia, to Baffora, by which they fupply the great caravans with Perfian and Indian goods of all forts, to be carried by the Euphrates and Tygris to Bagdat, and thence to Trapezond on the Black Sea one way, and over the defarts upon camels to Aleppo another way.
3. The coafting trade of the European merchants and Indians on the weff fide of the coaft of India, as that of Guzurattee, India, and Malabar, as far as the pearl-filhing of Madura; and the like coafting trade of the Europeans on the other fide of Iodia, as that of Coromandel and Bengal, [fee thofe articles.]
4. The river-trade up the river Ganges, wherein there are feveral factories and fettlements of the European nations, befides the trade of the natives.
5. Another trade on this fide of India, is that of Achia on the ifland of Sumatra, and from thence fouth, along the weft hore of the illand to Bencoolen, and to the Streights of Sunda, thence to the weft fide of the ifland of Java, and thence ftill fouth to the Streights of Bailly, and iflands of Tinier and the Molucca's: alfo on the eaft fhore of the inle Sumatra, the coaft of Molacca, and thence thro' the Streights of Sincapore to the North Side of the ille Bornio. Here the trade divides itfelf north, to the eaftern coalt of Afla, the extent of the known world on that fide, and the moit eafterly part of the Terra Firma of the globe.-As the gulph of Siam, coat of Camboyda, the kingdom of Cochin-china and Tonquin, and the Empire of China, to which is joined that of Great Tartary.

Upon all thefe long extended fhores, there is a very great coafting trade carried on by the Chinefe and Malayan merchants at Borneo, Batavia, and the Illands where they are permitted to traffic. To which may be added that of the empire of Japan.
South of Borneo lies the Dutch fettlement of Batavia, on the ifland of Java, where the Javans and other nations drive a confiderable trade from port to port, and ifle to ine, in fmall veffels of their own.
This trade takes alfo another courfe from Borneo, and to the numerous illands of thefe feas; this is done not only to Ternate, Tydore, Celebes, Gillolloo, and to all the inlands where the Dutch are extremely powerful,-[See Dutch EastIndia Company], but likewife to the Philippines, and among the Spaniards. [See Acapulco].
Befides this coafting trade, the Indians have a large inland circulating commerce with each other; and various merchandizes, which are the product of remote interior cities and countries, are brought down to be fold at the European factories, and at thole fea-ports where the European merchants are fettled; fuch as indigo from Lahore, which is brought to Surat: the diamonds of Golconda, the pearls of Madora, and an infinite variety of other merchandizes, of the produce and manufacture of the inland countries. - And European merchandizes landed either on the weft or the eaft fide of the great peninfula of the Indies, that is, the coafts of Malabar or Golconda.-We find alro the manufactures and produce of alowft all the provinces of the Mogul empire, to be bought at Ifpahan in Perfia, and other inland cities in the fame country, whither they are carried by caravans. See the article Caravan.
The Chinefe, alfo in particular, have a valt domeftic commerce by the navigation of numerous rivers and canals, and particularly by that inimitable canal defcribed by Mynheer Nieuhoff, which traverfes the whole Cbinefe empire from Canton to Pekin, by which the merchandize of all thofe countries to which the Chinefe trade, and whom they admit to traffic among them, as well as the goods and growth of the provinces through which it paffes, are carried to the emperor's court, as the demand makes necefliry; which, indeed, is the foundation, and original occafion of all commerce in the world.
Befides this, the river Loang, or Koang, and the Yellow River, are faid to be navigable above 600 or 700 miles, and both of them furround the empire; and thefe rivers, running through vaft lakes or inland feas, empty themfelves into the ocean, and thereby facilitate commerce.
The firft of thefe rivers is covered with fmall veffels of all fizes, continually employed in carrying provifions to the great and opulent city of Nankin, befides fuch as are employed in carrying immenfe quantities of merchandizes, the produce of the provinces through which thefe rivers pafs, and the manufactures of the feveral cities by which they alfogo.
This may give fome idea of the manner how trade is managed in this valt extended empire; and among fuch a prodigious number of people, who are not only the moft ingenious, but unexceptionably the moft induffrious people fortraffic in the whole world.

Vol. I.

From the confluence of thefe great rivers it is, that the city of Nankin is become fo immenfely opulent and populous, being the great center of all the inland commerce of thefe united empires; there being hardly a city in all China, but has a trading communication with Nankin, either by fea or river navigation: by which all the produce of the land, as well as the manufactures of the people, are conveyed to it, as to the great emporium of the whole country: and from hence again all the foreign merchandizes, which are inported at Amoy, Canton, or Nankin, are returned to the interior parts of the empire.
The productions of the fea, as concerned in merchandizing, are,
Pearl, the true Otiental pearl; the feveral forts whereof are diftinguilhed by the names of the countries where they are found, as alfo by their finenefs, beauty, colour, and fize.They are found in the Arabian gulph, or Red Sea, though not on the Alian fide, and not, indeed, fo properly in the Eaf-Indies: but, as they are found by the Turks and Arabians in ther colony on the Æthiopian fhore of the gulph, and are directly brought to Jeddo on the Arabian coaft, and thence fent farther into Europe, viz. by the way of Suez, and then by earavans to Conftantinople, we muft include them in this trade: the kind is exceeding good, the thape delicate, and the fize fometimes large.- The largeft and fineft pearl now to be feen in the world, are found at Baffora in the Perfian gulph. They are found too on the Fifhing coaft of Madura, between the ifland of Ceylon and the coaft of Coromandel. Though the quantity here is confiderable, the kind is inferior to thofe of the :gulph.-Some likewife are found in the Philippine Inands, but the quantity is but fmall.

## Of the pearl-fifhery in the Eaft-Indies.

Between the coaft of Madura and the itle of Ceylon, are divers confiderable pearl-banks near the fea. Thefe banks are rocks of white coral-ftones, whereon the oyfter-fhells, containing the pearls are faftened. Some of thefe banks are 12 or 13 fathoms, and others at 15 fathoms from the thore. The oyfters live about fix years, after which the fhells open and the pearls are loft.-The banks are fearched yearly, to fee whether the pearls are come to their maturity.-A fer the oyfters are come to their perfection, the time of pearl fifhing is proclaimed throughout the whole country; and the merchants refort thither from the other parts of India, even from Arabia and Turky, who fet up their tents near the fea-fide to purchafe the pearls.
They fif for the oyfter Thells containing the pearls, in boats about 28 feet long; of which you thall fee 3 or 400 at a time, each of which has feven or eight fones, which ferve inftead of anchors, and fix or feven divers, who dive naked, except a thin waifcoat, after each other.- They have each a net hanging down' from the Neck, and gloves in their bands, being to pluck the oyfters from the rock. -Thefe divers have alfo ftones about their necks to make them dive the fwifter.
All the oytter-hels brought up, are laid in great heaps 'ill the filhery is over, after which a wooden houfe is erected for the company and the nayk, where each receives his Ghare, the boats being obliged to firh one day for the nayk, another for the company. - Thefe take care that the filhers be not difturbed in their fifhery, the governor and two judges being every day near the fea fhore, to decide fuch differences as may arife among them.-After all the Chells are opened, in the prefence of the commiffioners, and the pearls taken out, they are fild, according to their different fizes, to the beft bidder The pearl duft is bought and fold by the Dutch.
They have alfo coral red and white, to which the pearloyfters are generally found ftcking; and fo fattened to the coral, that fumetimes, in breaking off the oylters, they bring up coral with them, which is generally white. See the article Coral.
Though the fea in this part of the world is very full of filh, and the rivers and lakes much more; yet neither is the quantity fo great as in our northern parts: nor are there fuch pe-riodical- fhoals, as is the cafe with the herring, mackarel, pilchards, 8 cc . - There are no fifh catched bere in fuch quantities, as to load fhips or faiks, to as to be cured, and become a confiderable branch of trade, from one climate to another, as merchandize.
The product of the land confiffs in great variety, viz.
That of the bowels of the earth, fuch as nines of jewels, of metal, and minerals, of dyers earths, and fuch produce as is dug out of the earth in moft, or all other parts of the known world. Alfo,
The product of the furface of the earth, fuch as plants, drugs, gums, and other the like particulars, of infinite kinds, which furnihh a furprifing variety of matter for merchandizes.
As to the product of the bowels of the earth, under which head we confider the diamond, fee the article Diamond, where thofe of the Eatt-Indies are fully treated of.
They have alfo divers other jewels, or precious flones, in thefe countries, fuch as fine rubies, exceeding fplendid and beautiful, in Ceylon; alfo the topaz, the turquoite, and the
emerald, in the Mogul's country ; the fapphire in Siam; and the amethy解 in Pegu; and an extraordinary agate and jafper in China and Japan.
There are mines of gold, or rather gold in general, whether in mines or otherwife. This is found in many places, but chiefly our commerce for this commodity is at
Achim, the capital of Sumatra, where it is found in great quantities, it being the chief return of merchandizes carried thither.
It is found in Pegu allo, whence it is brought to Achim, to be fold to the merchants. Likewife in
China and Japan: in the former they fell it for filver, to the great advantage of the merchants, particularly at Canton, Amory, and other places.
They have it too at the Philippine iflands, particularly near Manilla, where it is found in mines, and where, it is faid, that one mine yields the king of Spain 200,000 ducats a year, befides feveral others, wherein they do not work.
In the inland of Borneo, where they fift it out of the fands of the rivers, in their fearch after diamonds. See the Article Gold.
In thefe Indies there are alfo mines of filver; but it is very fcarce in Afia: it is found in Japan, but in no confiderable quantities; nor is there any of it found in the Indies in general, as I can yet learn, which is the reafon they put fo great a value thereon, as. to buy it with their gold, to great advantage.
In Pegu they have iron, as alfo in Siam and Japan; that of Pegu nearly approaches to the quality of fteel.
In China they have fome copper; but that metal is chiefly in Japan: the beft is that made up in fmall bars, like fticks of wax, which is very red and bright. See the article Copper.
The Chinefe, who are the greateft cheats in trade in the world, adulterate their copper, and put feveral ingredients therein, to make it appear like that of Japan.
Tutenage is a metal unknown except in the Eaft-Indies. It is found in Malacca and Sumatra; but the fineft is in China: it feems to be a fpecies of tin, but foft as lead, and blackifh; and, though not fo bright as either, is yet more compact.
They have a metal, which fome have faid is real block-tin ; and, though it is not fo hard and fine as our Cornwall tin, yet it is very valuable. This is principally found in China; but they have it likewife in Pegu, and the Dutch buy it at Achim, and other places, in the Streights of Malacca. It mixes well with lead, and makes tolerable good pewter, but will not fcour fo bright.
The minerals and foffils found are very numerous; fuch as fulphur, of which there are great quantities in the Mogul empire, though it is not brought to Europe but in fmall quantities, the Europeans having fuch plenty from Italy, Sicily, the Archipelago, Barbary, and other places. Red earth, a known commodity brought to England in pretty large quantities, for the ufe of the dyers. Allum abounds in the Mogul empire, Pegu, Sumatra, and in China.-Saltpetre is a confiderable article in the European importation from India, the confumption whereof depends' upon the confumption of Gun-powder.-See the article Gun-powder. It is found in moft parts of India, efpecially on the coafts of Malabar, and India Proper; they have it alfo in China in great quantities, in the province of Xenfi, where they dig it out of the earth, as plentifully as we do chalk, notwithfanding it is fo dear in Europe.
Potter's earth; of which they make their porcelain manufacture, and which, for diftinction, we call China ware: the beft is found in the province of Kianfi, on the banks of the great river Kiang. This kind of earth is faid to be found no where but in China and Japan, though fome have of late pretended that it is to be had in North-America.But this I have never heard fatisfactorily confirmed.-Nor can the earth or clay be procured in China or Japan, there to be brought over unwrought: but, whether it requires a particular preparation, as fome infinuate, and which cannot be performed in Europe to that perfection; though not only the Drefden, but the Englifh manufacture, are admirable approximations.
But the furface of the earth is fill richer than the bowels of it; and the growth is prodigious, as well in drugs, gums, and rare plants, as in other things; which raife a new fund of wealth, by their being the fubject of manufacture, and em${ }^{*}$ ploying innumerable multitudes of their people. In regard to the growth of the country, in what we call plants, fruits, or fuch things as are for food, and are ufed in the courfe of trade, are
Feas of divers kinds, from China, Cochinchina, and Ja-pan.-Sago from feveral parts, as Malacca, Java, Borneo, \&c.-Coffee, chiefly from Mocha in Arabia, with fome from the Dutch and French Settlements.-This coffee is now a prodigious article in commerce. - And to fum up all in our enumeration of particulars of this kind, with one article of an immenfe value, and to which we can fearce find an equal in the world, is the fpice; which is comprehended under the heads of nutmegs, mace, and cloves.-Thele are the proper
goods of the Dutch at the Molucca's, or Spice Ifands, where they are only produced. See Dutch East-India Company.
Cinnamon at the iffand of Ceylon, and fome in Borneo.Pepper on the coaft of Malabar, but chiefly, and of the beft kind, on the iflands of Java and Sumatra. Sugar in Bengal,
China, and Cochin-china; alfo in Java, Borneo and Ceylon.
The firft of there five articles of fpice are not only prodigious in quantity, infomuch that the Dutch, who have the whole importation in their own hands, fupply all Europe, Africa, and America with them, and the reft of Affa alfo, but thefe fpices are raifed in no other part of the world, and it is thought cannot be; by which the Dutch have the advantage of keeping up the price to what height they pleafe: and it is certain, that, though the nutmegs ate produced in no place but the ifle of Banda, and five little adjacent inlands, and that thefe are but very fmall places, yet they fuffer fome hundreds of tons of nutmegs to be burned at a time, rather than fend fo many to Europe as to overfock the markets, and thereby fink the prite. The like is faid to be done on the fame occafion by the pepper. Sir William Temple, in his Obfervations upon Holland, fays, 'That a Dutchman, who had been at che Spice Illands, - told him, that he faw, at one time, three heaps of nutmengs - burned, each of which was more than an ordinary church - could hold.

## REMARKs.

Quere, If the price of ficices in general was lower, the profits might not be more than at prefent are made thereon, feeing the confumption thereof would vifibly increafe, by the greater cheapnefs, as is ufual in the like cafes? But this, it feems, the Dutch will not truft to.
With refpect to the coffee and tea already mentioned, it thould not be forgot, that the demand in trade for thefe two atticles is fo increafed of late years in Europe, that they feem, in fome fort, to be equal to the foices of the Dutch.
The arrack is a fpirit extracted from feveral materials, and is a confiderable merchandize, the quantity whereof brought to Europe being extremely great; the prineipal forts are made at Goa by the Portugueze, and at Batavia by the Dutch.
Of the drugs, and fuch plants and other produce as come from this part of the world, fee the article Drugs.
Thefe produaions, which tend to the employment of their people, are chiefly filk, cotton, and herba. Raw filk is płoduced in quantity chiefly in the kingdoms of Bengal and China. See Bengal and China. The quantity as well of wrought filks as of callicoes, which the people of India and China are obliged to confume at home for their ordinary wearing, muft be exceeding great, if we confidar, (r.) That the fe are the ordinary manufactures for their eloathing: and whether we fpeak of the rich or the poor, they have no other kind of apparel, having no materials to make any thing for their wearing but thofe of filk, cotton, and herba. (2.) That the extent of the country included in thefe bounds beforementioned, is fo prodigious large, as to include the two vaft empires of the Mogul and Cbina, with the kingdoms of Pegu, Siam, Cambedia, Cockin-china, Tonquin, and all the illands of the Indian and Arabian feas. (3.) That all thefe countries are fo prodigious populous, that they reckon $8,000,000$ of people in the City of Nankin only, in thofe of Canton and Pekin 2,000,000 each, and in others in proportion. (4.) That the manufactures we fpeak of, callicoes efpecially, are not, a durable wear, fo that the people muft cloath often.
All thefe articles confidered, the quantities of the manufactures which they confume at home muft be exceeding great, and employ great numbers of people in making them; yet they have fo many to fpare for exportation, that they are able to make and export goods enough of the filken and cotton manufactures, to cloath all the people of Eorope, befides their own confumption.
Their filk manufactures are fo various, and their names fo numerous, that it would be tedious to enumerate them. Thelike may be faid of the cottons, under the name of callicoes, of infinite varieties, both white and painted, or printed, with figures of divers colours: they are all diftinguibhed under one general name of callicoes, whether mufins, chints, or plain, \&c. The herba is the bark of a certain tree, which, being drawn out very fine, works like filk, and is mixed with either filk or cotton; of which we fee divers kinds among the ordinary importations of the Eaft-India company.
Thefe are the mont confiderable manufactures of the Indies: there are two others from China in particular, which, as they are of the kind fingular to themfelves, fo they are allo very valuable articles. The one is their porcelain, or China, as obferved before; and the lacquered ware, called Japan ware, though not coming from thence: which fhew not only the excellency of the naterials, viz. of the earth for the one, and the lacque, or varnilh, for the other, but alfo the ingenuity of the workmanflip in both.
All the Englifh and Dutch factories in the Mogul's country are full of merchats, as well Europeans as Moors, Arabs,

Meftizes, Malabars, \&e. the latter having been inftructed by the Englifh and the Portugueze in merchandizing: and, as there is a very great trade carried on hence with the Turks and Perfians; as alfo with the Arabs; fo they are of late exceedingly increafed in fhipping, and build good fhips at Mufcat, and the river Indus, at Guzurafte; and other places, and even at Súrat.
The feveral forts of fhips known in the Eaft-Indies are, akas, veflels ufed by the Arabs at Aden ; country fhips, as they are called, buile fquare-fterned; as the Englith, but built by the Moors; who had their models from England; galleons, being large fhips, built by the Portugueze at Goa, and ufed to go from thence to Melinda, on the coaft of Africa, and then to the Brazils. Sloops of the Eufopean builders among the feveral faetories, efpecially at Batavia, Surat, and Goa, as allo at Fort St George. Sbips of Chinia, called jonks, of a form peculiar to themfelves, from 50 to . 120 tons; jonks of Japan, of a like burden, better failors, end of different fhapes, but not fo well built as the China jonks; proes of Sumatra and Malacca; burden about 15 to zo tons; tonnys, a kind of thoys, or lighters, to load and unload. lafgèr flips ; flying boats; built like our finall fifhing boats; greas galleons, built at Manilla, for the Acapulco trade, foimetimes of 1000 to 1600 tons burden.
They have, alfo, a valt variety of frall craft, in the feveral fivers, and among the illands, all differing, and peéuliar to the refpective places, and which are very curious, net only in their fhape, but in their manner of werkitigs, which would be too tedious for us to defcribe.
-By thefe veffels the whole commerce is carried on. Althouigh the Perfians are mafters of all the eaftern colifit of the Perfian Gulph, and have feveral good towns thera, and Gomberobn in particular; yet they have not one veffel of any butden belongitig to them.
It is muth the fame with the Tuiks in the Arabian Gulptr; at Baharefi, Baflora, and other places; and they bire the alkas of Aden in the greatelt part of their trade.
The exports of the commodities of the Indies to Europe are certainly very confiderable, nor are their imports, perhaps, fo difproportionate from the Europeans as fome are wont to conceive,-The quantity of European goods the Turks on the Arabian coaft of the Red Sia take off, brought by the Way of Suez, and thence to Aloxandria; are not inconfideratble; whereby they are fapplied from Europe by the Tarky companies of the feveral European nations.
That there has been a vifible increafe of the trade to the Indies from Europe, as well as frotn Europe fo the Indies; within half a eenturys is apparent to the whole witld, froin the increafe of the European factories there: for there fettlements are. numerous, increafing in people, and extenditig their power and jurlfdiction, atid, by this means, citiluzitg the people, and reconcilling them to the European euftomis and ufages, as patticularly to theit cloathing themfelvest in which particular they went naked and favage before. This lias been effectuated more particularly by the Dutch than by anty other, Etirepean power whatfoever. For proof of which fee the artiele Dufcheast-lndia Company.
In confequence of this Eupopeat commerce, the Indian inations takes every day more and nore of the European merchandizes: øur Britifh Raft-India company fell móore of eur woollen, and divers other mantufactures; by means of the weight of fheir commercial inteteft, thath, perhaps; they could ever have done without the exiftence of fuch a com-pathy.-The Chinefe, alfo, have increafed in thelr Brikinh imports, as well of the woollen as other eur Britifh manufactutes, -Our manufactures genciallyy fold among them ate, broad eloths of every colour, and more particiularly the blacis-Our eamblets, fearlets, and other colours; ferges, perpets ; lead and lead-fhot; Buroninghan wares of all kinds; glafs manufartures of every fert ; our chock and wateehwork, which are in as high efteem with the Indians as with the reft of the triading world.-A Ad thefe our exports are increafing daily.
The gelteral augment of the exports from Earope is more particatarly manifett from the inereafe of the Deten factories in the Spice Iflantly, efpecialy in Batavia, where their fette-' ments are not now trere fimple factories, but they are become populdors and opulent colonies and plantations ; the preperty of the cowntry being their own, and nibe fublect to ahy power of the princes, or lords of the adjacent territeries, as they are at Surat; and other places. Wherefore,
By virtue of there eftablifhments of the Dutch, thiey take off, as outs de at Madras or Fort St. George, and as thofe of the Portugueze do at Goa, much greater quantities of the growth shid manufactires of Europe than they ever did before.-Nor is this confined to the mere arsicle of apparel ; shey take, befides; the Eutcopean equipages, as coaches and horfes; \&c. porticulayly at Batavia, where coaches are kept more numieyoufly atie fytiendidly than even their mifters do in Earope. It is the fame at Groa and Fort St. George ; and we have a greater thare in the trade to the factories and feetlements of otbor Eufopetan powers, by means of our Eaif-India company, than our company will admit them to have at our Britifi forts
and feftements; if the repeated informations which 1 have received from various hands are not to be queftioned.
It appears upon the whole, from the general circumftances of this Afiatic traffes, that, fince the Europeans bave zealouly erigaged therein, the ballance of profit, however great it may heretofore have beén in fayour of the Eaft-Indians, has been for fome years declining; and our own Eaft-India company hath not been the leaft inftumental to contribute their flazre in this turn of the 'fale.
The chief profpeet of aniy lafting advancement to be made in the Eaf-India trade, depends on the number and power of the Europeans fo increafing, that they may bring the natives under their dominion to come into the European way of living, viz. in dreffing, eating, and drinking, whereby the export of fuch goods will come to be increafed, in proportion to the dominion that the Europeans obtain among thefe Indians.
Of this the Portugueze have fet an example on the coaft of Mofambique, the city of Melinda, and other parts thereabouts, where the people are brought into the European way of living; and cloath thentrelves after the manner of the Portugueze, and live as regularly. It is true, that the people are more tractable and docile there than the natives of Java, China, and Malabar ; and, which is fitl more, have no manufactures of their own to effablif, in the room of thofe which the Portuguéze bring them.

- I was furprized, fays an Englifh paffenger, who went on - there at Melinda (the fhip he was in being driven up thither ' in their voyage to Mocha) to fee; in the country adjacent, 6 whole villages of the natives cloathed in the Englifh manu-- factures, and having waiftcoats, breeches; and ftockings, - hats and fhoes, leather, ferge, and ftuffs, fuch as we wear - in England; and fome of the better fort having good broad-- cloth coats, bayes-clokes, \&c. which they wore, notwith-
- ftanding the heats, and efpecially in the rainy feafons, to ' keep them dry, and warm in the nights, which are damp ' and unwhotefome.'
This muit be a reafon, allo, why the Portugueze export fuch quantities of the Britifh manufactures to the Brazils, which is as hot a climate; in fome parts, as that of Zanguebar, and much in the fame latitude; and from whence, allo; they are carried into Affica, on the eaftern fliore, where, by their authority they have, in fome meafure civilized the people, and brought them to abhor going naked, as much as the Europedns themifelves do: and, further to confirm the praeficability hereof, we may judge, from what the Dutch have done in Jàz, Borneo, and Malacca, and other places, as well by their example as by their authority : añd this, added to the increafe of people, would certainly conftamty add to the increafe of the confumption of European commodities, in the feveral parts of India, as well as in Arabia and Ghima.
This will appear more probable, if we calculate the numbers of psople already under the government and infanence of the feveral nations planted there. Thus the Portuguèze are faid to have 100,000 people in the illand and city of -Goa; fome fay half as many more:- The Englifh are judged to have ho lefs than 200,000 fouls, in a great degree ander their jurifdiction, at Fort St George, the city of Madras, and the adjacent parts, fubject to their government; befides thofe at Fort St: David's, Calcteta, and other places, where they are fettled 多 proprietors, in fome degree, of the adjacent country. The Datch exceed them both at Batavia; and in the Spice Iflands, where they bave an abfolute dominion : in which, inclading the iflands of Borneo and Ceylon; it is certain that they have above 500,000 fubjects.
If thefe numbers are near the troth, it is no way ftrange that the Dutch Mips go out generally fo well freighted for Batavia, and carry by far, greater quantities of European merchandizes than formerly, or that they carry out more than any others.
This is alfo a reafor why, among the Portugueze ant the Dutetry the confumption of European goods muft neceffarily increafe; but the Englifh bavenot the fame advantages; becaufe all their fachories or fetilements, Fort St George excepted, are under the juriffiction of the great Mogul; or fome other ablolute government, who do not fubmit fo eafily to the Europeans; as at Java and elfewhere.
The commerce of the Philippines is the fame.
The trade cartied on between Perfia and India; by fea, is a very ferfarkable kind of commerce : it is indeed, an exchange of the moft valuable merchandizes of the world, and the quantity too, is very confiderable; for they have a very great confumption of Indian and Chinefe goods, which are partly fent up the country to lfpahan, and partiy up the Tygris, by Bafora, to Bagdat.
As the Perfians have no thips of their own, this commerce is carried on by the Armenian merchants, in country fhips, as they are called, or in Englifh or Dutch fhips, for which they are paid a very good rate; fo that our Europeans are always fond of taking freight there, and efpecially becaufe the Perfians pay in rpecie.
The Perfians import from - India, a very great quantity of callicoes, as well painted or printed, as white ; the latter is to

## EAS

make up their turbands, which, for thofe above the poorer fort, are folded about with white callicoe; and all the women are cloathed, either in their own wrought filks, or in painted callicoes, of Surat, and the coaft.
They import above a thoufand tons of pepper yearly, from the coaft of Malabar, by the Dutch ; chiefly brought by the Portugueze from Goa, befides fome from Surat, by the Enghith.
They alfo import all forts of fice; as cloves, nutmegs, mace, and cinnamon; from Coulang and Ceyion, by the affifance of the Dutch, or of fuch merchants as buy them at the Dutch factories.
They export a great many drugs, fuch as rhubarb, galbanumfena, galls, and many other valuable things, which are not fo plentiful among the Indians as in Perfia: for there they import indigo, allums, camphire, China-root, cardamums, ginger, fugar, fal armoniac, turmeric, fticklac, and many more. - Add to this, that they import from China a very great quantity of China ware, of the fineft kinds.-They bring from China a great quantity of merals, fuch as blocktin, tutenague, China alfo, and Japan copper, iron and fteel, from Pegu and Siam.-They bring alfo gold from China, and diamonds from the mines in Golconda; of the firft they buy a very great quantity; for it comes from China as a merchandize. Alfo, they import the white China raw filk, which they ufe in their filk manufactures, mixed with the fine filk of Georgia and Guylan.
Thefe goods, and many more (for almoft all the goods of India and China are vendible at Gombroon) they fend up the country, upon camels, to Ifpahan, as, northward to Bagdat by boats, and thence to eeveral parts of Afia, as, to Aleppo, Trepezond, Taurus, Erzirum, and many other places; tor Bagdat is the center of all the trade between India, Perfia, and the leffer Afia.
In return for thofe, they have the advantage of all the European traders; for they fend no money, but rather receive money in the ballance of trade: and it is obfervable, that all the fhips, from Gombroon to Surat, are deep laden, and very rich, with Perfian wines, Armenian brandies, Arabian coffee, raiins, almonds, from Ifpahan, in great quantities; ivory, imported from Mocca or Melinda, and the coaft of Zanguebar; wax, dates in bales, prunella's in boxes, rofe water in chefts, for which they have a great traffic among the Mogul Indians ; rich Perfian filks, rich Turky carpets, leather dreft like the Italian cordevants, lapis tutia, purl duft, oriental purl, drugs and gums of furprifing varieties, piftaches, Carmenia wool, bought by the Englifh for the hatmaking trade, Englifh cloth in bales.
As all thefe goods meet with a current fale, either at Surat or at Goa ; the Perfian merchants, that is, the Armenians and Jews, drive a very great trade at Gombroon; and it is ordinary to have from 15 to 20 country fhips in the port at a time, befides Englifh fhips belonging to the company, and Dutch alro: and their loading is fo valuable, that frequently an Englifh Chip, of 400 tons, laden from Gombroon to Surat, hath been worth 200,000 l. fterling.
They have alfo the advantage of carrying great numbers of paffengers, being merchants and their fervants; for-the Armenian merchants ordinarily go with their goods to Surat, and come back with the returns. - The Englifh merchants of Surat have always thips of their own, which are wholly employed in their coafting trade, between Gombroon and Surat, and are built at Surat, or in the river Indus: they are good veffels, and tolerable failors, but have not the beft of feamen.
Upon the whole, the ordinary channels of the Eaft-India trade, as now carried on, are as follow, viz.
A trade by the caravans, over the defarts- [See the article Caravan] from Bagdat, on the great river Tygris, to Aleppo, and from thence, by leffer caravans, to Conftantinople one way, and to Alexandretta (now called Scanderoon) another; and from both thefe into the eaftern parts of Europe by fea.
By thefe caravans, indeed, the raw filk, galls and drugs, and other goods of Perfia are carried; and they are the chief part of the loading of the caravans. Together with them, they have always a large quantity of goods, of the growth and product of the Indies, fuch as fine callicoes, curious wrought filks, fipices, drugs, diamonds, and pearl, all which are cartied from the coaft of India and Malabar into the gulph of Perfia, and up to Baflora, at the bottom of that gulph.-Fiom thence they are carried, by fmaller veffels, up the Tygris, or Euphrates, for theie they are joined, and landed at Bagdat, as above.
Another trade is by the Red Sea. - The manner of carring on which formerly differed from the prefent; all the fpices, and rich goods of India, China, and the iflands, were brought in the jonks and barks of India (and it is believed they might in thole days, be better furnifhed with fhipping, than they now are) to the port of Adju, then a great and flourifhing city, famous for commerce, fruate on the fouthern coaft of Arabia Foelix : here they unloaded, and weat back; and the merchants of Adlu partly telading the goods in thips of their
own, and partly, fending them, by land-carriage, to Jeddo, fent them up to the port of Suez, at the bottom of the Gulph, or Red Sea.-Here they were landed, and carried over-land opon camels and other carriages to the river Nile, a paffage of about 50 miles ; and thence to Alexandria, where the Venetian merchants, who then had that whole trade in their hands, received them, exported them chiefly to Venice, and from thence to all the trading ports of Europe.
Thefe were the antient, and, at that time, the only ways of carrying on commerce between Europe and the Indies.-As the navigation by long fea has leffened the trade above defcribed, and that the grofs of all the Indian commodities comes directly to Europe by the Cape of Good Hope; fo the obipping; between the feveral parts of India and the Arabian port of Adlu, decayed, and was wholly interrupted: by this means the faid port allo was entirely ruined, her trade cut off; and declining continually, without hope or poffibility of recovery, is now fo loft and forgot, that from having many hundred fail of veffels, of all forts, belonging to it, they are not fo much as heard of among the European failors.
But a trade to Suez is fill cartied on, though fmail ; it confifts only of a correfpondence between that port and the city of Mocha, which ftands near the mouth of the Red Sea; from whence the whole fea is now called the gulph of Mocha. This trade confifts in loading a few imall veffels, at Mocha, with coffee, drugs, and elephants teeth, which are brought thither from Melinda, or from the coaft of Ethiopia, or bort, and lometimes horfes for the Grand Seignior.-Of the coffee, about 5000 bags, or bales, are immediately for the Grand Seignior; nor can any coffee be fhipped 'till the baffa of Mocha gives notice that the Grand Seignior's coffee is fecured, and ready to thip off.
There are fome few Alexandrian merchants at Suez, chiefly Jews, who employ a few hips to go conftantly twice a year from Suez to Goa, the Portugueze colony on the Indian coaft, and who bring back large cargoes, of all the fine goods of the Indies, as alfo fome quantities of fices, and efpecially pepper and cinnamon. But thefe cargoes are generally freighted for the city of Grand Cairo, and may be faid to be wholly confumed there. - Thefe fhips might make three voyages a year, if they were people more ufed to buifnefs and difpatch ; for, thofe feas being generally quiet and free from ftorms, it may be called a fair weather voyage both out and home; but they are an indolent people, and but very indifferent navigators.
To this fmall remain of a trade is that great and ancient commerce of India, by the way of Alexandria, reduced: thus the two northern channels of the Eaft-India trade are accounted for.
There is a courfe of trade alfo, from the Mogul's country, to Armenia and Georgia, or to Samercand, on the river Oxus: There is alfo another commerce, by land, from India into Europe, and that very confiderable; which is the paffage by land, from China to Mufovy; to the practicability of which, Czar Peter the Great highly contributed...-Tbis renowned prince, whofe heart was fet upon the cultivation of commerce, and thereby civilizing his populous empire, could not make the way forter than it is, neither could he alter the feverity of the climates, though which the way lies: but foared no pains to make it both lafe and eafy for travellers, and for the fecurity of their merchandizes. (i.) By building towns and lodging-plares, at convenient diftances, for the merchants to reft at: whereas befure, the country was quite defolate, and there were no towns, fometimes, for ro or 20 days travel together. (2.) By fortifying thofe accommodations, and pofting troops at them, fufficient to defend the traveliers, and with orders to the goven nors of thofe places, to fend out parties upon notice, either to convoy the mercbants to the next port, or to advance and meer them if coming, efpecially if any notice was given of their being in danger.
This memorable monarch took care likewife, that fufficient provifions fhould be always had at thofe places, for fupply of the travellers, as well horfe as inan, and that at very reafonable rates; that they fhould be weil uled on all occafions, without exacting upon them, either fur lodging, or fur horfes or camels; which, upon failing of others, might be always ready to be either hired or bought, as occafion required. By this means, no incoufiderable quantity of merchandizes is every year carried from China inco Europe, particulariy rea, raw Gilk, called China filk, fine wrought filks, and all forts of goods not of a grofs and bulky nature, and too heavy fur fuch a kind of conveyance: and thefe caravans, fometimes confift of 3 or 400 camels and horfes together.
But the bulk of the commerce is wholly by fea. For example, there is a trade fom Madagafcar, froun Gud, on the coaft of India proper, and fiom the pors of Muzembique and Zanguebar, to the bay of Todos los bano, in the Biafils. --- This is a trade peculial to the Portugueze: all cheir chips from China and from Ladia come to this coaft of Africd, or Madagafar ; and there takiay in reficthanems, and fone mercbandizes, fuch as gold, civet, elephants teeth, \&c. and fometimes $\mathrm{n}_{\text {aves, }}$ they go away to the Bralils.

## EAS

The other fhips, which go conftantly between this coalt and the Brafils, and which take the benefit of the others, becaufe they are always hips of force, carry chiefly flaves, fome ivory and gold, and go back directly, from the Brafils to the fame place again, without going forward into Europe, or to any place elfe.
They have little in the Brafils to carry to the Indies, except fugar and tobacco; neither of which have any extraordinary demand there, though they make a fhift to put off as much as loads two or three fhips a year.
The reft of the trade is the grand commerce from Holland, England, France, Sweden, Denmark, by the Cape of Good Hope, and fo to all the feveral parts of India and China; which, in general, conftitutes the European Eaft-India trade.
It is managed in Europe by exclufive companies wholly, no ration admitting interlopers any privileges of commerce thither from Europe: the Englifh did formerly, indeed, fuffer it; but upon the union of the two companies, effected by the perfonal interpofition of the late king William III. the company obtained a complete exclufion of all feparate traders to the Indies, and have now that whole trade in their bands.
The Englifh part is managed, in the Indies, by factories, under the direction of the company, and by governors and officers, who are accountable to the company.-Thefe are chiefly at Surat, Bombay, Fort St George, Calecut, Bencoolen, Chufan, \&ce.-Thefe bave many other leffer factories under them, which are all accountable to the governors of the head factories, as they are alfo to the company.
Thele governments have many advantages in trade; they have peculiar powers and privileges from England ; moft of them are now incorporated, and made bodies politic, as the fort of St George has been many years, and is now, not only a fort and factory, but a city, with a diftrict adjoining, which is enjoyed in property and fovereignty; and the governor for the company has under his dominion, including the feveral diftricts, upwards of 200,000 people of all forts, entirely independent of any Indian government, as the like is under the Dutch governor at Batavia, and the Portuguefe at Goa.
But this trade is not confined to the factories; for they trade from place to place, not only as factors, for the company, but as private or free merchants, and on their own particular account, under the licence and authority of the company: and this they do to fuch a degree, as well by fea as land, that the cuftoms received by the proper officers, for the company, at Fort St George only, including their land as well as fea imports, rarely amount to lefs than 30,000 l. fterling per ann. which goes towards fupporting the expences of the factory.'
It would be too tedious to defrribe the manner of the civil governments, in all thefe fettled factories of the Europeans, the ftate and magnificence of their governors, and of their other officers, at Goa, Fort St George, Batavia, Pondicherry, \&c. It is enough to obferve only, that it is commerce alone that upholds all this fplendor.
The number of fhips, generally employed by the feveral companies in this trade, is confiderable. The number, at prefent employed by the Englifh company, is much greater than ever; not only in confequence of the increafe of their trade, but becaufe they find it convenient not to employ veffels of fuch exceeding great burden as formerly. For it was ordinary for the fhips trading to India, in the time of king Charles the IId, to carry 7 or 800 tons burden, and fome have been heretofore employed from 800 to 1000 tons. But now the trade is generally carried on in Mips of 3 or 400 tons, but then fo many of thefe are employed, that'tis not unufual for the company to have from 30 to 60 fail fometimes in their fervice.
The Dutch, whofe fleets are generally from 20 to 30 or 40 fail a year, have many more hips employed in this trade; they have rarely lefs than roo fail engaged in this commerce. Belides, the Engliih and Dutch, efpecially the latter, have a great many Chips always in the country, though built in Europe, for carrying on the trade there from place to place: fo that it is judged, and that without exaggeration, that the Dutch do not employ lefs than 200 fail always in their India commerce, and the Englifh about one third of the number; and the French have greatly enlarged this branch of their commerce within thefe few years, and aim at vieing with them both. See France.
There is fill another fort of commerce with India, which has not been yet mentioned, and which is carried on by the Spaniards from the weftern coaft of America, as Mexico, to the Philippine Iflands. But the number of fhips employed therein are not above two or three in a year, though they are generally very large; fome being occafionally even 1600 or 2000 tons. The voyage is long, being oftentimes three or four months between the Philippines and the illand of California.

Further $R$ em ARKs.
From this general ftate of the trade of the Eaft Indies, it appears, that the improvement thereof,' with refpect to the

## EAS

Intereft of the Europeans, depends more upon thè fettlement of colonies and plantations, as the Dutch and the Portu: gueze have done, and as the French, it feems, are at prefent doing, than upon the fettlement of fea-coafts, forts and factories only; for 'fis pretty apparent, we conceive, from what hath been urged under the article of Dutch EastIndia Company, that nothing but the fame fyftem of commercial policy, which that wife republic has purfued, could have rendered them fo potent and opulent in this part of the world.
Nor have they, by thefe meafures, at all depopulated their ftate in Europe, as fome might, at firft view, apprehend to be the confequence of fuch their conduct : on the conitrary, they have increafed in people, by means of communication with the native Indians; whereby they have alfo increafed their trading power in Europe, in proportion as they have in creafed their territories and their dominion in Afia.
We defire to be underfood only to mean and intend, from what has been faid, that our own kingdom, by purfuing the example of the wife Hollanders in the Aftatic traffic, may gain'an afcendancy in that part of the world, no way inferior to this neighbouring flate: and, without falling on fuch like meafures, it is to be feared, that we thall rather daily lofe, than gain ground in that improveable and extenfive branch of commerce.
What feems to have a tendency to confirm us in our humble judgment, with refpect to the natural advancement of this India trade, is the peculiarity of the way of traffic in thefe people; which it is obfervable differs, in one effential refpeft, from that of the whole world befides. For no man yet that ever I heard of, ever faw any capital trading veffel of EaftIndia in any part of Europe. What is the motive to thofe Indian nations for thus conducting their commerce, that they fhould forego one of the greateft advantages; that the wifeft Europeans have to increafe their foreign trade and their maritime power? Inftead of their giving themfelves the trouble to carry, in their own fhipping, their own produce and manufactures to the European nations, they attract them, by a fecret kind of policy that we do not feem to be acquainted with, not only into their ocean, but evifn their very rivers, to come and purchafe their commodities of all forts, upon their own terms and conditions.
Is not this, in effect, commanding the trade of the whole world? And what do the Eaft-Indians, the Chinefe, the Japanefe, \&c. mean by this, but explicitly declaring, hy their admirable fyftem of commercial policy, that the whole world hall bow down unto them? On the other hand, are not all the nations of Chriftendom ftriving to outvie each other in paying homage to thefe Indian nations! Are they not all bent upon the eftablifhment of Eaft-India companies, in order to vifit and pay refpect even to thefe heathen nations, as they are called by fome in a religious fenfe?
May it not deferve our enquiry, upon what principles of pò ólicy thefe nations feem to have an afcendency, in this refpect, over the reft of the whole trading world ? Is not every commercial ftate in Europe glad to have a vent for their commodities, even when they carry them in their own fhipping to other countries? Where is the fate in all Europe, that can prefume to command the fubjects of other fates, like thofe Indians, to bring treafures into their territories, to employ their poor, and add to the grandeur of their power?
'Tis infinitely more eafy to difcern effects, than to trace out the real caufes thereof. We therefore would only prefume to fuggeft, whether thefe effects may not have been naturally produced from the following caufes.
(r.) From the extraordinary wifdom and policy of thefe feveral ftates and empires, in devifing fuch laws for the general government of the people, as have an effectual tendency to render them induftrious and parfimonious?
(2.) Whether their laws alfo are not as vigilantly executed, as they are judicioully contrived, for the benefit of fociety? (3.) Whether their non-diffraction of the mals of the common people, with religious and other idle controverfies, has not had a tendency to quiet their minds, to ftimulate them to excel, rather in ufeful, innocent, and virtuous arts, than to concern themfelves in matters that few, in comparifon to the whole, have either leifure or qualification to comprehend? (4.) Whether the general cheapnefs of their manufactures, in comparifon to thofe of the European nations, is not the great inducement to others to fetch them from the Indies, in order to difpofe of them to advantage to thofe ftates, which cannot purchafe them at firft hand?
(5) Whether the caufe of their cheapnefs of labour does not proceed from the greatel culture of land among thefe people in general, than is among the Europeans, in proportion to the number of inhabitants; and, in confequence thereof, to the greater plenty of the productions of nature, and therefore their greater cheapnefs?
(6.) Whether the taxes in general in thefe ftates and empires, with refpect to commerce, are not more wifely laid than among the European potentates; and whether they are incumbered with the like burthen of national debts?
(7.) Whether they do not, from the principles of policy, bury, or fome how conceal, the bulk of the filver which they

## EAS

receive in the courfe of traffic from the Europeans, in order to keep the lefs quantity of money in circulation, with a view to keep the price of labour among all their manufacturers at a certain ftzadạrd? And,
(8.) Whether their non-ufe of paper circulation, in confequence of having no national debts, may not alio greatly contribute to keep the price of labour low, and their product and manufactures permanently cheap?

There are the chief weights, meafures, and coins in India, which are made ufe of at the Britifh forts and fettlements there, to which we at prefent give the more particular attention ; and under the articles Dutch East-India Company, Portuguese East-India Trade, Measures and Werghts in general, will be contained what elfe is requifite in regard to matters of this nature.
Thofe who would chufe to be more minutely acquainted with particulars of this kind, may confult the ingenious and induftrious Mr Brooke's tract upon this fubject, which will be of great ufe to all gentlemen who trade to thofe parts, by preventing the many and too frequent frauds and impofitions committed by the natives, in their ordinary way of traffic with the Europeans.
The ECCLESIASTICALSTATE in ITALY, is bounded on the north by the gulph of Venice and the Venetian dominions, on the eaft by the kingdom of Naples, on the fouth by the Mediterranean, and on the weft by Tufcany and Madena.
The air upon the whole is foggy and unwholfome, but the foil rich and fertile, and would, if duly cultivated, produce the greatelt plenty of corn, wine, oil, \&c.
This ftate comprehends the following territories, viz.

1. The duchy of Ferrara.
II. The duchy of Boloona.

It hath no town of any note except it's capital.
Bologna, fituated on the Rheno and Savoria, and hath a large channel cut between the Rheno and the Po, which wonderfully facilitates the tranfportation of all commodities to and from the city: they export chiefly wax, filk, hemp, flax, hams, tobacco, perfumes, fweetmeats, and a curious fmall breed of dogs, fo little, that the ladies carry them about in their muffs and apron-pockets. Befides thefe, they export great quantities of wrought filks of all forts, rich velvets, leather bottles, and other manufactures of this city; befides olives, and other fruits, produced in great plenty in the neighbourhood of it.
III. The province of Romagna.

The chief town of any note for trade is FaEnza, which is famed among other things for a fine earthen ware, called by it's name, and not inferior to the Dutch delf, and for it's fine linen manufacture.

## E G Y

IV: The duchy of $\mathrm{U}_{\mathrm{Rb}} \mathrm{ino}$.
Fano is a maritime town on the gulph of Venice; for the convenience of trade, a canal has been dug, and lined with fquare ftones, which, by opening fome fluices, brings various kinds of merchandize into it.
Sinigaglia is pleafantly feated on a large plain, near the Adriatic Sea, hath a convenient port for fmall veffels, and drives on a pretty good commerce.
V. The marquifate of Ancona.

Recanati on the river Mufone, in the gulph of-Venice, is reckoned a good trading city, and famed for a fair in September, which lafts 15 days, and was formerly much reforted to.
Tolentivo hath it's commercial fairs, which draw a concourfe of merchants of all forts to it.
VI. The Perugiano, or teritory of Perugia.

Passigniano is a fmall city, fituate on the north-eaft of the lake of Perugia. This, and another fmall but well peopled city; called Caftiglione del Lago, on the weft fhore of the fame lake, drive a good trade of the filh caught in it, and fupply the whole territory.
VII. The Orvietano.

Here are no towns of any note for trade.
VIII. St. Peter's Patrimony.

Civita Vecchia hath a good convenient harbour, and a fpacious dock for hips, with an artificial mole, at the end of which is a flrong high tower, which at once defends the entrance into the port, and ferves as a light-houfe to it. But it's fearcity of frefh water makes it a very inconvenient place, and is thinly inbabited on account of it's unwholfome air; though the Popes have done all they could to draw a good traffic thither.
IX. Campagna, or Campania di Roma.
$X$. The province of Sabina.
XI. Ombria, or the duchy of Spoleto.

Foligni, on the river Tubino, is inhabited by a great number of rich merchants, whofe traffic confifts chiefly in cloth, gold and filver lace, fpicery, fweetmeats, filks, and other fuch commodities, all manufactured within it's walls. It hath, befides, a celebrated fair in April, which lafts a month, and contributes much to the trade and wealth of the place.
XII. Citta di Castella.

In this territory, which is neither fruitful, pleafant, rich nor populous, is no town of any note.
EDINBURGHSHIRE, or MID-LOTHIAN. This, which is the principal fhire in Scotland, is bounded on the eaft with the fhire of Hadington, or Eaft-Lothian, on the fouth with Selkirk and Tweedale, on the weft with Lanerick, and on the north with the Firth of Forth.
It yields confiderable quantities of corn, with good pafturage, and is abucdantly furnighed with all neceffaries, particularly coal and lime-ftone.
Edinburgh, the metroplis of Scotland, is a mile from the port of Leith, confifts chiefly of one ftreet, but a very noble one ; the city is four miles in compafs, and as populous as any city in Europe for it's bignefs. The markets here are very well fupplied with all neceffaries, and kept for the moft part in diftinct places walled in.
Leith, which is the port of Edinburgh, lies on the Forth, and has a good mole or harbour, one of the moft frequented in all Scotland. The entrance of which is made good, by a long jet or pier on the eaft fide, bigger than thofe at Genoa and Leghorn. The mouth of it is dry at low water, and the fea ebbs about half a mile out from it north. The mercbants of Edinburgh generally keep the grofs quantity of all their heavy goods here to be ready for carriage, either by land or fea; fo that 'tis not improperly called the warehoufe, as well as port of Edinburgh. Here are alfo fome works not common in Scotland, viz. a glafs-houfe for making all forts of green glafs, efpecially bottles, carried on by a company who have their workmen and materials from England; a fugarbakehoufe, and a faw-mill for cutting timber, nitting deals, and the like. See the article Scotland.
EGYPT, is commonly divided into Lower, Middle and Upper.
I. Lowier Egypt, or Egypt properly fo called, is fo ftiled on account of it's fituation, according to the courfe of the Nile, it being the Jaft of the three through which that river runs, and from which it difcharges itfelf into the fea. It is bounded on the fouth by Middle Egypt, on the north by the fea, on the weft by the defert of Barca, and on the eaft by the ifthmus of Suez.
This country is very fertile, and fo well improved, that it abounds with pafture grounds, corn, wine, rice, dates, fenna, caffia, baulm, phyfical drugs, plants, \&c.
It's principal towns are,
Busiris, àn ancient city, but now dwindled into a village called Aboafir.
Alexandria, by the Turks called Scanderic, is fituate at the mouth of the Canopean branch of the Nile, where it forms a noble, fpacious haven, in form of a creftent; and which, though not very fafe, is much frequented.
Rosetto, is a healthy, pleafant, and populous city, fituate on a branch of the Nile,

## E G Y

tt has a confiderable manufacture of friped and coarfe linnen, but it's chief bufinefs is carrying of the European merchandizes, which are brought thither from Alexandria to Cairo in buats. For which purpofe the Europeans have here their vice-confuls and factors to expedite bufinefs, and the letters, bills, \&c. brought from Alexandria. As for letters of confequence, they are conveyed by land acrofs the defert by foot-meffengers directly to Cairo.
Damietta fands on one of the eaftern branches of the Nile, about 10 miles from the mouth of it. 'Tis reckoned one of the keys of Egypt, is Jarge, though ill built, and hath about 25,000 inhabitants, without reckoning a good large and populous town on the other fide of the river, chiefly inhabited by failors and filhermen, and a much greater number of ftrangers from all parts; on account of traffic ; all which have contributed not a little to make it opulent and confiderable. As for the inhabitants, they are all greedy of gain, and feverally employed; fome in mechanic trades, others in manufactures, particularly that of fine linen cloth of all colours, and in great requeft.
Maguilla, a handfome populous town, carries on feveral kinds of linen and cotton manufa Gures, befides the making great quantities of fal armoniac, and hatching vaft multitudes of eggs in ovens.
II. Middle Egypt

This province is fituate between the Upper and Lower Egypt, having the former on the fouth, and the latter, juft now defcribed, on the north, the Red Sea on the eaft, and the defert of Barca on the weft. At prefent it is chiefly known by the names of Baheirah and Benefor.
It is divided in two by the Nile, on the banks of which the foil is fruitful; but the farther the land runs from it, the more fandy and barren.
It's chief cities are,
Carro, the capital of Egypt, and by far the largeft and moft populous in the whole kingdom, is pleafantly fituated on the Nile.
It appears from the vaft number of fquares, caravanferas, bazars, and other fuch public buildings, to have been a place of extraordinary commerce, now decayed, fince the trade to the Eaft-Indies by the way of the Cape of Good Hope ; yet it ftill carries on a pretty many manufactures, efpecially that of Turky carpets, and a good trade by means of the caravans. See the articles Caravan and East-India Trade.
Suez is a fmall city, with an old caftle, both now almoft ruined; it's haven fo fhallow, that large veffels cannot get into it ; though there is a good road by it, where,they can ride fafely.
Frum is a large and populous city. The principal commerce of it confifts in linnen, plain and friped, leather of a fine fort and in great requeft, carpets, and the fineft mats in all Egypt, befides figs, raifins, oranges, lemons, and other fruits, which it fends to Cairo.
III. The Higher or Upper Egypt.

This province is bounded on the eaft fide by the Red Sea all the way, on the north by Middle Egypt, on the weft by the defert of Barca, and on the fouth by Nubia and the coaft of Abex. It is by far the leaft cultivated and populous of all the three. Moft of it's towns, or rather villages, are very thinly peopled. The chief commodities are corn, pulfe, rice, linnen, and leather.
The towns of it are,
Benesonef, chiefly remarkable for a manufacture of a narrow kind of ftriped carpet, made of wool and coarfe thread without nap, ufed by the meaner fort to cover the cufhions of their fophas, \&c.
Minio, a neat town, famed for an earthen manufacture of water-pots, or veffels, not only very curioufly made, but faid to give an uncommon frelhnels to the water; and, on that account, in great requeft all over Egypt, and efpecially at Cairo.
Aboutic, now a village, and of note only for the vaft quantities of black poppies that grow in and about it, and of which the Turks and Arabs make the beft opium, which is conveyed thence all over, not only Turky, but India. The caufe of it's decay is faid to be owing to the robbers that infefted it.
Esne makes a better appearance than moft towns in this province. It's inhabitants are rich, efpecially in corn and cattle, and drive a confiderable commerce up the Nile into Nubia, as well as by the land caravans through the defert.

## Remarks.

Egypt, though a large country, lies but little on the feacoaft, and that affords fill lefs that is remarkable for our pupofe. It begins to the eaft part, where the defert coalt of Barca and Tripoli are faid to end; and we find nothing here that deferves our notice, 'till we come to the mouth of the Nile, and nothing there but Alexandria. The corn they have here is generally fhipped off at fome of the little creeks upon the coaft, and fent to Conftantinople, or in fmall coafting veffels to Alexandria, in order to be carried thence to Europe. The city of Alexandria boafts of it's antiquity,

## ELG

having been built by Alexander the Great after the taking of Tyre, that he might preferve the trade between India and Europe, which he found, to his great diffatisfaction, was ruined by the deftruction of Tyre: fo great a value was fet upon the Eaft-India trade, even in thofe days!
This trade from India was carried on for many ages with infinite advantage by the Tyrians. And Alexander, who was ill advifed in extirpating the Phoenician merchants, to trake the world amends, erected this city, making it a free port, and giving it his own name ; and exerted his utmoft fagacity and authority to bring the Indian merchants to fette there, and make it the ftaple of their manufaEtures, which, however, he could never effectually do : a great part of the commerce took another turn, and paffing from India by the river Oxus, and the city Samercand into the Cafpian Sea, and thence by land to Trapezond, from whence it croffed the Euxine Sea, and, paffing all the other feas needful, centered at length in the city of Corinth, which by that means became a great and opulent. City. See the article Turky Trade.
Muft not this, as well as numberlefs other inftances throughout this work, convince us of the danger there is from diverting the channel of trade ourfelves, or fuffering thofe branches belonging to us to be broke in upon by rivals?
Alexander, however, fo far prevailed, that a great part of the trade from India came this way, particularly fuch of it as was driven on the coaft of Malabar, and in the Perfian gulph; which, coming up the Red Sea, landed their goods at Elam, now Suez; and they were thence carried over land to the Nile, and then again by water to Alexandria.
That this city, in the moft flourifhing ftate of it's commerce, was a large, opulent, ftrong, and magnificent city, is certain; and that, fince the decay of it's trade, it is now little more than the Ikeleton of what it has been, is not lefs true. It's conflagration by the Saracens, indeed, effected it's prefent ruinous ftate, in comparifon to what it was in it's fplendor. It has ftill fome trade, and is populous, but not confiderable. Rofetta and Damietta, and even Grand Cairo, have loft the fund of their wealth and glory from the time that the Portugueze, unhappily for them, found the way to the Eaft-Indies by the Cape of Good Hope.
The means whereby this country is rendered fo extraordinary fertile in corn, \&c. are by the courfe and overfowings of the famous river the Nile. As to it's fwelling, geographers inform us, that it correfponds exactly with the raing feafons between the tropics: they commence in the mountains about the beginning of May, and the water of the Nile begins to fwell about the middle of it; fo that there are fifteen days allowed by nature for the courfe of the water fifteen days allowed by nature for the coure of the water
from the latitude of Ethiopia to that of Egypt, which is efteemed a pretty exact allowance; the diftance being from 13 or 15 , to the latitude of 28 and 30 , which may very well correfpond with the time.--As to the continuance of the inundation, this is faid to be juft the fame, keeping time with the rains; for, as it is in feveral parts of Africa, fo it is in Ethiopia, the rains abate at the beginning of September, and ceafe by the beginning of October: thus the inundation anfwers exactly fifteen days, the fame fpace as before: after the rains begin to abate in Ethiopia, the inundation of the river begins to abate in Egypt ; and, ten days after the rains ceafe in Ethiopia, the Nile is quite reduced to it's ancient channel in Egypt. This being the cafe, there can be no room any longer to doubt, whether the rains in Ethiopia are the caufe of the inundation or no.---In regard to the beight to which the waters arife, fome authors give an account of the fwell being about forty feet in height perpendicularly; which, though it be extraordinary to imagine, and muft, in our imagination, place all the towns on a hilly fituation, or fuppofe them to be laid under water; yet, fince fo many affirm it for truth, we leave that as we find it...-The effects of this inundation are fructifying the earth, not only moiftening it inftead of rain, but enriching the land with the fattening nimy fublance, which it receives from the richnefs of the foil in Ethiopia, from whence it comes. This is faid to be particular to the river Nile, as the country of Ethiopia is particularly rich and fruitful beyond all that part of Africa. It is true, that the Niger, the Congo, and feveral other rivers on the coaft of Africa, which overflow the country, do make it fruitful, and enrich the foil as well as the Nile does, but none in fo extraordinary a manner.
The Shire of ELGIN, in Scotland. This comprehends one part of Murray, and is bounded on the eaft by the river Spey; on the weft by the fhire of Nairn, and part of Loquhaber ; has Aberdeenifire and Badenoch on the fouth; and is parted on the North from Invernessihire by the Frith and river Nefs. The air is wholfome, and the winter mild; the fouth fide mountainous, but abounds with pafture, as the low country does with corn, which is foon ripe. Here are feveral great woods of fir-trees, \&c. 1o miles long, with fome large woods of oak.
Elgin, the chief town, and a royal burgh, is fituate in a pleafant plain, and fruitful, though fandy foil. The Highland gentry come to live here every winter. The town fands on the river Loffie, which falls into the fea a few miles below it.

## E M B

This river abounds moft with falmon of any in the iffand, exept the Dee and Don, and may, indeed, one year with anbther, be faid to equal them, 80 or 100 lafts being annually pickled and exported, and all taken in a few of the fummer months, and within the face of one mile, at the village of Germach. It abounds with filh, indeed, to the very head; but thefe are moftly ufed for home confumption, and taken either with fpears by day, or in wicker baikets, or little boats covered with hides, by night.
EMBARGOES on hips, and QUARANTINES
An embargo is an arreft on thips or merchandize by public authority, and is commonly on foreign thips in time of war, being a prohibition of ftate for fecurity againt enemies, and, indeed, to endamage them.
The king may lay embargoes on hips, or employ thofe of his fubjects, in time of danger, for fervice and defence of the nation ; but they muft not be for the private advantage of a particular trader or company: and, therefore, a warrant to tay a fingle fhip in no legal embargo, as in the cafe of Mr Sands, and Sir Jofiah Child, in king William the Third's reign, which was as follows:
On the 13th of December, 34 Car. II. Mr Sands being about $t 0$ lail for the Madeiras, in the Mhip Expectation, with divers goods to trade there, Sir Jofiah Cbild entered a plaint in the Admiralty court, and procefs iffued to fop the flip, and Mr Sands to give fecurity that he would not fail within the limits of the Eaft-India company, which he refufed. There was judgment for the plaintiff Sands in the Common Pleas, and damages recovered to 15001 . and, on a writ of error brought, the error affigned was in point of judgment, viz. whether the matter on record was fufficient to charge the defendant Child? It was urged that what he had done was lawful: for the king may ftop any fubject's chip, and thut the ports of the kingdom at his pleafure, in time of danger : and fo, likewife, he may reftrain his fubjects from departing, left they fhould affift his enemies. And, to prevent fuch departure of Thips, it has been ufual to petition the king, who thereupon directs his advocate to require caution that the mafter trade not with infidels; and this in conformity to the common law of the land.
It was anfwered in favour of Mr Sands, that ftopping this fhip was illegal. At common law, no man is prohibited to travel out of the realm, whether to trade with infidels or not, as appears by ftat. 26 Henry VIII. cap. 10 . which impowered the king, during life, to reftrain trading to particular places, and had been to little purpofe, if he could have done it without heip of parliament ; and, the common law being reftored by the expiration of that act, no force can be put on any man's property, without breach of the peace, and private injury.
And no inference can be made form embargoes; which are only in war-time, and are a prohibition by advice of council, and not at profecution of parties; for Mr Sands, and the fhip's crew, might have gone to any infidels, refraining from trading within the company's charter; and finding the charter is not material, for, if that had any power, there had been no need of petitioning the council.
And, in another term, the plaintiff's judgment was affirmed: but the court declared, the partners of the Chip fhould have been joined with the plaintiff in this action; which might have been pleaded in abatement, but was omitted, and the plaintiff had his judgment. Trin. 4 Will. and M. 4 Mod, Rep. 176, 179, 18 r .
Quarantine is the term of 40 days, in which perfons from foreign parts, infected with the plague, are not permitted to come on fhore.
Several places in the Baltic being infected with the plague, an act was made, 9 Ann. cap. 2. that then, and at all times hereafter, all veffels coming to England or Ireland from infected places, fhall make their quarantine as directed by the queen, or her fucceffors; during which no perfon fhall go on board fuch fhip, without proper licence.
And, if any mafter of a flip, coming from an infected place, thall come on fhore, or permit any other, or go on board any other veffel, during the time of quarantine, without licence, he forfeits the fhip to the queen, \&xc. and the perfon coming on thore, or going on board any other thip, may be compelled to return; and, on conviction by oath of one or more witneffes, fhall forfeit a fum not excreding 2ol. or be committed to the houfe of correction.
Any perfon going on board, and returning without licence, may be compelled on board again, there to remain during quarantine, and the mafter thall maintain him. And any boat or fkiff belonging to futh fhip, may be detained for the time. Juftices of the peace where quarantine is made, are to caufe watches to be fet day and night, in convenient places for the aforefaid purpofes. When the fhip has performed quarantine, the cuftomer and juftice fhall give a certificate, and the thip, \&c. be no longer detained. But the goods fhall afterwards be opened and aired, as appointed by proclamation.
The flat. 7 Geo. I. cap. 3. enacted, That, during the infection at Marfeilles, and in all future times, when any country fhall be infected, all lhips, perfons, goods, \&cc. Thall perform quarantine as directed by proclamation, notifying the king's order made in privy council.

VoL. I.

## E M B

And if, during fuch orders, any thip attempts to entet any port, the prin'cipal officer of the cuftoms, and the perfons authorifed to fee quarantine performed, fhall go off to fuch fhip, and at diftance demand the following particulars, viz. hip's and commander's name, place where the cargo was laden, places touched at in the Voyage, whether fuch places were infected, how long the fhip had been in her paffage, how many perfons on board, when fet fail, \& $\mathrm{c}_{\mathrm{i}}$
And if it appear, on fuch examination, that any perfon on board is infected, then it fhall be lawful for all whom it may concern to refift the entrance of fuch hip, by any kind of force whatfoever: and the mafter, not difcovering the fame, hall be adjudged a felon; alfo, if, on demand made, he fhall not make true difcovery in the particulars beforementioned, he forfeits 2001
If any mafter, or other having charge, fhall quit, or fuffer any other to quit fuch fhip; or fhall not, on due notice, caufe thip and lading to be conveyed as appointed during quarantine forfeits every fuch thip, with the tackle, \&c. and fuch mafter for every offence, forfeits 200l. and every perfon going on Chore, Src. may be compelled to return on board, and thall, for every offence, forfeit 200l. and fuffer fix months imprifonment.
If, at any time, any place in Great-Britain, Ireland, or the fles of Guernfey, Jerfey, Alderney, Sark, or Man, fhall be infected, and the fame made appear to the king in council, his majecty, with advice of his privy council, may make the neceffary orders for the fafety of his fubjects. And any perfon whatever, neglecting to execute fuch orders, fhall forfeit his office, be incapacitated, and fubject to iool. penalty.
During times of infection in any part of Great-Britain; \&c. or France, Spain, Portugal, or the Low Countries, his majefty may, by proclamation, reftrain all veffels under 20 tons from failing out of any port of Great-Britain, \&c. without fecurity from the mafter in penalty of 5001 . not to go to or touch at any place mentioned in the proclamation: and, if fuch veffel fail without fuch fecurity given, the fhall, with her tackle, \&cc. be forfeited to the king, and the mafter, on conviction, forfeit 50l: or be imprifoned for three months. All goods fpecified in orders relating to quasantine, fhall, in any veffel whatfoever, be fubject to fuch orders. And all fuch orders are to be read in all parifh churehes.
Any infected veffel, \&ce. being entered any place of the king's dominions, his majefty may impower any perfons to burn fuch thip, \&c. or fo much as thall be neceffary to prevent the fpreading of the infection.
The 8th Geo. I. cap. 8. declared it lawful for the king, by proclamation, to reftrain all perfons from going to infected places, and from exporting thither any goods whatfoever, or to import any from fuch place.
All goods, \&c. exported contrary thereto, with tackle, \&c. fhall be foreited, and feized, wherever found; and every per $x_{1}$ fon fhiping fuch goods forfeit double the value: alfo perfons, procuring fuch goods to be imported, forfeit treble value, \& $c_{\text {. }}$ befides other pains and penalties.
Any perfon going to an infected place, after fuch proclamation, incurs a pramunire.
By the 8 th George I. cap. 10. certain claufes in the ad 7 Geo. I. cap. 3. are repealed.
But, by the ftat. I Geo. If. cap 13. for performing quarantine, it is enacted, That, when any country is infected, his majefty may order thips, houfes, or lazarets, to be provided for perfons to perform quarantine, and alfo heds, \&c. for opening and airing of goods, \&c, in places approved of by two or more juftices for the county, \&c. where the fame lie, paying fuch rent, \&c. as fhall be agreed on.
The proper officers thall compel all perfons, goods, \&c. comprized within fuch orders, to repair, or be conveyed, to fome of the fiips, \&c. provided as beforementioned : and perfons refufing, or being placed in fuch fhip, \&c. efcaping thence, or attempting it, may be compelled to return, and, on refufal, or actually efcaping, \&c. thall be deemed felons, and fuffer without benefit of clergy.

Any perfon not infected, prefuming to enter any fhip, \&c. appointed as aforefaid, while infected perfons are there, and attempting to return thence, unlefs particularly authorized, may be compelled to repair to fome fhip, \&c. to perform quarantine : and, if he efcape, thall be guilty of felony.
And any officer hereunto appointed, fuffering any perfon, thip, \&cc. to depart, ar be removed thence, unlefs by fome particular order, thall be adjudged a felon.
There is a claufe in this flatute, that whereas cotton, fkins, human hair, and certain other fpecies of goods, are more efpecially liable to retain infection, and may be brought from places infected, into other countries, and thence imported in Thips liable to quarantine: therefore, any foreign country being infected, all fuch goods, \&ic. particularly fpecified in any order concerning quarantine, flaall be hiable to fuch order.
By 6 Geo. II. cap. 34. fuch parts of the adt Geo. II. cap 13. as were to continue in force two years only, fhall be revived, and continue a longer time; and the king may, by proclamation, prohibit his fubjects going to any infected place therein mentioned during the time, and under the regulations therein fpecified. Alfo to prohibit all perfons to come from any infeled place into Great-Britain or Ireland, \&c. under

## E M E

the regulations prefcribed. And all perfons, exporting goods contrary thereto, forfeit double the value.
If, after fuch proclamation, any perfon thall go to any infected place, contrary thereto, he forfeits 5001 . half to his majefty, half to him who fues for it; and perfons coming from any infected place, or landing goods, \&c. contrary to fuch proclamation, fhall be guilty of felony, the fhip or goods be forfeited to the king: and all perfons, caufing fuch goods to be imported, fhall forfeit treble value, two thirds to the king, the other to bim who profecutes.
In every proclamation prohibiting commerce with any infected place, reafonable time is to be allowed before it commences, according to the diffance of the infected places from GreatBritain, Ireland, \&c. and the time in which notice may arrive at fuch infected places.
Any action, or fuit, commenced for any thing done, in purfuance of this act, the defendant may plead the general iflue, and, if judgment be given againft the plaintiff, the defendant thall recover treble cofts.
If goods be laden on board, and after an embargo, or reftraint from the prince or ftate, comes forth, and then he breaks ground, or endeavours to fail, if any damage accrues, he muft be refponfible for the fame. The reafon is, becaufe his freight is due, and muft be paid; nay, although the goods be feized as contraband.
A fhip was hired to J. S. in England, to freight at 3l. Ios. per ton, to Bourdeaux ; then an embargo is laid; fhe afterwards proceeds to Bourdeaux; the mafter, not difcovering his firt agreement, agrees with the correfpondent there of J.S. to allow him 61. ios. the ton; upon this laft agreement he recovered at law, and equity would not relieve, becaufe the performance of the firf agreement was hindered by the embargo.

EMERALDS. The emerald is a greenifh fone, found in different parts of the world, as Ethiopia, Egypt, Perfia, and both the Indies. The higheft prized, or moft valued emeralds, are thofe called the prime emeralds, in that they are commonly pure and neat, that is to fay, of a fine beautiful green, inclining to the blue. There is fome appearance that emeralds are found in iron-mines, becaufe I have feen where the iron has ftuck to them. It is by fome affirmed, that the emerald takes it's green colour in the mine, according to the degree of it's perfections, as fruits ripen upon the trees; which I cannot confirm, having never feen the truth of it. They are feldom found genuine with the druggifts, therefore fhould be bought of the lapidaries.
Some authors have made twelve kinds of emeralds, as the Scythian, the Bactrian, Egyptian, Cyprian, Attic, Ethioptc, Medic, Chalcedonian, Samian, Sicillian, Laconic, and Cyprian, or chalcofmaragdus; to which, of late, has been added a thirteenth, called the fmaragdites, or baftard emerald. This ftone has been of great efteem, not only for its glory, but the ufe it was applied to, being fet in the breaft-plate of judgment.
The fmaragdo-prafinus, fmaragdites, or baftard emerald, is a tranfparent green gem, of a mixed beauty, between a prafinus and an emerald. Being compared with the prafinus, it has the greenefs of glafs, without yellownefs; but, being compared with the emerald, it has a yellowifh greennefs, which is not in the emerald. It is feldom perfectly tranfparent, becaufe of fome clouds in it, and is of two kinds; firft, the Bohemian, which is almof tranfparent; and, fecondly, the American, which is but half tranfparent. This ftone is faid to be dieuretic, expels gravel, hinders the breeding of the ftone, and eafes pains of the kidneys, and the gout. According to Lemery, fmaragdus-prafinus, or the emerald, is a fine, green, precious ftone, that is diaphanous, fhining, refplendent, but moderately hard. There are two kinds, one oriental, and the other occidental. The firft fort is harder, finer, and more efteemed. It reprefents, by it's agreeable colour and pleafantnefs, the verdure of the fields, and fills the eye with a fudden glaring light. It is brought from the EaftIndies. The fecond fort may be diftinguifhed into two kinds, Peruvian and European; the Peruvian fhews a very fine, pleafant, green colour, but does not fhoot it's rays like the oriental, and is fometimes filled with little greenifh clouds. Thefe are plentiful in Peru, and pretty large. The European fort is not fo hard or refplendent, and the leaft valued of all. They are found in Cyprus, Great-Britain, and feveral other places. The weftern are generally much larger than thofe of the eaft : for they are fometimes met with as big as the palm of a man's hand. Both kinds are proper to ftop the flux of the belly, and hxmorrhages, to fweeten the too aerid humours, being finely powdered; and taken inwardly; the dofe from fix grains to half a drachm.
The emerald to be ufed in medicine is the fmaragdus, Kentam. 47. De Laet. 33. Charle.-38. It is of a glorious green, but more brittle than any of the other gems. If thrown upon a clear fire, it emits a fine flame, and totally lofes it's colour; which is a proof that it's colour depends on a fulphur, which is feparable from it without deffroying it's fubfance; for the fone fill remains hard and tranfparent, though colourlefs, like cryftal.

## E M E

## To imitate a green emerald colour in glafs.

Take common glafs, well purified from it's falt, without manganefe [fee the articles Manganese and Glass]. Put it in a crucible in a air-furnace, and, when well melted and purified, add to it, for example, to 100 pounds of glafs, three ounces of crocus martis *; mix well the glafs at the fame time, to make it incorporate with the crocus; then let it reft an hour, that it may thoroughly take the colour. This way nothing will come out yellowifh; it will lofe that foulnefis and bluenefs which the common metal always bas, and will become green. Then add, to the fame quantity of 100 pounds of glafs, a pound of the fcales of copper, thrice calcined $\dagger$, and put it in at fix different times, mixiog it well each time with the glafs; let it ftand two hours, to imbibe the tincture. After this, ftir it again, and examine if it be as you would have it; if the colour be too blue, you muft add thereto fome crocus martis, prepared as before, and you will have a very fine emerald colour. Twenty-four hours after, mix it as before, and you may work it as you pleafe.

## * To prepare crocus martis for this occafion.

Take filings of iron, or rather of fteel; mix them well in earthen pans, with frong vinegar, orly fprinkling them fo much that they may be thoreughly wet; fpread them in pans, and fet them in the fun 'till they be dry, or, if the fun be overclouded, fet them in the open air; then powder them, and Sprinkle them again with vinegar, and dry them as before. Repeat this procefs of powdering, fprinkling, and drying, eight times: at laft grind and fearce them well, and you will have a very fine powder, of the colour of powdered brick, which keep in clofe veffels for ufe.

+ Take the fcales which the brafiers make whenf they hammer pans, kettles, \&c. as being much cheaper than new copper, Waih them well, and put them into crucibles, at the mouth of a reverberatory furnace, for calcination, for the fpace of four days: when cold, pound them and fearce them. Set that powder a fecond time in the fame reverberatory, during four days longer, and you will have little balls, of a black colour, which mult be pounded and fearced again, and put the third time into the reverberatory, for four other days. Reduce them to powder, as before, and keep them for the abovefaid ufe.

## Another Oriental emerald green, of a finer luftre.

Put into a crucible four pounds of common frit of pulveraine, five pounds of common white glafs pulverized, five pounds of cryftal-frit well wafhed; add to this compofition three pounds of minium, or red lead ; mix them all well together, and in a little time they will be pretty well purified: after which, calt all that metal into water, to purify it more, taking care that no part of the lead fink to the bottom of the pot wherein it is caft, for it will break it, if fpeedy care be not had to take up again what is precipitated.
This glars thes wafhed, and after dried, mult be put into the pot again, to be melted and purified, during the pace of one day; after which, add a little of the caput mortuum of vitriol of copper, without any corrofive, together with a fmall quantity of crocus martis; firring the metal, and proceeding as we have fhewn before, and you will have an admirable oriental emerald green, which may be wrought as you pleafe.

Of an artificial colour of fea-green, for a tincture of glafs.
The colour of fea-green is given by the Italians to beryl, which is a precious ftone found particularly at the foot of Mount Taurus, by the river Euphrates, which has the green blue of the fea. It is found in the Indies of a colour fomewhat paler, and which occafions it's being. called by divers names; and, when the colour is deeper, they commonly pals for other precious fones: wherefore it is the water which expreffes it's colour. See the article Diamond. This colour, which is one of the fineft fky-colours, ought to be made in fine and well-purified cryftal, which the Italians call bollito, for, if it be made in common glafs, it has not that luftre; you muft likewife put no manganefe in this colour. See the articles Glass and Manganese.
To make it therefore very fine and beautiful, take cryftalfrit, put it into a crucible in the furnace, where being well melted and clear, fkim off the falt, which will fwim on the furface like oil, with an iron ladle: for, if you do not fkim this off clean, the colour will be foul and oily.
The matter being thus well purified, you muft add to every 20 pounds fix ounces of the powder of copper, or rather brafs, calcined *, with 2 fourth part of zaffer prepared, alfo in powder [fee ZAFFER] and well mixed both together. In putting thefe powders into the pot on the cryfalline metal, you muft do it little by little, left the cryftalline fweling thould boil over, whereof care muft be taken, by ftirring is well all the while.

* Take the thin leaves of brafs, and put them into a crucible, well covered and luted, and place them in the mouth of a furnace to calcine and let them fland there for four
days, at a coal fire, fo that the leaves may not melt ; for then they would be quite unfit for this ufe. The four days being expired, the whole will be calcined; after which, pound them on a porphyry fone, and fearce them through a fine fieve, and you will have a blackifh powder, which muft be fread on tiles, and put into the mouth of the furmutt be ipread on tiles, and pution heat, not contiguous to nace again, to calcine in lone open hake,
the coals, for four days longer. Take blow off the coals, for four days longer, Take it ont fant with bellows that may have fallen thereon: the afhes gendly with bellows that may have fallen thereon:
reduce it again into powder, fearceing it through afine fieve, reduce it again into powder, fearceing it throu
as before, and keep it for the ufe propofed.
The certain touchatone to know when the calcination is well performed, is when the glafs rifes and fwells with eballition, upon your putting the calcined matter into it: if it does not, you mult calcine other leaves of, brafs, thefe being not ferviceable in this operation, by reafon of their being over-burned in the calcination, which muft be carefully avoided.

This being done, let the metal ftand ftill and fettle, for the face of three hours, that the colour may incorporate, and then ftir it again, and a proof may be made of the metal. Twenty-four hours after the mixing of the powders, it may be wrought: for, by that time, it will be well coloured; but the whole muft be well mixed at firft, for fear the colour fhould not be duly intermixed throughout the whole: to effect which, proper care muft be taken of every ftep in the procefs, and the tinctures rightly proportioned in quantity to the cryftalline metal in the pot, according to what has been obferved.

## To make a fair emerald, in a method fomething different.

Take of natural cryftal four ounces, of red lead four ounces, verdegreafe 48 grains, crocus martis, prepared with vinegar as before, eight grains; let the whole be finely pulverized and fifted. Put thefe together in a crucible, leaving, at leaft, one inch empty; lute it well, and put it into a potter's furnace, where they make their earthen ware, and let it ftand there as long as they do their pots. When cold, break the crucible, and you will find the matter of a fine emeald colour, which, after it is cut, and fet in gold, will rear equal in beauty an oriental emerald.
If you find that your matter is not refined and purified enough, put it a fecond time into the like furnace, and, in lifting of the cover, you will find the matter thining; you may then break the crucible, but not before; for, if you thould put the matter into another crucible, the pafte would be cloudy, and full of blifters. If you cannot have the convenience of a potter's furnace, you may build one yourfelf at a fmall expence, wherein you may place 20 crucibles at once, each with different colours, and one baking will produce a great variety of artificial gems. Heat the furnace with hard and dry wood, and keep your matter in fufion 24 hours, which time it will generally require to be fufficiently purified for the purpofe: if you let it ftand half a dozen hours longer, you may have no reafon to.grudge the expence of fuel.

## REMARKs.

Under the article Diamond, and the article Earth, we have fuggefted fome things of no little ufe, if duly attended to, and properly executed, in regard to the making of artificial ftones; and, when we come to the article of Gems, we Chall purfue this point to a far greater extent.
This curious art is already arrived to fuch perfection, that it is capable of initating precious ftones in their luftre, colour, and beauty, even to furpafs the natural ones, except in the degree of hardnefs, which to obtain, hạs been, and doubtlefs ftill is, the endeavour of many ingenious men.
The art of making artificial gems confifts chiefly in imitating rightly the tinctures of thore that are real : they mult be extracted from fuch things as refift the fire, and do not change their colour, though of a volatile nature: thus verdegreafe, being put into the fire per $f e$, is changed to another colour; but, when put in fufion with cryftal, it retains it's natural colour, by reafon of the fixation it receives from the cryftal.
You mult, therefore, in the general, take fuch colours as change not when mixed together: wherefore, fince blue and yellow make a green, you muft take fuch blue as fhall notprejudice the yellow when you mix them; and alfo fuch a yellow as thall not be detrimental to the blue, and fo of the other colours.
As natural cryftal is a general body to work upor on there occafions, it may not be ufelefs to thew it's method of previous preparation.
Take natural cryftal the cleareft you can get; fill a large crucible with the pieces thereof, and cover it with a hd broader than the mouth of the crucible, to prevent the falling of alhes or coals into it : put it into a fmall furnace on burning coals, and, when the cryftal is theroughly hot, caft it into a pretty large veffel of cold water : then take it out of the water, dry it on an earthen plate, and put it into the fame crucible again: cover it, and proceed as before, repeating it a dozen times fucceffively, and changing every time the water : when the cryftal eafily breaks and crumbles, and is thoroughly white, it is a fign that it is calcined enough; if
there appear any black parts in the veins, break off the white, and put thefe again into the furnace, and proceed therewith as before, 'till only the perfect white remain behind.
After you have dried this calcined cryftal thoroughly, grind it to an impalpable powder, on a marble or rather porphyry fone, and fearce it through a filken fieve. Of this powder of cryftal, as it is ufed for all artificial.gems, of which we fhall treat in their order, it will be proper to have a fufficient quantity by you, to have recourfe to when at work; for the frit of cryftal, be it ever fo good, will not come up to the luftre of natural cryftal, prepared as before required.
Thofe who are any thing acquainted with the nature and properties of metals and minerals, well know that moft, excepting gold and filver, are capable of vitrification; and, therefore, it is nothing ftrange that there fhould be fuch an affinity between glafly, cryftalline bodies, and metalline ones, fo as to difpofe the one, when properly prepared, to give up it's tinctures to the others: for upon knowing, fays that great philofopher Mr Boyle, the different methods of producing the adventitious colours of metals and minerals in bodies capable of vitrification, depends the art of making counterfeit gems ; for white pure fand, or calcined ciyftal, gives the body in their preparation; and it is for the moft part fome metalline or mineral calx, mixed in a fmall proportion with it, that gives the colour. Calcined lead, fufed with fine white fand, or cryftal, reduced by ignition, and fubfequent extractions in water, to a fubtile powder, will, of itfelf, be brought, by a due decoetion, to give a clear mafs, coloured like a German amethyft. But this colour may be overpowered by thofe of feveral other mineral pigments; fo that with a glafs of lead you may emulate the freft and lovely green of the emerald; though, in many cafes, the colour which the lead itfelf, upon vitrification, tends to, may vitiate that of the pigment defigned to appear in the mafs; but a little experimental knowlege in matters of this nature, will eafily lead a perfon of any genius and attention to difcover the juft application of thefe things to each other.
Glafs, cryftal, diamond, borax, nitre, and other tranfparent folid bodies, lofe their tranfparency, and appear white upon being reduced to powder ; that is, by a bare alteration of their grofs texture, or a fimple reduction to fmaller parts, fo as to reflect many of the rays of light which they before tranfmitted.
As metals have a frong texture in their metalline form, fo they preferve their natural colours darably, unlefs corroded or diffolved by their fuitable menftruam, fuch as aqua fortis, aqua regia, \&xc. [fee thofe articles] after which, their folutions ftrike particular durable colours, and afford the ftrongeft ftains.
Iron, diffolved in ftale frall beer, gives the beautiful yellow ufed in callicoe-printing; when fublimed with fal armoniac, it alfo affords a yellow. [See Ammonitic.] The common iron-moulds made by ink are owing to the iron diffolved in the copperas, whereof the common black writingink is made.
Copper, melted with zink, appears of a gold colour. Mr Boyle fomewhere fays, that copper mixed with zink, prepared in a peculiar manner, produced as fine a colour as he ever faw any gold of: copper, alfo, diffolved in aqua fortis, affords a beautiful green for painters; and, in any urinous firit, it gives a beautiful blue; and the folutions may be reduced to dry colours by cryftalization or evaporation. The fame metal, precipitated with common falt, out of aqua fortis, gives the turquoife colour to white glafs, when melted therewith.
Tin, a white or colourlefs metal, affords a light blue colour, by being fluxed with antimony and nitre. The fame metal is neceflary in ftriking the fcarlet-dye, with aqua fortis and cocheneal : it's calx, by frong fufion, turns to a glafs of the opal colour.
Solead, being corroded by the fumes of vinegar, makes the fine white caHed cerufe, and the white fucus called magiftery of lead; by being coloured in a ftrong naked fire, minium, or red lead; and this, melted into glafs with fand, is the foundation of the art of imitating all the coloured gems whatever; for this glafs itfelf will refemble the hyacinth; and, by the addition of prepared gold and tin, the ruby ; the fapphire with cobalt, the emerald with iton and copper, according to the preceding proceffes; the amethylt with gold, and the granat with iron, \&c.
Silver, another white, colourlefs metal, being diffolved in aqua fortis, if chalk is put to the folution, turns of a beautiful purple, or amethyft colour ; and it's own folution, though pale as water, durably ftains the nails, the fkin, the hair, and otier animal fubftances, brown or black.
Quickfflver, mixed with brimftone, makes a black mafs; which, by fublimation, affords the beautiful red pigment, called cinnabar, or vermillion ; and the folution of quickfilver, being precipitated with common falt, yields a fnowwhite powder, which alfo turns black by being mixed with fulphur. .
Gold, diffolved in aqua regia, affords a fine yellow liquor, which ftains animal fubftances beautifully puple ; and, if the

## E N A

folution be fufficiently weakened with water, and mixed with a folution of tin, a fine red, or purple powder, may be thus obtained for ftaining glafs moft beautifully red.
From thefe, and numberlefs other metallurgical experiments, which will appear throughout this work, it is apparent, that metalline and mineral bodies may be fo prepared as to communicate colours of all kinds to cryftalline and glaffy matters; whereby the gems of every colour may be more beautifully imitated by art, than thofe who have never been converfant with this kind of experiments, can eafily imagine.
But then the experimentalift muft be extremely circumfpect in conducting every ftep of the proceffes, otherwife he may mifcarry, and condemn their veracity, when his own weaknefs and inattention only deferve to be blamed. Perföns who have never feen any thing of experimental philofophy, nor condefcended to foul their hands with charcoal, or exercife their heads with thinking on fubjects of this nature; are too apt to fight the whole either as ufelefs, or too myiterious: whereas, had fuch but firt feen all the courfes of this fort of philofophy, which are given by the feveral profeffors, and efpecially thofe of chemical philofophy, this might give them a general idea, and afterwards a general relifh, for the practice by themfelves; for a man may as reafonably hope to make an artift of this ftamp, without felf-practice, as to become a mufician equally celebrated with an Handel or a Geminiani, only by hearing them play on the refpective inftruments whereon they excel.
Natural philofophy is not that barren thing it has long been accounted by the pedant and fchoolman, whofe knowlege confifts only in cavalling and difputing, and ringing the changes upon other men's thoughts, for want of any thing new and ufeful of their own: I only wifh that I could rouze up the generality of inquifitive perfons, and excite the curicfity of mankind to the making of experiments, from which alone the greateft advancement of ufeful knowlege is to be expected. The inventions of philofophical heads fet great numbers of mechanical hands to work, and furnifh them with the means of procuring not only a fubfiftance, but eftates too.
Our modern naturalifts and jewellers divide the emerald, as produced by nature, into the Oriental and Peruvian : the former is harder, more brilliant, and tranfparent, than the Peruvian, which has generally clouds found in it, and therefore has lefs luftre.
Some authors inform us, that emeralds have been taken out of iron mines: Pomet affures us, that he had one to which the iron ore was fill adhering, and which I have feen myfelf. This ftone is fuppofed to grow more and more perfect in the mine, like the ruby, and to arrive at it's general greennefs by flow degrees.-It is the common opinion, that the emerald grows in the jafper ; it is certain, that fome jafpers are fo perfeally green, that they have been taken for emeralds.
The ordinary matrix of this ftone is the preme, which is held among the coarfer precious ftones; being hard, tranfparent, half opaque, and ufually mixed with yellow, green, white, blue, \&c.
Monf. Savary gives us an eftimate of the values of the different kinds of Peruvian emeralds. Rough emeralds.-Thofe of the firft and coarfeft fort, called plafmes, for grinding, are worth 27 s . fterling the marc, or 8 ounces. The demimorillons, 81. fterling per marc. Good Morillons, which are only little pieces, but of a fine colour, from 13 to 151 . per marc. Emeralds larger than morillons, and called of the third colour or fort, are valued at from 50 to 601 . the marc. Thofe called of the fecond fort, which are in larger and finer pieces than the preceding, are worth from 65 to 751. per marc. Thofe of the firft colour, otherwife called negres cartes, are worth from 1 io to 115 I.
Emeralds ready cut, or polifhed and not cut, being of good ftones, and a fine colour, are worth,

ENAMEL, a kind of coloured glafs.
The glafs ufed for enamelling, is called cryftalline, and Thould be made with the beft Alicant falt, and fand, vitrified together.
Pewter and lead in equal parts, and calcined in a reverberatory fire, with the cryftalline matter, are the principal compofitions of the enamel; the other materials added by the artizan, are only to colour it.
There are three forts of enamels; thofe which counterfeit precious ftones, thofe ufed by the painters in enamel, and thofe with which they make pretty curious works, wherein there is fo confiderable a trade at Nevers in Fiance. Thefe laft are

## E N A

peculiar to the goldrmiths and enamellers in gold, filver and orher metals ; and 'tis with this fort of enamel, with the white at leaft, that the Delft-ware-potters varnifh their works. Thofe fubflances which imitate precious ftones, and fuch as are for enamel-painting, are melted and prepared by the artificers who exercife this art. The others come from Venice and Holland.
The compofition of all three forts is the fame in the main, differing only in the colouring or tranfparency.

## Of enamel-painting.

This is performed on plates of gold or filver, and moft com* monly of copper, enamelled with the white enamel; whereon they paint with colours which are melted in the fire, where they take a brightnefs and luftre like that of glafs
This painting is the moft prized of all, for it's peculiar brightnefs and vivacity, which is the moft permanent, the force of it's colours not being effaced or fullied with time, as in other painting, and continuing always as freth as when it came out of the workman's hands. 'Tis ufually in miniature, it being, more difficult the larger it is, by reafon of certain aceidents 'tis liable to in the operation.
They are commonly made in plates to fet in fnuff-boxes, dial-plates for watches, and other things of the like fize, The colours ufed muft be ground with water, in a mortar of agate, 'till they are extreme fine, and, when ufed, muft be mixed with oil of fpike fomewhat thick.
They begin at firft by drawing out exactly the fubject to be pairted, with red vitriol mixed with oil of fike, marking all parts of the defign very lightly with a fmall pencil.
After this the colours are to be laid on, obferving the mixtures and colours that agtee to the different parts of the fubject: for which 'tis neceffary to underfand painting in miniature, that art being a great help to the execution of this. When the coloursare all laid, the painting muft be gently dried over a flow fire to evaporate the oil, and the colours afterwards melted to incorporate them with the enamel, making the plate red-hot in a fire like what the enamellers ufe.
Afterwards that part of the painting muft be paffed over again which the fire hath any thing effaced, ftrengthening the fhades and colours, and committing it again to the fire, obferving the fame methods as before, which is to bs repeated 'till the work is finifhed.
They ufe few colours: the chief are purple, azure, blte, and yellow, and clear green enamel, or inftead of it a mixture of
blue and yellow, hell black, and the red of vitriol. There' are many others, which need not be minutely defcribed, becaufe, with thefe few, a fkilful painter knows how, by mixing them, to compofe a great variety of others.

## Enamel for painting.

The white enamel fit for enamelling the plate to be painted on, is the fame with that commonly ufed by thofe who make enamelled dial-plates. 'Tis prepared by braying and cleanfing it with aqua fortis, after which being well wafhed in clear water, 'tis pounded afrefh in a mortar of Chalcedonian fint, or agate, as already faid.
The red brown is made with the lees of vitriol and falt-petre, or with the ruft of iron, well ground upon an agate, with the fineft oil of fike.
The blue is made with azure, which the painters in oil ufe, well cleanfed and prepared, with good brandy, expofed five or fix days in a bottle to the fun. If they would have the azure to be very fine, they mult take fome zaffer, adding to it about a third part of pebbles, or rather very pure cryftal ; and having pounded and put them into two crucibles well luted, and fet them in a glars-houfe furnace for 24 hours, they are afterwards to be ground afrefh with oil of fike.
The vermillion red is made with vitriol calcined between two crucibles luted, cleanfed with aqua fortis, and wahed with clean water; the fire fhould be moderate, and continued abour half an hour.
Lac red is compofed of fine gold, diffolved in aqua regia, with fal armoniac or common falt, and then digefted 24 hours in a fand-heat in a cucurbit with fring-water and mercury. The powder remaining in the cucurbit, after pouring off the water, is to be ground with twice it's weight of flour of fulphur, and put in a crucible over a flow fire; and, when the fulphur is exhaled, the remaining red powder is to be ground with pebbles.
Lafty, white copperas calcined makes a colour fomewhat like the umbre ufed by painters in water-colours.

Enamel of goldfiniths, enamellers, and other workers in enamel.
Such of thefe forts of enamels as come from Venice and Holland, are in fmall flat panes of different fizes, commonly four inches over, and about $\frac{1}{3}$ or $\frac{1}{4}$ of an inch thick. Every pane has the maker's mark on it, made with a kind of large
bodkin;
badkin; the moft common are a fyren, an ape, a fun, and the like.
The moft ufual colours of the Venetian enamels, are white, flate-colour, gridelin, ky-blue, fleh-colour, yellow, green, another deeper blue. Thefe feven colours are, as it were, the bafis of all the others, which arife from the mixture of them; and the white in particular is as the matrix of the fix other principal colours.
The white, as already ebferved, is made with cryftalline, pewter and lead calcined together in a reverberatory fire; and this is ufed by the golddmiths and enamellers in metal, the potters, painters in enamel, and the mafter bead-makers in enamel: by adding azure to it, they make the gridelin. If tofe-copper and Cyprus vitriol be put to it, the enamel becomes a fky-blue; if the Perigord fone, 'tis a flefh colour. Ruft of iron mixed with the white enamel makes a yellow, and filings of copper a green, \&c.

## The manner of working in enamel.

Mof enamelled works are wrought in France at the fire of a lamp, in which inftead of oil, they put melted horfe-fat, which they call oil of horfe. The rag-gatherers and thofe who flin them, prepare and fell this oil
The lamp which is of copper, or whited iron, confifts of two pieces; in one of which is a kind of oval plate fix inches long and two bigh, in which they put the oil and the cotton. The other part called the box, in which the lamp is inclofed, ferves only to receive the oil, which boils over by the force of the fire.
A table of what height and fize they think fit, ferves to fet the lamp on, of even three others, if four workmen have a mind to work together. Under the table, about the middle of it's height, is a double pair of organ bellows, which one of the workmen moves up and down with his foot, to keep up the flame of the lamps, which is bereby excited to an almoft inconceivable height of vehemence. Grooves made with a gauge in the upper part of the table, and covered with parchment, convey the wind of the bellows to the pipe, which is before each lamp, and which are of glafs; and, that the enamellers may not be incommoded with the heat of the lamp, every pipe is covered at fix inches diftance, with a little tinplate fixed into the table by a wooden handle.
When the works don't-require a long blaft, they only ufe a glafs pipe, into which they blow with their mouth.
'T is incredible to what a degree of delicacy and finenefs, the threads of enamel may be drawn at the lamp. Thofe which are ufed in making falfe tufts of feathers are fo fine, that they may be wound on a reel like filk or thread. The fietitious jet of all colours ufed in embroideries, are alfo made of enamel, and that with fo much art, that every fmall piece hath it's hole to pafs the filk through which the embroiderers ufe: thefe holes are made in blowing them into long pieces, which they afterwards cut with a proper tool.
The Venetian or Dutch enamels are feldom ufed alone; they commonly melt them in an iron ladle, with an equal part of glafs or cryftal; when perfectly fufed, 'tis drawn out into threads of different fizes, according to the nature of the work. They take it out of the ladle, while liquid, with two pieces of broken tobacco-pipes, which they extend from each other at arms length. If the thread is required fill longer, then anotber workman holds one end, whillt he that works it holds it to the flame of the lamp.
Thefe threads when cold are cut into what lengths the workmen thinks fit, but commonly from ten to twelve inches. As theie threads are round, if they are required to be flat, they ufe for that purpofe a pair of iron pincers; which they muft do, while 'tis warm.
They have another kind of pincer with which they draw it at the lamp, when they are making figured and fuch-like works.
When the'enameller is at work, he fits before his lamp, with his foot on the ftep that moves the bellows, and holding in his left-hand the work to be enamelled, or the brafs or iron wires the figures are to be formed on, be directs with his right the enamel thread which he holds to the flame, with a management and patience equally admirable.
There are few things they can't make or reprefent with enamel, and fome figures are as well finifhed as if done by the moft dkilful carvers.
Enamel in tablets or common inde, is a blue enamel, of a high colour, ground with indigo and ftarch, reduced to the confiftence of pafte, and formed into tablets with gumwater. This drug is feldom ufed but to mark fheep with, though there are fome grocers and druggifts difhoneft enough to fell it for the true inde. To difcover the fraud, 'tis fufficient to diffolve it in water; for the enamel of which this common inde is made, finks to the bottom like fand, which it does not in the genuine.
Enamel is allo a kind of blue mineral, reduced to powder', and purified by many lotions, ufed by the wafhers and laundreffes to tinge their cloaths of a fine blue, which renders them agreeable to the eye, and more tranfparent.
This enamel is an ingredient in the blue farch; the beft is
Vol. I.
faid to be made in Holland. Grocers and druggifts deal in it in Holland, thefe laft only by retail.
Enamel fignifies alfo a fort of potter's ware, or enamelled porcelain, very fine, and almoft traffifarent.
They imitate it in fome glafs-houfes, and it fucceeds there very well.
To EnAmel, is to lay the enamel upon metals, as gold, filver, copper, and to melt it at the fire; or to make divers curious works in it at a lamp. It fignifies alfo to paint in enamel.
ENAMELLER, he who worketh in enamel. The goldfmiths and jewellers who fet precious ftones, lapidaries who counterfeit them in enamel, and painters who work in miniature on enamel at the fire, are comprifed in the general term of enamellers; though, in France, in particular, they make a part, one of the goldfmiths, and the other of the mafter painters and carvers company of the city of Paris.
The enamellers, properly fo called, in that nation, are thofe they call bead and button-makers in enamel.
Thefelaft have long compofed one of the companies of arts and crafts of the city and fuburbs of Paris, and fill make part of that of the mafter glafmen and potters, to whom they have been united.
The edict of their erection into a fworn body is dated the 6th 6 J July 1566, enrolled in parliament the i 7 th of the fame month and year, and publihed at the Chatelet the 26th- of Auguft following.
'Twas given by Charles the IXth, and confirmed by letters patents of Henry III. dated April 1582, enrolled in parliament the 23d of May 1583, and again by Henry IV. in September 1599, who added fome others to the twenty articles in the flatutes of the firt edici. There appears nothing of the enrollment in parliament of thefe laft letters patents, which were only at the Chatelet the 6th of July 1600 ,
At length, on the refpective petitions of the mafters of that company, and of the mafter glaltmen-potters, Lewis XIV. reunited them, that for the future they might be only one and the fame body, without derogating either from their ancient ftatutes or their qualifications, both remaining to them in common.
The ftatutes of the edict of Charles IX. confift of twenty articles, and the augmentation granted by letters patents of Heary IV. of three others. By this edich, the mafters have only the quality of bead and button-makers in enamel; thefe letters added to it glafs and cryftalline enamel-makers.
Four wardens, two of whom are renewed every year, are charged with the difcipline of the body, with vifitations, mafter-pieces of workmanthip and trials, and with the reception of perfons to the freedom, as alfo the affair of apprenticeflips.
No mafter may be received, that hath not ferved his apprenticefhip with mafters in Paris, or fome fworn city mafter at leaft.
The apprenticeflip, even of mafters fons, if they learn with any others but their father, muft be five years eight days; after which, if the apprentice applies for his freedom, - information muft be had of bis life, manners, and apprenticelhip, before any mafter-piegce of workmanfhip or trials be delivered to him.
Every mafter may bind but one apprentice at a time, but he may take a new one in the laft year. A mafter's fon holds not the place of apprentice with his father, but with a -ftranger.
Widows continuing fuch, enjoy the privileges of their craft, and may continue an apprentice bound, but not take a new one. And they, as well as mafters daughters, make apprentices and journeymen free by marrying them.
Foreign merchandize is to be viewed by the wardens, who are to come as foon as advertifed of it, on pain of damages and interefts from the foreigners.
Mafters of the company may make all forts of bead-rolls, enamelled buttons, gilding on glafs and enamel, ear-pendants, toys, and all other fuch-like works, with enamel, and cryftal paffing through the fire and fornace.
It belongs to them likewife to ftring all girdles, calkanets, chains, collars, bracelets, bead-rolls, and chaplets of the fame materials and like workmanhip, even to the enriching and ornamenting them with gold and filver; they are alfo permitted to fell, buy, and work, alf glafs wares, which depend on and arife in confequence of all the faid works; without permiffion, however, to gild any works in horn and bone, thefe laft belonging to the craft of thofe called beadmakers in horn and wood only.
Finally, all perfons, dealers, and others, are prohibited to have any fort of enamel, or to keep peculiar forts for fale, except mafter enamellers.

## Remarks.

The foundation of the art of enamelling, as well as that of imitating natural flones, depends net only upon a chorough knowledge of the properties of all natural glafly and crytalline bodies, but on the experimental knowledge of artificial glafs-making; and not only on"thefe, for without a competent difcernment into the qualities of all mineral and metal

9 H

## E N G

line bodies, and all the changes which they are capable of undergoing by art, it is not polible that any enameller fhould arrive at that perfection his art will admit of.
There is one thing in particular that we will take leave to recommend to enamellers, that is, the vitrification of all mineral and metalline bodies; which will afford an extraordinary variety of very curious and permanent colours for their art. To which end they will find the proper application of antimony greatly to contribute, and more particularly it's fulphur auratum, as it is commonly called by the chemift. But, having fpoken to this already, under the article AntiMONY, the reader is defired to confult what has been there fuggefted.-Likewife, in order to judge what fort of colours the infinite divertity of middle minerals and marcafitical bodies will admit of, a fmall proportion of them in powder may be melted with the fixed clarified falt of tartar, or nitre, and let run per deliquium, or be thrown into clear water.Borax alfo will diffolve many mineral fubftances, and bolar earth, and exhibit to what colours they are likely to adminifter in the art of enamelling, \&c.
ENGLAND. In order to make a judgment of the commerce of England, we have under the article Britain, or Great-Britain, taken a furvey thereof in the following lights. (r.) With regard to it's domeftic traffic in general. (2.) With refpect to it's connection with Scotland and Ireland. (3.) In relation to ir's trade with her colonies and plantations in America [fee the articles British America, and Colonies]. And (4.) With regard to the ballance of trade, both general and particular, with other ftates and empires. See the article Ballance of Trade.
At prefent we fhall confider the commerce of England in other lights. And (I.) Let us take a fuccinct view of it's fea coalts and navigable rivers, and how nature, from the fituation thereof, has furnithed this part of Great-Britain with every advantage to enable her to carry on foreign traffic, to a degree of extent no way inferior to any part of the known world
(r.) We thall begin at the mouth of the river Thames on the Effex fide, and go north to Berwick upon Tweed. (2.) We fhall begin again at the mouth of the Thames on the Kentifh fide, and going fouth to the South Foreland and Dungenefs, then turning weft to the Land's-end in cornwall, and the intes of Scilly. (3.) We fhall begin at the mouth of the Severn fea, and coaft from thence to the fouth-weft point of Wales, called St. David's.
With refpect to the firf of thefe confiderations.
The Naze and the North Foreland make the mouth of the Thames, the diftance about fixty miles. From the Naze on the Eflex fhore, the firf town is Harwich, diftant about five miles. The chief bufinefs of this town, in queen Anne's war, depended on the grand ferry between England and Holland, and the coming in and going out of the packet-boats. But fince that time floops have been fet up, which run directly from the river to Holland, \&c. and take off great numbers of paffengers, the town hath diminifhed in advantages of this kind. This town, however, enjoys a tolerable maritime trade, has a market every Tueflds: and Friday, and two annual fairs, one on May-day, the bither on the 28th of OAtober. The harbour is of great extent, ine river Stower from Maningtree, and the river Qowel from Ipfwich, empty themfelves here; and the channels of both empty themfelves here, and the channels of both arelarge and deep, and lafe for all weathers; and, where they join, they make a lange bay or road, able to receive the biggeft thips of war, and the greateft number, perhaps, that ever were feen together. In the Dutch war, great ufe was made of this harbour ; there have been 100 fail of men of war with their attendants, and between 3 and 400 fail of colliers, all riding in it at a time, with great fafety and convenience. Here is a yard and launch for building and repairing fhips of war. It has a good fort, and fo fituate as to oblige veffels to pafs clofe under it's cannon. Oppofite to the fort, on the fouth fide of the mouth of the harbour, and on an high hill, ftands a large and high built light-houfe, for the direction of mariners.
Between the Naze and this place, they find the copperasftone [fee Copperas] in great quantities; and, here and at Walton, are feveral confiderable copperas works.
From Harwich, the fhore of Suffolk extends north-eaft to Aldborough, and then due north to the town of Great Yarmouth, and to thole famous fhoals, which they call Yarmouth Roads: there are fome creeks and harbours for finall veffels between them, as at Woodbridge, Aldborough, Swale, \&c. but not for lhips of burden.
Yarmouth, beffdes all her other commerse to London, has the particular trade of exporting corn to Holland, more than any port of England befides, and the chief trade of exporting the woollen manufactures of cloth, kerfies, \&ic. from Leeds, Wakefield, Hallifax, and all the Weft Riding of Yorkfhire; and alfo of lead and mill-fones from Derby and Nottinghaminire; which make a confiderable trade there to Holland, Bremen, Hamburgh, \&c.
Yamouth hath the fineft market-place, and the beft furnithed with provifions, of any in the thiee kingdoms.-It has likewife the moft facious key or wharf in all Britain, or per-
haps in Europe, that at Seville in Spain only excepted: the Thips here lie fo clofe to one another, and with their bow frits over the fhore, that you may flep from the fhore into any of the fhips directly, without going from one into ano ther ; and they lie in this manner fo clofe, that one may walk over them as over a bridge, for fometimes a quarter of a mile or more together.
Tbey have a fifhing fair, which is kept here at Michaelmas for the catching of Herrings; during which feafon, all the fifhing veffels from any other part of England are allowed to catch, bring in, and fell their fiih, free of all toll or tax, as the burghers or freemen of the town are.
Norwich is a large and populous manufacturing city, fituate on the river $Y$ are, navigable to Yarmouth; and, as it is a place of confiderable trade, adds to the commerce of Yar mouth, by receiving a great quantity of imported merchandizes from thence, by the navigation of the Yare: fuch as coal, wine, fifh, oil, and other heavy goods.'
The manufactures of this city of commerce are, generally fpeaking, fent to London, where their chiefeft markets are; they are alfo exported at Y armouth in confiderable quantities ; efpecially to Holland and the fhores of Germany; likewife to Sweden, to Norway, and other parts of the Baltic and northern feas; and this adds alfo to the trade of Yarmouth. Lynn-Regis and Bofton, ftand at the mouths of two large rivers, which are feverally navigable far into the country; and that navigation gives thofe ports a confiderable advantage in commerce, efpecially the firft, which fand at the united mouth or entrance into the fea of feveral leffer riverg falling into one; by means whereof this port has an intercourfe of trade even into the very heart of the kingdom, as high almoft as to Northampton. Take the particulars in brief thus: the Great Oufe is the main river, into which all the reft flow: this river rifes in Buckinghammhire, and, taking a long circuet north, runs by Buckingham, Stoney-Stratford, Newport-Pagnel, and Oulney, all of them large trading market-towns in the counties of Bucks and Bedford; thence it runs to Bedford, a large populous town, full of trade, where it begins to be navigable, and from thence pafles through St Neots, Huntingdon, St Ives, Ely, Downham, and Lynn. In it's courfe the Oufe receives the Nyne from Northampton and Peterborough; and obtained an act of parliament to make it fo to Fotheringay, Oundle, Thrapfton, Wellingborough, and Northampton.-It receives likewife, the river Cam from Cambridge, and the Lefler Oufe from Thetford and Brandon in Norfolk, which is navigable for large barges. - It alfo receives the Mildenhall from Suffolk, which is navigable to St Edmundibury.
By means of thefe rivers, Lyon commands the trade of all that inland part of England, which is comprized in the counties of Cambridge, Huntingdon, the north part of Bucks, all Bedford and Northampton, and the inland parts of Norfolk and Suffolk; all which counties are fupplied, efpecially with coal and wine from Lynn, which is the greateft port of importation for thefe two articles of any place on all the eaftern coaft of England, from London to Berwick upon Tweed. In return for which, Lynn receives back all the conn which thefe counties yield for exportation, and is therefore, next to Hull, the greateft port for the exportation of corn.
A little weft of Lynn are fmaller navigable rivers, which carry fome trade to the ports of Spalding and Wilbich, the navigation going fome lengths within the country; by the firft to Stamford, by the laft to the ifle of Ely.
North from hence, the fhore offers nothing of moment'till you come to the mouth of Humber, where lies the port of Grimfly, eminent chiefly for a good road for fhipping, and which is to the Humber and towns on it, as the Downs are to the river of Thames, a fafe riding for fhips to wait for 2 fair wind to carry them out to fea.
The next place deferving our regard, is the port of Hull, whofe town is the moft noted and confiderable place of trade in all this part of England. The trade between this port and London, efpecially for corn, lead, and butter; and the trade between this port and Holland for the like commodities, and for the cloth, kerfies, and other manufactures of Leeds, Hallifax, and other great and populous towns of Weft Yorkfhire, is fuch, that they not only employ few thips, but fleets, confifting from 50 to 60 fail at a time, and, in time of war, it has been an 100 fail or more.
Newcaftle upon Tyne, indeed, may contend with it; as Liverpool is now able to do, a place prodigioutly increafed in trade within a few years paft, and daily increafing; whereas Hull does not feem to have advanced to the like degree, but certainly it is the principal port of trade in all this part of England.
What has contributed to the increafe of the trade of Hull, is the great number of large navigable rivers, which make their influx into the fea near it, viz. by the Humber; by which Hull has a communication of commerce and navigation with a great part of England, efpecially with the inland parts, which have no foreign traffic by any other channel. Thete rivers are, (r.) The Oufe, navigable up to York, and thence near to Burroughbridge and Rippon. (2.) The Trent, with

## E N G

the rivers Idle, Witham, Don, and Darwent; by the navigation of which, no inconfiderable trade is carried on to the. towns of Bautry, GainBorough, Newark, and the city of Lincoln, the towns of Nottingham and Derby, and even to the city of Lichfield; and all the heavy goods of thefe countries, fuch as lead from Derby and Nottinghamflire, iron wares from Sheffield, cheefe from Warwick and SiaffordThire, and even from Chichire itfelf, are brought to this port, and from hence exported to Holland, Hamburgh, and the Baltic, as alfo to France and Spain.
But what is alfo very confiderable is , that by all thefe rivers fuch a prodigious quantity of corn is brought down out of thefe counties to Hull, as renders it, perhaps, the greateft port in England for exportation of corn, even fometimes exceding Londoń itfelf.
North from the Spurnhead is Burlington, or Bridlington, diftant about ten leagues, famous for a bay, ufeful for it's fafety to the failors and their hhipping, in cafe of ftronggales of wind and winter-ftorms from the north-north-weft and north-eaft. This place is of late years become remarkable for a great corn market. The head of land, which runs out far into the fea north of the town, is called by the failors Flambro'head.
The next harbour north of Flambro' is called Robin Hood'sBay, a good road for fhips bound to the fouthward, but too open to the north-eaft. The next port is Whitby, a town remarkable for building the beft and ftrongeft fhips for the coal trade, of any on this coaft; they have a fmall haven with a good pier, for the repairs of which they obtained an act of parliament. The river being fmall, they have no great advantage by an inland trade; yet they fhip off no fmall quantities of butter and corn for London, and fometimes for Holland : but their chief bufinefs is in fhipping for the coal trade.
Here the coaft falls north-weft to the mouth of the Tees, but there is no trading town on the coaft; Stockton, which is the port here, being two leagues up the river, which is capabie of good fhips at the entrance, but the current is fo dangerous, that fometimes the fhips are obliged to provide for their fafety; the tide alfo flows the lefs up the river, fo that there is no long navigation here, otherwife the Tees would be a fine river for trade. They abound with excellent falmon in this river, and they have a good trade for butter and bacon, but'tis chiefly to London.
The next port is Sunderland, famous for the pit-coal trade. Were the harbour as good here as at fome ports, fo that large fhips might go in and out with fafety, the coal trade of this port would equal, if not exceed that of Newcafle: for not only great quantities of coal are found upon the banks of the river Wear, which comes into the fea here, but they are the beft kind of coal, as thofe called Lumley coal, alfo divers others, which are greatly efteemed.
But the port of Sunderland is barred up, and the fhips are obliged to take in their loading in the open road; which makes it fo dangerous to the keelmen, that often they dare not venture off to the fhips, and are frequently loft in the attempt. Wherefore the fhips which load here, are generally fmaller than thofe at Newcafte; they have, indeed, one advantage of the Newcaftle people, that in cafe of contrary winds, as particularly a north-eaft, which, though fair when they are at fea, yet does not permit the hips at Newcaftle to get out of the Tyne; whereas the fhips at Sunderland, riding in the open fea, are ready to fail as foon as they can get their loading in: fo that it has been known they-have delivered their coals at London, and, beating up againft the wind in their return, have got back to Sunderland, before the fhips at Shields, which were loaden at their coming away, had been able to get over the bar.
Sunderland, by means of the coal trade, has many years been a thriving town, very populous, has a great many fhips belonging to the place, and abundance of able feamen, thofe of Sunderland being efteemed among the colliers, as fome of the beft in the countty.
Within the mouth of the river Tyne, are the towns of North and South Shields. On the fouth fide are great numbers of falt-works, which furnifh not only the city of London, but all the towns and cities between this place and that metropolis; alfo all the counties which are furnifhed by means of the Thames and Medway to the weftward and fouthward of London. Thefe falt-works are faid to confume no lefs than 100,000 chaldron of coals in a year.
On the fide of North Shields, where the river making a bay, and the channel running near the fhore, it makes alfo a deep and fafe road for the laden colliers to lie in, when they want a wind to go over the bar, and here 3 or 400 fail of thefe hips are feen lying together.
Upon this river, about two leagues and half lies the town of Newcaftle, to which there towns of South and North Shields, are like out-ports, as Gravefend is to London, or as Harwich to Ipfwich. The river is large, the channel good and fafe up to Newcafle, and the tide flows with a ftrong current to the town, and far beyond it; thips of any burden may come up to the key of the town, but the colliers generally take in their lading below, between Newcaftes and Shields.-

The coal trade, which maintains this very large and populous town is a prodigy, and affords more permanent treafure and maritime power to the nation, than if we were poleffed of fome of the gold or filver mines in America.
From hence to Berwick, we have nothing confiderable upon the coaft, except fome coal-wharfs and falt-works, and Holy-Illand, which is occafionally a good harbour for our hips from Ruffia and the other northern parts, when contrary winds have taken them fhort in their way to London. This hath frequently proved of no little importance to our merchants fhips.
Berwick is a good town but a mean port.-Nofhips that draw above twelve feet water can well trade there, neither is there any good riding in the offing near the bar, the fhore being fteep and rocky, the cliffs high; and, in cafe of a ftorm off fea, no relief but what is found in good anchors and cables.
We hall now take a view of the fouth and weft coafts of England, as before intimated.
The firft place remarkable on this fhore is Sandwich, in a fmall bay called by it's name, on the bank of the little river Stour, navigable as high as Fordwich. It is one of the Cinque Ports. See the article Ports. It's haven admits of no fhips of burden fo as to come to it's key. -It's chief bufinefs confifts of fmall hipping and malting.
Between this and the Foreland is Ramfgate, in the ifle of Thanet, and is a member of the town and port of Sandwich. An act of parliament was lately paffed, whereby it's harbour is like to be rendered capable of receiving 200 fail of fhipping; and a new pier is erected, capable of refifting the moft tempeftuous weather.
From hence a high ridge of fand and beach fecures the fhore, and the Good-win-Sands, lying parallel with the land, make a tolerable fafe road, which we call the Downs: and, though fometimes, upon miftakes of pilots or ftrefs of weather, fhips have beén driven upon thofe fands and loft; yet, generally fpeaking, the Downs, is efteemed a very good road, and the merchants fhips to and from London, and to and from all the fouth and weftern parts of the world, ufually ftop here. Whence they take their departure for their voyages outward bound, and here they notify their arrival to their merchants, when they return homeward bound. See the article Downs. From this cuftom of the fhips ftopping here, and the great confluence of people, as well feamen as merchants, on thefe. occafions, the modern town of Deal has increafed to an extraordinary magnitude, and to be more rich, populous, and better built, that moft of thofe in it's neighbourhood: this town was, within about half a century, no more than a trifling village, confifting of a few fifhing huts, with which the people ufed to go off, and trade with the fhips in the paffage of the Downs. But fuch are ever the bappy effects of trade and navigation, that it quite changes the face of the moft favage and depopulated places, and renders them opulent, flourifhing, and magnificent.
Folkftone and Hythe, two Cinque Ports, are alfo weft or fouth-weft of this at a fmall diftance. From hence the fhore makes a large bay, which is the coaft of that fmuggling country called Romney-Marfh, which, has been to remarkable for the owling trade, or that of wool-running from England to France; a moft pernicious traffic to this kingdom, but highly beneficial to that of France. See the article Wood.
This marih, which contains no-lefs than 40 or 50,000 acres of fruitful land, is efteemed the richeft pafture in England, and fattens vaft flocks of fheep and black cattle, fent hither from all parts, and fold in the markets of London.
At the end of this Ievel, fouth-weft from Hythe, lies Dungenefs, from whence the fhore falling off, the coaft lies eaft and weft ; and under the weft fide of this'point is a fafe road for fhips; if, coming from the weftward, they chance to be taken thort with an eafterly wind and cannot reach the Downs.
From hence we come to Rye, as the next place of any confideration. This is a fair fituated and well built town, and by the addition of French refugees, which fettled here at the time of their flight from France, is become pretty populous; and, were it not for the badnefs of their harbour, it would be a town of good trade. Yet this harbour was once capable of receiving the whole royal navy of England ; trough at prefent fo choaked up with fand for want of a ftrong back water, that 'tis almoft ufelefs; which is faid to be occafioned by reafon the gentlemen in the country have inclofed the low grounds upon the river, and thereby prevented the tide from fpreading itfelf upon the food, which obftruct a due quantity of water coming in to make a frong ebb. Was this port fully reftored to it's former goodnels, it would certainly prove a great convenience to merchants flipping, in cafe of diftrefs, either in going up or down the channel ; there not being one good harbour, where any fhips of burdencan put in for fafety between the Downs and Portfmouth; if the ftorm happens to make a lee-fhore, as did in the cafe of his majefty king George I. when he returned from Holland in $1725-6$ The chief trade of this town is in hops, wool, timber, cannon, and caft iron of divers forms, which are caft at the iron works at Bakely and at Breed.-The mackarel and herrings; taken here in their feafon, are reckoned the beft in their
kind. The reft of the feafon they trowl for foles, plaife, turbut, brill, \&c. which are carried every day to London. A Little beyond Rye, we fee the ruins of Winchelfea, once a good fea-port and flourifhing city; but with it's trade it has loft all appearance of a city, which experience hath always fhewn will be the cafe of all places whatfoever. The lofs happened, indeed, by the fea forlaking it; for whereas they thew you the vaults, cellars, and warehoufes, where the merchants goods ufed to lie, and the wharfs and cranes where they were landed, you now fee the green marihes extended where once the fhips migbt fail, and the very grafs grows in the ftreets where they are paved.
Weft from this we have nothing of note but Haftings, a fmall town ; and, though the chief of the Cinque Ports, yet of little confideration, having neither trade or harbour, fort or caftle. Great fums of money have been expended to make this a good harbour, but tempeftuous weather has hitherto obftruated it. London is fupplied from hence with abundance of fifh, which are taken upon this coaft, and which, indeed, is the chief of their bufinefs.
'Till we come from hence to St Helens, Spithead, and Portfmouth, there is nothing remarkable, except fome fmall towns on the coaft, as Shoreham and Arundel, two places eminent for building of fhips, hoys, and ketches ; the firft at Shoreham, the latter at Arundel: they are great builders of hipping, by reafon of the prodigious quantities of large timber, which this part of England affords more plentifully near the fea than elfewhere,
Portfmouth is the next place confiderable upon the fea-coaft of England; in it's prefent fourifhing condition it is a formidable place, efpecially by fea, though the fortifications on the landfide, are alfo very good. The fituation is fuch both by land and water, that the whole kingdom does not afford the like for the protection of the royal navy. The entrance of the harbour is fafe, but narrow, guarded on both fides by terrible batteries of guns, and thofe fo numerous, and fo well pointed from divers places, that, if it be defended with all defirable bravery and fidelity, it may be faid to be almoft impregnable to any fleet of fhips, how ftrong foever.
Within this entrance the thips may ride three or four miles up the harbour, fo as to be out of the reach of all batteries, cannon, or bombs. In regard to the flrength of the town byland, there is a large horn-work on the fouth-fide, running out towards South-Sea Caftle : there is alfo a very good counterfcarp, a double mole, and ravelins to cover the curtains; befides various advanced works in every place where requifite; and double pallifadoes round the whole place.
The dock and fhip-yard, which are to the north of the town, were before fecured by the ftrength of the harbour, and by the town; but the late King William, not fatisfied with that cover, ordered them to be particularly fortified, and new lines and baftions drawn round the whole place; which being done, the dock and fhip-yards are now an additional ftrength, diftinct from the town, and they mutually cover and ftrengthen each other ; fo that the dock and yards cannot be taken 'till the town is. The government has bought more ground, for additional works ; and no doubt it may be rendered impregnable by land,' as well as by fea, fince a fhallow water may be brought quite round it.
It is amazing to fee the extraordinary quantities here of all forts of military and naval fores, and the exact order in which every diftinet tool is laid up, fo that the workmen can find what they want in the dark. The rope-houfe is near a quarter of a mile in length. Some of the cables made here require 100 men to work them; and their labour is fo hard, that they cannot work at them with any vigour above four hours a day. The leaft number of men employed continually in the yard is faid to be 1000. The docks and Chip-yards refemble a diftinct town, there being particular rows of dwellings, built at the public expence, for all the principal officers; and they are under a feparate government from the garrifon. Here is alfo a fine key for laying up the cannon; the arfenal of Venice is not better difpofed.
The town of Portfmouth is a large, populous, and opulent corporation, having grown fo during the three laft great wars; and the fuburbs are become a kind of diftinct town, and appear with a very profperous afpect on the fide of the London road.
From Portfmouth weft the feveral inlets of water go almoft every way, making divers creeks and harbours, wherein are fafe riding for fhipping, even of the greatelt burden, as at Bafsleton, Southampton, Rumfey, and other places.
Southampton was once a very flourining town, in comparifon to what it is at prefent. It has feveral privileges in trade, which London itfelf has not. Here is fettled the trade between Jerfey and Guernfey; and a large quantity of wool is exported from hence thither, for the ufe of the manufacture of thefe illands, which confifts chiefly in the knitting of worted hofe, which they fend to England for fale. Here were alfo a great many merchants who traded to Newfoundland, which rendered this place, as it were, the general mart of England for the purchafe and fale of thefe fifh: but the town of Pool has at prefent, the principal fhare of that trade, and the exchange of London hath engroffed the mercantile correfpondence.

## E N G

This town has likewife been eminent for the building of good fhips, and fome are built there ftill, the fea flowing up to the very walls of the town. Here alfo is carried on the winetrade, and too much of the French brandy-trade by fmuggling, though that of late years is greatly abated.
The Ine of Wight offers nothing macerial, except the road of St Helens, at the eaft end of it, where the royal navy ufually makes it's rendezvous in time of war with France, or any of the powers of Europe which lie to the fouth or weft. It is a good road in cafe of florms from the fouth-weft, or from the north-weft, but otherwife not judged fo good by experienced mariners; which is an inducement to run the royal thipping up to Spithead, and the merchants hipping to Cowes, on the north fide of the Ifle of Wight.
Lymington, in Hampfhire, is a fmall but populous fea-port, on a hill that has a fine profpect of the Ine of Wight, in the narrow part of the Streights called the Needles, at the enterance of the bay of Southampton. Confiderable quantities of falt are made here, which is faid to exceed moft in England for preferving flefh; and the fouth parts of the kingdom are chiefly fupplied with it from hence. The fea is not above a mile from the town. Here is a key, with cuftomhoufe officers attending.
Weft from Lymington, diftant about 16 miles, lies the town of Pool, a port of good trade, abounding with merchants of honour and worth, and efpecially engaged in the fibing-trade of Newfoundland, which, as before obferved, has been, in fome meafure, removed from Southampton hither. The town is well peopled, and has a very good harbour for thips.
The iffe, or rather peninfula of Purbeck, which inclofes the weft and fouth parts of this bay, is efteemed the moft foutherly land of Great-Britain. From the north part of the Ine of Purbeck the land draws in a little to Weymouth, a fall town and port lying in the bottom of a bay behind Portland.
Upon the fouth point of the inland of Portland two light-houfes are erected ; which have proved importantly preferving of our hipping and feamen. This ifland feems to be one folid rock of free-ftone; and it is from hence that we fetch molt of the fine white ftone ufed in feveral of the public buildings in the city of London, which comes cheap by reaton of the fea-carriage.
On the north fide of the illand, and oppofite to Weymouth, is a fmall but ftrong caftle, built of Portland ftone, where a garrifon is conftantly kept, to command the road. The town of Weymouth has alfo a fmall harbour, and has been fome time a populous and flourifhing town, has many reputable merchants, and a pretty large number of thips belonging to them. They alfo build pretty good fhips here. They have a fhare of the Newfoundland fifing trade here.-They have good fifhing alfo for frefh fifh, which they carry away by horfes that run day and night with them, to Bath and Briftol. they have fome hare too in the wine-trade.
Lime is a town of good trade, has very good Mhips belonging to it; and the merchants are more particularly engaged in the pilchard fifhing at home, and the Newfoundland filhing abroad; both which are profitable trades.
There is an ancient and artificial mote made here, which they call the Cobb; and it ferves the merchants very well inftead of a harbour.
From Lime we meet with no town of confideration till we come to Dartmouth, except that of the city of Exeter; yet, as this lies up the river Exe, or Ifca, beyond the navigation of thips, it does not fall immediately under our fea-coaft defcription: but under it's county of Devonshire we have minutely defcribed it's commerce : fomething, however, may be neceffary to be faid at prefent. Though it has not the conveniency of a harbour for great hips quite up to the town, yet their trade is very confiderable; Topinam, lying at the diftance of four miles, is their port, and they bring all their heavy goods up in lighters to the city. They trade directly to Holland, France, and moft other nations, but chiefly to Holland for their ferges: to London their trade is fo large, that, by a moderate computation, they cannot trade for fo little as 800,000 I. a year ; many have reckoned it confiderably more.
Theriver Exe, indeed, is now fo well cleared, and the channel fo deepened, that the fmaller lhips, which ufed to come up no farther than Topham, come now quite up to the city, to the great eafe and encouragement of our merchants there. From the mouth of the river Exe to Torbay, the fhore is full of villages, but has nothing remarkable. About five miles weft from Berry-Point is Dartmouth town and harbour, being fituated on the mouth of the river Dart, a river of a long courfe and deep channel, and which makes an excellent harbour at this place, able to receive a royal navy.-The entrance, indeed, is narrow, but the channel is good; and it is commanded by a caftle, fo placed at the mouth of the river, that nothing can pafs but under the very muzzle of it's cannon. The town has a large key, is very populous, and the merchants here do not want bufinefs, being feated, as it were, in the centre of the pilchard-fifhing, which is no inconfiderable branch of trade, and which they conduct much to the advantage both of themfelves and the kingdom. They
alfo trade largely with France, Portugal, and to the Mediterranean; and feveral very good hips belong to the town: nor is their trade to Newfoundland inconfiderable. And, indeed, in all the towns on this coaft, beginning at Southampton, and reaching to the Land's-End, and even, after that, into the Severn Sea (the Wellh as well as the Englifh fides) there are abundance of wealthy and fikilful merchants who trade independent of London, having two particular trades, which they manage with great fuccefs, exclufive of their ordinary correfpondence: thefe are, in general, the pilchard and her-ring-fifheries, as well as the Newfoundland. They likewife traffick largely in the ferges and manufactures of Exeter, and other parts of Devonfhire; alfo in copper and tin, the latter of which is fo plentifully found in the mines of Cornwall, and fome in Devonfhire, and to little purpofe any where elfe in England. The trade is much the fame at Plymouth as at Dartmouth, and is the next port on this fhore, and the moft confiderable in this part of England. It is a large, populous town, fituate to very great advantage, both for commerce and for war. It is placed on a point of land, between two as good harbours as any in Britain, and is able to receive into either of them the whole royal navy.
This is a town of great importance for it's fituation : for upon the edge of the water, between the two harbours, ftands the citadel, which commands them both, and is itfelf very ftrong, but is made ftronger by a caftle juft oppofite to it, in a fmall ifland called St Nicholas's Ifland. - This caftle commands the whole harbour and found.-.- The town lies on the fide of this harbour, called Catwater, where the key is, the fhips being able to come up clofe to the town; and no thips are fo large but they may, with fafety, come and remain there. Here lie the men of war; and here, in the time of the late king William, as was done at Portfmouth, the government built lhip-yards and docks, with forehoufes and dwellinghoufes, proper for the officers attending, being for the laying up, and fitting out fuch men of war as fhould have their appointed ftation here. In confequence of the concourfe of people reforting hither on fuch occafions as the fleet make neceffary, a large town has been erected, which has done fome injury, doubtlefs, to that of Plymouth.
The town of Plymouth, however, as it is a large, populous, and wealthy town, will always preferve itfelf in good condition, while it's fpacious road and fafe harbour is fo general a receptacle of all the fleets of merchants fhips which come in from Spain, Italy, and the Weft-Indies, who generally make it the firft port fur refiefment which they put in at: nor can the town at the yards and docks on the river Tamar ever interfere with this port.
Weft of Plymouth lies the Lizard, about 18 leagues; the coaft full of deep bay, and many very good harbours, as Eaftlow, Fowy, and Falmouth; the laft, in particular, famous for it's being, except Mulford-Haven in South Wales, the greateft and beft inlet or gulph from the fea in Great Britain, as well for the receiving fhips for trade, as for heltering them from ftorms. It is fo commodious a harbour, that Mips of the greateft burden come up to it's key.---There is fuch thelter in the harbour and creeks, that the whole royal navy may ride fafe here in any wind. The town is well built, and is mightily increafed fince the eftablifliment of the packet-boats here from Spain and Portugal, and the Weft-Indies; which not only bring over large quantities of gold in fpecie, and in bars, on account of the merchants of London, but the Falmouth merchants trade with the Portugueze in fhips of their own; and they have alfo no inconfiderable fhare in the gainful trade of pilchard fifhing.---The cuftom-houfe for moft of the Cornifh towns, as well as the head collector, is fettled here, where the duties, including thofe of the other ports, are very confiderable: this contributes to increafe the bufinefs of the town.
Beyond this is nothing of moment but Penfance, which is weft of the Lizard; and this is remarkable chiefly for the fipping off tin for the London market, which creates a pretty large bufinefs in the town. Befides this branch of trade, they have a prodigious advantage arifing from the pilchard-filhery, and they are, in general, reckoned to have one of the beft fifh-markets in England. They have a pier, or key, running pretty far out into the bay, againft which veffels unload, and lie afoat, at low water.
We are now come to the Land's End of England weft, and have nothing to obferve further but the ifles of Scilly, which have proved very fatal to our merchants fhips in their return from the fouthward and weftward.
Thefe fatal effects having proceeded from mariners not being fo well acquainted as could be wifhed with the fituation of the Lizard Point, and the illands of Scilly, what the learned Dr Halley has remarked hereon may well deferve attention, for the benefit of our navigation. In regard to which the doctor obferves, that they are laid down in former charts too far northerly.

- The Lizard-Point, fays he, by undoubted obfervation, lies "in lat. 49 degrees 55 minutes, whereas, in mof charts and - books of navigation, that point of land, and the iflands of *Scilly, lying eaft and weft of each other, are laid down - to the northward of 50 degrees, and, in fume, full 50 deVol.I.
grees 10 minutes. Nor was this without a good effect, fo - long as the variation continued eafterly, as it was when ' thefe charts were made.' The doctor then proceeds to lay down rules for malters of fhips to go by, coming into the Channel, relating to the courle they fhould fteer to keep their parallel, which, as they vary with the variation, are made permanent, by reducing his particular to thefe general rules following:
- But, fince the variation is become confiderably wefterly (as it has been ever fince the year 1657) all hips ftanding in - out of the ocean, eaft by the compafs, get the variation to - the northward of their true courle, and thereby alter their \& latitude to the northward, in about half a day's failing, ' very confiderably; fo that, if they mifs having an obferva-- tion for two or three days, at coning into the Cbannel, ' and do not allow for this variation weftward, they fail not ' to fall greatly to the northward of their expectation, efpe"cially if they reckon Scilly in, or above, 50 degrees; and, - by this means, hips are often expofed to the danger of run-- ning up the Briftol Channel (not knowing their latitude) or - fall in with the rocks of Scilly, and are loft.
' Some have attributed thefe accidents to the indraught of St " George's Channel, by the tide of flood being fuppofed to ' fet more to the northward than is compenfated by the ebb - fetting out; but, the variation being allowed for, it hath ' been found that the faid draught is infenfible. It is, there-- fore, recommended to all mafters of hips, coming into the - Channel, that they fteer on a courfe as much to the fouth" ward of the eaft as the variation, at any time, is wefterly, which will exactly keep their parallel; and allo, that they ' come out of the ocean on a paralle, not more northerly - than 49 degrees 40 minutes, which will bring them fair by 'the Lizard.'
But, under the article of Scilly Islands, we thall be more minute, full, and explicit, in regard to a matter that fo nearly concerns the lives of our Britifh feamen.
We fhall therefore, at prefent, only obferve, that feveral of thefe iflands, like the county of Cornwall, afford tin, and alfo fome lead and copper; the tin is difcoverable by the banks next the fea, where the marks of the ore, in fome places, are vifible upon the furface.
On the north fide of thefe illands opens the Briftol Channel, which is called, by our geographers, the Severn Sea. The fouth fhore of this channel is the north coatt of the counties of Cornwall and Devon. Here are but few ports, but they are places of good trade, occafioned, (I.) By the large correfpondence of thofe counties with Ireland and Wales, which is carried on from that fide of the counties, by reafon of the fhores being oppofite, and which occafions that Minehead and Barnftaple are two of the ports appointed by act of parliament for the importation of wool from Ireland. (2.) By reafon of the herring-fifhery, that lies within this fea, where the merchants, even of the fouth Chore of Cornwall and Devon, employ a great number of veffels and people to take and cure them. Thefe are cured after a different manner from the other herrings, viz. by preffing, which they call packing in this country. Here, alfo, they have the rock-falt, brought from the river Merfee in Lancafhire, and which they diffolve firft in fea-water, thereby making a brine of four-fold ftrength, which they then boil up into a new falt, equal to that called falt upon falt, which the Dutch boaft fo much of for the cure of their herrings. See the article Salt,
The chief ports on this coaft are St Ives, a fmall but profperous trading town, having a gocd port and a bay; where, this being otherwife a hazardous coaft, fhips frequently put in for fhelter in great diftrefs, and are fecured from danger.
Eaft from hence is neither port nor harbour'till we come to the mouth of the river Allan, which, having a wide and deep channel, makes a good haven at the town of Padftow. This river, coming from the eaft part of the country, firft runs fouth-weft, but, turning fhort, and joining other ftreams, makes a large river, and goes north for the Severn Sea; the effect of which makes, as it were, a pafs into the weftern part of this county, and, if well guarded, keeps all paffing fiom England fhut up, into the weft of Cornwali.
Eaft from Hartland Point lie the towns of Biddeford and Barnftaple: they are reckoned twin-ports, the rivers going into the fea by one and the fame mouth, though, before that they are diftinct rivers, and both navigable. The port, in general, is very good, and, even feparately confidered, fhips of very good burden go up to either of the two towns, which are well built and populous. The key at Biddeford is the moft fpacious, and of the greateft extent of the two, of any in all the weft or fouth part of England.
Oppofite to this port, fomething to the weft, lies the Ifle of Lundy, well known for the road on the north fide of it, which is very good, and where fhips often ride for a wind in their paffage out from Briftol, and ocher ports in this channel.
To the ealtward is Minehead, a fea-port of good trade, and which bas an excellent barbour, though without a river. It is a clean, well built town; and, being one of the ports limited by act of parliament for the landing of wool from Ireland, it has, by confequence, a conftant correfpondence with

## E N G

## E N G

that kingdom, though the landing of wool, as we have feen, is allowed in other ports alfo.
Hence the ghore bears away eaft, to the mouth of the river Ivel, or Bridgewater River, and then goes north to the mouth of the Avon, which is called Brittol River. Bridgewater, though a portlying feven miles from the fea, and has but a frall river, yet has fome tolerable trade : they import coals from Swanzey in Wales, which is but a fhort paffage over the mouth of the Severn. They alfo bring their heavy goods by fea from Briftol, it being too long a voyage to make it worth their while to bring them from London.
Here are three feveral rivers, which fall together into the fea at one mouth: the channel is deep and good, though not broad. There is an artificial navigation to the town of Taunton, which carrying on a large manufacture, though not near fo great as formerly, have all their coals, and many other goods, brought up this canal.
As the mouth of the Avon, on which the city of Briftol is fituated, lies north of the Start-Point, which is the mouth of the Bridgewater River ; fo the city of Briftol lies within the land, about the like diftance; with this difference, that the Avon is a very large, deep, and fafe channel, able to carry fhips of the greateft burden even into the very ftreets of Briftol; for their key is in the heart of the city. The city of Briftol, efteemed for it's trade the fecond in England, lies in the bottom of that great gulph called the Severn Sea, and which is, on that account, named the Briftol Channel. It is a large, populous, and wealthy city. The merchants here have not only a very extenfive foreign trade, but they trade with lefs dependency on London than any other town in Britain; it is evident, in this refpect, that, whatfoever expottations they make to any part of the world, they are able to bring the full returns to their own port, and can difpofe of them there. This is not the cafe of any other port in England, except Liverpool; but they are often obliged either to fhip part of their effects in the ports abroad, on the fhips bound for London, or to confign their own thips to London, in order as well to get freight, as to difpofe of their own cargoes. But the Briftol merchants, as they have a very great trade abroad, fo they have always buyers at home for their returns, and fuch buyers that no cargo is too big for them ; to this end the Briftol -hop-keepers, who, in the general, are wholefale dealers, have fo great an inland trade among all the weftern counties, that they maintain carriers, as the London tradefmen do, to all the principal counties and towns from Southampton in the fouth, even to the banks of the Trent north; for, though they have no navigable river that way, yet they drive a very great trade through all thofe counties.
By the river Wyfe and the Severn they bave, alfo, the whole trade of South Wales, as it were, to themfelves, and a great part of North Wales. Their trade to Ireland, likewife, hath greatly increafed within half a century.
Going round the ine of Anglefey in North Wales, the and falls off eaft to the mouth of the river Dee, which leads to the antient city of Chefter.
Chefter is a large fine city, well built, and full of wealthy inhabitants. Nor is it's trade inconfiderable; for, by it's neighbourhood to the Severn and to Ireland, the traders there have a very good bufinefs, as may be feen by the great fair held here annually, to which abundance of tradefmen and merchants refort from all parts, more particularly from Briftol and from Dublin.
We no fooner pafs Chefter-Water by fea north, but you are in fight of Liverpool-Water, or the river Merfee, open upon the right; and, though that river is not near fo large as the river Dee, no not including the Wever, another river which falls into the fame mouth, yet the opening, at leaft as high as Liverpool, is infinitely before it ; for hither hips of any burden, with their full loading, may come up, and ride juft before the town.
This is the moft flourifhing town in all this part of England, increafed prodigiouly within a few years, and ftill daily increafes; infomuch that it is faid to be more than four, if not five times as large as it was in the beginning of the late king James's reign. The inhabitants are univerfally merchants, and very ikilful and judicious traders in general; and, in fpite of their fituation, they trade confiderably to all the northerin parts of the world, even to Hamburgh, Norway, and the Baltic: they trade, alfo, to France, Spain, Portugal, and Italy. As for their trade to the Englifh colonies in America, to Guinea, and to Ireland, they not only rival the city of Briftol, but begin to go beyond her in feveral articles.
The wet dock is the only thing of it's kind in Britain, London excepted, and is a notable work, of great expence, but fully anfwering the end, and accommodating the town in all the effential parts of maritime bulinefs, for the laying up and fitting out their hips, which, before, was both difficult and hazardous.
There is a navigation farther up the Merfee, and that for fhips of burden too, near to the town of Warrington, and alfo up the fouth channel, which they call the river Wever, (I.) For rock-falt, which is dug out of the earth in Lancathire and Chethire, which is thipped off here in large quan-
tities, and carried not only into Devonare and Somerfet fhire, and even to Briftol, but round to fuemb pater iin the fouth of England, particularly to London, Colcheffer, and to other places. This falt is diffolved in fea-water, then boiled up again into a ftronger and finer falt, and is then a good as that ftrong falt called falt upon falt, which the Dutch make of the St Ubes falt, and with which they cure their herrings. (2.) They alfo Thip off great quantities of Cheihire cheefe, and lead, manufactured from the ore with pit-coal in Flint Thire.

The moft authentic account we have of the foreign, coanting, and Irifh trade of Liverpool, is as follows:

A lift of the company of merchants trading to Africa, eftablifhed by an act of parliament, paffed in the $23^{\mathrm{d}}$ year of king George II. intitled, An act for extending and improving the trade to Africa, belonging to Liverpool, June 24, 1752.

N. B. There are upwards of eighty river floops employed in the falt trade, \&c. burthen from forty to feventy tons; and many coalters that trade to Liverpool conflantly (not here inlerted) belonging to different ports.
For the inland trade of Liverpool, fee the article Lancashire.
From this port we have no other moment upon the coaft, 'till we come to Whitehaven in Cumberland ; which is, in particular, very eminent for the coal trade, great quantities beng conftantly flipped off here for Ireland ; infomuch that in times of war here are fometimes fleets of thips, containing 150 or 200 fail at a time, loaden with pit-coal, and bound for Dublin and other parts of Ireland. This trade alone makes Whitebaven not only populous, but wealthy alfo, and the adjacent country is by that means much improved, a great number of people being always maintained, both by land and fea, in this confiderable branch of trade. But the foreign commerce of this port to America, and other parts, is greatly advanced within thefe thirty years, and is daily increaling.
From hence to Solway Firth, which parts England and ScotJand, we fee nothing material upon the coaft. The city of Carlifle is, indeed, a fea-port, but has very little trade.

## REMARK S .

From this fhort furvey of the coalt and fea-ports of England, and it's fituation in regard to maritime commerce, we may make a tolerable judgment how far nature feems to have contributed to render it a wealthy and powerful trading nation. But, when we confider the union of England with Wales and Scotland, and alfo the dependency of Ireland on this kingdom, as likewife her colonies and plantations in America, it muft greatly exalt our idea of the advantages which England hath, and yet may derive from being fo happily circumitanced by conftitution, as well as fituated by nature.
In the reign of queen Elizabeth, the Englinh began to trade to the Eaft-Indies and to Turky: and, by the help of the Netherlanders who fled hither for helter, the manufacture for bays and ferges was eftablifhed in England. See the article Austrian Netherlands.
This wife princefs alfo greatly improved the coin, and rendered the naval force of England confiderable, in order to protect and advance her commercial interefts. Her jealoufy of fupporting a fuperiority at fea for this important purpofe was fuch, that, although the gave the Hollanders all the affiftance the could againft the Spaniards, they were not fuffered to build fhips of war. For want of guarding againft which in the two fucceeding reigns, the Dutch became very formidable by fea, and difputed the dominion thereof with Cromwell and Cbarles II.
This renowned princefs likewife promoted the navigation and commerce of her fubjects, opened a paffage for them into both the Indies, and excited that firit which afterwards induced us to make fettlements in the moft diflant parts of the globe; and, by a wife and happy conjunction of our labours both here and at home, at once extended our wealth and our prowefs, without the diminution of our people; contrary to this the effects of plantations made then by other countries, which have fuffered at home by aggrandizing themfelves abroad; whereas our power at home is conftantly augmented, in proportion to the advantages derived from our fettlements abroad; and to this circulation of our commerce it is in reality owing, that our ftrength is fo much greater, our lands fo much more valuable, and our wealth fo much increafed, as it is fince that time; which has enabled us to keep pace in power with other our neighbouring nations, who muft long fince have fwallowed us up, had our commercial interefts been neglected, in proportion as they have purfued theirs.
Some people have made a diftinction between the interefts and the commerce of Great-Britain, but this feems to be a diftinction without a difference; for the intereft and the commerce of Great. Britain are fo infeparably united, that they may well be confidered as one and the fame. For commerce is that tie, by which the feveral, and even the moft diftant parts of this empire, are conneeted and kept together, fo as to be rendered parts of the fame whole, and to receive not only conftant protection, but nourifhment from the vital parts of our government.
Whatever, therefore, promotes and extends our commerce, is confiftent with our true interefts, and whatever weakens it is repugnant thereto. Confidering things in this light, we may derive from thence a juft notion of the folid and permanent advantage of Great-Britain, with relation to the other powers of Europe; and, by this criterion, be ever able to judge, when the real interefts of the kingdom are purfued, when they are neglected and abandoned.
If it be true, that the fafety of Great-Britain depends, chiefly, on her being miftrefs of the feas, and that the trade of Britain has never flourihed fo much, or it's glory been fo far extended, as in thofe reigns when it's naval ftrength was prin-

Vol. I.
eipally attended to ; it follows, that this ought, at all times; to be the grand point in view.
To give fome affiftance on the continent, when the liberties of Europe are threatened, is undoubtedly right, provided there be fuch an alliance formed, as is likely to check and fruftate the defigns of an ambitious potentate; but it has been the opinion of many confiderate men, that going into land wars ought, as much as poffible, to be avoided by Great-Britain ; becaufe, as her frength is thereby divided, her naval power muft be diminifhed:
At it has, moreover, been found, by dear bought experience, that dominions upon the continent coft more to get and keep than they are worth, nothing; but the prefervation of the bals lance of our power, can induce Britain to intermeddle at any time upon the continent. When this is really in danger, and ftrong confederacies are formed for it's fupport, the weight of Great-Britain thrown into the fcale may have glorious confequences; but, if other powers cannot fee, or will not heartily oppofe this danger which concerns them more immediately, it feems the wifeft way for this kingdom to fave her blood and her treafure, and to provide, by augmenting ber natural maritime ftrength, which we have feen her, coafts will admit of, againft the worft.
Suppofing that, by the fupinefs or infatuation of other powers on the continent, fome one prince fhould arrive at univerfal monarchy, is it not probable that he would have bufinefs enough upon his hands, to fupport himfelf in his new conquefts? If this were not the cafe, and he fhould form any defign upon this ifland, it would require many years to get fuch a fleet together, as could look that of Britain in the face? And in the mean time, by his death, or many other accidents, might not the pofture of affairs upon the cantinent be entirely changed? To fuppofe further, what can fcarce ever happen, but by her own ill conduct, that the fuperiority at fea was loft, as the invading fo populous an illand, whofe inhabitants are naturally brave, would be dangerous and very expenfive ; and there is no inftance in hiftory of it's being ever conquered, except the people were at variance amongf themfelves, it may be juftly prefuried, that the conqueft of Britain would, even then, be very difficult.
With regard to Germany, Poland, and other fates, which have no maritime force, Great-Britain has nothing to fear. On the contrary, 'tis for their intereft to be upon good terms with her, who may, by caufing a diverfion on fome occafions in their favour, be of good fervice to them.
It is of importance for the Portugueze to be on good terms with this nation, not only becaufe of the great confumption of her produce, but becaufe fhe is capable of affifting them greatly , in cafe of a war with Spain. On the other fide, as her trade to Portugal, if preferved upon the footing of the treaty of commerce made by Sir Paul Metbuen, will continue as it has done, adyantageous, and therefore her breaking with that power would be impolitic. Bur, if the Portugueze change their fyftem, and in any refpect violate or fuperfede that treaty, Britain would be under the neceffity of retaliating upon them, and fupplying herfelf with the produce, which the at prefent takes from that kingdom; the practicability of which I hall endeavour to demonftrate in it's place.
The naval force of Spain bears no proportion to that of Britain; yet, while the confumption of Britifh commodities is great, both in New and Old Spain, it is for our intereft to continue in amity with that nation: befides, no ports are more convenient for annoying the Englifh trade by privateers, than thofe of Spain. But, if the court of Madrid change their plan of policy, and virtually render null and ineffectual all treaties of commerce that have long fubfifted between England and Spain, we fhall doubtlefs be under the neceffity alfo of changing our commercial meafures, in order to render all their fchemes of trade abortive, which may prove detrimental to thefe kingdoms: and, how far we really have that in our power, we fhall labour to evince in the fequel of this work.
Our affairs with the crown of Spain have been long in a perplexed fituation, notwithfanding it is generally thought the Spanifh minifters have fuch true notions of the intereft of their own nation, as to be perfuaded, that nothing concerns them more than to live upon good terms with Great-Britain. It is our intereft likewife, without queltion, to live in a perfect correfpondence with that court; and, therefore, no pains ought to be fpared that are requifite to remove all jealoufies and difcontents on both fides.
It was hoped, that this would have been effectually done by the definitive treaty of Aix la Chapelle; but it feems that the neceffity of reftoring the tranquillity of Europe, made it eligible to conclude that treaty, without adjufting the differences between the Britifh and Spanifh courts, which were left to a particular negociation; that we are yet to expect an abfolute conclufion of the moft effential part of this important bufinefs: which, as it has procecded flowly, we have good ground to apprebend, will, when it is brought to a determination, fertle the terms of correfpondence to the mutual fatisfaction of both nations.
Delays are very difagrecable in all points of national concern, more efpecially fo in points of great confequence, fuch as this undoubtedly is, both to us and to the Spaniards. Yet after 9 K
$2 \mathrm{H}_{3}$

## E N G

all, if, by bearing with thefe delays, things can be adjufted, fo as to leave no grounds for future difputes; inftead of patching up expedient agreements to ferve a prefent turn, which never afford content to either party, and are feldom long obferved, we hall have good caufe to excufe thofe delays, and to be well pleafed with the finaliflue of them.
In the mean time, we have the fatisfaction of knowing, that at length the syftem of expedients is exploded; for, if there had been the leaft intention of returning to that fort of practice, we might doubtlefs have had fomerhing of that kind long ago. It was certainly better to treat with clearnefs and dignity, to explain and go to the bottom of grievances on both fides, that both old and freh wounds might be thoroughly healed, and not fkinned over, that our minifters may have a full, explicit, and well concerted treaty for their guide, upon which the fubjects of both crowns may rely, without any doubts as to the fenfe of the remaining articles, or any fears of their not being punctually executed.

## Remarks.

We waited for this well-grounded and conclufive adjuftment of affairs between Great-Britain and Spain, 'till the laft war broke out between England and France; and inftead of matters being fettled between us and Spain, they joined France againft us, as was repeatedly furpected throughont this work, would have been the cafe. This junction of Spain with France, coft them the lofs of the Havannah, and in confequence thereof, the abfolute ceffion of Florida to Great-Britain, by the definitive treaty of 1763 . See America, British America, Spanish America.
Notwithftanding that France is near three times as large as Great-Britain, ber maritime force could never yet come in abfolute competition with that of England: which is, perbaps, in a great meafure, owing to the number of troops kept up in France, for fupporting arbitrary power, and garrifoning an extenfive frontier. While fo many hands are thus employed, and no innovation takes place in the conftitution of that kingdom, which might greatly augment it's maritime power, we fhall be able to deal with them; and efpecially fo, if we can ftir up a conftant jealoufy betwixt France and the neighbouring powers, and prevent, if it can be done with fafety to ourfelves, all further acquifitions of the French in the Low Countries; for, if France fhould apply herfelf to the improving her marine, fome ports there would be very ferviceable for that purpofe: and, if this was not done, Britain might, by being in poffeffion of them, lofe the trade carried on into, and through Flanders.
Certain it is, that let whatever public meafures be carrying on in France at this comjuncture (and, perhaps, only to blind the eyes of the reft of Europe), yet 'tis certain they do not lofe fight of the great point of advancing their maritime power. For the wifett heads in that kingdom, amidft all their pretended confufion, which may probably terminate to our high difadvantage, are ufing their utmoft efforts to eftablifh, if poffible, a naval power, equal, if not fuperior to others, in order to ravifh from us our commerce, and one day to ftrike a blow that may be fatal to thefe kingdoms.
Ought not this, therefore, to put us upon our guard; ought it not to roufe and animate us to make ufe, in time, of thofe advantages, which, by the favour of the happy fituation of our coafts, we at prefent poffefs, that the like finit fhould fteadily take place in this kingdom, as hath been raifing in France ever fince the conclufion of the late peace. For, fince that period, there is not a port in France where they are capable of thip building, but more or lefs have been put upon the ftocks; others alfo built in America, and many of our own fhips employed in the late war purchafed by them, and every magazine in the kingdom filled with naval ftores. To what end can thefe preparations be made in times of peace? Do we not well know, that the French in the late war experienced their royal navy was not able to ftand in competition with ours; and, therefore, from the day of the peace of Aix la Chapelle being concluded, they have moft affuredly been increafing their marine, in order to obtain that fuperiority by fea, which they found themfelves deficient in during the late war. If, by expofing the meafures of this rival nation in their true light, I can any way contribute to the infpiring my countrymen with a generous refolution to fupport their trade, to maintain their reputation in maritime affairs, and to keep a vigilant eye over the ambitious and reftlefs views of this haughty neighbour, my end will be fully anfwered; but, whether I am fo fortunate or not, it will be fome confolation to me that I have done my duty; that I have fhewn, and fhall more effectually fhew, from facts inconteftable, the danger our trade is really in, the caufes of that danger, and the remedies which ought to be timely applied to prevent it.
Whoever bath done me the honour to attend to the feries of facts I have already candidly laid before the public in this elaborate work, to evince the exquifite policy of France, in regard to their commercial and maritime interefts, can never believe that our fears are groundlefs and imaginary : and what may ferve as additional proof that they are not fo, is the ftate of the negotiations between us and France fince the peace; for I believe it will be difficult to thew, that, in one infance,
they have hitherto acted honourably by this nation, and manifefted any cordial and fincere intentions to render the pacification folid and permanent on their fide, though the court of London has done every thing on their part towards that falatary end.
An inveterate hatred, or a perpetual oppofition to France, is a maxim that was never laid down by any wife Englifh fatefman, and ought never to be received and countenanced. In queen Elizabeth's time we affifted the prefent reigning family, and medals were flruck with the arms of England, France; and Holland, as powers whofe interefts were thoroughly united, and at that time they were fo; and our regard for the French was as well founded then, as that which we teffify for the houfe of Auftria is now.
The caufe that we are humbly ambitious to fupport, is the caufe of our trade and of our liberties: I am perfuaded that this nation nath no innate, hereditary, and groundlefs averfion to the French nation; for, were their minifters as upright and fincere in their treaties and negotiations, as the people in general are ingenious, induftrious, honourable, wife, and politic, both nations might purfue the peaceful arts of commerce, and make the fubjects of both contribute to the reciprocal profperity and happinefs of each other: they might, perhaps, io conduct their fyftems of policy, as not fo much to interfere with each other in their concerns of trade as they at prefent do; for this creates jealoufies and heart-burnings between the two nations, and 'tis to be feared ever will do fo, while this is the cafe. But, whenever their ftatefmen fhall abandon that plan, which they have fo many years fteadily purfued, and which is dangerous and deftructive, in it's nature, even to themfelves as well as others, they will infallibly difarm us; they will extinguifh that animofity, which their boundlefs ambition, and nor our obftinacy or perverfenefs, has excited.
There have been, within the memory of the prefent generation, certain feafons, in which the French minifters either really or feemingly laid afide thefe fchemes, and affected to aft upon other principles, that very foon produced an altera-tion in the conduct of other powers towards them, which fully juftifies this obfervation; and therefore their politicians have no juft grounds for imputing to the fiercenefs of our manners, or an hereditary hatred towards their country, that alacrity we have thewn in entering into all alliances againft them, but ought rather to afcribe it to that rectitude of judgment, which is natural to a free people, and which will always appear amongft us, as long as we continue free. Although the northern powers are not to be dreaded by Britain, it is for her intereft to fupport the ballance of power betwixt them; becaufe, if any one was mafter of the Baltic, he might obftruct her trade there, and in the end vie with the naval force of this nation.
The land force of Holland being greatly inferior, and the marine not equal to that of England, 'tis not likely the Dutch fhould break with Great-Britain. On the other fide, as the Hollanders are rivals to this kingdom by fea and in trade, the conduct of queen Elizabeth, who conftantly fupported that republic, yet took care to prevent it's becoming too formidable by fea, feems the wifeft meafures that can be purfued by Britain : for the falling of the United Provinces, into other hands, might prove a terrible blow to the Proteftant religion, and in the end deftructive of the commerce of GreatBritain.
The ballance in Italy is judged to concern us more remotely, notwithftanding which, we bave hitherto fhewn a juft and laudable regard to that likewife; and, indeed, diftance in this refpect is of little confequence, more efpecially to a maritime power. Our commerce in the Mediterranean, and in the Levant, is of very high importance; and we cannot but be fenfible, that whatever alterations have been felt in the Italian ballance, have alfo affected thofe branches of our commerce in a very fenfible degree; fo that whatever fteps we have taken, either during the continuance of peace by negotiations, or in time of war, by fupporting the only prince in Italy, who declared for the common caufe, and was true to his own interefts, which were likewife ours, were certainly right and juft meafures, and have no doubt left thofe impreffions, which will never be obliterated by any arts or intrigues. Whecher the affair of Corfica may not deferve the regard of this nation in particular, is fubmitted to confideration; and, whether a certain unfortunate nobleman, who was crowned king of that inland, might not be inftrumental to prevent thofe people from coming under the dominion of the houfe of Bourbon in any hape whatever, may poffibly merit the regard of the maritime powers before it is too late. The injuries our merchants are liable to from the infults offered to the nation by the corfairs of Barbary, will not allow us to doubt, that it is our true intereft to keep the Italian ftates firmly united to us; that, when occafion requires, they may afford us all the conveniencies in their power towards chafifing thefe barbarians, as our ufing vigorous meafures in fuch cafes, and fending a powerful feet into the Mediterranean, will contribute more to keep them in awe, and make us refpected by the Italian potentates, as well as to obtain juftice from thelo piratical governments; which is fcarce to be expected from mild and temporary meafures.

The many alterations that happen daily in the world, afford and will always afford, fufficient reafons for exerting ourfelves, not without hazard and expence, in fayour of fome or other of our allies; which, however, mult be done, and done with firit and chearfumefs, if we will remain a free, a great, and a refpectable people. It is in vain to hope to mainain ourcharacter by a Celfich and furly, or by a lukewarm and inactive behaviour; if we reafon ever fo littie with ourfelves, we may be fatisfied of this; if we confult hiftory, hiftory will convince us; if we have recourfe to experience, experience will read us the fame lecture.
Neither, ought we to confider what we do as any burthen or inconvenience, fince it arifes from the rank and figure we make in the world, from thofe connections which have been the fruit of our fignificancy, and by which that is upheld and fecured. In fhort, when we fuccour our neighbours, we do it from a principle of juftice to ourfelves; we flourifh chiefly from the commerce that we have with them; and, having thus a fake in their welfare, it is really confulting our own intereft, when we fulfil thofe prefervative engagements that were entered inito, on account of that ftake; and therefore, inftead of repining that we are obliged to it, we ought to rejoice that it is in our power, and thew by our alacrity, how mach it is in our will.
Thefe are the general principles of Britifh policy, deduced from our paft tranfactions; which, after having been often deliberately and folemnly examined in the wifeft and greateft aflemblies in this nation, have received repeated, as well as public fanctions; fo that, if private men err in adopting them, it will be very difficult to eftablifh other maxims which are attended with clearer evidence, and fupported by better authority.
In order the better to judge of the true intereft of thefe kingdoms in regard to it's trade, and where the ballance really lies with all nations, we refer to the articles Britain, or Great-Britain, and British America, and fo fuch other heads alfo as are there intimated.

## REMARK.

The foregoing obfervations being drawn up juft after the peace of Aix la Chapelle, and prognofticating what has fince happened by the laft war, we think it of fome utility to let them remain unaltered, that pofterity may the better judge from time to time of the conduct of England and France, and other powers, towards each other. And it is obfervable that, indeed, whatever we prejudged to be the confequence of the meafures taken by France in North-America, and the alarms we received there foon after the peace of Aix la Chapelle, has come to pafs: and this judgment we made was formed from a vigilant attention to the drift and tenour of their whole conduct. And they muft acknowledge, that it has been wholly owing to their reftlefs and infidious politics to diftrefs and injure this nation, that they have at length obliged us to extirpate them from all Canada and it's Dependencies, and poffeffed ourfelves of Cape Breton, to awe them for the future in this part of the world. From the fame principle of future fecurity to the fouthern parts of our continental colonies, we have annexed Florida to the crown of England, and obtain St Auguftine, Penfacola, and Mobille, and the freedom of navigation in the Mississippi, by the Definitive Treaty of 7 $_{6} 6$. Sec America,

Of the monies of England, both real and imaginary, with relation to practical trade.
Accounts are kept in London, the metropolis of England, and throughout the Britifh dominions, in pounds, fhillings, pence, and farthings: 4 farthings they reckon equal to one penny, 12 pence to a filling, and 20 fhillings to a pound.
The money of this kingdom, as weil as that of moft others in Europe, is imaginary as well as real. By the imaginary is meant all the denominations which are made ufe of to exprefs any fum of money, which is not the juft value of any real fpecies of copper, filver, gold, or any other metal; as a pound, a mark, an angel, a noble, \&c. thefe being all imaginary, becaufe there are no fuch fpecies at this time current; a pound being the value of 20 s . a mark I3s. 4 d . an angel ros. a noble 6 s . 8 d .-Real money is any real feecies, or pieces of money, current in payment at a certain rate, as a guinea, a crown, a fhilling, \&c. **

* We fhould not be fo minute in thefe things, was it not for the fatisfaction of foreigners, who have encouraged this work as much as our natives.

The copper monies current in England are, a farthing and an halfpenny; two of the former being equal to one of the latter. -The filver monies are, thofe valued at a penny, two-pence, three-pence, four-pence, fix-pence, and twelve-pence, or one fhilling ; a piece at 2 s .6 d . called half a crown, and a piece at 5 s . called a crown-piece. Thas filver coin is of the ftandard of in oz. 2 dwts. Troy, fine, called fterling.
The gold coin is of 22 carats fine, which is the ftandard thereof. The fpecies hereof are, a piece called a guinea, valued at 21 s. an half-guinea, at ros. 6 d . a quarter-guinea,
valued at 5 s . $3^{\mathrm{d}}$. The quarter-guineas were only coined in the reign of king George I. and werefo few, that they are rarely to be met with but in the cabinets of the curious. The filver pence, two-pence, three-pence, and groats, are not fo uncommon as the quarter-guineas.

## REMARK.

As there are variety of ufeful queftions relating to the weight, finenefs, and valuation of gold and filver, which may be refolved by knowing the proportions they bear to each other, I would refer the reader to our articles of Bulion, Coin, Gold, and Silver.

## Of the weights of England, and it's dependencies.

The moft common ufed throughout the kingdom are the Troy and the averdupoife weight. The Troy is divided as follows, 24 grains $=$ to a penny-weight, 20 penny-weights $=$ an ounce, and 12 ounces $=$ a pound. Thefe weights are ufed for bread, gold, filver, and medicines.- Eight pounds Troy is a gallon, 16 lb . a peck, and 64 lb . a buthel ; whereby weight and meafure are reduced into each other.
Wet meafure is alfo derived from this pound Troy, both on land and on hip-board, as alfo grain and corn, as before; for thefe 12 ounces, made into a concave meafure, is called a pint ; eight of thefe pincs make a gallon (containing 23 I cubical inches) of wine, brandy, cyder, $8 x \mathrm{c}$. according to the ftandard of the Englifh Exchequer: whence is drawn the excifemeafure of all vendible calks: a hogthead is to contain 63 gallons, a tierce 42 gallons, a pipe 126 gallons, and a ton 252 gallons, and weighs 1890 lb . avoirdupoife, or 2016 lb . Troy.

## Of the refiners weights in England.

Thefe are ftill a part of the Troy, the leaft of which is a blank, 24 of which make a periot, 20 periots a mite, 20 mites a grain, \& c. and what they denominate carats, are the $\frac{1}{24}$ part of a pound, an ounce, or any other weight. See the articles ALlay, Assay, Gold, Silver, Refining.

## Of the jewellers weights in England.

Thofe ufed in the weighing of jewels, and other precious ftones, are the parts of an ounce Troy: they divide that ounce into 152 parts, which are called carats; thefe carats are again fubdivided into grains, or $\frac{1}{4}$ quarters, and into ${ }_{8}^{\prime}{ }^{\prime}$ $\frac{1}{x} 6, \frac{1}{52}, \frac{1}{6}, \& \mathrm{k}$. parts. See the article Diamond.

## Of the avoirdupoife weight.

In this weight we reckon 16 drachms $=1$ ounce, 16 ounces $=1$ pound, 28 pounds $=1$ quarter of an bundred weight, or of 112 lb . and 20 hundred weight $=1$ ton weight.
This weight is ufed for all grofs goods, fuch as fugar, hemp, flax, butter, cheefe, \&ic. of which there are three quintals, viz. (I.) Of a 100 lb . by which fugars, \&c. ate bought and fold in the Englifh fettlements in America. (2.) Of 112 lb . by which all grofs goods are weighed throughout England. (3.) 120 lb . called the ftannary hundred, by which tin, \&c. is weighed to the king's farmers. Wool is commonly bought by the tod. -7 lb . averdupoife $=1$ clove, $14 \mathrm{lb} .=\mathrm{a}$ ftone, $28 \mathrm{lb} .=\mathrm{tod}, 182 \mathrm{lb} .=\mathrm{a}$ wey, $3^{5} 4 \mathrm{lb} .=\mathrm{a}$ feck, $43 \mathrm{olb}=\mathrm{a}$ laft; i. c. 2 cloves $=\mathrm{r}$ fone, 2 fone $=\mathrm{a}$ tod; $6_{2}^{\frac{1}{2}}$ tods $=\mathrm{a}$ wey, 2 weys $=\mathrm{I}$ fack, and x 2 facks $=$ a laft: but, when it is ftapled or forted, it is fold by the pack, containing 6 fcore, or 120 lb . Lead is fold by the fodder, and a load $=175 \mathrm{lb}$.

## A fodder at London $\left.=19 \frac{1}{2} \mathrm{C} . \mathrm{wt}.\right\}$ <br> it Newcaftle $=2 \mathrm{I}$ <br> II2 lb. to the C. wt. <br> Stockton $=22$ <br> nary wt. of 120 lb . to the C .

From this pound avoirdupoife of 16 ounces, there are formed other weights; a fone of $7 \mathrm{lb} .8 \mathrm{lb} .14 \mathrm{lb}, 16 \mathrm{lb} .20 \mathrm{lb}$. and fometimes, a clove of 7 lb .8 lb . and 10 lb . and fometimes, a tod of 20 lb .28 lb .32 lb .8 cc .
Raw filk from Perfia and Turky is fold by this pound, but a pound $=24$ ounces, or $1 \frac{\pi}{2} \mathrm{lb}$.
Gun-powder, 100 lb . avoirdupoife $=\mathrm{a}$ barrel, 24 barrels $=$ a laft.
Of freighting of fhips. The term ton ufed upon this occafion, fignifies 2000 lb . weight ; when it is faid that a fhip is fo many tons burden, it is to be underffood that it carries fo many times 2000 lb . weight. -Thefe tons, however, are different, according to the nature of the goods. - By weight they generally allow 2000 lb . avoirdupoife, but for bulky goods they make fome abatement of the weight.-By meafure, there is generally allowed to the ton two pipes or butts of wine, fo many pieces of brandy, fo many barrels of herrings, fo many butts of oil, \&cc. for barrelled goods, and fometimes by the C. wt.-Bur for bale goods, boxes and cafes, \&c.- they generally reckon 40 cubical feet to the ton. In Holland and the northern countries they reckon thers freight by lafts, which are two Englifh tons, or 4000 lb . weight; and all contracts are made ar fo much per laft.

## E N G

Meafures for linen，filk，woollen，\＆c．
Thofe moft in ure throughout the kingdom of England are of three kinds，viz．（I．）The yard，which contains 6 nails，or 36 inches；and by this yard all forts of woollen cloths，wrought filks，many kinds of linens，tape，\＆cc．are meafured and fold．（2．）The Englifh ell，containing 20 nails，or 45 inches； and this is of ufe chiefly in meafuring thofe linens called hollands．（3．）The Flemilh ell，for meafuring tapeftry，con－ taining 12 nails，or 27 inches．

## Of fue］．

Thefe，according to the ftatute，are coals and wood：－Of coals， $3^{6}$ buhels $=x$ chaldron，and，on fhipboard， 21 chal－ dron $=$ to a fcore，and 112 lb ．avoirdupoife $=$ an hundred weight， 8 chaldron at Newcaftle $=$ about 15 at London． Wood fuel is affized into chids，billets，faggots，fall wood， and cord wood．A hid is to be 4 feet long，and，according as they are marked and notched，their proportion muft be in the girth；viz．if they have but one notch，the muft be 16 inches in the girth；if 2 notches， 23 inches；if 3 notches， 28 inches；if 4 notches， 33 inches；and，if 5 notches， $3^{8}$ inches about．－Billets are to be 3 feet long，of which there fhould be three forts，viz．a fingle，a cafk，and a calk of two ； the firft is 7 inches，the fecond Io inches，and the third 14 inches about：they are fold by the hundred or five fcore．－ Faggots are to be 3 feet long，and at the band 24 inches about，befides the knot：of fuch faggots 50 go to the load． －Bavins and fpray－wood are fold by the hundred，which are accounted a load．－Cord－wood is the bigger fort of fire－ wood，and it is meafured by a cord or line，whereof there are two meafures；that of 14 feet in length， 3 feet in breadth， and 3 feet in height．－The other is eight feet in length， 4 feet in height，and 4 in breadth

Of corn meafure．
The gallon is found，by the ftatutes of England，to hold 8 pints，and to weigh 8 pounds Troy
2 gallons $=$ a peck $=16 \mathrm{lb}$ ．or pints，or $={ }_{8}^{2}$ gallons．
4 pecks $=$ a buifhel $=64$ ，or
2 bufhels $=$ a frike $=128$, or
2 ftrikes $=$ a coomb $=256$ ，or
2 coombs $=$ a quart $=512, \quad$ or
6 quarters $=$ a wey $=3072$ ，or
10 quarters $=$ a laft $=5 \mathrm{I} 20$ ，or
－$\quad 8$
二 $\quad 16$

$X$ 1oo Braffes of Bergamo，
${ }_{Z}$ Ioo Braftes of Florence，Leghorn，\＆c．
100 Braffes of Milan．

 common rule of three，or proportion，you will cafily make your computations for any quantity required．But there are more concife rules，which are practifed by the molt expert merchants．See the examples following．

## E N G

An example of the reduction of the weights of feveral countries, when compared together, into thofe of any particular country.
Suppofe 100 lb . of Amfterdam be equal to roo lb . of Paris, 100 lb , of Paris to be 150 lb . in Genoa, 300 lb . of Genoa to be 70 lb . in Leipfic, 100 lb . of Leipfic to be 160 lb . in Milan. Quare, How many pounds of Milan will 548 lb . of Amfterdam weigh ?
That the reader may be grounded in the reafon and foundation of the concife rule of equation, which we thall make ufe bf in order to obtain the folution of this quettion; he is defired to turn to the article Arbitration of Exchanges, where he will find the fame applied to the foreign monies of particular countries, which will ferve equally for the explanation of what follows.
The queftion equated according to the univerfal rule there giventand explained, of conjunction.

| Antecedents. | Confequents. |
| :---: | :---: |
| $\pm \varnothing \varnothing \mathrm{lb}$. of Aimfterdam | $=\mp \varnothing \varnothing \mathrm{lb}$. Paris. |
| $\pm \varnothing \varnothing \mathrm{lb}$. of Paris. | = $\ddagger$ ¢ $¢ \mathrm{lb}$. 'Geноа, |
| $\pm \varnothing \varnothing \mathrm{lb}$. of Granoa | 三 7ø ${ }^{\prime} \mathrm{lb}$. Leipfick, |
| $1 \not \square \varnothing \mathrm{lb}$. of Leipfick | $=\varnothing 6 ø \mathrm{lb}$. Milan. |
| $z$ | 3 |
| 5 | 4 |
| 5 | 2 |

Ergo $\frac{3 \times 2 \times 7}{25} \times 548=9201 \mathrm{~b}$ i $\frac{\mathrm{I} 6}{25}$ anfwer of Milan $=$ 548 lb . of Amfterdam.

## Remarks.

We call this rule that of conjunetion, becaufe it joins together feveral rules of three into one; by which, and by the relation that feveral antecedents have to their confequents, the proportion between the firft antecedent and the lait confequent is difcovered, as well as the proportions between the others in their feveral refpects.
(1). To difpofe this right rule, the antecedents muft be ranged in the left-hand column, and the confequents in the right-hand one.
2.) The firf antecedent, and the laft confequent, whofe antecedent is fought, muft be of the like fpecies: fo muft the fecond confequent and the third antecedent; which order mult be continued throughout the rule.
(3:) The terms being thus difpofed, you find a divifor and a dividend.
(4.) Multiply all the antecedents, in a continued multiplication by one another, and the lafil produet will be the geneal divifor. And,
(5.) Multiply, in the fame manner, all the confequents, and the laft product will be the dividend.---And, dividing the one by the other, the quotient will give you the antecedent required by the queftion.
This rule may be fo abridged, as to give the arithemetician but very little trouble, in comparifon to that which he muft have, provided he multiplies all the whole numbers (and alfo their fractions, when the cafe contains them) on both fides of the equation.
To exemplify fuch abridgment by the preceding example.
According to the axioms laid down under the article Arbitration of Exchanges, equal quantities, divided by equal quantities, their products are equal, and in the fame proportion.---In the example before us, the two $100^{\prime}$ 's on both fides cancel each other, and let the laft cypher of the three remaining antecedents be cancelled, viz. 100 lb . of Paris, 100 lb . of Genoa, and 100 lb . of Leipfick, which is dividing them by 10 ; and, to preferve the equality on the fide of the confequents, cancel alfo the laft cyphers of 150 lb . of Genoa, 70 lb . of Leipfick, and 160 lb . of Milan.--After which, divide one of the remaining io's on the antecedent fide by 5 , and the 15 on the confequent fide by 5 , and the quetes will be 2 on the fide of the antecedents, and 3 on that of the confequents..--Then divide the 2 on the lett fide by 2 , and 16 by 2 on the right fide. Then divide one of the remaining 10 's on the antecedent fide, and the 8 on the confequent fide again by 2, and the quotients will be 5 and 4 ; which being again repeated for the remaining 10 , and 4 on both fides, leaves another 5 on the antecedent fide, and 2 on the confequent one.---And there being no further room for common divifions, by reaton of the odd numbers 5 and 5 on the one fide, and 7 and 3 on the other, the operation is abbreviated, as far as it will admit of; and the anfwer is as before Shewn, viz. $3 \times 2=6 \times 7=42 \times 54^{8}=23016$, which,
being divided by 5 and 5 , or 25 , the quotient is $920 \frac{16}{52}$, the true anfwer.

An example with regard to Measures.
Suppofe a merchant of Hamburgh, not knowing the proportion between the ell of that place and the yard of London, and having orders to procure 8 I yards of cloth, of which 7 ells of Haraburgh muft be had for 3 1. ferling : how fhall he
difoover how may pounds fterling the 8r yards will amount to, only by knowing that 7 ells of France make 9 yards of London, and that 7 ells of Holland make 4 ells of France, and that $I$ ell of Holland makes $x \frac{1}{5}$ ell of Hamburgh.

## Difpofition of the terms.

$53 f 7$ ells of Hamburgh $=3$ 3. fterling,
How many pounds fterling are 8 x yards Englif ?
9
So that $5 \times 2$ is the divifor, and $\frac{9 \times 3 \times 3 \times 7}{10}=561.14 \mathrm{~s}$. fterling, the anfwer.

The general rule.
In the firft place, reduce the two terms, $1 \frac{1}{5}$ ell, and 7 ells of Hamburgh, into the denomination of the fraetion, to have 6 in the confequent, which fet down on the right fide, and 35 in the antecedent, which fet down on the left fide; after which, cancel the $I \frac{1}{5}$ and the 7 ells of Hamburgh. It is a general rule, that when there is a fraction either in the antecedent or the confequent column, both the terms that accompany the fraction, and the other that is of the fame fpecies, muft be reduced into the denominations of the fraction.
Begin the abbreviation of the terms by the multiple 8.I, which contains 9 times the antecedeat 9 , and cancel the 81 and the 9, fetting down 9 on the right of the 81 .
And, fecing 35 contains 5 times the confequent 7 ells of $\mathrm{Pa}-$ sis, cancel the 35 and the 7 , and fes down 5 on the left of 35.

Then take half of the antecedent 4 , and of the confquent 6 , and, cancelling them, fet down 2 on the left of 4 , and 3 on the right of 6 .
Then finding, at the fide of the antecedent, 2,1 and 5 , which are not cancelled, multiply them by each other, to have in that laft product the divifor 10 .
And, finding at the fide of the confequents $7,3,3,9$, that are not cancelled, multiply them into each other, to have in the laft product the dividend.---Then dividing, you will have
 the queftion.
The proof of this rule of conjunction may be reduced from what has been faid under the article Arbitration of Exchanges.

Of the exchanges of England with other the principal places of Europe, and their method of computation.
England, or London, exchanges in Holland (i. e. on Amfterdam and Rotterdam) at fo many fchellings and groots Fiemifh per pound fterling.
One pound Flemifh is 20 fchellings Flemith, or 6 guilders; I fchelling Flemilh is 12 groots Flemith, or 6 ftivers; 1 groot Flemifh is $\frac{1}{2}$ fiver, or 8 pennings.
Books of accounts are kept in Holland fometimes in pounds, fchellings, and groots Flemifh, but more commonly in guilders, or florins, ftivers, and pennings; I 6 pennings $=\mathrm{Ift}-$ ver, 20 ftivers $=1$ guilder, or forin, and 40 groots $=1$ guilder.
If London draws on, or remits to Amfterdam, 1. 852: $12: 6$ fterling, at 34 fch. $4 \frac{1}{2}$ groots Flemidh, per pound fterling, how many guilders, ftivers, and pennings mult be paid or received in bank money in Amfterdam?

## Case I

1. s. d.
fch. grts.
$852: 12: 6$ fterling, at $34: 4^{\frac{2}{3}}$

$\begin{aligned} & \text { s. } \\ & \text { 10 } \\ & 2\end{aligned}{ }^{6816}=\frac{12}{2}: \frac{1}{2}=\frac{5}{3}$
$2: \frac{6=\frac{2}{2} \quad 103: \frac{1}{8}}{8 \mid 0) 703415: \frac{5}{8}}$
guilders 8792 : $\frac{55}{85}=27$ groots $\frac{1}{2}=13$ ftiv. 12 pen. $\frac{5}{8}$ of the half groot $=2 \frac{\pi}{2}$ pennings, which makes the cotal $879^{2}$ guil. I 3 fiv. I 4 pen. $\frac{1}{2}$ bank money.

## INSTRUCTION

Reduce the price of excbange into half groots, which, being multiplied by the pound fterling, gives the half groots therein contained; and, for the $12 \mathrm{~s}, 6 \mathrm{~d}$, take r 0 s . as the half

## E N G

of 825 , and 2 s .6 d , as the fourth of that quotient: add the whole together, and the fum total is the half Flemifh groots contained in the fterling money; which being divided by 80 (the half groots in a guilder) produces the anfwer in guilders. The 55 half groots $=27 \frac{1}{2}$ whole groots $=13$ ftivers and 12 pennings; the $\frac{5}{8}$ of the half groot $=2$ pennings $\frac{1}{2}$, as above, which make 8792 guilders, 13 ftivers, 14 pennings $\frac{7}{2}$, Dutch bank money of Amfterdam.

Case I. reverfed.
guild. ftiv. pen. fiv. pen. [much fterling?

$\frac{132}{.4125}$
$\frac{20}{825100}=12 \mathrm{~s}$.
$\frac{66}{165}$
$\frac{132}{33}=6 \mathrm{~d}$.

## Instruction.

Reduce both the fum of Dutch money, and the price of exchange, which is in Dutch money alfo, into one denomination, and divide the fum by the price, and you have the an fwer in pounds fterling; and, for the remainder, multiply by the fubdenomination of the pound fterling (20 and 12) and you have the fhillings and pence equivalent to the fraction.
In the preceding cafe, the guilders are reduced into groots by multiplying by 40 , and, for the 13 ftivers, you take in 26 groots ; 8 pennings making a groot, you multiply by 8, and take in the 14 pennings: there being alfo an half penning, make it neceffary to reduce the produce into half pennings, and take in the half.
The price of exchange likewife, being multiplied by 12 and 8, reduces that into half pennings, and, dividing the half pennings in the whole fum by thofe contained in one pound fterling, muft neceffarily give the number of pounds as before.

## Case I.

Exemplified by another method of operation, thus:

$$
\begin{array}{ccc}
\text { 1. s. d. } & \text { ftiv. pen. } \\
852: 12: 6 \text { fterling, at } 34: 4 \frac{1}{2} \\
\frac{206: 4}{5112} & \frac{6}{2} & \frac{206}{} \text { fiv. } 4 \text { pen. }= \\

fivers 210$)_{1758513:}^{25:} 12 \frac{1}{2}$
guilders 8792: 13: 14 $\frac{1}{2}$ bank money of Amfterdam.
Instruction.
A fchelling Flemin being 6 ftivers, and 2 groots $=1$ fiver, you multiply the 34 by 6, and, for the 4 groots, take in 2 ftivers: and, as 1 ftiver $=16$ pennings, and 2 groots $=1$ Ativer, fo half of a groot $=4$ pennings: therefore, multiply the fum of pounds fterling by the ftivers and pennings in 11. and the produce gives the ftivers and pennings in the whole fum of pounds; and, for the 12 s .6 d . take the half of the fivers and pennings in 11 . and, for the 2 s .6 d . take the fourth of that product: add the whole together, and you have the anfwer in ftivers, which being divided by 20 (the fivers in a guilder) the anfwer is produced in guilders, ftivers, and pennings of Amfterdam.

## Case II.

To convert the bank money of Amfterdam into current money, the agio being at $4 \frac{7}{3}$ per cent. as it lately was at Amiterdam.
The agio is the difference, or advanced price, between the bank and current money of Holland: i. e. to fay, in the prefent cafe, 104 guilders $\frac{3}{8}$, current money, is fuppofed equal to 100 guilders bank money: quare, how much current money will guild. 8792:13:4 $\frac{1}{3}$ bank money of Amfterdam make, agio at 4 ?
The queftion ftated, according to the rule of proportion, runs thus:

## E N G

As 100 guilders bank money is to 104 guilders a curron is $8792: 13: 4 \frac{1}{2}$ bank given to the required cur:ent wimey But as this may be greatly abridged by the comra mote to computing the rate of exchange upon money, it : needlefs to thew the tedious method by the ordinary rule of proportion.

guild. 8792: 13: '4 $\frac{1}{2}$ bank money 9129
384:13: $9 \frac{1}{2}$ agio
guild. $9177: 6: 14$ current money $\frac{8}{2 / 37}$
To reduce which again into bank, fay, by the rule of proportion, as 104 guilders $\frac{3}{8}$, current money, is to 100 guilders banco: fo is guilders $9177: 6: 14$, current money, to guilders 8792 : $13: 4 \frac{\mathrm{x}}{2}$ banco.
Ufance in dealing in bills of exchange, at Amfterdam, is not reckoned there as in many other places, either precifely 30 days, or 31 , or 28 , or 29 ; but their ufance is drawn on a certain day, and is payable the fame day in the paying month, without regard to the number of intervening day. They generally allow fix days of grace.
For more matter, in regard to the exchange of the United Provinces, fee the article of Holiand; where, under the city of Amiterdam, we chall treat more largely of this matter.

> C A s e. III.

England exchanges on Antwerp for cchellings and groots Flemilh per pound fterling.
Suppofe 4821.18 s . fterling, to be reduced into Flemifh pounds, at 35 fivers 10 pennings, near the prefent price of exchange, howmuch Flemifh money will it make?

This is fo plain and familiar, that it is needlefs to enlarge. For more matter, in regard to practical mercantile concerns, fee the article Netherlands; fee alfo Austrian NeTHERIANDS.

## CAse IV.

England, or London, exchanges on Hamburgh, as on Holland and Antwerp, from 32 to 35 fchellings and groots Flemifh per pound fterling.
Books of accounts are kept in marks, fchellings, and pence lubs; and by fome in rixdollars, fchellings, and pence; and by others in pounds, Chillings, and pence Fleminh. A mark $=16$ fchellings lubs, 1 fchelling $=12$ pence, 1 rixdollar $=$ 3 marks, or 48 fchellings lubs. A pound Flemifh $=7 \frac{x}{3}$ marks, or $2 \frac{1}{2}$ rixdollars; ifhilling Flemifh $=6$ fhillings lubs, and the pound Flemiih $=\$ 20$ 亿hillings lubs, and the rixdollar $=8$ fchellings Fleminh.
If Hamburgh draws Flemifh money on London, the operation is performed as under the cafe of Antwerp.

## E N G

## E N G

But fuppofe Hamburgh draws upon London for 4117 marks, 5 fols lubs, at 33 : 10 exchange, what muft be paid for this draught in London?
marks.
4117: 5, - at 33:10
$\frac{16}{05877 \text { hil. lubs. } \quad 6 \text { thil. lubs. }=1 \text { fchei. Flem. and }}$ gives 1. $324: 10: 4 \frac{8}{8}$ fterling.
I NSTRUCTION.
Let the fum and the price be reduced into the fame denomination, and the former divided by the latter, and the fractions of a pound reduced as before, in cafe the firt.

CASE IV. reverfed.

1. $324: 10: 4$ fterling, at $33: 10$, how much mark money of Hamburgh?

## INSTRUCTION.

Reduce the price of exchange into fchellings lubs, as before; multiply by the fame, and take your aliquot parts, as directed in the other cafe, and divide the fum total by 16 , to reduce the fame into marks.-For the temaining fraction, reduce it into the fubdenominations of the mark.
In regard to what other practical matters are requifite, with relation to the mercantile affairs of the city of Hamburgh, fee the article Lower Saxony, Hamburgh being in that circle of the empire of Germany.

> CASEV.

England exchanges with France on the crown of three livres Tournois, or 60 fols French, and gives pence fterling, more or lefs, for this exchange crown.
Accounts are kept in France in livres; fols, and deniers, reckoning 12 deniers to the fol, and 20 fols to one livre, or franc.
Suppofe Paris owes to London 4186 livres, 7 fols, 5 deniers, and remits the fame fum to London at $31 \frac{1}{2}$ ferling per crown.

## INSTRUCTION.

Divide the livres, fols, and deniers Tournois, by 3 throughout, and that will reduce them into French exchange crowns. Then multiply the crowns by the pence flerling, and take the aliquot parts for the fractional parts, according to the fubdenomination of the integers, as in the foregoing cafes, and you will have the anfwer in pence fterling, which reduce into pounds, \&c.
The reverfe of this is fo eafy, that it is needlefs to add more than to obferve, that, when you are to reduce fterling money into French exchange crowns, reduce the fum given and price of exchange into the like denomination, and divide the one by the other ; and, for any fractional parts that may remain, proceed as in the preceding examples, according to the fubdenomination of your integer.
If you would have French livres Tournois, inftead of French exchange crowns, you are only to multiply the crowns, fols, and deniers, by 3 throughout, and the product will be livres, fols, and deniers,
For further matter relating to the exchange, and other practical mercantile concerns of France, fee the general article France.

## CASE VI.

England exchanges with Spain upon the piaftre, or dollar of $\frac{3}{8}$, for an uncertain number of pence fterling.
They keep their accounts after divers manners, in different provinces and cities, all which would be too prolix to fhew under this general article of England; where we intend no more than to thew the ordinary method of computing the exchange between us and Spain: but, under the general article of Spain, we fhall be very full and circumftantial in regard hereunto.
In Madrid, Cadiz, Malaga, and all the Spanifh places of trade in the Streights, Mediterranean, Africa, and the WeftIndies, the Spaniards keep their accounts chiefly in piaftres, or dollars, rials, half-rials, and quartiles, reckoning 16 quartiles to a rial, and 8 rials to a dollar; or in dollars, rials, and maravedies, reckoning 34 maravedies to a rial, and 8 rials to the dollar. -The old piaftre is valued at 8 , the new at 10 rials of plate.
Suppofe Cadiz remits to London 3537 dollars, 6 rials, at $40^{\frac{7}{8}}$ per dollar, what will this remittance amount to in England?

|  | $\begin{array}{r} 3537: 6 \\ 40 \frac{7}{8} \\ \hline \end{array}$ |
| :---: | :---: |
|  | 141480 |
| $\frac{7}{8}$ | 24才ち9 |
| rials | $3094 \frac{7}{8}$ |
| $4=\frac{2}{2}$ | $20 \frac{3}{8} \frac{3}{4}$ |
| $2=\frac{1}{2}$ | $10 \frac{1}{8} \frac{4}{8}$ |
|  | 12144605 $\frac{1}{2} \frac{1}{4}$ |
| $210) 1$ | 2050:5 $5^{\frac{1}{2}}$ |
| ]. 60 | : 10: $5^{\frac{2}{2}} \mathrm{ft}$ |

INSTRUCTION.
Multiply the dollars by 40 ; for the $\frac{7}{8}$ multiply by 7, cancel Vol. I.
the product, and divide by 8 ; for the 6 rials, take 4 the half; and 2 the half of that product: add the whole, it gives pence fterling, which reduce to pounds.
The $\frac{7}{8}$ may be taken by 4 ; the half, 2 , the half of that, and I, the half of 2 .
The reverfe of this is fo intelligible, that we fhall not trouble our readers with what is conceived fuperfluous, and may be reafonably thought only to fpin out the quantity, rather than to confult the quality of our matter.
If Spain be indebted to London in maravedies, you muft reduce them to dollars, by dividing them by 272 , and proceed as before.
As 8 rials make this dollar, and 34 maravedies make a piece of eight, $34 \times 8=272$.

## CASEVII.

England exchanges on Leghorn for the dolldrs of 6 livress and gives pence fterling, more or leff, for the fame. They reckon 12 deniers to the fol, and 20 fols to the dollar.
As thofe who have digefted the cafes foregoing can ftand in need of no information to reduce Leghorn money into fterling, nor fterling into Leghorn money, we hall not dwell any longer upon this fubject.

## CASE VIII.

England exchanges on Genoa for the piaftre of 5 livres, for pence fterling, more or lefs: fo that to reduce livres into piaftres, or piaftres into livres, mult be mighty eafy to thofe who underftand common arithmetic, and what we have already obferved; alfo, to reduce thefe dollars into fterling, and that again into thofe dollars, or livres, cannot but be equally familiar. They keep their accounts in livres, fols, and deniers, by 12 and 20 , or in dollars of 100 fols.
Under the article Genoa we fhall confider what elfe may be neceflary.

## CASE İX.

England exchanges on Venice upon the ducat of 24 grains, or grofs banco, for pence flerling, more or lefs.
They keep their accounts in lives, fols, and deniers current, and reckon 12 deniers to the fol, and 20 fols to a livre. The bank and bankers keep their accounts in livres, fols, and groffes, teckoning 12 grofs to a fol, 20 fols to a livre, and the livre at so ducats bank, or 12 ducats current. - The ducat bank is valued at 6 livers 4 fols, or 124 fols current, or 24 groffes.-The current money is what is ufually bargained for in the buying of merchandizes, and is 20 per cent. worfe. than bank.
To multiply examples of converting ducats of Venice, when you know their fubdenominations, into fterling, or ferling into them, is needlefs we apprehend. See the article VENICE.

## CASE X

England exchangès with Portugal on the milrea, and gives pence, more or lefs, for the fame.
Throughout this kingdom in general they keep their accounts in milreas and reas, accounting 1000 reas to a milrea; and feparating the milreas from the reas thus, $976 \omega^{8} 89$, which fignifies 976 milreas, and 859 reas.
Let it be fuppofed that Lifbon, or Oporto, which are the principal places of exchange, remits to London 4366 milreas, 183 reas, at 5 s. 5 d. $\frac{8}{8}$ exchange, how much fterling muft be paid in London for this remittance?

Anfwer, 1. 1193: $17: 6 \frac{3}{+}$ ferling.

## INSTRUCTİON:

The milrea being divided into 1000 ths, we confider them as fo many decimal parts. See the article Arithmetic.
Then 5 s . being $\frac{1}{4}$ of a pound, and 5 d . $\frac{1}{12}$ of 5 s . and $\frac{i}{8}$ the $\frac{1}{8}$ of 5 d . we divide accordingly, and fum up the whole; which makes pounds, and the decimal parts of a pound, the value of which is found by multiplying by 20,12 , and 4 , and cutting off the number of decimal places.
The reverfe of this being orily to reduce the fum and the price. of exchange into eights of pence, and divide the one by the other, there can be no difficulty, and, therefore, requires no further explication. See the article Portugal.

CASE.

## E NG

CASE XI.
England and Stotland exchange at fo much per cent. Since the union of the two kingdoms, the fame fpecies of gold and filver as are coíned in the kinges mint at the Tower of London, pafs current in Scotland.

## CASE XITT.

England on Irelind. The exchange befween London and Dublin runs from about 5 or 6 to 12 per cent. and they exchange to moff foreign places by the way of London ; that is to fay, they give 105 to 112 L . Irifh per 100 1. ferling.
They keep their arcounts in pounds, fhillings, and pence; reckoning 12 pence to a fhilling, and 20 fhillings to a pound Irifh money. As whoever can caft up the common intereft of money, cannot be atta lofs to caft up the exchange between London and Ireland, fo I fhall not dwell upon it.
England exchanges on her American Plantations.
In the Britifi dominions in America and the Weff-Indies, they keep their accounts in poundid, fhillings and pence, as they do in Londor, bat in America generally call their money currency.
In moft of the Britifh fettlements upon the continent of America, they have few coins of any fort circulating among them ; what few they have, are chiefly French and Spanifh pieces : fo that they are obliged to fubfitute a paper currency for a medium of their commerce, for want of a competency of cafh for circulation. See the articles Cukrency, i.e. Paper Curkéncy, Cash, anid Circulation.
The following table fhews at what value the foreign coins are to pafs in the Englifif collonies and plartations on the illands in America, according to an act of parliament miade in the fixth year of queen Anne, for afêertaining their value,

The TABLE.

The half quarters, and other parts in proportion to their denominations ; and light pieces in proportion to their weights. And to remedy the inconveniences which were caufed by the different rates at which pieces of the fame fpecies were current, it was ordered by proclamation, and confirmed by the faid act of parliament, that, after the firft of January 1704 , no pillar, Mexico or Seville pieces of eight, though of full weight as above, fhall be received nor paid at above fix fiil-
lings a-piece; and the half, quarters, and the other leffer pieces in proportion.
And the currency of all other pieces above-mentioned are not to exceed the fame proportion.
And the faid att enjoins, That, if any one fhall receive or pay any of the faid pieces for any more than as above, they fhall forfeit ten pounds.

## A West-India Tabie.

When any fum is advanced upon an ounce of ferling filver, upon 5 s. for an ounce, or when any fum is advanced over 41. for an ounce of ftandard geld, this table fhews how much the faid advanced money amounts to per cent. from 501 . advanced upon 41. an ounce of ftandard gold, to the ${ }_{3}^{\frac{1}{3} 2}$ parts of a penny; and upon filver, from 21 . advartred upon 5 s. for an ounce, to the $\frac{1}{2 \frac{1}{2}}$ part of a penny.

On gold per cent. Onfil. perct.

The foregoing table explained.
Suppofe that filver was bought in Jamaica at 7s. $5 \mathrm{~d} . \frac{1}{2}$ of their currency per ounce, to know how much the advance money amounts to per ounce.
From the given price in currency $75^{\frac{1}{2}}$ per ounce. Subtract for the fterling value 5 D per ounce.

## The remainder is the fum advanced

$25 \frac{1}{2}$ per ounce.
Then to know how much the advanced price amounts to per cent. look in the foregoing calculation.
Firft for $2 s$, which upon filver amounts to 1.40 o per cent. Then look for 5 d . which is - 868 disto Then look for $\frac{1}{2}$, which is

- 168 ditto

The 2s. 5d. $\frac{1}{2}$ advanced on the ounce ? amounts to

4934 ditto
Which is the difcount that currency fould be at, when filver is fold at 7 s. 5 d. $\frac{1}{2}$ per ounce.

## An example of the gold.

Suppore that gold is bought in Carolina at 91. 15 s. 7d. (of their currency) per ounce, and you would know how much the advanced fum amounts to per ounce.

From the given price - - 1.9157 per ounce.
Take the fterling value - - 4 o o per ounce.
The remainder is the advanced price $\quad 5157$ per ounce.
Then to know how much the advanced price upon the faid ounce of gold amounts to per cent.
In the foregoing tablelook for 5 l. which $\}$ amounts to
\}125 O o per cent.
Then look for 15 s . which is
1815 o per cent.
Look alfo for the 7 d . which is 0147 per cent.

The fum total hews that $51.15 \mathrm{~s}, 7 \mathrm{~d}$. $\}$

Which is the difcount that currency fhould be at, when an ounce of gold, valued at 4 l. fterling, is fold for 9 l .15 s .7 d . of their currency.

## E N G

Some examples on the fimple arbitration of the exchanges, which may be compared with thofe under the article Arbitration of Exchanges.

8
$\because \frac{43433}{169 \times 8}=32$ d. $\frac{x}{8}$ fterling. Proof.

## INSTRUCTION.

By comparing what has been faid under the article Arbitration of Exchanges with thefe examples, and alfo what has been oblerved with relation to the application of this rule of conjunction, as well to foreign weights and meafures under this article of England, the reader cannot be at any lofs, we conceive, to comprehend the reafon and foundation hereof.
However, left the utility and application of thefe operations thould not be fo thoroughly underftood as we could defire, a little further illuftration may not be altogether ufelefs.
Let it, therefore, be fuppofed, that roo 1. fterling is circulated from London to Amfterdam at the price of exchange in the examples preceding, viz. at $35: 2 \frac{1}{2}$, how many guilders of Holland will this produce?
Ioo l. fterling, at $422 \frac{1}{2}$ grots Amfterdam per pound fterling, will produce 1056 : 10 guilders of Amfterdam. [See the preceding part of this article England.]
Thefe 1056 : 10 guilders, circulated from Amfterdam to Pa ris, will produce at the arbitrated price of exchange (viz. $56 \frac{42}{368}$ grots per crown of France) 747 crowns : $1: 7 \frac{1}{2}$ of France.-And thefe crowns drawn home to London, at the above exchange of $32 \frac{1}{8}$ pence Aterling per French crown, will produce the fame ioo l. Aerling.
This demonftrably proves, that the faid price of $56 \frac{425}{76}$ is the true arbitrated price of exchange.

The A P PLICATION.
Whence it very obvioufly follows, that, if the real price of exchange in being at the time thefe computations are made (as in the firft of the three foregoing cafes) is more or lefs between Amfterdam and Paris than the exact arbitrated price,

## $E N G$

you may draw home more or lefs than your rool. ferling: But, that you might not draw lefs, fee what I have faid under the article Arbitration of Exchanges, which need not be repeated; for, in tranfactions of this kind, the fkilful and accurate merchant will watch the occafion to buy bills of exchange where they are cheapeft, in order to difpele of them at fuch places, where they will, for the time being, fell the deareft. And,
With regard to the variation of the prices of exchange during the time of thele negotiations, fee what I have faid upon that head under the before-mentioncd article. See likewife the general article of Exchange. For, as that judicious and experienced merchant Mr. Mun obferves, in his advice to his fon, whom he intended to breed up to merchandizing, 'That - he ought to underftand, and to be a diligent obferver of the ' rates of exchanges by bills from one flate to another, ' whereby he may the better direct his affairs, and remit c over and receive home his monies to the moft advantage ' poffible.'

REMARKA. For the advancernent of the general commerce of this kingdom.

Thus have we run through on this head of England, in conjunction with what has been faid under the articles Britain [Great Britain, British America, and ColoNIEs] fome of the moft effential particulars, which relate to the commerce of this kingdom; and thefe we have not only confidered in a political, but in a practical light, which is accommodated to the affairs and tranfactions of traders in general ; all which, together with what elfe we have already reprefented, and that we fhall further reprefent, under the various articles to which the reader is referred, will, we apprehend, afford a connected feries of the moft ufeful matter ${ }_{3}$ whereby to form the univerfal, as well as the particular merchant ; and not only this, the fupreme clafs of traders, but likewife every other fpecies; there being farce any trader, or any other man of bufinefs in thefe kingdoms, that bath any connection with commerce, but will find, we may humbly prefume to fay, fome matter, fome ufful matter, which is really interefting to his profeffion.
Before we conclude this article of EnGíaind, it may not be improper to obferve the bent, the fpirit, the univerfal paffion, if the expreffion may be allowed, of all civilized countries, for trade and commerce: of which this kingdom cannot be too jealous, nor keep to vigilant an eye over. Nor fhould the accounts of the commercial tranfactions of our neighbouring flates be tranfmitted to us by piece-meal, and in a very imperfect manner, through the channel of newspapers only: on the contrary, would it not prove importantly ufeful, if our confuls, refidents, envoys, and even ambaffadors abroad, were, by virtue of their office, obliged, by authority, to tranfmit a faithful narrative, to our lords commiffioners of trade, of all fuch like meafures; and which fhould, from time to time, be communicated to the public by that honourable board, in the GAZETTE. For nothing of this kind fhould be kept from the knowlege of the people, to the end that they might timely prevent thofe evil confequences, which may threaten our own trade and navigation. When our artizans and manufacturers, when our traders and merchants in general chall be made fenfible by authority, of what is doing in other countries to their perfonal injury, as well as that of the nation, they would fpeedily endeavour to avail themfelves of fuch intelligence; they would Atruggle fo to counteract their competitors, as to fuftain the leaft detriment, if they fhould not be capable of totally defeating thofe rival enterprizes : they would, by their fpontaneous induftry and ingenuity, not only ftrive to preferve the trade they poffeffed, but would zealoufly attempt to obtain a fhare in any new branches that might be fell upon in foreign ftates: and, by a dutiful application to the grear reprefentative of this kingdom, they would certainly meet with all reafonable regard, becaufe the parliament would then be convinced of the indifpenfable neceflity thereof, from the authentic teftimony of the officers of the crown refiding in fareign countries. And, as the fundamental foutce of new and profperous branches of commerce, is the happy invention and difcovery of new mechanical and manufactural arts and inventions, it is to be lamented, that perfons of the firft rank and digaity do not endeavour to inform themfelves of the moft eligible meafures for their advancement. Such politics would certainly not redound lefs to their intereft, than to their honour and glory; and that not only confidered as conftituents of the fame community, but, if thefe promoters of fach commercial arts were perfons in power and authority, they would draw to themfelves fuch friendthips and attachment; to their perfonal intereft, that no little florms of flate could poffibly. fhake or difcompofe them; for what temporary junto's or cabals could difturb the repore of minifters, who fhould engage the trading intereft of the nation in their favour and fupport? The landed part of the kingdom begin now to be fo thoroughly convinced of their intumate connection of in-
tereft with the trading part thereof, that the voice of the trading intereft will in the general be ever followed by that of the land; and the monied interefts will rarely act in oppofition to thofe of land and trade: fo that gentlemen in power feem to have nothing to fear, if they do not neglect our commerce.
Gentlemen of deep learning have, we are afraid, been too apt to imagine, that trade, and it's dependant arts of mechanics and manufactures, and others that have relation thereto, are not only beneath their ftudy, but will afford them neither that delight in the purfuit, nor glory in the acquifition, as the more general kind of academical literature does. If gentlemen would candidly condefcend to examine this notion, it is not improbable, but that they may find it fuch as to deferve being ranked among the tribe of vulgar etrors.
The ftudy of philofophy was in no age or civilized country thought unbecoming the dignity of the greateft men: I do not mean the verbofe, the difputative, the pedantic fpecies of philofophy, which has taught men little elfe than to ring the changes upon words and pompous mufical periods, and to quibble expertly with the fchool logic and fophiffry : we mean, on the other hand, that natural philofophy, which affords all the neceffaries and conveniencies of life to ftates and empires; fuch whereby our own dominions are extended abroad, as a knowlege in phyfics fecures us at home. And, methinks, it appears highly probable, that good naturalifts may greatly reform trade, or improve it; fince, in the general, it depends upon a number of the productions of nature; and chiefly lies in the hands of the mechanics, the manufacurers, and other artizans.
Thus, for inftance, the huibandmen's fkill confifts in the knowlege of a few plants and animals, their relation to peculiar foils, and management, with the influence of the celeftial bodies and meteors thereupon; all which fubjects fall properly under the cognizance of a naturalift. He, therefore, who has attentively confidered the nature of generation, nutrition, and accretion, both in plants and animals, and knows how to vary a ufeful experiment, fo as to remedy the inconveniencies or fupply the defects thereof, and can dextroully apply his own, and others obfervations, may cultivate the art of hulbandry to as much advantage as the ordinary farmer tills his land. And moft of the nobleft difcoveries in hufbandry have been owing to the fagacity of the experienced naturalift. See the article Husbandry.
And here it brings to my reflection a notable attempt, faid lately to be made in France; which, if it chould happen to prove fuccefsful, will be another memorable inflance of the abilities of the naturalift to advance the intereft of commerce in that nation: the undertaking I have in view, is no lefs, if I am rightly informed, than an attempt to make the fheep of that kingdom to produce in the general as good wool ; that is to fay, as good, in quality and itaple, as that of England or Ireland ; and it is reported, but with what certainty we cannot prefume to fay, that all royal encouragement is given to this defign, and fuch a progrefs bath been made already herein, as promifes the deffrable fuccefs to that kingdom.
If a defign, of this high concernment to the woollen manufactures of France, fhould be attended with the profperity aimed at, it mult prove of far greater detriment to the trade of this nation, than the clandeftine exportation of our wool. But, if any thing of this kind fhould be found fo generally practicable as to anfwer the purpofe intended, fhould it not excite our naturalifts to think of ways and means fo to manage our fheep, that we may be capable of carrying on our woollen manufactures, without the aid of Spanif wool? And, if the one fhould prove experimentally practicable in France, we may have fome grounds not to defpair of accomplifhing the other in England: which, if we flould be able to effectuate, it may make us fome compenfation for the lofs we may fultain on the fide of France *.

- It is allowed by our woollen manufacturers in general, that the wool of Lemfter in Herefordfhire, which they call their ore, is no way inferior to the Segovia wool of Spain, Quere therefore, Whether it may not deferve the confideration of an ufeful philofopher to enquire into the natural caufes hereof, in order that other parts of England may from thence be brought to yield us an ample fufficiency of wool of the quality of that of Spain, without being obligedto purchafe what we want of that kingdom.

Cbemical experiments, made with judgment and accuracy, will give fuch infight into the nature and quality of foils, as may afford ufeful directions towards the melioration of pafture, as well as of arable and wood-lands. From experiments which have been made upon earths, dungs; and feeds, falts have abounded in the liquors they have yielded. Whoever has obferved thefe many particulars in this art, which caufed Sir Francis Bacon to pronounce nitre to be the life of vegetables, and confiders how land is improved by pigeons dung, which impregnates it with falt-petre, and knows that mofl fat earths, defended from the fun and rain, and left to themfelves, will foon abound in nitrous falt: whoever confiders thefe things, will, perhaps, believe an enquiry into the na-
ture of falt-petre may be of very profitable ufe in hufbandry and farming.
The knowlege of the nature and diftinction of faline bodies may greatly affift, to thew the differences of the various faltnefs that is found in foils, and with what fort each plant or feed is moft delighted. By this means, many tracts of sland now thought barren, for want of a knowlege hereof, might be rendered very advantageous: and why may not, therefore, that which is already very good in quality, be rendered, by found philofophy, ftill much better; and confequently, wherein is the improbability of pafture land being fo improved in foil and fuitable production, as to rear fheep in fo neighbouring a country as that of France, where wool thall be no way inferior to that of England? And why may we not fave ourfelves the expence of Spanifh wool?
Certain it is, that ground may be made to yield much better crops than ufual, by being fucceffively fown with a proper variety of feed, agreeable to the nature of the particular fals at prefent inherent in the earth; for, by the abfence of one kind of falt, it is better prepared to feed thofe plants that delight in another. Of this the hufbandmen have, in fome meafure, already taken notice, as appears by their fowing turneps in grounds too remote for the convenient carriage of compoft, to ferve for manure, and fit there for wheat. And why may not any land, except mere fand, without much culture, be rendered fertile, were we. but well acquainted with the foil, and provided with the various forts of grain, that nature affords in different countries?
There are various foils, both in England and elfewhere, left quite uncultivated, wherein fome foreign vegetables might thrive and profper. Many large tracts of fleep and craggy land, expofed to the foutbern fun, lie wafted in feveral hot countries, where grapes are not planted; though in France, Italy, and even the Alps, fuch lands are turned into excellent vineyards. An experienced way of caufing wheat to grow and profper, even in clay, where no grain bad thriven, has been fuccefsfully practifed; and the art confifted in fteeping the feed for a determined time, in a certain expreffed oil that is not dear ; whence it fhould feem, that, without altering the foil, a flight change, properly made in the feed alone, may fo fit them for each other, as to yield a large increafe. The more comprehenfive any trade is, the more improvements it will admit of from philofophy; becaufe, depending upon many natural productions and operations, there mult arife many particulars to be meliorated or reformed, either in the manufacture or profeffion. Thus corn, in hubbandry, renders a knowlege of the whole art of tillage convenient, with the ways to order cattle, the dairy, an orchard, a kitchen-garden, wood, flax, hemp, hops, bees, \&c. and the particular productions of fome of thefe, as honey, cyder, \&c. are capable of improvement, and require fkill to manage. In the variety of particulars, therefore, wherewith the burbandman deals, there mutt be fome, wherein the fuperior knowlege and experience of the naturalift will be ferviceable. And, as one of the principal parts of hußbandry depends upon preferving the improvement of cattle, and prefer ving them from difeafes, and alfo the fruits of the earth from putrefaction, natural philofophy conduces to thefe great ends. He who knows how to accelerate and retard putrefaction in bodies, may fhew the hufbandman how to prepare variety of manures, either for the paftural or other purpofes; to enrich his land with the peculiar kind of falt it wants; and alfo how to preferve feveral feeds, flowers, and fruits, beyond their natural duration.
To purfue the ufe of practical philofophy to trade a ftep farther. An attentive confideration of the parts that conflitute each particular trade, would thew how all depend upon philofophy, and might be farther improved. Thus the principal parts of refining are a knowlege of the preparation of AQUA Fortr's [fee that article,] and it's operation upon filver, copper, and gold, with the means to purge it, that neither gold may be diffolved, nor filver precipitated, when diffolved thereby; to know what proportion is diffolvable therein, and the quantity of water neceffary to weaken the folution; how long copper-plates fhould lie to precipitate the filver it contains, how lead is colliquated with, and what proportion thereof is requifite to carry off the bafer metals upon the teft; how cupels are beft made, and with thefe to draw off lead or antimony from gold or filver; and laftly, to know the proper proportion of gold and filver, to make water-gold [fee the article Gold]. This trade, indeed, is underftood by few, and yet is not fo diffufive and complicated as hundreds of others; notwithltanding, if they all were refolved into their component parts, it would doubtlefs appear, that moft of them are only corollaries, deduced from particular obferv2tions in philofophy, and the application thereof to the ufes of commerce. And, if fo, 'tis more than probable, that farther difcoveries in the nature of the materials, the fubjects of trade, and a knowlege of the laws they oblerve, may reform or meliorate feveral of it's branches. See Royal Society.

## APPLICATION.

Without launching deeper into a philofophical ftrain under the prefent article, we would only take leave to obferve,

## E N G

## E NG

(r.) That fince it might be demontrated, in numberiefs inflances, that every kind of trade is improveable by this true and ufeful philofophy, it follows, that thefe experimental Aludies cannot be too much cultivated in a trading nation, nor too much encouragement given to thofe who need it, that hall become the happy inftruments of communicating whatever may have a tendency to the advancement of any branch of our commerce.
(2.) That it feems to be the intereft of the ftate to propofe fuitable rewards and honours to thofe who fhall excel in any thing of this kind, and not leave a matter of fuch confequence to the mere fpontaneous difpofition of the people, without any hope or expectation of advantage, except what the benevolence of fome great man, an encourager of thefe ftudies, may pleafe bounteoully to beftow; and this too often obtained only by mean cringing and follicitation, or by fulfome and flattering dedications of any ingenious and elaborate performance, which men of learning and fcience may prefent to the public.
(3.) It is obfervable, that, in this kingdom in particular, the making of laws for the benefit of commerce does, in the general, take rife from the application and remonftrances of traders themfeeves to the legiflature; and even to obtain the moft reafonable and falutary laws upon thefe important occafions, has been, I am afraid, too freequently attended, not only with great expence to the fupplicants, but fuch delay and procraftination as has proved extremely detrimental to the private concerns of traders, more efpecially to thofe whofe refidence has happened to be at fea-ports and trading towns, fome hundred miles diftant from the metropolis: whereas, in fome neighbouring countries, the rife of all laws which relate to commerce, proceeds from the valuntary act and deed of the ftate itficlf; from the deliberate judgment of a fucceffion of wife and able commifioners and minifters, appointed by authority, who have made it their bufinefs duly to enquire into all grievances that trade labours under, and inftantly to afford all public aid and affiftance to any peculiar branch thereof that may ftand in need of it: fo that the interefts of trade, in fome forcign countries, are not left to the vague will and judgment of traders, whether they will or will not apply to the flate for fuitable encouragement or no, or whether they apply in a manner fuitable to the exigencies of peculiar branches; no; on the contrary, thofe in authority are of themfelves follicitous to difcover the wants of trade, and every difficulty and difcouragement under which it lies; in order to remove them without delay, and without putting traders to the expence and fatigue of attendance month after month, and year after year, to the great neglect of their private concerns; which muft neceffarily prove proportionably detrimental to the general commerce of fuch nations.
That what has been fuggefted, with regard to foreign nations, is matter of fact, will further appear throughout this work, than what it already has done, from a feries of the public adts, arrêts, and councils of feveral nations in Europe; which are żealoully ftruggling to gain a fuperiority over others in their affairs of commerce.
For the means of permanently advancing the trade and navigation of our own nation in particular, fee the articles ARtificers, Manufacturers, Earth, Husbandry, Landed Interest, Trade, Royal Society.
ENGLISH AFRICAN COMPANY. Wehaving, under the article Africa, referred to the article English African Company, it may be neceffary to give a fhort hiftory thereof, to which recourfe may be occafionally had hereafter.

## A Chort Hiftory of the African Company.

The Portugueze being the firf that difcovered the coaft of Africa, they built one fort on the ifland of Arguin, on the north coaft; another, called St George del Mina, on the Gold Coaft; and a third at a place called Loango St Paul's, on the coalt of Angola, to the fouthward of the Equinoctial Line: by virtue of which poffeffions, they not only claimed, and (for many years) enjoyed, the right in and to all the faid lands and countries, but likewife feized and confifcated the thips of all other nations, as often as they found any of them trading on any part of the faid coaft.
About the latter end of the reign of king Edward VI. fome London merchants fitted out the firf Englifh hips that ever traded to Guinea; and, in the reign of queen Mary, and for the firft ten or twelve years of queen Elizabeth, fundry other private fhips were fitted out for the fame parts: but the Englifh not having as yet any fettlements or plantations in the WeftIndies, and, confequently, no occafion for negroes, fuch fhips traded only for gold, elephants teeth, and malaguetta; and all fuch voyages were undertaken and performed at the hazard of lofing the fhips and cargoes, if they fell into the hands of the Portugueze, without the leaft ground to hope for any redrefs or fatisfaction for the fame.
Queen Elizabeth, in the 3oth year of her reign, being then at war with Spain and Portugal, erected a company for the better difcovering and carrying on a trade from the northern moft part of the river Senegal, and from and within that river, all along that coaft, unto the fouthermoft pant of the

Vol. I.
river Gambid, and within the fame; and gave and granted unto them the whole and fole trade $\mathrm{in}^{\prime}$, to, and from the faid rivers and countries, for a certain term of years; with probibition to all others her fubjects to trade to the fame places, on pain of forfeiture of thips and goods: and thefe were the firft Englifh merchants that ever trade to the coaft of Guinea, by and under the authority and protection of the crown of England.
In the reigns of king James I. and king Charles I. and during the time of the ufurpation, fundry perfons were encouraged, by public authority, to trade to other parts of Africa, and to take fuch meafures for the better carrying on and improving the fame, as they fhould judge moft proper. In purfuance whereof, they built one fort, at a place called Cormantine, on the Gold Coaft, and another in the river Gambia, on the north coaft: and thefe were the only places of any confequence which the Englifh were in poffeffion of at the Reftoration.
The States-General of the United Provinces obferving, as we may imagine, the meafures taken in England for encouraging of a trade to Africa, did alfo, about the year 1621 , erect and eftablifh a company, which they called the Weft-India Company; and, for their encouragement, gave and granted unto them all the lands and countries which they could conquer, or gain poffeffion of in Africa, from the Tropic of Cancer to the Cape of Good Hope; and in America, from the fouthermoft part of Newfoundland to the Streights of Magellan and La Maire, on the eaft fide, and from thofe ftreights to the Streights of Anian, on the welf fide ; with the whole and fole trade, and liberty and right of trading into and from all fuch lands and countries; and alfo with prohibition to all others their fubjects to trade to, or frequent them, or any of them, under the fevereft penalties. Whereupon the faid company applied themfelves to the making of divers great and important conquefts in Brazil and Africa: and fuch fuccefs attended their arms, efpecially in Africa, that, in the year 1637, they took the ftrong fortrefs of St George del Mina, on the Gold Coaft; and, in a year or two more, all the other Portugueze forts and fettlements on the fame coaft: all which places were afterwards yielded to them by the treaty of truce and navigation concluded (anno 1645) between the crown of Portugal and the States.
From this time, and in virtue of thefe poffeffions, thus taken from and yielded by the Portugueze, the Dutch Weft-India company took upon themelves to claim the fole right and property in and to all the lands and countries in Africa, from Cape Palmas to Cape Lopez, comprehending all the Gold Coaft and Whydah, and fundry other great and populous countries on each fide of them. And, although the Englifh bad built a fort at Cormantine, and fettled factories at fundry other places on the Gold Coaft, before the Dutch had made the faid conquefts, and had, therefore, as good a right and title as themfelves to a free trade at all places on the fame coaft, not in their actual poffeffion or occupation; yet, from this time forward, the Dutch Weft-India company alwayskept one or two cruizers on the faid coaft, whofe chief bufinefs was to watch all fuch Englifh Mips as came to trade there, and to follow them from place to place, and either to lie between them and the Chore, and intercept their trade with the natives, or to frighten them off the coaft, and ruin their voyages, or to feize and carry them to St George del Mina ; and this not only when fuch thips were found trading on the Gold Coaft, and at places near any of the faid Dutch company's forts and fettlements, but alifo at piaces feveral hundreds of miles difrant from them.
King Charles II. foon after his reftoration, being made acquainted with the dangerous and precarious flate and condition to which the trade of his fubjects in thofe parts was reduced; and having likewife received many complaints touching the interruptions given to, and depredations committed upon, the fhips of this nation, by the Dutch Weft-India company on the coaft of Africa, it became neceflary to confider not only of a proper method for protecting and fecuring the faid trade for the future, but likewife how and in what manner reparation might be obtained for fuch danages and depredations.
For the firf, it being now evident that the fingle and feparate endeavours of private Englifh merchants were by no means fufficient to contend with the united power and intereft of the faid Dutch Weft-India company in thofe parts of the world; and the Englifh having found, by former experience in the Eaft-Indies, what little ftrefs was to be laid on any treaty that might be concluded between the two nations in Europe, for the fecurity of fuch a diftant branch of our trade: the only choice which his majefty had left for maintaining and defending the right of his fubjects to a free and unmolefted trade in Africa, againf the pretenfions and incroachments of fuch a rival, was to incorporate and unite fuch of his own fubjects as hould be willing to engage in the faid trade, into one body, and to give and grant unto them fuch powers, privileges, and encouragements, as the circumftances of the trade at that time required; which was accordingly done by letters patents under the great feal of England, bearing date the 1 oth day of January, 1662 ; and the
faid united body of Englifh merchants was called The Company of Royal Adventurers of England trading into Africa. As to the fecond, his majefty was pleafed to caufe a particular account of the damages complained of to be drawn up, and tranfmitted to his envoy at the Hague, with orders to demand and infilt upon full reparation for the fame. And, for the better protecting of the new company, it was likewife judged necellary to fit out a man of war to the coalt of Africa, under the command of captain Holmes. But neither the one or the other of thefe fteps had the defired effect: for in Holland the ftates ftarted fo many difficulties, and made fuch delays, that no fatisfaction could be obtained for any paft injuries. And as to affairs in Africa, as foon as they had advice that captain Holmes had by affault taken, and poffeffed himelf of a fort near Cape de Verde, belonging to their Weft-India company, they made all imaginable preparations to fit out a fquadron for the coaft of Africa, to retake the faid fort by force of Arms; notwithftanding his majefty affured them, that he had given no commifion or order to captain Holmes for that purpofe, nor did know upon what grounds he had proceeded to that act of hoftility; that he expected him fhortly at home, and that he would then proceed in a very frict examination of his proceedings, and would caule exemplary juftice to be done, as well in redelivering the fort, as in punilhing the perfon, if his carriage and demeanour deferved it. Which having no better fuccefs than the former meffages, in relation to reparation for about Twentiy Shrps taken from his fubjects on the coaft of Guinea: and the Dutch ambalfador telling his majefty in plain terms, That they had given inftructions to the admiral of their fleet, that was then going for Guinea, to take their fort near Cape Verde by force, and to take any Englifh which had had a hand in doing them injury: his majefty then found himfelf under a necefity of fitting out a ftrong fquadron likewife for the fame parts, under the command of prince Rupert; which the States no fooner had notice of, but they altered their language, and, for avoiding the effution of Chriftian blood, as they pretended, propofed that the fleets on either fide might be detained within the barbours, and not fuffered to put to fea; and that fome expedients might be found out by treaty for each other's fatisfaction: but, in the mean time that they were making this plaufible offer, they fent fecret orders to their fleet in the Streights, under the command of De Ruyter, to make all poffible hafte to Guinea, to execute all thofe inAtructions which they had given to their fleet at home; which orders he executed forigoroully, that he not only retook the fort near Cape de Verde, and feized and confifcated all the Englifh fhips that he could meet with, but alfo, by the affiftance of the natives of one of the adjacent countries, who had been bribed by the Dutch general at Elmina for that purpofe, he attacked and took the Englifh fort at Cormantine, and put a Dutch garrifon into the fame.
Some time before this the parliament had made an enquiry into the obfructions and incroachments of the Hollanders upon our trade, and into the loffes which our merchants had fuftained thereby; which they found to amount to the value of 7 or $8 \mathrm{co}, 000 \mathrm{l}$, and thereupon both houfes came to this refolution, April 21, 1664, That the wrongs, difhonours, and indignities done to his majefty, by the fubjects of the United Provinces by invading his rights in India, Africa, and elfewhere: and the damages, affronts, and injuries done by them to our merchants, were the greateft obftructions of cur foreign trade: and that the fame be humbly and fpeedily prefented to his majefty, and that he be moft humbly moved to take fome fpeedy and effectual courfe for redrefs thereof, and all other of the like nature, and for prevention of the like in future; and that, in profecution thereof, they would, with their lives and fortunes, affift his majefty againft all oppofitions whatfoever.
This refolution being prefented to his majefty the 27 th of April 1664, he was thereupon pleafed to renew his intances with the States for the fatisfaction fo long demanded, with more vigour than ever; infomuch, that in an audience of the 25th of June following, he told the Dutch ambaffador, That it was not to be fuffered that the Dutch Weft-India company, only by the means of a few forts, and three or four lbips, hould pretend to render the coafts of Africa inaccefible to all others, by blocking up the havens againit their commerce, and keeping them off, and driving them from every place. But the States turned a deaf ear to all thefe remonftrances: the lofes of our merchants amounted to too great a fum to be eafily reimburfed; and the advantages of the trade to Africa, could they have wholly engroffed and fecured the fame to themfelves, were too great and important to be willingly parted with. And therefore, inftead of fhewing any inclination to give the requifite fatisfaction on either of thofe heads, they chofe to renew their attacks upon the Englifh in Afica with more refolution than ever, under the conduct of their admiral De Ruyter, as aforefaid. And on the other hand, the king having tried all other methods in vain, found himfelf obliged, upon the firf notice of De Ruyter's proceedings in Africa, to comply with the defires of his parliament, and with the voice of his people; and accordingly, on the 22d day of February 1664-5, his ma-
jefty declared war in form againft the States General of the United Provinces.
Nothing is more evident, than that the chief view of the Dutch at this time, and for fome years before, had been exclude the Englifh entirely from the trade to Africa, and to engrofs the fame wholly to themfelves. And it is equally apparent, that the value which they then fet upon this trad was fuch, that, rather than confent that the Englih fhould enjoy a fhare thereof peaceably and quietly, they made it their choice to ftand all the bazards, and to bear all the in conveniencies of a war with England. But, however, it io fell out, that the event did not anfwer their expectations for, in fpite of all the efforts of the Dutch, the Englifh company kept their footing in Africa; and,-by the third article of the treaty of peace concluded at Breda, anno 1667 , it was mutually agreed, that each party thould keep and enjoy all fuch lands, iflands, towns, fortreffes, places, and colonies, as during that war, or before, the one had by force of arme or otherwife, taken from the other. And, in virtue of this article, the Duch Weft-India company kept poffeffion of the Englifh fort at Cormantine, and the Royal African company kept poffeffion of the caftle at Cabo Corfo, which they had (by the affiltance of Capt. Holmes) retaken from the Dutch before the war began, and to which they had an undoubred right.
But the fipulations in this treaty, in favour of the faid Englifh company, were by no means fufficient to enable them to bear up againft the many difficulties they had to ftruggle with. They had found it extremely difficult to perfuade people to come in at firf, and be concerned with them in fo precarious and hazardous a trade, by which means their flock was much too fmall for fuch an undertaking: they had been obliged to be at great charges in Africa, and they had met with many fevere loffes by captures, and otherwife at fea, during the war; and, for want of a fufficient ftock to begin with, they had contracted a large debt at home: and, under thefe circumftances, they were fo far from being able to carry on and improve their trade, or to make any new acquifitions, that it was with the utmoft difficulty that they could keep and preferve thofe places which they had fill in their poffeffion.
For extricating themfelves, therefore, out of thefe and the like difficulties, as well as for opening a way for others to undertake the care, management, and improvement of fo valuable a trade with more fuccefs, they confented and agreed, for and in confideration of a certain fum of money, which was to be paid unto them by another new company then intended to be eftablifhed, to furrender their charter to the crown, and to allign and transfer all their eftate, property, interefts, and effects in Africa, and elfewhere, unto the faid new company.
His majefty likewife approving of this, as the moft propet expedient, as well for doing juftice to the company of royal adventurers, as for the better preferving and enlarging the trade to Africa, was thereupon pleafed to accept of the faid furrender; and by his letters patents under the great feal of England, bearing date the 27 th day of September, 1672 , to eftablifh and incorporate the fate royal African company of England, and to give and grant unto them, all and fingular, the lands, countries, havens, roads, rivers, and other places in Africa, from the port of Sally in South Barbary, to the Cape of Good Hope, for and during the term of one thoufand years; with the fole, intire, and only trade and traffic into and from the faid countries and places, with probibition to all others his fubjects, to vifit or frequent the fame, without the licence and confent of the faid company: and alfo, with fuch other powers and privileges, as were then judged proper and neceffary, for enabling and encouraging them to undertake fo hazardous and chargeable a work.
Hereupon the new company provided proper bocks to take fubfrriptions in, and kept them open for near twelve months, and invited all his majefty's fubjects that pleafed to become adventurers with them, and to fubfcribe for what fums they thought fit, towards raifing a fufficient joint fock for retrieving the faid trade out of the dangerous and precarious condition it was then in , and for the better fecuring and enlarging the fame for the future. But fo backward and fearful were merchants and others at this time to be concerned therein, that all the fublcriptions they could get from all parts of the kingdom, amounted only to the fum of 111,1001 .
With this fock, however, fmall as it was, this company applied themfelves with all poffible vigour, to purfue the ends of their eftablifhment. At this' time the Dutch Weft India company were in poffeffion of the ftrong fortrefs of St George del Mina; and of the Englifh fort at Cormantine, then called fort Amfterdam; and they had likewife another, called Fort St Anthony at Axim; another, called Fort St Sebaftian, on the river Chamah; a fifth, called Fort Naffau, at a place called Mouree, about two leagues to the letward of Cape Coaft; a fixth, called Creveceur, at Acra; and a feventh, called Fort Conraadburg, at St Jago, within can-non-hhot of St George del Mina; all on the Gold Coaft, and lying very commodious to fuccour and affift one another in any cafe of need: the Danes were in poffeffion of one fmall but impregnable fort (afterwards called Fort Royal) on the

## E N G

top of a hill, within gun-fhot of Cape Coaft; and of another at Acra, to the eaftward of the Dutch fort at the fame place. The elector of Brandenburg (the late king of Pruffia) had one good fort, at Cape Three Points, and two fmaller ones at fome little diftance to the eaftward of the fame : and the new Englifh company were in poffeffion of one fmall fort at Cabo Corfo, that being the only fort on this coaft, which the Dutch had not difpoffeffed the former company of during the late war.
The firft thing, therefore, which this company found moft neceffary to be done, was to endeavour, by all lawful ways and means, to ftrengthen themfelves, as much as poffible on this coaft, as other nations, and efpecially the Dutch, had done before them. And, for this purpofe, they enlarged Cape Coaft Caftle, and made it fix times larger, ftronger, and more commodious than before: they built one fort at Acra, another at Dick's-cove, a third at Winnebah, a fourth at Succundee, a fifth at Commenda, and rebuilt a fixth at Anamaboe, all on the Gold Coalt, and three of them within mufket-fhot of Dutch forts; and they likewife purchafed Frederickiburg, now Fort Royal, of the Danes, without which Cape Coaft Cafte could not be fafe: and they alfo built another fort from the ground at Wydah, for the fecurity of the negro trade at that place.
And, although in the profecution of thefe works, the faid company met with all poffible oppoftion from the Dutch Weft-India company on the Gold Coaft, which often broke out into open hoffilities, and many times ended not without bloodhed on both fides; and the company were put to an incredible charge and expence in purchafing the confent and affitance of the natives, for making fuch fettlements, as well as for tranfporting, from time to time, the neceffary fupplies of foldiers, artificers, provifions, and all other neceffaries and materials from England for fuch buildings; all which were rendered ftill more difficult, chargeable and hazardous, by the long war which enfued with France : yet, neverthelefs, the faid company never ceafed their care and endeavours, 'till they bad completely finifhed their faid undertakings, and thereby put the Englifh intereft on this part of the coalt of Africa on an equal foot with the Dutch, and much fuperior to that of any other nation whatfoever. All which they effected during the fhort time that they were permitted to enjoy the privileges granted them by their charter.
On the north coaft, where it was natural to think the company fhould have met with lefs oppofition, and more fuccefs, matters did not fucceed altogether to their wifhes. The Dutch Weft-India company were in poffefion of the forts of Arguin and Goree ; the French Senegal company (which was eftablithed anno 1673) were in poffeffion of a fmall fort on an inland within the bar, in the river Senegal; and the royal African company of England had one fmall fort in the river Gambia, and another fettlement in the river Sierraleon. And in this fituation affairs continued 'till about the year 1677; and the companies of each nation traded freely to all places on the open coaft (not in the actual poffeffion of any of the others) from Cape Blanco to Cape Mount.
In the years 1677 and 1678 , the French took the Dutch forts on the iflands of Arguin and Goree, which foon after were yielded to France by the treaty of Nimeguen: and, in the year 1685, the French king, judging the grant to the Senegal company, which extended from Cape Blanco to the Cape of Good Hope, too large, reftrained that company to that part of the coaft which extends from Cape Blanco to the river Sierraleon; and erected another company, which was called the Guinea Company, and gave and granted unto them the fole trade to and from all that part of the coaft which extends from the river Sierraleon to the Cape of Good Hope. And from this time the French trade to Africa was managed and carried on by thofe two diffind companies.
The laft of thefe companies made no great progrefs in their trade 'till about the year 1702, that the French king gave them the contrad, which he had made with Spain, for introducing a certain number of negroes yearly into the Spanifh Weft-Indies. But that contract being afterwards transferred to Great Britain, by the treaty of Utrecht, the faid company was foon after abolifhed, and the trade to Africa, within their limits, laid open to all the fubjects of France; in which condition it continued from the year 1716 to 1720 , and no longer.
As for the Senegal company, they were fcarcely warm in their new poffeffons, before they fet up a claim to all that part of the coaft which extends from Cape Blanco to the river Gambia, comprehending above 500 miles in length. In the year 1681, they would fain have hindered the royal African company of England's hips from trading all along that coaft: but, not being as yet in a condition to conteft that point with them, they dropped their pretenfions againft them for that time. In the years 1683,1684 , and 1685 , they feized and confficated feveral fhips belonging to the Portugueze, Dutch, and Pruffians. And, in the laft of thofe years, they renewed their claim againft the royal African company: from which time they continued to give them frequent interruptions in their trade, 'till at laft a war broke out between the two nations; which, together with the difficulties the company fell
under at home foon after, put it in a manner wholly out of their power to affert arid maintain their own and their country's rights againft fuch incroachments, as otherwife they might and would undoubtedly have done.

REMARK。
Does not this, as well as the general condect of France too wards Great Britain, fhew the neceflity under which we lay, to annex the river Senegal to the crown of this kingdom, as we have done by the Definitive Treaty of 1763 ?
The loffes and damages which the company fuftained, during the courfe of the war, were more and greater than can be calily imagined. But one of the chiefeft was the lofs of thẹir fort in the river Gambia, anno 1695, which, by the negligence of their fervants, making no defence, was taken and plundcred by a fquadron of French men of war, and all the fortifications demolifhed and razed to the ground. And, as a farther addition to this misfortune, when the company came to take poffeffion thereof again, after the peace, they found the French fettied in the river, and claiming an equal fhare of the trade thereof with themfelves.
In the fear 1697, the parliament, having taken the trade to Africa into their confideration, thought fit, as a further means of inlarging and improving the fame, to lay the trade open to all his majefty's fubjects for 13 years, and from thence to the end of the next feffion of parliament; and, in regard that the royal African company of England had been at the charge of building and maintdining a confiderable number of forts and caftles on the faid coaft, which the parliament likewife judged neceffary to be kept up and maintained in future, for the prefervation and better carrying on the faid trade, they were further pleafed to impofe a duty of 10 per cent. ad valorem, on all goods and merchandize exported to Africa; during the faid term, to be anfwered and paid to the faid company for enabling them to keep and maintain their faid forts and caftles.
This act continued in force from the 24 th of June, 1698 , to the 24 th of June, 1712 ; in which time the charges which the company were at in maintaining their faid forts and caftes, amounted, at a medium, to about $20,000 \mathrm{l}$. per ann. and, in 14 years, to $280,000 \mathrm{l}$. in the whole. The Duty which the feparate traders paid in the fame time, amounted, in the whole, to $73,785 \mathrm{l}$. $10 \mathrm{~s} .6 \mathrm{~d} . \frac{1}{2}$, and no more; and 10 pre cent. upon the company's own exports for the fame time, amounted to the fum of $36,387 \mathrm{l}$. 13 s . I d. $\frac{2}{2}$. From whence it appears, that, even while that act continued in force, the total of the to per cent. duty came very much fhort of half the charges and expences which the company were at in keeping and maintaning their faid forts and cafles.
Since the expiration of this act, in 1712, to this day, all others his majefty's fubjects have traded as freely and openly to all parts of Africa, as they did or might do under the authority of the faid act; and the faid company did, at their own coft and charge, bear and defray the charges and expences of keeping and maintaining their faid forts and caftes, which, at a very moderate computation, has been reprefented, by the faid late royal African company, to amount to above $250,000 \mathrm{l}$. By which means, and by the extravagant rife in the prices of negroes at Anamaboe, and other places on the coaft, and by the decay of the gold trade which enfued thereupon, the proprietors of the company were, for many years paft, obliged either to raife fundry great fums of money for keeping and maintaining their faid forts and caftles, without receiving any profit from the trade in return for the fame; or to run the rifque not only of lofing all the money which they had from time to time raifed and expended for fupporting their own property, but of becoming acceffaries to the intire lofs of the trade to Africa, and confequently, by relinquilhing and abandoning their faid forts and caftles, to be feized and poffeffed by fuch foreign nations as were long watching for an opportunity to get them into their hands.
This being the cale with regard to the company, and it being the fenfe of the nation, that the trade to Africa fhould continue free and open to all his majefty's fubjects, the only thing that remained to be confidered was, whether, or no, forts and caftles were neceflary to be kept up and maintained for the prefervation of the faid trade to this kingdom? And, if they were neceflary to be kept up and maintained for that purpofe, who, upon the foot of an open trade, ought in juftice and reafon to bear and defray the charges of them?
That it is abfolutely neceflary that forts and caftles thould be kept up and maintained in Africa, was urged from thefe confiderations.
For 250 years paft, it bas been the conftant policy of all fuch European nations as have been fo fortunate as to make any new difcoveries, and to gain any eftablifhed power and authority in remote and barbarous countries, to build and maintain forts and caftles; and, in virtue of fuch poffeffions, to claim a right to whole kingdoms, and to tracts of land of a valt extent, and to exclude all other nations from trading in, to, or from them.
By this method the Portugueze long enjoyed the whole trade to Africa and to the Eaft-Indies.

## E N G

By the like meafures the Spaniards, for many years, claimed and engroffed almoft the whole continent of America, and moft of the iflands adjacent thereto, to themfelves.
By this method the Hollanders have rendered themfelves abfolute mafters of all thofe inlands in the Eaft which produce cinnamon, cloves, nutmegs, and mace, and from them fupply the whole world with thofe commodities, by fuch quantities, and at fuch prices, as they think fit.
By this method the fame people, for fome time before and after the year 1660, attempted to gain the whole and intire poffeffion of the moft valuable parts of the coaft of Africa, and to exclude this nation from any part, thare, or intereft therein; and thereby brought upon themfelves a war with this kingdom in 1664.
Before the royal African company had built a fufficient number of forts and caftles on the Gold Coaft, the Dutch interrupted our trade, and feized and confifcated our thips on the faid coaft, and within it's dependencies ; which, as they pretend, extend from Cape Palmas to Cape Lopez, and contains a tract of land of above 1200 miles. Since the royal African company have built and maintained a fufficient number of forts and caftles on the Gold Coalt, the faid company, and all other Britifh fhips and veffels, have traded freely to the faid coaft, and to all places dependent thereon, without the leaft interruption or moleftation from the Dutch, or any other nation.
Before the French got poffeffion of the forts in the river Senegal, and on the illands of Arguin and Goree, on the north coaft, the Englifh traded freely and openly to all places on the faid coaft, without any let or moleftation. Since the French have been in poffeffion of thofe forts, they have not only taken upon themfelves to exclude the Britifh nation from thofe parts, and do now actually take and confifcate all fuch Britifh fhips and veffels as venture to go thither; but they come freely and uninterruptedly to trade within our African company's rights and privileges; and traffic under the very nofe of our forts and cannon.
In thofe places where the royal African company have forts, as in the river Gambia, the Britifh feparate traders trade freely with the natives. In thofe places where other nations have forts and caftles, and the royal African company have none, there all Britifh private traders are either abfolutely denied the liberty of trading, or their fhips are actually taken and conffated.
For the better fupporting of forts and caftles in Africa, his moft Chriftian majefty has not only given and granted unto the India company of Paris the whole and fole trade of that coaft, from Cape Blanco to the Cape of Good Hope, but likewife allows them the following great and extraordinary privileges and encouragements, viz. an exemption from all duties for merchandize exported to Africa, and to the French inlands and colonies in America : an exemption from half the cuftoms of all goods and mercbandizes imported from Africa; and from half the cuftoms on all fugars, and other merchandize, imported from the French iflands and colonies in America, being the produce of the fale of negroes there : an exemption from all tolls of any kind upon their goods and merchandize in France: a bounty of 13 livres, to be paid out of his own revenue, for every negro carried to the French inlands and colonies in America: and, laftly, a bounty of 20 livres for every eight ounces of gold duft which they fhall bring into France.
I. An exemption from all local and provincial duties of any kind, upon their goods and merchandize in France, as alfo from all duties for merchandize exported to Africa, wherewith to purchafe negroes, \&c. which, confidering the number of fhips they employ in this trade, cannot be computed at near fo fimall a fum as 150,0001 . fterling per ann. nor the whole exemption at fo fmall a rate as 3 per cent. thereon: fay only
II. An exemption from half the cuftoms on all fugars, and other merchandize imported from the French iflands and colonies in America, being the produce of the fale of negroes there : the amount of which will appear by the following moderate computation, viz.
Suppofe 15000 negroes only (whereas good judges reckon them not lefs than double that number) are imported into the French fugar iflands annually; and that 10000 of that number only fhould be fold for fugar to be returned to France, at the rate of 40 hundred weight of fugar only per head,
The duty on importation of fugar into France is 3 per cent. on about two-thirds of the value; which is at the rate of 2 per cent. There is alfo an inland duty of

Carried over 1. 3000
three livres, or 2 s. 9 d. ferling per hundred weight.
Suppofe the price of fuch fugars is com. puted at no more than 25 s. per hundred, which, upon 10,000 negroes, makes 400,000 weight of fugar: and this, at I per cent. being one half of the duty upon importation, amounts to

1. 5000

400,000 hundred weight of fugar, at is. $4 \mathrm{~d} . \frac{1}{2}$ per hundred, being half of the above inland duty of three livres, or 2 s . 9 d . fterling per hundred weight, is

1. 27,500
III. A bounty of 10 livres, or 9 s . 2 d . fterling, to be paid out of the king's res venue, for every negro carried to the French fugar iflands and colonies in America; which, upon the faid 15,000 negroes only, amounts to
2. 6,875 negroes only, amounts to
IV. A bounty of 9.2 d . for every ounce of gold duft that hall be imported from Africa into France. Suppofe only 5000 ounces of gold imported from Africa into France, which is quite trifling and inconfiderable, when we recollect how rich their fips in the Guinea trade are in gold, as appeared by fome captures made in the late war, is
3. 2,296

The total is per ann. in fterling money
N. B. The exemption of duties on what the other 5000 negroes produce in coffee, indigo, cotton, cocoa, \&c. is left out in this account, left any exaggeration chould be made: and in every other article things are extremely under-rated; which 'every one at all acquainted with the extent of the French trade to Africa and America need not be apprized of.

Nothing can be a more modeft computation than thisis. But, if to thofe extraordinary encouragements we tack that of exclufive powers and immunities beffdes, it muft certainly give the French a great weight of influence and authority in their negroe-trade in Africa.
Yet their encouragements do not terminate here only : there is one fingle article alone, which feems to be fo well calculated to make the moft of the labour of negroes, and encourage their planters, that it may not, perhaps, be efteemed inferior in it's good confequences to all the reft, confidered togetber : and that is, the maxim of giving their moft induftrious planters credit out of the public ftock, or the king's treafury, for negroes, and other planting materials, The management of this part of, their encouragement, it feems, lies between the comptroller-general of the finances and the company : they are, indeed, as prudence directs, cautious of thers plantere to whom they give fuch credit; but, if they are perfons of known probity and induftry, and make proper application, they need want no credit for negroes, or any other planting materials *.

* The French king alfo grants lands in his plantations, gratis, to poor induftrious people, fent thither from France, and gives them other encouragements to go over and fettle there; and moreover lends money to his American fubjects in cafe of hurricanes, which deftroy their plantations, and other unavoidable misfortunes.
Meafures of this nature, it may be worth obfervation, have been the conftant practice of France, when they have aimed at carrying any capital point in trade. It was by thus giving credit to traders out of the toyal treafury, that the celebrated Monfieur Colbert firt enabled France to rival England in the woollen manufactory; for, after he had brought the French to furnifh their own people, and cloath their own nobility and gentry, and even the king himfelf, with their own woollen manufactures, and exclude the Englifh manufactures from France by a law, they turned their thoughts upon fupplanting us at foreign markets. To which end that great fatefman caufed credit to be given to exporters, even, 'till the returns of their woollen goods came from abroad. This was done particularly to the Turky merchants at Marfeilles, who had credit for the woollen manufactures of Nifmes, 'till the return of their fhips from Smyrna and Scanderoon: by which wife encouragement the Marfeillians firf fupplanted the Englifh in the Levant trade; in which, we are too fenfible, they have increafed ever fince.

In like manner, the States-General of the United Provinces, for the better enabling their Weft-India company to keep and maintain their forts and caftles in Africa, have not only given and granted unto the faid company the whole and fole trade of Africa, from the Tropic of Cancer to the Cape of Good Hope, but do likewife pay and allow unto them the following extraordinary aids and incomes, viz. from the feveral provinces of North Holland, Zeland, and Groningen, a fubfidy of 38,000 florins per annum: a duty of 3 per cent. on all goods and merchandize exported to, or imported from,

## E N G

any place between Newfoundiand and Cape Florida: a duty of 2 per cent. on all goods and merchandize exported to, or imported from, any place on the continent of America from Cape Florida to the river Oroonoko, including Curaffo ; both Cape Fhe computed to amount to 100,000 florins per anwhich : a duty of five guilders per laft on all thips trading to Cuba, Hifpaniola, Jamaica, Porto Rico, and other Caribbee Illands, or to any place from the river Oroonoko to the Streights of Magellan and La Maire, and from thence to the Streights of Anian, computed at 3000 florins per annum: one third part of the net income of the colony at Surinam, computed at 10,000 florins per annum: the clear profits of the colony of Iracape, computed at 20,000 florins per annum : and all the profits arifing from the captures and licences which they are authorized to make upon, or to grant to, fuch Portugueze fhips as come upon the coaft from Lifon or Brazil for negroes, valued at 100,000 florins per annum, making in the whole 271,600 florins, or about 25,0001 . fterling per annum, communibus annis.
Now as it is evident, from the fuccinct hiftory we have given of this trade, that the recovery of it out of the dangerous and precarious ftate and condition to which it was reduced about the year 1660, is wholly and folely owing to the care which the company took, and to the charge and expence which they were at for many years together, in building and maintaining a proper number of forts and caftles on the coaft of Africa; it is apparent, that the fafety and prefervation of our trade to Africa, againft the pretenfions and incroachments of fuch nations as are ftrongly fettled in thofe parts, depends abfolutely upon our keeping up and maintaining the raid company's forts and caftles on the fame coaft in a defenfible condition.
This point, therefore, being thus eftablifhed upon the ftrongeft evidence that matters of this nature are capable of, the next thing that remains to be confidered is, Since forts and caftles on the coaft of Africa are abfolutely neceffary for the prefervation of that trade to this kingdom, and fince it has been free and open to all his majefty's fubjects, it was but juft and equitable that the public fhould have fupported thofe forts and rettlements.
While the company enjoyed the whole and fole trade to Africa, they purchafed, built, and maintained their faid forts and caftles at their own fole coft and charge, and thereby acquired an undoubted right and property in and to them. The charges of keeping them from the year $167^{2}$ to the year 1698 , was not lefs, according to the company's accounts, than 15,000 l. per ann. which, in 26 years, amounts to the fum of 390,0001 . The charges for the next 14 years, viz. from 1698 to 1712, at 20,0001 . per annum, deducting the amount of the duty which the feparate traders paid in the fame time, came to about 206,0001 . And the charges which the company were at on the fameaccount, for the fucceeding 17 years, reckoning but 15,000 l. per annum, comes to 255,0001 . which three fums make together the fum of 851,0001 . And fo much, at leaft, the company reprefented that they had expended in keeping and maintaining their faid forts and caftles fince the commencement of their charter; and that, exclufive of many other neceffary articles of expence, which might be brought in, if they had a mind to fwell the account. Now, although the company did willingly and chearfully bear the expence of the firft period, becaufe nothing had been done by public authority in all that time to deprive them of any of their privileges; although they continued to keep and fupport their faid forts and callles for the next fucceeding 14 years, in hopes that the duty of 10 per cent. upon their own and the feparate traders exports to Africa would have fully defrayed that charge, as the parliament undoubtedly intended it fhould; and although the company, for the prefervation of their own property, as well as for the protection of the trade, continued to kecp up and maintain their forts and caftles for 17 years after, at their own fole coft and charge; whereby they expended in the fervice of their country above 250,0001 , yet, while the trade to Africa remained free and open to all others his majefty's fubjects, there was no reafon why the company Thould be obliged to keep and maintain the faid forts and caftes at their own fole coft and charge.
Accordingly, in the year $173^{\circ}$, the company petitioned the parliament, and they obtained 10,000 l. to enable them to fupport their forts and fettiements; which fum was annually continued to them, except two or three years interruption, 'till the laft change made in the fate of this company, by an act of parlament made in the year 1751 , intitled,
An act for the application of a fum of money therein mentioned, granted to his majefty, for making compenfation and fatisfaction to the royal African company of England, for their charter, lands, forts, cafles, flaves, military ftores, and all other their effects whatfoever; and to veft the lands,
forts, caftles, flaves; and military flores, and all other their effects, in the company of merchants trading to Africa, and for other purpofes in the act mentioned.
By this act the faid company were divefted of their charter; and, after the 10th of April, 1752, cealed to be a corporation, and their forts, caftles, and all other their poffeffions in Africa, are vefted in the new company of merchants trading to Africa; and, in confequence of the trade to Africa being by virtue of the faid act, and that alfo of the 23 d of Geo. III, made free and open to all his majefty's fubjects, the parlia ment allow the faid company 10,000 l. per annum for the fupport of the forts and caftles for the public fervice.

## REM $\dot{A} R K$

Thus bave we given a brief and faithful hiftory of the beginning and end of the late African corporation; upon which I thall take leave to make the following queries:

1. Whether fo extenfive and populous a country as Africa is, will not admit of a far more extenfive and profitable trade to Great-Britain than it yet ever bas done?
2. Whether the people of this country, notwithftanding their colour, are not capable of being civilized, as well as thofe of many other have been; and whether the primitive inhabitants of all countries, fo far as we have been able to trace them, were not once as favage and inhumanized as the negroes of Africa; and whether the antient Britons themfelves, of this our own ccuntry, were not once upon a level with the Africans?
3. Whether, therefore, there is not a probability that thofe people might, in time, by proper managernent exercifed by the Europeans, become as wife, as induftrious, as ingenious, and as humane, as the people of any other country has done?
4. Whether their rational faculties are not, in the general, equal to thofe of any other of the human fpecies; and whether they are not, from experience, as capable of mechanical and manufactural arts and trades as even the bulk of the Europeans?
5. Whether it would not be more to the intereft of all the European nations concerned in the trade to Africa, rather to endeavour to cultivate a friendly, humane, and civilized commerce with thofe people, into the very center of their extended country, than to content themfelves only with fkimming a trifling portion of trade upon the fea-coaft of Africa. See our article East-India Company.
6. Whether the greateft hindrance and obftruction to the Europeans cultivating a bumane and Chriftian-like commerce with thofe populous countries, has not wholly proceeded from that unjuft, inhumane, and unchriftain-like traffic called the Slave Trade, which is carried on by the Europeans?
7. Whether this trade, and this only, was not the primary caufe, and ftill continues to be the chief caufe, of thofe eternal and inceffant broils, quarrels, and animofities, which fubfift between the negro princes and chiefs; and, confequentIy, of thofe eternal wars which fubfift among them, and which they are induced to carry on, in order to make prifoners of one another, for the fake of the flave trade ?
8. Whether, if trade was carried on with them for a feries of years, as it has been with other countries that have not been lefs barbarous, and the Europeans gave no encouragement whatever to the flave-trade, thofe cruel wars among the Blacks would not ceafe, and a fair and honourable commerce in time take place throughout the whole country?
9. Whether the example of the Dutch in the Eaft-Indies, who have civilized innumerable of the natives, and brought them to the European way of cloathing, \&c. does not give reafonable hopes, that thefe fuggeftions are not vifionary, but founded on experience; as well as on humane and Chrif-tian-like principles?
10. Whether commerce in general has not proved the great means of gradually civilizing all nations, even the moft favage and brutal; and why not the Africans?.
II. Whether the territories of thofe European nations that are interefted in the colonies and plantations in America, are not populous enough, or may not be rendered fo, by proper encouragement given to intermarriages amongft them, and to the breed of founding infants, to fupply their refpective colonies with labourers, in the place of negro flaves?
11. Whether the Britifh dominions in general have not at prefent an extent of territory fufficient to increafe and multiply their inhabitants; and whether it is not their own fault that they do not increafe them fufficiently to fupply their colonies and plantations with Whites intead of Blacks.
How the trade to the moft interior parts of Africa may be extended for the benefit of Great-Britain, fee particularly the article East-India Company.

## REMARKS.

From this view of the forts and fettlements belonging to Great-Britain on the coaft of Africa, and now vefted in the company of merchants trading thereto, a judgment may be made of our ftrength there, when compared with that of other European nations, who have forts and fettlements upon the fame coaft.
That our readers may have all defirable fatisfaction upon this head, we fhall now give an account of the forts and fettlements in Africa, which belong to other European powers who have a thare in this commerce.

1. The northermoft fettlement is that at Arguin, on the Gum-Coaft, in the latitude of 20 degrees north, formerly belonging to the king of Prufia, for which, in the late queen's time, on occation of an overture made by the faid king to difpofe of that and another fmall fort at Cape Three Points, which is afterwards mentioned, to this nation, he demanded for them 200,000 crowns; but they have fince been purchafed of him by the Dutch, for 30,0001 . fterling. And afterwards taken by the French in 1721, and now in their pofleffion.
2. The river Senegal, in the latitude of 16 degrees north, where the French have feveral very confiderable forts, fettlements, and plantations, for a great many miles up the river. 3. The Ifland Goree, a little fouthward of Cape de Verde where the French are likewife fettled, and have a very ftrong caftie.
3. Cutcheo and Biffeo, two Portugueze fettlements, lying in 12 degrees north latitude.
4. Ancobra, the firft European factory on the Gold-Coalf, belonging to the Dutch Weft-India company.
5. Axim, about one league to the eaftward of Ancobra, a fort belonging to the Dutch Weft-India company.
6. Frederickßurg, at Cape Three Points, about five leagues to the eaftward of Axim, a fort formerly belonging to the king of Pruffia; lately fold by him, together with that at Arguin, before-mentioned, to the Dutch, for 30,000 I. afterwards taken and demolifhed by the natives, and lately recovered out of their hands, at the expence of a long and chargeable war, and now refettled by the Dutch Weft-India company.
7. Butteroe, a fort belonging to the Dutch Weft-India company, about eleven leagues eaftward of Cape Three Points. 9. Tacquerado, a factory-houfe belonging to the Dutch Weft-India company, about three leagues eaftward of Butteroe.
8. Succundee, a fort belonging to the Dutch Weft-India company, about three leagues eaftward of Tacquerado.
9. Shumah, a fort belonging to the Dutch Weft-India company, about four leagues to the eaftward of Succunde.
10. Commenda, a fort belonging to the faid company, about five leagues ealtward of Shumah, and within gun-ibot of an Englifh fort.
11. St George del Mina, the principal fort belonging to the Dutch Weft-India company, on the Gold-Coaft, about four leagues eaftward of Commenda.
12. St Jago, a fort on the top of a hill, within gun-fhot of St George del Mina, belonging to the fame company:
13. Mourea, a fort belonging to the Dutch Weft-India company, about four leagues to the eaftward of St George del Mina.
14. Cormantine, a fort built by the Englif, and, in the wat in 1665, taken by the Dutch, and now belonging to the

Dutch Weft-India company, about five leagues to the eaftward of Mourea.
17. Apong, a fort belonging to the Dutch Weft-India company, about ten leagues to the eaftward of Cormantine.
18. Borracoe, a fort belonging to the Dutch Weft-India company, about eleven leagues to the eaftward of Apong.
19. Acra, a fort belonging to the king of Denmark about two miles to the eaftward of the Dutch fort.
20. St Loango St Paul's, in the latitude of 10 degrees fouth, where the Portugueze have feveral forts and fettlements, and a large city ; and thereby carry on a very great and advantageous inland trade for fome hundreds of miles.
By this account of the forts and fettlements of other nations, we cannot doubt a moment of the high value they fet upon the trade to Africa, and with what care, indultry, and expence they have laboured to gain and fecure to themfelves a fhare therein.
See our new and correct Map of the coaft of Africa, from Cape Blanco, latitude 20 degrees 40 minutes north, to the coaft of Angola, latitude in degrees fouth, where the fettle ments belonging to the feveral European powers are delineated according to their fituation, with the flags of the refpective countries to which they belong. Upon the fame fheet alfo, we have given a feparate correct map of the Gold-Coast upon a larger feale. And, in our large map of the coaft of Africa, we reprefent the great encroachments that the French, when this work was firft publifhed, made on our trade to Africa in general, and upon the GumCoast in particular.

## Remarks.

But by the Definitive Treaty of 1763, article IX. " His moft chriftian majefty cedes, in full right, and quaran" ties to the king of Great-Britain, the river Senegal, "s with the Forts and Factories of St Lewis, Podor, " and Galam ; and with all the rights and dependencies " of the faid river Senegal."
By means of this acquifition in Africa, added to our other antient fettlements upon that coaft Great-Britain at prefent has it in her power more than ever fhe had, to prevent any future encroachments of the French, or any other flate upon the commerce of Africa; and more efpecially fo, if that whole commerce fhould be put upon a more ftable, permanent, and extenfive footing, in order to enlarge and extend the Inland-Trade of that part of the world, by a propofition for that purpofe, or fome thing fimilar thereto, which I have fuggefted under the article East-India Company. See East-India Company. For by the laft peace, a better foundation is laid to carry Designs of that kind into execution, with far lefs obftruction than when we fuffered the French to monopolize the gum trade, and the whole commerce of the river Senegal to themfelves, and ufurp the right to trade for the beft negroes to Annamaboe, and other places on the African coaft, under the very nofe of our beft Britifh forts and caftles there.-And this that rival nation was fuffered to do for above thefe 3 a years paft with impunity, to the eternal ignominy of this kingdom, and thofe who had the adminiftration of public affairs, during that long period of time. - Yet thefe men dare at prefent to dub themfelves friends to the Britifh nation, when they moft thamefully neglected the care and protection of it's trade in general, as appears throughout this work. By their difregard to the Britifh African trade in particular, they fuffered France to ftock all their fugar colonies, with the very beft of negroes to be had on the coaft, by encroachments on our rights of trade there, whereby they raifed their Sugar Colonies to the pitch they were before the definitive treaty, and by that means fupplanted us almoft in the whole fugar trade of Europe, to the unfpeakable emolument of France, and proportionate detriment of thefe kingdoms. See America for the Definitive Treaty of 1763.
ENGRAFFING. In order to purfue the art of engraffing to the beft advantage, our garden ought to be ftored with focks of all forts; that is, with fuch as are pomiferous, or applebearing ; pruniferous, or plumb-bearing; bacciferous, or berrybearing; nuciferous, or nut-bearing; glandiferous, or mattbearing; and filiquiferous, or cod-bearing; becaufe we may fometimes meet withthat which will only beincreafed by graffing; and, as moft trees fall under one or other of thefe claffes, fo our nurferies fhould be provided with ftocks of thefe feveral forts, that we may graff the apple-bearing upon the applebearing, and the pruniferous upon the pruniferous, and fo on.
The wildings, which are engraffed on, are called the ftock, and the twig, or fhoot, which we are to engraff upon the flock, is called the cyon, or graff; every cyon or graff, when it is rightly difpofed on the flock, according to art, will take root in the ftock, and retain the virtues of it's mother plant.
Some fort of plants will more readily join by eneying, or inoculating, than by graffing; and there are others which will not take by either of thefe ways, but by inarching only: again, there are fome which will only join by approaching ; all which
we fhall conflder, obferving, by the way, that nature gives us large liberties in graffing fuch, as that we may graff apples upon pears, or pears upon apples, and both thefe upon the common white thorn, upon which, alfo we may graff medlars, the lazeoli and fervices; and upon the grafts we may alfo graff the quince: all thefe may be made to grow upon one tree by whip-graffing, or by cleft-graffing, or ftockgraffing, or by inoculating, eneying, or budding.
So the pruniferous fruits, fuch as peaches, nectarines, apricots, cherries of all forts, and plumbs of all forts, may be budded upon plumbs, or upon one another ; and what feems extraordinary, is, that the lauro-cerafus, which is our common laurel and ever-green, may be inoculated upon the cherry and the plumb, and be made a companion for all thofe of the pruniferous race. By this we may obferve, that thefe graffs, or buds, are fo many plants of different kinds, which grow upon one.plant ; which is like one certain fort of foil, wherein we find growing many plants of different forts; but we muft obferve, that one kind will profper better than another. The firft fort of graffing we fhall mention, is that which is called whip-graffing, or rind grafing $:$ this is performed by paring off part of the bark on one fide of the ftock, either after we have cut off the head of the flock, or elfe while the head remains on the flock, for it is done both ways: if we cut off the head of the fock, then the bark we take off mult leave the wood bare about an inch and half from the place where the head is cut off downwards towards the root, and as wide as the cyon which we defign to join to it; then we muft, with our knife, fit the ftock down from a little below the place where the head is cut off, guiding it with the grain of the wood, 'till we have made a tongue on the fide of the ftock where the bark is pared off, about an inch long; this being done, we are next to pare off the bark from one fide of the cyon, and then with our knife make a tongue in the wood of the cyon, of fuch a length as may fit exactly with that in the fock; which, when we have placed together, fo that the barks of both the cyon and ftock join, we muff tie them faft with bafs, and cover all the wounded part with fine loam, well mixed with cow-dung ; or elfe we may cover the wounded part with the following mixture, viz.
To four ounces of bees-wax add as much tallow, and when thefe are melted together, add about an ounce and a half of rofin ; which muft be ufed, when it is blood-warm with a foft brufh; then we need not tie the cyon and the ftock together, for thefe coverings are only defigned to keep the air and the wet from the wounded part'till they are united; which they foon will be, if the tongues of the fock and the cyon are well wedged into one another.
When this fort of graffing is ufed without cutting off the head of the ftock, the bark is then taken from the flock in any fmooth part of a fhoot, i. e. between the buds, and, fitting the cyon to it as before with tongues, the wounded part is covered with fome of the aforementioned graffing-wax. This laft operation may be done when the fap is in it's highert fluences; but the firft muft be done juft before the buds begin to fhoot.
Cleft-graffing, or ftock-graffing, is performed by cutting off the head of the ftock, and then with the knife-flitting the ftock downwards an inch or two, in proportion to the bignefs of it, and of the cyon to be put into it ; then the bottom part of the cyon is cut wedge-wife, of the fame width with the flit, and fo place the cyon in the opening we have made in the flock, that the bark of the flock and the cyon both join or match with one another.
If the flock happens to be very large, as fometimes it is in this kind of graffing, fuch as an old tree fawed off, which may meafure, perhaps, three feet in the girt, then we muft be forced to open the places where we are to fix our graffs, with chiffels, and keep them fo open with wedges 'till the graffs are fixed to your mind: in fuch ftocks, three or four graffs may be placed, but two are fufficient, if you could be fure they would all take.
In Worcefterthire it is common enough to graff apples this way, with cyons, which meafure about five inches in the girt, and they profper very well ; but it muft be obferved, that the cyons may be larger if they are of trues that have tender wood, than if they are of a hard wood. When this is done, lay on fome of the graffing wax, as before directed, fo as to cover all the wounded parts of the flock and cyon. In this cafe, where the ftock is large, there is vegetable matter enough in it to feed the cyons to good advantage; fo that the third year they will produce extraordinary large fruits, though, before the old head was cut from it, the fruit was hardly bigger than hazle nuts. Here is another example of a tree growing upon a tree; and, as the cleft-graffing is practicable upon the oldeft trees, fo it is to be done upon plants which are not above three months old from the feed. The method is, when orange-trees are raifed from their feed, that, as foon as you find they have got a flalk about three quarters of an inch above the ear-leaves, you cut off the top, and, making ncifion crofs that ftalk, bear your knife downwards towfing a the part where the ear-leaves join with it, and then chuing a
tender fhoot of a bearing tree, that will match with the fock, tender fhoot of a bearing tree, that will match with the fock,
you cut the bottom of it in the manner of a wedge, and place

## E N G

ft as before obferved, fo that the barks may join, and then apply fome of the graffing-wax warm, with a fine painting brufh. This operation may be performed all the fummer long.
The fureft way of graffing is that of inarching, or inlaying the young floots of one tree into another; for here, if the part which acts as a cyon does not happen to join with the ftock, it may fill remain on the tree. To perform this, you muft have a collection of flocks in pots, that, when you have any particular tree which you have a mind to increafe, you may bring the ftock to it; and then, cutting off the head of the ftock, you chufe out fuch a fhoot of the valuable tree, as may, with the moft eafe, be brought down to the fock; then both thefe muft be ordered with tongues, as in the whipgraffing, only you muft leave that part which is to act as a cyon, to join with the tree in fuch a manner, that it may be well fed with the juices of the tree: to do which, you fhould cut the tongue of the graff half way only through the fhoot. Being thus ordered, you are to tie the two joining parts very clofe, and cover them with a mixture of loam and cow-dung, taking care to fecure the inlaid branch from flying from the flock, which fometimes it will do, if it is not well fecured by ftrings and fticks: for though this is a work to be done in the fummer, when the plants have their fap in the greateft fluency, yet the mildef fummer is not without it's forms. Some plants, it hould be oblerved, muft remain thus joined 'till the fecond year, before they are cut from the bearing, or the defired plant; efpecially thofe whofe enarched fhoots are of a more hardy or woody nature; but, where you can inarch green hoots, fuch as thofe of oranges or lemons, if you perform this work in May, you may cut them off in Auguf, if you find they have taken hold of the ftocks.
When you have cut out plants fom the mother-tree, you muft fet them immediately in fome place of fhelter, where the winds may not get at them, otherwife the new heads, which are tenderly joined, will be fubject to break from the flocks; or, if the focks be growing in the natural ground, then, when you cut the young inarch from the tree, you mult be careful to guard them well with ftakes.

- The art of graffing in the cleft confifts, fays Agricola, in taking a fecond graff, and placing it in the cut of a branch or ftock of a young tree. This manner is generally known; yet there are many gardeners who, out of twenty graffs, have eighteen fail. They will fay, perhaps, they have an unlucky hand; but I fay rather they have an unfkilful hand, which he experienced to his coft. But at length, fays he, I have found out one that never fails. He cuts off the head of the wild fock very ihort, or very near the earth, and takes, for that purpore, a cyon that has fhot out well that year, and, after baving carefully fmoothed the furface of the trunk, then, with a pruning-knife, he makes a gafh from north to fouth, and cuts the graff juft in the joint, whether it be a branch of two or three years old, or a long thoot of the fame year, and makes the intail on each fide near the bud.
It is beft to cut the graff on both fides, as we cut a pen, a little flanting, taking great care not to do the leaft hurt to the pith; and obferving not to make the cut too far in; for the deeper the wound in the tree is, the more diffcult it is to cure. It is frrange that fome people make great wounds in trees, the effect ever thewing them to be in the wrong. We muft likewife take caie in fixing the graff in the wild ftock, that the bark of the one anfwers exactly to the bark of the other, for fo the fap rifes the better into the graff. All this being done, we muft cover the whole with graffing-wax, which is generally known; but it's compofition is different. My gardener took half a pound of common pitch, a quarter of a pound of wax, and half an ounce of the oil of almonds: thefe he melted together over a fire, and, when the compofition was well mixed, he made long rolls of it, to keep for ufe; but, if it was made in fpring or autumn, he put a moderate quantity of terpentine to it. After having covered the cleft with' it, he put a double paper, or linnen, over the top of the tree, tying it gently with bafs, efpecially on fone fruit-trees; and, to hinder the too great preflure, he put on each fide of the cleft a narrow flip of the bark.
There is a method of graffing two or three times upon one another, which is a good way, and is called reiterated graffing, or the double or treble incifion. This operation is thus performed: they firtt graff a good cyon on a wild ftock; this they cut away to the half or a third part, and fix another graff on it, of a better kind, and on that another; for, the oftener a tree is ingraffed, the finer fruit it produces: in this manner mufcat pears have been cultivated of an exquifite flavour.
I took from my orchard a ftock graffed with the pound-pear, whereon I graffed a good fummer bon chretien; when this branch had fhot, I graffed a cyon of the bergamot on it, which I alfo cut, and graffed upon it a cyon of the mufcat pear, which has given me great fatisfaction. I ufed alfo to graff in the fplint or intail, which is propereft for large, wild, and unfruitful trees, that have a flock of a foot or two diameter; this is done in the manner following: cut off the head of the tree, leaving the trunk only half a man's height from the
root ; then fmooth the top with a knife; after which, divide the ftock into fix, feven, or as many more parts as you defign graffs; which, when you have marked out, take a good knife, and with a mallet frike it on the marked place, through the bark into the wood; then withdraw your knife, and make an incifion againft it on the other fide, fo as to refemble an angle; then take a graff an inch thick, and cut it alfo at the bottom on both fides angle-wife; then fix it in the great fock, fo as the wood may fit with the wood, and the bark with the bark. You may make an intail over it, fo as to hold them together: when this is done, you muft take care to cement the top, and tie it, as it ought, with bafs: This is a diverting, though troublefome operation; but, whent all the graffs take, they will pay very well for your trouble. There is alfo another manner of graffing, which is called ingraffing of branches. This is a very certain and profitable operation, and is beft practifed on large well-grown trees; and even upon the old, with great fatisfaction. In this cafe; you muft not diveft the tree of all it's branches at once, but only lop off the half, which is enough at firft; for, if we take away all, we find that the volatile fap, which circulates vigoroully towards the top, will choak the tree by it's fuperabundance. When the branches are well prepared for the purpofe, we make ufe of graffs of three or four years old, and take care to fupport them with ftakes, to prevent any inconveniency from the wind, or otherwife: you will have perhaps, the fame year, or the fecond or third, fuch a quantity of fruit as the youngeft and foundeft trees would hardly produce.
When I had fufficiently examined this manner, a curiofity feized me of trying another method. In the month of Fe bruary I took up feveral wild flocks, which were frefh and found, and, after lopping off their heads, I ingraffed them in the ordinary manner; then I put them in the cellar in pots of fand, and took a requifite care of them; they begun then to revive and grow, and to fhoot out gradually. In April I brought them by degrees into the air, and then they begun to bloom apace, and in May they were in full flower.
Being defirous to proceed ftill further, I looked into feveral treatifes of gardening; and, among other methods for the improvement of trees, I found one which is called graffing in the bark. In this operation you do not cut the ftock as in the ordinary manner; but only thruft the graff between the wood and the bark: this is moft proper for kernel-fruits. I take a found graff of one, two, or three years old, and at the bottom, near a bud, I make an incifion with a graffingknife, but not fo deep as to hurt the pith; then I cut the reft of the wood, pointing towards the bottom, a knot's length, but only on one fide, in fuch a manner as not to injure the inner green rind. Whether the aperture between the wood and the bark fhould be made on the north or eaft fide, is what I will not determine at prefent; yet I have found this a very good way too, and have made an incifion in the bark near the top, as long as the graff required: then opening the incifion witha little ivory graffing-knife, with a good edge, I there thruft in the prepared graff, fo as that the place where it's bark was peeled off was turned outwards, and joined to the bark of the ftock. This place muft be covered with graffingwax, and the whole bound up with the bafs. Neverthelefs, you muft put on both fides, between the ligature, a bit of loofe bark, that it may bind the tighter; for, if they do not prefs clofely one upon the other, there grows a kind of callus or excrefcence, which not only deforms the whole tree, but is a great prejudice to its growth.
Though this method gave me a great deal of pleafure, yet fill I was not fatisfied, but was earneft to difcover fome other better ways of improvement. To this end I vifited, from time to time, the fine country-feats at Kumpfmuhl, a little village a quarter of a league from Ratibon, where we fometimes find very extraordinary gardeners. Among others, I found one occupied in inarching a lemon-tree, which he did in the following manner : he placed a wild lemon-tree in a por, near a fruitful one, towards which he inclined it a little; then he chofe a found branch of the bearing tree, and bowed it towards the wild one, to fee whether it would match well with it as to height and thicknefs. Having found all right to his mind, he cut the wild ftock floping juft under the crown, and fmoothed it well with his graffing-knife; then he flit the flock, as the cuftom is in common graffing, and placed the crooked branch only at the entrance of the gap, fo as the barks bound clofely one upon another, and the branch ftood upright. Before this, he had cut the branch a little on both fides (where the infertion was to be made) from the bark to the wood; afterwards he bound up the graffed place as in the ordinary way, and, fetting up a flick near it, he tied the fock to it, that it might not be hurt by the Thaking of the wind. As foon as the branch began to fhoot a-new (which happens commonly in lefs than fix months) and that he found the graff to be well joined, he cut it from the bearing tree, and left the young graff to feed only upon the wild flock. This is a very pretty way, and is infallible, inafmuch as the wild ftock contributes jointly with the bearing tree towards an abundant nutrition, 'till the graff has taken.

## E N G

The fame gardener took an occafion, while I was with him, of fpeaking of a multiplication by union, which he thus performed. He placed a wild orange fock near a fruitful tree, and, after having picked out a found branch of each, and cut a little of the bark and wood from each of them, about two or three inches in length, in the place where they were to embrace, or be joined together, he clofed them ftrietly one upon the other, each remaining upon it's tree, and then plaifered them with graffing-wax, and tied them. In this manner the branches grew one within another; and, when he faw they were pertectly united, he cut the branch of the bearing tree, fo that it remained joined with the wild one, which, by this means was improved. It muft be obferved, during this union, that, to prevent the agitation of the wind, we muft tie the trees to fmall focks. The fame thing may be done by fruit-trees, when they are near each other. The operation, which we may call embracing, is very like this, and is performed as follow: we put the branches crofs-wife, one over the other, and then make an incifion in each branch, in proportion to the thicknefs of the branches; then we plaffer them over with graffing-wax, and bind them as before defcribed. Though thefe two different methods cannot be ufed with refpect to all trees, becaule they often are at too great a diftance one from the other, and the branches cannot be eafily brought together, yet thefe are inventions not to be defpifed.'

## 

As there is no topic of more general utility and emolument than the cultivation of lands, and the improvement of the vegetable tribe; fo nothing is more deferviug of our affiduous fludy and contemplation, than what tends to this end. And, although many of our own countrymen, as well as foreigners, have obliged the world with fome ufeful and curious performances upon this fubject, yet we do not apprehend it is exhaufted; we are rather inclined to believe, that there are far more difcoveries behind than have hitherto been made into the nature and caufe of vegetation.
Nothing is more certain than that great improvements have been made by art in agriculture in general, within this century. Is not our own country, in particular, a glaring inftance of the truth hereof, from the innumerable examples of exotics that have been here raifed by practical philofopby? Have we little more to boaft of in regard to our natural productions than the crab? There feems; therefore, lefs to be owing to the climate, than to foil and philofophical management; and, if fo, it does not feem at all improbable, but that almoft whatever grows in, one climate, may be produced in another ; and this not under cover only, and by the means of floves, but generally in the open air; for if heat, and all it's efficacious qualities, can be fo adminiftered by art and philofophy to the roots of vegetables, why may not the fpices of Afia be as well produced in Great-Britain as in the Indies? The Holy Scriptures inform us, that he who was efteemed the wifeft of men, was fo far from difregarding a knowlege of the vegetable kingdom, that he was well acquainted with the fame, even from the byffop upon the wall to the cedar of Le banon. Thefe are only occalional bints, which may be improved upon hereafter, to the benefit of individuals, as well as the whole kingdom.
ENGRAVING, the art of cutting metals and precious fones, and reprefenting thereon whatever device the artift pleafes, in order to ftrike off great numbers of the impreffion from fuch engraving, in a fhort time and at a fmall price.
Among the French, in particular, this art is divided into feveral branches, according to the matters whereon it is practifed, and the manner of execution. The firf way of engraving, on wood, is diftinguihed at prefent, with us, by cutting in wood; that on metals, with aquafortis, is named etching; that by the knife, burnifher, or fcraper, mezzotinto; that on ftones, carving or ftone-cutting; and that performed with the graver on metals, or precious fones, fignifies that branch of engraving which we fhall, at prefent attend to.
The principles whereon this art is grounded, are the fame with thofe of painting, viz. Design [fee that article] which an engraver ought to make his peculiar ftudy; for, without that, he will neither be able to imitate the performances of the greateft mafters in painting, nor to defign any thing exquifite of his own: his workmanfhip may, indeed, be delicately engraved, but will ever want that juftnefs, that accuracy, and that fpirit, which are the characterifics of a maftery performance.
In imitating the paintings of eminent mafters, the engraver hould ftudiounly conform bimfelf to the manner, tafte, and beauty of the copy, in order to preferve that elegance of character which diftinguilhes the ftile of one mafter from that of another. And, to the end that he may become familiar with the fuperior and affecting delicacies of thofe who have excelled, he fhould devote himfelf to the paintings of Raphael, Caracci, Daminichino, Pouffin, and others, and, at firft, more particularly to the forming of the outlines of their figures.
To do which to any tolerable perfection, it is neceffary that an engraver fhould underftand perfpective and architecture. The former will enable him with eafe to throw backwards,
by the natural degradations of frong and faint, the figures and other objects of the picture, or defign he would execute the latter will capacitate him to preferve the due proportion of it's orders.
To execute well in this art, as well as in others, every material therein ufed fhould be duly regarded. Thus the copper which the beft workmen chufe, is the red, that being efteemed the tougheft. Before the engraver begins to trace any thing on thefe plates, he cannot be too careful of their polith, and that his graver ought to be of the-purefl fteel, well tempered for the occafion, and never blunt.
There are in this, as in other manual arts, fome who, at the firt glance of their performances, thew an extraordinary facility, others great labour, in their work manihip. Of the former are Goltzius, Muler, Lucas, Kilian, and fome others, who feem to difplay more dexterity in the command of their infruments than juftrefs and proportion in their outlines, the expreffion or effect of light and thade. The elaborate pieces too frequently abound with infinite ftrokes and points, and thefe often confounded together, without any fignificant order.
In conducting the ftrokes of the graver, care ought to be taken that they always fow freely and naturally, and that odd fantaftical winding are avoided, which proceed rather from caprice than judgment and neceffity: yet the conttary extreme is to be guarded againft, which young artifts are apt to run into, who, when they would be thought to engrave finely, make none but fraight ftrokes; whereas the graver muft be conducted according to the various rifings and cavities of the mufcles, which depends upon a knowlege in anatoriy, as well as defign.
In the reprefentation of fculpture, the work fhould never be made dark, becaufe as fatues, \& c. are commonly made of white marble, or ftone, the colour reflecting on all fides does not produce fuch dark fhades as other matters.
In regard to drapery of every kind, if the diverfity of ftuffs can be reprefented by engraving, it generally adds to the beauty of the piece. As on thefe occafions there is a neceffity of croffing the ftrokes, it Chould be oblerved, that the fecond, fhould be finer than the firft, and the third than the fecond, it making the work appear more foft and mellow. Stuffs that have a luftre fhould be ftruck with fronger and fraighter ftrokes than others; for thefe being commonly of gilk, produce flat and broken folds, which being exprefled by one or two ftrokes, according to the lightnefs or darknefs of their colours, fhould have finer ones between them. Velvet and pluth are expreffed in the like manner, by fine flrokes between others, with this difference: the firft ftrokes fhould be much Atronger than for ftuffs, and the finer ones between them hould hold the fame proportion as thofe in ftuffsdo. Metals, as veffels of gold and copper, or armour of polifhed fteel, are to be engraved alfo with fine ftrokes, between frong ones, it being the oppofition of light and Chade that occafions the luffre.
With refpect to architecture, perfpective fhews us, that the ftrokes which form receding objects tend to the point of view: if a piece to be engraved contains any entire columns, it will be proper to reprefent them, as far as can poffibly be done, by perpendicular lines; for, in crofling them according to their roundnefs, thofe ftrokes which are near their capitals, being oppofed to thofe which are near their bafis, produce a dilagreeable effect, unlefs fuppofed to be at a great diffance, which renders the object near parallel.
For landkips. The practifers of etching may form the outlines by it, particularly of the leaves of trees. . This is fometimes more expeditious than engraving, and does as well, provided it be done with difcretion, not too ftrong, and that care be taken in finifhing it well with the graver, that the etching be imperceptible, becaufe it has not the foftnefs of engraving.
In reprefenting of fteep objects, the firft ftrokes thould be frequently interrupted and broken off, the fecond fraight, cutting the others with acute angles, and accompanied with long points. If you would reprefent rocks, the fecond frokes Chould not form the angles fo acute as for ocher things, flints and pebbles fhining commonly more than other matters. The objects receding towards the horizon fhould be touched very lightly, and charged with little fhade, though the mafs fhould appear dark, as it may happen from fome fhades, fuppofed to proceed from clouds intercepting the rays of the fun; inafmuch as thefe fhades, however ftrong they may appear, are always faint, compared to thofe which are on the figures and other bodies in the forepart of the piece, on account of the diftance and air that intervenes between the objects.
All waters are either calm, or agitated by waves, or by cafcades and rapid currents, like rivers, \&c.
Calms are reprefented by ftraight ftrokes, running parallel with the borizon, with finer ones between them, which are to be omitted in fome places, to make their fhining reflection which proceeds from the water. By the fame fecond ftrokes, alfo, made more or lefs ftrong, according as the nature of things require, and fometimes by perpendicular ones, the forms of objects, either reflected on the furface of the water, or advanced at a diffance on it's banks, are reprefented: ob

## E NG

## E NG

ferving that they are to be reprefented ftrongly or faintly; in proportion as they approach to, or recede from, the fore part of the piece: and, if trees are to be reprefented, it fliould be with outlines, particularly if in the fore-part of the piece, and the water clear, they being naturally fo reprefented by the reflection of the water. Thofe which are agitated, as are the waves of the fea, are reprefented by frokes, bending accordiug to the agitation of the watef, with finer ones between them, cutting them with very acute angles. Thofe which fall with rapidity from rocks or precipices, are to be expreffed by firtt ftrokes, according to the nature of their fall, with finer ones between them, leaving the lights formed by the beams of the fun, falling direstly on them, very bright, and the more f , as they approach the fore-patt of the plece. When the clouds appear thick and agitated, the graver fhould be turned about, according to their form and agitation; and, if they prodece dark flades, which require double frokes, the fecond fhould cut the firf with more acute angles than in figures; becaufe it gives a certain tranfparency very proper for thofe bodies, which are only vapours ; but then the firft trokes thould be ftronger than the fecond. Flat clouds, lofing themfelves infenfibly with the $\mathbb{I k y}$, muft be farmed by ftrokes parallel with the herizon, waved a little, according as they appear more or leff thick; and, if it be neceffiry to ufe fecond Atrakes, they 价ould cut the firf with anglea more acute than the former, and the extrentities of them fhould be done with fo light a hand, as not to form any out-line. The calm ferene fley fhould be expreffed by parallel ftrokes, very fraight, without any winding.
Though all the parts of a piece of engtaving tray be executed actording to the rules of aft, yef, unlefs there be a general proportion and harmony diffufed throughout the whole, it will not appear beautiful. Therefore,
The principal objects of a piece fhould be wholly fketched out before any parts of thern are finifhed. For example: if it is an hiftorical piece, cohtaining groupes of figures, the principal hould be fo perfectly defigned, that their expreffion hould be as vifibly as if they were only intended for 1ketches: fo:, if the engraver waits to perfect the defigning as he finithes them, he will frequently miftake, and fometimes not be able to recover himfelf, without defacing the whole, and beginning again ; which many will not do, for fear of fpuiling the neatnefs of their engraving, wherein they have exerted their utmof abilities, imagining that the whole merit of an engraver confilts in that; which is the reafon we fee abundance of plates finely engraved, but without expreflion. An engraver fhould fludioufly endeavour to join correctnefs and jultnefs of defign, with the neatnefs and elegancy of engraving: and not negled the former, and place his whole merit in the engaging allurements of the latter, which frequently render his performance mifipid and lifelefs. Nor Gould the other extreme be run into, which would make the work faint; it fould, on the contrary, be ftrong and bold; for the efficacy of a print does not confift in it's darknefs but in the juft degradation of light and fhade, which fhould be more or lefs energic; according as it approximates to, or recedes from the fight.
On examining the works of eminent mafters, we fhall find in the general, that they are not dark, unlefs they become fo by length of time; they imitate nature, which is not fo, particularly in fleda, except in night-pieces; where the objects are reprefented as enlightened by lamps or torches. Small works require finer and more delicate engraving than large ones ; in croffing, the frokes thould form more acute angles, that the engraving may not appear ftiff and heavy, notwithfanding the figares are fmall. If the work requires to be highly finilhed, it ought not, for that reafon, to be ove-laboured, but fo artfully executed, as to appear done with facility and expedition, although it lias coft extraordinary labour and application.
When the figures are large and bold, they require ftrong, firm, and bold frokes, and thofe to be continued and never broken off, but when the mufcles and folds make it abfolutely neceflary ; aad thefe, as well as the froaller miniature pleces, thould appear to the beholder as performed unelaborately and expertly.
If the piece requires crofing the flrokes (as is the care patticularlp in the flades, to exprefo well the energy and harmony of a painting) they fhould be croffed the contrafy way to that they were fketched, and the angles formed by the feconid ftrokes thould be more acute: this contributes greatly to the neatnefs and fpirit of a print.
There fhould never be much too much engraving on the lights, but they thould be gently paffed over, and with few ftrokes; they fhould be unconfned, and the half Chadings of the attif which he defires to finith to perfection, fould be very lively and bright $;$ for, if they are very dark, they obftruct the effect intended, as it will be difficult to find a darknefs in the fhades fufficient to give them life and roundnefs: and, if the engraving is from a defign taken from a painting; the lights and fhades ought to be rather larger than the original; for, though it be finifhed ever fo highly, it is never fo exaetly done as the painting; which for that reafon requires more labour on account of it's colours.

In regard to the imitation of colours, as etching, or engraving with aqua fortis, is at prefent fo much in vogue, and never carried to for much perfection as at prefent, as ftrong expreffion of paffions, as fine adjuftment of light and fhade, as well as a beautiful manner of engravitg, are, by means of this art united, when executed by the hand of a mafterly artift, who is capable of expreffing himfelf with equal vivacity and judgment in the different parts of his profeffion. The etching bere intended, is that which capnot be fine without the aid of the graver, which gives it all the luftre and perfection defired. This the ancients have not thewn in their pefformances of this kind, they not fo well underfanding the various graces proper for painting and engraving as the modenns. For, by the means of aqua fortis, a performance may, by a fkilful aitift, be carfied to an extraordinary degree of perfection; and that with a celerity to the graver, little inferior to that of the pencil: it ertables the profeflor, almoft inflantly, to expref 'she productions of his genitis with all it's vivacity; and with far more freedom than can be done without is.
There ate three ordinary objections made by fome fort of critics againft engraving, viz. (I.) That 'tis eafy to diltinguifh thofe prints that have been engraved by the painters themielves, or by other painters from their works. (2.) That an engraver by profefion can never acquire the ftile of a painter; fo that they pretend to know by a print, whether it was engraved by a painter, or an engraver by profeffion. (3.) That the modern engravers cannet poffibly exprefs the works of the ancient painters, fo well as thofe have done who were contemporaries with them; by reafon, fay they, every engraver executes according to the gufto of the time be lived $i n$, and therefore 'tis impoffible for a miodern attift to exprefs the works of Raphael, in thé fame maniner as Mark Antonio, Auguftine of Venice, Sylvefter of Ravehna, \&xc. have done. With refpect to the firft of thefe it has been obferved, that there are fome prints engraved by Simon Cantarini from Guido and Louis Cafacici, which are preferable to many that were inconteftably engraved by Guido bitifelf. Befides, as thefe objectors do not agreè among themfelves with regard to many of Guido's prints, fome * affirming, and others denying, that they were engraved by Guido himefelf; this diverfity of fentiments does not thew that any great regard is to be paid to thefe opitions.

* Among others, a print from Louis Caracci, engraved by Simon Cantarini, reprefenting a man poffefled by an evil firiti, which mott of thefe critics believe, was engraved by Guido himfelf.
In atifwer to the fecond objection it is faid, There are many pieces engraved by Gerard Audran, which, if thefe gentlemen bad feen without knowing they were done by him, they would rather have judged them the productions of a painter than an engraver: for they are touctied with fo much elegance and fagacity, that 'tis much to be queftioned whether alty painter could have excelled them. For conviction heereof, we need only view the judges in the print of the martyrdom of St Laurence, from Le Sieur; the Pyirhus faved from, Puuffiri ; the Rape of Truth, from the fame; the Paffage of the Red Sea, from Vetdier, \&c.
The faimous Bernard Picart chofe feveral defigns which had never been engraved; and, having privately engraved them, and printed fome copies on dirty paper, he fecretly difperfed thert; and had the fatisfaction to experience, that not one of thofe critics ever fufpected they were Hot prints which had been erigraved and printed in Italy. Ore of thofe pieces was from Pouffin, and only iketched as with a pen, which many took for defign ; 'another was a finall Holy Vitgin, in an oval, from Catlo Maratti, which had been engraved before at Paris, almoft as large as the life, by his father Stephen Pitart. Thofe who had never feen the large print, thought the friall the work of one of Guido's difciples, for Guido himfelf and thofe who had feen it, took the frall one for an original, engraved by Carlo Maratti. There was alfo a print of Rebecea, which they did thim the honour to afcribe to him, both for the invention and èrgraving. There were alfo three other prints, the one a Jefuit, amother a St Jetom, and another a Holy Virgin on the clouds, which fome intagined were done by Guido himfelf, and others by fome of his dificiples.
With regird to the third opinion, thefe gentlemen do not feem to obiferve, that they confound the manner of engraving, which they are ufed to fee in thofe old prints, with the dile of the painter; fo that when they fee a print of one of Raphael's compofitions, with all the outlifies traced with an equal black froke, and with a fine and faint engraving, without degradation of light and thade, or roundnels of the figures, as all the engtavings of that time are, they approve it as if it was Raphael's manner, which is abfolutely falfe. To prove which, thofe who have opportunity, need only compare Mark Antonio's, or any other engraver's prints of that age, with the original defign, and they will find they have been far from imitating them: they have taken the liberty even to make grounds to fome defigns that had none, and finifh fome parts according to their own fancy, that were only lightly touched.

## E N G

E NG

It is not intended by any thing here faid, to leffen the efteem that is due to the merit of thefe artifts, they having not only preferved to pofterity the idea of many excellent performances, the originals whereof being either loft, or not to be feen but by few, but as being the primitive inventors of engraving. All that perfection is not to be expected from the firf inventors of arts, that they may be expected to acquire in a feries of years among nations that cultivate them; and, indeed, it feems an unaccountable weaknefs to fet fo fuperlative a value upon their works, and to difefteem, in proportion, the more admirable performances of the moderns. Highly reafonable it is, that the prints of former ages mould bear a better price than the modern ones; not by reafon they are better, but by reafon they are very fcarce, and only to be met with in the collections of perions of diftinction, who are the fuperior clas of connoiffeurs. And, if one of our fine modern prints was as rare and as ancient as thofe of the firft mafters, it not only would, but ought to bear a better price than thofe of their anceftors.
The ancient print of Raphael's Holy family, taken from a painting in the French king's cabinet, is greatly inferior to that engraved by Mr Edelink ; yet there are virtuofi who have the ancient one, that difdain to look on Mr Edelink's; and this, perhaps, only from the vanity of efteeming nought but what is antique, left the fuperlative excellence of the moderns fhould depreciate the value of their poffeffions.
Some gentlemen, of a jult difcernment and true tafte, will fcarce believe that prejudice will carry people fuch lengths, but'tis too general and notorious to be gainfaid; and fome have thought, that the dealers in prints themfelves have been the firft propagaters of thefe ridiculous prejudices; for few lovers of prints, being competent judges of them, the generality rely too much on the dictation and profound judgment of their printfellers, who, from mercenary views only, endeavour art fully to excite a contempt for the modern performances, becaufe they are eafily to be had, and the ancients fearce. Mr Picart gives us an inftance of this. One Pefne, an excellent defiguer on paper, but a very indifferent engraver, engraved the Seven facraments of Pouffin, each on two plates. Afte a number of them bad been worked off and difperfed, Ge rard Audran having bought the plates, with Pefne's defigns of them, retouched them and made them incomparably better than before. Though Audran's merit is fo well known yet a print-dealer at Paris had the confidence, offering to fell one of the firlt copies, to fay, Thefe are fine, they are not thofe that were retouched by Audran. Thus thefe people prepoffefs the minds of unexperienced young gentlemen, who propagate the fame; and when once they have embraced an error, they think it difhonourable to retract.
Nor is this any recent prejudice. In the time of Henry Golzius, there were fome critics who laboured under it ; and were not lefs mortified, when impofed on by that great mafter's imitation of the ftiles of Albert Durer, Lucas of Leyden, \&c. than thofe were, whom Bernard Picart deceived in the following manner.-To undeceive fome, who were prepoffeffed with an opinion, that the modern engravers could not reprefent the works of Raphael fo well as thofe did who were his contemporaries, I was obliged, fays he, to engrave fome prints, which had been engraved by fome of tho ancient mafters, as by Mark Antonio, and fome others but the difficulty was to come at the originals, from whence they hid engraved them: at length he met with two, and, after having examined and compared them with the prints which had been formerly performed from them, he thought himfelf capable of improving them.
The firf was a Venus, who touches one of the arrows of Cupid, and thews that the feels the effects of the touch at her heart : this Picart engraved like the defign, without ground, or any addition.- The fecond was a bacchanal, which had been formerly engraved by Auguftine of Venice. The defign from whence be performed, is certainly the fame from which Augutine engraved; the ftrokes are the fame, the fize the fame, and the out-lines of the figures are the fame, but the mufcles within are quite different. The fatyrs have crowns of ivy on their heads, which in the old print are like cuttings or flips: the antient engraver bas made fmall white leaves, all of the fame form, ranged on a ground equally dark; whereas in the defign they are leaves carelefly difpofed, which form a mafs of light on a light. There is alfo a child, the back part of the hair of whofe head refembles little iron hooks ranged round it. The hair of the heads, Ikin and beard, are extremely fiff, and equally black, which are not fo in the defign, where the maffes of light and fhade are obferved.-The belly of Silenus, in the old print, has wrinkles as dark as poffible, and between his paps are fome things that look like laces to tie them together, which one can make nothing of.-If any one will give himfelf the trouble to examine the whole, part by part, he will find there is not one of them exact, Even without having the original before him, the fpectator need only have a juft idea of the conftruction of the human body to judge, that Raphae could never have acquired the reputation which he fo juitly has, if his works were like thore ancient prints; becaufe he would have flewed himfelf inferior to many painters who
are by far inferior to him. We cannot, therefore, compre hend, from what reafons fome gentlemen would attempt to perfuade us, that this is the true ftile of Raphael; and that it is impoffible to engrave his works at prefent, to that perfec tion which the ancients did. For, fuppofing that a modern engraver is a mafter of the art of engraving, and can give fi gures roundnefs, and a proper degradation of light and hade gures roundnefs, ander a expref a picture or defign, where all thefe are obferved, not only as well, but far better than the ancient engravers, who had neither that freedom of hand which the moderns have, nor underttood how to give their figures that roundnefs, or the degradation of light and fhade
Thefe ancient engravers might, poffibly, underftand defigning on paper very well; but, admitting that, is it not certain they had not that freedom of hand to trace with the graver what they would on copper ? And what hinders the modern engravers from being as good mafters of defign as the ancients ever were?
Thofe gentlemen's prejudices do not only extend to the prints from Raphael's work, they pretend alfo to draw confequences from them, to thofe of Rubens. In this refpect, indeed, they may be more in the right; for the prints of Bolfwert Voftermans, Pontius, and Soutman, are fo well engraved, and have fo much of the painter's ftile in them, that, perhaps, they cannot be excelled; in this Rubens has been more happy than Raphael. But there are many other prints engraved from the works of Rubens by other engravers of that age, which ars very meanly done, and which thofe gentlemen hunt after, while they defpife others engraved by mafters of this age, though infinitely more in the ftile of Rubens. In which they feem to blame, there being engravers now liwing who can copy his works as well as the beft of bis time, and much better than the others.

Remarks.
Engraving feems to be the fame in one refpect with relation to painting, as printing is to the hand-writing, this art being capable of multiplying copies ad infnitum. To make a fine collection of paintings, requires not only a large fortune, but an exquifite judgment to underfand their beauties, and to diftinguifh curiounty copies from originals, in order to prevent deceit and impofition: as the more delicate and coftly pieces of painting are only for perfons of fortune and diftinction, fo prints in general are adapted to all ranks of men, and all conditions; they not only coft much leis than paintings, but the knowlege of them is far more eafily attained, and the impofition no way detrimental to the purchafer as likewife they comprehend all forts of fubjects, they are not lefs ufeful, inftructive, and entertaining.
Prints divert youth, and inform and admonifh them at the fame time, by the lively and efficacious impreffion which they make on their juvenile minds. Nor is inftruction by this art the more readily received by youth in general only, but is more durably impreffed than that conveyed by words without thofe ftriking vifible images of reprefentation. If you would have a child retain any paflage either in facred or profane hiftory, by amufing him with a print of it, and explaining the fubject once to him, he will rarely forget the impreffion, which the different characters that compofe it will make on him. They are likewife no indifferent amufement to perfons of mature years, by recalling many things to their minds, which length of time and variety of tranfactions and readings had obliterated. They are as ufeful as engaging ; they reprefent abfent things to us, as if they were prefent ; they inftantly convey us, without hazard or expence, to the mof diftant countries, and make us as well acquainted with them, and with their peculiar modes, cuftoms, and natural hiftory, as with thofe of our own country : they make us, as it were, contemporaries with the greateft men of all ages, by exhibiting their lively refemblance.
If the ancients had enjoyed this advantage from the primitive ages of the world, we fhould have known, by the means of prints, whatever they had that was curious and eftimable, and deferving to be tranfinitted to pofterity ; the famous temples, and fumptuous edifices of every kind, fo celebrated by hiftorians ; the magnificent works of the Afiatics, Egyptians, Greeks, and Romans; the memorable ftatues, whofe ruins caufe the admiration and regret of connoiffeurs; in fhort, all the rarities and admirable things of antiquity would have been handed down to the remoteft ages, by the help of the art of engraving; whereby we fhould have inherited all their arts and knowlege to a far more certain degree than we poffibly can do by verbal defription, however lively the reprefentation may be drawn.
As the beft things may be abufed, fo may this admirable ar be proftituted to the vileft, moff debauched, and deteftable purpofes; and when it is fo, I fee no reafon why the authors and propagaters thereof fhould not be as liable to punifhment by the laws, as any others who are the promoters and perpetrators of vice and immorality.
On the other hand, no art, perhaps, can have a happier and more influential tendency to the advancement of virtue, reJigion, and induftry: nothing has a more familiar efficacy to form an univerfal good tafte than prints: they may diffufe

## E N G

and communicate a general bias and emulation for the liberal and polite arts; nay, there is fcarce any other art whatfoever, to which this may not be made auxiliary, as moft fubjects may be engraved or etched: as all mathematical and "anatomical figures, fables, emblems, devices, ornaments, animals, plants, flowers, fruits, pourtraits, cabinets, hiftories, \&i. 8 cc .

Of the accomplifhments of the engraver.
As this art is applicable to moft others, $f 0$, to arrive at any excellency therein, it requires a knowlege in divers other arts, as geometry, perfpective, anatomy, drawing, painting, fculpture, and, above all, defigning ; all which require notonly a regular education in every branch, but good fenfe and application, to arrive at any tolerable perfection; and to adapt them to engraving, requires a genius happily turned for the profeffion, in order to become diftinguifhedly eminent therein.
What is ordinarily called genius, is certainly an innate difcenment, and ftrong impulfe and propenfity to excel in any peculiar art: without which nature feems to be unnaturally conftrained; and, when that is the cafe, the performances of fuch perfons will alfo appèar forced, üncouth, and unnatural alfo, like the difpofition of the performer; for as fome poet fays,

## No art without a genius can prevail,

And parts without the help of art will fail ; But both ingredients jointly muft unite,
To make the happy character complete.
Mankind feeing with different eyes, tis no wonder they read nature in different lights; and he that has the moft acute connatural faculties to diferm, and enter into the ineffable beauties, and wonderful appearănces of that divine book, will certainly be more'capable of exhibiting ites infinite vasieties, either by the graver or pencil : the man of a true flrong natúral genius, reads as well as fees thingss in different views from thofe of a contrary ftamp, and therefore $\mathcal{Z}_{\text {an }}$ pourtray the illuftrious' actions of paft ages, with an elegance and fublimity no way inferiorto the defription of the nobleft hiftorian, and fuperlative poets: in a word, the painter and the engraver thould be no way inferior, in point of natural and acquired abilities, to any other profeffion whatfoever; and, without a delicate fancy, and a luxuriant imagination, improved by a good tafle and a correct judgment, all his performances will be lifelefs and infipid, notwithitanding he may be fkilful in every partial preliminary qualificationi*
What a learned ${ }^{*}$ and ingeniouts gentleman fays of painting, may, with equal truth and propriety, be faid of engraving:-- What atedious thing would it be to deferibe by words the view of a country (that from Greenwich-hill for inftançe) and how imperfect an idea mult we receive from hence! Painting fhews the thing immediately and exactly. No words can give you an idea of the face and perfon of one you have never feen; painting does it effectually, with the addition of fo much of bis character as can be known from hence ; and, moreover, in an inftant recalls to your memory, at leaft the moft confiderable particularst of what you have heard concerning him, or occafions that to be told which you have never* heard.
Auguftino Caracci, difcourfing one day of the excellency of the antient fculptare, "was profufe in his praifes of the Laocoon, and obferving his brother Annibale nieither fpoke, nor feemed to take any notice of what he faid, reproached him as not enough efteeming for fupendious a work: he ther went on, defribing every particular in that noble remain of antiquity. Annibale turned himfelf to the wall, and with a piece of charcoal drew the ftatue as exactly as if it had "been before him : the reft of the company were furprized, and Auguftino was filenced; confefling his brother had taken a more effectual way to demonftrate the beauties of that wonderful piece of fculpture : Li poeti dipingono con le parole, lipittorí parlano con lopere, faid Anribate.
When Marius, being driven from Rome by Sylla, was prifoner at Minturnæ, and a foldier was fent to murther him; upon his coming into the room with his fword drawn for
 Máposy dंvoupaiv? Dareft thou, mañ, kill Caius Marius? which fo terrified the ruffian, that he retired without being able to effect what he came about. This ftory, and all that Plutarch has wrote concerning him, gives me not a greater idea of him, than one glance of the eye upon his ftatue that I have feen; 'tis in the noble, collection of antiques, at lord Pomfiet's feat near Towcefter in Northamptophire. The Odyffes cannot give a gfeater idea of Ulyfles, than a drawing I have of Polydore, where he is difcovering himfelf to Peinelope, and Telemachus by bending the bow. And I conceive as highly of St Paul by once walking through the gallery of Raphael at Hampton-Court, as by reading the whole book' of the Acts of the Apoftles, though written by divine infpiration. So that not only painting furnifhes us with ideas, but it carries that matter farther than any other way whatfoever.?

Vol. $\mathrm{I}_{\text {. }}$

## Of the modern engravers, and of the merit of thofe of this king-

 dom in particular.Though we have before fhewn the reafons wherefore the modern engravers' may be prefumed to excel the antients, yet there feems fill fomething mase due to the characters of the prefent artifts, who are our contemporaries. Nothing weighing with us fo much as example; a few inflances may not be ufelefs:
The firft I thall give is that of the engravings of the kings and queens, and of feveral illuftrious perfons, in Mr Rapin's Hiftory of England, by Mr Houbraken, and other the beft mafters. But, the univerfal approbation of this work fufficiently fpeaking for it's merit in this, as well as all other refpeets, it needs no encomium.
Another inftance we have is in the illuffrious perfons of Great-Britain, with their liyes and characters by Thomas Birch, D. D. and Secretary of the Royal Society.
The public was fome time fince obliged to Meff. Knapton for this elegant work, which hath recommended itfelf to all perfons of tafte for the polite arts.
The execution of the plates in general hath been deemed excellent by the beft judges, particularly thofe engraved by that eminent mafter, the ingenious Mr Houbraken; who, for his mafterly ftile, and the delicacy and vivacity of his expreffion, is univerfally admired. Gravelot, Vertue, and other the beft hands in this kingdom, have alfo been employed in the courfe of this undertaking. Thefe engravings are copicd after the original paintings of the beft mafters that Europe hath produced, whofe names are refpectively mentioned at the bottom of the feveral plates, with the names alfo of thofe perfons of diftinction in whofe poffefion the originals are.
Another inftance we have in Albinus's Anatomical Tables, on 4, large capper plates, 15 inches by 22, moft beautifully engraved, and printed on large imperial paper. Thefe allo were publihed by Meff. Krapton.
Thefe plates reprefent various figures of the human fkeleton, and of the feveral orders of the human mufcles; alfo views of the particular parts, whereon all that belongs to the make or habth of each mulcle, is fhewn at large from the body: together with tables of Explanation, and an hiftorical account of the work either in Latin or Englif̣. The whole contains a complete anatomical defreiption of the human fkeleton and mufcles, more accurately and beautifully engraved than ever was done before, in this or any other nation, and the whole performed by our Englifh Engravers, and printed on 80 Theets of large imperial paper.
Supplementary to the foregoing, are contained allo the following, viz.

1. Three whole length anatomical tables, reprefenting the fore view of a man, and two different views of a woman, taken from Bidloo's anatomy, and enlarged to the fame fize as Albìnus's anatomical figures of the bones and mufcles. Each figure printed on a heet of imperial paper, with explanations of the figures, printed on one theet of the fame fize.
2. A complete fyftem of the blood-veffels, taken from Albinus's edition of Euftachius, alfo from Ruyfch, Haller, and "Trew, beautifully engraved, and printed on four theets of - large imperial paper (the fame fize as Albinus's anatomical tables of the bones and mufcles). Together with tables of explicauon, containing the text of Euftachius, Albinus, \&c. tranflated into Englifh, and printed on feven Beets of large imperial paper.
3. A complete fyftem of the nerves, taken from the abovementioned authors, beautifully engraved, and pinted on four fheets of large imperial paper, with tables of explanation. *
Another inftance we will beg leave to give, is in iegard to the maps of North and South America, that are contained in this our Dictionary of Commerce; and' which, although we have defired the fubfcribers acceptance thereof gratis, yet no expence has been féared to have them executed in the beft manner, which has been done by the engravers of this nation; and we will prefume to appeal to the judgment of connoifSeurs, whether they are not performed equal to any thing of the like kind that ever appeared in Europe.
Another fpecimen we would produce to evince that the art of engraving is arrived to as great perfection in England as in any part of the world, is the following pieces, lately publifhed by Mefl. J. and P. Knapton, and Mr Robert Dodlley; which are the firf feries of a fet of prints, entitled English History Delineated; comprehending what may be called the ancient hiftory, being the period from the landing of Julus Cefar to the Conqueft, viz. J. The Landing of Julius Cesar: 2. The Noble Behaviour of Caractacus the Briton, before the Empfror Claudius at Rome. 3. VortigernandRowenas or the fettlement of the Saxons in England. 4. The Conversion of the Saxons to Christianity. 5. Alfred the Great in the Island of Atheleiey, receiving News of a Victory over the Danes. 6. The Norman Conguest; or the battle of Caftings. The drawings, which are 18 inches by 14 , are finihed in a máferly manner by Mr Hayman and Mr Blakey, in Indian
ink;

## E N G

ink; and are engraved with great delicacy and correctnefs, by Ravenet, Grignion, and Scotin : being intended to exhibit a fpecimen of the prefent perfection of thefe arts in England, as alfo, to fix the principal events of our hiftory in the mind ; of which a fuccinct account is printed in lix pages only, by way of explaining and connecting the feries of events together.
In regard to hiftory, nothing can be more ufeful than an attempt of this nature, in order to fix in the remembrance the cardinal events of memorable tranfections: and as the art of engraving is yet but in it's infancy in England, it is to be greatly hoped and defired that this, as well as every other mafterly performance which is executed in our own nation, will meer with public encouragement fuitable to it's merit, as well for the honour of the nation and our rifing artifts, as for the benefit of it's traffick: lo that, inftead of importing immenfe quantities of foreign prints, we may not only fap: ply ourfelves, but become exporters of a commodity that is univerfally y vendible.
Further to confirm the truth of what bas been faid, with refpect to the extrordinary abilities and ingenuity of our artifts in this profeffor, I cannot in juftice omit taking notuce of fome mafterly pieces which have been lately executed among us; the one is engraved from a capital painting of Te niers, reprefenting a country-wake, containing 150 figures, wherein the painter has introduced himfelf and family. This print is engraved in a very elegant and Akilful manner, is two feet five inches, broad, by one foot eight inches high, engraved by the ingenious Mr Thomas Major, engraver, to his royal highnefs the prince of Wales, and performed under the patronage of his royal highnefs the duke of Cumberland, and dedicated to him by permiffion; his royal highnefs not being lefs follicitous, in time of peace, to promote all ufeful and polite arts that tend to the glory of the nation and the benefit of commerce, than he proved himfelf anxious, in time of war and rebellion, to preferve us from thofe evils, which threatened the ruin of our trade, our religion, and our liber-ties.- The other performances I allude to are two hiftorical compofitions, engraved from a painting of the celebrated Guido Rheni; the one a Cleopatra, in the collection of her royal highnefs the princefs of Wales; and the othera Magdalene, in the collection of Roger Hareng, Efq; by that eminent mafter Mr Robert Strange, who is rallowed to be inferior to none in his profeffion. Thefe performances are 16 inches and a half high, and 12 inches and a half broad.

## Of defign, as it has relation to engraving and to weaving.

Though the bulk of our mafterly pieces of engraving may be taken from the performances of the mofeeminent and diftinguilhed painters, yet the plenty of patterns of thefe great mafters thould by no means, methiaks, obftruct our engravers from ftudying the art of defign, in order to enable them to form and invent new compofitions, that the painter might fometimes copy from the engraver, ${ }^{\circ}$ as, well as the engraver from the painter: And, indeed, by engravers depending'too much on copying only, the original pieces of the moft celebrated mafters, they may cramp the natural force and growth of their own genius, by conftraining and forming it wholly upon that of others, and may have lefs knowlege of their own, for contenting thenfelves with hat of others befone them. : 'So a man that only tranllates, fays Sir William - Temple fomewhere, chall never be a poet"; nor a painter - that only copies; nor a fwimmer that fwims always with - bladders. So people that truft wholly to others charity, ' and without induftry of their own, will always be poor.' We do not fuggeft this to depreciate, by any means, thofe copies which engravers have taken' from the originals, of the moft celebrated painters; they may be the beft far the young artifts to commence with; and not only fo, but may be more acceptable to the public in general than any newf productions that the generality of engravers may be able to perform; and thofe thew more judgment by continuing copyifts than inventors. But our firft rate genii in this excellent art fhould be ambitious, methinks, fometimes to thew the world that they are not lefs able to defign a new piece of their own, than always to imitate thofe of others; though it is certainly more to the reputation of an artift to imitare excellently, than to invent meanly.
Having, under the article Design, quoted Mr Gwyn's effay on that fubject, and particularly a note, wherein it is faid, - That the filk weavers of this kingdom, with regard to de-- fign, are reduced to the neceffity of calling in to their af-- fiftance the better-inftructed, though not more ingenious, 'French, \&ic.' See the article Design.
But I find that Mr Gwyn has been mifinformed with refpect to this matter; and, I having quoted him, it is neceflary that I thould fet the public right, in what fo nearly concerns one of the moft capital and interefting branches of the manufactures of this kingdom.
There are two particulars afferted in Mr Gwyn's note, (1.) That, for want of fkill in drawitg, or delineating, as he calls it, the Englifh defigners are obliged to call in the affiftance of the better-inftrueted. French. (2.) That the perfons en-
gaged in the flowered branch of the weaving trade lament thin,misfortune. But, if we can prove the firft of thefa propofitions to be abfolutely falfe, the other will fall of courfe. That if really is fo, we chall appeal to Facts, and give a fhort account of the progrefs of Desioning in England, which is well known to moft, if not all perfons concerned in the weaving trade.
In the reign of king Charles II, there were few or no filks manufaetared in England, but they were imported from France at the expence of above three quarters of a million Aterling per annum.
After the Reyolution the French refugees fettled the filk manufactures in London, and particularly the flowered filks. The principal perfons herein concerned were Mr Lapfon, Marifcot, and Monceaux, and the firf defigner and patterndrawer was Mr Boudoin. A bout the fame time $\mathrm{Mr}_{\mathrm{r}}$ Jofeph Dandridge began, alfo, the profeffion of defigning, and carried on, the fame for near 40 years, with great repuration. This gentlemañ has been well known not orly by his amufements, his love of natural hiftory (as may be feen in the Na . tural Hiftories of Biids, by Mr George Edwards and Mr Albin) but in his own peculiar profeffion as"an Englifh defigner, or pattern-drawer, for the manufachure of flowered filks, wherein he eminently diftinguifhed himfelf, and is defervedly remembered with great'refpect by the trade.
Mr Dandridge was not only equal, "at that time, in his performances to any of the French, but was far fupefior to them, or to any one of his time, in defigns for damaiks.
It is to be obferved at this period, that neither the French nor Englifh obferved any of the principles of painting in their brocades. Their flowers bad feldom above two colours, and thefe were not difpofed according to the chairo obfcuro, hut in the manner of compartment, or thadowing, in a regular order, ffom black to white, through àny medium or colour, either red, blue, green, $\& \mathrm{c}$. Nether was the drawing in perfpective, but according to the geometrical form of the objeg, as they are commonly exhibited in botanical books and collections.
About the year 7.32 three defigners attempted to introduce the principles of painting into the loom, and fucceeded. Mr John Vanfomer (fon of Mr Vanfomer, a confiderable painter, by whom he was influcted in the principles of painting, and in thofe of drawing for the loom by Mr Dandridge) Mrs Anna Maria Garthwaite, and Mr Peter Mazell. At that time one third of the brocade filks, worn in England-were French. 'But the Eaglifh defigning was fo highly advanced, and fo generally approwed, that in lefs than ten years the preference was not only given in England to the Englifh deligning to that of France (and, as to the goodnels of our manufaçures, we trave always bad the fuperiority, firce it's fint eftablifhmertt among the Englifh) but we alfo begy to export, and foreigners, even the French themfelves, fixed an honourable name to our thite for defign, viz. Le Gout Anglois, heing at leaft equal, in that kingdom itfell, to Le Gout Françorss and, could we bring thefe our fiken manufactures as cheapito market as the French, we fhould be in a fair way of fuyplying a. great' pam of Europe. But, indsed, as our filk manufac'tures are not only fuperior in quality to thofe of the Freneh, - but our defigning is fo likewife, they cannot be faid to beat all dearer than the French, though they cannot be afforded fo cheap, by reafon of their fuperior quality: About the year 1744 , and fince, there lias been an increifo of the number of Englith defigners, who have greatly contributed to the perfétion of this art. *Mrs Pheebe Wright had eminently diftinguifhedi herfelf by the correctnefs and elegancy of her drawing and her colouring. Mr Gray, Mr Henry Knapton, and Mr Hincliffe, have alto been highly inftrumental to add to and fupport the reputation of thefe our Englif filken manufactures.
From this fhort account is plainly feen the mitake into which Mr Gwyn was led ; for it may be depended on, that 'ill the year 1750, there has not fétled in England ahy foreign pefigner: the few that ate come over were fo thamefutly unqualified, that theyscould find little or no employment hape: we have named thofe to whom the public is indebted for bringing this art to the high perfection it is now in; nor is there one Frenchman among them, the firft excepted, who was a Proteftant refygee.:
And indeed defign and drawing in England, fa far as they relate to the filk manufactory, feem at prefent to be brought to fuch a degree of perfection, as fcarce to admit of any larther improvement; and, with regard to the 5 french, we are fo. far from being inferior, that we excel them not only in compofition of grace, but in talte and colouring likewife.
The defigns of the French have a poverty and embarrafliment in them, to fay nothing of the conftant repetition of the fame objects, which tire and offend the difcerning and judictous eye. They give indeed a glare of colours in their filks, that impofe upon fuch who are effected only with tawdry tinfel appearances, and are ignorant of what is really juft and beautiful; whereas the Englifh compofitions are founded upon the true principles of defign; their drawings are graceful and elegant; fo that the manufactures of filk produced by the principal artifts in England, who are ail Englifh, are really pic-
tures of great delicaey and ornament ; and, when compared with the French, the contraft feems as great as between good fenfe and affectation; and, withall, the Englifh of late years have excelfed even in luxuriancy of imagination and fancy.
To fo fuperior a degree of excellency is the quality of this noble manufacture arrived in thefe kingdoms, and to fo exalted a height of beauty and elegancy is the admirable art of defigning brought, with regard to tur Howered filks of every kind, that we may prefume to fay, England herein has happily obtained the tranfcendency and mafterfhip over the whole world : and, while this is the cale, it is to be hoped, it is to be earneftly defirea, by all true friends to the folid intereft of thefe kingdoms,' that the utmof difcousagement will be given to foreign filks, while we have fo much better of our own to wear; and that the nobility and gentry of thefe kingdoms will delight to follow that noble and ever-memofable example lately given by our illuftrious monarch and father of his people, to promote the Britifh manufactures in everry refpect: and as our darling prince, his grandfon, who is heir apparent to the crown of thefe kingdoms, has given alro, and continues daily to give the mof diftinguified teftimonies of his defire to advance and encourage to the utmon, our own manufactures, in oppofition to thofe of foreigners : as likewife that moft amiable and incomparable prinicefs, her royal" highnefs the princefs of Wales, has, and daily does confpicuoudy intereft herfelf ia favour of our own manufactures: it is to be hoped, that it will now prove a mark of public infamy, deteftation, and refentment, for any, one to difregard thefe royal examples ; and a diftinguifhing characteriftic of public honour, glory, and applaufe, to all perfons of diftinction who
fhall imitate the virtues of the royal family, and teftify thefame regard and attachment to their country's intereft and happinefs.
Before I conclude this article, I would take leàve to obferve, that, if our ambaffadors, envoys, refidents, and their ladies, who refide in foreign countries, would take as much pride to be cloathed in the Britifh manufaclures, as thole of foxeign nations here do to be cloathed in thofe of their refpective nations, might it not tend to introduce the wear of our manufactures at many courts in Europe, when they had ocular demonftration, that ourfilks, as well as our cloths, werereally fuperior to thofe of the whole world?
I have dwelt the longer upon this article, in order to do juffice ${ }^{*}$ to allany way concerned in the profperity of the weaving trade, of this kingdom; as well as our defigners and engravers; and, although I was unluckily milled, by the quotation of a note from Mr Gwyn; yet I cannot believe but that gentleman wastas innocently led into the miltakea ass I wäs into the tranfribing it; and I am inclined to believe, that gentlemen would as readily retract his error, and atone for the miftale he has involunfarily committed, as I have chearfplly done.
ENTRE DUERO E MINHO, a province in Portugal. Tbis province is fo called from it's being fituate between thofe two fatned rivers: It bath the Minho on thêe north, to divide it from Galicia, and the Duero on the fouth, which parts it From-Beira; on the weft it is bounded by the ocean, and,on the eaft by a ridge of mountains, whieh fever's it from the province of Tra fos Montes. It is fmall, but the beft inhabited, and hath the greateft number of cilies, towns, and villages, of all the other provinces of Portugal, and one of the moft fertile; though mountanous having many other rivers befides the two that inclofe it, and a valt number of sive lets and fweet fprings to water it; fo that it abound's in good pafture more than any other, 等atts of Portugaly and it's plains are every-where covered with virge, fruth, and other frees of all forts, but it hath nott fufficient corm for 'it's infiabitants.' Places of any note for trade, are,
OpORTO, a fañed city and fea-port fituate on the north fide of the Diero, about three miles from the fea. The port, a very commodious one, \% fo well known and frequented by our nation, that we;need fay thedels of it. The harbour is fafe againf all winds; but," when the floads' come down, no anchor can hold the fhips $;$ at which time they's are forced to moor them alongfide each other, by the walls, totavoid the fury of the torrent : at the entratice into it there is a dangerous bar.
Gyimaranes, an antient town, feated upon a hill. The chief manufacture of this place is timen and fine thread, of both which confiderable quankisies are made and exported.
Viana De Fez De Lima, fo called, becaufe it is fituáte at the mouth of the river Lima. This town is bacome very confiderable for tride ever funce the great confunption of Portugueze wines in England, and is itfelf famed for a delicate fort of it's own product, which is fmatl, and not unlike the French, ner hardly inferior to it ; whereas thofe that grow in the more fouthern parts are heavier, and lefs pleafant.
Amarante, on the banke of the siver Tamada, hath a linen manufacture.
ESS EX, a county in England, is in a manner a peninfula, being wathed on the eaft by the German Ocean; on the north by the Stour ; on the weft by the rivers Lea -and Stort; and on the fouth by the Thames, and is in circumference about 140 miles.
The air is génerailly temperate, but near the fea and the Thames it is moilt, and the inhabitants are fubject to agues.

It abounds with corn, cattle, wood, and wild fowl; and, about Saffron-Walden, produces great quantities of faffron: It is particularly oblerved of this county, that, generally fpeaking, the foil is beft where the air is worft, and è contra. They have plenty of fifh of all forts; and by the fea-fide are decoys of great profit to the owners in the winter feafon.
It's chief towńs are, I. Colchester, a large populous place. This, and all the rowns round it, were the moft noted places in England for making bays and fays; which trade was fritt introduced into Colchefter, in the year 1570, by the Proteftant Dutch and Flemings. They made four feveral forts of bays, which were diftinguilhed by the names of rents, cuts, crowns, and croffes. There have been 1000 or 1200 bays, at leaft, made weekly in Colchefter.
This trade was firf molt fenfibly hurt by our wars with Spain, elpecially queen Anne's wars. By which, and other concurrent caufes, the Dutch congregation (which had the management of that trade) not being able to carry it on, diffolved themfelves in 1728.
Perpetuana's ufed allo to be made here in great numbers ; but now hardly any, or rather none.
At prefent there are but two forts af bays made, viz,

1. The fine, or Spanif bay, with a yellow lift.
2. The Portugal bay, which is coarfer and thicker, and has a blue lift. ${ }^{2}$
About thefe there are 600 looms, and upwards, employed, each managed by one hand, fince the engines invented by Solomon Smith: and there are not 20 in the whole town managed by two hands.
But the number of fpinners, winders, combers, beaters, and roughers, \&xc. amount to a much more confiderable number. The bay-trade is removed, in a great meafure, into the weft and northern parts of the kingdom, where the poor are more eafily fatisfied, provifions cheaper, and coals very plentiful.
This town is alfo of fome note for it's excellent oyfters, which the inhabitants have a peculiar art in barrelling, and fend in great quantities to London, and other parts; and it is famous alfo for candying eryngo-reots.
3. Malden, ftands on an eminence rear the fea. It is pretty large and populous, has a convenient haven on an arm of the fea, for thips of 400 tons; and fome of the inhabitants drive a confiderable trade in coal, tron, deals, and corn.
A little beyond this town begins Blackwater-Bay, famous for the pits of thofe excellent oyfters called Wall-fleet, from the thore where they; lie, which is five miles long, and guarded by a wall of earth, to keep out the fea
4. Harwich, fands near the mouth of the Stour. It is a , very fafe harbour, and has a-good maritime trade. Here is a very good yard for bieiding hips; with the conveniency of ftorehoufes, crápes, launchess, and all fuch neceffaries. It is -the itation for the packet-boats which pais to and from Holland, Germany, and other parts; with the mails and palfonMers.
5. Manningtree, is a fmall town, but has a good trade. It ftands on the Stour, over which it has a bridge.
6. Brametirer, had formerly a great trade in bays and fays, - but, within thefe few years, ${ }^{*}$ much decreafed.
7. Bocking, parted from Braintree by a fmall Atream onty, is one of the -largeft villages in Effex... It is adorned with fine "fpacious houfes of clethiers, inriched by the manufacture and Trade of bays, of which this village has a peculiar fort, called Backinge.
8. Cogersmali, was formedy a great cloathing town, but it's trade is now much decayed.
9. Saffron-W Alden, fo called from fits fituation amorig部any pleafant fields of faffron; but it is not fo much cultis.vated hére of lafey years'as formerly.
10. Curemisford, is a pretty large populous town, and a great thoroughfare.
Io. Ingatestone, is another large thoroughfare, with a confiderable market for live catde brought out of Suffolk, and other parts.
EST REMADURA, The province of, in Portugal, is a nar* row lip of land, running along the fea-coaft about ino miles; in breadth it is fcarce 50, and infome places. much narrower. It is bounded on the north by the river Mondego ; on the fouth it borders uporip part of Beira, and the province of Alentejo ; it hath again Beira on the eaft, and the ocean on the weft.
The land is, for the moft part, the beft in Portugal, and the climate very pleafant and mild, by it's being fo near the Weftern, or Pacific Ocean. It produces wheat, and other grain, in great plenty, abundante of wine, oil, fruits of all forts, efpecially citrons, lemons, orangés, pomegranates, figs, dates, almonds \& 8 c . Were is alfo a great variety of manufactures carried on, and a large gare of trade; all which is owing partly to it's commodious fituation and fea. ports, to it's nearnefs to the city of Lifbon, and noble river Fagus.
The noff coñfderable places for largenes, opulence, \&se. are, Lisbon, the metropolis of Portugal, is pleafantly feated on the * banks of the Tajo. The harbour is one of the moft commodious in Europe, being capacious enough of itfelf to concain ro,000 fhips, all riding in fafety, and not incumbering each other. The bar is very dangerous to pafs without pulors.

SEtubal,

## E U. R

Setubal, corfuptly called St Ubes, is feated on a handfome bay clofe to the ocean, is much reforted to by moft northern nations, efpecially for the valt quantities of falt made here.
The province of Estremadura, in Spain, is divided from Portugal, or from the Portugueze Eftremadura on the weft, by the rivers Elia, Caya, and fome others of lefs note; on the north it joins on the kingdom of Leon; has Old and New Caftille on the eaft, and Andalufia nn the fouth.
The air is hot, and fomewhat fultry, but the foil exceeding fertile, and well cultivated, the natives being laborious, and much addifted to tillage
This rich province contains feven cities, many large fately towns, equal to cities, and a great number of populous and wealthy villages, not inferior to good towns.
Place of chief note is
Merida, on the banks of the Guadiana, in a wholefome air and fertile country, furmerly a noble city, but now has little left of it's ancient grandeur but the ruins.
EUROPE, one of the four divifions made, by geogràphers, of the whole world. It is bounded on the north by the Frozen Ocean; on the fouth by the Mediterranean Sea, which divides it from Africa; on the eaft by Afia, from which it is parted by the Archipelago ${ }_{2}$ the Euxine, or Black Sea, and the Palus Mzotis, and thence by a line drawn from the river Tanais, or Don, almoft to the river Oby, in Mufcovy; and, on the weft, it is bounded by the Atlantic Ocean.
It is extended between 34 and 80 degrees north latitude, and between 5 and 80 degrees of longitude, reckoning the firft meridian to pafs through the inand of Teneriff. It contains in breadth, as a continent from the North Cape to Cape Metepan in the Morea, about 2600 miles ; and in length, from the mouth of the river Oby in the eaft, to Cape St Vincent in Portugal, weft, about 2800 miles.
Although Europe be the leaft of the four parts of the world, it is by much to be preferred for the mildnefs of the air, the fertility of the foil throughout, the many navigable rivers, the great plenty of corn, cattle, wine, oil, and ail things requifite not only for the fuftenance and comfort, but even for the luxury of human life ; but more efpecially for the beauty, ftrength, courage, ingenuity, induftry, and wifdom of it's inbabitants; the excellency of their governments, the equity of their laws, the freedom of their fubjects; and, which furpaffes all, the purity and fanctity of their religion, efpecially the Proteftant part; which, as it has happily checked the power of ecclefiaftical tyranny and opprefion, fo it has brought the judicious and learned laity to think for themfelves, as well in matters of religion as in fience of all kinds. Yet Proteftantifm has not fet afide the priefthood, much lefs attempted to extirpate it; on the contrary; they have only reduced it within the bounds of fcripture, and as near to the practice of the primitive Chriftians, for'the three firft centuries, as we can obtain any fatisfactory knowlege of ; nor do any Chriftians more highly venerate this order, when it's dignity is fupported by wife and good men.
The Christian Religion is profeffed throughout all Europe, except that part of it poffeffed by the Turks: but, by reafon of the innovations made by the church of Rome, the weftern church is divided; Italy, Spain, France, part of Germany, and the Netherlands, with Poland, ftill following the doctrine of the church of Rome; whereas England, Scotland, Ireland, Denmark, Sweden, Norway, great ${ }_{\text {j }}$ part of Germany, the United Provinces, Swifferland, \&c: have embraced the reformation, and profefs the Proteftant religion ; and in Mufcovy, fome parts of Poland, in Walachia, Moldavia, Podolia, Volhinia, and Greece, the doctrine of the eaftern, or Greek church, is followed.
Europe hath for many ages been exceeding populous, and her inhabitants, in general, illuftrious for their courage, their wirdom and virtue; by which they conquered the greateft part of Afia and Africa, and fubjected them to the two empires of Greece and Rome; and, in thefe latter ages, almoft one half of the earth, that was formerly unknown, hath been difcovered by Europeans, and poffelled. by the colonies they have fent thither.
For learning and arts the Europeans have been moft renowned : all the fcholaftic fciences they have brought to a much greater perfection than either the Afiatics or Africans ever did; and the invention and improvement of numberiefs ufeful and ingenious arts, particularly that of navigation, on which all intercourfe of foreign commerce between diftant nations depends, is wholly owing to the genius and induftry of the inhabitants of this part of the world.
The principal fovereignties of Europe are as follow:
The empires of Germany, Ruffia, and Turky.
The kingdoms of Great-Britain and Ireland, France, Spain, Portugal, Sweden, Denmark, Poland, Hungary, Bohemia, Pruffia, Sardinia, Naples and Sicily; which are termed the Two Sicilies, and the popedom of Rome.
The republics of Venice, United Netherlands, Swifferland, the Grifons, Genoa, Lucca, and the fmall republics of Geneva and Ragufa.
Next to thefe may be reckoned the electorates of Germany, whole princes chufe the emperor ; of whom the three firft ase fpiritual, and all the others temporal princes; viz.

E U R

## And the kingdom of Bohemia.

There are, befides thefe, no lefs than 300 fubaltern fovereignties in Germany, Italy. \&c. whofe poffeftors, whether firitual, as archbihhops and bihops, or temporal, as princes, landgraves, dukes, marquiffes, counts, \&c. though they are tributaries, or feoffees, to the emperor, or fome other fuperior prince, have authority in their own ftates.
Of the ipiritual, the moft confiderable are,
The grand mafter of the Tcutonic order.
The grand mafter of Malta.
The grand prior of Malta, who is alfo called the grand prior in Germany.
The abbots and princes of Fulda in Germany, St Gall in Swifferland, and fome others.
Of the temporal the moft confiderable are,
The archduke of Auftria, the great duke of Turcany, the landgraves of Heffe Caffel, Rheinfelds, Darmftat, Homberg. The dukes of Savoy and Modena, \&cc. in Italy, The duchies of Milan, Mantua, Mirandola, Parma, and Placentia are, at prefent, in the houfe of Auftria,. The dukes of Mecklemburg, Wirtemburg, Holftein, Saxe-Weymar, Ey fenach, Gotha, $\$ \mathrm{c}$. in Germany, and the duke of Courland in Poland,
The princes of Anhalt, Aremberg, Hohenzollern, Naffau, and Eaft Friefland, Furftemberg, Lichtenftein; Waldeck, Tour and Taxis, \&e. in Germany.
The marquiffes of Baden, Dourlach, Brandenburgh, Cullenbach, and Brandenburgh-Anfpach, in Germany.
The Counts of Hanau, Solms, Traun, Schlick', Staremberg, 8 cc .
Befides thefe, there are the cham of the European Tartary, the hofpodars of Walachia, Moldavia, \&xc.

## Of the commerce of Europe, with relation to the other quarters of the world.

When we fpeak of the trade of Europe in general, we mult fpeak of it complexiy, as it is in the product and improvements of all it's parts, and as it refpects it's correfpondence with the other three parts particularly.

1. Refpecting Africa, it's inhabitants, Egypt excepted, being moftly barbarians, fuch as the Moors and Mahometans on the north and north-eaft part, and the Ethiopians on the north-ealt, or the mere favages and negroes of the fouth and weft parts; they all take no great quantities of merchandizes from Europe; they take very litile, indeed, in comparion of the returns made to Europe in exchange.
The European goods fent to Africa are fuch as the Moors of the coaft on the fouth fhores of the Mediterranean Sea take off, which confifts chiefly in fome Englifh and French woollen and linen manufactures, and great quantities of tays and baubles: in return for which, Europe receives from that fide of Africa far more than an equivalent in corn, falt, almonds, wax, copper, and a large quantity of very valuable drugs.* From the coaft of Aficic, on the fide of the ocean weft, and on the fide of the Indian or Ethiopian Seas eaft, Europe receives annually an immenfe treafure, either brought immediately to them, or carried by the European merchants in their own fhips, and for their own account, to America; fo that is properly the European trade, and confifits of gold, elephants teeth, flaves, Jrugs.
By thefe articles (the quantity and value of which is infinitely great, confidering a great part thereof is procured by the exchange of mere toys and trifes, fcarce worth naming) the ballance of the commerce between Europe and Africa is greatly to the advantage of the former ; and that fo far, that it is mighty extracrdinary and unaccountable that the feveral maritime nations of Europe do not extend that commerce to a far greater degree; which it is manifeft might be done with the greateft eafe, and to fuch a height as, perhaps, might $e$ qual all the prefent improvements by colonies and plantations in America, many of which are remote, dangerous, and unhealthy, liable to certain charge, to difafter and mifcarriage : whereas Africa is near hand, every way equal in it's fertility, fuperior in it's production, the trade fafe, the country in many parts extremely bealthy, the people tractable, and the returns immenfely rich, and doubtlefs abounding, if we could once carry our traffic into the center of this great and populous country, with an infinite variety of commercial articles, that the Europeans, at prefent, are abfolutely ftrangers to. In what manner the trade to Africa may be greatly improved and eextended, fee the articles America, East-India Company, English African Company.
America is to be next confidered wich refpect to Europe This is by far the largeft country of the four, into which the world is generally divided; and, if we may give credit to the meafurement of geographers, it is equal to the other three, and beyond them all, perhaps, in it's extent. And it is found, by the experience of commerce, to be infinitely be-

## E U R

E UR
yond them all in it's produce, either on it's furface, or from it's intrails; for as to manufactures, and the labour of the people, America being unimproved, and the people therein unemployed, that part is not fcarce begun: fo that Europe and Afia, in this refpect, go infinitely beyond it; what may be the confequence hereafter, we would not conjecture.
With all the wealth of it's product, America is yet in it's flate of bondage rather, being, at prefent, dependent on, and the property of, the people of Europe; it is under the government of it's power, and in the polfeffion of it's people. As the land is the property of Europe, fo is the commerce; and all the wealth of the country pafles yearly away, like a tribute, to the feveral parts of Europe to which the yarious parts of America belong. And though it is true that the wealth of America goes away, as a tribute to Europe, yet it is allo true, that it goes thither by way of commerce too, and in return for the manufactures of Europe, which are fent to them in America for their fupply. In a word, the Europeans receive the whole product of the country, from end to end, and fend the Americans, in the room thereof, a few cloaths to wear; and thefe very cloaths are chiefly for the ufe of the Europeans fettled there for maintaining the poffeffion, as lords of the country, and who having difponeffed the native inbabitants, and driven them into corners, rule them with a rod of iron, efpecially the Spaniards.
The produce of America is a prodigy of wealth, immeafurable in it's quantity, and inexpreffible in it's value. It confifts chiefly of gold, filver, pearl, emeralds, hides of beafts, tobacco, fugar, cacao, cocheneal, indigo, peltry, drugs, fpice, cotton, dyers woods, filb, \&c.-Thefe are returned to Europe in it's proper divifions thus : the gold chiefly to Portugal from the Brafils; which is afterwards diffeminated, in the courfe of the Portugal trade, to divers other parrs of Europe. See the article Portugal.-The filver to Spain, from the fhores of the South Seas, and from Mexico and Peru, which is alfo difperfed throughout the other parts of Europe, in the channels of the Spanifh commerce. See the article Spain.-The fifh from Newfoundland, \&c. is fent to various parts of Europe.
Upon the whole of this commerce, 'tis certain that Europe alfo is the gainer, and that to an excers fcarce to be conceived; the ballance being fo great in it's favour, that it has, together with that wealth from Africa already mentioned, immenfely enriched and aggrandized all the trading European nations that have any great concern in thefe capital branches of commerce.
Afia is a country extremely rich alfo in it's product, though, in that refpect, not to be compared with either of the former two ; but it is rendered watremely rich, by the prodigious numbers and inimitable diligence, induftry, and application of it's inhabitants; who are fo circumftanced, that they call for little from any other part of the world : and they are fo indefatigable, affiduous, and ingenious in the mechanic and manufactural arts, fo amply fupplied by nature with materials and their workmanfhip is fo extremely cheap, that they are able to fill the whole world with their manufactures and produce. By which means the ftate of trade between Europe and Afia ftands thus : Europe calls for a valt variety of goods from Afia; great quantities of which are difperfed into America and Africa, by way of barter and exchange for the productions of thefe parts of the world: fo that although a coniderable part of the filver that comes from America is fent to Afia for their produce and manufactures; yet, as filver is one of the plentiful productions of America, it is the fame thing as the American bartering any other commodity for the Afiatic commodities, and therefore the trade of Afia cannat be fo injurious to the wealch of Europe, as fome have been wont to apprehend. For let it be fuppofed, that every ounce of filver that was ever produced in America centered in Europe, and was in circulation, it is to be queftioned whether Europe would be ever the richer, and the comparative ftate of the riches of thele European nations who fhared in the American filver, would be the fame as it is at prefent : the labour and manufactures of thefe nations in Europe would be fo much dearer, in their reciprocal barter and exchanges of produce and manufactures with each other ; which would ftill keep upon the fame comparative equality, with refpect to their riches. But, if the riches of nations fo much confifts in the plenty of filver, as fome are pleafed to think, the immenfe quantity of wrought plate which is at prefent in Europe, demonftrates, that all the filver that hath come from America, has not been fent to Afia; an immenfe quantity of it lies dead in thefe articles: and it is, perhaps, a moot point, whether thefe nations would be e'er the richer, if all the wrought plate among them was coined into money, and preferved as ong as the courfe of trade would permit, in their commercial circulation. See the articles Asia, Ballance of Trade, Bulifon, Cash, Circulation, Dutch East-India Company, East-India Trade, EastIndia Company of England, Gold, Silver, MoNEY.
If the trade of Alia had, for a feries of years, been fo difadvantageous to Europe, as is by fome fuggefted, it would certainly have greatly impoverifined all thefe nations there-
in concerned, which does not appear to be the cafe: on the contrary, not only thofe who have been long interefted in this trade, are zealous to preferve and increafe it, but new powers are daily Aruggling to obtain fome fhare therein; which they would hardly do, if they were not convinced that this trade, upon the whole, is reaily beneficial to the refpec tive potentates therein engaged.
Before I conclude this arricie, the peculiar policy of the Afias tics, in regard to the importation of filver from Europe, may deferve confideration; for aithough fllver is a commodity; which they take partiy in baster for their protuce, and manufactures, yer, if we are righty informed, this filver is not coined into money, and kept in circulation: no, to prevent this, the princes and great men not only make up large quantities into wrought plate, but they bury under ground im menfe quantities ; whereby they effectually prevent it's coming into their commercial circulation, and confequently by that means they prevent the rife in all the neceffaries, even luxuries of life, and thereby kecp the price of labour always low and at a fland: fo that by this policy they can afford to fell their produce and manufaclures cheaper than any other nation whatfoever. And, if an hufbandman, mechapic, manufacturer, or any other perfon, in Afia, can purchafe as much for the value of fix-pence flerling in money, as a European can do for two ihillings fterling, does not the fix-pence anfwer the fame end to the Aliatic, as the two hallings does to the European? In fome of the hiffories of this part of the world, that I have met with (but I can't at prefent recollect which) it is faid, that fuch is the policy of feveral of the governments in the Eat-Indies, that their priefts propagate a notion among the prople, that,: the more filver they die poffeffed of, the bappier they will be inial future ftate: which notion occafions the filver to be hoarded and buried, and thereby kept out of circulation to prevent any rife in the price of labour and commoditics: and this is faid to be the occafion of the furprizing cheapnefs of all theif produce and manufacures, when bought at firt band, in comparifon to thofe of the richeft European nations.
If this principle, upon examination, fhould be found to be good policy, may not the great paper circulation of the kingdom of Great-Britain in particular, which is occafioned by our national debts and taxes, deferve ferious confideration? For, if paper circulation, by authority, will anfwer the end of coined money, the more paper there is in circulation by way of transfer or otherwife, the more money there is, in effect, in circulation: and if fo, do not our debts and taxes in this refpect, as well as in others, contribute to keep up the price of labour, and render our produce and manufactures proportionally dearer than otherwife they would be? Can any thing, therefore, more importantly concern the interefts of our commerce, than the exonerating us from our national debts, and in confequence thereof, from the payment of thofe taxes which are appropriated for the payment of the intereft and the principal thereof? For when the whole debs fhall be paid off, and all the paper effects thereby occafioned be annihilated, and confequently the public taxes abated, will not all merchandizes fall in their price?
That this will prove the cafe, there are two reafons affignable, fays Erafmus Philips, Efq; in the ftate of the nation: - The frift is, that when thofe paper effects (which now have - the operation of money) are funk, their operation muf 6 ceafe of courfe; for as the value of commodities has rifen ' by the increafe of gold and filver within thefe 150 years, fo would they of neceffity fall in their price, if our gold ' and filver were confiderably diminifhed; the confequence - muft be the fame of that which has the operation of - money.

- The fecond reafon is very obvious ; for goods that are taxed ' bear a price in proportion to the impoft upon them; when ' they are free from this incumbrance, there can be no rea-- fon why they fhould not come to their natural value; (If I - may ufe the expreffion) for inftance, if the duty on malt ' be fix-pence per buthel; when this duty is taken off, malt 6 of courfe fhould be fix-pence a bufhel cheaper than before. - The fame mult be faid of all other commodities that are ' taxed.' See the articles Debts [National Debts] Funds, Taxes.
Some inave imagined, that it was for the advantage of a fate to be indebted to itfelf: they thought that this multiplied riches by increafing the circulation.
Thofe who are of this opinion have, I believe, confounded a circulating paper, which reprefents money, or a circulating paper, which is the fign of the profist that a company has, or will make by commerce, with a paper which reprefents a debt. The two firf are extremely advantageous to the ftate, the laft can never be fo, and all that we can expect from it is, that individuals have a good fecurity for their payment. But let us fee the inconveniencies which refult from it.

1. If foreigners polfefs much paper, which reprefents a debt, they annually draw cut of the nation a confiderable fum for intereft. To prevent which, fee the article Debts [NAtional Debts.]
2. A nation that is thus perpetually in debt, ought to have the exchange very low.
3. The
4. The taxes raifed for the payment of the intereft of the debt are a hurt to the manufdeturers, by raifing the price of the artificers labour. See our articles Duties, Debts [NAtional Debts.]
5. It takes the true revenue of the fate from thofe who have 4. It takes the true revenue of the itate from thole who have
aetivity and indufry, to convey it to the indolent; that is, it gives the materials for labour to thofe who do not labour, and clogs with difficulties the induftrious artif.
Thefe are it's inconveniences: I know of no advantages. Ten perfons have each a yearly income of a thoufand crowns, either in land or trade; this raifes to the nation at 5 per cent. a crapital of 200,000 crowns. If thefe ten perfons employed the half of their income, that is, 5000 crowns, in paying the interelt of an 100,000 crowns, which they had borrowed of others, that would be only to the ftate, as 200,000 ; that is, in the language of the algebraift, 200,000 crowns - 100,000 crowns $+100,000$ crowns $=200,000$ crowns.
People are thrown, perhaps, into this error, by reflecting, that the paper which reprefents the debt of a nation, is the fign of riches; for none but a rich fate can fupport fuch paper, without falling into decay. And if it does not fall, it is a proof that the ftate has other riches befides. They fay that it is not an evil, becaufe there are refources againft it, and that it is an advantage, hecaufe thefe refources furpafs the evil.

## Remarks.

Though Europe is efteemed the mof happy and valuable quarter of the globe, thefe prerogatives are not derived from it's fize, fince it is the leaft of all the four into which the it's fize, fince
world is divided.
It has been fuppofed, that if the whole habitable globe was divided into 300 parts, Europe will contain of thefe 27, Afia 101, Africa 82, and America 90. In refpect, though the excels America, and perhaps Africa, yet the falls far fhort of Afia, if we may depend on the account of the leaft exceptionable travellers.. With regard to fubterranean riches, her gold and filver mines are not to be compared with thofe in the other quarters of the world; fhe has few precicus ftones, and as to fpices and perfumes, we well know from whence they come.
But with regard to territory, if we confider what the Spaniards, the Englifh, the Portugueze, the French, and the Dutch, poffefs in other parts of the world, it may be faid, that the dominions of the European powers are equal, if not fuperior to Affa; and if it does not contain fo many people within it's own limits, yet it commands more. And, In confequence of their trade, the Europeans enjoy all that nature has beftowed on the other parts of the world. The trade of Europe has, in a courfe of ages, undergone great alterations. Upon the fall of the Roman empire, it feemed to be in fome meafure extinguibhed, but foon revived among the Saxons, who, when they became mafters of this inland, eflablifhed a great maritime power here, which did not continue long, the Danes becoming mafters of this country.
After fome ages, commerce and maritime power retired fouthward, and were in a manner engroffed by the Italian fates, particularly by the Venetians and Genoefe, who thared the traffic of the eaft.
In the $3^{\text {th }}$ century, feveral free cities in Germany began to league together for the fupport of their trade, and made their confederacy known to the world, by the title of the Hanfeatic league. As their trade acquired them immenfe wealth and power, fo it rendered them haughty and infolent, which, with other concurring circumftances, at length brought on their ruin; for in the 15 th century, the Portugueze perfected a new route to the Eaft-Indies by the Cape of Good Hope; and about the fame time the Spaniards difcovered America, which threw the trade of Europe and it's chief naval power into the hands of thofe nations, who, if they had known how to cultivate them, and ufe them with moderation, might not only have raifed it higher, but made it more durable than it proved. But the boundlefs ambition and cruel oppreffion of the Spaniards, animated the United Provinces to throw off their yoke, and engaged them and the Englifh to thare in thofe riches, which were the fource of the Spanifh power, and this gave rife to the maritime powers. The progrefs of the Dutch from this time, in commerce and naval power, was amazingly rapid; for in the fpace of about half a century, from having fearce any fhips at all, they came to have more than all Europe together.
Since that time, Great-Britain, by extending her commerce, and multiplying her colonies, has raifed her maritime force to an equality with the Dutch. The French too have, of late years, not only raifed a confiderable maritime force, but have extended their traffic into all parts of the world ; for though the wars before the laft, in a great meafure, suined their navy, yet we experienced by the war in 1741 , that they had greatly raifed it again, and carnied their commerce to a pitch beyond all our apprehenfions: and, whatever difadvantages they had fuftained in either, they were in a fair way to retrieve, and to extend them to what degree they pleafed, had not a fop
been put to this career by the Definitive Treaty of 1763 . So that the maritime affairs of Europe have in this laft century fuffered a very great change.
The like attention to commerce and maritime power has, within thefe fifty years, appeared in almoft every other nation in Europe. The Swedes and Danes have fet up EaftIndia companies ; the Ruffians have opened a new and beneficial traffic, as well on the Cafpian, as on the Black Sea. The houfe of Auftria has thewed a great defire of reviving the antient commerce of the Low Countries. The Genoef have, within thefe few years, erected a company of affurance, to encourage their fubjects to venture upon long voyages, and if poffible, to recover their antient reputation as a maritime power. Nay, even the Spaniards themfelves, who in this refpect bave flept for fuch a number of years, have at length opened their eyes, have erected fome, and have had under confideration the erecting feveral other companies, and eftablifhed divers capital manufactures for the encouragement and extenfion of trade throughout their European dominions, and have aimed at the eftablifment of a Fishery in Newfoundland; but the Definitive Treaty of 1763, has put an effectual fop to their prefenfions. See Biscay, Castille, Catalonia.
Whence 'tis plain, that the Navigation and Chipping of the Europeans in general, is, within the laft fifty years, greatly increafed: as a farther proof hereof, we need only confider the numerous fleets and great embarkations of different powers, fuch as the Ruffians, Swedes, and Danes in the north, the invafion of Sicily and. Africa by the Spaniards, and many others.
That nation which augments it's commerce and maritime power to the greateft extent, bids fair to give law to the reft, unlefs by a prefervative confederacy of the leffer powers, they fhould become a match for the greateft potentate.
Thus, for infance, if the houfe of Bourbon fhould ever acquire as great a proportion of trade and naval power as either of the maritime powers, by which name they are at prefent diftinguifhed, this would be an acquifition of much more confequence, than any they have hitherto made in point of territories or dominion.
It is therefore the intereft of the maritime powers to fuftain their characters in that refpect at all events; fince by this means only, they can preferve their independency, protect their fubjects wherever they may be fettled or difperfed, and affift their allies, notwithftanding the fuperior power, as well as boundlefs ambition of any afpiring neighbour. We need not wonder then, at a common notion which prevails, as if we had a right to prefcribe to fome other nations the bounds of their naval greatnefs; and fay the truth, we feem to have laid a good foundation for this by the Definitive Treaty of 1763.
What has been faid in relation to trade and commerce, may anfwer the end expected from it in an hiftorical light, and enable us, in come meafure, to judge of the nature, extent, and comparative ftrength of what is ftiled maritime power. We fee and know, that whatever ftate or power is poffeffed of an extenfive commerce, may have a proportionate naval force, the effects whereof will render her confiderable; yet it is requifite to know how this arifes, and why the ftrength and dominion of a maritime power is firmer and more durable than that which arifes from a great extent of territory, multitudes of fubjects, or rich and fruitful countries, which is what we fhall explain and apply.
Trade is certainly the ftrength and happinefs of a nation, let the form of it's government be what it will ; becaufe it introduces induftry and arts, by which the manners of a people are civilized, even from the greateft favagenefs and brutality. See Barbary. Remarks thereon.
Nor is it the number of fubjects only, but the number of ufeful fubjecis, that is, trading fubjects, that make a flate powerful. Commerce introduces preperty, and without fecurity with refpect to that, the inducements to purfue trade will flag ; and otherwife it will thrive and profper, and will draw an inconceivable flux of people, wherever it is thoroughly eftablifhed, and wifely cherifhed and promoted. Hence we may eafily affign the true caufes of the long duration of republics renowned for their trade; fuch as Tyre and Carthage in antient times, the Venetians and Genoefe in later ages. It is almof impofible, that a nation active and induftrious in commerce, and in confequence thereof rich and populous, and living under a mild government, thould not exert a greater force when employed in attacking others, and have much greater refources in cafe the is attacked herelf, than other ftates that are defective in thofe advantages; whence it will appear, how the fates of Holland rofe to fuch a vaft power in fo fhore a time, and how her fubjects have been able to thrive and grow opulent under taxes and impofitions, which muft have beggared them in any other fituation than that of a trading republic. See Holland. Befides, Trade quite changes the comparatuve frength of ftates and kingdoms, becaufe wherever it relides, it creates fo many and fo great advantages, and begets fuch relations and cor-nections, as render a trading country infintely fuperior to her neighbours, who are differently circumatanced. For,
fuch a ftate, if on the Continent, can fortify her great towns, fo as to refift a power ten times ftronger, in refpeĉ to people; fhelcan maintain, if requifite, great numbers of regular troops, and on emergency hire more of her neighbours, befides what the may be able to do by the help of her maritime force. Hence arifes that great ftrength and real power thewn by trading republics, when attacked either by ambitious princes, or even by powerful confederacies.
Thus the Venetians have often been too hard for the Turks, the Genoefe for the moft powerful princes in Italy; and, in earlier times, the Lubeckers for the greateft powers in the north. Hence the famous league of Cambray, which was formed for the deftruction of the ftate of Venice in 1509, came to nothing, though the greatelt princes of that time engaged in it, and though the Venetians themfelves were guilty of fome indifcretions, and though they had been much exhainted by former wars. Thus alfo the famous confederacy between France and Great-Britain againt Holland in 1672, proved abortive, though at the firft, even the Dutch themfelves thought their affairs defperate ; but their love of liberty animated them to exert themfelves to the utmoft, and their commerce furnifhed them with the means of getting tolerably out of the war.
Nor has trade only a great influence on the particular affairs of nations feparately confidered, and is alnoft the fole caufe of a comparative difference in the ftrength and forces of moft of the powers of Europe, but is alfo of unfpeakable advantage to the European quarter of the globe in general; frees us from apprehenfions of being over-run by thofe barbarous empires which the Mahommedan religion has eftablifhed in the world, and likewife brings us every thing that is rich and coflly, every thing that is curious and eftimable, even from the remoteft quarters of the earth; fo that to trade alone, all is due to this part of the world: in a word, it is to commerce that the people of Europe owe their freedom and independency, their learning and arts, their extenfive colonies abroad, and their riches at home; and above all, that naval power, which fo much furpaffes any thing of the fame kind in other parts of the world, and whatever was attempted in that way in former ages.
The reciprocal connections between nations refulting from trade, have quite altered the ftate of things, and produced within thefe two or three centuries paft, a kind of new fyftem in Europe, by which every ftate is'led to have a much greater concern than formerly for what may happen to another. As in former ages a quarrel in the north could only have affected the north, but in the laft century things. were totally altered. Both the Dutch and we have fent our fleets into the Baltic, upon the quarrel that happened between the Swedes and Danes, a little before the reftoration of king Charles II. Not long after this, the crown of Sweden became a contracting party in the famous triple alliance for maintaining the peace of Europe, preferving the Spanifh Low Countries, and fetting bounds to the power of France. After the Revolution, towards the clofe of the reign of king William, both the maritime powers fent their fleets again into the Baltic, with the fame view, and with the fame fuccers, and the like has been done more than once fince. In all thofe cafes the pretence was, the love of juttice, and a punctual performance of treaties, in which there was fomewhat of truth; but the real defign was, to prevent thofe inconveniencies which muft have befallen the maritime powers,' if either Sweden or Denmark bad been undone by thofe wars. May it not therefore be truly faid, that a notion of the BALLANCE of Power (in the ftrict fenfe of that phrafe) was created by Trade, and mult continue to be the object more efpecially of trading countries fo long as they would preferve their commerce and their freedom?
Whenever any power in Europe therefore attempts to opprefs another, or betrays a defign of increafing it's own ftrength, by weakening or conquering it's neighbour, other potentates are ready to interpofe; from a quick fenfe, not only of the inconveniencies that muft arife from the incroachments made by fuch a power, but from the jult apprehenfions that this muft prove prejudicial to commerce in general, and to that in feveral nations in particular; who, to prevent that, will not fcruple to take up arms.
Whence it appears, that the ballance of power is not an empty name, or a chimerical thing, but a juft and fignificant expreflion, though a new and figurative one. For the meaning is, the preferving the feveral governments of Europe in their prefent condition, and the preventing any in particular from acquiring fuch a meafure of power, as may be dangerous or fatal to thofe recipiocal interefts before obferved; which as they took rife from, are abfolutely neceffary to the continuance of commerce : for any attempts thereupon muft be felt by every nation that has a thare of trade to preferve. Whence it follows, that it is the intereft of all the powers in Europe to fupport each other's independency, and prevent whatever has the appearance of an Universal monarchy, or the introducing the influence of one court over the greateft part of the reft; becaufe this mult be detrimental to the whole, and injurious to the freedom, learning, arts, manufactures and commerce of Europe in general.

Without urging more on this head, it appears, that peace and good neighbourhood, the entouragement of arts and fciences, and the purfuit of manufaclures and commerce, as they are agreeable to the intereft of every particular ftate, fo they are beft for the whole; and would contribute to render every particular country of Europe infinitely more populous, and the people in all countries much more bappy, than any vain endeavours to aggrandize particular ftates at the expence of others, and the flaughter of human nature.
EXCHANGE. Under the articleArbitration of Exchanges, we have thewed how this practical part of exchange may occafionally conduce to the merchant's intereft in particular, as well as that of the nation in general: this we have done by a few fimple arbitrations, according to the moft concife methods of eperation, which are practifed by the more fkilful and expert negociators of money by exchange. This branch of practical exchange will be continued in a more complex manner throughout this work. And on confulting the article Bills of Exchange, the reader will not only find an ample account of the principal cuftoms and ufages relating thereunto in fome of the chief trading nations of Europe, but likewife the laws of England and Scotland in particular, and thore from the moft approved authorities.
With refpect to the computation of exchanges, and the converting of fterling money into the monies of the principal countries in Europe, and vice verfa, with which we have direat courfes of exchange eftablithed, the reader will find the principles thereof exemplified, with all defirable brevity and perficicuity, under the article ENGLAND, towards the conclufion thereof. There he will find allo our references to fuch other heads, with regard to the fubject of praEtical exchanges, as will, altogether, make a more complete fyifem of this branch of mercantile erudition than is to be met with elfewhere, either in the Englifh or any other language.
Under the article Ballance of Trade, we have confidered the nature of exchange in a political and national light, in order to difonver how far the courfes of exchange between nation and nation, together with the price of bullion gold and filver, and the true fate of the cuftom-houfe accounts, will contribute to give an infight into the particular ballance of trade, and all money tranfactions between one country and another, and enable us to judge likewife how the general ballance fands with all nations.
To exemplify and illuftrate what I have urged under the foregoing heads from reafon and authority, I have again refumed the fubject under the article Britain, or Great-BriTAin, where we have applied thofe general principles before laid down, to the prefent fate of our own kingdom, by hewing how the courfes of exchange at any time may be compared with the chief countries of Europe with which we drive any confiderable commerce; with a view to make the beft judgment we can of the fate of our trade and all money tranfactions, from time to time, by means of a due confideration of faid courfes.
But as the confideration of fubjects in variety of lights tends to a further and more fatisfactory ceclairciffment thereof, we fhall here again touch upon this topic of exchange, it being more natural for the reader, efpecially at firft, to confult this head than thofe others, which we have before intimated; although, upon perufal of what is there faid; I flatter myfelf, that the judicious obfervator will not judge what is before urged any way unnatural, or repugnant to the articles under which the matter is contained.

## Of exchange in a political light.

The relative abundance and fcarcity of fpecie in different countries, forms what is called the courfe of exchange. Exchange is a fixing of the actual and momentary value of money.
Silver, as a metal, has a value like all other merchandizes, and an additional value as it is capable of becoming the fign of other merchandizes. If it was no more than a mere merchandize, it would perhaps lofe much of it's value. Silver, as money, has a value, which the prince in fome refpects can fix, and in others he cannot.
The prince eftablithes a proportion between a quantity of filver as metal, and the fame quantity as money. (2.) He fixes the proportion between the feveral metals made ufe of as money. (3.) He eftablifhes the weight and ftandard of every piece of money. In fine (4.) He gives to every piece that ideal value whereof we have fpoken. We hall call the value of money in thefe four refpedts it's pofitive value, becaufe it may be fixed by law.
The coin of every fate has, befides this, a relative value, as it is compared with the money of other countries. This relative value is eftablifhed by the exchange, and greatly depends on it's pofitive value. It is fixed by the current courfe of commerce, and by the general opinion of the merchants, never by the decrees of the prince; becaufe it is liable to inceffant variations, and depends on the accidental circumftances of trade, the money tranfactions between nations, and the ftate of the public credit, \&sc.

## E X C

The feveral nations in fixing this relative value, are chiefly guided by that which has the greateft quantity of fpecie. If The has as much fpecie as all the others together, it is then moft proper for the others to regulate theirs by her flandard; and this regulation between all the others will pretty nearly agree with the regulation made with this principal nation. In the actual fate of the univerfe, * Holland is the nation we are fpaking of. Let us examine a lijttle the courfe of exchange with relation to her and France for example.

* The Dutch have more eftablifhed courfes of exchange eftablifhed throughout Europe than any other fate, and are a greater medium of exchange negotiations than any other ; they regulate the exchange for almolt all Europe, by a kind of determination among themfelves, in a manner mof agreeable to their own intereft. See the article Holland.
They have in Holland a piece of money called a florin, or a guilder, worth 20 fous, or 40 half fous or gros. But to render our ideas as fimple as poffible, let us imagine that they have not any fuch piece of money in Holland as a florih or guilder, and that they have no other but the gros; a man who Should have 1000 flotins, would bave 40,000 gros, and fo of the reft. Now the exchange with Holland is determined, by knowing how many gros, every piece of money in other countries is worth; and as in France they commonly reckon by a crown of three livres, the exchange makes it neceffary for the French to know how many gros are contained in a crown of three livres. If the courfe of exchange is at 54 , a crown of three livres will be worth 54 gros; if it is at 60 , it will be worth 60 gros. If filver is fcarce in France, a crown of three livres will be worth more gros; if plentiful, it will be worth lefs.
This fcarcity or plenty, from whence refults the mutability of the courfe of exchange, is not the real, but a relative fcarcity or plenty. For example, when France has greater occafion for funds in Holland, than the Dutch of having funds in France, fpecie is faid to be common in France, and fcarce in Holland, and vice verfa.
Let it be fuppofed, that the courfe of exchange between Holland and France is at 54 ; if France and Holland compofed only one city, they would act as the French do, when they give change for a crown: the Frenchman would take three livres out of his pocket, and the Dutchman 54 gros from his. But as there is fome diftance between Paris and Amfterdam, it is neceffary that he who for a French crown of three livres gives 54 gros which he has in Holland, fhould give a bill of exchange for 54 gros, payable in Holland. The 54 gros is not the thing in queftion, but a bill for that fum. Thus, in order to judge of the * fcarcity or plenty of feecie, we muft know if there are in France more bills of 54 gros, drawn upon Holland, than there are crowns drawn upon France. If there are more bills from Holland, than there are from France, fpecie is fcarce in France, and common in Holland ; it then becomes neceffary that the exchange fhould rife, and that the Dutch give for a French crown more than 54 gros ; otherwife the Frenchman will not part with it, and vice verfa.
* There is much fpecie in a place, when there is more fpecie than paper ; there is little, when there is more paper than fpecie.
Thus the various turns in the courfe of exchange form an account of debtor and creditor, which muft be frequently fettled, and which the ftate in debt can no more difcharge by exchange, than an individual can pay a debt by giving change for a piece of filver.
Let it be fuppofed that there are but three ftates in the world, Holland, France and Spain ; the feveral individuals in Spain are indebted to France, to the value of 100,000 marks ${ }^{*}$ of filver ; and that feveral individuals of France owe in Spain 110,000 marks: now, if fome circumftance, both in Spain and France, fhould caufe each fuddenly to withdraw his fpecie, what will then be the courfe of exchange? Thefe two nations will reciprocally acquit each other of an 100,000 marks : but France will ftill owe 10,000 marks to Spain, and the Spaniards will ftill have bills upon France, to the value of 10,000 marks; while France will have none at all upon Spain.
* A mark is a weight of eight ounces.

But if Holland was in a contrary fituation with refpect to France, and in order to ballance their account, muft pay her 10,000 marks, the French would have two ways of paying the Spaniards ; either by giving their creditors in Spain bills for 10,000 marks upon their debtors in Holland, or elfe by fending feccie to the value of 10,000 marks to Spain.
From hence it follows, that when a fate has occafion to remit a fum of money into another country, it is indifferent, in the nature of things, whether fpecie be conveyed thither, or or they take bills of exchange. The advantage or difadvantage of there two methods folely depends on actual circumflances. The French muft enquite which will yield moft gros in Holland, money carried thither in fpecie, or a bill upon Holland for the like fum *.

* With the expence of carriage and infurance dedu\{ed.

When money of the fame flandard and weight in France yields money of the fame ftandard and weight in Holland, it is faid that the exchange is at par. In the actual flate of feccie, which was in 1744, the par was nearly at 54 gros to the French crown of thiee livres. When the exchange is above 54 gros, the French fay it is high; when beneath, they fay it is low.
In order to know the lofs and gain of a ftate, in a particular fituation of exchange, it mult be confidered as debtor and creditor, as buyer and feller. When the exchange is below par, it lofes as debtor, and gains as creditor ; it lofes as buyer, and gains as feller. It is obvious it lofes as debtor: fuppofe, for example, France owes Holland a certain number of gros there are in a crown, the more crowns the bas to pay. On the contrary, if France is creditor, for a certain number. of gros, the lefs number of gros there are in a crown, the more crowns the will receive. The ftate lofes allo as a buyer; for there muft be the fame number of gros, to buy the fame quantity of merchandifes; and while the exchange is low every French crown is worth fewer gros. For the fame reafon the fate gains as a feller: you fell your merchandife in Holland for a certain number of gros; you receive then more French crowns, when for every 50 gros you receive a crown, than you would do if you received only the fame crown for every 54. The contrary to this takes place in the other ftate. If the Dutch are indebted a certain number of crowns to France, they will gain; if they are owing to them, they will lofe; if they fell, they lofe; if they buy, they gain.
Again: when the exchange between France and Holland is below par; for example, if it fould be at 50 inftead of 54 , it fhould follow that France, on fending bills of exchange to Holland for 54,000 , could buy merchandifes only to the value of 50,000 ; and that, on the other hand, the Dutch fending the value of 50,000 to France, might buy 50,000 crowns, which makes a difference of $\frac{8}{64}$; that is, a lofs to France of more than $\frac{1}{7}$; fo that France would be obliged to fend to Holland $\frac{1}{7}$ more in feecie or merchandife than the would do, was the exchange at par. And as the mifchief muft conftantly increafe, becaufe a debt of this kind would bring the exchange ftill lower, France would in the end be ruined. It feems, we fay, as if this fhould certainly follow; and yet it does not, becaufe ftates conftantly lean towards a ballance, in order to preferve their independency. Thus they borrow only in proportion to their ability to pay, and meafure their buying by what they fell; and taking the example from what has been faid, if the exchange falls in France, from 54 to 50 , the Dutch, who buy merchandifes in France to the value of a thoufand crowns, for which they ufed to pay 54,000 gros, would now pay only 50,000 , if the French would confent to it. But the merchandife of France will rife infenfibly, and the profit will be fhared between the French and the Dutch; for when a merchant can gain, he eafily fhares his prefit: there then arifes a communication of profit between the French and the Dutch.
In the fame manner the French, who bought merchandifes of Holland for 54,000 gros, and who, when the exchange was at 54 , paid fur them 1000 crowns, will be obliged to add $f_{t}+$ more in French crowns to buy the fame merchandifes. But the French merchant, being fenfible of the lofs he fuffers, will take up lefs of the merchandife of Holland. The French and the Dutch merchant will then be both lofers, the flate will infenfibly fall into a ballance, and the lowering of the exchange will not be attended with thefe inconveniencies which he had reaton to fear.
A merchant may fend his fock into a foreign country, when the exchange is below par, without injuring bis fortune; becaufe when it returns, be recovers what he had loft; but a prince, who fends only fpecie into a foreign country, which never can return, is always a lofer.
When the merchants have great dealings in any country, the exchange there infallibly rifes. This proceeds from their entering into many engagements, buying great quantities of merchandifes, and drawing upon foreign countries to pay for them.
A prince may amafs great wealth in his dominions, and yet fpecie may be really fcarce and relatively common; for inftance, a ftate is indebted for many mercbandifes to a foreign country, the exchange will be low, though feecie be fcarce.
The exchange of all places contantly tends to a certain proportion, and that in the very nature of things. If the courfe of exchange from Ireland to England is below par, that of Ireland to Holland will be fill lower ; that is, in a compound ratio of that of Ireland to England, and that of England to Holland : for a Dutch merchant, who can have his fpecie indirectly from Ireland, by the way of England, will not chufe to pay dearer by having it the direct way.
This, we fay, ought naturally to be the cafe; but, however, it is not exactly fo ; there are always circumftances which vary thefe things; and the different profit of drawing by one place, or of drawing by another, conftitutes the particulaf art and dexterity of the foreng bankers, the nature of which

## E X C

I have already explained, under the article Arbitration of Exchanges, and hall illuftrate the fame by a great variety of examples more, under the heads of all the capital ftates and kingdoms throughout Europe. See alfo the article Bankers, and the article England, the latter part of it.
When a fate varies it's feecie ; when France, for inftance, gives the name of fix livres, or two crowns, to what was before called three livres or one crown ; this new denomination, which adds nothing real to the crown, ought not to procure a fingle gros more from Holland by the exchange. The French ought only to have, for the two new crowns, the fame number of gros, which they before received for the old one. If this does not happen, it muft not be imputed as an effect of the regulation itfelf, but to the novelty and fuddennefs of the affair. The exchange adheres to what is already eftablifhed, and is not altered 'till after a certain time.
When a ftate, inftead of only raifing the fpecie by a law, cails it in, in order to diminifh it's fize, it frequently happens that, during the time taken up in it's pafing again through the mint, there are two kinds of money; the latge, which is the old, and the fmall, which is the new; and as the large is cried down, as not to be received as money, and bills of exchange muft confequently be paid in the new, one would imagine then that the exchange fhould be regulated by the new. If, for example, in France the antient crown of three livres, being worth in Holland 60 gros, was reduced one half, the new crown ought to be valued only at 30 . On the other hand, it feems as if the exchange ought to be regulated by the old coin ; becaufe the banker, who has fpeçie, and receives bills, is obliged to carry the old coin to the mint, in order to change it for the new; by which he mult be a lofer. The exchange then ought to be fixed between the value of the old coin and that of the new. The value of the old is decreafed, if we may call it fo, both becaufe there is already fome of the new in trade, and becaufe the foreign bankers cannot keep up to the rigour of the law; having an intereft in letting loofe the old coin from their coffers, and being even fometimes forced to make payments with it.
Again, the value of the new fpecie muft rife; becaufe the banker, having this, finds himfelf in a fituation, in which, as we fhall prove, he will reap great advantage by procuring the old. The exchange fhould then be fixed, as we have faid, between the old and the new coin. For then the bankers find it for their intereft to fend the old out of the kingdom; becaufe, by this means, they procure the fame advantage as they could receive from a regular exchange of the old fpecie, that is a great many gros in Holland, and, in return, a regular exchange a little lower, between the old and the new fpecie, which would bring many crowns to France.
Suppofe that three livres of the old French crown yield by the actual exchange 45 gros, and that, by fending this fame crown to Holland, they receive 60 : but, with a bill of 45 gros, they procure a crown of three livers in France, which being fent in the old feecie to Holland, ftill yields 60 gros: thus all the old fpecie would be fent out of the kingdom, and the bankers would run away with the whole profit.
To remedy this, new meafures muft be taken. The government, which coined the new fpecie, would itfelf be obliged to fend great quantities of the old, to the nation which regulates the exchange; and, by thus gaining credit there, raife the exchange pretty nearly to as many gros for a crown of three livres, as they could receive for fending the old crown of three livres out of the country: we fay, to nearly the fame; for, while the profits are fmall, the bankers will not be tempted to fend it abroad, becaule of the expence of carriage, and the danger of confifcations.
It is fit that we fhould give a very clear idea of this. Monfieur Bernard, or any other banker in France, employed by the ftate; propofes bills upon Holland, and gives them at one, two, or three gros higher than the actual exchange; he has made a provifion, in a foreign country, by means of the old fpecie, which he has continually been fending thither; and thus he has raifed the exchange to the point we have jult mentioned. In the mean time, by difpofting of his bills, he feizes on all the new fpecie, and obliges the other bankers, who have payments to make, to carry their old fpecie to the mint; and, as he infenfibly obtains all the feccie, he obliges the other bankers to give him bills of exchange at a very high price. By this means he profits in the end, in a great meafure, for the lofs he fuftained at the beginning.
It is evident, that, during thefe tranfactions, the ftate muft be in a dangerous crifis. Specie muft become extremely farce, I. Becaufe much the greateft part is cried down. 2. Becaufe ${ }^{2}$ part will be fent into foreign countries. 3. Becaufe every one will lay it up, as not being willing to give that profit to the prince, which he hopes to receive himfelf. It is dangerous to do it lowly; and dangerous alfo, to do it too precipitately. If the fuppofed gain be immoderate, the inconveniences increafe in proportion.
From what has ben faid, we fee, that, when the exchange is lower than the feccie, a profit may be made by fending it abroad; for the fame reafon, when it is higher than the fpecie, there is a profit in caufing it to return
pecie, ther
Vol.

## E X C

But there is a cafe in which profit may be made by fending the fpecie out of the kingdom, when the exchange is at par 3 that is, by fending it into a foreign country to be coined over again. When it returns, an advantage may be made of it, whether it be circulated in the country, or paid for foreign bills.
Suppofe a company has been erefled in a ftate, with a prodigious ftock, and this ftock has a few months been raifed 20 or 25 times above the original purchafe: fuppofe again, the fame flate eftablifhed a bank, whofe bills were to perform the office of feecie, while the numerary value of thefe bills was prodigious, in order to anfwer to the numerary value of the ftocks (this was Mr Law's fyftem in France) it would follow, from the nature of things, that the ftocks and thefe bills would vanifh in the rame manner as they arofe. Stocks cannot be fuddenly raifed 20 or 25 times above their original value, without giving a number of people the means of pro curing immenfe riches in paper: every one would feek to fecure his fortune, and as the exchange offers the moft eafy way of it from home, or conveying it whither one pleafes, people would inceflantly remit a part of their effects to the nation that regulates the exchange. A project for making continual remittances into a foreign country, muft lower the exchange.
Let us fuppofe, that at the time of Mr Law's fyftem in France, in proportion to the ftandard and weight of the filver coin, the exchange was fixed at 44 gros Dutch, to the French crown; when a vaft quantity of paper became money, they were unwilling to give more than 39 gros for a crown, and afterwards $38,37, \& \mathrm{c}$. This proceeded fo far, that after a while they would give but 8 gros, and at laft there was no exchange ar all.
The exchange ought, in this cafe, to have regulated the proportion between the fpecie and the paper of France. It is fuppoled, that, by the weight and ftandard of the filver, the crown of three livres in filver was worth 40 gros, and that, the exchange being made in paper, the crown of three livres in paper was worth only 8 gros, the difference was $\frac{4}{3}$. The crown of three livres in paper was then worth $\frac{4}{3}$ lefs than the crown of 3 livres in filver.
Although it could be proved, that the courfe of exchange alone is not the infallible criterion ${ }^{*}$, whereby to judge occafionally of the particular Ballance of Trade, only between one country and another; yet it is, perhaps, the moft certain characteriftic, whereby to judge of the ballance of money-traufactions in general between nation and nation; and that is the fame thing in effect; commercial tranfactions being comprehended in all money-tranfactions, let them be upon whatever accidental or temporary account they will.

* How fat the price of exchange may be helpfal to give us an infight into the flate of trade between one nation and another. See the article Ballance of Trade, and Britain, i.e. [Great-Britain.]
But if the nature and courfes of exchange be confidered only as one auxiliary medium of reafoning, in conjunction with other effential confiderations, in order to make a true judgment of the ftate of money concerns between natiors, and where the ballance of the account lies, it well deferves the ftudy of the rulers of a trading kingdom: and therefore it may be occafionally of important utility, to view this topic in every light, wherein it may, and has been ufefully confidered.

Exchange has been fhortly defined by fome, to be nothing but a compenfation of value from one country to another.
II.

If our commerce and difburlements in foreign countries are equal to their commerce and difburfements in ours, the compenfation is equal ; in which cafe the ballance of that trade, and money difburfements, are faid to be equal, and the exchange at par; that is to fay, one who gives money in the one country fhall receive as much from the other in weight and ftandard. Thus, if the Frenchman for each of his crowns that are now current for three livres, which he gives at Paris in new fpecie, receives $54 \frac{7}{3}$ gros, current money, or 52 gros of bank money, in Holland, and 29 d. 74.400 fterling of London; and if the Hollander, for bis $54 \frac{1}{2 \frac{1}{2}}$ gros, current money, or for his 52 gros of bank money, receives a crown of three livres at Paris, then they both receive precifely as much as they give; if they receive more, they gain; if lefs they lofe.

## Remarks.

Two forts of money are, as it were, the foul and mover of commerce, the one real, and the other ideal. The real money confifts of gold and filver; it was introduced for the facility of commerce; it made fale fucceed to barter, by becoming the price and meafure of whatever enters into commerce among men. But, as the incumbrance and difficulty of tranfporting thefe fecies was fill an impediment to commerce, recourfe was had to letters, or bills of exchange, from one country or place upon another; and, in order to make the negociations and computations the eafier, money

## E X C

of account, or exchange, was imagined, as pounds, fhillings, and pence fterling, in England; livres, fols, and crowns in France ; deniers, fols, and livres de gros, in Holland, \&c. This laft fort of imaginary, or ideal money, which confifts in a certain number of pieces of real money, may be called political money.
Thefe two forts of money furnith two forts of comparifons, equalities, or proportions; I. Between the weight, ftandard, and value of the real monies of one country, and the weight, ftandard, and value of the real monies of another country : this fort of equality we fhall call the real par.
The real par, or that exact equality between the current monies, is the moft effential point, and yet the leaft known, in the commerce of exchange : it is, likewife, the moft fixed point whence we can fet out ; for the weight and ftandard of coins are every-where more fteady than their numerical value.
The fecond equality which we are to confider, is between the monies of exchange of one country and thofe of another, which admit of frequent variations as to the quantity of the one which muft be given to equal the other. Thefe variations, which proceed from the arbitrary value which fovereigns affix to the real money in their dominions, and from the plenty or fcarcity of bills of exchange of one place upon another, make precifely what we call exchanges. Their equality confifts in finding the proportion of one exchange to two or more exchanges given : that is what we fhall call the political par.
This par is, therefore, an exact equality between the values of exchange of different markets, compared with one another; it is what ought to be confidered by the trader as a moft important object of his fudy *. He ought to trace out the difference of thefe exchanges, make exact and frequent comparifons of them, examine every day what is the refult of the changes laid together. It is from this nice and particular examination that he difcovers the paths that he ought to purfue, and the circuits which he may, or which he ougbt to make, from place to place, that he may be capable of improving every advantage which offers to him from each exchange in particular, and to fhun making remittances directly upon any trading city whofe exchange fhall not appear favourable to him.

* Ferthe reafons hereof fee the article Arbitration of Exchanges, and the article England, in the latter part of it. See alfo the articles France, Holland, and all the chief trading fates in Europe, under their refpective denominations.
Here then offer to our confideration two forts of parities, which muft not be confounded, the Real Par, and the Political. Par. No body has hitherto treated at all fatiffactorily of the real par: in order, therefore, to do that, in a manner the moft accurate and ufeful, we mult be perfeelly acquainted with the weights, ftandards, and values of all the real coins of every fate in Europe. We muft be above the difficulty of calculations which this delicate fubject requires, fo that none of them may give any obftruction to our profitable views and fpeculations.
profitable views and fpeculations. moft precifion, the moft exact proportion that is poffible between the weights with which gold and filver are weighed in our own country, and thofe with which they are weighed in all others; for, upon our exact knowlege of the proportion between all thofe different weights, the compatifon of the money of one fate with that of another abfolutely depends. In the ordinary books of commerce, or of foreign exchange, made up by arithmeticians, we find the proportions of weights and meafures; but there are proportions between the weights with which merchandizes are weighed only, and thefe are commonly inaccurately given: befides that thefe weights are not every-where the fame with which gold and filver are weighed, the importance of thofe metals requires much more exactnefs and precifion than is either required, or really befowed, on merchandizes in general : thus one who was to follow thofe proportions would be egregioufly miltaken.
As to the manner of finding the Real Par between the real coins of two fates, or the Political Par between the money of exchange of two or more ftates, we fhall give prefently a general formulary, by the proper application whereof all thofe parities may be difcovered ; it fuppofes an exact knowlege of all the real coins, of their weights, ftandards, and values in every ftate.
III.

If a nation fupplies us with more than it takes from us, or if we difburfe more money therein than fuch fate does among us, we muft neceffarily pay that overplus, which is the batlance of trade and all money tranfactions between the two nations, either in money or bullion.
In order to pay that ballance due to the foreign country, the demand for their money, or for their bills of exchange, becomes greater among us than their quantity: this is what saifes their price, and lowers the exchange below par*, becaufe, in that cafe, the Dutch give to the French, we will fuppofe, lefis than $54 \frac{2}{23}$ gros of current money, or than 52 gros of bank money, and the Engliih lefs than $29 \frac{14}{1050}$ pence
fterling, for the French exchange crown. In that cafe the French receive lefs, or they give more money than they have received; which makes the price of exchange difadvantageous to France; it falls below par, or it's true value. Thus exchange has become a traffic; and this difference of the par to what is given, makes the courfe of exchange. In the example before us, it Thews that France is indebted to her foreign neighbour, and, confequently, that the commerce which is carried on with that nation is burdenfome and expenfive to her.

* We fay the exchange is lowered, when it falls below par ; many people fay it rifes, becaufe they mean, in the prefent cafe, that a greater quantity of French livres, or crowns, are to be given for a certain quantity of foreign money.
In like manner, every time that France fhall fupply a foreign country with more than it receives from thence, that country will be indebted to France, and the exchange will be to the difadvantage of France; becaufe the need which that country will have of French bills of exchange, in order to pay that ballance, will increafe it's demand for fuch bills of exchange; and, in that cafe, they will be obliged to give France more than they really owe them, which makes the exchange to rife above par ; becaufe, for the French exchange crown, the Dutch give the French more than 54 gros current money, or more than 52 gros of bank money, and the Englifh more than 29 ritio pence flerling: in that cafe the exchange is to the advantage of France.
According to thefe principles, the exchange, which is above par, is advantageous to France, and fhews that the trade and money tranfactions which they carry on with Holland, is favourable to them, fince the ballance is on their fide.
And the exchange which is below par is difadvantageous to France, and hews that their trade is burdenfome and expenfive to that nation, fince they are indebted to the foreigners: whence the following conclufions feem natural enough to be drawn in the general.

1. That exchange fhews which of two nations is owing the other, and, confequently, that it is the true barometer of commerce and money-difburfements between them.
2. That the nation which is indebted bas the difadvantage in commerce and money-difurfements, and that the one to which a ballance is owing has the advantage.
And, 3. That the advantageous commerce, \&c. neceflarily draws fpecie, or bullion, into the fate which has the advantage, or to which the ballance is owing; and that they are exported out of the ftate which has the difadvantage, or which is indebted.
There are, however, cafes which may occafion fome exception to this rule. There happen, at fome particular times, extraordinary movements in the courfe of exchange. Thofe which are owing to fome particular turn of trade, are feldom of any continuance, nor confiderably felt by traders: things fpeedily return into their natural fituation, and the ballance leans fometimes to one fide, fometimes to another ; but it is quite otherwife, when thofe movements are occafioned by caufes that are fuperior to, and independent of, commerce. For example, a recoinage of money, which brings too much advantage to a prince, and, confequently, too much lofs to bis fubjects, a chamber of juftice, a vifa in foreign nations, induce people to fend their money abroad, in order to fave a part of their lofs; for, in thefe cafes, though a nation may not be debtors, the exchange will fall at once.
It is the fame cafe when a flate, for fome political confideration, is obliged to pay great fums in foreign countries, without having received a compenfation; then that export is the fall of exchange, as is the cafe between England and Holland, when money is remitted to pay armies upon the continent, or large fubfidies to foreign princes, through the medium of Holland, or for the payment of intereft of fuch part of our national debts as are due to the Dutch, or others which pars through Dutch hands, \&cc. and falls of the exchange which are occafioned by thefe caules, are generally of longer continuance than thofe occafioned in the way of mere commerce. In fuch cafes, before engaging in exchange, it ought to be nicely ftudied, and narrowly examined; and, if it be found not capable of affording fome profitable returns, it is much better to tranfport money in kind than to ruin or prejudice trade.
trade.
Upon the whole, it feems that they who attentively confider the daily courfe of exchange, by obferving which of two nations is indebted to the other, or which has the advantage or difadvantage in trade and money difburfements, will alfo difcern what is moft eligible to be done for the fupporting that exchange, or for the benefiting trade. This method of knowing the ballance of trade and money negociations between nations, is infinitely more certain and expeditious than that of examining the import and export of merchandize; for this enables the legiflature daily to take fuch meafures, as may either maintain and preferve the advantage, if we have it, or recover it, if we have it not: whereas that which refults from the examination of commodities which are imported or exported, can only be known a long time after; and then it is out of time frequcutly to put thofe meafures in
execution

## E X C

execution which may be requifte: perhaps it is neceflary to exe ufe of both the one and the other. See the articles Exportation and Importation.
A very ingenious French author, who intitles his work Re. flections politique fur les finances \& les commerce de France, applying his fkill in the foreign exchange to difcover how detrimental to France were thofe rifes and fallis of money which they formerly practifed, and what effects they had upon trade: we apprehend his argument may deferve our attention, becaufe it opens a new fcene of reafoning to thofe who have never confidered things in the fame light. The period from which he reckons, is from the general recoinage of the money, which was made by virtue of the edict of May, 1709, to the month of April, 1717, when the bank notes commenced, paffing over the period of Mr Law's fcheme, and refumes his enquiry at the new coinage of the specie, by the edict of Auguft, 1723, and carries the fame down to the end of the year 1734 . In thefe two interval of time, he fhews what effects both the rifing and falling of the money in France had upón exchange, and confequently upon the trade of that nation.

The ftate of money and exchange in France, in 1709, before and at the end of the recoinage.

The quantity of gold and filver bullion, and, among others, of piaftres, which came into the ports of France by their maritime trade, was what occafioned the recoinage, according to the edict of April 1709 , of lewidors of 32 to the mark, fixed at 16 livres io fols, and of crowns of eight to the mark, at four livres eight fols.
Before the edif, the current money confifted of lewidors of $36 \frac{1}{4}$ to the mark, and of crowns of nine to the mark. The arret of council, dated November 20, regiftered December 10, 1708, fixes this old lewidor, againft the ift of January, 1709, at 12 livres 15 fols each, and the crown at three livres eight fols. The proportion between gold and filver was then 15 to one; and, by the rates which the edict of April fets upon the new pieces of money which it orders to be coined, this proportion is ftill 15 to one. But the refolution of this edict did not long continue; the multiplicity of reformations and coinages of more money having produced in the pubic a great number of pieces of different ftandards, it was thought of confequence to remedy the fame by a new coinage, which was appointed by the edict of May, 1709, regiftered the 14 th.
This edict ordains, that the lewidores coined by virtue of the edict of April preceding, of 32 to the mark, fhall pafs for 20 ivres, inftead of 16, ro fols, and the crowns of eight to the mark for five livres, inftead of four livres eight fols.
This changed the regular proportion between gold and filver, which was 15 , into 16 ; which raifed the price of gold, and lowered that of filver.
The new fpecie, which were ordered to be coined by this edict of May, were lewidores of 30 to the mark, weighing more than the preceding ones, and yet fixed only at 20 livres; and crowns of eight to the mark, eftimated at five livres. The effect of which was, to lower the proportion of gold a fix teenth, and reftore the proportion of 15 to one between gold and filver, which the raifing the feccie by the edict of April had changed. See the article Coin.
There numerical values of the lewidor at 20 livres, and of the crown at five livres, continued all the reft of that year 1709 , and during the following years $1710,1711,1712$, to the firf day of December, 1713: thus they were fixed and conftant for upwards of four years and a half.
On the 28th of January 17 cg , the exchange of Paris upon Amfterdam was at 87 gros for our crown of exchange, which is always three French livres; and on the ift of February, it was at 88, and the French crown of 9 to the mark paffed for three livres eight fols.
This is the fate which our monies and exchange were in at the beginning of 1709: the queftion is, whether this exchange was advantageous to France, or the contrary? In order to find out this, we muft know what was the real par of our crown of exchange at that time, againft the gros, in Holland, with refpect to the ftandard, weight, and numerical value of the coins which were current in France and Holland, in January and February 1709 . This is what the folution of the following problem will give us with the utmoft exactnefs.
The crowns which were current in France were at 10 pennyweights 22 grains of flandard, at the rate of nine to the mark, and paffed for three livres eight fols a piece.
The crowns or rixdollars of ftandard Holland, at io pennyweights five grains of fiver, at the rate of $8 \frac{8}{\mathrm{r} 0}$ to the mark, paffed for 100 gros of current money, or 96 of bank money.
What was the par of the French crown of exchange, which is always three livres, againt gros, according to thefe two hypothefes?

## INSTRUCTION.

For the reafon of thefe operations, fee the article Arbitration of Exchanges, alfo that of England, the latter part of it.
According to the firft calculation above, the par required was $84 z^{\frac{7}{5}}$ gros current money, fuppofing, as all who have treated of foreign exchange do, that the rixdollar is taken, at the bank of Amfterdam, only for 48 fols, or 96 gros, of bank money; and, by the ftatutes of that city for exchange, made the 1 ith of December, 1643, part 3. b. I. tit. 8 and 9. all bills of exchange, to the fum of 300 florins, and upwards, muft be paid in bank money, under pain of forfeiting 25 florins, and of holding the payment invalid, whatever condition, claufes, and ftipulations they may contain, or may be inferted into them by the accepter; we muft have recourfe to the par in gros of bank money, which was $84 \frac{3}{\frac{3}{2}}$, according to the fecond preceding calculation. This par of bank money is what we fhall follow on the prefent occafion.

Examination of the French courfe of exchange, from the int of January, 1709 , to the end of September, 1713.
According to the foregoing calculations, he who gave three Iivres at Paris, and who received $88 \frac{\pi}{2} \frac{7}{5}$ gros of current Dutch money, or $84 \frac{3}{4}$ gros of bank money, received weight for weight, and ftandard for ftandard, precifely as much as he gave if he received more, he was a gainer; if lefs, he was a lofer
In January 1709 , the exchange was at 87 gros, and, on the Ift of February, at 88 ; that is to fay, $2 \frac{1}{4}$ and $3^{x}$ gros above the par $84 \frac{3}{4}$ of bank money: that was from $2 \frac{73}{20}$ to $3 \frac{80}{100}$ per cent. which the French received more than they gave: which fhews that the trade then carried on by the French was to their advantage from $2 \frac{65}{100}$ to $3 \frac{83}{100}$ per cent. bank money.

## The effect of lowering the fpecie in France.

The arret of council, dated February 19, 1709, regiftered the 4th of March, and publifhed the 26th, reduces the old lewidor to 12 livres 10 lols, and the old crown to three livres feven fols; this is a fall of five fols per lewis, and of one fol per crown
On the 8 th of March the exchange was at 85 gros; and, as this fall of the coin brought the par to 86 gros bank money, the exchange was one gros below it, and to the difadvantage of France $1 \frac{7}{43}$ per cent. Thus this fall made France lofe not only the advantage which they had before, from $2 \frac{65}{105}$ to 3 ${ }_{8}^{8,3} \frac{3}{102}$ per cent. but alfo $I^{\frac{7}{3}}$ per cent. more, which makes a difference in prejudice to France between 4 and 5 per cent. The edict of April, regiftered the 22d, in confequence of which there was a new coinage of lewidors, of 32 to the mark, and of crowns, of 9 to the mark, gives thefe pieces the fame currency with thofe that were coined by virtue of the arret of February 19; but it fixes the mark of thofe crowns carried to the mint at 32 livres 10 fols. This was as if they had been received upon the foot of 3 livres, 12 fols, $2 \frac{2}{3}$ deniers each, which produced a rife of 5 fols per crown ; but the execution of this edict was of no great extent; it was interrupted by that of May following. Thus the current value of thefe fpecies, according to the arret of February 19, publifhed the 26th of May, Alll took place, and confequently, the par was 86 in bank money.
On April 25, 1709, the exchange was at 84 gros: it was, therefore, a gios below par, which ftill caufed a lofs to France of $2 \frac{12}{1} \frac{2}{3}$ per cent.

## E X C

## E X C

The edia of May following, regiftered the 14th, and publifhed the 18 th in the morning, orders this crown of 9 to the mark to be received in the offices and royal receipts, at the rate of 3 livres 10 fols, and the mark in the mints at 32 livres io fols.

The rife of gold in proportion of $\frac{x}{5}$, and of filver $\frac{2}{8}$. This edict orders a new coinage of lewidors, of 30 to the mark, fixed at 20 lives, and of crowns of 8 to the mark, at 5 livres. It raifes the lewidor of $3^{2}$ to the mark, which was at 16 livers 10 fols, to 20 lives, or the new lewidor; and the crown of 8 to the mark to 5 lives; inftead of 4 lives 8 fols; thereby it advanced the price of the mark of coined gold to 640 lives, and that of filver to 40 lives; and, by fixing the mark of the old lewidors at 487 livres ro fols, it leaves between the old goid and the new a difference of 152 livies ro rols, or of $3^{\frac{1}{2} \frac{2}{3}}$ per cent. and, between the old filver and the new, a difference of 7 livres io fols, or of $23 \frac{7}{\mathrm{Y} 3}$ per cent.
There two differences are not equal, as they ought to have been; and this inequality was a diforder in the numerical value affixed to thofe fpecies. This great difproportion between the price of thofe old fpecies and that of the new, is an exception to the general rule refulting from the principles before laid down; which difference mult needs have occafioned the old fpecies to be fought afier, and tranfported into foreign countries; whence, after having metted them down, and recoined them into new ones, they were returned to France, which always makes the exchange fall to their difadvantage; and, in that cafe, foreigners gain thereby a good part of the profit which would have fallen to the king. This is a real lofs to the ftate; which muft be undertood in the fequel, every time we have occafion to ufe the fame reafoning. It is true, the edich of May, by fixing at 20 livres the new lewidors of 30 to the mark, which it orders to be coined, reduces the mark of thefe new lewidores to 600 livres; which reflored the proportion of 15 to $s$ between gold and filver, and left between the old gold and the new, only a difference of 112 livres 10 fols, or of $23 \frac{\mathrm{r}}{3}$ per cent. as is that of the old filver to the new; but equalling this pernicious difference is far from taking it away: confequently, the diforder of a heavy and light money ftull fubfifts.
It is no way diffecult to apprebend that thefe forts of operations cannot be favourable to cormmerce, and that this rifing the proportion of gold $\frac{x}{3}$, and of filver $\frac{x}{5}$, neither was, nor poffily could, prove a means of faving the flate, as the author of the Effai politique fur le commerce fays in his book.
This edict and arret of May 14, publifhed the 20th, proportions the value of the old fpecie near to an equality with that of the new, by fettling the old crown of 9 to the mark at 3 lives ro fols; which reduces the par to $82 \frac{1}{3}$ gros bank money. On the 25 th of the fame month of May, the exchange was at $84 \frac{1}{2}$ gros: this was $2 \frac{1}{6}$ above par, and, confequently, to the profit of France $2 \frac{3}{3} \frac{1}{3}$ per cent. which fhews the neceffity there was of raifing the old fpecies, in order to proportion them to the new, or to lower the new ones, to adjuft them to the proportion of the old.
The arret of June 4,1709 , publifhed the 7 th, brings the old fpecie near to an equal value with the new, by fixing the crown at 3 livres 12 fols; but the arret of the 25 th of the fame month, publinhed the ift of July, reduces it to 3 liver so fols. Thofe of July 20, and Auguft 13, confirm this rate. On the ift of October they are ftill reduced to 3 livres 7 fols, and they are to be no more current, nor taken in payments, againft the Ift of January, 1710, according to the arrets of December 7 and 28, anno 1709. Thefe are alterations of money which are unfavourable to the exchange of France.
This exchange was, on the I2th of July, at 86 gros; that was, $3 \frac{2}{3}$ above the par, $82 \frac{2}{3}$ bank money, which make; 4 $\frac{45}{855}$ per cent. in the favour of France: the mark, however, of thefe crowns was fill received at the mints upon the foot of 32 livres 10 fols, which was the fame thing as if thefe crowns, had been received at the rate of 3 livres 12 fols a piece; at this rate the par was $80 \frac{1}{25}$ gros of bank money: and the exchange, during all the reft of that year 1709 , kept between 86 and $83 \frac{1}{2}$. It was therefore fill above par from $5 \frac{24}{2}$, to $3 \frac{23}{\frac{2}{5}}$ gros; which brought an advantage to
 all thofe variations that happened to the old fpecie.
Thofe alterations in the fpecie of France extremely embarraffed it's trade; whereby the revenues of the fate, and of every private perfon, mult fuffer, which demonitrates the advantage of keeping the coin fixed and invariable.

## A n n o 1710.

On the ift day of January, this year 1710, the old pieces were cried down; they were no longer current by virtue of the arrets of his majefty's councils of ftate, dated December 7 and 28, 1709 : they were only received in the offices, and in payment of the king's revenue, at the rate of I 3 livres io fols the lewidor, and of 3 livres 13 fols the crown. In the mean time, thefe fame arrets order the fpecies and gold and
filvet bullion, which fhall be carried to the mints without mint-bills, to be paid there upon the foot of 508 livres 55 fols the mark of old lewidors, of Spaniih piftoles, and gold leopolds of Lorrain; and of 33 livres, 18 fols, 4 deniers the mark of crowns, piafters, and filver leopolds of Lorrain: which was the fame thing as if thofe crowns had been received at the mint upon the foot of 3 livres, 15 fols, 4 deniers piece: this is manifeft.

The raifing of the old fpecie.
This rife of the old fpecie brings again their rate near to that fixed for the new; it reduces their par to $76 \frac{8}{708}$ gros bank money, the crown being reckoned at 3 livres is fols, as above: now the courfe of exchange, during this year 17 mo , was at thefe rates, $80,80 \frac{3}{4}, 8 \mathrm{I}$, and $8 \mathrm{I} \frac{1}{4}$; that is to fay, it was between $3 \frac{18}{100}$ and $4 \frac{41}{50 \pi}$ gros above par, and between $4 \frac{14}{108}$ and $5{ }^{73}{ }^{73}$ per cent. to the advantage of France: which thews very plainly the neceffity of abolifhing the difference that is ftill fubfifting between the old fpecie and the new, whereby none make any profit but the king, and whom the French call Billoneurs, or thofe who carry on an illicit trade of buying and felling money, melting it down; and exporting bullion, \&c.

## The lowering of the old fpecie.

The declaration of October 7,1710 , regiftered in parliament the 14th, and in the court of mint the 22 d of the fame month, reftored the currency of the old fipecie upon the foot of 13 livres the lewis, and of 3 lives rofols the crown piece, and the mark of thofe crowns at 32 lives 10 fols; this is at the rate of 3 livies 12 fols a piece. The fall of 5 fols per crown reftores the par of the French exchange crown to $82 \frac{1}{3}$ gros bank money. Now on the 16 th of November The exchange was at 81 : this was $1 \frac{1}{3}$ gros below par, or
 the old fpecie fet France upon an advantage between $4 \frac{1}{1 \quad 1}$ and $5{ }^{7}{ }^{3} \frac{1}{0}$ per cent. and their reftoration made France lofe $1 \frac{0}{100}$ per cent. This makes a difference in disfavour of France of $5 \frac{72}{100}$ and $7 \frac{38}{100}$ per cent. the mean whereof was 6 fist per cent.

## AnNo ifir.

During the ten firft months of 1711 , when things remained in this fituation, the exchange was at $77^{1}, 77,74,74 \frac{1}{4}$, $71 \frac{3}{4}, 71 \frac{1}{4}$, and 72. Now, the old crown being reckoned at 3 livres 12 fols, the par of the crown of exchange was $80 \frac{1}{25}$ gros of bank money: the exchange was, therefore, from $27 \frac{70}{105}$ to 8 T 40 gros below par, which caufed a lofs to France from $3 \frac{48}{105}$ to 10 per cent.
It is therefore plain, that the crying down of thofe old fpecies had been advantageous to France, and that their reftoration, at the rate fo difproportioned to the new, as that upon the foot whereof the above declaration reftored them, makes France lofe not only the adyantage they had during the fuppreffion, but it lays the' nation under a prodigious difidvantage.
A year paffed before the French came to be fenfible of this diforder, but at length it was fenfibly felt. As an effectual remedy for it, there was a neceffity either to fupprefs the currency of thofe old fpecies altogether, or raife their value in proportion to that of the new; or elfe lower the value of the new, fo as to bring them near to a level with the old: but neither of thefe means would have fatisfied the exigencies of the ftate at that time. The next beft method was therefore taken, namely, to diminifh the evil, and redrefs it in part, by giving thofe old fpecies a value nearer to that of the new.

## The raifing of the old fpecie.

This was one by the king's declaration of October 24, 1711 , regiftered the 27 th, and publifhed the 2gth; which fixes the mark of the old lewidores at 56 l liveres, and that of the old crowns at 37 livres 8 fols: this was as if they had been received at the rate of 4 livres 3 fols a piece.
This rife of the old fpecie reduced the par of their crown of exchange to be $69 \frac{44}{700}$ gros bank money. Now the very day after the publifhing of this declaration, that is to fay, the $3^{\text {oth }}$ of OAtober, the exchange was at $71 \frac{1}{4}$, on the 5 th of November at $75 \frac{1}{2}$, on the 12 th at $71 \frac{3}{4}$, on the 16 th at 71 , on the 27 th at $71 \frac{1}{4}$, and on the 3 oth of December at $71 \frac{1}{2}$. It was therefore between $2 \frac{21}{100}$, and $1 \frac{3}{810 \%}$ above par; which made from $3 \frac{3}{1} \frac{3}{1} \overline{8}$, to $2 \frac{2}{4}$ per cent. in the favour of France; and, on the 5 th of November; the advantage was $8 \frac{7}{7 \sigma 0}$ per cent. This declaration therefore made France recover all the lofs which they had fuftained, of between $3 . \frac{48}{85}$ and io per cent. and $3 \frac{82}{102}$ and $2 \frac{1}{4}$ per cent. befides as abovefaid: which brought about a difference, to the benefit of France, of between $6 \frac{78}{700}$, and $12 \frac{1}{4}$ per cent. This proves, that to raife the old 㐌ecies, in order to proportion their value to the new, was a good expedient.

ANNO 1712.
According to the declaration of the 24th of October 1711, the mark of lewidors, of Spanifh pittoles, and of gold leo-

## E X C

polds of Lorrain is reduced, on the ift of January in this year 1712 , to 540 livres; and that of the old crowns, piafters, and filver leopolds of Lorrain, to 36 livres: this was as if thofe crowns hiad been received upon the foot of 4 livres each. And, with a view to make them circulate, this declaration advertifed, that they were to be lowered againft the int of February following, but, as they were not carried to the mints, where they were expeAed, this fall was feveral times prorogued. The arret of council, dated November 29, gives notice of the laft prorogation, and that the lowering was to take effect on the ift of January 1713 .

## The lowering of the old feecie.

That old crown of 9 to the mark, which was received before in the mints upon the foot of 4 livres 3 fols, being now only upon the foot of 4 livres, is lowered 3 fols; and by this procedure, which fettles a great difference between their value and that of the new, the par upon Amfterdam is brought to $72 \frac{1}{25}$ gros of bank money, and that upon London to $40 \frac{5}{8} \mathrm{~d}$. fterling.
During the eleven firft months of this year 1712, the exchange of Paris upon Amfterdam was about thefe rates 7 I , $70 \frac{3}{4}, 70 \frac{1}{2}, 70 \frac{1}{4}, 70,69 \frac{3}{3}$, and $69 \frac{1}{2}$; all of them below par between $\frac{1}{2} \frac{1}{2}$, and $2 \frac{54}{50}$ gros; which made our trade fuffer between 2 i8x and 3 soi per cent. If to this lofs we add the advantage we had at the end of 1711, which was from $3^{\frac{32}{00}}$ to $2 \frac{1}{4}$ per cent. we fhall fee that this lowering of the old fpecies, widening the difference between their value and that of the new, inftead of bringing them nearer to an equality, occafioned a lofs to France of $5 \frac{4}{100}$, and $5 \frac{77}{10}$ per cent. Thus to lower the old fpecies, fo as to widen the difference between their value and that of the new, is to increafe the difproportion, and confequently a very bad expedient.
The exchange between Paris and London was, on the 22d of November 1712, at $42 \frac{1}{2}$, and on the 24 th at $41 \frac{1}{4} \mathrm{~d}$. fterling; it was therfore above the par, which was $40 \frac{5}{8}$, from $I \frac{7}{8}$ to $\frac{5}{8} \mathrm{~d}$. fterling; which made a profit from $4 \frac{{ }^{6} \overline{5} \overline{5} \mathrm{O}}{5}$ to
 was 3 t子o per cent.
The fituation which thefe expedients lay before us deferves confideration. We have feen that France were lofers with Holland from $2{ }^{4} \frac{8}{80}$ to $3 \frac{52}{1050}$ per cent. And at the fame time that France had the advantage with England, from $4 \frac{6 \pi}{10} \bar{\sigma}$ to 1 T 5
 cent. Whence it follows from all thefe expedients, that all alterations of the coin are burdenfome and difadvantageous to nations, and that the further the value of the old fpecies is from that of the new, the more is their circulation, and confequently trade, injured; becaufe that which is loweft valued in France, remains there hoarded up, or paffes into foreign countries, which makes France fall under great difadvantages. For,
If the fpecie remains hoarded, it is a ftock which becomes ufelefs, both to the public and the poffeffor; which increafes diftruf, cramps circulation, and confequently commerce.
If it paffes into foreign countries, it will be there melted down, and recoined into new fpecies: by which means foreigners gain the profit ; and befides, that iranfported money turns out of work all thofe whom it might have employed, which impairs the revenue, prejudices manufactures, and is of general injury to all the inhabitants; whence it apparendly follows, that there never fhould be two fpecies of money in a ftate, whofe values are difproportioned to one another. Thefe expedients are contrary to the true interefts of nations.
Abftracting from the fall of the coin on the ift of January this year, we may fay, that the declaration of the 24th of October 1711, fill left, between the value of the old fpecies and that of the new, too confiderable a difference in France, to induce the public, as was defired, to carry their old fpecies and gold and filver bullion to the mints.
Accordingly thefe were not brought thither fo foon, and in fo great quantities as the French court wifhed for. To baften them forward, attempts and threatenings were ufed to lower them, by the arrets of council in April 5, May 28, Auguft 30, October 29, and November 29, of this fame year 1712, but all proved ineffectual. The French miniftry was obliged, in order to bring them forth into circulation, and to give not

## E X C

only motion to that part, which, for want of circulation, was become an ufelers flock to the public, and even to the owners themfelves, but alfo to reftore uniformity to the coins, a thing foabfolutely necelfary for the good of commerce, they were obliged entirely tagive up, with the profir of converting thefe fpecies and bullion carried to the mints, 'till the ift of February next 1713. Thefe are the terms of the king of France's declaration, December 10, 1712, regiftered and publifhed the 16 th, whereby his majefty ordains, that fiom the day of publifhing that declaration, to the ift of February next, the old fipecies and gold and filver bultion fhall be received in the mints, and by the money-changers eftablifhed in the feveral cities of the kingdom, and paid in ready money, at the rate 585 livres the mark of old Lewis, and of 39 livres that of the old crowns.

## The rife of the old fpecie.

In order to bring thofe old pieces into circulation, this declaration intimated a lowerng of the coin againft the ift of Fe bruary 1713: and feeing the event did not anfwer expechacion, this lowering was poftponed to the iff of April following, by the arrets of January 31 and February 2r.
The rife of the old fpecie, having brought it's value near' to that of the new, reduced the par of the old crown of exchange to $66 \frac{1}{2}$. Now, during the reft of December 1712 , the exchange was at 70 and $69 \frac{3}{3}$ gros, which was $3 \frac{1}{\frac{1}{3}}$, and $3 \frac{1}{4}$ gros above the par $66 \frac{1}{2}$ bank money, or $5 \frac{28}{205}$, and $4 \frac{89}{705}$ per cent. in our favour.
Upon London the par of the old crown of exchange was $37 \frac{1}{2} \mathrm{~d}$. fterling. The exchange between Paris and London was, on the 27 th of December the fame year 1712, at 4 I z that was $4 \frac{3}{8} \mathrm{~d}$. fterling above par, or $11 \frac{2}{3}$ per cent. to the advantage of France.
Thefe effects thew plainly, that thefe old picces were no fooner brought nearly to a proportional value with the new ones, than the trade of France recovered, as we have now feen, with the higheft evidence; and this is a manifeft proof, that it was kept under in France, only becaufe the old and the new fpecies were difproportioned to one another, and thofe pieces which were the leaft raifed, or which gave the loweft price, remained a dead and inactive fock, or were tranforted out of the kindom of France.

The nine firf months of 1713 .
During the month of January 1713, the exchange, was from $69 \frac{3}{4}$ to $69 \frac{1}{2}$ : this was ftill above the par $66 \frac{x}{2} \frac{x}{2}$ from $3 \frac{1}{4}$ to 3 gros; which was $4 \frac{88}{100}$ and $4 \frac{\pi}{2}$ per cent. to the advantage of France.
The exchange between Paris and London was, on the 9 th of January 1713 , at $39 \frac{1}{4} \mathrm{~d}$. fterling. It was therefore, $1 \frac{1}{4}$ fterling above the par $37 \frac{1}{2}$, making $4 \frac{4}{3}$ per cent. to the profit of France.
Here are the exchanges of Amfterdam and London upon a level, making both of them $4 \frac{2}{3}$ per cent. to the advantage of France: thus the inequality found between them, in the month of December the laft year, did not long fubfift ; nor indeed was it poffible, in the nature of things, that it could laft long.
And during the months of February, March, April, May, June, July, Auguif, and September 1713 , the exchange varied between $68,68 \frac{1}{4}$, and $67 \frac{1}{2}$. This was $I \frac{3}{4}$, and $1 \frac{2}{2}$ and I gros above the par of the bank money; confequently to the advantage of France from $2 \frac{63}{x_{80}^{6}}$ to $2 \frac{1}{4}$ and $1, \frac{2}{3}$ per cent. which advantage, diminifhed by the reports raifed about the falls of the coin that were advertifed by the arret of September, which we are coming to.
On the firft of September 1713 , the exchange of Paris upon London was at 38 d . fterling, this was $\frac{1}{2}$, penny above the par, or $1 \frac{1}{3}$ per cent. in the favour of France. Thefe were the effeets of lowering the coin in France, which were even fenfibly felt beforehand: they diminihed their advantage upon Amfterdam and London more than 3 per rent.
Before we come to thofe falls of the coin in France that were advertifed by the arres of council, September 30, I thall briefly give a recapitulation of the general advantages of the French trade, from the month of January 1709, to the end of September 1713.

| In January and February 1709In MarchIn AprilIn MayReft of the yearThe ten firt months of 1710The two laft monthsThe ten firf months of ${ }_{17} 11$The two laft monthsThe eleven firt months of 1712 | With Holdand. |  | With Exgland. |  |

Notwithfanding the frequent variations that befel the French old coins, and the prodigious difference that has always been between their value and that of the new, yet we may obferve by the foregoing table, that the French trade was, upon the whole, rather advantageous than the contrary, with England and Holland; fince their advantages at a medium, taken between the higheft and the loweft, is here reprefented to be for Holland 3: $\frac{56}{106}$, whereas the difadvantages allo at a medium is only $14 \frac{65}{105}$ : thus the mean advantage is to the mean difadvantage, as 3166 is to 1468 , or as $2 \frac{3}{25}$ is to 1 . And with England the mean advantage, from the beginning of 1712 , is reprefented by $20 \frac{72}{10}$, without any difadvantage. England, therefore, had taken more of the French commodities, arts and manufactures, than the French had taken from the Englifh: this made to the advantage of the commerce of France; and if the Utrechr treaty of commerce bad taken effect with that nation, what additional advantages might not have enfued to that kingdom, is no eafy matter to fay. See the article Friance.
To what a pitch then might the French trade within this period have arrived, had it not been difturbed and cramped by all thefe alterations of their old feecie, and fill more-by the confiderable difference that has always been left between their value and that of the new? For nothing brought it under any difadvantage, but one or both of thefe two cafes. The arret of courcil dated September 30, 1713 , intimates no lefs than cight falls of that fame fpecie of 1709 , to follow one another at the diffance of two months, each at the rate of 10 fols per lewidor, and of two fols and a half per crown. The firft to take effect on the firf of December following: it reduces the lewidor from 20 livres to sy liveres ro fols, and the crown from 5 livres to 4 livres 17 fols 6 deniers. See the article CoIn.

## REMARKS.

However impolitic the notion may be of rifing or falling the numerical value of coin; yet thefe principles are fill floating in fome men's heads; for the late French author of the Eflai Politique fur le Commerce maintains this fyftem; and he will hardly be taken for a weak man. His tract is wrote with a great deal of firit and lively eloquence, which makes it the more dangerous, becaufe feveral of it's maxims are falfe, and of univerfal bad tendency. The writer before quoted, therefore, thought proper to guard his countrymen againft the pernicious influence of fome of it's principles, efpecially thofe relating to money; he detects the fallacy of the other's reafoning, in every particular, lays open the fatal confequences that flowed from the frequent variations of the coin, under Lewis XIV, and in other reigns; and by tracing the fubject to it's firft principles, fhews that the fame confequences muft always inevitably follow, from purfuing fuch impolitical meafures. This ingenious gentleman has taken great pains to fet his countrymen right, in a matter wherein he thinks the intereft of their commerce is fo nearly concerned; and from the general frain of his reafoning, it appears, what good ufe he has made of fome of the beft of our writers, upon the fame fubject, particularly of Mun and Locke, if not of Vaughan and King, \&c. he often citing the authority of the two former, with whom he is perfectly agreed, as to the fubftance of the argument, which he has carried to a great length, and cenfirmed, by a different medium of reafoning, the fentiments of thofe of our own writers: and indeed, by
applying their principles arithmetically to exchange, he feems the more fatisfactorily to have corroborated their judgment, by really demonftrating how detrimental, from time to time, the variations of the coin of France proved to their commerce.
The foundation upon which the learned author reafons, is the courfe of exchange; which he afferts to be the true batometer of commerce, and all money-negociations, between nation and nation: fo that the reader is defired to obferve, that our author does not affirm the courfe of exchange always Thews where the ballance of trade only lies, but where the ballance of trade, and all occafional money-concerns, included in the general account, lies. And this feems to be, or ought to be meant and intended, by all who have taken the-courfe of exchange for a guide, in their difquifitions of this nature.
I had not taken any notice of this, did I not frequently obferve, in writing and converfation, that many gentlemen feem to miftake this matter, when they object againft the courfe of exchange being the characterific of the ballance of trade between nation and nation, by urging that all money affairs are not therein included; whereas the contrary feems to have been intended by all who have touched upon this fubject with any degree of difcernmerit. They except againf any fudden changes in the ftate, with regard to their public credit, \&c. and any caufe, foreign to the ordinary currency of commerce, \&cc. And this the reader will pleafe to rematik, once for all, is what is intended in every part of this work, where this fubject is handled. See the articles referred to at the beginning of this head of Exchange.
In order to judge how the courfes of exchange between England and other the principal countries of Europe, did, from time to time, correfpond with the intrinfic value of the foreign monies of thofe ftates, his late majefty's privy-council ordered Sir Ifaac Newton, then mint-mafter of the tower of London, to make actual aflays, weights and values, of moft foreign filver and gold coins: and it is not to be doubted, that fo incomparable a perfon, who was not lefs profoundly fkilled in the art of affaying, than in all other parts of philofophy, made thofe affays with all imaginable accuracy; efpecially when it was by the exprefs order of the council of this kingdom: nor is it to be fuppofed, but a gentleman, fo fuperlatively cautious and circumfpect in all his other performances, with which he honoured the world of his own accord, thould be any way remifs in this, which was done by the royal authority : we cannot believe, but on fo important an occafion, that great man was as curious in making choice of the proper pieces of foreign coins, for that purpofe, as he was in his method of affaying the fame. When the ftandard of foreign coins is varied, it is requifte, for the public fatisfaction and general ufe of trade, that thefe affays hould be again made by authority, with as much accuracy as thofe which we may prefume were made under the direction of Sir Ifaac: but, 'till that is done, we are inclined to believe, that the public will hardly pay a greater regard to the report of any private man, than to that made by authority, by fo diftinguifhed a perfon*.

* In regard to the nature of aflaying of metals, coins and ores, See what I have faid under the article of Assay, and alfo under the articles Goid, SilyER, Reining, and Smelting.

But if it Thould have fo fallen out, that our great mintmafter hath happened to have fallen ufor a piece of foreign

## E X C

ein, forme very finall matter lighter or heavier than it hould have been; this would not have defcated the end of fo nearly knowing where the ballance of trade lies, by exchange, as may be fatisfactory both the government, as well as to the private merchant: and, if this point is fufficiently anfwered by aflays, made by authority, that is what is chiefy required. Upon a new coinage, in foreign countries, or as the coins grow lighter by wear, traders who have dealings that way, will eafily difcover the worth of what they deal in.
Some, however, are of opinion, that the courfe of exchange does not indicate the ballance of trade and money-tranfactions, between one foreign nation and another; nor will others allow it to be of any help, or any auxiliary medium whatfoeyer, whereby to judge of the general ballance of accounts, between one ftate and another.
Thefe gentlemen feeming to be fomething fingular in their riay of judging, and differing from all the ableft writers upon this fubject, I thall further add, to what I have already faid in the preceding parts of this work, anather quotation upon this head, from the Britifh Merchant, which contains the fame fentiments of the moft experienced merchants, as well as of two of the greateft ftatefmen that this kingdom ever had; viz. The right honourable Charles late earl of Hallifax, and the right honourable James late earl of StanHOPE

- The flated maxims, fay they, among merchants, to know - whether the trade be for or againft us, is to have recourfe
to the courfe of the exchange. It is a nicety many of our merchants themfelves are unacquainted with; yet as the exchange holds the ballance of trade, fo as that is for or - againt us, it immediately decides the point.

If the exchange be above the par of the money of the country we trade with, it is a plain argument that the ballance - is on their fide ; for no man will bring filver from a coun-- try, when the exchange is more favourable than the coin.

- If a country takes more of our commodities, than we take
' of theirs, they muft pay the ballance in money; and, in - fuch a cafe, the exchange mult neceffarily be under the par 6 of the money, for there can never be found fufficient bills of 6 exchange ; and, if there are bills, they cannot be on Eng-- land, but muft be on fome country with which Spain has an
sover-ballance; and then, the debt being removed to that ' country, there the ballance will be decided, according as c we over or under-trade that country.
*That the fact of the exchange decides the ballance of all - countries, with whom there are exchanges, I think is very - plain from what I have already faid. But I will give two - inftances of an over-ballance and an under-ballance, which ( will be conviction enough to any underftanding trader on - the exchange.
- The trade to Portugal has been of fuch a magnitude, that c it is notorious to the world we have had a valt importation - of gold from thence. As our trade increafed, fo the ex* change declined; and in fome years when corn was cheap - here, and dear in Portugal, our ballance was fo very great, - that notwithtanding we paid fublidies to the king of Por-- tugal, and paid for troops, there were alfo vaft fums for - fupplies of our armies in Valencia and Catalonia; yet fill - the over-ballance lay fo much againt them, that the ex-
- change has been at 5 s . 2 d . and 5 s . a millree; now a
- millree in Portugueze gold weighs, according to the Englifh
- ftandard, 5s. 9d. fo that there was 10,12 , and 15 per - cent. difference between the exchange and the intrinfic va-- lue of the money.
- In fome years, when we had a want of corn ourfelves, and "therefore could not fupply Portugal, the exchange immedi-- ately found the want of fo great an over-ballance, and rofe ' 105 s. 4 d. 5 s. 5 d. and 5 s. 6 d .. At which laft price, in 'time of war, gold would not turn to account; nor now, 6 confidering that there is three per cent. at leaft, charges * without infurance, and that 5 per cent. will make 5 s .6 d . ' coft 5 s . 9 d . which is the ftandard of the milliree; fo that " there is but 2 per cent. for the time and hazard.
- Our trade to Hollad, during the war, was on a contrary - foot, notwithtanding our vaft over-ballance againft them - in commodities : yet by our paying fuch a fum to fubfift - the armies in Flanders, and fubfidies to feveral princes, the - ballance lay during the whole war againft us; to that, a ' faft almoft as we brought gold from Portugal, it was car-- ried over to pay the ballance.
- The exchange immediately found the ballance of trade, and went declining from 36 s .8 d . and 37 s. as it was in the - peace; and as our expence increafed abroad, by augment-- ing the number of troops in our pay, fo the exchange went - declining as the ballance againft us was greater. And - though in fome exigencies it was at 32 s . 6 d . and 33 s . yet, 6 that being but cafual, it came to a medium of 33 s .8 d . - and 34 s . So that ,there was 9 per cent. difference betwixt the ume of peace, and time of war; and fince the ceffa-- tion, and our drawing off our troops, as our expence went - decreafing, fo the exchange went advancing, and has come ' to 36 s . and 36 s . 4 d . but not yet arrived to the height it

## E X C

- was before the war; for to this day we have fulfifted troops - in Flanders, and very lately made a remit of $40,000 \mathrm{l}$. for ' the fubfifting the troops fill left. And when Dunkirk is
- demolifhed, and all our troops withdrawn, our over ballance
- will increafe, and confequently the exchange advance.
- Thus having plainly proved, that the exchange is the Stan-
dard by which you may know where the ballance lies, it muft now remain only to prove, that the exchange in Spain ' has hitherto been above the ftandaid.
- Though the exchange has been in Spain at 52 d. per piece - of eight, yet it has alfo been at 50 d . So we will take the
- medium of 5Id. Though I could prove that feveral quan-
tities of pieces of eight which were brought into England,
coft the importer 52 d . and fome, by draughts made on
6 Holland, more
- Now, rooo pieces, remitted by bills at 5 Id. per piece of ' eight, is 2121 . 10 s. ferling.
1000 pieces of eight will weigh about 870 ounces. And tho' ' fome were fold that came by men of war from Cadiz at 5 s. ' 2 d . per ounce, yet others were fold at $5 \mathrm{~s} .4 \mathrm{~d} . \frac{1}{4}$ : but the ' Eaft-India company, who were the greateft purchafers, - fixed the price at 5 s. 3 d. for what they bought; and, after ' they had bought the quantity they wanted, they gave liberty to the private traders to buy, who, before they had made up their quantities, advanced it to 5 s .4 d . and $4 \mathrm{~d} . \frac{\mathrm{z}}{4}$
$\begin{array}{cc}1 . & \text { s. d. } \\ 228 \quad 76\end{array}$

212100
So that, if they bought their pieces of eight at above $1 \frac{t}{4}$ pet - premio, a bill of exchange was more profitable. Now I do affirm, that the major part of the pieces of eight that we - imported, coll from 3 to $5 \frac{2}{2}$ pet. premio.
' Suppofe then, they had carried it to the mint at 5 s .2 d . the

- lofs would be 2 pct. more than the above calculation. I - appeal therefore to any reafonable man, if the pieces of ' eight, thus imported, could be the ballance of our trade.?
-Had it been, that would neceffarily have thewed itfelf in
'this trade, as well as in the facts I lay down in that of Por-- tugal and Holland.
'So that, until the Mercator,* can thew the exchange in - Spain is under the par of the filver, I do affert and affirm, - the ballance of that trade is againft us.
* This was a writer empleyed by queen Anne's miniftry during the laft four years of her reign, to fupport the treaty of commerce then made by France, which has been univerfally condemned ever fince, by all true friends to the intereft of the nation.
- And, notwithftanding the entries in the cuftom-houre, yet
' if the goods do not find expence at a market, it will be no - proof. When they do, and that Spain does confume more ' of our exports, than we import from them, the exchange 6 will be in our favour, and then I will join ilfue with the 6 Mercator, we have an over-ballance.
- And though the Mercator treats the notion of an over-- ballanse againft us with Spain, as a novel, yet it is no no-- velty to the traders thither: and, I believe, I may juftly - affirm, that none of the pieces of eight that came home, - were the product of the manufactures of England: if fo, 6 I would defire the Mercator to flew how he came by them, ' or whether he thinks we could purchafe them without an - over-ballance of trade with fome other country? If not, - we muft pay back as many ounces, in Spain, as we brought 6 in.
- And though he exclaims at this affertion, as flarted for - fome defign, yet I am very well affured, that in the hearing - before the late houfe of commons, againft the treaty of - commerce with France, this over-ballance of Spain againtt - us was then afferred; and the perfon that fpoke, appealed - to the whole body of the traders to Spain. That though - fome fhips were artived, and others on the way home, with - pieces of eight, yet not one bag of them was the produce - of the manufactures of England.
- This, had it been a novel notion, or not fact, would cer-

## E X C

tainly have met with a contradiction: we had then bad about ten months truce with Spain; and what proves that ' there was no alteration of the trade in our favour, the exchange was againt us then; and has continued fo ever fince.'
I queftion not but this will convince any man, who underftands the nature of trade, that the exchange is what will always, and in all countries, decide where the ballance lies. Thus far the Britifh Merchant. And, for the further confirmation of what is here faid, See the articles Arbitration of Exchanges, Ballance of trade, Britain, i. e. Great-Britain], Coins.
It having been alfo fhewn, under this article of exchange, how far variations in the money of a country affect the courfe of exchange, and confequently how far they affect the commerce of a nation; it may not be altogether ufelefs to thew the precarious flate and condition of the people in general, who are fo unhappy as to live under fuch an abfolute government, where their property can be raifed or fell, at the will of heir fovereign, in order to fill his coffers at their expence, and fometimes at the total ruin of numberlefs of his fubjects. As fuch kind of governments, when confidered in contraft with our own, will appear terrible, and our own amiable; it may contribute to maintain that firit of loyalty, towards the prefent eftablifhment, which may tend to fecure, to latedt pofterity, our properties, our religion, and our liberties.
However unneceffary fome may think this, who are already well apprized of the fatal confequences of arbitrary rule; yet, as this work is in every one's hands, it may not be ufelefs in diffufing thefe principles the more univerfally.

- Every Englifhman, fays our darling countryman, Mr. Addifon, and true fitend to our trade and liberties, will be a good fubject to king George, in proportion as he is a good Englifhman, and a lover of the conffitution of his country. In order to a waken, in my readers, the love of this their conftitution, it may be neceflary to fet forth it's fuperior excellency, to that form of government, which many wicked and ignorant men have, of late years, endeavoured to introduce among us. I hall not, theretore, think it improper to take notice, from time to time, of any particular act of power, exerted by thofe among whom the pretender to his majefty's crown has been educated; which would prove fatal to this nation, fhould it be conquered and governed by a perfon, who, in all probability, would put in practice the politics in which he bas been folong inftructed.
There has been nothing more obfervable in the reign of his prefent Gallic majefty, than the method he has taken, for fupplying his exchequer with a neceflary fum of money. 1 he ways and means for raifing it has been an edict, or a command in writing, figned by himfelf, to increafe the value of louis d'ors, from 14 to 16 livres, by virtue of a new famp, which will be ftruck upon them. As this method will bring all the gold of the kingdom into his hands, it is provided by the fame edief, that they fhall be paid out again to the people, at 20 livres each; fo that 4 livies in the fcore, by this means, accrue to his majefty, out of all the money in the kingdom of France.
This method of raifing money is confiftent with that form of government, and with the repeated practice of their late grand monarque ; fo that I hall not here confider the many evil confequences which it muft have upon their Trade, their Exchange, and Public Credit. I thall only take notice of the whimfical circumftances a people mutt lie under, who can be thus made poor or rich by an edict, which can throw an allay into a louis d'or, and debafe it into half it's former value, or, if his majefty pleafes, raife the price of it, not by the acceffion of metal, but of a mark. By the prefent ediet many a man in France will fwell into a plumb, who fell feveral thoufand pounds fhort of it the day before it's publication. This conveys a kind of fairy treafure into their chefts, even while they are under lock and key; and is a fecret of multiplication, without addition. It is natural, however, for the vanity of the French nation to grow infolent upon this imaginary wealth, not confidering, that their neighbours think them no more rich, by virtue of an edict to make 14, 20, than they would think them more formidable, Mhould there be another edict to make cvery man in the kingdom feven feet high.
It was ufual for his late moft chriftian majefty, to fink the value of their louis dor's about the time he was to receive the taxes of his good people, and to raife them when he had got them fafe into his coffers. And there is noqueftion, but the prefent government, in that kingdom, will fo far obferve this kind of conduct, as to reduce the 20 livers to their old number of 14 , when they have paid them out of their hands; which will immediately fink the prefent tympany of wealth, and re-eftablifh the natural poverty of the Gallic nation. One cannot but pity the melancholy condition of a mifer in this country, who is perpetually telling his livres, without being able to know how rich he is. He is as ridiculoully puzzled and perplexed, as a man that counts the ftones on Salifbury plain; which can never be fectled, to any certain number, but are more, or fewer, every time he reckons them.

## E X C

I have heard of a young French lady, a fubject of Louis XIV, who was contracted to a marquis, upon the foot of a five thoufand pounds fortune which the had by her in fpecie; but, one of thefe unlucky edicts coming out a week before the intended marriage, fhe loft a thoufand pounds, and her brideroom into the bargain.
The uncertainty of riches is a fubject much difcourfed of in all countries, but may be infifted on more emphatically in France than any other. A man is here under fuch a kind of fituation, as one who is managed by a juggler. He fancies he bas fo many pieces of money in his hand; but let him grafp them never fo carefully, upon a word or two of the artift, hey increafe, or dwindle to what number the doctor is pleafed to name.
This method of lowering or advancing money, we, who have the happinefs to be in another form of government, thould look upon as an unwarrantable kind of clipping and coining. However, as it is an expedient that is often practifed, and may be juftified in that conflitution, which has been fo thoroughly tudied by the pretender to his majefty's crown, I do not fee what fhould have hindered him from making ufe of fo expeditious a method for raifing a fupply, if he had fucceeded in his late attempt to dethrone his majefty, and fubvert our confitution. I fhall leave it to the confideration of the reader, $f$, in fuch a cafe, the following edict, or fomething very like it, might not have been expected.
Whereas thefe our kingdoms have long groaned under an expenfive and confuming land war, which has very much exhaufted the treafure of the nation, we, being willing to increafe the wealth of our people, and not thinking it advifeable, for this purpofe, to make ufe of the tedious methods of merchandife and commerce, which have been always promoted by a faction among the worft of our fubjects, and were fo wifely difcountenanced by the beft of them in the late reign, do hereby enact, by our fole will and pleafure, that every fhilling in Great-Britain thall pafs, in all payments, for fourteen pence, 'rill the firft of September next, and that every other piece of money thall rife and pafs current in the fame proportion. The advantage which will accrue to thefe nations, by this our royal donative, will vifibly appear to all men of found principles, who are fo juftly famous for their antipathy to ftrangers, and would nor fee the landed intereft of their country weakened by the importation of foreign goid and filver: but fince, by reafon of the great debts which we have contracted abroad, during our -- years reign, as well as of our prefent exigencies, it will be neceflary to fill our exchequer, by the moft prudent and expeditious methods, we do alfo hereby order every one of our fubjects, to bring in the fe his fourteen penny pieces, and all the other current cafh of the kingdom, by what new title foever dignified or diftinguifhed, to the mafter of our mint; who, after having fet a mark upon them, fhall deliver out to them, on or after the firft of September aforefaid, their refpective fums, taking only four-pence for ourfelf, for fuch his mark on èvery four-teen-penny piece, which, from thenceforth, thall pais in payment for eighteen-pence, and fo in proportion for the reft By this method the money of this nation will be more, by one third, than it is at prefent; and we fhall content ourfelf with not quite one fifth part of the current caih of our loving fubjects ; which will but barely fuffice to clear the intereft of all thofe fums in which we ftand indebted to our moft dear broher and ally. We are glad of this opportunity of thewing fuch an inftance of our goodnefs to our fubjects, by this our royal edict, which hall be read in every parihn church of Great-Britain, immediately after the celebration of HighMass. For such is our Pleasure.' Freeholder, No. (18). See the article Coin, Money.

EXCHEQUER, is a court of law at Weftminfter-Hall, wherein are tried all caufes relating to the royal treafury, in regard to the accounts of the nation, difburfements, cuftoms, Gnes, \&c. The immediate profits of the crown, as of fianchifes, lands, tenements, hereditaments, feizures, and fines laid on the fubject, \&c. are within the jurifdiction of this court. The king's attorney-general may exhibit bills for any matter concerning the king's inheritance or profits; fo allo may any perfon who finds himielf aggrieved in any caule profecuted againft him on behalf of the king, or any patent by grant of the king, exhibit his bill againtt the king's attorney, \&c. to be relieved by equity in this court.
The Lower Exchequer, called alfo the Receipt of the Exchequer, is the place wherein the king's revenue is received and diburfed. The principal officers hereof are the lord-treafuerer, a fecretary of the Treafury, a chancellor of the Exchequer, two chamberlains of the Exchequer, an auditor of the receipts of the Exchequer, four tellers, a clerk of the pells, an ufher of the receipt, a tally-cutter, \&c.

Some of the principal laws relating to the Exchequer.
I Stat. de Scacc. 5 I Hen. III. ftat. 5. § I. All bailiff, fheriffs, and other muifters, to be anfwerable in the Exchequer for their receipts of iffues, efcheats, and of therr baliwicks, and there make account to the treafury and barons; and all

Meriffs, farmers, bailifs of franchifes, and other, which ought to come at the profer of the Exchequer the day after the feaft of St' Michael, and after the clofe of Eafter, to pay their farms, rents, and iffues, thall come at the aforefaid terms; on default, their bodies to remain until they pay, or make agreement; and he that will not come to be amerced. Sheriffs and bailiffs at the fame terms thall pay fuch money as they have received at the fummons of the Exchequer, and other the king's debts, and thall be ready to thew their account of the things aforefaid.
Sect. 2. All bailiffs of franchifes which ought to levy the king's debts, and to anfwer to the Theriffs according to the eftreats of the fummons of the Exchequer, thall come and anfwer fufficiently; and fuch as do not, their bodies to remain in ward of the fheriffs; who, for default, thall caufe their own bailiffs to levy the debts, as in time paft: bailiffs not coming at the day appointed by the fheriffs, the fheriffs Shatl enter into franchifes, and levy the debts.
Sect. 3. Juftices and bailifs of Chefter, or one of them, Thall come at the profer of St Michael every year, with what they owe unto the king, as likewife at the profer of the utas of Eafter:- and the juftices of Chefter Thall have day to account, from year to year, in quindena Pafchæ, and the bailiffs thereof the day after the clofe of Eafter. And all Cheriffs, except of Weftmoreland, Lancafter, Worcefter, Rutland, or Cornwall, thall keep all efcheats not in the king's fees within their thires, and of the iffues thereof they thall anfwer in the Exchequer, at the terms aforefaid; and at their turns fhall do the offices of fuch other things as the king's efcheators have ufed to do, once or twice in the year, to as little grievance of the people as they can: and the fheriffs Shall feize the efcheats that fall to the king in fee, and fhall certify the king of them without delay.
Sect. 4. The king fhall affign three able perfons to furvey and extend the efcheats throughout the kingdom, from year to year : and the fheriffs, by their council, to improve and let to farm fuch as they hall think moft for the king's advantage. Sec. 5. The fheriff of Cumberland to execute the office of efcheator in Weitmoreland and Lancafter, and the fheriff of Nottingham in Rutland, and the fheriff of Gloucefter in Worcelter, and the fheriff of Devonhire in Cornwall : thefe three perfons to keep the king's demefns, and to approve them, and be anfwerable for the iffues, and to have power to let fmall manors or demefins ; the farmers to anfwer their farms to thofe, and they at the Exchequer, the day after the Afcenfion.
Sect. 6. The principal collectors of the cuftoms, at the two terms beforementioned, fhall pay the money they have received of the faid cuftom, and make account of all parcels received in any of the ports, fo that they fhall anfwer of every fhip where it was charged, and how much it carried, and of every loading in the fhip whereof cuftom is due.
Sect. 7. The warden of the wardrobe fhall make account yearly, in the feaft of St Margaret; and the treafurer and barons fhall be charged by their oath, not to attend to hear the pleas of other men while they have to do with the king's bufinefs, unlefs it concerneth the king's own debt; and, when a fheriff or bailiff bath begun his account, none other fhall be received to account 'till he hath accounted, and his money be received. And the conttable, marfhal, chamberlain, and others of fee in the Exchequer, thall prefent unto the king fuch as they thall put in their places to do their offices, which mult be of good fame and fufficient, for whofe acts themfelves will anfwer.
Sect. 8. The king commandeth the treafurer and barons of the Exchequer, upon their allegiance and oath made to him, not to admit others for them that be not fuch; and that the Exchequer be not charged with more perfons than is neceffary; and that none of them there fworn to the king fhall put in his room any other clerk, or lay-perfon, except he be fworn, nor that without licence of the treafurer ; any fo doing, to be removed from his office, and none other received in his ftead without the king's licence; and, if any put in without the treafurer's licence do trefpafs, he thall be punifhed, whether he be officer of fee or other; and the treafurer fhall put no other in his room 'till he hath licence from the king. And if he that keepeth the room of another by licence of the treafurer, doth any thing he ought not, he thall be punithed according to the trefpass, if he have whereof; and, if he have not, he that put him in fhall be charged; and, if he be not fufficient, he that put him in office fhall be charged, whether he be of fee or otherwife,
Sect. 9. All they fhall make oath, That, if any of them perceive that another doth commit any offence, or other thing difhoneft, in any office in this court, they thall certify to the treafurer, or barons, and they fhall return it, and, if need require, thall certify it to the king; and, about the feaft of St Margaret, before the Exchequer be clofed, they thall caufe fearch to be made, whether any fheriff or bailiff that ought to have accounted have not done fo, and thereof a remembrance fhall be made in a roll; and, if it be a fheriff, his account thall be firlt heard after Micbaelmas, before any other be received; and, if he be a bailiff, he fhall be fummoned, or diftrained to come, at a certain day, to account; fo that

Vol. I
no account thall be fuffered to fleep. And all furveyors of the king's works fhall be chofen by the oath of wife men, and Shall be of fuch as may attend beft, and fufficient to anfwer the king, and fhall fwear to bear true witnefs; and, if the treafurer or barons have any in fufpection of falfe allowances for works, or other things, the truth fhall be enquired, and he that is attainted fhall anfwer to the king as much as the allowance amounteth unto, and be imprifoned one year and 40 days, and punifhed at the king's pleafure; and the furveyors fhall be punifhed for their confent, and likewife be that upon his account fhall conceal fuch things whereof he ought to have charged himfelf, fhall be punifhed in like manner.
Sect. 10. The juftices, commifioners, and others, fhall deliver into the Exchequer, at the feaft of St Michael, from year to year, the eftreats of fines and amercements made and taxed before them, and of all things wherefore the eftreats arewont to be delivered there: and they of the Exchequer fhall make the eftreats of the fummons through all fhires; faving that the eftreats in eyre of all pleas fhall be delivered immediately after the eyre made.
Stat. Rutl. Io Ed. I. §. I. Bodies of the fhires not to be written in every roll, but in a yeatly roll by themfelves, and every thing fhall be yearly read upon the fheriff's account in every county. The remnants of the fame thires thall be written by later dates in the annual rolls, and the fheriffs thall be charged therewith; and of allowances view fhall be made in the Exchequer, and the 'treafurer and barons thall certify the chancellor of the allowances fo to be made, and the writs of allowances fhall be according to the fame certificate; and there fhall be written in the annual rolls the farms of fheriffs, the profits of counties, the farms of ferjeants and alferts, the farms of cities, boroughs, towns, and other fatms, whereof there is anfwer made yearly in the Exchequer; and in them alfo thall be written all ftalled and grofs debts, whereof is hope fomewhat flall be paid; and all debts that feem to be clear. When it is come to account, or to the title of new obligations, nothing fhall be written in the annual roll but thofe debts whereof there is hope of payment, and whereof the fheriff is anfwerable, and debts that feem clear in the originals.
Sect. 2. Of dead farms and debts defperate one toll fhall be made, and read every year upon the accounts of heriffs, and debts whereof the fheriff fhall be written in the annual roll, and there fhall be acquitted.
Sect. 3. It thall be proclaimed in every county, that all who have tallies of the Exchequer for their own or anceftors debts, paid ufually there, and not yet allowed, which fhall come out ftill in the fummons of the Exchequer, that fuch tallies be delivered to the fheriffs, to be allowed at the Exchequer at their accounts; and the theriffs fhall make to them their writings, witneffing the receipt of thofe tallies, deputing two knights, between whom and the fheriffs, indentures fhall be made of fuch receipts, with the feals of them both.
Sect. 5. The knights deputed fhall fend the parts of their indentures, at the term appointed, unto the Exchequer, that, by view of them, the tallies fo received by the heiffs may be allowed upon their accounts.
Sect. 6. It thall be proclaimed, that, except thofe who have fuch tallies do offer them to the fheriffs and knights to be exe= cuted, they fhall be diftrained for the whole debt.
Sect. 7. Debts which yet come into the fummons of the Exchequer, whereof the debtors do profer tallies agdinft divers Theriffs, thall be defalked and acquitted.
Sect. 8. Certain perfons fhall be fent into every thire, with power to enquire of fuch debts, and to call afore them the fheriffs, their heirs, \&c. and the tenants of their lands, that have received the debts, and to proceed to the taking of inquefts, whether the parties (againft whom the tallies were Thewed) do come or not, fo the fheriff return that he hath fummoned them; and, the truth being difcuffed, the inquifitors thall made rolls of what thall be convict and confefled before them; and, the inrollment being made, the tallies Shall be broken; the Cheriffs to have in their cuftody the tranferipts of the rolls, under the feals of the inquiftors, and fhall furceafe in making diftrefles for the debts contained in the fame, 'till otherwife commanded: and inquiftors fhall fend thofe rolls to the Exchequer, under their feals.
Sect. 9. Chamberlains hall not make to the Cheriffs, or their bailiffs, tallies dividendi, without particulars of the debts, and the names of them that paid them, into which particulars he would have fuch dividends parted; and, being foreceived, they fhall not be numbered into other particulars.
Sect. 10. All debts of infulvents returned by the fheriffs, fhall be eftreated in rells, and delivered to faithful men, who Thall enquire after the form provided by the treafurer and barons.
Sect. II. No plea to be holden in the Exchequer, unlefs it fpecially concern the king and his minifters aforefaid.
Artic. fuper chart. 28 Edw . I. Atat. 3. cap. 4. No common pleas fhall be holden in the Exchequer sentrary to the great charter.
Stat. 37 Edw. III. cap. 4. Becaufe many people, acquitted by judgment in the Exchequer in one place, be grieved in 9 U
other

## E X C

other offices of it, the clerk of the remembrance faall be titled to fit above the clerk of the pipe, to fee the difcharges made in the pipe, and to imbreviate the fame in the remembrance, and to caufe procefs thereupon to ceafe; and that the fummons of the pipe be withdrawn, according as the parties be difcharged; and, in whomfoever any default be found, the treafurer, by the king's command, 'fhall punifh the fame.
Stat. I Rich. II. cap. 5. At what time any debts be paid, and the tallies thereof made, rejoined, and allowed in the Exchequer, that debt hall never run more in demand; and if, after allowance made there, any clerk of the Exchequer make any procels to levy the fame, and that be proved, the clerk to lofe his office, and be imprifoned 'till he hath made agree to the party, if any will fue by the difcretion of the treafurer and barons.
Stat. 5 Rich. II. cap. 10. The barons of the Exchequer thall - have power to hear every anfwer of every demand made in the Exchequer, fo that every perfon tiere impeached fhall by himfelf, or any other perfon, be received to plead, fue, and have his reafonable difcharge, without tarrying or fuing any writ.
Stat. 5 Rich. II. cap. 12. The accounts in the Exchequer thall be more fhortly heard, made, and engroffed than they were wont; faving that the parcels be as plain as they were wont by ordinance of the barons of the Exchequer.
Stat. 5. Rich. II. cap. 13. Two clerks to be affigned to make parcels of the accounts in the Exchequer, to them that will that demand, and to be fworn they do no falfity in their office, and to take for their labour reafonably, according to the ordinance of the barons.
Stat. 5 Rich. II. cap. 14. The accounts of nichil in the Exchequer fhall be altogether put away; or, if any fuch ought there to abide, the accountants, immediately after oath made, thall be examined by the barons, if they ought to anfwer the king of any thing in that behalf; and, if it be found by their oath they ought not, they fhall be difcharged to yield other account before any auditor, the king's right faved.
Stat. 5 Rich. II. cap. 15. The clerk of the pipe and remembrancer fhall be fworn to fee, from term to term, all the writs of the great feal or privy-feal, fent to the Exchequer the fame term, for the final difcharge of any perfon of any demand due in the Exchequer; and every of them to whom it pertaineth thall duly execute the faid commandments: and the faid two remembrancers thall be fworn to make a fchedule every term of all perfons difcharged in their offices by judgments, or in other manner, in the fame term, of any demands in the Exchequer, containing the manner of the difcharges, and deliver the fchedule to the clerk of the pipe the fame term, for him to difcharge the parties thereof in the great roll. The clerk of the pipe thall allo be fworn from term to term to require the fame fchedules, and difcharge the parties as aforefaid. In like manner thall the clerk of the pipe caufe to be certified in writing to the remembraucers all difcharges in his office, that a man difcharged in one place may be difcharged in all.
Star. 5 Rich. II. cap. 16. Though many times perfons have had livery of their lands out of the king's hands, by judgment in the King's-Bench, or elfewhere, and bave after procured the tenor of the records to be fent by mittimus to the Exchequer, to difcharge them of the accounts for them: the officers would not difcharge them 'till the records and proceffes were newly entered in the Exchequer, and new judgment there again given; it is ordained that, after fuch record, or tenor of the fame, fhall come into the Exchequer, the remembrancer, in whofe office fuch accounts fhall be demanded, thall caufe the fuit to ceafe by words to be entered upon the endorfement of the writ, concerning the tenor of it, without making new procefs.
Stat. 5 Rich. II. cap. 17. Nothing thall be given to the clerk for making a commiffion in the Exchequer, above 2 s . nor for the record of a nifi prius with the, writ, but 2 s . only. Stat. 13 Rich. II. ftat. 1. cap. 14. No recognizance nor bond of the double (for the king's debts and farms) fhall be taken in the Exchequer, provided the king have fufficient furety for his duty.
Stat, I Rich. III, cap. I4. §. 2. If any difme be granted by either province of the clergy, if the collectors come by procefs before the barons of the Exchequer, and enter in their account, they fhall not be bound to anfwer bills there put againft them, but only touching the account.
Sect. 3. Provided that the accountant take no privilege of the Exchequer by reafon of the account.
Stat. I Jac. I. cap. 2. §. 2. All iflues loft, which, by intent of the late queen Elizabeth's privy-feal, and the orders hereunto annexed, ought to be difcharged, fhall be difcharged. Sect. 3. If the lord treafurer's remembrancer, or his clerks, fhall award any procefs, exact any pleading, or take any fees, or demean themfelves contrary to their faid orders, the perfons fo offending, or, if unable, the lord treafurer's remembrancer; fhall forfeit 20l. the one moiety to his majefty, and the other to the party grieved, to be fued for, within two years of the offence committed, in any of his majefty's courts at Wellminfter.

## E X C

Orders by Sir William Cecil, baron of Burleigh, lord-treafurer of England; Sir Walter Mildmay, chancellor and vice-treafurer of the Exchequer; Sir Edward Saunders, lord chief baron of the faid court; and other the barons of the fame; calling unto them Gilbert Gerrard, Efq; attorney-general, and Thomas Bromley, Efq; follicitorgeneral to her majefty, and made 15 Junii, anno Domini 1573.
x. No procefs ad faciend fidelitatem, nor any writ of fcire facias, capias, or diftrefs, from the fines eftreated out of the Common-Fleas, halliffue out of the treafurer's remembrancer's office, upon any fuppofal, upon pain by former flatutes limited, and by the orders of the faid court, but upon juft grounds; and the fame fhall be vouched in the procefles, according to the book, term, year, roll, and record thereof, that it may be certainly found. And if, by any known record semaining in that office, it may appear the fame tenure hath been traverfed, then the proceffes to be difcharged by the traverfe without pleading. 3. Where the firft tenant in any fuch writ from the faid original, or fuch inrollment is returned by the theriff mort or nibil habet, then thall go out according to the antient courfe of the court a difring-tenent, againft the tenants of the fame lands to the fherif, to do their fervice due to the king, and to thew their entry into the fame, who returning the name of the tenant of the lands in the writ, there fhall go procefs every term againft the new tenants to do their forvice and fhew their entry, and they to lofe iffues thereupon, 'till they come in and make their fine for refpect of fealty, or do their fealty according to the courfe of the Exchequer. 6. Where any writ of reverfion thall be made upon any record for lands, wherein the prince is in reverfion, if it appear by fufficient matter of record within the court, that the grant or record whereupon the writ of reverfion is made, is determined, the party, upon thewing forth fuch record, fhall be dircharged without pleading. 8. The iffues loft by her majefty's fubjects, which her highnefs bath appointed by privy feal to be difcharged, be as followeth, viz. all iffues loft upon any that are returned tenants of lands, which they have not, fhall be now difcharged, though they have other lands within the fhire. Allifinues, Iof upon any heir within age, fhall be difcharged. All iffues lof upon lands in the queen's hands, by extent or otherwife, hall be difcharged. All ifiues loft upon farmers and tenants of any lands for life, years, or at will, thall be difcharged, All iffues loft by fundry other vexations, as well by untrue returns and mif-returns of fheriffs and under-fheriffs, may be difcharged, moderated, or otherwife ordered, as the court hhall think meet. All iffues loft by any perfon returned in any jury in the Exchequer, or in any attaint or jury before the juftices of affize, which, at the time of their appearance appointed, were beyond fea in her majefty's fervice, or by fpecial licence in writing, or were in prifon, or in ordinary of her majefty's chamber or houlhold, and bound to perfonal attendance there, fhall be difcharged. The treafurer's remembrancer thall pay every fubject's charges, as by the court of Exchequer fhall be fet, that hall be vexed by any writ upon a fupporal, and not upon juft ground vouched, as before declared.
Sect. 4. If thought fit, for the knowlege and prefervation of the crown's tenures, and fo ordered in court, that procefs Ohould iffue againft any, the treafurer's remembrancer may iffue procefs, without incurring the penalties of this act; in which cafe, no fuch tenure appearing, the party lball be difmiffed without pleading or fees.
Stat. I Will. and Mary, ftat. 2. cap. I. fect. 52. Any collector keeping in hands money by him collected, longer than is directed, or paying any part to others than the receivergeneral, or bis deputy, forfeits 51 , and any head collector keeping money paid. him by any collector, by virtue of this act, longer than directed, or paying it to other than the re-ceiver-general or deputy, forfeits 201 , and any receiver-general or deputy paying fuch monies to any (other than the receipt of the Exchequer, and that within times limited by this act) or by any warrant of the commiffioners of the creafury, or upon any tally of pro or of anticipation, or other way, whereby to divert payment into the receipt of the Exchequer, for every offence of bimfelf or deputy, forfeits 5001 . to him who fues in any court of record.
Seet. 53. The commifioners of the treafury fhall not direet warrants to any of the faid collectors, \&c. for payment of any monies hereby given, to any perfons other than the receipt of the Exchequer, nor direct any warrant to the officer for friking any tally of pro or anticipation, nor do any other thing to divert payment into the Exchequer; nor fhall officers of the Exchequer ftrike, direct, or record the ftriking fuch tallies, on any account whatfoever; nor hall any teller throw down any bill, whereby to charge himfelf with any of the faid monies, 'till he have actually received the fame.
Seet. 54. The officers of the receipt of Exchequer fhall keep the fum hereby appropriated, and the account of it, diftinct from all other monies and accounts; and the commifioners of the treafury thall not fign any warrant or order, or do any other thing for the iffurn of any part of the faid fum, other than as aforefaid; nor fhall the auditor of the

## E X C

## E X C

receigt draw any order for iffuing any part other than as aforefaid; nor dired, or the clerk of the pells record, or any teller make payment of, any of the faid monies, by warrant, order, or other way whatfoever, other than for the ufes aforefaid, and to be fo mentioned in fuch warrant or order.
Sect. 57. Any of the officers appointed by this act, receiving the faid fum, or part, and afterwards mifapplying the fame by virtue of any warrant from the commiffioners of the treafury, or other fuperior officers, fhall forfeit the like fum fo mifapplied, recoverable in any court of record, one moiety to the informer, the other to the poor.
Sect. 58. Any officer of the Exchequer, offending againft this law, forfeits his office, and is difabled to hold the fame or any other.
Sect. 59. No ftay of profecution upon any command, warrant, or order, by non vult profequi, thall be allowed by any court in any fuit for recovery of the penalties by this act inflited.
Thefe directions are revived by feveral fubfequent acts; particularly 12 Will. III. cap. 11, fect. 27. and applied to the monies thereby appropriated, and made perpetual by if Geo. I. cap. 12. and alfo by 9 Will. III. cap. 44.
Star. 8 and 9 Will. III. cap. 28. fect. I. When money is brought into the receipt of the Exchequer, the teller, the officers of the tally-court attending, fhall receive and weigh the fame, and making entry thereof hall throw down bills written on parchment and figned, into the tally-court, whereby a tally may be duly levied according to the nature of the payment; and fuch teller, his clerk, or fubftitute, fhall not for fuch money give a note, importing a depofitum, or other private note or fecurity, to prevent the due charging thereof in the Exchequer, upon pain that fuch teller, who thall offend againt this act, fhall forfeit his office, and be difabled to ferve the king in any office, and forfeit double damages to the king or party, and cofts; and every teller's clerk fo offending, by giving any private note, \&cc. whereby the due charging is hindered, forfeits double the fum for which the note was given; one moiety to the king, the other to the informer, and alfo be removed from the receipt.
Sect. 2. No teller to charge himfelf by bill with receipt of any money in the Exchequer, but when the officers of the tally-court are there prefent; nor fhall any teller, or his fubflitute, throw down into the faid court any bill, purporting the receiving any money, unlefs fuch teller or his clerks have actually received the fame; except where tallies are levied by warrant of the commiffioners of the treafury or treafurer of the Exchequer; or where the perfon for whom any tally thall be levied, fhall on the fame day give a difcharge according to the courfe of the exchequer, upon fome order or debenture for the money; on pain of incurring the like forfeiture of office and difability as before-mentioned, and forfeiting double the fum fo unduly charged; one moiety to the king, the other to the informer, and for clerks and fubtitutes the like penalty as aforefaid.
Sect. 3. No teller, his clerk, or fubftitute, after the bills thrown down into the tally-court, fhall lend, pay, or depart with, fuch money out of his office, without an order or debenture for the fame, made by the auditor, and recorded by the clerk of the pells, and taking a receipt to difcharge the king according to antient courfe, under like penalties, as for unduly charging any money not received.
Sect. 4. Chamberlains or their deputies, and otherr officers, clerks and deputies of the tally-court, fhall daily, except Sundays and holidays, conftantly attend, from eight of the clock to one from Lady-day to Michaelmas, and from nine to one from Michaelmas to Lady-day yearly, unlefs fick, or have leave from the commiffioners of the treafury or undertreafurer of the Exchequer; in which cafe their room fhall be fufficiently fupplied as accuftomed, on pain to anfwer the king, or party fuffering by fuch abfence, double damages and full cofts. And the auditors of receipt, writer of tallies, clerks of the pells, the four tellers, and other officers, fhall by themfelves or deputies attend, under like penalties. Sect. 5. The firf clerk in the auditor of receipt's office, clerk of the pells, and four tellers, hall be fworn to the due performance of all matters of their offices, the oath to be tendered by the commiffioners of the treafury, or under-treafurer of the Exchequer, or by the barons or any of them.
Sect. 6. None of the monies in the receipt of the Exchequer Thall be thence iffued, but in purfuance of fome grant under the great feal, or under the privy feal, or purfuant to fome act of parliament.
Sect. 7. Tables fall be fet at the door of the auditor of the receipt, fhewing bow far the officers there have proceeded in the repayment of loans on the credit of revenues, and how far the monies, paid in by the receivers, extend to difcharge principal and intereft upon the faid taxes, \&c.
Sect. 8. The auditor of the receipt fhall (for his lawful fees) enter all letters patent and privy feals, for iffuing the king's trealure, and Chail draw orders or make the debentures for iffing thereof, as required by the treafury or treafurer of the Exchequer, and hall keep entries thereof, and weekly take the tellers accounts, and make certificate to the treafury of
all receipts, iffues, and remains, of the king's money there, and make out the impreft certificates, and trantmit the ordnary impreft-rolls half yearly to the remembrancer ; and fhall half yearly, at Eafter and Michaelmas, tranfmit to the trea fury the declaration of the receipts, iflues, and remains at the Exchequer, as hath been antienrly accuftomed. And the clerk of the pells thall (for his lawful fees) enroll all letters patent and privy feals for iffuing the king's treafure, and enter all receipts and iffues at the Exchequer, and take the tellers week!y accounts, and certify to the treafury, weekly, the receipts and remains of the king's money there, and examinc the impreft-certificates and impret-rolls, and tranfinit to the treafury, half yearly, declarations of the receipts, iffues, and remains, within the half year, and fhall in all matters obferve the antient method. And the faid officers, their deputies and clerks, fhall be anfwerable for their demeanors, as well to the king, as to any perion who may fuffer by any neglect.
Sect. 9. All penalties by this att fhall be recovered in any of the king's courts of record.
Sect. 1o. This aft not to leffen the lawful power which the commiffioners of the treafury or treafurer ought to have in their places.
Sect. 11. This act not to alter any method of receipts or payments by bills of credit ia the Exchequer; allowed by parliament.
Seet. 12. All the money in the receipt thall be kept in chefts under three locks and keys, the tellers to keep one, the clerk of the pells one, and the other thall be kept by the eldeft of the two deputy chamberlains; and no orders, \&c. Mall be paid the fame day they are fent up from the auditor's office to the clerk of the pells (except for the navy, ordnance, forces, or for monies regittered); and the clerk of the pelis and deputy chamberlains hall, every morning, except Sundays and holidays, cáufe the cheft to be opened in their prefence, and fo much money taken out and left with the tellers. as will fatisfy the orders ready to be fatisfied, and the relt to be locked up again; and every day fee all the money received that day (except what thall be paid away) to be firft weighed in the bags, a ticket of the contents put into each bag, and fo fecured in the chefts. And, if monies in the cheits be directed to be iffued for the navy, ordnance; \&tc. To that payment mult not be deferred, the clerk of the pells and deputy chamberlains fhall go up to the tellers offices and fee the chefts opened for that money, and the public fervice difpatched, and the chefts fecured again; and, when the clerk of the pells cannot attend, his eldeft clerk hall keep the keys of the chefts; if the deputy chamberlain cannot attend, his keys fhall be kept by his fellow; and no money thall be taken out of the chefts, but in the prefence of the teller, the clerk of the pells, and deputy chamberlain ; or, if fick or abfent, of their clerks, as aforementioned.
Sect. 13. The auditor of the receipt, or his chief clerk, fhall, at leaft once in 28 days, vifit every teller's calh, and by numbering the bags, opening fome of them, and, if he thinks fit, by weighing or telling the money, fee that the tellers have the remains wherewith he charges them; and, at leaft once in three months, he fhall examine the tellers vouchers for the payments he allows them in his weekly certificate. Stat. I2 Geo. I. cap. 12. fect. Ig. The commiffioners of the treafury thall caufe to be prepared Exchequer-bills, not exceeding in the whole $500,000 \mathrm{l}$. fterling.
Sect. 20. The faid bills hall bear an intereft of 2 d . per cent. per diem, payable to the beazers; but the intereft fhall be faved on fuch of the bills as fhall at any time be in the receipt of the Exchequer, or the hands of any receivers or colle taxes.
Sect. 21. The bills fhall be numbered arithmetically, and regiftered accordingly, fo that the principal fums may be paid off in courfe; and the intereft hall be payable every three months, and on every bill be indorfed the fum, after which the principal to be contained therein thall be paid in courfe; and the bills marked with fuch cheques or counterfoils as the trealary fhall direct; and the perfon who is to bave the paying off the bills thall have one part of the cheques, \&c. and the contractors for circulating the bills the other; and all the parts of the cheques, \&c. Thall be delivered back into the Exchequer, when the bills thall be cancelled.
Sect. 22. Thefe bills fhall be placed as cath in the tellers of fices, and the tellers be chargeable with the proportion of them.
Sect. 23. Thefe bills thall be current in like manner, and fubject to fuch rules as are prefribed by the land-tax act concerning the Exchequer-bills thereby authorized, and all the claufes relating to the currency, exchanging, $\& \mathrm{cc}$. of thefe bills, fhall be conftrued to extend, as well to the Exchequerbills to be made forth by this at, as to the bills made forth in purfuance of the faid act; the fuid claufes being the fame as in ftat. II Geo. II. cap. 1.
Sect. 24. All thefe bills thall be charged on the monies that Thall arife by the duties thereby charged on the retailers of beer and ale; and be iffucd cowards tiking in, circulating, and difcharging thefe bills, as the treafury fall think fit.

Sect. 25. Every year, during the continuance of thefe bills, the treafury fhall on Michaelnas-day, or within 20 days after, caufe a true account to be taken of all the monies that fhall in the preceding year have been paid into the Exchequer, on account of the faid duties or compofirions upon retailers of beer and ale, and how much thereof will be neceflary for the intereft on the faid bills, and for the charges of circulating; and, if any furplus remain, it hall be applied towards paying off the primeipal.
Sect. 26. In cafe, on any fuch feaft-day, the money arifen in the preceding year fhall not be fufficient to difcharge fuch intereft or charges, fuch deficiency fhall be made good out of the firft fupplies to be granted in parliament; and, if fuch fupply be not granted within fix months, the fame fhall be made good nut of the finking fund.
Sect. 27. What monies fhall be iffued out of the finking fund, Shall be replaced out of the firft aids to be granted in parliament.
Stat. 7 Geo. II. cap. 6. fect. 2. There fhall be kept in the office of the auditor of the receipt a regifter, to enter all the money payable upon this act, for granting the duties upon falt, \&ec. and it thall be lawful for athy perfons to lend bis majefty, upon the credit of the faid duties, fums of money not exceeding in the whole one million; with intereft not exceeding 4 per cent. fo as fuch loans be allowed by three commiffioners of the treafury, the intereft to be paid every three months, and the monies lent not affeffed in any tax. And every fuch lender fhall have a tally of loan, and an order for repayment ; fuch orders to be regiftered, and all perfons paid in courfe. And no fee demanded for the fame, on pain of treble damages to the party grieved, with cofts; or, if the officer himfelf take or demand any fee, then to forfeit his place alfo. And, if any undue preference be made in regiftry or payment, the party offending fhall be liable to pay the value of the debt with cofts, and be forejudged of his office. And if fuch preference be unduly made by any deputy or clerk, without privity of his mafter, he fhall be liable to the action, and ever incapable of his place. And in cafe the auditor fhall not direct, or the clerk of the pells record, or sellers make payment as directed, to forfeit as aforefaid, the penaliies to be recovered in any of his majefty's courts.
Sect. 3. If feveral tallies or orders bear date, or be brought the fame day to the auditor, it fhall be no undue preference which of thofe be entered firft, fo he enters them all the fame day; alfo it fhall not be any undue preference, if the auditor direct, \&c. and the tellers pay, fubfequent orders of perfons that demand their money, fo as there be money referved to fatisfy precedent orders, intereft being to ceafe from the time the money is fo referved.
Sect. 4. All perfons to whom money thall be due for loans by this act, by affignment indoried on their order, may affign fuch order, or any part thereof, which being notified in the office of the auditor, and an entry made in the regittry (which the officers hall without fee make) fhall intitle fuch affignee, and to toties quoties.
Sect. 5. The commiffioners of the treafury may raife the faid fuin of one million, or any part thereof, by Exchequerbills, with like powers and directions, as in 12 Geo. I. cap. I2. Stat. 8 Geo. II. cap. 12. fect. 4. It fhall be lawful for any perfons to lend to his majefty fums not exceeding 500,0001 . upon credit of the duties upon falt by this act continued, upon crders of loan, to be made out, as in 7 Geo. II. cap. 6. Stat. Io Geo. II. cap. I7. fect. 13. It thall be lawful to any perfons to lend to his majefty, at the receipt of the Exchequer, fums not exceeding in the whole 500,0001 . at 3 per cent. to be fecured by orders of loan or Exchequer-bills, upon the duties upon fweets granted by this act, as in 7 Geo. II. cap. 6. Stat. in Geo. II. cap. 17. fect. i3. It thall be lawful for any perfons to lend to his majefty, at the receipt, \&x. upon credit of the duties upon malt, \&c. by this act granted, fums not exceeding 750,0001. at 3 per cent. to be fecured by orders of loan or Exchequer-bills, as in 7 Geo. II. cap. 6.
Sect. 3r. The faid Exchequer-bills fhall be curredt to all receivers and collectors of the cuftoms, excife, or any revenue and at the receipt of the Exchequer; and fuch bill as fhall be received at the Exchequer, hall be locked up as calh; and all receivers and collectors of the revenue flall, out of any money in their hands, pay fuch of the fame bills as thall be brought to them; and, in cafe any fuch receivet or collector negleet to exchange fuch bills for money by the fpace of 24 hours, the perfon demanding it may bring an action of debr, or on the cafe, for monies due upon fuch bills, againt fuch receiver or collector, having money in his hands; in which action the plaintiff may declare, that fuch receiver or collector is indebted to the plaintif in the money demanded upon every fuch bill, according to the form of the Itatute, and hath not paid the fame, and the plaintiff fhall deliver up fuch bills to the defendant.
Seck. 32. As any of the bills fhall be paid or lent into the Exchequer, the officers there thall caufe tallies to be levied and delivered to the payers or lenders, as if they had made fuch payments or loans in feecic.
Sect. 33. The incereft due on any of the b:lls ahall be a'lowed
to all perfons paying the fame to any receiver or collector, to the days whereon fuch bills hall be fo paid.
Sect. 34. Provided no intereft be paid on any fuch bills while remaining in the hands of any receivers or collectors, or any teller of the Exchequer.
Sect. 35. Whofo thall pay any fuch bills to any receivers or colleetors, or into the Exchequer, fhall, at the time of fuch payment, \&ic. on each bill put their names, and write thereon, in words at length, the day of the month and year, in which they fo paid, lent, or exchanged, fuch bills; all which the faid receivers and collectors, and alfo the tellers, are to fee done.
Sect. 36. The bills may be re-iffued, and the teller from whofe office fuch bills thall be re-iffued, chall indorfe on them, in words at length, the day of the month and year in which they were fo re-ifued, and alfo on what account laft received into the Exchequer, and fign the fame, from which time the intereft of fuch time fhall revive.
Sect. 37. The fame bills thall be fo re-iffued for the principal money contained in them, and for the interett due on them, and allowed by the teller when fuch bills were laft paid into the Exchequer.
Sect. 38. Every receiver-general of the revenues fhall keep books of account of all monies by him received, and enter the fums in them, with the names of the collectors from whom received, how much in money, and how much in Exchequer-bills and what Exchequer-bills fhall have been exchanged by fuch receiver-general purfuant to this act, to which account every perfon concerned thall have free accefs without fee; and the faid accounts thall lie open at one certain place within the limits of his receipt ; and fuch receiver neglecting to keep fuch books, or enter any money by him received and paid by the face of three days, or refufing any perfon concerned to infpect them, forfeits rool. to any who Thall fue for the fame in any court of record.
Sect. 39. In cafe any of the Exchequer-bills aforefaid be filled up by the indorfement, or by accident be defaced, the commiffioners of the treafury may caufe new bills to be made forth at the receipt of the Exchequer, in lieu of fuch bills filled up or defaced ; and fuch bills to bear the fame numbers, dates, and principal fums, and carry the like intereft as the bills cancelled.
Sect. 40. Commifioners of the treafury may caufe Exche-quer-bills for large fums, not exceeding 50001 , each, to be made forth and placed as cafh in the receipt, in lieu of the like value of the principal contained in bills made forth fot leffer fums.
Sect. 41. Any perfon forging any Exchequer-bill made forth by virtue of this adt, before the fame be paid off and cancelled, or any indorfement thereupon, or tender in payment any fuch forged bill, or any Exchequer-bill, with fuch couinterfeit indorfement, or demanding money for fuch bill, knowing the bill or the indorfement to be forged, and with intens to defraud his majefty or any other perfon; fuch perfonfo offending, being thereof convicted, thall be adjudged a felon without benefit of clergy.
There are alfo other directions relating to the application of the duties, as in 12 Geo. I. cap. 12 .
Thefe are the ufual directions which are repeated or referred to in all acts of parliament directing the iffuing of Exche-quer-bills.
Stat. II Geo. II. cap. 14. fect. 130 . Any perfons may lend his majefty fums not exceeding one million, upon credit of the land-tax granted by this act for the year 1738 , to be fecured, as in 11 Geo. II. cap. 1 .
Stat. ,II Geo. II. cap. 27. feet. 2. Any perfons may advance, into the receipt of his majefty's Exchequer, fums not exceeding 500,0001 . for purchafing annuities at 3 per cent. charged upon the finking fund 'till redemption by parliament; or the commiffioners of the trealury may raife the money, or any part of it, by ifluing Exchequer-bills, with the ufual directions.

Remarks.
From this fketch of the flatutes, in relation to the conftitution of the Exchequer, the following particulars are obfervable. That the Exchequer is the great check upon all the other offices, which relate to the public revenue; thaf all the receipts and payments, which pals through the various channels of the revenue, ultimately terminate here, and the monies are iftued from hence, and applied to the feveral articles, ordinary and extraordinary, to which they are appropriated by the authority of parliament.
That fo various and fo ftrict are the checks, upon each other, among the feveral officers, appointed for the management and regulation of the Exchequer, that it is farce poffible for any frauds whatever to be carried on, without being detected. At the beginning, indeed, of the reign of his late majefty king George II. the Exchequer was robbed of 419 Il. 14s. 6 d . which was made good by parliament; but this accident is quite foreign to the conlideration of the admirable conftitution of this office.
Sir Thomas Clifford, who was at the head of the treafury, in the time of king Charles II. having involved his roval

## E X C

mafter in great perplexities, advifed the fhutting up the exchequer ; a project of fuch extenfive mifchief, as was, perhaps, never, equalled; at leaft excelled, till the late flagitious contrivance of the South-Sea-Scheme, in our days.
The confequence of public credit has been fo well underftood in all well-governed nations, that to break it has ever been efteemed rooting up the very foundation of a flate. With the Greeks and Romans, what was more facred and inviolable? And, though in thofe ages the public faith did no fo frequently concern pecuniary payments, yet that does not make any difference, as to the confequence.
Among modern princes and ftates, even with fome of the moft arbitrary, nothing is more inviolable than public funds. Great loans have been formerly made to the fee of Rome, by which the Pope's revenues are much incumbered, and he pays, every year, confiderable fums for intereft of money borrowed by his predeceffors; and though this does, and has, for years paft, much exhaufted the apoftolic chamber, and is fo heavy an incumbrance on the fee of Rome; yet no Pope (who in other things claims power to difpenfe with the laws of God and man) would ever attempt a thing fo barbarous, fo impolitic, and without precedent, in any wife ftate, as to break the public faith: not one of them would ever attempt fo much as to reduce the intereft, but by confent of the creditors; in order to which, one Pope, having provided a great fum of money, caufed notice to be given, that thofe who would not accept a lefs intereft, thould take their principal, which few would do, when they found their fecurity fo good.
It were eafy to fhew, from hiftory, what ill effects the breach of public faith has produced. Henry the Third of France, having called an affembly of the ftates-general at Blois, on fecurity of the public faith, prevailed with the Duke of Guife, and his adherents, to put themfelves into his power. His own weaknefs, or the ill advice of fome about him, made him think it his intereft to break through an obligation fo facred; and, by the death of the duke, and others of his party, to fave, as he thought, much treafure and blood, and become fafe and eafy on his throne. But he foon had cavfe to repent of his folly; for, after that action, no man would ever truft him, he never had a quiet moment, fhort and turbulent was the reft of his reign, and his end tragical.
The inftance of his contemporary, Philip the Second of Spain, may come nearer our cafe. In his wars of Flanders, he had been often fupplied with money by the merchants of Antwerp, to the great advantage of his affairs; but a piece of fuch good hulbandry came into his head, as thinking that thefe tally-jobbing merchants, as they were then called, of Antwerp, had got too much by lending bim money; therefore, in his profound wifdom, he thought it convenient to break his faith with them, in moderating their gains, (as the hiforian words it) by which he feemed to have faved forty or fifty thoufand pounds. But what followed? In the next line we are told, that neither they, nor any other, would truft him any more; which, in a few days, was the occafion of his lofing the then great city of Amiens, and, after infinite vexations and mutinies of his armies, for want of pay, by which his affairs were wonderfully retarded, and thofe of his enemies much advanced. In thort, this ungenerous and impolitic action contributed, not a little, to his lo's of many provinces.
It may not be amifs here to take notice, what fort of men have been the moft ufeful in their generation, and Thewed the moft application and fkill, in fupporting the government at the beginning of the revolution, in giving credit to our affairs, and fupplying our wants in all emergencies: we fhould not forget what fort of men, in the city, and of what principles, were the mof liberal and hearty in their loans to his majefty upon every occafion; they were all true friends to our trade, our public credit, and our liberties : to the number of whom we Thould add thofe who projected and wifely eftablifhed the bank of England; a defign fo happy, and fo feafonable, that the naming of it is fufficient to bring to our remembrance, of what extraordinary ufe it was to the government in the moft critical conjuncture: it was, at one time, the very prop of our affairs; and the prefent aid that admirable corporation at prefent gives to the exchequer, fufficiently evinces it's high concernment to the public credit.
The miferable condition to which this kingdom was reduced, by the clipt money, and the rife of guineas, at the time we are feaking, no ftory can furnith us with a more difmal example : at this crifis, the enemies of our eftablifhment thought themfelves certain of gaining their point; and they judged pretty right; for, if the currency of the clipt money, and the monftrous bulk of guincas, had not been overcome, they had been fure of our necks under their feet.
When we were under all thefe difficulties; when we wanted money to pay the army and navy; when all trade was at a fland, and we had not money to go to market, that admirable expedient of the Exchequer Bills fupplied our emergencies, while our filver was in the mint, raifed a new fpecie amongtt us, and came as feafonable as the manna in the wildernefis ; which demonftrates of what important utility to the

Vol.I.

## EXC

ftate the credit of the exchequer may be rendered, if it be facredly and inviolably fupported, and never over-itrained, by ifluing more of thefe bills, than the funds will, in a reafonable time, fink and difcharge. Fer,
In the raifing the public fupplies, a proper quantity of exchequer bills might be every year iffued on the land and the malt taxes, at a reafonable intereft, to be funk, in courfe, by the produce of the tax on which they were iffued.
The iffuing fuch exchequer bills would fupply, in fome degree, the want of money; and could never occafion any run on the exchequer, not being payable on demand.
The inconveniency which arofe, in former times, from iffuing exchequer bills, proceeded from the quantity being too large ; and there not being a fund to fink them in a reafonable time.
People would be glad to take fuch bills in payment ; becaufe thereby they would be enabled to make intereft of their running cah.
Thofe who contract with the government, would be glad to agree to have their payments in fuch bills; which would keep navy and victualling bills from being at difcount; and confequently the government would buy their goods cheaper, than when the contractors are at an uncertainty what they fhall be paid. See the articles Funds, Taxes, Trade.

## EXCISE.

## A fhort hiftory of excifes in this kingdom.

I. That called the temporary excife, firft granted by an act, 12 Car. II. cap. 23. and by the 2d. money-act, parl. laft of king $W$, and firft of queen Anne, continued to her majefty during her life, being 15 d . per barrel, upon every barrel of beer or ale, above 6 s . the barrel, and 3 d . per barrel, for every barrel of 6 s . or under, brewed for retail: 15 d . for every hoghead of cyder or perry, fold by retail; 1 d . for every gallon of ftrong water, or aqua-vitz, \&cc.
II. The hereditary excife, granted at firft for ever, by an act, I2 Car. II. cap. 24. being the very fame with the former.
III. A new excife, granted at firft to king William and queen Mary, their heirs and fucceffors, for 96 years, from January $25,1692-3$, by the fecond money-act, W. and M. parl. 2. feff. 4, and continued for 15 years longer, by the third money-act, Anne, parl. 2. feff. 4, being, for every barrel of beer or ale, above 6 s . the barrel, 9 d . and for every barrel of 6 s . or under, 3 d . for every hoghead of cyder or perry, 1s. $3^{\text {d. }} \& \mathrm{cc}$.
IV. A fecond new excife, firft granted by the third moneyact, W. and M, parl. 2. feff. 5. until May 17, 1713, and by the third money-act, Anne, parl. 2. feff. I. continued from thence for 95 years, being, for beer or ale, the fame with the laft, and cyder or perry is. per hoghead, \&sc.
V. A third new excife, at firft granted for ever, by the fifth money-act of the fame feffion of W. and M. being the very fame with the fecond new excife. In this excife, the price of he liquor is to be reckoned exclufive of the duty.
VI. An excife upon falt, firft granted by the third moneyact, W. and M. parl. 2. feff. 5. and continued for ever, by the feventh money-act, W. III. parl. I. Ceff. I. being three half-pence per gallon, upon all home-made falt, or rockfalt.
VII. A fecond excife upon falt, granted at firft for ever, by the eleventh money-act, W. III. parl. I. feff. 3 . being 3 d. half-penny per gallon, for all home-made falt, or rock-falt. VIII. An excife upon malt, firft granted by the feventh money-act, W. III. parl. I. feff. 2. revived by the firft money-act of parl. laft of King William, and firft of queen Anne, and continued annually to the 24th of June, 1715 , being 6 d . the buthel, on all malt made for fale, or not for fale, for every barrel of mum made for fale, 10 s . for every barrel of fweets made for fale, i2s. and for every hoghead of cyder and perry made for fale, 4 s . all thefe duties upon liguors being over and above the then prefent duties.
IX. An excife on fweets, over and above the excife impofed by the faid malt-act, or any former duty, was fiff granted by the fecond money-act, W. III. parl. 2. feff. I. and by the third money-act, Anne, parl. 2. feff. 4. continued to March 25,1808 ; being an additional duty of 36 s . the barrel, upon all fweets made for fale.
X. An excife on low wines or fpirits, firt granted by the fifth money-att, W. and M. parl. 2, fefl. 2. and by the third money-act, Anne, parl, 2. Feff. 4. continued to June 23, 1807 ; being then an additional excife, or duty of 6d. a gallon upon fpirits drawn from foreign materials, and on thofe drawn from Englifh materials, I d.
XI. A fourth new excife upon home-made liquors, at firft granted from Lady-day 17 IO , to Lady-day 1742, by the fourth money-act, Anne, parl. 3. fell. 2. being an additional excife upon every barrel of beer or ale, brewed for fale, above 6 s . the barrel, (exclufive of the duties) 3 d . and for every barsel at 6 s . or under, Id. for every hoghead of cyder and perry, 5 d . for every gallon of ftrong waters, or aqua vita, Id. This excife was not laid upon any fuch liquors imported.
XII. An excife on candles, firft granted by the fifth money-

act, Anne, parl. 3. feff. 2. and by the 8th money-act, Anne, parl. 4. feff. 1. continued for ever; being a duty of 4 d , the pound on wax, and a half-penny the pound on tallow candles, made in Great-Britain, for fale, or not for fale ; but makers, for their own ufe, might compound at Is. a head, for every perfon in their family.
XIII. An additional excife on candles was at firft granted for 32 years, from Lady-day 1711, by the third money act, Anne, parl, 4. feff. I. being an additional duty, the fame with the former in every refpect.
XIV. An excife upon hides and fkins tanned, \&c. in Britain, firft granted by the 6th money-act, Anne, parl. 4. feff. I. for 32 years, from Midfummer 17.11. This is an excife of feventeen different kinds, upon fo many different forts of hides and kins particularly named, and upon all others not named, 15 l. per cent. ad valorem.
XV. An excife on home-made vellum and parchment, firft granted by the fame act, and for the fame time; being Is. per dozen on vellum, and 6 d . the dozen on parchment.
XVI. An excife on hops of home-growth, firf granted by the 7 th money-act, Anne, parl. 4. feff. I. for 4 years, from June 1, 1711 , being id. per pound.
XVII. An excife on paper, pafte-boards, milled-boards, and fcale-boards, was firft granted for 32 years, from June 10 , 1712, by the third money-act, Anne, parl. 4. feff. 2. being a duty of eleven different kinds, on fo many different forts of paper particularly named, made in Great-Britain; on pafteboards, \&c. $3^{\text {s. }}$ the hundred weight ; and on all forts of paper not named, 121 . per cent. on the value.
XVIII. An excife on foap, firft granted by the fame act, for the fame time ; being a duty of Id. the pound, on all foap made in Great-Britain.
XIX. An excife upon printed filks, callicoes, linens, and fluffs, made in Great Britain, and printed, painted, ftained, or dyed here, was firft granted by the fame act, and for the fame time, being a duty of 3 d .. on filks and callicoes, and three half-pence on linen and ftuffs, the yard fquare, excepting filk handkerchiefs and callicoes, linens and fuftians, dyed of one colour, and ftuffs made of woollen, or the greateft part in value of woollen.
XX. An additional excife on hides and fkins, \&c. of GreatBritain, fift granted for 32 years, from Auguft 1, 1712, by the fourth money-act of the fame feffion, being an additional duty of different kinds, upon fo many different forts of hides and fkins, particularly named, and on all others not named, I5I. per cent. on the value.
XXI. An additional excife on home-made vellum and parchment, firlt granted by the fame act, and for the fame time, being an additional duty of 2 s , the dozen on vellum, and Is. the dozen on parchment.
XXII. An excife on ftarch made in Britain, frift granted by the fame act, and for the fame time, being a duty of Id. the pound.
XXIII. An excife on gilt and filver wire made in Britain, firft granted by the fame act, for 32 years, from July 1,1712 , being a duty of 8 d , the ounce on gilt wire, and 6 d . the ounce. on filver wire.
XXIV. An additional excife on paper, pafteboards, \& zc . firf granted by the third money-act, Anne, parl. 5. feff. I, for 32 years, from Auguft 2, 1714; being an additional duty of eleven different kinds, on fo many different forts of homemade paper particularly named; on pafteboard, \&c. is. 6. the hundred weight; and on all forts of paper not narred, 6 I . per cent. on the value ; and on painted paper for hangings, a half-penny the yard fquare.
XXV. An additional excife on home-made foap, firf granted by the fame act, and for the fame time, being an additional duty of a half-penny the pound.
XXVI. An additional excife on home-made farch, fint granted by the fame act, and for the fame time, being id. the pound.
XXVII. An additional excife on printed filks, callicoes, \&c. firft granted by the fame act, and for the fame time; being an additional duty of 6 d . the yard of half-yard broad filks; an the yard fquare of filk handkerchiefs ; 3 d . the yard fquare of callicoes, and three half-pence the yard fquare of linens and ftuffs, excepting, as before, callicoes, \&ic. dyed of one colour, and woollen ftuffs.

## Excife on liquors imported.

This duty being under the direction of the honourable the commiffioners of excife, it is ufual for them, by their deputation, to impower the collector and furveyor of the cuftoms in each out-port, to levy, collect, and manage it on their behalf, in conjunction with their own port-gauger: and, therefore, at the time of the entry of any excifeable liquors for the cuftoms, the collector of that revenue muft likewife demand and receive the excife-duty thereon; and, in order thereto, a bill muft be drawn from the cuftom-entry, which muft be dated and numbered in courfe, beginning a new number at each quarter-day. The form of this bill of entry may be as follows:

4 January, 1730. No. 1.
In the Tayiftock of London, Daniel Bright matter, from Jamaica.

## Benjamin Bowles.

3 cafks, containing 150 gallons of rum, excife 1.27 : $10: 0$.
A bill of entry being thus formed, and the excife duty received, the collector of the cuftoms muft, befides the cuftomwarrant, grant a diftinct warrant to the proper officers, who are to examine, gauge, and deliver fuch imported liquors, on the behalf of the commiffioners of the excife, as a voucher to them for fo doing. The form may be as follows :

Port of Southampton.
4 January, ${ }^{730}$ - No. r.
In the Taviftock of London, Daniel Bright mafter, from Jamaica.

Benjamin Bowles.
B. B. $\}$ Three cafks, containing one bundred and fify No. 1 to 3. Sgallons of Rum. Excife 1. $27: 10: 0$.
A. B. Collector.

To $\left\{\begin{array}{l}\text { B. C. Surveyor, } \\ \text { C. D. Gauger. }\end{array}\right.$
The warrant being thus made, it muft be delivered to the officers to whom directed, who are to take all imaginable care in the examining, gauging, and difcharging of the liquors therein fpecified; and demean themfelves in all refpeets relating thereto, as is practifed by the officers of the cuftoms in the difcharge of the like goods: and the bill of entry from whence the warrant was drawn muft be preferved upon a file, in order to be entered daily in a proper book, to be kept for that purpofe, in the following form :

An Account of excifeable liquors imported in the quarter ending at Lady-day 1731.

And immediately after the end of each quarter, there muft be tranfribed, from this book, in order to be tranfmitted to the commiffioners of excife, as a voucher for the duties with
which the collector is to be charged, an abftract of the ex cifeable liquors imported during the preceding quarter, in the following form :

Hants Collection,
Port of Southampton.
An Abstract of the excifeable liquors imported in the quarter ending at Lady-day i731.

But though this abftract is not to be fent oftner than once a quarter, yet the duty muft be remitted to the commiffioners, from time to time, as received, in the fame manner as before directed for the remittances of the cuftoms; obferving that, when bills are returned for non-acceptance, the collector mult, in his account current, charge bimfelf debtor for the faid bills, and claim credit for thofe fent in lieu thereof; and that when fuch bills are repaid, the charges of proteft and intereft, 'till the actual time of repayment, muft be charged for the fame; and that under the fecond bill muft be mentioned the number of the firft, and that it is in lieu thereof. And in confideration of the trouble in levying, collecting, and accounting for this duty, the commiffioners of excife make the following allowances, out of the duties received, to the feveral officers concerned, viz.

To the collector, 6 d . in the pound, but not to excecd 401. per annum.
To the furveyor, 6 d . in the pound, but not to exceed $3^{\circ} \mathrm{I}$. per annum.
To the gauger, 6 d . in the pound, which muft not exceed 20 I. per annum.
Which the collector mult deduct, and pay out of the duty by him collected.
Laftly, at the end of each quarter, a true ftate of the collection muft be made, in a proper book to be kept for that purpofe, by forming an account current thereof, which mult be compofed of the feveral receipts, payments, and remittances, during that quarter. The form of which account cursent mult be as follows:

The honourable the commiffioners of excife on liquors, ${ }^{\text {Dr }}$. their account current, from the 25 th of December, $\}$ 1730, to the $25^{\text {th }}$ of March, 1731.

Colleftor at 6 d , the pound, being under 40 Surveyor, the 6 d . exceeding

## $\ddagger$ The year's account murt be made up at Midfummer.

Frem this account muft be formed another of the fame nature, to be tranfmitted to the commiffioners of excife, with the quarterly abftract ; by tranfpofing the fides, and making the collector debtor for what is in the above account, the commiffioners are made creditors, and creditors for what they are made debtors. See Excise.

## REMARKs.

-The greateft excifes, fays John Hamden, Efq; which are laid in Holland, áre upon commodities, which are not of the growth of the country. Their corn comes from Dantzick, their flefh from Denmark, and fo of feveral other things: fo that, by loading them, they oblige their people to confume the goods of their own growth and country, fuch as cheefe, milk, herrings, \&c. whereas, if an excife be laid here, it muft be upon things growing, in a great meafure, in our own country, which unidoubtedly will hinder the confumption; for, the dearer they are, the lefs people will buy of them, and the more they will reduce their families, that they may live cheap. The policy of our anceftors tended to encourage the confumption of all home commodities, which is certainly the true intereft of the nation. Such a tax would go directly againft this maxim. Heretofore the gentry and nobility of England lived altogether in the country, where they continually fpent the product of the land; now they all flock to London, where their way of living is quite different from that ufed heretofore, and they do not expend in proportion the third part of things of our product to what they did when they lived among their neighbours.
The yeomen or gentlemen of fmaller eftates are now, generally feeaking, the only contant refidents in the country. If an excife hould come to raife the price of all things, how fhall thefe men maintain their families? and if they put them off, or diminith them, who thall fpend the growth of the lands?
It is evident, this tax will fall very hard every-where upon the poor farmers; and thofe who are beft able to pay it will be moft fpared. For example: if an excife fhould be laid upon malt, where will the burden lie? The price of it will certainly fink in the country, for want of confumption, by reafon of the new impofition. The brewers in great cities and towns, fuch as London, Briftol, Exeter, Norwich, \&c. will be the only gainers, fince they will buy their malt cheap, and fell their drink dearer than before; and the poor farmer muft bear the lofs, which will be the caufe of throwing up the lands in all parts of the kingdom, more or lefs.
But another thing, which I confefs, fays he, with me, is of the higheft weight, is this: we know the fafety of the nation depends upon the liberty of elections of members of parliament. The excifemen go already (in the year 1692) a great way in many corporations, by their intereft in inns and alehoufes, in influencing the elections to parliament. What then do we think they will do when they have an intereft almoft in every private houfe, when the excife may become more general?
If there were no other objection againft taxing by an excife, I fhould think this one abundantly fufficient, with any man who knows how much the being and well-being of the nation depends upon free parliaments, and, confequently, the intire liberty of thofe who are electors in giving their votes. If fuch an excife thould not be general at firft, yet, when once that way of taxing is brought in, it will tend to become general: if it be laid one time upon fome commodities, it will next time be laid on others. All we have will come to be excifeable; and it will be with us at length as it is at Amfterdam, where (to ufe the words of one who has lately written in that country*) a difh of filh, with it's fauce, before it be ferved up to their table, pays excife thircy feveral times. And one thing more I muft add, which is, that

Contra
C.

1. $33 \cdot 18: 8 \frac{1}{2}$

30:00: o
83.18:81
no tax whatever is fo chargeable in the gathering as an excife.
*Sir William Temple.
Perhaps there may be fome who do not fufficiently apprehend the dangerous confequences of this manner of taxing; and for their fervice it is that I fet down my thoughts upon this matter. No man in England is more thoroughly fenfible of the neceffity of carrying on this war. I am of opinion that the liberty of this nation, the prefervation of this governmens, and the fecurity of the Proteftant intereft throughout Europe, do mainly depend upon the fuccefs of it. I have fhewed, that it is impoffible to go on with it, without giving great fums of money; and I am heartily for giving thofe fums, when our reprefentatives fhall know what they are, by having an exact ftate of the war for the next year laid before them. This is reafonable and neceffary, and more than this cannot be defired: only we would haye the Taxes solaid, as, whem the Necessity of taxing ceases, the Taxesmay cease with thàt Necessity.
There will doubtlefs be many propofals made in parliament, of different natures, for ways and methods of raifing maney. Whenever there is occafion for a tax, there is always great variety of projects of that kind; but, when all is done, I humbly conceive there will be nothing upon the whole matter found fo fafe, and fo much for the good of the nation, as a land-tax. Other things may help, but this will be the main refource. It is true, this will fmart while it lafts, but we are fure to have an end of it. The members of parliament themfelves will be obliged in intereft to take it off, when the occafion ceafes; and, befides, the freeholders of England will never endure the continuance of a land-tax longer than there is an evident neceffity for it. This is the way which our anceftors walked in upon thefe occafions, and this is the fafe and fure way.
It has been laid down in parliament as a good rule, to fupport the government, in time of peace, by taxes on trade ; and, in time of war, to have recourfe to the land, becaufe that tax will not be in danger of being continued when the war is over. Let no man be mifled by a pretence of convenience, or difburdening his land in this way of taxing; all thefe are miftaken arguments; and, though they were not fo, though all the conveniences in the world were to be found in this new method [by excifes], yet the fingle confideration of what the nation hazards in giving a revenue, that probably will never be difcontinued, and the danger to which the liberties of the kingdom will be expofed, if ever the crown thall be rich enough to govern without parliaments, is abundantly fufficient to over-ballance whatever can be alleged to the contrary, from topics of prefent eafe or private interefl. The conflitution, the conftitution is our happinefs; let any inconveniences be fubmitted to rather than that brought into danger. We ftand upon a needle's point ; the revenue of the crown is fo very high already, that one remove more does our buffiefs. England can never be undone, but by it's awn confent; have a care then of giving that fatal confent. We have hitherto been the envy of all our neighbours for our liberties, and the privileges we enjoy; the greateft of which is, being governed by laws made by our reprefentatives. All we have is owing to the prefervation of parliaments, and making their frequent meetings neceffary. Let taxes be laid fo, that they may ceafe with their caufe, and fo parliaments may not become unneceflary. I hall ftop here, and fay no more concerning a land-tax, becaufe this paper is long already, and becaufe my chief intent in writting it, as I faid before, was not fo much to urge arguments for a land-tax, as to offer fome confiderations which might fhew the danger of a general excife.'
This is the fubftance of what Mr. Hamden urged againft ex-
vifes in the reign of king William III. and in miniature contains the whole that was wire-drawn out in numerous pamphlets a few years fince, excepting the arguments deducible from trials without juries, which made a formidable part of this controverfy.
The condition of mankind is fuch by nature, that they all depend on one another; the greateft are as much obliged to the leaft, as thofe are to them ; nor is there any perfon, high or low, in fuch a flate as to be able to live without the goodwill and affiftance of others. But, neverthelefs, as no body is bound to beftow fo much of his labour or his goods as another may want, fo it is plain that, whatever he receives in confideration of his pains or conveniency, is not given away by the other, but only changed.
Though this truth be felf-evident in the cafe of fervants, traffic, cloathing or feeding ourfelves, yet very few make becoming reflections on it with refpect to magiftrates, who are neither bound to fpend all their time for our fafety and welfare, nor able to govern and protect us without thofe revenues we allow them, to fupport their dignity as well as their power.
The reafon why men fo little think of this matter, and are wont to grudge what they give to the government, though not what they fpend on their domeftic neceffaries, is, becaufe the benefits we enjoy from our magiftrates are common to all, and thofe things we purchafe by our money peculiar to ourfelves. I hope I need not ufe many words to perfuade the people of this nation, that there is no price too great for liberty in general, nor the particular conftitution with which they are blefled ; and that it is not enough to preferve it from internal corruption, but that it mult be alfo defended from external violence; which can never be done if we do not maintain the ballance of commercial and maritime power. In regard to the raifing of money from time to time, as the exigencies of the ftate fhall require, it is neceffary that taxes fhould be fo laid as to prove the leaft injurious to the conftitution, and leaft detrimental to our commerce, and in the moft eafy and agreeable manner to the general fenfe of the people without doors; for, if they are ready and willing to pay the aggregate of whatever fhall be abfolutely requifite for the fupport of the eftablifbment, and for the true intereft and glory of the kingdom, it does not feem any way unreafonable that fuch a condefcenfion thould be paid to the general voice of the people, as to permit them to pay thofe taxes in fuch a fhape as may be the moft pleafing to them, and will preferve them in the beft difpofition, good humour, and attachment to that government and conftitution which they are willing to fupport.
EXPORTATION, is that part of foreign commerce, which is diftinguifhed by the active, or felling part, in oppofition to importation, which is called the paffive, or buying part. And, although mutual intercourfes of trade cannot be fuppofed to be carried on withother nations by felling, or exporting all, and buying or importing no merchandizes from others; yet that nation is certainly the wifeft, that fo conducts it's affairs, as to fell more to other nations than it buys of them, in order to keep the advantage in it's favour. The obvious meafures, requifite to promote the exportation of produce and manufactures, may be comprehended under the following particulars :

1. That our lands be cultivated in fuch quantities, as to render all the neceffaries and conveniences of life as cheap as they are in thofe nations, who are ftruggling to rival and fupplant us in our commerce and navigation. See the article Landed Interest.
2. To this end, that all taxes and incumbrances whatfoever, as foon as may be done with fafety, be taken off from the neceffaries and conveniences of life, that our people may work as cheap as thofe of other nations, and our commodities carried to foreign markets as cheap as they do, and, if poffible, better in quality for the price. See the articles Debts National, and Taxes.
3. That reafonable public encouragement be given to thofe, who fhall make any capital improvements in hufbandry, farming, and agriculture, \&c. fo as to afford not only our native productions defirably cheap, but to promote the cultivation of fuch valuable exotics as our lands will admit of, in order to make merchandize of them to fome other nations. See the articles Husbandry and Manure.
4. That all reafonable public encouragement be given to thofe who fhall make any material difcoveries in the mechanical and manufacural arts; either by improvements in the old commodities, or by the invention of new, whereby general induftry may be promoted, andour traffic and navigation with foreign countries advanced. See the articles Artificer and Manufacturers.
5. That working, mechanical, and manufacturing fchools be eftablifhed for children over the kingdom, in order to prevent floth, debauchery, and villainy, by habituating infants from their cradle to honeft. induftry, and thereby to render labour in general cheap throughout the kingdom. See the articles Labour, Poor.
6. That all meafures be taken to render the kingdom populous in ufeful artifts and manufacturers, and feamen, more efpecially in our own natives. See the article People.
Vol. I.
7. That our fifheries of every kind be promoted to the utmoft extent which they will admit of, as a nurfery to our feamen, as well as for the benefit of our traffic. See the article Fisheries'.
8. By importing rather foreign materials for manufadlures, than things manufactured. See Manufacturers.
9. By preventing the exportation of fuch quantities of wool as may injure our own woollen manufactures: and that every meafure may be ufed to work up the whole of our wool, by the improvement of new kinds of woollen manufactures; as thofe with wool and filk, wool and cotton; wool and linen, wool and hair, \&c. and to apply the material of wool to whatever elfe it will admit of, efpecially in the lieu of any general manufacture; wrought with foreign materials: fuch, for example, as woollen hats for men, which, doubtlefs, might be properly ftiffened for the purpofe; woollen hats for the ladies, woollen wigs for labourers, \&c. which might not only become generally fafhionable at home, and in our own plantations among the lower clars of people, but might, perhaps, be exported in large quantities to other countries.-In fhort, to promote whatever manufactures could be thought of, whereby all the wool produced in Great-Britain could be worked up, feems the moft natural and the moft effectual way to prevent it's being fent abroad, to the detriment of our woollen manufactory at home. See Wool.
10. That encouragement be given to thofe who fhall be inflrumental to improve our fineft wool in certain counties, that it may effectually anfwer the end of Spanifh wool, fo that we may have no occafion to import the fame from that kingdom; efpecially fince they have ftole away our woollen manufacturers, fhip-builders, and divers other artizans, in order to raife their own trade upon the ruin of our's, if they can. See the articles Biscáy, Castille, Catalonia, Spain.
11. That the produce of filk be duly encouraged in thofe our plantations which may be proper for it, and that our own filken manufactures be preferred in our general wear to thofe of foreigners. See the articles Georgia, Silk Manufacture, and Piedmont.
12. That the trade of our colonies and plantations be improved to the utmoft, fo that they do not interfere with the commerce of their mother-country, but that they be fo regulated as to enable us to rival our competitors in fuch branches as they are able to outdo us in.
13. That a ftanding committee of trade be appointed by parliament, compofed of perfons well verfed therein, whofe bufinefs thould be conftantly to confider the fate thereof, and to find out ways and means to improve it ; to enquire how the trades we carry on with foreign countries, grow more or lefs profitable; how, and by what means, we are outdone by others in the trades we drive, or hindered from enlarging them; what is neceffary to be prohibited, both with regard to our exports as well as imports, and for how long time; to hear complaints from our factories abroad, and to corsefpond with our minifters there, in affairs relating to our trade, and to reprefent the refult of their enquiries to parliament, with their opinion, what courfes may, from time to time, be proper to be taken for it's encouragement ; and to reprefent what bounties and drawbacks, \&c. may be neceffary for the advancement of particular branches. That this committee enquire into all improvements that thall be made for the benefit of trade, and lay them before parliament; and that fuch artifts may be rewarded at the public expence, according to their merits. See the articles Artificers, Manufacturers, Merchant-Court, Royal Society'of London.
14. That proper treaties of commerce be made with nations, that may prove mutually and laftingly beneficial. See the article Treaties of Commerce.
15. That our merchants who export our product and manufactures, be fecured in their foreign traffic, and the payment of their cuftoms made as eafy to them as may be.- That good convoys and good cruizers, in time of war, be provided for the fafety of their fhipping and merchandizes, to the end that affurance may be kept low, and our merchandize come as cheap as poffible to foreign markets, as well in times of war as peace. See the article Assurance.
16. That courts-merchant be erected in the kingdom, confifting of able and experienced traders, for the fpeedy deciding of all differences between merchants, relating to maritime and other commercial affairs.
17. That a mercantile college be eftablifhed in the kingdom, for the bringing up merchants with every defirable accomplifhment requifite for their profeffion, in as regular a manner as they are trained up for the moft learned profeffions.And alfo for initiating the fons of perfons of diftinction into the regular ftudy of commerce, in order to render them the more confpicuounly ufeful to their country in any public capacity. See the articles Commerce, MercantileCollege.

## REMARKS.

That great eflates have been acquired of late years, and that perfons of all degrees live more fplendid and expenfive than in former ages, cannot be any proof that our riches are in-
creafed,

## E X P

creafed, unlefs it allo appeared, that fuch eftates had been acquired by the exportation of our products and manufactories, and gains made thereon, or by fome other profitable engagements with foreigners. If they are acquired at home amongt ourfelves, it could not add to the capital ftock of the nation, though they occafion a great alteration in the fortunes of particular men. A prodigal expenfive way of living is a proof indeed that a nation hath fome flock and riches; but as all extravagant expesces bave a natural tendency to exhauft the treafure of a nation, fo they ought rather to create a fufpicion that fuch a nation muft grow poor, than afford any argument that therefore it muft neceffarily be rich.
The millions of money which have been got by trafficking in the public funds fince the Revolution, the advantages taken in receiving and paying the public money, and by feveral other ways unknown to former ages', as it occafioned the giving of great fupplies, which hath fallen very heavy upon the people, to make good what was thus got out of the public income, and diverted to private ufes; fo, when land could not bear the incumbrance, was levied by feveral impofitions on trade ; which laft, as they have been, fo ever will be, as long as they continue, a dead weight thereupon: likewife the drawing of fuch great fums of money out of it's right channel, hath made a great alteration in the employment of the capital of the nation and of the people: for, though impofitions on trade are in effect but a burthen on land, or landed men, by another name, yet as traders are firf to pay them, and fuch impofitions have always been found troublefome, an obftruction to commerce, and a diminution of traders profits, they will always think themfelves moft concerned therein. If, upon an enquiry into the ufefulnefs of the feveral orders, ranks, degrees, and employments of men, it appears that merchants, tradefmen, and feamen, and fuch as are employed under them, that carry on our foreign trades; hufbandmen, and fuch as are employed under them, to render the products of the earth ufeful ; are chielly thofe that can be a means of bringing in riches, or providing neceflaries for the fupport of a nation; then nothing can be more neceffary and beneficial, than to ufe all means to encourage and increafe the number of fuch, and to difcover what trades and employments are practifed that are ufelefs and unprofitable, that they may be difcouraged, or rather difcharged, as a fuperfluous burthen and a load upon the nation; left fuch, like Pharaoh's lean kine, fhould in time deftroy thofe that are valuable. As the univerfal employment and good management of our people muft be the way to obtain and increafe national wealth and power, fo good bufbandry, in our dealings with foreign nations, will be found the beft and fureft way to preferve and retain them. The expence and confumption of fuch commodities as have, and are always like to be purchafed with our money, fhould in the firft place be taken care of, that we may have as few of fuch as may confift with our fafety and our intereft.
It is true, that the continuance of trade depends much upon a mutual conveniency between nations; but the advantage and increafe of riches; expected by trade, depends upon our exporting more goods than we import; to which nothing can conduce fo much, as the producing and manufacturing, at home, as many forts of goods as is poffible, or having them from foreign parts for tranfportation, fo cheap and good as that they may be preferred by, and fold again to other foreigners, before the goods of fuch other nations as are our competitors : and the fpending of no more of our own goods, or of thofe we bring from foreign parts, at home, than our neceffities require, is the beft way to sun little in debt to foreign nations; for then we may either import the lefs, or have the more to tranfport to foreign markets. All prodigality at home, in the confumption of commodities that are fit for foreign markets, is in effect a confuming of fo much of the treafure of the nation; becaufe they would yield and produce treafure, more or lefs, if they were not $\mathrm{fo}_{0}$ confumed; whence it is obvious, that as nothing has a more inevitable tendency to reduce a nation to poverty, than an unlimited, vain, prodigal way of living, fo it is impoffible to propofe any way to recover and enrich a nation, equal to that of general labour, induftry and ingenuity: for läbour, induftry, and ingenious arts, are the means of bringing treafure into a trading nation, and frugality and parfimony the only way to keep and retain it; which can only be done by confuming lefs of foreign commodities, and exporting more of our own.

An abftract of the laws relative to the Eaft-India Company-
Of the practical bufinefs of the cuftom-houfe, continued from end of Letter D, with regard to East-India Goods.
-Goods imported from thence mult be brought to fome part of Great Britain, and be there unladen, and be openly and publicly fold by inch of candle, upon forfeiture of their value. 9 \& 10 W. III. c. 44. §68. -and 6 Ann, c. 3. § 2 . -The united company impowered to have the fole and exclufive trade to and from India, and to and from all places between the Cape of Good Hope and Streights of Magelian, for ever: but' fubject to redemption of par-
liament, by three years notice, after the 25th of March 1780; upon the expiration whereof, and repayment to the faid company of the capital ftock or debt of $4,200,0001$. and all arrears of annuities payable in refpect thereof, their right and title to fuch trade are to ceafe and determine 9 \& 10 Will. III. c. 44 . § 80 . \& 3 Geo. II. c. 14. § 9, 10 . II \& 12. \& 57 Geo. II. c. $17 . \$ 2,3, \& 14$.
-The trade and corporation of the united company continued, although their fund fhould be redeemed. 10 Ann. c. 28 . § $1 . \& 17$ Geo. II. c. 17 . § 12,15 .
-Perfons not qualified, going or trading thither, forfeit the thip and goods, and double the value thereof : one fourth part to the feizer or informer, and the other three fourths to the ule of the company, who are to bear the charges of profecution. $9 \& 10$ W. III. c. 44 . § 80 . \& 13 Geo. I. ¿. 8. § 3 . \& 3 Geo. II. c. 14. §9. \& 17 Geo. II. c. 17. § 12. -Any of his majefty's fubjects (not lawfully authorized) going to, or being found in the Eaft-Indies, fhall be guilty of an high crime and mifdemeanour, and may be profecuted within fix years; and being convicted thereof, fhall be liable to fuch penalty as the court thall think fit. 5 Geo. I. c. 2r. § I. \& 7 Geo.II. c. 21 . § I. \& 9 Geo. I. c. 26. § 6. -Every perfon fo offending may be feized, and brought to England, and committed to the next county goal, by any juftice of the peace, 'till fufficient fecurity be given, by natu-ral-born fubjects or denizens, for their appearance to anfwer the profecution: and not to depart out of the kingdom without leave. 5 Geo. I. c. 2 I. §2. \& 9 Geo. I. c. 26. § 7. -Perfons trading or going thither under foreigu commifions, forfeit 5001. 5 Geo. I. c. 21 I. §3.

- Eaft-India Goods traded for contrary to law, forfeited, with deuble the value. 7 Geo. I. c. 21 . § 3.
-Contracts for fhips, in foreign fervices, to trade thither, void, 7 Geo. I. c. 21. § 2.
-Goods not belonging to the company, or perfons licented by them, fhipped on board fhips bound thither, or taken out of fhips from thence before their arrival, forfeited, with double the value: the mafter privy thereto forfeits 1000 l . and all his wages. 7 Geo . I. c. 2 I. § 4.
-Bills of complaint may be exhibited againit illegal traders, for difcovery thereof, and recovery of the duty, and 301 . per cent, to the company. 7 Geo. I. c. 2 I. § 5 .
-Officers not to profecute for forfeitures and penalties, without the confent of the directors of the company. 7 Geo . I. c. 2 I § 7 .
-The Levant company's trade to the Levant feas not to be prejudiced by thefe acts. 7 Geo. I. c. 21. § 8. \& 3 Geo. II. c. 14 . § 16 .
-Goods of the produce of the Eaft-Indies, may not be imported into any place belonging to the Britifh crown, unlefs Thipped from Great Britain, on forfeiture of hhip and goods, or their value: officers of the cuftoms conniving thereat, or delaying proferution; forfeit 5001 . and rendered incapable. 7 Geo. I. c. 21. \$9.
-None of his majefty's fubjects may contribute to, or promote the eftablinhing or carrying on any foreign company trading to the Eaft-Indies, from any part of the Auftrian Netherlands, or any other place; upon forfeiture of their fhare in fuch company, with treble the value: one third part thereof to the ufe of his majefly, and two thirds to the ufe of the company, if they inform or fue; otherwife one third part of fuch two thirds to the ufe of the informer, or fuer. 9 Geo. I. c. 26 § 1 .
-Bills of complaint may be exhibited for the difcovery of offences, and secovery of the fingle value only; one third part whereof for the ufe of his majefty, and the other two thirds for the ufe of the company. 9 Geo. I. c. $26 . \$ 2$.
-But if a common informer declares his intention of profecution at law, and inftead thereof, the directors thall choofe to have it commenced by bills of complaint, they are to allow him one third of the aforefaid two third parts. 9 Geo. x. -. 26. § 3 .
-Any of his majefy's fubjects accepting of any fhare in truft, or knowing any other fubject to have any intereft or fhare in any foreign company, not difcovering the fame to the united company, within fix months, thall forfeit treble the value of fuch fhares, or one year's imprifonment. 9 Geo. I. c. $26 . \$ 4$.
-But making a voluntary difcovery to the directors in writing, within the time afore limited, to have a moiety of the forfeiture. 9 Geo. I. c. 26. §5.
-The forfeitures and penalties inflicted by the acts of 98110 Will. III. 6 Ann. 5 Geo. I. and thefe acts, may be profecuted by the attorney-general, the united company, or any officer of the cuftoms; one third whereof to be for the ufie of his majeity, one third to the ufe of the company, and the other to the ufe of the officers. 7 Geo.I. c. 21. §6. and 3 Geo. II. c. 14. § 9 .
-The united company may export ftores, provifions, utenfils of war, and neceflaries for their garrifons and fettlements, free of duty, provided the duty would not have exceeded 3001 . in any one year. 7 Geo. I. c. 21. § I3. - A Capias in the firft procefs may be iffued for offences againg any act for the encouraging and fecuring the lawful trade thither. 9 Geo. I. c. 26 . § 8 .

## FAC

FACTORS.

## Of factors, agents, and fupercargoes.

A factor is a merchant's agent, refiding abroad, conftituted by letter of attorney, to ad for his principal; and one may act for feveral merchants, who all run a joint rifque of his actions: factorage is the allowance.
A fupercargo is employed by merchants to go a voyage over fea, and difpofe of the cargo to the beft advantage.
Of fome principal laws of England in regard to factors and fupercargoes.
In factors commiffions on fuch occafions, 'tis common to impower them exprefsly to difpofe of the merchandize as if it were their own ; by which the factor's actions will be excufed, though to the principal's lofs. But a bare commiffion to fell is not fufficient authority for the factor to truft any perfon, fo that he fhould receive the money on the delivery of the goods : and, by the general power, he may not truft beyond one, two, or three months, \&c. the ufual time allowed in fales, otherwife he fhall be anfwerable out of his own eftate. A factor thould prefently on fale of any goods receive a quid pro quo, or he does not well execute the commifion given him; and he ought to fell to the beft advantage of his principal, and render a faithful account; and, in performance of the truft repofed in him, he is either to return the commodity to his employer, or bring the money received for it. 1 Bultrode Report. 103.
A merchant delivers goods to his factor to fell, which he cannot but for ready money, without a particular commiffion; for if he can find no buyers, he is not anfwerable: and if the goods are perifhable, and can't be fold for ready money, he muft have authority to fell upon truft. If the goods are burnt, or the factor is robbed, without his own default, he is nor liable; but in this care of perifhable goods, it was not alledged he could not fell for ready money; and the fale was made beyond fea, where the buyer was not to be found. And as a mafter is not bound by bis fervant's contrac, unlefs confenting, or at leaft the goods coming to his ufe; fo neither thall a factor fell but for ready money, without particular orders. 2 Mod . 100 , 10 I .
It has been adjudged by Holt, chief juftice, that every factor of common right fhould fell for ready money; but if he be where the ufage is to fell on truft, there if he fell to a perfon of good credit, who afterwards becomes infolvent, he is difcharged, but not if the man's credit were bad at the time of fate. If there be no fuch ufage, and he on the general authority fells upon truft, he only is chargeable, howfoever able the buyer is; for having. exceeded his authority, there is no contract between the vendee and the factor's principal, and fuch fale is a converfion in the fictor. Pafch. 13. Will. III. If a factor felling goods on credit does, before payment, die indebted by feecialty more than his affets will pay, this money fhall be paid to the principal, and not to the factor's adminiftrator as part of his affets, deducting only the factor's commiffion. Decreed in equity, Hill. 1708. 2 Vern. 638. If a factor give a man time for payment of money contracted on fale of his principal's goods, and after that time is elapfed, fell him goods of his own for ready money, and he becomes infolvent, the factor in equity and honefty hould indemnify his principal, but he is not compellable by the common law. Molloy 440.
And if any factor fells goods for another, either by themfelves or among other things, not advifing his principal, but dealing afterwards with the fame man, he becomes infolvent, the factor hall be anfwerable, becaufe he gave not the owner advice of the fale in due time, and 'tis as if he had fold them contrary to commifion, for the falary of factorage binds him to it. Alfo, if by a merchant's commiffion he buy a commodity for his account, with the merchane's money or credit, and he gives no advice of it, but fell it again for his own benefit, the merchant fhall recover this benefit, and the fuctor be likewife amerced for the fraud.
If a factor by commiffion buys goods above the price limited to him, or not of the fort and goodnefs, as by the authority
they ought to be, he muft take them to his own account, and the merchant may difclaim the buying of them : as he may likewife, if they are fhipped for another place than he ordered: but in fuch cafe, if the price rifeth,' and the factor thereupon fraudulently ladeth them for fome other port, the merchant may recover damages on proof.
A factor, felling under the price limited to him, is to make good the difference, unlefs he gives a fufficient reafon for fo doing. Lex Mercat. Malines, 82.
A factor and fervant differ in this, that the firt is made by merchant's letters, and takes commiffion, but the fervant is entertained with yearly wages, fome without : a factor is anfwerable for lofs fuftained by mifufing his commiffion, a fervant only incurs difpleafure; factors muft therefore punctually oblerve their commiffions. And factors deal moft commonly for feveral, but a fervant, dealing for others by his mafter's direction, can be no lofer if they break, for be has only his mafter's credit: wherefore intimations, citations, attachments, and other lawful courfes, are executed againt fervants, and not againft factors.
No factor, acting for account of another, can juftify receding from his orders, though it might be to advantage, unlefs commiffioned to act for the beff. And here, if four or five merchants remit to one factor four or five diftinct parcels of goods, which he difpofes jointly to one perfon, who pays one moiety down, and contracts for the reft at a certain time: before which if he break, the principals thall bear an equal fhare of the lofs. Lex Mercat. Malines, 81, 82.
If the factor fell at one time to one man goods belonging to divers, to be paid for in one or more payments, without diftinction made by the buyer for what parcels he pays any fum in part, as fhopkeepers do, the factor muft make proportionable diftribution of the monies received, according to the amount of each parcel, 'till all be paid; and if lofs happen, or all be not paid, it is to be diftributed in like manner.
As fidelity, diligence, and honefty are expected from the factor, the law requires the like of the principal : if, therefore, a merchant remits counterfeit jewels to his factor, who fells them as if true, if he receive lofs or prejudice by imprifonment or other punifhment, the principal thall not only make full fatisfaction to the factor, but alfo to the party who bought the jewels: for he fhall anfwer for his factor in all cafes where he is privy to the act or wrong. This was infifted on in the cafe of Southern againft How, on a fale made to the king of, Barbary; though in that cafe, after various arguments, judgment was given againft the plaintiff. 2 Cro. 468. Bridgm. 126, 128.

And fo in contracts; if a factor buy goods on account of the principal, efpecially if ufed fo to do, the contract fhall oblige the principal, who is properly to be profecuted for non-performance. But it has been held, if a factor or fervant buy things generally, not declaring on the contract that it is as a factor only, \&c. he is chargeable in his own right. 2 Keb. 812. The actions of factors depend on buying and felling, entering goods, freighting thips, and all other like matters of com merce ; and, their truft being great, they fhould be provident, for the benefit of their principals. If goods fent to a factor be through his negligence falfe entered, or landed without an officer of the cuftoms, fo as they incur a feizure, he fhall make good the damage: but, if he make his entry, according to the invoice, or advice by letter, and there happens a miftake, if any goods be loft, he faall be acquitted. Lane's Rep. 65.
In Chancery it has been decreed, that, if a factor faves the cuftoms due to a foreign prince, which by the laws is felony in the factor, and forfeiture of all the freight, he fhall have the benefit, and not the employer; for he ran the hazard wholly, and has poffeffon, which is a right againft all, except him that hath the very right. Though, if the duties were due to our king, the factor fhall difcover the fame, if the merchant bing a bill againft him; for this cuftom, being founded in fraud, is void. Abr. Caf. Efq. 369, 370.
If the principal order his factor to infure fhip and goods, as foon as laden, having money in hand, and he negleet, if
the fhip mifcarry, by the cuftom of merchants, he fhall anfwer it ; or if he make any compofition with the infurers after infurance, without orders fo to do, he is anfwerable for the whole aflurance.
A factor, entering into charter party of affreightment with a mafter of a fihip, it obliges him only; unlefs he lades abroad generally the pruncipal's goods, when both principal and lading are liable, and not the factor.
A merchant fends goods to bis factor, and about a month after draws a bill on him; which, having effects in hand, he accepts, the principal becomes a bankrupt, and the goods in the factor's hands are feized; it has been conceived, that, at law, the factor muft anfwer the bill, and can only come in as a creditor, for what he paid by his acceptance of it. Molloy 442.
Goods remitted to a factor muft be carefully preferved; yet, if he buys for his principal, and they receive damage afterwards, but not through his negligence, the principal Thall bear the lofs.
A factor, having made confiderable profit for his principal, mult be careful in the difpofal of it. If he fell the principal's goods for counterfeit money, the lofs is his own; but if he receives money, which is afterwards leffened in value where he refides, the lofs is to the merchant.
A factor is accountable for all lawful goods coming fafe to his bands, and fhall fuffer for not obferving orders: if, having orders not to fell any goods particularly fpecified, he fell them, he is anfwerable for the damage that thall be received; goods bought or exchanged without orders, the merchant may take, or turn them on the factor's hands. And, where a factor has bought or fold purfuant to orders, he muft immediately give advice of it, left they fhould be contradicted, and his reputation fuffer : and he is to fhip off goods bought, the firt opportunity, giving the fpeedieft advice, and fending a bill of lading. Factors hould carefully note the contents of their principal's letters, and fend feedy and particular anfwers; and fhould ftudy the nature, value, rife, and fall of goods, both at home and abroad: and the want of frequent writing to their principals is often of-pernicious confequence, in divers refpects. The gain of factorage is certain, however the voyage or fale prove to the merchant; but the commiffions vary; at Jamaica, Barbadoes, Virginia, and moft of the weftern parts of the world, the commiffion runs at 8 per cent. generally through Italy, two and a half; France, Spain, and Portugal, \&c. two; and in Holland, and other places near home, one and a half per cent.
Where a factor, at the Canaries, deferves money for factorage, it is faid, he cannot bring an action for it, unlefs the principal refufe to account; and, if it appears that the factor hath money in his hands, he may detain, and cannot bring any action; but, if directed to velt all the produce of the adventure in wines, he may bring an action for factorage, and his pains, becaufe he cannot detain, and hath no other remedy. Comberb 349.
If a factor, by error of account, wrongs a merchant, he is to make good, not only the principal, but intereft for the time: and, if the error be in his own wrong, the merchant is to anfwer it, in like manner.
By the ftatute no governor, or deputy governor, of any of the American plantations, or the judges there, or any other for their ufe, Chall be factor or agent for the African company, or others, for the fale of negroes; and any perion offending therein, forfeits 5001 . recoverable in any court of record at Weftminfter, 9 and $\mathbf{1 0}$. W. III. cap 26 . This was the law when the African company was a united corporation.
A bond from a factor to his principal, for faithful fervice abroad.
Know all men, by thefe prefents, that we C. D. of, \&c. and E. F. of, \&cc. in the county of, \&cc. gentlemen, are held and firmly bound to A. B. of, \&c. merchant, in two thouland pounds, of good and lawful money of Great-Britain, to be paid to the faid A. B. or to his certain attorney, his executors, adminiftrators, and affigns; for which payment to be well and truly made, we bind ourfelves, and each and either of us by himfolf for and in the whole, our heirs, executors, and adminiftrators, and of either of us, firmly by thefe prefents, fealed with our feals. Dated this day of, \&c. in the year of the reign, \&c.
Whereas the above-named A. B. hath, at the requeft of the above-bound E. F. and C. C. preferred the faid C. D. as his factor, to ferve him at Port Royal in Jamaica, and other ports and places beyond feas; and the faid C. D. is, upon his departure for Port Royal aforefaid, to take upon him the faid bufinefs and employment. Now the condition of this obligation is fuch, that if the faid C. D. fhall from time to time, and at all times, during his employmentabroad, in the fervice of the faid A. B. whenever he fhall be thereunto required by the faid A. B. his Executors, adminiftrators, agents, or affigns, make and give unto him ${ }_{2}$ or them, true and perfect accounts in writing, of, for, and concerning all and every fuch goods, merchandize, money, bills of exchange, and other things whatfoever, at any time or times hereafter configned or fent to him, the faid C. D. by or from the faid A. B. his execu-

Vol. I.
tors, agents, or affigns; and of and for all and every the re turn, proceed, and benefit to be had or gotten for, or in refpect of the faid goods, money, merchandizes, bills of exchange, and other things whatfuever, for which he the faid C. D. hall or may be charged or anfwerable, and which fhall come to, or be committed to his charge, cuftody, or difpofition, by and from the faid A. B. or any other perfon or perfons, wherewith the faid C. D: his executors, adminillrators, fhall, can, or may, be lawfully charged or chargeable, by reafon of his faid employment, in any refpect whatfoever: and thall likewife well and truly remit, pay, and deliver unto the faid A.B. his executors, adminiftrators and affigns, upon every fuch account made, all fuch money, goods, wares, merchandizes, notes, fecurities for debts, and other things in his hands, in fuch nature and quality as the fame fhall then be and confift, as by and upon the fame account, fhall appeat to be due or belong to the faid A. B. his executors, or affigns. And farther, if the faid C. D. fhall, from time to time, during the fad employment, follow the orders and directions of the faid A. B. his agents and affigns, concerning the management of his bufinefs, and the fale, difpofal, and proceeds of all and every the goods, merchandizes, and effects committed to his care ; then this obligation fhall be void, or elfe to remain, \&c.

## Remarks.

The factors meant and intended, by what has been faid, are fuch as are more properly calied fupercargoes, and return backwards and forwards to their principals, and not take up their refidence wholly in foreign countries.
It is the univerfal cuftom of merchants of the higheft credit, throughout Europe, to act mutually in the capacity of facters for each other: the bufinefs fo executed is called commiffion bufinefs; and, is generally defirable by all merchants, provided they have always effects in their hands, as a fecurity for all the affairs which they tranfact for the account of others. But this clafs of traders, of eftablifhed reputation, have current, as well as commiffion accounts, conftantly between them, and draw on, remit to, and fend commiffions to each other, only by the intercourfe of letters; which, among men of honour and worth, are as obligatory and authoritative, as all the bonds and ties of law: nay, traders may frequently retard and fpin out the proceedings at law, but they cannot obflruct the courfe of their mercantile negociations, for a fingle day, without the hazard of being undone, and lofing all their credit in the trading world.
A merchant, confidered as a principal in fending goods to foreign countries, to be difpofed of for his account, either by a factor, or fupercargoe, who returns perfonally to the country, from time to time, where the principal refides, or to one who lives altogether in a foreigo country, makes out an invoice of the merchandizes which he fo fends or configns. This invoice is fuppofed to contain a particular account of the whole prime coft and charges attending fuch merchandizes, for the government of his factor or fuperchargoe, in the fale thereof But merchants, upon thefe occafions, generally make an addition to fuch invoice, from 5 to 10 or 12 per cent. or more, efpecially if the goods happen to be well bought, or have rofe in their price from the time of purchafe, to that of exportation. This rife upon the invoice, has fometimes a good, fometimes the contrary effect; for, when factors know this to be fometimes a practice with their principal, they are apt to furmife that it is never otherwife; and difpofe of their goods accordingly. It is, however, for the intereft of factors, efpecially of thofe who act conflantly in that capacity, to promote that of their principals; for he that does fo, will never want commiffions. See the article Account of Sales.

Further Remarks with relation to Factors in Spain. The practice of the court of Spain formerly, and which, it feems, is of late revived, with relation to mercantile factors, may deferve attention, as it thews the natural way of firft eftablifhing commerce with diffant countries, and by which one means, amidt numberlefs other wife ones, at prefent, Spain is zealoully aiming at the increafe of her commerce and maritime power.
c The importance of fettling factors in foreign rea-ports is very obvious, fays the politic Spaniard Uztaritz, with a view of promoting an active commerce, agreeable to the antienc practife of the Spaniards, as it appears from a ftatute in the year 1494 ; fince it is for want of this meafure, that his majefty's fubjects cannot have either magazines or houfes, in thofe countries, on their own account, whither they may tranfmit their merchandize, depofit it in warehoufes, and caufe it to befold at the beft market. And though our merchants are under neceffity of importing certain goods from abroad, efpecially linens, fpicery, fome materials, and other things, that are now confumed in Spain and America, and which foreigners vend among us, at very high prices, we are at as great a lofs for factors, and other perfons to be confided in, and of our own nation, whom we may charge with the purchafe and Ihipping of them to Spain.
By this want of fafe correfpondents, our merchants alio fuftain a prejudice, by having no perfon, to whom they may make affignments for the barter of one commodity for another,
upon which greater profits are ufually made, than by felling for-ready money, as well from the difficulty of extracting the money they werefold for, or it's not beingtcurrent in thofe parts, where the owner refides, as to prevent the lofs, which is experienced fometimes in bills of exchange; befides that, there are times and places where they cannot be procured; difficulties and difadvantages that merit the firft attention of our traders, in order to provide againft them, before they engage in buying up any confiderable quantity of goods to fend abroad. So that upon this, and other accounts, the principal profits now turn out to their advantage, while we poffels only the very trifling intereft of a paffive trade.-
Though we have confuls in certain ports, thefe cannot fupply the want of factors, or other agents in commerce; of the former, becaufe moft of thole confuls, not being natives of this kingdom, have, in general, ftoo little regard for the nation, to be intrufted with it's interefts; of the latter, becaufe they are appointed to be judges, in many concerns of trade and navigation, and to take care; that captains, and other mariners, as well as traders, who are fubjects, obferve the orders and inftructions of their fovereign, and therefore ought not to be both judge and party ${ }^{*}$, as they would be, if they were allowed to take commiffions. From this inconfiftence, and for other reafons, Lewis $X[V$, gave repeated orders, in the year 1691, for prohibiting all forts of trade to the French confuls, their officers, domeffics, and other dependants, directly or indirectly, under the penalty of lofing their places, and a fine of three thoufand livres.

* See the article Consuls.

In thofe parts, where there are families of the fame nation or country fettled in trade, there is, no need of fending factors, or others to execute the commilfions abovementioned, fince by means of thofe families, already refiding there, a mutual correfpondence may be formed, for buying, felling, depofiting goods, remittances, and other tranfactions, as it is done by the generality of other nations, particularly in Spain, where we find many French, Englih, Dutch, Germans, Swedes, Italians, and others, trading, and making this kingdom, as it were, their place of abode.
The generality of there foreigners, who are fettled, and trade in Spain, are ufually in partnerfhip with thofe very correfpondents abroad, and divide the profit and loffes, in proportion to the fhare of the ftock or bufinefs each of them has, agreeable to the articles of partnerfhip, and other obligations fubfifing between them. And, for want of fuch families and partnerfhips, they then make ufe of perfons, who merely difcharge the office of a factor or broker, and have no farther intereft in the bufinefs, than fo much per cent. upon the goods, which is more or lefs, according to the refpective country, and the quality of the merchandize or employment:
There are alfo certain foreigners, that live in their own country, and maintain a correfpondence with Spaniards, mutually fending commifions to each other ; but theie are very few.
From there inftances it may be colle Eीed, that as there are no Spanifh families fettled for'a trade in France, England, Germany, and other parts, by our negligence in thig important intereft, for fome years paft, it is abfolutely neceffary for us to avail ourfelves of the meafure abovementioned, fend over and maintain factors, with a ftated falary, in fuch ports and places, as we thall be moft likely to eftablifh and maintain an active.commerce with, and that the ralaries granted out of the revenue be continued, 'till there be fettlements of families and other perfons in thofe parts, who, by the fame traffic, and the gains they will be daily making, are enabled to form and fupport fuch a mutual correfpondence, for the tranfaction of bufinefs, without having recourfe to the fending and maintaining factors with falaries.
Though there be a very large and profitable trade carried on by feveral nation, in the ports of that extenfive coalt of the Mediterranean in Europe, Alia, and Africa, the Spaniards can never have any confiderable fhare of it, fo long as they purfue the maxim of being continually at war with all the Moors and Turks, under whofe government the generality of thofe countries are found to be; notwithitanding it be notorious, that this war, proceeding from a zeal for our religion, has done greater injury to ourfelves, than to thofe infidels, at leaft for many years paft, as I have fhewn. Hence, in refpect to the Mediterranean, we can only trade in fome ports of Italy, and on the fouthern coaft of France, where our commerce cannot be very large, becaufe thofe countries have nearly the fame commodities and fruits, that are the growth and produce of this kingdom, on account of a refemblance between the climates, fo that, during the prefent flate of Europe, there cannot fubfift any confiderable traffic in merchandize and provifions, between each other, either by way of fale or barter + . However, we fhould not, on this account, flight a branch of commerce, though but a middling one, which it is $i^{n}$ our power to poffers in thore places.

+ Does not this shew, from the pen of a wife Spaniard himfelf, how impolitic it is for Spain, not to cultivate a friit friendfhip with Great-Britain; who takes fo much, and France folitte of their produce ?

In the northern provinces we have an opportunity of opening a more extenfive and advantageous trade, than in the Mediterranean, upon account of the neceffity they lie under of having many things from this kingdom, particularly wines, brandies, oil, and other fruits, befides filks and cloths, which we fhould be enabled to fupply them with, when our Manufactories shall be in a more flourishing Condition; and, in exchange for what we chould carry thither, we might import from thofe countries linens, ficicery, fome materials, and other things, which they now bring us themfelves, efpecially for the ufe of our Indies, and fell them to us at high rates.
We have allo a fair opportunity of opening an advantageous commerce at Lilbon, by tranfmitting thither many commodities and fruits, efpecially filks, as well for the confumption of that kingdom, as for the exportation that may be from thence to their Indies; and even to fome paits of Europe, as there is a great number of fhips and merchants, of feveral nations, collected together in that port and city; efpecially, if, for the encouragement of this, and other branches of traffic, we would reduce, as I propofed, the exceffive duties, and remove the other clogs which now diftrefs the Spanilh fabrics, as well in the manufactory, as in their paffing through the cuftom-houfes; fince we are fenfible, that, in fpite of thefe heavy loads, fome filks of Granada and Valencia find a vent in Portugal ${ }^{*}$; and this traffic will be much extended, after we have taken off the embargo upon it already mentioned.

* Here we fee the danger of a Spanifh rival in the Portagal trade.

Upon thefe confiderations, I efteem it a very feafonable meafure to fend and eftablifh factors in

| Lifbon, | Copenhagen, |
| :--- | :--- |
| Bourdeaux, | Dantzick, |
| Bayone, | Stockholm, |
| Nantes, | Peterfburg, |
| Roan, | Marfeilles, |
| London, | Genoa, |
| OAtend, | Leghorn, |
| Amftedam, | Naple, |
| Hamburgh, | Meffina. |

The advantage of fettling a factor at Lifoon has been already confidered, andy in fupport of my opinion, that we do the fame in the ether fea-ports, I hall point out fome of our principal inducements to it.
Bourdeaux is one of the richeft and greateft trading townsin France. In that city are two fairs held every year; one in fpring, another in autumn, when very great numbers of people, of different nations, are collected together: fome coming by fea, others by the famous canal, which croffes the country to the Mediterranean.
Bayonne bas not a very great number of inhabitants, nor a great deal of meachandize and fruits of her.own; but is a place through which paffes a confiderable part of the goods for the traffic between France and Spain, and where frequent commifions are fent for buying, carriage, and other tranfactions of bufinefs.
Nantes, in the province of Britany, is fo famous for it's trade and riches, that in this inftance it is unneceffary to affign any reafons, and I thall only intimate fome of the principal foundations of it's rife and grandeur. It is fituated at the mouth of the Loire, a very large river, and navigable for above a hundred leagues, crofling many fruitful provinces of France, with the advantage of a communication by camals, that are navigable, with feveral other rivers, in particular Seyne, which is well known to pafs by Paris, Roan, and other great cities; infomuch that the faid town of Nantes poffefles the convenience of receiving; by fea; a very large quantity of commodities, materials, and fruits from other kingdoms, at a fmall expence, in the greateft patt of the provinces of France; and the fame favourable fituation enables it to collect together a variety of merchandize and provifions, of their growth and manufacture, and afterwards fend them abroad, as they conftantly do, efpecially linens from Britany, which abounds with them, and from whence are fhipped vaft quantities for Spain, and the Spanihi Indies, introduced, in part, by the channel of Cadiz, and the reft by means of their own colonies.
Roan, a very rich and large town in Normandy, and fituated at the entrance of the River Seyne, carrying on a foreign commerce by the port of Havre de Grace, pofiefles the fame advantages with Nantes, both for: foreign and inland trade, by means of that, and fome other navigable rivers, with which it bas communication; and, notwithflanding it's courfe is not fo long as that of the Loire, it has the advantage of a nearer communication with Paris by water, for the tranfport of many things confumed in that rich capital; whence are alfo brought quantities of merchandize, and other goods, conveyed down the abovementioned river, and paffing by Roan, and Havre de Grace, to be fhipped for a foreign market.
The town of Oftend is not very wealthy, but it is the only good port and channel, for almoft all the commerce, which

## FAC

the Spanifh Low Countries, now in poffeffion of the Auftrians, ufually carry on with the kingdom of Spain.
The great commerce between this kingdom and London, Amferdam, and Hamburgh, is fo notorious that it would be idle to dwell upon it.
Copenhagen, befides its being the refidence of the Court of Denmark, a place of middling trade, and an excellent port, is fituated at the entrance of the Baltic, fo that it may facilitate an inland commerce in that kingdom, and ferve as a place to touch at for the trade to Denmark, Sweden, Livonia, Mufcovy, and other parts of the Baltic.
Moft of the commerce of the great kingdom of Poland, and duchy of Lithuania, is made by the town and port of Dantzick, fituated a league from the fea, at the mouth of the river Viftula, or Weyfel; as this river is navigable for above an hundred leagues, traverfing the beft provinces of that crown, it gives that city an opportunity of fupplying them, at a fmall charge, with variety of foreign merchandize and fruits; and for the fame reafon, facilitates the extraction and conveyance of the commodities and fruits of that kingdom, and it's united flates, to the faid poit, in order to be fhipped for foreign markets; more efpecially grain, of which it yields fo great plenty, that moft part of the prodigious magazines always in Holland is fetched from thence, as well for their own confumption, as that of Spain, Portugal, and other parts of Europe, in years of fcarcity; which cannot be thought ftrange, fince we have affurances from many hands, that foreigners export, by the channel of Dantzick, above eight hundred thoufand tons of grain, one year with another.
Some provinces of Mufcovy and Sweden, liable to bad harvefts, from the exceffive coldnefs of their climates, and more than ordinary moifture of the foil, are alfo ufually fupplied with grain from Poland, purchafing it at Dantzick, either on account of private teaders, or that of their fovereigns; and fince the great diftance does not deter the Hollanders from fetching, and fending it to market, even as far as the kingdoms of Spain and Portugal, and other remote countries, it feems, that, whenever we experience a bad harveft in Spain, the bad eflects of it may be prevented, by fending early notice of it to the factor, whom we fhall have in that city, with orders to buy up, either by himfelf, or other hands, by degrees, and with great privacy, confiderable quantities of the figid grain, which is ordinarily very cheap; and that this be done, either for the account of the revenue, or of fome merchants, who fhall be formed into a company for this purpofe, as it is on fuch occafions; and that they be charged allo with the tranfport of it, fending their own fhips freighted with our commodities and fruits, which are generally efteemed, and find a good market in Poland and it's neighbouring provinces even though we fhould difpenfe them fome indulgences and abatements in the duties.
And, in cafe this cannot be done in due time, that they may avail themfelves of foreign. hipping, fince it is already known, that in the times of diftrefs, when we dread a failure or fcarcity of bread, it is abfolutely neceffary for us to have recourfe to all practicable means for a feafonable remedy againft the evil.
Stockholm, the capital of Sweden, is the port by which is carried on molt of the trade of that large kingdom, where is very much efteemed, and a good market for feveral commodities and fruits of the fouthern provinces of Spain; and into thefe are alfo imported from thence a great quantity of merchandize, efpecially copper, iron manufactured, and to be manufactured, pitch, tary, and other commodities, for the land and fea fervice, and other ufes.
Peterfburgh, fituated at the very bottom of the gulph of Finland, is one of the ports upon the Baltic, a town lately formed, and has a good harbour.' It owes it's birth to the famous Peter Alexiowitz, Czar of Mufcovy; who defigned it, not only for the refidence of this folendid court, but alfo for the feat of moft part of that grand commerce he had projected; and which that glorious prince was daily improving throughout his valt dominions; but we fhall feak more fully, in another place, of the aftonifhing meafures of his political govermment.
Then, with a defign of making the port and city of Peterfburgh the feat of the principal commetce of his empire, be made feveral laws and provifions for transferring to it the confiderable trade of the famous port of Archangel, fituated at the mouth of the river Dwina, which difcharges itfelf into the White Sea, at the diftance of feven or eight leagues; becaufe their commerce to that port was really more chargeable, and attended with difficulties, and the navigation very hazardous, upon account of the great and dangerous courfe of the fhipping along the valt frozen coalt of Norway and Lapland, practicable only: in the few fummer months; while Peterburgh fands clear of all thefe inconveniencies, by it's fituation in a more temperate climate, almoft in the center of Europe, and very convenient for it's eafy communication, both with the feveral provinces upon the Baltic, and many other parts of Europe.
If we pafs to the Mediterranean, in whofe ports I recommend the fetlement of five factories, it is obfervable, that a very

## FAC

large traffic is carried on, by the channel of Marfeilles, be. tween Franoe and other kingdoms of Europe, as well as Geveral provinces of Africa and Alia, both in the Mediterranean and out of it; not only by the French themfelves, but alfo by many velfels and merchants of foreign countries, which I have feen collected together in that town: whence it muft be inferred, that fome commodities and fruts of the kingdom of Spain, and the Spanifh Indies, were they exported, and depofited in that city, might find a good market and we might purchafe there, at more reafonable prices than in Spain, fome things, which we want from abroad, and cannot go and buy, at the firft hand, upon the coalt of Africa and Afia in the Mediterranean, and under the dominion of the Moors and Turks; as it ought always to be confidered, that the circumftances of Marfeilles being a free port, (excepting for certain forts of goods) may much facilitate the buying, felling, and barter of fuch commodities, as we fhall find an intereft in; and that we can eafily fettle a correfpondence from thence with Lyons, an opulent city, that carries on a vaft foreign, as well as home trade, notwithftanding it's great diftance from the fea.
It is alfo well known, that a confidetable commerce is made at Genoa, both by reaion of their manufactories of paper and lilks, and by it's being a convenient paffage for a trade in many forts of merchandize, which go and come from the ftate of Milan, Germany, and other parts.
Leghorn, in the fate of Florence, from it's fituation, the freedom of it's port, and great tiade with the Levant, and other parts, may be reckoned another Marfeilles, efpecially from the vaft number of veffels and merchants I have feen there, collected together from various nations at two feveral times, which I have happened to be in that city; and this facilitates the purchafe, fale, and barter of many forts of commodities and fruits. For thefe réafons, I think we thall meet with a good market for filks, cloaths, tobaccoes, and other things, that may be exported from thefe kingdoms, and depofited in warehoufes there, as foon as the fpanifh duties thall be reduced, and fome other regulations made, that have been propofed, with a view to promote the home, as well as foreign commerce of Spain.
Naples, the capital and court of that kingdom, has alfo a confiderable trade; and we may likewife find there a good market for many Spanih American commodities, fuch as tobacco, cocoa, fugar, cochineal, \&c. by bartering them for linens, raw filk, and other things.
Meffina, fituated on the eaftern coaft of Sicily, and at a fmall diftance from Naples, carries on a large commerce in curious filk, of it's own produce, difpofing of moft of it manufactured, and the reft in the fkein, to the French, Genoefe, and other nations. It has a very fpacious and fafe port, and by it's being in the courfe of molt part of that great number of thips, which go and come from the Levant, it is made a place to touch at, and is convenient for refelhment and refitting; and alfo for a traffic with them, both going and coming, by their difpofing of fome forts of merchandize, and fhipping others; as well as for other branches of trade, which are favoured by it's advantageous fituation; and more efpecially from the circumfance of it's lying in the narrow fea, which feparates the two plentiful kingdoms of Naples and Sicily.
I have already intimated, that this kind of factors is wfually fupported by the brokerage, which is paid by the merchants upon the commiffions fent to them, for their trouble of buying, felling, and other fervices. But as his majefty's fubjects have not, at this time, a commerce of fufficient extent for the maintenance of them, and fuch a fettement, in thofe parts, is a previous meafure, and requifite, in order to invite and eftablifh fuch an intereft for the nation; it will be abfolutely neceffary, in the mean time, and until the trade be fo far advanced, as to yield factorage or commiffions fufficient to maintain them in a decent manner, that the Revenue contribute some Share towards the firgt estabiishment of what is a necessary FounDAtion for this foreign Traffic, from which wile result a very considerable Advantage to his Majesty's Treasury, and an universal Benefit to his Subjects. And in this view, Iam of opinion, there fhould be affigned, to each of the eighteen factors, that fhall be appointed, and fent to the faid ports, a falary of eight hundred dollars yearly; ordering it fo, that three hundred be allotted for his own fupport, two hundred for a book-keeper, who thall be in the nature of a deputy, as well to affift him in the commiffions, as to do the whole, in cale of ficknefs, abfence, or death, 'till his majefty make fome other provifian; and the remaining three hundred dollars for the hire of a houfe, fpacious and fufficient for the reception of his own family, and his book-keeper, and for warehoufes to depofit and preferve all the goods that fhall be fent him, or he thall purchafe, 'till they be fhipped to his corefpondents; together with a declaration, that if the book-keeper thould chufe rather to cloth and maintain himfelf, with the fad ftipend of two hundred dollars, the factor is to put them into his hands, and be obliged to granthim a proper apartment in
his own houle, befides the two hundred dollats; and the book-keeper is always to live in $i t$, that he may be ready to give his affiftance.
It will be alfo a proper regulation, that, fo long as the factors have a ftipend out of the Treafury, the merchants, who are his majefty's fubjects, fhall be remitted half the commiffion paid by thofe of other nations, who do not poffers a like advantage. The fame rule is to be obferved in refpect to the charge of Warehoofe-room. But, whenever his majefty's fubjeats fhall think fit to fop the faid falary, that then the factorage ufual in the place where each of them thall refide, may be regularly charged to their correfpondents.
Thore factors may be very ufeful, not only in cherimhing an Active Commerce in foreign countries, and confirming it to his majefty's fubjects, but alfo inftrumental in promoting fome other fervices of the crown, efpecially in refpect to our armaments by fea or land. For though this kingdom yields moft of the neceffaries for thefe and other ules, it is evident, that, as fome manufactures are ftill at a low ebb, and other things requifite for the trade between this kingdom and the Indies, are fcarce, we often find ourfelves obliged to get fupplies from abroad. Thus we want tin and copper for our founderies of artillery, and other ufes; as alfo hemp, rigging, fail-cloth, pitch, tar, rofin, tallow, planking, and other things for the ufe of the men of war and gallies, purchafing them of foreigners at Cadiz, and other places, at very high prices; whence refults, alfo, this great difadvantage, that careening, and other works in our dock-yards, ufually come exceffive deer.
But the evils enfuing from thence may be prevented, by an inftruction to the officers, whofe bufinefs fhall be, at that time, to draw out before-hand a memorial of the particulars of what thall be neceflary for the faid fervice, diftinguifhing thofe things which may be obtained from the prefent fabrics in the kingdom, or what may be further provided by them, from thofe we are under a neceffity of having from abroad.
With the help of fuch previous information, the neceflary orders may be iffued for manufacturing, procuring, or purchafing, on his majefty's account, all the commodities and materials which can be gotten on the continent of Spain, of it's own produce and manufacture, and a proportionable quantity of each kind collected together in the ports, yards, or magazines of the place where they are to be confumed in building, arming, careening, and fitting out hips, and other ufes; having beforehand a magazine of ftores fufficient for three or four years, and conflantly replacing thofe which Thall be made ufe of, that we may never be under a neceffity of purchafing thefe commodities at fuch times as we are in immediate want of them; for what is then bought, is ufually very dear, and not fo good; nay, fometimes we cannot fupply ourfelves at any rate.
And, if the fame memorial contains alfo a lift of the feveral materials and commodities which will be neceffary to import from abroad, it may then be confidered what countries or places are moft likely to fupply us with them at reafonable prices, and of due goodnefs, that we may fend advice to the refpective factors, and commifion them to purchafe, and thip them on his majefty's account to fuch ports as they fhall be directed, having firft made the ufual infurances, according to the diftance and navigation from thence.
And thefe commifions thould be always governed by this confideration, that they buy up and tranfmit to Spain a fufficient fupply for the confumption of four or five years; and that the orders and proper remittances be made, even before the ftores in hand are actually expended, fo that the magazines may be conftantly full. But it is to be underftood, that our factors are to execute thefe and other commiffions, for the ufe of his majefty, without any charge, or demand upon the revenue for factorage, or wharehoufe-room, fo long as they fhall enjoy a falary from his majefty; but all the neceflary charges and difburfements which they hall have made, are to be duly paid them.
Befides the benefits which I bave faid will accrue from an eftablifhment of factors, we may expect, by this means, to get an infight into the feveral policies, of which foreigners avail themfelves, for the improvement and fuccefs of their trade; as we fhall thus gain a certain knowlege of the circumftances of each country or ftate, and what particular advantages may be made in each place, from buying, felling, or bartering any particular merchandize.
By a correfpondence with thefe very factors, we thall alfo obtain, at an eafy rate, an information of what happens, or is tranfacting, in the kingdoms and fates where they fhall refide; a piece of knowlege that may be very ufeful on feveral important occafions.
As we fhall poffefs thefe and other advantages from fuch a meafure, we mult needs think, that the fum of 3400 doublons will be very ufefully expended yearly in falaries to all the eighteen factoss, as it does not amount to the charge of maintaining a fingle ambaflador in ordinary; and yet fometimes feveral miniftes are difpatched, and maintained at the fame time, in this public character, at a great expence, and to tranfact affairs of much lefs confequence to the general good
of the monarchy, than the benefits we may flatter ourfelves with receiving from the eftablifhment of thefe factors. Befides, hould not more than half of them fucceed, there would be enough to make a great improvement in the active commerce of the nation, to augment confiderably his majefty's revenue, and benefit of his fubjects; and this limited ex pence of thofe factors would but continue a few years a charg upon the revenue; for if, by their means, that active com merce, which is fo expedient and defirable, be oncemblifhed, they will be enabled to fupport themfelves once eftacommiffions only, and their flipends may ceafe: and if fhould be found, that our intention is not anferd if it provifion in any of the ports, we need no longer main this factor in that place.
An eftablifhment of factors would, however, be a very idle thing, unlefs we make choice of perfons of honour and fidelity and at leaft a tolerable fkill in trade, efpecially in keeping mercantile accounts; and, to fecure a prudent managemen in this article, and that the perfons appointed may be in full credit with the merchants themfelves, who are to intruft them with their commiffions and interefts, it will be proper to refer the choice of them to the principal cities, which, for their fituation, and other reafons, fhall be moft likely to ftrike out a trade in the places where the factors are to refide. I think too, that, though they be not made fecurity for the good be haviour of them, they will be in fome meafure under fuch an obligation, becaufe the very confidence of his majefty in fub mitting them to their election, obliges them to it, befides the intereft which their traders muft have in deputing a proper perfon.
I have underftood, allo, that the principal commerce of Spain with the North is by ports in the kingdom of Seville, the traffic of Cantabria, Galicia, and Aufturias, being not extenfive to thofe parts; that very large quantities of wine, raifins and oil, are exported from Malaga to London ; that Gra nada, though it be at fome diftance from a fea-port, has correfpondence and traffic with Lifbon, vending certain filks there. As to the ports of Italy, it is well known, that the principal traffic with them is by the channel of Barcelona Alicant, and Carthagena, exclufive of what goes to AndaJutia to be fhipped for the Indies.
In confideration of thefe circumftances, I am of opinion the choice of the factors fhould be intrufted to the following cities and towns, for the places fet down oppofite to them.

Though this propofal of fubmitting the choice of the factors to the thirteen cities and towns, points out the foreign ports where thofe are to refide who are nominated by each of them, it is only to add an improving circumftance in carrying this fcheme into execution. But there can be no confiderable objection to depart from this rule, whenever it fhall be expedient, from better knowlege of the feveral places, and other reafons, and appointing them a fettlement at the ports and in the places beft adapted to each of the eighteen juft now propofed, fince the main thing is, that perfons be elected by the thirteen cities of Spain before recited, whom they fhall find beft qualified for the truft in their refpective provinces, as by their experience and knowlege of then they will be good judges of their qualifications; but it mult be underfood, that though each city name one, they are to be factors for that and all other places in the kingdom, which Mall be willing to trade in the port or town where each of them fhall refide.
But, though the faid cities be invefted with a power of chufing the perfons for this office, it is to be with a condition, that they do not act 'till they have the approbation of his majefly; and, therefore, their nomination is to be prefented to the corregidor of each place, who is to tranfmit it to his majefty's hands, with a detail of the qualifications that recommend the perfon elected into it. But it is intended that this approbation of his majefty fublift no longer than the factors enjoy a falary out of the revenue.
After his majefty has been pleafed to grant his approbation, there fhould be given to each of them a defpacho, or patent, figned by his majefty's own hand, and underfigned by the fecretary for the time being, appointing him a factor for the

Spanith nation in the port or country he has been nominated to, and containing the fum of which is to be paid him for a faJary, and hpw it is to be diftributed, together with all fuch inflructions as tend to the better difcharge of his office.
To be intitled to this approbation, or choice, it flould be an invariable condition, that the perfon be a native of this kingdom, or bave a patent of naturalization, and be at leaft 30 years of age.
The affiftant, which each factor is to take along with him in quality of a book-keeper, ought to be one to his own liking, as he is to anfwer for his doing his duty in the office. It will, therefore, be expedient, as foon as each factor fhall be elected and approved, that be have leave to nominate a perfon, whom he thall think qualified for this employment, and that he atcordingly give him his nomination, figned under his own hand, which is to be prefented to the council of the city and town which it fhall concern, that they may be alfo judges of the propriety of his nomination ; and, after the city council have approved his choice, the factors thall not be empowered to remove him, without a juft caufe, giving, at the fame time, notice of it to the faid council, and his reafons for doing fo; any in filling up any vacancy, whatever may be the caure of it, the fame formalities fhall be obferved as before; though the factor may, in the mean time, employ fuch perfon as he fhall pleare.
It will alfo be expedient, that the book-keeper be chofen out of the natives of this kingdom, and at leaft twenty years of age.
Should there be confuls eftablithed in the above-mentioned cities and towns for managing and conducting the affairs of trade, it would be fitteft for thefe to have the choice of perfons to be employed as factors; but, in cafe there be none, and it is a troublefome circumfance to affemble, and bring the merchants of each of them to an agreement in the choice, it fhould, I think, be left, in the mean time, to the difiporal of the city couscil, in the hape propofed?
FAIR, a concourle of merchants, manufacurers, and fundry is others of various profeffions, natives and foreigners, who meet yearly, or at other fixed times, in fome certain place, on fixed days, to buy and fell; and whither others refort, out of curiofity only; to partake of the ufual diverfions of thefe public places.
The word is alfo ufed for places where, on certain days, fome one fort of merchandize is permitted to be fold, of which there are two forts at Paris, viz.
The fair for gammons, called alfo the bacon fair, held yearly in the ftreet of Notre Dame; it holds but one day, which is the Tuelday in Paffion week: at which time is fold fo great a quantity of hams, flitches of bacon, and other falted pork, as is fcarce to be expreffed
The onion fair begins on the Notre Dame in September, and holds 'till the end of the month; during which, an inconceivable quantity of black and red onions is brought, of which the citizens lay in for the whole year. It is held in the Ine of Notre Dame, along the Quai Bourbon.
Fair fignifies alfo the place where tradefmen meet together, keep their hhops, and carry on their trade.
Many are held in the open fields, under tents and booths, as that of Guibray and Beaucaire, in France; others within walled places, with hops ranged in a regular manner, like ftreets ; but all without covering, unlefs a few trees are planted as a Ghelter from the fun: fuch is the fair of St Lawrence at Paris, which is held in the fummer.
The fhops where the dealers have their goods, particularly in the two great fairs of Paris, that of Caen, and other principal cities of France, "are ufually termed lodges.'
Of the dealers that frequent fairs; fonse have their fixed abode in fome city, others travel with their goods and fanities from fair to fair.
Though it be not effential to thefe meetings of traders to have comedians, rope-dancers, and the like, yer there are few confiderable ones without enough of them, and, perhaps, is what greatly contributes to the trade of them, the robility and country gentry flocking to them more for their diverfion than what they buyt there, which might be had perhaps better and cheaper at home. It is well known how the nobility of Languedoc flock to the fair of Beaucatre, and thofe of Normandy to that of Guibray; but it is nothing in comparifon of the affemblies of German princes and nobles at the three fairs of Leipfic, and the two of Frankfort on the Maine.
It is the right of fovereignty alone to give patents for the eftablifhment of a fair, whether it be a free orre, or have it's franchife reftrained under fome local right, or on the foot only of a common fair, without any franchifes.

## Free Fairs in France, \&oc.

There are feveral in France, but the prerogatives and franchifes of fome are greater than of others.
The chief are, St Germains, held at Paris the day after Candlemas-day.

## The four fairs of Lyons.

Rheims has alfo four; Chartres in Beauce has three; Merinville three, Rouen two, Bourdeaux two ; Troyes, Mormant in Brie, and St Denis have each of them two; Caen Vol.I.
hath one free fair, and Bayonne one, which-lat̀s is days Clermont in Auvergne, Senlis; and Vitry le François, each one.
The fair of Montrichard in Touraine is alfo famous for the great concburfe of traders to it from all the provinces of the kingdom, but particularly for the great trade in wöbllen ftuffs, amounting, one time with anorber, to $\$ 2,000$ pieces.
The fair of Guibray in Lower Normandy.
The fair of Beaucaire in Languedoc.
The free fair of Dieppe was the laft eftablihed.
Of all thefe, we fhall fpeak particularly here only of that of St Germain, the two of St Dennis, the four of Lyonis and of Rheims, the two of Rouen, of Bourdeaux and Troyes, thofe of Caen, Dieppe, and Toulon; there being nothing remarkable to mention of the others, thofe of Guibray and Beau* caire excepted.
But'we fhall firft fay fomething in general of the fairs of ${ }^{\text {P }}$ Chatpagne and Brie; on the model of which all the others at prefent held in France were eftablifhed.

## The free fairs of Champagnè and Brie:

Thefe, which were at firlt eftabilhed by the earls of thofe provinces, in 16 of the chief cities of them, bave long been the moft celebrated in France, if not in all Europe.
Some of thofe cities had even fix fairs yearly, feveral four; and none but had two at leaft.
Traders, allured by the great franchifes, liberties; and privileges granted them there, run in troops at all times of the year, even from Germany; Italy, particularly from Florence, Lucca, Venice, and Genoa, with gold, filver, and fitk ftuffs, fpices, and other rich goods of their country, or of the Levant, taking in exchange, cloths, leather, and other commodities of Champagne and Brie, or brought thither from other parts of France.
In this Hlourifing fate were thefe fairs, when the two counties were united to the French crown, in 1284 , which, however, was fo far from adding new lufte to them, as might have been expected, that they loft their antient reputation in about 40 years time, and dealers, efpecially foreigners, ceafed to frequent them, finding little fecurity, and new charges and impofitions. Tó recover their former repute, Philip de Valois granted leters patent, in 1349, confirming their antient franchifes, and fuppreffing the new impofitions, which had the defired fuccefs; and it is by their model that all his fucceffors, down to Lewis $\mathbf{X} V$, had governed themfelves in this matter.
Thofe letters have 36 articles, the moft effential of which, as ranged in five clafles, are as follow.

## The franchifes.

All foreign dealers, their factors, sce have free liberty, under the royal protection, to refort to thefe fairs with their goods, provided, bowever, that they be defigned for them, to be there fold or exchanged, or to return with them, on failure of fuch fale, within the appointed time.
They are exempted from all dues, impofitions, stc. according to the good and antient ufages, cuftoms, and liberties of the faid fairs.
No favours, or letters of refpite, may be granted againgt the faid dealers, or the coftoms and liberties of the faid fairs; all fuch, if obtained, being null.
No dealers reforting to, or returning from them, fhall be ftopped or molefted, without fpecial warrant from the wardens of the confervation, and for obligations made truly and really in the fair.

Wardens of the ptivileges,
Judges appointed during the fair are fo called ; they are to fee the franchites preferved, and take cognizance of contefts that may arife between traders. Every fair is to have two wardens, one chancellor, who keeps the feal, and two lieutenants, 40 notaries, and 100 ferjeants.
The wardens and chancellors are fworn in the chamber of accounts in Paris, where they are yearly to make their teport of the ffate of the fairs.
No judgment may be given in the fair time but by the two wardens together, or by the warden, prefent, and the chancellor.
The time that goods muft be in the fair to have the franchife The drapers and traders of the 17 cities of Champagne and Brie, that are to frequent the fairs, that is to fay, thofe of cities in which one of thefe 17 fairs are beld, may not fell their cloaths, or other fuffs, wholefole or retail, within or without the kingdom, on pain of forferture; unldfs firft fent to one of the faid fairs, and expofed to fale from the firf day of the clothis to the fixth following; they being, however, at liberty to difpofe of them as they pleafe, if not fold in that time.
Horre-dealers, both fubjects and foreigners, mult have their ftables in the faid fairs, from the third day of the cloths 'tilt the fair ends.
Farmers, curriers, \&c. mult bring their leather to the fair, and expofe it all together from the firf of the three days, 4

พithous

## F/A I

- vithout referving any for the laft days, or felling in any other place than what is defigned for the fale of leather. In like manner all other wares brought into the fair are to remain on fale, fome fix days, others three days only, according to their nature and quality:

## Inspections.

Thefe are of two kinds, one by the wardens confervators, and the other by examiners, chofen out of the trading companies that frequent fairs.
The wardens infpection is at the opening of every fair, to fee that the dealers have all fuitable convenience and fecurity. The infpectors are to be two good judges of the nature, quality, and goodnefs of all commodities brought, and to ftop and feize what are not gaod, but not without advice of fix, five, or four experienced perfons in the faid trades.
The police of exchanges, bonds, and payments, made at fairs.

All tradefmen, both French and foreigners, may agree in their contracts for payment of goods fold in the fair, to be paid in gold and filver, current at the time of making the contract, notwithftanding any ordinance concerning money to the contrary.
None, unlefs he hath actual refidence in fairs, may ufe the feal, or other obligations, or enjoy the privileges of them. All letters, acts, contracts, \&c. relating to fairs, are null, unlefs they are under the authenticated fal of the faid fairs. Intereft for loans, and goods fold on credit in fairs, may not exceed fifteen livres per cent.
The intereft may not be added to the principal in renewing bonds made at fairs. Nor may bonds, made at any other time, run in the ftile of thofe at fairs, as if made there.
Though, as already obferved, thefe fairs were as a rule in the eftablifhment of all others fince, yet it has not been always followed without fome deviation, according as the times, place, and circumftances required, as may be noticed in what we fhall fay of the principal fairs at prefent in France.

The fair of St Lawrence.
This fair, fo called from it's fituation near St Lawrence's church, is fo very antient, that we know not it's origin. 'Tis held in a place walled in, one part of which is uncovered; the other is formed into fine and large ftreets, with fhops on bath fides, well built and covered. 'Tis chiefly frequented by the goldfmiths and mercers, painters, fempftrefies, lemonade-fellers, toymen, earthenware people, gingerbread bakers, \&c.
They come to it "allo from Amiens, Beauvais, Rheims, and other places of Picardy and Champagne, with Aight fuffs made here, both plain and ftriped, and camblets of all forts, Formerly it was held only one day, but at prefent it lafts two months; beginning the day after St James's day, and ending at Michaelmas. 'Tis proclaimed by found of trumpet, as that of St Germain.

The fair of St Germain.
This fair is opened the day after Candlemas-day, 'Tis greatly frequented by traders from Amiens, Beaumont, Rheims, Orleans, and Nugent, with various forts of cloths and ftuffs. The goldfimiths, jewellers, and toymen of Paris, have fine and well furnifhed fhops in it.
Two infpectors are to be prefent at opening the bales of ffuffs. There is alfo another infpection made by the mafters and wardens of the drapery and mercery.
There come to this fair, as generally reckoned, one year with another, about 1400 bales of cloths and other woollen ftuffs, of which the infpector of manufactures of the cuftomhoufe at Paris is to keep a particular regifter.
The halls under which the fair is held, are reckoned the fineft piece of carpentry in the univerfe, drawing the admiration of all experienced architects, as well as carpenters, 'Tis divided into two different halls, which compofe but one inclofure, and under the fame cover nine ffreets in' a line, cutting each other, and dividing it into 24 parts or illes. The fhops have little rooms or forehoufes over them, and behind fome of them are yards with wells, in cafe of fire. The ftreets are diftinguifhed by the names of the different trades, as the Goldfmiths-ftreet, the Mercers-Atreet, \& E.

## The fairs of Lyons.

Of thefe, one begins the firf Monday after Low Sunday, the other the $4^{\text {th }}$ of Auguft, the third the $3^{\mathrm{d}}$ of November, and the fourth the firft'Monday after Eafter.
'Tis meant of thefe four fairs of fuch note throughout all Europe, when 'tis faid of bills of exchange, that they are pay able at Lyons in the fairs.
The payments of the fair of the firf Monday after Eafter, are on the firft of March: of that on the Monday after Low Sunday, are on the firft of June: thofe-of that on the 4 th of Auguft, are made on the fifft of September, and the other on the firft of December.
The opening of every payment is with ceremony, for the magiftrate comes to the lodge of the exchange, accompanied
with his regifter and fix fyndics, viz. two French, two Italians, and two Swifs, or Germans; and there, after a fhort difcourfe to the affiltants, recommendifig probity in trade, and obfervance of the laws, cuftoms, and ufages of the place, the laws, cuftoms, and ufages are read, "and the clerk draws up a verbal procefs of the opening of the payment. The next day they meet at the city-hall, and by plurality of voices fettle the courfe of exchange for all cities, with which Lyons hath any commercial correlpondence.
This regulation, indeed, is but mere form, almolat all the commerce in bills and money being regulated by ufages contrary to thofe eftablifhed there. "But, on any difpute, recourfe may be had to them.
The prefent franchifes of thefe fairs, with refect to exemption from duties, are, that all goods intended for foretgn countries, fent out of the city, during the fifteen days of etither of thefe fairs, pay no cuftoms outwards, provided the bales and parcels be marked with the city arms, and have certificates of franchife properly made ${ }^{\text {ont. To enjoy this }}$ privilege, the merchandizes muft be fent out of the kingdom before the firft day of the following fait, unlefs otherwife permitted.

## The fairs of Rheimsi,

The continuance of thefe fout free fairs is different, two of them holding eight days, the other twoonly three days.
Their franchifes, \&c. are the very fame with thofe of Champagne.

The fairs of Rouen.
The one is called Candlemas-fair, and begins the 3 d of Eebruary; and the other called Pentecont-fair; opens the day after that feftival; they both hold fifteen days.
Goods fold and exchanged at them, and carried outof Rowen duritg the fifteen days, pay but half dues outwards.
They are much frequented by foreigners, particulaty the Dutch, Englifh, and Scotch, and other northerin nations the advantageous fituation of the city for trade contributing not a little to this concourfe of foreign tradess,

The fairs of Bourdeaux.
One begins the firft of March, the other the fifteenth of October; they laft fifteen days. The laft is commonly the niolt confiderable.
There are almoft conftantly in the port about a hundred foreign veffels; but, at the fair times, 'tir cuftomary to fee 4 or 500 , and fometimes-more, and fome of them even upwadds of 500 tons. For which, and the great quantities, of wintes and brandies fold at them, they are very famous, being inferior to no others in France,
They have the fame privileges, \&ec, with thofe of Paris, Lyons, Brie, Champagne, and Porctou.
The judges confuls are, at thefe fairs, to perform the officesof confervators, with the fame jurifdiction as thofe of Lyons.

The fairs of Troyes.
One of them is fixed to the Monday after the fecond Sunday in Lent, and the other to the firft of Scptember. Gooda fold at them are exempted from all cuftoms outwards, beat dues excepted, under certain reftrictions.

The fairs of St Dennis.
One of thefe two fairs held yearly at St Dennis, a little elty of the ifle of France, in the neighbourhood of Paris, is called the Landy. 'Tis the firft of them, and begins the Monday after St Barnabas, and holds fifteen days. The other begins the fair after St Dennis's day in October, and holde qut eight days. They have both the fame franchifes and privileges with that of St Germain. The chief trade at them is in cloths and woollen and filk ftuffs, brought from feveral provinces, chiefly Champagne, Picardy, Roictou, \&cc.
All goods brought into the fair are fubject to two infpections; the one gratuitous, by the infpectors; the other, with payment of dues, more or lefs, according to the quality of the ftuffs. 'Tis by the mafters and wardens of the drapers and mercers company of Paris, the dues, are fettled at the rate of $20,10,5$, or 3 fols the piece.

The fair of Caen,
This fair is very famous, and fcarce inferior to that of Guibray.
It begins the day after Low Sunday, and holds fifteen days: of which the firft eight days are called the great week, the others the leffer; becaufe formerly the franchife lafted only the firt eight, and becaufe the concourfe of traders was greater, which laft continues ftill, but not the diftinction of franchifes,
This fair is not only confiderable for the quantities of all forts of merchandizes, particularly woollen manufactures, but for the number of cattle and horfes brought to it from Normandy and the neighbouriag provinces.

The fair of Dieppe.
'Tis a free fair, eftablifhed by letters patent in OAtober 169, and was opened for the firf time on the ift of December the

## F A I

fame year. It holds fifteen days. It's franchifes and privileges are, that all goods brought into the port of Dieppe, during the fair, and there fold or bartered, are exempt from one molety of duties inward and outward.
While the fair lafts, foreign merchandizes that bave been imported and not fold, may be carried out free of cultoms.
All foreigners may drfofe of their effects brought during the fair.
Goods, declared to be for the fair, may not be feized while it lafts. Nor are they liable to infpection by the wardens.

The fair of Toulon.
This fair begins the third of November, aud holds fifteen working days.
It's franchifes granted in 1708 are, that no goods, whilft it lafts, are fubject to any duties; and all traders', both Freñch and foreigniers, cnjoy the franchifes and liberties granted to the fairs of Lyons, Brie, Champagne, Rouen, and other cities. Thefe franchifes, however, have certain provifional modifications, obtained by the farmers-general in 1709.

The infpectors of fairs in France.
They are to attend at all confiderable fairs, where there's any great trade, in fluffs and other woollen goods, to infpect and mark them ; and to feize them if deficient, and not conformable to the regulations by authority. But this examination muft be with great circumfpection and referve, at hours moft convenient to buyers and fellers. They are to be accompanied, in the performance of their office, by the judge of the police of manufactures, and the wardens and jurats of the places.
Some free fairs have their own judge, and particular jurifdiction.
There are feveral things to be obferved by wholefale men, who refort to, or fend their agents to fairs, in order to trade fuccefffully, it having it's difficulties as well as it's advantages. They fhould not engage in this trade unlefs they have a partner, or at leaft fome fafe perfon, with whom they can intruft the bulk of their affairs in their abfence.
They flould know what goods are proper, and if they will anfwer the expences of carriage, \&c.
They muft be careful not to carry goods, of which there are confiderable manufactures in or near the places where the fairs are held.
They are to fell for more or lefs, according to the times of payment; and allowance is to be made, in regard that the dealers of provinces, who buy at fairs, are not fo punctual in their payments, as thofe of great trading cities.
The invoice mult be made before the goods are packed; and if feveral bales, they muft be made feparately, and the bales carefully marked and numbered.
They muft be careful to keep a particular diary of the fairs, wherein to write down all the goods fold or bought during the fair ; and afterwards, when returned home, they muft enter methodically into the journal of their trade.
They muft not omit to take promiffory notes or bills of the traders with whom they deal, payable at the following fair, or fome other time agreed on, to avoid contefts about payments.
They are not to be difmayed, if a commodity, proper for a fair, bas neither been aiked for nor fold; but to carry it again the next year, when it will probably fell to good advantage.

## Bealt and horfe fairs, \&c.

Thofe held at Chenerailles, a greet town of Auvergne, are famous for their quantity of fat cattle, brought for the moft part to Paris. They are on the firft Tuefdays of every month.
There are three annual beaft-feafts at Braifne le Comte, near Soiffons; namely, on the 6th of May, the I4th of September, and the 14 th of December. The greateft part of the cattle bought here comes to Paris alfo.
The fairs of Nangis and Crecy in Brie, on the 4th of July, and 2gth of September, are likewife very confiderable, and from which the graziers and butchers of the ine of France are ufually fupplied.
Though the fairs of Guibray ane Czen are chiefly for the trade of linen and woollen goods, and the like; they are, notwithttanding, to be confidered as two of the principal fairs of the kingdom for Norman borfes. There are many other horfe-fairs in different parts of Normandy.
At the fair of Fontenay in Poictou, are fold moft of the horfes bred in that province. 'Tis held on the 24 th of June, and is one of the moft noted in the kingdom for that traffic. At Nogent on the Seine, is a confiderable horfe fair, the it th of Auguft.
The fair at Niort, on the 1 ft of December, is properly for foals.
Montely is a fair chiefly for cows, great numbers of which are bought up by the farmers and peafants about Paris, and all the ifle of France. 'Tis held the gth of September in an open field.
There are alfo, in feveral of the villages about Paris, fairs for pigs.

## FAI

Befides all which, there are innumerable others of leffer note, nor worth particular mention.

## The fairs of Germany.

The mof noted of thefe are at Frankfort, Leipfic, and Na. umbourg, not only on account of the great trade, but the vait concourfe of princes of the empire, nobility, and people, who come to them from all parts of Germany, to partake of the diverfions to be had.

## Frankfort on the Maine,

Has two fairs yearly, one in the fpring, the other in autumn, The firft; which is alfo called Eafter, or Midlent fair, begin* the Sunday before Palm Sunday: the opening of the September fair is not fixed. They are declared by found of bell, and hold three weeks.
Thefe fairs, fo noted for the fale of all forts of goods, and a great numbèr of finc horfes, are ftill more fo for the quantity of all forts of books, chiefly from Holland, Germany, and Geneva.
'Tis a long time fince the monnoie de change, or imaginary money, has been abolifhed, and they ufe now only current money: that which was formerly effective, is infenfibly become imaginary.
To avoid the monopoly that feveral bankers practifed on the eves of the fairs, in gathering the current effective, to raife the price above the currency to the lofs of private perfons, the magiftrate has wifely regulated without abolifhing it.
When a perfon draws on the fairs, it mult not be omitted to explain whether it be in currency or in money, for the current is worth about 5 per cent. more than the money.
Formerly all bills of exchange were payable the fecond week, but at prefent many are payable the third week, which is the time of paying affignations, but it mult be mentioned; every bill on the fair, without fuch claufe, being accounted payable the fecond week of the fair.
Payments are made by transfer of the parties on the exchange, as is practifed at Lyons, and other cities of change.

## Leipsic.

It's fairs are in no lefs repute than thofe of Frankfort, if not more. There are three in the year. One the firlt of January, the other three weeks after Eafter, and the third after Michaelmas, and continue each of them fourteen days.
The opening of thefe fairs is publihed on the frit day, and the breaking them up on the laft, fo that the twelve intermediate days are properly the fair time, in which bufinefs is tranfacted. The acceptance of bills of exchange, payable in the fairs, is ufually the twefth day after their opening: however, thofe on whom they are drawn, may defer the acceptance to the week of payment.
The time of payment does not begin 'till after the publication of the clofe of the fair, and continues to the 5 th day following inclufive; during which time, if not paid, they are to be protefted.
The proteft for non-acceptance may be made before the week of payments; but the bearer of a bill is not obliged to it for his furety, nor even to return the protefted bill before the end of the fair, there being often bankers and merchants who will accept and pay them.
Bills may be proteled for non-payment'till ten in the evening of the laft day of payments,' but not later.
The traders and bankers feldom return their protefted bills 'till three days after the five days of payment, in hopes of finding fome to honour them; but, if not paid in that time, they muft be returned to the drawer, with the protefts, by the firft poft, after the week of payments.
The fair of Naumbourg, though yery confiderable, is more commonly called a market. 'Tis opened the 2gth of June, and holds eight days. The negociations, with refpect to exchanges and protelts, are much the fame as thofe at Leipfic fairs.
The acceptarice of bills is on the firft and fecond day of the market, and are payable there the $3^{\text {d of July at furtheft, or }}$ elfe proteffed; but they are feldom returned with the proteft before the 5 th.
Zurzack in Smitzerland is of note for it's two fairs, one of which beginis two days after Pentecoft, and the other the ift of September. The Dutch, efpecially from Amfterdam, drive a great trade at it, both as to what they carry and bring away; which laft are all forts of filks and ftuffs made in Switzerland, for which they carry painted cloths, mullins, cottons, drugs, woollen cloths and ftufts, tea, chocolate, coffee, fices, drugs for dyers; \&ic.
All the different forts of money made or current in Switzerland, àre alfo here, fo that, to prevent difputes about buying and felling, traders agree in what fpecie they chufe to pay or be paid.

The fairs of Novi.
Novi is a little city in the Milanefe, and has four annual fairs; the firft of which begins the ift of February, the fecond on the 2d of May, the third on the rit of Auguft, and fourth on the 2 d of November. Though there reforts here

## FAI

no fmall concourfe of tradefmen with all forts of commodities, yet 'tis not that which renders them fo confiderable, as that the moft eminent bankers and merchants, from Lyons, Italy, and fome other more remote parts, meet here to fettle their affairs and bailance accounts, chiefly in matters of bank and exchange.
Each of thefe fairs lafts ufually eight days, but they are often prolonged one, and fometimes two days more, on remonftrances of the merchants and bankers to the magiftrates, that they have not had fufficient time to fettle their accounts and affairs.
As this fair is very different from others, being principally for regulating payments four times a year, it might properly be called the transfer, or meeting fair; for, of the many millions there negociated in a year, there's not above 100,000 crowns paid in fpecie.
The bankers of Genoa, and the principal cities of Italy, and even of France, Spain, and the Low Countries, ufed to fend fome one to this fair with a procuration, if they could not go themfelves, with their ballance-account of what they had to pay and receive.
At prefent this fair is not the only one of the kind, thofe of Lyons, Bolzano, and many others, imitate it; and, by their payments, the merchants have brought fuch credit to their fair, as hath diminighed that of Novi; which, though very confiderable, is frequented by few but Genoefe.
This fair hath it's judges to decide all matters, both civil and criminal. If difputes arife between merchants of different nations, one of the fame nation is chofe to decide it, in conjunction with the judges.
The fair of Sinigaglia, a little city in the duchy of Urbino, on the weft coaft of the Venetian Gulph, is held in Auguft and is famous for the great refort of traders to it from all parts of Italy and the neighbouring ftates, efpecially the Venetians.
Riga, the capital of Livonia, hath two fairs, one in May, the other in September, very much frequented by Englifh, French, Dutch, \&c.
The propereft time for the Riga trade is the fair time, but 'tis fomewhat inconvenient to foreigners, who cannot deliver their veffels, nor hire warehoufes in the city, 'till the burghers have made their purchafes, and taken what they think fit of the goods imported.
Thefe fairs are not fo famous as they have been.
At Rama in the Holy Land is a weekly fair, to which the Arabians bring great quantities of goods, particularly galls, fena, and gum arabic.
The fairs of Porto Bello, La Vera Cruz, and the Havannah, are the moft confiderable in the Spanifh Weft-Indies: the two fiff continue while the flota or galleons flay in their ports; and the other is opened at the arrival of the flota or galleons, according as either arrives firft in their return to Europe: the Havannah being the place where they meet, before they make for the Streight of Bahama.

## The principal fairs of ENGLAND:

1. Sturbridge fair, near Cambridge, beyond all comparifon the greatelt in Britain, and perhaps in the world.
2. Briftol, two fairs; very near as great as that of Sturbridge. 3. Exeter.
3. Weft Chefter.
4. Edinburgh.

## Alfo feveral marts, as $\left\{\begin{array}{l}\text { Lynn. } \\ \text { Boffon. } \\ \text { Beverly. } \\ \text { Gainforough. } \\ \text { Howden, \&c. }\end{array}\right.$

6. Weyhill fair
\} for fheep.
7. Burford, fair,
8. Pancrafs fair in Staffordlhire, for faddle horfes.
9. Bartholomew fair at London, for lean and Welfh black cattle.
10. St Faith's in Norfolk, for Scots runts.
11. Yarmouth fifhing fair for herrings, the only fifhing fair in Great Britain, or that I have heard of in the world, except the fifhing for pearl oyfters, near Ceylon in the EaftIndies.
12. Ipfwich butter fair.
13. Woodborough-Hill near Blandford in Dorfethire, famous for weft country manufactures, Devonfhire kerfeys, Wilthire druggets, \&c.
14. Two cheefe fairs at Atherfton and Chipping Norton.

With innumerable other fairs, befides weekly markets for all forts of goods, as well our own as of foreign growth.

Some of the principal laws of England, relating to Farrs and Mariets.

Fairs kept longer than they ought, to be feized by the king's hand, and proclamation to be made how long fairs are to continue. 2 E, III. . 1.15

## FAR

Merchants not to fell wares after the fair is ended, on pain of forfeiting double value. 5 E. III. c. 5 .
In the court of Piepowder, oath to be made, that the matter of the declaration was done within the jurifdiction and time of the fair. 17 E. IV. c. 2.
3 H. VII. c. 9. This flatute authorifes citizens of London to carry their wares to fairs and markets out of the city.
Owners of fairs or markets, to appoint toll-takers or booth keepers, on pain of 40 s . And they to give account of horfes fold, \&c. under the like penalty. 2 and 3 P. and $M$ c. 7 .

Sellers of horfes to procure vouchers of the fale of the horre to them, and, for every falfe voucher, fhall forfeit 5 l . The names of the buyer, feller, and voucher, and price of the horfe, to be entered in the toll-taker's book, and a note thereof delivered to the buyer. A horfe flolen may be redeemed by the owner, in fix months, repaying the buyer, \&c. $3^{1}$ E. c. 12.

## Remark

The origin of trading fairs was to facilitate the buying and felling of merchandizes, in the inland parts of trading countries; and, while the fairs in Great-Britain were duly attended, by the eminent tradefmen from the metropolis, and other chief trading cities, fhop-keepers refident in the interior counties were more cheaply fupplied with merchandizes, and could afford to fell their own at a much cheaper rate than they have been able to do, fince the cuftom of riders has been introduced among the country fhop-keepers; for this cuftom has been inftrumental to lay a voluntary kind of additional taxation upon our own commodities.
F ARMING, the art of cultivating land, and breeding of cattle. See Agriculture.
In the examining, purchafing, or farming of lands, there are two things chiefly to be confidered, the wholfomenefs of the air, and the fruitfulnefs of the place. Next to which mult be obferved, the roads, water, and neighbourhood; the former is beneficial with regard to the great article of carriage, water with refpect to fertility, and the other with regard to the fale of the productions of the land. Befides thefe confiderations, the farmer thould never poffefs more land than he is well able to manage, both by his purfe and his perfon. The antients applaud fpacious tracts of land, but recommend the well cultivation of fmall ones; for land of a large extent, not duly cultivated, will yield lefs than that of a narrow extent, managed to the beft advantage.
To make a right judgment of the nature and quality of foils, fee the articles Chemistry, Earth, Manure, and fuch other heads as we fhall from thefe refer to; where are thewn the experimental methods of improving foils, fuitable to the productions intended to be cultivated; whence it fhould feem to appear, that the farmer ought not to be a perfon fo meanly bred as the generality are; for although fuch who undertake this employment, are commonly bred and cut out for labour chiefly, yet the mere working parts feem to be the meaneft qualification in this bufinefs: his head may be of more benefit to him in an hour, than his hands in a twelvemonth. Nor do I fee any reafon, why the art of farming fhould not be as rationally and experimentally taught as any other, fince it fo greatly conduces to the fuftenance of mankind in general. Vegetation is an extenfive field of ftudy; and, though much bas been writ upon the fubject, yet no body has yet reduced the improvements that have been already made therein to any thing of a fyftem, fo as to lead either the gentleman or the practical farmer into a regular knowlege of the art.
Nor can we be of opinion, that this art is yet brought to it's ultimate perfection in this, or any other country; we are rather inclined to believe, that there is far more to be difcovered than has been, even with regard to the point of vegetation only: and, in relation to that part which comprehends the breeding of different forts of cattle, we feem to be far fhort of the knowlege requifite.
One who is qualified to direct every branch of the bufinefs of farming, will, with a moderate quantity of land, find fufficient employment, without ufing the fpade, or attending the plough bimfelf; the confideration of making every inch of land turn to the moft beneficial account, and giving fuch attendance on his fervants, that they duly execute his orders, will engrofs the whole of his time.
Befides thefe, there are divers other particulars, though lefs beneficial, which fhould by no means be llighted by the induftrious and Ikilful farmer: fuch as the management of bees to the beft advantage, the making of cyder, the breeding of ducks, geefe, and poultry, \&c. and the producing and rearing whatever elfe he can do at the leaft expence and the mot advantage, according to the nature and fituation of his land, and the extent of his judgment and his cafh.
However the mere practical farmer, who jogs on in the beaten track of hufbandry only, may be efteemed the moft knowing and Ikilful in his bufinefs, and howseer the ordi-

## F A R

F A R
nary practice therein may be prefumed to govern the theory, yet that is certainly a very indifferent guide towards the eftablifhing a true one; becaufe the practice of this clafs in general, as well as moft other mere practical people, is governed more by cuftom from father to fon, and from matter to fervant, than from any certain judgment in the operations of the laws of nature. Nor are fuch who are too much hurried in their way of bufinefs to give daily bread to their families, qualified to dive fo far into nature, as to make any extraordinary improvements in their profeffion. And indeed the art of farming being the art of nurfing nature according to her own laws, 'eis requifite the rational farmer fhould be firf well acquainted with thefe laws, which will render him a better nurfe to nature, than he could be without fuch knowlege.
To arrive at fuch knowlege, it muft be granted, wholly depends upon experimental knowlege; and the knowlege of the ordinary practical farmer, who daily watches his fields and his cattle, and makes his general obfervations upon the feafons, and the weather, 8 cc . is the beft foundation to improve upon ; for he that is unacquainted with the progrefs already made in this art, cannot be prefumed to make any further advancement therein.
In fome arts perhaps it may be more eligible at once to relinquifh the antiquated paths, and to ftrike out new ones; but the intelligent farmer thould not venture upon a new road, 'till he is well inftructed in the old.
This art having nature to deal with in it's living and animated ftate, requires different treatment, and different talents from thole which have only the dead and lifelefs matters to work upon, as the objects of their labour and dexterity; for nature herein is to be ftrictly fludied, humoured and obeyed; in other things, if the is only faintly mimicked, it may anfwer the end of the artizan.
To arrive at the thorough knowlege of all that has been difcovered by the practical farmer in the divers parts of bufinefs which come under that denomination, is no eafy tafk: it is not acquired by refiding within the fmoke of his own farm, or that of bis parith, or of his county; he fhould be fkilled in the methods of culture and hufbandry practifed in divers counties. To obtain a juft notion whereof, he fhould not only fee with his own eyes, but he fhould compare notes with his brethren, be communicative in what he may know, in order to gain a knowlege of what others may be acquainted with: in a word, he fhould not only attentively furvey the practice and improvements of others, both in his own and in diffant counties; and not only converfe with the living, but with the dead: I mean he fhould read, as well as view the works of others, and fhould never ceafe to experimentalize.
We would by no means recommend to the farmer to turn book-wotm, and to thumb over the many mufty volumes that have been feribbled upon the fubject of hufbandry; nor would we put him upon the expenfive trials of every whimfical experiment that has been broached. -This would prove detrimental, inftead of otherwife, to the farmer.-But 'tis as requifite, methinks, that the farmer fhould be able to read fome of the beft things wrote upon the fubject of huibandry, as to repeat the liturgy, or fing pfalms in his country church. The intereft of the land proprietor being connected with that of the farmer, and the gentleman having more leifure, fortune, and a better education, for the making of experimental improvements in hufbandry and agriculture in general ; it fhould feem to be not lefs for the advantage of the gentleman than the farmer, for the former to be able to communicate fuch knowlege to a tenant, as may render him profperous; for it is not always induftry alone, that will enable the farmer to pay his rent; the want of 1 kill to improve land to the pitch it will admit of, is, perhaps, as often the caufe of his ill fuccefs, as an unkindly feafon, or peftilence among his cattle.
Nor is there lefs benevolence than policy herein; for what can give a humane and generous mind more joy, than to render all happy and profperous that fubfift under him ? And to what better account can a gentleman's education tend, than to the due improvement of his own eftate?
Whoever confiders the way of life of the farmer from the cradle to his grave, needs little to convince him how unikely the generality of fuch are to cultivate lands to the beft advantage. However felf-wife the honeft farmer may think himfelf, yet 'tis to be feared, that want of knowlege is as often the caufe of his poverty as want of money: and when this is the cafe, how happy would it be for thefe ufeful and induftrious fubjects to receive admonition from their landlords, how to improve their farms to the beft advantage? Would it tend lefs to the glory and honour of the Britifh gentry to fupply their tenants with knowlege, than to thew them tendernefs, and even lend them money to exert their induftry to the utmoft!
Without any compliment to our country, it may with great truth be faid, that no nation in Europe has produced wifer or more learned men in general, than Great-Britain. The knowlege of the Antients was certainly very great, far greater, perhaps, than the mof leamed antiquaries have
Vol. I.
been able to trace: and 'till within the daft century or two the world feems to have reaped little benefit, by ftanding upon their houlders. But fince the Europeans have happily fell upon the experimental fudy of phyfics, and joined thereto that of mathematics, it may be prefumed, that the Moderns upon the whole are not behind, if they have not yet furpaffed the Antients in arts and fciences, notwithflanding what the learned Sir William Temple infinuates to the contrary, in his excellent eflay upon the antient and modern learning. It has indeed been the opinion of many very learned men, that the Antients had infinitely more knowlege in phyfics than the Moderns, but that they concealed it under the veil of hieroglyphie and mythology. True it is, that they feem to convey far more in this their mode of writ ing, than is generally undertood; and yet, probably, really meant far lefs than what many have extravagantly imagined. However,
The method taken by the Moderns for the advancement of natural knowlege, feems far more generous, for they make myfteries of nothing: on the contrasy, they have eftablifhed focieties in various parts of Europe for it's general cultivation; and, unrefervedly, not only communicate their difcoveries to each other, but to the world in general.
And as the purfuits of thefe truly learned focieties have been productive of fuch real good to mankind in general, and thereby cultivated the noble arts of commerce, to a degree infinitely beyond what they ever were in the world before: and as commerce tends to knit and cement the whole hu man fpecies, by the ties of intereft and civility; that knowlege which promotes it cannot be too much cultivated, nor can the gentry of this nation reap lefs honour and glory, and intereft thereby, than from any other purfuits.. The vietories which make the greateft part of hiftory, and attract admiration the moft, have little other effect than the defolation of countries, the deftruction of cities, and the flaughter of our own feecies. Thefe boafted heroes of antiquity, have they made a fingle man the better? have they made numbers happy? If they have fometimes founded eftates and empires, how dearly have they made their contemporaries pay for it, by the rivers of blood they have fhed? Of what utility to us are a Nimrod, Cyrus, or an Alexander? All thefe princes and conquerors, with all their magnificence and boundlefs projects, are returned into nothing with regard to us; they are difperfed like vapours, and vanithed hike phantoms.
But the difcoverers of ufeful arts for the benefit of general commerce labour for all ages. We ftill enjoy the fruits of their application and induftry. They have procured for us all the conveniencies of life. They haveconverted all nature to our ufe. They have taught us to extract from the bowels of the earth, and even from the deeps of the fea, the moft precious riches; they have opened to us the treafures of all the fciences, and guided us to knowlege the moft uffeful and worthy of our nature.
We do not enough confider the obligations we are under to thofe experimental philofophers, who made the firf effiys in arts, and applied themfelves in thefe important, but elaborate refearches. Are we not indebted to their labour and ingenuity, that we are commodiouly houfed, that we are cloathed, that we have cities and temples? Is it not by their aid that our hands cultivate the land, and that materials for numberlefs productions are obtained, for the unfpeakable utility, comfort and ornament of human life? Have all the conquerors together done any thing that can be imagined parallel with fuch fervices? All our admiration turns generally on the fide of thefe heroes of blood, whilf we fcarce take notice of what we owe to thofe improvers of commercial fcience.
The land of a kingdom is the great parent of every thing for the ufe, the convenience, and delight of mankind. is it not therefore of the laft importance that it fhould be employed to the beft advantage? Is not this much more ufeful than to extend its limits?
One reaton of the fmall produce of the land is, becaufe agriculture is not looked upon as an art that requires ftudy, reflection, and rules : every one abandons himfelf to his own tafte and method, whilft no body thinks of making a ferious fcrutiny into them, of trying experiments, and of uniting precepts with experience. The Antients did not think in this manner. They judged three things neceflary to fuccefs in agriculture. The will: this employment thould be loved, defired, and delighted in, and followed, in confequence, out of pleafure. The power: it is requifire to be in a condition to make the neceffary expences for the breeding and fattening of cattle and fowl of all forts, for labour, and for whatever is neceffary to the manuring and improving of lands; and this is what moft of our hufbandmen want. The fkill: it is neceflary to have ftudied maturely all that relates to the cultivation of lands, without which the two firl things' are not only ineffectual, but occalion great loffes to the mafter of a family, who has the afliction to fee that the produce of the lands is far from anfwering the expences be has been at, or the hopes he had conceived from them ; becaufe thofe cxpences have been laid out without difcretion, and wethout knowlege of the app'ication of them. To theie three heads

10 B
fourth

## FAR

a fourth may be added, which the antients had not forgot; that is, experience, which prefides in all arts, is infinitely above precepts, and makes even the fauls we have committed our advantage: for from doing wrong, we often learn to do right. Agriculture was in quite different efteem with the antients, to what it is with us: which is evident from the multitude and quality of the writers upon this fubject. Varro cites to the number of fifty among the Greeks only. He wrote upon it alfo himfelf, and Columella after him. The three Latin authors, Cato, Varro, and Columella, entered into a wonderful detail upon all the parts of agriculture. Would it be an ungrateful and barren employment to compare their opinions and reflections with the modern practice? Columella, who lived in the time of Tiberius, deplores, in a very warm and eloquent manner, the general contempt into which agriculture was fallen in his time, and the perfuafion men were under, that to fucceed in it, there was no occafion for a matter. 'I fee at Rome, faid he, the fchool of - philofophers, rhetoricians, geometricians, muficians, and - what is more aftonifhing, of people folely employed, fome - in preparing difhes proper to pique the appetite, and excite - gluttnoy, and others to adorn the head with artificial curls, - but not one for agriculture. However, the reft might be - well fpared; and the republic flourifhed long without any - of thofe frivolous arts ; but it is not poffible to want that - of hufbandry, becaufe life depends upon it.

- Befides, is there a more honeft or legal means of preferving * or increafing a patrimony? Is the profeffion of arms of this - kind, and the acquifition of fpoils, always dyed with hu* man blood, and amaffed by the ruin of an infinity of per-- fons ? Or is commerce fo, which, tearing citizens away - from their native country, expofes them to the fury of the - winds and reas, and drags them into unknown worlds in - purfuit of riches? Or is the trade of money and ufury more - laudable, odious and fatal as they are, even to thofe they - feem to relieve? Can any one compare any of thefe me-- thods with wife and innocent agriculture, which only the - depravity of our manners can render contemptible, and by * a neceflary confequence, almolt barren and ufelefs?
- Many people imayine, that the fterility of our lands, which - are much lefs fertile now than in times paft, proceeds from - the intemperance of the air, the inclemency of feafons, or " from the alteration' of the lands themfelves, that, weakened - and exhaufted by long and continued labour, are no longer - capable of producing their fruits with the fame vigour and - abundance. This is a miftake, fays Columella : we ought * not to imagine that the earth, to whom the author of na-- ture has communicated a perpetual fecundity, is liable to - barrennefs, as to a kind of difeafe. After it's having re-- ceived from it's mafter a divine and immortal youth, which - has occafioned it's being called the common mother of all - things, becaufe it always has brought forth, and ever will - bring forth from it's womb, whatever fubfiffs, it is not to - be feared that it will fall into decay and old age, like man. - It is neither to the badnefs, nor to length of time, that the - barrennefs of our lands is to be imputed ; but folely to our - own fault and neglect: we fhould blame only ourfelves, " who abandon thofe effates to our flaves, which, in the ' days of our anceftors, were cultivated by the moft noble ' and illuftrious,'
This reflection of Columella's feems.very folid, and is confirmed by experience. The land of Canaan (and as much may be faid of other countries) was very fertile at the time the people of God took poffeffion of it, and had been feven years inhabited by the Canaanites. From thence to the Babylonifh captivity was almoft a thoufand years. In the latter days, there is no mention of it's being exhaufted, or worn out by time, without fpeaking of after-ages. If, therefore, it has been almoft entirely barren during a long courfe of years, as it is faid, we ought to conclude, with Columella, that it is not from it's being exhautted, or grown old, but becaufe it is defert and neglected; and we ought alfo to conclude, that the fertility of fome countries, of which fo much is faid in hiftory, arifes from the particular attention of the inhabitants in tilling the land, in cultivating the vines, and breeding of cattle. See the Hiftory of the arts and fciences of the Antients, by Mr Rollin.
And here it may not be improper to take notice, in confequence of what bas been faid; of what the learned bifhop Sprat has oblerved, when he fays, 'That it would be no ' hindrance to the minds of men, if, befides thofe courfes of - fludies which are now followed, there were alfo trial made - of fome other more praCtical ways to prepare their minds - for the world, and the bufinefs of human life.

6 It is not enough to urge againft this, that the multiplicity - of methods would hinder and confound the firits of young - men; for it is apparent that nothing more fuppreffes the - genius of learners than the formality and the confinement - of the precepts by which they are inftructed. To this pur-- pofe I will venture to propofe to the confideration of wife - men, whether this way of Teaching by Practice - and Experiments would not at leaft be as beneficial - as the otber by Universal Rules; whether it were not

6 as profitable to apply the eyes and the hands of children to
" fee and to touch all the feveral kinds of fentible things, as to oblige them to learn and remember the difficult doctrines ' of general arts? In a word, whether a Mechanical - Education would not excel the Methodical?

- This certainly is no new device: for it was that which Plato - intended when he injoined his fcholars to begin with geo' metry; whereby, without queftion, he defigned that his - difciples fhould firft handle material things, and grow fami - liar to vifible objects, before they entered on the retired - fpeculations of other more abdracted fciences.
* According to this counfel of the father of philofophers, it - would not be amifs, if, before young fcholars be far engaged ' ' in the beaten tracks of the fchools, the myfteries of manual ' arts *, the names of their inftruments, the fecrets of their - operations, the effects of natural caufes, the feveral kind c of beafts, of birds, of filhes, of plants, of ftones, of mine' rals, of earths, of waters, and all their common virtues ${ }^{6}$ and qualities, were propofed to be the fubjects of their firt - thoughts and obfervations.
* : I have one thing more to add, fays the learned Mr Locke, - which, as foon as I mention, I fhall run the danger of be-- ing fufpected to have forgot what I am about, and what I - have above written concerning education, all tending to-- wards a gentleman's calling, with which a trade feems only - inconfiftent : and yet I cannot forbear to fay, I would have - him learn a trade, a mannal trade; nay two or three, but * one more particularly.
- The bufy inclination of children being always to be di-- rected to fomething that may be ufeful to them, the ad-- vantages propofed from what they are fet about may - be confidered of two kinds; I . Where the fkill itelef that - is got by exercife is worth the having. Thus faill not - only in languages and learned fciences, but in painting - turning, gardening, tempering and working in iron, and : all other ufeful arts, is worth the having. 2. Where the - exercife iffelf, without any confideration, is neceflary or - ufeful for health. Inowlege in fome things is fo neceflary - to be got by children, whilt they are young, that fome - part of their time is to be allotted to their improvement - in them, though thefe employments contribute nothing - at all to their bealth : fuch are reading and writing, and - all other fedentary fudies, for the cultivating of the mind, - which unavoidably take up a great part of gente-- mens time, quite from their cradles. Other manual arts, - mens time, quite from their cradies. Other manual arts, 'them, by that exercife, not only increafe our dexterity - and fkill, but contribute to our health too, efpecially fuch - as employ us in the open air. In thefe, then, health and - improvement may be joined together; and of thefe thould - fome fit ones be chofen, to be made the recreations of - One whofe chief bufinefs is with books and fudy. In this - choice, the age and inclination of the perfon is to be - confidered, and conflraint always to be avoided in bring-- ing him to it: for command and force may often create, - but can never care an averfion; and whatever any one - is brought to by compulfion, he will leave as foon as he can, and be little profited, and lefs recreated by, whillt he ' is at it. Locke's Works, vol. iii. fol. p. 90, 91.
- It may be here fuggefted, that the vaft number of fuch - particulars will foon overwhelm their tender minds, before - they are well eftablithed by time or ufe. But, on the con6 trary, it is evident, that the memories of youth are fitter - to retain fuch fenfible images than thofe of a fuller age. It ' is memory that has moft vigour in children, and judgment ' in men : which, if rightly confidered, will confirm what I - faid, that perhaps we take a prepofterous courfe in educa' tion, by teaching general rules before particular things; - and that therein we have not a fufficient regard to the dif-- ferent advantages of youth and manhood. We load the 'minds of children with doctrines and precepts, to appre-- bend which they are moft unfit, by reafon of the weaknefs - of their underftandings; whereas they might, with more profit, be exercifed in the confideration of vifible and fen-- fible things; of whofe impreffions they are moft capable, - becaufe of the ftrength of theirmemories, and the perfection ' of their fenfes.' So far the learned bifhop.
Now what kind of practical and experimental education feems more naturally adapted to the minds of young perfons of diftinction, than fuch as have a tendency to the prefervation and improvement of their landed eftates? And what can be more pleafing and agreeable to the minds of youth, if engagingly reprefented to them, than gardening? When once they delight in this, what lengths may they be not brought to go in agriculture in general? When they were fenfibly, at ftated times, by way of diverfion only, led into the due obfervance of thefe things, they would, as they grew up, take equal delight in mufing upon whatever elfe might conduce to the improvement of their eftates againft they came to them. This would enable them either to become experienced gentlemen farmers themfelves, or render them capable of fo examining into the $\mathrm{Kk} \cdot \mathrm{l}$ ! and experience of their farming tenants, as to know whether they deferved to be continued or not. Nay, thefe amulements would qualify them to inftruct thei nants how to improve their eftates to the beft advantage.

What lord Bacon obferves, in his New Atlantis, or Plan of a Philofophical Society, may deferve the attention of the landed gentlemen of this kingdom:

- We have many large orebards and gardens, fays he, wherein - we do not fo much regard beauty, as variety of ground and foil, - proper for different trees and plants. Some of thefe places c are very extenfive, and planted with vines, fruit-trees, and - fhrubs, that bear berries for making feveral kinds of drinks, - befides wines. Here alfo we try experiments of graffing - and inoculating, as well of wild trees as fruit trees; which
- produce many effects *. Here likewife, by art, we make
- trees and flowers to come earlier or later than their feafons,
< and to thoot and bear abundantly out of their natural courfes.
- By art we aifo render them larger, and their fruit bigger,
- fweeter, and more different in tafte, fmell, colour, and
- figure, than nature alone produces them; and others we
- fo order, that they become of fingular medicinal ufe.
* See Bacon's Sylva Sylvarum, under the articles Vegetables and Vegetation.
- We have alfo methods of making plants rife by mixtures of - earths, without feeds; and likewife of haking new plants, - differing from the vulgar, and of converting one plant into ' another*, \&c.' See the articles Agriculture, Earth, Chemistry, Manure, Husbandry.
*Though gardening, and the fubject of vegetation in general, has received confiderable improvements of late, yet there feems to be wanting a fkilful fagacity in this art, to dirett the proper experiments both of light and profit. This fagacity might, in good meafure, be learned from. what we thail reprefent throughout this work.

FEES of the cuftom-houfe; wherein our importers and exporters are greatly interefted.
The Fees and Allowances due and payable to the officers of his majefty's cuftoms, in the port of London.
An Order of the houre of commons in parliamentaflembled, eftablifhing and appointing the faid fees.
Whereas, in and by an act of this prefent parliament, intitled, *An act for confirming of public acts, an act therein, intitled, †A fublidy granted to the king of tonnage and poundage, and other fums of money payable upon merchandize, exported or imported, was confirmed; by which act fo confirmed, it is (amongtt other things) enacted and ordained, that during the continuance of that grant, $\ddagger$ where the goods exported or imported amount to the value of five pounds, or more, the cuftomers or collectors, and all other his majefty's officers in the feveral ports, fhall take and receive fuch fees (and none other) as were taken in the fourth year of the late king James, until fuch time as the faid fees fhould be otherwife fettled by act of parliament.

* 13 Car. II. cap. 7
$\ddagger 12$ Car. II. cap. 4. §8.
And whereas aifo, amongtt the rules, orders, and directions annexed to the book of rates, (ratified and confirmed by the aforefaid act) it is ordered and directed, that, for the avoiding all oppreffions, by any of the officers of the cuftoms, in any port of this kingdom, in exacting unreafonable fees from the merchant, by realon of any entries, or otherwife touching the fhipping or unfhipping of any goods, wares, or merchandize, it is ordered, * that no officer, clerk, or other, belonging to any cuftom-houfe whatfoever, fhall exact, require, or receive any other, or greater fee of any merchant, or other whatfoever, than fuch as are, or fhall be eftablifhed by the commons in parliament affembled. And if any officer, or other, fhall offend contrary to this order, he fhall forfeit his office and place, and be for ever after incapable of any office in the cuftom-houfe.
* 24th rule, page 303.

In profecution of which faid feveral claufes, in the act and book of rates beforementioned, and for the fettlement and certainty of all the aforefaid fees, for fatisfaction, as well of merchants and others, as of the officers, what fees are to be paid and received, for any caufe, matter, or thing whatfoever, for or concerning the import or exportation, fhipping, landing, or entering of any thip's goods, wares, or merchandizes, of what nature, or in what kind foever: it is ordered and declared, by the commons in parliament affembled, that the feveral and refpective fees and allowances, mentioned in a fchedule, or table of fees, relating to the port of London, and the members and creeks thereunto belonging (and none other) fhall be paid to the officers and others employed, and to be employed, in and about his majefty's cuftoms, in the port aforefaid, and are by the authority aforefaid fettled and confirmed.
And be it further ordered and declared, by the authority aforefaid, that the fees and allowances, hereby intended, are fet down, mentioned, and expreffed, in a fchedule, or table of fees, intitled, Fees and allowances due and payable to the officers of his majefty's cultoms and fubfidies, in the port of London, and the members and creeks thereunto belonging,
and fubfictited with the hand of Sir Edward Turner, knt. now fpeaker of the houfe of commons in parliament affembled; and every particular claufe, therein mentioned and contained, Chall be and remain as effectual, to all intents and purpofes, as if the fame were included, and particularly expreffed within the body of this erder: and, in cafe any merchant, mafter of a hhip, or other perfon or perfons whatioever, fhall refufe to pay all, or any of the fees hereby ordered or intended, that, in fuch cafe, it thall and may be lawful, for all and every officer and officers, to make thay of every bill of entry, cocket, or other warrant, that thall be tendered of given in, for paffing of any fhip's goods or merchandizes whatfoever, exceeding the value of five pounds in the book of rates, for which the fees fhall be detained and denied to be paid as aforefaid.
And be it further ordered and ordained, that copies or tranfcripts of this order and table of fees thall be made and fet up in public view, in the cuftom-houfe of London, and in all other offices or places where the faid fees, or any of them, are to be paid or received.

Fees and Allowances due and payable to the officers of his majelty's cultoms and fubfidies in the port of London, and the members and creeks thereunto belonging, viz.

For the officers of the petty cuftoms outwards.

For a cloth cocket by Englifh freemen of London
For a franger's cocket, or unfreemen
For a cloth certificate, by ftrangers

Sabbati $17^{\circ}$ Maii, $14^{\circ}$ Caroli regis Secundi.
The general table of fees for the port of London, with the members and creeks thereunto belonging, being thus read,
The queftion being put,
That, for all goods not paying one cuftom in or out, there Chall be but half fees taken for all cockets, warrants, deben tures, tranfires, or certificates:
It was refoved in the affirmative.
Refolved upon the queftion,
That the faid table of fees, as it was reported and read, with the alterations aforefaid, be agreed to, and that the fame be engroffed, and that Mr Speaker is authorized to fign the fame.

Will. Golderbrough,

The merchants fhall pay for all goods opening that fhall be fhort entered above ten thillings cuftom.
The merchants fhall pay for weighing all goods that hall be fhort entered above twenty billings cuftom.
The merchants not to be at any charge, if duly entered.
FE Z, a kingdom in Africa, is bounded by the Mediterranean Sea on the north; by the Atlantic Ocean on the weft; the river Marbea divides it from Morocco on the fouth; and has the kingdom of Alguir on the eaft. It is fruitful in all forts grain, fruit, cattle, wax, and honey, and would be much more fo, if duly cultivated; but fuch is their indolence, that a great part of if's rich lands lie barren and neglected. They have here fome good mines of iron, but fo ignorant how to manufdcture it, that they only make nails, and other fuch coarfe utenfils of it.
This kingdom is divided into the feven provinces following, viz.
The province of Fez Proper, is parted on the weft from that of Temefna by the river Sala; has the province of Afgar on the north; on the eaft it extends itfelf to the river Gnavan; and on the fouth to the province of Chauz. The foil is much the fame with what we have faid of the kingdom in general, only being a capital province, better cultivated, and more pppulous and rich than the reft. It produces plenty of corn, and other grain, and variety of fine fruits, as figs, olives, almonds, grapes, \&c. flax, hemp, cotton, camels, hories, oxen, theep, goats, deer, hare, and wild boars.
Fez, the capital of the whole kingdom, is computed to have about 300,000 inhabitants; the boufes as well as ftreets fwarm with men of all profeffions, and with merchants of all forts; this place being efteemed the general magazine of Barbary, whither all European goods are brought and exchanged, and fent into the other provinces, to be epxchanged for thofe of the country. The import commerce commonly confifts in cocheneal, vermilion, fices, iron ware, brafs, ffeel, drugs, watches, arms, ammunition, \&e. Englifh and othir woollen and linen cloths and filk, mulins, and other cotton cloths, toys of all forts, combs, varjety of earthern wart, paper, quickfilver, tartar, opium, allum, gold wire, brokades, damaiks, velvets, fuftians, and coarfe callicoes and finen, red woollen caps, and Guinea cowries. The goods exported are leather of feveral forts, particularly the fine Marroquin, the manofacture of the country, flins, hides, wool, offrich-feathers, copper, dates, almonds, figs, raifins, olives, wax, honey, horfes, filks of then own manufacture, a fort of cotton and flax cloth of the fame, terrafs, ftone, variety of, kali, or pot-ahh for foap, gold ducats, \&c. of all. which the Jews, which are here above 5000 , are the chief brokers, efpecially between the Chriftians and $\mathrm{Mo}-$ hammedans.
The province of Temesna. This is the moft weftern part of the kingdom of Fez. It was once efteemed the fineft fpot in all Barbary, and is one continued fertile plain, which formerly had no lefs than forty cities or towns, very large and populous, but now farce any footiteps of them are to be feen.
The province of AsGAR, is bounded on the north by the Me-
diterranean, on the weft by the Atlantic ocean, on the eaft it extends to the mountains of Gomera, and on the fouth to the river Bunazor. The country is fruitful in corn and other grain, horfes, flocks and herds, cotton, wool, butter, leather, and other fuch commodities, with which they fupply the city of Fez , and the canton of Larache in great abundance.
Larache, one of it's principal towns, is fituate on the Atlantic coaft, at the mouth of a river of it's name. The molt part of it's inhabitants are employed, either in gathering or fpinning of cotton, which grows about the country in great quantities, or in making of charcoal. The town hath a pretty convenient harbour for fmall veffels.
Alcassar-Quiver, near the siver Licus, is well peopled with merchants and tradefmen.
There were feveral other confiderable cities and towns in this province, which have been fince deftroyed by the wars, or gone to decay, becaufe the inhabitants have been forced to abandon them.
The province of Habat is one of the moff nortbern in this kingdom, beginning on the weft fide at the morafles of Afgar, and extending eaftward to the mountains of Errif and Gomera, on the north to the ftreight of Gibraltar, and on the fouth to the river Arguila. It is moftly plain and fertile, and watered by feveral rivers, which run from the mountains through it into the fea.
Moft of the cities and towns in this province allo are gone to decay.
The province of Errif is bounded on the eaft by the river Nocor, by the province of Habat on the weft, by the Mcditerranean on the north, and by the ridge of mountains that reaches the river Guarga on the fouth. The country is very full of mountains, fome of them very high, fteep, and rugged, yielding only fome oats and barley, and a few olives on the north fide, but on the fouth plenty of them, as well as grapes, almonds, figs, \&c.
Among their many high mountains, that called Seucafen is reckoned one of the moft delightful ; 'tis fruitful and well inhabited, having abundance of neat little towns and villages, in which live feveral forts of tradefmen.
The province of Garet is bounded on the eaft by the river Meluya, on the weft by Errif, by the Mediterranean on the north, and on the fouth by a ridge of mountains, which divides it from the defert of Numidia. A great part of this province is rough, fandy, dry, and barren land, like the defert of Lybia; the very beft part of it wanting feveral neceflaries for the fupport of human life, chiefly water.
Melilifa, at the bottom of a bay, called by mariners EnTREFOLCOS, was formerly the capital of the province, and is ftill a large town.
About two leagues fromit is the town of CAzAzA, near which is fo convenient a harbour, that the Venetians drove a confiderable trade there for fome time with the people of Fez: But the town has been fince razed to the ground, and the caftle alone left ftanding.
The province of Chaus is bounded on the eaft by the river Zha, on the weft by that of Garaguira, on the north by mount Zucato, and on the fouth by that of Aclas.
A great part of the province is ftony, dry, and barren, but in certain (pots very fertile; as that of Teza, which yields thirty for one; mount Matgara, which abounds with corn and pafture, and where the air is fweet and wholforme, both in furmmer and winter; that of Garfis hath many gardens, which produce plenty of figs, grapes, and peaches; and the vallies about the town of Dubdu, are covered with vines, as are the plains about Megeza: Mount Beni-Jafga feeds great Hocks of theep, whofe wool is fo very fine and long, that they weave it into fuperfine cloths, which are as light and neat as filk.
Teza, fituate in a fertile plain, 16 leagues eaft of Fez, has a great concourfe of merchants from thence, Tremecen, and other places, becaufe it fupplies moft of the country about with corn, near 30 leagues round. They have the beft wines in all Barbary, and the territory round it full of gardens, orchards, and noble vineyards.
SAFFor, a fmall town, built on an eminence at the foot of one of the mountains of Atlas; 'tis furrounded for near fix miles with date, olive, and other fruit-trees, in which confifts it's chief wealth, efpecially the vaft quantities of oil it makes and fends to Fez .
FIFESHIRE in Scotland. This fhire is a fine peninfula, wedged in, as it were, between the Firth and the Tay, by which laft'tis bounded on the north, as by the Firth of Forth on the fouth. It has the Ochil-hills, Kinrofsfhire, and part of Perthinire on the weft, and is walhed by the German ocean on the eaft. The eaft part is much the plainef, and the weft moft mountainous. The north and fouth parts are very fruitful in corn, and full of towns, with good bays and harbours; in the midlands are plenty of cattle, efpecially theep, whofe wool is much efteemed, as are alfo the hides of their black cattle, deer, and goats, which turn much to the profit of the inhabitants. On the fouth fide alfo there is much coal, and many falt-pans, where very good falt is made. At Dalgete is a quarry of excellent free-ftone, and
near the water of Ore they find lead, as alfo many fine cryftals of feveral colours at the Bin and at Orrock. They have likewife feveral mineral waters, as the fpaw at Kinghorn and Balgrigie. It's chief rivers, the Leven and the Iin, abound with falmon, \&c. The coaft is well planted with little towns, that are the nurferies of feamen, and the fea, befides other fifh, as herrings, which are taken in great quantities in Auguft and September, yields abundance of offers and fhellfifl.
Dumpermein, a pretty town, fituated in the weft end of this fhire, is chielly fupported by a manufacture of diaper, and the better fort of linen, which employs abundance of hands in this and the neighbouring towns.
Bruntisland is a market-town on the Forth, over-againt Leith, to which a paffage-boat goes from hence every day; it has a fafe harbour, where Thips lie clofe to the houfes; fo that when foreed up the Frith by gales, or contrary winds, they come hither for fafety; and frips trading on this coaft often winter here, there being at fpring-tides 26 feet water within the harbour, which will contain 100 fail : here is a manufacture of linen, as there is upon all the coaft of Fife, efpecially for green cloth, as they call it, which has been for feveral years in great demand in England, for printing or ftaining, in the room of the prohibited callicoes.
Kinghorn, on the fame coaft, is noted for a thread manufacture chiefly carried on by the women, the men being generally mariners upon all this coaft, as high as Queen's-Ferry. There is a ferry here alfo to Leith.
Kirkaldy, on the fame coaft, where it turns north-eaft, is larger, more populous, and better built, than any other on this coaft ; 'tis reckoned a place of good trade, here being fome confiderable merchants, befides large dealers in corn, who export great quantities both to England and Holland; and others who trade in linen to England.
Dysert, on the fame thore, has a harbour and a good trade in coal and falt, which, with a few nail-makers and workers in hard ware, is it's only fupport.
FIG. The fig of the fhops is the fruit of the common figtree, gathered when moderately ripe, not too mellow, and carefully dried in the fun before paeked up. They thould be chofen large, of a pale brownih colour, foft and mellow, heavy, and when broken, yellowifh and fweet, and of a foft glutinous texture.
They have been long known in medicine.
Figs, as well frefh as dry, are very wholfome food; they are nourifhing and emollient; they are good alfo in diforders of the breaft and lungs; but it is to be obferved, that a too free ufe of them has fometimes brought on obftructions of the vifcera, which are common complaints alfo where they are eaten as food, as they ace with bread, by the poor people in many parts of the Levant. They are frequently made ingredients in our pectoral decoctions, and are by fome greatly recommended in nephritic complaints. They are much ufed externally by way of cataplafm, either roafted or boiled in milk, for the ripening of humours, and for eafing the pain of the piles.
The fig delights in the fame foil with the vine, and may be propagated either from fuckers or layers, and allo from feeds. The fuckers are beft feparated from the old roots the beginning of March, and Chould be then tranfplanted without cutting any of their tops; for this, above all other trees, fuffers moft by amputation, and indeed chould never be pruned but in July. The layer chould be ordered like thofe of the vine, and the feeds, as I have been informed, will readily come up if they are fown in rubbifh, or fuch-like foil, about March. It is moft common in England to plant fig-trees againft walls, becaufe it has been thought they will not otherwife ripen in our climate, but that is a miftake; for in feveral gardens about London, I have feen them grow in fandards, and profper and bear fruit in more abundance; and much better, in my opinion, than an'y I have yet feen againft walls; for as they are endangered by pruning, fo they like as little the confinement they are obliged to againft walls.
I have been told of a fig-tree near Windfor, fays Mr Bradley, (that grows wild, without culture, in an old gravel-pit) which is fo extremely large, that many buthels of figs are gathered yearly from it; and $I$ know of fome old fig-trees that have been neglected for many years, which bear more fruit than any $I$ have ever feen dreffed and ordered in gardens; and it is the common practice abroad to plant them in certain places of their vineyards, and let them grow after their own manner without any interruption, fo that with a very little difficulty this tree may be cultivated. The only art required in it's management, is to preferve the fecond figs during the winter, that the fevere weather do not make them fall from the tree, but that they may be maintained in health to ripen early in the fummer. I remember to have feen, at Dr Compton's, Jate bihop of London's gardens at Fulham, ripe figs in May; which were brought to that forward perfection by keeping them in pots, and fheltering them all the winter in a greenhoufe.
Though with us we have not many varieties of this kind of fruit, yet are there as many forts of figs as of any other fruit,
which in Spain and Italy are held in great efteèm. The white figs chiefly are valued by the curious for their delicate flavour; and early ripening, and might be much more fo than they are in various parts of the territories belonging to Great Britain. F IS C A L, or follicitor, in Spain, is the king's mouth in caufes wherein he is concerned, a check upon thofe that manage the revenue, a fpy upon thofe who embezzle it, an informer againft thofe that defraud it, an agent, to improve it $;$ and laftly, a two-edged fword in a civil and eriminal capacity, to defend the patrimony of the crown; and therefore, this employment is of no lefs importance than bonour, and has in this court of trade, as well as in all others, an equal place with the judges of both chambers. And it being the duty of this fifcal, or fallicitor, to fee all the laws and ordinances obferved, he bas certainly the greateft fhare of bufinefs; fo that the prefident and he may be accounted as two poles the whole affairs of the Spanifh Weit-Indies turn upon.
This employment was firt eftablifhed by his majefty's order in the year 1546, for 'till then the commiffioners of ditection had appointed one to perform the duty of that place. The fifcal, or follicitof, is to be either with the judges, directors, or lawyers, according as the prefident fhall order 3 his feat in either chamber is next to the youngeft judge. It is left to his choice, whether he will be prefent or no, when the commiffioners, 'or judges directors, fit about fitting out the armada's, and buying in ftores and provifions. If he has any thing to lay to the charge of mafters of fhips or pilots, it muft be done as foon as they arrive in the port, and the bufinefs mult be decided with fpeed.
He is to keep a book to fet down all licences, and other orders, upon which fecurity is taken to fee the covenants performed. And another book of all fuits he manages for the king, which are to be tried before any ethers; and this book he is to deliver to his fuccaffor, and take a receipt for it. When hips return from the Indies, he is to be prefent with the commiffioner that receives them, that he may enquire into all frauds and other offences committed during the voyage; and 'till that time, lay his accufations immediately, and fee the bufinefs decided without delay. It is his particular charge to enquire whether the fhips, that fail from the Canary, IMands, perform their duty, and to fee thofe punifhed that do not; to have a hand in all fuits atifing upon accounts, and not to plead in any bufinefs that does not concern the king and his revenue.
In trials where the king is not concerned, if there wants a judge, the fifcal or follicitor is to fupply his place, as was faid before. All fuits arifing on account of the haberia, or con-voy-duty, are to be managed by him ; and he has power to infpect all books, papers, and accounts, in any office. In cafe of ficknefs or other lawful impediment on his fide, a counfellor, or the depury-fifcal or follicitor, goes down to vift the galleons or flota's, but never both together, becaufe one muft always remain with the court. It has happened, that the commiffioners being fick, or otherwife employed, the fifcal has been commiffioned either to receive home bound thips, or clear thofe outward bound. This perfon having fuch multiplicity of bufinefs, and that fo weighty on his hands, has many privileges to fupport him, and forward his going through them.
His caufes are to be heard and determined before any others, to be difpatched with all brevity; and he can act, and bring procefs on holidays. He cannot be confined as to time, and the adverie party may be obliged to produce writing in favour of his allegations. Befides, he may be prefent when the judges give their opinions, and cannot be compelled to fwear to, or make out his allegations, though he is bound not to lay his action, unlefs there be an evidence, or common fame make for him. No fees can be demanded of him, nor of any body in his name, on account of the caufes he has tried; nor can he be adjudged to pay cofts; nor can any goods, plate, filver, or jewals, belonging to the king, be difpofed of, without he intervenes ; and, in hort, he enjoys all the privileges belonging to thofe that are under age.
It is a point much controverted, whether the fifcal or follicitor may be excepted againtt; but D. Gafpar de Efcalona fays, he faw it allowed at Lima, upon occafion of private enmity, no way grounded on the execution of his office proved upon him. Being his majefty's follicitor, though he cannot alienate nor pafs a grant, yet he has power to compound differences, where he has little profpect of getting the better, yet fo as he muft acquaint the king with it ; and is mult be in civil cafes, for in the criminal any compofition is forbidden. The fifcal of this court, that he may the better go through fo much bufinefs, has an agent allowed him, whom he chufes himfelf, and his falary is paid out of the fines to the king. This agent's bufinefs is to gather up the proceffes and other papers the fifcal is to fee, giving a receipt for them where they are delivered to him, to carry them to be difpatched, and write what is dictated to him, but he may nct lay an action without fpecial order for it.

## FISHERIES.

By the ordonnance of November 1684 , in France, fifing is declared common to all the king's fubjects, whether in the

## FIS

open fea or on the hores, but only with nets and engines permitted by the faid ordonnance.
Thofe who follow the great filhery, as the cod, herring, and mackarel, on the Irih, Scotch, Englifh, and American coafts, and on the banks of Newfoundland, \&xc. muft have licence from the admiral, or the governor of the place they fail from.
As to the fifhers of frefh fin, with boats that carry fails and rudder, they are only obliged to take a licence yearly, nor need give any account on their return, unlefs in important matters, as feeing any wreck, fome fleet, or the like, which they are to declare to the proper officers.
Inftructions for thofe who would engage in the whale-fifhery in France.
The ports from which they ufually embark for Greenland, are Amfterdam, Rotterdam, Enchuyfen, Hoorn, Hamburgh, London, Bayonne, St Jean de Luz, St Sebaftian, Rochelle, and fome others. London is mentioned among the reft, though not a fea-port, becaufe it's merchants are mont interefted in this fifhery of any cities in England, and 'tis the place where moft Englith affociations are formed.
The engagements are ufually about the 1oth or 15 th of April. The wages, given by merchants in company, are is livres or florins a month the firft time, which are increafed according to the voyages already made.
After being muftered, they are paid one month's wages in advance. But their wages don't commence 'till they are at fea.
They require for the voyage good coatre cloaths.
Two good woollen blankets, about half a dozen fhirts, five or fix pair of coarfe ftockings, as many pair of mittins at leaft, ftrong and thick fhoes, a pair of furred boots, a barrel of brandy, gingerbread, fome lemons, oranges, and raifins, with about a hundred or two of good apples: but above all, a good bottle of vinegar, and fome antifcorbutics; which proviifons are the more neceflary, the lefs they have been ufed to the fea and fatigues of the voyage.
As to their food they have every morning boiled barley with butter, with cheefe and bifcuit ; for dinner, peafe with bacon, falt meat, or fock-finh.
They are forced to eat heartily, that the cold feize not on them ; befides, their work is hard.
The affociated merchants of Amfterdam are the moft interefted in the whale-fifhery.
Whales are taken near Iceland and on the Norway coaft, but 'tis not the true fifhery, which is chiefly from the fouthweft part of Greenland to Spitbergen.
There is no part of the whale eatable but the tongue, and a little of the flefh about the tail, which is faid to be as good as frefh bacon; they cut it in fmall fices, and broil it on the coals, and eat it with butter, falt, and pepper. There is a feafon for whales, as for feveral other animals, which is in May, June, and July, when they follow each other in thoals, but without quitting the north feas. There are fometimes at this fifhery 7 or 800 boats together, with fix men in each, having ropes, harpoons, and cutlaftes ; the harpooner is in the boat's bow.
They get not a like quantity of fat and oil from all, fome being fatter than others; fome will yield even 128 barrels of fat, and fometimes more. Thefe barrels are ufually four feet high and two and a half wide. One hip will carry about 8 or 900 of them, fo that eight or nine filh is a good capture for a fhip.
A whale of 100 barrels of oil may fell for 8 or 9000 francs, and the reft from 15 to 1800 livres: whence may be feen the immenfe profits of this fifhery when it fucceeds, but fometimes they lofe their flock inftead of gaining.
When the filhery has not been good on the Greenland coaft, they ftand away north-eaft, and firh in the Iceland fea; but the finh are neither fo fat nor well efteemed, nor of the fame fort. They don't yield commonly more than 50 or 60 barrels of oil.
We have already obferved the wages are 15 livres a month for the firft time, but, to be more exact, the rowers have from 15 to 20 , the harpooners from 25 to 30 , and the captain from 80 to 100 livres; befides which wages, the crew has on every barrel or ton of fat 25 or 30 fols.
There are fome other more important figheries, in the Indian, American, and Mediterranean feas ; as the pearl, coral, and tortoife-fifheries. Befide the frelh filhery carried on in boats with fails, there are others on the fhores, and in bays, and mouths of navigable rivers, with various forts of nets.
There are alfo fmall filheries permitted at certain feafons, and prohibited at others. Of which number are thofe of crayfilh, fhrimps, \&c. The mufcle-fiifhery has a place alfo in the French ordinance, and is under certain regulations.

Of river filhing and frefh water fifh.
This is performed either with lines, nets, or engines. That with the line and hook is free, and allowed to every body in France. That with engines and a line, to thofe only who have a right to fith on rivers.
None of thefe truly merit the name of fifhing but _that with
an engine, angling being a mere diverfion. The engine filhing is, however, prohibited in France.
The time of river fifhing is to be between fun and fun, that in the night being prohibited.
The makes of their nets are to be formed on a mould of an inch in diameter, but all forts of nets are not permitted.
FISHERY is ufed in particular of fome parts of the caft or weft fea, and even fome rivers where they filh for pearloyfters.
The eaftern fifheries are thofe of the ifle of Bahren in the Perfian gulph, of Caxifa in Arabia Foelix, of Manar on the coafts of the ille of Ceylon, and fome others of the Japan coafts, The Weft-India filheries are all in the gulph of Mexico, along the coaft of Terra Firma, amongft others at Cutagna, Mat guarita, Comogote, Rencherie, and St Martha. Laftly, the European fifheries, which are the leaft confiderable, are along the Scottifh coafts, and in a river in the dominions of the elector of Bavaria in Germany.
Fishery. The word is meant alfo of the places appointed for fifhing on the fhores and coafts of the fea, and in bays and rivers mouths. They have different names according to their conftruction, and the different nets ufed; and are all permitted by the ordinances of the marine of France in 168. and 1684 , but under certain conditions therein fpecified.
The marine ordinances regulate the police of fea-fihers, and thofe of the waters and forefts of Paris the river-fifhers. The former are ufually diftinguifhed into three forts, namely, thofe of the great fifhery; thofe of the frefh filhery, with boats having maft, fails, and rudder ; thirdly, thofe of the frelh fifhery alfo, but on the thores and in bays, and inlets of rivers.
With regard to the frefh fifhery with boats having maft, fails, and rudder. The fifher, fifhing in the night-time, is to fhew a light three different times when he cafts his nets.
Dredger's boats that cannot lie by, becaufe of fome accident, muft hew a light while they are in the place where their nets are foul.
No fiherman may caft his nets, where he may prejudice thofe who have been there before him.
Fifhermen going in ${ }^{1 a}$ fleet may not quit their ftation to go elfewhere, when others of the fleet have caft their nets.
Every mafter of a boat is to take a licence yearly, at the fame time regiffering the name, age, and abode of his boar's crew.
Laftly, every fifherman of the age of 18 years and upwards, going to fea, is obliged on the ift day of Lent every year to enlift himfelf. And, in places where there are eight mafter fifhermen, one is to be elected for warden of their company, who is fworn, and daily infpects the nets, reporting trefpafes againft the ordinances.
The fifhermen on the river of the city and fuburbs of, Paris, are not a fworn body.

The regulation of the waters and forefts for frelh water fifhing.
'Tis comprized in the ordinance of 1669 , and contains 26 articles, the moft effential of which we thall infert here. I. None except mafter fifhermen may filh in navigable rivers, on pain of 50 livres fine, forfeiture of the filh, nets, and other utenfils, for the firft offence, roo lives fine for the fecond, with a like fine, and fevere punifhment.
2. None may be received mafter under 20 years of age.
3. The mafter fifhermen of every city or port, if they are eight or more, are to elect yearly a mafter of the company, for prevention of abufes. If not in fufficient number, feveral mafters of neighbouring places unite to form the election. 4. None may fifh on Sundays and holidays; to prevent which, every mafter muft on the eve of thofe days carry his nets and engines after fun-fet to the houfe of the company's mafter, whence be is not to have them 'till after fun-rife of the day following the feltivals.
5. None may fifh at any feafon, but from rifing to fetting of the fun, except under bridges and mills.
6. None may fifh in fpawning time; to wit, in rivers where trout abound more than other fin, from the ift of February to the middle of March: and in others from the ift of April to the Ift of June, on pain of 20 livres fine and one month's imprifonment for the firft offence, double fine and imprifonment for the fecond, and for the third of pilloring, whipping, and banifhment from the diftrict for five years. . But falmon, fhad, and lamprey-fifhing are excepted from this probibition. 7. Fifhermen are to caft in again trouts, carp, bremes, that are under fix inches between the eye and the tail, and all tench, perch, and roach, that are under five.
8. All the filhermen's gins are to be marked with lead, having the king's arms, and round the name of the freedom, the ftamp of which is to be kept in the regiftry of the refpective freedoms.
9. None may throw into rivers chalk, nux vomica, mummy, or other drugs, on pain of corporal punifhment.
10. None may break the ice on ponds and moats, or carry flambeaux and other fires thither, on pain of punilhment as for theft.
11. The cognizance of the offences committed by manerfifhermen and others on navigable rivers, fhall belong to the officers of the waters and forelts, and not to the judges.
12. The mafter, \&c. of the waters and forefts, may infect the veffels of fifhermen; and if they find any figh under fize, they are to make verbal procefs, and fummon the fifhermen to anfwer for the offerice, but without expence.
13. The officers, finding prohibited engines, are to burn them, and fine thofe on whom they are found.
Fishers of whales. Is faid equally of the owners of the fhips ufing that fifhery, and of the failors that mann them.
The body of whale-fifhers in Holland, are an allociation of the principal merchants of it's cities, or of the matters and pilots who go thither in their own fhips. They have no exclufive privilege, any being allowed to go or fend others ; but all, if they go in a fleet, are equally obliged to fubmit to the orders of commiflaries deputed by the affociation, to which they mult fwear to be conformable before their departure.

## A general regulation for the whale-fifhery in Holland.

It confifts of twelve articles.

1. When a fhip is ftranded, and the mafter and company faved, the firft thip that finds them muft take them. On meeting with a fecond fhip, this laft is to take half the crew fived, unlefs they have already other thipwrecked men on board, in which cafe the divifion is to be equal between the two fhips; the like to be obferved for all others they fhall meet afterwards
2. The victuals, brought by the fhipwrecked men on board the veffels that take them up, are to be confumed by themfelves, and divided with thofe of them who are paffed into other fhips; if they bring none with them, they are to be maintained out of charity for their work.
3. If a fhip runs ahore with her cargo, the mafter, pilot, or other reprefenting them, may fave the hhipwrecked effects, and treat with whom they pleafe for falvage and charge of them: but 'tis free to the mafters of other hips to take or refure the faid effects.
4. Any mafter of a thip being where there is a thipwreck, and the effects abandonied, he may take the whole or part of what he finds, whether it be rigging, utenfils, fat, whales whikers, \&zc. And; on arriving at the port of Holland whence he failed, he is to deliver one moiety to the owners free of freight and alf other charges whatever.
5. If a fhip ftranded be left by her crew, they have no right to any of the effects faved.
6. But when the flip's crew are prefent and aiding in faving the effects, they are intitled to one fourth part ; to wit, their wages agreed for, if hired by the month: and thofe that are otherwife hired, at the rate of 20 florins. If the fourth part of the effects faved doth not fuffice to pay this, both are to lofe their proportion; if any overplus, it goes to thefe armateurs.
7. The mafter of a fhip, faving fhipwrecked effects, partakes with thofe of his crew who are hired differently than by the month, but thofe of the crew who are hired by the month do not fhare.
8. Goods and effects faved, being loaded infome other veffel, are fubject to lofs and damage, as the proper effects of the veffel.
9. He who has killed a finh in the ice but can't get it alongfide, remains owner as long as fome of his men watch it; but if left, the next mafter that comes may take it, though the filh be faftened to a piece of ice.
10. If any one taking a fifh be near the fhore, he may faften it to an anchor, and there leave it with a mark or buoy, and it fhall belong to him alone.
1I. If in going to, or returning from, the fifhery in a fleet, any one be wounded or maimed in a defence againft enemies, the commiffioners of the filhery are to procure him reafonable recompence, to which all the fleet muft contribute. 12. Any cafe bappening, not mentioned in the regulation, is to be determined by arbitration.
Befide this general regulation, which all muft fwear to obrerve before their departures there's another relating to each particular crew, which all the officers and failors are likewife fworn to obferve in prefence of one of the commiffioners, who comes on board every fhip for that purpofe. The contract is is in the following terms.

## A charter-party between the captains, whale-finers, and

 their crews.We the officers and failors are hired with capt. N. N. -commander of the fhip -- to go this year ——— to the whale-filhery, at a price agreed on between us, promifing to obey the faid captain in all things both at fea and on thore, and to him who fhall fucceed him in cafe of death. Firt, We promife to attend morning and evening at prayers, with devotion and modefty, on pain of fuch fine as the captain Thall think fit.
2. We promife not to get drunk, quarrel, or mutiny, nor Vol. I.
to caft any thing at another, nor to Arike, or draw a knife, on pain of lofing half the wages.
3. If any one, having a quarrel, comes to blows, and wounds another, he fhall lofe his wages, and fhall be put into the hands of a magiftrate, according to the nature of the cafe.
4. None of the crew may lay wagers on the fuccefs of their fifhing.
5. If the captain think fit to filh in company with fome other, the crew are to affift him with whom he affociates, as if he were their own captain, on pain of 25 florins.
6. The crew are to be content with the viduals diftributed to them by the captain's order, on the fame penalty.
7. If by the length of the voyage, or taking on board fhip wrecked men, provifions sun' hort, they are to be content with the allowance ordered by the captain, on the fame penalty.
8. Promifing likewife not to kindle fire, candle, or match, by day or night, without leave of the captain, on the fame penalty.
9. The captain on his part promifeth, that if any one be wounded and maimed in defending the fhip, he ball have recompence according to the laws of the country, or by accommodation to the content of the parties.
10. Any of the crew giving ufeful notice of evil or prejudice intended the Ghip or goods, thall receive good recompence.
11. Cafes not fpecified in this charter-party fhall be detarmined according to the ulage and cuftoms of the fea.
Made on board the fhip, \&c.
After this is read, the commiffioner and captain, fitting in the cabbin, call in the crew to receive the ufual gratification, and an affurance of another fum at their return, according as the fifhery proves.
The captain receives for his gratification from 100 to 150 florins, even more according to his ikill and reputation, befides fo much on the quantity of fat produced, according to the agteement made with thofe who fit out the veffels.
The pilot receives from 40 to 60 florins ; and, on return, what is agreed on, in proportion to the fuccefs of the vayage. Every harpooner from 40 to 50 florins; and fo much as agreed on in proportion to the fuccefs.
Every cutter of the fat, who are commonly harpooners alfo, receive on return home 5 florins for every whale, befide their proportion as harpooners.
The carpenter, who is by the month, has 36 Aorins.
The furgeon 28 florins.
The mate 26 florins.
The fteward, who hath charge of the provifions, 26 florins. Every experienced failor, from 18 to 20 florins.
Every lefs experienced failor, frotit 12 to 13 florins.
The fame is to be underftood of thofe who go by the month. Thofe who mann the boats, have, befide their wages, 2 or 3 florins for every whale they take. Sometimes they have granted them in proportion to the fat, and from 16 to 20 forins gratification, but then they are by the month.
The failor who has the care of the line in the boat, receives, befides his wages, 30 or 40 s . the whale.
Laftly, failors who do nor go by the month, receive for their gratification from 9 to 15 florins, and at their return for every whale 15 or 16 florins.
'Tis but fince the middle of the 17 th century, that the Dutch have ferioully applied themfelves to the whale-fifhery; but with fuch great fuccefs, that 'tis at prefent one of the chief branches of their commerce.
They attempted at firft to make their fettlements in Greenland, but not fucceeding, they fixed their fifhery on the coaft of Spittberg, which extends north and fouth from 76 degrees 40 minutes, to 80 degrees of north latitude, and from eaft to weft about 89 leagues.
'Tis on the weft coalt of this country, within a compafs of about 60 leagues, that'they fing; the eaft coaft not being fo proper, by reafon 'tis almont always full of ice.
The rendezvous for the departure of their fleet, though not fixed, is commonly the bay of Kokbay, in which is Klokrinier.
Private adventurers fending a fhip in the fleet, having appointed an able commander, have both examined and infpected by the commiflaries of the cities that compofe the body of whale-fifhers, and have charge of that navigation. When the fleet is ready for failing from the Texel, coafting pilots are put on board every veffel by the commiffioners, to conduct them over the banks.
The fleet ufually takes it's courfe by the inles of Iceland ; after which, leaving them on the eaff, they fland away thotth into 74 and 75 degrees of latitude, where they begin to meet with ice, and to fee whales, fo that moft of the veffels lie to here to fing. But as the whales are both larger and fatter further north, fome captains will venture as far as 80 and 82 degrees.
We fhall here add fome particulars, concerning the cargo of a Dutch fhip, and the ftate of the produce of this filbery in 1697, the moft confiderable of any made in 60 years and upwards.

A veffel of 300 , or 320 tons, has fix boats, with fix harpooners to each, and five failors to row, with whom one of the harpooners rows in the bow, and another in the ftern, thefe boats having no rudder. Every boat muft have feven lines, of three inches circumference, five in the ftern, and two in the bow, in readinefs for ufe. The five make together 600 fathoms, which added to the other two, the whole length is 880 fathoms. If the whale plunges further, or runs under the ice, they mult cut to fave themfelves.
Each boat has two chelts, to lay their harpoons, lances, knives, and other implements in.
When a fifh is ftruck and taken, they cut off the tail and fins, and, lathing a long rope in the place where the tail was, haul it to the flip.
As long as they fee whales, they lofe no time in cutting up what they have taken, but keep fifhing for others; when they fee no more, or have taken enough, they begin with taking off the fat and whikers, in the following manner :
The whale being lafhed alongfide, they lay it on one fide, and put two ropes, one at the head, and the other in the place of the tail, to keep thofe extremities above water. On the off fide of the whale are two boats, to receive the pieces of fat, utenfils, and men, that may fall into the water on that fide. Thefe precautions being taken, three or four men, with irons at their feet, to prevent llipping, get on the whale, and begin to cut out pieces of about three feet thick, and eight long, which are bauled up at the captane, or windla/s. Whien the fat is all gat off, they cut off the whifkers of the upper jaw with an ax. Before they cut, they are all lafhed, to keep them firm, which alfo facilitates the cutting, and prevents their falling into the fea. When on board, five or fix of them are bundled together, and properly ftowed. After all is got off, they turn the carcals adrift, which is good food to the bears, who are very fond of it .
As the great pieces are hoifted in, they are cut into fmaller by them on board, and the lean, if any, taken off, and thrown into the hold, 'till they have leifure, and all is got on board, when they ftow them in the caiks very clofe.
When all is fowed, and the decks cleaned and fanded, the captain prepares for failing for Holland, if in time of peace; but if the United Provincés are engaged in war, they have private orders to meet at a certain place of rendezvous, appointed by the commiffioners, where they find convoy ready to join them.

The cargo of a Dutch veffel going to the whale-fifhery.
They are commonly from 2 to 300 tons burden, carrying from 36 to 42 hands.
They are freighted at the rate of 2750 florins, if 250 tons, and in proportion, if of more or lefs burden. Every hip has 3,4 , or 6 boats, according to it's bulk. The boats have tarpaulins to cover them, in cafe of rain; they have compaffes, in cale of thick weather, and 10 horns to blow with; 20 or 30 little iron hammers to break the ice with; 50 oars; 65 larices, to attack the whale with when fruck. 70 or 80 harpoons.
8 leffer ones of iron, and longer ones of wood.
6 knives, to cut the tail and whikers.
24 lances for the fea-calves.
12 knives to cut the fat from the whale.
6 great knives, for the failors to defend themfelves from the bears with when they go on hore, or to kill the fea-calves. 18 knives to cut the fat with on board.
12 little gaffes, with handles.
12 other larger ones, which the Dutch call malemokahaak, 8 chopping-knives.
12 leffer knives for the boats.
2 large wooden mallets.
6 chandeliers, to lay the boat's maft on.
12 grapples, to hang the fat on.
4 axes, to cut off the whifkers, and feparate them from the jaw, by ftriking on the head of the ax.
24 axes to cut the ice with.
6 pair of cramp-irons for the carver's fhoes.
6 peculiar ancres, or fort of inftruments, ufed to hold the whifkers when cut.
2 crows, to put in the whale's noftrils, to keep the head above water.
12 axes, to adjuft and cut the whifkers.
18 hand-hooks, to take the pieses of fat with.
60 lines for the barpoons.
2 chefts to ftow the filhing utenfils in.
2 chefts in each boat for the fame utenfils:
3 carpenter's fheers, to cut the whirkers.
6 boat anchors with their painters.
6 iron wedges, to fplit the whalebone and the ice, \&c.
The produce of a whale-filhery.
We chufe to inftance in that of the Dutch in 1697 ; we thall alfo add that of other nations, that went to Spitfberg the fame year ; amongft which we find no French hips, by reafon of the war. There were, that year, 189 thips, of different nations, of which the Dutch multered 121; the fleet fet fail 129, but eight were lof. The Hamburghers had 47, out
of 5 I , the reft being loft. The Swedes had 2, the Danes 4 , the Bremeners 12, thofe of Embden 2, and the Lubeckers 4 The whales taken amounted to 1968 ; viz. 1255 by the Dutch, $449 \frac{2}{2}$ by the Hamburghers, the Swedes 113 , the Danes 52 the Bremeners 96 , and thofe of Embden 2.
The Dutch had 4.1,344 quarteaux of fat, Hamburgh 16,4143 Sweden 540, the Danes 1710, Bremen 3790, and Emb. den 68.

## Of the laws of England with regard to finheries.

* If the falt defigned for the curing of any filh for exporta. tion, or of herrings for home confumption, is, upon landing, and after weighing in the prefence of a proper officer, defired to be accordingly fectired in proper cellars or warehoufes, under the joint lock and key of the proprietor and the faid of ficer, there to remain during the feveral intervals of the refpective fifhing-feafons; though fuch falt is exempted from the new duty, and the additional import of 5 s . the wey, yet after the landing and weighing, an entry of the exact quantity lodged muft be made by the proprietor or his agent, and an account taken by the officer: and the faid new duty, and additional impoft, muft be particularly expreffed on the bills and warrant, and charged in the feveral books, as if the money had been actually received.
* 5 Geo. I. cap. 18. 5. 1. 8 Geo. I. cap. 4. \$. i, 3, 10. 8. Geo. I. cap. 16. §. $1,2,3,6.3$ Geo. II. sap. 20. §. 10, 16.

And as at the beginning of each fifhing-feafon, the falt is to be re-delivered to the fih-curers, or their agents, upon their oaths to the quantity, and that it is intended to be only fo ufed, they are to be refpectively charged with it by the collector and comptroller, as well as by the proper officer taking charge of the cellars. And $\ddagger$ the faid oath to be taken by the proprietor, or his agent, before the officer's lock is taken off, muft be as follows :
$\ddagger 5$ Geo. I. c. 18. 5. 1. 8 Geo. I. cap. 4. §. 1. 8 Geo. I. cap. 16. §. 1.

Edmund Trot, curer of filh [or his agent] maketh oath, That he hath lotged in his cellars, at ———, four thou, fand bufhels of foreign falt, which is all intended to be ufed for the curing of fifh for exportation only; and that no part fhall, by his order, confent, or connivance, directly or indirectly, be fold, given away, or any ways delivered, but for the purpore aforefaid, except fo much as fhall be ufed for curing fuch herrings as fhall be entered for home-confumption, and be charged with the duty thereon.

Signed-Edmund Trot.

## Jurat' $10^{0}$ die Februarii, coram me A. B. Collector.

Whereupon the falt muft be delivered to the proprietor, or his agent, and the oath regularly filed, and preferved in the office.

+ And the proper officer is, during the fifing-feafon, frequently to vifit the cellars and warehoufes of fihh-curers, to view and infpect them, and to gauge the falt, if neceffary, for difcovery of any frauds.
$\dagger$ I Ann. cap. 21. §. 2. 5 Gqo. I. cap. 18. §. 6.
$\|$ And, as foon as each fifing-feafon is over, the officer who had care of the cellared falt is to take account of what remains in the hands of the finh-curers refpectively; which, being weighed, muft be locked up in the joint cuftody of the faid officer and the proprietor, or his agent, who are, as foon as poffible, to deliver an account in writing of the quantity of foreign falt received, of the filh exported, or entered, or red or white-herings delivered for home-confumption, and the duties paid, on which the falt has been ufed, with certificates by the proper officers where the finh were exported, verifying the account, to be affirmed alfo by the oath of the proprietor, or his agent, ufing the falt : fo that the quantity of filh cured, and falt ufed, and remaining, may appear on oath :** which account muft be made up within three months at fartheft after Lady-day yearly, as follows; viz.
|| 5 Geo. I. cap. 18. 5. 1. 8 Geo. I. cap.4. 5.3. 8 Geo. I. cap. 16. 5. 3. 3 Geo. II. cap. 20. §. 10.
** 8 Geo. I. cap. 4 . \$. 6.
Port of Southampton.
No. 1.
Edmund Trot, curer of fifh at ————, his account of the foreign falt received inro his cuftody, and of the quantities of filh exported, or entered and chipped to be exported, on which the faid foreign falt, taken away after it's delivery into his fole cuftody, has been ufed or confumed, from the 25th day of March, 1730, to the 25th day of March, 173 x.

Edmund Trot [or his agent] who ufed the three thoufand, one hundred, and fifteen bufhels, and thirty-eight pounds, of foreign falt above-mentioned, maketh oath, That the account above written is true.

Jurat' 180 die Martii 1730 , coram me A. B. Collector.

A. B. Searcher.
B. C. Affifant-Searcher.

## Port of Southampton.

Thefe are to certify, Thats the duties for ten thouland red, and twenty-five barrels and fixteen gallons of white herrings, within-mentioned to be entered for home-confumption, are aetually paid. Witnefs our hands this 24th day of March, 1730.

## C. D. Collector. <br> D. E. Comptroller.

*.And, if any of the aforefaid falt be delivered to other fifhkurers, and be ufed by them, the feveral quantities fo delivered muft be exprefled in the account; and all thofe to whom it has been delivered, are likewife upon oath to make another
account of the particular quantity ufed by each in curing: which account, with the proper certificates, are to be fent to the office, there to remain.

* 5 Geo. cap. 18. S. 1.
$\dagger$ And, when any falt, delivered out to the proprietors for the fifhery, is by them, or agents, delivered to any other perfon, fuch proprietor, or agent, is by oath, or otherwife, to make it appear to the fatisfaetion of the proper officer, that fuch falt was ufed in curing of filh.
+ 11 Geo.I. cap. 30. 5. 4.
And the officer having care of the falt, and infpection of the fith-curèrs cellars, is, at Midfummer yearly, or as foon as the fifh-curers accounts are made up, to deliver to the collector his general account of all the falt received and delivered, \&c. by each refpective filh-curer, with the particular accounts of each of the faid curers, under his infpection, regularly attefted and vouched : the affiftant-fearcher's account mult be in form following, viz.

## Port of Southampton,

The affiftant-fearcher's annual abftract of the feveral accounts of the curers of fifh, from the 25 th of December $173^{3}$; to the 25th of December 1731.

And of the falt fecured in cellars for the fifhery, and re-delivered as aforefaid, the collector is alfo, at Chriftmas yearly, to fate a feparate account in the following form , viz. $^{2}$.

Port of Southampton.
The collector's annual account-current of falt imported for the fifhery, from the 25 th of December 1730 , to the 25 th of December 173 r.

And on the back muft be another fate, not only of the quantities of falt, but of the duties :
The debtor fide to contain-The total amount of all falt imported for the filhery in that year ; as alfo the duty for any foreign falt belonging to fifh-curers, brought into the diffricts of that collection, from any other port or collection
The creditor fide to contain-The falt ufed in curing of 'fin, or delivered to the charge of other collectors.

Fifh of Britih taking and curing.

* As they may be exported duty free, proof muft be made $o_{\text {a }}$ the bill of entry that they are fo taken; $\dagger$ and, as upon the exportation of fuch as are well cured and merchantable, the exporter is intitied to an allowance or premium, to be paid out of the new duty on falt, \& cc . therefore, as a foundation for granting a debenture in order to obtain the fame, proof muft be likewife made on the bill of entry, that they are duly intitled thereto, as in the following example :

In the Diligence of Briftol, Henry Hopkins mafter, for the Streights.

## Thomas Fielding.

Sixty-eight barrel of Salmon, of Britifh taking and curing. Thomas Fielding maketh oath, That the fixty-eight barrels of falmon above-mentioned, which are now to be exported in the Diligence of Briftol, Henry Hopkins mafter, for the Streights, are of Britifh taking, and that all and every part thereof are well cured and merchantable.

Thomas Fielding.
Jurat' $27^{\circ}$ die Febr. $173^{\circ}$,
coram me A. B. Collector.
And, before any cod-fifh, ling, or hake, may be fhipped for exportation, the fearcher muft cut out part of the tail of every fuch fifh with a punch; and alfo, before the fhipping of pilchards, fcads, herrings, falmon, and dried red fprats, he mult mark or brand every cafk with the letters E. A. on the middle of two feveral fide flaves, to denote the exportation ; having firft cárefully gauged the fame, and examined whether they be well cured, merchantable, and full packed. And then they may be fhipped off only at a lawful key, unlefs otherwife permitted by foecial fufferance and leave, firlt had from the principal officers of the port.
Whilft the fifh are fhipping, the fearcher, or affiftant-fearcher, are to enter, in a particular book to be kept for that purpofe, the number of hoghtheads of pilchards, and barrels of falmon, herrings, and forats, and the number and weight of cod-fifh, ling, and hake, expreffing, in proper and diftinct columns, their different fizes and fpecies, with the day of the months on which they were fhipped, the names of the exporters, malter, fhip, and port, for which they are entered. And, where pilchards and herrings are taken and cured, the officer appointed for that purpofe muft infpect the quantity, quality, and lize of fuch fift, when they come to be barrelled, to prevent the ill and under packing of them, and to fee that no bad or unmerchantable fifh be barrelled up.
Fifh, taken or imported by flrangers, may not be dried within Great-Britain to be fold, upon forfeiture, or the value, to any perfon that will feize the fith, or fue for the value; to be applied to the repair and maintenance of the port, \&c. 13 Eliz. cap. II. §. 6.
Fifh-herring, cod, pilchards, falmon, or ling, frefh, falted, dried, or bloated, gril, mackarel, whiting, haddock, fprats, cole-fifh, gull-fifh, congers, any fort of flat fifh, and any other fort of frefh fifh; may not be imported into, or fold in England, having been taken by, bought of, or received from foreigners, or out of a foreigner's thip (except Proteftant ftrangers inhabiting this kingdom) upon forfeiture thereof, and the
thip and tackle, and alfo rool. by every offender herein, 15 Car. II. cap. 7. §. i6. 18 Car. II, cap. 2, §. 2. 10 and II Will. III. cap. 24. §. 13. 1 Geo. I. cap. 18. §. 1. 9 Geo. II. cap. 33. §. I.
Except eels, ftock-fifh, anchovies, fturgeon, botargo, and cavear. 32 Car. II. cap. 2. §. 7. 10 and II Will. III. cap. 24. §. I3, I4. I Geo. I. cap. I8. §. 3.

Lobfters or turbets, which may be imported in any fip, and by any perfon, whether of Britifh or foreign catching. I Geo. I. cap. 18. §. ı.
Mafters of fmacks, hoys, \&cc. bringing in fifh of foreign taking, \&cc. are to forfeit 501 . 1 Geo. I. cap. 18. §. 2. 9 Geo. Il. cap. 33. §. 1 .
But profecution muft be commenced within twelve months after the offence be committed. x. Geo. I. cap. 18. §. g. 9 Geo. II. cap. 33. §. 2.
The forfeitures above may be recovered by any informer in any of the courts of Weftmintter-Hall, and diftributed, one moiety to the informer, and the other to the poor of the parifh where the offence is committed. 9 Geo. II. cap. 33. §. I. Herrings, pilchards, fcads, cod-fifh, ling, hake, falmon, or dried red fprats, by whomfoever caught or cured, may not be imported, unlefs oath be made before the falt-officer, by the owner of the fifh, or mafter of the veffel, that all the falt wherewith they were cured was taken on board in GreatBritain, mentioning the time and place, and that no drawback was, or is intended to be obtained for the fame; upon forfeiture, and double the value. I Ann. cap. 2I. §. 14 . 2 and 3 Ann. cap. 14. §. 13.
Herrings, white or red, to be packed in lawful barrels, juflly and exactly laid by fworn packers, who are to brand the cafk with a mark, denoting the gauge, quantity, quality, and condition of the herrings, and the place where packed. Magiftrates, neglecting to appoint and fwear fuch packers yearly, forfeit 100 l. 15 Car. II. cap. I6. §. 1, 5 Ann. cap. 8. §.8. Herring-barrels to contain $3^{2}$ gallons. I3 Eliz. cap. 11 . §. 5 . Salmon-barrels to contain 42 gallons. 22 Edw. IV. cap. 2. §. 1. 5 Geo. I. cap. 18. §. 15 .
Herring and falmon exported in barrels of any other fize (except half-barrels) not intitled to the bounty. 5 Geo. I. cap. 18. \$. $15,16$.
Pilchards exported, the words feyn or drift muft be burned with an iron, in fome vifible part of the cafk, or hoglhead, with the number and firname of the owner, and the number of pilchards contained in each, upon forfeiture of double the value of the fifh. $x$ Ann. cap. 2 I . § 3 r.
Pilchards, fcads, cod-fifh, ling, hake, red or white herrings, exported from Great-Britain, the exporter to make oath before the principal officers of the port, that they were Britifh taken, and really exported for parts beyond feas, and not relanded, or intended to be re-landed in Great-Britain.
The falt-officer is to pay the debenture within 30 days after demand, or, if he has not fufficient money in his hands, to give a certificate thereof gratis, and without delay, upon penalty of the forfeiture of double the fum to the party grieved; and, upon fuch certificate, the commifioners of excife upon falt are chargeable with the payment.
But, if exported from Scotland, to be paid by the commiffioners of excife or cuftoms there, at the option of the merchant. 5 Geo. I. cap. I8. §. 6.
Laws in force in either kingdom, for preventing frauds in curing and packing of fig, extended to Scotland. 5 Ann. cap. 8. §. I.
Cod-filh, ling, or hake, before laid on board for exportation, part of the tails to be cut off; and pilchards, fcads, herrings,
falmon, or fprats, the barrels or cafks to be marked by the falt-officer. 1 Ann. cap. 21. §. i6. s Ann. cap. 29. §. 6. 5 Geo. I. cap, 18. §. 6 .
Such filh, after exportation, fraudulently relanded or reimported, are forfeited, and double the value. I Ann. cap. 2 I. §. 17. 5 Geo. I. cap. 18. §. 6.
After fuch finh are put on board any boat, barge, \&c: in order to be exported to foreign parts, they may not be taken out, unlefs to be put into the fhip wherein they are to be exported; nor landed in Great-Britain, except in the prefence of a faltofficer, upon forfeiture of boat, 8 sc . goods, and 201. by every perfon concerned, or fix months imprifonment. 5 Geo: I. cap. 18. §. 2,3 .
The former allowance or bounty on exportation, granted by 5 and 6 W : and M. cap. 7.7 and 8 Will. IIf. cap. 31.8 and 9 Will. III. cap. 20. 9 and no Will. III. cap. 44. I Arm. cap 1I. 5 Ann. cap. 8 and 29. 7 Ann. cap. II. is taken away. 5 Geo. I. cap. 18. §. I.

The prefent allowance or bounty; and the regulations of exportation.
Officers refuling or neglecting to pay the bounty due on exportation, or to certify the want of money to the commiffioners, are to forfeit double the fum of the faid bounty. 5 Geo. I. cap. 18. § 6.
Whire herrings fraudulently relanded; forfeited, and 20s. the barrel. 5 Ann. cap. 29. §7.
Duly entered and flipped for exportation, loft or fpoiled before the thip procecds on her voyage, on due proof upon oath, to enjoy the fame bounty as if really exported; provided the thip was funk in the fea or port where the hip was loft or deftroyed, in fight of the proper officer, where any of the faid fifh hall come on thore, and that no ufe be made of the fifh by proprietor or his agent ; and the officer is to caufe the fifh to be burnt, or otherwife deftroyed. 5 Geo. I. cap. 18. §. 8. Red herrings or fprats, confumed in curing, to be taken as if actually exported. 5 Gec. I. cap. 18. § 10.
Salmon and cod-fifh cured in Scotland with foreign falt that has paid the duty, to be allowed the fame bounty on exportation, as was payable before the 24th of June, 17 19. II Geo. I. cap. 30. §. 42.
White herrings, cured with falt made in Scotland, may be imported from thence to England, upon payment of 2s. 4d. for every barrel containing $3^{2}$ Gallons, and in proportion for half barrels. 5 Geo II. cap. 6. §. 6.
The proprietor or his agent, before the departure of his veffel, is to make entry with the collector of the cuftoms there, of the number of barrels fhipped, and give bond to the value of the herrings for the delivery thereof in England (the danger and accidents of the feas excepted) and to make oath that they were cured with falt made in Scotland, whereof the duty hath been paid, and are not intended to be exported to any place beyond feas.
The officer is to grant a certificate gratis of fuch entry and oath; which is to be delivered, before landing the herrings, or putting them on board any other fhip or boat, to the officer of the cuftoms at the place, upon forfeiture of the herrings, and 40s. the barrel.
A certificate of the landing, under the hand and feal of the principal officer at the delivering port, is to be returned within fix. months after the date of the bond, to the officer where the fecurity was given, upon penalty of the forfeiture of the bond. Perfons counterfeiting or altering any of the cirtificates above required, or knowingly ufing fuch counterfeit certificate, are to fuffer as perfons convitted of forgery. 5 Geo. II. cap 6. §. 7.
A mafter of any boat or veflel, bound on a filhing voyage to the North Seas or Iceland, may take on board in any port of Great Britain any quantity of Britif falt, paying or fecuring the duty. 12 Ann. cap 2. §. I.
The officer of the place is to give a certificate gratis of the quantity of falt taken on board, and that the duties have been paid or fecured. 12 Ann. cap. 2. §. 2.
Cod-fifh, ling, or hake, caught and cured there, may be imported and landed, upon oath being made by the proprietor of the finh or mafter of the veffel, that they came from the North Seas or Iceland, and were caught and cured there; whereupon they are to be tendered at landing, and, before removing them, to have part of the tails cut off, that no allowance be obtained upon exportation, upon forfeiture, and double the value to be recovered of the importer or proprietor. 12 Ann. cap. 2. §. 3.
Foul falt fo made ufe of, remaining, to be thrown overboard, in prefence of the officer. 12 Ann. cap. 2. §. 5.
Remaining unufed, not entered, and the duties paid down within ten days after the fhip's arrival into port (except in cafe of being driven in or detained by Atrefs of weather, or other unavoidable neceffity) is forfeited, and double the value to be recovered of the proprietor or mafter of the veffel. 12 Ann . cap: 2. §. 5 .
The matter of fuch boat or veffel, upon producing the certificate aforefaid, to the collector of the falt duties, and malng oath to the quantity of falt in fuch certificate, and
that the fill were cured and tendered as above, is to receive gratis, from the fald collector, a certificate of the fame; which; with a certificate of the payment of the dity of the remainder of the falt being produced to the colledor of the falt duties, where the duty was paid or fecured, the fecurity is to be difcharged, and money repaid by the colleetor without fee or reward. 12 Ann. cap. 2. §. 6.
Boats of veffels having caken in fuch falt, perifhed at fea or taken by enemies, the proprletor upon proof at the quarter feffions for the county, \&c, where he inhabits, within nine months after fuch lofs, is to receive a certificate of fach proof; which, being produced to the officer where the duty was paid or fecured, the fecurity is to be difcharged, and money repaid by the officer, without fee or reward. I2 Ann, cap 2. §. S.

An Abstract of the ordinances of the States of Holland and Weft Friezland, concerning the managing of the great
fifherg.
No veffel, failing out of Holland or Weft Friezland, fiall be allowed to go to the great fimery, without the confent of the burgomafter of the town from whence he falls; and that he make oath, that he will not fail, give in prefents at fea, or cure on thore, any herrings, under penalty of 24 guilders for each barrel, and confifcation of the fifh: and further that he Chall feparate the herrings caught in one night, from thofe caught in another, and hall declare on what night each were taken, on forfeiture of the cargo and hip, and degradation of the mafter.
Nor fhall any mafter deal for herring, with any but thofe authorized by the chief magiftrate in the place where the herring trade is eftablifhed. Further, they thall not, at fea, fhip herrings on board any other veffel than thofe fo authorized, under penalty of the faid herrings, or their value, and a fine of 600 guilders, and the mafter rendered incapable of ever acting in that capacity for the future.
That the mafters of the jaggers make oath, that they will not take on board herring from any others but fubjects of Holland and Weft Friezland ; taking care to get a certificate from the mafter, figned by himfelf, and two or three failors, with the Ihip's name and port the failed from, the quantity delivered, and that they were taken after St John's day, cured and laid in barrels in his fhip, on penalty of the herrings, or value of them ; nor thall any mafter thip them on board jaggers, after the 15 th of July, penalty as above, and the money received for fuch herrings.
That no inhabitant of Holland or Weft Friezland thall be engaged with others living out of the faid provinces, in Busses or Jagoers, under penalty of thip and cargo, and 600 guilders, to be recovered, though the faet has been committed 20 years paft.
The firlt taken berrings are not to be fold, unlefs they bave been ten days in pickle; and not then, 'till marked by the infpectors between the neck and belly hoop, on penalty of 300 guilders; and, in cafe of non-payment, to be confined to bread and water for a month; and all herrings brought into the faid provinces, without fuch mark, to be publickly thrown into the fea.
Each mafter of a Buss is to declare to the fecretary of the port from whence he fails, where he is going to filh, to what port he is to return, and what mark he is to ufe, that it may be regiftered, under the penalty of 120 guilders.
The curing of the herring fhall be compleated three weeks after they arrive, whether they be fold or not, and thall be repacked more than once, according to the nature of the herring, and cuftom of the place; if not in the above limited time, the buyer to have no redrefs.
Herrings Chall not be repacked or heightened with frefh pickle, but in the public ftreets or cuftomary places; with open doors, where any may enter, under penalty of 240 groats.
No herrings to be packed or heightened to be fert abroad, before the cure-mafter has infpected. them, and afcertained that they are duly packed. Nor are fmall herrings to be packed up with great, but each foall be filled up with thofe of a like kind, and taken at the fame time and branded with theirs and the city's.mark.
No barrels fent abroad thall have lefs than fourteen hoops.
The herrings caught after St James's day, and falted with fine falt, may be exported as wrack weftward; the barrel to be bound with fixteen hoops, having the date of the year on the belly; and mark of the purchafer thereon.
No Spanifh or Portugal falt fhall be put in cafks, before the cure-mafter has examined it, on penalcy of 25 guilders for every hundred weight; nor fhall they carry to fea any other but the above for the herring filhery, and that twice to be examined by the cure-mafter, who muft open each barrel before it is thipped, and famp them with his mark; in cafe of failure, the mafter to forfeit $3^{6}$ guilders, and he is likewife to declare, that thefe herrings were cured with the faid falt. Each cure-mafter may make the mafter of the Buss open his barrels twice in his view, to have two infpections, and at each time to pay half a farthing, the one to be paid by the buyer, and the ocher by the feller.

Any perfon who cures herrings with French falt from StMar tins, Olderdame, Borea, Browart, South France, the WeftIndies, or ifle of May, to forfeit the herrings.
Fifh taken after St James's day, and Bartholomew-tide, may be falted with fine falt, boiled with fea-water, according to agreement with the city of Cologn.
There fhall not be fent abroad to the weftward, or France, Flanders, and Brabant, any herrings, but what have been taken and packed after Bartholomew-tide, and marked with the grand Rouen brand: nor fhall any be fent to Hamburgh, Bremen, Cologn, or other ports, that may be cured with coarfe falt, whether they be wrack, or refufal fifh, on penalty of fix guilders each barrel, and naval correction.
Herrings, once exported, hall not be brought back, or cured anew, on pain of forfeiture of the fin.
A warning againft the not handling, forting, falting, and lay-
ing of the herrings in a proper manner by the mafters.
The lords deputies of the great fifhery of Holland and WeftFriezland, with the utmoft indignation having been certainly informed, that fome mafters, neglecting their duty, do not manage, fort, falt, or lay in a proper manner the herrings, notwithitanding the good orders given by the general placart, refpecting the catching, falting, and management of the herrings, renewed by their high-mightinefles the lords ftates of Holland and Weft-Friezland, dated the roth of May, 1651, and amplified the 30 th of May, 1656 , efpecially enjoined in the 12 th, $13^{\text {th }}$, $14^{\text {th }}$, and 15 th articles, and of which, purfuant to the 4 IIf article of the faid ordinance, an exemplar is annually given to the mafters, and folemnly fworn to, as a further warning to prevent all abufes and neglects, decreed by the aforefaid lords deputies, by virtue and authority of the faid placart; from whence it is to be apprehended, that the now already much leffened foreign fale of the Dutch herrings, and the good repute thereof, will entirely ceafe, and, on the contrary, become in difefteem, to the great detriment and prejudice of the trade, and confequently to the ruin of the great Herring fifhery; being fo apparent a lofs to the trade and welfare of the country, and the inhabitants thereof, in cafe it is not fpeedily and rigorounly examined in-to.- The lords deputies aforefaid, by the advice and confent of the committee, confifting of owners of fhips, merchants, and herring-traders, for the prevention of thofe enormous abufes and neglect of duty, and for the confervation and reftoration of the great herring-filhery, have thought proper to defire and ordain, and do hereby defire and ordain, by way of renavation and amplification of the before-mentioned good orders, That the herring-mafters thall not mix different forts together or fort them; as, firft fort (which is full, middie, and fmall) by firf, fecond ditto by fecond, third fort by third; and on occafion of an extraordinary great capture, the time not permitting to fort them properly, the mafters, at their coming on thore, fhall be obliged to report them as unforted herrings to his owners: that, farther, the herrings fhall be properly falted, and the large barrel herrings be falted in no lefs a proportion than four barrels of falt to every laft (i. e. 12 barrels) the fmalleft fort of barrels excepted; the herrings to be likewife properly gutted, and afterwards laid clofe croftways in the barrel; ordering all and every mafter to conform themfelves to this rule, under pain of 300 guilders, over and above the action, in cafe of perjury, at the charge of the mafters whofe herrings fhall not be properly forted, in manner as beforementioned; to whom likewife no further grant fhall be given for the catching of herrings: but, with refpect to the herrings not being laid clofe croffways in the barrel, a penalty thall be levied of fix guilders per barrel ; the aforefaid penalties to be in conformity to the 40 th article of the placart before mentioned; one third to the informer or informers, whether they be failors or other perfons; one third for the officer who makes the challenge; and the laft third part for the poor. The herrings fo improperly falted, viz. the firft fort mixed with the fecond; item, the fecond fort mixed with the firft, to be reckoned unforted; and with refpect to the mixed firft and fecond fort, to be fold with the third fort as third fort, and to be reckoned and paid in that manner by the buyer, likewife at the charge of the mafter. All the reft of the before-mentioned given orders, and thereunto annexed penalties, remaining in their full force: and, to the end that no one fhould be able to pretend ignorance thereof, the lords deputies aforefaid order, that there Ghall be publifhed and affixed in all proper places. Done at Delft, the 23 d day of Maý, 1749. By order of the lords deputies.

## M. L. Secretary.

1749. The burgomafters and regents of the city of Schiedam give their confent unto $\mathrm{A}, \mathrm{B}, \mathrm{C}$, that he fhall be permitted to go with his herring-fhip to the North Sea, there to catch herrings, and hath folemily fworn to us by oath, that he is properly furnifhed, according to the fize of his herringChip, with tackle, falt, barrels, feamen, and all other neceffaries required in the herring-trade: likewife, that he will not, before the 24 th of of June, nor after the 3xit of December next coming, caft a herring-net in the fea, to catch her-
ring ; that alfo he will not deliver over to any body, whom foever it might be, any herrings whilf at fea, nor fuffer that they be given over out of his hhip by any other perfon directly or indirectly, in any manner whatloever, but only to thofe fhips from Holland and Weft Friezland, who produce the proper act of confent, having on the top of a Herring-Buss, being the feal of the great fifhery ftamped thercon, and figned by the fecretary of that city from whence he comes to which refpective thips he thall be impowered to deliver over his caught herring, until the 15 th of July ${ }^{5} 749$ inclufive, and no longer: that he fhall notify exactly upon the lift of the marked barrels, in what night or nights the herring thus delivered were caught: farther, that he fhall not fill up the berring-barrels more than once with preffed herrings, and take care, that as little of the bloody pickle thereof hall be fpilt as poffible: and further alfo, that he thall bring in all his caught herring into the provinces of Holland and WeftFriezland; and likewife, with three of his own failors, enter within three days at fartheft after his arrival, the faid caught herrings faithfully; taking alfo all poffible care, that the herring may be laid even in their lays, from the bottom to the top; and that the fame be not caft in with bafeets or buckets into the barrels, mixed, wrong laid, or adulterated that he thall not fell, change, or give away, by manner of gift, any falt, pickle, hoops, hoop-wood, rigging, thread, hook-lines, or any other fifhing-tackle. Item, he fhall not fell, barter, or give away any fort of merchandize, under what denomination foever might be in Zealand, Scotland, or any other land; taking likewife no fort of goods for freigh to this or that place, or fuffer the fame to be done directly or indirectly, on the penalty mentioned in the warning, and to regulate himfelf farther, according to the placarts and ordinances made with relation to the herring fifhery, and which, for that intent, are given with him; fo truly as he wifhes God Almighty may help him.
The feal of the great fifhery is hereon ftamped, and figned by the fecretary of the city the roth day of June 1749.
Acts relating to fifh, fifheries, and fifhing, in England, from Edward I. to the year $175^{\circ}$.

## Statutes.

13 Edw. I. cap. 47. Salmon, \&cc. in defence.
3 I Edw. III. ftat 2. cap. a. Herrings fold at fea.

3r Edw. III. ftat. 2. cap. 3. Stockfilh of St Botolph, falmon of Berwick, fifh and wines of Briftuit, \&ec.
3 Edw. III. Aat. 3. cap. 1. Fifhery, Blakeney, and the coafts of Satterly, Winton, in the county of 一一 3 Edw. III. ftat. 3. cap. 2. Fair at Blakeney, lob, ling, cod, orgies, felling, \&c. their nets, \&c. Norfolk.
35 Edw. III. about buying and felling herrings, Yarmouth: 4 Rich. II. Fifhmongers trade haid open.
6 Rich. II. cap io. Fifh and victuals to be fold by aliens, in London, enforced by Hen. I. cap. 17. 14 Hen. IV. capi 4. Query, If not fince repealed.
7 Rich. II. cap. If. Filhers, vintners, and victuallers, coming to London, to be in the rule of the lord-mayor and aldermen of the faid city. 31 Edw. III. Atat. 1. cap. I. (N. B.) repeals the ftatutes of 5 -Rich. II. cap. 4 . and 6 Rich. II. cap. II and 12. touching victuallers in London.
31 Rich. II. cap. 19. confirms ftat. I3 Edw. I. cap. 47. and appoints confervators of it, \&c.
17 Rich. II. cap. 9. All juffices of peace to be confervators of 13 Edw. I. cap. 47. and 13 Rich. II. cap. 9. who are to appoint fubiconfervators under them, \&c.
2 Hen. IV. cap. 15. Penalty on faftening trinck, and other nets, over the Thames, or other rivers; trinckers may fifh lawfully.
14 Hen. IV. cap. 4. Penalty on difturbing aliens fending their fifh.
22 Edwe: IV. cap. 5. Salmon-veffels, falmen packed, gril packed, herrings packed, fqld in barrels, \&cc. eels barrelled, \&ack. length, \&c. of barrelled fih, thokes, \&c. tale-filh, their length, \&c.
if Hen. VII. cap. 23. What gaugers; packers, and fearchers of barrelled falmon, herrings, eels, \&cc. are intitled to, with penalty on their offending, \&x.
31 Hen. VIII. cap. 2. §. 2. Penalty on fifhing in ponds, \&c. againft the will of the owners. See Eliz. cap. 21. 2 and 3 Edw. VI. cap. 6. §. 3: Penalty on admirals taking money, doles, \&c. fịhermen or merchants, for licences to pafs to voyages for filh, \&c.
5 Eliz. cap. 17. A general provifion for preferving of the fpawn, brood, and fry of fifh, made perpetual by Car. II. cap. 4.
5 Eliz. cap. 5. No toll for fea-filh, except on Kingfton upon Hull; penalty on herring on fea-filh, and not well falted and packed, and cod, and ling, to be imported loofe, and not in barrels.
5 Eliz. cap. I. Penalty on fifhing in ponds, \&cc. againft the owners confent.
39 Eliz. cap. 10. Exporting of herrings bought in this realm; cuftoma to be paid by aliens for felled fiih and herrings; penaly
on importing or falting bad filh or herrings. See 43 Eliz. cap. 9.
I Jac. I. cap. 23. §. 3. relates to the taking of herring, pilchard, and other fea-fifh in the counties of Somerfet, Devon, and Cornwall.
3 Jac. I. cap in. No wears along the fea-coaft, and penalty on killing, \&cc. of the brood, \&cc. of fea-fifh, affize, \&c. of fea-nets.
13 and 14 Car. II. cap. 2. §. $3^{6}$. relates to the exportation of filh into any ports of the Medterranean.
13 and 14 Car. II. cap. 28. Penalty on fifhing from June to November on the high fea, or any bay, port, \&c. of Cornwall or Devon, with any drift, \&c. nor nearer than a league and a half to the fhore, \& \& c.
15 Car II. cap. $7 . \S$. 16, 17. No freh herring, cod, haddock, cole-fifh or grill-fih, from the North Sea, Iceland, and Weftinary fifheries, fhall be imported; penalty fhip and filh; falted or dried cod, colefilh, ling, white herrings, haddocks, and grill-filh, imported in foreign built hips, to pay cuftom.
15 Car. II. cap. 16. How white or red herrings of Englifh catching are to be packed, falted, dried; bailiffs of Yarmouth, \&rc. to appoint packers.
18 Car II. cap. 2. No ling, herring, \&cc. to be imported by foreigners. 22 and 23 Car. II. cap. 25 .
30 Car. II. cap 9. A general provifion for preferving the fpawn, brood, and fry of fifh in the river Severn.
$3^{2}$ Car. II. cap. 2. § 7. Stockfilh and live eels may be imported.
4 and 5 W. and M. cap. 23. relates to private fifheries, \&c. 10 and 11 Will. III. cap. 24. concerning Billingfgate market duties, \&c. affize of lobiters brought on fhore and fold; no fifh, except flock-fifh and live eels, to be imported or fold by foreigners ; inportation of anchovies, fturgeon, botargo, and cavear allo excepted.
10 Will. III. cap. 25. relates to the filheries of NewfoundJand, and the iflands adjoining, with the regulations thereof. 4 Ann. cap. 15. Finhery of the river Stower in Effex and Suffolk.
4 and 5 Ann, cap. 21. Confervation, \&c. of the fifhers of the rivers, creeks, \& cr. in the counties of Southampton and the fouthern parts of Wilthire; feafons, affize of nets, \&cc. I Geo. I. cap 18. no herring, cod, pilchard, falmon, ling, frefh or falted, dried or bloated, nor grill, mackarel, whiting, haddock, fprat, cole-fifh, grill-filh, congor, or any fort of flat filh or frelh fifh, to be imported or fold in England, that are taken by any foreigners, or of ftrangers bottoms, except Proteftant inhabitants; eels, flockfilh, anchovies, fturgeon, botargo, or cavear, excepted, affize of drag-nets ufed at fea, \&c. affize of turbot, brill, pearl, codlin, whiting, bafs, mullet, fole, plaice, dab, and flounders, brought to fhore, fold, or exchanged with penalty; lobfters and turbots may be imborted by foreigners; affize of Salmon brought to London, \&cc. \&cc. rivers Dee, Severn, \&cc.
2 Geo. II. cap. 19. concerning the Rochefter fifhery.
5 Geo. II. An aet for encouraging the Greenland fifhery.
6 George II. An act for the further encouragement of the whale fifhery carried on by his majefty's Britilh fubjects. 9 Geo. II. cap. 33. confirming the firft claufe r Geo. I. cap. 18. about importation of ftockfifh by foreigners, Britifh thips trading to the Mediterranean Sea, and lobiters, when in defence, on the coaft of Scotland, 8 c .
13 Geo.I. An adt for continuing the feveral laws therein mentioned, relating to the premiums upon the importation of mafts, yards, and bowlprits, tar, pitch, and turpentine, to Britifh-made fail-cloth, and the duties payable on foreign failcloth, to the Greenland and to the Whale-fifhery, for granting a further bounty for all fhips employed in the whale-fifhery, during the prefent war, and for exempting harpooners employed in the Grcenland fifhery, trade from being impreffed, \&c.
22 Geo. II. An act for the further encouragement and enlargement of the whale-fifhery, and for continuing fuch laws as are therein mentioned relating thereto; and for the naturalization of fuch foreign Proteftants as fhall ferve, for theti me therein mentioned, on board fuch fhips as fhall be fitted out for the faid fifhery.

## REMARKS.

From thefe regulations of the filheries in Holland and France, we may, in fome meafure, judge of their importance to thofe ftates. The fifheries in Holland are well known not only to have been the firft rife of that republic, but the grand prop and fupport of all their commerce and navigation. This branch of trade is of fuch unfpeakable concern to the Dutch, that, in their public prayers, it is appointed to be mentioned, when they pray to the Supreme Being, That it would fleasehim tobless the Government, the Lords the States, and also their great and small Fisheries.
What the Dutch call the Great Fishery, refpects the whale-fifhing at Spitfbergen, and in the feas of Greenland; with the catching of reals, fin-fifh, and the other kinds, whercof they make train-oil; for which fifhery they generally employ 150, or 200 fail of dhips every year; which being
double manned, for the fervice of killing the whales, as well as failing the fhips, do not empluy, one year with another, lefs than 10,000 feamen.
This was apparent in the years 1674 and 1675 , when they had war with the Englih, and in the year 1695, when they declared war againft France; on both which occafions they laid afide their Greenland trade, that they might take up the feamen to man their fleet: and, by this advantage, they had 10,000 men at hand, and were enabled to fit out their navy rather fooner than their neighbours.
The fmall filhery refpects the herring, ling, and cod; the firft of which they take on the hores of Shetland, Scotland, and England; the latter in the North Seas, on the coafts of Norway and Jütland.
-Holland, fays the great De Witt, grand penfioner of Hal-

- land, is very well fituated to procure it's food out of the fea,
' which is a common element; it lies not only on a ftrand
' rich of fifh, near the Dagger-Sand, where haddock, cod,
- and ling may in great abundance be taken and cured; but
" alfo near the herring-filhery, which is only to be found on
" the Coast of Great-Britain, viz, from St John's ' to St James's, about Shetland, Pharil, and Boeknefs ; from 'St James's to the elevation of the crofs about Boekellton, or
- Seveniot; from the elevation of the crofs to St Katharine's, - in the deep waters eaftward of Yarmouth. And this her-
- ring-fifhing, which it is now $25^{\circ}$ years ago fince William
- Beakelfon, of Biervliet, firft learned to gill, falt, and pack
- them up in Barrels, together with the cod-fifhery, is become
- fo effectual a means of fubfifting for thefe lands, and efpe-
- cially fince fo many neighbouring nations, by reafon of their - religion, are obliged, upon certain days and weeks of the
- year, wholly to refrain from eating of feh; that the Hol-
- landers alone do fifh, in a time of peace, with more than 6 1000 buffes, from 24 to 30 lafts burden each, and with ' above 170 fmaller veflels that fifh for herrings at the mouth - of the texel; fo that thefe 1000 bufles being fet to fea for - a year, wherein they make three voyages, do coft above - ten millions of guilders, accounting only the bufs, with ' it's tackle, at 4550 guilders, and the fetting forth to fea - 5500 guilders, there remaining nothing, of all it's victuals - and furniture the fecond year, but the bare veffel, and that - much worn and tattered, needing great reparation. So 'that, if thefe 1000 buffes do take yearly 40,000 lafts of her-- rings, counting them at leaft worth 200 guilders per laft; - they would yield in Holland more than eight millions of - guilders.
- And feeing that of late men have begun to make very much - ufe of whate-oil and whale-fins, which are taken to the - northward, not far from us, infomuch that, with foutherly - winds, which are common inthis country, we can fail thither - within fix or eight days; the trade of fifhing and falt may ' eafily be fixed and fettled with us; for to fix thefe fifheries, - and feveral manufactures, and, confequently, the trade and - returns thereof depending on navigation, and hips let out
- to frieight, we ought duly to confider, that the greateft dif-
- ficulty for foinnumerable a people to fubfift on their own 6 product, proves the moft powerfal means to attract all fo-
- reign wares into Holland, not only to fore them up there, - and afterwards to carry them up the country by the Maefe,
- Waal, Yfiel, and the Rhine (making together one river)
c to very many cities, towns, and people, lying on the fides
6 of them (the moft confiderable in the world for confamp-
6 tion of merchandize) butalfo to confume the faid imported
- goods, or to have them manufactured : it being well known,
- that no country under heaven, of fo fmall a compafs, has
- fo many people and artificers as we have; to which may be
c added, that no country in the world is fo wonderfully divided
- with rivers and canals, whereby merchandize may be car-
- ried up and down with folittle charge.
- Emanuel Van Meteren fays, That, in the fpace of three - days, in the year 1601, there failed out of Holland to the c eaftward, between 8 and 900 thips, and 1500 Busses, a - herring filhing; which is ealy to believe, if we may credit ' what the Englifh authors mention, viz. Gerard Malines, s in his Lex Mercatoria, and Sir Walter Ralegh, and which - Lievin Van Aitzmar, anno 1653, pag. 863, doth in fome - meafure confirm, viz. that there are yearly taken and feent
- by the Hollanders more than 300,000 laft of herrings, and - other falt fifh: and that the whale filhing to the northward 6 takes up above $\mathbf{1 2 , 0 0 0}$ men, which fail out of thefe coun-- tries: for fince the Greenland company, or (to exprefs my-- felf better) the monopolizing grant thereof, was annulled, - and the whale-filhing fet open in common, that filhery is - increafed from one to ten: fo that, when we reckon that - all thefe filhing veffels are built here at home, and the ropes, - fails, nets, and calks made bere, and that falt is furnithed - from hence, we may eafily imagine, that there mult be - an incredible number of people that live by this means, - efpecially when we and all thofe people mult have meat,
- drink, cloaths, and houfing; and that the fifh, when caught, - is tranfported by the Hollanders in their veffels through the s whole world.
- And, indeed, if that be true which Sir Walter Ralegh

6 (who made diligent enquiry thereinto in the year 16.18, to
inform king James of it) affirms, that the Hollanders fifhed on the coaft of Great-Britain with no lefs than 3000 fhips, and 50,000 men, and that they employed and fet to fea, to - tranfporr and fell the fifh fo taken, and to make returns 6 thereof, 9000 Mhips more, and 150,000 men befides: and, if we hereunto add what he faith further, viz. that 20 Busses - do maintain 8oco people, and that the Hollanders had, in - all; no lefs than 20,000 fhips at fea; as alfo their fifhing, * navigation, and traffic by fea, with it's dependencies fince - that time to the year 1667 , is increafed to one thisd more: - I fay, if that be fo, we may then eafily conclude, that the - fea is a fpecial means of Holland's fubfiftence; feeing Hol-- land, by this means alone, yields, by it's own induftry, - above 300,000 lafts of falt finh: fo that, if we add to this - the whale-fin and whale-oil, and our Holland manufacture, - with that which our own rivers afford us, it muft be con-- feffed, that no country in the world can make fo many fhips-- lading of merchandize by their own induftry as the province - of Holland alone.'

## Of the French Fisheries.

Nor has France been lefs folicitous in cultivating the fifhingtrade, than all other branches which tend to increafe their maritime power. When the French king was, in queen Anne's wars, moved to admit the Dutch and Englifh fifhingboats into Dieppe, Dunkirk, St Vallery, and other ports, with their herrings, the king anfwered, No! by no Means; if my People will have herrings, why dothey not catch them, as the English and Dutch DO? Upon which, the merchants of thofe parts immediately fitted out veffels, and took herrings fufficient for all the country.
From this time the French have taken every meafure to improve their filheries; in which capital article of commerce, they have been increafing ever fince the treaty of Utrecht, and have become out moft dangerous rivals herein. The French have a confiderable whale filhery, and the French fifhermen of St John le Luze, Bayonne, and other ports in that part of the bay of Bifcay, are become the moft expert harpooners in the world, without excepting the Dutch and the Hamburghers.
But the French have not only increafed in the whale-fifhery, but, which is of far more confequence to Great-Britain, they have exceedingly increafed their fifhery to Newfoundland, as well on the coaft as on the great bank. The confequence of this increafe of their filhery we have, to our forrow, 'too fenfibly felt for many years. Nor do they filh only on the great bank of Newfoundland for fuch firh which are cured without drying, as the Dutch do in their white herring fighery in the open fea, but have had the addrefs to obtain that the ifland of Cape Breton fhould be yielded up to them, to fortify and do what they pleafe with; where they may, and doubtlefs will, make another Dunkirk, as I have obferved upon another occalion, and where they may carry on their dry fifhery, as well as at Placentia: for we have, for fome time, had daily accounts that they are fortifying Cape Breton to the utmoft. But this is not all; the world is well amended with the French fince the time that they paid a tribute for the liberty of curing and drying filh at Newfoundland, which was granted them by king Charles I. in the 1oth year of his reign. At this time the French do not only pay no tribute, but, by their neighbourhood at Cape Breton, will oblige us to keep large garrifons as well at Nova Scotia as Newfoundland, if we will prevent our being furprized; where at Newfoundland they have the liberty of the firing feafon equally with us, from Cape Bonavifta northward to the northern point of the faid inland, \&rc. by which fituation they are alfo become our rivals in another branch of our fifhery; that of falmon: for, at the harbour of Bonavifta, which is to the northward of the Cape, and therefore within their limits, is an extraordinary good fifhery of falmon.
Had the late king William granted the Dutch any one of the iflands of the Orkneys, as heretofore intimated, in propriety to fortify, or a liberty of reforting to, or erecting drying-houfes neceffary to cure red herrings in any fuch inland, or in England or Scotland, it would have been remembered, with good reafon, a thoufand and a thoufand times over. But the French have had the cumning to procure for their filhery fuch liberties and privileges as can fcarcely be confiftent with our fafety or intereft ; and, therefore, the world may be left to judge who are our greatest and most dangerous rivals in the FishERY. They are now become fo much our rivals in this trade, and are increafed to fuch a prodigious degree, that they employ yearly above 500 fail of fhipping from St Malo, Granville, Rochelle, St Martins, Ife of Rea, Bayonne, St Jean de Luze, Sibour, \&uc. to carry on their filheries on the great bank of Newfoundland, and on the coaft of that ifland; that is, in their wet and dry fifh: nor do they now only fupply themfelves with the fifh they formerly had from us, but furnifh many parts of Spain and Italy therewith, to our prodigious lofs.
They have the propereft falt of their own, which renders their voyages much fhorter than ours; for we have been obliged to go from hence to Rochelle, Olleron, St Martin, \&c. to fetch
that commodity, which they have at their own doors; and thereby we have moft frequently fent a month or fix weeks more in our voyage than they do.
The French are fo fenfible of the prodigious advantage of this filbery, and fo very intent upon purfuing it, that, from their firf attempts to make themfelves confiderable at fea, they have had it perpetually in view.-They firft obtained leave to fifh at Newfoundland, upon paying a duty of 5 per cent. afterwards they got that acknowledgement relinquighed: but, at the treaty of Utrecht, they went far greater lenghts; for thereby they procured a ceffion to be made to them of Cape Breton, a maiden fifhery, that had fcarce ever been touched; whereas Newfoundland was greatly exhaufted, and alfo feveral inlands in the gulph of St Lawrence. Not content with that, they further obtained a liberty of curing and drying their fifh, fetting up ftages, and reforting to OUR ifland of Newfoundland, during all the time that it is of any ufe to refort thither; which is during the filhing-feafon.
They, indeed, delivered up to us the poffeffion of Placentia, and fome other places in Newfoundland; but then they took care to have a much better place, for their fifhery yielded to them, in lieu thereof; with this extraordinary favour to them, more than to us, that they have the liberty granted them to frequent our inland of Newfoundland, and erect flages, \&c. thereon, for curing and drying their filh; but we have not the privilege allowed us on doing the fame on any of their iflands, or on the ifland of Cape Bieton, while they have exprefs permiffion granted them to fortify as they pleafe.
Thus the French are become our rivals in the Fishery by our own confent; which is the more wonderful, in that it is owing to this fifhery, that they dared to contend for the maftery at fea with the maritime ftrength of England and Holland united.
'Tis true, the Englifh and Dutch are moft frequently called the maritime powers; but we think it a jeft, at this time of day, to appropriate the name of maritime powers to GreatBritain and Holland, exclufive of France, when we coofider what a figure that nation made at fea before the battle of La Hogue in 1692, and what a figure they are able to make at prefent from the daily increafe of their marine, fince the late treaty of Aix la Chapelle. See the article France.
The hiftory both of France and England will Chew us, that fince the former procured leave to fifh at Newfoundland, and their fettlement and fifhery at Cape Breton, they have grown very formidable at fea, and that their royal navy has augmented in proportion to the number of fhips employed in thefe fifheries.-What have we not to expect then, fince they have obtained a right to a better place for their filhery, in the opinion, even of the French themfelves, as the reader will foon fee by the inclofed letter, written by a minifter of ftate in France, to the duke de Gramond at Bayonne. The occafion of it was, that the people of St Jean de Luze and Sibour, (two places in the county of Sibour) being under apprehenfions that their fifhery at Newfoundland was to be delivered up wholly to Great-Britain, the duke wrote a letter to Paris to be rightly informed, and received the following anfwer.

Copy of a letter written by Monf. de Pontchartrain, to Monf. the duke de Gramond, from Fontainbleu, 19 September, 1713.

- I have received, Sir, the letter you did me the honour to - write me the third of this month, with two letters that were directed to you by the inhabitants of St Jean de luze 6 and Sibour, upon the fubject of their fifhery of dry filh. - From the account I have given the king of their demand, 6 his majefty directed me to write, by his order, to Monf. 6 the duke D'Aumont, his ambaffador extraordinary at London, to afk of the queen of Great-Britain a permiffion - for them to go the next year to Placentia, and the liberty
- to continue their fifhing in all the ports and harbours upc on the coaft of Newfoundland. I fhall do myfelf the ho-- nour to acquaint you with Monf, the duke D'Aumon's 'anfwer.
- I agree with you, Sir, that the country of La Bour will - fuffer much, fhould they be deprived of their liberty of car-- rying on their fifhery of dry fifh; and you will be perfuaded - of the attention I have to procure to the merchants that - drive this commerce, the means to continue them in it, when - I have informed you, that the king fent from Rachford, in ' the month of May laft, one frigate, to go and lay the hrat - foundation of an eftablifhment in the inland of Cape Bre-- ton, where fih is Much More Abundant than at - the illand of Newfoundland, and where one may make the - finh, and manage the drying thereof eafily. This frigate * arrived June 26, at Placentia, from whence the was to con-- tinue her courfe for Cape Breton, to which place I - have caufed to be tranfported 100 men , to begin the fettlement. His majefty will fend, the beginning of the year, three - hips, to tranfport thither the garrifon of Placentia, and the c inhabtants of the inand of Newfoundland, and to put the - laft hand to the effablifhment of that port. The merchants of this kingdom may then fend all fuch thips as they
: Shall think fit to order, for the finhing of dry fin, and for - the oils that are made from the filh on the faid illand. This - favour ought to animate the merchants that drive this com-- merce, to carry it on with vigour, from the advantage they - will draw from it. This is all I have been able to do in ' their favour. I defire you to be perfuaded of the great fin6 cerity wherewith I have the honour to be
our to be -一- -
From this letter it is plain the French never intended to quit the filhery of dry cod, and that they have, from this period, very much rivalled us therein, to our great detriment, and thetr unfpeakable emolument, by the means of their fayourite and very important settlement of Cape-Breton.-And with regard to their herring. fifhery, we have frequent accounts of many hundreds of their buffes being upon our coafts in the feafon; which may one day prove highly dangerous to this kingdom upon other occafions, as well as injurious to our own fifheries of that kind.

Remarks, in confequence of the laft war, and the Definitive Treaty of Peace, 1763.

From the preceeding account of the French Fisheries at Newfoundland, and the adjacent iflands of CapeBreton, it appears, that the French have reaped very great benefit and advantage thereby fince the Peace of Utrecht, and more efpecially by that new and maiden Fishery, which they have fo many years fuccefffully carried on, by means of Cafe-Breton, and it's Coasts, and alfo all their Canadian Dependencies in general: and indeed it mult be confefled, that Cape-Breton has, ever fince the French fettled and fortified it, been a pungent thorn in the fide of the British Colonies in this part of the American World; but by the laft Definitive Treaty, this fevere thorn is plucked out and eradicated, as an annoyance to thefe kingdoms; and inftead of this iffand and it's Louifbourg fortifications being longer a terror to Great-Britain, they are now become fo to France; inflead of that nation being able, by means thereof, to awe and intimidate our adjacent colonies; the laft treaty having annexed this valuable ifland for fituation to the crown of England, it is now become our fafeguard; we can fortify Cape-Breton again, and render it an impregnable Barrier to all our antient northern colonies; an effectual protection to Canada, and all it's Dependencies, and to all our other new Acquisitions in thefe parts. This will prove of unfpeakable benefit and advantage to this kingdom, by fo curbing and reftraining the power and conduct of the French in their fifhery here, that by virtue of CapeBreton, we thall be able to extirpate them from the iflands of St Peters and Miguelon, whenever they dare violate the ftpulations of the treaty, and for ever after hinder them from catching a fifh on any parts contiguous to Newfoundland. - This we are now in a condition to do, by virtue of the latt peace ; and if France thinks foon to quarrel with GreatBritain again, they will run the rifk of being for ever, perhaps, deprived of the fmalleft fhare in the NEwFOUNDland Fisheries. This we certainly have now in our power to do; and this we have reafon to hope and expect will for fome years prevent a rupture between the two nations. See alfo Florida, Bahama Islands, \&c. Mexico.

Of the principles that are faid, at prefent, to prevail at the court of Spain with regard to Fisheries.
Under the article Biscay, a principality in Old Spain, I have fhewn, by a fhort quotation from the fage Spaniard Uztariz, whofe fyftem in regard to commerce is faid to be adopted by his Catholic majefty's miniftry, that Spain is about to diminifh, and in effect abfolutely obftruct and prohibit the importation of Britifh-caught fifh into their dominions, by eftablifhing fifheries of their own.
This author, after fhewing the advantages which the Dutch, French, and Englifh have reaped from their fifheries, takes no little pains to animate the Spanibh nation fanguinely to purfue the like commerce and policy : he goes fo far as even to affert, that the Spaniards have a right to fifh at Newfoundland : fo that we are likely to have rival upon rival in this branch.

- It ought to be a principal concern of the government, fays - this politic Spaniard, to prevent foreigners from enervating - the kingdom fo much as they do, by the importation of - falt filh, and the great confumption it meets with in Spain, - that of bacalao in particular, which is known to be focon-- fiderable a part of the food of all it's provinces in general. - In order to calculate the confumption, it is to be obferved, ' that in the proviaces of the crown of Caftille, the faft-- days amount to a hundred and twenty in a year, and that ' they exeeed a hundred and fixty in thofe of the crown of * Arragon, and in Navarre, where flelh is prohibited on Sa-- turdays, which is not the cafe in Caftlle. The computa-
- tion may be a little over or under, on account of fome va-- riation there is in the devotional fafts. But if we rate the Vol. I.
number to be a hundred and thirty in the year; one kina' dom with another, throughout Spain, upon a moderate fuppofition that ever family, one with another, thall expend four ounces of bacalao every faft-day (which is not an ounce to one perfon) there will be confumed, in a million and a half of families, fix millions of ounces, which amount ' to 3750 quintals per day; and, for the hundred and thirty faft-days in a year, 487,500 quintals ; which, at the rate ' of five dollars, the current price, a little more or lefs, when ' fereigners fell it to us, amount to $2,437,500$ dollars. And, 6 if we add the great quantity of cured falmon, herrings, pil' chards, and other fifh from abroad, which is alfo expended - in thefe kingdoms, one may reafonably imagine, that the ' money they annually drain from us, by this article, is above 's three millions of dollars: and it is one of the principal ' caufes of our unhappy fituation.
' I am aware there is no fmall number of perfons who, for - want of health, are difper fed with eating fin upon days of - abftinence; but there are alfo many convents of men and - women, fome of which live upon fif every day in the year, - others the greateft part of it: fo that what thefe focieties
' exceed the hundred and thirty days of abitinence, may be ' a ballance for fuch as eat flefh on thofe days.
- This general calculation I have thought proper to give, in ' order to have it more clearly feen how much of our fub-
- ftance other nations drain from us by the fale of cured finh;

6 though I do it with fome reluctance, becaufe I am to draw ' precife conclufions from principles doubtful, and incapable c of being afcertained. But fhould any one think I run far - wide of the truch in my eftimate, either exceeding or fall-- ing fhort of it, every one will beat liberty to correct them; ${ }^{c}$ and form others more correct from better information, and 6 clearer notions of this matter.

- I am alfo very fenfible, that bacalao is a diet of great relief ' to thofe parts, where frefh filh is farce; but we fhould ' not, on that account, throw off all thoughts of repairing - the great injury they do us by the fale of this, and other - falt finh, and neglect to avail ourfelves of fuch meafures as - prudence fhall dictate, in particular the adyantages which - our own Seas afford, and fome other prudent confidera-
- tions invite us to, and flatter us with an eafy way to fup' ply our wants, if not wholly, at leaft in a great meafure; - fince ie is well known what plenty of fifh there is on the - coaft of Spain, efpecially that of Gallicia; as is alfo cer' tain, that on the coaft of the Andalufia's, there is abun' dance of tunnies, fturgeon, lampreys, cuttle-fifh, chevins, ' and feveral other forts of wholefome fifh, fome of which - falted, and others dried, are kept whole years, not only for - a fupply to thofe provinces, where there is a great confump-
- tion, but alfo to furnifh us in the inland parts; and the only
- thing we want is to encourage a fifhery, both on our own ' coaffs and in other feas; and in this fort of commerce by his - majefty's fubjects I Mall, therefore, proceed to point out - fuch meafures as feem to me moft prudent, and likely to - take effect.
- In chapters 73 and 74 , I recommend the ftationing of ' guarda cofta's, and fhew, that, among other great advan-- tages, they would be a means to enlarge our fifheries on the - coaft of Spain and elfewhere. To their contents I refer for - what concerns the encouragement and fecurity of thofe - fifheries, and intend only to add, that I efteem it a very - prudent ftep to lay as heavy duties, as treaties of peace and - commerce fhall allow, upon the importation of bacalao, c and other falt fih inco Spain, without any abatement or - indulgence whatever, not excepsing the voluntary and ac-- cidental allowances which of late years have been made to - fifh, and fome other things in the cuftomhoufes of Catalo-- nia, on their importation, befides their not being charged 6 in that principality, or the kingdom of Valencia, with the - duty of the million, which moft part of the falt filh pays in 6 the ports of Caftille.
- It will alfo be proper for falt fifh to pay intire the duties of - the alcavala and ciento's, in all places where it thould be - fold, or the fale repeated, guarding it with neceffary pre-- cautions, whether the towns be under compofition or ad' miniftration. This is to be underftood of the provinces 6 where thore duties are eftablifhed.
- In chapter 23, giving examples from the French, Ifet forth - fome of the immunities which his moft Chriftian majefty, 6 in the year 1753, granted to bacalao, and oils proceeding - from the fifhery of his fubjects; and alfo obferve, that they ' were allowed to export ftores, arms, ammunition, utenfils, - and provifions for the fhips, or veffels, intended for the faid - fifhery, and even the falt that hould be wanted to cure the ' fifh. To this I may add, that in feveral articles under tit. - 15, of the ordinance of 1680 , in refpect to the fettling of - the gabel, or revenue of falt in that kingdom, are alfo - found many indulgencies, and other encouragements granted - Err $^{\text {c curing of bacalao, falmon, herrings, pilchards, and other }}$ - forts of filh ; in particular the abatement of the price of it, 6 and alfo the rules and precautions neceffary to prevent frauds, - fet forth at large.
- The $24^{\text {th }}$ chapter contains a prohibition, that was made in - France, againat the importation of pilhards from foreign
countries, in order to favour their own fifhery, and the trade - of his majefty's fubjects in this commodity
- In chapter 28, where I produce fome examples taken from - the Englifh, it is obferved, that the duty upon falt ufed in curing white herrings was taken off in that kingdom in the - year 1722, as alfo what was charged upon the exportation of the fame herrings.
- In chapter 36, which treats of the meafures employed by - the Dutch, mention is alfo made of fome indulgencies, and - other encouragements, in favour of their fifheries.
- Upon the foundation of thefe examples, taken from three c nations that beft underftand commerce, and moft profper c in it, and what one's own reafon fuggefts as proper to be - done, I am of opinion we fhould give leave to all his ma' jefty's fubjects that go to the fifhery in their own veffels, 6 whether on the coafts of Spain, or in the Mediterranean, - to carry out, free of all duty, at leaft bifcuit, all forts of - pulfe, dried or green, and falt fifh caught in the Spaniih - fifheries, and even a certain quantity of oil, vinegar, and brandy, in proportion to the number of hands and days a few - over and under, that they fhall be employed in the fifhery, - being fully convinced that the fubjects of other powers, up-- on no pretence whatever, can fairly claim an equal privi-- lege in this cafe with his majefty's people. For all conven-- tions, or treaties of commerce, even though they fhould * be ftrictly obferved, were made for very different purpofes. - Nor thall I ftay to explain this matter, as the motives, cafes, - and other circumftances that diftinguifh the two things, are - invariable and manifelt. But it is further obfervable, that, - for thefe indulgencies to the filhery, and his majefty's fub-- jects, there will be no reafon to make an allowance to the - farmers of the revenue, both on account of their trifing va-- lue, and becaufe they muft experience, from the great im-- provement made by this means in the fifhery, and trade of - the towns, where the revenues are farmed, a confiderable - increafe of them other ways, as has been already thewn in * the cafe of manufactories. And, to take away from the - farmers all pretence for it, there fhould be an exclufive ar-- ticle to this effect in their contracts for the kingdoms of Mur-- cia, Granada, Seville, Galifia, the Afturias, and the four - towns; for, in the other provinces upon the coaft, the pro-- vincial revenues are never farmed, nor the cuftoms any ' where elfe.'
Thus have we given our readers an idea of the nature and importance of the fifheries to Holland and France, as alfo of the meafures that are likely to be taken in Spain in relation to the fame branch of commerce. What feems to confirm this to be the real intention of the court of Spain, is their apparent endeavours to increafe their royal navy, by enticing away numbers of our hip-builders for that purpofe: and, if they are determined to increafe the number of their men of war, and likewife to eftablifh fitheries in order effectually to man them, is it not time that we fhould be upon our guard, as well with refpect to Spain as France? There are, it feems, alfo other powers that are attempting fifheries, and aiming at the acquifition of fome chare in maritime commerce.
Thefe are facts, not groundlefs conjectures. In regard to the pretended claim of the Spaniards to fifh upon our coafts of Newfoundland, it may not be ufelefs to obferve, that there was no more care taken of that fifhery in the Utrecht treaty than before ; for they went fo far, that they fent one Gillingham, at this time an Irifh papift, to our court, to get the liberty of filhing at Newfoundland. That this Gillingham was far from being fnubbed by the then miniftry, for coming about fuch an impudent bufinefs, is well enough known. Nay, the lord Lexington, who had not refufed the ambafly to Spain, when that monarchy and the Weft-Indies were about to be ravilhed from the houfe of Auftria and given to the duke of Anjou, thought this Irifh papilt was fo welcome to the miniftry, that, in his letter to the lord Dartmouth, then one of the fecretaries of flate, he frequently excufes himfelf for not writing upon that fubject, becaufe they had full accounts of the matter from Gillingham. Nay, the queen's plenipotentiaries, the earl of Strafford and Dr Robinfon bilhop of Briftol, went fo far, as to fuffer a claufe to be inferted at the end of the 15 th article of the peace with Spain ; whereby, to ufe the words of the fecret committee, they gave a pretence to the Spaniards to claim a right to fifh at Newfoundland, contrary to the 7 th and 8 th articles of the treaty made with that crown by Sir William Godolphin.
The board of trade, being confulted upon this occafion, made the following anfwer to the lord Dartmouth, dated January 13, 1712-13:-' We have confidered the extract of a memo-- rial from the marquis de Monteleone, relating to a claim of - the inhabitants of Guipufcoa to fifh on the coaft of New-- foundland; and thereupon take leave to inform your lord-- fhip, that we have difcourfed with fuch perfons as are able - to give us information in that matter, and we find that fome - Spaniards are come hither with paffes from her majefty, - and others may have fifhed there privately, but never any, - that we can learn, did do it as of right belonging to them.' We fee by this, that, even before the conclufion of that Fretch peace, the queen's paffes had been given to the Spaniards, to
take the benefit of the moft profitable branch of the Englith commerce; but the Spaniards have not carried their point in it ; and, by the 4 th article of the treaty which Mr Dodington made in December 1713, forme of the ground loft to them by the Utrecht peace was recovered, and all innovations made in trade were to be abolifhed; the moft fcandalous of which was their fifhing at Newfoundland.
Thus our Diclionary flood in the edition before the last War; and that thefe Pretensions of the Spaniards, to the Right of a Newfoundland Fishery was manifeft by their Claim to it, when they joined France in the last War, as we foretold throughout our Dictionary that they might be judged to do.
But this Point alfo is now finally fettled between GreatBritain and Spain, by the XVIIIth article of the Derinitive Treaty of 1763 , wherein it is exprefisly ftipulated, ' His Catholic Ma jesty defifts, as well for himfelf, as his fucceffors, from all Pretensions, which he may have formed in favour of the Guipuscoans, and other his Subjects, to the Right of fishing in the Neighbourbood of Newfoundland.'
The policy of other neighbouring nations who have long eftablifhed filheries, and others who are daily attempting the fame, at the expence of Great-Britain, fhould effectually roufe and alarm us, not only to preferve that chare in the filheries we already bave, but to excite and animate us to make the utmoft advancement in this invaluable branch of traffic that we are capable of; more efpecially fo, fince we have it in our power, by a natural right, to fifh upon our own coafts, and perbaps have an equal right to hinder and prevent all other nations from doing fo.
I fhall not here, however, enter into the fole right of GreatBritain to the fovereignty of the Britifh feas, though a great fund of argument might be urged on that head. What I fhall obferve at prefent is, that, although it may not be advifeable, at this conjuncture, to attempt to put an abfolute ftop to other nations from filhing upon our own coafts, yet it is to be hoped, that this indulgence to others is not to prevent ourfelves from, making the beft advantages that God and nature have given us, by floring our coafts with fuch immenfe plenty of fifh !

Of the herring and herring-fifhery, in the feas, and on the coafts of Great-Britain and Ireland.

About the beginning of the month, fignified by feveral tokens in the air and in the water; which the Shetlanders fay they know it by, there appears coming from the north an incredible fhoal of this feecies of fifh, which is fo well known throughout the world as to need no defcription.
From whence they come, and where they may be faid to breed and increafe, we know little of. That they are innumerable in quantity is matter of fact. Nor do they, as we can perceive, return from whence they came, to breed a farther fupply for the next feafon; on the contrary, they come from home, wherever that may be, big with young, as we may fay, fwelling with their prolific fpawn, in which every filh may be faid to produce 10,000 others: and this fpawn they caft in thefe feas, for they come to us full, and are fhotten long before they go from us.
They come up, as it may be faid, on the breadth of the fea; and the bulk of the fhoal, take it in the grofs, is probably greater than the whole land of Great-Britain and Ireland. They are doubtlefs greatly ftraitened when they come fouthward, by being obliged to pafs between the fhores of Greenland and the North Cape; which to fuch immenfe fwarms muft be called a ftrait, though, on the furface of the globe, it be no lefs than 200 leagues in breadth.
When their furprizing body meets with an interruption from the fituation of the ifland of Great-Britain, it divides them into two parts, whether equal, or how near fo, is not to be determined. One part of them fteer fomething weft or fouth-weft, and, leaving the inands of Orkney and Shetland to the left, pafs on towards Ireland. There meeting a fecond interruption from the fituation of that illand, they divide themfelves again; one part, keeping to the coaft of Britain, pafs away fouth down that which we call St George's or the Trifh channel; and fo coming on between England and Ireland, they enter the Severn Sea, where they meet with their feccies again. The other part, edging off for want of room to the weft and fouth-weft as before, go along the Hibernian ocean, and, fill keeping upon the coaft, make about to the fouth fhore of Ireland; and then, fteering foutheaft, meet with their fpecies again, who come down the Itifh channel.
The other part of the firft divifion made in the north, parting a little to the eaft and fouth-eaft, come down into the German ocean ; and, keeping fill clofe to the coaft of Britain, they pafs by Shetland, and then make the point of Buchenefs and the coaft of Aberdeen; filling, as they pafs, all the bays, firths, river, and creeks, with their innumerable multitudes, as if directed by Heaven on purpofe to prefent themfelves for the relief and employment of the poor, and the bencfits of traffic. Hence they come away fouth, pals
by Dunbar, and, rounding the high thores of St Tobbs and of Berwick, are feen again off of Scarborough, and not before, and not in bulk, 'till they come to Yarmouth Roads in England, and thence to the mouth of the Thames; from whence paffing the Britifh Channel, they are feen no more. We come next to fpeak of the fibing for them by the feveral nations in Europe, from which fo great a profit in trade is raifed, navigation fo much improved, feamen nurfed and bred up, and fo many thoufands, we may fay millions, perhaps, of hands employed and maintained both at fea and on fhore.
Before the late eftablithment of the fociety of the Free Britifh Fithery the Dutch gave them the firf falute, who were generally ready off Shetland at the firft appearance of- the fift, with above 1500 fail of buffes; and fpreading their nets in the fair way, as they call it, of the fifh, they are not long a loading aill their veffels; which, when done, they make home to cure, repack, and prepare them for the markets, which is zhiefly at Dantzick and the eaft country.
The herings not miffing the comparative few of their fpecies, which are there taken, make on their way for the fhores of Fcotland, and fpreading themfelves upon the fands and fhoals, in every creek, barbour, or bay, as it were, offering themfelves to the Seots mets, as well for food of the poor, as for the commerce of the merchants there : nor did the Scots, before the late eftablifhed fifheries, neglect to take very great quantities, which they alfo cured, pickled up, and fent to the fame markets as the Dutch ; and, confidering the Dutch carry all their fifh home, repack, pickle, and relade them on other hips, the Scots are frequently at the market before the Dutch, and fell for as good a price.
After the Scots on the north-fide the Tay have thus fifhed, the Dunbar fifhing-boats and the Fife-men fall in among the herrings ; and they likewife take a confiderable quantity, as well for carrying up the land for the ufe of the country, to Edinburgh, and other populous places, as for curing after the Yarmouth manner, and making what we call red herrings. From hence the thoal of fifh, keeping in deeper water, are fcarce feen any more, except, as obferved, a little off Scarborough, 'till they come to Yarmouth; where," fpreading themfelves upon the fands in quef of their food, they are again taken in prodigious quantities by the Englifh, the Dutch, and the French; for as the Yarmouth and Leoftoff men take and cure about 50,000 barrels of red herrings in a year, fo they confume an incredible number in the town of Yarmouth, the city of Norwich, and all the adjacent towns of thofe populous counties of Norfolk and Suffoik, as well as in Effex, Cambridgefhire, \& cc .
While they are fifhing of them here, other branches of that fhoal puth themfelves forward to the mouth of the Thames, where the fifhing-fmacks of London, Folkftone, Dover, Sandwich, and all that coaft, take alfo innumerable quantities for London markets, and for all the populous towns on the river Thames. and near the fea-coaft of Kent and Suffex. All this while the Dutch, fitting out their buffes again, lie on the back of Yarmouth-fands; as do likewife the French, Flemings, Fluhingers, Bremeners, and Hamburghers. Laftly, they come into the narrow feas, where the French on one fide, and our weft-country filhermen on the other, meet them again; and by this time they caft their rows, and become fhotten. After which they difappear in thefe parts.
On the fide of North Britain they fare no better; the merchants of Glafgow, Aire, Dumfries, and on the coaft of Galloway, are engaged more or lefs in the herring fifheries; and the merchants of Londonderry, Belfaft, Carrickfergus, Carlingford, and on to Dublin, meet them on that fide; and, beginning upon them at the Lewes and Weftern Illands, give them no reft ; 'till having run the gauntlot, as we may fay, through the Irifh channel, they come out into the Severn fea, where again they are attacked by the Englifh merchants of Devonifire, from Minehead to Barntaple and Biddiford, and fo on weftward to the towns on the north fhore of Cornwall, where many thoulands of tons are catched and cured for trade, and many fhips loaded off with them for Spain and the Mediterranean (befides an incredible number confumed by the people on (hore) the merchants of Pembroke, Swanfea, and all the coaft of South Wales, from Milford-Haven to the mouth of Brifol-River, above King's-Road, doing the fame: after which being fhotten, they march weftward into deep waters to their own fpecies, and are feen no more. Thus we have brought this filh round the illand, offering themfelves indifferently as they pals to the nets of all the neighbouring nations; who for their own food, and for fale to other countries, where the fhoal does not come, take an inexpreffible number. Whither they go afterwards is uncertain. As to the fuggeftion, that the quantity is by this time exhaufted, the contrary is fo evident, from the mighty thoals which are feen in the Severn feas, and on the weft and fouth coafts of England and Ireland, at their parting, that it rather feems the number taken bears but a very fmall proportion to the whole that might be.
It is alfo certain, that thefe fhoals of herrings are purfued and devoured in great quantities, by the more ravenous and larger fifh, fuch as.the porpus, dog-fifh, fin-filh, and other
the divers forts of fea-monters, with which thofe northera feas abound.
It is likewife true, that the herrings are found again upon the fhores of Norch-America, though not in fuch quantities as here; nor are they feen farther fouth, even in that country, than the rivers of Carolina: whether thefe may be part of that mighty fhoal, which, at their firf coming by the coaft of Greenland, might, inftead of coming to the fouth-eaftward with the reft, keep to the coafts of America on the north-weft fide ; or whether thefe may be the remainder of them that pafs our channels, is uncertain : but we know, that they are not feen in quantities in any of the fouthern kingdoms, as Spain, Portugal, or the fouth parts of France, on the fide of the ocean, or in the Mediterranean, or the coaft of Africa.
As this article of Fisheries is pretty much fwelled already, we fhall not here enter into a very minute and particular confideration of the herring fifhery, as it is at prefent eftablifhed in this kingdom, by a fociety of the Free British Fishery; becaufe, to do juftice to a fubject of that high concernment to the nation, requires a diftinct deliberation, and not to be Aurred over in a general and fuperficial manner. Wherefore we fhall only obferve, at prefent, that fince the divine providence has foeminently flored the coafts of Great-Britain and Ireland, with this valuable fpecies of fifh; and fince this branch of the Britih-fihery muft, if it proves fucceffful, become an additional permanent nurfery for the brood of expert feamen; it is not only a duty we owe to the Supreme Being, not to difpife that wonderful plenty of herrings he hath afforded us, by neglecting to extend this branch of trade to the utmoft, but it is a duty we owe to our country, for it's natural fecurity ; for that depends upon royal navies, and no nation can have a navy, where there is not a fund of bufinefs to breed and employ feamen, without any expence to the pub lic, but when they are actually employed in the fervice of the public: a fleet depends upon navigation, navigation upon trade, and trade upon Home Manufactures and Fisheries.
Our Fifheries, of all others, may be rendered the greateft nurfery for feamen. This bufinefs is now carried on more or lefs, in every part upon the coafts of the whole inland of Great-Britain, and upon the coafts of all the iflands that belong to it. Every man, who has been a few years in the prattice of going to fea to fill, makes a good feaman before the matt, and moft of them go to fea when a good voyage comes in their way; and when it is over, return to their fifhing again, until the like opportunity offers.
Another fifhery, almoft as peculiar to Great-Britain as the herrings, is that of pilchards. Thefe are a furt of fifh fomething finaller than a herring, and which come in the fame feafon; they chielly fhew themfelves on the fhores of the two weftern counties of Devon and Cornwall, and are rarely feen any where elfe in the world, at leaf not in the like quantities.
'Tis a faying of the Corniifh-men with regard to the pilchard, that 'tis the leaft fifh in fize, moft in number, and greateft for gain, of any they take out of the fea.
The mackarel fifhing comes next. Thefe are a kind of finh, which the Englinh are extremely fond of; the Scots fee few of them, they being found in no quantities farther north than Yarmouth. They are not cured or exparted as merchandize, except a few by the Yarmouth and Leoftoff merchants ; but are generally confumed at home, efpecially in the city of are generally confumed at home, elpecially in then and Yarmouth eaft, and the Land's-end of Cornwall weit. The Irifh alfo have them on their coafts on the weft of Ireland, but not far north.
There are feveral other fmall fifheries on the fea-coalts of Great-Britain, which, however confiderable in themfelves, are not much the fubjects of merchandize, and yet employ great numbers both of fhips and men.-As the oyfter fifhing at CoIchefter, Feverfham *, the Ine of Wight, and in the fwales of the Medway.
*From Feverflam the Dutch fometimes load - 100 fail of ver fels, or large hoys, with oyfters in a year: alfo oyfters are catched in very great quantities near-Portfmouth, and in all the creeks and rivers between Southampton and Chichetter; many of which are carried about by fea to London and to Colchefter, to be.fed in the pits about Waven--hoe, and other places.

The lobfter fithing: thefe are taken all along the Britioh channel, and brought to London for fale ; alfo in the Frith of Edinburgh, and on the coaft of Northumberland. But of late the Britifh fifhermen find a better account in it, by fifhing for them on the coaft of Norway, from whence.great quantities are brought to London.
It is to be obferved in general, that the Britifh fifhermen have always one fifhing or other in feafon; for, as pne fort of fifh goes out of feafon, another comes in.
Before we clofe this article of the Britifh Fifberies, we fould not forget to mention that of the whale filhing, or Greenland trade; a trade, though now little regarded by us, yet Great-

Britain has a title to by a kind of inheritance, the Englifh being the frift that ever made the bold attempt of attacking that terrible creature, and failed anongft thofe monftrous fands of ice, in quet of new difcoveries, and traverfed the frozen zone to the latitude of 76 , within the arctick circle, where they difcovered Greenland, as we call it, or Spitfbergen, as other nations term it. And although they here found the land not capable of being cultivated or inhabited, yet they found the leas full of whales; and, finding the catching of them very beneficial, they foon became dextrous harpooners. From them the Hollanders, Bremers, and Hamburghers, learned the fame; and in their firft enterprize were obliged to hire Englifhmen for harpooners and fteerfmen, as we are now (fo unhappily are the tables turned) to hire Dutchmen and Germans, if we go about the fame bufinefs.
Having thus run over, with what brevity we could, the nature of our own filheries, as well as thofe of fome of the principal trading countries of Europe, it requires no argument to inforce the neceffity of exerting ourfelves conftantly in this eftimable branch of traffic; for, if other nations hall enjoy fo certain, and fo important a nurfery for the brood of feamen, and we fhould wholly neglect the fame, it does not require the gift of prophecy to forefee, who muft one day obrain the fuperiority in maritime power.
Upon this point then feems to turn, in a great meafure, the very being and falvation of this kingdom, with relation to it's freedom and independency: and what more need be urged to rouze the Britifh nation to leave nothing undone, which ought to be otherwife, for the advancement of our fifheries of every kind ?
With refpect to thofe which are upon our own coaft of Great Britain and Ireland, as likewife in thofe in our American plantations, no nation can pretend to deprive us of our naural rights of fithing in thefe parts : and if we thall think proper to indulge other fates with the like privileges of finhing upon our own coafts, and reaping unfpeakable advantages thereby, is it not the worft of policy, is it not fuperlative infatuation, to fuffer other rival nations to grow rich and powerful by this commerce at our own doors, while we hamefully neglect it?
However advifable, we fay, it may be to tolerate and connive at the filheries of foreigners upon our coalt, yet this, which is only a matter of Favour and Indulgence, hould not be conftrued as a Matter of Right; for it feems fomething unjuit and unrealonable, that the fifh of our own feas thould be caught and engroffed by Strangers. in prejudice of our natural right, fince it will appear, we apprebend, that his majelty the king of Great Britain, notwithftanding the indulgence granted for a promifcuous fifhing in the' Britifh feas, has aright to reassume his AUTHORITY, AND PERMIT NONE TO FISH therein, without his special licence, as hathbeen hereTOFORE OBTAINED FROM HIS PREDECESSORS, FOR MANY AGES: nor can it be efteemed unreafonable, if, in confequence of fuch right in the crown of Great Britain, an abfolute interdiction thould be made, to prevent fuch foreigners taking the bread out of our mouths, unlefs fuch Foreigners merit fuch indulgence by their conduct Cowards these kingdoms.
It is greatly to be doubted, whether any nation would grant us the like privileges that we do to others, had nature given them the fame advantages which we have in this refpect. But it is a received truth, that the fovereignty of the Britifh feas is the moft precious jewel of the Britif crown, and next, under God, the principal means of our wealth, and our fecurity as a free people; and this certainly appertaineth to the kings of Great Britain by immemorable prefcription, continual ufage and pofiefion, the acknowlegement of all our neighbouring ftates, and by the fenfe of the municipal laws of the kingdom: and this right bath been infifted on many hundred years by the kings of England.
The famous Edgar, with a navy of 400 fail, vindicated his dominion in the adjacent feas. Canutus exacted bis tribute, called Danes Geldt, on them. Egbert, Alfred, and Etheired, were acknowledged fupreme governors of the ocean furrounding the Britih fhore. In the year 1200, king John had the honour of the flag paid him, in acknowlegement of his dominion, ever fince continued to his fucceffors, in the Britilh feas, and all the Netherlands craved protection and liberty to fish in them of Edward J. The earl of Holland petitioned Edward III ; he did the French king, Henry VI, for the like purpofe: and our learned Camden affirms, that in his time, the Holland. ers durst not cast a net on our northern COAST, 'till licence was firft obtained at Scarborough Caftle for fo doing. Philip II. of Spain obtained licence of queen Mary, that his fubjeas might fifh on the north coalt of Ireland for the rpace of 21 years; and it appears, by the records of that kingdom, that he yearly paid into the Exchequer 1000 l. flerling. This right was ftrenuoufly infifted on in the feventh year of king James I, as appears by the following proclamation.

## A proclamation touching filling.

- James, by the grace of God, king of Great-Britain, France - and Ireland, defender of the faith, \&cc. to all and fingula ' the perfons to whom it doth or may appertain, greeting - Although we do fufficiently know, by our experience in the ' office of regal dignity (in which, by the favour of Almighe - God, we have been placed and exercifed thefe many years) - as alfo of the obfervations we have made of other Chriftia
' princes exemplary actions, how far the abrolutenefs of fo-
- vereign power extendeth itfelf; and that, in regard thereof, - we need not yield account thereof to any perfon under
- God, for any actions of ours, which is lawfully grounded - on that juft prerogative; yet fuch hath ever been, and will - be our care and defire, to give fatisfaftion to our neighbour "princes in any action which may have the leaft relation to ' their fubjects and eftates, as we have thought good (by way ' of friendly premonition) to declare unto them, and to whom ' foever it may appertain, as followeth
- Whereas we have been contented, fince our coming to the
- crown, to tolerate and permit an indifferent and promifcu-

6 ous kind of fifhing to all our friends whatfoever, to fin
' within our ftreams, and upon any of our coafts of Great-

- Britain, Ireland, and other adjacent illands: fo far forth as
c the permiffion and ufe thereof might not redound to the im
- peachment of prerogative royal, nor to the hurt and da-
- mage of our loving fubjects, whofe prefervation and flourifh

6 ing eftate we hold ourfelf principally bound to advance, be-
c fore all worldly refpects : fo finding that our continuance ' therein hath not only given occafion of great incroachments ' on our regalities, or rather queftioning our right, but hath - been a means of daily wrongs to our own people that exer6 cife the trade of fiming: as (either, by multitudes of ftran-- gers that do pre-occupy thefe places, or by the injuries which 6 they receive moft commonly at their hands) our fubjects are ' conftrained to abandon their fithing, or at leaft to become

- fo difcouraged in the fame, as they hold it better for them
- to betake themfelves to fome other courfe of living, where-
- by not only many of our coaft-towns are much decayed, - but the number of mariners daily diminifhed, which is mat-- ter of great confequence to our eftate, confidering how much - the ftrength thereof confifteth in the power of fipping, and - ufe of navigation. We have thought it now both juff and - neceffary (in refpect that we are now, by God's favour,
- lineally and lawfully poffelfed, as well of the illands of
- Great-Britain as of Ireland, and the reft of the ines adja6 cent) to bethink ourfelves of good lawful męans to prevent - thofe inconveniences, and many others depending upon the - fame.
- In confideration whereof, as we are defirous that the world - may take notice, that we have no intention to deny our neigh-
- bours and allies thofe fruits and benefits of peace and friend-
' Ghip, which may be juftly expected at our hands in honour - or reafon, are afforded by other princes mutually in point ' of commerce and exchange of thofe things which may not - prove piejudicial to them: fo becaufe fome fuch conve - nient order may be taken in this; matter, as may fufficiently ' provide for thefe impirtant confiderations, which do depend 6 thereon, we have refolved firft to give notice to all the - world, that our exprefs pleafure is, That from the begin-- ning of Auguft next enfuing, no perfon, of what nation or - quality foever (being not our natural-born fubjects) be per6 mitted to finh on any of our coafts and feas of Great-Britain, - Ireland, and the reft of the ifles adjacent, where moft ulually - heretofore any fifhing hath been, until they bave orderly " demanded and obtained licences from us, or of fuch of our - commiffioners as we have authorized in that behalf, viz. at * London, for our realms of England and Ireland; and at - Edinburgh for our realm of Scotland; which licences, our - intention is, fhall be yearly demanded for fo many veffels - and thips, and the tonnage thereof, as fhall intend to fifh - for that whole year, or any part thereof, upon any of our - coalts or feas thereof, as aforefaid, upon pain of fuch cha-- ftifement as hall be fit to be inflicted upon fuch wilful of-- fenders.
- Given at the palace of Weftminfter, the 6th day of May, - in the 7 th year of our reign of Great-Britain, Anno "Domini 1609.
Notwithftanding this proclamation, foreigners ftill incroached upon our coafts and feas ; and, during the whole reign of king James, pretending, becaufe of the long connivance of bim felf and queen Elizabeth, that they had a right of their own, by immemorial poffeffion, which fome Dutch commiffaries pleaded (in terminis) before the king and council ; and they made no other ufe of his majefty's indulgence than to tire out his reign with evalive anfwers; and all that the king at length gained, was only a verbal acknowlegement of thofe rights; which, while they acknowleged, they equally evaded, abufing the favour of the king's indulgence, whereby he permitted his allies to make ufe of his feas and ports according to treaties.
He gave our neighbours leave to gather wealth and frength
on our coalts; nay, they were once glad to invite our merchants refidence, with what privileges they defired; they likewife, at one time, offered us even the fovereignty of their eftates; they fued to us for licence to fifh on our coafts, and obrained it under the great feal of Scotland, which they foon fupprefied. When thus, by permiffion and connivance, they had poffeffed themfelves of our fifheries, not only in Scotland and it's iles, as well in Ireland as in England, and by our ftaple had raifed their trade, they fo increafed their Chipping and power by fea, that they were not content to be kept within any bounds, the truch whereof is evident by a letter of fecretary Naunton's to the lord ambalfador Carlton, dated the 21 ft of January, 16 18; which follows:
- I received directions from his majefty to fignify to the fates - commuflioners here, that albeit their earneft intreaty, and - his gracious confideration of the prefent trouble of their church and ftate, had moved his majefty to confent to de-- lay the treaty of the great fifhing'till the time craved by the commifioners; yet, underftanding by the new atd frefh complaints of his mariners and fifhers on the coaft of Scot-- land, that, within thefe four or five years paft, the Low-- Country filhers have taken fo great advantage of his ma-- jefty's toleration, that they have grown nearer and nearer - on his majeity's coalts, year by year, than they did in pre-- ceding times, and opprefled fome of his fubjects, of intent - to continue their pretended poffefion, and driven fome of - their greateft veffels through their nets, to deter others, for - fear of the like violence, from filhing near them, \&sc.
- His majefty cannot forbear to tell them, that he is well per' fuaded of the equity of the ftates, and of the honourable re( fpect they bear unto him, and his fubjects for his fake, that - they will never aillow fuch unjuft and intolerable oppreffions: - for reflraint whereof, and to prevent the inconveniencies - which muft enfue upon continuation of the fame, his ma© jefty hath by me defired, that you write to their fuperiors, to caufe proclamation to be made, prohibiting any of their - fubjects to filh within 14 miles of his majetty's coaft this - year, or any time hereafter, 'till order be taken by com-- miffioners to be authorized on both fides, for a final fettling - of the main bufinefs.
- His majefty hath likewife directed me to command you from - him, to make the like declaration and inftances to the ftates - there, and to certify his majefty of their anfwer with what - convenient fpeed you may.'

Thus far fecretary Naunton to the ambaffador: what effect the ambaffador's negociation with the States had, appears by a letter of his from the Hague of the 6 th of February, 16 x 8 to king James himfelf, where, among other paflages, he hath this :

- I find likewife, in the manner of proceeding, that, treating - by way of propofition, nothing can be expected but their wonted dilatory and evafive anfwers; their manner being to refer fuch propofitions from the States-General to the - States of Holland. The States of Holland take advice of a certain council refiding at Delft, which they call the council * of the fifhery. From them fuch an anfwer commonly - comes as may be expected from fuch an oracle. . The way 6 therefore (under correction) to effect your majefty's intent, is ' to begin with the fifheries themfelves, by'publifhing, againit - the time of their going out, your refolution, at what di' flance you will permit them to fifh; whereby they will be - be forced to have recourfe to their council of fifhery, that - council to the States of Holland, and thofe of Holland to - the States-General: who then, inftead of being fought unto, c will, for contentment of their fubjects, feek unto your ' majefty.'
During the whole reign of king James I, incroachments more and more increafed, and the Netherlands, about the 12 th year of the reign of king Charles $I$, were grown to fuch a height of power and figure at fea, that they had the confidence to keep ground upon our feas, and to project an office and company of affurance for advancement of trade, and alfo to prohibit us free commerce even within our own feas, and took our thips and goods, if we conformed not to their placarts, in all which our fufferings may feem to be forgot, yet the great intereft of his majefty's honour, and the welfare of bis fubjects, occafioned the following proclamation, which was backed with a gallant fleet, to refrefh the memories of thofe bold incroachments on our right.

A proclamation by king Charles I, for reftraint of fifhing upon his feas and coafts without licence.

- Whereas our father of bleffed memory, king James, did, in - the feventh year of his reign of Great-Britain, fet forth a - proclamation touching fifhing, whereby, for the many im-- portant reafons therein expreffed, all perfons, of what na-- tion or quality foever (being not bis natural-born fubjects) c were reftrained from fithing upon any of the coafts and feas - of Great-Britain, Ireland, and the reft of the ifles adjas cent, where moft ufually heretofore fifling had been, unctil they had orderly demanded and obtained licences from c our faid father, or his commiffoners in that behalf, upon - pain of fuch chaftifement as fhould be fit to be inficted upon
Vo L. I.
- fuch wilful offenders: fince which time albeit, neither ouf - faid father nor ourfelf have made any confiderable execution - of the faid proclamation, but have, with much patience; ' expected a voluntary conformity of our neighbours and al-- lies to fo juft and reafonable prohibitions and directions as - are contained in the farne.
' And now finding by experience, that all the inconveniencies - which occafioned that proclamation are rather increafed than
' abated: we being very fenfible of the premiffes, and well
- knowing how far we are obliged in honour to maintain the
${ }^{6}$ rights of our crown, efpecially of fo great confequence,
' have thought it necellary, by advice of our privy-coumcil, - to tenew the aforefaid reftraint of filbing upon our aforefaid - coafts and feas, without our licence firf obrained from us : 's and by thefe prefents do make public declaration, that our
- refolution is, at times corivenient) to keep fuch a competent
- Atrength of fhipping upon our feas, ar may (by God's blef-
- fing be fufficient both to hinder fuch further incroachments
' upon our regalities, and affift and protect thofe our good
- friends and allies, who (hall henceforth, by virtue of our li-
- cences (to be firft obtained) endeavour to take the benefit of
- filhing on our coafts and feas, in the places accuftomed.:
- Given at our palace of Weftminfter, the roth day of May, * in the 12 th year of our reign of England, Scotland, France, ' and Ireland.'
This fecond proclamation, being fet forth in the year 1636 , ferved to fpeak the intent of thofe naval preparations made in the year preceding, which were fo numerous and wellprovided, that our Netherland neighbours were apprehenfive of fome great defign in hand for the intereft of England; and were let to know, that we hold it as a principle not to be denied, that the king of Great-Britain is a monarch at land and fea, to the full extent of his dominions; and that it as much concerneth him to maintain his fovereignty in the Britifh feas, as in bis three kingdoms; becaufé; without that, thefe cannot be kept fafe, nor he preferve his honour and due refpect with other nations; but, by commanding the feas, commands the refpect of his neighbours.
His majelty's intention by that fleet was not a rupture with any prince or ftate, nor to infringe any part of his treaties, but to continue and maintain peace, well-confidering that peace mult be maintained by the arm of power, which keeps down war byamaintaining dominion. And his majefty, heing provoked, found it neceffary, even for his own defence and fafety, to reaffume and keep his antient and undoubted rights in the dominion of the Britifh feas, and to fuffer no other prince or ftate to incroach upon him, thereby affuming to themfelves, or their admirals, any fovereign command.
But to force them to perform due homage to his admirals and thips, and to pay them acknowlegement as in former times they did; as alfo to fet open and protect the free trade both for his fubjects and allies, and give them fuch fafe-conduct as they might reafonably require : nor would he fuffer any men of war or free-booters to take prizes, or keep guard, to offer any violence, or give any interruption, to any lawful intercourfe upon his feas, being refolved to do juftice both to his fubjects and friends within his dominion aforefaid. True it is, that the indulgence of queen Elizabeth, king James, and king Charles I , to their neighbouring nations, efpecially the Hollanders, by giving them too much liberty, did, in their times, encourage them to affume a privilege to themfelves; and what at the firt was but a licence, they improved into a cuftom, and made that cuftom an authority; infomuch that fome of the bufieft of them openly declared againt the king's right of dominion in the Britifh feas.

## Remarks.

What is here fuggefted, in regard to the fovereignty of our monarch over thofe feas which belong, by nature, to the coafts of his dominions, is not with the leaft intent whatever to create any jealoufies or heart-burnings between GreatBritain and our natural ally, the States-General of the United Provinces; it being the reciprocal interefts of both thefe fates to maintain the greateft cordiality, and ftricteft union and friendhip with each other: and thisour intention, we humbly conceive, is fufficiently evinced, from what we have urged under the article Britain [Great-Britain]. Wecannot, however, but hold it neceffary to affent our natural rights, that our beft friends may be fenfible of the obligation they lie under for thofe extraordinary indulgences which they receive from us. But whether it may be confiftent with the interefts of this kingdom to indulge the Frencir or the Dutch to fifh on our British or frish coalts, is a point that may merit one day the ferious confideration of the government.

## Of the Society of the Free British Fishery.

The fubftance of the act of parliament, intitled, An act for the encouragement of the Britisfi White Merring Fishery, made in the year in49.
I. From the paft mifcarriages that have attended many jointftock exclufive trading companies, the parlament have, in
their great wifdom, been pleated to impower his majefty to grant letters patent to an incorporated fuclety, under the name of The Free British Fishery, who are, not vefted, with an exclufive power of trade.
2. The fociety are impowered to make by-laws.

They are to direct what feals or marks fhall be put on every barrel of finh. The penalty of counterfeiting fuch feals or marks is five hundred pounds for each offence, to be recovered in any of his majefty's courts of record at Weftminfter, of in the court of feffion in Scotland; the one moiety to be paid to the faid fociety, and the other to fuch as fhall fue for the fame
3. The fociety are impowered to raife a capital ftock of $500,000 \mathrm{I}$. and make calls for payments of the fubfriptions. 4. The fociety may fell the fhares of thofe who refufe to pay, after notice of call given in the Gazette. -Subfcriptions to be paid into the bank of England.
5. 3 I. per cent per annum, for the fums employed in the fifhery, to be paid to the fociety for 14 years.
6. An account of the faid fums to be given annually to the commiffioners of the cuftoms. - The account to be attefted upon oath.
7. 100,000 l. to be employed in the fifheries within 18 months from the date of the fubfcription.
8. The accounts to be laid before parliament.
9. All loffes to be made good by the fucceeding years gain; \&c.
10. Sums contracted to be paid in 6 months, deemed to be employed as a capital ftock.
11. No transfer to be made of the faid capital fock for 5 years.

## 12. Executors and affignees of bankrupts, \&cc. may tranf-

 fer.13. 30 Chillings per ton bounty to be paid out of the cuftoms, for decked veffels, built for the fimeries, after the commencement of this act.
14. Every fuch bufs employed in the white herring fifheries, that Chall be intitled to the bounty of 30 s . per ton, thall be decked, built in Great-Britain, and proceed on the faid fifhery from fome port in Great-Britain, manned and navigated, as by the law now in force is directed.--See Navigation.- Before fuch buls proceed on her voyage, and is intitled to the benefit of this act, the fhall be vifited by a proper officer of the cuftoms of the port, who thall take an account of the tonnage by admeafurement, and certify the fame to the commiffioners of the cuftoms, and that the had fuch a quantity of fifing-nets, and other flores to be ufed in the faid filhery as hereafter mentioned, and is otherwife a proper veffel for the faid filhery.-And, upon it's appearing, by the oath of one or more owner or owners, or agent, by them appointed, or of a proper officer of the fociety, and of the mafter of fuch veffel, written at the foot of the faid certificate, and made before the collector and comptroller of fuch part, who are required and impowered to adminifter the fame, That it is their determined refolution, that fuch bufs fhall proceed refpectively, fo manned, and otherwife furnifhed, either to Braffey's found in Shetland, and be at the rendezvous of the faid fifhery there, on or before the inth day of June, and fhall not fhoot their net before the I 3th day of the faid month, and fhall continue following and fihing among the fhoals of herrings, as they move, fouthward, to the ift of Ottober, or Thall proceed to Campbeltown in Argylefhire, and be at the rendezvous of the faid fifheries, on or before the ift day of December, unlefs they fhall have fooner compleated their loading of fifh; and thall fifh in a regular manner with other veffels, which thall be employed in the faid fifhery; and fhall keep a journal of their proceedings. - And if, after fuch certificate had, and oath made, fuch owner or owners, or officer of the faid fociety, and mafter of fuch bufs, do alfo become bound, with two fufficient fureties, unto his majefty, in the penalty of fuch fum as fhall be equal to treble the bounty, on the tonnage of his veffel, for the faithful dealing of the faid mafter, and fhip's company, in regard to the faid veffel and voyage, then it fhall be lawful for the collector and comptroller of fuch port to grant, to the mafter and owners of fuch bufs or veffel, full licence to proceed on fuch voyage as afore厄aid.
15. And, to prevent difputes which may arife, whether a veffel be properly qualified for the berring filhery, according to the meaning of the act, and intitled to a certificate from the cuftom-houfe officers; it is enacted, That every fuch veffel Thall be a decked veffel, built in Great-Britain, after the commencement of this act, and fhall have on board 12 Winchefter bufhels of falr, for every laft of finh which fuch veffel is capable of holding, which falt fhall be barrelled up in new barrels, and as many more new barrels as fuch bufs is capable of carrying, and thall have two fleets of tanned nets, proper for the herring filhery. - That every fuch bufs or veffel, of the burchen of 70 tons, and defigned for this fifhery, Ohall, on proceeding to fea, bave on board one fleet of nets, each 30 yards full on the rope, and 17 fathome deep, and fo in proportion for any veffels of a greater or leffer tonnage, and be provided with one other fleet of 50 like nets, on board
a jagger or tender, which is to attend the faid fihery, or left on fhore in a proper place, for the ufe of the faid bufs. 16. All veffels of 20 tons, to have on board, at the rendezvous, not lefs than 6 men, and every veffel of greater burthen Thall, over and above the 6 men, have one for every 5 tons, which the fhall exceed 20 tons.
16. Officers of the cuftoms to go on board every veffel at her return to Great-Britain, to view her condition and ladeing; who is to certify the fame, with the tonnage, and names of the mafter and perfons on board.- The mafter to make oath, that his veffel was at one of the places before-mentioned, at the time appointed by this act.-Certificates, \&c. to be tranfmitted to the commifioners from whence the veffel departed,-who are to caufe payment to be made to the owners thereof, after the rate of 30 s . per ton,-which bounty of 30 s . per ton is to be paid yearly for 14 years.
17. This act not to exclude any of his majetty's fubjects from carrying on the white herring filhery.
18. Perfons fubfcribing 10,0001 . into the ftock of the fociety, under the name of the fifhing chamber, and who thall carry on the filbery on their own account of profit and lofs, and fhall fend their accounts of monies expended in the faid filbery, attefted by three of the committee, and figned by the accomptant of the chamber, to the fociety of London, \&c. fhall be intitled to receive 3 l. per cent. per annum.
19. Fifhing chambers nor to have any profit, \&c. from the trade of the fociety.
2 I. Receiver-general to pay yearly the fum of 3 l. per cent. to the fociety of London, who are to pay over the fame to the refpective filhing chambers intitled thereto.

## Further Remarks upon the article of Fisheries.

From this abftract of the act of parliament for encouraging the Britifh fifhery, it appears, that this affair is put upon a footing the moft likely to prove fuccefful to the fociety, to the refpective chambers, and to the public.
The fociety is no monopoly, but every Briton bas the liberty of carrying on this fifhery, and is inticled to the fame bounty and encouragement as the fociety itfelf,
The beginnings of all great defigns require extraordinary helps and encouragements from the public, before the can be effectually fettled and effablifhed : and fo apparently beneficial to the kingdom, and to thofe concerned, muft this great undertaking prove, in it's confequences, that it is to be ardently defired it may be now eltablifhed upon fuch a bafis, as to be even impoffible to prove abortive.
When the Dutch were at war with England, and they wanted to mann twenty or thirty fail of men of war, it was only having recourfe to their fighery, and, in a few days, they were in a condition to give us battle, the feamen being only traniferred from a fanaller to a larger veffel on the fame element. What may we not expect from this fchene, a fcheme fo prudent in appearance, contrived by gentlemen of extraordinary kill and difcernment, as well as of diftinguifhed probity and honour, and is carried into execution by fuch opulent traders of this metropolis, whofe genius for commerce is univerfally allowed, in conjunction with other perfonages of the firf rank and fortune?
It is not to be doubted, but, while we have been raifing money to carry on this defign vigoroully and profperoully, the Dutch have, from miftaking their own intereft, been raifing large fums alfo to defeat our intentions, and to hinder us from ever putting in in practice, by enabling the proprietors in Holland to underfell us at foreign markets.- But, fince they find we are determined to carry it on in fpite of all oppofition, they are damped in their machinations, and ought rather to have a grateful fenfe of our fuffering them to enjoy any hare in our own coaft-fifheries, than to attempt to exclude us from thofe benefits, which the divine providence bath fo liberally beftowed on us. Notwithftanding the flart which the Dutch have had of us in this commerce, yet the difadvantages they labour under are many, in comparifon to us, who are by nature fituated in the midft of one continued herring-thoal. .The illand indented, as it were, with bays and harbours, to retire to in boilterous weather ; the thore, whofe inhabitants are ourfelves, to furnifh us daily with neceffaries: the contiguity of the land whereon to dry our fifh, and whofe fituation enables us, with due induftry, care, and difpatch, to be at moft foreign markets, before the Dutch can have repacked their herrings in Holland: and if we are not, I am perfuaded that it mult be owing to fome kind of mifmanagement or other.
Here we cannot but obferve, how favourable nature is to us; for, as the wind is above one half of the year wefterly, our head-lands and bays are good roads for our thips to ride in, we being on the weather, and the French and Dutch on the lee-ihore; befides, our hores are bold, our coalts high and eafily difcovered, and our anchor-hold is much better, being for the moft part ftrong clay, hard gravel, or chalk, whillt theirs are only hard rocks, mud or loofe fands; and, when the eaft wind blows, though it may block up the Thames Ahipping, yet we have many confiderable ports whom
that favours likewife; fuch as Portinouth, Ponl, Dartmouth, Plymouth, Briftol, Liverpool, Whitehaven, Dumfries, Air, Glafgow, Campbeltown, and Irwin, belides many ochers of lefs note.

What a prodigious advantage is this! the wind through the whole year fcarce ever interrupts us, while they don't enjoy the benefit of it above one half; nor are our harbours ever frozen or choaked up with fand as the Dutch.
We ought not to regard Britain as an inand only, abounding with the neceflaries and conveniencies of life, but as a trading ifland, that owes all if's wealth and grandeur to an extenive commerce; which, if we ever lofe, mult be either through ignorance or indolence ; and, the day we lofe it, we may behold a fuperior fleet riding triumphant in our channel, menacing our thores on every fide, and the trembling inhabitants, with their wives and children, fying to the inward parts. -If this profpect is fo terrible, let it animate us with refolation to prevent effectually fo great an evil.
In many branches of trade, it is no eafy matter to diftinguifh the nationally profitable from the difadvantageous; but this of the fifhery is an inexhauftible mine, a mine, which every year is as full, if not fuller of treafure, than it was the year preceding: gold and fiver mines are attended with a far greater expence, and, the more they are wrought, the fooner they are exhaufted; but this filhery mine of gold (for fo we may juftly call it) is liable to no fuch accidents; it's expences will yearly diminifa after it's firit effectual opening and working, and treafures increafe.
Other commodities people may difpenfe with, but meat they muft have. And we may hope to fee the day, that the papifts of Europe will become greater tributaries to us for our fifh, than to the church of Rome.
Nor will it feem extraordinary, if we confider the vaft number of people to whom it gives daily bread: as feamen, filhermen, fhip and houfe-carpenters, fmiths, fawyers, coopers, caulkers, butchers, bakers, brewers, carmen, boatmen, failmakers, net-makers*, block-makers, trinel-makers, ropemakers, pump-makers, compals-makers, bafket-makers, hook-makers, packers, dreffers, forters, labourers, tanners, and finners of net-work and fails.-Several of which trades are effected by children, the lame, the blind, and the aged, as well as by thofe who have bitherto been always the firtt in taking up arms againft our lawful fovereign. Nor, as an ingenious gentleman fays, who has had frequent opportunities of dealing and converfing with them, can he believe, that the Scots heretofore affiting in all rebelions is fo much owing to inclination, as to the want of employment and ignorance, in not knowing the laws, language, and cultoms of England, many of them believing that their inland, and a part of the main land, as they call it, oppofite to them, is almoft the whole world. Wherefore, if trade is once carried effectually among them, it is reafonable to believe that they would be more ready to carefs that which would give them conftant maintenance, than they would a pretender to his majefty's crown and kingdoms, for a little temporary affiftance. They are not a people at all averfe to arts and induftry, nor do they want underftanding for the comprehending of any fcience; yet it may be faid of them as of the richeft fields, that, if they are well cultivated, they'll produce the fineft crops; but, if not, the worft of thiftles and the moft hurtful thorns. Commerce is the fureft way to civilize countries; it is the fovereign parent of all ufeful arts.

* The meafure taken by the incorporated fociety, as well as by the refpective fifhing chambers, in regard to the employment of the poor in the making of their nets, will not only prove the means of taking off a great burthen of expence from numbers of parihes, bur will fupply the fifheries with this effential article, at à much cheaper rate than otherwife they could be.

At different times, 'tis true, we have endeavoured to recover the fifhery; but, whether the mifcarriage has been owing to any wifful or inadvertent neglect, is difficult to determine. King Charles the Ift began it, in conjunction with a company of merchants, but the civil war occafioned it's being dropt. King Charles the IId made the like attempt; but, being preffed for money, withdrew his foare; at which the merchants being diffatisfied, 'tis no wonder they did the fame. Whence 'tis evident, that neither want of finh, nor markets to vend them at, was the caufe of laying this trade afide, but the unhappy fituation of public affairs, and want of due vigour and refolution to combat a few obftacles, which attend every new undertaking, as might be fhewn in numberlefs important inftances; and yet by perfeverance, and wife and fteady meafures, they have at length very happily fucceeded. - About ten miles below Aftracan, fays that ingenious and - public-fpirited gentleman Mr Jonas Hanway, merchant, in * his Hiftorical Account of the Britifh Trade over the Caf'pian Sea, 8ec. $\dagger$ lately publifhed, is a fmall inand, called - Bafmakoff, remarkable for it's large ftorehoules of falt, - which is made about twelve miles to the eaftward of it, - and, being brought hither in boats, is conveyed in large flat-
$\dagger$ Vol. I. pag. 124.
botomed veffels up the Volga. With this all the country ' is fupplied, as $f_{d r}$ as Mofoow and Twere. They dig annuc ally feveral millions of poods, the exclufive property of * which is claimed by the crown, and brings in a confider-
' able revenue *; for the common food of the foldiery, and ' of the bulk of the people, is bread and falt. In this place ' alfo are large Fisheries, to which the neighbourbood of
' the falt-works is of great advantage. Thefe extend even - to the fea, reaching fouth-eaftward as far as Yweik, and - alfo 100 miles above Zaritzen. From thefe filheries all ' the country is fupplied as far as St Peterfburg: the' veffels - are loaded with falt fifh, and fent away in the fpring; but, as frelh fifh keeps good fo long as it is frozen, the winter is ' no fooner fet in, than it is tranfported by land as far as - Mofcow and St Peteriburg. The principal forts are fur' geon, flarlet, beluga $\dagger$, and affotra $\ddagger$.'

* In Aftracan they fell the falt at three copecks a pood, but in Ruffiz at 15 to 18 , viz. about a farthing a pound. The revenue of Aftracan is reckoned 140 to 160,000 rubles, or $35,500 \mathrm{l}$. of which the greatelt part atifes from falt and fill.
+ A large white firh.
$\ddagger$ It refembles fturgeon.
But what induced me to quote this learned author upon the prefent occafion, is what follows:
- The firft eftablifher, adds he, of thefe fifheries, was To-- kin Demedoffa, a carrier, who fettled there about - 50 years ago; his whole furtune then confifted in two - horfes, but through bis indutry and abilities he became the ' greateft merchant in that country. The crown, which ' before his time was a ftranger to thefe advantages, has, of ' late years, befides the falt, engroffed fome of the fifheries ' alfo.'
What I would infer from hence is, that if a private perfon, a carrier too, with no larger a fortune than two horfes, flould, by his induftry and abilities, become the great inftrument of eftablifhing fo confiderable a fifhery at Aftracan; what may we not expect, in regard to the prefent fifhery, from the wifdom of a parliament of Great-Britain, and the general concurrence of the people to contribute every thing to it's fuccefs!
And whereas the encouraging of the confumption of fifh in Great-Britain, as an ingenious gentleman has obferved, would be of great advantage to the undertakers of this trade, and to the nation in general; therefore, if the commiffioners for granting of wine and ale licences were to be impowered to grant, to every perfon that comes for fuch licence, the faid licence for 5 s . lefs, upon condition that they take one barrel of the company's herrings; if two barrels, 7 s . 6 d . and, if three, at to s. lefs, upon condition the faid perfons make oath, that the faid herrings are for their ufe only: in which cafe it will be requifite for thofe who grant the faid licences, to take each perfon's name, with a direction, naming, at the fame time, the number of barrels, and tranfmitting them to the proper office in London; each deficiency in the faid licences thall be made good by the company.
Was this the cafe, it is not to be doubted, but that every tavern and alehoufe-keeper, as well as their cuftomers, are fenfible, that a herring is fo relifhing to the palate, that it would not only be very wholfome, but often occation the felling of more liquor; by which fuch publicans will enlarge their gains, and thereby increafe the revenue.
And, to the end that an undertaking of fuch important concernment to the nation fhould not mifcarry, we do not fee the unreafonablenefs, if every perfon who rents a houfe of per annum, fhould be obliged, by act of parliament, to take one barrel of Britifh berrings, at leaft, every year, for their family comfumption; and thofe who inhabited houfes that were higher rented, to be obliged to take two barrels, \&ic. -——
- Without primary encouragements, fays a very judicious - writer in the year 1680 , who intitled his work Britan' wia Languens, \&c. and fuperintendance of the go-- vernment, it will be hard to nourih up any new branch of - trade, \&c.-Amongft the exportations, the filhing trade - ought not to be forgotten; fince, according to modern cal"culations *, the mere fifhing trade for Herring and Cod - on the Coast of England and Scotland, employs - above 8000 Dutce thips or veffels, 200,000 of their - feamen and filhers; and the herrings and cod, fold by the - Dutch in foreign countries, do bring an annual profit of - about $5,000,000$ 1. per ann. fterling to that nation: befides - which, 'tis accounted that there are at leaft 25,000 peo-- ple more employed and miaintained at home about this par-- ticular navigation, as in making of fifhing-ners, and the * curing, ordering, and preparing of the fifh, \&c. befides 'the Iceland, Newfoundland, and Greenland filhings, of - very great advantage.'
- See Mr Smith of Improvements, \& \% . pag. 268, 269, 270, who computes the whole profit of this finhery to be, in his time, ten millions fterling per and. and in a manner all gained by other nations.

Remarks on the nature of herring, ling, and cod; with an account of the almoft incredible increafe of codfifh.
The herring is in greater repute among other nations than in Bitain (clisefly owing, I believe, to our endeavouring to vend our own ill-cured herring among ourfelves.) It is generally from 10 to 12 inches long, the fides of a filver colour, the belly flarp, like a wedge, the eyes red, the tail forked, large fales, and the lower jaw longer than the upper, and full of teeth.
It dies inftantly when taken out of the water, from whence, I fuppofe, the proverb arofe, As dead as a herring. The fifh, when in perfection, is very delicious, if dreffed when taken, which is about the autumnal equinox, before they fpawn, are eafily digefted, and very nourifhing.
They come yearly in vaft fhoals, as it were by divine appointment, from the north-weft; not only for fuftenance, but to inrich us by our captures for others. Their voyage is performed with great exactnefs, and the tract known by the hovering of fea-fowl, in expectation of prey, and the fmoothnefs of the water; nor do they ever differ above 10 or 12 days in time, and that is always owing to ftrong fouth-eaft winds. When they come off the Lewis, the Ghoal divides, one half going to the Orkney and Shetland ifles, and the others flaying among the weftern, where they immediately meet with nourifhment: the number of river's and lougbs in thofe parts daily carrying from the land an infinite variety of worms, and other infects, on which they feed; and to this immediate fuftenance we may afcribe the caufe of their being always better than thofe of Orkney and Shetland.
The ling is longer in proportion to it's thicknefs than a cod, is from 2 to $4 \frac{1}{2}$ feet long, covered with fmall feales, of an alh and grey colour, a round tail, and a barb on the lower jaw.
It is a delicious fifh when frefh, and, when rightly dry-cured, is tranfparent, and is preferred before any other falt fin.
They are to be had all the year among the weftern and northern ifles, and, at particular times, off Penzance in England. The codfinh is from 2 to $3 \frac{1}{4}$ feet long; thofe fmaller are called codlings: it is a thick round fifh, with a large head and belly, the back brown, and belly whitifh, the eyes large, the fcales fmall, and the whole fifh full of yellow fpots.
They are diftinguifhed into fix different forts, from the manner of curing, and places from whence it comes, viz. Aberdeen fifh, Iceland fifh, green filh, fockfih, North Sea cod, poor jack, and barrelled cod.
It is much efteemed, and much ufed; the head of a large cod, when frefh, is reckoned a delicious difh; when they are ufed falted, they are generally fteeped in water before they are boiled, are eafily digefted, and very nourifing; they are taken in great quantities on the eaftern and weftern coafts of Scotland.
Perhaps fome may imagine, that, if we carry on this trade effectually, there would not be fifh for all the filhers, for which reafon I hall give an account of their prodigious and almoft incredible increafe, which is fo great, that, if there were but two males and two females left in the fea this feafon, there would be as many the next as there were the preceding, providing there was none of their young to be devoured by other fifh.

The number of animalcules fuppofed to be in the melt, or femen mafculinum of a cod.
Mr Leeuwenhouk, a very curious obferver of nature, having viewed the melt, or femen mafculinum, of a codfifh, found fuch numbers of animalcules, with long tails, that he fuppored there muft be at leait 10,000 in the bulk of a grain of fand; from whence heconcludes there muft be more animalcules in the melt of one cod-filh, than there are inhabitants alive upon the whole face of the earth at one and the fame time.
He computes that 100 make the diameter of an inch, fo that in an inch there muft be $1,000,000$ of fuch particles of fand: and, as he has found the melt of a cod-finh to be about 15 cubical inches, then of confequence there muft be $15,000,000$ of quantities as big as a grain of fand; now, if each of thefe quantities contain 10,000 animalcules, there muft be in the whole $150,000,000$.
A part of Sir Walter Ralegh's addrefs to king James, in regand to fifheries.
The great fea-bufinefs of filhing doth employ near 20,000 thips and veffels, and 400,000 people are employed yearly upon your majefty's coaft of England, Scotland, and Ireland, with 60 thips of war, which may prove dangerous.
The Hollanders only have about 3000 fhips to filh withal, and 50,000 people are employed yearly by them upon your majefty's coafts of England, Scotland, and Ireland.
Thefe 3000 fifhing thips and veffels of the Hollanders do employ near 9000 other fhips and veffels, and 150,000 perfons more by fea and land, to make provifion to drefs and tranfport the filh they take, and return commodities, whereby they are enabled, and do build, yearly, 1000 fhips and veffels, havigg not one timber-tree growing in their own country, nor home-bred commodities to lade 100 fhips, and jet they have 20,000 ihips and veffels, and all employed.

King, Henry VII, defirous to make his kingdoms powerful and rich, by increafe of hips and mariners, and employment of his people, fent unto his fea-coaft towns, moving them to fet up the great and rich fifhing, with promife to give them needful privileges, and to furnifh them with loans of money, if need were, to encourage them; yer this people were flack. Now fince I bave traced this bufinefs, and made mine endeavours known unto your majefty, your noblemen, able merchants, and others who (having fet down under their hands for more affurance) promifed to difburfe large fums of money for the building up of this great and rich large fea-city, which will increafe more ftrength to your land, give more comfort, and do more good to all your cities and towns, than all the companies of your kingdom, having fit and needful privileges for the upholding and ftrengthening of fo weighty and needful a bufinefs.
For example, 20 buffes built and put into a fea-coaft town, where there is not one fhip before, there mult be, to carry, recarry, tranfport, and make provifion for one bufs, three fhips ; likewife every fhip fetting on work 30 feveral trades and occupations, and 400,000 perfons by fea and land, infomuch as 300 perfons are not able to make one fleet of netg in four months for one bufs, which is no fmall employ. ment.
Thus by 20 buffes are fet on work near 8000 perfons, by fea and land, and are an increafe of above 1000 matiners, and a fleet of 80 fail of thips, to belong to one town, where none were before, to take the wealth out of the fea, to intich and firengthen the land, only by raifing of 20 buffes.
Then, what good ro00 or 2000 will do, I leave to your majefty's confideration.
It is worthy to be noted, how neceffary fifhermen are to the commonwealth, and how needful to be advanced and cherifhed, \&c.
I. For taking God's bleffing out of the fea to enrich the realm, which otherwife we lofe.
2. For fetting the people on work.
3. For making plenty and cheapnefs in the realm.
4. For increafing of thipping, to make the land powerful.
5. For a continual nurfery for breeding and increafing our mariners.
6. For making employment for all forts of people, as blind, lame, and others, by fea and land, from to to 12 years, and upwards.
7. For inriching your majefty's coffers, by merchandizes returned from other countries for fifh and herrings.
8. For the increafing and enabling of merchants, which now droop and daily decay.
A convention renewed and enlarged between his Britannic majefty and the city of Hamburgh, concerning the trade of herrings, February 8, 1719 .
George by the grace of God, king of Great-Britain, France, and lreland, defender of the faith, duke of Brunfwick and Lunenburg, arch-treafurer and prince elector of the Holy Roman Empire, \&ic. to all and fingular to whon thefe prefents fhall come, greeting. Whereas a certain convention for eftablifhing a regular and free trade for herrings, between our fubjects and the city of Hamburgh, was firft made in the year 17II, and was lately renewed, explained, and enlarged, and was concluded and figned on our part by Cyrill Wych, Efq; our minifter refiding with the republic of Hamburgh, and on the part of the conful and fenate of the faid republic, by their deputies; being furnimed on both fides with fuffi lent orders and authority, at Hamburgh, on the 8th day of this prefent month of February, in the form and words following:

- That is to fay, that between the moft ferene and moft potent prince and lord, George, king of Great-Britain, \&cc, by his minifter and refident, M. Cyrill Wych, on the one part, and the laudable republic of Hamburgh, by the deputies of it's honourable fenace, M. John Anderfon, fyndic, Peter Burmefter, and Henry Dieterick Wiefe, fenators, on the other part, by virtue of their powers and commifions, the convention of the year 1711 is renewed, explained, and inlarged, in the following articles, which are to ferve for a conftant regulation of a free trade of herrings caught by the fubjects of his Britannic majefty on the coafts of his kingdoms.
I. The city of Hamburgh grants permiffion for importing freely, to the faid city, herrings caught on the coafts of GreatBritain, upon paying the fame duties of entry as are ufually paid for Flemioh or Dutch herrings.
II. The herrings, at their being brought in, thall all be put into the warehoufe, or warehoufes, which fhall be judged moft convenient and proper, there to be kept, the proprietors paying a reafonable hire by the ton, as they can agree with the owner of the wareboulc.
III. The herrings thall be opened in the warehoufe-yard, in the fame manner as thofe of Holland are, in the view of all who have a mind to be prefent; the pickle thall be drawn out, and, after the barrel thall be filled up with good finh, the pickle fhall be put in again, the fin remaining always in the fame barrel, without being removed from one barrel to be repacked in another. Befides, they fhall be appraifed or valued, and according to their quality, a proper mark, within a circle, $\begin{gathered}\text { fall }\end{gathered}$

Aall be fet at the head and on the middle of every batrel; and, to thew that they are not Flemifh or Dutch herrings, but of Great-Britain, a crowned B hall be burned on the head of each barrel.
IV. For this purpofe the fenate oblige themfelves to chufe and appoint two appraifers, commonly called wraquers, and two packers ; and, that they may not be fufpected of partiality, they fhall not have any dependence upon, or concert with, the Schonen fahrers (or corporation of dealers in fifh) and the faid wraquers and packers hall take a folemn oath, conformable to the fenfe of this article, before the honourable fenate; which oath thall be adminiftered to them anew every year, the beginoing of June; by the deputies of the fenate.
$V$. If the proprietors, or their factors, come in perfon with their herrings, they thall have liberty to vend them to any burghers or inhabitants of the town indifterently, whom they fhall think fit to deal with; but, if within the fpace of eight days they cannot difpofe of them to the burghers or inhabitants, they fhall be'allowed to fell them to whomfoever they will, or to fend them out of the town, to fuch place as they fhall think fit.
VI. When the proprietors would fend their herrings to factors, to difpole of them, they fhould be obliged to chufe their factor either among the laudable Englifh company refiding in the town, or among the burghers, who may then fell them to whomfoever they pleafe, or fend them out of the town whither they thall think fit.
VII. Befides what is already agreed as above, the fubjects of his Britaninic majefty fhall always enjoy the fame privileges and advantages in the herring-trade as are already granted, or may hereafter be granted to the fubjects of their High Mightineffes the States General of the United Provinces:
VIII. It is likewife permitted to the fubjects of his Britannic majefty to bring to Hamburgh, falmon, fockfifh, cod, and all other forts of filh, either dried or fmoaked, in barrels or falted, on condition they pay according to cuftom the duty of entry, or moderate gabel. In the like manner it is fipuIated for the inhabitants and burghers of Hamburgh, that they fhall trade, according to their antient cultom, to the provinces of the Britifh kingdoms, catry their merchandize thither, and truck or exchange the fame for thofe forts of filh, and other goods.
In witnefs whereof, and by virtue of the orders and full powers which we the abovementioned minifter of Great-Britain on the one part, and from the honourable fenate on the other, we have figned the prefent renewed convention, and caufed the feals of our arms to be affixed thereto. Done at Ham. burgh the 8th of February, 17 Ig.

> (L. S.) Cyrill Wych.
> (L. S.) John Anderfon, Syndic.
> (L. S.) Peter Burmefter, Senator.
> (L. S.) Henry Dieterick Wiefe, Senator.

We have feen and confidered the above-written convention, have approved, ratified, and confirmed, as by thefe prefents we do for us, our heirs and fucceffors, approve, ratify, and confirm the fame, in all and fingular it's articles and claufes; on condition, however, that what is faid in the eighth article of the antient cuftom of the Hamburghers to trade to our kingdoms, be alvpays underfood according to the known and eftablifhed laws of our faid kingdoms; engaging and promifing, on our royal word, fincerely and bona fide to perform and obferve all and fingular the things contained in the faid convention, in the manner above explained; and never to fuffer, as far as in us lies, any one to violate, or in any wife to act contrary to the fame. In witnefs and confirmation of all which, we have caufed our great feal of Great-Britain to be affixed to thefe prefents, figned with our royal hand. Given at our palace at St James's, the I6thday of February, in the year of our Lord $1718-19$, and of our reign the fifth.

Georger.
Extract from the Protocol of the fenate of Hamburgh, the $3^{\text {d of April, }} \mathbf{7} 76$.
Refolved to depute the fyndic, M. Sillem, and M. Van Süm, to communicate, to the refident of his Britannic majefty, an authentic copy of the treaty made with the ftates of Holland; and to reprefent to him, that he will fee by it how it has always been laid down for a can come to it's maturity before Midfummer-Day; for which reafon the fenate cannot take upon them to change the eftablifhed rule. However, the fenate does hereby give affurance to the refident, that, if the fubjects of his Britannic majefty can give proof that there is no true ground for this principle which has obtained, and will bring hither, before Midfum-mer-Day, herrings in maturity, then the fenate will not make any difficulty to let them be imported.

Nich. Luze Schaffshaufen, Secretary.
This permiffion was confirmed by the fenate, under the privyfeal of the city, on the 3 d of July, 1716 . See HerringFishery.

Vol, i.

Remarks on Fisheries, fince the laft War, and the Definitive Treaty of Peace, 1763.
Under our article America, we have given the Definitive Treaty of 1763 ; the V, and VI, and XVIII articles of which being relative to the Newfoundiand Fishery. The article XVIII concerning the explicit difavowal of Spain, to their pretended right of fifhing in the neighbourhood of Newfoundland, we have already taken notice of under this head. At prefent we fhall prefent the reader with the other articles which refpects this matter, viz. articles the $V$, and VI. The former whereof is as follows, viz.
V. "The fubjects of France thall have the liberty of fifhing and " drying on a part of the coafts of the illand of Newfound" land, fuch as is fpecified in the 13 th article of the treaty of "Utrecht; which article is renewed and confirmed by the " prefent treaty (except what relates to the inland of Cape
" Breton, as well as to the other iflands and coafts in the
"s mouth and in the gulph of St Lawrence; ;) and his Bri-
" tannick majefty confents to leave the fubjects of the moft
"chriftian king, the liberty of filhing in the gulph of St
" Lawrence, on condition that the fabjects of France do not
" exercife the faid fifhery, but at the diftance of thrie
"Leagues from all the coafts belonging to Great-Britain,
"" as well thofe of the continent, as thofe of the iflands ft-
"s tuated in the faid gulph of St Lawrence. And as to what
" relates to the filhery on the coaft of the Island of Cape
" Breton out of the faid gulph, the fubjects of the moft
${ }^{6}$ schritian king fhall not be permitted to exercife the faid
"s filhery, butat the diftance of fifteen Leagues fom the
"coafts of the Island of Cape Breton; and the fifhery
" on the coafts of Nova Scotia or Acadia, and every
"s where elfe out of the faid gulph, thall remain on the foot " of former treaties.
VI. "s The king of Great-Britain cedes the inlands of 5 т "Pierre and Miquelon, in full right, to he moft chrif"s tian majefty, to ferve as a shelter to the French
" FISHERMEN; and his faid chriftian majefty engages not to "f fortify the faid illands, to erect no buildings upon them, but " merely for the convenience of the fifhery, and to keep ${ }^{6} 6$ upon them a guard of fifty men only for the "POLICE."
By the foregoing articles, we fee in what fituation the treaty of $\mathrm{I}_{7} 63$, has left the fifhery of Newfoundland, with regard to Great-Britain and France; and as we have in our preceding Remariks on this article, touched upon the rifk the French may run, by their infraction of the faid treaty, of being for ever exterminated from the liberty of this fifhery; it may not be improper to confider the confequence of fuch event. For if Great-Britain thall have power to do this, in a frefh rupture with France, fhe will hardly want power to reconquer the French Sugar-Islands; and if the does, can France flatter themfelves that Great-Britain will confent to reftore them as the did by the laft peace? if France does think fo, we have reaton to believe fhe may find herfelf greatly miftaken. For has it not been owing to the perfidy of that nation, and her other Catholic allies who have joined them againft this nation, that we are now become fadded with fo many millions of public debts and taxes, that fome of our greateft fatefmen have heretofore judged it impoffible for the kingdon to fuftain.
If France, therefore, fhall venture again to quarrel with Great-Britain, muft not the motive thereto be their fuggeftion of our incapacity to enter into a frech war? Upon this points, I hall only at prefent obferve, that if the court of France fhall be actuated by fuch view, he is quite unacquainted with the refources of this nation; and if the dare hazard another war with it, the confequences to her will be, as I humbly apprehend, that France will not only be foundly beat again, but that fhe will never more enjoy the liberty of the Newfoundland fifhery; which will prove no fmall detriment to her maritime ftrength, was this her only lofs the fhould fuftain by a frefh war with England. Nor can Britain longer afford to act the fame farce over again to conquer and reftore. Our conquefts have coft us too dear to give up in future, but upon the ftrongeft fecurity that the beft policy will adminiffer to us, for a long continuance of peace. See our article War.
FLANDERS is the firft province, county, or earldom in the Netherlands. It has Hainault, Artois, and part of Picardy, on the fouth; the north fea on the welt; on the north the fame fea, with a branch of the Scheld, called the Hond, which parts it from Zealand; and, on the eaf,, the marquifate of the holy empire, Brabant, and part of Hainault. It's extant from S. W. to N. E. is about 75 mites, and from W. to E: about 55. Herein is included French, Auftrian, and Dutch Flanders.
French Flanders is bounded on the north by part of the north fea; on the north-eaft by Auftrian Flanders, and part of Hainault; on the eaft and fouth by the fame province; on the S. W. and W. by Artois, and part of Picardy. This province, together with that part of Hainault, which has been yielded to the French, and the whole province of Cambrefis, are under the fame governor-general.

## F L A

Lusle, the capital city of French Flanders. There is here confiderable manufacture of ferges, and other woollen Atuffs; about half a century ago, they made above 300,000 pieces of ftuffs; but the miferies, which infeparably attend war, have obliged valt numbers of workmen to retire to Ghent, Bruffels, and into Germany; and, after the peace of Utrecht, feveral Proteftant families alfo left this city.
The commerce of Lifle to France, by way of land carriage, or by the way of Dunkirk, is pretty confiderable; but none much to the advantage of the inhabitants, becaufe they receive from France large quantities of wine and brandy, for which they pay in calh.
Their trade with the Dutch is not more profitable, by reafon the inhabitants of Life buy of them manufactures, which they might get much cheaper, if they could have them direcily from places, from whence the Dutch themfelves have them.
Their moft beneficial traffic is that which they carry on with Spain, and in the Weft-Indies; buying up all fuch commodities as they think proper for thofe countries, either for their owi account, or by commifion. But, by reafon of their diftance from the fea, that trade is far lefs lucrative than it otherwife would be.
Douay is fituate on the river Scarpe, on the borders of Artois, 13 miles from Arras to the eaft, 16 from Lifle to the fouth, 18 from Valenciennes to the weft, and 14 from Cambray to the north. The chief trade hereof confifts in the making and vending of worfted camblets, which are bought by all the neighbouring people, efpecially at the annual fair kept in September.
St AmAND is fituated on the river Scarpe, 9 miles from Tournay to the fouth, 16 from Douay to the ealt, and 19 from Lifle to the fouth-eaft. Here is no trade which deferves our notice; and which is the cafe of feveral other places here, that we fhall not mention at all, on that account.
Menin ftands on the Lys, about 4 miles diftant from Courtray to the fouth-weft, io from Ypres to the fouth-eaft, and 9 from Lifle to the north. It was allo one of the barrier towns, where the States General of the United Provinces kept a governor and a garrifon, and was pretty well fortified, but the French took it in 1744. There is fome trade, which confifts in woollen ftuffs, manufactured here, and in pale beer they brew here, which is in great efteem. In the neighbouring meadows they bleach linen cloths.
Ypres is 20 miles diftant from Lifle to the north, and 10 from Menin to the north-weft. It is a rich trading town, the capital of a large diffrict, called the Caftellany, or Cafte-ward of Ypres, which is a fruitful country: it's trade confifts in fays, wrought filks, 8 c .- This city was given up to the houfe of Auflia, by the treaty of Utrecht, and the Dutch kept a garrifon there, by virtue of the barrier treaty; yet this alfo was taken by the French in 1744, as well as Warneton and Menin, for which reafon we place now thefe cities in French Flanders.
Bergen St Winox, or Winoxbergen, ftands at the foot of the hill on the little river Colone, which runs through the city ; it is 18 miles diftant from Ypres to the weft, 6 from Dunkirk to the fouth, and 12 from Gravelines to the eaft. There is a manufactory of woollen cloth, but the trade of it was much more confiderable formerly than it is at prefent.
Cassel and Gravelines are not remarkable for any thing of trade.
Dunkirk is fituated at the mouth of the river Colone, on the coaft of the north fea, to leagues diftant from Gavelines to the eaft, 21 from Oftend to the weft, $3^{6}$ from Lille to the north-weft, and about 16 from St Omer to the north. It was but at firft a fmall hamlet, confifing of fifhers huts, built on the fandy hills. The advantageous fituation of this place engaged Baldwin the younger, earl of Flanders, to make a fmall city of it. Since that time, it has undergone various revolutions, and been in divers hands, and at length fell into thofe of the Englifh; but, in 1662, king Charles the IId fold Dunkirk to the French for five millions of livres, according to Monf. La Martiniere.
Lewis the XIVth, having vifited that city, obferved fo many defects in the fortifications, that he employed 30,000 men conftantly for many years, to render it impregnable, if porfible. All thefe fortifications, together with the moles, and Fort Lewis, have been demolifhed, and the harbour filled up, by virtue of the treaty of Utrecht. But, of late, the French have begun to fortify it again, and to repair the harbour, and it is now a very ftrong place: however, they have not yet been able to reftore the harbour, fo as to make it capable to receive men of war of any confiderable rate, though it is faid that fhips of 20 guns, or larger, can eafily enter in at high tide.

## Remarks fince the laft war and peace of 1763.

By the XIIIth article of the Definitive Treaty of 1763 , - The town and harbour of DUNKIRK thall be put into the ftate fixed by the laft treaty of Aix la Chapelle, and by former Treaties. The Cunette fhall be deftroyed immediately after the exchange of the ratifications of the PRE-
sent Treaty, as well as the Forts and Battreries, which defend the entrance on the fide of the Sea, and provifion fhall be made, at the fame time, for the wholefomnefs of the air, and for the health of the inhabitants, by fome other means to the satisfaction of the king of GreatBritain.' See France.
Austrian Flanders. See the atticle Austrian Ne. therlands.
Dutch Flanders is the moft northern part of Flanders, which belongs to the States General of the United Provinces. It confifts chiefly of fortified towns, which made a part of the barrier to the other territories which belong to the Dutch. It is a perfect level, there being little or no rifing ground in it, and is watered with innumerable rivers and canals; Flanders in general is exceedingly fruitful, and pretty commodioully fituated for trade. And, what trade there is in this part of Flanders, being a fmall proportion of that of the like nature with what is in the Auftrian Netherlands, as fine lace, linen, and tapeftry, we fhall refer to what we have faid under the article Austrian Netheriands.

## Remarks.

It has been ever allowed by the wifeft fatermen and beft friends to the prefent eftablifhment in the royal houle of Hanover, that this kingdom can have no alliance fo ufeful, in order to fecure the Proteftant fucceffion, as that of the States General; whether we confider their fituation, their flrength, their religion, or their intereft: and, therefore, for our own fafety, we are under the neceffity of acting in concert with Holland, in order to preferve to them a proper barrier in Flanders. And it was from this motive, we may reafonably prefume, that the court of London readily gave up Cape Breton, with a view to expedite the re-eftablighment of the Dutch barrier, which the French deftroyed in the laft war.
But, as this matter does not feem to be carried on with that alacrity, honour, and punctuality, with which the court of Great-Britain has conftantly acted on their part, it may not be mal-a-propos, at this juncture, to revive the fentiments of our former patriots upon this occafion: which we thall do by fhewing,
I. That it is the true intereft of England, that there fhould be a fufficient barrier againft France on the fide of the Ne therlands.
2. That no barrier can be effectually defended againft France, but by being put into the bands of the Srates.
3. That, for the defence of fuch barrier, it is neceffary the Dutch fhould have a free communication with it; and reafonable, that the barrier-country fhould contribute towards the expence of maintaining it.
4. That the Dutch have a right to a fufficient banier, and to have the defence of it themfelves.
As to the firlt propofition, it is a point fo evident, and hath been fo conftantly received as the avowed fenfe of the nation, that we are afhamed to think, that any fhould want that proved now, which has been allowed a fanding maxim of our government, and is at prefent become our intereft more than ever. To have a good barrier againft France in the Netherlands is as neceffary for us, as to preferve a ballance of power on the continent, and to prevent Europe's being enflaved by France. For,
Such is the fituation of the Netherlands, with refpect to Holland and the empire, and even to Britain itfelf, that, if France be once fuffered to prevent it, it will not be in the power of all Europe to fet bounds to the progrefs of their arms.-The United Provinces muft fall a prey to her.-The empire having loft the affiftance of the Stares, and being cut off from all communication with England, would foon follow the fame fate. So that if France could accomplifh her long laid defign upon the Netherlands, and have at the fame time a marine powerful enough to deal with that of England, as the is now certainly aiming at, he might, without oppofition, carry her conquefts as far as fhe pleafed into Germany. -If France be once miftrefs of thofe provinces, fhe will from that moment have the command of the narrow feas; fo that our trade will neither be able to go out, nor to return with fafety.-Was it not thought of the laft confequence by England, that the harbour of Dunkirk thould be ruined? And, may we not thence judge, how fatal it mult prove to this nation, to let France get poffeflion of the other FLEMISH Ports, with fuch an increafe of naval ffrength as that acquifition would give them? Would not our coafts and rivers then be expofed to perpetual infults, and our Trade in fo much danger in the narrow feas, as to oblige us to give it over?
Should France be fuffered to be miftrefs of the Netherlands, it is not to be thought the United Provinces could maintain their independency: they muft either become directly the fubjects of France, or live in an abfolute fubjection to that crown; and, would not the unavoidable confequence of that be, that the naval force of the Dutch, which hath hitherto acted in conjunction with us, would be turned againft us? Which would give France fuch a fuperiority at fea, as no one can be fanguine enough to think we could diffute.

Let France, therefore, by her machinations, deprive the Dutch of a barrier, 'till the puts her finances and her marine in order, and our ruin need not wait for that of other countries on the continent: if France can force the fubmiffion of the Srates, and have the ufe of their ports and fleets, England muft truckle to France, if the reft of Europe would be content to look on: and, if they flould not, all the efforts they could make would be of little fervice to us. For, while we have no maritime power on our fide, we can have no help at fea, where it would be moft wanted; nor any fupport in cafe of an invafion, though it's fuddennefs and ftrength fhould make it of the laft neceffity: and, as for any efforts made in our favour on the continent, when the States are either flaves to, or on the fide of France, we may be fure they would be foo weak to make any great impreffion, or to caufe any extraordinary diverfion in our favour, confidering the armies of France. So that the ruin of England feems to be the certain confequence of the abfolute lofs of the Netherlands.
If it were fufficient to have reafon on one's fide, we might think it needlefs to urge more to prove, that it is the true intereft of England, that there flould be a good barrier againft France on the fide of the Netherlands: and that we, as well as the Dutch, are now in imminent danger, by having a matter of fuch concernment delayed.
But, becaufe we write in times, when authority feems to have more weight than reafon, we fhall appeal to authority, and fhew that the Netherlands have, in all times paft, been looked on as the barrier to England; and that it was always thought our intereft to hinder the growth of France on that fide. - To prove this, we might go back to the time when the houfe of Burgundy governed thofe countries. But we have not room for this, and therefore thall only quote one memorable paffage in the excellent Hiftory of Philip de Comines to this purpore; who, fpeaking of the conqueft of the dominions of the Houfe of Burgundy by Lewis XI, who laid the firft foundation of the greatnefs of France, begins his fecond chapter with thefe words-' Thofe, fays he, that here' after thall read this hiftory, will wonder that the Englifh - fuffered the king to take the towns bordering fo near upon them, namely, Arras, Bolloin, Ardes, and Hedin, with - divers other cafles, and to lie fo long with his camp before ' St Omers.'
And the reafons he gives for it, are fuch as deferve to be remembered, which are thefe: 'That the king of France in - wifdom and fenfe furmounted far Edward IV. of England - then reigning, who was a very corpulent man, and much - given to pleafures; and endeavoured, by all means pof-- fible, to content and entertain him by ambafiadors, pre-- fents, and fmooth words, to the end he fhould not in-- termeddle with his affairs.-That he knew well the Eng-- lifh, as well nobles and commons, as the clergy, to be na' turally inclined to make war upon his realm; therefore he - perceived, that he muft in any wife keep the king of Eng-- land and his principal fervants his friends, whom he faw - altogether inclined to quietnefs, and very greedy of his - money; for which caufe he paid duly at London the

- Pension of 50,000 crowns, and farther gave yearly
- $\mathbf{x}, 000$ crowns, befides many goodly prefents to the faid * king's principal fervants; and their Acquittances ' are yet tó be seen in the Chamber of Accounts at Paris.
- Further, he gave goodly prefents to all the ambaffadors that - came to him, were their meffages never fo fharp and bit-- ter; and fent them home with goodly words and princely ' rewards, that they returned well contented; and, not' withstanding that some of them under-- stood that he did all this only to gain - Time, the better to atchieve his Enterprize - in the Conquest of the Duke of BURGUNDY's - Dominions, yet winked they at it, becaufe of the great - riches they received at his bands; and fo did the king of

England himfelf, though fome of his council told him "plainly, it would be very prejudicial to his realm; and, in - parliament, divers wife men that fmelt the diffimulation of - France afar off, and received no Pension as the others - did, were very defirous, that the king thould fend aid with-- out delay to the lady of Burgundy, daughter of duke - Charles : and, undoubtedy, if the king had not been pre-- vailed upon by thefe and fome other reafons, he would never - have fuffered the king of France to take places bordering fo - near upon the Englif dominions, but have fought to defend - them; and, if at the begioning be had declared himielf for - the faid lady, the king had never weakened this houfe of 'Turgundy as he hath.'
The whole of this chapter is well worth reading, of which this is but an abftract. It may be obferved from hence, that this hiftory was written about 280 years ago, by a perfon of great credit, who was not only an eye-witnefs of thefe things, but had a principal hand in tranfacting them: which leaves no room to doubt the truth of what he fays, that it was then looked on as the known intereft of England, to hinder the growth of France in the Low Countries, even in thofe days, when the French dominions were bounded by the Soam;
when the duchy of Britain, with the port of Breft, was no part of them; and the Strength they haye now at Sea, was not so muchas begun.-That it Was then a maxim in our government, to cherifh a ftrict alliance with the houfe of Burgundy, to prevent the French from extending their dominions on that fide, and making nearer approaches towards us; the dangers being forefeen at that diftanç, which we have fince frequently felt from the neighbourhood of a power, which through our own fault we have fuffered to grow fo very formidable: and, laftly, that this antient and ufeful alliance with the houfe of Burgundy, which England had before fo ftrictly cultivated, was loft, and that great houfe ruined unaccountably; not by the ftrength and policy of the enemy, fo much as by the weaknefs and covetoufnefs of their friend king Edward, and the corruption of his great minifters, who were all Pensioners of France: that it was French gold well placed in Englifh hands, that procured this acceffion to their dominion then, and prevailed with the court of England to fuffer them patiently to extend their conquefts in Flanders: and they that will carefully look into our hiftory, will find but too much reafon to think, that all the additions that have been made to the power of France in later times, particularly the mighty increafe of their colonies and plantations, and their naval power, and the extent of their conquefts in the Low Countries, have been chiefly owing to the fame caufes, to the ill conduct and wrong meafures of our princes, and the corrupt practices of their minifters, facrificing the intereft of their country to their own avarice; and, for French Pensions, felling both the prefent and future fafety of the nation.
But, to come to better times, the days of good queen Elizabeth, a name that will be always dear to true Proteftant Englifhmen. Every bady knows how much the ventured to weaken the power of Spain in the Low Countries, upon the fame principle, and in purfuit of the fame intereft, as fhould teach us now to weaken that of France; the houfe of Aufria aiming then at univerfal monarchy, as France hath done fince; though their views were never grounded on fo folid a foundation as thofe of Fiance have been; nor had their dominions the fame advantage of compactnefs; nor was their fcheme for empire built upon fuch rules of policy, as thore of the two great mafters Richlieu and Mazarine, fo that England then had much lefs reafon to be alarmed at the greatnefs of the power of Spain, than our age has had to be at that of France.
And what courfe did this good queen take to weaken it? Was the for increafing the power of France in the Low Countries, in order to leffen that of Spain ? Would her kingdoms have been fafer by thofe countries changing mafters, by being transferred from Spain to France? By no means: fhe was then jealous of the growth of France; fhe did not think it good policy to humble one power by advancing another, which might prove as dangerous an enemy.-She therefore favoured the revolt of the United Provinces, and gave all rupport to the Dutch in their infant ftate.-She wifely forefaw this was the moft fenfible blow the could give to Spain, and effectually remove, from her kingdoms, the dangers they were in from the nearnefs of fo formidable a power; and, as he judged rightly, fo the meafures the took proved fuccerfful. - This was the way that excellent princefs took to pull down the houfe of Auftria in the Low Countries, without building up that of France on it's ruins. For more matter on this head, fee the article France, Holland, Netherlands.
FLAX is a plant having a flender, round, hollow falk, about two feet high; it's bark is full of filaments like hemp; the leaves are long, narrow, and pointed; it bears a blue flower, to which fucceeds a roundifh fruit, about the bignefs of a pea, containing ten little feeds, full of an oily fubftance or meal.
There are 33 known fpecies of this plant, of which only two are in ufe for the linen manufacture.
The feed hath a great many properties. 'Tis in the compofition of feveral medicines; they draw from it by expreffion an oil, in quality not unlike the oils of nuts; for which 'cis fometimes ufed in painting, and to burn. That which is drawn without the help of fire, is much efteemed in medicine. The trade herein is pretty confiderable. Moft of what is confumed in Paris comes from Flanders, and from about Rouen, where they produce great quantities.
The culture of flax, and the feveral preparations of it for ufe, being pretty much the fame as of hemp, we fhall there make fome additions to what we fhall here obferve.
There is, however, one circumflance in the culture of this not to be omitted, and on which, in feveral provinces of Fiance, it's whole beauty and goodnefs depend.
The feed is very apt to degenerate; and, in fome parts, as in Normandy, Bretagne, and Picardy, it muft be renewed 25 lealt once in five years. The belt grain for that purpofe comes from the Baltic.
Moft of the French provinces fo abound in flax, their lands being fo fit for the culture of it, that, if they would, they might outvie their neighbours in this traffic, notwithftanding the great quantity ufed by them in many forts of works.

## F L A

However, they import great quantities from foreign parts; the Baltic, Holftein, Ruffia, and Flanders, chiefly fupply their fpinfters and weavers. 'Tis imported alfo from the Levant, and fome comes from Egypt.
The Flanders lint is in great efteem, that of Picardy comes rear to it. Of others, thofe of Riga and Koniglberg are in moft repute.

## Of the cultivation of flax.

You muft firlt chufe fandy or loamy ground, and manure it well, and lay it as fine as poffible you can; and then be fure to chufe good feed, and fow at leaft four buthels of it upon an Englifh acre, and chufe fuch a time to fow it in, as probably, by figns of the wind or weather, you may, by God's bleffing, have fome rain within ten days after it is fowed; for your feafon will laft in England to fow it, from mid March until a week in June; albeit, April be the beft feafon of the year, in regard the nipping frofts are paft by that time, and for that, in that month, you are likelieft to have rain. When the flax is grown a handful high, you muft weed it; and, although you tread or lie upon it at that height, it will rife again: when the buttons of the flax begin to look brown, you mult pull the flax, and then comb off the buttons, and lay them abroad, where they may dry; and, as the outfide withers, the flax-feed will ripen within; but that feed will only be fit to make oil, but not to fow: for, if you will fave any feed to fow, you mult let your flax fand until your feed be thorough ripe, and then you lofe very much in the weight of the flax, which is otherwife much more profitable to you than your feed. After you have combed off the buttons, you muft prefently put your flax in water, but it mult be fanding water, and fuch as will not difcolour it; where it muft be about feven or eight days ordinarily; but that rule is ordered according as the weather proves hotter or colder. Then it muft be feven or eight days laid out a drying, being now and then turned; and, when it is dry enough, it muft be put into a barn, where it muft lie in heaps feven or eight days more a fweating, before you muft do any thing elfe to it. But, to order the bufinefs well, you muft be fure to have one of experience, until you can come thoroughly to underfand every particular yourfelf. When it hath fweat enough in the barn, then it mult be beaten, breaked, hackled, and then it is fit for the market.
After you have pulled your flax, you muft then plow your ground for turnips. Two pounds and a half of turnip-feed will fow an acre. After your turnips be off, in April following you may fow the fame ground with barley or oats, and with it fow your clover-grafs, whereof nine pounds will fow an acre; and, by that time you have mowed your oats, your ground will be flocked with clover-grafs.
We import yearly into Ireland, fays an ingenious gentleman, about Ix,000 hogheads of flax-feed, which, at forty fhillings the hogfhead, coft 22,000 l. and in 1747 we imported 376 tons of undreffed flax, which, at 40 l . the ton, come to $15,000 \mathrm{l}$. Thefe are articles of expence well worth the faving, and which may be put in the pockets of our own farmers, if they were duly encouraged to raife large quantities of flax and feed.
Moft of the countries of Europe, viz. Germany, Holland, Flanders, France, England, and Scotland, have every year a frelh recruit of flax-feed from the Baltic, becaufe they find by experience their native feed and flax degenerate and grow worfe every year. This is alfo our own cafe, our home-raifed feed and flax frequently degenerate, by reafon of bad feafons, bad hulbandry, or fome other caufe, which creates a neceflity and makes it incumbent on us to encourage the importation of good foreign feed, that we may never be in want of fo ufeful a commodity.
I am informed, that North America feed anfwers near as well with us as feed from the Baltic ; the foil there being as rich and as natural for the growth of flax, and as much covered with fnow in winter, and expofed to as great a heat in fummer, as any lands bordering on the Baltic; if this be the truth of the cale, we fhould not fail to encourage the importation of feed from North America, becaule the feed we get from thence is paid for by the commodities we fend thither in our own hhips; but all the feed and flax we purchafe from the Baltic are paid for in ready money, without our felling any of our commodities in exchange for them. But, whereever the beft feed is to be got, we fhould from thence fupply ourfelves : and it is from frequent trials that we can judge which is beft. But it is certain, that due care is taken by the magiftrates in the feveral fea-port towns in the Baltic from whence flax feed is exported, that no feed fhall be fuffered to be exported from thence in barrels marked with the arms, and other feals of the place, but what fhall be found good and merchantable; fuch caution they ufe to preferve the credit of their goods, which is a great fecurity to the buyer. But I do not hear that any fuch care is taken in North America, to enfure the goodnefs of their feed. But, wherever the beft feed is raifed, this caution fhould be ufed to have it directly from thofe countries where it grows, and not from thofe places where it is afterwards fown, as Holland

## F L A

and Flanders, from whence we can expect nothing but the fecond or third crop of feed, which is then in a ftate of degeneracy.
The nation receives much more benefit by flax-feed than from flax imported. A barrel of feed may coft twenty fhillings, and fo may half a hundred of flax; but the produce of flax and feed from that barrel, if rightly managed (computed at 400 weight of flax, and three barrels of feed) may be worth at leaft eight pounds fterling, which is eight times the value of the prime colt, and is 700 per cent. clear profit to the kingdom, though not fo much to the farmer. This advantage we gain by feed, more than from flax imported. But, as to the profit arifing from the fubfequent management of foreign or home-raifed flax, it may be equal in both, viz. 700 per cent. over and above the prime coft, as is before fet forth.
Since we may receive fuch great benefit by making ufe of foreign feed (the prime coft being very frall in comparifon of the profit that may accrue by the fubfequent management thereof) and, in regard we cannot expect good flax or feed but from good flax-ieed, it is manifeftly our intereft to encourage the importation of good feed; and, therefore, it is humbly recommended to the truftees of the linen manufacture to give premiums, for one or two years to come, to fuch merchants as fhall import the greateft quantities of good merchantable flax-feed from the Baltic or North America into Ireland; excluding lack feed, as it is called, of the Baltic, or any other country, from any thare in fuch premiums, fuch feed being light, lank, and poor, and fit only for oilmills.
Though it is advifed for the prefent to give premiums to encourage the importation of flax and feed, yet we have good reafon to hope, that, if the methods herein recommended be carried into execution, we thall be able to raife flax and feed ourfelves, in fuch quantities, and in fuch perfection, as not to fand in need of a fupply of either from any other country.

## The laws of England with regard to Flax and Hemp.

I. Stat. 33 Hen. VIII. cap. 17. §. 2. It fhall not be lawful to water hemp or flax in any river, ftream, or common pond, where beafts be ufed to be watered, but only on the grounds, or in pits, or in their feveral ponds, on pain to forfeit 20 s . one half to the king, and the other to the party grieved, or to any that will fue for the fame in any court of record or leet.
II. Stat. 15 Car. II. cap. 15. §. 2. Any perfons in any place privileged or not, corporate or incorporate, may fet up the trade of breaking, heckling, or dreffing of hemp or flax; as alfo for making and whitening of thread ; as alfo of fpinning, weaving, making, whitening, or bleaching, of cloth made of hemp, or flax only; as alfo the trade of making twine, or nets for fifhery, or of floving of cordage; as alfo the trade of making tapeftry-hangings.
III. §. 3. All foreigners fetting up and ufing any of the trades aforefaid three years in England, fhall, taking the oaths of allegiance and fupremacy before two juftices of peace near their dwellings, enjoy all privileges as natural-born fubjects.
IV. §. 4. Foreigners exercifing the aforefaid trades thall not be liable to any other taxes than fuch as fhall be paid by na-tural-born fubjects, unlefs they fhall ufe merchandize into and from foreign parts, in which cafe they fhall be liable to pay cuftoms as aliens during five years, and no longer.
V. Stat. 7 and 8 Will. III. cap. 39. §. 1. Natives of England or Ireland may import into England, directly from Ireland, any forts of hemp or flax, and all the production thereof, as thread, yarn, and linen, of the growth and manufacture of Ireland, free of all duties, the matter of the veffel importing the fame, bringing a certificate from the chief officer of the port in Ireland, expreffing the marks, number, tale, or weight, of the 'pecies in each bale mentioned in the bills of lading, with the names and places of abode of the exporters from Ireland, and of fuch perfons that thall have fworn the goods to be of the growth and manufacture of the kingdom, and where and to whom in England conligned ; and the mafter of the fhip, on arrival in England, making oath that the faid bales and goods are the bales and goods taken on board by virtue of the faid certificates.
VI. Stat. I Ann. ftat. 2. cap. 8. §. 2. All hemp or flax, and the production thereof, as thread, yarn, and linen, imported directly from Ireland, by natives of England or Ireland, being of the growth and manufacture of Ireland, upon pro" ducing certificates, and making oath as by ftat. 7 Will. III. cap. 39, Thall be free from the additional fublidy of poundage, and all duties whatfoever.

## REMARKs.

The quality and reputation of our linen manufactures, both in Scotland and Ireland, depending upon the goodnefs of the flax; and the improvement of our linen manufacture to the utmoft, being a matter that nearly concerns the interetts of our trade; we cannot have too minute and circumftantial an idea of the methods of raifing flax of the beft quality for that purgofe.

## F L A

It is not long fince the method of managing in general our home-grown flax in Scotland and Ireland was to bad, that it would have been much better for our linen manufacture if we had raifed none at all ; for every fault, every imperfection in the flax; is, as it were, an error in the firft concoction, and not to be cured afterwards by the utmoft labour, ikill , and addrefs.
Yarn fpun of unripe flax will never make good cloth; and, where it is mixed with other yarn, the cloth is ever dilliked. Flax fpoiled or difcoloured in the watering, cannot be brought to that delicate whitenefs which is required in fine cloth, unlefs the cloth be fo much thinned and emptied as to lofs it's effential quality of frength; and where it is mixed with good yarn, the cloth can never be of the fame colour.
Unlefs, therefore, we are at pains to reform our way of managing our lint in general, we had better purchafe it intirely from the Baltic, Holland, and Flanders; but as we have been long in the practice of raifing flax, it is weak and irsefolute to give it up; and if we can be at a little more trouble, and fome fmall expence, we fhall reap, from the fame ground, a third part, at leaft, more flax than we do at prefent, and that too 30 per cent. or more, better in it's quality.
We thal therefore give a fhort account of the method practifed by the Flanders flax-dreffer, who was fome time ago introduced into Scotland by the truftees, upon public encouragement, in order to inftruct us in their way of preparing their foil, fowing of flax-feed, raifing, pulling, watering, ${ }^{\prime}$ and dreffing their flax, and compare it with our own. According to the Flanders method, the beff foil for fine flax is the tender and mellow black mould, or any light foil, mixed with loam and a little land, that will not bind with any fudden drought. The lower the ground lies, and the flatter it is, the better, provided it be dry enough to be fown in the proper feafon: it fhould be fallow at leaft two winters and a fummer. The firft plowing fhould be as deep as the foil will admit of, and thereafter plowed with an ebb furrow, fo often as the appearance of weeds makes it neceflary. In Otober or November, before the ground is to be fown (or rather in October in the preceeding year after the firft plowing, if they have then dung enough, becaufe the fum-mer-plowing thereafter deftroys the weeds that rife with the dung) it ought to be well dunged, and as well dreffed at fowing as garden mould; and three buhels. Winchefter meafure of good feed, is fufficient to fow one acre of ground thus prepared. More is too much to be fowed on one acre, becaufe our foil is not prepared as it ought to be: the effect of which is, if our feed be good, all comes up, and one half of it is under growth; this unripe lint is rotten in the watering, before the reft is ready, and the whole is fpoiled by it.
In ground prepared as before directed, the weeds are fo very few, that one hand will clean as much lint-ground of weeds in a day, 'as eight can do in the ordinary way; and this is a confiderable article of expence faved.
When flax thus prepared is fully ripe, and not 'till then, he pulls it, and, if any unripe ftalks appear, he carefully feparates them from the reff, and waters them by themfelves. When his lint is pulled, he ties it up in fmall bundles, or Theaves, no bigger than one can grafp about with his two hands, and ties them up loofely with a few ftalks of itfelf, a little below the feed, and then fets them up on one end, two and two, like fhocks of corn; in the air and fun, until it be well dried, and then ftrips the feed-boll from it, as we do. He then ties two and two of his theaves together, the feed end of the one always to the root end of the other.
Wherever he can find flat-lying ground, under level to any running water, there he digs his ponds for watering his lint, fo large as the ground will allow, and near to three feet in depth : when his ponds are filled from the rivulet with water, he puts in his lint until the pond is full, but does not fink it, The reafon why he ties the feed-end of one fheaf to the rootend of the other, is, that the roots, being heavier, would fink in the water, and the feed-end would be intirely out of the water; bat, when thus ballanced; the lint being much of the fame fpecific gravity with the water, it is juft emmerfed, and no more, and never comes near the ground or the mud. He turins it in the water every day, and, if the water is very hot, twice in a day. He tries when it is enough watered, by breaking a few ftalks; and, if the boon breaks freely, and parts eafily with the flax, then he takes it out, and carries it to a clear running ftream, and wafnes it very well from all in's filth and naltinefs, and then fpreads it upon grafs (very thin) as we do.
If the water appears to be very much difcoloured in the pond before his lint is fufficiently made, he lets off the water, wathes his lint, and then fills his pond from the tunning brook, and puts it in again until it be enough done. When his firf parcel is laid on the grafs, he puts another in the fame pond, and continues to water his lint, fo long as the feafon is warm enough. He turns his lint on the grafs once a day, and keeps it on the grafs fo long as the dews fall, which gives the lint a fine colour, without hurting it, and makes the yarn fpun of it walh and empty eafily, without

Vol. I.

## F L A

walling of weakening it; and the cloth made of it comes foon to a fine colour, without being thinned in the leaft. So much of his lint as he intends for his beft feed, he builds up in a ftack, like corn; after it is thoroughly winnowed, with the bolls upon it, and ftrips * it at fowing-time ; and, in the month of May thereafter, puts it into the water, and follows the fame method with that watered in the autumn. So much of his lint as remains on his hands undreffed after the middle of March, when the dews begin to fall, he lays out again upon the grafs for a good colour, and always takes up his lint from the grafs in dry weather, and about mid-day.

* The lint keeps all the winter in the ftalk, and is for his beft feed, which he takes from the bolls by beating them with a light timber hammer with one of his hands.
N. B. Care muft be taken, in rainy weather, that the lint receives no damage by rotting on the grafs, but gentle Thowers are as good as dews.

Our prefent general way is to fow our lint on any ground, which puts us to a great expence to weed it. We fow it thick (as wee muft do in ordinary ground) whereby one half of it is ripe before the other is ready; and thus the unripe feed, being mixed with the full ripe, fpoils the whole, and the unripe lint is rotten in the water before the other is ready.
In the weft of Scotland, where the fineft finning is, the people are rivetted in a moft pernicious conceit, that unripe lint makes the fineft flax; and, therefore, pull all their lint when the bloffom falls. This kind of lint heckles away al moft to nothing, and is indeed, in appearance, very fine but then. it has no fubftance, and the yarn fpun'of it is always weak and ouzy; it waftes much in the wafhing, and cloth made of it grows as thin as a cobweb in the bleaching, before it can be brought to a full colour.
In the country of Cambray in French Flanders, \&c. where the fineft flax is raifed for fine cambrics, thread, and lace, the ground is fallowed fummer and winter for three years fuccefively, and very well dunged; and, at fowing $y$ frewed over with human ordure, taken from their boghoufes, where it ferments. This is a very great expence, including the want of profits of the ground fo long; but then, if the feafon proves favourable for lint, they will have of dreffed flax upon one acre from 800 to 1000 lb . weight, which is worth
 per pound weight.
Our feafons are too precarious to rifque' an expence of this kind, for hard-blowing winds, heavy rains, or fudden droughts in the beginning of fummer, are all dangerous to the int-crop: but it imports our manufacture much, that our prefent way of managing our flax fhould be reformed, efpecially now, when we make large parcels of fine cloth; for it is intirely owing to the mifmanagement of our flax, that we have any bad Cloth at all; and every perfon who fows lint, will find his account in practifing the Flemith method, in managing of every part, from the firft plowing to the bringing' of the lint to the firf heckle.
The half of our lint is, in many places, loft in the watering; whenever it is pulled, it is ftripped off the bolls, and bound up hard like heaves of corn, with bands of itfelf, and carried to the water-green, and then thrown into the neareft pit, or large pool,' in any fmall river or burn.
The pool is dammed up with earth and fones, 'till the water fwells to make the hole of a fufficient depth, and then the lint is crammed into it, one fheaf on the top of another, until it be quite full; and then fods of earth and large ftones are laid on the top of it, to prevent it's being carried away by land-floods, in cafe of a thunder hower, or fudden fall of rain, which happen fometimes in the autumn feafon. If no running water is near; the lint is put in the fame way into mofs-water pits, and flanding pools of ftagnate water. In thofe places it lies in this condition, full of mud, and it's own llime and naftinefs, for a certain time, without regard to the weather, and is then taken out, and fet up an end, with the band pulled up towards the top, and opened wide at the bottom to dry; and after all the black ftuff on it is dried in, it is then laid out on the grafs, to little purpofe; for it is by this management fo much is fpoiled, and the whole fo difcoloured, that it can never afterwards be recovered. The Flemifh way cofts more trouble and attendance, and fome more expence, than ours does; but then, by their way, we fhould have double the quantity of lint we now have, and all of it good, at leaft zo per cent. better in it's quality, than our beft home-grown lint is now worth.
The right management of our flax then is of the greateft importance to the linen manufacture, and we ought, with all poffible expedition (be the coft what it will) to have the Flemilh method introduced, and univerfally practifed over the whole country, that we may have no more cloth of any kind fpoiled or difliked by the mifmanagement of our homegrown flax.
An attentive and diligent perfon, who is kept clofe to the dreffing of flax, and carefully obferves, every part of the 10 I

Flanders

Flanders method of management, may, in a few months, become fully inftructed in the art; and when this is well known, and practifed by a few who are fituated near our linen manufactures, the method will be foon propagated, and become general:- and when our home-grown flax becomes, in the general, as good in quality as that which comes from abroad, our flax-dreffers, as weil as manufacturers, and the nation in general, will find their account in it. In Scotland, the truftees for the advancement of manufac: tures, were at no fmall expence to bring to perfection a machine for dreffing of llax by water, and at length happily fucceeded; and this proves a great benefit and faving to the country on this branch of the fipen trade. The beft flax-dreffer, when he doss his utmof, cannot finifh of the beft lint (for bad and unripe lint, or lint not fully watered, or fooiled in the watering, will not bear the expence of dreffing, and is indsed not worth dreffing, nor ought to be dreffed) above 12 pounds weight in a day: but the lint-mill will drefs, at the rate of every hand employed in it, 16 pounds in a day. The cheapeft that good-lint can be dreffed by the hand in Scotland, is 32 pence the long fone, and it is drefled at the mill for two fhillings the ftone.
The woollen manufacture of England never came to any perfection 'till the bufinefs of the woolftapler became a trade; and it mult fare fo with the linen. Here then is a fine branch of bufinefs for any gentleman who has the conveniency of water for ereding a lint-mill; he may either raife lint himfelf, or buy it in the boon from others, and drefs it by bis mill for heckle; he may have his heckles in a convenient houfe near to it, for dreffing and ftapling the lint, by proper heckles, into fine drefled flax, fine dreffed tom, common tow, backings and breads, for the fervice of the country fpinners.
This will greatly increafe our fpinning, when every perfon may be ferved with their ftaple of flax and tow they are moft accuftomed to fpin ; and which, by conflant practice, they fpin beft, and with the greateft expedition; and when fo many days that are now mifpent by our fpinners in heckling of lint (for very bad hecklers they generally are) fhall be employed in fpinning; for the article of fpinning is the chief fupport of the manufacture ; and as this article requires and employs the greateft number of hands, great care fhould be taken to diffufe and extend it over Scotland and Ireland.
The fpinning-fehools eftablifhed in Scotland and Ireland, on the public encouragement, have much improved the people in fpinning, and in making of thread : but as thread can be fubject to no ftamp or check, to afcertain it's fufficiency at a foreign market, and that our yarn brings in more money to the country, when it is wrought into cloth, than when into thread only, the article of thread-making may be carried too far.
The French fpiming-fchool in Scotland has bred a great many good fpinners of fine yarn; but many of them are perfons of condition, and when fuch have gratified their curiofity in learning it, and fpun as much as will make a piece of cambric for themfelves, they give over the practice, and are of no further ufe to the manufacture. Fine fpinning is a trade in the weft of Scotland; but as their yarn is made of unripe lint, and not fpun in the Picardy way, although it be as fmall and fine, yet it. is weak, and cannot fand in the loom to be warp for cambric ; all that can be made of it, in general, is only woof for cambris; and the cloth where it is, thins much in in the bleaching. See the article Bleaching.
When the fine yarn comes in to contend for the prize, one can, at firft view, diftinguifh the yarn fpun by thofe taught by the French, from that which comes from the weft of Scotland. Their yarn is fully as fine as ours; but, when tried by a magnifying-glafs, theirs appears rough and ouzy, and of a bad colour; whereas the yarn fpun of the foreign'lint, by the French fcholars, appears, through a glafs, fmooth and clear, like a horfe-hair fifhing-line, and is of a fine colour, It is fit for warp, as well as woof; and when it is made into fine cambric, comes to a fine colour foon, without thinning he cloth : if therefore the French method of fpinning, which is, dreffing their flax with brufhes, as well as the Flemin method of flax-dreffing, was univerfally introduced all over Scotland and Ireland, where the linen manufacture is carried on, we fhould foon have plenty of yarn to advance the cambric trade.
We do not want to raife flax fo much, as we want to raife good flax. The improvement of this branch to the utmoft juftly clains the preference, fince we know from experience that all our bad cloth has been principally owing to the badnefs of our home-grown flax, and that arifing merely from our mifmanagement of it.
When this Flemith method of flax-dreffing fhall be univerfally underftood, application may be made for an act of parliament to prevent the management of flax by any other way, under proper penalties; for beedlefs perfons, of a lazy and indolent difpoftion, and averfe to all reafonable improvements, will fuffer floth and eafe always to gain the afcendant, even over their own intereft : wherefore;, fuch perfons
muft be reftrained by good laws, from doing harm either to themfelves or others.
But notwithftanding this method of flax-dreffing is not fo univerfally eftablithed, according to the information I have received, as could be defired, either in Scotland or Ireland yet the perfection to which they have allowedly arrived in the linen manufacture, within a few years, is very extraordinary : and experiments demonftrate, how well judged the premiums and encouragements have been, whieh they have given to create an emulation among thofe who are concerned in the feveral branches of the manufacture.
But if, after all, we fhould not be capable of raling a competency of good flax for our linen manufacture in England Scotland and Ireland, we chould exert ourlelves in America For the foil of many parts of Virginia and Maryland is ex ceeding rich, and fit for raifing good hemp as well as fine flax : and the fame hands which hough and drefe their tobacco grounds, and cut and cure their plants, may be employed all the winter in breaking and dreffing hemp and hax. Thefe commodities, being imported rough from our own plantations, may be manufactured at home, into cordage, fail-duck, and linen of feveral forts, and will contribute to leffen our demands for thefe goods from Ruffia and Germany. Gpeat quantities of hemp and flax may alfo be raifed in Penfyluania, North Carolina, and in feveral other of our plantations; and all fo near navigable rivers, that by faving the expence of a long carriage by land, to which thefe commedities afe liable in Mufcovy, they may be imported cheaper than they can be had from thence, and, poffibly too, of a better quality.
Several parts of our colonies The in the latitude of Egypt; and as their foil in fome places is equally fine and rich with the foil'of Egypt, where the finelt flax in the world is produced, and the feafon for preparing of ground and fowing of lint-feed is over, before the mulberry fets out; and the time of reeling off the filk from the worm-bag; palf before the flax is fully ripe; the fame hands that may be employed in producing filk in our colonies of Vitginia, Maryland, Penfylvania, and North and South Carolina, and Georgia, may be alfo employed in pulling and fripping off the fred from the flax, and watering and grafing it *, and the breaking and dreffing the flax will keep the people in work 'till the fowing feafon returns. By thefe means we may be furnimed with flax of a finer quality than any that grows in Eyrope, even preferable to that which is raifed about St Amand, for yarn to make their fineft cambrics, thread, and lace.

* The dews in thefe parts are exceeding rich, and, when the -flax is lying on the grafs, it is thereby brought to an excellent colour, without impairing it's frength in the leaft.

Here is a fine field of bufinefs to enrigh our planters in Aqerica, and to keep all their bands conttantly employed in a very profitable manner: and if the filk, which they certionly may produce [fee the article Sink] is fent home raw, and their hemp and flax rough, and all our fpare and idle bands at home employed in working up thefe materials into manufactured goods; fince all thefe fubjects of manufacture may be had from our own plantations, of a better quality, and at eafiar rates than they can be imported from foreign parts, What hinders but we may vie with the Hollanders, Flemings, Germans, in fine linens, cambries, thread, and lace, pad with our great and only dangerous rivals the French, in the filf manufacture?
And if to the care of raifing a competent quantity of good flax at home and in our plantations, we likewife, add the care of performing to perfection every branch of operation, which relates to the linen maniufacture: fuch as to relate to milful HECK wing of it according to the Picardy way, the purging and wafhing of YARN, and the WEAYING, the BLEACBLYG, $\$ c$.

## Remarfs fince the laft war, and Definitive Treaty of 1763 .

That Great Britain and Ireland have not long before now fupplied themfelves from North America with plenty of the heft flax; has been aftonifhing to the whole world: but that now, when the laft war and treaty of peace have made us mafters of fuch extenfive new acquilitions in that part of the world, if we hould not turt thpre lands, withou delay, to beneficial purpoles, we may as well have remained without them. We have here fuch a variety of climates, that it cannot longer be prerended that we, on that account, hall not be able to accomplifh this, for the advantage of our. linen manufacture of the molt delicate fort: and it is to be hoped, that we fhall no longer ftand in nęed of peing reminded to cultivate this article to the utmoft perfection, and thereby vie with and emulate every other pation upon the earth.
FLINT'SHIRE, in North-Wales. The Irif fea, or ra ther a branch of 15 , viz. the great zftuary of the Dee, into which that river runs, wafhes this fhire on the noth, and 'tis
bounded on the eaf by Chefhire, on the fouth-eat by Shropfhire, and on the fouth-weft by Denbighthire. 'Tis the leaft county of Wales, it's circumference being about forty miles only. The air is healthful, and it's vallies fruitful in corn and pafture, which feeds abundance of fmall cattle, from which they make plenty of butter and cheefe. They have alfo great fore of honey, of which they make metheglin, a liquor much drank in the Welih counties. Some of it's mountains are very rich in lead-ore, and produce fome millfones. There are alfo great quantities of pit-coal in this county.
Flint, the fhire-town, is feated on the xfluary of the Dee, where it has a fmall harbour.

## REMARKs.

The principal manufadure carried on in this county is that of lead, which is fmelted from the native ore with pit-coal, The chief of thefe works is that called the Quaker's Company, which is fituated between the town of Flint and Holywell, a market-town. This company have leafes of feveral of the capital lead-mines, within a few miles of their fmeltinghoufes. There are affo divers fmelting houfes in this county belonging to private people, where the ore is melted, and the lead feparated therefrom by pit-coal fuel; and alfo the filver extracted from the lead by the fame firing. See the articles Lead, Silver, Smelting.
FLORENCE in Italy. This is the moft confiderable part of the duchy of Tulcany, both in largenefs and opulency. ${ }^{\text {' }}$ Tis bounded on the north by the Bolog nefe and Romania, on the eaft by the Ecclefiaftical State, on the fouth by the Sienefe, and on the weft by the territories of Lucca and Pifa, which laft is often included within it.
The duke of Lorrain and Tufcany is now fovefeign of Florence, which, with the dukedom of Tufcany, was allotted him when he ceded the dukedom of Lorrain to France. The adjacent mountains yield mines of copper, iron, and allum, and fome quarries of marble, porphyry, and other fine ftone. The bills and dales are covered with grapes, which produce exceilent wines, befides citrons, lemons, oranges, olives, $\&<c$. and the plains with corn of yarious forts, rice, and faffron, honey, wax, wood, tlax, hemp, filk, and, in fome places, excellent mineral waters, which effectually cure many chronic difeafes. Several manufactures are carried on here, fuch as ferges, and various other kinds of woollen cloths; filks, linen, tapeftries, gilt leather, earthen ware, and perfumes; all which contribute more or lefs to the riches of it.
From England they take pepper, cloves, mace, indico, callicoes, lead, tin, cloths, bays, perpetuana's, herrings, white andred, pickled falmon, Newfoundland fin, plehards, calvefkins, and divers other commodites.

## REMARKs.

The duke of Florence, furmerly, was not only a great lover and encourager of merchants, but carried on merchandifing himfelf; nay, he was the greateft merchant in his time, in all Europe, not forgetting that his anceftors raifed themfelves, by commerce, to that great dignity and filendor they enjoyed.
FLORIDA. This country lies on the eaft-fide of the Miffiflippi river, extending to the weft frontiers of Carolina and Georgia, is feparated from New France on the north by the Apalachian mountains, and has the gulph of Mexico on the fouth. But what is properly called the peninfula of Florida, has Georgia on the north, the gulph of Mexico on the fouthweft, that of Florida on the fouth, with the channel of Bahama and the Atlantic ocean on the eaft.
The air is pure and temperate, and the sountry in general healthy ; 'tis rather fubject $t$ heat than cold, but the heats are tempered by the fea breezes.
The country abounds with all forts of timber and fruit-trees, and forefts of mulberry-trees 'both white and red, logwood, and many other dyeing woods, and fhrubs, fuffic, And it produces abundance of caffafras, which is exported yearly in great quantities. It's many ivers not only abound with fin, but render it inferior to no country, both for plealantnefs and fertility.
As to that part of Florida which borders on the gulph of Mexico, it appears by a memorial prefented to King WilIiam III. by Dr Daniel Cox, that England has had an undoubred title to it funce the reign of Henry VII. by whofe commiffion Sebaftian Cabot difcovered all this coaft from north latitude 28 to 50 . The fouth part, indeed, towards the gulph of Bahama, was vifited by the Spaniards under Juan Ponce de Leon, as it was ten years after by Vafquez Allon; but their cruclties fo enraged the natives, that they expelled them all one after another. Nor have they ever fince made any fettlement on this part of the continent, except at St Auguftin and St Matheo.

## Remarks.

Carolana was granted by king Charles I. on the 3 ath of October, in the fifth year of his reign, to Sir Roberr Heath,

Knt. his attofney-general *. The extent of this grant fet out in the charter was, all the continent on the weft of Carolina, from the river St Mattheo, lying, according to the patent, in $3 \mathbf{I}$ degrees of north latitude (though, by later and more accurate obfervation, it is found to lie exactly in lat. 30. 10) to the river Paffo Magno, in north latitude 36. extending in longitude from the Atlantic to the Pacific fea, a tract which was not then poffeffed by any Chriftian power; together with all the iflands of Veanis and Bahama, and feveral adjacent inands lying fouth from the continent, wibin the faid degrees of latitude, to be called by the name of the Carolana inands.

* See a defcription of the Englifh province of Carolata, by the Spaniards called Florida, and by the French La Louifiana. As alfo of the river Mefcacebe, or Minififippi, \&c. by Daniel Cox, Efq;

Sir Robert Heath conveyed Carolana to the earl of Arundel, who was at the expence of planting feveral parts of the country, and had effected much more, had he not been prevented by the war with Scotland, in which he was general for king Charles, and afterwards by the civil wars in England, and the lunacy of his eldeft fon. In the beginning of Cromwell's protectorate, Capt. Watts (whom king Charles II. knighted and made governot of St Chriftophers) being upon the coaft, one Leet, an Englihman, being intimate with the king of the country, by his influence, was allowed to trade, and incited to fettle here. Not long after, this king fent an ambaffador to England, and the Englifh had divers tracts of land given them by the Indians, and furveyed the continent (of which there is a map fill extant) for above 200 miles fquare. It appears alfo from this memorial, that the Five Nations in the territory of New York, whom the French commonly call Iroquois, who bave for almoft eighty years voluntarily fubjected themfelves to the crown of England, and who had conquered all the country from their own babitations to the Mississippiriver, and even beyond it, made a fale and furrender of all thefe their conquefts and acquifitions, in the reign of king James II, to the government of New York, which is another proof of their being the Property of the English.
The memorial here mentioned was prefented to king William, as aforefaid, by the late Dr Cox; who, by conveyances from one to another, after the death of the earl of Arundel, became proprietor of Carolana; and who fets forth in the faid memorial, that, at the expence of feveral thoufand pounds, he difcovered divers parts of it ; firlt from $\mathrm{Ca}-$ rolina, afterwards from Penfylvanid, by the Sufquebanah river, and that then he made a difcovery more to the fouth, by the great river Ochequiton.
And here it is proper to obferve, that, in September 1712, the late French king granted letters patent to M. Cozas his fecretary, for the sole Trade to this country, by the name of Louisiana, extending about 1000 miles along the gulph of New Mexico, and almoft as much from the faid gulph to Canada; and it appears by the patent, that the French altered the Names of the RIVERS, HARBOURS, \&c. as well as of the COUNTRY ITSELF, which bad been ufually called Spanish Florida; and that, under pretence of a New Discovery of it, they declared themfelves poffef fors of this vaft tract, which had been difcovered and poffeffed for 200 years, partly by the Spaniards, and partly by the Englifh; for, by comparing the patent with the MAPs, 'tis evident, that it inclofed and incompafled all the English Colonies of Carolina, Maryland, Pensylvania, New England, \&c.- This is a freh fpecimen of French Incroachment. For more infances of the like kind, fee the articles British America, French America, France, and Plantations.
The fon of the above memorialift (Daniel Cox, Eff;) who was himfelf fourteen years refident on the continent of America, has publifhed a particular defcription of this province of Carolana, as he all the way calls it; wherein he has given a fuccinct detail of fome of it's moft uffefulanimals, vegetables, metals, minerals, precious ftones, \&ic. And, as he declares his account is compofed chiefly from memoirs drawn by his father, from feveral journals and itineraties of the Englifh, whom he fent to difcover it ; and partly from the relations of other travellers and Indian traders of good underftanding and veracity; who had paffed through the heart of the country; we thall give our readers a hort abitract of it, as the molt fatisfactory view of this country that has yet appeared.
There are almoft every-where two, and in fome parts of the country three, crops of Indian corn in a year. All along the coaft, and 2 or 300 miles up the country from the fea, they have the root mendihoca, of which the caffavi flour and bread is made in the greateft part of America, between the two tropics, is efteemed as good as our manchet, and is confiderably cheaper. Here is likewife another fort of grain like our oats, and, when rightly prepared, it exceeds our oatmeal. It grows fontancoully in marhy places, and by

the fites of rivers. Théy have excelient limes and prunes growing wild, which they eat plentifully from the tree, and keep fome dry for winter provifion. Here is alfo the tunas, a delicious food, efpecially in hot weather, and fo wholfome, that, when 'tis ripe, the Europeans call it their cordial julap. Vines of different forts grow naturally in this country ; and the foil is admirably adapted, for producing as good grapes as moft countries of Europe.
Here is good beef, veal, and mutton, and plenty of hogs, acorns, chefnuts, and other meats, abounding in this country. Here are horfes for the faddle as well as draught; the former fo cheap, that they may be bought for five fhillings worth of European commodities. Their cattle have a long black fort of hair, or rather wool, fo fine, that 'tis thought, with fome fmall mixture, it would be preferable to ordinary wool, for hats, cloathing, and other neceffaries.
The wild animals of this country, are the elk or buffalo, panther, bear, wild cats, beaver, otter, fox, racoon, fquirrel. Cotton grows wild here, and fome of the moft civilized nations in this country, efpecially of the better fort, are cloathed with a fubftance like good, coarfe, ferviceable linen, very white, which is made of the inward bark of trees that abound here, is as becoming as moft of the ordinary linen of Europe, and as durable : of the fame, and other barks, they make thread, cords, and ropes.
